30,318. What is his present appointment?—His present appointment is assistant secretary to the Estates Commissioners.

30,319. Well, that is an appointment which is generally made by selection. The secretaries and assistant secretaries are generally chosen from the whole body of officers available for such positions?—The view we take is this, that there were men in the office equally competent to undertake these duties.

30,320. But, after all, the head of the office has to decide who, in his opinion, is the most competent person for the office of assistant secretary. So long as he takes a man from the office, and does not take him from outside, your case is not a strong one?—The only point we make is, that he was originally appointed to our office from another department.

30,321. I am afraid you will find it difficult to limit the choice of the head of a department in respect of such promotions as that of secretary or assistant secretary?—We recognise that, of course.

30,322. Now, if when he was brought in from outside he had been put into the post of assistant secretary, you might have some ground of complaint; but it is difficult to establish a complaint on the point that he was taken from amongst you to be assistant secretary?—Our point is that his original appointment to the Land Commission as chief clerk was unnecessary. There were men in the office equally competent to undertake these duties. B and C are different from the first appointment. These gentlemen were both appointed from outside. They had no previous experience in Government offices at all.

30,323. Had they any professional qualification?—B is a barrister-at-law and C has no professional qualification of which we are aware.

30,324. And what appointment was B put into?—He was appointed head of the Estates Management Branch.

30,325. Did that require legal knowledge?—In our opinion, no; that is to say, nothing more than could be gained by ordinary office experience.

30,326. Were B and C land agents' clerks?—I understand both of them were.

30,327. That explains it, Mr. Anstead. When the Act of 1903 was passing through Parliament a strong representation was made to the Government of the day that some consideration should be paid to clerks in land agents' offices. Land agents would be deprived of their business by the land purchase scheme, and their clerks would be thrown on the world. The Government of the time recognised that great assistance would be rendered in the administration of the Act by employing land agents' clerks to some reasonable extent, and it was in consequence of that understanding that I fancy these two gentlemen were brought in. That is what I think is an explanation of these two cases. Would you pass on to J now?—The last three instances are what are termed in our department "legal clerks."

30,328. They are employed at work which wants a legal experience?—We say that this work could be

done by second division clerks who have office experience, and we would also like to add that most of the duties now performed by these legal clerks were previously efficiently performed by second division clerks.

30,329. Is there any suggestion that there is jobbery about these appointments?—We are not confining ourselves for a moment to these appointments, and if you look at the top of the page you will see the work of legal clerks.

30,330. Is there any suggestion that the appointment of these gentlemen was due to improper methods?—We do not suggest that for one moment, but we say their appointment was unnecessary, and we have facts to bear out that suggestion. In an interview between five second division clerks and two of the Estate Commissioners, one of the latter expressed the opinion that a second division clerk of experience was more valuable for Land Commission work than a barrister who had never practised. The majority of the legal clerks never practised at their profession, and we desire to draw the attention of the Commissioners to the evidence given on behalf of the Charity Commissioners in London, in which a similar point arose. I understand they took the view there that a barrister who has never practised is not suitable for the work they have to do.

30,331. You think that experience gained in an office by a clerk is more valuable than the legal knowledge which a barrister who does not practice may have?—We hold that opinion. I notice in Question 15,457 and the two following questions that the same point was brought out by Sir Matthew Nathan of the Estate Duty Office, and it was brought out again more strongly by Mr. Turpin of the National Debt Office. We would also like to bring to your notice in support of our contention that for the performance of the clerical duties of the Land Commission a professional legal qualification is not necessary, the following list of high officials whose duties are bound up in legal practice, and who have no professional legal qualification: Mr. Commissioner Lynch.

30,332. Was he not a solicitor?—I am informed not. Then there are Mr. Commissioner Wrench, Mr. Commissioner Stuart, Mr. Beard (Secretary).

30,333. But Mr. Beard is, I believe, technically a lawyer. I think he was called to the Bar?—Mr. Beard informed me he had no professional legal qualification; Mr. Green (Assistant Secretary), Mr. Seaver (Assistant Registrar of Fair Rents), Mr. Haughton (head of Agreements for Purchase Branch); Mr. Rice (head of Vesting Branch, in which legal clerks are employed); Mr. B. J. O'Donnell (Chief Clerk Estates Commissioners Department); Mr. Cavanagh (First-Class Clerk Examiners' Branch); and Mr. J. O'Donnell (head of Church Property Branch).

30,334. They have no legal qualification although they are engaged in departments nominally requiring professional qualifications?—That is so.

30,335. But are the particular posts they are engaged in such as would require legal experience or legal qualifications?—They are engaged in the administration of the Land Purchase Acts and the Land Law Acts. In addition, two temporary staff clerks were appointed to the department and perform legal duties, but are possessed of no professional legal qualification.

30,336. When did they come into the office?—They were appointed to the Land Commission in 1904.

30,337. That was the time, you know, when the office was being constituted. The Act passed in 1903, and the Estates Commissioners had to create their establishments from the best material they could get at the time?—They had a large number of Land Commission clerks in the department at the time.

30,338. They had to increase their establishments enormously?—They had. We would like before closing this subject to give you our reasons for saying that second division clerks with experience would be competent to perform duties now performed by legal clerks at large salaries. (1) Most of the duties now performed by legal clerks were previously performed with efficiency by second division clerks. (2) For some years their work was checked by the assistant head of the

27 February 1913.]

Mr. ANSTEAD, Mr. KENT, and Mr. BALL.

[Continued.]

vesting branch who had no professional legal qualification. (3) The same official, now head of the Branch, not only checks their work but advises them on legal matters connected therewith. (I believe he is reading for the Bar at the present time.) (4) At an interview accorded by two of the Estates Commissioners to five second division clerks of the Vesting Branch, one of the former expressed the opinion that a second division clerk with experience was more valuable for Land Commission, work than a barrister who had never practised. (5) The secretary to the Land Commission, at an interview accorded to the representatives of the second division clerks, stated that if the duties performed by legal clerks were given to second division clerks they would only be paid for at second division rate. (6) Nevertheless, increases of 150*l.* in one case, 100*l.* in another, and 50*l.* in two further cases have been granted to legal clerks, while none of them receives less than 200*l.* per annum. (7) One second division clerk is employed side by side with the legal clerks, performing identical duties, and sharing equal responsibility with them, but has received no promotion, and is still in receipt of a salary of less than 150*l.* per annum.

30,339. (*Mr. Shipley.*) I suppose one of your difficulties is the increased cost of living?—We have not gone into that question at all.

30,340. I mean you have experience?—We have no official figures and we make no mention of it in our statement, but, if the Commission are taking this point into consideration, I would like them to bear in mind the abnormal cost of house rent in Dublin.

30,341. How does your salary compare with what it would be if you were a clerk in a big business or solicitor's office?—(*Mr. Kent.*) It is not so much their salary as what they call their "pickings."

30,342. You have not much overtime?—Practically none.

30,343. You have a seven hours day?—Yes.

30,344. Is there any way of making money in the evenings?—(*Mr. Anstead.*) Practically none whatever.

30,345. (*Mr. Graham Wallas.*) The first appointment in your office was in 1904?—No. There were second division clerks in 1891.

30,346. But the class which you now represent entered the office in 1904?—Yes.

30,347. Therefore the oldest of you now have not more than 8 or 9 years' service?—Not more than 8 or 9 years in the Land Commission, but a lot of them have

prior service in other departments, up to 12 and 15 years.

30,348. And the appointments you complain of, made in 1906, would have been made when the oldest of you had only two years' service?—The oldest of our body would have had only two years' service in the Land Commission, but against that you must also remember that there was a large body of Land Commission clerks existing in the office at the time.

30,349. (*Mr. Boutwood.*) I don't quite understand you when you say that for some years the work now done by legal clerks was done by the second division previously. What years were they, because your grade came into the office, I suppose, in 1904-5-6. It seems that the legal clerks were introduced about the same time?—I don't think we stated that "for some years" these duties were performed, but it is a fact that from 1904 to 1906 the duties of legal clerks—fiating, and noting the devolution of tenants' interest in holdings—were performed by second division clerks.

30,350. You spoke of preferential treatment of the temporary staff; do you mean the mere fact of introducing the men, or do you refer to the comparatively rapid increase of their salaries? Do you mean that your office prefers to introduce temporary men, or do you mean that having got them it treats them better than they do you?—The latter is exactly what we do mean.

30,351. "That a more adequate number of staff posts should be provided"—now what is the object of that?—Our object in making that claim is that in every department there are second division clerks having the supervision of staffs. One second division clerk supervises a staff of 19.

30,352. Tell us what you mean by supervision?—In charge of a branch, and responsible for the work of that branch and maintenance of discipline. There is another second division clerk exercising supervision over a staff of 11, and there are several instances of second division clerks in charge of staffs of four and five. In none of these instances do they receive any special emolument whatever, and with this in our minds we make the suggestion that a more adequate number of staff posts should be provided. Before we retire, I may mention that there is one head on which you did not examine us, and that is the disadvantages under which we serve compared with second division clerks in other departments. If you like we would hand in a statement.

(*Chairman.*) Very good. (*Statement handed in.*)

Mr. DEMPSEY, Mr. DUFFY, and Mr. GLEESON, called and examined.

30,353. (*Chairman.*) Do you, Mr. Dempsey, speak for your colleagues?—(*Mr. Dempsey.*) Yes. Before proceeding with the evidence I would like to say that the printed statement already submitted is incomplete.

30,354. It does not contain everything you wish to say?—Not quite.

30,355. But you have filled eight pages?—Yes.

30,356. We have your statement here and have gone through it. Tell me briefly what is your complaint?—Our general complaint is that at no time in his career has an assistant clerk got a living wage, and our particular departmental complaint is that whereas there are a large number of assistant clerks eligible for promotion to the higher grade—the second division—they are passed over when appointments to the second division are made.

30,357. Do you say that an assistant clerk, for instance, when he reaches 120*l.* a year has not got a living wage?—He has if he is unmarried, but in view of the fact that he is probably married at the age when he has 120*l.* he is not in receipt of a living wage.

30,358. You enter at 45*l.* a year?—Under the present arrangements assistant clerks enter at that salary.

30,359. Did you enter from the boy clerk grade?—Yes.

30,360. How long were you a boy clerk?—Slightly over three years.

30,361. Were you recruited in England or Ireland?—In Ireland.

30,362. Did you pass into the abstractor grade by the examination held in Ireland?—Yes.

30,363. How long have you been in that grade?—Just three years.

30,364. What pay do you now draw?—70*l.* a year. There was a different arrangement when I entered. I began at 55*l.* a year.

30,365. Your first complaint is you consider that the scale of pay for the assistant clerks is not a living wage?—Yes.

30,366. Your next point is that the assistant clerks are eligible for promotion, but are not promoted?—Yes.

30,367. What do you mean by eligible for promotion?—Fulfilling the requirements of the Treasury regulations.

30,368. That is to say when they serve six years?—Yes.

30,369. But the mere fact of service for six years does not render a man eligible for promotion: something else is required?—That is so, but our grievance is that assistant clerks have performed and are performing work of a superior nature.

30,370. Even that, under the existing system, will not make them eligible for promotion. The assistant clerks who are eligible for promotion are those of exceptional merit?—Yes.

30,371. If every assistant clerk in the office did his work well and was generally meritorious it would not justify the head of the office in promoting the whole of them to the second division; otherwise what is the use of having a second division examination?—That is so.

30,372. There must be only a small proportion of them promoted?—Yes, but we only ask that where there are men of exceptional merit performing work of a

27 February 1913.]

Mr. DEMPSEY, Mr. DUFFY, and Mr. GLEESON.

[Continued.]

superior nature, that is work that is not copying, routine work under direct supervision, or other work inferior to that of a clerk of the second division, they should be promoted.

30,373. How many promotions have there been in the last ten years?—In the Land Commission since the class was instituted there have been ten promotions.

30,374. Have you any idea what proportion of promotions from the assistant clerks to the second division would satisfy you?—We have never considered the question of proportion, but where assistant clerks are performing special work they should be promoted as laid down in the Treasury regulations.

30,375. Of course you read the Treasury regulations with your idea of what they ought to mean from your own point of view?—The regulations lay down that where a man shows exceptional merit he should be promoted.

30,376. Where an assistant clerk is of exceptional merit and has more than six years' service he stands a very good chance of promotion?—We contend that such is not the case in the Irish Land Commission.

30,377. For the last 10 years you say there were only 10 promotions?—Of this class, since 1897. At that time the assistant clerks were first brought into the Land Commission.

30,378. What is your next point?—Take the work done by the assistant clerk in different departments. For instance, the accountant's department. An assistant clerk is employed on the improvements fund account, and working with him is a second division clerk of 12 years' service. The work done by the two men is identical.

30,379. That is to say the second division clerk is in charge of the work and the assistant clerk is there to help him?—No. There is no supervision of one over the other. They are working independently, but on the same lines. Take another case in the same department. A second division clerk of 30 years' service and an assistant clerk with 12 years' service are both engaged on the same work, that is examining claims made for travelling expenses and allowances by the assistant commissioners, inspectors, and surveyors; they have also charge of the preparation of the salaries lists, and the increments, and deductions from lists of payments of all travelling expenses, salaries, and incidental expenses. All these claims are examined by one or other of them, that is by the second division clerk or the assistant clerk, and the work is divided according as it comes in without any reference to the position of the man.

30,380. How many of such cases have you?—They are very numerous.

30,381. That is a fair sample?—It is.

30,382. Do you desire to read any more? All I want is to have a fair sample?—I will read one or two more. Take the bonus section of the inspection branch. The work consists in making calculations of the amount of bonus to be paid on the purchase money. The principal point we wish to refer to on this is that since August 1912, when the second division clerk was transferred to another branch, the assistant clerk has been responsible for the work subject to the superintendence of a staff officer. The new second division clerk who was appointed in place of the one who was transferred had no previous experience of the work, and the work is being done by the assistant clerk.

30,383. I suppose he is learning from the assistant clerk how the work is done, and in a very short time he will be able to do it himself?—He has been six months there and he has not yet performed the work himself.

30,384. What you want us to infer from all that is that the assistant clerk is doing the same kind of work as the second division clerk?—Yes.

30,385. What is the conclusion you aim at—that the assistant clerk should be made a second division clerk?—When he has completed his six years' service in the Government employment.

30,386. That would lead ultimately to the abolition of the assistant clerks grade altogether?—No. There are a number of assistant clerks who in the ordinary course of events would not be put on to work of a superior description.

30,387. You admit that the work of the assistant clerk is as a rule of an inferior character?—I would not

say so. The work of the assistant clerk is of the highest kind of routine work.

30,388. But is not the substantial mass of the assistant clerk's work different from that of the second division clerk?—As at present given out it is.

30,389. As I understand, your case is that there are assistant clerks who are clever and do their work well and are exceptionally favoured compared with their fellows. These exceptionally clever and prominent assistant clerks ought to get promotion: is not that your case?—That is our case.

30,390. (*Mr. Boutwood.*) Have you seen the statement sent to the Commission by the second division clerks in your office?—No, I have not.

30,391. Because in one sentence they say that assistant clerks in the office in many instances discharge duties higher than are commensurate with the salaries: that means, I suppose, that the men in the second division take virtually the same view of your work that you have been representing to us?—That is so.

30,392. (*Mr. Graham Wallis.*) You say the assistant clerks came into the office in 1897?—Yes.

30,393. Is it not the case that anything that happened in 1897 was exceptional, and that the main introduction of assistant clerks into the office happened about 1904?—About that time.

30,394. Did you come in after 1904?—Yes.

30,395. When did you come in, Mr. Gleeson?—(*Mr. Gleeson.*) I came in in the year 1907. I had four years' service as assistant clerk prior to that. I worked in the Savings Bank department of the General Post Office. Prior to that I worked as a boy clerk in the Savings Bank department when it was near St. Paul's Churchyard. I also served for about three years as a boy clerk in the Customs House, Lower Thames Street. I was transferred from the Savings Bank to the Customs House. I have nine years' service as assistant clerk, and four years as a boy clerk.

30,396. If the whole of your class began in 1904 and you came in roughly in about the same numbers each year the average time of service of the assistant clerks in your office would be about four years?—(*Mr. Dempsey.*) The great majority came in about 1904 or 1905. That would give seven years on an average.

30,397. Taking the last seven or eight years, the majority of you have been ineligible for promotion on account of not serving more than six years?—Four years is all that is required as assistant clerk, and two years as a boy clerk. That is how the six years is made up.

30,398. The great majority are eligible?—Yes.

30,399. Of those who have become eligible 10 have been already promoted to the second division?—Yes.

30,400. (*Mr. Shipley.*) I suppose one of your difficulties is the increased cost of living?—Yes.

30,401. Are you adequately housed in the office? Are the rooms you work in well ventilated or well equipped?—We make no complaint on that point.

30,402. Your work does not extend beyond seven hours a day?—In the great majority of departments it does not, but in one department there is overtime for six weeks in each half year.

30,403. (*Chairman.*) Where were you at school?—In the County Kildare.

30,404. At a national school?—Yes.

30,405. Did you go to a secondary school after that?—I got private instruction in the country, but I never attended a secondary school.

30,406. The national school was the only school you ever attended?—Except a Civil Service college, Skerry's, in Dublin.

30,407. How long were you there?—One and a half years. I was a boy clerk at the time, and attended there in the evenings.

30,408. Was that the case with you, Mr. Gleeson?—(*Mr. Gleeson.*) No. I was not in this country when I was a boy clerk.

30,409. Did you get in as a boy clerk in England?—I passed the examination in Ireland.

30,410. And you, Mr. Duffy?—(*Mr. Duffy.*) I passed the examination for a boy clerkship in Ireland.

30,411. Have you served in the Civil Service in England?—Yes. I was a boy clerk in the War Office for two years.

MR. W. G. PERROTT, B.A., B.E., A.M.I.C.E., and Mr. PARR, called and examined.

30,412. (*Chairman.*) You belong to the Survey and Mapping Department of the Land Commission?—(*Mr. Perrott.*) Yes.

30,413. Do you speak for your friends?—Yes, with your permission.

30,414. What is your complaint?—One of the chief things we feel is that the importance of our work is not recognised by the heads of the Land Commission. We are the only Government officials who come into contact with every tenant farmer in Ireland, and I think I am correct in saying that the Estates Commissioners have informed the Treasury that two-thirds the money advanced for the purchase of land in Ireland in direct sales is advanced solely on the certificates of the department to which I belong. On our work is based the whole land registration of Ireland.

30,415. Just give me an illustration of the kind of work you do? Say that a landlord has agreed to sell his estate to his tenants, where do you come in in the transaction?—The maps and schedules and purchase agreements are given to us and we are sent to the estate.

30,416. Are they given to you direct or are they given first to your chief?—They are brought first to the surveying department. They are examined there in a cursory manner. They are then sent on to another department where schedules and agreements are checked, that is the actual figures. They ultimately come back to us, and we are then sent with these maps agreements, and schedules, to the estate to verify everything on the ground.

30,417. You verify first the area of the holding?—Yes.

30,418. You compare it with the map and see that there is no mistake?—Yes.

30,419. Then do you examine the fields?—Not necessarily individual fields.

30,420. You really concern yourself with the total area?—With the boundaries of the holding, and, if there is any question of right of way across the holding, we have to consider that. We have also with great care to see whether there are any sub-tenancies on the holding. We have to go into the question of turbary, where the tenant gets his supply, and if he has had a plot marked out on the bog, check it.

30,421. Do you classify the soil of the holdings?—No, we don't go into the quality of the soil. There are many questions of river or coast erosion, or, if the estate is subject to flooding, we have to report on these and as to the means that should be adopted to prevent these matters which would injure the security for the advance.

30,422. Do you hear evidence upon any of the points if they are contested?—We do, particularly in a case of dispute about the boundaries or a right of way. We have to get the tenants interested to come before us, and as far as we possibly can we settle the dispute on the ground, so as to prevent litigation and strife in the future.

30,423. You take agreements from both the parties?—We get them to sign consents when we arrive at a settlement.

30,424. Having done that, you make your report?—Yes.

30,425. You do that for each holding on the estate?—Yes.

30,426. Do you make your report to the Estates Commissioners?—Yes.

30,427. In your report do you touch upon each holding or merely report upon the estate as a whole?—We refer to each holding, stating who is the occupier of it, as to whether the maps lodged by the vendor are correct, and if there are any sub-tenancies on the holding, or any questions of right of way or matters of that kind, we refer specifically to them.

30,428. Is there any form you are to fill up in making your report, or have you to write it out *in extenso*?—We are supplied with forms on which we have to write out under those headings details of the various matters.

30,429. We now come back to head-quarters: having fulfilled that duty in respect of a particular

estate, do any further duties in regard to that particular estate fall on you afterwards?—Only in case of inquiries by the commissioners before they rule on the estate.

30,430. If there is anything that requires to be explained, they send for you and ask you to explain it?—Yes.

30,431. These are your functions?—These are the usual functions. Outside these we have very different functions to discharge, such as investigating title both on the lands and in connection with the examination of title deeds.

30,432. The examination of title is the business of the examiners, is it not?—There are cases of disputes between tenants as to what constitutes their holdings, and we go through agreements and leases to find out the evidence on the point, so as to be enabled to report fully.

30,433. You do that on the spot?—Yes, when possible, or if the agent resides in Dublin when we come back to Dublin.

30,434. If there are any disputes regarding the right of a man to hold a particular plot of land, you make inquiries and report?—Yes.

30,435. So that the whole facts may be before the Estate Commissioners?—Yes. I do not exaggerate in saying that a vast amount of strife and litigation through the country is prevented by our acting as arbitrators.

30,436. Very likely. I want to know the whole body of your work?—Then we are sent on various works outside what I have mentioned. Some of us have been sent to report on the question of coast erosion along very large areas of coast and the steps to be taken to prevent that on the estates, so that the commissioners, in considering the question of purchase, may see that they have got sufficient security. Matters of that kind are very important and require expert knowledge to do it.

30,437. Have you any professional qualifications?—I have.

30,438. Is it essential that a surveyor should have such qualifications from an engineer's or a surveyor's office? Must he have been apprenticed to a surveyor?—I think it is very important that he should.

30,439. Would your recruitment for the Service require you to possess that qualification?—It is the desire of the commissioners to get the most highly qualified men they can, not necessarily with a university training.

30,440. Is it essential?—No. I would not say it is essential. (*Mr. Parr.*) It is not essential.

30,441. Where did you learn surveying?—(*Mr. Parr.*) In the Royal College of Science.

30,442. What pay do you get, Mr. Perrott?—(*Mr. Perrott.*) 102*l.* a year at the present time.

30,443. How long have you been in the Service?—A little over two years.

30,444. What did you begin on?—90*l.*

30,445. Up to what sum can you go?—120*l.* That is the limit for the lower grade of surveyors.

30,446. Above that is there a higher scale of surveyors?—Yes. They go from 120*l.* to 180*l.*

30,447. Is there a still higher grade?—There are surveyors of improvements, men who get 200*l.* a year.

30,448. May you look forward to possible promotion to these grades?—Possibly, but the surveyors of improvements are occasionally brought in from outside, and are not promoted from our grade.

30,449. Now tell me what your complaint is?—We say that the salaries given to the surveying staff are entirely inadequate to the work we have to discharge. For example, we are sent to divide up boglands, and very frequently in the winter time we are up almost to our knees in water, and when the men we have for pulling our chains get 2*s.* 6*d.* a day for helping us we who carry all the responsibility of the work get 5*s.*

30,450. That is to cover expenses?—That is our salary.

30,451. Do you get anything to cover your expenses?—Our expenses in the country are supposed to be paid,

27 February 1913.]

Mr. W. G. PERBOTT, B.A., B.E., A.M.I.C.E., and Mr. PARR.

[Continued.]

that is, we are allowed 10s. a night for the first fortnight, but if we go to a place knowing we shall be there over a fortnight we are only allowed 7s. 6d. a night. Very frequently you cannot get put up in the country at that rate, and you lose money over it. Also very often we are sent to places where inspectors are working to work with them. They put up at very expensive hotels. We have to do the same. They get a very much bigger allowance than we do, so we lose more often than anything else on our expenses. We also say that it would be a great incentive—I don't say it would improve the quality of our work in any way—but it would be an encouragement to us, if we had the feeling that we might be promoted to a higher grade, if the position of assistant inspectors or something of that kind were open to us. At present we see no prospect of it.

30,452. How many of you are there altogether?—I think there are 49 in the department, including draftsmen at a cost of 6,000l. a year.

30,453. You are not pensionable?—That is one of our grievances, that at the moment I don't think there are any people in our department who are pensionable. We think that a certain proportion at any rate of the surveyors' department should be pensionable. I am informed that two surveyors are pensionable. They are old Land Commission men. I need hardly say on behalf of the staff that we do our level best, and no one except those who accompany us on the lands can realise the extremely strenuous life it is. The weather is deplorable more frequently than not in Ireland, and we have to work in all weathers. Those who are married are away perhaps for a month at a time in some village or town far from our homes and our people, and our position is not by any means what it should be. We think we ought to get some inducement both in salary and prospects, which we have not got at present. The surveying and mapping department costs 6,700l. a year, while the inspection branch costs 39,510l. a year.

30,454. You don't make maps?—We go down and have to verify the estate maps. We make maps sometimes, copy maps, and things of that sort.

30,455. When you are required to take a map with you have you to copy it?—Very often, and to prevent the original map being torn by the weather we very often have to prepare maps.

30,456. (Mr. Graham Wallas.) Your work is temporary in the sense that the whole mapping work of the department will come to an end some time?—To a certain extent that may be so, but it is very hard to tell. There will always be a land question in Ireland I presume, and I think a department like ours will always be required.

30,457. You knew when you were applying for the work that it was a strictly temporary job which would in the nature of things come to an end?—I could not give a direct negative to that, nor could I give an affirmative, because we quite realise that this work will go on at any rate in our time.

30,458. In copying maps do you copy them with an ordinary surveying instrument, measuring and copying them with your hand, or do you ever have them photographed?—We never have them photographed.

30,459. Is there a large amount of map copying done in your office?—Yes. (Map produced for inspection.)

30,460. This is a bog where the turf is to be divided among the residents?—Among the tenants.

30,461. Is the map prepared with a view to having it striped?—Yes.

30,462. You have to make certified copies of these maps?—Yes.

30,463. Have you ever seen the machine by which engineers' plans are photographed?—Yes, very frequently.

30,464. Would it be suitable for this kind of work?—I don't think it would.

30,465. Why?—That is generally used where a great number of copies are made. In our case only one copy is wanted.

30,466. (Mr. Boutwood.) You gave an account of surveying connected with the purchase of land, but

here on page 4 the account of the work of surveyors seems to be dealing with improvements, not with anything connected with purchase?—There are surveyors of improvement works who get 200l. a year. They belong to a branch somewhat different from the one I am engaged in. My branch deals with the purchase of estates. The work of the improvement surveyors deals with estates which have been bought and are being improved by the Land Commission.

30,467. Have you got the statement in front of you?—Yes.

30,468. There is a reference to loans and free grants to evicted tenants; tell me something about that?—Tenants who have been evicted and have been out of their holdings for some time have in numerous cases been restored to their holdings, but they have not sufficient funds to work the holdings with advantage to themselves, and the Land Commission frequently give them grants to enable them to get the agricultural implements and stock for their holdings.

30,469. Who does that work?—The inspectors and surveyors of improvements supply the funds to the evicted tenants who have been reinstated.

30,470. About the two sections of surveyors; will the surveyor in the lower grade at 120l. be promoted to the upper section automatically?—No.

30,471. How does he go?—He has to remain in the lower section until there is a vacancy in the upper section.

30,472. What would be your notion of a proper scale of salaries for the lower section?—It would be very difficult for me to say without appearing perhaps to overstep the mark, but I have worked a great deal at engineering work both at home and abroad, and when I was appointed to this work at 90l. a year, I thought the work would be absolutely child's play seeing what the salary was. It was not long before I realised the great importance of the work and the extremely arduous life one has to lead in carrying out the duties. You have to work in all weathers. Altogether I prefer not to venture an opinion on the salary, but it would be greatly higher than it is.

30,473. You had professional experience outside the Service before you entered it?—Yes, after taking out my degree in the university I was engaged on railway work in Ireland. I then went to South America and worked in Brazil, Chile, and the Argentine Republic. Then I came home and was engineer of one of the suburbs of Dublin for some years until it was absorbed in the city.

30,474. How does your present work compare with your work outside the Service?—There is no comparison between the amount of energy I have to throw into the present work as compared with what I had to do before. One does not realise the amount of cross-country tramping one has to do in this work.

30,475. In this statement you put in two tables of qualifications. One table, Appendix B, deals with surveyors and draftsmen. Speaking generally, the whole list of qualifications is what you might call academic or educational, the men are bachelors of engineering and bachelors of arts, and so on. If you turn to the other list of qualifications, Appendix G, of the inspectors, we seem to get a wholly different kind of qualification. I don't know what the men in Appendix G are socially, but they seem to be men who have had something to do with farm managing and things of that sort; the qualifications, in fact, strike one as being practical rather than the technical qualifications of Appendix B. Would you accept that as a broad contrast?—I don't think I would, because though some of the surveyors have had university training and degrees, that in all cases has been followed up by very extensive practical work as surveyors, engineers, architects, or something of that kind.

30,476. So one could not regard Appendix B as being as complete as Appendix G?—No. To refer to my own case. My degrees are stated, as well as membership of the Institution of Civil Engineers. I say nothing about my practical experience, both at home and abroad. The same applies to all the other men. They have all had practical experience, so in that

27 February 1913.]

Mr. W. G. PEBBOTT, B.A., B.E., A.M.I.C.E., and Mr. PARR.

[Continued.]

respect it is not as complete as the appendix relating to the inspectors. The whole staff of surveyors would feel that they were obtaining a great advantage as regards information being given to you if there was a possibility of our chief, Mr. Pigott, being examined, because he could give complete information on many

points which a subordinate can only deal with very poorly.

(Chairman.) I think we have obtained from the Commissioners information which merely required to be supplemented by yours. I think we understand the case.

Mr. DAWSON, Mr. BROWN, Mr. MURPHY, and Mr. GRIFFITH, examined.

30,477. (Chairman.) You come to represent the non-pensionable indoor officers?—(Mr. Dawson.) Yes.

30,478. Of what classes do you consist?—We consist in the first place of gentlemen known as Staff Officers. There are three of these. Then there is the Legal Clerks' branch, and then there are men who are known as "Temporary Clerks" and the Shorthand Typists.

30,479. What is the work of the staff officer?—The first, Mr. De Courcy, has the Estates Management Department. The department consists of about 45 men. He has to supervise the work of that branch, which is one of the most important branches of the Land Commission.

30,480. That is to say, he deals with lands which come into the possession of the Estates Commissioners, and which have to be managed before they can be re-sold?—Yes, and he looks after all the work in connection with getting these lands ready for re-sale. For instance, the inspector's work is very largely work that comes into his department, the inspection of maps, and all that, and the preparation of undertakings for re-sale of the land to tenants, and also the arranging of the proposal, the offer that is made to the vendor, and so on. Most of that work is transacted by him.

30,481. What pay does he get?—450*l.* a year.

30,482. Why do you say he should be pensionable? The work is not of a permanent character?—It is not permanent in this respect, that I suppose the treating of the land of Ireland will be completed at some date, but it will take a considerable time.

30,483. We were told in the House of Commons some time ago by Mr. Birrell that he looked forward to it being finished in 10 or 12 years?—Then Mr. De Courcy would have had 21 years' service under the State, and at the end of that time he would be without a pension and be thrown on his own resources.

30,484. I supposed he had been engaged in managing lands. Was he managing lands of his own?—He was in Lord Dunraven's office.

30,485. Then he must have had experience of land management?—Yes.

30,486. (Mr. Boutwood.) How old is he now?—42.

30,487. (Chairman.) That gives us an idea of the staff officers?—There are only three others. Mr. Brown acts as deputy to Mr. De Courcy. He has had 24 years' service, 16 in the Land Judges' Court, and the balance at the Land Commission. He takes Mr. De Courcy's place in his absence. A great deal of responsible work passes through his hands. Then, Mr. Brock, who is in the Vesting Department, and was in the Land Judges' office for 16 years, does very responsible work in the vesting of lands in the Land Commission, under section 6, and payments of purchase-money under section 7. When lands are bought from the vendor (under section 6) they have to be vested prior to re-sale.

30,488. There is a legal procedure: the vesting order has to be passed and so on?—Certainly. He prepares these vesting orders to a great extent, and is very conversant with the Land Judges' procedure in connection with section 7 cases, that is, Land Judges' cases. He has only 250*l.* a year.

30,489. What are your Legal Clerks? Are these the gentlemen who used to examine title?—No. Those are the Conveyancing Clerks. They are not in this section at all. They did not stand in with us. The work of the Legal Clerks is somewhat similar to that of the Conveyancing Clerks. Their work is putting through the direct sales cases where lands are sold under section 1 of the Land Act. They have what is known as the flating of the agreements, and deal with all the other necessary documents.

30,490. That follows a routine; one is very much like another?—There is a very considerable difference in each case.

30,491. A difference in the figures, but the character of the work is the same?—Points are raised as to how the lands were originally held, whether the lands were originally held in fee simple, and so on. All the reservations and other circumstances which vary have to be taken into account, and there is the work of noting the devolution of the tenants' interest. The Legal Clerk has to read the documents such as probate, deeds of assignment, etc., and has to give a certificate stating in whom the lands may be vested.

30,492. What pay does he get?—The first gets 350*l.*, another 300*l.*, I myself and one other get 250*l.*, and there are three more on 200*l.*

30,493. What are the temporary clerks?—Some 17 men, who have been employed in the Land Commission for periods of 24 years in some cases.

30,494. What do they do?—Their work is rather divided. Some of them have positions like minor staff officers, that is to say, they have two or three men, some of them of the permanent staff, working under them.

30,495. What is the character of the work—ordinary office work?—Ordinary office work of a more or less responsible nature.

30,496. Give me a few of the heads of this work?—One of these gentlemen is clerk in charge of the evicted tenants' branch, and he acts as a minor staff officer.

30,497. What does he do?—Mr. Griffith is in charge of, and responsible for, all the work of the evicted tenants' division. He furnishes replies to parliamentary questions, drafts minutes thereon, deals with all applications and correspondence relating to evicted tenants, takes the commissioners' instructions, drafts minutes and letters, and deals with correspondence between the commissioners and the Congested Districts Board, and deals with inspectors' reports on evicted tenants.

30,498. That is all secretarial work regarding the subject of evicted tenants?—Yes.

30,499. The other gentlemen do similar work on the subject of evicted tenants. That gives me an idea as to what the temporary clerks are. Are the typists men or women?—They are shorthand typists; they take down notes.

30,500. Are they men or women?—They are all men.

30,501. They have been there for various terms of years?—Yes; one of them has had 19 years' service.

30,502. Are they all full time officers?—Yes.

30,503. What you wish is that these gentlemen should be put on the establishment?—Yes, and be given better pay.

30,504. At the present time do the typists get a weekly scale of pay?—Yes.

30,505. All the other officers you have mentioned have monthly pay?—The temporary clerks are paid weekly, but the staff officers and legal staff are paid monthly.

30,506. They are of the same class and, I suppose, their fate would be determined by what we decide in regard to temporary clerks generally throughout the Civil Service. There is nothing special in your temporary arrangements as compared with what we have heard in England?—I am not in a position to know what obtains in English offices, but the point we make is that our temporary clerks are not temporary in the strict sense of the word. Most of them have long service, some of them have men working under them, and some of the men working under them are permanent men. About 20 years ago a large number of the temporary men were made permanent, but when the Land Commission thought they had made as many permanent as they could the others were left over on their present very low salary, not exceeding 130*l.* per year.

27 February 1913.] Mr. DAWSON, Mr. BROWN, Mr. MURPHY, and Mr. GRIFFITH.

[Continued.]

30,507. When one of these temporary posts falls vacant you have a number of people applying for it?—Since 1901 no further temporary clerks have been taken in the Land Commission.

30,508. (*Mr. Boutwood.*) Is that an accident or does it mean that the recruiting of that class has ceased definitely?—It has ceased as far as the Land Commission is concerned.

30,509. Now only permanent officers are recruited?—Yes.

30,510. Does that hold good in all departments of the Land Commission?—It does not hold good as far as the Legal Clerks are concerned. If one was appointed to-morrow he would be selected because he had professional qualifications, and he would not be permanent.

30,511. (*Mr. Shipley.*) I suppose the cost of living has something to do with the discontent?—It has a great deal.

30,512. Do you consider that there is a profound feeling of discontent in the Service?—Yes, I would say that in the Land Commission the men do their work very cheerfully, but we do not think that we are well paid or that our prospects are in any way bright.

30,513. (*Mr. Graham Wallas.*) You say that no temporary clerks have been taken on since 1901?—Yes.

30,514. So that every temporary clerk in the Land Commission has now more than 12 years' service?—Yes.

30,515. Certain branches of the Land Commission work are rapidly diminishing?—Not at the present moment.

30,516. Would not you say that the evicted tenants work was diminishing now?—Yes.

30,517. And that the fair rent work is diminishing?—I don't think any of our men come from the fair rent department.

30,518. What general principle would you desire to lay down with regard to the service of the State in getting work done which is of a temporary character? May the State ever employ temporary clerks?—The State in any office that is really very temporary might employ temporary men, but for an office like the Land Commission, that has lasted over 30 years, I think it would be a mistake to bring in young men, say of 17 or 18, and keep them on from year to year at very small salaries, with very small occasional increases.

30,519. (*Mr. Boutwood.*) Recruiting of temporary clerks stopped in 1901?—Yes.

30,520. What has happened since; suppose there was a vacancy for the same kind of work that those temporary men did, would the office recruit a second division man?—Yes. The second division men were brought in at that time.

30,521. That rather cuts against the argument that the work as a whole is temporary?—It does.

30,522. If you employ men who have a permanent status that is an argument in your favour to come on the establishment?—I should think so.

30,523. You say here the non-pensionable staff of the Congested Districts Board were placed on a permanent footing. When one speaks of temporary work and temporary officers, is not the Congested Districts Board at least as temporary as the Land Commission?—It was considerably more so at one time, but since the Act of 1909 it is not temporary for our time.

30,524. Supposing the work of the Land Commission went on for another 15 years, what would be the average age of your temporary staff?—The average age would certainly be over 50.

30,525. Would many of them be appreciably over 50?—One man would be over 60, the eldest of that particular class.

30,526. How old would your legal clerk be?—Between 50 and 55. That would be the average age. The shorthand-typists in the Irish Land Commission are the worst paid in the Government service in Dublin. Their terms of employment compare very unfavourably with those of the Congested Districts Board or the Local Government Board.

30,527. What pay do they get?—An average of 35s. a week.

30,528. That is high compared with the typists in London, but they are female typists mostly?—Most of the typists in Dublin are men. In the Congested Districts Board the men get up to 150l.

30,529. They are shorthand-typists; do they do nothing else?—That is all.

30,530. Don't they work in the office?—They work as shorthand-typists in the offices. They do the clerical work in the secretarial departments. They don't do work any way more responsible than is done in the Land Commission.

30,531. Does not that strike you as being very high compared with what we know in other offices, at least the scale of pay?—Our standard of comparison is the other offices in Dublin.

30,532. The Congested Districts Board always do pay their men well, I suppose, because it was regarded as a temporary business, and then when it was made, as you say, permanent, the men had the advantage of the preceding temporary basis?—(*Mr. Murphy.*) The typists in the Agricultural Department are in receipt of a maximum of 40s. per week. The Local Government Board quite recently made all shorthand-typists permanent and brought in female labour.

30,533. Do they pay the female labour a lower rate than the men?—Yes, but they don't do the same class of work as the male shorthand-typist. He has to attend and take shorthand notes whereas the female typist has not.

## SEVENTY-FIFTH DAY.

Friday, 28th February 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman.*)

Mr. ARTHUR BOUTWOOD.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.

Mr. S. ARMITAGE-SMITH (*Secretary.*)

Mr. HENRY DORAN, called and examined.

Mr. J. R. O'BRIEN was in attendance.

30,534. (*Chairman.*) Mr. Doran, the Commission had hoped to take your evidence on Monday last, but you were not in attendance on that day. You have written me an explanatory letter, and I very readily accept your explanation that your failure to appear on the day fixed was due to a misapprehension of the

circumstances, and that nothing would be further from your mind than disobedience to the summons of the Royal Commission?—Yes, I am gratified to find that you quite understand my position.

30,535. My association with you has been far too long and close to permit me to fancy that you would

28 February 1913.]

Mr. HENRY DORAN. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

have knowingly failed to appear before the Commission?—I thank you very much; it was quite a misapprehension on my part. I am very sorry if I have put you or the members of the Commission to any inconvenience.

30,536. We were put to some inconvenience. However, I shall say nothing more about it. In order to enable us to fulfil the duty imposed upon us by the King it is necessary that we should make ourselves acquainted with the work of each department and office of State, the purpose such work is intended to subserve, and the means it employs to that end. We desire to learn from you how the Congested Districts Board is constituted, what aims it has in view, and what means it adopts to attain them. Will you, therefore, kindly help by giving us a brief sketch of the origin of the Congested Districts Board, and the steps which have led up to its present position. You begin with the Act of 1891?—Yes; the Board was formed in 1891 for the purpose of bettering the position of the people in what were in that Act scheduled as "Congested Districts." They had power to act in rather a free manner in the administration of the funds placed at their disposal, within certain limits. That is, they were confined in their operations to works which would have the effect of improving agriculture in the congested districts or developing fisheries and industries. The income was mainly derived from interest on 1,500,000*l.* of the Church temporalities funds, which amounted to 41,000*l.* odd.

30,537. That is by way of endowment?—Yes.

30,538. That still forms an important asset of your funds?—Yes. The Board proceeded during the years from 1891 up to 1903 to administer the funds placed at their disposal under the Act of 1891. They found very soon after commencing operations that their powers in dealing with land under the heading of improvements in agriculture were too limited to do any effective work; and in succeeding Acts they got increased powers to purchase and deal with estates; that is, to purchase and prepare them for sale, which they did not have under the Act of 1891. They started in a small way, and were considered to have been very successful in their treatment of the estates they had dealt with up to the time when the old Land Purchase Acts were carefully looked into, preceding the Act of 1903. Then their powers were very much increased and more money was made available.

30,539. In the 12 years between 1891 and 1903 the Board's funds were limited, and its powers of improving and dealing with land were also limited?—Yes.

30,540. And these limitations, and their injurious effects on the Board's operations, had come prominently to the notice of the Government when the Act of 1903 was passed?—Yes.

30,541. Then under the Act of 1903 larger powers were taken, and more money was placed at the Board's disposal?—Yes.

30,542. In pursuance of the fuller powers conferred on them they undertook larger schemes?—Yes, under the Act of 1903.

30,543. Might it be said that from 1903 their functions were divided into two broad classes—land and industries?—Yes, including fishing.

30,544. Under the heading Industries, fishing was the most important?—That is so.

30,545. With the second class, namely, the industrial and fishing part of the Board's operations, you had nothing to do?—At that time nothing.

30,546. You were then altogether restricted to the agrarian part of the work?—Yes, dealing with the land part of the Board's work.

30,547. Would you give the Commission very briefly a sketch of how you used to proceed in dealing with a congested estate bought under the Act of 1903?—First of all we seek to buy estates in the congested districts which we regard as suitable for the Board's purposes. An estate which would be suitable would be one comprising mainly untenanted land, which would be available for the relief of congestion on tenanted properties.

30,548. (Mr. Boutwood.) Have you compulsory powers of acquisition?—We have. Another estate

which would be considered suitable would be one which was congested, that is, occupied by tenants of small or poor holdings insufficient to maintain an ordinary industrious family; and our main scheme in the two cases I have put would be to better the condition of these small holders by migrating some of them to the untenanted land, which we would seek to acquire on a suitable untenanted estate. There is another class of case which occupies a great deal of our attention, that is, estates which are held in rundale, or intermixed parts, of which there is a great deal in the west of Ireland. These were holdings which, as a rule, were small, that is, under 10*l.* rateable value, but which were held in numerous detached divisions. I gave particulars before the Commission on which your Lordship was acting of one holding held at a rent of 30*s.* a year, consisting of 49 detached parts, some of them being three miles asunder.

30,549. (Mr. Shipley.) How could they determine the boundaries?—They all know them. They are marked by stones, or an untilled ribbon of grass is allowed to remain between them. In all these cases, before dealing with such a holding, we have to map out the holding, such as it is.

30,550. (Mr. Boutwood.) What is the total area of those 49 pieces?—About seven or eight acres statute. That is an extreme case, but quite a common case on a bad estate is to find in a townland, say, 20 holdings, having an average of 12 detached parts, and the average rental of such holding would very frequently be under 5*l.* In that case we have two modes of dealing with those people; first, by what we consider the only radical remedy, to migrate from such a congested townland a sufficient number of the land holders, whose vacated lands when distributed among the people who are left would put these people in occupation of holdings up to what we would regard as an economic standard, that is, sufficient to maintain a family.

30,551. (Mr. Shipley.) What is a townland?—It is a very ancient division of land in this country. It is the smallest unit of land division for rating purposes. The radical remedy would be to remove a number of these people. If we cannot do it, and very often it is not feasible, we have such congested holders very remote from untenanted land, and occupied by people who would not be suitable very frequently for large holdings, who very frequently would not be willing to migrate even if we could find the land by agreement, though there is not sufficient land to meet all such cases; then we have to set to and make the best of the situation, which we do by what we call, striping these rundale or intermixed holdings, which in effect is this: to give each tenant a holding of equivalent value to that which he holds in these scattered patches in as few patches as we possibly can. Very often the result of our work is, as in the townland, which I put before you as an illustration, that where 20 tenants have their holdings, on an average in 12 detached parts, if we are unable to migrate any of those, we leave, as a result of our work, these 20 tenants in occupation of holdings, on an average, perhaps, of three detached parts. It might be asked why should not we give a man his holding in one part, but the explanation of that is, that where a man holds in these detached parts, as a rule, the land is of a very variable character, and for that reason we must give each man a share of the good, the middling, and the bad land, and, consequently, it is not in practice, as a rule, possible to have the land in fewer divisions than two or three; but when we do that we always connect these parts with accommodation roads, so that it is not so much of a practical disadvantage.

30,552. (Chairman.) Have you been given, by legislation, compulsory powers to effect that striping?—We have. If a tenant does not comply we can serve him with notice to resume possession of his holding. We can take up his holding from him, paying him such compensation as the County Court may assess, or giving him a holding that we regard as of equivalent value.

30,553. Therefore you find it easier now to effect the striping of land than you did in the old days when the only way of doing it was by persuading the people to

28 February 1913.]

Mr. HENRY DORAN. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

accept your advice?—Yes. It is getting easier every year. We hardly ever have resorted to the extreme measures. The fact of our having them at our disposal is quite sufficient to establish our power. If we had to use them very frequently I think we would fail, because we would get up the resentment of the people, but in practice we have not to put them into operation often and we get on very well with the people. In fact, in the districts where we work for some time, we find it easier every month almost to get on with the people; they are more amenable in every way.

30,554. (Mr. Boutwood.) That compulsory power is not what I meant a little while ago. What I really had in my mind was compulsory power to acquire untenanted land?—Yes. We have compulsory powers to acquire any untenanted land in the congested districts which is held in fee simple by the owners and which is not demesne land or a home farm, but we cannot acquire land which is owned by a tenant purchaser.

30,555. (Chairman.) The practice of striping which you have explained to us is also applied by you as far as possible to giving the people a certain amount of turbary or bog?—Yes. We take the greatest trouble with the turbary, because in districts there, there is a dense population and the people are poor. It is of vast importance to secure to them a supply of fuel in the neighbourhood, and we take a great deal of trouble with it, and we apportion to each holding such turbary as we consider sufficient, where there is an ample supply, and where there is not we apportion it as fairly as we can among those who are entitled.

30,556. That sufficiently explains to us what the process of striping is. Do you, before vesting the proprietary right in the holdings in the tenant-purchasers, carry out any other improvements in addition to the process of striping and consolidation of holdings?—Yes.

30,557. Please mention the general character of the improvements you carry out?—In connection with the striping it is necessary to make roads, so road-making forms a large part of our expenditure. It is also necessary to fence up the new divisions. That has to be done incidentally to the striping. Again, very frequently it is necessary to change the residences of the people. In some of the worst districts the houses are in groups of villages, and the houses in relation to one another are in a very unsanitary condition. They are also as a rule very old and generally speaking bad. We do what we can to alter that condition of things so that the housing of the people will be improved.

30,558. This goes on *pari passu* with the other work?—Yes, and our general plan is this: We never build a house for a person we don't move; that is to say, in the striping of the land, if we move people from their present house on to a new division, we build houses for them, charging them a certain proportion of the cost, or we give them the option of building the house themselves and we give them a free grant of 30*l.* If we build a house for them we charge them the outlay minus 30*l.*

30,559. What is the average cost of a new house to the Board?—It varies. We have six different plans according to the size of the holding. The poorest house we can build, affording what we regard as necessary decent accommodation, costs us from 80*l.* to 100*l.*

30,560. (Mr. Shipley.) How many rooms would there be in that?—Three rooms, a large kitchen or living room, with two bedrooms.

30,561. All on one floor?—All on one floor, and in the kitchen we have in our design a recess 6 ft. by 4 ft. 6 in. in which a bed is placed in which the old couple sleep. Then the other two rooms are left, so that the boys and girls of the family can occupy different apartments. That is our lowest grade. Another house containing four rooms, that is, three bedrooms and a living room, with a little dairy, costs from 110*l.* to 140*l.* without the offices.

30,562. What are they built of?—They are substantially built of stone.

30,563. I suppose there is plenty of stone in the neighbourhood?—It varies. A house in one place costs 110*l.*, and in another place where stones and sand are both scarce and dear it would cost 140*l.* Our average cost of all the houses we built at the time we were

inquiring for the Commission was 110*l.* It has gone up since then.

30,564. (Mr. Graham Wallas.) Do you have damp courses?—Yes.

30,565. (Chairman.) Are they slated?—Yes, I speak of slated houses.

30,566. You also drain?—Yes. Always when dealing with an estate we make or improve the main drains of the estate. We do not drain the individual holdings, but we make the main drains so as to provide an outfall to enable the occupiers of the individual holdings to do their part, but we never by any chance do work which we think the tenant himself ought to do.

30,567. You build houses for the tenants whom you migrate?—Yes.

30,568. Have you got any scheme by which you stimulate the tenants who remain to improve their houses?—Yes. We never build a house for a person whom we don't move, but we give every tenant on an estate which we buy, and who has a bad house, facilities for building a new one or substantially improving his existing one under schemes with the details of which we familiarise them by distributing posters among them. Shortly it is this, that we make an advance of a sum not exceeding 50*l.*, or the price of the necessary materials and skilled labour, whichever may be the lesser sum, to a tenant to build a new house according to our plan. It comes to this, that such people, for 50*l.*, can build as good a house as we could put up for 100*l.* or 110*l.*, because we have to pay for the stone and sand and all the skilled labour in connection with it, whereas we allow here 50*l.* as an advance, a sum which is barely sufficient to buy timber and slates and pay for the skilled labour. Then the persons who get this money have to make a great effort themselves. If they have no horse or other animal to draw stones they must either borrow or hire one. If they have to hire one we don't allow anything for it. They must in fact take off their coats and make a great effort.

30,569. What result do you find to come from stimulating people to improve their houses?—It has had a wonderful effect. There are parts of the country which, without any exaggeration, I may say, are actually transformed, and every six months this is getting more marked. The feeling now among the great bulk of the people is that it is a disgrace to occupy a really bad house for a long time with all these facilities existing.

30,570. Are you speaking of Mayo and the West of Ireland, or are you speaking of the enlarged congested districts altogether?—I am speaking of the enlarged congested districts but our progress is most marked where we have been longest at work.

30,571. That brings us up to the Act of 1909. What was the area of the congested districts at the time of the Act of 1903, and how far was it enlarged? It was the same under the Act of 1903 as it was in the commencement?—Yes. In 1891 the area of the congested districts as scheduled was 3,608,569 acres, the population was 505,723 and the rateable valuation was 577,043*l.* Then there was added under the Act of 1909 to that 4,049,545 acres, which was more than the previous area, the population in that area added and was 616,718, which was also more than the population of the previous area and the rateable valuation of that added area was 1,794,871*l.*

30,572. That left the total congested districts with which you are now dealing with an area of 7,658,114 acres, a population of 1,122,441, and a rateable valuation of 2,371,914*l.*, so that to put it another way the area of the new congested districts is slightly more than double the old area, the population is also slightly more than twice the old population, and the rateable valuation is over four times what it used to be?—Yes. The approximate ratio between the present congested districts and the rest of Ireland is as one to two in area; the population bears to the total population of Ireland the ratio of one to three, and the rateable valuation of the congested districts bears a ratio to the total valuation of Ireland of one to six.

30,573. You have one-third of the area, one-fourth of the population, and one-sixth of the rateable valuation to deal with?—Yes.

28 February 1913.]

Mr. HENRY DORAN. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

30,574. Besides the changes in area and consequently in population, what was the change in constitution which was effected by the Act?—The Board was reconstituted and two permanent members were appointed. The Board now consists of 14 members of which two are permanent members.

30,575. Paid permanent members?—Yes. These 14 members include the chief secretary for the time being as chairman, the under-secretary in his absence to be chairman, and the president of the Department of Agriculture. These are *ex officio* members. The others are nominated members.

30,576. They hold office for a term of years?—Yes.

30,577. What were the main features of the additional powers conferred on you?—We got much more money. We got a sum of 250,000*l.* placed at the disposal of the Board, minus a sum of 19,000*l.* which was to be paid over to the Department of Agriculture and Technical Instruction in respect of work to be done by them in connection with the development of agriculture as distinct from the work we were doing. The remainder of the money is placed at our disposal and is used practically on the old lines, except that there is more money available and that we can do a larger volume of work.

30,578. There are two points to which I specially wish to inquire. You told us about the enlargement of the Board and the change in its constitution. What additional legal powers were conferred upon the Board and what relations were established between it and the Land Commission?—I will first answer your question with regard to our relation with the Land Commission. The Board's duties in connection with the purchase and re-sale of land are clearly set out in a special part of the Land Act of 1909. Under that the Estates Commissioners are precluded from purchasing any estates within the congested area, tenanted or untenanted, without the permission of the Board, except such land as they may require for the settlement of evicted tenants. The Board on the other hand are precluded under the Act from purchasing any land outside the congested area, so that the field of operations of both Boards is clearly defined.

30,579. But in actual practice I understand that a different arrangement obtains. We heard from Mr. Bailey yesterday that although what you say is the legal situation, in actual practice the Estates Commissioners are allowed to deal with all direct sales within the congested area, that is sales by a landlord to his tenants?—I am correct in this way, that in the case of direct sales the Estates Commissioners do not buy but they merely act as the medium for transferring the ownership.

30,580. They give the money, which is the most important part of the transaction?—Yes, but I ask you to draw the distinction that they don't buy the land.

30,581. Yes. That is reconcilable with what Mr. Bailey says?—Yes, but I want to make it quite clear that it is not correct to say that they buy an estate.

30,582. Not in the technical sense. Then I take it the Land Commissioners deal with all cases of direct sales in the congested districts?—Yes.

30,583. They do not do so, subject to the possible veto of the Congested Districts Board. Might you not say "don't do it"?—Not unless it was a congested estate.

30,584. Does that situation arise under the Act or under your practice?—Entirely under the Act. We have no power of veto except in the case of an estate which is a congested estate, but I would like you to remember that the Estates Commissioners are dealing very largely, in fact altogether, with the estates in respect of which agreements to purchase were entered into before the passing of the Act of 1909, and they will be dealing with them for years yet. I don't think they have had many cases at all where the purchase was under the Act of 1909.

30,585. They have had some cases, I think about 1,500,000*l.* all told?—Not many.

30,586. (Mr. Boutwood.) What is your definition of a congested estate?—A congested estate is one-half the holdings of which do not exceed 7*l.* in rateable valua-

tion, or on which one-fourth of the holdings are held in rundale or detached portions.

30,587. (Chairman.) You have now given us all the information I want in regard to the relations between yourself and the Land Commission. Would you go on to the second point, namely, the extent of the powers conferred on you by the Act of 1909?—The most radical change was the power to purchase land compulsorily. We have now power to purchase any estate in a congested district compulsorily, whether it be congested or not, provided that the estate or the portion we seek to acquire is not demesne land or a home farm. That induces owners to come to terms with us, because they see that if they do not come to terms we have the power to acquire the estate compulsorily. We have acquired a great deal of property of a character most suitable for our purposes under the Act of 1909, and we have had no case of compulsion tried out yet.

30,588. Where an estate is not congested does your power of compulsory acquisition apply?—We believe it does. It is a question that is being raised in connection with Lord Clanricarde's property, but we are advised we have power to buy any estate suitable for our purposes in the congested districts.

30,589. Now as to the sum total of your operations, what is the value of the land you have purchased, and what is the value of the land you have sold to the tenants? I have got figures here which I obtained from the Land Commission, showing the results of the proceedings under the Irish Land Acts of 1903 and 1909, and the Evicted Tenants Acts of 1907 and 1908 up to 13th February 1913, and I find from this return that you have bought, or that vendors have sold to the Congested Districts Board under the Act of 1903, land to the value of 2,241,053*l.*?—These are only the closed cases. They don't represent more than half our actual agreements.

30,590. But I have not finished with the figures. They also show that you have bought from the Land Judge land worth 228,750*l.* That is a total of 2,469,803*l.* under the Act of 1903. Under the Act of 1909 the figures show that you have bought and paid for in 3 per cent. stock land to the value of 1,962,226*l.*; and that you have bought and paid for in cash land to the value of 82,803*l.*; further that you have bought from the Land Judge, land to the value of 60,219*l.* That makes a total purchase under the Act of 1909 of 2,105,248*l.* Under both Acts, that of 1903 and 1909, your purchases would thus be 4,571,051*l.* Does that fairly tally with your figures?—I cannot say it does. The figures I have for you are cases where we have come to terms. These only deal with cases that have gone quite through the mill altogether.

30,591. What addition would you make?—I can tell you quite shortly. We purchased under all Acts prior to the Act of 1909.

30,592. That is from the beginning. My figures only deal with the Acts of 1903 and 1909, only with transactions which passed through after the Act of 1903 came into operation?—I could separate them easily afterwards.

30,593. Could you give me what was done before 1903?—I cannot give you off-hand, but I can afterwards. The estates purchased prior to the passing of the Act of 1909 comprised an area of 497,484 acres, and the purchase-money was 2,260,551*l.* You want to compare that, I assume, with the result of the operation of the Act of 1909.

30,594. Yes?—Since the passing of the Act of 1909 the Board have been offered 758 estates with an area of 1,848,416 acres, and an estimated value of 7,263,951*l.* In reference to that 7,000,000*l.* worth we have closed agreements with owners for 3,132,923*l.* That is to say, we have done more within the last two years than we did in the previous eighteen years. In addition to these 3,000,000*l.* of offers accepted there are 146 estates where offers are issued and pending, and where the owners have not refused or accepted.

30,595. I think our figures are not far off agreement, because the agreements for 3,132,923*l.* must include estates of which you have not had possession yet?—Yes, that are not vested. We are in possession.

28 February 1913.] Mr. HENRY DORAN. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

30,596. My figures are for estates bought under the Act of 1909 with the land vested?—Quite so. These figures are quite correct, but they don't represent the operations to date.

30,597. I am only dealing with vested estates. Now out of the 4,575,000*l.* worth of estates which have been vested in you, what amount represents the land which you have resold to and vested in the tenants. I have got a similar statement up to 15th February 1913, which shows you have resold to the tenants land to the value of 718,542*l.*?—For comparative purposes you may take those two figures because they represent the same stage of operations.

30,598. If you do that it leaves in your hands land to the value of 3,852,509*l.*?—According to that, but we have much more.

30,599. But according to these figures which deal with vested estates?—That is a fair comparison on that basis.

30,600. What do you do with the land represented by this sum of 3,852,000*l.* I presume that some of it is in process of improvement?—Yes.

30,601. I presume that the untenanted land which you are not ready to cut up and divide is being let out to tenants for grazing, and that for the arable land you get rents from the tenants already in occupation of those lands. Am I right in thinking that you still take from them the rents they paid to the landlord?—Only for the first year.

30,602. What is the scale; because you must sell them within five years, as otherwise you have to pay the sinking fund without recovering it?—Yes.

30,603. I have given you certain figures to show the land which you have bought and which is vested in you. I have given you certain figures which show the amount of land that you have resold to and vested in the tenants. The balance between these two represents the land which is now in your possession? You are managing that land; you are preparing it for the purpose of vesting it in the tenant, but meantime you get rent from the tenants, and you get grazing fees and so on from the untenanted land. What I want to find out is, what is the total amount that you received, say, last year from these sources?—At the present time we have 22,764 tenants on our estates, and their rental is 136,000*l.*

30,604. I want also the income that you get from the grazing tenants?—What we do with the grazing lands is this: We put them under management and appoint a stock master in charge of as many farms as he can look after in the district, and we take in for grazing the cattle of all the small land holders who desire to send them upon the land, so that they get immediate access to and use of this grazing land, and we continue that while we are preparing it for resale, that is, cutting it out into new holdings for migrants, erecting houses for migrants, and making roads through it for access and all that. While we are preparing these lands for resale we give access to the small farmers in the district to put cattle on it, and we charge a grazing rent per head. If, as happens in some districts, there is not a dense population, and we cannot have the land utilised in that way, we let it in fields or divisions for grazing purposes to one or more persons. Where we fail to let it in that way then, and only then, we put stock on it ourselves. We buy the cattle and farm the land with a view to making what profit we can on it.

30,605. What is the annual sum you receive from the grazing rents?—The revenue from the untenanted lands last year was—

30,606. You receive rents from the tenants, collecting from them in the first year the old landlord's rent?—Yes.

30,607. Then do you proceed by a sliding scale of reduction?—We used to require them to pay the full rent until we had the estates sold, and we applied the difference between that full rent and the interest, which we paid to the development of the estate, which was a much sounder plan than the present one, if we could continue to adopt it; but, owing to the fact that when landlords arrange with their tenants now to sell their holdings by direct sale, or when the Estates Com-

missioners buy estates themselves, they always put the tenants under interest in lieu of rent; that increased our difficulties in dealing with the tenants. As a compromise, we have issued a circular, which is in our printed report, at page 62 of the twentieth report, which sets out our procedure, under which you will see, on page 63, that in the second year we allow abatements in the rents of 4*s.* in the pound on the first term and 3*s.* in the pound on second term rents. I ought to explain that we inform the tenants who demand these reductions, and claim to be charged only interest, that we cannot say what the purchase price of the holding is under present conditions, inasmuch as we propose to alter it, and that consequently we cannot put them under interest or tell them what the purchase price is, but we have agreed, in order to meet the practical difficulty which we had to meet, to abate the rents pending the final settlement of the holdings.

30,608. That abatement is not to be reconsidered when the final settlement is arrived at?—No.

30,609. It is a final transaction?—It is.

30,610. These rents from tenants and the grazing rents form part of your assets, which you employ for the purpose of your finance?—Out of that rent we have to pay interest on the purchase money of the estate, which absorbs practically the entire, except a small proportion due to the cost of collection and management, but any margin which is over—and there should always be a margin—is applied to the improvement of the estate.

30,611. For the estate or for the general purposes of the Board?—For the estate. We always show each estate's account by itself. We give credit for all rents we receive, and we show how much we lose on each estate we treat after giving credit for the entire receipts.

30,612. Now we come to your staff. In this statement which has been given to me at page 21?—(Mr. O'Brien.) That refers to the pensionable staff.

30,613. Is this staff working under you?—There are non-pensionable also, but these are kept separate.

30,614. We have not got a statement of the non-pensionable staff?—In our explanatory statement to the Government we took it that there were only Civil servants. We have figures to hand for all.

30,615. We should not be able to fulfil our functions unless we get information regarding your temporary staff. How many pensionable officers have you under your control, and how many non-pensionable officers? Read first, please, the classification, if you have them classified?—(Mr. Doran.) There are 109 men employed in connection with estates, outdoor officers outside of the Dublin office.

30,616. In connection with what?—With the purchase and preparation for resale and all improvements connected with estates.

30,617. What department do you call that?—The Land Department or the Estates Department.

30,618. What is the next department under you?—That includes all the men under me outdoor. Perhaps I ought to explain that the duties of the two permanent members and their functions are defined by the order in council, which I have here, and Mr. Micks and I have for our own convenience divided up the work. I look after all the estates business, he looks after the fishing and the industries, the parish committees and the general administration of the office. If you wish me to speak of the work which I deal with I shall do so.

30,619. Certainly. We only want you to deal with your part. You have 109 officers. Are these all temporary?—All temporary; but we have made application, and there was a scheme submitted to the Treasury for making them all pensionable. It has been under the consideration of the Treasury for, I think, nearly two years, and they have not yet given a final answer.

30,620. You are waiting for it?—There is a provision for that in the Act of 1909, a direction in fact to the Board to submit a pension scheme to the Treasury, and, in accordance with that, we have submitted a scheme to the Treasury, and at their suggestion an actuary has been employed to inform the Board of the amount of money which should be set apart from their

28 February 1913.] Mr. HENRY DOBAN. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

funds to provide a fund to meet the liabilities imposed on them by the proposed pension scheme.

30,621. How are these 109 officials divided and classified, if you do classify them?—One chief land inspector, four senior land inspectors, 12 inspectors, 16 assistant inspectors first class, 16 assistant inspectors second class, 1 superintendent surveyor, 19 first class surveyors, 17 second class surveyors, 8 valuers and strippers, men who arrange the holdings, 10 inspector's clerks in the inspector's offices in the country, and 5 paymasters; 139 is the number of the establishment approved by the Board, and 109 is the figure of the officers actually employed.

30,622. That is the approved establishment, and you might have 30 more?—Yes, 30 more.

30,623. All these men are on scales of pay, are they?—Yes.

30,624. Could you give me a sample case of the class now mentioned with the scales of pay against them?—I have it here.

30,625. Please hand it in?—These men are appointed with few exceptions after competitive examination.

30,626. Am I to understand that all those 109 gentlemen to whom you have referred are appointed by nomination, or after competitive examination, and how?—All of the 109, except 24, have been appointed after limited competitive examination.

30,627. Were they nominated before they competed? They were nominated; a nomination was given to every applicant who was considered to have the qualifications specified in the advertisement. There was no such thing as rejecting a man for any reason provided he had the qualifications specified in the advertisement.

30,628. You advertise that a certain number of vacancies were to be filled, and the candidates made application?—Yes.

30,629. The candidates sent in the applications, and any candidate whose application complied with the terms of your advertisement was permitted to compete?—They were nominated for the examination, that is what we call nomination.

30,630. The persons who were not nominated were senior men?—They were men who came in the earlier stages of the Board's work.

30,631. They had either professional or business capacity?—We considered them to be likely to be the most competent men.

30,632. That was in the old days?—Yes.

30,633. That disposes practically of your staff?—That disposes of what I call my staff.

30,634. That is the outdoor staff; have you got any indoor staff?—No, except in the Dublin office I have no special staff in the Dublin office.

30,635. You have none, but you make use of the Dublin staff and of the Dublin office?—We have the Estates Branch who do part of the work, the Dublin office deals with the collection of the rent and deals with the estates. I do not pay any special attention to that; they are not under my special control, the secretary deals with them.

30,636. I notice the rent collection; to whom is the rent paid, this enormous mass of rent?—Receivable orders are issued by the Dublin office, and the money is paid into the banks throughout the country by the people to whom the orders are addressed.

30,637. Then, in fact, you are not concerned with the collection of rent?—We do not handle the money, except in so far as a few of them remit directly by cheque.

30,638. Are you responsible for the maintenance of the rentals of the town lands?—I don't quite know what that means.

30,639. Rentals such as were kept by the landlords before they sold?—What we do is this, the landlord sells us his property, and we require a guarantee—

30,640. That is not what I mean; what I mean is this: After you have got possession of the land, and it is vested in you, do you make use of the landlord's rental which is submitted to you at an early stage of the sale negotiation; who issues the demands upon the tenants on the basis of that rental?—They are issued through the secretary's office of the Estates Commissioners.

30,641. (Mr. Shipley.) You are clear of the collection; you leave it to the office?—Yes.

30,642. (Chairman.) That is all I have to ask you, Mr. Doran. But there may be some points which you would like to explain further in reference to the ground we have traversed?—One thing I would like to explain. The Chairman is quite familiar with it, but the other members of the Commission cannot be expected to be. I would like to emphasise the fact that this work of ours is very special, exceptional work, dealing with the estates. You cannot have a staff on call or decide by examination who would be best qualified to discharge the various duties connected with striping, the arrangement of holdings, the supervision of improvement works, road making, bridge building, and all that kind of thing on a huge scale. We have really had to train up our staff. Our assistant inspectors are all men possessing engineering qualifications and university education. All the surveying staff have diplomas in surveying, and passed into the Service after quite a stiff examination. I would like to say in reference to this outdoor staff that they are promising to be a most efficient and excellent staff. The great bulk of them take the greatest interest in their work, and are most enthusiastic about it, and that to a very large extent accounts, I think, for the good relations which we are able to maintain in our dealings with the people, because it is only those who have been in close contact with the poor people in the remote districts that will appreciate the difficulties of dealing with them, when you come to interfere with the boundaries of their little holdings. They do not like to give up what they actually have, and what they know they possess, or to give up any holding, even though you promise something very much better. We must have a great deal of tact and patience so deal with them successfully.

30,643. You say your men have engineering qualifications, college qualifications, and so on, but, nevertheless, they pass through a separate examination?—Yes.

30,644. And the engineers, the men whom you recruited for your engineering staff, passed an examination before you appointed them?—Yes.

30,645. Was the examination on professional subjects?—Yes. What we did was this. I have the terms of the advertisement here. We applied by advertisement in the newspapers inviting applications from candidates for the position of assistant inspector, and pointed out that no candidate would be considered eligible who had not engineering qualifications or experience in land surveying, levelling, mapping, and land improvement work, such as the Board carried out, so that no man could be a candidate for examination unless he had engineering qualifications, or, in the absence of these, had special knowledge of the work required to be done.

30,646. What is the age?—Under 45.

30,647. Are you able to find men of that age, or, say, from 26 to 36 to submit themselves to those examinations?—Most of the men who come in are men who have just left college, having just got a degree in engineering in Trinity College or some other university. The assistant staff is recruited from that kind of men at ages from 20 to 30. The last time the men who were successful in the examination varied from 23½ years to 27½. The last time we had 35 applicants, and we had only 10 places, and instead of selecting these 10 from the 35 by interviews or anything like that we put them through an examination. That examination was conducted by the Civil Service, and our previous examinations were conducted by persons nominated by the Surveyors' Professional Board and by the professors of the university.

30,648. If the Treasury sanctions your pension scheme would you be prepared to agree to your examinations being conducted by the Civil Service Commission?—We have already had our examinations conducted by them, and we do not intend to have any more examinations otherwise. Our examinations last time for clerkships and for assistant inspectors were conducted by the Civil Service.

30,649. So that in your department there is nothing like patronage?—No patronage; nothing like patronage; it is not possible for any member of the Board to get a person on my staff by personal pressure of any kind; he must go through the mill.

28 February 1913.]

Mr. HENRY DOBAN. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

30,650. (*Mr. Shipley.*) I want to ask you a question about the examination. I gather that these candidates are men who have recently left college, and they compete and are eligible at the ages of from 30 to 40?—The maximum age is 45, at which no one can compete.

30,651. As a matter of fact, after 30 one hardly cares to present oneself for an examination. I think that is an important point. I thought they were allowed to compete up to 40 or 45, but they do compete just after they have left college at 22 or 23?—I mentioned that most of them were about 20 or 30; I do not think the average is much more than 24 or 25.

30,652. That is a point upon which we have had a good deal of evidence?—This is the form of the advertisement: "An examination will be held in Dublin, in September, on dates to be fixed, to fill up vacancies for the undermentioned officers, assistant inspectors, and staff surveyors. Particulars can be obtained on application to the secretary of the Congested Districts Board, 24, Rutland Square." When they made application, each applicant got a copy of these particulars. Shall I read them.

30,653. I think that might be put in?—Yes.

30,654. I want to ask you this: Your Board is financed partly from money which it got from the Irish Church when it was disendowed. I understand you have had 1,500,000*l.*?—That was the capital sum; we get the income of that 1,500,000*l.* of the Irish Church Surplus Fund.

30,655. I wanted to know how much was the value of that after the whole thing was cleared up; what proportion of the total is that 1,500,000*l.*?—We do not know. We never got any of the capital; we only got the income.

30,656. As a matter of curiosity I want to know what the Irish Church was worth?—We only get the income; we do not know whether it really exists or not; the Chairman would be better able to tell you.

30,657. Is there any overlapping of the work of your Board with the work of the Land Commission?—No; we get on quite well. We are always in communication, and since the Act of 1909 we have no overlapping of any kind. We have always worked quite in harmony.

30,658. Supposing you had a dispute with them and you could not come to terms, how would it be settled?—We have no need, because under the Act of 1909 they are prohibited from purchasing any land in a congested area. We are the only purchasing body except in the case of direct sale. There is no possibility of any friction even if we were so disposed.

30,659. Is the term "congested" often left to the judgment of some of the officers?—No; it is a legal definition. A congested holding is one under 7*l.* rateable value; a congested townland is one one-half of the area of which is made up of congested holdings; a congested estate is an estate comprising holdings one-half of which are under 7*l.* rateable value or do not exceed 7*l.*

30,660. And it has no relation to the density of population?—Not in that sense.

30,661. (*Chairman.*) Would you say it had if you go back to the early definition in the first Act?—The earlier definition of a congested holding is a different thing from a congested district. The definition of a congested district under the Act of 1891 was arrived at mechanically in this way: it was an electoral division where the population of the electoral division, divided into the rateable value, gave a result of 30*l.* per head or less. It was scheduled as a congested district provided that not more than one-twentieth of the Union did not come within that definition. A non-congested district might be one with a sparse population, if the land were poor. There might be a dense population and comparatively good land.

30,662. (*Mr. Shipley.*) When this Act first came into operation, did you have any maps showing all those scattered bits of land belonging to the people or did you have to make them?—When we took up these estates we had to map all those holdings ourselves, because we did not require the landlords from whom we bought the estate to furnish us with detailed maps.

30,663. They probably had them?—They rarely had.

30,664. You could not rely on the traditions of the people?—Each one knew his own holding all right.

30,665. It had come down by tradition; there was nothing on paper to prove it was his land excepting perhaps boundary stones?—In a great many cases that was so. In the case of small rundale holdings it was quite an exceptional thing to get an accurate map of them, and we had to make maps of such holdings before we could commence our treatment of them and know where we were.

30,666. Did they ever remove their neighbour's landmarks?—I think they watched one another too closely for that.

30,667. Taking the men whom you send down to those parts chiefly in the west, do the bulk of them have to talk Irish?—No. In our examination for these appointments any one who speaks Irish gets marks for it.

30,668. There is no real difficulty in conducting the surveys in English?—There are just a few districts where there is difficulty, but only a few.

30,669. I gather that the whole movement has been a great success; has it checked emigration?—I do not think so; I don't think it has to any appreciable extent.

30,670. Emigration has gone down recently?—Well, it has in numbers, but not so much in proportion, as the population of the country has been going down. Of course the numbers are smaller, but the proportion still continues large. There is a temporary check; we have not had so much emigration for the last year or so. I do not think that can be attributed to our operations, because the holdings we provide are only sufficient to support one head of a family and the surplus population must go elsewhere.

30,671. Still you think the whole movement has been very successful?—We are naturally prejudiced, but we believe it has been eminently successful.

30,672. One of the tests of that is that neighbouring districts want to come into it?—Yes.

30,673. With regard to your staff, apart from the complaint that they are non-pensionable, is there any considerable discontent or widespread discontent?—Among the outdoor staff: I say they are a splendid body of young men and most loyal and keen about their work, and they think their pay is not so good as it ought to be. That is a natural feeling. I do not think myself it is.

30,674. Can you tell us how much the paid commissioners receive?—2,000*l.* a year. It is fixed by statute. With regard to their duties, this is a definition of their duties (*document handed in*).

30,675. (*Mr. Graham Wallas.*) You have a Board of 14 members?—Yes.

30,676. The action of the Board is the action of the majority of the Board present and voting?—Yes.

30,677. How often does the Board meet?—Once a month.

30,678. And all the important business is presented by the two paid commissioners to the Board and voted upon by the Board?—When put to the vote, but voting is very rare. The necessity of asking for a vote is very unusual.

30,679. What attendance do you usually have at the Board?—Very good.

30,680. How many out of the 14?—Generally about 10.

30,681. I want to consider for a moment the relations of your work with the general land administration by the Government in Ireland. I may take it that the problem you had before you when the Government began to undertake the land question was that the arable land in Ireland was held in small intermingled strips, and these intermingled strips were occupied by occupiers who claimed and had certain rights, and that there were certain other rights claimed and had by the landlord?—Well, the right of the landlord was merely a right to collect rent; he had little else to do; the Land Act secured the tenant in the occupation of the land so long as he paid the statutory rent.

30,682. I am speaking of the period before the Land Acts. The general administrative action of the

[28 February 1913.]

Mr. HENRY DORAN. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

Government of Ireland with regard to land is to substitute for that system a system of occupying ownership in which every holding is sufficient for a family to live upon?—That is the ideal.

30,683. Taking that problem as a whole, I want to consider what Government departments are concerned with the carrying out of that policy. Would you say that the general substitution of an occupying ownership for dual ownership is a problem which concerns all Ireland?—Yes.

30,684. In the general administration of that policy the Irish Land Commission is concerned?—Yes.

30,685. And you have correspondence from time to time with the Irish Land Commission?—We have to work with them; we are in very close touch with them.

30,686. In constant touch with them?—Yes.

30,687. By correspondence with the Irish Land Commission?—Yes.

30,688. Your Board is concerned, so far as the supply of breeding stock and seeds, and so on, for these new holdings goes, with the Department of Agriculture, and you have to be in touch with them?—We have looked upon ourselves as preparing the way for agricultural development. When we have the holdings provided, our idea is that the Department of Agriculture should step in then and find better circumstanced holdings than those which previously existed, and so they would have greater facilities for inducing the people to develop agriculture.

30,689. You have to keep in touch with them?—We do.

30,690. And you are in correspondence with them?—Yes, but we do not interfere with them.

30,691. You have to work with the Public Loans Fund Board?—No, we have no connection with them.

30,692. Do they ever advance money in connection with these holdings?—No; not out of public funds.

30,693. Have you to keep in touch generally with the Valuation and Boundary Survey of Ireland?—We have to obtain from them certified maps and areas of each holding. Beyond that we have not. When we provide new holdings we apply to the Valuation Office for a revision of the rating.

30,694. Have you to keep in touch with the Inspectors of Land Improvements under the Board of Works?—No, we have no connection with them.

30,695. Have you to keep in touch with the Board of Trade in their work with regard to foreshores?—Yes, we have a good deal of connection with them with respect to seaweed rights.

30,696. Does your work bring you in touch, to any definite extent, with the Local Government Board?—We have no direct work with them.

30,697. No direct connection with them. Your estimates representing your general policy have to be prepared in the Chief Secretary's Office?—Oh, no; the Chief Secretary is merely an *ex-officio* member of the Board; he has no direct control over the Board.

30,698. The Chief Secretary says, on page 15: "All important financial proposals have now to be submitted by the Congested Districts Board through him"?—That is so. These are only the ordinary estimates. They are forwarded by the Chief Secretary to the Treasury for approval.

30,699. And considered by the Chief Secretary?—So far as they have to be submitted.

30,700. Concerned with carrying out the general land policy of the Government of Ireland, you have six offices all situated in Dublin and communicating by letter with each other?—Yes; but the important office with which really we have any practical work is the Land Commission, the Estates Commissioners, in making our valuations, revising the surveys, and altering holdings of untenanted land. There is also the Chief Secretary's Office. But we really have not very much to do with any of the others.

30,701. (Mr. Boutwood.) I am not quite clear about this—your Board seems to be independent of the Land Commission and to have a statutory origin. Within the range of your power can you do anything in your area that the Land Commission cannot do in its area?—We can.

30,702. What?—The Land Commission cannot spend any money on the improvement of estates purchased by them except when they are congested districts. They have no money available for the development of an estate or the improvement of an estate unless it is an estate which is scheduled as congested. In the acquisition of these estates they can only incur an expenditure each year to an extent that does not exceed 10 per cent. of the cost price of the estate sold to them. They have no money available and cannot do anything to develop a district in the same way as we can do in a general way.

30,703. Another matter I am not quite clear about. You have mentioned the 1,500,000*l.* from the Irish Church Fund, but you deal with many millions?—For the purchase of estates we get the money through the Estates Commissioners, who get it from the National Debt Commissioners. For the purchase of estates it is a different thing from our own income. We get the money for the purchase of an estate in this way: When we decide to purchase an estate, say, for 300,000*l.*, we enter into a preliminary agreement with the owner of the property to buy his estate for that sum. We lodge all the necessary papers with the Estates Commissioners who investigate the title, and when the title is approved of we requisition them to pay him the money, and that money is paid out of the Land Purchase Fund. We do not touch it at all. The owner is paid off, and then the estate is vested, and then we proceed to treat the estate. An account is opened for the estate separately. We get the 300,000*l.*, and we buy the estate *in globo*, and as we sell each tenant's holding we lodge an agreement with the Estates Commissioners showing the amount for which that tenant agrees to buy his holding. When that is approved of it is written off against our indebtedness until the whole estate is sold. We probably have sold it for 320,000*l.*, having spent 50,000*l.* and lost 30,000*l.* That is shortly the way the thing works out.

30,704. When you arrange the holding and put the tenants upon new holdings with, perhaps, new houses, do you give them implements or stock?—We do not do anything in getting them implements. We make a loan to them, if they desire it, to an amount not exceeding 50*l.*

30,705. As a general result of operations of that sort does the rateable value increase?—No, the rateable value of land in Ireland under the present statute cannot be altered, and it can only be varied when buildings are erected. When, therefore, we put buildings on untenanted land the rateable value is increased in respect to the buildings.

30,706. In another connection, with regard to inspectors under the Land Commission, we had two tables put in showing the qualifications of the men appointed; could you give us a similar paper with regard to your inspectors and valuers?—I have that here with respect to these 109 men (*document handed in.*)

30,707. In the exercise of your powers of migration do you ever send people very far from one county to another?—Yes, sometimes, but the bulk of them do not go from one county to another. It is not usual. They go quite freely seven or eight miles, and that kind of thing. Some have gone as far as 40 miles, but that is only a few, from one county into another. Some have come from the islands into the mainland.

30,708. (Mr. Shipley.) Do they pay back the debts very regularly?—We have not had a single defaulter in any case up to the present; not one single case.

(Mr. Shipley.) That is very remarkable.

Mr. W. L. MICKS, called and examined. Mr. J. R. O'BRIEN was in attendance.

30,709. (*Chairman.*) Mr. Micks, we have examined your colleague Mr. Doran, who has given us very valuable evidence. I understand that you and he divide the work between you. Mr. Doran deals with the agrarian portion, and you deal with the fishing and all the other industrial work of the Board?—Yes.

30,710. Will you please enumerate the departments of the Board with which you deal?—Fisheries, works, industries, and office discipline and arrangement.

30,711. Is the office discipline especially under your supervision?—It is very largely, because Mr. Doran is away so much in the country.

30,712. The fisheries is an independent and self-contained branch of your work?—Yes.

30,713. Who has executive charge of it now?—Mr. Pigot.

30,714. Is it a large branch; does it involve a large annual expenditure?—It does, it involves a large expenditure since the Board was reconstituted in 1909. They have started steamers and motor boats.

30,715. Do you mean steam trawlers?—Steam drifters.

30,716. How many have you?—We have two at present and three are being built.

30,717. Are they being built by the Board?—Yes, at the Board's expense.

30,718. Do the Board hire them out or work them themselves?—They work them themselves.

30,719. Am I to understand that the Board have entered into the fishing industry?—They have got a loan from the Development Commissioners for this purpose. They got a loan of 20,000*l.* from the Development Commissioners for the development of the fishing industry according to modern methods.

30,720. What is the policy of the Board in regard to fisheries?—The Board found that the sailing boats were not earning anything like the amount they used to earn.

30,721. The sailing boats used to be the property of the Board, and the Board used to let them out to the fishermen?—Yes, but we got the receipts, and we kept a certain portion of the receipts in repayment of the amount we spent on the boats and gear, and divided the balance according to a share arrangement among the fishermen.

30,722. There the policy of the Board was quite clear. It was not that the Board wanted to make money by fishing, but that the Board wanted to encourage the fishing industry?—The same method still prevails as regards the new boats, the steamers and the motor boats. The boats remain the property of the Board, and a portion—of course, it is a larger share—of the earnings go towards the repayment of the cost, and the balance is divided among the crew on the share system.

30,723. Have the Board in contemplation to divest themselves of proprietary rights in these drifters and confer them on the fishermen?—Our estimate is that a steam drifter will be really effective for about 15 years. We calculate we will get back our money in about that time. At present we are getting it back at a quicker rate, but we look on 15 years as a normal period for the replacement of the cost of a steam drifter.

30,724. The policy is not the acquisition of money by the Board, but teaching the fishing population how to manage these drifters?—Quite so.

30,725. And enabling them to make a living?—Yes, according to the new method.

30,726. It is the same policy as existed when the Board taught the fishermen how to build boats and to fish?—Precisely. We hope that capitalists in places like Londonderry and Galway will, as soon as they see the published results of our experiments in steam drifter and motor boat fishing, start crews of their own on the Scottish method, independently of ourselves. We don't look forward to employing the same number of men as hitherto have been working in the sailing boats.

30,727. Is the ordinary sailing boat fishing industry flourishing?—It is not at all flourishing, compared

with past years. At the same port, say our chief port Downings Bay, there are 50 or 60 local sailing boats fishing, and there are as many as 200 British steam drifters fishing. On a stormy day, the sailing boats cannot go out. The steam drifters do go out and bring fish in. When there is a dead calm, the sailing boats cannot go out. The steamers can, and they catch fish. On a good sailing day the fishing boats go out and bring back fish. The steamers do the same, but the steamers get in first, and get the top price of the market. The tendency of steam fishing is to lower prices, and the sailing boats get less fish at a smaller price.

30,728. Before you adopted this policy of steam drifters, Scotch steam drifters used to come round from Scotland and fish in Irish waters?—They do come at present. Their coming was what forced us into it. As many as 400 British steam drifters fish on the Donegal coast, and we have only got two steamers so far.

30,729. What are the other industries?—There is very little change since your Lordship's chairmanship of the Board. There are lace and crochet. The only new industry is knitting, knitting golf coats and other articles.

30,730. How does the carpet industry go on?—It is going on satisfactorily. The wages are not very large.

30,731. Has it now become established in the country, or does it still depend upon the enterprise of one firm?—The same firm is the only firm. They have four factories now in Donegal, and they are negotiating about one in the County Mayo. Its work is entirely apart from the Board. The Board only gave some slight assistance to that firm, by renting buildings.

30,732. The other industry which the Board favour are lace making and crochet?—Yes, and embroidery.

30,733. Has that now largely increased?—Yes, very largely increased. Last year the girls earned over 30,000*l.* chiefly in the County Mayo, in the districts which needed it worst, and the people were most anxious to do the work. The County Mayo receipts are very much larger than all the other counties put together.

30,734. Do the Board arrange for the sale of produce?—No. They never do. That is left to the head of the school. The head of the school is responsible for the marketing. She acts as the schools agent. We have no financial responsibility.

30,735. When you say the school, what do you mean?—The schools that the Board start in order to train the workers. The teachers whose salary is paid by the Board, remains on to teach new girls coming in, and also to work as agent for the girls who have learned the work.

30,736. Does she work through a great agency in Dublin, or communicate with France and other countries?—The largest number of schools supply their work to the Lace Depot in Molesworth Street close by. The schools that earn most have established a direct trade for themselves, chiefly with the United States. One school I know earned 4,000*l.* Practically all that lace was sold by the teacher in New York. Payment has been satisfactory, because a sum of 500*l.* is sent over in advance for the work before it is made.

30,737. (*Mr. Shipley.*) Over what period does that extend?—One year.

30,738. Was it a very big school?—Yes, I suppose it has over 60 workers.

30,739. (*Chairman.*) Is there a fashion in the lace trade, or would the same patterns do from year to year?—It is altogether a matter of fashion. You cannot have a high price if you are not kept up to the fashions and the coming fashions, so our inspector Mr. Phelan visits Paris, Vienna, and the different other markets. He used to be with the Lace Depot, so he is up-to-date, and anticipates the fashions with success, we think.

30,740. This large trade which you have established with New York, deals with the particular kind of lace that Americans want for the coming year?—Yes; Mr. Phelan gets a design worked in the districts.

28 February 1913.]

Mr. W. L. MICKS. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

We send that across, and the people in America say, "Make us so many yards, or so many founces of that."

30,741. How many schools of that kind have you established?—Eighty.

30,742. You say that the profits of these schools last year were 30,000*l.*?—Over 30,000*l.*, which does not include the work that is done in knitting. We provide a teacher, but the purchases are made and the payments are made to the girls by firms like Debenham of London.

30,743. When you say knitting, do you mean such things as sweaters?—Sweaters and golf coats, more especially the finer kind.

30,744. Is that all hand knitting?—Machine knitting is now coming in. We have two classes for instruction in machine knitting. The machine knitting is bound to succeed. We don't quite like it, but still we think, on the whole, it may not be an injury. A great deal of the work has to be done by hand, even with the machine work.

30,745. Up to the present, has hand knitting held its own?—It is not injured so far.

30,746. The hand-knitted sweater would have a value of its own?—The sweater is a rough article, but ladies prefer, I believe, the hand knitting for their coats.

30,747. Is there any other industry that has been established of late?—We have assisted a granite industry in Galway town. That is satisfactory, I think. It employs a limited number, but still it is valuable in that place as a means of employment.

30,748. What is the amount of money you employ in financing your industrial side?—About 5,100*l.* You will see it at page 38 of the 20th Report.

30,749. Between loans and grants?—Yes. Practically all that is the wages paid to the teachers.

30,750. Your office establishment is shown on page 21 of this statement furnished to us; they are pensionable officers at your headquarters?—Yes.

30,751. You have an under-secretary and chief clerk who, I presume, conducts the general correspondence of the office?—I have a full detailed explanation of the duties of each officer.

30,752. I merely want a general idea?—He is practically a deputy-secretary.

30,753. Your accounts' department is shown in this statement; there are five staff clerks?—There are six.

30,754. There are four minor staff clerks?—Yes.

30,755. Is your accountant shown among them?—He is. He is one of the staff clerks in charge of the accounts department.

30,756. What pay does he get?—400*l.*, rising by 20*l.* to 500*l.*

30,757. Your office then really consists of a secretary, a deputy-secretary, chief clerk who does secretary's work, and the staff clerk?—Mr. Pigot, head of the fisheries work.

30,758. Is he an outdoor officer?—He is mainly in the office. He goes down occasionally when something difficult occurs.

30,759. Mr. Doran has told us that the Board have submitted a scheme for bringing the temporary clerks on to the establishment and making them pensionable. How many temporary clerks have you on your side of the department?—We have not got them separately.

30,760. Mr. Doran told us that the outdoor staff number 109?—Of the others, we propose that the scheme which we sent forward to the Treasury, and which is still under consideration, should affect 81, and also 9 in the solicitors or legal branch. That would be 90.

30,761. Have you got a statement showing how the 81 are classified?—I have.

30,762. Would you be good enough to put it in?—Yes.\*

30,763. Does it show the scale of pay?—It does. We have three grades in our proposed scale. In the top grade there are eight men with a minimum salary of 200*l.* going by 10*l.* to 300*l.* In the second grade

there are 30 men beginning at 130*l.* and going by 10*l.* to 200*l.*, and the third grade consists of 43 men with a minimum of 70*l.* increasing by 7*l.* 10*s.* up to 130*l.*

30,764. Do these men come in by competitive examination?—Practically open competition. I don't think we have refused a man a nomination.

30,765. But you do, for appearance sake, insist upon a nomination?—The examination is held by the Civil Service Commissioners, and we conduct part of the inquiry for them. We conduct the inquiry into character and health.

30,766. Is that the only way in which nomination comes into play?—That is all.

30,767. Before a man is permitted to appear at the examination he has to give a certificate regarding his health and general character?—He has to be of the prescribed age and we send forward the name.

30,768. You make inquiries as to what his character is?—Yes.

30,769. There is an examination in handwriting, copying manuscript, English, arithmetic, mathematics, typing, stenography, French, German, or Latin, and Irish. Is Irish compulsory?—No. It is optional. If you compare the examination with that for the second division it is very much alike.

30,770. I find it here in the Civil Service abstract of rules and regulations?—The regulations are of course identical with the second division, and the subjects with the exception of Gaelic. There is some slight variation in the marks assigned to different subjects. There are 100 for Gaelic. We have in another subject, typewriting.

30,771. Your nomination is not a nomination really. It is an inquiry as to character and age, and you have got the Civil Service Commissioners holding the examination?—Yes. They send us the names of the successful candidates.

30,772. You have established scales of pay which bring your establishment on a second division basis?—Yes.

30,773. Do you give the right of promotion from this body to your staff clerks?—That is a matter that has not yet arisen, but my own impression is that that ought to be the course, but they would not occupy the same position. Suppose a vacancy occurred in one of the Civil Service positions, we could not promote a man from our own staff and give him all the benefits that his predecessor had. We could give him the salary but we could not give him a Civil Service pension.

30,774. If the Treasury accepted your pension scheme, would it be the ordinary pension scheme of the Civil Service second division?—That is a matter for negotiation. We don't know that a bit.

30,775. If your claim to bring your clerks upon the establishment were granted it would be practically establishing a second division in your office?—Certainly.

30,776. That being so, would not men of the second division naturally have a claim for promotion to the staff appointments on the occurrence of a vacancy?—I think so, but they would not have the same status as the present men, because the present men's pensions are paid by the Treasury.

30,777. Your pensions would come out of your own funds?—Quite so.

30,778. (Mr. Boutwood.) Why are the salaries and pensions of these men charged against the Treasury, and the rest of your staff against yourself?—Because when the Congested Districts Board was started in 1891 these men were transferred from other public departments to our staff, and so they carried their pension rights to other departments.

30,779. (Mr. Graham Wallas.) On the industrial side of your work you must be in close touch with the Board of Agriculture and Technical Instruction?—They give instruction but they don't carry on the same mercantile methods that we do; but we are closely in touch, and consult with them very frequently. For instance, as soon as the new area was given to us under the Act of 1909, we found that the department had already established instruction there, and we had a conference with the department and arrived at an arrangement that we should not start any school in the

\* Vide Appendix LXVIII.

28 February 1913.] Mr. W. L. MICKS. (Mr. J. R. O'BRIEN was in attendance.)

[Continued.]

new area except with the consent of the department. That was to prevent any possible overlapping.

30,780. Would it be the case that a body of fishermen who wanted to improve the industry and obtain boats might still, in some cases, have to choose whether they would apply to you or to the Board of Agriculture?—No; the coast of Ireland is divided distinctly between the two. We have the whole western coast of Ireland from Lough Foyle to Cape Clear and a little to the east of it, and the department has the rest. The department don't expend money or carry out schemes in our area. They exist as a fishery authority for making bye-laws for the whole of Ireland and for gathering statistics, but there is no overlapping.

30,781. In their area they carry out the same functions as you carry out in your area?—Quite so.

30,782. (*Mr. Shipley.*) The research steamer is still worked by Mr. Green and Mr. Holt?—That is under the Department of Agriculture.

30,783. The Department of Agriculture is doing the research work, finding new fishing grounds and so on?—That is scientific work. We don't do any scientific work.

30,784. I am Chairman of the Council of the Marine Biological Association of Great Britain, and I think I may say that it is also practical work. It is endeavouring to find new fishing grounds. Has the Board of Education any fishing work?—No.

30,785. Do the Irish Lights Board do anything about fishing?—No.

30,786. What is the Board of Conservators of Fishing?—They are local men dealing altogether with salmon fishing in rivers and tidal waters.

30,787. Have you anything to do with fresh water fishing?—No. We give a little money to stimulate hatcheries, and preserving in large lakes like Lough Corrib and Lough Mask.

30,788. Is the Board of Conservators an official board?—No. It is a local body altogether.

30,789. There must be a great deal of correspondence between these different boards, when they come in contact with regard to fisheries?—No. We are not at all scientific. We simply try to increase the earnings of fishermen on the west coast. We don't come in conflict or contact with the department. The department have only got a small sum to spend on fishing. I think it is only 10,000*l.* a year.

30,790. Do you do anything besides hatcheries to develop fresh water resources? Did you ever contemplate pearl fishing, which pays in some parts of Germany, and used to pay in some parts of Scotland; and fresh

water pearls are very much sought after in some parts of America?—Many fresh water pearls are got in the west of Ireland. There is no law regulating that fishery.

30,791. It is not systematised at all?—No. When the river is low people go in and gather mussels, and look for pearls.

30,792. I believe that shirt buttons are made of the shells of those mussels; most of them come from Scandinavia, that has never been developed?—No.

30,793. Do you do anything about creameries?—We have nothing to do with it in our office.

30,794. Is your work increasing or diminishing? Do you contemplate coming to the end of your work?—As regards the land side we have not made an estimate, but I believe that the Treasury have made an estimate that it might come to an end in 20 years.

30,795. Is there any marked discontent among your staff?—I don't think there is anything undue.

30,796. This little document, which has not been referred to as yet, deals with a small number of clerks in the Congested Districts Board who are members of the Irish Temporary Clerks Association. It says that in every case the prospects of increment and promotion are practically nil; I suppose that that only applies to a very small class?—That applies to a vanishing class. After our next Civil Service examination I think that that class may go altogether.

30,797. (*Chairman.*) Does that apply to the temporary clerks who sent in a memorial?—Yes. There are a number with the solicitor. He gets a lump sum of 700*l.* a year, and he can employ anybody he likes for the 700*l.* a year, and he employs men at, I think, about 30 shillings a week to do scrivenery and matters of that sort. They are, of course, in a hopeless position, but he employs them merely for routine copying and matters of that kind.

30,798. (*Mr. Shipley.*) They took this up knowing their future?—Absolutely. There are a few ladies employed by us in copying outside.

30,799. (*Chairman.*) Where are these men to be found?—In different departments. They are chiefly typists and shorthand-writers. We expect to eliminate these after the next examination. Our scheme of Civil Service examination only came into operation last year for the first time. We hope to have a second examination soon, and I think that class will disappear then. Our hope and aim is to have all our staff on the grade of salaries of the second division scale.

30,800. (*Mr. Boutwood.*) Do you mean that they will disappear suddenly, or drop out as they die off?—A number will go suddenly, I am afraid.

Mr. JOSEPH A. GLYNN, called and examined. Mr. JOHN HOULIHAN was in attendance.

30,801. (*Chairman.*) Mr. Glynn, what is your official designation?—Chairman of the National Health Insurance Commission.

30,802. When were you appointed?—On the 30th December 1911. That is the date of our warrant.

30,803. Please give the Commission a brief sketch of what you have done, of what your functions are, and how far you have gone in your work of National Insurance in Ireland?—Our department is divided up into two divisions—the indoor and the outdoor. The indoor staff, with two exceptions, is recruited entirely from the Civil Service.

30,804. You have recruited your indoor staff altogether from the Civil Service, with two exceptions?—Yes, my private secretary and the officer in charge of the statistics. We have what is known as the intermediate system in our office, and when we want to appoint clerks we have two alternatives open to us, either to go to the Civil Service Commissioners for a junior intermediate clerk or to appoint second division men under clause 6, and we adopted the latter course. From all the other Irish offices we got together an intermediate class.

30,805. Why do you call it the "intermediate"?—We have no second division clerks as such in the office at all.

30,806. What is the initial pay in the lowest grade in your intermediate class?—It begins at 100*l.* a year, and rises to 350*l.* Beginning at the top, we have the secretary and the assistant secretary. The secretary begins at 850*l.* and rises to 1,000*l.*

30,807. I want to ascertain from you what functions you discharge. When we know of the functions that you have to discharge then we can look into the staff to see whether the organisation is appropriate to the proper discharge of their functions?—Our functions are to administer the National Health Insurance Act, Parts I. and III. We have to see that every person in Ireland under contract of service is insured, and we then have to issue the cards to the employes, and again collect the cards at the end of every quarter, and credit the different societies with their proper contributions.

30,808. Now, in order to enable you to perform these functions you require two sorts of establishments, an indoor and an outdoor establishment?—Yes.

30,809. Let us consider what indoor establishment you have. First, you yourself, over everything, and immediately under you there is a deputy-chairman?—Yes.

30,810. And he was appointed at the same time as you were?—Yes.

28 February 1913.] Mr. JOSEPH A. GLYNN. (Mr. JOHN HOULIHAN was in attendance.) [Continued.]

30,811. And you have also got two colleagues as commissioners?—Yes.

30,812. Therefore, there are in the "Direction," four officers, one drawing 1,500*l.*, one 1,200*l.*, and the two others drawing 1,000*l.* each?—Yes.

30,813. Then there is the secretary. How did you obtain your secretary?—He was appointed by the Government at the same time as ourselves.

30,814. Mr. Houlihan, you are secretary to the Commission; were you in the service of the Government before?—(Mr. Houlihan.) Yes, in the War Office.

30,815. By what examination did you enter?—By the Class I.

30,816. The open competitive examination for Class I.?—Yes.

30,817. Did you pass from a university?—I finished in the Royal University in Dublin, and then I went to London to a well-known grinding school.

30,818. Then there is the assistant secretary. How did you get him?—(Mr. Glynn.) We got him from the Civil Service. He entered by Class I. also.

30,819. What department did he come from?—The Local Government Board, Ireland.

30,820. Now according to the classification we come to Group II—Civil servants. You have five first class clerks in that grade, and 28 second division clerks. Apparently, you have got some second division clerks then?—We have two or three that are awaiting promotion. When they were transferred we found that they hadn't done their eight years' service.

30,821. You have five first class clerks in Group II. Of these four entered the Service as second division clerks by open competition?—Yes.

30,822. And one is a junior clerk in the Supreme Court of Judicature in Ireland?—Yes.

30,823. I suppose they had special examinations in the High Court?—Yes.

30,824. You took these four officers who were in the second division and converted them into the intermediate division?—Yes.

30,825. Why, Mr. Glynn, didn't you preserve the second division organisation throughout?—It was considered a better service; this matter was considered in London. The class of work that was to be done in our office was considered to be better adapted for the intermediate grade than for the second division.

30,826. Where did this discussion take place; who took part in it?—That was a matter decided by the Treasury.

30,827. You personally did not suggest it?—No, we were told that this was the grade that was settled by the Treasury.

30,828. Your two assistant accountants entered also as second division clerks. Do you regard them now as in the intermediate grade?—They are. As a matter of fact that is their grade.

30,829. And there are 28 clerks shown as second division clerks and examiners. Twenty entered as second division clerks by open competition and two as assistant clerks. How many of these are now recorded as intermediate clerks?—All of them.

30,830. Then it is a mistake to enter them here as second division?—They came to us as second division and were then transferred. They entered the Service as second division. I took column 7 as meaning how they entered the public service and not our service.

30,831. I mean column 2?—Well, that means second class clerk.

30,832. Well, then the word "division" is a misnomer. Is not that rather a large establishment Mr. Glynn—these 35 clerks to begin with?—We find as a matter of fact, that most of them have to work considerable overtime as the work is excessively heavy.

30,833. How many persons have been insured?—At the present moment well over 700,000 but owing to the scattered areas in Ireland they are much harder to get at than in Wales where five-sixths of the entire insured population lives within twenty miles of Cardiff, and we have a much larger number of societies proportionately to deal with in Ireland than in the other countries.

30,834. What work is done by the supervising assistant clerks?—We have only two in the office, and it is a promotion from the particular grade, but they

do practically the same work as the assistant clerks; they look forward to that promotion in the office.

30,835. I suppose they supervise the rooms in which the clerks work?—Yes.

31,836. Did you get these clerks from the Civil Service Commissioners?—Either from other public departments or the Civil Service Commissioners.

30,837. You have 39 assistant clerks—did you get them from the Civil Service?—Yes, all of them.

30,838. Did they all enter your service for the first time?—Not into ours; most of them came from other offices. I understand that of the last batch of them about half came from the Civil Service Commissioners.

30,839. Are these assistant clerks all Irishmen?—I think all of them. (Mr. Houlihan.) There may be one or two exceptions. When the Civil Service Commissioners were asked for men they sent us Irishmen.

30,840. The impression was left on my mind that when an Irish boy passes into the assistant clerks grade in London, he generally wanted to get back to Ireland?—The Civil Service Commissioners divide the year into two seasons, in one of which transfers are allowed from London to Dublin. In the other there are no transfers allowed. That enables Irish boys who go in for the latest examination to come to Irish offices direct.

30,841. You have 11 female shorthand writers and typists. Do you recruit these by any educational test?—(Mr. Glynn.) They have to pass an educational test before they are put on the permanent staff. We take them on temporarily until we test them in the office and if the secretary or accountant, whoever is over them, is satisfied with their work then the best of them are sent up for examination.

30,842. Who conducts the examination?—The Civil Service Commissioners.

30,843. You nominate the typists, and on nomination they present themselves for examination?—Yes, that is so.

30,844. Do they work in the same room or side by side with the men?—They don't work with the men. They have all their own rooms. They are in different offices because we are scattered like most Dublin offices, unfortunately, over six houses, and the women are separated in different houses, but they have rooms for themselves.

30,845. And under a female superintendent?—Yes, our female superintendent who is in the principal building.

30,846. Let us come to the outdoor and inspecting staff. You have one chief inspector and five inspectors, and 16 assistant inspectors. Does the chief inspector stay in Dublin at the head office or does he travel about?—He practically stays in Dublin, but he is supposed to have Leinster as his travelling district, but he is not able to go around.

30,847. Who is your chief inspector?—He is Mr. Darley, a barrister and the founder of a big benefit society here in Dublin.

30,848. How did you recruit him?—He had founded one of the biggest friendly societies in Ireland, and we found that he had experience of just the very class of work that we had to do, and in addition the professional qualifications of a barrister, and so we took him in.

30,849. You got the sanction of the Treasury before you accepted him?—Yes.

30,850. How did you get your inspectors?—Two of them by nomination and three of them by open competition.

30,851. Three?—Yes, we had 10,000 applications, and we appointed from our commissioners two members and the Civil Service Commissioners appointed one, and they went into the applications and made selections, and a number were called up for interview. The result of that interview was to bring down the number to about six or seven for each vacancy. They were then examined and got their positions in order of merit.

30,852. By whom were they examined?—By the Civil Service Commissioners.

30,853. Was the examination a written examination or was it merely an interview?—Both written and oral. It was divided into an examination under the Act of Parliament, which was very severe, both written and oral,

28 February 1913.] MR. JOSEPH A. GLYNN. (MR. JOHN HOULIHAN was in attendance.) [Continued.]

and a literary test—not a stiff examination by any means, but owing to the limit of age we felt that you could not have a severe literary examination for men who were away at work for 15 years or so.

30,854. And the examination was principally upon the Act of Parliament that they would have to administer?—Yes, 50 per cent. of the marks were given for the Act of Parliament.

30,855. And the rest was a thesis, was it?—There was a regular examination, I believe, in mathematics and English, and composition.

30,856. And an oral examination?—Yes.

30,857. Did you see the papers Mr. Houlihan?—(Mr. Houlihan.) I did, my Lord, but not at the time. So far as I saw the papers, they would be something below the second division standard, but, of course, the competition would not have been keen, the number of candidates does not indicate the same standard of competition as would apply in the second division where they would be more numerous.

30,858. It was a competition amongst selected candidates?—Yes.

30,859. How were the 15 assistant inspectors selected?—(Mr. Glynn.) Seven by direct nomination. We appointed originally 25 lecturers—20 men and five women. They were brought over to London and got a thorough training in the Act.

30,860. How did you select these men?—We had to do the best we could from our own knowledge. When the secretary and the assistant secretary and the commissioners knew a good man and a good speaker, and intelligent and presentable, they got him.

30,861. From their own knowledge they selected the people?—Yes.

30,862. There was nothing in the shape of an advertisement asking for people to apply?—Not for the lecturers, because they were only appointed from week to week. Without the advertising we had 3,000 applications.

30,863. After going to London and being instructed were they sent to different parts of Ireland to lecture?—Yes. We had two types of them. We took a certain proportion from men who were working in factories and knew that sort of work, and the next type of men were men of sound education and of a university type, who would go to work in the good class towns.

30,864. When they were finished were they made assistant inspectors?—Yes, we made a selection from these men of two inspectors and seven assistant inspectors.

30,865. Were they appointed under any examination?—They were appointed under clause 7. The time was short and without that we could not have got any men.

30,866. Were the inspectors appointed in the same way? How did the others come in?—In the same way, by open examination amongst selected candidates.

30,867. How did you appoint the women inspectors?—In the same way. We selected one of the women lecturers as being the most suited, as we considered at the time, for the appointment, and the others by competitive examination, except the chief woman inspector, who was a direct nomination.

30,868. What is the standard of your health insurance officers?—They are rather above the average that would be expected from men in that grade. We found that the average were men of a class that in England would not take up the post at all. We got a very well educated and superior class of men. Some were from the factories, a very good type, and some were men that were in the country and had a thorough knowledge of the country, and had been in the habit of acting as secretaries of societies and doing work of that class.

30,869. You did not look to the college type of young men?—No. You see that the age limit was 25, and men of this class are already in employment.

30,870. And that limit would exclude the student?—Yes, we were assured that they would be too young for the delicate class of work that they would be called upon to discharge in going to people's houses, making inquiries and discussing things.

30,871. Of the accountants, several are women?—

The card branch and the tellers are all women, the same as in the Post Office.

30,872. You have a very considerable body of accounts to keep?—Yes, very big.

30,873. You have five first class clerks—are they not accountants?—Three are on the accountant's branch. (Mr. Houlihan.) The staff is interchangeable between the different sections, it depends upon the character and the pressure of the work.

30,874. Do you think you have the greater portion of the people that should be insured on your lists?—(Mr. Glynn.) Oh, we have by far the larger proportion. We have, I should say, 75 per cent. at the present moment, because they come in in much greater numbers than at first, and, judging by the rise in the sale of stamps, there is a steady increase, and we expect that by the end of another year we ought to have 800,000 insured in Ireland with a further increase in another year of 100,000.

30,875. You have no connection with the Labour Exchanges?—Oh, no. We don't touch that at all, except so far as regards the information that they give as to persons employed.

30,876. Who works the Labour Exchange?—The divisional officer for Dublin is Major Fuge.

30,877. Does his jurisdiction extend over all Ireland?—Yes, and they have a much more detailed system than we have, because they have practically in every town some officer who is a local person and gets a small salary and keeps a registry. We have no local system of that kind.

30,878. (Mr. Graham Wallas.) You have rather an elaborate system of cards, have you not?—Yes.

30,879. And card collectors?—Yes.

30,880. And it constitutes a part of the whole of a rather ingenious system?—Yes; they have it very well organised.

30,881. When you came into office had that system been thought out for the insurance system generally in England, or was it thought out in your office?—Well, that was thought out in London, where all the conditions were thought out and all the countries were represented on a joint committee that elaborated the system.

30,882. And every suggestion that could be made for reducing the routine labour was made to that committee?—Yes. They consulted picked men from all over the United Kingdom for that purpose.

30,883. And the result of that was that it was applied to your department?—Yes. Of course, in some cases we did not follow all their details because we have not the same division of labour as they have in England, where each branch is practically an independent branch acting upon its own lines. We had to concentrate very much more. In that way one of our branches does what two or three branches do in England.

30,884. And if that card system of labour saving had not taken place, you would have been overwhelmed with work?—Oh, yes. Besides, our accountant had spent all his time at the Post Office, and he was used to that class of work.

30,885. You had no suggestions from the Stationery or other offices of the Government on this subject?—(Mr. Houlihan.) No. They would not come to us direct, but through the sub-committee that was dealing direct with it.

30,886. As I understand the system by which you appointed your clerks and your inspectors, you have from time to time vacancies in your Health Insurance offices?—(Mr. Glynn.) No, not so far.

30,887. Were you overwhelmed with letters recommending capable and desirable people for posts?—Yes, we were up to the time of the interviews. I suppose my post bag must have been something like 1,000 letters a week, and everybody that knew the candidates that were up was writing to me.

30,888. And you think that the machinery you then created for self protection was an advantage?—It would be. I think the interview was honestly and properly carried out. Neither myself nor the deputy chairman sat on the interview committee at all. We appointed Dr. Maguire and Mrs. Dickie, and a repre-

28 February 1913.] Mr. JOSEPH A. GLYNN. (Mr. JOHN HOULIHAN was in attendance.) [Continued.]

representative came from England from the Civil Service Commissioners.

30,889. You valued from that point of view the co-operation of the Civil Service Commissioners in preventing pressure?—Yes, because he was there sitting on the Commission perfectly independent and not knowing anybody, and he judged of the merits of the candidates as they came up.

30,890. And you think in that way you got the best results by having a representative on one hand of the department concerned, and on the other a representative of an independent authority?—Yes, we thought it worked out very well in this case and saved us a vast amount of trouble.

30,891. (Mr. Shipley.) Which is Part II. of the Act that you don't administer?—Part II. is the Unemployment section.

30,892. Who does the Part II.?—The Labour Exchange.

30,893. You don't have to do with doctors?—We have no medical benefit in Ireland. Part II. has nothing to do with the National Insurance Act, and Part III. is the general section that applies both to Part I. and Part II.

30,894. Can you give me the number of your staff and the cost of the officers in round figures?—I have the total numbers.

30,895. Is it not 178?—(Mr. Houlihan.) Indoor and outdoor. (Mr. Glynn.) I could not give the cost at present. I will add it to the evidence.

30,896. I want to get some sort of relation between the cost and the benefit that the public get. Is it usual when a new Act is coming into force to send out at the cost of the taxpayer, people to lecture?—Well, it was an innovation. I think we had a precedent for it in Ireland to some extent in the Department of Agriculture. The idea of sending out lecturers was my own idea which I recommended to the joint committee, and which the Chancellor thought a good one to adopt. It was done all over the United Kingdom. I knew what had been done by the Department of Agriculture and Technical Instruction when the Act was passed in the way of lectures, and I thought it a very good way of making the Act known to the people.

30,897. You say, judging by the number of stamps sold, there would be an increase in the number of people insured—does that point to progressive poverty amongst the people?—It means that like everything else people will avoid paying if they can, but owing to our staff being now well distributed they are getting in touch with the uninsured people, those who have not up to the present been insured.

30,898. The Scottish commissioner told us some of his officials were watching people—I think I should call it spying myself, but he called it watching them—have you to do that here?—The Health Insurance officer's duty is to carry out section 112. His duty is to visit all factories and workshops and private houses where people are employed to see if the people are insured.

30,899. And has he a right to enter a house?—He has no right to enter a private house, but of course he can knock at the door and ask to see the proprietor but if he is told to leave he does so at once. As a matter of fact I must say nowhere in Ireland except in two or three districts, has there been any resentment shown. On the contrary the people have afforded every facility to our inspectors and Health Insurance officers.

30,900. And the sailors and fishermen—are their cards in order?—Fishermen with us are different—we have not completed our inquiries with reference to the fishermen because we have not the same number as they had in Scotland.

30,901. Is the tuberculosis division efficient?—Yes, in Ireland the county councils are coming forward very generously to work the sanatorium benefits and I have been able, owing to being so long connected with county councils in Ireland, to get in touch with most of the county councils and I got them to take up the work.

30,902. You stated there were none of your officials distributed in the various county towns, but of course

you have got the county committees sitting there?—Yes, we have county committees in all the counties.

30,903. You are in touch with them?—Yes the officials move about and attend meetings of these county committees.

30,904. You told us that in London they had done their best to get some mechanical device for counting these stamps; do you know if they considered any device like they have in America, having cards with holes punched in them instead of stamps stuck on them?—They had all these before the committee. I am not in a position to say, as I have no knowledge of the particular evidence they took. I never was on that committee and we only know the results as they come to us.

30,905. It seems to me there ought to be some contrivance which would save this terrible monotonous work of counting millions of stamps every day almost?—It is not such a big thing with us as it is in England. We have, after all, only seven or eight hundred thousand.

30,906. (Chairman.) At the head of this organisation in Ireland there are four—the two Commissioners and the chairman and deputy-chairman?—Yes.

30,907. Is there work for such a strong Board as that?—I think so. I have myself divided the office in consultation with the other commissioners so that each commissioner has his or her work assigned.

30,908. Would you be good enough to explain what is the distribution of work between yourselves?—I take the entire outdoor staff; the entire inspection work is directly under me. Of course, everything comes through the secretary or the assistant-secretary, but then the files dealing with the inspection staff come to me. All prosecutions come through me, and there are no prosecutions unless I initial that particular file after I have read all the particulars. In addition to that, none of the other commissioners are allowed to decide any point of principle, unless it is brought before the Commission or sent to me, and if I think it is of sufficient importance to be referred to the Commission, I so rule. Then, in addition to that, I myself am the second signature to what we call "X decisions." These are decisions where persons are excepted or exempted from the Act, and that second branch is dealt with by the deputy-chairman. He has charge of what we call the "X Department." First of all, the principal clerk and his assistant give a ruling on the facts as they come in. The system is: the person who claims to be exempt from the Act gets a form from the local pension officer, which is filled up by the employé, and another by the employer. The local pension officer writes a report on that, and it is sent up. That is dealt with by one of the clerks in the office, who writes a memorandum of what he thinks the decision ought to be. That goes to the deputy-chairman, who reads the file and writes "Agreed," or his reasons for disagreeing, and then they come to me, and I initial them. They don't go before the Commission as a whole. In addition to that work, the deputy-chairman does the approved societies, which is a very heavy class of work. All questions dealing with the work of the approved societies come either direct, or through the accounts branch, to him. They may come through our own approved societies branch, or may come on reports from the auditors, and he deals with all these.

30,909. What do the other two commissioners do?—The medical commissioner deals with all the questions of sanatorium benefits, and he has under him all the county committees. There are 39 county committees, and his branch has exceedingly hard work. In fact, I think the medical commissioner's work must be really, proportionately, harder than any of our work. He is assisted by two medical officers, who travel around. They are not always in the office. They generally spend time in visiting the various county committees, and arranging about helping them in sanatorium work. Then Mrs. Dickie has under her charge all the deposit contributors, whose accounts are in the Post Office—people not in approved societies; also all questions referring to maternity benefit, except medical questions, which go to the medical commissioner. In addition, she has any approved societies which are purely women's societies; in fact, any question dealing with women as

28 February 1918.] Mr. JOSEPH A. GLYNN. (Mr. JOHN HOULIHAN was in attendance.) [Continued.]

such. In addition, she is also doing a large amount of work in connection with the insurance of outworkers. That is a very pressing problem with us, and has not been settled yet in Ireland.

30,910. What is that?—An outworker is a person to whom a firm sends work to do, and which the employees do in their own home. There is a vast amount of it in the North of Ireland—all over Donegal and other places.

30,911. (Mr. Shipley.) You say you initial all prosecutions that take place—could you tell us how many prosecutions have taken place?—To the end of January, I think, the exact figure was 70 prosecutions, individual prosecutions, which included about 900 separate summonses. You might have 14 summonses against one employer.

30,912. Is that a large proportion of the number you recommended?—As a matter of fact, of the numbers of complaints that come in, 2 per cent. go to prosecution.

30,913. Not 2 per cent. of the numbers that come in are prosecuted?—The other 98 per cent. stamp when the letter goes from the office. The inspector first reports that in such a district a person has refused to stamp. Then there is a warning letter sent from the office, pointing out the liability that the person is under for not stamping. That is followed up by a second visit from the assistant inspector or the Health Insurance officer, and if on the second visit the person is still obdurate, then it comes back with a recommendation. We then take statements from the employé on a special form, and when the case is ready for a prosecution the files are sent to me to read, and to know if I shall order a prosecution.

30,914. Practically you then recommend it in every case?—In every case where there is deliberate refusal

to comply with the law. It is only in cases where there is deliberate refusal.

30,915. What is the result of the prosecutions?—In every case up to the present we have had fines inflicted.

30,916. Heavy fines?—Oh, no; as a rule they don't fine very heavily, but sufficient anyway to insure that the persons complied with the law, with the exception of one or two people of very high social position, who will have nothing to do with it, and still wish further prosecution.

30,917. (Chairman.) Are you familiar with this class of ordinary second division clerks?—Personally I am not. Of course, I never was in the Civil Service. I am only one year a Civil servant myself.

30,918. Mr. Houlihan is?—(Mr. Houlihan.) Yes.

30,919. Is the work which these 28 ordinary clerks do of a different type, or is it of the same type as is done generally by the second division?—I should say it is something of a higher standard, and has had to be done, of course, under circumstances of unusual pressure.

30,920. In what way is it of a higher standard do you say?—The general administrative return of the work that is done, dealing with what is generally admitted to be a complicated Act of Parliament, and each individual having to take, from force of circumstances, a great deal of individual responsibility.

30,921. (Mr. Boutwood.) Does that apply to the 28 or the 5 only?—The 28.

30,922. (Chairman.) I should have thought second division clerks would have been able to do this work?—These men have been second division clerks with considerable experience, varying from about eight years, which is the length of service they must have to be promoted, to, perhaps, 15 or 16 years' service.

30,923. Were they picked second division men?—They were picked men.

Mr. JAMES MILLS, I.S.O., M.R.I.A., called and examined.

30,924. (Chairman.) You are Deputy-Keeper of Public Records?—I am.

30,925. How long have you held that position?—Thirteen years.

30,926. Would you tell us very briefly what is the character of the records you keep?—They are all the records of the country over 20 years of age, primarily the records of the law courts, but ultimately practically everything in nature of public documents that exist.

30,927. Have the records from the Muniment Room of Dublin Castle been transferred to your keeping?—All the older ones.

30,928. Down to what year have they been transferred to you?—Practically down to 1790. We are bringing later ones over now.

30,929. Down to what year has it been determined that the records are to be transferred to you?—Under the Act they are transferred as the indexing is completed, but not to come within 50 years. That is the period laid down in the Act.

30,930. Then are all the records down to 1860 to be transferred?—They are to be transferred under the Act, but that transfer is subject to the approval of the Lord Lieutenant for the time being.

30,931. Yes, I remember there was some question about transferring to you the more recent records?—Well, we have some records down to about 1837, but there are others to come. They will be indexed and transferred.

30,932. To enable you to fulfil your functions you have as staff an assistant deputy-keeper, an assistant keeper, and seven clerks?—Yes.

30,933. Marked Class I.—what is meant by Class I. there?—Class I. is the same examination as the Indian Civil Service. Those who accept home appointments are called Class I.

30,934. We have found in different offices different nomenclatures. A man shown as Class I. had not really passed the Class I. examination?—Oh, yes, all these seven clerks passed the Civil Service examination, Class I.

30,935. The Home, India, and Colonial Civil Service?—Yes.

30,936. Well, I observe that they enter your office at the initial pay of 150l.?—Yes, 150l.

30,937. In most other offices the initial pay of the Class I. man is 200l.?—Many other offices are better than ours.

30,938. Why should a clerk who passes by the highest examination enter on a lower pay if he is posted to your office than he would if he was posted to the Treasury?—I have not the arrangement of that. The scale fixed for our office is the same as that adopted for the English Record Office.

30,939. Is that the case?—Oh, yes. It is quite the same. I looked it up very thoroughly. I did the best I could for them, and they cannot get more than they get at the other side. The Commission inquiring into the English Record Office last year recommended an increase, but the Treasury, I believe, have not done anything.

30,940. Did these young gentlemen who passed the examinations apply to be posted to your department?—They are allotted in the order of the examination.

30,941. So that if a man is posted to your department he begins at 150l.?—Yes.

30,942. And if he is posted to the Colonial Office he gets 200l.?—Yes, probably.

30,943. Is that fair play?—Of course, the men that come out highest in the examination take the best offices. For instance, I had one allotted this year. He was the 102nd in the examination. If he came tenth or twentieth he would have got a high office in England. There is a certain amount of reasonableness in that, of course.

30,944. These seven supplementary clerks begin at 70l. and get up to 250l. Are these what are elsewhere known as second division clerks?—Oh, no, they are not second division clerks. They pass by an examination which is very much the same as the second division examination, but it is not open competition.

30,945. How are they selected then?—They have been selected in practically every case from men who have been serving as temporary clerks before in the office and have already gained experience of the work there and have been tested.

28 February 1913.]

Mr. JAMES MILLS, I.S.O., M.B.I.A.

[Continued.]

30,946. What is the work these clerks do?—The work is different. Most of it is in connection with the testing of ages of claimants for old age pensions. We have sent some of them to relieve the better class clerks of the routine duties they had to do before this class was formed.

30,947. For these duties I see here that the age for appointment is between 18 and 22, with extension in favour of persons virtually employed in the Public Record Office—that is an extension in favour of these temporary clerks, but the only examination they seem to pass is handwriting, spelling, arithmetic, English composition, digesting returns into summaries and English history?—Yes.

30,948. That is very simple, and their pay is good?—The examination is fairly strict. They put very difficult papers to them.

30,949. The pay is good, is it not, for clerks recruited by that examination—from 70*l.* to 250*l.* a year?—Yes, I think it is very good.

30,950. That is better than the abstractor class than the assistant clerks?—Oh, it is distinctly better.

30,951. Are the men themselves a better type of men?—I have no experience of abstractors, but I should think they are very much the same.

30,952. Why should not the abstractor class be introduced into your office?—Simply because everything done in our office is moulded on the lines of the English office, and they have already fixed on this scheme of supplementary clerks, and the Treasury did the same for us.

30,953. What is the work these searchers do?—Their chief duty is taking out the records required to be seen, and then they have the minor work of arrangement of records. Some of these are bookbinders and repairers of records.

30,954. All mechanical work?—Mainly mechanical. Some of them engage in work that is more the work of a clerk. Two or three of them are selected for looking up the details and making returns; work similar to that on which some of the clerks are engaged.

30,955. If a person comes into your office and wants to examine the judicial records in a particular case, he has to fill up a form of application, I suppose?—Yes.

30,956. Are these the men to whom he delivers that form of application?—That is received in the public search room by one of the supplementary clerks, and he writes a docket and passes it to the searchers.

30,957. To these searchers?—Yes. The searcher goes to the place indicated, picks out the record, and brings it in.

30,958. Then he is the man who fetches and carries?—Yes, but he needs a good deal of knowledge of records to know what he is fetching from.

30,959. He must know how to read and write, of course; beyond that there is no intellectual labour, is there, involved in getting the record off the racks and bringing it down to the supplementary clerk?—It is very hard work, more than getting it off the rack; often a large bundle has to be examined for the particular paper required.

30,960. These men get 20*s.* per week, and after three years 25*s.*, and then an increment of 1*s.* per week every two years to 30*s.* per week?—I might mention that the Treasury granted a slight increase on that scale. They now go up to 32*s.*, and there are two men going to a higher rate.

30,961. When vacancies occur in the searchers have you many applicants for the vacancies?—As a general rule, it is not very well known. I get applications, but not to any great extent.

30,962. Have you a waiting list?—A small one. Of course, vacancies do not occur very frequently. There has not been a vacancy for some time.

30,963. Are the men pensionable?—Yes, they are permanently in the Service.

30,964. Do you think they have any complaint?—Well, I know they think they ought to be very much better paid. In London, men doing the same work have 5*s.* to 10*s.* a week more.

30,965. Is not the ordinary wage of labour considerably higher in England than it is here?—I do not

know; the cost of living is quite as high here, I think.

30,966. For instance, the ordinary agricultural labourer's wages is very considerably higher?—Oh, yes, agricultural labour certainly is.

30,967. What do you think would be fair?—I asked the Treasury to allow the men on entering to go up to 32*s.*, and they granted that; but I wanted to have a higher class of men for more responsible duties of overseeing others to go to 40*s.*

30,968. How many of these do you want?—I asked for three and they are only giving two.

30,969. They gave two, and they will go up to 40*s.*?—Yes.

30,970. And the rest up to 32*s.*?—Yes.

30,971. When did the Treasury make that concession?—Only a couple of weeks ago.

30,972. (*Mr. Graham Wallas.*) You have 17 temporary clerks?—About 17.

30,973. And from them the seven supplementary clerks are recruited?—Yes.

30,974. So that the 17 temporary clerks are virtually in permanent employment?—Oh, yes; seven of them I regard as virtually permanent, but of the remainder about seven more are engaged upon work which will come to an end, so that I only regard seven as practically permanent.

30,975. Seven of your temporary clerks are really permanent clerks, with practically a right of promotion, becoming supplementary clerks?—They have no right of promotion.

30,976. You do draw the supplementary clerks from them?—Those who were suitable have been promoted.

30,977. You have hitherto appointed temporary clerks to the supplementary clerks?—Yes; and we had a considerably larger number a few years ago, and we have selected men from them to be supplementary clerks.

30,978. That number has been reduced?—Yes.

30,979. Supposing there was a vacancy to-morrow in the supplementary clerks, how do you fill it up?—By limited competition from such men as were thought suitable.

30,980. By limited competition you mean that a man must get a nomination?—Yes. He is nominated by the Master of the Rolls.

30,981. What special advantage do you consider is there in this system compared with open competition?—In the case of limited competition the man is nominated, and you know, therefore, you have a suitable man, whereas if you leave it to open competition you do not know whom you get.

30,982. Now does the Master of the Rolls receive letters from time to time from people recommending persons to him?—Yes; the Master of the Rolls nominates from the names sent in.

30,983. Then you receive from time to time letters asking for nomination?—Yes.

30,984. And you receive a large number of these letters?—Not a very large number. We do not send in any names except of men who have worked well in our office.

30,985. I am talking about the new vacancies in the supplementary clerks. The men in these cases must have worked as temporary clerks?—Yes.

30,986. Then it is the case that you would fill a vacancy for supplementary clerk with a man who had already worked as a temporary clerk?—Yes, if he were a suitable man.

30,987. And the nomination is made by the Master of the Rolls?—Yes.

30,988. On recommendations made to him by friends of the candidates?—Yes.

30,989. And you think that for this kind of clerical work that is a satisfactory system of appointment?—I think it is eminently satisfactory; I have got plenty of satisfactory men.

30,990. Do you know that other Irish offices, such as the Congested Districts Board, have got rid of their quasi-temporary system altogether?—I have no knowledge of it?

30,991. (*Mr. Shipley.*) How long is your office open?—From 9.30 until 4.30 o'clock.

28 February 1913.]

Mr. JAMES MILLS, I.S.O., M.B.I.A.

[Continued.]

30,992. And do the first class clerks work seven hours per day?—Yes.

30,993. What is their day's work?—It is hard to describe it. One is in charge of the search rooms, another is in charge of the correspondence; another is in charge of the temporary clerks. Two have only just joined and are learning their work.

30,994. Do they much editing for publication?—Latterly we have not been able to do much owing to the Old Age Pensions Act, which completely upset our normal work for a couple of years.

30,995. Just explain what the Old Age Pensions Act has to do with it?—We had to check lists of 200,000 people; lists of 60,000 people were sent in at the same time; that was a big job. The registration of births in Ireland did not begin until 1864, and we had to fall back on the census records of 1841 and 1851, and it is not easy to pick up people who come in by tens of thousands from all over Ireland. The temporary clerks have been working on that for some years, and that stopped our other work.

30,996. Then the research work and editing has been stopped by this?—Yes, practically; it is a great pity, and we are trying to start it now.

30,997. As a matter of fact the work is more administrative than research?—Yes.

30,998. You want a particular kind of man for that work—men who are accurate, careful, and patient?—Yes.

30,999. Do you think you can do that by taking them from the Civil Service examinations?—At one time it was not satisfactory, but it is working better now. A man must pass the Civil Service examinations and must show a knowledge of Latin and French.

31,000. Does your work require a knowledge of Irish?—No. We have imposed, of late, a condition on new clerks entering the office, who are now informed that they will not get permission for transfer to another office. For some years we were terribly crippled by men using our office as a stepping-stone, and there was a constant loss of men who had acquired a knowledge of the work.

31,001. (*Chairman.*) You say you set your face against transfers? Does one of these seven first class clerks ever get promotion beyond 500*l.*?—Oh, yes; there are three higher appointments—a deputy-keeper and two assistant keepers. The two assistant keepers rise to 700*l.* a year, and the deputy-keeper 800*l.*

Mr. JOSEPH BRACKEN, called and examined. Mr. E. MURPHY (President of the Irish Temporary Clerks' Association) and Mr. M. DUGGAN (Hon. Sec. of the Irish Temporary Clerks' Association) were in attendance.

31,015. (*Chairman.*) Mr. Bracken, you belong, I understand, to the temporary clerks' class?—(*Mr. Bracken.*) Yes, my Lord.

31,016. Which consists altogether of 31 men, we are told?—Yes, my Lord.

31,017. It is a moribund class—it will probably be extinguished in a short time?—I understand it is of that nature.

31,018. We were told to-day by Mr. Micks that after the next examinations it would probably disappear—in that case do you hope to be provided for in the regular staff of the Congested Districts Board?—There is no particular provision for us at all.

31,019. Will it be open to you within the limit of age to present yourself for the Congested Districts Board examination?—Unfortunately no; I was just over the age at the last examination.

31,020. And no age allowance was made because of your being in the service of the Board?—No, I put a note in the application at the time, but the nomination was declined on that ground.

31,021. Tell me in a few words what your complaint is?—What do you mean by a complaint?

31,022. What do you want to represent to the Commission. Under what hardship do you conceive yourself to be labouring?—If you mean a personal grievance I cannot say I have any. It is merely on the general

31,002. That is the utmost they can rise to?—Yes.

31,003. Could not that work be done by other men—by picked staff clerks from the second division?—I tried to persuade the Treasury to have special examinations for it, but the Treasury was unwilling to adopt my suggestion.

31,004. Then I infer these young gentlemen who come with the highest university training are rather fretful when they get into your office—they don't like it?—Many of them do not.

31,005. Have any of these young gentlemen written any paper or any book of distinction upon Irish records?—Yes, one of the younger men now has written two particularly good books—Mr. Chart. He wrote a history of Dublin and a book "Ireland from the Union to Emancipation."

31,006. In that "Ireland from the Union to Emancipation"—I am sorry to say I do not know it personally—was he perfectly free and unfettered to make use of the records of your office according to his own discretion in writing that book?—Oh, yes.

31,007. You did not insist upon seeing the proofs?—I read every batch of the proofs.

31,008. If there was anything in the proofs that seemed to be injudicious, would you strike it out?—I would have recommended him to strike it out.

31,009. If he did not obey your recommendation it would be the cause of difficulty?—I don't think there was the smallest danger. I think I read over every sheet; I did call attention to several things, and in every case he agreed to whatever I suggested. There was not the slightest difficulty about it.

31,010. And if he wanted to leave your office you would prevent him from going?—Oh, I certainly would throw every obstacle in the way of his going.

31,011. Original research prosecuted under those circumstances is subject to inconvenience. What would the public say who are anxious to have access to documents?

31,012. (*Mr. Graham Wallas.*) Do you not think that some of the higher work dealing with records would be suitable to highly educated women?—Yes, but I am not aware that the question has ever come up.

31,013. Because it never came up it was never discussed?—We have several ladies as public searchers, and they do very good work.

31,014. (*Chairman.*) Are there suitable conveniences for the public in your offices?—Yes.

grounds. In view of our service we would like to have some special provision made for us.

31,023. Am I to understand that personally you have no grievance to complain of, but as one of the temporary clerks you think that the general grievances under which temporary clerks labour should be redressed?—Quite so.

31,024. Explain the meaning of the grievance; and also explain to me how you think it can be remedied?—Permanence should be arranged for us on some special basis on account of our general service to the Board.

31,025. Well now, you yourself have a very short service?—Very short, my Lord; I am little more than 18 months in the Board's service, and as regards the general body of the temporary men in our place they are all on much the same lines as myself—about two years' service at the outside.

31,026. There is no case of prolonged service at all—like 10 or 15 years?—It is two years at the outside.

31,027. It is hard to say what you have to complain of unless you complain of the abstract disabilities of the temporary men?—Quite so.

31,028. Is it worth your while talking on that point? Before we can remedy it we must have evidence of concrete hardship, and, as I understand, in this particular case 31 men will disappear with the abolition of the grade altogether. Please explain Mr. Duggan, if you

28 February 1913.] Mr. JOSEPH BRACKEN. (Mr. E. MURPHY and Mr. M. DUGGAN were in attendance.)

[Continued.]

have anything to say?—(Mr. Duggan.) I suggest that some provision be made by the transfer of these clerks to some other branch of the service. They have given satisfactory service, and they are not dismissed because of inefficiency.

31,029. Won't there be a difficulty there, as the Congested Districts Board is a temporary Board of a particular character, and men there don't belong to the public service generally. They are in a particular class of the Service, and paid from particular funds, and not paid from public funds generally, and other departments of State may make objection to taking them?—That is so. I think, owing to their service, they are entitled to be recognised as Civil servants.

31,030. I understand they are not Civil servants at all, except being paid by the State in that general sense, but they are not pensionable servants; it is only a small portion of the Congested Districts Board that is pensionable at the present time?—Yes, but they are servants of the State, and their contention is that the State should make some provision for them afterwards.

31,031. But when that claim is only supported by two years' service it is not strong?—Yes, but they have no future before them unless the Board make some provision, or they are transferred to some other department.

31,032. (Mr. Boutwood.) You have 31 temporary men and your statement relates only to six; what about the other 25?—(Mr. Bracken.) The six are members of our association.

31,033. Are we to take it that the other 25 don't share your views?—(Mr. Duggan.) The majority of the temporary clerical men in the Congested Districts Board of Mr. Bracken's grade think they can get their grievances settled by petitioning the Board, and they are inclined to approach the Board.

31,034. (Mr. Shipley.) You are not complaining of anything except that your position is precarious. You don't complain of the rate of wages or the hours of work?—(Mr. Bracken.) No, sir, the hours are good, and we don't complain about wages, but we would like to have something to look forward to in life, and that our services should be recognised.

31,035. (Chairman.) I suppose, when this class disappears you would have to seek a livelihood in the commercial world?—Yes, my lord, and commercial employers don't look with favour on those who have been some time in Government employment. (Mr. Duggan.) I have noticed in the appendix to a volume of evidence that the after careers of 58 temporary boy clerks in the Civil Service have been analysed. Of these, 39 found that their Civil Service experience was of no positive value, and my experience in connection with our association is that a commercial employer will not have a Government-trained clerk.

31,036. You are going to be abolished, and naturally are dissatisfied, and think you should be transferred to other departments?—(Mr. Bracken.) Yes.

31,037. You support that contention by the fact that you have served the Congested Districts Board more than two years?—Yes.

## SEVENTY-SIXTH DAY.

Saturday, 1st March 1913.

### PRESENT :

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (Chairman).

Mr. ARTHUR BOUTWOOD.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.  
Mr. S. ARMITAGE-SMITH (Secretary).

Mr. M. DUGGAN (Hon. Secretary to the Irish Temporary Clerks' Association), Mr. E. MURPHY (Chairman of the Association), Mr. RICHARDSON, Mr. ASHLEY, Mr. FLEMING, Mr. SOMERS, Mr. MCCRAITH, and Mr. MYLES (Members of the Association) called and examined.

31,038. (Chairman.) You gentlemen are members of the Temporary Clerks' Association?—(Mr. Duggan.) Yes.

31,039. And Mr. Duggan is here as your spokesman?—Yes.

31,040. You are delegates from the following departments: The Woods and Forests; the Agricultural and Technical Instruction Department; the Public Record Department; the Census Clerks; the Registrar-General's Department; and the Valuation Department. That, I think, exhausts the departmental temporary clerks here to-day?—Yes; Mr. Murphy is chairman of the Association.

31,041. But you, Mr. Duggan, are put forward as the spokesman of the Association?—Yes, my Lord.

31,042. Now, Mr. Duggan, will you explain your case to the Commission?—As you know there are a great many temporary clerks in the Service from Dublin; we have no means of getting the exact number; there are a good number of temporary Civil servants in the Irish public departments; and I should like to say that the Parliamentary return given at the back must not be taken as indicating the number of temporary clerks under the heading of "unestablished." That includes all classes of subordinate officials, and we have no means of getting the number of temporary clerical Civil servants.

31,043. How many members are there in your Association?—Something over 200, my Lord; and of these 200 temporary clerical Civil servants many have long services in their respective departments. In one department—the Registry of Deeds—some of the clerks have served up to 44 years' service. Their representative is not here now in this representation; but those in the Registry of Deeds are paid on piecework and have no weekly salary; they are paid 1½d. per folio of 72 words of copied matter.

31,044. How does that compare with the charges in ordinary copying offices; I think it is the usual charge?—In other offices there are salaries paid.

31,045. But I am asking you to compare what the copyists in the Registry of Deeds are allowed for copying with similar charges for copying charged in the commercial world outside; can you say?—I cannot say.

31,046. I think it is the same rate as they charge in London; some copying is done for me now and then, and I think I am charged 1½d. per folio of 72 words. Well, go on, please?—In the Registry of Deeds Department there are men who have spent 40 years in one department continuously; these are paid on the piecework system, and although they may not be aged and without capacity, their earning power decreases with age; they are not able to

1 March 1913.] Mr. DUGGAN, Mr. MURPHY, Mr. RICHARDSON, Mr. ASHLEY, Mr. FLEMING, [Continued.  
Mr. SOMERS, Mr. MCCRAITH, and Mr. MYLES.

earn as much as in their youth; and in the best days their maximum is 2*l.* 10*s.* per week, though very few ever attain that maximum. It so happens that when these men grow old they may have families, and they find that their earning power does not increase as they advance, and they get no retaining allowance such as is given in other departments, say, the Supreme Court of Judicature, mentioned in the Appendix to the Registry of Deeds statement, which gives particulars as to retaining fee and allowance for copying. These men get no retaining fee; some have up to 40 years' service and they cannot earn often 2*l.* per week, and they may have families to provide for.

31,047. Is there not a long waiting-list in the department—a waiting list of applicants to fill the vacancies that occur?—I have no information of that.

31,048. You are talking of the Registry of Deeds office?—Yes.

31,049. I think we were told there was?—I have dealt with the "temporary work" clerks. There are in other offices various classes of clerks who do general clerical work and the usual pay is 1*l.* a week. In some offices, if the clerk is under 20 years he gets 15*s.*, but I have known cases, and it is general that no matter what age a clerk may be on entering for temporary work—he might be 40—he gets 1*l.*, although he may have a family to provide for.

31,050. You are now dealing with clerks who are not on a piecework system?—Yes; assistants are often taken on in times of unusual pressure and paid 1*l.* a week.

31,051. For what length of day?—Seven hours generally.

31,052. Is overtime allowed?—Yes.

31,053. At what rate?—A copying rate of 1½*d.* a folio.

31,054. For overtime is it piecework rates?—Yes.

31,055. Is that universal?—I don't think it is universal, my Lord. I should mention in connection with temporary clerical assistants that in the Census Office, Dublin, for the purpose of assisting in the compilation of the Census of 1911, the Registrar-General had to get a staff of 175 officials, including boys and men and girls. The majority of these passed a Civil Service examination in open competition, and some passed a departmental examination.

31,056. You need not place very much importance on that. If I am right in saying that there was a competitive examination for employment at Census work?—That is right.

31,057. The examination which they passed for admission to that employment gave them no claim for subsequent employment when the Census work was over. There is little use in urging that it did. The Government regards the matter as one of contract. Sentiment does not enter into the business. If you are engaged for a particular temporary work after having passed a competitive examination for it, that fact only shows that a large number of people wished to get the work, and that the Government thought it right to make their selection by a competitive examination. They might have done it by nomination; but probably you would all have objected to that as a mere exercise of patronage. The men who applied for that particular piece of work were chosen fairly, and when the work was over their agreement with the Government ended. You would be deceiving yourself by placing importance on any claim arising from a transaction of that nature?—But I would respectfully submit that these Census clerks who hold certificates from the Civil Service Commissioners, and certificates of efficiency, might have a claim for employment in other public departments to which ordinary unskilled temporary clerks are appointed.

31,058. You mean that their selection for Census work should, when that work was over, give them priority of claim to employment in other departments?—Yes, on account of good service and governmental experience. I should like to go back to a statement I made yesterday. I referred to an analysis published in the evidence of the Royal Commission in which the cases of 58 temporary clerks were analysed with a view of

finding out whether their experience in the Civil Service was of advantage to them in securing other employment, and 39 of the 58 clerks referred to have, over either their own signatures or their parents' signatures, asserted that it was of no positive advantage in securing outside employment. There is a peculiar hardship in the case of the Census clerks to be thrown on the commercial world.

31,059. I should be misleading you if I encouraged you to place reliance in such an argument as that. Please go on?—I know from statements made by some of the witnesses of the Census clerks, they found it exceedingly difficult to secure commercial employment.

31,060. Would you direct your attention to the general question as to whether it is or is not desirable to employ temporary clerks in the Government service. Is it desirable, as a general rule, that there should be temporary employment in any kind of labour, except mere manual labour? I should like to hear you, or any other of you who have particular views on that point?—I should like to open the discussion myself. I consider the employment of juniors in a temporary capacity most unfavourable to the employed and to the employer. The junior has no assurance that his future is secure when he is taken away from domestic life and school life, when he could be preparing himself for commercial or technical life.

31,061. What is the earliest age at which you think a boy should be engaged as a clerk?—I think it would be unfair to take a boy from school, to put him in the arena of open competition or in a Government position before the age of 18.

31,062. That is the age at which boys go up for the senior intermediate, is it not—the limit of age of the senior intermediate?—I believe so, my Lord; I am not sure.

31,063. But there are many boys in commercial life who are much younger than 18; they go into business at the age of 16 or earlier?—I should like to deal with this. They go into commercial life and shops and they consider themselves in the position of apprentices. They may go into a chemist's and they are apprentices, in a way, to a chemist's life, and their experience may be useful in their career. They go into that chemist's shop with the view of improving themselves in their position.

31,064. Yes, they learn the manipulative rudiments of the work, but they have to fetch and carry just as in the shops?—Yes, but they also have the atmosphere of the shop. The druggist and his assistants come in contact with people who know things, and get to know things. It is an advantage to them after.

31,065. Quite so; well?—I have said I consider it a disadvantage for a clerk to be placed in a Government office before the age of 18.

31,066. Yes?—I think it is unfair of the State to take boys before that age.

31,067. You think it is wrong?—I do, my Lord; it is really perpetuating the system of cheap labour in my opinion. You take a boy clerk at 15*s.* a week. He knows he will be dismissed at the age of 20. Of course—

31,068. He knows he will be dismissed at the age of 18 if he does not get a permanent appointment earlier. Twenty was the former age?—Yes, my Lord, that is correct. He knows that there is another Service examination for—

31,069. That comes later?—He enters by the boy clerk examination, and if he wants to get a permanent post there is an abstractor's examination, which is restricted to boy clerks alone.

31,070. That is so?—So far it is restricted, but I would like to state that in April next there is an open competitive examination for abstractors announced by the Commission.

31,071. The competitors will be boy clerks, won't they?—It is open competition, my Lord. Before the competition was limited to boy clerks, now it is open.

31,072. If what you say be correct, and if the examination be not a very exceptional case, it seems to me an infringement of the rules that have hitherto prevailed

1 March 1913.] Mr. DUGGAN, Mr. MURPHY, Mr. RICHARDSON, Mr. ASHLEY, Mr. FLEMING, [Continued.  
Mr. SOMERS, Mr. MCCRAITH, and Mr. MYLES.

limiting competition for abstractors to boy clerks?—I have referred to the two principal examinations open to boy clerks, the abstractors which is usually a limited competition, and second division clerkships on which examination he is allowed service marks. I should like to emphasise the point that a boy clerk entering the Civil Service may study and he may not study. He may desire to become a second division man or an abstractor, but there may not be enough vacancies. Boys may or may not study, but if you increase the working knowledge and intelligence by 30 or 50 per cent. you will not increase the number of vacancies.

31,073. Are not vacancies always occurring in the abstractor and second division? Are not there examinations every year?—There are, my Lord, with limits of age.

31,074. Quite so, competitors are limited to a particular age?—Yes, my Lord.

31,075. Well?—And the competition is rather severe. Well the boy now has given some years of his life to the service of the State. He may be fortunate enough to secure a Civil Service appointment or he may not, because even if he worked very hard and increased by a percentage his intelligence or his value to the Commissioners, the number of vacancies would not be increased by a corresponding percentage.

31,076. The State has only a certain number of situations for the public service, and the State offers those to the most competent competitors. It does not undertake to find a career for every boy. It only wants for its own purpose to get a certain number of boys, and it takes the best. Therefore, the improvement you point out, the mental improvement a boy goes through is entirely in his own interest in the hope of getting one of the appointments, because if you have in an office 50 boy clerks, and they study and improve themselves, and are 50 per cent. better than when they entered, that imposes no obligation on the Government to take the whole of them if they don't want them. If they only want 20 they take the best, selecting them by competitive examination. You cannot impose an obligation on the Government to take more than they want, and you cannot prevent them from choosing the best?—Yes, I should like to argue this point. Men who have given so many years service and spent so many years studying—I don't claim that the State should extend the list—but they have not been studying in a line which will benefit them.

31,077. They take their chance of getting into the public service, and if they think that is not good enough, it is for them to look elsewhere for employment. The Government does not undertake to find employment for everyone. It can only offer employment to a certain number. There is never a lack of competitors and it takes the best men. You have not addressed yourself to the question of the desirability of temporary employment in the clerical service of the State; whether people should be employed temporarily, or whether persons taken into the service of the State should be taken in for good and all as permanent employees. That is the point you have to make, if you object to temporary service—if you think temporary service is bad, and I fancy that your presence here is an assertion that it is bad?—Yes; would you allow me to suggest a scheme by which the Government would get an efficient service without employing temporary hands?

31,078. Yes?—In France the system is rather different from here. A candidate for a Civil Service post gets a nomination from the ministry to which he wishes to be attached; he serves three months in a probationary capacity, and is nominated for an examination.

31,079. Yes, I know that?—I think that system, with amendment, could be applied to the Imperial Civil Service.

31,080. Let us begin at the beginning. A French boy gets a nomination before being attached to a ministry. That is the first condition; the boy has to get a nomination. There at the outset comes in the evil of patronage against which you have been all struggling, and against which competitive examination is, at all events, a sufficient remedy. That very first step raises

the great difficulty against which the poor boy has always had to struggle, and from which the competitive examination saves him. The French boy serves in a ministry for three months without pay; only boys who are able to support themselves can do that. Well, go on; pass by that objection, and explain your views regarding the French system, and its application to English and Irish conditions?—I think if the probationary period of service were extended, and that during that probationary time various men were tried in the posts, and some of them might be nominated for examination, and some might be allowed to try to make themselves fit for the work, might be allowed to compete with the people trained and found suitable, they might be able to get desirable Civil servants.

31,081. In the first place, the nomination is necessary, and afterwards work gratuitously in a public office, as a sort of probationer. There is no claim during that period on the State. At the end of that period a report is made about the candidate to a Minister, and again a nomination becomes necessary. A Minister nominates the probationer for the limited competition among men who have been selected from these probationers. That is the French plan, but do I understand you to say that the probationers who have not been nominated should be allowed also to compete? Is that what you have said?—Yes, it amounted to that.

31,082. If you are correctly informed (I do not think you are), what would be the difference between the French system and our own. If every one who had been a probationer is allowed to compete, whether nominated or not, there would be no substantial difference; why should not every one be allowed to compete, as here, without any probation. Here you have only to send in your application, and furnish certificates as to health and character; you introduce an unnecessary complication if before competing you insist on a period of probation. In the English system the probation comes afterwards, when you have been selected by competitive examination. Everyone who enters the Civil Service has to pass through a period of probation, during which he is tried; and, if found unsatisfactory, may be rejected?—It is not always enforced.

31,083. If it were more strictly enforced it might be better. I do not see anything in what you have said to show that this French system is better in any way than the English. What is your next point?—My suggestion from the French system is that a larger number of probationers than are actually required should be nominated for the probationary period, and the batch should be allowed to compete for the positions.

31,084. The whole of them?—Yes.

31,085. All these probationers?—Yes.

31,086. What is the advantage of that over the existing system; everybody, you say, who wishes to go into a particular office, should be allowed to go in as a probationer, and then, after the period of probation, should be allowed to compete; what is the advantage of that system over the system we have here, namely, that anybody who wants to get into the public service shall simply send in his application to be admitted into the examination?—The system of probation, and the power of rejection, to which you refer, as existing in the Service, is not generally known. I do not know that it takes effect. I do not think it is understood by people who compete in the examination system, and pass into the Civil Service, that there is a definite power of the kind you mention.

31,087. Then people do not read the published rules which every candidate should read before going in for the examination. The probation lies at the very threshold of the whole business?—If your Lordship will allow me I will leave that point for the present.

31,088. Yes, go on?—What I would like to state is that I think that a man who serves for a number of years continuously in one department should automatically become permanent on account of length of service. The man who wants to get into the Civil Service permanently has to pass an examination.

1 March 1913.] Mr. DUGGAN, Mr. MURPHY, Mr. RICHARDSON, Mr. ASHLEY, Mr. FLEMING, [Continued.  
Mr. SOMERS, Mr. McCRAITH, and Mr. MYLES.

31,089. You say that a man having spent a certain period of time as a temporary clerk, should either be dispensed with or should automatically become permanent?—If he has served satisfactorily for a long period as a temporary clerk, he should automatically become permanent.

31,090. What period would you fix?—In this connection I would agree with Sir Edward Ward, the Secretary to the War Office, in his evidence before this Commission at question number 11,060 in connection with the draughtsmen in the Fortifications Department of the War Office. He was asked, "Would you be disposed to say that provided a man on the unestablished list had remained at Government work for, say, 15 years, the question of bringing him upon the establishment may automatically arise?" and Sir Edward Ward's reply was: "I think so, decidedly."

31,091. Fifteen years. Would clerks enter the public service under such conditions, conditions of temporary service up to 15 years and the chance of permanency afterwards. Have you thought of the close sifting to which temporary clerks might then be subjected in the unestablished period of their service. Government would naturally, if it was bound to take them on permanently after a service of 15 years, winnow out all the incompetent from year to year. Men who are now making, not a rich living, but some sort of living, would have to go. I only put it to you, I do not say it is an insuperable objection?—I would like to say that the 15 years' system prevails in connection with the ordnance survey men. I am informed that after 15 years' service the men automatically become permanent.

31,092. I did not know that this prevailed in the entire ordnance service?—(Mr. Richardson.) I beg to say that that is so.

31,093. Did you belong to it?—Yes, I was on it for eight years; after 15 years they go up for the qualifying examination.

31,094. They have to pass an examination and medical tests, and so on?—Yes.

31,095. At 15 years it takes place?—For a certain age.

31,096. Does a man in that case suffer a reduction of pay on account of becoming pensionable?—The scheme was pensionable and at first that was so, but since then there has been a revision, and instead of anything being deducted there is an increase of pay.

31,097. We will look into that?—(Mr. Duggan.) Besides that, we are fighting for the abolition of the temporary system. We consider it is prejudicial to the interests of the State and the interests of the employee. If I may, I would like to quote Mr. Philip Snowden's book, entitled, "The Living Wage." At page 18 he says: "In February 1891 and March 1893 the House of Commons, with the approval of the Government of the day, passed resolutions in favour of the adoption by the State of the principle of a living wage in regard to the workmen in its own employment. The resolution which was passed in March 1893 accepting the principle of a living wage was definite." I think it is worth quoting in full.

31,098. What is a living wage?—It is a wage which enables a man to keep his family and himself in decency, to save a little, and educate his children properly.

31,099. That slides, does it not, with the class of life you belong to, your ambitions and desires. I think the temporary system might continue to prevail as it is now, consistently with the living wage; it merely means whether a man is to get 1l. 10s. or 2l.?—I contend that the present temporary system does not allow a living wage to a man and his family.

31,100. You are going now into the question of a living wage?—Yes, and also the increased cost of living during the past 10 years in Dublin.

31,101. I do not want to stop you, but are you not straying from the argument addressed to the abolition of the temporary system?—We want the complete abolition of the temporary system, and we suggest that any temporary man who has given long service—we will not say any particular number of years, it is a

very difficult point—and satisfactory service in the department in which he has served, would be made permanent on an official basis.

31,102. That is a definite proposition which this Commission will consider. Have you any other argument to address to this Commission that is in favour of that proposition. If not we should like to hear any other gentleman who wants to support the proposition or to urge any particular view he may wish to put before us. I think you now have really gone over the ground which you desired to cover?—There is a gentleman here, Mr. McCraith, who has written this and handed it up to me, "These temporary positions are usually accepted under stress of circumstances without any thought of the future, but when things become smoother the individual sees that he has made a bad bargain, he has no prospect of any increase of pay, although it is most inadequate, and he has to make the best of it."

31,103. I think that is a likely state of things. It is really what often does happen. A man takes temporary employment under stress of circumstances, and afterwards finds it difficult to get out of it; I think that is a reasonable way of putting the matter?—He must endeavour to make the best of it until he gets an opportunity of appealing to a Royal Commission to give him a decent wage.

31,104. It is a proper way of placing the matter before the Commission?—I would like Mr. McCraith to say a few words.

31,105. Yes, certainly?—(Mr. McCraith.) These temporary appointments I am very certain are usually accepted under dire stress of circumstances; very often, and, in fact, in most cases, when things begin to run smoothly for the individual, after a few years, he sees no prospect, nothing in front of him, and no hope of reaching a proper maximum, or anything of that kind. He has no means to provide for his old age, and in a good many cases he cannot even insure himself decently. In order to live out of his weekly salary he cannot pay a premium upon a decent insurance policy, and he drifts along until things become hopeless, and it is only in a case of this kind when he can appeal through his organisation to a Royal Commission that he can hope to get them to recognise the difficulty under which he is living, and that, as a result, he might be able to better his position somehow. Having spent the best years of his life in the service of the State, the State should at least provide for his old age, as is done by commercial firms, and that sort of provision is on the increase; speaking for Dublin, I must say that. Then, in commercial life his merits are recognised by his employer; he gets a decent salary, and his position is enhanced in a good many ways; his employer tries to make it appear to him, or does make it appear, that he appreciates his services, and the employee regards his employer's business welfare as a kind of vested interest for himself. Nothing of that nature obtains in the service of the State; he works as an automaton, and has no prospects. He may show ability of any description, but he still finds himself in a hopelessly subordinate position; he gets no merit for anything; there is no scope for his abilities in any way. In commercial life he gets a certain employment, and although the salary is not perhaps automatically increased as it is under the State, he gets an increase every now and then, and as it is substantial it helps him along just as much as if he were in the Civil Service. Personally, if I may say so, I was in commercial life for two years before I accepted a position as temporary clerk in the Government service. During those two years I got both promotion and increase of pay. The reason I left was I was advised by a kinsman who was in the Civil Service, that if I got into what he described as the outer circle I would be likely to do well, and my chances would be better.

31,106. What pay are you getting now?—I have been getting a maximum of 35s. during the last eight years.

31,107. I do not wish to pry into your personal affairs, but may I ask what did you get in business life?—To be as precise as I can, I will state the difference

1 March 1913.] Mr. DUGGAN, Mr. MURPHY, Mr. RICHARDSON, Mr. ASHLEY, Mr. FLEMING, [Continued.  
Mr. SOMERS, Mr. MCCRAITH, and Mr. MYLES.

between what I was worth then and what I am getting now. I was in the drapery trade, and we were getting our board and keep, which was reckoned to be worth from 40*l.* to 45*l.* I was paid 25*l.*, that is, 65*l.*; in round figures I was worth 70*l.* After 12 years' service I am now worth 90*l.* in the service of the State, and I am never likely to be considered to be worth another halfpenny.

31,108. You had much longer hours in commercial life?—Very little.

31,109. I should have thought that in a draper's shop you would have been pretty busy from 8 o'clock in the morning until 6 or 7 in the evening?—I was a clerk in the counting-house, and they have fairly regular hours in the counting-houses of those business firms. Occasionally, as happens in the Civil Service, one had to put in an extra hour or two, but you would be paid for that or it was likely to count anyhow.

31,110. Would you say that if you had remained in commercial life you would by this time be drawing 150*l.* or 200*l.*?—I would probably be drawing 200*l.*

31,111. We often hear that where in Dublin a Government clerkship at 25*s.* to 30*s.* a week falls vacant there are 20 or 30 applicants; what is the meaning of all that?—Simply the struggle for existence has become so keen, clerks have become more numerous, for the simple reason that education has given them ambition; they come from the rural parts of Ireland to Dublin, having become sufficiently educated and having got ideas of city life, and instead of working there they prefer the city.

31,112. They reject manual labour?—They reject manual labour by virtue of their education.

31,113. They think that is lowering? They become educated and prefer to work, if I may use a colloquialism, at driving a quill on 10*s.* to 15*s.* a week to manual labour, perhaps on their own farm, making a decent living?—It is not a case of agricultural labourers but of ordinary commercial and industrial life. Instead of coming here to quill driving, as you say, if they turned their attention to these things it would be much better for themselves and for the country.

31,114. Is it the fault of the education?—Of education such as they get, a great deal of it.

31,115. And if there be higher education, will there be more ideas of the kind?—Yes.

31,116. Thank you, I have a good deal of sympathy with you?—(Mr. Ashley.) You asked us about the abolition of temporary service. It is very generally agreed that it should be totally abolished, because it is not alone unfair to the man, but because temporary service is unfair to the office itself and unfair to the Service generally. In my own case I took up a position in the Department of Agriculture at 30*s.* per week. Immediately previously I had 150*l.* a year in London as a clerk.

31,117. Why did you give it up?—The firm I was with failed and my people were here in Dublin and I was married at the time. I came over here and my father died and I had to try to get a position. I was offered this position in the department at 1*l.* 10*s.* per week, which I had to take. I had nothing else to look forward to. I did not think when going in there that I would still remain now at practically the same salary. It has been very little increased since then. That obtains in almost every Government office in Ireland.

31,118. What age are you?—36. Personally, I do not consider that I have a living wage by any means. I think it is unfair to take a man in as a temporary official and to keep him, as I have been kept for 12 years, at a very small salary. I consider that if I had been in a good commercial office for 12 years I would have a very different salary from what I have now.

31,119. (Mr. Shipley.) I gather that you agree that the boy clerk system is a bad one?—(Mr. Duggan.) Yes.

31,120. If you have got a piece of work such as comes along only once in 10 years like the census how can the Government get on without temporary labour? With regard to the census it takes about two years. (Mr. Somers.) I spent 17 months myself in the census.

31,121. The census comes every ten years, and there is an interval of eight years in which you would not be wanted. In a thing like the census which comes at recurring intervals, when you want a lot of help, I do not see how you can do without temporary clerks?—They could take temporary clerks from Government offices where they are not used.

31,122. Do you think you could collect such a body of clerks from other Government offices where they were having a slack time?—I really think so, and again the census people on entering the office sometimes know nothing about Government business, and these men, who have experience, would be able to do it with a less number.

31,123. At the end of 17 months did you revert to another office?—For two months I did nothing, and then I was fortunately employed as a temporary clerk in the Labour Exchange, and since then I have 27*s.* a week.

31,124. There again, I suppose the establishment of Labour Exchanges and the present tendency of legislation to produce a gigantic mass of work which has to be dealt with at a feverish rate, accounts very largely for these temporary clerks. It seems to me you cannot do away entirely with temporary clerks?—(Mr. Duggan.) I would like to suggest if you are going to deal with the census clerks you might do it in this way. The position in cases of that kind is this: they hold Civil Service certificates and they have passed a Civil Service examination. Their position is unique. There are temporary clerks in various departments in Dublin such as the Labour Exchange and the new department of National Health Insurance. I think the Civil Service Commissioners who have evidence of their efficiency (educational and physical fitness) should arrange something better than what is done in the case of the census clerks who pass an examination, and that they should have a supplementary register, and when a Government department in Dublin finds it necessary to get temporary assistance they give it to their own hands and be supplied by the Civil Service Commissioners, who could register the names of qualified persons.

31,125. (Chairman.) You want to have a Labour Exchange for Government clerks?—No, not quite that. It does not resolve itself into a Labour Exchange, but the Civil Service Commissioners should have a register of permanent officials.

31,126. You want to see the principle of the Labour Exchange applied to these clerks?—The machinery would not be so cumbersome.

31,127. (Mr. Shipley.) There would probably have to be small off-shoots from the office in London to Dublin?—(Mr. Myles.) Talking about that, with reference to the finance branch of the Valuation Office, there are four or five second division clerks who are limited to temporary service, and all these four temporary clerks are on permanent work. That work will go on indefinitely for 20, 30, or 40 years, and they have no prospects even of getting overtime. Any overtime is done in another branch by the permanent men.

(Chairman.) That is an illustration.

31,128. (Mr. Graham Wallis.) You are now a supplementary clerk in the Public Record Office. You are a pensionable officer beginning with a salary of 70*l.* a year and going up to 250*l.* What is your present salary?—(Mr. Duggan.) 70*l.*

31,129. Were you up for a boy clerkship?—I was.

31,130. For the examination?—Yes.

31,131. And you failed?—Yes.

31,132. Did you ever sit at a second division examination?—No.

31,133. You sat for a boy clerkship and failed?—Yes.

31,134. You then went into the Service in the Public Record Office, and got for that purpose a temporary service nomination?—Yes.

31,135. From whom?—The Master of the Rolls.

31,136. How did you approach him. Did you write to him. How did you get at him?—It was like this, to go into a little detail, my father was a first class clerk.

1 March 1919.] Mr. DUGGAN, Mr. MURPHY, Mr. RICHARDSON, Mr. ASHLEY, Mr. FLEMING, [Continued.  
Mr. SOMERS, Mr. MCCRAITH, and Mr. MYLES.

31,137. (*Chairman.*) Don't go into details. We want to know how you got the nomination; was it friendly influence or otherwise?—Friendly influence.

31,138. (*Mr. Graham Wallas.*) You had failed as a boy clerk and you got, through influence, a nomination from the Master of the Rolls?—Yes.

31,139. Is I. J. Duggan, now a temporary clerk, a relation of yours?—My brother.

31,140. He also got a nomination?—Yes.

31,141. And he is among the temporary clerks?—That is so.

31,142. He hopes sooner or later to get from the temporary clerks into the supplemental clerks?—He will have to pass through an examination.

31,143. It is a mere pass examination, a qualifying examination?—It is sometimes a limited competition; it may be limited to the office.

31,144. Now, Mr. McCraith, you have told us that your friend informed you in Dublin that if you got into the outer circle of the Civil Service, into the temporary fringe of it, you would have a strong chance of being admitted into the inner circle?—(*Mr. McCraith.*) Yes, I had that from a kinsman who had spent a period in the service of the State; he advised me to leave commercial life. An opportunity arose on the occasion of the census of 1901, and he got me a nomination for the census and I sent in the papers, and I had nothing to do but to sit for an examination.

31,145. What trouble did he take to get you nominated?—I was nominated by the usual process, by the Lord Lieutenant in the case of census clerks.

31,146. How were you nominated?—This gentleman was in close touch with His Excellency at the time.

31,147. You got into the census by nomination, and I suppose you were led to believe that once you got Government pay the Government pay would increase and you would ultimately get into the Civil Service, into the permanent service?—I was too young at the time, I did not give much serious thought to it, I was only a boy.

31,148. That was what your friend had in his mind?—It was my parents whom he approached.

31,149. That was what your parents had in their mind?—They were influenced by him.

31,150. And you hoped that that would happen to you which has happened to Mr. Duggan; that sooner or later you would get into the permanent service?—I had a vague idea at that time.

31,151. Now, Mr. Ashley, you came into the Service in very much the same way, with the hope that having got into temporary service under the Government it would lead to permanent service?—(*Mr. Ashley.*) I had some idea of that kind.

31,152. The temporary service was, in fact, without prospects?—I thought, perhaps, that if I were retained in the Service for a certain number of years I certainly would get on the pensionable staff; I thought such would follow in course of time.

31,153. Now how did you get nominated?—I just heard from a friend who knew the Department of Agriculture was starting. He had been offered a post himself, and did not wish to give up his own post at the time. He came to me and asked me if I would like to take it. I said, "Yes," and I saw the secretary and was appointed there and then as the work was very urgent at the time.

31,154. Would not you agree that it would be a very bad thing for the interests of the staff in Dublin, that any man who gets on temporary pay should think that he would sooner or later get into the permanent Service if that were not true?—I do not know about the general interests of the staff. Of course, you cannot help thinking that something will occur if you are retained sufficiently long in the Service; you naturally hope to be a permanent official after getting on and serving a certain number of years. If I were told it would be only for six months I would have no hope, but if I am retained from year to year, such as I have been, I would certainly think it a great hardship if

I were to be told now that my services would be no longer required.

31,155. Would you say it is a thoroughly demoralising arrangement, this sort of vague expectation that anybody who can get a nomination for any job, however temporary, will be sooner or later, if he looks out for himself sufficiently, get into the permanent Service?—I think that should not be allowed to exist.

31,156. (*Mr. Graham Wallas.*) I entirely agree with you.

31,157. (*Mr. Boutwood.*) Mr. Duggan, when you were asked how you proposed to get rid of temporary labour you said that you thought that, after 15 years' service, a man ought to be established. If he is put on the establishment what is going to happen to the younger men?—(*Mr. Duggan.*) I would like to say before going on that I did not fix on behalf of my association the period for temporary clerks at 15 years.

31,158. It does not matter what sort of period you have, you say that a man having served a certain period of service, whatever that might be, should be made permanent; then what would you do with the rest?—I think the junior officials who have served satisfactorily in a department should have these benefits of permanency and pension accruing to them, so that when they complete a certain (unstated) length of service, at present unknown, they would automatically become permanent.

31,159. (*Chairman.*) What you want is, that a junior man should have an inchoate right to confirmation?—Well, length of service will give him that right.

31,160. If he is turned out at six years' service he would be disappointed; if turned out at eight years' his disappointment would be aggravated?—That is so; as the length of their service increases they feel that their claims are getting stronger. Mr. Richardson would say something in that connection. (*Mr. Richardson.*) The terms of appointment are not always correct. Take one case. Five men are designated as temporary clerks, but all these men are trained surveyors and draughtsmen, and were specially employed to do that class of work, although they were designated as temporary clerks.

31,161. They are trained draughtsmen and surveyors, but they are employed as temporary clerks by this arrangement and agreement?—I submit that to call them temporary clerks is an injustice in itself.

31,162. Still, an essential part of the business is the temporary character of your engagement?—Yes, but at the same time, if I receive my proper title, I would receive more money as a surveyor and draughtsman than as a temporary clerk.

31,163. Were you engaged as a surveyor and draughtsman or as a clerk?—I was engaged as a clerk to do drawing work.

31,164. I think we have listened with a considerable degree of patience, because I was anxious to see what was at the bottom of the whole thing. Now that I understand it I do not think there is anything else you can say which will throw any further light upon the subject. (*Mr. Duggan.*) I don't know whether I am quite right or not in bringing this case forward, but there are certain gentlemen who may be considered to belong to the Civil Service. They are men who are paid out of a grant allowed to the head of their department, what is called a lump sum.

31,165. A lump sum?—Yes, I do not know whether they are Civil servants.

31,166. Are they paid out of the lump sum, or are they put on the vote?—The lump sum, I think.

31,167. Do they appear on the vote?—I do not know whether or not they appear on the vote. I have not referred to it.

31,168. What department are they in?—They belong to the Receiver's Office in the Four Courts, and the like. The Land Judge gets an allowance for temporary assistants.

31,169. There may be some question whether or not any of you are Civil servants. You are not pensionable?—We are State servants.

## At the Royal Commissions House, Old Palace Yard, S.W.

## EIGHTY-FIRST DAY.\*

Thursday, 10th April 1913.

## PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Mr. ARTHUR BOUTWOOD.

Mr. JOHN ROBERT CLYNES, M.P.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Miss E. S. HALDANE.

Mrs. DEANE STREATFIELD.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. W. M. J. STARKIE, M.A., Litt.D., LL.D., called and examined.

33,251. (*Chairman*.) You are Resident Commissioner of the National Education Board, Ireland?—Yes.

33,252. We had the advantage, when we were in Dublin, of taking the evidence of Mr. Butler, and one of your secretaries of the National Board of Education, Mr. Lemass. But we feel that we have not got a complete and comprehensive account of the system of Irish national education, and that no doubt you will be able to give us. If, ignoring all questions of staff, you will give us a broad account of the system of national education, the relation which exists between it and secondary education, and, so far as you can, the relation between both and the university education in Ireland, we shall feel greatly obliged?—The Board of National Education was established by a letter to the Duke of Leinster from Mr. Stanley (afterwards Lord Derby), who was Chief Secretary in the year 1831. It originally was composed of seven members, with the Duke of Leinster as president, with a small endowment—I cannot call it an endowment, but a vote—for the first year, of 30,000*l.* to assist existing schools—not to open schools but to pay over small sums between 3*l.* and 12*l.* to the teachers of existing schools as a supplement to their salaries, which were provided from local funds. That system, although the circumstances have entirely changed, really continues to the present day. Although our present grant is something like 1,800,000*l.*, and although the money given to the schools in most cases is the total sum that these schools receive, still these grants are called grants-in-aid. Although occasionally through a confusion of ideas the word “salaries” appears in the Rules, we still look upon these grants as merely grants-in-aid of what the localities are supposed to do. When we are taking on a school, we ask how much local aid is available, and we are supposed not to assist a school unless local aid is provided. But, as often happens, local aid is promised and is not forthcoming, and the result has been that, after 80 years, the State grant practically is the sole grant to the schools. That might roughly be said to be so. The Board, as I said, was originally composed of seven members, and it existed and worked simply on this letter of Mr. Stanley for 14 years. There was no Act of Parliament behind it and there is not still. We had no charter until 1845. There was a second charter in 1860 which raised the number of members on the Board to 20, which is the present number, half Catholic and half Protestant. Originally there were four Protestants and three Catholics, but in 1860 the number was equalised and still remains so.

33,253. All purely nominated by the Lord Lieutenant?—Purely by the Lord Lieutenant. Originally the administration was conducted by the whole Board, and it was a very small affair. There were only 200 schools, which quickly mounted up to 2,000, and then it was found necessary to delegate part of the administration to a committee called the Office Committee. Of the seven members it turned out that only one, a Presbyterian clergyman living in Dublin (Mr. Carlile),

turned up. The Duke of Leinster had other duties I suppose, and the rest of the members of the Board were busy men, and it was found after some time that only one turned up for the committee.

33,254. Was this the first meeting of the Office Committee?—This was the first meeting of the Office Committee. Then, as this Presbyterian clergyman was the only person who looked after the details of administration, it was proposed after a time that he should get a salary of 300*l.* a year and a horse and car. He was also allowed rooms in Marlborough Street, and that was the origin of the title which I have (*viz.*, “Resident Commissioner”), although I do not reside there now. After a few years Mr. Carlile resigned. Then, as the work had increased very rapidly, in 1838 Mr. Alexander McDonnell was appointed out of the Castle—I think he was one of the first class clerks there—definitely to the post of Resident Commissioner. That was really the origin of the office. He got 1,000*l.* a year, and that salary was increased in 1873 to the present figure. So that my post may be said to date from 1838. The Office Committee had complete control of the details of administration. It was supposed to meet daily, and any commissioner who liked could turn up and sit with Mr. McDonnell, but as a matter of fact nobody ever did turn up for 60 years, and consequently, in practice, the Office Committee came to mean the Resident Commissioner. The title “Office Committee” was abolished about 12 years ago. Most of the Commissioners did not know the meaning of it. I do not believe they knew that they could present themselves if they liked and control the details of administration; at any rate, they never did, and possibly I should have been rather surprised if they had. The title was a confusing one, because many of the commissioners, I believe, thought the secretaries and the accountant (or the financial assistant secretary, as then) were members of the Committee. They used to see on the Agenda, “Recommendations of the Office Committee. Present: The Resident Commissioner attended by the secretaries.” They thought that the secretaries were members of the Office Committee. I explained to them that the Office Committee was myself, and they said, “In that case it is a misleading title and should be changed,” and they forthwith abolished it; so it does not exist any longer. The details of administration are now controlled solely by myself, and I make “provisional orders” which are brought up with certain details before the Board which fits them or not just as it likes.

33,255. Does the Board meet regularly?—It meets once a fortnight. For many years it used to meet once a week, but about 12 years ago it was decided to meet once a fortnight, because it was found that when the meetings were weekly busy men did not turn up, and there was a very bad attendance.

33,256. That is the history of it?—Yes.

33,257. You conduct the administration during the intervals between the Board meetings, and any matters of great importance—administrative or otherwise—you mark for consideration by the Board?—It rests with me according to certain regulations laid down at the

\* Dr. Starkie's evidence is included in order to complete the *fasciculus* of evidence relating to the Irish departments.

10 April 1913.]

Mr. W. M. J. STARKIE, M.A., LL.D., LL.D.

[Continued.]

beginning of 1902 to fix what comes before the Board. Somebody must decide it. The rules made by the Board were that matters of principle, and the classes of cases to which the principle should be applied, must come before it; but as to whether a particular case comes under a particular principle, primarily at any rate, it rests with me to decide.

33,258. That being the case, what is the control which the Board or you exercise over the appointment of national teachers?—Technically every appointment comes before us. We have to fiat it, but practically the fiat means that if certain regulations which we have laid down are carried out the teacher is approved by us. For instance, it is our rule that the principal teacher of a national school must be trained. That is a check upon the discretion of a manager, since he must select a trained teacher. Again, in the case of certain large schools we have a regulation that the principal teacher must have given five years' service in an inferior capacity—that also is a check upon the discretion of the manager. He cannot appoint a principal to a school with an average attendance of over 95 unless he has given five years' teaching in an inferior capacity. There are several rules of that kind, and if these rules are carried out, unless we have a black mark against the teacher in the office to the effect that he must not be recognised any more in a national school, the manager has absolute discretion, and consequently he may be said to appoint as well as to dismiss the teachers.

33,259. As a rule who is the manager?—As a rule, in the case of Catholic schools, he is the parish priest. In the case of Protestant schools he may be anybody, but in practice he is generally the rector or the Presbyterian minister.

33,260. I think we were told that a great many of your teachers at present in Ireland are not trained?—That figure can be discovered from the annual report. Thirty years ago 70 per cent. of the teachers, roughly—I am not quite certain about the figure—were not trained, but the percentage is rapidly decreasing. At present the number of untrained teachers would be about 32 per cent., and that is a very much smaller percentage, I may say, than in England.

33,261. (Mr. Boutwood.) By "trained" do you mean what we called "certificated"?—No, what we mean by untrained are those who have not passed through a training college. We would not recognise as trained a number of your certificated teachers who have only passed an examination.

33,262. (Chairman.) You mean by "trained," men who have passed through a training college?—Who have been two years in a training college.

33,263. And men who antecedently must have had certain experience in teaching?—No, not necessarily. If a man passes the entrance examination, although he is an outsider and has never been in a national school, he can go into a training college. You can see, of course, that the untrained teachers must be decreasing very rapidly, because we never appoint now among men, even to assistant-teacherships, an untrained teacher. Untrained assistants among women are still permitted, because the training colleges are not turning out a sufficient number of trained women to fill the vacancies in the schools.

33,264. I think we were told that you have at the present time something like 8,000 national schools in Ireland?—8,400, I think, is about the number.

33,265. Of those 8,400 what percentage have trained teachers, could you say off-hand?—I think 68 per cent.

33,266. That is, teachers who have passed two years in a training college?—Yes.

33,267. The remaining 32 per cent. may not have trained teachers, but all new appointments must be of trained teachers?—That is so. The untrained teachers are probably largely survivals of the old time. The reason why there are so many untrained teachers is that Catholic teachers were not allowed to go to Marlborough Street, and there were no other colleges in existence before 1881.

33,268. (Mr. Boutwood.) Are there other colleges now?—Plenty; in fact we turn out rather more teachers than we require. They come to England to

supplement the lack of teachers at present existing here.

33,269. (Chairman.) Have the national school teachers whom you appoint fixity of tenure in their appointments?—I should not care myself to exist on such a tenure as they have.

33,270. Will you explain what the tenure is?—Any teacher in Ireland can be dismissed on a three months' notice.

33,271. Or, I suppose, on paying him three months' salary?—Yes. He can appeal to us, I think you were told, by a new rule which I personally got the Board to pass. He can appeal to us if dismissed by the manager, and we can investigate whether the reasons alleged by the manager are in our own opinion sufficient. But we cannot reinstate the teacher, though we may remove the manager, as in fact we did in some cases. The principle the Board went on was this: According to the terms of the agreement the teachers sign with the managers, they must get three months' notice of dismissal. The manager in giving notice need not give any reason for his action, but we, exercising an equitable jurisdiction, hold that as we pay the salaries we ought to have some voice in protecting the teacher from an injustice that he might suffer even in a legal way.

33,272. So that you assert an authority which, if unquestioned, is adequate to protect the teachers?—No, I do not think it is adequate in this way—and I speak from the experience of a number of investigations that I have held—it is our practice and our inclination not to interfere unless we think the injustice is fairly gross, because we cannot reinstate the teacher; no doubt we may close the school; but we do not like to do that except in case of a very gross injustice. So that even when we consider that the action of the manager is somewhat questionable we do not care to interfere.

33,273. Who appoints the managers?—The manager is a person who has got very large powers, but when you go back to the appointment of the first manager of a school you might say he is not selected by anybody in particular. He selects himself, I think. The manager is the first person who asks to have a school taken on, and he may be Tom, Dick or Harry, provided that according to the rules he is a person whom the inspector considers respectable—the respectability of a clergyman is always assumed.

33,274. The parish priest is, I understand, the manager now, but when he dies?—His successor is automatically recognised.

33,275. If a new school manager were appointed, an application would be made to your inspector, and your inspector would have to report upon the application, would he?—The application would be made to the secretary, and then referred to the inspector to say if the person was fairly respectable. Sometimes it happens to be, in the case of a small farmer, a nice point whether, according to the terms of the rule, he is a respectable person or not, but provided he is reasonably educated we rarely refuse him.

33,276. Then the appointment of manager would be made by the Board?—Yes.

33,277. And do the Board hold they could revoke such an appointment at any time, they please?—Yes, but we cannot do that without holding a formal investigation. There was a celebrated case, which your Lordship may remember, of Father O'Keefe, many years ago. We dismissed Father O'Keefe without a special investigation, and the case came before Parliament, and there was a parliamentary inquiry. The result was that the Board made a rule that we must hold a formal investigation, notifying to the manager that he is in danger of dismissal.

33,278. But subject to that you now maintain that you are competent to hold a formal inquiry into the conduct of any manager who dismisses a teacher?—Certainly; but the Board, being composed of 20 persons, is cautious. There are managers and managers. When a manager is a member of a great organisation there is great difficulty in dismissing him.

33,279. That is a point upon which you would like to have your legal authority clearly defined?—Yes.

10 April 1913.]

Mr. W. M. J. STABKIE, M.A., LITT.D., LL.D.

[Continued.]

33,280. And you would like the definition to be in favour of recognising the full power of the National Education Board to dismiss managers on cause shown?—We have that.

33,281. You have that power, but do not always assert it?—To speak perfectly plainly, to dismiss a manager except for unanswerable reasons might mean the closing of three-fourths of the national schools in Ireland. You will understand that. I wish to add that, since the "Maynooth Resolution," under which a notice of dismissal must be countersigned by the Bishop, I have not had an appeal in more than one or two cases from a Roman Catholic teacher.

33,282. (*Mr. Boutwood.*) The power you want is rather a power with regard to the teachers and your range of investigation. Is not that the additional power you want? You want a more definite and larger power of dealing with that?—I do not know that we really require any more power; the question is whether we should exercise it or not. We have to consider whether it would be opportune or not. We do not wish to bring down the whole of the system like a house of cards. On the other hand, if a manager is a layman there is not the slightest difficulty about dismissing him.

33,283. (*Chairman.*) It is the difficulty which arises from having a great organisation to deal with. But you have control over the teacher; you appoint him and dismiss him?—We can.

33,284. It is only when the teacher is dismissed by somebody else that your difficulty arises?—Yes.

33,285. There are 8,400 schools, and we were told there was a difference between vested and non-vested schools. It was not made very clear what the difference was. Will you explain it?—The vested school is a school held under trustees, or vested in the Commissioners, under a deed to which the Commissioners are a party, and it must be devoted to national education. It cannot be removed from under the Board and devoted to something else. In the case of a non-vested school grants are received from us but may be refused at any time, and the building may be turned into a place of worship, etc. That is the difference. In the case of schools vested in the Commissioners, the Board of Public Works keep the buildings in order by painting, papering, and whitewashing. In the case of vested schools we give two-thirds, or perhaps more, of the building grant; in the case of non-vested schools we do not contribute anything except grants to salaries.

33,286. How many of the 8,400 schools are vested and how many are non-vested?—That is in the annual report. There are 3,550 schools vested out of about 8,400. The balance are non-vested.

33,287. So that it might come to this. That you appoint a teacher to a non-vested school, and if that teacher were dismissed and you instituted an inquiry the school might be closed?—Yes, the school might be closed whether vested or non-vested; but a non-vested school might be opened again under another authority (*e.g.*, the Erasmus-Smith Board.)

33,288. If there was legislation, and, instead of having your Board, there was a department of public instruction established in Ireland, would the difficulty disappear?—I do not think so; not necessarily.

33,289. The legislation would affect the vested and non-vested schools alike?—I do not think it would lead to all schools being vested; but there is a greater tendency now to vest than used to be the case. Indeed, we often now refuse to vest a school, for example, if the building is not good enough.

33,290. If you were to take over the responsibility for the maintenance of all these schools, do you think the trustees or proprietors of non-vested schools would willingly accept it?—Certainly not.

33,291. Why not?—Take the case of the Roman Catholics: the Roman Catholic Bishops at present refuse to vest their schools in the Commissioners although they would thereby be relieved of the whole charge of maintenance. They will not do it. They think they have more control of their schools if they are not vested in the Commissioners. I never could see in what respect they had very much more control, but they

have that idea. Presbyterians and Church of Ireland people often refuse to vest, even in trustees, because they like to make use of their schools for denominational purposes after school hours.

33,292. Although the system of national education in Ireland is supposed to be undenominational, it is really denominational in practice?—With a conscience clause.

33,293. Is the conscience clause operative?—Yes, always.

33,294. Both in Catholic and other schools?—Yes; that is almost the only remnant of the original system that remains. In most other respects it may be said to be a purely denominational system.

33,295. Could you give us the number of children who attend the national schools?—The number in average attendance is about 500,000.

33,296. There is a conventional percentage, is there not, of the population, showing the numbers who ought to be at school?—I am glad to say that the centesimal proportion has increased rapidly since I took up my present office—by 10 per cent. It is 72 per cent. now, which in England is thought very low, but still in the sixties of the last century the centesimal proportion was only 30. When one considers the local conditions of the country, the bad weather, the fact that children often live far from school, and that they are kept at home for work, and so on, 72 per cent. for the whole country is by no means bad.

33,297. Is any compulsion exercised in the rural parts of the country?—Yes, a good deal in many districts where they have adopted the Act, and in a great number of our urban districts.

33,298. (*Mr. Boutwood.*) What do you mean by "adopted the Act"?—It is voluntary in Ireland. The authorities can adopt the Compulsory Education Act or not just as they like. There are also several faults in that Act. The children have only to attend 75 times in six months, that means 150 times in the year, which is a poor attendance. Magistrates are loth to convict and the fines are small, and the result is, that I really believe that the Compulsory Education Act has had very little effect in Ireland.

33,299. (*Chairman.*) Although it has been adopted in several places?—Yes.

33,300. Has it been adopted by the majority of the counties?—It has been adopted by 131 rural districts out of 252. People of authority in these places are often strongly averse to acting on these committees, since they think it would make them unpopular. I cannot say that the Act has worked well or increased the attendance very much.

33,301. When you say that there are 500,000 children in school, are their names merely entered on a roll; or have they to put in an amount of attendance?—For the average of attendance you take the number of requisite days and the number of children present each day, and divide one by the other, and that is called the average attendance. The number of children on the rolls is considerably larger than that, as the average attendance is only 72 per cent. of the number on the rolls. We remove a child's name from the rolls if he or she has not been at school for four consecutive weeks.

33,302. But what is the divisor which gives you the 500,000? What number of days?—Two hundred days.

33,303. (*Mr. Boutwood.*) You said just now there were 500,000, which is 72 per cent. of the number on the rolls?—Yes.

33,304. What relation has the number on the rolls to the possible number of the population?—That is impossible to know without referring to the Census. I could not tell you how many children ought to be on the rolls. One in five of population is supposed to be the proportion, but, of course, that is very rough.

33,305. (*Miss Haldane.*) Is there no census of children of school age?—There are so many other kinds of schools. There are Christian Brothers schools, which are not under us, and many private schools. So the one in five would not tell you much with regard to the national system, as we do not cover the whole country.

10 April 1913.]

Mr. W. M. J. STARKIE, M.A., LL.D., LL.D.

[Continued.]

33,306. (*Chairman.*) I thought there was a conventional percentage, that 15 per cent. of the population were of school-going age?—Attending what schools?

33,307. All schools?—Yes, but that will not tell you how many children ought to be at the national schools.

33,308. No, it will not?—We have not got them all.

33,309. (*Mrs. Deane Streatfield.*) Does 72 per cent. of the children mean those attending national schools or all schools?—That is 72 per cent. of those on the rolls of the national schools. The figures are given in every annual report. The average number of pupils on the rolls is something like 700,000.

33,310. (*Chairman.*) We heard a good deal about teaching Gaelic when we were in Ireland, and we were appealed to to make the teaching of Gaelic compulsory in some respects. Do the majority of the teachers who are trained teachers know Gaelic?—Oh, no.

33,311. What is the percentage?—Speakers of Gaelic are quite a small minority.

33,312. Then Gaelic for teachers now passing through the training colleges is not compulsory?—No.

33,313. Is the Marlborough Street College under Government control?—It is the undenominational training school under the control of the Board.

33,314. There are training schools which are not under Government control, and are not connected with you?—They are what is called "under local management," but they receive grants from us.

33,315. If the controllers of those institutions decided that Gaelic should be taught in national schools throughout the country, would it not be in their power to say that every teacher passing through the training college shall learn Gaelic?—Yes.

33,316. And they do not do that?—No.

33,317. Is Irish making any way in the non-Irish speaking parts of the country?—Very little, I think; and even in the Irish parts of the country I think it is declining. As you know, we have given fees now for many years—fairly high fees—but the amount is decreasing annually. It is down now to something like 8,000*l.* a year, and it was up as high as 12,000*l.*

33,318. And has that declension taken place in the last two or three years, or from an earlier date?—The last two or three years.

33,319. We were told in Dublin that there was a sort of suspension of activity for the last two years or so?—Yes.

33,320. Then would you be in favour of making Gaelic an optional subject for Civil Service examinations?—I would make it optional. I do not see any objection to making it optional, but I could not agree to making it compulsory. There is pressure brought upon us now on the National Board to make it compulsory. We had a deputation from Mayo—15 or 20 gentlemen—who advocated making Irish compulsory in all the national schools. But in certain parts of the country, as I said, that proposal would be very much more unpopular than the Home Rule Bill. Supposing we made a regulation that the schools in Belfast should learn Irish, what would be the result?

33,321. You are Chairman of the Intermediate Board, and I will pass to the intermediate system of education. Will you explain briefly what it is. It is a system of examination, is it not?—The intermediate system was established at a time when people had more regard for examinations than they seem to have at present—about the year 1879, I think; just before Lord Beaconsfield's Government went out of power. It was a system purely of examination. The Board did not interfere with the schools at all; they prescribed a certain programme of examination, and held these examinations every summer—pass and honours examinations—and on the honours examination exhibitions were given and a grant to the school, which was very high at one time. We have reduced it lately; but some years ago it was discovered that an exhibition to a senior grade meant something like a 50*l.* grant to the school, which was in many cases more than 10 times the annual fees of the school. The system was purely examinational, and so it continues. We

have had a system of inspection for the last five years. This inspection may be very illuminating to our minds on the Board; but it has no effect whatever upon the fortunes of the school. The grants are given entirely upon the results of the examination.

33,322. Do you find in consequence that the teacher concentrates his attention upon clever boys of the school to the neglect of those boys who really require greater attention from him?—I should say that must inevitably occur. The clever boy may be worth at present 30*l.* a year to the school; while a stupid boy is really worth considerably less than nothing.

33,323. Does the system confer a benefit upon Ireland?—That is rather a difficult question to answer. For instance, I have heard the Lord Chief Baron say that he thought the system of intermediate examination was an unmixed evil. On the other hand the deputations from the head-masters express opinions which do not quite coincide with that of the Lord Chief Baron. The fact is that they are in deadly opposition to any alteration in present circumstances. Mr. Birrell lately brought in a Bill, but he withdrew it, discretion being the better part of valour, almost immediately, because the head-masters opposed it. That was a Bill to substitute inspection for examination. If you ask my personal opinion, I think the intermediate examinations have been the means of giving a chance to clever boys. You may not like the type of teaching that it has encouraged, but there is no doubt about it that it has fed the Services with a lot of very valuable people. I, myself, could not say with the Lord Chief Baron that the system is an unmixed evil, if it has given a chance to hundreds of boys who would never have had an opportunity or done anything without it.

33,324. It has what we are more or less familiar with in educational discussions, created "a ladder" by which clever boys from a national school may get up, through an intermediate school, into the university?—Yes, and into the Services, no doubt. Possibly some of us would like them to get into the Services in a better way, or in a way less injurious to the rank and file of the children, but they certainly have got into the Services.

33,325. Would you be disposed to say that, while it promotes the advancement of the clever boys, it decreases the chances of the advancement of the great body of pupils?—I think it sets up an entirely wrong ideal for the ordinary boy, who has to do the rough-and-tumble work of the world; he may be educated with the boys going in for the Indian Civil Service, or something of the kind, and if he is entirely below that class what does he get out of it? It would have been better for him to learn agriculture or manual training than to learn a couple of languages and higher mathematics, for which he is incapable.

33,326. We have been told that the examinations for the various Government offices had no effect upon the curricula of the various universities. Now I understand the intermediate education in Ireland has on the schools a contrary effect, and that this curricula is influenced by the requirements of the public examinations?—The curricula at the intermediate schools are curricula of the Intermediate Board. Whether the Intermediate Board is influenced by the great public examinations I do not know, but I do not think that we consider them.

33,327. I mean the great examinations for the public service. My question is, whether the curricula of the intermediate schools are influenced by the great public examinations?—Not to any great extent, if at all.

33,328. (*Mr. Matheson.*) The Civil Service examinations?—No, not the Civil Service examinations.

33,329. (*Chairman.*) What examinations?—The intermediate schools of Ireland think of nothing else but the Intermediate Board.

33,330. The Intermediate Board lay down the subjects?—The Intermediate Board lay down the subjects. You ask me whether the Intermediate Board is influenced by the requirements of the great public examinations. I do not think they are, as a matter of fact; but whether they are or not, it is the Inter-

10 April 1913.]

MR. W. M. J. STARRIE, M.A., LIT.D., LL.D.

[Continued.]

mediate Board that the schools look to, and they do not care twopence what the Civil Service Commissioners ask.

33,331. Would you accept it as a general proposition of education that it is injurious to direct the course of instruction so as to meet the requirements of a particular examination?—Very, I think.

33,332. And that education ought to be directed with a general view to the cultivation of the intellect and the widening of the mind, and not with the view to passing a particular examination?—No doubt. Whatever experience I have is to this effect. Let us begin with the clever children. The clever children at present who are very poor get into the Service through the intermediate schools well enough in Ireland, and I think they are very well grounded, as the intermediate course appears to suit the public examinations. But I think it would be a good deal better for them, from 14 to 18, to have a little repose. Nowadays boys in intermediate schools in Ireland seem to me to have little time for anything except examinations.

33,333. There are constant examinations?—Constant examinations and constant devotion to certain prescribed books. My idea of a boy in an intermediate school in Ireland is, that if you ask him to read anything, he says: "Will it do me any good in the examination?" If you ask him to read a play of Shakespeare, he says, "Is that set?" It may be the greatest play of Shakespeare, but he does not think much of it, if it is not prescribed.

33,334. There are schools in Ireland that do not present their students at the intermediate examinations?—There are.

33,335. The great Christian Brothers do it?—Indeed they do.

33,336. What schools do not? I want to know whether you are able to say that the boys who are educated at the schools which are outside the intermediate system compare favourably with the majority of the boys educated in schools that are subjected to that examination?—Endowments of schools in Ireland are very small, and you may say, as a general rule, that all the schools in Ireland go in for the intermediate examination, but there are a few where they are able to charge high fees, as in Dublin, for instance, Dr. Crawley's school, which does not send boys in for the intermediate examination. The St. Columba College does not, and a few isolated schools of that kind.

33,337. But the big Jesuit schools do?—They do—they live on it.

33,338. (Mr. Matheson.) Campbell's College?—Yes.

33,339. (Miss Haldane.) The girls' schools do not do it so much?—I am afraid they are among the chief offenders. I see from the notes of evidence that the Assistant Commissioner handed me that they look at the matter differently from what I do. They give, as a most triumphant proof of the success of the intermediate system, the fact that the proportion of girls' schools going in for the intermediate has been quadrupled in the last 30 years.

33,340. (Chairman.) You do not regard it as a desirable thing?—I do not, and I speak for the whole Board in that. We are unanimous on that. We do believe that this system of examination of children from the age of 14 to the age of 18 is the most deleterious thing possible.

33,341. If you determined to change that, what opposition would you have except from the head masters and the people interested in the schools?—Very little, so far as I know.

33,342. And if you were to say to those schools: "You must accept this change to inspection instead of examination, otherwise we will give you no longer any of these bursaries and prizes," would not you have them at your mercy?—But I should not have the Chief Secretary at my mercy.

33,343. I quite see that; but let us eliminate politics for the moment—we will come to them when we cannot help it. If you could do what you would like to do, what, as an educationist you would wish to do, would not that be what you would do?—Certainly, and I should have the whole Board with me.

33,344. The difficulty, you say, is the political difficulty that the Chief Secretary cannot face the opposition offered by these head masters?—He cannot, and he does not.

33,345. He offered, did he not, a sum of some 12,000l. the other day—for what?—There were two sums, one of 40,000l. and the other of 10,000l. The sum of 40,000l. was to improve the salaries of lay teachers.

33,346. Did not they accept that?—The lay teachers did; the others did not.

33,347. What others—the clerical teachers?—Not the clerical teachers, but the heads of the schools, who invariably are clerics in Catholic schools.

33,348. Why did not they?—They said it was a differentiation against their Order.

33,349. They wanted to share in it themselves?—Certainly.

33,350. But are they always stipendiary?—No.

33,351. Therefore they wanted it for their schools—I do not know, but at any rate that was the ground on which they rejected the offer. From what Mr. Birrell said the other day it does not seem the case is closed finally; but, at any rate, I am safe in quoting things that have appeared in the papers. They passed certain resolutions against it on the ground that it was a differentiation against their Order.

33,352. Then, in regard to the 10,000l.?—The 10,000l. was for the purpose of establishing bursaries to secondary schools from primary schools.

33,353. Do not any of those exist now?—No.

33,354. And Mr. Birrell wanted to establish a beginning?—Yes.

33,355. And was not that accepted?—No, it was not.

33,356. Why?—It was refused by the General Committee of the County Councils on the ground that there were two conditions attached: (1) that Irish should not be compulsory; in fact, the first subject for the examinations for getting these scholarships was English or Irish. The advocates of Irish, who are strong on the Committee of the County Councils, said that was not enough, that Irish should not be an alternative for English. The other condition attached was that at the end of the four years for which these scholarships were tenable, the children who had finished their course in the secondary schools should *ipso facto* be elected to county scholarships established lately out of the rates, and that these county scholarships should be tenable at any university. They rejected it on the ground that they did not wish the scholarships to be tenable either at Trinity or the Belfast University, but solely at the National University. So it has been rejected on these two grounds.

33,357. There really is no use my questioning you upon the university, because the system is new. Is there any other point that you think will be interesting for us to know?—With regard to the "ladder" your Lordship spoke of, I do not know whether you would like me to say anything about the attempts we have made to establish that kind of thing?

33,358. Yes, that would be interesting. We are greatly interested in that "ladder" here in England?—For 12 or 14 years we have been endeavouring on the National Board to establish what we consider to be more required in Ireland than the intermediate school, and that is what they call in England higher grade elementary schools. In 1902 we drew up a scheme for the Irish Government and the Treasury of higher elementary schools, such as they have in Scotland and in England. I was in one myself near Bath the other day, and I found it was giving the sort of education which I think is needed by all children out of the national schools, or for the great majority. The only opening that the children out of national schools have at present is to go to the intermediate school, where they must learn two languages.

33,359. At what age do they leave the national school?—If you like to use the metaphor of the ladder, it is a perfect ladder, because they come to the end of the national school course at 14 or 15, and then go to an intermediate school, so you have the two ladders attached endwise; but it is much too late at 15 to go to an intermediate school and begin to learn

10 April 1913.]

MR. W. M. J. STARKIE, M.A., LITT.D., LL.D.

[Continued.]

two languages like French and German. That is what we are told by our inspectors with regard to these boys and girls from the national schools, of whom there are a very large number. As a matter of fact, 65 per cent. of the attendance at intermediate schools in Ireland are from the national schools, which is a much larger proportion than you would find anywhere else; but the great mistake is that they go too late, so they are put into classes suited to them according to age, but not according to their acquirements. We proposed that these children should go sometimes to an intermediate school if it suited them, or to a higher grade elementary school where they would get a practical education after 12. In Germany they go to a higher elementary school at 10; in France at 11, and in Scotland at 12. We propose 12. But unfortunately it is not much use for us to make any propositions about education. We draw up the most beautiful schemes, but nothing has ever come of them.

33,360. Have you got any of these schools established?—Not one. When children go from the national schools to the intermediate schools, as they do in very large numbers, they do not get any help from the State. They go because the fee at an intermediate school in Ireland is a negligible quantity; it is ridiculous. A distinguished man told me the other day that his education (at a Christian Brothers' school) cost 13s. 6d. a year.

33,361. So anything like relieving them of fees would have no substantial effect?—Very little effect. In fact, it is said that some of the children are paid to go to these schools because the school may make 30l. or 40l. a year out of them.

33,362. In regard to the National University, and the University College in Dublin especially, Irish is to be compulsory there from next year?—Yes.

33,363. Irish is made compulsory for matriculation examination, but not compulsory afterwards?—So I believe.

33,364. (*Mrs. Deane Streetfield.*) What provisions are there for training women teachers in Ireland?—There are women's training colleges in Dublin, one in Limerick, and one in Belfast. There are three colleges in Dublin for women—the Marlborough Street one, one for the Church of Ireland in Kildare Place, and one at Blackrock belonging to the nuns. I might say there is ample provision for training so far as the primary schools are concerned.

33,365. But in spite of that you say many of the teachers are not trained?—They are mostly the old teachers dating from the days when these training colleges did not exist.

33,366. All the new ones are trained now?—Yes. There is a slight shortage of assistant teachers still among the women, and for that reason we have not been able to make training obligatory for the assistant women, but we hope to do so before very long. The shortage is not very much.

33,367. You are only talking of training for the head teachers?—No, the assistants. They are practically all trained.

33,368. It is obligatory for assistant teachers too?—For men and for women. We cannot quite supply the vacancies in the case of women yet; but things are advancing that way, and very probably in the next two or three years we shall make training obligatory even in the case of assistant women teachers.

33,369. Are there pensions for women teachers?—Yes, just the same as for men.

33,370. What conditions are attached to those grants-in-aid given to schools?—A school must be under the management of a respectable person, and it must be in a fairly satisfactory building; it must be attended by a certain number of children, and it must be required in the locality. We get reports on all these matters. At one time anybody could set up a school who liked, provided he could get 20 children; but that is not so now. The school must be absolutely required.

33,371. That is altered now?—Yes.

33,372. I have heard of cases where a man could simply start a school and have it recognised and get it practically paid for by the State almost as a venture of his own?—Certainly, he might start one if he wanted

to be nasty, opposite to the other school, and would draw away the children, as often happened; but we have put an end to that, I am glad to say, for the last 15 years. It was productive of very bad results indeed.

33,373. Is one of the conditions of the grant-in-aid that the teachers should be trained?—Yes.

33,374. Have you any women on your inspector's staff?—We have two organisers who are practically the same as inspectors. They organise a school that is weak; and we have two women inspectors.

33,375. What are their duties?—The same as men's exactly. They are quite recent appointments. We may increase the number, but up to the present we have only appointed three, and one retired on account of ill-health. We have a number of other women who are organisers and they are very much like inspectors. We have 14 organisers of domestic economy; they are very much the same as inspectors; they do not inspect the general subjects but confine themselves to cookery, laundry and domestic science.

33,376. Their duties are rather as advisers than inspectors?—They inspect those particular subjects and organise the school and teach lessons. If we say cookery shall be taken up in a certain school we send one of these ladies there and she tells the teacher what she ought to do, and she is present at the early classes, and that kind of thing. She also lectures at certain centres on the subject if the teachers have not been sufficiently trained in cookery and laundry. The work of these ladies is similar to that of the inspectors. They travel about the country and have authority in the school. Then we have six organisers of the same kind in kindergarten.

33,377. Are they all under the Board?—Yes.

33,378. Not under the county councils?—No, it has nothing to do with the county councils. The county councils have nothing to do with the national schools in Ireland.

33,379. (*Mr. Boutwood.*) Did I rightly understand that, as a matter of fact, at present the local contributions to the schools are negligible, and that you really maintain the whole edifice, and so on?—According to the annual report the proportion of local contribution to the whole grant is very small. The State grant per head is something like 3l. For the year 1909 the rate per pupil from State grant was 3l. 1s. 2d. The rate per pupil from local sources was 5s. 8d.; and I may say it is put from the most favourable point of view, when we ask, in a certain return, the rate per pupil (from local sources), it does not err on the side of being minimised. It is very small, at any rate.

33,380. First of all about the vested schools; 3,500 I gather were vested, and the remainder were not; but then you went on to say that neither the Roman Catholics nor the Episcopalians nor the Presbyterians would vest. I had got it into my mind that in Ireland everything was one of those three. What schools are vested?—I do not think I put it exactly in that way. This question is rather confusing on account of the fact that vested schools are of two kinds—those vested in trustees and those vested in the commissioners. The Roman Catholics will not vest in the commissioners, but they do vest in trustees; while on the other hand the Church of Ireland and the Presbyterians do not care to vest either in trustees or the Commissioners. So non-vested schools to a very large extent at any rate belong to the Presbyterians and the Church of Ireland, but not so much to the Roman Catholics, though possibly the absolute number of non-vested Catholic schools, may be larger because they are a very much larger denomination.

33,381. I think you said that the Christian Brothers' schools are still outside your elementary system?—Yes.

33,382. Why is that?—They remained out because our schools were supposed to be undenominational, and even at the present day religious emblems are not shown in national schools except during religious instruction. They are kept in a box, which is opened at the religious instruction and then closed again. On account of that the Christian Brothers remained out because they liked religious emblems to be displayed as they are displayed in all Catholic schools in England. They cannot be

10 April 1913.]

Mr. W. M. J. STARKIE, M.A., LITT.D., LL.D.

[Continued.]

displayed in Ireland but they are in England, which is very curious. In 1894 or 1895 the Board reconsidered all the rules with regard to religious emblems, and they passed a resolution that if a school had not been attended by children of any other denomination for a year the rules might be relaxed, so that if a school was purely Catholic for a year it might display anything it liked. That was thought sufficient to bring in the Christian Brothers, but when, after a discussion at the Board lasting more than six months, and extraordinary displays of bitterness of feeling, it was passed, though not by a very large majority, it was discovered that the Christian Brothers would not come in for reasons unconnected with the National Board.

33,383. You spoke of constant examinations in connection with the intermediate system. How often do you examine at these intermediate schools?—Once in the year—in June.

33,384. In speaking of the training of teachers you referred to those who went straight into the training colleges without having been through any teaching at all. Does that mean that a certain number of your teachers interrupt their teaching and then go to the colleges for a training course?—Some teachers do not get trained until they have been teaching for some years. They used to have the advantage—if it was an advantage—of escaping one year's training if they had been teaching, and only had to go through a training course lasting one year; but we have abolished that and require now two years from everybody.

33,385. So does a teacher have to get leave from his manager?—He must get leave from the manager, and provide a substitute for two years. That is what happens.

33,386. Is that what we heard about in Dublin? I have something in my mind to this effect, that quite a considerable number of teachers, actually engaged in teaching, stopped their teaching and took a course at one of the universities. Is that something different, or is that the same system?—There is a third year's course of training allowable now. We got the permission of the Treasury to pay for teachers for a third year, and it is during that third year that they go into the university and take out a diploma of teaching, and we give them then what is called a higher certificate for that.

33,387. Then their salaries go on but they find a substitute?—Yes.

33,388. (*Mr. Matheson.*) Has the Government no relation to the higher schools in Ireland except through the Intermediate Education Act?—I should not say that they had any relation to the schools even through the Intermediate Board.

33,389. Do you mean that it is purely a relation personal to the pupils of the schools?—The Government in Ireland is a very peculiar thing, and it would be very hard to say whether these Boards in Ireland were Government Boards or not; they are certainly not under the control of the Government, although they are often obstructed by it.

33,390. Has any authority which you might call a national authority any relation to higher school education except through that Board?—The Intermediate Board has that relation—that is, it inspects these schools, but it is not necessary to be at a school to go in for an intermediate examination.

33,391. But is there any other grant of public money to higher schools besides this?—There is a grant through the Department of Agriculture. That department spends money on the science and practical instruction in intermediate schools. They endow science and drawing, and that kind of thing, and give grants for woodwork, and inspect the schools. There is divided authority. The inspectors of the Department of Agriculture have admittance to the intermediate schools as well as our inspectors.

33,392. But apart from the Board of Agriculture is the Intermediate Education Board the only Board which grants public money to higher schools in Ireland?—I do not know of any other at the moment, unless, possibly, the Commissioners for the Ulster Endowed Schools.

33,393. Your opinion would be that if the public money is to be spent on schools above elementary, it would be more wisely spent if it were distributed as a grant for the general efficiency of the schools rather than on success in examinations?—Quite so. My idea of a proper system is a very simple one; it would correspond very closely to the Scotch. The Scotch have got two certificates, a higher and an intermediate. Whether they are very highly valued I cannot say. I speak for my Board, and we should be very glad indeed if, in the intermediate schools in Ireland, we could hold an examination for children at 15 on general efficiency, and give an intermediate certificate that might be of use to the child in any employment that he was taking up; and then at 18 a leaving certificate, such as they give in Scotland. I am not entirely averse to examinations. I do not see how you can get rid of them altogether.

33,394. As at present, are the grants nominally to the pupils and not to the schools, or to both?—To both. The school gets a grant per head, called the school grant, on every child that passes the examination, and that grant is added to if the child passes with honours. The child has nothing to say to that. In addition, exhibitions are given varying from 10*l.* to 30*l.* to children who pass with honours in two or three subjects and competitively. These go to the children, but the children who get the exhibitions need not be at a school; they can come from private tuition.

33,395. How are the fees at the schools kept so low. Is it that a good many of the teachers give their services for nothing?—A great number of them belong to religious orders who are not paid. Of course, the lay teachers must receive payment of a kind. These unfortunate people cannot give their services for nothing.

33,396. How are they paid?—Very badly. The average salary of a woman teacher in an intermediate school, if unfortunate enough to be a lay person, is 48*l.* a year, and a male teacher 82*l.*, which is below that of the national teacher, whose average salary, if a principal, is 112*l.* I should not wish you to understand that the lay teachers in Ireland are few in number; they are not. There are over 1,200 of them.

33,397. (*Miss Haldane.*) What is the average salary of women teachers in national schools?—It would always be 18 to 20 per cent. lower than that of men.

33,398. (*Mr. Matheson.*) Would the lay teachers you speak of take a university degree?—Yes, most of them.

33,399. How are they found willing to undertake it? Is there so little occupation for them?—It is a most deplorable fact. That is one of the things Mr. Birrell has been trying to remedy with his 40,000*l.*; but supposing he gives the 40,000*l.* a year, it is not certain they will be much benefited. If they are too expensive the authorities will say, "We will employ them no more." They only employ them because they are cheap.

33,400. (*Mr. Boutwood.*) Do you think it would lead to the substitution of clerical for lay teachers?—If the State insists, without paying the salary itself, on lay teachers receiving a high minimum salary, the result is very likely to be that they will cease to be employed.

33,401. (*Mr. Shipley.*) Where is your work carried on. The head office, I suppose, is in Dublin?—Yes.

33,402. Have you a very large staff?—Something like 150 clerks.

33,403. Are they selected by open competition?—Yes, invariably open competition.

33,404. Have you any first class clerks?—No. I was always anxious to introduce first class clerks; but that is the weakness of a great number of Irish offices—that we have very few first class clerks in Ireland.

33,405. Do you consider that the office is adequately staffed, or is there anything you can suggest to make it better?—I would like, I must say, some first class clerks on the staff. The second division clerks are very hard-working men, and I have no complaint to make of them; I think them an admirable set of men, and that they have extremely difficult duties to perform. I think it may be said of my office that the abstractors are performing the duties that the second class clerks in other offices are doing, and the second class clerks are responsible for duties performed by

10 April 1913.]

Mr. W. M. J. STARKIE, M.A., LL.D., LL.D.

[Continued.]

first class clerks in other offices. But I do feel—and I have heard many other heads of departments in Ireland say the same—that there is a lack of men who are able to write satisfactory letters on important subjects. One does miss that class of man.

33,406. Is the building adequate, well ventilated, and so on?—I think so. It is the old Dublin house of the Berafords. It is rather down in a slum; but it is a beautiful house.

33,407. There are many beautiful old houses in Dublin?—My office is, perhaps, one of the most beautiful. I have been told by a member of the Cabinet that it is probably the most beautiful office in the Empire.

33,408. We have had some evidence that there is a great deal of discontent among the second class clerks and the abstractor class. Do you find evidence of that? Do you feel that you are working among a number of men who are profoundly and thoroughly discontented?—You know everybody in Ireland is discontented. I do not know that the second class clerks are more discontented than anybody else. They are always sending petitions to improve their position, and no doubt they have their grievances.

33,409. (Mr. Routwood.) What is the general purport of their petitions? What do they ask for?—Probably for promotion to higher offices. There is a very considerable slowness of promotion in my office. I think it might be said of my staff that they do not get on to important posts as rapidly as is the case in other offices in Dublin; I have known men, for instance, who have left my office and have been transferred to other offices from the second division who are occupying very good posts now, and would not have been so well off if they had remained in my office.

33,410. Is movement in your office slow or do not the higher grade posts exist in your office?—There are a number of higher grade posts, twelve, I think. The higher and lower staff clerks—people who go from 400l. to 500l. and 500l. to 600l.—are a fairly large number, and there is no reason why these second division clerks should not be appointed to the posts of 1,000l. or 800l. a year; but there are very few vacancies. It is a healthy office, and vacancies are rarely created through death. In the last 15 years there have been very few vacancies in the higher posts, and for that reason the men are dissatisfied, and they apply to me sometimes—very naturally, as the work in my office is very hard—to be transferred to the Insurance Office, or elsewhere. I very often refuse, because one does not like getting rid of the best men when they have learned their work.

33,411. (Chairman.) Mr. Lemass told me that you had altogether 45 second division clerks and 15 or 16 higher appointments to which they are promoted in course of time. That is not a bad proportion?—No. Still, vacancies do not arise very frequently.

33,412. (Mr. Shipley.) Have you other offices outside Dublin?—No.

33,413. But you have inspectors travelling about?—Yes, about 74.

33,414. Is the stamp of school building improving?—Very much. The new school buildings we are erecting are quite as good as I see being erected in England by the county authorities. As Lord MacDonnell knows there was a block for seven years before we got them, but they are being erected now.

33,415. (Miss Haldane.) I want to be clear about the age of entry and leaving in your Irish elementary schools. At what age may a child enter?—At three.

33,416. Normally, it leaves when?—Normally, at 15.

33,417. (Chairman.) When does the child enter the intermediate school?—About 15.

33,418. And leaves at 18?—18 or 19.

33,419. (Miss Haldane.) Therefore it carries on the first part of its secondary education in an elementary school?—Yes, if it is in a high enough class. In order to bridge the gap the National Board instituted some years ago what are called seventh and eighth standards in primary schools, and allowed them to take up the preparatory and junior grade work for the intermediate examination. So that if the school is qualified the children can begin their intermediate work at a national school.

33,420. How do you manage to staff the national school, that being so?—We have nothing really to say as to the staffing. The manager appoints the staff. If the staff happens to be good enough for that kind of work, they do it; if they are not, they do not.

33,421. The boy who learns Latin and so on is taught several years before he leaves?—That would be very rare, because the national school teacher rarely knows Latin. Hence the evil I spoke of, going to an intermediate school too late. To learn two languages, which are obligatory in the intermediate school, at 15 is hopeless.

33,422. What about domestic economy and that kind of subject? Is it taught in national schools?—I am glad to say I have succeeded in getting domestic economy taught in every national school where there are five or six girls over 11. It is really a remarkable thing that they are the only schools in Europe that do teach domestic economy as a matter of course. You will not find that done in England. Cookery is taught actually by the teachers of the national school; you will not find it so in England.

33,423. By the ordinary teacher?—By the ordinary teacher.

33,424. (Mrs. Deane Streetfield.) Does the teacher have to qualify in it?—Yes, it is an obligatory subject at the training college. They have to do cookery for 80 hours in training colleges.

33,425. (Miss Haldane.) And if there is only a male teacher, what happens in a small school?—If there is a male teacher in a mixed school there must be a woman as well.

33,426. Who comes in and teaches domestic economy?—There must be a junior assistant-mistress in every small school where there are girls.

33,427. However small?—Yes. Needlework must be taught, and a man will not teach needlework—it must be a woman. It does not follow that cookery would be taught in so small a school as that, because in that school you would not have six girls over 11; you would not have more than three or four. In that case needlework must be taught, but cookery would not, when the number of girls is a negligible quantity.

33,428. We understood from what we heard in Ireland that the work done by the Board of Education here is done by quite a number of Boards there?—Yes, there are a considerable number. A great deal was spoken, some years ago, about the number of Boards in Ireland. Everybody who mentioned them seemed to give a different number. Some said 40 and some 80; but I really do not know the exact number. At any rate, with regard to education, the Boards that count are the Intermediate and the National Board, and it does not matter about the others.

33,429. The buildings are under the Board of Works?—Yes.

33,430. And the Local Government Board do something else?—The Local Government Board will have the Poor Law Union Schools.

33,431. And the Agricultural and Technical Instruction Board?—They have got technical schools, and are interlopers in the intermediate schools. There are plenty of authorities, but, really, only two count, the Intermediate Board and the National Board. There are commissioners for the Ulster endowed schools, the schools of the Hibernian Society, etc., but they are quite negligible. Then you have the Erasmus Smith Board, who have a number of schools of their own, but they do not count. The National Board has 8,400, and the Intermediate Board 400, so they are really the two authorities.

33,432. (Chairman.) They are the two more intimately connected with the Government?—Certainly. Besides, of course, they control nearly the whole country.

33,433. (Miss Haldane.) You would prefer a system of certificates like that which exists in Scotland—a leaving and intermediate certificate. They would not depend entirely on examination but on record, and the manner of teaching, and the opinion of the teachers would be taken into account also?—The Scotch are a very trustful people, who are willing to take the opinion of the teacher; but I am afraid in Ireland they would

10 April 1913.]

Mr. W. M. J. STARKIE, M.A., LL.D., LL.D.

[Continued]

not. I have never found them willing to do so, and I am afraid the examination of it would count very much more than in Scotland. I should like to take the opinion of the teacher myself, but I have suggested that with regard to training colleges and did not succeed in winning much support. I found one training college would not trust the opinion of any other teachers except their own.

33,434. Under the Intermediate Education Board have you no women inspectors?—Not up to the present.

33,435. Do you think of having any in the future?—I, myself, am in favour of women inspectors, but I do not know that my colleagues are. I try to get as many as I can, but I do not always succeed.

33,436. (*Chairman.*) But they are not very much use under the circumstances unless you have the system changed?—They are as much use as any other inspectors. Why should not a woman be as useful as a man?

33,437. But what use would an inspector, either a man or a woman, be in your Irish intermediate schools when the school authorities do not take any notice of the inspection?—They are useful for the improvement of our information.

33,438. But they do not have the least effect upon the school?—No, not directly.

33,439. (*Miss. Haldane.*) Do intermediate inspectors report upon the technical instruction?—No. The Department of Agriculture has inspectors of its own. There are two classes of inspectors who visit the intermediate schools—those from that department and those from our Board.

33,440. Do you have many breakdowns in health from the effect of these numerous examinations you have been telling us about?—I have no means of ascertaining.

33,441. You have not so many girls as boys entering the examination?—About half, I think.

33,442. I think we were told one-third?—It is possible. I thought from the final figures there were 4,000 girls and 8,000 boys. That would be one-third of the whole.

33,443. (*Mrs. Deane Streetfeild.*) Have you any of these cramming establishments in Ireland like Clark's College?—Plenty. Skerry's Academy is, I think, the most famous of them. Skerry has an agency in most parts of Ireland, and there are other such places at Belfast, too. They are mostly for the preparing of the second division clerks.

33,444. Do they go straight from an intermediate school into the examination?—I should say not. Unfortunately I have not much information on questions of that kind; we know so little about the intermediate schools. I fancy they go to Skerry's Academy in Dublin. I also hear of correspondence classes. These people who compete for second class clerkships come from all parts of the country, and if a man lives at Kanturk he probably will not have money to go to the classes and he works through correspondence. I fancy they do not go straight from the schools to the examination.

(*Chairman.*) Dr. Starkie, the Commission is greatly obliged to you for the extremely interesting evidence you have given.

(*Handed in by Professor John MacNeill.*)

Q. 27,898.

### NATIONAL UNIVERSITY OF IRELAND. UNIVERSITY COLLEGE, DUBLIN.

RETURN OF THE NUMBER OF STUDENTS WHO HAVE TAKEN IRISH AS AN HONOURS SUBJECT FOR  
B.A. DEGREE AND AFTERWARDS.

[*This University and College were established by Act of Parliament and Charter of the year 1908.*]

Year 1909-10.

B.A. Degree Examinations.—Two students obtained Honours in Irish.

Post-Graduate Studies.—One student obtained Travelling Studentship in Irish Language and Literature.

Year 1910-11.

B.A. Degree Examinations.—Six students obtained Honours in Irish.

Post-Graduate Studies.—One student obtained M.A. Degree with Honours (by thesis) in Celtic Studies, including Irish.

Year 1911-12.

B.A. Degree Examinations.—Seven students obtained Honours in Irish. (Twelve candidates presented themselves for Honours examination in Irish.)

N.B.—This return is in respect of University College, Dublin, alone. Honours courses, which include Irish, for degrees are also provided by the constituent colleges of Cork and Galway and by the "recognised College" of Maynooth, under the National University; by Dublin University; and by the Queen's University, Belfast.

JOHN MACNEILL.

## APPENDIX LXIV.

(*Handed in by Sir Hiram Wilkinson, B.A., LL.D.*)

Q. 28,401.

MEMORANDUM PRESENTED TO THE ROYAL COMMISSION ON THE CIVIL SERVICE BY SIR HIRAM SHAW WILKINSON ON BEHALF OF THE QUEEN'S UNIVERSITY OF BELFAST.

1. The following memorandum is submitted by Sir Hiram Shaw Wilkinson\* who has been authorised to

\* As in some of the observations in this Memorandum, Sir Hiram Wilkinson speaks from the point of view of a Civil Servant, the extent, and limitations, of his experience may be judged from the extract from the Foreign Office List at the end of this Memorandum.

give evidence before the Royal Commission on the Civil Service on behalf of the Queen's University of Belfast by a resolution of the Senate of the University passed upon consideration of a letter, dated 19th October 1912, addressed to the President of the University by the Secretary of the Commission.

2. As an opportunity, however, has not occurred of placing this memorandum before the Senate, it is

desirable that, under the circumstances, it should be considered as an expression of Sir Hiram Wilkinson's own personal views.

PRELIMINARY. THE QUEEN'S UNIVERSITY OF BELFAST.

*History.*

3. The history of the College of this University naturally divides itself into three periods.

4. Queen's College, Belfast, together with Queen's College, Cork, and Queen's College, Galway, was founded under the Queen's Colleges (Ireland) Act, 1845, and was opened for the reception of students in 1849. These three Colleges became the University Colleges of the Queen's University in Ireland, which was founded in 1850, and only students who had matriculated and had attended lectures in one or other of these Colleges could obtain degrees in that University.

5. Under the University Education (Ireland) Act, 1879, the Queen's University was dissolved in 1882, and its place was taken by the Royal University of Ireland. The three Queen's Colleges sent forward students for degrees to the Royal University, but matriculation and attendance at those Colleges ceased to be a necessary qualification for a degree. The Royal University of Ireland was an examining University.

6. Under the Irish Universities Act, 1908, the Royal University of Ireland and Queen's College, Belfast, were dissolved from October 1909, and two Universities were founded to replace them, the National University of Ireland, of which Queen's College, Cork, and Queen's College, Galway, became constituent Colleges, and the Queen's University of Belfast, in which were vested the buildings of Queen's College, Belfast. In other words, Queen's College, Belfast, was raised to the status of a University under the name of the Queen's University of Belfast.

7. As regards teaching, there has been no breach of continuity from the time Queen's College was founded in 1849 to the present time. The professors have from the first to last had the statutory right to the style of University Professors. But the College could not fail to be affected by the changes through which it passed. As already mentioned, during its first period, from 1849 to 1882, it was one of three constituent colleges of a University, attendance on the lectures of one or other of which was a requisite for a degree. During its second period, from 1882 to 1909, attendance on its lectures ceased to be necessary for a degree. In its third period, only lately begun, it is restored to its old privileges, with the additional privilege of constituting a separate University by itself.

8. The University as at present constituted has thus had but a short existence. It can only claim a life of a little more than three years, but it has succeeded to the results of strenuous endeavour carried on since the commencement of Queen's College over sixty years ago. It cannot claim to offer to students all the advantages of Oxford and Cambridge, but it has gone far towards realising the ideal of University life of which those Universities are the highest embodiment, and it may perhaps claim to present, as compared with those Universities, some special advantages of its own.

9. It has been restored to the status of a University, whose members require attendance in the class rooms of its Professors. Only a small beginning has been made towards providing it with Hostels, but it has a Students' Union and Common Room which would do credit to any University. It has a College Magazine, a Students' Representative Council, and a large number of Students' Societies for the discussion of Literary, Scientific and Professional subjects. It has an Officers' Training Corps, which compares favourably with that of any University, and clubs for nearly all forms of athletic exercise. It thus affords to its students the means of that social intercourse and general University life which prepares the student to take his place in the world as a man of affairs.

*Relation to the Civil Service.*

10. In considering the relations of the College and University to the Civil Service it has to be borne in mind that the open competitive examination for the Civil Service of India at one time occupied, so far as regards University students seeking to enter Government Service, the place now occupied by the open competitive combined examination for the Civil Service of India and the Home Civil Service. Students of Queen's College, Belfast, competed for and obtained appointments in the Home Civil Service, but it will not be necessary to refer to these in relation to the questions now under consideration. Any contrast between the present and the past must needs be a contrast between the combined examination, and the once separate examination for the Civil Service of India.

11. Queen's College, Belfast, in its first period provided a comparatively large number of candidates for the Indian Civil Service, and the Consular Service in China and Japan, with a very large proportion of successes.

12. In the open competitive examination for the Civil Service of India in 1857, out of the twelve selected candidates three were from Queen's College, Belfast, one taking the first and one the fourth place. (Fourth Report of the Civil Service Commissioners, page 322.) In 1859 there were two successful candidates from Queen's College, Belfast, one taking the second place. (Fifth Report of the Civil Service Commissioners, page 203.)

13. In the open competition of 1860, five of the selected candidates came from Queen's College, Belfast. The Civil Service Commissioners referring to this examination said :—

"It is gratifying to us to find that, as in former years, the successful candidates continue for the most part to be those who have been trained at the Universities, and we think that it is fair to state that the Irish Universities, as has been the case at previous examinations, send us candidates who do credit to the system of instruction and to the professors at those institutions. No less than thirteen of the successful candidates came from Trinity College, Dublin, and amongst them the 5th, 6th, 7th, and 8th in the order of merit. Five proceeded from Queen's College, Belfast, including the 4th in order of merit, and one from Queen's College, Galway. We ought to add that eight successful candidates have come from Scotland."

14. Then they give the institutions in which the candidates most distinguished in particular branches had been educated, and among these it appears that in three of the subjects, in English Literature, in Mathematics, and in Natural Science, the best was from Queen's College, Belfast. (Sixth Report of the Civil Service Commissioners, p. xxxi.)

15. In the next five years (1861 to 1865) there were twelve successful students from Queen's College, Belfast, but after that the numbers get fewer. In the following five years (from 1866 to 1870) there were only six.

16. There is no reason to think that there was any falling off in the standard of teaching. The diminution in the number of candidates is fully accounted for by the change in the age limits for entrance to the Service.

17. In 1866, the maximum age, which had been lowered from 23 to 22, was further lowered to 21. This allowed only the younger graduates to compete. But the blow came in 1878, when the maximum limit was yet further reduced to 19, an age at which scarcely any graduates could compete.

18. The effect of this latter change is thus referred to in the Twenty-ninth Report of the Civil Service Commissioners (for the year 1884) page xi :—

"The change of age has necessarily involved a material diminution in the number who at the time of examination belonged to Universities. Thus, comparing the period, since this change with the entire period before it (i.e., 1878-84 with 1855-78), the proportion of candidates from Oxford has diminished from 8.9 per cent.

to 0·96 per cent., those from Cambridge from 8·6 per cent. to 1·43 per cent., and those from Trinity College, Dublin, from 8·0 per cent. to 0·96 per cent. This decrease is considerably less, in the case of the Scottish Universities, having been from 8·3 per cent. to 5·26 per cent."

19. The effect of the change on the numbers of successful candidates from Ireland is shown by a return in the same report, by which it appears, that while as has been seen in the year 1860 out of 80 successful candidates there were 19 from Ireland, in the seven years from 1872 to 1878, out of 222 successful candidates there were only 23 from Ireland, and out of 220 successful candidates in the seven years from 1878 to 1884, there were only 16 from Ireland.

20. This is an indication of the part which the Irish Universities take in education. In England, when the age limit precluded candidates from the Universities competing, their place in preparing candidates was taken by the public schools. In Ireland public schools did in some measure take the place of the Universities in this respect, but there were many for whom the Irish Universities provided who could not take advantage of a public school.

21. The adoption for the Civil Service of India of a maximum age for entrance of 23, from 1892, and then from 1906, of 24, under the present system of combined examination for the Civil Service of India, Clerkships, Class I., in the Home Civil Service and Eastern Cadetship in the Colonial Services has removed this difficulty, but the scheme of the examination in other respects has raised other difficulties which it is proposed to refer to later on.

22. The result—which, however caused, is regrettable—is that since 1905 there have been only two students of this College among the successful candidates at that examination.

23. There has also been a falling off of students competing for the Consular Service in China and Japan, but this arises from different causes, and may be more conveniently dealt with separately.

24. In the Secretary's letter there are four questions upon which an expression of opinion is desired.

25. The first of these questions is:—

The relation between the highest education given at the Universities and the efficient discharge of their functions by members of the Civil Service.

26. In answer to this question, it is submitted, that for the higher branches of the Service, where the interests of the Service allow of the age for entrance being high enough to admit the entry of University graduates, there is no better preparation for the Public Service than a University training extending over the period required for graduation.

27. It is believed that there is a general consensus of opinion among those best able to judge that the Civil Servants recruited from the Universities have as a body proved themselves competent and efficient in the discharge of their duties, and have developed in a high degree administrative ability. There may, no doubt, have been instances where men have taken high places in their college classes and have obtained admission to the Civil Service by the excellence of their answering, who have exhibited afterwards more of the distinctive characteristics of the student than of the administrator, but these would appear to have been the exception, and it may be taken as established that in the Civil Service the effect of University life and University training in all its phases has been to produce men well fitted for the discharge of the most responsible duties. Certainly, as regards the men who in times past have entered the Civil Service from Queen's College, the number who have risen to distinction amply confirms this conclusion.

28. The Second question is:—

"The suitability of the open competitive examination for the Home Civil Service ('Class I.') as at present regulated to secure the supply of candidates possessing the highest education and giving the greatest promise of administrative capacity."

29. Reference has been made to the small numbers from Queen's College, Belfast, and Queen's University of Belfast who have of late years presented themselves as candidates at the open concurrent examination for the Home Civil Service (Class I.), for the India Civil Service, and for Eastern Cadetships, as compared with the numbers of those who presented themselves for the open competition for the India Civil Service before the reduction of the age limit rendered it difficult, and finally almost impossible, for University Graduates to compete.

30. Whatever other causes may have assisted in preventing a return to a satisfactory condition of affairs after the age limit had been raised, the fact is due mainly to the want of conformity between the scheme of the combined examination and the educational arrangements in the majority of the Universities at the present time.

31. The regulations for the open competition for the India Civil Service in the early years of that competition were very much in accord with the curricula of Queen's College, Belfast. The Registrar of the College was able, in 1855, in reply to inquiry from the Civil Service Commissioners (Eighth Report of the Civil Service Commissioners, p. 392), to say:—

"The success of the candidates from this College has been a source of great satisfaction to the President and Professors, the more especially as it has been attained as the result of a system of general education, without the least attempt in any single case to *cram* the candidates before going up to examination."

32. The divergence which now exists is due largely to a change in the curricula of the Universities in the Honours Schools, which the Regulations have failed to follow.

33. The trend of education in the Universities generally has been in the direction of widening the field of study in the subjects comprised in the Honours Schools, and of increased thoroughness in the training in those subjects, leading necessarily to a restriction in the number of the subjects taken up.

34. Many subjects have consequently acquired a greatly increased value as evidence of training and ability, but this increase in value has not been recognised in the scheme now in operation, in which recently their relative value has on the contrary been depressed.

35. The scheme of examinations for the Indian Civil Service was revised in 1890 to bring it into conformity with the educational arrangements of that time (Thirty-ninth Report of the Civil Service Commissioners, p. 4).

36. The principles adopted by the Commissioners in framing the Regulations are set out in the following statement in the Syllabus for the examination which appears in the Thirty-fifth Report of the Commissioners.

"The Regulations governing the Open Competition for admission into the Indian Civil Service have been framed with a view to the principle regarded by Lord Macaulay's Committee in 1854, as essential, viz., that the object of the Competition should be to secure for the Indian Civil Service Officers who 'have received the best, the most liberal, the most finished education that their native country affords.' The scheme of examination has accordingly been made to embrace most of the subjects of the Honour Schools in the Universities of Great Britain and Ireland. In administering the scheme the Civil Service Commissioners, concurring with Lord Macaulay's Committee in the opinion 'that no Candidate who may fail should, to whatever calling he may betake himself, have any reason to regret the time and labour which he has spent in preparing himself to be examined,' desire to avoid all disturbance of the general course of University studies, and to render it possible, with due regard to the principle of Open Competition, for those who have graduated with honours at the Universities, to attend the examination for the Indian Civil Service with good prospects of success.

\* \* \* \*

The Examiners will be instructed to keep the standard in each subject up to the level of the highest course of study pursued by the Universities.

37. There was a further revision in 1904.

38. On the 18th November 1903 there was a Conference at the office of the Civil Service Commission at which were present representatives of the Universities of England, Ireland, and Scotland, and in a letter dated the 22nd of February 1904, the Commissioners presented to the Secretary of State for

India a revised scheme, which was settled and sanctioned in June 1904. (Forty-eighth Report of the Civil Service Commissioners, pages 33 to 46.)

39. In 1909 a change was made in the scheme with regard to the number of science subjects which might be taken with Lower and Higher Mathematics and to an increase and rearrangement in four divisions of the marks assigned to Greek and Latin.

40. In the following table is shown (1) The Scheme as settled in 1890. (2) The Scheme as sanctioned in 1904. (3) The Scheme as altered in 1909 and now in operation.

Scheme as settled in 1890, and in operation from 1892 to 1904.	New Scheme sanctioned in 1904.	Scheme as altered in 1909 and now in operation (1913).

41. One of the subjects discussed at the Conference of 1903 was the educational effect produced by the unrestricted choice of subjects by candidates.

42. In the first few years of the Open Competition for the India Civil Service, no difficulty was experienced. Afterwards the increase in the number of subjects taken by candidates was observed upon by the Commissioners, but they seemed to think that the matter would settle itself, as it was seen that those who took

too many subjects fell so low in their answering that they were beaten by candidates taken fewer subjects, and preparing in them more thoroughly.

43. In 1904, however, matters had become serious. The Commissioners in their letter of 22nd February 1904, said :-

"The evidence before the Civil Service Commissioners shows conclusively that the effect of leaving the candidates an unrestricted choice of

subjects, leads under the present machinery of examination to an excessive eagerness for marks, which causes many of their candidates either to cut short their career at the Universities or to mutilate the established courses of academic study with a view to making such a combination of subjects in a special course of training as may prove most remunerative in the examination. Since 1892 the average number of subjects taken by the successful candidates has increased from 10 to 12, and in many cases candidates have offered as many as 16 or even 17 subjects. It is evident that such a state of things is not educationally to the advantage of the candidates and that (in consequence of the large number of candidates from the Universities) it tends to produce a very disturbing effect on the regular courses of University education."

44. It was decided that something must be done to limit the number of subjects taken, and it was settled that while candidates should be left at liberty to choose

their subjects, such choice should be subject to the proviso that the maximum of marks that could be obtained from the subjects chosen should be limited to 6,000.

45. It is submitted that this limit is too high, and should be reduced. That it would prove too high for Universities other than Oxford or Cambridge might have been anticipated.

46. The Commissioners in the letter to the India Office, of the 22nd of February 1904, above referred to, presented a tabulated statement of how the Scheme might be expected to work under this limitation. They said:—

"As an illustration of the manner in which the Scheme would be likely to work under the altered conditions, the Commissioners append specimens of the combinations which men of ability in various branches might make in the selection of their subjects. It is, of course, assumed that Classical and Mathematical Studies have formed the basis of their education at school and the University."

† 1 extra subject, say English Literature -	600		† Any other extra subject } 600	(N.B.—Mathematicians succeed under the present system with only a few subjects. It is not proposed to increase their mathematical maximum.)
	6,200		5,900	

47. Commenting on this table, the Commissioners said:—

The average marks of the highest successful candidate in the examinations since 1892 have been on the Indian Civil Service List 3,600, but it should be observed that the average would have been somewhat higher if the scale of marking now proposed had been in operation.

Bearing this in mind it is evident that the Oxford student of *Literas Humaniores* would find no difficulty in taking the proposed examination, so to speak, in his stride. He would merely have to add to his list of subjects a knowledge, say, of the languages and literature of his own country which he ought to acquire in the ordinary course of his education. The Cambridge Classical student would not, *prima facie*, be so well off, but, on the other hand, he would have an extra year in which to make special preparations for the examination. The History student at either University would, with his school knowledge of Classics or Mathematics, be able to make up a good total of marks, and, even if he had not much knowledge of Classics or Mathematics, could supplement his particular subjects with the knowledge of Modern Languages or of Law. The Mathematician would have a better position than at present, and even under the existing scheme. Mathematicians are often successful. The

marks for the scientific student are also considerably increased.

48. The concern of the Commissioners seems here to be as to whether the scheme would operate equally as between Oxford and Cambridge, and they do not appear to be quite certain that the advantage of Oxford had been quite balanced as against Cambridge. It quite clearly had not been.

49. Although the opinions of other Universities had been discussed, and in some measure met, there is here no illustration of the combinations which men of ability in other Universities might make in the selection of their subjects, or how they would fare under the scheme as compared with graduates of Oxford or Cambridge.

50. The advantage given to the school of *Literas Humaniores* so evident in the comparative table prepared by the Commissioners was further augmented by the change made in the scheme in 1909.

51. In submitting the scheme of 1903 to the Secretary of State for India, the Commissioners said:—

"In view of the time and attention bestowed on pure scholarship in the course of study for the Cambridge Classical Tripos, the Commissioners further propose to drop the original essays in Latin and Greek, which form part of the examination as it stands, and to restrict the test in competition to translations in prose and verse from English into Latin and Greek."

52. The Under Secretary of State replying said that Mr. Brodrick "is indisposed to agree to the omission of original essays in Greek and Latin, as an alternative to verse composition in those languages, as he considers that those candidates who may not have given attention to the art of verse writing in the classical languages should not therefore be discouraged from taking up composition."

53. On the 27th June 1904 the Commissioners gladly accepted the slight alterations suggested in their proposals affecting the subjects Latin and Greek."

54. But in a letter dated 18th December 1908, the Secretary to the Commissioners, writing to the Treasury, says:—

"The Commissioners have long been of the opinion that the existing arrangements for Greek and Latin verse operate unfairly. Candidates who take Greek or Latin Composition are not obliged to take Verse; they are allowed in lieu thereof to offer a prose essay. But prose Composition is already separately tested; and it is much easier to write a prose essay than to write good verses or good prose translation from English. It is therefore advantageous to a candidate, unless he is exceptionally good at verses, to take the essay. So long as the practice of verse Composition occupies so large a part of the training of the best Classical Candidates this method of supplying an alternative (which is not an equivalent) for Greek and Latin verse will handicap the best scholars.

"Further, it does not seem equitable that the paper on Greek and Latin Literature should receive as many marks as Composition and Translation.

"The Commissioners therefore recommend that Greek and Latin should be divided into four sub-divisions, as below, and that Candidates should be allowed as heretofore to take any two or more sub-divisions, of which one must be Translation.

"Subjects 4 seq. (Clause 2 of the said Special Regulations) would then run as follows:—

"Greek, not less than two sub-divisions, of which one must be Translation.

4. Translation.
5. Prose Composition.
6. Verse Composition.
7. Literature.

"Latin, not less than two-subdivisions, of which one must be Translation.

8. Translation.
9. Prose Composition.
10. Verse Composition.
11. Literature."

55. It does not seem clear that at this stage an increase in the marks for Greek and Latin was intended, but on the 6th November 1909 the Secretary to the Treasury, in a letter to the Commissioners, refers to two further letters from the Commissioners, dated 26th March 1909 and 12th July 1909, which are not published, as relating to a proposal "for an increase and re-arrangement in four divisions of the marks assigned to Greek and Latin respectively in the scheme for Class I," and transmits copy of a letter from the India Office, and the Treasury's reply thereto, which are not printed, but are stated in a note to convey the Treasury approval of the Commissioners' proposals.

56. The complete correspondence is not published, and the grounds for increasing the marks in Greek and Latin, as distinct from the re-arrangement of the marks, are not to be found in the portion which is published; nor does it appear whether attention was drawn to, or consideration given to, Mr. Brodrick's objection to an identical proposal made by the Commissioners four years before as regards Greek and Latin verse.

57. One effect of this increase was to relieve the Oxford student of *Literas Humaniores* from taking any additional subject to make up the maximum of 6,000 marks. Two hundred additional marks in Greek

and two hundred in Latin, added to the 5,600 in the above table, just made up the 6,000.

58. It almost, but not quite, saved the History student at either University from taking an extra subject to reach the same maximum. He could take half a subject, say, French, without the History of the Language and Literature; and, as will be further referred to, French, German, and Italian were split into two sub-divisions, and the standard in one sub-division apparently lowered at the same time that the 200 additional marks each were assigned to Greek and Latin.

59. The Cambridge student taking the Classical Tripos would be able to take three subjects and a half instead of four, and be nearer the maximum than taking the four extra subjects suggested under the 1903 scheme.

60. The Cambridge student taking Mathematics would gain nothing.

61. The students of other Universities taking any of the Honours Schools except Classics were further handicapped by the change, as were also students taking the Honours School of Classics in those Universities in which the practice of verse composition does not occupy a large part (if any) of their best Classical Scholars.

62. It is submitted that the arrangement as regards the marks and as regards the sub-divisions, in force from 1904 to 1909 ought to be restored. Such arrangement gave all the predominance to Greek and Latin to which they were entitled,—and more.

63. Some of the other subjects which had become unduly handicapped under the scheme of 1892, and were discussed at the Conference, had not received in the scheme of 1904 the increase of marks which the Commissioners thought they might reasonably receive.

64. This was the case with regard to the group of Philosophical subjects, and an explanation is given in the following extract from the Commissioners' letter of the 22nd February 1904:—

"Very difficult problems are encountered in determining the scope and marking of Logic and Mental Philosophy and Moral Philosophy. The definition of the extent and arrangement of the subject is complicated by the fact that the Cambridge Tripos in Philosophy takes no account of the History of Philosophy, and practically begins with the study of Descartes: hence the representatives of the University of Cambridge protest energetically against the increase in the marks to 700 for each branch of the subject which is desired by Oxford, the Scottish and Irish Universities, and by Liverpool University. Cambridge is also desirous to see a redistribution of the subject which does not commend itself to the other Universities. There can be no doubt whatever that in the present scheme the subject of Philosophy is marked far below what is just in proportion to its difficulty, and were it possible to consider the marks entirely *de novo*, the Commissioners do not think that 700 for each branch of the subject would be at all unreasonable. Nor do they think that the interests of the comparatively small number of Cambridge students in Philosophy should outweigh those of the students of Philosophy at all the other Universities in the kingdom. At the same time they cannot ignore the facts either that the proposed increase of marks for Philosophy from 800 to 1,400 is in itself out of proportion to the increase in other subjects, or that the whole scheme of examination happens to be more favourable to Oxford than to Cambridge—those two being the Universities from which the great majority of the successful candidates are drawn. On the whole they think that justice will be done if 1,200 marks be assigned to Philosophical subjects modified as proposed, viz.:—600 to Logic and Psychology, and 600 to Moral and Metaphysical Philosophy.

65. Here the Commissioners, after saying that 700 marks are desired by Oxford, the Scottish and Irish Universities, and by Liverpool University, and that, were it possible to consider the matter entirely *de novo*,

they did not consider 700 would be at all unreasonable, yet fixed the marks at 600.

66. It is clear that any increase in the marks for Greek and Latin over those fixed in the 1904 scheme reduces the relative value of the marks there assigned to philosophical subjects, marks which, it was admitted, might reasonably have been greater.

67. The reason assigned for not making them greater will be referred to hereafter.

68. Then in the matter of Modern Languages the balance between which and Greek and Latin it was considered had been settled in the 1904 scheme is upset by the increased marks given in 1909 to Greek and Latin.

69. The relation between the values of Greek and Latin is thus referred to by the Commissioners in their letter of 22nd February 1904:—

“Mr. Brodrick will observe that the Commissioners now recommend the restoration of the Italian Language and Literature which was for obvious reasons removed from the list of the subjects that might be taken in 1892. At that date no limitation was proposed in the number of marks obtainable in this examination, nor was there any appreciable recognition of Italian as a subject of study at the chief Universities of the country. Both these conditions are now altered, for, on the one hand, if the proposals of the Commissioners be adopted, the tendency to mark-hunting will be checked, and on the other the establishment of a new school for the study of Modern Languages at Oxford, together with the existence of the Mediaeval and Modern Language Tripos at Cambridge, makes it probable that many persons qualified to be candidates will have sought a degree in honours at the Universities through these courses. It seems just, therefore, that provision should be made in the scheme to meet the interests of these candidates.

70. Here the right proportion between Greek or Latin to French or German is considered by the Commissioners to be as 900 to 600, and this was the same proportion as had been fixed in the scheme of 1892, where the marks for Greek and Latin respectively were 750 and for French and German respectively 500. By the increase of marks given to Greek and Latin, the proportion is, in the scheme now in operation, as 1,100 to 600, a change which cannot be considered right in view of the increased difficulty which the study of Modern Languages now presents.

71. The subject of Modern Languages will be further referred to.

72. Enough, it is submitted, has been said to show that the additional 200 marks each assigned to Greek and Latin in 1909 ought to be taken off again.

73. There is then the question of Greek verse and Latin verse, to each of which 200 marks are assigned. It is submitted that the arrangement disturbed in 1909 ought to be restored, and the option again given to candidates following Greek composition or Latin composition to present original essays in Greek or Latin as an alternative to verse composition, so that, in the words of Mr. Brodrick, those candidates who may not have given attention to the art of verse writing in the classical languages should not therefore be discouraged from taking up composition—or, it may be added, handicapped in the competitions.

74. The Commissioners in first proposing to assign marks to Greek verse and to Latin verse respectively as separate subjects without option of substituting prose composition give as a reason “the time and attention bestowed on pure scholarship in the Cambridge Classical Tripos.”

75. There is here no consideration for those Universities in which time and attention are not bestowed on Greek or Latin verse.

76. The Commissioners consider that it is the “best scholars who devote their time to Greek and Latin verse.” Some good scholars, no doubt, do give their attention to Greek verse and Latin verse, but there are as good scholars who do not.

77. Would the Commissioners propose to assign separate marks to English verse, French verse, or German verse? or, do they consider skill in making

verse in any of the languages, ancient or modern, evidence of the qualities required to make a good public servant?

78. It is submitted that the fact that time and attention is paid to verse in the Cambridge Classical Tripos is an insufficient reason for so assigning marks to it as to require other Universities to make it a subject of their curricula, or put their student at a disadvantage in the examination when they consider that the time required for it might be put to greater advantage toward reaching a wider intellectual grasp of the great lessons which the Ancient Languages have in store for those who seek them with intelligence.

79. The rescission of the 1909 scheme, and the restoration of the 1904 scheme in its entirety, would not, however, be sufficient to put other Universities on a fair footing with Oxford and Cambridge.

80. There can be no doubt that the scheme of examination under the Regulations of 1904, without the further handicap of 1909, did raise a serious difficulty in the way of graduates of this University competing successfully, and what is applicable in this respect to this University will probably be found applicable in a greater or less degree to nearly all the Universities of England, Scotland, and Ireland, other than Oxford and Cambridge.

81. The results under the scheme are seen in the table given on pages 126 and 127 of the First Report of the Royal Commission. Of the Universities to which belonged the successful candidates in the Combined Competitions held between 1906 and 1910, out of 464 successful University candidates, 247 came from Oxford, 142 from Cambridge, and 75 from all the other Universities in England, Ireland, and Scotland.

82. A change in the scheme is required if students of other Universities than Oxford and Cambridge are to have a fair chance of competing.

83. It is submitted that the following changes should be made:—

- (1) That there should be a further limitation in the number of subjects which a candidate may take;
- (2) That increased values should be assigned to some of the subjects of the curriculum as compared with Greek and Latin; and
- (3) That in some of the subjects an increase in the marks assigned should be accompanied by an increase in the difficulty of the papers set for examination.

84. That the Commissioners were alive in 1904 to the evils produced by allowing candidates an unrestricted choice of subjects appears from the extract from their letter on that subject given above, and the limitation then fixed of the subjects chosen so that the maximum of marks obtainable from them should not exceed 6,000 was intended to meet those evils.

85. That limitation has not proved sufficient. A reference to the table prepared by the Commissioners to illustrate the effects of the scheme under that limitation shows that only the Oxford students taking the school of *Literae Humaniores* were released from the necessity of taking additional subjects. Four extra subjects were insufficient to bring Cambridge students taking the Classical Tripos up to the maximum, while two modern Languages and English Literature were suggested in order to bring students taking the Mathematical Tripos to the border of the maximum. The Honours School of History, where the same knowledge of Greek and Latin was assumed as in the Oxford School of *Literae Humaniores*, required only one other subject to bring them up to the border.

86. Candidates from other Honours Schools in probably all the Universities were required to take so many extra subjects as to put a premium on cramming, which is highly to be deprecated, and in this University, and in not a few of the others, has been almost if not entirely to sever the connection between its Honours Schools and the Class I. Open Competition.

87. What should be the extent of the further restriction is of course a matter for very careful consideration, and any suggestion made can only be considered as tentative, but it will probably be found that a reduction of 1,000 marks will be required to give

the other Honours Schools and the other Universities anything like fair play.

88. That Oxford would object may be expected. The instances of the objections and claims of Oxford and Cambridge, and the sympathetic consideration which they received by the Commissioners, are frequent, but it is to be hoped that the interests of this and other new Universities will not be sacrificed to the demands or interests of the old.

89. With regard to an increase of marks for particular subjects, reference has been made to the case of Philosophical subjects, and the question of the marks assigned to them and to Economic subjects deserves consideration.

90. Reference has also been made to the case of Modern Languages, and this is a case where, with higher marks, there should be an increase in the difficulty of the papers set, so as to allow of a candidate from an Honours School of Modern Languages doing justice to his training.

91. This need not interfere with an examination on those Languages of a lower standard with lower marks to allow and encourage candidates to show a working knowledge of the Language. That every Civil Servant in the highest grade should know something at least of one Modern Language other than his own seems almost axiomatic.

92. That the Commissioners from time to time have had before them both those aspects of Modern Languages appears from their reports.

93. The views of the Commissioners as to what the examination ought to be in the scheme of 1904 will be seen from the extract from their letter of the 22nd February of that year referring to the new school for the study of Modern Languages at Oxford and the Mediaeval and Modern Language Tripos at Cambridge.

94. The expectations of the Commissioners with regard to candidates coming from these schools seem not to have been realised, for in their letter of the 18th December 1908, they said :—

“The Commissioners think that the existing plan by which no candidate for Home Civil Service can take Italian, French, or German, unless he also takes the rather stiff paper on the history of the language and literature, operates to prevent candidates from taking the subjects in question. They think that the value of these languages for the purposes of this competition largely resides in their practical utility. They, therefore, think it desirable that candidates should be encouraged to acquire a working knowledge of these languages, and that candidates who have such a knowledge should gain thereby, but they do not wish to discourage the study of the history of the language and literature.

They, therefore, recommend that Italian, French, and German should be split into two sub-divisions, viz. :—

Translation, Composition, and Conversation,  
History of the language and literature,  
but that no candidate should be allowed to take the literature section who does not take the rest of the examination in that language.”

95. The Commissioners would seem to have thus lowered the standard of the examination. But with regard to other examinations they have proposed the two standards where candidates can take their option, a lower one, and it may be a desirable one, for those possessing only what the Commissioners call a working knowledge, and a higher one for those who have devoted time and attention to the whole curriculum of an Honours School.

96. The higher standard required from the view of a Professor in an Honours School of Modern Languages may be judged from the accompanying observations and suggestions of Professor Savory, Professor of French in this University (Annex IV.).

97. Whether Professor Savory's figures be accepted or not, a perusal of what he has to say on the subject must convince any one of the serious and difficult character of the thorough study of a Modern Language in an Honours School at the present time, and how a student who had devoted his time and attention in such a school would be handicapped by an examination in

which the papers are designed to test merely a “working knowledge” of the language.

98. As a summary of the views presented in this statement, the following propositions are respectfully submitted :—Accepting as a basis for considering any scheme for the concurrent Open Competition Examination for Class I. Clerkships in the Home Civil Service, for the India Civil Service, and for Eastern Cadetships, the principles adopted by the Civil Service Commissioners in framing the Regulations for the Open Competition for admission into the Indian Civil Service in 1892, as set out above.

It is submitted—

- (1) That the Regulations now in operation for the concurrent open competitive examination for Class I. Clerkships in the Home Civil Service, for the India Civil Service, and for Eastern Cadetships, fail to accomplish what the Commissioners set before themselves in 1892.
- (2) That the limit within which subjects may be chosen is too high, that it allows, and consequently, as a condition of success, requires, too large a number of subjects to be chosen, and that it ought to be reduced.
- (3) That under the operation of this Regulation the majority of those who have graduated with honours at the Universities could not attend the examination with any good prospect of success without taking up such a number of extra subjects beyond those included in the Honours Schools as would entail the necessity for cramming, and that a large proportion of those who might fail would, in the words of Lord Macaulay's Committee, have reason to regret the time and labour they had spent in preparing to be examined.
- (4) That the trend of examination towards widening the field of knowledge embraced in the study of the subjects comprised in the curricula of the Honours Schools, and the consequent severity of such study, renders the taking of a large number of extra subjects at once more burdensome to the student and less necessary as a test of diligence and ability.
- (5) That the present scale of marks requires readjustment.
- (6) That the scale of marks in the scheme sanctioned in 1904 gave quite sufficient, if not too much, predominance to Greek and Latin as compared with the other subjects, and that the addition of 200 marks to Greek and 200 marks to Latin has given quite too great predominance to these languages.
- (7) That the division of these subjects made in 1904, into Translation, Composition, and Literature gives a fairer test of a knowledge of the Language as among students of the Universities of the United Kingdom.
- (8) That the abolition, in 1909, of the option to substitute prose essay for verse, which was given under previous Regulations, and which Mr. Brodrick refused to disturb in 1904 (Forty-eighth Report of the Civil Service Commissioners, page 45), unfairly handicaps students of this and other Universities; and
- (9) That it is desirable that that option should be restored.
- (10) That, while it may be desirable to encourage candidates to have a working knowledge of French and other Modern Languages, and to have such an examination as is now set, with the present or even lower marks, it is desirable in the interests of students taking a degree with Honours in Modern Languages that more difficult papers coming up to the highest course of studies pursued in the Universities should be set to allow such students to do justice to their attainments and that correspondingly higher marks should be given.
- (11) That since the Conference of the 18th November 1903 between the Civil Service Commissioners and the Representatives of the Universities, referred to in the letter from the

Commission to the Under Secretary of State, India Office, set out in the Forty-eighth Report of the Commissioners (page 38), the trend of Education has been to alter the relative value of the subjects as evidence of labour and ability, and it is desirable, with a view to the revision of the scheme now in operation, that a further conference on the subject should be held.

(12) That at such conference the views and interests of the new Universities should receive the fullest consideration.

99. That a request for fuller consideration for these interests is justified, if the meaning of the following paragraph from the Commissioners' letter of the 22nd February 1904, is rightly understood.

"It is evident to the Commissioners that this diversity of opinion arises partly in consequence of the different systems of higher education established in the different Universities and partly through the natural rivalry between the two ancient English Universities, from which, of course, by much the greater number of candidates is drawn. On the one hand, it is certain that, looking to the degrees of difficulty in different studies, some of the subjects, notably those of Logic, and Mental Philosophy, and Moral Philosophy, are undermarked in the present scheme; on the other hand, it is equally undeniable that the scheme, as it stands, favours the Oxford course of education rather than that pursued at Cambridge, in respect of the number of subjects falling within the candidates' range of study. But this latter fact has again to be qualified by the consideration that the Oxford student cannot complete his normal course of education under four years, while the Cambridge student is able to take his degree in honours after three years' residence; the latter has, therefore, a year longer than the Oxford man to add to the stock of knowledge he has acquired in his University course. Looking to the whole history of this important examination, and to the duty of recruiting efficient officers for the Home, Colonial, and Indian Civil Services, the Commissioners think that those who are responsible for the construction and administration of the scheme ought to be guided by two main considerations: (1) that the scheme shall produce the minimum of disturbance in the course of higher education; (2) that it shall be framed, as far as is possible under the very difficult circumstances, to suit the different systems of education prevailing at the great Universities, and to give an opportunity of success to all candidates who have pursued the numerous courses open to students seeking to obtain a degree in honours at those institutions."

If the object which the Commissioners set before themselves in 1904 was to "suit the different systems of education prevailing" at "the two ancient English Universities, from which, of course, by much the greater number of candidates is drawn"—which seems to be the meaning of the "great Universities" in the latter part of the paragraph—they have not quite accomplished that object, as the preponderance of Oxford over Cambridge will show, but they have certainly by fixing their attention so earnestly on the interests of the "great Universities" failed fully to provide for the interests of the Universities of less ancient origin which might have been sending up a much larger proportion of students had those interests been more provided for.

100. The third question is:—

The facilities which exist under present conditions to enable persons of slender means to obtain University education.

101. This object has been kept in view in framing the Scholarship Scheme of the University.

102. A list of Foundation Scholarships is annexed (Annex I.). As will be seen there are among these Scholarships 40 Junior Scholarships of 40*l.* each. Of these 12 are assigned as Entrance Scholarships, 14 as

Second Year Scholarships, and 14 as Third Year Scholarships in the Faculties of Arts and Science. The object in fixing the amount of these Scholarships and of making them all of one amount, instead of grading them, was, so far as the funds for this purpose at the disposition of the University would allow, to enable as many students as possible to pursue their University education. It is obvious that after the payment of fees these Scholarships are insufficient to support a student without extraneous assistance, but they are of very considerable help to students of slender means who have succeeded in reaching the University.

103. The number of Private Endowment Scholarships is not large. A statement is annexed (Annex II.) giving the numbers and amounts, and distinguishing between those which can be held with, and in augmentation of the Foundation Scholarships. With this additional assistance students in a few cases may obtain an amount which may render them free from the necessity of further assistance, but such cases are very few.

104. The amounts of all these Scholarships might with advantage be raised considerably, but so far as regards the Foundation Scholarships it is regretted that the amount at the disposal of the University will not allow of this being done.

105. Scholarships—usually tenable for three years—are also provided by the majority of the County Councils and Councils of County Boroughs throughout Ireland for students of slender means, resident within their respective districts, under section 10 (2) of the Irish Universities Act, 1908, and the other Councils who have not yet completed their schemes under this Act have them under consideration. It is probable that very soon every Council will be providing Scholarships under the Act.

106. It is to be regretted that the Councils have not seen their way to allow all of these Scholarships to be held in any one of the Irish Universities which the student may choose. There is but a limited number of them which can be held by students desirous of entering this University. A list of those which can be held in this University is annexed (Annex III.).

107. With regard to the facilities for bridging the period between leaving the Primary School and the entrance to the University, there are a number of Entrance Scholarships in several of the Secondary Schools tenable for one, two, or three years. These Scholarships enable Scholars to start their studies in the Secondary Schools and Exhibitions given by the Intermediate Commissioners help them to continue their studies until they can enter the University. With very few exceptions what has been said as to the inadequacy of the amounts of the University Scholarships applies also to these Intermediate Scholarships. They are insufficient completely to support the Scholars during the Secondary School period, but are of material assistance to them. The amounts of these Scholarships might also, with advantage, be raised considerably.

108. These Scholarships are given in both the Public Schools under independent management, and under the name of Free Places, in the Royal Schools and other Schools under the control of the Commissioners of Education in Ireland.

109. The Draft Scheme recently proposed by the Chief Secretary by which it is proposed to assign 12,000*l.* annually for Scholarships tenable at Intermediate Schools by boys and girls from Primary Schools, to be held in connection with Scholarships at Irish Universities, to be provided by the Councils of Counties or County Boroughs, is no doubt well known to the Commissioners.

110. The Commissioners of National Education in Ireland referred to this scheme and the need for it in their Seventy-seventh Report (for the School year 1919-11). They said (page 7):—

"For several years we have urged the importance of the establishment of Scholarships for the clever pupils of our schools, and we are glad to note that something is now to be done to meet this want. We are at present considering (in connection with the Board of Intermediate Education) a Scheme of Scholarships for which

funds have been promised by the Chief Secretary."

111. The Commissioners had, in their Seventieth Report (for the year 1903), called attention (page 15) to the following remarks of Mr. Dale, one of His Majesty's Inspectors of Schools, who had been deputed to report on Primary Education in Ireland:—

"My inquiries left no doubt on my mind that, in the character of the education hitherto open to boys and girls of the lower middle classes, and in the opportunities for clever children of the poorest classes to rise beyond the primary school, Ireland compares very unfavourably with either England or Scotland. The gravity of this defect is unquestionable, especially as the native ability of some of the older scholars in the poorest National Schools is of a very high order, and should, if properly trained, fit them for very much better positions in life than, owing to the lack of opportunities for a good education, they are at present able to obtain."

112. The scheme is not finally settled, and it appears that there is a difficulty as to its acceptance by the County Councils.

113. The Fourth question is:—

The results produced by the examinations which are conducted by the Civil Service Commissioners upon the curricula of the Schools of the Universities.

114. The examinations cannot be said to have exercised any material result upon the curricula of the Schools of the University. The divergence at present existing between the scheme of the examinations and the curricula for the Honours Schools of the University has been referred to in dealing with the Second question.

HIRAM S. WILKINSON.

February 11th, 1913.

#### ANNEX I.

##### THE QUEEN'S UNIVERSITY OF BELFAST.

###### Foundation Scholarships.

	Tenure, Years.	Amount offered.	Possible Additions.
Entrance Scholarships in Arts, Science, and Medicine, 12 of 40 <i>l.</i> —480 <i>l.</i>	1	£ 480	£ —
Faculty of Arts:			
Second Year Scholarships, 7 of 40 <i>l.</i> —280 <i>l.</i>	2	560	—
Extra Second and Third Year Scholarships.	—	—	Un-certain.
Post Graduate Studentships, 5 of 50 <i>l.</i> —250 <i>l.</i>	1	250	—
May be raised by 25 <i>l.</i> each -	1	—	125
May be continued for a Second Year.	—	—	375
Faculty of Science:			
Second Year Scholarships, 7 of 40 <i>l.</i> —280 <i>l.</i>	2	560	—
Post Graduate Studentship, 4 of 50 <i>l.</i> —200 <i>l.</i>	1	200	—
Faculty of Law:			
First Year, 20 <i>l.</i> , 20 <i>l.</i> —40 <i>l.</i>	—	—	—
Second Year, 20 <i>l.</i> —20 <i>l.</i>	—	—	—
60 <i>l.</i>			
Faculty of Medicine:			
Second Year:

#### ANNEX III.

##### SUMMARY OF COUNTY COUNCIL SCHOLARSHIPS AND BURSARIES

available at the Queen's University of Belfast.

ANTRIM:—Two Scholarships of 40*l.* per annum, tenable for 3 years at any University in Ireland which the student may select.

**DONEGAL**:—Two Scholarships of 45*l.* per annum, tenable for 3 years at any University in Ireland which the student may select.

**KILDARE**:—Four Scholarships of 50*l.* per annum, tenable for 3 years in any University selected by the student if that student is not a Catholic.

**MONAGHAN**:—Three Scholarships of 50*l.* per annum, tenable for 3 years, and two Bursaries of 25*l.* per annum, tenable for 3 years in any University in Ireland if the student is not a Catholic.

**WESTMEATH**:—Three Scholarships of 50*l.* per annum, tenable for 3 years in the National University of Ireland or in the Queen's University of Belfast.

**WEXFORD**:—Three Scholarships of 50*l.* per annum, tenable for 3 years, and two Bursaries of 25*l.* each per annum, tenable for 3 years in any University or College in Ireland selected by the student, if that student is not a Catholic.

**BELFAST COUNTY BOROUGH**:—4 Scholarships of 40*l.* per annum, tenable for 3 years. Where a student is pursuing a professional course of 4 or 5 years, the Scholarship may be renewed for a fourth or fifth year.

#### ANNEX IV.

Letter from Professor D. L. Savory, Professor of French in the Queen's University of Belfast, containing observations upon the Examination Papers for the First Class Clerkships in the Home Civil Service, the India Civil Service, and Eastern Cadetships, and suggestions as to the marks which ought to be assigned to French, German, and Italian, in view of the marks now assigned to Greek and Latin.

"Having obtained the Examination Papers for the First Class Clerkships in the Home Civil Service, I have read through very carefully the papers set in Latin and Greek, French, German, and Italian, and venture to make the following observations:—

What I say with regard to French is to be taken to apply *mutatis mutandis* to German and Italian.

*First Paper*: French Translation.  
Time allowed, 1½ hours.

The paper should include, in addition to passages taken from modern French works, fairly lengthy extracts from old and middle French authors, and the time allowed should be increased to three hours.

*Second Paper*: French Composition.  
Time allowed, 2½ hours.

This paper should be divided into two parts, one of two hours for translation into French, and one of three hours for the Free Composition.

The time allotted to the essay is at present absurdly inadequate; it should, undoubtedly, form a three hours' paper by itself, as the English essay now does.

Kindly refer to the French Honours papers at the Queen's University, from which you will see that a whole three hours' paper is devoted exclusively to the French essay.

*Third Paper*: French Literature.  
Time allowed, 3 hours.

This paper consists of section (a) Language, and section (b) Literature.

I am convinced that each section should form a three hours' paper by itself, of which that on language would be far more exhaustive and satisfactory. It would require a thorough knowledge of old and modern French Grammar and Philology. At present the questions set demand only a superficial acquaintance with the history of the language, which I consider practically worthless. There should be questions on historical Phonetics, involving a knowledge of the

history of French sounds from Vulgar Latin down to the present day.

The separate paper dealing with Literature should also require a far wider knowledge of the subject than is at present the case.

It is clear that all the questions now set could be answered by cramming up a short manual of French Literature.

May I ask you to compare the questions on French Literature set in the Final Honours French papers at the Queen's University, which you will see demand a much deeper knowledge of the subject. Further, all answers to the questions in this paper, as well as to those in the preceding papers, should be written in French.

#### Oral Examination.

This should be a really serious test and should consist of (a) Reading aloud of extracts both in prose and poetry; (b) Dictation; (c) Conversation consisting of questions not merely on general topics, but on French Literature and contemporary institutions.

If such a scheme as the above were adopted, I would suggest the following scale of marks:—

Translation from French	-	-	150
Translation into French	-	-	150
French Essay	-	-	200
History of the French Language	-	-	100
French Literature	-	-	200
French Conversation	-	-	100
Total	-	-	1,000

In view of the additional requirements which I suggest I do not think the above scale of marks could be considered excessive.

D. L. SAVORY.

25th January 1913.

#### EXTRACT FROM THE FOREIGN OFFICE LIST.

**WILKINSON, SIR HIRAM SHAW**, is a B.A. and LL.D., of Queen's University, Ireland. Passed a competitive examination, and obtained an honorary certificate,\* July 30, 1864; was appointed Student Interpreter in Japan, August 22, 1864; was promoted to be a 3rd Class Assistant, January 1, 1868; and Assistant, Accountant, and Interpreter, April 1, 1868. Was called to the Bar† at the Middle Temple, January 26, 1872; was a 1st Class Assistant, with seniority from April 1, 1868, the date of his appointment as Assistant, Accountant, and Interpreter. Was Acting Vice-Consul at Hiogo and Osaka from May 27 till November 7, 1872; Acting Consul at Kanagawa from August 1 till October 8, 1873; from May 15 till June 30, 1875; and from May 28 till June 15, 1876. Was promoted to be Her Majesty's Vice-Consul at Neegata, April 1, 1877. Was Acting-Consul at Kanagawa from November 1, 1878, till April 7, 1879; and Acting Assistant Judge at Shanghai, from April 23, 1879, to October 15, 1880, was appointed Crown Advocate at Shanghai, December 21, 1881. Was British Commissioner for the settlement of the claims arising out of the Canton Riots of 1883. Has acted as Chief Justice on various occasions; was Acting Judge of Her Majesty's Court for Japan from April 1, 1894, to May 31, 1895, and from June 18 to November 10, 1897, when he was appointed Judge of Her Majesty's Court for Japan. Appointed Chief Justice of Her Majesty's Supreme Court for China and Corea, May 26, 1900. Knighted 1903. Retired April 1, 1905.

\* In Greek and Book-keeping.

† Studentship of the Four Inns of Court by competition, Michaelmas Term, 1871.

## APPENDIX LXV.

(Handed in by Mr. D. J. Coffey, M.A., M.B., B.Ch., LL.D.)

Q. 28,698.

REPLY OF THE NATIONAL UNIVERSITY OF IRELAND TO THE QUESTIONS OF THE  
ROYAL COMMISSION.

SIR,

I BEG to forward the following statement to the Royal Commission on the Civil Service on behalf of the National University of Ireland. It sets forth substantially the ascertained views of the Academic Councils of University College, Dublin; University College, Cork; and University College, Galway, on the questions submitted by the Royal Commission.

I am,

Your obedient servant,

S. Armitage Smith, Esq., DENIS J. COFFEY.  
Secretary,  
Royal Commission on the  
Civil Service.

THE NATIONAL UNIVERSITY OF IRELAND.

*University College, Dublin.*

The interest of the University in the references of the Royal Commission on the Civil Service relates chiefly to the following matters:—

- (1) The scope and character of the examination for admission by open competition to the higher division of the Civil Service, termed Class I.
- (2) The desirability of increasing the opportunities for the admission of University Graduates who have pursued Honours Courses for Degrees.
- (3) The possibility of bringing the educational training of the candidates for the division of the Civil Service known as the "Intermediate Class" or "Junior Appointments" into relation with the Universities.
- (4) The appointment of Examiners for Class I. examination with a view to a more direct relation in the standard of the examination and the average standard of Honours Degree examinations in the Universities of the United Kingdom.
- (5) The introduction of Irish Language and Literature in all examinations for admission to the Civil Service by open competition in the same degree as that to which other Modern Languages enter into the several examinations.
- (6) The provision, wherever possible, either under terms of limited competition or of open competition of a qualifying standard for admission to medical, legal, and engineering appointments.

*The present Examination for Class I.*—The maximum limit of age for admission to Class I. is fixed at 24 years. The competition is open. There are 38 subjects in the examination list, with wide differences in the maximum of marks assigned to each, Latin and Greek counting 1,100 each, Ancient History (Roman and Greek) 1,000, Mathematics 2,400, Physics, Chemistry and such Sciences, 600 each. A limit is placed on the number of subjects to be taken by a candidate by a total of 6,000 maximum marks. The examination is thus highly competitive, and, to make up the 6,000 marks, every candidate must present, besides his main subjects, several subjects of which his knowledge is likely to have been obtained by hard reading in the year preceding his examination.

In view of the fact that almost all the candidates for Class I. are University Graduates, the most striking view of the examination from the University point of view, is that a substantial correspondence is not attainable in respect of a great many subjects with the groups of subjects which, in the Universities, rank as equal in value for a degree with First Class Honours. It would appear from the distribution of marks, that the candidates whose main subjects are Latin, Greek, and Ancient History have the greatest advantage. Doubtless the value of a wide classical training is not to be gainsaid. It is, however, submitted that the custom now so well established in the Univer-

sities of awarding a degree with Honours in certain well-defined groups of subjects provides in several groups outside Classics a thoroughly effective training. In the groups of subjects so recognised as Honours Courses for Degrees the studies pursued are, in scope and character, not less exacting than the Honours Courses in Classics. Without entering on the question of the relative value of the mental culture of the classical training as compared with other studies, it is suggested that the standard established by the Universities in respect of Honours Degrees tends in its working to attract students of equal ability to different lines of study and work, and that as a result the best men amongst University Graduates will not be found to be associated with any one group of subjects.

Admitting everything that may be said on behalf of the classical training, it can hardly be regarded as satisfactory that any examination intended as a method of selection of a great class of administrators, and for that reason relying largely on the training to be acquired at a University, should have a possible means of limitation to one type of University training. In addition to the general point of view stated, it is suggested that the present examination system, owing to the number of subjects which must be taken to reach the maximum of marks, tends to induce candidates to take up a number of subjects in which they are otherwise not interested, subsequent to the ordinary University Course and in the year preceding the Civil Service Examination. It is suggested that elimination of this element from the examination would not diminish the value of the competitive character of the examination, or its means of determining the results of a broad liberal and well-sustained education.

Hence, in respect of the Examination the following suggestions are made:—

- (1) That the maximum of marks should be reduced to 5,000.
- (2) That something like equivalent values should be attained in respect of the following groups:—(1) Classics, including Ancient History; (2) Modern Languages (three to form the equivalent group); (3) History and Economics, to include a fuller course in Modern History on the lines of a B.A. Honours Course; (4) Economics and Law; (5) Mathematics; (6) Experimental Science.

If all these subjects are on the standard of B.A. Honours Examination in each, the total marks assigned to a group might be 3,000. At present English Composition, which would be taken, it is assumed, by all candidates, ranks as a subject with 500 marks. Including English Composition, every candidate would thus have a maximum of 3,500 in a course identical with that which he has presented for B.A. Honours Degree. For the rest, additional subjects might be fixed at a standard of 750 maximum, so that no candidate could take more than two additional subjects. Such limitation in the number of subjects would render it possible for a candidate to select with his B.A. group two other subjects which he would probably have studied in the earlier part of his University Course, so that his training in them would not be acquired shortly before the Civil Service Examination.

*The Intermediate Class.*—The candidates entering this division are young men whose secondary education is of a very good type. If they were in a position to continue their studies at the University they would probably become candidates for Class I. The fusion of the Intermediate Class with Class I. would be desirable from the point of view of the University, but possibly difficulties arise from the actual arrangements of the Civil Service. There would, however, appear to be some possibility of bringing the "Intermediate Class" into a closer relation with the Universities.

From the educational point of view it would seem to be of advantage if either the age of admission to this branch of the Service were raised so as to permit the competition to take place when candidates would have completed the course for B.A. Degree, or, if the present age limits of admission be retained, to afford the candidates during their probationary years opportunity of pursuing a course of study at a University in subjects related to the class of work proper to the branch of the Service to which the candidate is assigned. In this connection it may be pointed out that the facilities for a University Course for students of limited means have been greatly extended in Ireland by the foundation of County Council Scholarships. Candidates for the "Intermediate Class" may spend at present one or two years in the University before admission to the Civil Service Examination.

*Examiners for Class I.*—Bound up with the problems of the Examination for Class I. is the question of the best mode of selecting its Examiners. The fact that the candidates are almost exclusively University Graduates, and that the subjects of examination are so closely related to University studies, renders it highly desirable that the Examiners should be University Examiners. Probably no better way could be devised of bringing the examination into closer touch with the Universities than that of the appointment of Examiners who are constantly in touch with the standard of University Examinations. A list of such Examiners might easily be compiled by obtaining returns from all the Universities of their respective Extern Examiners.

*Irish as a Subject of the Civil Service Examination.*—The addition of Irish to the list of Languages of the Examination Syllabuses is of importance, not alone in the higher competitions but in the examinations for all branches of the Civil Service from the class of "Boy Clerks" upwards.

In both the Primary and Secondary systems of Education in Ireland Irish is studied by a larger number of pupils than is the case with any other Modern Language. The extent to which Irish enters into Secondary education in Ireland may be easily verified by reference to the examination results of the Irish Intermediate Board of Education. The extension of Irish in the Universities is no less striking. Chairs for the study of Celtic Languages have been established in many Universities in England. In London, Manchester, Liverpool, amongst others, an Honours Degree may be obtained in Celtic Languages. All the Universities of Ireland have Chairs of Irish; in all there are Honours Schools for Degrees. In University College, Dublin, alone there are over 180 students reading Irish as an optional subject, and to this number must be added the classes of University College, Cork, and University College, Galway, to appreciate the extent to which it is followed in the University.

Of the relative educational value of the mental training obtained in the study of Irish there can be no doubt. Striking testimony to its value may be easily obtained from the writings of foreign scholars:—

"Its treasury of words is extraordinarily rich, its syntax graceful and characteristic. The study of it consequently appears to me to be in no way less educational than that of other Modern Languages. It is tolerably difficult and incomparably deeper than, for example, Welsh . . . and an admirable exercise for the mind."—(E. C. Stern, Late Royal Librarian, Berlin.)

"We in Germany would certainly not introduce Irish amongst the languages to be learned in the Schools. But in Ireland Irish is the ancient language of the country; not to cultivate the Irish Language means to close up, without necessity, a well-spring of the spiritual characteristics of the people."—(Ernst Windisch.)

"For thorough education and schooling of the mind Irish stands at the very least on a level with the two above-named languages (French and German); in fact it is in many respects superior to them, because it is more characteristic and consequently gives more matter for thought."—(Dr. H. Zimmer.)

It is claimed, then, that since the Irish Language is universally admitted to be one of the best linguistic mediums in existence for training the intellect, and is now so widely studied, both in Schools and Universities, it should find a place in all open competitions under the Civil Service in which other Modern Languages, or Latin, are either optional or essential, and should count in such examinations as other Modern Languages.

*University College, Cork.*

That the Examination method of determining appointments is not theoretically the best means of obtaining the best candidates for positions may almost be taken as admitted. But, at the same time, it may also be admitted that, where many conflicting interests have to be considered, such a system may be the only one possible under the circumstances. If this be so it is not unreasonable to urge that the examination system should be mitigated as far as possible, and it is at least open to discussion whether it might not be modified by the appointment of certain positions or groups of positions to a limited competition determined by nominations given by Teaching Institutions such as Universities and University Colleges. Admission to the Examination might be confined to persons nominated by such institutions from amongst those of their students who had spent—say—a year under instruction and who were, in the opinion of their teachers, likely to prove successful as administrators. The candidates successful at the examination might be required to continue their studies during the period necessary for the obtaining of a Degree, and during that period should be the recipients, where it should be shown that such assistance was necessary, of Government Bursaries to enable them to carry out their studies. A corollary to this would be the right of the Government Board or Commission having cognisance of these students to determine the subjects of their study during the periods of the enjoyment of Bursaries. That a certain amount has been done and is being done to enable persons of slender means to obtain University education is undoubted, but that all such claims, in the case of persons well qualified to make good use of such instruction, can at present be satisfied, is certainly not the case. As things are at present, students who fully recognised the fact that they must begin earning their living from the time that they secure their Degree—and such of the majority of those with whom we are here concerned—are bound to follow those courses which promise the best chance of an immediate return. Such students cannot afford to take the risk of possible employment under the Crown at the termination of their undergraduate career, yet it is from amongst such students, in the past, that some of the ablest administrators have been found to emerge. The first year of University life affords an opportunity for the estimation of a student's character. If, at the end of that period, he learns that, subject to a satisfactory continuance of his studies and equally satisfactory reports on the same, he will be able to earn his livelihood at the termination of his University career, and if, in addition, he is assisted to continue that career, many will turn their attention to Civil Service appointments of the highest class who do not dare, at present, to take that risk. Further, the student, thus selected, will be able without fear and in all earnestness to direct his attention to those studies which will be likely to make him most valuable in his future employment.

In this connection, special attention may be directed to the course in the Faculty of Commerce, now in existence in many of the Universities of these islands. Though described under the name of Commerce, these courses offer admirable preparation for persons whose lives are to be spent in administration. Economics, Commercial History and Geography, and Law are all of them subjects of the greatest value in such a line of life. Accountancy forms a prominent feature in such courses, and it will hardly be urged that a knowledge of how to keep accounts is not likely to be of service to a public official. Further, these Faculties offer courses in Civics, that is, in public administration, and are, it will be seen, far more than a mere preparation for a business life. The instance cited is only an instance, though probably the best instance of

the kind, of choice of subjects which might be made by a student who was in a position to know that a post was open to him, and that it should be his ambition, as it would be to his advantage, to make the best use of his time in fitting himself for that post.

It is hardly necessary to urge that such a method would do much to strengthen the relation which should exist between the highest education given by the University and the efficient discharge of their functions by members of the Civil Service.

As matters are at present, the examinations which are conducted by the Civil Service Commissioners do not seem to exercise any special influence on the curricula of Colleges such as this, but it is highly probable that, in the event of some such system as that outlined in this memorandum coming into effect, a greater likelihood of the moulding of courses so as to make them serviceable to future Civil Servants would come to pass.

Finally, it may be added that students unsuccessful at the end of their first University year in obtaining a nomination, or, after being nominated, at the subsequent examination, would not be too late to start on some other line of work, as is so often the case with those who postpone their Civil Service examination until they have obtained their Degree in Arts.

*University College, Galway.*

1. The fact of possessing a higher general culture, of having a greater knowledge of his fellow men, of having been in contact with highly cultivated minds, and of having undergone a certain discipline in a University, provided it be a residential one, widens the outlook on life and contributes to greater efficiency and usefulness in the public service.

2. We believe that nothing can test administrative capacity except administration, and that therefore no

system could be devised that would always secure the best men at the start; we consider that the system of competitive examination is fundamentally sound; but we believe that the system requires modification in certain particulars. We hold that a man who has taken a honours degree in a residential University is more likely to prove a good man than one who has depended entirely upon grinding for a special examination: and that, therefore, such a man should in the competition be given some advantages. We suggest that an extension of age-limit might be made in favour of a graduate with high honours. We also hold that such a man, having presumably made a real study of a particular group of subjects, is in a better position, educationally, than if he had been merely crammed in a much greater variety of subjects; and on this ground we suggest that it should in the competition be possible for him to obtain as high an aggregate of marks on a limited range of subjects (including those in which he took his degree) as other candidates can obtain upon their much wider range. This could be secured by adding a percentage to all the marks of such a candidate in recognition of his Honours Degree. In fact, we are not sure whether it would not be in the interest of the public service to limit the competition for posts in the higher Civil Service to University Honours men.

3. The opportunities in Ireland for a poor student to secure a University education are now, in our opinion, ample; but no matter how brilliant such a man may prove in his University career, he may find himself after graduation unable to afford the special preparation which is requisite for the higher Civil Service examinations as at present conducted.

4. The Civil Service examinations do not in any way affect the curricula of the National University of Ireland, nor the curricula of any other Universities with which we are acquainted.

## APPENDIX LXVI.

(Handed in by Mr. C. T. Beard, I.S.O.)

Q. 29,928.

### THE IRISH LAND COMMISSION.

The following branches of the Land Commission perform duties common to both the Land Purchase and the Fair Rent sides:—

(1) Land Commission Secretariat (including branches dealing with procedure under the Labourers Acts, fair rent statistics, stationery, and subdivision and mortgaging):—

Assistant secretary . . . . . 1

Secretariat proper:—

Staff Officer . . . . . 1

Second Class Clerk . . . . . 1

Third Class Clerk . . . . . 1

Second Division Clerks . . . . . 2

Abstractors . . . . . 4

Shorthand Typists . . . . . 3

Boy Clerks . . . . . 5

Fair Rent Statistical Branch:—

Second Class Clerks . . . . . 2

Abstractor . . . . . 1

Boy Clerks . . . . . 2

Stationery Branch:—

Second Division Clerk . . . . . 1

Boy Clerks . . . . . 2

Total . . . . . 26

(2) Accountant's Branch:—

Accountant . . . . . 1

Assistant Accountant . . . . . 1

Second Assistant Accountant . . . . . 1

First Class Clerk . . . . . 1

Staff Officers . . . . . 2

Second Class Clerks . . . . . 3

Second Division Clerks . . . . . 16

Abstractors . . . . . 7

Temporary Clerk . . . . . 1

Total . . . . . 33

(3) Record Branch:—

Keeper of Records . . . . . 1

Second Class Clerks . . . . . 2

Second Division Clerk . . . . . 1

Record Attendants . . . . . 2

Assistant Attendants . . . . . 4

Abstractors . . . . . 3

Boy Clerks . . . . . 11

Total . . . . . 24

The following branches are solely occupied upon Land Purchase work:—

(1) Registrar's Branch (Land Purchase side):—	
Registrar	1
Assistant Registrar	1
First Class Clerk	1
Staff Clerk	1
Second Class Clerks	2
Third Class Clerk	1
Second Division Clerks	3
Abstractors	2
Boy Clerk	1
<b>Total</b>	<b>18</b>
(2) Annuity Collection Branch:—	
Chief of Collection	1
First Class Clerk	1
Second Class Clerk	1
Minor Staff Clerks	2
Third Class Clerk	1
Second Division Clerks	6
Abstractors	42
Temporary Clerk	1
Shorthand-typist	1
Boy Clerks	3
<b>Total</b>	<b>59</b>
(3) Interest Collection Branch:—	
Head of Interest Collection Branch	1
Chief Assistant	1
Second Division Clerks	2
Abstractors	29
Temporary Clerk	1
Boy Clerks	11
<b>Total</b>	<b>45</b>
(4) Examiners:—	
Chief Examiners	2
Examiners	16
Examiners' Clerks	5
First Class Clerk	1
Third Class Clerk	1
Second Division Clerks	3
Abstractors	3
Boy Clerks	4
<b>Total</b>	<b>35</b>
(5) Solicitor's Branch:—	
Solicitor	1
Assistant Solicitors	3
Clerks	14
<b>Total</b>	<b>18</b>
(6) Estates Commissioners' Secretariat:—	
Registrar and Assistant Secretary	1
Chief Clerk	1
Staff Officers	2
Second Division Clerks	5
Abstractors	8
Shorthand-typists	7
Boy Clerks	3
<b>Total</b>	<b>27</b>
(7) Legal and Vesting Branch:—	
Chief Examiner and Legal Adviser to Estates Commissioners	1
Examiner of Title attached to Estates Commissioners	1
Head of Branch	1
Second Class Clerk (Deputy Head of Branch)	1
Staff Clerk	1
Senior Legal Clerk	1
Legal Clerks	6
Third Class Clerk	1
Second Division Clerks	11
Assistant Clerks	9
Temporary Clerk	1
Boy Clerks	2
<b>Total</b>	<b>36</b>

(8) Agreements for Purchase Branch:—

First Class Clerk	1
Second Class Clerk	1
Staff Clerks	3
Third Class Clerks	2
Second Division Clerks	25
Abstractors	31
Temporary Clerks	4
Boy Clerks	14
<b>Total</b>	<b>81</b>

(9) Estates Management Branch:—

Estates Management Clerk	1
Staff Officer	1
Minor Staff Officers	4
Second Division Clerks	11
Abstractors	18
Temporary Clerks	2
Shorthand-typists	2
Boy Clerks	7
<b>Total</b>	<b>46</b>

(10) Survey and Mapping Branch:—

Chief of Branch	1
Chief Assistant	1
Surveyors and Draughtsmen	2
Surveyors of Improvement Works	5
Surveyors (Upper Section)	9
Surveyors (Lower Section)	18
Field and Office Examiners	2
Draughtsmen and Computers	11
Second Division Clerk	1
Assistant Clerks	2
Boy Clerk	1
<b>Total</b>	<b>53</b>

(11) Inspection Branch:—

Chief Inspectors	2
First Class Clerk	1
Second Class Clerk	1
Second Division Clerks	5
Abstractors	3
Shorthand-typist	1
Boy Clerks	3
<b>Total</b>	<b>16</b>

(12) Sub-division and Mortgaging:—

Second Class Clerk	1
Second Division Clerk	1
Abstractors	2
Temporary Clerk	1
Shorthand-typist	1
Boy Clerks	2
<b>Total</b>	<b>8</b>

And the following branches are solely engaged in duties on the Fair Rent side:—

(1) Registrar's Branch (Fair Rent side, including Appeals and Listing Branch).	
Fair Rent Side:—	
Assistant Registrar	1
Second Class Clerk	1
Third Class Clerks	2
Second Division Clerk	1
Temporary Clerks	6
Boy Clerks	7
<b>Total</b>	<b>18</b>
(2) Fair Rent—Outdoor Staff:—	
Legal Assistant Commissioners	3
Deputy Registrars	3
Assistant Commissioners	10
Assessors	3
<b>Total</b>	<b>19</b>

## APPENDIX LXVII.

(Handed in by Mr. Henry Doran.)

Q. 30,625.

## CONGESTED DISTRICTS BOARD FOR IRELAND.

## OUTDOOR STAFF, ESTATES BRANCH.

	Scales of Salaries for each Class.	Number of Appointments authorised by Board.	Number of Appointments not filled.	Number of Appointments filled.	Total of present Salaries.	
Chief Land Inspector	Fixed, 900 <i>l.</i>	1	—	1	£ 900	Entered service in 1904 without examination.
Senior Land Inspectors	400-25-600 <i>l.</i>	8	4	4	2,250	Entered service before without examination.
Inspectors	200-20-400 <i>l.</i>	20	8	12	3,315	One entered service in 1903 before examinations were held. All others entered service by examination.
Assistant Inspectors, First Class.	150-15-200 <i>l.</i>	16	—	16	2,729	All entered service by examination.
Assistant Inspectors, Second Class.	130-10-150 <i>l.</i>	25	9	16	2,190	" " "
Superintendent Surveyor.	400-25-600 <i>l.</i>	1	—	1	550	Entered service without examination; previously for 20 years on Ordnance Survey staff.
Surveyors, First Class	120-10-200 <i>l.</i>	20	1	19	2,940	All, except two, entered service by examination. The two who were admitted without examination had been over 20 years on the Ordnance Survey staff.
Surveyors, Second Class.	90-10-120 <i>l.</i>	25	8	17	1,800	All entered by examination.
Valuers and Stripers	1 valuer, 200-20-400 <i>l.</i> ; 3 stripers, 90-10-120 <i>l.</i> ; 1 striper, 25 <i>s.</i> weekly; 3 stripers, 30 <i>s.</i> weekly.	8	—	8	1,075	Entered service without examination.
Inspectors' Clerks	1st grade, 200-10-300 <i>l.</i> ; 2nd grade, 130-10-200 <i>l.</i> ; 3rd grade, 70 <i>l.</i> -7 <i>l.</i> 10 <i>s.</i> -130 <i>l.</i>	10	—	10	1,076	All entered service by examination.
Paymasters	3 <i>l.</i> weekly	5	—	5	780	Entered service without examination.
Total		139	30	109	19,605	{ All, except 22, entered service by examination.

ROYAL COMMISSION ON THE CIVIL SERVICE.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

CIVIL SERVICE.

At the Royal Commissions House, Old Palace Yard, S.W.

EIGHTY-FIRST DAY.

Thursday, 10th April 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.  
Mr. ARTHUR BOUTWOOD.  
Mr. JOHN ROBERT CLYNES, M.P.

Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Miss E. S. HALDANE.  
Mrs. DEANE STREATFIELD.  
Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. W. P. HERRINGHAM, M.D., F.R.C.P., called and examined.

33,090. (*Chairman*.) You are Vice-Chancellor of London University?—I am.

33,091. And you have come to speak on behalf of the University of London?—Yes.

33,092. Will all your evidence be on behalf of the university, or will you also speak on your own behalf? If you do, I should like you to distinguish between your replies given with the authority of the university and the replies given on your own authority alone?—I am afraid that anything I say beyond the explanation of the matters in our report would have to be my own opinion.

33,093. That meets my purpose. Do you think that the recruitment of men for the highest appointments in the Civil Service must be done by means of open competition?—On page 87 of their report the university state in clause 3: "The only practicable method of recruiting the public service from outside is in general by competitive examination, although they are prepared to admit that there may be exceptional cases in which special experience is desirable."

33,094. That is a point I should like you to develop. When you say that the university consider that as a general rule the method of entrance should be by open competitive examination, may I assume that an examination of a literary character is meant. In the phrase "literary character" I include mathematics and other subjects as well as classics?—Yes, that is what they mean.

33,095. That is to say, the main road of entrance into the Civil Service should be through open competition?—Yes.

33,096. But the university think that there may be exceptions?—Yes.

33,097. What would be the character of the exceptions? Wherever men are recruited for the Civil Service for professional work, for instance, the work of doctors, or lawyers or engineers, such men would naturally not be recruited by means of a competitive literary examination. But there may be instances, I understand you to say, other than these, in which the open competitive examination may be departed from. To what kind of instances do you refer?—The words used

in clause 3 are "cases in which special experience is desirable."

33,098. That is the point I want to clear up. Would the special experience be professional experience, is that what the university means?—I think the university would be quite prepared to agree with the words that are used by the Professorial Board of University College on page 90 of our minutes.

33,099. What minutes are you referring to?—I am referring to the minutes of the Senate in which our report was approved, and which are embodied in the statement\* which has been submitted to the Commission, on page 9: "In the opinion of the Board the University of London especially can afford assistance in this matter. There are already in attendance in connection with some of the post-graduate courses given by the university many Civil servants, among them some second class clerks. These men are enabled to obtain training in administration and in history, and in other subjects which are of especial value to Civil servants. This would appear to be the avenue by which second class clerks ought to be able to obtain promotion to the higher ranks."

33,100. In such a case how would you define the exceptional knowledge. I have a general idea of what is meant, but can you define it more precisely?—I do not think I know enough about the Civil Service to be able to define the various cases in which special requirements might be wanted.

33,101. On behalf of the university you admit that the general rule should be an open competitive examination of a literary character?—Yes.

33,102. But the university say that they contemplate the possibility of there being exceptions to that general rule. What I want to get at is a brief definition of the character of those exceptions. Take the British Museum, in which there may be a vacancy in the Department of Egyptology. Very few men have acquired a knowledge of Egyptology, but the authorities of the museum know that in this museum and that museum there are a few

\* *Vide* Appendix LXXI.

10 April 1913.]

Mr. W. P. HERRINGHAM, M.D., F.R.C.P.

[Continued.]

people with the exceptional knowledge, from among whom they might select the best. Is that what you mean?—That is one thing. In other words, it means appointments for which a special education might be required. That is one method.

33,103. A special education of a non-professional character?—Yes. I suppose another method might be—or perhaps you might include it under the same head—appointments in which a special knowledge of administration might be required which a particular candidate was known to possess.

33,104. I do not think that Civil servants at this stage are ever recruited upon the basis of a knowledge of administration; they learn administration after they come into the Civil Service; they are then trained in administration?—I take it that nobody is put into Class I. by examination for administration, but I believe they are sometimes appointed on nominations; I thought it was occasionally done for some such purpose.

33,105. We have excluded that method of appointment, for the moment, from our consideration. We have taken the principle of open competition as the general rule to which, you say, there are certain exceptions, and these exceptions I understood you to say were cases in which special knowledge is required?—That is one example of it at any rate.

33,106. We have heard a good deal of evidence to the effect that an open competitive examination, although it may test the knowledge that a candidate has acquired, will not give us a clue to what that candidate is likely to develop into 20 years hence; that although it gives us an indication as to his capacity, it will not give us a reliable indication of what his character is and whether he will turn out a good all-round man. We have been casting about for some means of correcting that defect, if it be a defect, in the open competitive system. You, of course, have also thought about it?—Yes, I have. This is a personal opinion; it does not represent the university.

33,107. We shall be glad to hear your personal opinion; is there, in your opinion, any means by which we could get a better indication of a man's character than we are able to get at the present time by the open competitive examination?—There are no means that are at present adopted; that, of course, is the great failure of the system of examination.

33,108. You say that there are no means under the present system?—I do.

33,109. Could you suggest any means which would be consistent with maintaining the present system as part of the test?—The only means I can think of would be such other sort of information as, for instance, was attempted by Mr. Rhodes.

33,110. Let us see how that would work?—It is a most difficult thing to work and it has never been tried.

33,111. Has it never been tried?—I mean in broad examinations.

33,112. Can you tell us what is the character of the further inquiries and information that has been gathered in the case of the Rhodes scholars?—I must speak under correction, I am not familiar with it, but I think the information was gathered from the contemporaries of a candidate and from his superiors.

33,113. From his college and school contemporaries and superiors?—I believe so.

33,114. Was that information gathered prior to a competitive test or subsequently?—I do not think there is a competitive test in the sense of an open competitive examination.

33,115. Are we not thinking about different things. The Rhodes men are sent from other countries to English universities; I was thinking of the Egyptian Service, which is recruited, I believe, somewhat in the way you mention?—All I said was that you might supplement the present open competitive examination by some such information as is obtained by those who select the Rhodes scholars.

33,116. Then I ask you what is the character of that information; and is it information gathered from the school and college superiors of the candidates?—That is done at the time that the selection is made of the Rhodes scholars.

33,117. Would you have that information supplant the competitive examination altogether, or would you have it taken as supplementary to it?—As supplementary.

33,118. Would you have it gathered before the competitive examination is conducted, or afterwards?—I have not thought about that. It is in the air; it is a very visionary scheme. May I add also that I think that some similar steps are taken in other examinations in England which are already in force. We always suppose that the interview which the Admiralty hold with little boys before they admit them is of that class.

33,119. Does not that interview take the place of an examination; has not, in these instances, the examination been abandoned in favour of that system of interview?—In that case I believe it is the only reason for the examination.

33,120. (*Mr. Matheson.*) There is a qualifying examination afterwards, but it is a very simple one?—Of course it is ridiculous to subject little boys of 12 to a severe examination.

33,121. But, as I understand, you would not substitute any such arrangement as that of an interview or anything else of the kind for a literary competitive examination?—No, I should make it supplementary.

33,122. That is the basis on which we have been discussing the whole question?—Yes.

33,123. I gather then that you would be in favour of making inquiries from the school and college authorities in regard to the character of particular candidates and the likelihood that they would be suitable for the purpose for which the examination is held?—Yes.

33,124. Would there, do you think, be any objection to that on the ground that all the men who pass into the Civil Service and do good work for the State have not been recruited from public schools and colleges of that description; I have in mind, would it not exclude the son of a poor man who may have worked up and prepared himself for the examination privately?—Do you mean a man who has never been under any teacher?

33,125. He may have gone through the ordinary secondary school education?—Then I suppose he would have some teachers, and he would have some companions.

33,126. But you could not go on the report of his companions; you would have to go to his teachers, and the information that you would get of that description from any schools, except public schools or colleges, would be rather of an unreliable character?—I think you would have to supplement it by evidence from other people who were not directly the authorities of the schools, perhaps.

33,127. That would make us go very far afield, would it not? We could not have a sort of judicial inquiry into the character of the candidate; that would be somewhat out of conformity, would it not, with the idea of an open competitive examination?—My impression is that we were expecting, for this class of examination, that all your candidates must be graduates and have had university teaching before they could enter; that nobody could pass the examinations who had not had it.

33,128. (*Sir Kenneth Muir-Mackenzie.*) You are confining yourself to the Class I. examination?—Yes.

33,129. (*Chairman.*) I think there is a great deal in that; that practically all the candidates for the Class I. examination are university graduates. It used not to be so while you had important preparatory places, such as Wren and Gurney's. You have them still, I suppose?—I think so.

33,130. In regard to the character of the Class I. examination, I understand that the London University has particular views; they are not satisfied, I take it from the paper you have handed in, with the syllabus of the examination at the present time?—Not quite.

33,131. Is the London University in a position to form an opinion—I do not use the phrase in any depreciatory sense; what I mean is, are the arrangements of the university such as to enable candidates to compete with men who go through the Oxford School of *Literæ Humaniores* with honours?—I do not think that our classical men would be the men to put against Greats, because they are usually much younger. I do not think

10 April 1913.]

Mr. W. P. HERRINGHAM, M.D., F.R.C.P.

[Continued.]

our classical school is comparable to Greats; I do not think that there is any school in the country which has a literary training comparable to Greats; but I think if you take Greats as one branch of learning, there are other branches of learning in which we certainly could compete.

33,132. And you are satisfied that those other branches of learning, as educational means of developing the intellect, are equally effective with the Oxford Greats?—I think they might be so, and ought to be so. I think that a man who is trained in science ought to undergo a training which should develop his mind in a little different way, but equally methodically and equally deeply with such training as Greats or such training as mathematics.

33,133. Could you mention a group of subjects such as you have in your mind which you would consider an equivalent to the Oxford School of *Literæ Humaniores*?—I should say the school of history including modern languages and the history of modern thought—philosophy—such a school as that (I am sketching it very roughly, of course) would practically mean the same sort of study in modern times that Greats gives you for classical times. Another branch, I should say, would be a really wide and deep scientific school, a scientific school in which a man not only came up in one or two actual sciences but had also studied deeply the philosophy of scientific thought, metaphysics, psychology and thought as applied to science, in fact, modern thought.

33,134. Do you think there is a feeling in existence that the present scheme of examination unduly favours Oxford and Cambridge at the expense of the more modern universities and the University of London?—I do not think one would say that. I think the feeling that is expressed is rather that you are only allowing in that examination for principally two schools—mathematics and classics; whereas there are at least these other two schools that I have mentioned, branches of learning, as I think the professors of University College call them.

33,135. Is there in the University of London a strong feeling that the question of the examination should be reconsidered from the point of view that you have now expressed?—I think there is.

33,136. Do you think that feeling is shared by the more modern universities that have sprung up in England?—I cannot say, I really have not any means of knowing that.

33,137. But you can speak positively for the London University?—Yes, I can say that.

33,138. How could such a question be brought to the test in a manner that would satisfy people who are doubtful. What means would you suggest for bringing it up for discussion and settlement?—Do you mean in order that you might know whether these other universities share our views?

33,139. No; in order to discuss the questions of the syllabus of the examination and the marking of each subject; how would you propose that that should be brought to the test, discussed, and decided?—Is it not suggested that there should be a conference of the universities? In clause 19 of our report, we suggest "that a permanent advisory body, representative of all universities in the United Kingdom, should be appointed to assist the Civil Service Commissioners."

33,140. Would you prefer that the body so to be appointed should be a permanent body, or that there should be periodic conferences between the Civil Service Commissioners and the university authorities?—I do not think that very much matters. I do not suppose they would want to be changing the examination every year, or anything like it.

33,141. Would it not rather infringe upon the jurisdiction of the Civil Service Commissioners if you had a body which continuously year by year might make suggestions to it; because if you had an advisory body, it would clearly have the right to make suggestions whenever it liked; but if you had conferences, say, at intervals of five or seven years, at which the proceedings of the preceding seven years would be reconsidered and any changes introduced, then the administration of those changes would be confided to the Civil Service

Commissioners. That would seem, would it not, to be a more effective means?—I should think that would be all that would be required. The only thing I see about it is, that if you have to have an Act of Parliament every time you summon such a conference, it would mean a great deal of trouble.

33,142. Would you require to have an Act of Parliament every time?—I do not know. You have not had such a conference, I think, since 1903.

33,143. I did not contemplate an Act of Parliament?—I do not know what your mechanism is; I believe you have not had a conference for a good many years.

33,144. It would be a voluntary act on the part of the universities, but I suppose the universities would be perfectly willing to take part in it?—They would be very willing, I should think.

33,145. Regarding the mere mechanism of the examination, are you in favour of having the papers examined by two examiners and not by one alone?—I like it better myself.

33,146. If the question of expense and delay were eliminated, would you be in favour of having two examiners instead of one?—Oh, yes.

33,147. What is your view as to the value of a *viva voce* examination? We have heard divers views expressed upon that point; some academic men do not favour *viva voce* examinations, and others think they are useful, and especially that they would be useful as a test of character. The doubt was, whether the public would accept the decision of the examiner as to the relative capacity and alertness of mind of the candidates. Have you considered that?—Yes; I have had to consider it a great deal. I think that if you give full play to the *viva voce* examination as we used to do at Oxford, it is a very fine thing; but as far as any test of a man's character goes, I do not think that a limited *viva voce* examination confined to 15 minutes, or anything of that sort, at which a bell rings and everybody stands down, gives you any test of character or what you might call general knowledge. I think that is not worth while.

33,148. If you were to give half an hour, for instance, to a *viva voce* examination of a candidate in Greek philosophy or Greek history, you would be able to ascertain in that time whether the candidate was an all-round good man who could marshal his information quickly, who could co-ordinate and arrange his thoughts quickly. From that you would be able to judge, would you not, of his precision of thought and general mental alertness?—I think in that form you would. I should be against fixing any definite time for any such examination. At Oxford, as you know, we used to be taken for exactly so long as the examiners chose; nobody ever complained.

33,149. But provided that there was no limitation with regard to time and the question of expense did not come into account, you do think that a well-conducted *viva voce* examination would be a useful test—a supplementary test or an additional test to the written competitive examination, and that it would give you an insight into a candidate's general character which the present system does not give you?—I am very strongly of that opinion.

33,150. I put to you two methods of choosing candidates for the Class I. examination: The first method is the present system of open competition, free to everybody, supplemented by a full and careful *viva voce* examination directed not only to ascertaining the candidate's grasp of the knowledge of his subjects, but also his mental alertness, the quickness with which he marshals all the information that he has, the precision of language with which he expresses it, and generally his mental alertness. That is one system. The other system to be contrasted with it is, ascertaining the candidate's school and college record and determining from that record that the candidate possesses the *mens sana in corpore sano* before he is recommended for this particular examination by the university authorities, and then instituting a competitive examination between the candidates so recommended. These are the two alternative schemes I place before you, and I ask you which of them, in your opinion,

10 April 1913.]

Mr. W. P. HERRINGHAM, M.D., F.R.C.P.

[Continued.]

would furnish the State with the best class of public servants?—Provided that I could not have both?

33,151. First, will you say as to the alternative, and then we will talk about the possibility of having both. If you had to choose between the two which alternative would you prefer?—This is a very personal opinion, and I am afraid that you will perhaps think I am talking, as people say, through my hat; but it seems to me that the evidence of the previous record would give you a very much better insight into a man's character than anything that the examiners could give you; but that a *viva voce* examination by a clever examiner, a really good man, would give you a much better insight into certain intellectual characteristics of the man than any evidence that you could get from his previous record. The two are different.

33,152. In regard to the alternatives, you have to remember that the first which I put to you would be the more democratic of the two; because anybody could come in for the examination, no matter whether he was a university man or was an outsider?—You are referring to the *viva voce* examination?

33,153. Yes; anybody could present himself from outside from the ordinary secondary school, or wherever he got his education: it would be the wider of the two?—May I just give as an illustration that I do not think a *viva voce* examination, such as we had it at Oxford, would give the examiner any particular view, any very good view at any rate, of the man's character; but it was an excellent test of the man's intellect, I always thought. May I say, further, that I am permeated by distrust of examinations (I am an examiner myself), with the feeling that examinations want all sorts of supplementing, that I should much prefer that you should have both the previous evidence and the *viva voce* examination.

33,154. Do you think that an open competitive examination does not furnish evidence, or at all events some assurance, of a candidate's perseverance?—Yes.

33,155. And of his powers of concentration and also his courage; because an examination is an ordeal, and a considerable ordeal. Do you think it does furnish evidence on those points—perseverance, concentration of thought, and that sort of courage which is manifested in appearing for an examination?—I think that a great many men, probably the majority of men who pass good examinations, are good men; but I think there are quite a large number of men who can pass examinations very well and who are of very little use for other purposes.

33,156. Then may I take it that the great majority, in your opinion, would, by passing such an examination as we have been talking about, give thereby proofs of their possession of certain important elements in what we call character—that they are about the right men?—No, I do not mean that.

33,157. Is there anything at all, then, in passing an examination which gives you an indication that a man is a man of character. Those points that I understood you to assent to, namely, perseverance, concentration of thought, and a certain amount of courage, which is shown by submitting himself to an examination, are elements in character—elements, at all events, which go some way to show the possession of what we generally understand as character, fitness to deal with things as they come. They are not a complete assurance by any means; and it is because they are not a complete assurance that you and I are discussing the question in order to see what supplementary means of assurance we can find?—That is quite so.

33,158. (Mr. Clynes.) On paragraph 3 of your statement you suggest "That in certain cases the universities might be asked to recommend as candidates for appointment persons who have had an exceptionally distinguished academic career of a sort to qualify them for candidature." Who would judge as to whether they had that particular sort of qualification?—Do you mean who would furnish the university with particulars?

33,159. No; I understood you to suggest that the universities should recommend the sort of men exceptionally fitted, because they possess a special kind of qualification?—Yes.

33,160. Who would judge whether they had that sort of academic qualification?—Perhaps I had better give an instance that occurs to me.

33,161. If you please?—If you wanted an Egyptologist—I do not know whether you do—but supposing you wanted somebody of that character, and you sent to us to say, can you recommend to us any such person? That would be referred by the Senate to the body of teachers of that subject, who would report to the academic council, who would again report it to the Senate, who would report to you. That is the way it would be done; it would be done by the teachers.

33,162. Supposing a number of gentlemen were recommended for this special reason, do you mean that they should then be subjected to any test or examination before appointment?—If you wanted people for a special purpose with a special qualification, I take it that you might ask more than one university to recommend; but I should hardly think you would want to put them to a further test. That would be a matter for you.

33,163. (Sir Kenneth Muir-Mackenzie.) The only reason, Dr. Herringham, why I ask you no questions is because I think the statement put in by the University of London is so clear, and having read it very carefully, I agree with so very much in it that I do not feel that I can attain a clearer view in my mind by asking further questions?—I will report your kind compliment to the Senate.

33,164. (Mr. Matheson.) When you speak, in paragraph 5, of the proportion of London graduates qualified to enter Class I. of the Civil Service, have you in mind that this examination serves, not only for the Home Service, but for India and the Colonies, and that probably at the older universities there is a much larger number of men who, from tradition and family association, are likely to go in for those services than there are likely to be at the London and the more modern universities?—That, I think, was fully allowed for. I should like to say that my personal opinion, not speaking at all for the university, is that we thoroughly understood that point. We know perfectly well in the first place that the facilities and the rewards held out at the older universities attract the finest class of men; they gather the pick of all the schools to the universities, because they have far more scholarships than we have; and, in the second place, as a rule, the men come from a class which has served the country in that way already, and, it may be, are looking forward from their early years to undertaking a public career of that kind. One professor of the university said, in so many words, to us, when we were talking over the matter, that he was quite sure that one of the reasons why we did not send men up was because the question was never brought before them, that they were not of a class who were accustomed to think of the Civil Service as a profession. I may say that he has held for the last few years a university class, a class which he has been getting together, and he finds that those who do go in do very well in the examination.

33,165. We have had the same sort of evidence from Scotland. In paragraph 9 you refer to the schools of economy and law; should you consider that for this kind of examination a student of law ought to be able to get as large a number of marks as some who have taken a school with a wider educational range, whether scientific or human letters?—I daresay you have not seen or read the book containing the syllabus for our internal students, but the students of economics take really a very broad course.

33,166. It is law that I was asking about?—I hardly think that you could say that law was comparable to a broad classical education. I do not think it is.

33,167. Then when you come to the proposals for reconstruction of the examination which come from University College, but which I understand are to some extent adopted by the university generally, they are very interesting proposals; but what occurs to me with regard to the compulsory subjects which are proposed on page 7, is this: that to require a modern language, and also one of the following, (a) economics, (b) sociology, (c) administration and geography (which is a very curious combination), would put a great deal

10 April 1913.]

Mr. W. P. HERRINGHAM, M.D., F.R.C.P.

[Continued.]

of pressure on the university curricula. Would you not be rather putting pressure on your candidates' university course by requiring them all to have taken a foreign language, and one of these three special studies, because, after all, they are special studies. And I confess I do not understand the curious combination, administration and geography?—Of course it signifies political and commercial geography, which is a subject.

33,168. What has administration to do with geography?—I could show it very plainly if you looked at the syllabus of economics for our degree; they are in very close connection.

33,169. I admit, of course, that geography comes into everything, but I do not see why administration particularly should be connected with it?—You think it is too much to put upon them?

33,170. My point is, that you are requiring all your candidates to take certain special studies which you think suitable for the Home Service, when, perhaps, a dozen will get posts in the Service?—I confess that I should not like to state an opinion about it other than that of the university.

33,171. I only wished to raise the difficulty?—I quite see the difficulty.

33,172. Then with regard to the modern course generally, I take it that you would agree that, if modern languages and modern studies are to have a larger assignment of marks, the modern course, say, in French or German, must be something very much more elaborate and very much more comparable to the Greats course than it is at present?—Certainly.

33,173. Then it would not do, I mean, to multiply the number of marks given to French or German unless you make those subjects a great deal more substantial than they are at present?—No. What we had in our minds was that you have now two subjects, Greats and mathematics, two very fine types of training, but that you have not in your regulations sufficiently allowed for two other equally fine types of training.

33,174. What you have said about a *viva voce* examination is very interesting, and I agree with a great deal of it. The difficulty, it seems to me, is this, and I should like to know your answer; that you have admittedly to examine candidates on, say, four different lines of study; you have to *viva voce* them all; you would have, therefore, to have different people conducting the examination for different candidates. Do you think that unless they all heard all the candidates examined, you could get any comparative estimate which would be of value?—You would, in any case, of course, have to have a lot of different examiners.

33,175. But what I mean is, that in a *viva voce* examination so much depends upon the persons who are going to estimate the comparative merits and character, seeing the men while they undergo the examination, that it would seem necessary for the examiners in all the subjects to be present at all the *viva voce* examinations?—I think you are exaggerating the difficulty. I think it is advisable that more than one examiner should be present at such an examination; but I think if you had two or perhaps three present (we always do have two at Oxford) you would very soon get a general standard established; they would level up.

33,176. You would have to have some common element, I think, connecting the different subjects?—Yes, I am sure of it.

33,177. (Mr. Shipley.) I would like to endorse what Sir Kenneth Maekenzie has said about the completeness of the statement sent by the university, but I want to ask you a question or two. In the first place how old are your men as a rule when they graduate?—The medical students I hardly think come in, they are older than your men; you send them to us.

33,178. They only come in, I think, in connection with the Local Government Board and the Home Office?—That is so; the other men are all generally younger than those are at the older universities.

33,179. Would you think that the extra year or two of training that they get at the older universities accounts perhaps to some extent for the larger numbers that pass, by training their minds very intensively up to 23?—I think the two extra years makes more difference than anything else.

33,180. Especially at that time of life?—Yes, but I believe really it is very largely a question of class.

33,181. We have had some evidence from a big city firm who employ a number of Cambridge graduates, that those who have been most efficient are those who were trained in classics; mathematicians came next, and then those who were trained in natural science, which rather upset my ideas; still, that was the evidence?—But then you must remember that all the prizes—the great majority at any rate of the prizes (and that means the ablest men)—go to classics. You have only to look at the list of judges, nearly all of whom are classical men.

33,182. Then I wanted to know how you think you could disabuse the public mind of all suspicion about favouritism; the public mind is so sensitive on this point at the present moment as to be almost morbid. If you do not confine your entrance strictly to competitive examination, if you admit these other methods, of a personal interview, *viva voce* examination, and record, how can you remove from the public mind the idea which it has now, that favouritism is being shown. That is a real difficulty?—I think that the previous record and *viva voce* examination would hardly appear under the guise of favouritism. It is the private appointments, as I understand, without other people's opinions, that fall under that suspicion.

33,183. I think when the Chairman was cross-examining you about character coming out by a man taking an examination, showing courage, perseverance, and so on, you were perhaps thinking of a different examination from the Class I. examination; you were possibly thinking more of some of the medical examinations. This is a crisis in a boy's life, of course, in which he is made or unmade, and it does show a considerable amount of courage, I think, to face it?—I should not have said that.

33,184. (Chairman.) You think it does not show courage to face a public examination of this sort?—No, I should not think so; you have to sit on a stool and write. I do not think there is very much courage required for that. Every man, of course, is afraid, but I do not think you can say that to sit for examination is a proof of courage. What would be the alternative: that the man having spent all these years in his learning when the day of examination came went away and played a game?

33,185. No, that is not what I meant. I have known many men to fail in examinations through want of presence of mind and courage; and those are the qualities you specially want in people who have in actual life to face emergencies; and a successful examination of the kind is surely an indication, so far as it goes, that the candidate will turn out well?—I am not prepared to rely fully upon it. I have known many a good man who in practical work would have had all his wits about him, and would have done very well, to be very nervous in *viva voce* examination, and that is why I wish the *viva voce* examination to be entirely without limit; because, if you are a good examiner, you can to a great extent by gentleness remove such a man's nervousness, and put him in possession of his faculties. I quite agree that presence of mind at examinations is tested by a *viva voce* examination; but I am afraid I do not think that is exactly the same thing as presence of mind in other circumstances.

33,186. Not altogether; but it is some indication, is it not? Finding it in the one case, you might expect it in the other?—It is some indication, but I should be very sorry to rely upon it altogether. I know, of course, that it is the justification for a *viva voce* examination, but it has never seemed to me that it is a full justification.

33,187. (Mr. Shipley.) I notice that in the Appendix at the bottom of page 8, one of the proposals is that "after a period of five years' notice all candidates for the first class Civil competitive examination should be required to have had a university education, and to have obtained a degree." At present I believe the examinations are open to all British subjects. Do you think the public would stand such a limitation; would it not excite a good deal of comment and antagonism?—We had in our minds the idea, which I

10 April 1913.]

Mr. W. P. HERRINGHAM, M.D., F.R.C.P.

[Continued.]

think seems to have been present in the mind of Lord Haldane when he spoke quite recently, that university education would be so widely extended within quite a measurable time that practically everybody who was going in for higher education would have it.

33,188. You do not think it is unreasonable or dangerous to put it in such a way that we should be told that we are aristocratic, and all that sort of thing. I do not see any advantage in it myself?—Well, of course, if you do not see any advantage in a university education I do not suppose you would agree.

33,189. I did not say that at all; I am an embodiment of the opposite view; but I do not see any advantage in confining this examination to people who have taken degrees. There are quite able men who have never taken a degree?—Undoubtedly.

33,190. (*Chairman.*) I suppose you restrict this to the Class I. examination?—Yes, I think we were meaning that.

33,191. (*Mr. Shipley.*) There is one other question I want to put to you, which I am quite sure Mr. Graham Wallas would have put if he had been here. I want to know whether you can tell us a little more about the scheme of post-appointment instruction. As I understand your paper, the proposal, I believe, is that some Civil servants should attend, say, the London School of Economics?—Yes.

33,192. Is it proposed that they should do that in Government time?—I think, if it was a regulation of the Government, it might be so done; but a great many of them, as I understand (I am speaking only from reports of the School of Economics, I do not know it myself), do at the present time undertake such courses, and it was felt that there are a great many things taught at the School of Economics which are just what a public servant wants to know; but as to when that should be done I do not think I ought to offer an opinion.

33,193. (*Chairman.*) Would you have it done in the very earliest years of a Civil servant in the public service, or would you extend it throughout his service?—I should not have thought it was necessary to extend it throughout his service, but that, after he was adopted as a public servant, the public service should require him to learn special additional things.

33,194. Anything that was necessary over and above his ordinary education?—Yes.

33,195. (*Miss Haldane.*) I am very much interested in what you say on the first page of your statement with regard to women: "To the University of London, which as far back as 1878 threw open its doors to women upon the same conditions as to men, a system which does not allow women to prove their capacity evinced in other quarters, to participate in important administrative and consultative work, cannot be considered as satisfactory or just." I judge from that that you consider that women have proved their capacity to undertake work of this kind?—They have done very well in Government appointments, so far as I have heard.

33,196. To what kind of appointments do you refer?—Inspectors of factories, and things of that kind.

33,197. Do you consider that they ought to have further outlets than they have at present for their work?—In such posts as they may be fitted for, I think we say.

33,198. Can you tell me what your women students are mostly working for at the present time—what their future career is going to be?—I think there are women in almost every school that we have.

33,199. But I mean their future career; so far as you know, what is their future career going to be?—Mostly teaching.

33,200. Therefore it is somewhat limited to the teaching profession at present. We have had a good deal of evidence to the effect that they desire further outlets. I suppose you would endorse that?—I really should not like to say what would be the subjects in which they ought to be admitted. I really do not know enough about the branches of the Civil Service to say, but I think we say, in such positions as those for which they might be fitted.

33,201. You go on to say: "The Senate would urge that any positive sex disqualification should be removed, and that women should be appointed in suitable offices to positions for which they are qualified." Did you intend to convey by that that, provided the sex disqualification were removed, women might be admitted to the examinations for the higher division along with men?—In such spheres as it was thought they could be safely admitted to. For instance, I do not suppose you could possibly suggest that they should be sent to India to join the Indian Civil Service.

33,202. I am concerned with the Home Civil Service at present?—I really do not know enough about the Home Civil Service to say in what directions it might be done; that was purely a general statement: it is an article of faith with us.

33,203. You would consider that women ought to have opportunities of getting into administrative posts in the higher division, if there was work that they could do?—Yes.

33,204. (*Chairman.*) Who is to be the judge of whether they are fit or not; would you not leave it to the Government of the day?—Certainly. I think it must be left to people who understand the Civil Service.

33,205. (*Miss Haldane.*) Have you considered the matter very fully; is it your idea that certain offices should be set aside for women's work. Different ideas have been put before us; some witnesses think that certain special offices would be more suitable than others, and other witnesses have said no, that all offices ought to be open to women equally with men?—I do not think that I should be misrepresenting the university if I were to say that we have not any idea of claiming that all offices were equally suitable to be open to women. There are certain offices which I should think that anybody, and certainly the university, would agree at once were not so suitable to women as to men.

33,206. You mean that certain Government offices might open themselves to women either to a limited degree or to a full degree, and others not; is that your idea?—Yes.

33,207. Have you any idea how it would be determined which offices would be suitable for being open to women?—I should say that that must be determined by those who are familiar with the work of the offices.

33,208. The heads of departments?—The heads of departments.

33,209. (*Sir Kenneth Muir-Mackenzie.*) Approaching the subject with an open mind so far as regards sex disqualification?—Certainly.

33,210. (*Miss Haldane.*) You have had a great deal of experience of men and women working together at the University of London?—Yes, we have; it is curious that at University College they all work together, and at King's College they do not; and in other places they are all separate.

33,211. Have you had any difficulties in cases where they work together?—None whatever.

33,212. Do you consider that there is likely to be difficulty in educated men and women working together; I am talking of men and women of the educated class just now?—I should not think there would be any difficulty in most subjects.

33,213. I am rather talking of their future. Supposing they were passed into a Government office, do you think there would be likely to be any difficulty in men and women working together? I am still talking of the educated classes?—I could only answer that by saying that they seem to work all right on committees. We have several lady members of the Senate of the university.

33,214. Have you any teachers who are women?—Two of our representatives on the Senate are the principals of two colleges; they are teachers, of course.

33,215. Supposing a certain number of places were allocated to women in the higher division examination, with a view to their being appointed to certain selected offices, you might have a large competition

10 April 1913.]

Mr. W. P. HEBBINGHAM, M.D., F.R.C.P.

[Continued.]

for those places on the part of women?—I should think so.

33,216. Do you think that the process of elimination which was discussed just now might be used very suitably in the case of these women, so that there might not be an undue competition for a limited number of places?—You mean the previous record method.

33,217. I mean the methods that have just been discussed?—I think you would have to get all the methods that you could, because I think it would be much more difficult for an examiner to judge of women than to judge of men.

33,218. Are you talking of a written examination or a *viva voce* examination?—I am talking of examiners who judge both men and women. I think it is much more difficult for them to judge a woman than to judge a man.

33,219. As to character—not as to intellect?—No, not as to intellect.

33,220. Do you think, in regard to women, there might be something in the nature of previous inquiry such as was discussed a few minutes ago, adopted with effect?—I said at the time that I thought the chief value of the previous inquiry was to judge character. I am perfectly certain that no man could judge a woman's character by any examination whatever.

33,221. Would you suggest, then, having a woman Civil Service Commissioner? How would it get over the difficulty if you brought in a woman Commissioner?—Are the examiners Commissioners—is it a convertible term?

33,222. No, the Commissioners are responsible for the examination. How would you propose to get over the difficulty?—That is what I meant by saying that the previous record would give you some indication of character.

33,223. The previous record from their university?—Or from their school. I hope I did not seem flippant in saying what I did just now, but I really think that a man would be a very bad judge of the character of a woman whom he might test—a young girl.

33,224. I want to know how the difficulty would be got over; do you think it would be got over by having women examiners for the *viva voce* examinations as well as men?—I think very likely it would. If I may say so, I have been present when candidates have been examined for posts by mixed committees of men and women for the teaching profession, and I thought that the ladies who were present, and who asked questions, were much more able to examine the lady candidates than we were. I thought they did it much better.

33,225. (Chairman.) Were they more severe than the men examiners?—I thought they did it better. A man does not like to harass a woman.

33,226. (Sir Kenneth Muir-Mackenzie.) They would get over that, I think, in due time. If it became the practice to have open competition between men and women for Government offices, the examiners would get accustomed to it, and that sort of modesty which we now have would to a great extent disappear?—Perhaps.

33,227. (Miss Haldane.) It is, of course, frequently done; women are constantly being subjected to examinations by men at present?—I shall probably be examining women myself to-morrow. I do not like it.

33,228. (Chairman.) You have had a large experience in examining men and women?—Yes.

33,229. Does a woman's mind expand more quickly than a man's mind, or the reverse? Is a woman at 21 more fully developed, mentally, than a man at 21?—No, the women are behindhand; they are not so good, I think. In some ways a girl is much ahead of her brother, but I do not think she is in intellectual strength, and she is much less ahead of her brother in those ways than she used to be, because she is taking on her brother's education, and, as a rule, has not got as strong a mind or brain as her brother has; she is losing the piece of education she used to have in which she knew a great deal more than her brother.

33,230. What piece of education?—I am thinking there of social things.

33,231. (Miss Haldane.) I should like to know what direction her former education took?—Simply drawing-room knowledge.

33,232. Not book learning?—No, not book learning.

33,233. (Chairman.) That is a very far-reaching line you have started us on?—I apologise for saying what I have said.

33,234. It is very interesting and very valuable. I do not think it is a thing that has been worked out sufficiently?—My only point was that, taking a girl of 21 and a boy of 21, the girl's intellect is as a rule not so strong as the boy's.

33,235. Does the girl's intellect grow with advancing years, say, up to 24 or 25; does it expand as a boy's mind expands?—I do not see why not. The women I have mixed with are so exceedingly clever, and I have such a very high opinion of them that, perhaps, I am rather prejudiced. I do not see the common run of women, really.

33,236. (Miss Haldane.) I want to ask you about paragraph 14, on page 4, of your statement. Those men attending the school of economics are second division men?—Yes, I think they mostly are.

33,237. Are all of them so, or do some higher division men attend the school also?—I cannot tell you that.

33,238. Do you think there should be some system of recognising work done of that kind by second division men, with a view to their promotion to the higher division?—That is what we meant.

33,239. That their either taking degrees or doing work of this sort might be considered?—That if the Government find that their second division men take a great deal of trouble to qualify themselves in such a manner they might take account of it.

33,240. I think you said you have not considered whether time might be given them to attend?—I know they attend them in the evening.

33,241. Then with regard to the Officers' Training Corps, do you suggest that marks should be given to those who have passed through the Officers' Training Corps, or merely that the Commission should decide whether there should be a new subject of examination?—Some time ago we made some sort of request either to your body or to some other body, that the fact of service in the Officers' Training Corps should be reckoned in selecting for posts in the Civil Service.

33,242. (Mr. Matheson.) We have had Professor Hill here?—Yes, that was one of the points included in that paragraph.

33,243. (Miss Haldane.) Then as regards the teaching of science, I judge from this paper that that is encouraged. The idea, I suppose, is that a man's training should be as all-round as possible, not that you should have a purely scientific man necessarily, but that he should have variety of ability?—Yes; our point in suggesting that science should be one line of approach, one line of learning, was not that a mere technical training in science would do, but we thought that it ought to be a very wide training in the philosophy of the subject.

33,244. I have heard it suggested that it would be useful in some departments to have scientific Civil servants, for instance, in the Home Office, in which scientific subjects are dealt with to a large extent. But your view would be that an all-round man would be able to deal competently with such subjects. He need not be a specialist in science?—I suppose he would always employ a specialist in science.

33,245. In such departments as the Home Office where scientific questions are continually cropping up, it would be valuable to have men with that scientific training?—It might be; I do not know what scientific subjects crop up.

33,246. For example, very large questions in connection with mines and technical matters in inspection?—I think in those matters they would ultimately rely upon the evidence of experts and with the evidence of experts they would sympathise much more with the subject if they had some knowledge of the subject themselves.

33,247. As part of their training?—Yes.

33,248. If they were all-round men they would be capable of being interested in it so to speak; they would be capable of taking in the information of experts?—Yes.

10 April 1913.]

Mr. W. P. HERRINGHAM, M.D., F.R.C.P.

[Continued.]

33,249. (*Mr. Boutwood*). On page 3 of your statement where you refer to those two groups of papers A and B, do you mean that each candidate whatever the candidate's principal subject was—supposing it was classics for example—would under Group A have papers

on all these subjects, and in Group B in all those subjects?—No, in Group A for example, which is Greats, I suppose he would have the ordinary classical papers.

33,250. Then the sections (i), (ii) and (iii) are just illustrations?—Yes.\*

## EIGHTY-SECOND DAY.

Friday, 11th April 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Sir KENNETH AUGUSTUS MUIR-MACKENZIE,  
G.C.B., K.C.  
Sir WILLIAM GUY GRANET, Kt.  
Mr. ARTHUR BOUTWOOD.  
Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. PHILIP SNOWDEN, M.P.  
Miss E. S. HALDANE.  
Mrs. DEANE STREATFEILD.  
Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. E. M. HARVEY called and examined.

33,445. (*Chairman*.) You are Deputy-Chief Cashier of the Bank of England?—I am.

33,446. I desire to begin by requesting you to convey to the Board of Directors of the Bank of England the thanks of this Commission for your attendance here to-day?—Certainly.

33,447. You have received a letter\* from our secretary of the 11th March?—Yes.

33,448. The first point mentioned on which we desire information is the manner in which the clerical and administrative staff of the Bank of England is recruited. I may tell you generally what the object of our inquiry is, so far as the Bank of England is concerned. We desire to see how far and in what particulars your method of recruiting your staff differs from the Government method of recruitment. Considerable discussion has taken place as to the method of recruiting for the public service, as to the usefulness in all cases of the system of recruitment by open competition. We wish to ascertain whether the great banking and commercial concerns have a different method of recruitment for their staff, and, if so, how it works. We desire, also, to compare, without going into anything like personal details, the broad classification of staff that you have adopted and the scales of pay which you attach to each class. We want to know whether your system of pay is personal to the clerk or whether it attaches to appointment. With that broad indication of our general object, perhaps you would now explain to us how your clerical and administrative staff is recruited. I am not acquainted with the nomenclature which the Bank of England has adopted, but any official in the position of a secretary or deputy-secretary, we should regard as administrative officers?—That is so.

33,449. In the first place, will you tell us whether your administrative officers are chosen and promoted from the clerical ranks, or whether you bring them in from outside?—Except in the case of the agents of our branches, the whole of the administrative staff are chosen from the clerks, from the staff entirely, and at the present time the inclination is rather to choose the agents of branches also from the clerical staff.

33,450. Let us begin, then, with your clerical staff. How do you choose your clerical staff; beginning with the lowest grade?—The first requisite is that they should obtain the nomination of a director. Nobody can become a candidate until he has a director's personal nomination. The nominee is then interviewed by a committee of directors, and if they consider him a suitable candidate he may proceed to the various formalities that are necessary to obtain election.

33,451. For a particular vacancy may you have more than one nomination?—We do not elect for a particular vacancy; we allow vacancies to accumulate. We have

such a large staff that we have at times, immediately after an election, just a trifle more than we require, and as the numbers work off by death or retirement, when the time has come that we require, say, an addition of 15 to fill 15 vacancies, we have an election, and all the candidates have to pass an examination.

33,452. Is that examination held prior to the interviews that I understand the directors have with them?—No, it is subsequent.

33,453. They are selected first and then subjected to the examination?—Yes.

33,454. Is that a competitive examination among the nominated candidates?—No, it is a qualifying examination.

33,455. In the Government service we have something like what you describe, nomination followed by a qualifying examination for the less important posts. But there is also a system called limited competition. A certain number of men who are believed to possess the qualifications requisite for a certain post are nominated, and they compete amongst themselves for the post. May I assume that in the selection of your staff the great difference between your system and the Government's is that there is no competitive examination in your system?—That is so.

33,456. A director nominates, the board of directors inspect the nominee, and they may either reject him or pass him?—Yes.

33,457. Have there been instances in which the nominee has been rejected?—Yes. Before he passes the qualifying examination he is required to pass a medical examination.

33,458. That is also in accordance with the Government practice. Moreover, the Government require certificates of good moral character from the candidates. Do you insist upon that?—Yes, we do.

33,459. In addition to the nomination of the director?—Yes.

33,460. One of my colleagues desires to know whether, when you have, say, 15 vacancies to fill, the examination will be among 15 nominees, or may it be among 20?—It would be among 20.

33,461. The object being to have a margin?—Yes. Our experience is that about one out of every four or five candidates fails at the examination, and therefore we invite about one in addition to each four or five to stand for election. If they all qualify they are all admitted.

33,462. Then the qualifying examination is a really effective test?—Yes.

33,463. You say that one out of four or five fails?—That is so.

33,464. What subjects does the examination comprise?—English composition, geography, arithmetic, handwriting and orthography. The examination in

\* Dr. Starkie's evidence (Q. 33,251-Q. 33,444) is printed after Q. 31,169 (76th day).

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

handwriting I should say has to be passed first and separately under the London Chamber of Commerce. We found that so many clerks failed in handwriting that we have recently started a sort of previous test in handwriting by the London Chamber of Commerce, and candidates must obtain within six months prior to election a certificate of handwriting from the London Chamber of Commerce or they are not allowed to sit.

33,465. Then the examination does not aim at testing the nominee's possession of a liberal education?—No.

33,466. That is outside?—Yes.

33,467. Nor is it directed to his having acquired any particular expert knowledge such as shorthand writing?—No.

33,468. Has it ever occurred to the board of directors to enlarge the scope of the examination?—No.

33,469. At what salary does a boy begin when he is taken into the Bank?—100*l.* a year.

33,470. If in regard to the details of your system I ask you any question that you would prefer not to answer, I hope you will say so?—Thank you.

33,471. At what age do they enter your service?—They must be not less than 18 and not over 22 years of age. Exceptionally, if we get a university candidate he may sit until he is 23, but they are very few; we have had, I think, only five or six admitted in the last two years, of whom five are still with us.

33,472. Is there any desire on the part of the board to get men from the universities?—They have been trying it rather as an experiment lately; they have made a special effort to get university men as candidates to sit, with the result that these six candidates sat and were elected. It is too early, of course, yet to express any opinion as to what the result will be.

33,473. Is the pay graduated according to years of service, or according to the work that the clerk is put upon?—Both; it is paid under two columns. One column is graduated according to years of service and the other according to the position that the clerk has reached by promotion.

33,474. If a clerk shows himself to be more efficient than others, does he get promotion out of his turn; that is to say, do you regulate promotion by merit or by seniority?—Up to a certain position in the Bank promotion is by seniority, provided that the clerk is perfectly competent to take a higher position. For positions above that they are specially selected by merit, and they may be selected by merit even prior to that, and they are occasionally; but it is not very often.

33,475. Would you have any objection to tell us what the grades of pay are?—For two years a clerk is what is known as an unattached clerk, and he is drafted from office to office, wherever his services may happen to be required at the moment, just to give him a sort of general idea of the work.

33,476. Is he regarded as on probation during these two years?—For five years he is on probation. During these two years he gets 100*l.* a year. He is then asked to state to which of the principal departments of the Bank of England he would rather be attached. The Bank is divided into two principal departments and one or two smaller ones.

33,477. Will you be good enough to tell us what the two great departments are?—There is the cashier's department under the chief cashier who superintends all the real banking work, and there is the accountant's department under the chief accountant who manages the National Debt and all stocks inscribed at the Bank. At the end of two years, if circumstances permit, a clerk elects whether he would rather be attached to the cashier's department or to the accountant's department, and for the succeeding three years he is moved about among the offices of that department only and stays for rather longer periods in the different offices, generally a matter of from three to six months in each office, and his pay rises 10*l.* a year. At the end of five years, provided that his reports are satisfactory, he is appointed a fourth class clerk, assuming that there is a vacancy in the fourth class. After he becomes a fourth class clerk, from that moment his pay rises 5*l.* a year in the first column—that is, the column governed by mere years of service—to the maximum in that column of 250*l.*; and in

the second column he gets what is known as an additional salary, that is to say, a salary according to the post he occupies. A fourth class clerk receives 25*l.* a year additional on appointment to the fourth class.

33,478. Is the 25*l.* cumulative; does it go on from year to year?—No; he gets 25*l.* the first year, 30*l.* the second year, and 35*l.* the third year, and nothing more in that column until he becomes a third class clerk.

33,479. Up to that time his pay depends on two considerations, first, his seniority in the service, and secondly, the character of the work he does?—That is so.

33,480. Am I right in thinking that in the second column the clerk might get nothing if his service be not good or more than common?—If his service is not good enough for him to become a fourth class clerk, he would not be retained in the service.

33,481. But if you confirm him as a fourth class clerk, must he get pay under column 1 and under column 2?—Yes, he must.

33,482. Then he gets to his maximum of 250*l.* under one column and 35*l.* under the other?—No, it would not work like that, because it takes him a good many years to reach his 250*l.* in the first column. He only gets 5*l.* a year increase on 100*l.* in that column, and if he had not got his promotion, that is to say, if he had not been good enough to receive his promotion in due course from the fourth class, he would then be told that we required him no longer. If a clerk is not fit to receive his promotion in the ordinary course he is not allowed to remain indefinitely in the lower class, he would be asked to resign.

33,483. Have you instances of fourth class clerks drawing 250*l.* under column 1?—No.

33,484. On the average, could you say what would be the highest pay in the fourth class that a man reaches before he is either dispensed with or promoted to the third class?—I should think about 180*l.*

33,485. Counting his pay under both columns?—Yes.

33,486. (*Mr. Philip Snowden.*) Does that mean that on an average he would be about 16 years in the fourth class?—No.

33,487. You are adding the two columns together?—Yes. He starts with 135*l.* the first year in the first column, and 25*l.* in the second column—that is 160*l.* Then he will rise 5*l.* a year for two years in each column, and that brings him to 180*l.*

33,488. (*Chairman.*) What would be the length of time that a clerk would remain in the fourth class?—It varies, of course, very much in different offices. In a small office where promotion happens to be very slow, owing to there being a lot of young men at the top of the office, he may be delayed in his promotion to a higher class. I should think that the average service in the fourth class would be about four to six years.

33,489. When he gets into the third class the pay takes a jump, I suppose?—Then the additional salary which stopped at 35*l.* in the fourth class becomes 60*l.* under the second column.

33,490. What will his pay be as a third class clerk?—Still rising 5*l.* a year, according to his length of service.

33,491. So that he begins as a third class clerk, with the pay in the first column that he drew as a fourth class clerk?—Yes, and that continues to rise at 5*l.* a year.

33,492. Does the 60*l.* increase then?—There are two rises of 5*l.* a year for the first two years.

33,493. Not afterwards?—To a maximum of 70*l.* in that class.

33,494. That is permanent?—That is permanent in that class.

33,495. How long on the average does a clerk remain in the third class; it depends, I suppose, on whether there is a vacancy in the higher classes?—Entirely.

33,496. How long will it be, as a rule?—I have not got the exact figures. I took out the figures of what a clerk would usually rise to at the end of 10 years, and I find that the average salary of the whole of the present staff of 10 years' standing, excluding any clerk who may have been selected for special promotion, is 212*l.*, that is taking the two columns together.

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

33,497. At the end of 10 years' service a clerk will normally reach the pay of 212*l.*?—Yes.

33,498. (*Mr. Philip Snowden.*) That is 10 years from first entry?—Yes.

33,499. (*Chairman.*) Then he passes on to the second class?—Yes, he passes on to the second class, and the additional salary of that class commences at 95*l.*

33,500. The other going on?—The other going on just the same.

33,501. How long does he stay, as a rule, in that class?—In the second class he would probably be, I should say, seven years; I should think generally five to seven years.

33,502. And what pay would he reach at the end of five years. We have got him up to 15 years?—He would receive 260*l.* at the end of 15 years I should think, on an average.

33,503. (*Mr. Boutwood.*) Does the same principle of retirement that you mention in regard to Class IV. hold good of Class III. if a man does not get promotion?—No, a clerk may be allowed to remain. If his behaviour is good and he can do useful work in that class he may stop at the top of the third class. He is not promoted to the second class unless it is considered he will be able to qualify for promotion straight on afterwards.

33,504. (*Chairman.*) There is a bar?—Yes, there is a bar at the top of the third class.

33,505. It is an effective bar?—Yes.

33,506. His maximum in the third class would be 260*l.*?—I should think it would be about that.

33,507. When he gets into the second class I understand the pay under the first column goes on; what jump does he get under column 2?—He goes to 95*l.* in the second class. In each case it is a rise of 25*l.* over the maximum salary of the previous class.

33,508. How long does he stay in the second class?—It is very difficult really to give any figures of the time that a clerk may remain in the class. After 20 years—I have taken out the figures for 20 years—he would be getting 309*l.*

33,509. After 20 years' service?—That would mean that he would have been about two years in the second class after 20 years' service.

33,510. Would he then be doing responsible work in the second class; what would be the general character of the work?—It varies according to the offices. In some offices he would be doing very responsible work; in others he would not be doing work of such great responsibility. During their earlier years the most promising clerks are generally selected and appointed to the more important offices, such as the chief cashier's own office, or offices really doing responsible work at the Bank, and in those offices they would have considerable responsibility; they are the clerks who are generally regarded as the promising clerks who are being trained for promotion to higher posts.

33,511. Will a second class clerk control or supervise the work of many other clerks?—No.

33,512. Would he have any supervising work at all to do?—No, he would not. Very exceptionally in the case of some special work that had to be performed he might be put in charge for a time, but he would not be put in charge as his ordinary work.

33,513. He has only his own work to do?—That is so.

33,514. Then promotion from the third class to the second class is purely by selection; there is an effective bar at the third class beyond which no man passes unless he gives promise of thorough efficiency?—The selection is rather the other way. We pick out those who are not fit to go on. There are not many as a rule; it is not often done, but it is done on occasions. The majority rise to the second class.

33,515. In case of promotion from the second class to the first class is selection more effective?—No, it is usually considered, I think, that the weeding out has generally been done sufficiently at the rise from the third to the second class, the result being that the second class clerks are usually quite qualified to be promoted to the first class.

33,516. And their promotion depends upon vacancies in the first class?—Yes.

33,517. When a second class clerk gets into the first class what salary does he receive?—He then gets a rise of 25*l.*, and his additional salary commences at 130*l.*

33,518. That is to say under column 2 he gets 130*l.* and his salary goes on in the regular way. You cannot, I understand, give an approximation as to what he would have reached, under column 1, when he gets into the first class?—No. I have a note here that the first class is usually reached—it varies in different offices—at from 25 to 30 years, and the average salary of a clerk of 30 years is 389*l.*

33,519. What appointments are there beyond the first class?—There are a few senior clerks; they are clerks who are put in charge of more or less responsible duties under less immediate supervision and control, they are left a certain amount more freedom to themselves. Then there is a class styled superintendents who are in charge of batches of men, superintending their work.

33,520. Is there a staff allowance or is the pay attached to these special appointments?—These two classes are paid exactly in the same way under the two columns. If I may go back to the first class for a moment, the rises there in the second column are two rises of 10*l.* at intervals of not less than three years; they do not get an annual rise. Then senior clerks commence at 155*l.*, rising by 5*l.* to 165*l.*

33,521. In addition to the normal?—In addition to the first column, and the superintendents receive 170*l.*, rising to 180*l.*

33,522. That is the top of the tree?—That is 430*l.* That is the top of the tree apart from the many special posts such as heads of offices and posts carrying higher fixed salaries paid as a staff salary in one amount.

33,523. How many of those higher appointments have you?—Up to and including the superintendents there are 869 at the present moment.

33,524. Including superintendents?—Including superintendents, that is the whole staff who receive their salary in two columns. In addition to them, there are about 125 higher appointments.

33,525. Do you understand what we mean by a "staff post," that is to say a post out of the regular scale?—Yes.

33,526. Would that express your 125?—Yes, the 125 are people who receive fixed salaries which attach to the particular posts they occupy.

33,527. The salary does not vary with the character of the work, and with the responsibility?—No, the officer is appointed at a fixed salary which attaches to the post; any increase on that afterwards is personal to himself.

33,528. (*Mr. Boutwood.*) Can you tell us how the 869 are distributed between the four classes?—Yes, 35 superintendents, 30 senior clerks, 127 first class, 131 second class, 174 third class, 183 fourth class, 116 assistants, and 73 unattached.

33,529. So that really when a man gets into the fourth class he clearly has a free run up to the top of the first class if he is a competent man?—Yes, if he is competent.

33,530. (*Chairman.*) What will be the pay attaching to the general run of your staff posts?—The highest salary attaching to any staff post is that attaching to the chief cashier, who is appointed at a salary of 3,000*l.*

33,531. These staff posts are not graded, that is to say you do not have so many grades carrying, say, 600*l.*, so many 800*l.* and so on?—No. It is a fixed salary according to the importance of the post.

33,532. And the salaries vary, the maximum is 3,000*l.* Have you got many appointments of that value?—The next appointment is 2,500*l.*; that is, the chief accountant, the head of the other large department.

33,533. Have you got many appointments of 1,000*l.*?—Then there follow three appointments of 1,500*l.*, one of 1,200*l.*, one of 1,000*l.*, one of 900*l.*, and then there are several of 700*l.* That is apart from the agents of branches, who, as I said when I commenced, were originally appointed from outside the staff, though the tendency is now to appoint them from inside. In some of those cases they receive salaries rising up to 2,400*l.*

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

33,534. Are there many branches?—There are nine in the country and two in London.

33,535. (*Mr. Boutwood.*) Then in addition to the group of 125 you sometimes bring in men from outside?—For the branches only.

33,536. (*Chairman.*) In your explanation to me you have covered very clearly the second point in the letter that was sent to you, namely the organisation of the staff as seen in the various classes of employees, the rate of pay assigned to each, and the practice with regard to promotion from a lower to a higher class. The third question is the extent to which these rates of pay have been modified in recent years on account of fluctuations in prices. Do you have regard to fluctuations in prices in fixing your scale of salary?—No. The existing scale was introduced in 1906, and it did provide for an increase in the pay given to a clerk on commencement. It used to be 80*l.*, but it was raised to 100*l.* because it was felt that 100*l.* was the least sum that a clerk ought to have if he had to live in rooms and keep himself. The lowest salary was raised about 20*l.*; the maximum salary of the highest class, the superintendent's, was raised by about a corresponding amount, and the intervening increases of salary were made to be more gradual, to extend over a longer period than they had hitherto done, so that a clerk should always be getting a little increase.

33,537. Have you a pension scheme?—Yes.

33,538. Is it contributory: do the clerks contribute to it?—No.

33,539. Could you briefly indicate what the scheme is?—It is precisely the same as the Civil Service scale; that is to say, a clerk after he has served 10 years is qualified for pension; provided he has to retire on account of ill-health, he is then entitled to receive so many seventy-fifths of his salary as he has performed years' service, with five years added; a clerk with ten years' service would receive 15 seventy-fifths.

33,540. (*Sir Guy Granet.*) Of his average salary?—Recently a modification has been introduced; it is now the average of the last three years, except for those receiving 1,000*l.* or over; for them it is the average of the last seven years.

33,541. (*Chairman.*) Is there any liberty to capitalise any part of the pension, as has been recently introduced into the Government scheme?—No.

33,542. Do you employ women in your clerical departments?—We employ them for the typing and shorthand writing; they are employed in connection with the sorting up and listing and agreeing of old paid bank-notes and they are employed for inspection of new bank-notes from the printing machines.

33,543. Their employment is limited to these functions?—Yes.

33,544. The last question you have already really answered. You say that the board of direction have lately recruited some university graduates, but your experience is so very limited that you are not prepared, I suppose, to express any opinion as to whether it will be a success or not?—No, we have had no means of judging as yet.

33,545. (*Sir Guy Granet.*) I should like to know, for my own information, about the pensions. Is it a condition of service that the staff are entitled to pensions?—No, every pension is granted at the pleasure and during the pleasure of the court of directors.

33,546. There is no certainty about it?—No, in practice it is more or less a certainty.

33,547. Can a retiring officer commute his pension?—He has been allowed to do so occasionally under special circumstances, but he has no right to commute.

33,548. The two things will not go together?—Exactly.

33,549. As I understand, your candidates come to you from 18 years of age?—Yes.

33,550. That is the lowest age at which anybody can come into the Bank?—Yes.

33,551. It follows then, that you have nothing in the nature of boy clerks or anything of that kind?—No, we have not.

33,552. And a young man of 18 who comes to you will, in the first year or two of his career, have to perform the very minor offices that a boy clerk would have

to perform?—Yes; we had boys at one time of from 16 to 18, but they were displaced by women, who are now employed in examining old bank-notes.

33,553. I was coming to that. I take it that the women whom you employ really take the place of the boy clerks?—Yes, they do on that particular duty.

33,554. So that you meet that possible difficulty in that way by employing women instead of boys?—Yes.

33,555. You say that when once a man is qualified and has got into the fourth class, unless he can show that he is competent enough to be promoted to the third class he is asked to retire?—Yes.

33,556. I do not want to ask any question which I ought not to ask, but I should like to know whether that is a fairly frequent occurrence?—No.

33,557. It is very rare?—Very rare, because you do not need to wait until a boy has reached the top of the fourth class to know whether he is likely to be able to rise in the service or not. If we judge that there is no chance of his being able to go up, we generally give him a hint to that effect and suggest to him that he had better retire.

33,558. You give him that hint before he gets into the fourth class?—Yes.

33,559. That is to say, while he is in his probationary period?—Yes.

33,560. But after that a man has got a freehold, practically?—If he behaves himself, except that we have that bar at the top of the third class, and that is an effective bar; there are a certain number who stop there.

33,561. But you are not actuated solely by commercial considerations, as I understand. So long as a clerk is efficient, even if he may be redundant, you retain his services?—Yes.

33,562. And you retain his services, too, at a price which is not commercial either in some cases, do you not?—That is so.

33,563. I take it that the clerks in, we will say, the third class, are doing purely clerical work?—Yes.

33,564. They have no administrative duties at all?—None.

33,565. And their average salary at the end of ten years, I think you said, was 210*l.*?—Yes.

33,566. Obviously, from a commercial point of view that salary would not be justifiable?—We regard it as justifiable, in that we think that unless we paid it we should not get as good a class of men as we do get, and because we find the class of candidates has very much improved recently, owing, as we think, to the fact that our service is better than many others.

33,567. I am entirely ignorant upon this point, but what I want to know is this: If the work of the clerks is purely clerical, and not administrative in any way at all, what is the object of getting such good material?—We want good material for the higher posts, and it takes a certain time to train them, and also in the Bank, where you are dealing with large sums of cash, you have got to pay your clerks a good salary; it is an absolute essential.

33,568. I follow that. Taking the banking department of the Bank of England, who is it who runs it?—It is immediately under the Governor, who is there every day.

33,569. The Governor is somebody who is a merchant of experience in the city?—Yes.

33,570. And he really runs the business?—He directs the policy, but the management, the carrying out of that policy, is in the hands of officials such as the chief cashier.

33,571. What do you mean by management; management in the sense of carrying out the details of the organisation of the Bank, and so on, or management in the sense of carrying out the business of the Bank?—Carrying out the business of the Bank. Practically all the negotiations between the Bank and its customers, and business of that character, would be conducted by officials, not by the Governor.

33,572. Do the directors take any considerable share in the direction of the policy of the Bank?—Yes.

33,573. Or is that principally done by the Governor?—The Governor has a committee of senior directors whom he consults principally in regard to policy.

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

There also is the weekly meeting of the directors at which the whole policy may be discussed.

33,574. (*Mrs. Streetfeild.*) Would you tell me something about the women who are employed in the Bank of England; how do you choose them?—They are nominated by the Governor, very often on the recommendation of one of the directors; they are then required to pass a simple examination in arithmetic, handwriting, orthography, and English composition. The possession of certain certificates, such as the certificate of the College of Preceptors or the Oxford and Cambridge Local Examination, or the London Matriculation, is taken in lieu of that examination. Then they have to pass the doctor, and the medical examination in their case has been made considerably more severe than formerly, because our principal experience with regard to women, when we first employed them about 20 years ago, was that their health failed; we had very considerable trouble on the question of health and a very large proportion were invalided on account of various nervous complaints. An inquiry was held, and the medical officer of the Bank consulted the medical officers of the Post Office and various other offices where female labour is employed, and the conclusion eventually arrived at was that it was due very largely to the fact that the women did not take sufficient nourishment in the middle of the day, with the result that the Bank were induced to provide them with free luncheon, which experiment has been quite successful and we have had much less sickness since.

33,575. What salaries do they have; what are they paid when they come in?—They commence at 54*l.* a year and rise at the rate of 3*l.* a year to 81*l.*; and then there are certain additional payments given to the typists and shorthand writers for their special qualifications, and the salaries rise until the salary of a permanent sorter of bank-notes is 86*l.* and of a typist 90*l.* a year. Then certain of them are made superintendents of typists and superintendents of sorters, and they receive various additional salaries; and the salary of the head superintendent will rise to a salary approximating to 200*l.* a year.

33,576. (*Chairman.*) Are the typists who receive 90*l.* a year also shorthand writers?—Yes.

33,577. (*Mrs. Streetfeild.*) What are their duties when they come in at a salary of 54*l.*?—To sort old paid bank-notes.

33,578. Purely mechanical work, like card tellers?—Yes.

33,579. At what age do they come in?—They must not be less than 18 and not over 22.

33,580. They are really girls living at home then when they come in?—The majority of them are.

33,581. Do you consider that they could live outside of their homes on 54*l.* only?—I am told that at the present time our experience is that we prefer not to have girls living outside, and we hardly ever select them; there are not more than one or two probably at the present time.

33,582. So that those who receive that salary are girls who are partly supported by their parents?—Yes.

33,583. And they also have to be fed in the middle of the day?—That was found necessary. We found that about 30 per cent. of all the girls suffered from writer's cramp and various nervous complaints of that kind. The conclusion arrived at was that it was due to the fact that few of them, if any, ever ate a sufficiently substantial luncheon in the middle of the day.

33,584. Did it occur to anyone that that state of things might probably be induced by the monotony of the occupation?—Yes, and varying the occupation was tried, but it was not found to improve them.

33,585. Can they rise straight from 54*l.* a year to 200*l.*?—No, there is only one who would reach that post getting 200*l.*; there are several receiving about 130*l.* and 140*l.*

33,586. But up to that there is a clear run with no stop?—It depends entirely upon their ability; they are specially selected for the posts carrying the larger salaries. Several run up to about 110*l.*

33,587. How many have you employed receiving up to that amount?—Sixty-three are employed altogether, 10 typewriters, about 45 bank-note sorters, 6 bank-note inspectors, and the rest are superintendents. A bank-note sorter can remain a bank-note sorter throughout her service if she likes, but then her salary will not rise above the permanent salary of 86*l.* a year unless she happens to be selected as a superintendent. Then she would receive probably about 110*l.* a year.

33,588. Has it ever occurred to you to use these women clerks in any other department?—The employment of women in inspecting new bank-notes has only been commenced about six weeks ago. For various reasons it has been found difficult to employ them on other work, because it is work on which they would have to be employed till late in the evening, and it is considered undesirable to keep them there to a late hour.

33,589. What would the late evening mean?—It might be 9 or 10 o'clock.

33,590. Is that the only reason why they are not being employed in the ordinary clerical work of the Bank?—I do not think that the question of employing them on the general clerical work, the business of the Bank has ever been considered. The idea has been to employ them in counting all the various papers and documents that we have to print, such as postal orders.

33,591. Ordinary mechanical work?—Yes. It was thought that they might sort the paid dividend warrants at the time of the quarterly dividends, but there the difficulty was that the dividends only fell due quarterly when they could be profitably employed, and a large number would be required then, but their services would not be required in the intervening periods between those dividends. With a large staff of male clerks we find that the work so adjusts itself that the clerks who can be employed sorting dividend warrants at the time of dividend payments can be useful otherwise in the intervals, whereas we should have no employment for the women clerks, and it was not possible to make arrangements whereby we could profitably employ them on that work.

33,592. What class of young man have you who comes in at from 18 to 22 by passing such a very elementary examination as you described, and yet is considered able to rise apparently to a post of great responsibility?—More than 50 per cent. of them at the present time are public school boys. Of the rest a certain number are sons of former clerks.

33,593. What is the reason why you do not ask for a better education?—I think the feeling is rather that so long as we have only one grade of clerk admitted, and all clerks are admitted through exactly the same system, we should be training a lot of highly-educated boys for work which does not require highly-educational qualifications. We find, as it is, from experience, that many of the better boys that we get now do not stay with us; unless they are singled out for promotion they find the work very irksome, and we think that if we tried to bring in still more highly-educated boys, they would probably not stay with us; there is no need for their services except in supervisory posts, and we find by experience that we can generally obtain people to occupy those posts from the boys who are admitted through the present system.

33,594. (*Chairman.*) Have you any general knowledge of the work in a Government department, say, in the Home Office?—Yes, I have some idea.

33,595. Are you able to say that the work of the Bank of England is more monotonous and more of one type than the work in a Government department?—One's experience, of course, of those who are employed in Government departments is only that of the higher officials, principal clerks, first class clerks, and so on. I do not think I am qualified to give an opinion.

33,596. There is no comparison, of course, with first class clerks, it would be second division clerks?—I have not much acquaintance with the work performed by the lower classes in the Civil Service, we only come in contact with the higher officials.

33,597. (*Mrs. Streetfeild.*) Am I right in understanding that any man who comes in at 18 can, if he is

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

efficient, rise up to the highest post in the Bank?—Yes.

33,598. There is no bar?—There is no bar at all.

33,599. He could become chief cashier?—Certainly.

33,600. (*Mr. Philip Snowden.*) May I first of all follow Mrs. Streatfeild's questions about the women? Do the women enter the service of the Bank of England for any particular work, for instance, to be bank-note sorters?—They all commence as bank-note sorters or typists.

33,601. Is there a different examination for typists, must they produce a certificate of efficiency in typing?—No girl, when she is elected, need be qualified in typing; she may come in as a bank-note sorter and qualify as a typist afterwards.

33,602. Are you aware that the work of the Post Office Savings Bank Department is very largely done by women clerks?—Yes.

33,603. Have you ever considered at all the possibility of employing women on the ledger work of the Bank of England?—No.

33,604. Is it not work rather analogous to the work that they do in the Post Office?—Yes, I suppose a good deal of it is.

33,605. How many examinations for the men clerks would you have in the course of a year?—It would depend entirely on the number of clerks who leave; in some years we should have three and in some years two. It is nearly a year since we have had one at all, and one is just coming on now. There has not been one since last May.

33,606. How many vacancies are you proposing to fill at the forthcoming examination?—We want 15, and 20 are going to sit.

33,607. Do the directors get a great many applications for nominations?—Yes, a very large number.

33,608. You will quite understand that I do not mean my next question in any improper way, but are the nominations given by the directors to any extent to their personal friends?—I do not think that any director would make a secret of it that if he has a personal friend who is really interested in a likely candidate, he is prepared to give him a nomination, but he would wish to know that the candidate is likely to do him credit when he came up for election.

33,609. You told us that after the nomination by a director the nominated candidates are seen by the body of directors?—Yes.

33,610. Could you tell us what the qualifications are that are looked for by these directors in the candidate at this personal interview?—He is asked various questions to see whether he seems an intelligent boy, whether he has good manners and address; I think it is nothing more than that.

33,611. (*Chairman.*) Are many candidates eliminated by that system of a personal interview?—It has only been in force for the last three or four years.

33,612. Do you find it a useful sieve?—I think it has had the effect possibly of making the directors a little more particular regarding the boys whom they nominate; they do not like to contemplate the possibility of their candidate being rejected by a committee of their own body.

33,613. (*Mr. Philip Snowden.*) Some questions have been put to you already in regard to what one might call the very simple character of the examination that these boys have to pass. Do you at any subsequent stage of their career encourage them to take, say, the certificate of the Bankers' Institute?—They are paid a small bonus if they do; 5*l.* on passing the preliminary examination, and 10*l.* on passing the higher examination.

33,614. I take it then that this method of examination is the only door through which entrance can be obtained into the service of the Bank of England?—Yes, other than the limited number of agents of branches who are appointed from outside.

33,615. I understood you to say that you are proposing in future to appoint them from inside the service of the Bank?—That is the tendency, but the directors still retain the right to appoint them from outside; the staff know that they are not to regard

themselves as entitled to the whole of the vacancies that may occur of agents of branches.

33,616. How long has the present system of appointment to the Bank of England service been in operation?—I could not say—for a great many years.

33,617. Has it been in operation sufficiently long to test its adaptability for supplying the higher posts in the service?—Yes, it has been in operation for many years. I should think it must have been in force for 30 or 40 years.

33,618. And that experience has led the directors to the conclusion that the system is quite capable of supplying them with men competent to fill the highest effective posts in the Bank of England service?—Yes, it has on the whole. There are special occasions when we are at a loss for a good promising clerk for a certain post, but on the whole I think they are quite satisfied with it. The recent arrangement by which they have invited university candidates to apply is rather an experiment to see whether they obtain a larger supply of qualified men for the higher posts. They have no difficulty in finding a certain number of them, but latterly, since they have thrown open agencies of branches to the staff, they have found that it has been rather more difficult to supply the higher posts.

33,619. But those posts of which you have spoken, where the salaries run from 700*l.* to 2,500*l.*, have been, to a great extent, filled by men who entered by this method of appointment?—Yes, entirely, except for the branch agencies.

33,620. You have not had a sufficiently long experience of the experiment that has been made in appointing university men, I gather, to be able to express a definite opinion?—No.

33,621. Are they treated in precisely the same way as candidates who are appointed by nomination?—Exactly.

33,622. (*Mr. Boutwood.*) I think I have already asked most of the questions that have occurred to me, but there are two I should like to ask you. This is just to see whether I rightly understand your evidence. I gather that in your second class there is a great difference in the character of the work done by different men, and there is varied responsibility but an invariable scale of pay; they all get the same money?—That is so. The tendency of that, if I may say so, is that the clerks in these more responsible offices are brought there, as I said, to be trained for higher posts, with the result that the clerks above in higher classes, such as first class clerks or senior clerks, are selected for promotion early in life for special posts, which again has the result that clerks junior to them rise earlier in their career, and consequently they reach the second class at a considerably earlier age.

33,623. In a certain number of Government offices, as the Chairman mentioned, there is a system of preliminary nomination, but some of the evidence we have heard about that suggests that the nomination is treated formally; that virtually anyone can get a nomination. Am I right in understanding that in the case of the Bank of England the nomination of a director is a more serious thing?—It is.

33,624. So that it is a sort of preliminary sieve?—Yes, no clerk can enter the service of the Bank at all without a director's nomination.

33,625. And a director would not give it as a mere formality?—He would not.

33,626. You said that your personal knowledge of Government offices was chiefly through contact with the higher officials. Do you know enough to say whether your higher grade men, the 125 men getting about 700*l.* a year, would be roughly comparable with the first class clerks in a Government office so far as the nature of their work goes?—No, I should say not.

33,627. How do they differ?—I am speaking, of course, without an intimate knowledge of the duties performed by first class clerks in the Civil Service, but, so far as we see them and come in contact with them, they appear to have a higher responsibility. All those clerks in the Bank who are drawing from 500*l.* to 700*l.* a year would not have so free a hand as first class clerks, say in the Foreign Office or the Treasury, appear to have.

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

33,628. (*Sir Kenneth Muir-Mackenzie*). I think you said that these young men who come in at the bottom of your service come mostly from public schools?—Yes, over 50 per cent. of them.

33,629. Do you mean the greater public schools?—Yes.

33,630. You do not have many come in who have been through an elementary school?—No.

33,631. They are not of that class at all?—No, not many of them; we have had some.

33,632. You mentioned, I think, good manners and address and so on as counting for something in the first qualification?—Yes; it is necessary in dealing with the public that you should have officials whose manners and address are likely to be acceptable.

33,633. You said, I think, that when men reach the second class it is a more serious question as to the passage into the next class above it?—From the third class into the second.

33,634. Is that so strongly marked a line that you could at all describe your organisation as being in two divisions, a lower and a higher division?—No, it is not.

33,635. It does not amount to that?—No.

33,636. Are you disposed to give us your opinion upon the subject generally of open competition for supplying the service of a great department? You do not use it at all?—We do not. I have no experience of it at all.

33,637. Would it strike you as being a better way of manning a great institution?—The directors have discussed it, I believe, among themselves, but we have never really heard the reasons which have led them to leave their present system undisturbed.

33,638. Do you see any distinction between one of the departments of State and such an institution as yours, which would afford a reason why in one case open competition should be looked upon as absolutely necessary and should be dispensed with altogether in the other?—No. I think the real reason for the existing system probably is that the Bank of England is a private corporation. We have generally considered among ourselves that the system probably arose from the fact that at one time it was a sort of private patronage in the hands of the directors, by means of which they were able to nominate their friends, and I do not think they have ever seriously considered the question whether there would be any advantage to be derived by now upsetting it. They have done away with the idea of patronage. They are much more rigorous in their exclusion of anybody who is considered in any way undesirable, but they have retained the old method of nomination. I should say that a director cannot nominate an unlimited number of clerks; they nominate in strict order one nomination at a time.

33,639. Might I ask you, as having experience of a great institution, whether, if you were setting up a great institution yourself, it would occur to you to get your men by open competition. How would you select your men in order to run your business?—I am inclined to think that there are great advantages in a certain amount of selection. A case which occurs to my mind at the present time is the method of selecting a candidate for Osborne, which is very much, after all, the system of the Bank of England. A boy is interviewed by a committee to see whether he is likely to prove useful, and the candidate having passed the committee, is allowed to sit for an examination, which is qualifying and not competitive; it is almost identical with the system of the Bank, except in the matter of nomination.

33,640. Would you apply that system to candidates of any age?—I do not feel competent to express an opinion upon that.

33,641. Might I ask you one or two questions of this kind, such as what you have in the nature of office hours in the Bank of England—what you consider a fair day's work for your clerks?—The office hours are very variable in different offices. They begin at 9 o'clock in the great majority of the offices—in a certain number at half-past nine, and their work may end at any time, except in times of great pressure, between 4 and 7 o'clock.

33,642. That is in London?—Yes.

33,643. Would you mind telling me what the rule is as to holidays?—A clerk who has been at the Bank for 15 years is entitled to 3½ weeks; a clerk who has been there for 25 years is entitled to 4 weeks, and anybody who is receiving a salary of 400*l.* or over is entitled to five weeks.

33,644. (*Mr. Philip Snowden*.) That will be, exclusive of Bank holidays?—Yes, that is actual working days.

33,645. (*Chairman*.) Does the five weeks also exclude Sundays?—They are allowed 30 working days—that is five weeks.

33,646. (*Sir Kenneth Muir-Mackenzie*.) And that is distributed by arrangement over the year?—They must take a fortnight consecutively, a minimum fortnight.

33,647. What I meant was that there might be, say, 20 clerks away at a time?—Yes.

33,648. There is no such thing, except on Bank holidays, as a complete shutting up or even a comparative shutting up of the Bank of England?—No.

33,649. With regard to promotion—as to whether men are fit for being brought up to a higher class, and eventually whether they are fit to be appointed to any of these better appointments—who decides that?—It is decided by a Committee of Directors, who are a committee for appointments and promotions, and who receive recommendations from heads of departments in all cases of the ordinary staff. In the case of the higher officials the committee act on their own authority, without any consultation with other officials.

33,650. Is there anything in the Bank of England corresponding to the age of retirement in the public service?—Yes, compulsory retirement at 65.

33,651. It is the same?—Yes, and optional retirement at 60.

33,652. (*Chairman*.) Does the time for pension count from the boy's entry at 18?—Yes, at 18.

33,653. (*Sir Kenneth Muir-Mackenzie*.) Up to a limit?—Yes, up to a limit of two-thirds.

33,654. As nearly as possible the same as in the Government service?—Yes.

33,655. I think you said that you had no such thing as appointing direct to any of these upper classes, that every man must begin at the bottom?—It always has been so.

33,656. That is to say, that with regard to the four classes that you mentioned, there is no such thing as appointing a man to the first class from the outside?—No.

33,657. But when you come to the classes that you spoke of, like the chief cashier and the chief accountant, and the various agents and so forth, with salaries running up from 700*l.* to 3,000*l.*, I hope you will forgive me for pressing this further, but practically are all those men, men who have passed through the classes?—All of them, except, as I said before, certain agents of branches, have passed through the classes.

33,658. The agents of branches are the heads of local branches practically?—Yes.

33,659. But all the others have passed through all the classes?—All the others have passed through.

33,660. The chief cashier, the chief accountant, and I think you mentioned that there were three officers who got 1,500*l.*, one 1,200*l.*, one 1,000*l.*, one 900*l.*, and several 700*l.* have all passed right through from the bottom?—Yes; there is one exception at the moment, but otherwise they all have.

33,661. None of those appointments are made in a manner corresponding to the nomination to high appointments in the public service?—No.

33,662. There is no such thing?—No.

33,663. (*Mr. Matheson*.) The boys who do not come to you from the old public schools, I suppose, have generally had an education of some higher kind, whether in a secondary school or a grammar school, or the like?—Yes.

33,664. Do you have any report from their schoolmasters?—Yes.

33,665. Is account taken of that at all in the ultimate selection?—Yes, the reports that they bring with them are carefully considered.

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

33,666. I am speaking not merely of character, but would any account be taken of the position that the boy had reached in his school?—No. I do not think it would; it is more as regards his personal character that the report from the school would be considered. He would be tested as regards his knowledge simply by the result of his examination.

33,667. Is the examination conducted by your own officials?—Yes.

33,668. In regard to promotion, is there any system of annual reports on the subordinate staff?—Yes, on the whole staff below the chief officials.

33,669. Is the head of each department responsible for that report?—Yes.

33,670. You said that you occasionally had men who left you because they thought that their prospects were not attractive enough; can you give us any idea of the amount of leakage that there is; is it considerable?—No, it is not considerable. The voluntary leakage from clerks taking up other posts does not, I should say, amount to more than ten a year.

33,671. You spoke of university candidates. Is the age for them the same?—They are allowed a year longer; they may come up a year later, up to 23.

33,672. (*Mr. Shipley.*) Have you enough experience to judge, as between boys who enter at 18 and boys who enter at 21, as to which do better in the service?—I should say those who enter at 18. I am judging solely by those who hold higher posts now. I think the majority of them entered young.

33,673. How does the salary of a lady typist compare with the salary of the boy clerks whom you used to employ?—The boy clerks received 50%. I think it was roughly, I have not got the figures with me, I think it was about 50%. They were employed for only two years on that particular work, and then, if they were sufficiently able, they were allowed to sit for examinations to qualify for higher service.

33,674. At that time there was no free lunch?—No.

33,675. (*Mr. Hoare.*) Do you have no boy clerks at all in the Bank of England?—None.

33,676. So that all the unskilled work of typing and sorting old banknotes is now done by women?—Yes.

33,677. Do you find that the progress of mechanical invention has enabled you to dispense with unskilled work of that kind in, say, the last ten years?—It has enabled us to dispense with a certain number of clerks; there are not many directions in which we can introduce mechanical contrivances, except what are known as adding machines, which are very largely used nowadays. We have many of them in the Bank, and they do enable us to reduce our staff.

33,678. I suppose you would always be keeping your eyes open for labour-saving contrivances?—Yes.

33,679. Please do not think that I am asking this question in any personal way, but may I ask whether you entered in the usual course?—Yes, I did.

33,680. (*Miss Haldane.*) Following up Mr. Hoare's question, is it anybody's particular duty to look out for means of saving labour in various ways?—No, I think it is nobody's special duty except those in charge of the various departments. We are always looking out and are prepared to consider anything that is brought to our notice. I may say that, in our position at the Bank of England, our experience is that if anybody has any invention of that kind, which he thinks will be useful for the purpose, one of his first endeavours is to get it into the Bank of England, so that we generally hear of anything of the kind that is going, and we are always prepared to consider it.

33,681. I suppose you employ a good many messengers and men of that type, who do a good deal of valuable work?—Yes.

33,682. How do you recruit them?—They are all appointed on the nomination of the Governor.

33,683. By pure nomination?—By pure nomination.

33,684. You do not employ army and navy men?—We have some army and navy men; our head porter at the present time is an army man, and his deputy is an army man, but the majority of them are men who have been private servants. We have altogether about 105.

33,685. Are the women you employ pensionable on the same scale as men?—They may retire at 45, and they must retire at 50. Pensions may be granted to them when they are over 45 years of age at the rate of one-sixtieth of the salary at the date of retirement for each completed year of service.

33,686. So that they have a reduced scale from that of the men?—They have a different scale.

33,687. And an earlier retiring age?—Yes.

33,688. I am very much interested in what you said about the health of the women whom you employ. I wondered whether we might possibly have the figures regarding their sickness, and also figures which would bring out the improvement following on your institution of a free luncheon?—I do not think there would be any objection to that. I have not them with me, but I could arrange that they should be supplied.\* There is one point I forgot to mention regarding that question of sickness, that the rule is now that, in addition to the women passing a medical examination on first entry, they have to pass a second medical examination at the end of five years, and a third at the end of 10 years.

33,689. Independently of whether they are promoted?—Yes, they have to pass three examinations during their service.

33,690. And if they were not passed medically at any of these stages would they be dismissed?—They would not be retained in the service. They are only engaged for five years, and their re-engagement is subject to their passing the medical examination.

33,691. (*Mrs. Streetfeild.*) Has that operated at all; you say it is a rule; have you had occasion to discharge any of them?—There has been one case. I may say that that rule was introduced at the time that I spoke of, when the inquiry was held, and the free luncheons were instituted.

33,692. (*Miss Haldane.*) You have no subsequent medical examination in the case of men?—No.

33,693. (*Mr. Hoare.*) Am I not right in thinking that the Bank of England provides many facilities for the recreation of their staff in various ways, such as a cricket ground, for instance?—About three or four years ago the Bank provided them with a cricket ground, football ground, squash and racquet courts and five courts; the grounds were opened about four years ago. Prior to that there was no such provision.

33,694. (*Miss Haldane.*) Does the Bank do anything of the kind for women also?—No.

33,695. Do men and women work together at all?—No. The six women who, as I said, during the last six weeks have been employed in inspecting bank-notes, work in an office with men so employed, but they are entirely screened off; they do not mix with them at all, except that the head of the office is a man, but they have a woman superintendent actually in charge, and they are quite screened off from the rest of the staff of the office.

33,696. (*Chairman.*) You said, I think, that if a clerk desired to learn shorthand or bookkeeping, or any other special subject, he would be allowed to do so?—Yes.

33,697. Does the Bank provide facilities for a clerk to learn bookkeeping, to get the certificate, say, of the Institute?—No, the Bank does not provide any facilities; it is left for the clerk entirely to do it in his spare time.

33,698. He would not be relieved from work, for instance, he would not have any time allowed him after 5 o'clock or 4 o'clock if the directors knew that he was preparing himself in such a subject?—No, he would not be given time except actually for sitting at the examination, if necessary.

33,699. (*Mr. Matheson.*) I suppose it is true, is it not, that the directors, and their committees, of the Bank of England supply an amount of expert information which would not be available in a Government office, that is to say, to a certain extent the expert knowledge of your directors, acting in committees, supplies an element which is not forthcoming in an ordinary Government office?—That would be so, probably.

\* *Vide* Appendix LXXIII.

11 April 1913.]

Mr. E. M. HARVEY.

[Continued.]

33,700. To that extent, therefore, the work of the directors really would correspond to the work of the first division in a Government office?—It probably would be so, because there are a certain number of them in attendance at the Bank every day to review

the work of the previous day, and they can give information and advice which possibly, in a Government office, might not be available.

(Chairman.) We are greatly obliged to you, Mr. Harvey, for your most valuable evidence.

Mr. ROBERT LEWIS (General Manager of the Alliance Assurance Company, Limited) called and examined.

33,701. (Chairman). You are good enough to come here to give us information as to the staff of the Alliance Assurance Company, as to how you recruit that staff, how you divide it, and what scales of pay you give. Our object is to compare your methods of recruitment with those which prevail in the Government departments to see if we can learn anything from your methods, and also to compare your rates of pay with those which the Government give. Unless you wish to give your evidence in any particular way, will you first of all state the manner in which you recruit your clerical staff?—For clerkships in insurance offices and banks preference is usually given to nominees of directors. At the Alliance, nominations by directors are not required, but all applicants whose letters are fairly well expressed and are in passable handwriting are invited to appear for examination at the office at a time fixed for the purpose. Those applicants who pass the examination are placed on a waiting list, and when vacancies have to be filled up the best candidates on the waiting list are appointed, subject to medical examination.

33,702. By "examination" there do you mean a literary examination, or a mere inspection by the directors?—The directors do not inspect at all. The examination is in writing from dictation, and in arithmetic. It would be convenient, perhaps, if I hand in a form of application for a clerkship. (*Producing form and handing in the same*). The form gives information with regard to the applicants, and a form of medical certificate is attached. Then I should like to put in also a specimen of the examination papers for the ordinary clerkships. (*Producing specimen examination paper*.)

33,703. Have you a statement of the subjects of examination?—Yes, I will put that in. Simple as those examination papers appear to be, 30 per cent. only of the applicants pass; so that practically 70 per cent. of the applicants fail to pass an ordinary examination in handwriting, in spelling, and in arithmetic.

33,704. Who conducts the examination for you?—It is conducted by one of the secretarial clerks. The maximum age for entrance in the case of an ordinary clerk is 21. All applicants under 17 years of age, except for appointments in the provinces, are considered ineligible.

33,705. The limits of age are: minimum 17 and maximum 21?—Yes.

33,706. There is no limitation upon applicants. Any person may send in an application in the form that you have given to us?—Yes.

33,707. With a medical certificate of the applicant's own doctor?—No, of our own doctor.

33,708. Then everybody who applies is subjected to this simple examination?—Yes.

33,709. And the result of it is that you find 70 per cent. fail?—Yes.

33,710. The 30 per cent. who succeed are put upon a roster?—That is so.

33,711. Do you allow several vacancies to occur before you hold an examination?—We have an examination monthly.

33,712. Merely to fill up the vacancies that occur?—Yes.

33,713. How many candidates do you allow to appear?—Any number.

33,714. Say that in a particular year 30 men have been entered upon the register and an examination becomes necessary to fill up vacancies in your office, do you allow all the boys who happen to be upon the roster at that time to present themselves for examination?—Yes; but we make a kind of selection beforehand. If we find the handwriting is very bad, or the history of the applicant is unsatisfactory, we put him aside altogether.

33,715. But I understood that you did allow that person to be placed on the roster?—No.

33,716. In the first place, do you look into any matters connected with health or character or handwriting of a candidate before you allow that candidate's name to get upon the roster?—Yes, even before they are on the list for examination.

33,717. Then having a certain number on the list for examination, you put them through a further sifting before you permit them to present themselves for examination?—Yes.

33,718. And you eliminate those who seem to you to be ineligible?—Quite so.

33,719. On what grounds do you eliminate them?—On their papers. For instance, if we find that half a dozen words are incorrectly spelt we should consider that applicant ineligible.

33,720. When it comes to the examination what happens?—We have 20 or 30 in a room and papers are read to them. For instance, an article in the *Times* will be read, and that will be a test of their handwriting and also of their spelling. Sometimes we give them a quotation of rather technical words as a test, and we give them sums in arithmetic.

33,721. That is done by your officials, not in the presence of the Board?—That is so.

33,722. The result of that examination is reported to the Board?—Yes.

33,723. And the Board select the requisite number?—They select those who are recommended by the chief official.

33,724. Are they then appointed?—They go before the doctor, and if they pass the medical examination they are appointed in rotation.

33,725. Before an appointment, does the Board interview them?—No; I interview them, or one of the secretaries.

33,726. If at the interview the candidate does not seem to you to be a suitable person, do you reject him?—Yes.

33,727. You have that power even after examination?—Yes, because we do not reject, except the clearly ineligible candidates until after the examination; and very often they have to be rejected simply on the matter of spelling.

33,728. I can understand the rejections on examination, but say 20 candidates present themselves for examination and 10 are rejected on the result of the examination, and 10 remain over as having passed the examination, those 10 are then interviewed by you?—Yes.

33,729. The result of that interview may be the rejection of any one, or two, or more, amongst them?—Yes.

33,730. It is only those who are interviewed at this personal inspection that are ultimately employed by the company?—That is so.

33,731. Then when they are employed, to what grade in your service are they appointed. Will you give the organisation of the staff in the various classes?—In regard to the salaries for ordinary clerkships in the head office of the company—we have a large number of branches in London and in the provinces—the commencing salary is 60*l.* per annum, with an annual increment of 10*l.* until the salary reaches 250*l.*; then the increase of 10*l.* is biennial until the salary reaches 300*l.* for an ordinary clerkship.

33,732. The salary begins at 60*l.*, and goes up to 250*l.* by increments of 10*l.* per annum. Then is there an efficiency bar at 250*l.*?—There used to be, but there is not now.

33,733. Then a clerk goes, if you retain his services, in the ordinary course from 60*l.* by increments of 10*l.* up to 300*l.*?—Yes. Young men having a knowledge of languages such as French, German and Spanish, or possessing actuarial qualifications, start at a much

11 April 1913.]

Mr. ROBERT LEWIS.

[Continued.]

higher salary; and in the case of university men the age of entry is extended to 22 or 23, and the commencing salary is usually fixed on the assumption that they enter the service at the age of 18, and that just covers the five years.

33,734. So they enter your service at the salary they would have attained if they had entered it at 18?—Yes.

33,735. You seem to have three classes—First, the class who enter by this ordinary examination you have mentioned?—Yes.

33,736. Secondly, clerks having a knowledge of languages?—Yes.

33,737. And thirdly, clerks with university training and having an actuarial knowledge?—Yes.

33,738. How do you get these other men?—They apply to us.

33,739. Do you put them through an examination also?—No.

33,740. Do you interview them?—We interview them, and then we put some questions to them in the higher branches of mathematics, but we have wranglers in the office, and we take it for granted they are sufficiently well educated.

33,741. Then you admit several classes of clerks to your office?—Yes.

33,742. But you institute an examination only in regard to those who begin at the pay of 60*l.* a year?—That is it.

33,743. In the case of the university man who is a wrangler and thereby satisfies you that he possesses mathematical qualifications, you take his university record?—We do.

33,744. The man who knows languages and is of use to you in that way you take on your own personal assurance that he does possess that knowledge?—Yes; but we test him. We must be satisfied that he is fairly well versed in the language.

33,745. But it is not a competitive examination?—No, it is not competitive. Public school boys have to undergo the examination.

33,746. They come in in the first grade?—Yes.

33,747. Take the case of a boy who knows modern languages; he goes before one of your staff who is a good linguist, who talks to him and sees that he possesses a knowledge of French or German or whatever it may be?—Yes.

33,748. Say that three or four of those boys came up at the same time, is the examination or interview that takes place, with the object of ascertaining whether the boys know French or German, or whatever the language may be, anything of a competitive nature?—No, as a matter of fact it is very difficult to get those men.

33,749. But still, if you have only one or two vacancies and four or five boys appear, you only select two?—In the matter of languages we have to seek them; they do not come to us.

33,750. How do you seek them. Do you put an advertisement in the paper for them?—No, but we apply to the foreign banks, and we also write to our agents abroad.

33,751. You do not communicate with the universities or any of the public schools?—No, because they would not have the necessary knowledge at public schools.

33,752. (*Mr. Boutwood.*) It seems that all these men, although they enter in different ways, fall into their respective places in one grade, in one body, when they come in?—No.

33,753. (*Chairman.*) No, you say the university man who comes in will probably enter at the age of 23, but he will be rated, so far as salary goes, as if he had entered at 18?—Yes.

33,754. (*Mr. Boutwood.*) But it is one body of clerks recruited in two or three different ways, and each man comes in as though he entered or had entered at the bottom?—Yes. The ordinary clerk must undergo all these examinations, and a clerk for the foreign department must know certain languages. A clerk coming from a university does not undergo any examination except the ordinary test in languages or mathematics.

33,755. (*Chairman.*) The boy of 17 will enter and get 60*l.* a year?—Yes.

33,756. That boy remains, say, six years in your service, and then he will have reached 120*l.* a year by 10*l.* increment annually?—Yes.

33,757. The candidate from the university—the wrangler let me say—enters, and his age is 23, and he will, on entry, draw 60*l.*, plus five times 10*l.*?—Yes, 110*l.*; and the foreign language clerk we should start at 200*l.* or 250*l.*, or perhaps even 300*l.*

33,758. You get him as cheap as you can, or have you a scale for him?—We have no scale. Those appointments, of course, are very few in number.

33,759. Once in the Service, as you said, the clerk who enters at 17 begins at 60*l.*, and goes on by increments of 10*l.* until he reaches 250*l.*, and then by biennial increments of 10*l.* to 300*l.*?—Yes.

33,760. He does not get beyond 300*l.*?—Not if he is only an ordinary clerk; but that salary does not apply to managers, actuaries, secretaries, heads of departments, surveyors, and so on.

33,761. Those are all special staff appointments?—Yes, and the salaries run to very high figures.

33,762. But the ordinary clerk has to be contented with the maximum of 300*l.*?—Yes.

33,763. Will the salary of the actuary whom you get in from the university go on in the same way as that of the ordinary clerk?—No.

33,764. You get him in at 110*l.*?—Yes, and if very efficient he would probably get 20*l.*, 30*l.*, 40*l.*, or even 50*l.* added in a couple of years, and then perhaps go on with additions of 20*l.* a year, and so on, until the salary reaches say 500*l.* As a rule we do not keep the actuarial clerks very long, because they are sought after, and go to other offices as actuaries at salaries of 1,500*l.*, 2,000*l.* or 2,500*l.* a year.

33,765. Am I right in thinking that the actuarial clerks are not on a scale; they come in at a certain point but they are not on a scale, and their pay is personal pay fixed with regard to their capacity?—Yes, they come in subject to the scale, and then we depart from the scale in their cases according to their efficiency, and the directors deal with that specially every year.

33,766. Will you proceed with your statement as to your staff?—With regard to the chief officials, I take it you do not want any information as to the salaries of managers, actuaries, secretaries, and so on: they run to very high figures.

33,767. But their salaries do not run according to scale?—No.

33,768. It is the personal value of the man?—Yes.

33,769. In the case of an appointment which may be held by one man to-day, say, at 1,500*l.* if he moves on the next man may come in at 1,000*l.*?—Yes.

33,770. We should learn nothing by getting these figures from you?—No. As to the third question upon which you desire information I do not think that the scale of salaries has been materially modified by public companies in the City to correspond with the recent increase in the cost of living.

33,771. In other words, has the cost of living in any way regulated or affected salaries?—The directors are talking about it, but nothing has been done except that everything has been interpreted in the most liberal manner, and liberal benefits are given to encourage life assurance amongst the officials, and systems of superannuation have become quite general amongst insurance companies and banks.

33,772. Is that system of superannuation a contributory system as a rule?—No. I have a copy of the Alliance system which I can hand in. But the question of the increased cost of living, I think, is bound to be taken up soon.

33,773. Do you think the increased cost of living has very much effect upon the higher salaries such as 1,500*l.*, and so on?—No, it only affects the lower grades.

33,774. Do you wish to answer the next question—No. 4?—Yes. I have little experience of the business methods employed by Government departments; in fact, I have none except in connection with the Inland Revenue Office and the Office of the Board of Trade; and I must say we have found that nothing can be much more satisfactory than the method in which they deal with business. They are very prompt and most

11 April 1913.]

Mr. ROBERT LEWIS.

[Continued.]

courteous. Those are the only two departments I have any experience of.

33,775. One could not bestow much higher praise on a public department than promptitude and courtesy in dispatch of business. Have you as a rule been satisfied with the results of your communications with them?—Yes, they have been most satisfactory.

33,776. You think they have done justice and dealt with matters on their merits?—Yes.

33,777. So that, so far as you know, the public are satisfied with the methods of conducting business in public offices?—They ought to be, if other departments are conducted in the same way. An impression prevails that unnecessary delay exists in the transaction of business in some departments, but whether this impression is well founded or not, of course, I am unable to say.

33,778. You say an impression does prevail that there has been delay?—Yes, it does prevail, there is no doubt.

33,779. But as far as your experience goes the impression is not justified?—No. I would add that business arrangements in offices require periodical overhauling and re-adjustment, but I am of opinion that no one who has not a fairly intimate knowledge of the working of a public department is in a position to offer useful criticism of the business methods employed therein. If it were possible to secure the services of a retired civil servant who, while in office, was distinguished for administrative ability, and is still capable of undertaking work of a special character for an examination of the working of the several departments, valuable suggestions leading to the efficiency of administration, and possibly to economy, might be obtained. From my experience in connection with a large office, of which I have been manager for 47 years, I think it would be impossible for an outsider to come in and to make suggestions that would be of substantial service. But if you had a retired officer who was a good administrator in his day—

33,780. Or still better, if you had an officer in the prime of life?—But the difficulty is for a man in office to make special suggestions for the improvement of a department; he would do that in the ordinary way.

33,781. If that was his business?—Yes.

33,782. If you had an officer in the prime of life—the best officer you could get hold of—and said to him, “You know the working of this and other departments; we wish to place you in a position of independence and responsibility for the purpose of ascertaining how the work is done in the department, and recommending to the head of the department such changes as you propose,” it would meet your wishes even better than the employment of a retired man?—Undoubtedly, but the difficulty would be to find a permanent appointment for that man.

33,783. The very business you mention—that of investigating from time to time how each department is doing its work, and seeing that the rules of business are observed, would give more than ample employment for such an officer?—Yes.

33,784. The work might even be adequate for a Board, if a Board were created?—Yes, I think it might be of service if, in connection with a man of that kind, you had a man who was accustomed to a large mercantile concern—say an insurance office or a bank—to assist him in going through one department only; he might throw out some suggestions which might be valuable. But for the important work you must have a man who has gone through the office.

33,785. But it would be essential that all such work should be carried out in harmony and consultation with the heads of the various departments?—Yes.

33,786. While the authority you have in mind should have an independent position, he should be bound to consult with all departments and to call the attention of the heads to his suggestions?—Certainly.

33,787. And if his recommendations were unreasonably disregarded, ought he to have the power of bringing them to the notice of the minister in charge of the department?—Certainly.

33,788. Such an arrangement as that you think would be useful?—Yes, very useful indeed, I think.

33,789. With regard to the employment of women, can you give us any information?—We do not employ women clerks at the head office of the Alliance. At some of the branches, however, women are employed, not only as stenographers and typists, but as ordinary clerks, with very satisfactory results.

33,790. Do they work side by side with the men?—No, not side by side. I understand that in small establishments in London men and women clerks work together in the same room, but in large establishments such as banks and insurance offices it has been found advisable to provide separate rooms for them.

33,791. Has that been found necessary in practice as the result of actual experience?—All I can gather is that it has been found convenient. In the United States, of course, men and women are freely employed in the same rooms and at the same desks; but in the United States boys and girls are accustomed to work together at school, so there is no novelty about it there. I must say that they do their work very intelligently.

33,792. What sort of work are you referring to?—Even actuarial work they do; that is to say, just the additions and subtractions and so on; and they are very good book-keepers.

33,793. Have you had any experience of women in drafting important letters or writing important minutes?—No, but the art of writing letters seems to be going out of fashion altogether now. What with the labour-saving machines and so on, it is a matter which is causing us great anxiety, because we find, if a junior clerk has anything to do, instead of sitting down and drafting a letter, he runs to the typist and tells him to say so-and-so; and even ordinary memoranda are dictated.

33,794. He merely tells the typist “I want to have such and such a thing done,” and leaves the rest to the typist?—No, he generally states what is required. Although we have added at our office 20 typists to our staff we have not been able to effect any economy. We require the same number of clerks notwithstanding this assistance. Of course, it is very convenient to have letters typewritten and so on, but it does not give the young men a chance of practising letter writing.

33,795. You could not adhere to the old practice, I suppose?—No, it is very difficult in these days. I have been very much opposed to the extension of this system of typewriting, but we have had to give way.

33,796. It facilitates the transaction of business?—It does.

33,797. But, as you say, in a slipshod manner as far as composition goes?—Yes.

33,798. But the essential business is carried through?—It is, and quickly.

33,799. What is your opinion with regard to recruiting the university-trained honours men for your office?—My experience is that the young men who prove most efficient in dealing with office work are, as a rule, those who have done best in the entrance examination, and that those who have received the highest education are best equipped for the performance of the difficult and responsible duties of the business of administration. We find at our office—and I think it is pretty general—that the boys from the provinces do better in offices than the London boys.

33,800. Are the boys from the provinces better educated than the London boys?—No, I do not think they are; but I think they come up with the determination to do well. With them there is a certain amount of ambition which is absent in the case of a London boy. Then they have not the same social attractions as the London boy. They go to King's College to evening lectures and classes and so on, and it is seldom that a London boy will do that.

33,801. Have you a considerable proportion of your staff consisting of boys who came up from the provinces?—Yes.

33,802. Then, they have to look out for themselves?—They have.

33,803. Do you find then that 60*l.* a year is sufficient for these boys to begin with?—We do not bring them straight to the head office, they go to one of our branches first. We try to send the country boys first of all to the

11 April 1913.]

Mr. ROBERT LEWIS.

[Continued.]

country branches, and then the best of them come up to London, and at a higher salary than 60*l*.

33,804. Your conclusion is that, while the ordinary routine office work is well done by the boys who enter by this examination and begin at 60*l*. a year, the higher and more difficult work of administration is better done by the better educated?—I think there is no doubt about that.

33,805. Is the practice increasing of employing university graduates in your higher work?—For actuarial work there is no difficulty, and for the foreign office there is no difficulty; but with regard to the ordinary work, it is difficult to get a highly educated man to go through the details and drudgery, which is very, very great. Promotion in the office takes place after examination for the Institute of Actuaries or the Insurance Institute. If it would be of any service to the Commission, I could hand in a memorandum of the subjects which they have to pass for the Institute of Actuaries and also for the Chartered Institute. (*The witness handed in a memorandum.*) Another thing I have found very useful in office administration has been to prepare a list of all subjects which should come up for periodical consideration; that is, weekly consideration, showing the position of the whole of the work in every department. This is a return that we require to have prepared for each department showing what is the condition of the work in connection with pretty well every book in the office. Then we have another column showing up to what date all necessary examinations have taken place. This is then brought to the head of the department once a week, and the chief sees exactly what is the condition of the office work in connection with everything.

33,806. That shows that you have a complete grip of your office?—Yes, quite. (*Handing in the form.*)

33,807. (*Mrs. Deane Streetfeild.*) At what age do the women in the branch offices come in?—We have no fixed age, but they come in quite young.

33,808. How do they come in—by nomination?—No, they apply and undergo the examination just like the male clerks.

33,809. The same examination as the men?—No, not quite the same.

33,810. What is their examination?—Simple arithmetic and writing.

33,811. And typing?—Yes.

33,812. And shorthand?—Yes.

33,813. What is their salary when they first come in?—We have no fixed salary for them, but I think they would get, on an average, about 100*l*. a year—not at entrance; the entrance salary would be about 1*l*. a week, I should think.

33,814. What is the highest salary paid to a woman?—200*l*. a year.

33,815. What are her duties?—To superintend a number of young women who are engaged in simple book-keeping.

33,816. What are their hours?—The hours generally are from 10 to 5.

33,817. Have you ever thought of employing women interchangeably with any branch of men and doing the same work?—We have under consideration now at the head office whether we shall do away with the men typists and shorthand writers and supply their places by the appointment of ladies. The difficulty, of course, is to find proper accommodation for them.

33,818. If you do that, what would be the reason for substituting women for men?—Our experience of typists is not altogether satisfactory.

33,819. You hope you will get a better class of woman?—Yes; I think so.

33,820. (*Mr. Philip Snowden.*) You are speaking of the men when you say the "typists" are not satisfactory?—Yes.

33,821. (*Mrs. Deane Streetfeild.*) You mean not satisfactory under the present system?—Yes.

33,822. What grounds have you for saying that men and women could not conveniently work in one room together in banks and insurance offices?—As I said, we have really no experience of that, except at one of our branches, and there they are kept distinct; whether it is necessary or not I do not know. But it has been found, I believe, at some of the banks and at

some of the insurance offices that they have to be kept separate.

33,823. Do you have any medical examination for your women before they come in?—Yes.

33,824. (*Miss Haldane.*) Carrying on what you have just been asked, have you any figures about the health of the women you employ?—No, but it is satisfactory. No complaints have been made from the branches that employ women.

33,825. So you believe their health to be good?—Yes. They want more holidays, I understand.

33,826. I was very much interested in what you said about a supervising board in the Civil Service. What do you think would be the functions of such officers. Supposing they were appointed, would they be merely advisory, or do you suggest they should also be executive?—I do not think you would get quite the same work from an executive officer. Do I understand that you refer to an officer superintending or making recommendations in connection with his own department?

33,827. No. I thought you suggested that a retired Civil servant, and also perhaps a man in active business, should be appointed to supervise the offices. I should like to know further what you think about that scheme?—I think he ought to be absolutely independent of the departments, but whether he could be made a permanent executive officer or not I cannot say.

33,828. You think the utility of such a body (supposing there were two or three officers) would depend on their having certain executive powers, and on their being more than an advisory committee or a board?—I think it ought to be advisory.

33,829. What sort of subjects would it deal with. Would it have to do with pointing out that the functions of the various officers were not quite what they ought to be and so on?—My idea would be, taking one department, that he should, first of all, have a list of all the officials in the department, know their salaries and their length of service; that he should have before him a list of all the books used in that department; that he should see that the clerks arrive at the proper time and do not leave before the proper time in the afternoon, and so on; and see that everybody is fully supplied with work. I am looking to the idea that the officers of the Civil Service are not overworked at any rate, to say the least of it.

33,830. (*Chairman.*) You would like in that case to have a body of inquisitors over all departments. It is the business of the head of the department to see to all that in our system at present; but what I understood you to suggest is a body who would be independent of any department, and yet have access to every department?—That is it.

33,831. A body who would see whether promotion went properly on in each department; whether a man's business aptitude and cleverness was brought to the notice of the head of a department; whether the work was properly distributed; whether the distinction between one class of work and another was properly regarded in the department. You would have periodical scrutinies made with the object of bringing all that out, and the result brought to the notice of the head of the department who should take action upon it, or show reasons for not doing so. These reasons might be laid before the Minister responsible for the department, and in that way the question might come to the notice of Parliament, and papers be called for. That was what you meant, was it not?—Yes, but I think he should go beyond that. He ought to be satisfied that the work was done in the most efficient way.

33,832. That is the business of the head of the department; he ought to do that now?—The difficulty is to get the head of a department to move in a matter of this kind.

33,833. What you want is some engine or means for making him move, for bringing the necessity of motion to his knowledge?—Yes, an independent examination of a department, and to some extent an independent supervision of a department.

33,834. That goes further than you would find would fit in with the Government system at present?—Yes.

11 April 1913.]

Mr. ROBERT LEWIS.

[Continued.]

33,835. I suppose you admit that the head of a department must be the responsible head; he is now responsible for it?—Yes.

33,836. And if you weaken the responsibility of the head of the department you weaken the responsibility of the Minister of the State. That responsibility you must preserve intact?—Quite so; but this official or board would be only advisory.

33,837. Only advisory to the head of the department, but also with sufficient power and sufficient independence to make the advice effectual, in so far that, if action is not taken on it, the matter may be brought to the Minister's notice?—Yes.

33,838. Then our understanding is mutual?—I think so.

33,839. (*Miss Haldane.*) Your idea is the same as the Chairman's?—Yes it is.

33,840. You mean the body would consult with the head of the department, and take a survey of the working of the office, and then advise the head of the department. Is that the idea?—Will that be sufficient? Supposing the head of the department were opposed to reform if reform were necessary. This official ought to be in a position to examine everything connected with the department and to make a report to the authority, whoever the authority may be, because you must anticipate difficulties, if not opposition, on the part of the heads of some departments.

33,841. (*Chairman.*) But you must remember that under our system the head of the department is the officer responsible to the Minister for the department—the Home Secretary, the Foreign Secretary, and so on, as the case may be—so that when you bring a fact to the notice of the head of the department and he does not take action upon it, nothing remains except to bring it to the notice of the Minister, that is, to the Government. It might then become a question for the House of Commons to deal with. But you cannot destroy the power of the head of the department without touching ministerial responsibility; you must maintain that power, only you may keep the departmental head up to his work?—The head of the department I had in view was rather the head of the executive—the permanent official in the office.

33,842. But he is really the right-hand man of the Minister. When you get to the head of the department you get very close to the Minister?—That is true.

33,843. (*Miss Haldane.*) Would you allow individual Civil servants to appeal to this Board (let us call it) with any complaints which they may wish to make?—I do not think that ought to be allowed.

33,844. Have you in your office anything corresponding to that? Is any survey made of your office from time to time?—We are in this position: The business is cut up into departments; we have a head of each department; we have two examining clerks for each department; then we have high officials whose duty it is to see that all instructions are carried out. I may say with regard to our office that we have the duties of all the clerks from the junior to the senior set forth in a book. We explain in that book the object of pretty well every paper and every book that we have in the office, and the duties of each clerk are duly set forth in connection with every department of the business.

33,845. Who composed this book?—I composed it. It took me about 30 years to prepare it. So that a clerk with us can, if he likes to take the trouble, know his business in a few months, and if he goes from one office to another there he would find the work conducted on identical lines. If it would be of any interest to you I shall be glad to send you a copy.

33,846. I should be much interested in seeing it. How are alterations made in the functions of clerks? For instance, when you thought of introducing women into your service, how was that effected?—First of all I should have to prepare a memorandum for the directors pointing out the disadvantages of the present system and what were conceived to be the advantages of a change, and then the directors would decide.

33,847. And then the book would be altered to coincide with the opinion of the directors?—Yes. We find an absence of enterprise and ambition on the part of young men. It is astounding that when a young man

can see that instead of receiving a salary of 300*l.* he may go up to 2,000*l.*, 3,000*l.*, 4,000*l.*, or 5,000*l.* a year, he has not the ambition or enterprise to aim at that. It is extraordinary.

33,848. Do you think that if you had a more highly educated class of young men that would be different?—I must say that those who have been best educated turn out the best clerks.

33,849. They have more ambition and initiative?—No, I do not say that; but they are better qualified if they will work, and their work, of course, is very much better; and in negotiations they are very superior.

33,850. Therefore, on the whole, you would advocate boys coming in at a somewhat high educational standard?—Yes.

33,851. (*Mr. Philip Snowden.*) I have had an opportunity of looking through the examination paper you have been good enough to hand in. The questions that are put are not of a very difficult character?—Not at all.

33,852. It is a very surprising thing to hear you say that 70 per cent. of the candidates fail to pass the examination. Is that to some extent accounted for by the very high percentage of marks that you insist upon for qualification?—No, I do not think so.

33,853. Then the only other conclusion to which one is driven is that the candidates must have a very inferior education?—There is no doubt that the education is inferior. If I may go back to 20 or 30 years ago, it was seldom that we had to reject an applicant then on account of spelling. Now we have, as you see, to reject 70 per cent. of the applicants mainly on the question of spelling. Some two years ago I brought the matter before Mr. Asquith, and Mr. Asquith, having looked at the paper, said: "It is very disquieting to see the result of these examinations." We used to look upon Scotland as producing rather well qualified clerks, and they used to begin office work very young. Now the results of the examinations are no better there than they are in other parts of the country.

33,854. Your examination, as you are aware, is very much inferior as an educational test to that for the lower division clerkships of the Civil Service, or even for the boy clerks?—That appears to be so.

33,855. And the percentage of failures to qualify for the Civil Service is very much lower than yours?—Is it?

33,856. Would you assume from that that the quality of candidate you get is very much inferior to the quality of the candidate who goes in for the Civil Service examination for the lower division and the boy clerkships?—I do not know. It is possible; but if you take the boy clerks in the Civil Service a very large number have come to us, and it is seldom we have been able to pass one.

33,857. That is a most extraordinary statement?—It is.

33,858. I suppose you mean they come to you at the end of their period of work as boy clerks?—Yes, and largely from the Post Office.

33,859. I am afraid they are not what we understand as "boy clerks." Perhaps they have been boy messengers?—No, boy clerks, who have to leave at about 19—a large number of them we have had.

33,860. That is a most extraordinary statement, because you have a list of words for spelling, and though it is a long time since I left school, I think I could spell all those words correctly. The test in spelling that is given to a boy clerk in the Civil Service examination is quite as severe as that which you have here, and the fact that a boy successfully passed the boy clerks' examination proves that he was able to do it?—Yes.

33,861. Could you say if failure to spell one of those words correctly would disqualify your candidates?—No. Something would depend upon the nature of the word. For instance, if you take the word "accommodation," we do not expect anybody to be able to spell "accommodation," so that we rule that out as a trivial mistake. Another word we find very few boys can spell is "inflammation;" few will put in two m's.

33,862. Do the boys that you get at the age of 17 or 18 come straight from school to you as a rule?—As a rule, yes.

11 April 1913.]

Mr. ROBERT LEWIS.

[Continued.]

33,863. And yet 70 per cent. of them are unable to qualify in a simple examination like that?—Yes.

33,864. That is the most striking condemnation of the results of our educational system that ever I have met with, and it appears to be in such striking contrast to the results of the tests that are applied by the Civil Service Commissioners. You have no explanation, perhaps, to offer why the boy should fail to pass your simple test and yet succeed in passing the Civil Service examination?—I cannot understand it.

33,865. Do you know if any of your candidates go to any of these cramming establishments in preparation for your examination?—I should not think so.

33,866. Having got your boys, what kind of work do you put them on when they come into the office first?—They begin with the indexing of letters, docketing letters, and then they proceed to the copying of returns that cannot be dealt with on a machine. Then by degrees the work is of a technical character, and then book-keeping, and so on.

33,867. What length of service would a clerk have who would be doing, say, the writing out of your policies or sending out notifications of premiums due?—In writing policies we generally employ outside clerks—law stationers' clerks—and pay them so much a policy, because we may have one day 5,000 policies to write, and the next day only 50 perhaps, and the law stationer lets us have all the clerks we require to dispose of those in a day. It is not regular work, and we do not employ the ordinary clerks on that work.

33,868. A good deal of your work must be rather of a simple character, I assume—mere registration?—There is a great deal of registration.

33,869. You employ the junior clerks upon that?—Yes. A fire policy may contain 100 items, beginning with the mansion, and so on. All these items have to be posted in certain books, and it requires very great care to see that they are properly posted. We employ the senior clerk for that.

33,870. The work of the clerk becomes, I will not say more difficult, but a little more responsible with each succeeding year of his service?—Yes, it ought to.

33,871. With regard to those men who enter not by the ordinary examination but by giving proof of the possession of exceptional qualifications, take your university man who enters at 23; what kind of work would he be put to first?—We should require him to go through the junior work for a few months. Then it depends entirely upon what kind of work he would like to take up. If he took up the work of survey we should send him to a branch to be specially trained for that, and then bring him back to the head office after an interval of, say, one or two years.

33,872. That is surveying property in regard to which you have had an application for a fire insurance policy?—Yes.

33,873. That is not work done by trained surveyors?—No, only by our own surveyors. We have a staff who are trained.

33,874. But I understood you to say you might put a university man on to that work?—Yes, for his training at a branch, and after a year at a branch we would bring him to the head office and put him on the surveying staff.

33,875. When I spoke of "trained surveyors" I meant professional surveyors?—We do not employ professional surveyors.

33,876. Are the chances of a boy who enters at 17 and who proves to be competent and ambitious quite as good for promotion as those of a man who enters by your university scheme?—No, not so good.

33,877. Not even if the two men show equal capacity?—That is a very difficult question to answer.

33,878. (Chairman.) I thought you told me that the boy entering in the ordinary way had a run up to 250l., and then to 300l., by a clear run?—Yes.

33,879. (Mr. Philip Snowden.) You said in reply to Miss Haldane that you regretted the want of ambition on the part of young men where there were posts of 2,000l., or 3,000l. or 4,000l. a year open to them, and they seemed to be content with the ease of a berth of 200l. or 300l. a year?—That is so.

33,880. Are those men who by the ordinary increments go to 250l. or 300l. eligible for promotion to these much better paid posts?—Certainly.

33,881. How long have you recruited university men?—We have not made many appointments, and they have all been on the actuarial staff.

33,882. Your higher posts are now filled by men who entered as ordinary clerks originally?—Yes, we make no difference in that respect between the clerk who has received an ordinary education and the clerk who has received a superior education. But when you come to fill an important post you do involuntarily take into account that a clerk who has had a university education, for instance, ought to have the preference, all other things being equal.

33,883. But you said just now that the number of your university men in proportion to your non-university men is very small?—Very small, indeed.

33,884. Therefore, as a matter of fact, your higher posts hitherto must have been very largely filled by what you called the ordinary clerk?—That is so.

33,885. And you have found them satisfactory?—I cannot say we have always found them satisfactory.

33,886. Not always, but generally?—Yes, the men we promoted have turned out on the whole satisfactorily.

33,887. Could you tell us roughly in figures how many university men you have in the service of your company?—At the present time we have only three.

33,888. Were they all wranglers?—Two were wranglers.

33,889. I understood you to say that you have appointed these three university men to actuarial positions?—Yes.

33,890. But are what you might call their academical university mathematical qualifications such as would enable them to undertake technical actuarial work?—Yes, in a very short time.

33,891. Have you any system by which you encourage your clerks to improve their education and to get additional requirements, attainments, and equipment?—Yes. I put in a statement of the examinations—a kind of syllabus—of the Insurance Institute, which is now a chartered company, and prizes are given for the best essays upon subjects relating to insurance, and we at the Alliance have always recognised the successful candidates by a considerable increase in their salaries.

33,892. Do you find that acts as an incentive?—It did for a year or two, but it has slackened now. It is very disappointing.

33,893. May I ask would you consider your salaries, taking the scale for the ordinary clerks, to be equal to or above the average paid for similar work in similar commercial concerns?—Above the average.

33,894. Do you think the effect that you pay above the average enables you to get a sort of pick of the men?—No.

33,895. You do not think there is economy in it in that respect?—I do not think so.

33,896. What holidays do you give your staff?—The heads of departments get one month and in some cases six weeks. The ordinary clerk can have a month in the course of the year, either in two halves or altogether, and we generally find that they prefer to take a fortnight early in the year and a fortnight late in the year.

33,897. About your suggested general organiser of the public service. I suppose you consider that one of his principal functions should be to see whether the kind of work that a clerk or an official is doing is too highly remunerated or not sufficiently remunerated, or whether the man is qualified to do work of a superior character to that upon which he is engaged?—No, I had not that in view.

33,898. Do not you think that might be very useful work for an independent official?—I should have thought the chief permanent official would be the best judge of that.

33,899. One would think that ought to be the case, but is not there a tendency on the part of every permanent official to magnify the importance of his own department?—Yes.

11 April 1913.]

Mr. ROBERT LEWIS.

[Continued.]

33,900. And one of the ways in which he can magnify it is by having a large number of well-paid subordinates?—This extra official would test all that.

33,901. That is just my point?—To see whether there is any ground for it. I do not think for a re-organisation of a department you can always depend upon the head of the department.

33,902. Supposing we had in a certain Government department a staff of 150 clerks and officials of all grades, and out of that 150, say, 30 were receiving salaries of over 500*l.* a year—one of the things which you would want this general organiser to do would be to see whether the proportion of highly paid posts in that department was what it ought to be in relation to the whole number of officials?—Yes.

33,903. (*Chairman.*) Would you have this organiser—I take the word but I do not accept it as carrying out the idea I had formed—would you have this authority exercising his own discrimination and his own judgment as to what pay should be given or what not given; or would you, as an alternative, have him make inquiries whether the scale of pay laid down by the Government was departed from or not, or whether the class of work ordered by the Government to be performed by a particular class of public servant was being adhered to or not. Would it not rather be the business of this officer—this authority—to see whether rules were being carried out, whether men were being given proper chances of doing good work and so on, and whether proper notice was taken of them; or would you have him as a dictator stating, “This should be the thing to be done in this office, and that to be avoided”?—I do not think he ought to be dictator. He ought rather to investigate everything connected with the department and report to some recognised authority. He would report whether the department was over officered or under officered and in what respect.

33,904. In a word he would report whether the office is being efficiently and economically administered?—Yes, efficiently administered.

33,905. It is not economically administered if it is not efficiently administered?—Exactly. I have had to go through a good deal of this kind of work in my time. First of all, I made a recommendation that, in order to bring about desirable changes, we should retire officers who seemed to be of very little advantage to the company. But I soon found that was a most extravagant system to adopt. We have adopted the alternative of not filling up vacancies, and it is wonderful how soon an unnecessary number of clerks is reduced.

33,906. (*Mr. Boutwood.*) Do you mean that men resign?—No, we wait until a man retires under the superannuation scheme or otherwise.

33,907. Have you any boys in the service of your company of 15 or 16 years of age?—No.

33,908. (*Sir Kenneth Muir-Mackenzie.*) You said that your experience of the Inland Revenue and the Board of Trade was that things were done with promptitude and courtesy?—That is my own experience, yes.

33,909. But later on I think you put it in a negative form that you did not think the public offices were overworked. Did you mean that you had an opinion of your own, or do you think there is a general impression that the public departments are generally characterised by a sort of slack time?—Yes I refer to that as a general impression.

33,910. Have you ever taken occasion to verify it or to think over it?—No, it is simply an impression which exists.

33,911. That, of course, might be consistent with promptitude and courtesy. If one had only one thing to do one might do it with courtesy and even with promptitude. Your experience is consistent with what you say you think is the general impression with regard to the public offices?—I simply mention it as an impression formed from what one has heard—that they have too many holidays, are late in arriving at the office, and get away early, and all that sort of thing; but there may be no ground for it.

33,912. You have no opinion formed upon information or investigation?—No.

33,913. But you think there is a general feeling of that sort?—I think that will be found to be so.

33,914. You cannot assist us in an investigation into that very important subject?—No.

33,915. There is nothing of that sort in your own insurance office. The men are fully occupied?—Fully occupied.

33,916. And for an adequate time?—Yes.

33,917. And that ought to be the case, of course, in any well-ordered institution?—Yes; and the supervision with us is very efficient. But, of course, there may be no ground whatever for the impression referred to.

33,918. There has been nothing happening in your experience, at any rate, to make you give that as a piece of information of your own?—No; on the contrary my experience, as I said before, of those two departments is that everything has been done promptly and always very courteously.

33,919. There was somebody always there, at any rate, at any time you went there, able to do your work?—Yes, always, and never any delay.

33,920. (*Mr. Matheson.*) Have you any information as to the schools from which your boys come?—Yes.

33,921. Do they come from a great variety of schools?—A variety of schools. I do not know whether I ought to say so, but the boys who have turned out best with us have come from Rugby, Charterhouse, and Christ's Hospital.

33,922. Am I right in thinking that most of the highly-paid posts in your head office are held by people with technical qualifications?—Yes, the whole of them in fact. It requires a very long training.

33,923. What I meant was, are most of the more highly-paid posts posts which require actuarial knowledge?—That is limited to what is called the Life Department. The actuary, of course, is a well-paid official, and the assistant actuary and the actuarial clerks also are well paid.

33,924. Are people like the heads of departments appointed from the general body of clerks?—Yes.

33,925. What would be the means of their selection for these higher posts?—The directors have to depend on my report with regard to this.

33,926. It would be on your report?—Yes.

33,927. And you would have reports on their work from subordinates?—Yes; and I make a point, which is very useful, of bringing the heads of departments as much as possible before the directors. I make some excuse to bring them into the Board room so that the directors may see them. I explained to them the object of it, and I have found that to be very useful.

33,928. (*Sir Kenneth Muir-Mackenzie.*) Do you require to have lawyers amongst your staff?—We have a barrister on our staff, but most of our legal work is done outside by our solicitors.

33,929. (*Mr. Shipley.*) I am not quite sure that I know how big your central office is. How many clerks have you?—About 300.

33,930. What are the hours?—10 a.m. to 4 p.m., but that means really, 10 a.m. to 5 p.m.

33,931. They have an hour off for lunch?—No, half an hour.

33,932. Could you tell me whether the boys who enter at the lower limit of age, 17, or the boys who enter at 21, as a class, get on better?—I think those who come in at 18 or 19; 21 is rather late.

33,933. Those about the middle of that range of age do better than those who come in later?—I think they do. Those who come in later, perhaps, have had something else in view, and are disappointed or something of that kind.

33,934. You are the only witness we have had who has been able to tell us anything about the way in which Government offices are conducted, and you think favourably of them. You do not think there are too many letters written?—I can form no opinion with regard to that.

33,935. You have a good many offices abroad or in the Colonies?—Yes.

33,936. Could you at all compare the conduct of public business in this country with that in either a foreign country or a colony?—No. I only speak of insurance, and I think that the insurance business of this country is better conducted than that of any other country in the world. It was my business some

11 April 1913.]

Mr. ROBERT LEWIS.

[Continued.]

two or three years ago to go to Germany to examine the systems there, and they are not to be compared with ours.

33,937. You could not compare one of the public offices here with a public office in Germany?—No, I have no experience of it at all; but I think that the English clerk is the best clerk in the world, and our system in England is very superior to that in Germany.

33,938. (*Sir Kenneth Muir-Mackenzie.*) You mean the people who do the work in institutions like insurance offices, banks and so forth?—Yes, the work is better done, more methodically done, and more intelligently.

33,939. (*Mr. Shipley.*) Could you compare it with the United States?—Yes, we are in advance of the United States in that respect.

33,940. They do not think so?—In fire and marine insurance, I think, they will admit it, if not in life assurance. In fire and marine insurance we are very superior.

33,941. (*Sir Kenneth Muir-Mackenzie.*) In the way the men work in the office?—Yes.

33,942. (*Mr. Shipley.*) And in the methods?—Yes, and in the methods. Women do a good deal of the office work in America.

33,943. (*Sir Kenneth Muir-Mackenzie.*) Have you actually got a branch office in America?—No, but I know the American business. I have examined it, and I know a great deal about it. We have simply correspondents there. We do not do fire insurance business in America.

(*Chairman.*) We are greatly obliged to you Mr. Lewis for the information you have given us.

## EIGHTY-THIRD DAY.

Thursday, 17th April 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman.*)

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Mr. ARTHUR CECIL TYRRELL BECK, M.P.

Mr. ARTHUR BOUTWOOD.

Mr. JOHN ROBERT OLYNES, M.P.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. RICHARD DURNING HOLT, M.P.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (*Secretary.*)

Mr. E. MIDDLETON called and examined.

33,944. (*Chairman.*) The well-known firm of John Brown and Company have deputed you to give evidence before the Commission?—Yes.

33,945. We are much obliged to them for having sent you to give us the benefit of your evidence, which will no doubt be very valuable?—Thank you.

33,946. What position in the Company do you hold?—I am Secretary of the Company.

33,947. Perhaps I might tell you what our object is in asking you to come here to-day. We want to contrast the method of recruiting the staffs of great industrial enterprises, such as yours, with the methods which prevail in recruiting the staffs of Government offices, and we want also to contrast the scales of salary which great industrial undertakings pay, with our own scales of salary. If I put any questions to you which you do not desire to answer for any reasons, please be good enough to tell me so, because I do not intend to press any questions which you may not desire to answer?—Thank you.

33,948. In the first place, would you say how you recruit your staff; do you get them in as boys, or do you take them when they are more advanced in years?—Generally as boys, from 15 to 16 years of age.

33,949. I am only talking of the clerical staff?—Yes, only the clerical staff.

33,950. Do you fix the age with any regard to the ordinary school education throughout the country? We have been told that the school education throughout the country consists of the elementary or primary school, and then the secondary school, and that the primary school education generally closes at about 14 or 15 years of age?—That is so.

33,951. Do you fix your age of recruitment with any regard to the termination of the primary school course?—In the primary schools they have what they term their standards: there is the seventh standard, and after that they have what they call the ex-seventh standard, and then the eighth standard. A boy who has been in the

seventh, or ex-seventh, or eighth standard, would be equal to a boy in a secondary school in about the first or second form, and he would have sufficient proficiency in general knowledge, such as would be ordinarily required for a youth of that age, to qualify him to take on the first duties of his office career; that is to say, we should put him as an assistant to some senior clerk, it may be in the counting-house or the wages department, or in connection with the sales department. His first business would be to index the letter books.

33,952. Before we come to that I want to know for certain whether in fixing your age for recruitment you have regard to the primary school stage in the general education of the country?—Yes, that is so. We require certain attainments of education.

33,953. Are the boys whom you recruit nominated by any of your directors, or by any of your managers, or is it open to anybody to apply to you?—Generally it is entirely open; we have perhaps 5 per cent. of nominations from time to time. One of the managers or one of the directors may say, "I have a boy for whom I should like you to find a place; you keep him in mind when a vacancy occurs." Such a boy is put on the list.

33,954. Do you keep a waiting list?—Yes.

33,955. Do you make your appointments at any particular time in your office, or as vacancies occur?—Only as vacancies occur.

33,956. Do you allow vacancies to accumulate until you have, say, 10 or 20 vacancies?—No, we make an appointment as each vacancy comes.

33,957. And when a vacancy occurs, do you take the boy who is first on the roster?—A boy who is put on the list is generally sent for and is put through an elementary test course, such as he would be doing at school, just to satisfy ourselves that he is what he is said to be from the school report.

33,958. It is not a competitive test?—It is not competitive at all, except so far as this, that if we have

17 April 1913.]

Mr. E. MIDDLETON.

[Continued.]

three or four candidates just to fill one vacancy, then we naturally choose the best.

33,959. The examination, then, does assume a sort of competitive appearance?—To that extent.

33,960. Is it conducted by your own officials?—It is conducted by my assistant.

33,961. Is it conducted partially by means of written papers, or is it altogether an oral examination?—It is entirely a written examination, except that the boy is asked sundry questions on the paper, and also with respect to the work he has been doing at school.

33,962. At first when you send for a boy, do you send for him with the object of seeing what sort of boy he is, whether he is a clever and bright boy?—Yes. Of course, if the vacancy is such a one as requires the boy to attend on a director or to come in contact with the public and answer questions and to go on messages, then he must be a better-looking boy, a boy of better carriage than a boy whom we should put on work, who would never come to the front at all.

33,963. When you send for a boy, before his name is put on the list, do you exercise a discretion as to rejecting him?—Certainly.

33,964. But when once he is put on the list he has the way open to a competitive examination if there be more than one vacancy?—Yes.

33,965. And if there be only one vacancy and only one application, you would see whether he was fit to fill it?—Yes.

33,966. When he first comes into your service, when he would be about 15 or 16 years of age, what pay do you give him?—Six shillings a week.

33,967. You assume then that he is living with his parents?—Yes.

33,968. What happens if a boy comes from a distance?—We have at the present time about half-a-dozen boys who come from the surrounding district to the extent of say 10 miles; in that case we do not pay them any more; we pay them 6s., which will pay their railway fare, but we make no distinction between any boy in the town and a boy who comes from a distance.

33,969. It follows from that then that all your boys are taken from the town?—From the town of Sheffield or just in the neighbourhood.

33,970. How long does a boy remain on 6s. a week?—Only a very few months. Our time for advancing salaries is generally the 1st of January, and if a boy has been with us for six months at this time he is advanced 2s. and he will move up to 10s.; he gets 10s. at about the end of his seventeenth year of age, and from his seventeenth year up to being 20 he will rise by 2s. 6d., so that in his twentieth year, before he is 21, he gets 20s.

33,971. During that time he is employed on various kinds of work?—Yes.

33,972. Do you give him a round of employment to see the particular line he is best fitted for?—Generally, a boy will remain in the office he is first put into for about two years, and then at the end of that time if a vacancy occurs in any other office, which during that two years we think he is fitted for, we will move him from the lower office to the better.

33,973. By these offices you mean the various departments that you have mentioned in the paper with which you have furnished the Commission in paragraph 2?—Yes. That paragraph 2 is really an order of dignity, I might almost say. I think the first office mentioned is that of managing director.

33,974. Yes?—Then you get the works manager, which department really requires a boy to have an inclination to some technical knowledge. A boy who comes first from school may have learnt a little drawing, and he may take a fancy to machine drawing. If he takes a fancy to machine drawing at the evening classes, then we should possibly move that boy into the works manager's office.

33,975. Are the evening classes that you mention classes held in your works or outside?—Outside.

33,976. They are evening classes conducted by the education system of the country?—Yes.

33,977. Do you make it compulsory on a boy to attend those evening classes?—No, it is not compulsory; we expect him to attend; we ask whether he is attend-

ing, and then from time to time we ask the teacher for a report.

33,978. In the hierarchy of appointments, if I may so express it, you have first the managing director, then the works manager, then the secretary's department, then the cashier's department, then the sales department, the purchase department, the counting house, the wages office and the forwarding department?—Yes.

33,979. It is rather a feather in a boy's cap, I suppose, if he is put straight off on his entry into the managing director's department?—Yes.

33,980. Is there any emulation among your boys to get promoted from one department to another?—Yes, there is.

33,981. Is there any little advantage given in the better departments, in higher departments?—No, except that a boy in the secretary's office would be sent round to all the other departments from time to time, and he would get an acquaintance with its ways in passing from one department to another in that way.

33,982. We have the boy up to 20 years of age, at which he receives 20s. a week?—20s. when he is 20 years of age.

33,983. The highest pay that a clerk can receive, as I understand, is 30s. a week when he gets to the age of 22 to 23?—23 or 24, unless he happens to be a man of exceptional ability; if he has learnt shorthand, or something of a technical character, if he is a mathematical boy, then we can put him somewhere where we can use him, and then he will get an advance of 5s. a week, so that he may get 35s.

33,984. And then, after that, his promotion is by merit. After a man gets to 30s. a week, which he ought to attain at about the age of 22 or 23, his promotion depends on his own merit?—Yes.

33,985. What are the scales of pay, if you have any scales laid down, to which a boy can hope to attain above 30s. a week?—The majority of the clerks who have been with us, say 10 years, will have attained to 40s. a week.

33,986. Do they rise from 30s. to 40s. a week by any periodical increments?—Yes, by periodical increments, perhaps once in two years. Let me take a man, say, at 30s. a week, he will remain perhaps at 30s. a week for one year; he will then get 32s. 6d.

33,987. Between the 30s. grade and the 40s. grade, may a man count upon a periodical increment every two years?—Yes, but perhaps not at the same rate; he may jump from 30s. to 35s. If he has been found an active man at 30s. he may be moved into an office where we will give him 35s., or where we have put the rate of 35s.

33,988. Am I right in saying that although there is no scale laid down, if you find that a man is a clever man you do promote him?—Certainly.

33,989. And the degree of promotion and the amount of increased pay that he will get will depend upon your appreciation of his value?—Yes.

33,990. You have no fixed scale?—We have no fixed scale except that we think a man should be worth about 40s. a week at 35 years.

33,991. We are still talking of the same class of clerks. At 35 years of age, to what may he look forward with a reasonable certainty of reaching ultimately; when he reaches 40 years of age what salary ought he with care and assiduity to have attained?—To 50s. a week. Then he may become an assistant to a manager, and in that case rise to 150l. We have assistant managers in our office who are getting 250l. and even 300l. a year.

33,992. Must he be 40 years of age before he becomes an assistant, or may you make him an assistant at an earlier age?—We may pick him out very early; some of our best managers have been men promoted at just over 30 years of age.

33,993. Then he gets out of the scale of weekly wages and gets into a yearly salary?—Yes, monthly or quarterly.

33,994. And he may get up in that way to 300l. a year?—Yes.

33,995. But in your recollection of the service, may a man ever reach more than 300l. a year?—Yes, in this way: We may find him a very useful man, a man of

17 April 1913.]

Mr. E. MIDDLETON.

[Continued.]

good carriage, and we may make him one of our representatives. We have a large trade in which we employ representatives. At the present time we have large agencies and about a score of travellers passing through this country, Scotland, and Ireland, and also some parts of the Continent, nearly all of whom have passed through the office. These men began, many of them, as boys at 6s. a week, and have risen until, in one or two instances, we have paid them 1,000l. a year.

33,996. Can these men who are your Continental representatives speak foreign languages?—Yes.

33,997. They have acquired that in the course of their employment?—Yes.

33,998. In Sheffield are there schools teaching foreign languages?—There is the Berlitz school and there are also many private teachers. A man has pretty well to find his own tutor. If he should get into the sales department, where there is a fair amount of correspondence, he sees the letters there and begins by translating them. If he has had a smattering of French at school he finds a use for it, and if we find him easy in his translations we encourage him to go on with his French or German as the case may be. We have not so many foreign travellers as we have English travellers.

33,999. In the general administrative department of your firm do any of these boys ever reach the administrative grade with the control of a department?—Yes, the manager of our London office at the present time was one of our youths. He did not begin quite so low; he came to us when he was about 18, not 16, and he had had a little clerical experience before he came, and now because of his ability and industry he has got on rapidly. He is now a man of about 37, and he has been put in charge of the London office under one of the directors in London, and he has control of three or four others under him, some of these travellers, recruited from the usual staff.

34,000. We have been informed that the great commercial undertakings are gradually finding it to be to their advantage to employ men of higher education—honours men from Oxford and Cambridge and other universities. Have you ever found it to your advantage to do anything of the kind?—In the course of my connection with John Brown and Company we have had several men who have been university men, but they have not been an unqualified success; either they have not had the technical commercial training to understand the ordinary terms of accounts and business or they have been a little inattentive to business; they have not been sufficiently industrious to give their attention to the business to acquire its terms. A man will say, "This is a matter of detail," when it is the detail, of course, which is important.

34,001. How many of these men have you tried?—In the course of my connection with the company I should say half a dozen. We have one at the present time on trial; I should think he is a very able man, but he has only been with us a matter of about twelve months.

34,002. From what universities do you take them?—This man came from Cambridge. He may turn out a good man yet.

34,003. Do these men to whom you have referred come from the older universities or have you had any from the newer universities?—We have had one from the Sheffield University, two from Cambridge, and some who have been in London colleges and then graduated at London University. I am speaking now of recent times, within the last five or ten years.

34,004. In what stage of your business would you employ them? Take any man—I do not want to know his name—but if you can think of a particular man in your own mind whom you have employed, in what stage of the work did you employ him?—We should put him as additional assistant to the manager of the department.

34,005. That would give him sufficiently wide and important work to do, would it not?—It would, certainly; he would then have deputed control. In the case of the manager himself being there he controls everything, but if he is not there his deputy takes on the work. But in this one case may I just explain that the three or four clerks in that department would be answerable to him

for the work that they do. If he had been brought up in that office he would have gone through all the gradations of the clerks, and would have known down to the bottom what each clerk did and whether it had been done properly; he would wait until the end of the day and he would not wish to make short days. The great difficulty we find with these university men is that they want to make short days, to come at 10 and leave at 4, when business hours are from 9 in the morning till half-past 5, and when in the work of a big industrial firm the last half-hour is perhaps the most important part of the day.

34,006. What did you say were your hours?—From 9 to 5.30, with an interval, of course, in the daytime for luncheon.

34,007. Do you attribute the want of success of these university men to the fact that they have not been trained in the office from the very lowest grade up to the top?—Or that they have not a sufficient bent of mind to stop their time.

34,008. (*Miss Haldane.*) May I ask whether those men were procured through the Appointments Board of the university?—Only in the last instance. The man we have at the present time we have only had in our employ about ten months, and I think he will turn out better than the others, because he is keeping better time, except that he has been unfortunate in having ill-health for a good portion of the time, due to the confinement in the office to some extent. Our rooms are not quite so large as this room, but we have to take the rooms as they are. And the wear and tear, I think, perhaps tells upon a man somewhat.

34,009. (*Chairman.*) Is there any tendency on the part of your establishment to be dissatisfied with the wages that you pay them?—No; we pay on a scale which is fairly general in the district. The heads of all the large firms more or less compare the wages which are given to their staffs, and hence we find very little change, and there are very few changes of clerks from one to another, except it may be in the case of a junior who has an opportunity of becoming a senior somewhere else. I am very proud and pleased to say that we have been a school in many instances; many of our men have taken very good positions elsewhere.

34,010. So that we may regard your scale of pay as that which is prevalent in the Sheffield district?—That is so.

34,011. Do you employ any women?—Not any at Sheffield; only on work in our shipyard.

34,012. So that, unless you wish to express a personal opinion, you probably are not prepared from your experience with John Brown and Company to give us an opinion regarding the employment of women?—No; only in connection with our agencies, and in that connection, where women can be limited to typewriting and looking over correspondence and keeping it in order, the women have been fairly successful. We have in our London office four women employed at the present time, and one of them has been there a long time.

34,013. You have not employed women at all in purely clerical work, in account keeping?—No.

34,014. Your experience of women is in the typist class?—The typist and shorthand class. I do know, of course, by coming in contact with other staffs that women are employed in Sheffield in some of the smaller industries, but there they are mostly kept to themselves in rooms by themselves, and they have certain assigned work.

34,015. You are not aware of the employment of women generally side by side with men on ordinary clerical work?—No.

34,016. (*Mr. Beck.*) Have you any objection to telling us the total number that you employ in your clerical staff?—The number employed in our clerical staff under the name of John Brown and Company Limited is from 350 to 400.

34,017. I do not want to worry you if you have never thought about it, but could you tell me how many of those are employed in responsible positions, who would really have to take the responsibility, I mean, of coming to some more or less important decisions, and not merely carrying out routine work to

17 April 1913.]

Mr. E. MIDDLETON.

[Continued.]

order?—Out of the number of 350 we have more than 50 receiving 150*l.* a year; that would be about one in seven.

34,018. Those would be more or less responsible officials?—Yes; and several of those, I should say about 10 of them, are receiving nearly 300*l.* a year.

34,019. I think probably that your evidence amounts to this, that almost everyone in your clerical staff enters your employment as a boy?—That is so.

34,020. And works up to the top?—Yes. May I make a remark with respect to the employment of boys. The 350 in our employment at the present time are not the total number of persons who have been employed. If a boy should be engaged as a clerk in the first instance in the office, he may express a fancy after he has been with us twelve months that he would like to go into the works and become an engineer or a draughtsman. If we find that he has an aptitude for anything of that sort we encourage him, so that our clerical staff will oftentimes be the means of recruiting the drawing office, and recruiting some portion of the works staff or the laboratory staff, or the engineering staff, so that the total clerical staff at any time only represents what is employed at the time in the clerical work.

34,021. As regards that, we may say, I suppose, that you do not employ boys and scrap them when they are wanting a higher wage?—Very rarely. It may happen that a boy in the first six months shows an indifference to his work, then we speak to him.

34,022. If you have no objection to my asking the question, did you yourself enter the firm as a boy?—Yes; I entered the employment of John Brown and Company as a youth of 20 in the secretary's office, and from that time until now, 44 years, I have had experience in nearly all the branches, and I have been secretary 12 years. Would it be of interest to the Commission generally if I were to give an outline of how a big firm like ours would manage with regard to its correspondence?

34,023. Yes; it would be a great help?—The secretary is the one who receives the correspondence. Personally, I am at the office every morning at 8 o'clock, and the letter bag is brought to me at 8 o'clock. It contains generally 400 to 500 letters, communications of some sort. I have an assistant there, and two or three boys very likely at hand also, to open the letters. We sit down at a table, about six of us; my chief assistant and second assistant, and two or three boys, to open the letters. Every letter comes before me, and I divide these letters up according to the department which has to deal with them; in the first place, for the managing director. I have the privilege of opening every communication which comes to the firm for the chairman, the managing director, and so on. If the manager or head of the department is not there to open them himself, and it occurs to me that a letter from the outside (as I know pretty well all the correspondence that we have) ought to be attended to, and he is not likely to be there for the next hour or two, I open it. These letters are separated first into the managing director's, then the secretary's, the cashier's, the sales department, the purchase department, the works manager, and so on. The secretary takes charge, besides his own, of the accountant's correspondence and the wages correspondence; the managing director takes charge of his own correspondence, the sales department takes charge of its own correspondence, and the forwarding department takes charge of its own correspondence. The purchase department deals with purchases, and if an article is wanted in the works for any manufacturing purpose a requisition is sent up from the works to the purchase department, and inquiry is sent out for the article, and so forth. The reply to that communication comes to the purchase department, and the purchase department deals with the reply. So that the order of the day begins with the secretary opening the letters, separating the letters, and handing them round to the separate departments, and the business of the day goes on.

34,024. (Chairman.) When you open the letters and before you distribute them, do you enter them in a register?—Every one of these letters is entered in a register in the department into which it goes.

34,025. There is no general register of receipts?—No.

34,026. That is departmental?—Yes.

34,027. So that if any letter by any means gets lost between you and the department there is no trace of the letter?—There is an order that every letter that gets astray must come back to the secretary.

34,028. That is not what I mean. If a letter reaches you, you open it and put it into the basket, say, for the sales department?—Yes.

34,029. Do you, on opening that letter, stamp it?—No.

34,030. Then it is conceivable, I do not say it is likely to happen, that in going from your office to the sales department, that letter might drop out and be lost?—Except that a representative of the sales department must himself receive that letter from me.

34,031. But through mere accident if a letter disappears before it gets to the sales department, there is no check?—No.

34,032. But that you say is an extremely rare thing?—Yes.

34,033. (Mr. Boutwood.) Before you leave that point will you tell me this, are the letters registered in the different departments before they are dealt with?—Yes.

34,034. (Mr. Beck.) You told us that your firm had not had a very satisfactory experience in the employment of university men?—Not very.

34,035. Apart from these men, do you find any difficulty in filling responsible posts from your own ranks, so to speak?—No.

34,036. You very seldom bring a man in from outside?—Very seldom at the present time; of the staff at Sheffield about half a dozen are outside men. There is one assistant to the managing director at the present time, but he is a technical man rather than a member of the clerical staff. My assistant was brought in when he was about 22, just because there happened not to be a likely man in the office at the time and he was the most likely man, a man we knew, because he came from one of our agencies.

34,037. We have had some evidence before us to the effect that some firms have found that clerks who have entered as boys get so cramped by routine that they are no use for responsible positions. You have not found that?—Not every boy is eligible to go forward to the highest position.

34,038. No, but you can out of your numbers find plenty of good men who will take the responsibility and discharge it satisfactorily?—Yes, for one thing it may be due perhaps to our selection. We do not quite depend on the order of registering the applications. When a boy's application is first made and is put on the register we send for him as I have already said, and we make sundry notes after we have seen him as to whether he is fit for one department or another.

34,039. (Mr. Graham Wallas.) Would you mind going on for a moment with the interesting story that you gave us of the history of your letters. I am assuming that there is a letter for the head of one of your departments. Is it always first put before the head of the department, or does it reach the head of the department with proposals from some one underneath?—It first reaches the head of the department and he passes it then forward for information.

34,040. Does he normally decide there and then what is to be done, or does he forward it for report down below?—Let me take the sales department as I did before. If we have an inquiry to supply a certain class of steel, the sales manager knows what department that letter should be sent to; his clerk who has charge of a certain section of sales has charge of that letter and he goes into the department, if there is anything to inquire he personally inquires of the technical manager and makes notes on the letter for reply.

34,041. So that the head of the department does nothing except merely indicate to whom the letter should go until one of his subordinates has looked up all the facts and prepared a minute on the facts?—Yes.

34,042. The minute very often containing the suggested action?—Yes.

17 April 1913.]

Mr. E. MIDDLETON.

[Continued.]

34,043. Then and then only does the head of the department come to a decision?—That is so.

34,044. Some letters, I suppose, on matters of detail never come back to him?—Every letter comes back to the head of the department; the head of the department, if he is there, signs every reply and deals with every reply, or, in case of his absence his deputy does so.

34,045. Some letters come back merely as a heap of documents for his signature?—Yes.

34,046. You take in boys between 15 and 16, and you indicate to us that a boy of 16 may be an ex-seventh standard boy just leaving the elementary school or he may have been a year or two in a secondary school?—Yes.

34,047. Do you show any preference as between those two types of boys?—We show a preference rather to the second type of boy. A secondary school boy may have an opportunity of having a little technical education as well. At an elementary school a boy has no chemistry; in a secondary school he may have chemistry; in an elementary school he rarely has an opportunity of learning French; in the secondary school he may just get a smattering—he may just get the inclination to know more.

34,048. Nowadays you normally take a boy who has been a year or two in a secondary school?—Yes.

34,049. And do you then practically indicate to him that it is his duty to attend an evening school?—Yes.

34,050. Would that be one of the evening schools as a rule provided by the Sheffield Education Committee?—Yes.

34,051. And you get regular reports from his teachers?—Yes.

34,052. May I ask do you get annual reports?—Sessional reports generally. The evening school commences generally in September and ends in December for the first part of the session, and ends in April for the remaining part of the session, and we get a report generally at the end of December and the end of April.

34,053. And do you keep a sort of *dossier*, a record for each of these young men into which these reports are inserted?—In rather a rough way. The assistant in a department has a list of all his men—all his boys, rather, and he would just make notes for when the time comes for raising the rates of salary. I may say that before any salary is advanced we ask the head of the department, or, failing him, his next man, how a boy is going on, what he is doing and if he is attending an evening school.

34,054. A boy who is attending an evening school and takes his work seriously is generally preparing for some examination?—Yes.

34,055. Do you indicate any preference as to the kind of examination that you want him to go in for, and the kind of qualification you want him to acquire?—Yes.

34,056. What special qualifications would you indicate to him?—If he were in the sales department we should ask him to learn a language and a little chemistry or machine drawing.

34,057. If he were in the secretary's department?—If he were in the secretary's department we would tell him to pay attention to book-keeping and just the commercial side, and particularly shorthand, which we are insisting upon everywhere.

34,058. They all have to take shorthand?—Yes.

34,059. Would you ask a boy in the secretary's department to take commercial geography?—Yes.

34,060. And generally the larger commercial subjects?—Yes.

34,061. Have you any relation in that respect with the evening work done by the University of Sheffield?—No, not directly.

34,062. You confine yourselves to the ordinary evening schools in the town?—Yes, the ordinary evening schools and the technical school.

34,063. You have never had any official in your firm who has gone through any commercial course at the university?—Not any.

34,064. Do you find that you have to pay two scales of wages for the same work, one in London and another in Sheffield?—It so happens that in London we have to

have two clerks. A London clerk is doing slightly different work, and therefore he gets slightly different pay. Let me put it in this way: A London office will correspond to our sales department. The clerk would look after the correspondence; would have learnt shorthand, and he would also probably have had a little training in our sales department to begin with, so that before he comes to London he will have got a rather higher rank.

34,065. Speaking from your general knowledge of commercial organisations would you say that wages for clerical work are higher in London than in a town like Sheffield?—No, I should say they are just about the same.

34,066. You said that a boy in the secretary's department is sent round to other departments; do you mean that he is sent round with correspondence, and making inquiries, and so on, or do you mean that he is sent to do a spell of work in each of your other departments?—He is sent round to make inquiries, and he has to be a rather sharper youth generally, or else we should clear him out.

34,067. You never put a boy, merely for the sake of employing him, to do a spell of work in some other department in order that he may become familiar with it?—Not expressly. Now and again we have an exceptional case. If we see that a boy has an aptitude which might develop him to be a traveller, let me say, he might come to me in the first place, and if he seems a bright boy and I send him round, that boy should know something about our manufactures, and then we might pass him into the wages department, where he would come in contact with workmen and go down and see the operations; then we might pass him into the counting-house and on to the sales department to finish up.

34,068. You train him up in that way?—Yes.

34,069. You said that in about half a dozen instances you had university men in after taking a degree?—Yes.

34,070. What would be the initial salary of those men?—The starting salary given would be about 100*l.* a year, and they have gone to 250*l.* or 300*l.* if we have found them able men; after a few months we can form a good opinion of them. In several instances they stayed with us two or three years, and one stayed about five years; that is rather a long time ago.

34,071. Did he stay with you for five years at 100*l.* a year?—He went up to about 300*l.*, from 250*l.* to 300*l.*

34,072. Would you mind telling me, just roughly, with regard to your technical staff; I suppose it is recruited by men who have had a more extensive education than a boy will have had who entered at 15 or 16?—Our technical staff is not recruited in that way; it is mostly recruited from the laboratory. We should take a youth into the laboratory at about 16, and he would be encouraged to go to a technical school again from 16 to 18—nearer 18 perhaps than 16. He would be encouraged to go to a technical school, and if we intended him to be in the metallurgical department, not in the engineering department, he would remain in the laboratory until perhaps he was 24. Then a vacancy might occur in some of the metallurgical departments for an assistant manager, or for a third assistant manager, and he would go there to assist as a workman; he would have to take off his coat and come at six o'clock in the morning, and have to take up his duties and generally to be put to manual work.

34,073. What wages would he be likely to get in the laboratory?—35*s.*; he will have to come on the rate per week until he becomes an assistant, and, of course, he will have an opportunity of rising quickly.

34,074. In the technical department then you have a sort of apprenticeship?—Yes.

34,075. The laboratory is a sort of apprenticeship?—Yes.

34,076. In which a great deal of his time is really spent in learning rather than in doing?—Not quite in learning; he will have, under the superintendence of the chief of the laboratory, to do certain useful work—the analysis of steel to wit. Supposing we take a piece of steel or iron ore: The steel will analyse into certain

17 April 1913.]

Mr. E. MIDDLETON.

[Continued.]

chemical constituents, and one of the first operations in the metallurgical laboratory is what we call doing carbon tests, that is the simplest of all analyses. He would be kept at that for some time until he has got perfect accuracy as to the percentage of carbon contained in a piece of steel. In the case of iron ore there are no less than 10 or 12 elements which will have to be determined, and it is according to the presence of this or that element that the value of pig iron will be determined commercially.

34,077. But in the laboratory he will not only be employed, but deliberately trained?—Yes.

34,078. Are you able in any sense to make use either of the teaching or of the work done in the University of Sheffield?—Nearly every one of our assistants in the chemical laboratory is at the technical school in the evening.

34,079. Is that technical school a branch of the university?—The technical school is the technical branch of Sheffield University.

34,080. Do they generally incidentally take a degree?—Not many of them. I do not think that we have had more than two who have gone forward to the B.Sc.

34,081. But he works under the university professors?—In Sheffield the technical school was in existence before the university came into existence, and when the university came into existence then it took the technical school as the technical branch.

34,082. (*Mr. Philip Snowden.*) Would you mind explaining a little more fully the distinction in the kind of work done between the one-seventh of your clerks who have some responsibility and the six-sevenths who are engaged on more routine work?—If I may take the sales department, the sales department has its own head who will be responsible for carrying out all the orders which he receives for goods. His assistant will be nearly equal to him in ability, if not quite in experience, and his business will be to superintend the subordinate staff. The sale of an article depends on its fitness for its purpose, and the head of the department, in the course of his training, will know the exact fitness which the article offers, and his assistant in the same way. Let me take a piece of steel for instance. A piece of steel may be hard or soft, of high tensile or breaking strain, and various other things. All these have to be learned, either by experience over a long period, or by acquaintance with the technical staff, and in the case of replying to correspondence it is necessary that the assistant should know and have a mastery of this information, and should know whether it has been accurately stated if he himself does not dictate the letter.

34,083. Does not that necessitate the possession of a good deal of technical knowledge?—Of technical knowledge of rather a general character than of special character. The gift of the assistant or sales manager is rather more literary than it is scientific or technical. Very many times, indeed generally, you will find a technical man unable to express himself in writing; he therefore will be far better able to express himself verbally to the sales man than he could express in writing, as to what is required or should be done, and the sales man being more literary carries it out with the correspondent.

34,084. Is your present head of the sales department a man who entered as a clerk?—The present head of the sales department entered when he was about 22 years of age. He had had a fair training before he came to John Brown and Company, and he has been with us now 35 years.

34,085. (*Chairman.*) What sort of training had he had before?—It had been a commercial training, but he was a man (and he generally is) in the sales department of a fair all-round education in this instance—in this instance he is a linguist, a man who knows four or more languages, and a man who is very widely read.

34,086. (*Mr. Philip Snowden.*) What will be the number of the clerical staff in the sales department?—Including the forwarding department, about 25.

34,087. What proportion of that 25 would you regard as having responsibility, and being called upon to make decisions?—About four.

34,088. And all those four are men who have been, during the whole course of their service with the firm, engaged in the clerical branches of your work?—Yes.

34,089. Do you have any interchange between what I might call the mechanical side of your business and the clerical side?—Very rarely.

34,090. Apart from the instances you gave of boys who would like to go to one department or another?—Very rarely.

34,091. Do you look upon the period between the time of entrance of a boy at 15 or 16 and his reaching the age of 21 as being something in the nature of an apprenticeship for the work he has to do afterwards?—Yes.

34,092. How do the wages which you give these youths of between 15 and 16 compare with wages paid to youths in the engineering department?—They are nearly the same. In the engineering business we have ordinary engineering apprentices who get 14s. a week when they are 20. For a youth of ability in the engineering section of our business we have a scale of premiums. If a youth attends a night school and does fairly well in the examinations we give him an advance. Supposing he comes to us at 16 as an apprentice to engineering he will only get 8s., then he will get 10s., and after that he rises at the rate of 1s. or 2s. per annum, so that he only gets 14s. at 20 years of age. If he has shown himself apt in examination he may skip a year, and instead of getting 2s. he may get 4s., so that he may get 14s. when he is 18 instead of when he is 20.

34,093. Are you quite satisfied that your method of recruiting your clerical staff generally from boys who have no higher education than they have acquired by an elementary school course or one or two years in a secondary school gives you men who are quite capable of fulfilling satisfactorily the duties that you require?—Let me guard myself in replying to that. The natural ability of a boy has to be taken into consideration. This is a personal matter. In the case of myself I was landed in the secretary's office having to do with the correspondence that came in in the morning. We have correspondents in many countries, say in half a dozen languages. It occurred to me that for the business of a secretary he should be able to read every language that comes before him, so that the secretary should be able to have a first hand general idea of every matter that comes before him, and the secretary should also know something of law as to his own profession. Personally, therefore I qualified myself, as I encourage my assistants to do, to meet the highest call on the office in which they are. I therefore personally can say before the Commission that I am able to read in every language that comes before me. I should think it a degradation of the dignity of the office if I was unable to do so.

34,094. Therefore if boys come to you with a better educational grounding they would be better qualified to emulate your example and all became secretaries like you?—If they qualified to become secretaries even if there were not the opportunity.

34,095. Do you engage clerks specially for the work of foreign correspondence?—For our foreign correspondence at the present time we have stipulated for the qualification.

34,096. You have mentioned once or twice, and indeed your own case is an illustration, that you do take in men of 20 years of age?—Yes.

34,097. Do you do that to any very great extent?—Not as a rule but only as an exception. At the present time to wit, our staff in age is the youngest that there has been for the last ten years. During the good trade which has prevailed during the last two years new firms have been starting up, and some of our senior clerks have seen it to their advantage to change. Men who have been with us earning 40s. to 45s. a week for the last 10 years, say, have got into, I will not say a rut, but into a position where their salary could not be advanced, and there have not been vacancies to put them into elsewhere, have gone outside and are getting, some of them, 150l. I know of one man who is getting 250l. a year who began only a few years ago getting 40s. a week.

34,098. I take it that the wage to which a clerk may look forward as his maximum, unless he rises to the position of an assistant, is 40s.?—40s.

17 April 1913.]

MR. E. MIDDLETON.

[Continued.]

34,099. You might regard that as the maximum salary of the ordinary clerk?—Yes.

34,100. He reaches it, you say, at about 35 years of age?—Yes.

34,101. And that after about 20 years' service?—Yes.

34,102. I gather that, from your experience, you have not a very high opinion of university men in business, and arising out of that and following upon the remark that you made I want to ask you, is it your view that it is better to train a youth in what we might call the routine of a business of a commercial kind, and that by that method he becomes more useful than by bringing in a man from outside and at once putting him into a position of more or less responsibility?—Certainly.

34,103. (*Mr. Holt.*) I take it that the persons who are ultimately responsible for the conduct of your company's affairs are the directors?—Certainly.

34,104. Where do you get them from?—The first directors would be the promoters of the company, and when a vacancy occurred there would be a consultation among the directors as to a likely shareholder or other known man having the qualifications of the director who occupied the seat vacated, or having some special knowledge which the Board at the time required.

34,105. I take it that it has practically never happened that any of the ordinary staff of the company have been put into the position of a director?—That is just the remark I expected and which I am going to meet. As a youth of 20 I entered the service and I had an assistant given to me, a very able man. He was my predecessor as secretary, and died as a director of the company.

34,106. That is one instance?—That is one instance of a clerk having gone forward to the Board.

34,107. Then I take it that we may understand that when you are recruiting the clerical staff you have no intention of recruiting persons who will take a position of the highest responsibility?—My encouragement to every youth who enters the service of John Brown and Company is that there is no position he cannot attain to.

34,108. But it is not a rule that the position of ultimate responsibility should be attained to by persons recruited for the clerical staff?—It is not the rule; but the actual position of a manager is nearly equal to that of a director. The directors, as a Board, only meet occasionally, say fortnightly; but the management of the company is conducted by the management.

34,109. Is there a managing director?—Yes.

34,110. Who is always there?—He is always there. Then there is an assistant managing director possibly, in which case we have two directors. We have indeed four active directors.

34,111. But none of them have been promoted from the clerical staff?—None of them. Two have been promoted from the technical staff. In a huge concern like John Brown and Company we have a Board which is appointed by the shareholders, and we have power by the Articles of Association to appoint what are termed local directors, that is, directors under control of the Board but taking rank as directors outside. Of those we have four at the present time.

34,112. With regard to your selection of experts, do you largely get them from other firms of similar character as fully qualified men of the highest class?—The majority at the present time have been trained by ourselves.

34,113. I do not know whether you know very much about the shipbuilding branch of the company?—A fair amount.

34,114. I think I am right in saying that amongst the shipbuilding firms there has been a good deal of seducing one another's experts?—From time to time. Our director, Mr. Bell, who was lately appointed a director, is resident director at our shipyard. He came to us, with a good technical education, as an engineer, say 20 years ago. He came as a draughtsman, passed through the office as a draughtsman into the shop, not quite as foreman, but as assistant, then manager, until he was promoted a local director, and now he is a full-fledged director on the Board.

34,115. That is to say, that on the technical side he has really risen from the bottom?—Yes. Then we have our designer; he came to us when he was a man of about 24, and is now a director. And we have other directors who have come in in much the same way.

34,116. That is really quite usual on the technical side?—Yes.

34,117. Those persons who have not risen from the bottom with particular firms have generally started at the bottom with competitive firms?—Yes.

34,118. You were telling us of your system of distributing the letters among the different branches, but is not that as far as you know almost universal in commercial firms?—Yes.

34,119. That is to say that letters are generally dealt with by men of the highest responsibility?—Yes.

34,120. If you get letters of exceptional importance, would you distribute those in the usual routine way, or would you keep them in your own possession?—I should retain them in my own possession.

34,121. Even though they might refer to another department you would retain them in your own possession and go and have a special conversation with the people concerned?—Yes, with the heads of departments.

34,122. As a matter of curiosity may I ask do you have very much correspondence in foreign languages?—Not so much now. English is more widely understood than it was 50 years ago.

34,123. You find that most of your foreign correspondents write to you in English?—Yes, most of them.

34,124. Except, perhaps, the Spanish?—Except, perhaps, the Spanish.

34,125. Have you in the last 20 or 30 years taken to recruiting your boys at a greater age than was formerly the case?—Yes, 21 years ago boys were introduced at 14 or 15 years of age. We find it better to let them remain a year longer at school.

34,126. And that is also a general experience, is it not?—Yes.

34,127. (*Mr. Boutwood.*) With reference to your system of dealing with letters I gather that in your firm the letters go from the top downwards, whereas, as far as I know, in a Government office the usual method is that the letters come from below up to the top, and one result of that is that letters very often do not turn up until after luncheon. Apart from that question of delay do you see any advantages in your method?—For control, yes.

34,128. You think it gives you better control?—Yes; it would be quite possible for the correspondence to be taking place in the lower reaches, so to speak, of the administration, which might not come to the upper reaches until something serious happened.

34,129. And if anything requires prompt attention you have an opportunity of getting it done?—You have an opportunity of urging it on.

34,130. When a letter gets down to its department how is the answer prepared; is it finally settled by some one man, or does it have to go through two or three hands for approval, and so forth?—It would in a general way be finally settled by one man, the man to whom the inquiry was first given.

34,131. He would write a letter and it would come before you, or someone on your behalf, for signature?—Yes.

34,132. Have you anything in the nature of a period of probation for your clerks?—We should look upon the whole time from 16 to 20 as being a period of probation.

34,133. (*Chairman.*) Did I rightly understand you to say that clerks when they are allocated to one of your departments are also given an opportunity of seeing what goes on in all the other departments?—Our business is such that an intelligent clerk has such an opportunity.

34,134. That is to say, that their work is really not monotonous?—No, it is not monotonous.

34,135. But there is a good deal to stimulate their intellectual activity?—That is so.

34,136. (*Sir Kenneth Muir-Mackenzie.*) You spoke about having a certain number of men from the universities; might I ask how they were selected?—They were nominees, you might say, either of the directors, or of the

17 April 1913.]

Mr. E. MIDDLETON.

[Continued.]

higher managers, having from their social position got into contact with the men. It might be that some local manufacturer, or a manufacturer at a distance, might say, "I have a son who has been to the university; I should like to bring him into business; I cannot take him into my own business. Will you give him a chance?"—and a chance has been given.

34,137. So that you have not had experience of anything like picking out men from the universities as being supposed to be the flower of the universities?—No, I have had no experience of that nature.

34,138. The universities have not had their chance in that way of showing what they can furnish?—No. One of our directors is a member of the Cambridge Appointments Board, and it is owing to his being a member of that Board that we have the gentleman with us at the present time of whom I have spoken.

34,139. That is the last one?—Yes, and he seems to be promising.

34,140. But in no part of your system is there anything which can be compared with the competitive system in the public service?—No.

34,141. Have you any opinion upon that point as to whether it is a desirable way of recruiting a great establishment either in the higher ranks or in the lower ranks?—I should say that it is not the way to get the best men for commercial service at all events. We have several times had youths who have done excellent papers, and when we have tried them they have not been quite the success that an inferior one has been.

34,142. If you were setting up in the first instance and staffing a great concern like the one you have just now, would you try by means of competition to get men to fill it, or would you prefer to select for yourselves whom you thought likely to do your work?—I should prefer to select them.

34,143. May I ask whether there is any regular system of pension in your firm?—No, we have no regular system of pension. The matter has been brought before me, and I have agitated the question several times. But the kindness of the firm is known to the extent that never anyone who has done good service to the firm has been allowed in case of having to retire either from sickness or from long service to be left destitute.

34,144. But no man could say that he had a claim to a pension, or that he had been told that he would have the expectation of a pension at the end of his time?—No.

34,145. What could a man who came into your service say as to what expectation had been held out to him when he came in. Could a man say anything of that kind?—There are no expectations held out.

34,146. He must come in and make his way?—Yes.

34,147. You must have, I suppose, in your establishment, as there are in other establishments, drones, men who, if I may put it so, just get through their business?—That is so; but every man in my experience has pretty well some special qualification. A man may be slow in doing some kind of work where perhaps his slowness is due to his taking excessive pains. Such a man I should personally allocate to do certain work where it would require great care. I have two men sitting side by side in my office at the present time in the share transfer office. One of them, about 40 years of age, has done the same class of work for years, and has made hardly one solitary mistake.

34,148. (Chairman.) That requires great patience?—Yes, great patience. The man next to him could do twice the work in the time, and possibly would make one hundred times the mistakes; therefore, one would never think of putting him on that particular work. The first man gets 40s. a week now, and I would very willingly pay him 50s. for the same class of work that he was doing for a long time at 30s., if he could work quicker; because he has saved a great deal of annoyance and a great deal of anxiety in the way he has done his work.

34,149. (Sir Kenneth Muir-Mackenzie.) Are there a certain number of men as to whom you would say they never will be worth any more money?—Yes.

34,150. There they remain at that salary?—Yes.

34,151. If a man came to you and said, "I have been 20 years on this pay," should you merely for that reason add to his pay?—No, I should say: "Well, you are receiving as much as your work is worth; but, if there is an opportunity of putting you into a position where we can afford to pay you more money at the market value, you shall have the opportunity," and, of course, one has to keep one's word, if such an opportunity does come about. Of course, he will think that every opportunity is his opportunity; but that is not always the case.

34,152. You have absolute power to get rid of any men if they are not required?—Yes, on the clerical establishment.

34,153. Have you often had to do so?—Very rarely.

34,154. Do you think that the fact that you have the power has anything to do with that result?—It may have. Of course, the power to appoint and the power to dismiss is a great power.

34,155. Have you any knowledge or experience of public offices?—Not any, only in as far as our correspondence has happened to be with the War Office, the Admiralty, or various offices, and our relations with those offices have always been satisfactory.

34,156. So far as your experience goes, they have done their business adequately?—Yes, in a businesslike manner.

34,157. And as you would wish?—Yes. I think I mentioned in my letter to the Commission something about individuality. That means the special forms that they use and the way in which they like information put before them.

34,158. (Mr. Shipley.) How do our Government departments compare with the great foreign departments with which you have to deal?—Very well. We have, if anything, less difficulty with our own Government than with foreign Governments. With foreign Governments there is, if anything, a little more routine; in the case of foreign letters, to wit, coming from an important department, they would rarely come without two signatures, and that lends itself a little to delay. If the officer of each of these departments has not been there, there has been a post lost perhaps. I should say that our communications with our own Home Government are better than those with foreign Governments for facility.

34,159. They are more prompt?—Yes.

34,160. Are they more prompt than other big business concerns?—No, not more prompt; large business concerns are very prompt.

34,161. (Chairman.) Would you say that the Government is less prompt than big business concerns?—Only occasionally; it may take sometimes two posts or three posts to get a reply from a Government department. In the case of a commercial concern they certainly would reply with very little delay.

34,162. (Mr. Shipley.) Do you find, when you are making something for the Government and they send down somebody to inspect it and pass it, that they send down men who thoroughly understand the thing?—That is rather in the technical department. Speaking from my general knowledge, I should say that the Government inspector is a very good man.

34,163. I gather that your experience of university men is not very large; you have had about six?—Yes, five or six.

34,164. I gather that they were put in by what we call patronage, not by selection?—I would rather not say by patronage, I would say by recommendation.

34,165. We have had evidence from the head of a very big concern that carefully picked university men do extraordinarily well. You could not tell me, I suppose, what sort of credentials these men brought—what degree they have taken; university men vary very greatly?—We have only had one honours man.

34,166. (Mr. Hoare.) I have only one question to ask you. Have you some personal knowledge of all your staff?—Yes, all of them.

34,167. (Miss Haldane.) Would you personally see each member of your staff in an interview?—Every one.

17 April 1913.]

Mr. E. MIDDLETON.

[Continued.]

34,168. Down to the lowest grade?—Down to the last boy.

34,169. You, personally?—Yes.

34,170. Is your clerical work, including accounts, done mainly by typewriting or is it written?—Only correspondence is done by typewriters, and repetition work in the case of accounts.

34,171. What do you mean by repetition work?—Supposing we have to give a quotation and we have to supply that quotation in duplicate or triplicate, that would be done by typewriting; and in the case of instructions which have to be given to managers, that would be typewritten. We very rarely have hand-written letters, and we rarely have any typewritten ledger work or accounts work.

34,172. Who sees to such matters as the introduction of labour-saving appliances; is there somebody in your firm specially responsible for seeing to the introduction of such things as calculating machines and so on?—Yes, those come before the secretary.

34,173. That is yourself?—Yes; we have tried them from time to time, and I cannot express an unqualified approval of them.

34,174. Are all your clerks capable of typing?—No; all the correspondents are capable of typing, but not all our clerks; some of them never have occasion to do so. If I may take the wages department, the wages of the workmen who are paid weekly will be computed from the time that the man has worked, if he is paid by the day, or by piecework which is done or by the weight of material which is turned out, and the various returns of that information come to the wages department, and the various members of that department will, of course, make the calculation. Here again I have to bring in the personal element, if you will allow me to do so. I was a wage clerk for some time, and I astonished the natives in those days by learning the 48 times table, the consequence was that I could as well do 37 hours at 8d. as I could do 5, and I wrote it down.

Now a computing machine would not write as fast as you could write with a pen.

34,175. (Chairman.) Do you mean to say that you can calculate as quickly as a calculating machine?—Certainly I could.

34,176. (Miss Haldane.) Do you think on the whole that the kind of education which the young lads have who come into your office is satisfactory, taking into account their ages?—Certainly.

34,177. (Mr. Philip Snowden.) About your girl typists, what wages do you pay them?—The top woman gets 45s. a week, and the lowest gets 20s.

34,178. At what age will they begin?—At the lowest; there is one who has just been brought in who gets 15s. She is 18 years of age.

34,179. Do they do shorthand as well as typewriting?—Yes.

34,180. (Sir Henry Primrose.) I rather gather that a large number of your men who come in never get beyond 40s. a week?—A large number, but not the majority.

34,181. May one take it that 250l. per annum is the maximum that all but the most select men are likely to get?—That is so.

34,182. (Chairman.) Smaller than that is it not?—150l. to 250l.; there are gradations, of course, in that; it would vary according to the importance of the department. The wages department is an important department, and there is a man there getting 300l. or 350l.

34,183. (Sir Henry Primrose.) In addition to the grade 150l. to 250l., to what sort of salary would the heads of each of these departments go?—We have them rising from 350l. to 1,000l.

34,184. You would always have at the head of each of these different branches a man at a considerable salary?—That is so. It might be as much as 1,000l. a year.

## EIGHTY-FOURTH DAY.

Friday, 18th April 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (Chairman).

The Right Hon. Sir HENRY PRIMROSE, K.C.B.,  
C.S.I.

Sir KENNETH AUGUSTUS MUIR-MACKENZIE,  
G.C.B., K.C.

Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR BOUTWOOD.

Mr. JOHN ROBERT CLYNES, M.P.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. RICHARD DUENING HOLT, M.P.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (Secretary).

Mr. BARROW CADBURY called and examined. Mr. H. E. JOHNSON was in attendance.

34,185. (Chairman.) Mr. Cadbury, I wish on behalf of the Commission to thank you for coming here to give us such evidence on the conditions of employment in your establishment as will help us to judge how the Government organisations compare with yours?—I shall be very glad to help the Commission in any way that I can with any information.

34,186. The first point we desire to inquire into is the manner in which your administrative and clerical staffs are recruited; but by way of introduction will you kindly tell the Commission very briefly what is the nature and magnitude of your undertaking?—We are cocoa and chocolate manufacturers, but we have also, I believe, 29 subsidiary trades associated with that business.

34,187. What is the size of the staff that you employ?—A total of over 6,800

34,188. That is including workmen?—That includes all employees.

34,189. What is the size of the administrative and clerical staff?—The strictly clerical staff is 527, 325 men and 202 women.

34,190. How do you recruit your clerical staff?—As a general rule the clerical staff is recruited from the elementary and secondary schools and grammar schools in the neighbourhood. No boy is admitted to the office who leaves school before he is 14 years of age and who has not attained the ex-seventh standard in an elementary school, or to a corresponding position in any other school which he may have been attending. A secondary school has recently been opened in the neighbourhood of the works, and it is our intention to give preference, as far as possible, to boys who remain at that school until they are 16 years of age. Admission to the

18 April 1913.]

Mr. BARROW CADBURY. (Mr. H. E. JOHNSON was in attendance.)

[Continued.]

clerical department is by examination; I have a specimen paper here (*handing in the same*) and also a medical examination (*handing in the form*), and an interview with a director.

34,191. Is a nomination required before a boy presents himself for an examination?—No, he comes on his own merits.

34,192. Do you examine frequently in the year according as vacancies occur or do you allow vacancies to accumulate to a certain number and then hold an examination?—We always pass a certain number to be taken on as occasion requires, not necessarily to take them at once.

34,193. You admit more than are required at the time of the examination?—Yes.

34,194. And you enter their names on a register?—Yes.

34,195. And then, according as vacancies occur, you appoint?—Yes.

34,196. Do you hold the examination before their names are put upon the register?—It is only when they are put on the final register that we have an examination.

34,197. Then it works in this way: at any time a boy can apply to you to be put upon the register of applicants for employment under your firm?—Yes.

34,198. His name is put on the register?—Yes.

34,199. With the application does he submit to you any documents showing that he has passed through a school course, say the primary school course, and a certificate of health, character, or anything like that?—Yes, he does so; and if he does not bring them we apply to the school for particulars.

34,200. Then when this application and his certificates of character and health and so on are before you, do you then call upon him to come before you, and do you see him before his name is entered on the final register of candidates?—Yes, as a matter of fact, the doctor's interview is the first.

34,201. Your own doctor?—Yes, our doctor sees him. Then he sees a director, and if he is passed by the director he is put to the examination.

34,202. At that first interview with the director what does the director look for in a boy?—The director has before him the application form, a copy of which I have here (*handing in the same*), with the filled in particulars as to his past history.

34,203. I understand that that form is submitted before the director sees the boy?—Yes, and it is put before the director. The doctor's report as to his general health and suitability is at the foot of it, also the dentist's report. If the director thinks the boy himself is a nice boy and comes up to what he expects, he passes him.

34,204. In saying that, if the director thinks the boy is a nice boy he passes him, do you mean that the director notices the boy's demeanour?—Yes.

34,205. He speaks to him and notices whether he is a clever, bright boy with good manners; is that what he looks to?—Yes. If we get a boy who seems clumsy he may be very well suited for some situation in the works; in that case the director turns him over to another department.

34,206. That is to say, he would turn him over to another than the clerical department?—Yes.

34,207. Therefore there is a process of selection gone through before the boy is submitted to examination?—Yes.

34,208. That is to say, the director winnows the unsuitable boys from the suitable and sends them elsewhere. They may be entertained elsewhere in your establishment, or they may not; at all events, the director has done with them for the time being?—Yes.

34,209. If a boy seems to the director likely to be suited for clerical work in your establishment he passes him, and his name is then entered on the register as a candidate for examination?—Yes.

34,210. Then the examination takes place?—Yes.

34,211. Who conducts the examination; is it some member of your own staff?—Our educational expert and the head of the office set the examination papers.

34,212. What do you mean by your educational expert; have you got schools connected with your under-

taking?—Mr. Ferguson, the head of our educational department, is a Bachelor of Science.

34,213. What do you mean by your educational department. Are there schools supported by your firm?—They are evening schools under the Local Education Authority, where our younger employees have to attend as a condition of employment. We are in close touch all the while with the Local Education Authority, and when it comes to advancing a boy the education report is before us.

34,214. I will come to that presently. It is very interesting. I merely want to know at the present time whether your examination is conducted by your educational expert?—Yes.

34,215. By your educational expert who supervises your continuation schools?—Mr. Johnson says that they are not supervised by our educational expert, but they are principally kept going by our own boys and girls.

34,216. I am coming to that. At all events, the examinations are conducted by members of your own staff?—Yes.

34,217. Will you now briefly tell me what is the character of the examination?—Probably the examination paper itself will give you that information (*handing in the same*).

34,218. Is it a qualifying examination, or is it competitive; do the boys whose names have been put upon your register compete among themselves for a certain number of appointments, or is it merely a qualifying examination, so that all who enter for examination get appointments in course of time if they qualify?—Yes; if they qualify by this examination they do get appointments.

34,219. I see that the examination is in reading, writing, spelling, geography, and arithmetic; these are the main subjects?—Yes. It is what an ex-seventh standard boy is supposed to know.

34,220. It seems to me that your geography questions are all restricted to the United Kingdom?—That is so.

34,221. You do not examine in general geography—the geography of Europe or the geography of the world?—No, but there is no reason why we should not. We have not done so hitherto.

34,222. The inference I draw from this examination paper is that the geography is limited to the United Kingdom; indeed, I might say to the geography of England alone?—Most of these boys are going into our general office; a few would go on into the export department.

34,223. Supposing there are 10 boys on your register, and you have at the time of the examination only five vacancies to fill; if these 10 boys qualify in this examination they are all passed for your service?—Yes, all of them.

34,224. Their names are placed on the register and they are given appointments according as vacancies occur?—Yes.

34,225. Assuming that there are five vacancies five will be appointed and the others will get appointments in their turn?—Yes.

34,226. Do you appoint the first five in order of merit amongst themselves?—Yes, we do; we put them down according to merit.

34,227. Now what is the initial pay at which a boy enters your service?—We have a scale of payment up to the age of 28 years.

34,228. The entrance age being 14?—Yes.

34,229. That is the minimum?—Yes.

34,230. (*Mr. Graham Wallis.*) It is intended to be 16 in future?—Yes, so far as we can get boys from the secondary schools.

34,231. (*Chairman.*) I thought you said that you intended to give priority to boys of 16?—Yes, when we can get them, but it does not necessarily follow that we can always get them.

34,232. When they enter at the age of 14 what salary do they get?—The scale is as follows:—From 14 to 14½ they get 6s. 6d. a week; from 14½ to 15, 8s.; from 15 to 15½, 9s. 6d.; from 15½ to 16, 11s.; from 16 to 16½, 12s. 6d.; from 16½ to 17, 14s.; from 17 to 17½, 15s. 6d.; from 17½ to 18, 17s.; from 18 to 18½, 18s. 6d.; from 18½ to 19, 19s. 6d.; from 19 to 19½, 22s.; from 19½ to 20, 23s.; from 20 to 20½, 24s. 6d.; from 20½ to 21, 26s.;

18 April 1913.]

MR. BARROW CADBURY. (Mr. H. E. JOHNSON was in attendance.)

[Continued.]

from 21 to 22, 29s.; from 22 to 23, 31s.; from 23 to 24, 33s.; from 24 to 25, 35s.; from 25 to 26, 37s.; from 26 to 27, 39s.; from 27 to 28, 41s.; from 28 to 29, 43s. After that the scale ends.

34,233. On what work are these boys employed when you take them in first?—All kinds of office work. It is difficult to say.

34,234. The general office work?—Yes; they are learners in every department of the office.

34,235. When they begin do you put them to directing letters and entering receipt of letters in the register, is that the sort of work?—Directing letters is girls' work. The boys enter index cards, and there are a great many errands to do from one office to another, all over the place, and the smaller boys do that, thus getting familiar with the office.

34,236. Is copying letters done by boys, or is that done by typists?—That is all done by the typing office.

34,237. Do you employ girls altogether in the typing office, or do you employ any boys?—We employ girls altogether, that is a separate office. There are one or two men in our general men's office who do typing, and in our export office the men do their own typing.

34,238. Are the girl typists segregated from the rest of the office?—Yes, there is a typing office and a general girls' office.

34,239. Do girls and men sit in the same offices together?—No, we have a rule all through the factory that men and women do not work together anywhere, and the same rule applies to the offices.

34,240. Can a boy by showing particular ability, cleverness, and brightness in any of these stages—from the time he enters the office until he reaches 28 years of age—get any special promotion?—Yes.

34,241. Is it your habit to give special promotion?—Yes, before he reaches the top of that scale we may put him on to a better post altogether.

34,242. For instance, a boy at the age of 20 gets 23s., might a boy of that age by special ability have reached the 25s. grade?—Yes, that is only a general scale.

34,243. To be departed from as a reward for special ability, brightness, and cleverness?—Yes, we might have some slightly under, but it is the scale that we go by. In the very rare cases where a boy's conduct is not right, we put him down a little in the scale.

34,244. But if you have a boy exhibiting special ability, special cleverness, say, between the ages of 20 and 24, do you adopt the principle that it is desirable to promote such a boy?—Yes, we have a certain number of vacancies by which we can always find room for boys or men of that character.

34,245. You say that you have a certain number of vacancies that you can make use of for that purpose?—Yes. The opportunities for promotion for members of the ordinary staff are fairly frequent, and the principal avenues for such promotion are: (1) to the official staff, and (2) to the staff of outside representatives, both home and export. The official staff is divided into two classes, viz., Staff A and Staff B., the first-named containing the highest positions in our service, and the second being made up principally of sub-heads of large departments and heads of smaller departments. There are 26 members of Staff A, and of these 12 have been ordinary members of our office staff; one was appointed from a position in the works, and the remainder have been engaged as specialists in their various departments, such as engineering, analysts, education, doctors, dentists, paper experts, etc.

34,246. These departments as branches A and B are manned by men over the age of 28 as a rule?—As a rule.

34,247. Although a very clever man of, say, the age of 26 may be promoted into them?—He may be specially promoted on to Staff B.

34,248. So that at the age of 28 and the salary of 43s. you draw the line between your ordinary clerical staff and your administrative staff?—Not exactly; that is not the top limit; they go on increasing after that.

34,249. But it is the top limit of what might be called your clerical staff, is it not?—No, they can get a good deal higher on the clerical staff than that. We

revise our wages every year, and we have a limit for some cases.

34,250. Are your staffs A and B paid by the week or paid by the year?—Staff A are paid by the quarter, and Staff B by the calendar month.

34,251. At what pay per annum does the B staff begin?—At 150l., increasing according to the merit of the officer; and Staff A begins at 300l., similarly increasing in accordance with merit. There is no limit in a sense, it depends on the real value of the man.

34,252. What salary might a boy who exhibited cleverness between the ages of 20 and 24 hope to reach in your service by the time he was 40 years of age?—By the age of 30 he might have got into the B staff, and by the age of 40 he might have got into the A staff. There are some who would never get into the A staff, but would stick in the B staff. The highest limit in the general office for, say, the best ledger clerk would be from 145l. to 160l. a year, that is an ordinary man.

34,253. At what age might an efficient man—not an exceptional man—but an ordinary efficient man, be expected to reach that stage?—From 40 to 45. I spoke of the A staff and the B staff, but a still larger outlet for promotion is our staff of commercial travellers. We employ 105 travellers at home and abroad, and of those only four have been taken on from outside our own works. Of the 105 travellers 85 have been appointed from the office, so that is as large an outlet for an able man as any.

34,254. Could you tell us what would be the limit of pay that they might hope to obtain?—They might get promotion at least up to the maximum of the A and B staffs.

34,255. Is there any fixed maximum for the salaries of the A staff?—No, there is no fixed maximum in the A staff.

34,256. Or in these outside appointments?—No, nor in those outside appointments. We sometimes take an individual and fix a maximum for him.

34,257. (Sir Kenneth Muir-Mackenzie.) You go on paying more as long a man is worth more?—Yes, we readjust his scale of pay.

34,258. (Chairman.) The maximum is a maximum for the person and not for the class?—That is so. A traveller may have been on the road for very many years, and he may wish to relinquish a large part of his ground so as to have more leisure, and the whole thing has to be readjusted; possibly we may pay him even less, and he is very glad to get it.

34,259. That is to say, that you adjust the pay to the work and the capacity of the man more than is done in the Government service?—Yes, and he is paid on results; he is paid on his turnover. It depends on his work entirely what he gets. It is not a matter so much of the figures I am giving here, because he has to work for these figures and show his return before he gets them.

34,260. (Sir Donald MacAlister.) Is it right to say that the general scale attainable by travellers would be comparable with the scales in Staffs A and B?—Yes, that is so. In connection with travellers we have a relief staff. We keep about six office men or others who have been approved, any of whom can be sent to take a traveller's place temporarily when he is ill; that is generally the first step, and we pay them extra when they are out on the road.

34,261. (Chairman.) Have you a pension scheme for your men?—Yes, we have a pension scheme and I have the details of it here.

34,262. Is it a contributory scheme or not?—It is. The percentage contributed by the men varies from 2.5 per cent. of his wages to 5.4 per cent. up to 250l. salary; and for every payment the man makes the firm pay in an equal amount. There are special arrangements for salaries exceeding 250l.

34,263. After how many years' service is the full pension which you grant due?—At the age of 60. There is an option for a man to continue working if he wishes to do so and if the firm agrees.

34,264. Do the contributions commence from the time that you admit him to the service?—From 16 years of age.

18 April 1913.]

Mr. BARROW CADBURY. (Mr. H. E. JOHNSON was in attendance.)

[Continued.]

34,265. Do you ever take into your service any highly educated honours men from the universities?—No; the only appointments that we have made are to professional positions such as doctors, analysts, educational experts; otherwise none. Most of them have grown up as boys in our employ.

34,266. Would you be disposed to answer the fourth question we put in our letter, namely, how far your experience enables you to form an opinion as to the working of the Government departments system. Have you been brought much into contact with Government departments?—Very little with departments; just with members of departments whom we have met, and whatever business we have had with public departments has always been conducted on their side to our entire satisfaction.

34,267. You find them prompt?—Yes, we have always received the utmost courtesy, consideration, and promptness. We do not feel that we have any suggestion to make under that head. We have carefully looked at that question.

34,268. (Sir Donald MacAlister.) Might I ask whether you issue a syllabus of subjects for examination for these boys of 14 years and upwards?—No.

34,269. What indication do they have beforehand as to what they are to be examined on?—They do not have any. I may say that the result of this examination has been that it has quickened the boys in the district; they come in better prepared than they did when it was first instituted, because they know they have to go through the examination.

34,270. Do you mean that you hold yourselves free to vary the examination without notice?—We do entirely.

34,271. You may even introduce fresh subjects like history?—Yes. The examination is on general knowledge and adaptability for the posts they are going to.

34,272. You would not, for example, introduce French without notice?—No.

34,273. It is generally understood, although it is not actually defined by you, that the examination will be in subjects that a boy in the ex-seventh standard ought to know?—Yes.

34,274. And that is all?—Yes; it is the ex-seventh standard that we take as our guide.

34,275. Can you tell me whether a high percentage of marks is required for qualification?—Over 50 per cent.

34,276. That is to say, that a boy who does not get 50 per cent. is plucked and is told that you do not require him?—Yes, but that does not necessarily cut him out from our employ; if he is a nice boy we send him on to the works department to be taken on for some trade, but as regards the clerical staff he is out of it.

34,277. If a nice boy who was otherwise eligible only got 40 per cent. of marks you would say that he was better adapted for the works department?—Yes.

34,278. Is that advice often taken?—I think so, because under our apprenticeship scheme they still have quite as good a chance of getting on in the works as in the clerical office.

34,279. So that your system of selection by examination enables you to divert boys who ought to learn a handicraft to that employment instead of to clerical work?—Yes.

34,280. Can you tell me what sort of proportion pass the examination?—About two-thirds pass.

34,281. And one-third go to something else?—About one-third are rejected.

34,282. Of those who are rejected in that sense of the word, do any considerable proportion go into your works or do they try something else?—They nearly all go into the works if the director has passed them first as boys suitable to have in the place.

34,283. That is to say, they are keen to get into Cadbury's on any terms, and you really sift out those who are fit for commercial work and those who are fit for other employment?—Yes.

34,284. Now will you answer this question: You say that you want boys to enter at a higher age than 14, say up to 16, in order that they may have some secondary education before they come?—Yes.

34,285. If a boy stayed at school for two years more and left at 16 and came into the examination and passed, would he begin at once on the 16-year-old scale?—Yes.

34,286. It is not to his disadvantage therefore to stay on at school to take the bigger pay at 16?—No, we do all we can to encourage it; we are considering whether we should not give such a boy a little more than the scale, but that is not decided.

34,287. May I ask why you have come to the conclusion that a better education than that secured at 14 years of age is desirable; is it from your experience of efficiency in the office or is it on general philanthropic grounds?—It is on our experience in the office that a boy is more efficient.

34,288. The better educated he is the more efficient he is likely to be even at the beginning?—Yes, those who have come from the grammar schools have turned out very well, when we have taken boys on who have had the advantage of a longer education.

34,289. They are well worth the money that you actually give them when they begin work?—Yes.

34,290. The next question I want to ask you is about your contributory pension fund, which is interesting. Is it financed by the firm itself or do you contract with outside insurance companies?—None of the funds of the pension fund are invested in the business; that is one of our strict rules; they are all invested in outside securities. There are seven trustees, of whom three are nominated by the workpeople and four by the firm. It is entirely outside the works as far as the whole management goes.

34,291. But the management is controlled by yourselves; you do not contract with outside insurance companies?—No, it is independent of any other insurance company.

34,292. The limitation is that the investment of the fund is not to be in the business itself?—That is strictly so.

34,293. (Miss Haldane.) You have 202 women I gather on your staff?—Yes.

34,294. Could you tell me how they are brought in?—They are brought in in the same way as boys, by going through a similar examination before they come into the office.

34,295. At the same age?—At the same age. I have a specimen paper of the examination here if you would like to see it.

34,296. Is that different for girls and boys, or is it exactly the same?—It varies (*handing in the same*). The questions are somewhat different.

34,297. Is it the same standard roughly for the girls' examination as for the boys or is it a little higher?—It is as nearly as possible the same.

34,298. Are the girls when they come in about the same age?—Yes.

34,299. Would you mind telling us about their salaries, you did not do that; are they the same as the boys?—No. From 14 to 18 they vary from 6s. 6d. to 14s., and then it goes upward to 30s. at 25 years and over.

34,300. That is about the same as for the boys to begin with?—Yes, it is exactly the same to start with. Our girls' office wages have not yet been scientifically graduated as in the men's office.

34,301. Could you tell me what they may rise to in the ordinary course?—On the ordinary staff the highest wage paid at present is 31s. 6d.

34,302. That is for the ordinary clerical staff?—Yes.

34,303. Do they all come in at 14 years of age, or do you bring in older women?—That depends on the supply. If we can get them at 14 we prefer it, but we do take them older. For instance, we cannot get typists of sufficient proficiency at that age.

34,304. Are they all competent to type?—No.

34,305. Do they learn typing afterwards if they wish to rise?—Not necessarily, that is a separate department.

34,306. Do they also attend evening classes like the boys?—Yes, the same rule applies. I perhaps ought to have stated that the parents of both boys and girls have to enter into certain agreements with us when the children come to us. I do not know whether you would

18 April 1913.]

Mr. BARROW CADBURY. (Mr. H. E. JOHNSON was in attendance.)

[Continued.]

like me to read these agreements; they rather bear on this point.

34,307. (Chairman.) Yes, if you please?—There is an authorisation form that the parent has to sign which applies both to boys and girls: "I agree that" (*then comes the name*) shall (1) attend from the date of admittance "to your employment for two evenings weekly at evening continuation classes held during the winter months "until he becomes 19 years of age, no student being "allowed to leave school until the end of the session in "which he has commenced. (2) That he shall receive "any attention that the dentist may consider necessary "provided that if any charge is made I am first advised "and give my further consent." That is always done practically at the charge of the firm. "(3) That he "shall receive instructions in gymnastics and swimming during work hours until the end of the term in "which he reaches his sixteenth birthday, and shall attend evening classes in gymnastics once a week "during the winter months for the two following years, "viz.: until his eighteenth birthday." That is the form for boys, and the girls' form is very much the same.

34,308. (Miss Haldane.) Can the women get special promotion by qualifying themselves in special ways?—Yes, we have avenues of promotion for girls somewhat similar to those for boys. They have opportunity with other employees of rising to the position of forewomen; we have also a small official women's staff, with higher remuneration than they would obtain in the office.

34,309. Would their salaries rise higher than you have mentioned?—Amongst the forewomen or the official women's staff there would be openings for exceptional girls.

34,310. As regards the system of promotion for both men and women, is it the head of the department who decides on promotion in all cases?—The directors decide, all cases are brought up by the heads of departments to the directors. All appointments to the staff or as foremen and forewomen of departments are passed by the board of directors, and each on appointment comes up to see the directors at their board meeting. The directors make a special point of seeing them all.

34,311. Do the directors personally see them?—Yes, we all see them. They come up to the board when it is sitting and are welcomed on their appointment.

34,312. Is that done annually at any particular date?—No, as required. One of the directors is generally responsible for a special department. I am responsible for the men's office department myself, others are responsible for other departments.

34,313. And one director introduces those who are going to receive promotion to the other directors?—Yes.

34,314. You spoke of dentistry; that is in the school?—Yes.

34,315. Do you do anything further with dentistry for any of your people?—We have two fully-qualified dentists in our employ, and it is one of the understandings with the parents which I have read that when the children come to us they shall have their teeth seen to.

34,316. Is that right through the time or only while they are at school?—Boys have to go periodically to the dentist up to 21 years of age, girls during the whole of their service.

34,317. Do you insure them for sickness beyond the State system?—There is a voluntary sick scheme for the office staff only.

34,318. In addition to the State scheme?—Yes.

34,319. Is that contributory also?—No; that is not so.

34,320. I think you said it was a voluntary scheme?—Yes.

34,321. Is this sick scheme carried out entirely by the employers?—Entirely. This is one of the forms (*handing in the same*).

34,322. Is that in addition to the State scheme to which the employee contributes?—Yes, it is entirely in addition.

34,323. (Sir Kenneth Muir-Mackenzie.) It is independent of it?—Yes.

34,324. (Miss Haldane.) So that an employee would have a very good remuneration when he or she is ill?—Yes.

34,325. Have you any system for men also?—Yes, this is the men's scale (*handing in the same*). When this scale does not meet a case owing to the length of sickness it may be referred to the board; that is to say, we may have some special old employee whose case wants special consideration.

34,326. (Sir Donald MacAlister.) Do you mean that an insured person in your employment will get full pay during these weeks and get a sickness benefit from the State as well?—No, we deduct the State pay during the period of full pay, that is to say, under 10 years' service for two weeks it is deducted; after that the two weeks half-pay is not taken into account.

34,327. (Miss Haldane.) You spoke of your education experts; are they all men or have you any women?—We have one man who is an expert.

34,328. Have you women teachers in your schools; are the evening classes under your control?—We have a few classes in the works, but otherwise they are not under our control.

34,329. (Mr. Hoare.) How long do you compel your boys to attend continuation classes—up to what age?—Up to the age of 19, and they may not work overtime during that time; we limit their hours very strictly.

34,330. Are all the classes which they attend evening classes or do you allow them part days off?—Some of the office classes are held in the afternoon in work hours. We have one or two special classes which are not yet recognised by the education authorities for the purpose of giving them a general office education, such as teaching them ledger work and the different technicalities of our office routine. That is our own class entirely.

34,331. The continuation classes, I suppose, are the ordinary classes provided by the Local Education Authority?—Yes, and they are mainly attended by our own people.

34,332. Do they in practice attempt to bring their curriculum into close touch with the work of your business?—Our Works Education Committee sketches out for a boy or girl what subjects they would recommend them to take according to their career, thus saving them from drifting indefinitely. I have a pamphlet here on our education scheme which might give you the information more fully (*handing in the same*).

34,333. Have you ever had cases brought to your notice of boys being too tired after their day's work to get the full benefit of the evening classes?—Not many. One wishes that they could have it in the afternoon; it would be very much better in the daytime. Our office boys work 40½ hours in the week.

34,334. (Chairman.) In 5½ days?—Yes.

34,335. Do they have a half-holiday on Saturday?—Yes, they go at 12.30 on Saturday.

34,336. (Mr. Hoare.) How long do these classes usually last in the evening?—Two hours or so.

34,337. On each day of the week?—No, three evenings a week.

34,338. (Mr. Shipley.) Do the three evenings include the gymnasium?—Yes, up to the age of 18.

34,339. (Mr. Philip Snowden.) All that is very fully stated in the form of agreement which you read?—Yes, the parent signs it, and we have had no serious objection taken to it.

34,340. (Mr. Hoare.) With regard to positions of responsibility, should I be right in saying that the general questions of policy are arrived at by the members of the board?—Yes, that is so.

34,341. Would you mind telling the Commission how many members there are on the board?—There are five directors.

34,342. Did any of those directors originally start in the firm on the staff of the firm?—No, they are all members of the family of Cadbury. We have no outside directors at present.

34,343. (Mr. Shipley.) Did I rightly understand you to say that you have a very large number of trades of different kinds carried on under the firm?—Yes, that is so; there are 29 different trades.

18 April 1913.]

'MR. BARROW CADBURY. (MR. H. E. JOHNSON was in attendance.)

[Continued.]

34,344. Could you tell me one or two of the chief things?—Carpentry, cardboard box making, tin making, printing, engineering, fitting, sheet iron work, gardening, and a great many others which gather naturally round our work.

34,345. Have you had any experience in dealing with Government offices in the colonies or in foreign countries?—No, I have not.

34,346. Do many of your clerks attend the evening classes at the University of Birmingham?—Not many.

34,347. And there are not many who proceed to degrees there?—No. We have just instituted a scheme by which we have made it possible for any student of exceptional ability to proceed to the university, and one such man is expected to go to Glasgow University shortly. There is a condition attached to it that we have the first claim on his services with the promise of a minimum salary on his return; we have just begun that scheme; we have not had any experience yet.

34,348. (Mr. Matheson.) For how long is the first claim; do you mention a term of years?—For three years.

34,349. (Mr. Philip Snowden.) Is the firm paying his expenses at the university?—We award a scholarship of 50l. per annum renewable for a second and third year.

34,350. (Sir Donald MacAlister.) Is that with a view to the general arts course or with the view to a scientific course in preparation for expert work?—It is for the arts course, to fit him for a responsible position in our factory.

34,351. Not electrical engineering or anything like that?—No.

34,352. (Mr. Matheson.) How did you select your man for this purpose; was it just that he showed special ability?—We found that he had exceptional abilities, and we encouraged him to pursue his studies.

34,353. I wanted to ask about your education expert; does he give his whole time to your firm?—Yes, entirely now.

34,354. Is he a man of university training?—He is a Bachelor of Science of London University, and before entering our employ he was the local official for higher education under the Worcestershire County Council, and before that was principal of a technical school.

34,355. Are the evening classes held in Bournville or in Birmingham?—They are held in different districts where the people live, some of them a considerable distance from Bournville.

34,356. Are they all within easy reach of their homes?—Yes, that is so.

34,357. How do you select your medical officers? You have no examination, I suppose?—No, the medical officers are fully qualified doctors of medicine.

34,358. You have no competitive examination?—No, we had all their qualifications before us when they were appointed. We have one man doctor and a lady doctor.

34,359. Do you advertise if you have a vacancy, or do you just let people know?—We advertise when we have a vacancy.

34,360. Are they whole time people?—Yes.

34,361. Can you say what proportion of your women employees leave to marry?—The majority of our women employees leave to get married. I am afraid I cannot tell you beyond that. I think probably the test is that in our women's pension scheme very few remain with us till they are 60 years of age.

34,362. What holidays do your clerical staff have in the year?—The ordinary office staff have a fortnight in the summer, five days at Christmas, three at Easter, one at Whitsuntide, and two at the August Bank Holiday—23 days in all with full pay.

34,363. (Mr. Philip Snowden.) Are those working days?—Including Bank Holidays that is 23.

34,364. Does that include Sundays?—No, it does not; it is 23 working days. The A staff has five weeks holiday during the year; the B staff has 27 working days including Bank Holidays. For three months in the summer, as far as possible, the clerks are allowed to leave alternate days at 4 o'clock, on the understanding that during the very busy period before Christmas the office hours may be extended for not more than three

nights a week to 7.45. The A staff is allowed a half day per week, in addition to Saturday afternoon from May to September inclusive; and the B staff is allowed eight half days during the summer.

34,365. (Mr. Matheson.) Mr. Hoare asked you about the directors. I suppose you would say that in comparing your business with a Government office we should have to bear in mind the fact that at the head of your business you have five active directors who are doing a good deal of the highest administrative work which in a Government office would be done by the highest class of employees?—That is so.

34,366. Are all the directors active directors?—They are all active directors.

34,367. (Chairman.) Do the directors divide the work amongst them, one taking one department and another another?—Yes, as far as we can. That is the principle we work upon.

34,368. (Miss Haldane.) Suppose a woman left to be married and subsequently became a widow, would you allow her to come back again?—No, we have been very strict about that. We have openings in the kitchen department only.

34,369. (Sir Kenneth Muir-Mackenzie.) Do you consider that your establishment is manned through open competition; it comes very nearly to that, does it not?—I think that is what it amounts to.

34,370. Do you consider that is the best way of manning a great office?—From my own experience, I should say yes.

34,371. What happens when you have got a man who is practically no use to you, or only of very little use, he just pulls along. I suppose he will never get into Staff B?—No. Speaking of the office, we have some clerks who have reached what we consider their limit, and will never get beyond.

34,372. Such a man could not say to you after a certain period that the expectations which had been held out to him when he came into your service had not been fulfilled?—We have had one or two men like that, and have definitely told them that they had reached their limit. They are glad, of course, to stay on; they would probably not get another place.

34,373. But they are not in a position to tell you that they had expectations of getting up to Staff B in the course of time?—No, we have never given them any such expectations.

34,374. With regard to pensions, however short a time a man has been with you, when he goes away he gets something because it is a contributory scheme?—He get all he has contributed himself with compound interest at 2½ per cent.; that acts as a savings fund; he loses nothing; under whatever condition he leaves he is entitled to that.

34,375. But not to the firm's contribution?—No, that goes to strengthen the fund. Those who remain in it get the benefit.

34,376. It does not go to that particular man?—No.

34,377. Have you anything that corresponds to the age limit in the public service?—Our age limit is 60, but some of our very good workers have exceeded 60. Every year after 60 they have to be passed by the doctor as healthy, and their continued service approved by the directors.

34,378. You have pretty strict office hours, I gather?—Yes, very strict. I have explained that for a short period in the winter we work overtime, but we adjust it in summer.

34,379. Have you a system of pay for overtime if you call upon men to stay longer than their daily hours?—Yes, they are all paid for overtime. Except as in the special arrangement referred to in the previous question, we do not pay our Staffs A and B for overtime under any circumstances.

34,380. If a man is called upon to stay beyond office hours you recognise that he has a definite claim to ask you for additional pay?—Yes, certainly; but the head of his department would not let him work overtime if he could help it, because he does not get anything out of it.

18 April 1913.]

Mr. BARROW CADBURY. (Mr. H. E. JOHNSON was in attendance.)

[Continued.]

34,381. You do not consider do you, that your whole establishment is manned from the bottom. There is a considerable proportion of Staff B, I understand, which does not consist of people who have entered at 14 or 16 P.—Out of the 33 in Staff B, 24 have been on the ordinary office staff.

34,382. And as regards the remaining nine what is the case?—They are outsiders. For instance, if we want a man with a special knowledge of the paper trade, we have not that internal knowledge, and we have to get a man with knowledge of the paper trade.

34,383. Then, except for those people whom you have to get hold of for some special purposes, your whole establishment may safely be said to begin from the bottom?—That is so.

34,384. (*Sir Donald MacAlister.*) Is that equally true of Staff A?—In Staff A, there are more outsiders—chemists and engineers, and men like that, holding positions which our own employees cannot fill.

34,385. (*Mr. Boutwood.*) I think you said that about half the boys who submitted themselves to your examination failed?—No, one-third.

34,386. Could you give any indication of the nature of the failure—what do they fail in?—We put down a number of towns and ask them what counties they are in. If a boy fails in three-quarters of the answers we do not consider he has got much general knowledge; or if he fails in his arithmetic questions altogether it is no good putting him on to the intricate work of the office.

34,387. (*Chairman.*) We have been told that boys of that age are very bad spellers; that it is marvellous how badly they spell; do you find that in your experience?—No, we always have their letters of application before us, and I should not say that that has been our experience at all.

34,388. (*Mr. Boutwood.*) In your firm do you make any extensive use of labour-saving appliances like calculating machines?—Yes.

34,389. What are the advantages of a calculating machine?—There are a great many advantages.

34,390. For instance, what?—I use one myself. I can devote my whole attention to putting down my figures correctly, adding them with equal ease either vertically or horizontally, the machine does the adding with unerring accuracy.

34,391. Then it is a saving in accuracy and time?—It is in accuracy as much as in anything.

34,392. More than in time?—I should think that there is a saving in time as well—time and accuracy.

34,393. (*Mr. Philip Snowden.*) About two-fifths of your clerical staff, I take it, are women?—Yes.

34,394. Are they in the main engaged in work similar to the work done by the men?—I have a few headings. For instance, making out accounts, checking invoices and cash sheets, and forwarding invoices and receipts, preparing all invoices for dispatching, computing their overtime lists, ledger work (correcting transfers). I think you may say that much of the work done by the women is the same as that done by men.

34,395. And will the average pay of these women be equal to that of the men?—No, it is considerably less.

34,396. What will your staff of women typists be; are they included in the 202 women?—Yes, they are included. There are 46 of them.

34,397. Have you a minimum scale of salary for them. Supposing you recruited a girl at 18 years of age as a typist and shorthand writer, what would be her initial salary?—I am afraid I have not got that. We go by the same scale. If we take an expert typist on we take her on at a higher rate. The highest rate at the present time is 31s. 6d.

34,398. You have a large number of women employed in your non-clerical departments?—Yes.

34,399. You told us that in no department of your works do the men and women work together?—That is so.

34,400. It has been the deliberate policy of the firm, you say, to segregate them?—Yes.

34,401. Did they at any former period work together?—I think it must be 30 or 40 years ago.

34,402. Then the present practice is not the result of any unfortunate experience of men and women working together?—No, it is on principle; we think it is better.

34,403. But you cannot avoid the men and women coming together occasionally on matters of business?—No, and we go out of our way to make social opportunities out of work hours for them to meet together at concerts, and one thing and another; they have plenty of opportunity.

34,404. We all know of course that you have a great many means of social recreation and the like in connection with your firm?—That is so.

34,405. Do the men and women mix freely in those ways?—They have separate recreation grounds—a men's ground and a women's ground.

34,406. Seeing that your men and women are kept in separate compartments, if I may so put it, you must have women to supervise women?—That is so.

34,407. Therefore you will have women in positions of considerable responsibility?—Yes, they are included under forewomen.

34,408. I was intending to include not only the clerical department but the boys and girls generally?—That is so, there are forewomen in our works generally over the departments.

34,409. The A and B staffs are not confined to the clerical side only but to the works generally?—Yes, and we have of course sub-officers of our clerical department which is divided over the works. For instance, our card-box room is a very large room and there is a great deal of book-keeping to do in it.

34,410. Having women in these positions of responsibility as superintendents you will be able to form some opinion as to the capacity of women for control and management; would you mind saying what your opinion is upon that point?—I think we have every reason to be satisfied that they do very well over women. In the opinion of the head of our office, Mr. Johnson, the advantage which the male clerk has over the female clerk is that his physical powers permit him to work at greater continuous pressure; that he is usually more dependable in the matter of health, and that, having learned his work, his period of service is likely to be much longer than in the case of women clerks; he enters into it as his life work.

34,411. May I ask whether you have any proportion of your clerical staff on piecework rates?—Yes, in one or two departments where it is possible.

34,412. Would it be in making invoices?—Yes, and in posting.

34,413. Are women as well as men engaged in that work?—No, there are no women engaged in it.

34,414. Therefore, on that basis you are not able to compare the output of men with that of women. Apart from the general conclusion which you have just stated, what do you say as to the comparative outputs of men and women engaged in similar work on your clerical staff?—I do not think we have any figures as to that. I should think that a male clerk has on the whole more capacity than a woman, that is to say, if he is a thoroughly good clerk he can probably turn out more work.

34,415. Do you find that the women are fairly conscientious and accurate?—Yes, very.

34,416. That you would say was a feature of women's work?—Yes.

34,417. You say you have no university men except perhaps one or two whom you might call technical men on your staff?—Yes.

34,418. You have never felt the need for men of what is sometimes called wide culture as managers of your departments?—No, apart from appointments to professional positions such as doctor, analyst, and educational expert, we have not engaged men of the highest educational attainments for positions of responsibility, having found it as a rule preferable either to choose for these positions men who have been brought up in our own offices and works, and who know by experience all the conditions, or men with special knowledge gained in other industrial concerns. We have in four instances withdrawn men from our travelling staff who had their early training in our offices, and

18 April 1913.]

Mr. BARROW CADBURY. (Mr. H. E. JOHNSON was in attendance.)

[Continued.]

have brought them back to Bournville to take responsible positions where the extended knowledge they had obtained on the road would be of great value to them on our official staff. Our general view has been that practical experience combined with administrative ability will produce the best official; at the same time we do not depreciate the value of the highest attainment in education.

34,419. That is a very valuable answer, and I am very glad to have it. You would say that the qualifications for a commercial traveller are of a somewhat special character, and it is rather important that he should be a man of good address and understanding and a man who had a good knowledge of the world?—Yes.

34,420. That a successful commercial traveller must possess the qualities which would come under the head of a man of fairly wide culture, not in the sense of book knowledge but of a knowledge of business affairs?—Yes, and of course he brings with him a knowledge of the requirements at the other end—that is a great value. He is working with knowledge.

34,421. For these important posts then you think that you can get better men by training them in your business from the beginning than by bringing in men, say, who have the polish of a university, but no practical knowledge of business?—That is so.

34,422. Could you tell us something about the organisation of your office, how you divide your work?—We divide it into sections such as our ledger department, order department, costs department, wages office, and perhaps a dozen other offices. There are a great many different offices.

34,423. You yourself, you have told us, are the head of the office department?—Yes, of the men's office.

34,424. That is your branch of the works?—Yes, everything of importance is referred to me which concerns the men's offices.

34,425. But you have one man I suppose, who has as it were in his hands, the reins of all the different departments of the office?—Yes. Mr. Johnson, who is here, is the head of the office.

34,426. Might I ask whether all the members of the staff would be personally known to him?—Yes, that is so, but Mr. Johnson has nothing to do with the women's office, the women's office is managed altogether from the women's side. I, myself, have nothing to do with it.

34,427. Could you tell us how you divide the work from the men's side and the women's side?—As a matter of fact, we have a very large room for the general office, and it is screened off between the men and the women, the women working on the one side and men on the other. They have to be very near.

34,428. They can easily pass from one side to the other?—Yes, they have to come round some way through a door which does not open directly into the men's office.

34,429. I want to put a question to you about your experience of what I might call the efficiency of a better education. In the book which Mr. Edward Cadbury recently issued, and which I have read with a great deal of interest, he gives some very startling figures which he has taken from the industrial side of your business, in which he points out that boys who have had a year longer at school earn on piecework something like 24 per cent. more than boys who have had a year less at school?—That is so.

34,430. Have you had any similar experience to that in regard to your clerical branch?—I do not think I could answer the question quite as clearly as that.

34,431. May I put it in this way. Do you find that a lad who comes to you after a year or two longer at school, takes up points much more quickly than a lad who has not had quite so much time at school?—Yes, he does.

34,432. Just a word or two about your method of appointment. I suppose it is not necessary for you to advertise for office boys?—No. Applications come in automatically.

34,433. I suppose that some lads at school are looking forward to the possibility of getting into your office?

—Yes, and we are in very close touch with the schoolmasters in the local schools.

34,434. Do you show any preference to the sons and daughters of your employees?—We give them an equal chance, and if they pass the examination and come out well we are very glad to have them. We do not give them any preference, but it is, of course, pleasant if we can take on a child of one of our own people.

34,435. Have you any restriction that the boys must be living with their parents in the neighbourhood?—Certainly, with their parents or guardians; it is one of the reasons for which we may refuse a boy if he lives on the other side of Birmingham, and there is no prospect of his having a home near.

34,436. Just a word about your pension scheme. Can a man retire before he is 60 years of age if he wishes to do so, and take a proportionate rate of pension?—If he has broken down in health under special regulations, not otherwise.

34,437. Do you make the women any gratuity on marriage in addition to the contributions they have paid into the superannuation fund?—We give a present of 20s. to each girl who is to be married.

34,438. That is in addition to her contributions to the superannuation fund?—Yes, and in the case of men it is a sliding scale.

34,439. You give a man something when he gets married, although he continues in your employ?—That is a special donation from the firm; it is on a sliding scale according to the time he has been with us, beginning with a sovereign and working up to 5*l.*

34,440. I want to put this question to you because I think it has a very important bearing on certain things we are inquiring into. I understood you to say that a good efficient ledger clerk could reach a maximum salary of about 160*l.* a year?—Yes.

34,441. You would consider such a clerk to be a good, all-round clerk, a man who is competent to go into the office and do almost any work that you require to be done in the business of the office?—He would be one of the ablest of the ordinary clerks who have got ordinary routine work, not brilliant but a man who would do ledger work to perfection.

34,442. (Sir Donald MacAlister.) Might I ask one question in supplement of what Mr. Snowden has been asking you. I notice on the last page of your Education Scheme, this phrase: "Valuable scholarships tenable at a college of university rank are also offered by the 'firm'?"—That would be the scheme under which the lad I have already mentioned is going to Glasgow.

34,443. Is that philanthropy or is it business?—I think it is business; he will come back better fitted for his work with wider knowledge.

34,444. (Mr. Graham Wallas.) The present policy of the firm is to recruit boys, so far as possible, about the age of 16 after they have had a secondary education course?—Yes.

34,445. Have you considered whether the type of examination paper that you are now using would be suitable for a boy who had gone through such a course?—Mr. Johnson says that we have a special paper for such boys.

34,446. Supposing that there were introduced, as is now proposed, under Government auspices, a school leaving certificate, for the efficiency of which the Government made itself responsible, would you attach any weight to the fact that a boy of 16 had obtained such certificate?—Yes, great weight.

34,447. Would you feel inclined to substitute proof of having done well at that examination for the necessity of passing your own examination?—I think that probably we should want to satisfy ourselves that on points which affected our business he had some knowledge as well as the certificate.

34,448. That is to say, that his general eligibility would largely depend upon whether he had passed the certificate examination, but you would like to make absolutely certain about special technical points?—Yes; the certificate would be a great help to us to know that generally he was a well-educated boy.

34,449. Has the point ever been raised that the kind of work that a boy does in the first couple of years in

18 April 1913.]

Mr. BARROW CADBURY. (Mr. H. E. JOHNSON was in attendance.)

[Continued.]

an office like yours is a little beneath a boy who has had, say, three or four years in a secondary school?—We do not put him to the lowest stage, we should not make him an errand boy, we should start him just so much higher up.

34,450. But then also for another three years you require him to attend continuation classes?—Yes, until he is 19.

34,451. The fact that you are giving him certain educational opportunities would be rather a balance; he must not mind doing a little strictly routine work during that time?—Having gone through an office myself, I think that routine is a good training for the work he has to do afterwards.

34,452. You have a London office?—Yes, it is more a show-room than an office; we do not do any manufacturing in London.

34,453. Do you find it necessary to pay rather more for the same work in London?—Yes, we always allow something extra. We should pay a man in London 6s. a week more than he would get in Birmingham, probably owing to the higher cost of living, railway travelling, and so on; and we make an allowance of 5s. a week for his luncheon; that is a total of 11s. extra.

34,454. You give an ordinary clerk about 11s. a week more in London?—I do not think our experience is of great value as we have only one clerk; but we do reckon that it costs more in London.

34,455. You are aware, perhaps, that Professor Ashley, of Birmingham University, has commenced a rather interesting scheme of higher commercial education?—Yes.

34,456. Do you make any use of his scheme at all?—We have not done so at present in connection with our own clerks.

34,457. Now I want to ask you a question on which I shall not press you for an answer, if you do not like to give it. You treat your employees in the matter of holidays, and in some other respects, rather conspicuously better than the average firms throughout England, do you not?—I do not know how we compare in that respect.

34,458. In so far as that may be true, do you ever ask yourself the question whether these special advantages are practically subsidised by the firm out of possible profits, or do these special advantages repay themselves in the same or additional profits?—They repay themselves many times over.

34,459. You believe that everything which you have so far done, in the way of giving special advantages, does, as a matter of fact, pay the firm in the shape of increased efficiency in general work?—I am sure of it.

34,460. In addition to all the other physical and personal advantages?—Yes.

34,461. (*Miss Haldane.*) Have you any figures in connection with your sick insurance which would show the relative amount of illness of men and women?—I do not think we have.

34,462. (*Chairman.*) In the book to which Mr. Snowden has referred, I find the following passage: "It is not satisfactory for education to stop at the age of 14. . . . There is a great national waste in allowing children to leave school at the age of 12 to 14 without insuring in some way that their education shall be continued. . . . Education develops initiative, adaptation, self-control, and general knowledge of mechanical and scientific principles, which, quite apart from specialised training, are so necessary in modern industrial life." I infer from these statements that you consider it unwise to take children from school before the age of 16?—Yes, where it is possible to keep them on it is much better.

34,463. So far as your business is concerned, you would wish to take no boy under the age of 16 into your business?—So far as we are concerned that is so. We have tried by evening classes, so far as we can, to make up for the loss.

34,464. But if you were able to get sufficient material at the age of 16, would there be any necessity for your establishing these evening classes?—I cannot answer that definitely.

34,465. Just one other question. It is usual, is it

not, in commercial life, to pay women less than men—the wages of women are fixed at a lower rate than those of men?—That is so.

34,466. What is the foundation of that practice? Is it that the out-turn of work done by women is found by experience to be less than the out-turn by men?—To some extent that is so; but I should have thought that it was owing to the greater responsibilities which rest upon a man in having to run a home.

34,467. Let me put it in this wider way. Is the undoubted fact that women receive less pay than men founded on the experience that, taken as a whole, women are less efficient agents than men?—I do not feel very confident to answer that.

34,468. Then on what reason is the disparity of payment justified? We have the fact, I believe the universal fact, that women are paid less than men?—I do not think that I wish to justify it. I simply take it as it is.

34,469. I am asking you whether you can advise us as to what the foundation of the fact is. We find it a universal fact in commercial life, is there any substantial justification for it, or is there not?—My only feeling is that it is because the man has the responsibility before him of starting a home and all the expenses connected with it, and that probably more claims will come on him than on a woman.

34,470. That, you think, is the justification, apart altogether from the work that is done; it appeals to something outside the work for which payment is being made?—As Mr. Johnson suggests to me, we are guided by competition outside. Our own standard of wages at Bournville is above the average standard in the district. I think that is all I can say.

34,471. But still your standard of wages, which you tell me is above the standard in the district, nevertheless presents this feature, that the wage paid to women is less than the wage paid to men?—Yes, that is correct.

34,472. I was endeavouring to see what was the justification for that. You point out to me what no doubt is an important factor, that a man has greater responsibilities to meet; he is the head of the household, he is the bread-winner; but I want to know if you can tell me whether in your experience the work turned out by women is less valuable to you than the work turned out by men, or is of equal value to you?—It is rather difficult to say. Speaking of office work, I should say that a woman's work is rather more mechanical than a man's, that a man would have more originality in some ways.

34,473. Do you think that the comparative value of the work of the two is represented by the difference in the price paid for it?—No, I do not.

34,474. The difference in price is then not a criterion of the comparative value of the two works?—No.

34,475. (*Sir Donald MacAlister.*) If the clerical work of women were appreciably cheaper than that of men, taking everything into account, on commercial grounds you would employ more women and fewer men would you not?—I do not think so, I do not think that we should take that element into account.

34,476. Firms with which you would compete would have that factor before them?—Where we employ a good many of these women is in outside offices and women's departments where we should not have men under any circumstances. For instance, in the general office I find that we employ only 46 women, which shows that, apart from the typists, the others are scattered through the works in the different women's departments where we should not have men clerks.

34,477. In the general office where the work is on the whole pretty much the same you have no temptation on the ground of cheapness to increase the proportion of women?—We have actually only 46.

34,478. You find that the men's work is not so much more expensive than that of the women, in spite of their wages being higher, as to make it worth your while to displace them by women?—No.

34,479. (*Mr. Matheson.*) It is also true, is it not, that you retain the services of men longer?—That is so; they stay on until 60 or beyond if they have health.

Sir CHARLES MATHEWS, K.C.B., called and examined.

34,480. (*Chairman.*) Are you the Public Prosecutor?—I am the Director of Public Prosecutions.

34,481. Your office dates from quite a recent date does it not?—Yes, as at present constituted.

34,482. It was constituted in the year 1908, was it not?—My present office, yes. The office of Director of Public Prosecutions was created in 1879. My present office was constituted in 1908, when the office of Director of Public Prosecutions was severed from that of the Solicitor to the Treasury.

34,483. Then you took over from the Treasury Solicitor a certain portion of his staff?—I did.

34,484. That staff, or your individual office, is not borne on the funds is it?—No.

34,485. Do you meet the expenses from a lump sum which you administer?—Yes, that is so.

34,486. And consequently you yourself appoint your staff, and your staff is non-pensionable?—The answer is in the affirmative to both those questions.

34,487. But certain members of your staff are pensionable?—Yes; they are on the establishment. I think the number on the establishment will be found to be four in all.

34,488. Yourself, your assistant director, the principal assistant, and the clerk in charge of copying?—That is so.

34,489. I suppose the clerk in charge of copying is the principal clerk in your establishment is he?—He is the principal clerk in the copying portion of my establishment, that is all.

34,490. We have had to deal with the establishment of the Treasury Solicitor, and also of the Solicitor to the Post Office, and the claims made on behalf of those staffs are, I suppose, somewhat similar to those which are made on behalf of your staff?—I cannot speak of the Post Office, because I do not know what their claims are. Of the Treasury Solicitor I can speak, and I think the claims are almost identical.

34,491. I infer from the papers you have been good enough to send me that you agree with Sir John Mellor in thinking that it is absolutely essential that you should have the selection of your staff?—I do, my Lord.

34,492. And you see some difficulty?—I do not say it is an insurmountable difficulty—but some difficulty in reconciling the usual practice of selection for a pensionable office with the maintenance of the plan on which you insist?—Yes, I see the greatest possible difficulty.

34,493. There would be difficulty in reconciling the two?—I should see the greatest possible difficulty in departing from the personal selection which seems to me to be essential.

34,494. What I mean is, that, before officers are brought upon the pensionable lists of the Government there is a certain method of selection prescribed?—Yes, as I know.

34,495. And that method of selection is entirely at variance with the method which you would insist on?—As I also know.

34,496. Can you suggest any way by which your method of selection might be brought somewhat nearer to the Government method. Would you be disposed at all to entrust the selection of your men to a committee upon which you would be represented, and also, say, the Civil Service Commissioners?—I should be unwilling to do so, because I do not think it would add at all to the suitability of the men for my department if that course were adopted.

34,497. The Commission had it in evidence, from one of the solicitors, I think it was Sir Robert Hunter, that he now follows the practice of recruiting his men at an early age, within one or two years after they become qualified. The principal officers of his staff are solicitors, and I think he follows now the plan of getting them into his office within two years of their acquiring a professional status. Do you think you could adopt the same plan?—I do not say it would be impossible that I should insist, that within two years of their admission to the profession of a solicitor they must tender themselves to me, because only within the first two years they would be accepted by me, but as to whether it would make for efficiency

I say nothing. My own impression is that it would not.

34,498. But you abstain from condemning it. The reason I ask you is this, that if you were content to recruit your men within two years after their acquiring their professional status, it might be possible to institute a competitive examination between men whom you had previously selected. What would you say to that? I am striving to find out a way whereby the Government pensionary scheme might be extended to your office, and I throw out the suggestion to see what you think of it. The plan would be this: say you had three vacancies to fill in your office from amongst clerks with professional qualifications, you select 8 or 10 men by such means of selection as you please, and then institute an examination of a professional character between these 8 or 10 men, and take the best three: would that plan fall in with your views?—I do not at this moment realise the fact that they have passed any examination of an educational character which would fit them the more.

34,499. Of a professional character, not an educational character?—Or of a professional character. I do not know that that would fit them more for doing the work of my office, which is quite exceptional, as I am quite sure your Lordship realises, if you have read the paper I have sent you. The very small department over which I have control, is one, if I may say so, by itself, where the professional clerks have duties to perform of a most exceptional character. I do not know that I would be better served by such a mode of selection, first of all by me, and then by the result of some professional examination than I am now.

34,500. You might not be better served and you might not be worse served, but at all events the way would be opened, would it not, to relieving these men of the hardships under which I assume you, to a certain extent, think they are labouring?—Yes, I do.

34,501. That would indicate a way, would it not, by which, according to the established rules of the Civil Service, they might be relieved. To this consideration also I would call your attention. We have been told by the solicitors that the instances in which they have had to dispense with the services of any of the men they have recruited are almost negligible. They have been very successful in their choice?—That is the experience of the Post Office Solicitor?

34,502. Yes. I was referring particularly to Sir Robert Hunter who had adopted the early age of recruitment. If that be the case it shows, does it not, that the same thing might be expected if you were to adopt the system, first of selection and then competition, amongst the selected nominees. There would be a double assurance, would there not, that you would get good men. I say that because it has been urged upon the Commission that the discretion possessed by the head of the office of getting rid of the men who turned out badly is a very desirable discretion to preserve. But if in the case of such a great office as the Solicitor to the Post Office it is really not necessary, and if, on the other hand, there are reasons in favour of giving these pensionary advantages—such as the longer they stay in your service the more valuable they become to you, and the less possibility they have of outside appointments, if these things are so, do they not point to the necessity of devising some means by which the recruitment might be brought within those rules of the Government service, which insist on some test before selection, some test of an independent character, not depending merely on the direction of one person?—I am obliged to you for telling me of what Sir Robert Hunter has said and done. I hear of it for the first time. I have not had the advantage of reading Sir Robert Hunter's evidence. All I would wish to say is that the matter is one which I would desire to give very much more consideration to than I can at the moment of my appearance here before you.

34,503. I understand your fortune in selecting candidates has been the same as that of Sir Robert Hunter; that you have had good luck, and that you have not had to dispense with the services of any of them?—I think I have made a very good selection of my candidates.

18 April 1913.]

Sir CHARLES MATHEWS, K.C.B.

[Continued

34,504. (*Mr. Matheson.*) The great majority of your men are not of your selection are they?—That is quite true, because they were selected by my predecessor and taken over by me in 1908, but I have since had occasion to add to them, and my own selections have been quite fortunate.

34,505. (*Chairman.*) Your proposal I understand is that after selection your nominee should serve for seven years?—That is so.

34,506. That seven years would give you, I suppose, ample opportunity of judging of his character and usefulness?—Yes.

34,507. And then that he should be brought upon the establishment list?—That would be so.

34,508. Do you propose that for the whole of your establishment?—I propose it for the professional clerks in my establishment whose case seems to me to be a stronger one than that of my unprofessional employees; I do advocate it very strongly for my professional clerks; and I advocate it, although not so strongly, for my non-professional employees.

34,509. It has been stated in evidence that all the great commercial institutions and firms with whom we have come into contact do consider it essential that some pensionary provision should be made for clerks, and that it is not right that one should employ men for 30 years, and then when they become unfit for further work should turn them out in the world without any sort of provision. If that be the feeling that prevails in the best commercial circles would you say still more that it should prevail in Government circles?—Yes, just as much, if not more.

34,510. Do you think it desirable that the Government should be a model employer?—I do.

34,511. In so far that its dealings with its employees should not be worse than those of a commercial concern?—Most certainly not.

34,512. That would be an argument, would it not, in still further support of your claim that your ordinary clerks should get some pensionary provision?—Quite so.

34,513. How do those conclusions compare with the conclusions which were come to by the Committee appointed in 1888, on which your present system is based?—All I can say would be, I am afraid, on that subject, to repeat what was said before you by Sir John Mellor. I do not think I can do other than agree with what he stated to the members of this Commission. I need scarcely say, however (and I would desire to say it), that on any such point he would speak with much greater authority than I, because his experience is very much longer than mine. My experience is comparatively of recent date, because I was appointed only in 1908. I have read what Sir John Mellor said with regard to the recommendations of the Committee of 1888, and if I correctly understood him he said he thought the Committee had been mistaken in the remedy which they had proposed, and that it had not been possible altogether to fulfil the wishes of the Committee, and that indeed the recommendations of the Committee did not lead, in his opinion, to the best possible condition of things, and therefore it was that he was desirous of no longer being bound by the recommendations of that Committee.

34,514. At all events, the actual facts have not verified, have they, the expectations of the Committee?—That, I should say, could very confidently be said.

34,515. The Committee expected that there would be a flow of men through your office?—Yes, that was so.

34,516. And in that way your office would approximate to what was assumed to be the practice in outside offices?—In outside private offices.

34,517. Is it a fact that there is that free flow through the office in outside professional offices? Is it the fact that clerks come and go in a solicitor's office?—I should venture to doubt it, but I have no experience on which to found my doubt.

34,518. I should have thought that in a solicitor's office, above any other, the employees would have remained, and remained for a considerable time. I should have thought that there would not have been anything approaching a free flow outwards and inwards. What is the practice in private solicitors' offices? Are

solicitor's clerks at the end of 20 or 30 years' service, when the time for retirement comes, thrown on the world without any pensionary provision or not?—I should think only if they had very bad, inconsiderate, or poor masters. If they had good masters who were able to make provision for them, I am perfectly certain that provision would be made. I can conceive a case, of course, where a professional man has not the means with which to pension his old servants as they fall out of service, but in the ordinary course of things I should have thought that any clerk who had been in a solicitor's office for anything like 30 years would be almost certain to get some provision, the best his master could give him, for his old age.

34,519. It was stated to the Commission that employment in Government solicitors' offices unfitted men for making their livelihood in the outside world. What do you say to that?—That has a very special application to my particular department.

34,520. If that be true in regard to offices in which the work does more or less approximate to the conditions of work in an outside solicitor's office, in the case of your office there is no such approximation?—No.

34,521. Is that because you are limited to the administration of the criminal law alone?—That is so, and to the practice of it, a great deal of the practice falling upon my employees.

34,522. Consequently, I suppose, when you employ a solicitor, as time goes on, and he renders you valuable service, he becomes more valuable to you?—That is perfectly, absolutely true.

34,523. And you state, do you, quite properly, as an argument in support of your claim, that there should be some consideration shown him?—As the main argument.

34,524. (*Mr. Holt.*) With regard to the 6,000*l.* which you distribute, as I understand, amongst 20 clerks, how is the lump sum arrived at? Does the Treasury say to you "There is so much money, get your clerical service with that," or do you go to them and say "My clerical service will cost me so much"?—No, I ask the Treasury for a lump sum for my personal clerks, which, hitherto, the Treasury has agreed to.

34,525. Are you entitled to put the difference in your own pocket, or do you have to surrender it?—I have to surrender it.

34,526. Do the Treasury in any way see or approve the list of salaries which you actually pay?—I think the answer to that is in the negative. I think they do not, certainly in the first instance, see them. I suppose that at any time they could call upon me to supply them with any information they require in regard to individual salaries and the amounts of them, but in the first instance they have nothing to do with the fixing of them.

34,527. Of course, the money is not divided equally amongst the clerks; they must receive very different salaries?—That is so. If it would help you at all, I have had prepared here a list of my professional clerks with their present salaries.

34,528. What I really want to know is, is each person engaged on anything like a definite understanding as to the progressive increments of salary, or does he simply come for so much a year, and trust to you to give him more?—I think the answer to that is that everyone I have engaged in my time I have engaged at a salary to commence with of 150*l.* a year for two years, and there is to be no increase for that two years. May I just say that all my employees come to me upon a three months' probation, and they are all subject to a six months' notice of dismissal. I have fixed, during the time I have been there in control, their commencing salaries at 150*l.* a year, and told them there would be no increase in those salaries for the first two years, and afterwards as they work, and if their work is well done, they might expect some increase.

34,529. Are the subsequent increases given at your arbitrary pleasure?—Yes.

34,530. And not in accordance with any well-understood scale?—Yes and no, if I might venture to answer your question in that way. They are given at my arbitrary pleasure, but I might frankly say that the

18 April 1913.]

Sir CHARLES MATHEWS, K.C.B.

[Continued.]

rate of increase is on a well-understood scale of 15% a year.

34,531. I suppose you are like other people who do things at their arbitrary pleasure; you have to keep your arbitrariness within bounds?—I hope so.

34,532. So that in substance I suppose they might just as well be on a well-defined scale?—Yes, I think in substance they might.

34,533. Are all the 20 clerks professional clerks?—My professional clerks number 14 in all. I have added one to them in the course of this year. To them you should add the director, the assistant director, and the principal assistant. In them would consist the professional portion of the establishment, but they are not 20 in number. The professional clerks, properly so-called, are 14 in number.

34,534. Is the work of those clerks so strictly professional that an ordinary clerk of good education who had served some time in your office could not perform the duties?—I think the answer to that is certainly in the negative. I think I might make it plain to the Commission in two or three words. My clerks have to be selected in some sense for their powers of advocacy, because they personally attend in courts of first instance, in order to present the cases which I conduct. They do that largely in London; they do it largely in the country, and therefore they do require very special qualifications for their particular work; and an ordinary clerk, however good clerically in his office employment, probably would not be at all suitable to the work which has to be done by my employees.

34,535. Then a large part of their work is not office work at all?—A large part of it is not.

34,536. Do I understand you also have an allowance for copying?—That is so.

34,537. Does that include what might be called common clerical work?—Yes, but of a copying character only.

34,538. Is there any reason why those copyists should not become one of the ordinary class of Civil servants who do that class of work in other offices?—We always have taken them from the law stationers. It is law stationers' work which they have to do in my office. We have taken them from law stationers, and they have remained, having come to us from that source.

34,539. Do you put it that those persons are also solely professional?—No, I do not say that. I would rather say of them, perhaps, that they are midway between the two, but they are more unprofessional I should say than professional.

34,540. Do they do anything that an ordinary clerk with the special training of an office could not attain to?—With a special training in a law stationer's office, I think, no. I think they would require some further special training in my office in order to do the work of it.

34,541. (*Mr. Graham Wallas.*) It has been represented on behalf of a number of unestablished officials that under certain circumstances, when a man has spent a great part of his life on specialised work, he thereby gets a strong moral claim to establishment and pensionable rights. Do you agree with that?—I do.

34,542. Can you assist the Commission by indicating some general principle on which a demand for pensionable rights by non-established officials should be granted?—I can think of none beyond that which I am afraid has become rather common form now, to the members of this Commission, namely, that if a man should devote himself during the best part of his life towards proficiency in the department where he specialises, and who, whilst he is specialising, loses all touch with outside employment, it seems to me that that is the man who makes out a very strong claim towards a provision of some kind when he ceases to be able to work.

34,543. Do you say it ought to be accepted by the Government as a principle, that if a man remains in the employment of the Government for a period of his life doing specialised work, he should at a certain period of his life gain establishment?—Yes; and I would like to add that during the time he is gradually

getting himself efficient he is drifting from the opportunity of getting employment elsewhere.

34,544. (*Chairman.*) Would you limit that to skilled labour, or would you extend it to unskilled labour?—Speaking for myself, I think I would limit it to skilled labour, but that is an individual view.

34,545. (*Mr. Graham Wallas.*) Then, would you say that all persons coming into such a Service as yours should acquire what I might call an inchoate right to establishment from the moment they came in?—Yes, I think that fairly expresses my views. I have already said, in answer to the noble Chairman, that I should myself rather insist on a lengthened term of probation.

34,546. Would you accept also the statement that when you are appointing a man to the Government service, with such an inchoate right to establishment, the Government is bound to protect itself by examining rather closely the conditions under which he is appointed?—I can only speak for my own part. I do not think, myself, that any Governmental interference with regard to the selection of the people in my department would be of benefit.

34,547. (*Chairman.*) I do not think that is quite a direct answer. Your explanation might come very well as a qualification to a direct answer to Mr. Wallas's question (*the shorthand-writer read the question*). What is your answer to the general proposition?—That it might be advisable in regard to other departments, but, in my opinion, it would not be applicable to mine.

34,548. Is your answer that, as a general principle it is desirable, but that there are exceptions in departments, of which yours is one?—I think I would rather keep to my own words.

34,549. It is an important question put in a general form, and I should be glad if you will give an answer to it in its general form, and then indicate the particular exceptions that you may like to introduce?—Would it be an answer to it if I were to say that it might be applicable to other departments than my own.

34,550. No; I do not think that would be an answer to the question. Can you first deal with the general proposition affirmatively or negatively, and then say to this general rule there are exceptions?—I am afraid I can only answer it by saying that it might be advisable, but I do not think it would be advisable in the case of my own department.

34,551. (*Mr. Graham Wallas.*) Would you say in your own case you have anything which can be called a system in making appointments, or do you approach the question of each appointment specially?—I have no system.

34,552. Have you a waiting list?—I have a waiting list.

34,553. And the appointments are in fact made, are they, as a rule, from the waiting list?—Yes, that is so.

34,554. In what way does a man get on your waiting list?—By a personal application to me by letter from someone who desires to come to me.

34,555. Do you see him before putting him on your waiting list?—No; I do not.

34,556. And the letters which you get with the recommendations of the people you file, do you?—Yes; I file them.

34,557. And then when a vacancy occurs do you look through the file of all the applications, good, bad, and indifferent?—That is so.

34,558. Can you tell me, roughly, how many applications you have at this moment filed?—I am told by the assistant director between 30 and 40.

34,559. Have you examined them in any sense to find out whether these applicants are good or bad, or is it simply a bundle of letters which you may open and look at?—I have opened them and looked at them.

34,560. But you would, I suppose, examine them closely, if a vacancy occurs?—Yes, that is so.

34,561. Do you think that is on the whole the most satisfactory arrangement that could be contrived?—It does not seem to me a bad arrangement under which an applicant can, as it were, get his name on my list, but what really becomes important is, when a vacancy occurs, in sending for the candidates, seeing them, inquiring about them, and so on. The waiting list is rather accidental, may I say.

18 April 1913.]

SIR CHARLES MATHEWS, K.C.B.

[Continued.]

34,562. (*Mr. Philip Snowden.*) May I ask you one or two questions about yourself. I did not hear very clearly when you were appointed to the position which you hold now?—In 1908.

34,563. Had you served in the department before that?—No.

34,564. You came from the outside, did you?—I came from the Bar, and, therefore, from the outside.

34,565. Was it a Crown appointment. Who appointed you?—The Secretary of State for the Home Department appointed me.

34,566. I gather from what Mr. Holt said to you that now the total amount of money given to you is 6,000*l.* a year?—No, that is not the total amount; that is for the payment of my professional clerks and for my staff.

34,567. For all the staff?—No, that is not the whole money I receive for my staff. I receive an allowance for copying from which a portion of my staff derive their earnings.

34,568. Does your salary appear on the votes?—Yes.

34,569. And what other members of your staff are in that position in your department?—The assistant director's salary appears on the votes; the principal assistant's salary appears on the votes, and that of the clerk in charge of copying, and, with regard to the rest, it appears on the votes in a lump sum which is granted to my department by Parliament for the purpose of defraying my expenses.

34,570. Does the sum vary from year to year?—It is increased by such additions as I make to the salaries of my staff.

34,571. That is to say, you do not send to the Treasury every year, when the Civil Service Estimates are being prepared, the amount you want?—I do. I send up my estimate.

34,572. In sending that statement, do you give particulars of the demands which are likely to be made upon you for payment of salaries during the year?—That is included.

34,573. Do you give to the Treasury a statement of all the members of your staff and the amount of salary you are paying to them?—I do not think I do.

34,574. Am I to understand that you say to the Treasury, "We shall want the same amount for the coming year as we had last year, 6,000*l.*?"—Yes, or it may be a little more. If my expenses had increased, I should ask the Treasury for a little more. May I point out, that before I can add to my professional staff I have always obtained the permission of the Treasury to make the addition. I have written and said what the requirement was, and how it had arisen, and how it is that I propose to appoint one more professional clerk to my office, and I have had to get the assent of the Lords of the Treasury to doing that before I could do it.

34,575. Am I to understand that although you have an unlimited discretion as to the amount of salary you pay to individual members of your staff, you have no discretion at all as to the numbers you should employ?—When you say I have no discretion, I have no unfettered discretion as to the additions I make to my staff.

34,576. (*Chairman.*) If you make an addition of one to your professional staff, and yet do not exceed the lump sum given you, have you still to report the addition to the Treasury?—Yes. I have had to get the consent of the Treasury to the making of the addition.

34,577. Even though no increase to the lump sum is thereby caused?—That does not enter into it. There is no question as to increase. I have to give the Treasury notice, and more than that, to obtain the Treasury sanction to the appointment of any additional professional clerk in my office. I wish to explain that since the date of my entering into office, when I have required additional assistance, it has so happened that I have not had sufficient money in my personal allowance to pay for it, and consequently I have been obliged to refer in each case to the Treasury.

34,578. (*Mr. Philip Snowden.*) Do you apply to the Treasury or the Accountant-General for vouchers

for disbursement of this lump sum?—Of everything. The accounting officer of my department is the same as that of the Treasury Solicitor. I rather think the Solicitor of the Treasury described himself the other day as my accounting officer. We have the same comptroller of our two accounts, and everything that is spent by the department goes before the Committee of Accounts; every item is investigated, I believe, separately, and, I am quite sure, closely.

34,579. Supposing you were making an application to the Treasury for an additional professional clerk, would you be required to furnish the Treasury with some statement?—Not if the amount is included in the estimates.

34,580. What means have the Treasury of knowing what sum will be required?—Because it goes into my accounts.

34,581. But it does not go into your accounts until after it is paid, does it?—Quite true. I ask the Treasury's sanction to the appointment of the particular clerk, which is given. I appoint the clerk and fix the salary, and that salary finds its way into my accounts and goes before the Committee of Accounts for the purpose of seeing what is paid, and any objection to be made would be made by them or through the accounting officer to me.

34,582. (*Chairman.*) Are not you confusing the Treasury with the Auditor-General? Do not you submit your accounts to the Auditor-General and not to the Treasury?—I ought to have said the Comptroller and Auditor-General.

34,583. That is the Auditor-General, and if the Auditor-General does not find that you have Treasury sanction for the disbursement of a particular sum, he immediately queries it, does he not?—That is perfectly correct, my Lord.

34,584. (*Mr. Philip Snowden.*) Are no questions put to you by the Auditor-General as to the way in which you spend the money?—I do not think there are. I think if there was any question to put you may be quite sure it would be.

34,585. But no question is put. May I assume that as long as you do not exceed the amount voted to you in a lump sum, you can spend it pretty much as you like, without any interference?—I think I have some discretion with regard to that certainly; but, at the same time, do not be under the impression that I am not liable to be asked why I have done this, that, or the other, when it relates to any expenditure I have incurred.

34,586. But, as a matter of fact, although you are liable to be asked how you have expended money, are you asked?—I think my accountant sometimes is asked a great deal when he goes before the auditor.

34,587. Is this 6,000*l.* for the payment of what you call your professional clerks as well as your non-professional clerks?—It is for the payment of my employees.

34,588. May I put it in this way, that it includes payment for the services of all, except the four men in your department who are on the establishment?—That I think is quite correct.

34,589. How many have you altogether in your department?—In all 37, with the additional one who has been added this year.

34,590. Out of that department of 37, do I understand that you have 33 persons whose services are paid for out of public money, and who are not under any of the ordinary regulations and control which generally govern those who are in receipt of payment for services from the public funds?—I do not quite follow that question, I am afraid.

34,591. Their salaries are not fixed by the Treasury; they are approved by the Treasury; they are not established; they have no pensionable rights, and the whole of the money paid for the services of these 33 persons is disbursed at the discretion of the head of the department. That is the situation, is it not?—Yes, and may I say that if you will refer to the report of the Commission of 1888 you will find why that is the present condition of things.

34,592. I was concerned with the actual state of affairs?—The actual state of affairs is, as far as can be,

18 April 1913.]

Sir CHARLES MATHEWS, K.C.B.

[Continued.]

in accordance with the recommendations of the Commission of 1888.

34,593. At the moment I have nothing to do with that. I gather from what you have stated that you consider that to be a very desirable state of things?—I do.

34,594. The most satisfactory that could be devised?—For the working of my individual department.

34,595. You think it a desirable thing, do you, that there should be such a discretion in the hands of the head of the department?—I do; it is essential.

34,596. And those who are in the service of the department are liable to be dismissed by the head of the department; the continuance of their employment depends on the maintenance of his good will. They may be dismissed by his whim or caprice, and there is no appeal. Is that so?—All that is sound, but you state it as if it were an undesirable power. All I can say is in practice it proves to be a power greatly to be desired.

34,597. Is not that the condition of things?—That is the condition of things, certainly.

34,598. Has it ever entered into your mind that a system like that is capable of lending itself to a good deal of abuse?—No.

34,599. Could not you imagine a public official who had that power using it for the purpose of putting his own personal friends into a position?—No, I cannot imagine it, because I think, for his own self protection, he would not take his incompetent personal friend into his service, when he cannot get from him what he requires. It will be his incompetent personal friend who is placed there only as the outcome of a job which will be very detrimental to the duties of the department, and in my opinion, any question with regard to jobbery or unfair preference is negligible.

34,600. There are four out of your staff of 37, I understand, who are on the establishment, and who have pensionable rights?—That is so.

34,601. Are they what one might call the chief officials of the department?—You must not call the fourth of them a chief official. He is the head of the copying room.

34,602. Should I be correct in saying that they are those in receipt of the highest salaries?—You would be right in saying it with regard to the first three, but not with regard to the fourth. He was established because the Register of Copyists was to be closed, and after passing a qualifying examination. With regard to the first two of those who have been placed on the establishment, both of them came from the outside profession, myself and Mr. Stephenson, and it was with us, speaking for myself at all events, a very considerable inducement that I should in leaving a practice, which was not unlucrative, at the proper time have some pension. As far as the first two of us are concerned it was absolutely regular and ordinary that we should have a pension at the age of 65. With regard to the third gentleman, he is a gentleman who has risen to where he is from a comparatively humble position in the office; he is a man of very exceptional ability; he is a man who has been there, I know not for how many years, something like 30 to 35 years. I think, with regard to the fourth of them, it was very long service which recommended him as a person who had special claims to the establishment which were recognised in granting him a minor staff clerkship.

34,603. Do you know of any reason which justified the establishment of these servants that would not apply equally to other members of your staff?—No, I think not. I think the members of my professional staff, with the passing of time, and with length of service, would have strong claims to be established.

34,604. You said that the prospect of pension was one of the reasons which induced you to accept the appointment?—It was a compensation towards the giving up of that, which, as I said, was by no means an unlucrative profession.

34,605. Supposing the prospects of the subordinates of your department were improved in the way of granting pensionable rights, would not that also be an inducement to men of superior ability to accept these

posts?—Superior ability, may I say, does not quite meet my requirements, greatly as it is to be desired, in all individuals. The people required by me for the purposes of doing my work are people with exceptional gifts; they may not be gifts of the highest, but they are exceptional gifts, and therefore I do not know that I should insist, in my selection for my professional clerks, on people of very superior attainments.

34,606. They would not be any the less efficient servants if they had superior attainments, would they?—They might be none the less efficient servants, but they might be very inefficient advocates and very inefficient representatives of me and my cases in court, however high their moral character, however superior their educational attainments, they might not be at all suited to the work which they have to do in my department.

34,607. And you think, do you, the positions you are able to fill from applicants can be better filled by you personally than by say, yourself, in conjunction with a body of advisers?—I think so.

34,608. You think the wisdom of one man is better than the aggregated wisdom of a number, do you?—In very few things, but in this one thing I should say yes.

34,609. (*Mr. Boutwood.*) Something was said about the Government taking particular care to scrutinise the appointment of people brought on to the staff with pensionable rights. Do you think it would be proper to say that the most effective care that the Government could take would be to appoint a good man to make appointments in the first instance?—To my office alone do you mean, or to appoint generally, and at large to all the departments?

34,610. If in your own particular office, for instance, the Government appoint a good man as Public Prosecutor, who will do his work properly, that is the best guarantee, is it not, that they can have, that the appointment is made properly?—There is a sense in which, I think, that is quite correct. I think in my department he will make the best appointment who best knows both its work and its requirements.

34,611. You said something about the law stationers in connection with your non-professional staff, and you said what the non-professional men did was more like the work of law stationers than that of ordinary clerks. I am afraid that conveyed to me no information at all. What do law stationers do?—As I understand it they do the work from the solicitor's office which there are not the people, and there is not the time to do within the office itself. They are available to solicitors to do what is called law stationery work, that is to say, work which has to be produced at such time and under such pressure that it cannot be done within the office.

34,612. But what I am trying to get at is this: when you get a man from a law stationer's office what qualifications does he bring with him, that, say, the ordinary second division clerk would not bring with him?—He has been familiar presumably for a great many years with the copying of documents, the engrossing of parchments, much of which has to be done in my office, and with duties of that kind. He has fitted himself for doing the work by his practice in a law stationer's office, and he has to continue that kind of work in my office.

34,613. (*Chairman.*) Has he to do anything beyond copying documents, whether it be on paper or parchment?—Speaking of some of the copyists I would say no. Speaking, however, of some of the men in my copyists' room, they have to do considerably more, because they have to attend in court very often to take documents down, and they have to be rather skilled in the abstracting and engrossing of indictments, which are peculiar things.

34,614. They do not compose forms out of their own minds, but simply copy the things which are placed before them?—Yes, but the copyists in my copyists' room would be able to refer back to precedents for the particular purpose of the moment, which they could find of by reason of their experience.

34,615. (*Mr. Boutwood.*) Do I understand that the two officers of your department have been brought on to the establishment from the non-established grade?—Yes, that is so.

18 April 1913.]

SIR CHARLES MATHEWS, K.C.B.

[Continued.]

34,616. Do you know what arrangements were made about their pensions, and how much of their un-established service counts?—I cannot speak of the details of either of the cases, but I will furnish them to the Commission.\*

34,617. (*Sir Henry Primrose.*) You said that you had 14 professional clerks. Do I understand then that you have 20 non-professional clerks?—No. Will you be so good as to divide us in this way: we are a department of 36; there are three officers, then I have 14 professional clerks, and the rest would be non-professional clerks.

34,618. In other words there would be 19 of them, would there?—It works out so, including copyists and messengers.

34,619. Do you include amongst those 19 any men who are paid out of this 2,100*l.* for copying?—Yes.

34,620. What number of the non-professional clerks do you think, would be paid out of the 6,070*l.*, or does that all go to professional clerks?—I am sorry that I am not able to allocate that sum of 6,000*l.* I can supply the information.† I have here a list of my professional clerks with their professional salaries. I do not know what it comes out at but I can supply the total.

34,621. Of your non-professional clerks who are paid out of these lump sums are there several of them with salaries of 200*l.* or 300*l.* a year. What is the maximum salary you pay to a non-professional and non-established clerk. I see from the table that you have not a great many non-professional men, but the majority of your men are professional clerks?—That is so, taken in the sense of clerks, the balance of my 36 being made up by messengers, and so on.

34,622. You said at the beginning of your examination that you felt more strongly in favour of the establishment of the professional clerk, than you did in favour of the establishment of the non-professional clerk?—That is so.

34,623. But in some ways is it not more difficult to justify that according to what is almost the universal system of the public service, in respect of the non-professional clerks, than it is in respect of the professional clerks?—I do not know what the difficulty as to departure may be. It occurs to me, however, that my non-professional clerks are not so debarred from resuming whatever their work may be in the open field, by reason of their having been some considerable time in my service; and therefore, it occurs to me—it is an individual opinion only—that they have a smaller claim to pension, or that their claim is less strong to pension than that of my professional clerks. May I instance it in this way: I do not, myself, see why anyone who has been in my employment for a long while, let it be as a messenger, let it be as a shorthand-writer, let it be as a copyist, and has done his work well, and I can give him a good recommendation on leaving my service, should have his particular field of employment shut against him. In the case of the professional clerk I think his field has been shut against him. There is no open field remaining; he cannot go back to the profession he has left, and I do not think that applies with the same strength to my non-professional clerks.

34,624. Could you say why all you have said on the subject of your non-professional clerks, might not be said equally of non-professional clerks in any other branch of the public service?—I am not sufficiently familiar with the other branches of the public service to answer that. I can only speak of my own department, and, as I admit, from a very limited experience of the public service—but that is the view I have formed—it may be a wrong view, an imperfect view, or a hastily formed view, but it is the view I have formed.

34,625. From the point of view of the Commission what interests us is what reason can be assigned for giving to certain clerks in certain departments such as yours special treatment—when such a system conceivably ought to be applied and could be applied to the whole public service, could it not?—Yes.

34,626. Can you suggest from your experience any particular reason that could be alleged for treating

your non-professional clerks differently from the non-professional clerks anywhere else?—No, certainly not.

34,627. As regards your professional clerks do I understand the principal assistant who is on the Estimate and gets 800*l.* to 900*l.* a year has been put on the establishment as a personal matter, or is that a post which is recognised as a permanent post for an established office; that is to say, when this gentleman retires shall you be permitted to appoint another man as principal assistant?—I shall.

34,628. (*Chairman.*) Would the appointment rest with you?—It would.

34,629. (*Sir Henry Primrose.*) And you would probably, would you, select him from the men serving you in a non-established capacity?—There is the strongest probability of that.

34,630. What would you say to a system under which, instead of yourself selecting suitable candidates, the Civil Service Commissioners were to be open to examine any men in the profession who would like a Government appointment in either your office or that of any other departmental Solicitor, and that the Civil Service Commissioners should keep an approved list of men whose characters they had examined into, whose health they had examined into, men who would still remain in the profession in their different offices, so that when you had a vacancy you could go to the Civil Service Commissioners and say, "Let me see whom you have on your list, and I will choose from amongst them." Do you see any objection to that?—Yes, the objection is that I might not find a suitable man.

34,631. Would that be very likely?—I think not at all unlikely.

34,632. (*Chairman.*) Which of the two would you prefer if you were limited to a choice between the system Sir Henry has now mentioned and the system I suggested to you, namely, that you should choose four or five people for each vacancy and allow a competition to take place between these four or five?—I should favour your Lordship's suggestion.

34,633. (*Sir Henry Primrose.*) That gives you considerably less choice than mine, does it not?—It may give me considerably less choice but it at all events allows me to get, after he has been examined, the man who is suitable for my work, which I do not understand Sir Henry's suggestion would.

34,634. Have you formed any opinion as to whether, as a matter of fact, the system which is now followed in your office is cheaper, or much the same, as it would be by having established clerks. Do you think it results in a saving to the Treasury. Do you know at all how far the cost of the Treasury Solicitor's department has been diminished?—I do not know. I think I would rather not answer the question as to whether the expense to the Treasury is diminished or increased. I do not think I am quite in a position to answer it. I have not had much experience and I do not know any of the figures.

34,635. Supposing you were suddenly authorised to draw up a scheme for your department with nothing but established men, do you think you could draw up a scheme which would not cost more than this?—I think so; which would not cost more.

34,636. (*Sir Kenneth Muir-Mackenzie.*) I understand you think the Committee of 1838 was right in giving the power of appointment to the head of the office?—I do.

34,637. But that it was not right in saying that the staff was to be non-established?—Yes.

34,638. That is really the position?—Yes. May I add that the way in which the Committee prophesied the business of particular departments would be done has not resulted in fact; their prophecy has not been fulfilled. They foresaw that these departmental offices could be worked as the offices of private professional men, and that there would be, as they said, constant changes, constant promotions, and constant moving of the people in them. That has not resulted.

34,639. Do you think they were wrong in not giving to your department an established staff?—I do.

34,640. As a matter of fact, the staff as appointed has proved satisfactory, has it?—Yes.

34,641. Under the existing system you can get the men you want?—Certainly.

\* *Vide* Appendix LXXIV.

† *Vide* Appendix LXXV.

18 April 1913.]

Sir CHARLES MATHEWS, K.C.B.

[Continued.]

34,642. Then where does the difficulty arise?—There is no difficulty under the present system, as I have been saying, in getting the men you want. Where, it occurs to me, injustice may creep in, is in keeping the men you have got for so long a time that they have no field to return to, and just at the time when they are most in want of provision they have none.

34,643. Then it is not a complaint with regard to the work of your department, but you feel, do you, that your employees are suffering under some injustice?—I think they are suffering under a very great disadvantage—"injustice" is a stronger word than I would use. By reason of the service which they give they are becoming much more valuable to my department and less valuable to themselves, and the longer they stay with me there is less chance for them, and it seems to me that at the end of their service they should be entitled to some provision.

34,644. I understand that really is your case; it is not that you cannot get the men?—No. If I am left to select them I can get the men.

34,645. (*Chairman.*) Does that imply that if any change is introduced by which the power of selection is removed from the head of the department no men will come?—Far from it. But it does not seem to me the way in which the most desirable men would come.

34,646. (*Sir Kenneth Muir-Mackenzie.*) Is there any man in your department who is in a position to say that any expectations were held out to him which have not been fulfilled?—I think not.

34,647. All that come into the department thoroughly understand what the conditions are?—As far as I know.

34,648. Do you happen to know whether the Treasury, in calculating the lump sum, which really means calculating what pay is to be given to the individuals, calculated that they might be expected to save money or make provision for themselves?—I know of nothing which goes to show that, much less to prove it.

34,649. That is to say, that you think the pay which is given to those men is not higher than the pay that is given to men who also have a pension in the public service generally?—I think not.

34,650. (*Chairman.*) Have you gone specially into that point, and compared the pay which your men, who have no pensionary rights, do now get with the pay of the men employed on similar work who are pensionable?—I am afraid not.

34,651. Would it be possible for you to do it, and give the Commission a memorandum on the point?—I do not know how I should contrast, my Lord, because I have been rather claiming for my department that it is exceptional and so on, so that I do not know how I should embark upon the search.

34,652. (*Sir Kenneth Muir-Mackenzie.*) I understand you hold the opinion, with regard to the class of men in your department, that they are young solicitors—or have you any barristers?—I have one barrister and 13 solicitors.

34,653. There is nothing to prevent you taking in a barrister?—No.

34,654. With that class of man, say, at about 25, do you think they are people who might be expected to go in for a competitive examination?—No. I think, however successful they might be at the examination it would be no recommendation, or rather the result of the examination would not be useful in determining whether they are fit for my work.

34,655. (*Chairman.*) It would, at all events, eliminate the suspicion of favouritism which, in the minds of the outside public, might exist regarding the appointment of a public servant by an individual. It might remove suspicion which does exist in the public mind to a certain extent, might it not?—It might, of course. I respectfully agree it might remove that impression, but I do not think it would produce as efficient a professional clerk.

34,656. (*Sir Kenneth Muir-Mackenzie.*) My recollection of the proceedings in 1888 is that, although it is true something was said about "flow" or something of the kind, the main position was that it was thought the office of a solicitor of a public department ought to be

run exactly like the office of any other solicitor?—That is so.

34,657. And it came in incidentally that they said in an outside office a big solicitor was able to man his office—some clerks stayed with him for ever and ever on the chance of a pension, and others made their way into other solicitors' offices; but they did not put that as being necessarily a thing which would follow in a Government solicitor's office. All that they said was that they thought a Government solicitor ought to run his office in the same way as any other solicitor?—Yes, that they certainly did.

34,658. Whether they were right or wrong I do not know. That is what you do, is it not?—That is what I do.

34,659. And it is because you do that that you are given the choice of your own men?—That is so, and because, if I may say so, I have followed the lines laid down by the committee. Suspicion may be created in regard to the making of appointments, or even apparently as to the sufficient auditing of my accounts, but my system is the result of the recommendations of the Committee of 1888.

34,660. As you have mentioned the accounts, is it not the case where a lump sum is allowed that that is the outside limit that the person who has charge of it may expend, but that he has to show the Treasury the amount of it that he does expend?—Quite so.

34,661. So that in a certain sense you really put before the Treasury an estimate?—That is quite so; that is just how the thing works.

34,662. (*Chairman.*) You have to furnish vouchers for every penny you spend, have you not?—Yes.

34,663. (*Mr. Matheson.*) You do not submit the names of the people you appoint to the Treasury or any other official body, do you?—No.

34,664. Do you think it would really hamper your independence of selection supposing the names and qualifications of the persons selected by you had to be submitted either to the Treasury or the Civil Service Commissioners for approval before the appointments were made?—With a power of refusal, of course; otherwise there is no reason to submit them to anybody unless you submit them with a power of refusal in their hands.

34,665. It would be a power of veto, but at the same time it would be the most mild form of public control?—I should only say as to that, that it might occasionally result in my loss of the best man that I could find. That would be the effect of it, but please do not think that, personally, I am anxious to get away from all control in the making of my selection. It is not control I am anxious to get away from, but it is that I should, within my own volition, have the power of selecting the man I believe to be the best.

34,666. I am trying to suggest the principle of public control of established persons in the least unreasonable form?—Far be it from me to say that you have not suggested it.

34,667. (*Mr. Shipley.*) Where is your office?—In Whitehall—Treasury Buildings.

34,668. Is the accommodation adequate?—Yes.

34,669. There has been no grumbling about it?—No, no considerable grumbling.

34,670. I do not really quite know what you do. I would like to know what one of your clerks does. Does he attend if there is a case on in the Law Courts?—In a case in London he attends at the Metropolitan Police Courts.

34,671. Do you yourself ever attend?—Sometimes I go to a Metropolitan Police Court. I have been to one this morning. I do not personally conduct my cases.

34,672. What happens when you go to a court? How is your business generally arranged?—The morning is devoted to correspondence. Then there are cases going on in the country and in London. Conferences have to be held with Mr. Guy Stephenson, the assistant director, with regard to my London cases; with Mr. Sims, the head of the country department, with regard to the country cases. Then I have counsel to see in London with regard to cases going on here; people who

18 April 1913.]

SIR CHARLES MATHEWS, K.C.B.

[Continued.]

wish to see me in my department with regard to cases which are going on anywhere and everywhere; chief constables come from the country for the purpose of getting my advice, and I have to determine, I will not say how many cases in the course of a day, but certainly a good many cases in the course of the week, as to the institution of prosecutions. These with consultations with the law officers on matters which have a graver criminal complexion—and they arise very often in these days—keep me at work, may I say, from about ten o'clock in the morning until about half-past six at night almost every day.

34,673. Then do you settle which of these professional clerks will go to each case?—It is Mr. Stephenson

rather who does that, and decides who will be the best of the professional clerks to attend to a particular case. But taking cases where I employ counsel, the clerk appears not as an advocate, but as the instructor of counsel. In cases where I do not employ counsel the work is done by my staff, and it is my staff I am represented by in public in the hearing of cases during their early stages.

34,674. When you employ counsel how do you pay them? Do you get a special grant from the Treasury?—I pay them out of my vote.

34,675. Out of the 6,000?—Oh, no; out of a different vote to that—out of the vote given to me by Parliament for the purpose of conducting prosecutions.

## EIGHTY-FIFTH DAY.

Thursday, 24th April 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.  
K.C.

Sir DONALD MACALISTER, K.C.B., C.S.I.  
Mr. ARTHUR BOUTWOOD.  
Mr. JOHN ROBERT CLYNES, M.P.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Sir ALEXANDER KING, K.C.B.,

recalled and further examined.

34,676. (*Chairman*.) There is one point, Sir Alexander, in connection with the Post Office on which I did not question you last time, and inasmuch as the Post Office is the most prominent department in which the question arises I have given you the trouble of coming here again. The question is that of civil rights. What is the situation in the Post Office on that question?—I hand in a copy of the rules governing the situation in the Post Office at the present time (*handing in the same*).

34,677. Do you desire to make any remarks upon the rules, so far as your experience in the Post Office department enables you to do so?—I think it is most desirable that the rules should be maintained.

34,678. Do you think it is desirable that public officials should take part in local politics; in connection, say, with the work that is dealt with by county councils?—I think it was a mistake for the Government of the day to make the concession in regard to county councils, because county councils are very largely political bodies now, and, occasionally moreover, there is a difficulty in the matter of attendance at county councils.

34,679. If attendance at the county council clashes with the proper performance of a postal official's duty, is it not within the power of the department to tell him not to attend?—Certainly, but no postmaster likes to put obstacles in the way of attendance, and, if a substitute can be found, the permission to attend is given.

34,680. To what class of postal officers does this permission to stand for county councils chiefly apply?—To every Post Office servant.

34,681. No doubt; but what class of Post Office servants is most likely to make use of it?—The large classes, I think, simply because of their numbers. We have postmen members of county councils, and sorters and sorting clerks.

34,682. When you say postmen, do you mean the local post office keeper?—No, the man who delivers letters.

34,683. Is he ever elected to the county council?—Yes, as a labour representative generally.

34,684. Are there many postmen who are members of county councils?—No, not many.

34,685. But the number may grow?—Yes. I should think there would not be more than a score altogether.

34,686. Are local post office keepers, as a rule, whole-time or part-time officers?—In the towns they are whole-time people, but in the villages and small towns they are generally shopkeepers.

34,687. It would be hard, of course, to impose any restriction upon people whose whole time you do not engage; was there ever such a restriction upon them?—Yes, as regards county councils up to 1909, not as regards borough councils.

34,688. They were free to stand for borough councils before 1909?—Yes, I have the dates here. Municipal borough councils were allowed in August 1894; county borough councils in 1902, and then the county councils in 1909.

34,689. Then the permission covers the whole area of local government; all local bodies now are open to postal officials to sit upon?—Yes.

34,690. Have you had any complaints that the exercise of this privilege does interfere with their work?—No, I cannot say that we have.

34,691. Does their official position in any way help them to advocate their views on local politics?—I do not think that their official position helps them at all.

34,692. So that you really cannot point to any matter in which their exercising the privileges of citizenship does conflict with their official duty?—Except in the matter of substitution, and occasionally they are led to go beyond what is allowed by the rules.

34,693. Do they show willingness to conform their conduct to the rules when the matter is pointed out to them?—Well, we tell them that they must; they do not like it, but we have to tell them that it is not allowed.

34,694. Comparing the existing state of things with what it was before these concessions were made, do you find that the postal administration is in any way less efficient now than it was formerly owing to those concessions having been made?—No, I do not think the service is in any way less effective, but we do at times

24 April 1913.]

SIR ALEXANDER KING, K.C.B.

[Continued.]

of parliamentary elections get rather more complaints than we used to get, and I think it is because of these concessions in regard to local bodies. A Post Office servant knows that he can talk about political matters at a county election, and he proceeds to talk about political matters in a parliamentary election, and then we get a complaint and we have to stop him.

34,695. Is he not permitted at present to talk about political matters in a parliamentary election?—He is not permitted to take a prominent part in politics in a parliamentary election.

34,696. May he take a less prominent part?—Yes, every Civil servant can vote.

34,697. Can he speak or appear on the platform?—No, we call that a prominent position.

34,698. Are the complaints really serious?—No, they are not serious, but I am afraid they would be very serious if the present restriction were removed. I have a return here of the complaints in the last three General Elections beginning in 1906; there are altogether 82 cases.

34,699. In the three elections?—Yes.

34,700. Throughout the United Kingdom?—Yes. There were public complaints in 54 of the 82 cases.

34,701. What do you mean by public complaints?—A member of the public or a candidate or a member of his committee would write up to the Post Office and say, "Mr. Jones, a postman, is taking a very prominent part in opposing my candidature."

34,702. As contra-distinguished from these public complaints, what would be the nature of private complaints?—Private complaints are generally matters that the postmasters send to us, or in some cases the officer himself asks whether he might do such and such a thing—was he committing an irregularity because he has done it?

34,703. Out of the 54 cases, into how many did you think it necessary to inquire?—Into all of them.

34,704. Did you find that disobedience to orders was serious in all of them?—It was sufficiently serious to provoke very strong comment in many cases.

34,705. Were the complaints well founded in the majority of cases?—Yes, it was found that people had broken the rules by taking a prominent part in the election. That is not so much the real reason for objecting to any change; it is that the public would lose confidence in the Post Office. At the present time every one, except perhaps a few cranks, believes in the absolute impartiality of the Post Office, but if the Post Office began to take sides in parliamentary elections I think that the confidence which we enjoy at present would disappear.

34,706. What is the character of the injury or of the help that these officers of the Postal Department could inflict or give in general elections beyond their personal advocacy of a particular candidate's cause?—We have complaints of this kind, that a postmaster or a sub-postmaster is a very violent Radical, and he is keeping back Conservative telegrams. We have complaints that a postman has destroyed circulars sent out by the other side. We get them from both sides, Radical and Conservative alike. There is one feature about this return which, I think, does not quite accord with the views expressed by Mr. Ammon in his evidence before the Royal Commission. The whole of the officers concerned in these 82 cases are people of the rank and file. There is no complaint against an officer of any higher standing. Mr. Ammon's contention in answer to Questions 18,431, 18,577, and 18,611, appears to be that, while it may be desirable for high officials to refrain from taking an active part in politics, there is no objection whatever to officers of lower grades so doing. Our experience points to exactly the opposite conclusion: that the public does not know anything about the higher officials. If I were to go on a platform in London nobody would know who I was or where I lived; but a man in the lower ranks, a sub-postmaster or a postman, is known by everyone who goes into the office. I am not now speaking of London, but of an ordinary town. It is the fact that those officers are known to belong to the Post Office that leads to these complaints. The complaints I admit are generally trivial, but we do not want to do anything which would

weaken the confidence that the public have at present in the Post Office, in our impartiality. If I may refer to another point on which Mr. Ammon laid much stress, it was that the institution of open competition, or of competition as a means of admission to the Service, prevents the use of political influence in the matter of appointments. That is true about the higher classes—the clerical classes; but as regards postmen and sub-postmasters, appointments have never been made by competition, they have always been made by selection from boy messengers or from sorters, and sub-postmasters are selected locally. As regards the large classes of sorters, telegraphists, and sorting clerks, they have in the past been recruited partly by limited and partly by open competition; but the proposal now is that they should be entirely recruited from the lower ranks, from boy messengers. There would be a test examination, but it would not be open competition on which Mr. Ammon relies so much.

34,707. Does the proposal mean selection followed by a qualifying examination?—There will be an examination at the age of 16, which would be of the nature of a competitive examination for the purpose of selecting the boys for the better posts; that is to say, the boys who came out best would have the choice of the telegraphists' posts, and the boys who came out worst would have postmen's places. These lower classes number altogether about 100,000 people, so that there would be scope for the use of political influence in appointments. I do not say that it would be used. Up to the present time it has not been used.

34,708. There the exercise of political influence would be from the top, hitherto we have been talking of the exercise of political influence being brought to bear by voters in dealing with the appointment of people to the public service?—Yes, but it might be with the object of securing votes.

34,709. You are looking at it now from the other point of view?—Yes.

34,710. Does that exhaust what you desire to say, or is there any other point that you wish to mention? You have, I think, a copy of Mr. Ammon's evidence?—Yes, I have marked one or two paragraphs in Mr. Ammon's evidence. For instance, in reply to Question 18,402, Mr. Ammon points out that we have within the department men who hold various and diverse political opinions, but they have never allowed them to enter in any way into conflict with their duty. I do not think there is any fear of that. My fear is what I have already mentioned: I am not afraid of internal discord, I am afraid of losing the confidence of the public in the Post Office. Then again, in reply to Question 18,435, Mr. Ammon says: "Nearly everyone knows in the Service what are the politics and bent of mind of the different people in it." I have been in the Service now for 40 years and I do not think I know the politics of six out of all the higher officials. I do not know the politics of the second secretary; I have not the least idea what they are, or of the third secretary. I happen to know the politics of the gentleman we sent to Dublin, because it came out in connection with his selection for Dublin; but it was quite by accident that I discovered he was in favour of Home Rule.

34,711. I do not suppose that his supposed Home Rule proclivities would be apparent in Dublin in his administration of Post Office business?—Not in the least; but I am merely on the question of the knowledge of the politics. I do not know the politics of more than a score of people in the Post Office with whom I may be intimately connected. Then there is another little mistake that Mr. Ammon makes in reply to Question 18,527. The question was, "You mentioned just now that the Post Office Federation was affiliated to the National Labour Party," and he said "Yes." The Federation was not in existence six months ago, and the Labour Party came into existence in 1900, so that that must be a mistake.

34,712. (Mr. Philip Snowden.) That, I think, is my question. That is a mistake. It was the Postmen's Federation, not the Post Office Federation. I evidently did not notice the mistake in the print. As regards the Postmen's Federation, Mr. Ammon was not mistaken?—No. In reply to Question 18,532 Mr. Ammon

24 April 1913.]

Sir ALEXANDER KING, K.C.B.

[Continued.]

says that no objection would be taken to the acceptance of a seat by a Post Office servant on the executive of the Labour Party. That is quite wrong. We have objected two or three times when we have heard of it.

34,713. (*Chairman.*) Was your objection effectual?—Yes, it would mean dismissal if the man did not obey. We allow delegates to the Labour Party; to congresses of the Labour Party the different Post Office Associations send delegates, but we have forbidden two or three people to hold office in the Labour Party.

34,714. The Post Office Department seems to be not very determined; in fact, to have vacillated in its treatment of the question. When you allow postal servants to send delegates to the meetings of the Labour Party, do you not thereby recognise a germ of solidarity between the Labour Party and your Post Office employees, and could you be reasonably dissatisfied if it grew into a closer union?—I would rather see it put an end to than grow into a closer union.

34,715. That may be; but if you go on as you are going, can you reasonably object if a little later on the two bodies become consolidated? If that came to pass postmen would have their representation in Parliament through the Labour Party, and might allege that they had it with the consent of the Post Office?—They could not allege that under the present rule unless the rule were relaxed.

34,716. But if under the present rule you allow these relations between the Labour Party and Post Office employees to continue, you cannot object if these relations get more intimate?—I think this association with the Labour Party has gone far beyond what was intended at first. The Labour Party in its inception was not regarded seriously as a political party; it was regarded more in the nature of a Trade Union—as working for Trade Union ends, and at that time the sanction for affiliation with the Labour Party was given, I think, on the ground that the Labour Party was not regarded as a political party. But now it is a political party.

34,717. It is very clear that it is a political party now. It seems also to be clear that it was a political party in the year 1909, nevertheless the Post Office in that year relaxed the rules?—No, the Government relaxed them.

34,718. Well, the Government of the day relaxed the rules and enabled the Post Office employees to exercise political rights more widely, and they exercised those rights in establishing a connection with the Labour Party. If things go on in that way, and a member of the Labour Party says in the House of Commons that he is there to represent the views of the Post Office subordinates, what answer would you have to make?—I think that any Member of Parliament could take up that position now.

34,719. But in the case I put he might say he was the elected representative of your subordinates whom you have allowed to enter into political association with the Labour Party?—Yes. I admit that it is not consistent, and I should like to see the rule altered now that the Labour Party is a definite political party. Our rule, I may mention, as late I think as 1903, was worded in this way: "A Post Office servant may not take up a prominent position on one side or the other," showing that at that time we recognised only two political parties. Of course, we had to alter the wording as the Labour Party grew, but we did not alter the concession which had been made in the matter of the affiliation to the Labour Party, and whether any Government would be strong enough to do that I do not know; it would be a very desirable step from the Post Office point of view, in my opinion.

34,720. Are there any other points in Mr. Ammon's evidence that you desire to comment upon? We are not anxious to dwell on small points, but mainly on broad principles?—Mr. Ammon is in error only on broad principles on those two points: first, that it is the higher officials who probably would be objected to by the public as exercising influence, and secondly, that the method of appointment to the classes most closely concerned is now by open or limited competition.

34,721. (*Sir Donald MacAlister.*) From the point of view of an effective Post Office your objection is that as the officials of the Post Office handle the correspondence and communications of all political parties, the persons who carry out that handling must be above suspicion of bias in dealing with it?—Certainly. I may say that, as a rule, I do not believe there is any bias or mistreatment of an opponent's correspondence or telegrams, but we do not want room for suspicion even.

34,722. I have heard, for example, of collusion sometimes suspected or alleged between telegraph operators and people engaged in betting?—Yes; that does happen sometimes, not very often.

34,723. And that has impaired the confidence of the betting ring?—Very much. I should like to see it more impaired.

34,724. I meant by that to suggest to you that the danger is a real one; it is not merely an imaginary one on the part of the Post Office?—Yes, it is certainly a real one.

34,725. During elections there are innumerable opportunities of tampering with the freedom of communication in the hands of subordinates of the Post Office, if they hold strong political opinions one way or the other?—Undoubtedly, a large part of the campaign of an election is carried out through the Post Office; there are of course public meetings, but the campaign is largely carried out by means of circulars, letters, and telegrams.

34,726. And, as we have learned, subordinates of the Post Office are influenced by strong political motives at present?—A very small number, because of the existing rule; but if the rule went I am afraid we should be inundated with complaints of charges of unfair treatment from one side or the other.

34,727. The object of the rule, therefore, is to prevent, first of all, the subordinate officers as well as others from identifying themselves more than they do at present with political motives?—Yes.

34,728. And, secondly, to prevent the fact that they are so identified from being strongly in the mind of the public?—Yes, that is the main reason.

34,729. (*Mr. Hoare.*) Did you say that an employee of the Post Office could not become a member of the executive of the Labour Party?—Yes, it is forbidden.

34,730. I do not quite understand that. You have Mr. Ammon's evidence there, perhaps you will refer to Question 18,466, where I see he says: "At periods two officers of our association were on the executive of the Labour Party"?—We did not know it. I have two cases here in which we have told them that they must come off the executive. One case Mr. Ammon referred to I think, an Exeter case. It was found in that case that a postman in Exeter held office in the branch of the Labour Party at Exeter. We informed him that it had always been held contrary to the rules for a Post Office servant to hold office in any branch of a political party, and by the Postmaster-General's instructions he was required to resign his position. We had a similar case at Glasgow earlier in the same year where the same course was followed. If we had known of these two cases which Mr. Ammon refers to we should certainly have called upon the officers to resign their positions.

34,731. These two cases look like something rather more than members of local bodies of the Labour Party. As I read the answer it looks like the central organisation of the Labour Party. Do you know whether that is so?—That is how I read the answer, but we did not know of the fact. If we had known it we should have required the men to resign.

34,732. It strikes me as rather curious that the Post Office should not have known of two of its servants holding what obviously is a prominent position in the organisation of one of the great political parties. Does it strike you like that?—No; we really do not look out for cases of infringement of the rules; they are brought to our notice by other people. We do not look out for them, and we do not study the list of office-holders of the Labour Party.

34,733. It may be, then, that there are a number of infringements of the rule of which you do not know?—It may be so, but I do not think it is probable; we are

24 April 1913.]

Sir ALEXANDER KING, K.C.B.

[Continued.]

generally told. Some one writes to us and says: "Are you aware that Mr. So-and-so holds office," it might be in the Conservative League, or the Labour Party, or some other party.

(*Mr. Philip Snowden.*) May I point out that the "two officers of our association," spoken of by Mr. Ammon, were members of the association, but not Post Office servants.

34,734. (*Mr. Hoare.*) (*To the Witness.*) Does it not then strike you that if that is the case this answer might be misleading to anyone who has not an intimate knowledge of the constitution of this particular organisation?—To anyone who has not that knowledge it may be misleading, and no doubt, if Mr. Ammon had thought of that, he would have explained it. To anyone dealing with these associations day by day, as Mr. Ammon does and I have to do, it is a well-known fact that some of their office-holders are not in the Post Office service.

34,735. (*Chairman.*) But, so far as the effect is concerned, that makes no matter. It is the views of the Post Office employees which are expressed through their delegate. It makes no matter that they are not expressed by an officer of the Post Office?—But it is a question of the Post Office rule. We cannot apply the rule to outsiders.

34,736. It is a question whether the letter of the rule has been adhered to, while the spirit was violated?—No, I do not think the spirit was violated more than it could have been violated in other ways. For instance, in the last General Election an ex-postman stood for Member of Parliament, and if he had been elected he would certainly have represented the views of the Post Office employees.

34,737. That is not my point. Here you have a rule prohibiting Post Office employees from being members of the Labour Party's association?—Office-holders.

34,738. That is the rule?—Yes.

34,739. If in order to get round that rule (I do not say that was the object) the Post Office employees in convention assembled say: "None of us can go, but we will depute our secretary, who is not a Post Office servant, to go," the letter of the rule may be observed, but the spirit of the rule is violated?—I do not think the spirit of the rule is violated.

34,740. (*Mr. Hoare.*) May I just amplify that last question put to you by the Chairman. Is it not your object to keep the Post Office impartial and not to have it connected with any particular party?—Certainly.

34,741. Would you not say, then, that the fact that an association of Post Office servants sent a paid secretary to represent them upon the organisation of the Labour Party, might naturally excite a feeling outside that the Post Office was not impartial, and that through its servants it was becoming associated with one of the political parties?—I think that inference might fairly be drawn.

34,742. (*Mr. Shipley.*) Do you think that these rules should apply to other Civil servants besides those of the Post Office?—No other Government service is so intimately and closely connected with the work of the country as the Post Office is.

34,743. Do you think it is wise for Civil servants generally to take a prominent part in politics?—No, personally I think it is very unwise for any Civil servants to take a prominent part in politics.

34,744. And there is an increasing number of Civil servants, every year they grow in number?—Yes.

34,745. So that an increasing number of citizens are debarred more or less from taking a prominent part in politics?—They can vote.

34,746. I was going to say that not one in a thousand of our Civil servants wants to take a prominent part, very few men want to go on the platform and speak. I think it is rather a happy thing, but many other people do not. What I wanted to know really is this: do you think it would satisfy the desires of these people if they could be made into a special constituency which would be scattered like the London University constituency. Do you think that would be workable, and that it would do any good or harm. They would not have a vote for any particular locality, but they would have a vote as Civil servants, just as an M.A. of

London University has a vote for the university, no matter where he lives?—But that would not remove the general objection, because they would still declare themselves on the side of the Conservative or Liberal or Radical Party, or whatever party they belonged to.

34,747. But they could not interfere with the letters or telegrams of such a constituency?—But it is the risk of being suspected of active partiality that I am afraid of. Assuming, for instance, that a postman in York was advocating the cause of the Unionist candidate and the Radical or Liberal candidate did not get his circulars through as quickly as he thought they ought to get through, that man would at once be suspected of tampering with the Liberal or Radical circulars.

34,748. It is the law of Cæsar's wife?—That is what we ought to aim at.

34,749. (*Sir Kenneth Muir-Mackenzie.*) You mentioned that you had had cases of complaint, I think you said 82?—Eighty-two in all.

34,750. In how many of those cases did it appear that the thing had been done of which complaint was made?—In every one of the 54 cases in which complaint was made.

34,751. Used it not to be the case that Members of Parliament used to have, as a sort of patronage, the giving away of the postmasterships throughout the country?—Yes.

34,752. That has been discontinued?—For the large postmasterships it was discontinued about 50 years ago; in the case of sub-postmasterships and the smaller postmasterships it was discontinued only, I think, about 15 years ago.

34,753. And nothing of the sort takes place now. I thought you said there was something in the way of nomination or selection, but that there was nothing in the way of competitive examination?—It is selection by the local surveyors for the small sub-post offices. For large offices it is a question of promotion which is settled at headquarters.

34,754. In these small offices is there no sort of political influence brought to bear for the purpose of selecting these people now?—Theoretically there is none, but actually it is attempted sometimes.

34,755. (*Mr. Boutwood.*) In reference to what Mr. Hoare asked you, I see that at Question 18,536 Mr. Snowden asked Mr. Ammon this question: "Your postal Federation, as I believe, has actually spent money in promoting parliamentary candidatures," and his answer is "That is so"; and then the next question is "And you have run candidates more than once," and the answer is, "Three times." Is not that a very considerable incursion into the political domain?—It is.

34,756. How does that fall within the general rule?—I do not think that is any actual infringement of the rule.

34,757. Not if a federation of Civil servants promotes a parliamentary candidature?—We should not allow an individual to do it.

34,758. A federation can hardly do it without the individual members of it openly committing themselves to some political side?—They do it in conference, but they do not do it in public. The association holds a meeting, and they decide at that meeting, which is a private meeting, to vote so much money to support the Parliamentary candidature of a certain person. I do not see anything there that our rules would touch.

34,759. So that the crime is rather in being found out; the publicity is really the serious thing—the actual participation in politics is not an offence?—I do not think the actual participation in politics is an offence really; it is the results of participation that we are afraid of.

34,760. I am not certain whether it is stated in Mr. Ammon's evidence; but, anyhow, I have seen it stated in newspapers that you have in the Post Office, I am not quite certain of the exact titles, an association which, I think, is called the Civil Service Tariff Reform League, and another which is called the Civil Service Social League, two associations of that nature?—Yes, Mr. Ammon refers to them at Question 18,541.

24 April 1913.]

Sir ALEXANDER KING, K.C.B.

[Continued.]

34,761. Is not that another considerable incursion. The Civil Service Tariff Reform League can hardly be called non-political by any stretch of the imagination?—I have here, if I may read it, an answer given in the House of Commons which meets that point. "In interpreting the regulation, which states that Post Office servants, as Civil servants, ought to exercise a certain reserve in political matters, I have adopted a uniform principle in dealing with the various societies to which my attention has been directed."

34,762. (Mr. Graham Wallas.) Is that Mr. Herbert Samuel?—No, Mr. Sydney Buxton. "There is no objection to the formation of societies, political and other, among Post Office servants, provided Post Office servants do not take a prominent or active part in political contests; but in order that there may be no doubt as to the observance of this rule, it is not expedient that such societies should be specific branches of societies which take an active part in politics." In the case of this Civil Service Tariff Reform League, the Post Office people were told that they must not be a branch of the general body of a society which took an active part in politics; if a dozen or more men liked to meet and call themselves the Post Office Tariff Reform League there was no objection whatever, but they must not take an active part themselves nor must they be branches of a society which takes an active part in politics.

34,763. (Mr. Philip Snowden.) Would you mind defining a little more clearly what you mean by a certain reserve?—It is very difficult to say. I think I should define it by declaring what he must not do, that is to say, he must not take an active or prominent part in politics.

34,764. That leads to a further question; what do you mean by an active or prominent part in politics?—A part which brings him prominently before the public as connected with one party or another.

34,765. You do not object then, I gather, from that reply to his being brought before the public in connection with politics, provided he is not brought too prominently before them?—I think if he is brought before the public it has a bad effect, it weakens the public confidence in the Post Office.

34,766. You do not object to his taking a part in politics provided that his activities do not bring him prominently before the public?—No.

34,767. You said that there were a number of postal officials on the county councils?—I do not think that there are a large number.

34,768. Not more than 20?—No.

34,769. Are you quite sure on that point?—I am not sure.

34,770. Have you got one?—Oh, yes.

34,771. On the rural councils, not including county boroughs?—I think we have a few on rural councils, two or three; because we have had difficulties in connection with their absences. The number is very small.

34,772. I am surprised to hear that there is one?—I think we have two or three on rural councils.

34,773. In regard to the restrictions that you impose upon the political freedom of sub-postmasters, are the rules that they have to observe as stringent as the rules that have to be observed by those who are wholly employed by the Post Office?—Yes, quite; in fact there is one paragraph which refers specially to sub-postmasters.

34,774. Do you think it is a fair restriction upon a man's individual freedom to impose as the condition of appointment to a post, which brings him in only a small portion of his living, that he should keep quiet in political matters?—I think if the imposition of those restrictions is necessary to the proper performance of the duties of the post which he is seeking, it is quite right to impose those restrictions.

34,775. Seeing that sub-postmasters as a rule are men engaged in business, and as a rule they know their customers well—their customers are usually their neighbours—do you think that at times when everybody's interests are in political matters it is possible for a sub-postmaster to refrain from talking about political questions to his customers?—I do not think

we should object to his talking about political questions to his customers. What we object to is his placarding the front of his shop, the front of the post office, with the bills or election notices of either candidate.

34,776. But in the 82 complaints to which you refer is there any complaint of the nature I have just indicated, that a sub-postmaster has given expression to his political views or his partiality for a particular individual candidate?—No.

34,777. Are you quite sure?—Yes.

34,778. Is there not one case from Blackburn in that list (perhaps you have not the full record) at the election of January 1910?—May I read the causes of complaint in sub-postmasters' cases?

34,779. Yes?—"Husband of sub-postmistress canvassing in parliamentary election," that is the first.

34,780. You actually place a restriction upon the husband of a sub-postmistress?—No action was taken in that case; that is the first complaint. This is to show how the public complain, rather than our action, "Sub-postmistress exhibits Primrose League poster"; the poster was removed. Another "sub-postmistress exhibits political notice"; it was removed. "Undue political activity," that is rather vague. I do not know whether that might be the case you were speaking of—"Presides at political meeting," "Exhibits party poster," "Exhibits political cartoon," "Uses official information for electioneering purposes"—that is the worst of the lot. Here is another: "Charged with having made indiscreet statements with regard to Old Age Pensions."

34,781. That is the one I refer to?—No action was taken in that case, but it shows how eager the public are to take up any complaint on political matters respecting a servant of the Post Office, or even anyone connected with the Post Office, as in the case of the husband of a sub-postmistress.

34,782. Now about this Postmen's Federation being affiliated to the Labour Party. I am afraid your impression of the history of the Labour Party is not quite historically accurate?—I dare say it is not, but that is the view we took at the Post Office—that it was a very small thing and did not matter.

34,783. If you looked at the constitution of the Labour Party, which was really formulated at its first conference, you would see that it was then formed for the purpose of securing direct representation in Parliament, and that from its very inception it was a political party, and the Postmen's Federation has been affiliated to this body since its inception, and the members of the Postmen's Federation make a financial contribution to the funds of the Labour Party?—Yes.

34,784. Could you imagine any action more political than that?—Yes, I think I could. That is the action of an association, and the public do not know the association. The public know the man. If a man makes a contribution, and it is known, the public think "That man has very strong views; I do not think I can trust him with my letters; he might tamper with them."

34,785. You do not think that the fact that the Association of Postal Servants is associated with a political party can convey the idea to the public mind that the Post Office itself is politically partisan?—I think not.

34,786. I am glad to have that answer, because it is quite contradictory of the last answer you gave to Mr. Hoare?—Is it?

34,787. You have other political organisations in the Post Office in addition to those which Mr. Boutwood mentioned?—Yes.

34,788. You have a Women's Suffrage organisation?—Yes.

34,789. You do not object to women postal servants taking part in the suffrage agitation, provided they do not get into prison?—We have had some of them in prison even; but at present it is not regarded as a political party.

34,790. You have had some in prison?—Yes, one or two.

34,791. You did not dismiss them?—No, they took their holiday.

34,792. You have had 82 complaints arising out of the last three General Elections?—Yes.

24 April 1913.]

Sir ALEXANDER KING, K.C.B.

[Continued.]

34,793. How many postal servants have you to whom that rule applies?—It applies to the whole 200,000 odd.

34,794. You have had 82 complaints out of over 200,000?—Yes, but they are not all dealing with letters and telegrams, and known to the public.

34,795. And many of them you found were so frivolous that you took no action?—That is so.

34,796. You referred to one case which I think everybody would regard as a very serious case, if it could be substantiated, where the postmaster was charged with having kept back some election telegrams?—Yes.

34,797. Would it not be possible for action like that to be taken whatever were the regulations in regard to political activity?—Certainly, and if it had been proved that he had willfully kept them back we should have had to dismiss him and probably to prosecute him.

34,798. But it was not proved?—No.

34,799. What is your view on this point? If you restrain a person's freedom of action, do not you think there is a tendency to drive that man into doing what he desires to do in an underhand manner, and that the more therefore you restrict what I might call the open political action of postal servants, the more likely they are to take political action which is not likely to become known?—I think if it does not become known the danger I am afraid of does not arise. It is the effect upon the public mind that I am afraid of. If the public do not know what the man is doing they are not influenced.

34,800. No regulation by the Post Office or any other Government department can prevent a man from having political opinions?—No.

34,801. Have you read the evidence of Sir Matthew Nathan, your predecessor, which was given before this Commission?—Yes.

34,802. Do you remember what he said upon this question?—So far as I remember, he said that he saw no objection to the removal of all these restrictions. I do not wish to put myself in comparison with Sir Matthew Nathan, but I have had 40 years in the service of the Post Office, and Sir Matthew had, I think, two.

34,803. Would you subscribe to his opinion?—No, certainly not.

34,804. You referred to the case of a postal official at Exeter who held some official position in connection with the local branch of the Independent Labour Party; you called upon him to resign that position?—Yes.

34,805. According to the Post Office interpretation of the maintenance of a certain reserve, would he have been permitted to continue to be a member of such organisation, provided he had not taken a prominent part in politics?—Yes.

34,806. Now I want to ask you just a word or two about the regulation with regard to standing as a candidate for a municipal body. You said that you thought the remission of the restriction with regard to standing for county councils had been a mistake, because county council elections are fought largely on political lines?—Yes.

34,807. Is it within your knowledge that the elections for county borough councils and municipal bodies are fought much more on political lines than the elections for county councils?—I accept it from you. I did not know that.

34,808. And that as a matter of fact, the interest excited by municipal elections is far greater than the interest excited by county council elections?—I should have thought that, in the case of borough council elections, there would have been local interests rather more than in county council elections.

34,809. The point I want to put to you is this, as it always appears to me to indicate a strange inconsistency in the regulations of the Post Office, and I should like to have your explanation of it. You permit a postman, say, to stand as a candidate for a town council?—Yes.

34,810. And town council elections are almost without exception fought on party lines. How is it possible then, for a postman to take advantage of this permission from the Post Office without coming prominently before the electors as a prominent politician and fighting his election on political lines?—If they are fought as you say, on political grounds almost entirely, it is impos-

sible, I think, that he could come forward as a candidate without making known his political views or his political leanings.

34,811. You said that so far as you know, quite a number of postmen who were on county councils were nominees of the Labour Party?—That is the impression I have; I have not gone into it.

34,812. The Labour Party is above all else a political organisation, both in national politics and in local affairs?—Yes.

34,813. Therefore, if these men have been elected to municipal bodies under the auspices of the Labour Party, surely they must have taken a prominent part in politics and come prominently before the public in the course of their electoral campaign?—Yes.

34,814. You have taken no action in the matter?—No.

34,815. You did not regard it as any violation of the rule?—No.

34,816. Have you read the evidence, may I ask, of the Public Service Commissioner of Australia, which was given before this Commission?—No, I have not.

34,817. It is very interesting evidence; I commend it to you. Do you know anything about the rules with regard to participation in politics in the Australian Commonwealth?—Somewhat indefinitely. At one time, I think, they started a Civil Service constituency.

34,818. It was found to be unworkable?—Yes.

34,819. (*Mr. Graham Wallas.*) I want to ask you one or two questions on the interpretation by the office of your rule as to taking a prominent part in elections. Supposing there is a constituency in which a considerable number of postmen live, and are voters, and supposing a body representing them—a committee, say, representing them—asked for an interview with each candidate and asked the candidate to pledge himself definitely to vote for a committee or to grant certain pecuniary advantages to postmen, and gave the candidates to understand that unless they agreed to pledge themselves the local postmen will vote against him, would that be held to be a violation of the regulation?—I do not think it would at present.

34,820. Then if one of the candidates who was so interviewed stated, "I was interviewed by men who were delegated for that purpose by a body of Post Office officials, and I was told that if I would pledge myself to give them certain advantages they would vote for me, but if I would not give that pledge they would vote against me," you would take no notice of that complaint?—No, unless they had expressed themselves in violent language. If it was merely a representation to that effect I do not think we could punish them.

34,821. Are you of opinion that interviews of that kind have during the last few elections taken place wholesale at Parliamentary elections?—I did not know so much that interviews had taken place. I have seen circular letters sent to members.

34,822. Do you believe that there has existed a list of Members of Parliament who have pledged themselves on certain points desired by postmen?—Yes, I have seen the list published in service journals.

34,823. And that when a question of that action having to be taken has come up, there has been an active system of lobbying to enforce such pledges?—Yes.

34,824. All that is considered by you not to have come under your regulations?—Yes.

34,825. Mr. Ammon, at Question 18,481 said: "We do take action now in Parliament with regard to our own affairs, and have questions put." Nothing of that kind, deliberately pledging Members of Parliament, drawing up a list of members, interviewing and lobbying, and exercising pressure upon Members of Parliament comes in any sense under your regulations?—No.

34,826. Have you followed at all the history of the corresponding difficulty of political activity of Civil servants in Australia?—No, I have not any definite recollection of it. I have read of it at times, but I do not remember it exactly.

34,827. Would your impression agree with mine that it was activity of that kind that constituted the really serious difficulty in Australia?—Yes I believe it was put on that ground, that members were getting

24 April 1913.]

Sir ALEXANDER KING, K.C.B.

[Continued.]

tired of it; they did not wish to be worried in that way.

34,828. Have you come across in any sense the difficulty of political activity of Civil servants in America?—You mean in the United States?

34,829. Yes?—No. Until quite recently the Post Office employees in the United States were political servants and nothing else.

34,830. But now, as you know, a great number of postal servants are appointed by examination only?—Yes.

34,831. Do you know that complaints are made of lobbying and exercising pressure on members before elections and during meetings of Congress, for advantages?—I have not heard of that as regards America.

34,832. Then you would say that the whole of that very serious form of political activity is at present open to the whole body of postal servants?—Yes.

34,833. Do you think there is any need to check it at all?—I think, from the member's point of view, it is very objectionable; but looking at it as I must look at it, from the Post Office point of view and the desire of the Post Office to serve the public well, I do not see any objection to it. The only remedy would be to take away the vote from Civil servants.

34,834. You can see no other remedy at all?—No.

34,835. Do you think it would be wise to adopt in the postal service a rule like that which is imposed in the London County Council on its servants, that no Civil servant shall directly or indirectly use his official position for the purpose of influencing votes?—That sounds a useful rule, but whether it could be applied properly I do not know, and in the case you have in mind I do not think it could be applied. For instance, if Mr. Ammon lobbies, he does not lobby as a sorter; he does not use his official position for the purpose of lobbying; he lobbies as a voter.

34,836. I am slightly extending the subject. Do you think that such a rule would give you power in difficult cases which you do not possess at all elections, whether municipal or county or parliamentary?—I am afraid it would be too general to be of great use.

34,837. Is not the object of executive action to interpret general rules?—Yes it is, but I really do not think it would be of any use to us; I cannot see how we could apply it.

34,838. We used to have to apply it in the County Council, and we found it a very useful rule?—Yes, they used their position in the Council to approach the members of the Council.

34,839. I was applying it to approaching candidates during an election and influencing votes during the election; that is to say, by a teacher in class, for instance?—Could it be said that postmen or even a body of postmen who waited on a candidate were using their official position to influence the election or to obtain a concession?

34,840. I agree with you, but the rule might be used, for instance, to prevent a man from making political remarks in class, or it might be used in your case to prevent a man engaged in paying old-age pensions from drawing a political moral from that fact while he was doing so?—That is certainly undesirable; but if we found a postmaster advising a class to vote in a certain way, we should tell that postmaster that he had broken our rule.

34,841. But if a man, in the course of conversation while he is paying old-age pensions, states that the fact that he is so doing makes a reason for voting in a particular direction, he is, as a matter of fact, using his

official position for the purpose of influencing votes?—Yes, that is the case.

34,842. And it would be well to have a perfectly definite rule to prevent it?—The cases are so few that I do not think the rule would be very valuable.

34,843. Would you mind telling me who, under the existing rule, actually selects a sub-postmaster?—The selection rests with the Assistant Postmaster-General, Captain Norton.

34,844. What sort of procedure does he take?—On the occurrence of a vacancy, a notice is put up in the local post office and applications are sent in to the postmaster; he sees the candidates, goes and looks at their houses, and sends the applications up to the surveyor; the surveyor very often, if it is an important sub-office, goes himself or sends one of his assistants to look at the people who seem likely; he then makes recommendations and sends up a list of all the applicants with full particulars. These are gone through in the Secretary's office, and a recommendation is made to the Assistant Postmaster-General, who in the meanwhile has received a number of letters from Members of Parliament and other people.

34,845. Is there any instruction as to whether he is to give special regard to letters from Members of Parliament or not?—There is an instruction that he is not to give regard to them.

34,846. Is not that a new thing; is it not the fact that quite a short time ago a Member of Parliament was asked to make these recommendations?—That was the rule.

34,847. About how long ago?—Somewhere in the 'nineties; I think in 1898.

34,848. Would you say that any development in the direction of greater political freedom or activity on the part of Civil servants must necessarily be accompanied by greater care in preventing politics having anything to do with appointment or promotion?—Yes, I think certainly it would involve greater care in selection and greater difficulty.

34,849. If there has been a development in the direction of political activity since 1898, has it, as a matter of fact, been accompanied by greater care in regard to letting Members of Parliament have anything to do with appointment and promotion?—Yes.

34,850. Finally, the people who do the main work of the Postmen's Federation are not, I think, as a matter of fact, employees of the Government?—There is one man in a high position in the Federation who is outside the Service, and that is the secretary.

34,851. Under the present arrangement the secretary is, to use a technical term, recognised, is he not, by the Government?—Yes, he is now.

34,852. He has direct access to the Postmaster-General?—Yes.

34,853. He has periodical interviews with the Postmaster-General?—Yes.

34,854. In which he goes through a list of a large series of complaints which his body has to make?—Yes.

34,855. Those are officially dealt with?—Yes, he does not come by himself, he comes with three or four other members of the executive committee of the Postmen's Federation.

34,856. But he is the main mouthpiece?—Yes, he is the leading man in the Federation.

34,857. Although he is not in the service of the Government, the Government do, as a matter of fact, treat him as representing for that purpose an important body of their servants?—Yes, by a comparatively recent concession made by Mr. Buxton.

Mr. W. W. KENNERLEY called and examined.

34,858. (Chairman.) You are a second division clerk in the Board of Education?—At present I am actually a staff clerk. I was formerly a second division clerk.

34,859. You have expressed a desire to come before the Commission to state the case of the second division clerks. Will you do so briefly?—The case is already stated very completely in the statement we sent in to the Commission.

34,860. But you have asked permission to come here in order to supplement it?—In order to make one or two additions to it; but we more particularly desired to come in the hope that we might be cross-examined upon it.

34,861. We desire to hear any supplementary remarks that you wish to make?—In the early portion of our statement stress was laid upon the rather special condition of the Board of Education, particularly in

24 April 1913.]

Mr. W. W. KENNERLEY.

[Continued.]

regard to the size of the higher staff and the distinction of the office from other offices in certain respects. That point was made in general terms, but certain facts confirming it were not stated. I will now state them. The higher staff of the Board corresponding to Class I., the higher division in other offices, amounts roughly to 100 people, which I find on examination appears to be a larger number than exists in any other office in the Service. In the Treasury, for example, I find the number is from 30 to 33, in the Home Office about 28, in the Foreign Office about 55.

34,862. What point do you wish to make?—As to the enormous size of the higher staff in the Board of Education as compared with the size of the higher staff in other offices.

34,863. But is that a matter for you? Would it not rather be a matter of organisation for the heads of departments and the Government? Have you come here to criticise the organisation of the Board of Education, or have you come to place the case of the second division clerks before the Commission?—I have come to place the case of the second division before the Commission and to support it in this way, that owing to the large number of the higher staff, certain posts, which, in other offices are open to the second division, are not open to them in the Board of Education.

34,864. Because, you say, of the excessive number of the higher staff?—I do not say the excessive number; I say the large number in proportion to the number in other offices; but I can leave that point now, and go on to the next.

34,865. I do not see what point you have made on that, because if the staff be not too large there is no place taken up by the higher men which ought to be taken up by you. Unless you maintain that the higher staff is too large, and therefore that the second division are kept out of work which ought otherwise to fall to them, I do not see what point you have made?—That is the point. The point is that that work might be done in part by members of the lower staff.

34,866. I now understand you to say that the upper staff is too large for the work which the upper staff ought to do, and that consequently it occupies part of the ground which should be occupied by the second division?—Yes.

34,867. Will you go to your next point?—The next point is as to the disadvantage suffered by the clerical staff of the Board of Education owing to the absence of promotion. That is dealt with in part in the statement, but I have here some figures which bear upon it and confirm it. During the last 12 years in the Board of Education the number of appointments to the higher staff, to examiners as they are called, has been between six or seven annually as compared with an average number of appointments to the higher division in the whole Civil Service of 25·4.

34,868. What is the number of second division clerks in the Board of Education?—328, including minor staff clerks.

34,869. What is the annual average recruitment of the second division?—For the last four years I am told the actual figures have been 41, 15, 63 and 12.

34,870. You have had an annual promotion of seven?—No; that is the number of appointments to the higher staff from outside. The point is, that the number of appointments to the higher staff at the Board of Education has been six or seven annually from outside, as compared with the total number of appointments to the higher division of the Civil Service in all other offices of 25·4.

34,871. There have been six or seven recruitments from outside to the examiner's staff per annum?—Yes, annually for the last 12 years.

34,872. I suppose the recruitment made up for the wastage?—Yes.

34,873. What is your objection? It ought not to be to the size of the outside recruitment but to the smallness of promotion from your division to the upper division?—That is so. I will come to that point now.

34,874. What promotion has taken place from the second division to the examiner class?—One in the last 10 years.

34,875. There has been practically none then?—None.

34,876. Then your representation to this Commission is that you have not had a fair share of promotion to the examiner class?—Yes.

34,877. What is your next point?—The next point is that in other large offices, such as the Inland Revenue, the Admiralty, and the Customs, where Class I. clerks are employed, they are confined solely or mainly to the secretary's office, and in other large departments of those offices, for example, the Estate Duty Office of the Inland Revenue and the Accountant-General's Department of the Admiralty, Class I. clerks are not employed; so that the ordinary clerical establishments have opportunities in those departments to which there are no corresponding facilities in the Board of Education.

34,878. They have no opportunity of promotion to the first division, because you say the first division does not exist in those offices?—That is so; but parallel posts of equivalent value do exist.

34,879. Staff appointments?—Yes, staff appointments of a kind, high staff appointments.

34,880. You have some staff appointments in your office, have you not?—Well, they are not called staff appointments; higher appointments.

34,881. What is the highest appointment that you naturally would have access to or would get promoted to in the ordinary way without passing from one division to the other?—The highest appointments in the ordinary way (of which there are 11) is the headship of a section.

34,882. What pay does that carry?—450*l.* a year, with an allowance of 50*l.* or 100*l.* or possibly 150*l.*

34,883. A possibility of 600*l.* a year?—Yes. I believe there is no case in the Board of Education at the present time of an officer who enjoys that salary. There is one single post higher than that, that is the headship of a special section, the accounts section, which carries a salary of 550*l.* to 700*l.*; that is the sole exception.

34,884. Is the accounts section usually manned from your second division?—The accounts section is; but the head of the accounts section is in a peculiar position, over him there are two higher officers, the Accountant-General and the Deputy-Accountant-General.

34,885. Are they Class I. men?—They are Class I. men in effect. We have no actual Class I. men, but they correspond to Class I.

34,886. You mean the examiners?—Yes.

34,887. Do you object to that?—I think that those posts should be open, as they are in all other offices, to the clerical division.

34,888. Is there any other particular reason for which you claim you ought to have access to these two appointments in the accounts section, beyond the general claim that you make to have in your turn access to the Class I. or corresponding highest appointments?—No, except that they would form the natural termination of the career of a capable man in the accounts section, who has spent his time there and is expert in accounts, whereas at present he is brought to a dead stop and has two officers superimposed.

In some other offices promotion to Class I. has taken place to an extent which, while it may not be adequate, is not inconsiderable. The total of such promotions in the 10 years 1901 to 1910 amounted to 36.

34,889. In which office is that?—That is in the whole Service. The figures are taken from the information supplied by the Civil Service Commissioners.

34,890. Thirty-six in ten years; that is 3½ per year?—Yes.

34,891. What point do you make on this?—For the comparison. The proportion of such promotions to the number of direct examination appointments was as 36 to 254, or about 14 per cent.

34,892. I do not quite catch that point?—The total number of appointments from examination in the same period was 254 to the higher division. So that of the total appointments made 14 per cent. were by promotion.

34,893. You have 36 by promotion?—Yes.

24 April 1913.]

Mr. W. W. KENNERLEY.

[Continued.]

34,894. And how many have you taken from outside?—254.

34,895. You have from the second division a promotion of about 14 per cent.—Yes.

34,896. Do not you think that is a fair proportion?—That is for the whole Service.

34,897. You are now casting your view a little wider, and dealing with the whole Civil Service?—Yes, for the purpose of comparison.

34,898. That is the established Civil Service?—Yes.

34,899. Within what period did you say?—In the 10 years from 1901 to 1910.

34,900. Within those 10 years you have recruited 254 from outside, and you have had promotion from the second division to the extent of 36.—Yes.

34,901. Therefore the percentage is 14?—That is so.

34,902. 14 per cent. of the promotions within the Service and 86 per cent. taken from outside.—That is so.

34,903. Would you say that that is an unreasonable proportion as the rules stand? What is the justification for a higher examination for a particular class unless the great bulk of recruitment for that class comes from that higher examination?—Our view is—I cannot speak with very precise information for other offices—that that proportion is probably inadequate.

34,904. When you say that that proportion is inadequate as things are, I want you to tell me what your reasons are for saying that it is inadequate?—Judging from my experience of my own office, and what experience I have of men whom I know in other offices, it seems to me that a proportion of 14 per cent. would leave a good many extremely able men unpromoted.

34,905. Possibly?—And men who thoroughly deserve promotion.

34,906. It would take the cream, would it not?—Not all the cream, I think.

34,907. What proportion do you think would be fair?—It is difficult to generalise.

34,908. Would 20 per cent. satisfy your second division in the Board of Education?—I think probably not. I think a much larger proportion of the second division would be found to be able and qualified men.

34,909. Yes, but still are they supposed to be as able and as qualified men as the upper division?—I see no reason at all why a very considerable proportion of them should not be.

34,910. What proportion would satisfy you?—I have of course no right to speak on behalf of the Service as a whole, but I should think possibly half would be about right.

34,911. So that practically you would appoint one-half of the upper division by promotion from the second division and the other half by Class I. open competition?—At any rate that would be a much more reasonable proportion.

34,912. Would you really consider it a reasonable proportion?—I think so.

34,913. What is your next point?—Now I come to a point that I particularly wish to make clear, namely, that while for the Service generally the proportion of promotions to direct appointments by examination was 14 per cent., in the Board of Education during the same period it amounted to 1.3 per cent.

34,914. You have told me that; I have that point down?—The next point was the effect on the efficiency of the organisation of the division of the whole staff into two clearly defined classes, between which there exists a barrier, not only in the sense that it is almost impossible to proceed—

34,915. We understand that; we are quite seized of that point, that you can only get exceptional promotion?—Quite so. Not only in that respect is it a barrier, but it is a barrier as a sort of permanent gulf, in the sense that it separates people in regard to their intercourse and in regard to their respective status.

34,916. What do you mean by their status and their intercourse in this connection?—I can perhaps put it in this way. The office is divided by the existing

barrier into what may be called two camps, not in the sense of hostile camps, but rather camps of allied bodies of men.

34,917. (Mr. Boutwood.) Are you referring to what is sometimes called caste feeling?—Yes, largely that. It is more than merely that; it is a very complete separation of course; it arises out of caste feeling, and probably enhances it.

34,918. (Chairman.) What is the point?—The point there is that, owing to that position, the office suffers from the limitation of having two separate forces as it were, rather than a single force of men more or less homogeneous.

34,919. Is there not a division of work; is there not a higher and a lower class of work in your office?—In a certain sense, yes.

34,920. Then, if recruitment be in accordance with the division of work—the recruitment of highly-educated men for the higher work and the less highly-educated men for the lower work, the division may occur naturally—why should it be regarded as a source of hostility?—I expressly said that it was not to be regarded as hostile.

34,921. But when you talk about “camp” and “caste” and so on you introduce an element of antagonism into the relations of both classes?—There are more divisions of work than into higher and lower.

34,922. What are they?—There are a dozen divisions of work.

34,923. But work is higher or lower (or routine). Can you give me any other division?—There are grades of routine work and grades of higher work.

34,924. There may be grades of routine work or grades of clerical work, and there may be grades of the higher or administrative work; but can you suggest any other generic term for the division of labour?—I think that division of labour cannot be made in a clear cut way.

34,925. The division has been made before in previous inquiries into the Civil Service?—Quite so. I think that all those divisions were absolutely theoretical divisions which do not work out in practice. All grades melt insensibly one into another.

34,926. You always have dovetailing on the border line, but that does not prevent there being substantial division?—No, but there is no point at which the change is made *per saltum*.

34,927. That is probably true. Will you go on. Will you explain what you mean when you say that this division which you say exists—(I am not admitting the statement, but you say so)—has a prejudicial effect upon the work of the office?—Our main point is that there is not the same complete unity of interest and purpose as there would be if the class were more homogeneous, and if the work did not purport to be divided in this strict way.

34,928. Please go on?—Our next point is that the higher staff is absolutely divorced from the direct supervision and control of the clerical staff, so that a clerical member of a section owes a kind of double allegiance, first to the head of his section, and also in so far as he is brought into contact with the members of the higher staff in particular pieces of work, he owes allegiance to them.

34,929. What allegiance does he owe to the head of his section?—The head of the section has disciplinary charge; he is in charge and control of the section.

34,930. The head of the section's business is to see that the work appropriated to the section is performed?—Certainly.

34,931. And what you mean by the term “allegiance” is simply that the clerk has got to do his work; and that the head of the section is there to see that the work given to him to do is done?—Yes.

34,932. The head of the section is there to see that you do it; and it is the business of the superior officer to see that it is done in the proper form, and that it coalesces and combines with other work coming from other quarters to form the whole that has to be completed?—Yes.

34,933. Will you go on?—Another point is that the whole present atmosphere tends to make the clerical staff take narrower views of their work than

24 April 1913.]

Mr. W. W. KENNERLEY.

[Continued.]

they would naturally and properly do, and to limit their efforts to what is expected of them; that is to say, they are not supposed in general to carry their work beyond a certain stage.

34,934. That is what they are there to do?—Yes.

34,935. When they reach that stage their functions cease and the case goes on further?—Yes, but their performing the work up to that stage is handicapped and limited by the consideration that they cannot carry it beyond a certain stage.

34,936. Is there much in that?—I think there is a very great deal in it.

34,937. Will you go on?—I do not need to enlarge further upon that point.

34,938. I desire to give you the fullest opportunity of stating your views. I have read your paper very carefully, and I did not think it was necessary that you should come here to supplement it, but you asked permission to come; you stated that there would be great dissatisfaction in your body of clerks if you were not allowed to come and give evidence. I am, therefore, very anxious that you should state to the Commission in the fullest way your views, so that there may be no misapprehension that you have not had the fullest opportunity of placing your case before the Commission?—I am very much obliged to your Lordship. I think we accepted the position that you did not wish to take evidence.

34,939. I did not wish to take further evidence in your case, as I thought we had ample evidence as to the views of the second division. But you did not accept that decision, and therefore I asked you to come to-day. Your words are these: Writing to the Secretary on the 12th February 1913, you said, "May I refer you to your letter of the 2nd December last, acknowledging the receipt of the statement submitted on behalf of the clerical establishment of the Board of Education, in which you stated that a further communication would be made to me if the Commission desired to supplement the statement by oral evidence. My colleagues here are much concerned that no communication in that sense has yet been made, as they are most anxious that the case should receive such further and fuller discussion as can only be possible if an opportunity is afforded them of presenting a witness for examination. They are conscious, as is indeed indicated in the prefatory note, that the statement is not wholly adequate. In many instances the arguments put forward would have been more fully stated but for the expectation that a witness would be examined; and there are points to which *prima facie* objections may doubtless be raised which could be elucidated and substantiated by oral evidence." It is because of that letter that you have been summoned here to-day. I am therefore anxious that if there be any further supplementary remarks that you desire to make, you should make them now?—I think in a subsequent letter we wrote accepting the decision of your Lordship and the Commission that we should not be called to give oral evidence. What we were hoping for in submitting our statement was to be cross-examined upon our case.

34,940. (Mr. Matheson.) I suppose you consider that for some of the work of the Board of Education it is desirable that there should be persons who have had the highest education that the country can afford?—Undoubtedly, but our idea is that the clerical staff would by suitable encouragement provide people who have had, if not perhaps quite the highest education the country can afford, something that would be at least equivalent. Actually at the present time there are members of the clerical staff who have been called to the Bar, or who have taken degrees at the London University.

34,941. But you would admit that in an office which differs from other public offices in being concerned with the education of the country, it is very desirable that those administering it should have the highest possible educational qualifications?—Yes; we deal with that point specifically in our statement. We suggest that a proportion of the highest posts should be so filled.

34,942. You consider that your case is mainly a question of proportion?—That is so.

34,943. (Sir Henry Primrose.) I think about a year ago this Commission issued an invitation to anybody interested to send in a statement?—Yes.

34,944. What exactly is the reason for the very long delay in presenting your statement which did not come in until November 1912?—The difficulty was mainly that this statement, as I believe is rather unusual, represents not a single grade but practically all grades in the office, and the delay was largely due to the difficulty of preparing a combined case. When you have the interests of so many different classes to consider, it is extremely difficult to get such a statement prepared. Supposing the case had been prepared for a single grade, it would have been produced much more quickly; but it was felt that it would be an advantage to the Commission to have the case of the whole of the clerical staff presented in one statement.

34,945. It seems a long time to have taken—more than six months—to formulate your case?—It is a long time.

34,946. As a matter of fact, there is no limitation upon the discretion of the Minister for Education as to whom he shall appoint as an examiner or an inspector?—That is so.

34,947. Therefore, during all these years it has been open to every Minister in charge of the Board of Education to select, if he chose, one of the body whom you represent?—Yes.

34,948. I gather that one such person has been selected?—That is so, in 1907.

34,949. Do you suggest that there is some influence at work which has prevented the selection of other men who have been capable of being promoted?—What actually happened, I think, was this—that the convention against any such promotion was so strong that it was practically impossible.

34,950. How do you mean that it was so strong?—That is to say, that a beginning of such promotion was never made until 1907, in spite of repeated protests.

34,951. Do you really suggest that both the political and the permanent heads of the Board of Education have been so blind to the material lying to their hands of a most suitable kind that they have not utilised it?—I think that is the inevitable conclusion.

34,952. From your point of view?—Yes, from our point of view.

34,953. But there may be another reason, may there not, that they may not have thought that it was pre-eminently suitable?—Quite so; presumably they did not.

34,954. Can you say whether any representations have been made in favour of selecting officers of the clerical grade and they have been rejected?—Repeatedly. I do not say in respect of individual officers, but general representations in respect of promotion from the clerical grade.

34,955. General representations are of no use. Have individual men been recommended, say, by the permanent secretary and rejected by the political chief?—I should think not. My general impression is that for 50 years the idea of promotion from the clerical staff to the examiner's staff was not contemplated as a practical possibility, in spite of extremely able men having been in existence during that time amongst the clerical staff. I can give you an instance of one man who was a member of the clerical staff of the office and who left, and is the present principal of the Birkbeck College and was, I am not sure whether he now is, Dean of the Faculty of Economics in the University of London.

34,956. What stage had he reached in the office?—I am not quite sure, a moderately high stage; but I am tolerably certain, though I can only speak from inference, that he would have stayed in the office had the office offered any opportunity of reasonable advancement.

34,957. May we take it that your view is this: first, that the Playfair Commission and the Ridley Commission, and all other authorities who have pronounced on this matter, have been wrong in holding that in the public service it was desirable to have a

24 April 1913.]

Mr. W. W. KENNERLEY.

[Continued.]

higher branch of clerical appointments recruited by men with the highest educational advantages?—I think that both the Playfair Commission and the Ridley Commission were wrong in the way in which they attempted to carry it out.

34,958. I rather gather that you think that the principle itself is altogether wrong?—The principle of an exclusive higher staff recruited solely, or almost solely, by direct appointment from amongst university men, I certainly think is wrong.

34,959. Are you aware that ever since anything in the form of a Civil Service began, ever since 1855 without exception, all inquirers have taken the view that it is necessary to have men of the highest education brought in?—I am not precisely familiar with the whole literature, but I imagine that at least one such body of inquirers—namely, a committee, I think, of the House of Commons in 1873 definitely recommended another system.

34,960. But that was not a committee, considering the Civil Service as a whole, but merely the control of the Treasury over the Civil Service, and if you look back into the history of that committee you will find that the person who moved the resolution in that sense was Sir Stafford Northcote, afterwards Lord Iddeleigh, who himself before and afterwards was strongly committed to the contrary principle?—That is so.

34,961. So I do not think that amounts to very much. It was not the business of that committee to inquire into that particular point; they rather went out of their way to refer to it at all; and the person who moved the resolution in favour of it had before been convinced of the opposite principle, and reverted to it within a year after the Playfair Commission reported. I think I may say that speaking generally, without exception almost, all inquirers have held that it is necessary to have a higher division?—I should admit that necessity to the extent that it is necessary to have in the higher posts a considerable proportion of men of intellectual culture, if I may use the term.

34,962. I gather rather further that you call in question not only the judgment of those commissions and other authorities, but that you also call in question practically the whole system of higher education in this country, to judge by your paper?—To an extent, certainly.

34,963. Therefore you have taken up rather a difficult position to maintain, have you not?—We are not without authoritative support in the matter.

34,964. (*Mr. Boutwood.*) Can you tell me why in this statement you choose the technological branch as your typical one to give an account of the management?—It is largely accidental; several of the men who were particularly interested in the preparation of this statement were actually in the technological branch; it has no other significance; it is not particularly typical nor is it abnormal.

34,965. It is not the branch of your office which people in general hear most about. You refer in two or three cases to correspondence. I believe that many years ago everything that by any stretch of imagination could be called correspondence was exclusively in the hands of the examiners, but from your statement that does not seem to hold now?—That is no longer the case.

34,966. To what extent has that been departed from. When you speak of drafting letters, do you mean real letters, something more than a mere formal draft?—I mean something more than a mere draft. In some cases it is merely an adaptation of a more or less recognised form of words; in other cases it may deal with matters of some importance and intricacy.

34,967. It is a real letter written?—It is a real letter varying from a more or less formal letter to a more or less important one.

34,968. (*Mr. Philip Snowden.*) You are not proposing to this Commission the abolition of the higher division?—The higher division, as such, does not exist in our office.

34,969. You are not saying that there ought not to be for a certain proportion of the clerks men of high university education?—Not in the least.

34,970. But your point is, that if a person has entered the Civil Service in a lower grade who manifests the ability which qualifies him to take a higher position, he should not be precluded from being appointed to the post because of the accident of his entrance into the Service in that lower grade?—Certainly.

34,971. I understand from the figures that you gave that there have been 36 promotions to the higher division from inside the Service in 10 years?—Yes.

34,972. How many second division clerks are there in the Service?—I think, roughly, 4,000.

34,973. That is 36 out of 4,000?—That is so.

34,974. You would not then call that a very undue proportion?—No. I should call it undue in the limited direction.

34,975. I take it that your point is, that among those 4,000 second division clerks in the Service, there are more than 36 who have the ability and the experience to adequately fulfil the duties that are required in the higher division of the Service?—That is the position, and I think it is unquestionable from my experience of the second division.

34,976. Am I to understand that you would be willing to accept an arbitrary limit as to the percentage which promotions from the second division should bear to the total number of appointments made to the higher division?—That is a rather difficult question. Ideally, of course, the limit should depend in each case upon the actual number of men qualified.

34,977. (*Chairman.*) You did, in answer to me, mention a distinct proportion; you said that one-half of the appointments made to the higher division in any year should be taken from the second division?—I think that would probably be a reasonable proportion. It would be more liberal than the present allowance.

34,978. (*Mr. Philip Snowden.*) My point is this: Supposing that in any one year you had, say, 50 vacancies in the higher division, you would not lay down an arbitrary rule that 25 of those appointments ought to be filled by promotion from the second division if you had amongst the 4,000 second division clerks in the Service at least 100 who could fill those posts quite as well as men who would come in by competitive examination?—No, I should not wish to limit it. The mention of 50 per cent. is a sort of working compromise.

34,979. Would it not be more correct to say that the Chairman drew it out of you by his acute examination?—I am quite willing to let it go at that.

34,980. After mature consideration you are not willing to commit yourself to it. Does not this really represent, what I may say is your mature conclusion, that men already in the Service who have gained experience in certain departments of public work, and who might be men of exceptional ability regardless of their numbers, should have a claim for promotion to the higher posts before those outside, who would otherwise be called upon to enter the Service by means of the examination for the higher division?—Undoubtedly I should think so.

34,981. I want to put one or two questions to you about a matter that has already been raised as to what might be called the demarcation of work in the Board of Education; do I correctly understand you to say that there is no clear line of demarcation between the work done by clerks and by those who are called examiners?—There is a theoretical line, but in practice the line of demarcation tends to become blurred. There can be no absolutely rigid line.

34,982. Can you tell me what work you are doing?—Recently, for the last fortnight or three weeks, I have been taking the place of the head of my section.

34,983. What would be the nature of the work that you have been doing as head of the section?—General control of the section as regards discipline and arrangements, taking references from the constituent parts of the section on any points that were uncertain, and at the same time I have been doing my normal work, which at present is the charge of the statistical section of the elementary branch, a branch of the main section I am working in.

34,984. What is your present salary?—435l.

24 April 1913.]

Mr. W. W. KENNERLEY.

[Continued.]

34,985. Then you are getting a salary much higher than that of a junior examiner of the Board of Education?—Yes, the limits of the scale are within the examiners' limits; it begins higher and ceases earlier.

34,986. And yet, in the estimation of those who administer the Board of Education, the work which you are doing is supposed to be less important and less responsible than the work which is being done by a junior examiner, who is getting a much smaller salary than you are?—I would not quite like to say that; the position of staff clerk is to some extent analogous. It has been given in evidence here that their position is in certain ways regarded as parallel with that of an examiner. The secretary of the Board, I think, used that term in describing the relative positions.

34,987. You were speaking about second division clerks in the Board of Education having been called to the Bar?—That is so, I know of two or three cases.

34,988. Has any special recognition been given to them by the Board of Education on that account?—Not the slightest.

34,989. Although I believe members of the junior Bar have been called in direct and appointed to the post of junior examiner?—Yes.

34,990. And they have been appointed mainly because of their supposed legal qualifications?—I think so; that has been an element in their qualifications.

34,991. And a number of your second division clerks, you told us, have taken university degrees?—Some of them have, I do not know the exact number.

34,992. That is given in your statement?—A pretty considerable number, I think, are either studying for degrees or taking a university course.

34,993. When Mr. Phipps was before us he said that in the last 10 years there had been a great improvement in the number of posts open to second division clerks in the Board of Education. What have you to say on that?—That conflicts with the statement made in our paper. I think on page 15 we say that the proportion of higher posts open has been reduced from 65 to 37 per cent. in that period of time, and I believe those figures are correct.

34,994. Supposing more staff posts were created would that satisfy you in regard to promotion?—No, I do not think it would unless their duties and status were also improved.

34,995. You want that barrier which exists between the two grades brought to an end?—Yes.

34,996. You do not want to feel that you are always an inferior grade?—Undoubtedly. On that point there is extremely strong feeling and the best men are the hardest hit; the man most nearly approximating to the intellectual calibre of an examiner naturally feels most keenly a state of permanent subordination.

34,997. I suppose this is your contention, that the feeling that an able man has that his ability will never be adequately recognised does not encourage him to make the best of his ability in the service of the department?—The thing is actually discouraging.

34,998. Just a word about the inspectorate; you have said nothing about that department of the Board of Education. Is there any change going on in the Board of Education. I do not know whether you are disposed to give an answer to this question, whether the tendency of the Board of Education is to transfer to the outdoor department, say to the inspectorate, administrative work, the determination of matters of policy which formerly were given to the examiner class?—I think probably in the last ten years there has been a very distinct tendency in that direction. Owing to the changed condition of local authorities since the passing of the Education Act of 1902 the position of inspectors has altered materially and they are in a certain sense ambassadors. Internally in the office the inspectors are largely responsible for drafting regulations and the settlement of changes in educational policy.

34,999. (Mr. Graham Wallas.) Would you say in an office like yours, where there has been in the past practically no promotion from the second division to the upper division but where there are a large body of staff posts, the Treasury rule about dropping salary in cases of promotion from staff posts works with very special severity?—Undoubtedly.

35,000. And when once it is established, the Treasury rule practically prevents any modification of it, because a staff man can hardly accept promotion?—No, it is practically out of the question; a man might never make up in his future receipts for the rest of his official life what he would lose on the change.

35,001. You have spoken of examiners being equivalent to what in other offices would be men appointed by the Class I. examination: should you say that the fact that they are not appointed by a competitive examination but by personal selection makes it more likely that they will conform to one definite type than if they were appointed by a system of examination?—I do not think so. It depends upon the idiosyncracies of the person who actually chooses them. In origin they belong almost strictly to the same class.

35,002. Your impression is that they are very much the same kind of people as would be appointed by examination?—They are very much the same, so far as I can judge.

35,003. You mention the fact that there is a great practical difficulty owing to the sharp class division in the office in the administration of the work. Would you say that smooth administration depends upon the existence of a large amount of frank oral communications instead of written communications?—I think it would be a very great advantage if the oral communication were between people who really deal in a frank and friendly manner with each other. I think that the limited opportunity that is given to a man in a subordinate position of speaking to his superior would limit the usefulness of the communication very much.

35,004. You think that what you have spoken of as a chasm or gulf does, as a matter of fact, hinder efficiency in that way?—In that and in many other ways.

35,005. (Sir Henry Primrose.) There is one question I forgot to ask you. Will you turn to paragraph 20 of your statement, where you speak about the inferior status of the clerical staff, and you say that a member of the clerical staff ranks below a junior examiner. What does that mean exactly? There is no table of precedence in the office is there?—In some sense there is. If there were any actual table of precedence he would rank below the junior examiners on it.

35,006. But under what circumstances is it possible to compare those two men as regards rank?—The one man is technically under the orders of the other; that is to say, if an examiner wished to see the head of the accounts section it would be the business of the head of the accounts section to wait upon the examiner rather than for the examiner to wait upon him. I do not say that every examiner would insist upon it necessarily, but that would be the technical position.

35,007. A junior examiner could not send for the head of the accounts section to come to his room?—In the last resort he can.

35,008. Are you sure of that; is there any order to that effect?—There is no order; it is a question of convention and tradition.

35,009. Have you ever known it done?—I believe it has been done.

35,010. Do you really tell me that a junior examiner if he wanted to know something in the Accountant General's office?—Not the Accountant-General, the clerk in charge of the accounts.

35,011. That he would send for him to come to his room?—I do not know that he actually would, but he would be entitled to do so.

35,012. (Chairman.) Did you pass into the Service by competition?—Yes, first as a boy clerk in November 1887, and then as a second division clerk in February 1889.

35,013. Did you become an assistant clerk?—No.

35,014. You passed from boy clerk grade into the second division?—Direct.

35,015. What age are you now?—Forty-two.

35,016. And you are drawing 450*l.* a year?—435*l.* at present; it will, I hope, be 450*l.* one day.

35,017. What age were you when you entered as a boy clerk?—Seventeen, and I have been 25 years in the

24 April 1913.]

Mr. W. W. KENNERLEY.

[Continued.]

Service. I should like to say upon that point of salary, that we do not suggest particularly—I certainly do not—that we are not tolerably well paid; the grievance is not the question of salary.

35,018. I only wanted to get an idea of the promotion generally reached at your age, with such past official life as yours?—I think possibly I have got promotion a little earlier than is general. I do not think it would be safe to take my case as a general one.

Sir L. A. SELBY-BIGGE, K.C.B., Secretary to the Board of Education, recalled and further examined.

35,022. (*Chairman.*) We are much obliged to the Board of Education for the enlightening memorandum that has been prepared for us on the statistics we called for when you were last under examination. But we wish to ask you some questions as to the bearing of these statistics, and the conclusions we are to draw from them. You will remember that the object we had in view was to gain a clear idea from concrete examples so far as possible, of the money help offered to boys and girls passing from elementary to secondary schools, and more especially as to the means and facilities afforded them for passing from the secondary school to the university and remaining there a sufficient time. Shall I briefly sum up what I take to be the effect of your figures? You told us during your previous examination—and you repeat it here in the figures—that the number of secondary schools in England as things now stand, is 885, with 145,568 pupils?—That is grant-earning schools only.

35,023. Of these pupils, about 60 per cent.—the exact numbers are 88,126—had previously been in public elementary schools?—Yes.

35,024. And of the 145,568 pupils, 50,414 were free pupils—they paid no fees?—That is so.

35,025. And of those 50,414 pupils, 46,926 came from public elementary schools?—That is so.

35,026. So that the public elementary schools furnish a very considerable proportion of your secondary school population?—Yes.

35,027. You say that on the whole you are of opinion that the secondary schools are adequate for their purpose in urban areas in England?—Yes.

35,028. You make this statement at the end of the second paragraph on page 11: "On the whole, the Board are of opinion that the supply of secondary schools in urban districts is adequate or in a fair way to become so" ?—I want to guard that remark rather carefully. I do not mean to say that in urban areas the provision for full-time education in advance of elementary education is adequate. There is, I believe a very considerable gap between the elementary school and the secondary school. If all the children who are capable of profiting by education in advance of elementary education were scientifically sorted it is possible that some of those who now attend secondary schools would not be attending them at all, but would be attending some other type of full-time day school.

35,029. Do you mean full-time day schools of the elementary type or the secondary type?—You may call it intermediate. I should prefer not to call it secondary, because I regard a secondary school as especially one which lays out its curriculum with a view to the scholars staying to at least 16 years of age. Our regulations contemplate an age range of at least 12 to 17.

35,030. We have had it in evidence that 18 is the maximum of the secondary stage?—Yes. It is not a secondary school, I should say, unless it is organised to take pupils on up to the age of 16. There are a large number of pupils in secondary schools at present who are obliged to leave school and go into employment at 15 or under. If there were provision elsewhere for these scholars who cannot, owing to their circumstances, go on up to 16 at least, then the existing provision of secondary schools in urban areas would probably be adequate for those who could continue their education up to 16.

35,031. Am I now to take it that in order to make the secondary school provision in urban areas adequate,

35,019. You have nothing to complain of personally?—Not on that particular point.

35,020. The point that you complain of most is what my colleague, Mr. Boutwood, described as 'caste feeling'?—Undoubtedly.

35,021. (*Mr. Graham Wallas.*) How much would you drop if you were appointed to be an examiner tomorrow?—The difference between 250*l.* and 435*l.*—185*l.*

you require to devise another type of secondary school?—Another type of school giving education in advance of elementary education.

35,032. Could that higher section be added to the existing elementary schools?—It could, so far as legality is concerned, be provided under Part III. of the Act of 1902.

35,033. But practically and efficiently could it be done?—I think it can be done. The experiment has been tried in London in the form of central schools. How far they will in practice fill the gap it is too early as yet to say.

35,034. Do not you think there will be great difficulty in establishing a separate intermediate type of school between the elementary and the secondary schools, and do not you think it would be easier to attain your end by making use of the primary school, and adding on a secondary or a higher section to it?—The development of the tops of individual elementary schools is, of course, one of the natural lines of development of primary education. There is no question about that. In addition to these there are central elementary schools which group the scholars from the tops of several elementary schools into one. But, personally, I think that there is room in the system for another type of school, which would perhaps not come directly "end on" with the elementary school. It would come nearly, but not entirely "end on." I am thinking of a school from 12 to 15.

35,035. (*Mr. Boutwood.*) Do you mean a type of school more technical in character?—Some of them might be more technical in character than the elementary school could be, or more vocational, either industrially or commercially.

35,036. (*Chairman.*) What I am thinking of is the evidence of Dr. Starkie, when he referred to his attempts to establish in Ireland higher grade elementary schools. Such schools, as I gathered from him, would be between the primary and intermediate schools, and I wonder whether you have the same idea in your mind?—I had not those particularly in mind.

35,037. You are familiar with the Irish system. There are the national schools, and above them you have the intermediate school, which gives secondary education. These intermediate schools are not Government schools, but the Government pays them large sums on the results of examinations. What Dr. Starkie wanted was a school better than the national school, but lower than the intermediate school. Now your division of education at present is, I understand, into primary, secondary, and university education. Your primary education ends at 14; your secondary education ends theoretically at 18, if, indeed, it does not generally end earlier than that?—In only too many cases it does.

35,038. What you want then is a school which shall be intermediate, between the primary school which ends at 14 and the secondary school which ends at 17 or 18?—Yes.

35,039. Very well. Then I want to know how you are going to create that school? Are you going to create it by taking the elementary school and superimposing on it a secondary section, or are you going to create an entirely independent school?—Either an advanced section of the ordinary school, or a school which groups scholars from the ordinary schools under the elementary system; or, I think, quite possibly, a general or vocational day school running up to 15, which, under present circumstances,

24 April 1913.]

Sir L. A. SELBY-BIGGE, K.C.B.

[Continued.]

would have to be carried on under the Technological Regulations.

35,040. Would you have to run into bricks and mortar for that—would you have to build schools?—You might have to go into bricks and mortar; but you could very often in the day-time use the technical school buildings which are only wanted for technical instruction in the evening.

35,041. In fine, the statement made here in the memorandum must be modified somewhat? Your memorandum says: "On the whole, the Board are of opinion that the supply of secondary schools in urban districts is adequate, or is in a fair way to become so"—I think it is literally true, but it wants guarding in this way—that if all the scholars who leave the elementary schools, or who will not stay at the elementary schools as they are now constituted, but want some further full-time education, are to be provided for only in secondary schools, then the provision is not adequate.

35,042. Then you go on to say that "In rural areas the problem is a different one"?—Yes.

35,043. And what I understand to be the effect of the Board's opinion upon that aspect of the case is, that in most counties secondary schools have probably been carried as far as practicable at the present time?—Yes.

35,044. But in certain counties, especially in Norfolk, Lincolnshire, the East Riding, and Devonshire, it is hopeless to think that you can establish a satisfactory system of secondary education because of the difficulty of bringing the children to school, or of bringing the school near the children. The only way is to add on a secondary stage to elementary schools and to give better boarding terms. That is something like what you meant in the urban areas?—Yes. Apart from provision of assistance for scholars to attend boarding schools.

35,045. Adding on a secondary section to the primary school?—Yes; developing the top of the primary school, where it is large enough to do so, by means of a supplementary class.

35,046. Then with that development of the primary school in the secondary direction, your provision for secondary education would be fairly adequate throughout the country, excepting in those particular counties where special circumstances arise?—Yes, but there is a big gap which remains to be filled in order to provide adequately for children who could be induced to stay at school till 15, but no longer. That is a big gap. It is not a little one. There are a large number of children concerned.

35,047. Would the means of filling up that gap be provided by increased allowances to enable the children to board at the schools or near the schools? You have stated in your report that the amount contributed by local bodies for secondary education is 450,895*l.*, of which 300,000*l.* goes to the payment of fees and 150,000*l.* represents allowances over and above the cost of fees?—Yes.

35,048. Then my question is whether this gap you speak of would be filled if these allowances were increased?—I agree, certainly.

35,049. You think that would be the way?—I think this expenditure would yield a good return.

35,050. I have examined your statistics with the view of ascertaining in what parts of England these local contributions were satisfactory or the opposite. You say that, generally speaking, in the north of England, the monetary provision is more generous than it is in the south; and you seem to explain that by the fact that in the great industrial centres more money is available for education, and the schools are larger and stronger than they are in agricultural districts?—Yes.

35,051. Are you taking any steps to improve the condition of things, or stimulate local authorities to increase their grants of money in relief of fees, and for the maintenance of poor children at the secondary schools?—I think that it would be very difficult for us in present circumstances to put effective pressure on local educational authorities to increase their expenditure in these directions.

35,052. Would it be too much to ask that your department should clearly define the objects and purposes for which more money was wanted, and should indicate the means by which the money might be provided?—Do you suggest that we should point out to the local authorities what we think they ought reasonably to do?

35,053. Yes, I do; but if you feel loth to point out to the local authorities their shortcomings, and what they ought to do, you might at all events state the existing facts periodically and publish them for general information. You might publish from time to time a statement showing for every educational area in England the number of children who ought to be at school; the number who are at school; the contributions made by the local education authority in relief of fees in secondary schools; the contribution for maintenance; the contribution for scholarships, and so forth. Then the public could judge on the way in which each authority was doing its duty, and public opinion would supply the compulsion which your department seems unable to enforce at present.—That can, of course, be got out of our statistics.

35,054. But who will take the excessive trouble of extracting from those figures the information I indicate?—I am quite prepared to admit that further and more 'vital' statistics might be provided, which would possibly have an effect upon the minds of local authorities, but I must also point out that at our inspection of secondary schools, when we see representatives of the local authorities, we do, as a matter of fact, deal with those topics and impress them as far as we can upon their attention.

35,055. You have furnished us here with a mass of statistics which to some extent indicate what the counties are doing?—This return will undoubtedly be very useful to us for the purposes of comparison in our discussions with local authorities.

35,056. Take your Table II. on page 2 of the Appendix. You there give against each the English county, the number of pupils in the secondary schools who are exempt from tuition fees?—Yes.

35,057. You show the total number of schools; the total number of pupils and the total number of free pupils—that is, pupils, for whom local bodies pay the school fees. Is that what you mean, or do you mean that the Government pays part of the fees?—It is local bodies and endowments together.

35,058. Very well. It is a comparative statement showing the total number of pupils, the number of free pupils, and the value of the exemptions. It shows that the value of the exemptions for boys in Cheshire is 4,740*l.*, while the value of the exemptions in Hertfordshire with less than one-third of Cheshire's population is 7,770*l.* The figures supply many other examples of the same kind. Do not you think it would be of use if such statistics as these were furnished?—I think they would be very useful to us.

35,059. Do not you think it would be useful if you went further down and published these statistics for every educational authority in England; because I find that while some areas are liberal in their provision of scholarships other areas contribute nothing at all?—Yes.

35,060. Then I take it to be possible for the Board of Education to make out a statement and to publish that statement from time to time for every educational authority in England, showing the number of their schools, the population of school-going age, the number of enrolled pupils, the daily attendance of pupils, and how far instruction is free at secondary schools. Then it would be well if the statement showed the provision made for scholarships in these secondary schools, and fix maintenance allowances in addition. If such statements were periodically published for each educational area in England, the country would see which educational areas are doing their best for education, and which are doing less than their best, or nothing. Why should not that be done?—I see no reason at all, and as a matter of fact we have been during the past twelve months considering the advisability of publishing statistics of that kind, area by area. Personally

24 April 1913.]

Sir L. A. SELBY-BIGGE, K.C.B.

[Continued.]

I look to the publication of such statistics as being one of the most useful means of securing progress.

35,061. I find that on the whole girls have not as full educational facilities as boys have. That, as a broad result, is the case?—That is so.

35,062. I mean in regard to endowments?—Yes, with regard to endowments. There are, of course, a very large number of private girls' schools.

35,063. But in regard to endowments and in regard to scholarships the girls are not on an equality with the boys?—No.

35,064. Now I pass on to the scholarship figures. The figures that you have furnished us show that in 1910 there passed from public elementary schools through the secondary schools 201 boys who carried scholarships to the university, and that of pupils who did not come from the elementary schools 99 carried scholarships to the university, or 300 in all?—Yes, I take your figures.

35,065. And out of those 300 boys who went to the universities with scholarships from secondary schools (of whom 201 came from public elementary schools and 99 who were not public elementary scholars) 157 came from London, Lancashire, and Yorkshire alone, leaving 143 for all the other counties in England, of which six counties made no provision whatever of scholarships. I think you will find that is substantially correct?—Yes.

35,066. From all England, with the exception of three counties, there were only 143 scholars in the universities. Now, why should not these facts be published, and why should not the names of the counties which are backward in making this most necessary provision for scholarships be published, so that the public may know exactly what counties are forward and what are backward in making this most necessary provision?—That is possible.

35,067. I submit to you that it is very desirable that these facts should be published, and that the country generally should know how far behind in their duty certain counties in England are?—I will certainly convey your suggestion to the Board.

35,068. I make out that the total value of the scholarships given by local authorities to boys who have gone to the universities is 56,893*l.* for the whole of England?—Yes.

35,069. Of the girls, 48 went to the university from public elementary schools and 64 went from schools other than elementary schools. Now of those 112 girls who went to the university with scholarships, 57 came from London and Yorkshire alone, leaving 55 for the whole of the rest of England. I also find that 20 counties made no provision at all for girls in the year to which your statistics refer?—They did not award any in that year; but whether they made any provision or not we do not know.

35,070. You have only given the statistics for the year 1910?—That is so.

35,071. The inference I draw is that the provision, in its bulk, is inadequate, and in its distribution shows the greatest disparity between English counties. Only a few of the counties seem to have any conception of what their obligations are under this scheme, and I think that the first thing to be done is to bring to public notice how inadequately certain counties in England and certain local areas comply with the expectations which have been formed. You, of course, appreciate the fact that there is no obligation under the Education Act of 1902 on the local authority to provide these scholarships.

35,072. Yes; but the mere fact that so much has been done by many counties and educational authorities is a recognition of the responsibility (if there be no obligation) which lies on these local authorities to afford to clever boys and clever girls an opportunity of getting that education by which they will benefit and the State will benefit. That is my appreciation of your statistics and of the general situation. Thank you, sir.

35,073. I now pass on to the question of your system of inspectors. You told us last time that the system of sub-inspectors and junior inspectors was modified, and they have since, I understand, disap-

peared?—We have since formally announced that we are going to appoint no more to this class.

35,074. And the assistant inspector is to replace those two grades?—The recruits for the subordinate class of men inspectors will be obtained through the assistant inspector class. I am not speaking of women. Women are not included in the assistant inspector class. They are in a class by themselves.

35,075. Do you propose to recruit your full inspectors from the assistant inspector grade?—Not exclusively.

35,076. The assistant inspectors are, I understand, to be exclusively recruited from the elementary teachers?—We have not said that. We have only said that for the present batch of vacancies we want men who have had considerable experience of teaching in elementary schools.

35,077. Have your orders been issued yet regarding the recruiting of assistant inspectors?—Yes. I can hand in the forms which we have issued. There is a circular here. Perhaps I may read the heading to it? "It is estimated that there will be about 10 vacancies for assistant inspectors in England during 1913, most of which will be filled at an early date. On this occasion, and in respect of these particular vacancies, the appointments will be confined to men who are between the ages of 30 and 45 and have had not less than eight years' experience in teaching in elementary schools, and, *ceteris paribus*, preference will be given to candidates who have had experience as head teachers."

35,078. That is for your present selection?—Yes.

35,079. It does not bind you for the future?—No.

35,080. It does not lay down a general rule?—No, but I think I can safely say that the Board contemplate obtaining a very large number of recruits for the assistant inspector class from those who have been teachers in elementary schools.

35,081. Have the Board any idea as to what percentage of assistant inspectors are to be recruited from elementary teachers?—No, we have laid down no proportion at all.

35,082. But you tell me that the grade of assistant inspector is not to be a monopoly of elementary teachers?—Certainly, I would say that it is not to become the monopoly of any class.

35,083. And that you retain the liberty and discretion of taking people from outside for that grade?—That is so.

35,084. Do you propose to put those people that you take from outside through an examination? Do you propose to subject them to any test?—None at all.

35,085. It is to be a pure nomination—a pure selection by the Board?—A selection by the Board. We are just completing our arrangements for selecting 10 or 12 assistant inspectors, out of something over 1,000 applicants. Of course, they have to obtain a certificate from the Civil Service Commissioners. They will be appointed under clause 7.

35,086. My question did not refer to your selections from the elementary teachers, but to those persons who may be appointed to be assistant inspectors, otherwise than from the elementary teachers. These persons are to be appointed by pure nomination by the Board under clause 7 of the Order of the Council, provided they have the certificate of the Civil Service Commissioners?—They would be appointed in exactly the same way as the teachers in elementary schools are appointed to be inspectors—the conditions will be just the same for the small proportion of outsiders as it will be for the elementary teachers.

35,087. But you will have had many years' experience of the elementary teachers to be guided by?—Yes.

35,088. You know precisely what sort of a man he is. He will have been in the educational service for several years?—Yes.

35,089. At all events, he would have been a teacher for a certain number of years, during which time he would have been under observation?—Yes.

35,090. And you have the means of judging what he is, and are not likely to make a mistake. But in the other case you can have no knowledge of the men?—

24 April 1913.]

Sir L. A. SELBY-BIGGE, K.C.B.

[Continued.]

They will possibly be teachers from the secondary schools, or more likely from the training colleges, or from pupil teachers' centres, of whom we know something.

35,091. So far you will have some means of judging?—I may say it is very unlikely that we shall appoint anybody to be an assistant inspector who has not had teaching experience, and about whom therefore we do not have, or cannot obtain, a considerable amount of information.

35,092. I gathered from your former answer that you did intend to take some people from the outside public as you are in the habit of doing just now?—We should certainly retain the right. That is the President's intention.

35,093. Assuming that you do take a man of whom you have had no previous experience, will you subject such a man to any test of examination?—I should think it very improbable; because he will be of an age at which it would be difficult to set him a suitable examination.

35,094. What age have you fixed for the assistant inspector?—For this present batch, we have fixed it between 30 and 45, and you cannot very well set people over 30 an examination—people of all sorts of different experiences and training; at least I do not think so.

35,095. (*Sir Henry Primrose.*) And they would be eligible for promotion?—They are eligible for promotion to the rank of full inspector. The President reserves to himself the right of appointing people to be full inspectors directly from outside, and they may of course be elementary teachers or teachers in secondary schools or anything else—just as at present. But they would not be likely to be very young men. No man appointed to be a full inspector would be a young man within what I should call the examination age.

35,096. (*Chairman.*) You said just now it would be impossible to submit a man of 35 years of age to an examination. When you said that, had you in your mind a written examination?—Certainly.

35,097. But other kinds of examinations may be devised?—I meant rather to say among half a dozen men of 30, 35, and 40, of very different ages and experience, it would be very difficult to devise a suitable examination which would fairly test their relative ability.

35,098. Yes, if you restrict your men to a literary examination, papers set and answers in writing; but that is not the only kind of examination conceivable?—We shall certainly examine them in the sense that we shall interview them—have a considerable amount of conversation with them.

35,099. If you make appointments in this way, why should not the "sizing-up" of people and conversations with them be conducted by an independent body like the Civil Service Commissioners? Why should it be done by the department?—The objection to the Civil Service Commissioners selecting our inspectors is to my mind a very strong one indeed—that they could not possibly know what kind of men we want for the work of inspectors, and especially for the work of full inspectors in charge of districts or divisions.

35,100. But is it not possible to create a committee who would be capable of judging what class of men you want?—I will tell you exactly what we are doing now. The President has appointed an office committee, which will contain our chief inspector and one of our divisional inspectors, two administrative officers, and a representative of the Civil Service Commissioners; we hope—and we shall know as to this before your report comes out—that Mr. Stanley Leathes himself will act.\* He has been approached on the subject and we understand that he is willing to interview the candidates with us, and to give us the benefit of his advice.

35,101. You do not, however, wish to lay down any precise rules to begin with?—That is so.

35,102. You make your committee as select as you can, and you save it from being a purely departmental committee by putting on it men of independent

judgment?—Yes, and we have appointed as Secretary of the Committees one of our officers in the office of Special Inquiries and Reports who is concerned with finding teachers for the Colonies and India, and that kind of work, and is, therefore, very familiar with this interviewing and selection work. The selection work will be organised as if we were choosing a teacher to go to India.

35,103. I want to ask you a question or two about your second division. You are, of course, familiar with the scope of the work in your office?—Yes.

35,104. I think you say in your report that there is a distinct line of demarcation between the work falling to your examiners and their assistant examiners, and the work falling to the second division?—I think there is a real difference between the qualifications required for the two classes. If you ask me to draw a definite line between their work at one point I shall find it very difficult to do so, as the line may not only be blurred but also altered. Sometimes it goes up, and I have known it go down.

35,105. But taking the work of one class with the work of the other, is there a substantial difference between them?—In my opinion there is.

35,106. For the work of the first class do you require a higher and more cultivated type of mind than for the work of the second?—To make a successful officer of the first class you want the very best possible education which can be obtained. There is no officer of the higher class in the service of the Board who could fairly say that he is better than his work, or that his work is not good enough for him.

35,107. You have had a fairly extensive knowledge of the second division?—For one in my position fairly extensive, because I worked, and rather closely, with a large number of clerks at one time when I first entered the service of the Board of Education.

35,108. In your judgment have you come across many men in the second division who were capable of doing the work of the first division?—I think I could say that there are a fair number who would be capable of doing some of it, but not many who could do the best work up to the best level.

35,109. If they had been promoted would their efficiency have increased by employment on work of a higher type than they would be employed on in the second division?—That is possible; but a promotion on those grounds is, of course, always very speculative. Though I feel sure that some of them would be improved, to what extent they would be improved is very difficult to say.

35,110. We have been told here to-day that in the Board of Education the promotion from the second division to the grade of examiners was only one in 10 years. Does your experience of the second division lead you to think that that was an inadequate proportion of men to have promotion from the second division, given the existence in the division of the proper men?—I should say it was inadequate. We have, however, made two attempts to promote and failed, owing to the Treasury rule with which you are familiar.

35,111. If the Treasury rule had not been adverse, would the promotions have been more than two? You say you have made two attempts?—I cannot say because I was not responsible; but I do know of two cases, and, as I said last time, we are only waiting for the alteration of the Treasury rule to make at least one, if not two, promotions to the higher rank.

35,112. Should I be right in saying that, knowing the character of the Treasury rule, and the difficulty or impossibility of altering it, you did not look out for possible men in the second division to promote?—I think that is true. The existence of the Treasury rule would force us to look mainly at the junior men who would not be affected by its operation, and would preclude us from taking into consideration those whom we know best, who have already obtained some promotion and become minor staff clerks or staff clerks.

35,113. It has been suggested to us that there is a feeling of, shall I say, class hostility between the higher division and the second division, whether emanating from the former or the second division we are not told. Is there any such feeling existing in the

\* Mr. Leathes has now consented to act.—L. A. S. B.

24 April 1913.]

Sir L. A. SELBY-BIGGE, K.C.B.

[Continued.]

Board of Education between the officers of the two divisions?—As far as I am competent to judge, I should say there is nothing of the kind. I may have been singularly fortunate in my relations with the clerks; but there are men among them not only whose service but whose friendship I value very much, and whom I could rely upon to assist me in any kind of difficulty to the utmost of their power.

35,114. What is the practice in the office? Suppose an examiner wanted to consult the head of your accounts department, who might be a second division clerk, a man drawing 700*l.* or 800*l.* a year, does the junior examiner send for the accountant to come to his room?—It would hardly ever happen that a junior examiner would ask the head of the accounts department to come to his room. He might do it if he was dealing with a matter of special importance for the Secretary himself. If a junior examiner was dealing with a point for me, I might say: "Go into this with the head of the accounts department"; and they would meet in whatever room was most convenient.

35,115. It might be that the junior examiner was dealing with a mass of papers, any of which might have to be consulted, and it would be more convenient that the accountant should come to him than that he should go to the accountant. But is there any such feeling that the junior examiner would not go to the accounts department, but would say: "He must come to me"?—If I thought it did exist, I should not hesitate to express my own opinion on it. I have not much time to spare now, but in the past I have over and over again been to the clerks' rooms—the heads of sections—to consult them instead of asking them to come and see me. I should have no hesitation in going to them.

35,116. The head of the office may do that without any derogation of position?—But that was when I was much more junior.

35,117. But does such a feeling exist among the junior men?—I think not. Perhaps Mr. Phipps is really more conversant with the matter. Would you allow him to answer?

(*Mr. Phipps.*) The question is a good deal affected by the rooms in which we sit. The only clerks who have a room to themselves are the heads of sections, and some of the most important staff clerks. They, therefore, would be the only people to whom an examiner could go with any chance of discussing anything at all confidentially or quietly. Otherwise he would have to go into a room in which there might be anything from four to 20 men. It is therefore much more likely that they would go to his room and would very much prefer to go to his room.

35,118. Have junior examiners a room to themselves?—They sit in twos or threes, and, I am sorry to say, sometimes four.

35,119. Would a junior examiner send for the staff clerk or head of the section?—For the staff clerk I would prefer to say, because it is in the capacity of staff clerk as a rule that the examiner would want to see him, as the man in charge of a particular division of the clerical work, and he would be right in sending for him in the case of any important work.

35,120. A certain etiquette of business must exist among the officers in a department, but I want to know what the spirit is?—(*Sir L. A. Selby-Bigge.*) I have never heard of a staff clerk complaining of being sent for by an examiner. I have never heard of such a thing.

(*Mr. Phipps.*) I was chief clerk for some years, and I certainly saw no trace whatever of such a feeling.

35,121. (*Chairman.*) You propose to recruit some officers of 30, 35 and 40 years of age; they will be for the full inspectors' grade?—Yes.

35,122. If you recruit an officer of 40 years of age, does he get the same leave rules as a man recruited at 25?—Precisely, under the present regulations.

35,123. A man of distinction who comes in, say, at the age of 40, is under just the same leave rules as if he had come in at 24?—That is so. He has to wait for 10 years before he gets any increase of annual leave. He would have to wait till 50.

35,124. What is the leave?—Six weeks, 36 working days for a man under 10 years' service.

35,125. What leave would an examiner of, say, 45 get?—If he came in at the age of 24, at the age of 34 he would get 48 working days.

35,126. And at the age of 45?—He would still only get 48, but the senior officer appointed at 45 would have to stay till 55 before he got 48 days' leave.

35,127. Do not you think that is a hardship?—Personally I think it is a hardship, and a great inconvenience. It is obviously due to the fact that when the rule was made they did not take into account an office which was likely to appoint a large proportion of men at ages later than the normal Class I. age; and if the Commissioners could take that into consideration I should be very glad.

35,128. It would have some effect, would it not, on the efficiency of the officer?—Certainly it would.

35,129. The older you are the more leave you want?—Certainly, especially if you have been accustomed to much leave before you come in; and it presses very hardly on inspectors, because there are the school holidays, during which they can quite conveniently take leave without any detriment to the public service.

35,130. Do you think it would be desirable to alter it?—I do most decidedly.

35,131. (*Mr. Philip Snowden.*) Do you think that the number of fairly well-paid posts in your department bringing in, say, 400*l.* to 500*l.* a year is not an undue proportion of the total number of persons who come in, or do you think it is only a fair proportion of the total number of persons you have employed?—As regards the clerical staff, I certainly do not think there are too many posts of 400*l.* and over.

35,132. I will take a particular department. I have not the estimate for the year, but I suppose there was not a material change last year?—No.

35,133. Taking the Evening Schools Instruction Department, I find you have one principal secretary, 1,200*l.*, three assistant secretaries, running up to 1,000*l.*, five senior examiners, running up to 800*l.*, and nine junior examiners, running up to 600*l.* Do you think that there is sufficient important work in that department to justify the employment of that number of highly-paid officials?—At this particular time, yes. That department has had rather a large number of higher staff drafted into it with a view to the revision of the technological regulations which are extremely difficult, and they have done a very great deal of work there (apart from ordinary routine administration), which I hope will bear fruit in the future. That branch during the last three years has been quite specially staffed.

35,134. Do you think that it is necessary then that you should have in that department three assistant secretaries?—I may say that I should be very glad if I could take any officers out of that department to strengthen departments. But we have to distribute our staff where it is most wanted. I want staff in other places.

35,135. (*Chairman.*) Do you mean to say that you would be glad to reduce the number of examiners and assistant secretaries in your office?—No, not at all. I should only take them out of that branch and put them in another where I want them very much also.

35,136. (*Mr. Philip Snowden.*) You do not think then there is a tendency in your department to create these well-paid posts in order to satisfy ambitions?—No, honestly I do not think there is any such tendency.

35,137. Did I understand you aright that all these new inspectors that you propose to make at once have had eight years' teaching experience in elementary schools?—Yes, that is the case.

35,138. I rather gathered from another reply you gave, although you did not commit yourself, that these regulations are to apply to future appointments to the grade of assistant inspector?—I think it is quite certain that a very large proportion of the assistant inspectors will in future be drawn from the teachers in elementary schools. Beyond that I cannot say.

35,139. Is it intended as a general rule that you will recruit His Majesty's inspectors from the grade of assistant inspector?—It would be rather difficult to say at present. The full inspectors will be recruited partly from the assistant inspector class by promotion—and I might also say from the existing sub-inspector class

24 April 1913.]

Sir L. A. SELBY-BIGGE, K.C.B.

[Continued.]

and the existing junior inspector class, because they have men in them whose claims for promotion must be considered—and partly from outside.

35,140. You are not going to merge the assistant and junior inspectors and sub-inspectors into the new class?—Not at the present moment. I think very possibly the sub-inspector class and the assistant inspector class will be merged in order to prevent the sub-inspectors thinking they are prejudiced by being kept as a separate class. But beyond that I cannot say. This is a new departure, and we are rather feeling our way with the establishment of this class.

35,141. Are the men who are going to be appointed to fill these vacancies, of which you have spoken, of the class of assistant inspectors, entitled to suppose that on proof of efficiency they will have a prospect of being appointed to full inspectorships?—They will certainly be considered on their merits for promotion to full inspectorships. Every one is entitled to be considered on his merits. The assistant inspector will be, not merely formally, but really, eligible for promotion, and I should say, considering the number of full inspectors we have been able to take from the sub-inspector class, especially of late years, that we shall be able to take a considerable number of full inspectors from the assistant inspector class. I certainly hope so. But it depends very largely upon the quality of men we get.

35,142. (*Mr. Graham Wallas.*) I was very much interested in your statement as to the need of a third type of school arising out of the elementary school, but not a technical secondary school. Would you accept the statement that between 1870 and 1897 such a type of school did, in answer to a general demand, actually spring into existence under the name of higher grade schools?—It was perhaps not quite the type which I was referring to.

35,143. Will you accept the statement that between 1897 and 1902, the whole force of the Education Department was employed in shortening the period of existence of these schools?—I do not think I ought to accept that statement.

35,144. I want to ask you whether you would accept the statement that your memorandum would lead up to the inference that the general accessibility of university education of all classes is somewhat dependent upon the provision of a local system of universities connected with the secondary schools of the locality. I will give you two quotations on which I found that statement. On page 7 you say: "It appears then that, except in the immediate neighbourhood of university towns, only a minority of schools send boys on to universities." Then again, on page 8, you say: "Where there is a university quite close at hand much has been done already. Here all things are relatively favourable—residence at home is possible, reducing the cost; there are large and good schools; a university tradition exists, old or new; modern industry has begun to recognise the need for higher training; the local authorities are interested in the university and give large assistance in "scholarships." Would you agree that leads up to the general rule that it is necessary to have a local university in connection with the schools of the locality?—Yes, certainly.

35,145. Then again, for such a new system of local universities to reach the highest point of excellence, time would be required?—Certainly.

35,146. And the time required would vary according to the circumstances. In point of fact, excellence in technological instruction appeared somewhat earlier than the excellence in instruction in the humanities?—Yes.

35,147. Do you imply here that for such a public competition as is maintained in Class I., the technological instruction is not suitable—you do not want them to compete on purely technological subjects?—I think that is so, certainly.

35,148. And that in so far as at present the chief subjects are classical, there has been neither in the university nor the school any approach to such excellence as was found in the old university, and you say on page 8: "But if he goes to a school of a different character this particular ambition is less likely to be

"aroused, his chance of winning a scholarship is slight even in science or mathematics, negligible in classics?"—Yes.

35,149. Would you agree that the fact that the chance of obtaining a scholarship in classics is negligible is due, not solely to the slow development of the humanitarian subjects, but to the fact that humanitarian subjects have developed rather on different lines from the traditional classical study?—That is possible, I suppose. As far as I follow, I think that is so.

35,150. The opportunity of scholarships in history would not be negligible?—No, but limited, because the number of scholarships in history is limited.

35,151. Therefore, if in Class I. you desire to follow the development of the humanitarian subjects, in the newer schools and the newer universities care must be taken to give full value to these humanitarian subjects that are there developed—to make the examination correspond to the facts not of 30 years ago but to the facts of to-day?—That is so. I could give you a very good instance that has occurred within the last few days. We have appointed an examiner who came up through the elementary school and the pupil teacher centre to the local university—in which he took a first class degree in history—and after that he took a Research Fellowship, and became an assistant tutor in history. He entered the service of the local education authority, and now he is an examiner of the Board of Education. I hope we may find more men of this kind in the future. He comes to us at the age of 30.

35,152. Would you say at Class I. examination his chance as against a young man of equal ability taking classics would be negligible?—I do not know enough of Class I. examination; but I should not think he would have a very good one. He obviously was a good man.

35,153. If he had prepared for it he very likely would have got it?—He comes to us, you see, at the age of 30. I think it is highly probable, beginning as he did, that he has ripened a good deal since he left the university.

35,154. Now with reference to your statement as to the provision of higher education for women. The question of how far the State is wise to provide opportunities for the higher education of women, and how far women are likely to avail themselves of it, depends, of course, in part upon the opportunities that are open to them after their period of education is over, does it not?—Yes.

35,155. Would you say that at this moment for a woman of great ability who has gone through the highest possible education there are lamentably few opportunities of work except in the teaching profession?—Much greater opportunities are opening to them in commerce than there have ever been before.

35,156. Put it in another way. Do you think it is desirable that there should be more opportunities than in teaching for the best women products of the higher educational system?—That is rather a big social question. It is my own opinion that the opening should be widened.

35,157. (*Mr. Boutwood.*) I think you said you had a thousand applications for these new appointments of yours?—Yes.

35,158. What sort of schools would those men come from?—They are all from elementary schools, but we have not sorted them yet.

35,159. What I had in my mind was this, that the salary is a good deal lower, is it not, than a headmaster's salary in the London area, or in most towns?—We have power to offer a higher initial salary for people who enter the Service at the age of 35.

35,160. That is what I had in my mind. I was really wondering what sort of head teacher you had in mind?—I think the prospects we offer are perhaps more favourable than they are in an elementary school, taking into account the pension and the possible promotion.

35,161. I see in the statement that much is based on the conduct of work in the technological branch. Is paragraph 10 a fairly accurate statement of what takes place?—I do not think it is a fair description of the work of the clerks in the technological branch and

24 April 1913.]

Sir L. A. SELBY-BIGGE, K.C.B.

[Continued.]

also I should most decidedly say that the technological branch is not typical of the whole of the office. The work was done at South Kensington at one time as you know—the science and art work—and a great proportion of it there was done by clerks, and the proportion of the higher staff was small. Now the technological work has become a very different thing from the old science and art work, and the amount of work requiring discrimination and judgment which can be done by the clerks, is, I think, decidedly diminishing. As a matter of fact, when I saw this statement I asked what were the regulations which guide the clerks in doing, for instance, correspondence work in that particular branch, and I received a procedure minute of 1909 which says, under the head of “outgoing letters,” “Communications should not be drafted in the clerical section unless (a) they are authorised forms or precedent letters; or (b) they are of a very short and routine character; or (c) they merely set out, even though at some length, information as regards grants, examination results, or the like, which must necessarily be incorporated in any reply sent.”

35,162. A lower sort of correspondence?—Yes.

35,163. Would that, or something like that, apply to the office generally? There are several references here to correspondence and letter writing. Would some such rule as that be the general rule of the Board?—I think, generally speaking, it is so. There are sections where the work is more special in character—more specialised—and where more work can be done, and done well.

35,164. Does your earlier answer about the technological section mean that that section was very largely a clerical department which for certain reasons now falls into the typical organisation of your office?—I am not personally so familiar with this section as with some of the others, but the amount of discretionary work which is entrusted to clerks in that section is, I believe, less than it was before. In some other departments of the office it has become more. The line in some cases moves up and in other cases it moves down.

35,165. (*Sir Henry Primrose.*) With regard to elementary school teachers who are candidates for the assistant inspectorship, do you require that their application should be sent through or supported by any local educational authority or school governors?—We allow them to send in three testimonials, and only three; and the writers of the testimonials must be personally acquainted with the candidate, and should be able to speak from knowledge of his character and work of recent years.

35,166. They are not required to obtain the sanction of the local educational authority before they apply?—No. What procedure will be followed by the committee by way of consulting the local educational authorities I do not know yet. That has been left entirely to the committee to settle.

35,167. I should rather have liked to have asked one question. We had before us Mr. Cholmeley, who was the head of Owen's School, and I put this question to him—that there was an enormous mass of work in the public service of a very simple and very routine kind—the sort of thing that clerks all over the country are doing at small salaries of 150*l.* to 200*l.* Now supposing we wanted to recruit men to do that work, and never to go to better work except in a very few cases, what should you say as to taking boys from that class of work at the age of 14—that is to say, in their fifteenth year. And his answer was: “Speaking as a person engaged in educating boys, I cannot consent to anything that takes a boy into work at the age of 14.” Then we went on to discuss the thing; and he rather implied that it would be very wrong of the Government to do anything which would attract boys away from school at an earlier age than the people who had the highest standard of education would have wished. I put it to him that, while in an ideal state of things, no boy would ever leave school till he was 16, still that we had got to look at things as they are to-day. Now should you say that the Government was producing an influence which was undesirable in education if they were to recruit boys for quite a low order of clerical work as boys—just as boys for the

navy are recruited as boys, or what would you say was the lowest age that we might put?—I should say 15 would be the lowest. On your assumption that it would be legitimate to employ a large number of mere writers in the public service, then I say, to keep them at school till 16 would not be a great advantage to the community, and to withdraw them from school before 15 would not be a disadvantage.

35,168. What I am suggesting is that examinations might be adapted to three limits—one the limit of the elementary school, the second the limit of secondary education, and the third the limit of university education; and I was conceiving a state of things in which we recruited boys as boys—not as boy clerks—but that we recruited a class of boys, and I wanted to know what was the limit of age you would suggest?—15 plus would be the limit of the elementary school under the Act of 1902, and that would coincide with the upper limit of the type of school of which I was thinking when I was saying it was necessary to fill the gap. But you will not regard me as assenting to the proposition that that is a desirable age at which, or a desirable way in which, to recruit the Civil Service.

35,169. (*Chairman.*) That was not the question Sir Henry put. Sir Henry has asked you whether, if there be three grades of the Civil Service, 15½ years of age would be a suitable age for recruiting the lowest grade?—Assuming that you require to recruit the Service in that way.

35,170. And to that you have no objection?—No.

35,171. 15½?—Up to 15—the end of the term in which they reach 15. One does not want children leaving school before 15.

35,172. You said just now that you are not to be taken as agreeing to that as a means of recruiting the Civil Service?—I only wanted to guard myself against accepting Sir Henry's assumption.

35,173. (*Mr. Matheson.*) Do you mean 15½ to 16, or 15½ to 16½? You must have some margin?—I am assuming that you require service from boys who never would in any case go to a secondary school. If they go to a secondary school, and are willing to stay there till 16, I think if the Civil Service takes them away before they are 16 it is definitely disturbing the educational system of the country in a most pernicious manner. I say that without hesitation. If, however, you say you are going to recruit that lower class of the Civil Service by boys who will never go to the secondary school, then the end of the term in which he attains the age of 15 is as good a time for him to leave as any other.

35,174. Suppose you want to get the best elementary school boys, and a few of those who have gone on to the secondary school, would it not be better to put your high limit of the class at something like 16½ so as to just give a chance for this?—Then you are trying to do two things. You are trying to get the recruit from the elementary schools, and you are trying to recruit from the secondary schools at the same time, and I do not think they are compatible. If you make up your mind that you want the product of the secondary school in the Civil Service, you ought to take them at an age which will allow them to stay there right up to 16.

35,175. I gather that you think that, especially in rural areas, the opportunity for boys to get to the university depends a good deal on the provision of maintenance grants?—That is obvious.

35,176. Does your experience show that there is any unwillingness on the part of local authorities to move in this matter if they have the means?—I think possibly in some districts there is an unwillingness to move in the direction of better maintenance scholarships to the secondary schools. As regard universities I am afraid I do not know.

35,177. (*Mr. Shipley.*) May I ask a question about page 5. I have often heard it said and claimed that manufacturing centres in the north have good education; but when I look at this I find that Cambridge, which is certainly an agricultural county (as there are only one or two towns containing more than 3,000 inhabitants) sends to the universities 130 boys per million of population; Hertfordshire sends 140, Rutland sends 330, and Westmoreland sends 120. Those are the only figures which pass 100. Then when I take the big

24 April 1913.]

Sir L. A. SELBY-BIGGE, K.C.B.

[Continued.]

manufacturing centres like Cheshire and Lancashire. Cheshire is 50, and Lancashire is 45, Northumberland 21, and Yorkshire 76. That does not seem to show that it is these rural populations that are making the least effort to get their boys to the universities?—Cambridgeshire has the advantage of the Cambridge University.

35,178. And what accounts for Rutland?—Oakham. It is very largely the accident of a particular school in a particular place. If you look at the actual number in Rutland it is only seven; and you cannot draw any conclusion whatever from such a small number as seven.

35,179. Yorkshire only sends 76 per million?—But it sends 274 scholars.

35,180. But there is such an enormous population?—It depends so much upon the accident of a particular school. Where you are dealing with small numbers the percentage is entirely misleading.

35,181. You say, "Of the total of over a thousand boys proceeding to universities, the counties already mentioned in the previous table send over 500 to their local universities"?—Yes.

35,182. And of the remaining 500, 400 go to Oxford or Cambridge?—Where the emoluments are much greater.

35,183. Do you think the university end of what is called the ladder is adequate? Have you any idea, for instance, of the amount of money that Oxford and Cambridge furnish in scholarships? We are always talking about the ladder to the universities, which I think politicians are rather apt to look through instead of at;

and I wish to find how far the university end of the ladder is adequate?—We really have no means of knowing.

35,184. You have told us that there are four members and the officers, and one Commissioner of Civil Service?—Yes.

35,185. Do you see any objection in having two representatives from the Civil Service?—I do not think we should, only we did not think of asking for them. We should be very glad of their assistance, but this committee has to travel.

35,186. The public is almost morbid about patronage?—We should have been very glad to have had the Secretary. He, however, is retiring. We are most anxious to have their advice, and we have expressly left the procedure open, so that when Mr. Stanley Leathes gets to work on it he can make any suggestions which appear to him proper, and I think if he advises us to add another man the President will very likely agree.

35,187. (*Chairman.*) Have you received any protests against the reduction of the age at which boy clerks are admitted to the Civil Service?—Yes, we have received protests from the County Councils Association, the Secondary Schools Association, the Incorporated Association of Head Masters, three County Councils, a County Borough Council, and from certain secondary schools.

May I say that we are putting in a revised list of the secondary and technological inspectors.\* It was not correct when it was put in for the first time; it was incomplete.

35,188. You were also asked for a list of the sub-inspectors?—Yes. We will put that in too.†

## EIGHTY-SIXTH DAY.

Friday, 25th April 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B.,  
C.S.I.

Sir KENNETH AUGUSTUS<sup>‡</sup> MUIR-MACKENZIE,  
G.C.B., K.C.

Sir DONALD MACALISTER, K.C.B.

Sir WILLIAM GUY GRANET, Kt.

Mr. ARTHUR BOUTWOOD.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Mrs. DEANE STREATFIELD.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Sir FRANK REE called and examined.

35,189. (*Chairman.*) Sir Frank, you are general manager of the London and North Western Railway?—I am.

35,190. How many years have you held that important position?—I have held that position about five years, but I have been 40 years in the service of the company, and for about 16 years before I was general manager I held the position of chief goods manager, which is practically that of assistant general manager.

35,191. Might I ask at what age you entered the company's service?—I entered the service of the company's agents at the age of about 17, but of the company itself at the age of 21.

35,192. That is to say, the whole of your experience has been in the service of one company, the London and North Western Company?—Yes.

35,193. We are anxious to learn what is the method of recruiting the clerical and administrative staff in your great undertaking, with the view of contrasting it with the system that is in force in the Government service. You are aware that the usual method of recruiting the administrative and clerical classes in the Government service is by open competition?—Yes.

35,194. I understand from the paper that you have been good enough to send me that that is not the

primary method of recruiting your clerical and administrative staff?—No, it is not. Shall I describe what our system is?

35,195. If you please?—First of all, I should like to say that I look upon, as one of my principal duties as general manager, the careful selection, recruiting, and training of the staff, and to give opportunities to young men among the staff to exhibit any special merit and exceptional qualifications they may possess, so that they may be further trained for the particular duties for which they are most fitted. The first means we have of recruiting the staff is by youths direct from the elementary, higher grade, and secondary schools.

35,196. Might I ask you whether these youths are nominated before admission by a director or any authority connected with the railway, or whether any young man who desires to enter the railway service may send in an application for employment without a previous nomination?—There is a system of nomination, but we take in so many that we do take in a number who are not nominated. There is a peculiar attraction amongst the boys in this country to enter railway service. The consequence is that we are

\* *Vide* Appendix LXXXVI.

† *Vide* Appendix LXXXVII.

25 April 1913.]

Sir FRANK REE.

[Continued.]

inundated with applications, and largely from the sons of the staff; so that we have always an ample supply.

35,197. Do you give any preference to the sons of the staff?—Most certainly. The boys enter the service at the age of from 14 to 18—you may take it that the average age is about 15—and prior to their acceptance they have to pass a very simple qualifying educational test, in addition, of course, to passing the doctor. The educational examination is a test in arithmetic (rule of three, practice, interest, proportion, additions of money and weights columns, fractions, and reduction of decimals), dictation, and composition. I hand in a specimen paper (*handing in the same.*)

35,198. Is the examination a pretty searching examination. Supposing the full marks for examination are 100, do you insist upon a certain proportion of the full marks?—We insist upon a certain proportion, and we find that the board school boy passes our examination well, and the young boy from Harrow or Eton generally gets ploughed.

35,199. We have been told here, in connection with another great commercial undertaking, that boys presenting themselves for examination are remarkable for their incapacity to spell; the majority could not spell the word "inflammation"?—The same remarks apply with regard to spelling; we find the spelling is better from the board schools than from the big public schools, and the writing also. Then they have to pass an examination in shorthand within a reasonable time of their appointment.

35,200. During their period of probation they have to pass in shorthand?—Yes.

35,201. Does the company afford them any facility for learning shorthand?—In the lower grade there is no probation; they receive pay the moment they enter the service. We used to have a large number of shorthand classes, but we found they were unnecessary because the board schools and others teach shorthand.

35,202. You say that there is no period of probation, that they start on pay at once. But the probation I mean is consistent with their drawing pay. You retain the discretion of getting rid of any boy within a year or two, or it may be a longer period of years if he does not turn out satisfactorily?—Our anxiety both in the interest of the boys and their parents and of the company is to discover whether they are likely to suit us as early as possible in their career. Then after having passed that examination to qualify them to enter the service, in order to impress junior clerks with the necessity of becoming efficient and interested in their duties, they are required to undergo a further simple examination at the termination of two years' service, with a view to ascertaining to what extent they have profited by that training.

35,203. Is that examination which they pass at the end of two years an examination in professional subjects, by which I mean subjects connected with railway work, or is it a sort of literary examination like the first?—It is an examination in shorthand, dictation from newspapers, a written statement describing what work he has been engaged upon since admission to the service, and then the geography of the line and a knowledge of British railways, and then a short essay on any branch of work he has been doing.

35,204. Not necessarily to test the knowledge of railway work that he has acquired, but generally to test his powers of taking matters in?—Yes, to see what he has got in him. Then we examine these junior clerks a third and final time by very much the same sort of examination, only slightly more advanced. But the principal thing is that in travelling about their districts the officers or their assistants and staff clerks interview the lads from time to time, and examine them as to their progress in the various branches of their work, taking note particularly of any lads who show special promise. I have selected the traffic department of the service, because we have more clerks in that branch than in any other, but it is typical of all the other services.

35,205. When they pass that third examination to which you have referred, do they become confirmed as servants of the company?—Yes; you may say that

that is the final examination which confirms them as servants of the company.

35,206. Before you go further would you kindly mention what pay they receive when you take them on first at the age of 14 or 15, and what enhancements of pay they receive afterwards?—I will hand in the scales of pay, from which you will see that the commencing salary for boys of 14 is 20*l.* or 25*l.* per annum according to whether they are employed in London or in the provinces, and then they go up by a scale of increments every year.

35,207. A boy has now passed, say, his final examination; then up to that I understand they are not graded in classes?—He is on what we call the junior scale.

35,208. When he emerges from the junior scale, into what scale does he pass?—He passes into what is called the fifth scale, which commences in London at 70*l.* a year, and in other places at 60*l.*, and goes up until in the ninth year in London he gets 110*l.*, in the large towns 100*l.*, and in all other places 90*l.* a year.

35,209. What age will a boy be on the average when he enters the fifth class. You get him in at 14 or 15; how many years will it have taken him to pass through the junior scales?—He will be in his sixth year.

35,210. About 21 years of age?—In six years he will be about 21.

35,211. Then he is getting a salary, if he is in London and about 21 years of age, of 70*l.* a year, and in the large towns and other places a salary of 60*l.*?—Yes.

35,212. From that forward, if his conduct is approved, he advances on the scale you give here?—Yes.

35,213. But during that period of nine years is it possible for him to get special promotion if he shows special capacity?—Certainly, any exceptional merit would be exceptionally paid, and he would be paid over the maximum.

35,214. That is interesting. Will the exceptional payment be the result of his transfer to some other class, or will it be a special emolument given to him in addition to the scale shown in this fifth class?—We will say that the scale would give him, if you like, 100*l.* a year, and owing to exceptional merit we paid him 150*l.* a year. He would still remain in the class, but it would simply be a difference in pay on the pay bill.

35,215. It would be personal?—It would be personal to him. We have a number of cases in which in the salary list which comes before me I see "Above Maximum" marked. Those men get more than the maximum of the scale for the post.

35,216. While they continue in this fifth class of what you call the clerical staff, may a member of the clerical staff who shows capacity for outside work in the engineering department, or so on, be transferred to such work?—I do not know of cases of the clerical staff going into a technical department to do technical work, but supposing that a clever young fellow has distinguished himself in the clerical staff we may take him out of the ordinary ruck, and make him assistant to one of the district managers.

35,217. He would get into the administrative staff in that way?—Yes.

35,218. And in that way might he get special promotion?—Yes.

35,219. When he reaches his maximum in his ninth year what happens to him? He is then about 30 years of age?—If there is a vacancy he goes into the fourth class, which starts at 110*l.* to 130*l.* in London, or 100*l.* to 120*l.* in the large towns, or 90*l.* to 120*l.* in other places, and as vacancies occur he is promoted to the third class, in which the salaries start at 130*l.* to 150*l.* in London, 120*l.* to 150*l.* in the large towns, and 120*l.* to 150*l.* in other places, and so on, into the second class, until he arrives at the first class of which the maximum salary is 200*l.*

35,220. Ordinarily speaking, supposing that he was not a particularly brilliant man, but was a good all-round man, what age would he be on the average on

25 April 1913.]

Sir FRANK REE.

[Continued.]

entering the first grade of which the maximum salary is 200*l.*?—From 40 to 45.

35,221. Has he any other hope of promotion after that?—Certainly, there are a number of what we call special class positions at a salary of over 200*l.* per annum for men who have passed through all those grades; but in addition to that, as you will see later on, when we come to the second means of recruiting, there are a large number of positions that a bright young man can hope to attain.

35,222. That is what I want to know. By ordinary good steady work he may look forward to reaching a salary of from 175*l.* to 200*l.* a year when he is about 45 years of age?—Yes.

35,223. But if he is a clever man who attracts your attention he may look forward to better things?—Yes.

35,224. Are there many appointments of higher value?—Yes.

35,225. Are you familiar with the Government nomenclature of staff appointments which are pretty much I understand what you mean, that is to say, a man is taken from the common run of clerical work and put over a room to see that the work of the room is properly done?—Yes.

35,226. The work that he does is generally of the same character as he has been in the habit of doing, but the responsibility of seeing that other clerks do this work is imposed on him in addition?—Yes.

35,227. Are these the appointments to which you refer?—No, that would be more like what we call the head of a section, which might be attained to by an ordinary intelligent clerk, who has worked through his grades and is a little bit better than others; he might be selected.

35,228. Would you give him a little more pay than the maximum of the fifth grade, namely 200*l.* a year?—Yes, I have a list in front of me. Taking the chief accountant's department, the heads of sections there would get anything from 250*l.* up to 350*l.* a year.

35,229. (*Mr. Boutwood.*) Are they the special class posts you were speaking of just now?—No.

35,230. They are besides those?—Yes.

35,231. (*Chairman.*) Outside the heads of sections you say that a clever man in the clerical service may get promotion to other appointments carrying higher pay?—Yes.

35,232. What is the character of those other appointments? You have mentioned one, assistant to a manager?—Yes.

35,233. Are those the sort of appointments that you mean?—We, like other railway companies, are in this position—we have no difficulty in finding vacancies, the difficulty is in finding the right men, and the consequence is that attached to all our districts we have as many of these bright young fellows as we can find training, and we pay them, or we try to pay them, irrespective of any scale, exactly what they are worth. Some we find rise to a certain point and they reach their level; others go on and on and on and can reach any height in the railway service.

35,234. They cease then to do clerical work and they are employed on administrative work?—Yes.

35,235. For instance, you have district superintendents?—Yes.

35,236. Would you very briefly tell us what the duty of a district superintendent is?—They are divided into two classes, on the passenger side and on the goods side. I might, perhaps, hand in a diagram showing purely on the traffic side what the arrangement is. I am only dealing with the traffic side for the moment, leaving out the locomotive, engineering, and all other departments which come under the general manager.

35,237. Then am I right in thinking that if a man who gets into the second, third, or fourth divisions shows brilliancy he may be appointed as assistant to the superintendent of the line?—Ultimately, certainly.

35,238. Let us say, that you take him first out of the regular clerical staff; would you appoint him assistant to a district superintendent?—Yes.

35,239. A district superintendent has complete control over a particular length of railway in all matters connected with traffic, subject, of course, to superior authority?—That is so.

35,240. And his assistant will help him in the discharge of all his functions?—Yes. For instance, take "District Traffic Superintendents (passenger and goods)" in the middle of the diagram—I have simply taken Shrewsbury as typical—and then follow it down to where you see "assistants." That assistant at Shrewsbury may be engaged generally as assistant superintendent, or he may be on the goods side or on the passenger side, the goods train workings, or the passenger train workings. He may be getting a general knowledge, the idea being with these young men who are assistants to traffic superintendents, to give them a general knowledge of the working of the line and everything appertaining to it so as to fit them for any post.

35,241. If you take a man from the clerical side and appoint him as assistant, say to the district traffic superintendent at Shrewsbury, he would get higher pay than he had been having as a clerk?—Certainly.

35,242. And in course of time when he became, as he might, district traffic superintendent himself, he would get still higher pay?—That is the usual run.

35,243. So that your clerks go from the clerical establishment into your general management?—Yes.

35,244. And in that way they have their promotion?—That is the way. In fact, the whole thing is, if possible, to let brains tell and knock down all stone walls with regard to grades or classes.

35,245. Are your superintendents—superintendents of the line or district superintendents and so on—recruited from this original clerical class, or do you take any of them from outside the railway into these higher positions?—No, they are nearly all home grown on the London and North Western.

35,246. So that the clerical class you have been describing to me is the class from which you recruit your administrative and executive officers?—Yes.

35,247. Is the pay which you give to the office of district superintendent a personal pay, or is it a pay attached to the office of district superintendents?—You might say both. If you have a very brilliant man in every way you give him increased pay, but it does not necessarily follow that you appoint him at the same pay as his predecessor.

35,248. Then it comes to this, that an able man may be taken up into these high administrative appointments before he ever gets to the 175*l.* to 200*l.* grade?—Very often.

35,249. It is only the steady going plodding man who, without marked ability, is an efficient clerk who will work his way up to 175*l.* to 200*l.* and remain there?—That is the scale for the ordinary clerical appointment.

35,250. But a clever man, who shows himself capable of better things, is appointed, say, an assistant district superintendent and gets a higher salary than?—Yes.

35,251. Then in the course of time he becomes a district superintendent?—Yes.

35,252. May he get a salary, say, of 400*l.*, 500*l.*, 600*l.* and 800*l.*, up to 1,000*l.* in your service?—Yes, and I may say that the London and North Western general manager began at 40*l.* a year; the superintendent of the line and chief goods manager began at about the same, and all the chief officers of the London and North Western Railway have worked their way up from practically the bottom.

35,253. Have you taken into your service any men from the universities, distinguished university graduates?—We have had one or two, but if I might mention our second means of recruiting, I think I can answer the question in that way.

35,254. Will you do so, if you please?—The second means of recruiting is of a limited character, to get lads of superior education who have gained some distinction at their schools by scholarships or in other ways, and as we give them an exceptional training we first of all have a probationary period, when they come to us as volunteers for three or six months, and if they do not show that they are likely to get on in the service we do not hesitate to fire them out, whoever they may be. They come to us from about 18 to 20 years of age at the end of their public school life; unless they are going to the university, they pass a slightly stiffer ex-

25 April 1913.]

Sir FRANK REE.

[Continued.]

amination and they come under much closer supervision than the ordinary lower grade apprentice. In the case of the ordinary lower grade apprentice, as long as he behaves himself and does his work fairly well there he is, you may say, for life; but these young lads are reported on to me every three months.

35,255. What would their age be?—It is generally from 18 to 20.

35,256. Then they will not be university men, they will be from the public schools?—That is so. I will come on to the university men if you will forgive me. Every three months these reports are given, but we give them, on the other hand, facilities for thoroughly learning the work. They start generally at the bottom, on the bank of a goods shed and see goods loaded, invoiced, and everything else—I take goods as typical—then they go into accounts and into the various workings of goods traffic, and then into passenger traffic. But all that means considerable trouble and considerable expense to the company, and it takes five years before they are of any use to us, so that we are very strict in weeding them out.

35,257. Then, do you find that the higher education, which it is assumed they have acquired in these public schools, fits them in any particular way for your work?—Yes, a clever young fellow, a clever young probationer, who has received and taken advantage of the education of a public school, certainly gets on quicker, because a great deal of our work is very difficult and very technical, and we want young men with the highest education. We would take university men willingly on the same lines, but then they would be handicapped, because they would come to us at 25 years of age, and by that time the probationers would have had perhaps seven years' training, and it would be a bar against the promotion of university men.

35,258. First, in regard to the public school boys, do you find that they commend themselves better to the general public by their manner and demeanour than a boy who enters from a secondary school?—I need hardly say that if we get a very nice gentlemanly tactful young man we select him for one of the positions where he is in close contact with the public.

35,259. Does your experience lead you to think that you get that style of young man more frequently from the public schools than from the secondary and primary schools?—To start with they must have it. When we examine them before they go through the ordinary examinations, they must have all those qualities to start with.

35,260. Otherwise you would not take them?—Otherwise we would not take them; we should not give them a trial.

35,261. Now let us look at university men. I was thinking whether there was any work on the railway to which a university man could at once settle down and find himself at home. Is it necessary that he should go through this period of probation which a boy who is taken at 14 or 15 has to go through?—That is the system we have adopted. We say that they would be of no use to us unless they have had that training.

35,262. We have had evidence to the effect that large industrial concerns find it to their advantage to take highly educated men from the university, because of the peculiar capacity they display in dealing with large questions and with the public in a way which facilitates and extends the growth of business transactions?—I am absolutely with you on that advantage. We desire to have that class of man, but our difficulty is in fitting them into our working with this second means of recruiting that we have, namely, the probationers. If these university men would be content to wait a little and stand the racket of the earlier years, we would be only too glad to have them. I think I can give you an instance of what I mean. One of my predecessors, Sir George Findlay, started as a ganger under Brassey. When he came on to the railway he found the enormous advantage of education, and he not only gave his sons the highest education he could possibly give them, but he created the class of probationers, and he created another class of what were called cadets, so as to get into the service men who had had a university education or a high education at

one of the big public schools, because he saw the shortcomings of the men round him through the want of that education.

35,263. (Mr. Boutwood.) What happened to those cadets? You have told us about your probationers but you have not told us anything about the cadets?—We took on to fill up a gap, some years ago, certain cadets, so to speak, and I have lost sight of them for the moment, because the gap ceased when these probationers got old enough to follow on.

35,264. So that, practically, the cadet system has ceased?—No, it has not ceased, it is still there, and if a bright young university man came to me to-morrow I would put him on.

35,265. (Sir Guy Granet.) I think this question ought to be made clear from any misunderstanding. The special class of young men with a special education to which you alluded, and which have been alluded to in various forms, still continues?—Yes.

35,266. (Chairman.) When you speak about these cadets do you refer to the boys you take on at the ages of 14 or 15 years, or to the boys of 18 or 19 whom you take on from the public schools, or to the class of university men who come to you at the age of 24 or thereabouts. To which of these three classes do you apply the term "cadet"?—To the university man.

35,267. Will you please go on with your second mode of recruitment?—Our system is to see that as far as possible we are not overlooking some promising young man. Before those young men are by age eligible for positions on the administrative staff, the periodical examinations, to which I have referred, made by district officers and others, are one means of testing their merits; but, in addition to that, the company have a system of selecting the brightest of these young men who have consistently shown merit for taking part in inquiries which are going on all over the line into almost every important subject connected with the working, and which differs as widely as from staff expenses to the working of a dining car. These committees are presided over by a senior officer, with other experienced officers to assist, and by that means the officers soon find out the merits or demerits of the lads, and those who show exceptional abilities go from committee to committee, and it is from them we pick the young men for the administrative staff. A young man will be taken who knows nothing at all about it; he has been doing merely clerical work, and is put on a committee to consider whether it is better to light carriages with electric light or Fintzche's gas.

35,268. That disposes of the first question as to the means of recruiting your staff, and in your answers you have largely covered the second question, the organisation of your staff?—Yes.

35,269. I will not ask you any further questions on those points. With regard to the gradations of pay, I understand that it does not depend upon fluctuations in prices and the cost of living?—No. We put in force a new scale only last January for the clerical staff, which cost the company a net increase of over 40,000*l.* a year.

35,270. Is that the scale you have given me here?—That is the scale. It was chiefly due to a desire on the part of the board of management that the staff should receive their advancements by scale, over a longer period of service instead of as formerly, the advancement being by a scale ceasing at a low figure, and any increases beyond that low figure were by special recommendations. I would like to say that, of course, the bare pay is not all that they get from us. They get passes and a large number of other privileges, and we have a superannuation fund, and we have also what is called a widows' and orphans' fund.

35,271. I was coming to that, but if you prefer to deal with the superannuation fund now, will you please do so?—The superannuation fund, which applies to the whole clerical staff, is compulsory, the contributories pay 2½ per cent. of their salaries, and the company used to do the same, but since 1908, after an actuarial valuation, it was shown that the fund was not self-supporting, and it is now guaranteed by the company. The company bear the brunt of the

25 April 1913.]

Sir FRANK REE.

[Continued.]

remainder to make up the benefits, because previously we were not solvent.

35,272. How long has a man to serve before he is entitled to the full pension benefits?—He gets no benefit for the first ten years; then they are based on a scale of length of service and average salary. For instance, a superannuated clerk, after having completed 20 years contributions, would receive 45½ per cent. of his average salary, after 30 years' service 69½ per cent.

35,273. Of his average salary for how many years?—Since he entered the service. After 40 years' service he would receive 94½ per cent., and after 45 years and upwards 109 per cent., which is the maximum. The minimum pension is 30l. a year.

35,274. If he dies before the initial 10 years are over, does the contribution that he has paid lapse to the fund, or is it returned to his representatives?—It is returned.

35,275. (*Sir Guy Granet.*) With an addition?—Yes, double his contributions are returned to those he leaves behind him.

35,276. So that it is an insurance fund in case of his death?—Yes, then there is a provision made for commutation.

35,277. (*Chairman.*) Then there is the widows' and orphans' fund?—Coming to the widows' and orphans' fund, this fund has been in existence since 1900, and it provides pensions for widows and orphans of the salaried staff.

35,278. In that case are contributions made by the men?—It is compulsory on all the salaried staff to become members at the age of 25, and their contribution is 1½ per cent. of their salary, and the company contribute an equal amount. In the event of a member dying after the completion of 10 years' service, a pension, varying according to the length of contribution, of from  $\frac{1}{10}$ ths to  $\frac{10}{10}$ ths of his average salary during contribution, is paid to his widow for life or until her re-marriage, with ½th extra for each child under the age of 15, until such child reaches 15; and that is limited to three children, and the maximum pension is limited to 300l. a year.

35,279. If the widow marries again the pension ceases. If she becomes a widow again does the pension revive?—We have not had a case of that kind.

35,280. (*Sir Guy Granet.*) It has not been claimed anyhow?—No.

35,281. (*Chairman.*) I asked the question because in a certain system it does revive. The fourth question is rather outside the arrangements of the railway company. What we really want to know is whether you find any fault with the administrative methods of the Government, whether your dealings with the Government have brought to your notice any defects in the Government system of despatching public business, which, in the public interest, you would be glad to have corrected. Do you find you are promptly dealt with and efficiently dealt with by public departments, or have you had reason to complain of red tape and delays?—That is rather a difficult question to answer. I do not know that I personally can say that I can give you any information upon that point. We have generally found the Government very prompt.

35,282. Your mind does not at once respond to the suggestion; you do not at once remember particular cases in which you had reason to find fault with the method of the Government in dealing with your railway company?—No, I cannot call to mind anything at the moment.

35,283. In regard to the employment of women, you mention in your paper that you employ them very largely on your accounts, and of course as typists, but I understand that they are segregated from the men; they work in separate rooms from the men?—Yes, with the exception that one or two men go in occasionally to exchange books and documents.

35,284. They do not sit at the same tables or in the same rooms with men?—No.

35,285. Have you employed women in any distinctively secretarial work such as minuting, drafting letters, writing letters, and so on, or are they altogether restricted to the accounts department and to typing?—

They are strictly confined to the accounts department and to typing.

35,286. Do you find them competent and efficient in those respects?—Very; we are very satisfied with them. The main reason why we introduced them was to provide suitable employment for the relatives of the staff.

35,287. (*Sir Donald MacAlister.*) I do not think that you have given us the total number of clerks on the staff?—12,000.

35,288. That includes, I take it, the whole of the clerical staff apart from the assistants and higher officers to whom you referred as recruited outside the staff?—No, it is including them.

35,289. What is the average age of entry, as a matter of fact. They can enter at 14, but what is the average age of entry?—About 15.

35,290. I notice according to your scale that a boy who enters at 15 or 16, that is to say, who stays at school a little longer, enters at the pay of his age and not at the pay of a beginner of 14?—No, he enters at the pay of his age.

35,291. Do you do that deliberately. Although he has lost perhaps a year's experience in the office by staying at school a year, you pay him at the scale of his age?—We are paying him a little more for the benefit of the higher education that he has had.

35,292. That is the deliberate policy of the company?—Yes.

35,293. You would rather recruit them at 16 and pay them the age payment of 16, if it implied a higher education generally?—For the bulk of them, yes; but their fathers very often press us to take them at 14 and 15 when we would rather wait a year.

35,294. What I meant was that the policy of the company was rather to encourage the later entry?—Yes, in order to get a little more advanced education.

35,295. What is the usual age of retirement of those of the clerical staff who have not received exceptional promotion?—They can retire at 60 on superannuation, and the company can retire them at 60; but it is compulsory at 65.

35,296. Very much like the Civil Service?—Yes.

35,297. How many of these assistant posts to which you can promote an exceptionally capable clerk are there?—I do not like to say that they are unlimited, but it is entirely at our discretion. There are no vacancies but we make our district managers all over the line our schoolmasters so to speak, and we send them as many pupils as they can usefully employ.

35,298. I merely wanted to know as a matter of fact how many assistants there are at the present time out of the 12,000?—I could not give you that at the moment.

35,299. Would it be 100 or 1,000?—Fully 100.

35,300. So that you are prepared to make something like 100 posts of assistants for exceptional men out of the 12,000?—Yes. Our difficulty is that by our system of selection we discover brains and the other companies come and I will not say poach, but take our men; they are satisfied with our system of training our men. For instance, at the present moment we have got about six general managers, of whom three are in London on big railways, who started with us under the system I have mentioned. And I have got a very long list of men like London goods superintendents, assistant traffic managers, and traffic assistants on other railways in England and abroad.

35,301. So that you are serving as a training school for other lines?—It may be a compliment but it is very unpleasant.

35,302. The bearing of that is that in addition to the post of assistant which is open to capable men they have an opportunity of leaving your service to enter better posts elsewhere?—Hardly a week goes by but what we receive applications to know whether we can recommend somebody for a position outside the railway.

35,303. Is that in regard to somebody who has already applied or somebody whom you might indicate?—It has even gone as far as asking us if we will nominate somebody.

35,304. That is a very high compliment?—Yes, but it is a heavy drain.

25 April 1913.]

SIR FRANK REE.

[Continued.]

35,305. Can you tell me whether from Class V. into which your clerks enter after passing through the juniors' scale, you make, as a matter of fact, many assistant appointments, or have they to get to a higher class before they can start out?—It is entirely a question of age, but we generally pick these young fellows between 25 and 30.

35,306. So that they would then naturally be in Class V.?  
—Yes.

35,307. Class V. is your main recruiting ground for brilliant young men?  
—Yes.

35,308. When a man gets into the fourth scale does he remain pretty stationary?  
—He runs that risk.

35,309. And that class represents the ages between 21 and 30?  
—Class V. represents ages between 21 and 31.

35,310. What I mean is, that after that, he gets rather into the scale and follows the usual course of promotion by seniority and competent service?  
—Yes, very much as in the Civil Service; if you do not detect the merit in a young fellow when he is under 30 then he runs the risk of getting into a merely routine man.

35,311. Your experience is the same as in the Civil Service?  
—Yes.

35,312. Do you often go outside Class V. to make appointments as assistants. I mean do you make appointments from this cadet class or the probationary class?  
—Yes.

35,313. That is to say, from men who have not got into Class V. at all?  
—Who are not in the class at all. That is one reason why we instituted those two classes.

35,314. Does it more frequently happen that it is from those classes, the probationary and cadet classes, that you make assistant appointments, in proportion?  
—No, it is on account of the limited number of probationers and cadets as compared with the large number of ordinary clerks.

35,315. That is what I mean. In proportion to their numbers would you expect a probationer or cadet to justify his promotion?  
—We should not keep him.

35,316. You would not keep him if he was not capable of promotion pretty soon?  
—No.

35,317. Do you, as a matter of fact, in your sifting-out process reject a good many?  
—Yes. Take the case of the last two. One of them was recommended by one of our prominent directors and the relation of a very celebrated personage; we rejected him. Another lad was supposed to have all the qualifications, and was very strongly recommended by a director; we got rid of him.

35,318. These are all practically nominations, as in the Civil Service?  
—Yes, the Board insists upon it that these young men are not kept, no matter who recommends them, unless they really warrant it.

35,319. So that your method of probation really is selection among those nominated by these important officials, and then trying them?  
—No, it is open to anyone; we have only a limited number appointed every year, and it is open to anybody to come to us, but unless he is the right stamp he will not be kept.

35,320. How do you find out that he is the right stamp? As I say, by trying him?  
—As I have explained already, by first of all examining him to see if he is right with regard to manners and appearance and everything else, and then by the quarterly reports which come to me personally, and no ordinary report of his doing his work satisfactorily would be sufficient; he must show exceptional merit.

35,321. How many months' trial would you regard as proper before you determine to reject a man who has been nominated in this way?  
—I should say within, at the outside, a couple of years.

35,322. (Sir Guy Grant.) May I interject a question? As a matter of fact he is on probation for five years?  
—He is on probation the whole time he is in the service until he gets into a vacancy. For at least five years he is being trained. I have got a list of some who have been trained long beyond the five years, and during the whole of those five, six, or seven years they are passing one of the strictest competitive examinations it is possible for them to pass.

35,323. (Sir Donald MacAlister.) My question was this: If in two years you find that a lad has not shown

those exceptional qualities that you want, you make up your mind that you will get rid of him; you would not wait until the end of the five years?  
—As a rule we make up our mind within 12 months.

35,324. I ask the question because it has been suggested to us as an alternative for competitive examination, which is open to everybody, that there should be a probationary period for those who have been successful when tested *prima facie*, and that we should reject those from the Civil Service who, after a certain time did not show the qualities that were required. That is the practical method that you have adopted?  
—We have tried every method.

35,325. Are you satisfied that in that way at the end of twelve months, or possibly two years, you can find out those who are most likely to do you credit?  
—Yes.

35,326. Can you give us an idea, however rough, of the number who have been accepted as probationers or cadets, say in the last five years?  
—We have always got about a dozen running. We take on up to about a dozen per annum if the right young men come.

35,327. So that you may have in five years as many as 60 through your hands?  
—Yes, we might, only the weeding process is so stringent that we do not have that number remaining.

35,328. Can you tell us what proportion remain, also roughly?  
—I could not give you anything definite now.

35,329. Not one half?  
—More than half would remain.

35,330. So that your process instead of being a process of examination on paper is a process of testing in actual work, with the result that less than half are plucked in the end?  
—Yes, but numbers come up who are not accepted, they do not get through the preliminary stages.

35,331. Why do you want men, if you can get them, with the superior education that you are contemplating? As a matter of business, why do you want them with this higher education? Is it to secure men of that nature that you have cadets and probationers of a higher age?  
—If you could see the problems that we have to deal with you would readily realise that we cannot have them too highly educated.

35,332. There are problems that you have to deal with of an administrative character, I suppose, which it would be very difficult for you to find a man to tackle, who had entered at 14 and had had nothing else in the way of education?  
—If he had not educated himself and kept up his education throughout, it is doubtful whether he would be able to deal with some of these big problems that we have.

35,333. Returning to the superannuation scheme, did I rightly understand that all the members of the staff are compelled to be contributors?  
—It is compulsory.

35,334. Do you manage the pension fund yourselves as a company or do you deal with any outside insurance company?  
—It is entirely in the hands of a committee consisting of representatives of the staff and of the Board.

35,335. And the ultimate financial responsibility rests solely on the company?  
—Solely on the company.

35,336. (Mr. Shipley.) We have been asked to consider how far the Government service meets the requirements of the public, and it is very difficult to get any evidence on that point. You must have a good deal to do with big companies like shipping companies and railway companies; could you compare the management, say, of the Board of Trade, with which you must necessarily have to do, with that of one of those companies?  
—I do not think I could.

35,337. I do not know whether, in connection with your railway, you have anything to do with Government departments in the colonies or abroad; could you compare our Government departments here with any of those?  
—I could not compare the Government departments here with Government departments in the colonies.

35,338. Or on the Continent?  
—I do not think my opinion would be worth having. I have not had much experience in that way.

25 April 1913.]

SIR FRANK REE.

[Continued.]

35,339. Is there any kind of restriction put upon the staff in the way of actively engaging in politics, as there is in some Government departments?—No.

35,340. None at all?—None at all.

35,341. The railway plays a great part in elections?—We do not trouble ourselves with their politics any more than we trouble ourselves as to whether they belong to a union. As a matter of fact, the president of the big union of all the railway societies is a driver on the London and North-Western Railway. We do not object.

35,342. In the pre-railway times, in coaching times, Mr. Sam Weller's father took a very active part in politics. Do not you think you put the age of graduation rather high when you talk of men coming to you from the university at 25. My experience is that they mostly graduate between 21 and 22?—Yes, possibly you are right; it may be that 23 is about right.

35,343. When you revised your scale of wages last January, was it in view of the increased cost of living?—That was only one factor.

35,344. It was a factor?—Yes.

35,345. (*Mr. Matheson.*) I do not think we were told whether your probationers are paid while they are probationers?—They get no pay for three or six months. Unless we are quite certain of them after the third month, they do not get pay until the end of the sixth month, and then they come on a scale beginning at 40*l.* a year.

35,346. And there are rises during the five years?—Yes.

35,347. Are they selected for higher posts during those five years?—Well, it might happen, but it takes, as I said, five years before they are of any use whatever to us; they are like boys at school.

35,348. As a rule, they would go through the whole five years before they were planted out?—They would not know the a, b, c, for five years.

35,349. You spoke of a certain number of your clerical staff being outside the scale; have you any notion what proportion those bear to the whole of the staff?—No, but they are a considerable number.

35,350. You spoke of the pay not representing all that the staff get; you spoke of allowances. Is there anything besides a railway ticket, and so on?—There are no allowances, it is mainly the railway ticket and the quarter fare—not only on our railway, but virtually on all railways—and that extends to all their dependents.

35,351. Their families?—The family dependent upon them.

35,352. (*Sir Henry Primrose.*) I understand that the number of 12,000 which you gave us includes everybody, even yourself?—Yes, it includes everybody, including the general manager.

35,353. Then the vast majority of men are men who fall into one or other of these classes that go up to 200*l.* a year?—Yes.

35,354. But I also gather from the existence of this probationary class that you cannot rely upon that great general body of employees to provide you with men qualified for superior work?—No, I agree with that.

35,355. And in order to provide men for superior work, you recruit specially by means of this probationary class?—Yes, to find a proportion of them in that way.

35,356. A certain number you may draw from the vast body who receive up to 200*l.* a year?—Yes.

35,357. Do you find that amongst that large body of men there is any feeling that they are rather unfairly treated in having this other body, a small and select body of probationers, brought in who get most of the good places?—No, because a junior clerk or apprentice enters our service and he gets pay from the day he enters the service. We do not expect a very high standard from him and, therefore, unless he does something wrong there he remains. A probationer comes in and, although the prizes may be large, he has to run the gauntlet of so many examinations and such strong competition throughout, beginning without pay for some months, that there is no feeling, so far as I know, on the part of the lower grade of the staff against these probationers.

35,358. In other words, this large body of something perhaps over 11,000 men who never go beyond 200*l.* a year, and cannot expect to do so, are satisfied with that prospect?—I have never asked them the question, but I have no knowledge of any dissatisfaction. There is no open dissatisfaction.

35,359. They do not complain that their expectations or their claims to promotion are not met?—No. As I have said, we recruit largely from the sons of our own clerks, and they would complain bitterly if we subjected their sons to the heavy examinations that we impose upon these probationers. To show how our staff is recruited within our own families, which answers to a certain extent your question, we have many cases of four generations, and I know of a case where, taking the whole family, they have been amongst them 600 years in the company; not individuals, but 600 years taking years of service altogether.

35,360. Then what do you regard as a working day for the general body of your clerks; how many hours a day?—They come in roughly at, say, nine and stay till six all over the line with proper intervals for meals.

35,361. Do you suppose that they are actually at work over seven hours?—Yes.

35,362. For eight hours?—Yes.

35,363. Do the booking clerks belong to that class, or are they picked men and specially paid?—They come under this class, but we have exceptional pay in exceptional cases.

35,364. Take, for instance, your head station at Euston, would the booking clerks there be exceptionally paid?—They are well paid; they come in a special class and get higher pay.

35,365. Now, as regards your probationers, perhaps I missed it, but I did not quite gather how you select them. First of all, I suppose any director may nominate—that is one thing?—Yes.

35,366. (*Sir Guy Gramet.*) It does not follow that the nominee will be taken?—No.

35,367. (*Sir Henry Primrose.*) But you would try him on a director's nomination?—I gave you two instances, both of which were recommended by prominent directors, but in neither case did they come up to our standard.

35,368. But a nomination by a director would be tried?—It is not necessary.

35,369. But on the nomination of a director you would, at any rate, give the young man a trial, would you not?—Yes, if we wanted anybody at that time; but, as a rule, I get applications coming direct to me from all quarters. I have had them from the public schools; we keep in touch with the public schools; there is no dearth of applicants.

35,370. During the time that one of these young men is in the probationary stage, does he work alongside the clerks of the general body?—Yes.

35,371. He may be in a room doing exactly the same work as these men who get up to 200*l.* a year are doing?—Yes, during the time when he is doing what I call learning his alphabet.

35,372. Have you ever thought of trying, or have you ever tried, the system of open competition, instead of nominating men as probationers?—No. You see we are differently constituted from a Government office; you may be obliged to have it there for political or other reasons, otherwise you would have such awful complaints of favouritism and political bias. But we have no intention of adopting the system of a highly competitive examination, because once having passed that highly competitive examination you are saddled with the man and he may not come up to your standard.

35,373. Do you happen to know whether any other railway company has tried the system of open competitive examination?—I do not think any company has.

35,374. I was told the other day that some Irish railway company had tried it?—I could not say what they do in Ireland.

35,375. You said, I think, just now that you could not say what number of places there were in the 12,000 which carried a salary in excess of 200*l.*?—I cannot. I have never looked into it.

25 April 1913.]

SIR FRANK REE.

[Continued.]

35,376. Can you give us any rough idea?—No, not worth giving to the Commission. All I know is that in a number of cases when the question of salaries comes before me I notice in a special column for it, "above maximum," "above maximum," "above maximum."

35,377. Would there be a considerable number of places the occupants of which have salaries ranging from 200*l.* to 500*l.* a year?—Oh, yes.

35,378. Would many have salaries like that?—Yes, a large number.

35,379. Above 500*l.* would you have many?—Yes, a considerable number.

35,380. I suppose the number above 1,000*l.* would be small?—There is still a certain number of them.

35,381. Would you object to giving us a return, say, of the number of salaries between 200*l.* and 500*l.*, the number between 500*l.* and 700*l.*, the number between 700*l.* and 1,000*l.*, and the number over 1,000*l.*, without mentioning places, a sort of rough classification?—Unless you really thought it would be of great benefit to you, I would rather not.

35,382. Going back over the last 40 or 50 years, has the London and North Western Railway Company always been able to find a general manager amongst its own staff, or has it ever gone outside?—You take me back 40 or 50 years.

35,383. As long as you can speak to?—We had one come to us, Mr. Cawkwell, from the Lancashire and Yorkshire Company. Then we took over Sir George Findlay with the Shrewsbury and Hereford Line, but then he was for long years with us. Then Sir Frederick Harrison started at Shrewsbury at a nominal salary, and he was all his life with the London and North Western, and I have been all my life with the company.

35,384. Then for any post below general manager I suppose it is not conceivable that you would not fill it from amongst your staff?—No, we always find plenty for those posts, and in fact, I regret to say, for other companies as well.

35,385. Are you troubled with complaints from your staff as regards favouritism in the matter of promotion?—No. I have, of course, heard of charges of that sort. No big company with 85,000 servants could avoid it.

35,386. But still it is not a serious matter?—No, it is not a serious matter. Of course, every man values his capacity according to his own standard.

35,387. (*Mr. Boutwood.*) The only question I want to put to you is a very simple one. I suppose there is hardly a case in the public service where the head of the department does not receive representations or memorials from his staff embodying all sorts of complaints and desires, and I was going to ask you whether you have any similar experience with your clerical staff?—We had a deputation some years ago from our clerical staff asking for more money; we had already decided to do something, and we gave them the new scale.

35,388. I gather from your answer that that was an exceptional incident in your official experience; it is not a common thing to be before you?—I do not find that in our service we have many cases like that. That was a case. We try to meet grievances before they arise, I mean to say before they become too prominent.

35,389. (*Mr. Philip Snowden.*) You have stated more than once in the course of your evidence that your idea is to find out and to encourage exceptional merit?—Yes.

35,390. You have told us already that you began at a salary of 40*l.* a year?—Yes.

35,391. And from your answer to a question which has just been put to you, I gather that your predecessors in the position that you hold were men who rose from very humble positions in the railway service?—Yes.

35,392. Has that been practically the universal thing in the service of the London and North-Western Company?—It is rather difficult, when you bring me in, to know how to reply, but the endeavour of the London and North Western Company is to give brains a chance.

35,393. Take one or two of the officials who are just below yourself, take the superintendent of the line, a

gentleman who, I believe, was knighted by the King the other day?—Yes.

35,394. Has he risen from one of the lower posts in the service of the company?—Yes, he has fought his way up from the bottom.

35,395. Then your chief goods manager?—I think he joined us at a salary of about 100*l.* a year.

35,396. Your district superintendents, are they all men who have risen from lower grades?—As a rule.

35,397. And you have told us already that you have always plenty of men capable of filling the responsible positions that fall to them?—Yes.

35,398. That indeed you have so many able men that you have been able to provide able men for other companies?—I do not put it quite like that. We always manage to find men for our posts, and we have managed to find men, and we regret to say we have had a number taken by other companies.

35,399. Quite so; that is what I meant. I take it from the answers that you have given me that neither the general manager nor the superintendent of the line nor any of your district superintendents have been recruited from this class of probationers?—No, I said mainly.

35,400. Your general manager, your superintendent of the line, and your chief goods manager?—The chief goods manager, as I have already said, came into the service at 100*l.* a year.

35,401. How long had he been in the service?—About 35 years.

35,402. But he would not belong to the same class as your probationers?—I think he came in as a cadet, and I know that several of the district managers came in as cadets.

35,403. The experience of the London and North Western Railway Company in the matter of having been able to find its general managers from men who entered the service of the company in the lowest grade has not, I believe, been quite an exceptional experience; other railway companies have been able to do the same?—When you say the lowest grade, the lowest grade is the 25*l.* a year apprentice. I did not come in as a 25*l.* a year apprentice; I came in on the second grade as a probationer.

35,404. At any rate it would be quite correct for me to say in the lower grades of the service?—Yes.

35,405. Is it not the fact that the present general manager of the Great Western Railway Company started, I believe, as a porter?—I do not know how he started.

35,406. But you have told us already what Sir George Findlay was?—I know about Sir George Findlay, but I could not give you any accurate information as to how any general manager on any other line started. I do not know how the present general manager of the Great Western Railway started.

35,407. I think I remember at the time of his appointment seeing something to that effect. Now about your university men; have you recruited many university men into your grade of probationer?—No.

35,408. None?—I will not say none; we have had some, but I do not know that we have got any with us at the present time.

35,409. Your experience, at any rate, of the university man in railway service is so very small that you are not prepared to express an opinion on either his inferiority or his superiority?—Our experience with university men has been that they got tired waiting for promotion.

35,410. I take it that this probationary class of yours, in which I am very much interested, is recruited mainly from the public school boy?—Yes.

35,411. It would not be fair perhaps if I were to ask you whether those appointments are really a little patronage in the hands of the directors?—No, they are not, because I have given you the case of how we do fire them out if they do not show exceptional merit over the lower grade. We should not think it fair to retain them in the service unless they showed that they had made the fullest use of the superior education they had had, and were superior to the lower grades of clerk.

25 April 1913.]

Sir FRANK REE.

[Continued.]

35,412. I understood you to say that, roughly speaking, you find about half of them unsuitable?—We find that more than half of them are suitable.

35,413. What proportion of your ordinary clerical staff do you find it necessary to get rid of on account of incompetence?—Well, we are very lenient in those cases. As long as a man manages in the lower grade to do his work without making his incompetency too apparent we do not get rid of him.

35,414. You told us that so far as the candidates for your clerical staff are concerned, you find that the Board school boy does much better at the examination than a boy from a public school?—Ours is a Board school examination paper. For instance, I know a case of one of these probationers who made a remark that he could have passed the examination with honours if it had been given him when he left the Dames school; consequently the examination is just one suitable for a boy coming from a Board school.

35,415. Have you ever thought of altering the scheme of your examination, so as to adapt it to the education of the later years of a boy's life?—We have thought of it, but we have not made an alteration.

35,416. Seeing that you are so anxious to get a good staff, and to try to have amongst your rank and file men who are able to fill the highest posts in the service, do you think this practice of yours of showing a preference to the children of your employees is not a restriction of your selection?—Well, we would not alter it for anything. We encourage, as far as we possibly can, the getting of as many as we can of a family into the railway service; it is something for a man who comes into the railway if he thinks that he has a reasonable chance of finding employment for his children, male and female, in the company. We should not like to do anything that would act against that.

35,417. You think the advantage of that human relationship which is maintained more than compensates for any disadvantage of the system?—Oh, by far.

35,418. You stated that you cannot have men who are too highly educated for certain important work that you have to do, but I take it from the answer you gave me just now that you have no university men; that the most highly educated men that you have in your service are those who have had a good school education?—Yes.

35,419. It follows, then, that you have not in your service men who have received the highest education?—As I say, we are only too anxious to have them, but it is that waiting time for a man of, say, 23; that is the difficulty. If he comes in with honours from the university, and he finds that these lads, so to speak, have had already years of experience in railway work before him, he cannot stand the comparison until he himself is efficient. Railway work is something you cannot pick up in five minutes.

35,420. Just one or two questions about your women. You said that you were very well satisfied with the way in which the women do their work?—Yes.

35,421. Are they employed upon work that is similar to the work done by men in your service?—It used to be done by men. It is extracting charges of the invoices, putting them into columns, and then adding them up.

35,422. Have you come to any conclusion as to the relative efficiency of a woman's work and a man's work?—It is work that they are well able to do.

35,423. I mean in regard to the respective output of men and women engaged on the same kind of work?—I think it is very much the same. I do not think either that the women do it more quickly than the men, or that the men do it more quickly than the women.

35,424. May I ask what is your scale of pay for the women?—Not under 15 years of age in the first year, 10s.; second year, 12s.; the third year, 14s.; fourth year, 15s.; the fifth year, 20s.; the sixth year, 23s.; and 25s. per week after the sixth year of service.

35,425. Roughly speaking what percentage would that be of the male scale?—I have not compared them.

35,426. Have you much trouble with excessive sick leave among the women?—No, we look after that; we see that their offices are well ventilated. You cannot quite treat women, you know, as you can men; you

have to be very careful in dealing with them. They are, perhaps, more emotional than men; you cannot blow them up, if you do you have a tremendous upset.

35,427. You have never tried the experiment of men and women working together?—No.

35,428. Are your stationmasters entirely recruited from your clerical staff?—No, not entirely.

35,429. It would be very interesting if you would just answer me this further question about yourself: could you very briefly indicate the various stages through which you passed to your present position?—Since I entered the railway?

35,430. Yes?—I started with the agents of the railway; I came to the railway when I was 21. I was then on the ordinary clerical staff, then I gradually worked up through the clerical staff until I became chief clerk to a district manager. Then I became assistant to the district manager in London, and then the same thing in Liverpool. Afterwards I became district manager in Liverpool. From district manager in Liverpool I succeeded Sir Frederick Harrison as chief goods manager at Euston, and then I became general manager.

35,431. (*Sir Donald MacAlister.*) Did I understand you rightly to say that you entered the railway service at 21?—I entered the railway service proper at 21, but prior to that I was for some years with their agents.

35,432. Not on the railway staff?—Not absolutely on the railway staff.

35,433. (*Mr. Graham Wallas.*) Do you, in increasing the salaries of meritorious men on your junior staff, ever use the expedient of giving men an additional increment or two, or more additional increments, that is to say, leaving them on the scale but putting them rather higher up?—No. Supposing that a man was getting 100*l.* a year, and it was thought that we should give him another 50*l.*, we would give that 50*l.* as purely personal to him.

35,434. He would remain getting the ordinary increment of his scale?—Yes, he would remain on, and he would come under the head of "above maximum."

35,435. Do you encourage your clerks in your service to get outside qualifications and to pass outside examinations for them?—No, we are always glad if they do.

35,436. What sort of examinations do your men go in for—for the Institute of Accountants, for instance?—No, I do not know that they do.

35,437. Do any of them take legal qualifications?—No.

35,438. Do none of them transfer themselves to your legal side?—No, we have had transfers from the professional side to the traffic side, but not from the traffic side to the professional side.

35,439. It is not a recognised way for an ambitious young man, to make his mark, to pass an outside examination or take a degree?—No.

35,440. You say that your policy is to get junior clerks in a little later. Do you think, as a matter of fact, their age of coming in tends to be a little later?—No.

35,441. It is about the same?—It is the same, about an average of 15.

35,442. Do you find that the great growth of municipal secondary schools tends to make a larger number of them come from the secondary school rather than from the elementary school?—I could not tell you.

35,443. Your lower clerical grade, to a large extent, I think, belong to the railway servants' organisation, the big union?—Not that I am aware of.

35,444. It is entirely the mechanical staff, the working men, is it, who belong to the union?—We do not interest ourselves in that. I really do not know.

35,445. What I was leading up to was whether, as in the case of the Post Office, you recognise, in the case of your clerical officials, their organisations?—No, we do not recognise any association. We deal direct with our employees, and we do not mind how many unions they belong to, or whether they are political or whether they are of any other character.

35,446. Would you recognise persons who presented themselves as representatives of your employees?—A deputation of our employees can come to us at any time, but we do not recognise anybody outside the service who

25 April 1913.]

SIR FRANK REE.

[Continued.]

says that he represents the staff. We do not know him, but prefer dealing directly with our staff.

35,447. But a deputation would naturally consist of representatives of the organisation, would it not; it would not necessarily consist of employees?—Not necessarily members of an organisation. The only deputations we would receive are deputations of clerks or men in our employ.

35,448. (*Chairman.*) Take, for instance, the Amalgamated Society of Railway Servants; if the secretary of that association came to you on behalf of some of your clerks, would you receive him?—No, we have nothing to do with him. I have never yet received anybody of that kind; not that I have any objection to him, but because I prefer to deal with our own men. I am there, and am always ready to meet our men.

35,449. (*Mr. Graham Wallas.*) But a man who comes to you may be in fact, as the Chairman has suggested, an official of an organisation?—He may be a red-hot Tory, or a red-hot Radical. All I say is that we do not recognise anything outside the company.

35,450. (*Chairman.*) Mr. Wallas wants to know whether, if the secretary of, for instance, the Amalgamated Society of Railway Servants came to you on behalf of your employees you would receive him, he not being a servant of your company?—No, I would not; but, as I told you just now, the president of the big union of all the railway employees, the old Amalgamated Society and various others, is a driver on the London and North Western Railway, and I have met him with deputations of our men, but coming to us, as a deputation from the North Western drivers.

35,451. (*Mr. Graham Wallas.*) The question was referred to us, and I want to be quite clear. Do you ever allow a representative deputation of men to come to you suggesting an appeal in a case of discipline?—No.

35,452. There is no appeal outside your own ordinary disciplinary organisation?—No. I should receive a deputation on any matter if they felt themselves aggrieved.

35,453. You have no regular organisation, but any deputation which seems to have a *prima facie* case, and does in fact represent a considerable body of your men, you would receive?—If they came to me with any reasonable representation I would hear what they had to say.

35,454. (*Sir Guy Granet.*) I only want to ask you one question, Sir Frank, as regards the scales you have given. As a matter of fact, even if a man is not promoted to a special position, he very often ends in the service by getting something beyond the scale, does he not?—Yes.

35,455. There is a system, is there not, of special advances?—Yes.

35,456. And as a matter of fact, without going into percentages, one may say that a very large proportion of your staff are in fact getting a salary in excess of the scale rate?—Yes, what I call over the maximum.

Mr. ROBERT BLAIR, M.A., B.Sc. (Education Officer to the London County Council), called and examined.

35,468. (*Chairman.*) You have come on behalf of the London County Council to explain to the Commission what are the educational facilities which are provided, by way of scholarships and bursaries, to enable children to get from the primary schools up to the universities?—That is so.

35,469. Will you, as briefly as you can, give us an account of these facilities. We have your full written statement, but we would like to have it on the notes in a compressed form?—You will see from the full statement that the Council's scholarship scheme is divided into two parts: First, the county scholarships, which provide for children from the elementary schools going through the secondary schools right up to the universities. Then there are other scholarships which provide for those who want to go to technical or trade schools; and there is a third class of scholarships for those who are in training for elementary school teachers. As regards the junior county scholarship scheme, it means that approximately something like 1,600 or 1,700 boys

35,457. That is so far as the scale is concerned. Now just one question about this special class from which your officers are recruited, that, as you have told us or something like it, was instituted by Sir George Findlay?—Yes.

35,458. Because he found that he required some new element from which to recruit your officers?—Yes.

35,459. And your experience is that that has been a success?—A great success. We have, you may say, largely improved upon it.

35,460. And your opinion as to its success is an opinion which is shared not only by other companies in England, but by other companies in other countries; is not that so?—That, I regret to say, is so.

35,461. And as a matter of fact in the last three or four years you have supplied to my knowledge two general managers to English companies, and a general manager to an Argentine company?—Three general managers to London companies, a general manager to Ceylon, a general manager to the Argentine, and a general manager to Egypt.

35,462. I have no knowledge at the moment of those in Ceylon and Egypt, but taking the London managers you have had taken away from your staff, and the Argentine one, were those men recruited from the special class?—Certainly two of them were.

35,463. (*Chairman.*) What is the special class from which these distinguished men have risen, because I am in some doubt on the point? Sir Guy Granet says it is the class of men who have come in with a high standard of education. Is that so?—I think certainly in the case of two, if not the third, they did not come in as ordinary apprentices; they came in either as probationers or as cadets. I am inclined to think that two of them came in as cadets.

35,464. That is to say, the special class is recruited from "cadets," who came in with a university education, or from probationers who came in from the public schools with a public school education?—That is quite right, though not necessarily cadets.

35,465. (*Sir Henry Primrose.*) There is one question I forgot to ask you, it is quite a small thing. I notice that after you reach the salary of 150*l.* you make no distinction between London and the provinces. Why is that?—In the third class do you mean?

35,466. Above the third class. In the first and second classes you have the same rates both in London and in the provinces. Why in that case do you not make a distinction between London and the provinces?—There are fewer positions, you see, and it is a question of classification.

35,467. You do not consider that the greater expense of London affects the lower paid people more than it does the better paid?—No, as I say, it is entirely a question of there being fewer positions in the large towns, and it is a question of classification.

(*Chairman.*) We are much obliged to you, Sir Frank Ree, for the information you have given us.

and girls every year are selected from elementary schools. The age of selection is from 11 to 12. The selection is by means of an examination supplemented by the reports of the head teachers. The reports of the head teachers are extremely useful at the tail-end of the scholarship list. The examination is in English and arithmetic only. As the result of that examination something like 1,600 or 1,700 boys and girls are selected every year.

35,470. What effect on the selection has the report of the teacher? As I understand, it is a competitive examination modified by the reports of the school teachers in each case?—That is so.

35,471. May it happen that a pupil who would come out first on the list might have his place altered owing to the operation of the school teacher's report?—If a head teacher were to say that a pupil in an elementary school was unfit to have a scholarship it would be a very serious case, especially if he were first in the examination. But the head teacher's report is

25 April 1913.]

Mr. ROBERT BLAIR, M.A., B.SC.

[Continued.]

not applicable really to the head scholars, but is only applicable at the tail-end of the scholarship list; that is to say, the last two or three hundred are settled partly through the marks and partly on full consideration of the head teacher's report. The reports help in settling marginal cases.

35,472. But the reports would have the effect in particular cases of modifying the position which a mere regard for the marks obtained in the examination would give?—There is nothing in the order of merit of the 1,700 candidates. There is no order of merit. You either get a scholarship or you do not get a scholarship.

35,473. But the 1,700 are chosen by a competitive examination?—True; that is to say, 1,700 are selected as the first 1,700 out of the 65,000 of that year.

35,474. I was thinking that somebody might have got into the 1,700 owing to the operation of the teacher's report upon the candidate standing 1,700 on the list?—No.

35,475. The 1,700th boy, say, had got 1,010 marks, and the next on the list, that is, the 1,701st, had got 1,000 marks, but was ranked before the boy who had got 1,010 marks because the report of the teacher had stated that, for one reason or another, he was a more deserving boy than the boy who had got the 1,010 marks?—While not committing myself to numbers, you may take it that that kind of thing does happen.

35,476. That is to say, No. 1,701 may have secured less marks than No. 1,700 in the examination, but the excess marks of No. 1,700 were neutralised by the report which had been given with regard to him?—That is so. When the 1,600 or 1,700 are selected they are selected in the first instance for the three years. At the end of three years there are reports on all, and those of them who are found capable to take advantage of secondary education for another two years are allowed to continue. I should also say that as soon as the 1,600 or 1,700 are appointed by the Council, the next thing is for them to fit themselves into secondary schools.

35,477. Are the values of the scholarships uniform, or is one more valuable than another amongst the 1,700?—Yes, there are something like 100 secondary schools on our approved list. Every year 1,700 pupils have to fit themselves into 100 schools. There are schools that are popular and schools that are less popular, and some of the very popular schools have a very large number of the 1,700 applying to get into them. The Council lays down no limitation as to the fee; that is to say, a scholar may get into any school whether the fee is 20*l.* a year or 2*l.* 10*s.* a year. Therefore, in that respect, the exemption from fees, which is a part of the scholarship, varies considerably from, say, 20*l.* to 2*l.* 10*s.* On the other hand, there is no variation (except in regard to the income limits) of the maintenance grant which is attached to the scholarship.

35,478. Then the scholarship carries exemption from fees, and in addition a maintenance grant?—Yes.

35,479. Consequently the boys who get into the favourite schools get more in fees and less in maintenance?—They do not pay the fees; the Council pays the fees for them and they get the same maintenance all through.

35,480. Then does the choice of the pupils rest with the schools?—Yes.

35,481. The favourite school exercises its choice?—It exercises its choice generally through a second examination.

35,482. That seems rather hard on the boys, but how could it be done otherwise?—Yes, it is a practical issue, and after all it means that the best boys and the best girls get into the best schools. Speaking generally, that is what happens. The effect is modified by geographical difficulties; boys in the South of London do not go to the best schools in the North of London, and so on.

35,483. Am I to understand in connection with the scholarships that the maintenance allowance is equal but the fee allowance varies?—The fee allowance varies.

35,484. So far as the boy is concerned, the amount of money he gets is practically uniform throughout?—The same.

35,485. He gets the maintenance only?—Yes; what he gets depends on his parents' income. The scholarship holders are mainly pupils from elementary schools. Out of something like 9,000 scholars at present in secondary schools only about 500 are scholarship holders who were in secondary schools before they got scholarships. So that it is 1 to 18, say 1 to 20. In the case of Junior County Scholarships there is no income limit in the case of scholars attending elementary schools for the exemption from fees. But the payment of the maintenance grant depends upon the amount of the parents' income. In the case of incomes not in excess of 160*l.* per annum, the maintenance grant is 6*l.* for the first year, 6*l.* for the second year, 6*l.* for the third year, 15*l.* for the fourth year, and 15*l.* for the fifth year. If the parents' income exceeds 160*l.* and is not more than 300*l.* there is no maintenance grant for the first three years, and it is 10*l.* for each of the fourth and fifth years. If the parents' income exceeds 300*l.* there is no maintenance grant. Now the percentage of scholars who belong to these different categories is this: Not in excess of 160*l.* per annum, 84 per cent, so that 84 per cent. are getting a maintenance grant in each of the five years—6*l.*, 6*l.*, 6*l.*, 15*l.*, and 15*l.* Thirteen per cent. belong to the second category of parents with incomes of more than 160*l.* and less than 300*l.*, and are getting 10*l.* in the fourth and fifth years; and 3 per cent. only are children of parents whose incomes are greater than 300*l.*

35,486. These are for the scholarships held in secondary schools?—Yes. So far I have mentioned only the first catch of what has been called "the Council's capacity-catching net." It was held that there were what are commonly called "late bloomers"—children who at 11 to 12 are not able to show their capacity, as well as those who, for some reason or another, miss the examination. In a large system like London you can understand that a fair proportion might miss the examination. There is a second collection of scholarship holders between the years of 13 and 14, and the Council awards 300 scholarships—what are called "the Supplementaries"—every year. That is mentioned on page 4 of my statement. They are supplementary junior county scholarships, and 300 a year of those are given. That means roughly 2,000 scholarships a year to children who in the main are attending elementary schools. The scholarships take them into the secondary schools, and they are there in the main for five years. As you will notice from my statement, a very high percentage remain in the school until the end of the five years. On page 4 it is said: "The length of the school life of the scholars is fairly satisfactory and appears to be increasing. Thus the percentage of scholars elected in 1905"—the first "year of this scheme"—1906 and 1907 respectively, "who remain to the end of the fifth year of tenure was 54, 60, 60, the figures for boys and girls being as follows: boys, 44, 46, 47; girls, 60, 67, 67." I think that is a very high percentage remaining for the full five years in the secondary schools.

35,487. They leave then at about the age of 17?—Yes, 16 to 17. I will refer to a diagram I have sent in in a moment. At 16 there is another set of scholarships to take on the best of the juniors a further stage. Those are called intermediate scholarships, and they are referred to from the middle of page 5 onwards of my statement. Those intermediate scholarships carry the boys and girls on for about two to two and a half years roughly. They are more valuable; they are only 300 in number.

35,488. At what age does this intermediate scholarship come in?—At the age of 16 to 17, at the expiration of the five years.

35,489. How do you select the boys? Is there an examination?—Yes, an examination. Having selected the intermediates, after something like two to two and a half years, another set of scholarships comes in; what are called the senior scholarships—those that will take boys and girls on to the university or to technical institutions of university rank.

35,490. What is the value of the senior scholarships and how many of them are there?—There are 100 senior scholarships open equally to the boys and girls.

25 April 1913.]

Mr. ROBERT BLAIE, M.A., B.SC.

[Continued.]

The value of the scholarship is 200*l.* Perhaps I had better give the figures one by one. A junior scholarship, on the average, is worth 85*l.*

35,491. But are these figures for the total time for which the scholarship is held?—Yes.

35,492. So that you have to divide the 85*l.* by five?—Taking the total expenditure on the scholarships and dividing by the number of scholarships, the cost of each junior scholarship works out as 85*l.*

35,493. By what number of years have you to divide in order to get the annual value of the scholarship?—By five. In other words, the council is committed to an expenditure of 85*l.* every time it elects a junior county scholar; 40*l.* for every supplementary scholar; 75*l.* for every intermediate scholar; and the council is committed to 200*l.* every time it makes the selection of a senior scholar.

35,494. In order to get the annual value of the senior scholarship you have to divide it by three or four years, according to the university course?—Yes. The senior scholarships have been modified within the last two years. The selection of a senior scholar is not by examination, but by record and interview, and a consideration of the parents' circumstances.

35,495. If the parent is not rich, the senior scholarship will not help the boy very much through his university course?—On page 6 of my statement you will see, with regard to the senior county scholarships, the regulation as to income: "The income of the parents or guardians of candidates for senior county scholarships must not, as a rule, be more than 400*l.* a year"—the words "as a rule" were put in about two years ago—"the council, however, considers each case on its merits, and scholarships are awarded to those candidates whose parents or guardians satisfy the council that they require financial assistance for the continuance of their education." My view is that this regulation of the council is not as well known as it ought to be amongst parents whose income is over 400*l.* a year; it will get known by-and-by.

35,496. A parent whose income is under 400*l.* a year cannot afford to help very much unless perhaps it happens to be the case of an only child. If the boy goes to Oxford and does not get a university scholarship, the 40*l.* to 50*l.* a year he gets from the senior scholarship will not help him very much?—The council assumes that a boy who goes to Cambridge will want 150*l.* a year. In looking at the boy's record it is generally required that he shall have gained a university scholarship. Such a scholarship may range from 40*l.* up to 80*l.* The next question is, how is the 150*l.* to be made up. The parents' circumstances are taken into account. As a matter of fact the council has authorised the Education Committee to go so far as to add 90*l.* to what a boy has already got in scholarships. That is to say, if the boy knew where to get 60*l.*, he could get 90*l.* from the council, and that will produce the 150*l.*

35,497. (*Mr. Holt.*) Is that 90*l.* annually?—90*l.* annually, and it may be for five years.

35,498. (*Chairman.*) Am I right in understanding you to mean that you assure yourself that the boy you send to the university is likely to do well in the university?—Certainly.

35,499. You do not give him a senior scholarship which will bring him to the university, unless you think he is capable of benefiting by the university course?—That is so.

35,500. When you find a likely and capable boy you do not permit him to suffer from want of means in going to the university?—No.

35,501. And although your senior scholarship only gives him 40*l.* a year, still you do make provision that he will in one way or another get 150*l.* a year, part of which would probably be from a university scholarship?—The council sees its way, generally speaking, to the boy having 150*l.* a year, and in addition the council has recently decided to give, in satisfactory cases, 25*l.* to start the boy so to speak, at Oxford or Cambridge.

35,502. (*Mr. Howe.*) Is it quite correct to say that the senior scholarship is worth 40*l.* a year? You said it was a variable sum depending upon the scholarships

and the means of the boy?—No, I did not gather that I said that.

35,503. (*Chairman.*) Did you not say the senior scholarship was worth 200*l.*?—Yes.

35,504. I assume that the university course would be four years, and that would give him 50*l.* a year?—That is dealing with averages, and I ought to say that while the university course has, in the main, been three years—with exceptions four years—it is only about two years ago that the council decided to make it five years. It may turn out at the end of ten years that our experience is that the scholarship is worth not 200*l.* but 250*l.* or 300*l.* In other words, within limits, there is not a limit to the scholarship. The council may go so far as to give any individual boy 90*l.* a year.

35,505. How many boys do you contemplate will get that from you?—Of boys and girls 100 a year. At the top of page 7 of my statement you will see that so far only something like 50 a year have been awarded, but the short award of 47 in this last year is due to two facts: firstly, that the scholarship system which began in 1905 has not had full time to operate, and secondly, as you will see from the top of page 7, a deputation—a very strong deputation—of Cambridge tutors came to the council a year ago and made representations as to the council's awards. There was a criticism of the council's awards, and probably that had the effect of reducing the number in 1912.

35,506. (*Sir Kenneth Muir-Mackenzie.*) What sort of criticism?—The criticism was as stated on page 7: "That the standard adopted by the council for the award of its scholarships had hitherto been too low." May I now draw your attention to the diagram. (*The witness explained the diagram.*) You may be interested in knowing that at the present moment the number of county council scholars in attendance or residence at university schools or technical colleges of university rank are these: Oxford 20; Cambridge 62; London (schools of the university other than medical) 39 senior scholars and 30 intermediates; medical schools 5 senior scholars; technical schools 7 senior scholars and 7 intermediate scholars. So on the whole, at present there are 133 senior scholars at Oxford, Cambridge, and London, and schools of university rank, and 37 intermediates, making altogether 170 scholars at present at institutions of university rank.

35,507. (*Chairman.*) Have you any information showing the social classes to which these scholars belong?—I am not sure that I can put it in a statistical form. In the first place, you have the income limit.

35,508. We have information from Oxford and Cambridge as to the social classes from which scholars come. I would like to know whether your scholars are equally distributed over the various classes—professional, agricultural, commercial, artisan, and so on?—I think we might say that our scholars belong largely to artisan and commercial families. What I mean by "commercial" families is, that their parents are engaged in London in business houses somewhere or other on the clerical or selling side.

35,509. But the income limit makes it clear that the parents cannot be well to do and cannot be of the rich classes?—Quite clear. I should also like to draw attention to page 8 of my statement. In 1910 the council began a very serious inquiry into what had happened to all their scholars. Something approaching 200 scholars are accounted for in that table. You will notice No. 1 are "scholars whose awards terminated not later than 1910." What has become of them? 77 are teachers, 3 are ministers of religion, 6 are engineers, 9 chemists, 16 civil servants, 13 belonging to other occupations, and 33 are not in paid employment at the date of the return. Scholarships had been awarded in London since 1895, but it was not found possible to get into communication with all the scholars. So that the 200 represent a small fraction—something probably like one-sixth of the whole of the scholars before 1910; but since then we have got more closely into communication with them; of scholars whose awards ended in 1911 (as distinct from those who ended in 1910) 33 are accounted for; and of scholars whose awards ended in 1912 a similar number is accounted for.

25 April 1913.]

Mr. ROBERT BLAIR, M.A., B.S.C.

[Continued.]

35,510. Am I right in thinking that you offer 1,700 junior county scholarships a year, and they are of the value, on the average—according to the scale and the condition of the parents—for the five years of 85*l.*?—Yes, 85*l.*

35,511. You offer 300 supplementary county scholarships?—Yes, of an average value of 40*l.*, for three years.

35,512. You offer also 300 intermediate scholarships of the average value of 75*l.*?—That is so, and they last for about 2½ years.

35,513. And you have senior scholarships to the number of 100 of the average value of 200*l.*?—That is right.

35,514. These last are intended for pupils and students who go to the universities?—That is so.

35,515. You assume that a student, to benefit fully from university training should have during his residence, if a boy, 150*l.* a year?—Yes.

35,516. And that is made up by a university scholarship if he gets one?—Partly.

35,517. While the balance is made up by the Council?—The 150*l.* is made up of three parts: the scholarships the boy has won from a university; secondly, what his parents can give him in the way of income; and the balance is made up by the Council, and the Council's balance may in some cases reach as much as 90*l.*

35,518. (*Mr. Hoare.*) We have a return here which shows that the annual amount which is now being spent on scholarships by the various local education authorities is 479,545*l.* Could you tell the Commission how much is being spent in London?—200,000*l.*

35,519. So that London is spending very nearly half the total amount which is being spent in the whole of the country?—Yes.

35,520. So that you will agree that the experience of London would be very valuable in gauging the adequacy of the amount of the scholarship system in the whole country?—I should think so.

35,521. We had some evidence a short time ago from Mr. Bentliff, representing the National Union of Teachers, and he was asked various questions as to whether the system in the country and in London was adequate. I asked him this question: "Would you say that the net of scholarships in London does not bring in all the ability that should have the chance of entering the secondary schools?" and his answer was "Not all." Would you say that in the present system of education you think the scholarship system is big enough in London to bring in boys and girls who are likely to benefit by further education?—I think so. I would just like to safeguard what I am saying by adding that no doubt after selecting 1,700 scholars a year there may be one or two in that number who do not deserve scholarships and there may be one or two out who deserve scholarships. That sort of thing will happen in any big scheme, but in general I believe that the county scholarship system at the present moment is as large as circumstances demand.

35,522. Judging from what you say on page 7 of your memorandum, it looks as if the difficulty really is to find well-qualified boys rather than to provide more places for boys and girls. I am referring to senior scholars?—So far the difficulty has been to find the 100, but it is only about two years ago that the 100 was settled upon, and, as I mentioned when referring to the diagram, the whole system has not yet got into full operation. It will be another five years, one may say, before we find the system in full effect.

35,523. According to page 8 of your memorandum, so far you have got particulars of 16 scholars entering the Civil Service. Do you know how many of those entered by the first division examination?—I think most of them, but I do not know.

35,524. Would you say that the present system of senior scholarships in London enables a clever boy to prepare himself for and eventually to pass the first division examination?—Quite; and I would go further and say that I think most of our scholars become either Civil servants or teachers. The figure that is given of 19 Civil servants must not be taken as adequately representing the number of Civil servants.

I have only the return here for about 200 out of something like 1,000 scholarship holders.

35,525. It has been suggested that the difficulty in obtaining a sufficient number of teachers at the present time is due to the desire of the classes who usually become teachers to become Civil servants. Have you had any experience of that in the last year or two?—I do not think that is the cause of the difficulty in getting teachers. There may be something in it, but it is not the main difficulty.

35,526. I think it is mentioned in the annual report of the Board of Education. I do not know whether it has been brought to your attention?—I did not know that that particular fact was mentioned in the Board's report, but I do not think that is the main cause of our not having teachers. It may be some part of the cause, just as the great boom in trade is part of the cause; but the main cause is, I think, a general fright owing to a circular that was issued.

35,527. Would you say from your experience that the conditions in the Civil Service would be better or worse than in the teaching profession in London?—Yes, they are better off.

35,528. The Civil servants are better off or the teachers?—It depends on the grade of Civil servant you are thinking of. I have forgotten for the moment, but I think the first division Civil servants begin at 250*l.* and rise to 600*l.* or something like that.

35,529. (*Chairman.*) 200*l.* to 500*l.*; then 600*l.* to 800*l.*, and then up to 1,000*l.*?—200*l.* to 500*l.* is the first scale. They are better off from the point of view of salary alone than the teachers in elementary schools. They are also better off than the assistant teachers in secondary schools. They are not so well off as some headmasters of secondary schools.

35,530. Are the headmasters of secondary schools paid up to 1,000*l.* a year?—We are speaking of the first division scale of salaries. There are certain headmasters of secondary schools in London who get 1,000*l.* a year or thereabouts—not many, but some. With regard to teachers in an elementary school it is a high post for a man to be getting 500*l.* a year. There are some, but I have forgotten the number—a small proportion of our 1,000 head teacherships. When you come to the second division of the Civil Service salaries begin at 70*l.* a year, and go to 300*l.* An assistant in a Council's secondary school has an opportunity of going to 300*l.* a year, but an assistant in an elementary school has an opportunity of going only to 200*l.*

35,531. (*Mr. Hoare.*) You say a clever boy in London would probably rather be a first division Civil servant than enter the teaching profession, but that he would prefer teaching to the second division?—I think the answer to the first question is quite clear; he would prefer the first division to entering the teaching service. I do not know so much about the second division, but the teaching profession has many anxieties which probably do not exist in the Civil Service, and from that point of view some might like to go into the Civil Service rather than to become teachers.

35,532. I suppose the teachers would be of much the same class as the second division are drawn from?—The second division candidates would be drawn largely from the same class.

35,533. (*Chairman.*) Are these salaries you have mentioned general throughout the 800 odd secondary schools that the education department has told us of, or are those salaries peculiar to London?—I am speaking of London salaries only. I cannot speak generally for the country.

35,534. You do not know what salaries are prevalent throughout secondary schools in the country?—I cannot speak of them in definite terms; generally they are not so good as in London.

35,535. (*Mr. Hoare.*) You have a big clerical staff under you in the London education offices. Do they all come in in the same way?—No. The staff at the office, speaking now of my own department, probably number something like 600 to 700, and they are recruited in three ways: there are what is called the minor establishment staff, and, speaking from memory,

25 April 1913.]

Mr. ROBERT BLAIR, M.A., B.SC.

[Continued.]

I have something like 150 minor establishment clerks akin to the abstractor or the present assistant clerk class in the Civil Service; they are men whose salaries may go up to 150*l.* a year or thereabouts. There is a second recruitment called the "major establishment," and their salaries begin at 80*l.* a year and may go up to 300*l.* a year. Then above that class I have quite a distinct class—very small in number—who are brought into the office, because such officers have experience of the things they are dealing with. For example, I have something like 8 or 9 heads of branches; that is to say, different branches of the work of those departments where there are 600 or 700 men and women. Those heads of departments are partly recruited from inside the office, but they are also recruited from the outside. I might give you examples. The head of the secondary schools department, who is a lady, is a very distinguished student of Cambridge University, and has had experience in schools, and from that point of view, knows the things she is administering. The head of the elementary schools department is a man who was educated at a school of university rank, and has had large experience as an inspector of schools. The man who is head of the technology branch is a distinguished graduate of Cambridge, and also of a Scottish university. He has worked in Professor Thomson's laboratory at Cambridge, and was head of the physics department in the Heriot-Watt College, Edinburgh, and so he knows the things he is dealing with on paper. These are types I might say of those drawn from the outside. Then we have those who are reared inside. For example, there is a branch which deals with accommodation and attendance of schools, and the head of that branch could not, I think, anywhere else obtain the necessary experience except in our own Service, because the question of accommodation and attendance at schools is so big that no other authority has the same class of experience. There is also a branch that deals with books, apparatus, and stationery. The head of that branch was recruited from inside.

35,536. Do you have examinations for the minor establishment?—Yes, for boys about 15 to 18 years of age. There are two grades of minor establishment in the council service, but in the education department, generally, I try to get boys of 15 to 18 years.

35,537. Do they pass in the ordinary course from one establishment to another, I mean in the two lower establishments?—The present regulations do not permit of a boy going from the minor to the major establishment. That question is however under the consideration of the council.

35,538. You do not promote by merit at all from one establishment to another?—No.

35,539. Have you had many complaints as to that?—The Council has had representations before it on that subject.

35,540. What happens then to most of the boys who come in at 15? Do they remain in the minor establishment?—As you know, the minor establishment is not a very old service yet; it is only about six years old, so that we have not got to what may be called the critical stage of experience.

35,541. Do you at present contemplate anything happening like that which happens in a Government department, where a number of boy clerks come in at the age of 15 or 16, and many of them are turned adrift at the age of 18 or 19?—No, the Council does not contemplate that.

35,542. You think boys who go in at 15 will be content to remain on the establishment for a number of years?—What has happened is that boys come in at 15 to 18, and some of them discover that they are too good for their ultimate posts under the present regulations, and so they have found posts elsewhere. The majority of them remain, and, as a whole, they have made representations that at all events there should be room for the ablest of them to move into the major establishment, and that question is under the consideration of the establishment committee at the present moment.

35,543. At what age is the examination for the major establishment?—18 to 23.

35,544. How does that compare with the second division examination in the Government service?—Our view is that it is mainly the same kind of examination, but perhaps a little wider, and probably a little harder.

35,545. A little bit harder if anything?—A little bit wider and a little bit harder.

35,546. How far do the salaries compare with the second division salaries?—Our salaries are 80*l.*, rising to 300*l.*

35,547. Has that scale been in operation since 1902?—Yes, and before that.

35,548. Have you found that, on the whole, it has worked satisfactorily?—I think so. We get very good men.

35,549. (*Chairman.*) Are they pensionable?—Yes.

35,550. Do they contribute to any part of their pension?—A deduction is made from their salaries.

35,551. What percentage of deduction?—It varies. I cannot remember all. I remember my own, which is 5 per cent. There is a deduction.

35,552. (*Mr. Hoare.*) Would it be correct to say that, generally speaking, your clerical work is done by the two lower establishments, the entrance to which is by competitive examination?—Quite so.

35,553. But that for the higher official posts you like to keep a free hand to appoint outsiders if necessary?—Quite true. I think that expresses generally the Council's educational service.

35,554. You have a staff of inspectors at the education office?—Yes.

35,555. Mr. Bentliff, on the 1st November, in giving evidence, told us that you were adopting a gradual change with reference to the appointment of inspectors, and were now showing a preference for university men rather than restricting the positions to men and women who have taught in elementary schools. Is that so? I will read the questions. I asked Mr. Bentliff: "Have most of the municipal inspectors in London had considerable experience in teaching in elementary schools?—(A) Under the old School Board that was the case invariably. (Q) Is that not the case now?—(A) Under the London County Council it is not the case. (Q) Do you notice any change in the character of the qualifications of municipal inspectors?—(A). Yes, there is a gradual change due to a change in policy on the part of the Council. (Q) "Would you regard that change as objectionable?—(A) Yes." The inference from that was that you were appointing more university men to your inspectorate and fewer elementary school teachers. Would that be a correct conclusion to draw?—Mr. Bentliff, I take it, is judging from the last few appointments that have been made. And it would be quite true to say that those last few appointments have drawn men who, amongst their other qualifications, have had a university qualification, rather than men whose experience has been confined to elementary schools.

35,556. How do you make the appointments to your inspectorate?—Upon advertisement and selection of candidates from applicants.

35,557. You never attempt an examination of any kind?—No.

35,558. You regard it as impossible to examine people of varying age and of different qualifications?—You could not measure the things you want.

35,559. At what age do you usually appoint these men. Are they usually old men, or all of the same age?—Of the inspectors the last who were appointed might run between 30 and 40 years of age, but there is no age limit imposed.

35,560. With reference to your staff, have you women on the staff?—Yes.

35,561. Do they work in the same rooms with the men?—I spoke of a lady just now who is head of the secondary school branch. She has a young man about 20 years of age in her room.

35,562. (*Chairman.*) But as a rule do the men and women in your office work in the same room, side by side?—Perhaps I should enlarge my answer. We have no women who are admitted to the minor establishment, and we have no women admitted to the major establishment. The women have come in either as inspectors, or as organisers, or at the top of the office,

25 April 1913.]

Mr. ROBERT BLAIR, M.A., B.SC.

[Continued.]

as the head of a branch, so that, speaking generally, the women in the office are very few.

35,563. (*Mr. Graham Wallas.*) You have a typewriting staff?—Yes, but that typewriting staff is distinct, and works in rooms devoted entirely to the typewriting staff.

35,564. (*Mr. Hoare.*) Is all the typing done by women?—All the typing is done by women.

35,565. How do the salaries of the women organisers, inspectors, and positions superior to typists compare with similar appointments held by men. Do you have a different grade for women to the grade for men?—The lady who is head of the secondary branch gets the same salary as a man who is head of another branch. As to organisers, I have in mind one lady who gets the same salary as the men organisers. Then we come to domestic economy organisers who have no corresponding people on the male side; and there are women engaged in organising physical education and men engaged in the same work. Their salaries are not the same.

35,566. With reference to the further education that you provide for your staff, do you do anything extra for the boys and young men who come in at 15 or 16 in the way of making them attend classes or continue their education in any shape or form?—The Council organises teaching for something like 200 of the boys in its service, but that is not for the minor establishment class, but is for a class below that, of whom we have few in the educational service—boy messengers.

35,567. Is it compulsory for boy messengers, but optional for members of the minor or major staff?—Yes; it is really not contemplated for members of the minor or major establishments, but is contemplated for the boys who are not clerks.

35,568. Have you ever considered the question whether you ought to do something more for boys who come in at the age of 15 in that direction?—What we shall do with boys of 15 on the minor establishment has been under consideration in connection with their application to join the major staff. Some kind of education outside office work altogether might have to be provided for them. It is provided, in fact, in the different schools in London.

35,569. Has it ever been considered whether the age of entry to the minor establishment should be raised?—I think it has been considered.

35,570. Are you satisfied with 15 as the age of entry?—I think that boys coming in from schools at which they have remained until they are about 15, make a very useful class of servant, and they do a great deal of the routine work of a big office; but there are amongst those boys some who might go right through to the top if they were allowed, or nearly to the top.

35,571. (*Mr. Holt.*) Will you look at page 8 of your statement and tell me more or less what you know about the persons "Not in paid employment at date of the return." Are those mostly women who are married, or what?—No, I think it refers to students mainly, or those who have only just graduated and not yet got posts.

35,572. Do I understand out of the scholars whose awards terminated in 1910, 33 persons, so far as you know, which represents about one quarter, have got no employment?—Not at the date of the return—that is not now.

35,573. That is not up to date?—No, it says, "Not in paid employment at date of return." The return was made in 1910.

35,574. I think you told us these scholarships were in the main limited to children of people with incomes under 300*l.* a year. Do many people who have incomes of less than 30*s.* a week get any benefit from these scholarships in practice?—Yes.

35,575. To a considerable extent?—Without committing myself to a number, I should say a fair proportion—probably something like 100 a year—have incomes of considerably less than 30*s.* a week.

35,576. Would that be something like half the scholars coming from such classes?—You are thinking of the junior 1,700.

35,577. No, I am thinking of the senior scholarships?—I should say something like 5 per cent—I am making a guess—have come from homes into which the income going is probably lower—25*s.* or 20*s.* a week.

35,578. Could you say what percentage would come from homes where the income was under 150*l.* a year?—84 per cent. of the junior scholars are from homes where the income is not in excess of 160*l.* per annum.

35,579. What about the senior scholars?—The senior scholars stand in the relation of 100 to the 1,700 juniors; that is to say, 1 in 17. If 84 per cent. of the 1,700 come from homes that have less than 160*l.* a year we can make a sort of proportionate sum.\*

35,580. Do you think it would be safe to take it to be so in London?—I cannot say, but, making a guess, I think it is something of that order.

35,581. Has your education authority ever made it a matter of complaint that the Post Office engage a large number of boys at or under the age of 14?—They could not engage boys under 14.

35,582. If they gain a certificate they can?—If the boys have got the labour certificate, yes; but there is not very much of that.

35,583. That remark is confined to London?—Yes.

35,584. But has there been any complaint from your point of view as to the engagement of boys by the Post Office at an undesirably low age?—If you mean any complaint from the London education authority, no. Some members of the London education authority have written on it largely, but I cannot remember any complaint from the authority.

35,585. The authority as a whole have not made it a matter of complaint?—Not within my recollection.

35,586. Do you find, as far as your experience goes, that in the choice of a career in life, boys are very much affected by the salary prospects?—Yes; but if you are asking me—and I take it you are—with regard to our scholars, they are very much affected by something else. It is so difficult for a county scholar, after he has left Oxford or Cambridge or a higher institution, to find his way into commerce—extraordinarily difficult; in other words the education authority has done its duty, and commerce or the community, if you like, has not done its duty in taking the equipped boys. In the second place, it is also very difficult for those boys to find their way into industry because they get small salaries, and have to hold out for two or three years at a pretty low wage.

35,587. Take the case you were asked about recently as to the choice of becoming a teacher or a Civil servant; do you find that persons who become teachers do so mainly because they want the teacher's salary, or because they feel they have a real desire to become teachers?—I should think, amongst the boys and girls, there are some of them who want to become teachers. But I should think a good many of them are guided by the fact that that is the best apparent opening to them.

35,588. For instance, supposing the salary of seafaring people were doubled, do you imagine that a greater number of people would want to take to the sea?—I dare say if you double the wages that seafarers are getting, you will have a very large increase in the number of people who will become seafarers.

35,589. That is to say, you think the actual wages are a very great inducement in settling on a career?—Clearly.

35,590. (*Mrs. Deane-Streatfeild.*) Can you tell me what other careers than teaching seem to you to be open to the girls who are senior scholars?—There is not much.

35,591. Do you know at all what has become of some of those who have gained these scholarships?—I cannot say much, but I know that some of them have got technical posts in connection with agriculture, dealing with seeds or in botanic departments and so on; but teaching is the main profession open to women who have had those scholarships.

35,592. You spoke of the head of a department on your staff who is a woman. What sort of duties does she

\* As stated above, I was making a guess at the percentages. I find on reference that the percentage of seniors whose parents' income is not above 160*l.* is about 50.—R.B.

25 April 1913.]

Mr. ROBERT BLAIR, M.A., B.SC.

[Continued.]

have to perform?—She has, subject to the education officer, the administration of the regulations of the council and the drafting of reports, which are recommendations to the council, in connection with secondary schools and training colleges.

35,593. Then, she has administrative work to do?—Clearly. The whole secondary school and training college administration is under the charge of that woman.

35,594. She is responsible?—She is responsible.

35,595. Just as the head of a department in some Government office might be responsible?—Quite so, in the same way.

35,596. Are the duties of your women inspectors similar to the duties of the men inspectors?—We have not any women called “inspectors.” Our women are “organisers.” We have a woman who is an organiser of mentally defective schools. We have no men organisers of that type. We have women who organise domestic economy. We have women who organise physical education. I see no reason why women should not be inspectors of the ordinary kind.

35,597. Does an organiser require to arrange, plan, and carry out a scheme and arrange a form of education?—An organiser should be one who could do all that in the way of organising, but should also be capable of doing the actual work herself.

35,598. And that is what your women organisers are required to do?—Certainly.

35,599. You have no women on your inside staff except the lady you speak of—the head of the secondary schools department?—No women who are heads of branches, but in the chief inspector's branch we have women organisers of many kinds.

35,600. But your internal staff are only typewriting women?—Our internal staff are only typewriting women; but those organisers I speak of, though not internal, have a foot in the office and a foot in the schools. They have a room in the office.

35,601. But their work does not lie in the office?—Their work does not lie in the office, but they are so intimately connected with the office that, as organisers, they require to be not constantly in the office in the sense of permanently sitting there, but they require to have a place in the office where they can work.

35,602. Whom do they report to?—In the first place to the chief inspector, and these reports pass through the education officer to the education committee.

35,603. How do you pay your typewriting staff?—Speaking from memory I think the lowest class of typists begin at 55*l.* and rise to 120*l.* through various grades; and the superintendent is paid 150*l.* I think.

35,604. About how many have you?—50.

35,605. How do you appoint them?—By examination.

35,606. Open competitive examination?—An open competitive examination with certain age limits.

35,607. Do you require any qualification from them before they are allowed to be examined. Do they have to bring any record from their schools or any guarantee of a proper education?—No.

35,608. Do they learn typewriting after they come in, or do they bring some certificate?—There is an examination in typewriting. I am not quite familiar with this, because it does not belong to my side of the work, but I am answering you as best I can.

35,609. (*Mr. Graham Wallas.*) You say that those who man your minor and major establishments and those who are second division clerks in the Civil Service come from very much the same sort of grade as those who man the teaching profession in London?—I think that might be said, certainly, of the major establishment, and generally, yes.

35,610. I used to find very often that they went in for both examinations?—Yes.

35,611. Taking the teaching profession, would you say that, since you have known the teaching profession, the age of entering that profession has been rather considerably increased?—If you mean the age of a boy beginning as pupil-teacher, he used to begin at 13 or 14, but now he is not selected until about 16.

35,612. That increase of a couple of years in the age of starting on the work of teaching is due really to

the general increase of educational facilities in the country?—I should say so.

35,613. The former age was due to the fact that very few people who did not come from the well-to-do classes continued their education beyond 13, and now the growth of education, particularly of this new secondary school system, has made it desirable that those going in for that kind of profession should stay at school until 16?—Yes.

35,614. Would you also say it has become part of the policy of the education authorities to see that those who enter the teaching profession shall have learnt what they know under the right kind of conditions?—I think you may take it that those who regulate the teaching profession are anxious that the boys and girls should have come through the secondary schools and had a good training there.

35,615. It is not quite enough that they should know something, but they should have had a certain amount of training at school?—Quite so.

35,616. If you were constructing a perfectly ideal system of public administration would you say that it was desirable that the future official should have gone through a regular school course, and that the State should provide for that as far as possible?—That depends on the grade of official you are working for. My experience shows that we have three grades: The minor establishment selected at about 15 to 18, the major establishment selected at about 18 to 23, and then the men or women who are brought in by open competition afterwards.

35,617. If we take in a boy at 16—if one could do it entirely in the air without regard to opposition—it would be well to see that he comes to us with a certain amount of regular school training?—I think the more school training he has had the better for him, and the better for those who have to work with him afterwards.

35,618. You consider the State would be wise to work towards a state of things in which not only should the boys of 16 know something, but that they should have had a regular training in a school course?—My experience goes so far, I think, as to enable me to say that the length, speaking generally, that a boy will go depends on the length of his training at school.

35,619. And not merely on the question whether he has been crammed for an examination at 16?—No. You get brilliant examples to the contrary, but generally what girls and boys become depends upon the length of school training.

35,620. (*Chairman.*) That is a very far-reaching remark?—Yes; I prefaced it by saying you get brilliant examples to the contrary.

35,621. It means this: That the efficiency of a public servant depends on the measure of his education, and the higher the education he receives the more efficient public servant he is likely to be. Do you say that?—I do not say that with regard to any individual; but I say, speaking generally, the efficiency of the public service depends on that.

35,622. (*Mr. Graham Wallas.*) The State takes on a comparatively small number of girl clerks at this moment?—Yes, so far as I know.

35,623. In the case of girls beginning at about 16 the difference between the school course ending at 16 and leaving school, say, at 13, for a period of cramming, is even more marked than in the case of boys?—Possibly.

35,624. Would you, from your joint outlook of education and administration, welcome a suggestion that the girl clerk should be required as one of our conditions, to show that she had attended a regular school course in an approved school before entering for an examination?—I have never thought that question out, but my sympathies would lie in that direction.

35,625. At the present moment you have really three grades of officers—the minor establishment, the major establishment, and the university graduates, or those admitted in open competition at the top?—Yes.

35,626. Assuming that the State was also to have three grades of that kind, could you help us by indicating the exact age at which they should come in to correspond with the educational system. I think

25 April 1913.]

Mr. ROBERT BLAIR, M.A., B.Sc.

[Continued.]

you said about 16 would be about the right age. Do you mean for the bottom grade?—Something like that.

35,627. Would you say to keep it open too long, and have it from 16 to 20, means keeping boys hanging about for the concurrent examinations?—I would not like it too old.

35,628. Would you like to give him one or two chances somewhere about the age of 16?—Yes. There are two ways into the council's minor establishment; but with the education service I was very keen to get the boys coming in at 15 to 18. There is another way in for older people, and I have had some in my office who had reached 24 years of age who had never previously done a day's work anywhere, but had been preparing for examinations all the time, and only for the ordinary examinations, too; they had come into the office too late.

35,629. Would you consider it wise for the State, having regard to the existing educational arrangements of the country and the needs of the Service, to make the first grade somewhere about 16 years of age?—Something like that.

35,630. Fifteen would be apt to out into what ought to be the most valuable part of his secondary school training?—Yes. In England a pupil can remain in an elementary school until about 15 plus, roughly, 15½. The best of those would make very good candidates.

35,631. Especially if they had been in what are called central, or higher grade schools?—Yes, really higher grade schools.

35,632. Take the next grade, who come without a university education but at the end of a completed and developed school course?—That should be, roughly, about 18—the stage at which they complete a good secondary school course.

35,633. You would not want to keep them hanging about up to the age of 20 trying to pass examinations, but would give them one or two shots and then make them turn to something else?—Yes. There is a considerable variety of age at which boys leave school; but, again, I would not like to raise the age too high.

35,634. Roughly, 18 to 19?—Roughly, 18 to 19.

35,635. When you come to your higher grade your position is somewhat peculiar, in that your higher grade of administration is of a very technical type; you have to deal with the technical details of education?—Quite so.

35,636. You have found it desirable to recruit, not by an open competitive examination at the age of 22, but by appointment at an age securing that the candidate has had some experience of teaching?—Securing that the candidate has had some experience of actually dealing with the things he is going to administer afterwards.

35,637. This is a question which comes up in the Board of Education, and has been brought before this Commission. From your experience of administering a large office in London, would you say it might also be desirable that some of the officials should be recruited at rather a later age and after definite educational experience?—I could not venture on any criticism of the Board of Education.

35,638. But the conditions are sufficiently alike?—I think I must confine myself to my own office. My own experience has shown me that the kind of man I have mentioned is the kind of man we want.

35,639. Turning to the senior scholars, they turn out a certain number of able young men and women very highly trained, but with no influence or connection in the existing more fortunate arrangements of the world. To them, the teaching profession always stands open?—Yes.

35,640. And for the best the Civil Service stands open?—Yes, for men but not for women.

35,641. But there is not very much else which stands open without influence, is there?—Those who have been through engineering departments can get posts, but the difficulty is in holding out for two or three years. The great difficulty of those students in respect of influence is getting into commercial posts.

35,642. (Chairman.) Are such students as these at all helped by the appointments committee at the uni-

versity?—Yes, very much. A great deal has been done by the Cambridge Appointments Committee which has taken the lead, and all over England, Scotland, and Ireland, the universities are now making up appointment committees, and those appointment committees really do a great deal to "market the goods" of the universities.

35,643. (Mr. Graham Wallas.) You would say, if there are posts in the Civil Service fit for women, and if women are shut out from them, that does make a very real hardship for the clever girl who arrives at the end of a long training, and at the end of her resources with no influence?—I think so.

35,644. You say, if a boy goes to Oxford or Cambridge, it is necessary to see that he has somewhere about 150*l.* a year. If he goes to the London University, especially if he is living at home, that would be much reduced?—Yes, it is not so much. I have forgotten the figure, but probably 100*l.* or 120*l.* for London. I was thinking of Oxford or Cambridge when I answered the Chairman.

35,645. If he were a boy living in one of the great Scotch cities—and you have an experience of the Scottish educational system—and going from his home to a Scotch university, it would be, smaller still?—It would certainly be smaller than 100*l.*

35,646. Speaking generally, if university education is to be reasonably cheap, and if a large number of boys and girls want to take advantage of it, it will have to be organised on a local basis?—It is not only the education in the narrow sense which wants cheapening—that is the fees of the universities—but there is the cost of living.

35,647. (Mr. Philip Snowden.) You give about 2,000 scholarships a year?—Roughly, yes.

35,648. You have 65,000 children leaving the schools of London every year?—That is so.

35,649. That means that about 1 in 30 of the children in the elementary schools pass by means of scholarships into the secondary schools?—Roughly, that is so.

35,650. And you give 100 senior scholarships entitling them to a university course?—That is so.

35,651. That is 1 in 600, roughly, of the children from the primary schools who, by means of scholarships, can get a university education?—Yes.

35,652. I understood you to say you thought that the present provision of scholarships was quite adequate—that provision was made for all children in the primary schools who had the capacity to take advantage of an education beyond that of the primary schools?—That is so.

35,653. Is it really your opinion that you have only the one child in 30 in the primary schools who could be made more useful by the extension of its education beyond the primary school course?—It is very difficult to answer that question, because I do not know all that you have in mind by saying "more useful." If you mean by taking a full course at the secondary school I stand where I was.

35,654. But did not you say in answer to the Chairman just now that it was education that really made the man, and what you might call the future usefulness or development of the man depended upon the opportunities he had had for education, and to the extent to which he took advantage of it?—Yes, I did say that; but I am afraid you are reading a little more into it than I put into it. I had an assumption, which I thought the Chairman also had in his mind, assuming that you have boys and girls of the same type.

35,655. I probably was mistaken, but I gathered that you did not attach much importance to the type, but rather you thought the type could be developed, or almost made, by means of education?—No; I am not prepared to say that, no matter what the initial qualities of the boy or the girl are, education can do anything; but I am prepared to say that given one hundred thousand boys and girls of, roughly, the same ability, what they do in the world, with equal opportunities, depends on their education.

35,656. Am I then to conclude that it is your view that only 1 in 30 have what we might call the inherent

25 April 1913.]

Mr. ROBERT BLAIR, M.A., B.SC.

[Continued.]

capacity for development by education—1 in 30 of the children in primary schools?—I am prepared to say that the result of my experience of the scholarship system in London since 1905 has led me to believe that there is no considerable number of boys and girls who are left out and unprovided for.

35,657. Let us pursue that a little further. You told us that five per cent., roughly—you did not commit yourself to the precise figure—of scholarship children came from homes where the incomes were probably not more than 25s. a week?—Yes.

35,658. What would you say was the percentage of children in primary schools coming from homes falling within that income?—Mr. Booth, I think, about 15 years ago said that one-third of the homes in London had incomes which were about 25s. a week. I am speaking from memory.

35,659. That is quite true, and you would agree with the assumption that the percentage of those below, say, 35s. a week was not more than 10 or 15 per cent. of the total number of scholarships; or, putting the question in another form, would it be correct to conclude that the large proportion of your scholarship children come from homes where the family income, though below 160l. a year, is not much below 160l. a year?—I think I can say that the family incomes run from the low stage that I mentioned up to the 160l., and they are probably pretty fairly distributed; but it is quite likely that the centre of gravity of them lies towards the 160l. I have not investigated that point closely, but I should think it would be found so.

35,660. Then, taking that for granted, does not that lead us to the conclusion that the financial position of the family is at least as important a factor in determining whether the child shall apply for a scholarship as the ability of the child to take advantage of one?—The application for a scholarship does not depend on the child. There is a requirement that all children of a given age, and of a certain school standard, are to be sent in for the examination.

35,661. Have you many refusals on the part of parents to allow their children to take up a scholarship or enter this examination because they feel that they could not afford to permit their children to remain at school during the tenure of that scholarship?—Some, but not many.

35,662. Therefore, the conclusion of all this is that you do not attach much importance to what I might call the financial position of the parent?—Very far from it.

35,663. I mean as affecting the number of scholarships. Supposing that the parents of all the children attending your primary schools were in a financial position to bear the cost of their children remaining at school up to 16 or 17 do you think then the demand for your scholarships would be increased?—I shall have to answer you not in a direct but in an indirect way. In the first place I do tell you that the scholarship does not depend on an application of the parent in the first instance. All boys and girls of a certain age

—11 to 12—and of a certain position in the school are required to be examined. Secondly, out of all the London schools—and there are 1,000 schools—there are probably a number somewhere between 100 and 150 who have never had a scholarship at all, and they belong to the class of schools or areas which, I think, you have somewhat in your mind. In the third place I ought to say that there have not been many refusals of scholarships on the part of parents of children who have won them. Fourthly, I might say that looking all round the question—and I have done it every year—as the result of these junior scholarship examinations I am convinced—and I should say that we examine 23,000 candidates for the 2,000 scholarships—that speaking within pretty close limits there are very few more that are really capable of taking on another five years' education at a secondary school.

35,664. I will not pursue that any further. About the women: The lady whom you spoke of at the head of your secondary schools branch has, I suppose, men under her direction?—About 30, I think.

35,665. You have had experience of women as organisers also. Have you formed any conclusion as to their relative capacity for administrative work?—I can only say that this woman does her work the same as the men of the corresponding grade.

35,666. (*Mrs. Deane-Streatfeild.*) Am I to understand then that out of this small number of the superior grade that you have—eight I think you said—the women in it have the same qualifications, the same duties and about the same salaries as the first division clerks in a Government office would have?—Yes, I should say so, the same salary as a first division clerk. She has got the same duties, the same qualifications, and the same kind of work as a higher officer and probably as an assistant secretary, and gets the salary of a first division clerk, or something like that.

35,667. (*Mr. Boutwood.*) Would you be able to make any sort of return—of course not mentioning the names—showing what the academic results of your senior scholarships are and what sort of degrees your men have taken?—I think I could get you something. I will see what is in the office. We have something, but it probably does not cover many out of the 1,000 senior scholars that have been there since 1895. No account was taken of it for a long time.

(*Witness.*) In concluding my evidence, I would like to add that, at the request of the Royal Commission, and with the permission of the council, I am here to give particulars of the London educational ladder. The draft of my evidence was submitted in a statement which had been approved by the council. During the course of my evidence, I have been asked certain questions, both as to facts and opinions, beyond the scope of my draft; and, while I have desired to assist the Royal Commission so far as my knowledge and experience permitted, I should like it to be understood that any opinions so expressed represent my own private views, and must not be taken to represent either the opinion or the policy of the council.

Mr. JOHN MCCALLUM called and examined.

Mr. ERNEST E. BEARE was in attendance.

35,668. (*Chairman.*) (*To Mr. McCallum.*) You come here to make certain representations to us on behalf of the lower grade clerks in the secretaries' office of the Inland Revenue Department?—Yes.

35,669. Will you state, as briefly as you can, what you wish to represent to the Commission?—The chief points we have made in our statement are, first, that in our department we suffer in that the Class I. grade of the Service has been superimposed on the department during the last 20 years. This has introduced into the Inland Revenue Department a rigid barrier, and placed the lower grade clerks in an inferior position in the department. Our plea is that the work in the department is of such a nature that this barrier has no direct correspondence to the division of the work as it comes before us; and while the barrier is based on the assumption that there is a distinct difference between administrative and clerical work, we find, as the result of our experience in the department, that

the greater portion of the work may be classed as executive. There is the lower grade of the department which is engaged in the examination of returns, the computation of assessments, the drafting of letters, and the making of orders; and there is above it a higher grade—the Class I. grade, which is engaged on similar work. The committee clerks devote most of their time to the making of orders, which do not differ in kind or in essence from the orders which are made by lower grade clerks, occupying the positions known as minor staff officerships. Our chief plea, I think, is that this division into "administrative" and "clerical" does not apply to our department. The nature of the work is what we call in general terms "executive." There is the routine work at the foot—the registration, which at present is done partly by assistant clerks and partly by second division clerks, and I think it is suggested that if any line were drawn across the department, it should be drawn in a place other than its present position.

25 April 1913.] Mr. JOHN McCALLUM. (Mr. ERNEST E. BEARE was in attendance.)

[Continued]

35,670. Do you deny the necessity for a higher division or higher grade of public officer in your department?—The claim at the end of our statement is that the type of officer necessary for the various classes of work, and various forms of responsibility in this department, could be obtained by such examinations as are set out in Mr. Norman's statement on behalf of the Ridley Clerks' Association.

35,671. Then is your position that you retain the upper division, but you desire to have access to it by the lower division examination—the second division examination?—No, our position would be in rather a broader sense, that the examination for the lower grade of the office—the routine section of the office—should be of such a standard as would permit of men coming in comparatively early, say at 16 or 17, while the other examination, which would cover the whole of the executive work of the office, would be confined to people coming in, say, from 18 onwards. Mr. Norman suggests that in order to allow a university man to take advantage of that, and in order to give the department the advantage of university service, any university man should have the right of coming in with five years' seniority. We think in that way you would get a division above the registry line, as we call it.

35,672. That would retain all the emoluments appertaining to the upper division at the present time, but would allow free access to them by the second division mainly through the second division examination?—It might be misleading to term this examination indicated by Mr. Norman a second division examination. The point would be that the men engaged on executive work in the office would have a clear run to the top.

35,673. You do not advocate any cutting down of the appointments, but you advocate the access to them of your division, the second division, with a clear run to the top?—Yes. We advocate the removal of the barrier.

35,674. (*Sir Henry Primrose.*) On page 1 of your statement you refer to Sir Algernon West's evidence before the Ridley Commission 25 years ago?—Yes.

35,675. Has any chairman since expressed any concurrence in that opinion?—The evidence given by Sir Algernon West was 25 years ago, and I believe no subsequent chairmen have endorsed it. Then came Sir Alfred Milner's action in 1894, introducing the Class I. clerks into our department.

35,676. You yourself show at the end of your paper that the condition of things in the Inland Revenue Department now is totally different to what it was 25 years ago when that evidence was given?—Yes, we show there that the work is more complex and more difficult.

35,677. Therefore, if Sir Algernon West was right, in 1887 or 1888 when he gave that evidence, it is very doubtful whether he himself would adhere to it now?—That might be so, but in reply I would point out that even now, after 20 years, the responsibility for the organisation of the office, apart from the responsibility devolving on the Board in the broadest administrative sense, has fallen on officers who came from the old Class II. examination—an examination which corresponded very closely to the old second division examination. Only this week or last we have had appointed for the first time a Class I. secretary in the Inland Revenue Department, so that the administrative duties during all that time have not fallen on the Class I. officers of our department.

35,678. How could they?—They have not been put to the test in the most severe sense—the success of the office during the last 20 years must still be credited to the type of clerk who is more akin to the second division than to Class I.

35,679. You cannot introduce a change of that kind and give effect to it all at once. It would not have been possible to clear away everybody who was in the department?—One of our points is that subsequent chairmen have insisted that the presence of Class I. clerks in the department was indispensable, despite the fact that those men have not had the principal responsibility thrown on to their shoulders.

35,680. I cannot follow that argument. Then you go on to say: "Under this system a Class I. clerk is promoted after, at most, six or seven years' service, to the position of committee clerk, with a salary of 600*l.* to 800*l.* a year." You do not suggest that a Class I. clerk coming in now is going to be promoted to be a committee clerk in six or seven years?—The Revenue Department is at the present moment extending its activities, and the Class I. clerks promoted during the last month are, I think, even junior in point of service to the Class I. clerks we have quoted in this statement. The tendency at present is not in any other direction.

35,681. How many committee clerks are there?—17.

35,682. Of those how many are Class I. men brought in by a first division examination?—I have not the exact figures, but I think 13.

35,683. No, 8 out of 17?—You are excluding surveyors, I see.

35,684. No less than 9 of those belong to a different form of entrance?—Yes.

35,685. That class will in future be recruited from the class immediately below?—Yes.

35,686. Of whom there are how many—20?—21.

35,687. Do you suggest that a young man coming in at the present moment is going to become a committee clerk in six or seven years?—I should still say that the promotion will be very rapid.

35,688. Why? Because it has been in the past?—No; because the department has new duties which are at present undeveloped—for example, the super-tax and land values, where the technique is quite incomplete; as that elaborates there will obviously be an increase in the responsible posts.

35,689. (*Chairman.*) That is to say, you consider the immediate future will be an abnormal state of things, and in order to meet that abnormality there should be an abnormal increase in promotion?—No, my point is that this has been characteristic of the recent history of the Inland Revenue Department.

35,690. (*Sir Henry Primrose.*) It is wholly abnormal?—Even if it is abnormal the general position put in these three tables\* remains; that even during this period of abnormal promotion among Class I. men it has taken a lower grade man on an average 28 years to obtain a position of 550*l.*

35,691. You state to the Commission here that the system which you object to—and one reason why you object to it is that a Class I. clerk will, after, at most, six or seven years be promoted to the position of a committee clerk—Do you really deliberately say that will happen in the case of a man who comes in now under that system? It has happened of late years because of the abnormal condition of things in the Inland Revenue, which has largely increased the number of people and the higher positions, and therefore there has been very rapid promotion. But what we have to consider is how is the system going to work in the future? Do you suggest that in the future a Class I. clerk coming in is going to be promoted to a position of 600*l.* to 800*l.* a year in six or seven years?—The section in our statement called "The relative position of lower grade clerks" must be taken not as setting out the principle and general working of a scheme for all offices, but as a descriptive note on the working of the scheme in the Inland Revenue Department.

35,692. You do not say so. What the Commission want to know is, how is the system going to work, and you tell us in so many words that the Class I. men are going to be promoted to 600*l.* or 800*l.* a year in six or seven years. Now that is not the case?—We distinctly state that the Class I. clerk "is promoted." It is now six months since this statement was made, and the process is still going on, and apparently is likely to go on.

35,693. There are two secretaries and four assistant secretaries above the committee clerks. You do not suggest those are going to be largely multiplied, or that the number of committee clerks is going to be largely multiplied. It has been already brought up to 17, when it used to be four in my time?—I do not sug-

\* The three tables as to salary, length of service, etc., included in the statement.—J. McC.

25 April 1913.] Mr. JOHN MCCALLUM. (Mr. ERNEST E. BEARE was in attendance.)

[Continued.]

gest that. Men always say there is no prospect of their being promoted, and yet you soon find that a man three or four down the list has been moved up.

35,694. (*Chairman.*) Be that as it may, it has reference to promotion in Class I. How do you say that it affects you? Assuming that this rapid promotion were to take place, do you say it would retard your promotion?—No; there are various criticisms—one on the ground of expense.

35,695. (*Sir Henry Primrose.*) Surely you are not responsible for the expense, but you are responsible for stating your own case. We do not want the opinion of the second division as to the cost of the Inland Revenue Department. We want to know what your grievance is, if any?—Obviously the case we put forward must be put forward with reference to its effect. Had I set out a case here which would have cost another 30,000*l.*, you would have said, "Look at the expense." We have to take that point into consideration as a matter of comparison.

35,696. (*Chairman.*) You must not look at it from that point of view. We want to know what your objections are, and how the existing state of things affects your class. A change, an administrative change, may have an important effect upon the higher class. But that is no reason, as far as you are concerned, why the change should not be carried out. You come here to represent your own case and the hardships which you say are being inflicted upon your division. What are these hardships? Let us see how your promotion is retarded, and if you claim, as I suppose you do, fuller and freer promotion into the higher division, tell us how you propose it should be made. These are the matters on which we wish to hear you. As regards the cost of administration generally, that is a matter which we need not consider at this time?—Our promotion is clearly retarded when a committee clerkship is given to a junior Class I. clerk rather than to a staff officer.

35,697. That is to say, you think the staff officer ought to be promoted into the higher grade?—Yes.

35,698. Very good; that is an intelligible proposition. Tell me why you support it?—Because the staff officer has been engaged in many cases on executive and organising work, perhaps less responsible in its nature, but still work which is essentially administrative, such as the chief examinations in the Claims Branch. Other staff officers are engaged on purely executive work—the making of orders, the consideration of cases and the initialling of draft letters to the public. That work is exactly the same as the work done by the committee clerks. We point out that the distinctions between one Branch and another are very frequently arbitrary and accidental. We say that those men of considerable experience who show that they are able to carry out this executive work, akin in its nature to the work which is being done by the committee clerks, should be made use of to a much larger extent than in the past.

35,699. (*Sir Henry Primrose.*) On page 7 of your memorandum there is a reference to the Department of the Special Commissioners. I want to test a little your representation of the case. Take the Department of the Special Commissioners which you deal with under three separate heads. Reading through that I do not think anybody who had no acquaintance with the Inland Revenue would realise that the branch which is described here is in a department which has at its head eight special commissioners with salaries going from 800*l.* to 1,000*l.*, or something of that kind, and below those eight special commissioners there are four committee clerks, and six first division clerks; that is to say, 18 men with high salaries who do the higher work. I do not know how it strikes other members of the Commission, but reading this through one would imagine that the lower grade clerks were the main body of the clerical staff in that department. I know a good deal about the work of the Inland Revenue, as you may suppose, and when I left the Inland Revenue there were three special commissioners, and there are now eight, because of the increase of work, and the special commissioners do an immense deal of work themselves. All responsible work is, and must be done, under the

law by the special commissioners. The amount of responsible work that subordinate people in the Special Commissioners' Office do is extremely small?—The difficulty of setting out a case for any branch, such as the special commissioners, is that the law demands that practically everything that goes out of the office should be signed, at least formally, by the special commissioners. The difficulty in stating the case is to try to represent what we regard as the essentially critical and discriminative work carried out on the papers apart from what may be a formal signature. Take the Foreign and Colonial Dividends Branch. We point out that the returns for the purpose of assessment are closely examined and then submitted for the formal assessment of the special commissioners. Now I insist that the insertion of that word "formal" in reference to the assessment of the special commissioners is justifiable, because of the fact that the assessment books containing these assessments are sent direct to the commissioners for signature without papers being attached.

35,700. But that particular work is very formal work?—That work I do not agree is formal work in any sense. I think the difficulty of keeping that duty up to its normal standard demands constant watchfulness and initiative, on the part of the officers, so that it cannot be called formal. In other parts of the special commissioner's office the work, is certainly more intricate and complex. In the special assessments branch the work carried out by the lower grade clerks is the examination of the returns. The lower grade clerks—men of wide experience—have those returns before them, and unless they raise points on the returns the special commissioners pass the papers as accepted. In this branch the papers are first of all sent up from the surveyors of taxes. The surveyor makes an assessment and states his figure; then the papers are sent up because a member of the public has asked that the assessment shall be made specially at headquarters. The papers are sent up by surveyors—our superior officers with wide outside experience—and if the lower grade clerk accepts the surveyor's figures the commissioners sign the papers formally. If the lower grade clerk disputes the case it goes through various channels. My point is, that this work is of exceptional responsibility, because, despite the fact that the surveyor has given his final figure, we find that the special commissioner's section collects an enormous amount of money every year. Twenty years ago there used to be a report sent to the Board from the special commissioners, but it has been dropped. Looking at that report I see the lower grade staff was complimented on the way in which it carried out the work. I find this year that a staff clerk in that section examining the returns from railways, which had been completely and finally examined by surveyors of taxes, has added to these assessments in one way and another amounts which will bring in duties exceeding 14,000*l.* The point of importance in that work is, that the surveyor has really made his final assessment, and that the points arising are exceedingly difficult and complex and require very wide knowledge.

35,701. Then it must be very different to what it was a very short time ago in respect of these special assessments, because the clerical staff under the special commissioners was comparatively small, and now it is very big. You have eight special commissioners and ten other men. Those 18 men with high salaries cannot do the rough work on the papers. They have to have the papers prepared for them, and that is what you do. There is the responsibility of doing your own work and you would be dismissed if you did not do it, but to say you are responsible for the assessment is absurd?—I certainly must protest against the expression of "rough work" in connection with the staff officers' work on railway companies' papers.

35,702. But the staff officers are highly-paid men?—The staff officers are lower grade men suffering from the grievance that we bring here.

35,703. (*Chairman.*) Do they not get special emoluments for their special work?—No, the salary is 550*l.* with no special emoluments.

35,704. That is higher than the pay in the grade to which you belong?—I am a second division clerk. The

25 April 1913.] Mr. JOHN MCCALLUM. (Mr. ERNEST E. BEARE was in attendance.)

[Continued.]

staff officer is also a member of the lower grade of the Inland Revenue Department.

35,705-6. (*Sir Henry Primrose.*) And gets 550*l.* a year?—Yes. May I say a word on another section of the special commissioners—the super-tax section?

35,707. I know perfectly well that the super tax has been kept very closely watched by the special commissioners themselves and by the committee clerks. It is very important work. Of course there is a very large amount of very rough work, so to speak, to do in classifying the incomes, and work of that kind, but the people who do that receive adequate salaries for that work?—As I happen to be in the super-tax section—in the non-liable branch—I am intimately acquainted with the responsibility thrown on to the second division clerks. In the middle of page 9 you will see it indicated that if a return shows 4,999*l.* the lower grade clerk makes inquiries, and then, on his own responsibility, may decide that there is no liability. That work has been exceedingly difficult because there has been an absence of precedents; there has been no technique; and again and again it has been emphasised by our chiefs that it is on us that the responsibility for the examination of these important returns rests. It is not rough work. It is work the importance of which I wish to emphasise for this reason—that our chairman, when he was here, indicated that, on the whole, the second division clerks in the super-tax section did registration work—the issuing of notices of charge and that sort of thing. We feel that he did not make clear the importance of this “non-liable” work. I do not wish to urge it on my own authority, but if I may I will read to you an extract from a memorandum sent to us by Mr. Fisher. “This branch of the work is most important as it affords the principal means of making good wastage, and yet, short of examination in detail of each case, no guarantee is possible either of the adequacy of particular returns for a given year, or of the potentialities of such returns for future years,” and “experience, discrimination and initiation on the part of the staff concerned must therefore be the chief factors; but, subject to these considerations, certain tests exist of general, though not universal, application.” Mr. Fisher closes by saying: “It is, however, most important to remember that in the last resort cases have to be considered on their own merits.”

35,708. That does not refer only to the lower grade?—That refers to the “non-liable branch,” who are second division clerks. I feel that unless this is made clear there will be a serious misapprehension. Mr. Fisher himself, I think, never disputed—in fact always recognised—the great importance of this work and the fact that it was very different from the work done by second division clerks elsewhere.

35,709. Do you suggest the work is not adequately paid?—I suggest the work is not in any sense akin to the work second division clerks are supposed to be doing. It is in no sense clerical; it is entirely different from registration and looking after papers.

35,710. (*Chairman.*) The clerks classed as “second division” do not do absolutely the same work in every department?—No.

35,711. (*Sir Henry Primrose.*) Besides, you have said yourself the registration work is unsuitable for a second division clerk, that it is not good enough?—I do not think we say that. The reference there is to the effect that second division clerks are in many cases unnecessarily skilled for registration work.

35,712. (*Chairman.*) The second division is the clerical division of the office, and that involves prac-

tically the whole of the office work, except administrative work, which is the work of the higher division. It is not for the second division to set limits to the work on which they are to be employed, provided it is generally clerical. Generally your work is purely clerical in its nature?—I beg to dispute that.

35,713. You dispute it here; but is it not the fact that to examine accounts and returns, to abstract them and see whether they comply with particular rules does not cease to be clerical work? You are dealing with papers laid before you; you are not originating plans; you are not discussing questions of principle; you are not considering great questions of administration; you are doing the clerical work of the office?—I admit that, but I also urge that committee clerks are doing exactly the same things in a different degree.

35,714. That may be. The committee clerks are a grade of the Service, and, in order to understand what the whole work of an office is, even the superior officers must in due time do clerical work. They must learn it. I must say I have no sympathy with the feeling which says, “We cannot do this work, because it is not the particular work for which we entered the Service.” “We require to be higher paid for this work.” The Government decides on the work each class of officer has to do?—The pay in any office, I take it, is based on the value of the work done, and if we hold that our work is of considerable value, it is only natural that we should follow it up.

35,715. (*Sir Henry Primrose.*) We are not here to settle that sort of question. All we have to do is to consider the general questions of organisation in so far as they call for improvement. If you consider that the Commissioners of Inland Revenue are putting upon you heavier work than they ought to, considering your salaries, it is to them you ought to go, and not to this Commission. We are not a committee of inquiry into the different departments of the Inland Revenue or any other office?—The reason for raising this point is, that we take it that such questions fall to be discussed under the conditions of service.

35,716. But you are making statements which I know as a matter of fact would be entirely repudiated by the heads of your office. I happen to know that?—I must protest against that suggestion, because this statement has been drawn up with the greatest of care after consultations among the members of the staff, and your statement is a reflection not on myself, but on the general lower grade staff of the department.

35,717. (*Chairman.*) I cannot permit you, Mr. McCallum, to take up that attitude. You have come here to make representations in regard to difficulties and hardships under which you say your fellow clerks suffer. One of those is raised by your desire to get promotion to the higher division. You say that the work that you perform is not second division work, and you claim promotion to the higher division because you say the work you perform is really higher division work. You have made your statement, and it is for us and for the Government to judge whether your work is “clerical” or not. Whether the rules of the Service should be modified so as to permit a larger proportion of second division men getting promotion into the higher division is another matter, but I see no use in allowing you to go on any further with the line of argument which you have taken up?—I can only adhere to the description in my statement that the differentiation in our office between clerical and administrative work does not hold, and that the work done is executive.

(*Chairman.*) We understand exactly what your position is, and I do not think there is any necessity for hearing you further.

Q. 33,099.

## UNIVERSITY OF LONDON.

## REPLY OF THE UNIVERSITY TO THE QUESTIONS OF THE ROYAL COMMISSION.

## STATEMENT A.

1. The questions contained in the letter from the Royal Commission cannot be satisfactorily answered so far as this University is concerned by direct replies, and the Senate therefore propose to answer in a more general way some of the matters therein raised which seem to affect this University. In doing so they avail themselves of the invitation of the Chairman of the Commission to express their views on "other questions falling within the scope of the terms of reference."

2. They may however remark, with regard to the first question, namely, "the relation between the highest education given at the Universities and the efficient discharge of their functions by members of the Civil Service," that they are of opinion that among those men who have received a liberal university education (not necessarily a specialised education) should be found in larger proportion than elsewhere those who are the most capable of undertaking important administrative duties. They do not, however, conceive that they are in a position to express any opinion as to the manner in which men possessing such qualifications do in fact discharge their functions.

*Admission to the Civil Service.*

3. In the opinion of the Senate the only practicable method of recruiting the Public Service from outside is in general by competitive examination, although they are prepared to admit that there may be exceptional cases in which special experience is desirable. They also consider that in certain cases the Universities might be asked to recommend as candidates for appointment persons who have had an exceptionally distinguished academic career of a sort to qualify them for candidature. The Senate are aware that certain appointments are now filled by limited competition. Generally speaking, they consider that the method of making appointments by nomination and patronage should be reduced to the lowest possible minimum.

4. They do not consider, however, that the present system, which precludes women from competing in the Class I. Examinations for admission to and promotion in the higher branches of the Civil Service, can be justified. To the University of London, which, as far back as 1878, threw open its doors to women upon the same conditions as to men, a system which does not allow women to prove their capacity, evinced in other quarters, to participate in important administrative and consultative work, cannot be considered as satisfactory or just. The Senate would urge that any positive sex disqualification should be removed, and that women should be appointed in suitable offices to positions for which they are qualified.

*Class I. Examination.*

5. The Senate wish in the first place to consider whether, assuming that the Civil Service Commissioners aim at obtaining the best products of each university, the present regulations permit that object to be obtained. They consider that such is not the case. They have been greatly impressed by the striking preponderance of successful candidates at the examination who are graduates of Oxford and Cambridge. The statistics published by the Royal Commission show that, of the 473 candidates who were successful at the Examinations held between 1906 and 1910 inclusive, 247\* were educated at

Oxford, 142\* at Cambridge, and only 5 were graduates of London.† They do not believe that this represents the proportion of London graduates qualified to enter Class I. of the Civil Service.

6. The Senate believe that a very high proportion of the London graduates who compete are successful in the Examination; that more do not compete is, in their opinion, due partly to the nature of the Examination, which not only in the range of certain individual subjects, but also in the allocation of marks to the subjects included in the present syllabus, is, in some respects, not suited to the training of a man preparing for a London degree.

7. If reference is made to the regulations governing admission to the Examination, it will be seen that a large number of marks is assigned to Classics and Mathematics, and relatively a small number to Science, Economics, Law, and allied subjects. Such an arrangement is not suited to the University of London, of whose students a large number graduate in the latter groups and a comparatively small number in Classics and Mathematics.

8. The Senate would call attention to the fact that many a man of a scientific bent cannot, unless he is prepared to submit himself for examination in several unrelated branches of Science (for each of which the maximum number of marks is only 600), obtain nearly as many marks as a mathematician (for whom the maximum marks are 1,200 in the higher and 1,200 in the lower branch), and that a maximum number of 600 marks only is obtainable in such important subjects as Geography, Political Economy, and a Modern Language, and 500 in Political Science, Roman Law, and English Law. Students either of Economics or of Law cannot, it would appear, obtain a sufficient number of marks unless they are prepared to take up other subjects which are related, if at all, only in a slight degree to their work.

9. More importance should be attached to securing that candidates should be able to express themselves clearly and intelligently in their native tongue. The Senate learn with some surprise that among the successful candidates there have apparently been men who have not been able to obtain any marks in English Composition.

10. The result of the present arrangement is that the State is practically deprived of the services of men who have not had a classical, a mathematical, or an historical training, and there is a comparative neglect of such subjects as Political Science, Law, and certain of the natural Sciences—subjects which may be of greater or at least of equal importance to persons about to undertake important administrative duties.

11. It is, however, in the character of the papers set even more than in the range of certain individual subjects and allocation of marks that the Senate think alterations might advantageously be introduced, and, without going into details, they would like in this connection to draw attention to the proposals of the Professorial Board of University College, which seem to them worthy of serious consideration, as coming from men of whom some have had experience in the teaching of candidates and also acted as examiners.

These proposals are as follows:—

The types of University training that would appear requisite for the selection of men of various ability for

\* Including 10 candidates who had also studied at other Universities, of whom none appears to have studied at the University of London.

† Including 12 candidates who had also studied at other Universities, of whom none appears to have studied at the University of London.

† The figures for 1911 and 1912 were 7 and 2 respectively.

the service may be roughly divided into four main groups:—

- (1) A classical training, in which emphasis is laid on the general aspects of Greek and Roman Culture.
- (2) A modern literary training, including Language; Literature, and a careful study of some large department of thought, such as History, or Philosophy, or Economics and Sociology, or Law.
- (3) A Mathematical training in both Pure and Applied Mathematics. Such a training requires to be supplemented by a slighter study of subjects in which the ideas receive expression in literary form, also by a general acquaintance with some Modern Literature.
- (4) A scientific training in some experimental or observational Sciences. Such a training requires supplementing in the same way as does Mathematics.

These types of training must not be distinguished too sharply. In particular, Groups (1) and (2) tend to coalesce, and so do Groups (3) and (4).

Also it must be remarked that in supplementing the special subjects of Groups (3) and (4), linguistic studies, conceived in the narrow sense as involving a capacity for translation (in both directions) and a knowledge of Grammar, are not all that is wanted; such a training may merely result in a double specialism.

The existing examination, while fairly satisfactory for the types of training analysed above in Groups (1) and (3), is gravely defective as regards Groups (2) and (4). This statement is substantiated by an analysis of the subjects taken by successful candidates in recent years.

It would, however, be unwise merely to raise the marks of the subjects under Groups (2) and (4) without at the same time taking precautions to exclude linguistic and scientific specialists of the type useless to the Civil Service.

The following Regulations appear to be adapted for the selection of the right type of ability:—

Candidates should be required to offer for examination:—

I. English Composition and one Foreign Language. (This should be a *modern* Foreign Language, except in the case of candidates presenting Modern Languages as their Principal Subject.)

II. One of the following:—

- (a) Economics;
- (b) Sociology;
- (c) Administration and Geography.

III. A branch or "School" of learning hereinafter called the "Principal Branch of Learning."

IV. Two Subsidiary Subjects selected from a list containing more headings than the list of Principal Branches, so that the range of each Subsidiary Subject is of smaller extent.

No candidate should be allowed to obtain a place in the Civil Service unless he obtains a substantial minimum in I., II., III., and IV.

In order to secure this, the papers set in the Principal Branch of Learning should be divided into two groups, namely:—

Group A.—Papers testing the fundamental knowledge requisite for various types of culture, *e.g.*, (i) purely linguistic papers, *i.e.*, Translation in both directions, Grammar, Philology; (ii) Mathematics; (iii) the Physical and Natural Sciences; (iv) Law.

Group B.—Papers testing breadth of outlook and acquaintance with the general ideas of the modern world; for example, (a) Ancient and Modern Literature; (b) Ancient and Modern Philosophy; (c) Ancient and Modern History; (d) History and General Aspects of Scientific Ideas; (e) Jurisprudence. (*Note.*—Questions involving translation would not be debarred from this group.)

The division of the papers into A and B would involve the remodelling of the examination in most of the subjects. The examination for classical candidates would, however, be practically unaltered.

The addition of papers on the history and general aspects of scientific ideas is to be specially emphasised.

12. Under the existing Regulations a high proportion of graduates—400 out of 473—supplement their degree work by extra instruction to ensure success in passing the examination. If the Regulations were reframed on the basis of a broad University education, this should not be necessary. If it be true that in some instances the necessary marks in such subjects can be obtained by instruction of only a few weeks or even days, these subjects are not receiving at the hands of the examiners the consideration which they deserve. If they were treated more adequately it would be as difficult for them to be "crammed" within a few weeks, or even days, as it is to "cram" Classics or Mathematics.

#### *Facilities for Persons of Slender Means.*

13. Among the questions upon which the Commission invites an expression of opinion is that of "the facilities which exist under present conditions to enable persons of slender means to obtain University education." As to this the Senate would point out that, although it is true that the older Universities are enabled by their endowments to offer substantial advantages in the way of scholarships, the University of London has been, and will probably continue to be, the "poor man's University"; not only are the fees charged relatively small, but the students whose circumstances do not allow of their attending at a resident university are enabled to pursue a course of university instruction and to obtain a university degree of a high standard.

#### *Post-Appointment Instruction.*

14. There is another aspect of the activities of the University of London to which attention may be invited. Apart altogether from the work of preparing candidates for admission to the Civil Service examinations, a great deal is being done by various schools of the University in training and instructing Civil Servants who have taken up appointments and who desire to follow an academic course—either to equip themselves better for promotion or to obtain the advantages of a university degree. Mention has been made to the Commission of the work done by the London School of Economics in providing a "business training" for Army officers, and information has been received from the same school regarding what may be termed "post-appointment instruction" to other State servants. There are in the present year 73 Civil Servants attending at the school, of whom 37 are working for a degree. 22 Civil Servants have already graduated—1 B.A., 2 M.A., 18 B.Sc. (Econ.), and 1 D.Sc. (Econ.).

15. In the opinion of the Senate this work could be extended with very great advantage if encouragement were given by the Government to the schools undertaking such work, and if, where possible, promotion were accorded to those Civil Servants who have, in the face of considerable difficulty, obtained a university qualification in this way. That there is room for great development admits of little doubt. London is the administrative as well as the political capital of the Empire; most Civil Servants at some time or other in their lives are employed in or about it; there are unrivalled facilities for receiving instruction in subjects which should be of especial value to Civil Servants; and it is a question whether the State should not require that any person engaged in administration should receive instruction in such subjects.

#### *Officers Training Corps.*

16. It appears to the Senate that some consideration should be shown to graduates who have taken an active part in the work of the Officers Training Corps, and that the subject of Military Science, which is now recognised by some of the universities for their

examinations, might also be included in the syllabus for the Higher Civil Service Examinations.

*Composition and Procedure of the Civil Service Commission.*

17. In conclusion, the Senate wish to submit some observations regarding the composition of the Civil Service Commission and the manner in which it discharges its functions.

18. It will be generally conceded that the aim of the Class I. Examination (and indeed of all the Civil Service Examinations) should be to test the attainments of the candidates in various branches of knowledge by an examination based upon the education which they have received. It is difficult to make the present Class I. Examination comply generally with this requirement. The effort to do so appears to have made it unduly favourable in this respect to the Oxford Classical candidate, but even in his case specialised coaching is generally necessary to ensure success, and for most candidates success in the Examination can be attained only by deflecting the normal course of education.

19. To ensure that the Examination shall be harmonised with the education of different university candidates, it is advisable in the opinion of the Senate that a permanent advisory body representative of all the universities in the United Kingdom should be appointed to assist the Civil Service Commissioners. The Senate desire to point out that there is not on that body any representative of the University of London, or of the Scotch, Irish, or newer provincial universities, and that they could not fail to benefit by the advice of a representative committee such as is suggested.

20. In 1903 a conference of the universities was held, at which the University of London was represented by the late Dr. R. D. Roberts. It does not appear that he was instructed to put forward any particular views, but this is doubtless due to the fact that the University was at that time undergoing re-organisation.

21. The names of the persons who act as Examiners for the Civil Service Commission are not published before the Examination. In order to prevent the possibility of some of the candidates gaining an undue advantage by ascertaining privately by whom they will be examined, and acquainting themselves with the examiner's works, the Senate consider that the practice followed by most universities in making public the names of the examiners should be adopted in the case of the Civil Service Examinations.

APPENDIX.

EXTRACT FROM THE REGULATIONS REGARDING OPEN COMPETITIVE EXAMINATIONS FOR THE CIVIL SERVICE OF INDIA, CLERKSHIPS (CLASS I.) IN THE HOME CIVIL SERVICE, AND EASTERN CADETSHIPS IN THE COLONIAL SERVICES. (Not reprinted.)

STATEMENT B.

*Statement prepared by the Professorial Board of University College for transmission to the Royal Commission on the Civil Service.*

1. The Professorial Board of University College are of the opinion that the various needs of the higher appointments in the Civil Service can only be met by a variety of methods of appointment. The three methods at present current appear to meet those needs effectively: they are (a) Open Competition, (b) Limited Competition, (c) Nomination. The Board have experience of these several methods.

2. In this section and the two that follow, the Board deal with the method of open competition. Many members of the Board have had considerable teaching experience in preparing students for the First Class Civil examinations, and many are, or have been, examiners for the Civil Service Commission. Many students of the College have been successful at the open competitive examination—a larger number some thirty years ago than now; during the twenty years

previous to the re-organisation of the University of London, owing partly to the lack of University organisation in London, as well as to a variety of circumstances, such as, for example, the large number of scholarships at the older Universities for students of classical attainments, many students of the College have, before presenting themselves for the competitive examination, migrated to one of the older Universities. But since the re-organisation of the University, followed as it has been by the planning of curricula, as distinct from mere examination syllabuses, there are indications showing that the College will again become the training place of a considerable number of candidates for the First Class Civil Competitive Examination. In order to meet this development a Censor of Higher Civil Service Studies was appointed in 1909. The Courses provided for candidates will occupy two years: they are framed on the assumption that a candidate is already either a graduate or has done the work equivalent to graduation. At the present time there are four students reading with a view to the First Class Civil Examination: there are seven undergraduates who have intimated their intention of competing for the First Class Civil in due course.

The College has possessed since 1855 an Indian School in which selected candidates for India pass their year of probation before proceeding to India. These Students have, during the last ten years, varied in number from eighteen to nine each year. They have been drawn to a large extent from Oxford and Cambridge and to some extent from Scotland, from Trinity College, Dublin, and from London.

Knowledge of the work of these men and of their careers after leaving College enables the Board to say with confidence that the selection of men for the Indian Civil Service by competitive examination has on the whole resulted in the appointment of men well fitted for their responsible tasks; they have proved themselves to be well educated men, men of adaptability and of quick perception.

3. Before making any suggestions for modification of the scheme of examination for the Civil Service, the Board would briefly indicate what kind of training should in their opinion be aimed at as fitting a man for a post concerned with the administration of this country or its dependencies. It would seem desirable, in the first place, that a liberal education should embrace, on the one hand, a knowledge of the properties of matter and the action of natural forces which determine a man's environment; on the other hand, a knowledge of the nature and behaviour of man himself as deduced from a study of his thoughts and actions in past times and recorded in literature and history. These two in general coincide with what are classed as scientific and literary studies. They should be included in the School training of all those who aspire to positions in the First Class Civil Service. The development of Science, both at the older Universities as well as at the more modern ones, proves that scientific studies, when properly grouped and worked out in well-arranged curricula, afford as good and as comprehensive a training for the Student of University age as the literary studies. It is, of course, admitted that for the servant of the State general capacity and adaptability are essential; the time spent in the acquisition of knowledge will have been wasted if a man has not thereby acquired the habit of concentration, powers of reasoning and facility of expression. The service of the State requires men of the highest ability, but not necessarily ability of the same type.

Accordingly, the general policy governing the Civil Service examination should be to select a proper variety of candidates, provided that (1) the requisite curricula in their main outlines are actually established in the national seats of learning, and (2) that due precaution is taken to exclude those deficient in the general literary culture essential to members of the Civil Service.

Judged by this standard, the present regulations seem unduly to confine the selection to candidates with certain special types of education, though at the time that the regulations were laid down, they were in their main lines probably the best possible. At

that time the two great "Schools" were the Classical and Mathematical Schools at Oxford and at Cambridge, and the present examination is undoubtedly favourable to those who have taken either of these curricula, and especially the Oxford Classical School. Although many may consider that this is the widest and completest "School" that exists in any University, it must be remembered that during the years which have elapsed since the drawing up of the Regulations, a new learning has grown up at the older Universities and has taken the most prominent place in the work of the newer Universities. Every year a larger number of the brightest boys take up some Science or Sciences, or the more modern studies, History and Economics, as their main subject of study, and there can be little doubt that the development of the study of Science as a mental discipline and preparation for future work in life would be still more rapid were it not for the fact that the chief rewards for learning, in the shape of Fellowships, Lectureships, and posts in the Civil Service, still fall to those who have attached themselves to the older disciplines.

To make the First Class appointments in the Civil Service as accessible to the man who has taken Modern Languages, or History, or some branch of Science as the chief subject of his University Course, would certainly tend to introduce into the Service a greater variety of ability than the State at present obtains. Although it can hardly be pretended that an exclusive training as a Chemist or Zoologist would be the best possible, or even a proper training, for a man whose main administrative work would probably be clerical, it is equally impossible to defend the present condition, under which the main avenue for selection as an administrator is a training which may leave the candidate ignorant of the whole of Modern Science, *i.e.*, of the factors which are almost solely responsible for the material welfare of the community.

The Board recognise that in selecting men for the posts in the Civil Service by competition every effort should be made to avoid encouraging pure specialising, whether it be on the linguistic or the scientific side, and would suggest that in any modification of the regulations regard should be had not only to the ever-increasing part played by scientific studies in the highest education of the University, but also to the necessity of ensuring that the candidate has not devoted his attention too exclusively to a narrow type of thought.

The types of University training that would appear requisite for the selection of men of various ability for the service may be roughly divided into four main groups:—

- (1) A classical training, in which emphasis is laid on the general aspects of Greek and Roman Culture.
- (2) A modern literary training, including Language, Literature, and a careful study of some large department of thought, such as History, or Philosophy, or Economics and Sociology, or Law.
- (3) A Mathematical training in both Pure and Applied Mathematics. Such a training requires to be supplemented by a slighter study of subjects in which the ideas receive expression in literary form, also by a general acquaintance with some modern literature.
- (4) A scientific training in some experimental or observational Sciences. Such a training requires supplementing in the same way as does Mathematics.

These types of training must not be distinguished too sharply. In particular, Groups (1) and (2) tend to coalesce, and so do Groups (3) and (4).

Also it must be remarked that in supplementing the special subjects of Groups (3) and (4), linguistic studies, conceived in the narrow sense as involving a capacity for translation (in both directions) and a knowledge of Grammar, are not all that is wanted; such a training may merely result in a double specialism.

The existing examination, while fairly satisfactory for the types of training analysed above in Groups (1)

and (3), is gravely defective as regards Groups (2) and (4). This statement is substantiated by an analysis of the subjects taken by successful candidates in recent years.

It would, however, be unwise merely to raise the marks of the subjects under Groups (2) and (4) without at the same time taking precautions to exclude linguistic and scientific specialists of the type useless to the Civil Service.

The following Regulations appear to be adapted for the selection of the right type of ability:—

Candidates should be required to offer for Examination:—

I. English Composition and one Foreign Language. (This should be a *modern* Foreign Language, except in the case of candidates presenting Modern Languages as their Principal Subject.)

II. One of the following:—

- (a) Economics;
- (b) Sociology;
- (c) Administration and Geography

III. A branch or "School" of learning hereinafter called the "Principal Branch of Learning."

IV. Two Subsidiary Subjects selected from a list containing more headings than the list of Principal Branches, so that the range of each Subsidiary Subject is of smaller extent.

No candidate should be allowed to obtain a place in the Civil Service unless he obtains a substantial minimum in I., II., III., and IV.

In order to secure the variety of types of ability necessary for the Civil Service, the Board are of the opinion that each of the Principal Branches of Learning should be put on a footing of equality; that the examination in each branch should be of an advanced type and so arranged as to test previous training and ability to an equal extent.

In order to secure this the papers set in the Principal Branch of Learning should be divided into two groups, namely:—

Group A.—Papers testing the fundamental knowledge requisite for various types of culture, *e.g.*, (i) purely linguistic papers, *i.e.*, Translation in both directions, Grammar, Philology; (ii) Mathematics; (iii) the Physical and Natural Sciences; (iv) Law.

Group B.—Papers testing breadth of outlook and acquaintance with the general ideas of the modern world; for example, (a) Ancient and Modern Literatures; (b) Ancient and Modern Philosophy; (c) Ancient and Modern History; (d) History and General Aspects of Scientific Ideas; (e) Jurisprudence. (*Note.*—Questions involving translation would not be debarred from this group.)

The division of the papers into A and B would involve the remodelling of the examination in most of the subjects. The examination for classical candidates would, however, be practically unaltered.

The addition of papers on the History and General Aspects of Scientific Ideas is to be specially emphasised.

This procedure would make it safe to equalise the total marks obtainable for each of the Principal Branches of Learning.

The essence of the scheme (so far as Principal Branches of Learning go) is the grouping of the *papers* rather than of the *subjects*; although all the papers of some subjects naturally fall into one or other of the two groups.

Appended is a Schedule suggesting the Principal Branches of Learning that might be accepted for this purpose, and showing the division into Groups A and B.

Keeping the maximum, as at present, 6,000, the marks might be allotted as follows:—

I. English and a Foreign Language	
300 each	600
II. Economics, or Sociology, or Administration and Geography	600
III. For the Principal Branch of Learning	3,600
IV. For the two Subsidiary Subjects	600
each	1,200
	6,000

Such a scheme could only be carried out by a much more elaborate system of examination than exists at present. For each division of subjects a Board of Examiners must be appointed, such Board to include men whose ability and training is sufficiently varied to enable them to treat their subjects in the fashion of Groups A and B given above. Each Board would be responsible for the paper in its own division.

3a. The development of Universities in London, and in the great centres of industry throughout England, the organisation of University education in Wales and in Ireland, coupled with the scholarship systems of the several local authorities, have greatly increased the facilities for University education. The fees at the Modern Universities vary from 10 guineas to about 30 guineas a year, and these, together with Maintenance Grants, are in many cases provided for by the scholarships of the local authorities, so that University education is now within the reach of the humblest and of those of slender means.

In view of this state of things, the Board are of the opinion that after, say, a period of five years' notice, all candidates for the First Class Civil Competitive Examination should be required to have had a University education and to have obtained a Degree. Not only would this be good for education, but it would simplify the task of the Examiners very much.

4. Speaking generally, the effect of the Civil Service Examinations upon the curricula of the "Schools" of the Universities has been small.

The Commissioners could probably exercise a considerable influence on the curricula of the Universities by adopting a scheme of examination on the lines of Groups A and B; by this means they would tend to widen and make of more general value "Schools" that have become excessively specialist.

5. In the opinion of the Board, even with the best conceivable organisation of the First Class Civil Examination, it will still be necessary to maintain the other methods of appointment. The other methods of appointment give freedom to meet specialised requirements, and also freedom to make appointments at a later age than would be possible if appointments depended exclusively upon competitive examination.

The system of limited competition in such cases as that of the British Museum seems to work well. The Board are, however, of the opinion that an intimation of all vacancies likely to occur in the British Museum should be sent as a matter of routine to all universities. The special training that is needed for such offices as those of the British Museum is to be found to a very large extent in students in the newer universities who have proceeded from the Bachelor's Degree to a higher degree. The development of this work for the higher degree is one of the most encouraging features in recent years in the newer universities. It would receive very considerable stimulus if these specialised posts in the Civil Service could be recruited mainly from Post-Graduate Students. The examinations in a limited competition should be conducted by a Board of Examiners with whom the Head or Heads of the appropriate Civil Service Departments should be associated.

6. For similar reasons the Board believe that for many offices it is desirable to maintain the method of nomination. There are offices within the Civil Service in which personal characteristics, together with the wider experience that may be possessed by a man of more mature years, are essential for the conduct of the work. While the Board agree that the system of nomination should be carefully exercised, so as to avoid any suspicion of mere patronage, they would regret any step that would prevent those departments in which nomination has worked so well (such as, for instance, the Board of Education) from recruiting their staffs in that method.

The question of the promotion of those who have entered the Civil Service in the Second Class to First Class positions is one of great difficulty.

The man who enters the Civil Service as a Second Class Clerk has received a general education lasting over a shorter period than the man who enters the First Class. Only in rare instances could this loss be made up. The existing regulations provide for it to some extent by allowing a Second Class Civil Servant to enter for the First Class examination at a later date. The Board doubt whether this scheme is a satisfactory one, as a man's power to cope with a competitive examination diminishes with advancing years. There ought, however, to be some method of promotion from the lower to the higher Class in rare cases. A Second Class Clerk who proves himself to be a good administrator, a man of tact and adaptability, and who, by the acquisition of a University Degree, or by some other approved method, proves that he possesses a wide and general education, ought, in the opinion of the Board, to be eligible for promotion.

In the opinion of the Board the University of London especially can afford assistance in this matter. There are already in attendance in connection with some of the Post-graduate Courses given by the University many Civil Servants, among them some Second Class Clerks. These men are enabled to obtain training in Administration and in History, and in other subjects which are of especial value to Civil Servants. This would appear to be the avenue by which Second Class Clerks ought to be able to obtain promotion to the higher ranks.

7. If the general principles set forth in this Report are acceptable, the Professorial Board would be glad to lend assistance in working out the scheme in detail, more particularly with regard to the division of papers into A and B for the Principal Branches of Learning, and also in regard to the list of Subsidiary Subjects.

*Schedule indicating the Principal Branches of Learning that might be prescribed, and showing the nature of the division into Groups A and B.*

Group A.

- (i) Classics (Linguistic).
- (ii) Mathematics.
- (iii) Two branches of Science.
- (iv) History (Ancient and Modern).
- (v) English and a Modern Language, or two Modern Languages.
- (vi) Law (English and Roman).
- (vii) Philosophy, Logic, Psychology.

Group B.

- Classics (Literary, Historical and Philosophical).  
 History and General Aspects of Scientific Ideas.  
 History and General Aspects of Scientific Ideas.  
 History (General Historical and Philosophical Ideas).  
 English and a Modern Language, or two Modern Languages (Literary, Historical and Philosophical).  
 Jurisprudence.  
 Philosophy, Logic, Psychology.

The relative importance of A and B in the different branches of learning would vary somewhat. In a branch of learning in which the requirements in B are lighter than those in another branch of learning, the requirements in A would be correspondingly heavier. For the purposes of the examination, the Principal Branch of Learning would be considered as a whole, but, in order to effect the aim suggested, a substantial minimum of marks in both A and B should be required.

## APPENDIX LXXII.

## COPY OF A LETTER ADDRESSED BY THE ROYAL COMMISSION TO THE COMMERCIAL WITNESSES.

SIR,

11th March, 1913.

I AM desired by the Chairman of this Commission to inform you that for the purposes of the inquiry entrusted to it he is anxious to obtain evidence on certain questions from representatives of some of the more important financial, industrial and commercial companies in the United Kingdom.

The principal questions on which information is desired are the following, viz. :—

- (1) The manner in which the clerical and administrative staff is recruited.
- (2) The organisation of that staff as seen in the various classes of employes, the rate of pay assigned to each, and the practice with regard to promotion from a lower to a higher class.
- (3) The extent to which these rates of pay have been modified in recent years to correspond with fluctuations in the cost of living.
- (4) How far the experience of those engaged in the more important commercial and industrial enterprises suggests criticisms of the business methods employed by public departments.
- (5) The suitability of women for employment on clerical work as distinct from the mechanical labour of typewriting, &c., and the advantage or

disadvantage of employing them in the same rooms with men.

- (6) The advantage or disadvantage of recruiting for the more difficult and responsible duties of business administration men who have received the highest education.

Lord MacDonnell would regard the opinion of such an important organisation as \* \* \* upon these questions as being of great value for the purposes of the Commission, and he desires me to express the hope that you (or some other gentleman deputed to speak for you) may find it possible to favour the Royal Commission by attending before it for the purpose of giving oral evidence on these questions, and upon any other questions within the scope of the terms of reference (a copy of which is enclosed) on which you may desire to make any representations.

If this course is agreeable to you, I am to say that at \* \* \* would be a convenient time to hear such evidence.

I have, &amp;c.,

S. ARMITAGE SMITH.

## APPENDIX LXXIII.

(Handed in by Mr. E. M. Harvey.)

Q. 33,688.

## MEMORANDUM on the HEALTH of the WOMEN CLERKS employed in the BANK OF ENGLAND.

The regulation requiring Women Clerks to pass renewed medical examination at the expiration of certain periods of service, and making further continuance in the Bank's employ contingent upon the results of such examinations, came into force in 1903 concurrently with the introduction of the arrangement under which the female staff is supplied with luncheon free of cost.

During the years 1901-2, when the total number of Women Clerks employed was 45, there were 15 cases in which clerks suffered from neuritis in the arm or some other form of nerve trouble, whereas complaints of this character are now very rare.

The daily average absence of Women Clerks from sickness of all kinds rose to 4.4 per cent. in 1902, that being the highest figure in any year except 1904, when there were numerous absences due to an epidemic of measles. Since 1904 the figure has only exceeded 3 per cent. in one year, and for the last two years it has been 1.3 per cent. and 1.9 per cent. respectively.

It is in regard to absences of less than a week's

duration, however, that improvement is most noticeable, as the following figures show :—

Period.	Average Total Days' Absence per Annum for whole Staff (short periods only).	Average Number of Staff.
1895-9	71.2	35.6
1900-4	103.4	44.4
1905-9	89.8	58.4
1910-2	77.6	59.3

Thus it will be seen that the total number of working days lost to the Bank in a year is almost the same now as when the employment of Women Clerks first commenced, although the number of clerks employed has increased meanwhile to the extent of nearly 70 per cent.

Bank of England,  
24th April 1913.

E. M. HARVEY,  
Deputy Chief Cashier.

### APPENDIX LXXIV.

*(Handed in by Sir Charles Mathews, K.C.B.)*

Q. 34,616.

#### MEMORANDUM REGARDING STATUS, AS TO PENSION, OF TWO OFFICERS IN THE DEPARTMENT OF THE DIRECTOR OF PUBLIC PROSECUTIONS.

In the case of the Principal Assistant, this Officer was first appointed a Personal Clerk in the Treasury Solicitor's Department in 1880, and, after passing a qualifying examination, became a Second Class Clerk in July 1887 under the provisions of Clause vii. of the Order in Council of the 4th June 1870. In existing circumstances, he does not count any of his back service for pension.

In the case of the Minor Staff Clerk, this Officer became a Civil Service Copyist in January 1881, and in the following December was transferred from the

Civil Service Commission to the Copying Staff of the Treasury Solicitor's Department. After passing a qualifying examination he became an Abstractor in July 1891 under the provisions of Clause vii. of the Order in Council of the 4th June 1870.

By virtue of a Treasury Minute dealing with this class of appointment, he will be allowed, under the provisions of Section 3 of the Superannuation Act of 1887, to count half his service as Civil Service Copyist in addition to his pension rights for service on the Establishment.

27	1912	F.R.I.B.A. and Member of Board of Examinations	5	39 4
28	1912	B.A., Cambridge. B.Sc., Cardiff. Diploma in Electrical Engineering. A.M.I.C.E.	2½	26 5
29	1912	B.Sc., Victoria Univ. and Leeds. Fellow of Institute of Chemistry.	19	41
30	1912	M.Sc., Manchester. 1st Class Honours in Engineering and University Scholarship. Whitworth Exhibition.	12	36 2
31	1912	B.Sc., Lond. 2nd Class Honours in Engineering. 1st Class Associateship in Mechanics. R.C.S., Royal and Whitworth Exhibitions. Whitworth Scholarship.	6	27 4
32	1912	LL.B., D.Sc. (Economics), Lond. Board of Education Certificate.	13	40
33	1912	2nd Class Hist. Tripos, Cambridge. Members Prize and Harness Prize for English Essay.	7½	31 4

## xii.—INSPECTORS OF SCHOOLS OF ART.

1	1898	A.R. Coll. Art. Queen's Prize: Medal. F.R. Hist. Soc.	20	41 7
2	1900	A.R. Coll. Art. Art Master's Cert. Science Certs., Science and Art Department.	4	38 9
3	1905	Art Master's Certificate. Silver and Bronze Medals in Nat. Compn. R.C.A. Diploma.	16	44 3
4	1905	A.R. Coll. Art. Art Master's Cert. Gold, Silver, and Bronze Medals, Nat. Compn.	15½	40 10
5	1910	Art Master's Cert. A.K.C.	5	55 2
6	1912	Art Master's Cert. R.C.A. Diploma and Travelling Scholarship. Silver and Bronze Medals in Nat. Compn.	5	34 3

## iv.—INSPECTOR OF THE MEDICAL BRANCH.

1	1898	1st Class, Parts I. and II., Nat. Sci. Tripos, Cambridge. Fellow of Emmanuel. M.D.	7	28 4

## APPENDIX LXXVII.

(Handed in by Sir L. A. Selby-Bigge, K.C.B.)

Q. 35,188.

AGE, ACADEMIC AND OTHER QUALIFICATIONS, and TEACHING EXPERIENCE  
of the SUB-INSPECTORS in the SERVICE of the BOARD of EDUCATION in April, 1913.

## SUB-INSPECTORS FOR DRAWING AND HANDICRAFT.

Reference Number.	Age at Appointment.	School, University, and College.	Qualifications.	Years of Teaching.	Years of Teaching in Public Elementary Schools.
1	Yrs. mths. 34 3	Private Schools. Lyme Regis, Nat. Sch. Battersea, Training Coll. London Univ.	Cert. (B. of E.). B.A. 1888, and B.Sc. 1884. Honours in English, 1888. "D" Cert., 1880.	19	5½
2	31 3		Art Master's Cert. 4 Medals and 2 Book Prizes in Nat. Compn. Clothworkers' Medal for Textile Design. N.A.T. Sch. Silver Medal. Several Science Adv. Certs.	7	—
3	26 1	Whaley Bridge Wesn. Schs. Westminster Training Coll. Charterhouse Sch. of Art. Royal Coll. of Art. Julian's Academy, Paris.	Cert. (B. of E.). F.R.G.S. Art Master's Cert. Certs. for Woodwork, Clay Modelling, Science, and Music.	8	7
4	35 0	London Univ. - - - -	B.A. 1886. 1st Cl. R.C.S. (Physics, Chem., Biology, Geology, &c.). F.C.S.	12½	—
5	27 8	National Art Training School and visits to Continental Schools.	Art Master, Sculptor, Exhibitor at Roy. Acad., Paris Salon, &c., Art Certs. and Silver and Bronze Medals. Queen's Prizes.	8½	—
6	31 9	Royal Coll. of Science - - -	1st Class Agriculture. 2nd Grade Certs. in Freehand and Geometry.	16	16
7	30 9	Royal Coll. of Art - - - -	Art Class Teacher's Cert. S.K. Art Certs. with Medals and Prizes. Cert. Teacher, 1881. "D" Certificate, 1880.	16½	—
8	29 1	Birmingham, P.E. Schs. Royal Coll. of Science. Royal Sch. of Mines.	A.R.C.S. and A.R.S.M., F.R.A.S. City and Guilds.—1st Class Hon. Iron and Steel Manufacture 5l. Prize and Medal. S. and A. Dept.—1st Class Hon. Pr. and Th. Metallurgy. 1st Class Hon. Physiography. E.C.S.—1st in 1st Class Mining and Assaying. 2 Art and over 40 Science Certs.	6	—

## SUB-INSPECTORS.

9	28 7	Lichfield, Nat. Sch. Saltley, Training Coll. London Univ.	Cert. (B. of E.). B.A. - - -	12½	12½
10	26 8	Winchester, St. Thomas' Nat. Sch. Winchester Training Coll.	Cert. (B. of E.). "D" Cert. Certs. for Science.	10½	6½
11	31 1	Bedford, Harrold C.E. Sch. Peterborough Trg. Coll.	Cert. (B. of E.). Advanced Science Certs. Certs. for Music and Drill. Full "D" Cert.	17	17
12	25 5	Penzance, Wesn. Sch. Westminster Trg. Coll.	Cert. (B. of E.) . - - - -	10½	10½
13	30 5	Eccleshill, Undercliffe Bd. Sch. Westminster Trg. Coll. Royal Coll. of Science. London University.	Cert. (B. of E.). Intermediate B.Sc. Sth. Ken. Science Special and Advanced Certs. "D" Cert. Tonic Sol-fa College Certs.	13	13

## SUB-INSPECTORS—continued.

Reference Number.	Age at Appointment.	School, University, and College.	Qualifications.	Years of Teaching.	Years of Teaching in Public Elementary Schools.
14	Yrs. mths. 27 7	Duloe (Cornwall) Nat. Sch. Carmarthen Trg. Coll. Cambridge, Non-Coll.	Cert. (B. of E.). M.A., 1890, 1st in 1st Class Moral Science Special. Sth. Ken. Advanced Certs., Agric., Physiol., Physiography, Geom. Perspective and Freehand.	11½	11½
15	33 10	Birmingham, Islington Nat. Sch. Westminster Trg. Coll. London Univ.	Cert. (B. of E.). B.A. Certs. for Science, Drawing, and Music.	19	19
16	32 0	West Ham, Model Sch. London Univ.	Cert. (B. of E.). B.A., 1888. Honours in English (Inter. Arts). Certs. for Science, Music. "D" Cert.	19	19
17	31 8	Ross, Brit. and Foreign Sch. Ross Nat. Sch. Saltley Trg. Coll.	Cert. (B. of E.). Certs. in Science and Drawing.	15½	15½
18	27 3	Chaddleton (Staffs) Nat. Sch. Saltley Trg. Coll.	Cert. (B. of E.) - - - -	11½	11½
19	35 6	Llanely, Copper Works Sch. Bangor Trg. Coll. London Univ.	Cert. (B. of E.). Matric. Certs. for Science. "D" Cert.	18	18
20	28 8	Shirley (Hants) Nat. Sch. Winchester Trg. Coll. London Univ.	Cert. (B. of E.). B.A. - - -	12½	7
21	28 0	Leeds, Bewerley St. Bd. Sch. Leeds Gram. Sch. Borough Rd. Trg. Coll. London Univ.	Cert. (B. of E.). B.A. Sth. Ken. Advanced Science Certs. Music and Drawing ("D") Certs.	8	7
22	29 4	Borough Rd. Trg. Coll. London Univ.	Cert. (B. of E.). B.A. - - -	8½	8½
23	27 5	Reddish, Albert Schs. Borough Rd. Trg. Coll.	Cert. (B. of E.) - - - -	12	12
24	29 0	Liverpool, Windsor St. Wesn. Sch. Westminster Trg. Coll. London Univ.	Cert. (B. of E.) B.A. Teacher's Diploma, London. "D" Cert. Cert. for Music (both notations). 8 Science Certs.	14½	14½
25	26 9	Ilfracombe, Bd. Sch. Exeter Trg. Coll. Oxford.	Cert. (B. of E.). M.A., Testamur Hist. 4 Sth. Ken. Certificates in Science. "D" Cert. Barrister.	9½	9½
26	28 9	Guernsey, St. John's. Winchester Trg. Coll.	Cert. (B. of E.) - - - -	12½	12½
27	34 6	York, Thornton Denholme. Lodgegate Bd. Sch. Edinburgh, F.C. Trg. Coll. Royal Coll. of Science. Edinburgh Univ.	Cert. (B. of E.). A.R.C.S. (1st Class Chemistry). Passed Mathl. Dept. of M.A. Degree. F.C.S. "D" Cert.	14	10
28	33 6	Stockport, Portwood Wesn. Hr. Gr. Sch. Westminster Trg. Coll. Dublin R.U.I.	Cert. (B. of E.) B.A. Honours, History. Sth. Ken. Advanced Science Certs. "D" Cert. Cert. for Music.	18	18
29	31 10	Liverpool, St. Vincent de Paul R.C. Sch., Norfolk St. Hammersmith Trg. Coll.	Cert. (B. of E.) F.L.S., F.G.S. "D" Cert.	12	4
30	32 6	Shirley (Hants) Boys' Sch. Winchester Trg. Coll.	Cert. (B. of E.) - - - -	15	15
31	24 5	Bishops Castle (Salop) Nat. Sch. Saltley Trg. Coll.	Cert. (B. of E.) - - - -	9	9

ROYAL COMMISSION ON THE CIVIL SERVICE.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

CIVIL SERVICE.

At the Royal Commissions House, Old Palace Yard, S.W.

NINETIETH DAY.

Wednesday, 29th April 1914.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

His Grace the DUKE OF DEVONSHIRE.

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.

Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.O.

Mr. ARTHUR BOUTWOOD.

Mr. JOHN ROBERT CLYNES, M.P.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Miss HALDANE.

Mr. N. E. BEHRENS (*Secretary*).

The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., G.C.V.O., K.C.I.E. (Permanent Under-Secretary of State for Foreign Office) called and examined. Sir EYRE CROWE, K.C.M.G., C.B. (Assistant Under-Secretary of State for Foreign Affairs) and Mr. J. A. O. TILLEY (Chief Clerk of the Foreign Office) were in attendance.

36,551. (*Chairman*). I understand, Sir Arthur, that before you joined the Foreign Office you had considerable experience in the Diplomatic Service?—Yes. I joined the Foreign Office in 1870, and I remained in it until the early part of February 1874, and then I went abroad. I was at Copenhagen; then Berlin; then Peking; then Berlin again; then Constantinople; then Athens; then Persia; then Budapest; then Constantinople again; then Sofia, Bulgaria; then Morocco; then Madrid; and then St. Peteraburg. That took me up to 1910—practically 36 years—and then I joined the Foreign Office again, succeeding Sir Charles (now Lord) Hardinge.

36,552. Should I be right in saying that the ground we have to cover is, in a broad sense, the Foreign Office, the Diplomatic Service, and the Consular Services?—Certainly.

36,553. And that, although all those three interconnect, still there are clear lines of distinction between them?—Yes; less, perhaps, between the Foreign Office and the Diplomatic Service than between the Consular Service and the others.

36,554. Should I be right in saying that the Foreign Office is very broadly divided into the political and non-political departments?—Yes, certainly.

36,555. That is a broad distinction?—Yes.

36,556. Should I be correct in saying that the political departments of the Foreign Office occasionally perform the functions which are attached more strictly to the diplomatic side of the Service?—Yes.

36,557. The diplomatic functions are exercised through your agents abroad, and partly through your establishment in London?—Yes. I should say that the diplomatic functions at home are limited more to the assistant under-secretaries.

36,558. But many of your discussions and negotiations are carried on with the Ministers of foreign countries here, and so far you act through the political

departments of the Foreign Office?—Precisely; and, of course, one or two of the political departments do have on occasions negotiations direct with the embassies here. For instance, at the present moment a member of the Eastern Department, Mr. Parker, is engaged in a very complicated and lengthy negotiation with a special delegate from the Turkish Government over here on questions of a large and wide kind.

36,559. Under your general control?—Of course, under general control.

36,560. The non-political department of the Foreign Office, into which we shall go in detail later on, either with you or with Sir Eyre Crowe, are ancillary, generally speaking, to the operations of the political departments?—Certainly.

36,561. I understand that you desire, on the whole, to confine your observations to the Diplomatic Service?—If the Commission would kindly let me I should prefer that, as I know it better than I do the Foreign Office.

36,562. Quite so. The other portions of our inquiry—that is the Foreign Office and the Consular Service—will be spoken to by some of your assistants?—Yes.

36,563. Will you tell us in your own way what you desire to say on the Diplomatic Service generally. Afterwards we shall put you some questions in respect of it?—I rather understand that the Commission is perhaps specially interested in the mode of entry into the Diplomatic Service.

36,564. That is one of the subjects of our reference?—On that I should like to say a few words. Of course, the net is thrown very wide for candidates who wish to come up for the Diplomatic Service. There is practically no restriction on people applying to be put on the list for nomination to coming up before the Selection Board. There is one restriction to which I will come later. Anybody who desires to come up for the Diplomatic Service has merely to apply. University

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B., and Mr. J. A. C. TILLEY were in attendance.)

candidates send in their applications through the Universities Appointments Committee, and they have to be recommended, of course, by some person on whose judgment the Secretary of State can rely. It is essential that any person recommending a candidate should himself be personally acquainted with him. If the candidate has been employed in any business firm or Government office, recommendations from such firm or office would also be taken. That throws the net exceedingly wide as to those who can present themselves as candidates for future examination or nomination. There is the Selection Board which sits twice a year, in May and November, and which interviews personally intending candidates for the Diplomatic Service. I preside over it, and for the Consular Service one of the assistant under-secretaries presides. We have each candidate up before us, and he is asked as to his education, his antecedents, what he has done, and we generally look over him and have a sort of oral examination of him. Then we have in our hands all the reports from his schools or universities or tutors, so that we have a pretty fair knowledge of his capabilities. I should almost feel inclined to call the Selection Board an Exclusion Board. As a rule we always accept the people who present themselves unless there is any serious reason which would lead us to think that the individual in question would not make a very suitable man for the Diplomatic Service.

36,565. What is the constitution of that Board?—I preside over it. Then, if we can, we always get a diplomatist of senior rank who happens to be at home; and we have the head of a department and the private secretary and the assistant private secretary, who acts as secretary to the Board, so it really consists of four or five members.

36,566. All connected with the Foreign Office?—Connected with the Foreign Office or the Diplomatic Service.

36,567. Did it ever occur to you to introduce on to that Board an outside element, such, for instance, as one of the Civil Service Commissioners?—I have heard it proposed but quite recently. It has never occurred to me personally, but I have heard the suggestion made. I myself should not see the smallest objection to it.

36,568. May I ask whether the question of the exclusion of candidates for particular personal reasons is considered by the Board?—Yes. After the candidate has left the room we discuss matters between us, and decide to recommend or not to the Secretary of State whether he should be put on the list of candidates. They come up to the Selection Board usually a year or even two, before they are of the age for examination. I think that is fair, because if a boy is rejected it gives him time to go in for something else. They usually come up when they are 19, or even younger.

36,569. You, in fact, consider on that Board all questions which it would fall to the Secretary of State to consider before giving an applicant a nomination?—Precisely. Then there is the question as to the income limit which, I believe, has raised a little misapprehension. We do ask that the candidates shall be able to guarantee that they have as a minimum 400*l.* a year. That is not done at all with the object of limiting it to a certain monied class, but simply with the object that we shall be sure that the young man has the wherewithal to live. For the first two years when he goes abroad he gets no salary at all, and even for his early years as third and second secretary, his salary is very modest; and, especially as an attaché, he has to go to some of the bigger capitals, and living there is very expensive, and if one were not sure that he had a certain minimum to live upon, we should have a series of bankrupts dotted over Europe.

36,570. (*Mr. Holt.*) It should be added to his salary, that is really what it comes to?—Of course if the State would be willing that instead of the man, or his father, putting his hand in his pocket the taxpayer should do so, I have no objection whatever. It would be a largish sum, because even a 400*l.* a year minimum—that means his private income, or what his father is able to afford him—is a very small income. In most of

the big capitals in Europe it would be out of the question for him to be able to live upon that.

36,571. (*Chairman.*) We might, perhaps, go a little further into that matter. I notice in the Memorandum you have been good enough to send to us that you discuss the effect of that limitation, or that requirement of an income of 400*l.* a year. It has been held, as you are aware, that the effect of it is to exclude from the Diplomatic Service men of the mental calibre whom you are able to command for your Foreign Office establishment.—Yes.

36,572. That effect was brought prominently to notice by the Ridley Commission?—Yes.

36,573. Question 27,962 put by the Chairman of that Commission to Mr. (now Lord) Bryce, runs thus: "Do you mean that the men who enter the Diplomatic Service are not so strong intellectually as those who enter the Foreign Office?" The reply was: "Speaking generally, I do not think they are. I do not think our Diplomatic Service, taking it all in all, is so strong either in the way of intellect or of general knowledge or accomplishments as it ought to be, or as a country like this requires." Later on, in question 28,022, the Chairman asked: "Have you formed any opinion as to what were the causes of the superiority of the Foreign Office men over the Diplomatic men which you observed," and the answer was: "The field of choice is larger because a candidate for the Diplomatic Service at present must prove that he has got independent means sufficient to support him for the first two years, if I remember rightly, and there is no similar requirement in the case of the Foreign Office. The position in the Foreign Office is, on the whole, rather more attractive. It does not involve absence from England, the prospects of promotion seem to be thought rather better, and therefore, a somewhat abler class of men go in for the Foreign Office posts." Do you, Sir Arthur, think there is anything in all that?—With all respect, I must say I differ from it, because at the present moment the examinations for the Diplomatic Service and the Foreign Office are exactly the same; and I should think, though it is rather a personal question, that the mental calibre and intelligence in the Diplomatic Service is certainly as high as that in the Foreign Office at the present moment.

36,574. I have before me the Civil Service Examiners' marks for the Foreign Office Clerks at the Examination of August, 1913, and the examination of the attachés at the same time, and I find that the successful candidates for the Foreign Office received marks varying from 2,411 to 2,132 out of a total of 4,000; while the attachés got marks varying from a maximum of 2,261 to 1,241?—That may be for that special examination, but I think I could find you other examinations where the reverse would be the case. I remember that examination. It was the one held last year.

36,575. It is a matter which requires further inquiry, and perhaps we had better get from the Civil Service Commissioners the marks for, say, the past ten years, before we form a judgment?—Yes, and so strike an average.

36,576. But the marks for that particular year—of course it may be quite an exceptional year—would seem to indicate that you cannot command the same educated class of man for the Diplomatic Department as you do for the Foreign Office clerkships?—It may arise from that special examination, but really, taking it as a whole I should put the Diplomatic Service, as far as intellect goes, quite on the same level as the Foreign Office.

36,577. Have you had within your experience many transfers from the Foreign Office to the Diplomatic Service?—A good many. I am one myself. In the Foreign Office at the present moment we have certainly three or four permanently in the office who were originally in the Diplomatic Service, and I think *vice versa*. I am all for encouraging that.

36,578. Without intending any personal application by my question, may I ask you, how do the transferees from the Foreign Office to the Diplomatic Service

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B., and Mr. J. A. O. TILLEY were in attendance.)

compare with their colleagues whom they find in the Diplomatic Service?—I think very favourably.

36,579. Am I to infer that they are better?—No, I should not say that. There may be individual instances, but on the whole I should put them very much on the same level. I think, really, some of the diplomatists we now have working permanently in the Foreign Office are some of our ablest men, and Sir Eyre Crowe will, I think, bear me out. (*Sir Eyre Crowe.*) Yes.

36,580. (*To Sir A. Nicolson.*) So that on the whole you are of the opinion—to be verified by subsequent examination of figures—that at the present time too much stress need not be laid upon the evidence of Lord Bryce, given 25 years ago?—I think so; and, of course, since he gave that evidence the examination has been changed. I think when he gave that evidence the examination for diplomacy was considerably easier than the Foreign Office examination.

36,581. It was not the same then?—Not in those days, I think.

36,582. Is there then, no difference, at the present time, between the examinations for the Home Civil Service, the Indian Civil Service, and the Diplomatic and the Foreign Office?—No, there is none, except with regard to languages. For the Diplomatic Service we do require a high qualification in French and German.

36,583. You insist upon a fuller and better knowledge of languages?—Of those two languages, French and German.

36,584. You were dealing with the question of the interchange between the Foreign Office and the Diplomatic Service?—Personally, I am all in favour of extending the system of interchange as much as possible. I do not think you could go so far as absolute amalgamation, because I think in the Foreign Office you want men who have been for a long time there, and who have knowledge of the details of the working.

36,585. It has, I think, been already stated that there is greater necessity for a limitation in the matter of recruitment for the Diplomatic Service than for the Foreign Office, so that if you were to dispense with the limitation in the case of recruitment for the Foreign Office and to introduce complete open competition in respect of it, it would not follow that open competition would also be suitable for the Diplomatic Service?—No, and if you extend, as I hope you will, or at any rate maintain, at the present rate the exchanges, the reasons which to my mind are very strong for having a certain option of selection for the Diplomatic Service would also apply to the Foreign Office.

36,586. You mention in this Memorandum we have before us, certain reasons for being particularly careful in the choice of clerks for the Diplomatic Service which it would seem do not apply with the same force to the Foreign Office?—I think they do. I am strongly of opinion that the same system, if you like to call it so, of selection, or, at any rate, giving the Secretary of State the faculty of not accepting certain candidates, is equally necessary for the Foreign Office as for the Diplomatic Service. I have a very strong opinion on that subject.

36,587. (*Sir Kenneth Muir-Mackenzie.*) You say you do not draw any distinction, practically?—No distinction.

36,588. (*Chairman.*) You do not draw any practical distinction, but the question I am desirous of having answered is whether you think the necessity for selection is stronger in the case of the Diplomatic Service than in the case of the Foreign Office?—Yes, perhaps it would be stronger, but then if you have the exchanges I should think it would be equally strong for the Foreign Office.

36,589. The exchanges are altogether in your own hands, are they not?—Yes, that is quite true, but we encourage them as much as possible.

36,590. You make reference to the necessity of a diplomatic officer being a *persona grata* to the Foreign Court—a reason which would not exist in the case of the Foreign Office?—That is quite true, but then if you transfer them from the Foreign Office to diplomacy you would require the same conditions and qualifications.

36,591. But that transfer would be entirely in your own hands?—You mean, if we had not a very suitable man to transfer, we should not transfer him? No, that is true. But then it would restrict the transfers very much. I wish to extend the system of transfer as much as possible.

36,592. I infer from your memorandum that the limitation in the case of the Foreign Office appeals more to the idea of the trustworthiness of the individual, while the limitation in the case of the Diplomatic Service appeals, not only to that consideration, but also to considerations of acceptability to the Foreign Court to which the officer may be sent?—That is perfectly true. There I quite agree, but I should like the Foreign Office clerk who is to be transferred to carry with him the same qualifications which apply to and are considered essential in a diplomatist.

36,593. Still it rests with yourselves. If you found a Foreign Office clerk who possessed the necessary qualities, you might transfer him; the transfer would be a matter lying within your discretion and would not be within the option of the clerk?—No, but, as a rule, it is not a compulsory transfer; it is usually a voluntary one. I think I have explained that I am very anxious to see the Selection Board maintained. As regards the income limit, if the Commission thought fit to recommend that, instead of it being demanded that the individual himself should be able to give reasonable guarantees that he had a minimum income of 400*l.* a year, the State should be willing to make it up: first the State must remember that the 400*l.* a year derived from private sources represents a certain amount of capital either in the hands of his father or owned by himself. So that it would not be 400*l.* a year, but, I think, you would have to take at least a minimum of 500*l.* a year which the State would have to give to a boy on entering the Diplomatic Service; and that would not be restricted to the time when he was an unpaid attaché, but would have to go on as he went up, and it would be practically increasing everybody's salary by 500*l.* a year, which would be a pretty heavy charge on the Vote. Personally, I should be delighted to see it. I do not mind whether the State gives it, the father gives it, or the boy has it; but unless you increase very largely the salaries of the junior ranks of the Diplomatic Service, it would render it impossible for them to live in European posts on their salary at present. A third secretary only gets 150*l.* a year after he has been two years in the Service, and that is a very small sum.

36,594. Obviously that is not a living wage at all?—It is not, as I know, in the large capitals. In St. Petersburg, for instance, my last post, I was frequently asked by parents what was the minimum on which an attaché could live. I could lodge one or two at the Embassy, but if not lodged there I always told them that 700*l.* a year was the minimum to live on in St. Petersburg.

36,595. If the State were to take the payment of the 400*l.* a year on itself, would not that seriously interfere with transfers between the Foreign Office clerks and the diplomatic officers?—No, if you increase salaries it would facilitate the transfers.

36,596. Would you not have to increase the salaries of both classes of officers?—We would not have to take into consideration, so much as we have to do very often now, the case of a young married clerk established in London. It renders it almost impossible, from a financial point of view, for him to exchange if he wishes to go abroad. If he went abroad as second secretary and instead of getting 300*l.* a year he was paid 800*l.* he might find it feasible. It would no doubt facilitate transfers. It is a difficulty now, very often, for a Foreign Office clerk to go abroad.

36,597. In such cases, in order to make the transfer practicable should not the higher salaries be made to attach to the office and not to the officer? If a man in the Diplomatic Service having, say, 550*l.* a year, pay and private income, exchanges with a clerk in the Foreign office whose corresponding pay is 250*l.* a year, one of two things must happen: either the diplomat transferred to the Foreign Office would carry his 550*l.* a year with him or must leave part of it for the Foreign Office

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B., and Mr. J. A. C. TILLEY were in attendance.)

clerk who exchanges for his diplomatic post?—When he comes home as a temporary transfer, as a rule he takes his diplomatic salary with him to the Foreign Office and the Foreign Office clerk takes with him his Foreign Office salary, which as a rule is higher.

36,598. Then the Foreign Office man's salary being *ex hypothesi* 250*l.* a year, he must have private means to enable him to exchange and live?—If he exchanges now, no doubt.

36,599. Then the exchange after all would not be on the basis of the Government salaries?—No, but if the State instead of the private individual is going to supply the minimum, which I consider should be 500*l.* a year, then the Foreign Office clerk would get that when he went abroad. If he went abroad as a second secretary he would get 800*l.* a year, or if he carried his Foreign Office salary with him he would get the 500*l.* too. I see you mean that the diplomatist coming home would drop the 500*l.*

36,600. May I repeat my question. You have a Foreign Office clerk, say of two years' service, drawing 250*l.* a year, and a third assistant in the Diplomatic Service having private means and official pay combined amounting to 550*l.* a year: these two would be on the same level?—Yes, as far as grade goes.

36,601. Very well. Say you want to transfer the third assistant to the place of the Foreign Office clerk and the Foreign Office clerk to the place of the third assistant. If the pay is personal the diplomat would carry it with him to the Foreign Office and excluding the idea of promotion would have 550*l.* a year, while in the Foreign Office. On the other hand the Foreign Office clerk would carry his 250*l.* pay to the diplomatic post. You cannot, in that case, effect an exchange unless the Foreign Office clerk happens to have private means?—That is so.

36,602. And if he has private means it is no longer a transfer on the basis of Government salary?—Quite so. It is not, because as exchanges are effected at present he takes the Foreign Office salary with him abroad, whatever it may be.

36,603. Therefore, you cannot effect these desirable transfers without increasing the salaries of the men you transfer from the Foreign Office, unless they are men of means?—Precisely; I see your point.

36,604. If private income is not to be taken into account, there must be a minimum increase of salary of 400*l.* a year, in addition to the salary of the clerk who is to be transferred to the diplomatic post. Is not that so?—Yes, that would be so, certainly.

36,605. (To Sir Eyre Crowe.) Do you see any defect in that reasoning?—I think that is logical. (Sir A. Nicolson.) Certainly it is.

36,606. (Mr. Holt.) Surely you could get over that difficulty by having a special allowance attached to the different posts which would be given up when the officers vacated the posts. You have a uniform scale of salary; you might say: "At St. Petersburg, you get an allowance of 500*l.* a year, or whatever the appropriate sum is, while at St. Petersburg; but if you go to a cheap place, for instance Norway, you get 300*l.* a year or 250*l.* while there; but if you come home all those allowances drop"—I see what you mean.

36,607. (Chairman.) Have you a system of special allowances owing to the dearness of living in different places?—In the Consular Service, yes. In the Diplomatic Service we have not, but I think the salaries are rather calculated on the expense of living. I am talking of the seniors, not the juniors. The juniors are always on the same scale, whether in an expensive place or in a cheap post. In the case of Ministers there is a large variety in the scales of salary according to the expense or otherwise of the post. But all the juniors are always on the same scale whether they are at an expensive post or one which may be cheaper.

36,608. But the salary is personal?—Yes, personal to the grade in which they happen to be.

36,609. 200*l.* to 500*l.* is the scale of a junior clerk in the Foreign Office?—Yes.

36,610. Then take the corresponding case of an attaché; when appointed he gets 100*l.* or 150*l.* a year?

—An attaché gets nothing at all for the first two years.

36,611. He gets nothing at all, but he has 400*l.* a year private means upon which he is supposed to live. If in the second year in the Foreign Office clerk's service, when he is drawing 220*l.* a year, it is decided to transfer him into the place of an attaché, he goes to it and the attaché goes to his place. When the attaché comes to the clerk's place he draws 220*l.* a year; when the Foreign Office clerk goes to the attaché's place he gets nothing at all; therefore in such a case as that there can be no transfer on the basis of official pay. It will be the same even if we take the case of the same men later on in this service. A diplomatic officer of, say, seven years' service is drawing, as a third secretary, 150*l.* a year?—If he were a third secretary he would get 150*l.* a year; if a second secretary 300*l.* a year.

36,612. And a Foreign Office clerk of seven years' service would be drawing probably 500*l.* a year?—(Sir Eyre Crowe.) No, it would be 340*l.* after seven years' service.

36,613. Take the two cases—a Foreign Office clerk drawing 340*l.* a year and a diplomatic officer drawing even 300*l.* a year; in such a case as that, if there be a transfer somebody must lose in respect of official salary?—(Sir A. Nicolson.) If he goes to St. Petersburg he takes with him the Foreign Office salary which he is enjoying at home.

36,614. (Mr. Philip Snowden.) But you have the guarantee of the private income also?—No, because he would not go if he could not afford it. At present the great check to the frequency of transfer which I should like to see carried out is the fact that a man cannot afford to go abroad.

36,615. (Chairman.) He must under present conditions have a private income to enable him to go?—Clearly.

36,616. Whether it is guaranteed, as in the case of the 400*l.* a year, or not, the private income must be there in order to render transfer at all practicable?—Precisely.

36,617. Therefore, I think I was correct in stating that if you want to abolish the necessity of a private income by paying the amount from State funds, you will have to guarantee to the man transferred from London the amount necessary to bring up his salary to the sum needed for living as a diplomatic officer of his grade should live abroad?—(Mr. Philip Snowden.) I do not at all see why it should not be paid to him as salary and why the sum paid to him should not be divided into salary and subsistence allowance. It is a very common practice in the public service to have a subsistence allowance varying according to the expense of the post?—We do it in the Consular Service, and, of course, in the case of the higher post of Minister, we calculate his salary having regard to the expense of the post, and also whether or not he has a house provided for him, or for other reasons. In the Argentine Republic the Minister gets pretty heavy pay, but it is an enormously expensive place to live in—one of the most expensive I think.

36,618. (Chairman.) If you were to pay a salary plus the extra cost of living in a particular place, the whole system of salaries for the Diplomatic Service would have to be changed?—Certainly, re-modelled. We should have to go into a very careful inquiry as to the amount of subsistence allowance to be given in various posts.

36,619. That would not be fixed for ever, but would have to vary?—As the cost of living increased in various posts; it rarely decreases, and it is a truism to say that the tendency is for it to increase everywhere.

36,620. And in such a case as that the extra cost of living would be a very difficult thing to define?—Very.

36,621. It would not depend merely on the butcher's or baker's bill?—No. Rent is one large item. I found really in my experience, talking of European posts, that practically the cost of living is about the same in each. Some articles may be cheaper, rent may be cheaper, but other articles dearer. Striking an average

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYBE CROWE, K.C.M.G., C.B., and Mr. J. A. C. TILLEY were in attendance.)

I found the cost of living very much the same everywhere.

36,622. (*Mr. Philip Snowden.*) You would not have any difficulty in estimating it?—You would not have much difficulty about the subsistence allowance.

36,623. (*Chairman.*) Would not a diplomatic officer's cost of living be influenced by the style and status of the people with whom he consorts?—Of course it would be.

36,624. Would not it affect the efficiency of your officer if he was not able to live in the same style as the others of his class?—Very greatly; there is no doubt about that.

36,625. And to the mere butcher's and baker's bills you would have to add on something to provide for the style of living?—Yes, and the social cost, of course.

36,626. In what stage in the upward career of a diplomatist would that arrangement have to be introduced? When should the pay be fixed with the object of covering such expenses? Would it be when he reached the position of counsellor?—Yes; not earlier. Of course, if he is married even a counsellor's pay would not cover his cost of living very easily. It would in a post like Persia or Peking. I could live on my counsellor pay very fairly when I was in charge the whole time in Persia, but the conditions are quite different now, and even there I hear that the cost of living since my day has gone up enormously.

36,627. Is there any other matter you would like to mention in this connection?—No, I have nothing further to say on the subject.

36,628. Then briefly resuming what you have said, I take it to be this, that at the present time there is no difference between the examination admitting to the Foreign Office clerkships and the Diplomatic Service, and the examination admitting to the highest grade of the public service generally, save that a lower maximum of marks is provided in the former examination?—No, none whatever, I think, except, as I always say, the addition for diplomacy of a high qualification in French and German, which may bowl a man out if he does not reach that qualifying standard, however well he may have done in other subjects.

36,629. The examination is limited in this sense, that it is not an open competition, and before competing each applicant for employment in the Foreign Department has to pass the ordeal of a committee?—Yes, the Selection Board.

36,630. A committee which is at present composed of the officials of the Foreign Office?—Yes, with a diplomatist.

36,631. (*Duke of Devonshire.*) Does the selection committee meet twice a year?—Yes, in May and November.

36,632. It is a sort of standing committee?—What we call a Selection Board. An intending candidate for examination for the Diplomatic Service or the Foreign Office comes before that committee.

36,633. Is not that rather the same as the Admiralty Board?—Yes, more or less.

36,634. It is analogous to that?—Yes, that is the idea. There is also one for the Consular Service—a separate committee.

36,635. (*Chairman.*) In consequence of the existence of that committee, you require from the men whom you employ as clerks in the Foreign Office and in the Diplomatic Service something more than mere high educational acquirements?—Yes.

36,636. They must have some personal qualities which are not to be tested by an examination paper?—Yes.

36,637. These qualities being absolutely essential in the work they have to do?—Certainly.

36,638. And also having regard to the fact that these men are brought into contact with people in foreign States whose likes and dislikes you have to more or less respect?—Precisely.

36,639. At the present time, although you favour transfers between the Foreign Office and the Diplomatic Service, the practicability of transfers depends first on the likings of both persons, and secondly on

the possession by the Foreign Office clerk of sufficient means to go abroad?—Certainly.

36,640. (*Mr. Matheson.*) There is a difference in your case and that of the Admiralty. The Board of Admiralty is really a selecting Board and selects candidates for the Navy, and then they only have a qualifying examination. This Board you are speaking of is really a Board which excludes a certain number of candidates who are not considered fit, and those who remain are then examined competitively?—That is it.

36,641. (*Chairman.*) In regard to the constitution of the Board, I understood you to say that, while it is at present entirely a departmental Board, you would have no objection if an outside element of an altogether suitable character were introduced into it?—I should have no objection personally.

36,642. Would you have any objection to one of the Civil Service Commissioners being a member of the Board? It must be borne in mind that they have afterwards to examine the candidates?—I should not mind as long as he was more or less cognisant of the kind of qualifications we desire for our people going abroad.

36,643. (*Mr. Holt.*) Could you tell us what are the sort of reasons which would influence you in excluding a person? For instance, if you look at page 8 of the Memorandum No. 4, you will see: "The peculiar conditions in which diplomacy has to work make it particularly important to retain some safeguard against the admission of men who, however well equipped mentally, would for other reasons be unsuitable for the position of confidential agent of the Government in its direct relations with Foreign States." Apart from the questions you deal with later on, what are the sort of reasons, which in a young man of 22 or 23 would induce exclusion?—I think it depends a good deal on his personal suitability for the place—his social qualities. We cannot tell whether he is tactful or not by an oral examination, but I think one can generally, by conversation with a young man for a few minutes and seeing what he is like, and also having in one's hand the confidential reports from his tutors, schoolmasters, and the authorities of the university (if he has been there), form a pretty good idea as to whether he possesses those qualifications which I consider very essential.

36,644. Is it really purely a personal question?—Yes, it would be personal.

36,645. It would not have anything to do with the status or position of his parents?—Oh no, not a bit. It is purely the individual. That is a point I should like to bring out, that we never inquire, at least I myself do not, as to the status of the parents. I look at the individual and judge of him alone.

36,646. Supposing the boy's father had been mixed up in a very scandalous proceeding of any sort, would that influence you?—No, I do not think it would, unless it was of such notoriety that it might attach, however unjustly, a stigma to him.

36,647. A notorious scandal?—I should be very loath to exclude a man because his father may not have been all that was desired. In fact, I should not dream of allowing that to enter into one's judgment on the question a bit.

36,648. That would not affect your judgment?—No, not a bit.

36,649. (*Chairman.*) Might not that be unfair to the boy when he came to mix with men of other nations, and they came to know of this circumstance?—I said unless it was very striking or notorious—if his father had committed some offence of a serious character.

36,650. (*Mr. Holt.*) Take a man like Jabez Spencer Balfour: would circumstances such as those induce you to reject an applicant?—I should prefer not, but as Lord MacDonnell said, it might affect the boy hereafter abroad.

36,651. (*Chairman.*) It might affect his efficiency as a Government official?—It might.

36,652. (*Mr. Holt.*) I quite appreciate that?—But I was thinking you were asking me as to whether the

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., G.B., and Mr. J. A. C. TILLEY were in attendance.)

social or other status of the parents at all influences our judgment in excluding the boy or not. It does not in the slightest, but if his father had been a notorious evil-doer, one would prefer that he should not go to represent England abroad.

36,653. Does the Secretary of State in this exclusion take anything but a formal part?—The decisions of the Selection Board are submitted to him by his private secretary with no reasons, and I imagine that he usually agrees with them; and, of course, the thing is final.

36,654. If the Secretary of State takes nothing but a formal part in the proceedings, there can be no suspicion of political pressure or influence?—There is no such question as that; it is merely formal. He goes merely by the decision of the Board unless he sees any strong reason for not doing so. He is at perfect liberty to ask for the reasons why the Board has come to such and such a decision, which would naturally be given to him. His private secretary submits them to him, and I think as a rule he is satisfied that the Selection Board has to the best of their judgment come to such a decision and he is willing to confirm it.

36,655. May we take it that it is impossible for a person, whom the Board thought unsuitable, by reason of political pressure, to get permission to compete?—Quite.

36,656. That is impossible?—I think so.

36,657. With regard to the question of the 400*l.* allowance, do we clearly understand that in your opinion it is purely a question of public economy?—Precisely.

36,658. That is to say, if the public would provide the money there is no reason whatever for maintaining the condition?—It is that. It is to see that the boy who goes abroad has the wherewithal to live decently owing to the very small salary the State gives him in the early part of his career. Although he ought to have 400*l.* a year privately, you ought to make it 500*l.* a year if the State makes the contribution.

36,659. But it is purely a question of economy?—Quite so.

36,660. When you ask for the 400*l.* a year do you ask for any condition that it shall go on for an indefinite period of time?—Yes, it is understood that it should go on. We always put the question to him: "You understand that you are to have from your father, or possess yourself, a minimum income of 400*l.* a year," and that is understood to go on. It is not to be withdrawn when he goes on higher, and we do not imagine that it would be.

36,661. It is 400*l.* a year for the whole of his natural life?—Yes.

36,662. It is not 400*l.* a year for him to tide over the initial five or six years?—No, it is not that. I have understood it as meaning 400*l.* a year on which he can count for the rest of his natural life.

36,663. What steps do you take to see that he has got it?—We have to take his word.

36,664. It is confined to that?—We do not inquire further than that. I do not think we have ever been deceived in that respect.

36,665. You say further in your memorandum: "It is of the essence of a suitable appointment that all causes for such prejudice, if of a nature that is known and can be predicted, are avoided." Is the question of the religion of the diplomatic representative a matter that has to be taken into consideration?—For certain posts it might have to be.

36,666. In choosing the entrants to the Diplomatic Service, does it become necessary to see that you get a fair selection from certain religions?—We have to take that, I perfectly own, into consideration to a certain extent, because it would be very awkward if you were not able to send your diplomatist to any post that you wished, or that you thought it was desirable he should go to.

36,667. Are there posts in general practice to which it is essential to send a diplomatist of a particular religion?—I should not say of a particular religion,

but I think there are certain posts where particular religions might be a bar and a hindrance to his efficiency.

36,668. An official of a particular religion would get on better; an official who professed the popular religion would probably be more efficient?—Yes, there are certain posts where I think a man belonging to a certain religion might find it inconvenient, and it would be a hindrance really to his efficiency and suitability.

36,669. (Chairman.) Does that at all influence the Board?—No, I should not say that.

36,670. But does that influence the competition?—I do not think so. I have not noticed that.

36,671. (Mr. Holt.) It would not occur to you to say, so to speak: "We are getting short of persons of the religion we require; we must get some more in"?—No, I have not found that difficulty.

36,672. Do I really understand that in your opinion it is in itself a good thing that an officer should have been both in the Diplomatic Service and in the Foreign Office?—Yes. I am very strongly of that opinion.

36,673. That in itself is a good thing?—Certainly.

36,674. Therefore, the interchangeability of the two Services would in itself be a good thing?—Yes.

36,675. (Sir Henry Primrose.) With reference to the question of the 400*l.* a year allowance, may not one say that the Diplomatic Service really differs from almost every other branch of the public service in this, that the social side and the official side are so closely combined that you cannot separate the one from the other?—I quite agree. It is very difficult.

36,676. Take almost any other branch of the public service; you pay a man for his official side only and you do not really care what happens on his social side?—No, once he has left his office, he is free to live as he likes, which is not the case in the other Service.

36,677. That being so, you have in the Diplomatic Service to find men who can adequately represent the official side and the social side of the life?—Yes.

36,678. Is not there something to be said for making him pay out of his private purse for the social part of it, while the public pay for the official part?—Yes, I think there is.

36,679. It avoids getting into very great difficulties as to how much a man ought to do on the social side, and so on?—Yes.

36,680. I rather calculate that supposing the 400*l.* a year which you require from private sources was to be replaced by an addition to the salary of 500*l.* a year, it would cost on the present establishment something like 50,000*l.* a year?—Yes, I have been told it would be between 50,000*l.* and 60,000*l.* a year on the Budget.

36,681. It looks like it. That would almost inevitably lead to this: that we should have to consider rather carefully whether certain legations and Ministers could not be dispensed with?—I do not know that there are any legations and embassies you could easily dispense with, really, in any way to cover up that 60,000*l.* a year which, I am told, would be the cost.

36,682. Supposing the question did arise, it would be a very difficult one in this way, that we cannot settle those things entirely according to our own minds?—No.

36,683. You have to consider what happens at the other end, as it were?—Very much so.

36,684. We might say that we could very well dispense with a Minister here or a Minister there, but unless that was acquiesced in more or less readily by the Power concerned, it would lead, or might lead, to very great embarrassment?—Very much so. It would almost be practically breaking off relations with that Power.

36,685. (Mr. Shipley.) I came here rather late, and did not hear all you said at first, but I gather that you do think the present system of preliminary nomination for the examination is working well?—Yes, very well indeed.

36,686. Giving you really a good class of candidate?—A very good class.

36,687. Do you think at all that the knowledge that this nomination is required keeps some able men out?—I do not think so, so far as I know.

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B., and Mr. J. A. C. TILLEY were in attendance.)

36,688. There is no difficulty in getting the nomination?—None whatever.

36,689. You have not known of any case of hardship?—I have not heard of any.

36,690. Do you feel the same about the Eastern cadetships—Chinese, and so on—that nomination is advisable there?—I believe it was recommended. You mean for student interpreters for the Far East?

36,691. Yes?—I think it was recommended by the Walrond Committee in 1903.

36,692. We had a case at Cambridge two years ago of a boy who was declined a nomination, and we rather thought it was on racial grounds. Are nominations often declined in that way?—No, but, of course, we should not care to have as a diplomatist a man who was not a thorough Englishman.

36,693. But I recollect another case 16 years ago, where we had a man of the same race, who has done extremely well in the Far East?—I do not know the case you mention at all.

36,694. (Chairman.) What do you say the Walrond Committee recommended?—They said that admission into that service should be by limited competition.

36,695. Do you refer to paragraph 6, clause 3?—On page 13, memorandum No. 4.

36,696. That was not in regard to the Far East?—No, I see it was for the General Consular Service they recommended that.

36,697. (Mr. Shipley.) Perhaps I am in error in asking you about that Service?—You will have before you later, Mr. Law and others, whose knowledge is closer than mine. I do not, myself, as to the Far East, see any objection to open competition. When we established the student interpreters in Constantinople they were put under my charge there, and that was by open competition, I think.

36,698. (Chairman.) I think the competition for student interpreters in the Far East, and China and Japan, used to be open, if it is not now?—Yes, I think so. I, myself, do not see any objection to open competition.

36,699. (Mr. Shipley.) It is by nomination now?—Yes.

36,700. (Mr. Philip Snowden.) Your Board of Selection is going to meet on Tuesday?—Yes, on the 5th May.

36,701. Could you say how many applications for nominations you have already on your list?—I could not answer you off hand. I shall be very happy to send you the list. I must ask the private secretaries for it; they keep it. They let me know the day before how many are coming up. We are not quite sure that they all will come. Very often a great many do not appear before the Board of Selection. I shall be happy to tell you how many they expect.

36,702. Could you say how many prospective vacancies there are?—At present one in the Foreign Office and two in the Diplomatic Service.

36,703. And you will send on those selected, to the examination in August?—Yes, they go up in August.

36,704. As a general rule how many candidates do you have before you at this meeting?—It varies a great deal. Last time for the Foreign Office and Diplomatic Service about 30 appeared. If they come up before the Selection Board, say, on Tuesday next, it does not at all imply that they are even of the age to go up for examination in August. They often come up when they are 19 or 18 years of age, when the minimum age for examination is 22. I think it is a very good thing that they do, for the reasons that I gave, because they have an opportunity of going in for something else if by any chance they are excluded, as we let them know at once.

36,705. On an average, out of the 30 candidates that appear before the Selection Board, how many would be excluded?—One or two on the average.

36,706. Would all the others go forward to the examination then?—They would be able to go up for examination if they wished.

36,707. As a general rule how many candidates are there in the competitive examination for each post?—I should say the average would be about six or seven. If we have three vacancies I should think about 18

would go up for the examination, which is heavy competition.

36,708. And the papers they take are the same papers as taken by the candidates for Class I. examination?—Precisely.

36,709. But not so many subjects are taken?—No. 4,000 is the maximum number of marks I know. Then we have this qualification in French and German always, which may bowl a man out even if he has done very well in the other papers, if he did not reach that standard.

36,710. Is it your opinion that the candidates who sit for the Foreign Office and Diplomatic Service are educationally equal to the candidates for the Class I. examination?—Yes, I should think so; in fact, with all due deference, I should say better, because as a rule they have gone abroad to learn their languages, and I must say I think they have a wider outlook than I imagine those who go up for the ordinary Home Civil Service have.

36,711. After two years the attaché is put on a salary of 150*l.* a year?—Yes.

36,712. Can you explain why the salary is so small as that?—I think the Treasury will be able to give you better reasons for that. I do not know. I think it is far too small.

36,713. I find the person who is appointed to the Consular Service has an initial salary of 300*l.* rising to 500*l.* a year?—Yes.

36,714. You stated in reply to Mr. Holt that you could suggest no reason, except that of public economy, for keeping the young diplomat two years without salary and then giving him such a small initial salary as 150*l.* a year. Why could not the same reason operate in the Consular Service if that be the reason?—I presume that is because we have a personal income requirement for the Diplomatic Service. In the Consular Service no personal income is desired.

36,715. I am afraid that does not touch the point. Personal income is made a reason for the non-payment of a salary?—Yes.

36,716. You said the only reason that you could suggest why that plan was adopted was to save the public purse at the expense of the private purse?—Yes.

36,717. If it was found to work in the Diplomatic Service why should it not be applied to the Consular Service?—I do not think you would get sufficient candidates if you applied it to the Consular Service.

36,718. Could not there be some other reason for it?—Not that I know of.

36,719. Has it never occurred to you that possibly when the system was adopted it was in order to restrict the appointments to a very small class of people?—I do not think so. This 400*l.* a year minimum was adopted fairly recently. I have always understood it in the light that owing to these extremely meagre or modest salaries which he received as a young diplomatist, it was absolutely necessary to ensure that he had private means of his own; otherwise you certainly would have people in very great financial difficulties all over Europe and the world.

36,720. Do you know of any other post in the public service where a similar system is adopted—where no salary is paid, and where a man has to pay out of private means?—No, I do not.

36,721. (Chairman.) Do you not find an explanation in the character of the work and of the society they are brought into?—I think that has a great deal to do with it. I think the Diplomatic Service is quite different from any other service owing to the conditions under which it works and owing to having to live abroad. I think you will find that in the Foreign Diplomatic Services most of them have a financial limit.

36,722. (Mr. Philip Snowden.) Whether that were the intention or not, would you say that it has the effect of keeping these posts as a sort of preserve for a very small number of families?—No, I should not say so, really.

36,723. You said in reply to Mr. Holt that you expect this allowance of 400*l.* a year is going to be paid during the lifetime of the candidate?—Yes, that is understood.

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B., and Mr. J. A. C. TILLEY were in attendance.)

36,724. That means that the parent must be fairly well off?—Yes, no doubt he must.

36,725. Supposing he has a family of five or six children and he wants to make a similar provision for each of them, that means that he must have an income of 2,000*l.* or 3,000*l.* a year at the least—probably more?—Precisely.

36,726. Are you aware that according to the super-tax returns there are only about 11,000 people—apparently that is not families, and there must be a similar number of families—who have an income of 5,000*l.* a year?—Yes. It is useless to close one's eyes to the fact that it does limit it to a certain class, but it is not done with the object of so limiting it. It is because your diplomatic salaries are so low and the cost of living in the Service is so heavy, that unless the State steps in and increases those salaries very largely, of necessity you do limit the entrance to it to a certain class. I do not wish to limit it to a certain class, as I say, but by the force of circumstances it is limited. If, of course, the State is willing to come forward and say: "Very well, we are ready to increase the cost of the diplomatic body by 60,000*l.* or 70,000*l.* a year, or whatever it may be, to be able to extend the field from which to select candidates," I, personally, should be delighted to see it done.

36,727. You do not think that by extending the area of selection you would lessen the quality of the candidates who attend?—Until it has been tried I should not like to express an opinion upon it.

36,728. I find that the examination for the Consular Service is a very simple one. I only want to draw a comparison between it and the Diplomatic Service, and yet the salary begins at 300*l.* and rises to 500*l.*—Yes.

36,729. Do you think that that salary has been fixed so high because of the expense of maintaining the position in some foreign countries?—Yes, I should think it has.

36,730. Then do you see any reason why the same plan should not be adopted in regard to the Diplomatic Service?—No, and I have raised no objection to the raising of the salaries in the Diplomatic Service—none whatever.

36,731. Sir Henry Primrose put to you what he described as the two sides—the social side and the official side—of diplomatic work?—Yes.

36,732. As a matter of fact is not the social side almost as important a part, and as necessary a part, of a diplomatist's work as what might be more strictly called the official side of his work?—Certainly.

36,733. Then why should not he be paid for that if it be necessary, just as he is paid for doing his strictly official work?—I am not objecting to it. I do not see any objection to it at all.

36,734. We had a return furnished by the Civil Service Commissioners of the antecedents and the social position of the clerks who were appointed to the second division of the Home Civil Service. Would there be any objection to your furnishing a similar return in regard to the persons appointed to the Foreign Office and the Diplomatic Service?—None whatever.

(*Mr. Clynes.*) I have no question to ask.

36,735. (*Mr. Boutwood.*) Does the Board of Selection which you speak of apply to both the Foreign Office and the Diplomatic Service?—We hold the meetings on the same day; in fact they are taken together.

36,736. Is there any way of getting into the Diplomatic Service otherwise than by that competitive examination?—As you know, we have had instances of transfers. For instance, consuls have become diplomatists. Our present Minister at Pekin was formerly in the Consular Service.

36,737. I was not thinking of that?—You mean entering as a junior. They must go through that gate.

36,738. Every one must go through that competitive gate now?—Yes, must go through it.

36,739. I do not know what paper it was in, but somewhere I saw a reference to honorary attachés. What are they?—They are young gentlemen who probably have not much to do at home, and whose parents

wish them to go and spend two or three years abroad, and we attach them to a legation or embassy, as the case may be. They receive no pay, and they are carefully told before they go that they are not to take it as entitling them to subsequent entry into the Diplomatic Service. It is a very good thing for a young fellow not having much to do at home, that he should go and live abroad. It costs the country nothing. He goes out on the understanding that it gives him no claim to entering the Diplomatic Service later. If he did enter he would have to go through the same procedure as everybody else; he cannot slip in.

36,740. It is not like the unestablished service we have heard so much of in some of the home establishments where you get on in that temporary way and then drift on to the establishment?—No.

36,741. Did I understand you to say that there is a lower maximum of marks for the Foreign Office and Diplomatic Service than for the Home Civil Service?—Yes, there is a qualifying standard.

36,742. Why is the maximum lower?—They are only allowed to take subjects up to 4,000 marks.

(*Mr. Tilley.*) It is partly to give greater advantage to French and German. You must make a certain proportion of marks for French and German. (*Sir A. Nicolson.*) He cannot take the total subjects on which the maximum is more than 4,000.

36,743. But that is lower than for the Home Civil Service?—I do not know the object of that. (*Mr. Tilley.*) It is in order to give more weight to French and German.

36,744. (*Mr. Boutwood.*) What are "chancellors"? One paper that we have before us makes rather frequent use of the term?—It is really a translation, though a bad one, of the word *chancelier*. He is a clerk.

36,745. What does he do?—He keeps the registers and the papers, and I suppose probably does some of the very routine work.

36,746. He is not a member of the diplomatic staff?—He is a member of the embassy, but is not what foreigners would call a member of the diplomatic staff.

36,747. He does not come in through the scheme we have been talking of?—No, he has a qualifying examination; but he is always an Englishman, probably a local man, and there he begins and ends.

36,748. One paper that has been submitted to us is virtually a long argument for the amalgamation of the Foreign Office Staff with the Diplomatic Service, and this passage occurs in it: "But the frequent interchange between the two Services necessary to effect complete amalgamation is dependent on several other necessary changes." Four are mentioned, and two of them are these: "A reduction of numbers in the Diplomatic Service, and a systematic employment of chancellors in foreign missions." That conveys nothing to my mind. Can you explain that?—I have not seen this paper.

36,749. It is in Mr. Ponsonby's memorandum on page 5?—I do not agree with him at all there.

36,750. What does he mean?—I imagine he means this: Supposing you have a staff of an embassy, say, of three secretaries with a chancellor, I imagine he means if you appoint two chancellors you can reduce your number of secretaries.

36,751. What bearing has that on the amalgamation of the two services?—I do not see any bearing whatever.

36,752. It puzzled me what bearing that had on the argument?—I had not seen this paper.

36,753. I understood from what you said just now that there are occasional transfers from the Consular to the Diplomatic Service?—I mean that we have appointed fairly often to diplomatic posts men who have served their time in the Consular Service. For instance, our present Minister at Pekin was in the Consular Service. Our Minister at Panama was in the Consular Service, and our representatives in Abyssinia, Bolivia, and Mexico.

36,754. Is it exceptional, or does it take place frequently?—It is fairly exceptional. One of our most

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
 G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B. and Mr. J. A. C. TILLEY were in attendance.)

distinguished Ambassadors I know served all his time in the Consular Service.

36,755. Does it take place often?—No, they are exceptions, certainly.

36,756. There is a passage I noted in the Memoirs of Sir Robert Morier. He was in the Diplomatic Service, I believe?—Yes.

36,757. I will read it and ask your opinion about it. It is in a letter he wrote in 1870 to Mr. Arthur Russell, then M.P. for Tavistock. I think he had a grievance about his own position in the Service, and was grumbling, and he said: "The following may be considered a fair average picture. In the first ten years of his professional life a diplomatist costs his father from 300*l.* to 400*l.* a year. Probably at from thirty-five to forty he will come into possession of his fortune, whatever that may be, probably for a man who remains in the career from 800*l.* to 1,000*l.* a year. With this, and a first secretaryship of legation, he will (having the certainty within a certain number of years of deriving much more from his profession) marry, i.e., he would marry on from 1,200*l.* to 1,500*l.* a year; and with a prospective margin before him, he would be justified in doing so. What I mean is this, he would, except at St. Petersburg, perhaps, be able to live on 1,500*l.* a year as long as he had no children, or only very little ones, but he could not provide for extraordinary expenses, such as the break-up of his establishment on change of post, etc., except by borrowing. He looks forward to the time when he is secretary of embassy (when his income has got up to 2,000*l.* a year, and under favourable circumstances a chargé d'affaireship to 2,000*l.* or 3,000*l.* a year), to pay the borrowed money back. If he can't manage it, then he will be able to manage it when he becomes Minister, i.e., he will then live on his official income and pay the debts he has contracted out of his private income. This, I strongly suspect, is the natural course of things in nine cases out of ten in married diplomatists. I should very much doubt if amongst the present married secretaries of legation any could be found who had not at least 2,000*l.* or 3,000*l.* of debt which they considered themselves certain to be able to pay off before their death by merely living on sufficiently long to step into their predecessor's shoes." That suggests that the Diplomatic Service is buried in debt?—Yes, it is a dismal picture. From my own personal experience I should not subscribe to his accuracy; but there is no doubt that it is not a remunerative profession.

36,758. Is there really anything in what that passage contains?—I think there may be individual cases. He may have had one in his mind—it may be his own, but I do not know. I should not take it as a picture of the general condition of the Diplomatic Service, or I should be sorry to think it. I do not think they are all in debt; at least, I hope not.

36,759. (*Duke of Devonshire.*) This method of selection by a committee, or examination by a committee, only applies to the first division, I understand, and not to the second?—That is so, not to the second.

36,760. Is there any avenue from the second to the first division?—Not at present. It is not actually barred. There is no reason, supposing there was a second division clerk who showed signs of being exceptionally talented and able, why he should not be moved into the first division; but you see the second division examinations are quite different from the first division examinations. Their work is different, and there might be a little hardship occasionally on the first division by getting a man put in there.

36,761. Do you think that in fact there being practically no avenue from the second division to the first division has any deteriorating effect upon the quality of the men who come up to you in the second division?—I should not think so. I have hardly enough experience in the office to say. That would apply to every public office, not alone to the Foreign Office.

36,762. The recruiting for your second division follows the ordinary Civil Service lines?—Precisely.

36,763. I notice in the first paragraph on page 14 of the annex to your report, you mention the Appointments Board of heads of colleges. Have you had any

candidates applying to come before your Board from other universities, such as provincial universities?—You mean besides Oxford and Cambridge? I remember one or two cases—people at Durham and elsewhere, and one or two from Trinity College, Dublin, and I think even a Colonial one.

36,764. And even the newer universities such as Leeds, and so on?—I think we have had one or two cases, but I should not like to be too positive.

36,765. Is any notice given publicly to candidates of what their powers are of coming before you?—No.

36,766. Is there anything known except what happens to be known to parents or friends of candidates? Generally, throughout the country, is there fair notification?—That there is to be an examination, or that they can come up? I think the universities and schools know it. I do not know of any public announcement in the newspapers, for instance.

36,767. (*Chairman.*) There would be no objection to putting a notification in the newspapers occasionally?—None whatever that I can see.

36,768. (*Duke of Devonshire.*) I see you can take recommendations from other Government offices. Do you have many candidates coming from other Government offices?—No, I do not remember such a case since I have been on the Selection Board.

36,769. (*Chairman.*) There have been some transfers?—There have, but I think from us rather than to us.

36,770. (*Duke of Devonshire.*) When a man gets on to the list, whatever means may be taken to get him on, at what age do you have to interview him?—It varies. As a rule they come up at 19 to 20.

36,771. You do not make any special rule about it?—No. I believe they are given to understand that the earlier they come the better—after 18 or so—because in case you do exclude them, then they have an opportunity of going in for something else. If they delay to the last moment, when they are 22, it is rather late.

36,772. Is the interview that takes place the only interview, or if the man fails to satisfy you, and you do not think him suitable, do you give him another opportunity?—No, he does not return again.

36,773. Have you ever heard of a candidate who has been excluded by you rising to distinction and a high position in some other career?—No; the Selection Board is of rather recent date, so one would hardly have had an opportunity. I have heard of people failing in the examination rising to distinction.

36,774. That is not the point. I mean a man you had barred from going into the examination who had afterwards risen to distinction?—No, I have not heard of any.

36,775. If a candidate fails, how does he ascertain that? Do you inform him of that, or does he know in a negative way that his name is not in the list?—He is informed by the private secretary.

36,776. Do you give any reason?—No.

36,777. Have you had any trouble as to that?—No, I have not since I have been on the Selection Board.

36,778. No angry parents have written for an explanation?—No.

36,779. When a candidate has got through he goes forward to the Civil Service examination in the ordinary way. Do you have any communication with the Commissioners as to the character of the papers to be set at the examination?—No, none whatever—that is left entirely to the Civil Service Commissioners.

36,780. You never see the papers at all?—No, not before the examination.

36,781. Then you would have no means of expressing an opinion as to whether the character of the papers which are set is such as to find the best candidates for the work to be done?—No, we must leave that entirely to the Civil Service Commissioners.

36,782. I have some recollection that the Treasury have an over-riding power over these papers?—That I do not know.

36,783. But nothing is ever sent from the Treasury to the Foreign Office as to the character of the papers?—No, never.

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B., and Mr. J. A. C. TILLEY were in attendance.)

36,784. A question has been raised as to emoluments generally, can you say how the emoluments of a young man joining the Foreign Office compare with those of a subaltern joining the Army?—I should think in the case of the Foreign Office they would compare favourably, but not in the Diplomatic Service.

36,785. Compare with those of a young man of similar age joining the Army?—Yes, I should think they would compare favourably.

36,786. (*Mr. Matheson.*)—Does the quality of your candidates vary much, in your experience, from year to year?—Yes, I think it does rather. I think you have your good years and your feeble ones. I have noticed that some examinations produce on some occasions a better class. I think that is pure chance.

36,787. On the whole are you satisfied with the quality of the men you are getting?—Quite.

36,788. Have you any instance of men in the Foreign Office whom you would like to have sent abroad, but whom you had to exclude because they had not means to go?—Personally, I do not know of any, but I have been at the Foreign Office only three years.

36,789. There must have been some cases, I imagine?—Probably.

36,790. Do you know, or does Sir Eyre Crowe know, of an instance of a Foreign Office man receiving any extra pay in order to enable him to go abroad? Has there been any exception made in that rule of 400*l.* a year?—No, I do not think so.

36,791. That is really an absolute rule?—It is an absolute rule, except for anything like the Hague Commission, but that is quite exceptional.

36,792. I am speaking of the ordinary cases. Supposing something like the allowance system which was mentioned were introduced, should you see any objection then to making the scale of pay in the Foreign Office and in the Diplomatic Service pretty much the same?—I do not see any objection at first sight.

36,793. What is the initial salary in the Foreign Office?—200*l.* a year.

36,794. (*Miss Haldane.*)—I suppose most of your candidates coming before the Nomination Board are in process of working at the Universities?—Yes, working for the special Civil Service examination.

36,795. And I suppose they are going to take Honours?—Yes, they mostly take Honours, and as a rule they go abroad to learn their languages. You cannot learn them thoroughly at home.

36,796. You said languages were extra. Do you mean that languages are taken in addition to other subjects?—No, but in French and German they must reach a certain qualifying standard for diplomacy, which is pretty high, and if they do not reach that qualifying standard, however well they had done in the other subjects, that would bowl them out.

36,797. But are they extra, so to speak?—French and German are obligatory subjects.

36,798. Are they in lieu of some other subjects in the ordinary Class I. examination, so to speak?—No, they form part of the 4,000 marks. A candidate can take up any subjects in the Class I. examination that he likes, but he must take up French and German.

36,799. And therefore they form part of the number of marks he can obtain?—Precisely.

36,800. I suppose any Scotchmen who come up probably come up through Oxford or Cambridge?—I think we have had one or two from Edinburgh and Glasgow or St. Andrews.

36,801. You consider that it would be useful to a young man to have a year or two in the Foreign Office before he goes into diplomacy?—Out of his two years as attaché he has to pass six months at the Foreign Office. This time we have begun by sending them abroad first, and shall probably bring them back, before they complete their two years, to the Foreign Office. They used to start in the Foreign Office before going abroad. The change is only for this year. It may become a regular rule. We had three or four coming into the Foreign Office, and there happened to be a number of vacancies both in diplomacy and in the Foreign Office. To have had seven or eight new men at the same time in the office was rather too much for

us, so we sent the attachés straight away abroad and before they complete their two years they will come back to do their six months at the Foreign Office.

36,802. Do you consider that six months at the Foreign Office is sufficient?—Yes.

36,803. They learn there what is the routine of office work, and so on?—Yes.

36,804. Do they learn when they come first to the Foreign Office about the country to which they are presumably going?—They do not always know what country they will be sent to. We try to put them into a department which deals with the country to which they would be likely to be sent; and, if they come back, or transfer, we like taking a man who has been, say, in Turkey, into the Eastern Department, where his knowledge of the conditions and the situation would be of use.

36,805. Is it not correct to say that in France the Foreign Diplomatic Service is identical with the Foreign Office Service, and that men pass from one to the other?—That is so, very largely.

36,806. Is their Consular Service also the same?—No. I was asking a member of the French Embassy about that. The examination is the same, but when they have passed they bifurcate and do not re-unite until they become Consul-General. Occasionally they appoint a Consul-General as Minister, usually to an Eastern or South American post; but they are perfectly distinct services from the commencement until the end of their career, when they do rejoin. It not often happens that a Consul-General becomes an Ambassador.

36,807. You think it might be occasionally a good thing to transfer from the Consular to the Diplomatic Service?—If you find an exceptionally talented consular officer I should not bar it at all; in fact we have taken advantage of it fairly often.

36,808. Are there not special allowances given to secretaries for special points?—If he passes his International Law he gets 100*l.* more while he is third secretary. Then at certain posts like Turkey, and one or two others, if he passes an examination in Turkish or Persian, as the case may be, he gets 100*l.* a year as long as he is at that post. When he leaves that post that disappears again.

36,809. I suppose he is always encouraged to learn the language of the country in which he is?—Yes; that is the inducement we give him. If he passes that examination he gets 100*l.* a year as long as he is at that post, not afterwards.

36,810. Are they also encouraged to have a considerable knowledge of the social conditions of the country?—Yes.

36,811. One has heard criticisms made by travellers that they do not know a great deal about them. I do not know whether those criticisms are justified or not?—They ought to know them.

36,812. One has heard that criticism passed?—I dare say some of them do not know them.

36,813. Do you consider that they are encouraged to learn all those things?—Certainly. It depends a very great deal upon their chief—the Ambassador or Minister as the case may be. Some of my chiefs used to insist upon it.

36,814. Is it only Ambassadors who are in very exceptional circumstances brought in from outside to the Diplomatic Service?—Yes. I do not know of any cases in the junior ranks. In days gone by there may have been cases.

36,815. (*Chairman.*) The maximum number of marks that the Foreign Office clerk or the Diplomatic clerk can secure in the examination is 4,000?—Yes.

36,816. For the Home and the other services the candidate can secure up to 6,000 marks?—Yes.

36,817. Is that an indication that the men who go into the Home and the Indian service are educationally more advanced than those who come to you?—Certainly I do not know the reason of that 4,000 maximum.

36,818. If a Foreign Office clerk knows that he cannot secure more than 4,000 marks he will concentrate himself naturally upon fewer subjects. The other man

29 April 1914.] The Right Hon. Sir ARTHUR NICOLSON, Bart., G.C.B., G.C.M.G., [Continued.  
G.C.V.O., K.C.I.E. (Sir EYRE CROWE, K.C.M.G., C.B., and Mr. J. A. C. TILLEY were in attendance.)

who has to secure 6,000 marks has to take up a greater number of subjects?—Yes.

36,819. Provided those subjects are not merely crammed, the inference would be that he was the abler man?—I do not know. I prefer myself a man who has more intensive knowledge of a few subjects than a man who has a superficial knowledge of many.

36,820. That may be arguable, but by the general public a man who scored high in Latin, Greek, mathematics, French, German, and philosophy would be considered to be better equipped for the struggle of life than a man who concentrated his attention on fewer subjects?—I do not really know the reason of those 4,000 marks as a maximum.

36,821. One of my colleagues suggested that it might be possible to equalise the pay in the Foreign Office and in the Diplomatic Service. Is it possible for a man in the Diplomatic Service to live on the pay which would be adequate for his living in England?—No.

36,822. If there is to be facilitation of transfers between the two departments it is not equal pay that would facilitate it; there must be differential pay?—There must be differential pay, no doubt.

36,823. It would be more expensive to live abroad than to live in England?—After all, a man in the Foreign Office can live pretty well where and how he likes; you cannot abroad. If you are a secretary in Berlin you must live perhaps in more expensive quarters than would be necessary in London.

36,824. With regard to the leave rules of the Foreign Office clerks and diplomatists, are you quite satisfied with them as they are?—Yes. I do not think they are generous, but they are adequate.

36,825. What leave does a Foreign Office clerk get in a year?—In the junior ranks he gets 36 days.

36,826. Is it a graduated scale as in the Civil Service?—Yes.

36,827. What does he get ultimately?—Two months. (Sir Eyre Crowe.) Including Sundays it amounts to

two months. It is 48 week-days. It is the ordinary Order-in-Council scale.

36,828. (To Sir A. Nicolson.) With regard to those chancellors, have you ever tried promoting a second division clerk or staff clerk to a chancellorship abroad?—I think at present we have a second division clerk at Constantinople.

36,829. Is it in contemplation, if it succeeds, to extend that system?—If they are willing to go I should be delighted, because they would have had a good training at the Foreign Office. Mr. Tilley wisely observes that it does not attract them because they are probably getting equal, if not better, pay at home.

36,830. Is a knowledge of the language of the country necessary for that post?—I do not think it is, though of course it would be desirable; but as a rule we get a local man—an Englishman who is there.

36,831. What is the pay of a chancellor of an embassy?—I think it is small—200*l.* to 250*l.* I think 300*l.* is the maximum.

36,832. Does the same rule regarding the preservation of the right of rejection or limitation, in the case of persons who are to compete for these appointments, prevail in foreign countries also?—Yes, under different forms.

36,833. Is the effect in foreign countries to really limit the diplomatic appointments to persons of good high social status?—Yes, I should think our doors are wider open than in the case of most of the foreign Diplomatic Services.

36,834. Does that prevail with regard to all European countries?—Yes, I think all the principal ones, and even in the United States, too. It is pure patronage there, I think.

36,835. Is there an income limit imposed there?—No, but I suppose it is understood. It is the President who has that patronage. They have a Selection Board, I see, whose duty it is to determine the qualifications of persons designated by the President for examination, and to determine their fitness for possible appointment as secretaries.

SIR EYRE CROWE, K.C.M.G., C.B. (Assistant Under-Secretary of State for Foreign Affairs), called and examined. Mr. J. A. C. TILLEY (Chief Clerk of the Foreign Office) was in attendance.

36,836. (Chairman.) I propose to examine you with regard to the Foreign Office. As an introductory remark, and not in continuation of what we have been saying, do you yourself see any great advantage in the system of examination which restricts candidates in the case of the Foreign Office to 4,000 marks. Do you see any objection to assimilating the examination for the Foreign Office to that for the Home and Indian Civil Service in all respects?—I understand that the scheme drawn up by the Civil Service Commissioners had for its object that candidates should go in very seriously for the two languages, and that, if you had say 6,000 marks with only 800 marks for languages, it would not induce candidates to give as much time as they ought to to the languages. That was the object of the Commissioners. How far that works out in practice I feel rather diffident in saying. It was done, I think, from the Commissioners' point of view, and as far as I know it was their suggestion. Of course, if you had the 6,000 marks with the languages outside, that would be in a certain sense an ideal arrangement, only it would make the qualifications very high, higher than in the case of all the other offices.

36,837. It would impose on candidates a great burden?—Of course a high qualification in French and German, I think, does imply a great intellectual effort.

36,838. Do you find that the young men you get have a perfect knowledge of French and German, or merely a knowledge of reading and writing the languages. Can they speak them well?—They vary, of course. Some of them are exceedingly good; others are not so good; but they are better than they used to be. Since we have had this examination we have got a higher standard.

36,839. I have not compared the exact figures, but my remembrance is that in the examination for the

Civil Services you do find men whose marks in French and German are as good as those I see in these papers before me?—But I do not think the test is the same. It would rather depend upon the papers set, would it not? I imagine they would set higher papers for this examination than for the ordinary examination.

36,840. (Mr. Philip Snowden.) Are not the papers precisely the same?—Are they the same? Then I speak under correction.

36,841. (Chairman.) The colloquial standard may be different, but we can find that out from the Civil Service Commissioners?—Yes.

36,842. At the head of the Foreign Office is the Secretary of State, and immediately under him is the Permanent Under-Secretary of State?—That is so.

36,843. The existence of the Parliamentary Under-Secretary may be disregarded as regards the establishment of the office?—He is not a member of the permanent service.

36,844. Then, as I understand, you have seven great departments?—Yes.

36,845. That is to say you have four political departments which deal with (1) Eastern and (2) Western Europe, (3) the Far East (China, etc.), and (4) America?—Yes, four.

36,846. Then you have the Consular department?—Yes, the Consular, the Commercial and the Treaty departments. Then we have other departments—the Accountant's department, which we call the Chief Clerk's department—and the Librarian's department; and a small offshoot called the Parliamentary department, which is not fully manned and has not a senior clerk.

36,847. Are the seven departments manned by the political establishment?—Yes.

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

36,848. Does the second division enter into any of these departments?—Only into the Treaty department do they enter in a very slight degree.

36,849. Then the seven departments are manned exclusively, we may say—the Treaty department we will consider later—by the Diplomatic establishment, that is the Foreign Office clerks?—Yes.

36,850. Outside the seven departments we have the Legal department, which is a consultative department?—There is no real department. Papers and cases are referred from each department to the Legal Adviser for an opinion.

36,851. There is the chief clerk, Mr. Tilley's department, which deals with finance?—Yes.

36,852. Then there is the library and the registry?—Yes, the registry is a sub-department of the library really—a branch of the library which deals with the registration and custody of papers.

36,853. And it makes over its documents to the library, but so long as the stage is not reached when documents are made over to the library, is the registry subordinate to the library?—Yes.

36,854. May the librarian go into the registry, and of his own initiative look into how things are done?—Yes, they are inspected periodically—the indexes and the registers.

36,855. (To Mr. Tilley.) I will begin with the chief clerk's department. You are a member of the Diplomatic staff?—Yes.

36,856. Have you any member of the Diplomatic staff under you?—No.

36,857. Are all the officers under you then of the second division?—All except one. One remains of the old supplementary class, but otherwise they are all of the second division.

36,858. How long has the second division been operating in your office. When did you introduce it?—Between 30 and 40 years ago was the first beginning of it. They began in my department—in the financial department—before they began in most of the rest of the office. They were introduced rather early into the financial department.

36,859. At all events they have been working in your office from the time the last inquiry by the Ridley Commission was made, the report of which was in 1890, I think?—Yes.

36,860. At what pay do they come in?—They come in on the ordinary terms of the second division.

36,861. And they go up now to 300*l.* a year?—Up to 300*l.*, and the staff posts go up to 400*l.* and 450*l.*, but in my particular department we keep them separate from the other second division clerks in the Foreign Office. They go into the chief clerk's department and they remain there their whole lives, because they require a certain amount of technical knowledge of book-keeping, and they do really, I should say, a higher grade of work than the other second division clerks—a certain amount of administrative work.

36,862. In what way do they come to deal with administrative work?—They have to interpret the regulations which govern the Foreign Office and the Diplomatic and Consular services, and have to exercise a certain amount of discretion in these matters, and they make suggestions.

36,863. Make suggestions as to action to be taken?—Yes.

36,864. But no action is taken on their suggestions without your *visé*?—No.

36,865. They are, in point of fact, of the accountant class?—Yes, but I think they do rather more than that class does in most offices in the way of suggesting administrative action, because they have to do with consuls in all parts of the world, and they have to suggest how they should be treated, and what exceptions should be made, and that sort of thing.

36,866. How many have you in your department?—Thirteen.

36,867. That is the assistant, four staff officers and nine second division clerks; and the whole work of your department is done by these men?—Yes.

36,868. Consequently they must note on papers and make suggestions which come before you, and action is taken upon them?—Quite so.

36,869. Do you communicate direct with Consular officers abroad?—Only in regard to their accounts.

36,870. In regard to the matters with which your branch deals?—Yes, queries on their accounts.

36,871. You do the same thing with regard to Embassies, do you not?—Yes, in regard to the actual accounts they render, we query them.

36,872. And you do that directly without the matter passing through any other branch of the office?—Yes.

36,873. But if you come to a difficulty, if your interpretation is questioned, and so on, then you refer it, I suppose, to one of the Under-Secretaries?—I should refer it to Sir Arthur Nicolson.

36,874. You communicate direct with Sir Arthur Nicolson?—Yes.

36,875. You say when the second division clerk comes in he sticks in your office?—Yes.

36,876. He is not transferred?—No, he remains in the chief clerk's department.

36,877. Has any transfer ever taken place from your office, to the library for instance?—I do not think ever. I cannot remember any case.

36,878. Your clerks have sent to us a memorial, or rather a dissent from a memorial, or an expression of difference of opinion from a memorial, that was sent up from the second division clerks. They seem to indicate that their position is not *in pari materia* with that of the other clerks?—Quite so.

36,879. As I understand them, they say they look forward to treatment of the same character as has been accorded to the staff of the Auditor-General?—Yes. We actually asked the Treasury not long ago to agree to put them into the old intermediate class, but any decision about that was postponed by the Treasury.

36,880. What is the highest pay which a staff clerk in your office now draws? What does your assistant, Mr. Fraser, draw?—He draws 550*l.* to 750*l.*

36,881. And the four staff officers under him?—One draws 500*l.*; the others go up to 450*l.*, or 400*l.*

36,882. So 750*l.* is the highest pay drawn at present in your office, excepting by yourself?—Yes.

36,883. Do you think that pay is adequate?—I think the assistant's minimum of 550*l.* is too low, I think he might begin at rather a higher minimum, and might well begin at 600*l.* or 650*l.* perhaps.

36,884. You think the maximum is adequate?—I think the maximum is adequate. It is nearly the same as the pay of other assistants in the office, which is 800*l.* Perhaps it would be fair that he should have a little less than they.

36,885. With regard to the maximum of the other assistants, what other assistants are there in the office?—They are assistants in the political department who get 700*l.* to 800*l.* a year.

36,886. But they are on the political staff?—Yes.

36,887. Would you give pay to an officer of the second division so as to bring him up to the political scale?—It would be a little lower; instead of going to 800*l.* he would go to 750*l.* I think that it is fair that the assistant in my department should be paid nearly the same.

36,888. In regard to the four staff officers, do you consider their pay adequate?—I think they might very well go up to 500*l.* There are three main branches in my department—four in fact—one dealing with the Foreign Office and the Diplomatic Service, two with the Consular Service and the China Consular Service, and one with the book-keeping.

36,889. Would the extension to your office of this Commission's recommendation with regard to the second division—the "Senior Clerical Division" as it is called in our Report—meet the requirements of the case, do you think? The salary on entry is 85*l.* a year, rising by increments to 350*l.* a year and with staff appointments, some of which may reach 500*l.* a year?—I think we might have one or two posts above that. That would not cover my assistant. He certainly ought to have more than 500*l.*; and perhaps one other man might go to 550*l.*; otherwise it would about meet the case.

36,890. Do you say that your assistant would not be covered by reason of his history, he having come from the supplementary class?—I do not mean the present

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

assistant, but the future assistants, whatever class they come from. I think they ought to have higher pay than 500*l.* or 550*l.*

36,891. What is your pay?—1,000*l.*, rising to 1,200*l.*

36,892. And you think you ought to have one staff officer under you with a higher pay than 500*l.*?—I think so. That is besides my assistant who, when I am away, represents me in every respect, practically.

36,893. But in other respects you think that the new proposal for a senior clerical class would suit your office?—Yes, but the proposal is strictly limited to 500*l.* We should have preferred one or two going a little higher than that, to 550*l.* I think in the Paymaster-General's office there are examiners who go to 550*l.*, and their work about corresponds to what my staff officers do.

36,894. (To Sir Eyre Crowe.) Do you think there is absolute necessity to maintain a strict rule of exclusion whereby the second division cannot hope to get into the diplomatic establishment?—I do not think there is any strict rule to prevent it.

36,895. Can you imagine cases in which such promotion might with advantage to the public service be practised?—I think the cases must be so exceptional that it is very difficult to imagine that they can arise at all frequently. It must be a very exceptional case where such promotion would be an advantage to the Service, but if that case arose there is no objection to it.

36,896. From what part of your office which now employs second division clerks should you expect to get men suitable for promotion—from Mr. Tilley's department or from the library?—Not from Mr. Tilley's department, but from the librarian's department.

36,897. Why do you think you could look with most chance of finding them in the librarian's department?—I think the chief clerk's department is practically excluded because they are entirely limited to financial questions and their training in that department would in no way fit them, and perhaps would disqualify them, for political work; whereas in the library it is conceivable that a man who works under the librarian and is engaged in making précis or memoranda on past political questions, and getting out precedents where he sometimes cannot help expressing opinions or, anyhow, where he can show ability, is a man well qualified; but I think it must be very exceptional.

36,898. You have in the librarian's department two assistants, two staff officers, and nine second division clerks?—Yes.

36,899. Amongst their duties there is the duty of preparing these memoranda?—Yes; of course the memoranda are very largely drawn by the librarian himself.

36,900. Are these memoranda ever prepared by the political staff?—Very largely, but there is no hard-and-fast division between the memoranda prepared by the one or the other. It is a matter of expediency. If the papers are readily accessible to the department, or if a man of the political department has dealt with the case for a very long time and is familiar with it, he writes his own memorandum, but if the Secretary of State says he wants to know what happened in 1792 with reference to a question, it would go to the librarian to search for the papers and deal with the subject.

36,901. There was a suggestion by the Ridley Commission that all these memoranda ought to be prepared by members of the political staff?—Yes, but I am not quite certain that the Commissioners understood what was involved in that recommendation. It would interfere with the political department to such an extent that if you made it the rule you would have to re-arrange the departments and have a research branch in every department. To a certain extent it is done, and always has been done.

36,902. (Mr. Boutwood.) When those memoranda are prepared by political men, are they members of the librarian's staff or of the other branches of the office?—It may be either. It rather depends upon the date of the papers to be consulted. The papers for two years—the current papers—are kept apart, and anything relating to those papers, which are practically

under our hands, is most readily dealt with by a man in the department having the correspondence to conduct.

36,903. Have you political men in the librarian's department?—Not on the diplomatic establishment.

36,904. (Chairman.) Am I to understand that these memoranda can only be prepared by members of the librarian's staff or by members of the political establishment?—Yes.

36,905. And by nobody else?—There may be memoranda on a small technical question which have to be prepared by the Treaty Department, where it might be done by one of the second division clerks working in that department, but that is exceptional.

36,906. But no memoranda are ever prepared by members of the registrar's department?—No, never.

36,907. How many second division clerks have you in the Treaty Department?—Three, including the passport clerk, who is a man dealing especially with the issue of passports, a matter which is also under the Treaty Department. There are three altogether, one staff officer and two second division clerks.

36,908. Does the one staff officer in the Treaty Department work within the department?—He and one other clerk of the second division have a room attached to the Treaty Department.

36,909. What character of work do these two men do?—It is very largely routine of a particular kind. There is a great deal of ceremonial work connected with treaties, with Royal letters, and with Royal Commissions and appointments; also with the formalities of extradition; the issue of passports, and questions of that kind are really the work of these second division clerks.

36,910. Do they ever consider the bearing of documents that come in and make suggestions as to the action to be taken on such documents?—They do in the Treaty Department on their own technical points. For instance, a question will arise as to the proper mode of ratifying or acceding to a certain convention, and what are the formalities to be observed here; then the man who has dealt with that in the Treaty Department would give an opinion and suggest that certain things should be done.

36,911. Are these men employed on work of a character which would suggest to you that you might look to them for possible candidates for promotion?—Yes, the question has actually arisen with regard to one or two of these men.

36,912. These, and the members of the librarian's department?—The higher members of the librarian's department.

36,913. They are, therefore, in your opinion, the only source from which you might possibly get men for promotion?—Yes.

36,914. That would make altogether eleven at the outside, possibly less?—Yes. May I mention as regards the librarian's department that it is only quite recently (within the last month or two) that we have ceased employing the last men of the old class of supplementary clerks. The two assistants in the librarian's department hold posts which were until recently held by supplementary clerks.

36,915. Let us go to the registry and trace a letter that comes in. From my visit to the registry office I carried away the idea that a letter addressed to the Foreign Office was received first by the registrar?—Yes.

36,916. He sits in a room by himself, and he has a certain number of clerks attending him?—Yes, boys.

36,917. These are boy clerks, whose sole duty is that of attending on the registrar, writing in a book a serial number which the registrar gives each letter, its subject, and the date of receipt; and then distributing the letters to the sub-registries?—Yes. They have a second duty, which is peculiar to our office, and that is to manage, to distribute, and put by a very vast printed correspondence.

36,918. That is purely mechanical work?—Purely mechanical, the whole of it.

36,919. To enter in the register is scarcely more than mechanical, but these are boy clerks, and under our proposals would disappear?—I am very glad to hear it.

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

We strongly protested against the employment of boy clerks when they were first imposed upon us.

36,920. So you are pleased with our proposal?—Yes.

36,921. How will you have that work done, then, in future?—That is a question which is, perhaps, a little difficult to answer. At the time when the boy clerks were forced upon us by the Treasury we were of opinion that it would be very much better to use the youngest of the second division clerks for a time in doing that work, and we thought it would do them no harm, and then draft them on to ordinary work.

36,922. That seems to me quite right, so long as you do not employ them longer than is necessary for the purpose of instruction?—No, say six months or so.

36,923. You will not be able to keep them much longer than that. Then, when that somewhat mechanical process is gone through, the letters are distributed to sub-registries?—Yes.

36,924. All the departments of your office are grouped under three sub-registries?—Yes, corresponding with the three floors of the building.

36,925. When the papers reach each of these sub-registries, the registrar having marked upon each paper the sub-registry to which it is to go, they are then dealt with in the sub-registry and a much more careful process of registration is gone through?—Yes.

36,926. Will you explain to the Commission what that process is?—It is this: The central registry—the preliminary registry—having put each letter that arrives into a docket or covering sheet, this docket is filled up according to certain rules by an analysis of the contents of the paper, which requires a certain amount of care. That is done in the sub-registry. They put the heading, they summarise the paper, and write eight or nine, or sometimes two or three, lines to indicate what the paper is. Then that entry is copied into a register book in its appropriate place. In that register book there will be found, or placed if necessary, the reference to previous correspondence which is arranged in a certain manner. The clerk will then get out that previous correspondence and put with the newly arrived paper such of the old correspondence as he thinks is necessary in order that the questions may be properly dealt with in the department. That is where his discretion comes in.

36,927. He gets out the old correspondence. Is he restricted to the two years which are in the registry or may he go into the library to get the older correspondence?—If the correspondence goes back far, then the paper goes to the library and they get out the correspondence there.

36,928. When the sub-registry exhaust their information, they go to the library for further correspondence?—Yes, if necessary. It is not as a rule required at that stage. They would often leave it to the head of the department to say he wants the back papers; but, if wanted at once, it is turned over at once to the library and the library get out that paper.

36,929. Have they in the registry any index showing the correspondence for the period of two years that they keep the papers themselves?—Yes, they have a card index.

36,930. Do they prepare that?—Yes.

36,931. Do they prepare it as they register each document?—It is made at a subsequent stage—generally when the paper comes back to them from the departments. The paper, having been completed in the registry with the previous correspondence annexed, goes to the head of the department, who then either deals with it or sends it to the Secretary of State, and it would come back with certain directions written on it. If they are of the kind which require the writing of letters in the department itself, where the drafts will be prepared, then the letters with the drafts prepared, all attached together, will go back to the registry, and it is the business of the registry to see that the drafts are written out and sent for signature; the papers are then indexed, together with all the minutes that have been written upon them, and filed away.

36,932. The letter goes from the central registry to the sub-registry, the sub-registry then proceeds to enter

the various particulars in their registry; then they get together all the relevant papers and materials, which their branch supplies, and they send them on to the department?—That is so.

36,933. It passes the boundary line into the political department?—Yes.

36,934. The political department proceeds to deal with it, and if they want more back papers they send for them to the library?—Yes, and ask for them.

36,935. Then the department deals with the case; orders are passed and perhaps a letter drafted, and then it is so returned in that stage to the sub-registry from whence it came?—Yes.

36,936. Then the sub-registry carry out the orders, fair-copy the letter, submit the letter for signature to the department, issue the letter, proceed to fill up the card index and deposit the papers with themselves for two years?—That is right.

36,937. At the end of two years what happens to the papers?—The papers are then bodily transferred to the library.

36,938. With the card index?—With the card index; and there being three sets from the three sub-registries the library have to dove-tail them together.

36,939. While they are in the registry for those two years are any of those papers printed?—A great many. A very large amount of our papers are printed.

36,940. Who determines whether the papers shall be printed or not?—The head of the department, subject to the direction of the Under-Secretary of State.

36,941. He orders them to be printed?—Yes.

36,942. Therefore it comes to pass that nearly all the important papers are printed and kept for two years in the hands of a sub-registry?—Yes.

36,943. Therefore the second division clerks in that sub-registry have access to all these papers?—Quite so.

36,944. They know, or may know, practically nine-tenths of what goes on in the Foreign Office?—These printed papers are not delivered to the sub-registry, but to the central registry where the boys are. These printed papers are under the personal care of the registrar himself. The boys distribute them to all our embassies and legations abroad.

36,945. Is not a copy of the printed paper put with the file?—One copy, yes.

36,946. Which is deposited in the sub-registry and is available to the clerks of the sub-registry?—Yes, and the paper itself, of course, is too.

36,947. What proportion of correspondence which comes into the Foreign Office is dealt with in that way?—Nearly all the correspondence.

36,948. Are the most confidential papers so dealt with?—No.

36,949. In your own experience of the second division have you come across many men or any man whose promotion would be justified on the ground of exceptional ability?—No, I have not in our office; but I should add that our experience is rather a limited one. We had second division clerks formerly only in particular departments, and it was not until 1906 that we introduced the registry. Up to that time we had no second division clerks at all dealing with our papers, but we dealt with them all ourselves, so we have not had much experience of them. I have had to consider this very question, but I have not found among the men now in the office any one who I think could be recommended for promotion.

36,950. Do you transfer your men among the various departments?—Yes, frequently.

36,951. I understood you to say that there are no transfers to Mr. Tilley's department?—Are you speaking of second division clerks?

36,952. No, I am now speaking of the political establishment. You have seven departments: do you transfer your men between the departments?—Yes, frequently.

36,953. Is it considered a desirable thing to let a young clerk have experience of various departments?—That is exactly the reason why it is done. There are transfers, especially from the political to non-political departments and *vice-versa*. I mean by the non-political departments the Consular, Commercial and Treaty Departments.

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

36,954. What conditions indicate to you the desirability of transferring men from the Foreign Office to the Diplomatic Service, and *vice versa*?—It is largely left to the initiative of the men themselves. It is, in certain cases, difficult to suggest it very strongly, owing, as Sir Arthur Nicolson explained this morning, to financial considerations; but the men who realise that it is to their own advantage to exchange, are all keen to do so, and, if they are, our difficulty is sometimes to arrange it. It is difficult because you must have men more or less of the same standing, and you cannot allow the office to be over-run by too many men coming from outside, because it depletes the departments of experienced clerks.

36,955. In arranging the transfers, should I be justified in thinking that the money difficulty is the chief one?—The money difficulty and the case of the young married man, which is perhaps connected with the same difficulty.

36,956. The two run into each other?—Sometimes a man recently married, even if well off, does not like to exchange.

36,957. Are you, in effecting an exchange, limited, in practice, to the men on the home staff who have money of their own independently of their official pay?—Yes.

36,958. You think that is a general rule?—Yes.

36,959. You are quite certain that transfers are desirable and should be effected as far as possible?—Yes.

36,960. I think I asked Sir Arthur Nicolson the question, but up to what time in a man's service are transfers desirable?—We have had transfers at all stages of a man's career, but they are of the greatest advantage in the younger years. They are made more difficult in the case of the senior appointments, but they have taken place in their case too.

36,961. (*Miss Haldane.*) With regard to the copying staff, the nine typists, the superintendent and chief superintendent—are the superintendents women?—Yes.

36,962. So there are altogether 11 women?—That is right.

36,963. Are they employed generally throughout the office or only in particular departments?—All copying for all parts of the office is practically done by them, although a certain amount of casual copying or typing is done by the younger men in the political department themselves. If a thing is wanted in a hurry they take their own typewriter and do it.

36,964. The typing is done in the department?—Yes; we encourage all our young men to do typing, and they nearly all type, and if a thing is wanted in a hurry it is often done in the department itself without troubling the ladies, who otherwise do all the copying work.

36,965. And, I suppose, they are paid at the same rate as the ordinary typists in the Service?—I understand that is the case.

36,966. Do they have to know foreign languages?—They must know French—there is a great deal of French typing to do—but no other language.

36,967. They type in French?—Yes.

36,968. Do they get any extra pay for that?—No.

36,969. Do they serve in any other department like the librarian's, and so on?—No; they have a little establishment with rooms to themselves, and the work is sent up to them from any department.

36,970. The women employed in typing are not employed in any other department, like the librarian's?—No, we do not employ them in the library.

36,971. Is the housekeeper a woman?—(*Mr. Tilley.*) The housekeeper is a man.

36,972. So practically the only women in the office are the typists?—(*Sir Eyre Crowe.*) Yes.

36,973. Is the promotion in the office entirely by seniority or by selection?—Very much by selection, especially after the initial stages.

36,974. (*Chairman.*) That does not merely apply to typists?—No, I mean throughout the office.

36,975. (*Mr. Hoare.*) When you transfer a clerk, is it usually for a short time or what is the average time?—The usual period is for two years, but it varies a good deal—sometimes for only one year; sometimes for an

extended period of years. We have had cases of as much as seven or eight years.

36,976. Do any formalities have to be gone through or is it merely an informal interchange?—It is an interchange which must be sanctioned by the Secretary of State, because the man who leaves the office must be appointed to a definite post.

36,977. Do you allow for the expense of moving?—Not in the case of Foreign Office clerks exchanging. Diplomats moving from place to place come under certain regulations as to outfit allowances, but those are not given to Foreign Office clerks.

36,978. Have you ever considered the advisability of allowing grants for this purpose?—I do not think we have considered that. It really opens up the much larger question, whether or not the whole scales of salaries should be equalised. The diversity of salary is so great that I think the outfit allowance would not make so much difference.

36,979. It would make a difference in the case you mentioned just now of the young married clerk?—(*Mr. Tilley.*) We are considering at this moment the question of giving outfit allowances to the first and second secretaries of the Diplomatic Service. Hitherto the first two classes, the Ministers and the Counsellors, have had allowances. Now when a married first or second secretary—if the Treasury agree to what we propose—is transferred from one post to another he will get the travelling expenses of himself and family and a small outfit allowance as well.

36,980. Is there any reason for restricting it to first and second secretaries?—It is restricted at present to married men. (*Sir Eyre Crowe.*) Their travelling expenses are paid in any case.

36,981. But with regard to these clerks that you do transfer, I suppose several of them do not go as first and second secretaries but as attachés?—(*Mr. Tilley.*) They might go as third secretaries and then they would probably be unmarried men and would not require any special outfit allowance beyond their travelling expenses.

36,982. That is assuming they are unmarried men, but if they are married men is there any reason for giving a grant to the first and second secretaries and not to the third secretaries?—We stop at the second secretaries because we are not very anxious that people should marry as soon as they come into the Service, or for the first few years of their career.

36,983. Do most of these clerks who are transferred act as third secretaries?—No, most as first and second secretaries.

36,984. (*Mr. Matheson.*) I see there are seven senior clerks in the Foreign Office. How many of those have been abroad? Several of them I happen to know have been abroad?—Mr. Spicer, Mr. Alston, Mr. Sperling, Mr. Clerk, Lord Dufferin, and Mr. Tufton have all been abroad.

36,985. They have practically all been abroad?—Yes.

36,986. The distribution of men if you send them abroad is ultimately settled by the head of the office; but have you any committee for consulting as to the destination of the men?—(*Sir Eyre Crowe.*) There is no committee. The Secretary of State consults largely his private secretary and the head of the office.

36,987. I think I understood from an answer you gave just now that in the case of clerks being sent abroad the initiative generally comes from the clerk himself?—Or from a diplomat; anyhow, it comes from the men who wish to exchange. They generally write to each other first. You have to get men of the same standing, and then you let them settle between themselves and you find out whether it is convenient and can be arranged.

36,988. You do not bring a man in from abroad unless you have a place for him?—It is done every now and then.

36,989. An exchange is the more frequent plan?—Yes, the other can only be done when there is a vacancy.

36,990. Is the legal adviser there all the time?—Yes.

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

36,991. He is a full-time officer?—Yes, he is a very busy officer indeed; and there is an assistant too who is kept equally busy.

36,992. (Sir Henry Primrose.) In what shape do you keep your papers—in the old fashion?—No, that has been abolished. We keep our papers like everybody else.

36,993. How long since that has been altered?—Since 1906 when the registry was introduced.

36,994. To what extent do you type? Is a dispatch from the Secretary of State typed?—Yes, practically everything is typed.

36,995. I see in the regulations for the examinations that candidates who have been nominated by the Secretary of State, and have to attend at the usual First Division examination may, if they like, be also examined in the general open competition?—Yes.

36,996. As a matter of fact, do most of the men enter for that as well as for the Foreign Office examination?—I do not know any case where a man has succeeded. I have several times myself urged candidates to do so, but I cannot say to what extent it is done.

36,997. But you can answer to that extent, that, whether they have done so or not, nobody nominated by the Secretary of State has come within the number of places that have been allocated for the particular examination to the Service at large?—I am not aware of any case.

36,998. As regards those who are nominated and who sit at that particular examination, the papers that they do take are precisely the same as the papers given for the general body of candidates?—So I understand.

36,999. Only the total number of marks is limited to 4,000 instead of 6,000?—Yes.

37,000. Does the Foreign Office fix a minimum number of marks. Supposing you have four vacancies and three men pass a very good examination and the fourth is rather a long way off, would he be passed because he was fourth, or would he be excluded as not having come up to the particular standard?—There is a qualifying standard, and if the candidate has reached the qualifying standard and there is a vacancy I take it he must be appointed.

37,001. Is that qualifying standard fairly high?—I think it varies in different subjects, but I think it is fairly high in languages. It is 50 per cent. I think.

37,002. Have you noticed at all how the marks given to Foreign Office candidates compare with the marks obtained by the successful candidates in the general examination?—No, I have not studied that.

37,003. I suppose in languages, at any rate, they would probably hold their own?—We exact a very high standard in French and German.

37,004. There are compulsory subjects like French and German, and probably one other language?—No. I think French and German are the only subjects in which qualification is absolutely necessary; the rest they can choose.

37,005. But do they not, as a rule, choose one other modern language?—I do not know that it is so customary as it used to be. (Mr. Tilley.) Not now.

37,006. What proportion of them take Greek and Latin do you think, a large number?—(Sir Eyre Crowe.) A fair proportion, I think, but I am not certain. This scheme of examination is comparatively new. It was only introduced in 1907, and our experience of it is not very large. We have had good classical men. The subjects they mostly go in for are history, political economy, and more modern subjects, and English.

37,007. I noticed in the matter of examinations that nominations do not seem to be required for the Levant Consular Service?—Yes. They used not to be required for the China Consular Service, but they were made general for all branches some time ago, largely owing to the report of the Walrond Committee.

37,008. In paper Q, at the top of page 3, paragraph 4, it says, "Candidates for the Consular Service in the Ottoman Dominions, Persia, Greece, and Morocco are selected by open competition"?—I think this must be an old instruction.

37,009. When was that change made? In the next paper, R, issued by the Civil Service Commission, it says, "The following regulations apply to

"persons who may be nominated by the Secretary of State"?—It is undoubtedly nomination. I do not understand where this other statement comes from. I cannot at the moment explain the discrepancy; I will examine into it, but it is not accurate at present.

37,010. Do you think it was accurate at the time when this was printed?—I should be sorry to say it was not accurate.

37,011. It would be interesting to know, if there had been open competition, why it was abandoned for the Levant Consular Service?—Yes, it was the result of the recommendations made by the Committee presented over by Sir William Walrond in 1903.

37,012. Yes; they say, "The Committee find that the British Consular Service in the Levant," and so on, "also by means of open competition"?—Then that Committee recommended for the general Consular Service that the examination system should be introduced, and it was in that connection it was made uniform. That was in 1903. I cannot tell you the exact year in which the change was made, but I can find it out.

37,013. Evidently it was in consequence of that recommendation?—Yes.

37,014. I do not remember that they gave any reasons for that. However, speaking from your experience do you think the change has been an improvement?—Yes.

37,015. Are you on the whole getting better men?—Yes.

37,016. In the case of appointments such as the Foreign Office appointments, I suppose the nomination is merely a process of excluding undesirable people?—Yes.

37,017. (Chairman.) Looking at these two papers of the Civil Service Commissioners' marking for the year 1913, I notice that none of the Foreign Office clerks took Greek or Latin, and that in the examination for the attachés—that is the Diplomatic Service—they also abstained from taking Greek and Latin. They took the English groups, Italian, Spanish, French, and German, natural science, English history, and so on, political economy, political science, handwriting, and mathematics?—I think they can take any of the subjects in the Class A list.

37,018. Provided they do not get over the 4,000 marks?—Yes.

37,019. None of them took Greek and Latin on this occasion, or mathematics?—I see that.

37,020. We can get information on that from the Civil Service Commissioners?—Yes.

37,021. (Sir Henry Primrose.) Have you many men in the Foreign Office who have taken their degree at the university?—Yes, a good many men.

37,022. And men who have taken honours?—Yes.

37,023. (Chairman.) How do you count the two years during which papers are kept in the sub-registry?—From 1st January to 1st January—the calendar years.

37,024. (Mr. Graham Wallas.) Some of the work done in the Foreign Office is rather closely akin to the work done in the Board of Trade, is it not?—They deal, of course, with trade in various countries through our consuls, yes.

37,025. But sometimes it is your duty to work in close conjunction with the Board of Trade?—We always do that, but there is a certain division of work.

37,026. And some of the work of the Board of Trade is very closely akin to work done by the Consular Service?—Quite so.

37,027. Has it ever happened that a man has been transferred from the Board of Trade to the Foreign Office or the Consular or Diplomatic Service?—I do not remember any instance.

37,028. Nor from the Diplomatic or Foreign Office Service to the Board of Trade?—No, I do not remember an instance of it.

37,029. In the case of the Diplomatic Service the financial difficulty would stand in the way?—Transfers to the Diplomatic Service are really unknown except from the Foreign Office itself by way of exchanges. I do not think from any other office people ever have been transferred to the Diplomatic Service.

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

37,030. Supposing the financial difficulties were got over, do you think it would in certain cases be an advantage that there should be men in the Foreign Office and the Diplomatic Service or Consular Service who had experience of the Board of Trade and *vice versa*?—Yes; but it would be very necessary that the men who had experience in the Board of Trade should also have very large diplomatic experience. I think merely to go out with commercial experience would be hardly sufficient.

37,031. Cannot you call to mind cases in which it would be to the advantage of both services that there should be a certain amount of common experience; that is to say, that there should be men in each service who had some experience of the other?—Our commercial work is very largely done by the commercial attachés, who work for a time in the Board of Trade and who are closely connected with it.

37,032. That is to say, they are seconded to the Board of Trade while remaining attachés?—Yes.

37,033. But on the other hand no person who starts at the Board of Trade can afterwards become an attaché?—It has never been done; but there is no rule against it.

37,034. Some of your work again is rather closely allied to some of the work done in the Colonial Office?—I should say not so closely allied. We deal with questions which may occupy the attention of any Government office. Any question of foreign relations of which the subject is a colony naturally engages the attention of the Colonial Office, but the Colonial Office deals largely with administering territories, and those are questions we do not deal with.

37,035. You actually transferred a large lot of work in Protectorates to the Colonial Office?—That is because we were doing work which was not ours.

37,036. That is to say, it was work on the edge; you were doing work which was akin to theirs?—It was, and that is why we got rid of it.

37,037. Has there been any exchange of personnel in connection with the Colonial Office?—In connection with the transfer of Protectorates several of our men were, I think, transferred from our office to the Colonial Office.

37,038. But no men transferred from the Colonial Office to the Foreign Office or the Diplomatic Service or the Consular Service?—No.

37,039. Then to shift to the internal arrangements of the office, I understand that in these various departments of the political service there are no subordinate officials. The department consists entirely of higher officials?—They are subordinate in years and rank, of course, but they belong to the upper division.

37,040. But the subordinate and routine work is done in these political departments by members of the registry, or the library, or copying staff?—To the extent of keeping registers and indexing.

37,041. In the case of registry and indexing, while they are supposed to be part of a general registry service, in fact a good many of the men are assigned, under the name of a sub-registry, to some one or other of the political departments?—That is accidental. The sub-registry is worked by floors; we have one on each floor. The object of the sub-registries when instituted was to promote dispatch and to avoid delay, and therefore they were placed on the separate floors, and whatever departments are on one floor deal with that sub-registry. We from time to time change the location of the departments according as they grow or dwindle. At present the lower floor is entirely occupied by the political department, but that is an accident, it may change to-morrow.

37,042. But there will be no difference except in name if these persons who are called members of the staff of the sub-registry attached to, say, the Far Eastern Department become subordinate officers in the Far Eastern Department?—They are not attached to any department.

37,043. But in the sub-registry they work for the department?—They may have the papers of all the departments on that floor, and there are generally three or four departments.

37,044. The Ridley Commission criticised very severely a number of the more mechanical sides of your arrangements. It took two years to bind the papers and they disappeared for the two years during which they were being bound; but that is all old history now?—Yes; the binding has been abolished. There was a good deal to be said for the old system, and nobody has yet known how to overcome the difficulty when the time will come to bind them. It will have to be done some day when these papers go to the Record Office. The difficulty has been shelved at present.

37,045. Invention may have gone so far that it takes less than two years to bind them?—It never took two years to bind them.

37,046. (Chairman.) Have you ever consulted the method which they have of dealing with these papers in the Treasury?—Yes, I, myself, examined carefully into the registries of all the Government departments before the system we have now was introduced.

37,047. (Mr. Graham Wallas.) Then, except on your own initiative, do you receive suggestions from the Treasury or from the Stationery Office as to methods of filing and dealing with documents—labour-saving apparatus?—No.

37,048. At present it depends upon whether it appears advisable to you to try and find out what is being done?—Yes.

37,049. There is no organised arrangement by which the Government suggest to you that there is some new method or invention which has been made to help you?—None.

37,050. In your department labour-saving apparatus—if I may so call it—is very important, because you very often have to use very highly paid work for routine purposes?—I should say not, unless you think the second division clerks are too highly paid for the work they do.

37,051. No. For instance, in the old days a Foreign Office clerk used to have to copy documents in his own hand?—But that has all been altered.

37,052. Now you make him copy by typewriter?—Rarely. It is nearly all done by the lady typists.

37,053. How are your lady typists selected?—I think they are personally selected.

37,054. I know, but there are 5,000,000 persons in London only. What steps are taken to ascertain that you get the right persons?—I must inquire about that; I cannot tell you; I do not know. (Mr. Tilley.) The private secretary to the Secretary of State has a list of candidates, and I think they pass a qualifying examination.

37,055. How do people get on to the list of candidates?—I do not know how.

37,056. (Chairman.) You may send us a memorandum upon that?—(Sir Eyre Crowe.) Yes, I will find out.\*

37,057. (Mr. Graham Wallas.) Do your typists act also as shorthand typists?—(Mr. Tilley.) Two or three of them do.

37,058. Do they attend on high officials to take down documents in shorthand sometimes?—Yes, chiefly the Permanent Under-Secretary of State.

37,059. They are paid at the ordinary rate of shorthand typists?—Yes, the ordinary rate.

37,060. Have you ever received a request from them that when they are, in fact, for many years doing important secretarial work of that type they should be paid at a clerical rate rather than the typists' rate?—I do not think so. We have only two qualified shorthand writers, and they have not been working very long, only a few years, so I do not think the question has arisen.

37,061. (To Sir Eyre Crowe.) You said in each subject in the examination for the Foreign Office there are qualifying marks?—Yes.

37,062. You mentioned half-marks; do you mean that failure to get the qualifying marks in any single

\* The lady typists are recruited from a list of applicants kept by the private secretary to the Secretary of State. When there is a vacancy the Secretary of State nominates four or five candidates who pass a competitive examination. No special steps are taken to obtain candidates, but they must produce satisfactory recommendations.—E.C.

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

subject disqualifies a candidate absolutely at the examination?—That is so as regards French and German, but it is really a technical question for the Civil Service Commission.

37,063. (*Mr. Boutwood.*) I am not quite clear on the question of transfers between the Foreign Office and the Diplomatic Service. You spoke at one time of transferring a man from the Diplomatic Service to the Foreign Office when there is a vacancy in the Foreign Office. When that happens is he transferred permanently?—I was referring to permanent transfers, and if you want a permanent transfer without an exchange you can only do it when there is a vacancy which you can fill.

37,064. Do you have permanent transfers from the Foreign Office to the Diplomatic Service?—Yes, they are rare, but they happen in both cases.

37,065. Who are the commercial attachés? Are they the ordinary diplomatic men, assigned to commercial work, or a different class?—They are a different class. They are generally recruited from the Consular Service, but they are special appointments. They may be recruited from almost anywhere, but generally they are taken from the Consular Service—sometimes a Foreign Office clerk is appointed.

37,066. Is there any special examination?—No special examination for that post.

37,067. (*Chairman.*) They must have passed into the Consular Service?—Yes, or been Diplomatic or Foreign Office clerks—we have had some from each branch.

37,068. (*Mr. Boutwood.*) There is one term here that rather puzzles me because I am not conversant with your organisation. I see the Foreign Office assistant mentioned once or twice. For instance, in the paper submitted from the second division clerks they talk about some posts in the Treaty Department being given to the Foreign Office assistants?—The “assistant” is a designation of rank and position. We have three classes of clerk on the diplomatic establishment—senior clerks, assistant clerks, and junior clerks. They are three grades.

37,069. They are grades in your higher division?—Yes. The word “assistant” is also used in its ordinary and non-technical sense in the case of other appointments, such as the second in command in any department, whether belonging to the higher division or not.

37,070. So this particular complaint of the second division means that the posts they were looking forward to have been filled by higher division men?—Yes.

37,071. I thought it meant that; but when you go to the Report of the Ridley Commission there must be some other kind of “assistant,” because they recommended the abolition of supplementary clerks. In the first place—it is only ancient history, but I should like to know, who were those supplementary clerks?—They were clerks who passed generally a high examination, but they were a different class and differently recruited, and had an examination of their own. In our office they were partly also subject to nomination.

37,072. Comparable with what?—They were a class of their own, something intermediate between what is now the upper division and the second division. When the extension of the second division was made it was recommended that they should be abolished.

37,073. And then it is said, “the Foreign Office accepted that recommendation except in the case of ‘assistants.’” That is another sort of assistant. That does not mean a grade in your higher division?—I do not quite understand the allusion.

37,074. The Ridley Commission recommended virtually the abolition of the supplementary grade, and then the Foreign Office accepted that recommendation, “except in the case of assistants”?—Where does that statement occur? We agreed—as all the offices did—to the abolition of supplementary clerks. As a matter of fact, we have one left who is now the assistant in the chief clerk’s department. I do not know whether that throws any light upon it.

37,075. Perhaps it does?—But there was no question of not accepting the recommendation—on the contrary, we made all preparations to fill their places with second division clerks. (*Mr. Tilley.*) We promised to

promote second division clerks, but not to be “assistants” in the Treaty Department or in the Library. We promised to fill posts which had been held by what is called first class clerks in the Treaty Department and Library by the second division, but not the post of “assistant” in Library, or “assistant” in the Treaty Department. That is what is meant.

37,076. Going back to your registry, it must be a rather complicated process. How long does it take before a letter reaches the man who has to deal with it?—(*Sir Eyre Crowe.*) It depends a little upon the previous correspondence to be consulted, and also upon whether the paper is considered to be urgent or not. I think we deal with our papers more rapidly than any other department, as far as my experience goes. A very large part of our correspondence is telegraphic, and in the case of that correspondence we often get the paper in and an answer sent off in three or four hours, including the time necessary for reference to the Secretary of State.

37,077. The Chairman asked you about the abolition of boy clerks, and the consequence of it, and you spoke of employing junior second division men on that work; but could you really ensure a constant flow away in the course of about six months? Would not it inevitably mean that, against your will perhaps, they would stick at that work somewhat indefinitely?—We have only four such clerks.

37,078. And you think you could work them off into other branches?—We should probably have a certain number of vacancies every year, but, of course, a chapter of accidents might land us with having to keep a man for longer. It could not always be avoided, but then a man might take his turn and come back to it after six months.

37,079. I see in your legal branch there does not seem to be anybody but the legal adviser and the assistant legal adviser?—Yes, we have no legal department proper. Each department works its own legal cases. We get an opinion from our legal adviser, and the correspondence is dealt with in the respective departments.

37,080. So you have not a system of personal clerks to your legal advisers?—No.

37,081. (*Mr. Philip Snowden.*) Are your second division clerks sent to you in the ordinary course by the Civil Service Commissioners?—Yes.

37,082. They do not specially select them on account of what is described as the sense of the greater responsibility of the work in your office?—No, I am sorry they do not. We specify that we want a man who has a knowledge of French, and they pick out men who have done well in French. That is all they consent to do. We made an endeavour when starting the registry to get a principle of selection accepted, but it was ruled out as being contrary to the general rule of the second division service. We must take the men who are assigned to us.

37,083. You think the work of the second division clerks in the Foreign Office is more responsible than that of the second division clerks in the other departments?—Only in the sense that we are dealing with confidential papers—not otherwise.

37,084. But I think Mr. Tilley suggested that they might be paid at a higher scale than the second division clerks in other offices?—(*Mr. Tilley.*) I was speaking of those clerks in my own branch—the Accountant’s Branch—because they do a rather higher class of work than the other second division clerks in the Foreign Office for the reason that they make suggestions and criticisms and do a certain amount of administrative work of that kind.

37,085. They have been recruited in the ordinary second division method?—Yes.

37,086. If they were placed upon a higher scale of salary, is it not possible that there might be some protest from the second division clerks in other Government departments?—I should not suggest that they should be paid higher than the second division clerks in other departments necessarily. I think in the Paymaster-General’s Office, and one or two other offices—the Audit Office—they have posts open to second divi-

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

sion clerks which are more highly paid than the ordinary second division clerks can hope for.

37,087. You suggested that there should be an intermediate grade?—We have practically asked the Treasury to put them into an intermediate grade.

37,088. And you would promote the existing second division clerks into the intermediate grade?—Yes.

37,089. All of them?—Yes. That is what we asked might be done—all the clerks in the financial department.

37,090. (To Sir Eyre Crowe.) With regard to the antecedents of certain members of your staff, and their official history, I take it that all the assistant under-secretaries are men who entered the Foreign Office service in the way that has been described to us this morning?—Yes. Some have entered the Diplomatic Service and some have entered the Foreign Office.

37,091. (To Mr. Tilley.) Are you officially described as "controller of Commercial and Consular affairs"?—(Sir Eyre Crowe.) That is Mr. Law. (Mr. Tilley.) No, I am described as chief clerk. Mine is a financial department.

37,092. I do not know whether you are under the Permanent Under-Secretary of State or the Assistant Under-Secretary of State. There is the Superintendent of the Treaty Department and then there is nobody with more than 700*l.* a year. Where do you come in?—I come in just above the senior clerks, as chief clerk of the Foreign Office. In 1912 my predecessor was one of the senior clerks who was in charge of the financial department.

37,093. What has been your history in the Foreign Office?—I have been on the diplomatic establishment always, in the ordinary political divisions of the Foreign Office, and abroad.

37,094. And now you are at the head of what one might call the financial department?—Yes, financial, general discipline and regulations, and that sort of thing.

37,095. Did you go straight into that department in this position?—Yes. Up to six months ago I was head of a political department.

37,096. Is not the work upon which you are engaged now different in its nature from that which you have been previously engaged in in your service?—Yes, it is certainly different, except that at one time of my life I was in the Consular Department, and my present work is very much connected with the Consular Service. A great deal of my present work is connected with the office allowances, the local allowances, and the general arrangements of the Consular Service.

37,097. Is not yours a post that might very well be filled by a competent man who had served his time, as it were, in the office?—You mean a second division clerk?

37,098. Yes?—I should say not. I have to exercise a certain amount of control over members of the Diplomatic Service, the Foreign Office and the Consular Service, because questions are constantly arising about their leave, their privileges and their behaviour, and that sort of thing, and I am to a certain extent responsible for all those sort of questions. I have to deal with Ambassadors and Ministers in the way of querying their accounts, their proceedings, and their leave.

37,099. But you told us that the ordinary second division clerk has to do a certain amount of administrative work?—Yes. He makes suggestions as to these things. If an Ambassador wants more leave, or to know whether he can have so much leave on full pay, or whether his salary can be increased, and that sort of thing, he comes to me. There are a number of questions of that sort.

37,100. If the second division clerk of more than ordinary capacity had had 20 years' experience in that department with progressive responsibility, might not he be quite competent to fill that post which you now occupy?—It is rather difficult for me to say perhaps.

37,101. May I say this, that experience of the other departments of the Foreign Office or the Diplomatic Service is not essential?—Yes, I must say it is essential certainly.

37,102. Who holds the position of librarian now?—(Sir Eyre Crowe.) We have quite recently appointed

Mr. Blech to this position, who has up to now been in the Consular Service. He was Consul-General at Port Said. We have had great difficulty about this post. It was one of those filled hitherto by a supplementary clerk, and the librarian resigned, and it was very difficult to know what to do with this post. It was not originally contemplated to appoint a second division clerk to it; nevertheless it was considered whether there was anybody who could fill it from the second division, but it was found not. Nor was there anybody on the diplomatic establishment of the office whom the Secretary of State considered to be possessed of the special qualifications required. It is a peculiar post. The question of bringing in a total outsider was also considered but had to be rejected; for while some of our librarian's work is like that of an ordinary librarian, his principal work is very different, because it really means dealing with Foreign Office papers for Foreign Office purposes. It was then decided to offer the post to Mr. Blech, who appeared to have the necessary qualifications. He has done a good deal of historical research work for himself. He has a good pen and has written for the Cambridge Modern History. He distinguished himself when at the head of the Archives of the Embassy at Constantinople, which is a very big place, rather like a small Foreign Office. All that taken together decided the Secretary of State to offer him the appointment, which he has taken, and I feel confident he will be successful.

37,103. Some part of the work of the librarian will be similar to that of the registrar?—No.

37,104. Is it not a sort of glorified registrarship?—No. The librarian is responsible for the whole of the library, which, of course, includes the registry. He has to decide all questions as to the manner of preserving the archives and making them accessible for use; but his chief duty is himself to use the archives and advise on the matters contained in the papers.

37,105. Is the assistant to the librarian a man who entered by this Foreign Office scheme?—The assistant librarian was hitherto a supplementary clerk. When the vacancy occurred it was decided to promote a second division clerk. In fact, the library has grown so much that it was decided to create two assistants, and both of these assistantships have been given to second division clerks specially selected, who, I think, will do very well. The appointments have only just been made—two months ago.

37,106. There is a deputy marshal of the ceremonies with a salary of 350*l.* a year?—That is a special appointment, and is held by an officer who is a survival of the supplementary clerks. He is an official go-between, between the Lord Chamberlain's Department and the Diplomatic Corps. His functions are largely connected with the ceremonial etiquette of the Court.

37,107. Is that a post to which a second division clerk may hope to aspire?—I think that would be very difficult. I do not know what will happen to the post when the present holder is no longer there. We have not considered it. It is quite possible that the appointment may be merged into some Court post.

37,108. The number of staff posts open to second division clerks seems to bear a fairly large proportion to the total number. You have in Mr. Tilley's department four staff officers and nine second division clerks?—(Mr. Tilley.) And the assistant, I might say. (Sir Eyre Crowe.) The assistant belongs to the class of supplementary clerks, and when he goes (which may be next year under the age limit) his post will probably be given to a second division clerk.

37,109. But in the Treaty Department you have a staff officer and two second division clerks?—The staff officer is specially selected for the Treaty Department, and deals with technical questions arising in connection with formalities of treaty making, ratification, the application of Orders in Council, ceremonial, and similar questions, etc., and a certain amount of mechanical work connected with writing Royal letters.

37,110. (To Mr. Tilley.) You cannot be engaged in superintending the work of ordinary second division clerks, because you could not very well have one man to superintend the work and two others to be overlooked in that work?—My department is roughly

29 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

divided into three main branches, and there is a staff officer at the head of each. One deals with the Foreign Office and the Diplomatic Service, one with the Consular Service, and one with the service in the Far East. Each of those staff officers has one, or in some cases two, under-studies, who assist him. The other staff officer is the head of the book-keeping department.

37,111. Is the difference between the work of the staff officers and of the ordinary second division clerks so great as to justify the difference in the pay of the two?—The staff officers are practically at the head of their particular branches, and the others are young men

working under them, who may have just come in; they are juniors.

37,112. But all the second division clerks cannot be new recruits?—No, they are not all new recruits, but they have a varying number of years' experience.

37,113. Would one be justified in assuming that the staff posts are being created in order to, in a sort of way, satisfy the desires for promotion on the part of the second division clerks?—No, I do not think it would be fair to say that. You do require one responsible man at the head of each of these branches dealing with accounts.

## NINETY-FIRST DAY.

Thursday, 30th April 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

His Grace the DUKE OF DEVONSHIRE.  
The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.  
Mr. ARTHUR BOUTWOOD.  
Mr. JOHN ROBERT CLYNES, M.P.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.  
Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. PHILIP SNOWDEN, M.P.  
Mr. GRAHAM WALLAS.  
Miss HALDANE.

Mr. N. E. BEHRENS (*Secretary*).

Sir EYRE CROWE, K.C.M.G., C.B., recalled and further examined. Mr. J. A. C. TILLEY was in attendance.

(*Witness.*) Would you allow me to make a few remarks on one or two points which arise directly out of the evidence given yesterday?

37,114. (*Chairman.*) In addition to, or in modification of what you have said?—In explanation.

37,115. Certainly. You will also be able to make corrections in the proof of your evidence, which will be supplied to you?—A question yesterday related to two papers which were furnished being contradictory. One was an extract from our general Consular Instructions speaking of the Levant Consular Service as being entered through open competition, and another paper spoke of it being limited competition. The fact is that the last edition of the Consular Instructions, as printed, is dated 1907, and the change of introductory nominations in the case of the Levant Consular Service was made in 1909. This chapter of Consular Instructions was furnished for other purposes than this one particular point which occurs in it.

37,116. I think Mr. Tilley said something to the effect that we were referring to instructions which had become obsolete?—It was an extract from the book of Consular Instructions printed in 1907 and not reprinted since. The further point is one of greater difficulty. Sir Arthur Nicolson yesterday readily fell in with a suggestion made by one of the Commissioners that we should furnish an account of the antecedents and the parentage of all the members of the Diplomatic Service.

37,117. Only those who had passed by the open competition. Mr. Snowden asked the question, I think?—The limited competition?

37,118. Those who have been examined by the Civil Service Commission and passed in in that way?—The matter has been referred to Sir Edward Grey, and he says he is in a difficult position. He, and other Secretaries of State before him, have made it a point not to inquire into the parentage of candidates, except as regards their nationality, for obvious reasons. He consequently does not possess the information desired, which, therefore, he could only obtain by issuing a circular of instruction to all diplomats abroad, and it would take some time to get the information, and it is open to misconstruction. It might appear that he wanted to institute a system of investigating what a man's father is in order to decide whether he should

have a nomination or not, and that has been particularly avoided hitherto. Perhaps the Civil Service Commission has the information. If, however, the Commission desire the Secretary of State to issue such a circular, Sir Edward Grey would be glad to be fortified by some official statement on their part in the form of an official letter.

37,119. We do not want to get from Sir Edward Grey anything contrary to the rules of the department so long as we know the rules?—If the Civil Service Commission could supply the information Sir Edward would have no objection.

37,120. We have asked them to supply it; if they can do so, no difficulty arises, and if they cannot do so we will consider your statement?—And then, perhaps, you will address Sir Edward Grey officially. He is willing to act as desired, but he wishes for some authority.

37,121. If the Commission consider it desirable we will address him?—Thank you.

37,122. (*Mr. Graham Wallas.*) You have been kind enough to give us a memorandum respecting the nomination system, and if you turn to page 9 of the memorandum you will find it stated: "It is therefore on the one hand manifestly desirable that there should be some means of excluding from the Diplomatic Service individual persons whose circumstances of birth, parentage, or upbringing are such as would in all probability condemn them to official sterility, or make their employment in some of the more important countries a practical impossibility?"—As I said just now, the only cases where we do require information as to parentage is where the statement is not furnished by the candidate that his parents were both of them born in the United Kingdom, or where there is a *prima facie* presumption of foreign extraction.

37,123. This statement in paragraph No. 25 has to be limited by what you say?—Yes, it has. You will find it is limited by the connection in which it appears, namely, in connection with nationality chiefly.

37,124. If the man is of British nationality?—British nationality alone, no. We require him to say that both his parents were born in the United Kingdom. If that is stated then we do not generally inquire.

30 April 1914.] SIR EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

37,125. You get no further information about his birth, parentage or upbringing?—His upbringing, yes, but not his birth or parentage.

37,126. (Sir Kenneth Muir-Mackenzie.) Do you mean that when an application is made to the Secretary of State for nomination of a young man, the Secretary of State does not know who his father is?—No.

37,127. (Mr. Boutwood.) He does not know what his father is?—The information may be available, because it may be that the father applies for the nomination. No doubt that sometimes happens.

37,128. (Chairman.) But on such an application would the Secretary of State not make inquiries?—No.

37,129. None at all?—No.

37,130. Then when the boy goes before the Selection Committee would the Selection Committee make inquiries on the point?—No; apart from the question of nationality they would not inquire as to the status of his father. They go entirely by their personal impression of the candidate.

37,131. (Mr. Graham Wallas.) Even if his name is obviously a foreign name, if his parents were both born in England, do you make no further inquiry?—If it is obviously foreign I think inquiry might be made.

37,132. Then you judge in that case from the name?—Yes.

37,133. (Chairman.) The Civil Service Commissioners have to examine him?—Yes, when he has got his nomination.

37,134. Then do not the Civil Service Commission issue to him any paper to be filled up by him whereby they may be informed as to his parentage and upbringing, as is done, I believe, in connection with the ordinary Civil Service examinations?—I am sorry I cannot say.

37,135. We will find that out from the Civil Service Commission?—They are not papers which are furnished to us.

37,136. At the moment it seems to me an extraordinary degree of abstinence on the part of the Foreign Office?—I have not myself sat on the Selection Board, but this is the information given me by Sir Edward Grey's private secretary that a particular point is made of refraining from inquiring into the antecedents of candidates.

37,137. I think there must be some misunderstanding?—It was very explicit. The Selection Board mainly limit themselves to personal impressions of the candidate himself.

37,138. When a candidate desires to apply for an appointment, is the candidate furnished with any form from your office on which the application is to be made?—I believe there is no prescribed form. He is told that an application or a recommendation must be made by somebody who is known to the Secretary of State.

37,139. No form on which the application is to be made giving certain information and certain details regarding the candidate?—I am not sure that there is. I believe almost any statement is accepted, but candidates are required to give certain particulars as to upbringing, as to schools and certificates of masters.

37,140. You can only give this information second-hand?—Yes. I never have sat on a Selection Board.

37,141. Who can give information first-hand?—Sir Arthur Nicolson sits on the Selection Board.

37,142. I did not ask him the question?—He presides over it, in fact.

37,143. Who deals with these applications for nomination?—The private secretary.

37,144. Would not the private secretary be the proper person to inform us?—Certainly.

37,145. I think we must ask Sir William Tyrrell to come here. At the moment I, myself, cannot see any objection to requiring a candidate applying for a nomination to state what his father's profession was, what schools he was educated at, and so forth?—Information as to the schools we insist upon, but I understand the reason for refraining from asking the former question is the desire to avoid any idea of nominations being refused on account of a man's parentage.

37,146. Has that self-denying ordinance been long in force?—That I cannot say. I am told it is the established rule.

37,147. We shall get it from the private secretary?—Yes.

37,148. In the meantime we will get from the Civil Service Commission what information they have?—Quite so.

37,149. With reference to the question of pay which we discussed at some length yesterday, it occurs to me to put to you some questions regarding the appointment and the emoluments of the naval and military attachés. Are they appointed by the Board of Admiralty and the War Office?—The Secretary of State appoints them, but the appointments are made on the proposition of the Secretary of State for War or the First Lord of the Admiralty. Their salaries are borne on the War Office or Admiralty Votes. We do not meddle with their salaries at all.

37,150. Are they given any allowance beyond their regimental or staff pay?—I believe they are given a fixed rate of pay whilst they are attachés. (Mr. Tilley.) They have a special salary.

37,151. Does that salary vary with the place at which they are stationed?—Yes, I think it does. (Sir Eyre Crowe.) The pay is not given in our lists, as it does not figure in our estimates at all. We could find out from the Admiralty or the War Office.

37,152. Is the appointment for a limited period?—Yes, generally, I think, for four years.

37,153. It may be extended, I suppose?—Yes, or it may be shorter.

37,154. They are proposed by the War Office or the Admiralty, as the case may be, and the appointment is made by the Secretary of State?—Yes.

37,155. Is any regard at all paid to the existence of private means?—I believe it plays a large part in the selection which the Army and Navy make for the posts. I understand there is often considerable difficulty on that score.

37,156. Shall we get that information from the Admiralty and the War Office?—Yes.

37,157. You could not furnish it?—It would not be authoritative.

37,158. But the naval and military attachés form part of the life of the embassy?—Yes they are part of the regular staff of the embassy. They report to the Ambassador, and take their instructions from the Secretary of State for Foreign Affairs.

37,159. (Mr. Boutwood.) Is the same true of the commercial attaché?—Yes, except that he is selected as well as formally appointed by the Foreign Office.

37,160. (Chairman.) So that if there was any definite rule introduced in regard to the emoluments of the Diplomatic Service it would also, in order to ensure equitable life in the embassy, have to apply to the naval and military attachés?—It would, equitably.

37,161. (Mr. Shipley.) I was away yesterday and may ask questions which you have already answered. The ordinary first class clerks in the Foreign Office pass in exactly like the Treasury or other clerks, or do they have to know special French and German?—It is the same as for the Diplomatic Service.

37,162. You have officers going to Ceylon, and so on. Are they taken from the same examination?—No. Those are Colonial Office appointments.

37,163. The Consular Service is a different examination?—Yes.

37,164. The Levant Service is also a different examination, and they are paid when they pass in until they qualify?—There are different systems. The Levant Service is differently arranged from the China Service. In the one case they receive their pay and go direct to their posts where they are trained—that is in China. In the Levant Service, owing to a change made many years ago, they receive the first part of their training at Oxford or Cambridge, and receive their pay whilst there, and from that pay certain deductions are made for university fees.

37,165. Is that considered to work well?—Yes.

37,166. When they once get in you do not think there is a tendency for them to say: "The Government has spent so much money on me; I need not work

30 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

"very hard" P—I have not heard that. The Government on its part takes security that the man shall really work satisfactorily, and makes the candidates enter into some surety that they will repay the expense incurred by the Government in regard to their training if they do not continue.

37,167. Do you get reports as to their work P—Not by any system of confidential reports, but during their period of training we get reports.

37,168. I gather that you would be in favour of exchanging from the Diplomatic Service into the Foreign Office and *vice versa* rather more than is done at present P—It is done very much at present. Whether it could be still further extended I do not know, but it is very common now.

37,169. Do you think also that the Consular Service could be interchanged with the other with advantage to the Service P—Not with advantage to the Service.

37,170. There have been wonderful cases—Sir William White started as a consul P—There have been cases where consuls have been appointed to diplomatic posts with great success—quite a number in the Service now were originally in the Consular Service, but that is not a regular system. Those are exceptional appointments.

37,171. Exceptional men P—Yes.

37,172. In France are not all these three branches one P—No, not in fact. The Consular Service in France is entered by the same examination as the Diplomatic Service, but after passing the examination the men are appointed to either one or the other.

37,173. How are the translators at your office paid P—We have three translators, and they receive a fixed allowance in addition to their pay of about 100*l.* a year. They are expected to translate documents from practically any except Oriental languages, which we refer to the British Museum. No French documents are translated, and a certain number of German documents are not translated, but other documents have to be translated unless they reach us translated from the embassies and legations abroad; a large number of translations are made there.

37,174. You do not call in outside help P—Sometimes, if there is special pressure—a Royal Commission might ask for a translation of a long law of Denmark, which would take a very long time to translate, and in such a case we should get special permission from the Treasury to employ outside translators.

37,175. Is the accommodation at the Foreign Office adequate for the staff P—It is just adequate. We have expanded a great deal, and if we are going to expand very much more we may become cramped, but at present we have sufficient room.

37,176. (Chairman.) Do the translators work under the librarian P—No, in the departments. They do the translation work out of office hours.

37,177. (Mr. Hoare.) What kind of officials are they P—Junior clerks on the diplomatic establishment.

37,178. Do they get the appointment by examination P—Yes, competitive examination.

37,179. With an extra allowance P—Yes; they draw an allowance in addition to their pay, and the work is done out of office hours.

37,180. The number is limited P—To three.

37,181. (Chairman.) They are on the ordinary diplomatic staff, and specialise in a particular language P—Yes.

37,182. (Mr. Matheson.) You have one or two clerks in residence P—Four.

37,183. Do they draw extra pay P—They draw an allowance of 50*l.* a year and quarters. They do night duty chiefly.

37,184. They have to deal with anything that comes in when nobody else is there P—They come on duty as soon as the departments close and remain on duty until the departments open, and I may say their work consists mostly in dealing with telegrams, of which we have an enormous number. They have to get every telegram ready and decipher it and send it out in such shape that the Secretary of State can deal with it.

37,185. (Chairman.) Then they have night work P—Yes.

37,186. Are the four on duty every night P—No, they are on duty in turns. One is on duty for a week and he gets a couple of hours off in the day from his ordinary work to give him a rest. Sometimes the work is very heavy. Sometimes the other men in residence help him, but we have periods in which we have to tell off junior clerks to go and work at night with the resident clerks and give assistance.

37,187. (Mr. Matheson.) How long would that appointment last P—They hold it up to the rank of assistant or until they marry.

37,188. It might go on for some years P—Yes.

37,189. (Chairman.) Have you found out whether that has any injurious effect upon their health P—No, I have myself been a resident clerk for 13 years. At times the work is heavy.

37,190. It may keep you up all night P—Sometimes, but that is rare.

37,191. Then it is only by amicable arrangement among the clerks that they are able to have any rest during the day P—During the rest of the day the resident clerk is entitled to two hours off, either to lie down or to take exercise.

37,192. Are the office hours the same as generally—seven hours P—Yes, except that in reality they are a good deal longer. The resident clerk does not come on duty until seven or half-past seven in the evening instead of six, but meanwhile he works in the department during the day.

37,193. When does the office open P—At eleven. The registry is open at half-past ten, but the rest of the staff arrives at eleven.

37,194. (Mr. Matheson.) Supposing some very urgent business has to be dealt with in the morning before the general office work has begun, would one of the resident clerks do that P—He would if he could do it himself. That must be rare. As a rule he would see that it was at once referred to the proper authority at his private house by sending a messenger with it.

37,195. (Chairman.) Have the four clerks quarters in the Foreign Office P—Yes.

37,196. As each of them takes alternate duty for one week; each one is on duty once a month P—Yes.

37,197. If the work is particularly heavy during one night, is it open to the man on duty to call on any of the others to help him P—They must arrange it between themselves. He is responsible.

37,198. But he is not given any power to call upon them; they must arrange between themselves P—That is so.

37,199. (Miss Haldane.) What about Sundays P—He is on duty all Sunday, of course.

37,200. (Sir Kenneth Muir-Mackenzie.) Does he actually sit up in his clothes all night P—He does at times.

37,201. (Mr. Boutwood.) Can you tell me about the assistant in the Treaty Department P There seems to be some sort of grievance that it was given to one of the Foreign Office clerks. What was the reason of that P—The Treaty Department was formerly staffed by the supplementary clerks who were as a class abolished on the recommendation of the Ridley Commission. The Ridley Commission recommended that the lower appointments in the Treaty Department might very well be staffed by second division clerks in future, when the supplementary clerks disappeared. That recommendation did not commend itself to the Secretary of State, chiefly for the reason that since the time that the Ridley Commission made its recommendation, the Treaty Department has been enormously extended and was to be still further strengthened as soon as the supplementary clerks left. The two last of the supplementary clerks resigned last year, and it was therefore necessary to deal with this question practically. There seems to be no doubt that the second division clerks had got it firmly into their heads that they would obtain those posts. But as a matter of fact it became necessary to strengthen rather than run the risk of weakening the Treaty Department, because the work of the Treaty Department has very much increased, largely owing to

30 April 1914.] Sir EYRE CROWE, K.C.M.G., C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

the Peace Conferences, Hague Conventions and arbitration work.

37,202. What do they do in the Treaty Department?—They have a very large number of subjects to deal with. They are much occupied with questions of form and ceremonial—the formalities connected with the conclusion of treaties, the ratification of treaties, the obtaining of the Royal Assent, the King's signature to Royal Commissions, the drafting and actual writing out by hand of Royal letters that pass between the Sovereign and the heads of other States. They also deal with the technical side of various routine legal matters. Extraditions are ultimately decided by the Home Office, but many questions in connection with them have to be discussed in our office; the question of consular marriages now has been transferred to the Treaty Department in view of the staff being strengthened. There is a good deal of routine work to be done as to the application of Orders in Council, the Foreign Marriages Act, rules on nationality and the issue of passports. In addition this is the department which deals with general questions of international law, and that is a matter which has grown immensely in recent years. It was found during the former organisation of supplementary clerks that some of this work had to be kept out of the department because they could not cope with it, and it was considered desirable that in future, as these questions grew more complicated and important, the Treaty Department should take them in hand, and not only deal with the question but actually conduct the personal discussions and undertake the negotiations that were necessary at the Hague, and so on. From this point of view there was no one among the second division clerks really qualified to undertake work of that kind. It was, therefore, decided, with Treasury concurrence, to put the Treaty Department on the same footing as the other departments in the office instead of depressing it to the level of the second division clerks.

37,203. From what Sir Arthur Nicolson said yesterday, I gather really that the progress that a young diplomatist makes in the studies and experience that are supposed to be required of him, depends very largely on his immediate chief—the head of the legation or embassy?—To a certain extent it must depend upon him.

37,204. But does the Foreign Office look after that immediately at all?—Yes, they look after the selection of chiefs.

37,205. But it is virtually left to the chiefs?—Yes, the chief has great authority. I think you might compare it with the effect that a colonel has on the subalterns of his regiment.

37,206. (Chairman.) The chief of a department?—The chief of a mission abroad, either Ambassador or Minister, must have a great influence on the way the work is done by the juniors.

37,207. But you have only three officers on the establishment in the Treaty Department?—The Treaty Department consists now of three of the upper establishment, and we hope that will suffice for a time, but the work is constantly growing.

37,208. (Mr. Graham Wallas.) I understand there are two Boards of Selection in the office, which deal on the one hand with admissions to the Foreign Office and Diplomatic Service and on the other hand with admission to the Consular Service?—Yes.

37,209. I want to consider the methods of appointment for those posts, if there are any, which do not come before these Boards of Selection, and therefore I will ask you with regard to two or three posts whether they do come before the Boards of Selection. I will begin by asking you about the judges. The Foreign Office is responsible for the appointment of four extra-territorial judges?—Yes.

37,210. Does the appointment of those judges come before the Board of Selection?—No. The Secretary of State appoints those largely on the advice of his own legal advisers, but very often he takes the advice of the Lord Chancellor. They are appointments which have to be filled by professionally qualified men.

37,211. Is there a waiting list of applicants for such appointments?—I think there is.

37,212. The word "attaché" apparently has three meanings; a man may be a naval or military attaché, an attaché pure and simple, or an honorary attaché?—Yes, or a commercial attaché.

37,213. The commercial attaché is one of the ordinary staff of the embassy having special commercial duties?—He becomes a member of the ordinary staff of the embassy on his appointment. He is generally chosen from the Consular Service.

37,214. Is he chosen by this Committee of Selection?—No, that is a question of the Secretary of State promoting a man out of the Consular Service, or any body else, to a particular post.

37,215. The military and naval attachés are appointed on the recommendation of the War Office or the Admiralty?—Yes.

37,216. How is the attaché pure and simple appointed?—The attaché pure and simple is the first appointment of a man entering the Diplomatic Service in the ordinary way. It is the lowest grade of the Diplomatic Service.

37,217. The honorary attaché is appointed how?—By pure patronage.

37,218. Again, is there a waiting list of persons desiring to become honorary attachés?—I believe that is a matter of personal communication with the Secretary of State as a rule.

37,219. (Chairman.) He is unpaid?—He is unpaid, and not a member of the Civil Service at all.

37,220. (Mr. Graham Wallas.) On page 5 of the Foreign Office list there is half a page of chaplains—some honorary, and others paid. Take the paid chaplains?—Those are all patronage appointments.

37,221. But they do not come before the Board of Selection?—No.

37,222. Is there a waiting list in that case?—I cannot tell you exactly how that is. The Secretary of State, of course, consults the episcopal authorities. Some of the honorary chaplains are often recommended locally by the Ambassador or Minister on the spot. The Bishops of Gibraltar and for North-Eastern Europe have special visiting power over chaplains, and make recommendations to the Secretary of State for appointments.

37,223. Have you a list of those posts which are honorary and those which are paid, or may a post which is at one time held by a paid official be held at another time by an honorary official?—No, that is fixed in the estimates laid before Parliament. There are only certain paid posts, and the others are unpaid and honorary.

37,224. On what principle is it decided whether a post of chaplaincy shall be paid or honorary?—I believe certain paid posts are survivors. They have been from time to time diminishing owing to parliamentary and other pressure, and those posts where they are paid are special, there being special circumstances which militate in favour of keeping up a paid chaplain. At Constantinople, for instance, there is a chaplain. There there is a large British community, and the embassy holds a very special position.

37,225. Take Madrid?—At Madrid the chaplain has a very small salary.

37,226. The paid chaplain of Alexandria belongs to the Scotch Church. Why was that particular religion taken?—(Mr. Law.) That dates from about the year 1830. It is a survival of the old consular chaplains, of whom only two survive still.

37,227. On what principle is it decided that the chaplain at Alexandria should belong to the Scotch Church, and the one at Constantinople should belong to the Church of England?—There were found a certain number of Presbyterians ready to subscribe a sufficient fund towards the payment of a chaplain, and under an Act of 1834, or some such date, power was given to the Secretary of State by the Treasury in that case to supplement the salary by an equal amount up to a level of 500*l.* a year. There is another one in Brazil.

37,228. Then you have a number of typists in the office. Those, I understand, are not chosen by the Committee of Selection, but are patronage appointments?—

30 April 1914.] Sir EYRE CROWE, K.C.M.G.; C.B. (Mr. J. A. C. TILLEY was in attendance.) [Continued.]

(*Sir Eyre Crowe.*) Yes, made from a list. I have handed in to-day a short note in accordance with what I undertook yesterday. The lady typists are appointed by the nomination of the Secretary of State, and then pass a competitive examination.

37,229. And the ten office-keepers, and so on, are appointed in the same way by patronage without the help of the Committee of Selection?—Yes.

37,230. It must happen from time to time both in the Foreign Office and the Diplomatic Service that some special question—you instanced international law—becomes of recognised increasing importance. Does the Foreign Office ever take steps to secure that some existing officer shall have special opportunities of studying such subjects?—We encourage the study of international law in the office indirectly by giving allowances to junior members of the Diplomatic Service if they pass a certain examination which the Civil Service Commission have established; and as many of our men exchange, it is quite customary for clerks in the Foreign Office themselves to pass that examination.

37,231. What examination do they, in fact, take?—A special examination in international law, and if they

pass they receive an allowance during the time they are, or act as, third secretaries in the Diplomatic Service.

27,232. Is that examination held by the Civil Service Commission?—Yes.

37,233. What other examinations of that type are open to members of the Foreign Office or Diplomatic Service by the Civil Service Commission?—Only languages of certain Oriental countries.

37,234. Languages and international law?—Yes.

37,235. Supposing some question of geography became of great importance, as might happen when a country only lately surveyed became a matter of diplomatic action; do you ever second a man for that special study?—We do not find that necessary. We would expect whoever deals with that matter to acquire that knowledge; it would be his business to do so.

37,236. It is only in the case of international law and purely international law? You never ask a man to study Roman Dutch law?—No, our legal adviser would be ready to give an opinion on that.

37,237. (*Chairman.*) We have no further questions to ask you, Sir Eyre, and we thank you for your evidence?—Thank you.

Mr. J. A. C. TILLEY called and examined.

(*Witness.*) Might I supplement something I previously said to Mr. Snowden? He asked about the duties of the staff clerks in my department. I ought, perhaps, to explain that they do a good deal besides examination of accounts. For instance, all questions which involve the expenditure of public money are referred to them, and all applications for increases of allowance, the consuls' local allowances covering the cost of living, or office allowances to cover office expenses. Therefore these staff clerks have to make suggestions on those subjects which require a great deal more than knowledge of accounts. They have to consider the conditions of life in different parts of the world, and really exercise a good deal of administrative ability in those directions. I am afraid I did not quite explain that they are not by any means only examiners of accounts.

37,238. (*Mr. Philip Snowden.*) Yes, I think we understood that, but would the opinions they express be decisive upon such matters as those you refer to, without some reference to some superior official?—Not decisive. Their experience and their knowledge of different matters is very useful.

37,239. (*Chairman.*) In fact they do, in regard to you, the same sort of work that an assistant clerk would do in reference to the head of his department?—Yes.

37,240. They make their suggestions and you consider them, and you initial them if they are all right?—Yes.

37,241. It is much more than mere mechanical work?—Yes, that is why I suggested that they should be paid rather higher than the other scale.

37,242. (*Mr. Boutwood.*) And they seem to stand apart, too, by themselves from the fact that in their case they hold their staff posts for special work, and not for what is ordinarily the case—mere supervision?—They do not do much supervision; they have only one or two men under each.

37,243. (*Chairman.*) They have only nine clerks to supervise?—Exactly.

37,244. You told us yesterday that all accounts of the various Ambassadors and heads of missions abroad come to your office?—Yes.

37,245. Do they submit their estimates to you in the ordinary way?—No, they do not submit estimates. Estimates are prepared in the Foreign Office.

37,246. The estimates are prepared in the Foreign Office, I suppose with reference to past expenditure?—Yes, with reference to what has been spent by the different embassies and legations.

37,247. But if any additional expenditure is needed do they make representations to you?—They make representations if they require an increase of salary or increase of expenditure of any kind, and we consider whether it should be recommended to the Treasury or not.

37,248. And if sanctioned by the Treasury you embody it in the estimates?—Yes.

37,249. Do you communicate direct with Ambassadors upon any matters requiring elucidation and explanation?—On matters connected with their accounts we do.

37,250. Merely with regard to all financial matters?—Yes.

37,251. Are you competent to pass a final judgment on any disputed matter between you and, say, an Ambassador?—No; it might have to be referred to the Permanent Under-Secretary.

37,252. Would the reference be by yourself or on the initiative of the Ambassador? Are you in a position to say: "This is what should be done," and that would be final if the Ambassador did not object?—That might very often happen, and if he objected it would be referred to the Permanent Under-Secretary.

37,253. If he objected you are not capable of overruling his objection finally?—No.

37,254. It would go to the Permanent Under-Secretary?—Yes.

37,255. You communicate direct with the Permanent Under-Secretary?—Yes.

37,256. So that as far as your relations to the Permanent Under-Secretary are concerned, they are on the same footing as the heads of any other department?—Yes, the same footing practically as the assistant under-secretaries.

37,257. Do you think there is in your office any work suitable for what were called, in our Civil Service investigations, the "junior clerical class," suitable, for instance, for an improved assistant clerk?—I do not think there is much. The two junior men in my department do ordinary registration work, but then a good deal of their time is spent in being trained in accounts and in higher work; they take it in turn to work in one of the other branches.

37,258. You say ordinary registration work. Do you not depend upon the sub-registries for the registration of your letters?—No; we have a separate sub-registry of our own.

37,259. So you do not get your papers from the three sub-registries we have heard of?—No.

37,260. Is there any other registration office in the Foreign Office except those three and yours?—Yes, the secret register in departments.

37,261. Is there a special sub-registry in the Consular and Commercial Departments?—No, that is served by an ordinary sub-registry.

37,262. In the sub-registry in your department how many clerks are engaged?—Two, but they take it in turns also to help in the accounts branch, and to learn that work.

37,263. In your sub-registry do they write up the index?—Yes.

30 April 1914.]

Mr. J. A. C. TILLEY.

[Continued.]

37,264. Do you keep your papers for two years or a longer or less period?—We keep ours much longer, and we keep our own index in the same way as the other sub-registries.

37,265. Do you make over your index with the papers to the library?—We have not done so yet.

37,266. (*Mr. Philip Snowden.*) I understood you to say just now that you are practically upon the same footing as an assistant under-secretary?—Yes.

37,267. Then why do you not rank as an assistant under-secretary?—I believe I rank with, but after, assistant under-secretaries, technically.

37,268. But why have not you the same designation if you are at the head of the branch?—I think it is a very old title. It has existed for about a hundred years, and it has never been thought necessary to change it. My predecessor was not in the same position; he was one of the senior clerks, and just before my appointment they reverted to the old system.

37,269. Has a promoted supplementary clerk ever held your position?—No. It has always been held by a diplomatic clerk. It is rather important, perhaps, that he should have served abroad at some period.

37,270. Have you served abroad?—I have; so had my predecessor.

37,271. (*Mr. Boutwood.*) Where does your department come in in this memorial from the second division men in the Foreign Office? I have, in Annex No. 1, a statement specifying the work of the various departments in which the staff officers and the second division clerks are employed?—My staff did not join in the memorial of the other second division clerks at all.

37,272. Are your men those who signed this other one?—Yes.

37,273. Do you know whether, as a matter of fact, that general statement about the frequency of transfer of the second division men in your office to other offices is true? In paragraph 15 on page 15 they speak of the second division men in the Foreign Office being very uneasy owing to the extremely poor prospects of advancement, and taking every opportunity of getting out of it; and they say, "In this way a great number have sought transferment, and no less than 17 have obtained employment elsewhere during the past seven years. Most of these were clerks of several years' service"?—I believe that is correct.

37,274. (*Mr. Philip Snowden.*) Then in that case in view of the small number of second division clerks in the Foreign Office you have hardly a single second division clerk on your staff who has been with you during the whole length of his service; your second division clerks have very short service in the Foreign Office?—No; some of them have been over 30 years second division clerks; 17 have dropped out at different times in the last 30 years or so.

37,275. No. It says here: "No less than 17 have obtained employment elsewhere during the past seven years"?—Then possibly none dropped out before, and 17 dropped out altogether. (*Mr. Law.*) Some have come in from other offices.

37,276. (*To Mr. Law.*) Have they come in voluntarily, by exchange?—Quite so. One, who came from the Treasury, made special application to be transferred to the Foreign Office. (*Mr. Tilley.*) A good many of those 17 had been only a few years in the office before transfer. Several were transferred in the last two years to new appointments.

37,277. (*To Mr. Tilley.*) Do you agree that it was because of the paucity of prospects in the Foreign Office that they desired to be transferred elsewhere?—I understand that was the reason. I think one reason is that a great many of our second division clerks came in at the same time, one block two or three years ago, and one when the new registries were introduced. There were large blocks of second division clerks who came in, all very much of the same seniority, and, of course, the prospects of the junior ones of that lot are rather bad for that reason.

37,278. Have you any suggestion to make by which the prospects of the second division clerks could be improved in the Foreign Office?—As regards those two blocks, which certainly is a serious matter, I can only suggest that some endeavour should be made to transfer

some of them to other offices. It is impossible with a large block of men coming in in the same year to hope to promote all of them.

37,279. Cannot you see anything in the way of an increase in the number of superior posts to which they might aspire if competent?—We have done our best just lately by making two assistant posts in the library.

37,280. (*Chairman.*) Are you speaking for the second division in your own department or for the whole of the second division?—I am now speaking for the whole of the second division. We appointed two to be assistants in the library, and they have salaries of 500*l.* to 600*l.* That has created an opening.

37,281. (*Mr. Matheson.*) What is the total number of second division clerks?—There are 36 second division clerks.

37,282. Then the proportion of staff posts is very high?—Yes, I believe it is one of the highest.

37,283. (*Mr. Philip Snowden.*) According to this list it is 21, and eight staff officers—that is 29—and then there are those in the registry where there is no number given. It would be about the number you give?—Altogether about that, not including the staff clerks.

37,284. (*Chairman.*) According to page 13 of this memorial—I suppose we may take it as right—there are in all 40 second division clerks, and 18 staff officers?—I said 36, but in the estimates it is 40 second division clerks.

37,285. (*Mr. Philip Snowden.*) What kind of work will these second division clerks be doing in the Librarian's Department. Can you speak to that? I suppose you have communications with the Librarian's Department?—The staff officers chiefly do research work. The second division clerks chiefly do indexing.

37,286. Is not that the kind of work which might be done by the class of clerk to which the Chairman referred just now? Is it work which is worth paying the maximum salary of a second division clerk for?—I think they must have a beginning. They cannot at once be put on to the higher class of work.

37,287. Perhaps I did not clearly understand the nature of the work, but I gather that it is work of rather a mechanical character?—I do not know whether indexing can be quite called mechanical. Some of it is no doubt mechanical. Perhaps, one or two might be of the lower class.

(*Chairman.*) That will be a point for the registrar, who will come later, to speak to.

37,288. (*Mr. Boutwood.*) Do you think that the 17 transfers can be at all explained by the creation of labour exchanges and the Insurance Commission? Did you lose several men to either of those?—I think we lost one or two to the Insurance Commission. Several have gone to be surveyors of taxes, and one or two have gone to the Board of Agriculture. Several went to new appointments in the last two years.

37,289. (*Mr. Philip Snowden.*) But if they went to be surveyors of taxes they passed another examination and it would be a sort of promotion for them?—That was a sort of promotion. The 17 include those.

37,290. That could hardly be attributed to dissatisfaction with their position as second division clerks, contrasted with the position of second division clerks in other offices?—That is true.

37,291. (*Mr. Boutwood.*) Probably they would have done that in any case whichever office they had been in?—Yes.

37,292. (*Chairman.*) After all, in your department you have five staff appointments and nine second division clerks?—Yes.

37,293. I understood you yesterday to say that you thought you wanted, for the purposes of your substantial work, an additional assistant?—I do not ask for an additional assistant. I said I thought his pay ought to be at least 650*l.* to 750*l.* I thought he ought not to be included in the class of accountants, or the higher clerical class.

37,294. But you have one assistant now?—Yes, with salary rising from 550*l.* to 750*l.*

37,295. I understood you to say that the character and quantity of the work would justify the employment

30 April 1914.]

Mr. J. A. C. TILLEY.

[Continued.]

of an additional assistant?—No, I do not think I said that. I said his salary ought to be rather higher—650*l.* to 750*l.* rather than 550*l.* to 750*l.*; he might even go a little higher. He exercises a good deal of authority. Whenever I am away, and when I cannot attend to things he is in authority.

37,296. (*Sir Kenneth Muir-Mackenzie.*) You recommend that his initial salary ought to be higher?—Yes, higher than 550*l.*

37,297. But if he has been in the Service some time his initial salary does not affect him?—Yes, it is 550*l.* rising to 750*l.*

37,298. (*Chairman.*) But he has been promoted from the second division when he might have reached the maximum of that division?—He will be; but the present assistant is one of the old supplementary clerks, and his time comes to an end next year.

37,299. Do you think there is amongst your staff of second division clerks any man of capacity to be promoted into his place when vacant?—Yes.

37,300. Then he would get his promotion from the

pay he would be drawing at the time—say 350*l.*?—He is getting 500*l.* at present; he is a staff clerk.

37,301. If the Commission were to apply the senior clerical scale to your department, it would be, so far as the clerks are concerned, satisfactory. The scale begins at 85*l.*, going on to a maximum of 350*l.* with staff appointments bringing the maximum up to 500*l.*?—I suggest that they might go to 550*l.*, which is what I think is paid in the Paymaster-General's Department, and some departments of that sort, to posts which include a good deal of administrative work.

37,302. You propose that this assistant, who really is your deputy, ought to begin at 650*l.* or 600*l.*, and go up to 750*l.*?—Yes, 650*l.* to 750*l.* at least.

37,303. (*Mr. Philip Snowden.*) What is the salary of this staff clerk whom you have in mind who might fill the post?—His present salary is 500*l.*

37,304. You suggest that he should jump 150*l.* on his promotion?—Yes.

37,305. Supposing the present scale of salary were maintained he would jump 50*l.*?—Yes.

Mr. ALGERNON LAW, C.B. (Controller of Commercial and Consular Affairs, Foreign Office), called and examined.

37,306. (*Chairman.*) Did you enter the Service in the usual way by nomination and competition?—Yes, by limited competition. On that occasion 22 young men were nominated; there were two places, and I gained the second.

37,307. You were nominated by the Secretary of State?—Yes.

37,308. And you passed the examination before the Civil Service Commission?—Yes.

37,309. Corresponding to the Class I. examination of the Civil Service?—No. At that time the subjects were different from that of the Class I. examination. I had passed the Class I. examination a few months before, and then I gave that up on receiving a nomination to the Foreign Office, and went into that office. The subjects were more or less the same, but it was a different programme.

37,310. How long have you been in the Service?—Just 34 years.

37,311. Have you served abroad?—For a very short time. I went to the Hague for about a fortnight, and I have been on short special missions, but I could not afford to go abroad, because, as I had very little fortune of my own, it would have been quite out of the question, either as a bachelor or afterwards, when I married.

37,312. How long have you been at the head as Controller of the Commercial and Consular Department?—For two years. When a vacancy occurred for an assistant in the Commercial Department it happened to be just when I was next for promotion, and by a curious coincidence the same thing occurred when there was a vacancy in the headship of the Commercial Department. Two years ago I was placed in a different position, and the Consular and the Commercial Departments were placed under me, so that my position is somewhat analogous though senior to that of Mr. Tilley.

37,313. And you take your orders direct from the Under-Secretary of State, or communicate with him direct?—I communicate through the Permanent Under-Secretary with the Secretary of State and also with the Parliamentary Under-Secretary of State.

37,314. Taking the Consular Service, you have a senior clerk, an assistant, and two junior clerks. These four are all on the diplomatic establishment?—Yes. At present there is one senior clerk, one assistant, and one junior clerk in the Consular Department.

37,315. It is shown in this statement that there is a senior clerk, an assistant, and two junior clerks?—There is only one now available.

37,316. Is there any authorised strength for the department?—No. Evidently the Office think that two juniors in addition to the assistant and senior would be a full staff, but we do not always get the full number on account of pressure elsewhere.

37,317. Have you any second division clerks employed in the department at all?—No. Formerly the registry was kept in the Consular Department, and

then there were two second division clerks who did the registry in an adjoining room.

37,318. What is the character of the work done in the Consular Department under you?—It has to conduct the correspondence with the consuls on all subjects practically, except those purely political (which are rare), commercial (which fall into the Commercial Department), marriage, and certain other questions (which fall under the Treaty Department). The rest remains with the Consular Department. Of course the department has a great deal to do with the discipline of the Service—the movement of the various men from one place to another, their pay and their allowances, and all the other subjects with which a consul would normally deal. The mercantile marine is really the great subject—the duties under the Merchant Shipping Act, which are partly under the Board of Trade and partly under the Foreign Office.

37,319. When a candidate passes the examination for the Consular Department, does he spend any time in your office?—He spends six weeks in the Foreign Office and six weeks in one or other of the departments of the Board of Trade. Sometimes the time is prolonged.

37,320. What sort of work is he employed on while with you?—We show him the sort of work that is done in the department and he writes short drafts, and we put him on the way of understanding how the work is managed at our end, so that when he gets abroad he has some idea as to what is required of him by us. At the same time he makes acquaintance with the men in the Consular and Commercial Departments, and we get some idea of his personal qualifications.

37,321. Is he attached to a consulate?—When he goes abroad he goes to one of the big consulates where he is not likely, in the absence of the consul, to be left in charge, so that he is learning his work. The number of independent posts is so great, that after the lapse of a few years he finds himself in a position where he will either be left in charge in the absence of his chief, or he is himself at an independent vice-consulate or consulate.

37,322. How many grades have you in the Consular Service?—The Consular Service, as a whole, is divided into two main branches, that is, the salaried and unsalaried. Dealing with the salaried branch, there is in the general Consular Service first the vice-consul, then there are practically two grades of consuls, ranked according to salary, and three grades of consuls-general, also ranked according to salary.

37,323. What is the official designation of this young gentleman, who, having spent six weeks in your office, is attached to a consulate?—He is a vice-consul.

37,324. The lowest, then, is vice-consul?—Yes.

37,325. Above that is consul?—Yes, and above that is consul-general.

37,326. That ends the gradation?—That is the whole set. But I ought to mention, perhaps, that in

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

every large consulate—in fact, in every consulate—there is a staff of clerks who are usually found locally by the consul; so an entrant does not begin at the very bottom in the Consular Service, but he finds clerks under him.

37,327. I only want to have on the notes the grades of consul. There is the vice-consul, and the next above him the consul. Are there grades of vice-consul and consul, first, second and third vice-consul and first, second and third consul, according to the pay they receive?—There are no grades of vice-consul. There are grades of consul as regards salary, the first grade beginning at 600*l.* to 700*l.*, and then they go to 800*l.*

37,328. And there are grades also of consuls-general?—Yes, beginning at 900*l.*, then 1,000*l.*, and a few at 1,200*l.*

37,329. Who manages the promotions from one grade to another?—The promotion is in the hands of the Secretary of State.

37,330. Is that in your department? Do you deal with the papers before they are sent on to the Secretary of State?—Yes, but though that is in the hands of the Secretary of State, and not in the hands of the Permanent Under-Secretary in the same way that the office recommendations would be made, the private secretary is the medium of communication with the Secretary of State in regard to those promotions or transfers; but as a matter of practice usually one of the private secretaries and the head of the Consular Department and I go through the list when any vacancy occurs, and then we agree upon some recommendation which goes forward to the Secretary of State.

37,331. Through the private secretary?—Through the private secretary.

37,332. So you watch the consular list and when you find vacancies occur, and promotions to be made, you make your suggestions and pass them on to the private secretary, and so to the Secretary of State?—Yes.

37,333. Passing over the Permanent Under-Secretary or leaving him out?—The Permanent Under-Secretary may intervene in some particular case and say: "I think this would be a good appointment to make in the case of this vacancy," but as a matter of practice the ordinary appointments in the Consular Service go through the private secretary to the Secretary of State.

37,334. And the question, I suppose, is taken up in the first place by a senior clerk?—Yes.

37,335. And he makes his suggestions to you?—Yes, it goes through in that way, and then to the private secretary, and then we usually discuss the matter. We take the list according to seniority and go through them and say, would he do, or the other do, and so on.

37,336. Now will you turn to the Commercial and Sanitary Department. What are the functions of that department, which is the second of the two departments under your control?—It has to correspond with the Board of Trade and all departments on matters of commerce, and also with His Majesty's Ambassadors, Ministers, and Consuls abroad; and with the public at home.

37,337. In connection with these promotions in the Consular Service, do you ever consult the Board of Trade?—We do ask the Board of Trade to furnish us with information as to the capacity of consuls in regard to commercial matters. We refer to them every now and then, particularly in regard to the amount of information they send home, and the character of their trade reports.

37,338. This Commercial and Sanitary Department is also connected with part of the functions of consular officers?—Yes.

37,339. I can easily understand their dealing with general and commercial subjects; but what is the Sanitary Department?—It is not a very good name for it possibly. It arises out of quarantine as affecting shipping, and out of that has grown a great number of subjects, so that to a certain extent we deal with public health in its international aspect. I have here a list of subjects dealt with by the Commercial and Sanitary Department: Defence and support of British commercial interests; collection and distribution to other Government departments of information on the finances, trade, and industries of foreign countries, including reports on bounties, subsidies, strikes, labour questions, railways, and

other means of communication, currency, agriculture, crops, etc., foreign tariffs, editing of annual diplomatic and consular reports on trade and finance, supervision of the work of commercial attachés, and of commercial work of the Consular Service. All international sanitary and quarantine questions, including sanitary conventions, international boards of health at Constantinople, Alexandria, and Teheran; sanitary regulations affecting Moslem pilgrims to the Holy places; reports on public health; notification of outbreaks and progress of plague, cholera, and other contagious diseases, including cattle and plant diseases in this country and abroad; notification of the imposition of quarantine measures in foreign ports; also international exhibitions, telegraphs, cables, wireless telegraphy and postal questions; emigration and immigration; copyright and trade-mark questions; national insurance questions in foreign countries; fishery questions; shipping and pilotage questions; arial navigation; international sugar legislation; correspondence relating to the Suez Canal; the Danube Commission; international circulation of motor vehicles, and questions relating to the protection in foreign countries of wild birds and their plumage. That covers practically the whole field of what is not political, or mixed with politics, or the work of the Consular Department, or the Treaty Department.

37,340. Are you familiar with the Report of the Walrond Committee which reported on the Consular Service?—Yes.

37,341. In regard to appointments, they recommended that efforts should be made to get into the Consular Service some young men who had had experience of commercial matters. Has that proved a fruitful source of candidates?—The Committee rather suggested that some advantage should be given to commercial men. It is very difficult to see how, if you have two candidates up, you can give some preference to a man who has had commercial experience. You would have to consider the nature of the commercial experience—whether it was a valuable one or not. But the age of admission into the general Consular Service rather indirectly provides for that. We have had such cases as this, of young men—one in particular I am thinking of who did very well at school, was not well off, and could not go to the university; and his headmaster recommended him to endeavour to train for the Consular Service or for commerce. He said: "I am afraid unless you can go to the university you will not have much chance for the Indian or the Home Civil Service." So he went to Germany; he advertised in the newspapers that he was a young Englishman wishing to be a clerk in a commercial house, and he very soon got an appointment; he served in Germany and in France, and, I think, he also went to the United States, where he acted practically as a man touting with goods, samples, and so on. He has now entered the Consular Service, and has done extremely well since. There are one or two other examples. By having the age limit up to 27, I think it is quite conceivable that we may get a considerable number of young men who, unable to go to a university, go abroad to learn foreign languages in the way that he did, and then come up and pass into the Consular Service.

37,342. Do you think that on the whole you are getting a good and suitable stamp of man now for the Consular Service?—Yes, I think so now. I think there is considerable improvement. There are some really rising young men.

37,343. Are you quite satisfied with the scale of pay for the Consular Service?—I should like to see it improved in some quarters; but we have done a considerable amount in improving the scale. In the general service they enter at 300*l.* a year, and if they go, say, to New York, they get a local allowance of 250*l.* a year, and at Buenos Aires they get 200*l.* a year. Where the expense is very great they get these additional local allowances.

37,344. Do you find that there is any difficulty in making transfers because of the system of local allowance. Are transfers in any way impeded by the system of the local allowance?—If the local allowance in an office is excessive, no doubt a man would be disinclined to go to a place where we do not consider so large a

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

one necessary. But we hope—and I think the Treasury probably will make that hope more or less a certainty—that we do not give a preference to one place over another. I have never heard of any man not wishing to go from one place to another on the score of his having a local allowance where he is. We certainly should not listen to a plea of that kind. Our difficulties there are of another character which I will mention later in connection with transfers.

37,345. If a man in a particular place gets a local allowance, which with his salary reaches 600*l.* or 700*l.* a year, his style of living is formed accordingly and ruled by the larger income; if he is transferred to a place with a lower allowance, because of the presumably cheaper living, he may still find difficulty in adjusting his living to the smaller income?—It is not so much a cheaper mode of living. It is really the excessive prices which, as in New York, men have to pay for the bare necessities of life. The vice-consul's salary is really the salary of a skilled artisan in New York.

37,346. But you have not, in your experience, found that the system of local allowances does in practice impede the power of free transfer consistently with the wishes and convenience of the officers?—I do not recall any case in my experience of two years of managing the Consular Service.

37,347. (*Miss Haldane.*) I was wondering how those men obtained the knowledge necessary for all those manifold duties you have been talking of in the Commercial and Sanitary Department of the Foreign Office?—They do not deal, nor do I, with those various subjects without reference, in any case of doubt, to the other offices of His Majesty's Government. In matters of commerce we are in constant communication with the Board of Trade, and in matters of quarantine we are in communication with the Board of Trade and also with the Local Government Board. On telegraph questions we are in communication with the Post Office, and so on.

37,348. In the office you have no experts in those very technical subjects. That is rather my point?—No.

37,349. It is not necessary?—No, one acquires by experience sufficient knowledge for carrying on the duties with the assistance of those departments which are more expert than ours in those special branches.

37,350. The consuls themselves ought to have a very wide extent of knowledge in order to do their part of the work?—They have got very minute instructions as to their duties which cover a very wide field—I will not say the whole field, because a great deal depends upon tact, judgment, and discretion in the individual man.

37,351. On the whole, do you think that you get men who are competent to perform all those very extensive duties?—Yes, I think so.

37,352. The young consul comes in practically in the same way as the candidate for the Foreign Office or Diplomatic Service, I understand?—The examination is not so severe.

37,353. It is a different examination, but as regards selection, and so on, it is practically the same?—It is practically the same. I am the Chairman of the Board of Selection for the Consular Service.

37,354. The Board sits from time to time?—Twice a year, on the first Thursdays in May and November.

37,355. And you have a list?—We are open to receive practically anybody—any young man who comes forward and applies for a nomination.

37,356. Have you any limitations about birth such as the Foreign Office have?—Yes. We consider that a man who goes abroad to represent this country in a consular capacity should be representative and typical of his own country and the races which compose it. I think that if you had no Board of Selection, no means of any sort of checking the introduction of young men into the Consular Service, you would find from the fact that the examination depends to a very large extent upon knowledge of foreign languages, that you would get more and more into the Consular Service men of foreign origin and foreign surroundings, educated perhaps, though British subjects, entirely abroad,

going abroad representing this country, and being regarded abroad as really not at all typical or representative of the country which sends them, but foreign essentially, and without any knowledge of our constitution, our laws, our customs, our manners, and our mode of thought. So far as I have been concerned in the matter I have always tried to bear that in mind in examining the candidates who come forward.

37,357. (*Chairman.*) Do you get a large number of your men who are partly of foreign parentage?—There are a certain number, and we do admit a certain number who are undoubtedly of foreign parentage, but whose upbringing has been thoroughly English.

37,358. What proportion of the salaried Consular Service is of partly foreign origin, of that kind—10 or 20 per cent.?—Something between 5 and 10 per cent., but that is a mere guess. In some cases it is not apparent from his name what his origin is. A great many foreigners now take English names.

37,359. (*Miss Haldane.*) I gather that the Consular Service is quite unlike the Foreign Office in respect that you make full inquiry about the parentage?—We do not unless we see reason to do so, or unless it has been volunteered to us.

37,360. How do the boys apply usually?—I think they are told how to apply. They write to the private secretary, I think. At any rate, I think they are free to come before the Board of Selection, but it would be useless for them to come up before the Board until they have sent us from their schools the reports of their masters.

37,361. They apply usually through their school-masters?—Yes. They send recommendations either from the Appointments Boards in the two universities, or from their schools.

37,362. Have they mostly been to the universities?—I should not say in the general Consular Service most of them have been; I should say about half. A great many of the young men who have come to us say that they have got the Consular Service as a second string to their bow. They are coming up for the Indian Civil or Home Civil. Some of them think they would like to visit foreign countries; there is a sort of spirit of adventure in them. We ask them: "Why do you think of the Consular Service?" and that is the answer we often get.

37,363. How do you make your requirements known? The Appointments Boards of the universities naturally would know, but do schools have any information?—I think so. We get young men from all sorts of schools.

37,364. Do you advertise, or anything of that kind?—I think the Civil Service Commission provide information. I think it is quite well known about the Consular Service, and is every day becoming more known.

37,365. Are the boys mostly grammar-school boys, or mostly public-school boys?—I think about half and half.

37,366. Do you have a large number of applications for this Service? Is it a popular Service?—Yes. I think the general Service or the Levant Service is most popular, but we have recently found more difficulty about the China Service. But these things come by a kind of tides—sometimes there is a falling off in one sort, and then it comes on again.

37,367. In about how many cases do you allow a nomination?—I think in a day we possibly reject one man out of 20 or 30.

37,368. And the others go on for examination?—Yes.

37,369. The examination, I gather, is not a very stiff examination?—For the general Consular Service it is not stiff in regard to the subjects, but it is stiff now, I think, in regard to competition, so that you get a high degree of excellence in comparatively simple subjects.

37,370. Do you think the examination is well suited to the purpose for which it is designed, namely, to get the best sort of boys into the Service?—I think fairly, but it is one of those things one wants to watch, and I do not see why we should not, perhaps, stiffen the examination for the general Consular Service a

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

little. I think there is no fault to be found in the case of the separate branches of the Consular Service.

37,371. It might perhaps be better adapted to the knowledge which the young men have to have later on?—No, I think it is fairly well adapted to that.

37,372. (Chairman.) Does it really appeal to any high educational standard?—I think a certain amount of strengthening might take place.

37,373. In the statement before me the subjects are: English composition (nothing about history), French, and either German or Spanish, the principles of British mercantile law, negotiable instruments (the principles only), and arithmetic to vulgar fractions and dec'ma's?—But that is on the recommendations of the Walrond Committee.

37,374. It is subsequent to the issue of that report, no doubt, and so far as you have accepted those recommendations it must follow it. It includes commercial geography and political economy, but nothing of the ordinary educational curriculum, such as history?—The general principles of economy as applied to commerce.

37,375. No rudimentary knowledge of Latin or Greek, and no substantial knowledge of mathematics; nothing of chemistry or natural science?—Since I have been connected with the Consular Service the last two years I have thought that the examination was not quite on the proper level. I think it might be further extended to give a more liberal education. I am quite of that opinion.

37,376. (Mr. Boutwood.) What makes you think that? Is it abstract reflection on the syllabus, or your personal connection with the men?—There are one or two men in regard to whom I wonder how they succeeded in getting through; their powers of composition are not very great. But it is not always fair to judge young men when they first come in. They come quite into a *terra incognita*—into a large public office, and they are put down to do work; they have not recovered from a very strenuous examination; they are rather exhausted, and very often they cannot put their best powers into the work. In fact I have known that in the case of a man who passed a most brilliant examination.

37,377. (Miss Haldane.) With regard to the unpaid consuls, does the same rule apply to them about nationality, and so on?—No. The unpaid branch of the Consular Service is a thing that is not generally understood by the ordinary public. There are a great many places, particularly inland places, where you want to have somebody to whom people can go for the purpose of signing documents, notarial acts, and for advice as to lost luggage. They go to them to assist them in any difficulty they have got into with the police, and also with regard to passports—those trivial matters in regard to which a tourist or traveller wants assistance in any country where he is a stranger both as regards laws, language, and everything else. The result has been that all countries have appointed persons eminent in their towns in trade whose position is such that they would have in case of difficulty a certain amount of influence with the authorities of the town.

37,378. I have sometimes thought that there ought to be a difference in name between those two types of consul.—I quite agree with you. The French never give the rank of consul-general or consul or vice-consul to the persons who are selected locally for the appointment of a consular official; they give the name of consular agent, and I think there is a great deal to be said for applying this title to such persons; but at the same time that is an international question, and we might have great difficulty in regard to it. I once mentioned it to Sir Arthur Nicolson, and he thought that it was not a matter of very great importance, as it was a pure question of designation.

37,379. (Mr. Hoare.) What kind of difficulty would it occasion?—Under certain treaties we say that we will accept the consuls-general, consuls, and vice-consuls appointed by a foreign country. Some of these States who cling to the high-sounding titles for these men might say we ought to accept them. Unless we ourselves refuse to accept them it would be rather difficult to expect eminent foreign merchants to accept the title

of consular-agent when there was a representative of some quite minor country who was receiving the title of consul-general. The smaller the country very often the more they go in for appointing persons abroad as consuls-general, and one might find a greater difficulty in securing acceptance by suitable persons of these appointments if we lowered the title which they received in relation to that which others had in the same town. That, I think, is the difficulty.

37,380. Upon what principle are some positions salaried and some not salaried?—It is a case of economy. In some cases we find persons who are ready to undertake rather slight duties in return for the position which that of consul-general gives them in the town. They put up the shield of the Royal Arms and the consular flag, and it is a guarantee to anyone engaged in business with them that they are persons whom we regard as fitting to receive that honour.

37,381. (Miss Haldane.) Are their office expenses paid?—In some cases the office expenses are paid.

37,382. Not in all?—In most cases in Europe, but there are a great many cases in small towns where we give them a fee allowance-of, sometimes, it may be, 5*l.* a year, or 20*l.* a year, which is based on the return of the fees which they take.

37,383. (Mr. Hoare.) It is simply a matter of economy; if a man can afford to pay his own clerks he does, and if he cannot you pay them?—There are some men who behave extraordinarily liberally in this matter. I am thinking of a gentleman whom we employed in a very large capital in Europe, and it is quite certain he spent about 1,000*l.* a year on the upkeep of his office. He paid a man who received the appointment of vice-consul something like 600*l.* a year. One really does not want to receive from a foreign gentleman a sort of gift like that. I think possibly it is rather unfortunate that we should have expected a man—I do not suppose we were fully aware of it—to spend such a large sum on the upkeep of a consular establishment in return for nothing but the name of consul.

37,384. Then you do not have any fixed rule nor any fixed number of paid appointments?—The proportion between the two is that there are throughout the world 365 salaried consular officers, and rather more than double that number of unsalaried consular officers.

37,385. Do you add to the number of salaried appointments from time to time?—Yes, by degrees.

37,386. As a result of the importance of the place?—As a result of the increase of trade and the amount of business to be done. I do not think the increase in the number of posts is very great. There is, I suppose, a slight increase in the number of posts, but there has been an increase in the amount of salary attached to the various posts, as the expenses have increased quite out of proportion to the number of persons employed on account of the increased cost of living throughout the world.

37,387. Do you ever make an unsalaried post into a salaried post?—Yes, sometimes we cannot find a suitable person for an important post where we have had hitherto the advantages of the services of an unsalaried man. Then we have to go to the Treasury and explain the position, that we think there ought to be a salaried officer at that place, and ask them to assign a salary to it.

37,388. Then it sometimes really depends upon the private circumstances of the particular individual whether a particular post is salaried or unsalaried?—No, it depends upon the circumstances of the town—whether there is anybody to be found suitable or ready to take it.

37,389. But supposing there was a man suitable who had means of his own, then you would not go to the Treasury and demand that the position should be made a salaried position?—We might be driven to that.

37,390. In that case it would depend upon private circumstances?—In that particular case.

37,391. Do you ever bring any men from outside the Service into the higher consular appointments?—At one time there was a very great movement for appointing men who had been employed as clerks and so on in consulates abroad, or in some cases men who had been unsalaried as consuls abroad; and they were

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

brought under the old patronage system into the Consular Service. But I think it is very rare for any outside appointment to be made now, because the more you appoint from outside (if you do appoint from outside), the more you would keep candidates away from admission through the ordinary system, and what you want is to encourage the young men to come up for the Consular Service. If they know that some appointments are being given to people who have not gone through the same gate, of course it rather keeps them off.

37,392. What I had in my mind was that in the Diplomatic Service appointments of that kind are not unfrequent, and I wondered whether they ever occurred in the Consular Service as well—cases of a man being brought from outside the Service into a higher appointment?—Not from outside the Service altogether now, I think.

37,393. Take the case of Mr. Bryce in the United States?—That is a diplomatic appointment, and I think it has always been the practice from time to time to appoint eminent persons to be Ambassadors in the same way as sometimes we have appointed eminent consuls to be Ministers.

37,394. Do you see greater objections to doing that in the Consular Service than in the Diplomatic Service?—I do not think it is so necessary in the Consular Service.

37,395. Why?—Because I do not think there is any occasion for it.

37,396. Will you develop that, and say why in the one case there is occasion for it, and in the other case there is not?—Of course, Mr. Bryce was Mr. Bryce. He was a very well-known personality in the United States. That was a case of a high political appointment where the relations between the two countries were of an exceptional kind, and he was, I suppose, thought to be a man who would be a special *persona grata* to the United States, and so his appointment came about.

37,397. I had in my mind the possibility of such a case as this: whether in the case of some prominent business men who would be extremely useful from a commercial point of view in an important commercial centre, it would not be wise sometimes to go outside the Service?—I do not think a commercial man would be of much value in his special line of business if he was ready to sacrifice his position in commerce for the very small remuneration which he would receive as a consul.

37,398. (Chairman.) Do you mean that there may be pure patronage appointments from outside? This list of consuls and consuls-general would seem to indicate that. Take the case of Sir Cecil Hertslet?—You cannot call him an outsider. He was in the service of the Foreign Office.

37,399. He was appointed from the Foreign Office?—He was appointed from the Foreign Office.

37,400. But he was appointed straight to the consul-generalship and did not go through the grades of consul and vice-consul?—That is so. He was in the service of the Foreign Office.

37,401. What was he in the Foreign Office?—Head of the Treaty Department.

37,402. Take another case—Major John Grey Baldwin at Galatz?—His appointment originated in Africa. There is an enormous number of appointments under the office, fewer at present, which originated in connection with the development of Africa. Appointments were made of people who were suitable and some of them were found locally for service in Africa. The conditions of service in Africa are very difficult. Major Baldwin, I think, was appointed at the time of the South African War.

37,403. He was appointed in 1904 as Consul-General at Galatz?—He was first appointed as acting Consul-General at Lorenzo Marques in 1902. He had been in the Army, and I believe he rendered very valuable services, in connection with the war, at Lorenzo Marques. I think the War Office considered that we ought to provide for him.

37,404. Quite so, but it is an appointment made from outside the Consular Service?—When the question was first asked me I thought it was with regard to the appointment of people who were found locally abroad.

37,405. (Mr. Hoare.) I did not mean that at all?—I must apologise.

37,406. (Chairman.) As I understood it, the question was whether persons were brought from outside into the Consular Service without passing the examination and going regularly through the grades?—There are cases.

37,407. Do they continue?—They have continued until more or less recently. I do not know that there has been any case in the last two years.

37,408. There is the case of Mr. Percy C. H. Wyndham, of Bogota?—He is in the Diplomatic Service. His appointment there is in addition to his diplomatic position. There is another appointment—Mr. Lamont.

37,409. I notice several other appointments on the list—take the appointment of Edward Beit von Speyer at Frankfort?—That is unsalaried.

37,410. And Sir William Townley?—That is diplomatic.

37,411. Sir Frederick Duncan of Vienna?—That is unsalaried.

37,412. Then Mr. Max Muller of Budapest?—That is diplomatic.

37,413. And Mr. Mitchell Innes of Monte Video?—That is diplomatic.

37,414. (Mr. Hoare.) Then a number of soldiers I see looking down this list who, I assume, did not come in by the consular examination. Take the consuls and vice-consuls, for instance, in Persia?—A great many of those are Indian officers. They are in the Foreign Department of the Indian Government.

37,415. But it would seem that they are a considerable number of your salaried appointments?—But they do not belong to our service at all; they revert to India.

37,416. But they are given on the list that the Foreign Office has provided us with of the salaried appointments in His Majesty's Consular Service?—Because their salaries are partly paid by the Home Government and partly by the Indian Government. There is an arrangement between the two governments with regard to service in Persia and the Persian Gulf; Baghdad for instance, and Bushire have always had Indian officers—members of the Foreign Department of India—but some of the patronage appointments are anterior to the establishment of an actual salaried graded service entered by limited competition.

37,417. So that your policy would be to keep the Service a graded service?—Certainly; so far as my influence can go it is always to keep the Service for the Foreign Department. There must be a certain liberty to the Secretary of State, who has under him both men in the Diplomatic and the Consular Service, and sometimes he may find it useful to bring a man home to the Foreign Office and sometimes to send a man from the Foreign Office abroad. I think that is a latitude which any one who has the Foreign Service at large under his charge must have.

37,418. (Mr. Hoare.) We were dealing with the salaried and unsalaried posts. On page 13 of the Foreign Office list I find a list of the salaried consuls. In that list I find the names of several gentlemen who apparently have been appointed consuls without previously having been vice-consuls. Take one or two specific cases. Take the case of Mr. Lamont?—Mr. Lamont's was a very exceptional case. He was employed in Africa and he was a remarkably good man. By accepting the appointment of financial adviser and receiver of customs to the Republic of Liberia he rendered the Foreign Office very useful service, and he was then made consul at Boma in 1911. That was a special case in which the Secretary of State took a personal interest, and he considered that he was so useful a man and had rendered such excellent service that his was a very suitable case for special appointment.

37,419. Would that explanation also apply to Mr. Grant the consul at Tonga who was appointed consul in 1913 without previously having been a vice-consul?—That is unsalaried.

37,420-1. He is put down in the list of salaried consuls?—That is because he receives a salary from the Colonial Office.

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

37,422. Why is the salary of some consular posts carried on the diplomatic Vote and some on the Vote for the Consular Service?—Those carried on the diplomatic Vote are in the cases of men who are primarily diplomatic officers and who for special or local reasons have the rank of Consul-General. In Persia there must be a Consul-General under the Persia Order in Council. He has certain judicial duties to perform in certain cases. In Monte Video it is really for convenience. He is given consular duties to perform in addition to the diplomatic, but they are rather those of supervising the actual consular officer who is under him. It is practically from the point of view of economy. In former days all the Ministers in South America were also Consuls-General.

37,423. Was that a good thing?—It sufficed for a time, because we wanted a diplomatic officer for communication with the Foreign Offices of those countries. Their main duties were consular in connection with shipping, but with the growth of our relations with those countries, and with the growth of their own importance, and also in order to meet what is the wish of the countries themselves out there, it is necessary to have diplomatic officers for the ordinary duties of diplomacy. Therefore, what was a combination is now no longer possible, and Monte Video is a survival.

37,424. Then there are one or two points with reference to the fees that I cannot quite understand in the list we have. How, for example, is it that the fees which the Consul-General receives in Paris amount, roughly speaking, to about 2,000*l.* a year, whereas the fees of the Consul-General in Berlin amount to about 500*l.* a year?—There is an enormous English population in France, and there is an enormous number in France of holders of securities which are paid in London, and a great many people have to sign all sorts of declarations in connection with their holdings, some for exemption from income tax, and all sorts of legal matters. I believe that the number of those documents that have to be signed at the consulate is tremendous. Then a fee of 2*s.* 6*d.*, and in some cases 5*s.*, is charged, and stamps cancelled to that amount.

37,425. Is that the reason why the fixed salary of the Consul-General at Berlin is 100*l.* greater than the salary of the Consul-General in Paris?—There is no relation between the amount of fees taken by a man and his salary.

37,426. But is the salary of the Berlin Consul-General greater than the salary of the Consul-General in Paris because his fees are so much less?—No, it could not be that.

37,427. Who takes the fees?—The Government. All fees are taken by the Government, and, in certain cases, the consul is allowed to retain a portion of the fee under the Consular Salaries and Fees Act and Order in Council thereunder, Parts II. and III. of the Table of Consular Fees. Those are chiefly for attendances. When a man has to attend at night, or sometimes to go and ship seamen at night, or go some distance from the town, and so on, out of office hours, there is a charge for attendance made, and a stamp cancelled to that amount—1*l.* or 10*s.*—and the consul puts it into his account that he has retained so much of that fee, in accordance with the Act and Order in Council.

37,428. But apart from that he retains none of the fees?—None.

37,429. Does that apply to unsalaried consuls?—Exactly. All consular fees are remitted to the Government. It is all a matter of account; it all goes in to the Government. In certain cases where new appointments of unsalaried men are made, they are allowed to retain 75 per cent. of the fees. But, of course, we know what the fees are, because stamps are cancelled to that amount. It goes into his account, and he credits himself with so much of the fees.

37,430. The criticism has sometimes been made that the Consular Service is not in sufficiently close touch with finance and commerce. Do you take any steps to consult representative business men in London, for example, as to policy in connection with the Consular Service?—We consult the Board of Trade on commercial matters, and if there was some financial matter we could not deal with ourselves, we should,

probably, consult the Treasury. But I do not know what financial questions would arise exactly in connection with the Consular Service.

37,431. Perhaps I ought to restrict the question to commercial questions. In commercial questions you do not go outside the official channel of the Board of Trade?—No, we go to the Board of Trade; and the Board of Trade, so far as commercial intelligence is concerned, has at its side an advisory committee which sits several times in the course of the year, consisting of eminent commercial men. The Board of Trade consult that committee on many questions connected with the obtaining of commercial information. I am an official member of that committee, and have been a good many years. There are also official members representing the India Office and the Colonial Office.

37,432. Does every consular district publish an annual report?—Certainly. It is the duty of every consul to provide an annual report. Sometimes for some local reason, or consul's illness, or something of that sort, it may not be supplied in one year, and we have two years rolled into one.

37,433. Those annual reports are presented to Parliament?—Yes, but there is always a slight misapprehension with regard to the annual report. It is a report made showing the course of commercial events and the statistics for a particular district. It is really for statistical purposes, for the purpose of comparison and for the purpose of general information; but they are not intended to provide for the needs of the commercial community from day to day or week to week. Consuls are expected to send home information which will be of interest to commercial persons in this country whenever that information comes into their hands. That information goes to the Board of Trade and is published by them in their journal, and is also sent to persons on their special register.

37,434. Do they take any steps to publish it in the general press?—The Board of Trade Journal comes out once a week, and the press usually make extracts from the Board of Trade Journal.

37,435. But you in the Foreign Office are not in direct touch with the press on matters of that kind?—No, they go to the Board of Trade. We act in the very closest communication with the Board of Trade. We go over to see them and they come over to see us, and we are in constant telephonic communication as well as communication by letter.

37,436. (*Mr. Shipley.*) I want to ask a little more about the examination. The syllabus is rather a meagre one, and you are in favour of strengthening it, I understand?—Yes.

37,437. Would you increase the number of subjects or increase the difficulty of each subject?—I think we might rather increase the difficulty of the subjects.

37,438. Have you ever thought whether it would work well to take the consuls from the general Home and Indian Civil Service examinations, and then give them a year's training, say, at the London School of Economics? Would you get a better class of man, do you think, in that way?—That question was gone into by the Walrond Committee. I was summoned as a witness before that Committee, and they asked me what I thought was the best preparation for a young man for the Consular Service. I thought at that time that possibly the best way was to have an examination which would be suitable for a man of fairly liberal education, that we should get them young, and then that they should be trained, and we should adopt in some sort of way rather the system which is in vogue for the Levant Service, and they should then go to some commercial college either here or abroad and study for two or three years. But Mr. Bonar Law and Lord Inchcape (then Sir James Mackay), both of them commercial men, were of quite a different opinion. They did not think that was the best system. They considered that in business houses there were a great number of young men who went in and who had great commercial aptitude but felt they had no prospect in the future of ever becoming partners in the concern with which they were connected, and they would be very likely suitable candidates and anxious candidates for the Consular Service, and that we should aim at attracting them. I

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

think, as I was saying at an earlier stage of my evidence, that by the wide limit of age that we allow we do afford opportunities for such young men to come into the Consular Service.

37,439. Do you think that the examination and nomination are sufficiently well known, because we always have a vagueness about the Consular Service at Cambridge, though we are very precise about the other examinations?—You have an Appointments Board at Cambridge, and I think Mr. Roberts, who is a member of it, knows all about the Service and is very active. I cannot understand how there can be any vagueness. All these things are very much ventilated in the press, and they will be still more ventilated when the report of this Commission on this branch of the subject is published.

37,440. The examination is held twice a year?—The Board of Selection sits twice a year. The examination is held when there are a sufficient number of vacancies to make it worth while for the Civil Service Commission to hold an examination.

37,441. And that, perhaps, is once in two years?—I think, if there was a regular time for holding those examinations, and if the Treasury would not mind our taking on a few redundant men so as always to have a stock in hand, there is no reason why there should not be a fixed date, and I do think that would be an advantage. People would know when the examination was going to be held.

37,442. I feel very strongly that it would be an advantage, as against the vagueness of not knowing whether there will be an examination within six months or two years?—As a matter of fact they are held pretty frequently, and there has been a very considerable flow.

37,443. It is a thing we might consider in our report, because I think it would be a real help?—It may be.

37,444. (*Chairman.*) Your object of having some men in hand might be secured by your calling up those high on the Civil Service Commissioners' list?—We have done that. But if you have a great flow of vacancies after an examination you get very low down the list, and we have had cases in which both the Civil Service Commission and ourselves thought that the men we were beginning to tap were rather of a low stratum in the examination. On one occasion we were perfectly baffled by it in the case of the China Service, and we then took some young men from the previous Foreign Office examination who passed very well indeed, much better than any of those who had gone through the China examination, and they, with the consent of the Civil Service Commissioners, were put into the China Service.

37,445. (*Mr. Shipley.*) Have you any knowledge of how far the whole Consular Service, paid and unpaid, is bigger or smaller than, say, the Consular Service of other European countries of about our size; because much of the work of ours is in regard to shipping, and one would imagine that the British Empire would require rather more consuls?—I should say our Consular Service—that is the salaried Consular Service—was more numerous than that of any other country.

37,446. With regard to the unsalaried appointments it seems odd, if you look at the Scandinavian countries—Norway, Sweden, Denmark, and so on—that the unpaid consuls are nearly invariably Norwegians, Danes, and Swedes; but when you come to remote parts of the world—South America and so on—they are nearly always people with English names. Is there any particular reason for it?—To begin with, if you went to Norway I do not suppose you would find, except when fishing was on, or in the summer, at the time of the midnight sun, a great number of British subjects at the ports along the coast. For small consulates it is very useful to have local men; they are men who have a high reputation in their native towns, and in case of any difficulty they have great influence with the local authorities, and are really of greater assistance to a trader probably than some British subject who was living there for his health or some other reason.

37,447. Probably they would all be able to speak English?—I should think so.

37,448. Are there many amongst the unpaid consuls who do not speak English. Have you any idea?—They

all profess to speak English, but in some very small out-of-the-way places they are not very fluent, though for all practical purposes they serve.

37,449. Does the Foreign Office supply the enamelled iron coats-of-arms that appear outside the consulates?—Yes.

37,450. (*Mr. Matheson.*) At what age do the candidates generally come before the Board of Selection before the examination?—They come at about the age at which they leave school—about 18 to 20.

37,451. Do you think that they come from a good variety of schools in different parts of the country?—Yes, a wide variety. We have had a good many from Ireland, and a certain number from Wales and from Scotland and England—all parts of the United Kingdom.

37,452. Supposing you were to average the number of vacancies, how many would there be in a year? How many appointments have been made in the last six years?—It would be a very considerable number.

37,453. Would there be really any serious reason against having one examination a year at a fixed time. Would not there be always enough vacancies going?—So far as I know I do not think there would be any reason against it, but there is always this question of sudden calls. I do not know whether I may take the opportunity of saying that we have a very great difficulty in managing the moves in the Consular Service on account of the nature of the climates in the case of so many of these posts. We have now provided, under the last system of grading, that every man early in his career should pass through what you may call the fire zone. There are a certain number of unhealthy posts, and it is only fair that every man in the course of his career should take his turn at those posts. The result is, particularly with the increase in the number of these posts on the West Coast of Africa which has recently been urged upon us, that the health of a great many of these young men fails—sometimes practically permanently—and sometimes they get on to the sick list, and the consequence is that suddenly we find ourselves without a supply of vice-consuls. There has been a great difficulty in filling up the posts. So I feel if there was an examination once a year we should always run the risk of not having enough men. But I do not see any reason why there should not be one period in the year fixed for an examination, and if in the course of the year, say six months after, we require more, there might be a supplementary examination. I do not think that would interfere with anyone's convenience, but probably would meet the convenience of all. I do think it would be a good thing if there was a fixed date for consular examinations.

37,454. (*Chairman.*) Take the years from 1909 to 1913. In 1909 you had four appointments made; in 1910 six; in 1911 eight; in 1912 three; and in 1913 you had 19. That shows the fluctuations?—Yes.

37,455. I suppose I may take the salaried list of vice-consuls as indicating the appointments?—I think that fairly indicates them.

37,456. (*Mr. Matheson.*) Are the appointments subject to the ordinary Civil Service rule of probation?—I think all appointments are subject to that.

37,457. Are there many instances of people appointed being sent away?—No, I do not think there have been. In one year's probation a man may fail in one particular post and may not get on well with his senior consul, and may have some difficulty with him, and we send him somewhere else and see if he does better there. Then we warn him, and if he was continually inefficient and refractory we should no doubt get rid of him. Some people have left the Service, probably because they found the Service was unsuited to them.

37,458. Supposing during the short period during which he is at the Foreign Office first, you came to the conclusion that he was quite unfit for the Service, should you act on the probation rule or should you give him a chance?—I should be very sorry to condemn a man who came in in the first few weeks. I do not think a man necessarily shows at his best at that time. He is probably very nervous entering a new career and very much exhausted by his examination.

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

37,459. (*Chairman.*) The age at which you engage them is 22 to 27?—Yes.

37,460. You do not often get university men—men who have passed an Honours course at the universities?—No.

37,461. Do you not think all your requirements would be secured, so far as an educational test is concerned, if you adopt the standard of a completed secondary education which this Commission has proposed for the "senior clerical class"? With the candidate would lie the choice from among the following subjects—subject to such a limitation of total marks as you might impose—mathematics, English, French, German, Greek, Latin, history, chemistry, physics. The candidates would be allowed to take as many of these subjects as they choose, up to a certain maximum number of marks?—It does not mean that all those subjects are to be obligatory?

37,462. No; to each of those groups a certain number of marks are attached and you would say to the candidate: "You may take as many of those groups as you please, provided the groups you take do not carry an aggregate number of marks in excess, say, of 4,000 or 6,000," or whatever aggregate you fix. By adopting this plan you will bring your examination—so far as possible—into harmony with the general educational system of the country, and thereby maintain a high and a wholesome standard?—Yes, but I would rather make a certain number of those subjects obligatory.

37,463. That would be open to you to do?—French, and some other language, and also political economy.

37,464. You do not recruit university men, and the maximum limit of age is so high—27 years—that no standard of examination suitable for the men you do recruit will be in harmony with existing educational stages. Still, the secondary standard seems the most suitable. But if that standard be adopted, there remains the question of requiring candidates to have a certain knowledge of British mercantile and commercial law, shipping, negotiable instruments, bills of exchange, promissory notes, contracts for carriage of goods and contracts for marine insurance. These are not educational subjects, and unless they form the subject of a professional education they can be "crammed" up in a few months. I suggest that if your examination be directed to testing general education you should not also insist upon the candidate possessing knowledge of these technical subjects. The better plan would be to lengthen his period of probation in your office and afford him facilities for learning them, testing his knowledge before the expiry of the period of probation. In that way you would bring your system of selection into harmony with the system in force for the Indian Civil Service?—I had myself formed the opinion that the standard of the examination was not sufficiently high. I am quite open to consider any alteration of the kind indicated subject, of course, to the limit of age being high in order to meet the case of men with commercial training. My own feeling is that we do have more chance of getting men who have followed the career which I have mentioned than if we had the age too low.

37,465. You would not, I think, under the proposal which I have just sketched in outline, forfeit any advantage which your present methods possess. At the present your syllabus of subjects is essentially such as admits and even demands the "cramming" and "special preparation" which this Commission has condemned?—That is so.

37,466. (*Sir Henry Primrose.*) What determines the Foreign Office as regards whether a post should be filled by an officer in the regular Consular Service or a trade consul?—First the importance of the post, and next whether there is available a man or more men of sufficient standing who would be willing to accept the appointment without a salary. Where there is a great deal of shipping work to be done you must have a salaried man, because, to begin with, the duties under the Merchant Shipping Acts are extremely responsible, and also because there is an enormous amount of work to be done in shipping and discharging seamen and remitting their wages.

37,467. Does the consular officer who is permitted to trade get no pay at all?—Nothing in the shape of remuneration. He receives, in those cases where it is necessary, an office allowance to meet his office expenses; that is to say, it is an estimate of what one particular room in his office costs, and one or two clerks whom he puts aside for consular work.

37,468. Does he get nothing out of the fees?—No, except that under Parts III. and IV. in the Order in Council he would take that proportion which the salaried officer is also allowed to retain.

37,469. Then what is the inducement to a foreigner to accept the consulate? Is it the honour?—The honour and the practical guarantee that he is a man of good reputation.

37,470. Take Vienna, where we have a Consul-General; he is an Austrian?—He is now a British subject—Sir Frederick Duncan, a man of considerable wealth—and he has a cotton or some textile factory in Bohemia and lives in Vienna, and when his predecessor, who was an Austrian banker and was extremely useful to us, decided no longer to continue the duties, we thought we could not do better than select this British subject. He gets a large office allowance, as he has no office of his own in Vienna, so that he may maintain this office, and he has a gentleman who acted under his predecessor as consul—Mr. Philpotts.

37,471. The consuls are not expected to do anything except to attend to the interests of the trader and make reports on trade?—Yes, in an inland place, and shipping work at a port. They report from time to time on any matters of interest to the British community in this country.

37,472. Are they expected to report at all on what may be called diplomatic matters or only upon trade matters?—Not in most places. In the East a great deal of the work is political.

37,473. Then, the fees that they collect are all paid in?—They are all remitted to the Government, and stamps are cancelled to the same amount.

37,474. Looking at the German list, I see that a very large number of the consuls there are Germans in rather important places. At Bremen there is a British Consul. Does he get nothing except just the honour and glory of it, because Bremen is an important place?—He gets nothing more than that. There is a man close at hand at Hamburg with a staff of two or three salaried men under him.

37,475. It occurs to me whether, with considerable fees collected and so on, we get all that we ought to get from employing a foreigner as consul, and whether it would not be desirable, even if it cost a little more, to employ an Englishman?—You referred to the case of Germany, and there we do, as you say, employ a certain number of German subjects, but they have very severe calls on their time, and I know in one case the man is very anxious to be made a salaried officer. I think there is a point beyond which you cannot go in the employment of unsalaried persons.

37,476. Take the case of Germany; there is the keenest possible competition in trade between Germany and this country, and these consular officers are there for the purpose of assisting British trade. Can we feel confident that a German whose interests are primarily those of Germany will really do justice to English traders?—It is remarkable that we do receive, I am assured by the Board of Trade, very considerable information from unsalaried officers with regard to commerce. A man is very reluctant to tell you much about his own business, but he has not that reluctance to tell you about the business of other people. He may not tell you much about the particular branch with which he is concerned, but you will get a good deal of information about those branches with which he is not concerned. The trade relations between Germany and England are so very close that I think the commercial community may be expected to find out for themselves a good deal of what is going on in regard to trade matters in Germany.

37,477. No doubt; but we have a German representative in such a place as Frankfort-on-Main?—At Frankfort we are very well provided for by Sir Francis Oppenheimer, who is a British subject, and who has

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

furnished us, in his capacity as unsalaried Consul-General, with such brilliant reports that he was made commercial attaché. He still resides there, but he asked, when he was made commercial attaché, to be relieved of the formal duties of the Consul-General, and those duties really reduce themselves to notarial acts and the very routine matters which the consul transacts. We do not expect Mr. Beit von Speyer really to give us information or to do anything that an ordinary consul would. He more or less does the routine duties of a consul.

37,478. Then Sir Francis Oppenheimer is still there?—Yes, at his headquarters, but he goes to Berlin, comes to this country, and also visits various parts of Germany; Holland and Scandinavia are also under him.

37,479. A man is appointed for no definite term and there is no limit of age. Supposing that you find that an unsalaried consul is not satisfactory, what means have you for getting rid of him?—We should say that we wanted to make other arrangements.

37,480. Does not it happen sometimes?—Yes, it does, and usually there is no difficulty about it. We merely say that we should like to make a change. It is put to him delicately by somebody.

37,481. (*Chairman.*) Do the general service rules as to limits of age apply to unsalaried consuls?—No. There is a special Order in Council with regard to the Consular Service which carries the age up to 70 for those who came in before the year 1896.

37,482. With the same rules of superannuation?—They are under the Superannuation Acts exactly as a Civil servant in this country is, except that in unhealthy climates two years' residence is calculated as three years for pension.

37,483. And these unhealthy districts I suppose you have scheduled?—Those are scheduled for the purposes of pension and also for the purposes of leave.

37,484. (*Sir Henry Primrose.*) I see with regard to salary 600*l.* to 800*l.* seem to be about the rates, and up to as much as 1,000*l.*; but in most cases where they are 1,000*l.* or more they are really diplomatic appointments?—No, there are a certain number of 900*l.* and 1,000*l.* a year posts, and a few 1,200*l.* a year—New York, Hamburg, and Antwerp.

37,485. Is not Sir Cecil Hertslet a diplomatic servant?—No; but Budapest is a diplomatic post. At least, there is a diplomatic officer in a consular post.

37,486. Do you find that on the whole the salaries paid are satisfactory or do you have complaints at all?—We have had in the past bitter complaints of the great cost of living, and we have induced the Treasury to go a long way towards meeting that demand for an increase.

37,487. For instance, I see the consul at Buenos Aires only gets 800*l.* a year?—But he gets a local allowance in addition.

37,488. That is an enormously expensive place?—Yes, just as expensive as New York. The population is over 1,000,000.

37,489. What do you give the New York man?—He gets 1,200*l.* and 2,000*l.* or 1,500*l.* local allowance.

37,490. Is he a diplomatic officer?—No, he is solely a consular officer.

37,491. Why do you make a distinction between the Levant Service and the Far Eastern and the general Service?—On account mainly of the language difficulty. The examination for the Levant Service provides us with men who have an extraordinary facility for the acquisition of foreign languages. In the case of China, and also Japan and Siam, the language is very difficult to acquire, and our system is to obtain the man and to send him out to those countries where he learns it.

37,492. The examination for the Far Eastern Service is held in combination with the general Class I. examination?—Yes.

37,493. Is that so with the Levant Service?—The Levant Service is a special examination entirely. The result is that we do obtain men with extraordinary linguistic powers.

37,494. Take the candidates who stand for the student-interpretships in the Far East, how do they compare with the successful candidates at the Class I. examination. As a rule, would they, if they were

standing for the Service at large, often be successful?—I should say so, but I should not like to give a considered statement upon that. I would rather the Civil Service Commissioners gave an opinion on that.

37,495. The age is higher; they go up to 25 or 27, and that would make a difference?—I think the age is 24.

37,496. What do you do about the inspection of consulates?—That we have recently taken in hand on a more systematic way than we have hitherto. The great difficulty of any system of visiting consulates is that of selecting the right man for the place. We have great difficulty in devising some system and have recently decided to use, so far as may be possible, the commercial attachés for the purpose of visiting consulates, because in the course of their duty they go round the countries which form their sphere and they have opportunities of seeing how the consulates are managed. To a certain degree we have adopted that system. In some cases there have been special difficulties which prevented us from doing it.

37,497. That is to say, the commercial attaché at Berlin, for instance, would visit all the consulates in Germany?—As a matter of fact the commercial attaché for Germany, Sir Francis Oppenheimer, whose headquarters are at Frankfort, is so fully occupied with his own duties—and he also lacks experience in the ordinary consular routine—that we decided it would be impossible to impose that duty upon him. The consequence is that a consul upon whose capacity we very much rely will visit the German Consulates as well as the French Consulates.

37,498. From the point of view of merely financial control, to see as to the collection of fees and that sort of thing, do you do anything in the way of financial inspection?—The visiting will be a most thorough overhauling of the consulate in all its branches, and seeing how it is conducted; the visiting officer will practically work in the consulate for a day or two to see how it is carried on, and give friendly advice to the consul as to how he should carry on his duties, and endeavour, as far as possible, to introduce uniform methods in all the consulates. That is, I think, a very important thing, because if a man goes to a new place he ought to find the consulate kept in very much the same way in which he kept his own. The Americans have gone so far as to send out special sorts of furniture—bookcases, and so on—so that when a man goes into his consulate he can walk about almost without any light in the room and know where he can find everything, although he may have only entered it the day before.

37,499. The whole amount of revenue that unpaid consuls collect is rather large?—Yes.

37,500. Do you have visitations for the purpose of checking their financial proceedings?—This visiting system will provide for that.

37,501. But in the past what has happened?—In the past there has been a certain amount of visiting, sometimes by people from the Foreign Office, sometimes by diplomatic officers, and sometimes by other consuls. Of course the consul visits from time to time all the vice-consulates in his district.

37,502. Can you say roughly what the consular fees amount to?—Not straight off.

37,503. On the Vote something like 100,000*l.* is taken as a deduction, but I do not know whether that is all from consular fees?—It is rather mixed up in three sets of Services.

37,504. Taking 1912-13 I see appropriations in aid, "consular fees, fines, etc., connected with the general Service, 80,000*l.*"?—That is not complete.

37,505. But those are mainly consular fees, I understand?—Yes, I think entirely.

37,506. Then "fees, fines, etc., connected with the Services in China 16,000*l.*," and some smaller ones?—Yes, Japan and Siam as well.

37,507. Under the new system will it be the case that a man may expect at any moment that an inspector may come down upon him?—Yes, when we have got the system made complete for the whole world, but it is not so yet.

37,508. (*Mr. Boutwood.*) About how many candidates per vacancy do you get as a rule for the general

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

Consular Service?—It is rather difficult to say, because there have been vacancies after the declaration of the poll, as it were, but I should say possibly one in five, or one in six, or that sort of thing.

37,509. When Mr. Hoare was quoting sundry names to you of men who had been appointed consuls without having been vice-consuls, on several occasions you used the word "diplomatic"?—These are Ministers who also have the rank of Consul-General. In some cases owing to there being Orders in Council and extra-territorial jurisdiction of the Minister he is also Consul-General for certain judicial purposes; and in other cases they are mere survivals, such as in the case of Monte Video.

37,510. What happens to student-interpreters after they have finished their training?—In the case of the Levant they go to a university, and they learn there the languages necessary in the countries to which they are going.

37,511. After that what happens to them?—After that they go out to Constantinople, and they are distributed, either to the embassy or one of the big consulates-general.

37,512. Do they become vice-consuls?—No, they first become assistants. In the Eastern Service there are nine student-interpreters, 12 assistants, 29 vice-consuls, and so on.

37,513. It is a separate way of entering the Consular Service?—Yes, only instead of, as in the general Service, joining as vice-consul they join as student-interpreters, and go on to become assistants. In the Far East there are four grades; they begin as student-interpreters, then they become second assistants, then first assistants, and then vice-consuls.

37,514. (*Chairman.*) What does a student-interpretership begin at?—The student-interpreters in the Levant begin at 200*l.*—they go to the university. In Japan they begin at 250*l.* In Siam they begin at 200*l.*, and in China they begin at 250*l.*

37,515. (*Mr. Boutwood.*) Was I right in thinking that this list of "consular officers in trade," is a list of your "unsalaried officers"?—Yes.

37,516. The two bodies are identical?—Yes.

37,517. I suppose that explains the remark I heard once: "I strongly object to a rival in trade knowing my business"?—I do not quite know how he is to know that business.

37,518. Neither do I, but that remark was made to me, and I suppose the one who made it had had dealings with one of those men?—I do not know how that may be.

37,519. With regard to the examinations, your present examination seems almost of a professional type. It seems intended to secure the actual needs of the Service rather than addressed to any particular educational standard. When I was listening to what other Commissioners said, it seemed to me that the age which you fix (which is apparently a necessary age) almost excludes the idea of co-ordinating your examination in the way that has been suggested, because, if you have this school examination suitable for boys of 18, what is the good of asking a man of 22, 23 or 24, to say nothing of one of 25, who has been three years in the City to sit for it, when he has probably forgotten all about the subjects? Does not your need for an older type of man with sufficient special experience rather place your examination in a category by itself to which the idea of co-ordination with the general educational system may be inapplicable?—I am bound to say that I had not considered it from that point of view. It may be that a man would not be up to going in for the examination some years after he had left his studies, but if, as I suggested, we made a certain number of foreign languages obligatory and certain other subjects obligatory I think we possibly should provide against that.

37,520. I was only indicating a possible point of view in connection with the examination?—Yes.

37,521. (*Mr. Philip Snowden.*) In this memorial of the second division clerks in paragraph 30 on page 19 they suggest transfer to the Consular Service?—I have not seen that document.

37,522. It is a memorial submitted from most of the second division clerks in the Foreign Office and they say: "It is submitted that a further means of promotion might with advantage be found by permitting the transfer to the Consular Service as opportunity offers, of staff officers and second division clerks, of proved ability and merit, whose experience and training in the Foreign Office eminently qualifies them to fill posts in that Service." What do you say to that?—I should not think that it ought to be a common case, but I do not see why there should not be an occasional transfer. I think in some cases it might be quite advantageous.

37,523. You have no second division clerks in your own department?—No, but they are in the sub-registries. I do not say that we should not on some occasions appoint a man of acknowledged merit to some consulate or other, but I think it ought to be very exceptional, because one does not want more than absolutely necessary to appoint men from outside the Service into it, as I think it might check the flow of young men through the ordinary door.

37,524. You have no person in your department below the rank of junior clerk?—No.

37,525. And the junior clerks have entered by the ordinary diplomatic examination?—Yes, the ordinary Foreign Office examination.

37,526. Have not you in your department work of a routine or subordinate character?—No, I should not say so at all. They are plunged into the thick of really very difficult work at once.

37,527. Have you no work at all below the capacity and pay of these junior clerks?—No, not at all.

37,528. Who writes letters?—That is done by the junior clerks, and sometimes by the senior clerks, and mostly revised by either the head of the department or by me.

37,529. Who does the mechanical copying of letters?—That is all done by the typists.

37,530. There is a typing staff in the Foreign Office then that is common to all the different departments?—Yes.

37,531. And all the letters from the various departments are sent to the typists?—They all go upstairs to the typists, and are copied there and come down again.

37,532. Then there is no work in your department on which you could employ clerks at a lower rate of pay than the salary of the junior clerks?—No, I do not think so. If you introduced a different class of clerks into the work of either the Commercial or the Consular Department, you would withdraw from the ordinary run of clerks in the Foreign Office those duties connected with the Consular Service and commercial work which, I think, they ought all, more or less, to be experienced in. If you did that you would really deprive the men in the office of a very useful knowledge and experience. About one-third of the staff of the office has passed through the Commercial Department, and I should imagine about the same through the Consular Department, so every man as he goes up in the Foreign Office—that is to say, most of them—have had experience either of the commercial side of the office or the consular side. I think that is useful as a training for men in the higher posts.

37,533. We have heard a reference a few times to the private secretary to the Secretary of State. Is he usually selected from officials in the Foreign Office?—Yes, usually.

37,534. Invariably?—I think Lord Kimberley appointed his son.

37,535. (*Chairman.*) Lord Salisbury appointed Sir Schomberg McDonnell?—Not in his capacity as Secretary of State for Foreign Affairs, but in his capacity as Prime Minister.

37,536. (*Mr. Philip Snowden.*) What became of that son of Lord Kimberley?—He went into Parliament, I believe, and then, I am sorry to say, he died.

37,537. Who holds the position of private secretary at present?—Sir William Tyrrell, who is a senior clerk in the Foreign Office.

37,538. I gather, from what we have heard of this gentleman, he seems to be a rather important personage.

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

He is the medium through which recommendations go from this Board of Selection to the Foreign Secretary?—Yes.

37,539. Does he ever interfere with regard to the suggestions made by the Board of Selection?—No, I have never heard of his doing so.

37,540. Is this private secretary to the Foreign Secretary a member of the Board of Selection?—He, if he can find time, or one of the other private secretaries, attends the Board of Selection for the Diplomatic Service, and one of them usually attends the Board of Selection for the Consular Service as well. The Permanent Under-Secretary is Chairman of the first and I am Chairman of the other.

37,541. When the Foreign Secretary is considering the recommendations which have been made by the Board of Selection, does he call the chairman of the Board of Selection into consultation with him personally?—Not in my case.

37,542. Then what has a Foreign Secretary to guide him in deciding whether he will give a person a nomination or not?—The recommendation of the Board of Selection.

37,543. He is guided entirely by their written recommendation?—He reserves to himself the right to go behind it if he does not feel confidence in the Board of Selection.

37,544. But something was said about his consulting with his private secretary about these matters?—The private secretary is the instrument for sending out the nominations.

37,545. (*Chairman.*) Was that phrase "consulting with the private secretary" used? (*Mr. Graham Wallas.*) I think that was used with regard to an appointment not made through the Board of Selection?—Yes. In fact the Boards of Selection are, if I may venture to say so, a protection to the Secretary of State against undue pressure from outside for obtaining appointments in any of those services under his control.

37,546. (*Mr. Philip Snowden.*) In the report that the Board of Selection sends to the Foreign Secretary do you give fairly full reports as to each person that you suggest should be nominated, or do you simply approve or disapprove?—We do it in the latter way.

37,547. Then there is not very much to guide the Foreign Secretary in making his selection. Does he, as a matter of fact, give a nomination to all the recommendations of the Board of Selection?—So far as I know he has never done otherwise.

37,548. You told us that these applicants for nomination come to you at a fairly early age—at about 18, say; and they are not able to sit at the examination until they are 22. What are they doing in the meantime?—Going on with their studies.

37,549. They are not employed in any kind of way?—Some of them may be members of the Civil Service. We have had some second division men up, and we have had boy clerks up.

37,550. But you gave us one case of a lad who had done very well at school, and could not afford to go on to the university, and he was recommended to apply for nomination to the Consular Service?—He did not come up before the Board of Selection at that stage. It was his head-master who recommended to him that as he could not afford to go to the university he had better go abroad and take up some occupation.

37,551. Would not it be as expensive to go abroad to study as to go to the university?—He did not go abroad to study, but he advertised for employment in a merchant's office, which he obtained shortly afterwards.

37,552. That rather bears on my point. If you get a promising lad of 18 years of age, do you ever suggest to him that he might employ his time between 18 and 20 in a way somewhat similar to the way in which that young fellow applied himself?—I do not know whether one would volunteer advice to a young man. They do come up at 18, but I should say 20 was more the age.

37,553. Take those of the age of 20?—As I say, they are often running for some other examination at the same time. This is a second string to their bow.

37,554. A lad who has had schooling up to the age of 18 or 20 does not require to devote all his time to study for two further years in order to be able to acquire sufficient knowledge to pass the examination for consul?—That depends upon the amount of competition.

37,555. That may be; but the variety of subjects is so very limited that I cannot see how a fairly well-educated young fellow could fully employ his time for two years in making himself proficient in those subjects. As a matter of fact, do you get many who enter at the minimum age?—Yes, I think so.

37,556. Have you many who are fairly well advanced before they enter for the examination?—I think they will go up to 22, 23, and 24, and if they do not succeed then they probably go in for something else.

37,557. You are not familiar with the regulations for the examination for inspectors of factories?—No, I am not.

37,558. There is a condition there that the nominated candidate must have had factory experience; he must have spent a certain number of years in a factory or a workshop, and then he is submitted to an examination which is partly literary and partly technical. Have you ever considered the idea of laying down as a condition that a candidate for the Consular Service should have had experience similar to the experience that was acquired by that young fellow of whom you told us?—What would that experience be?

37,559. Knowledge of business in some departments?—As I was saying before, the difficulty about that seems to be to decide whether the experience of the office, or whatever it was that he was in, was one that did give such an experience as was useful to him in the Consular Service. One knows what a factory is—its conditions of employment, and so on. But I do not know that the experience in one particular business office would necessarily be on the same plane as employment in some other business office. I think there might be some difficulty in ascertaining whether the experience had been a genuine experience.

37,560. Do you consider that one of the duties of a consul, whether established or honorary, is to find out and to make known to the traders of this country opportunities for trade development; that is, the extension of our own trade in foreign countries?—Certainly; and a man might be extremely experienced in one branch of trade and be no use in regard to other branches of trade.

37,561. You would not expect that any man would be thoroughly well acquainted with the details of every kind of trade and industry?—No.

37,562. But if he had a general knowledge of trade methods would not he be able to use that knowledge advantageously in a general way?—If he had a general knowledge of trade matters, no doubt that would be valuable. But the difficulty which I think everyone must recognise in the matter of providing trade information which is to be of real benefit to British traders is to know what it is exactly that British traders require to know. By a system which has now prevailed for some years, I think, consular officers are just attaining that knowledge by the experience they gain from the inquiries which are addressed to them by commercial firms. The system is this: a trader wishes to know certain facts with regard to the trade of some particular town, and to know whether there is any opportunity for his particular class of goods. He either writes direct to the consul or directs his inquiry to the Commercial Intelligence Branch of the Board of Trade, and that inquiry is then dealt with by a consul who answers the question, and it goes back to the Commercial Intelligence Branch who schedule the information for their own use and send on the reply to the trader. I think that the more British traders realise that there are in every part of the world consular officers whose duty it is to reply to all these inquiries, the more they use the consuls the more useful the consuls will become, and the more they will understand what the requirements of British trade are. That is really, I think, a better experience than going into any particular trading office.

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

37,563. I was just working up to that point. You are aware that there have often been expressed feelings of serious dissatisfaction with the inadequacy and inefficiency of our Consular Service?—Yes; that is very much a Press cry, and I do not know that it is founded on very great knowledge. To begin with, I meet in the course of my duties a very large number of prominent persons engaged in business on a very large scale, and they tell me it is out of the question to suppose that any man in the position of a consul, and who is not an expert in their particular branches of trade, could give them any information which they are not much better able to obtain through their own correspondents and agents.

37,564. You are aware that that opinion conflicts with the opinions which have been expressed by Chambers of Commerce and the like?—I see a great many of the people connected with Chambers of Commerce, the chairmen and prominent members, and also the Committee of Commercial Intelligence, and that is the view generally expressed by big firms with regard to Government assistance.

37,565. (Chairman.) The view being that they can get the assistance better through their own organisation?—Yes, and that anything else really cannot stand beside it. On the other hand, the whole system of consular assistance to trade is of very great advantage to new struggling firms who are beginning in a small way of business, and by sending out inquiries to consular offices and obtaining from them a list of buyers of their class of goods they can in that way obtain an opening and extend their trade, and build up a very large business; and from time to time we do hear that such a business has been built up by means of the inquiries which have been addressed to consuls.

37,566. Say a firm here wanted to push a particular trade, and the firm addressed the consul in a particular locality and asked his opinion whether there would be a probability of success for that trade in that particular locality: would the consul deem it his duty to reply to that, giving all the necessary information?—Certainly, giving all the information he could obtain. But, of course, you cannot expect one man, who has other duties to perform besides those of giving commercial assistance, who has shipping to attend to, and multifarious duties falling upon him, to be an expert in any particular branch of trade, or even in a wide section of trade; but if an inquiry is addressed to him he does his best to reply to it.

37,567. (Mr. Philip Snowden.) You have often seen criticism, or comparison, made to the disadvantage of the British Consular Service with the German Consular Service, from the point of view of the assistance that the German consuls give to German trade?—Yes, and I have also seen criticisms on German consuls to their very great disadvantage as compared with British consuls. The complaint of people against their consuls is common to all countries; it is the same in France, in Germany, and in the United States.

37,568. In the appointment of consuls by Germany, are they actuated to a greater extent than we are by the commercial idea?—It is quite possible that foreign countries in appointing consuls have regarded more the commercial side of the duties of a consul than those of the shipping and general side, which this country must regard as of equal importance to that of the commercial side. From that point of view, no doubt, greater stress is laid in some countries upon the commercial qualifications of a consul than would be the case here.

37,569. We are acquainted with the more or less interesting and useful reports that the consuls send to the Foreign Office, but in addition to those do they send private and confidential information to the Foreign Office that can be communicated privately to British traders?—Those communications go to the Board of Trade, and the Board of Trade have a special register in which are classified the various firms who take an interest in particular branches of trade, and when information relating to their branch comes in, the list is referred to and the information is sent at once to those particular firms who are on the special register. But, of course, as this information is procured by public officials, paid for out of the public exchequer, it is

only right that this information should eventually reach all. Those who have taken the trouble to make the inquiry, or to get on to the special register, have an advantage in the matter of time.

37,570. (Chairman.) Could you supply us with a list of the gentlemen who have been appointed vice-consul or consul after having acquired commercial experience in this country, those gentlemen referred to by the Walrond Committee?—I have not got the records myself. I believe the private secretaries are obtaining it.\* There are some cases, but they are not quite so numerous as I should have liked.

37,571. We have a list of gentlemen who have been appointed in the Foreign Office Service, and perhaps you will mark off for us those who have had that experience?—Yes. It is quite possible that some may have had the experience and we not aware of it.

37,572. (Mr. Graham Wallas.) Mr. Matheson asked you whether many cases had occurred where the future consul had been got rid of during his period of probation, and you answered no. Can you remember any case in which any selected candidate for a consular post has been got rid of during his period of probation?—No, but some have gone, no doubt.

37,573. Some have been dismissed in the ordinary way?—Some have retired; they are not suitable, find themselves out of place, or get into difficulties with their Consul-General and get reprimanded by the Foreign Office possibly once or twice, and they will be told that they will be dismissed if they do not look out, and some of them go; but that is not a very common case.

37,574. The specific arrangement of not renewing the appointment at the end of the period of probation has, as far as you know, not come into operation?—No, it does not work in that way. A man does not wait until he is dismissed.

37,575. Have you ever thought of a process, in a case where you want to give a man another opportunity but are doubtful about him, of extending his period of probation?—If a man is not satisfactory we warn him, but I do not know that we specifically think of the period of the year of probation or carry that particularly in our mind, because I feel that a public official is on probation from the day he enters the public service until the day he leaves it.

37,576. As far as you are concerned the probation rule does not exist; you act as you wish as if it does not exist, and you get rid of a bad man?—Practically that is so.

37,577. The Walrond Committee stated that evidence had been submitted to them tending to show that the most successful traders have no desire to invoke the assistance of our consuls, but that there is a certain demand for the commercial intelligence which consuls are in a position to afford. That is very much what you told us?—Yes.

37,578. Can you judge at all whether, in the judgment of commercial firms, the value of the consular reports and the information they can get from consuls is increasing?—I think it must be admitted that the quality of the information does improve. I know I have heard it stated that the annual trade reports are very much better than they used to be. There is a continual flow of information I believe, and it really gives a very great degree of satisfaction; but, of course, if a man gets certain information by means of which he sets up a very good business, he does not go and proclaim it at Charing Cross, and is not likely to tell the Commercial Department or anybody else that the information he derived from a consul has been of such use that he has been able to make a big business out of it. We do get that information, but it is not likely a man would trouble himself to give it; he would rather let it be supposed that his success was the result of his own efforts.

37,579. You told us that the extension of the maximum age to 27 was intended to provide for the case of those who had gained some business experience?—I do not think I said that it was intended, but I think that it did have the effect of giving an opportunity to such but not an advantage. You cannot give an advantage—or I do not see how you are to give an advantage.

\* Vide Appendix LXXVIII.

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

37,580. The actual selection is done by the marks in the examination?—Exactly.

37,581. And a man of 27 is not likely to be as good an examinee as a man of 22?—No.

37,582. And you said that, as a matter of fact, hardly anybody went into the examination after 24 years of age?—Yes, I think that is the usual age.

37,583. Could you give us a return of the actual age at which successful candidates have come in?—I dare say the Civil Service Commission could give that with greater readiness than we could; but I dare say we could get out a return of that sort.\*

37,584. Then you stated that in your judgment it would be desirable to stiffen and liberalise the examination. Have you ever discussed that point with the Civil Service Commission?—No, I have not discussed it with them yet. I have only had the Consular Service under me for the last two years, and there have been other questions to attend to. But it has struck me that the syllabus was not sufficiently liberal.

37,585. But so far as your experience goes there is no systematic or regular consultation between the Civil Service Commission and your department with regard to the suitability of the examination?—We do consult them. We have been consulting them lately with regard to some points in connection with the Levant Service.

37,586. I have here the paper on political economy set in the current Foreign Office examination. Are you at all familiar with the range of that paper?—No. I am not.

37,587. It seems to me to be a paper of pure cram that might be set purely out of a shilling text-book?—We have nothing to do with that. We merely agree with the Commission as to what the subjects shall be, and it is left to them to make whatever examination they like out of it.

37,588. The Chairman suggested to you that in the case of those people who have to come in young and who have to have special knowledge, it might be desirable to consider the arrangement of a special course after selection such as is given for the Indian Civil Service. Has that ever been considered?—That was the suggestion I very tentatively made to the Walrond Committee, and which Mr. Bonar Law and Sir James Mackay did not agree to. I think there is one thing to be said, that it may be more expensive, but I do not know how that might be.

37,589. But you are still of opinion that, subject to the consideration of expense, it would be of importance to get a lad at his most examinable age, at the end of his education, and then train him for the special knowledge?—I think there is a good deal to be said for that.

37,590. What sort of training had you in mind—training in a commercial house?—I thought of training in commercial colleges. It is so doubtful about a commercial house. Supposing he is a very good man and he goes into a commercial house they may say to him: "If you go into the Consular Service you will never get more than 1,200*l.* a year; in commerce you may get a fortune."

37,591. There are commercial colleges and schools of economics?—Yes, there are many in England now.

37,592. Speaking of a particular candidate you said he was recommended by a Member of Parliament. Do candidates generally secure recommendations of that kind?—Every one who comes before the Board of Selection we must know something about and he must be recommended. We may get a recommendation from the schoolmaster, and if the report is lukewarm we communicate with him and say: "We should like more information. Do you really think he is a young man who can safely be sent abroad where, in about five or six years' time he may be in independent charge of a consulate." With regard to the Consular Service or any service representing this country abroad, you want some system of obtaining a personal character as distinguished from a written character which the Civil Service Commission requires.

37,593. And the boy would naturally provide himself with such testimonials and qualifications as he

would think likely to influence a Committee of Selection?—Yes.

37,594. Do they generally try to get the recommendations of leading public men?—I think about one out of four gets somebody in a fairly prominent position to recommend him. I am bound to say that those recommendations are sometimes so very lightly given that we do not attach very much importance to them. What we care about is the record of the boy at school. In the case of boys brought up at one of the semi-English schools abroad, we do not place very much reliance on the recommendation given by them.

37,595. You in some cases give a nomination to the examination at an age as much as four years before the examination can be taken?—No, not nomination, but the recommendation is given to the Secretary of State. The nomination is given for the examination. The nomination does not come out until shortly before the examination.

37,596. But the decision that he may in fact enter for the examination is given before?—He practically knows whether or not he will be likely to get nomination.

37,597. That intimation may be given as many as four years before the minimum age for appointment?—Yes, but we do not encourage people to come up too young, and we might tell a boy to come up again.

37,598. What is the advantage of giving it so long a period before the minimum age?—I did not draw up those regulations, but I see the age of 17 is given somewhere at which they can come up. In some cases they come up at 18. It is only in the general Service that the age is so late as 22.

37,599. But in the general Service a boy may get a nomination at 17 or 18 and his character may completely change in the next five years. Is there any advantage in giving it so early?—That fitted in with all five branches; but there is no reason why in the case of the general Consular Service these boys should not be told that 17 is too early to come up.

37,600. The work of consuls with regard to commercial information is very closely allied to the work of the Board of Trade?—Yes.

37,601. They practically act as an instrument of the Board of Trade?—Yes, practically. I am in close touch with the Board of Trade, and so is the head of the Commercial Department.

37,602. Do you think in that particular case where practically all this branch of work done by the officials of one department is initiated by the officials of another department that the present arrangement is thoroughly satisfactory, or could you see a way of improving the relations between the two departments?—I think it is the only possible way of doing it. You cannot serve two masters. They must look to the Foreign Office as being their master, particularly as they are going to a foreign country where the Secretary of State is really responsible for the whole conduct of the Consular Service abroad.

37,603. Is there anything in the nature of a joint committee for commercial inquiries?—There is this committee of commercial intelligence, which is a committee of some 30 members, and I am a member of it. It is a committee appointed by the President of the Board of Trade.

37,604. There is a rather large sort of general advisory committee, but otherwise the relations between the two bodies is informal?—It is informal but constant. We are in constant communication not only with the departments of the Board of Trade at headquarters, but also with the director of the Commercial Intelligence Branch in the City.

37,605. Have you ever had an official with that kind of experience transferred from the Board of Trade to the Foreign Office or one from the Foreign Office to the Board of Trade?—There has been an official of the Consular Service transferred to the Board of Trade, but that was in a special matter in connection with exhibitions.

37,606. (Chairman.) When we shall have taken remaining evidence touching the Consular and Commercial Departments, and have heard the evidence

\* *Vide* Appendix LXXIX.

30 April 1914.]

Mr. ALGERNON LAW, C.B.

[Continued.]

which Chambers of Commerce may give us, we may find it necessary to examine you again?—Thank you, I shall be very glad to come back again after they have made their observations.

37,607. You will have an opportunity of seeing their evidence?—My remarks with regard to the im-

portance of selection of consular officers were only made with reference to the general Consular Service, but they equally apply to all the other branches.

37,608. The private secretary to the Secretary of State is a member of the Board of Selection?—One of the private secretaries always attends my Board.

## NINETY-SECOND DAY.

Friday, 1st May 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

His Grace the DUKE OF DEVONSHIRE.  
The Right Rev. the LORD BISHOP OF SOUTHWARK.  
The Right Hon. Sir HENRY PELMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.  
Mr. ARTHUR BOUTWOOD.  
Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. PHILIP SNOWDEN, M.P.  
Mr. GRAHAM WALLAS.  
Miss HALDANE.  
Mrs. DEANE STREATFEILD.  
Mr. N. E. BEHRENS (*Secretary*).

Mr. D. A. LEAK and Mr. C. S. NICOLL called and examined.

37,609. (*Chairman.*) (*To Mr. Leak.*) When did you enter the Civil Service?—In April 1883.

37,610. Did you enter by open competition?—Yes.

37,611. Did you enter in the second division?—Yes.

37,612. (*To Mr. Nicoll.*) When did you enter the Civil Service?—In January 1895.

37,613. In the second division?—Yes.

37,614. (*To Mr. Leak.*) What salary are you drawing at present?—375*l.* a year.

37,615. Then you hold a staff appointment?—I hold a staff appointment.

37,616. The maximum pay of the second division is 300*l.* a year at present, is it not?—That is so as regards the Ridley men, but I entered under the earlier scheme which secured to me in any event 350*l.*

37,617. (*To Mr. Nicoll.*) What is your pay?—300*l.* a year.

37,618. And you entered in 1895?—Yes, I entered in 1895, but I have recently been promoted to a staff post from the 1st April.

37,619. You hold a staff post?—Yes.

37,620. (*To Mr. Leak.*) You, I presume, have read or been informed of the recommendations of this Commission in regard to the Civil Service generally?—I have read your report closely.

37,621. And you know the recommendations which we have made in regard to the second division?—Yes.

37,622. If those recommendations are accepted by the Government and applied to the Foreign Office, would they not meet a good deal of your difficulty?—I take it that by that you mean if the existing second division body was absorbed into the senior clerical staff that you contemplate.

37,623. No, I do not mean that; the Commission have not stated that. They have stated that whenever there is a case for promotion from the second division into the proposed senior clerical class promotion should take place, but the standard of recruitment in future for the senior clerical staff will be a higher standard than for the recruitment for the existing second division. We do not propose the transfer *en masse* of the existing second division into the new senior clerical staff, but if the proposals that we have made in regard to the new senior clerical class are applied to the Foreign Office in future, would not most of the objections that you now bring forward be inapplicable?—No, I think that depends entirely on the degree of the application.

37,624. But in regard to future incumbents would there be much room for objection?—I take it that

the second division body, as such, will disappear, and so it is rather difficult to answer your question.

37,625. The scales of pay and some of the conditions of service of the existing second division will disappear in time, and when they have disappeared and the new senior clerical class has come into full operation, will not most of your objections disappear?—It is difficult, my Lord, to project myself into the future and to speak, so to say, from the position which a member of the senior clerical staff will occupy. We are rather limited, if I may so speak, by our own position and our own standard.

37,626. Very good. At the present time how many second division clerks are there in the Foreign Office all told?—There are 47 second division clerks altogether.

37,627. And how many staff clerks are there?—Sixteen.

37,628. Under the chief clerk there are nine second division clerks?—Yes, that is so.

37,629. (*Mr. Philip Snowden.*) Are the 16 included in the 47?—No.

37,630. (*Chairman.*) In the Treaty Department there are two second division clerks?—Yes.

37,631. And in the Librarian's Department there are nine second division clerks?—Yes.

37,632. In the registry how many second division clerks are there?—Twenty-three.

37,633. Are you sure?—(*Mr. Nicoll.*) Twenty-six including the minor staff clerks.

37,634. I am not talking of the minor staff clerks?—(*Mr. Leak.*) Therefore there would be 23 second division clerks.

37,635. In the Commercial Department how many are there?—There are no second division clerks in the Commercial Department.

37,636. Are there no second division clerks in the Consular and Commercial Departments?—There are none in either the Consular or Commercial Departments.

37,637. Are there staff officers in those departments who rose from the position of second division men?—They are at present grouped in the general registry.

37,638. Are they included in the registry?—Yes, they are no longer members in any sense of the Commercial or the Consular Departments.

37,639. But are they not employed in those departments?—No.

37,640. Is not the Passport Officer a second division clerk?—Yes.

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

37,641. Is he not included in the Consular Department?—No.

37,642. (*Chairman.*) I find that there are four staff officers under the chief clerk, and an assistant who was a supplementary clerk?—Yes.

37,643. His post would be open to a second division clerk, would it not?—No, not in actual practice.

37,644. It has not happened hitherto, because you have not got rid of all the supplementary clerks, but why do you say that the post is not open to a second division clerk, an exceptionally efficient and good man?—They would not draw upon the whole field of the second division to fill that particular post, they would simply look at the possibilities within their own department, that is within the Financial Department itself. That has always been the policy with regard to the Financial Department; it is a self-contained department.

37,645. If they did that, and there was an exceptionally good man in the Financial Department, would they not consider his claim to promotion to an assistantship?—Undoubtedly.

37,646. Then it is an opening; the appointment is open to the second division?—To the second division within that department.

37,647. But that is the second division?—Yes.

37,648. Probably they are engaged on accounts and more or less technical subjects, so that naturally a man who has been trained in the Accounts Department would have preference at all events in the second division. There are, then, four staff clerks and an assistant; that makes five. There is one staff clerk in the Treaty Department, that makes six; there are two assistants in the Librarian's Department, that makes eight; and there are three staff officers, that makes 11; there is one staff officer in the Parliamentary Department, that is 12; and there are four staff officers in the registry, that makes 16. Therefore you have 16 staff officers for 43 second division clerks; is it not so?—You have included the four minor staff officers.

37,649. The four minor staff officers must be either counted as staff officers, or they must be included among the second division clerks?—They are included in the second division.

37,650. They are included in the 43?—I think your Lordship has included them in the 16. If you subtract them from the 16 and add them to the second division clerks, just for the purposes of a rough enumeration, then I think you get the correct figure.

37,651. At all events, according to your calculation, you have 13 staff officers for 46 second division clerks. I have read your statement very carefully, and I think that you have been betrayed into certain inaccuracies in making it out. Would you look at page 12, paragraph 6? I understand that while you adhere to this general statement, you also wish to call attention to the fact that two assistant clerkships have been created which goes some way towards satisfying your claims. Have you your statement before you?—Yes.

37,652. In paragraph 6 you say: "The Treasury recognised that the work on which they" (that is the second division clerks) "were engaged was even at that time above the average of that performed by those of their class in other offices, and increased their salaries in practically every case by granting special allowances. Towards the end of 1888, 12 out of the 13 second division clerks were in receipt of duty pay." I understand you to mean that from 1881 onwards you have been more favourably treated than any other body of second division clerks in the Service?—I believe if we could go back to that year it would be found that in no other office under the Crown was such a large proportion of this form of special emolument, called duty pay, assigned to the second division.

37,653. But is that not what you say here? I inferred from your memorial that the second division clerks in the Foreign Office were the only second division clerks in the Service who got duty pay?—Oh, no; we do not intend to suggest that. I do not think the words bear that interpretation.

37,654. If I misread your meaning then so much the better for you. There is another point on which I think I discover a little inaccuracy. If you look at

page 13, you say (half way down through the italic portion): "Some of the salaries now paid to supplementary clerks reach 650*l.*, and while duly regarding the fair claims of those now in the Service, it would be possible gradually to make the higher posts staff appointments, carrying even less salary than 650*l.*, which would be open to second division clerks who have, by good work in the various branches, deserved special promotion." Upon that you make the following statement, at the end of paragraph 8: "The recommendation of the Royal Commission of 1891 was undoubtedly in intention and effect that second division clerks should take the place, and succeed to the prospects of the older supplementary class." Is that a correct statement? What the Ridley Commission advised was that the supplementary class should be dispensed with, that recruitment for them should be discontinued, and that their place should be taken by second division clerks. There is no promise, so far as I can see, that second division clerks should either succeed to the prospects of the old supplementary class, or that they should succeed to their pay. So far as I can see the circumstances of your employment in the Foreign Office do not give you any claim to, or promise of any sort of promotion more than the second division clerks in any other department enjoy. Indeed, it is, if anything, rather the other way, inasmuch as the practice of the Foreign Office did then, and does now perhaps, discountenance promotion from the second division to the class of Foreign Office clerks. It certainly did not give you the same kind of claim to promotion to the Class I, which second division clerks elsewhere in the Service enjoyed.

Passing on, I find you saying on page 17, paragraph 21, that you are in a worse position than your colleagues in less important offices. Will you explain how it comes about that you are in a worse position?—As the Service is at present constituted, there are, I think I am correct in saying, only two broadly recognised outlets for second division clerks; one is by promotion to the class above, the higher division, and the other is by promotion to staff appointments.

37,655. When you say that is so at present, do I rightly understand you to mean that promotion to the higher division, that is the class of Foreign Office clerks, is a part of your expectation?—Oh, no. You are asking me to justify this language we have used here, and I can only do so by comparing our position with that held by the analogous class in other offices; and in those other offices, I do not say in all by any means, because the other offices in which the higher division is present is a limited number, but still it remains true that there are at least, I suppose, 16 public offices in which a second division man, I am speaking of individuals now, can look forward to an outlet on to the higher division grade on the one hand—

37,656. That is the exceptional man?—Yes, and on the other hand where there is no higher division present he will find ahead of him a continual succession of higher posts, administrative posts carrying salaries considerably beyond the maximum of the second division.

37,657. In some instances he does?—Yes, in some instances, and in many instances I think I am correct in saying.

37,658. There are departments, are there not, in which he can look forward to nothing beyond a staff post with salary reaching 500*l.* a year?—Very few indeed. I speak under correction, because I have not informed myself very accurately on figures and statistics, but I question if there is a single office where that applies.

37,659. We have stated in our report the number of appointments that are open to the second division in all the departments. You have stated that there are departments in which the second division co-exists with the first division, with the Class I, division, and that in these departments there is the possibility of promotion to the first division for exceptional men?—Yes.

37,660. And that there are other offices in which the first division does not exist, but in which the second division have the chance of getting not only staff

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

appointments, but certain appointments beyond those that are usually regarded as staff appointments?—Yes.

37,661. That is your point?—Yes.

37,662. And your object is to contrast them with your own situation?—Yes.

37,663. What is the other side of the contrast: what do you say about your own department?—At the time that we drew up this statement the most remunerative staff post, I think you will find, was rewarded by a salary of 500*l.*, that is the extreme limit, and there is only one post rising to that particular figure; in other words, the maximum salary attainable in the Foreign Office for a promoted second division clerk is a salary of 500*l.*

37,664. Is that quite correct at the present time?—I must supplement it by the fact, of which this Commission is aware, that two assistantships carrying salaries of 100*l.* in excess of 500*l.* have been created.

37,665. And your statement would also have to be modified would it not, if I be right in thinking that the assistantship under the chief clerk is open to a second division clerk?—I believe so.

37,666. And the assistantship carries a maximum of 750*l.* does it not?—Our statement does not deal with that question.

37,667. But surely it should?—We rather excluded from our memorial any very close consideration of the position of the chief clerk's department or of the men in it.

37,668. But if the assistantship to the chief clerk be open to a suitable and competent second division clerk, you ought not to exclude that appointment from your consideration?—I think so, because, although it is a highly favoured branch of the Foreign Office, any advantages that it may have over the registry or over the library, can only be enjoyed by men actually within the ring of that particular department.

37,669. Who are the two assistants in the Librarian's Department: are they second division clerks?—They are promoted second division clerks.

37,670. You should not exclude them?—No, we do not; we acknowledge that freely in the small supplementary statement we have attached to the memorial; we tried to give full weight to that fact.

37,671. I have no doubt you did. Now, what are the directions in which you wish to have a wider scope for advancement?—I think I can best answer that by going back to a remark which your Lordship made at the beginning of the sitting. You carried me up to a point at which I had to admit that the proportion of staff officers' posts to the general number of our class was large, and I think, though you did not openly suggest it, you must have had it in your mind that all our reasonable ambitions and desires might be considered to be met by what is, we admit, an ample provision, having regard to the proportion of staff officers' posts. But the crux of the position is that we want to go a point beyond. If we cannot, and at present we cannot with the two exceptions of the assistantships you have mentioned, it seems to us that a principle which this Commission has repeatedly condemned, the "blind alley" principle, or the blind alley system, is again operating, though perhaps at a different level, in closing us in rigidly against any further progress whatever. We recognise that there must be classifications, and there must be conventional limits; but what we contend is that these should never be allowed to harden at any stage into an impassable barrier, and the Foreign Office, I think, more conspicuously than any other office, offers an example of an absolutely impassable barrier.

37,672. In what departments of the Foreign Office do you think that barrier might be passed with advantage to the public service?—That is a momentous question. If I answered it exactly as I feel, I am afraid I might be considered as guilty, not of criticism, but of a sort of suggested invasion of a class that is very highly privileged.

37,673. You need have no such fear. Express yourself without any fear whatever. We wish to hear what you have to say?—I do not hesitate, my Lord, from fear in the ordinary sense, but perhaps you might regard it as too ambitious. I can put it in a nutshell by saying that I would like the possibility at least, as a

possibility, to exist of promotion without any limits whatever; and of course that would apply to all the departments—it would apply to the whole of the Foreign Office.

37,674. That is the ideal that you entertain. Are there any particular departments in the Foreign Office in reference to which your ideal might be attained more easily than in regard to others?—Yes, I should say the departments which are not concerned with high political subjects.

37,675. Then you would look, as a practical matter, for further promotion beyond that which your Service rules secure to you, to the non-political side of the Foreign Office?—Broadly speaking, yes. Of course in a sense there is no such thing as a non-political side: the discrimination is a rough one.

37,676. For practical purposes it consists of the Consular and Commercial Departments, and the Treaty Department; is not that so?—Yes, and a considerable amount of work that is done in the Parliamentary Department in the preparation of blue books and so on.

37,677. Preparing answers to parliamentary questions and so forth?—Yes, so far as regards papers called for by Parliament.

37,678. That is a small department?—Quite a small department.

37,679. But the others are the larger departments?—Yes.

37,680. (*Mr. Boutwood.*) To the Librarian's Department you already have the way open?—Yes, we occupy the whole ground there with the exception of the headship of the library.

37,681. (*Chairman.*) The headship of the library is not restricted to any service; the gentleman now holding that office was taken, I believe, from the Consular Department, was he not?—From the Consular Service; he was not a member of the Foreign Office staff.

37,682. He was taken for special reasons?—Yes.

37,683. Let us follow that matter a little more closely. What is the number of appointments in the Consular Department? I see there is an assistant and one junior clerk in the Consular Department, and there is an assistant and three junior clerks in the Commercial Department?—That is so.

37,684. We have been told that it is a most important matter that the clerks in other departments of the Foreign Office should from time to time have experience of the consular and commercial sides of the office. Do you think so?—Yes, but only with regard to the more important work transacted in the Commercial Department and in the Consular Department. I think in the Consular Department there is a great deal of work which is concerned with the machinery, so to speak, of the Consular Service which, if a Foreign Office clerk is told to inform himself of, does not tend to his mental enlargement a little bit.

37,685. Work of a more or less mechanical character?—Not of a mechanical character.

37,686. Is it work that requires initiative?—To a limited extent I would say. What it specially requires is previous knowledge.

37,687. Of past precedents and so on?—Yes.

37,688. It does not require any great administrative ability?—It requires no great administrative ability I should say.

37,689. Do you not think that such an employment as that would be well paid by 400*l.* a year or 500*l.* You see, if you do think that such work as you speak of is well paid by 400*l.* to 500*l.* a year, you would not gain much by being promoted into that department, would you? No doubt the number of staff clerkships would be increased?—It would enlarge the area of promotion open to second division clerks considerably.

37,690. It would increase the number of higher paid staff clerks, but it would not satisfy the ambition which you have expressed?—No, it would not.

37,691. It would probably make the proportion of staff clerkships to ordinary clerkships perhaps one in three or one in two and a half?—Exactly; and it would leave the main position, I think, quite unchanged.

37,692. Do you ever get any promotion out of the Foreign Office into other departments; do many men leave the Foreign Office and take employment in other

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

departments?—A great number of the juniors do. I am speaking now of the second division; we are dealing with the second division?

37,693. Yes?—And I think we have indicated in our memorial all the disadvantages of that; I mean regarding simply the efficiency of the Foreign Office. As regards the individual concerned he regards it, and rightly, I think, as a very happy escape for himself.

37,694. Does it not rest with the head of the office to consent to his transfer?—In actual practice that is never withheld; the consideration would be, of course, that it would not be right to impede these transfers, which are in the nature of betterment.

37,695. When a transfer takes place another man comes in, does he not?—Yes.

37,696. And that other man comes into the Foreign Office with his eyes open?—No, my Lord, that process is a slow one, and it starts after his entry. I have seen it.

37,697. There is a certain amount of glamour about the Foreign Office?—Exactly.

37,698. And he is pleased to come in?—I will not say that he seeks the Foreign Office, because his tutor, if he has been to one of these tutorial establishments, has probably warned him against the Foreign Office.

37,699. Yet they come?—Yet they come. I do not know that the glamour really operates to bring them to the Foreign Office. I do not think it does.

37,700. Now if you compare your own official history and the amount of pay that you receive with that of a contemporary, say, in the Home Office or the Colonial Office, how do you stand?—Well, my Lord, you have now afforded me an opening that I should like to take the fullest advantage of.

37,701. Yes?—You asked me a little time since my salary, which is 375*l.* a year, and I am now in my 32nd year of service. The other day I met a contemporary of mine who at the present moment is drawing 900*l.* a year, and in that same office where I myself served—of course he was my contemporary in that sense—there are others of my old colleagues drawing 600*l.* and 700*l.* and 800*l.* a year. I do not make it a grievance that after 31 years' service I am only drawing 375*l.* a year, but I say that it is an extraordinary anomaly that the chances should be so unequally distributed that that relative position which I have just described should come about. And, if I may say so, I regretted when I read the Majority Report that the Commission was absolutely silent upon it, although in the Minority Report I was glad to see that it was, I think, fully recognised and amply allowed for.

37,702. Well that is the fate of a great number; some have good luck and some have not such good luck. You came into the Service at 70*l.* a year did you?—No, as a Playfair second division clerk my salary was 80*l.* a year.

37,703. And the scale was 80*l.* up to 350*l.*, and you are now drawing 375*l.* after 32 years' service. How many years more have you to serve before you are entitled to pension?—I am now—and I hope I shall be able to convince the Commission of the fact—49 years of age.

37,704. So that at 49 years of age you have got up to 375*l.* a year?—Yes.

37,705. You have not done badly. You have not done as well as some men, but you have not done badly?—Does not that entirely depend upon the standard which you invoke?

37,706. You have got beyond your Service scale of pay, and as you have 15 years more to serve, there is the possibility of getting up in your present office to 600*l.* a year?—I do not think it is possible. It may appear to be so on paper, but it is not a practical possibility.

37,707. The appointment is there?—The appointment is there, but the present holder is, perhaps, six months older than myself.

37,708. However, if the recommendations of the Majority Report are accepted by the Government, you will have the possibility of promotion into a post not in the Foreign Office but in some other office. If the Treasury consider that you are specially fitted for promotion beyond your present grade it will be open to them to propose your transfer if there is a

vacancy to another department?—Yes; we think that will go very far to remedy the inequality I spoke of; but of course the machinery for bringing merit to the surface must be very carefully constructed.

37,709. You admit, of course, that any promotion from a particular division to another division, from your class to another class, must be a matter of pure selection for marked ability?—I think that factor ought to predominate, certainly.

37,710. What other factor should enter into it?—There may be a factor common to two men or to three men; there may be a factor of a common length of service.

37,711. Should that enter into such promotion at all; should seniority enter into it in the least degree?—Is your Lordship asking me whether it does enter into it at present?

37,712. No; ought it to enter into it?—Under an ideal system does your Lordship mean?

37,713. For such exceptional promotion as that from your second division into the grade of Foreign Office clerk, should the promotion be determined by anything except exceptional ability?—I agree with you, by nothing except transcendent ability.

37,714. That is to say exceptional ability, such as will satisfy the Government that the officer will do credit to the new duties he would have to discharge?—Yes.

37,715. Do the rules of your Service prohibit such promotion at the present time? If the practice has not recognised it, do the rules prevent it in your department, the Foreign Office?—I do not know that there are any written categorical rules absolutely forbidding it, but of course practice is more compulsive than any rule, and I can imagine the emotions which would be excited if it were recommended.

37,716. Is there any other matter that you wish to urge upon the Commission?—Most of our suggestions are already contained in the statement before the Commission, if you would allow me perhaps to expand our recommendations?

37,717. Yes?—Our main recommendation is that a new department, or perhaps two new departments, should be created, into which should be lifted bodily work that is not of a highly diplomatic character, work of a technical kind which concerns, so to speak, the business side of international relations. There is at the present moment in the Treaty Department and in the Consular Department a great deal of work which really is only political in a very limited sense, in a secondary sense, which the general body of second division clerks I consider would be competent to perform.

37,718. And which is now performed by Foreign Office clerks?—Yes, by Foreign Office clerks.

37,719. That would involve, would it not, a reduction in the number of the establishment of Foreign Office clerks?—Not necessarily. The department that we contemplate would be of slow growth. That we advocate, because we do not want redundancy among the Foreign Office clerks, which obviously would be very unfair to them. But the creation of this new department and its enlargement might go on from more to more as vacancies befell among the Foreign Office clerks.

37,720. That would mean a contraction in the number of Foreign Office clerks. I do not object to that, but it would mean that?—Not in the end.

37,721. They have a certain amount of work that they now do, and if you transfer it to the second division clerks they will be left idle, comparatively speaking?—And we are trying to obviate that by not effecting that transfer until a vacancy among the Foreign Office clerks is pending.

37,722. And on filling it up the post would be absorbed?—Yes.

37,723. Consequently there would be a reduction in the total number of Foreign Office clerks?—Yes.

37,724. If you think there is work to be done in that direction, why should it not be done by second division clerks now? If such a reorganisation be possible, why should it not be possible to employ second division clerks in the Consular or Commercial Departments in doing that work of a technical and business character, and not,

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

as you say, of a secret or diplomatic character?—There is an importance attaching to it; though it is not secret or confidential, it is something above the ordinary registry work, for instance. But why it is done at the present time by Foreign Office clerks of course is a question which the office as such might be able to answer, because it would throw them into a defensive position perhaps.

37,725. You would create a new department for the purpose of improving the condition of the second division clerks?—No, not exclusively for that.

37,726. Partially?—We do not close our eyes to it, obviously; I am not pretending that we are doing so. We have not worked it out in detail, but I think we could establish that it would be for the efficiency of the Service, and I think that we could show that a saving would be effected if some scheme of the sort we have in our mind were carried out.

37,727. What is your next point?—The second idea that we have, I think I have already given expression to, and your Lordship discouraged me. I spoke of the absorption of the entire second division men at present in the Foreign Office into the contemplated senior clerical staff.

37,728. That is a matter which is really not in the hands of this Commission. We have recommended the creation of a senior clerical staff, and it is for the Government to pass orders on the recommendation. Our recommendation is that if men at present in the second division are, in the opinion of Government, up to the standard of our proposed senior clerical staff, they should be promoted into it as a matter of individual selection?—Yes.

37,729. I do not discourage you; on the contrary, if the Government and the head of your department consider you fit for promotion to the senior clerical class I think you ought to have it. Have you ever considered the question of the employment of second division clerks abroad at the embassies or legations?—Yes, we have.

37,730. Do you consider that there is an opening for them there?—It is a limited opening. Personally I am not acquainted with the clerical constitution of our missions abroad.

37,731. You are not prepared to advocate anything in that direction?—Not very strongly except, perhaps, as regards archivists. At present we have at Constantinople—I do not know whether the Commission are already informed of it—an archivist who was a second division clerk in the Foreign Office, and I think there is one at Rio also.

37,732. That would require some knowledge of the language of the country, would it not?—Not necessarily; it would be an advantage, of course, in certain States. That gentleman who is at present acting as archivist at Rio has a knowledge of the Portuguese language, but the promoted second division man at Constantinople, I think, is sufficiently equipped with a good knowledge of French. I do not imagine for one moment that he has a knowledge of the vernacular.

37,733. Business is mostly conducted in French at Constantinople?—Yes.

37,734. By an archivist you mean a librarian, the custodian of the records?—Yes, the keeper of papers and a man who could be referred to for precedents and cases, and who would have a general knowledge.

37,735. The papers at Rio and the papers at Constantinople would be either in Portuguese and French respectively?—Largely.

37,736. And a man having the custody of them, in order to be able to produce them quickly, ought to know Portuguese or French?—Yes.

37,737. That is the reason is it not, why the archivist is usually a local man, because of his knowledge of the local language?—It may be so, but you would have no difficulty in finding in the Foreign Office clerks just with that particular accomplishment necessary to that position.

37,738. That is another direction in which you think you might have more prospect?—Yes.

37,739. Is there any other?—I think among our suggestions you will find that we suggest that, if we may now look at the purely Political Department, a staff

officer might with advantage be introduced into each of the four purely political departments (I do not know that I need trouble you with their names—the Eastern Department, the Western Department, the Far Eastern Department, and the American Department) for many objects, perhaps, the chief one being the preparation of memoranda on current events, not on past history. Any questions in regard to what is past are dealt with more in the library.

37,740. Can you treat current events effectively without some reference to the past?—It would be continuous. The type of memorandum which the staff officer, if he were appointed to a political department, would be engaged upon would be a sort of continuous history of the thing; he would take it up obviously from the point at which it started, which might be last month or might be four or five years since, and then develop it.

37,741. He would work upon the papers which are now in the registry?—Upon the papers which find their way to the registry, upon current papers.

37,742. The second division staff clerk in the library does that work. Why should he be put in the Political Department in order to write such memoranda when he can do so in the Librarian's Department?—It is not the function of the librarian to prepare current memoranda.

37,743. You are now proposing the creation of a staff clerk to perform a new function?—No, a function at present discharged or which should be discharged by a Foreign Office clerk.

37,744. You would appoint a staff clerk to do that work?—Yes.

37,745. What would the Foreign Office clerk do? If he did not do that work, so far his time would be unengaged?—I think you would find on investigation that this particular sort of work, the construction of memoranda on current events, is not, as a matter of fact, being done. Owing to pressure, or owing to reasons which I have no doubt are perfectly good reasons in themselves, that side of the work has fallen behind, in fact in some departments you might almost say that it is non-existent, and that is a great disadvantage to the work.

37,746. Is there anything else?—Then we should like, if it is feasible, my Lord, some modest opening to the Consular Service.

37,747. That is to say, you would be glad to be transferred from the second division into the Consular Service?—Yes. Of course we have seen two conspicuous instances of that last month, though the gentlemen concerned were not second division clerks; they were members of the supplementary staff.

37,748. Who were they?—The assistant in the library and the senior staff officer in the library.

37,749. What was the assistant's name?—Mr. de Bernhardt.

37,750. And the other?—Mr. Godfrey Hertslet.

37,751. (*Mr. Philip Snowden.*) Was he related to the consul at Antwerp?—Yes, he is a brother of the Consul-General.

37,752. (*Chairman.*) What position has he in the Foreign Office?—He was a senior staff clerk in the library, but he was not a promoted second division clerk; he was a member of the supplementary class, a moribund class, if I dare to call it that.

37,753. And the other gentleman was of the same origin?—Yes, he was a supplementary clerk; and I believe there has been a solitary instance of a second division man pure and simple, being offered a consular post. He was in the chief clerk's department, and I think there were very special reasons for it. The heads of the department were good enough to consider his health, and offered him a change of climate.

37,754. It is open to the Government to do that again. A precedent has been created, if one was necessary?—Yes, I should say that these recent transfers from the library of the Foreign Office to the Consular Service constitute a precedent which nobody can disregard in future—which should not be disregarded in future.

37,755. You have got pretty much what you want in this respect?—Not exactly. I cannot say that we have got it, but we should be in a fair way of obtaining

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

it if this Commission could make such a recommendation.

37,756. And in future, without wishing in the very least to underrate the capacity or ability of the existing second division clerks, we may hope that in the process of improvement the future senior clerical staff will be even more efficient than the existing second division clerks, and may furnish more gentlemen of the kind you now mention?—I share that hope entirely, my Lord. I think that all of us at the Foreign Office are not fanatics for efficiency, but we do value it very highly.

37,757. It is a perfectly legitimate ambition?—All our suggestions and recommendations have been framed simply with the one idea of providing, not an immediate outlet so to speak, but an ultimate outlet in the Service, because when a man is appointed to a staff post, and that is the height under existing arrangements to which he can rise, he is left with the depressing knowledge that he never can get any further; the wall remains. His position, it is true, has shifted a little, but there it is.

37,758. (*Mr. Graham Wallas.*) Any person under the age of 27 who receives a recommendation from the Secretary of State is entitled to compete for an original appointment to a post in the Consular Service, is he not?—Yes.

37,759. Do you remember any instance in which a second division clerk in the Foreign Office has applied for leave to compete for that examination?—Not within my own knowledge. My colleague corrects me; there has been a solitary instance.

37,760. The man applied?—He applied for nomination.

37,761. Was he given a nomination?—He did not eventually receive a nomination. (*Mr. Nicoll.*) He was put on the waiting list, but he was never asked to go up for the examination. (*Mr. Leak.*) The nomination is a sort of procedure in which there are two stages. Before it is effective, before you may say it is a nomination at all, the candidate must have satisfied the Board of Selection. You have two nominations; you have a nomination to appear before the Board of Selection, and upon the result of the personal estimate of the candidate the real nomination to present himself at the consular examination is granted.

37,762. This is important from another point, and I want to be clear about it. You say that the candidate sends in his name asking for a nomination?—Yes.

37,763. At that stage may he be at once rejected—told that he is not suitable?—Oh yes, if he does not furnish immediately with his first application evidence or some credentials which would satisfy the Secretary of State he will be immediately rejected.

37,764. But at this stage the Board of Selection has not appeared at all?—No.

37,765. If he is not then rejected he is put upon a list called a waiting list?—Yes.

37,766. And then members of that waiting list are permitted to see the Board of Selection?—(*Mr. Nicoll.*) They are selected for examination.

37,767. But do all the members on that waiting list appear before the Board of Selection?—(*Mr. Leak.*) Yes, they would all appear before the Board of Selection.

37,768. Then in this particular instance, the man who was put upon the waiting list appeared before the Board of Selection, and then was not admitted to the examination?—No, he never appeared before the Board of Selection.

37,769. Then it does not follow that being on the waiting list, he appears before the Board of Selection?—I am not clear what you mean by the waiting list.

37,770. You used the term?—It was Mr. Nicoll who used it. (*Mr. Nicoll.*) I am afraid we cannot give you a very definite answer as regards the waiting list. (*Mr. Leak.*) But I am correct in saying with regard to the nomination that first of all it is a nomination to a list and then a nomination to the examination.

37,771. (*Mr. Philip Snowden.*) Would I be right in saying that the point of your complaint is that you have in the Foreign Office people whom you call Foreign Office clerks, who are analogous to the higher

division in other Government departments, and that in other Government departments people in the second division and the higher division are employed together, and a second division clerk may hope to be promoted to the higher division, whereas a second division clerk in the Foreign Office cannot hope to be promoted to the analogous rank in the Foreign Office?—Yes, I think you sum it up quite correctly.

37,772. And would you go so far as to claim that the second division clerks in the Foreign Office should have the same hope of passing into the class of Foreign Office clerk which a second division clerk has in other Government offices?—I think that hope should certainly exist.

37,773. Now is there a clear line of distinction between the kind of work upon which second division clerks are engaged in the Foreign Office and that of a Foreign Office clerk?—No, there is no hard and fast line, not even a clear line.

37,774. Are second division clerks or staff officers in the Foreign Office employed upon work which might be described as administrative?—Yes, I can answer that without hesitation; they are. Of course, I would have to limit that by saying that there are only perhaps two or three, or four at the outside, engaged upon what I should call administrative duties.

37,775. I take it from what you have said this morning, that the prospects of advancement of the second division clerks in the Foreign Office at the present time are not very bright, owing to the fact that the higher posts for which a second division clerk is eligible are held by men who, in the natural course of things, have a fairly long prospect of efficient life before them?—That is so.

37,776. Have you any figures bearing upon this particular point as to the length of time before a second division clerk, say of 15 years' service in the Foreign Office, might expect to be promoted to one of these higher posts?—Yes, according to a list which we have drawn up with great care, a second division clerk of 15 years' service must serve another 13 years, that is to say, he must complete a period of 28 years' service before he can obtain what you might call normal promotion.

37,777. The position then is that a competent second division clerk in the Foreign Office, a man of ability, quite above the average, a man who might be competent to do the higher work of the Foreign Office, cannot possibly hope for promotion, even to a rank below that of Foreign Office clerk within the next 13 years?—That is so. I question whether there is another department under the Crown which presents such an extraordinary block and congestion.

37,778. I gather from what you have already said that they cannot hope to reach one of the posts, for which second division clerks may be considered to be eligible, for 13 years?—That is so. Perhaps I ought to explain that this calculation is arrived at upon the consideration of what you may call normal factors.

37,779. (*Chairman.*) What salary does a man of 15 years' service reach in the second division; what had you got to then?—With 15 years' service he would reach a salary of 200*l.* a year.

37,780. That is the minimum salary of a Foreign Office clerk, so that at 27 years' service he would have reached a much higher salary than a junior Foreign Office clerk. At 27 years' service what would he have reached?—300*l.*; he would have got his maximum.

37,781. And if he was an exceptionally clever man he might get anything up to 500*l.*?

(*Mr. Philip Snowden.*) But is it not a fact that the Foreign Office clerk advances, not by ordinary rate of increment, but special promotion comes to him very often very rapidly, which brings him the maximum salary of his rank, 500*l.* a year, very much sooner than he would have reached it if he had to proceed by the 20*l.* annual increment?—Certainly. I think our statement contains a table illustrating that. We worked it out to an average (I think this may help in answering your question) that after ten years' service (I am speaking in averages) a Foreign Office clerk is promoted to the rank of assistant, and after another five years to the rank of head of a department, carrying a maximum salary of 800*l.* in the case of an assistant and 1,000*l.* in the case of a head.

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

37,782. And therefore the chances of advancement above the maximum of the lower grade are very much higher in the case of a Foreign Office clerk than they are in the case of a second division clerk?—The chances against the second division clerk are certainly very much greater.

37,783. And the second division clerks who are in the Foreign Office at present in the rank of second division clerk, cannot reasonably hope for promotion until they reach nearly 50 years of age?—I should perhaps put it at 48 years.

(Mr. Snowden.) That is not far off.

37,784. (Chairman.) There is just one question I want to ask you. You say that there are three or four staff officers who exercise administrative functions?—Yes.

37,785. In what department are you?—I am in the registry. I am head of one of the sections of the registry.

37,786. Have you ever exercised any administrative function yourself?—No, I cannot say that I have.

37,787. In what department do staff officers of the second division exercise administrative functions?—In the Treaty Department.

37,788. You have not got many there; you have only one staff officer?—Yes, and the two assistants in the library.

37,789. Do they exercise administrative functions?—Yes, unless one is hampered by a very strict definition of what an administrative function is.

37,790. What does the library officer do, which you could class as an administrative act?—(Mr. Nicoll.) May I answer that as I am in the library?

37,791. Yes?—Papers are sent down to the library, and the staff officers and assistant there are asked to collect information on precedents and to sift that material and to put down the result of that sifting, and to advise on the papers generally.

37,792. Advice of what character?—As to the course which should be followed.

37,793. Is that constantly done in the library?—That is constantly done, under the supervision, of course, of the librarian.

37,794. (To Mr. Leak.) Then there is another matter. Do you say that the second division clerks in your department are cognisant of important papers?—That is so.

37,795. Do you do anything in the registry except register the documents in a book, filling in the various entries and then send the paper to the diplomatic officer, and afterwards see that the orders recorded on the paper by the diplomatic officer are carried out, and the letter which is drafted by the Diplomatic Department is issued. Is not that the sum total of your duty?—No, it is not the sum total. It certainly is our chief task. Broadly speaking, we exist for that purpose.

37,796. What other duty have you to do?—It extends itself in half-a-dozen directions. A Foreign Office clerk will come in and ask whether from our knowledge we can produce an analogous case which would help him individually.

37,797. Before you send the papers into the department you have to put up all the relevant papers that are in your possession that you can think of, namely, up to the two years' limit, and if there are other relevant papers you have to get them out of the library and send the complete file to the Diplomatic Department?—Yes, that is so; but even "relevant," of course, is a relative term. A quick mind in the registry will see the bearing of the old papers upon the new papers which have just come in.

37,798. In that way you see important papers, you are physically in possession of important papers?—Yes.

37,799. But you do not consider these important papers in any way; you do not consider their contents unless you wish to go outside your functions?—I do not say that we should go outside our functions, but I do say that we go to the extent of our functions, and very often in this direction: that we not only have, to use your Lordship's own words, to give effect to orders on a particular paper, those orders being contained in

the minute, but from our general knowledge and from our general experience, from mother sense shall I say, we are able very often to detect something that should be done which has not been allowed for in the minute, or something that has been allowed for in the minute and is not absolutely in accordance with precedent.

37,800. Am I to understand that you exercise a sort of revision on orders as they come out of the Diplomatic Department?—That is a word I could not quite accept.

37,801. I am not applying it in the sense of looking for faults, or anything of that description at all. I want to understand what the process is. Does it ever happen that if you notice a mistake in a file sent to you from the Diplomatic Department for the purpose of issuing orders, you return it to the department for correction?—Oh yes, very often; and this has a bearing on our suggestion that a technical department should be created, more so in the case of the departments which are not predominantly political. I know myself, as head of a sub-registry, and having seen the oversight myself, or having it pointed out to me by one of my juniors, that we frequently go to the department and say, "Do not you think this should be done?" That sort of thing occurs.

37,802. You take it in the first instance, I presume, to the registrar?—No, the staff officers in charge of the three sub-registries have, and I am glad to say it, a close and constant association with the departments, and we should not trouble the registrar. He would not expect to be troubled by us.

37,803. You would not take it to the department without consulting the staff officer in charge?—Exactly.

37,804. (Sir Henry Primrose.) With reference to that question of the prospects of promotion to staff places, you said just now, I think, that no second division clerk in the Foreign Office at the present time could hope to get up to a staff post until he was 48?—Yes, that is the figure. I always qualify it by saying that we are taking normal conditions: that the individual stays until he is 65 before he retires, and he will be able to say that life will be good enough to him.

37,805. Is not that view inconsistent with the whole scheme of the second division, as laid down by the Ridley Commission? Let me remind you that when they recommended the change in the scale of pay from what was paid to the Playfair clerks, which stopped at 200*l.* plus duty pay and substituted 350*l.*, they expressed some diffidence as to whether they were not putting the figure too high. What they said was: "At first sight this may appear to be too liberal a scale, but when you consider the sort of duties we wish them to have"—I am paraphrasing—"those duties will not be unduly paid by a salary which after 35 years' service will reach 350*l.*" Surely that indicates that in their mind what a second division clerk was really recruited for was a service which ensured his getting to 350*l.*, and in addition there were certain prospects, but only for a few. It was not part of the scheme that every second division clerk should have the expectation of being promoted to be a staff clerk before he was 50, was it?—I think we must allow something for what one might call the tendency of things constantly operating and pushing the position, which ended on a given point at a given year, forward on to fuller ground. And I do think, from such general knowledge of the Service as I have, that work of an increasingly important character is concentrated into the hands of the second division.

37,806. That was intended, of course; that was why they were put up to 350*l.*?—Does not that carry with it the corollary, or might it not be a presumption at least, that an increase of salary and prospects at all events should accompany that increase in the importance of the work? What I wish to convey to you is that what appears to you to be an inconsistency is not, perhaps, if we examine it a little more closely, really an inconsistency.

37,807. I think there was a clear intention in giving this rather high pay to the class, as a class, that a man should get 350*l.* without what is called promotion by

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

selection; that he should proceed automatically?—Yes, a Service scale.

37,808. That presupposed that that would be the limit of the prospects for the majority of the men; not for all, of course. Now, as regards abnormal promotion to, say, the higher division, or to a consular appointment, and so on, I understood you to say there is no absolute prohibition; there is no minute in the Foreign Office which precludes the Secretary of State from making such promotion, if he chooses: is not that so?—Yes, but I pointed out that there was something more authoritative than a minute, and that is system and practice.

37,809. But let me put it to you in this way: Do you hold that within your experience in the Foreign Office there have been within your knowledge a certain number of second division men who, in your opinion, might properly, if the Secretary of State had taken that view, have been promoted to the first division?—I can only answer that question from my own general knowledge of the second division body. I should say that such a number would be an exceedingly small number.

37,810. Are you speaking of the second division as a whole, or of the second division in the Foreign Office; do you mean the second division men serving in the Foreign Office?—I rather mean the typical second division men.

37,811. There being no rule, you say there is something more important, and that is practice; but the question is, is the practice due to the fact that there have been no second division men whom the Secretary of State thought he could put up, or is it due to what you rather suggest—that, as a matter of fact, if there was a man good enough he would not be put up, simply because he was a second division clerk?—I should rather say that all second division men, however able, have been totally lost sight of in that connection. It never occurred—it would not occur to the appointing agencies to think of a second division clerk in that connection.

37,812. But is that so? Last year you presented a memorial to the Secretary of State in July, complaining that a post which you thought the second division were entitled to regard as open to them was given to somebody else?—Yes.

37,813. In answering that the Secretary of State said: "As regards the post in question there was no second division clerk properly qualified or competent to fill the post." Do you disagree with the Secretary of State on that point?—I must say that we absolutely contradict it.

37,814. Then there you come to the whole point: are you or is the Secretary of State to be the judge? We cannot judge between you, but it comes to that, that you take a view of your capacity which the Secretary of State does not take?—Obviously there was opposition between us.

37,815. But now I take your memorial as a whole. I presume it has been very carefully prepared, and one may look upon it as a paper that represents careful work upon the part of the second division clerks?—That is so.

37,816. The Chairman has already pointed out one or two inaccuracies in it, but there is one very material inaccuracy which runs all through it. You speak over and over again of the Royal Commission of 1891, by which, I presume, you mean the Ridley Commission of 1886, which terminated in the middle of 1890?—(Mr. Nicoll.) The Royal Commission of 1891 was quoted with regard to the supplementary clerkships.

37,817. But there is not such a thing as a Royal Commission of 1891. The report of the Commission from which you quote is dated 30th July 1890. You may say it is a slip of the pen, but it is not. Here is a very important paper drawn up for presentation, and all through you make that very serious error in the date?—(Mr. Leak.) If we designated the Body in inaccurate terms, I think that is really what you might call a nominal error, and it has absolutely no prejudicial bearing on the general substance of our statement.

37,818. I think it has, for this reason: You wish to have certain more important places assigned to the

second division than you have now, such as in the Librarian's Department, drawing up memoranda, and so on; surely if you were drawing up a memorandum in the Librarian's Department, or the Treaty Department about a treaty, and you misquoted your dates all the way through, that would not encourage the Secretary of State to promote anyone, would it?—(Mr. Nicoll.) This statement was not drawn up on a question of accuracy of dates; it was drawn up on a question of accuracy of facts, and a clerical error hardly vitiates accuracy of facts.

37,819. In your memorial to the Secretary of State you say that "As far back as 1891 this disability was represented by us to the Royal Commission of Inquiry then sitting. The Commission thereupon recommended that staff appointments should be created, including the three posts of assistant in the Treaty, Financial, and Librarian's Departments." That is not the case; the Commission never recommended that. You are confusing these two things; you are confusing what the Treasury did in 1896, as the result of the recommendations of the Ridley Commission, with the Commission, which is rather an important thing?—(Mr. Leak.) I do not know whether it will serve to place a proper valuation on that error, if it be an error, which I am sure I regret, if I point out that the document containing it is not a substantive part of the memorial at all; it is an annexe, and although it may be illustrative, it is only incidental to our memorial.

37,820. But those are just the things which really are indicative of the quality of work?—Oh! I hope not.

37,821. The work you want to do is work in the Treaty Department and work in the Librarian's Department, where precision and accuracy are required. Here you state that the Royal Commission did something and said something which they never did or said, and you also give them a wrong date for their existence.

You rather suggest that the present second division clerks and the staff places that are reserved to them should be replaced by a new body of clerks, such as has been recommended in the fourth report of this Commission, somewhat corresponding to the present intermediate clerks, as they are called?—Yes.

37,822. The result of that would be very much to restore the old supplementary establishment, would it not? That class, as recommended in the fourth report, would correspond very closely with the supplementary establishment which was abolished by the Ridley Commission?—I see no resemblance whatever between the senior clerical class, which you contemplate, and the old supplementary class in respect of opportunities or promotion, or salaries or maxima—I see no common ground between the two.

37,823. I think it would come out very near it; however, that is a point you see very well and we here cannot. The Commission have recommended general principles, and if you choose to ask the Secretary of State, in applying those principles to the Foreign Office, to substitute the new senior clerical class, if it comes into existence, for the second division, that is all right?—(Mr. Nicoll.) We are not aware that you will recommend that the Foreign Office would be staffed by the senior clerical class.

(Sir Henry Primrose.) No, we have not recommended that any department should be so staffed.

(Chairman.) We have not made any recommendation in this connection. We have only begun to deal with the Foreign Office; our recommendation will come later.

(Sir Henry Primrose.) But the general recommendation, as regards the second division clerks and subordinate staffs, would apply to the Foreign Office, I take it.

37,824 (Chairman.) (To Mr. Leak.) I asked you, at the commencement of my examination, whether the substitution of our proposed senior clerical class in the Foreign Office for the second division would not meet a good deal of your grievances?—It would meet a great deal. I hope I did not convey any other impression. We are men of very varying ages, of course, from boys of 19 to men of ripe years, and perhaps some may take different views of what will satisfy them, but

1 May 1914.]

Mr. D. A. LEAK and Mr. C. S. NICOLL.

[Continued.]

I think it will go very far towards meeting all their reasonable complaints.

37,825. For the future?—Yes.

37,826. (*Sir Henry Primrose.*) Just one other question as regards your contention that the second division clerks employed in the Foreign Office are worse off than second division clerks elsewhere. I notice from the Foreign Office list that out of 44 second division men, who are not holding staff places, there are only five who came in before the year 1901, so that it is rather early for those gentlemen to be crying out, I think?—I do not think so. I live and work with my men, and on the whole I am pleased to know that they do realise their position in all its bearings, and that they are not, I will not say contented exactly, but that they have enough prescience to keep the future before them; after all, they are interested in their own individuality and their own prospects, and I think that, within limits, and if a right spirit is running through it, that is a thing that has its value.

37,827. (*Chairman.*) You think that the office ought to be animated by a "pensive discontent"?—No, you are carrying me to the region of definition, which is always dangerous.

37,828. (*Mr. Matheson.*) Are there many second division clerks in your office who are able to deal with papers in French and German?—Yes, a considerable number, if by "dealing" is meant that their minds immediately give the English equivalent. They do not deal with them in the sense of Minutes.

37,829. I meant that they can read them with sufficient fluency to know exactly what their bearing is?—Exactly to know what their bearing is. I do not possess a knowledge of German myself, so I do not want to be considered as affecting an accomplishment that I do not actually possess; but in many cases the papers that we receive in German—I know from the subjects dealt with that a German note may be quite simply understood, or on the other hand it may concern highly technical subjects which would drive the professed and paid translator to his lexicon.

37,830. (*To Mr. Leak.*) You were speaking of promotion to be a Foreign Office clerk. Do you know

that one of the qualifications is that they must have a rather extensive knowledge of French and German?—Yes.

37,831. Do you think that, so far as that qualification is concerned, there are many men in the second division in the office who would satisfy it?—No, but I do not think it would be a disqualification. I do not pretend that the lingual attainments of any of the second division clerks are for one moment comparable with those of the Foreign Office clerk; but I say that there is a great amount of Foreign Office work done by Foreign Office clerks in which that particular point, as to whether A, B, or C has this or that advanced knowledge of German or French, does not arise at all.

37,832. (*Mr. Shipley.*) What are your hours; at what time do you go to the office?—The hours vary slightly, but we have a seven hours' day. The registry assemble at half-past 10 to catch the early worm, and close at half-past 5. The library are all supposed to be there at 11 and disperse at 6, and the Foreign Office clerks quite rightly come a little later and stay later.

37,833. Do any second division clerks do night duty; do any of them remain there all night?—No, none.

37,834. Is the office adequate; is it large enough, and so on?—I think so; but I know that the problem of space is becoming more and more pressing. When I first entered the Foreign Office there were great vistas of emptiness, rooms about which you ask: What object do they serve; whoever enters them? But it is difficult now as the work expands to find space for it; and to illustrate that, I may say that we have absorbed waiting room after waiting room; we have transferred one portion of the luncheon room to the basement, and we are in a sort of dilemma, and it is an ever-present dilemma.

37,835. (*Miss Haldane.*) Is all your copying done by typists or is any of it done in the office?—I may say that substantially all the Foreign Office copying is done by typists, inside the office.

37,836. What is the average duty pay? I see you say it goes from 20*l.* to 100*l.*?—It no longer exists.

Mr. EDWARD CHARLES BLECH, C.M.G. (Librarian, Foreign Office), Mr. WILLIAM LEWIS BEEROW, I.S.O. (Registrar, Foreign Office), and Mr. EDWARD PARKES (Assistant in Librarian's Department, Foreign Office) called and examined.

37,837. (*Chairman.*) (*To Mr. Blech.*) You have been only recently appointed librarian?—Yes.

37,838. Do you prefer to give evidence or that Mr. Parkes, your assistant, should?—I think it would be more satisfactory that Mr. Parkes should give evidence.

37,839. But if there is any point upon which you desire to speak I hope you will do so?—Certainly.

37,840. (*To Mr. Parkes.*) Will you be good enough to say what your experience of the public service is. How long have you been in the Service?—I was appointed in 1882 and was employed in the Accountant-General's Department of the Post Office. After six years' service there I was transferred to the Foreign Office. That was in 1888; and since then I have been in the Foreign Office.

37,841. Did you enter as a second division clerk?—Yes.

37,842. You are now the assistant to the librarian?—I am one of the two assistants.

37,843. What salary are you getting now?—500*l.* to 600*l.*

37,844. What is the salary of your colleague, the second assistant?—500*l.* to 600*l.*; we are joint assistants.

37,845. Will you briefly describe your system of keeping the papers; how the papers come to you and how you deal with them?—The 1912 papers were handed over to the library in the early part of January this year, that is to say, papers in the registries are from one year to two years old so far as concerns those registries.

37,846. The registries, at that rate, have only about one year's papers at present?—Only one year and a few months.

37,847. They come to you with the indexes that have been prepared in the registry?—Yes.

37,848. How do you treat them?—The indexes are card indexes kept in cabinets, which, of course, are useful from the start. The papers come to us in boxes, and, supposing there are about 80 papers in a box, or rather 80 files of papers in a box, unless the files are very big ones they are then transferred from those boxes into boxes that are suitable for our own shelves. There are two men engaged in taking over these papers and checking the papers as they are transferred from one box to another to see that each file is complete. A file has an outer sheet over it on which the numbers of the papers contained in the file are recorded. It is the duty of these two men to see that the files are complete; and that the papers are put away in the box with numbers outside the box.

37,849. Are they put away by months?—They are put away numerically.

37,850. Do the numbers correspond to their reception by the sub-registries, or what do the numbers refer to?—As each paper comes into the office it goes into the central registry where it receives a number, and that number carries it right through.

37,851. And it is in accordance with those numbers that you put them in your boxes?—Yes. It is to be remembered though that a file is the file of the first number, and other papers connected with that file, although they have their own numbers, are put under the original file number.

37,852. When you deposit those papers, on receipt from the sub-registries, in your box how do you proceed to treat them?—Nothing more is done with them except that they are there for reference.

1 May 1914.] Mr. EDWARD CHARLES BLECH, C.M.G., Mr. WILLIAM LEWIS BERROW, I.S.O., [Continued.  
and Mr. EDWARD PARKES.

37,853. Are they not separated by subjects and are they not printed?—No, they are kept in their numerical order; there is no question of subject, and such printing as is done is done in the first case before they come to us.

37,854. We shall hear of that from the sub-registries?—The sub-registries can tell you all particulars.

37,855. Have you no method of referring to these papers except through the card index?—We have the registers and the card indexes.

37,856. You have the registers sent to you from the sub-registries?—Yes.

37,857. Is there any sort of consolidation of those registries in your department in the library? If you want to refer to a document have you to refer to the registers which you receive from the sub-registries?—It depends how the documents are referred to. If referred to by number, and we know the country, we at once turn to the register which will give us the file number, and we proceed to take out the file with the document in it. But if it is referred to as a subject we should go to the index, get the number of the paper and the file number there, and then get out the file.

37,858. If there was some question about a foreign place, say, Somaliland, and one wanted to see a letter from the Resident at Aden to some officer in Somaliland which was written in the year 1905 how would you proceed to get hold of that. I want to know what the system is?—I should explain, first of all, that this system of keeping papers did not come into force until 1906; but in a case like that we should go to the register and trace the despatch forwarding this particular paper. The record in the register would be the number of the paper and the file number. If we had particulars including the date of the despatch forwarding this particular paper we should still get those numbers from the register; or if we were simply informed of the subject we should go to our index, and from the index get the file number of the particular paper dealing with the subject.

37,859. Are the card indexes which are sent to you from the sub-registry kept in those cabinets for always, or are the entries in the card index copied into any large register, and then the card index dispensed with?—No. At present they are simply kept as received in the cabinets. But the idea is that every five years these card indexes shall be printed. There has been some difficulty in amalgamating the indexes so far, but I think that in all probability within the next few months we shall start printing the first five years, from 1906 onwards, of these card indexes.

37,860. Will they be printed in a book?—Yes.

37,861. In continuation and in the order in which they are in the cabinets?—Yes.

37,862. Then will the card indexes become useless?—Yes, the prints will then be sufficient for us.

37,863. You must have a great accumulation of card indexes?—We have only those from 1906, when the new system came into force.

37,864. When you commence printing, and that is carried on, it will be reduced to much more manageable size?—Yes. Instancing the Blue Book you have before you, probably the index will come out very much like that, which, of course, will be very handy, and we shall have copies to distribute to each department, as well as a copy for our reference clerks in the library, and a working copy in which we can make alterations.

37,865. I understand you have in the library the librarian, the two assistants (yourself and your colleague), three staff officers, and nine second division clerks?—Yes.

37,866. What is the duty of the second division clerks?—Our rooms downstairs are the librarian's room, the reference room (in which the assistants and two of the staff officers sit), and the long room, in which we keep all, or most of, the correspondence. A second division clerk there is available for references and writing memoranda at all times.

37,867. What do you mean by available for references?—All day long we get requests for papers, for statements as to the position of certain subjects, and

for general information. The senior second division clerk's duty is to be available for that purpose; he also has general supervision over the other men in that room, and he has the care of a rather important part of the work, which is the custody of the maps. We have a large number of maps—about 6,000—and there is a good deal of work to be done in looking after those maps, and he is compiling a map catalogue which will be very useful, but which is a long piece of work to get through. He also receives the papers which are given to us every year by the sub-registries, when they discard their papers for the year. For instance, 1912 papers are received this year. He receives those and supervises their being taken from the boxes, and treated and put away in our boxes.

37,868. Are they taken from the boxes and the papers compared with the numbers and put into your boxes by the second division clerks or people of the messenger type?—By second division clerks. The next second division clerk is engaged on the library register. We have a great deal of library correspondence pure and simple.

37,869. The letters come to you direct?—They come to us from the central registry.

37,870. And are not registered with sub-registries?—No, because we form a sort of sub-registry for the library. This second clerk has the minuting and drafting of this correspondence, and he is assisted in dealing with that correspondence by one of the most junior men. Another second division clerk also assists in the work of the maps and in the reception and treatment of the papers. Another man deals with confidential prints. We have a big mass of confidential prints all under what is called a library number, and a complete record has to be kept of the distribution of those prints. If a piece of print, for instance, is asked for, that piece is numbered and a record is kept of the person to whom it is given. In addition to that there are two men engaged in marking Parliamentary questions. There is a good deal of experience wanted in marking these questions, because, although most of the questions affecting the Foreign Office are addressed to the Secretary of State, a large number are also addressed to other departments, or to the heads of other departments. The men engaged in marking these questions have to see whether a question affects the Foreign Office in any way.

37,871. By the phrase "marking the questions what precisely do you mean?—When the Parliamentary Order Papers come round there are certain questions asked, and these are marked and copies are sent down to be mounted, and are distributed throughout the office.

37,872. You have accounted for the work of four or five second division clerks out of the nine. On what kind of work are the remainder of them engaged?—The senior second division clerk I have informed you about. The second clerk has charge of the library register. The third clerk assists the senior second division clerk in cataloguing maps, and marks Parliamentary questions and is also called upon in times of pressure for reference work and for the production of papers, and so forth. The fourth clerk has charge of the most recent confidential prints, but assists No. 3 clerk in the work connected with Parliamentary questions, and deals with papers returned from various branches. The fifth clerk assists the second clerk on the library register, the correspondence, and so forth. The sixth clerk has care of the earlier confidential papers and assists the staff officer who is in charge of the printed library. The seventh clerk assists in the arranging of the papers on their transfer to the library, and in general work. In addition to that we have two clerks who were appointed for three years in order to get up some arrears of indexing previous to 1906, when the new system came into force.

37,873. That accounts for the whole nine. What are the three staff officers engaged on?—Two of the staff officers are in the reference room where they are engaged in reference work, in memoranda and précis writing, and in fact in work very similar to that of the

1 May 1914.] Mr. EDWARD CHARLES BLECH, C.M.G., Mr. WILLIAM LEWIS BERROW, I.S.O., [Continued.  
and Mr. EDWARD PARKES.

assistants and of the librarian. The other staff officer is in charge of the printed library.

37,874. We have been told that one or more of these assistants is engaged on what may be called administrative work—that he writes memoranda, gets together relative documents, and so on, and makes suggestions to the Diplomatic Department as to the action to be taken and so forth. Would you describe his duties in that way?—Do I understand that that relates simply to one assistant?

37,875. It was one, or more than one, I forget which; but take one case. Are any of your three assistants engaged on what you may call, by any extension of the term, administrative work?—I should think so, certainly. I take it that the four men in the reference room are practically engaged on work that might be termed administrative. They all write memoranda. They all write précis and draft correspondence. They all minute papers which come down to us. They all give advice on subjects with which they are acquainted.

37,876. Say that the rules or the practice of the Foreign Department permitted promotion from the second division to the Foreign Office clerks, would such work as that prepare them for the duties of Foreign Office clerks?—It seems to me it would very much so, because they see all the work of all the departments. They write on every subject which concerns the office. Every department is asking them for memoranda on particular points. They have a more varied experience almost than they would get in any one department.

37,877. How long is an officer kept at that work? When he becomes a staff officer is he always employed on that work, or does he get promotion out of it?—There is no other promotion except that of assistant.

37,878. He would remain on the same kind of work?—On the same kind of work.

37,879. Do the Foreign Office clerks ever come into the library to write memoranda, or do they write such memoranda in their own rooms?—They write memoranda in their own rooms. They would not come into our department at all to write.

37,880. But they would call on you for the papers if they wished to write a memorandum?—Yes.

37,881. And it would be the business of the Librarian's Department to furnish the papers?—Yes; or very often, if they are writing a memorandum, as we have the 1912 papers, we should write it until the end of 1912, and they would continue with the current papers.

37,882. If it was considered desirable for you to continue on to the end of 1913, it would be quite open to you to call for the current papers from the sub-registries?—Yes, we do that quite frequently.

37,883. Is there any sort of communication or transfer of officers between your Librarian's Department and the sub-registries, for instance, or do you receive men from the sub-registries in exchange for men of your department?—Yes, we do undoubtedly. For instance, to give a concrete case, one of our men was appointed a sub-registrar, which is a staff post. He was a second division clerk with us, and got promotion as a sub-registrar. Afterwards, when there was a fresh run of promotion, he came down to us as a staff officer. Then second division clerks have been transferred from the library to the registries. In fact, it is a very good training indeed for registry work if second division clerks pass through the library into the registry.

37,884. From the description of the work given to me, it would seem that the better preparation would be to begin in the sub-registries and go on to the library, because, as I understand, the work done in the sub-registries is of a very formal character. The sub-registries receive from the central registry the documents merely bearing a number on its covering "jacket." In the sub-registries all the information required for registration of the letter and its subject is entered; the relevant papers are put with the letter which is then sent to the department without any comment on the part of the sub-registry. The letter is considered in the department, minutes are recorded, decisions come to, and probably the final order is

drafted. With these minutes and orders the letter comes back to the sub-registry, which then sees to the issue of the final order. That is the style of work I understand is done in the sub-registries?—That is the bare bones of the work. You must remember that when a paper comes into a registry it requires a great amount of discrimination, and a large amount of knowledge for the man dealing with that paper to select the right papers, and to send in papers which may not be obviously relevant, but which are really very suggestive with regard to the treatment of subjects dealt with in that particular letter. You can always tell a good registry man from a bad one, and a good registry man from an indifferent one.

37,885. We have been told to-day that when the paper comes back from a department with orders to be issued, and the clerk in the sub-registry detects any defect in the minuting and the discussions in the department, it is his business to bring the defect to the knowledge of the staff officer in charge with the view of referring the thing back again to the Administrative Department. That is what the clerk in the sub-registry has to do?—Certainly. Of course I have not had very much experience of registry work by itself, but I am brought in contact with the registrars and with the men in the registries. I have not been in the registry myself. Mr. Berrow would give you all information on registry work.

37,886. Perhaps Mr. Berrow will reply to that question?—(Mr. Berrow.) He is most certainly expected to do that. If he allows anything to pass that he knows is wrong, and does not call attention to it, he would get into trouble.

37,887. (To Mr. Parkes.) You are of opinion that it is of great advantage to transfer men from the library to the sub-registries, and *vice versa*?—I do not say *vice versa*, but I think the training in the library is a very good training for registry work.

37,888. Do the men who are in the library consider that they are in a grade either higher than or co-equal with that of the sub-registries?—I take it they are co-equal.

37,889. What is the men's own opinion? Is there any gradation in the various departments of the office? Is one regarded as higher than the other?—I do not think so. The work in the reference room of the library is rather different from that of sub-registrars, because we have so much memoranda writing, and précis writing, and so on.

37,890. There is no such transfer, I understand, between the chief clerk's staff and your staff?—No transfer at all.

37,891. You have two assistants, three staff officers and nine second division clerks. Has the second division clerk a reasonable hope in course of time, if he is a good man, of getting promotion to the assistant's grade?—Yes, but the Librarian's Department is not a water-tight department as the chief clerk's department is. The library and sub-registries are run together.

37,892. And there may be promotion. If there be a particularly good man in a sub-registry he may be promoted over the head of the men in the library to the library?—Yes, promotion by merit.

37,893. There are 23 second division clerks in the registries and 9 in the librarian's office, that is 32. There are 9 staff officers and 2 assistants, making 11. Does not that afford a fair proportion of promotion for the second division clerks?—The proportion seems a very good one, certainly.

37,894. (Mr. Boutwood.) Are any of those staff posts minor staff posts?—No, the minor staff posts are separate from the staff posts and are not counted amongst them.

37,895. Have any of the 32 second division clerks minor staff posts?—Some of them, I believe. I do not know exactly the figures. Probably there are three, but I do not think there are more.

37,896. (Chairman.) Do you think your second division ought to have further avenues of promotion?—I do not know that one should be limited really. At present we are practically limited to a maximum of

1 May 1914.] Mr. EDWARD CHARLES BLECH, C.M.G., Mr. WILLIAM LEWIS BERROW, I.S.O., [Continued.  
and Mr. EDWARD PARKES.

450*l.*, or at the very outside 500*l.* It is only recently when these last promotions were made from the 1st April that we went up to 600*l.* as a maximum in two cases.

37,897. You think there ought to be further avenues of promotion?—I think so. I think it checks a man's ambition, and certainly does not assist very materially to efficiency if you limit him.

37,898. Could you indicate in the Foreign Office in what directions you would find such avenues of promotion?—I think one could only find them by getting a larger proportion of second division men in; that is to say, by working second division men in certain of the non-political departments—departments which are staffed at present by Foreign Office clerks. The Commercial Department, for instance, is what is called non-political, and the Consular Department.

37,899. You would exclude the Foreign Office clerk from the Commercial and Consular Departments, and fill his place with promoted second division clerks?—Even if you did not exclude him, I think there would be possible ground for the introduction of the second division clerk.

37,900. I do not mean to exclude him altogether, but would you find places in the Consular and Commercial Departments for second division clerks by appointing them into positions now held by Foreign Office clerks?—I think opportunity might be made, certainly.

37,901. Have you known any second division clerks who would be quite suitable for promotion in the Foreign Office in that way?—Yes. In the old days, before the registry system was brought into force, there were second division clerks in the Commercial and Consular Departments.

37,902. Were they second division clerks or intermediate clerks?—Second division clerks. Mr. Berrow for instance, was a second division clerk in the Commercial Department.

37,903. (*Mr. Boutwood.*) Were they doing second division work in those departments, or other work?—All sorts of work I believe. Mr. Berrow perhaps can give you further information.

37,904. (*Chairman.*) You cannot speak from your own knowledge as to what they were doing?—No. My work has been confined to the library pure and simple, the whole time I have been in the office.

37,905. (*Mr. Shipley.*) How long does it take on an average to find a document; I suppose it varies a good deal?—It varies materially. If you are told the number it is easy to find the file number and you go straightway to the box and get it. If you are simply told the date and the person, not knowing the country or not knowing the subject, it would be rather difficult, except by means of the index, to find it.

37,906. Do you have a subject index?—A very minute subject index.

37,907. And a geographical one?—Not geographical, but a subject index would include the geographical.

37,908. We have heard from more than one witness that there is rather a desire to get away from the Foreign Office into some other office, and that the coaches who prepare the candidates for examination rather recommend men not to go to the Foreign Office. I gather you were transferred into it; you came from another office?—Yes, I was transferred in 1888. At that time there were only 13 second division clerks in the office, 12 out of those 13 men were getting special remuneration for their work—what they called duty pay. The library was opened for the first time to second division clerks and four men were transferred from other offices, naturally in the hope of getting duty pay, duty pay being given on the understanding that the work in the Foreign Office was of a higher class than that in any other office.

37,909. Duty pay is done away with now?—Yes, at the time of the Ridley Commission.

37,910. At that time you were rather glad to get into the Foreign Office?—In the hope of duty pay, and of course in order to be in a pleasant office.

37,911. How many languages does one have to know to use the library. A great deal must be foreign

literature?—French is the principal language. Beyond that German; if you know enough German to carry you through you do not want anything more.

37,912. No Spanish?—I think not. We have translators in the office.

37,913. (*Mr. Matheson.*) In the case of papers like Spanish papers, would they be put away with a translation or how are they filed?—The original is put with the translation.

37,914. (*Sir Henry Primrose.*) The papers that come to you are two years old?—From one to two years. The papers for 1912 are received in the early part of January 1914.

37,915. Supposing a paper of 1912 was in a file attached to a case that was current in the office at the moment, that would not be taken off and come to you because of its date?—The files are confined to the particular year. The 1912 file closes with 1912 and the reference outside to the following year is to such and such file number, 1913. "Cases" may run from 1906 up to the current time, and the 1912 papers in any particular case might not be handed over to us immediately but might be kept for a time in the registry, although as a matter of fact it would only be kept in the registry for a few months after the year's papers were handed over to the library.

37,916. When the papers come to you, before you put them away, do you do anything in the way of making a short digest of what is in the file?—No, we have an outer "jacket" on which is simply given the subject and the numbers included under the file number.

37,917. That is already on the paper when it comes to you?—Yes.

37,918. You do not do anything more?—We do nothing more.

37,919. Do you do anything as regards printing?—The printing is done by the department in the first instance in the early life of the paper.

37,920. Are these memoranda that you speak of prepared in the Librarian's Department, prepared in order to enable the people in the Foreign Office proper to deal with the paper that has come in?—Yes.

37,921. Do they send you the paper that has come in and say: "I want a memorandum with the previous history of this"?—Yes. Supposing a question arose about the title deeds of the church at Pernambuco, the department would refer that particular paper to us and say "Will you give us the history of the church at Pernambuco, and say what has become of the title deeds?" We would then probably get out the papers which go right away back—perhaps have to get papers from the Record Office in that case—and trace the history of those title deeds.

37,922. Take that particular case. Before putting away the papers each time something happens in connection with the church at Pernambuco would you record it so that the memorandum gradually grows up. Do you do that?—No.

37,923. The précis are the same as the memoranda?—Much the same.

37,924. With regard to parliamentary questions, you cut out the question and put it on a piece of paper and send it to its particular department?—It is rather a longer job, because we have to supply all the under-secretaries and the private secretaries and the departments, so that it means about 12 or more of these sets of parliamentary questions have to be prepared every day. They are simply marked by our men and sent down to the binding staff that we have attached to the Foreign Office, who mount these papers. They then come back and are sent to the central registry, who distribute them to the departments and to their destinations generally.

37,925. The questions that are addressed to the Secretary of State about current diplomatic questions would not come to you, would they?—Yes, all the questions which are mentioned in the House of Commons or House of Lords Order Papers come to us.

37,926. Let us take the period during the Balkan War. Any question addressed to the Secretary of State in connection with negotiations and so on you would not have any information about, because you have

1 May 1914.] Mr. EDWARD CHARLES BLECH, C.M.G., Mr. WILLIAM LEWIS BERROW, I.S.O., [Continued.  
and Mr. EDWARD PARKES.

no papers that are not two years old?—We do nothing more than mark and mount all parliamentary questions.

37,927. You do not contribute towards the answering of them?—No.

37,928. Do you keep up the State Paper series?—That is done by the librarian and an assistant editor, who as a matter of fact is a man in the chief clerk's department.

37,929. Who decides what papers are put into this series?—The librarian is editor. There is a remuneration of 150*l.* for each volume which is paid to the librarian as editor and to the assistant editor.

37,930. When do you send your papers to the Record Office—after 20 years?—The last lot we sent were up to 1869, and we probably shall not send any more until we want more space in the office. We shall probably send papers about every eight years.

37,931. With regard to papers that have not gone to the Record Office, supposing anybody is engaged on a literary work and wants to consult papers, is he given leave to go to the library?—No. Papers are only open to inspection by the outside public up to 1860, and those papers are at the Record Office. Up to 1837 they are open to inspection at the Record Office without special permission. From that year (1837) up to 1860 anyone wishing to consult those papers would have to get special permission from the Secretary of State for Foreign Affairs.

37,932. (Chairman.) These are papers connected with foreign matters?—These are our own papers.

37,933. (Sir Henry Primrose.) Where do the maps you mentioned come from? Are they maps specially produced for the Foreign Office?—A certain number of them, but whenever there is a good map needed for any particular question we, of course, take it into the Foreign Office library. We get a certain number of maps from the War Office, who are producing maps on special subjects. We produce maps ourselves through the War Office or the Ordnance Survey for special purposes, and of course we buy from Stanford and other publishers when necessary.

37,934. Do you exchange Parliamentary papers and Blue Books with foreign governments?—We do.

37,935. I suppose you have a regular list of what particular papers you send to particular countries?—Yes. A foreign government or society applying through a government wishing to effect an exchange of papers would specify what papers they wanted and what papers they were prepared to give.

37,936. Do you have quiet times in the library in which you can set men down to work up a paper, say, on such a question as Albania and the recent history of it, so that you may have it ready in case of emergency?—No; we are subject to so many interruptions. There are many calls upon us for all sorts of information. We give not only information on official matters, that is to say; matters connected with official correspondence, but all sorts of general information, as we have a big printed library and a great number of reference books; departments are continually ringing us up on the telephone for information on various points all day long.

37,937. Take, for instance, countries like the Balkan States; have you in the library anything on which you can put your hands that would show the Secretary of State at a glance exactly the history of everything the Foreign Office had had to do in connection with Macedonia for the last 20 years or so?—The department prepares a current memorandum. For instance, after the Balkan crisis it would really be the duty of the department to prepare a memorandum on the subject of that crisis.

37,938. And that would be printed, I suppose?—That would be printed.

37,939. But you would have the prints in the library?—Yes, we have all the confidential prints. That would be what we call a confidential print.

37,940. You are in charge of those and therefore if one was wanted at a moment's notice, they would not go to the department but would go to the library for it?—They would go to the library. Supposing this were a department memorandum on any particular

subject it would have a library number. The printer would print "confidential number" so and so. We have a book in which the particulars are entered—the title, the date and the person who wrote it, and so on, and a very adequate card index of our own to these confidential prints.

37,941. Those are important papers and those are prepared in the department and not in the library?—On those current questions, yes. But if we had written up the question it would have been prepared in the library and given an official number in just the same way.

37,942. When you do that in the library is the clerk who does it expected to produce a dry epitome of facts, or is he expected to put in observations and draw attention to particular points which may be important?—I think it would be something a good deal more than a dry record. It would be on just the same lines as a memorandum prepared in the department.

37,943. (Mr. Boutwood.) You told us about a binding staff. That is the first mention I have heard of that. What is the binding staff?—We used to bind all our correspondence.

37,944. (Chairman.) The correspondence you mentioned as being put in the boxes?—The manuscript correspondence previously to 1906, when the new registry system came in. Our correspondence then was made up in countries and bound in thick volumes. It was kept on quite a different system to the present system. It had no numbers in the same way that our present papers have. A binding staff was introduced then and paid by the Stationery Office, and, of course, we still have to bind and are binding a great number of volumes as they decay. In addition to that there are books always coming down from the printed library to be bound. So there is a particular man, Mr. Collins, who is a binder, who has a certain staff of so many men. We do not know about his arrangements; he makes them with the Stationery Office. We call upon him to do all sorts of miscellaneous work, such as mounting these parliamentary questions to which I referred, and general work of that sort.

37,945. I suppose, therefore, it is really a little local branch of the Stationery Office working in the Foreign Office?—It is not that exactly, but it is more as if it were a contractor working in the Foreign Office and paid by the Stationery Office. Practically, I think, that is about what it amounts to.

37,946. (Mrs. Deane Streetfeld.) In writing up the memorandum, such as you were describing to Sir Henry Primrose just now, as to which you had the papers in your possession, would your memorandum cease with the papers you had in your possession, or would you be able to call for current papers from any department to complete it?—I mentioned that sometimes we carry on a memorandum with current correspondence, just as the department very frequently writes on the older papers as well as the current papers. It overlaps to a certain extent occasionally.

37,947. (Mr. Graham Wallas.) There is a large mass of discussions on technical library methods—a lot of literature on the subject—but does your department take any part in that? Have any of your staff been through a course of librarianship, or do any of them belong to library associations or anything of that kind?—No. Our library is not a very important library from a book point of view. It is simply a library of reference books for the use of the office. There is no access to it with regard to the public. We do not allow the public in.

37,948. But a good deal of the technical discussion on librarianship concerns methods of reference and of card-cataloguing—methods which are very important in your library as well as in others?—We have not taken up that question at all.

37,949. There are a number of Government libraries; most of the offices have libraries of more or less importance. Do the librarians of the various Government offices ever meet and discuss technical points?—Not to my knowledge.

37,950. A good deal of the efficiency of your library must depend upon the character of the apparatus which

1 May 1914.] Mr. EDWARD CHARLES BLECH, C.M.G., Mr. WILLIAM LEWIS BERROW, I.S.O., [Continued.  
and Mr. EDWARD PARKES.

is provided for you by the Stationery Department. They provide you with your cards and a good deal of your furniture—files and so on?—Yes. We send requisitions to the Stationery Office. If we wanted a special sort of card we would get it. It is for us to select the card, not for the Stationery Office to supply us with any card they wish.

37,951. Do you remember any suggestion arising from the Stationery Office stating that such and such a piece of apparatus has been found useful elsewhere and might suit you?—I am not aware of any such suggestion.

37,952. Nor is there an advisory committee on library materials which advises the Stationery Office in that way?—I am not aware of any.

37,953. The work of your Consular Department is very closely connected with the Board of Trade?—Yes, undoubtedly.

37,954. A very large proportion of the consular papers and returns on detail requisitions are sent in from the Board of Trade?—Yes.

37,955. And the Board of Trade has a library?—Yes.

37,956. Do you keep in touch in the matter of the methods of reference and so on with the Board of Trade library?—No, not at all, I think.

37,957. Have you, for instance, a common card catalogue. Do you duplicate your cards so that you have a card catalogue of their library and they one of yours?—As a matter of fact, we have not a card catalogue at all of the printed books. We have a printed catalogue. One was produced some time ago—I am afraid I cannot say when exactly—and the supplement was produced in 1908. The current catalogue that we keep now in the printed library is kept with a view of being printed later on. We keep it on very large sheets.

37,958. You have no card catalogue of the books in your library at all?—No, not of the printed books. We do not keep a card catalogue of those.

37,959. What happens when you get a new printed book. How do you catalogue it—write it on a slip and stick it on a back sheet?—We keep it on a large sheet, which we can interleave, and so forth.

37,960. It must be very essential to the Board of Trade, for instance, to know exactly where all the papers are which have been provided by the Consular Department, and it must be sometimes very important for you to know at once what papers there are on kindred subjects at the Board of Trade?—I am afraid I do not quite understand the point of these questions.

37,961. I am not dealing with the books, but with Foreign Office papers which one can buy, or various Board of Trade returns, ranging from papers which are sold to the public to papers which are official papers. It must constantly happen that they want to refer to papers originally prepared at the Foreign Office at their request; and it must also constantly happen that you want to refer to papers prepared by them?—All these papers, whether prepared by us or by the Board of Trade, are Parliamentary papers.

37,962. I am referring not to Parliamentary papers, and not to confidential papers, but there are often papers intermediate between those?—I do not think we have any. Parliamentary papers are issued, and those are purchased from the Stationery Office.

37,963. Then you have a complete set of Board of Trade papers?—Any Board of Trade paper that we want, if a Parliamentary paper, we should not go to the Board of Trade at all for, but to the Stationery Office, on our own requisition.

37,964. Then you think in regard to your work, although in many directions it is closely akin to that of the Board of Trade, there is no point in which close co-operation between your library and their library would be of the least use?—If you are speaking of the printed library, none at all. If you are speaking of our manuscript library I do not quite see that there would be any co-operation or connection. (Mr. Blech.) As an old consular official, I may say that a consul has a large correspondence direct with the Board of Trade which does not pass through the Foreign Office at all. On everything connected with shipping returns, and

with seamen, and that kind of thing, he corresponds direct with the Board of Trade.

37,965. Cannot you conceive it rather useful at the Foreign Office library that there should be easy means of ascertaining what those papers are which are sent direct to the Board of Trade?—Yes, but I do not think that is a case likely to arise, because it is peculiarly a Board of Trade matter.

37,966. (Chairman.) Does the consul send to the Foreign Office at stated times a list of the letters he has addressed to the Board of Trade?—No, he does not give any such information.

37,967. (Mr. Graham Wallas.) (To Mr. Parkes.) Taking library work all over the world, a very large portion of it is done by women. You know that?—Yes.

37,968. Has it ever been suggested that any of the work of the library of the Foreign Office should be done by women?—Never.

37,969. We have been told that you have in your library a body of people who are employed by a contractor, as to whose terms and conditions of employment and conditions of dismissal you know nothing, and who work for a binder. Has it ever been suggested that it might be convenient if those men were more directly employed by the office?—It is simply a question of convenience. We, and the office generally, want some work done. In the ordinary case we should go to the Stationery Office, who employ contractors. As a matter of convenience it is very much better that the work which we want done should be done close to us in the office. As a matter of fact, we have a lift from our department into the binder's room, so that he is able to do things for us at a moment's notice.

37,970. (Mr. Holt.) Are those three staff officers in any sense of the word supervising officers?—The staff officers of the library are not. They are staff officers from the point of view of the importance, I take it, of the work they are doing. They are not supervisors; the man who is supervisor is the second division clerk in what I have called the "long room," which is really the third room of the library.

37,971. Is he a minor staff officer?—No; but he has reached the minimum of the minor staff officer's pay, or exceeded it.

37,972. What is the exact pay of those three staff officers?—Two of them go from 300*l.* to 450*l.*, and the other goes from 300*l.* to 400*l.*

37,973. (Chairman.) (To Mr. Berrow.) When you were good enough to show me over your department I noticed that in the central registry, which you yourself control, you employ boy clerks?—Yes.

37,974. And only boy clerks?—Yes.

37,975. Not second division clerks?—No, not second division clerks.

37,976. Under the new dispensation, if the Government approve of the report of this Commission, there will be no longer any boy clerks. How then do you propose to deal with the work of registration?—The suggestion that I should make would be to employ the young men that you propose to take in under the name of the "junior clerical staff," but only to keep them, say, for 12 months or so.

37,977. And then pass them on?—Yes.

37,978. Would boys of that junior clerical class do for the central registry?—Quite, because the boys we have there have other work to do besides distributing papers; they keep a register. We even ask them to have a little knowledge of French.

37,979. Do you think that the work of the sub-registries, where you have 23 clerks, could in whole or in part be done by the "junior clerical class" under the new proposals?—I dare say it could be done, but I do not think it ought to be done.

37,980. Will you tell me why?—I think we ought to have somebody a little better educated. We ought to have the senior clerical staff there. Many of the papers are extremely confidential.

37,981. (Mr. Boutwood.) But then if you have the senior clerical class upstairs in the sub-registry how would you work off your junior clerical men in the central registry?—Only employ them temporarily and

1 May 1914.] Mr. EDWARD CHARLES BLECH, C.M.G., Mr. WILLIAM LEWIS BERROW, I.S.O., [Continued.  
and Mr. EDWARD PARKES.

send them back to the Civil Service Commission; because you do not propose that their employment should count for pension until they are 20, so it would not be a bar to them.

37,982. (*Chairman.*) You think that apart altogether from the mere question of confidence you would require for the sub-registries men of the higher class because of the nature of the work?—Most certainly I do.

37,983. When we were going through the sub-registries the other day I did not understand so clearly as I do now that it was open to sub-registry clerks to scrutinise the minutes and notes that came-back from the departments, and to suggest corrections or improvements?—It is their business to read them, undoubtedly.

37,984. But to read them with the object of understanding what was done, and reading them with the object of supplying defects are two different things?—An incident may have arisen before similar to the one actually concerned in the paper the man has. He knows what happened before; if a new decision is being taken or a new line of procedure it is for him, unless he sees it has been carefully examined, to suggest to the department that a different procedure was adopted before.

37,985. Would he take a slip of paper and write his opinion?—No, he would take the paper back to the head of the department and suggest to him: "I suppose you remember so and so happened."

37,986. To the head of his own department?—No, the head of the Political Department concerned.

37,987. He is in the habit of doing that?—Yes, he can go to the head of the department or the assistant in the department.

37,988. He would not think his duty discharged by going to the staff clerk in charge of the sub-registry and pointing it out to him?—It is immaterial whether he gives it to him to do or does it himself; but it is his business to point it out.

37,989. In that way he must acquire a considerable knowledge of what goes through the office?—We do not expect him to be a machine.

37,990. And by that means you are able to discriminate between the capacities of men who are working under you?—Yes, you soon find that out.

37,991. (*Mr. Holt.*) What is exactly your own history? Are you a Foreign Office clerk?—No, I originally entered the old lower division, afterwards termed the second division. My whole official career has been passed in the Foreign Office.

37,992. You have simply risen from the ranks?—Yes.

37,993. Are your staff officers supervising officers? Yes, they are supervising officers in the registries.

37,994. They supervise the 23 second division clerks, and how many boy clerks?—We have four staff officers, four minor staff officers, and I understand 23 second division clerks.

37,995. Are the four staff officers on this table, which has been supplied to us, minor staff officers?—There are four staff officers and four minor staff officers.

37,996. How many boy clerks?—Five boy clerks and 22 second division clerks.

37,997. Is it approximately correct to say that there are eight supervising officers to 27 supervised persons, including five boy clerks?—In the room I am in, called the central registry, I have a staff officer.

37,998. Your total staff is eight supervising officers and 27 clerks?—27 men and boys.

37,999. That is a liberal proportion of supervising officers?—The minor staff officer does not supervise, he works—except that he supervises when the staff officer is away on leave.

38,000. (*Mr. Graham Wallas.*) Is your work entirely supervising and directing, or if there is a difficult question in a paper involving technical knowledge do your subordinate officers bring it to you?—Yes.

38,001. So you are not merely running a department, but using your experience and knowledge for the purpose of directing minutes and making suggestions?—I have nothing to do with directing minutes.

38,002. I mean directing the preparation of reports and the collection of papers?—No; I have nothing to do with that at all.

38,003. You do not do in the registry anything in the nature of what is done in the library with regard to past papers?—Not in the shape of writing memoranda.

38,004. They never send to you and say: "We want the papers relating to such and such a question"?—Yes.

38,005. The collection of papers for that purpose involves a considerable amount of technical knowledge?—Certainly.

38,006. And almost amounts to collecting the material for a paper?—Yes.

38,007. And that, if it is difficult and technical, is sometimes brought to you to advise on?—To help, certainly.

38,008. (*Chairman.*) That is with regard to modern papers not more than two years old?—Yes.

## NINETY-THIRD DAY.

Thursday, 7th May 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

His Grace the DUKE OF DEVONSHIRE.  
The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir DONALD MACALISTER, K.C.B.  
Mr. ARTHUR CECIL TYRRELL BECK, M.P.  
Mr. ARTHUR BOUTWOOD.  
Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. PERCY EWING MATHESON.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. GRAHAM WALLAS.  
Miss HALDANE.  
Mrs. DEANE STREATFIELD.  
Mr. N. E. BEHEENS (*Secretary*).

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B. (H.M. Ambassador at Vienna), called and examined.

38,009. (*Chairman.*) You are His Majesty's Ambassador at Vienna?—Yes.

38,010. Will you be good enough to mention the various appointments you have held in the Diplomatic Service?—I entered the Service in 1877, and was then a little over a year at the Foreign Office.

38,011. Did you enter the Service by competition?—No, I was one of the last who entered without competition on a qualifying examination.

38,012. Then you spent some time in the Foreign Office?—Yes; I was a little over a year at the Foreign Office. Then I was appointed to Washington as attaché under Sir Edward Thornton, where I remained about three years, and became a third secretary. Then I was a short time in charge of our Legation in Switzerland as quite a junior. It so happened that there was an interval between the out-going chief and the in-coming one, and the secretary in charge had to leave for family

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

reasons. Though quite a junior I had the advantage of going there, for a few months only, in charge of the Legation at Berne. Then in 1882 I was appointed third secretary at Madrid, which is a place where I have spent about 12 years of my diplomatic life. I was at Madrid under Sir Robert Morier, a very distinguished Minister—it was then a legation and not an embassy. I became a second secretary at Madrid, and stayed there until after the death of King Alfonso XII. Then I was appointed to the Embassy at Paris, where I had the advantage of serving for one and a half years under Lord Lyons, one of our most distinguished diplomatists. I stayed on in Paris under Lord Lytton till the end of the year 1889, when I was appointed Secretary of Legation (as it was then called, but now would be called Counsellor of Legation) at Tokio, in Japan. For the next five or six years I was in the Far East—Japan—and afterwards as Chargé d'Affaires, and not as Minister—by my own wish—because I did not wish to be Minister then, as I wanted to go through the regular course and become counsellor. I was in Siam for about two and a half years; after that I came back, and was appointed Counsellor of Embassy at Constantinople, where I remained five years. From there I was appointed counsellor, with the rank of Minister, in Paris, where I remained about two and a half years. That brought me to my first independent post as Minister at Lisbon, in the year 1905. I was Minister at Lisbon a year, and was then appointed Ambassador in Madrid, where I remained seven years, until a few months ago, when I was transferred to Vienna.

38,013. Yours has been a most varied experience, and in the course of it you have had ample opportunities of forming a judgment in regard to the qualities and capacities of our diplomatic officers; and the way in which they compare with the clerks in the Foreign Office?—Yes. I have not been in the Foreign Office since that first year, but still I have had such opportunities.

38,014. Transfers do occasionally occur between clerks in the Foreign Office and members of the Diplomatic Service?—Yes.

38,015. Have any such transfers taken place in any of the missions or embassies with which you have been connected?—Not while I was there.

38,016. So that you are not able to give the Commission an opinion, formed from actual observation, as to the capacity and the general mental calibre of diplomatic officers compared with those recruited for the Foreign Office?—I have an opinion, because I know so many of the members of the Foreign Office well. I certainly have formed the opinion that they are interchangeable, and that it is very desirable to interchange them as much as possible. I am strongly of that opinion.

38,017. Am I right in thinking that you regard them as so much on a level that interchangeability would cause no difficulty either in the Diplomatic Service or in the Foreign Office so far as the capacity of dealing with the work goes?—I think so.

38,018. At what stage of the diplomatic officer's service or up to what stage do you think that system of interchangeability could be practised?—I think it would be difficult after a member of the Diplomatic Service has become a first secretary. It seems to me it would be difficult then to effect the exchange.

38,019. Normally speaking, after how many years' service does an officer reach the post of first secretary?—I suppose in about 12 years. I will not be certain about it; but that is very easily ascertainable.

38,020. Beyond that period you are disposed to think that interchangeability is not desirable. By that time an officer specialises in the Diplomatic Service?—I think so. I think it becomes difficult in the higher branches of the Diplomatic Service to transfer them, because they ought to be, owing to their rank, by that time heads of departments; and yet, considering that they have not been in the Foreign Office all those years, it might not be desirable that they should be.

38,021. From what you say I infer that you do not think there could be such a complete amalgamation of the Foreign Office and the Diplomatic Service as that

all the members of both Services could be brought upon one promotion list?—No, I do not think so.

38,022. Then you think the interchangeability should be in the earlier stages of an officer's service, with the object of enabling the diplomat to know how things are worked in the Foreign Office, and the Foreign Office man to know how things are worked on the diplomatic side?—Yes, very desirable in the lower ranks, and up to pretty high rank.

38,023. There are some difficulties, or at least some have been suggested from past inquiries into this subject by the Ridley Commission, with which I suppose you are familiar. It is said that some difficulty may occur in effecting transfers owing to the greater expense of living in a diplomatic career than in the Foreign Office?—Undoubtedly that is so.

38,024. Am I also right in thinking that the kind of work and the mental qualities required for the work differ somewhat?—Certainly they differ; but I think the men who form the membership of the Foreign Office would adapt themselves very easily.

38,025. I inferred that from your previous answer; but I should like to go a little more closely into this point. First, as to the greater expense of a diplomatic career. Am I right in thinking that in the case of a clerk in the Foreign Office here his position imposes upon him no obligation of living in an expensive way—entertaining, and so forth?—I think not. It is a matter of choice for himself. It is not expected of him.

38,026. Does the same rule apply in the case of a diplomatic officer?—There he is compelled to.

38,027. Should I be right in saying that while the matter depends, in regard to the Foreign Office clerk, altogether on himself, the standard and the style of living of a diplomatic officer is prescribed to him from outside, by the society in which he is forced to live?—Certainly.

38,028. And his efficiency as a diplomatic officer would possibly be impaired if he were unable to live in the same style as his fellow diplomats and his colleagues of other countries live?—Yes. If he were not able to live in the same style as they his value to the Service would be impaired thereby.

38,029. I noticed in reading the back papers, especially in the evidence given by diplomatic officers before the Ridley Commission, that while the business of a Foreign Office clerk is finished when his day's office work was done, the more effective business of a diplomatic officer usually commences after office hours and when his social engagements begin?—Certainly; that is a large department of his duties. I consider that an efficient secretary of an embassy is, in a sense, on duty always. He is not at all exclusively an office man—though that is a very important part of his duties certainly. It is most important to have the most efficient clerk you can have; but, besides that, it is his duty to have his eyes open wherever he is, in whatever society. There is scarcely an hour in the day when he could not learn something or pick up something and gain an impression.

38,030. Which would be of use to you?—Which would be of use to the chief of the mission?

38,031. There is, of course, absolute confidence between the head of the mission and his staff, and it is part of the duty of a member of the staff to inform the chief of all those things which touch upon his functions as, say, Ambassador?—Absolutely, and, if I may develop that a little, I may say that I think it is a feature of our Diplomatic Service that we live very harmoniously together as a kind of diplomatic family in each post. That is what we aim at, and what I think is done, perhaps, more in our Service than in any other.

38,032. That being so, do you think support is lent, by the facts that you have mentioned, to the practice of careful personal selection of officers who are to be employed in the Diplomatic Service?—I think there must be selection.

38,033. Not only must the officer be intellectually fit, but he must be what I might call temperamentally fit and also sociably disposed?—Certainly. I think he must be a man who can take his place in the society, whether political, purely fashionable, or literary—what-

7 May 1914.] The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

ever it may be—of the place in which he lives, and move in that society as belonging to it naturally and without difficulty, and be accepted as standing on a footing of equality.

38,034. I infer, then, that in your opinion the selection of members of the Diplomatic Corps by an open competitive examination would not strike you as being the means best adapted to secure the class of men you require?—It would not.

38,035. Unless supplemented, may I say, by this personal selection?—Yes, examination plus selection.

38,036. The expense of living abroad also introduces another element into the selection of men for the Diplomatic Service?—Certainly.

38,037. The ordinary pay of a Foreign Office clerk, beginning at 200*l.* a year, and after many years reaching 500*l.*, would, under those circumstances, be inadequate in your opinion for such a life abroad?—I think quite inadequate.

38,038. At the present time, as you are aware, the rules prescribe that a candidate for the Diplomatic Service must have private means of at least 400*l.* a year?—Yes.

38,039. In your opinion is that sum more or less than it ought to be?—I think the estimate is low. We all know that prices have gone up very much; everywhere living is more expensive, and I think 400*l.* a year is certainly a low estimate.

38,040. The necessity that men are under of having a private income, if they wish to enter the Diplomatic Service, would seem to limit the operation of interchangeability between the diplomats and the Foreign Office men to clerks having private means?—It would limit it to those. I suppose a transfer would not be made against the wish of the Foreign Office man in any case, and a man who did not feel that he was able to meet the expense would not ask for an exchange.

38,041. I suppose the exchange would be effected with men who were anxious to have experience of foreign Courts; and, of course, at the present time, seeing the necessity that exists for something more than a man's pay, the transfers are limited to those who are financially able to go?—I think so: by their wish.

38,042. But it may happen, may it not, or, at least, it is conceivable, that the Secretary of State here might consider that the interests of the public service would be helped by transferring a Foreign Office clerk to a diplomatic post, while the man proposed to be transferred may not have the money to go?—That may happen, of course.

38,043. So that the existing system presupposes the possession of money, both on the part of the diplomat and on the part of the Foreign Office clerk?—Yes, the particular Foreign Office clerk who would be selected for an exchange. But I should like to say that I think myself it is very difficult to lay down a hard-and-fast rule. I think, for instance, if there was a very promising young Foreign Office man who would be benefited in the opinion of the Secretary of State by spending a few years abroad, he would probably send him to a post where it might be possible, even with less money, for that young man to get on. In the first place, posts differ in this respect: not only may one be rather more or less expensive than another, but some have greater facilities for secretaries. In Madrid, where I have been so many years, we have a house where secretaries are put up, and a secretary who has the advantage of getting into that house, of course, saves the whole of his expenditure under the heading of "rent," and he is next door to the Ambassador, who, if the habits of the Ambassador are sociable, would very likely have him very often at his table. There are many ways in which the position of a secretary can be made, under favourable circumstances, easier in one post than in others, or under one chief than under others.

38,044. But there would not be the full freedom of employing that man who was transferred from the Foreign Office that there would be if the money difficulty did not enter into the question?—Certainly; he would probably feel the money difficulty, but it might be overcome in certain cases.

38,045. I put these questions to you in order to lead up to this question: Do you think the money difficulty

could be got over by any system of local allowances abroad? A system of local allowances might relieve the case of the Foreign Office clerk abroad who had only his official pay, but would it be well to introduce the plan of local allowances for particular individuals; if introduced at all the system should, perhaps, be general. I would ask you whether in your opinion a system of local allowances, fixed with reference to the expensiveness of a diplomat's life abroad, would meet the difficulty we are considering, while not forfeiting the advantages attaching to the present system of going some way to secure the men possessing the social qualities required in a diplomat?—If the State is going to pay what is now paid out of the family chest, in that case it seems to me at first sight that local allowances would be the fair way of distributing the State aid.

38,046. Have you ever discussed the consideration I have suggested with your brother diplomatists?—No, I never have discussed that point. It has never come up in conversation between myself and members of my staff. It would be an interesting point to discuss, and I do not remember ever having discussed it.

38,047. If it were practicable it would from one point of view widen the sphere of selection of men for the Diplomatic Service. People would join the Diplomatic Service who now do not think of doing so. Should I be right in thinking that the requirement of 400*l.* a year restricts the Diplomatic Service to the wealthier classes, and also deters people not so well off from entering it?—Yes, but I am personally rather afraid of widening the field of selection, which appears to me at present to be fairly wide. Of course, there must be thousands of young men who have not got the 400*l.* a year who would make capital secretaries—just as good as the others, I dare say—but I think we ought not to get away from the necessity of selecting from the set of young men who are accustomed in their home surroundings to the kind of conditions of life that they will meet with abroad. That seems to me very important. I might develop some of these questions, but I would like to answer you as directly as possible.

38,048. I should like you to develop them, because the point you have just touched on is that to which one of my previous questions was addressed, namely, that if a system of local allowances were provided, we might relieve one difficulty, while on the other hand importing certain disadvantages?—You would run the risk of importing disadvantages. I have in mind that the object we all wish for is the greatest possible measure of success in diplomacy. We want to succeed. There are so many qualities, besides those of mere quickness and intelligence, which are wanted, and which I should say even come before great brilliancy or great cleverness—common sense, judgment, and tact, I think, all come before mere intellectual alertness. The great thing is to get both, and I hope in many cases we have both, but judgment and common sense come first in my opinion. I think the object in a foreign diplomatic mission is to have at the foreign post an English centre, where the members of the mission live the kind of life that people most respect and admire in England—what is most looked up to and honoured in England. I think if those circumstances can be reproduced abroad it will give the embassy influence. That has regard to the composition of the embassy itself. Then I think the members of the embassy should be welcome guests among the circles in which the government of the country is carried on; and not only the government of the country, but a most important thing is to be on easy terms with the foreign diplomatists. Now a man who has been in the Diplomatic Service for a number of years comes to know a great part of the Diplomatic Body of all nations. It would be impossible for him to go to a post in any part of the world without meeting a few people whom he knew before, and in the families of those people and in their missions he should be a welcome guest, so that he can exchange views, and in that way assist his country by being in a position to report faithfully and accurately as to the state of feeling in different countries.

38,049. Angularities of character or brusqueness of demeanour would not be conducive to that efficiency which you have now suggested?—I think not.

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

38,050. Do the diplomatic departments of foreign States and Governments to which you have been accredited pay much attention to that method of selection—that is, selecting for their Diplomatic Corps men who will mix on easy terms of equality with their colleagues of other countries?—I think they all pay attention to it, and, as far as I know, in all the great nations—in most of the leading nations in the world certainly—the Minister for Foreign Affairs reserves to himself in one way or another a right of exclusion of people whom he thinks, however well suited for other careers, are not well suited for that. I think all of them really have the power to keep such candidates out.

38,051. In the United States of America, to which you were accredited, I believe that is specially insisted upon, and the appointments are all matters of nomination resting with the President?—Yes.

38,052. We called for information upon that point, and in a document under date 26th November 1909, which has been presented to the Commission, the following passage occurs: “No person shall be certified as eligible”—(that is for a diplomatic appointment)—“who is under 21 or over 50 years of age, or who is not a citizen of the United States, or who is not of good character and habits and physically, mentally and temperamentally qualified for the proper performance of diplomatic work, or who has not been specially designated by the President for appointment to the Diplomatic Service, subject to examination and subject to the occurrence of an appropriate vacancy.” So that selection in a great democratic State seems to be insisted upon?—The President reserves to himself entire discretion. I think the American Diplomatic Service is unlike any other in that there is no constituted Civil Service in the United States in our sense of the word, and it is a familiar spectacle at all posts to have a new set of American diplomatic colleagues after Presidential Elections.

38,053. Is it your experience that these new colleagues come mostly from the same social stratum as their predecessors, and that they are men of the world, men who have been in the habit of mixing in good society?—I think the Americans are not very particular in their selection in this sense. We are particular, in sending men abroad, that they should have some knowledge of foreign languages. That does not seem to be considered at all a necessity in American diplomatic appointments. I think most Americans would admit that the appointments are mainly made for political reasons, as a reward for services during the elections.

38,054. If the system of local allowances were introduced, do you think it would be necessary to alter the existing system of leave and travelling allowance and allowance for removals? It seems to me that these allowances at present are calculated upon an economical scale?—I think they are, because journeys for leave are not paid; they come out of the secretary's pocket, and that is, of course, a very considerable expense when one is at a distant post.

38,055. That is to say, if we are to send young gentlemen abroad from this country who have not the 400*l.* a year private income, regard must be paid not only to an adequate local allowance, but to the other matters of necessary expenditure which they must incur?—That is to say travelling expenses. Yes, I think so, certainly, because it would differ according to the different posts, and the length of the journey when a young man came on leave.

38,056. Passing to the Consular Service we have noticed in the Ridley Commission's Report that proposals were made for the amalgamation of the Diplomatic and Consular Services, our attention being specially called to the French precedent. It was said that the two Services are amalgamated in France. In connection with this question of amalgamation, do you think you want the same stamp of man for your Diplomatic Service as you do for your Consular Service?—No, I think not. I think for a consular post some of the special qualifications that we have been talking about as being desirable in diplomacy are not so necessary—always very acceptable when they are there, but

not so necessary. I was speaking of communication with foreign diplomatists, and with the Government of the country in which you are; all that, of course, exists in a consular post on a much smaller scale. The necessity is there too. A consul should enter into friendly relations with his brother consuls of different countries, and therefore the qualifications we have mentioned are also very desirable there; but the interests at stake are so much smaller and so much more local that I should say, broadly speaking, the qualifications required for the two Services are different.

38,057. I infer that you are not in favour of an amalgamation of or frequent transfers between the two Services?—I am not in favour of amalgamation. I am in favour of the Secretary of State having a considerable discretionary power as to appointments. The object being always the best service of the State, if there is a man who is eminently suited for a post, I think it should be in the power of the Secretary of State to appoint him, as has been done in the past.

38,058. It has been done, but in exceptional instances?—Yes, exceptional instances.

38,059. Are you in favour of the transfer of diplomatic officers to high consular posts, say to the post of Consul-General?—I think so, sometimes. I do not see why, in certain cases, it should not be done. I have known instances where it has been done and where it has suited the diplomatic officer: Where he has been told, for instance, for some reason, that he is not likely to get to the top of the tree, and a good consular post is offered to him. In some cases he will accept it and be glad to have it.

38,060. Such a transfer as that might be, I think, likely to create discontent in the Consular Service?—Yes, it might do that.

38,061. Still, you would not fetter the discretion of the Secretary of State to make such an appointment?—I think it is very desirable that he should have the discretion.

38,062. (*Mr. Beck.*) I think our Chairman has asked you most of the questions dealing with the machinery, but I would like to ask you, not perhaps on behalf of myself, but on behalf of a considerable body of public opinion, a few questions as to whether there is any need for altering in some way the present machinery of British diplomacy. It is said to us constantly—and I am speaking as a politician now—that our present Diplomatic Service was a very fine Service for the 18th century, and the beginning of the 19th century, and that kind of thing, but that in these days when power has changed so much—I mean when newspapers have so much to say, and when you have great democratic governing countries—our diplomacy does not really keep the Foreign Office adequately informed of great popular movements. I do not know whether you care to say anything on that point, but it is a thing that this Commission may have to deal with?—I think it is a very interesting question and I should like to talk about it. I think, myself, that our missions abroad do now pay very considerable attention to those questions which lie outside the sphere which is generally considered to belong to diplomacy—the relations between countries and so on—and that they use their presence at a foreign post to obtain information on many interesting subjects. I do not know if I am answering your question quite directly or whether what I am going to say is included in your question, but nowadays I should say certainly half the time of a diplomatic mission—I am speaking of those I have been acquainted with for a good many years past—is taken up with commercial work, that is to say, backing up the interests of British traders who have grievances, who have complaints against the country, who say they cannot get justice and who try and make out that they are prejudiced as foreigners or as Englishmen in their business. It is a very large part of our duty to look after these claims. I may say that at my present post there is no topic that has so engrossed me and taken up my time—which I do not grudge, and I would give twice the time if I could do any good—as the question of the treatment of the Canadian Pacific Railway; it has been with me night and day. That has nothing to do with the Balkan question, but it is a question to which the whole embassy

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

have devoted a great deal of time, very properly and rightly. Then as to other questions I think you were more specially asking as to information with regard to great movements in the country—labour movements and such like. We constantly receive circulars from the Foreign Office asking for information on particular points, generally in order to enable the Secretary of State to answer a question that has been asked in the House of Commons. On every kind of topic we obtain information. I remember in Spain having to ask what was the custom in Spain with regard to boys smoking too early in life. All kinds of subjects come up, and if you could look through the register of an embassy, you would see that certainly the majority of the entries do not relate to those matters which affect merely the relations between countries, or what is going on in the Far East, for instance. I do think that a great deal more attention is devoted to these matters than is generally supposed, and probably a great deal more now than was the case 20 years ago—I can assert that that is so.

38,063. I am not criticising it personally, but you said just now to the Chairman something about it being very desirable for all diplomats to be people who could go into drawing-rooms and be amongst friends there, and discover the state of feeling of the country. The criticism that is made is that nowadays, whether rightly or wrongly, what drawing-rooms think does not count so much as what people who have no drawing-rooms think. What I want to ask you is, whether you had any feeling that there was any gap in our diplomatic machinery which should be filled by training people more in the study of those great questions which we all have more or less to face nowadays?—I do not think it is the glamour of drawing-rooms that attracts one, but in continental places it is in the drawing-rooms that you meet the statesman and people who can tell you about important questions. Besides, I think the ideal member of an embassy should certainly not restrict his visits to smart drawing-rooms. Quite the contrary; I think he should go into all societies, literary, artistic, or any society, in which he can hear the great questions of the day discussed. I think an intelligent young man will do so, and I think many of them do. I think if you were to question the diplomatists of to-day—the young members of embassies and legations—you would find that they could talk intelligently about the view taken in foreign countries of those great questions. As to having men who are specially competent to discuss those questions—

38,064. I meant competent in the sense that they had studied them. My point really is that though nobody who knows anything about the subject denies that in the way of meeting great statesmen, diplomats, and so on, our people are splendidly equipped, yet there is a criticism that they do not sufficiently study the movements which may have a very enormous bearing on the future of the world. That is the criticism that is made?—They study, of course, specific points to which their attention is called by a Secretary of State. As I was saying, we are constantly called upon to furnish reports on such questions as rates of wages and so on. Then the information is obtained and sent home. I think in every embassy now there is a secretary whose special duty it is to attend to commercial matters, which would include, very largely, rates of pay and labour questions too. Certainly it is the duty of those secretaries to inform themselves very specially on all those subjects.

38,065. Supposing there was any great social experiment—lately in this country, for instance, our political Ministers have taken to running over to Germany and bringing back bits of social legislation with them—would it be the duty of anybody at the embassy to report on any great social change that might be taking place in the country?—I think so, most certainly. For instance in relation to Germany, where all these great insurance experiments have been made, I have no doubt that the archives of the Foreign Office are full of reports on the subject.

38,066. All that work is done?—That is done: done, I think, pretty fully now, though certainly it could be stimulated. It depends a good deal no doubt on the particular head of the mission whether he will direct

inquiries into a particular question, which he would do if it was becoming important. Certainly such questions as those connected with social legislation are reported on and are studied at embassies and legations.

38,067. Leaving altogether for the moment the question of means, social position, and so on, do you consider that the present intellectual training for the Diplomatic Service gives you men who are quite competent to deal with and report on these very complex questions?—They are not experts in those particular subjects, but I think their education enables them to take an intelligent view of them.

38,068. If I may sum up that side of it, you do not agree that too much attention is paid in modern embassies to the work that can be approached from the social side and too little to the knowledge that is to be acquired outside what may be called fashionable circles. That is the charge that is made, and you do not think that it is really a substantial one?—No, I do not think it is deserved. I think a young man who is popular in society may very often be very capable of going into questions that have nothing to do with his social qualifications.

38,069. In England we undoubtedly have that nowadays—people are all interested in so many things, that in any drawing-room you may meet a man who is a very great expert on a particular subject?—That is so in some countries much more than in others. I should say that in my present post I am less likely to meet people of that kind; in other posts more likely—in France I should think more likely.

38,070. But in a country like Austria do you think we have the means of knowing what people think who obviously would not be in society?—I think my present post is one in which it is very difficult to obtain information, but the members of my present staff are as capable of obtaining it as any other body of young men who are not special experts.

38,071. I have heard it suggested that we ought to have somebody attached to each embassy who has made a particular study of those questions. What is your opinion about that?—If I may say so, I think in the same way as we appoint commercial attachés for that special purpose, so we might have attachés or secretaries whose special duty it should be to watch labour questions or social questions. I think such a colleague would be very welcome, if the Government chose to undertake the expense, but whether the information that he could get would be of sufficient importance to make it worth while I do not know; and whether it would be so much superior to what can be got by the present machinery I should rather doubt.

38,072. I suppose it would be doubtful whether a man could occupy his whole time in such work, and if he was not fitted for other diplomatic work he might feel in a difficulty?—Those questions are so vast that I would not go so far as to say that a man could not spend his whole time in getting them up. I suppose he could if it was thought worth while to turn on a special man for those particular questions in the same way as has been done with regard to commercial questions.

38,073. (Chairman.) Is there at present any means of general control over the Diplomatic Service which would enable you to pick out from a mission, say, in America, a man of the particular type Mr. Beck was speaking of, and securing his transfer, say, to Vienna, to deal with a particular subject which it was desired to investigate there?—I could always ask the Secretary of State if arrangements could be made.

38,074. Any such arrangement would have to be made in the central office in London?—Yes, it would have to be done through the Foreign Office.

38,075. (Mr. Beck.) With regard to commercial interests, the only thing that has been said to me is that our embassies—and I think perhaps it is to their credit—are more scrupulous in the way of pushing British commercial interests than foreign embassies are in pushing foreign commercial interests. A big business man has said to me, that whereas he knows his rivals in a foreign country have behind them the whole pushing power of their embassy, he finds that owing to the very high standard of the British service he is told: "We cannot use any influence. If you have any

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

"injustice or hardship we will support you, but we cannot actively push the contract you are trying to get for a railway bridge," or whatever it may be. Have you anything to say about that?—It is a little difficult to answer without bringing in the names of foreign countries. I think there is something to be said about that, but I do think that very great attention is given to pushing commercial claims and commercial interests. Certainly at some posts it would be done more and at some less; but in all British posts it is done to a very great extent now. I do not think people realise the extent to which commercial business and pushing commercial interests take up the time, quite rightly, of a diplomatic post.

38,076. (*Chairman.*) In a growing measure?—Certainly much more so now than 15 years ago. In my last post, where I spent so many years before going to Vienna—in Spain—my time was very constantly taken up with claims and pushing commercial interests, such as mining matters and questions of that kind—perpetually the whole time I was there. For that purpose I think it is very desirable that the staff of missions should travel a good deal. I always encourage my young men to go about and see the different parts of the country. You cannot learn about a country from being at the capital only, and, for commercial reasons especially, it is very important to be in touch with all the principal consuls at all the great ports. I make, myself, a great point of being in touch with them.

38,077. (*Mr. Beck.*) I find in the regulations for the examinations for the Foreign, Diplomatic, and Consular Services this: "No candidate will be eligible unless he be a natural born British subject and born within the United Kingdom"—those are the important words—"of parents also born therein, except when the circumstances are of such a special nature as to justify a departure from the general rule." I do not know whether that regulation has ever been brought to your notice. I cannot say, personally, that I have ever heard of any grievance, but it does strike me that to put down in a paper that a candidate must be born within the United Kingdom of parents also born within the United Kingdom when we have a vast Empire around us is a very undesirable regulation which ought to be altered?—I should not think it was applied.

38,078. You have never heard of any case which has arisen that anybody born in one of the Dominions has been barred from the Diplomatic Service because of that regulation?—No, I cannot think of any case in which any one who was otherwise suitable and could be called an Englishman was barred.

38,079. Do you think that a practice that is really obsolete?—I do rather think it is.

38,080. (*Chairman.*) The Secretary of State has a dispensing power. He should, I suppose, be satisfied that the representative of England shall have been born and brought up in an English atmosphere. A British representative abroad should, I presume, represent British feelings in the best sense of the word?—Of course I suppose I am rather a case in point, and no doubt you may have had that in mind. Of my four grandparents one was a German—a very distinguished German grandfather of whom I am very proud. The rest of my parentage is purely English. So that I may say that out of four drops of blood one was originally German. I do not know how far it has become assimilated. It might have been said—and I do not know that I should have any right to complain—when I got my nomination many years ago from Lord Derby: "This candidate has a foreign name and some foreign ancestry and he is not the man we want." But it did not occur to him to say so, I suppose, owing to the fact that I was entirely born and bred in this country and never had any idea of being anything but an Englishman.

38,081. (*Mr. Beck.*) That was not in my mind at all. I was not thinking of a man of whom it might be said that he was foreign in any way. I was thinking merely of the fact that there is a school of colonial thought which considers that their interests are not particularly adequately represented by the Foreign Office, just like they say the British Army is a preserve and so on. I do not think it is a very well informed school of thought;

but I was only pointing out that, in my opinion at any rate, it is very undesirable to have the words "born in the United Kingdom of parents also born therein." I think it ought to be "born in the King's Dominions" or something of that sort. I only wondered whether you knew of any case in which that rule had worked harshly which would strengthen my view?—No, I do not know of any instance.

38,082. I was thinking of a young man born in Canada. A considerable number of people are making their homes in Canada, and in New Zealand, South Africa and so on—people of great culture and of very English traditions—and it does seem to me somewhat anomalous that such people's children should have to be specially brought in because they break a rule which I think is obsolete?—Yes, I understand.

38,083. (*Mr. Graham Wallas.*) Some men who have been in the Diplomatic Service have complained that in a certain sense there is not quite enough to do, that inquiries and work which might be entrusted to the Diplomatic Service are not, in some cases, given to them, and they say that they think the Service would be more efficient if rather more use of it were made. Has that point of view ever been presented to you?—I certainly do not think we suffer from lack of work, but if that is so it would be because the Foreign Office omitted to instruct us.

38,084. I think what was in their minds was inquiries which originated in other departments than the Foreign Office—perhaps in the work of the Board of Trade, or the Insurance Commission, or in the work of the Local Government Board; and that the other English departments are not quite sufficiently in the habit of seeking the assistance of the Diplomatic Service?—I am sure we should always be most happy to give our assistance, and I suppose it is open to them to apply to us through the Foreign Office.

38,085. You have never had the feeling yourself that closer touch with the other departments in that sense would be advisable?—I have often been in close touch with them. With the Office of Works and the Board of Trade I have frequently corresponded privately, as well as getting instructions founded on what they wrote to the Foreign Office. I think it lies with them.

38,086. You have never thought that any change in degree or any increase of touch between the Diplomatic Service and other parts of the British Government is desirable?—No; I think it exists, because there is really no obstacle to it whatever.

38,087. Then it has been complained that in the earlier years of the service of a young diplomat he has, in the English service, routine work given to him to do which, in certain other services, is done by a special class of more subordinate officials. Have you ever heard that complaint?—Yes, that is a very important point, no doubt. It is a difficult question. In our Diplomatic Service all the routine work is done at most posts by the diplomatic staff. They are often, for hours, typewriting, deciphering telegrams, and doing work, which people of less intellectual standing than theirs could do just as well. It is an important question, and I think myself that in some foreign services they meet it by employing a class of officials called "chancelliers" (chancellors), who are, no doubt, extremely useful. I think it is a little exaggerated in some foreign services; they do too much of it. I am inclined to think that we do too little. Of course, our system has certain manifest advantages. I have noticed in the case of some foreign missions that owing to the fact of the routine work being done by this special class, the regular secretary or attaché is not well informed; he does not know what is going on. At least all our men do know it, because they have had to write it out themselves, and they are better informed thereby. That is all to the advantage of our system. But, of course, there come times when there is a great rush of work, when you see the entire time of our staff taken up in typewriting.

38,088. But on the balance of considerations you think there ought to be an increased delegation of work to more subordinate officials?—I think in a big embassy it would be desirable, if it were possible to do it, to have a secretary who should not belong to the official staff of

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, B.C.M.G., G.C.V.O., C.B.

[Continued.]

the embassy, but who would typewrite and perhaps keep registers, and do that kind of work.

38,089. How would you appoint him?—He would have to be appointed, I suppose, by the Secretary of State.

38,090. (*Chairman.*) Would he be an Englishman sent out from this country?—Yes.

38,091. (*Mr. Graham Wallas.*) Do you think it would be possible to make a post of that kind more or less interchangeable with the second division clerks in the Foreign Office?—That, I should think, would be very difficult, owing to questions of pay. The pay of a second division clerk would be entirely inadequate abroad. You would have to start a new service really.

38,092. (*Chairman.*) Cannot you meet such a case by a local allowance attaching to the place or mission?—I cannot say straight off why not. That seems to me quite reasonable.

38,093. But if it were practicable it would be desirable?—It seems to me that in big embassies it would be desirable.

38,094. (*Mr. Boutwood.*) As a matter of fact, has not that been done in two cases? Have not two chancellors been appointed, two archivists?—Yes, an archivist very often does that work, there is no doubt. There is no reason why an archivist should not do the work.

38,095. (*Mr. Graham Wallas.*) On the question of pay, do I understand you to suggest that it would be necessary to appoint persons with private means to these posts?—I do not suggest that, but I suggest if it were someone of the category of a second division clerk his pay would have to be considerably augmented by means of local allowances, or some other means.

38,096. (*Chairman.*) Have you in your mind what the limits of pay of second division clerks are? They enter very young at 85*l.* a year, and go up to 350*l.* a year. Say that a clerk had 250*l.* a year, would that be inadequate pay for your chancellor?—I should think he would be pinched. I should not think that he would desire the post at that salary.

38,097. (*Mr. Graham Wallas.*) It has been suggested that such a man in an important embassy would find himself rather solitary in a foreign capital. Do you think there is anything in that point?—I think he would, but I dare say people would be ready to face it.

38,098. You said while in the earlier years of service you would favour an interchange of posts between the Foreign Office and the Diplomatic Service, you would not favour it in the later years of service?—I hope I shall not be understood to have said that I should discourage such an exchange as an Ambassador being made an Under-Secretary of State, for instance. That has happened more than once with the best possible results. Those are rather special cases, I think, but for the ordinary work of the Foreign Office it seems to me it would be difficult to find a post at the office that would suit, for instance, a counsellor of embassy, unless it was such a post as head of a department, or, perhaps, one of Under-Secretary of State.

38,099. But if he were found fit for such a post as the head of one of the minor departments of the Foreign Office, you think there is nothing in the nature of things against such an appointment?—I see no objection to it.

38,100. (*Chairman.*) Do you think it should be a permanent transfer in such a case as that, and not a mere temporary one?—I think it should be temporary because you would lose the man's special usefulness by transferring him permanently to the Foreign Office, as he has been trained to diplomatic life.

38,101. You mentioned such a transfer, for instance, as from an ambassadorship to a ministerial appointment of high rank here. Would that be permanent?—I suppose not necessarily. We get down to two or three cases, but I do not see that there is anything to prevent their subsequently leaving the Foreign Office and going back to an embassy.

38,102. But it would not be in accordance with the Service rules?—It would be done as a matter of expediency within the discretion of the Secretary of State.

38,103. (*Mr. Graham Wallas.*) Do you think in certain other cases an interchange of employment between the Diplomatic Service and other offices—I take, as instance, the Colonial Office and the Board of Trade—might be advisable. If you got a thoroughly suitable man who liked to go abroad, it might give a certain accession of new blood to the Diplomatic Service if he were moved as a comparatively young man to one of the embassies?—Is it suggested that a member of the embassy would take his place in the Colonial Office?

38,104. Moved to fill a vacancy, or by way of exchange?—I certainly think the interest of the State is the first thing. I would agree to that if you could get a more efficient man in that way—if there was a man who was obviously efficient—but I think it is rather dangerous to go into too wide a field. We always come back to this, that the Secretary of State has a wide discretion. If he knows of a case where it would be specially desirable, I suppose he has power to bring it about.

38,105. But you can conceive that it might be a certain advantage in the general efficiency of the Service if there was that amount of variety of type represented by the occasional appointment of a suitable man from other branches of the public service in England?—Or from anywhere else, as is done. People are taken from outside altogether; then why not from one of the public departments if, in the Secretary of State's opinion, it is desirable? We have seen the most important posts filled, and very admirably filled sometimes, entirely from the outside. From the outside would include from one of the Government departments.

38,106. But you would agree that a certain variety of type of experience and outlook is desirable in the Diplomatic Service?—We think we get a good deal of it in the course of a long career.

38,107. At present the Diplomatic Service is confined to the sons of those who can give their sons at least 400*l.* a year by way of allowance?—Yes.

38,108. Would you say that if you took the body of people who can allow their sons 400*l.* a year, there would be a certain approximation to uniformity of outlook? You spoke of the need of common sense—would you say that among that body of people, things that would appear to be common sense to them would not necessarily be common sense to the rest of the community?—I think you would find thousands of people who have just as good common sense outside.

38,109. But the common sense is apt to be of the same uniform type if you confine yourself to those in receipt of 400*l.* a year?—I have not noticed that. I cannot say that that is a matter of my own observation. I think you have a pretty large field in the 400*l.* a year people.

38,110. If we were to assume that this Commission desired to recommend that the 400*l.* a year rule should be done away with, what steps would be taken to do so with the least harm? Would it be best to grant, or to add, 400*l.* a year to everybody's pay, or give it by way of house allowance, or residence in an embassy, or increased language allowance, or abolition of the probationary period? Which would you do if you had to do it? Would you do it by simply adding 400*l.* a year to his pay, or by a more complex system of allowance?—I think a local allowance in that case would be the best way.

38,111. And you would make general what you suggested to us existed in Madrid—that the embassy provides its younger staff with a residence?—That is very desirable. It cannot very well be done everywhere. Of course, the State could pay for lodgings and give rent allowances, and I should think it would be desirable in that case.

38,112. Then instead of the State merely paying the 400*l.* a year that the father pays now, it ought to be done in some other way?—I suppose it would involve some money payment as well as making things easier by way of rent. It is rather a complex and difficult question to answer off-hand, and I do not feel very competent to do it.

38,113. It has been suggested that in some cases a young diplomat, either when on leave or during his

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

term of service might be encouraged to get up other subjects as well as languages and international law. At present he gets up languages because he gets a definite allowance, and also in some cases he gets up international law. It has been suggested that a young diplomat living in a foreign capital, with large opportunities for study, or when on leave, might be definitely encouraged to acquire other subjects in a formal and definite way?—For instance, labour questions?

38,114. I will take diplomatic history, for one thing, and the history of developments in legislation, and so on?—As to history, I think every intelligent man naturally studies very closely the history of the country he goes to. It is the obvious thing that one does. It is a matter of the greatest possible interest, when you go to a new post, to study the history of that post. It does not seem to me that any special inducement is necessary to bring that about.

38,115. Cannot you conceive that it might be desirable in any sense to extend the list of studies which a man is formally recommended to undertake as part of his life training in the Diplomatic Service?—That is, as at present, languages and international law: but those are subjects that are taken up almost before he enters the Service, or in the first two years. I think the international law examination has to be passed within two years, when he ceases to be attaché and becomes third secretary.

38,116. Then you think no change in that respect is desirable?—I am not ready to suggest any change.

38,117. You suggested that it would be a great advantage to a young diplomat if he could find himself at home in literary and artistic circles, and acquaint himself with the literary and artistic interests of the country to which he is attached. It has been suggested very strongly to me that it might also be very desirable if a young diplomat were capable of being interested in the scientific work of the country to which he is attached—either anthropological, or any other form of work. Can you think of any instance in which a young diplomat has been really able to associate on fairly equal terms in some branch of science with scientific men in a country to which he is attached?—I cannot think of any special instance. An intelligent young man will naturally take up what he can in the country where he is, but I do not think it is part of the purposes of a diplomatic mission to turn on one of its members to make a special study of those questions. It is not the purpose of an embassy.

38,118. Nor is it the purpose of diplomacy to study literary or artistic subjects?—No, it is not, but I think any young man who goes about informs himself of the manners of thought, and of what literary, artistic, and scientific people are talking about. Certainly he gets a better insight into the country if he has a liking for those pursuits, and for those inquiries. It would make him, perhaps, a more intelligent observer if he had a hobby of that kind to take up.

38,119. I notice you have added the scientific now to the literary and artistic?—I never thought of making an exhaustive catalogue of the things a young man should turn his attention to. I consider that we have a good set of men in the Diplomatic Service, and I think very highly of them, and an intelligent young man naturally takes an interest in the questions of the day, among which you may mention literary, scientific, and commercial questions. I think, perhaps, we should get away from the main purposes of diplomacy if we defined special directions in which the members of a mission are to work outside the usually accepted ones.

38,120. (*Mr. Beck.*) All you said was, I understood—and I think Mr. Wallas rather drove you a little far—that in studying the popular movements they obviously hear a good deal about them in artistic and literary circles, and that kind of thing?—Yes.

38,121. (*Mrs. Deane Streetfield.*) I have only one question to ask which arises on what Mr. Beck asked, and on what you have been replying, I think, to Mr. Graham Wallas. I should like to ask you whether you think it would be advisable in the examination or training of persons intended for the Diplomatic Service, that they should be specially required to study such things as commerce or commercial law, or have

some knowledge of social or economic science?—Certainly I think it would be very important.

38,122. As making them more easily able to judge, or inform themselves of such matters in the country to which they went?—I think those are very important subjects, and that it is very desirable that they should be instructed in them. I suppose the examiners in the Civil Service Commission would have an opinion, or those who lay down the subjects that have to be gone in for, and the subjects might, perhaps, be usefully extended. Those are, no doubt, most important matters for a diplomat to be acquainted with.

38,123. I only want to know your opinion?—Yes, I think them very important.

38,124. (*Chairman.*) They are important for him to know, but at what period he should learn them is a matter upon which perhaps you would prefer not to express an opinion. It is a very moot question whether these subjects should be made subjects of study before admission to the public service or afterwards. If taught among collegiate educational courses they might, of course, be taken up as a particular subject of study, and then the Service examination might be taken in those subjects?—Yes. I do not pretend to say how it would fit in with the educational system, and the system of preparation in England at this moment, but they are subjects which it is very desirable that a diplomatist should have some knowledge of.

38,125. There are schools in the universities which deal with some of such subjects, and it might be a question whether it might not be obligatory upon men presenting themselves for the examination to take up a particular course?—Yes.

38,126. (*Mr. Boutwood.*) The first questions Mr. Beck put to you were based upon a document which has been submitted to us, and the impression that document has made on my mind was this: This seemed to be the feeling behind it, that in every considerable country nowadays there are large changes taking place in the thoughts and sympathies of people more or less beneath the surface, and certainly outside the circles that one comes closely in contact with in "drawing-rooms"—to use that expression. I gather that it was felt by those who were parties to that representation that all these movements are going on, more or less, under the noses but beyond the vision of our diplomatic representatives, so that by-and-by, five or ten years hence, the Foreign Office might find itself confronted with a transformed political and social condition in some foreign country which had been developing for many years but of which it heard for the first time when it became an accomplished fact. I gather that they felt that the Diplomatic Service might extend its purview beneath the surface of things, more or less, in that way. If that interpretation of the paper, and of Mr. Beck's questions be right, do you think our Diplomatic Service is really in touch with the vital movements of national life in the different countries as distinguished from official movements?—I think if an ambassador who was conscious of such a movement going on did not direct the attention of his staff to it with a view to obtaining a report on the subject, he would be omitting to perform a part of his duties. But I must say that it is extremely difficult for a man really to pronounce an opinion on those movements. They are judged so very differently, and people have such very different opinions about them that I do not know whether the opinion of the particular mission would be of any very great value. In our own country these questions are judged very differently. I do not know that a foreign diplomatist who went into those questions in England would be likely to write anything very illuminating. I certainly think that any great apparent movement of thought, or intellectual movement which is going on, ought to be detected by the diplomatic mission and brought to the attention of the Government. I think if anything is concrete enough to be able to be handled in a report it should be reported upon.

38,127. There is one point upon which I am not clear. Have the different embassies and legations any clerical staff, or anything of that sort, outside the diplomatic ranks attaching to the embassy?—I should say no, they have not, except in certain cases. For

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

instance, at Madrid, the embassy and the consulate are in very close touch, and they correspond and discuss every kind of question together, and pull together, of course. Is that the kind of addition to the staff that you refer to?

38,128. No. If one went into a foreign embassy and saw all the men belonging to it, would there be anybody there outside the diplomatic staff except, perhaps, the archivist?—No, there would not be.

38,129. You described the qualifications which you thought necessary for the Diplomatic Service. Your description tempts me to use an unfashionable word nowadays, and to say that for the Diplomatic Service you require gentlemen—using that word in no narrow meaning?—I did not use that word because people differ so much in defining a gentleman.

38,130. I do not know how old this rule about 400*l.* a year is, but one imagines that it goes back a good many years, and then, perhaps, it did roughly define a certain social class. But nowadays one knows so many gentlemen who could not afford their sons 400*l.* a year, and one knows so many men who could afford their sons 400*l.* a year who are in no sense gentlemen. Supposing that rule were abolished and you had, as far as that went, an open field, then the only possibility of getting men of the class you indicated would be by the preliminary selection before nomination is given?—That would be so.

38,131. Assuming that the financial restriction no longer operated, then the only means of making the necessary selection of that sort would be by inquiries preliminary to nomination?—Yes. You would have to eliminate much more, perhaps.

38,132. Is the present system of selection strong enough for it to bear that strain do you think? Taking the three or four gentlemen at the Foreign Office who constitute the committee, and who make no inquiry about parentage, apparently, would they be willing to accept the responsibility?—I should think they would be sorry to accept it.

38,133. Your experience of the Diplomatic Service goes back a long time. How do the men who come in now, under the recent system of examination, compare, on the whole, with the men you found in the Service in the earlier days of your experience?—I think there is more of a level kept—a more uniform level.

38,134. But is it higher, lower, or about the same?—I mean to say an absolute duffer, or anyone like that, would not get in. It takes a very able young man to get in nowadays with all the competition that there is. Even with the system of selection he has considerable competition with others who have all been working for it for a considerable time, and I think the result is extremely good. I think the level is high.

38,135. (*Duke of Devonshire.*) What is the relationship of the naval and military attachés to your work? Are they responsible to you, or only to the Admiralty and War Office, respectively, in the first instance?—They are under my directions, and all their reports go through me, and there is the very closest intimacy between the naval and military attaché and the head of the mission. We meet every day and talk over all questions.

38,136. Could you direct the naval and military attachés, respectively, to do a certain sphere of work if you thought it advisable?—Yes.

38,137. It has come to my personal knowledge during the last two or three months that a comparatively young gentleman was sent over to Ireland to investigate the position of affairs there, and at the end of the first week he confessed himself hopelessly mystified and confused with what he heard and saw, which I do not think would surprise anyone. If there was a similar case would you tell off someone specially to inquire about a matter which was occupying so much attention?—I should ask the military attaché to make inquiries.

38,138. To inquire into the social, economic, and general political situation?—No, but with regard to the question of military preparations, which is what I thought you were referring to.

38,139. Do you think there are men coming into the Diplomatic Service at the present moment who are well qualified to deal, not with what is on the surface, but with the general undercurrent of what may be going on?—As I have said once or twice, I do not think those particular studies could be carried on very usefully.

38,140. Is the general standard of the men who are coming in such that they are capable of being able to form a fairly reasonable and sensible estimate of what they see and hear going on around them?—On social questions?

38,141. I was thinking of the question of the condition of Ireland?—That, perhaps, is a question very much in point at my present post, where half a dozen "Irish questions" are going on perpetually. Yes, I think they are qualified to study those questions.

38,142. They have tact, judgment, discretion, and a sense of responsibility?—Certainly. I am thinking of the particular men I have with me now, and I answer that unhesitatingly, yes, they have certainly a very high sense of responsibility and duty, and they have capacity, too.

38,143. I rather think the suggestion coming from Mr. Beck and Mr. Boutwood is, that generally things are getting more complicated from various causes—partly the Press and partly big democratic movements. But you think, on the whole, our Diplomatic Service is keeping well abreast of the times?—Yes, I think well abreast of it. Having been able to observe it for a great number of years now, I think it is very sound; that it stands well, and is highly respected in the great countries of the world. That I do firmly believe.

38,144. So, on the whole, would you agree that the present system of recruiting, and the present class from which candidates for the Foreign Office are drawn, ensure that they are able to deal with the work they are called upon to perform?—Yes. I have said that I should look with some hesitation on suggestions for enlarging the field.

38,145. (*Mr. Beck.*) I think what we all have in our minds is this specific case: Supposing a foreign embassy in this country wanted to know, and they must know, what is likely to be the course of future events in this country, they would want to know what London thought, and to a certain extent they would want to know what Hampshire and Kent thought, but it would also be vital for them to know what the industrial north of England was thinking?—Certainly.

38,146. In similar circumstances are our embassies equipped to know what people who would be entirely out of their social relationships are thinking. That is really the point we all have in mind?—I think they are, and that for the purpose of being as well equipped as possible they should travel a good deal, and go to outlying parts of the country and hear what is said and thought there. I do think they are capable of dealing with those questions.

38,147. (*Chairman.*) At the present time the clerks in the Foreign Office and the attachés of the Diplomatic Service are examined in the same subjects that are presented for the examination of men applying for the Indian Civil Service, the Home Civil Service and cadetships—at least there are a certain number of groups of subjects made out, and men can take these groups up to a certain limit of marks. The men who enter for the Home and Indian Civil Service take subjects carrying a maximum number of marks of 6,000; but men for the Foreign Office and the Diplomatic Service are limited to subjects carrying a total of 4,000 marks. Consequently, if you can judge of it in that way by marks, the Foreign Office and Diplomatic men's education is not as extensive as the education which must be possessed by men who enter the Home and Indian Civil Service. Is there any reason why all the examinations should not be assimilated? There is no substantial reason so far as the limits of age are concerned, but is there any other reason why candidates for the Foreign Office and the Diplomatic Service should not be treated, in regard to the examinations, precisely on the same footing as candidates for the Home and Indian Civil Service?—I have so little studied the question that I do not think I can give a

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

very useful answer. If I were asked now I could not give a clear account of what the subjects are. They have changed a good deal since I entered and I have not followed them closely.

38,148. The limitation in the marks I rather fancy is due to the expectation that men for the Foreign Office and Diplomatic Service would concentrate more upon modern languages than the applicants for the other services would. You think it essential that men in the Diplomatic Service should be thoroughly familiar with French and German?—Certainly.

38,149. They must be able to speak French and German as well as they do English?—As nearly as possible.

38,150. I was anxious to know what your views were, if you have considered the subject, as to whether it would not be desirable to assimilate the two examinations?—I do not know what subjects are excluded from the Foreign Office examination.

38,151. They generally do exclude Greek, for instance, in the papers that I have seen?—I did not know that.

38,152. (*Duke of Devonshire.*) Are there any general rules laid down as to honorary attachés?—No, no general rules. It is left very much to the initiative of the head of the mission to ask if he may take on an honorary attaché.

38,153. And if he takes one on I suppose the honorary attaché takes his fair share of the work?—Yes.

38,154. And he would be treated exactly the same, as far as regards discipline and attention to his work, as if he was an official member of the embassy?—Just exactly in the same way.

38,155. Does he interfere at all with the promotion and prospects of the regular members of the service?—I think not. He generally comes for a short time. I have had two or three who stayed a couple of years, perhaps.

38,156. You find that they do not interfere at all with the matter of promotion?—I find they do not interfere.

38,157. (*Sir Henry Primrose.*) With regard to what was said just now as to studying the domestic politics of the country to which an ambassador or his staff are accredited, it is a matter of considerable delicacy, is it not?—Yes.

38,158. For instance, at this moment I am not quite sure that we should relish it if there was a general desire on the part of the Embassies in London, to have representatives in Belfast reporting on the subject. It is very easy to get into considerable trouble over those things?—Of course.

38,159. Therefore it has to be very carefully done?—Certainly, it has to be very carefully done; but that is a point that is not lost sight of. There are special instructions with regard to the kind of information, for instance, which consuls may get who would otherwise be looked upon as spies.

38,160. But it clearly shows that there are rather narrow limits within which it is possible for diplomatic officers to be active in that field?—Yes. I suppose they would perhaps avoid a very burning question. There are plenty of questions left where inquiry would only be welcomed, and information very readily given.

38,161. After all, it is always possible to ask the question, what concern is it of the foreign power to know anything about it?—Of course. It depends a good deal upon the tact of the person who makes the inquiry what results he will get.

38,162. As regards what foreign powers do, I suppose in the case of the majority of the foreign powers the Diplomatic Service is essentially a close service, and there is no pretence of making it an open service?—No, I do not think any.

38,163. Take France, which is now a Republic, and America. In France it is not a close service, is it?—No, I should not call it a close service.

38,164. They recruit their subordinate diplomats by means of examination?—Yes, they do; and they pass through a probationary period in the Ministry of Foreign Affairs in Paris, and I believe there is a system of marks there; but I have not studied it very much.

They select them, of course. They want good men, of course.

38,165. Do they do the same in America?—I think much less. I think the idea there is, that any American can fill any post.

38,166. Take France: do they make any requirements as regards private means, do you know?—I do not know what they do about that. I think it is almost essential that they should. They cannot send a man abroad and let him live miserably.

38,167. Unless they pay high salaries?—Yes. But I do not think there is any special local allowance; I do not know about it. They have what is called an allowance for representation—that is for heads of missions; and that, of course, is a regular system they have. More than half of an ambassador's pay is considered to be given in that manner.

38,168. If we were to withdraw the requirement of private means of 400*l.* a year, it would mean a very large addition to the cost if the State had to make it up?—Certainly, it would be expensive.

38,169. And it would be absolutely necessary if men are really to be of service, that they should be able to live in a way which means an expenditure of whatever it may be, 600*l.* or 700*l.* a year, probably?—Yes, I think so.

38,170. Therefore, it would be absolutely necessary to make it up if we did away with that requirement?—Undoubtedly.

38,171. (*Mr. Matheson.*) I suppose it is true to say that in France and Germany there is rather more formal training for diplomacy than there is with us. Do they not require men to study more special subjects in qualifying for the service?—I am not aware that they do. It may be so, but I really have not gone into that point. That is a thing which is easily ascertainable. I feel that on many questions I am rather answering off-hand; but some of those answers are very easily obtained.

38,172. Do you think our less formal training is equally effective?—I think it is effective. I am satisfied myself. I have the honour of the service very much at heart, and I think it stands very high in the estimation of the world.

38,173. I gather that in a man's earlier years his education in the service will depend very much upon the head of his mission?—Very much indeed. No doubt the head of the mission has a great deal to do with the distribution of work, and the amount of work that is done, and the way in which it is done.

38,174. And the encouragement which is given to independent work?—Yes. I think it is very desirable—I have done it very much myself—to ask particular members of your staff to pay special attention to certain subjects of interest that call for attention.

38,175. You have seen a good many young men as secretaries. Should you say that on the whole they have been responsive to your training?—Yes, I do think that. They "play up," if I may use the expression.

38,176. It has been said to us that our young diplomats are not sufficiently acquainted with English institutions. Do you think that that is at all a just criticism?—I do not think that can be fairly said. Our profession makes us live abroad a good deal, but it does not in any way cut us off from home life. We follow everything that goes on, and we spend our leave at home, and endeavour to become acquainted with what is going on. An English embassy abroad is like a little English oasis in the country, but it keeps up its interest in what is going on at home, and I think you will find it follows the events with intelligent interest.

38,177. Would the members of a mission in a foreign country have opportunities of seeing representatives of the political party that was not in power, as well as of the other party?—Certainly. It would depend very much on themselves. It is most desirable to keep in touch with all parties in the country in which you are. Speaking for myself, after the years I spent in Spain I may say I knew all the leading Spanish statesmen of the different parties, and many of them were intimate personal friends. That ought to be so after you have spent a few years in a country. You have no more leaning towards one of their parties than towards another.

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

38,178. We have had some statistics given us as to the schools from which Foreign Office clerks and diplomats come, and I find in the list for six years that out of 21 attachés 16 came from Eton. Do you think it possible that it might be an advantage to have more variety of schools represented?—I was proud to think that at one time there were three Rugby ambassadors, of whom I was one.

38,179. I am glad to hear it. The question of widening the choice is a question of some interest, and those figures do seem to show that the social area from which at the present moment the service is drawn is somewhat narrow.—If that is so, I suppose it is because people educated at that particular school have shown a greater desire to come forward.

38,180. I think that is so; but it is possible also, and, I think, very likely, that people who send their sons to other schools are not familiar with the service and do not know what attractions or opportunities it offers. It does seem to indicate, as a matter of fact, that the service is drawn from a comparatively narrow area?—Yes; but, of course, it is a very small service. I have not gone through the list of schools. I think there are a good many Eton men, but there are others. It may be that a large proportion have come from Eton, but there is no obstacle placed in the way of others coming forward.

38,181. I quite understand that. Should you say that taking the men you have come across in your service there has been a good deal of variety of personality among them—that they are not all people of one type?—Yes, I think there is sufficient variety.

38,182. Would you say they are fairly representative of English life?—Yes, I think so. You find very different characters among them. I think they are fairly representative.

38,183. (*Mr. Shipley.*) I wanted to ask you about the King's messengers. They travel once a week, I suppose, between London and Vienna, or something of that sort?—Once a week between London and Berlin, and one week they go on to St. Petersburg, and the next week from Berlin to Vienna and Constantinople. It bifurcates at Berlin.

38,184. They do not seem to be very well paid; they only get about 200*l.* a year, and they have very monotonous work. It sounds romantic in a novel, but in reality it must be very monotonous?—Yes; it used to be much better paid. I think it was 400*l.* a year when I entered the Service, and it is now 200*l.* a year. It is poorly paid, no doubt.

38,185. Since the examination has been modified and made what it is now, have you noticed any improvement in the class of men you get?—I think I have said already that I consider the level is a more even one of intelligence. You have eliminated the obviously unfit.

38,186. I do not know whether you have seen the document put in by an anonymous group in the House of Commons, which is called the "Liberal Foreign Affairs Group"?—I have not seen it.

38,187. Then I will not bother you about it. It struck me it would have more weight if it had been signed because we should know who they were; but they do say this: "British diplomats have a reputation 'abroad, not only for what foreigners call greater 'snobbism,' but for less energy and activity than those of Germany and France." I gather from what you have said already that you think our Service quite as good if not better than the Services of those countries?—I think certainly it compares favourably with any Service. I am convinced of that myself. I do not know where they get that criticism from.

38,188. It is not a very satisfactory document as it is, as I say, unsigned, and we have no indication of who sends it in or from where they get their information. Are there any other countries that exact certain financial guarantees such as our Government does?—I really cannot answer the question. I do not know. I think it must be so, because they would not send a man to a post in order that he might live there miserably, and not be seen and not be known at all.

38,189. Could you tell me whether they pass in by examination in Germany or Austria?—Yes, they do pass an examination in Austria, I know; and I am sure

they do in Germany. I think there was a Parliamentary paper put in on the subject.

38,190. (*Mr. Hoare.*) Do you know at all how these salaries of our diplomatic servants compare with the salaries of the servants of other great powers?—I have never really compared them. I could only answer that very generally. I think it has always been rather understood that the Russian salaries are the highest, but I should think ours struck a good average. They are perhaps higher than the average.

38,191. In Vienna for instance?—In Vienna the ambassador's salary is 8,000*l.* It is very difficult to compare salaries, because so much depends on the allowances for transfers and for housing. It is not only the salary that counts, so it is rather difficult to compare them. I think the figures are given in a Parliamentary paper.

38,192. I have the figures for France?—But there is another one showing Austria and Germany, I think.

38,193. Can our ambassadors in any of the great capitals live comfortably on their pay, or would they have to have outside means besides?—I think there are one or two posts where they can live on their pay. That is difficult to answer because so much depends on whether the ambassador has a family or not. I think it would be the experience of almost every ambassador that he does not live on his pay alone, but that he has to supplement it rather considerably from his private income.

38,194. With reference to the expenses to which an ambassador is put when he moves from one place to another, do the grants from the Foreign Office cover all his expenses. For instance, when you moved from Madrid to Vienna, were your expenses covered by the allowance paid you?—They were met to a great extent, but not covered. The expenses of removal are, of course, very great indeed. For instance, I had to pay the men—a forwarding house—who transported my furniture and goods between 700*l.* and 800*l.* Then you have to break up your stables and start afresh; and you have to sell a great many things for a song and buy new ones and partly furnish the house, because the ambassador's house that is given you is only furnished for you, in respect of state rooms and reception rooms—not the rooms in which you live.

38,195. I suppose that would be covered by the figure I see in this return which the Foreign Office has sent us. 2,500*l.* is the scale of outfit?—That is on first appointment.

38,196. But if you move from one embassy to another you do not get that?—You only get half.

38,197. How long leave does an ambassador get?—He has two months' leave, during the whole of which a deduction is made from his salary to pay the *Chargé d'Affaires*. In my case it is 5*l.* a day during those two months that I am away. Therefore, to get at the ambassador's salary you must begin by deducting two months at 5*l.* at day. That is the arrangement in regard to the payment of the *Chargé d'Affaires*. He has two months' leave, and if he exceeds the two months he automatically goes on half pay.

38,198. Is an ambassador expected to spend some of his leave in England?—There is no rule at all about that. As a matter of fact, I suppose most of them do. I never spend mine anywhere else; but there is no rule about it at all.

38,199. I had in mind that it is very important that an ambassador should keep in close touch with what is going on in England, and, unless he spends a considerable time of the year in England, he might fall out of touch with the things going on?—I think what you say is absolutely true, and I cannot think that any ambassador would not do so. I feel myself that we are too little in England, and I would be very glad if it were four months instead of two. It is, of course, so very necessary to keep in touch with what is going on in England that one should spend one's leave there.

38,200. I suppose it would be difficult to arrange for longer leave than two months?—I think it would. It seems to me that it is a reasonable period. I should naturally like it to be longer, but I do not think it

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

could be fairly asked. A consul's leave, I believe, is only one month, which always seems to me very short.

38,201. Does an ambassador have any voice in the appointment of the members of the staff apart from his personal attachés?—It is really the Secretary of State who decides that, but the ambassador is always privately consulted, and they are always very willing to meet his views as far as they can with regard to his staff.

38,202. (*Miss Haldane.*) You said that what was most requisite in a young man going into the Diplomatic Service was common sense and judgment. How do you think you can test that before he goes abroad?—That is almost impossible, I think.

38,203. You cannot think of any way of testing it?—I cannot think of any way, because an examination could not be a test of that. I do not know how far a Board of Selection would be able to form an opinion after putting a few questions to a candidate. I have never been on a Board of Selection myself. I should think it is almost impossible to determine that beforehand.

38,204. I suppose you think if they do not possess those qualities naturally, they may acquire them simply by practice?—I think they may do so, certainly.

38,205. And in association with others?—In many cases they do, no doubt.

38,206. Do you find that there are many failures in the Service?—I think remarkably few.

38,207. When one occurs, what happens? Is the young man advised to go?—I think there is great reluctance to dispense with the services of anyone who has got into the Service.

38,208. It struck me that if there were more assimilation between the Foreign Office and the Diplomatic Service, a young man might succeed as a clerk in the Foreign Office and be a success there, but not a success in other departments?—That may be, and I should think that in that case it would very likely occur to the Secretary of State and his advisers in the Foreign Office to suggest a change. I think that would be so.

38,209. Do you think that has ever been done?—I am not thinking of any specific case, but I think it would naturally suggest itself to the Secretary of State to do that.

38,210. You said to Mr. Boutwood that competition had certainly raised the standard amongst the young diplomats?—Yes.

38,211. Would you think it likely to be the case that extending the area of competition would raise the standard yet higher?—I do not think it would. I am not an expert in this question of examination, but it seems to me that the amount of competition which there already is, is quite sufficient to ensure that only a man of considerable ability gets in. The competition which already exists under present circumstances is very severe, because they are all working hard for it for a number of years perhaps. They know it is no use competing unless they have considerable capacity, and then they all work up for it, and come before the examiners, and only a man of ability can get through. It seems to me that you would not get a better man by extending the area, but I say that with all diffidence; it is not a question I have really studied.

38,212. (*Sir Donald MacAlister.*) With regard to the commercial activities of the various missions, you told us that of late years these have very greatly increased?—Yes.

38,213. Can you tell us the nature, generally speaking, of the activities of the commercial side of a given embassy?—It is a subject which interests me very much, and I shall be glad to tell you all I know about it. In the first place there is a commercial attaché who used to be a resident in the country, but under our present system the commercial attaché, say, for Spain, resides in England, and goes periodical rounds in England to the Chambers of Commerce. It is given out that he is there, and if anyone has a question to put about commercial matters in Spain—about selling a new pump at Bilbao or anything of that kind—he is there to answer the question and to tell what the duty would be and what prospects there are of the duties rising or falling, and what the demand would be likely to be. If the commercial attaché who has

experience of Spain is not able to answer the question he takes a note of it and sends it to the embassy, which ascertains, through the local consul probably, what is the answer, and it comes back, and the man who put the question eventually gets his answer. That is the present system. In order to give the embassy the benefit of a man specially charged with commercial matters, even in the absence of a commercial attaché, one of the staff is termed commercial secretary. The ambassador recommends one of the staff to undertake the duties of commercial secretary, and that man gets 100*l.* a year extra for it, and it is his special duty to write the annual commercial report and to interest himself in commercial matters. A claim that arises with regard to a commercial matter will go to the commercial secretary first of all; I should minute the application to the commercial secretary, who would go into the question and report to me about it, and we would decide what was to be done. That is the organisation at the embassies. But the embassy as a whole is expected to take an interest in these questions, and, in the first place, the ambassador certainly. As I understood you to ask me for a few details about it, I will say that during the years I was in Spain I was concerned in starting a British Chamber of Commerce at Barcelona, which was at first thought rather a tender plant, but I may say that it turned out a very great success. I used to make a point of going every year to Barcelona to consult with them, and I was in constant correspondence with them; anything they wanted done or any representation to the Government was done in correspondence with them. A new tariff was under discussion while I was in Spain, that is to say the new tariff was made just after I came to Spain, and after five years it was given out that there would be some modifications, and the Government would listen to any representations that had to be made. That was a very active time for the embassy. We tried to ascertain also through the Board of Trade, what the special grievances against the tariff, as it stood, were, and we sent in representations with regard to items that were considered excessive. These were all considered, and the tariff was modified, and in some respects regard was had to what we pointed out. Then in a country like Spain there is a good deal of British mining, and there are four British railways—not important ones, because the important railways in Spain are not British—and I believe there are only three, because one has been sold. Those companies were constantly troubled about Spanish taxes. A tax on capital was levied, and it was a question how the capital should be estimated—a most thorny and difficult question—and I was in correspondence with the Spanish Government about it nearly the whole time I was there. As to the Rio Tinto there were constant difficulties with regard to this same question of taxation, and strikes also. Many British merchants would have claims against the Spanish Government for fines unjustly imposed on ships, for instance. That is a fruitful source of dispute, and the consuls will try to settle these questions locally, but as a rule they have to come up to the embassy for final settlement with the Spanish Government. Those were all cases we paid great attention to. I do not hesitate to say that our English communities in Spain would bear me out in what I am saying, that they have met with great support at the embassy. They have been good enough to say so to me over and over again, and I think their claims have been attended to as far as possible. In my present post there are fewer of those claims, for some reason, but there is one which has occupied me the whole time I have been there—the dispute about the Canadian Pacific Railway—and I have done what I could to help the Company to get back their concession, and it is a negotiation that is still going on. I am in constant oral and verbal communication with the different Ministers concerned; I go and see them to talk over the matter in a friendly way. In fact, I may say that the commercial side of the business is not lost sight of.

38,214. I am very glad you have given us so full an explanation because I have been in Madrid and Lisbon,

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

when you were ambassador, and I heard enough to bear out all you have said. I was particularly anxious that we should be enlightened on what I may call the "non-drawing-room" side of the embassy. Is the commercial attaché a member of the staff of the embassy?—Yes, he used to be. When he resided at Madrid which was in the first few years I was there, before the new system was introduced of having him reside in England, he was a member of the staff of the embassy. He was sometimes a Foreign Office man—Mr. Wellesley of the Foreign Office, now head of the Treaty Department, was commercial attaché.

38,215. Is the commercial attaché while on duty a member of the Diplomatic Service?—Yes, he is a member of the diplomatic staff.

38,216. Have you found it necessary in Madrid to have a commercial secretary who is also a member of your staff?—Yes, only because the commercial attaché no longer resides in Spain. It is for that reason.

38,217. So the commercial side of the embassy work is represented by the attaché, who is not necessarily a resident in the country, and by the commercial secretary, both of whom are members of the ambassador's staff?—Yes, the commercial attaché who now resides in England is a member of the diplomatic staff while he is at his post, but not when he is in England, naturally.

38,218. But he is a member of the Diplomatic Service when in England?—No, not necessarily. The commercial secretary who replaces him is, and he is selected by the ambassador from his staff. But the commercial attaché is not necessarily a man selected from the Diplomatic Service. He is sometimes selected from the Foreign Office, as in the case I mentioned, and sometimes from the outside.

38,219. But while he is exercising his functions he is a member of the Diplomatic Service?—Only when he is in the foreign country concerned.

38,220. Is he attached to the Foreign Office when he is not in the country concerned?—Then he has a room at the Foreign Office.

38,221. So he is either in the Diplomatic Service or in Foreign Office employment?—Yes; and in close communication with the Foreign Office and with the Board of Trade especially.

38,222. How do these functions, that you have described as fulfilled jointly by the commercial attaché and the commercial secretary on the spot, differ from those of an active consul with regard to his particular district?—They differ in this way, that a consul's activity is limited to his district, whereas the commercial attaché and the commercial secretary have regard to the commercial affairs of the whole country. Constantly consuls are unable to settle questions because their power is limited and they are referred to the capital for settlement, and then the commercial attaché deals with them. It is the larger area which is the main difference.

38,223. That is exactly what I thought. The nature of the function fulfilled within his district is very much the same in the case of a superior consul as would be that fulfilled by these attachés or secretaries at the embassy itself?—Very much the same. The consul writes an annual commercial report for his district, and the embassy produces one which is written by the commercial attaché, under the direction of the chief, for the whole of the country.

38,224. Generally speaking, how are commercial attachés selected?—I think it is done very much in consultation with the Board of Trade. Those I have known in Spain, for instance, have been Foreign Office men.

38,225. Are you satisfied that this system of having commercial attachés with a secretary on the spot, is a good working plan?—It is being tested now. I do not know that it is a definite plan which will be adopted. I believe the Board of Trade prefer that to having the commercial attaché reside in the country. I should say, from the point of view of an ambassador, that he would rather have the commercial attaché at hand. I missed mine very much when he left.

38,226. I was not referring to the fact that he was non-resident, but practically, as missions and embassies have developed now, a commercial member or attaché,

resident or non-resident, has become a necessity?—Oh, yes; I think so.

38,227. Would not the consul who had a large district and exactly this kind of experience, be the man who might most properly be transferred to this particular branch of diplomatic activity?—And added on to the staff of the diplomatic mission?

38,228. No. Is not the experience that a good consul gets exactly suited to qualify him for this kind of duty?—I think there would be nothing to prevent that transfer, and I dare say it may have been done, if you look through the list of commercial attachés. I cannot say, but I should think very likely you would find one or two have been consuls.

38,229. If the Consular Service were more closely associated with the Diplomatic Service than it is at present, would not this necessity, which you have indicated, for commercial experience to be represented at an embassy, afford a bridge between the two?—Yes; the consul might become the commercial secretary.

38,230. Or the commercial attaché, if that system were continued?—Yes.

38,231. I merely throw that out to see whether you, in your experience, have found anything fatal to that idea, because it has impressed itself on my mind?—That the commercial work at an embassy might be done by an official selected from the Consular Service?

38,232. Yes; which would thereby be a stepping-stone for the most capable consuls to get into this particular branch of the Diplomatic Service?—I do not see why it should not be.

38,233. (*Mr. Hoare.*) That has happened in the case of Sir Francis Oppenheimer?—Yes, he was Consul-General.

38,234. (*Sir Donald MacAlister.*) It has happened several times sporadically, I think I may say. There is no system?—That is so.

38,235. Take an example you are familiar with: you were for several years in Constantinople?—Yes.

38,236. The Consular Service in the Levant is very different from that of any other part of the Service, for obvious reasons?—Yes.

38,237. But there, apart from the mere routine work—what I might call registering work, and so on—the other higher work of the consuls, who have a large area, is exactly what you described as the commercial side of an embassy?—Yes, but it is much more.

38,238. It goes further in some directions and less far in others?—It is largely political in those countries.

38,239. They have a very great deal of political work to do in connection with their commercial activity?—Yes, and apart from that, too. The Consul-General at a place like Smyrna has an enormous area where his activities are not only connected with commerce and shipping, but he watches politics too.

38,240. He is a political agent as well?—He is a political agent as well. If a British subject gets into trouble and is captured by brigands the local consul has a good deal to do with getting him out.

38,241. And he could act on his own responsibility, reporting no doubt to the embassy; but he could initiate things?—Certainly he could. He would probably report to the embassy, and it would add to his power of dealing with the local authorities if he could say: "I am instructed by the embassy to say this."

38,242. As an ultimate resource?—As an ultimate resource, yes; but he could do so without.

38,243. You were also out in China and Japan, and it is the same there exactly?—Yes, quite the same.

38,244. So that in those two regions at least there is no reason in the nature of things why the Consular and Diplomatic Services should not be more closely related as regards the individual members of it?—You were suggesting just now that to give commercial assistance at an embassy a consul might be useful. I think he would be.

38,245. If it were possible to transfer him to the embassy for commercial service?—As commercial attaché in some sense—I do not see why that should not be done.

38,246. I have never met anyone who can see why there should be any difficulty, but it is not done?—No.

7 May 1914.]

The Right Hon. Sir MAURICE DE BUNSEN, G.C.M.G., G.C.V.O., C.B.

[Continued.]

38,247. (*Chairman.*) Then would not he have to cross the bridge which you have referred to?—He would not then become a member of the Diplomatic Service, but could be transferred. His usefulness would still be local only. He would not be available for a diplomatic appointment elsewhere; he would be on a different footing.

38,248. (*Sir Donald MacAlister.*) That would be true. So far as his special experience made him valuable in the Levant, or in China, or Japan, it would be a personal limitation?—Yes.

38,249. But I want to see whether, in this case, where the Consular Service and the Diplomatic Service on their commercial side are really doing the same work, the difference being only that of the area, there could not be established correlation between them which would make it possible for picked men of the Consular Service to be drafted into the other service?—Yes, but I must keep to it that it would be a local appointment, and, therefore, would differ from an ordinary diplomatic appointment, which is not local, and entitles the man who gets it to go through the regular course in another country, and to rise up to the top of the tree.

38,250. Sir William White was transferred from the Consular Service to the Diplomatic Service. He made an admirable Ambassador at Constantinople, and his special knowledge made him particularly valuable there?—Yes, his special knowledge was political. He had, it is true, a consular career, but he was distinguished for his knowledge of the political relations between all the countries in the East, and his knowledge of the Eastern question. It was more than his commercial attributes that brought him to the embassy.

38,251. The very fact that he was supreme in his particular knowledge of that kind made him less available to transfer to China?—Yes, he was available for that particular position as ambassador at the top of the tree getting to the end of his career. There would not have been any question of sending him on, I suppose.

38,252. So that the special qualities of an ambassador relating to particular regions makes him less transferable to others, and a consul transferred in that way would lead to the same difficulty?—We are transferred. I have been just transferred from one region to another with a very different outlook.

38,253. Do you know Sir Edwin Pears, at Constantinople?—Yes.

38,254. He is a man with immense opportunities of forming a sound opinion?—A very good man.

38,255. A paper by him has been sent us, in which he says: "A point to which I attach the most importance is that the Consular and Diplomatic Services should be co-ordinate," and he gives reasons of the kind I have mentioned?—Yes.

38,256. You would realise that in the East, in Constantinople, the feasibility of that is greater in that Service than it might be elsewhere. There is the Special Consular Service, the special political character

of that Consular Service, and the special commercial character of one side of the embassy?—Yes; but then I do not know why he should be transferred. The Consul-General at Constantinople is in constant touch with the embassy, and they are working together. They would not be more closely associated really if the Consul-General was called a member of the embassy.

38,257. Do you think that is an opinion held in the Consular Service?—I dare say he would like to come in. There is nothing to prevent his being selected as commercial attaché.

38,258. From the nature of things you do not see why there should not be a pretty regular custom, established by degrees, of transferring?—It is really extremely difficult to answer these questions. One would like to think about them a little more. I rather hesitate to say that in the Levant it ought to become the regular system for the Consular Service to send one of its members to the embassy to join the staff of the ambassador. I do not quite see that it is needed. I think the commercial work is done without that. There is the commercial attaché.

38,259. Was the gentleman I named at Constantinople when you were there?—No. The present Sir Adam Block was there when I was there.

38,260. He was in the Consular Service?—There is no reason why any efficient consul should not be made first dragoman. The Dragoman Service is the same as the Consular Service. That is at the top of the tree.

38,261. And he could not rise higher because he would not be technically in the Diplomatic Service?—He could rise higher if the Secretary of State chose to think that he was so eminently qualified that he would make a better Minister or Ambassador at a post than anyone that the actual organised service could find.

38,262. But the rules of the service would separate the two?—Yes, they would.

38,263. I was wondering whether that rule was worth retaining?—If you took him away from his sphere of special activity in Constantinople, of course, he would not be an expert at any other post.

38,264. Are not we constantly losing the service of men who, in these particular posts have risen to the top of the tree in the so-called Consular Service, but have been really doing diplomatic work. They take posts elsewhere. They have no prospects, and the rule of the Service which keeps them outside the diplomatic circle makes us lose them just when they become most valuable. That is the complaint that I have heard in Constantinople. Is not that so?—I have such a high opinion of one or two people who have become first dragoman that I think they are capable of filling any post with distinction.

38,265. So any rule which prevents them doing so, and causes the country to lose them, is not a rule which in itself is beneficial?—I agree to a certain extent with what you say.

(*Chairman.*) We are greatly obliged to you for the valuable evidence which you have given.

Mr. WALTER REA WALLIS called and examined.

38,266. (*Chairman.*) You are a second division clerk?—I was.

38,267. When did you enter the Service?—In 1882.

38,268. Did you enter by open competition?—Yes.

38,269. Have you been since then in the chief clerk's department of the Foreign Office?—Yes, continuously.

38,270. What position do you now hold?—The post of staff clerk.

38,271. Drawing what salary?—500*l.* a year.

38,272. We have heard evidence in favour of the general memorial from the second division clerks. Will you now tell us exactly how you differ from them?—We think we have a stronger case for improvement than they—and that has been shared by the department who have pressed that view on the Treasury—from the nature of the work that we do. Having had the case put before the Treasury we did not join in the original memorial because we were not asking for the

same thing as the rest of the second division clerks in the office were asking for.

38,273. If the general scheme of the "senior clerical division" which we have proposed be accepted by the Government and applied in the Foreign Office will not your difficulty be met if not altogether then to a large extent?—To a large extent, but I do not think wholly. If I may look at it from the public point of view, as apart from a personal point of view, this is a small department and does not attract the best men unless it can get some more attractions attaching to it. If when the clerks are doing some particular work—even about the third man from the bottom is doing more or less individual work—some special rate of pay could be attached to it, I think that would meet the case by a slight modification of the scheme.

38,274. Something of the nature of the establishment of staff posts of about 500*l.* a year?—No. They are to come in at 85*l.* under the new scheme. That

7 May 1914.]

Mr. WALTER REA WALLIS.

[Continued.]

might do for a few years, but if a man was doing important work in six years he ought to be getting at least 150*l.* a year I should suggest.

38,275. But there are minor staff posts?—I did not know that that was provided for in the new scheme.

38,276. Yes, it would be provided for in the new scheme?—I think that would largely meet it if they were fairly liberally given; but from a public point of view you do want to attract some of the best men into the Foreign Office because the work there requires it. It is not quite fair that they should all go into big offices where they can get much better prospects.

38,277. If the Treasury were to sanction a certain proportion of minor staff posts, in addition to major staff posts which go to 500*l.*, would that meet all your difficulties?—Yes, I think it would meet a great many of them. We still ask that we should go rather above 500*l.* for the staff posts.

38,278. You have at the present time one post above 500*l.*?—That is the assistant. That is rather a special post.

38,279. But the clerks of the "senior clerical class" would naturally expect to hold that post?—Yes.

38,280. If that were so, if their expectations in that respect were gratified, would that not meet your difficulties altogether?—Mostly so. It largely depends upon what rate of pay you attach to the post—whether you go beyond 500*l.* or not. If you absolutely fix it at 500*l.* we do not think that is quite sufficient for the third man.

38,281. The assistant at present gets up to 750*l.*?—Yes.

38,282. He begins at 600*l.*?—At 550*l.*

38,283. I should think 550*l.* to 750*l.* about adequate?—I think 550*l.* is too low a minimum to begin with. It takes ten years to get to the maximum, and, as far as one can see, for a long time to come it will be at least the age of 50 before one can think of getting that. In my own case it will be 52, and ten years will take me to 62 before I touch it.

38,284. Have you any objection to 750*l.* as the maximum?—I cannot say an objection, but I have suggested 800*l.* There is not much difference.

38,285. What do you suggest as the minimum?—600*l.* or 650*l.* to 800*l.*

38,286. If that was granted then you consider the application of the senior clerical scheme to your department would meet your difficulty completely?—Yes, I think it would provided you will allow for one or two posts going to 550*l.* and not stopping at 500*l.*

38,287. That is really what you have to say and nothing more?—Practically that. There have been one or two points mentioned. Perhaps I am not called upon to meet it, but I have heard the objection made that we have already a large proportion of staff posts to second division; and it is so at first sight, but I think you might take into account the work we have to do. I do not know whether you have seen an account of the distribution of the work—a list we have sent to the Treasury of the work done in the chief clerk's department.

38,288. Yes, we have had that?—We have to account for spending nearly a million of money, and we collect over 100,000*l.* under several different kinds of regulations. You cannot therefore have one man or two men supervising all these things; there is too much variety of work. We have not only got that voted money to deal with; but take the consuls, whose accounts we have to control; they have to deal with a lot of other monies in their official capacity, such as the estates of deceased British subjects, and recently, under the Algeiras Act, consuls have to collect taxes on their nationals. They have to be accounted for and we have to show that they are accounted for and handed over. There are a number of outside things of that kind like the Persian advances and the advances to the Crete Government, and so on, which come before us and cannot be treated all alike by a lot of juniors all doing the same work. Each one almost has individual work to do. That is why we consider that the staff posts should be more than perhaps an average proportion, and also that even the juniors should be rather

better paid than they are in many places. I think we meet the possible objection that you are unduly favouring the department by the fact that at present the office is not sufficiently attractive to get the best men; they do not offer to come to the Foreign Office. So that by giving something more than the average you would not do more than attract an average number of the best men, which is certainly wanted.

38,289. Do men often leave your branch of the Foreign Office and go to other departments?—There have not been many, but one or two have entered for other examinations—for surveyors of taxes. There have been very few so far.

38,290. Are men taken from the chief clerk's department of the Foreign Office for promotion to other departments?—No; it has been called a close corporation, with its advantages or disadvantages, as the case may be.

38,291. (Sir Henry Primrose.) I take it that the chief clerk's department really corresponds in part of its work to the accountant's department in other offices?—I should say so.

38,292. Is the chief clerk the accounting officer for the Diplomatic and Consular Vote?—Yes.

38,293. So that is a very large part of the work?—Yes.

38,294. And that part of it exactly corresponds to what second division clerks are expected to do in other branches of the Service?—Yes.

38,295. There is no real difference there?—No, I should think not. I am not quite sure that we do not get more of what you might call administrative work than any other department. Even a junior, in examining an account, draws attention by queries and that sort of thing on it. The others, apart from the juniors, have to deal with all sorts of financial questions referred from other departments to the chief clerk's department. I do not mean that the answers are always given direct by a junior. They go to the chief clerk, but they are too numerous for the chief clerk to deal with unless suggestions or minutes are made for him.

38,296. What is your own position?—I am a staff clerk.

38,297. At what rate of pay?—500*l.* a year.

38,298. Is that the limit?—That was made personal to me by the Treasury. It was 450*l.*, and when an application was made to raise it, they only did so on, the condition that it should be personal.

38,299. Over you there are only two officers, namely a chief clerk and an assistant?—Yes.

38,300. Do you deal mainly with estimates and accounts, and so on?—Personally I have, generally speaking, the Consular-General branch of the work, including estimates and everything connected with it.

38,301. Work largely in connection with the distribution of the Consular Service, the pay, and allowances, and things of that kind?—Yes, of the Consular Service.

38,302. You have nothing to do with the reports of consuls?—No, not the trade reports and so on. We get reports on the state of vice-consulates under their jurisdiction, which largely deal with finance, and state whether the funds are properly accounted for.

38,303. I understand the chief clerk's department did not join in the other memorial sent in?—No, for the reason that we consider the work we do is more important than theirs and can fairly claim a higher rate of pay. As a matter of fact, we did ask the Treasury to adopt the intermediate scheme.

38,304. You consider the work of the chief clerk's department is really of a higher order than that in the Treaty or Librarian's Departments?—Yes, but I am not so anxious to depreciate theirs as to impress upon you the importance of our own, really.

38,305. Supposing you have a vacancy in the Foreign Office for a second division clerk, is there a tendency amongst the successful candidates to whom it is offered to decline it and prefer to wait for another department?—Personally I do not know, but I have heard that the coaches, tutors, and so on recommend them not to put the Foreign Office amongst their preferences.

7 May 1914.]

MR. WALTER REA WALLIS.

[Continued.]

38,806. Taking the men you have had in the office lately, how far do you know whether they would prefer to have gone to some other department?—I do not know their preferences at all. As to whether the chief clerk's department would be quite satisfied with this new scheme, I may say that the present men think they

ought to be put in as good a position as they would be in if the Treasury had sanctioned the scheme put before them two years ago, but merely abstained from sanctioning it until they had your report. This is a personal matter apart from the situation of the department.

## APPENDIX LXXVIII.

(Vide Q. 37,570.)

## GENERAL CONSULAR SERVICE, 1905 EXAMINATION.

1. Employed in the British Consulate-General, Antwerp (3½ months), and as Acting Vice-Consul and Vice-Consul at Ghent for 1½ years.
2. Employed in Bank of England (one year) and with two firms of stockbrokers for about three years.
3. With Messrs. Nixon, Forrest & Co., East India Merchants (three years) and the North of Scotland Bank (six months); also employed by the "New York Herald" and various New York firms during one year.
4. Clerk in the Bank of England (three years).
5. Served as student interpreter at Pekin (about two years).

## GENERAL CONSULAR SERVICE, 1906 EXAMINATION.

*Ordinary Candidates.*

1. Was British Acting Vice-Consul at Hanover for short periods and Vice-Consul of U.S.A. at Hanover for nearly two years.
2. No commercial experience.
3. " " "
4. Had written articles for the "Independent Review."
5. Hon. Attaché to the British Consulate-General at Antwerp for nine months, Acting Vice-Consul at Ghent for some time, and Vice-Consul at Caen for about one year.
6. No commercial experience.
7. " " "

*Commercial Candidates.*

8. Employed by the Agent-General for Victoria for about one year; by Messrs. Coode, Son and Matthews, Civil Engineers, for about three years; and by the Agent-General of New South Wales for 4½ years. Was secretary to the Delegation of the Commonwealth of Australia at the International Telegraph Conference, London, 1903, and Attaché to the Commonwealth Delegation at the Universal Postal Congress, Rome, 1906.

## GENERAL CONSULAR SERVICE, 1907 EXAMINATION.

*Ordinary Candidates.*

1. No commercial experience.
2. Employed in French, Lemon & Co.'s Bank at Florence (eight months) and in the Resident Engineer's office of the Buenos Aires and Rosario Railway at Buenos Aires (seven months).
3. Studied marine engineering with Messrs. Vickers, Son and Maxim for 1½ years.
4. No commercial experience.
5. " " "

*Commercial Candidates.*

6. Employed by the Ocean Accident and Guarantee Corporation for three years, mainly in Paris; acted as secretary to the Naval Attaché of the U.S.A. Embassy in Paris for three months and for six months acted as foreign correspondent to the North Egypt Land Company.
7. Served as Assistant Expense Accounts Officer under the Admiralty for 6½ years.
8. Served as Assistant Store Officer under the Admiralty for 4½ years.

## GENERAL CONSULAR SERVICE, APRIL 1908 EXAMINATION.

1. No commercial experience.
2. " " "
3. Was translator and archivist to the British Legation at Caracas, Venezuela, for over five years and (concurrently) Acting Vice-Consul for nine months.
4. Clerk in a shipping firm (one year); stockbroker's clerk (two years); buyer and representative in Austria-Hungary and Roumania of the Anglo-Austrian Trading Co., timber and general merchants, for 3½ years.

## GENERAL CONSULAR SERVICE, JULY 1908 EXAMINATION.

1. Served as Assistant Naval Store Officer under the Admiralty for 7½ years.
2. Employed by Messrs. Watson and Youell, steamship agents, at Galatz and Kustendje (18 months).
3. Indian Army Officer for about 2½ years.
4. No commercial experience.
5. Clerk in Lloyd's Bank for 10 years.
6. Served as Customs Port Clerk for seven years.
7. No commercial experience.

## GENERAL CONSULAR SERVICE, 1909 EXAMINATION.

1. Employed as book-keeper at Frankfurt (two months); private secretary to the British Vice-Consul at Zurich (1½ years); correspondent with Mons. A. Tournier of Paris (nine months); and clerk and correspondent at Messrs. Kleinwort, Sons & Co.'s Bank for eight months.
2. No commercial experience.
3. " " "
4. " " "
5. " " "

## GENERAL CONSULAR SERVICE, 1910 EXAMINATION.

1. Employed by Manufactures Royales de Corsets of Brussels as foreign correspondent for nearly 1½ years and by the British American Tobacco Company, Ltd., Bristol, for a like period.
2. No commercial experience.
3. Employed for four months at the Dresdner Bank and for 3½ years with Messrs. Gray, Dunlop & Co., stockbrokers; for about one year was English secretary to the town of Carlsbad and was also correspondent of the "Daily Mail," "New York Times," &c.
4. No commercial experience.
5. Employed by Messrs. Heyn, Franc & Co., East India merchants (three years); by Messrs. Franc and Zurhosen of Moscow (three months); for two years in the Indian branches of Messrs. Kahn and Kahn, merchants, of Paris.
6. No commercial experience.

## GENERAL CONSULAR SERVICE, 1911 EXAMINATION.

1. Was head manager of a rubber firm in the Malay States.
2. Previously a schoolmaster.
3. Six years with the Pearl Life Insurance Society.
4. No previous commercial training.
5. Six years in a solicitor's office; two years in H.M. Sasines Office, Edinburgh.
6. No previous commercial training.

## GENERAL CONSULAR SERVICE, 1912 EXAMINATION.

1. No previous commercial training.
2. Apprenticed to a commercial house at Havre (one year); and nine months with a Seville firm.
3. No previous commercial training.
4. " " " "
5. Taught English abroad. " "
6. Employed for a few months in the office of the British Consulate General at Havre.
7. No previous commercial training.
8. " " " "
9. Acted as sub-editor of the "Literary World" for some months.
10. No previous commercial training; called to the Bar.
11. " " " "
12. " " " "
13. " " " "

## GENERAL CONSULAR SERVICE, 1913 EXAMINATION.

1. 2½ years as foreign correspondent of Messrs. Lockie, Pemberton and Company.
2. Entered Civil Service as Boy Clerk. Was employed as Second Division Clerk in the General Post Office and in the Estate Duty Office as Second Class Clerk.
3. Employed for six years (including apprenticeship, transferred from another firm) in a solicitor's office at Edinburgh in their Factory and Estate Management Branch.
4. A schoolmaster (as substitute on several occasions).
5. Six years clerk to the British Consulate at Helsingfors.
6. Came straight from Oxford.
7. Came straight from the University (under tuition for the examination).
8. No previous commercial training.
9. " " " "
10. " " " "
11. " " " "

## APPENDIX LXXIX.

(Vide Q. 37,583.)

## APPOINTMENTS in the GENERAL CONSULAR SERVICE.

ROYAL COMMISSION ON THE CIVIL SERVICE.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

CIVIL SERVICE.

At the Royal Commissions House, Old Palace Yard, S.W.

NINETY-FOURTH DAY.

Friday, 8th May 1914.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

His Grace the DUKE OF DEVONSHIRE.

Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.O.B.,  
K.O.

Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR OECIL TYRELL BECK, M.P.

Mr. ARTHUR BOUTWOOD.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Miss HALDANE.

Mrs. DEANE STREATFELD.

Mr. N. E. BEHRENS (*Secretary*).

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B., called and examined.

38,307. (*Chairman*.) We should like, Sir Arthur, to have on our notes a brief statement of the various diplomatic posts you have filled, if you will be good enough to give it to us. When did you enter the public service?—I began in the Foreign Office. I passed into the Foreign Office in the year 1880.

38,308. By open competition?—No. The competition in those days was limited competition; twenty of us went up for two places.

38,309. That is practically the existing state of things I understand; it was in fact competition?—It was competition before the Civil Service Commissioners in Cannon Row.

38,310. It was competition among nominated candidates?—Yes.

38,311. Will you very briefly mention the particular missions to which you have since been attached?—I went, first of all, as Secretary to Madrid. Then I went to St. Petersburg, from there to Constantinople, then to Bucharest, then I was for three years attached to the Agency in Egypt. Then I went as Agent and Consul-General to Zanzibar; then to that was added the Commissionership of the East Africa Protectorate, which I held for six years; then I was made Minister in Persia, then in Belgium, and then in Portugal, and last year I became Ambassador to Spain.

38,312. During the course of your many appointments you have seen a good deal of the young men who join the Diplomatic Service in their earlier years?—Yes, I have; but I ought to qualify that by saying that during the seven years I spent in East Africa I was quite severed from the Diplomatic Service; strictly speaking it was not a diplomatic post. I was agent and consul-general and commissioner, and my staff was almost entirely recruited from either consular officers or from young men who had been in the service of the Imperial British East Africa Company, and in Persia, too, we had a good many on our staff who were not regular diplomatists, but Persian specialists with local rank. I had never been at any of the great central European capitals to which young men usually go when they begin their diplomatic duties.

38,313. What posts have you held in which you have been brought into contact with these young gentle-

men?—Of course, at Madrid, Constantinople, and St. Petersburg, and Cairo to a certain extent; and now, since I have been a Minister in Europe at Brussels, Lisbon and Madrid, my staff has been nearly entirely composed of them.

38,314. All that experience enables you to speak with authority on their general capacity?—Yes.

38,315. Would you say that the kind of work which diplomatic officers do differs essentially from the kind of work which a Foreign Office clerk does?—Now, I think it does, and that you require rather a higher standard of ability in the lower ranks of the Foreign Office than you do in the Diplomatic Service, so far as I understand. In my time the work done by the lowest rank was rather clerical and mechanical—highly confidential but consisting largely of deciphering and ciphering secret telegrams; but now I understand that all the mechanical work in the Foreign Office, copying out and typing and that kind of thing, is delegated to lower division clerks, and the ciphering work, I believe, is done in a special department by junior clerks who take it in turns.

38,316. We have been so informed. It has also been suggested to us that the work of a Foreign Office clerk might be distinguished from the work of a diplomat in this way, that no obligations social or other lie upon a Foreign Office clerk after office hours?—That is true. A Foreign Office clerk has harder work, I think, than the ordinary diplomatic attaché, because there are many of the smaller posts, like the Hague and Copenhagen and so on, where the actual work, intellectual or mental or even physical work if you like to call it so, of a young diplomatic attaché is comparatively small. At other places he works harder than a Foreign Office clerk does; at a place like Constantinople, for instance, during the recent Balkan crisis, I fancy they worked all day and a great part of the night too; therefore as a general rule his hours are lighter, but he is not free on his Sundays. He may be summoned at any moment by his chief, whereas a Foreign Office clerk gets his week-end.

38,317. The distinction which I was endeavouring to indicate was that while the Foreign Office clerk's work ends when the office closes for the day, the attaché's work,

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

which makes him really useful to the Minister he serves, begins after the office hours have finished, and he goes into Society?—Very frequently that is the case; and then, of course, in many ways he is like an aide-de-camp to a governor, he has to arrange dinners and issue invitations and so on.

38,318. But the work of making himself acquainted with current political movement and thought in the country to which he is accredited and reporting to the Minister is an even more important part of his duty than his mere office work?—Yes, quite so. We want him to know people, the Ministers, the leaders in Society, everybody who counts in the country.

38,319. He is largely an intelligence officer?—You might say so.

38,320. And the conditions of his usefulness depend a good deal upon his personal character?—Yes, they do—upon his quickness of intelligence.

38,321. And his acceptability in Society which largely depends on his manners?—Yes, his social aptitudes, his quickness of apprehension, his knowledge of the language, and so on.

38,322. Therefore you cannot infer that a man will make a good diplomatic officer because he possesses good intellectual qualities?—Not necessarily, you might have a very brilliant professor who delivered admirable lectures on international law who would be a failure in an embassy, because he might not have the social qualifications; he might be shy perhaps or eccentric in manner.

38,323. A potentially good diplomatist cannot demonstrate his efficiency as a diplomatist by doing a very good paper in the examination hall?—No, I think you want more than that.

38,324. You want certain qualities that cannot be tested?—Which it is very difficult to test by any competitive examination.

38,325. (*Sir Kenneth Muir-Mackenzie.*) I think Lord Bryce was a professor?—Yes, but Lord Bryce, besides being a professor, was a statesman and a very brilliant writer and traveller.

38,326. (*Chairman.*) You might say in Lord Bryce's case that the exception proves the rule?—Yes.

38,327. What I was leading up to was that beyond the written examination you should have a personal test?—Yes.

38,328. And that you cannot rely altogether in selecting diplomats on a written examination?—I do not think it would be wise to do that. You might get, of course, a very good man but a bit of a failure for the Diplomatic Service.

38,329. Do you think that the expenses of living in the Diplomatic Service abroad are greater than the expenses of living of a Foreign Office clerk?—Yes, I should say that they were, because London is not a very expensive place to live in. A Foreign Office clerk who lives in London can very much choose his own quarters, but if he is in the Diplomatic Service he must live near or fairly near his embassy, because, as I ventured to observe just now, his work does not terminate with his office hours like that of a Foreign Office clerk; he is liable to be sent for at any hour of the day or night, he may have to dine with his chief and send people in to dinner. Therefore he must live near the embassy, so that he cannot economise.

38,330. But apart from the mere fact of his place of residence, is he not compelled by the circumstances of his situation to mix in an expensive society?—Yes, naturally more or less; it varies of course in different capitals. In a place like Persia, where outside the legations there is practically nothing but Persian society, that does not apply.

38,331. You have a legation in Persia?—Yes, we have a full legation there; there are a councillor, a military attaché and two diplomatic secretaries; they are housed there, it is cheaper, and a young diplomat who is not very well off is glad to go to Persia because he has very few expenses; if he likes sport he gets plenty of it, and interesting work; but in places like Vienna, Paris, and Berlin, his expenses naturally are very much greater, he has, for instance, to belong to expensive clubs.

38,332. At the present time an attaché must have 400*l.* a year private means as a condition of his employ-

ment?—That is his pay under the present rule; it is a fairly recent rule I believe.

38,333-5. Did such a rule exist when you joined; if so, was the sum higher or lower then?—When I entered the Diplomatic Service I was never an unpaid attaché, I entered from the Foreign Office, so that the question was never put to me, but I believe that my contemporaries when they entered were usually asked whether they had sufficient means.

38,336. I should like to put this question to you, if you will excuse the personal application: was it understood in the Foreign Office at the time when you were transferred to the Diplomatic Service, that you had a private income besides your pay?—I do not think so—they did not ask me any question about it. I do not think they knew anything about my private means, but the question was not put to me, and at the time when I entered I was already in receipt of 250*l.* a year from them because I was third secretary, getting 150*l.*; I had passed my examination for international law, which gave me another 100*l.*, and I was on the eve of getting my promotion—there had been rather a rapid flow of promotion and I expected soon to be second secretary, getting about 400*l.* a year, also; so that perhaps on that account they did not think it necessary to ask me the question.

38,337. So that when you were transferred from the Foreign Office to the Diplomatic Service, you were, or were about to be, in receipt of about 400*l.* a year?—I was very near it, from the Government.

38,338. Might I ask, without desiring to intrude into your private affairs, whether you found 400*l.* adequate for your expenses when you joined the Diplomatic Service?—In addition to the 400*l.* I had an allowance for Oriental languages, which, housed as I was at three of my posts, and with extra pay at two of them as Chargé d'Affaires, rendered it sufficient; but I do not think if I had gone to Paris or Vienna or Washington, or some other expensive western post, I could have managed on my pay from the Government.

38,339. May I ask you to say whether, in your opinion, the allowance of 400*l.* a year now secured to an attaché is sufficient to enable him to live in the style that his position in the Service requires?—Yes, I should say that it was sufficient if a man is not extravagant. It depends of course enormously upon what post he is at; probably he would find it difficult to live on it at a place like Washington or Vienna or Paris, while he could live on it quite comfortably in the Balkan States or in the East.

38,340. The necessity that he should have 400*l.* a year private means when he goes into the Diplomatic Service would render, would it not, transfers between the Foreign Office and the Diplomatic Service somewhat difficult? A clerk of the Foreign Office need not necessarily have 400*l.* a year private means?—No, not necessarily.

38,341. If a clerk in the Foreign Office were desirous of transfer to the Diplomatic Service, and he had not got private means, it might be difficult under the existing conditions to effect a transfer?—It might be so. The higher up in the Foreign Office that secretaries get the easier transfer is; it is only in the lower ranks in the Service that the absence of money is keenly felt.

38,342. But is it not also true that beyond a certain point it is undesirable to effect transfers? We were told yesterday by Sir Maurice de Bunsen that a diplomatic officer who had reached the rank of councillor ought on transfer to the Foreign Office to be granted the position of an Under-Secretary of State?—Yes, I think that would be a difficulty.

38,343. Transfers seem to be either in the lower grades or in the very highest?—Yes, there are many cases of transfers for a short time; many diplomatists, say second or third secretaries, for reasons of family convenience, because they find it advantageous to be in England, get a transfer for a year or so, exchanging temporarily with some junior in the Foreign Office.

38,344. Do you think it is beneficial to the Foreign Office that such temporary transfers should take place?—I think it is very desirable that we should occasionally come home, and that Foreign Office men should see something of the legations abroad.

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

38,345. Do you think it would be desirable, to facilitate those temporary transfers by such adjustments of the emoluments as may be found practicable?—Certainly.

38,346. Do you think that the introduction of a system of local allowances would have that effect. Say that a local allowance, in addition to grade pay of 400*l.* a year, was attached to an attachéship in Paris or in Washington (in the less expensive places a smaller allowance might suffice), could transfers between the Foreign Office and Paris or Washington be effected more freely than now, the man transferred from London drawing the local allowance and the man transferred to London ceasing to draw it during the continuance of the transfer?—Yes; but it should be done in such a way that the junior diplomatists could not complain that the Foreign Office men were better treated than themselves.

38,347. That raises the question whether the transfer should be limited to those cases only in which both parties are consenting; we can discuss that in a moment. But let us for the present suppose that the Secretary of State thought it desirable that, A, a Foreign Office clerk who shows signs of diplomatic ability should be tried in diplomacy, and transferred to Paris in place of a diplomat, B, to be transferred to the Foreign Office. In this case B, who in Paris was drawing 400*l.* a year from the State as an allowance, would, in the Foreign Office, cease to draw it; while A, on transfer from the Foreign Office to Paris, would draw it. How do you think such an arrangement would work?—I should like a little time to think it over before giving a definite reply because it raises a certain number of questions, but *a priori* I see no objection to the scheme. I should like if I may say so, to reserve my opinion until I have considered the full bearings of the thing.

38,348. Yes, by all means. In this connexion have you ever thought over the question of amalgamating the Foreign Office and the Diplomatic Service—bringing them all into one list for promotion?—Yes. It is what they do in Spain, for instance, and I believe in some other foreign countries; they have one entrance examination, and the Foreign Office there is regarded as a sort of embassy or legation. A man spends a certain number of years in a foreign post and then goes for a time, for three, four or five years, to the Foreign Office. An objection which has been made to that by some of the older permanent officials of our Foreign Office has been this: They say that if you once put a man into the Diplomatic Service he becomes rather unfit for the discipline and the regular hours of the Foreign Office. He gets into, I do not say lazier ways, but more irregular ways, and his chancery hours are shorter in a diplomatic post.

38,349. That is probably because of the different character of the work they do?—Yes; his duty is more independent, if I may say so, of mere routine; he may be sent for at all hours of the day by his own chief to see some official of a Government department; and say that a case arises of some injustice done to a British subject or British ship, he goes off to the Ministry concerned at 4 or 5 o'clock in the afternoon, and perhaps manages to get an hour or two of golf beforehand.

38,350. I understand your feeling to be that it would be better to have not a general amalgamation, but rather perfect freedom of transfer at the discretion of the Secretary of State?—I daresay that amalgamation might prove a success, but it is of course a new departure, and on the whole I think the present system works so well that I should be a little afraid of touching it in that way.

38,351. (Miss Haldane.) How is the money difficulty got over in Spain? Is there a difficulty as regards the remuneration?—In the Spanish Diplomatic Service I believe there is no rule at all. I went into that question the other day, because Sir Arthur Nicolson wrote to me about it, and I found that the Spanish Diplomatic Service is entered by theoretically an absolutely open system of competition. In practice they get about the same number of candidates for their posts, or rather fewer than we do; that is to say, for one post there would be say nine or ten candidates competing.

38,352. (Chairman.) Do they retain to themselves the right of excluding any particular candidate for reasons which seem good to them?—I believe theoretically there has never been a case, or only very few cases, in which they have excluded anyone; but I have heard of one, which came before them recently, where a very bright and able boy, who was of humble origin, and had no means of his own, passed a brilliant examination, and they were rather nonplussed as to what they should do because he had not the means to live decently, and his appearance and manners were not suitable to a legation or embassy; so they sent for him, and they said that he would have great difficulty in living on his pay as a diplomat abroad, and offered him a post in one of the home departments.

38,353. Then they do keep that resource in their minds?—Yes.

38,354. It is a factor with them in deciding?—Yes; but such cases are very rare.

38,355. Is the competition for the Foreign Office in Spain really restricted to sons of well-to-do parents?—I think their diplomacy is mainly recruited from the upper and their Consular Service from the upper middle or middle class.

38,356. And that practice is the result of tradition and long experience?—It is not that so much. I think that before the boys compete for the entrance examinations they have to pass certain preliminary examinations. They must have been at a university; they must have a good knowledge of French, German, and English, and in practice in Spain the number of boys outside the well-to-do classes who know French and German and English well is very limited, so that the examination operates to keep the posts within the well-to-do classes of society.

38,357. What is the intellectual calibre of the young men whom you now get into the Diplomatic Service. Do you think it is better than it was?—I do not see very much change since my day, but then in my day the competitive examinations for the Foreign Office and the Diplomatic Service began on very much the same lines. I think my cousin, the Viceroy of India, was the very last of our diplomatists who got in without competitive examination, and after his time it became customary to have the same kind of examination and the same kind of competition for the Diplomatic Service as for the Foreign Office; I think you now get very much the same type of man for both.

38,358. Do you hear any complaints regarding the travelling allowance or leave allowance of your men?—I have not heard of any. My secretaries have never spoken to me about it. I do not know that if anyone did complain he would come to me about it. There may be grievances—I never remember having had any grievance myself.

38,359. (Sir Donald MacAlister.) We heard yesterday from Sir Maurice de Bunsen about the commercial activities of the various embassies in which he happened to have served; among them he mentioned Constantinople, and also Madrid and Lisbon. You have had experience of these places?—Yes; Lisbon is a very busy place in those ways—the commercial work there is pretty heavy.

38,360. That is to say, the commercial work of the embassy?—The work of the legation is largely concerned with attending to the complaints of merchants and shippers.

38,361. So that it would be right to say that, in these embassies at least, the duties of the Minister include a great deal of commercial work, besides that which we might describe as social and political work?—A great deal in a place like Portugal with its African Colonies. We have got in Mozambique and Angola a very large British trade—a South African trade with Mozambique—and the consuls there, when they find they can do nothing with the local government, pass complaints on to the Legation at Lisbon. I have had cases brought before me like the dismissal of an English foreman under contract by the local Department of Public Works.

38,362. You are familiar, of course, with the grumble that we constantly hear from British traders and so on, that our legations and embassies are less careful to push the interests of British commerce than are the

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

corresponding legations of other countries?—Yes, I have heard it. I do not think it is at all true; it may have been truer in the old days. I think the older class of ambassadors in Victorian times may have looked upon commercial disputes as largely consular matters, but I have never known it in my own time. It is always rather impressed upon us that commercial competition is a very important thing, and that we must back up British traders strongly. I have always done so, and have repeatedly been thanked by Chambers of Commerce and commercial bodies in my various posts.

38,363. So that you would say that the tradition has now been established in the places with which you are familiar, that commercial interests are part of the business of the legation?—Yes.

38,364. Can you tell us whether provision is made on the staff of the embassy, or of the officers who are attached to it, for specially looking after these commercial interests?—Formerly we used to have what were called commercial attachés who received a special allowance, and resided at the posts; now there is a commercial attaché for several countries who resides in this country, and whose headquarters are at the Foreign Office in London, who visits the Chambers of Commerce, and who is supposed to be in touch with the commercial world at home, and then goes out to the country to which he is attached, and travels about to various places. In addition to that we have at every legation or embassy a secretary, who gets an allowance of 50*l.* a year for specially looking after and reporting upon all commercial subjects; he writes the commercial part of the annual report to the Secretary of State on the country, and if any new commercial question arises he has to get it up and prepare it for me. There are a number of cases of the incidence of a new duty and its effect upon British trade, upon the local merchants, or of some new tax which may hit a particular industry in which British subjects are interested; he has to get up all that and provide me with materials for supporting a representation on behalf of the interested commercial parties.

38,365. Can you tell us whether this comparatively recent change of system by which the commercial attaché is no longer a resident member of the mission, but is placed in the Foreign Office, is proving successful for the object in view?—I should like to see it at work a little longer before I give a definite opinion. I personally think that in many ways there is great advantage in having your own men resident on the spot, especially the commercial attaché, who is usually a man of middle age with some experience, and that in some ways that was a better system, but the change has not yet been tried long enough for me to give an opinion.

38,366. The commercial attaché when he was resident was actually a member of the Diplomatic Service, I presume?—Yes.

38,367. The present commercial attaché is a Foreign Office clerk?—Yes. The one we have in Spain was formerly Consul at Bilbao, so that on Spanish matters he is a good authority. Whether he is equally good in Portugal and in Morocco, which are the other posts in his beat, I do not know; but I think he is sound enough on Spanish affairs, because he had for a long time been consul there.

38,368. What I was thinking of was his status; he was a member of the Diplomatic Service when he was attached to the embassy?—He is now a member of the Diplomatic Service, he was a consul, but he lives in London; his headquarters are in London, and he comes to Spain, say, for a couple or three months, then he goes to Portugal for a month, and then he goes to Morocco. I suppose for about six months in the year he is on his foreign beat, and six months of the year at home; he has an office in the Foreign Office, does his work there, and interviews commercial people; he also goes to Wolverhampton, Birmingham, Newcastle, and other centres of industry or trade.

38,369. The resident commercial secretary is naturally a member of the Diplomatic Service?—Yes, he is a junior secretary, not the councillor or the first secretary, usually the second secretary in an embassy.

38,370. Then that work which is now undertaken in the various missions by these officers is very largely what the Consul-General would undertake in his special

district?—Yes, in his special limited district, but of course the commercial secretary at the legation or embassy is supposed to be familiar or has to make himself familiar with commercial questions all over the country; and they do so more or less successfully, I think. It rather depends upon the aptitude of the particular man; you may have a much more able man at one time than another; it is rather a lottery whom you get as commercial secretary, some are slower and perhaps more laborious and produce rather more meagre results than others.

38,371. Would it not, in your opinion, be an advantage for such commercial secretary, in that it would enable you to secure that he was better trained rather than less trained, if he had had consular experience beforehand?—You mean that you might appoint a consul?

38,372. Yes?—You might do that of course, but then a secretary in the Diplomatic Service has other duties besides purely commercial duties to perform; he would have political work, and you would have the difficulty, if he were a local specialist, that you could not move him so easily. Your consul is a man who is rather more of a specialist. A diplomatist goes all over the world, whilst a consul often has larger local experience and knowledge.

38,373. Consuls are moved from one place to another?—Yes, but not nearly with the same regularity or frequency as junior diplomatists.

38,374. Would it not add to the efficiency of the Consular Service, and what I might call the commercial side of the Diplomatic Service, if there were some co-ordination between them, so that appropriate persons might be transferred from one to the other with great ease, keeping in mind your own experience?—That is a thing that has been often talked about, and in theory it looks very well; but our Secretaries of State have never found it practicable to do it on a very large scale. It has been done in some of the Oriental posts: for example, several of our Ministers and Ambassadors in the East were men who began life as consuls and spent most of their time in the Consular Service. Sir John Drummond Hay at Tangier was one, so was Sir Ernest Satow who began life as a student interpreter in Japan, was Minister first at Bangkok, then Tokio, and then Peking. The present Minister in China has had the same kind of career.

38,375. And Sir William White?—Sir William White was Consul at Dantzic, and was for a long time in Warsaw and he ended by being Ambassador at Constantinople. There are cases, but I think it would be a little difficult to co-ordinate the two services. The flow of promotion in the Diplomatic Service would be so greatly slowed down by it, that it would rather discourage your diplomatic men.

38,376. If it enabled us to get better diplomats then it would be a less evil in that sense?—Yes. I do not wish to say anything detrimental to the Consular Service which has some very admirable men in it, but I do not think you get on an average quite so highly qualified a class of officials in the Consular Service as you do in the Diplomatic Service.

38,377. Let us take Constantinople, you know about that?—Yes.

38,378. The Consular Service there is a special organisation?—Yes. The Levant Service is entered by competition and produces very capable officers. I know many young student interpreters who have become consuls, and very good men they are, excellent in their own posts; but I do not know that they would all do equally well at posts like Paris or Vienna.

38,379. Let us take Constantinople itself. Supposing there were a rule or a tradition (because a contrary rule or tradition exists) favouring transfers from the Levant Consular Service to the service of the embassy, would you not from time to time gain very considerable effectiveness in the Constantinople mission if that were possible?—You mean that you would appoint the ambassador from the Levant Consular Service?

38,380. I was not going so high as the ambassador; you must appoint the ambassador from the very best men you can get, but in the higher ranks of the Diplomatic Service at Constantinople, have you not

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

from time to time lost men because of the tradition against transferring the best men from the Consular Service to the Diplomatic Service. Let me take, for instance, Block?—Block was a very able man, I knew him well.

38,381. And Fitzmaurice?—Fitzmaurice I know too.

38,382. He has got to the top of the tree; you cannot keep him for long?—I did not know that. Both Block and Fitzmaurice were very able men. I do not see why those men should not be qualified to hold diplomatic posts.

38,383. The special kind of experience in the Consular Service in the Levant would make them more fitted for diplomacy?—I think those men would probably do far better for diplomatic posts in the East than an ordinary consul would. Theirs is the class of officer from whom we had Sir John Drummond Hay and Sir William Kirby Green in Morocco, but the latter had no experience of Western Europe or of America, or of anything but the Eastern world, and the theory of the Foreign Office is that they like their men to have a more or less universal knowledge of foreign countries. The Russians rather adopt your system; they have what they call the Asiatic Department, and a good many of their Eastern posts are filled up by men from the Asiatic Department. I do not know that it is altogether an unmixed success.

38,384. (Chairman.) Is it diplomatic?—Yes, it is; there is an under-secretary for it, and the staff at Constantinople, Teheran, and Peking is mainly recruited from the Asiatic Department. They go, so to speak, into the Eastern service; it is a diplomatic service, but they go from one Eastern post to another; they are rather Oriental specialists.

38,385. They are not interchangeable in places with the Western staff?—In practice they do not go much to European capitals.

38,386. But their salaries and emoluments are on the same scale?—Yes, and they have the same rank.

38,387. (Sir Donald MacAlister.) Does not that practice hold here? A consular officer in the Far East who has been transferred to the Diplomatic Service and rises high in it, say in China or Japan, is, as a matter of fact, not commonly transferred, let us say, to Paris?—I think Sir Ernest Satow was for a time in South America, and Palgrave, the famous central Arabian traveller, went from being consul in Bulgaria to Siam as Minister, and from Siam to South America, and he died, I think, as Minister at Monte Video.

38,388. That, so to speak, was ignoring his special gifts and capabilities?—I think it was. Burton, the great Orientalist, was for years at Trieste.

38,389. But in Egypt, when you were acting-consul at Cairo, for instance, in theory it was consular service that you were engaged on; but your work was just that of the local minister?—Egypt being part of the Ottoman Empire, we could not be diplomatic officers there. We were a consular body; Lord Cromer was Agent and Consul-General, and I was Acting Agent and Consul-General; but the consular work at Cairo, which was not very heavy, because Alexandria is the great trading centre, was done by a special man; he was a Maltese who had been there a long time and had a great deal of experience and knew the ropes very well.

38,390. But it was a consular service?—Yes; but in Egypt our position and the means we had of dealing with the commercial wrongs of British subjects were rather exceptional.

38,391. We will take that as an example where the so-called consular service was a diplomatic service; to meet the local exigencies it had to be so arranged. But in the nature of things there was nothing to make the duties incompatible or to make a fusion of them impossible?—No, throughout the East the consul occupies a very different position from what he does in the West. He is a magistrate and judges his own subjects; he is very much revered by Orientals; he goes about with a cavass in front of him, and a good deal of pomp and display. He is what the natives call a Sahib, whereas in the West a consul's functions are altogether of a less showy character; he is not ex-territorial, he is subject to local law; the

police can arrest him or enter his house, and very often he is merely a local merchant, a native of the country, so that his prestige is much less in Europe than in the East.

38,392. What it comes to is this, that in the East the functions of the Consular Service and of the Diplomatic Service run into each other very closely?—I think they do.

38,393. And their prestige, as you say, is one, really?—I think it is.

38,394. So that in the East the grounds against some kind of closer approximation of the Diplomatic and Consular Services would seem to be small, or at least not very wide?—Yes, I think it is much more easy to fuse the services in the East, or to facilitate an exchange in the East, than in the West.

38,395. In the West what I want to bring out is this, that owing to the development of the commercial side of the ordinary mission, there is a part of the work of the ordinary mission which is consular in essence although not in territory or area of jurisdiction?—That is so.

38,396. And for that reason a closer relation between the Consular and the Diplomatic Services might be worth establishing, in order that you might get the best men for the commercial functions discharged by the Diplomatic Service?—I see what your idea is, and I quite agree with it in principle, but I think it would be a little difficult to carry out, because as I said it would mean importing into diplomatic missions a number of men from the Consular Service—who as consuls are splendid men locally but perhaps would not have the necessary qualifications for service outside the particular country in which they have acquired their consular experience.

38,397. All I have to suggest is that such men would be eligible for such posts if they were otherwise qualified?—Yes.

38,398. It has been pressed upon us very strongly in representations, especially from the East, that the Consular Service suffers owing to lack of admission of its best men to the Diplomatic Service, and that the Diplomatic Service, owing to the existence of some such usage against it, cannot avail themselves of the services of the best of the consular servants?—Yes.

38,399. (Miss Haldane.) There are consuls under the India Office we understand?—Yes.

38,400. Are they eligible to be transferred into the ordinary Diplomatic Service?—No, I think not. We have them in Persia; we have an agent of the Governor-General at Meshed, a Resident in the Persian Gulf, and there are a certain number of consuls in smaller places, one at Ahwaz, and if I remember right, one at Kermanshah. They are Indian officials whose expenses are shared between the Indian Government and the Foreign Office and the appointments are made by arrangement between the Indian Government and the Foreign Office.

38,401. These men are very much allied to the Diplomatic Service?—They are all Indian "politicals," and their desire generally is to go back to India after a time. Say that a man has been at Meshed, or Resident residing at Bushire, he looks to going back and getting a good appointment in India; he is purely an Indian official.

38,402. (Chairman.) And in most cases a soldier?—Yes, a good many of them are soldiers. At Meshed we have Major Sykes. Many of them are men who have begun in the army, but have become politicals, whose work is mainly diplomatic, but who go on rising in military rank.

38,403. (Miss Haldane.) Do you think from what you have seen and heard, that a better type of men enter now under the examination system than used to do so?—Yes, I think you get a more accomplished young man intellectually. I think examination has done good in that way; that they know more of languages and history, and more of them have been to the university.

38,404. On the whole you think that it is a more effective way of recruiting them?—Yes, I think it is. I think that our present staff of young diplomatists is rather more accomplished than was the staff when I first entered the Service, before the competition system began, and that the competitive examination has done good.

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

Under the old system, especially if a man had passed Moderations at Oxford or Little Go at Cambridge, he was allowed to pass in on a mere knowledge of French and précis writing and a few things of that kind.

38,405. Do you think that if the range could be extended even further and if the 400*l.* rule were not so strict you might get a yet better class of men coming in?—If you mean by having more competitors, at present I think we have as many candidates going up for a place as is the case for the Indian Civil Service.

38,406. But the appointments are restricted of course to the sons of rich parents at present according to the rule?—Yes, I do not like that rule myself, but it seems to me that unless you pay them better it will always be a necessity.

38,407. But you think it would be a good thing if some arrangement could be come to by which they were paid better, by a special allowance or something which would get over this 400*l.* a year difficulty?—Yes, I think personally, it would not be a bad thing. I think you might get a certain number of desirable young men who might be kept out by the present rule but you would have to pay them, because naturally the more gifted and accomplished the young man is, the more he is likely to be popular in society and be asked to expensive shooting parties and that kind of thing; the more agreeable he is socially the more he will get on in society and the more he will be tempted to spend his money.

38,408. Would that be altogether desirable? Do you think it is a good thing that he should go a great deal into society like that?—The more he can do so the better, of course, but if he is a clever, gifted boy with social accomplishments he will be asked a great deal about the country, especially in Austria and Germany; and if he is badly off, he may not be able to afford it.

38,409. Do you think that young men are encouraged as a rule to study such matters as the social conditions of the country, to learn the language, and so on, independently of the special allowance?—Yes, I think they are. I certainly always try to encourage mine to do so.

38,410. But it depends a good deal upon the head of the embassy or mission what the character of the men is, does it not?—To a certain extent it does, I suppose, but they are constantly called upon now—it is a very much increasing practice—to write reports on one subject or another, for which demands are made by some Government department at home, say on the currency, education, and the schools question, or about labour problems, and so on.

38,411. Do you think, on the whole, the system is satisfactory, because one often hears criticisms made that attachés do not know a great deal about the country they live in. I do not know whether rightly or wrongly?—Yes, I think, on the whole, from what I have seen since I have been back in Europe, our young men are better than they were; they are more intelligent and industrious. I think we have got an abler set than was the case when I first joined, and I attribute it very much to the fact that there is a higher standard of competition and that you get cleverer men in.

38,412. (*Mr. Hoare.*) Does every important country have a commercial attaché?—No, I think the system is peculiar to ourselves.

38,413. I did not mean that; I meant, do all our embassies and legations have a commercial attaché of their own?—No, they lump them together. For instance, we have got for Spain, Portugal, and Morocco, one man who does the three countries. France and Belgium are joined together, and Germany, I think, has one to itself, and so has Russia; the Balkan States and Turkey in Europe have one between them.

38,414-5. And they are ordinary clerks in the Foreign Office?—No, ours in Spain was a former consul. The one at Paris—Sir Henry Austin Lee—has been there for a great many years. He began his career in the Foreign Office; he was private secretary to successive Under-Secretaries of State, and then he was transferred to the Paris Embassy I think in an ordinary diplomatic capacity, and was made a commercial attaché, and I think he has been there ever since. He is the one exception, I think, to the rule that they now reside at home.

38,416. Is it the commercial attaché who drafts the annual commercial report that you send to the Secretary of State?—No, that is done by the commercial secretary in the embassy itself. I think the commercial attachés send reports independently to the Foreign Office at home, but so far as regards what we do, we send in every year what is called an annual report on our country, the Minister or Ambassador writes the political part of it, the military and naval attachés contribute their parts, and the commercial secretary, the diplomatic secretary in charge of commercial affairs, contributes the commercial part, which is largely statistical.

38,417. So that you have really three kinds of commercial report; you have the consular report, the attachés' report, and the diplomatic secretary's report?—And you have special reports sent from time to time by commercial attachés to the Foreign Office direct, and you also have the annual report which contains a certain number of paragraphs about the commercial statistics of the year, the trade and commerce, imports and exports, shipping, and so on. I do not think these last reports are always of very great commercial value, because they have to be sent in at the beginning of the year, and a great many of the statistics do not appear until April, so that they are rather guess-work so far as accurate statistical information is concerned. It would be better if they could be sent in in May or June, after the annual statistics have come in. In Spain and Portugal the annual statistics come out in April, and it takes a long time to collect them and bring them out. I know that frequently, when we have sent in our commercial report, we have had the complaint that we have not given sufficient statistical information, and my secretaries say they cannot get it because it is not out.

38,418. On the other hand you have the other extreme that the consular reports very often do not come out till a very great length of time after the statistics are out?—The consular reports we have very little to do with; they are sent to us, and those that concern our country we read; but the annual reports are supposed to contain full commercial information for the year as compiled by the legation or embassy.

38,419. Would the secretary who drew up the commercial part of the annual report be in touch with the consular report and the reports that the commercial attaché in London is making as well?—He would have to read them. The secretary for commercial affairs at Madrid would have to read the consular reports from Malaga, say, and Barcelona, and all those places, and he would have to be in touch with the British Chamber of Commerce in Spain (or Portugal, as the case may be, or wherever the country was). As a rule, in both Madrid and Lisbon, the Ambassador or Minister is honorary president of the Chamber of Commerce, and at Lisbon I used frequently to attend their meetings. I knew them very well and the merchants constantly came to me for assistance and information, so that I was acquainted with all their requirements and complaints.

38,420. You do not think that the commercial secretary on the spot and the commercial attaché in London overlap at all?—That I cannot say as yet. I have not sufficient knowledge of what the commercial attachés in London do. I believe they interview the Chambers of Commerce and receive a number of visitors—people who ask about openings for trade in all these various countries, but they come to us for a comparatively short time, and I do not know that the embassies and legations get an enormous amount of benefit from their visits.

38,421. I suppose that now in Spain the commercial attaché is there only a very few weeks in the year?—He gives us say a month or six weeks, and during that time he stays a fortnight, say, at the capital, and then he goes to the ports. In Madrid we are in a rather different position from Lisbon. Lisbon is at once the commercial and political metropolis of the country, so that at Lisbon we are more in touch with the commercial world than in Madrid. Our commercial centre in Spain is Barcelona. I was down there at Christmas, and I went to the Chamber of Commerce and met the

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

merchants and had a meeting and discussed what there was to discuss. But at Lisbon they were constantly coming to see me, as I have already said; two or three times a week, I suppose, I had personal interviews with one or other of them about some matter or another.

38,422. Are you in close touch at the embassy with the commercial attaché in London?—Not at all, except when he comes to Spain.

38,423. He does not write to you?—Very rarely. I fancy, as far as my experience is concerned, since these changes have been made and I have been back in Europe, that as regards his commercial work in London he is entirely independent of the embassy.

38,424. Would that not seem to place him at some disadvantage in obtaining valuable information?—I think perhaps it does. I have not thought very much about the subject because I found the system in existence and have acquiesced in it, and at Lisbon I do not think we felt the need of his assistance very much. As I say, I was in such close personal relations with all the local commercial people, and knew all their requirements, that I was almost the commercial attaché myself.

38,425. Would it be then correct to assume that the commercial secretary at Madrid and the commercial attaché in London are not in communication at all with each other?—They were in very little communication, so far as I know.

38,426. (*Mr. Shipley.*) While you were in Constantinople, of course, you had something to do with the Levantine interpreters?—Yes.

38,427. Do you think they are sufficiently well paid? They are expert linguists, and men who live very isolated lives?—I do not think they are, considering the work they have to do, and the disagreeable places they are liable to be sent to, like, for instance, Erzerum.

38,428. And in many cases, I imagine they are exposed to some more or less degree of danger from outbreaks?—Not, I think, always to the extent that they were in a time like the late Balkan crisis. They are undoubtedly exposed not to great but to some danger.

38,429. We have had an anonymous document presented to us which states that British diplomats have the reputation abroad, not only for what foreigners call greater snobbishness, but for less activity and energy than those of Germany and France. Would you agree with that view?—It is rather a personal question, is it not?

38,430. Taking the Service, as a whole, do you think it compares quite well with the Foreign Services?—Yes, I think it does. You may say that is rather speaking personally, and that I would naturally stand up for my own Service, but I do honestly and quite sincerely think that our Diplomatic Service is quite as good as that of any other country.

38,431. Last night I happened to dine next to the Austro-Hungarian Ambassador in London, and he certainly took that view very strongly—that our Diplomatic Service was very good?—I have often heard foreigners say that, on the whole, the best of the Diplomatic Services were the German and ours; of course our opinion may not be worth very much, but I should say that our Diplomatic Service stands high, on the whole, in the opinion of all continental people.

38,432. (*Mr. Boutwood.*) To go back to those commercial attachés, I shall be glad if you can clear my mind a little about them. When I first heard of them here, I got the impression that the commercial attaché, whatever he might know when he took up his appointment in London, had to depend on a knowledge which was every day becoming more and more out of date; that he was fixed in London here, and was no longer in intimate contact with men and things in the country that he was supposed to be cognizant of; that he sat in his office with his knowledge gradually becoming obsolete. But I understand you to say now that he visits his country?—Yes. The old system was that he was resident at the capital of the foreign country in which his work was performed; the commercial attaché to Germany, for instance, was always at Berlin. Then they changed that. I was not consulted at all on the subject, in so far as the countries in which I was at the

time the change was made, Belgium and Portugal, were concerned; it was done by the Commercial Department of the Foreign Office; they came to the conclusion that it would be better that the commercial attachés should be in greater touch with the English commercial world than they could be if they resided permanently abroad; so they arranged that they should divide their time between the countries in which their work was done, or in which they were especially interested, and home. That system was inaugurated a few years ago, and the first man we had of that kind was Mr. Wellesey, commercial attaché to Spain and Portugal, who came out last year to Lisbon, and travelled about Portugal before coming to Spain. He and I discussed all the commercial questions at issue, and no doubt he reported upon them to London, and was thoroughly acquainted with our situation. But whether it is better to have that system, or whether it would be preferable to have them on the spot is a matter upon which I should hesitate to express an opinion. From our point of view as diplomatists, I would rather have them on the spot.

38,433. I was thinking of the man's knowledge of his country?—What they are trying to do now is to combine local knowledge with a knowledge of English requirements; that is evidently their object.

38,434. The present system then seems to depend on whether those comparatively short visits to Spain keep a man up to date?—Yes. I think that is quite an open question, and one quite deserving of examination and study.

38,435. Does the Diplomatic Service, in your opinion, make it its business to get into touch with the changes which are taking place in the national eye of foreign countries? I am thinking of changes in the trend of things which may one day become politically important, but are at present social rather than political. Does the Diplomatic Service charge itself with the duty of keeping in touch with those movements of national life?—I think it tries to do so; whether it absolutely succeeds is another matter. It is very difficult to know really any country thoroughly, and to know what you may call these under-current movements unless you have been very long resident and have considerable power of observation. I think one difficulty is that living mainly in rather a restricted circle, it is a little hard sometimes for diplomatists in any country to be in touch with what you describe as these under-currents; but I think that every serious diplomatist tries to learn all he can about them, to get all the information he can, and to embody such information as he can get in the reports which he sends home to the Foreign Office.

38,436. (*Mr. Philip Snowden.*) Adverting to a question put to you just now by Mr. Shipley in regard to an observation made in a document which has been sent to the Commission; in which it is stated that the present traditions of British diplomacy are exceptionally aristocratic, what would your opinion be as to the correctness of that statement?—What is meant exactly by aristocratic?

38,437. What would you say was meant by it?—It is susceptible, of course, of different interpretation. The word "aristocracy" may signify a class government of a wide or narrower character, or it may mean a government of wealth or birth. I do not quite know what the writer meant.

38,438. Suppose we interpret it as meaning that members of the British Diplomatic Service were drawn from the aristocracy, or had aristocratic associations or connections, what would you say?—I should say that on the whole the members of the Diplomatic Service belong to the aristocracy, and are drawn from the aristocracy, in a very wide interpretation of the term. I should say that a certain number of them are drawn from the families belonging to the peerage, and that a larger number still are sons of country gentlemen and professional men.

38,439. I find in the list of third secretaries in the current issue of the Foreign Office year book that there are 20 names, and eight of those are obviously sons of peers?—Yes.

38,440. Two of them are baronets evidently by succession?—Yes.

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

38,441. And judging by the number of names that the rest have I should say that they, or their parents, have very aristocratic ambitions?—That bears out what I said just now, that a certain number are drawn from the peerage, and a certain number, perhaps a rather larger number, from the families of country gentlemen and professional men, the sons of officers (soldiers and sailors), there are a few sons of clergymen, and a few sons of members of Parliament.

38,442. But seeing that the great aristocracy in this country is so very small in comparison with the working classes, and seeing that the examination for the Diplomatic Service is supposed to be a sort of limited competition, at any rate, not exclusive, would you not consider that the fact that one-half of those who have entered since 1906 belong to the aristocracy seems to point to the fact that they have by some means or other exceptional opportunities for getting into the Diplomatic Service?—Yes, I should think it would. I should think that probably the Diplomatic Service has always been largely recruited, and is in all countries, from the higher classes of society.

38,443. It is, then, true to say that the traditions of British diplomacy are aristocratic?—Yes, I suppose so. What you want to know is whether the Diplomatic Service, as a whole, is a body recruited from the aristocracy or the classes on the verge of the aristocracy; and certainly I think it is so.

38,444. May I ask you what is the difference between a legation and an embassy?—The theory is that the Ambassador is the personal representative of the Sovereign, whereas a Minister represents the Government. An Ambassador has a position of greater dignity and of more display and pomp, he is called "Your Excellency," and so forth; but very often the work of a Minister is quite as important.

38,445. An attaché has no salary for two years?—That is so.

38,446. Are his services of any value at all from the beginning of his attachéship?—Yes, I think so; if he is intelligent and has passed a good examination, he probably talks the language well and is generally rather keen when he gets to his post to learn something about the country and make himself useful.

38,447. What is the reason then why he should give his services to the country for two years for nothing?—He would be glad to get pay if he could, no doubt, but as the Government does not pay him he has to look to getting it later on.

38,448. (Chairman.) There is the honour and glory?—Yes. A man says: "I am going into diplomacy as a profession and I hope some day to rise to be an ambassador and get good pay. I shall have an interesting life abroad; I shall probably see a great many countries, China, Persia, America, and shall have an opportunity of earning distinction or honours like that of K.C.B., etc." It is the same as in the Indian Civil Service. No doubt if you asked him whether he would not prefer to have some remuneration for giving his services to his country he would say: "By all means, I should be most grateful for it, but as you will not give it me until I have been in the Service two years I must put up with it, and look to earning pay when I get higher up."

38,449. (Mr. Philip Snowden.) But the Indian Civil servant does not give his services for two years free?—No.

38,450. Why should a member of the Diplomatic Service be asked to do that when no other person, so far as I know, who enters the public service is required to conform to the same condition?—I agree with you. I think it is rather hard on the attaché.

38,451. Can you give the Commission any reason why such a rule exists?—It is a very old practice and has lasted for many years; there have been paid and unpaid attachés ever since the Service was instituted, and in the old days I think they remained unpaid for a very much longer period. There was at first no regular and organised Diplomatic Service, and an ambassador made his son an attaché or he brought out young men, friends of his own, who were part of his staff; they lived with him in his house, and performed the work of attachés, but they got no pay; and it became a custom

for the first few years of a man's career that he should be prepared to serve for the honour and glory of it, and then gradually, as diplomacy became more of a profession, the attachés and their friends began to ask for better terms, and pointed out the injustice of keeping them for a long time without remuneration for their services; and now the pay of junior diplomatists has been steadily improved and increased.

38,452. After serving two years for nothing he begins at a salary of 150*l.*?—Yes, then he gets 150*l.*

38,453. That, I gather from what you have explained as to the cost of living and the like, does not go very far in meeting his expenses?—No.

38,454. Therefore he continues to serve the State for the honour and glory?—Yes, to a certain extent he does. So does an officer in the Army very often. If you take the Army, there are a vast number of officers who could scarcely live on their pay with the expenses of mess and that kind of thing.

38,455. They look forward, to use your own phrase, to some recompense in the form of a K.C.B. or some good post?—Yes; honours, or a post where they can earn 3,000*l.* or 4,000*l.* a year, and live comfortably in a position of dignity and interest.

38,456. To return to the question that was put to you by the Chairman with regard to the system of making what you might call a maintenance allowance to these men, based upon the expenses of a particular post, I think something of that sort—I do not know whether you are familiar with it—obtains in the Consular Service?—No, I am not familiar with the workings of the Consular Service, but I think they give them an office allowance in some places, and a house allowance in others. It rather depends upon the place. In some countries they get an office allowance where there is a good deal of work to do and they have a certain number of clerks to pay.

38,457. There are probably in the Diplomatic Service some of the cheaper posts to which you referred, where a young man beginning his service might be able to subsist on 300*l.* or 400*l.* a year altogether?—I should say so; I should say at Teheran, for instance, where he is housed, and a few other places where he has not to belong to an expensive club and where servants are cheap he might do so.

38,458. What do you think of a suggestion of this sort: that there should be fixed what one might call a base salary of 300*l.* or 350*l.* or 400*l.*, common to all who entered the Diplomatic Service as an initial salary, and then in addition to that there should be what one might call a maintenance allowance for the extra cost of living in places where the cost of living was more expensive?—I think it is a suggestion that is well worth consideration.

38,459. I gather from what you have said this morning that a young diplomatist has a rather free and easy time of it; he is not required to keep to any fixed hours, and he has a good deal of range in the form of social visits and the like of that. I suppose they all do a good deal of mixing up with local society?—It depends enormously upon the post you are at. At a place like Constantinople they are grinding pretty well all day in their chancery, especially of late since the Eastern question has been so acute; in Persia also they are pretty hard worked. I dare say it takes them most of their time to get through it; but in some places the work is much lighter. At a post like Copenhagen, there may be a sudden press of work, but the work generally is light. And there are places where there is a good deal of social duties, and others where there is very little of them. In America—I have never been there—I believe there is a great deal of entertaining and social life at Washington—on the other hand, at Lisbon there is comparatively little. It depends enormously upon the places.

38,460. I can well understand that; but I suppose the members of the Diplomatic Service do not mix up with anybody except people who are in what one might call smart society?—Of course, the official society—the official world and what you may call the "smart society" in the capitals in which you are accredited, are naturally the elements with which the Ambassador or Minister, and his staff, would come most in contact, because the

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

Governments belong to that world in most cases, and the entertainments are chiefly given by people in that world.

38,461. Do the duties of ambassador and consul—I remember what you said with regard to their relations in Eastern countries—overlap at all in Western countries?—No, I do not think they do. Of course, in capitals where you have a consul, very often complaints are made, not to him directly, but to the Ambassador or Minister; and the Ambassador or Minister sends them on to the consul and says to him, "You try to settle this business, and if you cannot arrange it I will intervene and bring the legation into the field and write myself." It will carry greater weight, of course, if the Ambassador or Minister writes than if the consul writes.

38,462. You yourself quoted the case of an English workman out in a foreign country who could not get his agreement fulfilled?—Yes.

38,463-4. And I understood you to say that that was a case which you would take up?—Yes, I took it up.

38,465. Finally, have you any suggestions that you would like to put before this Commission as to any improvements in the methods of recruiting the Diplomatic Service or the treatment of the diplomatists after they have been admitted into the Service?—No, I have not. I am quite satisfied myself with our Diplomatic Service on the whole. No doubt it is not perfect; no service is absolutely perfect in this imperfect world, but I think on the whole it performs its duties as well as it can be expected to do. I do not know that I can suggest any actual reforms which would improve it much; I think it might be well to pay some of its members a little better.

38,466. (*Mrs. Deane Streetfeild.*) I think Mr. Snowden has asked most of the questions I wanted to ask you; but with regard to the relation between the ambassador or diplomatist and the consul, there is one point on which I am not quite clear. Is it possible or customary for a diplomatist to obtain the services of the consul? Can he go to him direct or has he to do it through the Foreign Office? What are the relations between the two—between the consul and the diplomatist?—What happens as a rule is that the consul is stationed in a port. If you take a country like my own, Spain, the consuls are chiefly in seaport towns, Barcelona, Malaga, Cadiz, and so on, and their business is largely with shipping and with sailors, such as paying off crews, and with British subjects who get into difficulties, with local merchants and traders who have quarrels with the local authorities, or are oppressed, or are interfered with by those authorities, and very often they settle these matters on the spot. If they fail to settle them they report to the embassy and say: "We have tried in vain to get justice for the captain of this ship from the governor of the town; will you try to bring pressure upon the proper department at the capital."

38,467. I wanted to know really whether the embassy could give orders to the consuls—whether they are under your control?—Yes, we should instruct our consuls; and if any complaint were made by the Spanish Government, as sometimes happens, that our consuls were behaving improperly, we should inquire into it, and we should either back up our consul if we thought he had acted rightly, or check him and tell him not to do it again if we thought he was in the wrong.

38,468. So that the Consular Service is really under the control of the embassy?—Yes, in every country the consul gets his instructions from the minister or ambassador. He communicates to a certain extent independently with the Board of Trade and the Foreign Office. There are a number of mechanical duties that he fulfils in such matters as the paying off of seamen, repatriation of British subjects in a state of indigence or poverty at his port, as to which there is generally a regular instruction laid down by the Foreign Office or the Board of Trade, and he marries and buries people, and disposes of their estates. With regard to these he requires no instruction from us; but there are a number of questions on which he applies to us and asks us what

he is to do. He will say, for instance, such and such a case has arisen; such and such a man has been arrested; the local authorities have made such and such a claim upon us, what am I to do? Then I instruct him; I tell him, you are to do this or you are not to do the other, and he carries out my order.

38,469. I have only one more question to ask you, which I think you practically answered to Mr. Snowden. In the case of a young diplomatist who wishes to make himself useful to his country and has some difficulty in learning how to inform himself on matters which he thinks it is important for his superior to know, have you any opinion as to the desirability of giving him any special training for the purpose of enabling him to make himself competent to judge of these matters—a special training in political science or economics for instance?—I think it would be a little difficult to do that because he does not start as a specialist. He has probably been to Oxford or Cambridge—I think it is very desirable that he should go to one or other of the universities if he can—and he has just that general culture and knowledge which a boy who has passed through a public school and a university possesses, with the addition of a knowledge of the languages he has to learn, and no doubt it would be desirable that he should endeavour to qualify himself by acquiring knowledge of the country to which he is going. Very often he begins pretty early. If I may give my own case, when I first went to Spain as a junior one of the first things I had to do was to inspect the Spanish lunatic asylums and write a report on the Spanish Lunacy Laws. Mrs. Georgina Weldon was very much interested in the lunacy laws of the whole of Europe, and she obtained a report from all our embassies and legations on the subject. I was told that I must write such a report, and I accordingly interviewed barristers and solicitors, and visited the lunatic asylums all over Spain and wrote a report upon them.

38,470. That would mean that you think that the work itself is the training?—Yes, I think it is. For instance, they will call upon you frequently to write a report upon the educational system of the country, and that interests a young man. If he has any intelligence or enterprise about him he tries to write a good report which will please his chief and the Secretary of State in London, and he will try to master the subject. That, I think, in a way gives him an interest which perhaps the ordinary work of his chancery in writing or copying out his chief's despatches or deciphering telegrams may not afford.

38,471. (*Mr. Graham Wallas.*) Do you think that sufficient provision is now made to relieve the younger members of the Diplomatic Service from really routine and mechanical work?—I think that it is very much improved from what it used to be. A good deal of the clerical work is now done by what is called the chancery, a sort of office clerk. A good deal of the translating work is done by a special man—they have translators who relieve the younger men of a good deal of the work of translation.

38,472. But the employment of such men is not universal or even general in the Service, is it?—In Portugal we had a permanent secretary with local experience who was by way of doing all the translating work. As a matter of fact it was too heavy, and during the few years I was in Portugal, when we were exceptionally hard pressed just after the Revolution, a whole number of questions arose, so that the translating work practically could not all be done by the regular translator, and the secretaries used to have to do both the commercial work, and some of the translating work to help them to get through the correspondence.

38,473. Your experience then would suggest that the employment of a man of the type of a chancery is satisfactory?—Yes, I think it is.

38,474. Have you ever considered whether it might strengthen the Diplomatic Service if suitable men could be put into it from other departments as well as the Foreign Office—say from the Board of Trade?—In what capacities would you propose to do to make them Ministers?

8 May 1914.]

The Right Hon. Sir ARTHUR H. HARDINGE, G.C.M.G., K.C.B.

[Continued.]

38,475. Or secretaries, or of the rank of chancelliers?—I think that the Diplomatic Service would very much dislike your introducing from other departments of the Government service, men who could become Ministers and get the prizes to which they look forward. They are always liable to that, because from time to time distinguished men who have no connection with the Diplomatic Service are given these posts, and it always creates a certain amount of disappointment, naturally enough. I do not think it would tend to the harmonious, the working, or contentment of the Diplomatic Service if you introduced too many men from other departments.

38,476. In your experience does the Minister in assigning work to young diplomatists, or does the Foreign Office in sending young diplomatists to this place or that, consider whether they are sending a rich man to a poor place or a poor man to a rich place?—No, I do not think they do very much; they may do to a certain extent. I think if a man were to say: "I do not want to go to Buenos Aires because it is a very expensive place and I cannot afford it," they might perhaps listen to it and say, well it is true it is rather hard upon you, we will send you to some less expensive place. I have heard of cases in which that has been done. I think it ought to be considered.

38,477. You say that at present to a certain extent it is one of the things that are considered?—Yes, I have known cases in which that has been done. I take a place like the Argentine Republic; life is very expensive there, and on a small salary it is more than a secretary without much means can do to live there, and I think that plea would be sympathetically listened to, though, of course, the Secretary of State would say, naturally, "I must reserve my right to send you anywhere; you have to take the good places and the bad." The general view, and I think the right view, is that every man has to go wherever he is sent, and that he must go to bad places as well as good ones.

38,478. But the department are not in a position to send the man whom they simply think to be the best man; they must also consider his pecuniary position?—It does not follow, and as a general rule I do not think they do, unless he complains himself. I think the kind of reasoning by the Minister's private secretary in distributing men through the posts would be: Where has this man been before? He has been to Paris; that is a popular, agreeable embassy near England, with interesting work and pleasant society. He has been to Rome; that, again, is a popular embassy near home. Now it is time for him to have a turn at Peking or Venezuela and then they send him there, especially on promotion.

38,479. (Mr. Beck.) We ventured yesterday to trouble Sir Maurice de Bunsen with one or two general questions, and if you will allow me I would rather like to repeat them to you; but before doing so, may I say, in justice to a matter which escaped me at the time, that Mr. Shipley was wrong when he said that this was an anonymous communication; it is from the Liberal Foreign Affairs Group, the members of which are quite well known; and it did not suggest snobbishness on the part of the British Diplomatic Service, but merely, I believe, it is very fashionable; "*tres snobbistes*," I believe, means very fashionable persons?—I dare say.

38,480. The point is that British diplomats are really in touch with only one class of society in a greater degree than other embassies, and that view is borne out by a very eminent gentleman in Germany, Mr. Edwin Peers, who starts his letter by saying, "I am quite convinced that our Service is less efficient than that of other countries, and I believe the wealth test and the society test are two contributory causes." He mentions four ambassadors whom he considered extremely efficient at Constantinople, of whom you and Sir Maurice de Bunsen are two, but he says that on the whole he considers that our embassies are not as well served as many of the foreign embassies?—I do not know what the present condition of things at Constantinople is. When I was there my chief, Sir William White, was, I should say, an exceptionally efficient and

vigorous ambassador, and the last man who you could say was a snob or cared about rich people or fashionable society for its own sake. He had a wonderful knowledge of the East, not so much of the Mahometan East as of the Balkan countries and the Slavonic side.

38,481. Then I do not know whether you would care to express an opinion, but I ventured to say yesterday to Sir Maurice that a thing which is said to us continually—I do not know that we say it, but, at any rate, it is said in democratic circles—is that the present Diplomatic Service of Great Britain is out of date; that it was very desirable in the eighteenth and the first half of the nineteenth centuries to have people who were in close touch with what in those days were the ruling classes, that is to say, people of great position and very often of great wealth, but that now, although that is still necessary, there is also another need, and that is, of people who really know something of the great democratic upheavals that are taking place in so many countries. Do you follow me?—I think I understand the drift of your question.

38,482-5. May I give an example? Supposing that a foreign embassy here in London wished to convey valuable information to its own country, it would be able to convey a very large amount of information if it knew London society, and of life in the Highlands of Scotland, but it would convey very incomplete information if it neglected the great industrial northern life, or the life of the Welsh coalfields, where these enormous movements, the future of which we do not know, are taking place at the present moment. It would, I think, help us enormously if you would express any opinion that you might have as to whether the British Diplomatic Service is equipped to notice that great change in foreign countries?—I think it is exceedingly difficult both for foreign embassies in London and for the British embassies abroad to have any very real or close touch with what you call the democratic movements of the modern world. No doubt the object of the Diplomatic Service should be to get to know all that. Of course its primary object is to maintain friendly relations between Governments, and its secondary object, but a valuable object, too, is to inform the Secretary of State of all that is going on. You must, however, be careful, I think, if you will allow me to say so, not to allow the secondary object to interfere with the primary object, and if the good relations between the English Government and a foreign Government were to be compromised by a too great intimacy between the embassy, or legation, and forces, such as socialism or its leaders, which a Government regarded as unfriendly to itself, that would be for the sake of the secondary object perhaps defeating the first.

38,486. Might it be desirable, do you think, to strengthen or to add to the Diplomatic Service men of the type of our permanent Civil servants, men who have made a special study of the social questions and economic conditions, who might be attached to the embassy, perhaps temporarily only, in the same way as your commercial attachés are?—I have never thought of the question. I think it worth considering. One difficulty about having those specialist members is that they might not harmonise very well with the rest of the staff, and some of them might want to obtain higher posts themselves, and to interfere with the flow of promotion in the Service itself. I am a little doubtful whether it would be a good thing to have attached to an embassy as its officials people acting as intelligence officers who are not really subordinate to the head of the mission. It is very important that the head of the mission should have authority over the whole of his mission, that his staff should all be under him, and look to him as their head, and if you were to have persons from outside, whose interests are not in the Service, who are attached to it as observers, I think you would get rather an unsatisfactory state of things. Abdul Hamid used to practise it in Turkey; he had eminent outsiders attached to his missions, and they often sent in diametrically opposite reports.

(Chairman.) We are greatly obliged to you, Sir Arthur Hardinge, for your evidence.

Sir ROGER CASEMENT, C.M.G., called and examined.

38,487. (*Chairman.*) I believe you have come here at considerable personal inconvenience, in compliance with my suggestion that you should give the Commission the benefit of your evidence, and I desire to thank you on behalf of the Commission for coming. When did you first enter the Consular Service?—In June, 1895.

38,488. Did you enter by competitive examination?—No.

38,489. We should like to know what your experience has been in the Consular Service. To what post were you first appointed?—Perhaps I had better state how it was I first entered the Service, because, although not actually in the Consular Service, it was more or less an apprenticeship to it. I went out to the Niger in 1892. At the time it was called the Oil Rivers Protectorate, and was administered by a Consul-General, Sir Claud Macdonald. It was supposed to be a native territory, or native territories, with a consular officer merely representing the protecting power, but the administration quickly developed and the protecting power ultimately became the annexing power. I entered the Service there, not in a consular capacity, but in a branch of the public service that was administered by the Foreign Office through consuls and vice-consuls. Then, having served there for nearly three years, I was asked by Lord Kimberley to go out to Delagoa Bay, Lorenzo Marques, as the British Consul in May, 1895. At that date I was 31, and there was no competitive examination then, but it was necessary to pass an examination in certain subjects. That question was raised in the Foreign Office, and I said: "I am not prepared to pass to-day examinations in those various subjects; but I doubtless could pass them if I had a little time." My examination was dispensed with, and I was sent out without any examination at all to Delagoa Bay in 1895.

38,490. That was a direct appointment?—A direct appointment. It was quite an ordinary one. Many appointments of the same kind were made at that time. The Secretary of State could always dispense with an examination if he was satisfied that the officer he was appointing fulfilled the conditions necessary for the post he was appointing him to.

38,491. That was in 1895—19 years ago?—Yes.

38,492. Can you say whether that same power of dispensing with the examination, in particular circumstances, is still retained by the Secretary of State?—I could not answer that. There may be reserved to the Secretary of State, in certain circumstances, the power; but I do not know.

38,493. How long did you remain in Lorenzo Marques?—I went out immediately following my appointment and took up my duties in the beginning of September 1895, and I remained there until June 1897—nearly two years. Then I returned in November 1897; but as I was ill I came back almost at once, within six or seven weeks, and I was kept at home, nominally as consul at Delagoa Bay, but with a view of appointing me to another post.

38,494. What was the next post you were appointed to?—My next post was at St. Paul de Loanda as consul in the same capacity. This post of St. Paul de Loanda at that time covered the whole of the Congo State, Portuguese West Africa, and the French Congo. I was really three consuls. I held three separate commissions from the Queen, and three exequaturs from the foreign governments. St. Paul de Loanda was merely the headquarters.

38,495. How long did you remain there?—St. Paul de Loanda was an old post, and the other jurisdictions—the Congo State and the French Congo—had come into existence long after the consulate at St. Paul de Loanda had been created. St. Paul de Loanda was merely the place of residence. I pointed out that it was very inconvenient for the British Consul who lived in St. Paul de Loanda to attend to his urgent duties in the Congo State, and I suggested to the Foreign Office that they should split up my consulate into two, keeping a consul for the Portuguese province of South-West Africa resident at St. Paul de Loanda and appointing a consul to live in the Congo State itself.

That suggestion of mine was made to them at the end of 1899, when Lord Salisbury was Foreign Minister, and they accepted that suggestion at the end of the Boer War. I was transferred to South Africa, not officially, but Lord Salisbury employed me in South Africa during the Boer War for nearly a year in a political capacity which had nothing to do with my being consul at St. Paul de Loanda, but had some relation to my previous experience at Delagoa Bay. On my return from that special service they told me that they had followed out my suggestion and had split up the consulate into two, and wished me to go into the Congo part of it, and to transfer my seat of residence to Stanley Pool.

38,496. We need not dwell at any length upon your Congo experiences; in connection with your reports, I understand, important inquiries in regard to rubber in the Congo took place?—No, not in consequence of my reports—in consequence really of the public feeling raised by public reports outside.

38,497. From the Congo where were you transferred to? What was your next post?—At the end of my Congo experience I was seconded for a year. I wanted a rest and there was no post available for me, and I could not return to the Congo, where I was not a *persona grata*. My next post, after being nearly two years out of the Service seconded, was Santos, in Brazil.

38,498. How long did you remain there?—I went to Santos in July or August, 1906, and I stayed there until the following June. Then I was asked if I would like to go out to the Republic of Haiti, in San Domingo, as Consul-General, and I said, "Yes, I should prefer it to Santos"; and I was told that my next post would be Haiti. That appointment did not ensue, for purely private reasons, but I was sent to Para, at the mouth of the Amazon—the next consulate—in December, 1908; and from Para, after only a few months, I was transferred, or promoted to be Consul-General at Rio de Janeiro, in Brazil, and that was the last consular post I held.

38,499. During your tenure of the consulate at Rio you were engaged upon inquiries in connexion with rubber?—Yes; not as Consul-General at Rio, but merely because Sir Edward Grey desired me to go to the Upper Amazon. Some consular officer had to go and I was the one he selected. As Consul-General at Rio I had nothing to say to consular affairs in Peru.

38,500. It was a special duty?—It was a special duty. I merely retained my consular rank and titular office, but I was never near Rio for three years during the actual period that I was Consul-General.

38,501. When you completed your inquiries did you return to Rio?—No; I never went back to Rio. I came back here on the Secretary of State's orders, and was kept here by the Foreign Office until finally, in June last, I retired from the public service.

38,502. I do not wish to inquire into your private reasons; but were there any public reasons for your not going back to Rio?—In this sense, yes; that having been employed by the Foreign Office upon a special mission they desired to keep me in close touch with themselves here, and did so keep me until the public issues involved had been sufficiently dealt with, whereupon they gave me leave of absence. I was at the time seriously unwell, and I was ordered out to South Africa, or at least to a very warm climate, by the doctors. I had arthritis and was half-crippled. I went out to a warm dry climate, and on returning from there, acting upon medical advice, I declined to go back to Rio—at least the doctors said they thought it would be, not fatal, but that it would perpetuate the malady from which I was suffering to return to a damp climate. As there was no transfer available from Rio to another consular post I decided to resign.

38,503. Might you have had an extension of your leave?—No doubt I could have had; but I had already had six or seven months of leave on half-pay as a sick man, and I did not wish to be continually asking for sick leave. I was convinced that the medical opinion was a just one. I had the opinions of five doctors, and they were all unanimous that it would be highly detrimental to my health, and would probably end in my

8 May 1914.]

Sir ROGER CASEMENT, C.M.G.

[Continued.]

being physically incapacitated if I returned to Rio. I asked if there was any possibility of a transfer, and was told that there was no likelihood of one at an early date; whereupon I resigned.

38,504. The first part of our reference is concerned with the appointments to the Consular Service. As you know, the ordinary way of entering the Consular Service is by examination?—At present, yes.

38,505. Am I right in thinking that a candidate requires a nomination by the Secretary of State, after which he has to pass an examination?—Yes. That was the rule in my time, and I fancy it still holds good. I am not sure. I know it was the rule in my time that you had to be nominated by the Secretary of State.

38,506. In the paper before me I see the nomination is still preserved. I do not know of any later rule. Have you any opinion upon that question of nomination? Do you think it is desirable that the competition for the Consular Service should be a limited competition—that is, a competition between nominated candidates—or do you think it should be an open competition like that for the Indian and Home Civil Service generally?—The Civil Service, I take it, is quite open?

38,507. Yes, quite open?—Then I think the Consular Service should be quite open. I see no special reason for differentiating between the Consular Service and other branches of the Civil Service.

38,508. For all the services under the Foreign Office limited competition applies?—When I entered the Consular Service I was told that it was the last stronghold of patronage. Those were the words employed to me by a Foreign Office officer, and at that date it was strictly limited, because the Secretary of State could dispense with the public examination. There was no competitive examination, but merely an examination to satisfy the Commissioners of the Civil Service that you were a competent person, and even that test could be dispensed with, and was, in my case, dispensed with.

38,509. At the present time, under the existing rules as I understand them, a nomination by the Secretary of State is required; but among the nominated candidates there is competition?—Yes, that probably is the case now.

38,510. And the appointment goes to the person who gets the greatest number of marks in the competition?—The idea, I take it, is, that the Diplomatic Service necessarily must be a selected service; but the Consular Service is not a part of the Diplomatic Service, although subordinate to it, and I take it that the Foreign Office has applied to the Consular Service a rule that was probably a good rule to apply to the Diplomatic Service.

38,511. That may be so, but you yourself do not see any particular reasons for retaining the rule?—I see no particular reasons. The reasons that probably are good ones to govern a State in selecting its diplomatic officers do not apply, in my opinion, to the Consular Service.

38,512. In your days was the Consular Service a regular graded Service consisting of vice-consuls, consuls, and consuls-general?—Nominally and theoretically, but not actually. I was never a vice-consul. I had nothing to do with the Consular Service when I received a telegram from Lord Kimberley offering me the Consulate at Delagoa Bay.

38,513. But yours was a special appointment?—But I think many similar appointments were made subsequent to mine. A Member of Parliament, who left the House of Commons for private reasons, was appointed as a Consul out at Monte Video merely to give him a post. I mean that rule undoubtedly did exist in my time, and was applied—that the Consular Service was at the disposal of the Secretary of State for purposes of patronage.

38,514. The Foreign Office list shows us now that the Service is divided into grades—vice-consuls, consuls, and consuls-general—and so far as I know at present the rule is that promotion to the consul grade should be of persons who have entered through the vice-consul's grade; that is to say, you must pass through the grade of vice-consul before reaching the grade of consul?—I should say probably to-day the Foreign Office would adhere to those published rules;

that is to say, any person now entering the Consular Service would have to enter it as a vice-consul. I presume that is the case, but it was not so in my personal experience.

38,515. That is an improvement upon what prevailed in your time?—I think it is an undoubted improvement.

38,516. (*Sir Kenneth Muir-Mackenzie.*) If it prevails?—Yes, if it prevails.

38,517. (*Chairman.*) But that is a point upon which you can give us no information?—No, I cannot give you any information on that. May I say that, although the Consular Service is there graded into vice-consuls, consuls, and consuls-general, there is no such thing as the status of a consular officer. I think there should be a definite status of vice-consul, consul, and consul-general in this particular Service, just as in the Army you have the ranks of lieutenant, captain, major and colonel; and that whether a man is filling a certain consular post or not—which depends entirely upon his employers—he should occupy that grade, and should receive the salary attaching to it. I will give you my reasons now or later on, if you like, but they do bear very much upon the Service.

38,518. Do you mean to say that the pay should be personal pay attaching to the status of the officer, and not pay attaching to the office or place to which he is appointed?—Yes, I mean that. There are grave inconveniences to the public service in the method now adopted of attaching the pay to the place and not to the rank or status of the officer.

38,519. For instance, was the post that you filled at Para a consulate or a consulate-general?—It was a consulate.

38,520. Was the pay, which you drew when at Para, personal to yourself or was it attached to the place?—It was attached to the place. The difficulty arises in many ways. A consul is appointed to a place like Para, or the Congo—unhealthy posts with very unhealthy climates—and he may fall sick suddenly, as I often did on the Congo. He has to leave his post, but he still remains in law a consul. He may not be able to return to that post at all, and during that period that he is awaiting a transfer to some other post he is drawing the pay of that post or the half-pay, and his duties are being filled by anybody he likes to lay hands on out on the spot—not by a person sent by the Foreign Office, not by a person they have any cognisance of at all, not by a person who has fulfilled any requirements imposed by these published conditions. I could lay my hands on a publican or a nigger, or anyone I pleased, and appoint him as consul in the Congo, and notify the Secretary of State that I had done so, and ask for sanction—purely a formality, which will be given because I am supposed to exercise my discretion. In a place like the Congo, Delagoa Bay, or Para I have to get anyone I can.

38,521. Do you mean to say that when, owing to ill-health, you left Para, you had to find a substitute?—I had to find a substitute. I found a young clerk in a commercial office in Para to act as the consul there during the period that I was away, and I never returned to it, and I never meant to return to Para. I was sick there and I was carried on board the steamer. I appointed him, notifying the Secretary of State by telegraph that I had done so. The name was all he knew of the person.

38,522. Does the Secretary of State give the substitute any document conveying authority to act as consul?—No, none. His document is the letter of authority the consul, the titular holder of the post, gives him.

38,523. Is that a universal rule?—That is a universal rule, and I think it an exceedingly objectionable one, and it could be obviated by adopting my idea that the status of the consul should prevail over the existing system of the post.

38,524. Did you take the pay attaching to the post of consul at Para with you when you went on leave?—Up to a certain period, then I lost half the pay.

38,525. What did your substitute get while you kept the whole of the pay?—This man was supposed

8 May 1914.]

Sir ROGER CASEMENT, C.M.G.

[Continued.]

to be unpaid; that is to say, the State had no cognisance of him other than my notification that I had appointed him. I had to make arrangements with him. If he was willing to act for me for purely personal reasons to please or oblige me he would do it for nothing. If he was not I had to pay him anything he said was necessary. I had to find my substitute out of people who had no experience of my work or my duties—that is the point.

38,526. Is that the case now in, for instance, such a great city as Marseilles?—Yes, it would be so in any post. I know during a great part of my consular experience consulates that I have titularly filled have been filled by somebody whom I laid hands on.

38,527. (*Mr. Hoare.*) Did that ever happen in Rio?—No, but it might have happened in Rio. There is nothing to prevent it applying at Rio, except that at Rio you have a vice-consul, a subordinate in the service, and naturally he takes your place when you go away. That is the only reason why it does not prevail in Rio.

38,528. (*Sir Kenneth Muir-Mackenzie.*) When you say “naturally,” do you mean according to the rules of the service?—Yes, I think you will find it a rule that when a senior consular officer goes on leave, or for other reasons, the junior would *ipso facto* take his place. If there is a salaried officer, as in the case of the vice-consul at Rio, he does take your place, and I am sure there is a rule to that effect.

38,529. (*Chairman.*) In such a place as Para some fees are paid to the consul for consular acts?—Yes.

38,530. Are those fees credited to the Government?—Nearly all. You will find the distinctions in the table. Parts I. and II. go direct to the Government; that is to say, the fees for the compulsory services that a consul must render in his public capacity are paid by him to the Foreign Office. As to certain services that are not obligatory but lie within his competence to discharge, or refuse to discharge, such as translations of documents, a part of those fees is retained by the consul. In my case they never furnished any appreciable sum at all; they were of no importance in regard to my salary.

38,531. What is your opinion regarding the possibility of connecting the Consular Service with the Diplomatic Service more closely than at present? Do you think there ought to be a recognised system of transferring suitable men from the Consular Service into the Diplomatic Service?—Yes. I think so. I think the Government should contemplate that. They are probably the only Government of a great Power that have not already effected it. The German and French Governments have long since made their Consular Service and their Diplomatic Service concurrent systems; that is to say a French diplomat, the ambassador of to-day, may have been the consul of yesterday or the day before yesterday. Most of their diplomatic officers, probably the majority, would have filled consular posts. Take my own experience: when I was consul in 1895 in Delagoa Bay the French consul at that time has long since—many years ago—been appointed a French Minister. With us the rule is once a consul always a consul. There is nothing to hold before a consular officer in the shape of promotion except to be shifted from one post to another, and, if his health fails, he may end his career in a much less desirable post from a financial point of view than the one he began at, because the better paid posts are possibly the less healthy ones. If he has been in unhealthy climates, as I have been most of my time, there comes a period when his health breaks down and he wants a healthy post, and the healthy posts are not so well paid; so that in order to live at all he would have to go back and take less pay than he started with in many cases.

38,532. Does the emolument attached to unhealthy posts consist of pay and an allowance for the unhealthiness of the posts?—No allowance for unhealthiness is made.

38,533. It is a consolidated pay?—There is no consideration as to pay in regard to an unhealthy post except in regard to leave of absence, which is longer. You are entitled to a longer period of leave annually.

38,534. I thought you said the unhealthy posts are more highly paid than the healthy posts?—I do not

think the consideration of health after all enters in there. It is probably because the cost of living is greater at those places.

38,535. Would you consider Buenos Ayres a healthy or an unhealthy post?—I think it is marked as a healthy post—it should be.

38,536. We have been told, for other reasons, that that is an extremely expensive place to live in?—It is, but not so expensive as Rio de Janeiro. I have been at both—not officially at Buenos Ayres, but I have been there several times—and the cost of living is not so high there as in Rio; but both are exceedingly expensive places to live in.

38,537. If the Consular Service were reorganised on the principle that a particular salary attached to the status of vice-consul, a higher salary attached to the status of consul, and a still higher salary attached to the status of consul-general, with additions to the status salary according to the unhealthiness of the posts, would it be an improvement in your opinion on the existing conditions?—I think it would be an improvement. I think the pay should attach to the office, so that when a consul either goes on leave or is compelled to leave his post for reasons of health, another officer of the same grade should be at once appointed, and not, as is now the case, that you should have many posts filled by undesirables for the time being and the absent man drawing perhaps not the pay of his post.

38,538. Would such a reorganisation of the service as would provide that a man going on leave should be replaced by the transfer of a junior consular officer, necessitate an increase in the number of men in the established service?—It would, but not a very great increase I think. The cases in healthy posts would not be very frequent. It would apply really to the unhealthy posts. Some provision should be made by the Foreign Office to deal with unhealthy posts, similar to the provision that the Colonial Office makes for dealing with the Gold Coast. I was for years nominally consul in the Congo at St. Paul de Loanda, a very unhealthy post—quite as unhealthy as the Niger where I had previously been, or as any post on the Gold Coast—and no provision at all was made for discharging my duties when I was away on sick leave or when I was on my ordinary leave—none whatever. It was left entirely to me to find any one I pleased, and I had to find all sorts of people. On one occasion I closed the Congo Consulate altogether and telegraphed to Lord Salisbury and said “I will not leave anyone that I can find in Boma in charge and I am coming home by the next steamer.”

38,539. You could not find anybody?—There was nobody I could trust. No regard is paid to that aspect of the case in the Foreign Office. They have allowed it to go on for years on those lines.

38,540. These places may be important politically, but does it follow that they are important commercially?—No, it is just because they are important politically that it seems to me most disastrous that there should be no steps taken as to transfer.

38,541. Does that furnish a clue to the explanation that, although the posts are important politically, they are not important commercially?—I think not, because the rule applies elsewhere. Para, which is not at all important politically, has some commercial importance, and there exactly the same condition of things applies. It was in the absence of making provision that the Consular Service grew up out of a European service long ago, and they have never altered their point of view in relation to it, I believe. It grew up on a system of patronage—to give a post to an individual who had to be satisfied, or whose friends had to be satisfied—and it was perpetuated on those lines for a great many years. It is only quite recently, within the last 10 or 12 years, that another conception has begun to be perceived.

38,542. One would fancy that the necessity of having a consul at a particular place was dictated originally by the commercial requirements of the place. The method of filling the place by patronage would be a subsequent development?—No, I do not think that that was the original reason of appointing consuls at all. I remember reading of a duke who many years

8 May 1914.]

Sir ROGER CASEMENT, C.M.G.

[Continued.]

ago refused to pay his tailor's bill, but said he would make the tailor's son a consul. Those things did take place.

38,543. In regard to the method of promotion in the Consular Service, are you of opinion that the general rule which prevails in the Civil Service now, of promotion by merit, should prevail, or are there any circumstances connected with the Consular Service which would at all suggest that promotion by seniority should not be disregarded?—Is it not rather difficult to separate seniority from merit?

38,544. It may be so in certain cases, but there is really a substantial difference between them. Still it is conceivable that some services are so little influenced by public opinion that contentment, which affects efficiency, might be promoted if some regard were paid to seniority in determining promotion?—I think as a general rule it might be better to appoint by seniority.

38,545. In the Consular Service?—Yes. No very special aptitudes are required from a consular officer.

38,546. Would you briefly describe what his functions are?—They never have been defined and could not be defined. He is expected to do everything. They are not defined in any regulations.

38,547. Let us endeavour to form a conception. He exercises in some places political functions?—Never by the letter of his instructions, but only by the fact of local conditions.

38,548. His immediate functions are those connected with the Merchant Shipping Act?—Those are some. Those are not his only immediate functions, because he is also a marriage officer by special act, he is a registrar of births and deaths, and he also has to relieve distress amongst British subjects.

38,549. Those duties do not occupy much of his time, do they?—The relieving of distress amongst British subjects occupies a great deal of his time.

38,550. He gets very little money to relieve them with?—He gets no money. He has to do it out of his own pocket, although he is compelled to do it, and then submit a case.

38,551. If he does it out of his own pocket I should fancy his duties in this direction are not very oppressive; he cannot do much?—You have a gang of distressed British subjects three days in a week. My predecessor at Santos had a wire-netting up to the ceiling of the consulate in order to prevent these distressed British subjects throwing things at him. I did not take over the wire-netting, but I took over the British subjects. You are compelled by these regulations to furnish assistance to distressed British subjects, but you are given no funds at all, and no means of relieving their distress. You must do it at your own discretion; and you must submit the case to the Secretary of State at the Foreign Office, and seek reimbursement. In the majority of cases I have been reimbursed, but in several cases I have not been. I remember when I was in Delagoa Bay relieving the whole family of a man called Jensen, and the Foreign Office refused to repay me, because they said there was no proof that he was a British subject. The relief had been furnished by my *locum tenens* at the time I was on sick leave, and he had omitted to get from the man a declaration as to his place of birth. He had relieved the man, his wife, and some children, and sent them down to Natal, which involved an expenditure of 7*l.* or 8*l.*, which I never got back. In many other ways you pay money out of your own pocket, and I have paid out of my own pocket again and again; but that is only because I may have a kind heart, or I may not. One man will do it, and another will not. Your obligation is to relieve, and if you do not relieve you incur, possibly, grave reproach. I remember a case occurring in Cuba where the British Consul-General declined to relieve a gentleman who was in distress, and who subsequently died in Cuba of fever, and the *Daily Mail* and other papers conducted a campaign against that consul, and said that he had failed in his public duty. But if he had relieved him it would have been out of his own purse, and he might never have got the money back.

38,552. Is not that due to the fact that the responsibility of the consul had been brought to public notice,

but the facts as to the limits of his power and capacity, as you now state them, had not been disclosed?—I think Parliament should take up the whole question of the Consular Service. I believe it is of vital importance to this country to go into it thoroughly.

38,553. We are endeavouring to do that?—Take the question of office allowances, which is very important. It is just the same as the equipment of a ship, putting the guns and the crew in and all the other necessary equipment to make a man-of-war an efficient fighting unit. The office allowance is the sum annually paid to the consul by the Foreign Office to equip his office and to render it efficient for the public discharge of its duties.

38,554. They pay him an allowance?—Yes, and it is most unsatisfactory. It is not the sum but the whole principle which is wrong, because it depends entirely upon the individual consul whether he will spend the office allowance on his office or on himself. They do not control it.

38,555. Has he not to furnish vouchers for the expenditure?—None whatever. I went out to Delagoa Bay in 1895, a young man with no knowledge of the Consular Service at all and entirely untrained. They had built a consulate there at an expense to the Office of Works and to the tax-payer here of 7,000*l.* or 8,000*l.*—a large house. The man I was to relieve was being transferred to some other post. I received a telegram from him at Cape Town, asking me if I would buy his furniture for a fixed sum; if not, he would sell it. Well, I was a poor man. The sum he named was quite beyond my means; I could not have bought his furniture. I wired back and said: "Will you not wait until I arrive," and I got a reply at Natal, "Either buy now or I sell." I wired then from Natal at a point nearer Delagoa Bay on my way: "Regret cannot buy but beg that you will await my arrival." I arrived at Delagoa Bay and he told me he was leaving by the steamer that had brought me. I arrived at 10 o'clock and the steamer went out at 2. He had sold every stick in the consulate. There was not a table, a chair, a pen, a bottle of ink, or a sheet of paper or a single thing. I took over a roof and bare walls. I had to sleep on the floor for three days. I had absolutely nothing with which to discharge my public functions. I had to furnish the house. I am not complaining of the absence of beds and chairs, but of the absence of public furniture for me as a public officer to discharge my public duties. He had sold everything. That occurs nearly every time that a consul is transferred, and it goes on to-day.

38,556. But what becomes of the Government furniture?—There is no public furniture belonging to the Government at all. It is all the consul's private property.

38,557. Do you say that the Government gives funds for the furnishing of the office?—They give an office allowance which depends upon the post, and you do what you like with it. One man puts it in his pocket, another spends it, and when he goes he sells lock, stock, and barrel.

38,558. Then there is misappropriation of Government money in some way or other?—It is parallel to this: that the Government should appoint a captain to a man-of-war and say: "Here is your ship; you have " to supply the guns, ammunition, and everything else " and we do not care whether it is derelict or a man-of-war." Many of these posts are taken over as derelict consulates and have to be made efficient by the individual. At Delagoa Bay I could not afford a secretary or clerk. I was bottle-washer and everything else. I had to sit in an office for two years and open the door to anyone who came in. You would be insulted. You have no means of keeping yourself apart from any drunken individual who would come in. There is absolutely no staff appointed, no equipment, and no means of discharging your duties. The same thing applied to Para in 1908, and I took over a consulate there in exactly the same circumstances, without a bottle of ink, a pen, or a sheet of paper. I furnished the Para consulate at my own cost. Nearly all the office allowance paid to me went to my secretary, and when I left to be transferred to Rio my successor took

8 May 1914.]

Sir ROGER CASEMENT, C.M.G.

[Continued.]

my furniture that I had bought and refused to pay me for it.

38,559. You say your office allowance went to your secretary?—Nearly all. It went to my secretary; and the rent of the office and all the other expenses came out of my pocket.

38,560. The office then was not a Government house?—Not at all.

38,561. Was the secretary a public officer?—Not at all. He was my servant, and I could kick him out at any moment.

38,562. You used the allowance given you in hiring an office?—And a man to do the writing. All other expenditure—and there is a good deal of it, if you come to think it out—came out of my own purse, or was not met at all. I got 500*l.* a year paid to me personally, as is always done. I wrote officially to the Secretary of State, and said: "I will give you the office allowance with great pleasure if you will equip the office and keep it going. It is a public office; I do not want it, but I want a clerk here and an office, and stationery, and stamps, and I want various things." They said that was impossible. I think the Foreign Office should undertake to do as the American Government does, which entirely equips its consular offices, and furnishes them with good furniture and gives the same stationery to all, and provides everything that is necessary, and it is public property. It cannot be sold by an outgoing consul, and the incoming consul left with no public office.

38,563. Now, coming to the work which you have to do, and the reports that you have to write, do you communicate regarding your consular work with the Foreign Office or, in some respects, with the Board of Trade?—Almost entirely with the Foreign Office. Certain things you send to the Board of Trade. You do not write to the Board of Trade, but you transmit documents to them—letters that reach you, and copies of your replies.

38,564. We have been informed that there are two sorts of intelligence that consuls furnish—the annual reports and reports on special subjects. We have been told that the annual reports are sent to the Foreign Office, and by them transmitted to the Board of Trade, while the special reports are furnished by consuls on direct calls from the Board of Trade?—That is hardly a correct distinction. That, I am sure, refers to special reports called for by the Foreign Office.

38,565. May I repeat my question? I am told that so far as the department is concerned the consul's duties consist largely in furnishing reports on commercial questions, and these are of two kinds—annual reports and reports on special subjects. The annual reports are sent to the Foreign Office and transmitted by them to the Board of Trade. The special reports are called for by the Board of Trade, as required, in direct communication with the consuls, and these reports seem to be regarded by the Board of Trade as the more important of the two. Does your experience confirm that?—No. Those rules hardly existed in my time in that concrete form. We had to furnish to the Foreign Office the annual report, which is not much use, and special reports when called upon to do so upon any subject that the Foreign Office thought useful. Then we were instructed to keep the Board of Trade informed on purely commercial matters, or rather to keep them informed by sending copies of letters to them that were sent elsewhere. For instance, a manufacturer in Birmingham would write to a consul and ask for information as to local buyers, and a copy of the answer to that manufacturer would be sent direct to the Board of Trade without any covering letter—things of that kind. Then the Commercial Intelligence Department of the Board of Trade began before I left Rio to ask specially for information on certain questions, and no doubt what you say deals with an amplification of that. But I left four years ago.

38,566. From what you have said, I infer that possibly you are not in a position to give the Commission a general impression of the Service as it at present exists; but can you give an opinion as to whether the men in the Service at present are an improvement on the Service as you knew it when you entered it?—Yes. I think

they are an improvement since the competitive system came in. I have not great experience of the men under this fresh system, but the few I have seen, I think, are better.

38,567. There was a committee—the Walrond Committee—in the year 1903, which inquired into the Consular Service, and among other recommendations they made was one that aimed at getting into the Service some young men who had had commercial experience, who had joined a commercial firm for a few years and afterwards joined the Consular Service. Have you ever met any of those men?—No.

38,568. It might occur to one that the men who entered the Consular Service in that way would be rather the failures of the commercial world. If they had seen their way to prospering in commercial life would they be likely to abandon it for the Consular Service?—I think, as the Consular Service is now constituted, it offers no inducement to a man of intelligence or commercial ability, because there is no promotion in it. It opens the door to nothing; unless he is a man of superior capacity he would go in as vice-consul and remain as vice-consul for many years and end his days as a consul and there would be an end of it; he would not get beyond it.

38,569. But if you have that gradation into consular-general, consuls, and vice-consuls, and if on entering the Service as vice-consul at 300*l.* a year, which is fair pay to begin with, one reaches to 1,200*l.* or 1,500*l.* a year as Consul-General, and if that promotion be in accordance with the man's merit, do you not think that the inducement to young men to enter the Service as a career, would be adequate?—Yes, if that was made quite clear it would afford inducement, not to men of the highest capacity, but still to good and very good men probably.

38,570. (*Mr. Boutwood.*) But is not that the system as it now exists? It should be?—I cannot say.

38,571. (*Mr. Graham Wallas.*) I have here a set of instructions to consuls issued by the Board of Trade, dated 1914. Do you know if those are all the instructions? Is another volume of instructions issued by the Foreign Office?—Yes, which are the more important of the two. The Board of Trade has no authority over a consul. A consul is only responsible to the Foreign Office. He is not bound to communicate with the Board of Trade, or was not in my time at all.

38,572. He has a volume of instructions to consuls issued by the Board of Trade and another by the Foreign Office?—Yes.

38,573. Is there a third volume?—No, but he gets many other instructions as well. The Admiralty transmits some, but through the Foreign Office.

38,574. There is no bound volume of instructions issued by the Foreign Office and the Board of Trade?—No.

38,575. Have you ever known the instructions of the Board of Trade and Foreign Office to conflict?—No. You would have in the Foreign Office instructions a general instruction that you were to carry out to the best of your ability instructions communicated by the Board of Trade. There would be no conflict, because they deal with different matters. Where the Foreign Office refer you to the Board of Trade they leave the Board of Trade to say what it wants.

38,576. I think the ordinary Englishman would believe that the sole duty of a consul is to push the individual interests of the traders of his nationality. Would you say that?—No, I should not admit that for a moment. There are many other British subjects abroad besides traders.

38,577. Would you say that the consul has to act as civil and criminal judge in effect, or as magistrate?—In some parts. That depends entirely upon the locality.

38,578. But, if he is in a port, on civil questions connected with the Board of Trade he has to act in a judicial capacity?—No, never.

38,579. Supposing a vessel calls with an entry in the log that an offence has been committed, you have to inquire into that offence?—Yes, that is all; but you cannot try the case.

8 May 1914.]

Sir ROGER CASEMENT, C.M.G.

[Continued.]

38,580. Not in a magisterial capacity?—No, not in a magisterial capacity, but merely in the capacity of an arbitrator; that is to say, you would use your good offices between the crew and the officers. A consul cannot so act in his consular capacity. If very grave breaches of discipline occur upon a British ship a consul may summon a naval court, for which there are special regulations in another book. If there was a naval officer in the port the naval officer would preside; if not, the consul presides, and he summons assessors to assist him. Then the offender on a British ship is tried by this naval court sitting in the consulate, and may be sentenced. If sentenced to imprisonment he would be sent home as a prisoner on a British ship under the warrant of that naval court, and committed to gaol in a British prison. You cannot sentence or deal with a man out in the country where you are; you have no jurisdiction there.

38,581. On page 99 of the instructions of the Board of Trade it states: "Whenever it comes to the consul's knowledge that a serious offence against property or person has been committed either on board ship or in a foreign country by a person who is, or if a British subject has been within the last three months, master, seaman, or apprentice on a British ship, he is empowered by section 689-1894 to inquire into the case on oath, and (if the evidence appears to be sufficient), to send the offender to some place in the British dominions to be tried." That is a magisterial function, is it not?—No. It is a consular function.

38,582. It appears that he is a consul exercising magisterial functions; that is to say, he holds inquiry on oath and sends the man to trial?—That particular case I should think very rarely occurs. Where the consul is satisfied that there has been a serious breach of discipline or any crime necessitating prompt interference he would call a naval court and the offender would be tried there and then on the spot, and would not be sent for trial but would be committed by the order of the court to a period of detention.

38,583. The consul is also a registrar of births, deaths and marriages?—Yes.

38,584. He is also, as you very clearly explained to us, a relieving officer?—Yes, without the funds at his disposal.

38,585. He is also from time to time directed to take such steps, particularly in less settled communities, as amount to administrative interference in the country in which he is residing?—There is no limit to his functions. They have never been defined and no attempt is made to define them. They could not be defined at present. I have known ladies come in and ask me to pay their cab fares. I have been asked to pronounce a divorce and upbraided for not doing it—quite extraordinary things are asked of you. Once a woman came into my office at Delagoa Bay and fainted on the sofa, and that woman remained in the house for a week. I could not put her out. I got the clergyman's wife to take charge of her. I was summoned once at 2 o'clock in the morning to go down to the gaol to get another woman out who had been locked up.

38,586. Was this special inquiry you undertook to inquire into the Putumayo question part of your consular work?—No, it was no part of my work.

38,587. It was assigned to you as consul?—There comes in the status of a consul. I had no consular jurisdiction in Peru at all. In the country I was sent to I was not a consul. I was consul in Brazil and only in a defined area of Brazil. My commission as Consul-General at Rio de Janeiro covered only certain States of Brazil. I had no more authority as a consul in Peru than I had in Russia. I was sent to the Putumayo merely because the Foreign Office wished to send me.

38,588. Is it your impression that any conception of the duties or possible duties of a consul which related solely to his ability in pushing British goods might be dangerously narrow?—My experience leads me to think—I may be wrong—that it would be better to leave the pushing of British goods to a Board of Trade official, and to take away these supposed functions from a con-

sular officer altogether. As a matter of fact he cannot push British goods effectively. He is really not a man of any commercial training; he does not know anything about British goods. Commercial travellers would laugh at him. The best person to push British goods is a British commercial traveller. I know nothing about commercial matters. On most of the questions that came to me during part of my consular experiences in Rio de Janeiro and Para (which were commercial posts purely, and not political), I knew nothing about the subjects I was dealing with.

38,589. Your suggestion is that the work of a consul, as representing the Government, is so important and so unlike his work as representing the Board of Trade, that the two had better be divided?—I think so. I think consuls were originally intended to be people to represent a commercial community as the chief men of a commercial community abroad, who got a sort of letter of credit from their Sovereign to represent that community in that foreign country. Latterly the functions of the State have entirely outgrown the other aspect. The consul is now an official of his country and his Government, and his official duties take up practically all his time. The possibilities of his aiding the commerce of his country, as a commercial agent, are nil—that is my experience.

38,590. Would it be possible for these ideal commercial travellers, in the employment of the Board of Trade, to be attached to the consulate as a sort of commercial attaché to the consul?—Yes, I think so.

38,591. Then in every place of any importance you would have a consul who would be the general representative, and perform all these varied functions in connection with the State, and who would have in his service a sort of commercial attaché to whom the duty would be specially assigned to look after the commercial interests of British subjects?—Yes, or they might have in great countries, like Brazil, one or two commercial attachés, who would travel and who would have a consulate headquarters to which they were attached.

38,592. (Chairman.) There was a German consul at Rio?—A Consul-General, who is now the Minister Plenipotentiary to Uruguay, at Monte Video.

38,593. Used he to push the trade and interests of traders more than it is the custom for British Consul-Generals to do?—I think he would probably give more assistance, but that was really because he had a much better equipped office, and a better staff. He had many more men to do his work than I had.

38,594. (Mr. Graham Wallis.) Do you think it would be any advantage to the Consular Service, taking its duties together, if men could be promoted to and from another service, say, from the Board of Trade, or the Colonial Office, who had done kindred work under other conditions?—I think it would.

38,595. And again, a man in the Consular Service, who had shown himself possessed of such abilities, might be shifted, say, to the Board of Trade, or to the Colonial Office?—Yes. Anything that would enlarge the outlook would be a gain, and, in itself, good.

38,596. In Crown Colony administration, for instance, there are a large number of posts for which a man trained in the Consular Service would often be admirably fitted?—Yes.

38,597. And a man in Crown Colony administration might develop powers which would make him an admirable consul?—Quite possibly.

38,598. And the same in regard to the Board of Trade?—I think so.

38,599. Do you think a larger interchange of personnel between those departments would be advisable?—I think so; and I should begin it by seeing that both in the Board of Trade and in the Foreign Office there should always be an official who had been a consular officer. The Foreign Office entirely controls the Consular Service, but nobody in the Foreign Office has ever been a consul, or knows anything about the duties of a consul. The Consular Department, so called, in the Foreign Office, has no working or actual experience of a consul's duties, and knows nothing about it at all; but yet they are there to decide upon every question that might arise. I think it would be a gain, and it should be a standing rule, that a consular officer of senior rank,

8 May 1914.]

Sir ROGER CASEMENT, C.M.G.

[Continued.]

who has been through the Consular Service, filled all ranks, and knows it thoroughly, should be appointed to the Consular Department of the Foreign Office. Similarly, I think, a consular officer should be in the Board of Trade.

38,600. Is there any point which, in your opinion, it is important that we should know which has not been elicited by our questions, so far?—I have been dealing with the question from practically the official point of view, that is to say, the point of view of the man in the post, and all these things bear on its efficiency. A consul retires on a pension when he retires, and there again we come to the status of a consul. It would be very desirable that the pension should belong to the status; that is to say, if a man retires as a consul there should be a certain pension attaching, just as you have in the army or the navy.

38,601. (*Chairman.*) Yes, but that would follow as a general rule on the classification, if it be adopted?—Yes. The present system is that as a man gets older and contemplates retirement on the age limit, or other reasons, he hustles and tries to get into a highly-paid post, and, if he is a *persona grata* to the Foreign Office, he gets it in order that he may retire on a pension calculated on the pay of his post. The pensions to-day do not depend upon your service so much as on the pay of the post you happen to hold at the time you retire. If your health broke down completely you might have been forty years a consul holding, perhaps, highly-paid posts, but if you had to go to a healthy post for the purposes of health you would go to a poorly-paid post; and then, if you retired altogether, your retiring allowance would be calculated on the pay of that post, which would scarcely be just. On the other hand, it is equally unjust, perhaps, that a man who has not been very long in the Service and has to retire, should be appointed to a highly-paid post in order that he might retire on a better pension. That is really a development of the other points I raised.

38,602. (*Mr. Boutwood.*) I gather from your evidence that, partly for historical reasons, what we have at present is an aggregation of consular posts rather than an organised Consular Service. Is that your view?—That is my view. I have often said to myself that there is no Consular Service. I have said it in the Foreign Office. It is an aggregation of posts.

38,603. (*Mr. Hoare.*) With reference to what you said about throwing the Service open to everybody, do you remember that there is a regulation that no candidate will be eligible unless he be a natural born British subject born within the United Kingdom of parents also born therein? Would you contemplate still keeping a restriction of that kind?—That is a different question. That would depend upon Imperial questions.

38,604. I thought you said you would throw the Service open to everyone?—I meant, of course, within the United Kingdom.

38,605. So that you were not contemplating removing that restriction?—Do not you see the reason for that is that it is the United Kingdom that pays?

38,606. I was only anxious to know whether you were contemplating the removal of the restriction or not?—That had not entered into my mind. It is a question of the federation of Colonial administrations with this country.

38,607. (*Chairman.*) Is there any objection to an Australian or a Canadian being appointed a consular officer?—There is no objection, but I take it they have confined the Diplomatic Service and the Consular Service rather in the first instance on the grounds of who paid. The pay comes entirely from the United Kingdom.

38,608. (*Mr. Hoare.*) With reference to what you said about the graded Service, in the paper that we have had sent us from the Foreign Office, I find that the vice-consuls are to receive from 350*l.* to 500*l.*, the consuls from 600*l.* to 800*l.*, and the consuls-general from 800*l.* to 1,100*l.* If that is carried out, it is very much what you have in your mind?—Yes, if those salaries attach to the officer and not to the post.

38,609. I suppose some posts would always have to rank as consulates-general?—Yes; that is to say, some posts would only be filled by a Consul-General supposing my idea were adopted. As it is to-day it is the post

that makes the man. The pay attaches to the post only, not to the officer.

38,610. But would it not come to the same thing, that certain places—Paris, for instance, would always have to be a consul-generalship?—Not always. Paris was not a consul-generalship very long ago.

38,611. So it is now rather an arbitrary system?—Entirely arbitrary. It is purely an academical distinction. A vice-consul may be performing much more important duties than a Consul-General. As a matter of fact when I entered the Consular Service in 1895, I was discharging much more important duties to the British Empire than as Consul-General at Rio when I left—so much so that they were able to leave me away from Rio for three years and send me up the Amazon. But in Delagoa Bay I was specially sent out because they wanted me, so they said; and they sent me out without an examination because they said it was most important that I should go quickly.

38,612. You would not regard the reverse as somewhat incongruous—a man who has served a considerable length of time in the Consular Service, who is still in a comparatively insignificant place, and yet under the change that you contemplate may be ranked as Consul-General. Would not that be incongruous?—No, I do not think so, any more than in the case of a colonel of a regiment being put in some very dreary garrison town that he did not like. You might say there was no military reason for his being there, but if he was sent there he would be a colonel. The point is that there should be a definite status, I think, attached to the officer, and in that case you will get over these scandals of acting-consuls. We ought to get rid of that idea of an acting-consul, or an acting-vice-consul. The other day when I left Putumayo they appointed somebody consul. I was not consul there, but when Mr. Mitchell left they appointed the agent of the steamship company which was directly interested in the trade of carrying the rubber from Putumayo; but he was the only person available. Questions were raised in Parliament about it. There you have an acting-consul in charge of a post where there is only one question; the post was only created to deal with the Putumayo. I am not making any reflection upon the individual at all, but on the system. The consul lays his hand upon the only available British subject, who happens to be the agent to the steamship company, which makes its profit by carrying that particular commodity.

38,613. Have you ever known any actual scandals arising from the misappropriation of public funds by acting vice-consuls of that kind. At a great many of these places a large amount is collected in fees. Have you ever known those fees to be misappropriated?—Very rarely. I have heard of some cases, but they have gone out of my memory. There have been cases, but I do not think there are many scandals of that kind.

38,614. It seems to me to be a great danger with a man appointed in that haphazard way having possibly at his disposal several hundreds of pounds of fees?—I do not think that is the danger. The danger is that he does not do his duty. Again, we have things that are called trading-consulates, which, I think, are very unsatisfactory. Of a trading-consulate the French definition is much better. They call an official consul *consul de carrière*; the others are not. We have a great many such consular posts. The Foreign Office give a commission to, or appoint, an individual who happens to be a merchant in the place, who gets no salary and who is permitted to trade—this is the official definition. That means he is already a trader, a merchant, or, it may be, a banker. He gets a very small office allowance to cover stamps and stationery. Some of these appointments are quite right, and perhaps excellent; others are merely sops to inefficiency. They are given for purely local reasons.

38,615. In any case, would you like to give some different title to distinguish them from the paid consuls?—Yes, I do not think they should be called consular officers. In the eyes of the local people they rank as consuls, and they are consuls very often. They are entitled to all the deference that would attach to the direct consular office, but they really discharge none of

8 May 1914.]

Sir ROGER CASEMENT, C.M.G.

[Continued.]

the duties of a consul, and do not attempt to in many cases.

38,616. (*Chairman.*) Do they wear a uniform?—Yes, they can.

38,617. Do they hoist the Union Jack?—Yes, and they are entitled to a salute and all the rest of it. They have the same official status, but they do not do the work, in many cases. I had under me at Rio five of these unpaid consuls. One never reported anything for years, and never answered a letter: Then the man died and somebody had to go—I had—to clear up the mess. I found documents had not been signed; all the Somerset House registry papers—which are really very important from one point of view—had not been filled up. Another of these men officiated as marriage officer without any authority and quite illegally, and the marriages were entirely invalid, and were lawless marriages. That was an extreme case; but the majority in my experience do not do their duty. They regard it merely as a credential to the local authorities to give them local standing to wear a cocked hat and a uniform, and to get a salute, and to rank with some other consular officer in the neighbourhood and to help their trade.

38,618. (*Mr. Hoare.*) Would you abolish men of that kind altogether?—I should not have them as consular officers. I should have them as Board of Trade officials, give them the same office allowance and get, if you can, from them the same returns they now give or do not give; but let it be for the Board of Trade, because their whole appointment is merely for trading purposes.

38,619. (*Chairman.*) Perhaps you would not get any of them at all unless you gave them something in the way of dignity in return for their gratuitous work?—Perhaps not. In many cases those posts are not very necessary. With the telegraph and the cable, and an efficient embassy or ministry in the country, you can get most questions of difficulty always settled at headquarters.

38,620. (*Mr. Hoare.*) Sir Eyre Crowe suggested to me that if you called them something different, it might lower their position in comparison with the officials of other countries and might raise difficulties. Do you foresee difficulties arising, for instance, if you call them commercial agents, or something of that kind?—I can only give you my experience, and judging from my experience those men have been of very little use. I have had to deal perhaps with 20 or 30, and I do not think more than five ever attempted to supply their superintending consul with the information they were called upon to supply.

38,621. Your experience has been mostly in South America?—Africa too, but I had not many of them there. It was mostly in South America where I had consular officers under me, all unpaid.

38,622. With reference to leave in unhealthy posts, how does that compare with the leave that is given to Colonial Office officials?—It does not compare at all.

38,623. If you take Boma or Loanda, for instance?—The Congo is a very unhealthy place to live in, and the leave there was the same as in Rio de Janeiro, which is two months after a year of service.

38,624. Whereas a Colonial Office official gets six months?—Yes, and he gets his passage paid both ways, and his *locum tenens* is an official for whose work he is not responsible. He goes away with a clear conscience, drawing his pay and getting his passage paid both ways; whereas the consular officer has first to find a substitute and remunerate him, and then, of course, pay his passage both ways.

38,625. I suppose at a place like Loanda it would be quite impossible to keep in good health with only two months' leave in a year?—You could. Loanda was not so unhealthy. The Congo was much the worse. Loanda is on the sea-coast. The Congo, Para, and up the River Amazon would be about the three most unhealthy posts in the Consular Service.

38,626. And in each case the leave would be exactly the same as in Buenos Ayres or Paris?—The leave would be the same as in some nominally unhealthy post. Buenos Ayres, for instance, is not unhealthy.

38,627. How long would the leave be there?—In an ordinary post you get one month, in an unhealthy post two months.

38,628. (*Mr. Shipley.*) Was it yellow fever that made Buenos Ayres unhealthy?—No, that was Rio.

38,629. There is a diminution in the cases of yellow fever?—Yes; there is better sanitation altogether. Rio might be abandoned as an unhealthy post now; it is merely a hot place.

38,630. (*Mr. Hoare.*) It simply depends upon how the place is graded? In any place the leave is considerably less than in a corresponding place in the Colonial Service?—Yes, less in point of duration of leave and in other respects, that a colonial officer has a substitute appointed and paid by the Crown.

38,631. Are there houses provided in most of the tropical consulates?—No, that again, is entirely arbitrary. At Delagoa Bay there was a house.

38,632. What is the reason of that?—I went to the Congo on the direct appointment of the Foreign Office after the Boer War, and there was no house to live in and no consulate. I had to live with all my belongings in a small wooden hut with two tiny rooms. Then a sum of money was voted, on my representation, to build a consulate, and it was carried over each year to the next year because the ground had not been bought. I finally bought the ground off my own bat, and the Office of Works dropped upon me at once, and protested; but Lord Lansdowne backed me up, and the Office of Works had to pay for it.

38,633. Do you think a house ought always to be provided?—I think in unhealthy posts a house should be provided, because it is very hard in those posts to find a house to begin with. In Para, which was nearly the end of my service in 1908, I arrived after a decrepit consul who could not work and had to be carried away. He had a hired house up in the town. There was no other consulate. He hired a furnished house which I either had to take or go to a hotel. The house was a very unsuitable one. It suited him because he was in bed the whole time and unable to move. It did not suit as a consulate. I had to hire two rooms first to have a consular office, and I lived in the hotel. The two rooms were in the Brazilian Bank—a British Bank—and I paid 120*l.* a year for those two small rooms. After I had had them for three months the bank directors here, in London, notified their manager that they did not wish a consular office established in the bank because it attracted undesirable people—which is quite true—sailors, and other people, and distressed British subjects—and they would be much obliged if the manager would get rid of the consul.

38,634. With reference to the change which you suggested as to removing from the consuls the commercial duties they now carry out and giving those duties to commercial agents of some kind under the Board of Trade, what would be the relation then of a consul to a minister. Take a place like Rio?—A consul has a great many other duties. His merchant-shipping duties, to begin with, would take up a considerable part of his time. Then he reports upon various aspects of the commercial or economic life of the country he is living in—you might say the commercial traveller's part of his duties. He is individually supposed to push goods. A consul constantly will get letters and samples sent out to him offering him a commission if he will push certain things—champagne, bootlaces, rubber-heels, and all sorts of things are sent to him. He will have constant inquiries for the names of people who will undertake agencies for certain firms. These all involve inquiry, and you cannot give a guarantee otherwise, because you would be guaranteeing your Government. It would be much better to dissociate those aspects of pushing the trade of your country from the consuls themselves. I think that work could be done far more properly, better, and more efficiently by a man appointed by the Board of Trade. There is a great deal to be done in that line, I am sure; but it cannot be done by a consul. To begin with, he has to be for six or eight hours a day in a certain office with open doors available to any British subject who comes in upon any possible question. He must be there, and

8 May 1914.]

SIR ROGER CASEMENT, C.M.G.

[Continued.]

is required by law to be there. How then can he be pushing the commercial interests of his country? At any moment he is liable to interruption. People come in with all sorts of questions, and want to see him or take his advice, or somebody is locked up, and the police come and say, "So-and-so is in gaol," or sailors have been drinking and have been arrested, or they have deserted from a ship. You have a hundred and one duties to perform during those six or eight hours. It is only six hours by law, but it is generally eight in fact. When you have finished that, how are you to push the trade of your country? If you are in a very hot and unhealthy climate the first thing you want to do is to get home and take a bath and change your clothes—you are wet through—and get some food, and then you are not going out to rummage round the town and push British commerce in boot-laces. The duties are quite distinct. They put too many things altogether on a consul, and they were accumulating them every day during my period in Rio by circulars. The Board of Trade issue circulars *en masse*, and the Foreign Office issues constant circulars. The Admiralty recently have asked consuls to furnish information. I should limit the functions of a consul as far as possible, and differentiate between the duties appertaining to a commercial traveller and to a Government official.

38,635. (*Miss Haldane*.) Is the French system of separating the two kinds of consuls, the trading consul and the regular consul, a satisfactory one? You said they had different names?—They lay more stress upon their official consuls than we do. Their consul—*consul de carrière*—the official consul, is always eligible to be a Minister or an Ambassador; he is part of their Diplomatic Service.

38,636. (*Sir Donald MacAlister*.) With regard to these trading consuls, they are usually vice-consuls?—Yes.

38,637. Have they all the privileges of a consul?—All—absolutely of the same status and in international law, identical.

38,638. And have they the usual duties with regard to births, marriages, and deaths?—Quite so. Not marriages, unless they are specifically marriage officers.

38,639. So that so far as status and duties are concerned, they are in the Consular Service as fully as any others?—Yes, in law just the same.

38,640. They are not necessarily British subjects?—No, some of them cannot speak English.

38,641. (*Chairman*.) He is an unsalaried vice-consul?—Yes.

38,642. (*Sir Donald MacAlister*.) Therefore his position is the same as the position of other members of the Consular Service?—Yes, it is identical.

38,643. And yet he is not necessarily a British subject at all?—No, and may not speak English. I had a vice-consul under me at Santos who could not speak a word of English. How could he assist British subjects?

38,644. (*Mr. Hoare*.) Some of the trading consuls are paid?—Some are paid.

38,645. Some are paid as much as 300*l.* a year?—That is an office allowance I think.

38,646. (*Mr. Graham Wallas*.) But they can spend it as they like?—Yes.

38,647. (*Sir Donald MacAlister*.) You have yourself suggested that closer connexion between the Consular Service and the Foreign Office is desirable in order that the Foreign Office might have the experience, which a consul has, at its disposal?—Yes, the Foreign Office is our authority; it directs and controls us and gives us our instructions, and it knows personally directly nothing of our duties. None of its members have had any experience of our duties.

38,648. Do you think it desirable that the members of the staff of the Foreign Office itself should occasionally be appointed to act as consuls too?—Yes, that would be the same thing. It would be the same as takes place in foreign governments.

38,649. If the Consular Service was so re-organised as to make this grading you have spoken of an effective thing, do you see any reason in the nature of things why it should not be more closely connected with or amalgamated with the Diplomatic Service as such?—No, I see no reason why.

(*Chairman*.) We are much obliged to you, Sir Roger Casement, for your evidence.

## NINETY-FIFTH DAY.

Thursday, 14th May 1914.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Mr. ARTHUR BOUTWOOD.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Miss HALDANE.

Mr. N. E. BEHRENS (*Secretary*).

Mr. STANLEY LEATHES, C.B. (First Commissioner, Civil Service Commission), called and examined.

38,650. (*Chairman*.) We want your advice in regard to the selection of men for the Foreign Office clerkships and for the Diplomatic and Consular Services. According to the published orders of the Secretary of State, candidates for the Foreign Office clerkships and Diplomatic attachéships may present themselves for examination in any groups of subjects prescribed for the Class I. examination, provided that the maximum number of marks they can win does not exceed 4,000?—That is so, except that they have, of course, to present French and German, which is a further restriction.

38,651. Yes. They have to concentrate more on French and German than on any of the other subjects for the general Civil Service examination?—Yes.

38,652. Looking at the evidence given before the Ridley Commission, I find that some witnesses suggested that it would perhaps secure a more generally educated type of man if candidates were to present more groups of subjects for examination. But, in the case of the Foreign Office and Diplomatic Service, we must take it as a postulate that complete knowledge of two continental languages, French and German, is essential?—Yes.

38,653. Would it be possible for candidates to comply with that requirement while taking subjects up to 6,000 marks?—I think not. An exceptional man might do it.

38,654. Have men presented themselves for the Class I. examination who came up to the requirements

14 May 1914.]

Mr. STANLEY LEATHES, C.B.

[Continued.]

of the Foreign Office in French and German?—That is a question I am not prepared to answer. I can tell you generally as to the relative standards of the two classes, but I could not answer that particular question.

38,655. And you could perhaps only answer it in any case by comparing marks, which possibly would not indicate the relative ability of the men in respect of conversation?—Yes; I could give you the marks for conversation separately.

38,656. Is it possible, without any great difficulty, to get out statistics of that kind?—Yes, I have them here, and can give you them at once. I have not got them out for the whole range of years, but for each year separately. I think the oral examination is the one you are most interested in, and there, in French, the Foreign Office clerks and attachés get, you may say, half as many marks again on the average as the Class I., Indian Civil Service, and Colonial cadets, that is, the successful candidates only in each case. They really show a very remarkable superiority there. In German the superiority is not quite so great, but there is a superiority. I cannot say why they do not do so much better in German, but it may be that the number of candidates taking German in the Class I. examination is rather small, and those who do take it are rather highly efficient. But in both cases there is a decided superiority in the oral examination. If you take the other part of the examination—translation and composition—you get a very similar, or even, perhaps, a greater superiority.

38,657. Would you attribute that altogether, or in a very large measure, to the candidates for the Diplomatic Service and the Foreign Office having to live in France and Germany?—They almost all of them do go abroad; there is no obligation that they should. I think the main explanation is that they do really concentrate on French and German, and they work very hard at them. I should be inclined to give greater weight to French and German, and, supposing the competition were left as at present, I should be inclined to double the marks in French and German. I think that would then have a more just effect upon the result of the Class list.

38,658. I think you have made a proposal, something to that effect, to the Foreign Office?—We have.

38,659. The present maximum number of marks in French and German is 400 each, and you propose to double that and to make the maximum 800 each?—Yes.

38,660. If you did that, would you still maintain the gross maximum at 4,000?—No; I should increase the maximum accordingly, that is to say, increase it to 4,800 marks.

38,661. You were good enough to send me some time ago the marks both for the attachés and for the Foreign Office clerks for 1913. Taking the attachés first, would you say that these young gentlemen, apart from their knowledge of French, German, and other foreign languages, and judging from the marks they won in other subjects, have acquired a liberal education?—I think so.

38,662. Take the first man on the list of attachés: He got good marks for English composition—329 out of 500—and for Italian translation, and for French and German. He has taken geography; he has taken two periods of English history; he has taken general modern history and political science; but nothing else?—That seems to me a very good general education. He has got a good knowledge of history, and a good knowledge of geography—because the standard of those papers is quite high. For political science it is difficult to say what he really got, because his marking has been reduced; but his English is quite good. I should call that really a very good general education. It is the kind of education that I should like to see more people receive.

38,663. How would that education compare with the completed secondary course in an English school, say, a grammar school?—It does not include any mathematics; but that is natural, I think. Mathematics is part of the earlier preparation, and it is to be expected that candidates whose interest lies in the direc-

tion of what you may call literature in its highest sense should drop their mathematics when they leave school. They have no doubt done sufficient mathematics when they go to the university. Mathematics and science are the two subjects one notices missing, but they presumably have been acquired at school; and at any rate in geography a certain amount of science comes in.

38,664. All the four gentlemen who passed had been at the university. Comparing this list with another, with which you furnished me, giving the universities from which you recruited them in 1913, they were all either at Oxford or Cambridge?—Yes, they had all been at the university.

38,665. There were five selected in 1913, but four only are shown here. Was a man called up in addition?—Yes, no doubt a man was called up.

38,666. As these men were at Eton and Oxford we may assume that mathematics, for the reason you mentioned, have dropped out?—Yes.

38,667. Possibly they may have learned some Latin and Greek—the usual school course?—Very likely. That, of course, we have no evidence of.

38,668. Looking at the successful candidates, there are four Foreign Office clerks for the same year, 1913?—Those four are a very even set of candidates approaching very nearly the same standard, and a very good one, too.

38,669. I suppose really the same remarks would apply to them. They were all at Oxford or Cambridge, and they were all at public schools—such as Eton and Rugby?—I think so.

38,670. Then you would not be in favour of any extension of the subjects for the examination?—As long as they take the subjects which they are taking, it seems to me that they give a very good and sufficient education. Of course, if the Class I. examination is to go to be rearranged, it might turn out that the subjects which they actually take would receive a much larger total of marks.

38,671. We cannot foretell that?—No; but it seems probable that modern subjects will receive greater weight in the examination; and it is the modern subjects on which these candidates are strong. They have what I should call a good modern education.

38,672. What, in your opinion, is the effect of the limitation on the number of men who appear? Does the effect of nomination by the Secretary of State mean that you may have shut out good men who ought to have admission to examinations like this?—No doubt it would shut out a certain number of people who, taking the limitations all together, had not the private means, and so on, required for attachés.

38,673. Omitting that for the moment?—You mean merely the system of nomination? No doubt it would shut out some people who would be successful in the competition if the competition were the only thing; but the importance of personal qualifications for these professions seems to me even greater than it is for the Civil Service, for instance.

38,674. But you think that the effect of the nomination is to shut out men who, if freely admitted, might be successful?—I do not know that it is so, but it seems to me clear that it must be the case that certain people are not nominated who might wish for nominations, and it seems probable that some of those would actually succeed in the competition. But I am only theorising; it is merely a general inference from the conditions. I am not aware of any person who wished to enter the Foreign Office or to become an attaché who has been excluded.

38,675. But from your general knowledge of the men who present themselves for the open competition, and from, in some cases, their very considerable knowledge of modern languages, and, generally, their intellectual equipment, you think it is not impossible that some are shut out who would be successful if admitted?—It seems to be possible. I should not like to say it was so.

38,676. There are two ways of looking at recruitment for the public service: firstly, a fair field and no favour to anybody; and secondly, endeavouring to get the men who are best suited for the kind of work to be done?—Yes.

14 May 1914.]

Mr. STANLEY LEATHES, C.B.

[Continued.]

38,677. Which would you say is the best course to follow—an open field and no favour, on the one hand, or the limited competition among men presumably best suited for the work to be done, on the other?—As a practical administrator I should attach more importance to the second. I should not neglect the first, but the second seems to me what we have to keep mostly in mind.

38,678. Is there any means, do you think, of accommodating one to the other, that is, accommodating the needs of the public service to the competitive method of recruitment—a fair field and no favour. Does any way of reconciling both principles occur to you?—Referring to the report which you have already published, it appears to me that, in a large measure, the memorandum of the Foreign Office, which you were good enough to send me, shows that the Foreign Office does its best to select, from the candidates who present themselves, those who are likely to be most suited for the public service. That reconciles it, to a certain extent.

38,679. I was thinking whether any means of reconciliation could be invented, which did not depend upon personal selection?—You would have still to appraise their personal qualities in some way.

38,680. Towards that you have, perhaps, gone some way by imposing the necessity of acquiring a good knowledge of foreign languages?—But that is only a scholastic test. For the Foreign Office and for attachés, I understand, personal qualities other than those of a scholar are in the highest degree desirable, and I can see no way of appraising those qualities except by personal inspection. That might lead either to the exclusion, which the Foreign Office endeavour to carry out, of those whom they think to be unfit, or it might, conceivably, lead to the assignment of personal marks. That we do already for a post of less importance, but still of considerable importance, in the Post Office—the engineers. In their case a large proportion of the marks is assigned to personal qualities, which are considered by a committee on which the Civil Service Commission are represented.

38,681. Has that system been in operation in the Post Office for long?—No, only a year or two.

38,682. So far as you can judge, is it satisfactory?—We think it is. We hope it is. The Post Office seem pleased with the people they are getting in that way.

38,683. Has it been readily accepted by the candidates?—We have heard of no complaint at all.

38,684. What are the points to which your committee directs attention?—The duty of the engineer is not only to make constructions and to see that constructions are properly carried out, but also to deal with staff of all kinds, and generally to maintain discipline and method. Those are the qualities, I conceive, that the committee—I have not actually served on that committee myself—would naturally direct their attention to.

38,685. Personal qualities, suitability for the particular kind of work which they have to do, and address?—Address would be taken into account.

38,686. Do they ever take into account a man's personal demeanour and appearance?—I do not suppose that would be so important for a Post Office engineer, but I imagine for the Foreign Office it would not be without its weight.

38,687. (*Miss Haldane.*) Is his record taken into account?—The record would be before the committee. I think they would take it into account.

38,688. In the case of estimating his personal qualities, do you consider his record—I do not mean his school record—but his record in other ways than scholastically?—I think they do consider that.

38,689. (*Chairman.*) Beyond the increase of marks to 4,800 you are not disposed to modify this scheme of examination in any respect?—Not substantially.

38,690. Any further modification would follow on a general readjustment of the Class I. examination?—Yes. Perhaps you would like to know what subjects these candidates are most fond of taking? I have some figures about that?

38,691. Yes. I have them for August 1913?—Yes, but my figures cover the whole ground since 1908.

38,692. (*Sir Kenneth Muir-Mackenzie.*) Of people who have got nominations?—Yes, and what subjects they prefer to take in the examination. This examination is for the Foreign Office clerks and attachés. They all take English composition; that is voluntary, but they all take it.

38,693. (*Mr. Philip Snowden.*) Are these papers the same papers as for the contemporary Class I. examination?—Yes, exactly the same papers. Very few of them take Latin and Greek. Relatively a large number take Italian. Very few indeed take natural science. A good many take geography. Very few take Greek or Roman history. A very large proportion take English history and general modern history; and a fairly large proportion take political economy. The other subjects are not largely represented. So that you may say that the effect of this limitation is to cause them to concentrate on foreign languages and on history, which is practically, as far as I can see, the best educational preparation for the work that they have to do. I should add that a good many take Spanish.

38,694. (*Chairman.*) Could you make a comparison between the general capacity and character of the men who go into the Foreign Office and those who go into the Diplomatic Service?—From the examination point of view?

38,695. Yes, from that point of view?—On the subjects which they take, it may be said that both the attachés and the Foreign Office clerks do better, that is to say, they obtain a larger proportion of the marks than the average of the Class I. and the Indian Civil Service.

38,696. They do better?—Yes, they obtain a better average of marks on the subjects that they take, but they take fewer subjects. If you exclude French and German they are not far behind.

38,697. I had it in my mind to ask you the question whether, from the examination point of view, these two Services might be interchangeable having regard to the educational standard?—I should not be at all sorry to see the Class I. examination readjusted, so that people who take the subjects commonly taken by the Foreign Office clerks and the attachés should count for the whole total of the marks—that is to say, the 6,000.

38,698. I meant interchangeability between the Foreign Office and the Diplomatic Service only?—They must be very much the same kind of people.

38,699. So far as education goes there is really no reason why they should not be amalgamated?—No, not so far as I can see.

38,700. With regard to the question of raising the number of marks, I have here a paper from the Foreign Office which says: "There is a great deal to be said for the present scheme of subjects. The candidate who passed first at the last examination is a good example. He had obtained a first-class in the Cambridge history tripos, and he took, besides French and German, roughly the subjects covered by the tripos: English composition, two English history papers, general history, Roman history, political economy and economic history, and political science. This seems ideal. With a maximum of 6,000 he would, even if the French and German marks had been 800 each, have been obliged to take up two more subjects, and considerable ones, e.g., Latin translation and prose and verse composition and Greek translation, or, perhaps, Italian (600) and Greek history (500)." Do you think you would have got a better man if the candidates could have taken up these two additional subjects?—No, I cannot say I do.

38,701. Not for this purpose?—Not for this purpose, nor, indeed, from the point of view of general education, because if he really works at his French and German that means a very considerable addition to the whole work of the historical tripos, and he must work very hard at his French and German because the standard is a very difficult one indeed. I think it was not last year, but the year before, that we ploughed in French the man who came out first.

38,702. (*Mr. Graham Wallas.*) I realise the difficulty of comparing the examination for the Home Civil and the Indian Civil—with its larger maximum—with that for the Foreign Office clerks and attachés;

14 May 1914.]

Mr. STANLEY LEATHES, C.B.

[Continued.]

but could you amplify an answer you made to the Chairman, and indicate, as far as you can judge from the subjects taken, in what relation the successful candidates in the Home Civil Service and the Indian Civil Service stand to the Foreign Office clerks and the attachés?—I will give you what information I can about that. Of course, it would require a very elaborate analysis to make an exact comparison. Taking all the successful candidates in the Class I. combined examination in the six years under consideration they have obtained an average of just about 43 per cent. of the possible marks. The attachés in that period have never been below 44 per cent., and they have been as high as 64 per cent.; their average may be said to be 50 per cent. The marks of the Foreign Office clerks run much the same as the attachés and they have never been below 43 per cent.; their average is also over 50. If you exclude French and German, which brings up their total, their average would be somewhat lower than the average of Class I.—say about 39 or something of that sort.

38,703. The average successful Indian Civil Service candidate represents a somewhat lower percentage than the average Home Civil Service candidate?—I do not feel sure about it. The Indian civilians all come in the middle, and the Home civilians come at the top and often also rather low down.

38,704. I understood you just now to propose to the Chairman that the subjects which are taken by the Foreign Office and Diplomatic Service candidates might have such an increase of marks assigned to them as would bring their total up to about 6,000?—Yes, very roughly—that the total might be very considerably increased at any rate.

38,705. And that that change should be applied, not only in the case of the Diplomatic Service and Foreign Office clerks, but as an improvement of the whole Class I. examination?—Yes, I think that would be a very reasonable arrangement.

38,706. If you increase, for instance, the marks given for history, would not that scheme make it possible for you to slightly extend the range of subjects in history?—I think it might.

38,707. I notice, for instance, that English history in the Class I. examination stops at 1848. For a man who is going into the life of the Foreign Office or Diplomatic Service, it would be very valuable that he should know certain events in English history since 1848?—I think you will find that in general modern history the range is more extensive.

38,708. I know, but general modern history means all history since 1848 I suppose?—I see no reason why we should not come down considerably later than 1848.

38,709. You think it might be possible with increased marks to make general modern history (which would include the lifetime of Bismarck and Cavour, and so on) quite an important subject?—Yes.

38,710. You told us that every one of the successful candidates in the period of the six years you were dealing with, in the Foreign Office and Diplomatic Service, was either at Oxford or Cambridge?—I do not know that every one had been, but certainly a great majority.

38,711. Would it be possible to give the figures for those six years showing the proportion who were at Oxford, at Cambridge, and elsewhere, both among the successful candidates and among all the nominated candidates?—You want a table classifying all the candidates nominated according to the university they attended?

38,712. I think it would be interesting?—Certainly, you shall have that.\*

38,713. The immense majority of the successful candidates in both examinations were at Eton were they not?—Yes, a great many were at Eton.

38,714. With regard to this paper which we have, proposing certain amendments in the Foreign Office and Diplomatic Service examination, which is issued by the Foreign Office, I understand it is a paper which the Civil Service Commission approve of?—I do not recognise it.

38,715. It says: "This seems ideal. With a maximum of 6,000," and so on—is that paper prepared in consultation with you?—No, we have not seen that.

38,716. Then the opinion that it is "ideal" is an opinion of the Foreign Office as to which they have not yet consulted you?—Yes.

38,717. I want to consider the Consular Service. From a paper handed to us it appears that the existing examination for the Consular Service was the result of a committee, one of whose purposes was to secure that young men with commercial experience should enter the Consular Service?—That is so.

38,718. For that reason the maximum age is raised to 27?—Yes.

38,719. But in the examination itself no advantage is given to commercial experience directly in the competition?—No, the commercial experience is one of the circumstances considered with a view to nomination.

38,720. But success in the competition depends upon success in the marks in the examination?—That is so.

38,721. The examination might be so managed that indirectly a man with commercial experience would get more marks than a man without such experience?—It would be difficult, do you not think?

38,722. Take an examination in economics: It would be possible to set an examination paper in economics in which a clever man with wide experience of commercial life might do better than a man coming straight from the university?—With wide experience undoubtedly, but with such experience as he could get in two or three years in one or two businesses it is not so certain, is it?

38,723. I have here the political economy paper set in the last Consular Service examination. Are you familiar with the lines of it?—I do not recall it at this moment. I have no doubt seen it.

38,724. Perhaps you will just glance at it in this book (*handing book to the witness*)?—It follows very closely the syllabus.

38,725. You would agree that it is very conspicuously what might be called a text-book paper?—Yes, I agree to that.

38,726. And a young man who knew his text-book and nothing else would be more likely to do that paper with confidence and success than a man whose ideas were confused by actual experience?—I am afraid I do agree to that.

38,727. It is also, in order to secure that experience, arranged that an arithmetic paper should be taken. You have the arithmetic paper on page 577 in that book. Arithmetic, according to page 90, is only to include vulgar fractions and decimals, including English and metric weights and measures?—Yes.

38,728. Would you say it is anomalous and absurd to examine able young men, in order to detect their mental ability, in arithmetic confined to vulgar and decimal fractions, including English and metric weights and measures?—What would you think ought to be added—book-keeping?

38,729. I should have supposed that arithmetic which really detects ability and shows the power of an able man would include the logarithmic methods which are used in actual banking business?—Your suggestion is that the syllabus might be extended by that?

38,730. In fact, if you look at the paper itself, you will see that in order to make it a test you put questions in these extremely simple rules, which questions themselves are of almost ridiculous difficulty?—I should not say they were of very great difficulty.

38,731. They are laborious, but simple?—Yes, laborious.

38,732. That is the kind of paper that used to be set in the old second division examination when the arithmetic was restricted in the same way?—Very likely.

38,733. Do you think it would be possible to reconsider that side of the consular examination?—Certainly.

38,734. Have you any figures to show whether young men of commercial experience up to or near the age of 27 do, in fact, prove successful in those examinations?—We do not know that. That, of course, comes out before the Nomination Committee. That information does not reach us.

38,735. You know the age of the candidates nominated?—Yes.

\* Vide Appendix LXXX.

14 May 1914.]

Mr. STANLEY LEATHES, C.B.

[Continued.]

38,736. And you know the age of the successful candidates?—I have the figures. I do not know them at this moment.

38,737. Could you insert upon your notes of the figures of the last six years the number of successful candidates of certain ages and the proportion of those successful candidates who claim to have had commercial experience?—I do not think we should know that latter point, but you shall have the other figures.

38,738. (Chairman.) That merely helps for the nomination, and not in the examination at all?—They may fill up a form in which it occurs, but I am not sure.

38,739. (Mr. Graham Wallas.) There are certain special examinations held for attachés which entitle them to receive an allowance for international law and languages?—Yes.

38,740. Do you manage those examinations?—Yes, in international law, but I do not think we examine them in languages.

38,741. Do you know who does?—We hold an examination for Foreign Office clerks as translators, but it is rather an elementary examination—just for the business of translating. There have been only five such appointments in ten years.

38,742. Will it be practicable from your point of view as an examining body to hold certain other examinations to test the acquirements of attachés in their earlier years in special subjects of study, besides international law, that are directly useful for their work?—If the attachés were to go in for the examinations we hold for the Army and Navy interpreters, there would have to be a little change as to the nature of the papers set and so forth, but that class of examination would be extremely practical. I think it reaches a high standard. In almost any foreign language they could be examined.

38,743. At present they get a special allowance for international law, and I can conceive it desirable that the same system should be extended to some other subjects, say to the general trade history of the world, or the history of tariffs in the world?—Yes, I imagine we could examine in that. The syllabus would have to be very carefully considered, but I see no practical difficulty. If it were thought desirable we should be able to do it.

38,744. Then there is in the Foreign Office a selection committee that selects nominees for the Foreign Office, and another selection committee for the Consular Service?—Yes.

38,745. Has the Civil Service Commission ever been consulted as to the formation or procedure of those committees?—No.

38,746. As far as the Civil Service Commission is concerned you have no knowledge of the procedure of the committees or their formation?—None whatever, except what is contained in a memorandum which the Chairman was good enough to send me.

38,747. But you imagine it might be helpful to the committees if the experience from a somewhat detached point of view of the Civil Service Commission were represented upon a committee of that kind?—It is not for me to say.

38,748. (Chairman.) Sir Arthur Nicolson said that for his part he would have no objection?—We should have no objection, of course, if our assistance was thought useful.

38,749. (Mr. Philip Snowden.) You said there were other qualities than those of a scholar that were important for the post of Foreign Office clerk or attaché.—Yes.

38,750. Do you mind saying what those other qualities are?—They are very well set out in the Foreign Office Memorandum No. 4—"Respecting the nomination system as applied in the Services administered by the Secretary of State for Foreign Affairs." I do not think I can improve upon that.

38,751. Do you include in those other qualifications high social connections, and the qualification to take his part in high society in the country to which he goes?—Yes, I should, as the world is at present constituted.

38,752. Have you any explanation to offer of the fact that half the successful candidates in the last few

years have been the sons of peers or baronets in their own right?—The only explanation I can suggest is that that is the class which is most ambitious to fill such positions.

38,753. You would not offer as a possible explanation the suggestion that the system of nomination has something to do with it?—I do not know enough really about the system of nomination to be able to say whether it has or has not.

38,754. The candidate is nominated either for a Foreign Office clerkship or for the Diplomatic Service; he does not enter simply for the common examination, and then afterwards select the post to which he will go?—No, they are nominated for one post or the other.

38,755. Is the condition of a private income of 400*l.* a year applied to a Foreign Office clerkship as well as to the other?—That is not within my knowledge.—(Chairman.) It does not apply to Foreign Office clerkships.

38,756. (Mr. Philip Snowden.) You said in reply to the Chairman that you think the educational standard of these candidates is quite equal to that of the Class I. candidates?—I do not think that is exactly what I said. I said that their educational standard was very suitable for the posts which they are going to occupy, and that in the subjects which they take they obtain a standard fully comparable with that of Class I.; but if you put it to me as a question whether it is actually equal to Class I., I should say it is not so good as the highest and better than the lowest.

38,757. Is it within your knowledge whether these candidates have restricted their studies at the university to the subjects likely to be of use to them in the examination?—I could not say that for certain. If they have, their studies would still be wider than those required for almost any university degree.

38,758. Then they would possibly be, as the examination results show, more proficient in that limited number of subjects than if they had taken a wider range?—I think that is so.

38,759. I take it from what you have said this morning that you really are fairly well satisfied on the whole, I will not say with the system, but so far as you are associated with it?—Yes, I am very well satisfied with the class of men who come up to us to be examined from an examination point of view. I have no reason to be dissatisfied. We sometimes get a bad man, but then he is not successful.

38,760. I notice that on some occasions the competition appears to be rather keen; that is to say, you have a considerable number of candidates for a small number of vacancies. In 1908, for instance, you had only one vacancy for a Foreign Office clerkship, and you had eight candidates. What is your idea about the severity of the competition; that is, the pitting of a large number of candidates against each other for a very limited number of places?—You mean, is it bad from the point of view of the candidates themselves?

38,761. Yes, and about the fairness of the whole thing?—I see no particular unfairness in encouraging people to go in for this competition if they desire to pass, because, supposing they are unsuccessful, they have still had as good an education as they can want, and if they go on to something else instead they are still young; they are in no way damaged. It is not like a highly specialised examination in which all the work done is wasted. I should say that none of the work done for this examination has been wasted.

38,762. Are these returns with which you have supplied us copied from some official document. It is the list of candidates at the various examinations and the marks they have taken?—Yes.

38,763. How does it come to pass that in some instances you give the names of the unsuccessful candidates and not in other cases? Is it not an unusual thing to give the names of unsuccessful candidates?—We sent you such copies as we possess. We have been in the habit of printing two lists, one which goes to the Foreign Office filled with names, and another which goes to the candidates, in which only the names of the successful candidates are given, and the others are indicated by numbers. The candidate will know his own.

14 May 1914.]

Mr. STANLEY LEATHES, C.B.

[Continued.]

number and place and his own marks, but he will not know the names and number of marks of the other candidates.

38,764. Are these returns in which the names of the unsuccessful candidates appear accessible to the public?—No, they have not been in the past. We have recently taken to issuing the names of all candidates in a competition, and we now follow that practice for the Foreign Office, but the names only go to the department and the candidates.

38,765. Do you think it desirable to publish the names of unsuccessful candidates? There is a young fellow here who got a total of 641 marks out of 4,000. I do not suppose he would thank the Civil Service Commission for publishing that fact?—We went very cautiously when we introduced the custom of publishing the names of unsuccessful candidates. We started with one examination, and then we went to another. When we had published three or four, and had received no complaint, we thought the matter was so convenient in general that we might venture further on it. We had some delicacy in the matter, I confess.

38,766. (*Chairman.*) What good is gained by publishing the names?—It saves a great deal of official trouble.

38,767. (*Mr. Philip Snowden.*) In what way?—First of all you do not have to print and check two lists.

38,768. You mean for the use of the Foreign Office?—No, I am not speaking of the Foreign Office, but of the general examinations.

38,769. You do not now publish the names of the unsuccessful candidates in the general examinations for the Civil Service?—Yes.

38,770. The second division?—Yes, and Class I. too.

38,771. How long have you been doing that?—Two or three years, and we have had no single complaint.

38,772. (*Chairman.*) It seems that the only thing to be gained by it is the little saving in printing?—There is also the risk of error eliminated, and a considerable saving of clerical labour. It was urged upon me very much by the directors of examinations, as they thought it would be a very decided improvement, provided the candidates did not dislike it. Of course, if the candidates had disliked it we should not have done it, but as no candidate has raised any objection we have taken to doing it.

38,773. How do the headmasters of schools like it, for instance?—They have never objected.

38,774. You never see any of the Class I. men. They never come before you. You see their papers, but not the men themselves?—No, they never come before the Commissioners. They come into the office to choose their situations, but I never see them except by accident.

38,775. (*Mr. Boutwood.*) Some books containing regulations have been supplied to us by the Foreign Office, and in regard to one of the regulations there is something I do not understand. In a paper you issued in October 1911, you speak of the candidates for the Diplomatic Service and the Foreign Office being examined also as candidates in combined open competition?—That is if they like they can enter for Class I. as well, taking the whole range of subjects; but they do not do it.

38,776. Supposing they did, they would then be eligible for anything that turned up?—Yes.

38,777. And they do not do it?—No.

38,778. I suppose sometimes in this examination for the Foreign Office and Diplomatic Service you do what you occasionally do in other examinations. You take a man for a later vacancy from below the list of those who succeeded?—Yes.

38,779. In cases of that sort does any indication ever reach you, directly or indirectly, that the Foreign Office would prefer a certain individual—Smith rather than Brown—or do they take the man you send?—They take the next man always.

38,780. You spoke several times of a high standard in French and German for the Foreign Office and the Diplomatic Service. I was not quite clear what you meant. Have you a different standard in those two subjects, or is it merely that you exact a higher number of marks in the same standard?—The papers

are marked in exactly the same way, but they have to get a considerable proportion of the marks—60 per cent. before reduction. I may say that the question whether the candidate is to pass or not, does not depend entirely upon marks. If he were anywhere near the border line, his work would be very carefully studied from the point of view of whether it was sufficiently good, and he would be passed or not passed on that investigation, and not merely by the addition of marks.

38,781. Comparing the Foreign Office and Diplomatic Service examination papers with those for Class I., it occurred to me while I listened to you—we heard it many times in the course of the earlier part of our inquiry, and more or less adopted the view ourselves—that one of the objects of the Class I. examination was to secure a good general education of a high type as the basis for the administrative work of the Service?—Yes.

38,782. Evidently the subjects taken by these Foreign Office and Diplomatic Service candidates form a more or less separate group; for instance, you find classics conspicuous in the Home list, and equally conspicuous by its absence in the Foreign Office and Diplomatic Service list?—Quite so.

38,783. The subjects do fall into two more or less contrasted groups?—They do.

38,784. It struck me from what you said, that really the selection made by the Foreign Office and Diplomatic Service men tended rather to get away from the conception of a general education, and tended to make their examination more or less of a professional type. You yourself said that the subjects chosen were admirably adapted for the work the men have to do. That differs from what we have been accustomed to hear about the Class I. examination and the Class I. men?—I should not call it professional. I should call it a general education, only it is a modern general education instead of a classical general education. It is the kind of education I am always trying to persuade people to provide at the universities.

38,785. With regard to the consular examination, the maximum age for that is 27. What sort of examination can you give a man of 27?—It is not very satisfactory, of course, from the examination point of view, to examine a man after he has left his scholastic studies; certainly I agree to that. But the system of examination being imposed upon us we do examine people well up to 30, and beyond that even.

38,786. Hitherto we have attached some importance to the idea of co-ordinating examinations with a general educational system, but when one has an examination open up to the age of 27 and intended to catch men who have been out into the world, such an examination is rather outside the range of that principle, is it not?—It is. It is an endeavour to reconcile two different requirements—one a scholastic requirement and one a practical requirement.

38,787. (*Chairman.*) I put a question upon that point some days ago, my object being to ascertain whether the education which your examination for the Consular Service was devised to test, should be of the secondary type or of the university type. Having regard to the Consular Service and the sort of work these men have to do, which do you think it ought to be?—At that time of life it ought to be an examination on such parts of their general education as people who had been out in the world for a little while might be expected to have retained. That is the answer I should give to that question.

38,788. But do you not appeal to a different class of people in the Consular Service; you do not appeal to the university man?—Not so much.

38,789. You appeal to a man who has a general commercial education?—A certain number of university men go in, but I do not remember the proportion. It is a very difficult examination to make at all satisfactory, I fully agree.

38,790. And then you mix up with it certain matters of a semi-professional type—knowledge of merchant shipping and all that sort of thing—which are really matters which can be crammed in a very few months?—Yes, it is a very troublesome examination.

14 May 1914.]

Mr. STANLEY LEATHERS, C.B.

[Continued.]

38,791. (*Sir Kenneth Muir-Mackenzie.*) I think you have nothing to do with the number of men who are sent in for the examination for the Foreign Office at any particular time because of there being certain vacancies?—No, we have no control over that. If the number was singularly deficient we might make representations, but that would be all.

38,792. And after they have passed you have nothing to do with whether they continue to act upon the list that you have sent in, or whether they send in a fresh batch for examination upon two or three vacancies taking place?—They only hold the examinations once a year.

38,793. Is it a regular system with them, as far as you know, that they exhaust during the year the number that you have made out on the list?—That must be so, because they come to us for certificates, and, if they take people out of their order, we should know of it; but they do not. Whether they take any more from the list as originally issued would depend upon casual vacancies which, I suppose, they might or might not fill.

38,794. That lies in their discretion?—Whether they fill their vacancies, yes, but if they fill them they must take the next man.

38,795. I do not know whether such a case has ever arisen, but I suppose it might arise that there was a small list of men sent in for you to examine, say, for a couple of vacancies, and there were two men very good, and perhaps the rest were rather below the average, and not men who would be likely ever to be at the top of the list of ordinary candidates. Under the system that you say prevails one of those inferior men, I suppose, might get in?—He might, yes. We have never had much anxiety as to the qualifications of the candidates.

38,796. I did not wish to suggest that, but it occurred to me as a possible evil in the system?—Yes.

38,797. (*Mr. Boutwood.*) Would you refuse your certificate if the men were very low down and very bad?—We might be obliged to, I think.

38,798. (*Sir Kenneth Muir-Mackenzie.*) But the question before you in the examination is to put the candidates in order?—Yes; and also to see whether they pass in French and German, so that there is generally a proportion of the candidates who are not qualified, and they cannot be appointed.

38,799. (*Mr. Matheson.*) I notice that in 1913 the lower candidates who were successful seem to have been rather below the average. I suppose that is only just an accident of the year?—It varies from year to year. If I remember rightly the Foreign Office result was very good, but there was a weak candidate among the attachés.

38,800. Yes; it is an attaché of whom I am speaking. Is the minimum standard in French and German definitely fixed, or do you go just on the general look of the work when you come to the examination?—There is a standard of marks, but then when the candidate appears not to have come up to the standard of marks, or very near it, the work would be specially considered.

38,801. Do you find that the people who are good at French and German generally do pretty well in the other subjects?—Commonly; but it has happened that the man who was best in French and German was not successful.

38,802. Have you any experience of the people appointed under the old system?—No, I have known nothing about it.

38,803. The old examination was not in force while you were there?—Yes, it was in force, but I was not then on the examination side.

38,804. You have no opinion as to the quality of the two classes of men?—No, I have not. I could not really compare them. The old classes of men were all crammed; that is to say, they went to a crammer.

38,805. It has been pointed out that a comparatively small number of public schools are represented in these lists. Do you think the Foreign Office is known among the public schools as a possible service?—It has occurred to me that perhaps the conditions for applying for nomination were not so widely known as they might be.

38,806. We have it in evidence that nominations are given very freely, but I cannot help thinking that perhaps good men are not aware that it is very largely an open service?—I should think what you suggest is quite possible.

38,807. Do you get many inquiries with regard to the Foreign Office and Diplomatic Service?—No, I think not. I do not think they write to us. They write to us very extensively about the Egyptian Civil Service because they do not know whom to ask; but I do not think we have many inquiries about the Foreign Office.

38,808. At this examination the age is a year older; they go up to 25?—Yes.

38,809. As a rule do you find that men go in before their last chance?—I should say certainly most of them would enter the second time if they were not successful the first.

38,810. What you said about men who failed having other professions open to them is quite true, only they would be a little older than the man, say, who had failed for Class I.?—That is so. I do not suppose they would go in again if it was plain that they had no chance. I should not say it made a very great deal of difference.

38,811. (*Mr. Philip Snowden.*) Have they to state on a form to you whether they have competed in any Civil Service examination before and for what examination?—Presumably, yes.

38,812. You do not happen to remember whether these candidates for the consulships are the failures of the Class I. examination, largely?—I should not say so, but I do not know. It would require a good deal of research to ascertain that. I do not think there is any reason to believe it.

38,813. (*Mr. Shipley.*) Could you give us any information about how other countries fill their Diplomatic Services?—I am afraid it would be very inaccurate.

38,814. As far as I make out in France you are allowed three chances at a final examination; if they fail once they may go in twice again. Is that so with us?—That results from the working of the age rule.

38,815. A man may compete more than once?—Yes.

38,816. I suppose the waiting list runs out in twelve months, and then you start again?—That is so.

38,817. Would you see any objection to having the consular examination at a fixed time? It always seems to me that the consular examination is not nearly so well known as the others, and I think it is partly because it is held so erratically?—I think it would be a great advantage to hold it at a fixed time.

38,818. I have some information here about the way they enter the United States Service, and they seem to have an examination which, I take it, is rather more than medical—something in the nature of gymnastics. Is there anything like that in ours—any physical examination?—No, no physical examination.

38,819. They pay so much more attention to that kind of thing in the United States. With regard to the student-interpreters, in your experience of them do they compare favourably, say, with the higher consuls or the Diplomatic Service, or the Foreign Office?—Do you mean the student-interpreters for the Far East or the Near East?

38,820. Begin with the Near East?—The student-interpreters in the Near East are a very special class of men. They are really tremendous linguists, and from that point of view they are very remarkable. Most of them, or nearly all, take up six languages; and then they go to Cambridge and learn others. Those for the Far East are rather like diplomats, but they are not so highly qualified. The competition for the Far East is not so keen.

38,821. Looking down their salaries it struck me that these men with the very highest ability are very poorly paid considering the life they have to lead in the Near East?—It must be a very hard life, no doubt, though very interesting.

38,822. I suppose a man might pass in and become a diplomatist without any particular knowledge of such things as international transport or the big problems of emigration or the Convention of Berne or such

14 May 1914.]

Mr. STANLEY LEATHES, C.B.

[Continued.]

things as they examine them upon in France?—That is so.

38,823. As far as I make out, in France they have to have either a degree or diploma from the *École des Chartes*, or some other institute, and then they have a highly specialised examination in subjects that they would be likely to have to deal with in after life. Do you think that would lead to a better class of men passing in?—I should doubt it myself, and it is open to the very grave objection that the people who fail have wasted their time to a large extent.

38,824. (*Miss Haldane*.) With regard to the advertising of this consular examination, is it advertised in the public newspapers?—I think not. We never advertise for nomination posts. Any advertising that is done would be done by the Foreign Office, and I think their memorandum shows that they do not advertise.

38,825. I wondered how the examination became known to schools and universities. I was rather struck by seeing how very few Scotch boys have gone in for this examination, as I thought probably it would be one that would appeal to that type of boy?—It seems to me possible that it is not very widely known.

38,826. Is the examination in French and German what you would call an educational examination for the Consular Service?—No. I should say it is an examination in the languages.

38,827. Anyone whom I have known going in for that examination simply went abroad to learn the language in a colloquial way?—They have to know it in a scholarly way too. They have to be able to compose and translate in a scholarly way.

38,828. Is it of a sufficiently educational type?—I think as far as you can make an examination in a language educational it is educational.

38,829. But surely you can make an examination in a modern language highly educational?—Not unless you bring in the literature and the history of the country and everything of that sort, and that we do not feel able to do; it would keep them out.

38,830. It would make the standard too high?—Yes, it would make the requirements too high.

38,831. (*Chairman*.) In regard to the consular examination which consists of two parts, first the educational and next the special subjects, what would you say to having the examination altogether of the educational type, and subsequently giving them time to learn the special subjects?—I think that is rather a question for the Foreign Office.

38,832. It would be; but from your point of view, if you can express an opinion, I should like to know whether you would be likely to get a better type of man if you were to have the examination directed to purely educational subjects, and afterwards to employ the selected candidates, say, for six months during a period of probation in learning the special subjects?—Looking at it purely from my point of view, I should say that would be preferable. Of course, I see difficulties with regard to cost and trouble.

38,833. But, eliminating those difficulties, the men, if employed here in the Foreign Office and in the Board of Trade during a period of probation and given facilities to study and learn the special subjects, might at the end of six months be turned out more efficient consuls?—I think that is very likely.

38,834. You are not in favour of assimilating all the examinations for the Diplomatic Service, the Foreign Office, and the Class L, but you think there are particular reasons why you should retain the existing system?—Yes, with such modifications as there are.

## NINETY-SIXTH DAY.

Friday, 15th May 1914.

### PRESENT :

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

His Grace the DUKE OF DEVONSHIRE.

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Mr. ARTHUR BOUTWOOD.

Mr. JOHN ROBERT CLYNES, M.P.

Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Mr. GRAHAM WALLAS.

Miss HALDANE.

Mr. N. E. BEHRENS (*Secretary*).

Mr. CHARLES EDWIN MUSGRAVE (*Secretary to the London Chamber of Commerce*) called and examined.

Mr. WILLIAM G. WALDER (*Statistical and Information Department, London Chamber of Commerce*) was in attendance.

38,835. (*Chairman*.) Will you tell us what office you hold and what opportunities you have had of acquiring information respecting the Consular Service?—I am Secretary to the London Chamber of Commerce. I have held that position since 1909, but prior to that I was Assistant Secretary to the Chamber; I was appointed to that post in 1884. I joined the Chamber in 1882, so that I can speak with 32 years' experience of these matters so far as the Chamber of Commerce has been concerned in them.

38,836. Will you give us your evidence in your own way. As you go on I may put you a question or two with the object of elucidating obscurities?—I am authorised to give evidence on behalf of the Chamber of Commerce with special reference to the Diplomatic and Consular Services in relation to trade matters. The Chamber is frequently requested to invoke assistance on behalf of individual members, and on behalf of committees or trade sections of members. Those trade sections are large bodies of traders interested in a particular trade or a particular market. We have 45 of those sections. I may mention two or three of them :

We have the Anglo-Russian section, the Anglo-German section, and the Far Eastern section, including China and Japan. We have also an East India section, and so on. I need not refer to our Colonial sections, because we are here mainly concerned with foreign trade. On behalf of those sections, or of individuals trading with foreign countries, we have occasion to invoke the assistance of the Diplomatic and Consular Service either through the Board of Trade or the Foreign Office in connection with difficulties or grievances which may arise out of a large variety of business transactions. Latterly, I may say, that our practice has been to address the Board of Trade who communicate with the Foreign Office. Occasionally we go to the Foreign Office direct.

38,837. Do you ever go direct to our diplomatic and consular officers abroad?—Sometimes, but not so frequently now as in former years, in view of the Board of Trade arrangement under the Advisory Committee on Commercial Intelligence.

38,838. Will you explain in a few words what you mean by the Advisory Committee of the Board of

15 May 1914.]

MR. CHARLES EDWIN MUSGRAVE. (MR. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

Trade?—I will give that a little later. Since the formation of the Chamber in 1881 many matters of the kind to which I have referred have arisen, and our representations have usually been attended with results which we may consider satisfactory from the point of view of the interests concerned. One is not always successful; but on the whole we have nothing to complain of in the sympathy, at all events, with which our representations have been received.

38,839. Are things growing better in your estimation?—Certainly, and I will be able to give you one or two instances later. Then we have observed in recent years—and this is partly due to the activities of the Board of Trade Advisory Committee on Commercial Intelligence—that there is a greater disposition than formerly, with certain limitations which I will refer to more particularly presently, to afford such assistance to British traders as may be possible under certain prescribed conditions. Those prescribed conditions are laid down by the traditions of the Foreign Office Service and their administrative policy as it may change from time to time. You asked me about the Board of Trade Advisory Committee on Commercial Intelligence. That is a committee which was set up a few years ago, and consists of the heads of those Government departments which are more particularly associated with trade matters, with the addition of a number of representative commercial men selected and appointed by the President of the Board of Trade. Until recently that Advisory Committee, or rather the commercial members of the Advisory Committee were only able to deal with or advise upon matters which were put before them by the permanent officials; but by an arrangement which was made about a year ago the commercial members may initiate a subject with the approval of the Board of Trade, and that approval has not been, and I do not think ever will be, unreasonably withheld.

38,840. Do they meet at stated intervals?—Yes. You will probably be getting some evidence from them, but my impression is that they meet once in two months, or something like that, though I do not pledge myself to the accuracy of that. The improvement to which I have referred applies both to the Diplomatic Service and to the Consular Service—that is, speaking from our own point of view. For greater convenience in giving my evidence I would ask the Commission to allow me to deal separately with the two Services in view of certain essential differences which the Commission will appreciate; but my object is to show how these services have been instrumental in the promotion of legitimate commercial interests abroad, and what further possibilities may exist for extended usefulness in the future. Practically I hope that will be within the scope of the Commission's inquiry.

38,841. Undoubtedly it will?—Dealing first, with the Diplomatic Service in connection with trade matters, I think I am right in stating that, broadly speaking, the action taken has been mainly in the following directions—there may be others, but these are the principal ones: (A) Negotiations of treaties of commerce; (B) Obtaining information as to probable changes in foreign tariffs. That is very necessary, because if we have particulars in good time of a projected change in a tariff, or in the law affecting tariffs, it enables timely representations to be made before the proposals have got so far that neither diplomacy nor peaceful persuasion will alter the intentions of the projectors of the proposals. Then another point is (C) the unreasonable treatment of British shippers in connection with Customs tariffs, as to classification and otherwise. I think the Commission know that a foreign Customs tariff is a wonderfully intricate piece of machinery, not only in operation but even on paper; and there are occasions when we have to ask the assistance of our Government in connection with administration, more particularly questions of classification—as to whether a particular article comes within one classification or not, and consequently whether it is subject to a low duty or a high duty. It sometimes happens that a very cheap and common article is being assessed for duty quite beyond its proper value or its actual nature, and therefore from a business point of view

these sort of questions are very important. Another point upon which the Diplomatic Service is most useful to trade is (D) in supporting British owners of foreign concessions—concessions for public works, contracts, and things of that sort—but hitherto that support has usually been given after the concession has been obtained, and not prior to it being obtained; and that is a point I want to develop, with your permission, a little later on.

38,842. You say that the support of the Diplomatic Department is usually given after the concession has been received, and not before it has been received?—Quite so. There is little, if any, assistance given in obtaining it.

38,843. You propose to say something later in favour of assistance being given before the concession is obtained?—Certainly, in approved cases. Another valuable service which is rendered is (E) in supporting British traders in cases of alleged miscarriage of justice. The judicial system in some countries cannot be mentioned in the same breath as our own, and anomalies and grievances arise; and it has been found possible to bring pressure to bear which has helped to rectify a situation which has been most unfair to the British trader. I am referring particularly to suits instituted by or against British subjects. We had instances in Persia, and we have had some very bad instances in Spain in particular, and there the Foreign Office was very useful. In the case of Persia I may mention that certain money which was being wrongfully withheld was obtained after some years' efforts on the part of the Foreign Office. I do not complain of the delay; I only wish to express appreciation of the success. I have mentioned the cases with regard to a possible miscarriage of justice; they are principally in the direction of unreasonable delay in the hearing of cases.

38,844. On some of those matters do the consular authorities also lend their assistance?—Yes, to some extent, I believe, but not in the same degree. The moral effect of representation by an embassy or legation is very much greater than that of a consulate. I should like to see the status of the consuls raised somewhat. In status they rather suffer by comparison. In the case of Spain I am reminded that our Minister in Spain went direct to the Minister of Justice in Spain, and was able to disclose the details of the scandal which existed, and some steps were taken to mitigate the trouble. The Chamber desires to acknowledge the promptitude with which on several occasions the Foreign Office has communicated by cable or letter to His Majesty's Ambassadors or Ministers in support of British interests in certain cases. I have, for example, a case which I am going to put before the Foreign Office to-day on a telegram we have received from China from the Hong Kong Chamber of Commerce with reference to piracy in southern waters there. I have very little doubt whatever that on receipt of this letter and our representations the Foreign Office will cable instructions; they will not wait and send a letter; when they are seized of danger to commercial interests they are very ready to act promptly. But having said that, I would like to point out that the impression exists among British firms that in some cases instructions are given to the Minister abroad to make friendly and informal representations, and they may be effective in some cases; it all depends upon the terms upon which the two Governments may be at the time. Friendly and informal representations may be very effective, but there are occasions when it is more desirable we think to make formal representations. If it is known that the British Government, and the force of the British Government—I mean all the moral force of the position of Ambassador or Minister—is behind the complainant, that would be effective in some cases where we have not been able to get satisfactory results. I have an instance, if I may refer to it.

38,845. I was going to ask you to give me an instance so that the Commission may clearly understand what you mean?—Here is an instance where a large firm of contractors in London and Liverpool had made a contract with a municipality in Portugal to do all the sanitary work and drainage of the municipality. They

15 May 1914.]

MR. CHARLES EDWIN MUSGRAVE. (MR. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

had to deposit a sum of money as a guarantee that they would carry out the work, the understanding being, of course, that that money would be refunded to them on the completion of the contract—it is what is called caution-money, both in Turkey and there. They carried out their works satisfactorily, but although these works were completed some years ago this firm have been unable to get payment of the money, which, with interest, now amounts to about 40,000*l.* We understand that informal representations were made to the Portuguese Government, but that very little notice was taken of them. We went to Mr. Acland, the Under-Secretary of State, and convinced him of the justice of the complaint, and, I may say, the injustice of the treatment which our contractors had received, who had not only carried out their work but were unable to get back the money they had deposited as a guarantee that they would carry it out. Mr. Acland was so far impressed with the representation that he agreed that further representations—formal representations—should be made on the general ground, of course, that such treatment of British subjects and British contractors was not calculated to encourage trade and was not in the interests of the Portuguese themselves who might be coming to this market for money; and, as you know, confidence is at the root of a good and satisfactory business. We have not heard the upshot of that, but we have every reason to hope that the ultimate result will be satisfactory. At all events there is the point we wanted to make, that official representations were more effective than informal and friendly ones.

38,846. In that particular case did you communicate with the Ambassador or the British Minister at Lisbon and suggest that official representation should be made to the Portuguese Government?—We did not. We went to the Foreign Office, and the Foreign Office ultimately decided to make those further representations.

38,847. But you do not question that in the first instance unofficial representations were the proper thing?—I quite agree. As a matter of fact there is a British Chamber of Commerce in Portugal, and they brought it under our notice as a grievance. They are there to look after the interests of British traders.

38,848. It comes to this, that where unofficial recommendations fail an official recommendation succeeds, or has had a chance of succeeding?—Quite so.

38,849. All that is satisfactory to you; the Foreign Office and the Diplomatic Service are responsive to your call?—Yes, but I want to say something by way of qualification with regard to that. I am aware that the traditions of the Foreign Office are against direct intervention in trade matters. But it is freely stated by people whom I represent that other foreign governments are less diffident in respect of the commercial interests of their subjects in other countries, and I submit that in the altered circumstances of the present day this country would be justified in taking a less diffident attitude.

38,850. Might I ask whether the attitude which you desiderate should be taken in regard to pushing trade or in regard, for instance, to the recovery of debts and the enforcement of contracts?—I think in all three—in all those directions.

38,851. So far as I understand, in regard to enforcing claims on a foreign government, you have not found the Foreign Office and Diplomatic Service unresponsive?—We have found them diffident, as I prefer to put it. The idea is this, if I may put it in a colloquialism, that it is considered to be *infra dig* to appear to be pushing trade.

38,852. That is just what I want to ascertain—what the precise complaint is or the precise cause of dissatisfaction; whether it is, for example, in regard to the recovery of the just dues of a firm in England or laxity or unwillingness to push the trade interests of a firm in England?—I think the diffidence is more in the direction of not pushing the trade interests.

38,853. You think that other governments do more in that direction than the British Government does?—Yes. It seems to be their policy to support their nationals more openly than our Government does.

38,854. Would not that part of the question come more naturally under your consular division?—No, because I will give you presently my view of what the consular functions are; but there is a distinct division between the two things. I know a great many consuls, and their sphere of action is somewhat limited.

38,855. You think that British missions could do more and ought to do more in pushing the interests of British trade?—The larger interests, of course, and within reasonable bounds. I do not suggest that every concession-hunter, whatever his status, should receive support.

38,856. The larger and general interests of British trade?—I think that it should be done for firms of repute. Inquiries could be made of course.

38,857. Will you indicate the means by which, in your opinion, the interests of British trade could be pushed by British missions and embassies abroad? Would you suggest the appointment, or the addition to the embassy staff, of a particular officer charged with those functions to which you now refer?—Yes, that would be one of the means, and I will develop it presently. I have referred to the attitude of diffidence. In these days there is no diffidence on the part of foreign governments, and possibly a little less diffidence on the part of ourselves would not be at all undignified under modern conditions. I have mentioned the altered circumstances. I think altered circumstances will be common ground. Circumstances have changed very much in regard to the competition of other countries with us and the methods of business in the last few years. No doubt the position has been improved by reason of the efforts of commercial attachés and trade commissioners. I think the Commission know that there are eight commercial attachés (for foreign countries) and there are trade commissioners (for the Dominions). They frequently meet the London Chamber of Commerce and other chambers of commerce and associations, and keep themselves in touch with business interests. As a matter of fact, I have just arranged appointments which will occupy the whole day with many members of our Chamber with Mr. Ainscough, the special trade commissioner, who is to be sent out to China through the Board of Trade and the Foreign Office to report on the prospects of British trade and obstacles and difficulties in the way. It is a very great advantage that that trade commissioner should be in touch with people who are actually doing business, that he should know what their desires are, and that he should be able in his report to produce something which has more than a journalistic value, and which may be of practical utility.

38,858. That is the direction in which you think the embassies could give you greater assistance?—That is one of the directions, but my point is that, while the special commissioners charged with these missions can perform a very great service, they are away for a year or so and then come back again; the troubles which a business man has may arise on the spot, and would have to be dealt with in a great many cases by the local Minister or by his staff.

38,859. (Mr. Boutwood.) Will you tell me what trade commissioners are?—Trade commissioners are officials appointed by the Advisory Committee of the Board of Trade to visit various countries and report on openings for British trade.

38,860. Are they members of the commercial world or of the public service?—Usually the Board of Trade have selected the commissioners outside the Civil Service. For instance, the trade commissioner for Canada, who is in London now (and who, by the way, is going to address the members of the Chamber of Commerce in a few days' time on the position of trade in Canada), was a business man in the City of London—a merchant—and, therefore, was personally acquainted with the details of business. Mr. Worthington, the head of the Commercial Intelligence Branch of the Board of Trade in Basinghall Street, was a merchant also, and he acted first as a special trade commissioner. He produced reports on South America which were very useful, and he was appointed as the first head of the Intelligence Branch of the Commercial Department of the Board of Trade.

15 May 1914.]

MR. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

38,861. Have they permanent appointments, or is each commissioner appointed for one particular report?—They are not all permanent. They have short engagements. But the Board of Trade, of course, would be able to give you these particulars more precisely than I can. I was going to say that these special commissioners have been extremely useful because they have been able to deal with authorities on the spot with regard to matters brought under their notice, but when they have returned here again, there is still a liability that something might happen in the particular countries they have visited, and there we want naturally the man on the spot; we want the Minister or someone in his office. So the man on the spot is a necessity as well as the special commissioner.

38,862. (Chairman.) You have the man on the spot in the Minister at present. All you want to do is to stimulate his activities and his good will, as I understand?—Yes, and to provide him—and I wish to say the same thing in regard to consuls—with such assistance as will enable him to deal with details. The position of an Ambassador or a Minister is such that if it is a very trifling matter—the point may seem trifling though it is of great importance to some particular trader—it would not do for the Minister to deal with that, but someone attached to him could. At the Embassy in Paris, Sir Henry Austin Lee, the commercial attaché, is particularly charged with looking after difficulties in connection with classification of tariffs. There they have the man on the spot. Sir Henry Austin Lee has been in Paris for a great many years. He knows the French officials, and is able to render exceptional service. The suggestion I make is, that the trade commissioners are not always on the spot, or so well acquainted with local conditions as the local ambassador and his staff, whose action can be immediate when circumstances so require, and it might be possible to provide the ambassador with additional assistance in the way of men of special commercial knowledge. So far as our information goes, the diffidence to which I have referred depends upon the nature of the instructions from Downing Street rather than any real reluctance on the part of His Majesty's representatives abroad to intervene in such matters. The point is not that the Minister will not, but he has not the instructions, or the power, or, perhaps, it is not policy. Sometimes politics interfere with the zeal of the Diplomatic Service in these matters. They would be very glad to perform a service if it were politic that they should do so; but it is just a question of high policy, and I think there are signs that the diffidence to which I have referred will be relaxed.

38,863. You have it in your own power to ascertain in London and to make sure whether these instructions have been issued or not—these instructions which you suggest produce reluctance on the part of His Majesty's Ministers to act—and you have it, at all events to some extent, in your power so to influence the Ministers here as to procure the sort of action that you want to have carried out?—We should have to get together a deputation; we should have to persuade. Of course, the administration of the British Foreign Office is a very important matter. There may be things that we do not know. All we ask is a greater leaning towards the same kind of assistance which some foreign governments give their traders—a little more disposition to help.

38,864. We take it from you that foreign governments do give that assistance. Perhaps a little later on you will be able to give us some evidence as to the character of the assistance which foreign governments give to foreign traders?—Yes, I can give you some general indication about that. I was going to remark in a general way that the nation's trade is the source and basis of the revenue of the country, and the prosperity of the people, and therefore we suggest that it should be the first interest of the Government and its diplomatic and consular officials not only to protect (which it is admitted they do at the present time), but to support in every possible way the initiative of British private firms and financial concerns who may endeavour to obtain concessions and contracts in foreign countries for railways, municipal undertakings, financial and

trading schemes of all kinds, subject, of course, to proper guarantees of the standing of those desiring the assistance and support of His Majesty's officials. I put there in a phrase what I suggest. It has been very frequently asserted that the representatives of foreign governments are more active in such matters, with the result that their nationals benefit. In strengthening the commercial position of any country in another country, I think it follows that the political influence of the former is also enhanced. The political influence of France and Germany in particular has certainly followed the establishment of commercial interests in various parts of the world—in the Near East, in China, and also in Africa. The Governments which I am informed are more inclined than any other to give this rather valuable assistance in promoting trade interests are the German, the American, and the French, especially in such countries as Russia. I am glad to say that in Russia we are gaining in influence every day. The trade relations between Russia and this country are increasing. I have that, not only on the authority of the Russian Consul-General here, whose business has increased four-fold during the last five or six years, but I also know from our own consuls in Russia that their work is increasing as well. It is important to realise that in Russia, China, Turkey, Portugal, and Morocco, other countries are looking out for the trade, and their traders are being well supported by their governments, and I do not think it is too much to suggest that ours should be similarly supported as far as possible.

38,865. That, I understand, concludes what you have to say upon the diplomatic aspect of the case?—Yes.

38,866. As we are specially concerned with the establishments of the Diplomatic and Consular Services abroad, I might perhaps sum up the object and the aim of your representations to be this: you desire that the staffs of missions should be strengthened with a view to dealing more especially with commercial matters?—Quite so.

38,867. With a view that the mission should take more active interest in promoting the interests of British subjects in pushing trade, getting concessions, and so forth?—Generally that is so. I do not wish to make any reflections at all upon the Service. My suggestion is, that they should have the means of doing better.

38,868. I have not understood you as making any reflections upon them?—And that would come in the way of having the right sort of advice. I remember the British Minister in Brussels interesting himself in the question of the duty on cloth caps. It happened to be quite an interesting point here affecting a large amount of trade. It was very good of him to do it, but I suggest that in some centres such a question as the duty on cloth caps might be left to a subordinate of the Minister or the Ambassador (as I think was done in this case), but the subordinate of a Minister has, when he approaches the local government or authorities on the spot, a certain amount of standing in the same way as the Commission are good enough to recognise me as representing the London Chamber of Commerce; it is what I have behind me; it is not what I am. That is the sort of influence I mean. If it is understood that there is official influence behind it and if the technical work is done by experts, I do not think we should have anything whatever to complain of. I have here a list that I can put in of subjects with which we have been dealing since 1883, showing the nature of some of the matters in question.

38,869. Upon which you have made representations?—Yes; and some of which I have referred to in the course of my evidence.

38,870. If you will hand it in to the secretary we will see if it can be attached to your evidence or published as an appendix?—Certainly, subject to that, I would like to put it in. It goes from 1883 to the present time. It is merely a list of points upon which we have had very valuable help from the Consular and the Diplomatic Services.

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

38,871. As indicating the sort of assistance which you hope to get in the future?—Certainly.

38,872. Now will you proceed to deal with the Consular Service?—Dealing now with the Consular Service in relation to trade, I desire to inform the Commission that the London Chamber of Commerce has made frequent representations to His Majesty's Government both independently and through the Association of Chambers of Commerce of the United Kingdom, at whose meetings the subject has been discussed on many occasions. We are members of the Associated Chambers of Commerce. We frequently bring propositions before them, which I am glad to say they usually endorse; but, of course, in the present instance, although I may have to refer to that association, I am not representing them but am representing the London Chamber. Speaking generally, consular assistance to trade, apart from the usual official services—and the Commission will have before them the duties of consuls in their purely official and routine sense—and leaving those out if I may, is required more particularly in respect of reports as to trade matters, statistics, etc. They are frequently asked to supply the names of importers of particular goods in the town where they are located, or the names of exporters of particular goods and produce. We frequently get inquiries, for instance, as to whether we will send a list of the principal lemon growers in Sicily or the principal shippers. We probably have that list in the office, because we have a great deal of information now; but if we had not got it, we should write out either direct or through the Board of Trade to the consul, and he would give us a list of names without responsibility that would enable the buyer on this side to communicate with people in Sicily. I take that just as an instance, but I could give a hundred such illustrations. In that way buyers and sellers are brought together, and, of course, business follows. So it is very valuable indeed to get a reputable list of traders from your consul abroad in the particular town in which he is located. They are also asked for, and frequently give, advice in connection with claims or contested accounts. It may be that the consul himself will not enforce the payment of the bill, but he would give advice, and that advice is useful, probably recommending some solicitor or some reputable advocate, and it is very necessary that that should be done. I have heard of cases where traders have confided their interests unwittingly to some local representative abroad who has not acted fairly in the matters entrusted to him. The other point is about openings for trade. That is a very wide subject and I think it is so elementary that I need not enlarge upon it very much; but the members of the Commission will be familiar with consular reports and the sort of information given in them. Those reports, being published, are available to everybody, but what the Chamber of Commerce are specially considering, and I know the Board of Trade are, is the question of exclusive information; that is to say, that a trader in a particular line of business who is making the inquiry ought to have the benefit of that inquiry for himself. The information, of course, which is got for him by the public service or by the Chamber of Commerce should be available to everybody else who asks for it, but publication, from a business point of view, has only a limited value. It suggests to any trader that there is an opening in a certain direction, and having got the hint he either wants the Chamber of Commerce or the Government to give him more information or he goes on the spot and gets it. These reports are very valuable indications and I do not think we have a word to say of criticism of them, because they have been very greatly improved in recent years and the publication of them has been much more rapid.

38,873. Referring to the eight commercial attachés you have been mentioning, do they compile these reports or are they compiled in the consul's office?—The commercial attachés compile a different class of report altogether. They would report for an entire country or for a group of countries.

38,874. We know that is the report which comes home from the embassy, but you have now been men-

tioning special reports which are of great value to commerce. Are these special reports on particular subjects compiled by those eight gentlemen mentioned or do they come from the consuls?—They both prepare reports. The trade commissioner or commercial attaché very often makes investigations under special instructions in particular directions. The consul has to report through his vice-consuls and otherwise on the whole trade of his particular district. So the distinction is between "country" and "district."

38,875. But the consuls do also occasionally compile those special—those very valuable reports to which you refer?—Yes, and there are not only the reports which are published and printed, but they also send confidential reports to the Board of Trade either by request or on their own initiative.

38,876. Say that a particular firm wished to have a confidential report on the capabilities of a particular district or the possibility of pushing a particular line of trade in a district, would the Board of Trade get a confidential report for them; and when such a report comes, does the Board of Trade make it generally public?—The Board of Trade would not make it generally public, but they would file the information for the benefit of the next inquirer. It would not be fair, I submit, to publish that report far and wide, because anything that is printed and published may be bought by foreigners as easily as by Englishmen. Therefore, I think there is a very wise discrimination made between the matter which is put in the consular reports and the matter which is kept by the Board of Trade at the disposal of the Chambers of Commerce and of British traders who are entitled to receive it.

38,877. If a report is compiled at the instance of a particular trader, that report must be available for other British traders also?—Obviously. May I add that it very frequently happens that a trader thinks he ought to write to a consul or thinks he has to go abroad for information, when all the time they have it in the office at the Board of Trade; and I may claim the same thing for the Chamber of Commerce. We have a very extensive information and statistical department. We keep and file all these reports and we also have confidential reports, so that we have a good deal in the office. We do not have to write abroad every time we want to give some of the information I have been referring to. The London Chamber of Commerce does not so much call in question the efficiency as a whole of the Consular Service, which has latterly improved greatly, as the inadequate allowances made for office expenses and additional assistance to the consuls. Proper allowances are more necessary now than ever before, owing to the larger demands made upon the Consular Service, not only by the Commercial Intelligence Committee of the Board of Trade, but by various other departments of the Government and by individual traders. I am told that consuls make inquiries for various Government departments now. Information may be wanted by the Local Government Board, for example, as to certain local government conditions abroad, and the consul is asked to get the information, so that the demand for information of all sorts from the consuls is growing. I have seen many of them and they tell me that that is so. We do not question their efficiency, but we do think that they ought to be provided with sufficient means to carry out the increasing work which is thrown upon them.

38,878. You say that the Consular Service has improved considerably lately?—Yes.

38,879. From what time would you date that improvement? In the year 1903 a departmental committee was appointed under the presidency of Sir William Walrond. The present Lord Inchcape and Mr. Bonar Law were members of it, and they submitted a report, principally connected with the recruitment for the Consular Service. Does the improvement which you refer to date from the submission of that report or from before it?—I should be inclined to say that it has dated from that report; in fact I was going to say to the Commission that a good deal of what I have to put before them is better said in this report. As an ideal or as a programme of what would be desir-

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

able to be attained, this report is admirable from the point of view of the commercial community.

38,880. And you do not think you have anything to change or alter in that report having regard to existing circumstances?—No, subject to some remarks which perhaps you will allow me to make. I should say, broadly speaking, that if effect were given to this report in its entirety and thoroughly, and if sufficient money and men were voted to give effect to it, that report is admirable from our point of view.

38,881. A prominent proposal in that report in connection with the recruitment of the Consular Service was that an effort should be made to bring into the Service young gentlemen who, in addition to having the usual education, had also acquired some commercial experience. Is it within your knowledge whether such men have been recruited into the Consular Service?—I am afraid I cannot answer that question. I met a young man the other day who had been a vice-consul and who had had that sort of experience, and as he did not see any chance of further promotion he has asked me to keep an eye upon the possibilities of a place for him. We have an employment registry at our Chamber and about 5,000 candidates pass through it every year. This young man had learnt practically the details of the Service but there was no prospect of his getting further, and he is prepared to go back again into commercial life.

38,882. Did he strike you as being a man who was suited for the Consular Service?—Certainly.

38,883. Is his position now that of a vice-consul?—Yes.

38,884. Is he stationed in a healthy place, or in an unhealthy place?—It is in Italy.

38,885. He is a vice-consul getting I suppose over 300*l.* a year?—That I do not know.

38,886. (*Mr. Graham Wallas.*) Is he a paid or an unpaid vice-consul?—I think he must be unpaid.

38,887. (*Chairman.*) The unpaid consuls, as you probably know, are usually gentlemen in commercial life in the country?—Yes.

38,888. Carrying on their own business and also carrying on the business of British consul, and they are not usually appointed except in places where there is not sufficient work for a paid consul. This gentleman was in commercial life here at home?—No, as a matter of fact he is in Italy.

38,889. He has his own business in Italy?—I merely mentioned to the Commission that I had come across a young gentleman with the particular qualifications mentioned. I have come across this vice-consul who I think is an unpaid vice-consul. I did not go closely into the matter. That is the sort of man that ought to be kept in the Service.

38,890. Is he an Englishman?—Yes.

38,891. Do you remember his name?—I do not at the moment, but I shall be glad to give you particulars of the case.

38,892. By the name we could tell you at once whether he was paid or unpaid?—I receive a great many visitors, but it flashed across me that this was the type of man who I am sure would be very useful if he could be brought permanently into the Service in some way or other. That is why I mentioned it. I can give you the exact details if you like.

38,893. In regard to the contentment and the efficiency of the Consular Service, what pay do you think a consul in his various stages should receive? I understand there are three grades of members of it—the vice-consul, the consul, and the consul-general. The vice-consul's salary, I understand, begins at 300*l.* a year. Do you think the pay of 1,200*l.* a year would be adequate for a consul-general?—I should say it depended entirely upon the country where he was, the place at which he was stationed, and the position which he would have to keep up in competition with the consuls of other countries. That is rather an interesting point. We had that point before us in connection with Russia, and I can give you the figures as given to us—they have altered since—but there was a comparison made between the salary of the British Consul in St. Petersburg and the allowances made to him and what was paid to the consul for

Germany. The point is, that the German Consul had a very fine residence in a prominent part of the town; he looms larger therefore, I may say, in the estimation of the people there. Our consul, with very little assistance indeed, in a side street, and located in an inferior sort of a house, naturally was not socially, at all events, or from the point of view of appearances, on a par with the German Consul. Therefore, I should say that in establishing a consulate in Paris or St. Petersburg or any large centre, the importance of the post should determine the salary.

38,894. Would you be disposed to think that the principle should rather be this—that you give to the consul a salary adequate to retain his services as a member of an organised Service, and that if you post him to an expensive place, you should give him an additional allowance while he remains in that place, commensurate with the extra expenditure he would have to incur there?—I quite agree to that.

38,895. I am anxious to know whether in those conditions you thought the salary of 1,200*l.* per annum was adequate as the maximum to which a member of the Consular Service could hope to get and upon which his pension will be calculated?—I do not think I can quite judge of that point, but speaking for myself, of course, the greater cost of living just now all over the world, which is in everybody's mind, is a factor in the case and would be covered by the allowance probably.

38,896. My suggestion is, that while living in a particular place the consul's extra expenditure would be covered by the allowance?—Yes, I think a consul should not be forgotten in that connection.

38,897. Has the Chamber of Commerce ever considered what would be a proper scale of pay for the Consular Service?—No, we have not agreed upon a scale, but what we have done is, we have gone into figures as to the cost of the Consular Service and we have compared the cost of the Consular Service with the total of British trade, and we think that the amount of money voted for it is out of all proportion to the amount of trade we want to ensure, and to maintain.

38,898. Out of all proportion small?—Yes, out of all proportion small. I have some figures with regard to that, which I was going to mention at the end of my evidence.

38,899. Then perhaps you will keep them until later, at present will you go on in the order in which you have prepared your evidence?—I was going to say that a deputation from the London Chamber of Commerce was assured by Mr. McKinnon Wood, when Under-Secretary of State for Foreign Affairs, at the House of Commons in July 1910, that wherever it was possible to appoint additional consuls or to replace foreigners by British consuls it would be done if it could be shown that the trade of the place or the district required it. This to my knowledge has been done since in certain cases. There was a popular outcry against there being so many British consuls of foreign nationality. When that was investigated it was found that that remark applied more particularly to unpaid consuls.

38,900. Entirely I should say, because the appointment to the paid service is apparently restricted to persons of British nationality. The rule is that candidates for the Consular Service must be natural-born subjects of His Majesty. Persons not actually born within the United Kingdom or born within the United Kingdom of parents not born therein will only be allowed to compete by special permission of the Secretary of State. These foreign gentlemen must have been unpaid?—That is so, but there was an outcry with regard to it. There were a few cases—for instance, Leipsic was one where the consul was a German but he has been replaced on retirement by a Britisher.

38,901. How has that affected British trade? Has it been beneficial?—I have no means of tracing that, but there is a sentimental objection, if I may say so, to a consul, paid or unpaid, in an important centre not being of British nationality, and that point we have had some assurances about. There is a great deal to be said in favour of vice-consuls of foreign nationality for this reason, that providing the Consul-General is of British nationality, it is a useful thing for him to be

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

able to employ foreigners who are able to get certain information, which they bring to him, and by their knowledge of the language, and by their social intercourse with their own countrymen they can be very useful indeed in getting the right sort of information. I do not wish to labour this point, but Mr. McKinnon Wood pointed out to our deputation that there are a great many Englishmen in this country who act as consuls or vice-consuls for foreign countries. Primarily, if the head of the district is of British nationality, the sentimental objection, I think, is very largely removed.

38,902. The head of the district?—Yes, the chief consular officer. There is a consulate and a vice-consulate—several in a district very frequently. Having regard to the considerations which I mentioned about appointing additional paid consuls where the trade of the place warranted it, and also employing consuls of British nationality as far as possible, the Associated Chambers of Commerce passed this resolution: "In view of the growing activity and utility of the Consular Service of the principal foreign countries competing with the United Kingdom in the markets of the world, the British Consular Service should be strengthened and improved in a manner commensurate with the requirements of British traders, and that this Association assures His Majesty's Government of its full support in any measures, financial or otherwise, which will conduce to that end." That resolution was moved by a representative of the London Chamber of Commerce, and was endorsed by the others. Our point is not that there is any great inefficiency in the Consular Service, but the question of sufficiency. In reply to this resolution Sir Edward Grey stated that he was in correspondence with the Treasury with a view to the improvement of the conditions at present existing in the Consular Service. Subsequent to that, I think, it is within the knowledge of some members of the Commission that it was announced that an additional sum of 20,000*l.* had been granted for the purposes of allowances to consuls and generally for strengthening the Service in that direction. There is rather an interesting question which was put to Sir Edward Grey by Sir Albert Spicer after the friendly interview with Mr. McKinnon Wood: "Whether, in view of the desirability of improving the conditions of the Consular Service, he can give information showing, apart from the annual payments, salaries, etc., to consular officers, the number, age, nationality, and remuneration received by the clerks employed in the principal consulates and consulates-general, and the special duties assigned to those employees whose remunerations are covered by office allowances, as well as the rent paid for, and address of the respective consular offices." That was really the crux of the whole thing. We did not get a complete reply to our inquiry, and I am hoping possibly that the Commission may pursue the matter further, because it is worth going into. Sir Edward Grey's reply was this: "The clerical staffs of the consulates in the general Service are not in the direct employment of His Majesty's Government, but in that of the consuls, who delegate to them such clerical duties as they see fit, and as they are legally competent to discharge. I am not in a position to give full particulars as to the consular clerks in question. Consular officers are themselves in most cases the legal tenants of the consular offices, and pay the rent out of the sum assigned as office allowance. Such office allowances are fixed with the sanction of the Treasury from time to time according to the need of the various posts. Consular officers are instructed to furnish the Foreign Office with the address of their offices, and these are available if required, but for postal purposes 'British Consulate' is a sufficient address. Should the hon. member have definite suggestions to make as to improving the conditions of the Consular Service, perhaps he will be good enough to communicate them." Some suggestions have been made to Sir Edward Grey, to which I will refer presently. There is a misapprehension as to the scope of the inquiry. What we wanted to get at when we asked for the addresses of the

consular offices was to know in which particular streets, or which particular buildings they were, because the general allegation is that you find the British Consulate up some back street which is difficult to reach, and you find some of the other consulates in a leading thoroughfare where they are easily found. That may be again a sentimental objection, but from the point of view of the predominant commercial country in the world, it is one of those things worthy of consideration, and it will be worth the money if an improvement can be made. It bears somewhat on the question of commercial or political prestige as to the sort of appearance we are able to keep up abroad.

38,903. Has the Chamber of Commerce formed any opinion upon that system whereby consuls engage their staff and pay the rent of their consulates?—I cannot say that the Chamber has formed any opinion about that. I could speak unofficially about it. I know, as a fact, that the consuls would like to have the right to engage some of their clerks, but I am making a suggestion to the Commission, later on, that there should be attached to the principal consulates a certain resident commercial expert of the same status as, say, the chief clerk of a merchant firm with similar knowledge.

38,904. That appeals to different considerations?—I do not think the Chamber would at all repudiate my view of the matter, because I am merely reflecting what I have been hearing for a great many years.

38,905. Then you see no objection to the consul being given a lump sum from which he should pay his staff and pay the rent of the consulate?—Certainly not, and for ordinary purely clerical service I think it is just as well that the consul should have the choice of his men. But what I want to see attached to the consulates are certain men with commercial knowledge, and they should be practically qualified, under certain conditions to be laid down by the Government.

38,906. We have been informed that in some consulates, at all events, when the consul goes on leave, or is ill, and has to go away for the purposes of health, he nominates his *locum tenens*, who may not be a Government official. Of course where there is a vice-consul he would naturally step into the place of the consul; but where there is no vice-consul, and the consul is obliged to leave, he it is who appoints his successor, and arranges with the successor as to his emoluments, and so on. Has that state of things ever been brought prominently to the notice of the Chamber of Commerce?—No, I cannot say it has; but if I may express an opinion, for what it is worth, I should say trust the man on the spot. I mean, supposing a London firm has a house in China and something happens to the partner in China and he has perhaps to leave, and he has to arrange for business to be done in his absence, the London house would confirm it. A consul is located abroad to do his best for his country, and I should be inclined to leave it to him.

38,907. That might be an obvious way of doing it in case the consul had to leave the country suddenly?—Yes.

38,908. But where the periods of leave can be anticipated, would you also leave to the consul the appointment of his *locum tenens*?—I think I should, in the same way that I think a doctor would nominate his own *locum tenens*; he would think about his patients and their prejudices and fancies, and arrange for such a man as would adequately represent him.

38,909. The cases are not on all fours, are they?—I will accept your Lordship's ruling on that, but at the same time I should say that the man on the spot should be qualified to select his *locum tenens*. I mentioned that Sir Edward Grey said he would consider any definite suggestions as to improving the conditions of the Consular Service, and therefore the Chamber sent to him and to Mr. Acland a memorandum reaffirming previous views on the question. The main points of principle, upon which I can say the Chamber entirely agrees, are these: First, that as far as practicable the British Consular Service should be confined to British subjects whether paid or unpaid. Secondly, that as regards certain countries (that is Germany, Russia, Scandinavia, etc.) where there are now a considerable number

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

of foreigners acting as British consuls or vice-consuls, such countries should be divided into districts with a British subject in charge; that may involve some re-adjustment. Then, thirdly, that the status of British consuls generally should be raised—by examination; by adequate remuneration for their services; and by giving greater encouragement to young men to qualify themselves for the consular services.

38,910. I wonder if it would be possible for you to place before the Chamber of Commerce this question of a fair and equitable maximum and a minimum scale of pay for the Consular Service, keeping in mind what is now paid them—what should be the scale for a vice-consul minimum and maximum, the scale for a consul, and the scale for a consul-general? If you have any information or figures that would help this Commission to a clear judgment upon that matter we would be very glad to get them from you?—I will undertake to bring that matter before my executive committee and to make inquiries, and later on, if I may do so, send a supplementary communication.

38,911. We should hope to have it not later than the beginning of July?—I think I could investigate the point and let you know what we thought about it by that time.

38,912. Will you continue your general evidence now?—Having stated the ideal conditions with regard to British subjects, consular districts, and raising the status of the consuls, I would like to go on to say that we recognise that there has been a marked improvement in the Consular Service in recent years, and that the adoption of the three suggestions which I have made would involve some fundamental changes in the present system. But the question of immediate importance is the provision of adequate financial resources, on which it is understood that Sir Edward Grey is in consultation with the Treasury.

38,913. What fundamental changes in the present system would your proposals, if adopted, introduce?—First of all, the division into consular districts, and then the question of giving greater encouragement to young men to qualify.

38,914. I understood you to say that the principles laid down in the Walrod Report are satisfactory to you?—Generally satisfactory.

38,915. That report lays down a scheme of examination which this Commission will reconsider; but in other respects you have your consul, your vice-consul, and your consul-general, and that particular division of the Service into three grades seems to be satisfactory to you?—Yes, I think so.

38,916. And the question remains whether the pay at present attached to each grade is adequate, and that is a matter worthy of consideration?—Quite so. I was merely putting on record, *qua* the Chamber of Commerce, and not for myself, what were the conditions which they thought would be satisfactory; but I agree that they are mainly covered by this report. I have quoted Sir Albert Spicer's question and Sir Edward Grey's reply. We believe that the consideration of the data asked for in Sir Albert Spicer's question would show that present allowances for the expenses of the various consulates are insufficient to meet the demands upon them by the trading community, or by the various departments of the Government requiring information and reports on such matters as are constantly referred to them. The growth of British commerce concurrently with increased foreign competition obviously calls for additional office expenditure and personnel. Sir Edward Grey's statement that the clerical staffs of the consulates are directly employed by the consuls themselves, and that the latter are the legal tenants of the offices they occupy does not dispose of the point raised, as obviously the consuls are limited in the matter of personnel and accommodation by the allowance made to them. It may, therefore, be fairly urged that where this is shown to be inadequate it should be increased, regard being had to the commercial importance of the particular consulate. There, of course, we get to the question of money, which you asked me about. As regards the offices of the consulate and their suitability, convenient

location is largely a matter of expense, and in this respect British consulates do not compare favourably with those of leading foreign countries. The addresses of the consuls were not, as Sir Edward Grey's reply assumes, required for postal purposes, but to show that in some cases the locations of consulates are not always convenient, sufficiently central for business purposes, or commensurate with the relative importance of British interests in particular places. The consulates of St. Petersburg and Moscow are instances which could be cited. There has been an increased allowance made in respect of Russia quite recently, and I am told that the consuls themselves are very well satisfied, and our Russian section of the Chamber of Commerce is also satisfied in that respect. On the question of personnel the London Chamber fully appreciates the fact, that apart from the consular officers, the services of the commercial attachés are readily available—that is for general or special inquiries—but it has received a considerable amount of information as to the need for assistance being given to British traders in particular places of a character similar to that rendered by foreign consuls for various reasons, which cannot be given by British consuls under the existing conditions. I have a Minute of the Far Eastern section of the Chamber of Commerce on that very question. Recently the section had before it complaints referring to definite cases in which it was alleged that certain firms, so far from receiving from local British consuls that assistance which French and German houses so readily obtain from their consuls, had actually been handicapped by the action of their national representative. The section did not desire to approach the Foreign Office with regard to any particular instance, but simply to record their unanimous opinion that, speaking generally, the British Consular Service in China does not support the British mercantile community there to the extent which the latter have the right to expect, and which, indeed, is essential to them if they are to hold their own in the constantly increasing competition from French, German, American, and other foreign commercial houses. The section were, therefore, desirous that a communication should be sent to the Foreign Office emphasising the necessity of British consular officers in China assisting British commerce there to a greater extent and with more sympathy and enthusiasm than in the past. We had a good deal of correspondence on this, and I may say that the firms concerned in the Far Eastern trade are very important firms in the City of London, and vouch for the accuracy of it. I am supported in that by an ex-consul, Mr. W. Holland, who gave an address to the Chamber on British trade and the British Consular Service in China in 1908. He had retired from the Service, and therefore he was free to speak his mind. He said this: "As regards official support and assistance, the British Government might well adopt a more resolute policy in China, and give a more active support and a freer hand to the consuls." I think the point of it is "a freer hand," so that they should not be tied by the traditions of the Service to feel that it was *infra dig* to render assistance. Of course, the danger is that a consul, if he were over-zealous, might be suspected of a private and pecuniary interest in the transaction. That is really the deterrent. But that is a suggestion no one would dare to make against our Consular Service or the Civil Service generally.

38,917. Does not the China Consular Service perform functions of a diplomatic nature? Do not the consuls in the Far East discharge functions which we may call diplomatic?—No doubt they are left in charge of very much more important matters than, say, the British Consul at Boulogne would be.

38,918. In that case, where the consul was charged with diplomatic functions, would you see any difficulty in their pushing trade?—Not at all. I think he should have the freer hand which is suggested; the two should go together. What this ex-consul says is, that the British Government should give more active support and a freer hand to the consuls, "so that they might at least be on even terms with the consuls of other Powers, which at present they are not. Russia, France, and Germany were all very busy in China extending their settle-

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

"ments and pushing their influence and interests in all sorts of ways; and vigorous action was needed to meet the sometimes unscrupulous action of our competitors if we did not wish to be left utterly behind in the race." Another ex-consul, Mr. Longford, endorsed the lecturer's suggestions. There are several retired consuls easily available and ready to give first-hand information.

38,919. Mr. Longford, I think, wrote a remarkable article on the Consular Service which was published by the *Quarterly Review* in 1903. He left the Service several years ago?—Yes. He happened to be at this particular meeting at which this statement was made.

38,920. Would not you say there is some difference between consular work in Europe and consular work in China, because of the intermixture of quasi-diplomatic functions with the Chinese consul's commercial duties?—Certainly, and that is where the idea of the freer hand comes in. If it were part of the policy of the Foreign Office to give a freer hand, that might satisfy some of my members.

38,921. If consuls, generally, and not merely in China, had a freer hand and made use of the freedom, might we not be in danger of finding ourselves in diplomatic entanglements?—That is so; but I should be inclined to have confidence in the ability of the consuls to keep within their powers. I was going on to say that it is recognised that the duties of consuls, especially in connection with legal and shipping matters, occupy a large part of their time, and in some cases do not admit of special attention being given to trade inquiries; but it ought to be possible, if the means were forthcoming, for consuls to be allowed to engage competent assistance for this phase of their work—I know they can engage ordinary clerks—whether it arises out of correspondence from home or from the demands of British subjects who may visit the places where they are stationed. In the absence of some such arrangement as this, unfavourable comparisons have been made between the utility of the consuls of foreign countries (who have possibly less routine work to transact, and larger means for dealing with other matters) and our own. I refer particularly to the American consular reports. Many people speak highly of those reports. They are very excellent things, but the American consuls have more time to spare to write those reports than ours, as a rule, because they have not so many ships and sailors to look after. They have not anything like the amount of routine work which some of our consuls have. Take the consul at Hamburg, whom I know personally; he is an extremely busy man, and in a very important centre. In a case like that it is absolute cruelty to expect a consul, after having had a very hard day's work—and they have hard days of work—to be writing reports, and therefore he ought to have qualified assistance in that respect.

38,922. You would correct their leisure in that way?—Yes. Almost the only original or practical suggestion I have to offer, short of my comments on the Service, is that the consuls should have available at these large centres commercial experts in their offices—men to be specially trained, specially selected and properly paid. The salary for such a man ought to be equal to the salary which a big commercial firm would pay to their managing clerk or chief shipping clerk—something like 400*l.* or 500*l.* a year would probably satisfy men of that type; that is to say, they would be willing to give up commercial life, in which they had gained a good deal of experience, and go into the Service for a salary of that sort.

38,923. (*Sir Kenneth Muir-Mackenzie*). Who do you propose should appoint him?—First of all, I suggest that he would have to be approved by the Board of Trade and the Foreign Office in the same way as the trade commissioners are. There would be a certain number of men selected for these posts, and they could easily be sent to particular consulates.

39,924. (*Chairman*). In other words you would increase the staff of your commercial attaches and trade commissioners?—No; the difference is a commissioner travels round to different points. If I had my way I would wish that the principal consulates should

have attached to them a man, or men, of this type. I think it would be welcomed; in fact, I have private reasons for knowing that it would be welcomed, but it ought not to be at the expense of the consul on his present allowance. He can only afford to pay a small salary to some of his men, and the difficulty is that they are engaged in other occupations. They eke out their existence—this is quite provable—by doing translations, acting as interpreters, and so on; and at other times they are engaged at the consulate. Those men are useful in small places; but I think my suggestion is an ideal one: that a properly paid and properly accredited commercial expert in the office of a consul in a commercial centre would be a very useful man and could render service to the consulate and to the trade of the country. I have already made some reference to the question of commercial training for the Consular Service, and I quite recognise that that may not be attainable concurrently with preparing for the existing examinations. The young man is at school to 21 or 22 years of age, and then goes in for the examinations and there is not very much time for him to study practical commercial matters; but of course if arrangements could be made for such men to go into commercial offices for three, four, or five years to get the equivalent knowledge which they get, I believe, in the Commercial School in Paris, that would give just that extra commercial knowledge which preparation for the present examinations does not allow of.

38,925. Do you think that the training that they would receive in commercial schools—the information that they would acquire, for instance, in the London School of Economics—would be a satisfactory substitute for actual experience in a merchant's office?—No, I think not. I think if they went to the School of Economics in the evening and were in a merchant's office in the day that would be the best combination; but I should not consider that the School of Economics would be equivalent to the commercial office. Just to emphasise my point about these commercial experts, I would like to remind the Commission that in other branches of the Civil Service in various offices, it is occasionally necessary to appoint experts from outside. For instance, the Board of Trade have put on to their Commercial Intelligence Staff several men who are not members of the Civil Service, but who were specially qualified on particular subjects. The Home Office frequently appoint inspectors or officers who have had special knowledge. For example, after the passing of the Factories and Workshops Act of 1901 certain trades were declared to be dangerous, and certain inspectors had to be appointed, and certain officials had to be appointed. I remember a little later on when electrical works were declared to be dangerous an inquiry was held, and an official was appointed for the purpose of inspecting factories with regard to electrical installations. So there are numerous precedents for going outside the Civil Service to get expert advice for the purposes of a particular department, and I think there ought to be no bar to this proposal as regards the Consular Service. I think if the Commission go into it they will find that there are numerous precedents of the kind I mention. My next point simply covers what I have said three or four times, and I need not trouble the Commission with it except to say that the position and local influence to which a British consul attains largely depends upon his means, and even when he is provided with the auxiliary aid referred to, it is still desirable that he should be at least as well paid as responsible men in commercial employ. Without this it is not possible for him to frequent those places or cultivate those persons where and from whom the best information alone is obtainable. The great thing, if you have difficulties with authorities, is to become acquainted with them and be able to get them to oblige you personally; and that involves cultivating acquaintances of a desirable kind. Confined to his office by routine and his leisure after ordinary office hours encroached upon by the writing of reports, it is impossible for him to get far beyond the purely technical requirements of his office, nor can he get much relief from an

15 May 1914.]

MR. CHARLES EDWIN MUSGRAVE. (MR. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

underpaid staff, British or native, which ekes out an existence by taking other work in addition. We rather suggest that a 50 per cent. increase in the Vote for the Consular Service would not be thrown away, and, we think, would be advantageous.

38,926. What additional sum do you think that would amount to?—I believe in the 1903 Report the amount for the Consular Service and allowances was put down at 96,000*l.* per annum. There have been some increases since. There was 20,000*l.*, I believe, added last year, but even if it is 120,000*l.*, or 130,000*l.* a year now, 260,000*l.* would be none too much as a sort of insurance premium for maintaining a total trade of 1,200,000,000*l.*

38,927. Does that Vote include the Diplomatic Service as well as the Consular Service?—No, that is the Consular Service.

38,928. The Consular Service, according to your figures, now costs about 120,000*l.* a year?—Possibly; but I give those figures under reserve.

38,929. At all events, your suggestion would involve a very substantial increase in the Vote?—A very substantial increase; but I suggest, and, my official superiors have suggested in speeches and deputations more than once, that is a very small premium to pay in connection with a trade of 1,200,000,000*l.* annually; it is a mere bagatelle.

38,930. (*Mr. Philip Snowden.*) Has your Chamber any idea as to the means by which the extra money should be raised?—By a vote of the House of Commons.

38,931. I mean by what method of taxation?—I would suggest that the Civil Service Estimates should be increased by the necessary amount, and that members of Parliament should vote accordingly. I cannot make any more direct suggestion than that. I make it quite respectfully, but I do not at the moment see any better way.

38,932. I think your 50 per cent. increase would mean an addition of about 225,000*l.*?—I think the figure would be relatively a bagatelle when you take into account the size of our trade and look at the fact that the nation has got more or less to live on trade. We have to pay for social legislation, and so on, and therefore you want to keep business going.

38,933. (*Sir Kenneth Muir-Mackenzie.*) Where you have a particular man in the place now, you mean you would at once get a great advantage by doubling his salary?—No, that is not the point; it is the aggregate expenditure over the whole Service.

38,934. (*Mr. Philip Snowden.*) You complain that our Foreign Office is somewhat diffident in pushing trade as compared with the Diplomatic or Consular Services of other countries?—That is the impression conveyed to me by many of our members with whom I have been in communication.

38,935. Would you mind stating a little more definitely in what respect you see differences in the methods of this country and other countries in that respect?—I am told, and I am merely reflecting what I have heard in my official position, that the representatives of foreign countries are more keen in looking after business for their merchants and traders than ours are and they are probably not restrained by the very proper traditions of the British Service. I mean we have great faith in the incorruptibility of our representatives abroad, and are anxious that they should say and do nothing which would leave them open to the suspicion of being personally interested in something which they are pushing on behalf of their country. That is the point.

38,936. You have heard that similar complaints are made by foreign countries about the relative inefficiency of their Consular Services?—Yes, I have heard of those things in a general way.

38,937. You will appreciate the fact, I think, that there is, after all, a difference between the functions of the Diplomatic Service and the functions of the Consular Service in this respect: that the Diplomatic Service is more engaged with what one might call high politics than trade matters?—Absolutely.

38,938. You could conceive that there might be a conflict of interests between the trade interests of the country and its international politics?—Absolutely. I accept that certainly. I guarded myself on that.

38,939. And if our high diplomats were to interfere in trade matters it might sometimes have an injurious effect upon international relations?—I agree, if they were to interfere; but if there was a sort of understanding, without making it a *casus belli*, or anything of that sort, that our Government were behind the traders in their desire to get fair play, or whatever it might be, that would be a good thing. I do not want to go further than that.

38,940. And there would not be that same danger in the consuls taking an interest in the trade affairs of a foreign country?—No.

38,941. You know something about the constitution of our Diplomatic Service and the method by which it is recruited?—I had occasion to look at the Foreign Office list, which has the general conditions. I do not know much about the internal working, but I do know how it affects us. I know where we had made representations—where, for example, I have on occasions written a letter officially, and I have had a private letter back to say: "We would like to see you before we answer your official letter," and I have found out that the official letter was put in a form which would probably be inconvenient as I had drawn it; in other words, I have been advised as to the best way in which the case should be brought forward. We appreciate all those difficulties.

38,942. From what little you do know of the method by which the Diplomatic Service is recruited would you think that that is a method well calculated to get the type of man you would like to see in the Diplomatic Service. The method by which the Diplomatic Service is recruited is by nomination by the Secretary of State, a high university education has to be passed, and there has to be a guarantee of private means on the part of the candidate to the extent of 400*l.* a year; he has to serve for two years without any salary at all, and then his initial salary after that is very small, beginning at about 150*l.* a year; so you gather from that, of course, that the selection must be confined to a rather small social class?—Certainly.

38,943. Do you think that those restrictions are a hindrance to getting the type of man into the Diplomatic Service who you think would be best suited for it?—It might be in certain cases. Of course, diplomacy rather runs in families. Diplomatic ability is not obtainable from all individuals and it cannot be acquired in schools or by examination. A diplomat is born, and not made. What I would wish is that the diplomat who has passed the necessary examination should in some way be instructed to regard trade interests as more or less predominant interests for his country, subject, of course, to the political considerations mentioned.

38,944. If diplomacy be an inheritance and a tradition, is there not this danger: that it may run in a rut and be very conservative and therefore may be just the very thing which you mention as one of the things to which you take exception; that is, not keeping abreast of the times. You spoke of the great changes in international trade and life, and the like, which have taken place in recent years. Do you not think there is that danger?—I think there is.

38,945. And that the infusion of some new blood might bring some new ideas?—I think the new blood would be extremely desirable; but, as I said before, diplomatic ability is a special ability, and I dare say it will come from the son of a gardener just as easily as from the son of a peer, if he has got it in him.

38,946. Am I right in assuming that the only complaint you have to make about the Consular Service is one that attaches rather to the Government than to the men who constitute the Consular Service; that is to say, that provided the Government were a little more generous in its treatment of its consular servants the men are of the class, of the ability, and of the knowledge to quite fulfil your requirements in every

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

respect?—I think I could say, speaking of the present generation of consuls, that the men are splendid.

38,947. You mentioned more than once that there is not quite so much dignity attaching to the surroundings of our consuls in some countries as is associated with the consular servants of foreign countries. For instance, you said that in St. Petersburg or Paris the German Consul will have his house or office in a good thoroughfare, and in a prominent position, and there is an air of dignity and respectability about him, whereas you have to go down an alley to find the British Consul. It was put to you that the British Consul is given a lump sum to provide his own building, his own office, and his own staff, and rather to my surprise you appeared to express approval of that method. Do you know anything about the methods of foreign Consular Services, as to whether a similar system is in operation?—I believe so. Broadly speaking, I was told that the cost of the German Consulate in St. Petersburg was 12,000*l.* a year, and that our consul's salary and allowances came to something under 2,000*l.*

38,948. This difference then is explained by the fact that the foreign consul has a more generous allowance from his Government than the British Consul has?—That is right.

38,949. I do not know, of course, whether a consul has to give a return or vouchers for his expenditure of his full allowance or not, or whether he can make money out of it if he chooses to do so; but if that were the case it would be an undesirable thing, and if an allowance is made for an office, or the like, the Government ought to have some assurance that that money is fully spent?—They should have that, and I think they get it now. It is simply a question of whether it is worth while, as a matter of business, to keep up a good appearance. The keeping up of appearances is, from a business point of view, sound policy.

38,950. I am inclined to agree with you?—I have now the figures. With regard to St. Petersburg, the German Consulate is presided over by a consul-general; the British Consulate by a consul. In addition to this chief official, the German Consulate had 18 salaried officials; the British Consulate two. This was the case before the additional Vote was made last year. The salaries and expenses of the German Consulate probably reach 12,000*l.* as against an annual total cost for the British Consulate of 1,840*l.* The German Consulate is situated in the most convenient quarter of the city; the British Consulate, for reasons of economy, is not. Those figures have not been questioned, I got them from a good source.

38,951. That is most important. Do you think you would find a somewhat similar contrast in other important places?—I am told so in a general way, but not so great as this. I think it is only fair to look at the other side of it. You can quite understand the German Consulate being a very large affair there because of Germany being an adjoining country, and although there is not much love between the traders of Russia and Germany, they are obliged to do business with each other, and they do it on a very large scale. Still, that is the figure we put in St. Petersburg as compared with the other country. What is fair is what is probably being done now; that is, a larger allowance is given to the British Consul in St. Petersburg.

38,952. (Sir Kenneth Muir-Mackenzie.) Do you know how much it is now?—I do not know precisely.

38,953. (Mr. Philip Snowden.) We have the figures here. Have you the figures giving the total cost of the German Consular Services?—No, I have not that information. It is a bit difficult to get.

38,954. And you do not carry in your mind, as bearing on the statement you made just now, what is the total trade of this country with Russia, and Germany's total trade with Russia?—No, I have not got that, but I have got some figures for 1911. Our total trade with Russia was 65,000,000*l.* The total trade of Russia itself was 265,000,000*l.* I have a table which shows how much we pay for our Consular Service in Russia. Prior to the 20,000*l.* voted last year, the cost of our Consular Service in Russia was 12,000*l.* a year. On our total trade with Russia of 65,000,000*l.*,

that is 0.018 per cent.; of our exports to Russia, 22,000,000*l.*, it is 0.054 per cent.; and of our imports from Russia, 43,000,000*l.*, it is 0.028 per cent. So that what our Consular Services and allowances amounted to in respect of that trade was 7,300*l.* a year plus the allowances—12,000*l.* altogether; the salaries being 7,300*l.* and the allowances 4,955*l.*

38,955. That 12,000*l.* may be taken to represent all that the British Government is spending for the encouragement of British trade with Russia?—So far as the Consular Service is an adjunct to that.

38,956. That does not take into account the cost of these special trade commissioners?—No. We have a very excellent commercial attaché for Russia, Mr. Cooke, who is constantly in touch with us and with other Chambers of Commerce, and he has just gone out to Siberia where large developments are expected.

38,957. (Mr. Graham Wallas.) You sketched out a scheme for the appointment of young commercial men to consulates. Is it right to say that your idea is that they should be appointed comparatively young by examination, and then should be put into commercial life for a period of four or five years, while still holding a promise of a consular appointment?—Yes.

38,958. Would you give them any pay during that period?—I think it might be necessary. I have not thought that scheme thoroughly out. It is merely a broad idea—something which the Commission might possibly themselves consider.

38,959. You see certain obvious difficulties. After four or five years the really good young men might desire to stay where they were?—I think the money would be justified if we only copied the German plan. It is very well known that a large association in Germany subscribes in order to find food, money, and maintenance for a number of young Germans who come to this and other countries. They are subsidised by this association; they work at a more or less nominal salary; and then they are supposed, when they have got into employment, to return the money which is advanced to them. At all events, they are subsidised during the period they are learning, in the hope that ultimately they will be useful pioneers, more or less, of German trade. So that, as an investment, I think, it would be a very good plan indeed to subsidise these young men during that period. It is like a scholarship.

38,960. Then you must have a sort of contract that they will enter the Service after four or five years?—I think the Treasury would require some guarantee, and that would be a very good way of giving it.

38,961. Have you considered the comparative usefulness to British trade of the paid Consular Service as a whole, and the unpaid Consular Service—which is the more useful?—The paid consul is, of course, the more useful, but the unpaid consul very often gives a good deal of work because he likes the position. An unpaid consul is very proud of the fact that he has such a position, and, therefore, is inclined to do a good deal for nothing for his own prestige, and the possibility of his own business interests being advanced by it. It helps him to get business.

38,962. In some cases a consul has a vast amount of administrative government business which takes up nearly his full time?—Yes, an enormous amount.

38,963. Have you ever considered the suggestion that there might be a fairly complete separation between the man who does that vast amount of administrative business, which is *quasi* diplomatic or connected with the Merchant Shipping Act, and so on, and the man who has commercial duties, so that you might have two services rather than one?—Yes, you might have two services, but the consul should still be the responsible head, just as I have in my Chamber of Commerce five important departments. The head of one is with me here. I am responsible for him, but I leave him to work that department on the same principle as a business firm is conducted.

38,964. At present there are two grades, the Diplomatic Service and the Consular Service. If there were three grades, the Diplomatic Service having general responsibility, the official Consular Service doing official

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

duties, and the Commercial Consular Service, do you think that arrangement might be a good one?—I think you would find that there would be some difficulties at the Foreign Office with regard to that because of the question of control. I think the Consul-General must have absolute control, but he should be provided—as I am glad to say I am in my position—with competent assistants under him for whom he is responsible.

38,965. You urge that the British Diplomatic Service in trade matters should act in future with less diffidence, and, quoting particularly the case of China, that it should adopt a more resolute attitude, and give more active support to traders?—Yes; not any trader, and not on any matter, but in cases that are properly vouched for, if I may say so.

38,966. Then you said that from that would naturally arise a greater influence with China?—Yes.

38,967. Has it ever occurred to you that the contrary might be the case. Do you remember the extremely resolute attitude taken up by Sir John Bowring in the matter of the lorcha "Arrow" in the middle of the nineteenth century. It might be argued that if we had been less resolute on such an occasion we should have larger influence now with China?—Yes, but resolution in this instance means conveying to the Chinese, or others, the fact that the legitimate interest of a British subject is something which his Government will support. But there need be no guns. The moral effect of that is very much greater than if it were to happen that they knew nothing about this man at the consulate at all, or his affairs, although he might be a very worthy trader, or that they knew nothing about him at the embassy.

38,968. But the moral effect of a resolute attitude depends upon the existence of force in the background?—Not in matters of trade.

38,969. Have you ever known any case in which two countries have agreed to exchange consular information on matters of trade? Has our consulate and the consulate of the United States for instance, to your knowledge, ever agreed, in some South American town say, to exchange information and help each other?—I think it is common knowledge that where they can do so in the interests of the two countries they are very ready to co-operate.

38,970. Would you welcome an extension of this arrangement of exchanging information and giving joint reports?—No, I should put some limitation upon that. Supposing I have, on behalf of a member of the Chamber of Commerce, written to the Board of Trade or the Foreign Office and asked that the interests of one of our members in a particular matter should be supported, I should not expect the representative of a foreign country to be told by the British Consul that that was so; it would be a matter of discretion. But there are some common interests, I admit.

38,971. (Sir Henry Primrose.) I rather gather from your answers given to Mr. Graham Wallas that the assistance to the trader that you want is bringing pressure to bear upon the authorities of the country?—That would be so, partly.

38,972. You say foreign consuls do that very much more than ours do. With regard to the resolution you read to us, passed by the Chamber of Commerce in favour of representation to the Foreign Office, that our consuls should act more in the way that the foreign consuls do—could you give us any instance of the sort of thing you want done? What produced that resolution?—This was more particularly a complaint that British traders in China were not so well backed up by our consul as certain German, or certain French firms might be.

38,973. Could you translate that into definite facts? Could you give us any illustration of the sort of thing?—I had in connection with this case a lot of very confidential correspondence—even a letter written by the consul himself. The question under our consideration was whether we should not bring the conduct of this particular consul to the knowledge of the Foreign Office, but we decided not to do so, because we found he was going to leave very shortly. I am here to reflect

opinions which I have been gathering from our members.

38,974. But I take it it has been the tradition of our Foreign Office as a rule, not to interest themselves in the particular interests of traders—not to bring pressure to bear, for instance, in favour of a concession being given to a British trader in preference to a German trader?—That has been the tradition.

38,975. Do you want that altered?—I want it altered to this extent, that we know of individuals who, wanting to get concessions, have had very valuable support from the German Consul or the German Government. I do not suggest for one moment that any concession hunter, as I said earlier, should, as of course, receive support; but certainly reputable traders and houses of standing should have that support.

38,976. Of course, you have to do to a certain extent what other people do. Your wish would be that no foreign government should take action of that kind, but if foreign governments do, then you would say, I suppose, that we must follow suit?—We must follow suit as far as we can, always maintaining our reputation for incorruptibility and integrity, and I think it is quite possible to do that and still be a little more sympathetic.

38,977. Do you think that the members of your Chamber make much use of the trade reports of consuls?—Yes, frequently.

38,978. Do they always subscribe for them?—No, they have a habit of writing to us for information, and we give them any particulars of a special matter in connection with any particular country. If we can find it in the consular report we lend it to them; if we cannot get it from there we get it from some other source; if we fail altogether we try the Government.

38,979. Do you suppose that many people trading with Russia make a practice of subscribing for the annual report on the trade of Russia that is presented by the consul?—I do not think they do. Some of these people have got their local correspondents, and they know all they want to know. Where the consular reports are useful, where the Government is useful, and where the Chamber of Commerce is useful is in the case of a man who is not in a business, but thinks he will go into it. He wants to make an inquiry about it; he may be asked to put some money into it, or he may have some goods to ship. That is the man who wants some particular information.

38,980. Have you any opinion as to whether in certain cases we are at a disadvantage by employing a foreigner as our consular agent rather than an Englishman. Take, for instance, Germany, where a large number of our consuls are Germans. Do you consider that that is a disadvantage or an advantage?—It has its advantages and its disadvantages. The disadvantage would be if the consul was engaged in trade and had an inquiry from someone in this country who was in the same trade, and who would thereby get to know either a trade secret or of some move or other which he could turn to his personal profit while acting as an unpaid consul. That is the worst that could be said of it. The best that could be said of it is that the native consul certainly has facilities for information, and, provided he is straight, honourable and fair, he could give his Consul-General information, and he would have access to sources of knowledge which the British Consul would not have; and therefore to that extent it is an advantage.

38,981. So far as your experience goes, should you say that these foreign consuls, of whatever nationality, are really zealous and active in the interests of English traders?—I can only speak of what I hear. It is alleged, of course, that they are not—that it is a shame, and so on, that we should be so represented.

38,982. One can see that, if you had an Englishman to begin with he is a foreigner there when he goes into the place, and he has not the local position that the other man has, and from that point of view we lose?—We lose unless there is a large English colony there. I know the English colony in Hamburg very well. I have been there, and I have some friends there, and should

15 May 1914.]

Mr. CHARLES EDWIN MUSGRAVE. (Mr. WILLIAM G. WALDER  
was in attendance.)

[Continued.]

have no difficulty in getting information through them; but it is more in the outlying districts where you are more or less dependent upon the goodwill of the native consul.

38,983. Where there is a large English colony, as a rule does the Foreign Office select a member of the

English colony as consul?—If an unpaid consul, yes, as a rule, although there may have been exceptions.

38,984. (Chairman.) We are greatly obliged to the Chamber of Commerce and to you for the evidence that you have given us?—I am glad to have had the opportunity of coming.

Mr. CHARLES CLIPPERTON called and examined.

38,985. (Chairman.) Will you please mention when you entered the Consular Service and what posts you have held in it?—After I passed the examination, or since I have been in the Consular Service.

38,986. When did you pass the examination?—In 1894, but I had been for 12 years previously working in consulates.

38,987. Were you in the Consular Service before 1894?—No, not in the Service, but working as junior, senior, book-keeper, and so on.

38,988. In a consular office?—Yes.

38,989. In one consular office or more than one?—In my father's office in Philadelphia, and then in Baltimore; I was unpaid vice-consul in Baltimore.

38,990. When were you first appointed to a post in the Consular Service?—At Philadelphia in 1894.

38,991. After Philadelphia, where did you go to?—While I was in Philadelphia I was sent to take charge for about nine months of Boston; then I came back to Philadelphia; then from there I was transferred as vice-consul to Rouen, and I was promoted to the rank of consul there.

38,992. Have you been in Rouen ever since?—I have been there 10 years.

38,993. Your earliest experience, then, has been that of a clerk in a consul's office?—Yes.

38,994. So that you are familiar with the system of payment of the establishment from a lump sum given to the consul?—Yes.

38,995. The system, as I understand, is that a certain amount of money, a certain allowance, is given to the consul for the payment of his establishment, rent, and all office expenses. What is your opinion of that system?—Properly controlled, I consider it a good system; not controlled, I consider it a bad system. It is properly controlled now, or it will be.

38,996. You think it will be?—It is; that, any rate, will be part of my work as Visiting Consul—which means inspecting.

38,997. Does the consul who receives that lump sum furnish any vouchers or accounts to any authority for the expenditure of that money?—He will from now on.

38,998. But hitherto he has not done so?—I believe not.

38,999. Have general orders applicable to the entire British Consular Service been issued in accordance with which a better system will be introduced?—Yes.

39,000. And these orders are not restricted to your consulate alone?—Oh, no.

39,001. They are of general application?—Yes, so far as I know; they are at least for Europe. I have myself eight countries to inspect. I have France, Germany, Sweden, Norway, Denmark, Belgium, Holland, and Switzerland.

39,002. You are inspecting Consul-General for all these countries?—I am what is called Visiting Consul.

39,003. As Visiting Consul-General, you must have someone to perform the work of the Rouen Consulate?—I have.

39,004. So that you spend little of your time in Rouen?—I shall in future, certainly.

39,005. Has your appointment of Visiting Consul been lately made?—I do not know the exact date. I think my appointment was made in October or November last.

39,006. Only a short time ago?—Yes.

39,007. What are your duties as Visiting Consul?—To teach and to learn; where we can teach to teach, where we can pick up information to pass it on for the sake of uniformity where we are able to do so.

39,008. How do you work? When you reach the Consul-General's office at Hamburg, say, how do you

set about inspecting the consulate?—We have a set of printed instructions, of course, to guide us, but it is a hard question to answer. First of all, I should try to get in touch with the atmosphere which, perhaps, I am qualified to do; then when I notice how things are, I should go from one part of the work to the other.

39,009. That is what I mean. What work would you regard as most important in a consulate?—That depends on the consulate. One of the chief things, of course, is practically becoming an auditor of the accounts to see that the office allowance is properly spent; where it is not sufficient to recommend an increase; if it happens to be too much, to say so; in fact, to inform the Foreign Office exactly what occurs at each place.

39,010. With regard to the work in connection with the promotion of trade, what points would you chiefly look at in inspecting a consulate?—I should find out the trade of the district, and then gradually see what part of that trade the consul is reporting on. But I do not think this system of reporting what has gone by is of much use—what happened the year before—except, perhaps, for statistics. I do not think people want to know that. The great difficulty is to get merchants to make use of us; some do and some do not.

39,011. But what could you do in inspecting a consulate if there were no reports on what had gone before and as we are not prophets and cannot prophesy what will happen?—I think if we had more knowledge of what it was that any particular firm wanted we could be more useful; but we cannot guess what somebody, whom we have never seen or heard of, wants, can we?

39,012. We have been told that it has been the tradition of English missions and consulates abroad that they were not to push the trade of a particular individual or a particular firm; that they were to do what they could to facilitate trade in general, but not to push the trade of a particular commercial firm. What you have now said seems to indicate some doubt on your part as to the wisdom of that rule?—Perhaps not to push it, but to give him all the information by which he could push it himself.

39,013. Have you heard from English trading firms any complaints regarding the activity of German consulates or the consulates of other nationalities, as compared with those of Great Britain, that the British consulate is somewhat inactive, while the foreigners are very active in pushing the trade of a particular firm?—No, I cannot say that personally I have heard any such complaint. I have seen it in the newspapers.

39,014. We have had to-day a complaint made by a representative of the London Chamber of Commerce, that the consular representatives of Great Britain abroad are somewhat inactive in that respect, as compared with the consular representatives of some other nations?—Probably the fault is with the very people who make the complaint. We are at their disposal, and I am sure you would find very few consuls who would not cheerfully render any service they possibly could, but you want to know what the service is that you can render.

39,015. The duties of the consul, I suppose, in such a place as Rouen differ essentially from the duties of the consul in a great port like Hamburg?—I have never been to Hamburg; I do not know.

39,016. It is within your sphere of inspection, is it not?—It will be; it is, but I have not been there yet.

39,017. Take any large port that you know. Have you been to Antwerp?—No; take any American port that you like. I was there for 20 years.

39,018. Would not the duties of a consul in such a port be different from those at Rouen?—I think not.

15 May 1914.]

Mr. CHARLES CLIPPERTON.

[Continued.]

39,019. A good deal of the work of a consul in a great seaport is connected with the administration of the Merchant Shipping Act, is it not?—Yes.

39,020. And that work is wanting to some extent, not entirely, in an inland town?—Oh no, not at all necessarily. By an inland town do you mean a town like Rouen.

39,021. Yes?—No, not necessarily.

39,022. You have the same trade?—Rouen is one of the largest ports in France.

39,023. I was not aware of its being so large?—There are a larger number of English ships coming to Rouen than go to Marseilles—not the same class.

39,024. Ships of what tonnage go up to Rouen?—Ships of 2,500 to 3,000 tons net. Rouen is the largest petroleum port in France.

39,025. Then, of course, you have a great deal to do with the Merchant Shipping Act?—No, not particularly that, because all vessels, say oil tankers, after they have discharged their cargo come to discharge and reship fresh crews in England as a rule; it is only those that do not that change their cargoes at Rouen.

39,026. What age were you when you entered the Service regularly after passing the examination?—I was 30.

39,027. Was your experience altogether that of a consular office, or had you had any commercial experience; had you ever been a clerk in a commercial firm?—No, I had not. I am also at Rouen Lloyd's agent, which is a very useful thing.

39,028. May you combine the two?—That is one of the few things—that and Post Office agent—which salaried consuls are allowed to take.

39,029. You can compare, then, the class of men who are consuls now, with the class of men who were consuls 15 years ago?—Those that I have seen.

39,030. Do you think that there is an improvement in the stamp of men who are now being recruited?—I have not seen many of those. I have only seen one of those men.

39,031. Who has been recruited within the last 15 years?—Within, say, the last 10 years.

39,032. You have only come across one?—I have not been in any place where I should see them. I shall now, of course; I shall come in contact with them.

39,033. Have you seen much of the unpaid consuls?—Yes, a good deal. I have had eight of them in my own district.

39,034. In France?—In France until the district was taken away from me, and I have seen all the unpaid men in the various districts I have just finished inspecting.

39,035. Do you think they serve a useful purpose for British commerce, or would you prefer to have a larger proportion of paid consuls?—I think that in a great many instances people who have been brought up in and know the locality are of more use for a time until the salaried consul has been in a place for some time; he cannot learn very much, until he has been there four years, say; then he begins to feel at home, and begins to know people. I think that people in the locality are of more use till a man gets thoroughly acclimatised; and sometimes the unpaid man is of more use than the salaried man. I have one or two cases in mind where the man is not an Englishman, but he is an excellent man.

39,036. Are you speaking of France?—I am speaking of France.

39,037. Were the men you have met themselves in commerce?—Some were and some were not.

39,038. Of the two classes, men in commerce and men who were not, which seemed to you to be the more useful representatives of English commerce?—Do you mean those who were actually British subjects?
