39,039. No, take them all; I mean the unpaid ones. It has been suggested to us that where an unpaid consul is himself a trader, so long as his work as British consul does not interfere with his own trade, he is to be relied upon; but when it does interfere with his own trade there is less reliance to be placed upon him?—I think that is natural; he looks first to his bread and butter.

39,040. You have seen that?—I have seen it to a very small extent.

39,041. Would that suggest to you that it would be desirable that where there are unpaid consuls they should not be people themselves engaged in trade?—Oh, no.

39,042. Why not?—Where that happens, if it became so pointed as that, it would be necessary to send a salaried consul.

39,043. We have been told that when the salaried consul goes on leave, the appointment of a *locum tenens*, where there is no vice-consul, rests with him?—He submits the name in applying for leave to the Foreign Office and unless they have reason to doubt the recommendation the Foreign Office would sanction it, depending entirely on their man to do the straightforward thing and not to recommend a man who was not fit to act.

39,044. The arrangement for the salary of the *locum tenens*, for the proper expenditure of the office allowance and so on, rests with the consul?—Up to a certain point, up to the time until he has finished his leave on full pay. Then if he goes on three-quarters pay or half pay, the amount which is deducted from his service is paid to the *locum tenens*.

39,045. But it may be that the consul has to pay a fee to the *locum tenens* during the period when he himself receives his full salary?—I think not, that is very unusual. He usually leaves the vice-consul under him or if there is not a vice-consul his head clerk—that has been my experience, whoever has charge of the office under him—to act as *locum tenens*.

39,046. And the head clerk continues to draw whatever allowance of pay he drew during the presence of the consul and no more?—Until the consul has exhausted his leave. Our leave is not so very large, and if the consul pays his clerk a good salary and that clerk goes on a holiday, the consul does his work; so that when the consul goes on a holiday it is not a hardship to ask the clerk to take his part of the work if he is competent, and that would only be for the time the consul has leave. If he stays away beyond his month or two months if he has accumulated leave, then he goes on a smaller scale of salary and what is deducted from his salary is paid to the *locum tenens*.

39,047. (*Miss Haldane.*) Must the substitute be a British subject?—Oh no, madam.

39,048. (*Chairman.*) You think then on the whole that the arrangement with regard to the leave of consuls does not result in hardship to anybody?—I do not think it does; to be perfectly fair I do not think so.

39,049. And you do not think that British commercial interests suffer from leaving in the hands of the consul the nomination of his *locum tenens*?—He nominates him subject to the approval of the Foreign Office, and the Foreign Office in the majority of cases know their own man and consider that he is capable of looking after their interests.

39,050. What I wanted to find out was whether in your opinion it would be desirable in particular cases, where there is no vice-consul and the consul goes on leave, that the vice-consul from some other place should be moved up to take his place?—It is very often done.

39,051. Is that done on the suggestion of the consul or on the action of the Foreign Office?—The consul I believe reports that he has nobody to leave in charge—or as has happened to me when there was nobody to put in charge I was told to go on six hours' notice and that was an end of it. I did not know what I was going for; I was told to report at a certain place.

39,052. Were you vice-consul?—I was salaried vice-consul. But when a place is important and the consul cannot find somebody, I could tell you of several instances where the consul or vice-consul from other places has been sent to replace him until he comes back; I believe that is the practice.

39,053. We have been told that in some cases at all events, the lump sum allowance given to the consul for the maintenance of his staff and the hiring of his consulate, is very often small compared with the allowance given by some other European States, and that the consequence is that in some very important cities the British Consulate is located in a back street

15 May 1914.]

Mr. CHARLES CLIFFERTON.

[Continued.]

where a house can be obtained at a low rent, while the consulates of other countries are located in a front street and attract more attention, and in that way British interests suffer. What do you say with regard to that?—I think that in a way you have been correctly informed, and in a way you have been wrongly informed. The system of giving a lump sum very often worked in this way, that the consul would take an office wherever he saw fit; now he cannot do so. If the inspector sees that the office is not in a proper place or sufficiently large, the inspector tells him he must change it and go to decent quarters so that the office allowance will be properly spent. I think the office allowance as a rule has been sufficient; and where it has not, in my own experience, I have always found the Foreign Office on proper proof quite willing to give one what was necessary. But of course when it was not controlled you did not know what was done with it. It will be controlled now.

39,054. This new arrangement is of a very modern date; it has not been a year in existence yet?—No, not yet.

39,055. We need not then go into the matter further. Have you any remarks or suggestions to make to the Commission on the subject of the entrance to the Consular Service? For the Consular Service now the age fixed for entry is from 22 to 27, and there are certain subjects of examination, as you know, some of which are of the ordinary educational type and some of which are technical subjects, such as a knowledge of merchant shipping and commercial law, negotiable instruments, etc.?—I think that is a very unnecessary part of our examination.

39,056. I was just coming to that. The examination is divided into two parts, first ordinary educational subjects and next technical subjects; do you think it is wise to examine candidates for a vice-consularship in both these classes of subjects?—My own experience is that it was a very good thing to read up "Smith's Mercantile Compendium," but I cannot say that it has been of any practical use to me since I have been in the regular service.

39,057. Did you say it was of use to you?—No; it was a good thing to have read and learned.

39,058. Did you not find it of use when you were in the office as a clerk?—I cannot say that I did.

39,059. Do you mean to say that it is of no use at all to consuls?—It is a good thing to know. Mind you, if we were examined in the Merchant Shipping Act itself, I should say yes—that is our work.

39,060. But a knowledge of contracts?—We do not see very much of that. I can only speak for the countries I have been in, the United States and France. It may be of use in South America and places that I know nothing of.

39,061. Did you pass your examination and enter the Service regularly when you were in the United States?—Yes.

39,062. At that time did you know French or German?—Yes, I knew French. I was practically born in France.

39,063. You found no difficulty, of course, in passing the educational examination?—No.

39,064. Nor did you find a difficulty in answering the technical questions in law?—No.

39,065. But you do not think the law was of any use?—Of very little use. Of course, I had to read up and learn certain chapters of that book which we were told in the instructions we would be examined on, but, if we were examined on the Merchant Shipping Act and the practical part of our work, I think it would help a great deal.

39,066. Might I ask you how long it took you to read up these technical subjects for examination?—I read them while I was working.

39,067. Did it take you six months?—I dare say.

39,068. Do you think that the age of 27 is too old to enter the Service?—No.

39,069. Would you prefer to have the ages as they are now, or to recruit young fellows at the time they leave school and then to give them some time afterwards in which to learn the technical part of their

work?—Where would they learn it; what would be the idea?

39,070. They could take up a course of political economy or some matter dealing with trade and commerce in some of the great schools of the country?—I think one of the great things that we want to study more than anything else in our Service is common sense; a supply of that will go a long way.

39,071. You do not think much then of attending lectures?—They are always useful; knowledge is always useful, but I do not think you want to bring men into the Service much younger.

39,072. Than 27?—I forget what the range is now.

39,073. Twenty-two to 27. Do you think 27 too old?—I think it is about as old as you want to get them to start to learn. There are always exceptions to the rule, but I should say that 27 to start as vice-consul is quite old enough.

39,074. In your experience have you ever had to deal with any diplomatic work?—I think not. I do not know how you divide diplomatic work up. What would you call diplomatic work?

39,075. Such work as is done by attachés to embassies, for instance?—For instance, in the United States the consuls do a great deal of work which in other countries would be done by attachés; not what you would call confidential diplomatic work, but in the United States the Ambassador is accredited to the Federal Government at Washington, but not to the various States, and therefore he cannot and does not communicate with the governors and local authorities, unless they are Federal authorities, in those States. Therefore, the whole of that part of the work falls to consuls. It is commercial work which the embassies very often do in other countries.

39,076. Have you ever known any consuls who were promoted out of the Consular Service into the Diplomatic Service?—Yes.

39,077. Do you think that such promotions should be more frequent than they are?—It would be a most delightful state of affairs.

39,078. Would it stimulate the Consular Service to greater exertions?—No, I do not think it would, because I think our work is entirely different and should be kept different too from the work of embassies and legations; except that part I think which comes in under the commercial attaché. I dare say that many consuls would be quite capable of going into the Diplomatic Service. I am only talking of the countries I have been in.

39,079. Taking the countries you have been in, in France before you became Visiting Consul-General, had you your time fully occupied. Could you with advantage employ an additional officer of the stamp of commercial attaché?—In my own office?

39,080. In your office making inquiries and pushing trade?—No. You were mentioning just now the difference between the Germans and ourselves. The Germans are far ahead of us. Many consuls have suggested, and I myself amongst them, to English merchants that what they need to push their wares in France are commercial travellers speaking the language, that all the pamphlets they send out should be in the French language, that the measurements and weights should be in the French system. The Germans take advantage of that and they do it; and I suppose you meet many of these German commercial travellers speaking French very well; you scarcely ever meet an English commercial traveller, the English firms will not do it. Why I do not know. That is one reason why German commerce is going ahead of ours.

39,081. (Sir Kenneth Muir-Mackenzie.) You speak as if you wanted more commercial travellers than consuls?—I think they would do better for the particular firm certainly. The consul cannot be expected to be the private agent of a firm, or to push one firm more than another. That is where the commercial traveller comes in—each man for his own house.

39,082. (Chairman.) It was suggested to us here to-day that if there were attached to the bigger consulates a man of the character of a commercial attaché with the object of pushing trade, it would have to be done with tact because it is, as you say, not altogether in harmony

15 May 1914.]

MR. CHARLES CLIPPERTON.

[Continued.]

with the traditions of the British Consular Service; but that if you could get the proper men to do it, it would be to the advantage of British trade. You meet that by saying that British traders do not go the proper way about it; that instead of looking to the Government to create new offices of the character of commercial attachés they ought to send commercial travellers about who know the country and speak the language and that they should send out their papers in the language of the country and so forth?—Yes, they should send out men first in their particular trade.

39,083. Have you read the report of the Walrond Committee which was issued in 1903?—No.

39,084. It was on the basis of that Committee's report that a considerable reorganisation of the Consular Service took place, and one of their proposals was that it would be very desirable to get into the Consular Service young fellows with commercial experience, who having left school went into a merchant's office and remained there for three or four or five years and then came into the Consular Service; that the experience that they would have acquired in that time would be of great use to them. Have you heard of that?—Yes, I have heard of it.

39,085. In your experience have you ever met any of these young men who have commenced in that way in commercial life?—I cannot say that I have or I have not.

39,086. Does that commend itself to you as a good way of getting men for the Consular Service?—If they have any prospect in a business firm of getting on, I think they would be very foolish to leave it, and therefore we would not get the better class. I mean by the better class the most likely men.

39,087. You get a good number of men now who have been through the universities?—I think we do.

39,088. The returns show that a vice-consul begins at 300*l.* a year does he not?—I think so—300*l.* to 500*l.* now.

39,089. The Consul-General generally goes up to 1,200*l.*?—A few of them do.

39,090. With an allowance in addition?—That is only at their particular posts.

39,091. The rule is now that the pay attaches to the post is it not?—I cannot answer that for I really do not know.

39,092. We have been told that if you are Consul-General, say, at Rio, the pay of 1,200*l.* a year attaches to the post?—The local allowance attaches to the post.

39,093. The local allowance, of course, attaches to the post; but we have been told—I do not say whether accurately or not—that the pay attaches not to the person but to the post?—I cannot answer that. I believe it is true, but I cannot answer it.

39,094. But if it be so, can you see any reasons in favour of that arrangement, or would you prefer that the pay should be attached to the individual regulated according to his length of service and his success, his merits while in the Service?—I think that the fairest thing is to regulate it according to his length of service, rising gradually.

39,095. It would not be right, in your opinion, that a salary of 1,200*l.* a year should attach, say, to Rio, and that, if the holder of it were removed to another place against his own will, and for no fault, he should have his salary reduced?—No. I do not think it would be done either.

39,096. It does not commend itself to you?—I do not think it would be done unless the man proved himself incompetent.

39,097. (*Mr. Shipley.*) Can you tell me why there are no commercial attachés in the New World; why should the commercial attaché be confined exclusively to Europe and Asia, and why do we not find any commercial attachés in the whole of Southern America?—I am not competent to answer that question.

39,098. Do you attach very great importance to having a big house in a front street and your flag waving over it; does it really affect your position?—No. I think you should have a respectable office.

39,099. At Naples you see the most prominent house in the city occupied by the German Consul with a big flag waving over the top of it?—That does not

mean that he does more work than anybody else. You ought to have a respectable office in a respectable street; but in the first place in a great many countries they will not have a consulate on account of the shipping and discharging and the objection of drunken sailors on the ship.

39,100. What sort of countries are you referring to?—The United States. The consul is an objectionable tenant where the shipping office is in the main office.

39,101. (*Mr. Graham Wallas.*) By "they" you mean the proprietors of decent houses?—I mean anybody—the people living in the same street.

39,102. You do not mean that the authorities forbid the consul to come there?—No, it is the landlord who will not let his house to a consul on account of the class of customers; and it is a fact—I have been there myself and I know.

39,103. (*Mr. Shipley.*) There have been several consuls lately appointed quite from outside the Service, have there not?—I do not know that. I do not know anything about it.

39,104. One of our witnesses to-day told us that he thought, if our ambassadors and Ministers promoted trade it would strengthen their position; have you any opinion on that point?—Of course there is a commercial attaché belonging to each embassy or legation who I suppose has charge of that; his work does not come into our Service.

39,105. I was in Constantinople some years ago, and the German Ambassador who was a distinguished man and the French Ambassador too, undoubtedly got some concessions for their countries while the English Ambassador stood apart from that business, and it seemed to me that he had a much stronger position diplomatically because of his standing out?—I am not competent to answer those questions.

39,106. (*Mr. Matheson.*) Was the limit of age higher when you were appointed. I think you said that you entered at 30?—Yes, it was. I think 33 was the limit then. I am not sure.

39,107. I gather that you consider common sense the first quality that is required in a consul?—Three-quarters of it.

39,108. What would you put next: knowledge of the language of the country he is in?—Learning his work.

39,109. It has been suggested to us that after a man has been appointed, he should get two or three years office training. Do you think there is anything in the work of a consul which cannot be learned fairly readily on the spot?—I think it can be perfectly well learned there; but you must choose your consulate to send him to, and I think also the man should be picked out who is to teach anything. Whereas two consuls may be equally competent one may be able to teach and be willing to take an interest in his office more than another. I think that that is the sort of man who should be picked out, who is willing to teach and will take the trouble.

39,110. Perhaps you cannot answer this question, but is the Foreign Office kept posted up as to which men are the best men for that purpose?—I do not know. I think the Foreign Office have a fairly good idea of their own men, and with the system of inspection now they will no doubt be assisted further. I think this system of inspection is going to do a great deal of good.

39,111. By collecting and co-ordinating information?—No. If a business firm sends an agent to open a branch abroad and then leaves the branch there and never looks it up, the man in charge of that business begins to think, "I am here, and can do just as I please"; whereas if there is somebody from the home house who comes and looks him up, and says, "I do not think this is exactly right; suppose we try another way"—he has got somebody who is looking after him.

39,112. So far as your visits have gone at present, would you say that the officers you have come across have been fairly keen on their work?—I think so.

39,113. Could you give an estimate of them as compared with representatives of foreign countries; do you think our men are of as good quality as the

15 May 1914.]

Mr. CHARLES CLIPPERTON.

[Continued.]

consuls of other great Powers?—I do, in a great many cases they are far better. I have met them all. I do not think you will find that our men make so much fuss but they get the results. Some countries make a great deal of fuss, newspaper talk and all this and that, but I do not think that the results are any better.

39,114. Do our men generally succeed in making themselves pretty good linguists?—If you learn a language young you pick it up far better than when you learn it old. I think that a point should be made that when a senior is sent to a country a competent person should see whether he does know the language of the country he is going to. It is not sufficient for a man to say: Oh yes, I speak it. He should not be re-examined; but should pass before some competent person in that language to see whether he really does know it.

39,115. Should you recommend his being examined again after he has been a year or two in his place?—Yes, my idea would be this: We have probationers now who pass before a committee when they are given a nomination—I think that is the system, and then if they pass the examination they go to the consulates as probationers. I think they should pass before that same Nomination Committee again.

39,116. How long do they go as probationers?—I am not quite certain; I think for two years.

39,117. (*Sir Kenneth Muir-Mackenzie.*) Do you think that the Consular Service suffers from being underpaid?—It did. I do not think it does now. For instance, when we have had 15 years' service we are fairly sure to be getting 800*l.* a year. I had completed 19 years' service before I got 800*l.*—and that is not encouraging. But now I think the conditions are very much better.

39,118. But independently of the pay of particular consuls, and so on, do you think that the Service is starved in any sense; that it would be better if the country spent considerably more money upon the Consular Service generally?—I do not think that I am at present competent to answer the question; I have not been to other countries.

39,119. (*Chairman.*) From your tours of inspection, so far as you have made them, can you give an answer to *Sir Kenneth Muir-Mackenzie's* question?—Just where I have been now inspecting?

39,120. Yes?—I think the pay is quite sufficient. It comes under the rôle of a visiting consul, if he thinks it necessary that a consular officer should be appointed, to recommend it where he thinks it advisable.

39,121. (*Sir Henry Primrose.*) What other inspectors have been appointed besides yourself?—There are four of us.

39,122. Is the whole of Europe now covered by inspectors?—Except the Levant Service.

39,123. And prior to that was there no inspection of any sort or kind?—Once in a while.

39,124. How did they check the consuls' accounts and stock of stamps?—You had to make a return quarterly. There was no checking it in the consulate itself.

39,125. The stock of stamps of the consul was never checked?—No, except when somebody, I think in the year 1906, went round—the chief of the department.

39,126. Therefore if a man was defrauding, it would be a long time before he would be found out under the old system?—Yes.

39,127. I suppose that now the first thing that you would do would be to check the actual stock of stamps?—Not one of the first things because there are other things I want to know first which give me a very good idea before I check them whether they will be all right or all wrong.

39,128. Will you name some largish places that you have inspected lately?—Marseilles is supposed to be a big place.

39,129. How many days would you give to it?—I gave it a week. I was ten days at Bordeaux.

39,130. Is your salary now that of an inspector?—I get an allowance of 100*l.* a year more than my pay.

39,131. Is there any particular object in keeping you as consul at Rouen at the same time; you cannot do both?—I cannot answer that.

39,132. (*Chairman.*) You get your travelling allowance?—Yes, the District of Rouen is now confined to the town and port of Rouen; that has reduced my work very much.

39,133. And during your absence, the vice-consul does the work?—Yes, only of the port itself in the district.

39,134. (*Sir Henry Primrose.*) When you make an inspection do you form an opinion as to the value of the annual reports that are made; do you look at the annual reports that have been made and consider whether they are accurate?—I do not myself personally consider the annual reports of any use whatever. I have said so time and time again.

39,135. Is an unpaid consul expected to make an annual report?—Yes, they all do.

39,136. And may an unpaid consul be called upon for special reports?—Yes, he may, and he is. For instance, when the Commercial Intelligence Branch of the Board of Trade sends to a superintending consul for a report on a certain subject, he sends it to each of the vice-consuls in his district.

39,137. Looking down the list of unpaid consuls, I notice that in some countries the great majority are British subjects, but in others, especially in the North of Europe, they seem to be almost wholly of the nationality of the country. Taking France, the majority are British. Then coming to Germany, they are about equal in numbers. Do you consider that, provided there is a suitable person of English nationality in the place, there would be any particular advantage in choosing him rather than a national?—I think not. I could not answer until I had seen the man.

39,138. It depends on the individual?—Yes, entirely.

39,139. But you do not feel that there is in the nature of things any particular objection to employing a German in Germany or a Frenchman in France, provided that he was a suitable man?—No, I do not. Of course you must remember that those men, even if they are Britishers, do not get very much money for their services.

39,140. The unpaid people practically get next to nothing?—I have mentioned in my reports to the Foreign Office, that some of the amounts paid are simply absurd.

39,141. They are getting a little something?—Yes, for instance I had two vice-consuls in my district who were getting 8*l.* I asked for an increase for them, and I pointed out that it was not even an old-age pension that they were getting.

39,142. (*Chairman.*) Do they not get an office allowance besides the 8*l.*?—No. They do now; they have both been increased to 20*l.*

39,143. (*Sir Henry Primrose.*) You said just now that after 15 years' service a man may get 800*l.* a year?—He has reasonable hopes.

39,144. From the evidence so far, we have rather gathered, I think, that there is no regular system of promotion. For instance, taking France, if you look down the list you see certain different rates 500*l.*, 600*l.*, 800*l.* Is it a usual thing to give a man promotion, say, from one of these lower paid places to a higher paid place in France, or is it not rather the practice to keep a man at the same place because he knows the work there?—I do not think it is the practice to promote them; it is a very good idea.

39,145. You do not think it is the practice to promote them?—Not on the spot.

39,146. Manifestly it would be difficult to promote a man from one country to another; he might not know the language of the country, and so on?—Not unless he knows the language. It is done, I believe.

39,147. But take for instance the French consulate, might a man be brought in straight away into an 800*l.* a year place and not have had to go through some inferior places first?—He might, but I do not think it is likely.

39,148. Then I gather that you yourself feel that merchants might make a great deal more use than they do now of the services of the consuls?—Yes.

39,149. In what way exactly?—If they want any information on any particular subject.

15 May 1914.]

Mr. CHARLES CLIPPERTON.

[Continued.]

39,150. But is it not common to receive applications for information?—Not common enough. That is my experience, mind you; it may be different in other places.

39,151. As regards what you said about English firms not having travellers, and so on, one has read a good deal of that in the annual reports?—Well, we see it.

39,152. But after all, may it not be the case that English firms have as much as they can do in other directions and therefore are not seeking outlets in that particular direction?—It may be so. Some English firms have Germans as their agents, and so on; they speak the language and are more go ahead than our own commercial travellers.

39,153. I think we hear more of that sort of complaint at a time of depression in trade than we do when trade is doing well?—It is a fact; that is what it is.

39,154. When trade is doing well the fact is that English firms have as much as they can do at home?—Yes, and they do not want to extend their business.

39,155. (Chairman.) As regards your inspections, do you find willingness on the part of all consular officers to submit themselves to inspection?—I think so. After I have been there an hour or so and have explained that I have not come as a policeman.

39,156. Fees, of course, are charged for consular duties in the consulate; are those fees on the whole adequate or not?—They are not sufficient.

39,157. They might be increased with advantage?—Yes, with fairness to those paying them and with great advantage to the Treasury. Our Consular Service is known to be the one that charges less than any other.

39,158. Are our fees low compared with those of Germany or France?—I believe so.

39,159. That is a matter which might be inquired into?—It is a matter I have reported on now in certain cases.

39,160. (Sir Henry Primrose.) Is it not an advantage to our traders to have to pay small fees?—No; it is the foreigner who pays the fees.

39,161. I have here a schedule of the fees; would you give us an instance of two of the fees that you think might be increased?—Yes, take consular invoices, not with England but with Canada. At the present moment they are going out under the heading of certificates of origin, which is all wrong, because we have a Convention with France and it has so far been claimed that these invoices are certificates of origin. On the invoice is a description of the goods and the value of the goods, and those invoices are used by the Canadian Customs to know what *ad valorem* duty to charge, they are purely and simply consular invoices in my estimation, and they are all being issued now gratis under the head of certificates of origin. In the United States the invoice is made for everything in triplicate.

39,162. The consul has to see about it?—Yes; there is no inspection there at all.

39,163. Then how do you certify?—It is a declaration made before the Consul.

39,164. By the importer?—By the exporter; these are exports. Goods leaving France have to have a consul's invoice certified by the consul of the country to which they are going.

39,165. Is that so with everything that comes to England?—No, there is Free Trade here.

39,166. It is a Customs duty?—Yes, but in Canada there is a tariff.

39,167. But it is a tariff on incoming goods. What has the consul in Canada to do with it?—The consul in Canada has nothing to do with it; it is the English Consul in the country from which the goods are exported; Canada being a British Dominion the British Consul is the one before whom the declaration is made.

39,168. Foreign goods coming into Canada have to have an invoice signed by the consul of the country from which they come?—Yes, in most cases.

39,169. There clearly the Treasury would benefit if the fee was a good deal higher?—If a fee were charged at all.

39,170. There is now no fee?—There is now no fee; and all our fees charged in connection with merchants or the marine service are very small.

39,171. But then that would fall on our own people, would it not?—Yes, but it does not seem quite fair that a little schooner of 50 tons should pay exactly the same fee to the consul as the *Olympic*, yet such is the case.

39,172. (Chairman.) Do you see any reason why a Canadian or Australian should not enter the Consular Service if he is a suitable person?—If he is considered a suitable person I see no objection to it.

39,173. At the present time the Consular Service is restricted to persons who are natural born subjects of His Majesty. Persons not actually born within the United Kingdom, or born within the United Kingdom of parents not born here will only be allowed to compete by special permission of the Secretary of State. You were not born within the United Kingdom?—I know very many who were not. I was born on British territory by courtesy.

39,174. In the consulate?—Yes.

39,175. Is the consulate British territory?—No.

39,176. Both your parents were British born subjects?—Yes.

39,177. Then the Secretary of State saw his way to make an exception in your case, but you say you know many similarly circumstanced as yourself?—I know several.

39,178. Who are consuls?—Yes.

39,179. They must have come in under this exception?—Yes.

39,180. (Mr. Boutwood.) Do I rightly understand that on the whole you do not attach much importance to a preliminary training in what you may call technical subjects?—I do not quite understand the question.

39,181. Going back to your examination, the Chairman drew a rough distinction between the subjects, and spoke of some as being of a general educational character, and of others as being more or less technical?—Yes.

39,182. Did I rightly understand you to mean that on the whole you do not attach very much importance to a preliminary study of those technical subjects?—The benefit derived from the examination so far as regards mercantile marine law is not much, except as something to be learnt, as knowledge to be obtained.

39,183. So that you would be prepared to let men into the Consular Service on what I may call a general education test?—Provided he was personally a proper man.

39,184. And that so far as commercial experience goes, I understood you to say that you thought it might be desirable, but that on the whole you thought we should never get it?—I did not say you would not get it. If you take a young man in a business firm, and he sees any likelihood of staying there, I think he would be very foolish to leave it.

39,185. So that we might be in danger of getting the failures in business?—Exactly.

39,186. Why are not the annual reports any good? What is the matter with them?—The information that they furnish in civilized countries is out of date, and of no practical use.

39,187. (Mr. Graham Wallas.) You have told us that in some cases it is rather difficult to get suitable offices in the centre of towns, that the consul is an unpopular tenant?—Yes.

39,188. Have you ever thought whether it would be desirable for the British Government itself to take a suitable house in a suitable place and use it as the permanent consular office?—Do you mean to purchase it, to have its own building?

39,189. Either to purchase or to lease it?—The question of leasing comes under my answer that nobody will let a house to you in a decent neighbourhood in many places.

39,190. To purchase or to lease it, to get a pretty permanent occupation of a suitable house, and then to let it be occupied as the office by successive consuls?—I think it would be a good idea, provided that the neighbourhood did not change, because you cannot expect business people, apart from the shipping world,

15 May 1914.]

Mr. CHARLES CLIPPERTON.

[Continued.]

to come down into the slums; it is not right to ask them, and the shipping part of the work belongs to the slums, I am afraid.

39,191. Then, what is the arrangement about furnishing offices now; to whom does the furniture belong?—The furniture in future will be purchased out of the office allowance, and remain in the office.

39,192. It remains the property of His Majesty's Government?—It will remain the property of the office.

39,193. Since when did that begin?—The 1st of April; anything purchased after the 1st of April out of the office allowance remains the property of that office.

39,194. Then in future the man will take over an inventory of the furniture that has been in the office, and hand back the furniture with an inventory?—Yes, furniture that has been purchased since the 1st of April 1914.

39,195. Have you ever considered whether it would be desirable to have a very small body of unattached vice-consuls, who could at some time of their career be sent wherever men were wanted, at very short notice, to fill vacancies?—I think that exists now, unless I am mistaken. I think there is always one, if not two, men at the Foreign Office.

39,196. What are they doing at the Foreign Office?—They are there for emergencies, or junior ones.

39,197. What are they doing while they are at the Foreign Office?—Working.

39,198. As clerks?—I do not know in what department.

39,199. Do you think that in your own district you could make use of a rather larger number than you have attached of men living in other localities?—No, it is only in far-away posts.

39,200. Can you imagine that in a far-away post, it might be very useful to have a man who could be sent to an important place in a bad climate?—It would be very useful, and is met at the present time at important posts by men being sent. For instance, I believe that at Rio, or somewhere, the Consul-General was sent away, and the Consul from Bahia was sent to act for him.

39,201. When you report to the Foreign Office you report to the Department of Commercial and Consular Affairs, do you not?—To the Consular Department.

39,202. And that Consular Department has two sub-departments, the Consular Department and the Commercial Department. I have looked up the career of all the holders of these offices, and none of them have had consular experience, so far as I can judge?—That is so.

39,203. From your point of view, would it be somewhat convenient if some one of the directing officials in the Foreign Office had had consular experience?—I do not know how it could be worked exactly, because in order to get sufficient consular experience to become chief of that department, would mean your spending nearly 15 years of your life at it, and what becomes of his Foreign Office experience during that time?

39,204. But there are men in the Diplomatic Service, for instance, who have had consular experience, are there not?—There are men who have been in the Consular Service for a good many years, who have been promoted in South America to the Diplomatic Service.

39,205. And, I think, also in Europe?—I do not know it.

39,206. Do you think that if it could be managed; if the personal difficulties of expense, and so on, could be got over, it would be an advantage that someone should be sitting in the Foreign Office, in a responsible post, who had had direct experience of consular work?—They have it now.

39,207. In what form?—In the shape of inspectors.

39,208. But the inspectors are not sitting in the Foreign Office?—Two of them have their headquarters at the Foreign Office at this present moment. I received no instructions to appear before the Commission until I called at the Foreign Office. I am at home now to report on the result of my inspection. I asked permission to come and discuss my report, having been absent on inspection duty two months and a half.

39,209. Then you think, in fact, that this new arrangement of consular inspection will provide that one of the consular inspectors, as chief inspector, will sit in one of the departments of the Foreign Office and that they will be very largely Foreign Office officials?—No, I believe not. We are to be taken from our own Service.

39,210. (Chairman.) But having been brought to the Foreign Office you would not become a Foreign Office official?—No.

39,211. (Mr. Graham Wallas.) Let me repeat my question. I thought I asked you whether you think it would be an advantage that there should be someone sitting in the Foreign Office in a responsible position, who should have consular experience, and I understood you to answer that two of the consular inspectors had their head quarters at the Foreign Office and do in fact sit there?—Their headquarters are there in case they are wanted, and can be consulted while they are at home.

39,212. I am inquiring how far it would be possible that there should be normally in the Foreign Office building a man having consular experience?—You would have to take him from our Service.

39,213. But in other departments the chief inspector is constantly taken from his peripatetic service and sits in the office, and I was asking whether it would be possible in this case?—I am afraid I do not understand the question.

39,214. The Chief Inspector of Schools, for instance, spends more than half his time in the Board of Education, and the Chief Inspector of Factories is an organising officer in the Home Office. Would it not be possible to have the Chief Inspector of Consulates an organising officer in the Foreign Office?—You would have to put one of the consuls there.

39,215. Yes?—It would be possible.

39,216. That he should have a recognised post in the scheme of reorganisation of the Foreign Office?—I think so. I do not know what others would think.

39,217. You said that it is the duty of the consul to render any service that he can to a trader who applies for such service. I want to ask what kind of service you would render. Supposing that an English merchant has a proprietary patented article whose use he wishes to push; say, to use a case that was used by a consul to us the other day, that he was proprietor of a patented set of rubber heels; he sent specimens of these goods and he asked that the Consul at Rouen should inform him what means there exist for pushing this particular patented rubber heel in Rouen and the consul is extremely willing, he is an ideal consul and anxious to do any service that he can. What steps would he then take?—If we take Rouen I should tell him that there are a great many boot and shoe stores there and I have no doubt that he could sell the particular article if he send a commercial traveller who could speak the French language to go and visit each of these places.

39,218. Would you go and visit any of those places?—Yes, if I thought I could do him any good in one or two places to start I would not mind.

39,219. Then within moderation you think that an ideal consul would act as commercial traveller and go with a sample into somebody's house?—No, I do not say he would do that, but when you live in a place you generally have a bootmaker that you buy your boots from. I would go to mine and say, "Look here, can you find any market for these." That is the way I should do it, and practically make my bootmaker buy some of them.

39,220. But that would depend upon the accident where you get your personal boots from?—I say that if you live in a place for 10 years, you usually get your boots in the place you live in, or you get one pair of shoes once in a while.

39,221. There is now a growing demand by English traders for that kind of service to be done by the British Consular Service on a larger and more systematic scale than seeing one's own bootmaker, is there not?—I have not noticed it.

39,222. We have had complaints made to us which indicate that?—Mind you, my place, Rouen, is very peculiarly situated. I am only an hour and three-

15 May 1914.]

Mr. CHARLES CLIPPERTON.

[Continued.]

quarters from Paris, and there is only one town in the whole of France which directs the business of the country, and that is Paris.

39,223. At present the foreign service abroad and in England is divided into two sections, the diplomatic section and the consular section, is it not?—I have never looked upon the Diplomatic Service as having much connection with the Consular Service. Our own Service abroad is divided into three sections.

39,224. But those are geographical sections, are they not?—No: there is the general Service, the Levant Service, and the China and Japan Service.

39,225. That is what I meant by geographical sections. Can you imagine that the Consular Service itself might perhaps be divided into two different Services, one of which should perform the official duties with regard to the Merchant Shipping Acts and other matters which the consul has to perform, and another of which should be more purely commercial?—I think that a capable consul should be able to do both, because, after all, the Merchant Shipping part is generally done by a perfectly competent chief clerk or the vice-consul. Where you have no vice-consul it is done by the chief clerk.

39,226. You say that you have just come from inspecting Marseilles. What is the work which takes the chief part of the Consuls-General's time at Marseilles?—Correspondence; that is done by the consul himself with his private secretary who is a stenographer and typewriter. Inquiries in the town are done by the unpaid vice-consul, who is a clerk you may say under instructions from his chief. The chief goes and makes his own inquiries. The shipping is in the charge of the salaried vice-consul and a boy clerk, and when it becomes congested the unpaid vice-consul goes and helps. You want a good head to direct, and a sufficient staff.

39,227. Take the directing head; supposing he works on the whole seven hours a day, how many hours does he spend thinking and writing about commercial business, and how many hours does he spend thinking and writing about what you might call administrative business?—I do not know.

39,228. Probably half and half, do you think?—No, I do not think he pays much attention to the shipping part, unless he is called in; it is more or less, if you like to put it so, an inferior branch of work, it is so cut and dried; there is nothing to improve in paying men off and shipping them.

39,229. If you saw his letter book the letters he dictates during the day would be mainly reports upon commercial questions?—The commercial questions are very simple questions.

39,230. What are these other questions which are not commercial?—Anything from marrying a person, sending a dead body home, and things like that. You have no idea until you get practically into it what a consul's work is.

39,231. Can you not distinguish in your mind between these questions of marrying persons and sending a dead body home and the whole question of pushing commercial products?—These various things come in the course of the day's work.

39,232. Can you suggest in the light of your experience, any improvement on the present method of recruiting salaried consuls and vice-consuls?—No, I

have not seen the result of it yet, I have only seen one under the new system so I cannot say.

39,233. You were appointed 20 years ago by examination?—Yes.

39,234. In your examination had you to do a political economy paper?—No.

39,235. That is new?—Yes.

39,236. All you did was mercantile law?—Reading, writing, and arithmetic, merchant shipping law, and I had to write an essay; I forget exactly what it was, it is a long time ago.

39,237. You are not an authority at all on the existing examination?—No.

39,238. (*Sir Henry Primrose.*) With reference to part of your examination just now, I take it that you would not at all wish to see the consul made practically the commercial traveller for any firm in England that wished to employ him as such—a commercial traveller paid at the public expense for the benefit of an English trader?—I think that would be asking a great deal of the Treasury, to supply consuls as commercial travellers.

39,239. Take, for instance, what you said about the rubber heels?—I do not think I should take a sample round to every bootmaker in the place, but there are ways in which you can do a good deal.

39,240. Informal ways?—Yes.

39,241. You would not wish that it should be part of your duty to go there?—It is a hard way to put it. If you take an interest in your work, there are so many things you may do that I do not think you are called upon to do.

39,242. (*Chairman.*) You have to be nominated by the Secretary of State before you are admitted to the examination for a consulship?—I believe so, now.

39,243. Could you express any opinion as to whether it would be better to do away with that nomination, and leave the examination purely open competition, so that any man who wants to go in for an appointment could go in and ask to be examined without any sort of selection before the Committee of Selection?—I think that would be a very wrong thing.

39,244. You think it is desirable that the personal qualities of a man should be regarded?—I think you want to see his general appearance and to know something about him.

39,245. As much as you can?—Yes, and then, as I said before, after he has passed the examination and has been a probationer for two years, I think he should come before the Committee again.

39,246. Would you allow the Committee to inquire into his past history, his parentage, the schools he was brought up at, and so on?—I think that, so far as possible, you want to keep him a British subject; I mean a *bona fide* British subject.

39,247. But beyond that would you inquire into his parentage with a view to see what social class he came from?—No, I do not think that social class is any barrier; everything is open to him, I think.

39,248. It would not be open to him if it depended upon the permission of a particular person or a particular body to admit him to examination, that would be limitation. That is the difference between limited and open competition?—I decidedly think that you ought to have some control; you ought to know something about your man.

## NINETY-SEVENTH DAY.

Thursday, 21st May 1914.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Mr. JOHN ROBERT CLYNES, M.P.  
Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. PHILIP SNOWDEN, M.P.  
Mr. GRAHAM WALLAS.

Mrs. DEANE STREATFEILD.

Mr. N. E. BEHRENS (*Secretary*).

Mr. ARTHUR PONSONBY, M.P., called and examined.

39,249. (*Chairman*.) Will you tell us what your experience has been under the Foreign Office? When did you enter the Service?—I entered the Service at the beginning of 1894.

39,250. Did you enter the Foreign Office or the Diplomatic Service?—The Diplomatic Service. I was appointed to Constantinople in November 1894, and I stayed there till May 1898. I was promoted to be a third secretary in 1896, and a second secretary in 1900. I went to Copenhagen in May 1898 to February 1900, and then I was exchanged into the Foreign Office, where I remained from February 1900 to October 1902, when I resigned.

39,251. You had about eight years' experience?—Yes, eight and a half years.

39,252. Will you briefly tell us whether you found any great difference between the character of the work you had to do in the Foreign Office and what you had to do as secretary to an embassy?—So far as I am concerned, when I went to Constantinople, the work there, though specialised, was very much the same as the work I had to do in the Foreign Office, except that our hours were on the whole a good deal longer, and we sometimes had to work till the middle of the night. I happened to be there at a time of excitement during the Armenian massacres and also during the Turco-Grecian War, and there was a great deal of work. At Copenhagen I had very little to do in the way of chancery work—I should think at the most about half-an-hour to an hour a day. But I should like to say, with regard to the social duties, that I think they are very much exaggerated. At Constantinople, of course, there were none, except the ordinary dinner parties amongst friends and colleagues that one went to. At Copenhagen there certainly was a certain amount of Court functions to attend and one had to go to the station to meet members of the Royal Family and escort them into their places in church, and so forth, and parties and dinners. But all that amounted really to very little and involved no expense, and I do not think it can be really regarded as part of the diplomatic duties. I should like to say in that connection that, of course, in former years, when high society in all the capitals was very closely allied with government, it was necessary for a diplomat to go about, to gather what gossip he could, and to make acquaintance in that high society. To-day in very many capitals high society is rather divorced from government, and these so-called social duties are merely the pleasures of individual members of the Diplomatic Service in so far as they indulge in them—parties, country house parties, shooting expeditions, and so forth. It is merely for their own pleasure, and I do not think it in any way adds to their utility as diplomatic officers.

39,253. Would you say that that would be characteristic of the greater number of the Courts to which our diplomatic officers are accredited, or could you name the countries in which society, in the highest sense, is divorced from the government?—I should think in the majority of cases, certainly in the case of the Great Powers, with perhaps the exception of St. Petersburg, high society is not very closely allied with the government. In the minor posts like the one I quoted—Copenhagen—there certainly is a certain amount of

social duty to be performed; but that does not add to the expense of a diplomat's life, and I think it is rather negligible. As third secretary at Copenhagen I had to organise dinner-parties and receive people, and I think I did my fair share of going out to dinner-parties; but it amounted to very little and involved no extra expense anyhow.

39,254. (*Sir Kenneth Muir-Mackenzie*.) I am rather surprised at your saying it involves no extra expense, as a man who lives in that sort of round of society must surely spend more money than a man who does not go into that sort of society?—I cannot say that that was my experience. After all, going out to dinner very frequently only involves the cost of a clean shirt—nothing more. Of course, if they go to country houses that would be more expensive no doubt. I believe they are invited very frequently, in the Vienna embassies, to country houses round about, and I dare say that would involve expense; but I do not consider that to be in any way part of their diplomatic duties.

39,255. (*Chairman*.) Unless they accepted these invitations would they not be somewhat out of it? Would they not be taking up a line different from that taken up by the diplomatists from other countries?—Yes; I think it would be a mistake to take up an attitude of refusing all invitations. I think it is necessary anyhow that they should know their colleagues—that, I think, is important.

39,256. They cannot act very differently from what is done by the embassies of other great nations?—Quite so.

39,257. They must live up to the same standard, must they not? I do not mean to say that they should vie with each other in extravagance, or anything like that, but they would have to conform to the general standard of living?—Yes; but I think that can be quite well done without any great extravagance.

39,258. So that you would be inclined to agree with the opinion that a greater amount of expenditure falls upon the diplomat than necessarily falls upon a Foreign Office clerk?—Certainly.

39,259. At the present time the rule of the Service is that anyone who enters the Diplomatic Service should be secured 400*l.* a year as private income. Do you think that the expenditure that a diplomat incurs, over and above the Foreign Office clerk, is to be measured by 400*l.* a year?—It varies so very much according to the capital he lives in. In Constantinople, for instance, it would be quite easy to live on less than 400*l.* a year. At St. Petersburg or Washington it would be rather difficult to live on 400*l.* a year. It depends upon the cost of living in the particular capital.

39,260. If you were to take an average, and to vary the diplomat's income by reference to the cost of living in particular places, would 400*l.* a year be a fair average? We were told by the Foreign Office that 500*l.* would be a little nearer the mark than 400*l.*?—It is rather difficult to say. I should have thought that 400*l.* would have been sufficient.

39,261. How did the men of your day in the Diplomatic Service compare with the men in the Foreign Office? Were they pretty much alike in ability?—I should say they compared very favourably with the

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

Foreign Office. I think it would be invidious to make any particular distinction; but certainly there were in the Diplomatic Service more or less among my contemporaries men of first rate ability.

39,262. I asked that question because in your paper you seem to favour the amalgamation of the Foreign Office and the Diplomatic Service?—That is so.

39,263. As far as your experience goes, you think that, comparing with each other the men who enter the Foreign Office and Diplomatic Service now, there is nothing to prevent such an amalgamation, the men are much on a level?—Certainly.

39,264. Would the amalgamation which you advocate extend to all grades throughout the Diplomatic Service (including ambassadors), or would you limit it within certain bounds?—I should not limit it. I should have one Service—a Foreign Service. A candidate entering for this Service would know that he might be employed in the Foreign Office in London or he might be sent at any time to an embassy or legation abroad.

39,265. Would you bring them on the same list for promotion?—Yes, on the same list for promotion. I think it would entail a reduction in the numbers of the Diplomatic Service, which I think might be quite easily effected.

39,266. You seem to make your proposal for a reduction in the Diplomatic Service contingent upon the employment of men of the second division type in certain capacities abroad?—Yes, that is so. I advocate the employment in embassies of chancelliers or archivists. They are now employing either archivists or translators at Paris, Berlin, The Hague, Madrid, Stockholm, St. Petersburg, Athens, Christiania, Buenos Aires, Lisbon, and at Cairo.

39,267. Are you taking those names from official sources?—I have been supplied with these by a member of the Service. My idea would be to extend that system all over the world, so that in each place there is an archivist or chancellor who is responsible for the main work of the mission and keeping the register.

39,268. You were dealing with transfer between the two Services. It has been suggested to us by, I think, one of the ambassadors whom we have examined, and by the Foreign Office, that they are quite in favour of transfers up to the grade of counsellor—that is to say, transfer between the Foreign Office clerks and the diplomatic secretaries and attachés. The impression left on my mind by the evidence is that when the grade of counsellor is reached a man has specialised. After that point a man in the Foreign Office gains in value by remaining in the Foreign Office, and if he is in the Diplomatic Service he gains in value by remaining in the Diplomatic Service. Is there anything in that, do you think?—I should take entirely the contrary view. I think a man would gain in value by having experience abroad, even if he decided to spend the greater part of his time in the Foreign Office; and inversely, I think a diplomatist would gain considerably in value by coming to London and seeing things from a central point of view.

39,269. He would have seen them up to the point at which he becomes a counsellor. He reaches the position of a counsellor in something between 15 and 20 years' service?—Yes.

39,270. But in the meantime he would be freely transferable between the Foreign Office and the Diplomatic Service, so we must assume, I think, that he had acquired diplomatic knowledge by that time. But whether the further acquisition of diplomatic knowledge as counsellor, or Chargé d'Affaires, or Minister, would be an advantage to him in the Foreign Office comparable with the advantage that it would be if he remained in the Diplomatic Service, is a point on which I would like to have your opinion?—In the higher ranks, when he is at the head of a mission, and after he had served several years in that post, I think it would be an advantage to him to come home and serve in the Foreign Office as head of a department, or as an under-secretary.

39,271. You are, I see, disposed to think that at the present time there is some sort of "antagonism," to use your own words, between the two branches of the Service—between the Foreign Office and the Diplomatic

Service?—I think that is so. I think the Foreign Office clerk is rather apt to regard the diplomatist as an amateur, and the diplomatist feels the rather superior position of a Foreign Office clerk, being at headquarters. Also there is a lack of connection between the two Services at present, so that when a diplomatist comes home on leave and goes to the Foreign Office he finds nobody who takes any particular interest in him, or knows where he comes from; and when he is there by way of reporting himself, which he does reluctantly, he does not regard the Foreign Office as part of his Service at all.

39,272. Is it not true that on some questions the diplomacy or the negotiations are carried on by the Foreign Office direct with the Ministers of the various States accredited to His Majesty's Court?—Yes.

39,273. In that way the work of both Services dovetail into each other?—Certainly.

39,274. Am I to infer that the diplomat thinks he is rather in the position of a person to whom orders are being given?—Quite so.

39,275. And am I to think that he does not consider always that his views are sufficiently recognised?—I would not go so far as that, but it is conceivable that in certain cases he would think so.

39,276. That is the reason you think why there is a certain indefinable antagonism between the two, one being in the position of a person who receives, and the other being in the position of a person who gives the orders?—That is so.

39,277. And you think it would be modified if there were more frequent transfers?—I think it would be entirely eliminated if it was one Service.

39,278. But the frequency of transfers (even if it were determined not to consolidate the Services), within that certain limitation up to the grade of counsellor, would diminish that antagonism you refer to?—Yes, but in order really to diminish the antagonism you would have to have a system of more frequent transfers than at present. At present I think there are only four gazetted, and that on the whole rather tends to aggravate the situation.

39,279. Four transfers over what period of years?—I cannot at the present moment say; but, I think there are only four diplomatists, if as many—I am not quite sure—in the Foreign Office and four Foreign Office clerks serving in various missions abroad.

39,280. At the present time does not the question of transfer a good deal depend upon the existence in the Foreign Office of men having private means?—Yes, I think it does.

39,281. So that in order to effect your object it would be necessary to tackle that question of the 400l. a year private income?—Certainly.

39,282. You are of opinion that that should be abolished?—Yes, I am.

39,283. Would you replace it from public funds, assuming, as I think you have admitted, that life abroad is more expensive than it would be in London when serving in the Foreign Office?—Yes. I should be inclined, first of all, to have quarters in all embassies and legations for the staff. At present the whole staff is put up at Constantinople in a secretary's house. There is one room at Paris for a secretary, and one room at Berlin. I believe two secretaries can be lodged at St. Petersburg, and one at Madrid. That is, of course, very inadequate and makes it extremely expensive. It is very difficult for a man coming as a stranger into a town to find suitable lodgings at a moderate price.

39,284. Where the secretary is lodged in the embassy, he becomes a member of the ambassador's family. I presume, a member of the staff?—That depends very much on the head of the mission, the Minister or the Ambassador. In those cases where I say one secretary is lodged, he generally acts as private secretary to the ambassador and becomes more or less one of the family.

39,285. (Sir Kenneth Muir-Mackenzie.) He would not be a married man?—No, he would not be a married man.

39,286. (Chairman.) When he is a bachelor and when he becomes a member of the family, does he contribute anything to the general expenses. Is he in the position of a guest, or a paying guest?—I think where

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

there is just this one secretary, he is really admitted as a member of the family and as a guest of the ambassador.

39,287. If he acts the part of private secretary he becomes one of the family and naturally pays nothing, just as an aide-de-camp attached to a governor pays nothing?—Yes.

39,288. If all the secretaries employed at a mission were treated in that way, it would be rather hard on the ambassador, would it not?—Certainly. Then I should do it on the system that was adopted at Constantinople, where the secretaries had their house, their own mess, and paid their own expenses, but had their lodgings free.

39,289. At Constantinople they were not members of the ambassador's family, but had quarters provided for them?—Yes, we had quarters in the embassy.

39,290. Is that the system you would recommend?—Yes, to be adopted everywhere.

39,291. In such cases no difficulty would arise if the secretaries were married men?—In the case of married men I would make them an allowance for lodgings.

39,292. You would allow free lodgings for the secretary and his family?—Certainly.

39,293. In the former case, if the secretary acted as private secretary and he was married, still his wife would be a member of the family just as he himself is. That case is not uncommon?—Yes.

39,294. That is one of the ways you would propose to meet the question of expense?—Yes.

39,295. Would that cover the whole expense?—No, I think in addition to that there should be certain allowances. For instance, I think the allowance for languages, which is at present so very unsatisfactory, might be extended to all capitals. At present there is a language allowance for Turkish, Russian, Arabic, Persian, Chinese, and Japanese. It happens that in those countries there are a complete staff of translators or dragomans. The secretary who passes the examination has never to use officially in any way his knowledge of that particular language; whereas in the other posts such as Lisbon, Stockholm, Copenhagen, he may know Portuguese, Swedish, or Danish in such a way as to be of real use in translating and in reading the newspapers, and yet he receives no allowance for it. I should allow 100*l.* a year for a really proficient knowledge of the language of the capital where the secretary was residing, provided it was not one of the languages which he took up in his first examination. That would be 100*l.* a year. Then there is the allowance for the International Law examination, which is another 100*l.* a year, which I think ought to be made compulsory in order to attain the rank of third secretary. There is the commercial allowance which is being now extended, and which I think is a very good way of supplementing the income of secretaries. In addition to that, I should have connected with each post local allowances for the secretaries which would be graded according to the particular expenses of that town.

39,296. Then you would place the 400*l.* a year, or whatever the sum would be, upon the State, and you would meet it partly by providing house accommodation, partly by enabling the particular attaché or secretary to gain allowances for proficiency in languages, in international law, and so on, and partly by a local allowance graduated according to the expensiveness of the place?—Yes, and perhaps I may add that, of course, I would allow them in any case a salary from the very start.

39,297. I assume, as part and parcel of the amalgamation, that the salaries would in the Foreign Office and in the Diplomatic Service be brought on the same scale?—Quite so.

39,298. Now we come to the question of the archivists. You propose the appointment of archivists with two objects: one the object of reducing expenditure, and the other the object of greater uniformity in office administration abroad?—Certainly.

39,299. What should be the pay of an archivist in your opinion?—I think an archivist can always be found out of the British Colony in the particular capital.

There is in all the capitals of the world a very large British colony generally.

39,300. But is not that what is done now?—Yes, I think that is so. He is got locally.

39,301. I may be wrong, but I understood you to mean that for your archivist you would depute a second clerk, increasing the number of the second division in the Foreign Office if necessary, with the object of filling the post of archivist abroad?—It might be conceivably advisable in certain cases, but I am not sure that I should adopt that system. I think it would be rather hard on a second division clerk in the Foreign Office to be sent out abroad without any colleagues of his own standing, and to live among strangers.

39,302. That has been suggested to us as one of the difficulties?—I think it would be very difficult, and I think you would be always able to find a local man quite well fitted to undertake those duties.

39,303. And you would find him cheaper?—Much cheaper.

39,304. You pay at the present time something like 250*l.* a year for your archivists abroad. You would not get one of your second division clerks to go abroad for that?—No, but I can imagine at a place like Paris, where the archivist would have a very good position, perhaps circumstances would make it advisable.

39,305. The archivist has access to papers of great importance at times?—Yes, but he is by way of not seeing the confidential documents.

39,306. At all events he must be a responsible man?—He is a very responsible man.

39,307. He must know the language of the country?—Yes.

39,308. And he probably would not be or could not be transferred from place to place, but would be a fixture?—Yes.

39,309. That is pretty much the case at the present time?—At the places I mentioned, but it is not a universal practice.

39,310. At the places mentioned you employ local men?—Yes, either an archivist or a translator, but only at those places. It is not a universal practice.

39,311. At other places one of the staff takes the place of an archivist?—Yes.

39,312. You think by extending that system of employing archivists you could reduce the diplomatic staff?—Certainly.

39,313. Have you worked the matter out carefully by calculations, or is that merely your general impression?—I think it could be quite well proved, because take a small legation where there is a Minister, a first secretary, and a third secretary. The third secretary does more or less the archivist's work, and, when he is moved to some other post, a new man comes in without having the slightest knowledge where all the papers are or how the work has been continued from year to year, and there is a very abrupt break.

39,314. Has the third secretary no clerk under him?—None at all. Take my own case at Copenhagen. If you had an archivist he would be a permanent man, and you would simply have a Minister and one secretary. One secretary is ample to do the work.

39,315. It does not follow that at all the missions you have a counsellor and first, second, and third secretaries?—No. At the larger embassies you do want a larger staff undoubtedly, because you have so very much more business, and the ciphering and deciphering of telegrams, which must always remain very confidential work and be in the hands of secretaries, takes up a good deal of time.

39,316. Within your knowledge has there been any examination or consideration of the staffs which are located at the various missions and embassies with the object of fixing an authorised strength for the diplomatic staffs?—I do not think so.

39,317. The staff varies, I suppose, with the work?—It varies with the work very much. If there is pressure of work at one post a secretary is transferred and sent there.

39,318. You, I observe from your paper, also are of opinion that more could be done than has been done hitherto in amalgamating the Consular and Diplomatic Services?—That is rather a more difficult question. I

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

should certainly not place any obstacle in the way of moving a consul into the Diplomatic Service if he was eminently fitted for a diplomatic post, as has been the case, we know. Sir Ernest Satow is a recent case. But on the other hand, I think the Diplomatic Service ought to be safeguarded against people from outside being put in and the promotion all the way up the scale being stopped. If a consul was drafted into the Diplomatic Service I think it ought to be arranged at the same time that some diplomatist should get a consular post.

39,319. There is, I understand, no absolute prohibition at present against promoting a consular officer into the Diplomatic Service now, or *vice versa*?—None at all.

39,320. You have seen a good deal of consuls in your time?—Yes.

39,321. Are they recruited from the same class of men who form the staple of the Diplomatic Service and the Foreign Office Service?—Not always, perhaps. Those whom I have been especially impressed by are the members of the Levant Service. I think the Consul-General at Beyrout, at Smyrna, or in Crete, has really practically a political diplomatic office.

39,322. He enters the Service by a much narrower door than the other consuls?—It is a special examination.

39,323. His education is much higher and he is a more selected officer?—Certainly.

39,324. He stands on the same level with the Far Eastern consulates?—Yes.

39,325. It is a difficult service to get into? Educational qualifications enter far more largely into it than into the ordinary general Consular Service?—Certainly, that is so.

39,326. Would you restrict your promotions from the Consular Service into the Diplomatic Service to the Levant and Far Eastern Services?—No, certainly not. I only quote that as an instance of men I knew who were quite well suited to come into the Diplomatic Service.

39,327. You would advocate greater freedom of promotion, but not anything in the nature of amalgamation?—Exactly.

39,328. Now we come to the important question of the Board of Selection. As I understand your paper, you advocate the throwing open of the Diplomatic Service and the Foreign Office to open competition?—That is so.

39,329. Would you apply the Class I. test for the selection of these men?—Certainly.

39,330. Would you abolish all limitations, making it an open competitive examination, or would you make it a limited competitive examination among nominated candidates?—I should have it an open competitive examination.

39,331. And no previous Board of Selection?—No, I should prefer to have no Board of Selection.

39,332. Do you think that for the Diplomatic Service a particular kind and stamp of man is needed? Do you think you could trust to getting the precise stamp of man you want from open competition or are there any particular qualities essential for the success of the Diplomatic Service which an open competitive examination does not bring to notice or test?—My view is, that there is no method either of a Board of Selection or nomination by which you can make quite sure of getting the exact man you want, and you would run no greater risk than you do at present if you had open competition.

39,333. In the appointment of the Diplomatic Corps of other nations that you have had dealings with, do you think the principle of selection was at all brought into operation?—Yes, I believe in nearly all the Services, except, of course, the American Service, which is quite different, there is some sort of Board of Selection or nomination necessary.

39,334. Are the members of the Diplomatic Service of other States in your experience rich men as a rule?—Not in the French Service, and not so much in the German Service. In the Russian Service I should say they were, and in the Austrian Service, but I do not think I ought to dogmatise on that point. I may have met rich men in some services and not in others. I do not think I can generalise at all about that.

39,335. Did they strike you as being men who had gone through careful education, such an education as you would connect with the idea of Eton and Oxford?—I

should say most of them had been better educated than what we connect with the idea of Eton and Oxford.

39,336. You know what I mean—the character, training, the habit of thought, the manners and the general demeanour which result from passing through Eton and Oxford?—As regards manner it varies very much. That is what I feel about the whole of this point with regard to trying to get a man of tact and good manners—there is no money test, there is no examination, and there is no method of unfailingly getting your right man.

39,337. No; but are not you more likely to get your right man by adding to the examination test some kind of selection than if you did not add it?—I very much doubt it.

39,338. In regard to promotion in the Service do you advocate promotion by merit alone, or would you have any regard to seniority?—I think up to the rank of counsellor you ought to abide by seniority, but after that I think you must allow the better men to get the better posts.

39,339. In your paper you say with regard to promotion and appointments: "In the lower ranks this should not be left entirely in the hands of a single individual as it is at present. A Board should be set up for the purpose, and attached to the Board should be inspectors, who could visit foreign missions and consulates from time to time." Would not it be difficult to carry out that procedure? Do you think that the inspector on visiting the Embassy at Vienna or Berlin would be able to find out things which were not known to the ambassador, and which the ambassador if asked to report upon could not do so?—I do not insist on that point very strongly, but in connection with the first part of what you read about the appointments in the junior branch of the Service, I do think that that ought to be systematized and placed in the hands of some sort of Board of Appointments in the Foreign Office who would know where their men were placed, where they intended to send them, and have some regard to their future utility and the particular interests that they wanted them to watch. At present it is entirely capricious. It is in the hands almost entirely of the private secretary, who is a very powerful man in the Foreign Office. The young diplomatists go to him, send complaints to him, and petitions to him asking to be moved from one post to another. It rests with him—of course, with the Secretary of State's approval, but entirely with him ultimately—to settle where these young men shall be sent.

39,340. What you propose is really that there should be a responsibly constituted section of the Foreign Office, whose business it would be to control the Service and supervise the general promotion?—Yes.

39,341. Subject, I presume, to the general control of the Under-Secretary of State and the Secretary of State?—Certainly. Perhaps I may be allowed to add on that point that that might become the nucleus for a regular diplomatic department in the Foreign Office, where diplomatists on leave could call, and could work, and could see the papers connected with their own posts, and find some sort of business home when they were on leave. As it is, diplomatists on leave are very often called in connection with business relating to their posts, but it is in a desultory way. They come with their hats in their hands, and are handed papers across the table, and they are visitors. Diplomatists on leave should, if they wished, or if it is desired by the Secretary of State, come to the office and be part of the staff, and I think that this diplomatic department which had charge of the appointments in the junior ranks might be converted into a regular department where there was accommodation for diplomatists on leave.

39,342. (Mr. Graham Wallis.) You suggest that an amalgamated Foreign Service should be instituted, consisting of the Foreign Office and the Diplomatic Service. Such a Service does exist already in certain other countries, does it not?—In France, certainly.

39,343. Do you know roughly whether any other country except France has the system?—In some of the other countries I think they practise interchange

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

between the Services rather more than we do, but I do not think there is any complete system of amalgamation except in France.

39,344. But we could, by asking for a return from the embassies, get that information, and nobody would object to giving it?—Certainly. They would be quite ready to give all information with regard to the organization of their own Services.

39,345. After the amalgamation, where do you think the young member of the Service should normally start his work—at home or abroad?—I should appoint him to the Foreign Office for certainly two years, where he should learn all the routine work and get a thorough knowledge of how all business is transacted, and I should also require him during those two years to get a very much better knowledge than diplomatists get at present of how his own country is governed. I think it is very necessary that diplomatists should know something about the institutions in their own country—the educational institutions, prisons, hospitals, local government, and everything that concerns the life of the country—because when they are abroad they very often have to inspect these places, or write reports on these subjects, and they are deprived of any first-hand knowledge of how these matters are managed in their own country. You must remember that a young candidate has already spent a considerable part of his time abroad in learning the languages. That is the only way he can learn them properly. He is very likely learning abroad during all his holidays, when at school, and during his vacations while at a university. Therefore his opportunities for knowing about his own country are very small, and it is a noticeable defect in our diplomatists that they really do not know their own country. I should employ part of the two years in the Foreign Office in giving an opportunity for studying these questions.

39,346. That could be done by co-operation between the Foreign Office and other departments like the Local Government Board, the Home Office, and so on?—Quite well.

39,347. I think you have already said that such an amalgamated service would necessarily require the abolition of the 400*l.* a year test. You cannot freely exchange a man subject to that test with another man who has not been subject to that test?—Certainly, it necessitates the abolition of the 400*l.* a year test.

39,348. If you merely abolish the 400*l.* a year test, without substituting an actual payment of 400*l.* a year in some form or other, that difficulty would still exist, because it would still be impossible for a poor man to live in an expensive capital without a special allowance?—Certainly, there would have to be a substitution.

39,349. You said you thought that the system of examinations for extra allowances for proficiency in languages, international law and so on might well be revised and reconsidered?—Yes.

39,350. When you passed your examination in Turkish do you know whether the Civil Service had anything to do with it at that time?—No. I must say that my examination in Turkish was a farce. I was examined by the chief dragoman in an oral examination. I do not say that I did not spend a great deal of time and money in learning Turkish, because it was a very difficult language, but my knowledge of it was extremely superficial and it was never required.

39,351. Such office examinations by an official in the department concerned were general in the Home Service, I believe, before 1855?—I dare say.

39,352. And they were at that time said very freely to be a farce. The cure for that was the bringing of them into the general system of the Civil Service Commissioners. Do you think these examinations in languages might well be made on the responsibility of the Civil Service Commissioners?—I certainly think so.

39,353. Then the general trend of the university examination system, and of certain others, now in matters like law has been away from the mere examination which can be crammed, and towards an examination plus teaching. Do you think that might be possible in the case of the International Law examination, for instance. If a man lives in Berlin or Vienna where there is a great university, he might not only be required

to sit for an examination but might be required to attend lectures by the greatest authority in the university on international law?—I think that would be quite a good thing, especially in connection with international law, I am not quite certain that the International Law examination is conducted on precisely the same lines as when I passed it, but it was purely a crammed examination and, I think, it would have been far better if we had been obliged to attend a course of lectures and if that had been part of the test.

39,354. If you get rid of cramming in that way, do you think it might be possible to extend it to recent diplomatic history, say, so that a man should be either required or encouraged to take a course of instruction as well as an examination during the earlier years of his service?—I think, perhaps, that ought really to come into his first examination—his entrance examination.

39,355. That leads to a suggestion which Mr. Stanley Leathes made to us the other day, that it might be possible to get rid of the present maximum of 4,000 marks in restricted subjects for the Diplomatic Service, and substitute the same 6,000 maximum as is usual in the Home Civil and Indian Civil Service examinations, but make a series of options which he called a modern literary examination cover the whole 6,000. You are probably not familiar enough with the details of the examination to criticise that in detail, but would you say that, if you could, by letting the men take history, modern languages, political science, law, and so on, cover the whole 6,000 marks, then you could fairly and really use the Home Civil Service competition for the Diplomatic Service?—Yes, I have had that point under consideration, because I quite saw that if I advocated open competition in Class I. examination you would be confronted with the difficulty that you might get a man wanting to go into what I call the Foreign Service who had not passed in French and German. I certainly think, as you suggest, that the modern studies, the modern side, should be put on a footing of equality with the study of ancient humanities so that he would lose no marks, and, if his desire was to go into the Foreign Service, he would naturally take up modern languages and modern history, and should he fail to get into the Foreign Service, there being no vacancy, he would be on a footing of equality with the other successful candidates for other posts in the Civil Service.

39,356. What is the age at which a man in the Diplomatic Service now must retire under the age limit?—He retires now at 70.

39,357. There are certain men who must become of very little use a long time before the age of 70?—My suggestion about that is, that if a certain rank is not reached before a certain age or, I put it, if a diplomatist does not get an appointment as head of a mission after 25 years' service, he should be made to retire, because at present the Service is very much blocked by men whose ability is not considered to be first rate getting no promotion and yet stopping the way of the promotion of those under them.

39,358. Would you make him retire on a much smaller pension than a pension after full service?—Certainly, a pension according to the rank he had reached.

39,359. Supposing the Commission do not accept your suggestion of throwing open these posts to absolutely free competition, do you think there is any other way in which the general Class I. examination could still be used for the recruiting of the Diplomatic Service? For instance, might not the successful candidates after their success apply for a post in the Foreign Office, and if they did not pass a Board of Selection then normally apply for any one of the other posts open in the competition? Would that be possible?—I feel, myself, that as long as you have these restrictions of a Board of Selection, or the 400*l.* a year, or nomination, you have to have some sort of makeshift which will never be very satisfactory. I quite admit with the Board of Selection there is a wider scope for nomination which has come in lately. When I got into the Service it was extremely difficult to get a nomination, and there was no Board of Selection. Now there is no very great difficulty about getting a nomination, but there is also the Board of Selection. It has been

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

widened, but I think it is extremely important considering how our whole system of government is changing and how necessary it is to obtain certain sorts of information from foreign countries, that we should get a much more representative man or set of men into the Diplomatic Service than we have at present under this very restricted system.

39,360. (*Chairman.*) May anybody apply to come before the Board of Selection; does the nomination come after the Board of Selection has reported, or must it precede the Board of Selection's action?—It precedes it.

39,361. The candidate must get a nomination from the Secretary of State to appear before the Board of Selection?—That is so.

39,362. And that nomination you say is much more freely given now than before?—Yes.

39,363. (*Mr. Graham Wallas.*) But there is a much severer test before he is allowed to compete for the examination?—Yes, because of the Board of Selection, where the test is on I do not know what principle, but manners and appearance and that sort of thing seem to count for a great deal.

39,364. Would you allow men who had been successful in the Class I. examination and had been appointed to other offices in their first few years of service to apply for transfer if considered suitable to the foreign Service?—Yes, I should have no objection. If you have a Class I. examination for the whole Civil Service I should have no objection at all to men being taken from the Colonial Office, the Home Office and the Treasury and transferred, so long as you did not interfere with the promotion in any particular Service and you always drafted another man back into the place of the original man.

39,365. At present a young man is appointed to the Diplomatic Service, he goes at once abroad and lives practically his whole life abroad, and he normally marries. Do you think there is a certain difficulty arising from the fact that those ladies he meets are mostly ladies belonging to the other countries and he very seldom meets ladies of his own country?—I think that is a very real difficulty. I think this enforced exile on a young man from the age of 24, if he is not able to get an exchange into the Foreign Office, which nine out of ten do not, necessitates very often his marrying a foreigner. There is a recent example of an embassy in which the wives of the staff consisted of two Italians, one Spaniard, one Swede and one German—that is a British embassy. I think the wife of a diplomatist is an extremely important person. I do not believe there is any profession in which a woman figures so prominently as in the Diplomatic Service. I think, therefore, it is really important as it is a representative Service abroad, that the women should be British. But if our diplomatists are kept abroad from a young age it is only too probable that they would marry foreigners. By my proposal of amalgamation where they would have long periods at home, I think you would obviate that difficulty.

39,366. A consular officer complained to us that a consul coming home found no one in the Foreign Office who had any actual consular experience. Do you think, if that is so, it might be a real practical difficulty?—Yes, I again think that the Consular Department in the Foreign Office ought to be manned by consuls who have had experience in the consular service and not merely by Foreign Office clerks who have had correspondence with consuls. You want the Foreign Office again to be a sort of home for the whole foreign service, so that men coming from any part of the world will really be met there cordially and feel that they are part of one large Service.

39,367. In other Government departments, taking the Home Office and Board of Education as instances, that difficulty is met by making him a chief inspector, who after a long period of experience outside the office practically becomes an inside official and is always there, and is the means of communication between the other inspectors outside and the permanent officials inside. Do you think it might be possible to have a chief inspector of consuls who has had experience both as a consul and as an inspector of consuls, and

make him spend most of his time in England?—I have not actually thought that out, but the principle of an amalgamation which I feel is so important, I think to some small extent should be adopted in order to get a link between the Consular Service and the Foreign Office, and I should certainly favour a man with consular experience being in the Consular Department of the Foreign Office.

39,368. You have had a certain amount of experience of the functions of the unpaid consuls when you were in the Diplomatic Service?—Yes.

39,369. Would your experience indicate the desirability of an extension or a restriction of that system?—I should certainly not extend the unpaid men. I think it is very undesirable as it is to have so many.

39,370. With modern means of travelling and communication you think a smaller paid service might be more effective than the present large unpaid service?—I certainly do.

39,371. We have received a great deal of evidence from commercial sources indicating a demand for a great extension of what I may call the purely commercial side of consular work—making inquiries for particular firms, pushing the goods of particular firms, and so on. Do you think in your experience it would be possible to divide the Consular Service into two, making the administrative side a definite service and creating a commercial side which did not necessarily consist of the same personnel?—I certainly have been struck by the very different functions that a consul has to perform. As I said a little earlier, some of the posts in the Levant are really diplomatic and political posts, and that work is very different from the work you have just described of a purely commercial character. I certainly think, although I should not like to lay down any hard and fast rule, that that purely commercial work which is very necessary and is not altogether efficiently performed at present would be better performed by a man of rather different experience and who had different prospects, so that the political work might be kept more apart. I agree to that extent.

39,372. You might make three branches of the Foreign Service—the Diplomatist, the Administrative Consul, and the Commercial Consul?—Something of that kind I think would be quite desirable.

39,373. I have received indications of a view amongst some diplomats that it would tend both to the advantage of the State and to the training of the young diplomatists if more work were given to them by the home departments, that is to say if the departments accustomed themselves to rely rather more upon the Diplomatic Service for their information?—I think that is true, but I think it is partly from his want of knowledge on these subjects that he is not used. When I was in Copenhagen I can give two instances. I had to make a report on commercial education, and as that was really only a matter of scissors and paste and visiting, there was no very great difficulty about it. But there was at that time a desire to find out accurately the system of old age pensions in Denmark. I knew nothing about Local Government at home. I knew nothing about our poor law system or anything of that kind. I should have been quite useless for a task of that sort, and a Local Government Board official was sent out to do that. Now I think all that sort of work might be done by diplomatists if they had a more specialised training, and it would be of interest to them, because in those countries where there are no particular diplomatic complications and where the high diplomacy of Europe is rather quiescent, there are very often a great many social questions which could be investigated with very great advantage. But then you want a man who has some knowledge and training and is capable of doing it. I think in those posts where there is so little to do diplomatists would really be very grateful if they were allowed to do this work, but I think they would have to be better fitted first to do it.

39,374. Travel is very easy, at any rate, from one North European capital to another nowadays. Supposing in your Copenhagen case you had been asked to prepare a report upon commercial education and you had said "I could do this very much better if I knew

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

" what exists in England and what it is I am comparing this system with, and, therefore, it would be well if I went home for a week or ten days and went round and saw what existed in England and then went back to compare what I saw abroad with that " ?—That, no doubt, would have been the thorough way of doing it, but the Treasury would have complained very much if I had asked for my travelling expenses.

39,375. Travelling expenses are not of much importance as compared with the whole expense of your salary, and so on, when you were doing the work?—I do not know. I found that any little addition of that sort was extremely difficult to get through.

39,376. (*Mr. Philip Snowden.*) Do you think that a man coming to the study of such a subject as commercial education in England without any previous knowledge of it would be likely in a week or ten days' time to acquire sufficient information to be of any value to him?—No, I do not think he would. I think it would be far better that he should gain that knowledge when he is resident in England and when he is at the beginning of his career.

39,377. Your answer to Mr. Graham Wallas's later question then, is that you think it very important that a diplomatist should be kept in this country for some time in order to get to know his England?—Yes.

39,378. You said that in some of the countries of Europe high society is divorced from government?—I think that is so.

39,379. Is that because the form of government in those countries has changed or that high society leaving the government as it formerly was has ceased to take an interest in government?—I think both are more or less the case. For instance, high society in Paris is in a little backwater by itself, and has absolutely no connection with the government of the day. A man may go out into high society in Paris and have a very good time without being of the least use diplomatically.

39,380. The uprising of great democratic political movements in the continental countries may have had something to do with bringing about that result?—I certainly think that is so.

39,381. Bearing that in mind, do you think it important that a diplomatist should keep himself in touch with the political and social movements in the country in which he happens to be stationed?—I think that is very important indeed. I think you may find in a country some social movement that ought to be fully investigated, and reports of it sent home. I think you would find a tendency in the Diplomatic Service to-day to really restrict their vision very much to a narrow area, and intercourse with commercial classes, artistic classes, or political movements, is certainly not encouraged. There is this difficulty about it: if in some foreign capital there is a large political movement which is in its essence anti-governmental it would be difficult for a secretary who is accredited to the Court of that country to mix very freely with the people who are responsible for this movement and engineering it, without it being interpreted as an unfriendly act to that government. That is a difficulty I quite admit, but that does not get rid of the fact that we ought to have far better information than we have of these various movements which may arise at any time in a country. If necessary a secretary not accredited to the Court, not actually gazetted as a member of the staff of the embassy, should be sent out to investigate.

39,382. Have you read this short memorandum that was sent to the Commission from the Liberal Foreign Affairs Group?—Yes.

39,383. Do you associate yourself with it?—Yes, I am one of the group.

39,384. Do you agree with the statement made in this memorandum: "That at present the traditions of British diplomacy are exceptionally aristocratic by comparison even with those of more aristocratic governments" ?—Yes, I think that is very strongly so.

39,385. What is the interpretation that you put upon the phrase "The traditions of British diplomacy are exceptionally aristocratic" ?—I think that our Diplomatic Service continues to be run on the same lines and with the same traditions as it was 50 or 60 years ago,

when our Government at home had a very much more aristocratic flavour than it has now. Those traditions have been kept up. This 400*l.* a year, this nomination, all means that the Service has to be restricted to a certain class which is preferred to any other class, and which has ceased to be really a representative class.

39,386. You mean then that what we might call the atmosphere of British diplomacy is aristocratic, that is to say, its view point is aristocratic as well as the constitution and the personnel of the Service?—Both.

39,387. Then the memorandum further goes on to say that "British diplomats have a reputation abroad, not only for what foreigners call greater 'snobbism,' but for less energy and activity than those of Germany and France." Do you agree with that?—I am afraid I do. I am afraid that is a British characteristic, I do not say necessarily an aristocratic characteristic. Foreigners are always very much impressed by the way we are perpetually playing golf and lawn tennis and enjoying ourselves, and that leads them to think that we do not take things so seriously as they do, and moreover in a public schoolboy to-day there is a much less serious tendency than you would find in almost any foreign university student.

39,388. Is it your experience that a French or German diplomat takes his work more seriously than a British diplomat?—I dare say he does; I do not say that for that reason he is more successful.

39,389. But do the foreign diplomats go as much into the society of the capital in which they are stationed as the British diplomats do?—Yes, every bit as much.

39,390. We have received a copy of a letter to this Liberal Foreign Affairs Committee from Sir Edwin Pears, of Constantinople, and he begins by saying that he is quite convinced that our Diplomatic Service is less efficient than that of other countries. Would you agree with that?—He has had a very long experience. He has lived in Constantinople practically all his life, and he has come into close contact with the very large staffs of embassies out there.

39,391. You think his opinion is valuable?—Very valuable indeed.

39,392. (*Chairman.*) What is he?—He is a lawyer connected with the Consular Court, but, I think, he is retired now.

39,393. (*Mr. Philip Snowden.*) He attributes that less efficiency of the British Diplomatic Service to the wealth test and the society test. Is the wealth test and the society test more exacting in the case of the British Diplomatic Service than in the case of foreign diplomatic services?—I think it is rather more than in the French service. The German service again is smaller, and Germans are very hard workers, and with a smaller staff they have a good deal more to do than our Service. The service that really compared with ours most accurately was the Russian service, where there was a very large staff like we had, and rather the same class of men.

39,394. In your memorandum you say that in the last year you were at the Foreign Office you drew up a memorandum containing proposals of reform which were represented to the Permanent Under-Secretary of State. Have any of the suggestions which you made in that memorandum since been carried into effect?—I do not attribute it to my memorandum at all, but most of the suggestions with regard to the Foreign Office were afterwards adopted by Sir Charles Hardinge, now Lord Hardinge.

39,395. That is very important, from many points of view. May I ask, did you do it on your own initiative?—Entirely.

39,396. And it was not resented by your superiors?—Well, it was not received with favour.

39,397. (*Chairman.*) Was it written when you were retiring?—No, it was written when I was in the Service. At that time I had been nearly nine years in the Service, and my work was still to copy out dispatches, to put numbers on papers, to sort confidential prints, and, more especially, to do up dispatch bags with sealing-wax and red tape. That occupied my whole time day by day, and the resentment caused by that

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

inspired me to draw up this memorandum, which I presented to Sir Thomas Sanderson, now Lord Sanderson. I do not think he received it with any favour.

39,398. (*Mr. Philip Snowden.*) Were you of the rank of a Foreign Office clerk at that time?—Yes, I had exchanged.

39,399. Was the work you have described just now as being your daily routine the average kind of work that a Foreign Office clerk of nine years' service does?—That was so when I left in 1902.

39,400. What would be the salary of a Foreign Office clerk after nine years' service?—I was getting between 350*l.* and 400*l.* a year.

39,401. Was any work that you had to do work that could not have been quite efficiently done by, say, a second division clerk?—Most of the work could have been very much better done by a second division clerk; but, of course, there was a good deal of ciphering and deciphering of telegrams, which is always supposed to be confidential work; but that has changed now. The work of a Foreign Office clerk is infinitely better managed now.

39,402. You suggest certain reforms for the purpose of assisting in the making of the Diplomatic Service into a valuable and efficient instrument for obtaining information and conducting negotiations with foreign governments. It follows that you regard the present system as not achieving that purpose?—That is so.

39,403. You would not say that the present system is calculated to develop the diplomat into an efficient and valuable instrument for the purpose he is supposed to serve?—I think not. I think you very often get men of very high capacity who, by enforced exile, and absolutely aimless wandering about from capital to capital all their life through become literally incapacitated, and quite unfit to do the important work which sometimes may fall to them.

39,404. You said when you were at Copenhagen you very often had not more than half-an-hour's work a day?—That is so.

39,405. And you were spending the rest of your time just following your own inclinations?—Certainly.

39,406. Do you think that is a fairly common experience in the smaller legations and embassies to-day?—I should say so.

39,407. For that reason you think the numbers of the Diplomatic Service might be considerably reduced?—Certainly.

39,408. And therefore a saving might be effected by that reduction, which would go some way to meeting the cost of giving a higher salary to those who need it?—Yes, I intended to show that.

39,409. You tell us you think it is much easier to get a nomination now than was formerly the case?—I think it is easier.

39,410. If that is so how do you explain the fact that with the greater ease of securing nominations the social class of the men who receive nominations has not been changed in the slightest degree?—Because you have the 400*l.* a year and the Board of Selection still.

39,411. But we were told by the present Permanent Under-Secretary the other day that the number of rejections by the Board of Selection is very small indeed?—I think that must be due to the fact that people are rather reluctant to send their sons into the Diplomatic Service because it has the reputation of being a very expensive Service, and this 400*l.* a year rather frightens them.

39,412. Do you think there is a very wide-spread impression amongst well-to-do people who have not social and aristocratic associations that it is no use applying for a nomination to get into the Diplomatic Service?—I should think very probably that is so.

39,413. And that may account to some extent for the fact that people of that class do not in any large numbers try to get their sons into the Diplomatic Service?—I should think it is very probable.

39,414. At present the attaché receives no salary for two years. I take it that you would approve of a system by which he should be paid what one might call a living salary from the date of his appointment to the post?—Certainly.

39,415. Your suggestion in regard to the salary meeting the cost of living in foreign countries seems to be very much on the same lines as a scheme that has either been suggested to the Commission or one that has been gradually forming itself in our minds, that is, that the salary of the Foreign Office clerk and of the young diplomat—what I might call the base salary—should be the same, and then the young man who goes abroad should be paid what one might, for want of a better word, call a maintenance allowance in addition to the base salary?—That would be my idea.

39,416. Of course the maintenance allowance would vary at different places according to the expense of the place?—Yes.

39,417. Am I to take it from you that you would not include in that maintenance allowance any sum, or at any rate any very considerable sum, for meeting what might be called the expenses of mixing in the high society of the place?—As I have already explained, I think all that is very much exaggerated, and anyhow it does not involve any great expense. In so far as the social duties are at all real, there is quite a good class of men who could be used to deal with them—the honorary attachés. The honorary attachés—there are now half a dozen or so—can be attached to the staff. They may be, possibly, friends of the Minister or Ambassador. They can be used for all these social functions, and for drawing up invitation lists, and for arranging dinner parties; and there are a great number of young men with nothing very much to do only too glad to undertake work of that sort.

39,418. (*Chairman.*) But is that the point? The point, as I understand it, is, that by entering into this society, mixing with the diplomatic staffs of other countries, and with the representatives of the Government of the countries, you may get information or give information which would be of great use to your chief. Such information could not be conveyed so well if at all by the honorary attaché who is perhaps more ornamental than useful, and is hardly a working member of the staff?—I quite admit that; but I am rather inclined to minimise the value of information that can be gained in that particular way through social intercourse.

39,419. (*Mr. Philip Snowden.*) It has been represented to us that the social duties of the Diplomatic Service are quite as important, and as much a part of his work, as the other duties that attach to his office. You would not be prepared to accept that?—Certainly not; I should dispute it very much. I quite admit that diplomatists have to leave cards on a great number of people, and it takes a good deal of time, and they are supposed to accept invitations here, there and everywhere; but I really do not think that can come under what are called "social duties" at all.

39,420. And even supposing it were so, it is not your opinion that it is the kind of diplomatic activity that ought to be encouraged?—No, certainly not.

39,421. (*Chairman.*) But if there is a big question on the tapis, do not you think it as well that there should be a good deal of interchange of opinion between the persons employed in carrying on the negotiations, and that is done occasionally more effectively outside the office than in the office?—Yes, I should not stop it in any way at all; but I think it is made an excuse now for an excessive amount of really purely social waste of time. I think so far as it is at all useful intercourse between officials and seeing people who really matter at the moment, it is all so much to the good; but that can be done quite well and in quite a natural way without this emphasis on the social duties of a diplomatist, which amount really, to a large extent, in people who like going out very much having an excuse for doing a great deal of it.

39,422. (*Mr. Philip Snowden.*) And if the change in the methods of recruiting for the Diplomatic Service which you have been advocating were adopted, is it not likely that you might get men in the Diplomatic Service then who will come in with a new tradition, a new outlook, and a new idea of the kind of work that is expected from them: and therefore one might say almost naturally, or automatically, there would be a falling off in giving their time and energies to those mere social functions?—I think in so far as the social functions

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

were useful between colleagues there would not be any falling off; but in so far as they were merely frivolous I think there very probably would be, and that would be an advantage.

39,423. (*Chairman.*) Would not the English mission in that case be rather isolated?—I do not think so. After all, as it is, ambassadors vary; some are extremely sociable and entertain a great deal, and some are inclined not to keep quite such open houses; but I do not think it makes the very smallest difference.

39,424. (*Mr. Philip Snowden.*) I was going to put that question to you. Have you had any experience of the United States Diplomatic Service?—Yes.

39,425. Do they keep up the same style that the English Diplomatic Service do?—No, they do not at all.

39,426. And you do not think that that interferes in any way with the success of their diplomacy?—No, I do not think that, but I do think with regard to their Service that the constitution of it in some way does interfere with the success of their diplomacy,

39,427. But that is quite a different point?—It is.

39,428. You said that manners and appearance appear to count a good deal now in the selection of candidates for the Diplomatic Service?—Perhaps I ought not to have said that, but I should say, considering the strength of those traditions about manners and appearance, it would be a long time before we get rid of them.

39,429. But you would not ignore the importance of a British representative being a man of good manners, affable, ingratiating, and all the rest of it, in the Diplomatic Service, provided he has other essential qualities?—No. Certainly, if a man has good manners and is tactful he is likely to get on; but to find the very man who has good manners and great tact is beyond human power—to make certain of him—until he has been tested by an experience of years.

39,430. (*Mr. Shipley.*) Is the Liberal Foreign Affairs Group a large group?—I think we have about 40 members.

39,431. We have no idea who they are, and it would carry more weight if we knew the names of a few of them?—Yes, I have sent a list to the Chairman.

39,432. With regard to this snobbism, it has always seemed to me that English people are more self-conscious and shy than others. Do not you think that there may be something rather subjective of this snobbism?—It is a disagreeable word I agree, but I think what is meant is, that foreign diplomatists rather regard the English Diplomatic Service as very exclusive in their point of view.

39,433. More exclusive than the Austrian or the Russian?—No, I should not say so.

39,434. It has been represented to us by some of these papers that the British diplomatists are less active and pushing, but is not it sometimes a greater advantage to be the reverse of active and pushing when you are a diplomatist?—On certain occasions a great advantage I should think.

39,435. I happened to meet an Ambassador accredited to the Court of St. James and a Minister the other day, and I asked them if that was their experience, and they were not inclined to say yes or no, but they did say that the English diplomatists generally get their way?—I think that is very likely true.

39,436. They seemed to think they were rather more successful than their foreign colleagues. If you admit your men entirely by competitive means you would have no inspection of any kind would you?—No selection.

39,437. No inspection committee?—No.

39,438. But you would retain the medical one, I presume?—Yes.

39,439. Would you confine it to the British-born young men?—Yes, in the larger sense of any subject of the King in Great Britain or in the Dominions or in the Colonies.

39,440. Would you admit Indians?—No, I should not.

39,441. Do you think that in order to get up a knowledge of his country, the German method, by which the

young diplomatist is set a thesis and given six months to write it up on some such subject as local government or education, would be satisfactory?—No. I think there would be better ways than that, I think by lectures and by experience in other Government offices, more especially the Local Government Board and the Board of Trade, a first-hand knowledge of our institutions might be got.

39,442. When you were in Constantinople did you form any opinion about the Levant Consular Service, which is a very highly specialised Service, being underpaid?—Yes, I thought they had very arduous duties, that their pay was certainly low and their prospects were not good either, because the chief dragoman at Constantinople was really at the top of the tree and could never get further.

39,443. He gets about 1,200*l.* a year?—I am not sure.

39,444. (*Mr. Matheson.*) In your own experience of diplomacy, should you say the men you came across in our own Service were narrow in their interests?—I should say they were very much the public school type with all the good qualities, but also with a very restricted outlook on general questions, especially social questions—very restricted, indeed.

39,445. What did you find about their readiness to learn about the country they were in?—That varied very much, not only with the individual, but with the chief of the mission. In some countries they are encouraged to travel, and that is I think a very desirable thing. There were several instances that I know of diplomatists who did a very great deal in the way of travelling and learning the country they were in. A notable instance was Sir Charles Elliot, who was one of the most eminent of our junior diplomatists.

39,446. If you get rid of the Selecting Committee altogether, would not it be necessary to make the probation a very real and serious one?—Certainly. I should be in favour of making the two years' probation very real.

39,447. It seems to me that those are the two alternatives—either you must make it a very strict probation or else have a Selection Committee?—I should make the probation a very real one, and it would be so very much easier if the candidate had been through the Class I. examination to say to him: "It is obvious from your work that you are not suited for the Diplomatic Service," vice, and the Foreign Office is so closely allied with the Diplomatic Service, and there is such continual interchange, that it would be very much better for you to be drafted into another branch of the Government service."

39,448. Supposing a Selecting or Nominating Committee is retained, do you think it would be an advantage to make it rather wider in its composition. At present we understand it is mainly in the hands of the Foreign Secretary and his private secretary and a diplomatist who may happen to be in the neighbourhood, but I fancy it is not much larger than that. Would you agree that it would be desirable to have on the Committee some representative of the Civil Service Commission, and possibly one of the high standing officials of the Foreign Office?—I certainly should be inclined to add a member of the Civil Service Commission, but I cannot help thinking that the Committee's duties are extremely difficult, and I cannot understand on what principle they work.

39,449. With regard to the interchange of the two Services, has not that increased a great deal of late years?—No, I think not.

39,450. I do not mean a permanent interchange. For instance, we learn that five heads of departments are all men who had been abroad. I do not mean to say that all of them have been abroad for a long time, but they all have had some foreign experience?—I dare say that is so.

39,451. If you had a single Foreign Service such as you propose, would not there be some danger of want of continuity in the office at home. Must not you have a pretty strong permanent element in London to maintain unity in the Service?—Yes. I think that is certainly quite true up to a point, and, of course, if you had one Service you would gradually find that there were certain

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

men who were obviously more suited for office work at home than they were for work abroad. Possibly you would gradually get men who would spend most of their time in the office, and I think you could secure that if you wanted it; but there would be this complete elasticity to obviate this feeling of difference between the two Services which there is now.

39,452. You mean that they would practically sort themselves in time, on one side or the other?—I think they would, and also with the assistance of this Board of Appointments the appointments both in the Foreign Office and the Service would be very carefully scrutinised and arranged.

39,453. You attach great importance to that?—Very great importance to that.

39,454. How large do you think a Board of that kind ought to be?—I think quite small—two or three men.

39,455. With a permanent head?—Yes, a permanent head, a diplomatist, and, of course, the private secretary, too. But at present the private secretary, although I do not suppose he could possibly admit it, has complete power over the junior appointments. Of course, the senior appointments come before the Secretary of State.

39,456. (Sir Henry Primrose.) Sir Edwin Pears's experience, I suppose, is really confined to Constantinople and the Ottoman Empire?—Entirely.

39,457. Therefore his authority would be very great there, but not very great as regards the Service in general, taking the whole Service?—No, not with regard to the Foreign Office.

39,458. I should read his letter as referring very largely to the aspect of things in and about Constantinople?—That is so, I think.

39,459. For instance, when he speaks of the Consular and Diplomatic Services being co-ordinate, that might be right there, but might not be possible or desirable elsewhere?—Quite so.

39,460. You said just now that you would be in favour of any young man going abroad to an embassy being given at once a living wage?—Yes.

39,461. What sort of figure do you put that at?—I would not send him abroad for two years. Those two years he would have in the Foreign Office. He then ought to have a salary of 250*l.* to 300*l.* a year. He would then find abroad that he would have his lodgings free, and he would have an opportunity of receiving these other allowances for extra subjects, one of which, international law, he would probably pass before going out.

39,462. You are assuming that he is given quarters free?—Yes.

39,463. I am not sure that that would be an economical thing really. As regards the extent to which the junior members of the diplomatic staff have to mix in society, is it not the case that, unless a man mixes in society—official society to some extent, and also, if there is one, a separate high society—he does not really get into contact with the people whom he ought to get to know and to understand, and whose views it is necessary he should know. The man who sits merely doing so many hours work of a clerical kind in the embassy and then goes home and does not appear in society is very little use?—I quite admit that he is very much more use if he mixes quite freely and naturally with his colleagues and with the people he naturally comes in contact with. I fully admit that a recluse would be useless.

39,464. But, then, not to be a recluse is expensive. It does mean that a man has to spend a very considerable sum if he is to live as other people live?—A junior diplomatist would be entertained and would not himself be expected to entertain. For instance, in Copenhagen I think I did my fair share of going to dinner parties and even entertaining in a very small way myself, and I did not find it very expensive.

39,465. Copenhagen would not be expensive, but going further east to St. Petersburg you would find it expensive?—Yes, it would be more expensive there.

39,466. Supposing you belonged to whatever is the club there. A young diplomatist ought to belong to a

good club in the place?—Yes, that is useful for him to meet other diplomatists and officials.

39,467. The moment you do that you have to live rather according to the standard of the place?—Yes.

39,468. And that is expensive?—That makes St. Petersburg, of course, more expensive than other places, and Vienna too, I should say.

39,469. Personally, while I think that is absolutely necessary, I should be rather reluctant to charge the Votes of Parliament with the expense of that sort of thing. It is necessary, but I think it is right that the man should pay that himself to a large extent?—In so far as—and I only admit it to a very moderate extent—it adds to his ability as a diplomatist, I certainly think the country ought to see that he is not out of pocket; but in so far as it is for the sake of personal gratification, which I think it is in most cases, I quite agree with you.

39,470. You cannot separate it. It really comes to this, that the Diplomatic Service is not wholly a serious Service—I do not mean to say by that that it is a frivolous Service, but it has its serious side and its non-serious side, and you cannot disassociate one from the other. A man cannot devote himself wholly to the serious side and neglect what I call the non-serious side. Is not that so?—Yes.

39,471. You can determine what you ought to pay on the serious side, but it is very difficult to say what you ought to pay on the non-serious side. This idea of doing away altogether with the obligation to have private means of some amount means a very, very large addition to the Vote, does it not?—I think economies can be effected in other ways to meet it.

39,472. You do not think economies could be effected by reducing the number of legations, for instance?—No, we must have the full number everywhere, but we can have a reduced staff by the use of archivists; and another reduction which I have not mentioned which could be effected would be the abolition of the allowance given to *chargés-d'affaires*. At present a *chargé-d'affaires* gets 1*l.* or 2*l.* a day for the time he is *chargé-d'affaires*, and really the opportunity of having the responsible position of head of a mission for a short time is a reward in itself, and it also sets up a rather uncomfortable relationship between himself and his chief. He is anxious to see his chief go away in order that this extra allowance should begin.

39,473. (Chairman.) As *locum tenens*, would not the position impose a certain responsibility on him in the way of entertaining and so on?—I do not think very much. He really as counsellor is, so to speak, almost the best paid man in the Service, because the obligations for entertaining are very small with regard to his position, and yet he gets a very good salary.

39,474. (Sir Henry Primrose.) Your proposal to do away with any obligation in respect of private income would be dependent upon the amalgamation of the two Services?—Yes.

39,475. You would not contemplate that unless the two Services, the Foreign Office and the Diplomatic Service, were amalgamated?—It would be very much more difficult if there was not amalgamation.

39,476. If the two Services were not amalgamated, would not it have the effect that apparently the Diplomatic Service would become very much the more attractive on the face of it?—I think it would.

39,477. The result is, that men would press into it who did not realise that the money did not mean all it looked to them?—Yes. On the other hand conversely it is very difficult to effect amalgamation alone without getting rid of the 400*l.* a year, because you have now a type of man in the Foreign Office who does not expect to go abroad and does not bargain to go abroad.

39,478. That only makes it all the more clear that the two things go together?—They go together.

39,479. You cannot do one without the other?—Quite so.

39,480. (Chairman.) You stated, with reference to the 400*l.* a year, that you would give pay to the diplomatic men on the basis of the Foreign Office pay and

21 May 1914.]

Mr. ARTHUR PONSONBY, M.P.

[Continued.]

also an allowance made up in certain ways. Would you apply the same thing to ambassadors? Would you give them a certain pay for the work they do plus an allowance for the expensiveness of the post they were occupying?—The salary of an ambassador at present varies very much according to the capital he is in and not according to the work he is doing.

39,481. With reference to the expensiveness of maintaining his position in the capital that he is in?—Quite so.

39,482. Would you recognise more fully than is recognised by the consolidated pay that separation between pay and allowance?—Yes. I would be inclined to do that.

Sir JOHN JARDINE, K.C.I.E., M.P., called and examined.

39,483. (Chairman.) You are a member of the House of Commons?—I am.

39,484. And a member of the Liberal Foreign Affairs Group of the House of Commons?—Yes.

39,485. You come here to place before us certain considerations with regard to the reform of the Foreign Office and the Diplomatic Service?—Yes. I will confine myself to the parts on which I have something to say, premising that I have not an interior acquaintance with those Services. I think two principal points are raised—the system of nomination by the Secretary of State and the limited competition thereon, and the requirement of the Diplomatic Service that the person appointed should have an income of 400*l.* a year.

39,486. Those are the two points you wish to speak to?—Those are the two points chiefly. As regards amalgamation I have only a general view on that subject. I agree with the view expressed in this paper which has been sent to the Commission, that the tendency of the present nomination system and of the property qualification is to limit competition, and I think that also has a tendency to limit the nucleus in the Service of ability of various kinds. First as regards the nomination, there are whole classes I think that would not see their way to getting a nomination, some of them being persons in those disciplined families who make very good public servants. I speak of the clergy of most denominations, and retired military and Civil officers—people of the same sort as the father of Lord Lawrence and his five distinguished brothers in India. I think also that it tends rather to exclude Scots and Irish. In that way the area for selecting people of ability is limited. As regards the property qualification, I would say the same, but with greater emphasis, for there are many people among these classes that have not got 400*l.* a year and whose fathers cannot provide them with 400*l.* a year, and yet who are by training, discipline, aspiration, and character as good men as you could want to have. I think also that both these points of the present system are against the democratic tendencies of the time. I lay particular stress upon the fact that my colleagues in Parliament belonging to the Labour Party in one of their programmes laid great stress on education as one of the best things they could give to their children; they wished to retain them at school until 16 years of age, and after that to give them all the advantages that are to be got from universities in all parts of the United Kingdom. That is a tendency which I think cannot be resisted and is a very noble statement in a programme. I should suppose that the nomination system and the qualification system give rather more advantages to the richest portion of the kingdom—England—than to Scotland, Ireland and Wales. My experience has been largely derived from India, where there are now, I think, about 1,200 selected covenanted Civil servants.

39,487. Would you call them selected covenanted Civil servants?—Yes, by the open competition. I should say, after being 33 years in the Service in India, that there the peculiarities of the three nations are notable at times and that they are all wanted. You want the Englishman, Scotchman, and Irishman there for different things, and the combination of the three is a great advantage to the government of the Indian Empire. If I may speak generally on the competition system so far as I have seen it, it brings out the qualities of discipline, hard work, perseverance and patience, and those are qualities of great value. It is also found that in India—and I believe it is the same in the Civil Service and other bodies of men here—that people selected after high scholastic examina-

tions are ready for a good deal of outside kind of work. For example, in India you see magistrates appointed, say, to the Bench of the High Court, having to deal with intricate systems of law that they have not had much to do with until the moment they take their seat on the Bench. Then, again, you get vice-chancellors for the Indian universities scholarly persons able to understand educational questions and such things as between European and native, and you get out of this corps men who are well fitted for holding those offices. I do not say that under the older system you had not got them, too. Then you have people of high literary abilities in different matters and some who apply themselves to languages and become authorities on, say, comparative grammar of Indian languages, and some become great in archæology. I would say, therefore, that education, like wisdom, is justified not of all but of most of her children. I notice on looking through the records of the older time, i.e., of the Royal Commission of 1890, that there were eminent men who were for abolishing the property qualification, and some of them said that it did not give as high a standard for the Diplomatic Service as they got for the Foreign Office where is no property qualification. Sir Philip Currie objected to open competition by saying that he was afraid that commercial men, financiers, and such persons might in their eagerness to get at some of the secrets of the Foreign Office, for the sake of filthy lucre, undertake the education of some young man and send him in and perhaps pay for his education in order to make him their nominee. That, I should say, is the fear that a rogue might be introduced in that way. Then Sir Charles Dilke took the objection that he thought if you had not the sifting of highly recommended persons such as the Secretary of State selects from, and if you did away with his power of selection, you would have foreign powers training men to get into the Foreign Office for the purpose of disclosing the secrets of the British Government, and that in that way if you kept up as a *sine qua non* a high knowledge of French and German, there would be a lot of people only half and half British subjects perhaps, who had lived in foreign countries and in that way obtained an unrivalled knowledge of those languages, who would push their way in and would then be adopted by the foreign governments as their purveyors of secrets. Well, I have not had to watch anything of the kind in England, but I state those as objections that have been taken by eminent men. I would, from my own official experience elsewhere, be inclined to say that they do not weigh for much nor greatly against the advantages of the open competition. Mr. James Bryce and Sir Charles Dilke would do away with the property qualification. But I have said what I have to say on that point. As regards what is said as to the amalgamation of the Foreign Office with the Diplomatic Service it seems to me that the arguments are sound. That also was dealt with by the Royal Commission in 1890, and I think there is a good deal to be said for having occasional or frequent interchanges between the two, much in the same way as happens in India between the officers of the Civil Service doing the work of the districts and those engaged in the much more varied work, more closely connected with government and requiring a different kind of power that is done in the Indian secretariats. I think it would be to the advantage of both parts of this important Service if there was more interchange, and a better grading of promotion according to service would in that way be secured. I do not think there would be any particular hardship, for often the man who wants to go to a particular place does it because he is the best fitted for it, and the man

21 May 1914.]

Sir JOHN JARDINE, K.C.I.E., M.P.

[Continued.]

who does not want to go there has very often some good reason for not jumping at the chance for letting his views be known if ordered. On the question of training, that has been discussed and is discussed in Mr. Ponsoby's minute which I have read. As regards languages, international law, political conditions of the country, and such matters as that, I should suppose that if the examination by which these gentlemen are to be selected was the ordinary one in high studies—the ordinary studies of the country, which most of the Civil servants of this country and of India learn—proficiency in languages could be secured afterwards. In that way the danger of giving too great opportunities to the persons who have spent all their years or the greater part of their youth in foreign countries and so have got that much higher proficiency in French and German could be avoided. Those languages could be put into their proper place among the other subjects that the Civil Service Commission examine in. As for proficiency in languages and such matters as international law or commercial matters or the products and tariffs of different countries, that could be secured by departmental examinations held after appointment. They might well fill up a couple of years learning a good deal of work either at the Foreign Office or in some embassy or legation and be tested in those ways.

39,488. You would make the acquisition of the foreign languages come after appointment to the Service?—I would be inclined to do so.

39,489. During the period of probation?—Yes, I would have them among the subjects in which they should be examined, but I would not give them such extreme predominance as is given under the present system. I am speaking again rather from Indian experience. I think that the system of holding the higher and the lower departmental examinations in India at intervals, while the man is learning his ordinary work in the lower grades of the Service, is a good one, and that it gives great opportunity to a persevering and energetic man to go on with all his studies. Every day he finds the advantage of the studies in his practical work, both in helping him to understand the language spoken in his Court, and in knowing a good deal more about the aims of the administration. That is only a suggestion.

39,490. Do you wish to enter any further into the points which this paper raises, namely, the question of whether there is a feeling that the Diplomatic Service is exclusive—that the need for private means, as well as the limited nomination amounts to a plutocratic and an aristocratic test?—I have expressed my views about that. I lay no particular stress from my own experience on that, after much association with a great many men in the Indian Service. Having had under my command or supervision a great many men, I would not attach any great weight to this question of manners. That is one thing that is sometimes raised.

39,491. Your Indian experience as regards manners would, perhaps, need some qualifications when applied to European diplomatic society. The European standards are perhaps more complex and exacting than Eastern standards, though good manners are, of course, necessary everywhere?—Desirable everywhere I would say, but I have seen people, I will not say ill-mannered, but without manners. Ambition, good nature, and other motives very soon make them assimilate the conventional manners, and they do well enough in a short time. That is my experience, not only in India, but in this country too. It is desirable that they shall have the gentle manners, and more particularly in diplomacy, I would say; but that applies also to dealing with Indian princes very much, and with the Indian people generally. I would give more value to the quality of patience than I would to a particular fineness of manners, because I know that in the embassies and the consulates there are frequently people who have some kind of grievance, or something to represent, and they do not always get what they want; there is inevitable delay in order to hear the other side; but it is a great solace to them if they can only get a hearing from the person in authority. Therefore I have always laid stress on what they say in India: "God gave judges and public servants two ears, one for the plaintiff and one for the

defendant, and then after having heard both, only "one tongue to pronounce a decision between them." As regards the abolition of the property qualification, I think the analogy that removes any inconvenience in the matter is to be found in what is being done in the Army for the purpose of raising men from the ranks to commissioned officers. I think it is better that the pay should be made a living wage. Any inconvenience from not being able to keep up the proper sort of establishment could be rectified in that way. As regards appointments from the outside, I do not doubt that the views expressed on former occasions by men entitled to speak are right—that the Crown should retain a right to take persons from outside, from the consular ranks or elsewhere and put them in; but that power should be sparingly exercised in order not to do away with the proper expectations of the men recruited for the Service who naturally look all through to the chance of getting into the higher grades, and especially the highest appointments of all.

39,492. I think you have touched upon all the points in this paper. Is there anything else you desire to say?—I do not think there is.

39,493. (Mr. Graham Wallas.) At present the rule as to English birth with regard to the Diplomatic Service is extremely strict, both parents having normally to be born in the United Kingdom. It is less strict, I think, with regard to the Indian Civil Service, where a man, for instance, coming from the Dominions has an equal right to compete?—That is so.

39,494. Have you known in the course of your long experience, men coming from the Dominions who have been successful in the Indian Civil Service?—I have known not many, but several.

39,495. You would say that nothing in your experience would suggest that there is any reason why that source of ability should not be tapped?—No; among the white peoples. I think the admission of a negro might be a more difficult question.

39,496. I am speaking of the Dominions strictly?—I know in Canada, for example, there is a college for the Royal Engineers, and a number of Canadian gentlemen are glad to get their sons into that; and some of them have risen to distinction, served in India, and gone elsewhere. For political reasons, I think it is well that they should be encouraged to enter the service of the Crown anywhere.

39,497. You said there is the same sort of interchange of personnel between the service in the provinces in India and service in the secretariat as would result from an amalgamation of the Foreign Office with the Diplomatic Service?—Yes.

39,498. Did you find that men tended in that Service after the first 10 or 15 years to become either pretty permanently in the secretariat or pretty permanently in the Provincial Service?—That is the tendency; but it is not a good one, and it has been objected to by some governors of repute, who would have a sharp man in to be under-secretary, and let him learn all that he can there, to make him more efficient when the time comes for a high place, say, as a member of the Government; but they would turn him out after he had been there three years, or some such time, to go back to the district—to the ordinary work of the Service.

39,499. Then you would say that the normal course of a young man's service in India should begin with a certain period in the secretariat in a subordinate capacity?—Only after he has been for some time doing the work of assistant to the magistrate and collector of a district.

39,500. He should begin in the district, and then go into the secretariat for a time?—Yes, it is all important that he should understand the people, and get to know their languages; and after that go to the secretariat, where a mass of work is done in English, and a good deal of it is hardly connected with the district administration.

39,501. And then go back to his district after knowing both the district work and the other work?—Yes, and give another man a chance.

39,502. But during the last 10 or 15 years of a man's life in the Service, he would normally have got

21 May 1914.]

Sir JOHN JARDINE, K.C.I.E., M.P.

[Continued.]

so far specialised that he would probably be doing either secretariat work or district work permanently?—I do not think that need be so. It sometimes happens that they go to a high place outside; say, as commissioner—which is something like being a French prefect over a lot of sub-prefects—or into the High Court sometimes.

39,503. At present, when a young man is successful in the Indian Civil Service examination, he enters upon a period of probation and training?—Yes.

39,504. At the end of that he has to take certain examinations, and then he goes out to India, and is so far in a condition of training that he still has certain examinations before him?—He has to pass in two languages. He has to pass two easy examinations in the languages of provinces he knows best. He has to pass in vernacular languages. Then he gets some small employment—say, a magistrate who can inflict a month's imprisonment, taking the criminal part of his work. Then, in about 18 months or two years after that, he has to pass two departmental examinations of a lower and higher grade. Then he is full-fledged.

39,505. Confining ourselves for a moment to India, who hold those departmental examinations?—A committee, on which there is usually a Civil servant or two who have passed more or less in one or two languages, and a translator to the Government (an Oriental), and one other person.

39,506. Is a man brought up to Calcutta or Simla for examination, or is the examination held in the province?—It can be done either way. It is a mere matter of convenience which it is.

39,507. (*Mr. Philip Snowden.*) Are you here to support this memorandum that has been handed in by the Liberal Foreign Affairs Group?—So far as I have spoken.

39,508. Do you agree with the suggestions that they make and offer?—I do not agree in everything. I do not like to speak about the reputation of British diplomatists abroad.

39,509. But you agree with them in condemning what they describe as the plutocratic monopoly in the Diplomatic Service, the methods of recruitment to the Diplomatic Service, and its undemocratic and non-progressive character?—Yes; for the reasons I have given I agree in the conclusions.

39,510. Are you a member of this Liberal Foreign Affairs Group?—More or less; it is not a very tight-fitting bond.

39,511. I take it that you would have these appointments for the Foreign Office and Diplomatic Service amalgamated, and you would have them filled by an open competitive examination?—Yes.

39,512. You said that by that method you would get quite as good a type of man, and one quite as well fitted for the peculiar work of diplomacy, as is secured now by the present method?—Yes, I think you would.

39,513. Perhaps a better type of man?—I think you would get more varied types. I think Scotland would have a better chance, and the classes that cannot readily get the ear, or think they cannot readily get the ear of the Foreign Secretary would have a better chance. I should say from my knowledge of my own Service that you would get quite a good enough set. You would get a hard-working lot of men. What I mean is, that by a high intellectual test to begin with, a man who would take a first-class at one of the universities would have no particular difficulty in learning either French or German in a short time.

39,514. Have you some substantial reason for the statement which you have made more than once, that Scotchmen and Irishmen do not get their fair share of these diplomatic appointments?—No. It is only my impression, from a knowledge of their circumstance.

39,515. You think there are very few Scotchmen who can afford to give their sons 400*l.* a year allowance?—I would not go quite that length, but I should say that there are a very great many who could not do it.

39,516. It may interest you to know that of the 86 appointments that have been made to the Foreign Office and Diplomatic Service between 1908 and 1913, there does not appear to be a Scotchman amongst them, in the sense of a person who has been educated in

Scotland. There is one who has been at Edinburgh University for three months, but he was schooled at Marlborough. Most of the rest have been to Eton and Oxford and Cambridge. So that appears to bear out your impression?—Yes.

39,517. With regard to French and German, if the Services were amalgamated I suppose your idea is that the successful candidates should spend the first year or two here in London at the Foreign Office, and during that time they might be making themselves more proficient in French and German?—I would be indifferent whether they spent it in the Foreign Office or elsewhere; that would be just as the Secretary of State chose to direct, but wherever they were I would expect them to apply themselves seriously to such things as those languages.

39,518. And you would give the successful candidate a salary sufficient to maintain himself until the time that he was appointed either to the Foreign Office or the Diplomatic Service?—Yes.

39,519. You would not put the country in the position of a pauper in the sense of living upon the services of these diplomats?—No, I think he ought to be paid. I thought it was very just when I was selected that they should tell me that if I got through the next examination in Indian subjects at the end of a year, and if I showed that amount of diligence I should have 100*l.* to keep me during that period. Though it was a post-payment, that, I think, was right; and it would be a comfort to many parents and young men to know they were to have something of that kind. I should say they should be paid; they are worth paying for.

39,520. (*Sir Henry Primrose.*) I gather that the reasons you have given for these various changes that you propose are rather based upon abstract principles than upon any practical experience of defects in the existing system?—Yes. As regards the Foreign Office and the Diplomatic Service I said I had not an interior acquaintance with them.

39,521. Your main feeling about it is that everybody ought to have an opportunity of going into the Diplomatic Service, and not only a limited number?—Yes.

39,522. Have you any views at all as to the qualities of the men that the present system provides for the Diplomatic Service? Do you consider that they are distinctly less good than they might be or than you wish to see them?—No, I have not had the opportunity of observing, and, therefore, of judging.

39,523. If these changes were to add very largely to the cost of the Diplomatic Service, would not you then think it right to inquire whether the change was worth the cost?—I would inquire, but I would, I am afraid, be prejudiced in the affirmative before I began.

39,524. Supposing it was going to cost 50,000*l.* a year, do you consider that the advantages of the change would be worth that?—Yes; all the remote as well as the near considerations being looked at.

39,525. You think that the Diplomatic Service in itself, quite apart from this principle of admitting everybody, would be improved to the extent of 50,000*l.* a year by this change?—I would not mind going that length.

39,526. Assuming that there is no serious fault to be found with the Service as it exists to-day, and that it performs the duties it has to perform satisfactorily, do you think that merely for the purpose of conforming to the principle of admitting everybody to every branch of the Public Service indiscriminately, it would be worth while to add 50,000*l.* a year to the cost of the Service?—Yes, I think so.

39,527. Take the somewhat corresponding Service in India—what is called the Political Department. Supposing you were going to recruit that directly from outside instead of during what is done now, recruiting it by selection from men in the Service, would you be prepared to throw that Service open absolutely without any restriction to the men who passed the best examination?—I do not see any danger in it. The Government should take care to fit them into proper places, or if they were useless men they would, when their time came, get a hint to retire, or something of that sort. Everybody's characteristics get to be known in India.

21 May 1914.]

Sir JOHN JARDINE, K.C.I.E., M.P.

[Continued.]

89,528. But it is a serious thing, when you have encouraged a man to work for a particular service and you have admitted him because he has passed a successful examination, if two or three years afterwards you have to hint to him that he had better retire. That leaves him rather stranded, does it not?—That would happen under any system of selection, and there might be cases under any system. I would not say there might not under the system I am trying to favour.

39,529. If you recruit, (as you do in India), for the whole of the Civil Service, it is extremely unlikely that you may not be able to find some sort of position, amongst the many varied positions there are in the Service, for which a man would be more or less suitable. But for the Diplomatic Service we recruit specially, and if a man fails in that you have nothing else to give him?—I do not think in India, among the young men appointed to the Diplomatic part of the Service, there is any special examination into their characteristics. Lots of them are young men from the army, no doubt excellent young officers with some talent for languages, but as a rule I do not think they have been known as particularly made for the Diplomatic Service.

39,530. Still, it is important in the Political Department in India to get suitable men?—Yes.

39,531. You would not say that every man in the Indian Civil Service was suitable for that kind of work?—No, I would not say suitable.

39,532. Take the European Diplomatic Service: You recognise, of course, that there are certain qualities and attainments that are required, apart from the purely intellectual power of dealing with papers which has been indicated by passing a good examination. If a man fails in some of these subsidiary qualities he is practically useless?—He might be.

39,533. Then you have to get rid of him?—He might then be transferred to the Foreign Office where he would not be in so diplomatic a position.

39,534. That would be if you amalgamated the two Services?—Yes, that is what I am advising. It is one of the ways of getting out of the difficulty of incompatible people in a limited number of places.

39,535. Is not there something to be said for having a preliminary sifting before you put men into the Service?—I do not think any preliminary sifting would be of much use.

39,536. But it is done now, and you have your preliminary sifting?—There is some, no doubt.

39,537. That is the object of it?—I doubt if it can be a very effectual one, taking young men at an undeveloped part of their career.

39,538. I do not think the preliminary inspection and the ascertainment of a *prima facie* suitability for a position can be regarded as wholly futile now. It is not on that ground that you have recommended that that preliminary examination should be done away with, but on quite other grounds?—Yes, I would say it is something like the different ways of selecting for the Artillery and the Line. Before the Line came under competition, the Artillery was always under competition, and they got just as good a set of officers, and so did the Royal Engineers who were selected without nomination, or anything of that kind, by the competitive system.

39,539. Yes, because there you were recruiting for a very definite purpose and what you wanted was a scientific soldier, and by means of your examination you could tell pretty well that you were getting that. But you want something in the Diplomatic Service which is more than a mere scientific diplomatist; you want something else, and it is in order to test those other qualities to some extent that the preliminary sifting takes place?

—For the corps of Royal Artillery and Royal Engineers you wanted the highest soldierly qualities, which do not always come out under the test of high intellectual examinations, and yet I say they got enough men quite as good as in other branches of the army.

39,540. Yes, but they passed them through a two years' course at Woolwich during which they were able to eliminate those who were not suitable?—Yes, and I would pass these men, as I say, through these departmental examinations.

39,541. Going back to my original point, the whole of your evidence is based not upon any instance that has come before you of serious defect in the existing Service, but is based almost, if not entirely, upon the general theory that the Diplomatic Service, like every other part of the public service, ought to be open to every man who chooses to go into it and who is capable of passing successfully the competitive examination?—I have said that I am not speaking in censure of the existing Services because I have not had the opportunity of knowing anything about them; and I know nothing unfavourable. As to the other point, I would say that my view is not that everybody has got a right to stand for getting into the service of the Crown, but that the more you can get to come up, the bigger the area over which you extend your selection (as you do by the competitive system), the more is the chance of getting on the whole a better class. I would put it on the point of utility to the State and not on the right of the individual.

39,542. (Chairman.) You say there is no inherent right in the individual to enter the public service. The principle we laid down in dealing with the rules which should govern the recruitment of public servants generally was that it was not legitimate to take up a particular course of action simply with the view of providing a career for a particular class of the community, but that the sole object of recruitment should be to provide the most efficient public service possible consistently with economy on the one hand and satisfactory conditions of labour on the other?—That is my view.

39,543. You defend the system of open competition by saying that it brings a larger number of men under your scrutiny and increases the chance of your getting the men you want?—Yes, that is what I mean, besides the ulterior importance of increasing education and keeping that part of the Service in greater harmony with the institutions of the country. The quotation you have read is the view I take of it.

39,544. (Mr. Shipley.) I gather that you would admit the candidates to an unlimited competition with no selection or inspection of any kind, except possibly a medical one?—I would require certificates of character as well as a careful medical examination.

39,545. There would be no personal interview with the candidate by any body of men?—No, I am not inclined to it.

39,546. In your opinion and in the opinion of this Liberal Foreign Affairs Group, would you confine the Service to British-born people or would you admit any subject of the King?—I cannot speak for the rest of my colleagues, but speaking off-hand I would let the subjects of the Dominions compete for this. That brings in another variety of talent which I think is wanted in such a world-extensive Service as ours is.

39,547. You would let Canada in? What about Australia?—I see no harm.

39,548. (Sir Henry Primrose.) And India?—I admit there is a difficulty as regards people so entirely different to the European world as the inhabitants of India, or most of them there and in other parts.

39,549. (Mr. Shipley.) The same would apply to the West Indies?—Yes.

**APPENDIX LXXX.***(Vide Q. 38,712.)***FOREIGN OFFICE CLERKS AND ATTACHÉS IN THE DIPLOMATIC SERVICE.**

The competitors since 1908 studied at the following Universities:—

*Oxford	-	-	-	-	-	-	50
*Cambridge	-	-	-	-	-	-	24
Edinburgh (3 months)	-	-	-	-	-	-	1
No university	-	-	-	-	-	-	11
							86
							— individuals, some of whom — competed more than once.

\* In a few instances, candidates studied also at London, or at foreign universities, for short periods.

ROYAL COMMISSION ON THE CIVIL SERVICE.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

CIVIL SERVICE.

At the Royal Commissions House, 5, Old Palace Yard, S.W.

NINETY-EIGHTH DAY.

Friday, 22nd May 1914.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

His Grace the DUKE OF DEVONSHIRE.

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.

\* Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B., K.C.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.

Mr. N. E. BEHRENS (*Secretary*).

The Hon. FRANCIS OSWALD LINDLEY called and examined.

39,550. (*Chairman*.) When did you enter the Service?—In 1897.

39,551. Did you, on appointment, join the Foreign Office, or did you join the Diplomatic Department at once?—I belonged to the Foreign Office for two years.

39,552. Were you posted to the Foreign Office first, or to the Diplomatic Service first, joining the Foreign Office for work there?—What really happened was rather mysterious. I went up for the Foreign Office examination, and there was one vacancy with about 10 candidates. I was three marks behind the first man, and they could not put me into the Foreign Office because there was no vacancy for me, so they put me temporarily as attaché in the Diplomatic Service. Then a few weeks afterwards a vacancy occurred in the Foreign Office, and I then joined the Foreign Office for about two years, though I was in it nominally for more.

39,553. Did you join the Foreign Office on transfer from the Diplomatic Service, or on appointment as a clerk in the Foreign Office?—I was a clerk in the Foreign Office, but I am not sure whether I was actually appointed to the Diplomatic Service first. It was only a question of a few weeks.

39,554. Did you apply for transfer to the Diplomatic Service at the end of your two years?—Yes; I applied first to be transferred temporarily. I was an acting third secretary at Vienna and in Persia, and then I applied for transfer in 1902. It was five years before I was actually transferred into the Diplomatic Service, but during those five years I was working abroad for two years on temporary transfer from the Foreign Office.

39,555. To what missions have you been attached?—I have been attached to the Embassy at Vienna, the Legation at Teheran, the Agency at Cairo, the Embassy at Tokio, the Legation at Sofia, and the Legation at Christiania, where I am now.

39,556. We have heard a good deal of the expense of living abroad in the Diplomatic Service as compared with living in London as a clerk in the Foreign Office. You have experience of both. Did you find that living abroad as a diplomat was much more expensive than living in London as a clerk in the Foreign Office?—Yes, it is certainly more expensive; but when I was

living in London I was living at my father's house, and of course, I had not got the expenses which most people have. Abroad the expenses are certainly greater in most posts, but not everywhere—not in the East, in Teheran, for instance. I believe it is quite different now; but in those days in Teheran the expenses of living were not higher than they are in London; in fact, you got more for your money.

39,557. Were quarters provided for you in Teheran?—Yes, we had no rent to pay.

39,558. In the larger European missions or embassies, say St. Petersburg or Vienna, must you spend the full 400*l.* a year which a diplomat is supposed to have as private means?—Oh, yes. Vienna was my first post. I was unmarried when I was at Vienna and I could not live on 400*l.* a year.

39,559. (*Mr. Graham Wallas*.) In addition to your pay do you mean?—No; I meant on 400*l.* a year actually. My pay was 100*l.* I think then. You wanted about 700*l.* a year to live without keeping a horse or anything of that sort.

39,560. (*Chairman*.) You want 700*l.* a year?—I think so. I did not live on that. I spent more than that, and I had no horse and no extra expense of any sort.

39,561. We were told that 400*l.* a year was rather scanty, and that the allowance which a diplomat would need to have was nearer 500*l.* than 400*l.* a year?—Yes, I think that is correct. Of course the posts vary. But that applies to the European posts. American posts are quite different.

39,562. Do you think you were benefited by beginning your service in the Foreign Office, and by being subsequently transferred to the Diplomatic Service?—Yes, I think so in those days; but the Foreign Office has been completely reorganised since, and I do not think attachés benefit at all by going to the Foreign Office first now. When I went to the Foreign Office we did all the elementary work, kept the registers, the archives, and did the ciphering of telegrams, and all the things that an attaché has to do in a chancery; but now when they first go to the Foreign Office they write minutes and drafts—things which they do not in the least require abroad—and they never typewrite. The principal duty of an attaché from the point of view of

22 May 1914.]

The Hon. FRANCIS OSWALD LINDLEY.

[Continued.]

the chancery is typewriting, undoubtedly. They do not learn any of those things in the Foreign Office now.

39,563. But we have been told that it is desirable that there should be free interchangeability between the Foreign Office and the Diplomatic Service—at all events, up to the post of counsellor?—I think it is desirable up to a point.

39,564. If it be desirable that there should be free transfer like that, of course, as things at present stand, only those men in the Foreign Office who have private means can afford to accept a transfer?—Certainly. That is quite true to a certain degree, but the pay in the Foreign Office is so much better, and they enjoy their Foreign Office pay abroad, that they are in a very much better position than we are.

39,565. If you were to introduce a system of free transferability you would be compelled to provide a certain allowance for the Foreign Office man going abroad?—Yes, you would. That would make the disparity of the pay between the two Services even greater than it is at present.

39,566. If you introduced such a system now, you would not have both sides—the Foreign Office clerk and the diplomat—on an equality, and you would have to start the diplomat on pay similar to that which the Foreign Office clerk enjoys at the beginning?—Yes; but the diplomat would still have to have private means.

39,567. If transferability were to be made freely practicable the two classes of men—the Foreign Office clerks and the diplomats—should be on the same basis of pay?—Certainly.

39,568. Then the question of living abroad would be a question to be dealt with by a local allowance?—Yes.

39,569. That local allowance would vary probably with the expensiveness of the place to which the men were posted?—Yes. In the case of South America it is impossible for married secretaries to go there unless they not only have means but are comparatively rich men.

39,570. It has been suggested to us that the local allowances might take the form, not so much of cash as of the provision of free quarters, allowances for languages, and allowances for knowledge of international law, and so on?—Yes. The difficulty as to the quarters is that the requirements of different secretaries are so very different. You may get a married secretary with four or five children (like myself) and you may get a bachelor who does not need half the accommodation and does not wish to have it.

39,571. There is that difficulty, but do you think a diplomatist—a first or second secretary—would be as well pleased if suitable quarters were provided for him as if he were allowed to choose his own quarters, being given a suitable allowance?—I think, if the quarters were suitable, personally I should prefer to have the quarters, because the difficulty of finding quarters is often very great. Also one would get the advantage of certain fixtures and things which you otherwise have to pay for. The question of pay in my opinion is not nearly so important as the question of the expenses of transfer.

39,572. It does not follow at all that the secretaries attached to a mission should form part of the family, as it were, of the ambassador or the chief of the mission?—No.

39,573. But when it is the case of a single secretary he generally acts as private secretary of the ambassador, or the head of the mission, and in such a case as that he becomes one of the family?—I should not say there was any rule to that effect. Sometimes it is the case, but it depends entirely upon their private relations.

39,574. Passing to the question of travelling allowances, I understand that at present actual travelling expenses are allowed to counsellors and to first, second, and third secretaries and attachés. Actual travelling expenses are allowed on first appointment or on removals on public service, or on promotion?—Yes, there is something additional to that.

39,575. Yes, I am coming to it; I have here a statement which shows that in the Diplomatic Service you are allowed on first appointment, on removal on the

public service, or on promotion, your actual travelling expenses as the first item?—Yes.

39,576. Then you are allowed subsistence allowance at the rate of 1*l.* a day if by land, and by sea if the subsistence allowance is not included in the passage money?—Yes.

39,577. You are allowed also the expenses of one servant?—Yes.

39,578. But no subsistence allowance for the servant?—I do not think so.

39,579. Only his travelling expenses?—Yes.

39,580. And you are allowed for your family on first appointment and on authorised removals one-third travelling expenses of your wife and children up to a maximum of four persons. That is allowed to first and second secretaries only, and is not allowed to counsellors or to third secretaries or attachés?—That is so.

39,581. What is the explanation of that variety of treatment?—I am afraid I do not know what the explanation is.

39,582. Is it supposed that the counsellor is so well off that he does not want recoupment of his expenses?—I suppose that is it.

39,583. And that the third secretary and the attaché have no right to get married?—I imagine that is it. I believe the counsellor on first appointment has a lump sum to cover his expenses, but I am not sure. It may have something to do with that.

39,584. When you leave your post for private reasons you get no allowance?—No.

39,585. How do the rules affect men? Where do they pinch particularly?—They particularly pinch on the question of furniture. The expense for a move is very small, comparatively, if you merely take into account the ticket for the railway journey, except in exceptional cases, and the transport of one's clothes; but the real expense of moving is the furniture and the heavy luggage; also the incidental expenses about leases of houses and that sort of thing. In the actual travelling expenses the real expense is the furniture and luggage. If you are moved by a long sea journey, such as to China, the tickets are also a considerable item.

39,586. You are allowed the actual travelling expenses; that is to say, I suppose, the actual railway fares?—Yes, for yourself and for one servant.

39,587. You only get the actual railway fares for yourself and servant; you do not get the actual railway fares of your wife and children?—No; the provision for the wife and children is almost entirely illusory, because the rule does not admit nurses among the four persons; they must be exclusively the wife and the children. No first secretary, unless he marries at an age which is very unusual, can have children without nurses, and of course the tickets which are really the expensive ones are the nurse's and not the children's. The one-third allowance to the wife and children is really worth nothing at all; it is only worth a few pounds.

39,588. Have you any idea why the particular fraction of one-third is fixed?—I am afraid I have not.

39,589. You get one-third of the price of the tickets for your wife and children, and only one-third subsistence allowance for them?—I do not know what was the reasoning used in framing the rule.

39,590. The rules are more liberal in the general Consular Service, I think. Is it the general feeling in your Service that you are illiberally treated in regard to all these allowances?—I think the married members of the Service feel it as regards the transfer expenses.

39,591. Say you are transferred from Vienna to Tokio, you would not think of taking your furniture with you; you would sell it?—To the Far East one would not take the furniture, but you would have to take it in the case of any European transfer, and I think in the case of an American transfer; but I have never been to America. It is usually cheaper to take the furniture with you than to buy it and sell it. You lose so much in selling it and you pay so much in buying it that it is cheaper in the end, and saves trouble to have the whole thing packed. But to places like the Far East, where people live in wicker chairs, and where, after all, it is only a temporary thing, I personally did not take my furniture, or only a very small part of it.

22 May 1914.]

The Hon. FRANCIS OSWALD LINDLEY.

[Continued.]

39,592. Do you know if any concerted representation has ever been made to the Foreign Office in regard to the inadequacy of these allowances?—Not that I have ever heard of, but I should think plenty of complaints have been made privately.

39,593. It has been stated to us that the difference between the work of a Foreign Office clerk and the work of a diplomatist might broadly be stated in this way—that the Foreign Office clerk does his work in his office, and when his work is over no further obligations rest upon him in the way of going into society and entertaining, and so on; while in the case of the diplomatist the more important part of his work begins after his office is closed when he goes into society, and becomes, as it were, the intelligence officer of his chief. We have been told that he then learns a good deal which is of use to his chief, and which facilitates the transaction of business with the missions from other States. Is there anything in that?—Yes, I think there is a great deal in it.

39,594. Would you say that, broadly speaking, that is the true difference between the two classes of officers?—Certainly I should say it is one of the principal differences.

39,595. There is a good deal of useful work done by that sort of out-of-office communication between diplomatists?—Yes, I should say there was a great deal. They are more expansive after dinner usually.

39,596. Did you find that your colleagues and contemporaries of other missions were a selected body of men like yourselves?—Yes, mostly but not always.

39,597. It has been stated to us that British diplomatists abroad have a reputation for what has been described to us as “snobbism” and also less energy and activity than those of, say, Germany or France. Is that a correct description in your opinion. Is the British Diplomatic Service, in your opinion, less approachable than the Diplomatic Service of other countries?—I should have thought that if there was any difference it was the other way, but I cannot be considered a fair judge.

39,598. Are the members of the missions of other countries as well educated do you think as the members of the British Diplomatic Corps?—I should say the majority were.

39,599. Do they come from the same or from a more restricted social class?—They vary a good deal in different countries. They mostly come from the same class as the British Diplomatic Service.

39,600. Have they all some private income?—Yes, all I should say, as far as I know.

39,601. Do you think a British diplomatist would be as effective if he had not a private income?—Not necessarily if his salary was increased by 1,000*l.* a year for a secretary.

39,602. You think the possession of adequate resources either in the shape of private means or in the shape of official salary to enable him to go into society, is essential for a diplomatist?—I think so.

39,603. So that the money has to be found in one way or another?—I think so.

39,604. Did it strike you in any of the missions to which you were attached, that the number of diplomatists engaged was too large? Do you think the number of our diplomatic agents abroad could be reduced so far as you could judge?—When I was at Vienna I thought so, but there was very little work at Vienna in those days. That was in 1899. There were a good many of us in the chancery—four, I think.

39,605. Did that last any length of time?—I was only there six months so that I do not remember now.

39,606. It might happen that a press of work might come on at any moment?—Certainly.

39,607. We have at present, I understand, 124 members of the Diplomatic Service, and it has been suggested that if you were to employ men of the second division type as archivists and so on you might be able to dispense with some of the diplomatic men?—I think you could in some posts, certainly.

39,608. Is there any such necessity for secrecy in respect of documents which would prevent that being done?—There is that question.

39,609. At the present time the men whom you employ as archivists are men you find locally?—I have never been in a mission with an archivist. We have at Christiania a vice-consul who works in the chancery and he is a local British subject, but he is rather an exceptional sort of lucky case. I do not really know from personal experience anything about the archivists.

39,610. We have also been told that if you were to employ an archivist sent out from England of the second division type he would be very isolated in a foreign country?—He would in some posts, I should think. That would vary with the post.

39,611. Is it very essential that the archivist should have a knowledge of the language of the country?—I think so.

39,612. You could not always command that in a second division clerk?—No, but I think an archivist should make his whole career in one post, and in that case he could acquire the language after a certain interval without any great difficulty.

39,613. It has been strongly pressed upon the Commission that there is no necessity for selection for the Diplomatic Service—that it would be safe to rely on open competition and the Class I. examination, and trust that that examination would produce the kind of men which you require, and that special selection with the object of securing men of good manners, good demeanour, and so, on is really not necessary. What would you say to that?—I do not know about being absolutely necessary, but I think the further test provided by some formal nomination is desirable, certainly.

39,614. You think that these personal qualities, which are not to be tested by an examination paper, form a valuable element in the general equipment of a diplomatic officer?—I think so.

39,615. Have you been brought much into contact with the Consular Service?—Not very much. In Japan I was brought into contact with it more than in any other post.

39,616. There are student-interpreters in the Far East?—Yes.

39,617. A student-interpreter is, on the whole, a more carefully selected man than a member of the general Consular Service?—I believe so. It was so in the old days because the Far Eastern Service was more sought after, but the conditions are not so good as they were, and I do not know whether it is so now or not.

39,618. He does pass the same general test as the candidate of the Home and Indian Civil Service and your Service. Is he not selected by the Class I. examination?—He was not in my time. When I entered the Diplomatic Service we had a special examination. We did not have the Class I. examination, and the Consular Service did not either, but now they may have.

39,619. It is the case now, I understand. Did they strike you as being a particularly good lot of men?—Yes, I thought they were very good.

39,620. How did they compare with the men in the Diplomatic Service in your opinion. Were they mentally and educationally as well qualified?—I do not think they were as well educated—not as regards modern languages certainly.

39,621. The Diplomatic Service concentrates on modern languages?—Yes.

39,622. Did they strike you as being as much men of the world as the diplomatic men you used to meet?—The student-interpreters when they came out, were younger than our young diplomats are, and I do not think they were as much men of the world.

39,623. (*Mr. Holt.*) How long ago is it since you were in Japan?—I left in 1908.

39,624. That was after the abolition of the extra-territorial regulations?—Yes.

39,625. (*Mr. Graham Wallas.*) Did I understand you to say that you were in favour of the provision of quarters for the diplomatists in all cases where it was at all practicable?—If the quarters are suitable.

39,626. The provision of suitable quarters?—Yes. I think most diplomatists would prefer quarters if they were suitable, but the danger is that if they are provided they would be unsuitable for a good many of the people who would have to occupy them.

22 May 1914.]

The Hon. FRANCIS OSWALD LINDLEY.

[Continued.]

39,627. But provided that the difficulty of suitability can be got over, you think it would be a good arrangement?—I should, myself.

39,628. Would the quarters you contemplate have the main mass of the ordinary furniture there permanently provided?—It would be an advantage if some of it was provided. I do not think it would all want to be provided.

39,629. But if the heavier part of the furniture in the quarters were the property of His Majesty's Government that would get over some of the difficulty of moving furniture from one place to another?—It would.

39,630. Such provision would also abolish the difficulty to which you referred of getting rid of the leasehold agreement for a house?—Certainly.

39,631. That is in some cases serious. A man takes a lease of a house thinking he is going to stay, and cannot get rid of it, and has all sorts of legal troubles?—Yes, he has to pay the rent when he is not there.

39,632. And he may have all sorts of claims made against him in respect of an empty house in a foreign capital?—Certainly.

39,633. Did I understand you to be generally in favour of the appointment of men of the archivist type where that is practicable?—I think I am in favour of it.

39,634. You said you thought employment in the Foreign Office is not now useful for a young diplomatist?—Not for his first appointment.

39,635. The reason you gave was that he does not do now, as he used to do in the Foreign Office, the work which I understand is specially that of an archivist?—Yes.

39,636. Then if the diplomatist is not required in future to do the archivist work that objection of yours would not remain?—It would be much less strong, certainly.

39,637. Assuming that the use of archivists became general would you then say that the young diplomatist if he spent two years as you spent it in the Foreign Office before going out to his first mission, would be helped by that?—Yes, I think so.

39,638. You must find that the work in a foreign mission varies enormously from year to year and from mission to mission, I suppose?—Certainly.

39,639. Where you are dealing with a country which is for the moment out of the great complications of European affairs, it is apt to be lighter?—Yes.

39,640. Is the work in Christiania rather light now?—Yes.

39,641. Do you sometimes feel that it would be good for the Diplomatic Service if more work were asked from you by the ordinary departments?—Yes. We have a good deal asked from us. I do not think anyone would object to having more work asked from them unless they were very busy.

39,642. It has been stated that the reason why certain inquiries that we want to know in England for various departments as to the practice of foreign countries are not entrusted to the Diplomatic Service but given to special persons sent out, is that the young diplomatist going out immediately after his school and college career does not know much about the institutions of his native country with which he is comparing the foreign institutions?—I think that is the case sometimes.

39,643. Do you think that would be less the case if a diplomatist did, as a rule, spend quite a considerable amount of his active career at home?—Yes, I think he might spend more time at home with advantage. But I think he ought to be principally abroad.

39,644. But he ought to spend some part of his career at home?—I think it is an advantage for him to spend some part of his career at home.

39,645. Do you think it would be an advantage if in some cases he spent some of his time at home, not in the Foreign Office only, but in certain of the other offices—take the Local Government Board, for instance, or the Colonial Office. Assuming that he begins with two years at home and then goes abroad for eight or nine years, and then has perhaps two years at home, would it at first or later on be of advantage to him to see some

of the work in other offices?—I think if he works at the Foreign Office he gets a fairly good insight into the other offices. Anyhow, he gets a considerable insight by having to correspond with them, and also he probably sees the principal officials in several of the other offices. I am not sure that it would be to his advantage actually to serve in any of the other Government offices.

39,646. You know the young Indian civilian after he has received his nomination by examination goes through a period of rather varied training before going out. Do you think anything of that kind would be useful in the case of the young diplomatist?—I think, on the whole, it is probably not necessary.

39,647. It has been stated to us that the practice of interchange between the Foreign Office and the Diplomatic Service would be useful in the very early years of a man's service, but that later on he becomes specialised, and after the time that he gets to the position of counsellor to an embassy it ceases to be practicable. Would you agree, or would you say, that it was equally useful later on?—I should have thought it was equally useful. It is done now later on constantly.

39,648. You would say that a certain amount of home service in the Foreign Office would be useful throughout a man's career?—Yes, I think so.

39,649. Could that be arranged on the basis of practical amalgamation of the two services?—I think you could not amalgamate the services as they are now, because you could not ask Foreign Office clerks to go to many places abroad without giving them quite a different sort of pay to what the Diplomatic Service get.

39,650. But, supposing we got over the question of the pay, the amalgamation of the two services would render possible the sort of interchange that you desire?—I think, personally, that the interchange which is carried on now is sufficient under the present régime. There are always several diplomatists at the Foreign Office, and a good many Foreign Office clerks abroad.

39,651. I think there are four such interchanges at the moment?—Yes, at the present time; but at some moments there have been a good many more.

39,652. A diplomatist can add to his income by getting a language allowance?—Yes.

39,653. Have you ever thought that the conditions and circumstances of the language allowance might be reconsidered, with a view to improvement?—The examinations could be made more difficult.

39,654. At present he is examined by one of the officials in his future office, is he not?—Yes. I was examined in Persian by the Oriental secretary.

39,655. That is to say, you are examined by an official, who, if you are successful, would spend the rest of his official life in your service under your direction?—In Cairo I was examined in Arabic by the military authorities, who had nothing to do with the agency.

39,656. A gentleman here, the other day, told us that in Constantinople he was examined by the chief dragoman?—I dare say.

39,657. You think, perhaps, it is a bit casual in that respect?—It is, perhaps, in a way. Of course, the examination could easily be made more difficult; but, then, as a secretary is only a very short time, comparatively, in a post, he would not find it worth while going up for a difficult examination, because it would mean devoting his whole time to the language.

39,658. Whether the examination is easy or difficult, it is desirable that it should correspond to a standard deliberately chosen, and not left haphazard?—I think so.

39,659. The languages for which a language allowance is given exclude the Scandinavian languages?—Yes.

39,660. Do you speak Norwegian?—Yes.

39,661. Do you find that the fact that you speak Norwegian is of considerable use to you?—Certainly, but reading it is more important.

39,662. But you get no language allowance for speaking or reading Norwegian?—No.

39,663. Can you see any reason except a historical reason for that fact?—It is a much easier language to learn. The languages for which you get allowances are all very difficult languages to learn.

22 May 1914.]

The Hon. FRANCIS OSWALD LINDLEY.

[Continued.]

39,664. But you told us you only learnt Persian and Arabic to an elementary extent?—But that is very much more difficult than learning a language like Norwegian or any Latin or Teutonic languages. The languages for which we get allowances are either Slavonic or Oriental, and they all require very much more study even for a somewhat poor knowledge than a Teutonic or Latin language.

39,665. Do you think it would have been as easy for you to speak Norwegian as well as you speak French, or as well as an educated Norwegian, as to reach the point you reached in Arabic?—No, not to know it as well as that. There is an enormous difference, I am afraid, between the standard which you mention as to French and that in which we pass in Arabic.

39,666. But in Norway it would be a great advantage for you to be able to speak Norwegian well?—Yes. I talk Norwegian fairly well. The most important thing is to be able to read the newspapers.

39,667. You can also take an examination in international law and get an allowance?—Yes, but only while you are third secretary.

39,668. That examination again allows for the fact that life is not very long, and it can be very easily crammed?—I should think so. I did a certain amount of work for it, I must say, but I am not sure I did not do too much really.

39,669. Does not the career of a young diplomatist depend almost entirely upon the kind of shifts from one mission to another that he gets. Whether his career as a diplomatist is successful or pleasant or not depends upon the succession of shifts to which he is subjected?—Yes, the amenities of his life depend upon his posts.

39,670. And his opportunities for success?—Yes.

39,671. Do you think it would be a desirable arrangement that those shifts should be arranged by a Board containing men of different kinds of experience?—I have not considered that point, and it is rather difficult to give an opinion straight off.

39,672. Do you think it would be an advantage in the Diplomatic Service if there was a sort of superannuation allowance by which, if a man did not reach a certain grade in the Service at a certain age, he should be retired?—Yes, I think it would, provided he had some chance of reaching the grade.

39,673. Provided there was *prima facie* reason to suppose that his not having reached the grade was due to his not being very efficient?—Yes, I think it would be an advantage.\*

39,674. You have seen a good deal of the Consular Service in different parts of the world. Would you agree that the work of a consul consists of two quite different sections—his administrative work in connection with the Merchant Shipping Acts, and a number of things which run up to *quasi* diplomatic work, and his purely trade work, where he is perhaps pushing or providing opportunities for the sale of the goods of particular firms?—Yes. I suppose those are the two main divisions. I am not really well acquainted with consular work in its details, especially the administrative and shipping part of it. We have nothing to do with that. The trade part of it and the commercial intelligence part of it we have a good deal to do with.

39,675. Would you care to express an opinion as to whether it would be a good change to divide the Foreign Service generally into three grades instead of two—into the diplomat, the administrative consul, and the trade agent, instead of as at present, the diplomat and the consul, with his two functions?—I think the ground of trade is sufficiently covered by the system of commercial attachés.

39,676. The daily work which is superintended and organised by the commercial attachés is done by the

\* On consideration I think that the length of service and not the age of a diplomatist should determine the time when he should be retired—if new rules of compulsory retirement are introduced. Those who, like myself, have taken a university degree are already severely handicapped in comparison with those who went straight from a public school to a crammer or abroad: we are many places below men of our own age. We should be under an additional disadvantage if we were all liable to be retired at the same age.—F.O.L.

consuls?—A good deal of it. I do not think it is necessary to have three grades.

39,677. (*Mr. Holt.*) With regard to the Consular Service in the Far East, where there is a territorial concession, the consul is almost the Governor?—Yes, he has very extensive powers over his own subjects.

39,678. He has to be responsible for the maintenance of law and order?—Yes.

39,679. (*Chairman.*) You have explained to us that, at present, the language allowances are only to be won in respect of certain languages—the Russian, the Turkish, the Persian, the Arabic, the Japanese, and the Chinese?—Yes.

39,680. For no European language can you get a language allowance?—No.

39,681. Do you think that is a good thing? Do not you think a language allowance ought to be given for proficiency and competency in the language of the country to which the diplomat is accredited, provided it is not French or German in which he qualifies at his examination?—Yes, I think it ought to.

39,682. He is evidently a much more effective agent of the Government if he knows the language of the country?—Much more; but after a certain age the acquisition of languages is rather a laborious process.

39,683. What languages would remain now in Western Europe—Spanish, Portuguese, and Italian?—Yes, and Dutch, Norwegian, Swedish, and Danish.

39,684. (*Mr. Holt.*) Can a diplomat get on without knowing Spanish or Portuguese?—Yes, at most posts.

39,685. Are not those subjects obligatory for any man who is going to South America?—Yes, it would be very difficult to get on in South America without Spanish. I have never gone to South America, but I did pass an examination in Spanish once.

39,686. In the case of a diplomat who did not know Spanish a considerable number of appointments would be absolutely closed to him?—A knowledge of Spanish is never considered in appointing him, at least I have not seen a trace of it. Of course, he would attempt to acquire the language as soon as he came to a post requiring Spanish.

39,687. You could not imagine a Minister being sent to South America without speaking Portuguese or Spanish?—I should think many Ministers have gone to South America without being able to speak Spanish. It is very useful, but for official communication French is always used. I am not speaking of personal experience; I have never been to South America, but I imagine the official class all talk French.

39,688. (*Sir Kenneth Muir-Mackenzie.*) I suppose what you were speaking of as to the great expense of removal and other expenses must put a difficulty in the way of freedom of selection of men for going to different places. If a man was thought the right man to be sent to South America he might resist going there as much as he could?—He certainly would resist it if he was married. I should resist it, personally, as far as I could.

39,689. It, of course, occurs that when it is proposed to send a man there he gets out of it if he can, although he may be considered for various reasons the right man to be sent there?—Certainly.

39,690. Were you asked whether you had private means of a certain amount when you went into the Service?—No.

39,691. That did not take place in your time?—It was understood I believe; but anyhow it was necessary. It was considered that you could not live without it.

39,692. You were not asked the question?—I was never asked, myself.

39,693. But you could not have gone into the Service if you had not had it, in fact?—No.

39,694. Then you spent the first two years in the Foreign Office?—Yes.

39,695. And I suppose you received a salary during that time?—Yes.

39,696. But if you had gone abroad you would not have received a salary?—No.

39,697. (*Chairman.*) You were two years in the Foreign Office before you went abroad, and then you

22 May 1914.]

The Hon. FRANCIS OSWALD LINDLEY.

[Continued.]

must have reached a salary of about 250*l.* a year. You began at 200*l.* if the present scale of pay prevailed in those days?—I think we were paid less; but I could not be certain.

39,698. You were drawing in the Foreign Office when you left it much higher pay than you would have been drawing in the Diplomatic Service if you had entered that from the commencement?—Yes.

39,699. Did you retain your Foreign Office pay when you were transferred to the Diplomatic Service?—Not when I was transferred permanently.

39,700. But that permanent transfer did not take place for four or five years?—Five years.

39,701. During the five years that you were on temporary transfer did you continue to draw your Foreign Office pay?—Yes.

39,702. And did you get your Foreign Office increments?—I think so.

39,703. If the transfers from the Foreign Office were temporary, and if the man transferred could take his pay with him, I do not see how it would work out, because the man who comes from the Diplomatic Service in exchange to the Foreign Office would, apparently, also draw Foreign Office pay?—No. I was working in the Foreign Office two years ago for a year, and I drew my diplomatic pay of 300*l.* or 400*l.* a year, and the man who took my place drew his Foreign Office pay of about 800*l.* a year.

39,704. He took his Foreign Office pay with him to the Diplomatic Service?—Yes. Each man keeps his own pay when he is transferred to the Foreign Office or Diplomatic Service on temporary transfer.

39,705. (*Sir Kenneth Muir-Mackenzie.*) If there were not that difficulty about the expense of the Service the Service would be open to a much greater number of men. Do you think the Service would gain by that? Do you think the Service would be a stronger Service if there were not that difficulty about the expenditure?—Yes, I suppose it would. If you have a larger selection you ought logically to get a better article, I suppose.

39,706. If you could arrive—I do not say whether I think it is practicable or not—at a system by which you paid the men sufficiently for them to be able to live properly at the different places, so that in a sense they might disregard the question of expense, do you think it would be an improvement to the Service?—I am not quite sure that it would.

39,707. It has been suggested here that our Diplomatic Service represents only one class, and that, perhaps, not nowadays really the most influential and characteristic class of the people of this country, and that if we had a different class of diplomatists they would more truly represent this country, and would get into more complete communication and sympathy with those who are really now the most important class in foreign countries—that is, if we had a larger system of selection?—I think if you have a larger system of selection by increasing the pay to the extent which should be necessary to enable anyone to go into the Service without private means, you would certainly have to retain a Board to deal with the nominations. I do not think it would be a wise thing to throw the Diplomatic Service, with very high emoluments, open to the whole community without any previous personal examination, such as they have at the Admiralty, or as they now have at the Foreign Office.

39,708. Of course, it is a subject of tremendous difficulty; but if the suggestion which has been made were carried out it would mean that a class of men would come into the Diplomatic Service who would not want to live upon the sort of scale for which we seem at present to be trying to provide the money?—I think his opportunities for acquiring information would be a good deal curtailed if he lived on a smaller scale than is done at present in the Diplomatic Service.

39,709. The suggestion is just the opposite?—I think it is not correct.

39,710. That he would be in communication with classes in foreign countries with whom we are not in communication now?—I think the change would be a loss rather than a gain.

39,711. (*Mr. Matheson.*) I gather from what you said that, supposing some attempt were made to pay the diplomatist a living salary, that is to say, to provide what he has now in the way of pay and his private allowance, a very considerable addition would be necessary?—Yes.

39,712. It has been suggested to us that it would mean on the average an addition of 500*l.* a year all round. Do you think that represents probably what would be necessary?—Not if the official is married. He would certainly require more than that to marry.

39,713. As to the duration of a man's stay in one post, when he goes to a new post he learns a new language very likely and has to adjust himself to new conditions. Do you think that, as a rule, he is kept sufficiently long in his new post to make it worth while? Is there any complaint that people are moved too quickly from one post to another?—I do not think so. There are individual cases, but I think on the whole the amount of time spent in each post gives general satisfaction.

39,714. And is reasonable?—I think so.

39,715. Did you learn your French and German while you were an undergraduate?—No, I learnt them after I left Oxford.

39,716. How long had you for them?—I had three years.

39,717. That meant living in France and Germany a good part of the time?—Yes, I lived nearly all the time in France and Germany.

39,718. So I suppose the necessary expense for preparation for the Service is considerable if you are to be really good in French and German?—Yes.

39,719. (*Mr. Shipley.*) When you were in the Near East you came across the student-interpreter class, I suppose, in Turkey and Persia?—In Tokio I did, not in the Near East. There were no student-interpreters in Cairo or Teheran where I was posted. In Tokio there were.

39,720. With regard to the Near East, the Government advertise posts, I understand, in Egypt, Persia, Morocco, and the Ottoman Dominions; but practically it seems to me, as far as I can gather, those posts are filled up in Persia very largely by the Indian Government, and they nearly always nominate military men. Practically the bulk of the student-interpreters are in Turkey and Asia Minor. There are none in Egypt you say?—Not when I was there. There may be now, but I do not know.

39,721. Do you know anything about the rate of pay of these people?—I am afraid I do not.

39,722. They are very skilled linguists I understand?—I believe they have an adequate knowledge of Turkish and Arabic after a time. I do not think they join as very skilled linguists. Certainly they do not in the Far East.

39,723. But they do in the Near East?—I am afraid I have no personal experience.

39,724. In Tokio you saw something of them?—Yes.

39,725. Do you think they are adequately paid?—I did not hear any complaining, but that was some years ago. They may complain now.

39,726. They have produced men of very great distinction—men like Sir Ernest Satow and Dr. Herbert Giles?—Certainly.

39,727. Do you think that the Doctor at Constantinople is adequately remunerated? Is he allowed to practise outside the embassy?—I should think he is sure to be—most of them are. I have not been at Constantinople as a post.

39,728. I thought you might have passed through it?—Yes, I have been through it pretty often, but not as a post. I think all the embassy doctors are allowed to practise outside.

39,729. I thought perhaps it was rather peculiar to Constantinople?—It may be so.

39,730. (*Chairman.*) It is stated in a memorandum which we have received from the Liberal Foreign Affairs Group of the House of Commons, that "the work of making acquaintance with people of importance will be best promoted by giving adequate pay throughout the Diplomatic Service; and that

22 May 1914.]

The Hon. FRANCIS OSWALD LINDLEY.

[Continued.]

" at present the traditions of British diplomacy are " exceptionally aristocratic by comparison even with " those of more aristocratic governments." Has there been anything in your experience to lead you to believe that the traditions of British diplomacy are more aristocratic than those of the other great States of Europe to which you have been accredited?—No, I should say not. Of course, the States vary. It certainly is not true as regards Germany, Austria, Russia, Italy, and some of the smaller countries like Holland and Spain. It may be true as regards France.

39,781. Did you find it difficult to make yourself acquainted with the movements of popular feeling in the countries to which you have been accredited. By reason of your being accredited to a Court, did you find it difficult to make acquaintance with popular leaders?—I should say it was a great facility.

39,782. You had facilities?—I should say it gave you great advantage.

39,783. It was said by one witness that possibly the Ministers might not take it well if, where they were contending with a great popular party, British diplomatists were to make friends with the leaders of that popular party?—Of course, anything like interference or mixing up with the internal politics of the country to which you are accredited is always very disagreeable, not only to the Court but to most of the political leaders. That is one of the greatest dangers. Certainly, in making friends with the leaders of a great popular movement you might very easily be represented as either sympathising with the movement, or as being antagonistic to the movement, and either of those tendencies would be very much resented.

39,784. But while avoiding both Scylla and Charybdis, you may nevertheless be able to obtain all the information you want without exciting notice or objection?—You certainly could in most cases. Of course, if the movement was very prominent and attracted a great deal of attention at the time it would be probably unwise to have anything to do with the leader of it. But that applies to any sort of movement—not a popular movement, but any kind of internal movement.

39,785. (*Mr. Matheson.*) There has been a change in the examination for the Foreign Office and the Diplomatic Service a few years ago. Have you any opinion on the kind of men who are coming in on the new system?—I believe they are very satisfactory.

39,786. Speaking of the younger men generally, do you find that the men who come in fresh are fairly ready to learn about the countries they are appointed in?—Certainly.

39,787. (*Mr. Shipley.*) As head of a mission, do you frequently get information through the young attachés that would not come to you direct? An illustration of what I mean is, if my undergraduates want me to know something they sometimes let the young B.A.'s know?—I think a junior secretary may often get useful information.

39,788. Information which would not readily be given straight to the head?—Yes, or get it from one of his junior colleagues who is less discreet than his chief.

39,789. That is a help?—Yes, I think it is a help for the junior secretaries to see a good many people. They know what is going on and many pick up something.

39,740. And often in that way get information which is valuable to the Minister?—Yes.

39,741. (*Chairman.*) In regard to transfers, are you ever consulted? Do you, on getting the order to go, simply go, or may you represent any personal or private circumstances which would make it inconvenient for you to go?—Yes, you may make a representation.

39,742. Are you asked whether it is convenient for you to go to such and such a place?—In some cases you are and in some cases not.

39,743. In regard to promotion, does promotion go usually by seniority or is it by selection by merit?—Ambassadors are always selected, I believe; but up to that post lately it has been entirely by seniority.

39,744. It would be difficult, I suppose, to work any other rule?—Of course there is always a difficulty.

39,745. Is there any organisation in the Foreign Office by which a rule of selection by merit could be worked? Is there any board of selection or any such office organisation?—There is no existing organisation.

39,746. Of course, it ultimately rests with the Secretary of State; but are all promotions made by the Permanent Under-Secretary or the Assistant Secretary?—I think they are made by the private secretary to the Secretary of State.

39,747. Then he is a very powerful man?—Very.

39,748. Could you give me an idea of the way in which the difficulties with regard to transfers and travelling expenses might be overcome?—I think the most logical way is what the Germans do, which is simply that the transferred secretary sends in vouchers for the whole of his expenses, which are paid by the German Government.

39,749. He sends in bills stating each head of expenditure?—Yes; regular vouchers from the tradesmen, the furniture movers, and so on.

39,750. (*Sir Henry Primrose.*) Do they allow all the expenses?—Yes.

39,751. And of the wife and family?—Yes, and servants.

39,752. (*Chairman.*) Then the transferred officer would gain nothing and he would lose nothing?—No; he is supposed not to be out of pocket.

39,753. Is that a very sensible head of expenditure in the German foreign diplomatic system?—I should think it must be considerable, judging by my own expenses when I moved. The Germans stay about as long as we do in their posts, and are transferred about as often as we are.

39,754. Have you any idea what percentage of your pay has your cost of removals been?—Of my pay it is about 50 per cent.

39,755. Do you mean per annum? Do you say that on account of the cost of travelling and cost of removals you have had to pay so much as 50 per cent. of your salary?—About that; but, of course, for a bachelor it is nothing like that.

39,756. (*Mr. Holt.*) That is on the one year in which the transfer takes place?—No; I mean my net pay is really about 50 per cent. less than what it appears.

39,757. (*Mr. Matheson.*) Averaging the years?—Yes.

39,758. (*Chairman.*) Over a series of years in your case it has been so much; but in the case of a bachelor it would be less?—Far less.

39,759. Would you say yours is a maximum?—Oh no, because other people live in a larger way than I do.

39,760. Yours is the case of a diplomat living in a quiet way?—A very quiet way.

39,761. Your expenses of removal cost 50 per cent. of your pay?—I should say about that. It costs me about 400*l.* usually, and my pay is about 400*l.*, and I am taking it that I move every two years, which is what you are supposed to do in the way of moving; but you may be lucky and not move so often.

39,762. If that state of things continues nothing that this Commission can do in the shape of recommending open competition and equalisation of pay can really widen the classes from which diplomatists are drawn?—Not if they are married. I have had experience of moves both married and unmarried. If you are a bachelor then your moves cost you comparatively little, because there is no need to have a lot of furniture.

39,763. You could not suggest any relation between the expenses of a married diplomat and the expenses of an unmarried diplomat?—No.

39,764. When unmarried, did your costs of removal come to 10 per cent. of your pay?—I do not think they did, but I never took any furniture with me when I was unmarried. Some do. It is entirely a question of furniture really.

39,765. (*Sir Henry Primrose.*) You get a certain allowance?—Yes, but it is so small that except in exceptional cases it is no use. It is when you have a long sea passage; but in the case of an ordinary transfer in Europe you only get 20*l.* or 30*l.*

39,766. (*Mr. Holt.*) Speaking of the Diplomatic Service as a whole, would you say the members of it are more or less in financial difficulties?—I do not think so.

22 May 1914.]

The Hon. FRANCIS OSWALD LINDLEY.

[Continued.]

39,767. (*Chairman.*) That was suggested by Mr. Boutwood on a quotation based on Sir Robert Morier's book?—I have read the book. But the Minister's pay is not nearly so good now as in his day. A chief of a mission in his days calculated to live on his pay, but

now he cannot in many capitals. You have to go on spending your private means after you reach the top of the tree. You never had to do that in the old days. Several missions have been reduced in pay, and the expenses have gone up enormously in all of them.

MR. HAROLD EUSTACE SATOW, H.B.M. Consul at Trebizond, called and examined.

39,768. (*Chairman.*) You belong to the Levant Consular Service?—Yes.

39,769. When did you enter the Service?—In 1897. I passed my first examination then.

39,770. Before passing the examination had you to receive a nomination from the Secretary of State?—No, not as far as I remember. My father really did it all; I do not know much about it.

39,771. In the regulations which are now in force they say: "The following regulations apply to persons who may be nominated by the Secretary of State for Foreign Affairs to compete for student-interpreterships in the Ottoman Dominions, Persia, Greece, and Morocco." From that it appears that nomination is now necessary?—Apparently.

39,772. You passed an open competition?—Yes.

39,773. Did you remain in England for any time after you were first appointed?—Yes, I went up to Oxford for two years.

39,774. Then did you pass an examination at the end of the two years?—Yes, I passed one at the end of the two years and one at the end of the first year too.

39,775. Did you follow a prescribed course of study during your stay at Oxford?—Yes.

39,776. Is that the case at the present time?—I believe so—at Cambridge.

39,777. Having passed your final examination at Oxford, did you join the Service?—I went to the Embassy at Constantinople.

39,778. Were you attached to the embassy?—Yes, part of the time, and to the consulate part of the time.

39,779. Did you study the Oriental languages at any particular place?—We did that at Oxford. If I may explain, the original system of student-interpreterships was that they went out to Constantinople and stayed at a place on the Bosphorus. The Foreign Office then gave that up and sent them to Oxford. They got rather doubtful about it then and sent some to Cambridge. In my batch two were at Oxford and two were at Cambridge; and finally it was decided that Cambridge was the more suitable place, being more suitably staffed, and they now all go to Cambridge, I believe.

39,780. Before passing the open competition did you read with a coach?—Yes. I went for a year to Scoone's.

39,781. Do men still go to such a place?—I really do not know. Certainly in my time I think everybody who came up had been to some crammer's.

39,782. The examination is not very difficult. You required a good knowledge of French and Latin?—Yes.

39,783. Is that same examination still in force?—As far as I know it is on those lines. There may have been some modifications.

39,784. On going out to Constantinople and being attached to the embassy, on what kind of duties were you engaged?—When I first arrived they did not seem to know what to do with me, so I was attached to the chancery and worked there, where I learnt how to docket despatches, and other routine work, for three or four months, and then I was sent down to the shipping office at the Consulate-General, where I did shipping work until I was sent out into the provinces.

39,785. How long did you remain at Constantinople?—The first time about 10 months.

39,786. On that sort of routine work?—Yes.

39,787. Then you were sent into the provinces. Where were you sent to?—I was sent to act at Adana, a town 40 miles from the coast.

39,788. What sort of duties had you to perform there? Were they commercial or diplomatic?—I happened to go there in the summer when there was very little doing as it was the dead season. They were not commercial duties, I think.

39,789. Was there an English Colony there?—A very small one. In those days the consul actually lived at Mersina, which was the port, and went up to Adana to see the Governor-General when required. The shipping work then consisted chiefly of issuing bills of health for Cyprus as required, but most of the work was composed of the ordinary miscellaneous dealings with the Turkish authorities, which in Turkey take up a great deal of a consul's time.

39,790. If they were dealings with the Turkish authorities they must have been somewhat of a diplomatic character?—I should say so.

39,791. You stayed there for some time. Where were you sent to next?—To Van, in Armenia.

39,792. Were the duties you had there more commercial?—No, they were entirely political.

39,793. How long did you stay at Van?—I was acting as vice-consul for one year and nine months. Van is really a military vice-consulate.

39,794. From Van where did you go?—After I had been on leave I went back to the embassy as acting third dragoman.

39,795. What are the duties of the dragoman?—The dragoman in those days had to deal with the Turkish authorities, and to follow up every possible kind of case at the Sublime Porte and in the different ministries, at the Custom House, and at the Police Office.

39,796. Were your duties pretty much what would fall to a secretary to the embassy?—No, a secretary could not have done it, because it required a knowledge of Turkish.

39,797. In all that there was no commercial business?—None at all, except that some of the claims were of a commercial nature, such as claims for compensation.

39,798. Had you to do with merchant shipping and with British sailors, and so on?—Not in the least. All that is done by the consulate.

39,799. And up to that time your rank was that of vice-consul?—I had been acting vice-consul.

39,800. Then when you became dragoman you continued doing the same kind of work?—Yes.

39,801. What was your next promotion?—Then I was promoted to be vice-consul. I was promoted while I was at the embassy to be vice-consul at Scutari, but I never went there, and in 1904 I was sent to Uskub, in Macedonia, where I stayed for 5½ years.

39,802. Had you any commercial work there?—Very little—an occasional inquiry.

39,803. Mostly it was the kind of work in connection with the Government authorities which you have explained to us?—During the whole time I was in Macedonia the reform scheme was in progress—the international scheme of reform—and a species of perpetual revolution going on. Most of my time was taken up in acquiring as accurate information as possible as to what was going on in the country.

39,804. In point of fact that was work of a diplomatic character—collecting information on the political situation and the condition of things?—Yes.

39,805. Are the duties you have now explained to me a fair sample of what men in the Levant Consular Service are generally engaged on?—In the interior posts certainly. As regards trade in all the interior towns of Turkey it is not done direct with foreign countries; it is done through the nearest big town. For instance, in Uskub the importers imported the greater part of their goods either through Salonika, which was the nearest town, or else through Constantinople, and I should doubt whether a third of the trade of the town was direct. Therefore, there was no question of commercial inquiries, because the people

22 May 1914.]

Mr. HAROLD EUSTACE SATOW.

[Continued.]

were not capable of dealing with manufactures in Europe directly. They cannot use any language but, say, Bulgarian, Turkish, or Greek in the smaller towns.

39,806. You remained at Uskub for six years?—Five and a half years, until 1909. Then I was promoted to be consul at Jerusalem, where I stayed two and a half years.

39,807. Were your duties there of the same kind as you performed in your previous posts?—There was perhaps more dealing with Europeans. In Jerusalem again the surroundings are quite different because there are a very fair number of British subjects there, and practically all of them are either missionaries or Jews. The consul there has to deal with a great many questions connected with missions, assisting missions in matters of schools, permits, and questions connected with land.

39,808. So that the question of trade came very little to the front?—In Jerusalem there is practically no trade; it is not a commercial town.

39,809. The impression I form is that the duties of the Levant Consular Service are closely connected with those of the Diplomatic Service; you work in with each other?—Yes.

39,810. You are the agents of the Diplomatic Corps there?—Of course there are trading towns like Constantinople and Smyrna.

39,811. (*Sir Henry Primrose.*) Have you any magisterial duties as a consul?—Yes, there are consular courts. Every consulate is also a consular court.

39,812. (*Chairman.*) What pay did you receive when you were appointed first as vice-consul?—400*l.* a year,

39,813. While you were at Oxford did you get an allowance?—I got 200*l.* at Oxford, and I had 300*l.* as assistant at Constantinople.

39,814. And when you were appointed vice-consul you got 400*l.* a year?—Yes.

39,815. Is the Service divided into vice-consul, consul, and Consul-General?—Yes.

39,816. Are those the three stages?—There are also, starting from the beginning, two more—the student-interpreter and the assistant.

39,817. How long does a student-interpretership's office last?—Two years. That is the time one spends at the university.

39,818. Student-interpreter, assistant, vice-consul, consul, and Consul-General?—Yes.

39,819. As student-interpreter you get 200*l.* a year?—Yes.

39,820. As assistant you get 300*l.* a year?—Yes.

39,821. As vice-consul you get 400*l.* a year?—Yes.

39,822. Are there grades of vice-consul?—No.

39,823. Then what is the next step after 400*l.*?—The consul at 600*l.*

39,824. What is the pay of the Consul-General?—It seems to vary, but I think from 800*l.* to 1,000*l.* That depends upon the different posts.

39,825. Does every consul get his 600*l.* a year?—I believe so, as far as I know.

39,826. Is there any grade between the 600*l.* a year and the 800*l.* a year which is the pay of the Consul-General?—Recently they have placed certain consulates—I only know of my own—on a sliding scale rising to 700*l.* My present post is now 600*l.* to 700*l.*

39,827. And the Consul-General is 800*l.* to 1,000*l.* Is that the highest pay that a member of the Levant Service can hope to reach in the regular line?—As far as I know. I have not seen the Foreign Office list recently.

39,828. How many Consuls-General are there?—I really do not know, because there are several in rather an uncertain situation at present—I do not know whether they still exist or not—owing to political changes.

39,829. There is no inter-connection so far as promotion goes between your Service and the Diplomatic Service?—None at all.

39,830. Is there any feeling in your Service on that point?—Yes, I think there is occasionally, that some of the leading men might find an outlet in diplomatic posts in the Near East.

39,831. There have been instances of that kind of promotion?—Recently, since I have been in the Service,

certain members of it, like Sir Adam Block, have got posts outside, but not in the Diplomatic Service.

39,832. What post did Sir Adam Block get?—That of delegate on the Public Debt, representative of British and Dutch Bondholders.

39,833. An outside appointment altogether?—Yes.

39,834. (*Sir Henry Primrose.*) But nominated by the Government?—I believe so, or at any rate with the approval of the Government.

39,835. (*Chairman.*) Is life in Constantinople very expensive?—I am told so. I am not there now myself. I am in Trebizond. It must have increased, as in all the other towns.

39,836. Is the life in Trebizond expensive?—Yes, the cost has increased a great deal.

39,837. But the pay which you receive is adequate for life in a place like Trebizond?—Yes. One has to live on very simple lines, but it is quite adequate at the present moment.

39,838. Is it adequate for a married man with a family?—It depends on the size of his family, of course. I have only one child myself, and it is sufficient, but prices are still rising.

39,839. Do you furnish periodical reports on trade matters to the Ambassador at Constantinople?—No, I correspond with the Commercial Intelligence Branch of the Board of Trade direct on trade matters.

39,840. Not through the Embassy at Constantinople?—No.

39,841. Are you subordinate to a Consul-General?—No, I am not.

39,842. Is there any subordination between the vice-consul and the consul, and then between the consul and the Consul-General?—No. I think, as a rule, the subordination is between the vice-consuls and the consul or Consul-General.

39,843. Is it permissible for the consul to go and inspect the office and supervise the work of a vice-consul?—Yes, if he obtains permission from the embassy.

39,844. He must obtain permission from the embassy before he can go and inspect the office of a vice-consul?—Yes.

39,845. It is not a recognised part of his duty?—No.

39,846. Are you called upon by the Board of Trade to furnish reports upon special matters?—Yes, occasionally.

39,847. Do you ever correspond with commercial firms in England as regards pushing their commercial enterprises?—Whenever they write to me I answer them to the best of my ability, sending the reply through the Board of Trade.

39,848. You do not have any direct correspondence with commercial firms in England?—No. If there is any subject of interest or any opening which I think is capable of being developed, I would call the attention of the Board of Trade to it, and they inform the people at home, I believe.

39,849. Would you think it within your province to endeavour to promote the commercial interest of any particular firm. Says a firm wanted to push the sale of a particular article, would you consider it part of your duty to help in that?—Yes. If a firm writes to me I always do my best. Of course, if they were going to compete with another British article that might be a different matter. My object is that a British firm should get what is going.

39,850. But if it was a matter of competition between a particular British firm and a German firm, would you consider it your duty to help the British firm?—Certainly, as much as possible.

39,851. Do German consuls act in the same way?—I really do not know much about German consuls.

39,852. Or the consuls of any other nation?—I do not think the German Consul does as much as he is reported in the Press to do, if I may say so, because I have had in Turkey personal friends among Germans whom I know very well indeed and who have said to me sometimes: "What a lot you do for your British subjects, I wish our consuls would do as much for us." I do not think that was said with a view to flattering me, because I knew the people too well.

22 May 1914.] ,

MR. HAROLD EUSTACE SATOW.

[Continued.]

39,853. (*Mr. Graham Wallas.*) A consul who was giving evidence before us complained that the arrangements for providing him with quarters and furniture were extremely inconvenient, that he arrived at one post in a savage country and found that there was nowhere for him to live and no paper, and no office material at all. Do you find that the arrangements in the various posts you have been in for the provision of furniture and office apparatus are satisfactory?—No; I quite agree with him in regard to savage countries. For instance, in the case of posts in the interior of Turkey where you may be three weeks from the coast, you may arrive there and find absolutely nothing unless your predecessor has saved something for you. It is very difficult to get anything made on the spot, and you may not even find a house in some places. I know one of the consuls at Erzeroum had to live in a sort of inn for a long time. I think he was taken in at last by a friendly missionary.

39,854. Do you think that with a little trouble it would be possible in most consular places for the British Government to take a long lease or freehold of a house, fit it, furnish it, and let successive consuls hand over the house to each other?—I think something on those lines ought to be done in the interior of a country; otherwise a consul is put in a very awkward position indeed. For instance, I think the bare necessities of a house ought to be there; he ought to be able to find beds, and just the skeleton of a house for him to go into.

39,855. Have you yourself suffered actual practical inconvenience from turning up and finding an unfurnished consulate?—At Van there had been something on those lines done, and there was a certain nucleus of furniture belonging to the Government. I do not know how it had got there. Otherwise you have a camp-bed with you always, and you can get along somehow.

39,856. If your predecessor has provided furniture and wants to sell it, a bargain has to take place between two men who do not know each other in a great hurry from a distance and it is very difficult to carry on with fairness?—Of course one always loses on the transaction.

39,857. Does the Government provide you with sufficient attendants. One consul said there was no one to prevent a drunken sailor from penetrating inside his office?—In my experience in Turkey the attendants are always sufficient.

39,858. And there is always one at each consulate?—Yes.

39,859. Is he a Government servant?—He is paid out of the office allowance. There are generally two.

39,860. In going from these interior posts to an important post, say Smyrna, is there some difficulty in getting a suitable office?—In Smyrna the consulate belongs to the Government and is a Government building.

39,861. But where it is left to the consul he might find it rather difficult to get a suitable office?—He might.

39,862. Landlords do not very much encourage consuls as tenants, do they?—They do not encourage them in this way, that they try to squeeze them to the utmost limit. For instance, at Jerusalem I left my lease to my successor, who was perhaps more particular than I was; at any rate he demanded that some of the rooms should be whitewashed by the landlord, who refused, and therefore my successor left the house, and the landlord was so aggrieved that he telegraphed to the embassy to complain. They expect that the consuls will pay double the rent of anybody else and have nothing done for them.

39,863. You think therefore that if the Government could make a fairly good permanent bargain it would prevent successive consuls from being unfairly squeezed because they have to act in a hurry?—I think it would. In Turkey, at any rate, there are, as a rule, very few houses available in any case, so that you are very much at the mercy of a speculator.

39,864. You would strongly urge that so far as possible the Government should provide offices and furniture, to remain the property of the Government?—Yes.

39,865. As to the superannuation in the Levant Consular Service, at what age does superannuation take place?—It is possible at 60, and it is obligatory at 65.

39,866. Is it based on the final salary received by the superannuated person?—Yes, the pension is based on that.

39,867. Then if a man, having done very good work in a bad climate, finds himself at the end of his life in a less important post he will be superannuated not upon his best post in the past but the post which he happens to be holding at the end of his service?—Yes.

39,868. Does that seem to you fair?—No.

39,869. What arrangement would you substitute for that?—But I do not suppose that a man, as a rule, ends up in a less well paid post than he had in the middle of his career. I have not heard of instances.

39,870. If so there would be no harm in regularising an arrangement by which a man is superannuated rather upon his grade than upon his post?—Yes.

39,871. It has been complained that the Government sometimes causes unnecessary trouble by paying at inconveniently long intervals. At what intervals do people in the Levant Consular Service receive their pay?—Personally I draw my pay every quarter.

39,872. Would it be more convenient if you could draw it monthly?—No, I think I prefer to draw it quarterly as at present.

39,873. You entered the Service by a rather severe specialised examination? Can you add in your Levant Service to your allowances by passing a further examination?—No.

39,874. You have nothing like the special allowances for languages which are given in the Diplomatic Service?—No, we are supposed to know the languages.

39,875. And you are supposed to know international law?—Yes.

39,876. It is taken for granted that once you are in the Service you will teach yourself the necessary things?—Yes, and as a rule you are obliged to do so because you need them.

39,877. Do you think it might improve the Service if either special leave or special allowances, or special opportunities of encouragement were given to men in the Consular Service to improve themselves, as in the case of the Diplomatic Service?—In languages do you mean.

39,878. In languages, or as in the case of the Diplomatic Service, in international law or in whatever other subjects might be chosen?—I think as regards the Levant Service, as we have judicial duties, we might be allowed to have some training in judicial matters, because at the present moment a consul or vice-consul has to administer British law by the Order in Council, and in my case, at any rate, I have had no training at all in law.

39,879. Neither in law nor in procedure?—No.

39,880. When a man goes out to India in the Indian Civil Service, very soon after his landing he may find himself to be a magistrate, and in order to prepare himself for that he visits and spends some time in watching the procedure of the London stipendiary magistrates. Do you think that opportunities of that kind might be useful to you?—I think very useful, and I think student-interpreters ought to be given some sort of training in legal matters when they are up at Cambridge.

39,881. They are, in fact, all of them going to be judicial officers?—Yes, all of them.

39,882. And they neither acquire any knowledge of law nor have given them an opportunity of acquiring a knowledge of law or legal procedure?—That is quite correct. That is as far as it refers to myself. I cannot say what has happened since I came into the Service.

39,883. Law is not even an optional subject like ancient Greek in the examination?—No.

39,884. Do you find that your administrative duties—the duties of holding a Consular Court, or negotiating with Turkish officers, the duties under the Merchant Shipping Act when you are at a port, and so on, form a somewhat different kind of work from your duties as a commercial agent for British firms? The two are rather sharply separated from each other in their character, are they not?—I should not say that the consul

22 May 1914.]

Mr. HAROLD EUSTACE SATOW.

[Continued.]

is a commercial agent for British firms. Is he supposed to be?

39,885. We have received evidence on behalf of the Chamber of Commerce which seemed to be based rather on that conception. If it is desired to develop what I may call the commercial side of the consular work, do you think it might be possible to develop it by a different set of officials from those who exercise the high judicial and other duties at present assigned to consuls?—More or less the position in Turkey which, of course, differs from other places, is this: Turkey is the East, to begin with, and the natives have perhaps rather an exaggerated idea of officials. The ordinary Turk, I think, is rather surprised to see a consul going touting round a bazaar, and, as a matter of fact, there is so much of a sort of underground work to be done really that a consul might spend a whole day doing nothing else, if he was to do that.

39,886. Do you say if we desired a set of what we may call high and specialised touts, it would be better to make a separate service of them and to put them in connection with the Board of Trade rather than the Foreign Office?—Yes, if you want to have a kind of official commercial traveller he should do nothing else, because you cannot combine the two in Turkey as far as I know.

39,887. A consul's position as a judge would, perhaps, be made a little more difficult by the fact that a defendant or plaintiff had been one of the persons he had touted the day before?—That all depends. In Turkey one only has jurisdiction over British subjects.

39,888. But a British subject might be one of the persons in an action you have to try?—He would be, of course.

39,889. When you return to the Foreign Office to report on occasions, is there at the present moment anybody in the Foreign Office, so far as your knowledge goes, who has had consular experience?—I have not met anybody in the Consular Department.

39,890. Do you think from the point of view of a consul it might be convenient if, when visiting the Foreign Office, there were some official there who had some experience of some of his duties?—I think it might, because it is impossible to expect a Foreign Office official who has, perhaps, never seen a consulate, to understand much about the workings or the difficulties of one.

39,891. Do you know the custom in other English Government departments by which a man of experience, in what may be called the outside work of the department, is, perhaps, after 20 years of experience, largely retained in the department as a means of communication? I refer to the Chief Inspector of Education, who is the means of communication between the education inspectors and the Board of Education. The Chief Inspector of Factories, who spends most of his time in the Home Office, communicates with the outside agents. Do you think the existence of an experienced consul, who should be the normal means of communication between the consuls and the Foreign Office—a man part of whose time should be spent in the Foreign Office—might be a convenient arrangement?—I never really thought of such a possibility. I should not like to give an opinion upon that.

39,892. But you can see no reason against it now?—I believe that in other Foreign Offices there are in the Consular Departments consuls—in the Austrian or the French—and the system seems to work very well there.

39,893. Have you in the East a large number of unpaid consuls?—I can only speak for myself, and in my consular district I have only one dependent consular officer, and he is a consular agent unpaid.

39,894. Have you come in contact with the system of unpaid consuls in other districts?—Yes, there are some; I could not say how many.

39,895. Would your experience suggest that it is desirable to increase or to restrict the use of unpaid consuls?—As far as the Levant is concerned I should restrict them.

39,896. You think with modern means of communication, and the fact that the consul can get about a great deal and communicate by post, telegraph, and so

on, there is not a very great advantage as against the obvious danger of unpaid consuls?—What I am always afraid of in a place like the Levant is, that the remuneration being very small, the man takes it on for personal ends, which is not desirable.

39,897. Personal ends may be either the legitimate end of increasing his importance, and therefore his trade, or less legitimate ends?—I should say even the legitimate end was not a desirable one—that a man should be flaunting the British flag in order to boom his own trade.

39,898. That is the most legitimate end that he can have before him?—Yes.

39,899. (*Chairman.*) In regard to your travelling allowance and cost of removals from one place to another, are you satisfactorily treated?—I have not really had any experience under the new scheme which only came into force quite recently, but it seemed to me to be fair.

39,900. Have you seen the new system in actual practice?—I have not, except that this time coming home on leave, I have had a proportion of my expenses paid.

39,901. Your leave counts from the time that you reach England?—Yes.

39,902. Were you paid your travelling expenses to England?—I was paid a half of my own and a third of those of my family.

39,903. Was the sum considerable? Was it a sensible addition?—It made a considerable difference.

39,904. Are you allowed the cost of removing your furniture and your heavy baggage. Can you include that in your bill of expenses?—No. Speaking from memory one's expenses are only allowed to include those for personal effects, and one is given a certain sum, equal, I think, to one first class fare for oneself and one third for the family, or something of that sort; but I have not had experience of it yet.

39,905. (*Mr. Matheson.*) Do you think that on the whole the system of two years' training in this country is satisfactory?—I should think so myself, because I think at Cambridge there is, at any rate, a more or less scholastic atmosphere; whereas at Constantinople I should have thought it was very difficult for anybody to settle down and work at book work. They learn to pick up a smattering of the language and talk it, but I do not think it is a place to study seriously in; there are too many distractions.

39,906. In the general Consular Service there have been lately instituted people called Inspecting Consuls. Has that been introduced into the Levant, too?—Not yet.

39,907. You have not heard whether it is contemplated?—I believe it is contemplated. I rather hope so myself.

39,908. While Mr. Graham Wallas was asking you about the two sides of a consul's work, I gathered from what you told us that you yourself do not find under present conditions the two sides of your work incompatible?—No. Of course I am not in a very big place at the present moment.

39,909. It is a port?—Trebizond is a port.

39,910. What amount of shipping is there?—There is very little British shipping, practically nothing. There would be no question of discharging or engaging men there. It is mainly coasting trade.

39,911. Mr. Shipley, who is not at present able to be here, has asked me to put one or two questions to you. Should you say that on the whole the chances of promotion in the Levant were fairly good?—I think there is rather apt to be a block at the top occasionally. The prospects at the beginning seem to be very good, but after a time there comes rather a block; but I do not know how it compares with the general Service.

39,912. The notice about student-interpreters is headed "The Ottoman Dominions, Persia, Greece, and Morocco." Is it the case that practically the Service in Persia, Egypt, and Morocco does not afford much opportunity?—I do not think Persia affords much opportunity, although of late years they have sent more men into Persia. When I went first into the Service there was not a post in Persia held by a member of the Levant Service so far as I know, but there are

22 May 1914.]

Mr. HAROLD EUSTACE SATOW.

[Continued.]

several now. In Egypt the three consulates are held by men in the Levant Service—Cairo, Alexandria, and Port Said—and they have sent quite a number of men recently to Morocco.

39,913. Is there any complaint in the Service that some of the better posts in Egypt and elsewhere are filled from outside instead of from the Service itself?—The only complaint I ever heard was about Crete, and that, of course, has disappeared from the Levant Service now. That was for a time filled by an outsider.

39,914. Do you know anything about the Consulate at Adrianople?—No; Major Samson is there.

39,915. Was that post filled from the Service or from outside?—From outside. He was originally a military consul, but he seems to be more or less permanent now; it is an important military place.

39,916. Have you ever had occasion to compare the prospects or conditions of the Levant Service with those in China and the Far East?—No, I do not think I ever have.

39,917. We are told that the conditions of retirement in the Far East are far more favourable than in the Near East?—The conditions of retirement might be made perhaps a little more favourable in the Near East, because anybody living in Turkey is undoubtedly living in a more or less unhealthy climate the whole time, and certainly in unhealthy surroundings everywhere, both physically and mentally, and one is apt to get used up.

39,918. I am told that in the Far Eastern Service when a man has 25 years' service he can retire with fifty-sixtieths of his pay as pension; whereas, in your Service he could not get such a big pension in any circumstances, and he would have to serve 40 years to get forty-sixtieths?—I do not know about the China Service. I know about ours.

39,919. On the whole, is it true that, as compared with the general Service, there are fewer highly paid posts in your Service?—I really do not know the proportion.

39,920. At all events, taking the average, the conditions of life in your Service are more severe than in the ordinary Consular Service?—Yes. I remember the Foreign Office sent out a circular saying that consuls must not always expect to have comfortable posts; they must take the bad ones with the good. Members of our Service were rather amused at that, because we had practically all bad posts. It is a question of degree really. We have some very bad ones like Jeddah, on the Red Sea, or Bushire, on the Persian Gulf, but I should not say that any of our posts have really healthy climates.

39,921. Who settles your move from one place to another—the Foreign Office?—I believe the embassy recommends and the Foreign Office sanctions the proposals of the embassy as a rule.

39,922. But these recommendations come from Constantinople?—I believe so.

39,923. (Chairman.) When you remove from one post to another is your successor always sent from the embassy, or do you nominate your successor in any case?—When one goes on leave, the embassy usually sends the substitute.

39,924. In case of transfer your successor is nominated by the embassy?—Yes, or rather by the Foreign Office.

39,925. But in case you go on leave do you nominate your *locum tenens*?—In a great majority of cases the embassy appoints your *locum tenens*. The embassy always sanctions it.

39,926. If you leave in a hurry do you nominate your *locum tenens*, and leave it to the embassy to sanction?—If I wished to leave in a hurry I should apply for permission to do so, and either submit the name of a substitute or ask that one might be sent.

39,927. In regard to the office expenses, the rents of the consulates, and the pay of the clerks, and so on are paid from the office allowance—the lump sum?—Yes.

39,928. Do you furnish any account of the office allowance. Do you send in a monthly or quarterly account supported by vouchers?—No. Occasionally a

return is called for. One is supposed to keep an account of one's expenses which may be called for.

39,929. Does each consul keep a book in which the expenditure of his allowance is regularly recorded?—I do not think that is laid down in the regulations.

39,930. How is your system of promotion managed? Who orders promotion?—I imagine it is done in order of seniority.

39,931. You think the general rule is that of seniority?—I think so.

39,932. Is it done by the embassy or by the Foreign Office?—I think when any consulate is vacant the embassy proposes a name which is generally accepted by the Foreign Office.

39,933. (Sir Kenneth Muir-Mackenzie.) Promotion means being put to a better post?—Promotion in rank.

39,934. (Chairman.) You have no people of the character of the second division clerk employed in your consulates in the Levant?—No, but I believe at Constantinople there are special arrangements about the clerks employed at the Consulate-General there.

39,935. But in your consulate if you employ a clerk you employ a local man?—Yes, I engage him locally.

39,936. Has the consul's clerk a more or less permanent tenure. Does the successor take on the clerk of his predecessor?—As a rule.

39,937. Are the fees that you charge for your Consular Services adequate?—The fees all go to the Foreign Office with very few exceptions and are paid to the Treasury.

39,938. But are the fees commensurate with the services you render or are they less than they ought to be?—I think on the whole they are commensurate. A good many people come to one for things for which one cannot exactly charge a fee and those often give the greatest bother, but that is inevitable.

39,939. (Mr. Graham Wallas.) We have had it said that the fees in the British Service are rather lower than those charged in other Consular Services. Do you know if that is so?—From what I know of visés of passports and things of that sort I should think that is so on the whole.

39,940. (Chairman.) Have you come across many men of the general Consular Service?—One or two.

39,941. But not in such numbers that you could compare the men of your own Service with those of the general Consular Service?—No, I could not.

39,942. You could not say which, on the whole, you think the better Service?—No, I could not.

39,943. If you were in a post where your health had failed or had become enfeebled and you did not want to go on leave, but wanted to get a transfer, is it usual or possible to write to the Embassy at Constantinople to represent the case and to ask for a transfer?—Yes, I think so, and I think every effort would be made to meet one's wishes.

39,944. Are there many consuls or consular agents in Greece?—I think there are very few consuls *de carrière*.

39,945. (Mr. Shipley.) I have heard that some of the young men who start as dragomen and student-interpreters have been rather dissatisfied about people being introduced from outside into posts that they have been looking forward to fill. Do you know of such cases?—I have not heard of many such cases, except that in one or two places there are military vice-consulates for which one cannot always see the reason. For instance, there is a military vice-consulate at Van in Armenia.

39,946. Was not there an Oriental secretary at Cairo who was introduced from outside the Service?—Yes. I believe there was.

39,947. Was there nobody in the Service who could have been put there?—I really do not know. I dare say they could have found somebody.

39,948. You started as a student-interpreter. How many languages do you talk?—I can talk four fairly fluently.

39,949. Turkish?—Yes, and French, German, and Italian; and I understand bits of a good many other languages.

22 May 1914.]

Mr. HAROLD EUSTACE SATOW.

[Continued.]

39,950. Is it not rather a disappointment to some of these men when posts are advertised in Egypt, Persia, and the Ottoman Dominions to find that practically the Persian posts are largely occupied by military men and paid for by the Indian Government?—I believe there are more posts in Persia occupied by members of the Levant Service than there used to be, but I really do not know much about the Persian side of the Service or what their relations with the Indian Government are there.

39,951. (*Chairman.*) Is there any feeling in your Service in favour of closer union with the Diplomatic Service? Is there any general feeling that your work is so allied with that of the diplomatic work in the Levant that there ought to be closer assimilation of the two Services?—I have not had much opportunity of seeing other members of my Service for the last few years. I have been in outside posts, so I really do not know; but I think there is a feeling that there might be more chance of an outlet at the top somehow by allowing one to pass the last few years of one's

service before pension in better surroundings, say, in some European post, if one was capable of it. After many years' service in these Turkish towns all one has to look forward to is Beyrout or Constantinople, or Smyrna, which is the same thing on a larger scale.

39,952. From the account that you have given of the work which you do, which is much more diplomatic in character than commercial, do you think that the majority of your Service would be fitted for consular work at such a town as Hamburg or Antwerp, or some of the great European ports?—I imagine a man who was Consul-General at Smyrna, or at Constantinople (which is a very important shipping office), really would have had good experience of shipping.

39,953. If there was an opening at the top in that way there would be some relief to the block lower down in the Service?—Yes. I think members of the Service are only too willing to do all they can in commercial matters, but it is rather difficult to know what is wanted sometimes.

## NINETY-NINTH DAY.

Thursday, 28th May 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman.*)

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Mr. ARTHUR BOUTWOOD.  
Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. GRAHAM WALLAS.

Mrs. DEANE STREETFIELD.  
Mr. N. E. BEHRENS (*Secretary.*)

Mr. LIONEL EARLE, C.B., C.M.G. (*Secretary to H.M. Office of Works*), called and examined.

39,954. (*Chairman.*) For how long have you held your present post?—Since the end of October, 1912.

39,955. During that time you have acquired information regarding the provision of quarters for the staffs at embassies or missions?—Yes. Since I have been at my present post naturally I have had to deal with these diplomatic dwellings abroad, both for the Diplomatic Service proper and for the Consular Service.

39,956. Previously you had, I understand, visited several embassies and legations?—Yes: I was a considerable time at Paris. My uncle, Lord Lytton, was Ambassador there, and I was for one-and-a-half years attached to the embassy. I have been on various missions to other countries, twice to Madrid and Constantinople, and once to Athens.

39,957. Have you been to Berlin?—Yes. I was a month in Berlin as guest of the present Emperor, when Prince William, as interpreter to four English colonels who went out there to the manœuvres.

39,958. Have you visited St. Petersburg?—Never.

39,959. Vienna?—I have been there twice; once, many years ago, when I was a boy, and the other day I stopped three days at the embassy when on my way to Constantinople.

39,960. I wanted to know if you are acquainted with the embassies?—I think I have visited every embassy in Europe with the exception of St. Petersburg, and a great many of the legations.

39,961. Then you are peculiarly competent to speak on the question of the accommodation provided for the Diplomatic Staff?—As regards Europe, perhaps; but I have not been farther afield than some of the North African posts.

39,962. As a rule, are quarters provided at the embassies and legations for the Diplomatic Staff attached to them?—No. In European capitals and other places where suitable houses can be rented, accommodation is not provided for officers below the rank of the head of

the mission. Counsellors of embassies, however, receive a house allowance. In some cases the head of a mission allocates a suite of rooms to his private secretary in places such as Paris, Berlin, Madrid, Rome, etc.

39,963. Is the private secretary usually a member of the Diplomatic Staff?—Usually, but not necessarily. At present in Constantinople Sir Louis Mallet has an honorary attaché who acts as private secretary; he is a soldier. At Constantinople residential accommodation is provided for all the unmarried staff. It is a very large embassy, and in olden days, I suppose, the country was even less civilised than now, and it was considered desirable to have all the staff as far as possible inside the house, which is almost fortified. The Foreign Office have written to the foreign governments asking for exact details of the accommodation which they give to their secretaries, etc., and that information I will send on to the Commission when it arrives. In remote or non-civilised countries, at places like Adis Ababa, Bangkok, Peking, Teheran, and Tokio, accommodation is provided for the whole staff of the embassy or legation.

39,964. (*Sir Kenneth Muir-Mackenzie.*) Why have not you got that information about the accommodation for secretaries already? Is that because it is entirely a private affair?—Not at all; but I was only summoned to appear here a few days ago (really for the 18th June) and then I was asked to appear this morning because a witness has failed.

39,965. (*Chairman.*) But ought not that information to be on record in your office?—It is entirely at the option of the ambassador. At Paris there is accommodation in the chancery provided for a secretary.

39,966. Accommodation is provided, I understand, for the staff of the missions and embassies in the East—in Tokio, in Peking, and Teheran?—At Adis Ababa and Bangkok accommodation is provided for the whole staff; it is a complete compound.

39,967. And also in Constantinople?—Only for the unmarried staff there; not the married staff.

28 May 1914.]

Mr. LIONEL EARLE, C.B., C.M.G.

[Continued.]

39,968. In none of the western European capitals is such accommodation provided?—Not for more than one or two secretaries.

39,969. If accommodation had to be provided, to what extent would it be necessary to build or to buy houses?—I think that would be a very difficult matter to decide. I will give an instance of what I saw myself the other day at Constantinople. In this vast embassy accommodation is provided for at least five unmarried secretaries. At the present moment there is only one unmarried secretary on the whole of Sir Louis Mallet's staff, in addition to the honorary attaché—his private secretary—to whom I have referred. The position is exceptional, but it means that the whole of that accommodation provided for at least five unmarried secretaries is completely unoccupied, with the exception of those two gentlemen who live at the embassy at the present moment. That seems to me to point very largely to the difficulty of arranging for permanent accommodation for any of these gentlemen. Supposing one provided a house for four or five unmarried secretaries at Paris, it is quite possible that you might have only one or two at the outside unmarried, and out of those one might have considerable private means—or both might—and they might say, "Unless we are compelled to live at the embassy, we prefer to live at our own expense in our own apartments."

39,970. If the Government did provide accommodation, the staff would, I presume, be expected to occupy it?—That is a question. The Foreign Office might compel them to; but if quarters were provided for the staff below the rank of counsellor, it seems to me adjustments of salary would probably have to be made, and possibly the burden of keeping up official quarters adequately might fall hardly on the occupants, particularly if occupied by the married secretaries with small incomes.

39,971. At the present time, as you know, a member of the Diplomatic Staff must have a minimum private income of 400*l.* a year?—That is so.

39,972. If it were thought desirable to throw the Diplomatic Service open to public competition, it would be unreasonable to expect that all men coming in by open competition would have 400*l.* a year?—Quite so.

39,973. The Commission are desirous of considering what arrangements would have to be made if the condition of the 400*l.* a year private income were to disappear. It would then be necessary to provide for diplomatists an official salary, as in the case of the Foreign Office clerks; and some allowances would have to be provided owing to the extra expenditure which diplomatists abroad have to incur. It has been suggested that the allowances might to some extent take the form of freedom from house rent, and thus the question arises, What charge would the provision of free house accommodation for the Diplomatic Service impose upon the public revenues?—It is impossible to say. Do you mean buying freehold sites and building, as we do in the case of an embassy, or merely leasing premises?

39,974. Which ever way would be the more economical it would be for your department to judge. The point which immediately interests us is the cost of providing free accommodation for the staff?—It is very difficult for me to give an exact figure. My impression is that it would come to nearly 100,000*l.* a year, certainly for a term of years, possibly ten; but it is very difficult to estimate, because so much depends on localities. In South America we have no properties of our own, with the exception of one at Petropolis near Rio. It has always been considered inadvisable to hold freehold property there, partly on account of the insecurity of tenure, and the violent upheavals which used to take place—it is more quiet now. You could not give such accommodation to the staff without providing for Ministers, and it would mean a large additional staff in my office, because these places would have to be periodically inspected to see that they were in proper repair.

39,975. Am I right in thinking that you do provide Ambassadors and Ministers with free house accommodation?—Not in South America. They have a house

allowance and provide their own house, with the exception of this one place near Rio, Petropolis.

39,976. Do you provide Ministers with free accommodation in European stations?—Yes, everyone in Europe, except Belgrade, Munich, Darmstadt and Dresden where the Minister has, as a rule, a house allowance.

39,977. Is the property forming the embassies and the missions freehold of our Government?—All freehold with the exception of St. Petersburg and The Hague.

39,978. If the Government decided to provide quarters for the staff you would either have to acquire further freehold property to build on or you would have to lease them?—That is so.

39,979. We should like to know your opinion as to which would be the less expensive method for the Government to adopt. Another question would arise, namely, whether the provision of quarters would be more acceptable to the diplomatic staff than a house allowance?—I think a house allowance would be infinitely cheaper to the State; but much would depend also on what the views of the Foreign Office were as regards the necessity of the closeness or proximity of the accommodation to the actual legation or embassy. These embassies are in the most fashionable or principal quarters—anyhow, the most select quarters—of the town in every instance. Therefore, if it was considered a necessity that the staff should be near the embassy—which I do not think would be absolutely the case, on account of such things as tramways, which are now so largely introduced in all the great towns of Europe—the price would be considerably enhanced. On all those points it is very difficult for me to form a reliable estimate as regards cost at this stage. As regards the Diplomatic Service alone, I do not believe it would cost very much less than 80,000*l.* to 100,000*l.* a year, certainly for a term of years. As regards the Consular Service it is a very much larger business.

39,980. Do you mean that 80,000*l.* or 100,000*l.* a year would be the total annual cost, including the purchase of the freeholds?—Yes; and the cost of maintenance, the increase in staff to visit these places, and their travelling expenses, which would amount to very considerable sums in the case of outlying places like South America.

39,981. The diplomatic staff do not now receive house allowances?—Only the counsellors. The counsellors of embassies receive about 150*l.* a year. In Paris, where probably the rent is higher, the amount is 200*l.* a year, I think, and in Madrid and Rome, 100*l.* a year.

39,982. Have you any information with regard to the practice of foreign Powers in connection with the housing of their diplomatic staff abroad?—I have only this information: As regards Germany they practically provide the same accommodation as we do in various places like Tokio and Constantinople. At Constantinople a house is provided for the first secretary subject to a deduction of 10 per cent. from his salary. We provide our counsellor with no house but he gets an allowance instead. As regards the other Powers I cannot give you definite information yet, although I believe the system is practically on the same lines as our own; but I have asked the Foreign Office to circulate the foreign Powers as to the way they treat their officers in this respect, and directly I receive this information I am prepared to forward it to the Commission if they should desire it.

39,983. The one outstanding fact from your evidence so far is that if the Government did provide house accommodation for their diplomatic officers and charged them nothing, it would impose an additional charge, so far as you can judge, of about 100,000*l.* a year?—I should think so, for a term of years.

39,984. As to the preference of the staff between living in Government quarters or hiring quarters of their own, we have been told by one gentleman that so far as he personally was concerned, he would prefer to have Government quarters because it is sometimes difficult to get accommodation in the proper part of the town, and at all events it would be expensive. Probably you could not lay down any general rule about

28 May 1914.]

Mr. LIONEL EARLE, C.B., C.M.G.

[Continued.]

the wishes of the Service on the point?—I should have said that in places like Constantinople, and places where there is not much society, they would probably prefer the accommodation to be provided for them; but I very much doubt if they would prefer it in places like Paris, Vienna, Berlin, or Rome.

39,985. Now, passing on to the Consular Service, are there houses provided for consuls in any parts of the world?—Yes, but generally a rent allowance is given, and the office is provided and furnished by the consul. At several of the missions, such as Bucharest, Constantinople, Tangier, consular office accommodation is provided.

39,986. Do you provide it in accordance with any general rule. Do you classify places into those at which you provide accommodation, and those at which you do not?—Yes, we generally provide free accommodation in all countries which are practically non-civilised, like Katanga, and places in West Africa, and even in countries like Morocco. When buildings suitable for the accommodation of Europeans cannot be readily rented, offices and residences are provided by the Government after a sufficiently strong case has been made out by the Foreign Office; as, for instance, in Persia, Africa, China, Japan, Corea, Siam, Pacific Islands, Faroe Islands, Ionian Islands, and New Caledonia.

39,987. Do you provide office furniture also?—As regards the office, yes, where the building is the property of the Government; not as regards the house, except in some remote cargo stations where a rent on furniture is charged.

39,988. Do you not provide the substantial pieces of furniture, such as beds and tables?—We do not provide furniture for the house, only for the office.

39,989. Apart from the class of places you have mentioned, do you leave consular officers to provide their own houses and office accommodation, giving them an allowance?—In places where it is easy to find accommodation, yes, that is the practice. The Foreign Office give the allowance, not the Office of Works.

39,990. As a general rule?—As a general rule.

39,991. Are there exceptions to that in European consular stations?—Yes; at Constantinople and Thorshavn.

39,992. Do you provide official residences for all Consuls-General at all places?—I think for some but by no means all; for instance, in Buenos Aires there is a Consul-General, and we have not provided any official residences in those South American countries.

39,993. Would it be very troublesome to your department if we were to ask you to furnish us with a statement of the places where you do provide houses?—You certainly shall have it.\* I have actually a statement here of the houses in China and the Far East, but I will have a complete statement made out. In China and Japan there are a very large number of places in the various towns; they must amount to 30 or 40 different houses.

39,994. (Mr. Holt.) You go further than houses, and provide gaois and all sorts of things?—Yes, gaois too.

39,995. And, I suppose, all their offices too?—Yes. We have four architects always in China the whole time.

39,996. (Chairman.) Would you say that the general rule is rather that you do not provide houses for consuls (excluding the Far East) than that you do?—I should say the rule was that we do not provide houses except in the Far East or in uncivilised places.

39,997. Has the question of providing houses for consuls ever been dealt with by your department as a whole?—Not that I know of. I should say it is a question of policy more than anything else, which would depend more upon the Foreign Office than upon ourselves.

39,998. We were told with reference to a complaint that had been made that British consulates are situated away from the best streets, while the consulates of other nations are situated in prominent parts of the town, that where the consul has a good deal to do with merchant shipping house-owners do not willingly let their houses for the purposes of a British consulate. The reason given is that rough sailors congregate in large numbers at the British consulates?—

Take a place like Barcelona: I have never heard of the slightest difficulty about finding accommodation in such a town.

39,999. (Mr. Holt.) But in a place like Barcelona, does the consul find his own office out of his allowance?—Yes.

40,000. And what have you to do with it?—We have nothing to do with it.

40,001. How do you know anything about it?—Because I have been to Barcelona.

40,002. Then that is not official information?—No, it is merely from my own personal experience.

40,003. (Sir Kenneth Muir-Mackenzie.) Is his house in Barcelona in a good position?—It was when I was there about 12 years ago, I do not know if it is exactly the same house; I think it is. I should say it was in quite a good position.

40,004. (Chairman.) It has been suggested to us that the Government ought to provide houses for consuls in unhealthy places?—I think that is right, assuming that proper accommodation cannot be obtained, and we do so whenever funds are available.

40,005. The unhealthy places are scheduled in the consular list, so that it would be easy to find where to build the houses if the money was available?—We have at the present moment 40 buildings belonging to or hired by the Government, and the cases unprovided for appear to number about 140 or slightly more. That is entirely exclusive of China, Japan, and Corea.

40,006. (Mr. Boutwood.) Do those figures you have just given relate only to the unhealthy districts?—To the whole. The 40 naturally would not all be in unhealthy districts. The 140 are places like Barcelona and Seville.

40,007. (Mr. Graham Wallas.) With regard to the consular offices in uncivilised districts you say that in those districts furniture for the office is provided by the Government?—Yes, where the building is the property of the Government.

40,008. Is that universally the case?—I think so. For the official side of the house, namely, the office, the furniture is provided by the Government.

40,009. I think we were told in evidence that the Government had adopted the thing in principle, and in some places they have provided some furniture, but as yet the offices are not fully furnished with Government furniture?—I do not suppose there is any objection to the consul putting in things of his own if he likes, but I think we are supposed to equip the office in the style considered desirable.

40,010. And all those consular offices are now supposed to have been provided with sufficient furniture?—I believe so.

40,011. Do you know whether any provision is made for stationery in consular offices in the uncivilised districts?—I have nothing whatever to do with that. That would be dealt with by the Foreign Office. We do not provide anything in the way of stationery.

40,012. You say you provide freehold consular offices for unhealthy places whenever funds are available. That means I suppose whenever the Treasury puts funds at your disposal?—Exactly.

40,013. If one treats both the Treasury and your office as part of the same machine and tries to ascertain the policy of the Government, the words "whenever funds are available" have no meaning. They mean only that the Government has as yet only chosen to do a certain amount of that work?—The words have great meaning as regards ourselves, because very often we do not get what we ask for, and we cannot, naturally, because the financial stringency is so great that there are other greater demands, such as for Dreadnoughts.

40,014. As to the consulate in civilised towns we have been told that the consul is considered a bad tenant because drunken sailors and so on come to the place. Is that your experience?—On what grounds a bad tenant?

40,015. That it is undesirable that a house in a nice quarter should be visited by drunken sailors or other persons, and that therefore, in most civilised ports, the owners of houses in good quarters are very anxious not to have consuls as their tenants?—I have never heard this, and I should rather doubt it, because if so, I do not

\* Vide Appendix LXXXI.

28 May 1914.]

Mr. LIONEL EARLE, C.B., C.M.G.

[Continued.]

think they would go on leasing them year after year in the way they do. The bulk of the places do not change.

40,016. In fact you think you can get houses in good quarters with equal facility?—I think so, but we do not arrange for that at all. The consul is given an allowance and provides his own accommodation.

40,017. (*Mr. Holt.*) How do you know that the bulk of the places do not change?—Because we have reports from a great many places. There are two sides of the Consular Service—the paid and the unpaid. I am only talking of the paid consul, naturally. We have knowledge that in a great many towns—I cannot say by any means in all—these places have for 25 or 30 years been in the same streets and at the same numbers.

40,018. When a consul rents a house out of his allowance do you inspect the house?—No.

40,019. (*Chairman.*) Nor are you responsible for keeping it in repair?—Absolutely nothing to do with it.

40,020. (*Mr. Holt.*) How do you know anything about it?—I fancy the Foreign Office inform us from time to time of these things, and I know the places are handed over from one consul to another. I do not know it in any definite way, but I have been a great deal abroad myself and I know that the consul in Paris, for instance, has been in exactly the same place for the past 30 years.

40,021. (*Chairman.*) But you have no official knowledge?—No official knowledge. We have nothing whatever to do with them, beyond supplying safes in some places.

40,022. (*Mr. Graham Wallas.*) You say that if you provided quarters for the younger members of the Diplomatic Service that would cost about 100,000*l.* a year?—I thought, roughly speaking, that would be the amount, anyhow, for a period of years, including the considerable increase of staff in my own office, which it would mean.

40,023. How much of that 100,000*l.* a year is now spent, do you think, by members of the Service out of their own pay and out of their own private pockets?—That is again a very difficult question to answer. In my 100,000*l.* a year I included providing legations to all the Ministries in Europe and South America, which at present, with the exception of Petropolis, do not exist. It seems to me it would be very difficult to provide additional accommodation for the staff if you do not provide it for the head of the mission. For instance, as regards the allowance actually given to Ministers at present, they have all told me, although this is unofficial, that they cannot hire houses for the allowances they get, and therefore they pay something out of their own pockets.

40,024. Therefore, your impression is that if you added together the existing allowance and the amount that is paid by the Ministers and their secretaries out of their own pockets, it would come to at least 100,000*l.* a year?—Including the very large charges which would be put on my own office, the expenditure over a term of years would probably amount to that sum. I should have to have a whole branch to deal with South America alone.

40,025. I want to exclude the charge upon your own office, and take the sums which are now paid for accommodation in the form of official allowance and in the form of payments out of the private pockets of the officials concerned. Do you think that that would come to nearly 100,000*l.* a year?—No. Perhaps 20,000*l.* a year would cover the outlay by Ministers and staff at present.

40,026. (*Chairman.*) Can you really form any close estimate on such a matter?—It is almost impossible to form any accurate estimate as so much depends on the considerations which I have already put before the Commission.

40,027. How much is now paid by the chiefs of missions, ambassadors, and diplomatic officers of all kinds for their housing accommodation?—Our vote comes to about 100,000*l.* a year.

40,028. That is for the maintenance of existing property?—Yes, including new Diplomatic and Consular buildings.

40,029. But there is no relation between your vote and the gross amount paid?—None.

40,030. One can only form a vague idea?—Very vague.

40,031. If you could take what was paid in a particular case, and if you could say, for instance, that the diplomatic staff at Paris or Vienna paid so much in house-rent, perhaps you might get the foundation for an estimate?—Even then it is very difficult. I know one man in Paris who pays 400*l.* a year for his flat, but he is a wealthy man, and can afford a good apartment. It is not necessary to have so much accommodation as he has, as he entertains largely.

40,032. (*Mr. Holt.*) Are you asked to advise whether it is expedient or not to provide government buildings, or do the Foreign Office simply give you an order?—As regards consulates or the Diplomatic Service, or both?

40,033. Both, or either of them?—We advise the purchase of sites as regards the Diplomatic Service. For instance, about two years ago I strongly recommended that a site should be acquired at Stockholm, where there was only a rented flat of a very poor description. There was an opportunity of buying land from the Swedish Government at a very favourable site, and I recommended to the Foreign Office that it should be acquired, and the Treasury agreed.

40,034. (*Chairman.*) Did you erect a building on that land?—It is being built now, and I hope it will be finished this year.

40,035. (*Mr. Holt.*) Was that for the embassy?—For the legation.

40,036. Previously to that, had the Minister had an allowance?—The Government hired the premises.

40,037. The Government had hired the premises and provided them?—Yes.

40,038. Supposing it had been a case where the Minister had had an allowance and rented the premises himself, it would not then have fallen to your duty to advise that on the whole it would be better to buy a piece of land and put up a building and stop the allowance?—I do not think there is a single case where a Minister rents a building except in South America and the few cases in Europe before mentioned.

40,039. That practice is confined to South America?—I think so, now. I think we provide the official residences everywhere except in South America.

40,040. But as regards consuls, is that the case too?—No.

40,041. Are you ever called upon to suggest to the Government that it would be a good plan to substitute an official residence in their case?—Not as regards consuls. With regard to Stockholm the Minister wrote to me himself telling me that the lease was coming to an end in 1914, that the American lease had just come to an end also, and rents had gone up enormously. He said he was quite sure our rent would be put up in proportion for this flat, and he was wondering, in view of this offer of the Swedish Government to provide a very good site, whether I did not think it advisable to recommend that the site should be purchased. I went into it very carefully, and in my opinion I considered it was desirable and, therefore, I recommended it. As regards consuls, the Foreign Office invariably writes to us and says Sir Edward Grey wishes a consular station to be started, say, at Saffi, in Morocco. They vary very much as regards the change of political movements. We have to provide two in Morocco—one at Fez and one at Saffi—where consulates never existed before. The Foreign Office writes to us and says that Sir Edward Grey considers it essential provision should be made.

40,042. And calls upon you to see them put in hand, so to speak?—Yes. As regards Saffi, which is a very out-of-the-way place, I sent an architect out there. He had to ride I do not know how many miles on mules, and it was very difficult to get contractors to build, but we were fortunate enough to buy a house erected by an Englishman there and not quite finished.

40,043. Do you provide residences at places like Port Said in Egypt?—Yes. At Alexandria we have an official consulate.

40,044. A place belonging to the Government?—Yes.

28 May 1914.]

Mr. LIONEL EARLE, C.B., C.M.G.

[Continued.]

40,045. You do not know what control is exercised over a consul in seeing that he possesses proper premises when he procures them himself?—No, we have absolutely nothing to do with it.

40,046. If a consul is left to find his own premises your department knows nothing whatever about it?—No. We should certainly not provide accommodation where the expense would be considerably increased as regards my own office and staff. Even now I think the position is unsatisfactory, inasmuch as I have not sufficient staff available to send very long distances to inspect these outlying places. It takes a man perhaps three months to go and come back after inspecting a place in the Far East or, say, Katanga, in the centre of Africa. Therefore, we have to rely very largely on the advice of the consul in the place, who may say: "This is a site I recommend you to buy." We submit the case to the Foreign Office, but they have no more experience than we have; and we buy it. It has happened, I am sorry to say, in more than one case that when the next in-coming consul goes there he says: "I do not at all agree that this was the proper site." Therefore, to my mind, the more you extend this Service the more important it is that you should have proper supervision over these matters.

40,047. One of the difficulties of providing an official residence is that you can never be certain that it will fit the family?—It rarely does in their opinion. It is the same as regards decoration; I never get an ambassador going into an embassy who does not want something different to suit his own taste.

40,048. It is the same difficulty as one has with the question of whether or not it is better to provide an official residence for the minister of a church?—Exactly; but naturally we build the house to suit generally a married ambassador with a fair-sized family.

40,049. Then that becomes unduly expensive for the unmarried man?—If he is a bachelor (as at present at Constantinople) it is excessive accommodation for him.

40,050. In that sense it becomes an undue strain upon him, as he has the maintenance of it?—Yes; but he would have to have that sized house for his position in a place like Constantinople.

40,051. (Mr. Matheson.) I gather that there is no definite periodic inspection of these buildings. You do not fix periods for inspection?—We have inspection of all diplomatic and consular buildings in Europe, North Africa and Washington, but we never inspect, unless it is a very exceptional case, places in Central Africa and other remote places.

40,052. But the European buildings are regularly inspected?—Yes, our architects go regular tours. The system is that when occasion calls for a visit to a capital on special business, opportunity is taken to inspect the Government properties within reasonable reach and *en route*.

40,053. It is always an expert who goes?—Yes, a skilled architect. Then we have a local architect in every town—a German or an Austrian of great repute, or a Frenchman in Paris—who goes over the embassy many times a year and consults constantly with the ambassador about anything required, and then reports home.

40,054. I gather that your main criticism on the proposal of providing quarters for the younger staff is that you cannot really forecast the requirements?—My chief objection is the great waste which it is possible there may be. You provide official accommodation for the normal staff of four or five secretaries, and it is quite possible that it might be occupied only by one. I do not think it would be easy to compel married people to live all together in one house.

Mr. CHARLES STEWART SMITH, R.N. (H.B.M. Consul-General at Barcelona), called and examined.

40,068. (Chairman.) When did you enter the Consular Service?—In November 1883.

40,069. What age were you then?—I was 24.

40,070. Did you pass a competitive examination?—No, I was given a Royal Commission.

40,071. You were appointed by direct nomination by the Crown?—The reason was this: I had been sub-

40,055. (Mr. Shipley.) Does the Board of Works supply the enamelled signs on the outside of these consulates?—I am not sure about that, I will find out and let you know.

40,056. (Chairman.) Am I right in summing up the general result of your evidence thus: First, in regard to the heads of missions and ambassadors, you provide accommodation for them everywhere?—Yes, with the exception of South America—and even there we provide it at one place, Petropolis—and certain places in Europe.

40,057. For the staff—the counsellors, secretaries, and attachés—you provide accommodation in the Far East and at Constantinople?—Yes, and certain unmarried secretaries at European embassies.

40,058. That is to say, at Peking, Tokio, Seoul, and Teheran?—Yes, Seoul is now a consular building.

40,059. At Constantinople you provide accommodation only for the unmarried staff and not for the married men?—That is so.

40,060. Am I right in supposing that elsewhere in Europe you provide no accommodation for the diplomatic staff, but that allowances are given to them to provide themselves with house accommodation?—The Foreign Office gives an allowance, but only to Ministers and counsellors.

40,061. We were told that in the embassies there is accommodation for one secretary who may act as private secretary to the Minister, but that his employment by the Minister in that capacity is a matter at his discretion?—Yes, and at Paris there is actual room always for one secretary in the chancery. In some cases more than one secretary is accommodated.

40,062. Do the secretaries and the attachés receive a house allowance?—No, I think it is only the counsellors who receive an allowance.

40,063. Then the question of the cost of providing house accommodation for the diplomatic staff generally is a very difficult matter to estimate?—It is.

40,064. That is owing partly to the uncertainty regarding the proportion of the staff that would be married. On the whole, taking an outside estimate, you consider that if the policy of providing house accommodation for all the diplomatic staff abroad who are not now provided for was adopted by the Government, it would be an addition of 100,000*l.* a year to the cost?—Roughly speaking, including the expenses attaching to my own office, anyhow for a term of years.

40,065. There would, on the other side of the account, no doubt be some saving, partly official and partly private. The official saving would be in the house allowances which are now given to some members of the diplomatic staff; and the private saving would consist of the sums which the diplomatic staff have now to meet from their own pockets?—The house allowances amount to a very small sum, because they are only given to the Ministers in South America and a few European places, and to the counsellors in the embassies. I should like to add that I have based my estimate of cost, which is very rough, on the assumption that the houses would be required somewhere in the locality of the embassies and the legations.

40,066. (Mr. Graham Wallas.) The actual places at which the secretaries and other attachés at an embassy now reside are not necessarily near the embassy?—They generally try to find premises fairly near in all cases I know of.

40,067. But they are not necessarily in very good streets. They do not go to the most expensive sites?—That depends very much on their private means, and so on; but I think they try to live in the neighbourhood of the embassy more or less. That is my experience.

lieutenant in the *London*, and had taken part in the suppression of the slave trade. I had learnt Swahili, and they were going to appoint a set of consuls to be on the coast to look after the slave trade and to encourage trade. Sir John Kirk knew me on account of the slavers which I had caught, and put forward my name as a suitable person. The post was practically

28 May 1914.]

Mr. CHARLES STEWART SMITH, B.N.

[Continued.]

offered to me, and so I was appointed by Royal Commission.

40,072. At what places have you served since then?—I was at Zanzibar for about two years, and then I was invalided and was appointed to Massowah, but the Italian Government objected, and so I was set to work at the Foreign Office for about two and a half years. Then I was sent out to Zanzibar again, and after a little time I became consul there. I was acting Consul-General at times, then I was a Boundary Commissioner, and after the Commission was over I was wrecked in health. Then I was Consul at Bilbao for about seven years, and then Consul-General at Odessa for nearly 14 years; and from there I have been moved to Barcelona.

40,073. At a very early period of your service you were acting as Consul-General?—Not the first time I went out.

40,074. During some of your stay at Zanzibar you were acting as Consul-General?—I was.

40,075. You were seven years at Bilbao and then went to Odessa?—Yes.

40,076. What is the principal business of the consul at Bilbao?—It is almost entirely dealing with merchant shipping and also looking after seamen. One year we had as many as 2,000 British ships there.

40,077. Had you any judicial authority there?—None, except what the Spanish authorities conceded. One does have to take a kind of judicial position very often.

40,078. Did the consulate house belong to the British Government?—No.

40,079. Did you hire the house yourself or was it hired for you?—I hired a house and also hired my office. My office was in the town and the house was rather outside.

40,080. Did you get an allowance for hiring the house?—No; that came out of my pay.

40,081. But you did get an allowance for the office?—Yes, that came into the office allowance.

40,082. Did you furnish the office?—I bought what my predecessor left.

40,083. Was there no control exercised over your action by the Office of Works here in regard to that consular office?—No. The Foreign Office just paid the office allowance, and that was all.

40,084. Did you furnish any monthly or quarterly accounts of that office allowance?—None at all. I cannot remember without access to the archives whether I asked for an increase, but in those days if you asked for an increase the Foreign Office always required you to give an account of how the money went.

40,085. When you went from Bilbao to Odessa did you hire in Odessa also an office which was separate from your house?—Yes.

40,086. Did you furnish any accounts of the expenditure of your office allowance at Odessa?—None, excepting when I have asked for an increase.

40,087. And then you had to justify the grant of an increase?—Yes.

40,088. (*Mr. Holt.*) Was the office allowance in every case sufficient to pay the rent?—Yes. At Odessa my office expenses in the last year went up to within 20*l.* of what I was given, and the office, although it was good, was rather meanly placed. The only access to it was up a back stairs; inside it was all right. It was half of an old-fashioned house which had been cut into halves, but it had very good rooms. Inside it was quite a good office, but it made a bad impression on the public because it was the half of the house which had the back stairs. If I had had more money I might have taken a much nicer office.

40,089. (*Chairman.*) Do you think that British trade or influence suffered at all by the character or location of your office?—I do not think so. I think one had the same sort of painful feeling as if one had to wear a bad coat through poverty when dealing with one's colleagues. It is very difficult to assess the difference. The office was placed in a convenient part of the town, and, as far as British subjects were concerned, we could always hold any meeting required there. There was lots of room and it was quite an efficient office, but it had rather a mean approach.

40,090. At Odessa had you to deal with British seamen and British trade just as you had at Bilbao?—Yes, but less in degree, because there is much less shipping.

40,091. (*Mr. Holt.*) Did the amount of shipping at Odessa fluctuate from year to year?—Yes, depending on the harvest. We send nothing out there except agricultural machinery.

40,092. (*Chairman.*) How long have you been in Barcelona?—A few months.

40,093. In Odessa and Bilbao had you any unpaid consuls under your supervision or control?—At Bilbao I had three vice-consuls, and at Odessa I had 13 altogether; that is to say 12 subordinate posts, not all unpaid.

40,094. Was it part of your recognised function to inspect these subordinate vice-consulates?—Yes, I used to do so. I think I certainly saw them all once every two years. I have always felt it very much one of my duties to know as well as I could all my vice-consuls.

40,095. The paid vice-consuls were those young gentlemen who had passed examinations in England and been appointed vice-consuls?—Yes.

40,096. Had any of those young gentlemen commercial experience before entering the public service?—One had.

40,097. Did he strike you as being the better for having had his commercial experience?—Yes, I think so.

40,098. You think he formed an efficient vice-consul?—Yes, but I think his virtue lay in what he was himself, and he had the other experience extra which was extremely useful.

40,099. He was a good man?—Yes.

40,100. On the whole are you able to contrast the general character and usefulness of the men who enter the Consular Service now with those who entered it ten years ago. Do you think we are getting a better staff now than we did ten years ago, or as good?—The difficulty in answering that is that I know so little about my colleagues, but I have had more experience since I have been at Odessa, and I think on the whole the young men who have joined have good possibilities in them; of course, they have to learn. The drawback often is with young men that they seem to be wanting in matters of outside address.

40,101. In manner and demeanour?—Yes. Young men from the universities in dealing with foreigners seem to have an off-hand way and a certain want of formality. Of course, these are outside things that may seem very little, but when you are dealing with colleagues and foreign officials my experience is the more formal and careful your manner is the more certain you are to avoid those little influences unfavourable to yourself which are so apt to come in and make difficulties when you are trying to do anything.

40,102. You say you have only had one man who had had commercial experience, but you have seen some university men who have come into the Consular Service?—Yes.

40,103. And you have seen other men who have not passed through the university?—I do not think I have.

40,104. Did this man who had had commercial experience pass through the university?—No; but he was, I think, rather an extraordinary man. He began life, I think, as a banker's clerk and worked very hard at languages in his spare time and managed to pass the examination. I think he will do very well.

40,105. (*Mr. Boutwood.*) Was that what you meant by saying he had commercial experience—being a banker's clerk?—That is what I meant.

40,106. (*Chairman.*) Had you under you any unpaid consuls?—One unpaid consul and a number of unpaid vice-consuls.

40,107. The unpaid vice-consuls were possibly stationed at places where trade was not very brisk?—Yes.

40,108. How do they contrast in your opinion with the paid vice-consuls?—I think one has to look on them as in quite a different category. I think they are extremely useful, but you cannot make the same claims on them that you do on a career consul. But I have the greatest respect for them, and the ones I had in

28 May 1914.]

Mr. CHARLES STEWART SMITH, R.N.

[Continued.]

Odessa I thought were extremely good. They were very willing to help.

40,109. Do you think that British trade benefited considerably by their presence and assistance?—I think so. In places where British shipping goes one is practically bound to have unpaid men; that is, where there is only a little shipping. Supposing you have a port with perhaps 70 or 80 British ships calling in a year, it is very important to British shipping that there should be some consular officer, and also it is necessary to carry out Acts of Parliament, and so on. But I do not think you could ask for money from Parliament to send a paid man there, and I think, too, it would be a very undesirable thing from the point of view of a young man to send him to a place where he would have so little to do.

40,110. Then your opinion is that these unpaid vice-consuls do serve a very useful purpose in helping British trade in those places where the trade is too small to allow of the appointment of a paid vice-consul?—Yes, I think so—that would be for the purpose of helping British trade, in a restricted sense, and helping people who come there for commercial purposes, and the ships. For such things as suggesting fresh lines of business, I do not suppose they would do as well, because, of course, they have their own businesses to attend to.

40,111. Did you consider it part of your duty to push British trade? Say, a firm here in England addressed you, either directly or through the Board of Trade, with a view to pushing a particular kind of trade, would you have considered it your duty to help in that way?—Certainly, in my own way—not perhaps in the way they would wish. I mean I should not think it my duty to do anything like personally recommending people, or doing anything that could make anybody think I took any responsibility for their statements, or anything of that sort. Nor should I be responsible for the character and position of the people whom I might mention to them. But if a British firm wrote and asked me questions—for instance, if they sent me a long *questionnaire*—I would do my best to get answers for them. The difficulty very often is that one gets such very vague questions\* people do not trouble to ask precisely what they want. For instance, you might get a letter from a merchant saying: "I should be glad if you would give me some information about the iron trade." You do not know where to begin or end, or what is wanted; but if a firm which dealt in pen-knives put down a list of questions going into the whole thing—whatever the points are about the pen-knife trade—one would do one's best to get each question answered.

40,112. In such a case as that, if you were consulted regarding the pen-knife trade, would you deem it within the duty either of yourself, or one of your subordinates, to take a sample of pen-knives to a shop in the town and ascertain from them whether there would be a sale for such an article?—I should not object to doing it, but it would have to be purely in the nature of an inquiry; and I think I should tell my inquirer that I did not think that particular thing was very much good.

40,113. We have been told that British trade in some foreign countries suffers from the character of the people sent to push it. For instance, the commercial traveller sent, say, to France or Germany, frequently knows nothing of the language and cannot speak it, while the representatives of some rival nations in trade are good linguists. Do you think British trade suffers in that way?—I think it is a definite handicap. You will notice it more in Russia, where there are so many Germans who know Russian. Germans have a particular benefit over us because there are so many German colonies in Russia, so they have a great population from which they can draw such people.

40,114. Did you yourself speak Spanish when you were in Spain?—Yes.

40,115. And did you learn Russian when you went to Odessa?—No, I ought to say I did not, but I tried to learn it, and I worked at it a good deal. I suppose I was rather too old, and had other difficulties, but I never got to be any good at Russian, though I knew a lot of the words.

40,116. Did you know sufficient to be able to get about and make yourself understood?—I could make-shift in a very lame way.

40,117. But not sufficiently for the purpose if you had commercial business to carry on?—I should not try to do anything except such things as simple shopping; that I could manage.

40,118. (*Sir Henry Primrose*). What language carried you through, French?—For ordinary purposes you can find someone who speaks German, French, or English.

40,119. (*Mr. Holt*.) You do speak German, French, and Spanish?—Yes.

40,120. (*Mr. Graham Wallas*.) At Barcelona I suppose you have permanent premises provided for you by the Office of Works?—No, they are hired quarters.

40,121. Are you free to hire those quarters or any others?—Yes.

40,122. You took them over from your predecessor?—Yes.

40,123. But you were free to refuse them if you liked, and to take any others?—Yes.

40,124. Did your predecessor hold them under a yearly agreement, a monthly agreement, or what?—I think it is four-monthly—three payments a year; and you can give notice at any time.

40,125. If you had refused to take them over he would simply have had a few months which he would have been personally responsible for?—I am not sure what the Foreign Office would say, but it would not be a very nice thing to do. One naturally would take over an office unless there was some very strong reason against it.

40,126. Is the furniture in that office the property now of the British Government?—I think it is mine at the moment. The Foreign Office are introducing a new system, and they say that anything that is paid for out of office allowances belongs to the office. Mine has certainly not yet been paid for out of the office allowance; but I suppose the way it will be looked at will be that when the office allowance has covered the cost it will belong to the Government. They have made the change quite lately, and I do not quite understand about it yet.

40,127. Is the furniture you took over fully sufficient for your purpose?—Yes, but I had to have a few alterations made in it.

40,128. Have you to provide the whole of the stationery?—Yes; except that many printed forms and certain register books are supplied.

40,129. And you took over your predecessor's stock of stationery, I suppose?—Yes.

40,130. I understood you to say that at one time at Odessa the office expenditure went up to within 20% of your office allowance?—Yes.

40,131. Was that rather an unusual fact?—I suppose it would be; but I cannot speak with any authority. It was unusual as regards myself, but I cannot tell you much about other people.

40,132. It is understood in the Consular Service that the office expenditure ought not normally to come very near the office allowance?—I think it has always been the custom that it should be ample. In making out office expenses you put down all the things that are definitely office expenses. Nobody would dispute that paper, ink, and such like things were definitely office expenses; but as you go on you come to the border line—to all sorts of things where you cannot say which they are. For instance, whether your tram fares go to office expenses, or subscriptions which you cannot avoid practically because you are consul. All sorts of things come in very much on the border line.

40,133. Confining yourself to what you meant just now by the expression "office furniture," what would you say is normally about the proportion between such expenditure and the office allowance in the Consular Service—two-thirds, should you say?—I do not think it would be right for me to hazard a guess. I could tell you about my own.

40,134. Does it come normally to about two-thirds?—I should say more, but I cannot answer for other people.

40,135. Then the office staff is provided by yourself?—Yes.

28 May 1914.]

Mr. CHARLES STEWART SMITH, B.N.

[Continued.]

40,136. You make your own bargains in that respect?—Yes.

40,137. That is also paid for out of your office allowances?—Yes.

40,138. You divided your work just now into official work in administering Acts of Parliament, and so on, and the work of encouraging trade. Would you agree that those two pieces of work are rather clearly divided?—I think practically that almost everything you could put either into the one or the other. I did not mean to make any distinction.

40,139. In the case of a large port where the "official work," in that sense, occupies the whole of a man's time, do you think it might be an advantage if there were a division between that work and the work of encouraging British trade, so that the two pieces of work could be done by different representatives of the Government?—I do not think that is the case in any post I have served in.

40,140. No; but I am putting it as a possible scheme. Do you think if that were introduced it might work well?—If it were proposed to me I think I should say it was rather a dangerous thing, because it would be difficult to work, with humanity like it is. I should say that there would be great risk of friction, and that one man could probably do it better.

40,141. But you have a kind of judicial position with regard to a good deal of your work, have you not?—Yes.

40,142. You have quasi-magisterial work?—Yes.

40,143. If you threw yourself enthusiastically into the work of pushing British goods, is that quite consistent with the kind of responsibility and impartiality which must attach to magisterial work?—I do not think the two would cover the same ground in the least. The magisterial work of which I was speaking is almost entirely confined to such things as the affairs of merchant seamen and ships.

40,144. In some cases you have to act in a very responsible way with regard to claims between British subjects and foreigners?—The responsibility is to put the case in the best possible way for the Government—to try and make the case as clear and complete, and truthful as one can for the Government. One may have to put forward cases locally, but anything serious would be sent to the embassy.

40,145. Your work with regard to encouraging trade is done on the initiative of the Board of Trade in the main, is it not?—I should say, mostly on the initiative of the particular applicant.

40,146. But he applies through the Board of Trade, and you send your answer through the Board of Trade?—We always send our answers through the Commercial Intelligence Department; but at the very beginning it comes from the applicant, who may write to the Commercial Inquiry Department, or he may write to us.

40,147. But the relation of the Foreign Office to that department of your work is rather formal?—The answering of inquiries the Foreign Office have nothing to do with.

40,148. Have you any experience of the Levantine Consular Service?—None.

40,149. You do not know anything about the method by which they are trained at Cambridge now?—No.

40,150. Could you suggest any improvement in the training of the young *carrière* vice-consuls before they go out?—I am sorry to say that some of those I have seen cannot write English.

40,151. That is, they are badly selected?—I would not say that. I think if a man is able he will do very well, but he ought to be able to write a despatch that does not want pruning and correcting.

40,152. We can improve the examination by securing, for instance, that a larger number of marks shall be given for English, and we can make arrangements that the selected person after examination shall have a certain training in England. With regard to either of those methods have you any suggestions to make?—No, I do not think I have; but I can only say that it does seem to me a pity that a young man should

not be able to write a plain, straightforward statement. After all, in despatches all that you ask for is that they shall be plain and straightforward.

40,153. Do the young men who come to you have a really adequate knowledge of commercial law?—I think we want very little commercial law. What we want is knowledge of parts of the Merchant Shipping Act.

40,154. Do they know that when they come out?—No, I think they have to learn it.

40,155. Do you think they learn it during their work just as well as they would learn it in England?—I think so. I think there is no better way of learning such things than having to deal with the particular work. In the case of the vice-consul I have with me just now, I do my best to ensure that he shall actually do the work with the sailors, and there am I to be referred to on any point, and to see that the work is done, and he learns it in that way.

40,156. Could you suggest to us any improvement in the superannuation arrangements in the Consular Service?—I do not think I could. Of course, everybody wants to have more superannuation than he is entitled to under the existing scheme, but I do not feel competent to criticise it without having thought about it at all.

40,157. It has been suggested, for instance, that a man is now superannuated on his final salary, and, if he has been doing very good work in bad climates, his final post may not be so well paid as the posts that he held when he was in better health. In the Consular Service your pay is the pay of the post, and not the pay of the grade in the Service?—Yes; with the proviso that, if the Foreign Office want to, they can always change the pay of the post.

40,158. A man may, after good service, occupy towards the end of his service a post which carries actually a lower salary than that which he has had at other parts of his service?—Yes.

40,159. In that case he will be superannuated on his final salary?—Yes, on an average of the emoluments of the last three years.

40,160. If a man has done very good work in a very bad climate, that might work with great hardship?—Yes.

40,161. Do you think it would be an improvement if a man's pay followed the career of the man rather than the particular post to which he was sent?—Yes, I think it would. I think it is a great defect in the arrangements as they are that you get fairly good pay to begin with, and then in the upper ranks you come to a dead level. I was Consul-General when I was 40, and I think there was only one man younger than I was on the list before me at the time, but I had practically come to the end of all things.

40,162. (Chairman.) What pay did you draw at 40 when you were Consul-General?—I got 900*l.* a year then, and it was increased to 1,000*l.*; but that was all.

40,163. May you not look forward to an increase to 1,200*l.*?—There are only three such posts.

40,164. The pay of 1,200*l.* is attached to those three posts?—Yes.

40,165. (Mr. Graham Wallas.) And you might be sent at any moment to a post with still lower salary conceivably?—I do not think so, unless I committed myself.

40,166. Is it a fact that it is sometimes arranged that the pay does follow the man, although nominally it is the pay of the post?—I suppose so.

40,167. (Chairman.) That would be for special reasons?—Yes.

40,168. (Mr. Graham Wallas.) Have you any further suggestions you would like to make for the improved organisation of the Consular Service?—I think one thing that could be very helpful if it could be arranged would be if there was some system of giving extra pay after a consul had been a little while at a post, and he had learnt the language of the country. When you go to a new post some languages are easy and some are difficult, but whatever it is, you have to spend a lot of money in tuition and a great deal of time and pains in learning and, of course, the older you get the more difficult it is. I think it is a great advantage to the public when the consul has a ready know-

28 May 1914.]

MR. CHARLES STEWART SMITH, B.N.

[Continued.]

ledge of the language. Let the conditions be whatever may be thought desirable, but I think it would be money well laid out if a consul got some sort of remuneration as soon as he could show that he knew the language of a new post. I should not apply that to languages like French.

40,169. You think the things that make it desirable to have an allowance in the Diplomatic Service also apply *mutatis mutandis* to the Consular Service?—I think so. Again, if it were possible to recommend little gifts to local people, I think it would increase the influence of a consul.

40,170. (Chairman.) You mean if a consul could make some return for valuable information received by him?—Yes; at present you cannot do anything.

40,171. (Mr. Graham Wallas.) At present the only thing given is for saving life, when we give barometers, watches, and so on?—I think so.

40,172. Is that done on a consular recommendation?—It would be, no doubt. With regard to inquiries from merchants and people who wish to begin a trade, it would be a very great advantage if they always made their inquiries very specific and asked for details, and were not ashamed to dot down all the questions one of their own people would ask if he went himself. They may not be able to get them answered, but as it is you simply deal with the vaguest generalities, because one does not know anything of other people's business. With regard to the training of vice-consuls one of the great difficulties in our Service and in the economical and sound administration of it is, I think, that there are many places which, though sometimes very busy, are intermittently so. You get a good deal to do for a week or a month, or whatever it is, and then very likely go on for a time with hardly anything to do. You may have too large a staff for a time when there is nothing to do, and at the same time not be able to do without a vice-consul. For this reason if you could have vice-consuls put first in constantly busy posts for them to learn their business, it would probably be better.

40,173. (Chairman.) Your suggestion is that vice-consuls should be attached to busy posts to learn their work before being sent to smaller posts?—It would be a great advantage if it could be done.

40,174. (Mr. Graham Wallas.) It has been suggested that it would be possible to have a certain number of unattached vice-consuls to be sent to deal with pressure of business in particular places or to deal with cases where there has been a temporary breakdown in health or a period of leave of a consul. Do you think that the provision of such unattached vice-consuls might be useful?—I think it might be, but it is rather outside my experience.

40,175. (Chairman.) When a consul goes on leave is a vice-consul always sent to replace him?—I have always had a vice-consul at my post of late years.

40,176. Supposing the vice-consul breaks down in health or goes on leave suddenly does he nominate his successor?—Yes.

40,177. Does he send the name to the consul for approval?—Yes.

40,178. And does the consul send it forward to the Foreign Office?—Yes, but the Foreign Office always approve unless there is a definite reason to the contrary.

40,179. If he does nominate his successor and you think it better to send a vice-consul to succeed him, may you move any of the vice-consuls under you to his place?—One would only do it without consulting the Foreign Office in the case of emergency, but I am sure they would approve if there was any real reason for it.

40,180. (Mr. Graham Wallas.) Have you any further suggestions to make?—There is the question of more pay as you rise in the Service. It is a very difficult question I am sure, but I think that it is a real disadvantage to us not to have the same pay as other consuls—the Germans, for instance. As regards the matter of real efficiency, if you are in such a position that you are not able to entertain people—the local authorities, or one's colleagues, or the principal merchants, and such-like people—you are in a very difficult position. There are so many people that you deal with, and if you want

information and you know them pretty well you can just go and sit down in their office and ask them, and they will put themselves out to get information for you; but if you are not on terms of social relations with them it is very difficult.

40,181. What is the maximum pay of each of the existing grades in the Consular Service?—The Consul-General's highest pay for the first grade is 1,000*l.* to 1,200*l.* The pay of the second grade, I think, is 900*l.*, and then there are consuls and vice-consuls. I have not the whole details in my head.

40,182. About what is the difference between that and the corresponding German pay?—At Odessa my German colleague, I think, got about 50 per cent. more than I did.

40,183. Do you know whether that is the case at Barcelona?—No, I think the pay is roughly equal at Barcelona, but then for the Germans that is a second grade post.

40,184. As far as you know, in regard to the Service generally, the German consular pay is you think about 50 per cent. above the British consular pay?—I do not know enough about it to answer that question. I think the Foreign Office pay is calculated rather on the basis of what a bachelor can live on. But, of course, most men when they are grown up have a wife and have children to educate in England, and it becomes a great difficulty.

40,185. Do you think it would help your work if there was in the Foreign Office an official, bearing perhaps the title of chief inspector of consuls, but normally in the Foreign Office, who has had consular experience?—Yes, I have often thought so.

40,186. At present do you think there is a certain want of efficiency due to the fact that no one who is normally in the Foreign Office has any consular experience?—I would not like to say that.

40,187. Do you think there might be increased efficiency if some one in the Foreign Office had consular experience?—I think it is a very difficult question to answer.

40,188. (Mr. Boutwood.) How is promotion managed in the Consular Service? How does a man get from a poorly paid post to a better paid one? Is there any general system at headquarters by which he can be fairly certain of being brought under review when his time comes, or is it left to himself, as a matter of pulling the strings and pushing?—I think it is the general idea that if a man does not at least signify his wish for a move he is supposed to be contented with where he is. I think everybody expects you to make an application if you wish to be moved, and then, after that, I do not know how the selection is made.

40,189. Otherwise, so far as headquarters are concerned, you might be at the ends of the earth for the whole of your natural service unless you stirred yourself?—I do not know how it would be in the last resort, but I think you are expected to say if you want to be moved.

40,190. In this present scheme of examination there are three subjects that look more or less technical—the principles of British mercantile and commercial law relating to sundry matters, commercial geography, and certain parts of political economy. Judging from the men you have seen who have come through that examination, what sort of preparation for their work do their studies for that examination give them? Is it a real preparation or have they virtually to learn the whole thing when they go to their post?—I think in practice when a point arises you look it up. Certainly I do. I think those are things which come into operation very seldom. It is very difficult for me to tell you how much they have in their heads.

40,191. I gathered from one of your answers that you thought on the whole the technical side of your work was best learnt in the process of doing it?—Yes.

40,192. And you trust to that rather than to any system of preliminary training. You would be content to take men on the basis of some general education and then let them learn their work as they went along?—I think so.

40,193. Supposing a man wrote decent English, knew languages, and had a general education, then, so

28 May 1914.]

Mr. CHARLES STEWART SMITH, R.N.

[Continued.]

far as regards all the business as to mercantile and commercial law and the Merchant Shipping Act, you would be quite prepared to take him into your office and let him grow into it and learn it in actual process of working under you?—I think so, so far as my experience goes.

40,194. (*Sir Henry Primrose.*) I see the initial salary is 300*l.* a year increasing to 500*l.* Therefore at that earlier age the salary would attach to the man and not to the post?—Yes.

40,195. Do many men get to 500*l.* a year and have to remain where they are some time before they get a post that is worth more than 500*l.* a year?—I cannot tell you.

40,196. As regards the age at which they come in, do you think the limits of age—22 to 27—are suitable?—I think so.

40,197. You do not think that 22 is too young or 27 is too old to begin. Would you prefer to have men brought in younger and do more of their training in the Service?—I do not see any reason to wish to change it.

40,198. As regards the unpaid vice-consuls, looking at Russia, Odessa, very nearly all the vice-consuls are British subjects, but at Barcelona in Spain all the vice-consuls are Spanish. Why is that?—The reason that makes one take people who are not British subjects is that generally speaking there is no British subject available.

40,199. As a matter of fact you would prefer a British subject provided there is a suitable British subject available?—Yes; if you look at Theodosia for instance, which is under Odessa, there is a Swiss there. He was really the only man available there and I thought I was very lucky to find him, for he is a good man. There was not a British subject there; and it was the same in Spain, in a place like Alicante, for instance.

40,200. From your experience, on the whole do you prefer to have a British subject rather than a national?—Certainly, I would rather have a British subject.

40,201. I think one witness gave it as his opinion that it was entirely a question of the individual, and that it did not very much matter whether he was a British subject or not, and it all really turned on what the man's competence was?—I would not make it final if there was any British subject who offered, but I would take it as a very great point in the selection.

40,202. One has often heard, and seen in consular reports, that there is a very large amount of matter provided for the waste-paper baskets of consuls in the form of trade circulars that are sent out for distribution. Do you suffer from trade circulars sent out in English and in English weights and measures, that are really quite useless in the country to which they are sent?—Yes, we receive a good many.

40,203. Do you think the annual reports of consuls on trade are valuable?—I am told they are in some ways. They give better statistics, perhaps, than other people do.

40,204. I suppose you have had to draw up a good many?—Yes.

40,205. Does it take up much of your time?—It gives a great deal of trouble. It is so difficult sometimes to get materials.

40,206. Do the statistics which you get occasion a good deal of trouble to collect as a rule?—Yes, in Russia, certainly; and in Spain as well. They are not published, and you have to get them by labour and do your best.

40,207. (*Mr. Matheson.*) Someone said that the consuls of other countries are more active in promoting the trade of their countries than British consuls are. Do you think there is anything in that?—I think they do things different in kind to what we do very often. The Germans, for instance, and, I think, others, do things like collecting debts and pressing people to pay.

40,208. Which we should not like to do; or it is not the custom?—Supposing somebody wants me to

collect a debt from somebody. In the first place, I have no means of knowing whether the money is really owing. The debtor may have something to say; and then, too, I cannot do anything except ask him for the money, and if he says "No," what am I to do next?

40,209. Do you generally spend your periods of leave in this country?—Yes, in England.

40,210. Have you, on any of your periods of leave, been asked to go to the Foreign Office to make a personal report?—I always go there and talk over anything that there is to talk over.

40,211. What department at the Foreign Office do you go to?—The Consular Department, the Chief Clerk's Department, and the Eastern Department.

40,212. You think that consuls in your position have pretty free means of communication with the Foreign Office?—Oh, yes. I think one can write with great freedom to people, too.

40,213. As a matter of fact you have paid a good number of personal visits to the Foreign Office?—Yes.

40,214. (*Chairman.*) Have you heard much about promotion from the Consular Service into the Diplomatic Service?—It is difficult, but I have not heard much about it.

40,215. Do you think the work done by consular officers is, to any extent, similar in character or quality to the work done by diplomatic officers?—No, I think it is very different; that is to say, in the case of the ordinary consul.

40,216. I understand you to say that you would prefer the system of personal pay to the present system of pay attaching to the post held. As I understand, the present grades of pay are: for vice-consuls, 200*l.* to 500*l.*; then on promotion to consul, 600*l.* to 800*l.*; and on promotion to Consul-General from 900*l.* to 1,200*l.*, these rates of pay being attached to the post for the time being held. The suggestion is that the scales of pay should attach to the individual and not to the post held for the time being. What do you think of the suggestion?—I should prefer it if it were joined with the possibility of getting some kind of allowance in places where the expensiveness of living was of definite seriousness.

40,217. Do you think, then, that for an expensive place—say, the most expensive place you have been in—the pay of 1,200*l.* per annum is inadequate?—I think it is inadequate.

40,218. You think it would be proper to grant local allowances in addition to pay, such allowances to vary with the expensiveness of living in that particular place?—I think I should prefer to say that local allowance ought to be given where there is definite hardship from excessive expensiveness.

40,219. Take two places—one at which the officer can live comfortably on 1,200*l.* a year, and the other at which the officer holding it cannot live on 1,200*l.* a year—you would give a local allowance to the holder of the more expensive place?—Yes; that is very much the Austrian system. They give pay and then a local allowance, which is often a good deal more than the pay.

40,220. Would it be useful if, when young men are recruited into the Consular Service, they were kept for a while in England and made to attend schools of economics, or institutions of that kind, in order to learn something about trade and economics generally?—I should like to see it tried, but I do not feel able to judge about it.

40,221. If the examination were of a higher type than it is to-day, when, as you say, it sometimes sends you out men who cannot write a letter, and if the selected men were made to spend two years at some commercial college, as student-interpreters do at Cambridge, do you think you would get a more useful class of man for the Consular Service?—I do not feel able to give an opinion about it.

40,222. You think that the men you are now getting in the Consular Service are suitable on the whole?—Yes, I think so.

## ONE HUNDREDTH DAY.

Friday, 29th May 1914.

## PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
 Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
 K.C.  
 Mr. ARTHUR BOUTWOOD.

Mr. PERCY EWING MATHESON.  
 Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
 Mr. GRAHAM WALLAS.  
 Mrs. DEANE STREATFIELD.

Mr. N. E. BEHRENS (*Secretary*).

Mr. HERBERT SHAW (Secretary to the Newcastle-upon-Tyne and Gateshead Incorporated Chamber of Commerce) called and examined.

40,223. (*Chairman*.) You are the Sheriff of the City and County of Newcastle-upon-Tyne and Secretary of the Newcastle-upon-Tyne and Gateshead Incorporated Chamber of Commerce?—That is so.

40,224. You have been deputed to give evidence on behalf of that Chamber of Commerce before this Commission?—Yes.

40,225. From the paper which you have been good enough to send to me, I understand that you desire in the first instance to deal with the qualifications necessary for the Consular Service?—Yes. We are impressed, if I may say so, with the ability, courtesy, and great attention which most of our consuls show with regard to any recommendations or suggestions that we put before them or inquiries that we may make; but at the same time there are one or two, at any rate in my mind, who consider that commercial interests are perhaps rather a little beneath the dignity of their office, if I may put it in that way.

40,226. Those are in the minority?—Yes, in the minority. Taken altogether, especially, I must say, in the last ten years, of the manner in which consuls deal with our requisitions, I cannot speak too highly. That applies also to our own Board of Trade and the Foreign Office. There is a distinct advance on the attitude which used to be taken, and from my own experience, which is a fairly large one, I can only speak in the highest terms of the assistance we now get from all these departments; but we still think, notwithstanding this great improvement, that the commercial interests of this country would be better served—even better than they are to-day—if it were possible by some means or another for some of our most important consular posts, if the opportunity arose, to be given to men who have distinct commercial ability and some business experience. I think our trade prospects in various countries would distinctly improve under those conditions.

40,227. To secure the end you have in view, namely, the appointment to those important consular posts of gentlemen possessing commercial ability and experience in commercial matters, it would be necessary to keep the end in mind in providing for the recruitment of the Consular Service?—I agree.

40,228. In order to secure that sort of ability in the higher posts we must rely on the method adopted for recruiting men for the junior posts in the Consular Service?—Yes.

40,229. I think you have something to say upon the method of recruitment for the Consular Service?—Yes. Our idea is this: In these days when in every branch of the public service men of the highest ability and attainment are necessary, and especially if this country is to maintain its present first position in the world as a commercial country, and if it is to progress, as it ought to progress, in greater proportion than perhaps it is doing at present compared to other countries—the names of which I need not mention—we are distinctly of opinion that all officers (if I may use that expression), whether they are appointed by the Board of Trade or the Foreign Office, should be men specially trained for

the purpose, so that it should not be simply that they are attached to the Foreign Office and promoted from the Foreign Office. With that view the Newcastle Chamber of Commerce has taken a very important step lately. We have in Newcastle a college known as Armstrong College, which is a constituent part of the University of Durham. Several of the degrees of the University of Durham can only be obtained in that college. The Chamber of Commerce in Newcastle last October established a Faculty of Commerce. We are endeavouring to raise 25,000*l.* to endow that. We have 15,000*l.* up to the present time, and raising the remainder is only a matter of a short time. Our view is, that with the training that is specified there, combined with more practical commercial experience—I put those two together very carefully—you will have the type of man, all other things being equal, that you want.

40,230. At what age would you recruit your men. What should be the minimum and maximum ages at which they should be recruited?—The minimum age of entering the Service?

40,231. Yes?—I should say 25 years of age as the minimum; up to that age his whole time ought to be devoted to his university career in the Faculty of Commerce, combined with some practical experience of commercial life.

40,232. Do you mean that 25 is the earliest age for appointment to a consular post?—I should say for an important consular post even that age is too early.

40,233. Do you fix the age of 25 years as that at which their special training for consular work should cease?—Yes.

40,234. There would be, to begin with, the ordinary literary education?—In the course of study which is set out in Armstrong College the greatest attention is paid to a thorough grasp of modern languages; not from the theoretical standpoint but from the practical standpoint. In addition to that we have such subjects as banking and currency, questions of international trade, foreign exchanges, foreign trade of the chief commercial countries, special periods of economics, history, and so on. That is the theoretical training.

40,235. Yes; that kind of training they would, as I understand your scheme, receive in the college you mentioned—the Armstrong College?—Yes.

40,236. Before they are subjected to that training they must have been recruited and selected on an educational test?—Yes.

40,237. Selected, I presume you would say, by an open competitive examination?—Yes, possibly.

40,238. For admission to that examination do you think that a nomination should be necessary, or would you say that anybody who wished to enter for the examination for the Consular Service should be free to do so?—Most distinctly, free and open.

40,239. Without any nomination from any Government official or any Minister of the Crown?—That is so.

40,240. You think that the first step for admission to the Consular Service should be selection at an open competition in educational subjects?—I do.

29 May 1914.]

Mr. HERBERT SHAW.

[Continued.]

40,241. Then do you consider that the persons who are successful in that open competition should be subjected to a certain period of training in such a college as the Armstrong College?—Yes, for three years at least.

40,242. You consider that to be essential?—I do.

40,243. At what age would you allow a candidate to appear for this open examination?—18 or 19.

40,244. Then you would subject him to three years' training at this college?—Yes.

40,245. That would bring him up to the age of 22?—Yes.

40,246. Would you then send him to a consulate to begin his work, or would you give him any further commercial training?—I should let him for the next two or three years have some special commercial training.

40,247. How would you manage that?—I think it could be easily done in some large office. He could join the staff.

40,248. He is a probationer. He has passed his entrance examination, he has studied in your training college for three years as a probationer for the Consular Service, getting, I suppose, during that time some stipend from the Government?—Yes.

40,249. Then at the end of these three years you would require him to spend a further period in a commercial house?—I would.

40,250. How many years of commercial training would you provide for him?—Two at least—a varied commercial experience by means, probably, of travelling scholarships, if I may put it in that way.

40,251. He would then have spent practically five years in preparation for his work?—Yes.

40,252. At the end of that time would you have him pass any examination?—He would have to pass the degree of Bachelor of Commerce at the end of his three years at the college.

40,253. Then he would be confirmed in the Government service and be sent as assistant of some consul?—Quite so.

40,254. From such training as that you would expect to have an adequate supply of competent men for the Consular Service, including the high posts to which you have referred?—That is our opinion.

40,255. Can you tell us what the Faculty of Commerce is?—Yes. A three years' course of study in modern languages; not so much from the philological and literature point of view as from the practical needs of speaking and writing. The object, in short, is, that at the end of the course the student should be able to take part in a business correspondence, or to take part in a business interview as readily in the foreign language as in his own. Among other necessary subjects are the following: accounting, commercial law, general economic geography. Optional subjects are: banking and currency, international trade, foreign exchanges, foreign trade of the chief commercial countries of the world, special periods of economic history or special subjects in economic science and practice. Generally speaking that is an outline of the Faculty of Commerce. You take a Bachelor of Commerce degree in specified subjects just the same as you take a Bachelor of Arts degree in any of the universities.

40,256. Would you limit the number of colleges to which selected candidates for the Consular Service should be sent, or would you allow the candidates to choose their own college?—Choose their own, wherever there is a Faculty of Commerce attached.

40,257. (Chairman.) (To Mr. Shipley.) Is there at Cambridge a Faculty of Commerce at present?

(Mr. Shipley.) No, we have no Faculty of Commerce at present at Cambridge, although we teach some of the subjects; but not such manual things as type-writing.

(Mr. Graham Wallas.) There is a fully developed Faculty of Commerce in Birmingham.

(Witness.) In addition to that there is a Faculty of Commerce, and a very excellent one, in connection with the University of Manchester, and also in connection with the University of Liverpool. There is in London the well-known School of Economics, which is practically a Faculty of Commerce. There is also in Newcastle

now an excellent Faculty of Commerce with a large number of students, although it was only established last October, in the Armstrong College.

40,258. (Chairman.) Have you read the report of the Walrond Committee? That was a departmental committee appointed in 1903, of which Mr. Bonar Law and Lord Inchcape were members. They recommended that men who had had previous experience of commercial life should be recruited into the Consular Service, the examination being so arranged that such men would have a reasonable chance in the competition. Does that strike you as being a suitable arrangement?—Quite. It is on the same lines as the one I have been advocating, but I have not heard of any such men being appointed.

40,259. No. Our inquiries have not shown that many men of that type have been recruited. Possibly few young men, who have gained a footing in commercial life and have shown capacity and promise, will be found ready to leave it for an appointment in the Consular Service?—My point is, that he would start out with the intention, as his career in life, to enter the Consular or Diplomatic Service.

40,260. I am now referring to your scheme, which I understand. This other scheme is different: it contemplates a man entering commercial life and going on with it for some years, and then leaving it for the Consular Service. If such a man saw his way to prospering in commercial life, do you think he would be likely to abandon the prospect and enter the Consular Service?—That is a very difficult question to answer. There are cases in which it has been done, of course, to your knowledge. The present head of the Commercial Intelligence Branch of the Board of Trade in Basinghall Street, London, was a business man. Some of the trade commissioners, as they are called, who spend part of the time in their respective countries, and then come back here and visit the chief commercial centres of the country for the purpose of giving information, were also business men before they took up this work. It depends entirely, I think, on how attractive the Service is made to them.

40,261. Have you heard anything to lead you to think that the attractions of the Service are insufficient, that the rates of pay which consular officers receive are unsatisfactory to them?—We think they ought to receive more, and that a higher standard of salary ought to be paid to these men.

40,262. At present, on entering the Service as individuals, they draw a salary starting with 300*l.* and rising by increments to 500*l.* On promotion to the grade of consul they draw from about 600*l.* to 800*l.*; and on promotion to the grade of Consul-General they receive from 900*l.* to 1,200*l.* a year. Do you think that scale of pay insufficient to attract good men?—It has attracted good men, of course, on account of the dignity of the position, and also, no doubt, the pension attaching to it later on. But we think that with the career I have just sketched out, if larger salaries were attached we should get men who would really serve the country better.

40,263. Have you formed any idea as to the increase that should be granted?—I have not. It all depends naturally upon the position, and so on, in which the particular consul is placed. We maintain that the dignity of a consul at present with his salary is not commensurate with his important position. He has not the office accommodation, for instance, that is necessary for his position. A great many of the offices are very small, and with not sufficient accommodation.

40,264. Has your Chamber of Commerce had complaints of the inadequacy of office accommodation?—Well, I have been in most of the consular offices on the Continent, and that is my own practical experience.

40,265. Did it strike you that British consulates were not situated in prominent places in the cities you have visited?—In one or two cases, but as a rule they are near the quays or wharves, and so on, and I take it that they find the position much more satisfactory for shipping people.

29 May 1914.]

Mr. HERBERT SHAW.

[Continued.]

40,266. But while the situation is good the accommodation is bad?—Yes.

40,267. Have you had any experience of unpaid consuls?—I have.

40,268.<sup>3</sup> Are you in favour of the system of unpaid consuls?—I am not, because on the Continent at any rate, they are chiefly foreign gentlemen. There are a large number of vice-consuls in Belgium, in France, in Germany, and other countries, who are members of their respective nationalities. Our position is that no consul attached to the Consular Service of this country should be a foreigner.

40,269. Would you lay that down as a general rule?—As a general rule, but not necessarily final or absolute. I would like to add to that, that in the course of my work I have called upon various vice-consuls who have been foreigners acting for the British Government, and they have received me with the greatest courtesy, and given me most valuable help. It is the principle we object to.

40,270. If that principle were carried into effect it would mean a very considerable increase in cost of our Consular Service?—I quite agree, but our position is that the absolute necessity of promoting the trade and commerce of this country is so urgent, and as large sums of money are being spent in other directions, it is necessary, and it becomes a most urgent question, that a larger sum should be spent on our Consular and Trade Commissioner Service.

40,271. Has your Chamber of Commerce received any detailed information as to the necessity of converting unpaid consulates in particular localities into paid consulates?—No, we have never had that before us.

40,272. Are you aware whether any such inquiry has been made by other Chambers of Commerce?—Not to my personal knowledge.

40,273. Before any general principle such as you lay down were adopted, it would probably be desirable to make detailed inquiries?—I have no doubt it would, but still I think the general drift of my evidence would be confirmed.

40,274. Would you be disposed to say that the appointment of a paid consul should be determined by the amount of the trade in the particular place?—Undoubtedly.

40,275. You would not propose the appointment of a paid consul if the trade were small?—No.

40,276. And if there was no great prospect of pushing trade?—No.

40,277. That is, I think, the general rule which the Government attempts to act on. Wherever there is an important volume of trade, there you have paid men?—Yes, that is so generally.

40,278. But you think that principle ought to be still further pushed?—Yes, my Chamber of Commerce is very strongly of that opinion.

40,279. (*Mr. Boutwood.*) And if we still retain the unpaid men, you think, if possible, they ought to be British subjects?—Yes. I know one consul-general who never appoints a foreigner to any of his vice-consulates if he can possibly get an Englishman.

40,280. (*Chairman.*) Where there is not sufficient trade to appoint a paid vice-consul, and an unpaid vice-consul is desirable, you think that that unpaid vice-consul should be an Englishman?—Yes, if possible.

40,281. Even if the Englishman were not in trade, and therefore had probably less means of helping British trade?—I take it, under those circumstances such a man would not receive the offer of such an appointment. I should be surprised if any consul-general offered such a man an appointment.

40,282. I take it that, so far as we have gone, the main point you desire to press is that our Consular Service should be recruited by competitive examination from Englishmen about the age of 18 or 19 who have had a good secondary education?—Yes.

40,283. And, having been so recruited by open competition without any previous nomination, they should be trained in a college having a Faculty of Commerce, and should remain there for two or three years according to the college regulations?—Yes.

40,284. And afterwards that they should be given some commercial training, that is to say, be attached

to a business house for, say, two years?—Yes, one or more business houses for variety of experience.

40,285. And then that they should be sent to work under a consul for awhile to learn and be appointed in the regular course to a vice-consulate?—Yes, with promotion by ability.

40,286. You consider that the pay attaching to the grade of vice-consul, consul, and consul-general is somewhat low?—Not to begin with.

40,287. But when they get to the grade of consul-general you think the pay is somewhat low?—Yes. It is impossible, I think, for a man to maintain the dignity of his position as consul-general in a large country on the pay he has at present.

40,288. Would you advocate an increase of pay or the granting of a local allowance commensurate with the extra expenditure?—I think the latter would be quite sufficient according to circumstances.

40,289. Further, you say that your Chamber of Commerce is on principle against the employment of unpaid consuls?—Yes, on principle.

40,290. You think they should only be employed where trade is of small volume?—Yes.

40,291. And where unpaid consuls are employed you think the preference should be given to Englishmen?—Yes.

40,292. (*Mr. Graham Wallas.*) You say the preference should be given to Englishmen. You would include, I suppose, Scotchmen and Irishmen?—I am a Scotchman myself, so I should.

40,293. Would you include also persons of British parentage born in the Dominions?—Most distinctly. I reckon them all as one.

40,294. But there you would stop?—All members of the British Empire should be eligible for this Service.

40,295. All persons of British parentage who are citizens of any state composing the British Empire?—Yes.

40,296. Will you give us an idea of the sort of functions which would be carried out by an ideal consul? I want to assume that someone in England has, say, invented a sewing machine which he believes might, if properly known, secure a very large sale, and he wants to avail himself to the full of a British consul's services and he communicates with the kind of consul you desire. He would, I presume, send a catalogue, drawings, etc., of his machine and offer to send any specimens of the machine that might be necessary. What ought the consul to do?—If I may put myself in the place of that excellent consul, I think I should make it my duty to advise all firms in my district who are interested in such a machine and give them the fullest details at once without any delay.

40,297. And stop there?—I doubt very much whether it is his business to go any further than that, and give the representatives of particular firms introductions to likely customers in his immediate district. I doubt whether he can go any further than that.

40,298. Supposing the question is: "What firms are likely or willing to take up my sewing machine?" You say the consul should make no attempt by personal interview to discover whether any firms are likely to take up that sewing machine?—I think it is rather doubtful whether it is the business of a consul to go any further than I have mentioned. Beyond that you are developing him into a commercial traveller, and we are against any such idea because it is not in accordance with the dignity of his office.

40,299. But there are members of certain Chambers of Commerce who take just the lines you are now deprecating, that he ought to be a commercial traveller?—I am surprised at any Chamber of Commerce making such a suggestion.

40,300. You have not met with anybody who advocates that?—We certainly would not advocate that. It is quite possible that it would be advisable, if we had the *par excellence* system, to have attached, under the direction of the consul, men of an inferior grade who might do such work. That is quite possible.

40,301. The Consular Service might include men who would make it their business to actually visit

29 May 1914.]

Mr. HERBERT SHAW.

[Continued.]

firms, beyond merely sending circulars, and ascertain by personal interview whether they were prepared to take up an article?—Yes.

40,302. (*Chairman.*) Are you aware of the existence of such men in the consulates of any other countries?—I cannot at the moment say, but I know that representatives of other countries in various parts of the world make no hesitancy in doing anything to promote the trade of their respective countries. They do not stop at anything. They would not stop at my limit. The promotion of the trade of their countries is their first object, and they do it at any cost and at any self-sacrifice.

40,303. (*Mr. Graham Wallas.*) Now I want to take the ideal consulate. The ideal consulate would be an office situate in the commercial quarter, I suppose?—Yes.

40,304. And it would be a place which commercial men would be encouraged to visit?—Yes.

40,305. Would you have something in the nature of a show-room or museum of British goods, changed from time to time?—Goods that were disposable in that country? I say decidedly, yes.

40,306. The consul, using his own judgment, might have a room in which specimens of the products of his country could be from time to time shown?—Yes.

40,307. Coming back to what you spoke of as the dignity of the consular office, you are fully aware that the consul has a number of important magisterial duties?—I am aware of it.

40,308. Those duties require that his absolute impartiality as a magistrate should be without any doubt?—Quite so.

40,309. In the Levant, in the Ottoman Empire, and in Persia, for instance, those duties are of very high importance in some cases?—Yes.

40,310. That would be one of the reasons why you would object to the consul becoming a sort of commercial traveller, as you say?—Yes.

40,311. You have already said that you think there might be about the consul men who are not magistrates, who are not tied by that particular necessity, and who might, with the sort of vigour and personal action which is impossible and undesirable in the case of a consul, push British goods?—Yes, purely commercial men.

40,312. Do you think it would be possible to make inside the Consular Service two distinct Services—one under the Foreign Office, consisting of the men who would do the important magisterial and administrative work; another closely connected with the Board of Trade having purely commercial duties, and in some cases the commercial office need not be in the same place or part of the same building as the administrative office?—I think if the idea you have suggested were carried out, the commercial branch ought to be under the authority of the consul.

40,313. You think the consul should be in general control?—I do.

40,314. But while there might be a commercial office, the staircase of which should not be constantly partially occupied by sailors who get into trouble, or by people getting married, or in connection with various other work, and which might not necessarily be the administrative office or have the ordinary consul's staff, yet you think it ought to be under the general direction of the consul?—Yes, I think so.

40,315. And therefore under the general control of the Foreign Office?—Yes. I am not particular as long as the authority is not divided.

40,316. You have worked out with some care your scheme of training. A successful candidate would be about 18½ years of age, according to your scheme?—Yes, for his first entrance examination entitling him to enter the Faculty of Commerce in a college.

40,317. He would be about the age at which people generally go to the university?—Yes, and he would go to the university.

40,318. What sort of salary or allowance during his university career should he have in your judgment?—His parents ought to supply that.

40,319. You know the arrangement at present with regard to the training of the Levantine consuls who are sent to Cambridge?—Yes.

40,320. I believe their allowances are paid by the State, but you would not suggest that should be done in the case of these young men?—No, not until a man is accepted. After going through his Faculty of Commerce course and being accepted as a candidate for the Consular or Diplomatic Service, then I think he might fairly have a Government stipend.

40,321. But the competitive examination entitling him to enter the Consular Service if he behaves well would occur before his going to the university. Does the all-important competitive examination which puts him on the list of future consuls after his training is finished occur at the age of 18, when he enters the Faculty of Commerce course, or at 21, when he leaves?—Yes, at 21 or 22, according to the age at which he leaves.

40,322. What you are asking for is, that there should be a competitive examination at about the age of 21 or 22 open to graduates of commercial faculties?—There is no need for any competitive examination, if the candidate has passed through the Faculty of Commerce and taken his degree. That is his imprimatur.

40,323. (*Chairman.*) I do not quite understand that. I understood that there was to be a competitive examination on educational subjects about the age of 18 to 19, after the boy had finished the secondary course of education?—I agree.

40,324. Then the boy successful in that examination would enter the Faculty of Commerce of any university and spend the three years necessary, after which an examination would be passed?—Certainly.

40,325. But I understood that he would be marked as selected for the Consular Service at the competitive examination, and the three years would be years of probation, as it were?—Provided he passed his Bachelor of Commerce examination with a certain amount of distinction. I wish to impress upon you that that is all that is necessary.

40,326. (*Mr. Matheson.*) How are you to select him, because there will be a number of people who will have obtained this qualification?—For some years to come there will not be too many for the Service.

40,327. (*Chairman.*) You want first to have a test of general education, and next you want to have a test of special training. But the special training is undergone with the object of fitting the young man to be a vice-consul. He has been selected by the Government for that purpose when he has passed the competitive examination. That is what I understood?—To a certain extent a number would be eliminated by the high standard of the test to which they would be put.

40,328. Of course, some people might fail, but the hope would be that they would be a small percentage. At all events I am not now quite clear about what you mean, and perhaps you will explain your meaning more clearly. What would be the use of having a competitive examination in the first instance if the selection is to be made at the end of the period of technical instruction?

(*Mr. Graham Wallas.*) In the German Civil Service, I believe, a man possessing the appropriate university degree is considered an efficient candidate for Government service, but the question whether he is given a Government post depends upon actual selection. Is that rather what you want?—My view is that candidates having gone through this course, naturally the Government would have to make its selection. If there were no openings they could not make any selection.

40,329. How would the Government make its selection from among the graduates?—Probably by personal interview. I think there is a great deal in that.

40,330. What you are thinking of is something like the German arrangement, that an antecedent condition of employment in the Consular Service shall be a degree from the Faculty of Commerce in some university, but among those who possess that degree a process of selection shall take place by the Government?—Yes.

40,331. That degree would normally be obtained somewhere about the age of 21 or 22?—Yes.

29 May 1914.]

Mr. HERBERT SHAW.

[Continued.]

40,332. Then the graduates would present themselves, and those who were thought to have the highest qualifications, or otherwise suitable, would be chosen. The Government would then, I understand, arrange with firms that were willing to enter into the system, so that the graduates should have practical experience of commercial life?—Yes.

40,333. During this period would the Government make them an allowance?—Yes. I think then it would be necessary.

40,334. When you have the able young man of about 22 who is going to have two or three years in a commercial firm, what sort of allowance ought the Government to make him?—I should think about 150*l.* a year.

40,335. And if the commercial firm reports well of him, and if he shows himself to have done well, he will then go straight to the Consular Service?—Yes.

40,336. Would you at the end of that period require him to pass any examination, as a man does at the end of his training for the Indian Civil Service?—No, I do not think it is necessary.

40,337. Simply get a good account of him from the commercial firm with whom he has been working?—Yes. I might add that I know the procedure pretty well in Belgium, since the study of commercial life has taken such a hold in Belgium as it has.

40,338. (Chairman.) There is a great commercial college at Antwerp?—Yes. I know it intimately, and have been there several times. I have studied these matters very carefully on the Continent. Practically all the men in the Belgian Consular Service are men who have been trained in the Commercial Institute at Antwerp, and have passed three years there. That is the idea which we have.

40,339. Are they chosen for the Consular Service before they enter the institution?—They make it known to the principal of that institute that they are devoting themselves to that, and that is their object in life.

40,340. Then the Government has no responsibility until they come out of the institution fully fledged?—That is so. The course there for an ordinary man is two years, but for a consular man it is three years.

40,341. In that institution is there training in the ordinary transactions of commercial life?—Yes, of a very high order.

40,342. They are not, then, attached to any business house before entering the Consular Service?—No, but these men have a good deal of holiday, and they spend most of their time in a Belgian house learning the actual practice of commerce.

40,343. You think there are now established in England sufficient opportunities in the way of Faculties of Commerce for us to follow that example?—Undoubtedly.

40,344. If the Government were to say: "We will appoint nobody to the Consular Service except those who have a degree of Commerce, and we will hold a competitive examination among all such holders of degrees once a year for the Consular Service," do you think that the supply of candidates for the Service would be adequate to our needs?—I am inclined to think it would, although I should not like to bar any exceptional case. I should not like to make it a *sine qua non*.

40,345. You would not like to make the degree of Commerce a *sine qua non* for appointment?—Not necessarily, because there are other men who naturally have abilities which, if devoted to the Consular Service, would do quite as well. I quite see that, and I would not like to make it a hard-and-fast rule.

40,346. We are now getting rid of our preliminary examination at the age of 18?—Perhaps I should not have gone as far as that. There are cases where there are men of outstanding ability whom one would not like to shut out, although they have not necessarily gone in for it. There are discretionary powers in all these things. Still, as a principle, I think the statement I have put before you would tend to the efficiency and improvement of the Service.

40,347. (Mr. Boutwood.) Then it comes to this, that there would be no preliminary examination for the Consular Service before the man went to his course at the Faculty of Commerce; that has vanished?—No, I was

giving an exceptional case—I very carefully put that—of a man of great ability probably, whom the Government could appoint.

40,348. (Chairman.) That would be reserved?—It is an exceptional case. I am not giving up the other suggestion.

40,349. (Mr. Boutwood.) In the ordinary case would the candidate for the Consular Service have to pass a consular examination before he entered the Faculty of Commerce, or would he first come into contact with the consular programme after he had graduated?—As the Chairman put it to me, before he was allowed to enter the Faculty of Commerce for his preparation he would have to pass a competitive examination of some kind to show his ordinary ability and his education. If I may say so, without any hesitancy, I prefer that from my experience. But there are men of exceptional ability, and you know perfectly well what I mean.

40,350. (Chairman.) That it would be within the power of the State to appoint such men directly: but such appointments would be quite exceptional?—Quite exceptional.

40,351. What you want to secure first of all is the general educational equipment, and afterwards you would superimpose the technical training?—Yes, for three years.

40,352. And after that the commercial training?—Yes.

40,353. (Mr. Graham Wallas.) Do you press the word "competitive." Is not the examination you are thinking about really a high pass examination? I think you mean a qualifying examination entitling a candidate to enter the Faculty of Commerce, and not a competitive examination?—He would have to conform to a certain standard in that examination.

40,354. (Chairman.) If you had, say, 20 vacancies, would not the easiest way of getting the 20 best men be by competition?—Certainly, to start with, and then close the field.

40,355. You cannot avoid open competition?—No.

40,356. (Mr. Boutwood.) After a candidate had graduated would he have to pass another examination, or would he simply have to come up before some committee and be approved?—The latter was my idea. He has had quite enough examination by that time, I think.

40,357. You spoke of a business training. As a matter of fact you apparently contemplate, after a candidate has graduated, putting him into one or more businesses for a period of two or three years to learn business methods and the practical side of business?—Yes.

40,358. Can you do that? Is that practicable?—It would be quite possible; just in the same way as many engineering students taking a degree course in engineering at our universities spend part of the time in the shops. I only wish I had had practical commercial experience myself. I am speaking from experience.

40,359. You said that you had seen most of the principal consulates on the Continent. It has been represented to us that in some cases the position and general appearance of the British consulate is markedly inferior to the position and appearance of some other consulates?—Yes, that is so.

40,360. It was said that that acted detrimentally to British interests?—I believe so.

40,361. You share that opinion?—Yes, to a certain extent I do.

40,362. (Chairman.) Might not it be possible that during the technical college course these men might provide themselves with commercial experience as well as those men in Antwerp do?—It is quite possible. It might be arranged.

40,363. And the obligation of getting it might be thrown on them?—Quite so. But I would like to point out that I think, considering the advanced character of the studies that would be undertaken during those three years, it would be rather too much to put upon them. Still, that is an idea that might be kept in mind.

40,364. (Sir Henry Primrose.) I understand that under your scheme an aspirant to the Consular Service

29 May 1914.]

Mr. HERBERT SHAW.

[Continued.]

who went through this training in the college would not necessarily get an appointment, and he might be thrown out at the end?—If there were no vacancies.

40,365. Or if there were so many candidates that there were not quite enough posts for all?—Yes.

40,366. What would be the position, as regards other employment, of the man who had spent his time in training for the Consular Service and failed to get an appointment within the limits of age? Would he be at a disadvantage or not?—Not at all. It would improve his opportunities immensely.

40,367. Is not 22 or 23 a late age for a man to get into any definite position?—Not in the higher walks of commercial life where men of ability are required to-day. There are plenty of openings for men of that age.

40,368. You speak of their being put into some house of business for the purpose of commercial training for the Consular Service. If a man is to be useful for commercial purposes he must know all branches of commerce. Would it be any particular use for a man to have had training, say, in the iron and steel industry and so on? That would not help him very much for other branches of commerce?—No; but a general training of the high order I have mentioned must fit a man to a certain extent. It is not exactly what the man learns, but the training that he undergoes.

40,369. What sort of office would you choose to put him into—what is called a general merchant's, or a broker's, or what?—Personally I should think a large shipping office would be the most valuable.

40,370. Like one of the large shipping lines?—Yes, or a line of tramp steamers—large owners—of ships.

40,371. That would not give him expert knowledge of particular kinds of trade, but a general knowledge?—He would have to develop particular knowledge himself afterwards, naturally.

40,372. In the Report of the Committee of 1903, to which reference has been made it says, "Evidence seemed to show that the most successful British traders have no desire to invoke the assistance of our consuls." Do you agree with that?—No, I do not at the present time. My experience is quite the contrary in the last 10 years at any rate.

40,373. Even the most successful British traders?—Even the most successful.

40,374. Take for instance, the Armstrongs of Elswick, do you suppose they would value the assistance of consuls in promoting their trade?—Not in promoting their trade necessarily, but they certainly ask for the assistance of consuls in other matters.

40,375. Of course, they require it for certain things?—You are taking a rather exceptional case. Armstrongs are so famous all over the world that their trade comes without asking for it. But in the ordinary course a business house, to my knowledge, frequently ask the assistance of consuls for information, and so on.

40,376. What is the sort of help that they want?—Chiefly this, if I may put myself in their position: How can my trade be developed in your district; what are the openings for it; can you help me; can you give me any advice?

40,377. As things are now, supposing a firm wanted to open trade with Germany, can they write direct to the consul, or must they write through the Board of Trade or through the Foreign Office?—It is preferred that it should go through the Commercial Intelligence Branch of the Board of Trade, and the request is then forwarded to the consul. I think it is more authoritative then and more official.

40,378. Do you think the people you are acquainted with study the annual trade reports of consuls?—No; for this reason: That you may be getting the reports for last year now. It is too late. I advocate a better system to be established somehow or another by which these trade reports should be put into a much better and more useful form than they are at present. A large number of them are waste paper.

40,379. They are out of date by the time they appear?—That is so. Every one of them should be standardised. There should be a proper form in which every one of these consular reports should be drawn up

on certain lines settled by the Foreign Office; and they should be by some means or another brought before the notice of the commercial public much quicker than they are at present.

40,380. The Board of Trade publishes a trade journal. How often does that come out?—Every week.

40,381. I suppose that embodies any information received from a consul as regards things of the moment?—Yes; it is a fairly useful publication, but it does not meet the requirements of traders.

40,382. How do you get over this difficulty: All trade is competition, and a public officer must treat all traders alike. The moment he does that the information becomes of very little value to the separate trader. Is not that so?—No; they all have the same advantages and each one must take his own chance.

40,383. But it ceases to have any advantage. The whole object of trade is to discover openings, either markets that traders can appropriate to themselves, or a particular line of goods that they can appropriate to themselves; but they have not the least wish that all that information should be made public?—Every man who required that particular information should have it; the consul's duty finishes then. It is their business then to use the information, and the one who is most up to date will get the trade, if possible. As long as we get the trade it does not matter about the individual.

40,384. It bears on the question of what our consuls are for. Until you have made up your mind precisely about that, it is very difficult to determine what kind of man you ought to have, and how you are to recruit him?—Probably my view might not be accepted, but my view, at any rate, is that a consul is chiefly for the purpose of promoting the trade of his country in his respective district however he can.

40,385. He is not primarily for that?—I know that; but that is my own private view.

40,386. You are aware that there are certain primary purposes for which a consul is required?—Yes.

40,387. You want to enlarge those, and to make the enlargement really the more important part of a consul's business?—Yes; and if that is not possible, then someone else should be appointed to do that, and let the consul keep to his magisterial and other duties—the preservation of the lives of his countrymen, and so on—and let that be the office of one man.

40,388. That bears on what Mr. Graham Wallas was saying, that there might be something to be said for having two quite distinct branches?—Yes; but I do not think that at the present time it is necessary, as one man can carry out all these duties perfectly well.

40,389. (Chairman.) Except in a few places, the consul would have very little to do if he were restricted to his magisterial or other functions of giving assistance to British travellers, and so on?—That is so.

(Sir Henry Primrose.) But, as a matter of fact, in a great many places he is so restricted now.

40,390. (Chairman.) It is rather a blurred line, I think. Every consul you ask will say: "I regard it as my function to help British traders." What should be the limits of the help he gives is the question. No consul coming before us would say he has nothing to do with British trade?—No, I am sure of that.

40,391. (Sir Henry Primrose.) When you are determining what your Consular Service is to be you have to consider whether it is worth while, because such a service as you contemplate would probably be very much more costly than the existing Service?—I think it would be well worth it if carried out properly.

40,392. You think it would be worth it, but the question is, would it be worth it?—I am sure of it.

40,393. But it is quite possible to take a different view?—Quite. These are matters of opinion.

40,394. (Chairman.) All the consul's duties in connection with the Merchant Shipping Act—sailors, and so on—are in connection with the promotion of British trade?—Yes; my whole object at present is the promotion of trade, so far as we are concerned, and the views that I have expressed are those which I think would carry that out.

29 May 1914.]

Mr. HERBERT SHAW.

[Continued.]

40.395. And you enforce that by saying that competition is growing very great?—Yes.

40.396. Competition with British traders is very much greater now than ever before, and you are dealing with competitors who are not always scrupulous in adhering to lines which were observed in the past, but which are not so now?—May I give an example? Mr. Worthington is the head of the Commercial Intelligence Branch of the Board of Trade. Here is a document sent out by him on the 22nd May last as received from a British vice-consul, in which he makes certain suggestions (which are published, and have been sent to me) for the advancement of a particular branch of the furniture trade. I happen to know a large firm in Newcastle, and I went to see them about it, and they said that the method of disposing of furniture in Russia, as just discovered, has been the common practice of the world for many years.

40.397. So that the consuls only told you what everybody knew?—Yes; that is what I want to obviate. That is a particular example of a case where the information is useless.

40.398. (Sir Henry Primrose.) That is extremely interesting, because it is very likely you would only multiply instances of that kind by endeavouring to employ consuls in this enlarged capacity. That exactly illustrates what one has so often heard from traders. They say: "Oh, thank you for nothing. We know all that the consul can tell us, and a great deal more." Probably active and good firms who have good travellers are quite right, they do know?—Yes; but I still think, and I know from my own experience in my connection with very large houses in the district of Newcastle, that they very often come to me for introductions to the British consul, or vice-consul in the particular district where they are going; and I know in nine cases out of ten they get the greatest possible help and assistance from them. That is another reason why I advocate the extension of their powers and position.

40.399. As regards the employment of vice-consuls or consuls who are not of British nationality, surely it depends a good deal upon the character of a place. For many purposes a foreigner in a good position, knowing the people of the place, knowing the laws of his country, and the customs of his country, might be really very much more useful to a British subject—I will not say in distress, but in difficulties—than a young man who had been sent there, and who had had to learn his way about?—From that point of view, possibly; but is it likely that a British vice-consul, a foreigner, is going to help British trade as against that of his own country?

40.400. No?—That is the point.

40.401. That is a danger; but that also points to this. Might not there be a danger from the diplomatic point of view, in having British consuls posted in places very actively pushing the interests of their nationals as against the interests of the nationals of the place where they were?—But surely there are two particular countries who are pushing their trade as hard as they can wherever they can, and they take the risk. I do not fear competition, and I do not think it will lead in itself to unfriendly competition.

40.402. It does not as long as it is in the hands of traders, but I can conceive that in the case of an official representing the British Government, action on his part might be resented by the Government to which he is accredited, whereas it would not be resented if taken by a private trader who was trying to push his own goods?—I should say he would have to use his own tact and discretion in such a case.

40.403. But he would want a good deal of it, would he not?—No, I do not think so.

40.404. He might?—It is a question of common sense.

40.405. (Mr. Matheson.) How long has your commercial curriculum been in existence in Newcastle?—It started last October.

40.406. Then no students have yet completed their course?—No; but we have been very pleased with the number taking up the full-day course for three years, and the very large number who are taking important individual subjects in the evening.

40.407. How many are taking the full course?—Ten or eleven are taking the full degree course, and some hundreds are taking individual subjects.

40.408. But it is a little soon to pronounce an opinion on the result of the curriculum?—Quite so, but the Faculties of Commerce in Birmingham and other cities are of some years' standing, and there is a great demand for the properly trained men.

40.409. You told us that you had been in a good many consulates. What do you consider are the defects, if there are any, of our consuls? You are proposing an alteration in the recruiting. What defects are there that you are wanting to remedy?—I think I made it very clear and went very thoroughly into it at the commencement of my evidence.

40.410. If you have already answered that I will not trouble you. I came in late and did not hear your explanation?—The point, putting it shortly, is simply this: That as a rule men who are appointed consuls at many important consulates are not men of any commercial experience or practice. My point is that men who have that experience will perform their duties as a rule—I will not say always—better. At the same time, as I said at the beginning of my evidence, I wish to speak in the highest terms of most of the consuls I have had any acquaintance with.

40.411. Have you seen anything of the consuls of other countries?—I have seen most of those on the Continent, but have never been farther afield.

40.412. I mean the consuls representing other countries?—In this country, yes; and abroad.

40.413. Do you think that those you have come across have more knowledge of trade than our consuls?—In some cases I should be inclined to say yes.

40.414. (Chairman.) Do they compare favourably with our men?—Distinctly.

40.415. I meant to ask: Are they better than our men?—I am rather inclined to think they are better.

40.416. (Mr. Matheson.) I have heard it stated that the consuls of other countries make more fuss, but ours do more real work?—Not the men I have come across.

40.417. As to office training, do you not think that two or three years of office training is excessive for the sort of preparation you want?—I did not mean to go so far as that. Perhaps two years at the very outside would probably be enough.

40.418. Do you not think that for a consul's work, general intelligence, education, and alertness are more important than knowledge of a particular business?—I quite agree with their importance, and I think those things ought to be present in every consul; but backed up with a trade experience, as I suggest, I think that would make the ideal consul.

40.419. In the training in a business house he could not possibly cover all the trades that might come under his notice abroad?—No; it is just the idea of business practice that he would get—a larger outlook on practical life.

40.420. (Mr. Shipley.) Have you had any experience of commercial attachés and their work?—Yes.

40.421. Do you consider that valuable?—Yes.

40.422. Have you any explanation of the fact that there is not a single commercial attaché in South America?—I am aware of it, and have called repeated attention to it. I have spoken at various meetings urging the Government, on behalf of my Chamber, to appoint resident trade commissioners in view of the important developments we anticipate through the opening of the Panama Canal. The Government sent Mr. Milne, a well-known Trade Commissioner, there for seven or eight months, and he had to report in that time on eight of the South American Republics—the thing is ridiculous. I have urged that there should be at least three or four resident trade commissioners appointed at once in that part of the world to study the trade prospects and report to this country at once.

40.423. A trade commissioner is not quite the same as a commercial attaché; he is merely temporary?—Yes; a commercial attaché is attached to the embassy. There is one for Russia, one for Portugal, and so on. I know them very well. They periodically visit Newcastle and interview traders, and they give valuable help.

29 May 1914.]

MR. HERBERT SHAW.

[Continued.]

40,424. We have had it in evidence that the traders approaching our consuls ask a vague question on the state of the iron trade, or some such thing as that, which is very difficult for the consul to answer; and one gentleman told us that if he was given specific questions, rather like those in an examination paper, he would have very little difficulty in answering them?—I have never myself asked any question on a trade topic to which I have not had a reasonable answer. I know several of these commercial attachés personally, and know their work, and know the help they have given to people in Newcastle. I prefer strongly the extension of the appointment of commercial attachés. One of the commercial attachés is commercial attaché for Austria, Hungary, Italy, and Greece. How is it possible for one man to attend to all that?

40,425. (*Mr. Matheson.*) It was said in evidence that our traders suffer a good deal from a want of knowledge of the country on the part of their commercial travellers. Is it your experience that travellers who are sent to foreign countries generally know the languages of the countries they go to?—Yes, they do.

40,426. You would not complain of any difficulty of that kind?—No, I cannot complain of that at all.

40,427. (*Chairman.*) Do you find in your travels that our vice-consuls abroad know the language of the country in which they live?—They have learnt it there.

40,428. As a rule are you impressed with their linguistic powers and knowledge of languages?—I am.

40,429. Would you be disposed to give the young men, vice-consuls, language prizes to stimulate them? They have to learn two European languages for their entrance examination at present, but there are many European languages besides the two. If a man was stationed in Russia, would you give him an allowance to stimulate him in acquiring a knowledge of Russian?—I think it would be wise.

40,430. Of course he is a much more efficient officer if he knows the language of the country?—Quite so. He cannot carry out properly the duties of his office unless he is practically able to speak it as a native.

40,431. That is imposing a high test; but I agree his utility may be measured by, or depends largely on, his knowledge of the language?—My point all along is

that men occupying those posts should be men of the highest attainments, if we are to maintain our position as the premier commercial country of the world. That is really the drift of all my evidence.

40,432. What do you think is the earliest age at which a man should be sent out as vice-consul—24 or 25?—At the very least.

40,433. If he were to be 24 or 25 at the very least, and had to spend two years in a commercial college such as you have mentioned, and, say, a year in practical commerce—that is three years—you ought to recruit him at about 22?—He might be put into an inferior position at the bottom rung of the consular ladder, and not in a responsible position.

40,434. He always is; but then the pressure of work may be such that he has responsible duties falling to his lot; or he may have to relieve another officer and be sent to an independent charge. All that would seem to point to recruiting from the educational stage of the university rather than of the secondary schools?—Yes; but I reckon that the Faculty of Commerce puts a man on the same footing as a university man who has been through his course.

40,435. I am thinking of the age at which you recruit, whether the first examination should be at the age of 18 or 19 or at the age of 22. If at the age of 22 you would tap the university stratum. Why should you not tap the university stratum? Do you not think you would get university men?—I quite admit your point at once.

40,436. We had evidence at our last inquiry showing that the services of university men are being largely appreciated in commercial life?—Yes, I know that, and I think that is an argument in favour of the suggestion I have put before you, that if the consul went through this training he would be a more useful man generally speaking.

40,437. At all events, the main thing you wish to enforce is that you ought not to rely upon a competitive examination only to give you the men that you want for the Consular Service, but that you ought also to train the men you have selected by the competitive examination in a suitable institution for commercial training?—Yes.

MR. JOHN JOYCE BRODERICK (H.B.M. Consul at Amsterdam) called and examined.

40,438. (*Chairman.*) You are the Consul at Amsterdam?—Yes.

40,439. When did you enter the Consular Service?—In September, 1908.

40,440. What age were you then?—I was then 27.

40,441. Did you go through a university course?—No, I was at the French College, Blackrock, Dublin, and I went through the intermediate in Ireland—through all the grades. Then I went to the University College there, and I went through the matriculation of the Royal University. Then my father died and I had to make my own living. I went up for two examinations just about the same time: one for a junior appointment in the Admiralty (which is now the intermediate scheme); and just before that examination came off there was one announced for the Customs—outport clerks, as they were called—and I thought I would have a shot at both. I intervened with the Customs examination in my studies for the other, and I passed the Customs, and I think I was three places behind the successful candidates in the other examination. I spent eight years in the Customs Department at Glasgow first, and afterwards at Newhaven in the South of England; and then for a short period I was acting chief officer of Customs at Shoreham. Then I went to Dublin, where I acted as private secretary to the collector and assistant-receiver of wrecks, and so on. In 1908 I felt that the prospects in the Customs were not as bright as I anticipated and I thought it was time to get out, and I got a nomination for the Consular Service, sat for the examination, and got through.

40,442. What places have you been posted to since you have joined the Consular Service?—I spent the usual time at the Foreign Office and at the Commercial Intelligence Branch at the Board of Trade. Then I

went out to New York, and was in New York until last December. I went to Amsterdam to take charge there definitely about two months ago.

40,443. What is your pay now?—400*l.* a year exactly.

40,444. Although you are full consul?—No, my rank is local. I have to maintain the position on the salary of a vice-consul.

40,445. You are on the list of vice-consuls?—Yes.

40,446. There is no Consul-General at Amsterdam?—The whole of the Service in the Netherlands has been re-organised. Amsterdam was formerly a full consulate—my predecessor was a full consul—but recently it has been reduced and placed under Rotterdam, which has been made a consulate-general, so that I am actually under the superintendence of the Consul-General at Rotterdam.

40,447. Have you had any experience of vice-consuls who are unpaid?—Do you mean in charge of different posts?

40,448. Yes, vice-consuls who are unpaid are far more numerous than the *carrière* men?—I have heard that. I have only known two, one under our superintendence at New York, at Buffalo, and another at Providence, Rhode Island.

40,449. Are they useful, do you think?—Both those places were not very important from the point of view of British trade, and, while they did anything that we asked them to do, we never got very much initiative from them.

40,450. Have you seen any similar unpaid vice-consuls in Holland?—I have seen one, a man at Leeuwarden, and I would say certainly that he is a very good man.

40,451. We have just been told that British traders would prefer to have paid British vice-consuls even in

29 May 1914.]

Mr. JOHN JOYCE BRODERICK.

[Continued.]

places where there was not a great deal of British trade, and that they rely upon them much more than they do upon unpaid men of the country. Do you think that these unpaid men do supply a useful want?—It all depends. I suppose the reason why we have them is from motives of economy. I have really never looked into the matter. I think I could hardly volunteer an opinion on that subject.

40,452. Do you speak French?—Yes.

40,453. Any other European language?—I speak German and I speak Italian, and I am now, of course, learning Dutch.

40,454. Is your office distinct from your house?—Yes, I made that change when I went to Amsterdam. My predecessor had set apart a few rooms in his house for office purposes.

40,455. You did not find that convenient?—No; I have young children, and Amsterdam was not suitable for us to live in. It is a very expensive city to live in, and the taxes are very high. So I made the change and I took a house outside the city, and engaged a special place for the offices.

40,456. Do you pay the rent of the office from the lump allowance given to you?—Yes.

40,457. And also all office expenses?—Yes.

40,458. We have been told that hitherto it has not been the custom to furnish any monthly or annual accounts of the expenditure of that lump allowance. Is that so?—That is so.

40,459. Does that custom still prevail?—We do not furnish any accounts, but our instructions at present are to keep a special account for inspection.

40,460. So you keep an account for inspection, and the inspecting official, when he comes round, has it there to see?—Any man with proper credentials can see it. It is there for any proper person to see. I have not yet had a visit from an inspecting consul, so I do not know what it is he will look at.

40,461. What is the staple of your work? Is it the Merchant Shipping Act, or the pushing of trade?—I can speak better about New York than I can about Holland, where I have only been such a short time, and most of that time has been spent in looking for suitable premises for a new office, and so on. I should say that at New York we spent a very great deal of our time in making reports which were thought to be in the interests of British trade. We had in New York an enormous amount of shipping, of course.

40,462. We have been told that these reports are not so useful as they might be, owing to the fact that they are mostly out of date—the figures in them are said to be mostly antiquated figures?—Of course that is a subject upon which the commercial community are in a better position to judge than I am.

40,463. That is what they say. Is the statement correct?—I always thought the reports we made were very germane, and ought to be very useful.

40,464. There are two kinds of reports, the annual reports and the special reports. We understand that special reports are valuable, but that the annual reports are not so valuable?—I should say they would be valuable, at least for statistical purposes.

40,465. We are told that the statistics are generally out of date?—They are got as soon as they are available to the public in the countries where the reports are sent from. In New York, for example, we got from the Customs and other departments in New York figures before they were actually published.

40,466. And made use of them for your annual report?—Yes, we inserted them in that report before they were known to the general public of the United States. That is not antiquated.

40,467. No, that is not antiquated. Were you principally engaged in administering the Merchant Shipping Act in New York?—We had the shipping office distinct altogether from the general office in New York, for two reasons: one was that we found it difficult to get premises at a reasonable figure in a respectable building on account of the depreciation in value which would follow from seamen congregating about the door. Another reason was that by chance the Seamen's Church Institute were putting up a new building, so we were able to design a shipping office

ourselves and to take it in that building; it was then distinct from the other office. The general office had a larger staff than the shipping office, so that shipping was not really our main work.

40,468. Were you in the habit of getting demands from British traders as to the possibility of pushing their trade in a particular region or place for a particular commodity?—Yes, very frequently.

40,469. How used you to deal with those applications?—We would put the inquirer in touch with the best possible correspondents that we knew of in the place where we were, and leave them themselves to arrange their relations mutually.

40,470. But further than that you took no active interest?—We always made suggestions. Supposing we were in a position to make suggestions as to the best manner of doing things, we made those suggestions; but if not we put the inquirers in touch with the best source of information that we knew of, and allowed them to work for themselves.

40,471. Supposing there was a particular manufactured article, and that a British trader wished to procure an extended sale for that article, had you a room in your Consulate at New York in which the particular article might be placed for inspection?—No.

40,472. Are you aware that that is ever done, so far as you have personal knowledge?—I have heard that there are show-rooms in certain consulates situated, I think, principally in Oriental countries, where British goods may be shown, and where local people may ascertain their excellent qualities; but we did not have that, so far as I know, in the United States, nor have we that in the Netherlands.

40,473. I suppose you have seen some of your colleagues who entered the Service within the last eight years?—Yes, I have seen a great many of them.

40,474. Were any of them engaged in active commercial life before they entered the Consular Service?—Personally I only know one who was, and I know of another who was.

40,475. How did they compare with the men who had not had that commercial experience? Do you think they were better officers, more alert, and better able to set about their work than the others?—No, I do not think they were. I think they were on about the same level as the others.

40,476. Then you would be inclined to think that this previous commercial experience was really no great help to them?—I am inclined to think that the three years' commercial experience, as now appears in the syllabus, is of no use whatever. The syllabus says that it will be a recommendation if they have spent three years in a commercial house. My opinion is that that experience would be, in general, of very little use.

40,477. A suggestion has been made that probably a better way of recruiting for the Consular Service than that which now exists, is to recruit your man early, about the age of 19, and send him to a commercial college—many of which are now springing up in England. There is a celebrated commercial college at Antwerp, I understand?—There was one established in Rotterdam last November.

40,478. That is the sort of thing I mean. Then after passing through that college and getting his degree, if there is one given, in the Faculty of Commerce, the young man should be sent to gain commercial experience in a large commercial house, such as a great shipping house. He would then, at the age of about 23 or 24, be posted to a consulate to begin his work. How do you think a training suits the Consular Service?—There are two features in that—the academic training in the college, and the practical training in the commercial house. I think if he studied the subjects with which a consul would naturally have to deal, such a training might be useful; but for him to spend a year in a commercial house, unless it was well understood that he would get the full run of the house, and unless it was a very good house engaged in important foreign commerce, I think he would be wasting his time.

40,479. But you think if the training in the commercial college were directed towards the theory of such work as would probably come to the consul later

29 May 1914.]

Mr. JOHN JOYCE BRODERICK.

[Continued.]

on in the practice of his profession it might be useful?—I am sure it would be useful.

40,480. Do you think from such a system as that you would get better men than from the present system, which really depends upon competitive examination?—I think that would tend, perhaps, to get better men. You cannot get better material, but you would finish off the material better before you sent it out to the consulates in various places.

40,481. You would possibly get better educated men than those now recruited. The examination at present does not appeal to a high standard of literary or scientific education?—I think the scope of the examination ought to be extended.

40,482. The scope of the literary part of it?—Yes.

40,483. Would you exclude from it all the technical portions and bring them in afterwards?—No; I think I would examine in these portions, as well.

40,484. They are the principles of British mercantile and commercial law, negotiable instruments, contracts of carriage of goods. Would you, at the first examination, examine in those subjects?—I think I should.

40,485. How can a boy of 20 or so learn these things except he gets the knowledge by "special preparation" from a crammer, and that kind of knowledge he soon forgets?—Perhaps there is that objection to it; but in some way or another I think they are subjects useful for him to learn.

40,486. But could not he learn them thoroughly during the two years he would be in the commercial college?—Yes, he might do that. I think the course should include, for instance, international law, the history of modern commerce, and the history of the industrial development of England and of her principal commercial rivals. I believe a young man going out as a vice-consul would be much better fitted to represent British commerce abroad if he was equipped with a knowledge of those things. If he acquires them now it is due to his own industry, and it is more accidental than because of the system.

40,487. Are your colleagues who have come into the Consular Service in the last eight years possessed, as a rule, of such knowledge as you have now mentioned?—No; I do not think they have studied international law or the history of industry and commerce. Some of them may have; but, as a general rule, I do not think they have.

40,488. Is it your impression that we might get by other means a better representation of British interests abroad than we are getting now?—I do not wish to say that the men we are getting at present are not good men, but I think we would get a better equipped man from some such scheme as you have suggested.

40,489. Do you think there is room for better equipment?—I think the results would be better.

40,490. Am I justified in thinking that you consider that a better state of things would be produced by this altered system of examination and training?—Will you allow me to answer it in this way: I myself would have been greatly improved had I gone through such a course.

40,491. (*Mr. Graham Wallas.*) Do you, in the Consular Service, distinguish between commercial work which is directed to spreading general information of opportunities to British interests, and work undertaken in the interests of a particular British firm. Does that distinction make itself clear?—We do not undertake any particular work in the interests of particular firms, except to put them in touch with people who will purchase their goods and to whom they have a bargain to offer.

40,492. Do you find, as a matter of fact, that certain British firms expect you to do a good deal more than that?—No, not as a rule. I have known cases where they expect you to collect debts for them, for example, and that is a thing we would, generally speaking, refuse to do.

40,493. Or go round to particular firms inquiring whether they will take goods?—In my experience we have not been asked such a question as that, and we would certainly not undertake it.

40,494. You told us that in New York now the shipping office has been separated from the general consular office?—I think I should have said that it has always been separate; but we have continued the separation because of the reasons I mentioned.

40,495. Which of those offices can be called the chief office?—The general office.

40,496. The shipping office is a subordinate office?—The shipping office is in charge of a vice-consul and in the head office we have the Consul-General, two vice-consuls, and a staff of clerks.

40,497. Then really when difficult points arise in merchant shipping work I suppose the chief consul is brought in?—If there is any occasion for it. If the vice-consul is not able to deal with the matter he refers it naturally enough to the Consul-General.

40,498. Marriage questions for instance?—We are not allowed by the local law to perform marriages in the United States, so we do not have any of that work.

40,499. Is there any administrative work in the United States which is not strictly shipping work?—New York is the commercial capital of the United States, and British interests would crop up which called for correspondence with the immediate local authorities in the individual States. For instance, correspondence with the Governor of the State of New York or the local authorities in New York city, or in the city of Hartford, or in the city of Trenton, and so on, was all carried on from the general office. Then we had a number of questions cropping up with regard to the administration of the Aliens Act where British subjects felt themselves aggrieved by the administration of the law—that we carried on from the general office. We carried on the commercial correspondence from the other office. Generally there were a thousand and one things where British interests were involved.

40,500. You had two offices, one doing commercial and general administrative work and the other dealing with the Merchant Shipping Act?—Quite so.

40,501. You passed a competitive examination for the Consular Service in 1908?—Yes.

40,502. How old were you at that time?—Just under 27—that is to say I was 26 the previous April.

40,503. You passed an examination at that time in political economy?—Yes.

40,504. How did you prepare yourself for that examination?—I just read it up privately.

40,505. Do you mind telling me what books you read up?—I remember having read Marshall, Nicholson, Walker, and Mill and a few others, principally American works on the subject.

40,506. You were simply guided by the character of the preceding examination?—No. I was unable for some reason to obtain the preceding paper. I took it on the chance of being able to cover the programme.

40,507. There is no economic history in it at all?—No.

40,508. And there is no modern descriptive economics?—No.

40,509. It is pure theory?—Yes, pure theory.

40,510. Have you found it helpful in your work, do you think?—I do not know, except that it has perhaps improved my mental methods.

40,511. You had to get up commercial law. What books did you use for that?—I think I read Smith, Stephens, McLoughlin and some minor books on commercial law.

40,512. Do you know whether you came out head in the examination?—No, I was not head. I was No. 6. I think.

40,513. When you went to Holland you had to learn Dutch?—I have not finished learning it yet, but I am assiduously learning it at present.

40,514. In the Diplomatic Service there are a certain number of language allowances for men who make themselves really proficient in the language of the country in which they are stationed. Do you think it would be convenient if something of the kind existed in the Consular Service?—I do not think it is necessary.

40,515. You simply have to acquire the language?—We do. We have to. There is a regulation that we have to speak the language of the country sufficiently

29 May 1914.]

Mr. JOHN JOYCE BRODERICK.

[Continued.]

well to correspond on all subjects with the local authorities within a year of going there.

40,516. Have you to satisfy anybody as to your knowledge of the language?—Not to my knowledge. I have never passed any test since I entered the Service.

40,517. Have you in your mind any suggestion you would like to make to the Commission as to the improved organisation of the Consular Service?—I had in mind something on the lines of what the Chairman suggested, only not quite the same thing.

40,518. You had certain suggestions to make in regard to recruiting for the Service. Have you any suggestions you would like to make with regard to the organisation of the Service?—I thought that we would tend to get better material first by enlarging the scope of the examination, and, secondly, I thought it desirable that after you had got that good material, your rough diamond, you should cut it and polish it properly before you sent it abroad; that you should allow these young men opportunities of learning something about the conditions of the industry that they go abroad to represent. To that end I thought it would be a very useful thing if you were to arrange, say, a course of lectures at the Foreign Office or somewhere else, for these particular men who had succeeded, on modern commercial history, the industrial history of our country, and of our principal commercial rivals, on international law, and on politics as they affect questions of commerce. After a short course of such study you should then take these young men on a tour of the principal industrial centres of the United Kingdom, so that they might get into an atmosphere which would suggest to them that they were going abroad for the serious purpose of endeavouring to find new outlets for the surplus products of our industries, and also that they might come into personal contact with our principal captains of industry and principal commercial men. I think that would serve two objects: it would give a better knowledge to the vice-consul of the conditions of industry at home, and it would reawaken the interest of the commercial community in the existence of the Consular Service and impel them to correspond with the consul more and more, and by that increased correspondence his efficiency would be increased in proportion. The more commercial work he gets to do, the better man he becomes. Then afterwards I would think it very desirable that Chambers of Commerce should have consuls come before them from time to time, according as a question cropped up which might be of interest to them with regard to a particular locality abroad; that the consul from that locality, when home on leave, or on another suitable occasion, should be asked to visit a Chamber of Commerce and to make up before he comes home the particular question which is interesting to that British locality, and address them, or advise them, or speak to them about it. You will have then the consul and the commercial community acting and reacting on each other, as it were, and they will derive mutual advantage. These are vague ideas just floating in my mind.

40,519. (*Mr. Boutwood.*) Is the office allowance that you get at Amsterdam sufficient for the maintenance of your office?—I think it is just about sufficient.

40,520. Not more than sufficient?—That is all it is. It will not be sufficient to cover my initial expenses in Amsterdam. I have had to acquire office furniture and to change the office, and the expenses of removal and the acquisition of furniture will fall upon my private resources until such time as I am able to economise sufficiently on the office allowance to cover them.

40,521. You said you knew two men, or you knew one man and knew of another, who had had some sort of commercial experience before joining the Consular Service. Do you know what sort of experience that was?—No. I only know that the reason why they were nominated, or one of the reasons, was that they had previous commercial experience. I think, if I am not misinformed, that in that year (which would be about 1907) there was a special list of successful commercial candidates. I think there were three of them in all, and one of those men it is that I know, and another of them that I know of.

40,522. (*Mr. Matheson.*) You were not given an allowance for moving in?—I asked for it, and the Foreign Office agreed to pay the expenses of actual removal in; that is to say, the expenses of the transport of the furniture from one office to another.

40,523. But not the expenses incidental to making the change?—Not the expenses of acquiring furniture. I had to purchase from my predecessor what was left there, and I had to supplement that by getting other things necessary for the equipment of the office, and I have still to supplement it. They will not bear the expense of acquiring that furniture. It will remain my property until, as I say, I have economised out of my office allowance, if I do, to cover it; and if I do not, I shall be able to sell it, if I like. That is as I understand the position.

40,524. I suppose you have seen a good deal of the consuls and the vice-consuls of several countries in your experience?—Yes, I have seen a number of them.

40,525. Do you think that they come from much the same sort of experience and training as our own men?—I think so. I think that in France the diplomatic and consular offices are interchangeable. They are recruited by the same examination, or whatever other arrangements that they have; and are interchangeable, but I have seen no difference between their capabilities and the capabilities of our own men.

40,526. The consuls of other countries are sometimes said to be more zealous in pushing trade than ours are. Do you think there is anything in that?—I do not believe it.

40,527. With regard to the recruiting for the Consular Service, I gather that you think it would be desirable to widen the course of study?—Yes.

40,528. Especially in the direction of commercial history?—I think it might be widened generally, first of all. I think perhaps the examination which I underwent myself and was just unsuccessful in for appointment in the Admiralty—the intermediate examination as it has since become—would be a fairly good standard of examination to set for the candidates, together with whatever might be determined with regard to special study for particular appointments, either then or before or later.

40,529. There are two possible courses—one is to select people on a general examination and then give them a special training after you have selected them; and the other is to select at pretty much the same age as the selection is now made, only on rather a wider examination. Have you any opinion to offer as to those two courses?—I think they would not suffer by coming into the Service younger than the age of 27, for example. I myself was just in time.

40,530. You think it would not matter if the age was lowered to 25?—No. I think a man is fresher from his studies at that time than he is later on. If the examination is broadened I should say it would keep out the older man because he is not so fresh from his studies at that time.

40,531. Do you find that your other colleagues—the English consuls and vice-consuls—have done much to acquaint themselves with the history of commerce since they have entered the Service?—I am hardly able to say that. Some of them whom I know seem to know it. I have never actually talked to them about what they studied. Naturally they would tend to be eager to read anything that would improve their knowledge and widen their experience, so as to enable them to judge better what is in the interest of British trade and what is not.

40,532. Do you find that on the whole the foreigners among whom you live are friendly disposed towards British consuls and ready to help them in their work?—I have found that in America, and I have found it in Holland. I think I may go further and say that they would give consuls information which they will not give to representatives of British firms or even to other Government officials who go abroad. In illustration, I may mention an incident that happened in New York which I remember somewhat vaguely. The New Zealand Government desired to find out why it was that the demand for Kauri gum, which New Zealand used to export very extensively, had dropped off, and they sent

29 May 1914.]

Mr. JOHN JOYCE BRODERICK.

[Continued.]

over a special Government agent to make inquiries. He came to New York, and, if my memory serves me rightly, when he applied to the people who could give him information on this point, they referred him back for a letter of introduction from the consul before they would have anything to say to him at all. That suggests to me that that inquiry might equally well have been made by the consul.

40,533. Has a consul, from his position, much to do in the way of entertaining?—He can control that fairly well, but he has to do some. It is not so much entertaining, but he has to live in a style that will be in keeping with his position or that which the people among whom he lives voluntarily accord to him.

40,534. But there is no special allowance for that?—There is no allowance at all for that. I myself find that a good deal of my income goes in that way, and has gone in that way even in New York, where I was not a chief man. In obtaining commercial information I find it very frequently necessary to invite people to come and lunch with me before I can actually broach a subject with them, and that entertaining comes out of my private purse.

40,535. (*Mr. Shipley.*) If New Zealand wanted to approach you, would it do it direct, or would it do it through London?—I think New Zealand would approach us through the Foreign Office.

40,536. New Zealand correspondence would come through London. That means, I suppose, that all the smaller places would do the same?—Canada would probably approach us direct. Canada, in fact, did approach us direct in New York on many occasions, but that was on account of its geographical position, probably.

40,537. Is your office in Amsterdam in the same building as your house?—It is not. My predecessor had his office in his house, but I have changed that, as the arrangement did not suit me.

40,538. Some of the commercial firms seem to think that consuls should be turned primarily into agents for pushing British commerce, and they seem to me to neglect the other functions of a consul which perhaps are more his primary functions. Do you think that substantially any more could be done than is done now to push the trade of the country through consuls?—I think that depends largely upon the British firms themselves. The vice-consuls whom I know are very anxious to do whatever they can to assist British foreign trade; but the difficulty is that they are not always clear where or how to begin. We have no means of knowing exactly what it is that interests this firm, or that firm, or this chamber of commerce and that chamber of commerce, or this particular industry and that particular industry at a given time, and that we must guess at, for the most part.

40,539. There is a certain vagueness in the applications, I gather. They do not ask a specific question, but want a report on a wide subject?—My experience is that the letters we have had from individual firms have been specific enough. They ask for specific information about a given thing. If it was too vague, I should ask them exactly what it was that they required information about before I actually undertook to report upon it.

40,540. Do you get many letters—say, six or seven letters a day?—We, in New York, had more, I should say.

40,541. More than in Amsterdam?—In Amsterdam the commercial correspondence is not very great, but there is some.

40,542. I suppose most of your time is taken up really with shipping cases?—In Amsterdam it is pretty well, but there are all sorts of questions. Whenever a British subject is aggrieved, or interested in any way, he usually comes to the consulate, either in person or by letter, to help him out of a difficulty, or to show him where he can make profit, or to look after his interests in whatever way it may be.

40,543. Do you think if the examination were held at one fixed time of the year we should get more candidates, and it would be better known in the schools?—That might be so. I can say with regard to Ire-

land, that it was very little known at the time I went up for it.

40,544. And it still is, I think, one of the least known of all the examinations?—In fact, I am not quite sure, that for many years I was not the only Irishman who did get in for that particular branch of the Service. The examinations for the student-interpretships in the Levant, China, and Siam are well known, and they draw a number of candidates from Ireland; but I believe I would be accurate in saying that I was the first for many years to go up for the examination for the general Consular Service or rather to get through.

40,545. Do you think there is any widespread or deep feeling of discontent in the whole Service?—I have never heard of much discontent. There is discontent about the inadequacy of the salary at several posts. I have shared that discontent very seriously.

40,546. With regard to the pension and the arrangement by which the pension is calculated on the emoluments of the last post, which may be less perhaps than the post a consul has held in a more unhealthy place when he was younger, do you think that could be put right in any way?—I have not actually considered that yet, because it has not come to the time when I would be very keenly interested in it, and the thing has not struck me, but, of course, if, coming on to the end of my service, I was suddenly faced with transfer to a post where the salary was smaller, I should naturally try all manner of means that I knew to avoid that in my own interest.

40,547. (*Chairman.*) With regard to the question of the attachment of the pay to the person and not to the post, you have not felt that difference yet because you are on the 300*l.* to 500*l.* scale?—That is so.

40,548. But when you come to be a consul or a consul-general, you may feel it?—No doubt.

40,549. And you say you have not thought over it sufficiently at present to form any opinion with regard to it?—If what you say is the case, I should say I would regard it as very undesirable indeed to be transferred to a post where I had to lose pay, not only from the point of view of pension, but from the point of view of immediate interest.

40,550. How is promotion arranged? Is it by selection, or by seniority?—There have not been a great number of promotions, I am sorry to say, since I came into the Service. I think the upward movement is all too slow.

40,551. Such as it is, is it by selection, or by seniority?—I imagine it is by selection; but on that I am not competent to speak.

40,552. (*Mr. Graham Wallas.*) Is it generally taken that if a man wants to be moved to a better post he must apply for it, and use what influence he can, or does everybody feel that their careers are being watched, and that they will be moved if they deserve it?—I think they feel that it is no use applying—I mean that that would not really influence the Foreign Office at all. I have not heard that any outside or inside influence would be of any use to me whatever.

40,553. Then a man simply waits until it seems good to the Foreign Office to shift him; he does not apply and set things going?—I suppose applications have been made; but certainly they are not made by the junior staff in the Service, and that is really all I know very much about. But presumably the senior officers might write private notes to Lord Dufferin, or somebody else in the Foreign Office, if they felt aggrieved. They would hardly find it necessary to make a formal application to the Secretary of State, or a protest against their being left in a given place for a long time, I should say.

40,554. (*Chairman.*) Have you ever heard any discussion regarding closer amalgamation between the Diplomatic Service and the Consular Service?—Beyond the vaguest sort of suggestion among some of the junior men, I have not heard anything.

40,555. Does it strike you that closer amalgamation would be desirable?—I think it would be a question of finance.

40,556. Have you come across any of the diplomats—the secretaries of legations?—Yes, I have.

29 May 1914.]

Mr. JOHN JOYCE BRODERICK.

[Continued.]

40,557. Are they of the same educational equipment as the consular men, do you think?—No; I believe that they are nearly all university men. Some of them are exceptionally brilliant men. I know some of the men, and they are very brilliant men indeed, and I felt that they were ahead of the rank and file of the vice-consuls in the Consular Service. I have never really considered the question of the diplomatic posts. I do not suppose consuls would accept them if they were to lose money over them. The other objection would be that their duties are not exactly the same.

40,558. Have you ever considered the question of the desirability of having a consular representative in the Trade Department of the Foreign Office?—No; I do not think that would suggest itself to me as being particularly desirable.

40,559. In regard to your leave and travelling allowances, have you any remarks to make? Do you consider your leave sufficient?—Yes.

40,560. Do you consider your travelling allowance, when you have to travel, sufficient?—I consider the leave sufficient and ample, but the travelling allowance I consider not sufficient. When I came over from New York it would have been impossible for me to transport my furniture over here, for example.

40,561. Did you suffer much by selling it and buying again?—Yes; I lost a good deal of money, and I lost money by the transfer. It cost me more than I can actually reclaim.

40,562. You get your own first-class fare and the first-class fares of your wife and children?—Yes; full first-class fares; that is by the recent improvement. Formerly it only used to be one-third; now we get the full first-class fare.

40,563. Do you get the fare of any servant?—You get second-class fares for servants, but your whole family is not allowed to exceed five, including servants. I think that for people who are travelling with children it is not quite right to confine the nurse's fare to second-class, because she has got to travel with the children.

40,564. Is not she allowed on board a steamer to go from second into first-class?—I am not sure. My wife came home separately from me, and I did not consider that; but that would not be the case on a train journey, and she only gets a second-class fare on the train as well.

40,565. I think you told me that, without being able to give precise figures, your impression was that the pay and allowances of German consuls are better than those of English consuls?—In some places I think that is the fact.

40,566. But you cannot give precise details?—No; I never had occasion to inquire into that, and the figures never were before me. I only remember vaguely that once we made inquiry in New York, for some particular purpose, and my memory is that the German Consul-General there has more allowances than the British Consul-General.

40,567. When you, as vice-consul, go on leave do you nominate your *locum tenens*?—It all depends. If I am in charge of a post, yes; if I am under a Consul-General it is for him to nominate the person who will take my place or perform my duties in my absence; that is, if I am under him at the same place; but if, as in my present place at Amsterdam, I go on leave, then I recommend to the Consul-General at Rotterdam the man who I think should be left in charge of the post in my absence. He is usually the man who is constantly with me in the office, and who has actually the rank of vice-consul.

40,568. Have you anything additional to say?—In addition to the suggestions that I ventured to make

with regard to obtaining better material for the Service, or trying to obtain better material, of course, besides increasing the scope of the examination, attention should be paid to the maintenance of a constant upflow of promotion. You must increase the prospects in the Service, at the same time, to attract the better men and retain them.

40,569. Leaving out the question of recruitment, supposing the Service were constituted in this way: Beginning at 300*l.* by annual increments to 500*l.* a year for vice-consuls; then on promotion from the grade of vice-consul to that of consul, pay fixed from 600*l.* to 800*l.* a year rising by increments; then the Consul-General with pay from 900*l.* to 1,200*l.* a year rising by increments, and if you had also a scale of allowances when men are posted to extra expensive places, would that be an adequate scale of emoluments for the Consular Service, in your opinion?—In my opinion it would. I do not know now what the difficulties may be in the way of adopting a scheme like that, but I am perfectly sure that given a scale like that and a reasonable upward flow of promotion it would be satisfactory to the Service.

40,570. If voluntary retirement was fixed at 60 and compulsory retirement at 65, would such age limits stimulate promotion?—I think so. I think we are kept back at present to a certain extent by men who have the option of remaining on until 70 years of age.

40,571. That option you are not in favour of?—No.

40,572. If the scale of pay in the Service was graduated, with the leave rules as they are now, and with retirements fixed voluntarily at 60 and compulsorily at 65, do you think the Service would be so far satisfied?—Yes, that would satisfy me thoroughly. But, I think, the Treasury ought to consider the granting of local allowances to certain European posts which are more expensive than England. The scale is fixed to remunerate a man for those services on the basis of the cost of living in England, I presume, and our income tax is charged on that basis. But take my own case in Amsterdam: the cost of living in Amsterdam is higher than it is in England, and I cannot command the same amount of comforts in return for my salary there that I could command in England. If that were well established, it is a fair reason, I think, for granting a small local allowance to Amsterdam. I have applied for that as a matter of fact privately, and I have been told that the Treasury are absolutely adamant in refusing to grant local allowances to posts in Europe. If I may be permitted to say it, that dissatisfies me very much.

40,573. (*Mr. Shipley.*) Do they grant a local allowance for New York?—Yes they grant it in New York. When I went to New York I had 300*l.* a year and a local allowance of 150*l.* As a consequence of representations to the Foreign Office that local allowance was increased to 250*l.*, and, following on a visit of one of the Foreign Office men, they adopted the principle that the senior vice-consul there—that is, the man who is longest there as vice-consul—should get an extra 200*l.* if he were married. That was my own case, so I enjoyed that for about six months. I had then more in local allowance than I had in salary, and it was still not too much for a married man in New York.

40,574. (*Sir Kenneth Muir-Mackenzie.*) I suppose the expenses in Europe vary in different countries?—I think so. In Holland they are pretty high, but in France I believe they are less than they are in England. I do not know how you would adjust that.

## ONE HUNDRED AND FIRST DAY.

Thursday, 11th June 1914.

## PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O (*Chairman*)SIR KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

MR. ARTHUR BOUTWOOD.

MR. JOHN ROBERT CLYNES, M.P.

MR. RICHARD DURNING HOLT, M.P.

MR. PERCY EWING MATHESON.

MR. PHILIP SNOWDEN, M.P.

MR. GRAHAM WALLAS.

MISS HALDANE.

MRS. DEANE STREATFIELD.

MR. N. E. BEHRENS (*Secretary*)

MR. FRANCIS W. HIRST called and examined

40,575. (*Chairman.*) You are the editor of the *Economist*?—Yes.

40,576. And naturally you take an interest in all questions connected with trade and the organisation of the Government which deals with trade?—Yes, I have always been much interested in those questions.

40,577. In that connection you have, I presume, paid attention to the Consular Service?—I have had a good deal to do with that partly because we receive all the consular reports and partly because I have made a point of travelling a good deal. In the last eight or ten years I have travelled, I think, in every country in Europe, and on those occasions I have usually seen something of the Consular Service and also something of the Diplomatic Service. Perhaps I might be allowed to say at this point that I feel a certain amount of diffidence in appearing before the Commission upon a subject with which I am only indirectly acquainted, and I should like also to say that I have no personal grievance of any kind whatsoever against either the Foreign Office or the Diplomatic Service; I have always met with the ordinary courtesies, and have sometimes received most valuable aid from our consular officers. So that the criticisms that I was going to offer and the suggestions I was going to make are strictly impersonal.

40,578. They will be the more valuable on that account, and because of the point of view from which you regard these questions. If you have marked out any particular line of evidence which you wish to give I shall be glad if you will follow it. During your evidence or afterwards I will put to you such questions as arise from the observations which you give?—Thank you very much indeed. I read the other day in the papers that a lawyer was always a very bad witness, and having been a lawyer myself I am quite sure I am a bad witness. Therefore I should be rather glad if you would allow me to read from my notes what I should like to put in evidence, and then, of course, I am quite willing to submit to examination afterwards to any extent that seems desirable.

40,579. I might perhaps mention at the outset that the points to which we are directing our attention are, first, the recruitment for the Foreign Office, the Diplomatic and Consular Services; next, the questions connected with promotion in those Services, and finally the organisation of those Services with a view to producing the greatest efficiency in the public interest. As you give your evidence I may put such questions as will tend to bring these points into prominence?—If I may just add a few words more as to myself. Being on the *Economist*, for some reason or other I have often been asked to go down to Chambers of Commerce to discuss questions such as the laws of shipping, the sea laws in times of war and peace, and questions of that kind. I have, as a matter of fact, been to, I think, every important commercial town in England and Scotland, and have frequently addressed Chambers of Commerce. In that way I have heard a good deal about the relations between Chambers of Commerce and the Foreign Office, and I have found that there was a good deal of

criticism. Besides that I may say that my interest in the Foreign Office began when I was at Oxford, and I can remember very well among those of us who were in for the "Greats" School, there was only one, as far as I know of those at any rate, who took a first, and I think of those who took a second class who could have gone into the Diplomatic Service—I mean who had sufficient income for that purpose. I remember that we always regarded the Foreign Office and the Diplomatic Service as a closed door. We never discussed it as a thing that any of us could think of going in for. I am thinking of people among those who were at college with me, like Sir John Simon and Mr. F. E. Smith, people whose intellectual ability, I think it will be admitted, was quite sufficient for the Civil Service, but they never even dreamt of the Foreign Office. Of course, everyone was talking about whether we should try for the Home Civil Service and the Indian Civil Service examination. So my interest began at that time, and I remember being struck by an expression of Professor Phillimore, then Mr. J. S. Phillimore, who was at Oxford at that time. He was, one might say, a Liberal of the Rosebery school, or perhaps a Whig of the Palmerstonian school. At any rate, he wrote an essay when we were at Oxford, and he described the Foreign Office—we all thought it was a rather clever descriptive phrase—as "the last choice preserve of administration practised as a sport." That has rather remained in my mind. I do not know whether it was a fair description of it, but it rather fell in with our ideas of the Foreign Office, and with the feeling that no Oxford man of our time who was in any way distinguished ever contemplated going into the Foreign Office, or attempting to go in. These early views have been developed and confirmed by experience and conversation. I should like especially to mention Sir George Trevelyan, who initiated the debate of 1877 on the reform of the Foreign Office by moving that it should be thrown open to merit. I have often talked to Sir George Trevelyan about the subject and he has talked to me about it; so the other day as I was coming here I thought I should like to see him and ask him if his views were the same. He said his views could not be stronger than they were at the time, but they were just as strong, and he referred me to the debate, and mentioned the very feeble opposition which was put up against him in that debate. The weakness of the replies, and the general feeling and tone prove that even then this was felt to be an anomaly which would have to be reformed.

40,580. I have read that debate very carefully. It took place on the 23rd February 1877 in the House of Commons?—Yes. I do not know whether it is permissible to put in that debate as evidence. It is not very long.

40,581. It is fully reported in Hansard?—I do not happen to possess Hansard of that date; but I should feel I was doing some service to the Commission if I put that debate in as evidence.

40,582. It will be brought to the notice of my colleagues. But I may say that the points in that

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

debate which struck me most forcibly were those dwelt upon by Mr. Lowe, afterwards Lord Sherbrooke, and Mr. Lyon Playfair who had been Chairman of the Committee which inquired into the Civil Service in 1875. Their opinion was in favour of throwing open the Diplomatic Service to competition, but retaining the Committee of Selection. It was to be a limited competition?—I do not know whether he said “the” Committee of Selection, or “a” Committee of Selection. There is an immense difference.

40,583. The Committee of Selection. He was strong upon the point of selection prior to competition?—Much depends on the purpose and composition of such a Committee.

40,584. It was this: that you require a greater measure of assurance that men recruited for the Diplomatic Service and the Foreign Office possess certain personal qualities than you require in recruiting for the ordinary Civil Service. The men you recruit for diplomatic work must have certain qualities, a good address, a pleasant manner, and a gentlemanlike demeanour; qualities which cannot be tested by an examination paper. The committee was intended to secure that only the men who possessed these qualities were permitted to go in for the examination?—It is not easy to make objection to a proposal for securing good diplomats; but then who are the committee, and is it really a Board of Patronage or a Committee of Selection?

40,585. It should be a Committee of Selection?—If it is a real genuine *viva voce* examination to see whether a candidate possesses those qualities of address, which are, I admit, extremely important, without any reference to his birth and connections—if it is simply a device to ascertain his manners and address—then personally I certainly am not here to object.

40,586. I am glad to hear that; that was the object of Mr. Lowe?—Yes, I presume so.

40,587. (*Mr. Holt.*) If it was a committee of elimination it would be better still?—A committee to eliminate persons who could not under any conceivable circumstances have the right sort of address?

40,588. Yes?—I would just make this *caveat*: that I think it is a little bit dangerous to assume that a man is unsuitable for diplomacy because he has not got a very good appearance. I think some of the great diplomats have not been very beautiful to look upon, and possibly have not had very smooth manners.

40,589. (*Chairman.*) I do not think that such a *caveat* would be applicable. The committee would not have regard to such superficial appearances. I understand that you see nothing objectionable in a committee which had in view the objects I have mentioned, and from whose consideration would be eliminated matters concerning birth, or large fortune, or political patronage?—Quite so.

40,590. That was Lord Sherbrooke's idea, as I understand it?—Especially if it was known at Oxford and Cambridge and at the public schools. I was at a public school which, I suppose, has never had a man in the Diplomatic Service or the Foreign Office either; it may have had, but I have never heard of it. If it was known at the public schools, and the colleges of Oxford and Cambridge and other universities, who the members of this committee were, and if it was generally advertised in a way so that everybody could see that there was such a thing as an examination for the Foreign Office, and that people were not excluded on such grounds as you have mentioned.

40,591. Would you advocate that such a committee should not consist altogether of Foreign Office officials, but that it should have an admixture of outside people?—I should venture to think that the fewer Foreign Office officials the better. I do not say that we should not have one, but I do not think that that should be the main idea, because the main idea should be to refresh the Foreign Office, and not to try to secure that the new one should be exactly like the old one.

40,592. Would you admit a representative of the Civil Service Commission, or the chief Civil Service Commissioner to such a committee?—If he had time I think that would be a desirable thing.

40,593. It might meet once a year, perhaps?—It is so important a matter that I think you should put on it

the very best men, who would give confidence to the public.

40,594. Although you think the Foreign Office should be represented on the committee, you are decidedly of opinion that it should not have an overwhelming voice?—I should very much regret if it were allowed the control.

40,595. Will you proceed with your evidence?—At the risk of startling the Commission and possibly annoying some persons outside, as regards the present system I would say that if during the last few years there had been inscribed over the door of the Foreign Office, “No English Nonconformist, no Scottish or Ulster Presbyterian, no one with Radical or Socialist leanings need apply,” and if it had been added that marks would be taken off for Free Trade, then I say the composition of the Foreign Office and the Diplomatic Service might have been practically what it is to-day. Yet, in answer to the question: “What is the present method of appointing officers to the Foreign Office, the Diplomatic Service and the Consular Service,” a formula of the most elaborate innocence has been provided by the present Under-Secretary of State, Sir Arthur Nicolson. He says in answer to that question, that Foreign Office clerks, diplomats, and consular officers are all appointed by competitive examination of candidates selected by the Secretary of State on the advice of a Board; and he added that anyone may appear before the Board if properly recommended. So that it would appear from that statement that the Foreign Office, the Diplomatic Service, and the Consular Service are all appointed in the same way, but he admits two exceptions. He says there is not even a limited competitive examination for commercial attachés and legal advisers. Here, perhaps, I might remark that there is no mention as far as I can see of what are called naval attachés, which is evidently becoming an important post about which information ought to be sought. Anyhow, in these two departments—the departments of commercial attachés and legal advisers—the appointments apparently go by pure patronage. The commercial attachés need have no knowledge of business or political economy, or of banking, or of currency, or of statistics; and any briefless barrister knowing little of the laws of his own country and nothing of the laws of other countries, or of international jurisprudence might be appointed a legal adviser, and in that post he might, such is the commanding position of Great Britain in maritime affairs, act as an almost insuperable obstacle to the progress of commercial laws and of international treaties. You and probably all of us may say: “Well, but he would not do that; they would not appoint such a person,” but my suggestion is that what you want is to make sure that jobbery is impossible in an office of this importance. An enlightened policy must have enlightened instruments. You may have a cart full of good things with a horse and a driver, but it will never reach its destination if the wheels will not go round. To my mind the Foreign Office—using that term to include the Diplomatic Service and the Consular Service—is by far the most important department of the State. I need hardly mention that on it depends the great question of peace or war, the treatment by foreign governments of our foreign trade, the improvement of the international commercial code on which the security and progress of our shipping and commerce largely depend. One has also to consider what immense good might be done if the Foreign Office were to take the initiative in the reform of international law and in the advancement of civilisation. At any rate, if I am right in my view of its importance, it follows that the Foreign Office ought to be the most enlightened department of the State. It ought to be in touch with the best thought of the country. It ought to understand modern business and the ways of finance. May I pause on that? There is nothing so extraordinary as the development of international business and finance, and the pressure which is brought to bear upon the Foreign Office, and has been brought to bear lately in regard to those subjects. I mean there is no comparison between the new Foreign Office functions and the old Foreign Office functions. Some business firms

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

spread all over the globe and know how to bring pressure to bear. Then besides that there ought to be in the Foreign Office men who comprehend the outward relations of British capital and labour to capital and labour abroad. The Foreign Office ought through its representatives abroad to possess a close and sympathetic knowledge not only of foreign courts and governments but of foreign countries and foreign peoples. If I may give an illustration, I remember when I was at Vienna a good while ago the most interesting person in Austria at that time was Lueger, the Mayor of Vienna, the most powerful politician in the country, and, as a matter of fact, he had a great deal of power at Court. I went to our embassy with an introduction, and I asked the young gentleman whom I had to deal with about Lueger. He had never seen him or heard him; he knew nothing about him except just the name, and finally after making inquiries—the Ambassador himself I should say was ill—his second in command said: "We do not know much about these things here, but I will give you an introduction to *The Times* correspondent, Mr. Lavino, and he will be able to tell you everything," and so he was. Still I thought it was a little humiliating—or I felt it was—that our embassy did not know something so elementary as that. I would observe that important as foreign Courts and potentates are, it is not upon kings, princes, and presidents, that London, Liverpool, Manchester, Glasgow, Belfast, Newcastle, Cardiff, Hull, Bristol, and twenty other towns depend for their foreign custom, and practically for their livelihood. Our Foreign Office is out of touch with business and democracy at home, and everyone will agree it must be out of touch if, let us say, the whole of the Nonconformists, the Unitarians, the Quakers, the Independents, the Scotch Presbyterians, and the Ulster Presbyterians—the greatest men of business in the country—are absolutely excluded, not by any statutory rule, but in fact, from the Service.

40,596. (*Miss Haldane.*) Is not that because of the money question, rather than because of their religious proclivities?—No, I think I can say not, with great certainty. The income test is not specially hard on Nonconformists.

40,597. It is remarkable that we have very few Scotch boys thinking of going in for the Diplomatic Service, but I always considered that was because they were comparatively poor, or not rich enough to enter?—My experience of the North of England and of Ulster—I should not like to say my experience of Scotland, because I am sure I could not put it against yours—is that the business wealth and enterprise of those parts is about equally divided between Nonconformists and orthodox people. I was with the Liverpool Chamber of Commerce two or three days ago, and on making some inquiries I found that perhaps the wealthiest religious community there is the Unitarian. I can mention many towns in Yorkshire where you find the important business men are about equally divided between the Church of England and nonconformity of various kinds. Certainly there is enormous wealth amongst the Nonconformists. One could mention a good many millionaires, in a moment almost, who are Nonconformists.

40,598. (*Mr. Matheson.*) Is not that because there is no tradition of the Service in the Nonconformist families you speak of?—How, then, is only one public school represented in the Foreign Office practically? It is not that they are absolutely excluded by any law, but as a matter of fact somehow or other they do not get in or cannot get in.

40,599. (*Mr. Holt.*) About 90 per cent. of them come from Eton?—I am told so.

40,600. (*Chairman.*) We have the figures here?—I have the greatest admiration for Eton. Many of my own friends are Etonians, and I have a great opinion of them; yet I may doubt if the first ten men at Eton are intellectually superior to the first ten men at half a dozen other public schools one could mention. Further, I do not believe that all the best men at Eton go into the Foreign Office. You will probably find that intellectually men in the second rank at Eton go in—not always of course, but frequently.

40,601. You were dealing last with the advantage of having a diplomat properly equipped with legal knowledge and also with expert knowledge on financial matters?—Of course, there is a Legal Department of the Foreign Office. I have very little to say on that, though I personally have always been deeply interested in the development of international law, the laws of naval warfare, arbitration, and so on. I have seen something of the work of the Foreign Office in those respects, and of course, anyone who reads the proceedings of the last Hague Conference carefully, or those which ended in the Declaration of London, can see something of it for himself. I do not believe that the department is adequate now, and I do not believe that it is strong enough; and I would say about the law, as I would say about finance, that if you want to have first-rate men in the Foreign Office you must be prepared to pay for them. Perhaps I might give an illustration: Not very long ago there was required for the service of the Empire a man to whom they were prepared to pay 5,000*l.* a year, and all that was wanted was that he should have great commercial knowledge, and tact, and prudence, and so forth. There was a tremendous search instituted in the City. Of course there were a large number of men whom one would have said would have done the thing very well. They wanted particularly to have a practical man who had seen something of business, but they could not persuade anybody to go in for it, because the salary was so miserably small and the right men really could not afford to leave their businesses.

40,602. (*Mr. Holt.*) Might not that also be because the person would have no real authority?—It was a very fine position.

40,603. (*Chairman.*) In what department in the Foreign Office would this gentleman be placed?—I was going to say that I do not stake all my hopes on reinforcing the Foreign Office with commercial men. I should like to have some and I think it could be done. Perhaps I may develop that in a moment, but my notion was that you would get the really first-class business experience into the Foreign Office by means of a committee like the committee which assists the Secretary of State for India. You will remember that there is a committee of men like Sir Felix Schuster and Lord Inchcape who have been on it. That is the kind of committee which I think is needed for the Foreign Office.

40,604. That would be for the purpose of giving financial and commercial advice?—Exactly.

40,605. Not for the ordinary everyday work of the Foreign Office. That would be in addition?—I do not mean for the ordinary details, but I think there is a great deal of work from week to week, and generally some important question which ought to be considered.

40,606. I suppose such a council as you mention would have to deal with, say, questions of large concessions abroad which commercial people in England desire to get, and questions connected with foreign tariffs or matters of that description?—Exactly.

40,607. Have you considered that such matters would come within the purview of the Advisory Board which is now attached to the Board of Trade?—I have purposely excluded from my view the question of the Board of Trade.

40,608. I am afraid you would not be taking a complete view of the operations of the Foreign Office if you were to exclude its connection with the Board of Trade?—I know it is a difficult subject, and it is so difficult that without taking some special time for the purpose I should not care to give evidence upon it.

40,609. I will call your attention to that point later on, because the Foreign Office in one department of its work acts in close connection with the Board of Trade, and such questions as you seem to have in mind do fall within the duties of this Advisory Committee. We will return to that later on?—Perhaps I may make this observation upon that, and that is, that I do not personally believe in co-operation between two Government departments. I know how they hate one another—they always do—and you seldom get real co-operation. Now the India Office works very harmoniously with this India Council.

11 June 1914.]

MR. FRANCIS W. HIRST.

[Continued.]

40,610. And yet there is now before the House of Lords a Bill which, if it passes into law, will materially alter the Council of India?—I am sorry to hear that. As to the composition of the Foreign Office, it ought I think—and I hope I may urge this view upon the Commission—to be not only open to merit quite freely, but it ought to be to some extent a mirror of the nation; that is to say, if you have a Committee of Selection that Committee of Selection ought not to say: "Oh, but so-and-so is the son of a shopkeeper, we could never allow him to come in." I think that would be rather a good argument for letting him in—that he was the son of a shopkeeper. I think that our Foreign Office would succeed far more in some democratic countries, especially in the New World—in the United States—if they could send there men who had come out of the life of the people. Then what should the Foreign Office be? It should be, as I say, a mirror of the nation. It should have at hand the best intelligence of the nation. It should be an intelligence department for foreign commerce, which it is to some extent, but it has no idea, or very little idea, of the value of prompt publication, and it does not seem to have very much idea of what is important news to a business man and what is not. I have sometimes, when there has been a very serious international crisis, in money for instance, seen suddenly something published from some important centre which dealt with the trade of last year or the year before, and at the beginning of it how easy it would have been to deal with the present monetary position and then deal with the trade of the past year. They have begun to do it, I believe. Some criticisms which have appeared in the press may have had some effect upon them.

40,611. (*Mr. Holt.*) What we really want is criticism of the trade of the next year?—The prospects. I do not say that statistics are not useful. I do not complain of them. The Foreign Office ought, in my opinion—if I may throw this out as a suggestion—to be a kind of meteorological office for publishing conditions in foreign countries; I mean it ought to tell people about probable changes in international weather. I do not see why they should not publish something. I think it would be better if they published something than if they exchanged tit-bits of information with one or two newspapers in return for support. I think it would be really better if the Foreign Office instead of doing that were to do what they do in Stockholm in Sweden. There any journalist can go into a certain room in the Foreign Office and there ask for information on any subject, and they are always very glad to give it to him so long as it is not a secret. The whole press is treated, I believe, quite fairly, and you do not feel, as members of the press very often feel here, that if you go to the Foreign Office you are expected to support the policy of the Foreign Office. Now that is a very bad arrangement. It is exactly the same with the Admiralty; if you go to the Admiralty of course you are expected not to say anything against the policy, let us say, of "Dreadnoughts" or whatever it happens to be. For that reason I think independent journalists practically never do go to them.

40,612. (*Chairman.*) Would it make any difference to your view if that information and these facilities were provided by the Board of Trade and not by the Foreign Office? I ask the question because there seems to be a growing tendency to transfer this business from the Foreign Office to the Board of Trade, so that in regard to such business the Foreign Office practically acts as a post office. The general trade statistics are marshalled and worked up into shape in the Board of Trade for presentation to the public and not in the Foreign Office. But so long, I presume, as the thing is well done it does not make any matter to your argument where it is done?—Yes, if I were simply speaking as a person who wanted to collect statistics; but I do not think the Board of Trade could give one information as to the state of affairs in a particular country at this moment.

40,613. The political or the commercial state of affairs?—Both. They are so mixed up that it is hopeless to distinguish them.

40,614. (*Mr. Holt.*) Do you think it possible that any Government department could publish a statement in advance that another Government is not going to pay interest in a month's time, for instance?—Certainly not, but the really interesting questions are often half financial and half political.

40,615. How could a Government publish adverse anticipations of what another Government is going to do?—I am afraid I put it rather crudely. If you go to a department, and if you want to know something, you go to the people who know. They will not tell you everything; it would be very foolish of them if they did, but you can judge how the position stands very often, and if they have a man of tact, good sense, and knowledge there he could probably give out a good deal of information which ought to be given out—and which ought not to be given out to one particular newspaper in return for support, but ought to be given freely to any respectable newspaper seeking information. I am told, at any rate, that the Stockholm principle works very well, but I admit it entirely depends on the way it is worked. I think an information bureau of that kind would be useful, and it is better, I think, than the proposal for a Foreign Office gazette.

40,616. (*Chairman.*) Something like what you suggest was put into operation in Calcutta in my time, and it died of inanition in a few years. Newspaper people did not care for it?—May I say that I do not think that is conclusive, because Calcutta is not London. London is the greatest centre of the world's news and information—by far the greatest. If you like to go about the City of London, and know your way about, you can find out anything in a financial way about what is happening in other countries. As to the Legal Department I have said, I think, all I have to say.

40,617. You have said that the Diplomatic Service and the Foreign Office do not at present command the best intelligence of the country?—I consider that the present system is a caste system and that it produces a caste. Almost anybody who has had dealings with the Foreign Office and with diplomacy would probably agree with me up to a certain point that that is so. I have read with great interest the evidence of Mr. Stanley Leathes, but it did not at all convince me, and perhaps I may make a little criticism upon it. It seems to me, as to this "gate of merit," that one of the means by which it is closed or half closed is by insisting upon a very good knowledge of French and German. Now you could not devise a better plan for preventing the first class men from Oxford and Cambridge getting into the Foreign Office. It is an absolute certainty that if you insist that everybody shall be first rate in French and German you will not be able to get the best men, because our system of education is not a French and German system.

40,618. The public service is recruited with the particular object of carrying on official work with the greatest efficiency. The work of the Foreign Office and the Diplomatic Service cannot be efficiently conducted unless the staff engaged are well acquainted with French and German?—I do not follow the argument. Why both languages?

40,619. If a diplomatist is stationed in Germany he will not be able to do his work well without knowing German?—I quite agree.

40,620. In the same way if he is stationed in France or Russia he will not be able to get on without knowing French, which, in diplomacy, is used in Russia as well as in France. If that be so, and if it be also the fact that you cannot learn French well unless you learn it when young, and in the country where it is spoken, is not there something in the statement that a thorough knowledge of French and German are necessary for a diplomatic officer?—Of course there is something in it.

40,621. Keep in mind the principle which governs the recruitment of the public service?—I quite agree that for every proposition you can find an argument on the one side and an argument on the other, and the question is, which predominates. I quite agree that they will have to know French or German well—one or the other—and perhaps also Spanish or Russian. But after you have got them you can send them to the

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

country whose language they have to know. I would lay my trap so as to catch the best men, and after I had caught the best men, then I would teach them any special knowledge that I wanted them to have. I venture to think that this plan of insisting upon a perfect knowledge of French and German is really using French and German as a means of excluding the best intelligence of the country.

40,622. You know that boys from the primary and secondary schools of the country now go abroad and learn continental languages under a system of scholarships which are given to them from the secondary schools?—So I am told.

40,623. That is a means of bringing the acquisition of French and German within the reach of the poorest people?—Yes.

(*Mr. Graham Wallas.*) The special scholarships for going abroad are very few.

(*Chairman.*) But there are some.

(*Mr. Graham Wallas.*) I think they are entirely held by teachers.

40,624. (*Chairman.*) But surely that system may be developed?—I think it is a fair question as to what position French and German should have. I do not mean they should not have a good position, but I do not like to see them in a position which enables the Foreign Office to exclude such a very great amount of merit; that is all. May I say a word about the question of pay?

40,625. Yes, certainly. The question of pay is a most important one?—I do not believe that any rank in society is really free from the possibility of being in some way or other influenced by pecuniary considerations. I do not accept the view that a university education, or a very high rank or a long pedigree, makes it impossible that a man may under certain conditions yield to pecuniary inducements. Surely it is amazing that the Foreign Office should have gone on so long as it has done on this system of getting important services from men for years and paying them either nothing or very little, or much less than they can live upon. It is not at all an answer to say, "We insist upon their having 400*l.* a year." That is quite true; but supposing after three or four years the man loses his 400*l.* a year, or it drops to 300*l.* or 200*l.*, I do not suppose they immediately exclude him from the Foreign Office or the Diplomatic Service, but he is obviously immediately in difficulties. Even 400*l.* a year does not preclude you from being in difficulties. I do not know what other people's experience is, but I should not like to have to maintain a position in a foreign capital on 400*l.* or 500*l.* a year. Therefore, I say that one of the first things that ought to be done—and I am amazed that it has not been done long ago, and it seems to me surprising that it should require a Commission in order to make this change—is, that people should be paid a living wage in this Service. If you cannot afford more for the Foreign Office, the Diplomatic Service, and the Consular Service than you can at present, then I would say reduce the numbers and divide up the money so that they should all have a living wage. Another plan would be to give them more and increase the taxation. Another plan would be to give them more and economise in some other direction. For instance, you might reduce the size of a Dreadnought for one year, which would probably provide enough money for the purpose.

40,626. (*Mr. Holt.*) The interest on that sum would provide you with enough for all eternity?—Might I say a word about amalgamation?

40,627. (*Chairman.*) Amalgamation of all three Services, or of the Foreign Office and Diplomatic Service?—My view is that the amalgamation of the Foreign Office with the Diplomatic Service would be a good thing.

40,628. Will you please restrict yourself to that before you go on to the Consular Service?—But amalgamation with the Consular Service would be a much better thing.

40,629. But it would be more difficult?—It would be more difficult.

40,630. We will take that afterwards, if you please.—As to the first question I have really not much to

add to what has been already said. I think it is clearly a good thing, and I merely record my own impression—an impression that is taken from other people. I do not think it necessary for me to argue it. I believe you know the arguments much better than I do; you must have heard them. To put it quite briefly, I do not believe in having a Service which is divided into two water-tight compartments, one of which is supposed to be supervising the other and promoting the other. I think there ought to be perfect communication between the two. I believe that applies to the Consular Service also, and the reason why I want to see the Consular Service amalgamated with the Foreign Office is, that you then throw into the Foreign Office and diplomacy the classes which are now excluded. You would immediately have men of experience who have earned their livelihood and been accustomed to do it, and who have grown up in, shall I say, humble or commercial surroundings—some of them, not many perhaps.

40,631. Would you alter the entrance examination in any respect? Would you insist on better education?—I am not sufficiently familiar with the examination for the Consular Service to be able to say why it is that the consular officers, especially in the Near East, are so infinitely superior on an average in calibre to the diplomatic officers.

40,632. Is that the fact?—I think it is a matter of notoriety. Anybody who has travelled in the Balkans or Turkey, or Russia, and has met both types, could hardly have much doubt about it. What the reason is I do not quite know.

40,633. I hardly think that statement would be accepted generally. We have had before us an apparently competent officer from the Consular Service in the Near East, who, comparing his own service with the Diplomatic Service, thought they were not on the same level?—Far be it from me to say that every consul in the Near East would make a good Ambassador. I am not saying that, but there are some who would make first class Ambassadors.

40,634. Some have. There is the case of Sir William White, for instance. That is the case of the exceptional man?—He is not so very exceptional, I think. There are a good many first-rate men as consular officers.

40,635. And the work that consular officers do in the Near East is not so much commercial as diplomatic, while actual practice and responsibility bring a man forward and develop the capacity that may lie in him, independent of education. But that is appealing to the exceptional case. The point I wish to bring before you is, that if you amalgamate the three services—the Foreign Office, the Diplomatic Service, and the Consular Service—there ought to be something like equality in the method of recruitment?—Yes, I suppose there ought to be; but by amalgamating I only mean that it should be recognised as a perfectly proper and ordinary thing for a man who happens to be in the Consular Service to be put into a diplomatic position, or *vice versa*; that is to say, if they develop the sort of qualities that are wanted there should be no question that it is a perfectly proper thing to do.

40,636. At the present time it is, I understand, admissible. It is possible, but it does not often happen?—And it creates a good deal of friction, I understand.

40,637. You would have such promotions, then, more a matter of course?—Yes.

40,638. But you would insist upon selection?—I was thinking, for instance, of positions like Constantinople or Athens or Vienna. I am certain that where there is a vacancy in an embassy like those it would be proper to consider very carefully the qualifications of the leading consular officers in the neighbourhood who know the ground so thoroughly and are often shrewd statesmen.

40,639. (*Mr. Boutwood.*) In fact you want to bridge the gap between the two services rather than have a formal amalgamation?—Yes; I do not care about the formality. Probably it is not desirable for this, among other reasons, that we have a system (that is sometimes very good) of appointing a consul-general who is an honorary person, and who very much appre-

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

ciates the honour. I do not say it is always a success, but it is sometimes a great success.

40,640. (*Chairman.*) Your suggestions would, I presume, be altogether restricted to the paid Consular Service?—Quite so. I should not like to hamper the freedom of the Consular Service by what you may call a formal amalgamation which might make honorary appointments difficult.

40,641. Is there any other point you wish to mention?—I think I have put my main points: that you should throw open the gate to merit, that any citizen of the United Kingdom, whatever his birth, fortune, or religion, should be qualified to stand for the entrance examination provided he bears a good character, and, if superiority of brains and good character are held to be insufficient, then I should be quite ready to agree that on a *viva voce* examination marks should be given for manners, appearance, and address, but not for family or other connections.

40,642. So that it would be possible that a person who was rejected on account of address and manners might nevertheless be successful in the competition?—Yes; and in that case he would probably be sent into the Foreign Office itself, where that quality is not so important; or into the Consular Service, where you may say that address and manners really are not important, but where more substantial qualities are required.

40,643. Then you would reject a committee of inspection or elimination and would rely upon marks?—A *viva voce* examination by a committee would, I think, meet the case; as to whether the committee should be a separate committee or should be the examiners, I have no reason for supposing that examiners are always good judges of address and appearance.

40,644. The two conflicting theories, if I may say so, are these: (1) that there should be a Committee of Elimination (adopting Mr. Holt's word) which should sit prior to the examination, and that those who were eliminated by the committee should not appear at the examination?—I do not like that plan at all.

40,645. That is one plan; and the other plan is that an examination should be held, part of the procedure of which should be inspection by a committee (a kind of *viva voce* examination) which would give marks for address, demeanour, and so forth. This second plan would not be an effective way of eliminating an undesirable candidate?—I do not want to eliminate a man who appears to be undesirable on the ground of his address, or his looks, or his manners, because you may be excluding the great diplomatist, or the great business diplomatist of the future.

40,646. And your proposal is to find a place for him either in the Foreign Office or in the Consular Service?—If he was a man of superb brain power, certainly.

40,647. If you did find a place for him in the Foreign Office, the Diplomatic Service being, on our assumption, interchangeable with the Foreign Office, there would still be a difficulty?—The interchangeability does not mean that a man *must* go from one to the other.

40,648. I see your point; if he persists in wanting to go into the Diplomatic Service you would say to him, "No, we will not send you"?—That is my point exactly; you would let him be run up the Foreign Office ladder, but you would not send him out into the Diplomatic Service.

40,649. Then he would have the grievance of not being on the same footing with the rest of his colleagues?—Some people prefer the office.

40,650. (*Mr. Holt.*) Surely if a man had great brain power you would ascertain it from his looks. That is the best way to ascertain it?—I thought the idea of a Committee of Elimination was to say: "This is a rough sort of fellow who will never do for the Diplomatic Service; therefore he shall not even come into the examination." I would like to avoid that. I do not like that idea at all, because I think you might make a great mistake. I think I have said enough on the point of the Council or Board. I attach a good deal of importance to it. I do not know whether it has been proposed otherwise.

40,651. (*Miss Haldane.*) Would you exclude from the Service those outside the United Kingdom?—Yes, I should. After all, the United Kingdom pays for it. I do not think it fair to allow people from the Colonies who do not contribute to enter. Of course, if they contributed it would be a different story. As to this Committee or Board, my idea is that a Board is the only way in which you can get first-class financiers and commercial men to serve the country. They can give you a day or an afternoon a fortnight, but they could not possibly give you their whole services.

40,652. (*Chairman.*) Am I correct in thinking that you are not very familiar with this Advisory Committee on Commercial Intelligence which is attached to the Board of Trade now? It was formed, or reorganised, some three years ago, and I have its first report now before me. The committee consists of the following groups of gentlemen: Four official members—the President of the Board of Trade, the Permanent Secretary to the Board of Trade, the Parliamentary Secretary to the Board of Trade, and the Assistant Secretary of the Commercial Department of the Board of Trade; next representatives of other Government Departments—the Colonial Office, the India Office, and the Foreign Office; next come representatives of the self-governing Colonies—the late Lord Strathcona was one; Sir George Reid, Sir William Hall Jones, and Mr. Henry Birchenough; then follow fifteen names, representatives of trade and commerce—the late Lord Avebury, Sir F. Forbes Adam, Sir Alfred Bateman, Sir Hugh Bell, Mr. Frederick Brittain, Mr. Henry Brock, Mr. George H. Cox, Mr. T. Craig-Brown, Mr. W. H. Mitchell, Mr. E. Parkes, M.P., Sir Albert Rollit, Lord Rotherham, Sir Albert Spicer, Mr. D. A. Thomas, M.P., and Mr. R. Thompson, M.P. These are all representative men?—There are certainly several very good men there, but I wonder if they attend. I can hardly conceive that they all attend.

40,653. It is said the meetings are so timed as to secure a large attendance. The committee deals with such business as the following:—Questions connected with commercial intelligence, foreign tariffs, commercial missions, participation in the San Francisco Exhibition, proposals for the collection of colonial and foreign legal decisions affecting commerce, proposals for the formation of British trade associations for Central America, the possible effect on British trade of the exemption of vessels engaged in the United States coasting trade from Panama dues, the probable effect on British trade of the Italian annexation of Tripoli, legitimation by the Board of Trade of certificates issued by the British Chamber of Commerce in Paris for commercial travellers. All these are matters of wide scope and importance?—But there is a large official element; in fact the official and semi-official element seems to be predominant. If I might suggest it, the Panama Exhibition is a very good case in point. Here you have the House of Commons with a largely predominant desire that the Government should be represented at the Exhibition. The Government decides not to, except by means of a mission of battleships which is going to be sent; they will not have any mission of trade. Then they tried to get at the Prime Minister, and talk to him about it. This Committee you have mentioned sits upon it. The official view is well known; the Government has taken that line, and, of course, they do nothing. They cannot do anything.

40,654. Well, let us disregard for the moment the four official members who may conceivably be influenced by the views you indicate; let us also omit the representatives of other Government departments. That I think takes out eight altogether. Would you say that the representatives of the self-governing Dominions are liable to be influenced?—Yes, I should certainly.

40,655. Even if that be so, and we omit them—that is 12 altogether—you have still the 15 commercial representatives?—I know some of those gentlemen, and I think I could be pretty sure that they would not be there. They are not much in London.

40,656. At any rate, that is the kind of body you contemplate creating?—I would not have the official element, or certainly it should be very small.

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

40,657. But reducing the official element, that is still the kind of body which you think might with advantage be attached to the Foreign Office?—I do indeed.

40,658. Then would it make much difference if the committee were attached to the Board of Trade instead of to the Foreign Office?—I think it would make all the difference. Perhaps I may give one or two little illustrations. First of all I would say that you have got that body and you have got the Board of Trade, and we may assume that that body and the Board of Trade are both interested in commercial questions, and would like to see them settled. Take the Portuguese tariffs as an illustration. About four years ago the Germans made a special commercial treaty with Portugal. They had a very good man at Lisbon, and they got the thing through. It was at about the time of the Revolution. Things were very difficult there, and they were very pleased to be on good terms with Germany. Our representatives at Lisbon were quarrelling about minor matters with the Portuguese Government and the Germans got this treaty through. For four years we have been accepting all Portuguese articles on free trade terms and Germany has been taxing them all that time. For four years the German exports to Portugal have been treated better than English exports to Portugal. In some particular cases the tax on English exports to Portugal has been three or four times as much as the tax on German articles. I know of cases of English goods having been actually shipped to Hamburg in order to be reshipped afterwards as German goods to Lisbon and Oporto. If you had had a competent office that took any intelligent interest in trade it is inconceivable that such a state of things could ever have occurred. If anybody wants to find out what the consular officers abroad think of it they must go and talk to the consular officers. There is another case I should like to mention, and that is the case of loans for armaments, and loans generally. The Foreign Office has formulated no principles or rules, so far as I am aware, about foreign loans or about the open door, or about concessions, or—and this is a special point in loans—about the financing of loans in London for wars and for armaments abroad. I think that the Foreign Office regards commerce much as the Homeric heroes or the Samurai of Japan used to regard it. This is one of my principal points against them, that the only kind, or almost the only kind of commerce that finds favour in the embassies abroad and with the Foreign Office is the commerce in armaments, whose agents—I am speaking now of armament companies—are usually ex-officials of Government departments, or ex-officers of the Army and Navy, or members of the aristocracy; and these gentlemen are received and assisted by, I think I may say, almost every embassy. But as to the other commercial travellers, if they travel in soap, if they travel in Lancashire cotton or West Riding cloth, or Nottingham lace, or Dundee sacking, or Leicester hosiery, or the tools and machinery of the Midlands and the North, you do not meet those unfortunate commercial travellers at dinner at the embassies. In fact all the things upon which Great Britain lives and flourishes and supports her State services and her officers are apt to be cold shouldered in a very different way, I may say, from the way in which they are treated by the foreign offices of our rivals.

40,659. If you were asked to produce an actual concrete instance of what you say, should you be prepared to do it?—I do not see how I can prove a thing like that. I do not see how I could bring up members of the embassies to ask them if they ever remembered meeting a commercial traveller.

40,660. Have you in your mind, in making that statement, any actual instances?—Yes, I have definite instances, but not definite instances that I could produce, for reasons which I think you can easily understand. I could easily produce proofs—and I will give one or two, if I may—that our Government does give assistance constantly and regularly to the armament firms. I will give, if I may, one case, which I think is sufficient, because it is a very strong one. At the present moment there are two Naval missions, as they are called, operating in Constantinople and in Athens. It has been

pretty clearly stated in *The Times* and other papers as to what their business is. Their business is to assist the Governments of Turkey and Greece, and, perhaps I might add, to encourage them, to strengthen their Navies in view of the danger that they may be at war with one another very shortly. I do not think there is any doubt about this, and I heard about it yesterday from an acquaintance who has just been to Athens. Now, those Naval missions are not there for the purpose of getting contracts for the Germans or the French or the Austrians. There are military missions of Frenchmen there, and, of course, Krupp has his agents there, and so on, and there is a good deal of rivalry at present; but our men are there undoubtedly, I think one may say, for the purpose—and they have succeeded—of getting very large contracts at Constantinople, and, I think, some smaller ones, and they are hoping for more, in Athens.

40,661. (*Mr. Holt.*) What do you mean by a Naval mission?—That is the expression. It is quite a recognised expression.

40,662. Is that something under the auspices of the Government, or do you mean instruction officers sent there?—You may remember, perhaps, that last year Mr. Churchill said that we were very badly off for officers, but the importance of a Naval mission must be judged by the fact that we have been able to spare 12 of the very best officers for Greece and 12 for Turkey for the purpose of these Naval missions.

40,663. You mean they are lent to the Governments of Greece and Turkey?—Yes.

40,664. (*Chairman.*) Are these officers in active service, or are they retired or in the Reserve?—Some of them, I feel sure, were in active employment.

40,665. (*Mr. Holt.*) We have done the same thing for Japan and China in days gone by?—Yes; and our naval attachés are, I think, somewhat on the same principle. I should very much like to know more about it. I know cases of naval attachés who have objected to being expected to do this kind of work—assisting in obtaining contracts. The point I want to make is this, that if we are going to take part in these sort of things there ought to be some people at the Foreign Office, or somebody connected with the Foreign Office, who would put the finance case as against the naval case. If the Foreign Office looks after the interests of armament firms they ought also to have an eye to the interests of British investors. If they are going to send a Naval mission to persuade Turkey and Greece to make big preparations, they ought to send somebody of the Treasury type to warn Greece and Turkey that if they do these things, and take the advice of the Naval missionaries, they will be ruined. What is rather in my mind is that the Foreign Office ought to have a really sound financial department. It has not at present. There is nobody to give out this warning, and it must be remembered that Great Britain is a country which sends out into the world something like 200,000,000*l.* sterling of capital every year, and it is of the greatest interest and importance to us that this capital should not be destroyed, wasted and lost through the efforts of our Foreign Office, and so on; but that we should try to keep countries like Turkey and Greece and Portugal, which are financially dependent upon us, at peace, and acting in a reasonable sort of way. Also we should try to avoid raising their tariffs. This year costly missions have been sent at the public expense to help to sell private battleships and torpedoes to Turkey and Greece. When these countries prove themselves bankrupt our Foreign Office will—I am speaking now of similar cases in the past—probably assist in floating a loan in London, and will almost certainly agree to the raising of tariffs against British merchandise in order that our armament contractors, or foreign armament contractors, may get paid. That has been done over and over again. Then, a few years later, perhaps—or a few months later—this same Foreign Office, which has been so blind up to now, will take part in negotiations by which British investors in those loans—Turkish, Greek, Portuguese, and so forth—will be forced to accept one-half, or one-third of the capital they invested. I say that under a Foreign Office differently organised and differently composed such things would be impos-

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

sible. This reminds me finally to say that one of the things most wanted in the Foreign Office is an admixture of real workers who have known what it is to save money and to earn a livelihood. The Board I have suggested would be composed of some men of this kind. Mr. Bagehot, who was a pretty close critic of public affairs, ascribed Lord Clarendon's success at the Foreign Office to the fact that he belonged to "a very small and a very remarkable class of peers," the class who both inherited their rank and had to earn their bread. Perhaps you will allow me to quote just one short paragraph from that admirable study. Mr. Bagehot said: "It was perhaps the result of Lord Clarendon's early training that he always took great interest in commerce, and whenever he had the power steadily used the agency of the Foreign Office for its advantage. He was much too thoroughly on a level with his time to do this by an aggressive foreign policy. The old notion of fighting for foreign markets, or of intriguing for their exclusive use, had so completely died out that he cannot be praised for being exempt from it. Lord Clarendon used only the legitimate functions for trade purposes. He was especially eager for the collection of actual statistical information by our foreign consuls and embassies. The commencement of their reports on these subjects, and the establishment of the Statistical Department of the Board of Trade were largely owing to his great interest in these objects." That is in his study of Lord Clarendon. In the old days—as a friend wrote to me the other day—when the gentry governed England and formed public opinion, it was not unreasonable that foreign affairs should be in their hands; but now the landed gentry no longer represent the country, and the character of foreign affairs has been very rapidly changing, commercial and financial and judicial questions are driven to the front. International finance and international law require fine brains and large experience, and diplomacy has failed constantly in both these spheres to the great prejudice of British interests and of the world's progress. Diplomats must have a sufficient knowledge of finance, and they must be assisted by men of experience, so that they shall be able to control financiers instead of being controlled by them, or of being overreached by foreigners. I think the success of Mr. Bryce at Washington may be cited as one of the exceptions which prove the rule, and which show how ineffective is the old routine of gold lace and red tape to cope with the new conditions. If I may just sum up in a word, the inefficiency of the Service—perhaps there may be some doubt as to whether it is inefficient, but I have none—is due partly to airs of superiority and partly to a feeling of unjust inferiority in another branch. The Foreign Office itself is not only exclusive but very secretive, often quite unnecessarily secretive. I can recall instances which have occurred in my journalistic experience in which the Foreign Office has been quite absurdly secretive about things that did not matter in the least; and they might just as well have told the journalists; but no—I think they are rather proud of appearing to know things which are really of no importance at all, and which might just as well be known by everybody. Then I am sure that the Diplomatic Service has been injured by the income condition which bars out the majority of the best men and hampers many of those who have wriggled in; and still more, perhaps, on account of the fact that in the early years of service a living wage cannot be earned. The Consular Service, of course, suffers from want of prospects, and from the sense of inferiority. By amalgamating the three as I have suggested some defects will be corrected.

40,666. All that is rather an expansion of what you have already said?—Yes; and that is really all I have to say.

40,667. But, as I understand your views, you really do not insist on amalgamating the three services?—Perhaps interchangeability is the much better expression.

40,668. (Mr. Graham Wallas.) You propose that on big financial and commercial questions the Foreign Office should be associated with a special board of financial experts?—Yes.

40,669. You also, I understand, propose that there should be another Board who should be consulted as to the fitness of possible candidates for the Diplomatic Service and as to the giving of marks for address and so on?—Yes; I was saying that, in order to meet the possibility of objection, I would much rather have that than a Board which eliminated people on their appearance beforehand.

40,670. The prospects of a young man in the Diplomatic Service and the Consular Service depend essentially upon the places to which he is moved?—Upon promotion, in fact.

40,671. Promotion or appointment from one place to another?—Yes.

40,672. Would you propose that that, on which really the whole organisation of the system depends, should be also done by a Board rather than by an individual?—I think it would be a very good thing if it could be done to a certain extent by a Board, but I have not personally thought that out carefully. I am not at all sure that if you had an Advisory Board for the Foreign Office they should not have a say in important appointments.

40,673. You would leave it open whether those three Boards, if they existed, should be three separate Boards or whether two of the functions might be one Board?—The Board I suggested as an Advisory Board could not possibly be an Examination Board. I did not think of it in that light at all.

40,674. In effect you do find yourself desiring three Boards—possibly one official and two unofficial—assisting the Foreign Office?—It would seem so.

40,675. You know that in the Foreign Office there is a special Consular Department which controls the consular work?—I am told it has been improved lately, and that they have introduced a system of inspection, which was very much needed.

40,676. But the inspector is not a member of the department; he is simply a consul with a district abroad whose duty it is to travel from time to time and see other consuls?—I wanted to say that I consider it extremely important that the Consular Service should be able to look to some man of real position in the Foreign Office who is watching them and trying to improve them; and the inspectors should be more or less his eyes and his instrument. I do not believe there is anything of that kind.

40,677. There is no man in the Foreign Office now who has had any consular experience?—I am afraid that is so.

40,678. Does that seem to you undesirable?—Certainly, that is obvious.

40,679. Going, for the moment, to the men who are borne on the Foreign Office list and are in the permanent service of the Foreign Office, you desire that there should be a certain number of men with experience of both finance and commerce who should be actually in the service of the Foreign Office?—Yes. There are two ways of getting that. I do not want to say that you must necessarily go to a man of 40 in the City, which is one method and not a bad method; but another method, which might be a very good method too, would be, when you have caught your good man, to give him a commercial training.

40,680. In any case you would have to pay salaries which would seem somewhat attractive even in the City?—I would not say in any case. In the latter case you would not do that, but if you wanted to get hold of the right man of 40, I am afraid you would have to give a good deal. I think it would be possible to get a man for, perhaps, 2,000*l.* a year.

40,681. Again, going to the permanent foreign service, you desire that there should be recruited into it some man who has a European reputation as an international lawyer?—No, I would not say a man of European reputation as an international lawyer, because some international lawyers who have a semi-European or perhaps a European reputation are just the kind of men you would not want.

40,682. But, at any rate, one who deserves a European reputation?—Certainly.

40,683. A really distinguished and trained international lawyer?—It does sometimes occur that there is

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

a man who is a good lawyer and who also knows a good deal about business, commerce, and so forth. That is the kind of man. If I may give one illustration which I had intended to give: There have been cases of a kind where you have wanted very much at the Foreign Office to have some element of commercial law, and you have not had it. I remember one case where that absence of any knowledge of commercial law and commercial opinion was very conspicuous indeed, and it was very unfortunate.

40,684. (*Chairman.*) Was it in the nature of interpretation?—I was thinking for the moment of the Declaration of London. The Foreign Office committed itself to that declaration without consulting commercial opinion in the country at all, and the result was that certain persons—very competent people—went round to Chambers of Commerce and persuaded them to take a line against the Declaration of London. I am not saying whether the Declaration of London was right or wrong; but, whether it was right or wrong, it was to my mind an extraordinarily foolish thing for the Foreign Office to put the thing through without consulting shipping opinion.

40,685. (*Mr. Holt.*) They would probably have got shipping opinion on their side if they had consulted them beforehand?—It is possible that they would.

40,686. (*Chairman.*) In such a case as that, would it not be open to the Foreign Office to refer the matter for opinion to the law officers of the Crown?—Yes, but then, of course, comes in the question, What about the Attorney-General? Has he any spare time?

40,687. But if it is referred to him, he has very competent men in his office, and he would be responsible for their opinion. At all events the Foreign Office could have the opinion of the law officers of the Crown?—Yes, I believe they would sometimes have done better if they had obtained such an opinion.

40,688. (*Mr. Graham Wallas.*) Anyhow, you desire that the Foreign Office should have access to the best possible opinion both upon international law and upon commercial law?—Certainly. They have access in a sense. I suppose they could, if they liked, take opinion, but I do not think they do like.

40,689. I understand from your evidence as to the relations of the Foreign Office with journalism, that the Foreign Office has no recognised or systematic system of giving information to the Press?—No.

40,690. But in the absence of such a system an unrecognised and informal giving out of information to the Press does take place?—Yes, I am sure it does. I think that the criticism I make of the Foreign Office applies to some other Government departments. You exchange news for views; you give titbits of news and expect to be supported in your policy.

40,691. If there was a systematic arrangement which everybody could appeal to as a matter of right, that would prevent the exchange of news for views?—Yes. I was listening to Sir Edward Grey the other night at a banquet and he said how desirable it was that diplomacy should be in the sunshine of publicity, and so on. I could not help remarking afterwards that if the Foreign Office would give out a little more daylight, then they might deserve a little more sunshine; but we have not obtained enough information from them very often.

40,692. In fact, now anybody who can go into the Foreign Office and is a person whom they consider as their social equal and personally sympathetic to themselves would find that he is very well attended to?—Yes. There are one or two journalists who make a point of being on friendly terms with persons in the Foreign Office.

40,693. And would not you say that one of the dangers of recruiting the Foreign Office solely from one social caste is that that class is very accessible to members of its own class but very inaccessible to persons not of its own class?—That is true, and at the same time members of all classes have to support it.

40,694. I said "personally sympathetic"?—He has to be very sympathetic.

40,695. (*Mrs. Deane Streetfeild.*) I do not remember whether you said anything about the recruitment for the Consular Service. Have you any view at all as to

what special training, if any, would be desirable for applicants for the Consular Service?—My own view rather is, that you should catch your good men and then give them special training.

40,696. For the Consular Service as well as for the Diplomatic Service?—Yes. Perhaps it is my own prejudice, but I have a great belief in examinations of the type of the Oxford Greats examination.

40,697. For the Consular Service?—Yes, for any public service.

40,698. (*Chairman.*) And then subject them to technical training afterwards?—Yes; but perhaps my opinion on that point is not of any particular value.

40,699. (*Mrs. Deane Streetfeild.*) That would mean that you would have to raise the salaries of the Consular Service a good deal?—I do not see how you can get out of that. If you want efficiency in this Service I think the salaries would have to be raised.

40,700. (*Chairman.*) What salary do you think a Consul-General ought to receive?—I think it depends partly upon where he is.

40,701. Let us consider the salary first, and then if the consular officer is stationed in a very expensive place we may consider the question of giving him a local allowance?—It came to my personal knowledge a year or two ago that a consul receiving 700*l.* or 800*l.* a year in a great foreign city had to live under such poor conditions that his wife actually gave lessons in order to add to the income.

40,702. So far as you can judge, would a scale of salary commencing with 300*l.* to 500*l.* a year for vice-consuls, and progressing to 600*l.* to 800*l.* a year for consuls, and for Consul-Generals from 900*l.* to 1,200*l.* be adequate, supplemented in expensive places by local allowances?—I am afraid that is not adequate.

40,703. To what pay ought a Consul-General to attain? Would 1,500*l.* a year suffice, do you think?—I should have thought 2,000*l.* would be more like it; that is to say, a Consul-General is a man who ought to be ready and would be ready, I think, if he could afford it, to give a little hospitality to British subjects who are travelling, and so on. He has to keep up a position. Take a place like Moscow or Warsaw, or Rio, or Oporto, or Barcelona. Those are great centres and the British representative ought not to be in a back street. Take Riga; it is absurd that our representative should be housed in the way that he is, and that he should not take a leading part in the life of the city.

40,704. (*Mr. Boutwood.*) You spoke about catching your consular officers young and giving them a commercial training. What is a commercial training?—If we had a good man, say at a place like Riga—(we ought to have a great Consul-General at Riga, but we have not)—you could not do better than send a young fellow whom you had caught in that way to Riga. Just look at the advantages: he would be in one of the most rapidly developing towns in Europe; he would see all about the timber trade, the flax trade, the hemp trade, and so on; he would learn Russian, and he would learn German, and he would be in what ought to be a bustling and important office. The Germans have about eight or ten young fellows working almost night and day at Riga in their office.

40,705. One or two witnesses who have been before us used virtually the same phrase, but by it, they apparently meant putting a man through a university commercial course, and then sending him for a year or two to a commercial house. That is not what you have in mind?—I do not think that is necessary. I think he would be waiting too long.

40,706. You have in mind, really, a commercial training inside the Service?—It might be either that, or he might go to some big shipping or commercial firm for six months. That would be quite worth doing in certain cases, but he would learn a lot of business in a good consular office.

40,707. Speaking of armament firms, you mentioned those in connection with the general question of the treatment of British commercial interests, and you said—and apparently attached some significance to it—that if you travelled in armaments you would be invited to the embassy dinner, but if you travelled in soap you probably would not. Invitations to embassy dinners

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

are largely governed by personal and social considerations, and the man's business in soap might receive full attention in official hours even although he did not receive much attention in unofficial hours?—There is a great deal in that. I do not want to press the distinction too far.

40,708. But to get behind that illustration, do you really mean that the more sober side of commerce is rather ignored in the official Diplomatic Service?—Certainly. They do not know anything about it to start with, and they do not care anything about it. One reason why armament firms interest them in a way is that they are connected with the Naval Service. They have naval attachés in a good many centres for that purpose, and so there is a sort of official connection, as well as the social one.

40,709. I was not quite clear what your opinion was about those annual consular reports. You speak of them having a certain statistical value. Do you think they have any other value?—Some of them have. There are some reports from Frankfort which are good, and some of the Russian and Brazilian reports are good. The Russian reports, of course, would be extraordinarily interesting if we were properly represented in Russia. You want good consular reports from places like Russia, Brazil, and so on, but you do not require them so much from Germany or France, because they have good newspapers in those countries.

40,710. So you would not, generally speaking, concur in the view that reading the annual consular reports was somewhat like reading a last year's novel?—Some of these reports from very out-of-the-way places giving you statistics even of two years ago are valuable, because you want to be able to measure in your own mind what sort of a position the place has, and, although two years is some time, still, it is of some use, and it is not always the fault of the officers that the statistics are so late. It is generally the fault of the little South American Republics, and so on, when statistics are stale and imperfect.

40,711. Very different answers have been given before the Commission on the point about the interest that the Diplomatic Service takes in what you may call the non-official developments of life and opinion in foreign countries. Do I rightly gather that you think on the whole the Diplomatic Service does not take as much interest in these matters as it might?—I think very often it does not. It depends entirely on who is there. I have instances in mind of a period at which our legation in an important city was entirely ignorant of what was really going on just before a revolution; and afterwards it became very much more alive to the situation, and new men went there and it was very much better.

40,712. Some who have more or less held that same view have attributed it to social pre-occupations which are more or less natural to the class of man who finds his way into the Diplomatic Service. Would that be your explanation, too?—Doubtless there is a great deal in that. There is no man who went in for what you call "social pre-occupations" more often than Mr. Bryce, but he made them the means of securing information from all classes in the United States. But the ordinary diplomat does not.

40,713. (Chairman.) We have been told that that is what he does principally, and that when he goes into society his really important work begins. He has not much office work, but when the office closes and he goes into society then his real day's work begins. It is then he hears what is going on in the diplomatic world, and communicates with his colleagues of other nations and with politicians?—He has a very restricted idea, if I may say so, of what society is. Mr. Bryce had not a restricted idea.

40,714. (Mr. Boutwood.) When you were speaking of the Committee of Selection, or Committee of Elimination—call it what you like—you rather put forward the thought that the Diplomatic Service, as at present constituted, is more or less composed of a caste, or has a certain predominant social colouring. Yet we have it in evidence that the existing Committee of Selection at the Foreign Office never makes any inquiries

as to a man's antecedents?—Perhaps it knows them without making inquiry.

40,715. With regard to the unpaid consuls, we have heard two sets of opinions, I think, before this Commission. One witness practically said that within his experience they could not do much work, and did not even do the work they could, and others have spoken in precisely opposite terms. To which of those opinions do you incline?—It entirely, of course, depends upon which of the unpaid consuls you happen to know. Some of them are quite different to others, and there are some men who do a great deal of work. They feel it is a very distinguished position. They may not do much office work, but they will do a great deal for an Englishman who happens to be travelling, if he has got a proper introduction to them, and so on.

40,716. There are a very large number of them, and, speaking of them in the mass, do you think that they form a valuable part of the Consular Service, or would you like to see them largely replaced by the regular paid consuls?—I think it is rather a question of what you can afford to do, and I would suggest that there is a certain parallel at home in the case of stipendiary magistrates. There may be towns where it is very desirable to have stipendiary magistrates, and so on. I should not like to commit myself to the idea that all honorary officers ought to be abolished—not under present conditions, certainly.

40,717. (Mr. Holt.) With regard to the legal adviser, would it approve itself to you as expedient that the Foreign Office in such a case as you have given of the Naval Prize Bill—the Declaration of London—should take expert advice, on that particular subject, from a recognised expert on that question without being committed to his opinion generally?—Yes; but I rather believe in the theory that they should have two or three men of broad, and, if possible, different views in law. We all know that lawyers are just as different in their opinions as other men. You want two or three in the office, I think. But when a question of that importance comes up there should be a consultation with leading representatives, as I say, of commerce, shipping, and so forth. One could easily mention the kind of men they ought to call in to ask what views the shipping, commercial, and business men take. It is the same in preparations for the Hague Conference, I think.

40,718. Why should they not get the suitable lawyer and pay him a fee for that job instead of keeping a second-class tame lawyer on the premises?—I am afraid I cannot quite agree with you if you mean that they should not have a first-class lawyer on the premises. International developments of that kind are so tremendous now—legally and commercially—that you cannot afford to depend upon a person who is right outside.

40,719. (Chairman.) There is a legal department in the Foreign Office now?—There is one already, and I think that ought to be strengthened, certainly.

40,720. (Mr. Holt.) You would like to strengthen the existing legal department by getting in a man, when a vacancy occurs, of recognised position?—Yes, I think you ought to have two or three first-class men. I do not say that they should necessarily spend all their time there. It is possible that you might get a good professor and arrange with him that he should give up a certain amount of his time to Foreign Office work.

40,721. You might give him a retainer as consulting adviser?—Quite so.

40,722. And a special fee when you sent for him?—Yes; and in the same way with the idea of a commercial lawyer—you might do the same. I think it very desirable that there should be a big commercial lawyer attached to the Foreign Office.

40,723. Surely you would get a much better man by paying him a retaining fee and sending for him at the appropriate time and then paying him a large sum for the particular work?—Yes, but that does not get over the necessity of having a good man in the office, because the office might not send for this outside lawyer when you and I might think they ought to send for him.

11 June 1914.]

Mr. FRANCIS W. HIRST.

[Continued.]

40,724. But in the case of a man in the office you want a man humble enough to recognise that he has to send for somebody else?—Perhaps so.

40,725. It is like the ordinary medical practitioner sending for a specialist?—Yes.

40,726. You were talking about the Foreign Office and finance. Do you think that the Foreign Office ought to interfere in any way in the flotation of loans in this country?—That is a very difficult question to answer off-hand. Under absolutely ideal circumstances it might be possible to say no, but as a matter of fact, I believe it always has interfered although it has always said that it has never interfered.

40,727. If you accept the doctrine that you are not to use force to collect debts, why should the Foreign Office interfere at all?—I would suggest to you that there are other reasons. Suppose two small countries went to war. Is it desirable that one of them should carry on the war by the help of loans raised in London and the other by the help of loans raised in Paris? Ought not the Foreign Office or somebody to have something to say in a case of that sort? There is a very well-known case in recent times of two great countries having gone to war and having financed themselves in that way.

40,728. (*Mr. Philip Snowden.*) But would not that be for the Foreign Office to take sides in the matter?—You mean if they interfered?

40,729. Yes?—They would not be interfering; they would be saying "No, we must be neutral, and therefore we must not supply either belligerent with the sinews of war."

40,730. (*Mr. Holt.*) As regards this publication by the Foreign Office of business news, is it in the least likely that a Government department can ascertain what is going to happen better than the agents of private firms?—I should think not very often, but I think there may be some cases where the embassy may have information which ought to be made available for investors and people with large commercial dealings.

40,731. I can see the point as regards investors, but as regards traders do you think the Government can possibly have as much information as the agents of the traders themselves?—I think that traders with Governments might. For instance, I remember a case of a Government which had been for a long time on the verge of bankruptcy, and at one time when it was really on the verge of bankruptcy ordinary folk did not know it, but a friend of mine had a very large coal contract with it, and certainly if he had known what the position of the Government really was he would not have given them as much coal as he did.

40,732. But do you think it is the business of the Government of this country to warn a coal merchant that one of his customers may not be a person to whom credit should be given?—Yes, I do. I think that warning and caution are one of the functions of an intelligence department of that kind.

40,733. You think that the State ought to provide that sort of intelligence to private traders?—Yes, I think it is desirable that there should be a bureau to which traders could apply in case there was information available. I do not say that the Foreign Office ought to devote all its energies to acquiring information of that kind, but I think they ought to have their eyes and ears open, and that when they have information they should not secrete it, but should use it in a sensible way.

40,734. (*Chairman.*) Do you not think that would impose on them the duty of verifying their information by making all sorts of private inquiries?—I should not object to that.

40,735. (*Mr. Holt.*) Do you not think it is a very dangerous thing for a Government to publish or circulate unfavourable prognostications with regard to another Government?—Yes, I quite agree; the thing must be done very discreetly. I think one may be quite sure that it would be done discreetly—that it is done discreetly, but I think at the present time the value of the Foreign Office or the uses of the Foreign Office are mainly confined to a small caste and their friends. I

should like such information as it possessed to be more freely available.

40,736. Apart from dealings between Governments, is it not under any circumstances a very difficult and delicate thing to put about your view that somebody is going bankrupt, supposing it happened to be incorrect?—I quite agree. I would rather not press that particular case. I did not mean it to be pressed at all; it is only one of the cases that occurred to me where you might have a certain amount of information that might be made more or less available.

40,737. You were speaking about acquiring a knowledge of French and German. You are probably aware that French is the official language of diplomacy?—Yes, I suppose that is so. But you are not bound if you are in Washington, for instance, to speak French.

40,738. But it is nevertheless the official language of diplomacy?—It is the most used language, I suppose.

40,739. No, more than that; it is the official language. Take the Convention of London, for instance; you are probably aware that the original text is in French?—Yes.

40,740. And you are probably also aware that one of the most disputed points related to the translation?—Yes, I remember.

40,741. (*Chairman.*) Does Germany recognise French as the official language of diplomacy?—I understood that even Sir Edward Grey did not recognise French as the official language.

40,742. (*Mr. Holt.*) I think I am right in putting it in this way, that French is the official language in this sense, that if several nations were concerned French would be used, and a document relating to three or four nations would be in French?—I think Sir Edward Grey addressed the Balkan Delegates at the time of the Peace Conference in English.

40,743. That was not an official document. Supposing there is an international agreement, the official text is in French?—Yes, I dare say it is. I do not know whether you want an admission from me on that subject. I was not sure myself whether you could describe it as the official language, but pray use whatever admission is required for the purpose of your argument.

40,744. Assuming that I am correct in saying that French is the official language of diplomacy, it does become of very great importance, I understand, that a diplomatist should be a first-class French scholar, having regard to trouble that may arise from mis-translation?—I do not want to make an admission of that kind. Personally my submission is entirely different from that. What I say is that if it be desirable to have a first-class French scholar, you can make one very quickly, and a very good one.

40,745. Would you object to a system under which a candidate was appointed temporarily, subject to his subsequently acquiring a first-class knowledge of French or German?—If needed, you mean?

40,746. That is so. Supposing you have an examination in the Oxford Greats subjects, you then select a candidate and say, "We will appoint you if within twelve months you acquire a first-class knowledge of French or German"; would you see any objection to that?—No, I do not see any particular objection, but I do not think it is necessary personally. I think there will always be plenty of people in the Foreign Office and in the Diplomatic Service who know French very well.

40,747. You think you could trust to that?—A very large number of our diplomatists want to know German or Spanish or Russian.

40,748. Would you approve of sending a diplomatist to South America who could not speak Spanish in one part, or Portuguese in another?—No, unless he was sent there to learn the language.

40,749. Would you be surprised to hear that we have had it in evidence that many of the more important chiefs themselves cannot speak Spanish?—I have heard so.

40,750. We have had it in evidence?—I think that is certainly a very great mistake. I think that no man

11 June 1914.]

M<sup>r</sup>. FRANCIS W. HIRST.

[Continued.]

ought to be sent to a responsible position in a country who does not know the language of the country.

40,751. (*Chairman.*) Every diplomat, we are told, is supposed to know French and German, but any other language is not considered in posting the diplomat; a man may be sent to Russia who does not know a word of Russian, or to Italy who does not know a word of Italian?—Personally I regard that fact as a public scandal.

40,752. It is sought to correct that in this way by giving prizes for acquiring a knowledge of the language of the country to which the man is sent?—But you could not give a prize to an Ambassador exactly.

40,753. (*Mr. Holt.*) You have just stated that you regard the non-knowledge of the language of the place as a public scandal, and that brings me to another point. Supposing you were to require a knowledge of the language of the place to which a diplomatist is sent as a condition of his appointment—at any rate in the case of the head man: I am not talking of beginners—seeing that no man could possibly expect to have a knowledge of the languages of the whole world, or very few, that would compel you to confine your individual diplomatist to a comparatively narrow sphere of appointment?—I think I may agree to that. Spanish and Portuguese go together, and Italian practically goes with them; then you have the Slav groups; then you have German, Scandinavian, and French, and you have practically covered it.

40,754. But you would see no objection to a diplomatist being, so to speak, confined to a particular group?—I would not like to see that. I think all I want to do is to secure that they should know the language of the country to which they are sent.

40,755. But you see what the corollary would be?—No, because you have only to send a man there for six months when he is young, and he knows the language.

40,756. But take the case of a Minister or Ambassador, it is not credible that a man who is a good Spanish scholar could also be a good Russian or a good Turkish scholar?—I am not sure about that; it is astonishing how many people know several languages. I think Lord Macdonnell probably will know of people who would know three or four or five languages well.

40,757. (*Chairman.*) Yes, I do.—I have a friend of my own who was at Oxford with me, who knew Turkish, Hungarian, German, French, and, I think, Italian; and one or two other languages quite well.

40,758. (*Mr. Holt.*) You were telling us about the commercial treaty with Portugal; do you think it is possible that the difficulties we have encountered there may be due to our not keeping the same man there long enough consecutively?—I do not think it was due to that.

40,759. Do you not think that if you had kept the right man at Lisbon long enough these difficulties might not have arisen?—But you are probably aware that if you get a really good man at a place like Lisbon he is almost certain to be moved on somewhere else to a better place. I believe there are too many changes.

40,760. If you want to do successful diplomacy, especially of that character, it is probably very necessary to know the local ropes?—I think what is most necessary of all is to realise that you have got to do the thing, and nobody, I think you may be quite sure, at Lisbon had realised that until very recently.

40,761. If a commercial firm wanted to be well represented in a particular place they would not be likely to change their representative frequently?—I suppose not, but you have a far better knowledge than I on such a point as that.

40,762. Having got a good man it would probably be considered a good thing to make it worth his while

to stay there, and not to want to go somewhere else?—That is true naturally. But if they get a good man at the Foreign Office, they may want to promote him.

40,763. And the result of that would be somewhat the same sort of thing as you have in the composition of the Government, where the best men gravitate to certain particular places, and other places are left to less good men?—I think in promotions private and social reasons have great influence.

40,764. (*Mr. Matheson.*) Supposing you appointed to the Foreign Office without having regard to modern languages, I suppose you would put the age for appointment a little earlier, so as to make it about the same age as for the ordinary Civil Service examination?—My mind is rather uncertain about these subjects, and I do not consider myself to be a person who ought to be examined about them, because I am not an expert; but if I might just express the opinion of an ordinary human being on the subject, I think, personally, that if you compelled me to take a decision on this point, and I was in command of the Foreign Office, I should be inclined to have the examination at such a time as would enable me to trap the best men who have gone through a university career; and in addition to that I think it is very desirable to have openings for people at, if necessary, a younger age than university age.

40,765. With regard to promotion and transference from the Consular Service to the Diplomatic Service, do you think that if within the Foreign Office there was a committee on which there were persons who were quite familiar with the personnel of both the Diplomatic and Consular Services, that would go a large way to meeting the case; if there were an advisory committee to advise the Minister before promotion or transference; would that meet your view?—That sounds a good idea. I feel assured that a committee is better than an individual as an adviser of patronage.

40,766. (*Miss Haldane.*) May I ask whether you do not think it would be rather a pity to have the Service practically manned by Oxford Greats men?—Yes, I do.

40,767. You consider it is desirable to have the modern universities represented?—Certainly.

40,768. The new universities and also the Scottish and Irish universities?—Very strongly.

40,769. In fact, I suppose, your idea would be to get the examination system into touch with the educational system of the country?—That seems to be the right thing if you could do it. I do not know whether you could do it by means of one examination.

40,770. That is rather the difficulty, because you might have an examination which dealt more with modern languages, and so on, a knowledge of which would be very desirable?—I hope I have made my objection clear. I have read the evidence of Mr. Stanley Leathes very carefully, and my objection to French and German is that they are at present used, or they seem to be used, as a means of excluding merit. It looks to me very much as if a small select body of wealthy people who have good connections with the Foreign Office, train up their sons for the Foreign Office from a very early age, regardless of expense, and in that way they become very proficient in French and German. Then it looks to me as if this specially small trained body went in as professional athletes into this contest, and of course defeated all the other persons—mere amateurs by comparison—who have not had those special advantages, although they might be very superior in mental equipment.

40,771. But you acknowledge that modern languages might be studied in an educational way?—Yes, I agree. I think that modern languages might be made a gate to merit instead of a gate against merit.

SIR WILLIAM TYRRELL, K.C.M.G., C.B., called and examined.

40,772. (*Chairman.*) Sir William, you are private secretary to the Secretary of State for Foreign Affairs?—I am.

40,773. When did you enter the public service?—In April, 1889.

40,774. Did you enter in the Foreign Office or in the Diplomatic Service?—The Foreign Office.

11 June 1914.]

SIR WILLIAM TYRELL, K.C.M.G., C.B.

[Continued.]

40,777. Are you an advocate for the complete fusion of the two branches, or would you keep them separate?—I think I should keep them separate under present conditions, because the practical difficulties of amalgamation would be very great, and they would work out unfairly under the present system, where you insist on treating candidates for the Diplomatic Service differently from candidates for the Foreign Office. I think there would be a certain hardship involved if you forced a man who had gone up for the Foreign Office to go abroad.

40,778. That is with reference to the necessity that a diplomat is under, of having private means?—Yes.

40,779. But assuming that both Services were placed on an equality, so far as that matter is concerned?—Then I should be entirely in favour of complete fusion.

40,780. On the assumption that the pay given to the Diplomatic Service should be equal to the pay of the Foreign Office you would bring both Services on the same list for promotion?—No, I do not think I should do that, because the qualifications which tell in favour of a man employed abroad for promotion are not the same as those in the case of a man employed at home.

40,781. But the degree of merit might be the same?—The degree of merit might be the same. Yes, I should have no hesitation in recommending that.

40,782. That, of course, assumes a great change in the existing state of things?—Yes.

40,783. We are anxious to learn from you all about the recruitment of men for the Foreign Office and for the Diplomatic Service; and in the first place we want to know who compose your Selection Board?—There are two permanent members of it, one of whom is the Permanent Under-Secretary of State for the time being, and the other is the private secretary to the Secretary of State for the time being. The other members are selected on each occasion as they happen to be available.

40,784. You take care to represent the foreign side of the Office on the Board?—Yes, we invariably take advantage of the presence of a diplomatist at home on leave to ask him to attend.

40,785. Sir Arthur Nicolson told us that practically anybody who applies may come before the Selection Board?—Yes, broadly speaking, anybody who applies, and is vouched for by people of standing or who are known to the Secretary of State, is allowed to appear before the Board.

40,786. If a distinguished honours man at the university wishes to present himself for examination, will a recommendation from the head of his college be considered sufficient?—Quite.

40,787. It has been stated to us that no questions are ever asked with reference to the parentage or upbringing of a particular candidate; is that so?—I should say that no inquisitional questions are put as regards parentage. You might look upon me as more or less the recruiting officer, and provided that I am satisfied with his recommendations; if for instance he is recommended by the head of his college that would be sufficient for me in the first instance to proceed with the matter. If an opportunity presented itself when I saw him—and they generally come down to see me—I might ask him about his parentage, but it would be more accidental really than general. We leave the inquisition as regards parentage to the successful candidates, and that is done by the Civil Service Commissioners who put them through a very searching list of questions which they get on passing. We have been generally satisfied hitherto with knowing about the man, but we do not inquire much into his parentage.

40,788. When I say his parentage I mean really knowing about his family; who he is?—Yes. In a general kind of way we know about his belongings because, when he appears before the Board of Selection questions are put to him which throw a light upon his upbringing, the schools he has attended, what his tastes are, what particular things he cares for in life, and all that kind of thing.

40,789. Now if these inquiries showed you that he did not come from the upper grades of society; that he came from the people, but in other respects was suitable,

had good manners, and good address, and that his intellectual equipment was satisfactory, would you put him on the list?—Certainly.

40,790. For instance, if such a candidate was the son of a small tradesman, would that fact count at all against him if his ambition led to the Diplomatic Service?—No, provided that he answered to the description of what you expect a man abroad to do, certainly it would not count against him. If he was the son of a small tradesman who had gone to the university with a scholarship, and so on, and who had displayed qualities which fitted him for employment abroad, the parentage question would not come in. If I may say so, I think that is one of the great steps in advance that we have taken by the appointment of the Selection Board. I think that under the former system of nomination pure and simple, parentage counted for a great deal more than it ought to have counted for.

40,791. We have noticed that to a large extent you recruit from men who have been to Eton: Eton has furnished you with a large percentage of the men now in the Service—Eton and the universities, especially Oxford?—I should doubt whether that applies to the recruits we have had in the last five years; I would not be certain. I should certainly say that, speaking generally, they come from the public schools.

40,792. (Mr. Matheson.) I think it was 16 out of 21 in the last six years?—Really. I will not contradict it. I did not realise it.

(Mr. Graham Wallas.) Perhaps I might read out the clerks appointed since 1908. They go as follows: August 1908, Eton, Eton; August 1909, one appointment Eton; August 1910, one appointment Eton, one appointment from Malvern, one from Rugby; August 1911, Radley, Eton, Eton, Wellington; August 1912, Winchester. Then August 1913, Eton, Bedales, Eton, Eton, Rugby. I think the proportion is about two-thirds Eton.

40,793. (Chairman.) I think it may be assumed that Eton has furnished the great majority of your candidates—Eton and Oxford; and Eton and Oxford suggest to one a particular social status. And that is supported by the information given to us as to parentage, to some extent. But you assure us that birth does not really enter into it?—The way in which I should put it is, that these candidates presented themselves and were examined, and passed on their merits. If other candidates presented themselves we should apply the same method. I mean that we have not endeavoured to restrict our choice to these candidates; as it happens those people have presented themselves. Whether it is the impression of a certain number of people that they had no chance and therefore have not presented themselves, I do not know; that is possible. All I can say is, that we have taken no steps to limit our choice to these particular candidates.

40,794. These young gentlemen cannot present themselves for competition without a nomination by the Secretary of State?—That is so.

40,795. When is that nomination given?—On the recommendation of the Board of Selection.

40,796. Is there any possibility of a nomination being promised, or application for a nomination being entertained, before the Board of Selection sits?—Under the present system, no. The machinery now is that a man applies, and when he furnishes the proper credentials and is vouched for by people, say, the head of his college, his name is put on the Secretary of State's list, then he is informed that the Board of Selection meets twice a year, in May and November, and he is asked to inform us when he wishes to present himself; and then he passes before the Board of Selection who examine all the candidates who have presented themselves, and they make a report to the Secretary of State.

40,797. I understand you to say that his name is put on the Secretary of State's list before he appears before the Board of Selection?—I think I have not made myself clear about the terms. The nomination is a permit given to him by the Secretary of State to present himself before the Civil Service Commissioners for examination.

11 June 1914.]

Sir WILLIAM TYRELL, K.C.M.G., C.B.

[Continued.]

40,798. Is that nomination given after the Board have reported or before?—After.

40,799. There is no nomination or permission necessary for him to appear before the Board of Selection?—No, none at all.

40,800. If he is a boy who has been educated at a private school, he can obtain a nomination?—Absolutely.

40,801. If he is the son of a tradesman who has been educated at a private school and considers himself capable of passing the examination, he may send up his name?—Certainly.

40,802. And it goes upon the Selection Board's list?—Yes.

40,803. Without any requirement as to nomination or permission?—Yes.

40,804. Then he appears before the Board?—Yes.

40,805. Then it depends upon the decision of the Board whether his name will go further to the Secretary of State?—The Board will recommend him to the Secretary of State, either for acceptance or rejection; his name in either case will go before the Secretary of State.

40,806. That is what I mean. He comes before the Board, and the Board decides whether they will recommend him to the Secretary of State for appointment, or whether they will not recommend him?—Yes.

40,807. But whether they recommend him or do not, his name goes before the Secretary of State?—Certainly.

40,808. Then the Secretary of State approves of the appearance before the Civil Service Commissioners of a certain number of men?—Yes, in the final instance it rests with the Secretary of State to approve the recommendation of the Board.

40,809. Does the Secretary of State ever give permission now to a boy to appear before the Civil Service Commissioners who has not appeared before the Board?—No.

40,810. Appearance before the Board is a necessary condition?—*A sine qua non*.

40,811. How do you find out about the possession of the 400*l.* a year private income?—I take the statement of the candidate. I ask him, and he gives that assurance on behalf of his parents.

40,812. Do you require any confirmation from the parents?—Nothing written; it is a personal assurance.

40,813. On the part of the candidate?—On the part of the candidate, on behalf of his parents.

40,814. The parent, of course, knows of the condition?—Oh yes.

40,815. And that is sufficient?—Yes.

40,816. (*Mr. Holt.*) Is this assurance given in response to a printed or written question, or may the question vary in form between one candidate and another?—At the time when we receive an application, we, as a rule, send a memorandum stating the conditions of employment, and one of those conditions is that in the case of diplomatic candidates the parents are expected to guarantee 400*l.* a year.

40,817. (*Chairman.*) And you accept the assurance of the candidate as a compliance on the part of the parent with that condition?—Yes.

40,818. Then if a young gentleman applies for the Diplomatic Service, is brought before the examiners, and passes the examination, he is attached to a Foreign mission as an attaché?—Yes.

40,819. For the first two years he receives nothing?—Nothing.

40,820. And for the next year he receives 100*l.*?—150*l.* I think he starts with.

40,821. That of course is not a living wage?—No.

40,822. He may serve abroad for many years and not get the same amount of pay as a Foreign Office clerk gets?—Whose pay, of course, goes up by increments automatically within a certain grade. No, he does not.

40,823. What pay does a Foreign Office clerk get?—He starts on 200*l.*

40,824. And he rises by increments to 500*l.*?—Yes.

40,825. After serving for two years without pay, a diplomat starts at 150*l.* and he rises by increments of

20*l.* to what sum?—I think he goes in one class up to 300*l.* as second secretary.

40,826. Does he receive a particular pay as third secretary?—Yes.

40,827. What is the pay of a third secretary?—150*l.*

40,828. Rising to what sum?—I believe to 300*l.*

40,829. And the pay of a second secretary?—A second secretary begins at 300*l.* and goes to 500*l.*

40,830. And a first secretary?—A first secretary starts at 500*l.* and goes to 700*l.*

40,831. Then he becomes a councillor; that is the next step?—Then he becomes a councillor.

40,832. What is the pay of a councillor?—It varies at different posts; some get 700*l.*, some get 800*l.*, some get 900*l.*, according to the character of the post.

40,833. The pay of a councillor is then attached to the place?—Yes.

40,834. It is not personal pay, it is attached to the place?—Yes.

40,835. And it varies with the expensiveness of the place?—Yes, but the initial salary of a councillor anyhow is 700*l.*

40,836. To what may it rise? It depends upon the place, as you say?—Yes.

40,837. What is the next grade above that of councillor?—He becomes a minister.

40,838. And above that he becomes an ambassador?—Yes.

40,839. Is there any particular minimum pay attached to the post of minister, or does it vary with the place?—It varies. I should not say that there is a minimum pay.

40,840. It varies with the place?—Yes.

40,841. And in like manner, as we know, an ambassador's pay varies with the place?—Yes.

40,842. So that the pay is a personal pay up to the grade of councillor, and it is attached to the place afterwards?—Yes, for all the higher appointments.

40,843. If you were to make the two Services—the Foreign Office and the Diplomatic Service—interchangeable, you would have, as a preliminary step, to equalize the pay?—Yes, at least. I should say at least.

40,844. I was coming to that. That would be the minimum?—Yes.

40,845. We have been told, and I presume you will confirm it, that living abroad in the Diplomatic Service is more expensive than living in London in the Foreign Office?—Yes.

40,846. In consideration of that fact, it has been suggested that, if the Services are to be really interchangeable, the Foreign Office clerk sent abroad should be given an allowance in addition to pay, and the diplomatist coming to the Foreign Office would draw the Foreign Office pay of his rank. Would such an arrangement as that commend itself to you as a means of getting over the difficulty of pay?—Yes, certainly.

40,847. How do you think that would be received by the Service?—I think it would be well received.

40,848. Do you think it would in any way impose an impediment or inconvenience in the transaction of public business?—No, because it would only be in the very highest posts that such inconvenience might arise, and the Secretary of State would naturally, in such a case, use his judgment to obviate any injury either to the public service or to the individual.

40,849. What local allowance would you consider suitable to attach to the lowest grade of the Service? Take the case of an attaché who now draws nothing: Under the proposed arrangement he would draw 200*l.* a year, rising by increments to the maximum of the grade?—I should say a minimum of 500*l.*

40,850. You would attach a minimum allowance of 500*l.*?—No, I should, by allowance, make up to him a sum of 500*l.* I consider that the minimum, very roughly speaking.

40,851. That is to say, he would for the first year draw 200*l.* pay and 300*l.* local, or compensation, allowance?—Yes.

40,852. After two years he would become a third secretary?—Yes.

11 June 1914.]

Sir WILLIAM TYRRELL, K.C.M.G., C.B.

[Continued.]

40,853. And if his pay was on the same scale as the Foreign Office clerk he would draw pay of about 250*l.* per annum?—Yes.

40,854. Would you attach the 300*l.* allowance to him also, or what compensation allowance for expensiveness of living abroad would you attach to a diplomatist drawing 250*l.* as pay?—I should say, roughly speaking, that I would give him 300*l.*

40,855. You would give 300*l.* right through all the grades, would you?—Yes. That, of course, is on the supposition that he had a private income of 400*l.* a year.

40,856. Under present arrangements he would at that time we have in mind be drawing 150*l.*, and would have a private income of 400*l.*?—Yes.

40,857. Therefore, he would be in possession of 550*l.* a year?—Yes.

40,858. But as the proposed plan excludes the idea of private income from consideration, you think the allowance should be fixed at a sum which will bring the diplomatist's income to 550*l.*; in other words, that it should be 300*l.*?—Yes.

40,859. You would preserve that basis right through?—Yes.

40,860. (*Mr. Holt.*) Do you contemplate the possibility of the local allowance being different in different localities?—I guarded myself by saying that it was rough. There are certain posts, of course, which are very much more expensive than others, not many. I mean that the practical difficulty is not very great.

40,861. (*Chairman.*) But you do not contemplate making the official allowance that you would give him the equivalent of the private income which he must now possess?—No.

40,862. That would be putting too heavy a charge upon the State, and I do not suppose it would be expected?—No.

(*Sir Kenneth Muir-Mackenzie.*) If you do not make some change you would not get rid of the difficulty of which we have heard, that you cannot send a man to a place merely because you think he is the proper man fit for that place because he says, "Oh, that is an expensive place; I cannot live there."

40,863. (*Chairman.*) It is to be presumed that moneyed men will still continue to go into the Service?—Yes.

40,864. (*Mr. Boutwood.*) Sir Arthur Nicolson told us that 700*l.* was the minimum that a man could do with at St. Petersburg. How would you deal with that in the case you were just discussing with the Chairman?—I should regard St. Petersburg as one of the places for exceptional treatment, if you ask me to pick them out.

40,865. So that the allowance would vary?—It would vary, I should say, in about half a dozen places at the utmost; but the 300*l.* local allowance would enable him to live in the average post.

40,866. (*Chairman.*) We have heard a good deal of the great expense imposed upon diplomatists on their transfers or removals from posts. For instance, one gentleman who gave us evidence said that practically for over a series of years transfers cost him 50 per cent. of his pay?—Yes.

40,867. That is a state of things which, when recognised, the Government can scarcely expect people to bear?—Of course the system has prevailed hitherto because the Government has found people willing to submit to it, but there is no justification for it, and personally in my own department, where one of my functions is to move about the more junior men, I am very much handicapped by the fact that a man's expenses are not paid, because you sometimes are face to face with a situation in which you are actually financially penalising a man by sending him to a better post where he can distinguish himself. That post may not have been available last year; it falls vacant this year; you say to him, "Well, here is your chance—go." And he will reply, "I am very grateful, but look at the penalty you put upon me."

40,868. (*Mr. Holt.*) You accept the fact that a man might lose half his salary on removal?—I cannot help it.

40,869. You agree that it may be true that a man may lose half his salary on removal?—Yes, I should

think it is possible. I should not be astonished to hear it, that is how I put it.

40,870. (*Chairman.*) I asked the same witness, Mr. Lindley, whether he could make a suggestion, as to the most suitable way of remedying that difficulty, and he suggested that the German system seemed to him the best, by which a man is recouped his actual expenses?—Yes, I entirely agree with him.

40,871. Keeping, of course, in the hands of the Secretary of State a reasonable control over the disbursement?—Yes.

40,872. For instance, if a man be transferred from Paris to St. Petersburg, and wanted to carry with him a large quantity of valuable furniture, you might reasonably draw the line there?—Yes, it would have to be reasonable expenditure.

40,873. But subject to that condition you consider that that is the proper way of dealing with the matter?—Yes, I have no hesitation in saying so. At the present moment, if I may say so, we are sweating people.

40,874. Coming now to the question of recruitment and the system of examination, it has been suggested to us that insistence upon the high degree of knowledge of modern languages now required at the entrance examination acts as a rule of exclusion against all except the wealthy classes. Does it, in your opinion, act as a rule of exclusion?—I should say that the tendency was in that direction, because in order to acquire the knowledge of French and German which is expected by the Civil Service Commissioners, a man is forced to go and live abroad; that means an extra expenditure of time and money.

40,875. Is it not the fact that the method of recruitment is directed to getting for the Foreign Office the most efficient agents?—Yes.

40,876. And that a knowledge of French and German is absolutely essential for the efficient performance of your work in the Foreign Office and in the Diplomatic Service?—Yes.

40,877. Therefore, although it may tend to work as a rule of exclusion still you cannot recruit an efficient Service otherwise?—That is so.

40,878. I think it was Mr. Lindley who told us that he learned his modern languages after leaving the university, that he went abroad for three years, and then he passed into the Service. But those three years of residence abroad meant a considerable expenditure of private means which only a man of means could afford?—Yes.

40,879. So that unless boys of small means get scholarships, and in that way go abroad to learn French and German as they should be learned, in the countries which speak them, the exclusive tendency of the existing system seems to be inevitable if the Foreign Office is to be served by good linguists?—Yes, inevitable under present conditions.

40,880. Do you think that by restricting the number of marks to 4,000 and not allowing men to compete as in the ordinary Civil Service examinations up to 6,000 marks limit, you are restricting the area of selection?—Yes. I think when these regulations were laid down in 1905 by Lord Lansdowne, the dominating idea at that time was to eliminate the crammer. I know that in drawing them up Lord Lansdowne consulted the authorities at Oxford and Cambridge. Those regulations have now had nine years' trial, and I believe we are now in communication with the Civil Service Commissioners with a view to amending them and increasing the maximum so as to throw our net wider.

40,881. The Civil Service Commissioner made some mention of that to us, but I understood him to mean that he was proposing to increase the number of marks for modern languages only up to 800?—Yes, but I do not think we are going to agree to that. I think we want to raise the maximum now to 6,000, but not under the head of modern languages. Modern languages may be increased by 100 or 200 marks.

40,882. Then is it your intention to have the examination on all fours with that for the Class I. test?—We should like to do so, but I was looking at the correspondence the other day that passed between Lord Lansdowne and some of the university authorities, and I saw that they warned us that if we strove

11 June 1914.]

Sir WILLIAM TYRELL, K.C.M.G., C.B.

[Continued.]

for the ideal—if, concretely put, we tried to get the Greats men, the first-class classical men, we might lose the history men. In the nature of things I think that the average man who goes in for history is more suited to our purposes than the man who goes in for Greats.

40,883. Will that history school include international law and studies of that kind?—It practically does; so far as I can understand the arrangements, for instance, that they have made at Oxford and Cambridge to give facilities to candidates for the Foreign Office and the Diplomatic Service, they encourage them to take up international law and what I should call cognate subjects. But we are inquiring into that matter now, and shall get into touch again with the universities.

40,884. Are you prepared to answer any questions regarding the Consular Service, or would you prefer not?—I will do so to the best of my ability.

40,885. The question of an amalgamation between the Consular Service and the other two Services, the Foreign Office and the Diplomatic Service, has been urged upon us; what is your general impression upon that point?—The one country where they have done it has been in France, and from all I hear the results have not been satisfactory. The reason why I do not think it answers is that the two Services pursue different objects. The diplomatist is mainly occupied with political work, and the consul is mainly occupied with shipping and commercial work, and by amalgamating two services which are not pursuing the same objects, it seems to me you would be weakening both and not benefiting either. That is broadly my view.

40,886. We were somewhat impressed by the fact that the work on which the Levantine Consular Service is engaged is very largely of a diplomatic character?—Yes, the Levantine Service, of course, is a branch apart. Generally speaking, when we talk of the Consular Service we are talking of what we call the general Consular Service. Then you have the particular branch of the Levantine Service and also the Far Eastern Service.

40,887. I was coming to that?—In the Levantine Service undoubtedly the functions in many cases are political.

40,888. Do you think there would be the same objection, or would the objection be less to having, if not complete amalgamation, a certain degree of interchangeability between the Levantine Service and the Diplomatic Service?—I see no objection, and under our present regulations that is not excluded.

40,889. And does the same hold of the Far Eastern Service, in China and Japan?—Yes, our present Minister in Pekin started in the Consular Service, worked his way up, and was made a Minister.

40,890. If that were so, how could that nearer approximation between the two Services be brought about; what steps should be taken to bring it about?—I do not think you would promote the object that you have in view by making hard and fast regulations. I think that the elasticity which at present prevails makes it easier really for the Secretary of State to pick out a man in, say, the Levantine Consular Service, and put him into a diplomatic post.

40,891. And if you were to have a closer amalgamation you would probably have to alter the entrance examination for the Levantine and Far Eastern Service to bring it up to the standard of the Diplomatic Service?—Yes, but the difficulty would be this—that in the case of a member of the Levantine Service who was ripe for promotion, and who was qualified for promotion to the Diplomatic Service, you would only presumably employ him in a sphere to which he has been accustomed. To take a man who has spent 30 years in the Near East and make him a Minister in an ordinary European capital would not, in my opinion, benefit him or the public service, because the school in which he has been brought up has developed qualities in him which are wasted in an ordinary European post. You would expect him after 30 years' service, when he has reached a certain age, to acquire new habits and new views, to get into touch with people he has not been in touch with, and I doubt very much

whether you would get the benefit out of him for the public service that the public is entitled to. That is why I should say that any rigid system would not answer.

40,892. You would say that it had better be left with the Secretary of State without any clear regulations, but on the general understanding that promotion should be given in the region for which the man has been recruited?—Yes, if I may put it in a superlative way, there is no reason why you should not take a man who started in the Levantine Service who may certainly be perfectly well qualified to become Ambassador at Constantinople, and there is nothing in the present regulations which would make it impossible. I mean that the discretion of the Secretary of State in that matter is quite unfettered.

40,893. It has been suggested to us that the Foreign Office might be strengthened if it had one or two Advisory Committees composed of men of eminence in the financial and legal world to advise them on particular questions of high financial policy, such questions as the Advisory Committee of the Board of Trade were appointed for the purpose of dealing with. Can you conceive of the possibility of a committee of that sort working with your present system in the Foreign Office?—I was thinking, while you were putting the question, of cases which would make it necessary. For instance, when you mentioned the Advisory Committee of the Board of Trade, if you take commercial questions, roughly speaking, we are to a very large extent in commercial matters a post office; it is the Board of Trade who decide, and it is we who negotiate. I was thinking whether there were any questions of sufficient financial importance which would require or justify setting up such a machinery.

40,894. It has been suggested to us that because you do act as a post office, and that the real discussion and threshing out rests with the Board of Trade, there is thereby created a possibility of friction between your two departments; what would you say with regard to that suggestion?—I should doubt it, because the line of demarcation is so very clear. If we developed at the head of our commercial section a great genius, I think that friction might arise, because he would not be satisfied with being a post office; but then that is a question of the personal equation. As things have worked out within my recollection now of 10 to 15 years, I should not say that there had been friction.

40,895. You have a legal department in the Foreign Office?—We have a legal adviser, but no department.

40,896. You have a legal adviser and all questions connected with international law, for instance, are referred to him, are they not?—Yes.

40,897. The matter has been illustrated before us by reference to the Declaration of London. Before the views of the Foreign Office were expressed on that great matter, was your legal adviser consulted?—Oh, yes; and not only that, but the law officers were consulted. In the first instance a legal question will go to the legal adviser, and if he is not quite happy he will suggest reference to the Law Officers of the Crown, and if they are not quite satisfied they go to the Lord Chancellor; so that on legal questions we have at our disposal the best machinery that the State provides.

40,898. (*Mr. Philip Snowden.*) Supposing the Lord Chancellor is not quite satisfied, what then?—I have never known such a case.

40,899. Would you consider the existence of eminent legal officials?—I dare not suggest it. I have never heard of it.

40,900. (*Miss Haldane.*) What would happen, supposing that one of these young men who had 400*l.* a year at least to begin with lost his money, or his father did, what steps would be taken? Would he have to resign his appointment?—Curiously enough an instance occurred last year. There was a young man in the Diplomatic Service who came to me and said that his father had speculated and had practically lost his fortune. He had a very good record, he was very promising; so the Secretary of State transferred him into the Foreign Office, which just enabled him to go on.

11 June 1914.]

Sir WILLIAM TYRRELL, K.C.M.G., C.B.

[Continued.]

40,901. But the Diplomatic Service might have lost a very valuable man in that way?—A very valuable man we should try to keep alive by that expedient.

40,902. But he would cease to be in the Diplomatic Service pure and simple?—We should transfer him into the Foreign Office where his pay is better and his expenditure less, and when he had got to a certain degree of seniority we could transfer him back into the Diplomatic Service where he would draw a higher salary than he would ever get in the Foreign Office.

40,903. Do you think it is the case that many men in the Diplomatic Service are apt to get into monetary difficulties owing to their having insufficient means?—No. I think that human nature is the same there as in any other service; you will have a certain number of men who, whatever position they are in, will probably get into monetary difficulties.

40,904. They are not adequately paid for their work, so to speak; they have to meet their expenses out of private resources, and therefore the difficulties might be greater?—I may say that I have had considerable experience of the junior members of the Diplomatic Service, and what has struck me very much is the very great self-denial that they practise, considering that in most places where they live they have to live with people far wealthier than they are themselves, and lead rather a leisured life.

40,905. Do you think that by having to restrict their social activities, if one may call it so, they lose in point of view of efficiency, or not?—I do not think that their lack of means is so great as to make them lose social activities—not to the extent really of injuring the Service; but I think it imposes a greater sacrifice on them. That is what I meant to say.

40,906. Do you lay much stress on the social side of diplomatic life?—Not if you mean by that (I am not quite orthodox on this point) whether they show themselves in drawing-rooms or parties. The kind of social life that I should like to see them lead is getting into personal touch with the people who really govern the country; that is the social life that I would encourage.

40,907. That need not imply a very great deal of expenditure?—No. It implies a certain amount of expenditure by way of returning hospitality; you do get best into personal touch with people over meals, and there, you see, hospitality comes in. They need not practise it on a large scale. For instance, in the country that I personally have acquaintance with, Italy, the people who really govern the country have very simple tastes, but a certain amount of hospitality is necessary.

40,908. Do you think that, as a rule, the young diplomats get into touch with those outside the higher social sphere?—Yes, those men who are worth their salt do. I do not say they are all like that, but the men who, roughly speaking, have ambition, have seen it and do do that.

40,909. As you know, we have had in evidence a criticism of some of our diplomats in this respect, that they did not know the really important people in political life in the country in which they were living. Do you think that criticism is frequently justified?—I should not say "frequently." I think there is less of it than there used to be.

40,910. Do you think that if we had lads coming in from a rather different social class we should get them to be more in touch with the whole life of the country as distinguished from its social life?—If I may offer a criticism it would be this: Are you not expecting too much? The first object of a diplomat is to get into touch with the people who really govern the country in order, after all, to carry out the first object of his stay there, namely, to promote good relations, and that takes up a great deal of his time. If he gets into touch with the people who really govern the country—I can only quote the country I was personally concerned with, Italy—he will *ipso facto* also get into touch with a great deal of the popular movement that is going on, because those people come out of that class. In Italy, roughly speaking, society, so-called, and government are divorced; it is very rarely that you meet in any drawing-room the people who really govern Italy.

40,911. Italy is different in that respect from other countries?—I can only quote Italy because of my personal knowledge of it. There are other countries again to which that would not at all apply.

40,912. I have been rather struck by the fact that there are practically no Scotch boys—at least, none who have been educated in Scotland—coming into the Diplomatic Service?—They do not apply.

40,913. Why do you think that is?—It may be that they think it is no use; it may be prejudice, or it may be due to ignorance; but, as I was saying to the Chairman, it is not due to any policy of exclusion on our part.

40,914. Do you ask them what their religion is?—Never; in the seven years that I have been on Boards I have never known a question asked about their religion.

40,915. You do not think that their being Nonconformists or Presbyterians would have any influence whatever?—No, none; the subject never figures in our reports.

40,916. You told us that a small tradesman's son would be eligible, but while the 400*l.* rule exists he could not come in?—To the Diplomatic Service, no.

40,917. I am talking of the Diplomatic Service?—It would be a very unfair thing to him to allow him to do it.

40,918. Still, one wonders rather why there are no, let us say, rich Nonconformist merchants' sons in the Service?—I do not know why. It is a fact, but it is simply, so far as we are concerned, because they do not present themselves.

40,919. Do you think it is from tradition? Do not you think it is considered throughout the country that it is no use for them to apply, probably from old tradition?—It may be that; that is quite possible.

40,920. (*Mr. Matheson.*) In regard to the interchangeability of the Foreign Office and diplomacy, it is true, is it not, that at least two existing ambassadors entered the Foreign Office?—Yes.

40,921. So that even now there is a good deal of opportunity for a man in the later part of his career to pass into the Diplomatic Service?—Yes. If I may say so, when I entered the Foreign Office one of the conditions of my employment was that I could not be sent abroad without my consent. A few years ago that was changed, and every Foreign Office clerk now is liable for service abroad.

40,922. (*Chairman.*) Is that so?—Yes.

40,923. Without his consent?—Yes; it is there in the regulations.

40,924. I was led to understand that it depended mainly upon whether the Foreign Office clerk had private means?—When it comes to carrying out the regulation, consideration would be paid to that, and we should see that no injury or injustice was done; but, theoretically speaking, every Foreign Office clerk recruited since my day is liable to foreign service, whether he likes it or not.

40,925. (*Mr. Matheson.*) When you were speaking of possible changes in the examination, was it your idea that perhaps rather too much stress has been laid lately on French and German?—No.

40,926. But was it rather the consideration that you wanted to get into line with university education generally?—Yes.

40,927. What should you say to a system of putting the age for examination earlier and requiring what one may call a pass knowledge of French and German, and then giving your man a year after appointment in which to perfect himself in the languages?—Where would he do it—at his post?

40,928. He would have to be subsidised to do it?—But then, for the time being, you would be withdrawing him from the public service.

40,929. You would; it would be parallel to the probationary year of, say, an Indian Civil Servant?—But I think we should require to have an increase of staff. As it is we are very short handed—every attaché who joins is at once required; and if he were told off for six months to perfect himself in French or German, for the time being we should be without him.

11 June 1914.]

Sir WILLIAM TYRELL, K.C.M.G., C.B.

[Continued.]

40,930. I put the question, because the object would be to give an opportunity to men who had not been able to afford that special training abroad before they went in for the examination?—But if I may say so, I think he would require more than six months.

40,931. I said a year?—Or a year to pass the standard required now. I am pleading, you see, for the individual. If we lower the standard of French and German we *pro tanto* handicap him when he gets abroad. I should be sorry if in order to throw the net as wide open as we can, we were to lower the qualifications and lower the usefulness of the candidate.

40,932. What I suggested was with the object that in the first selection the man should be examined on his general qualifications, rather than that the emphasis should be laid on that particular qualification. I quite see that there may be insuperable objections; I wanted to get that out?—I do not think they are insuperable, but I think it would require a great deal more change than strikes one at first sight. I do not in the least think they are insuperable.

40,933. One question with regard to what the Chairman put to you about an advisory body on matters of trade. I think what some of us had in mind was not matters that you would consider mere matters of trade, but matters in which trade and diplomacy very closely affect one another, questions, for instance, as to the raising of loans by foreign countries and the relation of traders here to those loans. Those are not purely Board of Trade questions, are they?—No, I quite see what you mean.

40,934. Does your trade department in the Foreign Office deal with that sort of question?—No. If any question were connected with politics, the political department concerned with the question would deal with it. Under our present system it is open to the Secretary of State to call in, and I know he has called in on occasion, expert advice before coming to a decision. I mean when we have to deal with what I should call a financial question, the question of a loan.

40,935. (Chairman.) He does call in expert advice?—Yes. Take, for instance, the question of an Austrian or Chinese or Turkish loan; it is perfectly open to him, and I know the present Secretary of State has asked men of standing and knowledge to come and see him and discuss it with him, and he has done that before coming to a decision. But they are rare occasions, because we do not have the same intimate relations, say, with the financial world as foreign offices have abroad.

40,936. (Mr. Matheson.) Supposing that a leading British firm wanted information as to loans which are likely to be raised by a foreign government, with a view possibly to trying to get a contract, would they be able to get any information in the Foreign Office?—If we had not got it we should certainly undertake to obtain it for them.

40,937. (Mr. Holt.) How long have you been private secretary to the Secretary of State?—Seven years now.

40,938. Have you any knowledge as to the selection of diplomatists for different positions abroad; does that come within your purview?—Yes, I am responsible for the promotions and transfers and movements of what I should call the junior grades.

40,939. Would you send a person to a position where he was totally ignorant of the language of the country? For instance, would you send a man who was totally ignorant of Spanish to South America?—Oh, yes.

40,940. In the junior grades?—Yes.

40,941. Would you send a man in a senior grade; would a man be sent as Minister who was totally ignorant of Spanish?—Oh, yes.

40,942. How can we be really very satisfactorily represented in a country like that, where Spanish, as I am informed, is the ordinary language of intercourse, by a person who cannot speak the ordinary language of the place?—Because he has at his disposal the machinery for getting over all the difficulties in his official communications with the Government, I mean such as writing notes or receiving notes in Spanish, for which he has translators and so on. As regards colloquial Spanish, it is the easiest language to pick up in the shortest time, and as regards the people he moves

among, a knowledge of French and English is so general that his ignorance of Spanish would not really be a handicap.

40,943. I have been told that for commercial purposes it is essential that you should have a knowledge of Spanish or Portuguese, according to the particular district of South America to which you go?—As regards commercial services, the Minister would rely on the Commercial Secretary, and we should never send a Commercial Secretary to South America who had not got a knowledge of Spanish—a technical knowledge, if I may say so.

40,944. If you take the view of what a Minister's or diplomatist's social duties should be that you yourself have just expounded with regard to Rome, how can they be fulfilled properly unless the man has a knowledge of the language of the country?—I said his duty was to get into touch with the people who really govern, and the majority of the people I have heard about who govern South American Republics are very familiar with French or English. I think that an ignorance of Spanish to start with is not so great a handicap as it appears to be.

40,945. Do you think that our Service suffers at all by reason of Ministers being moved too frequently?—No, I should say, if anything it suffered because they were not moved sufficiently.

40,946. Take a place like South America, for instance, might it not conceivably be advisable that a person should start his career there with the knowledge that he would be employed in South America during the whole of his diplomatic lifetime?—Well, that would mean a reconsideration of the lines on which appointments are made. Appointments in the Diplomatic Service are not made with a view to connecting a man locally too much with one part of the globe. I am talking of diplomatists, and what we have tried to do. In the past, for instance, a belief had arisen that if you were sent as Minister to South America, it was your official burial; they were very unpopular posts when the men were always there. We have tried to break that down, and I think we are succeeding, but the only way in which we can do that is by taking men who are just ripe for promotion to a ministership and sending them to South America and telling them, you can win your spurs there, and if you do, of course you will get a transfer again to a post nearer home. That would go against the idea suggested just now, that the man should be as it were brought up for the South American service. I think that if at the present moment you attempted that you would meet by a strike in the Service.

40,947. Clearly that would be so unless you engaged the person originally on those conditions, but if you engaged him originally on those terms?—Then naturally he would have no grievance, but the terms on which men are engaged now are that they will get an average of pleasant and unpleasant posts—a mixture.

40,948. But you have never thought that possibly our Diplomatic Service suffers by reason of our representatives not knowing the local ropes?—That I would not answer. A knowledge of the local ropes, of course, is one of the touchstones of a man's efficiency.

40,949. But surely it must take a considerable time to really learn the ropes?—That depends very much on the man, on his energy, on his quickness, his capacity of getting into touch; certain personal qualifications enter there. Broadly speaking, I know men who have gone through the Diplomatic Service and have been so little in touch with residents abroad that they might almost as well have stayed at home; obviously they have missed their vocation.

40,950. Then rather arising out of this, you, I think, describe the diplomatist as being essentially a political officer, and the consul as being a commercial and shipping officer?—Yes.

40,951. Might it not be the case that in some countries the diplomatist is really more of a commercial officer than a political officer?—That would depend on the country.

40,952. May there not be countries in which our interests are more commercial than high politics?—

11 June 1914.]

Sir WILLIAM TYRRELL, K.C.M.G., C.B.

[Continued.]

Yes, but you must remember that as we go on the connection between commercial questions of that kind and politics is very close indeed. For instance, you might describe our attitude as regards Spain as mainly governed by and interested in the wine we import from Spain, which are commercial relations, but I think you would probably be mistaken if you said that was really the sum total. It is not.

40,953. I gather that so far as the Levantine Consular Service is concerned, and I suppose the same would apply to the Far East, the officers might be suitable for diplomatic appointments in that district, but not outside it?—That is so.

40,954. And that a person who had been brought up and spent 30 years in Turkey would not necessarily be a very suitable person to go to Norway?—He might be entirely thrown away in Norway.

40,955. Would that rule apply generally to diplomacy; that persons who had spent a long period of time in a country with one very backward set of political institutions would be an undesirable person to send to a country with a very advanced set of political institutions?—It is unlikely that he would spend a very long time in one country.

40,956. But if he had done it?—Of course, if he had done it then he might naturally become disqualified, but we do try as far as possible to prevent people getting too much into a rut.

40,957. That is to say, that you are against specialising in a particular district?—Yes.

40,958. That has been deliberately thought out and discarded?—Yes.

40,959. The peculiar predominance of Eton in getting these appointments has never come to your knowledge?—No; honestly I was quite surprised when Lord Macdonnell raised the question just now. I was prepared to say that the majority of course are public school boys.

40,960. It is not merely a case of the majority being public school boys, it is the huge preponderance from one particular school?—That is purely an accident.

40,961. It never attracted attention before?—I can only speak for myself. I was quite astonished.

40,962. It is a very remarkable circumstance?—Yes.

40,963. Can you say what proportion the successful candidates, that is, people actually taken into the Service, would bear to the number permitted to compete in any one year?—No. I can get that for you, but I think you have the figures.

(*Mr. Philip Snowden.*) Yes, we have them. Mr. Leathe gave them; it is about five to eight.

40,964. (*Mr. Holt.*) Talking about this question of consulting commercial interests, in such negotiations as with regard to the Declaration of London, were any commercial or shipping interests consulted formally or informally before the Foreign Office came to accede to that declaration?—I cannot speak from personal knowledge, but my recollection is that a committee was appointed with a view to studying, drafting, drawing up, the Declaration of London before the meeting of the last Peace Conference at the Hague; and one of their duties undoubtedly was to consult all concerned, Chambers of Commerce, for instance, and so on; but if you want on that particular question the best information you could get it from Sir Eyre Crowe, because he was a member of the committee.

40,965. I only want it in a general way. In such a case would commercial interests, such as Chambers of Commerce, be consulted in advance?—Yes, undoubtedly.

40,966. (*Mr. Boutwood.*) Have you anything to do with promotions in the Consular Service?—Yes, I am responsible for making recommendations for promotion in the Consular Service. The machinery is this, that there is a committee consisting of the Controller of Consular Affairs, Mr. Law, the head of the Consular Department, and the Assistant Private Secretary, who meet when occasion arises and discuss the merits and claims of consuls, and then make the recommendations which I submit to the Secretary of State.

40,967. In the practical working of things is that machinery which you have described of such a character that a consul—I am speaking of paid consuls, of course—at the ends of the world may feel that he will automatically come up for review by the powers at home, or does it depend on his own initiative, pulling the ropes and pushing, whether he ever comes before the committee?—I am responsible for the appointment of that committee, because when I became private secretary nominally all recommendations for promotions in the Consular Service rested with the private secretary, and it did not seem to me that that was a good system, because it rather put a premium on men moving on their own behalf, which I do not think is a good thing for the Service; so I suggested the appointment of this committee, because the members composing it are familiar with the work that a consul turns out, and they inquire on the occasion of a vacancy into the merits of all the various candidates, and under the system it is almost impossible for a man to be entirely forgotten. Under the previous system that undoubtedly might happen, because it was impossible for the private secretary of the day in the pressure that he worked under to go sufficiently into the question of making recommendations that one could describe as well considered.

40,968. You used the word "candidate"; does that mean that you regard the whole consular body as consisting of candidates when a vacancy arises, or do you simply consider certain names that happen to be before you?—When a vacancy arises in a consulate there is a list in existence of all the consuls, and I describe these consuls as candidates for that particular post. This committee will meet and will work through this list of consuls, and recommend out of that list the man who they think is the best candidate. So that a man does not get overlooked.

40,969. Then at the present time, I believe, the consular pay is attached to the post, not to the person?—The salary is attached to the post.

40,970. Does that ever act as an inconvenience in shifting men about?—No, because for years and years, I should say about 13 years, we have had a system of local allowances which has been established and has been elaborated to meet the extra cost of any expensive place.

40,971. But we have had it put before us that through a variety of circumstances a man at the end, perhaps of quite a meritorious career, perhaps a distinguished one, may find that his last years in the Service are spent in a comparatively poorly paid place, and that acts prejudicially on his pension?—I am amazed to hear that that has been given before you in evidence.

40,972. You do not think it happens?—It does not happen. Whoever gave that evidence is 13 years behind the times.

40,973. (*Chairman.*) Can this happen: that a man is attached to a particular post, the pay of which is, say, 800*l.* a year; it is an unhealthy post, he asks for an exchange, and he is stationed at a healthier post, but the pay of which is 600*l.* May such a thing ever happen?—Yes, that could happen.

40,974. That is what I understood the evidence to point to; namely, that the pay attaches to the post and not to the individual, so that the man's pay is not regulated by his service?—Every consul starts by getting 600*l.* irrespective of what post he is in; he rises to the 800*l.* a year scale irrespective of what post he is in, and he rises to the 1,000*l.* a year scale irrespective of what post he is in. Then there is a system of allowances in particular posts, according to the expensiveness or otherwise of the place.

40,975. So I understood. Then may I assume that there are grades, namely, for vice-consul from 300*l.* to 600*l.*, for consul from 600*l.* to 800*l.* and for consul-general from 900*l.* to 1,200*l.*?—Yes.

40,976. So that whatever posts any of these officers may be posted to, he draws the pay of his grade on the scale?—Yes.

40,977. But he also in addition draws the allowance attached to the place because it may be of its unhealthiness or expensiveness?—Yes.

11 June 1914.]

Sir WILLIAM TYRELL, K.C.M.G., C.B.

[Continued.]

40,978. That seems to me a reasonable arrangement, but what I understood was that if for any particular reason an officer was transferred from one post to another he drew the pay attached to the post and not the pay attached to his grade?—No, that is not so now.

40,979. The mistake may have been with regard to the local allowance?—Yes.

40,980. (Mr. Boutwood.) That puts an entirely different complexion upon it?—Yes.

40,981. (Mr. Graham Wallas.) Does the allowance which a man holds at a particular place affect his superannuation?—He is pensioned on his salary.

40,982. Only on his salary?—Yes.

40,983. (Mr. Boutwood.) Let me get this clear in my own mind, because our earlier evidence was that the Consular Service consists of a number of posts all over the world with somewhat arbitrarily assigned salaries, one of 600*l.*, one of 700*l.*, one of 800*l.*, one of 900*l.*, and so on, and it is just according to the mercy of God, where a man happens to drop down at any part of his career?—That used to be the case.

40,984. Now, is the Consular Service a graded Service with scales like the ordinary Civil Service?—Yes.

40,985. One more question about the Committee of Selection for the Diplomatic Service. What proportion of men have you rejected or advised the Secretary of State not to nominate?—I think a very small proportion, I should think 1 per cent., roughly speaking perhaps 2 per cent.

40,986. (Mr. Philip Snowden.) What post did you occupy at the time of your appointment as private secretary?—I was second in command in the Far Eastern Department.

40,987. Of the Foreign Office?—Yes.

40,988. Might I ask what your salary was at that time?—I was then an assistant clerk and drew 700*l.*, I think it must have been going up to 800*l.*

40,989. Did you as private secretary retain your Service scale of salary and then were you paid something in addition as private secretary?—Yes, the salary I draw now under two heads, one as senior clerk.

40,990. You have been promoted in the meantime?—I have been promoted in the meantime by time, by seniority; I was promoted in 1907, and as senior clerk I get a salary starting at 800*l.* and going up to 1,000*l.* by increases of 50*l.* a year; and as private secretary I get an allowance of 300*l.*, out of which I give 100*l.* to the clerk who is acting for me as senior clerk.

40,991. So that if you ceased to be private secretary you would go back into the position of senior clerk?—Yes, at 1,000*l.*

40,992. You said that the promotions in the Diplomatic Service up to a certain point are practically in your hands?—Yes, I am responsible for the recommendations to the Secretary of State.

40,993. Would you appoint the Ministers in the smaller legations?—No. Those appointments are made by the Secretary of State. I would submit to him a list of names of those who are ripe and he would select.

40,994. Would you submit with the recommendations any suggestions of your own?—The Secretary of State would naturally consult me and I would give him the reports of what I hear as to how a man has done his work, and his other qualifications. What I mean by saying that the Secretary of State makes the appointment is this: that junior appointments I merely submit to him for his signature, I do not trouble him with an explanation of the reasons why a third secretary is being moved from Paris, say, to Berlin.

40,995. Supposing there was a vacancy for a councillor, would you go through the list of first secretaries and select for appointment any person that you thought best qualified, or would you take the man at the head of the list?—If there were no men who had done prominent service among the first secretaries I would recommend the man by seniority alone; but it is well understood that appointments to councillorships are made by merit and not merely by seniority. If you take O'Beirne, the councillor at the Embassy at St. Petersburg, who formerly was in the Indian Civil Service, and is one of the ablest of our younger men, he was first secretary and made a big jump and became councillor,

that was done on merit. Others have just worked their way up the ladder by seniority.

40,996. It was you who appreciated the merit of that man?—Yes. But when it comes to a councillorship I would take two or three names out of the first twelve and put them before the Secretary of State, and I should say: "By seniority Smith should get it, but Jones, who is junior to him, has done much better service, and really ought to jump at this stage." This is the rubicon. Then it rests with the Secretary of State to accept or reject my recommendation.

40,997. What means have you here in London of estimating the relative merits of men in these far-away places?—All the important work that reaches the Secretary of State reaches him through me, that is to say, I pass it on, and that enables me to see the work turned out. I am now talking of councillors.

40,998. The secretaries are not in direct communication with the Foreign Office?—No, they only communicate the work through their chief. Now and then a secretary will work a report which his chief sends in with a recommendation.

40,999. And therefore you have no direct means of knowing the relative merits of these smaller men?—Yes I have, because I am in communication with the heads of missions, who write to me about their staff, and that really gives me a great deal of material on which to form an opinion, and when they come home, they always come and see me, or meet me, and talk about their work, and so on. All that helps me to form an impression.

41,000. They come to see you, no doubt, because they think it will be useful to do so?—Sometimes, of course, because they find it pleasant.

41,001. That is just the point I am coming to. You have to rely on the recommendation of their superiors abroad largely?—Very largely, and also it has been encouraged lately a good deal more, that they turn out independent work in the way of special reports. For instance, if anybody asked for a report on insurance against sickness or anything of that kind abroad, a young secretary will be told off to make it and that is sent home, and that gives one a fairly good idea of what he can do. That is being very much encouraged now.

41,002. You do not think then, that any alteration is desirable in this method of making the selections for promotion in the way of seeking the assistance of other persons who are qualified by knowledge and experience to form a judgment?—I do not know who they would be. It so happens that as private secretary I get centred in me all the information that one can obtain about a man, and if you imported other people, I do not think they would have a sufficient knowledge to form an opinion. They again would apply to me really.

41,003. But apart from your year's experience at Rome, you have had no practical experience of the Diplomatic Service?—That is so.

41,004. When you were appointed to the Foreign Office the regulation requiring a Foreign Office clerk to serve abroad was not in existence?—No.

41,005. How then did you come to be appointed abroad?—Because my exchange was voluntary.

41,006. Were you in the Diplomatic Service in Rome?—Yes, I was what you call acting second secretary. For the time being I was a diplomatist in character, but not in pay.

41,007. Did you carry your Foreign Office pay with you in Rome?—Yes.

41,008. Might I ask what was the reason why you went, then?—Well, I thought it would be a very good thing for me to go abroad; secondly, I had been very hard worked in my previous post, and I had really been advised to go and take a holiday for six months, a prospect which did not attract me; I preferred to go to Rome, with a certain amount of work to do, to just going abroad for six months without any.

41,009. And you think it is a desirable thing for a Foreign Office clerk to go abroad occasionally to widen his experience?—Yes, I have no hesitation in saying so.

41,010. You would recommend it in the case of every Foreign Office clerk?—Yes, broadly speaking.

41,011. You said that the qualifications for the Foreign Office and for the Diplomatic Service were

11 June 1914.]

SIR WILLIAM TYBRELL, K.C.M.G., C.B.

[Continued.]

different. If the system of interchange were more general, then there would be an opportunity of finding out that a particular individual possessed qualifications which might be more advantageously employed later on in one department or in the other?—Certainly; that is one of the reasons why I am in favour of frequent exchange: it is a very good test.

41,012. A word or two about this Board of Selection. You told us that when a person applies to be permitted to come before the Board of Selection, you make certain inquiries about him, and he supplies you with recommendations from his college or school?—

Yes,

41,013. That information one might assume will contain a good deal about the lad's antecedents and associations?—It depends entirely on the head of the college or school, some furnish you with a great deal of personal information, others do not; others will give you more information about what he has done, what his own tastes are, and so on—individual information; others will give you more information about his parentage, and so on. We have no forms that we require them to fill up; that is why the information varies.

41,014. You said in reply to a question just now, and your statement agrees with what the Permanent Under-Secretary said on the matter, that the persons who apply who are refused permission to go forward to the examination are a very small percentage of those who make such application?—Yes, very small.

41,015. Only one or two per cent., you said?—Yes.

41,016. That practically amounts, in a sense, to an open door for everybody who can fulfil the necessary conditions.—Yes.

41,017. How then do you account for this very curious result, that of those who do make application those who go for examination belong almost exclusively to one very narrow social class?—The only explanation that occurs to me is that the Board of Selection has only been in existence now for seven years, and that up till then there was a general impression that unless you could command a great deal of interest it was no use applying. There was a great deal of truth in that, because nomination in those days depended entirely on the favour of the Secretary of State for the time being, if you could bring enough interest to bear on him. That is only my own impression to account for it.

41,018. That seems a very reasonable and plausible suggestion, but, unfortunately, it does not happen to be borne out by the facts, because within the last few years the number of members of the aristocracy who have found a way into the Diplomatic Service form a larger proportion to the total number than they did in the previous year?—Do they?

41,019. Yes. If you turn to page 9 of this Red Book you will find that out of 20 third secretaries, all of them appointed since 1906, that is practically since the date of this new system, eight are sons of lords, and two others are baronets, and evidently a number of those who are not the sons of lords are aristocrats, such as Francis D'Arcy Godolphin Osborne?—Well, he is not; I can tell you that he is not an aristocrat.

41,020. Is he not?—No, he gives the appearance.

41,021. At any rate, you see eight of them are sons of lords, and two others are baronets?—May I, as against that, suggest that we will supply you with a list, if you would like to have it, of all the candidates whom we have sent up, and that will show you what the proportion is. These are all successful candidates.

41,022. Quite so; and that leads us to the conclusion, provided that the high proportion of the aristocracy is not maintained in the whole list of candidates—that aristocracy, and it may be capacity—I do not like to say brilliancy, but capacity to come out successfully in the examination, go together?—Well, it looks like it.

41,023. If the percentage is not the same all through, then it will be for the Civil Service Commissioners to explain why the aristocracy happen to come out successfully in the examination?—Yes.

41,024. Can you explain how the system arose of not paying these young diplomats anything at all for two years?—I think it arose out of the history,

more or less, of the Diplomatic Service. So far as I can make out, 40 or 50 years ago an ambassador was appointed, and the first thing he did was to select his own staff from among his relations, his sons, nephews, and so on, who would all be called unpaid attachés, with no claim for promotion, and no status except the rank. Out of this gradually developed an organised Diplomatic Service, but going back 30 or 40 years, people would remain unpaid attachés for 10, 12, or 14 years, and then they would be jobbed into a post as secretary of a legation, or Minister, according to the interest they had. It was an unorganised Service, and out of this chaos there gradually evolved this organised Service, and the only link that remained with the past was the unpaid attaché, and I fancy the Treasury accepted it because it suited them.

41,025. I take it from what you have said that you approve of the suggestion that the requirement of 400*l.* a year private means should be abolished, and that a system might be adopted by which there would be a base salary and an additional allowance for the cost of living?—I should like to have both, but if I cannot have both I should prefer the system of salaries and allowances.

41,026. If you are going to have both, you are going to increase the means of the diplomat by 400*l.* a year?—I should be delighted to do it.

41,027. (Chairman.) From Government funds?—No. I should like to see the Government increase their pay, but I should like the men also to have private means of their own.

41,028. (Mr. Philip Snowden.) But if they are able to subsist now on 550*l.* a year when they are appointed to third secretary, why cannot they exist in the same state if they are paid an inclusive sum of 550*l.* by the State?—I think they can. I do not deny that for a minute.

41,029. Is it your opinion that the present system of nomination does get the very best type of man for the Diplomatic Service, or if the pecuniary qualification were removed, and thereby the field of selection were widened, do you think that it is possible that you might get some able men who are excluded by the present system?—Yes, with one reservation. When you say able men, I do not think that the Diplomatic Service is a Service in which I should encourage geniuses. I think that a man with average ability and sound judgment is the best fitted for that Service. The most precious qualification in the Diplomatic Service, I consider, is judgment.

41,030. Sound common sense?—Yes. You see you are a feeder; you are sent abroad to feed your Government, and the information that you send home increases in value in proportion to your capacity of sifting it, weighing it, and presenting a précis of it; and there judgment comes in. And as regards the other function of promoting good relations, there again sound common sense will help you a great deal more than brilliant capacity.

41,031. You spoke of the importance of the Diplomatic Service getting in touch with the social life of the countries in which they live and in touch with the people who really govern the country?—Yes.

41,032. You are aware that the modern movement in all great nations is for the Government of the country to change from one class to another class?—Certainly.

41,033. And that the old aristocracy in the various countries who formerly entirely controlled the Government are now, if they are not being superseded, having to share the Government with democratic forces?—Yes.

41,034. Am I to understand then that what you mean by getting into touch with the people who govern the country is this: that our diplomats should make themselves acquainted with the great social and democratic movements at work in the countries in which they live, and the democratic movements likely to have an important bearing on international politics?—Certainly. The phrase I used intentionally was that they should get into touch with the people who really govern the country, the people of real influence, the people with whom the future of the country lies.

11 June 1914.]

Sir WILLIAM TYRELL, K.C.M.G., C.B.

[Continued.]

41,035. Who may not in every case be the people nominally controlling the Government for the time being?—Certainly.

41,036. (Mr. Graham Wallas.) In making your recommendations for consular appointments you are helped by a committee in the Foreign Office?—Yes.

41,037. Is there any one on that committee who has ever had any consular experience?—Actually serving in a consulate, do you mean?

41,038. Yes?—No.

41,039. Do you think it might be of advantage to have some one on that committee who has once served as consul?—It would be a retired consul.

41,040. There are other alternatives?—I had not thought of it; it might be.

41,041. You have lately introduced a system of consular inspectors?—Yes.

41,042. Are you familiar with the system which now prevails in a number of other Government offices, by which the chief inspector has a room in the office and after a period of experience as inspector devotes most of his time to the work of an organising official?—No.

41,043. Can you conceive that an arrangement by which the chief consulate inspector should be a Foreign Office official for the greater part of his time might be of advantage?—It might be. I should not like to express a definite opinion; I am not sufficiently familiar with the system.

41,044. The Secretary of State's nomination is required for the Consular Service?—Yes.

41,045. We were told by Mr. Leak, who gave evidence with regard to his nomination, that first of all it is a nomination to a list and then a nomination to an examination?—Oh no, it is not.

41,046. He said, another time, that you have two nominations; you have a nomination to appear before the Board of Selection, and afterwards really a nomination to be examined, and he gave an instance of a second class clerk who received apparently the first nomination, and the last witness said that he was put upon the waiting list and was never asked to go in for the examination. Is that the case?—No; the machinery is exactly the same as in the case of the Diplomatic Service. There is only one nomination, and that admits you to the examination by the Civil Service Commissioners?—No other nomination is required.

41,047. Then that evidence is founded on a complete misapprehension?—Complete.

41,048. We had at another time from, I think, one of the consular witnesses, a statement that a lad who intends to go into the Consular Service normally gets put upon the list, this witness believed, at about 18 years of age. Is that a fact?—No, there is the same misapprehension, the same confusion.

41,049. I suppose what happens is that he sends in an application at the earlier age, and receives a formal reply stating that his application will be considered in due time?—That is the origin.

41,050. And he treats that formal reply as being *prima facie* ground for expecting an appointment?—That is so.

41,051. In the case of the Levantine consuls there is a rather elaborate system of training which is gone through at the University of Cambridge?—Yes.

41,052. It lasts, I think, for two years?—Yes.

41,053. Has it ever been considered whether, if in that case so much as two years' training is desirable, some training at any rate might be desirable in the general Consular Service?—The training, I think, is mainly for languages.

41,054. At Cambridge?—Yes.

41,055. I happen to have been talking to one of the Cambridge dons who teaches them, and his work is to teach them law?—Yes, they are all subjects connected with the special work which the Levantine consul has to do.

41,056. But with a general knowledge of any languages and law?—There is very little law. A member of the general Consular Service is not expected to preside over the Consular Court.

41,057. But ultimately he will have to do quite magisterial work in connection with it?—Signing papers

and such things, but not the duties of the Levantine consul.

41,058. But he will have to do with law in connection with the Merchant Shipping Act, the wages of seamen, and so on?—Yes, but not in a judicial capacity. The training at Cambridge is individual connected with special work that the Levantine consuls have to do, and if there were any special work required of the general Consular Service, no doubt it would be a very good thing to get that training.

41,059. Then you think that the clear case that can be made out for training the Levantine consuls does not apply in any sense to training general consuls?—I should doubt it.

41,060. In considering an application, for instance, for a Foreign Office clerkship, would the question whether the applicant would have to live wholly on his pay in London be considered for a moment?—Not for a moment.

41,061. If he proposed to live wholly on his pay, that would be his affair and not yours?—Yes.

41,062. I want to get on the notes a question that I will put to you, if I may. Have you noticed the following disproportion, that while in the general Class I. of the Civil Service, 35 out of 1,557, that is one to 45, came from Eton, that makes a very glaring difference between the fact that 9 out of 15, that is 27 out of 45, in the Diplomatic Service have come from Eton since 1908?—I tell you that it surprises me.

41,063. Do you think that the public have yet realized that pressure upon the Secretary of State for a nomination either to the Diplomatic Service or to the Consular Service is of no use; that is to say, do letters, as a matter of fact, from very important persons, come in, urging nomination, and have such letters relation to the Diplomatic Service or Foreign Office appointments?—Since people have got to know of the existence of the Selection Board, my experience is that that kind of personal pressure is very rare.

41,064. That people know it is no good?—Yes.

41,065. We have had certain evidence as to the relation of the Foreign Office to journalistic work. In certain foreign offices, in Sweden for instance, and I believe in America, we are told that there is a recognised system by which journalists are supplied with such news as may be available from the Foreign Office. Do you know that at all?—No, we have no system.

41,066. I know what there is abroad, but the point is, there is nothing of the kind in England?—No.

41,067. But on the other hand, there is no hard and fast rule preventing an unsystematic communication of news, which can be given in accordance with the public interest in the Foreign Office to journalists?—No, none; there is no rule against it. On the contrary, any representative who comes from any paper of standing and asks for information is given it, provided that it is in the public interest.

41,068. But the point is that he does not get it as a matter of right; he gets it as a matter of courtesy?—The only people who are entitled to information really are Members of Parliament.

41,069. So that it follows inevitably that if a journalist is on the whole a *persona grata* he will get it, and if he is a *persona ingrata* he will not?—No, any respectable journalist representing any respectable paper will get information. There is an absolute equality of treatment; there is no selection.

41,070. Then, if it were held in the world of journalism that application for such information implied that it would be treated from a point of view sympathetic to the Foreign Office, it would be completely unfounded?—Completely. I do not quite catch the drift of the question.

41,071. Is it the fact that a journalist who wishes to get information, and will, in fact, use that information to criticise the existing policy of the Foreign Office, will get it equally freely with a journalist who wishes to support the existing policy of the Foreign Office?—Certainly; we make no difference.

41,072. Is there any machinery by which you could convince yourself absolutely that such a difference is never made in the office?—I am the person who supplies the information.

11 June 1914.]

Sir WILLIAM TYBRELL, K.C.M.G., C.B.

[Continued.]

- 41,073. Everybody comes to you for it?—Yes.
- 41,074. There is no other official in the Foreign Office who can give such information?—There is no other official who has authority to do it.
- 41,075. (Chairman.) We have been told that attachés may gain some addition to their income by a language allowance, by passing in languages when they join their post?—Yes.
- 41,076. And in the same way a law allowance?—Yes.
- 41,077. Would you think that these allowances might reasonably be taken as against the 300*l.* if we should recommend that?—No, I think they should be in addition, because they are rewards.
- 41,078. Is it the case in the Diplomatic Service that leave, that is annual or privileged leave, does not count for pension, and that those are sometimes worked to the disadvantage of secretaries. Does ordinary leave entitle to count for pension?—No, not for the purposes of the Diplomatic Pensions Act.
- 41,079. But in the ordinary Civil Service it does count?—Yes.
- 41,080. Do you not think it ought to count in the Diplomatic Service?—Yes, I do.
- 41,081. Leave is given really in order that the officer may be in good health to do his work, and he requires some relaxation?—I think so. I think the whole provision of the Act practically penalising men for going on leave is indefensible.
- 41,082. Then is it the case that when a Minister goes on leave and a *chargé d'affaires* takes his place, the allowances to the *chargé d'affaires* are subtracted from the pay of the Minister who goes on leave?—Yes.
- 41,083. During the whole period of leave?—Yes.
- 41,084. Do you think that is defensible?—That is why I said you penalise him.
- 41,085. In your opinion, then, it would be a desirable thing to reconsider the whole of these leave allowances?—Yes.
- 41,086. I have only one more question to ask you. In this list of Consuls-General, I find the pay varies from 1,200*l.* to 900*l.* Each particular grade of pay is attached to a particular place?—Yes.
- 41,087. So that a man cannot be a Consul-General without being stationed at one of these four cities, Antwerp, Hamburg, New York or San Francisco?—Yes, but we give the rank of Consul-General to others.
- 41,088. Take Marseilles, for instance, which is a very important place; there is a Consul-General?—Yes.
- 41,089. But may the Consul-General at Marseilles, be permitted to draw 1,200*l.* a year as salary?—We can transfer him to Hamburg to-morrow.
- 41,090. May he not draw it while remaining at Marseilles?—No.
- 41,091. Do you not think that may cause inconvenience?—I should not like to express a definite opinion, because I am not sufficiently familiar with the report of the Committee that fixed these salaries, and I should prefer that you would examine someone else.
- 41,092. I wished to point out that in attaching the pay to the place, you may cause either hardship and injustice to the official, or inconvenience to the State?—Yes, it is in that sense.
- 41,093. It might be inconvenient at a particular crisis to transfer your Consul-General from Marseilles to San Francisco, while at the same time it would be hard on him to deny him promotion to the 1,200*l.*?—Certainly.
- 41,094. Would you say that the Government should retain the power to give him the 1,200*l.* while retaining him at Marseilles?—I would rather not express an opinion; I am not sufficiently familiar with the circumstances, and it would not be right for me to do so.
- 41,095. We are much obliged to you, Sir William, for the valuable information you have given us?—Thank you very much.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

CIVIL SERVICE.

At the Royal Commissions House, Old Palace Yard, S.W.

ONE HUNDRED AND SECOND DAY.

Friday, 12th June 1914.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman.*)

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.  
Sir DONALD MACALISTER, K.C.B.  
Mr. ARTHUR BOUTWOOD.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.  
Mr. PERCY EWING MATHESON.  
Mr. GRAHAM WALLAS.  
Miss HALDANE.  
Mrs. DEANE STREATFIELD.  
Mr. N. E. BEHRENS (*Secretary.*)

Mr. SIDNEY BARTON, C.M.G., called and examined.

41,096. (*Chairman.*) You belong to the Consular Service in the Far East?—Yes.

41,097. When did you pass your examination?—In 1895.

41,098. Is the syllabus which is now prescribed that which regulated the examination when you passed?—No.

41,099. Do you remember the subjects which you took for your examination?—Yes, approximately.

41,100. What groups of subjects did you take?—There was an obligatory group consisting of composition, précis writing, arithmetic, and, I think, geography. Then there was French, German, Latin, Euclid, and mercantile and commercial law.

41,101. Any political economy?—No.

41,102. (*Mr. Boutwood.*) Any history?—No history.

41,103. (*Chairman.*) These last subjects you have mentioned were optional subjects?—Yes, optional.

41,104. After passing the examination did you remain for any time in England prosecuting further studies?—No, we go straight to Peking in the case of the China Service; to Tokio, in the case of the Japanese Service; or to Bangkok in the case of the Siamese Service.

41,105. Is that the practice still?—Yes. We spend two years learning the language in one of those places.

41,106. But immediately on passing your examination you go out to the East, and spend no time, as the selected candidates for the Indian Service do, at Oxford or Cambridge?—No.

41,107. What salary do you begin upon?—It has recently been raised to 250*l.* It was 200*l.*

41,108. You continue at 250*l.* as long as you are a student?—Yes.

41,109. How long does the student period last?—Two years.

41,110. You are expected to be competent in the language in two years?—Yes.

41,111. Then what grade do you pass into?—You become an acting-assistant, which is the term used.

From that you become a second assistant, then a first assistant, and then vice-consul, consul, and Consul-General.

41,112. What pay do you get when you are appointed an acting-assistant?—300*l.*

41,113. It is assistant something—probably “consul” is understood?—There is no word for it.

41,114. How long do you remain an acting-assistant?—On an average, two to three years.

41,115. Does the promotion depend on seniority?—Yes, on seniority. There is a fixed number of first assistants, and a fixed number of second assistants.

41,116. And you only get promotion when a vacancy occurs in a higher grade?—Yes.

41,117. After how many years, on an average, do you reach the position of vice-consul?—At the present time an average of from 12 to 14 years.

41,118. What is the pay of a vice-consul?—600*l.*—with, in all the posts except, I think, one, a local allowance of 100*l.*

41,119. So that you take on an average 12 years to get through the assistant stages into the stage of vice-consul?—Yes; but there are certain allowances which are drawn by the two classes of assistants, called “Interpretorial” allowances, for which a further examination has to be passed in Chinese—a fixed number of first-class allowances of 100*l.* a year, and a fixed number of second-class allowances of 50*l.* a year, and an examination has to be passed to qualify for each class of allowance.

41,120. Do you continue to draw the allowance for the whole of your service?—No, only as long as you are an assistant, until you reach commissioned rank as a vice-consul; then it is for fixed periods, because there are a fixed number of allowances, and sometimes you draw an allowance while a man senior to you, who is entitled to an allowance, is home on leave, or is acting in another post in which he is not allowed to draw his allowance; so that you do not necessarily draw it continuously after you become entitled to it.

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

41,121. The pay you draw during the 12 years, which varies, as I understand, from 300*l.* to 600*l.* a year, is increased by these language allowances?—Yes.

41,122. Some of which allowances are 50*l.* and others 100*l.* a year?—Yes.

41,123. How long does the stage of vice-consul last?—On an average from two to four years.

41,124. Is there any increment to the pay during the two or four years?—It remains at 600*l.*, with the exception that five out of the six posts have a local allowance of 100*l.* attached to them. One post has no allowance, but a fixed salary of 600*l.* a year.

41,125. How many posts of vice-consuls are there?—Six in China.

41,126. Then is the consular list different for Japan, and different for Siam?—Entirely different. We never leave China once we are appointed there.

41,127. Then there is no interchangeability between the Japanese and Chinese Services?—None whatever. It has occurred in one or two instances that students have been transferred from one Service to another, but very rarely. Occasionally from Siam a man has been transferred to our Service. I think there have been, perhaps, two instances.

41,128. Then you get into the grade of consul from the grade of vice-consul?—Yes.

41,129. What is the pay of a consul?—800*l.*

41,130. How many grades of consuls are there?—Only one grade.

41,131. What is the next higher grade above that of consul?—Consul-General.

41,132. What pay does the Consul-General get?—He gets in three posts 900*l.*, and a local allowance of 100*l.* a year. In another three posts he gets a salary of 1,000*l.* and a local allowance of 200*l.*, and in one post he gets a salary of 1,200*l.* and a local allowance of 600*l.*

41,133. (*Mr. Boutwood.*) You have as many consuls-general as you have vice-consuls—six vice-consuls and seven consuls-general?—There are seven consuls-general and I think six vice-consuls.

41,134. (*Chairman.*) How many consuls are there?—I could not say definitely, but I think somewhere in the neighbourhood of 20.

41,135. Then the position is this: When you pass your examination you are sent out at once to China, and on arrival there you commence to draw pay at the rate of 250*l.* a year. You continue on that pay for two years, when you emerge from the grade of student-interpreter, and get into the class of assistant. In the class of assistants there are three grades, in the lowest of which you draw 300*l.* a year?—300*l.* as acting-assistant; 350*l.* as second assistant, and 400*l.* as first assistant.

41,136. When you pass beyond the grade of first assistant you become a vice-consul and draw 600*l.* a year?—Yes.

41,137. Passing from the grade of vice-consul to the grade of consul you draw 800*l.* a year?—Yes.

41,138. And above that there is the grade of Consul-General, for which certain pay is attached to certain posts?—Yes.

41,139. That is to say, there are three posts in which the pay is 900*l.* with a local allowance of 100*l.*, three posts in which the pay is 1,000*l.* with a local allowance of 200*l.*, and one post in which the pay is 1,200*l.* with a local allowance of 600*l.*?—Yes.

41,140. Between the Chinese Service and the Japanese or Siamese Services there is no interchangeability whatever?—No.

41,141. It has sometimes occurred that a man in the Siamese Service, which is probably of later origin than the other two, has been transferred to your Service; but that is exceptional?—Yes, and only in the junior ranks—either students or assistants.

41,142. Do you know sufficient about the Japanese Service to say if the gradation is somewhat similar to yours?—Yes, I understand it is, except that they have now two outside posts which we have not. The consular posts at Manila and at Honolulu are, I understand, filled from what we call the Japanese Service. Similarly, from the Siamese Service the posts at Batavia and Saigon are filled. At present we have not any outside

posts with the exception of Wei-hai-wai, where we have a man lent for duty under the Colonial Office.

41,143. What leave do you get?—For the first 15 years we get home leave after every five years.

41,144. And the period of leave at home?—It is one year in five years.

41,145. Does your leave count from the date you depart from China?—It counts from the date when you arrive in England.

41,146. When does your leave terminate—on the date you leave England or the date you arrive in China?—On the date you leave England. It is so many months clear in England.

41,147. Are you allowed pay during the time you are travelling home?—The regulations have just recently been altered. For the first 15 years you get one year's leave after five years. After you have completed 15 years' service you get your leave every three years of two months a year—that is, six months after three years' service, eight months after four years' service, and ten months after five years' service. The first four months of that leave is now spent on full pay; during the remainder of the leave you draw what is known as "Leave pay"; there is a reduction of a certain percentage of your salary; of course your allowances stop altogether.

41,148. In the first 15 years you get a year's leave after every five years?—Yes.

41,149. And your year's leave begins at the time you land in England?—I ought to say that that is a new rule. I have never taken leave under that rule, and I should perhaps speak subject to reference to actual leave regulations with regard to it. I have only experience of the leave after 15 years' service.

41,150. What pay do you get while on leave?—There is no reduction of salary under 400*l.* a year, but you drop your allowance.

41,151. If that be the minimum allowance, you may perhaps be entitled to a larger allowance?—It would depend upon the position you had reached in the Service when your time came to take your leave.

41,152. Say you did not take your leave for 12 years you would then probably be a vice-consul. Supposing you took leave when you were a vice-consul and your pay was 600*l.*, what leave allowance would you get?—You would draw, I think, 420*l.* on leave—a reduction of, I think, three-tenths from the pay of the post.

41,153. Was the change in the rules due to any representation coming from your Service?—I understand that the representation came originally from the general Service, and our Service was dealt with at the same time. Certain proposals were sent out, I know, to the Minister in Peking for his observations, and he made certain recommendations, some of which were eventually adopted and some were not. As a result the new rules came into force.

41,154. Is your Service contented with the new rules?—There was a good deal of difference of opinion about them at the time, but I think I may say that what we feel bears hardly upon us is the cost of availing ourselves of the new rules. Even the three year period for leave-taking is of recent introduction. Originally it was five years for everybody throughout the Service; you could only have leave every five years. Then it was changed to leave every three years when you had completed 20 years' service, so that the leave was rendered more frequent, but it was not until the new rules were applied about 18 months or two years ago that it was made easier for the members of the Service to avail themselves of the more frequent leave by the increasing of the pay which was drawn while on leave because of the great cost of getting to and from one's post.

41,155. On the experience of the one and a half years that have elapsed since the relaxation was introduced, does the Service consider the rules fairly equitable? Are you fairly contented with the rules as they stand now?—I know there are many members of the Service who find it difficult to avail themselves of leave when it is due to them—particularly married men with families.

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

41,156. (*Mr. Boutwood.*) Do you mean that that is because of the reduction in the salary while on leave?—We receive an allowance towards travelling expenses of half of the consular officer's cost of passage and one-third of the cost of the passages of his wife and family. That is paid by the Government; but in the recommendations which were put forward on behalf of the China Service it was asked that that allowance should be increased. It was not, however, found possible to do that, but we received an increase in the pay, or rather the reduction in the pay was done away with for a period of four months, so that we draw full pay for four months—which was a great benefit.

41,157. (*Sir Kenneth Muir-Mackenzie.*) Was that in order to make it equal between married and unmarried men?—No. The object of it was to make it easier for all members of the Service to take advantage of the leave, which is now more frequently given than before.

41,158. (*Mr. Matheson.*) It is really the difficulty of the travelling expenses?—That is the principal difficulty which is felt.

41,159. (*Sir Kenneth Muir-Mackenzie.*) Was it that they did not want to give more travelling expenses to a man who was married than to a man who was not married?—No, I do not think that was the point, but simply that no increase in the allowance was found possible. The allowance remained at its original figure.

41,160. (*Chairman.*) I have here an abstract of the leave regulations which says that: "Regulation leave" is exclusive of the time occupied on journeys to and "from England"?—Yes.

41,161. Does the time which the journeys take count as service towards pension?—Yes.

41,162. So that if you take leave the time you take in coming from China to England, and going from England to China, counts as service for pension?—Yes.

41,163. What pay do you draw during that time? Do you draw full pay during the journey both ways?—We get full pay during the journey homewards and for the first four months of the leave in England.

41,164. Then when your salary exceeds 400*l.* a year a deduction is made for the whole of the remainder of the leave, whatever it may be?—Yes.

41,165. But so that the reduction shall not bring the leave allowance below 400*l.* You are always entitled to draw 400*l.*—that is a minimum?—Yes, that is a minimum, assuming that you have reached a grade which entitles you to that salary. I do not think in your first leave you would get 400*l.* a year, because after five years' service you would probably be a second assistant drawing 350*l.*

41,166. But I understood you to say that an officer gets 400*l.* in any case during leave in England?—Only as first assistant. Provided your salary does not exceed 400*l.* you get your full salary; but in the first leave it would not reach 400*l.* in all probability.

41,167. Will you please repeat the point upon which you say the new rules pinch at present?—The cost of taking your leave—in fact, the cost of travelling to and from your post.

41,168. Can the cost of travelling home from China be fairly demanded, seeing that you draw your full salary during the journey?—That is so.

41,169. But you have to pay your way back?—Yes.

41,170. (*Miss Haldane.*) In the case of sickness leave, is your pay the same?—In the event of a medical certificate, and if the doctor certifies that it is necessary for you to return home on account of sickness, you could receive the same allowance toward the cost of your passage as if you were going on regulation leave.

41,171. (*Chairman.*) The only point on which you say the rules pinch is that the expense of travelling is so great that many people cannot take the leave to which they are entitled?—That is so.

41,172. What are your duties as acting-assistant?—You are attached either to the staff of the Legation in Peking, or to one of the consulates. The usual thing is to be attached to one of the consulates; the exception is to the legation. In a consulate you are supposed to learn the whole work of a consulate. The actual work you do is assigned to you by the consul or Consul-General under whom you are serving. It includes the care of all correspondence, indexing, attend-

ing to the more routine functions, such as registration, the writing of certain letters and despatches, and translation work; and attendance at interviews with the Chinese authorities.

41,173. What is the exact nature of the work? Is it commercial or is it in any way judicial or administrative?—It is in some cases all of those, but the only administrative work would be in the post at Wei-hai-wai which is not, strictly speaking, a consular post. The judicial portion of the work would be acting as clerk of the court or registrar in cases which come before the consul for trial.

41,174. Ordinary cases of recovery of debt, and so forth?—Yes, and criminal cases. You are stationed at what is called a treaty port, where there is a British community of varying size, and the consul has to see *vis-à-vis* the Chinese authorities that that community is allowed to trade and enjoy the full exercise of its treaty rights in that respect, which means continual representations to the local Chinese authorities to see that those treaty rights are observed. Then, with regard to the British community itself, any disputes which arise between members of that community are liable to be referred to you for settlement, and you have a jurisdiction which extends to imprisonment for one year in criminal matters, and to civil suits where the amount does not exceed, I think, 100*l.*

41,175. The jurisdiction is not territorial but personal. Can you say that you exercise magisterial functions over a particular area? Would it not be more correct to say that you exercise judicial functions in respect of particular people who are British subjects?—But the jurisdiction is limited by districts. Each consul holds a district court under the Supreme Court of Shanghai.

41,176. If a British subject has a dispute with a Chinaman, is the Chinaman subject to your jurisdiction?—No. Then that becomes a mixed case, which under treaty goes before a court which consists of a Chinese official—the official of the defendant's nationality—and the British consular officer sits as assessor; he is there to see that justice is done to the plaintiff, who is of British nationality.

41,177. But when the dispute is between two British subjects you have complete jurisdiction?—Yes, subject to the power of the Supreme Court in Shanghai.

41,178. Is that generally the sort of work that a vice-consul does?—A vice-consul is capable of holding a court in certain posts where there is only a vice-consul and there is no consul. But in other posts there is a Consul-General and a vice-consul and it may happen that the vice-consul does most of the judicial work. We are afforded certain opportunities for studying law and being called to the Bar, and it may so happen that the vice-consul is a man who is a barrister and the Consul-General may not be. In that case the judicial work would be done by the vice-consul. That is in a port where a vice-consul and a Consul-General are together. In ports where there is only a vice-consul, of course, he is a judge in the same way as a consul or Consul-General would be.

41,179. Does the vice-consul exercise control and supervision over the assistants?—Yes.

41,180. In like manner would the consul exercise control and supervision over the vice-consuls?—In his own port, yes.

41,181. Besides that judicial work which you have explained to us, I suppose you also have to deal with British seamen?—Yes.

41,182. And such business as the ordinary consul in Europe performs?—Yes.

41,183. Do you report regularly upon the condition of the port where you are stationed and on the commercial operations of that port?—Yes.

41,184. You send out annual reports?—Yes.

41,185. Do you, in addition to that, exercise any diplomatic functions?—Yes. A very great portion of the work is what might, perhaps, be called diplomatic, in so far as you are responsible for seeing that the local Chinese authorities, with whom you deal direct, carry out their treaty obligations. Any dispute or complaint that arises under that head is dealt with always by the man on the spot first, and he is not expected to refer

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

the case to Peking until he has exhausted every means of getting satisfaction locally. It is only when he fails to get satisfaction from the local Chinese authorities that the matter is referred to Peking, and then it is dealt with by the Minister with the Chinese central government.

41,186. Do these diplomatic negotiations take up a good deal of your time?—They take up the greater portion of the time.

41,187. As much of your time as your commercial functions take up?—It is very often difficult to draw the line between them. In nearly all cases what may be called the diplomatic work is of a commercial nature; that is to say, the reasons for your diplomatic representations are that a particular merchant is not being allowed that freedom of trade which he ought to be allowed under treaty, and nearly always the subject of your representations is commercial.

41,188. Your Service has supplied more than one Minister to Peking?—I think we have supplied five or six.

41,189. Do you consider that the Legation at Peking belongs to your Service and that you may reasonably look for promotion to that post?—No.

41,190. I suppose you have heard of proposals to amalgamate the Consular Service and the Diplomatic Service. Would it not be difficult to do anything like that in connection with your Service?—As far as I know, our Service is one in which probably the two Services are brought more closely into contact than in any other, except the case of the Near East Service. I myself, at the present moment, hold a post which is of a diplomatic nature. I am, for the time being, employed as Chinese Secretary to the Legation, a post which ever since the foundation of the legation has been filled by a man from the Consular Service; that is to say, he is the interpreter to the Minister. In addition to the post which I myself hold there are always, perhaps, half a dozen other consular men employed in different posts in the legation. There is an assistant Chinese Secretary and a junior in the Chinese secretariat, so there are three consular men in that department. There are usually two or three assistants employed in the chancery in the general work of the legation. There is a vice-consul attached to the legation who also is in charge of the accounts; and there is the commercial attaché who is drawn from the ranks of the Consular Service.

41,191. Are there many members of the Diplomatic Service in the legation?—There is the Minister and the counsellor, and two secretaries,

41,192. But in connection with any proposed amalgamation might it not be suggested that your previous experience in China would not fit you for a diplomatic post in, say, Western Europe?—That is quite so. We are specialists entirely in China; we never leave it.

41,193. Am I to understand that you favour the amalgamation of the Consular Service with the Diplomatic Service in China?—I would not say I was favourable to that. I merely state, as a matter of fact, that in China the work of the two Services dovetails more than, as far as I know, it does in other countries. Therefore it is a delicate question, perhaps a little more delicate for a man in the China Consular Service to express an opinion upon than it would be for a man in a service which is not brought into such close contact with the Diplomatic Service as we are in China. I would not say that I was in favour of an amalgamation of the Consular Service and the Diplomatic Service in China, because our specialised experience in China certainly would be wasted in any other country.

41,194. In that case an amalgamation between the Chinese Consular Service and the general Diplomatic Service would not be advantageous to the public interest?—No, it would not be advantageous.

41,195. Would you say the same would be true of the Japanese and the Siamese Services?—I am not in a position to say. I can only say this, that the conditions that originally existed in Japan and Siam, which conditions were analogous to those which still exist in China, have ceased to exist to a large extent. The jurisdiction over British subjects has been surrendered in Japan, which renders the functions of the

consul different from what they were originally, and I understand to a certain extent the same is true in Siam, and that the functions of the consul there are no longer exactly what they were before that jurisdiction was surrendered.

41,196. And they became more purely commercial functions?—I imagine that must have been one result.

41,197. (*Mr. Graham Wallas.*) Have you found in your Service that the arrangements for providing the buildings for consular offices are on the whole satisfactory?—Yes. In China all the buildings are provided by the Government throughout the country.

41,198. Is the furniture in those buildings provided by the Government?—Only for the offices, for the reception rooms of the legation itself, and for the students' quarters.

41,199. The heavier mass of the furniture is provided?—Only office furniture. In the consul's quarters in the ports and legations no furniture is provided at all—merely the houses.

41,200. Do you normally take over your predecessor's furniture then?—That does happen, but it is by no means a fixed practice. That is a point which has often been represented. A desire has often been expressed that the heavier furniture for consuls' residences should be provided, because in some of the more remote posts it is a matter of considerable difficulty to get any furniture, and if there are frequent changes in the tenure of the post it means a great deal of unnecessary removal of heavy baggage.

41,201. You can see no reason why that arrangement should not be entered into?—I understand that the reason given is one of expense—that the initial expenditure of supplying heavy furniture for a large number of consular residences would be prohibitive.

41,202. It has been represented to us that to provide furniture for consular officers abroad would be very difficult, because one man may be a bachelor and another may be married; and the same applies to providing residences. Do you find that that difficulty is great in China?—As regards the provision of residences the question does not arise there, because the residences are provided on a fixed scale at every post.

41,203. On the assumption that the man is married?—Yes. A man of a certain grade is entitled to a certain number of rooms. Whether he is married or not does not affect the question, but sufficient rooms are provided for his accommodation if he happens to be married.

41,204. And you have full provision of office stationery and so on. A man who comes into a consulate finds everything he wants in that respect?—The stationery is supplied from England from the Stationery Office by indent.

41,205. And the provision in that respect is satisfactory?—Yes.

41,206. You have told us about your work in the consular courts and of your work in seeing that our various treaties with China are faithfully carried out and that merchants have their rights. Do you have other trade work where you are communicated with from England and you are requested to use your influence to secure an opening, for instance, for certain goods sent out from England?—There is a considerable volume of correspondence with merchants in England, both those who are represented locally and those who are not.

41,207. Do you find that those merchants sometimes form a conception of your office as being that of a sort of general unpaid commercial traveller, which seems to you to be inconsistent with the actual position you must occupy in China?—I think perhaps some of the letters received give one the idea that the writer does not understand the local conditions or how far it is possible to comply with his request. If we get a letter from a firm in England asking to be put in touch with the likely buyers of any particular article, of course it is a matter of physical impossibility to put them in touch direct with any Chinese buyer, because there is the language difficulty and also there is not a very great deal of direct business done between the Chinese purchaser in China and the English seller at

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

home. What we do is (in accordance with the instructions as to furnishing the information through the intelligence division of the Board of Trade and that sort of thing) to send a list of the English commission agents or firms doing business in our district, who would be likely to know of Chinese purchasers for those articles.

41,208. But you do not come as a sort of missionary of British trade directly in contact with native Chinese?—If one were calling officially on a Chinese official one could not in the course of conversation recommend him to buy a particular class of British goods or that sort of thing. I do not think that would be consistent with our duties.

41,209. A man who is a judge and to a considerable extent a diplomatist in a very difficult position cannot also be directly a commercial traveller?—No, not a commercial traveller: but he can do his best to bring parties together and supply information with regard to the matter.

41,210. When a young man is chosen for the Chinese Consular Service he becomes a student-interpreter and he goes out to China and for two years his life is that of a student?—Yes.

41,211. During those two years his main business is to acquire the language?—Yes.

41,212. What arrangements are normally made? Is there a certain body of learned men who make it their habit to teach young Englishmen?—The supervision of the students' studies is under the Chinese secretary—at present under myself. A student arrives in Peking and he is supplied with the services of a Chinese teacher. We call him a "teacher," but he is a Chinese who knows no English, who attends so many hours a day in the student's quarters, and teaches him the language. It is a little difficult to explain perhaps, because the language is so utterly unlike any other language that most people have any acquaintance with. There are practically no teachers in the proper sense of the word. There are very few, if any, Chinese who are capable of teaching you Chinese in the way that a French or German teacher would be able to teach those languages.

41,213. Or an Indian baboo?—Yes, I doubt if there is anything of that sort. Anyway, eventually he does learn as the result of two years' study.

41,214. There is in China a general literary language?—Yes.

41,215. And certain local dialects?—Yes.

41,216. Is the Chinese that is taught the general literary Chinese?—Yes; we never learn any dialects. The theory in China is that every official speaks what is known as official Chinese—the dialect of the mandarin—and we only teach that to our students.

41,217. Does the ordinary student acquire the power of speaking freely the mandarin dialect?—Yes; not necessarily at the end of two years, but he has acquired a good grounding which is sufficient for him afterwards to build up a good knowledge of the language on if he sticks to it.

41,218. There is in Peking the building of a university intended to be somewhat of the modern type?—Yes.

41,219. Have you, as being responsible for the training of students, ever considered whether some use might be made of that university for the training of students?—I do not think at the present time it is in a sufficiently advanced stage for us to consider it. As a matter of fact it has had a very chequered career. The history of higher educational institutions in China has not been a very happy one hitherto, for a variety of reasons.

41,220. But it might happen that if it did develop you might get into touch with it?—It might happen that facilities would be afforded for teaching Chinese in a way better than it is taught at present. I would not be prepared to say more than that.

41,221. Would it be an advantage if such development took place that the young student-interpreter instead of entirely confining himself to the language should learn something of the history of China?—He does. I will explain the course. In his first year he learns only colloquially. There is a great difference in

China between the spoken language and the written language. During his first year the student's learning is colloquial and he is examined at the end of that first year. In his second year, in addition to his continuing his colloquial studies, he learns the written language in which all official communications between the consular officers, the legation, and the Chinese authorities pass. He also learns in his second year the history, geography, and contents of the treaties relating to China.

41,222. Who teaches him the history and geography of China?—At the present time there are no classes in those subjects. He is recommended to read certain books and he has a library, and at the end of his second year he is examined in those subjects. I think improvement might be made there, not so much in classes on history and geography, but in the duties of a consul afterwards. There are certain subjects—what you may call the stock-in-trade of an efficient consular officer—which can only be learnt by experience. There are certain directions in which it is more difficult than in others to secure that treaty rights are enjoyed. It is comparable almost to case law in England. There are certain recognised principles which cannot be found in any book, but which do exist in the history of the cases which have been fought with the Chinese authorities for years past. I think a student would be more fitted for his work afterwards as a consular officer if he were instructed in that sort of work during his studentship. At present he is not. In rotation, he attends the Chancery—that is the general office of the legation—in the afternoon for a week at a time. They take it in turns to do that so that he acquires a certain acquaintance with the usual forms of correspondence, telegrams, and that sort of thing, which is a good training of course; but at the present time there are no lectures or classes provided for him on consular work, and that might with advantage be done.

41,223. That is to say, instead of his period of study being purely linguistic, you think it might be wider and more general?—Yes, I think it might be wider.

41,224. Part of that study would be law; he has to act in many cases as judge later on in life?—Yes.

41,225. You say he ought to learn case law?—I was using the term "case law" not in the legal sense but in reference to the duty of securing the enjoyment of treaty rights, which is the principal part of a consular officer's work, and which depends on a knowledge of cases in which those rights have been enforced in the past; that is to say, there are certain stock questions which are always arising at the treaty ports. China is a land in which precedent counts for a great deal, and if you can quote to a Chinese official a case in which your point has been upheld or admitted by one of his predecessors, that case goes a long way towards inducing him to admit your contention; but you have to learn those cases by your own actual experience or else be taught them by people who have had that experience. That is what I mean by it.

41,226. He also has to be a magistrate; he can sentence his own fellow-subjects to imprisonment?—Yes.

41,227. And he has to act as a commercial judge?—Yes.

41,228. He has to deal with questions of evidence and procedure in different branches of law?—Yes.

41,229. Would it be desirable that he should be given systematic means of learning some of those duties?—He is given the means under the existing system. He can take branches of the law for his entrance examination, and then again, when his first leave of absence is due after five years, he can, if recommended by the Minister, get an additional year's leave, so that he gets two years' leave on full pay on condition that he attends one of the Inns of Court and goes through the course of study prescribed for a barrister.

41,230. You went through a course of study at the Middle Temple and were called to the Bar in 1910?—Yes.

41,231. Did you find that the arrangement of the Middle Temple for teaching you were as convenient as possible to fit into your general arrangements?—At the

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

time that I did the law course, in addition to passing your four Bar examinations you had four six-monthly examinations under the Civil Service Commissioners which to a certain extent overlapped some of the Bar examinations. The only special subject was treaties with China. That has now been altered, and you have only one examination in addition to your Bar examinations. The facility which in my opinion is the most valuable, is that every six months you are given a list by the Civil Service Commissioners of the courts which you have to attend. You have to go and see the working of the law in practice. You have to attend these courts and take notes of the proceedings in those courts, verify all the references to quoted cases in the library of your Inn, and send those notes to the Civil Service Commissioners.

41,232. The Civil Service Commission in effect superintend your legal education?—Yes.

41,233. Is the man who does that himself a lawyer?—I am not in a position to say that, but I assume he is.

41,234. Do you think it would be convenient if a man who was himself a lawyer familiar with some of the problems in the East were general adviser in regard to legal training of young Chinese consuls when they are over here?—I am not of opinion that it would be of very great advantage, because I think what one wants more than anything else is to see the law being administered, and to study that. The present system makes you do that. Naturally one cannot learn to be very much of a lawyer in the course of two years, but one can learn where to look for one's law, and by attendance at the courts one can get an idea of how the law is administered; so that when you are called upon in China to act as a judge the whole thing is not entirely strange to you; you know where to look for your law, and you know roughly how that law should be administered on the principles on which we administer it in England.

41,235. Do you get any special instruction with regard to the principles of trade?—No.

41,236. You get no special instruction as to the course or the principles of the world's trade?—No.

41,237. Do you think it might be an advantage if a young consul instead of merely picking it up by rule of thumb were given opportunities for rather special study in that respect?—Yes. Do I understand you to mean attendance at a school of economics, or something of that sort.

41,238. I do not refer specially to any particular place, but there is a great body of knowledge of the principles of the world's finance and the course of the world's trade which cannot be picked up by a man in China by a rule of thumb?—No.

41,239. But which might nevertheless be extremely valuable to him if he came to a high post in the Consular Service?—Yes.

41,240. You think it possible that just as we give them access to the law so we might give them access to the accumulated knowledge of the principles in regard to trade?—Yes, if given on the same lines as the knowledge of law is offered; that is, if facilities were offered to members of the Service to acquire a knowledge of trade and finance I think it would be advantageous.

41,241. (*Mrs. Deane Streatfeild.*) Returning to the question of leave, would you consider it advantageous for a man who had reached the grade of vice-consul or consul to be able to make full use of the opportunities of getting to England when he got a chance?—I regard it as essential that he should.

41,242. Do you know what proportion of the men of that grade, or above the grade of assistant, are married, in the Consular Service in China?—A very large proportion.

41,243. Then, on the whole, does it seem desirable that Englishmen in that sort of public position should be married men in China?—My personal opinion is that marriage should not be allowed until after a certain length of service has been attained.

41,244. But when they reach a certain stage it is an advantage that they should be married?—I would

not say that there are any particular conditions attaching to service in China which render it more advantageous for a man to be married there than elsewhere.

41,245. Nevertheless, you said just now it is difficult, or more difficult, on the whole, for a married man to take the full opportunity of leave than an unmarried man?—Yes; that is simply on the ground of the extra expense which falls on his shoulders.

41,246. Exactly. Then, would not it seem to you a pity that there should be anything which makes it difficult for a married man in that position to make full use of the chance of getting to England?—Yes, I do think that.

41,247. So that on the whole any increase in the facilities for coming home for men in the higher branches of the Consular Service in China would be a good thing?—Yes. I will go further and say that the conditions of life in China, particularly in the smaller ports—the more remote ports with small communities, where one is cut off largely from Western influence—are such that a frequent return to the home country is essential if a man wishes to retain his efficiency.

41,248. Or his health?—Yes.

41,249. Or the health of his family?—Yes.

41,250. Are the student-interpreters learning anything besides the language during the first two years of their residence in China?—Only to the extent I mentioned, that they are acquiring an acquaintance with the routine work that passes through the chancery, and some acquaintance with the history, geography, and government of China itself.

41,251. (*Sir Henry Primrose.*) With regard to houses, I suppose it is absolutely necessary that they should be provided because a Chinese house is not habitable by Europeans?—That is so. A European house is very essential to a man's health. In a few places where houses have not yet been provided—there are certain ports recently opened in the interior of China—it is a matter of very great difficulty to obtain a house which is suitable. At one or two of the ports the health of the members of the Service has suffered considerably on that account.

41,252. Is that equally true of Japan and Siam?—I am not in a position to say that. I do not know the countries well enough.

41,253. Are those three branches of the Eastern Consular Service distinct; that is to say, once a man is appointed to Japan is he always in Japan, and once he is appointed to Siam, is he always in Siam?—Yes, with the exception of the addition of two posts. The Japan Service now supplies the Consular posts at Manila and Honolulu, and the Siam Service at present supplies the posts at Batavia and at Saigon in French Cochinchina.

41,254. But the entrance to the three is common?—Yes.

41,255. But once you are in you are appointed to one or other of those three compartments, and they are water-tight compartments?—Yes, that is on account of the language.

41,256. (*Mr. Boutwood.*) Do you choose which branch of the Service you go to?—In the event of there being vacancies for two or more countries you have a choice which you will go to. If there are only vacancies in one country at a time you take that.

41,257. (*Sir Henry Primrose.*) Siam does not present the same opportunities; it is a very small Service?—Yes.

41,258. And yet a man might be compelled either to accept that or to resign the Service?—Yes; or I presume he could take his chance later on at a subsequent examination.

41,259. Has the written official language that you spoke of in China changed much?—Yes, it is undergoing a very great change at the present time. It is being very largely influenced by Japanese.

41,260. For instance, if you were able to read a modern edict of the Empress Dowager, could you also read an edict of the Ming dynasty, or whatever it was?—Yes.

41,261. (*Sir Kenneth Muir-Mackenzie.*) Do you consider it desirable that any man who is going to occupy

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

one of those judicial positions—because apparently one of the principal consulates is a very important judicial position—should occupy that if he is not a barrister and has not had a complete legal education?—I think he should at least be a man who has taken advantage of the facilities afforded to members of the Service for acquiring some knowledge of law.

41,262. But a man of ability can get on in that position although he has not done so?—Yes; but it is sometimes arranged as a matter of practice that in the big ports, in Tientsin, for instance, where there is a good deal of judicial work—of course in the smaller ports there is very little indeed—if the Consul-General himself has not taken what is called his law course, the vice-consul appointed is a man who has taken that course, or there is a man there who has acquired some knowledge of law. In Shanghai, as there is a Supreme Court, there is no judicial work for the consul.

41,263. I observe you, yourself, after considerable service, have taken the course of being called to the Bar?—As a matter of fact I passed my law course during my first year, but the rules are such that it is not possible to be called unless you have kept your 12 terms, except that if you take honours in your final you might be remitted one or two terms. Your leave does not permit your keeping 12 terms continuously. So that although I passed my final in 1904, but I was not able to be called to the Bar until my next leave came round, which was in 1910.

41,264. (*Mr. Matheson.*) Did you have any special preparation when you went in for the entrance examination? Did you come from a university or from school?—I went practically straight from my public school. After leaving school I went to a crammer's. I went to King's College, which, at that time, under the old syllabus, had a class which prepared the subjects of examination which were not those one learnt at school, such as law and précis writing. Now the examination is quite different, and I imagine that most of the men have been to the university.

41,265. I suppose you see something of the consuls of other nations in China?—Yes.

41,266. Do you know whether their recruitment is of much the same sort as ours?—It is different to this extent, that they all—the French, the Germans, and the Russians—teach their men Chinese in their own countries before they go to China.

41,267. Do you know how long they give to that?—I cannot say.

41,268. What do you think of the merits of the two systems?—I think our system is better. They can, of course, acquire a certain grounding in the written language in their own country, but that means that they come out older than our own men do, and I think the Chinese language is one which the younger you are when you begin to learn it the better, and that it is better learnt in its own country than abroad.

41,269. Do you think there is any respect in which their training suggests hints for us to adopt? Does anything particular strike you in which they have superiority over us in training?—No; I think I can honestly say not. We are a much older Service than any of theirs. Our Service has been in existence as a Service now for very many years—50 or 60 years—and no other country has a service with those traditions.

41,270. Were you in Tientsin during the siege?—Yes.

41,271. I suppose then you had to take military duty?—I was not doing consular work at the time. I was on the staff of the military at the time. I did not belong to the Tientsin consulate. I was then attached to Wei-hai-wei under the Colonial Office, as a matter of fact.

41,272. (*Miss Haldane.*) In those countries which have their men taught Chinese before they come out to China, are they taught by Chinamen?—I understand that all these Oriental colleges have native professors on their staffs. To what extent the teaching is done by native professors and not by a foreign scholar of the language I cannot say.

41,273. Is there no better way of learning the language than by means of a Chinaman who knows no English? It seems to me it must be extraordinarily

difficult?—I admit that that is a great difficulty, but our view has always been that the language is such a difficult one that there is less of a royal road to it than to any other.

41,274. Are there no Chinamen who speak English who could teach it better than Chinamen who can speak no English at all?—They are very difficult to obtain, and we think that it is, perhaps, better not to use them, at any rate in the earlier stages. There are very few Chinese who are capable of acting as teachers; that is to say, of explaining why a particular combination of characters should mean a particular thing.

41,275. Do you pick out Chinese who have that power of giving instruction, or do you simply have any Chinaman?—As far as we can we endeavour to get them. They are all men of a certain education—that is essential—because a Chinese who has not studied his own language to a considerable extent of course is not any use for that purpose; but I cannot say that they are teachers.

41,276. When a member of the Service is absent on sick leave who appoints his substitute?—That is done entirely by the Minister in Peking.

41,277. The consular officer has no responsibility himself of appointing his successor?—He has none whatever.

41,278. In that respect it is different from the general Consular Service?—I believe so. We are quite differently controlled in that way.

41,279. (*Sir Donald MacAlister.*) I gather that your answer with regard to the possible amalgamation of the Consular Service and the Diplomatic Service was not so much with regard to the conditions in China as with regard to the general question of the Consular Service and the Diplomatic Service in other parts of the world. There is really no difficulty, is there, in China in a somewhat free interchange between the Consular and the Diplomatic Service; it constantly takes place?—I cannot say there is an interchange, but I will put it in this way: With regard to the staff of the Legation in Peking, which is a diplomatic post, the Consular Service has always been drawn upon, to a certain extent, to fill certain posts in the Legation at Peking.

41,280. Practically all the consular officers when they first go out are sent to the legation?—But that is only for the purpose of tuition. They hardly form a portion of the staff of the legation. Some of them are kept on afterwards. There are always five or six men belonging to the Consular Service employed in the legation.

41,281. And they may be employed on legation work, and not merely learning?—Yes, I mean that—that is over and above the students.

41,282. So that the Consular Service in China is freely drawn upon for actual diplomatic service by the legation in China?—That is so for certain duties.

41,283. On the other hand, even for the higher duties, to an unusual extent the Consular Service has been drawn upon—even for the Ministers?—That is so.

41,284. So that the one Service and the other in China, at least, seem in fact to be co-related, in that the legation cannot get on without drawing on the Consular Service, which, moreover, has frequently been drawn upon for the higher officers?—That is so, principally on account of the language difficulty, and of the fact that the work has to be done by means of interpretation. The Minister in Peking has to have all his interviews interpreted for him. An ordinary Chinese official does not speak a foreign language. He may—many of them do—speak a foreign language to a certain extent; but more satisfactory results are obtained by speaking in their own language.

41,285. Therefore a staff of interpreters is a necessity for the legation?—Yes.

41,286. The student-interpreters are all nominally recruited for the Consular Service?—Yes.

41,287. Therefore the legation cannot get on without the only trained interpreters, and these are supplied to them through the Consular Service?—That is so.

41,288. Therefore there is a necessity that there should be a constant stream from the Consular Service into the Diplomatic Service in China?—Yes, for the interpretation service.

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

41,289. So that if there was one Far Eastern Service there would be no reason in the nature of things against, but a good many reasons for, close association of the two?—Yes, that close association exists to-day and always has existed.

41,290. But there is a nominal barrier between the two Services?—Yes, they are entirely distinct.

41,291. Then the barrier is more than nominal?—Yes, there is a very actual distinction between the two.

41,292. Do you see any reason for the permanent existence of that actual distinction in the Far East? Would not it be good for the Consular Service to be occasionally served by men who had had experience in the legation other than of interpreting work. Consuls-General, for example, have practically to act as British representatives for all purposes?—Yes.

41,293. Would it not be well if they had had at some time or other actually served in the legation as responsible officers?—They very often do.

41,294. But there is no regular scheme; the system is against it. The facts are too strong for the system, however?—There are always some six members of the Consular Service employed in the legation, but they are not permanently employed there. They go to the legation for a time, and then go as consul to another post, so that there is a constant interchange between the legation and the consular posts that always go on.

41,295. The nature of things makes that necessary?—That is so. The members of the Consular Service are, by reason of the conditions prevailing in China, capable of doing the work at the legation, but I do not think it would be possible to reverse that and say that a diplomatic secretary without a knowledge of the Chinese language would be capable of filling a post as Consul-General, say, in one of the provinces.

41,296. Yet there is no provision for recruiting junior officers for the Diplomatic Service on the lines of student-interpreters?—No. There are no men with a knowledge of the Chinese language available except through our own particular Service.

41,297. And there is no machinery for training them other than the consular machinery?—No; I think it is an admitted fact that to acquire an efficient knowledge of the Chinese language means continuous residence in China for a great number of years.

41,298. (*Mr. Boutwood.*) I suppose the question of amalgamating the Chinese Diplomatic Service and the Chinese Consular Service in practice would resolve itself merely into a question as to whether those assistants in the Peking Legation were taken from the Consular Service. Those seem to be the only diplomatic men you have in China?—There are three—a counsellor and two secretaries. The Minister at the present moment happens to be a man from the Consular Service.

41,299. You say there have been four or five cases of high promotion of that kind?—Yes.

41,300. So that transfer from the Consular to the Diplomatic Service is a possibility?—There have been a greater number of Ministers in Peking taken from the Consular Service than from the Diplomatic Service since the post was established.

41,301. Then it is a considerable possibility, and outside that you have as diplomatic officers merely two secretaries and a counsellor?—Yes.

41,302. So that as a matter of fact it is a small question when you come to deal with the actual units concerned?—Yes, but as I say, I am not in a position to say how far it would be possible to carry on the work of any legation without men from the Diplomatic Service.

41,303. (*Sir Donald MacAlister.*) But may not it happen that when a consular officer has served in a legation for some time, that he develops qualities which may make him properly aspire to rise in the Diplomatic Service?—No; he can never acquire a position in the Diplomatic Service itself. I, myself, am a case in point. I am a member of the Consular Service in China, but at the present moment I do not hold a consular post; I hold a post in the legation. I am Chinese Secretary to the Legation. I hold a commission as Chinese Secretary, but I do not hold any position in the Diplomatic Service.

41,304. But you might well have the ambition to attain such a position?—The fact that one attains that particular post does not carry with it any promise or any claim to a future position in the Diplomatic Service.

41,305. What I want to get at is, whether there is any reason, in the nature of things, why you should not look forward to promotion in the Service of which you are really an essential element?—There is no reason other than tradition and the existing division between the Services.

41,306. I want to know if there is any good reason for maintaining that division which prevents, except in the case of the highest diplomatic officers, a man who has served well in the legation in the capacity of consular officer hoping to rise in the Diplomatic Service?—I think it is doubtful how far the experience, say, in my own post in Peking would qualify one for diplomatic work in a European post.

41,307. I am speaking of the Far Eastern Diplomatic Service only?—Then there is no reason.

41,308. (*Chairman.*) You mean, I presume, there is no reason why the tenure of your present office should not be a qualification for higher promotion in the legation. Does the counsellor draw higher pay than you do now?—No, I draw higher pay than he does.

41,309. (*Sir Donald MacAlister.*) Because you have got to the highest consular post in the legation?—Yes.

41,310. (*Chairman.*) It is not a consular post; but you say you hold it because, being a consular officer you have acquired a peculiar qualification—the knowledge of the language?—That is so. The post of Chinese Secretary has always been so filled.

41,311. I agree, if there be promotion in the legation there is no reason why the claims of a consular officer to it should not be considered?—There is no better paid post in the legation.

41,312. (*Sir Donald MacAlister.*) Than the one you happen to have?—Yes.

41,313. But there are other consular officers serving in the legation not so well paid?—The commercial attaché gets the same salary, and the others are junior in the Service.

41,314. (*Mr. Graham Wallas.*) Is the commercial attaché a consular officer?—He is.

41,315. But it is a diplomatic post?—He is drawn from the Consular Service, and it is a diplomatic post for the time being.

41,316-7. (*Sir Donald MacAlister.*) I ask these questions because in the corresponding case in Constantinople we had it in evidence before us that consular officers are similarly drawn for the Diplomatic Service, and no doubt because of their knowledge of the language; they become first dragomans, and they can go no higher in the Diplomatic Service, because they are in the Consular Service, and as a result men of ability leave the Service.

(*Chairman.*) I think the evidence was, that there is no actual bar to their promotion, but in practice they do not get it. There is no actual bar to their being put into the Diplomatic Service?

(*Sir Donald MacAlister.*) Then I must have misread the evidence?—Our positions in China are the same.

(*Sir Donald MacAlister.*) They remain nominally in the Consular Service, and get to the highest interpreter post in the Service, and they can go no higher.

41,318. (*Chairman.*) They may. For instance, Sir William White went higher, just as Sir Ernest Satow has gone higher?—Yes, as Minister.

41,319. (*Sir Donald MacAlister.*) He was made Minister—the head of the legation—but he could not rise in the legation to that post. He was lifted over other's heads?—Yes.

41,320. (*Mr. Graham Wallas.*) He could not be counsellor. Has any counsellor been appointed from the Consular Service?—No.

41,321. No counsellor and no secretary of the embassy has ever been appointed from the Consular Service?—No.

41,322. (*Sir Donald MacAlister.*) Although owing in your particular case to the salary attaching to your

12 June 1914.]

MR. SIDNEY BARTON, C.M.G.

[Continued.]

high office, you have no special ambition in the Chinese Legation at Peking at the present moment; others, in a lower position, might well aspire, but are debarred from rising in the legation because they are in the Consular Service and not in the Diplomatic Service?—That is true, and it applies to my own case, too.

(*Chairman.*) We had an admission yesterday by Sir William Tyrrell that the objections to amalgamation between the Levantine Service and the Diplomatic Service were not at all so strong as the objection to amalgamation between the Diplomatic Service and the general Consular Service.

(*Sir Donald MacAlister.*) The facts are too strong for the tradition both in the Near East and the Far East, where the Services have constantly to overlap.

41,323. (*Mr. Boutwood.*) You spoke of having aspirations, but can there be aspirations when a consular officer on the whole has a higher scale of salary than the secretaries of legation? Would it be any advantage to make him a secretary of legation, who only starts with a salary of 150*l.* a year in the Diplomatic Service?—That is so. The Consular posts are very much higher paid than the lower ranks in the Diplomatic Service.

41,324. (*Sir Donald MacAlister.*) Is it not the case that men of ambition in the Consular Service who might, in the public interest, have been promoted from one Service to the other, have found themselves by the existence of this tradition debarred from aspiring to service on the diplomatic side?—As far as I know that does represent the fact, but there have been promotions into the post of Minister from the ranks of the Consular Service, but those promotions have always been, I understand, acts of grace in special cases.

41,325. (*Chairman.*) Not because they were men of the Consular Service?—And no consular officer can ever acquire a claim to promotion in the Diplomatic Service.

41,326. (*Sir Donald MacAlister.*) All these promotions to a higher position in the Far Eastern Diplomatic Service have been exceptional?—Yes.

41,327. (*Chairman.*) Seeing that promotions from the Consular Service have not been infrequent in the China Service, would it not be advantageous if some of those gentlemen who were so promoted had had experience of the Peking counsellorship before their promotion. Would he not have been a more effective Minister if he had had experience as counsellor in the legation?—I think *vis-à-vis* the Chinese it would be preferable, and make his position better for him that he should, if he is going to be promoted to Minister, be promoted from the position of counsellor and not Chinese Secretary.

41,328. (*Sir Donald MacAlister.*) I am right, I think, in putting it that in looking out someone for the career of Minister in Peking, in one out of every two or three appointments they have had to go to the Consular Service to find a man?—That is so.

41,329. With regard to studying Chinese, do you tell us that it is no real advantage to have made some literary study of the language before going out to China?—No, I am not prepared to say that, but I say it is a question of the time spent in making that study. You presumably would not be in a position to commence your study in England until you had finished your other studies necessary to enable you to pass the examination. You would then be 22 years of age presumably, and if you were to make any progress at all you would have to spend a year or two studying Chinese in England, and I think you could spend that year or two more profitably in Peking than you could in London.

41,330. In the case of student-interpreters in the Near East it was found worth while after their selection to make them spend a year in the study of Arabic, Turkish or Persian, as the case may be, and the result is that when they go out to the country the colloquial aspect of the language comes much more easily to them; they learn first the characters and the details of the grammar, and so on. Do you see, from your experience, any strong reason why that should not be the case also with regard to the student-interpreters for China? If they spent one year at a university centre, or something of that kind, in the study of the characters of the lan-

guage from such a man as Professor Giles, would it not be an enormous advantage to them when they began in China, seeing that they cannot get what one may call a philological teacher to begin with?—It would be an advantage certainly to them to have that, but I question whether that advantage would counterbalance the loss of a year in age when they start their work in China.

41,331. The advantage, from my point of view, would be that they would have a British teacher who knew the difficulties that an Englishman had in tackling the language, and who could put before them the general system of the language, the radicals, and the way of building up the words and characters, and so on, which would enable them when they got out to China to put the right questions to their Chinese teacher, on which so much depends if they are to get the right answers?—In my opinion the atmosphere in which you learn Chinese should be that of China itself.

41,332. Are you speaking of the colloquial or the written language?—Any study of the language in any form other than the simple study of the written language—certainly as regards the colloquial.

41,333. The colloquial is absolutely necessary, I admit, and they begin with the colloquial?—Yes.

41,334. Without any reference to the written character at all?—They learn it through the written character. There is a colloquial writing and an official writing as well.

41,335. Will the Chinese litterateur condescend to colloquial writing?—He would not condescend to it, but there are books written for the purpose of study in colloquial writing, by using which the student of colloquial writing at the same time acquires a knowledge of the written character; so he is also learning so many thousands of characters. In the first year he gains, simply by the aid of his books which are to teach him colloquial Chinese, a knowledge of something like 2,000 characters, so that he has those 2,000 characters ready to begin with when he goes in the second year to study the official written language.

41,336. It gives him the wrong names and the wrong meanings for many of the characters, however?—No, the difference is very small, and the same characters are used in the written language.

41,337. But it gives him the wrong names and the wrong meanings for these characters?—Only in very, very few instances.

41,338. I am surprised to hear that a year's preliminary study in this country with a skilled professor, who himself acquired the language in the East, and who knew the difficulties of the language to a British student, would not enormously save a man's time when he gets out to China; but that is your opinion, however?—I admit it is an open question, and that it would be a very great advantage to have genuine teaching of the language, which he does not get in Peking; but it is a question whether the benefit of that teaching would compensate for the absence of atmosphere and the living amongst the Chinese, which is the only way. I hold the view that the only way to learn Chinese is by mimicry.

41,339. That is spoken Chinese?—Yes, and you may have a marvellously accurate knowledge of the Chinese language, but unless you can speak that language like a Chinese that actual knowledge is very little use to you in the work you have to do. As consular officers in China we have to get things out of Chinese officials, and we have to talk to them for hours on end. It is a very exhausting process. You can get nothing, or very little, out of them by writing. No case is ever settled, and no diplomatic question is ever put through by means of correspondence. It is nothing but hours of continual conversation, an endless repetition of the same subject; and unless you have the faculty to enable you to do that and to speak the language in a way that the man you are arguing with understands, and cannot pretend not to understand, you will get nothing done. Therefore fluency in speaking is essential to a consular officer if he is to do his work properly.

41,340. There is also a great deal of translation?—Accurate translation is one thing, and that is essential too—most essential—but that ability is acquired. That is a question of care. There are certain men who are

12 June 1914.]

Mr. SIDNEY BARTON, C.M.G.

[Continued.]

capable of accurate translation, but who are not perhaps fluent speakers of the language when it comes to a prolonged argument with a Chinese official.

41,341. The same would be true of French and German; you can learn French and German here, but may not be able to speak them fluently?—I think it is true to a greater extent in the case of the Chinese language; but, as I say, it is an open question. My opinion is, that great though the advantages would be of proper teaching here in England, I think those advantages would be counterbalanced by the loss of surroundings.

41,342. It is absolutely necessary if you are going to communicate in Chinese with the Chinese Government, that your communication should be written in literary Chinese?—Yes, you must write good Chinese.

Mr. CHARLES STEWART SMITH R.N. (Consul-General at Barcelona), recalled and further examined.

41,347. (Chairman.) We have recalled you in order to give you an opportunity of going in a little more detail into the question of the sufficiency of the travelling allowances that you receive?—As I have thought it over, there are one or two notes which I have made. The first one is that the increase of salary that comes on promotion is very apt to be annulled by increased expensiveness. As an officer grows older he goes to more important posts in larger towns, and then he finds increased rents and other expenses, so that the increase in the salary may be quite annulled or almost so. When I was removed from Bilbao to Odessa, I had to pay a rent of about 170*l.*, in lieu of a rent of about 70*l.* which I paid at Bilbao, and the increase of pay was 200*l.*, so there was 100*l.* a year swallowed up simply in obtaining a house in a more expensive town.

41,348. You incurred certain expenses in transferring yourself and family to Odessa?—Yes.

41,349. Were you recouped all the expenses that you incurred?—By no means. Of this 200*l.* increase 100*l.* was swallowed up by increase of rent, and then there was 100*l.* left as increase of pay; but I was a good deal out of pocket (I cannot tell now how much) because the outfit allowance was not sufficient. You have first of all to wind up the house at the post you have been at already, and you are lucky if you get off with paying one quarter's rent for that. Then you have to instal yourself at the next post. Then there is the cost of conveying and forwarding one's furniture and insurance of it, and establishing yourself in the new house. I think most of the consuls sell their more common furniture and buy it afresh at the new port. Besides that a transfer involves expenditure of more than the allowance, the present system is unfair as between different transfers. I am at present at Barcelona, but if I was transferred to Marseilles I should receive the same sum towards the cost of my setting myself up as if I was sent to Valparaiso—that is, supposing the pay was the same—although in the latter case the freight would be ever so much more, and it would be necessary to spend a great deal more money in buying new furniture at an extravagantly high cost.

41,350. Then the sum you receive has no special reference to the expenses you incur, but rather is an average sum?—Yes, it is a proportion of one's salary at the new post. I think the inequality as between the different transfers might be reduced if there was some factor corresponding to the distance. For instance, if  $\frac{1}{2}$  per cent. was added (for a married man) to the outfit allowance for every 100 miles which his luggage had to travel, and perhaps  $\frac{1}{4}$ th per cent. for an unmarried man, that would overcome the difference of cost owing to the difference in distance traversed. Some slight arrangement like that, I think, would not cost much, but would equalise matters very much.

41,351. I have an impression that you took more exception to the grade pay, namely, 300*l.* to 500*l.* for a vice-consul, 600*l.* to 800*l.* for a consul, and 900*l.* to 1,200*l.* for a Consul-General. Should I now be right in thinking that you thought that scale would be fairly sufficient, as the grade pay, provided there was something additional in case of the exceptional cost for dearness of living in particular places?—No, I can only speak from the knowledge of the posts I have had, but I thought

41,343. If not the communications would not be respected?—The present revolution has unfortunately produced a style of writing Chinese which is not what it might be.

41,344. (Sir Henry Primrose.) Does it occasionally happen that a man fails to learn the language and has to come back in consequence?—It does occasionally happen.

41,345. Sometimes it takes a man a long time. If a man failed to pass in the prescribed time what would happen?—We usually put him back for perhaps six or three months, as the case may be.

41,346. And after a time you would have to say, "You will have to go"?—Yes, that is part of the condition of his appointment, if he fails to pass. He is only on probation for two years.

more remuneration ought to be arranged in some way so as to enable one to move about with people of importance.

41,352. But that was to be met, as I understood, by an allowance in the nature of a sumptuary allowance?—In that case, yes, I think so.

41,353. But with regard to the substantial grade pay attached to the various grades, in the Consular Service, I understood from you or some other witness that 300*l.* to 500*l.* for a vice-consul, 600*l.* to 800*l.* for a consul, and 900*l.* to 1,200*l.* for a Consul-General, with an addition of an allowance to meet the dearness of living at particular places, was fair pay?—Yes, and also an allowance for entertainment which I spoke of. I do not think that in Europe there are any allowances at all for such things as entertainment—at least, I know of none.

41,354. Not under that term. You are now Consul-General at Barcelona and your pay is 1,000*l.*?—Yes.

41,355. And it will rise to 1,200*l.*?—Not unless I am transferred to one of three posts.

41,356. But if the pay were made personal so that, in course of time, and with your seniority, you might rise to 1,200*l.* without the necessity of a transfer, would you still think there ought to be an allowance attached to the post at Barcelona because of the expensiveness of living at that place?—I would rather say that in theory I think it ought to be possible to have an extra allowance. I have been at Barcelona such a short time that I cannot say whether an allowance ought to be paid there or not.

41,357. Take your last post at Odessa: you were drawing 1,000*l.* there, and I understood you to say that you found 1,000*l.* a year inadequate to enable you to live comfortably and to return the hospitality shown to you, and which you found to be of use to you in your official work?—That is true.

41,358. If, in addition to having the 1,000*l.* salary, you were granted 200*l.* or 300*l.* allowance at Odessa, do not you think the situation would make you satisfied?—I think it would.

41,359. Am I right in thinking that the scale of pay which I mentioned would be sufficient as remuneration for your official work?—I think so.

41,360. Do you know what rule prevails, say, in the German Consular Service, in regard to costs of removal and travelling?—I am afraid I do not know that.

41,361. Is there anything else you wish to say?—I should like to point out that consuls generally pay double taxation. We do not live in England but we pay income tax, which is in England the principal means of taxation; but in foreign countries the revenue comes from indirect taxation, so that all the time we are spending money abroad we are also making our full contribution to the foreign exchequer.

41,362. Is there really any very great hardship in that matter of double taxation? If you lived in England you would have to pay income tax and also the indirect taxes. You would have to pay duty on the tea and sugar you consumed. All indirect taxation would fall on you in England as it does abroad?—In Russia or Spain the duties on everything that is imported are vindictive; at least, in Russia they are vindictive, and

12 June 1914.]

Mr. CHARLES STEWART SMITH, B.N.

[Continued.]

in Spain they are very high, though nothing comparable to Russia.

41,363. (*Mr. Boutwood.*) So that the local indirect taxation is much heavier than the indirect taxation in England would be?—Yes. And the indirect taxation means *octroi* also in so many countries.

41,364. (*Mr. Hoare.*) But would not account for that be taken in the grant for cost of living, if made?—I am only pointing out the different things that concur to make things more expensive.

41,365. (*Sir Donald MacAlister.*) You would have to pay rates in England?—Yes. Then we have the disadvantage that so many of the pleasant parts of the world are British, and therefore foreign consuls have many opportunities of good posts in our Colonies which are not open to us. At the same time the duty is increasingly laid upon us to further Colonial trade interests if asked to do so. That has not meant anything serious yet, as far as I am concerned, because I have had very few applications. A further point is that in the Civil Service the expenses of a family are generally considered as the private affair of the father, but still, there are a number of indirect expenses which do not fall on the home Civil servant if he has a family, but they are specially hard upon a man who lives abroad. In a place like Russia or Spain you cannot bring up your children; you must send them to England to be educated. If you have to send your children home to educate you have to make arrangements to take a house for the children's holidays, which a man of my standing would not do in England—he would have the children in his own house. Then there is the cost of the journeys to and fro on account of the children. Whilst I was at Odessa I had to pay for about 120 journeys backwards and forwards, and had to rent a house in England as well as at Odessa, so there are unusual expenses caused simply by the local conditions of the place. The same question of family comes in in regard to travelling expenses. The Foreign Office will only pay travelling expenses for five people; but people who have more than five in their family are precisely the ones who are hardest hit by such expenses. If the moving of families was defrayed altogether by the Government, it would press much less hard on the individual than it does now; a man with a large family has so little spare cash.

41,366. (*Sir Henry Primrose.*) Are the locomotion expenses fully paid for for a family of five?—No, I do not think so, but the regulations have been changed lately.

41,367. (*Chairman.*) Are these all the points which you wish to bring to our notice?—Yes. Then I was asked about a consul's duties when I was examined last. I ought to have mentioned that they were divided into duties towards merchant shipping and seamen and merely commercial business; but that there are also special duties which are voluntary, but which are of very great importance to the community. At Odessa I had to be chairman of the church committee, and chairman of the church purchase funds; I was president of the cemetery committee, the Seamen's Institute, and the British Benevolent Fund, and of two clubs. When these things go well it does not mean much work, but when things go wrong then one has to take a good deal of trouble about them. I think it is a great advantage to the colony when that sort of thing is done by the consul, because he is the one person that nobody minds taking the lead, and so it puts a stop to a great many jealousies, and makes it much more possible for people to do things together.

41,368. And at the same time it imposes upon you a certain expenditure?—It does, but I have not found that very serious. One would do it anyhow if one was in a place where one had to do such things. I do not lay down that it is well for consuls to take on all those duties at once when they go to a post. They ought to look round first and make sure that they can take them without stepping into places where they will find themselves quarrelling with half the community.

41,369. (*Mr. Graham Wallas.*) There is a certain amount of travelling which is incidental to the full performance of your duty. I suppose, in order to prepare your reports or get information, you have to do a

certain amount of travelling?—Generally it is for inspecting posts.

41,370. When you are travelling in Spain on official work, how far are your travelling expenses paid?—All the out-of-pocket expenses and 1*l.* a day.

41,371. Supposing you thought it desirable to cross the Spanish frontier into France, would the expense of that be paid?—If the Secretary of State approved.

41,372. Supposing you thought it essential that on some big question you should come home to England and see, say, a Chamber of Commerce which had sent to you an important request, before answering their request or entering into any discussion, would the expense of that journey be paid?—If the Secretary of State approved of the journey. I would not think of doing it without his approval.

41,373. You would write to him?—I should telegraph.

41,374. It would not be contrary to custom that such a journey should be made and paid for?—Not if the Secretary of State considered it was in the public service.

41,375. (*Mr. Boutwood.*) Do I understand you to say that you think there ought to be an increase of salary or a separate allowance for entertainment and social work generally, or only an allowance at exceptional places where living is dear?—I think the point of dearness ought always to be considered and decided on the merits; and I think the question of where it is desirable to help people to entertain should also be decided on the merits. I should not think it was necessary in every post by any means.

41,376. You think that in some posts the social side of your work is more important and more expensive than in others, and in those places that should be taken into consideration?—Decidedly. In Russia, for instance, it would have been a very great help to be able to entertain the local officials and people of that kind.

41,377. But for the ordinary post that has no exceptional claims, you think the scale of salary is sufficient?—I should think so, except where undue expensiveness is shown.

41,378. (*Sir Henry Primrose.*) What you are really suggesting is that this system of local allowances which is already in force to some extent should be extended and systematised?—I should be very glad to see it done.

41,379. Take Bilbao, where you were; there, in addition to a salary of 600*l.*, a local allowance of 100*l.* was given?—None was given when I was there: the salary was then 700*l.*

41,380. I have a table before me which gives the salaries of all the salaried officers in the Consular Service, and there is a column giving the local allowance, which in some cases is substantial. Those allowances are really given for the very purposes you mention, namely, the increased cost of living in a place, and so on?—I believe so.

41,381. Take Buenos Ayres; there the salary is 800*l.* and the local allowance 500*l.*?—That is on account of the expensiveness of living.

41,382. So that there is, in fact, in operation a system of supplementing salaries by means of local allowances which are to cover exceptional cost of living?—Yes, but there is no idea of anything being given at all for expenses of entertaining. It is simply rejected. I have suggested it more than once, and simply been told that the Treasury would never allow it.

41,383. I think we must assume that the salary is fixed at a rate which is supposed to enable a man to live according to the conditions of his appointment, which would include a certain amount of entertaining?—I do not think so. I think you would find that the Foreign Office would not say so. They would say: "It is no part of the duty of a consul to entertain."

41,384. You mean he ought to be encouraged to entertain?—No. I say I think there are certain posts where it is very desirable that he should. I think there are plenty of places where it does not matter a bit.

41,385. (*Mr. Hoare.*) The Ridley Commission, in their Report on the Consular Service, said: "We would venture to propose that meritorious services

12 June 1914.]

Mr. CHARLES STEWART SMITH, B.N.

[Continued.]

" of consuls might to a larger extent than hitherto " be rewarded by honorary distinctions." Has that point ever struck you, that our consular servants do not receive the recognition in the way of decorations and honours that they deserve?—Certainly.

41,386. How, for instance, would they compare with

the consuls of Foreign Powers. Are their services more generously recognised in that sort of way?—I can only judge by when I attend any function like the King of Spain's birthday, or anything of that sort. The foreign consuls are much more decorated than our consuls.

The Hon. RONALD CHARLES LINDSAY, M.V.O., called and examined.

41,387. (*Chairman.*) I find you entered the Diplomatic Service in 1899?—Yes.

41,388. You entered by open competition?—Open competition after nomination.

41,389. Did you enter the Foreign Office or the Diplomatic Service?—The Diplomatic Service.

41,390. Have you ever served in the Foreign Office?—Yes, for three years on end latterly, and I started in the Foreign Office, where I served about a year as attaché.

41,391. Were you a Foreign Office clerk?—No, attaché in the Diplomatic Service, but we used to begin in the Foreign Office.

41,392. During the year which you spent in the Foreign Office you received no pay?—No.

41,393. And for another year after you went abroad you received no pay?—That is so.

41,394. Then you got 150*l.* a year?—Yes.

41,395. What missions were you attached to?—I was first at St. Petersburg, where I stayed for three years. Then I was in Teheran, Persia, for about two years; then in Washington two years; then I was rather more than a year in Paris; about three years in the Foreign Office; and, after that, a little more than a year at the Hague. Since then I have been unemployed.

41,396. Of course, you found living while attached to an embassy or mission expensive—more expensive than your official salary enabled you to meet?—Yes, always.

41,397. What would you say to such a scheme as this, and how do you think it would work: Say that you commenced with the same pay that a Foreign Office clerk gets—that is 200*l.* to 500*l.*—and when attached to a mission abroad you were given an allowance of from 200*l.* to 300*l.* from the Government, would that have enabled you to get on?—With 200*l.* salary to start with, and an allowance in addition? Not at St. Petersburg.

41,398. Have you been at Vienna?—No; but St. Petersburg is an expensive post. I do not think a bachelor could live there on, say, 400*l.* a year; in fact, I know he could not.

41,399. Then as far as you have had experience, does it cost 500*l.*, or 600*l.*, or 700*l.* a year to live at an embassy in the position of a third secretary?—Yes, I think so, as a bachelor.

41,400. Can a bachelor live on 500*l.*, if not at St. Petersburg, elsewhere?—At Teheran he certainly could. At Washington he could not. At Paris he might possibly, but not very easily. I think Paris is a good deal more expensive to live in than London. I am only speaking of a bachelor. When a man is married it makes a great many more complications; his transfers cost so much more.

41,401. If such an arrangement as that were introduced you think that the allowance ought to be 300*l.* a year at all events?—Yes, I think so.

41,402. How did you learn your modern languages?—Russian I learnt abroad, to a certain extent. I was appointed to St. Petersburg three or four months before I went there, and I took lessons in Russian while I was in London.

41,403. But before you entered the Service you knew French and German?—French, German, and Italian.

41,404. Did you learn those languages when you were young, abroad or in this country?—Abroad. I learnt them in order to pass the examination. They were obligatory subjects.

41,405. Did you live abroad for many years?—I lived abroad altogether for a little more than two years learning the three languages.

41,406. Had you been to the university?—No.

41,407. You lived abroad before you went in for the examination?—Yes, after leaving a public school.

41,408. Had you got a nomination for the Diplomatic Service before going abroad to learn the languages?—I think I had, or the promise of one, at any rate.

41,409. It took you two years to learn the languages?—Yes.

41,410. Then when you passed your examination and got your appointment you had a few months here before going to Russia, in which to learn Russian?—Yes, that is practically what it comes to. While working in the Foreign Office I was told I was going to be sent to St. Petersburg, and so I learnt some Russian then.

41,411. We have been told that the duties of a young diplomat are not so much office duties as duties which he is able to perform by going into society. When his office work is over he then goes into society and meets men of his own class, and diplomats of other countries, and in that way work is done, communications are made, and you hear what is going on, and get information which is valuable to your chief, and you communicate it to your chief?—Yes.

41,412. We are told that that sort of work is even more valuable than the work done in the chancery. Is that your view?—It is hard to say whether it is more valuable, but it is certainly important. As a matter of fact, the office work proper in the larger embassies is certainly increasing tremendously, and I think they spend more and more hours every day in the chancery.

41,413. Take, for instance, your work in Paris. Had you much commercial work to do there?—Not very much in Paris. In Paris there is the commercial attaché who does most of the commercial work.

41,414. Take another embassy?—In Washington I used to do a good deal of commercial work.

41,415. What was the character of the commercial work you used to do in Washington?—It was largely in regard to the laws that were being passed affecting trade and commerce, and laws on social legislation—it is hardly commercial work, but it is not political, at any rate. Very complicated laws are constantly being passed—for instance, railway rate legislation and shipping control.

41,416. Used the embassy in America to send home an annual report upon trade and commerce, or was that the work of the consuls?—There is a commercial attaché in America, too, but all the time I was at the embassy he used to live in New York. I think he used to send a trade report in every year for the whole country. Then each consul sends in his report for his district. The embassy do not send in commercial reports every year.

41,417. How did you find your travelling allowances tell on you? Were they adequate?—No, certainly not. They are adequate for a bachelor who has nothing but the luggage which he takes with him, but for a married man they are completely inadequate. It only comprises a railway ticket and the luggage which you take with you. There is nothing to complain of over the subsistence allowance, which is 1*l.* a day as long as you are travelling.

41,418. You had to find your own house accommodation wherever you have been?—Yes, and that, of course, is also a source of expense. The customs vary in different countries. When I went to Holland, for instance, I took a house, and it consisted of nothing but the walls of the house, and when I left Holland I found myself with seven fire-places on my hands, besides a kitchen stove, which I had had to buy.

12 June 1914.]

The Hon. RONALD CHARLES LINDSAY, M.V.O.

[Continued.]

41,419. You had to furnish the house?—I had to buy the fire-places even. That sort of thing is an extra source of expense, apart from the mere transfer of furniture.

41,420. To where did you move from Holland?—To Cairo.

41,421. At the present time you are seconded?—Yes, at present.

41,422. You had to sell your furniture in Holland?—There are two schools among the diplomats: there are some who sell their furniture at every post, and some who carry it round from post to post. I happened to have some furniture, and I took it round with me.

41,423. Then you must be considerably out of pocket at the year's end on the present scale of allowance?—Oh, yes.

41,424. But on no scale of allowance that the Treasury would be likely to admit would you get the cost of carrying all your furniture with you?—Not unless transfers were very much rarer than they are, and I do not think, perhaps, that that would be very desirable.

41,425. Have you seen a good deal of the Consular Service during your stay at the various places you have been to?—Not systematically. I have seen a good many consuls at various times.

41,426. Have you ever considered the question of greater amalgamation between the Consular Service and the Diplomatic Service than exists at present?—No, I have not. I think it would be very useful for diplomats to know more of consular work sometimes, and I think it might help them a good deal.

41,427. Do you mean that it would be desirable if a young diplomat were made a vice-consul or consul for a time, and then reverted again to diplomacy?—Yes, I do not think it would be at all a bad thing for him.

41,428. You think it would be a good thing?—Yes.

41,429. If that were so, if there were transfers from the Diplomatic Service to the Consular Service which were made general, transfers from the Consular Service to the Diplomatic Service would almost seem to be necessary also?—It would almost seem to be necessary, but I do not know that it would be feasible.

41,430. Have the consuls you have met been of the same intellectual calibre as the general run of the members of the Diplomatic Service?—I think not quite as high, intellectually. There are some extremely able ones, of course.

41,431. As a rule were they as good linguists?—No, they are not as good linguists.

41,432. (*Sir Donald MacAlister.*) With regard to the commercial attaché in the United States, he is really detached from the embassy?—He was then. I do not know what he is at the present moment.

41,433. In your time what was his relation to the embassy? Was it only nominal?—He used to report to the embassy, and the embassy used to instruct him very often to prepare reports on special subjects in accordance with whatever instructions we got from the Foreign Office.

41,434. But he did not appear at Washington very often?—No, not very often.

41,435. So that his connection with the embassy, as such, was not very close?—No; the reason was because New York is the commercial centre. Washington is not a commercial centre at all; in fact it is mostly political, and the embassy used to take charge mainly of the legislative proposals that were going on in Congress.

41,436. And political questions?—Yes, of course.

41,437. So that as far as your experience went you had very little commercial work, pure and simple, at Washington at all?—Not much.

41,438. If any question touching on commerce did come to the embassy it would be naturally referred to the commercial attaché?—Yes, usually.

41,439. Did the commercial attaché in New York visit this country very often?—I do not remember whether he did or not. They do from other posts. There was one in Russia when I was there posted at Moscow, and he used to visit England and give lectures to Chambers of Commerce on commercial subjects.

41,440. Was his connection with the St. Petersburg Embassy any closer than that of the New York attaché with the Washington Embassy?—No, it was very much the same.

41,441. Have you had experience of commercial attachés in any other legation or ministry?—There is one in Paris, Sir Henry Lee, who is resident in Paris.

41,442. Is his relation to the embassy very close?—Yes; he is right in the embassy. I have not had experience of any others.

41,443. In the cases of Moscow and New York the commercial attachés would be in much closer relation with the Consular Service, and would have to depend on them more than on the Diplomatic Service?—In New York certainly he was closely in touch with the consulate. In Moscow the consulate was a very unimportant office, and I think the commercial attaché was more or less on his own there. I think there was only a vice-consul in Moscow at the time.

41,444. So he was really there fulfilling the commercial side of the consul's functions?—Yes, purely.

41,445. But he was nominally in the Diplomatic Service?—I think so.

41,446. (*Miss Haldane.*) Do you think the young attaché when he joins the Service gets, as a rule, much instruction in his work at the embassies?—Yes, he has to learn the work. I think the instruction he gets in the Foreign Office is the most valuable.

41,447. Then do you think it desirable that he should be in the Foreign Office for a time always before going to a foreign mission?—Yes, I think so, speaking entirely from the point of view of what is most advisable for the attaché.

41,448. You mean to learn the routine of office work and so on?—He could do it much better in the Foreign Office than in the biggest embassy.

41,449. But is he, as a rule, encouraged to learn about the social conditions of the country he is in, and so on?—Yes, a great deal.

41,450. But I suppose there is a good deal of difference in the different embassies?—I do not think so. I think it is very much the same everywhere—in all the big ones certainly.

41,451. Sometimes one hears a criticism made that they do not know a great deal about the social life of the country in which they are living?—I think they are distinctly encouraged to learn about the country in which they are living and to prepare reports on it.

41,452. Sometimes it has been said that the reason they do not know more about the social conditions of a country is that they do not know very much about the social conditions of their own country before they go out. Is there any truth in that?—There is a great deal of truth in that, and if they knew more about the conditions in England it would very often help them to realise what is most interesting in the countries abroad.

41,453. Can you see any way of remedying that evil?—No, except by frequent exchanges.

41,454. (*Chairman.*) What do you say to their beginning their service in the Foreign Office here and during their time in the Foreign Office, say, two years, giving them facilities to see the proper working of our various departments here at home?—It might be very valuable. I do not know if it would be possible or not.

41,455. (*Miss Haldane.*) Do you put much stress on the social side of the work as regards the young members of the embassy?—The moment he arrives in the British Embassy abroad the attaché finds himself in the middle of it, anyhow. It is expected of him by the other people.

41,456. Do you think it an important matter that he should take part in the social life of the country?—Yes, I do. I think it helps him, too.

41,457. (*Chairman.*) Could he keep out of it even if he liked?—Yes, some of them do, I think.

41,458. (*Miss Haldane.*) You would not say that he might be an efficient diplomat, even though he had not taken part in the social life of the country?—Not necessarily; but it is a question of his personality rather.

41,459. Do you think he sees all manner of people beyond what are called the highest class? Does he see something of the middle class?—Yes. It is easier

12 June 1914.]

The Hon. RONALD CHARLES LINDSAY, M.V.O.

[Continued.]

for him to see nothing but the highest class, but a good man will easily find his way into every stratum of society and meet the interesting people.

41,460. Do you think that is done to a considerable extent, and that they do see a good deal of the other influential classes who are not belonging to the higher orders?—Yes, I certainly think so.

41,461. It may be rather difficult for him to do so; it requires rather an effort to do that, while it is very easy for him to enter into the other society?—Yes, the other is the broad and easy path.

41,462. (*Mr. Hoare.*) You said that the office hours were increasing in the embassies?—Yes.

41,463. Do you think there is too much routine clerical work done by the attachés?—No, I do not think there is. I really think the routine and clerical work is at a minimum.

41,464. It has been suggested to us that it might be a good thing to lighten some of this work by putting it into the hands of clerks?—There are chancellors, as I think they are called, at several posts now.

41,465. Do you think the number of them should be increased?—I do not think it is necessary really.

41,466. In your own experience, looking back, you do not think that you had too much work in the nature of drudgery to do at embassies and legations?—There is bound to be a good deal. I think the confidential work and the management of cyphers ought to be kept in the hands of attachés. I do not think the clerks ought to be allowed to do that.

41,467-71. Speaking generally, you do not think there is any great grievance?—Not in that respect.

41,472. (*Mr. Matheson.*) Do you think our diplomats hold their own, as far as the linguistic side of their work is concerned, as compared with other diplomats?—Yes, I think they are just as good.

41,473. Did most of your colleagues live abroad before going in for the examination?—I think nearly all of them spend some time abroad learning the languages.

41,474. I suppose the Diplomatic Corps of some countries have rather a more formal training in law, and so on, than our own people—the Germans, for instance?—Yes, I think they do. I could not tell you much about it.

41,475. Do you think on the whole our system of appointing on general education with special knowledge of languages works out pretty well?—Yes, I think it works out pretty well on the whole.

41,476. Might it possibly be supplemented by rather more training in history?—I think a little more training in English administration, and the state of the laws in England, would help them a good deal perhaps.

41,477. During their probationary period in the Foreign Office?—I do not know how they could learn it quite.

41,478. (*Sir Henry Primrose.*) Looking at your record in the Service, might that be taken as a fairly typical history of a man entering the Diplomatic Service?—I think absolutely.

41,479. As regards the rate of promotion, I see you were four years a third secretary. Would that be about the time with most people?—I think that was rather faster than my immediate predecessors.

41,480. What do you say as regards the number of transfers you have had?—I think that is about normal. I think it works out to about one in every two or three years on an average.

41,481. Has the Foreign Office any minimum time within which they would not move a man?—No, there is no such limit.

41,482. Are the junior members of the Diplomatic Service allowed to indicate preference for one post rather than another?—Yes, you can indicate a preference.

41,483. With any result?—Sometimes. For, instance, when I was at St. Petersburg I asked to be sent to Teheran, and I was sent there; but I think that is the only time I indicated a preference.

41,484. (*Chairman.*) Were you long at Teheran?—Nearly two years.

41,485. Did you learn Persian?—Yes.

41,486. (*Sir Henry Primrose.*) If a man is two years at a post I suppose it takes him perhaps a year to really learn the ways of the place?—Yes, very often.

41,487. Therefore these frequent changes have a certain disadvantage, have they not?—Yes, sometimes. It does take a man some time to understand the machinery of the government.

41,488. As regards the Service generally, does a man often remain as a first secretary; that is to say, having arrived at the maximum salary of 500*l.* as a first secretary, does a man often remain at that a long time before he gets promoted?—I think they generally stay three or four years. It is practically one class—first and second secretaries—and I think they generally take about ten years to get through it.

41,489. When a man has got to the 500*l.* stage, probably, from the point of view of money, the remuneration is better at that stage than at any other, either below or above?—Yes; and when he is at that stage he is very often at a post where he occasionally takes charge and gets charge allowances: so it is not his total emoluments really.

41,490. The ministries do not leave a very wide margin for a man over his salary. Take a Minister at Brussels, for instance. The salary is by no means very liberal from the point of view of what he has to do?—Probably not.

41,491. So far as your observation goes, should you say that our Diplomatic Service was as well paid as that of other first class Powers?—Yes, I think on the whole it is very much on the same scale.

41,492. But even in the case of the foreign embassies the men in the Diplomatic Service are all men who probably have some private means?—Yes, I think always.

41,493. I do not suppose there is any foreign Diplomatic Service which gives a salary which would be sufficient to enable a man to live in the way he has to live in a great capital?—No, none at all.

41,494. (*Chairman.*) Do foreign governments give allowances in addition to the grade salary?—I rather think they do, but I am not quite certain. I fancy every country has its own system in that respect, I think some certainly give quite a moderate salary to Ministers and Ambassadors and a considerable entertainment allowance, which comes to very much the same thing in the end, I suppose.

41,495. Except that on our system the entertainment allowance will not be taken into account in calculating pension?—I think our pensions are on a different basis; not on the figure of the salary, but on the class of the post.

41,496. (*Sir Henry Primrose.*) I suppose in every Diplomatic Service the appointments are by nomination rather than by way of open competition?—I think always, in every country.

41,497. (*Chairman.*) You say a first secretary or a counsellor sometimes gets a charge allowance for acting as chargé d'affaires?—Yes.

41,498. Is the charge allowance deducted from the pay of the Minister?—Yes, always.

41,499. Is that occasionally a cause of friction and dissatisfaction?—Yes, certainly.

41,500. We are interested in hearing about the points in which friction occurs with a view to possible removal, so we shall be glad if you will develop that a little?—I think it is merely that sometimes the first secretary or the counsellor feels rather cross with his chief for not going on leave a little oftener, but I do not know that it ever causes actual friction.

41,501. That possible cause of friction, if it be a cause of friction, would be removed if the Minister for a period of authorised leave were to draw the usual pay?—Yes.

41,502. And if he ceased for that time to draw the allowances: He would not incur the burden of hospitality, if it be a burden? That would fall on the chargé d'affaires, who would receive the sumptuary allowance?—I do not think the friction is serious enough to cause any difficulty. It may have done so occasionally, but it was probably in cases where the two persons did not get on well together.

12 June 1914.]

The Hon. RONALD CHARLES LINDSAY, M.V.O.

[Continued.]

41,503. It has been suggested to us that it would be well to amalgamate the Foreign Office and the Diplomatic Service: to make it one Service. Do you see any objection to that?—I think in many cases clerks in the Foreign Office live on their pay, and I doubt if they could live on their pay when they go abroad, as a rule.

41,504. Supposing the system I have just outlined were introduced whereby the diplomats would receive pay on the Foreign Office level plus an allowance?—You could do that in the case of a bachelor.

41,505. That would meet the case of a Foreign Office clerk going abroad?—He would get exactly the same as a diplomat in that case.

41,506. He would, so far as the Government is concerned. The Foreign Office clerk might have private means or might not; if he had it would be so much the easier for him?—Yes.

41,507. I suppose we may take it for granted that in most cases where Foreign Office clerks at present become diplomatists and go abroad they have private means?—I suppose they have; in fact, I think they are sometimes unable to exchange because they have not private means. But even in that case the Foreign Office clerk gets rather higher pay than the diplomat, very much on the revised scale which you were suggesting, and, if even in that case he cannot accept a transfer abroad because he has not private means, I am afraid that it would indicate that the scale which you are suggesting is not adequate.

41,508. That would be an objection to the adequacy of the allowance, but assuming that a suitable wage were available for a Foreign Office clerk if he went abroad, do you think that the amalgamation would be beneficial to the Service?—I think it is certainly advisable that they should be very closely in touch with each other.

41,509. I infer from what you say that it is desirable and advantageous that there should be transferability?—Certainly.

41,510. The only question is whether the transferability should be such that the Secretary of State may order a Foreign Office clerk to go abroad and he must go, and may order a diplomatist to come to the Foreign Office and he must come, and thus take away the discretion of the individual. Would that be to the interest of the Service?—Yes, certainly, I think it would be to the interest of the Service.

41,511. Although it might be impeded in particular instances by financial considerations?—In particular instances it would be difficult to carry out.

41,512. (Mr. Boutwood.) But the amalgamation of the two Services—the Foreign Office and the Diplomatic Service—would mean bringing the men on to one list for promotion?—I suppose it would.

41,513. How would that work?—I think it would be a great deal fairer. At present exchanges which are effected may work injustice to people. I mean if a senior person comes out of the Foreign Office into the Diplomatic Service, and a junior diplomat comes out of the Diplomatic Service into the Foreign Office, the result is that a certain number of people in the Foreign Office go up one, and a certain number of people in the Diplomatic Service go down one. One list would obviate that at any rate, because they would all stay in the same place on the list, whether they were employed at home or abroad.

41,514. (Mrs. Deane Streetfield.) I find it a little difficult to clear my mind on this question of expenses in certain situations abroad. I should feel it easier if you could tell me what you consider would be the possible salary for an attaché in London, say, a Frenchman or a German attaché; then I should be able to compare it more easily with the question of the expenses of an Englishman in St. Petersburg. How much do you think it would take for a man to live in London?—There is always this difference, that the diplomat who goes abroad is a foreigner living in a foreign country and he does not get the things as cheaply as the natives can get them; he is not up to the ropes in the same way. So that a Frenchman living in London would probably require more than the corresponding Englishman living in London.

s (5)12300—Ev 102 &amp;c

41,515. Have you any idea in your mind as to what it might cost a Frenchman to live in London?—A bachelor living in London? I should say about 600l. a year.

41,516. (Mr. Graham Wallas.) At one point of your career you must have determined to try for the Diplomatic Service—I suppose at about the age of 18?—I made up my mind even earlier than that.

41,517. Then in consequence of that you decided not to go through the ordinary university course, but to go abroad?—Yes.

41,518. You took the precaution of finding out whether, if you did so, you would receive a nomination?—I think I did, but I could not say for certain.

41,519. You got what was in effect a binding promise that you would get a nomination?—Yes, I went at some time to see the Secretary of State's private secretary, but I cannot remember at what exact stage in my life it was.

41,520. Would you advise a young man who was going to make the same decision to do the same thing now?—Yes, machinery is provided for it now. There is a Selection Board, I think, which meets periodically.

41,521. But that Selection Board, as far as we can ascertain, only meets just before the examination?—It meets twice a year, I think.

41,522. But the persons who come before it, we understood, were nominally expected to come before the Board shortly before the examination?—No, at any time.

41,523. (Mr. Matheson.) Yes, two or three years before the time. Men are coming up now before the Committee who will not be going in for the examination for a year or so?—Yes, it is a long time before.

41,524. (Mr. Graham Wallas.) If they go into the examination at about 21 or 22 years of age they come up before the Selection Board at 18 or 19?—Yes, as soon as they are old enough.

41,525. You were nearly two years at Teheran. There you were dealing with a particular type of Eastern consul, and, I suppose, there were a certain number of Eastern consuls attached to the legation doing work in the legation?—There was one in the Levant Service, he was a vice-consul; and I think there was another vice-consul who had been recruited outside.

41,526. Were they doing regular work in the chancery of the legation?—No, they never came into the chancery of the legation at all but were entirely occupied with consular duties.

41,527. Then you were not in the position you find in China or Constantinople—that an integral part of the legation are these trained men in the Consular Service?—Not at that time. I believe now, although I am not quite certain, there are student-interpreters in Persia learning the Persian language and attached to the legation. I do not know whether they work in the consular part of the building, or in the chancery.

41,528. In Teheran the building is one; the Consular Service on one side and the Diplomatic Service on the other?—Yes, all in one enclosure.

41,529. In your time was there no communication? Were documents never sent over to the consular part to be translated?—Not for translation, but one was on one side of the court and the other on the other side of it.

41,530. You were working together?—Certainly.

41,531. So that the Minister would know if there was a very good man on the consular side?—Infallibly.

41,532. When you were in Russia in 1901 you passed an examination in public law?—Yes.

41,533. Do you remember the syllabus of that examination. Did you work it up with a couple of books, or how?—While I was on leave I had lessons in it from Sir George Sherston Baker, and I worked from books while I was in St. Petersburg, too. I worked on two or three books and then had a course of lessons.

41,534. There are some very distinguished lawyers in the University of St. Petersburg. Did you ever attend any lectures there?—No, I did not.

41,535. Who examined you?—The Civil Service Commission.

41,536. You returned to England from St. Petersburg for the examination, just to sit for the examina-

B

12 June 1914.]

The Hon. RONALD CHARLES LINDSAY, M.V.O.

[Continued.]

tion?—Yes; so far as I remember I was rather taken by surprise in the examination; it came on sooner than I expected, and I think I happened to be in England on leave at the time.

41,537. You say that system of encouraging the young diplomat to get a knowledge of law might be extended to certain other subjects?—I think it would be very useful to him sometimes.

41,538. What subjects?—I hardly know; but I think he ought to have certain familiarity with the state of the law in England on social subjects such as the Factory Acts and food adulteration, and perhaps liquor legislation and I should think Old Age pensions, and things like that. Then he would be very much more able to see what points in foreign legislation are of interest.

41,539. That is to say, if he is asked to report on any particular questions of social legislation in a foreign country, he is, in fact, impliedly asked to compare that with what exists at home in order to make suggestions, and unless he knows what it is at home

he cannot work on that line?—That is so; and he is very often in the dark at present.

41,540. Do you think it would be a convenient arrangement if, when he was in a European capital within reach, he were allowed to come home. If he is asked to report on the system of poor relief, say, and he finds he is ignorant of the system of poor relief at home, and he asks to come home and get himself up-to-date by a short and laborious visit home instead of working in the dark, do you think that would be a convenient arrangement?—Yes, I think that would meet the situation perfectly in cases where he was not too far away.

41,541. Did you get a special allowance in consequence of passing your examination in public law?—Yes, 100*l.* a year as long as I was third secretary.

41,542. Do you think that that special allowance system, or something analogous to it, might be extended to the study of existing British institutions?—I think it would be a very good thing.

## ONE HUNDRED AND THIRD DAY.

Thursday, 18th June 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.  
Sir DONALD MACALISTER, K.C.B.  
Mr. ARTHUR BOUTWOOD.  
Mr. JOHN ROBERT CLYNES, M.P.

Mr. RICHARD DURNING HOLT, M.P.  
Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. GRAHAM WALLAS.  
Miss HALDANE.

Mr. N. E. BEHRENS (*Secretary*).

Mr. H. A. ROBERTS (*Secretary to the Cambridge Appointments Board*) recalled and further examined.

41,543. (*Chairman*.) You are acquainted with the syllabus of examination for the general Consular Service?—Yes.

41,544. The examination combines technical subjects and subjects of general education?—Yes.

41,545. Have you formed an opinion on the advantage or disadvantage of that kind of examination?—I take the view that the subjects in themselves are those which the best advice obtainable has laid down as necessary for consular officers, but I think that several of the subjects—especially the technical subjects of commercial law and geography—lend themselves very badly to examinations, and I think the same is true, not of political economy as understood in institutions of university rank, but certainly of political economy as understood in this particular examination. I think these examinations lend themselves to an undesirable kind of special preparation. The general effect on the *personnel* of the Service must, I think, be to favour candidates of a very mediocre capacity.

41,546. Do you think it would be better to restrict the open competition to a scheme framed more from the educational point of view, and afterwards to subject the selected candidates to a period of special training?—That would be my idea. I know there is some objection to that on the score of expense, but it seems to me so important that, if it is possible for the Treasury to find the money, it would be advisable to give these men a longer period of special training than they have at present.

41,547. You have read the Walrond Report, I presume?—Not recently, but I read it at the time.

41,548. You know it was the hope of that Committee that we might be able to attract men who had acquired some preliminary commercial experience?—Yes.

41,549. I think that was one of the reasons why the maximum limit of age was fixed at 27?—Yes.

41,550. From the information that has been furnished to us as to the previous occupation of those who have been selected, it seems that results disappointed the expectations of that Committee. As a matter of fact, men with previous commercial experience have not entered the Consular Service?—I believe that is the fact.

41,551. That result is perhaps what might have been expected in the circumstances?—Yes, I think that it was to be expected. I think that any man, with the intellectual capacity that you want, and with the personal powers that you want, would, if he were in a great business house, be very unwilling to leave it, and the business house would be very unwilling to dispense with his services. The tendency has been latterly the other way—to try and recruit men of ability into business houses on a much wider basis than usual, and I think that that tendency shows that there are not enough of them there.

41,552. Since you appeared before us the year before last has that tendency on the part of business houses developed?—Yes, it goes on steadily. It does not go on by leaps and bounds.

41,553. But it goes on progressively?—It goes on progressively.

41,554. If you had an examination, or if the recruitment were conducted, on those principles which you have mentioned, what sort of examination would you have for the open competition for the general Consular Service? Would it be an examination based upon the secondary type of completed education, or on the university type, having regard to the work which consular officers are called upon to do?—I should be very unwilling to exclude the university man. It is not reasonable to suppose that the Service as a whole should consist of candidates from the universities, but I think that here and there you should leave the door open for any graduate who is obviously drawn to that work.

[18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

41,555. Would your examination be more of the type prescribed for the intermediate class of clerks, or would it be of the type of the Class I. examination?—If it were quite like the Class I. examination I think it would exclude everybody, or almost everybody, who was not a university candidate. That would be the objection to that. I have in mind the examination for the Levant Service—not as a model for the examination for the general Service, but as indicating the desirable standard. You there have an examination which can be taken by the better kind of sixth-form schoolboy with additional preparation, and you have the age limit of 24, which leaves the door open for the occasional man from any of the universities whose thoughts turn in the direction of consular work, and who, perhaps, has studied modern languages.

41,556. The examination for the Levant Service comprises the following subjects: Reading aloud and writing, orthography, arithmetic (including vulgar and decimal fractions), English composition, French translation, from and into, writing French from dictation, writing a letter in French on ordinary subjects, and conversation, paying attention to accents, genders, and tenses, and Latin. Those are the obligatory subjects. Then the optional subjects are: Ancient Greek, Italian, German, Spanish. There you have no history?—No history. I do not suggest that as a model for the other examination, but rather that the same standard should be aimed at. The standard in all these subjects is considerably higher than it is in the examination for the general Consular Service, and you have also the make-weight subjects of Latin and Greek in this particular case; but, naturally, in the examination for the general Consular Service you would have alternatives, such as modern history.

41,557. You would introduce history?—I think I would, and I would keep some economics if possible.

41,558. You would introduce political economy and economic history?—Yes, if you could maintain a reasonable standard in them.

41,559. And political science?—That is a vague subject; I do not think I would include it.

41,560. (*Mr. Boutwood.*) How does the standard for these subjects compare with the standard of Class I.?—It is below the standard of Class I. On the other hand, of course, what happens is, that in practice every subject there is obligatory. A man has to attain a reasonable standard in Latin and Greek, a very high standard of French and German, and has to know something of Italian and Spanish as well. That is how it works out, and I believe that is the salvation of the examination for its particular purpose.

41,561. (*Chairman.*) What ages would you fix? What would be the minimum and maximum age for the examination? The limits are now not under 22 or over 27. Do you consider that those ages are suitable, or would you reduce them to 18, and 24 or 25?—Assuming that you cannot ever get a candidate from a business house, there would be no objection to lowering the age to 24 or 25, but, if it is possible to get even occasionally such a candidate, you might leave the door open for him, I think. It might be advisable to lower the inferior limit to 19 or 18. I am not sure that it would be worth doing, because if you want to catch the sixth-form boy he will already be 18 or 19 years old, and he must have a considerable training in languages to follow, apart from anything he has done in school. Therefore, that brings him nearly to 21, and perhaps 21 would be a good limit.

41,562. For the Far Eastern and China Service the age is, I think, 21 to 24?—I think 20 or 21 would be a very reasonable inferior limit.

41,563. That would not enable you to escape the crammer, would it? The boy would leave school at 18 or 19, when he would have completed his secondary course, and there would be two years—between 19 and 21—the lowest age for the examination?—I should hope that he would spend that time mainly abroad.

41,564. You would secure that by insisting upon a high standard for languages?—Yes, and no doubt he would want a little special preparation at the end; but if he had learnt his history, or whatever other subjects were alternative to that, properly at school—for

example, supposing he had done mathematics or science properly at school, and he added the structure of languages—it ought not to take very long for him to revise his work. The kind of special preparation one wants to keep out is that which aims not so much at actual attainment as the mechanical doing of a paper. These papers for the general Consular Service lend themselves to good mechanical work. Any skilful teacher of the kind who takes up this work would know exactly what ropes to handle, and when you raise the standard of the examination, I think, to some extent, you get rid of that.

41,565. A suggestion has been made to us that after passing the competitive examination the candidate should spend a period of two years in a university having a Faculty of Commerce?—Such as Birmingham, for example.

41,566. Yes, such as Birmingham?—I hardly think that is quite the right suggestion. It seems to me that in the first place the successful candidate ought to be in touch with the Foreign Office and the Board of Trade, as now—probably he ought to spend more time there than he does—and I cannot help thinking that he ought to be trained in a great port where there are facilities for obtaining information which would not be found exactly in the same way at Birmingham. It seems to me that everything points to London as the obvious training place.

41,567. What course should he go through during this period of training?—There, I must not pretend that I really know. It is a matter, I think, for people who are in closer touch with the actual duties of a consul than I am; but it is quite clear that he would have to learn a good deal of commercial law and commercial geography, and, I should say, commercial history and political economy (which would be on a realistic pattern), and a great deal about the markets of the world. I have never seen the museum of specimens at the Imperial Institute, but probably, as far as the products of trade are concerned, that might be developed, if it is not already in such a state as to be useful. Then there would be his official relations with the Foreign Office and the Board of Trade.

41,568. What character of official relation? Would you have him go to work in the Board of Trade and the Foreign Office?—He does so at present for a short period, does he not?

41,569. I think only for a few weeks, or something like that?—I think he ought to have more than that, and ought to familiarise himself with the whole nature of consular reports, with what is required by the Board of Trade, and with how the reports are used.

41,570. You would have him spend a certain time in the Consular Department of the Foreign Office and at the Board of Trade to make himself acquainted with the character of the work?—Yes.

41,571. That is to say, to be employed as a young clerk would be for a time?—Possibly that would be the way.

41,572. Would you have him employed at all in actual commercial work in, say, the Port of London office or the office of a large commercial firm?—I think if the right kind of work could be found, and if you could find employers willing and public spirited enough to help, that would be a valuable thing. What I really do not know is, how far in any one organisation, even in the Port of London—which, I suppose, would be the best place—he would get quite the experience that you want him to have.

41,573. Would you have the first examination an open competition?—I think not. You mean whether there should be a nomination to compete or not? I think the question of nomination is extremely important. I do not think you can dispense with it for these particular Services.

41,574. We are talking now about the general Consular Service?—Yes, I think it is important for the general Consular Service.

41,575. Will you explain why you think so?—Directly one begins to deal with recruiting for this Service one finds that there is—it is rather difficult to describe it—a kind of cosmopolitan population, people who spend most of their time abroad for various

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

reasons, who are British subjects, but who are not the typical Englishmen you would wish to have representing the country. I think that is one strong reason.

41,576. Are you at all influenced by the desirability of getting young fellows of good demeanour and of good address?—I think that is important too, but I think we shall not find that they come from any particular class. I am quite sure that the income of their parents has nothing to do with it. But anybody who watches Englishmen dealing just in a common way with, say, Frenchmen in an hotel, or anywhere abroad, will see that there are very marked differences of behaviour, and many foreign nations are extremely sensitive to slight differences of manner. Therefore if it is possible to ascertain that candidates have quiet, good manners without aggressiveness, offensiveness, or any marked peculiarity, that is to the good.

41,577. Turning to the languages that men recruited for the general Consular Service should know, should French be one?—French and German, and, of course, Spanish, is very important nowadays.

41,578. Do you think that not more than one language should be obligatory?—I think I would make two languages obligatory, but I would have a very high standard in one of them.

41,579. What two languages would you make obligatory?—I see no objection to the present arrangement of French and German, or French and Spanish.

41,580. French and German are obligatory in the Diplomatic Service, but not obligatory in the general Consular Service?—No. Here what is obligatory is either French and German, or French and Spanish.

41,581. You prefer French and German?—I think not. I think the present is a very good arrangement as far as I can judge of the utility of the languages; but if you are going to increase the standard of the examination in other subjects of general education you will probably have to compensate to some extent for that by not having a high standard in both languages. My feeling would be, that if a man has learnt one language really well, much better than the present examination implies, he is on the way to becoming a linguist and his second language will come very easily to him; if he has begun it, he will soon make something of it.

41,582. Would you be content with the 300 marks for French or would you raise the marks for French to 400 and leave the marks for German or Spanish at 300?—I think I would leave them on an equality so far as I can see at present—I am not quite sure about the bearing of that—only I would make the pass marks in French very high—perhaps two-thirds of the total. The colloquial test should be a severe one, and also the written test.

41,583. At Cambridge you teach for a period of one or two years the gentlemen who pass for the Levant Services?—For the Levant Service for two years.

41,584. Do you teach them political economy, commercial law, or any of those subjects?—Commercial law, yes. There is a very elaborate syllabus of law which includes besides commercial law the subject of consular jurisdiction.

41,585. Do you think that the Cambridge curriculum would be suitable for recruits for the general Consular Service during the period of their probation?—It contains certain things which they would not want. It is rather wider in some directions, but I am not prepared to say if it is wide enough in others. They have special consular jurisdiction in Turkey and in Persia.

41,586. At the university they would not have the advantages or facilities which we have been talking about in connection with trade here in London?—No. On the other hand their duties are very largely diplomatic and political.

41,587. I am not dealing at present with the Levant Service, but only with the general Consular Service. So far as you can see, the recruits for the general Consular Service could not be so suitably trained at Cambridge as at the port of such a place as London?—Not so suitably.

41,588. Are you satisfied with the pay that the general Consular Service gets?—The pay of the general Consular Service is a very large question, and I do not think there is such great dissatisfaction with that as

there is in the other two Services. The fact is that the men hope to get a position in Europe, and in many places in Europe the pay, though not very high, is, according to the standard around them, fairly comfortable; but I think an increase of pay on the whole would be an advantage. You cannot suppose that a Consul-General in New York with 2,000*l.* a year can be properly paid.

41,589. You think that sum would not be excessive pay for the Consul-General in New York?—I think it is very little, considering what one hears of the cost of living in New York. He gets 2,000*l.* a year if I am not mistaken.

41,590. If his allowances are taken into account he does?—Yes, I think he has special terms. I see that he has 1,200*l.* salary and 1,200*l.* allowance. Generally the United States salaries strike me as very low, considering the level of the cost of living there. I do not know enough about the cost of living in South America to be able to make suggestions.

41,591. We are told it is very expensive in Brazil and the Argentine. That is all I want to ask you regarding the general Consular Service, but before passing on may I sum up the effect of your evidence as follows: the existing examination for the general Consular Service admits of improvement?—Yes.

41,592. The course you advise is a higher standard of literary examination, with a period of training afterwards?—A higher general educational standard.

41,593. A high general educational standard with special reference to high proficiency in one European language and a lesser degree of proficiency in another European language, both being obligatory?—Yes.

41,594. Then you advocate a period of training which could be carried out most suitably at a port, such as London, that training to be partly practical and partly theoretical?—Yes.

41,595. The practical part would be under the control of the Board of Trade and the Foreign Office in conjunction with some great body like the Port of London Authority or some commercial house if a suitable arrangement could be made?—Yes.

41,596. That that period of training should be conjoined with teaching in the subjects you have mentioned—political economy, commercial law, and such like?—Yes.

41,597. And such further training would be in the course of time tested by examination, I suppose?—Yes, there would be a final examination.

41,598. At the end of the training you would require an examination?—Yes.

41,599. Notwithstanding the desirability, if possible, of getting men with commercial experience, you think that the success of the Waldron Committee's recommendation in that respect has been so small that it is better to alter the general plan, and trust to the system you have indicated of examination and subsequent training?—I think we are driven to that conclusion.

41,600. But if there were a young fellow who had acquired a good commercial training, you would make it possible for him to be recruited also?—Yes.

41,601. But that would be outside the scheme of regular recruitment?—Not if you retain the present age limits.

41,602. You think the age ought to be from 21 to 24 as the rule?—That would be good as the rule.

41,603. But if young men with commercial training did present themselves they might be admitted even of higher age?—Yes, that would meet the case exactly—very much as the service in the Army and other Government services counts at present.

41,604. We might do it in that way. If a man over the maximum age limit but with commercial training presented himself, he might be allowed to deduct one, two, or even three years from his age in proportion to his commercial experience, and so bring himself within the age limit?—Yes.

41,605. With regard to the pay, you consider that the pay of the higher grade of appointment—the Consul-General and so on—is not high enough?—I should have thought not in some places.

41,606. Does that objection also hold good regarding the lower appointments—vice-consuls and consuls?

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

The vice-consul begins, I understand, at 300*l.* and goes on to 500*l.*; the consul from 600*l.* to 800*l.*; and the Consul-General from 900*l.* to 1,200*l.* But if you have not thought over the matter particularly I will not press for an answer?—It is a very large scheme, and, of course, I only know a few of the younger consuls, and they are in special places. At Sebastopol, for instance, I should think 400*l.* a year did very well for a while.

41,607. The gist of the evidence, I think, has hitherto been that the scale of 300*l.* to 500*l.*, 600*l.* to 800*l.*, and 900*l.* to 1,200*l.*, if supplemented by local allowances to make up for the expensiveness of living in particular places, would do?—Yes, I think so, if supplemented with local allowances. I notice there are a good many. Probably it is not very far from the mark.

41,608. Some of the pay is attached to particular places. For instance, there are only four Consuls-General, I believe, and in order to draw the full pay of a Consul-General, you must be stationed at one or other of certain places; that is to say, the pay is attached to the place. On the other hand, it has been suggested that that arrangement may very often be inconvenient. A man may rise to the top of the tree and be entitled to promotion—to the 1,200*l.* grade—and yet it might be inconvenient to the public service to remove him from the place where he is, while, if he is not removed, he will suffer the hardship of being denied the promotion. Do not you think it would be better that the pay should attach to the individual and not to the place?—In the case of these large places?

41,609. As a general rule, should not the pay be attached to the individual and be regulated by his merit and seniority in the Service?—Provided you have an adequate system of local allowances, obviously that would be good.

41,610. Have you formed any idea as to the desirability of associating the general Consular Service more closely with the Diplomatic Service, and making transfers from one to the other more easily?—I have not thought about that, and I should not like to express an opinion without consideration.

41,611. Are you quite satisfied with the examination for the Levant Service?—Yes; we have thought about that a great deal at Cambridge, as we have to deal with the student interpreters afterwards. It is an examination which I think you would not defend *a priori*, but in practice it turns out a very capable linguist, and in view of the fact that these men have to know Arabic well, something of both Turkish and Persian (one of them well, and quite a good knowledge of the other), and possibly Russian also, the paramount consideration is obviously that they should be linguists who will not be overwhelmed with that requirement. In practice we find that this examination does produce that, the fact being that when a man is capable of learning three or four languages, he acquires a certain dexterity, and the other languages are not so difficult as they would be to anybody who began with them.

41,612. The system of nomination previous to examination prevails in the Levant Service?—Yes.

41,613. Do you think it is necessary for the reasons that you have given already?—Yes, for the same reasons, I think. The examination is very strongly weighted with languages, and you have this particular type of men whom I mentioned, who I do not say should be excluded, but who should be admitted with judgment when they are suitable. Then, of course, in Turkey especially, the question of a certain standard of manners and bearing is astonishingly important. The Turks are extraordinarily sensitive to small gradations of manner, which perhaps a European would not notice.

41,614. Would you introduce into the examination for the student interpreterships any knowledge of history?—I should be very much afraid of altering that examination at all on any theoretical grounds. They have quite enough to do, as you see from the scheme, when it is realised that all those languages are obligatory in practice, as nobody has a chance of selection unless he has studied all four languages. Of course in their subsequent course they do learn some history of the countries to which they are going. That is part of the curriculum.

41,615. What is the character of the professional training that you carry out at Cambridge in connection with these Levantine cadets?—I have here, and I may perhaps hand in, a copy of the final examination papers. The staff is controlled by Professor Browne, who is our director of studies, appointed by the university for the purpose. Professor Browne is assisted in the first place by the university lecturer in Persian, Dr. Nicholson, a distinguished Orientalist, and by the university lecturer in Russian, Mr. Goudy. He has also under him three very carefully chosen native scholars. There is a Sheik from Egypt, and great care is taken over his selection by the Government of Egypt, and he is lent to us for periods at a time. There are also a Turk and a Persian. The work in the Oriental languages is carried out very much on the system which is employed in the *École des Langues Orientales* in Paris or the similar school in Berlin. In other words Professor Browne breaks the ground with Arabic, and a great deal of the first year is spent on Arabic as being the key language, and there is always at his side lecturing conjointly with him a native scholar. They begin with a certain amount of classical Arabic and go on to colloquial Arabic. They study the newspapers and official documents and so on—every form of the language; similarly in Turkish and Persian. That is a very complete system, which works very well, and I understand the method is extraordinarily successful. Then they have Turkish and Persian history. They have Russian, not obligatory, but a large number of the candidates take it; it is understood that some of them must take it. They have a certain amount of instruction in French, and we use for that purpose one of the French lecturers, usually a *professeur de Lycée* attached to the university, who does a certain amount of French conversation with the student interpreters. They are also bound to spend at least a month a year in France, which keeps their French in a mobile state. Finally there is the course in law, which is very important, because it is not only the ordinary law which a consular officer should know, but also the question arising out of the Orders in Council for Turkey and Persia. I have a short note here drawn out by Dr. Higgins on the course which he gives, which I might put in.\*

41,616. Do these young gentlemen acquire such proficiency as to read an ordinary manuscript in Arabic and Persian?—Yes. Of course you cannot be certain that any one of them will be proficient in Persian or Turkish; but in one or the other they will be good. I am told that certain forms of manuscript are such as to baffle even the most competent, but they can certainly read an ordinary plain clear script.

41,617. Just as everybody does not write legibly in English?—That is so.

41,618. Are you satisfied with the scale of pay for the Levantine Service?—I think that the student interpreters' 200*l.* a year at the university should be sufficient. They have to pay 30*l.* to the university in fees, and the remainder they have to live on, and if they exercise reasonable economy, I do not see that they should want more.

41,619. Are they allowed to gain scholarships or prizes?—There is nothing provided. Directly they go out they become assistants at 300*l.* a year. I have never heard them complain of that, but I have heard complaints of the fact that they have to wait about 16 years, as the average of the last six cases, before they are promoted to consuls at 600*l.* a year. I think one must admit that that is quite inadequate.

41,620. Is the recruitment very equable or are there jumps. Are a good many recruited one year and very few the next, or do they recruit by percentage?—Recruitment, unfortunately, depends on the occurrence of vacancies, and that has been one of the great troubles with the school at Cambridge. Formerly we had a dozen student interpreters in residence, and then they dropped down to two or three, and now we have nearly a dozen again.

41,621. But do not the requirements of the Service proceed on fixed lines? Can you say whether the

\* *Vide* Appendix LXXXII.

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

number of posts which these gentlemen fill is a fixed number?—Yes, I think they are approximately fixed.

41,622. If so, there ought to be a possibility of recruiting according to a percentage?—It is very desirable that that should be done, but one meets this difficulty in every Government office. For some reason or other at some epoch in the last 30 or 40 years appointments may have been few, and then a number of appointments may have been made simultaneously. Once that is done the mischief is there, and is difficult to get rid of.

41,623. Our English Services have largely increased owing to legislation and departmental expansion, and recruitment on a percentage is not always possible; but where you have a particular number of posts to be filled, and wastage to be provided for, it should be possible, I should say, to recruit according to a percentage?—I wish it were possible; probably departmental expansion caused the difficulty.

41,624. (*Sir Donald MacAlister.*) Was it not the case that from time to time they used to transfer the students bodily to another university?—There was a time when they did it.

41,625. That was how the denudation took place?—No; it was due to irregular occurrence of vacancies in the Service. The denudation I speak of took place after the school was established at Cambridge.

41,626. In your experience, and mine, they would send, for example, all the student interpreters to Cambridge for two years, and then send them all to Oxford, and the result was that two schools had to be maintained each working only half time?—Yes, that was the case.

(*Chairman.*) Was it to ascertain which was the better of the two places for them?

(*Sir Donald MacAlister.*) I think the idea was that each university should have its turn, and it did not occur to them that, as a result, it was necessary to carry on two distinct schools.

41,627. (*Chairman.*) (*To the Witness.*) Have you any other point on the pay subject?—I would not say that the higher prospects in the Service are what they should be, I think they should be distinctly improved. If you look at the prizes they are very few.

41,628. Is 1,200*l.* the maximum?—There are two Consuls-General at 1,200*l.* and five Consuls-General at 1,000*l.*, and one consul has 900*l.* I certainly think when a man attains the rank of consul, he should, if possible, have at periods a regular increment of pay from 800*l.* onwards. But, perhaps because I know the younger men in the Service better, the long wait of 16 years to reach 600*l.* a year has been brought to my attention particularly.

41,629. They might get some little addition by allowances for languages and law?—I think the allowances they get are merely in the nature of local allowances. There are language allowances in the Diplomatic Service and in the Foreign Office.

41,630. They have language allowances for China, but not for the Levant. You have eight allowances of 100*l.* and nine of 50*l.* for languages in China, but that is a different Service. To stimulate the younger men acquiring a knowledge of modern languages, are they given any allowance in the Levant Service?—I think not.

41,631. Can you tell us anything about the Far Eastern Service—the China Service?—Yes, something.

41,632. The examination is the same as for the Indian Service, except that the maximum limit of marks is less?—That is so.

41,633. It agrees in that respect with the Diplomatic Service?—Very nearly, except that one language only is obligatory—French.

41,634. You have no suggestions to make regarding any improvement or change in that examination?—No. This Service has always been rather difficult to recruit for, I believe. The old scheme which was in force before 1910 was, in standard, more like the general Consular Service, and it was not satisfactory. Professor Giles, the professor of Chinese at Cambridge (who was himself a distinguished officer of the Far Eastern Service before he retired), had always urged very strongly that this particular scheme—that is the

scheme in vogue since 1910—should be given a trial, because he said: "You have here a class of candidate who may be supposed to be destined for the East and has made up his mind about it, and in time you will get there a very valuable recruiting ground which you would not get elsewhere."

41,635. That is on the basis of the existing syllabus?—Yes. That is why the syllabus is rather governed by the Indian Civil syllabus, in order to catch the same class of man who is preparing for India.

41,636. Do they catch the same class of man, or do they get the people who are low down on the list for the Indian Civil Service?—At present they do get the people low down on the list. Men are chosen who are qualified for this Service, and they very often get the offer of an Indian appointment, and they usually choose that in preference.

41,637. You have no suggestion at all to make as to altering these rules at present?—I think the examination has been on its trial for only a very little while.

41,638. If it be so, would the same objections to interference also hold good regarding their salaries? Are you satisfied with their salaries?—I am not at all satisfied about the salaries. I think that is a serious drawback. I am told over and over again that it is very difficult for them to marry at any reasonable period of their life.

41,639. They begin at 250*l.* a year while they are students. Then they get their first step, on passing an examination, into what is called an acting assistantship, when they get 300*l.*?—Yes.

41,640. Then there is the second-class assistant at 350*l.*?—Yes. It takes about six years to get to that grade.

41,641. And then first-class assistants get 400*l.*?—It takes 10 years and 6 months to get up to 400*l.*

41,642. You think that is too long?—Very much too long. 400*l.* a year is what a first-class business house pays its young men of 22 in Shanghai. Though one would not expect the salaries in the Government service to be as good as that, still it is obvious that the standard of living must have effect.

41,643. Have you had complaints made to you to that effect?—We have taken a great deal of trouble at Cambridge about the officering of this Service. I notice, for example, simply because we have taken the trouble to let people know about it, that of the last 14 vacancies, seven are actually filled by Cambridge men. My constant difficulty has been this: We get the consuls—we have had a couple of them in the course of the last 18 months to lecture for us—and when they are pressed as to how far their stipend goes, and what are the material prospects of the Service in the first 15 or 16 years, they are apt to say, "Well, that is a weak point. You must, unless you have some small private means, be prepared either to be a bachelor or to live a life of great economy, and to drop out of society altogether, which is not good for your work."

41,644. Are you prepared to make any suggestion as to what improvement should be introduced?—I think the salaries in the East ought to be very much higher than they are anywhere else, because of the necessity of sending children home to be educated. The ideal would be that in 10 years they should be getting not less than 800*l.* a year by one means or another. That would not represent what a man in a commercial house, if he does moderately well, gets.

41,645. (*Sir Donald MacAlister.*) What salary would an Indian Civil servant who enters by the same examination arrive at in 10 years?—It depends on the promotion.

41,646. (*Chairman.*) In 10 years he ought, in normal times, to be an acting collector, drawing about 1,200 rupees a month, which would be something under 1,000*l.* a year?—That was the sort of scale I rather had in mind.

41,647. (*Sir Donald MacAlister.*) An Eastern cadet may even be higher on the list than the man who gets into the Indian Civil Service?—Yes. Then, of course, an Indian Civil servant goes very much further than that, and these consuls stop very much short of anything the Indian Civil servant gets.

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

41,648. (Chairman.) The China cadet begins at 250*l.*, while the Levant man begins at 300*l.*?—Yes.

41,649. And the general consular man begins at 300*l.*?—Yes.

41,650. Do you know whether houses are provided for men in the East?—Yes, as a rule a house is provided.

41,651. And they get free medical attendance, as in the Indian Service, I understand?—That I do not know. There is a house provided, and sometimes a local allowance in the Far East, but that is in about 14 years. I do not think anybody who is below the rank of vice-consul gets a house provided, but he may have quarters. I imagine the assistant would not have a house.

41,652. We will verify that from a witness from the Far East?—The fact that it takes 10½ years to get 400*l.*, and nearly 14 years to become a vice-consul, are the things that have struck me about the Service.

41,653. That is a point which you think should be looked into?—Yes.

41,654. (Miss Haldane.) Do you think they should learn the language at home, as we are told the Russians do?—That is a matter really for the authorities at Peking. They may think that the whole surroundings are so strange that the best way of acclimatising the student-interpreters is to have them sent out as soon as they are of age to go. I cannot offer an opinion at all.

41,655. We were told that Russia and other countries teach them the language before they go out?—One's feeling is always in favour of getting some rudimentary instruction, at all events, in the language before one falls into the hands of a native teacher; but I think the question is rather broader than that, and it is a question of what the Ambassador at Peking would think the best way of doing it.

41,656. (Chairman.) Are you prepared to give us any information regarding the Diplomatic Service?—I see some of the candidates.

41,657. You see some of those who go to the Foreign Office and some who go into the Diplomatic Service?—Yes, both.

41,658. Do you think that they are pretty much alike or that one class of man is better than the other?—They are very much the same. One class is a little richer than the other, but I do not think you would distinguish them. The Foreign Office competition is rather more severe.

41,659. But if it were a question of amalgamating the two Services and bringing them on the same list, there would be nothing to prevent that in the intellectual equipment of both?—No, I do not think there would.

41,660. (Sir Donald MacAlister.) Have I got your idea aright, that after reflection, you would suggest for the general Consular Service an examination like the intermediate, with a higher requirement in languages, especially French?—I think it would be higher than the intermediate. I take it the Levant standard is higher than the intermediate standard.

41,661. (Chairman.) I do not think it is (*hands the Intermediate syllabus to witness*)?—There are more subjects in the intermediate; but I still think the Levant standard higher.

41,662. (Sir Donald MacAlister.) And the age limit 21 to 24; or, if he had some approved commercial experience, higher?—Yes. What I mean is that in the intermediate standard you have a large number of subjects just suitable for a schoolboy as he leaves school. The standard of the Levant Service is not suitable for a boy leaving school, for a boy as he leaves school could not possibly pass it. He has to learn a great deal about four modern languages.

41,663. I am speaking of subjects other than languages?—No doubt the Latin and Greek in the Levant Service are of about the same standard as Latin and Greek in the intermediate.

41,664. But your idea, as I understood it, was to have an examination which would correspond rather to that of a completed secondary education than one which requires special preparation either by a crammer or at a university?—Yes; but I would have it in a small number of subjects. I would not compel the boy to get up all his mathematics, or all his history, or all his science, or whatever it might be.

41,665. Then you mean it would be somewhat easier than the intermediate?—No, I do not think so. It might be a matter of standard. Supposing you examine him in French and German and, say, two periods of modern history, and English, you can pitch your standard of history as high as you choose, or the same would be true if you wish to examine him in natural science. You can make the comparatively few subjects of as high a standard as you choose.

41,666. There is a matter of principle in it, so we had better have it clear. We have been trying, in the earlier part of our labours, to assimilate the competitive examinations in general education by which students enter the Service in various grades to what they would acquire in the ordinary course of education at the age of entry. Are you suggesting that a special examination having no particular relation to the ordinary system of education at the particular age of entry should be established for this purpose?—I think there is a very definite reason why this examination must, to some extent, cut across the ordinary system of education; you must get your two languages clear and good.

41,667. I am keeping them on one side and only speaking of the general education?—Does not that affect the question, because, after having learnt your languages abroad, when you come back it is very hard that you should be turned into the sixth-form school-boy again and have to have at your fingers' ends exactly what you knew when you left school. You might keep one or two subjects going yourself.

41,668. Then you are deliberately opening the door to cramming?—I do not know. I think the danger is quite as great the other way, or greater, because you could easily find teachers who would brush up mathematics, a little history, a little natural science, and so on, up to a relatively elementary standard.

41,669. What is the advantage of a competition conducted upon that principle in which English, mathematics, and so on, have to be brushed up?—I suggest that it is not an advantage; I want to get rid of it by reducing the number of subjects.

41,670. But owing to your system it requires to be brushed up?—I think not. I want to restrict the number of subjects rather severely to two modern languages, and perhaps one group of subjects of general culture.

41,671. And the latter would have to be kept up, or brushed up, or crammed up?—No doubt the men would have to pay some attention to it, but I think the more objectionable forms of cramming would be avoided.

41,672. Practically, therefore, it comes to this: That you would lay the whole stress of the competition upon the languages, with some assurance that a general education had accompanied them?—I want to make sure that there is a high standard of general education, certainly.

41,673. Is there any advantage in having a separate examination from Class I., say with a lower maximum and a higher requirement in languages?—I think you might conceivably arrange a series of subjects from the Class I. examination to meet the case.

41,674. You do see that there are disadvantages, from a theoretical point of view, in having a special examination at a non-educational age—if I may use the expression—in a small number of special subjects. The competition in that would be limited by the power of the candidates to get special training for it, apart from school, university, or college?—It seems to me to be a logical corollary to the necessity of learning languages, that you have to have this break. I do not think it is ideal.

41,675. Then might not it be desirable to have what one may call a qualifying examination in general education and a competitive examination in languages afterwards?—I do not think you will get the requisite standard then, will you?

41,676. It depends upon how high the qualifying examination is?—Certainly.

41,677. Supposing the candidates for the Consular Service were required to enter for the intermediate examination, and were selected by competition as qualified when they had passed that, and then later on had a

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

special examination in the languages which you referred to, in which their places in order of merit would be given, would you not correlate an examination like that with the schools on the one hand, and on the other permit of the special proficiency in languages being tested? Perhaps it wants thinking out?—Yes, I think it does.

41,678. But an essential part of your plan is that however the entrance competitive examination is framed a year at least, perhaps more, of probation should be spent by the selected candidate, say, in London?—Yes.

41,679. Is it one year only that the Levant students have?—They have two years.

41,680. But you think for the general Consular Service one year of probationary period would be sufficient?—No doubt something could be done in one year.

41,681. All that is required?—Perhaps almost all that is required.

41,682. Much more anyhow than is now obtained?—Much more than is now obtained. It would depend a little upon what time was spent at the Port of London, supposing the candidate were partly trained there.

41,683. But this practically presupposes the organisation of what one may call a consular school in London, in which that year might profitably be put to use?—I do not think it would be worth while, nor, indeed, wise perhaps, to create a special institution for the purpose. I think that probably the London School of Economics could be utilised. Where you have an institution of that kind doing very good work it seems to me rather a reason for bringing the course to its door.

41,684. I was not speaking of a separate school, but rather of an educational organisation. The year would have to be organised for consular instruction or probation?—Yes.

41,685. Very much as you have organised the school for Levant cadets in Cambridge?—Yes, very much.

41,686. And then they might put in their special subjects, which are proper to be included for their career, but not proper to be included in their competitive examination?—Certainly; that would be right.

41,687. With regard to the Near Eastern Service, the experience which has been gained with regard to the training of cadets for the Levant Service has been wholly satisfactory, I think, so far as you are aware; that is to say, the preparation in the languages (colloquial and classical) for one or two years has made it extremely easy for them to pick up what further proficiency they require on going out to their posts?—Yes. I should like to say that there has been, we think, a great improvement in standard since the university has had full control of this matter. There was a time when it had not, but the university now conducts the examinations itself, and the results have greatly improved.

41,688. You spoke of Professor Giles having proposed, suggested, or recommended a system which came into force in 1910 for the Far Eastern Service?—Yes.

41,689. Did that exclude the possibility of a year of preliminary instruction in Chinese?—No, it does not exclude it. If it were thought desirable, that certainly could be added.

41,690. It has not been included in practice?—No, but the possibility has not been excluded. The question has been raised from time to time, I believe.

41,691. I wanted to know if any decision had been come to by those who are experts in Chinese?—I suppose that the Ambassador at Peking has never pressed strongly for a year's training at home.

41,692. A previous witness, who was actually out in China, and who learnt the language from a native instructor, told us that in his view it was not desirable that they should know any Chinese before going out, but that they should begin at once with the native instructors, although there were obvious difficulties about it. Has any opinion upon that point been expressed by Professor Giles, or the other experts in Chinese in this country in relation to the consular system?—No, I do not think so. I do not know what Professor Giles's opinion would be, but I do not think he has ever pressed strongly for training in this country.

41,693. But basing yourself on the Levant experience you see no reason against requiring or providing for preliminary knowledge of a rudimentary kind in Far Eastern languages before the students go out?—It is obvious that you could do a great deal with a year's training, not only in the language—the importance of beginning which one must leave to an expert—but in these other subjects which are as important in that Service as in the general Consular Service. Do you know that the Hong Kong and Shanghai Bank takes the trouble to get its employees, or some of them, taught Chinese beforehand?

41,694. I know that every Oriental Service except our Consular Service does?—They are very carefully trained in Peking.

41,695. (*Chairman.*) Does the Hong Kong and Shanghai Bank have them trained here in England?—Yes, they are taught in London.

41,696. By Englishmen who have been to China and learnt the Chinese language?—I take it that those are the instructors.

41,697. (*Sir Donald MacAlister.*) There would be no difficulty in providing for corresponding instruction in the rudiments of Chinese, such as you are providing for instruction in Arabic, Persian, and Russian?—No difficulty at all.

41,698. Is the reason for the official view, which is that the students should go out at once, possibly a financial one?—No doubt money would have to be found.

41,699. The Levant cadets when they go to the school of living Oriental languages, to be prepared before going out, are paid for by the Government?—Yes.

41,700. And get a certain amount of maintenance pay as well?—Yes. There is a total of 200*l.* a year provided for each one, of which he pays 30*l.* in fees. Then the Government gives a small grant besides for provision of teachers.

41,701. In saying "the Government," you are speaking also of the Egyptian and Soudan Government?—The Egyptian and Soudan Government help by paying half the pay of the Arab Sheik.

41,702. These three sections of your employers all find it worth while to pay for the preliminary training of those who are going out to the corresponding Service in the Levant?—Yes.

41,703. But the Consular Service in the Far East has no such subsidy to provide for preliminary instruction under the present method?—No.

41,704. (*Mr. Matheson.*) Surely the men are receiving pay when they go out, and are undergoing training in China. It is exactly the same as far as pay is concerned.

(*Sir Donald MacAlister.*) I venture to think it is not the same in amount, or anything like it, because the cost of training in Chinese out in Peking is vastly less?—I suppose so.

41,705. I want also to suggest that when you speak of the cadets for the Far East being as a rule lower down on the list than those for the Indian Service, is not the reason nearly always given that the prospects of the Service are very considerably inferior?—Certainly that is the reason.

41,706. Even students who are high up in the list, if they have the option of taking something other than an Eastern cadetship, will take it?—That is the case.

41,707. It is not that the requirements for the Eastern cadetship practically bring them to the foot of the list by any means?—No; and the same is true with regard to the Far Eastern Consular Service. If you put the pay on a level with what the Indian Government can afford to give, you will I believe at once equalise the competition as between the two Services.

41,708. So that while the examination may be in form the same, the prospects in the several Services to which it opens a way are so different that naturally the best men take the best places?—Yes.

41,709. (*Miss Haldane.*) With regard to the modern language that is studied abroad, would the examination be of a highly educational sort or mainly merely colloquial?—Of course there would have to be a very high colloquial test, but I think the examination ought to be distinctly of a literary type.

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

41,710. For that you would have to study the language in what you may call a scientific way while abroad?—You would go to live in the family of some educated Frenchman, probably a *Professeur de Lycée*—a good schoolmaster, in fact.

41,711. So that they would study not only the language colloquially, but be studying it in an educational sense, you mean?—Yes.

41,712. Do you consider that the present system of nomination and selection, both for the Consular Service and the Diplomatic Service works satisfactorily so far as you know?—So far as I know, it does.

41,713. Do you consider that the plan of a Selection Board is a good one?—I think a Selection Board is very important. I think it most important in the public interest that any attempt by public men of any sort to influence the selection should be discouraged. I have here a paper which has been given me by the Colonial Office, and in dealing with their appointments the Secretary of State has now sanctioned this paragraph which is shown to candidates: "Attempts to influence the Secretary of State's selection through Members of Parliament or other persons who are not personally well acquainted with the applicant are useless, and will be regarded as indicating that the applicant himself does not consider his qualifications sufficiently great to justify his appointment on his own merit. They can in no case operate to the advantage of a candidate, and may seriously prejudice his chance of success."

41,714. (Chairman.) If he is personally well acquainted with the applicant, is influence allowed?—I do not think the paragraph implies that. Of course personal knowledge in some way comes in and is valuable, whether it is the personal knowledge of educational authorities, or others competent to judge.

41,715. I think that is very safe. Any man who wants to preserve patronage might put forward a thing like that and ask all the world to believe that he is going to act differently from what he is doing?—I cannot help feeling that the integrity of the permanent officials is a thing we can rely on very strongly, and the principle of a Selection Board is a very good one.

41,716. (Miss Haldane.) Have you known nominations refused sometimes?—I have.

41,717. Does the 400*l.* a year which is necessary for the entry into the Diplomatic Service as private means, cut off, in your opinion, a large number of candidates from entry?—It makes it impossible for a large number of candidates to enter, no doubt.

41,718. Supposing the Government were to face that matter and get over it in some way which would be good for the Service, should we get a better type of man in? While preserving the Board of Selection do you consider that it would bring in a better type of candidate?—If you preserve the Board of Selection I think you might improve things by giving better chances to the Foreign Office clerk who very often now interchanges with the Diplomatic Service by arrangement, but who often cannot do so because he is too poor; he is the same type of man. But if you did it without the Selection Board I think it would have a disastrous effect.

41,719. If you admitted them without a Selection Board?—Yes. I think if you did away with the Selection Board, anyhow, the effect would be disastrous, whether it is a question of paying an additional 400*l.* a year or not.

41,720. Do you know the constitution of the Selection Board at present?—No, I do not. I suppose it consists of the permanent officials.

41,721. I gather that you think the Service would be a better Service supposing this money difficulty were to be got over in this way, because you would have a larger sphere from which to draw your candidates?—Yes, provided you keep the Selection Board.

41,722. Therefore, it would be for the good of the State?—Yes, I think so. But I should like to say that the quality as judged by the examination of attachés is extraordinarily high. They would as a rule get, as far as I can see, high up into the Indian Civil Service list.

41,723. But has it occurred to you that nearly all the candidates for the Diplomatic Service come from

one particular class of social surroundings?—Of course, the provision of the necessary income does, to some extent, involve that, but there are very wide limits.

41,724. Therefore, you might get men from a wider sphere otherwise?—I think you might.

41,725. Do you think that that would be beneficial as far as you can judge?—Yes, as far as I can judge.

41,726. (Mr. Shipley.) Do you get many candidates through Cambridge for the general consular examination as it exists now?—There is a piece of history about that which is rather interesting, I think. In early days, when the examination was first altered in 1904, we had quite a number of candidates. About that time there were 15 successful candidates, and five of those came from Cambridge. Since what we may call the cramming machinery has got to work, and has become understood, those university candidates have not died out, but they have been much less numerous.

41,727. Do you think we should get more if the examination was held at a fixed time of the year?—Yes, I think it is very important that, if possible, there should be an examination every year, and that the number of vacancies, as far as possible, should be approximately the same in number every year.

41,728. I gather that you think this examination is not very good for picking out the men with great ability?—No, it obviously does not do so. Of course, there are men of great ability who have passed the examination; but I see a case here of a man who took the ordinary pass degree and who was in no way a man of any ability at all, and by dint of restricted education very strictly to what the examination wanted, he finally passed.

41,729. Is there any provision for these young men going abroad supposing they cannot afford to pay for themselves?—There are ways in which they can do it. One of the early Cambridge men was the son of a widow; he had a younger brother, and their means were very small. He went to the Berlitz School as a teacher of English, first in France, and then in Germany. It was very hard work indeed, but he was able to keep himself by exchanging lessons with foreigners. Finally, I think, he got a private tutorship in one of those two countries from the Berlitz School, and his languages were brought up to the requisite standard. He then spent six months at Cambridge, reading law and geography and economics, and then he passed. Then there are the two schemes of the French and German Governments for English assistants in the schools; they might certainly be utilised by the poor man. There is in each *Lycée* one English assistant who acts as a helper to the professor, and gives conversation lessons for two hours a day in English. The rest of the time is his own, and if he is in a university town he can attend the full university lectures for a single fee of 30 francs a year. The French Government provides board and lodging for him. There is a similar scheme in Germany; the German Government gives 1,300 marks, say 65*l.*, for the period of residence, which, I suppose, is about nine months.

41,730. Those posts are rather sought after, I gather?—There are a great number of places. I do not know what the competition for them is at present, but at one time it was very difficult to find enough men to fill them.

41,731. With regard to the Levant people, one of our witnesses told us that no provision was made for the student interpreters to learn any law during their residence at the university. That is surely a mistake, is it not?—That is quite inaccurate. I propose to put in Dr. Higgins's schedule.

41,732. (Mr. Graham Wallas.) He was referring to a period just before this scheme?—I see.

41,733. (Mr. Shipley.) It seems a very happy state of things, but I am told that there is not a single English lawyer in the whole of Persia, and therefore it seems highly necessary that they should have some training. As a rule these student interpreters are not informed what country they are going to, and it seems to me there is a grave danger of their getting up Persian and being sent to Turkey, or getting up Turkish and being sent to Persia or Morocco. Have you heard complaints of that kind?—One of our difficulties is the

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

assigning of the student interpreters to their respective countries. The Foreign Office is fully aware of it, and do their best to have the men assigned to the respective countries as early as possible, but they cannot always tell beforehand where the vacancy is going to occur. It is nevertheless most desirable that at the end of their first year's study they should know exactly where they are going to, for their first period of service, at all events.

41,734. One witness went so far as to say, I think, that if it was known that you wished to go to Persia you were nearly always sent somewhere else?—That is most certainly not so. Every effort is made to send them to the country they wish to go to, but of course the exigencies of the public service must come first.

41,735. (*Chairman.*) But being allocated to Persia does not prevent your being transferred afterwards?—No, you may be transferred afterwards, of course.

41,736. (*Mr. Shipley.*) We are told there is nobody in the Foreign Office who has been in the Levant Service. Do you think there would be an advantage if there was anybody at headquarters connected with the Service who knew it better?—I should suppose it would be an advantage. Are you sure there is nobody?

41,737. That is one of the complaints I have heard, and we have heard the same about the general Consular Service?—I was not aware of that.

41,738. (*Mr. Matheson.*) Miss Haldane spoke of the Selection Board for the Foreign Office and Diplomatic Service. We understand it consists of the Under-secretary of State, his private secretary, and any diplomatist of position who happens to be available at the time. Some of us think it might be of advantage to have one of the Civil Service Commissioners, and possibly some other person of independent position, to enlarge and strengthen the Committee. What should you think about that?—I can see no objection to the inclusion of one of the Civil Service Commissioners.

41,739. I think it is clear that if the qualification of property were removed it would be very important that the Selecting Committee should be a strong one?—Yes, as strong as possible.\*

41,740. (*Mr. Graham Wallas.*) If it were decided to give a preliminary training in Chinese in England to the Far Eastern cadets, have you a native Chinese scholar at Cambridge?—No, we have not at present.

41,741. Do you think it would be possible for you to arrange for it?—I am sure it would be quite easy to arrange if it were thought desirable.

41,742. Such a native scholar would have the advantage of knowing English?—Yes.

41,743. We were told in evidence that no one who teaches these men out in China knows any English?—I have no knowledge of this, one way or the other.

41,744. Under the existing arrangement your men for the Levantine Service come into the university term at all sorts of odd times?—We have minimised that, and I think in future, as far as possible, they will join at the beginning of the October term. The difficulty hitherto has been that the necessary formalities have not always been completed. They have, for example, sometimes not been vaccinated, and the Civil Service Commission has not been able to issue a certificate; but now we have obtained permission for them to attend at the beginning of the term so as to begin altogether, and the Treasury has consented, on certain conditions being fulfilled, to date their allowance from the beginning.

41,745. I had a complaint the other day that they sometimes arrived in the middle of the second term, exactly bisecting the university year?—That used to be very frequent.

41,746. But that has completely disappeared now, and all candidates will in future begin at the beginning?—We are in the way of doing that. Unfortunately this year more vacancies were declared rather late, and the men had to begin at the beginning of the second term, though even that is not so disastrous as beginning in the middle of a term. The point is that it is very

important that they should begin at the beginning of the university year if possible.

41,747. As to your training scheme for the general consuls, they are to remain in some great port and receive organised instruction in a succession of subjects which will be technically valuable to them. Would you examine them in the whole of those subjects at the end of their course or let them get up one subject, pass in that subject, and then go on to the next?—I think I should examine at the end with a view to keeping their minds a little free of examinations for a time.

41,748. To let things soak in a little bit instead of disappearing. You know in many Continental countries there is a somewhat different scheme. Instead of the training coming after selection, selection is made from persons who have received a certain training. A man goes through an approved course which will qualify him not only for the Government service but for certain other higher commercial work, and then, having gone through that course, he becomes a qualified candidate for the examination. Have you ever considered whether it might be possible that our Government might, in a considerable number of universities, approve an appropriate course, and then say that the examination will be open to those persons who can show that they have been through that course?—I have thought about that from time to time. I have tried to gather opinions, and one opinion I have heard quite frequently expressed is that the success of those Continental schools, in France for example, is very largely due to the fact that hitherto the diploma of the school has excused men from military training, and the pressure caused by that has ensured a large supply of candidates. What one wants to know is, if you train your men before selection, what is going to happen to the 95 per cent. of them who are not selected.

41,749. I am assuming that the course is such that it is suitable, not only for the Government's Consular Service, but for other forms of business and commerce?—You will end such a course at what age—22 or 23?

41,750. You are now in Cambridge trying to train young men for the higher ranks of business?—Yes.

41,751. And you advise them in Cambridge to take a certain course?—No, we do not do that.

41,752. If a young man came to you for advice you would say: "If in Cambridge you take modern history " or the economic history or one thing or another, we " can give you a course which you will find useful to " you"?—I am afraid that is not the advice that I should give. I should say: "Do as well as you can " the subjects on which you are engaged now, what- " ever they may be—whether classics, mathematics, " natural science, or economics—make your academic " record in that as high as possible. Learn to be a " clear thinker." That is the advice I should give him.

41,753. If he came to you as a freshman in the first year would you say you were quite indifferent whether he took history or anything else?—No, I should think it was not my place to advise. If I knew him well, and knew what he was capable of, I should not say necessarily history or languages, but advise him to take the subject in which he was strongest.

41,754. (*Sir Donald MacAlister.*) You would not advise him to specialise with an immediate view to his business career?—No.

41,755. (*Mr. Shipley.*) You want trained brains?—Yes.

41,756. (*Mr. Graham Wallas.*) It has been suggested that for the Diplomatic Service it might be possible to give up the arrangement of the 4,000 marks and substitute the sort of arrangement of modern subjects covering 6,000 marks which Mr. Stanley Leathes proposed. Have you read his evidence on that point?—I have not seen his recent evidence.

41,757. If we could manage that instead of merely competing for 4,000 marks, the future diplomatist competed for 6,000 marks, you would have the advantage of it being also a preparation for other Government offices if he did not succeed in getting in?—I think that the whole examination would be improved if the maximum were 4,000 marks instead of 6,000 marks.

41,758. There are certain obvious advantages if you can have the same standard for the Foreign Office and

\* I am of opinion that the number of the Selection Board should in any case be small; and on reconsideration I think that a modification, if any, in the existing composition of the Selection Board should be limited to the addition of the First Civil Service Commissioner.—H.A.R.

18 June 1914.]

Mr. H. A. ROBERTS.

[Continued.]

the Diplomatic Service as for the rest of Class I.—Certainly.

41,759. That might enable you to get a larger number of quite suitable candidates for the Foreign Office and the Diplomatic Service?—I think there is quite a large number of candidates already. I do not think there is any difficulty at all about the supply.

41,760. You think that at present the Board of Selection works so as to choose absolutely the best men from the whole possible source of supply?—As I understand it, the Board of Selection only exercises a negative influence; they will nominate very widely. I think that anybody who knows these candidates as a whole will place the Foreign Office clerks in the first rank of all the candidates for the Home Civil Service, the Indian Civil Service, and the rest. That is my impression.

41,761. We have the figures here from 1908 to 1913, and of the successful candidates just two-thirds came from one public school, Eton?—You are speaking of the Foreign Office clerks?

41,762. Yes, not the diplomatists. There is no question of income here; it is simply a question of the suitable person?—Yes, I see there are a certain number of Etonians.

41,763. Two-thirds of the whole body came from Eton?—Is that not accounted for by the high standard of Eton scholarships? A large proportion of them are King's scholars.

41,764. Would you say that the Eton scholarships are higher than Winchester?—At least as high. I should not say higher. I should think it is a mere accident that there are no Wykehamists there too. I should have thought there would be.

41,765. There is one Wykehamist, but out of the entire body of candidates two-thirds come from Eton?—I think that is only an accident. I think they tell one another what their aim in life is, and so a kind of tradition is established. I am sure it is so, in fact.

41,766. (Chairman.) You say that the Foreign Office clerks stand higher than the Home or Indian Civil Service?—That is my general impression.

41,767. That has not been borne out by other witnesses. I have here a list of Foreign Office clerks who passed in August 1913: none of them took either Greek or Latin?—Does that matter?

41,768. (Mr. Graham Wallas.) But the Eton scholarships are Greek and Latin?—Yes.

41,769. (Chairman.) You say they are of higher mental equipment than the others, but, if you exclude Greek or Latin, you do not compare the same things; I have here the classes they took in the year 1913. There were four firsts, four seconds, a third class, and a fourth class?—I have here four candidates successful in August 1913.

41,770. I am talking only of the Foreign Office candidates, and I see that none of them took Latin or Greek?—No.

41,771. Would you say that these are of the highest class?—Take the one at the top; he happens to come from Cambridge.

41,772. He got good marks in French and German, and he took Roman history, English history, political economy, and political science. That is a very fine education, but would you say it would be quite as good

as that of an Oxford first-class Honours man?—Had he gone to Oxford, he would presumably have been an Oxford first-class Greats man. He came to Cambridge as a classical scholar; he had done Latin and Greek before he came up to a very high standard and obtained a good scholarship. He lays aside Latin and Greek and proceeds to read history, and I think he read that throughout his career at Cambridge. But I was thinking of the total marks. He gets out of the 4,000 maximum 2,400, and about the 47th of the candidates out of the 6,000 total marks on the general list gets about the same. Supposing he had been a 6,000 marks candidate—and he would certainly have gained very high marks in classics—you cannot tell where he would have come. It seems to me he would have been at the top of the list.

41,773. What marks did the first man get in that year in the general list?—3,300.

41,774. What subjects did he take?—English, lower mathematics, higher mathematics, natural science, and history. It is very difficult to equate them.

41,775. Well, let us pass on. Is there any dearth of candidates at present for the Far Eastern Service?—There are not enough candidates. There would be enough candidates were it not for the necessary high qualification in French.

41,776. (Mr. Matheson.) Is French necessary for the Far Eastern Consular Service?—Yes.

41,777. (Mr. Holt.) High qualifications in French are demanded for that?—Yes.

41,778. (Chairman.) They take subjects up to 4,000 marks?—Yes, but they must qualify in French.

41,779. (Mr. Holt.) Do you know why that is considered necessary?—I suppose in the first place it is the *lingua franca* of diplomacy in all countries, and, in the second place, I understand, it is in order to secure a test of a certain linguistic capacity.

41,780. (Chairman.) Do you think the matters you have brought to our notice now regarding the salaries exercise a deterrent influence upon candidates?—No doubt they do. If you were to improve the salary in the Far East you would improve the recruiting.

41,781. I understood the gist of what you said in reply to Sir Donald MacAlister was that you were not in favour of an assimilation of the Far Eastern examination with that for the general Consular Service?—Not as the latter is now.

41,782. You thought the general Consular Service did require a little improvement?—Yes.

41,783. But what would you say to assimilating it to the Far Eastern examination; that is to say, bringing it up to the 4,000 marks limit?—Assimilating the general Consular Service to that is I think a scheme worth considering. I do not know quite how it would work out in detail.

41,784. Do you know anything of the Commercial Institute at Antwerp?—The Secretary has kindly drawn my attention to it. I cannot pretend that I have any first-hand knowledge of it.

41,785. Is that the sort of training you think our young consuls should undergo?—In a general way, yes; but it seems to me very much overloaded. I cannot imagine how they can really cover the ground in the time.

Sir HENRY AUSTIN LEE, K.C.M.G., C.B., called and examined.

41,786. (Chairman.) You are the commercial attaché at Paris?—I am.

41,787. I understand that you belonged to the Diplomatic Service at an earlier period?—I began in the Foreign Office, and after serving at various times abroad temporarily, was finally transferred to the Diplomatic Service. It was after my transfer to the Diplomatic Service that I was appointed commercial attaché in Paris.

41,788. How long did you spend in the Diplomatic Service?—I entered the Foreign Office in the year 1870, and I was in the Foreign Office until 1887—17 years. Then I was appointed to Paris as acting 2nd Secretary until 1893, when I was appointed Secretary of Legation in the Diplomatic Service, and from that date I have been in the Diplomatic Service.

41,789. I propose first to put some questions to you in regard to the commercial side of the embassy. How long have you been commercial attaché at Paris?—I was appointed commercial attaché in Paris on April 1st 1896.

41,790. We have taken evidence from some Chambers of Commerce, and I formed the impression that to some extent the Chambers thought that we did not do as much as we might do towards pushing the interests of British traders abroad. Do you think we do not push the interests of British traders sufficiently?—That is a complaint which I have heard during the whole of my career for the last 40 years. Originally I think there may have been some ground for it. For instance, when I went to Paris in the year 1872, being temporarily attached during the Commercial Treaty

18 June 1914.]

Sir HENRY AUSTIN LEE, K.C.M.G., C.B.

[Continued.]

negotiations, there was practically no communication of any kind between the Embassy and the British Chamber of Commerce, which then existed in Paris. That system went on for a considerable number of years, but I may say that there has been an entire change, not only in the Diplomatic Service but in the Consular Service too. There is no ground now for any complaint. On the contrary, I think men rather vie with each other in their attempts to be useful in commercial matters.

41,791. Supposing that you received a letter from an English manufacturer who stated that he had manufactured a particular article and desired to push its sale in France, and asked you to help him—what help could you give him consistently with the principles which you now act upon?—It would depend very much on what he wanted me to do. Of course, I could not, as a rule, give him any particulars with regard to the technical part of his trade, but if he wrote to Paris—and the letters are always handed over to me—I can often answer the enquiry myself. I have been so long there, and have been in such constant communication with and know so many people in all classes, that I can answer at once as to those with whom it would be useful for him to communicate.

41,792. Take an instance of a type-writing machine—any instance will do—a new invention in the way of type-writing, and he asks your assistance in pushing the sale of that article. Would you think it consistent with your duty to go, say, to a large retail shop and ask whether they would take it up?—No, I could not do that. I have never done that. What I should do in Paris, which, of course, is rather a unique post of its kind, is this: I should see the applicant and recommend him to go to the British Chamber of Commerce, who would do exactly what you have suggested to me—put him in communication with the firms who would be clients for his manufacture.

41,793. If you were stationed in another French city where there was no British Chamber of Commerce, would you put the man in communication with a large retail dealer in such goods?—Each case stands more or less on its merits. If a man were to write and say that he was anxious to be put in communication with anybody at Orleans, for instance, where there is no consul, I should in that case possibly write to the British Chamber of Commerce in Paris to ask who the people were at Orleans who dealt in that particular article, and who would be useful to him. If there was a town where there was a consul, Bordeaux, for instance, I should write to the consul and ask him for the information, or tell him that the applicant would call upon him for the information.

41,794. It would not be consistent with your duty as commercial attaché at the embassy to go any further than that?—Not to act as a direct intermediary between an English manufacturer and a French client.

41,795. If an English firm addressed you desiring to push their trade in a particular district, would you help them?—Yes, I could help in various ways. What I should do now, owing to the relations which at present exist between me as commercial attaché and the British Chamber of Commerce, is this: I should advise him first to go and see the secretary of the British Chamber of Commerce—and then I should write to the consul of the district, in whose district the place was, and ask him what he would advise him to do and to communicate with him.

41,796. Or put the man in direct communication with the consul?—Yes, but I would not serve myself as intermediary between him and the Frenchman.

41,797. Have you controlling or inspecting authority over the consuls in the interior of France?—No. As a matter of fact, I have been two or three times round all the consulates in France, and I know the posts and I know the individuals.

41,798. Is that part of your official duty?—It used to be, more or less; I was supposed to exercise a kind of visiting authority over the consuls until the recent appointment of visiting inspectors.

41,799. That relieves you?—To a certain extent, it does. As a matter of fact I have visited all the consulates, and know practically all there is to be known about

them, but my work in Paris is heavy and I have not time to absent myself very much from my post.

41,800. As the result of your inspections do you ever furnish to the Foreign Office or the embassy, or to the Board of Trade any appreciation of the merits of the particular consuls?—Not to the Board of Trade, but to the Foreign Office. I think they know very well what the opinion of the embassy is with regard to each individual consul.

41,801. You consider that that is part of your duty?—Certainly.

41,802. To keep the ambassador informed of what your opinion is of the *personnel*?—Yes, and to know the *personnel* of the Consular Service.

41,803. Are you subordinate to the ambassador or directly to the Foreign Office?—I am absolutely subordinate to the ambassador, but as a matter of fact the ambassador leaves the commercial work to me under his superintendence. All drafts which I write I send up to the ambassador for his approval before they go forward.

41,804. Are there commercial attachés at each embassy and legation?—There has been a great change of late. There were a certain number of commercial attachés—not a large number. There used to be one at Berlin, one for Vienna and Rome, one at St. Petersburg, one at Constantinople, and one in Spain and Portugal combined. But the system has been entirely altered of late. With the exception of myself, and those in Japan, China, and Constantinople, and of a recently appointed commercial attaché for Germany residing at Frankfort, there are no longer commercial attachés in the other embassies or legations. The headquarters of the commercial attachés are now in London and from London they visit, as may be required, the various posts at which they formerly resided.

41,805. Are there commercial attachés allocated to each embassy and legation although their headquarters may be in London?—Practically each embassy or legation comes within the arrangement. They are not separate men, but each embassy or legation in Europe comes within the district of a commercial attaché.

41,806. Do you think it would facilitate or promote British trade if attached to each embassy and each legation there was a separate commercial attaché?—I will not say to each, but I think to the most important there should be. That is my personal opinion; and I am opposed to the change which has been made in bringing the commercial attachés to London.

41,807. How long does a commercial attaché remain in London under the new arrangement?—That I cannot tell you. It is a matter entirely for the Foreign Office to settle. They send them abroad. For instance, the attaché within whose district Spain comes only visits Madrid for about a month, I think, in the year, when formerly he resided there perhaps most of the year.

41,808. Am I to understand that he resides in London the other portions of the year?—I do not know exactly, but I think Portugal and Morocco are in his district, too. I am the senior commercial attaché and I have practically France alone though nominally attached to the Legation at Brussels and Berne. Mr. Weakley, at Constantinople, has Constantinople alone. Mr. Bennett resides in London, and he is commercial attaché for Austria-Hungary, Italy, and Greece. Mr. Crowe resides at Tokio for Japan only. Mr. Cooke resides in London, and is commercial attaché for Russia only. Mr. Ker resides at Peking. Sir Francis Oppenheimer resides at Frankfort-on-the-Main for Germany, Denmark, Holland, Norway, and Sweden. Lord Herbert Hervey resides in London for Spain, Portugal, and Morocco.

41,809. Would the same remark be applicable to the other attachés who live in London?—Yes. I think the system of commercial attachés living in London is a mistake. I understand that that is the opinion of Sir Arthur Hardinge who has had considerable experience in the matter, and the Ambassador in Paris told me recently that that was his opinion—that to have a commercial attaché for France living in London would be practically useless.

41,810. What do these gentlemen do? Take Sir Francis Oppenheimer who is attaché for nearly the

18 June 1914.]

Sir HENRY AUSTIN LEE, K.C.M.G., C.B.

[Continued.]

whole of northern Europe. He lives at Frankfort?—Yes, he lives at Frankfort.

41,811. He is a merchant there?—His father was, I believe, a banker there.

41,812. Am I right in saying that he is not a paid attaché?—He is paid. I think his salary is 1,500l. a year.

41,813. Is it not in the shape of an allowance?—No, I see on page 172 of the Foreign Office list that the commercial attaché for Germany gets 1,200l. for salary and 300l. a year allowance—that is 1,500l. a year.

41,814. Take an attaché who lives in London; the attaché for Russia I think lives here and goes to Russia for portions of the year?—I do not know the precise time, but he spends or did spend the larger part or a considerable part of his time in London.

41,815. What work does he do in London?—He goes round to the commercial centres and the commercial towns and sees people interested in Russian trade who want information when they come to London. Mr. Law, of the Foreign Office, could give you better information than I can about that.

41,816. At all events you spend your time in France with headquarters in Paris at the Embassy and you travel about throughout the provinces of France?—As a matter of fact I really do not move about very much. My time is taken up in Paris with my commercial work. I am also, as you know, the senior official British Director of the Suez Canal. For 23 years I have held that position.

41,817. Are you paid for being a director of the Suez Canal?—Not paid by the Government, but, like all the other directors, I get fees from the Suez Canal Company for attendance at the meetings of the board, and in return for that my salary, which, as commercial attaché, is 1,500l. a year, in consequence of my getting the fees from the Suez Canal Company, is reduced to 500l. I return 1,000l. of it to the Government.

41,818. Practically then you pay over to the Government all the fees you receive?—To the extent of 1,000l.

41,819. What is the ordinary income of a director of the Suez Canal?—It varies according to the profits, of which 2 per cent. is allotted by the Statutes to the directors.

41,820. In what language are the Suez Canal proceedings conducted?—In French. A few of the directors do not understand French, but what is said is explained to them. I am the only foreigner who is a member of the managing committee and that committee practically does the whole work, meeting once or twice a week. The council which meets once a month confirms the action of the committee.

41,821. In the evidence you have given to us, you insist upon the point that the commercial attachés ought to reside in the countries to which they are appointed?—That is my opinion, and it is the opinion of Sir Francis Bertie who has had considerable experience both at home and abroad.

41,822. Would you say that it is desirable that for each legation and each embassy there should be a commercial attaché?—I should say certainly for each of the countries with which England has large commercial interests.

41,823. Would you apply that to South America?—I have no experience of South America, but I should say that places like Buenos Ayres and Rio ought each to have their commercial attaché, and perhaps one between Chili and Peru and Central America.

41,824. But you do not think that the commercial attaché should perform more particular functions in the promotion of trade than those you have explained?—I do not think so, I think it would damage his position and prejudice his usefulness.

41,825. Your own position in Paris is peculiar because of the existence of a British Chamber of Commerce there?—If I might say so, I think it is I who render great service to the Chamber of Commerce.

41,826. At all events, you find the Chamber of Commerce a very useful body?—Most useful, and we work absolutely in harmony together.

41,827. Are you quite satisfied with the method of recruitment for the Consular Service?—I cannot say that I think it is perfection, but it is a very moot ques-

tion, and a very disputed one. Of late there has been considerable alteration. When I first went into the Foreign Office the consulates were in the private patronage of the Foreign Minister.

41,828. Have you read the Walrond Report on the Consular Service?—I did read it at the time.

41,829. Perhaps you carry in your mind the general tenor of the report?—Yes.

41,830. They fixed the age for recruitment between 22 and 27, the object of the higher age being probably to allow young men having commercial experience presenting themselves for competition. We find that few men with commercial experience have presented themselves for the competition. A young man of promise, and with expectations in a big commercial house would probably not be likely to forego his prospects for a consular post. It has been suggested to us that it would be better to raise the standard of education for admission to the Consular Service, and then to subject the selected candidate to a period of training in which he would be taught something of commercial law, the history of commerce, and so on. Do you think that would be an improvement on the existing system?—I think it would be, if you had the minimum standard at 22, 23, or 24 if you like, and then give the men some kind of commercial training in the Foreign Office, in the Board of Trade, and in Chambers of Commerce. I think you would get a good class of man in that way.

41,831. At the present time it is necessary to get a nomination from the Secretary of State before admission to the examination?—Yes.

41,832. The object of that nomination is possibly to exclude undesirable candidates?—It is the same both for the Diplomatic Service and the Consular Service.

41,833. And the object is what I have stated?—Yes.

41,834. Do you think it is desirable to preserve that system of nomination?—I am somewhat doubtful on the point. My personal opinion as regards the Consular Service is opposed to it. I think the career should be open. But the Diplomatic Service requires the possession of certain qualities, and the requirement exists to a much smaller degree in the case of the Consular Service. I think a man should not possess any physical defect.

41,835. That man would naturally be excluded by the Civil Service Commissioners, because they have to give their certificate regarding health. Any physical defect which would interfere with the proper performance of a man's duty would naturally exclude him without the intervention of any Board. We may take that for granted. But concentrating your attention on other reasons for exclusion which this Board deals with, do you think in the case of the Consular Service there is strong reason for maintaining the nomination system?—I think it may have its uses in its way, and, as a matter of fact, as far as I have heard, I do not think it exercises the power of exclusion very often; and there may be certain cases in which it may be useful.

41,836. It has, to some extent, the effect of limiting the area from which your men are drawn, and might conceivably exclude good men?—I do not think so, because I understand that nearly everybody who applies for a nomination nowadays gets one.

41,837. Do you think that the pay of the Consular Service is adequate?—It has certainly not been adequate, but, as you are aware, I think in the Estimates for the current year there has been a very considerable addition to the consular estimates. Certainly for a long time past the pay has not been sufficient. I think in some places there has been no increase in the salary for nearly 100 years.

41,838. In some instances the pay is attached to the place. For instance, suppose a consul drawing 800l. a year at A in a particular country and doing particularly good work there, becomes entitled to promotion. The promotion at present involves his transfer to B in a different country with which he has had no previous connection. Do you think it is advantageous to the public service that he should necessarily be transferred because he becomes entitled to an increase of pay?—I do not. I can quote a case which will show how irrational

18 June 1914.]

SIR HENRY AUSTIN LEE, K.C.M.G., C.B.

[Continued.]

the present system is. There was a consul-general who was very well known, who, I think, had spent between 30 and 40 years in one of the chief Turkish ports. In order to get a higher pension on retirement, as the pension is calculated on the salary during the last three years, he was sent for three years only to a consulate in America to qualify for a higher pension. I think that system is absurd.

41,839. In the first place it would be unjust to deny the man promotion, and in the second place it might be injurious to the State to remove him from a place in which he was particularly useful?—Exactly.

41,840. There are places which are more expensive to live in than others. Do you approve of the principle of giving allowances in consideration of the expensiveness of living in a particular place?—It has never come under me in any official way, but I think it is the usual system in all consular services.

41,841. Is a consul, in your experience, called upon to exercise functions of hospitality as the British representative in a particular place?—It is not required as a matter of regulation, but as a matter of practical experience it becomes necessary, I think.

41,842. Is not his usefulness as a consul improved by his being on good terms with the local notabilities?—No doubt.

41,843. Can he be on very good terms without interchange of social amenities?—I think it is a great help to him to be in a position to entertain.

41,844. Have you formed any opinion about the desirability of amalgamating the Diplomatic and the Foreign Office appointments?—I have talked over and discussed the matter frequently during the last 40 years, and I think to a great extent it would be possible, but there are advantages and disadvantages, and there are possibilities and impossibilities.

41,845. Assuming that the difficulty arising from the necessity of having private means of 400*l.* a year was obviated, do you think it would be possible to amalgamate the two Services?—I do not look on that as changing the advisability of the matter at all, because I do not consider that 400*l.* a year would be sufficient for a clerk in the Foreign Office who had not means of his own to take a post abroad.

41,846. Assuming for a moment that a Foreign Office clerk without private means beyond his pay was sent abroad and was given this allowance, on account of his being sent abroad, of 300*l.* or 400*l.* a year, would he not be enabled to perform his duties in the Diplomatic Service abroad?—It would depend entirely upon where he was sent. He could not possibly go to Paris or St. Petersburg or Vienna. I doubt whether he would be able to go to Berlin or Rome or Madrid. He could not possibly live on it. I know Paris, and what it costs you to live there without extravagance of any kind. I do not think it is wise for a young fellow to go as an attaché there on less than 700*l.* or 800*l.* a year, and I think any parent who sent him there would place him in a difficult position.

41,847. Do you not think the diplomatic officer is the better if he has had some experience of the Foreign Office work, and that a Foreign Office clerk is the better if he has had some experience of diplomatic work?—Absolutely. When I entered the Foreign Office, there were senior clerks who were directing our policy in China, in Japan, in Russia, in the East and in Persia, who had never been outside England except perhaps for pleasure, and who had no experience, who did not know the languages, or the peoples, or the countries.

41,848. Do you think the same advantage would result from sending a Foreign Office clerk or a member of the Diplomatic Service to a consular office?—I think so. I very much regret that in my younger days in the Foreign Office I did not go and work in and take charge of a consulate. More or less I have made up for it by being a great deal amongst the consuls, but I think it would be a distinct advantage to young men in the Foreign Office if they worked in and knew a consular office.

41,849. Would you be disposed to favour a system of transfers between the Foreign Office and Diplomatic Service and the Consular Service?—Between the Diplomatic Service and the Foreign Office, but not the

Consular Service. I do not think you can make transfers from the Diplomatic to the Consular Service and *vice versa*.

41,850. I understood you to say that you regretted yourself not having had the opportunity?—Merely as a Foreign Office clerk to learn the work and having more or less to deal with the consulates, to know what the duties and work were. Most of the clerks in the Foreign Office can have no idea of what takes place in a consulate.

41,851. Might you not say the same with regard to the Diplomatic Service, that many men in the Diplomatic Service know nothing of what happens in the consulates?—I think it would be very useful that the same rule should apply to the Diplomatic Service—that young men should be sent, for instance, from Paris to take charge of the consulate at Bordeaux or Marseilles. It would be a great advantage, and I would be very glad to see it.

41,852. What would happen to the permanent incumbent in the consulate? Would you advocate his temporary employment in the Diplomatic Service?—There would have to be some discretion used. If a vacancy occurred at Bordeaux you might send a junior secretary from Paris to take charge of the consulate. Of course he would not at first know the work, but he would have a vice-consul who would help him.

41,853. Might I say that you are in favour of a modified system of transfers between the Diplomatic Service and the Consular Service?—No, I am not in favour of a system of transfers. I am in favour of diplomatists and Foreign Office clerks both working in consulates to know what takes place there, but not to be transferred permanently.

41,854. Shall we say a temporary transfer?—Temporary employment.

41,855. You would be in favour of that?—Certainly.

41,856. Would you be in favour of employment in diplomacy or in the Foreign Office, for the same temporary period, of the consuls whose offices had been taken charge of by diplomatists?—No, the consuls would be no use in a legation or an embassy. In my time there were always consuls working in the Consular Department. I do not know whether that is the case now.

41,857. You think that Foreign Office clerks and diplomatists would by temporary employment in a consular office gain valuable information which consular officers would not gain if transferred to diplomacy?—I think so, because diplomatists have more or less the management of the Consular Service.

41,858. Have you ever heard any complaints made regarding the matter of promotion in the Diplomatic Service?—As to the slowness of promotion, but rarely with regard to any question of alleged unfair promotion.

41,859. You consider then that promotion is administered in a manner which does not invite criticism?—I think almost unfailingly.

41,860. Could you say how the question of promotion is regarded in the Consular Service?—One hears complaints with regard to the Consular Service, but I do not know whether they are altogether justified. One hears complaints sometimes that men who have served a long time in distant posts are forgotten.

41,861. (*Mr. Clymes.*) With reference to this matter of securing nominations, I understood you to say that anyone could secure a nomination. Is that an opinion or are there records kept respecting it?—That I cannot tell you. It is merely my opinion. I have never heard any complaint of a person not having been able to get a nomination. I live abroad and I have never heard of any complaint.

41,862. (*Mr. Graham Wallas.*) Are you satisfied with the existing arrangements for providing offices and quarters for our consuls?—I really can hardly say what the existing arrangements are. We do not provide consuls with offices; they provide them as a rule for themselves. They have an office allowance and out of that they provide their own offices. I know in many cases they have not provided themselves with the offices they ought to, or are in a position to have, and I think the result of the appointment of consular inspectors

18 June 1914.]

Sir HENRY AUSTIN LEE, K.C.M.G., C.B.

[Continued.]

will very likely be to remedy that. They will see where a man is not properly housed, and will make a report accordingly.

41,863. Would you be in favour of the abolition of the whole system of office allowances and the provision of permanent offices by the Government?—I think it would be a very expensive operation. If they were provided it would be necessary to keep them up, and it would be a very big business.

41,864. But somebody must keep them up, and at present the consul keeps them up?—No; he hires a house and it is kept up in the ordinary way that a hired house is kept up. A consul arrives at a place and it is not necessary that he should take the house his predecessor had; perhaps he takes another. That is the case except in a few posts. In the Eastern countries they are generally, I believe, provided with a residence, and those are kept up by the State.

41,865. You have had large experience of the unpaid consuls as well as of the career consuls?—I cannot say I have large experience. One does not see much of them. The ones in France I know, but not outside France.

41,866. Does your French experience suggest that it is desirable to extend or to restrict the system of unpaid consuls. Would you have in future a larger proportion or a smaller proportion of unpaid as compared with paid consuls?—I think the paid consul is far superior to the unpaid consul.

41,867. Then you would advise a diminution of the number or proportion of unpaid consuls?—Yes, and an increase of the paid consuls, if the Treasury would allow it.

41,868. You know that at present in the Levantine Consular Service, and in the Indian Civil Service, a man who is selected by the examination for the Service submits to a period of training in the special work which he will have to undertake. Do you think that could be applied to the general Consular Service?—I do not exactly know what the period of training is, and have no experience of it.

41,869. In the Levant it is languages, law, and, I think, a certain amount of history. In the Indian Civil Service it is mainly languages and law and legal procedure?—Is not there a regulation now that they go to one of the universities?

41,870. Yes?—That is required for the Levantine and the Oriental Consular Services, but I think for the other Services it would not be required. I think they could spend their time in better ways than that—in learning commercial subjects and getting commercial training.

41,871. Do you think any period of training could be introduced with advantage into the Diplomatic Service?—I have always been of the impression that our juniors in the Diplomatic Service were not sufficiently trained; that is to say, they pass the examination and they get into the Diplomatic Service, but from that date they practically have no examinations to pass, except a trifling examination in international law (which is really hardly worth their taking any trouble about, because I think they only draw the pay as long as they are third secretaries), and also a voluntary examination in the languages of certain distant countries—Russia, Persia, Japan, and China. I do not think what I say is altogether the general opinion, but I do not consider that their education ought to be finished when they have passed the examination for the Diplomatic Service. For instance, I know a great many cases of young fellows who have come to a legation or an embassy who have passed their examinations and who did nothing more, and when they leave the post perhaps they have not learnt the language; they have not learnt the history, and they know nothing practically about the country where they may have spent two or three years. In my opinion before they get their promotion, after being two or three years in a post, they should pass some sort of examination to show that they had employed their time usefully.

41,872. If you had to sketch out an ideal scheme for the training of a young diplomatist, would you keep him at home for a definite period of training, or

would you arrange that he should take his training while also learning the work of the chancery?—I think it is very useful for them to serve a certain time in the Foreign Office before taking up a post. As a matter of fact, just now I do not think they do, but the rule used to be that they served six months in the Foreign Office before being appointed to a foreign post.

41,873. Do you remember that it was a difficult matter to induce officers in the Army to train themselves as long as they purchased their commission and received practically no pay?—Yes.

41,874. Do you think it might be easier to induce young diplomatists to train themselves if their services were recognised by pay adequate to them?—At the present moment what exists in diplomacy is practically what used to exist in the Army in the purchase of commissions. Young diplomatists purchase their places by the expenditure of their own money in living for a great number of years at their own expense on the chance of getting later on a post which will repay them.

41,875. And you think if that process were done away with and a man were enabled entirely, or nearly entirely, to live on his pay, he would be willing to work for his pay in the way of training himself?—It depends very much on the man, and it depends to a large extent on the amount of pay you give him. As I said before, I do not think 400*l.* a year would be a sufficient salary if not supplemented by private means.

41,876. Can you suggest any improvement in the existing system of allowances to young diplomatists. At present they have travelling allowances if travelling on official business?—Yes, their expenses are paid, but as a rule a young attaché does not travel on official business at any time.

41,877. But would not it be well if he did in some cases travel more on official business and his expenses were paid?—I think it would be useful for some young men to give them a chance of going about a country if their expenses were paid.

41,878. Supposing a man were asked to report upon the glass-making industry, say, in France, he ought not to report by mere scissors and paste?—No, he ought to visit.

41,879. He ought to go and see something of it, and he ought probably to go and see some of the work that is being done of that kind at home?—Certainly.

41,880. For all that it would be wise expenditure to pay at least his travelling expenses?—But still that, as a matter of fact, is an impossibility, because the staffs are so reduced that it would be impossible to detach a man, even for a few weeks, from the embassy to go and report on the glass industry in the north of France, for instance. You have not got the staff. You have barely sufficient to carry on the work of the embassy. During the last eight years in the Embassy in Paris we have only had two attachés who belonged to the regular Service. The whole of the work which an attaché should do—copying, typewriting, etc.—has been done by honorary attachés.

41,881. Do you think it would be an improvement if there were an increased employment in the chanceries of men of the chancellor type—men of the second division type?—I can only quote the case of Paris, where our chancellor, who was for 17 years my own clerk and shorthand writer, and paid by myself, is now our archivist. He is, in my opinion, invaluable.

41,882. Your experience suggests that there ought to be a large extension of that kind of assistance?—Yes. Every embassy and all the chief legations should have a man of that class.

41,883. And if that system was introduced, the highly qualified staff of attachés would have more time for the more difficult work?—I think so. Instead of being employed on typewriting and copying, putting by papers, etc., they would have time to study and travel.

41,884. You know that office work has been greatly economised of late years in all commercial centres by the use of very elaborate apparatus?—Yes.

41,885. Do you think that the necessary official machinery exists for securing that such inventions

18 June 1914.]

Sir HENRY AUSTIN LEE, K.C.M.G., C.B.

[Continued.]

should be at once adopted in our chanceries?—I really do not think that they are required. I do not think the amount of work is sufficient to justify the expense of them. I think all that the chanceries really want is sufficient telephones and typewriting machines, and I think that fulfils all requirements.

41,886. Was the use of the typewriter introduced into the Paris chancery almost at once after its invention?—I think my clerk was the first person who used a typewriter there, 27 years ago.

41,887. Are you satisfied with the existing arrangements for superannuation in the Diplomatic Service?—I think so. I have never heard of complaints with regard to them. Of course, as to an ambassador, I have heard it said that 1,700*l.* a year was rather excessive as compared with the pensions given in other countries. I do not think it is, myself. I think 700*l.*, 900*l.*, 1,300*l.*, and 1,700*l.* are the four pensions according to the rank of a man on retirement. An Ambassador gets 1,700*l.*; a Minister of the first class 1,300*l.*; a Minister of the second class 900*l.*; and a Counsellor, 700*l.*

41,888. Do you think it would be an improvement if, when a diplomat after many years had not reached a certain rank in the Service, he was superannuated on a small allowance?—That is sometimes done. But I do not remember many cases of it. I remember some men retiring who had got to be what we call first secretaries or counsellors, because they did not have a chance of getting an independent mission, and they have retired then on a pension of 700*l.* a year.

41,889. Supposing a man turns out to be a duffer, or to be inefficient, is it easy to get quietly rid of him?—We have to put up with him, I think.

41,890. Up to what point would a man who was a hopeless duffer stick in the Service?—That is rather difficult to say, but, as a matter of fact, what you call the hopeless duffers disappear. They see that they are not likely to get on, and very often they are men with means, and they retire. There is no way of actually dismissing or getting rid of them except by giving them a pension.

41,891. Do you think it would be possible for the wit of man to contrive some way of getting rid of them?—I really do not know. I think the thing works itself out without the necessity of having any regulation, or devising any plan. I think the men who see that they are not going to get on in the Service—I can quote many instances—leave the Service.

41,892. (*Mr. Boutwood.*) You indicated in the early part of your evidence that you did not like the new regulations relating to the commercial attachés by which they were made virtually fixtures in London for the greater part of the year?—I am not in favour of it. I dare say the Foreign Office would not agree with me, but I think that the present system is rather increasing the staff of the Foreign Office at the expense of the Diplomatic Service. These commercial attachés are working in the Foreign Office and are paid out of the diplomatic estimates. The general impression is, that the want of a commercial attaché in the more important diplomatic posts is now very much felt, and would be felt if they are removed from where they are now. In the case of Paris I think Sir Francis Bertie will tell you that it would be impossible to dispense now with a commercial attaché.

41,893. Do I rightly understand that the difficulty you feel is the remoteness of the man from the sphere that he is supposed to be responsible for, and that he is out of touch with it?—I merely quote my own case. I think my usefulness in Paris comes from the fact that I have lived there a great many years, that I know all classes of people, and if anybody comes and asks me to whom to apply I can tell him. That is owing to the fact of my having been a great many years living there, and knowing the people. That would be perfectly impossible in the case of a man who is living in London and goes and spends one month at Madrid, for instance, and one month at Lisbon. It is impossible that he can have that local knowledge which is necessary for a commercial attaché.

41,894. (*Chairman.*) We have been told here that the office work of a diplomatist attached to an embassy or legation is not very heavy, and that the

heavier and more important part of his work commences when he leaves his office and goes into society. He then becomes of special use to his chief; he learns what is going on, has opportunities of free communications with his colleagues of other missions, and so on. Do you think there is very much in all that?—I think that what are called the social duties of young diplomatists are very much exaggerated. A young fellow in Paris or Vienna does very much what he would do in London. When his work is over he pays calls or plays games, dines out, or goes to a ball, or to a theatre. I do not believe in all that is said of the so-called social duties of the younger men of the embassies or legations.

41,895. But he is compelled to go into society?—He is not compelled to do so. It is of great use that the young men, to a certain extent, should get to know the people of the country, and be known themselves, but it is by no means a necessity for all. The most efficient junior I ever remember in our Embassy in Paris was a young married man who never went into society at all.

41,896. The best clerk possibly, but was he the most effective aid to his chief?—In Paris we have some secretaries who go into society and collect useful information, and others who lead more retired lives. I do not think you can make any general rule on the subject. I think it depends entirely on the character of the young man himself.

41,897. (*Sir Henry Primrose.*) Speaking of the Consular Service, I gather that you are very much in favour of keeping a man in the same place as much as possible?—I think so. I am very strongly of that opinion.

41,898. But you must have some moves, because it would not be possible to give a man a salary which grew during all his time irrespective of the importance of the place?—No, but I think it might be possible that his retiring allowance should not depend on the amount of the salary which he is drawing at the time of his retirement, but that it should be calculated on the length of his service.

41,899. Clearly a consul is more useful the longer he has been at a place and the more he knows about it?—A consul who is constantly moved from one place to another is, in my opinion, of no use in any one of them.

41,900. Still it seems to me a great difficulty to know how you can overcome that objection to transfers and yet arrange that the man's salary should not suffer?—That is a difficulty, of course, but not, I think, an insuperable one.

41,901. Within certain limits you might allow a man to increase in salary just as the second division do in this country, irrespective of the particular work or the particular place, but you cannot carry that too far. You could not carry that into the higher paid posts. Take the case of a man who is a consul in Spain, if he is at some small port, you cannot reasonably pay him more than a certain amount and not more than the relative importance of the place demands?—But as a rule my idea of keeping them a long time in a post would be in the case of the big posts.

41,902. I notice in the report of the Ridley Commission, it was mentioned that Sir Charles Dilke was of opinion that the Diplomatic and Consular Services could be amalgamated, and he justified that on the ground that that was what was done in France. Is that the case?—They are absolutely different services in France. You will see that in the papers laid before Parliament.

41,903. Then Sir Charles Dilke was not correct in saying that?—No.

41,904. In the French Diplomatic Service, what do they do about private means. Do they require it?—As a matter of fact nobody goes into any official employment in France unless he has some means of his own.

41,905. Not any official employment?—No, not as a rule; and I should say that in France certainly the men who go up for the examination for the Diplomatic Service all come more or less from the moneyed class. They are not men who have their way entirely to make in life.

18 June 1914.]

Sir HENRY AUSTIN LEE, K.C.M.G., C.B.

[Continued.]

41,906. But there is no formal condition imposed?—I believe not. In Italy there is. In Italy an attaché has to have an income of 6,000 francs—that is, 240*l.*—and Italy is the only country where a private income is required of consuls; they are required to have a private income of 120*l.* a year.

41,907. You say that, whatever rule you make, as a matter of fact in the Diplomatic Service it would always be necessary for a man to have some private means?—I think so, certainly in the early part of his career.

41,908. Unless the salaries were fixed so very high as to be out of the question?—Yes.

41,909. What do you suppose historically is the reason for giving them no pay for two years?—I have never been able to understand that. It is the remains of a very old system when there used to be a regular class of unpaid attachés. When a man entered the service he was for many years an unpaid attaché.

41,910. (Chairman.) Probably a form of probation?—A form of probationary attaché.

41,911. (Sir Henry Primrose.) While it still might be necessary to maintain an obligation to have private means, it does not seem to me to follow that you need deprive men of salary altogether during the first two years. There is no reason in the nature of things why an attaché should not be paid as soon as he begins?—I see absolutely no reason whatever why he should not be paid, as a Foreign Office clerk is paid.

41,912. I gather that most of the attachés in the Paris embassy of late years have been honorary attachés?—As I said just now, during the last eight years we have had a series of honorary attachés there.

41,913. Therefore you personally have not had very much opportunity of judging of the character and quality of the career attachés?—No, I know very little about them indeed.

41,914. How long do honorary attachés generally remain in the Service?—There is no rule. We had one, who is a peer, who was there eight or nine years. He has left now.

41,915. (Chairman.) Has he left the Government service for good or has he gone into a paid post?—He has come to live in England.

41,916. (Sir Henry Primrose.) We had some evidence on the question of members of an embassy—the young secretaries and so on—not acquainting themselves sufficiently with the domestic institutions of the country and the domestic politics of the country. Do you think more might be done in that way?—I do not think they do it very much because there is no inducement of any kind and no necessity for them to do it. They get their promotion just the same whether they continue their studies or whether they do not. I have already in my evidence recommended a system of examination of junior diplomatists.

41,917. After all I am not at all sure that it would be desirable that they should do too much in that way. If we want in this country to know something in regard to, say, the system of education in France, it would probably be really better to send over a man from here who was thoroughly acquainted with our institutions, and knew exactly what we wanted, than to ask somebody in the embassy to report upon the matter?—I am entirely of that opinion. I think very often the embassy is called on to furnish a report on a subject, and perhaps a young attaché or secretary is told to do it, and he knows nothing at all about the subject, with the result that you get a series of reports, drawn up very often on an entirely different basis, which are practically useless. It would be far more useful if a man were sent out from this country to draw up the report, with the assistance of a member of the diplomatic staff.

41,918. A man who really knows what you want to know?—Yes and how to produce it.

41,919. Do you think the annual consular reports are of much use?—I do not.

41,920. They are out of date by the time they come out?—My own impression has always been that they are useless for business men and commercial purposes. They contain a mass of figures and statistical information which are not always correct and which could be procured very much more easily from the Board of

Trade or from the Chambers of Commerce themselves in England.

41,921. Do you yourself produce an annual report?—I do not, for this very reason, that I write a great many confidential reports on subjects of all kinds which come to me, but if I produced an annual report, and it contained unintentionally anything which was considered disparaging in any way there might be unpleasantness. I may say that that is the opinion of the diplomatist in Paris who knows most about commercial matters. I spoke to him once about it and he said “If I were to publish a commercial report I could not remain in this country a week afterwards.”

41,922. You mentioned that your work in Paris was very heavy. Is that largely official correspondence with the Board of Trade and the Foreign Office or with people outside?—With correspondents in England and France. I have been there so many years that every kind of application is made to me, not only on commercial subjects but from persons desirous of obtaining information on the most varied subjects, to whom I feel bound to reply.

41,923. Are you often called upon for a report on a special subject by the Board of Trade or the Foreign Office?—Frequently.

41,924. We had some evidence from the second division clerks in the Foreign Office, and they urged that the consular appointments might be used for the purpose of giving promotion to second division clerks. Do you think second division clerks would really be qualified?—I think that would be very unfair. I know occasionally it has been done, but I think it very unfair to the junior members of the Consular Service, that a lower division clerk should be taken out of the Foreign Office and sent to an eligible post in Europe which will keep in South America, or some distant country, a young fellow who is equally deserving, and knows a great deal more about the work. I do not think consular appointments should be used as prizes for members of what is practically another profession.

41,925. I suppose you would say that the second division clerks *prima facie* would not be so well qualified as the junior men in the Consular Service?—No; I do not see how they can know anything about the duties. They certainly do not learn them as lower division clerks.

41,926. As regards the routine work in embassies, do you think that more might be done by people of the second division clerk order, instead of employing the secretaries and attachés on it?—I think that might be. There would always be a certain difficulty except in a place like Paris. I think it absolutely necessary that they should be of British nationality. In a place like Paris there is no difficulty whatever in finding as many suitable men as you want, but I think there would be considerable difficulty in regard to other posts. But if they could be procured I think they would be very valuable.

41,927. It would not be any cheaper I suppose than now?—I do not think so, because you get a great deal of the work done now by unpaid men, or by men on small salaries with private means of their own.

41,928. Have you any views as regards the examination for the Diplomatic Service and its relation to the general Class I. examination, as we call it?—I take a great interest in the examinations. I have been looking through the papers which have been set for the Foreign Office and Diplomatic Service during the last three years, and my impression, as far as modern languages are concerned, is, that they are certainly not of a kind to produce the men that we want. I can give you my own experience which I know is confirmed by other people. During the whole course of my service, I have seen a large number of beginners pass through Paris at different times, and I could almost count on my fingers those who know French to the extent that they can thoroughly understand and be thoroughly understood. I do not know what the fault is, but it certainly is the case that we do not get men who are good linguists.

41,929. I suppose they can write pretty good French?—Some of them may. But then, again, I have not seen much of the younger generation. As I explained, we have not seen them in Paris; but still I am told that even they do not possess the knowledge of the language which they ought to possess. I have

18 June 1914.]

Sir HENRY AUSTIN LEE, K.C.M.G., C.B.

[Continued.]

looked through all these examination papers, especially those in the literature of the country. I showed the other day the papers in French literature to a well-known Frenchman, professor of English in one of the largest lycées in Paris, and he said: "I assure you there is not a boy of the higher class of my college who could answer those questions in French which were set to English youths for the Diplomatic Service." The examination I consider to be perfectly ridiculous for the purpose of finding the men we want.

41,930. After all, with a proper examination, you have certain things to translate from and into French?—It is divided into three parts. The French literature paper is not the paper I should set for a diplomatist; the knowledge it would show would be absolutely of no use to him. This applies equally to the literature papers of other modern languages.

41,931. (Chairman.) Is it that the style is difficult, or archaic?—It is archaic and mediæval.

41,932. Do they mention the author from whom they take the passages?—They do not mention the actual author, but it is easy enough to see the period. The French composition is fair enough. In French literature the paper is set in all kinds of archaic French. I can only tell you that what I have said is the opinion of the papers given to me by a man quite qualified to give it.

41,933. (Sir Henry Primrose.) Do they give an essay on anything to be written in French?—Yes, they have to choose one of various subjects.

41,934. That would be all right?—I should make the examination very much more severe in colloquial French, and I think to a certain extent there might be more knowledge required of modern French history, which would be very useful, and of modern German and Italian history. I think it is a great mistake that more importance is not given to Spanish in these examinations. When you consider that Spanish is spoken practically all over the peninsula and all over South America and Central America, except Brazil, it is one of the most useful languages a young diplomatist can learn. It is spoken at far many more posts than German, which is an obligatory subject. I think that a knowledge of any one of most foreign languages would be useful to candidates, and that they should have an opportunity of showing it.

41,935. (Chairman.) Is German usually spoken anywhere except in Germany?—No; in Germany and Austria, and partly in Switzerland. The language that has been of use to me in my career has been French.

41,936. But you do not speak German unless with a German in any country except in Germany?—A German, when you meet him abroad, will always speak English with you.

41,937. (Mr. Matheson.) Is the criticism you make on these French and German papers that they are not sufficiently colloquial, and that they contain too little in relation to everyday life?—My criticism is that I think they are too archaic, and they do not find out that a man possesses that knowledge of the language which will be useful to him as a diplomatist. What is useful to a man is that he should be able to speak fluently in French and be able to write fluently in French. We do not get men who can do that. The beginners in the Diplomatic Service, as far as my experience goes, are not proficient in the languages. It is an examination of cramming.

41,938. But a good many of them spend a long time in France before they go in for the examination?—Well, it is not really a very long time. They spend a few months.

41,939. I have known a good many who have spent six months at different times. Is not the idea of the examination that it is not in what is to be useful to them, but a test of higher education limited to a particular field?—I look on it more from the point of view of utility, and I think it would be no use for a young diplomatist to possess the knowledge which is required to answer these papers in the literature of modern languages. That is my opinion. I know the modern Language Tripos of Cambridge; I have often seen the papers. These are more or less of the same class as those set in the examination for the Foreign Office and Diplomatic Service.

41,940. What would you say to a plan of selecting these men on something like the Class I. examination, and then making them acquire the colloquial knowledge of languages afterwards. Do you think that that would be an improvement from your point of view?—That is what to a certain extent takes place in the Indian Civil Service with regard to the Indian languages. My own experience is that unless a man has begun to learn a foreign language when he is young he will never arrive at any proficiency in it colloquially afterwards. I think it is very difficult to begin late in life with a foreign language.

41,941. With regard to the attachés in a country I suppose a good chief will try to give his attachés opportunities to learn about the country they are in?—Yes, but the staff is so very limited that it is very difficult to make arrangements for a junior to go away. There is often difficulty in arranging for the ordinary leave.

41,942. Then the most obvious way of improving that would be to rather strengthen the staff of men?—Exactly, but still that means considerable expenditure. You could do a great deal if you could increase the estimates.

## ONE HUNDRED AND FOURTH DAY.

Friday, 19th June 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (Chairman).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Sir DONALD MACALISTER, K.C.B.  
Mr. ARTHUR BOUTWOOD.  
Mr. JOHN ROBERT CLYNES, M.P.

Mr. RICHARD DURNING HOLT, M.P.  
Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. GRAHAM WALLAS.  
Miss HALDANE.  
Mrs. DEANE STREETFIELD.

Mr. N. E. BEHRENS (Secretary).

Sir ALGERNON F. FIRTH, Bart., called and examined.

41,943. (Chairman.) You are President of the Association of Chambers of Commerce of the United Kingdom?—Yes.

41,944. And you come here to favour us with evi-

dence in regard to the Consular Service, to which you have given a good deal of attention?—Yes, solely the Consular Service.

41,945. Have you read the Report of the Walrond

19 June 1914.]

Sir ALGERNON F. FIETH, Bart.

[Continued.]

Committee which sat in the year 1903?—I have, with great interest. If you wish to have my opinion about it I think it covers all the ground necessary.

41,946. One of the points to which that Committee attached considerable importance was the recruitment for the Consular Service of gentlemen with commercial experience?—Yes.

41,947. In order to admit of the recruitment of men of that description the maximum age for admission to the general Consular Service was fixed at 27?—Yes.

41,948. We have had inquiries made as to the effect of that part of the Walrond Committee's Report, and we have found that up to the present time it has been practically inoperative. Very few men of commercial experience have come into the Consular Service?—I cannot explain why that is. I think it is a pity that it is so, but perhaps it is not sufficiently known about.

41,949. You can judge for yourself from these facts. The first man recruited in 1905 was employed by the British Consul-General at Antwerp for three and a half months, but he had acted as vice-consul for about one and two-third years before that. He cannot be said to have had commercial experience?—But was not 1905 rather too early to expect that recommendation to take effect?

41,950. That is true; I will go through the entire list of men recruited since 1905. The next man recruited in 1905 was employed in the Bank of England for a year, and with two firms of stockbrokers afterwards. Was that the sort of commercial experience required?—Not at all.

41,951. The third man was for three years with Messrs. Nixon, Forrest & Co., East India merchants, and afterwards in the North of Scotland Bank for six months. He was also employed by the *New York Herald* and various New York firms for one year. The experience gained with Nixon, Forrest & Co., East India merchants, would probably be the kind of experience we want?—I should think his experience would be valuable. That man seems to have had a wide experience.

41,952. The next man had experience for three years as clerk in the Bank of England. That is not commercial experience?—Not at all.

41,953. In 1906 the first man was British Acting Vice-Consul at Hanover for short periods, and Vice-Consul of the United States of America at Hamburg. That was not commercial experience?—No.

41,954. The next man had no commercial experience. The next man had written articles for the *Independent Review*. The next man was honorary attaché to the British Consul-General at Antwerp for nine months?—A very short experience.

41,955. The next two men recruited had no commercial experience. The next man was employed by the Agent-General for Victoria for about one year, afterwards by a firm of civil engineers, and afterwards by the Agent-General of New South Wales. He was Secretary to the Delegation of the Commonwealth of Australia at the International Telegraph Conference. That is not the sort of experience you would call commercial?—Not at all.

41,956. In 1907 the first man on the list had no commercial experience. The next man was employed in French, Lemon & Company's Bank at Florence for a short time, and as clerk in the resident engineer's office of a railway at Buenos Aires. That is not the experience wanted?—Not at all.

41,957. The next man on the list studied marine engineering for one and a half years under Messrs. Vickers, Son and Maxim. The next man had no commercial experience, nor had the next. The next was employed by the Ocean Accident and Guarantee Corporation for three years, mainly in Paris; he acted as secretary to the naval attaché of the United States Embassy in Paris for three months, and for six months acted as foreign correspondent to the North Egypt Land Company?—That is not the sort we want.

41,958. The next on the list was assistant expense accounts officer under the Admiralty for six and a half years, and the next served as assistant store officer under the Admiralty for four and a half years. That is not commercial experience?—No.

41,959. In the examination for April 1908 the first two gentlemen on the list had no commercial experience. The next was translator and archivist at the British Legation at Caracas in Venezuela for five years. The next was clerk in a shipping firm for a year, was a stockbroker's clerk for two years, and a buyer and representative in Austria, Hungary, and Roumania of the Anglo-Austrian Trading Company, timber and general merchants?—That is better.

41,960. In the examination for July 1908, the first chosen man served as assistant naval store officer under the Admiralty for seven and a half years. The next man was employed by Messrs. Watson and Youell, steamship agents at Galatz and Kustendje for 18 months. The next was in the Indian Army for two and a half years. The next had no commercial experience. The next was at Lloyd's Bank for 10 years. The next served as Customs port clerk for seven years, and the last had no commercial experience?—That is exactly what nearly all the Chambers of Commerce complain about, that there are not sufficient men with commercial experience appointed to consulships and vice-consulships too.

41,961. In the next year, 1909, the first man chosen was employed as book-keeper at Frankfurt for two months; next as private secretary to the British Vice-Consul at Zurich for one and a half years; then as correspondent to Mons. A. Tournier of Paris (nine months); and then for eight months as clerk and correspondent at Messrs. Kleinwort, Sons & Company's Bank. There is not much commercial experience in that?—A little, but very modified.

41,962. The next four men chosen in 1909 had no commercial experience whatever. In 1910 the first man was employed by the Manufactures Royales de Corsets of Brussels. That is not the sort of commercial experience we want?—No.

41,963. The next man chosen had no commercial experience. The next was employed for four months at the Dresdner Bank, and for three and a quarter years with Messrs. Gray, Dunlop & Co., stockbrokers; for about one year he was English secretary to the town of Carlsbad, and was also correspondent of the *Daily Mail* and *New York Times*, etc. The next man had no commercial experience; and the next was employed by Messrs. Heyn Franc & Co., East India merchants, for three years, by Messrs. Franco Zurhosen, of Moscow, for three months, and for two years he was in the Indian branches of Messrs. Kahn & Kahn, Paris, merchants. The last man's experience was extensive?—That should be satisfactory.

41,964. Finally, the last man chosen in 1910 had no commercial experience. In 1911, the first man chosen was head manager of a rubber firm in the Malay States. The next was previously a schoolmaster, and had no commercial experience. The next man had been employed for six years with the Pearl Life Insurance Society. The next had no previous commercial training. The next was six years in a solicitor's office and two years in H.M. Sasines Office, Edinburgh. The next had no commercial training whatever. Coming to the year 1912, the first man chosen was apprenticed to a commercial house at Havre for a year and was nine months with a Seville firm. The next had no commercial experience, nor the next. The next was a schoolmaster and taught English abroad. The next was employed for a few months in the office of the British Consul-General at Havre. The next two had no previous commercial training. The next acted as sub-editor of the *Literary World* for some months. The next four had no commercial experience. The last year is 1913. The first on the list was foreign correspondent of Messrs. Lockie, Pemberton & Co., for two and a half years. The next entered the Civil Service as a boy clerk and was employed as second division clerk in the Post Office and in the Estate Duty Office as second class clerk with no commercial experience. The next was employed for six years in a solicitor's office at Edinburgh in their Factory and Estates Management Branch. The next was a schoolmaster. The next was for six years clerk to the British Consulate at Helsingfors. The next came straight from Oxford, so did the next. The remaining four had no commercial experience

19 June 1914.]

Sir ALGERNON F. FIRTH, Bart.

[Continued.]

whatever. So I think we may say that the rules of 1903 have been practically inoperative in procuring for the Consular Service men with commercial experience?—That is quite correct, I think.

41,965. You have said that this is one of the complaints which the great world of commerce makes in reference to the Consular Service?—It is the almost universal complaint and the chief criticism which the Chambers of Commerce put forward in their remarks to us.

41,966. Does it not appear to you to be reasonable that if a young man enters a commercial house, shows aptitude for his work, and has a prospect of getting on, he is not likely to leave that commercial house for the Consular Service?—It is all a question of remuneration. If he thinks he will do better by sticking to his commercial house, he will do so.

41,967. At present it seems likely that, under these recruitment rules, we shall only get men who have no prospects in the commercial world, if, indeed, we get men with any commercial experience at all?—Certainly, I am afraid that is so.

41,968. Then are we not brought face to face with the question whether our system of recruitment for the Consular Service is good, and whether it ought not to be altered?—I should say that is the position; but then is it not worth while ascertaining whether applications have been received in those different years from men who had had commercial training, and whether there is any particular reason why these other men have been preferred over them?

41,969. All these men entered by competitive examination, and there is no suggestion that there has been any exclusion?—But it is just possible that these men who have had commercial training are not able to pass satisfactorily that competitive examination. That examination may be on lines which they are not familiar with and for which they have not studied.

41,970. The examination was fixed at that time with the view of attracting men of that character. The subjects of examination were: 1. English composition including handwriting, spelling, and précis writing). 2. French. 3. Either German or Spanish—that is, two languages. 4. The principles of British mercantile and commercial law relating to (1) Shipping. (2) Negotiable instruments, bills of exchange, and promissory notes. (3) Contracts for the carriage of goods. (4) Contracts of marine insurance, bottomry and respondentia. 5. Arithmetic, to vulgar fractions and decimals, including English and metric weights and measures. 6. Commercial geography. 7. Political economy—general principles and their special application to currency, the money market, foreign exchanges, and taxation?—I should think very few young men who have gone into business at 18 or 20 would be able to pass or care to bother themselves with an examination of that sort at the age of 25 or 27, say, when they have got some commercial experience. I do not think they would sit for it unless they were absolutely certain that if they passed it they would get a good post.

41,971. What you now say seems to point to our adopting some method of appointment other than by competitive examination?—Yes; I should think in good cases—in cases where a man has thoroughly good business experience and recommendations—that a competitive examination on all those subjects is not absolutely necessary for a man to qualify for the Service.

41,972. Then you would appoint him by a system of direct patronage?—I would.

41,973. I am afraid that there you would bring yourself into conflict with the weight of public opinion?—I cannot help that. On the Advisory Committee of the Board of Trade—the Commercial Intelligence Branch—of which I am a member, if we have to arrange a commercial mission we go into the question of the business experience of the man, not as to whether he can write a paper on all those subjects. We take what his business experience has been in order to judge whether he is a man fit to conduct a commercial mission. It is somewhat similar in the case of making a consular appointment. It does not follow that a man who can write papers on all those subjects is the best man.

41,974. Certainly we have not succeeded in getting the men with previous knowledge of commercial life into our Consular Service under these rules?—No.

41,975. It has been suggested that a better way of recruiting the Consular Service would be to separate the technical part of the examination from the ordinary educational part; to recruit young men by an examination on their educational acquirements, and then, having selected the best of them by open competition, to subject those boys for a certain period (say two years) to training in England in matters connected with trade and commerce. They might also be required to attend lectures in the Faculty of Commerce which has now been established at many of our universities, and we might procure for them facilities for dealing with commercial work in the Board of Trade, or the office of the Port of London Authority, and possibly, by making arrangements with large business firms, introduce them to the actual procedure of commerce?—I am informed that in Austria-Hungary and in France they have a special college for training for the Consular Service.

41,976. We have been told that a college at Antwerp has been established for that purpose, and also one near Amsterdam. We have also been told that no person is now appointed to the Belgian Consular Service unless he has the *imprimatur* of this college near Antwerp?—I think it would be a great deal better if some specialising college was appointed for that purpose rather than interfere with all the existing educational institutions and making a special course at each one. This is a day of specialisation, and I think you might specialise in education for the Consular Service.

41,977. We have Faculties of Commerce now in several of our universities. We have a fully equipped Faculty of Commerce in Birmingham; and we have had evidence from Newcastle where a Faculty of Commerce has also been established in connection with the University of Durham. In other colleges similar Faculties have been created?—Those Faculties of Commerce are more for the training of men to go into business as clerks and managers, to take a broader view of business than they would acquire in your own office before they start; but this is totally different to that, I think.

41,978. We have been told that if young vice-consuls knew something about the theory of trade and general political economy and the movements of exchanges, and so on, it would be a great advantage to them?—Yes, and the developments of markets, and so on. It would be a great advantage, but I think it would be far better to specialise than to encourage all these scattered faculties of commerce to take up the idea of training for appointments in the Consular Service.

41,979. Something like what you say has been suggested to us. We might perhaps make London the headquarters of this training, because in London we have the Board of Trade, the Foreign Office, the Port of London Authority, and numerous great commercial houses which might assist?—It ought certainly to be in the capital.

41,980. Seeing that since 1903 up to the present time we have not succeeded in getting the sort of men with commercial experience that was thought desirable at that time, would it not be well now to change the method of recruitment—to select our men by a suitable educational test, and afterwards to train them specially for a period of years in the way most likely to produce good consular officers?—There is no doubt in my mind that that is far the best plan to pursue. At the same time I think it leads to what is my chief argument, that the remuneration is not sufficient in the Consular Service. It is a question of Treasury grants that would induce the right men to come forward.

41,981. As I understand, the Consular Service is now divided into three great grades. There is, first, the vice-consul. When a young fellow passes and is sent abroad he becomes a vice-consul; he is sent to a consulate and there learns his work for a time, and then he is given an independent post. He begins on a pay of 300*l.* rising to 500*l.* a year. When he emerges from the grade of vice-consul and passes into the grade of consul he gets 600*l.* to 800*l.* a year; and when he emerges from that grade and becomes a Consul-General he

19 June 1914.]

Sir ALGERNON F. FIRTH, Bart.

[Continued.]

gets 900*l.* to 1,200*l.*, and in addition he gets allowances. There are, we understand, certain places at which living is more expensive than at other places, and accordingly a system of allowances is established and graded in accordance with the expensiveness of life in those places. Do you think that that scale of pay is adequate for the work they have to do?—The offices are found and the furniture?

41,982. For their office rent and expenses they get a lump sum. We will deal with that matter separately, because the question of the sufficiency of the lump sum is quite an open matter. In the far East—China—houses are provided?—Those salaries which you refer to should be clean salaries without any expenses to pay out of them.

41,983. The salaries are clean salaries?—I do not think they are enough. The standard of remuneration in business has risen so considerably in recent years that I do not consider that there is very much attraction in those salaries for able young fellows. Any man of ability knows that he can get more than that if he sticks to his career and makes a success of it, in almost any business he goes into.

41,984. Do you think 300*l.* is sufficient to start with for a vice-consul?—For a man, say, 27 years of age?

41,985. No, he would not be 27, but under the new system, which I have suggested to you, he would be about 24?—It is possibly enough to start on, but how long would he have to remain at that salary?

41,986. That is an important but a different question. What I ask you now is, is the salary enough to start on?—I should think so, for a start.

41,987. What salary do you think a consular officer should receive when he has been 10 years in the service? What ought a man reasonably to look forward to at the end of ten years' service?—If he was in business and he had started in at, say, 300*l.*—I can only speak from my own business experience—if he had brains, education and energy, he would probably be able to make 800*l.* to 1,000*l.* a year when he had been there ten years.

41,988. The consul is entitled to a pension, which should be taken into account?—He may never live long enough to draw it. A man looks at what he is getting to-day and not at what he will get 20 or 30 years hence.

41,989. Still a salary of 800*l.* after ten years' service without a pension, and a salary of 800*l.* carrying the right to a pension later on are different things. But you think that if a consul of ten years' standing draws 800*l.* a year it would be adequate?—It would depend upon the ability of the man. In most businesses if he was a clever man he would earn more than 800*l.*, but I do not think there is very much attraction unless he is in a position to earn 800*l.* to 1,000*l.* clean. Of course, he has the advantage that he is not taking any risks and is looking forward to permanent employment in the Consular Service. I think it ought to induce him to stay on and do his best.

41,990. The rate of pay I take it is not inadequate to start with?—No.

41,991. We are given to understand that during the period of transition from vice-consul to consul, and until about the fourteenth year of a consul's services, the pay is at present unsatisfactory?—I quite agree with that.

41,992. But having regard to the security of his tenure and also to the fact that he is entitled to a pension you are disposed to think that 800*l.* a year after ten years' service would be satisfactory?—I should put it at 800*l.* to 1,000*l.*, according to the ability of the man.

41,993. Do you think that the maximum salary of a Consul-General, 1,200*l.* clean pay with pension, is adequate?—No, not enough to secure the best class of man.

41,994. Would you say that 1,500*l.* would be adequate?—I should say so.

41,995. Then you think 300*l.* to begin with; after ten years' service from 800*l.* to 1,000*l.*, and a final salary of 1,500*l.* per annum, would do?—How long would he remain at 800*l.* to 1,000*l.*?

41,996. That would, I presume, depend on vacancies in the superior grade. He would have to retire at the age

of 65—at 60 he would be entitled to a pension, and at 65 would have to retire compulsorily. Would you prefer to consider these points at your leisure and let us know what your considered opinion is?—I would prefer to think it over carefully. It is a question of the period of the service at the different salaries. I think a man's expenses grow as he gets on in years and his family grows up, and that ought all to be considered very carefully as to the number of years he would remain at each salary if he gave satisfaction. I would not for a minute say that every man should be treated exactly alike. It is impossible in a business concern to do that.

41,997. Would you be in favour of increasing the salary by annual increments?—I think so. I think a steady increase is what men generally want in business. They want to feel that they are getting on.

41,998. But the promotion from grade to grade would depend, I presume, upon a vacancy occurring in the higher grades?—Yes, that is the drawback in the Consular Service, that there is slow promotion. On page 1 of the Walrond Committee's report it says: "The social position which the consular representatives of this country are called upon to maintain must not be forgotten."

41,999. That would be remembered in the allowances. What we have been talking about is the net pay; besides that there will be the allowances, which would take into consideration that matter of position?—That means that these things must be more elastic. If it is an expensive country to live in and consuls of other countries are able to maintain a different position, that should be taken into consideration in the allowances and provided for.

42,000. If there are any other points which you want to bring forward particularly, will you be good enough to mention them?—I wanted to draw attention to paragraph 9, on page 3, of the Walrond Committee's report: "The successful candidates should be required to work for some months in the Commercial Intelligence Branch of the Board of Trade before taking up their appointments." Of course, that is carried out now, I believe, but I do not know whether it has been in force all these years since the Walrond Committee's report. My opinion is that the time they spend there is too short; I think they get very valuable information from the Commercial Intelligence Branch, where they receive an enormous number of inquiries on all kinds of business. An insight into business of all sorts is very valuable indeed to a man taking up a consular appointment. I think that is one of the very best suggestions.

42,001. That is on recruitment and before being sent abroad?—Yes, a year would be very well spent there.

42,002. That would be particularly attended to if there was the change in recruitment which I have mentioned?—Then there is another remark in the same Report on page 5, paragraph 14, about the inspection of consulates. I believe that has only been undertaken this year.

42,003. Yes, quite recently?—If that had been carried out before I believe it would have secured a great deal better and more efficient Service and more uniformity of work on the part of the consuls. I look upon that as very important. There ought to be ample provision made in the same way as in the case of business men who have a lot of foreign agents. In my own experience I would not leave agents unvisited from the works and not kept in touch with the works for a long time. I send a representative to inspect the agents and see that they are going on in right lines, and get posted up with what is going on in the place so as to keep them up to the mark. I look upon inspection of consuls as very important.

42,004. Do you think that there should be one inspector for each country, or would you have one inspector for several countries?—I would have a staff of several. I would not have always the same man go to the same place. I think the inspection should be done from London, and you should not put the chief consul in a place to inspect his branches and so on. You would obtain uniformity if you had a staff of three or four men to cover all the ground that is necessary. It

19 June 1914.]

Sir ALGERNON F. FIRTH, Bart.

[Continued.]

would not cost a great deal, and it would keep them up to the mark and secure efficiency. The inspector would find out the weak spots.

42,005. You would make London the headquarters of these inspectors?—I would have it all under the business head of the Foreign Office or the Board of Trade.

42,006. Would you make it a section of the Consular Department of the Foreign Office?—I would.

42,007. When the inspectors have done their inspection they would come back to that office and write up their reports, and until they go on tour again would be at hand to give advice on consular matters to the head of the Consular Department?—I think that is a business-like proposal.

42,008. You would strengthen the Consular Department of the Foreign Office in that way?—I would.

42,009. In paragraph 6 of your proof you say you will submit to us some views on the existing practice by which information concerning British commerce, trade, and shipping as transmitted from British Ministers abroad or consuls is received and distributed in this country?—Those are the views of certain Chambers of Commerce, which I think do not understand fully the position. My opinion is that the method of transmitting reports is quite effective and efficient. I think that the information which we have received and which we have had given us from the Foreign Office, in consequence of our representations to them as to the method in which the reports are dealt with, has satisfied nearly all the Chambers of Commerce.

42,010. I notice that in your appendix you do admit that since 1910 there has been considerable improvement?—Very great improvement.

42,011. Then on the important point of unpaid consuls, who are mostly natives of the countries in which they are stationed, you have some remarks to make?—That is another point that is always brought up at any debates we have at Chambers of Commerce.

42,012. I have before me the letter from the Foreign Office dated July 1910. It was there shown that certain misapprehensions prevailed, and that in reality the British Government does more towards keeping in foreign countries consular officers of British parentage than other countries, so that the Foreign Office was not really open to complaint to the extent that the Chambers of Commerce thought?—Yes. We have not heard another word from any Chamber since that letter from the Foreign Office of 5th July.

42,013. First, on the general principle of employing paid consuls and not unpaid consuls, what is your opinion? Do you think that paid consuls should, wherever possible, be substituted for unpaid consuls?—Of course I would like it to be so, but you have to consider the expense and what is practicable. At a great number of these towns I am convinced that the Foreign Office is quite right, and that it would not pay to appoint paid consuls. There are other cases, but I am sure if those were brought forward to the Foreign Office they would quickly recognise them, and it is then up to the Treasury to grant the money. It is the Treasury which is the great bar to efficiency at the present time.

42,014. You have a preference for paid consuls, but that must be limited by financial considerations?—Certainly; and on the amount of business passing at the consulate.

42,015. In the case of unpaid consuls would you prefer that the unpaid consuls should be men of British parentage or natives of the country?—Certainly the unpaid consul should be of British nationality if he is available, but if there is not an efficient man I would rather have a man who is efficient of another country than an inefficient man.

42,016. You can understand that frequently a man of British nationality may not have the same opportunities of helping and assisting English commerce as a well-disposed native of the country would have—a merchant having his place of business there?—I think it is very difficult to lay down hard and fast rules on that. You have to appoint a man you have confidence in to take charge of the appointments, and if he does not do it right you must go to somebody else. I am quite certain that the gentlemen in charge of these duties, from my

different talks with them, are thoroughly cognisant of the whole matter and know the best way to go about it.

42,017. But your constituents are of opinion that it is better always that a man of British nationality should be appointed as unpaid consul in preference to a man of the country?—Undoubtedly.

42,018. (*Mr. Holt.*) Only if he is of something like equal standing?—Certainly. I would not take a man who is no good, but I say other things being equal. This letter from the Foreign Office of 5th July 1910 I think, generally speaking, satisfied the Chambers of Commerce that we were very favourably situated in comparison with our opponents in the matter of nationality. I have had the percentages worked out, and our percentage is 54; whereas the United States percentage is 45 of their own nationality, Germany 30 per cent., and France 22 per cent. So I think we compare very favourably, and in fact I have not heard any criticism whatever from any Chamber of Commerce men since those facts were brought to the knowledge of the gentlemen who thought we had not sufficient British consular officers.

42,019. Is there any other point you would like to bring to our notice?—I draw particular attention to my paragraph No. 5, because what I say there gives my opinion almost as fully as it is necessary to do. Our Commercial Intelligence Branch I find a very efficient one. I very often find that where complaints are made of it, it is simply because the business firm or the party complaining has not taken the necessary steps to obtain the information he wants and therefore he finds fault with the Commercial Intelligence Department, purely on account of inexperience of its resources and organisation. I have also had a great deal to do with the officials of the Foreign Office and have always found that they understand the matter thoroughly, and as far as my experience goes, without being told so by people who directly are there, it is all a question of money. They could undoubtedly greatly improve the Service if they had more money given them to do it with. It is exactly the same as with a business man; it is a question of money whether he gets the brains or not. If he is prepared to pay the salaries he will get the brains.

42,020. (*Sir Donald MacAlister.*) I gather that you think it so important to get men of business experience into the Consular Service that you would be prepared to throw over the competitive system and adopt that of nomination and patronage. Is that a serious opinion?—I would not go quite as far as that. If I threw over the competitive examination and had a special training for this Service I should want to know that a man had the educational qualifications before he went into commerce and got commercial experience. I should not appoint a man simply because he knew a bit about business if he could not speak the King's English, or could not compose a letter properly, nor knew how to behave.

42,021. It would have to be some qualifying examination, but not competitive?—I think the examination is rather stiff for a man who has spent some years in business; and for him then to read up those things and pass an examination is not necessary. If he had educational qualifications before he went into business it would be a different matter.

42,022. You suggest a qualifying examination in general education before a man begins his business training?—Yes.

42,023. And if after he has his business training he wants to enter the Consular Service, you would have the appointment made, not by a further paper examination, but by nomination and selection?—Yes, that is what I would do.

42,024. That is a very remarkable change on anything that is likely to happen in the Civil Service?—A man may have lots of brains, and yet may not be able to pass a competitive examination in all those subjects—may have lots of ability, and yet will not face such a competitive examination.

42,025. But those who have the brains and ability and can pass the examination are probably better than the others?—I say commercial knowledge should come first, but I would suggest that it is not that I want to do away altogether with, or not to make it a condition that he should have the qualification. Take men who

19 June 1914.]

Sir ALGERNON F. FIRTH, Bart.

[Continued.]

have passed their examination either at a public school or university—there would be an enormous number of those young fellows now trying to get into business. Supposing they took positions in businesses for a time and they found that they would prefer to go into the Consular Service, I would let that former record count for the educational qualification.

42,026. Let us take that. You would let the educational record count both at school and the university (if they had it), and let the "business record count, and all who had the qualifications, educational and business, might then offer themselves for the Consular Service?—Yes.

42,027. How would you select them if there were more candidates than there were posts for?—I would then select them, as I select the people I want, by seeing them and sizing them up as far as I can. I make mistakes but often come out right.

42,028. That is patronage?—Certainly.

42,029. So it comes to that in the end—that if there are more candidates with all the qualifications than there are posts you would require to select them by personal test rather than competitive examination at that age?—Yes, you can generally judge for yourself whether a man would represent you as you would wish him to.

42,030. You would trust a Government Department to do that?—I would have a Board. I would not leave it to one man. In a business, if you have an important appointment to make, a man comes before the directors for them to see what they think of him. I should not leave it to one man to appoint.

42,031. You suggest a Selection Board with absolute power to say: "You shall come in," and "You shall not?"—Yes.

42,032. What is the relation of your Appendix No. 2 to your evidence?—As I explain in paragraph 2 of my notes, we sent out a circular to all the constituent chambers—there are 108—and we asked the two questions (a) and (b). A number said that they were going to give evidence. Others replied giving numerous views, but these in the Appendix were the most important replies, and we thought we might put them in. I should not like to bind myself to support each view, but they are the views of certain Chambers of Commerce.

42,033. Take Chamber No. 3—the name is not given, but I suppose it is important because you have chosen it. "(a) Diplomatic, nomination by Foreign Secretary, limited competition (and a private income); (b) Consular, nomination, and a limited competition." These are the existing methods for appointment to this Service at present?—That is not exactly so at present—not limited competition.

42,034. It is a competition of those who are nominated. Yes, it is called limited competition. Paragraph 2 of the reply of that Chamber goes on to say: "This system of nomination and limited competition should be substituted by open competition so that the gate of merit may be open to the best brains in the country." That is exactly the opposite?—Do not tie me to that paragraph 2.

42,035. I understand you entirely dissent from that?—As I said just now, we put in the opinion of those Chambers and leave you to judge.

42,036. I am asking your opinion; as now expressed to us is it opposite to that?—I do not want to disagree with my constituents or otherwise.

42,037. Then it says: "Nomination by the Foreign Secretary should be abolished and qualification of a separate income in the Diplomatic Service should not be necessary. The Government should provide an adequate salary?"—The last is all right.

42,038. Then No. 3: "Selected candidates for appointment to the Consular Service already undergo a severe examination with modifications and extensions as may be found necessary." They approve of the severe examination?—I do not take that to say that they approve it. It is simply a statement of fact. I do not know why it is put in. You know far better whether it is correct than I do.

42,039. What is the question to which that is an answer—"What method for recruitment of consular

"officers should be adopted?"—We asked: "The appointment and promotion of officers in these Services." I do not quite see the relevancy of this reply to No. 3.

42,040. I read it that they are satisfied with the present method of appointment to the Consular Service with such extensions and modifications as may be found necessary, which they do not specify; but the existing examination they do not propose to alter?—They have absolute confidence in you as to the extensions and modifications, evidently.

42,041. No. 4 touches the point you have spoken to in your evidence: "There should be interchangeability within the Imperial Services; especially should officers of the Board of Trade be frequently chosen for diplomatic and consular appointments, in order that the business side of the embassies and agencies may be strengthened." Have you a clear view as to strengthening, from the business side, the diplomatic missions? You have only touched on the consular side?—I do not know what the business side of the Diplomatic Service is at present.

42,042. You have heard of commercial attachés?—Yes.

42,043. And commercial secretaries at the missions themselves?—Yes.

42,044. Are the Chambers of Commerce satisfied that that representation of commercial interests in the Diplomatic Service is satisfactory?—Yes, very.

42,045. You know that within recent times the commercial attaché of a given embassy is no longer required to reside there, but resides for the greater part of his time in this country, and visits the country of his mission only from time to time?—I am not aware of that. To which are you referring?

42,046. The commercial attaché who represents the Embassies in Spain, Portugal, and Morocco, and the commercial attachés who represent the German, Austrian, and North European Missions, visit those countries only for a few months in the year, and the rest of their time is spent in this country going about visiting Chambers of Commerce and communicating with merchants and others interested in business. Are not you aware of that system?—I am aware that they come over here, but I had no idea that they were spending a great proportion of their time here. I think it very desirable that commercial attachés should come over occasionally and keep Chambers of Commerce in touch with the necessities of the markets, which is ten times better done by a personal interview than by any reports they can send.

42,047. I am not asking whether it is too much or too little, but only whether you knew of the system of working, and whether you thought the system effective?—I approve of the system; whether it is extended too far in regard to residence in this country is another matter. I really do not know without details as to the time they spend here, and I should not like to express an opinion; but I think it is very desirable that they should come over and keep in touch with British trade.

42,048. Some years ago, when commercial attachés were first established, they were attached to a particular mission, and resided there, made journeys throughout the country to which the mission was accredited, getting in touch with the various mercantile interests, and at the missions they were available for communications from this country—from merchants and others—on commercial business. They were the business representatives in the missions, available there for communications from this country. Then they changed that to the system by which they only now reside for a certain part of the year at one or other of the missions to which they belong, and, during the rest of the year, they travel about in this country. Which of those systems seems to your constituents the one which is most helpful?—I should not like to criticise the proportion of time without knowing what it is. If I knew how much time they spent in this country, and what they spent abroad, I could criticise it, but without knowing that I could not. I should say that the system of their coming over here each year, or every second year, or something of the sort, to get into touch

19 June 1914.]

Sir ALGERNON F. FIRTH, Bart.

[Continued.]

with trade and know what information traders want, is extremely good.

42,049. They are more likely to be useful if partly out in a foreign country and partly here, than if wholly in a foreign country?—Yes, if they visit home markets, decidedly.

42,050. How would you make for greater interchangeability of the officers of the Board of Trade and Diplomatic and Consular Services?—I cannot explain that. I have no views upon it.

42,051. Have you any views with regard to the possibility of more frequent transfers of able men from the Consular Service to the Diplomatic Service, which is referred to in some of these answers more than once?—I do not know what the connection of that is.

42,052. In paragraph 4 of Chamber No. 3's reply they express the opinion that the Government admit: "That the Diplomatic and Consular Services are wanting in business knowledge seems evident from a recent decision of the Board of Trade to send 'special commercial missions to China to investigate the conditions and prospects of British trade.'"—That statement is made under a misapprehension altogether, I think.

42,053. I think so, too. There is no evidence that the Government admit anything of the kind?—It is to open up new places where there are no consuls. I am responsible, as a member of the Commercial Intelligence Committee, for that mission—the China Mission—and I think knowledge about it is not sufficiently spread among the Chambers of Commerce as yet. It will be very shortly before the agent leaves.

42,054. But the whole side of the question of diplomatic representation of business interests has not specially come before you in drawing up this evidence?—No, it has not come before us.

42,055. (Chairman.) Are you anxious that this Appendix No. 2 should be printed?—No.

42,056. (Miss Haldane.) You say that you desire that consular officers should be authorised "to communicate direct on application information to British inquirers in foreign countries." Do you go so far as to say that the sale of English goods should be pressed by consuls?—No.

42,057. Or exhibition of goods held, or anything of that kind?—No, not at all. The British manufacturer should run his own business and not expect a consular agent to be a commercial traveller for him.

42,058. That is quite a wrong conception of a consul?—It is a very grave complaint of some of them that they give one firm's business away to others. I know that at the Board of Trade they have sat on men who have done so considerably, and they try to point out to the men—and it is in their instructions—that they are there to inform British firms where they can oust foreign firms, but not to inform one British firm how it can take away the business of another British firm.

42,059. I wanted to know your views on that subject?—They are very strong, and I have expressed them repeatedly, on that point.

42,060. You think it would be very dangerous if consuls were to do that?—Yes, and it is quite outside the sphere of a British consular agent. As long as a British firm is doing business let it alone; it is when it is not doing business that it wants support.

42,061. I see in one of the Appendices the days taken by consuls as holidays are criticised. Have you any views about that yourself?—No, I do not know about that. That is one of those points that I should simply send in to the Foreign Office and ask them to investigate, because I am sure they would handle that all right. I was not going to worry you with details of that sort.

42,062. We have had some evidence about consular reports being too late to be of much use?—There is a great deal in that. Men think that the consular reports are judged by the amount of stuff put in them and not by the pithiness of their information. I think they are far too voluminous, and that business men have not time to go through them.

42,063. Could they be more up-to-date by any system?—Only by revision when they come home. I think a consul is perfectly right to send all that information home, but I think the reports want putting in a form that is easily read and easily adaptable for business men. They are too long to look through now.

42,064. Do you think that that might be done by the Consular Department at the Foreign Office?—More could be done by the Commercial Intelligence Department of the Board of Trade.

42,065. You think they ought to edit the reports and condense them?—If they could condense them it would be an advantage, I am sure.

42,066. (Chairman.) Would you advocate a certain standard form for the reports so that all reports should show information on the same subjects under the same heads?—Yes. The Commercial Intelligence Advisory Committee had that matter up some time ago, and we addressed communications to all the Chambers of Commerce, asking them to give a list of the particulars upon which they would like information in those consular reports; but we found that there was such a tremendous variety that it was almost impossible for anybody to summarise them properly. We did that at the request of the Foreign Office and the Advisory Committee, and we found that the trouble is—and it is a very difficult thing for the officials to handle—that the variety of information desired is so enormous. One man wants one thing and another man wants another, and the result is that it makes the reports so voluminous that half the men have not the time to read them when they get them, and then they complain that they have not got the information. It is one of those difficulties that is unavoidable, I think. You cannot have it all ways.

42,067. (Miss Haldane.) Do you think that those in the Consular Service receive less recognition from the Government in the way of honours, and so on, than some other departments?—Yes, I do. The foreigners think a great deal of a little decoration—the Legion d'Honneur—or anything of that sort. If a British consul has to attend a function, it is always a great advantage and a great cause of satisfaction to him if he has some mark of honour that distinguishes him from the ordinary man, or he feels a grievance, perhaps, if he is behind some of the representatives of other Powers who have these recognitions. I think there might be a little more liberality in that respect shown to the men who represent us abroad.

42,068. Some countries give them much more freely than we do?—Yes.

42,069. But even so you think the Consular Service might have some further recognition than it has at present?—I think so. I think it is felt that these recognitions are a little bit grudgingly given, and they would have great value if distributed more freely in this service.

42,070. (Sir Donald MacAlister.) There is no difference in the efficiency of the American consuls, and they have no decorations at all?—That is a principle with them, but it is not with us. We have decorations, and they see British decorations.

42,071. (Mr. Shipley.) Do you not get a summary of those consular reports in the *Economist*?—We do not all read the *Economist*.

42,072. I thought all people read the *Economist's* consular reports?—Perhaps round at the clubs, but I do not think business men do. Some big firms have never heard of the "Board of Trade Journal," which gives a summary of these reports.

42,073. No business man has spoken of them so contemptuously as some of the consuls before us have. Do you find in America that the commercial attaché is a very great help? You have large business holdings in America?—Yes, but ours is a purely American concern—an American company. We have nothing to do with the British attaché there. We come under the American laws. I should only go to him if I got into difficulty personally.

42,074. Does it strike you as very peculiar that there is not a single commercial attaché in the whole of South America?—It does.

19 June 1914.]

Sir ALGERNON F. FIRTH, Bart.

[Continued.]

42,075. It would be helpful if there were one or two at least?—I think so.

42,076. (*Mr. Matheson.*) I think you mentioned with approval two systems of appointment to the Consular Service—one would be selection by open competition on general education followed by a systematic training of one or two years in special subjects; the other would be selection by nomination of people who had had business experience. Which of those two methods of selection on the whole would you prefer? One system is selection by open competition on general merit followed by a special training; the other system is that you allow men to come in who have had business experience, and you then appoint from them by patronage without examination?—I should not let the man come in purely on business knowledge. I should make sure that he had the education to begin with, but I would far rather have that than a man appointed on a competitive examination only.

42,077. Should you prefer to have people specially trained in a college or university which provides a special course, or would you prefer a training in a business house?—I should like them both. I think at the present time you have not got that college which is giving a specialised training for the Consular Service. It would take a good deal of time to set it up, and eventually, if such a system were adopted, it might supersede what I think is desirable at the present time. At the present time I think it is desirable to get hold of men who have had good general education, who have shown their ability through that general education, and then have served some time in business at some place or another, and who want to get into the Consular Service. Until you can get a specially trained class of man that is the best system you can go on at present.

42,078. (*Sir Henry Primrose.*) You mentioned that your association includes in its membership four British chambers of commerce situated abroad?—Yes.

42,079. Which are they?—Paris, Belgium, Italy, and Nice.

42,080. Chamber No. 1 in your Appendix No. 2 urges that British consular officers should encourage as much as possible the founding of British chambers of commerce in foreign countries. That seems rather an important suggestion. I should think that a British chamber of commerce abroad is very valuable?—It is, undoubtedly.

42,081. Are those four that are associated with your association the only ones, or are there others?—These are not foreign chambers, but British chambers abroad.

42,082. Are they the only British chambers of commerce abroad?—No, one has just joined us which has been formed in Buenos Aires; and there is one in Egypt, and another in Constantinople.

Mr. GEORGE HENRY WRIGHT called and examined.

42,095. (*Chairman.*) You are Secretary to the Birmingham Chamber of Commerce?—That is so.

42,096. And you have come to give us evidence regarding the Consular Service?—That is so.

42,097. If you have prepared notes of evidence which you desire to follow we shall be glad if you do so?—During the period of my service as Secretary of the Chamber, which was established in 1813, and is a representative body comprising over one thousand seven hundred commercial and professional firms in the city of Birmingham and district, I have on many occasions had cause to address communications to His Majesty's Consuls abroad seeking information, advice, or assistance on behalf of members of the Chamber. From actual experience I am able to say without hesitation and with pleasure that even during the comparatively short period of between 11 and 12 years the services rendered by the Consular Service to the commercial community of this country have increased in value. I have found a greater disposition to respond to requests for information, advice and assistance, than was the case earlier; and in not a few cases His Majesty's Consuls have even gone out of their way, or in other words

42,083. By working with the consul they could be very helpful?—They could be very helpful to the consul.

42,084. In Appendix No. 1 you give a copy of the Foreign Office reply of 5th July 1910 to the representation made to the Secretary of State on the subject of the nationality of consular officers. The answer seems pretty complete. Did it satisfy your association?—Yes. As I have stated already, that closed the matter altogether.

42,085. I notice there is a reference to languages, and it is suggested that every consular officer ought at least to know French. Do they not always know it now?—I do not know. I do not think so.

42,086. Should you say that the consular officers were often defective in their knowledge of the language of the country in which they are?—I do not know enough about them to express an opinion on that. I do not visit them.

42,087. (*Mr. Holt.*) With regard to the recruiting of the consuls, do you think it would be possible to engage persons of ability who had had anything like good experience in business at salaries at all approaching what are being paid at present?—No, I think those salaries want raising.

42,088. On the present scale of salaries would you agree that the persons you were likely to get who had had business experience would be mainly people who were not satisfactory and were failures?—I think that is a fair inference.

42,089. As regards salaries, supposing you want to get a good man, do you think you are more likely to get him by having a fairly good scale of pay for the start, with moderate increments, or by throwing open to him some prize—some really good place for the best man?—I do not know. I could not say.

42,090. Is not the principal inducement for able people to go into business the prospect that if they are very successful they will get something good?—Certainly. That is exactly what I was saying: that if the men can advance to these different grades, and there is steady progression in salaries, they would be attracted far more than at present.

42,091. Assuming you want to attract a much better class of man, do you not really want to improve the higher places considerably?—Yes, I stated so.

42,092. To give the best man a prospect of something much better than anybody has got now?—Certainly; I think they should be raised.

42,093. Rather than give him a certainty of something moderately good?—I do not understand the difference. The more you raise the salaries means there is so much more prospect and more to go for.

42,094. Are you not more likely to bring in the best class of man by raising the bigger salaries than by raising the lower ones?—I have suggested that you should raise the high ones as well as the low ones.

exceeded what I conceive to be the strict scope of their duties, to render service to the commercial community.

42,098. Can you attribute that improved effectiveness of the Consular Service to any particular cause?—I think I should attribute it to the fact that the commercial community have during the past 10 or 15 years attempted to make greater use of the Consular Service than they had done in the past.

42,099. You would not attribute it to any marked improvement in the Consular Service?—I think the improvement in the Consular Service has in all probability followed the greater demand made upon them for services. The same ability may have rested there before, but it was not exercised to the same extent that it is today. I do not propose to suggest that the Consular Service at present meets all the legitimate needs of the commercial community, and as I have not had an opportunity of perusing their official instructions, I am unable to say whether the fault—if fault there be—rests with the consuls or with their stereotyped instructions. I know, however, from experience, that information which is willingly supplied by one consul—of course with appropriate reserve and without responsibility—is

19 June 1914.]

MR. GEORGE HENRY WRIGHT.

[Continued.]

declined by another on the ground that it is outside the scope of his official duties.

42,100. Can you give us a concrete instance?—The sort of instance I would mention which is as strong as any I know is, that if you take a particularly remote market and you desire to know whether a particular individual is a man with whom an English trader may with a certain amount of security enter into trading relations, in some cases the consul will give a report which is not a status report by any means, but which will convey to you a general impression as to the reputation that man has in the district in which the consul serves. In another case the consul would at once reply that he refuses you that information. I should say that in all inquiries of this description I always make it quite clear to the consul that I do not want him to do what a commercial status inquiry office would do, but to give, if possible, some general guidance.

42,101. On the whole are they more willing to give the information, or less willing? Is the number of consuls who are more willing to help you by giving you the information you want greater than the number of consuls who are reluctant to do so?—I should say that on the whole now there would be a greater desire to impart information.

42,102. Is that desire growing?—So far as my experience goes the willingness to assist is growing. Excepting actual canvassing for orders, giving status information, or directly collecting debts, there is little that a consul may not do in the interests of the commercial community; whilst even with regard to the exceptions I have had cases where consuls—whilst not giving the kind of information supplied by status inquiry officers—have given very useful advice or information of a quite general character—as I have just said—and also instances where, in the case of an unpaid debt, they have helped to induce payment without in any way sacrificing the dignity of their position as His Majesty's representatives.

42,103. On the whole your experience is that it is satisfactory?—On the whole I should say that my experience is satisfactory, whilst at the same time I should like to see greater facilities provided by the consuls for the supply of information and assistance to the traders of this country. I suggest that, without prejudice to the high position which a consul should naturally occupy, their official instructions should be so widened as to give them greater discretionary powers in regard to the services they are able to render to the commercial community. I am convinced that whilst considerable benefit would accrue from this, no harm could accrue to the Consular Service so long as the standard for admission into the Service is maintained at a high level. One of the essential requirements at the present time is that there should be an increase in the number of salaried consuls, that is to say, of whole-time men, whose service every day is to be devoted to the interests of the United Kingdom. It is not reasonable to expect that an honorary consul or vice-consul, who has either a commercial business, or a professional practice to attend to, can be expected to give undivided attention to the commercial interests of this country, and on this ground alone it is important that more salaried consuls should be appointed.

42,104. Of course you would not advocate that a salaried consul should be appointed where there is not much trade?—Most certainly not.

42,105. But where there is substantial trade you think the consul should be salaried?—In every case where the commercial work of the consul would exceed anything in the shape of ordinary consular duties, then the consul, in my opinion, should be a salaried consul.

42,106. Do you think that the unsalaried consuls serve a useful purpose in the commercial organisation of the United Kingdom?—I should not like to suggest that they do not serve a useful purpose, especially as I have on the council of my own Chamber a very considerable number of honorary consuls of foreign Powers, who I know serve a very useful purpose in connection with their own countries. Still at the same time they are commercial men who have their own interests to look at.

42,107. Would you draw a distinction between an unpaid consul of British nationality and an unpaid consul of foreign nationality employed by Great Britain?—To a slight extent, but I should not care to make any invidious remarks with regard to one class or the other.

42,108. Would you be prepared to say that in all cases where unpaid consuls are employed they should be of British nationality?—Whenever it is possible to obtain a man of the required reputation.

42,109. Not otherwise?—Not otherwise, decidedly. I am aware that the terms of reference to the Commission are somewhat limited, and that part of the evidence given by me may be to a slight extent irrelevant, unless the Commission hold that it comes within that part of the reference which authorises them to consider whether the existing scheme of organisation meets the requirements of the public service.

42,110. You have said nothing which is outside our reference?—I offer no criticism as to the educational standard required of competitors for consular positions, but I think that this should be so modified—especially as to the age limit—as to furnish greater opportunity for the admission of men of commercial experience, that is to say, of men who have either had actual experience in the office of an export merchant or manufacturer, or who have, by means of study, acquired a close acquaintance with commercial subjects. Where the latter condition prevails I submit that adequate allowance should be made for lack of purely scholastic or theoretical knowledge, subject, of course, to an adequate test by means of oral examination.

42,111. How can you secure that information? You know of the Walrond Committee?—I have not read the evidence given before the previous Committee on the Civil Service.

42,112. The Walrond Committee sat some 11 years ago, and one of its principal recommendations was that it was desirable to get into the Consular Service men with commercial experience. Our experience since then in recruiting for the Consular Service shows that we have not been able to get men with commercial experience into the Consular Service. How would you improve that?—I am afraid I am not prepared to make any definite recommendation as to how the improvement could be brought about, but I think I can give what would be a practicable alternative. I would suggest that after an applicant for appointment as vice-consul has satisfied the Civil Service Commissioners and been recommended for appointment, he should be provided with an opportunity of acquiring a knowledge of the needs and requirements of the commercial community. That is the alternative.

42,113. That is an alternative scheme?—That is an alternative. This knowledge could be acquired by his being attached for a few months to the Commercial Intelligence Branch of the Board of Trade, and to one or more of the principal Chambers of Commerce, such as London, Manchester, Sheffield, Birmingham, and others. The cost of this would be comparatively slight, and as compared with the value of our foreign trade, quite insignificant, whilst the return value for the country would probably be very considerable. At the outset this might be tried as an experiment with a few consular officers appointed to represent us in the more remote countries.

42,114. Your proposal is that if you cannot get recruits with commercial experience for the Consular Service you ought to recruit so as to secure a good ordinary education in your candidate, and then submit your candidate to a course of training afterwards—such a training as would make him suitable for the Consular Service?—That is so. I might mention with regard to our own particular Chamber, that in the course of a year we may have 3,000 inquiries with regard to certain problems which may have to come before the notice of a consul—all sorts of demands for information, advice, and assistance as to what is happening, or may happen, in some particular part of the world, and as to how certain difficulties are to be overcome. If a consul could serve for a month, or six weeks, or two months in the office of a Chamber like

19 June 1914.]

Mr. GEORGE HENRY WRIGHT.

[Continued.]

ours, he would ascertain to a nicety the class of information upon which he could most usefully write home when he got to his position.

42,115. You are familiar with the Birmingham University?—Fairly familiar.

42,116. Do you know that there is a Faculty of Commerce established in that University?—Yes, we have a scholarship there.

42,117. If you have recruits selected on a proper and suitable educational test, and these recruits are subjected to training in the United Kingdom, say for two years, being sent for a year, say to Birmingham, attending the lectures in the Faculty of Commerce, and also attending your Chamber of Commerce, and making themselves familiar with the matters you have now mentioned, and then coming to London and becoming acquainted with the procedure of the Board of Trade, and perhaps of the Commercial Department of the Foreign Office, and also perhaps with that of the Port of London Authority's office—is that the sort of training you think would be suitable for a consul?—I think that that training, if it were practicable, would be of the utmost value, especially as the training at the University of Birmingham would be such as would enable a consul to undertake investigations which perhaps the ordinary consul could not undertake at the outset.

42,118. That system of recruiting for the Consular Service would meet with your approval?—I feel quite sure that it would not only meet with our approval but would bring about an improvement on the present condition of things. The only other points to which I desire to refer are (1) the systematic collection of samples by His Majesty's Consuls, and (2) the consular reports issued by the Foreign Office and the Board of Trade. In regard to the first-named I would urge the necessity for His Majesty's Consuls in various parts of the world being in turn instructed to make a reasonable collection of samples, such samples to be placed on exhibition in the principal centres of industry.

42,119. Is not something like that done now by the Board of Trade?—That is done by the Board of Trade so far as British Colonies are concerned. We have had exhibitions of South African samples and New Zealand samples in Birmingham, and we are hoping shortly to get an exhibition of samples from Australia.

42,120. You would extend that?—I should extend that to all the principal markets where British products have to compete with foreign products.

42,121. Where would you have the samples placed on exhibition?—The samples which come from the Colonies go in the first instance to the Commercial Intelligence Branch of the Board of Trade, where there is a sort of permanent exhibition. Then hardware and other samples applicable to Birmingham are sent to Birmingham for a month or six weeks, as the case may be, and then they are sent on to other centres of industry.

42,122. Would you have samples from foreign countries sent in the same way through the consuls to the Board of Trade, and then distributed to centres in the United Kingdom?—Yes, samples of foreign articles which compete with the English article. With regard to the second point, I would say that the present system of consular reports would seem to be cumbrous and altogether too expensive. In the case of an important commercial and industrial country, we are now furnished with a number of annual reports. In these there is much overlapping, because the reports in many cases deal not only with the commerce of the consular district, but also with that of the country to which the consul is accredited. What I would suggest is that every consul and vice-consul in any country should report to the Consul-General or other superior consular official, and that the latter should make a single annual report on the commerce and industry of the country concerned, in the course of which he should summarise the information furnished to him. Thus we should get only one report for each country. This condition being secured, I would suggest that His Majesty's Consuls should be required to furnish daily, weekly, or monthly reports as to the openings for trade, for circulation by the Commercial Intelligence Branch of the Board of Trade.

42,123. Are you familiar with the system of commercial attachés?—I think I am fairly familiar with it.

42,124. Would they not be the proper source from which your general report should come?—That would be so, if there were a commercial attaché established in each country, but I do not quite see that Lord Hervey could send us a report for Spain, Portugal, and Morocco, where he represents us. What we get in consular reports to-day is this: The consul at one town in Germany, not only reports with regard to the trade of his particular district, but he makes comments on the general conditions of the country.

42,125. You would have him restrict himself to his own circle?—I would restrict the consular reports to such reports as come in periodically to the Board of Trade and are circulated when there is information of value to any part of the country, leaving one good consular report to represent the whole of any particular country.

42,126. Do you find that the reports giving statistical information are belated?—I do not think that the delay of a few months in regard to the materials furnished in a consular report is of very serious consequence. The complaint we have is that reports with regard to contracts which are open at the moment, frequently reach the commercial community at too late a date to enable them to tender, but that condition of things does not apply to the annual reports.

42,127. Has your Chamber formed any opinion as to the sufficiency of the existing scale of salaries for consuls and vice-consuls?—I am afraid they have not discussed that, but my own personal view, of course, is that the scale is not a sufficiently generous one to attract the hard-working man who is needed in the Consular Service.

42,128. Do you think that the initial salary given to the vice-consul when first recruited is adequate? He gets 300*l.* to 500*l.* a year?—I think if the minimum was 500*l.* it would more nearly represent a sum upon which he might be expected to live with some comfort.

42,129. They get as much if not more than any other class of officer that I know of either at home or abroad gets to start with?—In a sense a consul has to occupy a position which is rather distinct from that of any other representative of this country abroad.

42,130. He gets more pay than a diplomatic officer abroad, but perhaps you will say that a diplomatic officer gets no pay to begin with?—Yes.

42,131. What is the maximum which you think a consul ought to reach at 50 years of age?—It is very difficult to say. So much would depend upon the country in which he was living, and the town in which he was established.

42,132. I mean "clear" pay. As you know, consuls do get allowances for the cost of living in particularly expensive localities, but restricting yourself to the net pay, do you think a maximum of 1,200*l.* a year is adequate?—I think 1,200*l.* in addition to allowances for the cost of living would be quite ample.

42,133. 1,200*l.* and, say, at a very expensive place 200*l.* or 300*l.* extra for the extra cost of living?—Yes, I think that represents it.

42,134. But you think that maximum to which consular officers could hope to attain would be a fair maximum?—I think possibly some places might be selected at which the salary would reach a higher maximum, and to which promotion might be obtained.

42,135. Would you think for such exceptional cases a maximum of 1,500*l.* a year adequate?—Quite adequate to my mind, to secure a man of sufficiently good type for the Consular Service.

42,136. Beginning at 300*l.* and looking forward to a maximum of 1,500*l.* would seem to you to afford a good and adequate scale to attract the best men?—Providing the opportunities for promotion are sufficiently good. I do not know anything about the inner working of the Consular Service, or how long it takes a consul to rise from one scale of pay to another.

42,137. Have you heard any complaints with regard to promotion in the Consular Service?—No. I have only heard the trader's view, and he never discusses the question of payment.

19 June 1914.]

Mr. GEORGE HENRY WRIGHT.

[Continued.]

42,138. (*Mr. Graham Wallas.*) Have you ever travelled abroad yourself to any extent? Do you know anything of the consular work from the other side?—No, I have never travelled extensively abroad, but I have come into contact with a considerable number of consuls and commercial attachés who visit the Chamber of Commerce periodically.

42,139. You do not, for instance, know whether traders generally, who visit consulates abroad, think that the offices are adequate?—You mean the establishment in which the consul is?

42,140. Yes, the house in which he lives and where his work is done?—I have never heard comments from traders on that point.

42,141. You say you want further powers given to consuls in addition to those which, as far as you can judge from their statements of what they are allowed to do, they have at present. What further powers do you want?—I should like every consul to feel that he has a discretionary power to give advice, which, at the present time, he tells you is outside the scope of his duties.

42,142. You gave us one instance, that is, careful and wise advice about the stability of firms?—Yes, and that is a most important instance.

42,143. Is there any other point?—I could not suggest anything which would be of greater importance to a trader who did not happen to have a direct agent in a particular country.

42,144. Besides that, is there any other point you would like to urge where their powers should be enlarged?—Only quite generally, that having secured the right type of man the greatest possible discretion should be given to him, and that he should not be hide-bound by official instructions.

42,145. Speaking generally in the case of a good man he should be given larger liberty?—I think so.

42,146. I understand the system of recruiting the Consular Service which you would prefer would be the appointment of suitable men, rather young, and then a period of special training?—I rather suggested that, if practicable, we should like to see more opportunity given to men with actual commercial experience; but if that be not practicable, as an alternative we would have the men as they go in at the present time with an after period of training in some commercial office in this country, such as the Board of Trade or a Chamber of Commerce.

42,147. Let us take for a moment the second alternative. In order to be successful that would have to be very carefully adapted to any changes in the commercial world that might occur. The best system of training to-day might not be a good system of training ten years hence—the world changes so quickly?—The experience obtained by the Commercial Intelligence Branch of the Board of Trade would be as much up-to-date to-day as it would be ten years hence.

42,148. But some body, like the Commercial Intelligence Branch of the Board of Trade, would have to constantly direct, and, if necessary, from time to time vary the system of training of consuls?—It seems to me that the growth of the experience of consuls at the Board of Trade would coincide with the growth of the improvements due to the later period.

42,149. Do you think if some one were appointed director of consular education or training—a man with some consular experience, and who knows the system pretty thoroughly—he could watch and direct, and make up for any errors or failures that might appear in the system?—I think if it were ultimately decided that this class of training should be given to consuls, it would be essential to have a director who would see that what they were supposed to be getting was being given to them.

42,150. That is to say, if some young men are being trained in Birmingham and others in Liverpool, you would want somebody to go round to see if he could pick up hints in one place and give advice in the other?—Yes, and also to see whether the time of the consul was being wasted or not.

42,151. You have indicated, on one or two points, that you think the country would be wise to incur a larger expenditure on Consular Services?—Yes.

42,152. Do you think that if that involved a certain amount of increased taxation, that taxation would be willingly borne by merchants?—I think that in the present age, when taxation is growing so rapidly, a few hundred pounds for the Consular Service would not be noticed.

42,153. And if noticed it would not be objected to?—I do not think for a moment that it would, because it would be an expenditure of money for the benefit of the producers of the country.

42,154. Which would you prefer: That the increased expenditure should be arrived at by an increase in consular fees or voted out of the Treasury?—I should not recommend that consular fees be increased anywhere unless it were proved that they were absolutely inadequate at the present time. The burden of consular fees which has to be incurred by Birmingham traders who are shipping goods abroad is now very considerable, and I have no doubt that my Chamber would protest against that if other Powers attempted to increase them.

42,155. The consular fees in the British Service are somewhat lower than those in other Services?—I should think they are. In other Services consular fees have to be incurred for so many other things, such as the shipment of goods, and that class of work.

42,156. But you think the trading community would much prefer that any increased expenditure came out of taxation and not out of increased fees?—I think we should be prepared for it to run in with the ordinary supplies voted by the House of Commons.

42,157. You said you were familiar with the commercial attachés. They are always members of the Diplomatic Service?—They are attached to the embassy as a rule, except in certain cases where they reside in London and visit their countries.

42,158. But they are members of the Diplomatic Service?—Yes.

42,159. Have you ever heard the question discussed as to whether it would be desirable that they should be drawn rather from the Consular Service than from the Diplomatic Service?—I am not sure that that they are always drawn from the Diplomatic Service. I think His Majesty's commercial attaché in Japan was a commercial man before he became commercial attaché.

42,160. Have you ever considered the question on commercial matters of the relation between the Consular Service and the Diplomatic Service at all—whether, for instance, it would be desirable from the point of view of trade to have greater interchange between the Consular Service and the Diplomatic Service, or an amalgamation of the two?—I do not think that that is quite so important as an increase in the opportunities now afforded for traders in this country to come into personal contact with consular officers and commercial attachés who have to report upon trade matters.

42,161. Supposing a consular officer in Europe received a request to report on such and such a subject, do you think that it would often pay the community if he were simply to take a ticket and come home and spend two or three days over in England seeing the people who are asking for the information and see the position at home before going back and reporting?—It would depend a good deal upon the question he was asked. I should like to see a hypothetical question, and then I could express a view as to whether it would pay for him to come home.

42,162. But there are certain questions where it would get rid of misunderstanding and prevent waste of money, if, instead of communicating by letter, a man could come home and find out what was wanted?—I think if the matter in Europe were of so great importance to the English trader it would be better for the trader to go over to his consul rather than the consul to come over here and see him. We do see our commercial attachés periodically. In fact, next week we have Lord Hervey coming to meet a lot of traders.

42,163. You think that that makes enough personal communication?—I think, if possible, the visits ought to be increased in number, except from the more distant markets such as China and Japan—it is very difficult there.

42,164. (*Sir Henry Primrose.*) You mentioned something about information as to contracts being open

19 June 1914.]

Mr. GEORGE HENRY WRIGHT.

[Continued.]

abroad arriving late. Does not the Board of Trade publish a weekly journal?—Yes; but you may find an advertisement in the "Board of Trade Journal" to-day for a bridge contract in Egypt, tenders for which have to be in by next Tuesday or Wednesday. Unless you have someone holding your power of attorney in Egypt to-day you could not get a tender in in time, because you must have a directly-appointed agent in the country. That is the only trouble we have. Whether the consuls could possibly obtain the information at a sufficiently early date to allow of tenders being sent in in most cases I do not know; but I should think in all probability they could.

42,165. Take Egypt, for instance, and a large contract that might be taken in Birmingham, unless they give proper time you have no chance. Where do they advertise their contracts in the different countries? Is there any system which they adopt?—Some Egyptian Government contracts would be advertised in the columns of English papers; others may not be advertised at all, but a smart consul may possibly be able to ascertain, before any notice appears, whether the contract is likely to be open, and so put the trader on the *qui vive*.

42,166. Yes, but that is rather difficult?—It is done in many cases. We have instances of it.

42,167. You said you thought one thing required was an increase in the number of salaried consuls. Take one specific country in which you find that the absence of paid consuls is a disadvantage. Could you take, for instance, Belgium. Where have you found that the absence of a paid consul has been a disadvantage?—You would find that the absence of a paid consul was a disadvantage where a trader was in a difficulty and the consul was a merchant who might, in his merchant's business, be somewhat interested. I have had an actual case of where a British consul was a man from whom I was attempting to collect a debt for a member of the Chamber. You referred to Belgium. In the case of Belgium being so close, and one being always in touch with Sir Cecil Hertslet, there is very little difficulty in getting information from there because instructions are given by the Consul-General to any consul in Belgium.

42,168. Speaking of Birmingham interests, can you say that in any one country specially the absence of salaried consuls has been a disadvantage?—Yes, because my experience is that you get the most prompt service and the fullest service, and you are always sure of getting replies from salaried consuls, but you are not sure of getting anything more than an acknowledgment from an unpaid consul.

42,169. The unpaid consuls, as a rule, are in unimportant places, or where they are in important places there is also a paid consul and they are assistants to the paid consul?—I do not think that would apply generally.

42,170. Take Hamburg?—We should not value the Consular Service in Hamburg so much as we should value it in a remote market in South America. An English trader who trades with anyone in the Hamburg district could go over himself. It is more in the distant countries where we need these services.

42,171. (*Mr. Matheson.*) Do you think the members of your Chamber make pretty good use of the Board of Trade publications?—I think a good average use as compared with communities in other parts of the country.

42,172. You think they know pretty well what is to be got out of them, and what is being published?—I should not like to say that the circulation of the "Board of Trade Journal" is even equal to the whole of the commercial community of Birmingham, but a fair average number of firms, who might be interested, more or less, each week, would undoubtedly see the "Board of Trade Journal."

42,173. (*Mr. Shipley.*) Do you know the reports of Sir Francis Oppenheimer?—I have read those with great interest on many occasions.

42,174. Those are the sort of reports you would aim at?—That is a class of report one would always be glad to see, but I should be more glad to see one from

Germany than a dozen containing comments upon the situation throughout the whole country.

42,175. That seems a very good suggestion. The samples you say are sent from English countries; are samples collected in the colony and sent to England?—That is so.

42,176. You do not propose that samples collected in England should be sent to consuls and exhibited?—That is very difficult, because you would have to collect then a set of samples for every market, whereas collecting abroad you collect samples for one place of production.

42,177. Is not there a danger of the consul favouring one firm at the expense of another, and lessening his position in that way?—No. What we want the consul to collect is a sample of that article with regard to which he now says that the English manufacturer cannot compete. Take a single instance—a very humble one—the case of the ordinary common house bucket. A consul will report that the English manufacturer's price is altogether too high for the common house bucket, and therefore the German, or some other competitor, is in front of him. But the consul does not tell you whether the sheet out of which the foreign bucket is made is as thick as the sheet out of which the English bucket is usually made, and that is where there is the difference in price in all probability.

42,178. Do you feel that South America is specially neglected by English trade?—Speaking with regard to Birmingham I should say that Birmingham's share of the South American markets is equal to that of any other country. It is the one market in which our merchants have specialised.

42,179. The proportion of English goods going into some of the big South American countries is very high, and there is not a single commercial attaché there. Do you think we should have one, or two, or three, in South America?—I think the money would be well spent, having regard to the very large interests involved there.

42,180. Do the hardware firms of Birmingham employ commercial travellers who understand the foreign weights and measures and languages?—Of every important merchant firm in Birmingham who exports to South America, the principals know the countries as well as they know Birmingham itself. They have all been there, and many of them have travelled there for their own goods, and they keep a traveller or two in the market the whole time.

42,181. We are often told that English people do not employ commercial travellers so much as the German people, and not such able ones?—That certainly does not apply to merchants. It may, of course, apply to some extent to manufacturers, but their difficulty is very much greater than that of merchants.

42,182. (*Chairman.*) Do the men engaged in the South American trade all speak Spanish?—All our merchants can speak Spanish, and all their travellers can speak Spanish. A Spanish-speaking merchant would never employ a man only speaking English in South America, because he knows the country himself, and the difficulties of handling it.

42,183. (*Mr. Shipley.*) Do you ever remember a consul coming to Birmingham and saying: "Let me see your Chamber of Commerce, and show me what work you are doing"?—Not, might I say, on his own; but we get many consuls who come after notice given by the Foreign Office, and then we arrange for a number of firms to meet them.

42,184. (*Sir Donald MacAlister.*) Were you connected with the Chamber of Commerce in Birmingham in 1910?—Yes.

42,185. Does the Birmingham Chamber take part in the work of the Association of Chambers of Commerce?—Yes, we were the originators—one of the first half a dozen Chambers who formed the Association.

42,186. Do you remember that there was correspondence with the Foreign Office about this question of non-British consuls representing this country in 1910?—I have some recollection that there was correspondence between the Association and the Foreign Office or the Board of Trade.

19 June 1914.]

Mr. GEORGE HENRY WRIGHT.

[Continued.]

42,187. And the Foreign Office sent an elaborate reply to the charge that this country was backward in the matter of appointing British-born consuls to represent it?—Yes. I remember the incident; I do not remember all the details.

42,188. We were told by Sir Algernon Firth that it was so convincing that no further complaints came from Chambers of Commerce on this point?—Yes, I have made no complaint to-day with regard to the appointment of non-British-born consuls. I have suggested that where possible the consul should be British-born, but where you cannot get a man of the right stamp I have no objection, where he is unpaid, to his being a foreign-born subject.

42,189. I got the impression that you were objecting?—No.

42,190. Then you accepted the answer given by the Foreign Office?—I accept the position as being one that we cannot get beyond at the present time.

42,191. And a position in which this country is rather better off than the other two countries said to compete with it?—I accepted the position as stated by the Foreign Office. I never investigated it myself.

42,192. So that the answer we got from Sir Algernon Firth is confirmed by you, that the complaint that was made was rather a theoretical complaint, and when the answer came explaining the actual facts the complaint died away?—Quite; but I should not like you to think that the last word had been said with regard to improvement in the Consular Service because of that. I accept that position just as it stands, and in view of the reply of the Foreign Office it would be impossible for any Chamber of Commerce to make any similar representation within the near future.

42,193. You have said, as others have said, that you would like to see more men of commercial experience get into the Consular Service. Are you clear as to

what means of selecting those officers with business experience for the Consular Service should be adopted?—I am not, and that is why I suggest the alternative of allowing consuls to visit various centres of industry before going to their posts.

42,194. You do not see how a selection of business-trained men could be made otherwise than by competition, and you do not like competition?—I do like competition in a sense, and I do not see what other fair system could take the place of competition as it stands to-day, and you obviously could not have two forms of examination.

42,195. And that consideration, which is a very sound one, no doubt, makes you give up the idea of selecting by patronage business men for consular appointments?—I should strongly object to selection by patronage.

42,196. You do not see any other way of selecting?—I see no other way, and whilst I should like to see the door open so as to admit the commercial man, I do not at the moment see how the examination could be adapted to that purpose.

42,197. The door must be either open or closed. If you are going to take a man of 27, successful in business, into the Consular Service, it can only in your opinion be by personal selection?—Undoubtedly.

42,198. And rather than have that you drop the business qualification altogether?—No, I think possibly the examination may be more adapted—I do not know precisely what the subjects are—to bring out any commercial knowledge, or knowledge of commercial subjects which candidates may have, but to that I have not directed my consideration.

42,199. Anyhow, you are quite clear that personal selection would be an undesirable thing to introduce into the system of appointment for the Consular Service?—I think it would be a very dangerous thing.

## ONE HUNDRED AND FIFTH DAY.

Thursday, 25th June 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B., K.O.

Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR BOUTWOOD.

Mr. SAMUEL JOHN GUENEY HOARE, M.P.

Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MATHESON.

Mr. GRAHAM WALLAS.

Mrs. DEANE STREATFIELD.

Mr. N. E. BEHRENS (*Secretary*).

Mr. EDWARD CHARLES BLECH, C.M.G. (Librarian, Foreign Office), recalled and further examined.

42,200. (*Chairman*.) Mr. Blech, you came to the Foreign Office from the Levant Consular Service?—Yes.

42,201. You are now librarian at the Foreign Office?—Yes. When the post of librarian was offered me, I was told that I should be able to return to the Consular Service if I desired to do so.

42,202. You keep a lien, as it were, on your appointment in the Consular Service?—Yes, so to speak.

42,203. In what grade in the Consular Service were you when you left?—I was Consul-General at Port Said.

42,204. As Consul-General what pay did you draw?—As Consul-General I drew 700*l.*, and had a residence; but besides that I was what is called Navy agent at Port Said, for which the Admiralty gave me 200*l.*, so that I had in actual salary 900*l.* and a residence.

42,205. But your salary in the Consular Service was 700*l.*?—Yes.

42,206. How many years did it take you to reach that salary?—I was appointed to that post towards the end of 1909, and entered the Service in 1883—that is 26½ years.

42,207. You drew 700*l.* a year as Consul-General; but I understood that the pay of a Consul-General in the lowest grade begins at about 900*l.*?—It was 800*l.* before they built a residence; then the consul had to provide himself with a house. The moment they built the residence they deducted 100*l.* from the pay. I have been fighting for some time without success to get that 100*l.* restored, and the Treasury has refused to do so.

42,208. Your salary was 700*l.* after 26 years' service and you get a free house?—Yes.

42,209. What are the grades of Consul-General in the Levant Service?—I suppose the posts at Beirut, Salonica, and Alexandria are better paid than that. I imagine they get at Beirut 1,000*l.* It may be even 1,100*l.* now, but no house is provided. At Smyrna the Consul-General receives 900*l.* and a house; at Salonica I think it is 1,000*l.* with no house.

42,210. Does any Consul-General in the Levantine Service get 1,200*l.*?—Not unless Salonica was raised to it this year.

42,211. Is there a Consul-General at Constantinople?—Yes.

25 June 1914.]

Mr. EDWARD CHARLES BLECH, C.M.G.

[Continued.]

42,212. What does he get?—900*l.* and a house, I think. At Constantinople the Consul-General has perhaps less to do in many respects than at other places, because the embassy is also there, which takes all political work off his hands; and there is the Supreme British Consular Court, so that he has no judicial work; he is therefore only concerned with actual consular work.

42,213. The post you held at Port Said was nominally that of Consul-General, and now, I understand it is reduced to the position of consul?—Yes.

42,214. To which the pay of 700*l.* is attached?—Yes.

42,215. In addition to the 700*l.* the incumbent of the office gets a free house?—Yes, he gets a free house.

42,216. Which is considered as equivalent to 100*l.* a year?—Yes.

42,217. In addition, he also gets, for special work which he does for the Admiralty, a further allowance of 200*l.* a year?—Yes, which, however, might cease at any time.

42,218. But the work which he does for the Admiralty, is over and above the work of the consul?—Quite.

42,219. Had you any diplomatic work to do at Port Said, or was it altogether consular work?—There was very little diplomatic work.

42,220. The work was mostly dealing with seamen?—The ordinary consular work. There was judicial work; in the east a consul has judicial functions.

42,221. Before you went to Port Said where were you stationed?—At Jerusalem.

42,222. Were you consul there or vice-consul?—Consul.

42,223. Were you drawing 700*l.* there?—I think I was drawing 700*l.* pay and 100*l.* personal allowance.

42,224. You got no free house there?—No.

42,225. Is the personal allowance a constant sum paid to every incumbent of the office?—No, it was special to myself. It was obtained for me when I was working at the embassy at Constantinople by the late Sir Nicholas O'Connor, and I was allowed to take it with me when I went from Constantinople to Jerusalem.

42,226. The scale of pay for the Levantine Consular Service begins, I understand, at 300*l.* for an assistant?—Yes.

42,227. When he becomes vice-consul his pay rises to 350*l.* and by degrees goes up to 450*l.* His next step is consul at 600*l.* to 800*l.*, and after that he may become Consul-General at 900*l.* to 1,200*l.* Do you consider that scale to be adequate to the work?—I think in the early stages of a man's career it is adequate. I think the young vice-consul, presumably unmarried, getting 400*l.* a year, is quite decently well paid. But after that it is practically a dead-level. You may have a post of 500*l.*, or 600*l.*, or 800*l.* a year, but you have to spend it all on living. By that time you are probably married and have a family, and even when you are drawing 1,000*l.* a year you are perhaps less well off than when getting 400*l.* a year. There are no prizes in the Service to look forward to. It really does not make much difference to a man—supposing he is Consul-General at Beirut he would have a post of nominally greater glory, so to speak, but he would not be much better off pecuniarily; his expenses would rise in proportion.

42,228. Is there any system of allowance to make up for the expensiveness of life in some of those places?—No, I do not think so, except that at a few posts local allowances are given.

42,229. There is no such thing in the Levantine Service?—One gets one's pay and, if there is one, an office allowance; that is all. The office allowance is usually only just enough to cover the office expenditure.

42,230. Is there any obligation imposed on, say, the consul at Beirut, to maintain a certain standard of living with reference to his colleagues of other nations?—There is no precise obligation, but he naturally feels it incumbent on him not to allow his position to fall below that of his foreign colleagues.

42,231. Do you think that the pay of the British consul is as good as that of the German or French consuls?—It is probably about the same as the French

in most places. I should think less than that of the Russian, and very often less than that of the German, and probably better than the others, although in most places we have far more shipping to attend to, and far more of our countrymen travelling than either of those countries.

42,232. Let us come now to the duties of a consul. Do you communicate in regard to trade matters directly with the Board of Trade, or do your reports go through the Foreign Office?—Through the Foreign Office.

42,233. May your reports be classified under these three heads? First, the general annual report; next a report on any special subject of wide importance that you are called upon to furnish; and, thirdly, reports in reply to applications for information from particular British traders?—Yes.

42,234. Would that cover the whole of the duties of reporting?—Yes; but one often does report on any subject that happens to crop up—public tenders for any manufactures or engines, and that sort of thing. One keeps one's eyes open and reports upon things which are likely to be of interest.

42,235. Say that the local government were calling for tenders and that applications were made by British firms, how far would it be possible for you to help those firms?—I do not think it would be possible to help them to get their tenders accepted. We can, and do, get the specifications and conditions of tender, and all that—several copies of those printed documents—and send them to the Foreign Office, by whom they are placed at the disposal of British traders in this country.

42,236. That would be possible for the Consul-General to do at Constantinople where the head of the Government is?—Yes.

42,237. But would the consul, say, at Beirut, or the consul at Jerusalem, or the consul at Salonica, have any means of learning about such a thing?—The municipality in those towns might have tenders for waterworks, or things of that kind, and he would be able then to assist to a certain extent.

42,238. In regard to trade generally, does the Levant consul help British traders?—I think to the utmost extent of his power.

42,239. For instance, if a British trader had a particular machine, the sale of which he wanted to push, would it be possible for him to send a specimen of the machine, if it were portable, to the British consul for him to see whether there would be a market for that sort of commodity in the particular town in which the consul was?—I do not think that is much done. The consul would be more likely to indicate to him a satisfactory and thoroughly trustworthy agent who perhaps would already understand that particular business and would be better able to deal with it than himself.

42,240. Are such applications as that often made to a British consul?—For agents, often.

42,241. Do British commercial travellers go much into the Levant?—I think they are beginning to be more frequent than they were. It used to be a standing reproach against British firms that they did not send commercial travellers. I think they are doing more in that line now.

42,242. Are these commercial travellers men of the country or Englishmen?—They are not men of the country. They are either Englishmen or Europeans who, perhaps, are chosen in preference to Englishmen, because they are more conversant with foreign languages. One of the last people who came to see me was a traveller, I think for the linotype people; a very intelligent Englishman, who, I think, did some business in Egypt.

42,243. I suppose when a traveller gets into the country he will employ an interpreter?—Not necessarily, because most business people know a certain amount of French. This man came to me to ask me the names of the principal newspapers in Port Said. There are none there likely to employ his machines; they are small newspapers. However, I gave him the information, and put him into communication with such people as I thought likely to be useful to him. I can give you an instance of what a consul

25 June 1914.]

Mr. EDWARD CHARLES BLECH, C.M.G.

[Continued.]

can do. When I came to Jerusalem the Governor had recently built a clock-tower, and in this clock-tower he had placed what I believe to be a good French clock by a well-known Paris firm. One evening I happened to meet the Governor, and he complained to me of this French clock, saying, that although he had specially desired that the chimes should be very loud so that he could hear them at his house, which was some distance off, he could not do so, and he said: "I am thinking of applying to the German consul to get me a fresh clock from Germany." I said to him: "You know in the time of Queen Elizabeth Turkey bought all her clocks and watches in England, and we have not gone out of the business since." He said, "Of course, if you had been here when I first got the clock I should have got it through you in England." He let it drop for some time. However, shortly afterwards, he applied to me to get him tenders from England, with the result that there is now a clock in this tower in Jerusalem by Messrs. Dent, of Cockspur Street. I happened to pass their shop the other day and saw a photograph of it in the window. I am happy to think that I was instrumental in getting the order for a clock placed there. Anyhow 200*l.* or 300*l.* was spent for that clock in London instead of in Germany.

42,244. In Jerusalem had you much diplomatic work to do?—A certain amount.

42,245. Your diplomatic work and consular work (ordinary commercial work) is intermixed in the Levant Service?—Yes. There are a great many missionaries at Jerusalem. Some of the societies hold property there, and one is constantly dealing with the local authority in connection with the registration of their property and encroachments on their schools, and that kind of thing.

42,246. Did you come into contact with the Diplomatic Service?—Yes, I was for 12 years latterly at the Embassy at Constantinople.

42,247. Did you see any marked difference in the kind of work that consular officers do at other places than the ports from the kind of work which the diplomatic men do?—No. I do not know that I did. Of course a diplomatist is more likely to be charged with important negotiations with a foreign power than a consul, but in the Levant there is a great similarity between the Diplomatic Service and the Consular Service.

42,248. Was the kind of work you did in the embassy at Constantinople pretty much the kind of work that the secretaries did?—The secretaries used to do it before my appointment, or at least used to do a certain amount of it.

42,249. Did you succeed somebody else, or were you the first incumbent of the post you held?—Practically I was. Before my time at Constantinople for some years the work of archivist had been divided between two of the secretaries, one of whom was the senior and the other the junior archivist. They found, I dare say, that this system did not work very well because the secretaries do not remain at Constantinople permanently; and it occurred to the then ambassador that it would be better if there were a permanent archivist (which was reverting to a system followed in the past), and they thereupon took that course, suppressing the archivist allowance which was at that time paid to the two secretaries. The secretaries did not like that, of course, but I must say there was never any feeling in the matter.

42,250. Is the archivist the chief clerk of the office, in charge of all the papers?—Yes.

42,251. And he conducts the work of the chancery?—He is not the head of the chancery. The senior second secretary at that time was the head of the chancery.

42,252. Is the archivist next under the head of the chancery?—Not in hierarchical rank.

42,253. But as far as the work is concerned?—The archivist would not do much in the way of drafting letters and so on. He would find the previous papers, see what had been done, if necessary, in a former case, and do a variety of things.

42,254. He would make the first minute on the case—would he summarise the previous discussions, if any,

which had taken place on the particular subject?—If called upon to do so.

42,255. He would not do it in the ordinary course?—No; the papers would not come to him at all until done with.

42,256. His ordinary functions as archivist would be fulfilled if he brought all the papers together and submitted them to the officer at the head of the chancery?—No. The papers would not come into his hands at all until they have been dealt with as a rule.

42,257. I thought he would be in custody of the papers as archivist?—Not until they have been dealt with.

42,258. Who would have charge of the papers?—One of the secretaries or attaches would open them, register them, and place them on the table of the head of the chancery. The head of the chancery, if he finds it necessary, would call for the archivist and say: "Let me have the previous papers on this question," or "What did we do in a former instance?" The archivist would then supply him with that information and perhaps discuss the matter with him, and then the head of the chancery would minute the dispatch for the Ambassador.

42,259. Then is the archivist much more than the record keeper of the embassy?—Yes; there are a great many other things which the archivist may or may not do according to his position with the Ambassador. It may range up to the draft of a most important dispatch, or it may not, according as the Ambassador has confidence in him. The regular functions of an archivist are those I have just stated, and that is putting away the papers, being responsible for their custody, and producing any paper that may be called for.

42,260. Do I correctly understand you to say that there are certain records which remain with the secretaries, and these records, when a case comes up for consideration, are put together by the secretaries for the head of the chancery, and if he does not find sufficient details, he calls upon the archivist?—It is the current papers that are in the hands of the secretary. As soon as they are dealt with everything goes to the archivist.

42,261. Do you think any greater function might be conferred on the archivist, and that he might be called upon to take a wider part in the administration of the chancery?—I see no necessity for that. There are already sufficient people in the chancery.

42,262. But is it possible that the number of people in the chancery might be reduced if the functions of the archivist were enlarged?—I do not think you would gain much by that, because the secretaries are probably paid less than an archivist. Although I was under the orders of the head of the chancery at Constantinople, I should think I probably got more pay than he did. He would probably get 500*l.* a year and perhaps something additional at Constantinople; at all events there was not much difference in pay.

42,263. But apart from the question of economy, do you think that the number of secretaries might be reduced if the functions of the archivist were enlarged?—I do not think so. The secretaries deal with the ciphering and deciphering of telegrams, writing out dispatches, and copying documents.

42,264. Could not the copying of these documents, for instance, be carried out under the supervision of the archivist by typewriters?—I should not like to do that at a foreign capital, where you could not be sure of the trustworthiness of the men.

42,265. I am anxious to know whether there is any similarity between the work of the Consular Service and the work of the Diplomatic Service; I should like to know whether there could be closer connection established between them?—I do not know that that would rebound much to the advantage of the Consular Service, because the lower grades of the Diplomatic Service are not very well paid. Socially, of course, the position is a better one, but the pay is hardly adequate unless a man has private means of his own, which is not often the case in the Consular Service. As regards the higher grades in the Diplomatic Service, I really do not think that the Consular Service has much to complain of in that matter. There are a number of consular officers

25 June 1914.]

Mr. EDWARD CHARLES BLECH, C.M.G.

[Continued.]

who have managed to reach high posts in the Diplomatic Service from time to time.

42,266. High posts restricted to the Levant area?—The present Minister at Peking entered the service as a student-interpreter.

42,267. But that was in the China Service?—Yes. I rather think there are one or two in South or Central America who are Ministers.

42,268. (*Sir Kenneth Muir-Mackenzie.*) I have a recollection that Mr. Alban Young at Guatemala had served in the Levant?—Yes, but as a diplomatist. He was secretary at Constantinople. Sir Lionel Carden, who is His Majesty's Minister in Rio now, was a consular officer in the general consular service. I think Mr. Gosling, Minister at La Paz in Bolivia, was also in the Consular Service. Your point, perhaps, is that no member of the Levant service has so risen.

42,269. (*Chairman.*) Yes. We are dealing with the Levant service?—I am not aware that any member of the Levant service has reached high rank.

42,270. Sir William White was one?—But he was a consul before the Levant service existed.

42,271. You do not think that under existing circumstances anything like an amalgamation between the two services would be beneficial to the Levant service?—Not unless the pay was increased.

42,272. Would it stimulate the Levant service to any greater exertion or any greater zeal than they now exhibit? Is it a subject of complaint with the Levant officers that they are excluded altogether from promotion to the diplomatic grades?—Not a serious complaint. One knows perfectly well when one enters the service that one is entering the Consular Service and not the Diplomatic Service. Perhaps at first one does not know much about these things, but it is later on when you do see that there is a difference. No doubt you may be disappointed, and say: "Why cannot I get such a position?"

42,273. Have you known instances where able men in the Levant service had reached positions in which they saw nothing further, and have retired from the service for that reason?—I do not think I have. There are not very many who have retired from the Levant service. One of the earlier members of the service retired to become a journalist. I think he is now correspondent of one of the papers in one of the principal capitals of Europe, and perhaps he is not much better off than if he had remained in the service. One or two young men have retired because they did not like their positions; but that is all.

42,274. Are you quite satisfied with the scheme of examination for entry to the Levant service?—Yes. It attributes considerable importance to languages, which, after all, are necessary. I think it quite a good entrance examination. Latin is one of the compulsory subjects, so that you have to have a liberal education.

42,275. You spent no time in this country after passing this examination, but went at once to Constantinople?—That was the case in my time, but not now. They go for two years to Cambridge now. That system was introduced some years after I entered the service. We went direct to Constantinople, where we had a house, and were provided with tuition by the Government; but now they go to Cambridge for two years.

42,276. Where they learn Oriental languages, among other things?—Yes.

42,277. Do you think that a better method of learning the Oriental languages than going out and learning them on the spot?—It is a question on which there are two opinions. For myself, I think you are not so likely to pick up Oriental languages at Cambridge as you are in the places where they are spoken.

42,278. But in Constantinople you had no opportunity of learning the other subjects in which they have instruction now at Cambridge?—I do not know what other subjects they do—perhaps law. We had law lectures at Constantinople in my time from the present Sir Edwin Pears. He used to give two lectures a week on English law and on international law.

42,279. He lives in Constantinople?—Yes.

42,280. And he is a barrister?—He is both a barrister and a solicitor as they are there.

42,281. Is Sir Edwin Pears an advocate of a closer union between the Diplomatic Service and the Consular Service?—I have reason to think he is. I am not sure that he did not write something on that subject lately, but I have not seen it myself.

42,282. Can you remember what his reasons were?—No. I did not see the article, but I suppose his ideas would probably be that there is no reason to make these social distinctions.

42,283. Mostly on the social side?—I should imagine so.

42,284. There is a very clearly marked distinction socially between the status of the consular officer and that of the diplomat?—Yes, which is more marked in the case of some countries than others.

42,285. More marked in the case of Great Britain than in the case of Germany or France? Is that what you mean?—No, I do not mean that. I think it is more marked in the case of Germany than Great Britain. Possibly it is not very strongly marked in the case of France. I do not think it is particularly strongly marked in our case either.

42,286. How does a Consul-General rank at an official function compared, say, to a third secretary?—Properly speaking, after the third secretary. At Constantinople, however, a special table of precedence is drawn up where, I think, the Consul-General ranks after the senior second secretary. I am not perfectly certain, but it is given in the Foreign Office list.

42,287. Is that table of precedence of recent origin?—The one in use in Constantinople is, perhaps, 20 or 30 years old.

42,288. Does it tend to depreciate the prestige of a consul in the minds of the natives of a country?—No, I think not, because as a rule the consul is in a provincial town, where he does not come into contact with any diplomatists. In Constantinople it has no importance.

42,289. (*Sir Donald MacAlister.*) Were you archivist the whole time at Constantinople?—I was called dragoman-archivist. I had a good deal of translation work to do, and also occasional dragoman's work, which in Constantinople consists in going to the different ministries and discussing the business in hand.

42,290. So that your position as dragoman-archivist was quite different from what we understand an archivist in a European embassy to be?—I had the functions of an ordinary archivist as well as those of dragoman. I did not do much dragoman work except translation.

42,291. But you ranked with the dragomans?—Yes, I was one of them.

42,292. So that a second division clerk in the Civil Service could not have held the position you held as archivist with this additional work?—No, certainly not. I did not gather that that was what was meant. He would have been useless without the special qualifications which I and the other dragomans have for the post.

42,293. (*Chairman.*) One of your chief qualifications being a knowledge of the language?—Yes.

42,294. (*Sir Donald MacAlister.*) That is a primary qualification?—Yes, not only knowledge of the language, but of the laws, treaties, and one thing and another.

42,295. So that it would be quite misleading to say that you were simply the keeper of the records with no initiative and no confidential work entrusted to you at all?—Certainly. I gave my previous answers purely in relation to the archivist work.

42,296. Your position was totally different to that of a mere clerk or keeper of records without initiative or confidential work?—Yes.

42,297. Although the position was called that of an archivist, what additional work had you to do as dragoman-archivist?—In the first place I should read the local press in the morning, and, if in that any article was worth translating, I would translate it and send it in.

42,298. Upon your own initiative?—Certainly. Sometimes it might happen that an article would be indicated to me. A newspaper correspondent might come in and say, "Did you see such and such an article" which might have escaped my notice, or it might not.

25 June 1914.]

MR. EDWARD CHARLES BLECH, C.M.G.

[Continued.]

42,299. But it was your duty to supply the Minister on your own initiative with information which you acquired in that way?—Yes. Besides that there were translations from the Turkish or other languages to be made. I used also to translate the communications of the Sublime Porte into French.

42,300. You were a necessary intermediary in the official communications sent between the Porte and the Ambassador?—The Porte's communications are sent in French, but those we send are sent in English with a French translation. I usually prepared that French translation.

42,301. Which French translation was the actual communication to the Porte?—It accompanied the English communication to the Porte.

42,302. And with any communications with other Embassies I suppose the dragoman-archivist would have something to do?—Not much, except that I used to represent our Ambassador at dragomans' meetings. Meetings of the dragomans of the different embassies are constantly held at Constantinople to discuss new laws proposed by the Turks. Every embassy sends a delegate to these meetings, and at one period I was always sent by the British Embassy.

42,303. The result of that is that you were the intermediary between these dragoman meetings, for common discussion of new laws, and the Minister?—Certainly, I would return to the embassy and make my report, and that would go to the Minister.

42,304. So that to all intents and purposes you were a diplomatic officer, and not a consular officer, in your functions?—I had no consular work of any kind.

42,305. And yet you retained your status, and so on, as a consular officer?—Yes. I was given the rank of a consul at Constantinople while doing that work.

42,306. And no more?—And no more.

42,307. I can think of one predecessor and two successors who both thought it was a grievance that, although they were essentially diplomatic officers performing diplomatic functions which were essential to the success of the embassy, their rank was still consular and their promotion could only be consular. Have you not heard of such cases?—Yes, but I do not know that I share that feeling myself.

42,308. But you know it existed?—Yes. I suppose discontent exists in every branch of life. I see no grievance. I did not enter the Diplomatic Service, and I do not see why I should claim to be put into it. I know that the Diplomatic Service is a close service.

42,309. I merely want to know whether from your experience, although you do not feel the grievance personally, there is any reason in the nature of things why the closeness of the Diplomatic Service should be maintained. With your experience of 12 years at the embassy, do you see any reason why it is absolutely necessary to maintain the closeness of the Service?—It is not maintained in other services—for instance, in the Austrian Service. The moment a man is dragoman at an embassy, unless there is any reason to the contrary, he is almost certain to become Minister.

42,310. Does Austria suffer from that?—Not to my knowledge.

42,311. Do you think the British Service would suffer from it?—No, I do not suppose it would suffer from it.

42,312. Would it gain by keeping good men who had acquired experience?—The secretary is also acquiring actual experience, and the experience which the dragoman acquires is perhaps more valuable at Constantinople than elsewhere.

42,313. I am speaking only of Constantinople at present?—But the Austrians go elsewhere.

42,314. Speaking of the British Service, a secretary does not stay as long as a dragoman at an embassy?—No.

42,315. His experience, whatever it is, is lost to the Constantinople mission when he goes elsewhere?—Yes.

42,316. The dragoman's experience, which has been acquired in the Consular Service, is available in the Levant for a much longer time?—Yes.

42,317. And it becomes more valuable as time goes on?—Certainly.

42,318. Then if any scheme were devised by which he could be retained by being amalgamated or incorporated with the Diplomatic Service there would be at least no loss to the Diplomatic Service?—No, I can see none.

42,319. They have lost yourself, for example?—I should have been delighted to have had a diplomatic post at Constantinople, no doubt.

42,320. But by transfer your service at Constantinople would be lost?—Yes.

42,321. Is it not the case that Sir Adam Block also left the Service?—Sir Adam Block, while he was first dragoman, became a candidate for and eventually obtained the post of delegate at the Ottoman Public Debt at Constantinople, which, of course, is a highly paid post.

42,322. He was first dragoman performing similar functions to those you have described?—Quite so.

42,323. But there was no promotion for him in the Diplomatic Service; he had come to the top of the tree in the Consular Service and we lost him?—That is so.

42,324. Do you know Mr. Fitzmaurice?—Yes, very well.

42,325. Is he not in the same position?—Yes.

42,326. So that at least in three cases recently the fact that the first dragoman could get no further has involved retirement?—Only Sir Adam Block; I am not aware that Mr. Fitzmaurice has retired from the post of first dragoman.

42,327. And yourself?—I was not first dragoman.

42,328. No, but you were one of the dragomans?—I went on in the ordinary course. Having had enough of Constantinople I said I should like to go to Jerusalem, and so I went there. The Ambassador kindly recommended my application.

42,329. There was no great advance possible for you at the embassy?—No.

42,330. I will not press it, but you see what I mean?—Yes.

42,331. You get to a *cul-de-sac* when you get to the dragoman position?—Certainly. Sir Adam Block's post is quite as good as that of Minister.

42,332. But he had no chance of being Minister at the embassy?—No.

42,333. You mentioned Sir Edwin Pears. He is thoroughly familiar, from experience over a long series of years, with the whole working of the system in Constantinople?—Yes, but he does not know much of the inner arrangements of the work, and that sort of thing, at the embassy; the general results he knows.

42,334. But he is very likely to know the feeling of the Consular Service?—Yes. He sees a good many of the members.

42,335. Mr. Ayres also?—Yes.

42,336. He would be an authority on the feeling in the Consular Service?—Mr. Ayres is at Constantinople now.

42,337. Those two gentlemen would know thoroughly the feeling in the Levantine Service?—Certainly.

42,338. When they say that this artificial bar against promotion from the Consular Service to the Diplomatic Service is damaging the Consular Service, we should give some weight to their evidence?—Yes. I said that there was no particular plum in the Service, nothing special to look forward to, and that all the posts were on very much a dead level. It is not like the Indian Civil Service, for instance, where, I think, you can look forward quite legitimately to becoming a Lieutenant-Governor or a judge.

42,339. Is it good for the Service that there should be a dead level?—It is a small Service, and undoubtedly it is not good for the Service.

42,340. (*Mr. Matheson.*) I suppose the number of diplomatic posts in the East is not very large?—Do you mean of separate diplomatic missions?

42,341. Taking the diplomatic missions generally, the number of possible promotions on the lines that Sir Donald MacAlister was speaking of, would not be very large in the area of the East served by the Levantine Consular Service?—No; but I suppose you would include Bulgaria, Servia, Rumania, Albania, Greece, and Egypt.

42,342. I did not realise that Bulgaria and Rumania would come into that area?—I think they do.

25 June 1914.]

MR. EDWARD CHARLES BLECH, C.M.G.

[Continued.]

Although they have been made independent kingdoms they still form part of the area of the Levant Service.

42,343. I suppose it is true that it would not be good economy to bring members of the Consular Service into the general Diplomatic Service outside the East?—No, I suppose not. As I said, the junior posts in the Diplomatic Service are not well paid.

42,344. When you were appointed there was not the preliminary training in this country?—No, we had it at Constantinople.

42,345. Who were the teachers of languages there? Were they natives?—They were natives. The gentleman who taught us Turkish was one of the Sultan's aides-de-camp—an exceedingly able young man, who afterwards entered the Turkish Diplomatic Service and died. He was specially delegated by the Sultan to teach us Turkish. We had a Greek to teach us Greek, and an Arab to teach us Arabic; and we had law lectures.

42,346. Had the teachers any knowledge of English?—The man who taught us Turkish had a very good knowledge of English. The others used to speak in French.

42,347. On the whole you thought the teaching was satisfactory?—I think so, to a certain extent. Sometimes they did not turn up, and we had the strange anomaly of the pupils complaining of their teachers more than once; but otherwise they were excellent, I think, in their methods.

42,348. How long were you engaged in learning the languages?—Two years.

42,349. And during that time were you doing any other work in the consular office?—No.

42,350. It was entirely instruction?—We lived outside Constantinople in a house provided for us, and did nothing but receive instruction.

42,351. (*Mr. Holt.*) What exactly were your duties at Port Said? Were they all with regard to shipping?—The duties were very varied. There was shipping, and a little criminal correctional work—cases of rows between Maltese or other British subjects, or police cases.

42,352. What we may call police-court cases?—Yes, or even more than that; you can give up to two years' imprisonment.

42,353. Purely criminal cases?—Civil also, between British subjects.

42,354. Up to what amount?—I think it has been recently limited. There used to be no limitation. I think if it exceeds 500*l.* you have to report the case to the Supreme Court.

42,355. Have we got a Supreme Court in Egypt, or what happens there?—By the Ottoman Order in Council there are British Courts which are held by the Consul. If any British subject is the accused person in a criminal case the case goes to the British Consular Court. If there is any civil action between British subjects then it goes to the British Consular Court; but civil actions between foreigners of mixed nationality go to what are called the Mixed Courts, which are special courts in Egypt.

42,356. You tried these cases, but had you had any legal training whatever?—Except these law lectures which I had from Sir Edwin Pears, no.

42,357. Was there some British judge attached to the Consular Service in Egypt?—There is a judge, and an assistant judge, at the Supreme Consular Court, who live in Constantinople; one of these goes to Egypt twice a year on circuit, so to speak.

42,358. I see, according to a statement which was given to us, that the fees received in Port Said in the year 1910-11 (when you were there) were 1,150*l.*; in 1911-12 they were 498*l.*, and in 1912-13 they were 889*l.* Can you give me any explanation as to why they should differ so much?—Yes, it is quite simple. It is probate and estate duties. If a man dies leaving 10,000*l.*, as happens occasionally, we charge a fee of 300*l.* on that. If there happens to be no such death in a year the fees are much less.

42,359. The figures I have given are the net fees. Perhaps you can explain that?—498*l.* seems very small indeed for 1911-12. I can hardly imagine that that is correct.

42,360. Do you collect something in the nature of death duties there as well?—Yes; it is 3 per cent. if the estate exceeds 100*l.*

42,361. Three per cent. from any British subject who dies in Port Said?—Yes.

42,362. Does that apply to the whole of Egypt?—The whole of Egypt and Turkey.

42,363. (*Chairman.*) Three per cent. on all his property?—All his personal property within the jurisdiction.

42,364. (*Mr. Holt.*) That is included in the fees?—Yes. I think 498*l.* must be a misprint. I am almost certain that the fees have never been so little as that.

42,365. You would not get much in fees from shipping at Port Said, would you?—About 2*l.* a day.

42,366. About 300*l.* a year?—Perhaps 2*l.* a day. For every seaman who is discharged or engaged a fee of 2*s.* has to be paid.

42,367. You say the average of fees from shipping comes to 2*l.* a day?—The average total fees.

42,368. Does that include these death duties?—They are something which happens rarely—once or twice a year.

42,369. Do you know what this return means by the expression "net fees." What are the deductions?—There are certain fees of which a consul is allowed to retain a portion. There is what is called the Consular Fee Table, which is published, and which is in four parts. Of the first two parts the consul retains no portion for himself. Of the third part, which is for certain attendances outside office hours but during the day, and things like that, the consul is allowed to retain half; and for certain attendances during the night he is allowed to retain four-fifths of the fee.

42,370. Can you give me any rough estimate of how much you retained at Port Said in addition to your salary?—Yes, about 80*l.* a year, I should think.

42,371. So that you actually got about 80*l.* a year more than the figure of the salary you indicated?—Yes, I should think so.

42,372. Therefore I should imagine that at some other places it would come to more?—No, I do not think it is likely to come to much more anywhere else; for this reason, that there is more night work at Port Said than in most places that I know of. Ships are going through all the time and have to be attended to at once. It is a port of passage, and not so much a port of call.

42,373. I see you got an allowance of 850*l.* for office expenses?—Yes.

42,374. In that case does that pay the exact amount of the office expenses, or may the office expenses come to a little more or a little less?—They may come to more or less. I have known both happen, even at Port Said. You are given that sum and have to keep up the office properly. Out of this 850*l.* I had to provide a consular office at Suez, at the other end of the Canal. I used to have a pro-consul there. I gave him when I started (but I reduced it just before I left) 22*l.* a month out of this 850*l.*—that is 26*l.* a year.

42,375. Was the office rent in addition to that at Suez?—No, he provided everything.

42,376. 22*l.* a month covered the whole thing at Suez?—Yes.

42,377. Did you have to provide an office at Port Said?—No, an office was provided for me. The office allowance used to be 900*l.*, and when they gave me the office they reduced it by 50*l.*

42,378. Was the office and the house the same place?—Yes.

42,379. Had you to provide assistants out of the 600*l.* left?—Yes. I had two clerks and three cavasses (messengers and porters), and a door-keeper.

42,380. (*Sir Donald MacAlister.*) Cavasses are a sort of janitors?—Janissaries is another name for them.

42,381. (*Mr. Holt.*) What were the clerks—natives?—Maltese. One of them practically exclusively did the shipping work and also acted as clerk in court to administer the oath to witnesses, and that sort of thing.

42,382. Had he any legal training?—No.

42,383. And the 600*l.* was sufficient, as a general rule, to pay for this assistance?—Yes, and to provide electric light, water, stationery, and so on.

25 June 1914.]

Mr. EDWARD CHARLES BLECH, C.M.G.

[Continued.]

42,384. Was there any supervision whatever as to the class of persons you engaged for this work?—We have to send in a return of them to the Foreign Office once a year.

42,385. You did not send your return to the Agent and Consul-General?—No.

42,386. You communicated direct with the Foreign Office?—Yes.

42,387. Had the Agent and Consul-General any supervision over you whatever?—He did not exercise it, at all events. I was under his orders, of course, and used to report to him in the first instance if there was such a thing as a political matter to report about.

42,388. He was a political officer entirely?—Yes.

42,389. And he in no way whatever supervised your office?—He had every right to do so if he wanted to. He was my chief. The agency at Cairo exercised the ordinary right of supervision which the diplomatic representative has over consuls under him, but no inspection of the Consulate-General at Port Said by the agency at Cairo took place during my tenure of office. I was in the habit of consulting the agency either officially or informally before taking any decision of importance.

42,390. He was so satisfied that he did not, in fact; he did not bother about it. That is what really happened?—It never happened during the time I was at Port Said that any supervision was exercised.

42,391. But all these returns about what you were doing as to clerks, and things of that sort, were directed to the Foreign Office and in no way to the office at Cairo?—I do not think we have to send a return of that to Cairo.

42,392. Was this pro-consul at Suez a man appointed by yourself?—Yes, after having asked for sanction for his appointment.

42,393. What do you mean by asking for sanction?—I would report to the Foreign Office and say this post was vacant, and I would recommend such and such a person, saying: "Have I your authority to appoint him?" and they would answer, "Yes, you can." I would then give the pro-consul a letter of appointment.

42,394. Was the pro-consul your deputy, and did he lose his office when you went, or was he the permanent deputy of the consul, whoever he might be?—He would not lose his office when I went. I found him there when I went to Port Said. Afterwards I appointed another man who has died since I left.

42,395. Does the appointment, formally, at any rate, terminate when the consul at Port Said is changed?—No.

42,396. (*Mr. Boutwood.*) I am afraid I misunderstood or did not quite catch what you said about local allowances. I understood you to say that there were not any in the Levant Service; but in this paper which has been supplied to us by the Foreign Office it says this under the head of "Levant Service": "11 Consuls—General 800*l.* to 1,100*l.* Local allowances at certain posts 100*l.* to 300*l.*"?—That is so; I was not thinking of that. Certain consuls have a local allowance.

42,397. I suppose that local allowance is given in the Levant Service, as it is elsewhere, on the ground of the expensiveness of the place?—Precisely.

42,398. So that you had in mind the greater expense in living when you spoke of a man's increased salary being swallowed up by increased expenses, or were you thinking of increased social duties, and things of that kind?—Both. The cost of living has risen very much everywhere of late years, as you probably know.

42,399. And also, I suppose, when a man becomes a Consul-General he is expected or has to do more in the way of social hospitality, and such things, than he had before?—Quite so.

42,400. Have you had anything to do with unpaid consuls?—Yes. Practically this man at Suez you may call an unpaid consul, because he does not make much out of it, and I had a man under me at Gaza, when I was at Jerusalem, who was unpaid.

42,401. Was he a British subject?—I am not sure that he was. I think he was an Austrian subject.

42,402. On the whole, what do you think of the system of unpaid consuls? Are they really an efficient

part of the Consular Service?—I think some of them render excellent services. This man at Gaza has been very useful to us, and so have others.

42,403. He is a man in business, I suppose?—Yes, but has not much business.

42,404. Can you explain this? I remember some time ago—before this Commission was dreamt of—a friend of mine who has a considerable foreign business, was referring to unpaid consuls, and he said: "I strongly object to having to disclose my business to a man who 'is my competitor in trade'?"—Yes, I saw that in the printed Report of the Commission.

42,405. What did he mean?—I do not quite understand it, unless an unpaid consul had gone and asked him for statistics. Perhaps he was an export or an import man and the consul had asked him how much stuff he exported or imported, and he objected to telling him. Otherwise, I fail to understand it.

42,406. (*Mr. Graham Wallas.*) You have a commercial attaché now at Constantinople?—Yes.

42,407. Have you had other experience of the working of the commercial attaché system?—He and I used to share a room for some years, and I think I know a good deal about his work.

42,408. The commercial attaché is not nominally a man who has had experience as a consul?—No, this man had none.

42,409. Speaking generally, do you think it makes for the strength and efficiency of the whole work that the commercial attaché should not be a man with consular experience?—I do not think it has any bearing on the subject at all. No man could be more efficient than Mr. Weakley, the present commercial attaché, although he had nothing to do with the Consular Service before he was appointed.

42,410. (*Chairman.*) What was he before he was appointed?—He was in the service of the Ottoman public debt. On the other hand, his predecessor, the late Mr. Wrench, had been for many years a consul, and was equally efficient.

42,411. (*Mr. Graham Wallas.*) But in some cases men are appointed commercial attachés simply as one step for a short period in an essentially diplomatic career?—Yes.

42,412. Does not that strike you as being less likely to lead to high efficiency than if the man is appointed after considerable consular or commercial experience?—I do not think a man would be appointed unless he had shown considerable aptitude for the post. There is a man who entered the Consular Service—where, I think, he did very well—who became commercial attaché at Berlin, and who is now Consul-General in Paris; so that he has gone from the Consular Service to be a commercial attaché, and has now returned to the Consular Service. That, I take it, is what you think is a good course.

42,413. If the commercial attachéship could be treated simply as a step in the career of an ordinary young diplomat, it is not likely to lead to high efficiency?—I think a good deal is expected of a commercial attaché, and if he failed to come up to the level it would pretty soon be found out.

42,414. I understand the capitulations with the Ottoman Empire only apply to those places which are, in fact, at the time Turkish territory or under Turkish sovereignty?—That is a rather far-reaching question.

42,415. I will put it in another way. Have you, during your official career, known of any territory which has been in fact removed from the effect of the capitulations?—We know Japan has freed herself from similar restrictions.

42,416. (*Sir Donald MacAlister.*) Cyprus and Crete?—Yes, Cyprus; but that was before my official career. In Cyprus there are no capitulations. I think they have been abolished in Tunis, and, I think, in Tripoli by the Italians.

42,417. (*Mr. Graham Wallas.*) And the effect of the late war will be to remove a great deal of territory from the effect of the capitulations?—Yes, I do not know what the international agreements are on that point as yet.

25 June 1914.]

Mr. EDWARD CHARLES BLECH, C.M.G.

[Continued.]

42,418. Would you say that if a consul was stationed in a town affected by the capitulations his position would be quite seriously influenced by the removal of them?—He would lose in importance undoubtedly.

42,419. Whereas if his future was to be found in the Diplomatic Service that would not apply. His position in the Diplomatic Service would be equally as good before as after?—Yes, on broad lines at all events. A consul in Turkey, for instance, enjoys exemption

from customs duties. But it is not so in the Kingdom of Greece, at all events.

42,420. Have you ever heard it said that the effect of that is to produce a certain feeling in the Levantine Service against any political changes which are likely to diminish the extent of the capitulations?—No, I have never heard of anything of the kind. A consul does not enjoy sufficient influence to be able to oppose changes of that kind. I have never even heard it mentioned.

Mr. IAN MALCOLM, M.P., called and examined.

42,421. (Chairman.) You are a member of the House of Commons?—I am.

42,422. For some time you were in the Diplomatic Service as an unpaid attaché?—Yes.

42,423. Will you kindly tell us what embassies you were at?—I was at the embassy as honorary attaché first of all in Berlin, and private secretary to Sir Edward Malet. From there I went once to do a little work at the legation at Munich. After that I went as assistant private secretary and honorary attaché to Lord Dufferin in Paris. I think that was the whole of my connection with the Diplomatic Service in that way. Then I got into Parliament in 1895, and Lord Salisbury made me assistant private secretary in the Foreign Office, and I was there, I think, about five years.

42,424. Then you have had considerable experience of the Foreign Office?—It is a little while ago.

42,425. Were you in a position to form a judgment as to whether it is better to begin official work in the Foreign Office or in the Diplomatic Service—that is to say, better to begin in the Foreign Office and then pass on into the Diplomatic Service, or whether it is better to begin with the Diplomatic Service?—I should say that on the whole it was better to begin in the Foreign Office for a short period. Of course, under present circumstances, when the attachés are not paid anything for their first two years, it puts a considerable strain on them sending them abroad.

42,426. But apart from the money consideration and having regard to the interests of the public service and greater efficiency, which course would you prefer?—I should like to see them start in the Foreign Office and learn a little of the ropes.

42,427. You have been good enough to send me a paper which you desire to make the basis of your evidence, and I shall be glad if you will proceed with your evidence in your own way?—I am afraid I shall have little or nothing to say which will make for retrenchment in the Estimates for either the Foreign Office, or Diplomatic or Consular Service, my impression being that the whole scale of these salaries requires revising to adjust them to the general advance in prices and the cost of living in all the great cities of the world. I hope, however, that one or two suggestions which I make will, if acted upon, increase the efficiency of the public service and so justify the slightly increased total levied upon the public purse. My chief object in offering to give evidence is in regard to two matters:—(1) to obtain from the Diplomatic and Consular Service better value for the taxpayers' money; and (2) to indicate certain hardships under which members of the Service lie, and which would, I think, long since have been removed if they had been brought to the notice of Parliament, and of the public, through the customary channels. My first point is in regard to over-staffing. It has always struck me that our embassies, and perhaps the principal legations, are over-staffed with secretaries considering the daily average amount of work that has to be got through in the course of the year. It is, of course, quite true that, if the establishment of embassies was reduced by two, and that of legations by one secretary or attaché, in weeks of crisis they might be hard put to it to get through the extraordinary business in addition to their current work. But in ordinary times I think the staff would be quite sufficient.

42,428. Did it ever occur to you that the work done by these surplus secretaries (shall I call them?) could be done by a less highly paid agency?—I will come to that. This brings me to my second point. I am quite

clear that you will never get the best work out of the young men who enter the Service after an expensive training and a difficult examination (to pass which denotes exceptional intellectual attainments) if you set them down for days and weeks and months, and perhaps years, to do practically nothing but copy the despatches and letters and correspondence and reports which form the staple daily work of the chanceries of Europe—I say Europe, but I mean the chanceries all over the world.

42,429. You have had experience, and you say from experience that that is the kind of work which the secretaries are now engaged upon?—Yes. The archives of any chancery would show you that nine despatches out of ten are the merest routine work. It is soul-breaking work; it saps the heart interest of a young man at the outset of his career, and—worst of all—it rusts his higher intellectual machinery by long disuse. All this copying work, of course, has to be done, but not, I think, at so great a cost. I strongly advise, therefore, the attention of this Commission to what I know as the "Kanzlei" system which obtains among many of the Great Powers, and the advantages of which we are beginning to recognise. I understand in one or two of the embassies—for instance, Paris—they have taken on an archivist, and there are one or two indications that the Kanzlei system is beginning to be adopted. By adopting this system it would free our young diplomatists from a mass of routine business—not because it is dull, but because it can be done more economically—to enable them to use their highly-trained intellects (for which the public pays) in the higher branches of politics and social systems existing in the countries to which they are accredited.

42,430. What is the character of the work that you would transfer from the secretaries to the archivists? Am I to understand that by the "Kanzlei" system you mean the employment of archivists?—No. I use the term "archivist" because I was in the embassy at Paris the other day, and Sir Henry Austin Lee told me they had employed an archivist and found that he was able to take over a certain amount of the routine work. I think what I mean is something in the nature of what we call second class clerks, who would do the typing, and who would look into such questions as whether some foreigner was to be given binoculars by the Board of Trade—those are the kind of things.

42,431. Do you think there is much in the objection that the work is of a confidential character which should not be entrusted to foreigners?—I would not give any of it to a foreigner.

42,432. Would you employ second class clerks?—That is the Kanzlei system.

42,433. You would staff the Chancery with second division clerks taken from this country?—I would have a Chancery—it might not be the Chancery in which the secretaries are—staffed with second division clerks. It would mean a couple of them.

42,434. We have made inquiries upon that point. It would be difficult to get second division clerks to go abroad. If they are to be effective they should have a knowledge of the language of the country to which they were sent?—I do not see why they should not have some knowledge of the language of the country. I believe in many of the foreign embassies they have what corresponds to second division clerks. The Germans, I know, have them in London. Those men make London their home, and they are second division clerks of their own country stationed here practically for ever, and they do all this routine copying work. I

25 June 1914.]

Mr. IAN MALCOLM, M.P.

[Continued.]

would not give them for a moment the ciphers to decipher, but all the other general routine work they could do. It need be nothing of a confidential character. Seven-tenths of the work in a chancery is not confidential at all.

42,435. In that way you think you would effect economy by saving the work of the more expensive diplomatic agency for duties more of the kind to be expected from him?—Yes, and I think you would have a brain asset which you would be using instead of leaving it to rust.

42,436. And in that way you might probably reduce the number of diplomatic officers abroad?—Certainly. Then I come to the co-relation of posts. I wish to speak of this matter, to which, from time to time, I have given some thought. It is, in a sense, a new idea as applied to the Diplomatic Service; but I hope you will not dismiss it as visionary because it is not antique. If you look through the statement of services of diplomatists in the Foreign Office list, you will note that, roughly speaking, a young man is never more than two years at the same post—often less. It is by no means uncommon to see, in a career of say 20 years, a statement of services in 9, 10, or 11 posts. It is to be observed that these constant changes are extremely expensive in travelling allowances, either to the public servant or to the public purse. I want to speak about these expenses under another heading, so I need only say here that it stands to reason that it is cheaper for two men of equal standing to remain in their respective posts at opposite ends of the world for four or five years, than for them to exchange posts at the end of two years. Further, it seems very plain to me that, when a young man goes to a foreign post for the first time, and is paid by the public, he is not really "earning his corn," if I may use the expression, except perhaps as a copying machine for at least a year or more, generally more. I mean by that, of course, that until then he has not got the intimate knowledge of the political situation, the friendship of diplomatic colleagues, the confidence of the authorities to whom he is accredited, the facility of the native language of the country, which will enable him to give a full return to the taxpayer for his salary—small though that salary is. The young man is willing and he works; but just as he is beginning to acquire all or some of the advantages which I have named, he is whisked off by the private secretary at the Foreign Office to some other post, and the whole business of making friends, studying politics, learning languages, and so on, has to begin again—and once more the public has to wait for its money's worth. My advice, therefore, respectfully, is to keep your junior secretaries and attachés longer than at present in their posts. If you, as a public employer, have to be paying them for learning their business for a year in a post, it is not extravagant to expect them to serve for at least two years after that without desiring a change.

42,437. We have been told that it is desirable that a member of the Diplomatic Service should have experience of several countries, and that the more countries he has experience of the more efficient he would be. Do you attach importance to the idea that a diplomatist should possess a knowledge of many countries rather than be a man well acquainted with one or two countries. Would he not be likely to be a more efficient officer if he had acquired a wide knowledge of men and affairs in many countries than if he were kept for a number of years in a particular country and had completely mastered the politics of that country alone?—As near as possible mastered them. My point of view all through my evidence is rather specialising. I think, although a man, perhaps for his own individual culture, enjoyment, and all the rest of it, might be better off by constantly changing, that the taxpayer is not so well served by that man as by a man who is really competent to deal with and to know more about one particular post than he knows rather superficially about three posts.

42,438. You mentioned the cost of transfers. That is considerable now?—Yes; I will come to that rather more in detail later. It is considerable, and it is mostly paid by the man himself at present.

42,439. You speak of his being "whisked off by the private secretary at the Foreign Office." A good deal of authority rests with the private secretary in making transfers?—In my time it all rested with him.

42,440. Was it *ad referendum*? Used the private secretary to refer these things to his chief for orders, or used he to assume his chief's acquiescence in his orders?—No; *pro forma*, he always submitted them to his chief.

42,441. But it was generally understood that it was the work of the private secretary?—Yes; he was practically to all intents and purposes the principal official.

42,442. Did you ever find in your experience that there was dissatisfaction with the concentration in the hands of the private secretary of such great power?—Yes, I suppose I did; but I do not think it amounted to much. It was generally the dissatisfaction of a man who was sent to a post that he did not want to go to. There was no appeal.

42,443. Did you think that the Service would have been better pleased if this question of promotion and transfers had been placed in the hands of a committee?—No, I never heard that.

42,444. You never heard that mooted or discussed?—No, never. I come now to my next proposition, which is clearly connected with what I have just said about lengthening the term of appointment. I complain that a great deal of public money as well as talent is exhausted by this unscientific method of hustling a man from one post to another, without (so far as I can see) giving a thought to whether what I have learned in post A will be of use to me or to my employers in post B. I go from St. Petersburg to Cairo, from Vienna to Japan, from Constantinople to Buenos Ayres; if I only stay two years at each place I may enjoy myself, but I shall be practically useless in both. Cannot this be avoided? First, by a strong recommendation that men shall stay longer in their posts than they do at present, and then by developing my idea of dividing up the Service into political groups, on something like the Foreign Office plan of departments. You know they have an Eastern department, a Western department, an American department, and so on. I come, then, to the group system, which I should like to explain as shortly as possible. Under my plan countries with similar political systems or affinities or interests would be grouped together within an imaginary circle; to each circle would be attached a division of your diplomatic army, and its personnel would make their careers within that particular circle—not absolutely rigidly, but as a general scheme. You might in Circle A—call it Asiatic—include Russia, Persia, China, Japan. In Circle E, or European, you would have the other European countries—with the possible exception of Spain and Portugal, whose people and languages and history are so much allied with the South American Continent that perhaps they ought to be included in Circle I, embracing Brazil, Argentina, Chile, Peru, Mexico, and other countries of the South American Continent. You would, of course, have to consider whether Turkey and Egypt should be in the European or the Asiatic group; and you might find that the United States, not fitting into any particular group in the system on historical, political, or ethnological grounds should be served—and I think this would be the way out of it—by a special division from the ranks of the Foreign Office. I do not for a moment claim to have worked out the system in detail; it would require far more minute knowledge than I can pretend to. But I hope you see the drift of the advantages which I claim for the system—that it would give you, in each division or group, a number of public servants intimately acquainted and continuously dealing with and reporting upon political and commercial situations which are inextricably entwined one with the other; in fact, you would have, I hope, after the plan had been in operation for a few years, a class of men able to teach with authority in their respective spheres instead of being willing learners in all spheres from the start to the close of their secretarial careers. I have talked over this scheme at intervals for a good many years past. I have talked about it to quite a number of Foreign Secretaries and people, and only two

25 June 1914.]

MR. IAN MALCOLM, M.P.

[Continued.]

big objections are raised. One is, that by it you rear up a race of Ambassadors who are specialists instead of, as at present, having men with wide experience, broad horizons, and all the rest of it. I am afraid my answer to that is that we live, after all, in the days of specialisation in every department of life; and, moreover, it is my impression that in recent diplomatic history the ambassadors who have conspicuously succeeded have been those who by special knowledge have made themselves masters of the political conditions of the country to which they are accredited, and have been admitted by length of residence to the franchise of intimate friendship with the rulers and high officers of the land. In a word, I set no particular store by any experience wider, or horizon broader, than that of any cultivated man travelling and working for a number of years within the limits of one of my proposed groups. There is the second objection, which is an obvious one. People say, "Your European circle will be full to overflowing, but nobody will dream of voluntarily exiling himself for life in Asia or South America." I think that is quite a reasonable and a most human objection; but if it was quite valid we should find (by analogy) that the Home Civil Service was always overcrowded, whilst the Colonial and Indian Civil Services had to advertise for men. But that, of course, is not so.

42,445. Would you recruit for one foreign service as a whole and allocate the men after recruitment, or would you recruit for each of those different territorial groups and restrict the men to the group for which they were recruited for ever afterwards?—I do not like to say for ever afterwards. I think that would be too rigid, and I hate great rigidity in all services. I should not like that. I think the way would be to get your men as you do for the Service as a whole, and draft them off to the different circles according to their proclivities. I would go on to say that I think there ought to be certain preferences given to those who serve far abroad, in the way of leave and pay.

42,446. India is a very big country with many provinces. We recruit for the Service as a whole and allocate the recruits afterwards to the various provinces. On occasions of emergency the Government of India may, I think, afterwards transfer men between the provinces?—Yes.

42,447. But there is probably less difference between Indian provinces than there is between Europe and, say, South America, in the matter of climate, expense, and so on?—That, of course, is a matter of opinion.

42,448. However that may be you would recruit for the Foreign Service as a whole?—As at present; but, I think, the European circle has amenities which the others would not have, and therefore these latter must be made more attractive by advantages in pay and longer leave of absence than would be permitted nearer home. In this way the balance would be substantially righted, and I should be much surprised if keen men were not forthcoming to fill up each group.

42,449. You have considered that in the European group, for instance, ways of thought and methods of life are such as to help one who was transferred, say, to the South American, where civilisation is in a less advanced state is yet of the European type?—I should suggest that Germany, Denmark, Switzerland, and Austria have all got the same problems to deal with, and therefore a man who has been dealing with them, say, for two or three years in Berlin, would go to Vienna, and he would not then have to begin *de novo* as he would have to do if he were sent off to Buenos Aires or to Japan; he would have so much to "put in the pool" the moment he got there, and would not have to begin afresh. That is the kind of idea I have, so that men are not always having to begin again. Now on the general question of pay in the Diplomatic Service, you have, I understand, already heard a good deal, so I will just make this general criticism in support, that I certainly think it requires the most careful over-hauling from top to bottom—with special reference to two considerations: (1) The great discrepancy between the salaries of heads of missions and their counsellors or first secretaries, and also the necessity—this is rather

a truism, I am afraid—for a more scientific regulation of salaries in accordance with the cost of life and living in the various countries in which our men are stationed.

42,450. I would like you to look at that matter from a rather more fundamental point of view. Putting out of consideration for a moment the question of pay, do you think it is desirable to amalgamate the Foreign Office and the Diplomatic Service?—I like the idea of quite a free interchange better than what I think would technically be called an amalgamation.

42,451. Do you think that there should be a perfectly free interchange between the Foreign Office and the Diplomatic Service throughout all its grades?—Does that mean from an attaché to an ambassador?

42,452. Yes. Are you in favour of complete amalgamation between the Foreign Office and the Diplomatic Service throughout all its grades, or would you restrict the interchangeability to certain grades; for instance, limit it up to the position of councillor?—Does that mean that you should cease the interchange below a councillor?

42,453. Have free interchange up to the position of councillor?—I like that.

42,454. One proposition is that there should be free interchange between the Foreign Office and the Diplomatic Service according to grades throughout; and the second proposition is that there should be free interchange until the man reaches the position of councillor. Which of those two propositions, if you are in favour of free interchange, as I understand you are, would you prefer?—I should prefer to stop at the councillor. There are so few plums in the Diplomatic Service.

42,455. As matters at present stand you could not have such free interchangeability, owing to the fact that a man must have a certain income of 400*l.* a year before he enters the Diplomatic Service. You would, to secure such interchangeability, have to provide that the salary drawn by a Foreign Office clerk and by the attaché be on an equality?—Certainly.

42,456. Do you also think that living abroad is more expensive than living here in the Foreign Office in London?—Yes, I have had experience of both.

42,457. Then in addition to equalising the pay of the Foreign Office clerks and attachés, you would also have to give the attaché a certain allowance for living abroad?—Certainly.

42,458. Such an allowance probably would be regulated with regard to the expensiveness of the particular place to which he was posted?—I should hope so.

42,459. It would be possible to make out a list after due inquiry of what would be a fair allowance to add to his pay in the various places in which he is posted?—That is as simple as possible.

42,460. By that means you would place the Foreign Office clerk and the diplomat on the same level so far as pay is concerned, and you would then have removed one strong objection to free interchangeability as it exists now?—Certainly.

42,461. Having reached that position of equality, do you not think the Secretary of State ought to be free to say to the Foreign Office clerk, "You shall go to Vienna," and to his contemporary in Vienna "You shall come to the Foreign Office"?—I see no objection to that at all.

42,462. Then would you think that the Foreign Office clerks and the diplomats should be brought on the same list for promotion up to the grade of councillor?—Yes, I think so, as far as I understand; but my memory is a little rusty about the administration, I should hope that the Foreign Office clerk, if there is going to be this free interchange, would come under the Board of Selection just as much as a diplomatist.

42,463. Certainly, he does now. Do you mention the Board of Selection in your paper?—No, because it is a good deal since my time.

42,464. We will deal with that later. But assuming that the Foreign Office clerk and the diplomat are recruited under precisely the same conditions, and provided that the pay is equalised, you see no objection to bringing them on the same list for promotion?—No, always remembering that the continental training a man has had in one post belongs to the taxpayer, and

25 June 1914.]

MR. IAN MALCOLM, M.P.

[Continued.]

it is therefore more valuable to the taxpayer that that man should go to another continental post, looking at it from one point of view, than that he should come home where his continental training is of less value.

42,465. That is to say, that the head of a department will utilise his men to the best advantage. You must trust him to do that?—Certainly.

42,466. But at the same time you free his hands and place him in a position to be able to employ the agent in a place where he can render the most efficient service?—I think there is a great deal to be said for that.

42,467. It has been suggested by some witnesses that there might be difficulty in bringing the Foreign Office clerk and the diplomat on the same list for promotion?—Financial reasons largely.

42,468. No, I assume that the financial reasons were removed; the work of the diplomat, it is said, is somewhat different from the Foreign Office work, and there might be difficulty in comparing claims for promotion. But if merit is made the standard of promotion there ought not to be much difficulty?—No, although I do admit that their duties are different in quality, quite.

42,469. But although there may be a little difficulty, at all events you regard with approval the general principle that it should be open to the Secretary of State to change them about as he thinks right?—Yes. I would rather not go further than the general principle. I wanted to go on to say that unless things are very much altered the same careful examination should be made of our consuls' salaries. I remember that whilst I was serving with the late Lord Salisbury at the Foreign Office, I made a tour through all the principle cities of the United States, and there I made the rough computation that our consuls were badly paid compared to those of the other great Powers. At that time Russia, Germany, and France were all paying their consuls better than Great Britain paid hers, and the result was apparent both in the status held by the consul in the United States and in his own dissatisfaction.

42,470. Do you mean that the status of our consul was depreciated in comparison with the consuls of other nations because of his smaller pay, or do you mean that our consul suffered in the estimation of the American people?—The latter is what I mean by status. They thought, to put it in common parlance: "this consul cannot be much of a man; his colleagues of France, Germany, and elsewhere are paid more than he is, and we know it."

42,471. Was that due to the fact of our consul being unable to entertain, or generally maintain a social position on the same level as the consul of Germany or France?—I do not know that I was in any place quite long enough to ascertain that, but I did ascertain this, that the consuls of those other countries—Russia, Germany, and France—and, I think, Italy was another, because I know we came fifth—made no secret of what they got, and they knew pretty well what our men got, and they made no secret of that in the town in which they were situated.

42,472. Unless the Frenchman spent his money more freely would the Americans think more of him than of our consul?—No, I do not think they would, but I think those people knew their places and did spend their money. Their money was given them to spend and their Foreign Office at home took good care that they spent it.

42,473. We are anxious to hear what you think about unpaid consuls. Is the system a good one?—This same journey of which I have spoken, and many subsequent ones, have left on my mind the firm impression that this country should have far fewer consuls and vice-consuls unpaid and far more who are what is called *de carrières*. At present there is in the Foreign Office list a very large number of foreign gentlemen, most of them engaged in trade of their own, who officiate for Great Britain as consular officers in an honorary capacity. I think it stands to reason that these men who are after all nearly all of them our rivals in trade, cannot be expected to assist our commerce and our traders as though they were of the same nationality as their competitors; they cannot have the same ambition for and interest in the advancement of British commerce as a British subject would naturally feel. Moreover, I state

my own experience for what it is worth, and I do not bring a general indictment against the whole of the unpaid service—these men are often very difficult to find, they keep quite casual office hours and their interest in our affairs, once they have received whatever social advantages there are in connection with the posts, is often of the most superficial character. Instances have occurred of neglect of our interests; but I think it quite a natural result of the very imperfect and unbusiness-like system of expecting men to do something for nothing.

42,474. Your opinion is that a paid consul should be appointed wherever possible; and, that the unpaid consul's place is only where trade is little and does not justify the appointment of a paid consul—there an unpaid man may do good service. But you are not prepared to go so far as to condemn the whole system of unpaid consuls?—I cannot do that, because my experience is not sufficient. There are three or four pages of unpaid consuls in the Foreign Office list. I do not know all of them, and I do not know half of them, but they have not impressed me. Perhaps the Commission will now let me glance at a few of the imperfections—I should call them "grievances," but our diplomatists are too loyal to use that word—upon which I have heard some criticism. You know, of course, that when an Ambassador or Minister goes on leave his place as head of the mission is taken, for the time being, by his first secretary, and to him the Ambassador pays so much a day out of his salary during the weeks or months that he is absent from his post. Now, this regular long leave of absence has in the past always been taken advantage of by the *chef de mission*, and consequently the councillor has always computed his own income on the assumption of 200*l.* to 300*l.* a year out of the Ambassador's pocket going into his own; and the poor man budgets for his annual expenditure accordingly. When, therefore, it suits the Ambassador, as it might very easily suit his country in critical years, not to take leave, or to take it within the jurisdiction of the Court to which he is accredited, the unfortunate councillor is deprived of his extra salary upon which he, quite naturally, counted as the normal thing—and you will immediately see the possibilities of suppressed friction in such an altogether unwholesome arrangement. It is not, in my view, the business of an Ambassador or Minister to contribute to the salary of his *locum tenens*—another member of the Service. Private secretaries are, of course, on a different footing, their service being personal to the chief. To reduce the salaries of the various Ambassadors, etc., by the equivalent of two months' *chargé-ship*, and then tell them that, provided they did not take more than their regulation leave, there would be no deductions, is no remedy, for it is common knowledge to those in the Service that, if the salaries of the heads of missions are to be revised, the revision should be in an upward direction. I have heard it said often that the salary attached to the Paris Embassy, for instance, was raised because, amongst other reasons, the Ambassador declared that he would be unable to pay the allowance to his *locum tenens* out of the original salary; in other words, that he would be unable to take leave. When the public read that such and such an Ambassador is receiving a salary of 8,000*l.* a year and a house, they think this a "fine proposition." They do not work out, because they do not know, the deductions to which this salary is liable; that is, 300*l.* a year or so to the *chargé d'affaires* and the amount of the super-tax. These two items reduce the salary to 7,300*l.* The remedy, which means an increase in the estimates, is to relieve the head of the mission of deductions on account of his *locum tenens* and to put a sum of money at the disposal of the Foreign Office for the express payment of *chargés d'affaires*. On the assumption that all the Ambassadors and Ministers took two months' leave of absence every year, payments to *chargés d'affaires* would total approximately 6,000*l.* a year. In practice the amount would not be quite so great. These payments are worked out on the basis of the present scale of allowances to *chargés d'affaires*. At present the Foreign Office, I believe, like their agents to go home on leave in order to remain in touch with native feeling, but I do not think they ought to penalise them for doing so.

25 June 1914.]

Mr. IAN MALCOLM, M.P.

[Continued.]

42,475. Do the Foreign Office prefer that they should not go on leave?—On the contrary, they want them to come home, but they penalise them for coming. Then on outfit allowances—and this and travelling expenses are real grievances in the Service—I want to speak from the point of view of a councillor, because I think I am right in saying that below the rank of councillor there is no outfit allowance.

42,476. Is super-tax paid on the whole of the salary of Ambassadors?—I should not like to answer that.

42,477. That is a matter of detail on which you do not speak?—I do not know. The outfit allowances vary with the post and are so far logical that they are as a rule, highest in the case of distant posts such as Tokio, Peking, and Teheran. But the logic ends there. Take two men, both of them councillors, who are being transferred to other embassies, the one is sent from Peking to Paris, the other from Rome to Vienna. Both receive 100% on transfer. But there is no comparison in the expense to which they have been put. The man from China is a very heavy loser. There should be far more elasticity about these allowances. The same remark applies to the rule as to payment of expenses from one post to another. This rule is, if I remember right, that if, while you are serving at one post you are transferred to another, and go from one to another, your expenses (if a councillor) and those of a servant are paid from post to post. If, however, you are transferred while you are on leave, your expenses are only paid from London to your new post. The result is to put temptation in the way of the Foreign Office to keep a man at a distant post so long that he finally decides to come home at his own expense; and take the chance of being transferred.

42,478. The Foreign Office has many charges made against it, but I can hardly believe that to be seriously made?—I cannot call it a serious temptation, but there it is, and you save money by doing it. I am bound to say that it has been done more than once, but certainly not of *malice prepense*. I say I do not accuse the Foreign Office of pursuing this policy, but undoubtedly the temptation is there. You see it would be quite easy, nor would it prove expensive, to pass a rule that if, from force of circumstances, a councillor or first secretary is obliged actually to reside for more than two and a half years at a distant post, he should then, failing a transfer, be able to come on leave at the public expense. As things are at present, councillors in the distant posts are at a disadvantage as compared with their *confrères* in Europe. The above remarks apply only to a certain extent to first and second secretaries. These get no outfit allowance at all, and yet their expenses in connection with moves are practically as great as those of a councillor. They are paid their actual travelling expenses from post to post, one third of the expenses of a wife and children, and the expenses of a servant. I hope very much that this Commission will consider the advantages and the justice of the German system of paying the whole of the expenses of a man's move of his furniture, and so on, from one post to another. That is not only just, but I think it is an economic stimulus to my idea of keeping men longer at their posts. I have known several men, whose names it is not necessary to give, really hampered for years as young men by having to pay the whole cost of their transfer from post to post, with the constant moves that have been so frequently dictated by the Foreign Office. Another way in which I think you might help the diplomatists if you are thinking of increasing their pay, is giving them what I believe a good many foreign nations do, that is house rent. I should like to make that suggestion though no doubt it has been made before.

42,479. No doubt if you want to equalise their pay that is one way in which it might be done to some extent. I do not mean to say that paying the house rent would be a complete equivalent, but at all events it would go in that direction?—Yes, and the taxpayer would then know where the money went to.

42,480. That would be susceptible of auditing and checking?—Quite so.

42,481. (Sir Kenneth Muir-Mackenzie.) Would you pay the same amount of rent whether he was married

or unmarried?—If the secretary is not a married man, but in an expensive post, I do not see why the man should be mulcted, and I should be inclined to pay the same. Here is another matter which has to do in a way with this question of houses. It sometimes happens that a councillor or secretary cannot obtain the inclusion of the diplomatic clause in his lease of the house he takes abroad. This clause allows of three months' notice of the termination of the lease or transfer, when sent away to another post. A secretary may therefore find his flat or house on his hands for six months or a year, supposing he is transferred at the beginning of a fresh year's tenancy. I understand that in such cases the German and Belgian Governments pay what is due under the remainder of the lease. Other governments may do the same for all I know, but if the German and Belgian system were to prevail, our secretaries would be protected from the consequences of sudden and unexpected transfer. I think that is quite a reasonable grievance that we have. Speaking generally, the Service is expensive enough without its members being subjected to avoidable expenditure. I find there is still one point I have not touched—it is a small point, but I think it ought to be put before you, if it has not been. Heads of missions have to pay for the firing and lighting of the chanceries. This expenditure ought to be borne by Government in the same way as the salaries of the chancery servants are paid by Government.

42,482. (Sir Donald MacAlister.) Has an ambassador, for chancery purposes, an office allowance?—Not for chancery purposes, I think. In most of the embassies I know, the chancery is in the embassy itself.

42,483. Does it come out of his salary?—No, it does not come out of his salary. He does not pay any rent for his embassy, and the chancery is under the same roof.

42,484. (Chairman.) The lighting and heating of the chancery, which is a public office, is not paid for by the Government?—It is not paid for by the Government. On the question of attachés, the attachés, as you know, receive no pay during the whole period of their attachéship, that is, two years. Up till quite recently attachés were kept for a year or so at the Foreign Office in order to learn their work. During this time many of them, presumably, had the advantage of living at home, or at all events, living less expensively in England than is possible at a big embassy abroad. Now, however, they are sent straight out to the embassies, and are put to considerable initial expense during their first year. I submit that they ought under those circumstances to be paid 100% or 200% a year. It may be objected that they are on probation during their two years, and therefore cannot logically receive a salary. That might avail as a criticism if one could recall a single instance of an attaché having been refused his commission as third secretary.

42,485. All public officers in this country very nearly, even though they get their pay, are on probation for a time. A second division clerk draws pay from the first moment he enters the office, but he is on probation for a year, or whatever the period may be. Why should not the same rule be applied to an attaché?—Quite so. Finally I would like to say a word about honorary attachés. I speak feelingly on the subject of honorary attachés, having been one of them, but quite candidly. I think, first of all that, they may be most useful supernumerary members of a mission, but at the same time it would not be a bad thing if, before their appointment, they too had to submit themselves to the Board of Selection at the Foreign Office. If you ask me why, I will just indicate that occasionally there is put upon an Ambassador or Minister certain private pressure which he cannot easily resist, to take a young man as an honorary attaché whom he may not consider quite suitable. The Board of Selection in such cases would probably find reasons for not submitting his name for appointment. I would add that, in the case of those selected, it might not be a bad plan to take nobody who was not prepared to work in the Service for a minimum period of three years. This would avoid the appearance of employing "loafers," or those whose parents might desire their

25 June 1914.]

Mr. IAN MALCOLM, M.P.

[Continued.]

sons to be out of harm's way in London for a short space of time. But I am bound to say that, having known a good many honorary attachés, I think that, as a rule, they are a distinct help to their embassies; they take the work seriously and take their share of it, and, when they resign, men like Sir Mark Sykes, Mr. George Lloyd, Mr. Aubrey Herbert, and others, come into public life with a distinct asset in their first-hand knowledge of certain branches of foreign affairs: That is all I specially want to lay, with great respect, before you.

42,486. (*Mr. Graham Wallas.*) At what date was your long visit to the United States when you inquired into the Consular Service?—I think it was about 1899.

42,487. You know that the Walrond Committee, which sat in 1903, made certain alterations in the salaries of consuls?—No; I am afraid I do not know of the Walrond Committee.

42,488. You said that an arrangement might be made by which the staff of diplomatists at certain particular missions might be kept lower, and special arrangements made in times of crises. Do you think it would be possible in times of crises sometimes to shift men from the other embassies—say, a third secretary or a man from the Foreign Office?—Quite easily.

42,489. Travelling now is easy?—Yes, I have known it done already.

42,490. If we staffed the whole Service so as to have a little ease somewhere in the Service, you could have a body which it would be easy to send?—Yes, emergency men.

42,491. To any place where there was a sudden demand?—I think it is quite easy.

42,492. And now that communication is quite easy it is uneconomical to staff every embassy up to the crisis point?—I think so—that is, up to "war footing."

42,493. It was in our minds whether it would be better to leave the shifting of diplomats from one post to another to be managed by a single official or by an official board. Have you yourself any opinion on the point as to which would be better?—No. My recollection of the Foreign Office is that although the private secretary was really responsible under the Secretary of State, he consulted two or three men, who would be the men you would choose for a board if you had one.

42,494. (*Chairman.*) Would you see any objection to constituting these gentlemen whom he consults into a recognised board for the purpose of dealing with transfers and appointments under the orders of the Secretary of State?—No, I do not see any objection. I have never heard anything like a serious complaint.

42,495. (*Mr. Graham Wallas.*) But it would check the rise in any particular case, from the personal point of view, or personal policy, of a particular man?—Yes, it would protect the private secretary, certainly.

42,496. You know that in the Home Civil Service and in the Indian Civil Service the salaries are based upon the idea that the kind of man the State wants is a man who ought to be able to live on his pay. Would you accept the same idea in the Diplomatic Service?—No, I do not think I would.

42,497. Why?—I am not perfectly sure that I understand the question.

42,498. The pay in the Home and Indian Civil Services is calculated so that the person receiving it can live on his pay?—Yes. I suppose technically one ought to accept that, but I think in practice in foreign countries you want the man to have more than his pay, because I should not like to think, as a taxpayer, that public servants abroad were spending money in entertaining their colleagues and friends, quite properly, and were being paid by me to do that.

42,499. But if I, as a taxpayer, desired that this particular diplomat should live in a particular way, why should not I, as a taxpayer, having that desire, also desire to pay for it?—If you can get all the other taxpayers to agree with you I think you are quite right.

42,500. Then your only objection to enabling a man to live the kind of life we want him to live on his pay is, that you do not think you can persuade your fellow taxpayers in the country to adopt it?—Yes.

42,501. But if you had any hope of persuading them to adopt that policy, you would advise them to do so?—Yes, I think so.

42,502. (*Sir Kenneth Muir-Mackenzie.*) I think you said that you had not had personal experience of the Board of Selection at the Foreign Office?—No; I think it was started about 1910.

42,503. We have had a good deal of discussion here about it because, unlike the rest of the Civil Service, for the Diplomatic Service it is necessary for a man to be passed by the Board of Selection at the Foreign Office. Can you give us any opinion as to whether you think that is a desirable distinction to be maintained between the Foreign Office and the rest of the Civil Service?—Yes, I think it is. I do not like the idea of open competition without a Board of Selection. I think competitive examination does enough harm already, and you very often get really the second best diplomatist who comes out first in the examination.

42,504. Then probably it is not of any interest to you whether the operation of the Board of Selection should be before or after the Civil Service examination?—I think it would be only fair to have it before, because, if held after, it might be a great disappointment to many who have passed the examination.

42,505. You would not allow a man to go into the Civil Service examination unless he had passed the Board of Selection, and that is the present system?—No, I would not, for the Diplomatic Service.

42,506. (*Chairman.*) Here we have a public examination—the Class I. examination—for the Civil Service. A man goes in for this examination and if he desires to compete for the Home Service he puts down H; if for the Indian Service, I; and if for the Colonial Service, C—he generally puts in all three. If a man wants to compete for the Foreign Office he might add an F, and will then go in for the examination for all four. But, for the reasons you have indicated—he would have to go before the Board of Selection prior to going in for his examination. If the Board of Selection passed him, and if in the examination he passed sufficiently high for the Foreign Office he would be appointed to the Foreign Office. If the Board of Selection did not pass him his chance of getting an appointment in some other department would be unaffected; he would be judged by the number of marks he obtained, so his chances in no departments except the Foreign department would be affected by the sitting of the Board of Selection?—I understand it now.

42,507. (*Sir Kenneth Muir-Mackenzie.*) Do you think under the existing system the Service gets as good men as it wants, and as good men as you wish to get?—I think so.

42,508. You have no suggestion to make as to an alteration in the system of recruitment for the Service?—No. They seem to me very good men all through Europe, judging from those I have seen during the last two years—extremely good men.

42,509. (*Chairman.*) It has been suggested to us that an insistence upon a high standard in modern languages acts in an exclusive way; that is to say, it excludes those members of the general community who wish to go in for the Foreign Office but who cannot afford the money to go abroad in their early years and learn French and German?—I suppose it may have that effect to some extent—I suppose it must have.

42,510. But still, the necessity of a full knowledge of French and German, or as nearly a full knowledge as can be acquired at that age, is essential for the Foreign Office?—Quite essential.

42,511. You cannot get your efficient diplomatic officer unless he knows the languages?—You have no other means of communication really in anything except the purely official work. If I had my way I should put on more languages as optional subjects than they do now.

42,512. There are Spanish and Italian as optional subjects, but not Russian, I think?—Not Russian nor the Oriental languages. I should like to see Turkish or a Scandinavian language put on as an optional subject, or Arabic, if you like.

25 June 1914.]

Mr. IAN MALCOLM, M.P.

[Continued.]

42,513. They can get grants for languages afterwards?—Yes, for some.

42,514. (*Sir Kenneth Muir-Mackenzie.*) Some of those objections with regard to the expense of living, and still more the expense of moving, I suppose, arise with regard to the Army also?—I have several brothers in the Army, and I am always hearing them grumbling at the expense of moving, but I do not know any details about that.

42,515. You do not know if the subject has been much discussed in a way that might be of assistance to us?—In Army circles I have heard it discussed.

42,516. The question arises on the change of quarters in England and in our foreign service in India, and in former days when we had soldiers in the Colonies. I thought perhaps the principles laid down about that might be useful to us here?—I am afraid I should not be a good source of information.

42,517. (*Mr. Matheson.*) It has been urged as an argument for paying the Diplomatic Service better, that it is desirable to draw from a rather wider circle than is drawn upon at present. Would you at all agree with that point of view? Should you say from your experience of the staffs of missions that you have seen, that they would gain by having men drawn from a rather wider circle of education and interest?—It is a delicate thing. Do you mean the type of the secondary schools rather than the public schools?

42,518. It is partly that, but the statistics we have show that even taking the public schools there is a very narrow range at present in recruitment. For instance, something over 60 per cent. are drawn from Eton, and only a few from Winchester or Rugby, or other public schools?—Before that basis of proportion is worth anything, may I ask how many apply? Do 50 per cent. of the applicants, or only 50 per cent. of those that are taken, come from Eton?

42,519. I think it is quite true that the percentage of the candidates from Eton is very large, too. It is not a question of rejection, but the question is whether the present system encourages men to present themselves from a great variety of schools?—If you have your Board of Selection, and it is working to your satisfaction, I do not think it matters from what school they come, or how many people apply from the different classes of life that go to make up the British public: but I think your Board of Selection will generally take what we may call perhaps one type of man, because he is the type of man who is fit for this international career called diplomacy. All of this type of men, speaking metaphorically, speak the same language; they have the same habits of thought, and more or less the same points of view, and if anybody with a different language and, roughly speaking, a different point of view, came in, I think he would be treated by the whole diplomatic circle more or less with suspicion—more or less with lack of confidence, perhaps.

42,520. (*Chairman.*) We are talking in vague terms. We know what we mean, and I think we had better speak more plainly. Is it or is not desirable that you should recruit for the British Diplomatic Service men who come from the ranks of the people. It has been put to us in this way: Our general politics at the present time are growing more democratic; but we have been told that our diplomacy abroad is not as democratic as the general state of thought in this country is, but, on the contrary, is more conservative. It is alleged that the true opinion of this country will not be expressed, will not be reflected in its diplomacy abroad unless our Diplomatic Service reflects to a greater degree than it does at present the democratic spirit and tendency of this country, assuming for the moment that the description of popular feeling in Great Britain is as I have stated. Do you think that it is desirable to throw the net of recruitment for the Diplomatic Service and the Foreign Office more widely than at present with the object of getting into the Service men who come from the secondary schools, get scholarships and go to the university; and not recruiting so largely as at present from the classes whose sons go to Eton and Oxford. It is to be assumed that the man secured for the Service by this wider throwing of the recruitment net should in personal demeanour, address, temper, and so on, be

such as would fit him for the society in which he would have to mix, the society of his other diplomatic colleagues in the particular embassy to which he may be sent. It has been suggested also that if you could recruit your diplomats from a broader social strata, they would be better able to get into touch with the democracies of the countries to which they may be accredited?—In answer to that I should be inclined to say that if this gentleman under a system of open competition could be found with all the qualifications you speak of—personal address, and all the rest of it—he would be a most valuable member of the Service; but I would stick to the Board of Selection.

42,521. With a view of securing that these qualities shall exist in our recruit?—Yes, to be quite sure that they are there, because otherwise he might even be a danger perhaps to his mission. As I tried to say, more or less in metaphorical language, these people are more or less a close corporation all over the world, all drawn from the same class in all the different countries.

42,522. (*Mr. Graham Wallas.*) There is an existing rule that no one may go into the Diplomatic Service unless he has either an income or an allowance of 400*l.* a year. Would you keep up that rule?—Not necessarily personal income, if the State gives it to him. I think it is absolutely necessary for him to have it, or he would be quite miserable abroad.

42,523. Would you be prepared to contemplate the State giving 400*l.* a year and the abolition of that rule?—With a Board of Selection.

42,524. I am assuming that it stood for the moment alone?—Without the Board of Selection I would not.

42,525. But the Board of Selection exists?—I would like a little more time to think over it. I do not think I would go quite the full length of open competition.

42,526. I am assuming that there is a Board of Selection existing. The question is, other things remaining the same, except that an allowance of 400*l.* a year is substituted for the requirement of a private income of 400*l.* a year, would you abolish that 400*l.* a year private income.

(*Chairman.*) I think you have, in substance, answered that question. Assuming the existence of a Board of Selection to judge of the personal qualities, then you would be prepared to abolish the rule prescribing that a man shall have 400*l.* a year private income; provided in place of that rule the grant to him by the State of 400*l.* a year is made?—If you would make it not actually 400*l.* a year, but something such as he can live upon.

42,527. I will put it in this way—that the diplomat shall, so far as pay is concerned, be put upon precisely the same footing as a Foreign Office clerk, and that he shall be given in addition an allowance to be fixed by the Government, as representing the extra expense of living in the way in which, in the opinion of the Foreign Office and the Government, he should live if he is to be an efficient diplomat?—I know other people see very strong objections to it. I do not see anything like so strong an objection myself, but I do think the present a better system.

42,528. (*Mr. Matheson.*) With regard to the position of the junior members of a mission, is it your experience of them that they move pretty freely in the various regions of society in the countries where they are?—Yes.

42,529. Would they get to know something about all classes, do you think?—That depends very much on the man nowadays, much more than when I was in the Service.

42,530. On the whole you think there is a good tradition growing up in regard to that?—Very good. It is much wider. I think their reports are very much better than they used to be.

42,531. To what extent do you think entertaining is a necessary part of the junior members' business? Do they have to do much in the way of entertaining?—Not what would be called entertaining on the grand scale, but constantly in a small way, and, as you know, much more store is set upon that sort of friendliness and hospitality in foreign countries than is the case here.

25 June 1914.]

Mr. IAN MALCOLM, M.P.

[Continued.]

42,532. Then you spoke—and I think we should all agree with you—as to the desirability of moving the mechanical work down, and you said that they ought to have more time to devote themselves to the higher branches of their work. What do you consider to be the natural and proper employment of the secretary in a mission when he is freed from these more mechanical tasks?—There might be quite a lot of things. It would depend on what were the questions agitating the country at the moment. Those questions he might go into a great deal more profoundly than he has time to do now—they might be political questions, or social questions, or others.

42,533. With regard to moving, do you think that moving is more frequent with us than with the staffs of other countries?—I have not made any comparison, but I should say it was.

42,534. Your group system sounds very interesting, and from many points of view good; but do you think it would make recruitment more difficult if a man knew that possibly when he entered the Service he might be put in a group which did not appeal to him and be for life in that. One of the attractions of the Service at present, I suppose, is that a man, even if he is in a dull place, knows that some day he may go to a much more interesting one?—I think there are drawbacks to it, but I am under the impression, having seen a good deal of the Colonial Service, and of the Indian Civil Service and other Services, that distance from home, somehow or other, to Englishmen is not always a drawback. Long leave of absence, and the advantages of higher pay *pro rata* when far away instead of being close at hand, seem to equalise it.

42,535. (*Sir Donald MacAlister.*) Do you think that the 400*l.* a year limit serves any other purpose than merely that of providing that a young diplomat shall be unembarrassed in his life abroad. Does it hamper the selection you are desirous of maintaining?—No. I know of lots of people I should be very sorry to see in the Diplomatic Service who have 4,000*l.* a year.

42,536. Then apart simply from the fact that it makes for him the private life, or the life he is expected to live, easy, you see no value in the 400*l.* a year limit by itself at all?—No, I think that is the only reason.

42,537. Then efficient selection would, from your point of view, serve all the purposes you have in view?—Yes, efficient selection on certain grounds.

42,538. It has been alleged, as you would naturally expect, that the 400*l.* a year limit is meant to exclude particular people?—I think we are at cross purposes. The Board of Selection, I think, exists to exclude the people I want to see excluded.

42,539. But the 400*l.* a year limit also excludes others that you would like to see included?—Very often. On page 64 of the Foreign Office List you will observe paragraph seven, which says, "Certificates may be granted without examination." It looks to me by that that where the Civil Service Commissioners, helped, I suppose, by this Board of Selection though it is not mentioned here, come across what Lord Rosebery used to call an "Eagle" they could perfectly well put that man in now without an examination.

42,540. (*Chairman.*) Yes, that is a general Order in Council which is maintained applying to the whole Civil Service of the Crown and not specially the

Diplomatic Service?—Quite so, so if the gentleman could not afford to have that particular training and was still a very desirable person to have in the Diplomatic Service, I suppose it would be possible to get him in under paragraph 7.

42,541. That is appointment by patronage; this Commission would be better pleased if a man were able to get in on his merits alone. But we recognise that the Diplomatic Service of the State does require in its efficient agents qualities which cannot be tested by examination, and we have been endeavouring to see how they can be secured. This Board of Selection holds the field at the present time?—It seems to me to be admirable.

42,542. But I do not suppose you are quite wedded to the Board of Selection as it at present exists, you would like to see it made more effective for its object if that be possible?—If you are going to change the *personnel* of the Board, it might not be exactly the same Board.

42,543. It might not, exactly, be the same Board, but if altered, the alteration would aim at making it more effective for the purpose in view, such as strengthening public confidence, that candidates really fit for diplomatic work would not be rejected for inadequate reasons, and that the Foreign Service of the State should be as freely open as the interests of the department permit?—Of course I should always like to see men on that Board who know what is required when the people get abroad.

42,544. That, of course, would be the main object in the selection?—Others with theories of what might be required would not be so satisfactory.

42,545. (*Mr. Graham Wallas.*) You once or twice used an expression about "excluding the kind of man you want to exclude and getting the kind of man you want to get." I understand you are referring to the description of the diplomatic family?—I think the people I want to exclude are people who are plutocrats and nothing else.

42,546. You speak of them as being of one group who all see things from one point of view and understand each other's language?—The whole diplomatic career of all countries.

42,547. And unless a man belongs to that particular type and sees things from one point of view you desire to exclude him?—I think it is better to, because he would not have the confidence of the rest of the group and he would not be earning his corn from the taxpayer's point of view.

42,548. (*Chairman.*) But you would not stereotype that particular form of diplomatic family life in Europe—if I may so express myself. You would not prevent the diplomacy of England being represented abroad by people who would really reflect the character of the democratic mind at home?—No, of course not, but I tried to make plain—and I am afraid I quite failed—that I do not think those people would carry guns.

42,549. They might not perhaps at the outset, but I think I understand what you mean. You are not an advocate for absolute immovability?—No, I only feel that if you get them you would be disappointed in them. For at any rate quite a long time, they would be working in a machine of which they did not quite form a part.
