ROYAL COMMISSION, ON THE CIVIL SERVICE.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

CIVIL SERVICE.

At the Royal Commissions House, Old Palace Yard, S.W.

FIFTY-FOURTH DAY.

Thursday, 9th January 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Sir KENNETH AUGUSTUS MUIR-MACKENZIE,  
G.C.B., K.C.

Mr. ARTHUR CECIL TYBRELL BECK, M.P.  
Mr. ALFRED ALLEN BOOTH.  
Mr. ARTHUR BOUTWOOD.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.  
Mr. PERCY EWING MATHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. GRAHAM WALLAS.  
Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. R. CARY GILSON, M.A., called and examined.

22,047. (*Chairman*.) You are head master of King Edward's School, Birmingham?—I am.

22,048. Will you be good enough to tell the Commission in what representative capacity you appear before us to-day?—I appear, my Lord, as representing the Head Masters' Conference, which is a voluntary society of head masters of about one hundred public schools. There are two associations of a somewhat similar kind, the Head Masters' Conference and the Incorporated Association of Head Masters. The Head Masters' Conference is, I suppose, in a sense the more select, I think I may say also, the less business-like, of the two bodies. The hundred schools that it comprises are schools selected because they send a considerable number of boys to the older universities of Oxford and Cambridge.

22,049. Do they include the great public schools, Eton and Harrow, and so on?—Yes, all of them.

22,050. And the other association which you refer to is connected with different schools?—It is connected with about 600 schools including most, but not all, of the schools which also belong to the Conference.

22,051. It includes smaller schools than the Conference does?—Yes, smaller schools and of more modern foundation, and of a somewhat different type.

22,052. Might I then infer from what you say that your Conference includes all the greater schools?—It includes all the greater boarding schools certainly.

22,053. And the other association includes the smaller boarding schools and schools that are not boarding schools?—Yes, that is so.

22,054. Does your Conference meet frequently in the year?—The Conference itself meets once in the year only—generally at the end of December; but there is a standing committee, of which I have been for many years a member, which meets about four or five times a year in London and transacts special business. The actual Conference itself is little more than a debating society.

22,055. And the business is connected with school affairs common to all the schools forming the Conference?—Yes, that is so.

22,056. In that business do questions regarding the Civil Service examinations naturally come up?—Yes.

22,057. We have been informed by the representatives of the universities whom we have heard so far that the syllabuses of the examinations for the Civil Service have no effect upon the general course of studies in those universities; would you say that anything like the same rule would apply to the schools that you represent, or do you so direct your instruction in the schools as to prepare students for the Civil Service examinations?—I am afraid I could not answer that question definitely with regard to all the schools of the Conference. Schools of the older type like Eton, Harrow, Winchester, Westminster, and so on, are, I should think, very little affected.

22,058. And your own school?—My own school is affected to a certain extent. If I may venture to say so, I presume that one motive, at any rate, of the Conference committee in appointing me to represent them was that my school and perhaps my experience (I was ten years a master at Harrow before I was appointed to my present school) is exceptionally wide, so that I see more than one side of the problem.

22,059. Am I not right in thinking that your school is one of the oldest foundations?—Yes; it was founded in 1552, but it was remodelled in the middle of the 19th century and brought into modern lines to an extent which does not apply to most of the Conference schools.

22,060. Would you date your regard for the requirements of the Civil Service examinations from the remodelling? I understood you to say that, in the curriculum of your school, attention is paid to the requirements of the Civil Service examinations, that you do direct instruction with regard to the examinations, and my question is whether that arrangement dates from the remodelling to which you have referred, or is of a later date. I only want to know how far the course of instruction in the great schools is influenced by the character of the Civil Service examinations?—Yes, I should think the change did occur at the time when the school was, to a large extent, remodelled in

9 January 1913.]

Mr. R. CABY GILSON, M.A.

[Continued.]

the middle of the 19th century; but I was under the impression when you said "influenced" that you meant influenced in what we schoolmasters regard as an unfavourable way.

22,061. I was just going to put that question. I did not connote any meaning by using the word "influence." But I did intend to ask you whether the changes which came about have had any such effect as examinations, if often repeated, do have on the course of instruction in a school?—I think I have not allowed them to affect it much in my own school.

22,062. The inference that I myself have drawn and I think others have drawn, is that where the instruction of a school is so directed as to prepare boys for examinations, there is not the same freedom of education as there would be if examinations were not the object in view?—Yes, it differs of course; the degree of influence exercised depends very much upon the nature of the examination.

22,063. Have you classes to prepare for the Civil Service examinations?—No, none that are specially constituted for that purpose.

22,064. You have classes which prepare for the universities?—Yes.

22,065. The whole tenour and texture of your education lead up to the university?—Yes, including the newer modern universities. I pass through the matriculation of London or Birmingham somewhere about 60 boys a year.

22,066. Do your boys go more to the modern universities than to the older ones?—Yes, they go in larger numbers to the newer universities.

22,067. And what is the course of study they pursue in the newer universities?—For the most part science and engineering.

22,068. They begin at once their technical studies. When you say engineering, they begin at once, I suppose, their preparation for the profession and the study will be more or less professional?—Yes, it is also academic of course; it is not a strictly professional course of study in Birmingham University, it has to be supplemented by actual professional training as well.

22,069. When boys do join, say, the engineering department of the university, they have their general training, but do they visit any of the great workshops?—Yes.

22,070. And any of the great industrial centres outside?—Yes.

22,071. So that their theoretical training is joined with practical experience?—Yes, that is so.

22,072. They are at once prepared for a profession then?—When they leave me.

22,073. Those boys, of course, would have nothing to say to the Civil Service examinations?—No, the same boys would not.

22,074. No such training as that would fit them for Civil Service appointments, except the professional appointments, and these we are not considering at the present moment?—No, I should think that few boys leave me and enter Birmingham University who afterwards take up Civil Service appointments—very few.

22,075. Is the faculty of arts in the Birmingham University a large one?—Yes, it is large, but there are many more women than men, the majority of whom intend to become elementary school teachers.

22,076. So that in that respect Birmingham University could not compare as a school of preparation for the Civil Service with any of the older universities, such as Oxford and Cambridge?—I do not think it could, but I cannot speak, of course, from intimate knowledge. I am only a member of the large Court of Governors of Birmingham University; I am not on the council nor responsible for its administration.

22,077. Have you any acquaintance with any of the other new universities?—Not at all an intimate acquaintance.

22,078. So that you are not able to speak more particularly about them than you can about Birmingham?—No.

22,079. Are you acquainted with the examination which is required for entrance into the higher ranks of the Civil Service, the second division and the intermediate?—Yes.

22,080. Your school of course sends no candidates for the Class I-examination?—Not directly.

22,081. And in regard to the Class I examination you cannot speak from knowledge acquired in your own school?—A fair number of my pupils do take that examination and do pass it.

22,082. But not direct from you?—No, not direct from me.

22,083. Do they pass the intermediate examination direct from you?—Yes.

22,084. Do you think that the standard for the intermediate examination requires a much better education than is required for the second division?—Yes, a much better standard.

22,085. Are you familiar with the class of students who go up for the second division examination?—Yes.

22,086. Are those who go up for the second division examination of the same social class as those who go up for the intermediate examination?—So far as my school is concerned, yes, certainly.

22,087. Quite the same?—I do not see any difference.

22,088. Would there be much of a disruption, do you think, if the second division were required to pass the intermediate examination standard; do you think you would get the same class of men for the second division that you get for the intermediate class now, if that were in force?—It depends a good deal upon whether the limits of age were altered.

22,089. The limit of age for the second division is at present 17 to 20, and for the intermediate examination the limit of age is 18 to 19½?—Which makes a profound difference to us schoolmasters.

22,090. Will you explain that to me; do you think that the limit of 17 to 20 is not suitable?—I think it is quite unsuitable.

22,091. For what reasons?—Because the limit of age, from 17 to 20, seems to bear no relation to any actual educational machinery that we possess in the ordinary schools and universities; it is too late for the schools, and too early for the universities. I do not know the origin of it; it looks to me as if it were a survival of some condition of things which no longer exists. It is too early, of course, for boys who have taken a regular university course, and on the other hand those of my boys who take it, I pass through the London matriculation as a rule, and then, after that, I have nothing very much more that I can do with them, and they are bound to leave me by my own limit of age before they have reached 20; therefore they are left very much to their own resources.

22,092. Why do you fix the uneven limit of 19½; why do you prefer the half; is it for any particular reason connected with your school?—No, I think it applies to most public schools.

22,093. What is the exact reason why you do not have it from 17 to 19?—To allow a margin for the fact that boys are born at all times of the year. In my own school the limit is 19, but with the head master's consent a boy may stay two complete terms—it is really therefore more than 19½—after the term or the holidays in which his nineteenth birthday occurs. For example supposing that a boy is 19 in the Christmas holidays, we do not want to turn him adrift then because then he would have two terms before he could go to the university and take up the ordinary university course in October, in which case he would have no educational institution in which he could be pursuing his studies. Occasionally it is not a bad thing; a boy may go abroad for two terms and pick up French or German in a conversational way; but as a rule it would be a mistake, and therefore we allow that margin in order that he may stay with us until July and go to the university in October.

22,094. You know that there is a class of clerks called boy clerks?—Yes.

22,095. Who are recruited at very junior ages, and they are not recruited for permanent service; they are recruited for temporary service during which they may manage to obtain a permanent appointment?—Yes.

22,096. Have you any views regarding the recruitment of such a class of clerks as that?—I have very strong views. I regard it as a disastrous arrangement.

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

When a boy in my school desires to go in, I do my very best to dissuade him, because I think it is a very bad educational course for him to pursue. Sometimes the parents insist, and, in that case, the boy nearly always passes; but I view it with regret, because it interrupts his school course just at the most important point.

22,097. Would you desire to see that class of public servant abolished?—That is hardly for me to say.

22,098. I only ask your opinion from an educational point of view?—Yes, I certainly should.

22,099. Would you think it would be well to substitute for the boy clerks a class, the upper limit of whose recruitment should be 17 years of age?—Yes, that would be a certain gain.

22,100. Do you think that would give you a class of boy who would be likely to develop into a better public servant than the existing boy clerk?—I feel no doubt of it.

22,101. Would you have the lower limit 15 for such a class of public servant?—Certainly not as low as 15.

22,102. What then should be the lower limit?—I should like to see the lower limit 17, or, at any rate, 16½, in order that the boy might not be tempted to go away and take this external examination until he had in some sense completed his secondary school course.

22,103. Leaving the intermediate class of public servant out of consideration for the moment, and, assuming that you have three classes of public servants—a higher division, a second division, and then a lower division—the lower division would be recruited, would it not, under such an arrangement as that, on a less advanced educational test?—Yes, certainly.

22,104. What age would you recommend for such a class as that?—Sixteen and a half.

22,105. Sixteen and a half to what maximum limit, bearing in mind that there is another clerical class to be recruited for by such an examination as we have in mind?—Sixteen and a half to 18 would be the age which would fit our education arrangements in Birmingham. Perhaps, if you will permit me, I may mention (though not, of course, as representing the Head Masters' Conference), that I have also considerable responsibilities in Birmingham for a whole group of schools besides my own actual school. There are six schools of King Edward's Foundation, and six municipal schools, whose limit of age is 18, and where the course is designed to attain some kind of completeness by 16½, therefore the limit of 16½ to 18 years would suit very well with that type of school. There would be the educational machinery calculated to serve the purpose.

22,106. How would these limits of age, 16½ to 18, suit the ordinary secondary school throughout the country?—These schools, of which I have been speaking, are ordinary secondary schools. It would suit them extremely well, I should say.

22,107. Have you any idea what is the general age at which boys leave the ordinary secondary school?—The average age at which they leave is, unfortunately, low. I do not know precisely what it is, but I suspect it is not much over 15, taking the average. That represents an enormous educational wastage, because boys who leave before 16 are not getting the real secondary education that they went to the school to obtain. A boy, or a girl, for that matter, who gets the full advantage of the educational facilities afforded in the ordinary secondary schools which receive Government grants, does not complete that education before attaining the age of 16 at least.

22,108. If you had the age of recruitment for the lowest division that we have been contemplating, 16½ to 18 did you say?—I said 18; but I should be content with 17.

22,109. How many chances would a boy have for the examination with those limits of ages; would he have only one chance, or more than one?—It depends upon how frequently the examinations are held.

22,110. Say they were held yearly?—Then he would have only one chance. I do not think that is a great objection.

22,111. What advance on the higher limit would give him a second chance?—I suppose, in order to make sure of giving every boy two chances, you must have an interval of two years between the minimum

and the maximum limit. Except for the purpose of preventing hardship from illness or accident, I am rather inclined to think that one chance is the better plan; it does not prolong the agony so much. I rather admire the navy plan of taking him at one particular age.

22,112. Then what would be the limits that you would recommend for the higher division, the division next above the one we have been talking of?—The present limits for the intermediate examination, namely, 18 to 19½.

22,113. Does that give one, or more than one chance?—As a rule one, but that depends upon the boy's birthday, I take it.

22,114. For the lower of these two examinations what would be the standard you would recommend; would you recommend the standard of the examination which we already have for the second division? You told me that you thought the standard for the intermediate examination would be suitable for the second division, and that you would get a better class of boy than we now recruit?—Yes.

22,115. Do you think that the examination for the second division would be suitable for the lower division we have been talking of?—I think it would be much more suitable at the earlier age than it is at the present later age. I do not think the examination is quite ideal, but in answer to your question I should say that the standard of University matriculation represents the sort of standard; that is a fairly well recognised standard throughout the country.

22,116. The standard of University matriculation would, in your opinion, be a suitable standard for the lowest class recruited into the Civil Service?—Yes, I think so. It does not require any really exceptional ability. A boy must be an intelligent boy, but he need not be any kind of a genius to attain the matriculation standard by the time he is 16½ if he has been to a good school.

22,117. Are there any facilities available in your school for boys of slender means?—Many.

22,118. Are there bursaries or scholarships attached to your Foundation?—Yes.

22,119. Are there any such given by the local authorities to boys from elementary schools to carry with them into your school?—In answer to the first part of your question, one-third of all the boys in my school pay no fees at all, they are holders of Foundation scholarships which are awarded on an examination by merit, regard being had to age, and boys may obtain those scholarships at any age from 8 to 16.

22,120. Do the candidates for these scholarships come from the elementary schools?—Sometimes, but much more commonly through one of what we call the grammar schools of our own Foundation, and sometimes, though not so frequently, from the municipal secondary schools, all of which, including our own group of schools, are schools of the secondary type earning Government grants and receiving 25 per cent. of free places, as we call them.

22,121. How many students are there in your own school?—About 480.

22,122. So that you have about 150 free places?—More than 150.

22,123. Then are there scholarships which boys can take from your school to the university?—Yes.

22,124. How many are there?—There are about five leaving exhibitions every year from my own school, and my boys are also eligible for major or university exhibitions, given by the local education authority, and, of course, they are eligible for open scholarships.

22,125. Are there many of these exhibitions given by the local education authority?—Yes, there are nearly 20 every year in Birmingham.

22,126. Are they held for one year or more than one year?—For four years.

22,127. During the whole university course?—For three years as a minimum, and extensible for a fourth year on ground being shown.

22,128. What is the average value of these scholarships?—50*l.* a year.

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

22,129. Do you think that this ladder to enable boys to get through your school to the university is adequate for the circumstances of your locality?—I believe it to be so in my own locality, that is to say, I believe there is no boy whose natural ability is such as to render a university course, or a higher Civil Service course, a thing to which he may naturally aspire, who is prevented from pursuing that course by want of means.

22,130. We have had evidence before us that boys, entering the Civil Service through the second division examination, are fit for all appointments in the Civil Service; that the education which they have received and the training which they receive in official employment suffice to prepare their minds for the highest posts in the Civil Service. We have had it said that a university training is not an essential requisite for the highest employments in the Civil Service. Of course there is the exceptional man, for whom we can make no rule, but excluding the exceptional man, would you agree in that view of education?—Not in the least, excluding the exceptional man.

22,131. Would you be disposed to say that the proper way of opening the Service to every competent man, would be to give him the opportunity, when a boy, of getting the highest university education and not trusting that he may become fit for the highest appointments when he enters by an inferior examination?—I feel certain of it on a fairly extensive experience of what my own pupils have done.

22,132. Would you develop that; would you mention what your experience has been?—I have had a very considerable number of pupils who have pursued the course that you have just sketched, who have started, some of them, in elementary schools, who have passed through my school and subsequently taken a university career, taking honours therein, and have afterwards taken places in the first division clerkship examination for the Home and Indian Civil Service. I know them—I knew them as boys, I watched their career as students at the university, and I have not by any means lost sight of them now that they are in their present employment. I feel sure that they are the very type of man, and educated in the very sort of way that is calculated to produce an efficient public servant. I have had other boys of, in some cases, approximately, so far as I can judge, equal natural ability who, for some reason or other, did not aspire so high, who took the London matriculation, say, with me, left my school at about 17, and then in most cases took some kind of special preparation and passed into second division clerkships. I am sure that they suffered greatly by that course; they are not the men that they might have been if they had taken a university career.

22,133. Do you approve of the age limit for the Class I. examination, from 22 to 24?—Yes. I think it is very good. I am old enough to remember (though I was not in any responsible position for education in those days) the old Indian Civil Service limits, which I am sure were as bad as the present ones are good.

22,134. To what limits do you refer?—When the limit for the Indian Civil Service was 19.

22,135. That did not prevail for long?—No.

22,136. The idea then was to catch the young recruit and then train him, to send him to college and train him for two years?—Yes, two years not being enough; but the effect was to render it practically impossible for the public schools to compete with the crammers in an examination of so extensive a scope as the old Indian Civil Service examination.

22,137. Do you think that the ages that you have recommended would have any effect, if they were adopted, in excluding the crammer?—Yes, I do; they would do away with the need for the crammer that at present exists—I suppose it may be called a need—for boy clerkships, and it would do away with the present gap which exists between the age limit in the school and the age limit for second division clerkships, a gap which is obviously the crammer's opportunity. I do not wish to depreciate all persons called crammers, they are often extremely good teachers. Nevertheless the crammer represents a breakdown on our part—a breakdown either in our educational system, or, if I may

say so, in the arrangements of the Civil Service examinations. It is through such lack of adjustment that the crammer really gets his opportunity. The one system ought to fit the other.

22,138. You would not class under the objectionable category of crammers men who take an Oxford honours man for, say, three weeks or three months before the Civil Service examination?—Not in the least.

22,139. That is a different thing?—It is quite a different thing.

22,140. But the crammer that you object to is the person who is a substitute for the teacher?—Yes, that is so.

22,141. We have been told that, although open competitive examination holds the field (in the opinion of some it does not, but the general impression is that it holds the field), nevertheless it does not give you everything that you want?—No, it does not.

22,142. It enables you to judge of a man's knowledge, but it does not give you a clear indication of what his capacity may be, although it gives you some idea; and we have been endeavouring to ascertain whether there is any means of supplementing the defects of the system. Have you ever directed your thoughts to that?—Yes, frequently; but the problem is not an easy one. One circumstance which naturally directed my attention to substitutes or supplementary conditions to competitive examination was the fact that I have on one occasion been one of the examiners for the navy, where of course a system of interview of an interesting experimental kind is adopted. I have also taken part in discussions and even controversies which have occurred in our own educational councils with regard to what is called the school record, and how far that school record of a boy ought to be taken into account along with the actual performance he makes when he is set down with a paper of questions and blank sheets of paper in front of him. I think that supplementary conditions might be found, but at the same time I am not one of those who would say that competitive examination is altogether a mistake. It may be quite true that the actual questions which a boy or young man answers are not exactly the questions that he will be required to deal with when his practical duties begin. But I do not think the whole problem is settled by that, because ability to deal with problems of an intellectual kind, promptly, and with a time limit, does imply a very useful kind of mental capacity and training.

22,143. All that you say about the school record and the tutor's knowledge of a boy would only be operative in the case of the public schools and universities; it would not be operative in the case of outside boys who had been educated, say, by private tuition?—No, and that is one of the difficulties that I feel. I should not wish to exclude those boys altogether. At the same time the private student now is a rare person, and I do not think it would be wise to take him very much into account—to modify or to refrain from making other desirable improvements out of consideration for him, because he is an exception, and a rare exception, at the present time.

22,144. Has it ever occurred to you that candidates for the highest class of the Civil Service might be recruited in the way that you mention; in other words, that nobody should be recruited for the highest class of the Civil Service who had not gone through a public school and university life, while the other classes might be open to all if there be such a ladder between them and the highest class as would not exclude the capable man recruited in the more general way?—The idea is not unfamiliar to my mind, because I know, of course, that some appointments have hitherto been made in the highest division of the Civil Service by limited competition, and so on, but I do not myself see any reason for drawing the line which you indicate between the higher division clerkships and the others.

22,145. That would be the only way, would it not, of giving effect to those means of supplementing the open competition that we have been talking of?—I should say that the open competition is least harmful

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

and most effective as a test in the case of the highest standard.

22,146. Less so than in the case of the recruitment of a class whose occupation would be mostly clerical?—I think so. I think that a purely competitive written examination is a very poor test for boys, but a comparatively good test for men.

22,147. (Mr. Beck.) I take it that the evidence on behalf of Birmingham, in your paper,\* is yours?—Yes, it is my own.

22,148. I want to ask you a question about the boy clerks. We have heard a very great deal of evidence, as you are aware, against the boy clerks, and it has always taken the line that you take, that it is a blind-alley occupation. I quite understand the education point, but of course we have to try and arrive at the actual facts with regard to these boys. Have you really any actual experience that, in their subsequent life, these boy clerks do worse than other people in the same social position?—No, I have not. I have very little experience of boy clerks myself, for the reason that I avoid them as much as I can. I did not myself use the phrase "blind-alley occupation."

22,149. No, I do not think you did; but I am asking you upon the point because we have had some very strong comments on the boy clerkships, and it has been stated that they are ruined for life by going into a blind-alley occupation, but when we have tried to test it, we have rather found that they have done quite as well as others of their class. The next point I want to ask you about is this. I think you said that you imagined that the average age of leaving a school such as yours is 15?—No, not such a school as mine—the secondary schools generally throughout the country.

22,150. You keep your boys up to 18 or 19?—I keep a fair proportion of my boys up to 18. I have not worked out the actual average leaving age in my school of all the boys, but I should imagine that it was nearly 17.

22,151. The only other point about the boy clerkships is this. Perhaps it is not within your knowledge, but if the boys who left your school to go in for boy clerkships had not left your school for that purpose, would they not have left to go in for something else that would bring in an immediate remuneration?—Yes, in most cases I think they would.

22,152. I take it that the parents of those boys are poor people who are tempted, who take a short-sighted view that it is a great thing to get some money coming in, and they will not make a sacrifice unless it will put their boys into some immediate remunerative employment?—I think probably that would be so.

22,153. There is one other subject I want to touch on, about the second division clerks. What is your idea of the age for them? I take it that your idea is that these boys should, so far as possible, go through the full course at such a school as your own or in a secondary school and should then have an opportunity (if they were not fitted or had not the opportunity of going on to the university or of going in for the highest branches of the Civil Service) of going into the second division?—Yes.

22,154. That they should not have their education curtailed at all?—No. Their education is in a sense not curtailed now, but there is a gap owing to the limit of age after they have completed their education with me.

22,155. Your idea would rather be, as regards secondary education, that all the boys, whatever class of the Civil Service they are going in for, should have the same education up to a certain point and should begin to discriminate by ability at a fairly advanced age and then a boy should say, "I am not competent for the higher division, I will go in for the second division?"—You mean that they should discriminate as regards which division of the Civil Service they are to enter?

22,156. Yes?—But of course I am strongly of opinion that you must discriminate on ability and on nothing else as to which boys are to enter secondary schools at all.

22,157. I take it that what you wish to see is that no boy who is capable of taking the very highest class,

Class I. and so on, should be tempted at an earlier age to take the second division?—That is so. I think that is important.

22,158. You think it is a waste of good talents to use the public service to tempt boys at an early age into the second division?—Yes.

22,159. It is really a matter of opinion as to competitive examination, but I take it that all of us who have had experience of it would agree that a competitive examination is not only a mental test but it is a considerable test of coolness and readiness and even, to a certain extent, of courage that a boy is able to set himself to it?—Yes, and it is a test beforehand of hard work, which is a most important matter; it is a test of capacity for hard work, physical, mental and moral.

22,160. There is one little point that I do not think really comes within our purview, if I may, for my own curiosity, ask it. You say on page 3 that at Birmingham "A boy who remains in the elementary school up to 14 seldom achieves success?"—That is my experience.

22,161. To what do you attribute that?—I attribute it to the fact that, if he is a sharpish boy, he has learnt all that the elementary school can teach him at about the age of 12½, and then he spends a year and a half marking time which not only wastes that year and a half but destroys, or largely destroys, in him the right mental aptitude for further learning. If he then enters a secondary school at 14, it takes him a year to recover his mental equilibrium, so to speak, and by that time two and a half years have been wasted. Then, unless he is a boy of quite exceptional ability, his educational career is hopeless.

22,162. (Mr. Graham Wallas.) I want you to sum up, if you will, your statement about the ages for entering the Civil Service. Putting aside the entry into Class I., at present there are three ages, the intermediate age, the second division age, and the boy clerk age?—Yes.

22,163. You, I understand, would desire to substitute two ages for those three?—Yes.

22,164. Can you give us quite clearly what the two ages are?—The earliest age would be with a minimum limit of 16 or 16½, and I think I said to the Chairman 16½ to 18. The second limit would be the present limit for the intermediate examination, namely 18 to 19½.

22,165. You give a play in each case of a year and a half?—Yes, there is no very particular reason for that; I should be content with a play of one complete year.

22,166. But a play of a year and a half would have the effect that half the boys going in would have two chances, and half would have only one chance?—Yes, I am afraid that is so.

22,167. Would it not be possible for a mathematician with a little ingenuity to construct a scheme by which a boy should always have a year and a half's chance, that is to say, two chances, and that the age at which the year and a half should begin should in each case depend upon his birthday?—I believe that to be possible, it is an elusive subject.

22,168. It would not be impossible?—I think not.

22,169. Have you read in the *Times Education Supplement*, last week I think it was, an article by Mr. Stanley Leathes, the chief Civil Service Commissioner, on what he calls "Modern Humanism"?—I am afraid not. I have heard of it, but I have been so very busy that I have not had time to read it.

22,170. May I put my question then in another way. Would you say that in King Edward's School, Birmingham, a serious attempt is made to found a severe cultural curriculum on modern languages, history, and other modern art subjects?—Yes, not excluding Latin.

22,171. But it is possible for a boy who does not take Greek at Birmingham to receive nevertheless a very serious and severe cultural training?—Certainly.

22,172. Would you mind stating what are the main subjects in that training?—That involves the question how the upper part of my school is managed. It is a system of bifurcation at the age of about 14 into a classical and a modern side, and the real differentia between the two, in my conception, is that the staple

\* Vide Appendix XLVI.

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

education on the classical side is literary and the staple education on the modern side is scientific. I do not think it is at all desirable that boys at that age, or even considerably later, should specialise severely in either direction, and I maintain the literary element on the modern side by Latin, and by French and German.

22,173. Would it be possible for a boy whose interests were largely literary and humanist still to remain on the modern side and to get out of his history, languages, and literature, a very serious training in that direction?—Yes, undoubtedly. At the same time, I am bound to say that my experience is that even boys who have had that opportunity, and who have taken it, have afterwards told me that they wished they had been on the classical side—they regretted their ignorance of Greek.

22,174. The education on the modern side is predominantly scientific, I suppose?—That is so.

22,175. Would you say that, in English secondary education generally, the possibility of development of a serious cultural education without Greek is rather rapidly increasing?—Certainly, it is already very large.

22,176. Would you say that the existing Class I. examination provides sufficiently for testing, at a rather later age, that type of boy if he is continuing his studies in that direction still further?—I think so.

22,177. You think he would have a fair chance against the boy who does take Greek?—Yes, I think so. There is always this difficulty that most of those men have been to Oxford or Cambridge, and at present those universities very unwisely, in my opinion, stipulate for a modicum of Greek, for entrance. I pay no attention to it in my school.

22,178. That is to say, that a boy who wants to go to the university and has not learnt Greek, learns Greek up to the minimum that is required, and forgets it as soon as possible?—Yes, I should say that he learns it in about eight weeks.

22,179. And forgets it in another eight weeks?—Probably.

22,180. Has the Head Masters' Conference, which you officially represent, expressed any opinion upon that particular point of the necessity of acquiring a certain amount of Greek?—Yes, repeatedly, in favour of its abolition, practically unanimously.

22,181. (*Mr. Boutwood.*) You spoke of a number of scholarships provided by the local education authority for the universities; are they tenable at Birmingham University or at others as well?—Fifteen are tenable at Birmingham, and five are tenable at either Birmingham or other universities.

22,182. When you were comparing the boys who have passed through your hands who have gone on to the Class I. examination, and those who have entered the Service at an earlier age through the second division, you said that the latter were not the men that they might have been, had they had a longer and larger education, or something of that kind?—Yes.

22,183. What were their shortcomings? One can see obviously that they have certain merely educational shortcomings, but I imagine that was not all that you meant, was it?—Not by any means.

22,184. What were the other shortcomings?—It is difficult to put it very briefly, but they lacked a certain capacity for dealing with men, and, I think, also with things, which my experience leads me to think is associated, not only with the actual studies at the university, but with the attrition of minds and characters, such as a university, and pre-eminently a residential university, but any university to a large extent, affords; they are more men of affairs, men of the world in a good sense.

22,185. You were speaking of the system of competitive examination, and I did not gather what was your final opinion about it. Do you think it could be advantageously supplemented?—In the earlier stages, yes.

22,186. For the lower examination?—Yes.

22,187. What would be the effect of any such supplement; what would you look for; what would you try to get by any supplementary machinery that you might devise?—I should try to get some kind of glimpse of those qualities which a boy exhibits at

school, in other places, and at other times than when he is actually receiving instruction in a form room.

22,188. And that, I suppose, is where the school record would come in?—Yes.

22,189. But what is your reason for thinking that there is a less need for such supplement in connection with the higher examination?—I think that any man, whatever his origin was, who has been through the whole education mill, so to speak, who has passed through his due school course and university course, and can then floor an examination of the calibre of the Class I. clerkship's examination or the Indian Civil Service examination, may be safely assumed to possess, not, of course, all the desirable qualities, but qualities which will be very valuable to him as a Civil servant, and that it would be desirable that he should have his chance.

22,190. In one of your answers on the last page of your statement, you say that the intermediate examination could easily be modified so as to secure most of the next ablest boys; what sort of modification have you in your mind?—Principally the mathematical part of it. I have no doubt that those who devised the mathematical papers considered them a great improvement on the ordinary mathematical papers; but I do not share that opinion myself. I have had a boy go in for that examination who was in my top mathematical division, where, I think, it may be said that no boy without rather exceptional mathematical ability is likely to appear, and who obtained comparatively low marks on his first shot. Then he spent a considerable amount of time in doing the particular sort of questions set in that examination, and next time he came out about top of the whole list.

22,191. (*Chairman.*) Did he remain in your school in the interval?—Yes, he did; but instead of going on with a mathematical education he did examination papers.

22,192. You put that down to the character of the examination papers that were set?—I do.

22,193. (*Mr. Boutwood.*) Have you read the report of the proceedings of the Head Masters' Association?—Yes, I was present at them.

22,194. It is stated there that out of a total of 602 schools only 8 per cent. of the boys were 16, or over?—I did not remember that the figures were as bad as that. I know that they were bad.

22,195. And then the comment is made that only 8 per cent. were really receiving secondary education?—The comment is absurd.

22,196. Will you point out why it is absurd?—Because, supposing five years is the ordinary secondary school curriculum, and that the limit of age is from 12 to 17, naturally it follows that if there were no premature withdrawals there would only be 20 per cent. of the age of 16, and therefore the 8 per cent. compares with 20 per cent., and not, as seems to be implied, with 100. A secondary school in which 100 per cent. of the boys were 16 would be an absurdity.

22,197. Is King Edward's School a boarding school?—No.

22,198. I have heard this suggestion in connection with the scholarship system. Apparently there are a certain number of boys who reach the older universities from the elementary schools, going through secondary schools which are not boarding schools. They are plunged, it is said, into the life of the older universities without any social preparation, and, as a consequence, for about 12 months they are at loose ends, they are 12 months before they find their feet and begin to really enter into the life of the university. It has been suggested that boys of that sort should have taken at least a year of their secondary school course in one of the larger boarding schools, to get, I suppose—to put it simply—their corners rubbed off, to get a little humanising. What would you say to that?—It is impracticable.

22,199. (*Mr. Matheson.*) You have had some elementary school boys who have passed through your school to the university, and then into Class I. clerkships?—Yes.

22,200. On the whole have they done well?—Very well.

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

22,201. Have you had any instances of breakdown in health, or have they generally managed to go through the course without it?—I can remember one instance of a partial breakdown, a temporary breakdown.

22,202. But on the whole the transition from one school to another, and to the university has been managed, without any great difficulty?—Yes, generally.

22,203. I suppose Birmingham is better supplied in regard to scholarships, and so on, than other parts of the country?—I believe so.

22,204. Are your scholars in the school selected by examination?—Yes, our Foundation scholars are selected by examination.

22,205. Is that an entirely written examination, or is there any element of school record?—No, except as regards character; there is a rather stringent certificate of character.

22,206. But substantially it is a written examination?—It is a written examination.

22,207. Supposing there were only two classes of clerks below Class I., as the Chairman suggested, I suppose you would agree that you would have a very distinct difference in standard between the examinations for the two classes?—Yes, certainly.

22,208. Would you be satisfied if the examination for the upper one of those two divisions corresponded fairly closely with the present intermediate examination?—Yes, I should.

22,209. Then the lower one, I suppose, would have to represent something like a year or two years' less school work?—Yes, and it should also, I think, be less specialised, it should be more in the nature of the matriculation examination.

22,210. (Chairman.) I understood you to say that you would have no objection to the examination for the second division being imposed in the case of the new division, the lowest division?—I have no objection. I was not thinking of it then as regards the limits of age. If you are going to fix the lower limit of age at 16 instead of 18, I think that a different examination, different in calibre, and also in character, would be desirable.

22,211. If you want to have an examination for boys between the ages of 16 and 17½, as you suggested, you would require a different examination from this second division examination?—Yes, I think that certainly, the reason being that if you made it of the same character as the present intermediate examination you would encourage premature specialisation.

(Chairman.) There is no question of that, as I understand, Mr. Matheson.

22,212. (Mr. Matheson.) No. (To the Witness.) You would make the examination an examination really in school subjects?—Yes.

22,213. I think we are all agreed that it is a great disadvantage for boys to be taken away from the secondary school in the middle of their course. Would you sum up for us from your experience as a schoolmaster, what you think, apart from the purely intellectual loss, a boy loses by being taken away from school at too early a date?—Apart from intellectual loss there is extreme difficulty in knowing what to do with him. The boy clerks go to London, and obviously it is a very unsuitable thing to send a boy of 15 to live in London by himself.

22,214. I was thinking rather of the case of a boy who is taken away from school to be specially coached for the lower Civil Service examinations?—There the same quasi moral difficulties occur, he is not under the same kind of moral and quasi moral discipline as he is at school, and he very often comes to grief more or less.

22,215. He loses in fact the training in character that he gets at school?—Certainly.

22,216. And intellectually he loses something through not having corporate study or study in a class?—Intellectually he loses enormously, because he is taken away just at the time when his previous studies are beginning to have some kind of fruition; he is taken away at the beginning of important subjects of which he has not learnt enough to comprehend the value. Moreover, the evil is not limited to that, because he knows beforehand that he is going to take

this sort of examination, and he will be very half-hearted in his studies of those things that will not count for that particular purpose.

22,217. (Mr. Beck.) As regards these public elementary school boys who go through a secondary school and through the university and then take the Class I. examination, you have followed the career of several of them?—I have.

22,218. Have you found them, after they have done all this, in any way inferior to men who have come from easier circumstances in life when they get into the Civil Service?—I do not know that my experience is wide enough to enable me to answer that question with an absolute negative, but I have been struck with their success and not with their failure.

22,219. The only point in my putting the question is because, personally, I hold the view that it is the training and not the home that forms them; but it has been suggested by various people that there are rather a large number of breakdowns, that these boys work very hard from an early age, and then when they have, so to speak, reached their goal they do not compare favourably—the mental effort has, so to speak, exhausted their brain—with people who have had an easier chance to arrive at the same condition?—I do not believe it. The breakdown would have occurred before they reached that point.

22,220. (Chairman.) I understood you to say that you had had no experience. You look at it from the point of view of the head of a great school, and it would require that you should have mixed in the society of those men in order to be able to know how they got on in after life?—In order to know fully; but I take a great interest in their careers, and I hear of them not only in letters from the men themselves, but from their superiors in the Civil Service.

22,221. But their having attained to high distinction and success in life is some proof that they have not been wanting in the social attributes that are necessary?—I certainly think so.

22,222. (Mr. Shipley.) Do you think that the class of boy who goes in for a Government appointment compares favourably with the class of boy who goes in for, say, a mercantile or commercial career?—In what sense are you using the word class?

22,223. Say, boys from your school who go in for a Government appointment. Are they as good as or better or worse than the boys who go in for a mercantile career?—So far as second division clerkships are concerned, they are the same; so far as first division clerkships are concerned they are approximately the same, but, of course, it is only a small section, of exceptional ability, who think of that; very few boys in my school, not more perhaps than three or four a year, can possibly go to Oxford or Cambridge unless they obtain open scholarships at one or other of the colleges, so that it is a very select body.

22,224. How do the boys hear of these posts; how do they know that such things as second division clerkships and boy clerkships exist; do they hear of them from one another or do they have notices put up on the screen?—I do not put up notices on the screen except for the intermediate clerkships and anything beyond that. I do not put up notices of any other kind; they hear of it from one another, I think, and their parents hear of it from one another; but, of course, they frequently come to me to inquire.

22,225. We were discussing just now whether a boy should have one, or two chances; I think I am right in saying that the intermediate examinations are held twice a year, so that, if they had a run of 18 months, all of them would have certainly two, and possibly three chances?—Yes.

22,226. You consider that mathematical questions have rather changed in character in the last 10 years?—Undoubtedly, entirely with my approval, that is to say, a change was wanted, but I think the particular style of paper that is set for the intermediate Civil Service examination is a faddy kind of paper; it does not represent a healthy development at all.

22,227. Would you say that the change began about 10 years ago?—In point of fact it began in my school about 30 years ago. A great mathematician named

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

Rawdon Levett, who was second master there, was the founder, together with one or two other men, of a society for the improvement of mathematical teaching, whose operations have eventually led to the very great reforms which have occurred in the last 10 years.

22,228. You approve of the reforms, but still you do not approve of the papers?—That is so.

22,229. That is one of the things we might help to put right, if these papers are peculiar and faddy in any way. You think the papers are not suited to the selected candidates?—I think they are not, and I think that is proved by the fact that boys whom I consider to be pursuing a good mathematical curriculum are unable to obtain high marks in mathematics until they have, as I should say, wasted some weeks in doing these particular papers.

22,230. Is it a matter of graphs?—I suppose the questions purport to be of a highly practical kind, but they really involve no knowledge of mathematical principles which would not be in the head of any ordinary mathematical boy, while they are so full of details and practical complications that, unless a boy has actually solved things of the particular kind against time, although he would get full marks if you gave him time, he cannot do enough in the limited time.

22,231. Do you think that explains the statement of St. Bees School that examinations do not find the best boys?—Probably; I cannot say certainly, but it is probable that Mr. Sawyer finds that the case.

22,232. (Mr. Hoare.) I am not quite sure what would be the effect of the change that you suggest in the ages. Would it be to make two examinations instead of three, or would you still go on with the boy clerks' examination, the intermediate, and the second division examination?—I should like to see the boy clerks abolished. There would then be three examinations, one first division examination, one which would correspond to the present intermediate examination, and one corresponding to the present second division examination, but with a different limit of age.

22,233. You would then only have two examinations?—Three altogether; one post-graduate and two from the school.

22,234. Do you foresee any difficulty with the two pre-graduate examinations, that by bringing the first to a later age and the second to an earlier age—which I think is your suggestion—you would not be able to have so clear and deep a line between the two classes in the Service as you have now?—I do not anticipate any difficulty. I think the present limits of age are really a topsy-turvy arrangement.

22,235. Apart from the educational reasons, which are, of course, very strong, there is the practical point that, with the ages divided by a considerable number of years, you do have two very distinct classes, and in any service it is very difficult to keep classes if you do not have a distinct division between them. Your suggestion would have this effect, would it not, that you would have the boy clerks' examination a year later, and the other pre-graduate examination a year earlier?—Yes.

22,236. (Chairman.) Do you mean by the post-graduate examination, the Class I. examination?—Yes.

22,237. And by the pre-graduate examination you mean either the intermediate or the second division examination?—Yes. I do not contemplate three pre-graduate examinations, but only two.

22,238. (Mr. Hoare.) And with two examinations at so near an interval it seems to me that it might be difficult to draw a line between them. You do not think so?—I do not think so. Those who entered for the earlier and easier and less specialised examination would be boys leaving school at 16 who had had a good sound general education up to that age, but had not specialised to any considerable extent. Beyond 16 a boy ought to specialise; he ought to make up his mind whether he will be predominantly mathematical and scientific or predominantly literary and humanistic. The corresponding examination ought, therefore, to allow him to show his specialisation as the present intermediate examination does by allowing him to take a subject at a higher level

22,239. I think you said that the Birmingham education authority gave scholarships of 50*l.* a year to be awarded to boys going up to the universities?—Yes.

22,240. Are they given on the condition of the boys obtaining other scholarships of a certain specified amount?—No, but they are limited in this way, that the sum actually paid shall in no case be more than will make up the boy's total income from scholarships, exhibitions and similar emoluments to 150*l.* a year; that is to say, that if a boy is already in possession of emoluments that amount to 120*l.* and then becomes a successful candidate for a Birmingham local authority's major scholarship, the value of that will be only 30*l.*

22,241. Would you then let a boy go to the university, supposing that with his 50*l.* he had less than 150*l.*?—I would not prevent him if he could manage it. It means, of course, that his parents would have to pay something. It is impossible to get through Oxford or Cambridge with less than 150*l.*, or much less.

22,242. I do not know whether you are aware of what is done by the London education authority. There they make it a condition that a boy must have 160*l.* a year in scholarships of some kind?—I believe so. We have no condition of that kind.

22,243. You do not adopt a policy of that kind?—No.

22,244. With your experience of one of the older public schools, Harrow, and with a group of new schools, would you advise your best boys to go into the Civil Service?—Yes, into the higher division of the Civil Service.

22,245. (Miss Haldane.) Am I right in thinking that you have on your foundation a large school for girls?—Yes.

22,246. Have you a knowledge of its working and so on?—Yes. I am described by the Act of Parliament as its head master.

22,247. I did not realise that. I suppose that the arguments you have been using about the nature of the examinations for the Civil Service would apply to girls and women as well as men, in the main, so far as any positions are open to women?—In some respects even more so; it is even worse for a girl to be taken away from school at 14, and crammed for a post office appointment, than it is for a boy to be taken away at that age.

22,248. Do you mean because of their health?—Yes, her health, and her general *entourage* in the sort of place she goes to.

22,249. You mean the special preparation, the crammer?—Yes.

22,250. You regard that as bad for girls?—Particularly so.

22,251. Is that different from boys?—No, it is the same; but the conditions are not in my opinion wholesome or desirable.

22,252. Therefore you think it ought to be abolished so far as possible?—It is very desirable that girls should remain at school up to 16 before they enter for any external examination.

22,253. I suppose the nature of a girl's education both in school and later in college is much the same as what I am acquainted with in Scotland, that is to say she usually emphasises a knowledge of modern languages, possibly Latin, history, literature and a little science, would that be the line usually taken?—My knowledge of girls' schools is confined to Birmingham, but it is fairly extensive in Birmingham—three schools of King Edward's Foundation and five municipal girls' schools, all of which I have a hand in. In the case of those schools science is more prominent than that would indicate, decidedly.

22,254. Do you consider that that is a good thing for what you might call cultural training in girls' schools?—I am a little doubtful whether the science has quite as good an educational effect.

22,255. The education that I am most acquainted with does not emphasise science so much; perhaps it is more so in your case. Do you think that anyone trained properly in that particular way would have as good a chance of passing the higher division examination as

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

one who had had a more thorough classical training?—Yes, so far as I am able to judge.

22,256. I have heard it said that the marking of the science papers in the higher division examination is not sufficiently high for the difficulty of the examination; have you heard that criticism made?—No, I have not.

22,257. Do you think it would be an advantage to schools to have some national certificate such as we have in Scotland in our leaving certificate and our intermediate certificate; might that have the effect of obviating some of the cramming that you have been speaking of?—I think it is possible that it might, but, as I said before, I do not wish to exclude or to penalise the private student if he or she exists.

22,258. I think you said before that he or she was almost extinct?—Yes, approaching that, I think.

22,259. That being so, I do not know whether it is worth while taking him much into account. You have been talking of the record; do you consider that it would be valuable to have that sort of record, along with a school examination in which the examination should not be a set book examination?—I am afraid I do not quite follow you.

22,260. Do you not think that in order to avoid cramming, to which I gather you object, an examination such as our leaving certificate examination might be utilised?—I think it might.

22,261. In that case you would have an examination of course, but it would be a school examination and not a set book examination?—Yes. Most of our external examinations, even in England, are not set book examinations.

22,262. And that might apply also to the lower grade examination of which you have been talking, which would correspond to the intermediate grade examination?—Yes, I think so. I am not very familiar with the Scottish system; but so far as I am acquainted with it I think it is a great deal better than the English system.

22,263. It is working its way there. But the intermediate certificate would reach the level of your lower pre-graduate examination?—Yes.

22,264. And the leaving certificate would correspond to what you have been talking of as the higher of the pre-graduate examinations?—Yes.

22,265. Do you teach any handicraft or practical work in your school?—I do not in my own school. We do in all the other schools for which I am responsible. I am always a little doubtful whether I am right, but there are various practical reasons why I do not do it. There is not much room for workshops in the middle of Birmingham, and also I find that so many of my boys have practical hobbies of the kind, that I do not think it is very necessary. I have never thought it necessary to incur the very serious financial and other difficulties that would be involved in starting it in my own school.

22,266. One more question about the education ladder. You think that what is termed the ladder is really efficient?—I believe it is in Birmingham. I know that statement in some quarters is disbelieved; I do not mean as regards Birmingham particularly, but as regards the country generally, and for aught I know it may be so; but in Birmingham I have had considerable experience in the matter because even before the passing of the Education Act, 1902, and certainly considerably before it affected our schools much, we in Birmingham were already in possession of a system of extensive privileges enabling elementary school children to enter our secondary schools. Already one-third of all the places in all our King Edward schools were free, and a large proportion of them were already earmarked for elementary school children, so that really we were working what is practically the Board of Education scheme for some years before that scheme was established.

22,267. There is one other point I wish to be clear about. You stated that you think that children must come at 12 years of age, if they are to benefit from secondary education?—Yes.

22,268. That being so, do not you consider that it is possible that you do not ascertain by the age of 12 what children are capable of, and you may possibly not get the best material for that reason?—I should be very far

indeed from saying that we make no mistakes, but my experience was that it was rather difficult to find enough children of either sex from the elementary schools to fill these one-third of our available places in a satisfactory manner.

22,269. Do you consider that that is because there is not sufficient talent, or because the proper talent is not laid hold of?—Because there is not sufficient talent. I think we got the best children. It has been the fashion in Birmingham to send promising boys from the elementary schools to the secondary schools.

22,270. Are the scholarships given in Birmingham by examination?—Yes, in the subjects taught in the elementary schools.

22,271. Do you think that the system of having them without examination might not be better—by the choice of the teacher, with certain safeguards added?—I cannot say; I have no experience.

22,272. It is a great difficulty to test children at that very young age?—I quite agree.

22,273. (*Mr. Booth*). I want to come back for a moment to the two examinations that we have been calling pre-graduate examinations. The first, I understand, you suggest should be an examination of the secondary school type, which a boy should be prepared to pass at the age of 16?—Yes.

22,274. Do you gain anything by putting up the limit as high as 18. If the examination took place twice a year would it not be enough to say that he should pass it while he was, say, 16?—I think so, if it occurred twice a year.

22,275. If you put the upper limit at 18 there would be a danger, would there not, that the boys would not try to pass it until later, in order to make sure of getting through, and then you would get boys entering by an examination which is really not a proper test for them at that age?—I think there is something in that objection.

22,276. If the examination took place twice a year you think on the whole that 16 would be a suitable age?—As I said before, I am not really very keen on their having more than one chance.

22,277. You realise, I suppose, that in the Government service, as in any other, there is a great deal of work of a very elementary kind that has to be done by someone or other, and it is no use having nothing but future generals in the army?—But these examinations are not of a very elevated type.

22,278. The other examination you put on the basis of the present intermediate examination, from about 18 to 19½?—Yes.

22,279. If that change were made I think it would follow that more boys would have to pass through that examination, that more boys would be required to pass than at present pass through the intermediate examination?—I think we could provide them.

22,280. I was going to ask you, you think it is a suitable examination for a larger field?—Yes.

22,281. You spoke of other secondary schools in Birmingham besides the King Edward School; would they be able to prepare boys for such an examination, or do you think they would be better prepared by the high school?—The King Edward Grammar Schools would not, nor is it contemplated in their constitution that they should. Our group of schools is very carefully co-ordinated and arranged with a ladder of scholarships in such a way that boys and girls of exceptional ability should be drafted on to the high schools from the grammar schools, and that would be the proper place, therefore, so far as the King Edward Foundation is concerned, in which these candidates should be taught.

22,282. Therefore, so far as Birmingham is concerned the entrance for this examination would almost entirely come from the high schools?—Yes.

22,283. But the other secondary schools would be able to present candidates for the lower examination?—That is so. I foresee that there might be a difficulty there. My own view is that the municipal secondary schools also had better send on their candidates to me, and there is every facility for their doing so; but there are some people who might not think so.

9 January 1913.]

Mr. R. CARY GILSON, M.A.

[Continued.]

22,284. Are the municipal secondary schools preparing any candidates for the intermediate examination?—Yes, they do sometimes.

22,285. But I suppose they send more to the present second division?—Yes, no doubt.

22,286. And your view is that an examination of the type of the intermediate examination is better prepared for at such a school as your own rather than at the more general type of secondary school?—Yes, I think so. Of course it is really a financial question. In order to provide adequate training and education up to the maximum age of 19½ you require to some extent more expensive equipment, and certainly a more highly qualified and more numerous staff in proportion to the boys passing through. If we provided it in all our secondary schools in the area, our educational expenditure would advance by leaps and bounds.

22,287. In the ordinary municipal secondary schools there would be very few boys staying beyond 16 to 17 years of age in school?—Yes, there would not be many.

22,288. So that it would be necessary, in addition to the ladder of scholarships to the secondary schools, that there should be some means, such as you say you have in Birmingham, for boys going on from the ordinary secondary school to the high school?—Yes, I quite agree.

22,289. With regard to the examination itself, you criticise the mathematical papers. Are there any other criticisms you have to make on that subject?—If I had only looked at the syllabus, I do not think I should have seen any criticism to make, excepting that the mathematical papers, as I have already said, strike me as being of a somewhat peculiar kind, but I have observed—at least, I think I have observed as a matter of experience—that those boys are most successful in that examination who take the maximum number of subjects, rather than those who rely on a high standard in particular subjects. I think that is undesirable.

22,290. You think that the total number of marks allowed is probably too large. "Candidates may select" subjects, one of which must be a language, carrying "marks up to a maximum of 10,000, making with the

"subjects in Class I, 15,000 in all"?—Yes, that has been slightly modified later; it used to be 14,000.

22,291. I was going to ask you about that modification, whether there was any conference on the subject of the change?—I have not been consulted about it.

22,292. Do you know whether your Conference has been consulted at all?—I do not think so. I am not absolutely certain about it, but I do not think so.

22,293. I think we have got an impression, I do not exactly know where from, that the examination was modified in order to meet criticisms from certain schools?—I remember Mr. Stanley Leathes attended a meeting of the committee of the Head Masters' Conference about three years ago now, at which that examination was discussed, and it is quite possible that that modification may be connected with that interview. I cannot remember exactly.

22,294. There was no formal conference at which the alteration was suggested and discussed, and adopted or rejected?—No, I feel sure that that did not happen. I ought to guard that statement though, because, although I have been a member of the committee of the Head Masters' Conference off and on for over ten years now, by our rules we are allowed a year's furlough—having served for three years, one is ineligible the next year, therefore something may have happened in the year when I was ineligible.

22,295. I have also seen it stated, or I have heard, that this intermediate examination was designed to attract boys from the older public schools?—I have always understood that that was what was intended when it was originally established.

22,296. It has not had that effect?—I do not think it has.

22,297. Is there any truth in the suggestion that the examination was altered in order to try again to draw boys from the older public schools?—I do not know.

22,298. You do not feel that in its modified form it is any less suitable for the work you are doing in Birmingham than it was before, subject, of course, to the criticism about the way in which the papers are drawn up, but so far as the syllabus itself is concerned?—I think the syllabus is a good one.

Mr. W. M. HICKS, Sc.D., F.R.S., called and examined.

22,299. (Chairman.) You come before the Commission on behalf of the University of Sheffield?—Yes.

22,300. What is your official appointment in the university?—I am Professor of Physics in the university, but at present I am acting Vice-Chancellor. We are in an interlude between our old one and Mr. Fisher who is coming to us in June.

22,301. Is there a large faculty of arts in the university?—Yes, and I think, so far as the number of students go, we can say that it is the largest faculty.

22,302. Of how many students does it consist?—I should think there would be somewhere about one hundred matriculated students reading for degrees in arts.

22,303. Have you sent many students to the Class I. examination of the Civil Service?—No, I think none.

22,304. None yet?—None. Most of our able people have a view to going into business connected with the City, and most of them go into business.

22,305. They do not look so much to the Civil Service as to employment in commercial business?—Yes, manufacturing and commercial business.

22,306. Is the curriculum of the university directed to degrees more suitable, then, for commercial life than for entering into the Civil Service?—No, I think not. The curricula for arts and pure science are quite independent of any view to that.

22,307. They are not modified, at all events, with reference to the Civil Service examinations?—No, a large number, of course, of our art students are going to be teachers.

22,308. You know the subjects for the Class I. examination?—Yes, I have seen them.

22,309. Do you think that all those subjects can be as well taught in Sheffield as they are at Oxford and

Cambridge?—Not all of them, of course; some we could not teach at all; for instance, Sanscrit and Arabic are subjects that we could not teach, nor, of course, at present, could we teach Greek. We cannot teach Greek or Latin as well as they can at the ancient universities, because there are a number of teachers there who are first-class classicists, whereas we have just single teachers, but in all the other subjects I think we might do it quite as well.

22,310. In the mathematical and science department you think you could do it as well?—Yes.

22,311. And in modern languages?—Yes, French and German. I do not say that we could do it as fully in German, but we have a very good French school indeed, and a very large number of honours students.

22,312. We are now talking of the Class I. examination, and I will limit my questions to that. You say in your statement\* that "whilst the present examination scheme seems well arranged to meet the cases of able men who have received a good university education, an examination of this kind could not be a test for the greatest promise of administrative capacity." Then you add, "it would probably achieve the purpose better if the possible range of subjects taken by a candidate were diminished," and you would do that "by reducing the maximum number of marks obtainable below 6,000." What particular subjects are you referring to there?—Not to particular subjects at all.

22,313. You have, I suppose, in your mind a particular group or groups of subjects when you refer to the maximum of 6,000 marks?—No, the reference there is not to the range of the examination, it is to the range of subjects which an individual candidate can take.

\* Vide Appendix XLVII.

9 January 1913.]

Mr. W. M. HICKS, sc.D., F.R.S.

[Continued.]

22,314. That is what I mean?—We suggest that he should not be allowed to take so many, and we suggest that a possible way of meeting that would be that the maximum number of marks should be made below 6,000.

22,315. That is to say, you would insist upon greater concentration in his studies?—I do not know that that quite puts our view. The candidates, as a rule, and as a matter of fact, after they have taken their degree at the university, at present have to spend another year in getting up special subjects just to pass a special examination at the end. There is no advantage to the public service to be got from that, and the year is practically wasted for that purpose. If a student takes his degree he works for his degree, and he studies for it in a proper way without reference to any special examination that he has to pass. He should be examined in that and perhaps a little more, but not sufficient to make him obliged to put aside a whole year in getting up some special subjects. Getting up a subject like that tests him to a certain degree, but it gives a premium to those who simply have powers of acquisition.

22,316. Would you illustrate your remarks by taking the scheme of the examination for Class I. You have it before you, I presume?—Yes, I have. In what way do you mean?

22,317. Take the subjects in which you think a man ought to get his 5,000 marks, and then I shall be able to understand more clearly what is the nature of the additional subjects that you deprecate his taking up?—I do not know that I am quite prepared to do that; it requires a great deal of consideration, of course.

22,318. But I only want a general idea of what you mean?—If a person has taken, for instance, a classical degree he would naturally take Latin and Greek, which would give him 2,200 marks, and, in addition, he might take Greek History and Roman History, which would give him another 1,000, say 3,200; that would naturally be work to cover his degree work. Then, of course, you would probably expect him to do English composition, which would give him 3,700 marks, and then, I have not thought this out, but I should think about 4,000 marks would just bring it about right.

22,319. I see what you mean. If he took the subjects you mention he would go over 4,000, but you still would allow him to get up to 5,000?—I do not commit myself to any definite figure. A person who takes modern languages, of course, would take English and French, that would be 2,000 marks.

22,320. The main point that you want to make is that, at the present time, a candidate's attention is diffused over too many subjects?—Yes, I should like, of course, to see this special coaching made unnecessary.

22,321. And you would go as far as possible in the direction of restricting the examination to subjects that a man must take for his degree for honours?—Yes, but that really covers the list you already have, except possibly for persons who have taken applied science. I do not think it is likely, of course, that students who have taken applied science, that is, engineering or metallurgy, or things of that kind, would naturally go in for the Civil Service, and it might hardly be worth while to include that, but, I think, in the subjects for that examination you cover most of the things which are taken in degree work.

22,322. Do you know anything about the other examinations for the Civil Service for the second division, for boy clerks, and so on?—No, I know nothing about them.

22,323. You do not desire to give evidence with regard to them?—I did not know that that was really under consideration. It is only Class I. that we have been considering. I think, in fact, your questions were with reference to that.

22,324. Are you in close touch with the secondary education in your neighbourhood?—Yes, we have representatives on their governing bodies, and their boys take, very largely, our entrance examination, that is to say, the examination for the joint board of the four universities.

22,325. Are there many scholarships held in your university by boys who come from secondary schools?—Yes.

22,326. Are they university scholarships or scholarships given by local bodies?—Some are university scholarships, and some are given by outside bodies, like the West Riding of Yorkshire, the city of Sheffield, and the town of Rotherham.

22,327. Are these scholarships given by the outside bodies you have mentioned given on the result of examinations, or on the result of the holder's school life?—Of course it varies. In the West Riding, and at Rotherham, they are given on the results of the joint examination board, that is, our matriculation. The city scholarships are given on our entrance examination, that is, the university entrance scholarship examination.

22,328. Are the scholarships of sufficient value to enable the holder to live in comfort at the university?—Yes, I think so, in general; those of the West Riding run to 60*l.* a year, those that are university scholarships given by one of the bodies in the town, the town trustees, are 50*l.* a year, and other scholarships are of less value, of course, which are not sufficient, but they are very often tenable with something else.

22,329. Are the students of your arts faculty mostly boys who come from the ordinary secondary schools or do they come from the larger public schools?—The arts students as a rule come from the ordinary secondary schools; the applied science students come from the public schools and from the grammar school in the town.

22,330. I form the impression from what you have said, that up to the present time there has not been much touch between your university and the Civil Service?—None at all.

22,331. At what age, do you think, might it be said that secondary education was substantially completed in the schools of which you have any knowledge?—The average age of those entering is between 17 and 18. Eighteen is the average, I should say.

22,332. Is 18 the average? From other information that we have had I was under the impression that 18 was rather the maximum?—I was going to qualify that. I used the wrong word, not meaning from 17 to 18. I should think the majority were about 18; there are not many above that.

22,333. (*Mr. Matheson.*) Are you speaking of the age when they come to the university?—Yes.

22,334. (*Chairman.*) Does your knowledge of the secondary schools within your area lead you to believe that an average student of a secondary school is well grounded and has acquired as much knowledge as he can acquire up to the age of 17 in those schools; and would the age of 17 be a proper age at which to recruit boys from the secondary schools for the public service?—I should doubt it.

22,335. It would be a little too low?—Yes, certainly.

22,336. (*Mr. Graham Wallas.*) When you say in your statement that it would be an advantage if selected candidates were required to attend courses of higher education for a year, were you thinking of the practice in the Indian Civil Service?—I was going, if you will allow me to alter the word "would" to "might." It is more of a suggestion thrown out.

22,337. It might be useful?—Yes.

22,338. In making that suggestion were you thinking of the actual experiment which is being tried now with regard to the Indian Civil Service. You know that successful candidates for the Indian Civil Service are required to continue their studies?—Yes.

22,339. Were you thinking of that proposal?—I do not know that that was in our minds. We were looking at this more from the point of view of the Home Civil Service.

22,340. I ask the question because you appear to refer to the same question at the end of your section 3 where you say that the extra year for special preparation would require some pecuniary assistance?—Yes.

22,341. Did you therefore contemplate that during that extra year they should receive any pay or allowance from the Government?—I do not think that was con-

9 January 1913.]

Mr. W. M. HICKS, SC.D., F.R.S.

[Continued.]

sidered. It was simply stated, which is the fact, of course, that some pecuniary assistance would be called for on behalf of students of slender means.

22,342. You know that, in the case of the Indian Civil Service, they draw pay during that period?—Yes.

22,343. Have you considered whether any such scheme would be most useful under the home conditions applied at the beginning of a man's course or somewhat later?—That depends, of course, upon the work he has to do afterwards. I really do not feel qualified to give an opinion on that. If he is an able man and goes into office work at once, I should think he ought to pick it up.

22,344. (*Mr. Boutwood.*) In your second paragraph you say that the present examination scheme cannot be a test for "the greatest promise of administrative capacity." Why not?—An examination, of course, tests a man's knowledge; it tests to a certain extent his ability, but it cannot be a test of the personal qualities of the students. If you want to get a judgment as to promise of administrative ability you can only do it if you know the individual candidate intimately in each individual case. It is impossible to get it, I think, in an examination.

22,345. Does that comment amount to a suggestion for supplementing the competitive examination in some way by some sort of personal appreciation; would you go so far as that?—That, of course, is very difficult. If it was a question of appointing a man to a single post that is vacant, then I think examination would be distinctly bad, but when you have a large number—as I take it, each year you have a large number of candidates—what this examination does is to give you a considerable number of individuals who have a large number of the essential qualities which you require, and then, I take it, especially if promotion goes by merit as well as seniority, that those who have got the administrative ability will go to the top, and those who have not will not get promotion. So that what the examination does and what it ought to aim at is to get a body of people who have the intellectual qualities of education and training that you look for.

22,346. So that you would trust to methods in the Service for sorting; you would not apply any other test or any other kind of sorting than examination before appointments were made?—You might, for instance, allow a candidate to come on probation for a year and give the heads of his department power to tell a candidate at the end of the year, if he is distinctly unsuitable, that he is so; or if he is not very suitable, to advise him to resign, or to say that if he goes on there is not much possibility of promotion for him.

22,347. That is the sort of thing?—But I think the selection had better be left in the hands not of one man, of course, but of the chief men in his department forming a small committee.

22,348. (*Mr. Matheson.*) I want to ask you about the natural science subjects in the Class I. examination. In your honours course, in which natural science is a chief subject, how many branches would be taken up ordinarily by one candidate?—You refer to our students in Sheffield?

22,349. Yes, I am speaking of your honours examination?—An individual candidate for honours takes one subject with certain subsidiary ones. For instance, if he is taking honours in physics he has to do a certain amount of mathematics, and he may also take, as subsidiary subjects, either chemistry or electrical engineering. So again, if he is taking honours in chemistry, he can take, as a subsidiary subject, mathematics or physics, but, practically, an honours man takes his degree in the one subject.

22,350. Therefore, from the point of view of your science man, these marks for Class I. examination would not be very favourably distributed?—They would not.

22,351. (*Miss Haldane.*) Amongst your 100 arts students how many are women, about half?—A very large number.

22,352. More than half?—I should think so in the arts course. In pure science it is the other way round; there are very few.

22,353. Are they aiming mostly at the teaching profession?—Most of our arts students are preparing for teaching.

22,354. Is there a demand for other outlets beyond teaching on the part of the women students who are taking the arts course?—I do not know of any other. There are a few who take medicine, but that is not arts.

22,355. I suppose some of these women are taking honours?—Yes, a considerable number.

22,356. Do you think that amongst them there are women who would be fitted to take up higher posts in the Civil Service, supposing such were open to them?—I can think of just one or two—I can count them on my fingers—whom I could really recommend.

22,357. You consider that the education ladder is satisfactory on the whole?—Yes, I think that any candidate of great ability can get a scholarship sufficiently valuable to keep him or her for three years at the university.

22,358. Have a large number of your students come from the elementary schools?—Some do. We get a large number of women from girls' high schools, and we get men from grammar schools.

22,359. But, originally, a certain number of them came, I suppose, from elementary schools?—Yes.

22,360. You do not know what sort of proportion, I suppose?—I could not say.

22,361. But you would consider that an elementary school child has quite a good chance of going to the university at present if he has sufficient ability?—The ladder is there for the child to climb, and if the ability and capacity are there, he has every opportunity, I think, for getting on.

22,362. But the special preparation would deter a good many from going in for the Civil Service, you think?—No doubt it would.

22,363. The expense of it?—No doubt the extra year would debar them.

22,364. So that if that special preparation were not necessary, you might perhaps have some candidates for the Civil Service?—We could prepare them, and we might possibly. Are you speaking of women students?

(*Miss Haldane.*) No, I was thinking of all students, because such higher division posts are not open to women at present.

22,365. (*Mr. Booth.*) In your honours courses in arts in the University of Sheffield, do you have a special course for classics, or is it one arts course; have you several arts courses for honours?—Yes, honours in modern languages, honours in English, honours in French, and there is a combined honours course, I think, in English and French.\*

22,366. Is there an honours course in classics?—Yes.

22,367. What does that examination involve?—I am afraid I can hardly tell off hand.

22,368. Could you say whether it is a very much narrower examination than the classical tripos at Cambridge?—I am afraid I am not competent to give an opinion. It cannot be as broad, of course.

22,369. The honours examination in French, I take it, is entirely in French?—Yes, it is in French only.\*

22,370. Therefore that is, in itself, much narrower than the modern languages tripos at Cambridge?—It may be narrower, but the French school is certainly as good as the one at Cambridge.

22,371. My point simply is that, so far as I can understand, a student for one of your honours courses in arts in the University of Sheffield could not be qualified in any way to get sufficient marks to pass the Class I. examination on his honours subjects alone?—Not if he took French only, certainly, as the marks stand at present.\*

22,372. He might obtain an honours degree in the University of Sheffield, but on his honours reading he would only be able to get quite a very small number of marks for the Class I. examination?—If he had that in mind he would probably take the combined English and French course.

\* This answer, I find, was not altogether correct. The honours schools comprise classics, history, English language and literature, modern languages and literature, mathematics and philosophy. In modern languages two, out of the three, English, French, German, must be taken.—W. M. H.

## FIFTY-FIFTH DAY.

Friday, 10th January 1913.

## PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
 Sir DONALD MACALISTER, K.O.B.  
 Mr. ALFRED ALLEN BOOTH.  
 Mr. ARTHUR BOUTWOOD.

Mr. PERCY EWING MATHESON.  
 Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
 Mr. GRAHAM WALLAS.  
 Miss E. S. HALDANE.  
 Mr. S. ARMITAGE-SMITH (*Secretary*).

Sir W. S. McCORMICK, LL.D., called and examined.

22,373. (*Chairman*.) You are good enough to come here to explain to us the origin and method of working of the Carnegie Trust?—Yes.

22,374. Will you give us a sketch of the origin and growth of the Trust, beginning from the time when Mr. Carnegie first declared his intention of making this Foundation?—I may put it very briefly of course. Mr. Carnegie's great benefaction was given under a trust deed which divided the two million she gave into two parts.

22,375. When did he first manifest his intention?—In 1901, exactly 11 years ago; so that we have been working, and any statistics that I have are statistics over 11 years. Mr. Carnegie divided his great benefaction into two parts, which we call clauses A and B.

22,376. Did he give two millions to start with?—Yes, two millions. I believe in the inception of it he began with one side of it, but in his talks and discussion with those who were interested in the matter, he ultimately decided to make it two millions.

22,377. So that we may start from the grant of two millions?—Yes. 102,000*l.* we have as income.

22,378. Before you go further, would you tell me how is the money invested; are there trustees?—Yes, there are trustees. I think about 20.

22,379. Are they all Scotchmen?—No, the Prime Minister and Lord Morley are trustees, though not Scotchmen. Among the Scotchmen, outside the Executive Committee, are Mr. A. J. Balfour, Lord Haldane, Lord Rosebery, and many others.

22,380. All distinguished men?—Yes.

22,381. Are there any American trustees?—No, there are none.

22,382. They are all British trustees?—Yes, they are all British trustees, and Mr. Carnegie himself is not a trustee.

22,383. Are the funds invested in British securities?—No, we have them in bonds of the Steel Corporation of America.

22,384. Is there in the trust deed any power vested of varying the securities, selling and re-investing?—Yes, there is entire power. It has not been taken advantage of for obvious reasons. We could not get a trust of the same security which would give us 5 per cent., and the 5 per cent. has not failed us yet. I may also add that besides the trustees there is an executive committee, and the trustees are the body to whom the executive committee report once a year; we are preparing at present our annual report for the trustees in February. The Executive Committee consists of Lord Elgin as Chairman, and the other members are Lord Balfour of Burleigh, Lord Kinneir, who was formerly Chairman of the Universities Commission in Scotland, Lord Shaw of Dunfermline, two representatives from the four Scottish universities, who come off and on alternately every two years, the two Lords Provost of Glasgow and Edinburgh, and one representative of science, who used to be Sir Henry Roscoe, whose place is now taken by Sir Arthur Rücker, formerly Principal of the University of London.

22,385. That is an indication of the character of the men?—Yes. To come then to the two sub-divisions of 50,000*l.* As to the first under clause A, after careful consideration and conference with the university authorities during the first year of the Trust's existence,

the committee came to the decision that they should make their distribution quinquennial, and we therefore organised a scheme of distribution under clause A among the four universities, which lasted for five years. We have had a second distribution which comes to an end next September, over five further academic years, and we are at present in conference with the universities, and have visited already three universities with a view to a third quinquennial distribution which will begin next October 1st.

22,386. That is the distribution of the 50,000*l.*?—Yes. We have not distributed it all among the universities and other schools of university standing (for these are also included within the benefaction) because it was part of clause A that we should finance post-graduate study and research.

22,387. When you speak about schools of university standing, are there a fixed number, or are they susceptible of increase or diminution?—They are susceptible of increase, but we do not judge this matter; the Scotch Education Department is really the judge. We recognise in the main what the education department calls central institutions as of university rank; they include the great Royal Technical College situated in Glasgow, probably the biggest thing of its kind in the world, the Heriot Watt College, the three colleges of agriculture, and even the two colleges of art in Edinburgh and Glasgow respectively. Besides the distribution of the money to those institutions, we have kept a certain part of the income under clause A for the endowment of postgraduate study and research—I refer to that later—and there, I think, we have found what has been recognised by the public as one of the most remarkably successful parts of our operations. After five years of its existence we were able to publish a report to the trustees at their annual meeting, a copy of which I have brought (and I can give you more copies), showing the great success that it has met with. Then under clause B we have the financial assistance of students.

22,388. Also to the extent of 50,000*l.*?—Also to the extent of 50,000*l.*, or near by, and we have been able, until two years ago, practically to pay the full class fees of every qualified student under our regulations, and frank him practically through his university course, except for matriculation and graduation fees.

22,389. But only in regard to fees?—Only in regard to class fees. We have a clause allowing us to make very exceptional provision for a distinguished student who we might find could not get through without further assistance; but that was a precedent which was rather a dangerous one, and we have only acted upon it a small number of times. Perhaps with that preliminary I might refer to the regulations.

22,390. If you please?—The regulations which we put down have been gradually developed according to experience—that is my Appendix A.\* The first and second of these regulations are quotations from the trust deed.

22,391. I infer from the second of these regulations that the operation of the Trust is not strictly limited to people of Scotch nationality?—No, it is not.

22,392. An Englishman or an Irishman living two years in Scotland would be eligible?—Yes; indeed we

\* *Vide* Appendix XLVIII.

10 January 1913.]

Sir W. S. McCORMICK, LL.D.

[Continued.]

have Jews, Armenians, Greeks, and many others under the Trust who happen to have been educated in Scottish schools. But it is particularly with regard to the third regulation that I would wish to speak at the moment. The trust deed leaves all questions of qualification to the final decision of the executive committee. It is this power which I think has resulted in great educational good to Scotland, because from the first we have wished to raise the educational qualification as high as the school system of Scotland would allow. We found, for one thing, that under the universities' regulations the various faculties did not all require the same standard of education.

22,393. Do you mean the various faculties in the particular universities?—In the four universities, because they are all the same so far as this is concerned.

22,394. Am I to infer that a varying standard of education prevails in the four universities?—No, they are all the same; they are dominated by the joint board of examiners, but the faculty of medicine, for a certain reason, demands a lower educational standard in Scotland than the other faculties, the reason being that the Scottish universities, as I think Sir Donald MacAlister will admit, are not purely Scottish universities, but international universities, and especially in medicine in the schools of Edinburgh and Glasgow.

22,395. Do you limit the term international to the three kingdoms?—No, it extends much further. I do not think in Edinburgh, and probably also in Glasgow, more than one half of the medical students are of Scotch nationality. I think it is just a little less than half in Edinburgh and perhaps a little more than half in Glasgow, but a great proportion of the medical students are not Scottish students or students educated in Scotland; therefore, to have put the qualification of entrance to the faculty of medicine as high as it is in the other faculties in Scotland would have been probably too high a standard for those who had not been educated in Scotland, and would have allowed the other universities of Britain to undersell, as it were, the Scottish universities in the faculty of medicine by a much lower qualification. I believe for that reason the Commissioners at the time allowed the medical preliminary examination to be fixed at a distinctly lower school standard than that of the other faculties. But, so far as beneficiaries of the Carnegie Trust were concerned, it was quite obvious that we could not allow that to go on. We could not allow students who were getting by far the greatest share of the trust funds—because, of course, the medical student was going to cost far more than any science or arts student, not only on account of the superior length of time, namely, five or six years, that he was at the university, but on account of the high fees per year—we could not allow them to take such a much larger share on a lower qualification; so that our first change in the regulation which we brought on in the third or fourth year of our institution was that we would demand the same standard of all beneficiaries whether they were medical or otherwise, and we accepted the standard of the Scottish leaving certificate or the standard of the arts and science preliminary examinations of the Scottish universities which are of a fairly equal kind. Then we came to a great difficulty. We found that so long as we put these two types of examination on the same level, parents who were eager to push forward their boys and girls as quickly as possible were apt to take them away from our Scottish secondary schools where they developed slowly but surely, and to send them to proprietary schools where they could be prepared more quickly to pass an external examination.

22,396. At these schools, of course, they could not get the leaving certificate?—They could not.

22,397. But they might matriculate?—They can matriculate, because they can pass an external examination, so that this fund of Mr. Carnegie's was becoming rather in the nature of a bribe held out to parents to take their boys and girls from the secondary schools, say at 15, or perhaps 16, years of age, and give them a year at what we might call these cramming institutions (I am not using the term in any depreciatory sense), and they would come into the benefits of the Trust probably a year before they would otherwise have

done. We thought that was not in the interests of national education, nor ultimately in the interests of the individual boys and girls themselves—and we therefore, four years ago, put the regulation much in the form in which it is at present.

22,398. Did you experience any opposition from the universities?—We have had some criticism among the General Councils; but we have not heard from any of the university courts which are the supreme governing bodies of the universities. The step that we took was, I think, a necessary one, and I may state that the policy of the Trust in now demanding where possible from applicants the school leaving certificate rather than the external (so far as schools are concerned) university preliminary examination, is due primarily to the inherent inadequacy of a written examination in single subjects as a test of capacity, training and general fitness for university studies.

22,399. That would be the entrance examination?—Yes, any external examination, however well conducted. It is excellently conducted. I was a member of the joint board as a Scottish professor on and off for 10 years, and it is as well conducted as any external examination can be.

22,400. That determined you to throw the weight of your influence in favour of the leaving certificate examination?—When it was no injustice to the individual to enforce it.

22,401. In order to reconcile the interests of the individual and the general interests of education it would require a very minute surveillance over the individual students?—That is so; that is why I have brought before the Commission Appendix B, which will show you exactly the minute way in which we have gone into the whole matter. But might I reserve that just for the moment in order to complete what I have got on the notes here?

22,402. If you please?—The main reason for our making this development of our regulation is that it is carrying out the ideal which the Universities Commissioners of 1889 had before them when instituting the present university preliminary examination system. They could not enforce it then, and they said, on page 13 of their report (I have brought the report with me because this is merely an extract from a most interesting couple of pages in it): "We believe this to be the best arrangement that could be made in the present condition of secondary education in Scotland. But we should think it far from satisfactory if it were to be regarded as final and permanent. The object of all such arrangements should be to secure that before he begins his university course a boy should have been for a certain number of years under good and trained teaching. This cannot be secured by a mere examination, although an examination at the end of the school course may be a very useful test of his training. We do not consider that either an entrance examination or a certificate which can be obtained in single subjects can be an adequate test of school training. . . . The regulations we have framed may be usefully revised when good secondary schools have been made available throughout Scotland." We considered that the time had come for certainly some pressure to be applied such as was in our power, in order to bring this ideal more into effect, and I have here a table which shows the proportion of new beneficiaries entering the four Scottish universities through the leaving certificate alone for the past two years. In 1911-12 you will see the total was practically 75 per cent. of all our beneficiaries, and in 1912-13, owing to this regulation becoming more and more known, it has risen to 87.1 per cent., nearly 90 per cent., and the details are given in Appendix B.\*

22,403. Could you say, in order to clarify my mind, what is the age at which boys and girls in Scotland, as a rule, take the leaving certificate examination?—18, sometimes 19—18 to 19; in exceptional cases you have some taking it at 17. This increasingly high percentage is all the more remarkable in that no applicant except one in very special circumstances—there was one exceptional case—has yet been refused

\* *Vide* Appendix XLVIII.

10 January 1913.]

Sir W. S. McCORMICK, LL.D.

[Continued.]

the benefits of the Trust on account of his not having obtained the leaving certificate. For instance, there have been a good many students who have applied to us at the age of 20 who have not completed their leaving certificate course; they have got a number of their passes, but they had failed to get the full certificate. It was hardly worth while keeping a boy or girl at school any longer, so we allowed them to make up their deficiency in the leaving certificate passes at the preliminary examination.

22,404. But do not you occasionally have to decide between a boy with the leaving certificate and a boy who has not got it?—There is nothing competitive in the application.

22,405. But I suppose you reserve to yourselves the discretion of giving the fees, in the case of two boys or three boys who come before you, to one or the other if you cannot give them to all three?—As a matter of fact we have not found it necessary to refuse any application as yet; it is merely the putting forward of our regulation which has done this without any undue pressure. One reason why we could not do that was that the regulation has only been out for four years; there was some slight ambiguity in its first framing, and we had to alter the wording of it, and I think the Senate of the University of Glasgow showed us some better method of expressing our intention; but the regulation in its essence has only been published for four years. Now supposing that four years ago the parents sent a boy or a girl away from the secondary school without knowing of this regulation, and sent him or her somewhere else to get prepared for the preliminary university examination in Scotland, it would be obviously unfair that we should exclude him or her at the present time on that account, so that the carrying out of the regulation has had to be done as gently as possible; but even without any undue enforcement of it up to the present moment, which would have been a hardship on the individual—indeed, up till now without any enforcement at all—we have practically got 90 per cent. of our applicants coming forward with this testimony of a sound and thorough secondary education.

22,406. Is that 90 per cent. of all those boys who conform to regulations 1 and 2 who present themselves?—Yes.

22,407. Foreigners, of course, are excluded?—Yes; they are not within the Trust, unless, as we have seen, they have been in attendance at Scottish schools; and they cannot possibly be so.

22,408. And all boys and girls enjoying the advantages of university education in Scotland will have come into the university from the school with this leaving certificate?—Why I emphasise this is because it seems to me that the position of this Royal Commission in the matter is very much like what our position was. One way of stating it—it is a crude way of stating it—would be that the State is the biggest education authority in the country; and from another point of view, the State is the biggest examining authority in the country; and at present, so far as I can see, the State conducts the one side of its operations and the other side of its operations without any connection with each other. That is my point.

22,409. And your policy was directed in Scotland to obviating that?—Yes. It just occurred to me this morning to look at Matthew Arnold's "Higher Schools and Universities in Germany," which, as you know, was written in 1868, and there I found the following two sentences: "That a boy shall have been for a certain number of years under good training is what in Prussia the State wants to secure, and it uses the examination test to help it to secure this. We leave his training to take its chance, and we put the examination test to a use for which it is quite inadequate, to try and make up for our neglect." That, as I say, was written in 1868, and I feel that it is just about as true at the present time. May I go on now to university education?

22,410. If you please. You have now got your man into the university?—First of all I may speak of the influence of our Trust upon the number of students. I am not quite sure that that is so important a matter as many members of the public think; they think that

the Carnegie Trust has failed in Scotland because it has not doubled the number of students in our Scottish universities. Indeed, that might, under certain circumstances, have proved an unfortunate result.

22,411. Because it has not increased the numbers?—Because it has not doubled the numbers. It has increased the numbers, I think, although it is difficult to say whether other agencies have not also been at work. But the facts are these: the total number of matriculated students at the four Scottish universities in 1900-1, that is, the year before the Carnegie Trust was founded, was 5,755; in 1910-11 (I am merely taking that year because it is the last for which we have published records), that is, in ten years, it has increased to 7,188; and it is a curious fact that that is exactly 25 per cent. I may mention that those figures omit Dundee University College, as it is not included in the financial Parliamentary Returns; but this omission does not affect the percentage of increase. It is difficult to say how far this increase of 25 per cent. is due to the Trust. There are various things that have happened within the ten years that may have increased the number of students at the universities. There has been the new scheme of training teachers which has brought a greater number of the teaching profession within university walls, and that may have had something to do with the increase. On the other hand, it may be that the numbers in the universities would have fallen off but for the Carnegie Trust—one can never tell exactly with regard to numbers, and it does not very much matter, I think—but it is very interesting to note that the increase is mainly, if not entirely, in the faculties of arts and science. If you will turn for a moment to Appendix C\* (which I have got out very hurriedly for the purposes of the Commission), you will see that it shows the numbers in the various universities of Scotland; they are put in the order of their age or seniority—St. Andrews, Glasgow, Aberdeen, and Edinburgh, and if you compare the first three years, 1899, 1900, 1901, and 1901-2 with 1910-11, you will find that the increase in arts is very great, and the increase in science also is very great, but not so much in medicine; indeed, with the exception of St. Andrews and partly of Glasgow, you will find that there has been no appreciable increase in medicine at all; on the contrary, in Aberdeen it has gone down rather than up, and in Edinburgh it is stationary; so that it is in arts and science that the increase in the number of students in the Scottish universities has taken place. Of course, when we think of the large proportion of foreigners—non-Scottish students—in the faculty of medicine, that is partly explanatory of this fact.

22,412. It is rather soon, I admit, because your scheme has been in operation for such a short time, but are there any indications of the success in life of the young men who have entered the universities by means of the leaving certificate; is there any proof that they have been more successful in life than those who entered in other ways?—I am afraid I can hardly give statistics for that at the present moment.

22,413. After all, that is the criterion, is it not?—Yes, but if you mean are there indications of the success in life later of students who have been Carnegie students at the university, there are very many indications, and more especially when they come in and follow through with our research scheme.

22,414. That points in the direction I was asking about?—I think it is important to note further that in accordance with the hope expressed by Mr. Carnegie in his letter to Lord Elgin in founding the Trust, the trustees have avoided up to now the invidious task of inquiring into the circumstances of each candidate. The only qualifications that are demanded are these set down in the three regulations I have already spoken of. But I thought it worth while (and this again has been hastily done) to bring before you certain statistics under Appendix D\* regarding the occupations of parents of the entrants to the Trust for the winter sessions 1908-9 and 1912-13 respectively; those years were chosen at random, and they are

\* *Vide* Appendix XLVIII.

10 January 1913.]

Sir W. S. McCOBICK, LL.D.

[Continued.]

evidence I think of the social classes from which the beneficiaries are drawn. You see at a glance over this list the professions or businesses of the parents of all new beneficiaries in these two years respectively. And I have given here everyone; it is not a selection; you have in every case the social class noted of the parents of every beneficiary who entered during these two years. I need not go over them, but I think they show that the Trust has really helped the classes that it was aiming at.

22,415. (*Mr. Graham Wallas.*) Can you tell us what percentage of the students of the universities are not beneficiaries?—I can tell you that percentage, but if you ask me the percentage of those who are not beneficiaries to those who might have, if they had applied, been beneficiaries I cannot tell you, except in the case of one university which has got statistics where, I think, it would roughly be found that 80 to 90 per cent. of those who were eligible are beneficiaries.

(*Chairman.*) That was not exactly what Mr. Graham Wallas asked you.

22,416. (*Mr. Graham Wallas.*) No, what I have in my mind is this: There are certain classes; take the class of landowners, or rentiers, who do not appear here, I suppose, because they have not applied for benefactions?—Perhaps Sir Donald MacAlister knows more about it than I do. I only come across those who are beneficiaries, except for my experience as a professor for ten years in a Scottish university before, but, I should say that, as a whole, the upper classes in Scotland send their sons to Oxford or Cambridge, if they can afford it, except in medicine, and probably in engineering. I should say that in Glasgow, between the university and the great Royal Technical College, you have an engineering school that nothing in the world can surpass; in that case, no doubt, a son of a Glasgow man would go there if he was going to be an engineer; and also in medicine in Edinburgh or Glasgow, which have European reputations, the same; but in arts and pure science, I think, for the sake of the social life, and other reasons, a parent who can afford it would send his son to Oxford or Cambridge.

22,417. (*Chairman.*) You show at the bottom of Appendix C, against the year 1910-11, in Edinburgh, under the faculty of arts, 1,287 students; what percentage of these would be beneficiaries and how many would not?—I have not got it by me, but I should say probably about two-thirds in arts are beneficiaries.

22,418. Would the same rule obtain in the other three universities?—Yes, I think so.

22,419. (*Sir Donald MacAlister.*) A table has been prepared showing that?—Yes, I could show it you.

22,420. It is not quite the same in all four universities?—No. As I say, I cannot get what is an important factor in such a percentage, how many of those are eligible, because the statistics are not to be had to guide me.

22,421. To avoid a possible misconception, would you tell us what the percentage of eligible candidates is to the proportion of beneficiaries. I think you have that?—I have only got it in one university.

22,422. You can tell us, not the name of the university, perhaps, but what the proportion is in its case, because it is probably not very different in the other universities?—I may say that it is in the University of St. Andrews, because that being a smaller university they are able to give us information which it would be impossible for others to give, as they have regarding all their students, where they were born, and everything about them, so that we know whether they would be in any way entitled to the benefit of the Trust. As I say, in the year 1911-12 the number of students eligible for payment of class fees at St. Andrews was 347, and the number of beneficiaries was 312.

22,423. (*Chairman.*) In arts alone?—No, in the whole university. The percentage of students, who were Carnegie students, to those who were eligible, is 89·91 per cent.; that is in 1911-12. In 1904-5 we made the same inquiry, and got 93·53 per cent., and in 1907-8 it was 94·77 per cent.

22,424. (*Sir Donald MacAlister.*) Would your information suggest that that proportion was higher or lower than in the other universities?—I cannot say;

but, on the other hand, I would submit that the lists of the occupations of the parents, which I have presented to you, shows that the Trust has been successful in assisting the classes of our Scottish population for which its benefits were intended.

22,425. (*Chairman.*) Will you continue?—My next point is with regard to the further regulations, which you will see in Appendix A, and which we laid down in order to see that a beneficiary after he had got the benefits of the Trust made a proper use of them. Regulations 4 to 8 regard the university studies of beneficiaries, and these have undoubtedly had some influence upon their university work and probably raised the proportion of students who are successful in taking a degree. There has, as Sir Donald knows, been a little friction at times between the university authorities and the Carnegie Trust, because this inquiry as to our beneficiaries, this attempt of the Trust to take a position *in loco parentis* of the beneficiaries, led to our inquiry being probably sometimes misunderstood for interfering in the education arrangements and administration of the universities themselves; you can quite see how that might occur. For instance, one of our regulations is that if a student has had two opportunities of passing the degree examination and has failed to pass it by that time, he goes off, he becomes ineligible for further payment of fees till the regulation is complied with. Now that, in the opinion of the Trust, is a very proper regulation; still there were cases where complaints were made, and particular circumstances had to be inquired into. I think that probably these regulations will be considerably modified (I speak in the presence of Sir Donald MacAlister, who is on the Executive Committee of the Carnegie Trust at the present moment) on account of the fact that the universities have now not only appointed advisers of studies in their various departments, but have also adopted in most faculties an inclusive fee which will obviate our payment of individual class fees, and will leave the supervision of our beneficiaries entirely in their own hands. But I now come to the most remarkable effect—and, in my opinion at any rate, the Trust can claim it in great measure—and that is the increase in the number of honours degrees in arts, which is the only faculty in which honours degrees are differentiated, and also the remarkable increase in the number of degrees in science. There is only one undergraduate degree in science, that is the B.Sc., but it is to be regarded as an honours degree. Now, if you look at Appendix C, in which I gave the number of students, you will see if you take "honours," which is the second column under arts in St. Andrews, it has risen from 16, 12, and 13 to 20, 15, and 54.

22,426. That is students who have taken honours in arts?—Yes, those who have taken honours during those years, and it refers back to four or five years, while they have been students. Then in Glasgow it has risen from 23 to 49; in Aberdeen from 25 to 34; and in Edinburgh from 26 to 58. And the numbers in science are even more remarkable, in St. Andrews from 8 to 16, in Glasgow from 24 to 82, in Aberdeen from 12 to 31, and in Edinburgh from 24 to 61, which is a greater proportion than the increase in the number of students. There is no doubt that in many ways the Trust has helped to that, it has helped financially by enabling students to stay one year or perhaps two years longer at the university, and it has also enabled them no doubt by keeping up the standard of entrants to the university and the standard of work during a man's first years in the university. I think, therefore, the Trust can claim a good deal in these statistics.

22,427. On that point, the increase in the number of men taking honours with their degrees imposes an additional charge upon the fund?—Certainly, which we are very glad to find imposed.

22,428. Your fund is of limited amount?—Yes.

22,429. Consequently, does it not follow that you are able to help fewer people if more of them take honours?—That would be so, and that is probably one reason why we are not able now to pay the whole class fees as we were at the beginning. There are other reasons. The universities, with the increase in their organisation, betterment of their education, increased

10 January 1913.]

Sir W. S. McCoRMICK, LL.D.

[Continued.]

number of classes, and so on, have had to raise their class fees to some extent, and that has led to our being a little short of funds.

22,430. Have you been brought face to face with the consideration of this question: that, your fund being limited, it is better for you to pay for honours degrees than to spend the money in the earlier stages?—We have had to face the financial question because we were bankrupt last year. By bankrupt I mean that we had spent under clause B about 700*l.*, I think, more than we had. Of course, it was merely debited to the next year's income, but at the same time it could not go on; and therefore, instead of the payment of separate class fees, we have had to frame a method of assistance to students in definite sums, inclusive grants, according to the faculty in which they were studying. We give 9*l.* a year to every arts beneficiary, 12*l.* a year to every science student, and 15*l.* a year to every medical student; and if he is an honours student in arts we give him that for four years, and he therefore gets 36*l.* instead of 27*l.* and so on; we do that now, and it is working quite satisfactorily.

22,431. I only wanted to know whether it did work itself out in that way, and whether you had it under consideration?—Yes.

22,432. Will you go on?—My next and last point regarding the Carnegie Trust is advanced study and research. That comes, as I have already explained, under the other part of our income, clause A, out of the 50,000*l.* of that; but the research scheme of the Trust being an assistance to our beneficiaries at a further stage, I may also say a word upon it. The assistance offered is of three kinds: scholarships, fellowships, and grants in order, so far as possible, to reach all classes of workers, from students who have just graduated, to graduates who have already entered upon professional careers. Selection is made, not by competitive examination—I may say that the executive committee are quite unanimous as to the inadequacy of any competitive examination being useful in this respect—but for fellowships on the merits of original work already published (they must have done some piece of work) and for scholarships on the evidence of experts, usually their own professors, regarding the applicants' special fitness for the work proposed. Instead of separate allotments to individual universities a common scheme was established for all the four universities, the administration of which is retained in the committee's own hands; the four in a way come into the one scheme and compete against each other, although the competition of course is not of university against university. Finally, no fixed number of foundations, nor even a definite total sum, is assigned to any one year. In short, the aim of the scheme is, within the limits of the trust deed, to discover, and if at all possible to supply, the demand for assistance in higher study and research throughout Scotland. This, I think, has been extremely successful, and, as I have already said, I have brought the detailed report of the experts for the first five years of it in order to show what has been done. Our method is that when the applications come in they are indexed and catalogued and so on, and sent to three expert advisers of the Trust; one medical expert, one physical science and chemistry expert, and the other a literary, historical, and economics expert; he cannot be an expert in all three, but he knows sufficient to make an estimate of the recommendations and qualifications of the candidates. Reports are sent in by these three experts. Then the representatives of the four universities meet—not only the two who happen to be on the executive committee, but the other two also—and discuss the experts' reports and criticise the candidates from their own universities as well as from the other universities, and make out a preliminary selection list. They then report to the advisory committee on research, which takes into account their report of the qualifications of the candidates, but also takes into account, for the committee, the financial side of the question; but I may say that such has been the care with which the selection has been made that we have never had, since we have started, to refuse a recommendation from this advisory committee on account of finance; we have always managed to meet the cost of the whole scheme.

(Chairman.) I think that is a very clear exposition and I have no more questions to ask you. Unless you wish to make any further remarks in what I may call your examination in chief, I will ask Sir Donald MacAlister to question you.

22,433. (Sir Donald MacAlister.) Our object here, as you are aware, is to ascertain whether in Scotland, of which we have already had a certain amount of evidence, the opportunities of students of all classes to obtain a university education may be regarded as approximately satisfactory. I think you have shown, and it is your object to show, that the operations of the Carnegie Trust have facilitated, at least, the attainment by Scottish students of all classes of a university education?—That is so.

22,434. Would you tell us how, during the course of the last ten years, secondary education has advanced in Scotland, whether owing to the operations of the Carnegie Trust or otherwise. Do you know anything about the increase in the number of opportunities for secondary education that have taken place in the last ten years?—I do not know it directly, but the statistics I have given with regard to the proportion of leaving certificates show that it has been more and more taken advantage of.

22,435. Do you mean to suggest what the Commissioners of 1889 spoke of: "The regulations we have framed may be usefully revised when good secondary schools have been made available throughout Scotland"? As the result of your operations, are you of opinion that now good secondary schools have been made available throughout Scotland?—I think so, and I think that is proved by the 90 per cent. of leaving certificate qualifications for the Trust which I have given.

22,436. Could you give now or could you provide the Commission with any indication of the distribution of that secondary school provision throughout Scotland? We have been told that in some places it is very effective, and in other places it is not. Do you know the places where your beneficiaries come from, who have qualified by secondary school leaving certificates, so as to illustrate their distribution over the country?—I could not give details on the matter, but I think I know generally what the policy of the Education Department has been in this matter. Its policy has been to give in the country, besides the former secondary schools, certain other secondary education centres, as many as the finances would allow of, but—and here I think it has done rightly—it has been very careful to do it only where it could do it properly. I mean that there is no use in calling a thing a secondary school that is not a secondary school. To make a secondary school costs the nation a good deal of money both from local rates and from the central government, and I think that great care has been taken to see that any school that got the name of a secondary school was really worthy of the name. The standard now in Scotland is fixed. I do not say that the whole work has been done; there are very many places in Scotland that are inaccessible for secondary schools, and there always will be; the nation cannot plant a secondary school in every parish in Scotland. But the standard is there. I mean that an elementary or higher grade school has been made a secondary school in as many centres as has been found possible, and I think what is required still to link up the elementary schools of Scotland with the higher grade and secondary schools would be probably, as finances again would allow, to get a certain secondary superstructure upon the elementary schools that are too far away from the secondary centres, so that it might delay for a year or two the necessity for sending these better pupils to the secondary centres. But that is a detail which will come gradually with the possibilities of finance. A second necessity, I think, will be to found in these secondary centres, where required, hostels. There has been one hostel in Dumfries founded by the late Mr. McKie, of Dumfries, and it has been a great success—the applications to get into that hostel are far in excess of the possibilities of the house. I think if more centres of that kind were established, say in Oban and elsewhere, so as to bring in any of the better pupils in far outlying districts where it was impossible to have

10 January 1913.]

Sir W. S. McCORMICK, LL.D.

[Continued.]

secondary centres, that would be a great linking up, and I should say that, on the whole, if these two very slight developments were instituted, we would have affairs as complete as could be desired.

22,437. You think that by these additions to the present system, by the erection of secondary departments in certain primary schools where there are no secondary departments at present, and by the provision of residential hostels for boys from primary schools who could not otherwise attend?—And also from secondary schools—

22,438. —If that were done we would be able to say that, under the operation of the Scottish Education Department and the Carnegie Trust, no boy or girl of merit need miss a university education in Scotland?—I believe so. I would also add by means of county council scholarships.

22,439. You have informed the Commission that the preliminary examination in a given faculty was the same in all four universities. Is that strictly the case, having regard to the different regulations in the four universities for graduation?—That is a point with which I did not know whether it was worth while to trouble the Commission; but it has been a difficulty with us. One of the reasons why we preferred the leaving certificate examination is that the preliminary examination consists of two things; it consists of a matriculation examination which enables a boy or girl to enter the university, and it is also a preliminary examination to certain classes which he or she desires to take. The result of this is that the preliminary examination passed may not include a subject such as Latin, which he or she finds to be a necessary part of the graduating course later; therefore the student is left with a school subject still to complete while taking his university education before he can qualify for entrance to the Latin class. That was a great trouble with us on the Carnegie Trust, and we ultimately decided that the student should give, as we put it here, "evidence of such preliminary education as is required by the universities for their respective graduating curricula"—in other words, we did not want them to come to the university until they had cleared off all their school work.

22,440. Was that another reason for preferring, where it could be obtained, the leaving certificate instead of the varying preliminary university examinations?—That is so.

22,441. Could you tell us whether any beginning has been made by beneficiaries of the Carnegie Trust towards the repayment of what has been advanced to them, by way of illustrating the point that was put by the Chairman as to the subsequent success of your beneficiaries. In 10 years, of course, not many would be in a position to do so, but has a beginning been made?—A very good beginning has been made, and not only in repayment but in the interesting letters that accompany it. It has been very gratifying not only to the Trustees but to Mr. Carnegie. We send the letters to Mr. Carnegie when we get them, and he is very interested to see the excellent results; on the other hand, we cannot expect, of course, that any great proportion of the beneficiaries will succeed ultimately in getting such positions as will enable them to contribute very much to what has been done, but at the same time those who have already, within the last 10 years, got into positions of independence have returned in many cases the whole, and in other cases proportions, of the financial assistance that has been given them.

22,442. (*Miss Haldane*.) Can you tell me what proportion of women have applied to have their fees paid?—The proportion is certainly very great. In the various universities it is different. I think, probably, more women apply from St. Andrews, say, than men, and of course, the scheme by which the teachers come for a university training has increased the number of women very considerably.

22,443. Do they also enter by the leaving-certificate examination?—Yes, exactly in the same conditions.

22,444. The number of private students among women is almost negligible, is it not, who do not come from the schools?—Yes, practically.

22,445. Women, I understand, are also entitled to the scholarships and fellowships?—Yes.

22,446. Do they take them?—Yes.

22,447. Can you tell me in what numbers?—I could get the statistics for you, but I cannot tell you off-hand what the numbers are, because, really, we do not consider the sex in regarding the application. In biology and medicine there are quite a number, and I am not quite sure that that is a good sign in medicine. I think that a number of women have become medical students either without knowing whether they would like the practice of medicine when they graduated, or, perhaps finding that they did not get a practice of medicine when they have graduated; but I find a considerable number of medical students now coming up as scholars and fellows in medical research. From certain talks I have had with them it would almost seem that their bent was not so much the practice of medicine but scientific research; but whether they take the scientific research because they have found that they could not get on as women doctors or not I am not quite sure.

22,448. I wanted to know whether you considered the mode of appointment a satisfactory one. You do not appoint, I understand from what you say, by examination?—Not at all.

22,449. Do you consider that method of appointment satisfactory?—I think the method of purely competitive examination is most unsatisfactory, and I am glad to have the opportunity of saying what I forgot to say before, that with regard to our scholars we have made, no doubt, one or two mistakes but only one or two, but with regard to our fellows we have never made any mistake at all; in the choice of our fellowships there has not been one failure in the whole of our research scheme in the experience of the last nine years.

22,450. From your experience of women students, supposing that some of the higher posts in the Civil Service were open to women, would you consider that the women students in the Scottish universities could suitably fill those posts?—I should think so. You mean among our students and those engaged in research work. One would need, of course, to know what department was indicated.

22,451. (*Chairman*.) Is that answer given in regard to the intellectual qualities of the women, or with reference to wider aspects of their activity?—It was rather given with reference to the intellectual qualities of the women. As to the suitability of places for women in certain departments of the State I have nothing to say, I have no experience.

22,452. (*Miss Haldane*.) As regards the leaving certificate, I gather that you consider that the benefit of it is that you avoid what is popularly known as cramming?—Yes.

22,453. By having inspection along with examination?—That might be a short statement of it. I think the benefits extend much more widely than that.

22,454. You regard it as showing training?—Yes, I regard it as evidence of training which, as I indicated before, an external examination can never be.

22,455. A set book external examination cannot fulfil those conditions?—No. If I might say just one word more on that, I would say that, with regard to the State appointments, Government appointments, I should expect that the Government would, at any rate, look to the education that they provide as a means of training for those appointments. I consider that the present system of Civil Service external examination deliberately goes past the door of the very schools upon which we are spending millions and encourages proprietary institutions, which I have no wish to underestimate, but if these proprietary institutions are as good educational instruments as schools, why does the nation spend its millions on schools?

22,456. (*Chairman*.) Does that apply to all classes of examinations, for instance to the Class I examination; will your remark be applicable to that?—It does not apply to that for this reason, that that examination is of such a kind that although the candidates may go to crammers in the end, and may do so rightly, they are going after they have got a sound and efficient training in secondary schools and universities. If there was such an arrangement as this: that for the

10 January 1913.]

Sir W. S. McCORMICK, LL.D.

[Continued.]

lower posts in the Civil Service what we call in Scotland the intermediate certificate, to be got at the age of 16 at the completion of a general secondary education, were taken, and they had to qualify for the competitive examination by first passing this intermediate certificate examination, then that would do away with a great deal of the evil effects of cramming. I would not so much object to their going for three months to get their memories brushed up by the crammers; I think there is something to be said for the crammer, but it must be cramming on the top of a sound training.

22,457. Your suggestion, excellent as it is for Scotland, would not be applicable to a country that does not allow of such leaving or intermediate certificates as you have?—My answer is: Why not supply it? That is what I have been trying to get the English Board of Education to do for the last 10 years.

22,458. The English Board of Education has its limitations we find?—It has got its difficulties.

22,459. (*Miss Haldane.*) I was just going to ask you whether you considered that these national examinations might not be used in connection with Civil Service appointments?—Yes, I should agree. I am following really the lines of much of my evidence before the Consultative Committee to which I have referred in my précis. All through their report, you may remember, they suggested an examination, whatever you call it, at the age of 16, and a higher at the age of 18 or 19. I take the age of 16 as your first qualifying grade. I would have those who had qualified under that be certificated or selected; then up to the age of 18, two years might be spent in a little more specialisation, some for going to the university, specialising for arts, some going in for science, specialising for the science school, and some for medicine. I would use the higher grade examination as qualifying for competition or selection for higher posts. Then you come to the universities, and you have honours men and others in the universities. These would then have qualified themselves for selection for the first class posts. Cramming on the top of any of these three trainings is not so objectionable, but cramming as a substitute for training is what we object to.

22,460. I have been told by a teacher that she had hardly any breakdowns in health in preparing girls for the leaving certificate, but had had a good many breakdowns in preparing them for other external examinations; have you had any experience of that?—Yes, we have had great experience of overwork of this kind, especially in the case of students in training. I think I might quote one other sentence from that somewhat remarkable page or two of the Scottish University Commission on preliminary examinations. They say on page xiv.: "It ought not therefore," that is, this preliminary examination, however done, "to exact from candidates who have been reasonably well taught any special preparation or effort, but 'ought to be such as a scholar of fair ability and proper diligence may at the end of his school course come to with a quiet mind, and without a painful preparatory effort tending to relaxation and torpor as soon as the effort is over.'" That quotation is specially remarkable, because it is from the very same passage as the other which I took from Matthew Arnold's "Higher Schools and Universities in Germany"; but it is not his either, it is in quotation marks in Matthew Arnold without saying where it comes from. My opinion is that it is a translation of the German document from which he was quoting explaining the method of the *Abiturienten-Examen* and its purpose.

22,461. (*Chairman.*) That commends itself generally to your common sense and your acceptance?—Surely.

22,462. (*Miss Haldane.*) And you find that it is generally approved by teachers?—Yes, by teachers most assuredly. I have brought here, just simply because I came across them in looking for what I could say, two copies of the *School World*, for December 1912 and January 1913, both of them with articles on the system of school leaving certificates with special reference to Scotland, and both of them by secondary school teachers of standing in Scotland, and they give

a very clear and excellent account of the whole system. I might refer the Commission to these. Then I do not know that there is any use in referring—you must have it yourselves—to the circular from the Education Department (Scotland) explaining the leaving certificate examination. I remember that when I was giving evidence before the Consultative Committee, advocating a national system such as we have in Scotland, it was said that in England they could not do it because of its size; I think England is supposed to have eleven times the population of Scotland. I do not see that that, with proper organisation, is any argument against such a system. I think it could be done.

22,463. (*Chairman.*) So far as the mere area of country is concerned I agree with you; I do not think that has been put before us as an insuperable objection. The greatest difficulty is in the unevenness of the capacity of the teachers; you might have a leaving certificate on your plan which might be suitable for a certain area, but would be either too high or too low in character for a neighbouring area?—It is astonishing, my Lord, how putting up a standard will effect a reform. I remember that over 20 years ago when the commissioners all of a heap set up this preliminary education standard for the Scottish universities (because we were worse than England then—there was no entrance standard for the universities at all), there was a great outcry about its being too high, and so on, but there it was, and it has been the compelling force that has raised secondary education in Scotland. Until you set up a standard you never get the result. My feeling is that it is the institution of such a thing that must be the first step.

22,464. Who appoints the teachers in Scotland?—The school board.

22,465. In each district?—Yes; Scotland is more cut up into districts.

22,466. Has the school board in Scotland laid down that its teachers before appointment shall have any special qualification—shall have passed through a training school for instance?—The department does that now.

22,467. Does it insist upon it?—Yes, the department insists that any teacher to teach any special subject must have gone through a certain course.

22,468. Does the department in Scotland insist that the chief teacher in a secondary school shall have certain qualifications?—I think so.

22,469. Do they go beyond the local authority then in the appointment of teachers?—They have practically a registration system, and, of course, the school board must take their teachers from those who are registered.

22,470. (*Miss Haldane.*) Do you consider that the system of advertising successes which is carried out so much by those who go in for special preparation and also by private schoolmasters is apt to have a deleterious effect?—Very much so. I referred to that especially before the Consultative Committee. I think it is being done less now than it was. In fact, no institution can claim the whole credit of its successes. You hear of Oxford and Cambridge men for example being superior to others. It is not necessarily nor entirely Oxford and Cambridge that make them so, but partly because, as a rule, the best men go there—that is the point. In like manner the splendid secondary schools in Edinburgh get the good material, and therefore, of course, they get the excellent results in bursary lists, and so on.

22,471. Do you consider that the age of leaving school in Scotland is a satisfactory one?—I think so on the whole. It is not a question I really have gone into very minutely. I have discussed it with a number of educational people, principals of universities and so on, and if it is to be an earlier age, then the universities must give secondary training—that is what it comes to. A boy or a girl cannot finish ordinarily his or her secondary training before the age of 18, and if you are going to have them leave at 16, as they certainly did in Scotland 40 years ago, then you must put on a secondary department to the university. In Germany they do their secondary education all in school; in America they have a different arrangement, because they have what they call a college, which is a

10 January 1913.]

Sir W. S. McCORMICK, LL.D.

[Continued.]

buffer between the secondary school and the university, and it is hard to say what it represents on our standards, but I should say that on the whole it is half and half.

22,472. Do you know the proportion of university students to the population of Scotland?—I am not sure, but on the other hand that would be rather useless, I think, for statistical purposes on account of the large number, say half of the medical faculty of Edinburgh and Glasgow, that have nothing to do with Scotland at all.

22,473. (*Mr. Shipley.*) Do you pay the money direct to the student?—We pay it by voucher.

22,474. To the student himself?—Yes.

22,475. Not to the university?—He gives it to the university, and we pay the university in cheques of thousands when they send back the vouchers.

22,476. Are the students asked, or is a hint given to them, that if they can they ought to repay the benefaction?—We send them Mr. Carnegie's letter. Mr. Carnegie has indicated that the trust deed allows of their taking advantage of that privilege.

22,477. Do you think that this list of employments and professions that you have given us differs materially from a similar list that might have been drawn up 15 years ago; did you not then have people coming from very much the same class?—Yes, except that there is evidence that we are reaching many who could not have come before without.

22,478. Did you say that you could take a degree in a Scottish university without Latin?—You can take a degree in science without Latin.

22,479. Not in arts?—I think you can.

22,480. (*Sir Donald MacAlister.*) The preliminary examination requires Latin?—Yes, but you do not need to continue the study of Latin at the university. But that, I think, is the same at Oxford and Cambridge.

(*Mr. Shipley.*) Certainly. I thought you said that you could take a degree without any Latin.

(*Sir Donald MacAlister.*) The preliminary examination requires Latin or Greek.

22,481. (*Mr. Shipley.*) (*To the Witness.*) You said in answer to one of Miss Haldane's questions that you had had great experience of students breaking down; does that mean that a considerable number do break down on taking the leaving certificate examination?—No, not on the leaving certificate examination; we were talking there of the overpressure of the external examination, cramming for it. I was referring rather to the breaking down, especially of girls by overpressure that they had at the time when they were not only students at the university, but students at the training college, and were doing two things at one time. We have had many instances of that.

22,482. (*Sir Donald MacAlister.*) But you have not had experience of breaking down under the leaving certificate examination?—No.

22,483. (*Mr. Shipley.*) Do many of these research Fellows take service under the Government and get posts in the Civil Service?—I do not think they are on the way to it, because I do not suppose there are Government services where their researches are required. Quite a number of them have taken places in the Soudan and in the Colonies in investigations into rubber and tropical diseases where their scientific attainments in research have been useful; but when you talk of the Home Service, I do not think they are trained for it.

22,484. (*Mr. Matheson.*) Is there any provision in the Trust for the universities of Scotland to be consulted on educational points which arise?—I think so. I do not know exactly the meaning of your question.

22,485. What I mean is whether, in the terms of the Trust, there is any formal consultation of the universities with regard to action that the Trust takes in educational matters?—There is, of course, the representation of the universities on the Trust. The four university representatives are all on the Trust.

22,486. That is what I wanted to know; there is a representative of each university?—Yes, there is a representative of each university on the Trust, and two of these representatives are always on the executive committee.

22,487. How large is the executive committee?—Nine; two out of nine.

22,488. I gather from what you say that the character of the students and the class from which they come have not been altered much by the Trust, that the difference has been rather in the increase of honours work, and the increase in prolonged study and advanced study?—And an increase of 25 per cent. in numbers..

22,489. This, of course, is a question which it is very difficult to answer, but do you think there is any ground for saying that the independence or self-reliance of the Scottish student or his parent has been injured by the institution of the Trust?—It is very difficult to say. The parent, provided that he is in the class I have shown on the statistics is, or has been, spending a good deal upon the education of his son or daughter before he asks us for our share. Apart from such fees as secondary schools require, the boy or girl has been kept from wage-earning all these years, which is a great sacrifice, and I think that the small financial assistance we are able to give him should not be regarded as breaking down the independence of the individual who receives it.

22,490. You attach great importance to selection, without examination, for fellowships; do you think that system is applicable at all to the Civil Service?—I hardly know enough about the Civil Service problem of itself to say. I should perhaps answer the question like a Scotchman by putting it the other way, and saying that we are convinced that competitive examination would be the worst method of selection for our purpose.

(*Mr. Matheson.*) I do not want to interfere with your election of Fellows, I wanted your advice on another subject.

(*Chairman.*) You will pardon me if I seem hypercritical, but that is not an answer to what Mr. Matheson asked you. You restricted it to selection for fellowships, but his question was much wider.

22,491. (*Mr. Matheson.*) I am thinking of Class I. of the Civil Service. It has been suggested that selection for that should be by record and personal interview, and so forth; do you think that is a practicable scheme?—Well, it is the way in which a business man does it in his own business; but, of course, there are objections, political and otherwise. But what I indicated formerly in my evidence was that I did not so much mind the competitive examination if you have, first of all, a qualifying examination by which to limit your candidates for that further one to ensure that it is on the top of something real.

22,492. Turning for a moment to the lower examinations of the Civil Service, supposing that you had two examinations below Class I. should you say that the proper ages for those examinations, from an educational point of view, would be somewhere about 16 to 17 for the lower and 18 to 19½ for the upper?—I think so; of course for precocity it might be a little below 16.

22,493. Is not one reason why it is easy in Scotland to institute a uniform certificate examination the fact that a much larger proportion of the schools there are immediately under the Board of Education?—I suppose that is so, although there are many schools in Scotland that are not under the Board of Education, but which have voluntarily come into the system.

22,494. But it is true, is it not, that there is a greater variety of schools. I am speaking now of efficient schools in this country, to be considered in any scheme of secondary examination?—That is true, I think, but the variety may be good or may be bad. There is a variety, for instance, which I think is an unfortunate variety, which I have found in English schools, on account of the variety of examinations imposed upon them. I have found English schools so various that every pupil in a certain class was preparing for a different examination. That is a variety which, I think, is unfortunate.

22,495. Everyone agrees with that. I am not speaking of that kind of variety. I am speaking of variety in the type of schools which is a legitimate variety, but I do not want to dwell on that?—But I think that a common system would allow of that variety. For instance, there are various methods of

10 January 1913.]

Sir W. S. McCORMICK, LL.D.

[Continued.]

teaching mathematics, but I think a good mathematical examination paper, so long as inspection and other things belonging to the leaving certificate were brought in, could be framed so as to test a pupil however he had been educated.

22,496. But when you multiply the area or the numbers by 10 or 11 it is very much more difficult to prevent any centralised system from becoming rigid and excessively uniform than it is where the area is smaller and the whole thing can really be under the view of a comparatively small number of experienced people. I am merely taking that as what seems to me to be the difference?—In considering that I have thought that probably it would be best done in provinces if there was such a scheme. I forget how many provinces there are in England under the English Board of Education—five or seven—but it might be done in each province, of course.

(*Mr. Matheson.*) I did not want to go into the details.

22,497. (*Mr. Boutwood.*) When you were speaking of your work under clause A of your trust deed, you spoke of a quinquennial payment; do you mean that you make the payment once in five years, or do you mean that it is a scheme that lasts for five years?—It is a scheme that lasts for five years.

22,498. The payments are annual?—They are quarterly, because we have not got the money; the five years' distribution is in anticipation of our income coming in.

22,499. When you speak of the inadequacy of a written examination in single subjects, am I right in thinking that what you have in mind is the contrast between such an examination and the larger unity reached by the school leaving certificate which connects education with the school life?—That is so, and also with the fact that there is an inspection of the school, and also that the teacher has some say in presenting the record of the career of his pupils, indeed that there is a careful weighing, which is the real meaning of examination, of the pupils' whole qualifications.

22,500. Then you said that you thought it would be unfortunate to double the number of people who entered the Scottish universities?—Yes, in certain circumstances it might.

22,501. Why?—Because I think that probably they would not find occupations. You see I have shown, say, in medicine, a lack of the rise within the last 10 years in the Scottish universities. I have no doubt that it has adjusted itself from the fact that the medical profession was over-supplied.

22,502. (*Mr. Shipley.*) The cease in the rise is much more recent, is it not, within the last two years?—No, it has been going on for years.

22,503. It was not in consequence of the Insurance Act?—Oh, no. I should not wonder if the Insurance Act had the reverse effect.

22,504. (*Mr. Boutwood.*) You did not mean then that such an increase would bring into the universities men who were not fit to profit by a university training?—No, we would have taken care of that. But in short, I would point out that the universities only attract a certain proportion of the brains of the nation. It may be fortunate or unfortunate, but I almost seem to think it is a fact that the better brains of the nation at the present moment are not going to the universities at all.

22,505. Why is that?—In the first place, if you take the upper classes, their fathers have businesses, and they prefer to enter there.

22,506. (*Chairman.*) We have had evidence to show that the commercial classes are in greatly increasing numbers taking men into their businesses from the universities, which would be the reverse of what you say?—That is so.

(*Chairman.*) No doubt the university does not create intellect.

22,507. (*Mr. Boutwood.*) In your Appendix B what does Table II. on page 12 mean, "Table showing refusals in the various faculties at the four university centres"?—You understand what the first list means, that I have given the cases of all those whom we have accepted as beneficiaries without a leaving certificate so

as to explain why they have been accepted. You will see under arts a student aged 19; it shows why we have accepted that candidate. It is evident that we have accepted him because he was aged 19. Although he had not absolutely completed his leaving certificate, he was so near it that it was hardly worth while keeping him at school any longer. Then the next was 21, and she was accepted on account of her age also. Then when you come to page 12 I have to explain why those were refused, and I put in every case the refusal and the reason for it.

22,508. They are refusals by the Carnegie Trust?—Yes, those are people who applied and were refused. This printed document is a confidential document for the committee, but it goes in our minutes to show that the office has taken the most individual care, so that no application has been unjustly dealt with.

22,509. (*Mr. Graham Wallas.*) You have given us certain figures showing an increase of 50 per cent. since 1900 in the number of students taking arts in the Scottish universities, and an increase rather beyond 100 per cent. in the last ten years in those taking honours in arts?—Yes.

22,510. That increase, I suppose, has been accompanied by an increase in teachers in arts subjects, has it not?—It has to a great extent.

22,511. And to a very large extent those teachers' posts which have been added to the old staff have been added under the auspices of the Carnegie Trust?—There have been some.

22,512. You are, therefore, in a position, in regard to the teachers, to know the type of studies taught by men holding the new posts that have been created in consequence of this increase?—Yes.

22,513. Traditionally, in Scotland arts subjects have been very largely rather rigidly classical, have they not?—No, the old seven subjects when I took my degree were Latin and Greek (both of which were compulsory, that was the difference; there was no option of course) mathematics, physics, English, logic, and moral philosophy.

22,514. There are certain new subjects, of which I take history and modern languages as an instance, which are now considered possible parts of an arts course?—Yes.

22,515. Have the new professorships been professorships in the main in the older group of subjects or in the newer group?—In the newer group of subjects.

22,516. Have you any figures with regard to the students, either the 50 per cent. increase in arts, or the 100 per cent. in honours, as to which were due to students taking the new group of subjects or the old group of subjects in the main?—I think both. But I see your point. There are now more opportunities of taking honours in various modern departments, therefore there are some students attracted to take honours in history or modern languages who would have had no opportunity of taking honours in them 25 years ago.

22,517. No, my point is rather this: that in so far as there has been a noticeable change in arts teaching in the universities, which corresponds with the increase in the number of students and professors, it has been in the direction of what Mr. Stanley Leathes calls "modern humanism"?—Yes.

22,518. Modern cultural subjects?—I think so.

22,519. Have you any figures there?—I have no figures, but I could get them.

22,520. It would be very kind if you would add to your evidence a few typical figures showing first with regard to the teachers, and then with regard to students in arts, as to whether there has been a trend towards what I call the modern humanistic subjects?—It is quite certain, although I may possibly be able to get the absolute figures. It is obvious also that the scientific part of the arts degree has been very much increased. A student can take a degree in arts in the Scottish universities with three subjects in science, and a very favourite practice of students, especially since they get their fees paid, is to take their M.A. in honours, in mathematics, and it only needs another year in pretty much the same subjects to take their B.Sc. with the combined curricula.

10 January 1913.

Sir W. S. McCORMICK, LL.D.

[Continued.]

22,521. (*Chairman.*) When a student who has benefited by the Carnegie fund repays his benefit, to whom does the money go, does it go into the fund?—It goes into the fund.

22,522. (*Sir Donald MacAlister.*) Into the fee-paying fund?—As a matter of fact that does not matter,

Sir WILLIAM AUGUSTUS TILDEN, D.Sc., LL.D., F.R.S., and Sir WILLIAM RAMSAY, K.C.B., D.Sc., LL.D., F.R.S. (representing the Institute of Chemistry), called and examined.

Mr. RICHARD B. PILCHER, Registrar and Secretary of the Institute, was in attendance.

22,523. (*Chairman.*) (*To Sir W. Ramsay.*) You have been good enough to come here to speak on behalf of the chemical officers in the service of the Government?—Yes; Sir William Tilden has been President of the Institute of Chemistry, and if you will allow him to speak on behalf of the Institute first, possibly I might add something with regard to the other questions later.

22,524. Certainly?—(*Sir William Tilden.*) Perhaps it would be as well, in order to clear the air, to endeavour to explain to the Commission the functions of the Institute of Chemistry, because there is a little misunderstanding in the public mind as to the functions of the various Institutes which are connected with chemistry. The public are apt to confuse the title "chemist" with that which has been assigned by Act of Parliament to the people whom we should prefer to call "pharmacists." By the term "chemist" one understands a man who is occupied in the study and application of the science of chemistry. By Act of Parliament a chemist and druggist who keeps open shop for the dispensing of medicines has the title "chemist and druggist" assigned to him, and the public are rather apt to think that a chemist is merely a man who is a pill-roller, or a compounder of medicines. But in the purely chemical field there are several societies. The oldest of these is the Chemical Society, which is a body of scientific chemists engaged in the study of scientific chemistry; they occupy apartments in Burlington House. The Chemical Society was founded in 1841. Then there is the Society of Chemical Industry, which is another body, consisting of some 3,000 or more members, composed of people who are engaged in the application of chemistry to technological purposes, industries, and so forth. Then there is the Institute of Chemistry, which is a professional body—the body that we represent here to-day. It was founded in 1877, because at that time there was no body which was qualified to give certificates of competency and of qualification to conduct analyses, or to carry on investigations in chemistry, pure or applied. This Institute was founded in 1877 and received a Royal Charter in 1885, and it is a body composed of about 1,400 members, all of whom possess high qualifications for carrying on the business of consulting and analytical chemists. At the present time, and, in fact, for many years past, the Institute has been carrying on a system of examination, on the results of which the members who pass have their names placed on the register of the Institute. In order to qualify to obtain this certificate of the Institute, a man requires to pass through a rather long course of training. In the first place, he has to give evidence of having had a fairly good secondary education, because he is required to produce evidence of having passed some kind of preliminary examination, for which the matriculation of the London University may be regarded as a sort of type. Then, having passed this preliminary examination in subjects of general education, the candidate must enter one or other of the universities or colleges in the empire recognised by the Institute: these include all the British universities, and some of the Colonial universities, and a few other colleges, of which a list has been supplied to members of the Commission, on page 44 of the volume of "Regulations." He must enter one of those colleges and remain a student there for at least three years, and pass all the class examinations conducted by that institution in the subjects of mathematics, physics, chemistry, and one other subject selected by himself, which other subject may be a biological subject, or geology, or mechanics, or some-

thing else specified in the Regulations. The alternative for that three years' course of study is that the candidate should have entered such a college for two years, and also have spent two years in the laboratory of some Fellow of the Institute who is in practice. That alternative represents four years. At the end of three years' study in a college, or the four years' combined study, he has to present himself for intermediate and final examinations conducted by the examiners appointed by the Institute. Now these examinations are all of a markedly practical character. The candidate spends several days in the laboratory, which has been provided by the Institute, under the supervision of the examiners, and he has to perform certain operations, either analytical or otherwise, to the satisfaction of the Board. If he passes the examinations his name is then submitted to the Council of the Institute and he may be elected an Associate.

(*Chairman.*) We are greatly obliged to you, Sir William, for the most interesting evidence that you have given us.

22,525. At what period is the first examination passed?—At the end of his course of study in college, or at the end of the combined course I mentioned just now, of two years in college and two years with a Fellow of the Institute.

22,526. But during his apprenticeship, if I may use the word, to a member of the Institute, is there any preliminary examination passed before the final at the end of those four years?—At the end of those four years he has to pass the first examination of the Institute conducted by the examiners of the Institute.

22,527. I understand that; but I understood you to say that he has to study at one of the universities mentioned in this list for three years?—Yes.

22,528. At the end of which period of three years he goes into the laboratory of a professional member of your Institute?—No, I am afraid I do not make myself quite clear. There are two courses open to him: Either he can spend three years in a university or college, and then present himself for examination at the Institute; or he may spend two years in college, and in exchange for the other year he is allowed to take two years in the laboratory of a Fellow of the Institute.

22,529. I thought there were two periods, one of three years, and a subsequent period of four years?—No.

22,530. He may qualify at the end of the three years' college course, or at the end of the four years—two of which are spent in the college and two in the laboratory?—Quite so.

(*Sir William Ramsay.*) The alternative regulations are given on pages 16 and 21 of the book. Page 16 refers to the college career under A, and the technical career is given under B on page 21.

22,531. I quite understand it now?—(*Sir William Tilden.*) Having passed that first examination, after an interval he has to present himself for a further examination before the examiners of the Institute, and if he satisfies them he is qualified for admission as an Associate of the Institute. Then there is a further step. To attain the Fellowship of the Institute he must remain in practice of his profession in some form or other for three years, when he is admitted, after inquiry by the Council of the Institute as to the nature of the work he has been doing, to the final examination for the Fellowship. That examination is not conducted in general subjects of chemistry, but on a particular line chosen by the candidate himself, and depending upon the nature of the work that he has either been doing, or is expecting to do. That may mean that he will present himself in, say, the analysis of food and drugs, or the analysis of metals and minerals, or

10 January 1913.] Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and [Continued.  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

organic or physical chemistry. There are several divisions, and he may present himself under one of those heads for an examination conducted on special lines. As perhaps you are aware, the applications of chemistry are so very numerous, and the whole field is so very large, that it is necessary for a man to specialise to a considerable extent before he enters practice to determine along what particular line he is going to follow his profession. You will see from what I have said, that the period over which the education of a man who becomes a Fellow of the Institute extends from the passing of the preliminary examination is a matter of at least six years—it may be seven; and it is very commonly more. Consequently, a man who has passed his examinations and has become a Fellow of the Institute of Chemistry, has been through a course of study and training as difficult and quite as expensive to him as if he were wishing to become a doctor of medicine, or an architect, or a barrister; in fact, the course of training required is fairly comparable with that which is required for entrance into any other profession. So that we feel that the Fellows of the Institute are entitled to be put on a somewhat different footing from those who enter the Civil Service as clerks by the ordinary competitive examination, and that, in the interests of the public service, it is very desirable that the position of those people should be better than it has been in the past, for the simple reason that unless the attractions of the Service are sufficiently great and are improved upon what they have hitherto been, the effect will be that the better class of young men will go into other professions, and the career of the professional chemist will be in a sort of way impoverished from an intellectual point of view; it is a profession which will not attract the same class of young men as it would if the prospects were better than they are. That, of course, brings me to the position of some of these employees in the arsenal and other parts of the Government service in which chemistry is applied. I believe the Commission have already taken some evidence in connection with this question, and to-day Sir William Ramsay and I would like to correct what appears to us to have been some little misapprehension in respect of the position occupied by some of the men in the chemical department in the arsenal.

22,532. To what evidence do you particularly refer?—I refer particularly to the evidence of Sir Edward Ward, Secretary to the War Office, whom you have heard in connection with a petition or appeal which has been addressed to the Commissioners by the chemists of the war department. I think the first point that we want rather to emphasise is this: I gather from reading the evidence of Sir Edward Ward that it was represented that the grievance under which these men appeared to be smarting was the abolition of the office of War Department Chemist. I think I should be safe in pointing out that this would be rather an imaginary kind of grievance if it stood alone, because it is an office which, if it existed now, would probably be filled by the selection of some person of high scientific rank from outside the Service. It is not the sort of office to which junior members of the staff would expect to be promoted by mere seniority.

22,533. Yes, but are you aware that some of the juniors do make the complaint that the office has been removed from the sphere of their expectations?—I think that is where the misapprehension comes in.

22,534. You do not support them in that regard?—No, and I do not think they make that suggestion. What happened, I understand, is this: Sir Frederic Abel was formerly War Department Chemist with a salary, which was supposed to be commensurate with his position, of some 1,200*l.* or 1,400*l.* a year and a house. I cannot say exactly when he retired from that office—it may have been in 1895 or perhaps 17 or 18 years ago—but after he retired a change was made, and the emoluments of the office of Chemist to the War Department were reduced from those which were received by Sir Frederic Abel to a salary of 650*l.* a year. The office was held for some time by Dr. Kellner, and on his retirement it was subsequently held by Mr. Deering, who retired in 1908. Now the complaint is that in con-

sequence of the re-arrangement which has been made, not only is that office of the value of 650*l.* a year abolished, but the lower offices of principal assistant and senior assistant have also disappeared. The chemists who remain on the staff have been re-classified under three heads: Class I., Class II. and Class III. As a consequence of this classification, those who formerly could aspire to become a principal assistant with 650*l.* a year, are now reduced to 450*l.* a year, the highest salary to which they can possibly attain. In consequence of this re-arrangement and classification and re-classification, the offices which these men would have reached in course of time—by lapse of time and by seniority—in two cases as senior assistants with a salary of 500*l.* a year, and in the other case as principal assistant with a salary of 650*l.* a year, are no longer existent, and therefore they cannot reach them. That is the consequence of the re-arrangement under the new scheme which was made in 1906. I believe it is understood that, when the new scheme was inaugurated, it was intended, or at any rate it appears to have been so understood by a great many, that a head chemist was going to be appointed, that is to say, a chemist with the salary which had been received by the War Department Chemist, but that appointment was not made.

22,535. Was any official encouragement ever given to the idea that the appointment would be made?—Of course I have no direct knowledge of that, but at any rate that is the allegation, and I have no reason to doubt it. As a matter of fact, whether there was any promise of that kind made or not, it is obvious that the grade of principal assistant has disappeared, and the two senior assistantships have disappeared, with the salaries attaching to them of 650*l.* and 500*l.* a year respectively.

22,536. Yes, there has been a grading down?—There was a grading down; so that the men who are now classed as chemists Class I., Class II. and Class III. have nothing of that kind to look forward to, although they may have been in the Service for a very long time. I do not know whether it is worth while to give you any facts about the holders of the office of "chemists" under the war department.

22,537. I understand there was a grading down, and the alteration did not affect the present incumbents of those offices?—Yes, it did affect them in this way. Mr. Duncan, for instance, has had 38 years' service and he is now receiving 500*l.* a year. If the old system had remained in existence he would have reached in 1908 a salary of 650*l.*, because he would have been the senior assistant—the principal assistant.

22,538. May I call your attention to an answer given me by Mr. Pedley, one of the gentlemen who accompanied Sir Edward Ward. You probably have not the evidence before you, so I will read it to you. In answer to Question No. 11,096 he said, "The position is this: We have abolished the position of head chemist, but we have not interfered with the right of any one of those individuals who is serving to rise to the maximum of the class to which they belonged at the time." That would seem to me to safeguard the rights of the persons who were then in the Service—I may be wrong?—But when they entered the Service, some of them (such as Mr. Duncan) as much as 38 years ago, these offices were existent, and they entered with an expectation of rising, in course of time, to that rate of pay. The office being now abolished, although it is true that they receive the salary which is the maximum for the class in which they are, they cannot get any further than that.

22,539. No; but I understand the present incumbents can get as far as they could have got, including the appointment of head chemist to the war department?—Apparently not. (Sir William Ramsay.) I think, my Lord, it is a mistake.

22,540. There are two points: The first point refers to the existing men, which is one distinct thing, and the other point you make is with regard to the desirability of a better grading in the Service as a whole?—(Sir William Tilden.) Yes.

22,541. These two points are distinct from each other?—No doubt.

10 January 1913.]

Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

[Continued.]

22,542. I am only anxious to understand quite what your point is, because we shall probably take further evidence upon it?—May I remind you that Dr. Kellner and Mr. Deering both entered at the bottom, and men who are still there at work have seen Dr. Kellner and Mr. Deering mount up and pass to those offices, which have now disappeared, and therefore their expectations have been disappointed. (*Sir William Ramsay.*) May I venture to take one case which I think puts the thing very clearly. It is the case of a junior assistant, who is an old student of mine, named Elsdon, a Fellow of the Institute of Chemistry and Bachelor of Science of the University of London with first-class honours, educated at a private school, and at University College for six years under myself. He took all the honours that he could take at that time. He was appointed, by open competitive examination, junior assistant to the war department, Chemist Class III., in 1906. This young man is, at present, getting 250*l.* a year. He can live on it, of course. Perhaps it is his mistake, but he is married and has got a child. In the old days he expected to rise to 650*l.* a year, and it offered a career. Now he will get 350*l.* at the most, and he was complaining bitterly to me that he cannot possibly educate his son as he should like him to be educated. He goes down in class. There is the case of a junior and his views on the subject, and it appears to me that it is almost a breach of faith to engage young men on a certain understanding of rising in course of time, and then to alter the system so as to make that rise impossible.

● 22,543. In what grade was he?—He was in the third class.

22,544. That is to say he entered at a salary of 130*l.*?—It is now the third class.

22,545. He must have been a junior assistant under the former scheme entering at 130*l.*, and rising in that class to 300*l.* a year?—But there was every expectation of his going up his class.

22,546. You say that although his right to rise up to 300*l.* a year in his existing class has been reserved, no right to get up to 500*l.* or to 650*l.* has been reserved?—No, that has been abolished, and the man can no longer keep his position in the society to which he is accustomed.

22,547. (*To Sir William Tilden.*) Does that exhaust the point you wish to put upon that personal aspect of the case?—I think I should like to say a word on the subject of the temporary assistants. The temporary assistants are taken on, in consequence of pressure of work, at a pay of 2*l.* 0*s.* 6*d.* a week. We cannot help feeling that this is an extremely undesirable and unfortunate kind of arrangement, not only because the pay is small, as I believe a great number of young men are quite content to begin at a small rate of pay if they have a reasonable prospect before them, but because there are two objections to it: one is that these young men are perpetually coming and going. In the course of the last 12 years there have been no fewer than 17 of these people who have been brought into the laboratory and who have passed away because naturally they come merely for the sake of getting experience. They will not stop, and the consequence is that there must be considerable disorganisation of the work in the laboratory. It takes them some time to learn their business.

22,548. I suppose the work in the laboratory fluctuates?—No doubt.

22,549. It is more at one time than at another, probably?—(*Sir William Ramsay.*) But may I point out that that sort of work is work which those temporary chemists cannot possibly do, and I think Sir William Tilden has probably something to say on the nature of the work.

22,550. I only want to understand the nature of the objection, and to point out that it is difficult to have always a sufficient establishment where you have fluctuating work?—But the people they take on as temporary assistants are persons who are of no use until after they are trained, and their training takes at least six months or a year, and then they go. (*Sir William Tilden.*) The objections to the system are twofold: one is the disorganisation of the work, and the other is that a great

deal of the time of the seniors is occupied in instructing the temporary assistants in their business, and, as soon as they have learnt the work they wish to learn, away they go.

22,551. Are the heads of the War Office impressed by that view?—I do not know what the heads of the War Office would say about it.

22,552. After all it is their concern, is it not?—Yes, it is their concern. (*Sir William Ramsay.*) I suppose they have been told.

22,553. (*Sir Henry Primrose.*) What sort of work do the temporary assistants do?—(*Sir William Tilden.*) They assist in the general analytical work and the work of investigation which is carried on in the laboratory.

22,554. But presumably the War Office have made some considerable change in the work; the work is not now the same as it was in Sir Frederic Abel's time?—No, for a variety of reasons; one is, I may say, the advance of science. The knowledge of explosives and all sorts of materials of that kind has enormously developed since that time.

22,555. But has not work that used to be done in Sir Frederic Abel's time in the War Office laboratory been transferred somewhere else now?—There is a research laboratory, but the business of the research department is to investigate new things. They endeavour, I presume, to push out in new directions and to make useful discoveries. The business of the laboratory is, of course, to inquire into such things as the causes of failure, and into the quality of the materials that are submitted for stores and supplies of all kinds, and it is on the result of the analyses and investigations conducted in the war department laboratory that very large contracts have to be made. Samples are submitted and their qualities are inquired into by the chemists there, and contracts, in many cases for very large sums of money, are involved on the result of their examinations.

22,556. (*Chairman.*) And the heads of the War Office are responsible that all these things should be well done?—Yes, but the man who does it is the man who gets 350*l.* a year. The responsible head is not a chemist, and not qualified, so far as I know, to inquire into the quality of the work and to see that it is done.

22,557. But if the War Office are satisfied with the service they get from this officer, how is this Commission to say to the War Office: "You are unwise; you are employing imperfect agencies; you are not doing your work properly"?—(*Sir William Ramsay.*) I think that can hardly be said yet. We want to point out that if this sort of thing is continued, though you may not be getting imperfect services now, because the men who are there have been for a long time there, and although they grumble they do their work, you will not get good successors. That is the long and short of it.

22,558. If the War Office find they do not get the men who are suitable for their work they will have to increase the pay?—But do not you think it is rather unjust on the persons who hold the office at present to give them as low pay as you can because they are forced to remain? They have served their apprenticeship for 20 or 30 years, and you keep their pay as low as you can; but when they die, or grow old, and you try to replace them by people at the same salary, you will not get them.

22,559. That is a reasonable thing to say. We are entitled to look into the question of promotion?—I think so.

22,560. That is quite within our mandate, but we can scarcely instruct the War Office as to the class of man they should recruit. They make up their minds as to the class of man they want to recruit, and they recruit him with certain qualifications; they may not want men with the highest class of qualification?—That leads again to a discussion. Will you hear Sir William Tilden's evidence to the end and then ask me questions, or shall I deal with it now?

22,561. Sir William Tilden has not yet dealt with the second part of his argument, namely, the scale when the men come into the office, and the scale to which, in his opinion, they ought to be entitled on promotion?

10 January 1913.]

Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

[Continued.]

—(Sir William Tilden.) I think, at any rate, the basis of the scale should be the old scale by which you have chemists at the head, with not less than 650*l.* a year. If you come to compare the rate of remuneration of a chemist, in an office of this kind, with the kind of income that is common among practising chemists, consulting chemists, and others, you will find that that scale is not more than, probably, a third, or a quarter of what a man in private practice will be able to make. It is quite a common thing for a consulting chemist to make several thousands a year. As long as this disparity exists it is quite obvious that the best men will all go into private practice, and the material available for the Government service will be very considerably reduced in quality. I have been saying something of this kind for years past in reference, not merely to Government employment, but to the employment of technical assistants, chemists, and others, by manufacturers, and, in fact, throughout the country. Those professions which have considerable money prizes will always attract the best of the young men, and so long as the profession of chemistry is put in this sort of subordinate kind of position—a subordinate position which is determined by the smallness of the income obtainable in official positions—then, of course, the character of the men entering the profession will be very much inferior to what we should like to see. I think it is a matter of great national importance, and in view of the immense application of chemistry in all sorts of directions, this should be recognised both by the private employer and by the Government.

22,562. Was this reorganisation carried out by the War Office as the result of an inquiry, or was it carried out without previous public inquiry?—I am afraid I cannot say; I do not know.

22,563. Had the chemical profession or the Institute of Chemistry an opportunity of placing their views before the War Office?—No. I can say that.

22,564. If Sir William Tilden has finished we will now hear you, Sir William Ramsay?—(Sir William Ramsay.) As regards the Institute of Chemistry, Sir William Tilden has told you all the points, but I may emphasise them in two phrases: First, the object of the founding of the Institute of Chemistry was to raise the educational and professional status of chemists, and, secondly, to protect the public; and we have succeeded in both those objects. The chief reason why we appear before you at this moment is not so much on behalf of certain persons whom we happen to know, but in order to prevent the Government antagonising the objects of the Institute of Chemistry. By offering this scale of pay it means that it puts the profession on a lower status. We are anxious to raise the status. Then, again, I may say this: In former days I used to recommend students for the Government service; now I warn them against the Government service. I simply and deliberately say: "There is plenty of room in other ranks of the profession; do not go into the Government service"; and they naturally follow my advice. It is not a patriotic thing to do, and I am very sorry to have to do it; but the conditions of the Government service are such that there is no other course open in the interests of the young men themselves. There are plenty of appointments in chemistry where there are good prospects of success, but the Government service is not one of them. I am not alone in this. Most teachers throughout the country I know are doing the same thing, and the result will be that only the dregs of the profession will enter the Government service. The parents of these young men have spent a very large sum of money on their education, and the young men have spent a very long time on it, and, naturally, they expect a return. In advising a student, I advise him where he will get that return most quickly. If he can go to a teaching post, to begin with he gets a small salary, but the prospect is that of a fair income as a professor of chemistry later on and of a very good position. Many men have no turn that way and prefer to go to industrial posts, where the chances are exceptionally good; very often they become partners, and rise to an income of many thousands a year. I can point to 20 of

my own old students who are making very large incomes. So why should one advise an ordinary clever boy to go into the Government service, where he will get 350*l.* a year at the outside, when one has the chance of advising him to go to a place where he may earn as many thousands, with more interesting work.

22,565. The result will be that there will be fewer candidates for the Government service?—Precisely; or, rather, I do not think you will have fewer candidates, but you will get people who are rejected on other sides.

22,566. If you do not get fewer candidates, what you will get will be candidates of a lower type?—Candidates who have no chance of doing anything else.

22,567. And yet the Government wants to have its work well done?—Precisely; and that brings me to the work. The work is this: We have been given certain information of a general character by a number of these gentlemen. Of course, they cannot go into particulars, and we did not ask them to, because it is confidential information. They gave us a general sketch of the sort of work they do. We also have the report on the Government Laboratory, at the head of which is Dr. Dobbie. The work is of precisely the same character. If the scale of pay of the chemists in the Government Laboratory is compared with that of those in the War Office Laboratory it is perfectly incommensurate.

22,568. From the information before you, you are of opinion that the work done in the Government laboratory is below the work in the War Office laboratory?—No, I could not say below; it is of the same class as the work done in the War Office laboratories—it is exactly the same sort of thing.

22,569. Your remarks refer merely to the work done in the War Office laboratory now?—Yes, and also to the work in the research laboratory; but I will come to that later, if you do not mind.

22,570. Does the information before you lead you to the opinion that the work done in the War Office laboratories is below the character of what it ought to be?—Oh no, I do not think so. As Sir William Tilden has stated, the kind of work they do is to test, say, paints, oils, iron and steel, and all sorts of things. These are bought in large quantities and the quality has to be guaranteed by analysis. That is precisely the work the Government laboratories do.

22,571. Then the work in the War Office laboratories at present is fairly well done?—Yes, I do not deny it.

22,572. And at present the War Office gets chemists at a certain rate of wages?—It has got chemists at a certain rate of wages, and they are bound to stay on because they cannot throw up their livelihoods.

22,573. I understand it with regard to the people already in the Service, but is the Government at a loss to recruit their men at those rates?—Yes, now.

22,574. Can the Government recruit men at those rates of pay now?—Probably not.

22,575. Well, if they cannot, they will have to raise their rate of pay?—Precisely.

22,576. Is it our duty to recommend the Government to raise the rate of wages without at the same time saying "your work is badly done, you have not the proper men"?—I think the position which may be taken up is this: Those already there have been taken on with an implied contract that they shall have a certain rate of increase. That contract, in their opinion, has been broken.

22,577. I see the force of that argument?—There is another point: If they go on offering the wages those people are now getting, they will get a very inferior class of persons. Then a further point is with regard to the work. The work is in a certain way analogous to the work of the Government chemist and his staff; but I think it ought to be realised in comparing the work of the War Department Chemist with that of the research department, that the War Department Chemists are really doing more difficult work. It is an easier thing to investigate new products than it is to find out the errors in old products. A great deal of their work consists in having failures reported to them—failures on account of cloth turning mouldy, or iron rusting, or copper going wrong, or explosives not exploding, accidents with explosives, and so on. The investigation of

10 January 1913.] Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and [Continued.  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

that kind of thing is often much more difficult than the investigation of the actual fresh facts in regard to explosives. So that it wants a very high character of man to be able to do it.

22,578. Have you any other point you wish to refer to?—I was going to deal in much more general terms with the Civil Service as a whole. I do not know whether you wish this sort of statement, but I think they can be divided into two classes—the scientific and technically trained persons, and the administrators. Class I.—the scientific and technically trained persons—obviously could not be dispensed with. On the other hand administrators might be very largely dispensed with, because the scientific persons are capable of the amount of administration necessary to administer their departments. I should like to drive this home. In appointing a military head to the War Office laboratory, this military head has the responsibility of the work of the department, that is to say, the responsibility is thrust upon him, but I doubt if he ever reads the reports of the chemist, and if he did, he probably would learn very little. He signs his name at the foot. He accepts the responsibility and gets the pay, but the other men have the real responsibility and do the work and get no credit for it. They are never allowed to publish their work because, of course, it is all confidential. It is rather amusing to look into a case of this sort. I have chosen it purposely because it is not a Government case, but it is the Metropolitan Water Board. For scientific and technical work they pay 4,427*l.* a year; for administration they pay 7,100*l.* a year; and I have not the slightest hesitation in saying they could cut down the administration payments by 5,000*l.* a year and yet the administrative work would be quite as efficiently done. It is perfectly ridiculous that the men who really do the work are subordinated to men who simply sign their names at the foot of a report.

22,579. Your point is that the administrative and professional work in such cases should be fused?—It should be fused.

22,580. And that the technical head of the department should be the administrative head also?—Quite so. In the case of Sir Frederic Abel he was both administrator and technical man. One knows what an enormous effect he had upon the improvement of artillery in the country.

22,581. As a matter of curiosity, may I ask: Has there been an administrative head appointed in the place Sir Frederic Abel filled?—No, not directly. There is a military head—the Chief Inspector.

22,582. But he is not an expert chemist?—He is not an expert chemist. I am informed that he is an extremely pleasant man, and that the relations of the staff with him are perfectly amicable. I only speak in general terms.

22,583. But in your opinion he in no way contributes to the success of the department?—I do not think he does; I think he merely accepts reports and passes them on. If it is of any interest to the Commission, I should like to point out that in Australia, which is a new country, scientific men, in the service of that Government, are given a very free hand. I happen to have first-hand acquaintance with what is done in the hygiene department. The Central Department of the Commonwealth of Australia have appointed a senior medical man and two assistants, who are entirely responsible for hygiene for the whole of Australia, and who are not removable by any act of the Government. They find that works. In amplifying something that Sir William Tilden has said, I should like to point out that in the payment of such Government officials there are three points to be taken into consideration: first of all, an income commensurable with that of others of their social class, so that they can take their place. That is essential.

22,584. Sir William Tilden made the remark that they ought not to be compared with clerical officers?—They ought not.

22,585. What stamp of clerical officers did Sir William Tilden refer to?—The ordinary Civil Service clerk, I think. (Sir William Tilden.) I did not name

them, but I think the second division clerk will be even better paid than the men in the War Office laboratory.

22,586. Do you suggest that they should be better paid than the higher administrative class of Government officers?—I do not see why they should not be improved if they are made equal. (Sir William Ramsay.) Their work is equally responsible.

22,587. (To Sir William Ramsay.) In your opinion should they be better paid?—That opens up another question as regards the qualifications for such officers. I do not know whether you have seen this very curious document, which I should like to show you. It is a copy of an arithmetic paper issued for appointments under the Insurance Act. If I read one of the questions it will convey the information to you. This is Mr. Lloyd George's latest instructions for the examination of persons who are going to administer the Insurance Act at 200*l.* a year. The first question is: "A man buys goods worth 14*s.* 8*d.* at one shop, then others worth 7*s.* 10*d.* at a second shop, and others worth 4*s.* 5*d.* at a third shop. How much does he spend in all?" The rest of the paper is full of similar questions.

22,588. That question would not be put to the clerk submitting to the Class I. examination?—Probably not; but these persons are getting 200*l.* a year, which is almost equal to the pay of the class we are discussing.

22,589. When I referred to the examination for Class I, I meant the examination which is passed by men who have taken the highest honours in the universities—those whose salaries reach 1,000*l.* a year?—That is one set of people; but I am pointing out that the Government has come down to this.

22,590. With reference to Sir William Tilden's statement, I want to know if you claim that the pay of your chemists should be placed on a par with the pay of Class I. in the Civil Service?—Certainly, they are men who have taken the highest honours in the university. We think the senior men of that class should be so paid. But a paper which could be answered by any school boy of 10 years old leads to a Government appointment at 200*l.* a year.

22,591. (Miss Haldane.) For those Insurance appointments I do not think it is a competitive examination; it is a qualifying examination?—But there are not candidates enough to fill the posts, so it is really competitive. It is quite an amazing paper; it is really ludicrous. I think the income of these chemists ought to be commensurate with that of people of their own social class. Then they ought to have a fairly secure tenure. And thirdly, they ought to have a certain consideration due to their rank and position. If Nos. 2 and 3—fixity of tenure and a certain given consideration to their rank—are fairly well accentuated, the pay can be lower. To take a case in point: a German professor as a rule is not very well paid, but he lives like the people in the same town; he has got an absolutely fixed tenure, and he has a great deal of consideration paid to him, and the last two qualifications make it possible to pay him a comparatively low salary. If one could induce by some means—a professional standing and title, or something of that sort—greater consideration to be paid to these men, no doubt they would take smaller salaries if they were perfectly certain of fixity of tenure.

22,592. May I refer to this examination question, as I happen to know a little about it? Is not this simply a qualifying examination for men who are being appointed at a high age probably, and with entirely different qualifications? It might be on all fours with putting a Latin paper to your chemists?—I really cannot think so. These people are promised between 150*l.* and 200*l.* a year, and that is the paper they have to answer to gain the appointment.

22,593. But is not this mainly a qualifying examination? Probably the appointments will be decided on quite other grounds?—Then what is the use of setting such a paper? Such a paper would have been passed by the people we are talking about here at the age of 10 years.

10 January 1913.] Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and [Continued.  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

22,594. These men might be 50 years of age?—Then what is the use of setting them such a paper; the thing is simply ridiculous.

22,595. My point is that the two cases are not comparable?—As regards the question of status I am reminded of this point, which is worth taking into consideration: When these War Office chemists have to travel they are allowed 10s. a night for hotel accommodation, and they are allowed nominally second class fare, which means third class. So when they have to go away, and that is pretty frequently, they are always out of pocket. That is the kind of consideration shown them.

22,596. (Chairman.) I understand the points made by yourself and Sir William Tilden are these: Firstly, there is the personal point regarding the men already in these War Office appointments. There the gravamen of the charge is that when they entered the Service they did so on the understanding that they had the prospect of promotion up to 650*l.* a year; but this reorganisation has restricted their prospects of promotion to the class in which they happened to be at the time?—Yes.

22,597. The second point is, you consider that this scale of pay is inadequate to secure the men that are required?—Yes.

22,598. Then you went on to point out how the interests of the public service suffer by recruiting inefficient people who are not properly educated in chemistry, and that that would be the result of a scale of pay such as this?—Yes.

22,599. You next say that although chemists, properly educated as chemists, should be entitled to the same advantages, the same scales of pay, and the same style and dignity which the highest class of Civil servants enjoy, still if their position in society, and so on, could by any means be safeguarded, as it is said to be in Germany, a smaller rate of pay might possibly be appropriate?—Yes.

22,600. Finally, you pointed out the disadvantages under which these chemists labour in the small rate of allowances which are given to them when they travel?—Yes.

22,601. And that reacts also upon their dignity in a prejudicial manner?—Yes.

22,602. That is briefly what you say?—Yes. I should like you to understand precisely the object we have in coming here. It may be thought patriotic. We can easily provide for chemists in paying posts; but we do not like to be obliged to warn chemists away from Government posts.

22,603. (Sir Donald MacAlister.) In Sir Frederic Abel's time the whole of the chemical department of the War Office was under one organisation. The research work was not separated from the analytical work?—(Sir William Tilden.) No, the research department is another part of the establishment altogether.

22,604. The research part of the work was done in the same department as the analytical part in Sir Frederic Abel's time?—Yes.

22,605. Is the research department under a head now?—The head is Dr. Robertson, who is a chemist. (Mr. Pilcher.) But there is a military head over the research department. There are two departments under the research department, a chemical and a mechanical department. (Sir William Tilden.) I am afraid I cannot say of my own knowledge; all I know is that the research department is now separate from the Government laboratory at the arsenal.

22,606. Is there some official equivalent to the old war department chemist at 650*l.* a year in connection with the research department?—I do not know what his salary is. (Sir William Ramsay.) It is on page 68 of the book of "Official Chemical Appointments," where the whole of these facts are to be found with the names of the officials. The superintendent of research is under a military head, Mr. J. A. Duncan, Lieutenant in the Royal Navy. Of the chemical research branch the superintendent chemist is Dr. Robert Robertson.

22,607. What salary does he get?—I think he gets about 800*l.*\*

22,608. It is a pretty high salary?—Yes, it is pretty high.

22,609. Now that there are two departments, the head of all has a salary higher than that of the old War Department Chemist: are you not really speaking of the war department laboratory for analytical purposes as if it were the whole of the chemical department of the War Office?—But the work done in each is of about equal importance.

22,610. But to give a complete account of the provision made by the war department for chemistry you ought to include the research department?—Yes, naturally.

22,611. Therefore, there are posts in connection with the chemical department of the War Office which are just as good as those in that department in its undivided state?—The head man is well paid, but the others I believe are not.

22,612. But we have no information about that?—I am only told so. The head chemist of the research department, Dr. Robertson, is fairly well paid, but the others have very small pay. Here is an advertisement for an assistant at Woolwich which crops up in to-day's *Chemical News*: "Vacancy for assistant chemist with some experience in research; must be a university graduate, salary 110*l.* per annum. Apply with copies of testimonials." That is the sort of thing that is done. They will get a man worth 110*l.* a year, that is to say, a labourer.

22,613. I am trying to get all the facts before the Commission. I suppose you have a number of demonstrators in your department who have taken high honours and are highly qualified men?—Yes.

22,614. What salaries do those demonstrators get?—From 200*l.* to 250*l.*

22,615. Is that a usual rate throughout the country?—I think so, now. (Sir William Tilden.) I am afraid not, but these are young men. (Sir William Ramsay.) It is rather difficult to know what is a just salary for assistants. Supposing you pay them too large a salary they do not leave you; supposing you pay them too small a salary they cannot live.

22,616. And these matters are present to the minds of all university and college authorities throughout the country, and they balance them by giving a salary of about 100*l.* to 150*l.* and sometimes, but rarely, it is 200*l.*?—I know that is the case at Glasgow where I for many years got a salary of 100*l.* a year; but then I left as soon as I could.

22,617. To better yourself?—Naturally; but here there is no prospect of bettering oneself or of leaving.

22,618. How do you compare the chemists, Class III., with the demonstrator class?—Chemists, Class III., are older men.

22,619. They are men who have been demonstrators, I should think?—No, they are promising senior students who are put in.

22,620. Not all of your demonstrators have become professors?—I do not think any demonstrator would take such a post; for instance, Mr. Elsdon was simply a promising senior student when he went there. If he had been a demonstrator he would not have gone. A man's prospects are much better as a demonstrator than as an assistant chemist in the Arsenal.

22,621. You are speaking of University College?—And of any university; the chances of promotion are greater.

22,622. Am I to understand you to say that the chemist, Class III., is not so well qualified as the ordinary demonstrator?—No; he is a man one would not make a demonstrator; one picks a man for the post of demonstrator.

22,623. A demonstrator gets about 200*l.* a year, and the chemist, Class III., can rise to 250*l.*?—He can rise to it, but that is the limit. The demonstrator may rise to a chair, and hopes to do so.

22,624. It takes a long time in Class III. to rise to Class II., and from Class II. to Class I.?—But that chance of rising is rather cut out now.

\* This answer is corrected in 22,659.—W. A. T.

10 January 1913.] Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and [Continued.  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

22,625. But those who enter are very much of the same grade as the demonstrators. The demonstrators are paid much the same rate. A certain number of demonstrators in the course of years may succeed to higher posts, but only a few of them become professors. Do the general body of demonstrators rise to anything like 450*l.* per annum?—They generally leave; they either rise or leave; it has been my experience that they leave for commercial work in which they are extremely well paid, or they go to be heads of big technical schools, or something of that sort. I have not a single demonstrator who has left me who has not obtained something very much better.

22,626. But the commencing salary of the chemist, Class III. (who you say is not quite so good as a demonstrator) is therefore not unreasonable?—No, it is not unreasonable if there is a chance of leaving; but they are side-tracked. There is hardly any chance of leaving. It is true I got one of those men a post the other day in South Africa where he is getting 800*l.* a year, and he is very glad to get out of Government employment; but such posts do not usually come their way.

22,627. Why?—Because they do not come into contact with other chemists to any extent. They live by themselves down at Woolwich. Their work cannot be published and they cannot become known. A demonstrator makes a name for himself by published work; but these Government men are pledged to treat their work as confidential and nobody knows what they are doing.

22,628. You say these chemists, by the nature of their work are pledged, as it were, to forego the advantages of publication?—True.

22,629. And some compensation ought to be made to them for that. Is that your view?—That is my view. They get no credit from their senior for the work they do. The head of the department, the military man, no doubt receives a report which is handed over to him by the senior of those men, the Class I. chemist, and signs it; I do not know whether he makes any inquiry as to who actually does that work, but he is not obliged to.

22,630. Is not that so in all government departments?—It may be so; but it hardly appears to me to be the best way of selecting a man. For all I know the military head may keep his eye on the junior men with a view to advancing them, but I do not know.

22,631. Are not there some compensations in that system to a professional man? To be fair all round, if anything goes wrong in the department it is the man who signs the report who gets blamed, and not the subordinate officers?—But, as I said before, it is the man who signs the report who should have the responsibility.

22,632. But he has the responsibility, has he not?—Yes, without the knowledge. Supposing his report is wrong, and his signature is put to a misstatement of facts, he gets the blame, and he passes it down to his subordinate obviously, because he has nothing to do with the actual facts of the report; he simply takes them from his subordinate.

22,633. But he has to bear the consequences of the mistake?—But no doubt the subordinate bears them far more drastically.

22,634. You do not think the subordinate is protected?—I do not think the subordinate is protected.

22,635. The general impression we have gathered is that he is protected by the responsibility assumed by the head?—I do not think he is; the blame comes down to the member of the practical staff, you may be sure, and he is not promoted when he might be.

22,636. I do not quite catch the distinction which is sought to be drawn on page 6 of your statement\* between research work and routine work. You sought to make out, I think, that the research was the easier work of the two, but I suppose the assumption from that is that it should be the less paid of the two. Do you seriously maintain that as a general proposition?—There is a certain amount of routine work, I understand, in the shape of determining the composition of samples, such as oils, paints, iron and other things. That is very cut and dried, and certain men get trained to do that

without supervision after a short time. But that is only a small part of the work. From what has been told us the kind of thing that comes in very frequently is the testing of an explosive which has behaved badly, or the ascertaining the cause of accidents, or the investigation of a large supply of cloth which mildews, and which they want to recover money for, and that sort of thing, which really involves difficult research.

22,637. But do you mean that research work on new inquiries is less important?—It is quite as difficult, if not more so.

22,638. Do you mean that it is less important and requires less investigation than original work?—I should say it requires quite as much qualification as actual research. For instance, to experiment on new explosives, which is done in the research department, involves no higher efforts of brain than to find out what is wrong with old explosives. (*Sir William Tilden.*) In one case you are following out ideas of your own and testing them, and in the other case you have a sort of conundrum before you for which you have to find an answer.

22,639. I know of a public laboratory with which I am familiar, where we have to examine and analyse samples of atmospheric air. We consider that somewhat routine work, and work which could be done by a demonstrator?—(*Sir William Ramsay.*) Perfectly.

22,640. But the discovery of a new element in atmospheric air, I fancy, requires somewhat higher qualifications?—I should quite agree.

22,641. And ought to be better paid?—Yes. Supposing it is a question of sizing cloth, anybody who can size cloth once can probably go on sizing it. But supposing the cloth mildews, it involves a microscopic and bacteriological search to find out the fungi of the mildew, and that may require a lot of knowledge.

22,642. Quite so, but the same thing may have happened last week or last month?—I take that as one case, but such cases are continually arising.

22,643. You would not lay it down as a general rule that the research department is the easier to man?—No, but I want to point out that this work is very largely research work. I think it would be an advisable thing to appoint someone, or some small committee of chemists, to inquire into the kind of work done in this laboratory we are discussing, and in the Government laboratories. The work is of precisely the same kind, but the pay in the Government laboratory is very considerably higher than in the Woolwich military laboratory. (*Sir William Tilden.*) The only difference is that in the war department laboratories, they do not analyse food and drugs. (*Sir William Ramsay.*) They used to, but owing to the increase of work that has been given over to the other department.

22,644. I understand there has been a good deal of distribution of the work in the War Office laboratory, compared with what there was in Sir Frederic Abel's time, or at a comparatively recent date. Work which was formerly all concentrated in the War Office laboratory has now been distributed to other laboratories, and what they retain is the residual?—As I understand, the only thing sent away is the food and drugs analyses, and that has gone to the Government laboratory. Any research carried out on new explosives has been given to the research laboratory.

22,645. So what remains at the War Office laboratory is not what was originally within its scope?—It really is the same with the exception of the analysis of food and drugs.

22,646. But that is a large part of the work?—No, a very small part. It merely meant the food and medical supplies for the army, and that is very routine work. (*Sir William Tilden.*) Some of the work is owing to the development of chemical explosives. Since Sir Frederic Abel's time we have got to deal not only with gun-cotton, but a great variety of other things.

22,647. With regard to all professional service, as I understand, within the last 10 or 15 years the rate of remuneration outside the Government service has been rising rapidly?—Yes.

22,648. Not only with regard to technical chemistry, but with regard to public health chemistry, and so on?—Quite so.

\* *Vide* Appendix L.

10 January 1913.]

Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

[Continued.]

22,649. And that is perhaps a better argument for raising the status of these Government chemists than minute consideration of the nature of the work which they do; similar work outside is better paid?—(Sir William Ramsay.) That is quite true; one might say almost incomparably better paid. I am thinking of some of my acquaintances who are making from 4,000*l.* to 8,000*l.* a year, and who are doing very much the same kind of work.

22,650. No Government service can compete with that scale of pay?—Yes, it can compete by giving fixity of tenure, no risk, a fairly good social position, and a pension.

22,651. Have you kept the pension in mind?—Yes, but that is simply deferred pay, really.

22,652. And it accounts for a somewhat lower rate of pay?—I agree.

22,653. (Miss Haldane.) I wanted to know how many individuals are in question as regards this particular department doing what is called routine work in Classes I., II., and III.?—In this book of "Official Chemical Appointments" there is a list of all those appointments, and on page 67 is the chemical staff of Woolwich Arsenal. There are six senior chemists besides the temporary assistants. The Commission might be interested to know that as regards the present temporary assistants, who are paid about 100*l.* a year (actually 2*l.* 0*s.* 6*d.* a week), of the three mentioned here one has left, one is a man of means and goes down to amuse himself more or less as a temporary assistant, and the third is, as it were, marking time until he gets another appointment, doing something rather than nothing while he is waiting.

22,654. Then the whole question concerns six chemists?—Yes.

22,655. How many people were appointed to the new research department?—That is on page 68. You will see there are two chiefs, and a great many assistants who are paid 110*l.* a year and are simply waiting to leave.

22,656. How many men do you make it altogether?—Nine men besides the two chiefs.

22,657. In the Estimates on page 69 it is stated that in the research department there are 155 men employed, 22 of whom are highly-paid officials. Have you the salaries?—No, we have not got the salaries stated.

22,658. The superintendent receives 850*l.*; proof and experimental officer, 650*l.*; five assistant proof and experimental officers, 2,600*l.*?—Those are military men.

22,659. Then there is a superintending chemist at 550*l.*?—Yes.

22,660. And 14 chemists and one chemical engineer, 2,802*l.*?—Which means about 150*l.* apiece.

22,661. Fourteen chemists, 100*l.* to 400*l.*, including extra pay?—Yes.

22,662. This research department, you agree, is rather a large department?—The research department is not a large one; it contains two chief chemists and, I think, nine juniors, besides the military chiefs whom we cannot count.

22,663. Is "mechanical" also research work?—There are three chemists, and one superintendent in mechanical research, but there are nine assistant chemists to the research department, three assistant metallurgical chemists and a chemical engineer, which altogether accounts for 14.

22,664. In what you may call the routine department there are only six men altogether?—That is so, and three temporary assistants.

22,665. So that the question is not a very large one?—It is not a large one at all.

22,666. (Mr. Shipley.) You were comparing the salaries of the demonstrators with the salaries of those chemists. I do not know how it is in London University, but in Cambridge and Oxford I think the demonstrator generally about doubles his salary by coaching in the evenings?—Yes.

22,667. So although he officially appears in the list as being a demonstrator at 200*l.* a year, he is generally making some 400*l.*?—I know that is so in Oxford and Cambridge, but it is hardly the case in London,

which is too scattered. They do get extra teaching and increase their salaries in that way to some extent, and partly also by examining, and partly by doing abstracts for journals.

22,668. All those sources of revenue are cut off from the people we are talking about?—I think the chief disadvantage is that there is no means of publicity. An ordinary chemist in a university can advertise himself by publication—putting it in that way. These people have no chance of advertising themselves, or of getting themselves known in any way, and therefore their chance of outside employment is very small.

22,669. Are they pensionable?—Chemists, Class III. are not pensionable; Classes I. and II. are pensionable.

22,670. Some of the War Office chemical work has been handed over, I think, to the Government chemical laboratory?—Only food and drug analyses.

22,671. Could not all of it be handed over?—Of course it might be done by making a special branch in the Government laboratory for such work, but it opens a very wide question whether it is advisable to centralise. I do not think in that particular case it is. It would be totally different work from the other work the Government laboratory is doing.

22,672. Still it would very likely save a laboratory?—Yes, and it would throw a good deal more responsibility on the head of the Government laboratory. (Sir William Tilden): I am afraid it would be hardly feasible. At Woolwich, steel castings and all that kind of thing have to be tested on the spot. If you moved in that direction you would have to do away with the dockyard laboratories. There is one at Portsmouth and another at Plymouth.

22,673. Both you gentlemen have had considerable experience of Government departments. I will ask you a question which is very wide but which I am always trying to get at, that is, whether, in your opinion, the offices which you have had mostly to deal with are really efficiently conducted for the purpose of carrying on the public work—whether you could express any opinion on that?—(Sir William Ramsay.) It is all confidential work, and the point does not come before us in any form. The only chance of it coming before one is in law cases which occasionally arise; for example, when disputing the nature of a certain powder or things of that kind delivered by outside firms to the Government, and then one does not have much opportunity of knowing how the work is done, except in so far as one sees that the work is apparently well done by the Government chemists. That is all one can say.

22,674. (Mr. Matheson.) Do all the chemists in Class I. and Class II. pass through Class III.?—That I cannot tell you. All who are now on the list have passed through, but I do not know that they necessarily do so.

22,675. I suppose, really, your contention is part of a general contention that on the whole the tendency is to pay those holding scientific and learned posts connected with the Civil Service lower than those holding administrative posts?—That is the main contention.

22,676. (Sir Henry Primrose.) Taking the scale of pay given in the Government chemist's department, are you satisfied with it?—We have not had any complaint on that score. As a matter of fact the junior members of the staff leave pretty readily.

22,677. That, of course, is the central representative department of chemical employment under Government?—Yes. There is no doubt Dr. Robertson is a very pleasant man to work under, and they usually look at it from that point of view.

22,678. It is the Clement's Inn Laboratory that I mean?—That is under Dr. Dobbie. It has been entirely reorganised lately, but I do not know in what direction. It used to be very bad indeed, from the point of view of the junior chemical staff, and there were many complaints, but I think Dr. Dobbie has succeeded in getting it reorganised, though I have no definite information as to what has been done.

22,679. Are the Institute of Chemistry satisfied with the scale of pay there?—We have had no complaints.

10 January 1913.] Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and [Continued.  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

22,680. Reading this paper you have put in, one would understand that the Institute of Chemistry regarded this particular place at Woolwich, to which a large portion of the paper is directed, as typical of the Government treatment of chemists as a whole. But it is not so, is it?—It can hardly be said to be typical; it is rather an aggravated case.

22,681. It is a single case relating to six men who are in a department which has been subject to very great changes?—Yes.

22,682. A great deal of work has been taken away from it and given to another department?—You must not say a great deal, but a very small fraction.

22,683. We have not to consider what has happened in one little department to six men, but what is the relation of the Government to chemists when they employ chemists?—Yes.

22,684. From that point of view surely we ought to begin with the Government Laboratory, and, if that is quite satisfactory, then we might go on to the others. There are not a great many very important departments, outside that one, where there are chemists?—There is the Government department at the Royal Gunpowder Factory at Waltham Abbey.

22,685. Is not that satisfactory?—I think so, but the difference there is that it is a manufacturing place where they make gunpowder, and I daresay it is within your knowledge that the people who are there leave as soon as they can obtain more remunerative employment. For instance, Sir Frederick Nathan has lately gone to Nobel's factory, and two other men I know have also gone there because they have got much better pay and much more chance of promotion. One reason for a man in going to Waltham Abbey is that he has a good chance of getting out of it.

22,686. That is not a bad thing, is it?—It is not a bad thing at all.

22,687. I do not think the evidence in this paper of yours, or that you have given us, quite justifies such a sweeping denunciation of the attitude of the Government towards the science of chemistry as your evidence conveys?—We have agreed, I think, that it is rather satisfactory that the Royal Gunpowder Factory leads to outlets in commercial life where young men can go. Is that satisfactory from a Government point of view? Do you want young people to go there to learn their job and then to go away? Surely that is not satisfactory. In the particular case we have been considering—the Royal Arsenal Laboratory at Woolwich—the men cannot get away, and that is why they are disappointed.

22,688. I quite agree that all those are matters which ought to be taken into consideration by the particular department, the War Office, and so on. But as regards this Commission, taking the central department, the Government chemist's department, which costs over 20,000*l.* a year, I understand you are quite satisfied with the rates of pay there?—I do not think we are.

22,689. We have not heard anything to the contrary?—We can only judge by the actual figures which are brought forward. There is no doubt that the head administrator, Dr. Dobbie, gets very fair pay. I am not sure if the second in command gets 800*l.* or 900*l.* a year.

22,690. The second man gets from 700*l.* to 800*l.* a year; there are four superintending analysts at from 600*l.* to 650*l.*; nine analysts of the first class who are getting 400*l.* to 550*l.*, and 13 analysts of the second class who get 160*l.*, rising by increments of 15*l.* to 350*l.* per annum. Those are fair salaries; it is impossible to say whether they are quite enough, but they are good salaries?—They are good salaries.

22,691. They are not starvation salaries?—They are not starvation salaries at all, and no doubt there is a system of promotion there with which the men are contented. We do not have any complaints.

22,692. Take the inspectors' department at Woolwich. You know a great deal more about it than we do, but without knowing exactly what the work is, it is impossible for anybody to say what ought to be paid. There is a great deal of work, as I happen to know,

having been through the two revenue departments, which is quasi chemical, and which does not require a highly trained chemist to do it?—For that reason I suggest it would be a desirable thing to get someone to compare the cases we are discussing of the Royal Arsenal at Woolwich and the Government laboratory to see whether the work done is of the same quality; so far as we can judge, it is.

22,693. We have very large numbers of men employed day after day, not merely at the Government laboratory but elsewhere, in determining the alcoholic strength of liquids, the moisture of tobacco, and so on. It is a process that requires a man to have a little knowledge of chemistry, but not much?—Those are mere workmen.

22,694. There may be a great deal of that work at Woolwich, and probably is; but that clearly would require to be investigated by people who really understood what the attainments were which were necessary in a man who did the work well?—That is quite true, and for that reason we would urge that some sort of investigation should be made of the relative work in the Government laboratory and in this particular department.

22,695. (Mr. Boutwood.) Some of the men in the Government laboratory have had considerable service?—Yes, very long service.

22,696. When was the last appointment made at the Royal Arsenal of these men we have been talking about?—Some of them were appointed a very long time ago. (Sir William Tilden.) One was appointed temporary assistant in 1901 and junior research assistant at the Imperial Institute in 1903.

22,697. I was not speaking of the temporary men, but of these assistant chemists?—As chemist, Class III., Mr. Garland was appointed in 1906.

22,698. Then 1906 was the last appointment made. If the appointments there are not very frequent (and I suppose they are not), it occurred to me that the War Office might not have had any accurate experience as to whether the scale of salary would have the disastrous results that Sir William Ramsay indicated?—(Sir William Ramsay.) It is merely a matter of time. For example, there are two senior men who will resign or die. Mr. Trigger told me that in five or six years he would probably be able to apply for a pension, and when he goes, it will be extremely difficult to get any one to take the junior post and start again. Mr. Pilcher, Secretary of our Institute, has a very large *clientèle* of young men who are ready to take appointments, and no doubt he would advise them not to take a Government appointment, and would say: "There is no chance for you."

22,699. Sir Donald MacAlister called attention to the higher salaries paid, as shown on page 68; but your assistant chemists, on page 67, have no opportunity of promotion to the more highly paid posts in the other offices?—I have never heard of a transfer being made, and I do not think it occurs.

22,700. In this book of "Official Chemical Appointments" there seem to be scattered through the Service, outside the big laboratories, a number of what might be called small chemical departments. Would it be possible, do you think, to centralise them all and have a properly organised chemical department at which all the Government work scattered about in that way could be done?—Sir William Tilden suggests that so long as they do not amalgamate the laboratories, it is a mere question of administration. But supposing you put them all under the Government laboratory in London, would not it be exceedingly difficult for the head man there to know what is going on at Woolwich or at Portsmouth?

22,701. I was excluding those from my mind; but in connection with other offices there seem to be chemical appointments of different sorts, and I wondered how far it would enable your views to be met if those were centralised under a somewhat elaborately organised office. It was merely a thought that occurred to me in looking at this list?—It is really a question of administration on which we cannot very well advance an opinion. If you take the Admiralty, there is a

10 January 1913.]

Sir WILLIAM AUGUSTUS TILDEN, D.S.C., LL.D., F.R.S., and [Continued.  
Sir WILLIAM RAMSAY, K.C.B., D.S.C., LL.D., F.R.S. (Mr. RICHARD B. PILCHER was in attendance.)

chemist employed in the Director of Works' Department at Chatham, under the direction of Mr. John Watson, assisted by Mr. Andrews. They probably want him at Chatham, and if he were placed elsewhere it might be exceedingly inconvenient, but I really do not know.

22,702. (*Mr. Graham Wallas.*) The Council of the Institute offers as its first suggestion, Point (a): "That chemical departments should be controlled by chemists" ?—Yes.

22,703. And it says later on that the "Professional technical services should be systematised." Would you apply that principle generally to the expert servants in the Government service or to chemistry only?—Generally in the Government service. It appears to me as an absurdity to appoint an engineer who does the work, and is really responsible for what he does, and then have the actual name signed to his report that of a clerk, practically a senior clerk.

22,704. You would apply it to engineers ?—To anything where science comes in.

22,705. Would you apply it to a man who was a chartered accountant ?—I should think so too. It appears to me to be a very general principle.

22,706. Or to a man who is a member of the Institute of Actuaries ?—I should think, if a man of that sort did the work, it is he who ought to have the responsibility.

22,707. (*Chairman.*) Would you extend it to accountants; would not accountancy be merely ancillary or subordinate to the administrative work of the office ?—It depends very largely on what the accountant does. I know of a case lately in which an accountant who was winding up "Allsopps" had to become a director and learn a good deal about brewing in order to get the accounts straight. Things differ. There are accounts which anybody can understand, and there are other intricate accounts, such as in the case I have mentioned, which want an experienced and well-trained man; this particular individual had to be made a director of the company in order to be able to make his report.

22,708. (*Mr. Graham Wallas.*) There are two ways in which the Government service can be organised; either by administrative steps, in which specialised skill is ancillary to the administrative steps, or by a parallel system of professional appointments ?—Yes.

22,709. The Government service could be organised as consisting of physicists, accountants, lawyers, engineers, each with its professional hierarchy, and each responsible only to its professional chief ?—That appears to me to be satisfactory.

22,710. That appears to you to be the ideal of Government service ?—I think so.

22,711. (*Chairman.*) Would there be no means at all for co-ordination in that case? Take any office that we know. Take the Home Office; it has a branch dealing with accounts and a branch dealing with law, and it also has a branch dealing with medicine. Each of those branches contributes towards the general result, which is the Home Office administration. Unless you had, at the head of the whole business, some co-ordinating and administrative mind, would not there be a difficulty ?—You must have that, obviously; but in Germany and America where businesses of this sort are successfully conducted, we know because they earn large dividends, the directorate is composed mostly of skilled men of the class you are speaking of—men skilled in some particular line. I happen to know rather intimately a very large American chemical works in which out of 10 directors more than eight are actually chemists or engineers, and it is an enormously successful concern.

22,712. (*Mr. Graham Wallas.*) As a director the chemist gives orders to the engineer or the engineers to the chemist ?—The whole body gives orders.

22,713. Your ideal of Government service is a system of skilled professional hierarchies meeting only at the top ?—Yes, I think that would be very successful.

22,714. Are you familiar with the very interesting French literature on syndicalism ?—No.

22,715. You know that the suggestion you make is practically the syndicalist proposal for the organisation of the Government service ?—I do not know that.

## FIFTY-SIXTH DAY.

Thursday, 16th January 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman.*)

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,  
K.C.

Mr. ARTHUR BOUTWOOD.

Mr. JOHN ROBERT CLYNES, M.P.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (*Secretary.*)

Dr. J. R. TANNER, called and examined.

22,716. (*Chairman.*) You are lecturer in history at the University of Cambridge ?—I am not a university lecturer, but a college lecturer.

22,717. You have been deputed to represent here the University of Cambridge, and to answer the Commission such questions as we may put to you ?—Yes.

22,718. You received the letter\* of the Commission in which they call the University's attention to the four points upon which they particularly desire to have the views of the University.† The first point is the relation between the highest education given at the Universities and the efficient discharge of their functions by members of the Civil Service. One of the reasons why the Commission ask the opinion of the Universities on that point is that it has been suggested to us that a

single examination for the Civil Service, of the type of the second division examination, would suffice to produce men of the intelligence which the Civil Service requires from the highest grade to the lowest. Is that your opinion ?—Would that be an examination coming at an earlier age than the present one ?

22,719. An examination coming at the age of from 17 to 20 under the existing rule, and an examination in such subjects as a boy could acquire a competent knowledge of in the secondary schools of the country. The list of subjects is to be found on page 5 of the Green Book, which has been put before you ?—Yes, I have it here. I think myself it would be a very unfortunate change. A good many men ripen rather late, and if you selected men at an early age, many men who at that stage are not promising, but who afterwards develop, would be excluded. I should think also that

\* *Vide* Appendix XXXII.

† *Vide* Appendix LI.

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

an arrangement of that kind would set up a tendency for candidates to break up their school work and to go to professional coaches to be specially prepared for examination, and that would be quite disastrous from the point of view of the schoolmaster and the educationist; and even if they were not diverted into the hands of the professional coaches there would be great pressure at the schools to establish Civil Service departments of a rather utilitarian character in which boys, instead of being prepared on strictly educational lines, would be given a different outlook, and a much inferior outlook, on their own education.

22,720. And the earlier years in the clerical ranks of the Civil Service might probably not conduce to any expanding of their minds. Would you be inclined to subscribe to the proposition that such a scheme of recruitment for the Civil Service would furnish it with an ill-educated service?—I know so little of the effect of the Civil Service on the mind that my opinion on that point would be rather second-hand. On the other hand I have the profoundest faith in the value of university education in its bearing on the mind, and I should go very far indeed in expressing a positive opinion that university education would be of the very highest value.

22,721. Not only as cultivating the powers of the intellect, but would not it also have a great value in forming character?—I think, under the conditions that prevail at the residential universities and in a lesser degree at the non-residential universities, that is absolutely true.

22,722. Then you are of opinion that boys taken from the secondary schools would miss all that formative process on the character which they would enjoy at the Universities. They naturally would miss it, would they not?—I cannot see how the conditions of the work in a public office could supply it.

22,723. Would you say still less the work in the elementary and secondary schools?—You carry on the process of the formation of character later at the University, and I think that is very valuable.

22,724. Could you tell us very briefly how the process of forming character is effected and carried out at the universities?—I think that the statement in answer to the first question which has been put in by the council of the senate expresses that very well. There is an immense value in the combination of freedom with discipline which prevails in a residential university, and of course the social life of the undergraduate, the frequent intercourse, for all kinds of purposes, of different kinds of men, has a most valuable effect in bringing out the latent powers and possibilities of individual men. The kind of responsibility which is thrown on men for managing their own games and their own societies—as, for instance, the experience gained in the union society, which is almost entirely managed by undergraduates, or in connection with important athletic clubs—is of great value in enabling a man to acquire the power of managing other men, and leading them. That sort of knowledge of character and tact in handling men is of great value in any sphere of work in after life.

22,725. It has been objected to the system of open competition that, although it may enable you to pick and choose between candidates as regards the knowledge they have acquired, it does not enable you to pick and choose between them in regard to their capacity of doing things, and in regard to their power of initiative, and so on. Are you of opinion that success in competitive examinations does give some reason for thinking that a successful man will possess those qualities of initiative and self-reliance which are desirable in the public service?—I think that it is a useful test as far as it goes, because success in a Civil Service competition means great tenacity and power of concentration, and power of subordinating a man's immediate pleasures to more important ultimate aims; but I do not feel that it is quite an ideal test. I should have preferred an arrangement which gave an opportunity of a personal inspection of candidates, if that were at all possible. It would also be a great gain if the university record of a candidate could be brought into account together with expressions of opinion on the part of college tutors or

those who had some intimate acquaintance with him. But I see that there are immense difficulties in the way of applying that system. I think that an experienced committee of selection could always get behind a man's manner, especially if they were, as they would be, guided by some sort of knowledge of the interpretation of physiognomy. I do not share the feeling which has been expressed in some quarters that it is not possible to apply that kind of test with any fairness. The sort of difficulty that strikes me most is, in the first place, that such a system would be much easier to apply, and could be applied with greater exactness, in the case of residential universities than in the case of non-residential universities, and I also feel rather strongly a doubt whether a system of that kind would really command public confidence in the way that an open competitive examination does. There would always be the suggestion—it would no doubt be quite unreasonable, but it would be entertained—that somehow or other people were penalised because they had not got quite the demeanour which appealed to a selection committee, and so on; and it is rather difficult to see how that could be got over. I should have the greatest confidence in that method of selection myself, but I doubt whether people in general would.

22,726. Are you familiar with the method of selecting men for the Soudan Civil Service?—Only by hearsay, but that does, I think, involve the personal interview.

22,727. Yes, something in the way you describe. I believe the selection is left with the University, and the University take their own means of getting the best men. That, you think, would be a means of supplying the defect which is inherent in an open competition?—It means that the method of selection would cover a great deal more ground, and bring other considerations into account.

22,728. But the method of selection would not dispense with the necessity of open competition?—No.

22,729. Would you have that personal interview and personal appreciation of character before or after the open competition. In other words, if there were, say, 10 vacancies, would you give notice to applicants, and, if 30 or 40 applicants appear, would you see them beforehand, and then nominate a certain number of them to compete, or would you allow all to compete and then interview them afterwards, and bring to bear the criteria which you have explained?—Either method would have the effect of bringing the personal interview as a test into very great prominence, and that is, in a manner, a disadvantage, I think. If a man were excluded from the competition itself on the ground that he had not satisfied the interviewers, there might be a sense of grievance, and rather more so, if, having been successful in the examination, he were excluded, unless great care were taken not to issue any independent result of the examination, but to make the result of the examination depend on both the interview and the paper work.

22,730. So that you would prefer not to have a limited competition, that is, competition among selected candidates, but would prefer that the competition should be open, and that the selection should follow the competition?—I think that would present fewer difficulties, but I have not considered the point with any great care.

22,731. Have you considered the question of the facility with which poor students from elementary schools and secondary schools can reach the University?—The statement put in by the university, together with an appendix, described as Appendix A, supplies a certain amount of information with regard to that kind of poor student who, being under 19 years of age, is a candidate for an entrance scholarship. That does not cover the whole ground, but it covers a great part of it.

22,732. Are the scholarships given by the University open scholarships? Are they given as the result of examination?—By the colleges. The university in its corporate capacity with one or two exceptions gives no scholarships at entrance.

22,733. The colleges give the scholarships?—Yes.

22,734. Are the scholarships given as the result of open competition, or are they given to students coming from particular schools?—The scholarships dealt with

16 January 1913.]

Dr. J. B. TANNER.

[Continued.]

in our statement are entirely under conditions of open competition with the exception of certain 40l. exhibitions offered by King's College, to which a pecuniary qualification is attached. But with that exception it would be true to say that all these entrance scholarships are offered in open competition.\*

22,735. (*Mr. Shipley.*) Are not there some closed Eton scholarships of 80l. at King's College?—That is so, I had forgotten those.

22,736. (*Chairman.*) With some exceptions, such as the Eton scholarships at King's College, the general rule is that the scholarships given by the Cambridge colleges are given as the result of open competition?—It is certainly broadly true to say that. There are a certain number of exhibitions, limited to particular schools, which are not, generally speaking, offered at the same examination as the entrance scholarships, but there again I am afraid I must make an exception. I believe that the school exhibitions tenable at Emmanuel are given at that examination.

22,737. Would it be competent for a boy from any secondary school to compete for one of these open scholarships at Cambridge?—I think so, certainly.

22,738. What would be the procedure? Would he have to submit papers showing his previous school career, or certificates of conduct or anything of that description?—Yes, he would have to apply to the tutor of the college to which he gave his first preference in the event of being elected, and would be required to furnish to the tutor a certificate of character, and it would be very frequent practice for there to be correspondence between the tutor and the head master of the school concerned.

22,739. Would there be any objection raised for social reasons? Would the social position of the parents in any way interfere with the boy's eligibility?—That would not be taken into account in any way.

22,740. If a boy from, say, a secondary school, got one of those scholarships, might he also bring with him a scholarship from the secondary school?—Yes. It will be noticed that in Appendix A, "Return of entrance scholarships and exhibitions," not only the college emolument is returned, but also the value of supplementary grants made by the college, the value of school scholarships or exhibitions held by the student, the value of county council scholarships, and grants from other public funds. A very large number of successful candidates also hold school scholarships or county council scholarships.

22,741. In the college life do you notice any distinction drawn between young men who come into the University in that way and men who are the sons of rich people and of higher social position?—I think the university is extraordinarily free from anything in the nature of class feeling. Young men take each other very much on their merits, and if a man justifies himself by any kind of success, he finds very ready recognition. At the same time I do not want to put it too high. I think that in exactly the same way as there is a more complete freemasonry prevailing between members of the same school and a similar freemasonry between members of the same kind of school in relation to each other, it is a little more difficult for anybody coming from one of the poorer schools to establish exactly that relationship. But there is nothing in the nature of hostility or even drawbacks that cannot be got over; in fact it is not more than the kind of drawback which might prove a positive stimulus to a man of character.

22,742. Do those scholarships from local sources show, so far as you can judge, a tendency to increase. Do the young men who come to the University with scholarships from outside—from local bodies, county councils, and so on—tend to increase in number? Do they come to Cambridge in greater numbers?—I am afraid I can only offer an impression. I have no statistics bearing on that.

\* NOTE BY WITNESS.—Trinity College, by a recent change of statute awards "at least three" of its Entrance Scholarships "with special reference to the pecuniary circumstances as well as to the other qualifications of the candidates receiving them."

22,743. Will you give us your impression?—My impression would be that of late years they had considerably increased, and were increasing.

22,744. In regard to the general mental equipment of the students who enter the Civil Service by the open competition, do you consider that the curriculum in Cambridge is perfectly satisfactory?—Do you mean whether the examination itself is satisfactory from a Cambridge point of view?

22,745. We have been told that the older universities produce men of the same type, that Oxford and Cambridge give to the Civil Service men of the same type, while fewer men get into the Civil Service by what has been called the more modern studies, such as economics; and it has been suggested that that is due to the system of marking which has been adopted and has been in force for some time. It is said that not sufficient marks are given to such subjects as natural science, political economy, and political science. Have you looked at the subjects of examination from that point of view?—Under our system where triposes are divided into parts, it is a very common thing for a candidate for the Civil Service to take two parts of different triposes, and therefore to rely not only on, say, classics or mathematics, but on some kind of combination of those subjects or other subjects, and therefore as far as they are affected by the education, I do not think it would be true to say that the men are of one type. I have an analysis of the results in the competition of 1912 which bears that out to a certain extent; it shows a great variety of selection.

22,746. As regards the general power of dealing with things as they come up, in preparation for the business of life, are you of opinion that these studies I have been referring to now—political economy, natural science, and so on—are as good a mental training as the classical studies? Do you think the men who devote themselves altogether to those modern studies—to use a generic term to describe them in contradistinction to classical studies—are as capable of dealing with emergencies and situations as they arise in the general work of life as men who have been trained in the old classical studies?—It is difficult to generalise, because the individual is always escaping your generalisation. I have known quite as effective men produced by the modern subjects of study as by the older studies. My own feeling is, however, that of the different kinds of education afforded under the present scheme, the best of all is a combination of classics and history. I think that that produces, so far as I know, the very best men. But it is a question of degree, and other combinations are quite effective educationally.

22,747. Is the combination of classics and history that usually taken in Cambridge for the Civil Service?—No; I think the choice is very much wider than that. A good many men take classics and history; but in 1912, for instance, three candidates took history alone; one candidate combined natural science and economics; another combined natural science with mediæval and modern languages; another combined mathematics and history. The majority, however, began with classics or began with mathematics; but 3 of the 11 men who took Part I of the classical tripos took Part II of history, and out of 8 men who began with mathematics, 1 took history and 2 took natural science. So the combinations are very various.

22,748. At all events you think that the combination taken for the Civil Service is that most calculated to produce suitable and good men?—Yes, I think so.

22,749. Your scheme of studies in Cambridge, I understand, has not been influenced by the Civil Service examinations?—The arrangements of our schools have not been affected at all except in this way, that there is a subsidiary organisation—a private organisation—supported and financed by the colleges apart from the university for supplementing university teaching for Civil Service purposes. With that qualification I think it is true to say that the actual subjects taught have not been modified in any way by the Civil Service examination.

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

22,750. Then the organisation you refer to is for the purpose of directing students to take particular subjects?—To advise them in their choice of subjects.

22,751. To advise them as to the subjects which would be most paying in the examination, but that does not interfere with the general direction of education in the University?—Not at all. On the other hand I think the choice of individual men as to what subjects they should read is a good deal affected by the existence of the Civil Service examination, because they choose subjects which would be of value to them in that examination.

22,752. (*Mr. Graham Wallas.*) You know that two theories are held with regard to the kind of studies which should be pursued by candidates for administrative posts; one which is used in Germany and France, that a man should study a special type of question which would fit him for that special work; and the other the English tradition that he should be examined upon the ordinary work of higher education without reference to any special preparation for administration. Would you accept that statement?—Yes.

22,753. Then assuming that the English system, the English tradition, is right, it would rather follow from that tradition that great care should be taken by the State to follow all actual changes in the general trend of higher education and not to be left behind?—The State itself, I suppose, should influence the trend of higher education.

22,754. If the State, as examiner, says, "I am not going to ask you for special preparation for State service, but will examine you on what you have freely chosen as the best subject," then the State must be careful to follow the free choice of university students, and not to lead it?—I do not feel that I could assent to that without qualification. It is possible that the trend of higher examination in certain directions might be unfortunate from the point of view of those who were responsible for the manning of the Civil Service.

22,755. That is to say, the State must to a certain degree follow what I have taken as the first alternative—that it should in its allocation of marks in its own examinations give preference to those subjects which it considers specially useful in preparation for the State service?—I do not feel that that alternative quite follows. I can imagine the State able to recruit its service quite adequately on lines which were not entirely in accord with what you describe as the general trend of educational tendency in the country.

22,756. But if the State decided to ignore, to a certain extent, the general trend of education, it would do so because it thought that certain subjects are more suitable as preparation for its own service?—It might take the view that certain subjects were more valuable educationally without any intimate relation with the duties that the Civil servants might be called upon to discharge.

22,757. And more valuable for the education of the kind of man they want?—If you put it in that way, "for the education of the kind of man they want," I think I should agree.

22,758. Would you say that in the last 20 or 30 years a strong trend in university education has been shown by the development of the more modern humanistic studies—take history, modern languages, and modern types of philosophy as an instance?—There has unquestionably been a very great increase in Cambridge, at any rate, in the study of those modern subjects.

22,759. Do you think that the State in organising its examinations to lead to its own service should allow for that change?—Do you mean should distribute values among subjects differently to the way in which they are already distributed?

22,760. Distribute values somewhat differently from the distribution of values which would be suitable if that change had not taken place?—I think the present distribution of values is not very old, and is subsequent to the development of modern subjects, and it is quite arguable that the tendencies which you refer to have been allowed for already to a sufficient extent.

22,761. And if that tendency goes further, do you think it ought to be further allowed for?—I think that

is a question on which I am hardly qualified to express an opinion. I can imagine an overwhelming preponderance of modern subjects which might have the effect, if the distribution of marks followed it, of crowding out a most valuable type of candidate for Civil Service purposes.

22,762. I understand you to say that you could imagine a change taking place in the type of university education which you would personally deplore, and which the State would practically have to oppose by means of these examinations, in order to choose the men who followed the older rather than the newer way?—I should not be willing to assent to the position that the State ought, without reference to other considerations, simply to follow the educational trend for the time being.

22,763. But this particular trend which we are talking about does not seem to you to be deplorable—the trend which has increased the importance of subjects such as history and modern languages?—I do not think it has reached a point at which it is deplorable at present, but I can imagine the tendency being carried so far as almost to extinguish what I should myself regard as a better educational system.

22,764. You pointed out to us that the students made their own choice very largely among subjects for examination, and grouped them according to their own tastes, and also according to what they thought would pay in the examinations?—Of course that is very largely done under advice. There is a director of Civil Service studies who interviews men and gives them counsel.

22,765. You know, for instance, in the American universities that right of choice under the name of option is extended very much more widely than is the case in any English university?—Yes.

22,766. Would you say that the present distribution of the work at Cambridge between more or less watertight triposes hinders in some cases what would be rather a wise combination?—I think that could have been said some years ago, before the triposes were divided into parts. At the present time, with the division among the triposes, and the possibility of men combining parts of triposes in a great variety of combinations, I think that objection has been met.

22,767. You think there is no unnecessary difficulty in the way of a man taking such a combination as law and history?—No.

22,768. Or history and modern languages?—No. That is rather a more difficult combination, because modern languages take a very much longer part of a man's course; but it would be quite possible to combine history and modern languages in four years.

22,769. Or law and philosophy?—Law and philosophy could in the same way be combined in four years.

22,770. Do you say that a modern university ought to provide at any rate in the organisation of its studies for all combinations of studies during the university period which are reasonably wise?—Yes, those which are of high educational value.

22,771. The University of Cambridge keeps up the system of compulsory Greek?—Yes.

22,772. Do you think that that system of compulsory acquisition of sufficient Greek in all cases represents a wise allocation of time from an educational point of view?—That is a large and burning controversial question, and I think there is a good deal to be said on both sides.

22,773. The fact that it is a burning question indicates that the question is fought out on large general lines of social organisation, does it not?—Yes, I think so.

22,774. That is to say, if you know a man's politics you know fairly well how he will vote on that question?—Do you mean his academic politics?

22,775. No, his general politics?—No, I do not agree with that.

22,776. Would you say that with regard to two men out of three it is true?—No, I do not think I can assent to it in any degree.

22,777. The first page of the memorandum of the University of Cambridge represents, I believe, the considered opinion of the council of the Senate on the

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

general character and value of education given at Cambridge?—Yes.

22,778. I choose two short paragraphs as summing up the opinion of that Senate. One is "The principle of freedom of choice, the wide range of study, and the character of the teaching, both literary and scientific, which is accessible to the students, provide for the excellence and variety of their intellectual training"; the other is "As regards the development of character, the conditions of life in the university and colleges are in a high degree favourable." That represents generally the opinion of the council of the Senate?—Those are the two points with which the statement deals, I think.

22,779. (*Mr. Boutwood.*) On page 4 of the statement, in speaking of the entrance scholarships, you say the opinion is held by some that the number of those scholarships ought not to be increased very greatly until there have been certain external improvements in education and the methods of selection. What does that mean? Does it mean that in the opinion of those who so think the secondary educational system of the country, as it stands at present, does not provide a large number of men up to the university mark?—No, I do not think it is intended as a reflection on the system of secondary education, but only as a statement of our experience that under existing conditions all the men who go in for scholarships and who show really considerable intellectual attainments and promise get scholarships or exhibitions, and that if you greatly increased the number of scholarships you would not under existing conditions have men good enough to fill them.

22,780. When you speak of methods of selection, what sort of changes do you desire in the method of selection?—I think that was intended to refer to scholarships awarded by county councils and bodies of that kind. The tendency at the present time would rather be for their awards to include boys not of the first rank. The best boys, of course, would get assistance from the county councils, but our view would be that under existing conditions the tendency was for boys to find their way to that kind of assistance who were not from our point of view really of scholarship rank.

22,781. That is what you refer to in the last two sentences of the paragraph on page 4 of your statement?—Yes, that is a concrete case illustrating the general statement.

22,782. Was the report of that inquiry embodied in any accessible document?—That I do not know.

22,783. We have been told by another witness, when speaking of the principle of competitive examination, that, in his opinion, the principle of competitive examination was a more adequate test in the case of the higher examinations such as Class I. than it is in the case of the examination of a lower grade. Do you agree with that?—I am afraid I have no knowledge of the lower grade examination.

22,784. I was not referring to a specific examination, but if you take the Class I. examination as representing a very high educational standard and compare it broadly with anything appreciably lower, the evidence given was that, in the opinion of the witness, the competitive examination gave a more adequate test of the general capacity and character of the man in the case of the higher examination than it would do in the case of the lower examination?—I think I should agree with that, because when you get into the more difficult regions the men spread out more. I mean there would be a tendency in a simple examination for men to be pretty much on an equality and to arrange themselves in great blocks; but when you are dealing with the higher subjects there is more play as it were, and it is possible to arrange men very much more according to their real order of merit.

22,785. I suppose the students who come to Cambridge in some way or other from elementary schools usually come without any prior experience of corporate school life, or in many cases they do?—They come without any experience of residential school life, but I understand there has been an increasing tendency in the elementary and higher grade schools to organise

sport, for instance, and to create as far as possible something in the nature of a corporate feeling. That is only a general impression, and I have no first hand knowledge.

22,786. Using the words in quite a limited sense, does that impoverishment of their earlier experience operate adversely when they come to the university. Is it some time before they feel their feet?—It depends very much on the individual. I think some of them come up physically exhausted, and they are timid and tend to lead rather a hermit life, and with those men there is a difficulty in assimilating corporate ideas; but that would be quite a minority. The man of character always makes himself felt pretty early, and generally speaking I should think that most of them find their feet within quite a reasonable time, although of course they are under some disadvantages.

22,787. (*Sir Kenneth Muir-Mackenzie.*) I did not quite understand that last answer. Who are the people that you say come up physically exhausted—the athletes or the overworked students?—The overworked students.

22,788. Do you agree with the sort of opinion one has heard frequently stated lately, that all university men are alike—that is, always the same type?—The same type as supplied to the Civil Service, or generally?

22,789. I suppose it is really generally?—I should entirely disagree with that view.

22,790. One sees a good deal written just now about the older universities in particular as if every one university man was exactly like another?—I have had 17 years' experience as a college tutor and I have had a great many men under my hands, and I should say with absolute conviction that there is a very great variety of type.

22,791. Then you would not agree that the higher ranks in the Civil Service, by being largely recruited from the universities, were recruited as far as that source is concerned entirely with one type of man?—No, I should disagree with that entirely.

22,792. With regard to the very interesting things that you have said as to bringing in some sort of personal inspection for the purpose of selecting men for the Civil Service, is anything of that sort actually in use at Cambridge either for selecting scholars or for selecting fellows of colleges?—In the case of the selection of scholars, I think that in history a new experiment was tried for the first time last year in the establishment of a *viva voce* examination; but that would be directed mainly to testing further the man's knowledge. The Appointments Board take a great deal of pains, by means of personal interview and inquiry into the antecedents of men and the impressions formed by the tutors in the colleges about them, when they are making recommendations for business appointments and others.

22,793. But I suppose it would be really almost impracticable to introduce the principle, which you appear to favour, into the selection of men for scholarships. That must almost necessarily be open examination and nothing but examination?—I think it is so enormously important to maintain public confidence in the fairness of the competition that it would be undesirable to adopt a system of that kind.

22,794. But it is so with fellowships?—With fellowships the knowledge of the individual is for other reasons very much more complete. At Cambridge it is rarely the case that a man is elected at any other college than his own, and at his own college, of course, he is very well known.

22,795. But you have open examinations for most of your fellowships?—No. That is rather the exception at Cambridge. It exists at Trinity, but the method adopted at most other colleges is by means of dissertations. A man writes a rather bulky and detailed thesis on some important question, and that is submitted to referees.

22,796. At the university you do not profess to prepare people for the Civil Service or for any other particular profession. Your business at the university is to afford the best education according to your judgment for all people who come up to the university?—That is certainly the general attitude of the university.

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

22,797. And, therefore, I suppose one would not expect that you would be influenced in considering what was the best education that you should afford to men by the fact of whether it assisted them or enabled them to get into the Civil Service or into any other particular profession. But, on the other hand, you would expect that those professions would come to something like the same conclusions as yourselves as to who were the best men?—I think that would be our view certainly.

22,798. If that is the case, if you are successful in finding out who is the best man, why should he be examined over again in order to go into the Civil Service or whatever might be the profession that he wanted to enter?—That would be in practice a system of nomination by the university?

22,799. Yes, it would be very nearly that, subject to some such board of inspection as you refer to?—I think one difficulty would be that it would not be easy to standardise the different universities. One university might be extremely strict in its methods of selection and another university rather lax. Then you would have a tendency set up under the law of self-preservation by which the strict university would in the interests of its own men become more lax in its nominations; that is the kind of difficulty I foresee in that system.

22,800. But still that is rather the system that is used for the selection of men in the Egyptian, and Soudan Civil Service?—The numbers there would be rather small, would they not?

22,801. (*Mr. Shipley.*) With regard to *viva voce* in the entrance scholarships examinations, you said it was a new experiment. Did you mean it was a new experiment in history? You have had *viva voce* examination in natural science and modern languages for many years?—In natural science it is the practical examination you are thinking of.

22,802. Yes, combined with *viva voce*?—Yes, I was referring to history.

22,803. Then there is a general impression abroad, which was voiced only a week or two ago at the conference of the educational associations, that Oxford and Cambridge still confine their attention largely to classics and mathematics. Have you any statistics you could give us as to the honours schools in Cambridge and the percentage of men who take the different triposes?—I worked out the figures for the triposes of 1910 and the percentages are: natural science, 30·3; classics, 18 per cent.; history, 12·6 per cent.; mathematics, 9 per cent.; law, 8·5 per cent.; mechanical sciences, 7·4 per cent.; theology, 6·2 per cent.; medieval and modern languages, 4·3 per cent.; moral science, 2·1 per cent.; economics, 1·4 per cent., and Oriental languages, 0·2 per cent. Those are the 11 triposes.

22,804. You gave us some information as to the subjects taken by Cambridge men going in for this Class I. examination, and the combination of triposes. It might be interesting if you could hand in any further information which you have?—I will hand in the paper from which I quoted.\*

22,805. You come from one of the largest colleges in Cambridge. Have you any idea how many elementary school boys and how many secondary school boys, apart from public school boys, come up to the university?—I am afraid I have no figures bearing on that. It would be very difficult to get them.

22,806. In this statement, Appendix A, that the council of the senate put in, I notice there are 53 out of a total of something like 220 of the students who are receiving help from county councils. I suppose the majority of them would come from the elementary and secondary schools?—Yes, I think the great majority—in fact, almost all.

22,807. That is to say, 25 per cent. of those scholars are from such schools, and I suppose to them you might add the teaching training men?—And men receiving grants from city companies or public funds of that kind would certainly be poor men.

22,808. I notice one case in which a scholar in classics is receiving 300*l.*, 200*l.* of which is from a city company?—Yes.

22,809. You have no system of limiting the amounts which a person can gain in this way if he is clever enough in securing exhibitions?—My own college in administering some of its endowments asks for a statement of the emoluments which the student is receiving from other sources, and it is quite probable that the same method prevails elsewhere in Cambridge, although I have not any direct knowledge of it.

22,810. I suppose you would agree that it would not do if the world was peopled entirely with university men. The world can only absorb a certain number of men who have had a university training?—I agree with that.

22,811. On the whole, do you think the ladder is fairly broad for a poor and really able boy to get to the University of Cambridge?—I think so. I have had a good many under me and it is extraordinary how, in addition to the help they get from outside, money will be found, not perhaps by the parents but by the family collectively, to complete the boy's education—that is very noticeable.

22,812. You were asked whether the social conditions of those candidates who come in through entrance scholarships had any effect on the examination. I think it is true to say, from having examined for many years, that the examiners have no knowledge of the social conditions, but simply have the names before them?—They have not as examiners. It might be the case that a college tutor was also an examiner, and therefore, knew the circumstances of half-a-dozen men entered for his own college; but that would be quite exceptional and would have no effect whatever on his judgment on the performance of the men.

22,813. He would be only one of a large number of examiners?—Yes.

22,814. In these big groups we have sometimes as many as 25 or 30 examiners?—Yes.

22,815. With regard to the question Mr. Wallas raised about compulsory Greek, as far as my recollection goes, the resident members of Cambridge—that is, those actively engaged in teaching—have lately had a considerable majority in favour of doing away with compulsory Greek?—And I think it is the case that the majority of those residents in Cambridge are, politically, conservative.

22,816. (*Mr. Hoare.*) Could you tell the Commission what is the least sum upon which a man could reasonably be expected to live at a college in Cambridge?—I think the best way in which I could answer that would be by referring to some estimates of expenses which appear in the university handbook to the university and colleges. The calculation is a little complicated by the fact that there are certain initial expenses. At most colleges a man deposits 15*l.* caution-money and then there is an admission fee, a university matriculation fee of 5*l.*, and the valuation of furniture; and he has to buy cap and gown and surplice, and so on. These various initial expenses, amounting altogether to, perhaps, 30*l.*, spread over the three years, would have the effect of raising the annual expenses from the lowest figure which is put down in this estimate. The lowest figure there is 107*l.* 5*s.*, but that is exclusive of these initial expenses. It is also exclusive of examination and degree fees. The examination fees are spread over a man's course, and the degree fees occur at the end. In the case of natural science students, or medical students, or engineering students—and into that category poor students would more commonly come—a considerable sum has to be added every year for the very heavy cost of laboratory fees. Although I have known men of that type get through the university course by extreme care—it sometimes involves a kind of penury which deprives them of a great many of the social advantages of Cambridge—on something like 140*l.* or 150*l.*, I think if a man studying the expensive modern subjects really wanted to make the most out of the place he would be a good deal happier with something like 200*l.*, and that would not allow for anything in the nature of extravagance.

\* *Vide* Appendix LII.

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

22,817. Do you think it would be wise of county councils in sending municipal scholars to Cambridge, to insist upon their being able to show scholarships or other means, say, to the value of 150*l.* a year?—So as to insure that the man should not lead a very miserable life?

22,818. So as to insure that the man should be in a position to take full advantage of the advanced education?—Yes, I think it might be a good thing, but I have not specially considered the point.

22,819. Have you followed the career at Cambridge of any of these municipal scholars?—I have some information which was supplied to me by the secretary of the Appointments Board. I am sorry to say it is very incomplete, because it is only for the years 1905 to 1909, and it refers only to the London County Council, but it is the best information available. During that period there seem to have been 77 scholars altogether, but there is only information with regard to 39 of them. Many of the rest probably became schoolmasters. Taking those 39, I can give you the professions which were subsequently adopted by them, if that would be the kind of information you desire.

22,820. But, roughly speaking, does the return which you have there bear out the contention that, upon the whole, they have been successful at Cambridge?—I think, as far as it goes, quite. It is rather striking, in one way, that out of the 39, 13 have gone into the Civil Service, including India, the British Museum, and other departments, and nine more have taken up scientific appointments of one kind or another—some of them business appointments, no doubt. The remainder are distributed rather widely. There are three Fellows of colleges, four have gone into agriculture, two are engineers, one is a journalist, one a chartered accountant, one is in an insurance office, and two are described as lecturers—I am not quite sure what that implies—one is in a bank, one has a railway appointment, and one has taken holy orders. It is a very wide distribution, if you exclude the Civil Service and the scientific appointments.

22,821. The system of municipal scholarships only began in 1902?—It is quite recent.

22,822. Have you in that return, or in your experience, any cases of physical breakdown of these municipal scholars?—I have had a certain number of cases of physical breakdown of my own pupils belonging to that general type, but I could not say without reference whether they were actually county council scholars or not.

22,823. The strain is very great upon a large number of boys of that type?—Yes, I think that some of them cannot stand it; but the dimensions of that particular evil are not very great. I do not wish to give the idea that any very large proportion of them come to the university in an exhausted state.

22,824. I think you told Mr. Boutwood that the standard of education still left something to be desired. Have you thought out how the standard of municipal scholars could be improved?—I am afraid that is rather a large question, and I have not considered it sufficiently.

22,825. You had not any specific remedy in your mind when you gave the answer?—No.

22,826. In the last paragraph, on page 2 of your statement, you imply that the maximum age of 24 for Class I. of the Civil Service, judged from the standpoint of the university curriculum, is too high. Would you like to see it lowered to 22 or 23?—I think the view was taken by the Council of the Senate that, as men take their degrees at the university usually at the age of 22, the upper limit of 24 prevents some, who would otherwise compete, from competing, because they are not able to spend an additional year after their university course is completed. There is another class of student—and I was asked specially to bring this in, in connection with that paragraph, in my oral evidence—who devote the main part of their course to the study of one particular subject, and are debarred from competing because the examination has so wide a range. But the council did not wish to express an opinion on the question whether the age limit should be lowered in consequence, and I am not

authorised to speak for the university on that point. It is, however, the case that a good many people at Cambridge take the view that if the age limit were lowered from 22–24 to 21–23 it would have the effect of enabling our candidates to go straight from their ordinary tripos work to the Civil Service examination, provided that the maximum marks were at the same time reduced. Supposing that instead of 6,000 marks being the maximum you had 5,000, it would then be possible for an ordinary student, combining two parts of two triposes, to be a candidate for the Civil Service without having to take the extra subjects which sometimes have to be got up with the assistance of professional coaching, and educationally there would be a considerable gain on that ground.

22,827. I do not quite understand the point about the reduction of the maximum. How would that work out in actual practice?—At the present moment a man who offers, say, classics and history, or any other combination, cannot secure the full maximum of 6,000 without adding some outlying subject or subjects. Some of them would take French literature, others would take law, and so on. These extra subjects which require special preparation, and which are not, as it were, relevant to a man's main work at the university are, some of us think, educationally disadvantageous. Of course, the view is also taken by others that they are a test of a kind of mental agility, and are valuable for their own sake.

22,828. What is the average age at which most men enter Cambridge? Should I be right in saying 18?—I think the great majority would be nearer 19. A good many enter at 18, but 19 would be a much more representative figure.

22,829. So that there may be a considerable gap between a man leaving the university and entering the Civil Service examination?—Yes, that is the difficulty. I ought to add that, supposing the maximum were reduced from 6,000 to 5,000 marks, those at Cambridge who are in favour of that reduction would attach considerable importance to certain subjects being made compulsory, because, if you simply allow a reduction of the maximum, it would be possible for a man to specialise in particular directions, and there would not be a very satisfactory guarantee that he had the ordinary equipment of an educated man. I read a very interesting article by Mr. Stanley Leathes which appeared in the "Nineteenth Century," and I find myself very much in agreement with that. I think he suggested in that case that in addition to English composition, which should be compulsory, there should be at least one language and either history or philosophy. Some arrangement of that sort would be a protection against the excessive specialisation which a mere reduction of the maximum might involve.

22,830. Have you ever made any special recommendation to the Civil Service Commissioners on the subject?—There was a conference some time ago, I think, between representatives from Oxford and Cambridge, and the Indian Civil Service Board at Cambridge passed resolutions with regard to the age limit.

22,831. (Chairman.) In favour of a reduction?—In favour of a reduction of age. With regard to that I would like to mention that I think a good many people in Cambridge would be very reluctant to press a change which we might regard, as in our particular interests, against the interests, say, of Oxford or of other universities. It is quite realised that the general interest transcends that of a particular university, and I would be rather sorry to press these changes as against definite evidence, say, from Oxford or from some other university, to the effect that they did not suit their curriculum, and would diminish the number of good candidates which they could send up.

22,832. Have you any reason to suppose that they would not suit Oxford?—I believe the view was expressed at this conference, which took place some time ago, that a change of that kind did not suit Oxford; but I have some impression—I do not quite know where I derived it—that the Oxford view has undergone modification.

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

22,833. May I ask you whether the most interesting views you have expressed on this matter now are the views of the University of Cambridge or your own individual views?—They are certainly not the views of the Council of the Senate, which avoided expressing an opinion on what is rather a thorny question, but I have no doubt that that view is widely entertained at Cambridge. But Cambridge is not agreed.

22,834. (*Mr. Hoare.*) What would be the case of the opponents of the change?—I think their view would be that extra subjects might be a test of mental agility, and would be a corrective to an education which would be on rather narrow and more specialised lines. I am not sure that that is a fair representation of their case, but one can recognise that there is something to be said on that side.

22,835. Now I suppose it would be usual for a man having passed his degree to go to a crammer for one of those special subjects, unless he was a very remarkable man?—I am afraid it is the case that a very large number of our men spend a short time with crammers, perhaps 6 months or 12 months. The best go to get up the extra subjects, and the second class go partly for that and partly in order to get a very drastic revision of the work they have already done. In 1910, out of 33 successful candidates at Cambridge, 21 were at Wren's for six months or more, and two more for seven weeks. The corresponding figures for 1911 are 30 successful candidates, of whom 12 were at Wren's for six months or more, and three for seven weeks. The figures for 1912 are 30 successful candidates, of whom 17 were at Wren's for six months or more, and two for seven weeks. If you take the whole three years into account, it looks as if all the men who obtain second classes in triposes, and not quite half the men who obtain firsts, resorted to outside assistance at Wren's.

22,836. Do you know at all what extra expense that throws upon a man?—That I do not know.

22,837. It would impose upon him an appreciable expense?—I think so. I do not altogether like the term "crammer," because these people are supplying a definite want in a very business-like way, but our view would be that the less our men go to professional coaches, and the more they are enabled to go straight from the university into the examination, the better, and that a reduction of the maximum marks might have that effect.

22,838. Is there close co-operation between the Civil Service Commissioners and the University of Cambridge?—I think the Civil Service Commissioners would consult the university before making any important change in their system, but I do not think recently there has been any need for consultation.

22,839. Have you ever considered the advisability of having the universities represented officially on the Civil Service Commission?—I have not considered that at all.

22,840. Would you care to express an opinion upon it?—I think I would rather not, without more consideration.

22,841. With reference to the scholarships: of those 220 scholarships which you mention on page 4 of the Appendix, do you know at all how many are restricted to men of poor means?—I am afraid it would be very difficult to arrive at any figure. We point out in the second paragraph on page 4 that it may be safely assumed that out of the 220, 79 were receiving assistance from county councils or public funds and were of slender means, but my own experience certainly, and I think the general experience of college tutors, is that that number does not anything like represent the number of poor men, interpreting "poor men" in the widest sense, as men who are in need of additional help to complete university education. It is very commonly the case that you have the sons of clergy and professional men with large families who need help, and are receiving help.

22,842. But are there none of those scholarships which are explicitly restricted to poor men?—The only exception that I know of is the case I mentioned at King's—the 40*l.* exhibition for which a pecuniary qualification is necessary; but, of course, apart from this entrance scholarship examination, the colleges offer—

usually at a different examination—sizarships and sub-sizarships, which are entirely restricted to poor men.

22,843. Then it would not be true to say of Cambridge what is true of many colleges at Oxford, that the exhibitions are restricted to men who have to show that they are in want of them?—The exhibitions offered in open competition are not restricted, broadly speaking. The sizarships and sub-sizarships, which are offered at a different examination, are restricted, as the name implies.

22,844. (*Miss Haldane.*) Do you consider it altogether satisfactory that a young unmarried man, without presumably expensive tastes, should not be able to attend a great national university for half the year under a cost of 150*l.*, and even then that he should do so in a state of penury, and get little advantage out of the social side of university life?—It is a little difficult to express an opinion on that question. It might be unsatisfactory from some points of view; but the university is a great going concern, with standards of living which are regulated more or less by tradition, and determined by the class from which the students are drawn, and I think it would be a great deal better that men from the poorer schools should enter fully into the general life of the place than that they should form a class apart, living under special conditions.

22,845. (*Chairman.*) Does the 150*l.* refer to students who live in the university, and not to those who live in quarters in the town?—I think there is not very much difference. The colleges have quite small and cheaply rented rooms, which are as inexpensive as lodgings in the town.

22,846. (*Miss Haldane.*) Then you do not consider that an effort should be made rather to reduce those expenses than to enhance the emoluments of those who are coming in?—I think it would be very undesirable to mark off poor students into a separate class if that can possibly be avoided.

22,847. I meant would it not be better to reduce the cost all round. As I make out, only about 25 per cent. of those in Appendix A, who are receiving scholarships and exhibitions, would be able even at the rate of 150*l.* a year to pay for their university career out of those exhibitions and scholarships?—It is very difficult to work out in one's mind exactly what the consequences would be of a general change in the whole habits of the university. I think it might be described as a sort of depreciation of the whole standard of living of men who were not required from pecuniary considerations to live on a reduced standard.

22,848. But at present you consider it practically impossible for a poor man to go to a university like Cambridge unless he has considerable assistance from relatives at home?—A good many of those men in Appendix A are getting sums of 150*l.*, 160*l.*, 100*l.*, 145*l.*, and so on.

22,849. Twenty-five per cent. of them 150*l.* or over as I make out?—Some of the 30*l.* exhibitioners, assuming them to be poor men, would certainly require a great deal of assistance from friends.

22,850. Taking the whole year, how would you estimate the expenditure which a parent would have to be prepared to make for his son—counting the whole year, vacation and all—who wished to have a university education at Cambridge?—Supposing the whole cost worked out at 150*l.* a year, and the son had a 30*l.* exhibition, it is simply a matter of arithmetic; the parents would have to find 120*l.*

22,851. But then there is the holiday time. You would have to consider the cost of the whole year?—A man living at home in the vacation is, I imagine, very inexpensive to his parents.

22,852. I have a poor man in my mind. I am not thinking of the better off ones, or even the poorer clergyman's son. Would such a poor man have any chance of getting to the University of Cambridge as things are at present without help, except what he gets from exhibitions and so on?—It depends on the amount of outside assistance.

22,853. Then if he thought of the Civil Service he would have extra expenses, I suppose, for special preparation. Do you know how much that would be?—The expense for special preparation in Cambridge

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

itself would be quite small. The fees charged by the Associated Colleges for lectures on subjects not included in the ordinary curriculum are, perhaps, one or two guineas a term. I cannot think that it would work out as a very substantial addition to the cost. Directly he comes away from Cambridge and goes to a place like Wren's, the cost would probably be a great deal higher. In the case of a man whose parents lived in London, and who was therefore able to live at home, and merely went to Wren's for teaching purposes, the situation again would be modified in his favour.

22,854. But supposing he remained at the university, could you give me any idea of what he might be expected to pay extra in order to receive the special preparation which I think you said was general on the part of those who go in for the higher division examination?—I should think about 20*l.* would cover it.

22,855. You said in your memorandum: "In the methods of selecting those who are to be thus educated, it will not be possible to increase very greatly the number of entrance scholarships awarded to such persons without lowering unduly the standard of ability required. In support of this statement it may be mentioned that a joint inquiry, conducted in the summer of 1912 by representatives of the colleges, suggested the conclusion that a number of the students to whom grants had hitherto been made by an important public body had failed to show sufficient ability to justify the amount of public money spent on them." Will you say what you consider is wrong in that method of choice?—I am afraid I do not know enough about the method of choice adopted. I have no first hand knowledge.

22,856. (*Mr. Shipley.*) What really happened in this case, if my recollection is right, is that we found at Cambridge, of the number of boys coming up from one very important public body with scholarships, a certain percentage were not doing well. The university formed the idea that they had been badly selected, and communicated with the local body. The local body were afterwards more careful in selection, and decreased the number but increased the amount of the scholarships. Does your recollection coincide with mine?—I think the university, in dealing with this memorandum, rather intentionally avoided disclosing the name of the body concerned, because it is only an *ex parte* statement of what happened. There was a redistribution of funds, which to our view was of much greater advantage.

22,857. (*Miss Haldane.*) That is the explanation of this sentence in the memorandum?—Yes.

22,858. You consider it is better to have fewer men but with higher standing?—Exactly.

22,859. (*Mr. Clynes.*) Respecting that list of 39 municipal scholars, would you say that the results as shown by that list compare favourably with the results in any similar number of cases of scholars drawn from another quarter?—By "another quarter" would you mean entrance scholars who were not specially marked out as being poor men?

22,860. Yes?—It is rather difficult to make a comparison. My impression is that the men of poorer antecedents have strong points of their own, and also weak points.

22,861. Would you consider the results, as shown by that list, to be very good results? As a rule, how do they develop under university instruction?—I think that the poor men gain the full advantage of a university education on the intellectual side—I mean the freeing of the mind from any kind of prejudice, the development of an instinct for fair-mindedness, and the handling of evidence fairly, and also, what I always think is one of the great advantages of that kind of training, the development of an instinct for getting to the bottom of things; that is to say, a man ceases to be satisfied with inadequate or partial explanations. On the intellectual side I think the poor men get the full advantage of the university education, but I think they have their own weak points and strong points. The strong points in particular are that they are very industrious, and perhaps less pleasure-loving than other kinds of men, and very willing to learn—I have always found that. I have had dealings with a good many of them, and I

have liked and respected them immensely on that ground. On the other hand, I think some of them are too specialised; they come to the university with rather a narrow outlook—with the literary instincts undeveloped, or with their literary knowledge based not on their own reading but on other people's ideas derived from quite small text-books, and it is sometimes difficult to create in them the literary appetite; but we have been on the whole successful with them, although it takes a longer time. I think also they do not find it quite so easy as the other kind of men do to subordinate personal interest to the general interest of a college or a service. One does not like to say that they are a little mercenary, but their outlook perhaps has that character. But I have always found that college loyalty, and the impact on them of college life are good correctives. Of course, there are numbers of exceptions. I have known extremely loyal and unselfish people, and I have known quite selfish and mercenary people in both classes, and therefore I could only lay considerable stress on what I said before, namely, that the individual is always escaping your generalisations.

22,862. (*Chairman.*) What would your answer be with regard to the comparative degree of appreciation for university teaching exhibited by the poorer class of boys compared with the boys from the richer classes?—I think they are more one-sided.

22,863. (*Mr. Clynes.*) Would you say that these poor boys, having secured these educational advantages come out very well as compared with other classes in respect to securing positions either in the Civil Service or elsewhere?—I do not feel able to make a satisfactory comparison between these and other students; I think, however, it may fairly be said that, although they are under some disadvantages, on the whole they do exceedingly well.

22,864. I understood you to say in answer to one question that the college did not, generally speaking, specially seek to prepare men for the Civil Service?—No.

22,865. Have you some exception in mind?—The exception I was thinking of was the organisation of Associated Colleges, which arranges for supplementary lectures on the extra subjects.

22,866. (*Chairman.*) You mentioned that if the age were reduced from 22-24 to 21-23, and the total number of marks were reduced from 6,000 to 5,000, you would insist upon making part of the subjects compulsory. Had you in mind any particular group of subjects that you would make compulsory?—I was thinking of the subjects referred to in Mr. Stanley Leathes' article—English composition and one language, either classical or modern or Oriental perhaps, and either history or philosophy, in order to correct the excessive specialisation which might grow up under an altered system.

22,867. (*Sir Kenneth Muir-Mackenzie.*) With regard to that same subject of the reduction of age, the effect of that would be to bring the universities and the Civil Service into closer relation than they are now as regards the examination and the selection of candidates?—Yes; men would be much more likely to go straight from the universities into the Civil Service without any intermediate period than they do now.

22,868. Then the probable effect, and, perhaps, from the point of view of the universities, the desired effect, would be that a larger proportion of university men would go into the Civil Service?—I think that is quite possible.

22,869. (*Mr. Boutwood.*) Are the 39 cases you have mentioned once or twice the same as those in Appendix B?—They are not the same. It is a different return limited to senior county council scholars, but it is quite possible that individual cases might occur again in Appendix B. There is one point I was asked to mention specially with regard to Appendix A. In that list the names of some students occur who have been elected to scholarships and who retain the status of scholars; but, being men not in need, they voluntarily resign the emoluments attached to the scholarships, and the money set free is not taken by them but is carried on to the next year. All the colleges have an arrangement by which they encourage that, and this would

16 January 1913.]

Dr. J. R. TANNER.

[Continued.]

seem to have rather an important bearing on the relation of Appendix A to poor men.

22,870. That is to say, the money becomes available for the poor men?—Yes.

22,871. (*Mr. Shipley.*) In giving your estimate of the expenses of students, I do not think you had in your mind at all the non-collegiate system?—No.

22,872. By that system the expenses are very markedly reduced. It is a system by which men can join the university without joining a college?—Yes.

22,873. (*Chairman.*) I asked you, if they did not live in college but lived outside, whether there would not be a saving of expense?—Yes, the expenses are less. I certainly misunderstood the question with regard to men living in lodgings. I did not take it as referring to non-collegiate students, but to members of colleges living in lodgings.

22,874. (*Miss Haldane.*) What could a man who entered on the non-collegiate system live for in a year?—The censor of non-collegiate students, writing in the "Students' Handbook," sums it up by saying: "It will not be far from the truth to infer that the average expenditure in Cambridge of students living in lodgings" (that is, non-collegiate students) "is between 78*l.* and 90*l.* a year. I include books and stationery, and provision for a normal share in corporate life, but not clothes or travelling expenses." If you bring in clothes and travelling expenses I suppose it would be 100*l.* to 110*l.* to compare with the 150*l.* mentioned before.

22,875. That would be the only system by which the really poor man, of whom we have been speaking, could

go in—a man who had merely the exhibitions or scholarships under 150*l.* a year?—Yes, and whose parents could not contribute much. That would certainly be the cheapest way.

22,876. (*Mr. Hoare.*) Could he hold any of these scholarships as a non-collegiate student?—Only a few—very few. There would be nothing to prevent; his holding a county council scholarship or getting a grant from a city company.

22,877. (*Miss Haldane.*) But he would not be entitled to hold the larger part of those of which we have the return. The college and university give 11,055*l.*, and the schools and county councils, and so on, 9,113*l.* Would he be entitled to any part of the 11,055*l.*?—Not being a member of a college he would not be eligible for scholarships offered by a college, so I think the answer to that is no.

22,878. So he would be only entitled to what comes from county councils?—Yes, and grants from public funds.

22,879. (*Mr. Shipley.*) There are one or two scholarships in connection with city companies, I think, which are non-collegiate?—There are six Clothworkers' company exhibitions of 30*l.* and a few other smaller exhibitions.

22,880. (*Mr. Hoare.*) How many non-collegiate students are there?—About 150, or something like that number. The exact number of men in residence last year as non-collegiate students was 151.

22,881. Is the number increasing?—It has increased of late years.

Dr. A. NEWSHOLME, C.B., F.R.C.P., called and examined. Dr. R. W. JOHNSTONE was in attendance.

22,882. (*Chairman.*) What is your position at the Local Government Board?—I am medical officer of the Board.

22,883. Have you long held that position?—For five years.

22,884. Dr. Johnstone is also a medical officer of the Board?—He is a medical inspector of the Board.

22,885. Will you tell me briefly what it is your wish to bring to the notice of the Commission?—I appear to-day in support of the summary of evidence of which you have a copy before you, which has been presented by the medical inspectors of the Board; and I wish to confirm the statements made in that summary of evidence.

22,886. You yourself are in a somewhat different position from the medical inspectors?—That is so.

22,887. What is the range of the salary of the medical officer?—The medical officer of the Board has an initial salary of 1,200*l.*, which rises at the end of five years to 1,500*l.*

22,888. Then the medical officers have no grievance to bring before us?—No, this summary is on behalf of the medical inspectors alone. I ought perhaps to add that there are three assistant medical officers as well as the medical officer.

22,889. I will ask you what the hierarchy is. The assistant medical inspector is the lowest in the grade?—That is so.

22,890. Then comes the medical inspector?—Yes.

22,891. Then come the medical officers?—Yes.

22,892. Are the medical officers selected from the medical inspectors?—As a rule that is so. In my own case that was not so.

22,893. Does the Local Government Board retain the discretion of appointing as medical officer a gentleman from outside the Service?—It is within the president's option to appoint whomsoever he thinks is best suited for the purpose.

22,894. Are the functions of the medical officer those of supervising the work of the medical inspectors, or are they of a different character?—Both—to a large extent supervising the work which is carried out by the medical staff of whom there are 27, and also doing independent work, advising the Board directly in regard to important matters of public health.

22,895. How many medical officers are there?—There is the medical officer, and there are three assistant medical officers.

22,896. What is the scale of pay of the assistants?—The senior assistant medical officer receives a salary which goes from 1,000*l.* to 1,100*l.*; the salaries of the second and third assistant medical officers go up to a maximum of 900*l.*, starting with the addition of 100*l.* beyond what they were receiving when medical inspectors.

22,897. Are the assistant medical officers always chosen from the ranks of medical inspectors?—I believe there has been no exception to that rule.

22,898. If an assistant medical officer were brought in from outside, is there any scale of pay at which he would begin?—I take it in such a case it is probable that he would begin at 800*l.* and go up to 900*l.*, the maximum of the present assistant medical officer.

22,899. I understand you have one medical officer who is at the head, and he has three assistants, and then comes the grade of medical inspectors?—Yes.

22,900. Have the medical inspectors assistants?—No, they have no personal assistants, but there are at present on the medical staff of the Board three assistant inspectors of a lower grade.

22,901. What is the salary at which the assistant inspectors begin?—They begin at 400*l.* or 420*l.* and rise to a maximum of 600*l.*

22,902. And the inspectors?—The inspectors begin at a maximum of 500*l.*; at the end of three years there is an increase to 600*l.*; at the end of five years more there is an increase to 700*l.*, and at the end of five years more to 800*l.* That is to say, the maximum of 800*l.* is reached in 13 years.

22,903. Are the medical inspectors chosen from the grade of assistant inspectors always?—No.

22,904. May the assistants be promoted in course of time to the inspectors' grade?—Yes.

22,905. The point that you wish to bring before the Commission is that the inspectors are too poorly paid?—That is so.

22,906. Their pay which begins as you say at 500*l.* and reaches 800*l.* after 13 years' service you consider to be an inadequate emolument for what they do?—I do.

22,907. Have you any representation to make on behalf of the assistant inspectors, or do you consider

16 January 1913.]

Dr. A. NEWSHOLME, C.B., F.R.C.P. (Dr. R. W. JOHNSTONE  
was in attendance.)

[Continued.]

their scale of pay is adequate?—At the moment I have no representation to make on their behalf.

22,908. Then we will restrict ourselves to the inspectors?—I would like, however, to add that in actual fact it has been found impracticable to distinguish carefully between the class of work assigned to the assistant inspectors and that assigned to the inspectors, and if I were framing a scheme at the present moment, I should consider that the class of assistant inspectors would preferably not exist; but I am not here to-day to press that point.

22,909. But if the assistant inspectors were abolished as a class, you think that the inspector class would have to be enlarged?—Yes. My only point is that the assistant inspectors are doing the same class of work almost entirely as the inspectors are doing.

22,910. Is the inspector class appointed by examination, or by nomination?—By nomination.

22,911. Pure nomination?—That is so.

22,912. How is the occurrence of a vacancy made known?—Vacancies occur by death or by retirement upon superannuation, and, I think, it is quite well known in the public health medical service that such vacancies are about to occur.

22,913. That may be, but there is no publication of the fact that a vacancy is about to occur?—None.

22,914. As a vacancy does occur the Local Government Board make inquiries in the manner in which you say, and make the appointment?—Yes.

22,915. Would there be any objection to notifying publicly that a vacancy is about to occur, and asking for applications?—I see no objection whatever in principle; but I cannot see, at the moment, that any material advantage would accrue.

22,916. Still you see no objection?—Not in principle.

22,917. Do you happen to know whether in practice, when there is likelihood of a vacancy occurring, the medical schools are communicated with?—No. May I explain the method of keeping up the President's list. The President receives a large number of letters applying for the post of medical inspector under the Board; those letters come in irrespective of any immediate or immediately contingent vacancy. The letters are referred to the medical officer of the Board for his observations, irrespective of the fact that there is no vacancy. The medical officer then makes such inquiries as he can about the candidate's position and experience; nearly always he asks the candidate to come and see him, and after the interview he presents a statement to the president, on the strength of which that candidate's name is usually added to the President's list to be considered in the event of a vacancy occurring. That is the first step. Secondly, the medical officer who has to see medical officers of health from all parts of the country day by day, always takes an opportunity of ascertaining who are the good men coming along. Personally, I have always made it a practice to ask the senior men if they know of any promising man.

22,918. Who are the medical officers of health you refer to. Are they gentlemen engaged under the local bodies?—Yes, under the local sanitary authorities—largely senior medical officers of health of counties and county boroughs, who have a number of assistants under them, or medical officers of health having smaller districts under their charge. In many instances, as the result of those interviews, men are sent up to see me, and if they are suitable men their names are also recommended to be added to the President's list.

22,919. Do you impose on yourself any limit of age in your selection of medical inspectors?—No limit of age has been stated at all, but, other things being equal, it would be preferable to have men, say, under 40, or about 40, years of age.

22,920. In the English medical schools, at what age do men qualify?—From 23 to 26 or 27; if it is one of the older universities it is more often 26 or 27. In addition to that, I should add, that most candidates for the post of medical inspector have to pass an additional nine months' course of training as medical officers of health, in order to obtain a diploma in public health.

22,921. That is before applying for an appointment?—Yes.

22,922. Do you insist that all your officers shall have the diploma of public health?—I could not say that it is an absolute condition, but, with very few exceptions, it is a condition which in actual practice is enforced, the reason being that it would be anomalous for medical inspectors of the Board who have to go down into the country and advise and confer with medical officers of health when they have lower qualifications than the officers in question. Exceptions have been made where men having specialised experience have been brought into the service of the Board. We have special branches of work—pathological work, including bacteriological and chemical work. For tuberculosis work recently the Board appointed an inspector who had not a diploma in public health, but who had very special experience with regard to tuberculosis.

22,923. Do you always look to it that the gentlemen you put upon your list shall have experience as ordinary medical practitioners?—Yes, I do not think any candidate has been put on the President's list who has not had considerable experience in some form of practice—either medical practice or preventive medicine practice.

22,924. Then you rarely, if ever, put anybody on your list who is under 30 years of age?—There have been one or two instances of putting men on at 27 or 28—first-rate men.

22,925. Immediately after getting their degree?—In those cases I think they had been qualified two or three years.

22,926. Then they, after qualification probably, went in for post-graduate research?—Certainly.

22,927. Then you are quite clear that the circumstances are such as preclude the possibility of a competitive examination among candidates for a particular vacancy?—I do not think that arises at all. These candidates have already passed through a double examination. First of all they have got their medical degree; secondly, they have got their diploma in public health; and, in addition, there is their record of experience qualifying them for the special posts. I do not think you would gain anything in such a case by a competitive examination.

22,928. But all these examinations that they have passed have been up to that time non-competitive. Say a vacancy occurs and there are five or six gentlemen on your list who are well qualified. The question of a competitive examination between these six for a particular appointment is an intelligible proposition, is it not?—Surely.

22,929. But you in your discretion have never adopted it?—That is so. If you use the words "competitive examination" in a sufficiently wide meaning there can be no objection.

22,930. The object is to see which of the hypothetical six men is the best?—I submit that the examination to which those six men should be submitted is an examination first as to their academic record, secondly as to their experience, thirdly as to the use they have made of that experience as judged by their annual and other reports as medical officers of health or in whatever position they have held, and fourthly an interview to judge as to the capacity of the men, and particularly as to their power of getting on with committees and people whom they will have to interview.

22,931. I admit that is one method; but that is a method of selection on the man's record, and on your appreciation of his capacity for dealing with men, and so on?—Yes.

22,932. The other is the competitive method. I am not saying that it is the best method that can be adopted; I only want to know the reasons why it cannot be adopted in this particular case?—I think you would not gain anything by it. I think the method I have set out gives better information, and it is the method in fact which is adopted by all local sanitary authorities who are proposing to appoint a medical officer of health.

22,933. But is there anything impracticable in subjecting six gentlemen, say, between the ages of 30 and 36,

16 January 1913.]

Dr. A. NEWSHOLME, C.B., F.R.C.P. (Dr. R. W. JOHNSTONE  
was in attendance.)

[Continued.]

to a competitive examination in professional subjects?—There is nothing impracticable in having such an examination, but personally I should be very sorry to abide by the result of it. The man who can write the best examination paper is not necessarily the best man.

22,934. You say there is nothing impracticable in that examination, but these gentlemen have got out of the age of passing examinations?—Yes, there is a good deal in that.

22,935. They have no longer perhaps the same facility in putting their views on paper. From that point of view do you see anything objectionable in subjecting to examination gentlemen who have passed into what you may call middle age, or beyond 30?—I think it would be an objectionable method in their case.

22,936. Therefore you prefer first to scrutinise their professional qualifications and then to see them personally and make inquiries, and make your choice on the result?—On the result of the general record and of a personal interview.

22,937. What is your reason for thinking that the scale of salary from 500*l.* to 800*l.* with the chance of promotion to the higher appointments, of which there are four, is inadequate?—I ought perhaps to correct a previous answer I gave. There are 18 medical inspectors in the main medical department and five food inspectors and a chief food inspector in the food sub-department—24 altogether, of whom 23 are medical men.

22,938. And the highest pay is 800*l.* for the 23?—Yes. Except that the chief food inspector goes to a maximum of 900*l.*

22,939. With the possibility of promotion to five higher paid appointments?—Yes, with some measure of probability, those vacancies occurring infrequently. These posts comprise the post of one medical officer, three assistant medical officers, and one chief inspector of foods.

22,940. Will you give me your reasons for thinking it is inadequate pay. Have you any dearth of applicants for these appointments?—The president has a very considerable list, but a large proportion of them are of course men one could not recommend. The main dearth is in getting men between 35 and 40 who have already won their spurs in the public health service of the country, who have proved themselves men of the highest ability and administrative competence.

22,941. Then you look to the service under local bodies as the recruiting ground for your medical inspectors?—Yes, the main recruiting ground. I ought to add that there are special branches of work—pathological work, chemical work, and tuberculosis work—in which we may have to look in other directions for these specialised inspectors, but for most of the inspectors one looks to the public health service as the recruiting ground.

22,942. Out of the 24, have you to look to that recruiting ground for 16?—I should say about that number.

22,943. These gentlemen under the local bodies have got into the public service in what way—by nomination of local boards?—They have been appointed by the local sanitary authorities after advertisement. A number of men have applied; somebody has gone over that list and reduced it to a short list; the men on the short list have been interviewed and the local committee have then chosen one out of the short list. That is the usual procedure.

22,944. Does the Local Government Board prescribe the necessary and essential qualifications for these posts?—Medical officers of health for districts over a given population, that is over 50,000, must have a diploma in public health.

22,945. Besides a diploma of medicine?—Besides the ordinary medical qualifications.

22,946. They must be qualifications of the College of Surgeons or College of Physicians?—There is no condition on that point except that a man must be fully qualified in medicine and surgery.

22,947. A mere chemist would not have sufficient qualification?—No.

22,948. That being the recruiting ground, will you tell me what salaries these gentlemen draw under the local bodies. You have given me particular localities which, I suppose, are more or less exceptional?—There are two classes of appointments—part-time and whole-time. The whole-time appointments, as a rule, begin at 500*l.*, and the salary may be anything from 500*l.* to 1,200*l.* or 1,500*l.* in exceptional cases.

22,949. Would these be cases to which promotion would take the man?—In a few instances; but the possibilities of such appointments are, unfortunately, very few.

22,950. A man does not count upon any exceptional appointments, but they are there and they stimulate his hopes. The regular scale of appointments would be from 500*l.* up to what sum?—500*l.* to 900*l.* about.

22,951. Therefore the maximum scale is above the Government medical inspector's scale, though the minimum agrees?—Yes.

22,952. What are the inducements which lead a medical officer, under a local body, to accept Government service. I suppose they do accept it at the present time?—Yes.

22,953. Are there any inducements beyond the certainty of Government service?—That is one important consideration.

22,954. The pension?—The pension is the second consideration.

22,955. Which all the medical officers, I understand, employed under local bodies do not get?—Not all of them?

22,956. Only the whole-time men?—Not even all the whole-time men.

22,957. Then there are two appreciable advantages—the certainty of position and the pension, and further the hope of promotion to those higher appointments?—Yes.

22,958. And that, you think, is not sufficient inducement to get you the class of man that you want?—In actual fact it is not. If I may illustrate it, during the last year I have had three men who came to see me who were most desirable men to have on the medical staff of the Board. After inquiring into the conditions they all declined to put down their names because they were receiving considerably higher salaries than the Board could offer to them.

22,959. Let me assume that one of these gentlemen who came to you, a desirable man to have on your list if you could get him, was drawing a salary of 700*l.* under a local board, and there was a vacancy in your staff of medical inspectors, and he was considered to be eligible, would he have to begin at 500*l.*?—Always; without exception.

22,960. That, of course, is a handicap?—Yes.

22,961. What are your proposals?—The petition of the medical inspectors, with which I agree, proposes that the minimum should be increased to 600*l.* and the maximum to 900*l.*

22,962. How many years does a medical inspector serve for a pension?—I think I am right in saying he must have at least 10 years' service, and he does not earn a pension until he is 60 years of age except under very rare circumstances.

22,963. Unless he retires on the ground of ill-health, I suppose?—Yes.

22,964. Then does he get the usual Government terms?—Yes, the usual Government terms.

22,965. (*Miss Haldane*) I understand you would like to bring the salary to the same rate as that which the general inspectors have?—So far as the maximum is concerned it would then be equal to that of the general inspectors. It would still differ in the important respect that the general inspector reaches his maximum in five years, whereas the medical inspector would reach it much more slowly.

22,966. But it would be 600*l.* to 900*l.*?—Yes.

22,967. What are the qualifications of general inspectors?—I have no special knowledge on that point.

22,968. What sort of qualifications have they?—I do not know.

16 January 1913.]

Dr. A. NEWSHOLME, C.B., F.R.C.P. (Dr. R. W. JOHNSTONE  
was in attendance.)

[Continued.]

22,969. You do not know whether they have had long special training of any kind?—That I do not know. I think Sir Horace Monro would give evidence on that point.

22,970. (*Mr. Shipley.*) Is not the term "inspector" slightly misleading? In the last 30 years have not the medical inspectors ceased to do merely mechanical inspecting and seeing that the departmental rules are carried out, and are they not now doing a much higher class of work?—The proportion of the higher class of work has very greatly increased in the last 10 or 15 years, and to that extent it is true, but there still remains a very considerable amount of routine work in seeing that local authorities are doing their duty.

22,971. Is that chiefly done by the medical inspectors, or by the assistant inspectors?—To a considerable extent by both. All of us have to do a large amount of routine work. It is inevitable in a big central organisation.

22,972. The medical inspectors are specialised and highly trained men: they have to be capable of carrying on investigations; they have to be epidemiologists, and have to understand an enormous number of things, and have to exercise at times very great tact and firmness?—That is so.

22,973. They are really picked men?—They are picked men, and it ends in actual fact in nearly every medical inspector specialising in some particular direction. If you want an investigation of a sudden outbreak of typhoid fever there are two or three men you would pick out for that particular class of work; if on the other hand it was a housing investigation another man would be picked out; and so with tuberculosis and so on.

22,974. Certain of these gentlemen are exposed to very considerable risks to health, and I imagine when you are, for instance, dealing with a plague outbreak in Suffolk there is considerable danger of acquiring the disease. That risk is quite different from what the general inspectors are exposed to?—That is part of the life of a medical man. He does not mind about it very much, but still it is an actual fact that he has certain risks.

22,975. Do the medical inspectors ever have to go abroad and take part in big international conferences?—Yes, that is another direction in which the medical staff have to specialise. It is important that we should have good German scholars and good French scholars on the staff. Those are two important points. One or more of the medical inspectors has to take part in international conferences and conventions which settle most important matters of international hygiene.

22,976. I think you once sent one as far away as Mukden?—Yes, last year one of our medical inspectors who had made himself specially skilful in regard to plague problems was sent at the request of the Chinese Government to Mukden in Manchuria, right in the midst of that terrible epidemic of pneumonic plague. The risk was considered actuarially so great that the life insurance premium was almost too exorbitant to be taken. The premium charged was at the rate of 25 per cent. per annum.

22,977. That was the plague where everybody died who acquired it?—Yes, it was the pneumonic plague, and there were very few recoveries.

22,978. None, I think?—No, I believe none.

22,979. When were the existing salaries of the medical inspectors fixed?—They were fixed in 1887, 25 years ago, and there has been no modification since then, although during the interval there has been an improvement in the scale in other departments of the Board.

22,980. I suppose you will admit that the cost of living has materially gone up in the last 25 years?—Yes, I think there is no doubt about that. Another point bearing on that is that in former years it was practicable to "district" the medical inspectors; that is to say, allot them to certain parts of the country. Owing to the stress of work, and the fact that one is never certain where an epidemic will occur, it has been found in practice more advantageous for more of the inspectors to live in or close to London as the best

centre. That also has a material influence in increasing the cost of living.

22,981. (*Chairman.*) What travelling allowance do medical inspectors get if they are away for a night, for instance?—It is 1*l.* a day and travelling expenses.

22,982. (*Mr. Shipley.*) I gather the medical inspectors have two grievances—one inside the office, that they are paid at a lower rate and rise at a lower rate than other inspectors; and the other is that, compared with similar offices outside, their stipends are lower?—Yes.

22,983. We have the evidence of that on your printed paper?—Yes.

22,984. How does your stipend compare with the head medical men in the army or in the navy?—It is considerably lower.

22,985. And their work is more stereotyped; they are dealing with only one sex, for instance?—I think the salary is 1,750*l.* or 2,000*l.* in the army. I am not quite certain.

22,986. I understand that other gentlemen in the Local Government Board had their stipends increased. I do not know much about it, but my impression is that the president's stipend was materially increased a short time ago, being raised to 5,000*l.* from 2,000*l.* His stipend has been more than doubled, and the salaries of these medical inspectors have remained the same for 25 years. Is the office understaffed in any way?—We have recently had considerable additions to the staff of the medical department. If I were to judge by the present year, I should consider we were very much understaffed; but it is not quite fair to judge in that way as there is an enormous access of work in connection with the new tuberculosis and sanatorium benefits. But there is no doubt that good work could be done with additional staff permanently.

22,987. You yourself would like to see the staff increased?—That is so.

22,988. Legislation, as usual, has got ahead of the staff?—That is so.

22,989. You told us you had considerable difficulty in getting the men you want. Do you think that lately, say the appointments in the last five years, compare unfavourably with the appointments of the last five years of the last century?—No, I should not like to say that. We have some very promising younger men. The only thing I would say on that point is that they are men who have not yet in most instances made their mark. They are men whom we have had to take on trust to some extent.

22,990. (*To Dr. Johnstone.*) Would you like to make any general statement beyond what has been put forward?—No, thank you; I think not. I think Dr. Newsholme has expressed my view, and this paper which is handed in practically expresses the views of the medical inspectors in general.

22,991. (*Sir Henry Primrose.*) (*To Dr. Newsholme.*) I see from the appendix to your paper you mention that, in giving evidence before a committee in 1897, Sir Richard Thorne-Thorne said that a committee in 1887 had thought of putting the medical inspectors on the same footing as the engineering inspectors, but the committee decided not to recommend that, because during their first years of service they were chiefly employed in vaccination inspection. Sir Richard seemed to imply that that was not true in 1887. Whether it was true in 1887 or not is it true now?—It is much less correct now than then.

22,992. Then apparently the whole case was gone into by Sir John Hibbert's committee in 1897 (of which I happened to be a member), but they did not observe upon it. That is 15 years ago. Has the grievance—to give it that name—been considered by the President of the Local Government Board at any time since?—On two or three occasions representations have been made, but for various reasons it was not thought opportune to press it at the time.

22,993. But has any official answer been given justifying the difference between the medical inspectors and the general inspectors?—None at all.

16 January 1913.]

Dr. A. NEWSHOLME, C.B., F.R.C.P. (Dr. R. W. JOHNSTONE  
was in attendance.)

[Continued.]

22,994. Therefore, may one say that the question has been asleep since 1897?—It has been occasionally roused from sleep by petitions from the medical inspectors.

22,995. But have those petitions not received any definite answer?—As I said, I gather it has not been considered expedient to put the matter forward to the Treasury.

22,996. But, so far as the President was concerned, has he on those occasions said that he was not prepared to press it on the Treasury?—I am not in a position to say that.

22,997. Has any president expressed sympathy and indicated that if there was a more favourable opportunity he would like to press it on the Treasury?—That again I am unable to say.

22,998. With regard to the local medical officers, are their salaries net salaries or have they any outlay? For instance, has the local medical officer to provide himself with an office or with a motor car to get about the country?—As a rule not an office. I have no doubt there are outgoings, but, speaking generally, travelling expenses are paid for by the local authority—not always.

22,999. That is, travelling expenses outside his own district; but would they be paid for within his district?—Yes.

23,000. He could charge for cabs or anything of that kind?—Speaking generally, that is so.

23,001. But some of those medical officers would have some outlay?—Some of them I am afraid would have to pay their travelling expenses within their own districts.

23,002. Do you often draw men from any other quarter than the local authorities? You told us, I think, that possibly eight out of 24 had been drawn from elsewhere. Do you ever take a man from general practice?—Yes, general or special practice. One of the most recently appointed inspectors is a doctor who does not hold a diploma in public health, but has been physician to a tuberculosis dispensary and to two or three sanatoria for consumptives.

23,003. Do you think it might be some explanation (I will not say justification) of the difference between the rates of pay between your class of inspectors and the general inspectors, that there is a very much larger supply of medical officers than there would be of general inspectors?—I should say it was very much the other way about. As no definite statutory qualifications are set out for general inspectors, you have every gentleman in England to draw from.

23,004. From that point of view, no doubt, there are a large number to draw from, but they do, as a matter of fact, require certain technical qualifications?—I am not suggesting they do not, but it is not a case which you can test by examination or otherwise, so far as I know.

23,005. (*Mr. Boutwood.*) When you were speaking of the local officers of health, something was said about the greater certainty of the Government service. What is the element of uncertainty in the local service?—There are four classes of appointments of local medical officers of health: First, appointments as in London and under county councils, which have nearly the same security as the Government service; secondly, in most of the large county boroughs you have appointments which are made during the pleasure of the council, and in which three months' notice can be given on either side; thirdly, you have appointments, especially in the smaller districts, which are made annually, or at the end of two, three, or five years, subject to renewal, and in which frequent changes, for obvious reasons, take place; fourthly, some appointments are made permanent, with the consent of the Local Government Board.

23,006. (*Mr. Graham Wallas.*) The medical inspectors have to undertake from time to time public inquiries?—That is an important part of their work, inquiries into loans for fever hospitals, for disinfecting apparatus, and questions of land in regard to hospitals.

23,007. And the work of holding public inquiries is practically judicial work?—That is so. The judgment does not rest eventually with the medical inspectors, but they must report in a judicial fashion.

23,008. But a man has to be able to conduct his inquiry as well as a stipendiary magistrate would conduct a judicial inquiry?—Yes. On that point I may mention that some of the medical inspectors are also barristers.

23,009. (*Chairman.*) Some of the medical inspectors have medical degrees, and have also been called to the Bar?—Yes.

23,010. (*Mr. Graham Wallas.*) Do you agree that the State should carefully safeguard the interests of the technical officials in administrative offices?—Yes.

23,011. The history and origin of a technical official are somewhat different from the administrators. The administrators are in a great majority, and it would be a right principle to adopt that care should be taken that the technical officer does not suffer. Sir William Ramsay laid down that principle?—That should be so, undoubtedly.

23,012. You have yourself a clerical staff under you?—Yes. In the chief medical department we have eight clerks, and in the food sub-department three—a total of 11.

23,013. Do you remember how they are classified?—The clerical staff consists of one staff clerk having a salary of 300*l.* to 400*l.*; four second division clerks from 70*l.* to 300*l.*; two assistant clerks from 45*l.* to 150*l.*, and one boy clerk.

23,014. Do you remember how much your staff clerk is actually getting?—At the present time he is getting 440*l.*, and he has a personal maximum of 450*l.*, in view of the fact that he acts in a responsible position as my private secretary.

23,015. Then you have no first division men in your department?—None at all.

23,016. Have you ever recommended that any of your officials should be promoted to the first division?—Both my predecessor and myself have recommended that the staff clerk in the medical department should be promoted to the first division.

23,017. Was the rule that staff clerks should lose salary on promotion proposed to be applied to his case, do you remember?—That would have been applied, doubtless, and would have meant serious financial loss to the clerk in question.

23,018. What actually happened. Was the request made?—The request was made, I think I am right in saying, but it fell through.

23,019. But it fell through you believe on that ground?—I am not clear whether it went to the Treasury or not. I think it did go to the Treasury.

23,020. But you are satisfied with the absolute competence to do the highest work of the gentlemen in question?—Yes. The officer in question is a thoroughly competent man who has extremely responsible work, and who is quite equal to that responsibility.

23,021. (*Chairman.*) (*To Dr. Johnstone.*) Have you anything you wish to add?—I should like to say just this that the inspectors have petitioned the President more than once since 1887, but we have no means of knowing whether our petition ever reached the President or not. It went through the usual channels.

23,022. But you do not know what happened?—No, there has been no pronouncement made.

## FIFTY-SEVENTH DAY.

Friday, 17th January 1913.

## PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).The Right Hon. Sir HENRY PRIMROSE, K.C.B.,  
C.S.I.Sir KENNETH AUGUSTUS MUIR-MACKENZIE,  
G.C.B., K.C.Sir DONALD MACALISTER, K.C.B.  
Mr. ARTHUR BOUTWOOD.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. RICHARD DURNING HOLT, M.P.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. C. B. HEBERDEN, D.C.L., called and examined.

23,023. (*Chairman*.) You are Principal of Brasenose College, Oxford, and Vice-Chancellor of the University?—I am.

23,024. And you have come to represent the University of Oxford before this Commission?—Yes.

23,025. And you have furnished us with the answers\* of the Hebdomadal Council of the university to certain questions † that we forwarded to that council?—Yes.

23,026. The first question is: "The relation between the highest education given at the universities and the efficient discharge of their functions by members of the Civil Service." That question was put because it has been represented to us that the highest education is not essential to the efficient discharge of their duties by the superior classes of the Civil Service, and that less protracted and lower kind of education, when supplemented by official experience, would supply all that was necessary? What is your opinion upon that point?—I do not know that I have much to add to what has been stated in the answer from the council. I think if I tried to state my opinion in a very few words it would be to this effect: That a university education teaches a man to think for himself, and I should like to add that that is an education which takes a long time. I think that you must have some years after a boy leaves school if you are really to develop his mind to the fullest extent and in particular to teach him to think for himself.

23,027. And in that process of mental development what would you say would be the factors—in what respects would the university have advantages over lesser centres of education?—I suppose, so far as the subjects are concerned, they are very difficult and very large subjects. The subjects which a man takes for the final honours school are certainly big subjects which require a great deal of time to get up at all thoroughly. Then I think that it is very important that a man should have a great deal of training and teaching, which he can get at universities, in getting up those subjects. There is a very elaborate system of tutorial teaching at Oxford, and, of course, at Cambridge also, but I am only speaking for Oxford, and I think that combination of very big subjects, together with a great deal of very highly-organised teaching, is what constitutes the benefits of a university education from an intellectual point of view.

23,028. The curriculum in Oxford enables a student to receive the highest education, not in one branch of knowledge but in many?—Yes.

23,029. Are there many schools?—There are many honours schools—there are nine final honours schools.

23,030. It will be desirable to have them enumerated on our notes if you can state what they are?—These are the final honours schools. Of course, we have also the intermediate honours school of Moderations.

23,031. We are dealing with the final honours schools?—They are as follows: *literæ humaniores*, which really means Greek and Latin, including philosophy and ancient history; mathematics; natural science, which comprises eight different branches. There are eight different natural science schools.

23,032. Will you mention the names of the eight scientific subjects?—Physics, chemistry, physiology, zoology, botany, geology, astronomy, and engineering science. Then the other schools are jurisprudence; modern history; theology; Oriental studies (that is Sanskrit, Arabic, Hebrew, Persian, or Egyptian); English language and literature; modern languages, which includes French, German, Italian, Spanish or Russian.

23,033. Do you attach the same educational value to each of these honours schools?—No; personally I should not attach the same value to them.

23,034. Our object in having your views as to the best scheme of preparation for the public service, the best means of developing men's faculties, is to know which of these honours schools you would prefer as a means of literary culture and sharpening a man's capacity for dealing with the events of life as they happen?—My own opinion is that the school of *literæ humaniores* is the best adapted for the purpose.

23,035. Are you of opinion that any one of these schools would produce men capable of initiative and of dealing with men, and generally of managing affairs?—That partly depends upon other considerations, not merely the school for which a man reads, but I think there are others of these schools besides *literæ humaniores* which will develop a man's intellectual faculties in a very adequate way.

23,036. Does each school produce a particular type of man, or is there much of a similarity between the products of all the schools?—I do not think that any of the schools produce a particular type of man; we have very different types of men at Oxford; people sometimes do not quite understand that; they think there is a sort of Oxford type or Oxford manner or something of that kind, which to those of us who are in Oxford is not very apparent.

23,037. I suppose there is more or less of an external similarity; I suppose that Oxford does put its cachet upon its alumni?—It must be a very external cachet. Certainly, if I may take my own college, we have men of every sort of type of character.

23,038. Of course, you must have; for you cannot assume that Nature casts all men in the same mould; you must have separate types?—Yes.

23,039. But are you of opinion that any of those final honours schools may produce a man as good as another school may produce for the management of affairs? I must tell you what I am leading up to. I am leading up to the question of the allocation of marks for these schools?—I find it a little difficult to answer that question for more reasons than one. I ought perhaps to say to the Commissioners that I have had no experience in lecturing to men or teaching men for the final honours schools. My own experience has been entirely in preparing men for the earlier part of their honours. When I was lecturing I used to lecture for honours in classical Moderations; therefore, I have no experience in lecturing for the final schools; but I should say that some of these schools seem to me to be more likely, as I have already said, to develop the mind than others, and in particular I should myself attach considerable impor-

\* *Vide* Appendix LIII† *Vide* Appendix XXXII

17 January 1913.]

Mr. C. B. HEBERDEN, D.C.L.

[Continued.]

tance to a man's having had something of a literary training.

23,040. Are you acquainted with the general character of the instruction conveyed in the newer universities?—No, I cannot say I am. I know nothing beyond what everybody must know. I have no special knowledge.

23,041. From all you do know, are you justified in saying that Oxford supplies as efficient and as good instruction in any department of knowledge as any of the new universities do?—I hardly know enough to answer that question. I should imagine that in preparation for professional life or in technical instruction, very likely some of the modern universities might supply quite as good instruction as Oxford or better.

23,042. In regard, let me say, to political science, in regard to history, in regard to psychology, in regard to natural science, the heads you have mentioned, do you think that the instruction at Oxford is quite as good as can be given in any of the modern universities?—I should think so.

23,043. You are aware that the age limits for the Civil Service examination of the higher class (Class I.) are from 22 to 24?—Yes.

23,044. Are you quite satisfied with those age limits?—Yes, I think so. I see no reason why they should be altered.

23,045. We were told yesterday by the representative of Cambridge University that 21 to 23 would be a more ideal arrangement for that university?—It would not suit Oxford as well, I must say frankly. Our normal course for a man is four years; that is to say, if a man takes honours both in Moderations and in a final school he requires four years to do it in.

(*Mr. Shipley.*) The Cambridge representative advocated lowering the age at Cambridge, but said he would not press it.

23,046. (*Chairman.*) I was going to say that. Then one would direct one's attention to the age at which men matriculate at Oxford. What is the general age at which young men go up to Oxford?—The normal age is 19.

23,047. Then, if four years were required to graduate with honours, that would mean 23, would it not?—Yes.

23,048. And if the object was that a man should go from college to the examination without any intermediate time spent at crammers, what would you say?—I quite agree to it. I think that is very desirable. But when I say that the normal age is 19, a man is generally 19 before he comes up; he is very likely 19½ before he comes up, or he may be. I have forgotten exactly, but I think the age limit for the Civil Service examination is fixed at the 1st of August—your secretary tells me it is the first day the examination begins, and I feel pretty sure that it would exclude an appreciable number of our men if the age limit were lowered; but I agree that it is very desirable that a man should, if possible, take his Civil Service examination as soon as he leaves the university.

23,049. Do honours men, as a rule, now prefer the Civil Service to commercial or industrial occupations, do you think?—I think probably they do, but at the same time it seems to me that there is an increasing desire among university men to go into business, and I believe that there is an increasing desire on the part of business men to get university men.

23,050. We have had evidence to that effect. But, in your opinion, does the Civil Service exercise more attractions upon honours men than the professions do?—I am inclined to think it does with a man who has any chance of getting into the Civil Service. I think they like what is a certainty after all.

23,051. That being so, is there any disposition on the part of the university authorities to adjust the curriculum to the requirements of the Civil Service examinations?—I do not think the Civil Service examinations have caused us to alter our curriculum, and I should be sorry that they should have that effect.

23,052. If the curriculum is not altered—if it is directed more to the general cultivation of a man's mind than to preparing him for a particular examination, is there any arrangement made whereby assistance can be given to men who aim particularly at

going into the Civil Service; are there any lectures particularly adapted for them?—No, not in the ordinary university course; but there is teaching, which a good many men now have after they have gone in for their final honours school. A good many of them now go to Mr. Sturt who, with other lecturers he employs, lectures to men for about six weeks before they go in for their examination. Apart from that, there is no special preparation for Civil Service candidates.

23,053. That is, of the nature of special preparation though free from its more objectionable features?—Yes, certainly.

23,054. Could you tell us anything of the help that is given by the University of Oxford to men of slender means to get from the ordinary secondary school to the university?—I have brought a few statistics with me; I thought I might be asked that question. I can give some statistics which are statistics covering the university, and some from my own experience, which I think might be interesting to the Commissioners.

23,055. If you please?—I have some details here as to the amount of money that was spent or, perhaps I should rather say, that was offered in the way of scholarships and exhibitions during the last academical year, that is to say, 1911–12. It is very difficult to get them quite accurate, and it is sometimes rather difficult to know how to classify the different scholarships, but according to the figures I have here, which, at any rate, are approximately correct, there was offered in the way of open scholarships, that is to say, scholarships that are open to all candidates whether of limited means or not, 10,557*l.*—of course, under certain limits of age.

23,056. And on submission of certain certificates, I suppose?—They all have to produce certificates of good character, of course.

23,057. But there is no limitation to boys of particular schools?—No, not in these open scholarships. I am coming to the limitation to schools.

23,058. But these 10,000*l.* worth of scholarships are free and open scholarships?—Yes.

23,059. (*Sir Donald MacAlister.*) Is that 10,000*l.* a year?—No, that was offered in the year. The amount spent on scholarships and exhibitions is probably not less than 60,000*l.* a year. Scholarships are held for three, four, or five years.

23,060. (*Mr Hoare.*) Is one year very much like another?—I think so; I do not think there is any reason to suppose there would be any great difference.

23,061. (*Chairman.*) I suppose there is no religious qualification?—No, certainly not in ordinary cases.

23,062. For these open competitions?—Oh, no. Then in the way of close scholarships, that is to say, scholarships attached to particular schools, the sum I have down is 3,335*l.*

23,063. May I ask you how many scholarships are covered by the 10,000*l.* open scholarships?—154; and then the amount limited to men who are in need of assistance was 1,757*l.* 12*s.* There may be a slight inaccuracy in those figures, it is extremely difficult to get them quite right, but I feel sure they are approximately correct. The total of that adds up to 15,649*l.* 12*s.*, but I should like to make one or two observations about them, if I may. In the first place it will be understood by the Commissioners that many of these open scholarships are, as a matter of fact, held by men who are in need of assistance. The number of rich men who hold scholarships is very small, in my experience—very small indeed. Then I should like to give the Commissioners a few figures which are from my own experience in my own college; they are very few, but they may be of interest.

23,064. (*Sir Kenneth Muir-Mackenzie.*) May I ask, do you mean by a rich man any man who could go to college without assistance?—Yes, that is roughly what I mean. At my own college we have certain valuable scholarships of 100*l.* a year (which is more than most scholarships are worth) which are confined to men of limited means. When men apply for those scholarships we send out a paper of questions, and in that paper of questions we ask the parents, "What is your professional income?" "What is your private income?" and we also ask, "How many children have you?" I have put down here a few details from my experience of the last six years—of course, I give no

17 January 1913.]

Mr. C. B. HEBERDEN, D.C.L.

[Continued.]

names. I may give you the details in this way. I will give you a column of the professional income and a column of the private income. I have got 11 cases here. I should say that I have taken the last six years simply for this reason, that I do not keep these statements beyond a certain time; I generally keep them only as long as the man is with us, because we may want to know whether he requires further assistance, therefore I have destroyed other statements. This covers, therefore, only the last six years: (1) professional income 130*l.*, private income nil; (2) professional income under 2*l.* weekly, private income nil; (3) professional income 200*l.*, private income nil; (4) professional income 80*l.*, private income nil; (5) professional income 220*l.*, private income nil; (6) professional income 200*l.*, private income nil; (7) professional income none, private income between 80*l.* and 90*l.*; that is the case of a widow; (8) professional income 250*l.*, private income 20*l.*; (9) professional income 36*s.* weekly, private income none; (10) professional income none, private income 80*l.*; (11) professional income 232*l.*, private income none. Then I should like to point out that of the candidates who have been elected in these cases, five have been elected to scholarships or exhibitions, mostly to scholarships, which are not limited to men in need of assistance, and that is one of the points that I desire to make, that it must not be supposed for a moment that the money which is spent on open scholarships does not assist very largely men of limited means. Then there is another point which I should like to put before the Commissioners, that is that many colleges, have, in addition to their scholarship fund, a fund which they administer in the way of grants of money privately—at any rate not after advertisement—to students in need of assistance. Taking my own college last year—I have not got the exact figures, but I know in round figures we spent 480*l.* in the way of grants to students in need of assistance. I may add that I know of another college where about 500*l.* has been spent in the year; so I was informed by a college tutor. I therefore desire to point out to the Commissioners that there is a good deal spent on men of limited means which does not appear at all in the advertisements of scholarships.

23,065. Have you any note of the number of scholarships to be held at Oxford which are given by county councils and brought up to Oxford from secondary schools?—No, I am afraid I cannot supply that. I dare say I could obtain the information by writing round to all the colleges, but I have not got it. I have got a rather striking fact, which I only learnt quite recently, but I think it might possibly interest the Commissioners; I have it really quite accidentally. This is the case of the Oxford High School. I am told that since the present head master has been there, that is since 1888, there have been 109 boys sent to Oxford High School with scholarships from elementary schools, and of those 80 have passed into the university. That is only an illustration.

23,066. What is the cost of living; how cheaply can a student live at Oxford?—It depends, of course, upon whether he is in a college or is a non-collegiate student.

23,067. Will you give us estimates for both?—We think we have given you a statement of the cost of the non-collegiate system on page 8 of our Answers. Under the non-collegiate system a student can limit his annual expenses to about 52*l.* That would not include clothes and travelling expenses and so on, and what other expenses he may be put to in his vacations; that is, of course, a very difficult thing to estimate. If you take the case of the colleges, putting aside Keble College, which has a fixed charge which it makes for each term in advance—if you take my own college, which I should think is not very exceptional one way or another, our men can keep their expenses to something under 40*l.* a term, that is to say 120*l.* a year. I think if a young man comes up with a college scholarship of 80*l.*, or it may be even, as it is sometimes with us, 100*l.*, and if he has a county council scholarship also, which I believe are something varying from 50*l.* to 70*l.*, he can pay his way.

23,068. Can he take part in the college life and pay subscriptions with 120*l.*?—Yes, I think so. I do not

say that he could do a great deal of entertaining; I should not like to say that; but I think he can live the college life for that sum. I am speaking now of a man's college bills, which include board and lodging, tuition fees, and college and university dues.

23,069. (Mr. Shipley.) Can you state what the Keble College fixed charge is?—85*l.* a year.

23,070. (Miss Haldane) Does that 40*l.* a term include undergraduate clubs and things of that kind?—Yes, 40*l.* would. We have a regular college subscription for clubs and things of that sort. I do not wish it to be understood that a man would not have to be very careful about his expenses, but I have satisfied myself—I have looked quite recently at the college battels—that many of our scholars spend just under 40*l.* a term.

23,071. (Chairman.) That is cheaper than they can do it at Cambridge, according to the evidence of Dr. Tanner yesterday?—I think there must be some mistake about that.

23,072. (Mr. Graham Wallas.) You have to add to those the whole cost of clothing, books, and travelling, and the expense of maintaining the man during the other 26 weeks of the year?—Yes. I feel sure that there must be some mistake. I do not think it is likely that Oxford is cheaper than Cambridge. But I also wish to make it plain that I do not mean that the bulk of our men only spend 40*l.* a term; I only mean that it can be done without any very great difficulty, with care of course.

23,073. 40*l.* a term is the college battels?—Yes, 40*l.* a term includes board, lodging, tuition fees, and college and university dues, and subscriptions to athletics.

23,074. (Chairman.) But you are satisfied that if a man from a secondary school did manage to get an open scholarship at Oxford and also brought a scholarship with him of, say, 50*l.* or 60*l.* from the county council, he would be pretty well able to get through?—Yes, that is my strong belief.

23,075. In regard to competitive examination, are you satisfied that a *viva voce* examination is not desirable in a competitive examination?—I should like to know what the *viva voce* examination is intended for.

23,076. A written competitive examination shows what a man knows, what knowledge he has acquired; do you think that a *viva voce* examination would enable the examiner, especially if the examiner was carefully chosen, to form any idea of the alertness of mind and quickness and accuracy of perception of the candidates, which cannot be inferred from written papers?—If the *viva voce* examination is intended merely as an intellectual test, I do not think you gain very much from it really; and I also think it is a very dangerous thing, as so much depends upon the skilfulness and acumen of the examiner. I quite admit that it may be required for certain special posts, or that it may be desirable for certain special posts, but I think it would be a risky thing to introduce it as a regular part of examination for all candidates.

23,077. Do you admit that a written examination does not enable you altogether to judge whether probably a man will be successful in dealing with practical affairs?—I think it is a very good test of his intellectual capacity; but there are other things that enter into a man's capacity for practical affairs, and no doubt the examination does not throw light upon them.

23,078. Could you make any suggestion by which, at an open competition, some information might be gathered upon these points. Up to this time we have been told that the best way of getting information upon these points is by knowing what the candidate's past record has been, what his school record has been, and what his college record has been; and if you could restrict your competition to men from schools or from colleges which preserve such records you would probably be able to get what you want. But you cannot restrict competition in that way?—No. And then there is the further difficulty that you cannot tell that the estimate that you get from one school is co-ordinate with the estimate you get from

17 January 1913.]

Mr. C. B. HEBERDEN, D.C.L.

[Continued.]

another. You want to know something of the person who gives the certificate.

23,079. Are you of opinion that a man's papers ought to be examined by two men?—Yes, I am of that opinion, if it is possible.

23,080. Why should it not be possible?—I do not know. I have no means of judging about it; I have never had anything to do with the examination, but I suppose there may be difficulties in getting out the list in time, and so on.

23,081. It would be a matter of expense, I suppose?—It would be a matter of expense, but I think certainly if it can be done it is very much better to have two opinions than one.

23,082. (*Sir Donald MacAlister.*) I observe on page 4 of the Summary of the Hebdomadal Council they express the opinion that, "The reforms promulgated in 1904, whereby the number of subjects was limited and the margin of age for India raised to the same limit as that for the Home service, have greatly abated this mischief." Do you mean there to refer to the limitation of the maximum number of marks that can be obtained?—Yes.

23,083. I take it that the object was to diminish the temptation to take a number of extraneous subjects for the purpose of adding to the marks?—That is what I understand.

23,084. It has been suggested to us from a number of quarters that the process which has led to that improvement might be continued a little further, and that the maximum might be still further reduced on the ground that there are still temptations to take extraneous subjects beyond what a man has taken for his regular university course. Have you any views on that point?—I am not sure that I am very competent to express an opinion because, as I have already told the Commissioners, I have never lectured to men or prepared men for the final schools, and, therefore, I have no experience of my own as to the desirability of further limiting the subjects; but I do not see any objection to the present state of things. I think it does not seriously interfere with a man's studies if he has to take up some extra subjects in order to make certain of getting marks in an examination. It does not mean very much. If a man takes certain subjects at Oxford he can get in with a very little addition to those subjects; and personally I do not think there is anything to quarrel with in the examination.

23,085. I gather that if he takes certain subjects at Oxford he needs to add very little in the way of extraneous subjects?—I think so.

23,086. But if he takes other subjects at Oxford he has to add a great many extraneous subjects?—Yes; but, if I may say a word about that, it is obvious that I was referring mainly to the School of *literæ humaniores*. It is quite true that if a man takes *literæ humaniores* he has not got very much else to add; perhaps he takes English literature, or English history, or, possibly, political economy, which hardly enters into *literæ humaniores*; but at the same time there is this to be remembered, that some men take other schools, and a history man, for instance, probably will take his degree in three years instead of four years, and, therefore, he has a whole year in which he can prepare himself in other subjects.

23,087. But if he has to take a few extraneous subjects of that kind he does it outside the regular curriculum provided by the university?—Not necessarily; he may go in for another school, or he may read for a diploma, or something of that kind.

23,088. If he does not do that, these subjects, like political science and so on, which you say involve a little extra work, would merely serve the purpose of increasing the maximum number of marks that he can hope for, but have they any serious educational value in regard to his work at Oxford?—I think it depends upon how much time the man gives to them. If he can give a whole year to them he will make something of them, especially as he would have been pretty well trained by his previous experience.

23,089. You would not ascribe the same value to these extraneous subjects educationally or intellectually

as you would to those which he had seriously studied for his degree?—I cannot say that I should.

23,090. What I am coming to is this: there seems to be a tendency on the part of those who have previously given evidence to think that the limits of the Civil Service Class I. examination should be more or less made to correspond to those of the honours school that a man has taken, whatever that honours school may be, in order to secure that that examination shall be a competition testing the product of university training?—I quite appreciate that.

23,091. And that the element of what I might call perfunctory study (because it is very often perfunctory study) might be eliminated?—Of course if it is very perfunctory, I agree.

23,092. For example, to limit the maximum number of marks obtained by a candidate to 5,000 instead of 6,000 might have that effect?—It might; but as I say, I do not think my opinion on that point is worth very much.

23,093. But you would confirm the impression that the present scale, 6,000 as the maximum, does make it specially favourable to a man who has taken Greats?—I think that is so.

23,094. (*Miss Haldane.*) To go back to the question of cost, could you tell me how many men there are who have, perhaps, scholarships sufficient to carry them along in college—not during their vacations—without any assistance from their parents?—Do you mean in the university in general?

23,095. I mean, how many men get scholarships and exhibitions, say county council scholarships and college scholarships together, that are sufficient to carry them along?—I am afraid I cannot give you any statistics about that.

23,096. You have no rough idea how many men can really go to the university without having help from their parents during the session?—No. I cannot give you any information about that. I have not any means of answering that question.

23,097. We have had a list from Cambridge from which it appeared that about one-fourth of those scholarships, etc., would give men sufficient to carry them through their college course without extraneous help?—I cannot give you any information about that off-hand.

23,098. I suppose you feel that poor men benefit very much from coming into their new surroundings?—I think very much.

23,099. Do you think, on the other hand, that richer men also benefit by coming in contact with those who come from a different kind of surroundings, and, more particularly, those men who are going into public life who will in future meet persons in every class of life?—Certainly. I am a great advocate for the poorer and richer classes mixing together.

23,100. You think there is benefit on both sides?—Yes, on both sides.

23,101. In your summary the 52<sup>l</sup>. is for those who, while being members of the university, are unattached to any college?—Yes.

23,102. That means, does it not, that they have not the benefit of the social life of the university?—I should not like to say that they have none of the benefit of the social life, but they have not so much benefit as a man living in college. I mean that there is a certain social life among the non-collegiate students; they have their clubs, and so on.

23,103. But they do not mix with the others?—Of course, it is quite open to them to do so; they go to the same lectures as others, and they get to be known.

23,104. (*Chairman.*) Are they eligible for membership of the Union?—Certainly.

23,105. (*Miss Haldane.*) Can you say what is the future, as a rule, of the non-collegiate students?—I cannot answer that.

23,106. Are there many teachers attending the university?—There are a certain number, but I have not got any statistics about that; I could not say. A certain number of the non-collegiate students are rather senior men who do not want to enter a college.

17 January 1913.]

Mr. C. B. HEBERDEN, D.C.L.

[Continued.]

23,107. Have you many future teachers in State-aided schools who are members of the university?—We have some men who are training to be teachers.

23,108. Have you a large number of men who are training to be elementary school teachers?—We have some. I have not got the statistics, but I could supply the number who are training in that way.

23,109. And I suppose a large number are training to be secondary school teachers?—I wish there were many more. I am sorry to say that comparatively few men seem to me to come to Oxford now with the idea of becoming teachers in secondary schools. I do not think the teaching profession is very popular at the present time amongst our men.

23,110. (*Sir Donald MacAlister.*) I suppose that a considerable proportion of the non-collegiate students pass into one or other of the colleges during their career?—Yes, a certain number do; every term there are men passing into colleges.

23,111. (*Miss Haldane.*) Are there a considerable number of women attending the university who are intending to become teachers?—Yes.

23,112. Have you any figures as regards their numbers?—No, I have not.

23,113. (*Mr. Hoare.*) We had some rather full figures yesterday from Cambridge in reference to scholarships, and I should like to know whether you could obtain similar figures for us with regard to Oxford. We had, for instance, figures of the supplementary grants made by the colleges. I suppose those were the grants you were referring to?—I have no doubt that I could obtain the information you want by writing to the colleges and asking them how much they grant in the way of supplementary grants. In my own college it would be the sum I have already given, 480*l.*, that we have granted, in round figures.

23,114. (*Chairman.*) If we sent you a form you could supply the information?—I will endeavour to obtain any information that you want.\*

23,115. (*Mr. Hoare.*) There was a third heading of school scholarships and exhibitions?—You want to know from what schools the scholars come?

23,116. Not the schools from which they come, but the amount of the school exhibitions. 4,518*l.* is the amount given us for Cambridge?—Probably I can supply any figures if you will tell me exactly what you want.\*

23,117. Otherwise it is difficult to know exactly what the scholarship provision is. Have you had any experience at Brasenose of county council scholars?—Yes, we have some.

23,118. Has your opinion of these men been on the whole favourable?—Yes. I do not think we have any reason to find any fault with the awarding of the scholarships.

23,119. You think they have been awarded carefully and well?—Yes, I have no reason to think otherwise.

23,120. With reference to the cost, has there been any movement in Oxford lately to attempt to reduce the cost of living?—For some time past the domestic bursars have held meetings twice a year, and conferred together as to possible means of effecting economies. That has been going on for some time, and I believe it has borne fruit.

23,121. It would be correct to say, would it not, that you would be anxious to get the cost of living down as low as possible?—Certainly, I quite agree with that.

23,122. With reference to what you said about *viva voce* examination—a *viva voce* examination is very common in Oxford in various examinations?—Yes.

23,123. Is it solely used as an intellectual test?—Solely, if you are speaking of the university examinations.

23,124. University or college examinations?—I must draw a slight distinction there. So far as the university examinations are concerned, undoubtedly the *viva voce* examination is solely directed to testing a man's intellectual ability. If you take the college matriculation examination for admission to the college, I think other things are taken into consideration. In that examination a college naturally thinks a good deal of the testimonials it receives as to a man's

character and the impression that they form of a man's character on a *viva voce* examination. I think there is generally weight attached to considerations of that kind. At any rate, so far as the university is concerned, there is no doubt that the *viva voce* is intended to find out what a man's capacity is.

23,125. Do you find that the supplementary test by a *viva voce* examination in the colleges is useful in taking into account considerations other than purely intellectual considerations?—I think it probably is. Of course, it is of great importance to a college to have men of high character. Moral considerations certainly come in. I think it is useful to *viva voce* men to form some judgment of the likelihood of their being good members of the college.

23,126. Do you think that those advantages would apply to the public service if such a system were adopted?—I think it would be very difficult.

23,127. What is the distinction?—The distinction is that men in a college are living together very much, and they influence one another very much, and it is extremely important that there should be men of high tone and character in college.

23,128. Do not you think that equally applies to the public service?—I think it is a different thing. There is not the same close society as there is in a college where men are in constant contact with one another and influence one another very much. But it is a test that has to be very carefully used; it is a difficult test to apply, and there is always the danger of making mistakes unless one is very careful.

23,129. Is the number of non-collegiate students increasing?—I do not think it is increasing.

23,130. Can you say what is the number?—About 220 undergraduates.

23,131. Would it be true to say that several distinguished men have been non-collegiate students?—No, I do not think it would be true to say that there have been a very large number. Of course, there are men who, as Sir Donald MacAlister has said, pass from the non-collegiate body into colleges.

23,132. Do any of them take a prominent part in university life?—I should think it is very rare.

23,133. For instance, have any of them been President of the Union, or in some similar distinguished position?—There have been one or two cases apparently, but I do not think there have been very many; I cannot say offhand.

23,134. (*Mr. Shipley.*) Could you furnish us with a list of the number of men who have taken each of the nine honours schools that you mentioned; we have had a similar list furnished from Cambridge?—Yes, we could easily provide that. Do you want the average of a few years.

23,135. One year would do—say the last year for which you can give the numbers?—We can easily furnish that.

23,136. Do you think that a reduction in the total number of marks in the Class I. examination of the Civil Service would lead to increased specialism; would it lead to a narrowing of the reading of a man?—As I said before, I really do not feel competent to answer questions about that examination because I have no experience. I should very much regret an increase of specialism. If it should have that effect I should object to it.

23,137. You feel quite clear that lowering the age of entrance into the Civil Service Class I. would be detrimental to Oxford?—Certainly.

23,138. Do you think it would exclude a great many Scotch candidates coming from the Scottish universities?—Yes, I think it is probable.

23,139. To go back to the question of expense: at Cambridge we have five colleges who make inclusive terms, not for all their students, but for such students as wish it, and in one college the number, I think, is 30. Of course, the average is different, but at Selwyn it is 27*l.* a term, at Emmanuel 21*l.* to 29*l.*, at Queen's 21*l.*, at Downing 25*l.*, and at St. Catherine's 29*l.*, and, of course, for non-collegiate students it is equally cheap or cheaper. I gather that at Keble College there is an inclusive charge?—Yes.

\* *Vide* Appendix LIV.

17 January 1913.]

Mr. C. B. HEBERDEN, D.C.L.

[Continued.]

23,140. Is there at any other college?—I do not think there is.

23,141. Could you tell us what the Keble figure is?—85*l.* a year, paid in three instalments. You will find all the information in the Oxford University Handbook, of which I will furnish a copy; it has been brought up to date for the Congress of Universities.

(Mr. Shipley.) We have a corresponding book for Cambridge. In every case the terms vary in little details according as one college allows washing and another allows lights, and so on.

23,142. (Miss Haldane.) Do any of the scholarships of which you have been talking go to women?—No.

23,143. (Mr. Shipley.) I see the charge at Newnham is from 30*l.* to 35*l.* a term?—It is something like that at Oxford in the women's colleges.

23,144. Is the non-collegiate Board at Oxford subsidised by the university?—Yes, 1,000*l.* a year.

23,145. I see it is more happily situated than the non-collegiate Board at Cambridge. From your experience as a teacher and the head of an Oxford college of the normal type, you would not, I take it, agree with what one occasionally reads in the papers, that Oxford is the rich man's playground?—I do not agree with that at all; there are a great many poor men, and very poor men, at Oxford.

23,146. (Sir Kenneth Muir-Mackenzie.) With regard to what you said about the cost of living, and that there was an attempt being made by the bursars of the colleges to reduce it, the general cost of living I suppose is really higher, is it not, because prices generally are higher, and it must take them all their time to keep the cost of living where it is?—As a matter of fact we have succeeded in reducing the cost of living a good deal. Since I have been at Brasenose I am quite certain—I have not got the figures with me—that the cost of living is much lower than it was some years ago. I am looking back over 40 years. One thing that was done was that many of the colleges now have got stores from which they supply groceries and other things at a reasonable cost, and that has considerably reduced the cost of living.

23,147. Are there any means of influencing the cost of living, not in those respects where the college has direct control as it has with stores in the general charges for battels, and so on, but I mean in the general style in which men live?—No, there are none. One may, of course, get to know in some way that a man is spending too much money, and, if so, that would be a matter for his tutor to investigate; but I cannot say that there is any machinery to provide against extravagance.

23,148. With your considerable experience would you say that Oxford is more extravagant or less extravagant than it was, say, a generation ago?—Much less extravagant.

23,149. You said just now that you thought that the business of being a teacher was not popular at Oxford as regards secondary schools. Did you mean that there are not many men at Oxford now who go in for being masters at our public schools?—Yes, I did mean that. I should say that when I first came to Brasenose if I asked one of our classical or mathematical scholars what he intended to do, he very often said he wished to be a schoolmaster. I find now that it is very rare for a man to say when he comes up that he wishes to be a schoolmaster; he is sometimes driven into it a little against his will, but comparatively few men nowadays, so far as my own experience goes, look forward to becoming masters, even in the big public schools, when they come up.

23,150. Does the Civil Service compete largely in that matter?—I think it does very largely.

23,151. Is that because the pay is better?—I think so, because the pay is better and it is secure.

23,152. Is it really more secure than that of a mastership in a good public school?—Well, it has to be a very good public school; I mean a school which has a very assured position. But I do not think for one reason or another that the scholastic profession is very popular nowadays. I am very sorry for it.

23,153. I want to ask you one or two questions with regard to the *viva voce* examination, that is to say, the investigation as to a man other than on paper. Fellowships to some extent correspond more nearly to the competition for the Civil Service than scholarships, because they are given at the same age practically. Is much account taken at Oxford of men's records or the impression they may make in *viva voce* in the election of Fellows. Do you elect Fellows simply on paper examination?—Perhaps I ought to distinguish. There are official and non-official Fellows at Oxford—they may be differently styled in different places—but some are Fellows whom you elect in order to do work in college, and eventually to become tutors, and so on, and others are Fellows whom you elect as prize Fellows or non-official Fellows, or whatever you like to call them. I think that considerable weight is attached in the election of official Fellows, that is, men who are going to be teachers and tutors in the colleges, to what you may know of a man's character and the impression you may form of him in an interview with him; but in the case of prize Fellows I do not think it enters in in the same way.

23,154. Do you think that you are able to make an effective and useful examination of a man under those circumstances when you want a Fellow of the college, and it is important, as you say, from the point of character and so forth?—I ought to have added, what I forgot to say, that we do not very often examine for official Fellowships nowadays; we generally depend upon the man's record in the schools, and we know what a man has done, that he has taken a first class in *literæ humaniores* or mathematics, or whatever it may be, and we know what his record is; and then we get testimonials, of course, and we also interview a man; but we do not, as a rule, nowadays examine a man on paper for an official Fellowship.

23,155. Is that a change from our time?—Yes. I myself was examined, but I was one of the very last—I will not say quite the last that was examined; we only went on for about five years afterwards doing it, and since then we have always, at Brasenose, elected an official Fellow without a written examination.

23,156. (Sir Henry Primrose.) With reference to that last examination, after all there is a great difference between selecting a man for a single place which you know all about, and selecting men in large batches for a number of places of very varying kinds?—That is so. I hope I was not misunderstood as advocating this *viva voce* examination. I think it may be desirable in certain special cases, but I was not in any way advocating it as a general thing for the Civil Service.

23,157. (Mr. Boutwood.) As regards the 11 cases that you mentioned in connection with your college, do you know the occupations of the parents?—I have not got them here. I think I could supply them, but I should prefer not to do so, because I do not want the men to be in any way identified. I have, as a matter of fact, made a list of our men who have got into the Civil Service since 1894, and I have got notes as to the parentage of all those men, and they are very various.

23,158. (Chairman.) Will you look at Appendix B that was given us by the representative of Cambridge University (*handing the same to the witness*)?—In our case some are simply given as "of slender means" or "means limited," but some, I think, are sons of shopkeepers, and so on. I know at the present moment, for instance, of the son of a shopkeeper and the son of a carman.

(Mr. Boutwood.) The thing that I have in my mind is this. We have had that statement from Cambridge and we have had even longer particulars from some of the Scotch universities showing how various are the social classes that they draw from, but practically we have nothing of the kind from Oxford.

23,159. (Chairman.) I think, if it will not inconvenience you, it would be desirable to have something of the same sort from Oxford; otherwise an inference may be drawn that would be unfair?—If you will let me know exactly what you want, I will endeavour to furnish it.

17 January 1913.]

Mr. C. B. HEBERDEN, D.C.L.

[Continued.]

23,160. I think you might follow the Cambridge method without mentioning any names?—Certainly, and without identifying them with any locality. I have a list here of about 60 Brasenose men who got into the Civil Service since 1894.

23,161. We are not so much interested in that as we are interested in the men who got to Oxford; we want to know that Oxford does not exclude the poor man?—I think we can supply that. You want to know about selected cases?

23,162. No, not necessarily selected cases, but cases showing that there are poor men at Oxford, and by what means they have been able to get a university education?—I understand.

23,163. (Mr. Graham Wallas.) You have kindly told us that you would give us some figures showing for last year, or some year, the percentage of men taking the various honours schools at Oxford; would it be possible for you to add to that a couple of other figures showing the tendency of the changes that are taking place in those percentages—say, the figures of 10 years ago and the figures of 20 years ago?—Yes, quite easily. You want to know the total number who have got honours in the final schools covering a period of 20 years at intervals of 10 years?

23,164. Yes; say last year and 10 years ago and 10 years before that?—You mean taking all our schools together, the percentages that have gone in for *literæ humaniores* and so on.

23,165. Showing whether an increasing percentage go in, say, for mathematics?—Yes.

23,166. (Chairman.) Supposing that 200 men take honours in a particular year, we want to know what is the percentage of men who take *literæ humaniores*, and so on?—Yes.\*

23,167. (Mr. Graham Wallas.) The general tendency in the last 20 years would be for what one may call the modern humanistic school somewhat to increase—history in particular and modern languages—I think, would it not?—Yes.

23,168. You also kindly gave us some particulars as regards 11 poor men to whom scholarships were supplied at Brasenose. Could you give us the numbers from whom those 11 were drawn?—The total number from which these eleven are drawn is 29. All of them were candidates for emoluments limited to men in need of assistance, but the 11 were especially needy.

23,169. I just wanted to know from whom they were selected—the number from whom they were selected?—Yes, I appreciate that; but you will understand that the whole number from whom they were selected were of limited means.

23,170. Now I want to ask you two or three questions arising out of what Sir Donald MacAlister spoke about as to the value of certain selected subjects for the Class I. examination. I am supposing that a man has gone through with industry, and a certain amount of wide reading, the full course for classical Moderations and *literæ humaniores*; he takes both Greek and Latin translation, and prose and verse composition, and literature. All those subjects might be taken, or would be taken, by a diligent scholar taking the full course in classical Moderations?—Yes, except that an increasing number of men do not do verse composition; but, subject to that reservation, I quite agree with what you say.

23,171. Have you ever had any complaints that a diligent and wide-reading scholar, taking the Oxford Moderations course, cannot find in the papers which are set for the Class I. examination a sufficient number of questions which are covered by his reading and working?—No, I do not remember having heard that said. I suppose he would always take something beyond; I think they always do take something else—for instance, English literature or English history.

23,172. I am only just dealing, for the moment, with that particular subject?—No, I have not heard that said.

23,173. Then he gets for that 2,200 marks out of his 6,000?—Yes.

23,174. If he takes Greek and Roman history he gets 1,000 marks for those?—Yes.

23,175. Again, have you ever heard any complaint that a diligent student, taking Greek and Roman history in *literæ humaniores*, does not find a sufficient number of questions in the papers set which are covered by his work?—I do not think I have ever heard that said. I am not quite sure that I am in the way of hearing such things said.

23,176. A good student of Greats would take the philosophy paper?—Yes.

23,177. For which he gets 600 marks?—Yes.

23,178. He would take that on his ordinary reading?—Yes.

23,179. He would take the logic and psychology paper, which, again, he could take if he were a really diligent student on his ordinary work?—I should think so; but I am not very competent to speak about the Greats work.

23,180. He would take the political science paper?—Yes.

23,181. He will always have considerable practice both in Greats and Moderations in English composition?—Certainly in Greats, considerable practice.

23,182. Then it is more doubtful whether he would take political economy and economic history; that is a special subject?—That is a special subject.

23,183. Which he might or might not take?—He would be unlikely to take it as a special subject.

23,184. But with that exception, that he might not take the special subject of political economy and economic history, he does get the full 6,000 marks out of that run of studies; the totals I have given you add up to 6,000?—Yes, I dare say that is so. I have not absolutely followed the figures, but no doubt you are correct.

23,185. Now do you know of any other course of study at Oxford by which he could in the ordinary run of study get anything like that total?—I suppose it would not be so, but I have not the whole details very clearly in my mind.

23,186. Now I want for a moment to put aside the marking of the various subjects in the Civil Service examination and to consider the provision for teaching the various subjects that is made at Oxford, supposing, for instance, that for the Civil Service examination a man desired to take law, philosophy, and modern history together?—All at once, do you mean?

23,187. If he wanted to take the Class I. examination in all those subjects, you would say that that is educationally a defensible group of subjects, would you not?—I should not have thought that was a very good combination.

23,188. Then I will cut it down. Law and modern history is a defensible group of subjects, is it not?—Yes.

23,189. How would he go to work if he wanted to be taught at Oxford both law and modern history?—He could do it quite well; he could take history in three years and take law in his final year. A man can take double honours.

23,190. He can take them in four years, but he could not study the two subjects at the same time?—No, he could not; and I should not have thought it very desirable that he should.

23,191. If he wanted to add philosophy, he would also have to add a rather high knowledge of Greek literature and Greek history; he would have to take Greats if he wanted to be examined in philosophy?—Yes, he could not take philosophy without taking Greats.

23,192. Supposing he wanted to take philosophy and modern history?—Without taking *literæ humaniores*?

23,193. I want to see what would happen to him. He would have to take Greek history as well as other things, and he would find it very difficult to take both modern history and philosophy?—A man can take Greats and modern history if he chose to do so. He could do it in two ways. From the Civil Service point of view he would have to take *literæ humaniores* in three years, that is to say, he would have to omit honours Moderations, which he could do, and then he could take history in his fourth year. That would be possible.

\* Vide Appendix LV.

17 January 1913.]

Mr. C. B. HEBERDEN, D.C.L.

[Continued.]

23,194. But in no case could he take any branch of philosophy without taking the full classical side of *literæ humaniores*?—No, he could not be regularly examined in philosophy in any other school.

23,195. Then would it be easy for him to take a group consisting, say, of modern history, psychology, and modern literature, or modern history, political economy and literature?—No, not easily. I should doubt whether it would be very desirable. My own view is that it is better for a man to study one big subject and to study it well than, perhaps, to study three subjects not so well.

23,196. Would you say that modern history, modern literature, and psychology represented three big subjects that ought not to be studied together, whereas ancient history, philosophy, and ancient literature represented one subject?—I should have thought that the latter were more connected.

23,197. If he wanted to take any branch of philosophy, with high mathematics and science, that would be extremely difficult?—It would be extremely difficult.

23,198. Almost impossible to fit into a system, would it not?—I think it would be difficult.

23,199. Has it ever been proposed or discussed at Oxford whether provision should be made so that it might be more convenient to take other groups of subjects than those in classical Moderations and *literæ humaniores*?—There has been some talk of having a kind of *literæ humaniores* without Greek, or philosophy without Greek, but nothing has come of it at present.

23,200. At present nobody can take anything in the university unless he takes a certain minimum of Greek?—He cannot read for an arts degree unless he does so.

23,201. He cannot take any degree in the university, can he, unless he takes a certain minimum of Greek?—Not in arts, except an Oriental candidate.

23,202. At what period of his life at the university, supposing he is anxious to forget that minimum of Greek as quickly as possible, can he begin to forget it?—He can forget it from the very beginning, except so far as the Greek Testament is concerned.

23,203. Provided that he retains a minimum of Greek necessary to translate the Greek Testament?—Because he can pass Responsions before he comes into residence.

23,204. (Mr. Holt.) Do you consider that the education given at Oxford—and, of course, also at Cambridge—is the best training for a person who intends to become a Civil servant?—I do not know what would be better.

23,205. Let me put it in this way. Are you quite certain that a young man of 23 who has been educated at Oxford or Cambridge and goes into the Civil Service, is going to be a better administrator than a man of the same character and domestic circumstances who at 19 goes straight into the Civil Service?—I should have thought that the man who had had the longer intellectual training would have been much more efficient in the long run.

23,206. Would not the practical performance of administrative duties be of itself an intellectual training?—No, I should not think so. I dissent entirely from that. What do you mean by an intellectual training?

23,207. The performance of the duties he is called upon to perform in his office?—I should not call that an intellectual training.

23,208. Have you any such experience or knowledge of persons who have been successful in different walks of life as to enable you to say that those persons who have had a university training, when placed in competi-

tion with persons who have not, are, roughly speaking, more competent?—I do not know that I can say that I have had such experience, but I should have thought it a miracle if a man who was put into an office at 19, and had to do the work of the office at 19, would be eventually as competent and as highly trained intellectually as a man who was able to pursue his education for another three or four years longer.

23,209. For the purposes of that office?—I should have thought so.

23,210. You would have thought that the longer education was certain to make the man more competent for the purposes of his office?—I should have thought so, unless it was an office where the work was merely of a routine character. It depends, of course, to a certain degree upon what the work of the office is, but I take it that an office in the Civil Service is not of that character.

23,211. I am assuming an office in the Civil Service, and I am assuming that both persons are bound ultimately to rise to the highest position. You feel confident that a university training must produce a better man?—I do.

23,212. But you cannot say from knowledge whether, under similar circumstances, if the university-trained man is put in competition with the non-university-trained man the university-trained man has proved to be more efficient?—No, I could not say that because I have not had experience of people in the Civil Service; but I should like just to add that I do not doubt that there may be very exceptional men who may go into an office at 19, and who, through having exceptional qualities, may eventually rise to the very highest posts, but I think they would be very rare.

23,213. You think that what is known as special preparation for an examination is a bad thing?—It depends upon what the examination is, and I am not quite sure what you mean by special preparation; do you mean what we call cramming?

23,214. I mean getting up a subject of the examination specially for the examination?—I do not think that is a very wholesome thing. I think that you want to study the subject apart from the examination, if it can be done.

23,215. Might not the power of passing a sufficient examination at very short notice in a subject with which a man is unfamiliar be indicative of very valuable qualities for an administrator, as showing that he has the capacity of getting up a subject rapidly, and mastering it?—Getting up a subject rapidly I do not think means very much; it does not mean that you get to know very much of the subject. You get up a sort of minimum knowledge in a very short time, and that is no training for the mind at all. My whole point is, as I said at the very beginning of my evidence, that education is a long process, and the mere getting up of a subject in a rather smattering way, especially a big subject in a short time, is not a mental training.

23,216. Supposing you wanted to test a man's mental training, might it not be a very good test of his mental training that he was capable of getting up a subject at very short notice—as you put it, a smattering—in a sufficient way?—It might be a desirable test for a special occasion, but it would not show that the man had had a good training.

23,217. Would it not be a test of the sort of quality that a man requires to make a successful barrister?—I should have thought not.

Mr. R. F. CHOLMELEY, M.A., called and examined.

23,218. You are the head master of Owen's School, Islington?—Yes.

23,219. Whom do you come to represent?—The Incorporated Association of Head Masters.

23,220. Of what does your Association consist?—It consists of somewhere between 500 and 600 head masters of schools working under a scheme—secondary schools.

23,221. Working under a scheme prepared by the Department of Education?—Yes.

23,222. I understand that some of these schools are not generally understood to come under the definition of secondary schools. Some of them are larger schools, such as you mention in your memorandum, \* Westminster

\* *Vide* Appendix LVI.

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

School and Clifton College?—Yes; the fact is that a head master of any school ordinarily known as a public school is eligible; but some of them do not condescend to belong.

23,223. So that the majority of the schools represented are what are known as secondary schools under the Department of Education?—Yes.

23,224. Manned by teachers who are appointed by the local bodies—education committees and county councils?—No, not necessarily. The teachers are appointed by boards of governors.

23,225. Some?—Most of them I should think. There are a number of municipal schools now growing up in which the teachers are appointed by education committees.

23,226. What proportion of the Association is composed of this class of schools; that is to say, schools under the local education committees?—You mean directly governed by education committees, without the intervention of a governing body?

23,227. Yes; the secondary schools that are governed by committees of the county councils, and so on?—That would be very difficult for me to tell you.

23,228. Very roughly, out of the total number in your Association, how many of the schools in your Association would be of that class, without a governing body? For my present purpose I do not regard a committee of the county council as a governing body?—I should say it would be a very small number.

23,229. In considering the Civil Service examinations, if you have no objection, I propose to begin with the boy clerk. Are you in favour of the class of boy clerk constituted as it is now?—No.

23,230. What, very briefly, are your reasons?—My reason is that they take away a boy from his higher education just about the time that he is beginning to profit by it.

23,231. And I suppose another reason would be that his employment is of a blind-alley description?—Certainly.

23,232. I suppose you are opposed to the arrangement by which, if the boy does not get a permanent appointment at the age of 18 his services are dispensed with?—Certainly.

23,233. So that you are entirely opposed to the boy clerk class as at present constituted?—Entirely.

23,234. Have you any views as to the minimum age at which a clerk of that description should be recruited. What, in your opinion, should be the minimum age fixed by the Government for recruiting clerks of the lowest class?—I should put it at not less than 16. One is always in rather a difficulty in making a statement of that kind from a purely educational point of view, because one does not know what the boy is going to be set to do, and one realises that that does enter into the question.

23,235. Let us say that the boy is recruited for the ordinary clerical service of the Government; do you think a boy to be recruited for the ordinary clerical service of the Government ought not to be taken from his school before the age of 16?—I think not.

23,236. That would be the minimum age. What would be the maximum age that you think should be fixed?—I think I should put that at 17.

23,237. How many chances would such an arrangement as that give the boy?—I suppose you could give him two.

23,238. Do you see an advantage in giving a boy of that age two chances?—I do not know that I do. What I had in my mind, and what I should like to see, would be that such a certificate, for instance, as the London senior schools examination, should be taken as a qualification.

23,239. A qualification in substitution for a competitive examination?—Not as a substitute for a competitive examination, but as a preliminary to a competitive examination.

23,240. As a qualification for admission to the examination?—Yes.

23,241. A sort of leaving certificate?—Yes, that is practically what it is; a boy may get it practically at

any time; that is to say, he may qualify, but he does not get the certificate until he leaves school.

23,242. Is that a practical proposal as regards all the London schools?—I should think it is.

23,243. As regards the London elementary schools?—Not the elementary schools. That suggestion of mine means that a boy shall really have had a secondary school course.

23,244. How many years would a boy who got such a certificate have been in attendance at a secondary school?—Anything from three to five years, or even more. It varies, because the age of entrance to the secondary schools varies so much. I get boys entering my school between 9 and 10, and I get them entering at 13 years of age.

23,245. Then you have an elementary section to your school?—It is not called an elementary section, but the work in the two lowest forms is of a rather preparatory kind.

23,246. Up to what age do the children remain in the two lower forms in your school?—Not as a rule beyond 12. Most of them not beyond 11 years.

23,247. Then they enter on a secondary school course?—Yes.

23,248. Would such a leaving certificate be difficult to provide, as a general rule, throughout England?—I do not think so. I think the general tendency is for secondary schoolmasters to consider this one of their aims.

23,249. We have had evidence to the effect that the education in contiguous areas in England may be of a very different standard?—Yes.

23,250. It may aim at a high standard in one place, and owing to the difference in the schoolmasters, at not so high a standard in another place?—That is so, undoubtedly.

23,251. Consequently, if you were to have a universal leaving certificate, it should be of a low standard?—That certificate, if I may quote my own case, which is the one I do know about, is taken by the third division of my sixth form. I think that most of the secondary schools of England ought to have a top, which is at least equivalent to the third division of my sixth form.

23,252. Do not you think the prescription of a standard would gradually raise schools up to the standard?—I think it would. I think that is very important.

23,253. That is a very important consideration in your opinion?—Yes, and perhaps I may say here that the Federal Council of Secondary Schools' Associations, of which I also happen to be honorary secretary, and which is made up of representatives of the secondary school bodies, is now memorialising the Board of Education on that point—the institution of a general standard.

23,254. Do they make any suggestions as to what the standard should be?—What they have said is that it should be of a standard that a well-educated boy of 16 ought to be able to reach, say, the fifth form, or the form next below the sixth in a secondary school. That was as near as we could get having regard to the great variation.

23,255. How would that standard compare with the examination (which is shown in the book before you), for the second division of the Civil Service, omitting book-keeping and stenography?—I have no personal experience of the second division examination, but I should say that the London senior schools examination, which we take ourselves, is a more educational examination than that. The point is that it is an examination on the school syllabus; it is not an examination in subjects prescribed by the examiners. They take our syllabus.

23,256. Looking at the examination on page 4 of the same book, which of those two examinations would approach more to your syllabus?—The "junior appointments" examination approaches more nearly to my syllabus; but, of course, it is a higher standard. That is taken by boys at the top of my upper sixth form.

23,257. But the boys in your top form would be able to come up to this standard—the "junior appointments" standard?—The best of my boys would. It is

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

very often a question with regard to a particular boy whether he will try for a scholarship at Cambridge or go in for the "junior appointments."

23,258. You say you are dissatisfied altogether with the boy clerk class as it at present exists. Do you know anything about the assistant clerk class?—No, I cannot say that I know anything except what I have read in the memorial from the second division. It is not within my own experience.

23,259. You know the assistant clerks are recruited from the boy clerks?—Yes.

23,260. And the boy clerks are recruited from the class that you say have not benefited adequately by the education that is appropriate to their age. What would you say to a proposal which would abolish the boy clerk altogether, and, consequently, abolishing the boy clerk would abolish the assistant clerk, and create a new class of clerk, to be recruited from boys between the ages of 16 and 17, or say, at a single age of 17, for permanent service; and thereby save them from the danger of losing their appointment at the age of 18?—Of course I should welcome that.

23,261. Do you think such a proposal as that would meet all the objections that you have urged to the boy clerk?—I think it would decidedly, because the two objections that I find to the boy clerks are that their education is checked at an important point, and that their occupation is not permanent.

23,262. And such a proposal as that would meet both those objections?—So far as I can see, it would.

23,263. With regard to the one or two examinations, is there any great advantage in giving a boy recruited at the age of 17 two chances of getting into the public service, so that if he misses one chance he may go in for the other. If there is only one chance he prepares for that, and if he misses it he turns his attention away from the Government service to ordinary commercial and industrial life?—Yes, he does.

23,264. Do you think there is an advantage in having only one examination for that lowest class in the public service?—I should see no particular disadvantage. I am not particularly in favour of giving him two chances, supposing that the entrance were, as I suggested, by a qualifying examination to begin with, which is practically an examination upon his school work, and particularly if that examination could be improved, as I think most of us would consider it would be improved by taking into account what is called the "school record."

23,265. Do I understand you rightly to say that you would have a qualifying examination before the competitive examination?—I should. I should not admit anybody to the competitive examination who had not got such an equivalent, as I hope we may some day set up, to the German *Abiturienten* examination.

23,266. (*Sir Donald MacAlister.*) You mean a qualifying certificate?—Yes.

23,267. (*Chairman.*) Such an examination resulting in the grant of a certificate would be held in the schools?—Yes.

23,268. Not a qualifying examination held by the Civil Service Commissioners?—No.

23,269. Until we reach that state of perfection in the schools do you think we should improve matters if we substituted for the boy clerk and for the assistant clerk classes, one class?—I think so, certainly.

23,270. And then it would be a still further improvement if, as the educational system in the country progressed, this leaving certificate were provided?—Yes.

23,271. Then you would insist that nobody should be admitted to the examination for a clerkship who did not possess this leaving certificate?—Yes, I would.

23,272. Did I understand you to say that you had no experience in regard to the second division examination?—No, I have not.

23,273. But you have had experience in regard to examinations for the junior appointments?—Yes.

23,274. From what class of schools do the boys who present themselves for the junior examinations come?—I think it is very difficult to generalise about that. I was looking at the statistics, for instance, in an Appendix to a report of the proceedings of this Commission,

and they were extraordinarily scattered. For instance, at St. Paul's school, where I was for 23 years before I came to my present post, I taught those boys from the time that the naval store clerks were invented, about 1903, I think, and I always had two or three candidates. It would be a sort of toss up whether they went in for that examination or for Sandhurst.

23,275. They came from that social class?—Yes. They would probably be poorer boys, because the great attraction was that the salary began at 100*l.* a year the instant you left school. Now I find, as I say, the best of my boys go in for that, the junior appointments examination—generally from three to half a dozen at the top of my school.

23,276. Are you able to say that the boys who go in for the junior appointments examination come from a richer or a better social class than the boys who go in for the second division?—I could hardly say, because I do not know enough about the second division, but on the face of it I should say they did, a little.

23,277. Do no boys go in for the second division examination from your school?—Not since I have been there. If they have got into the second division they have begun as boy clerks; that is to say, boys from my school.

23,278. So that the only recruits that you furnish to the Government service are those who go in as boy clerks and those who go in for junior appointments?—Yes. We have had it under consideration several times lately whether we should encourage boys to go in for the second division, and we have never been able to make up our minds that we could do it without spoiling our syllabus.

23,279. Then you have never really considered whether the scheme of examination for the second division should be retained or should be improved?—Only so far as to decide that it will not fit in with what I consider a reasonable school syllabus, looking at it from that point of view.

23,280. Do you think it is educationally a good scheme?—No.

23,281. Let us consider it from the point of view of age, and afterwards from the point of view of the subjects. Do you consider the age from 17 to 20 for the second division a desirable scale?—I should have thought not, because it does not seem to me to be either one thing or the other. It is difficult to see whether it is intended to catch the boy who is just leaving school or whether it is intended to catch him later. As I think I have said, as far as I can make out, it seems to be a survival from the days when boys went out into business in the hope of being able to improve themselves up to the standard of the examination by attending evening classes—and that might take some time.

23,282. Do you consider that the lower limit of age, 17, is undesirable. We have provisionally considered that, for the boy clerks, if there be a new grade in the Service, a suitable age might be 17?—Then it would seem reasonable that the second division should begin at 17 where the new scheme leaves off.

23,283. But what would be the higher limit of age for the second division in such a case as that, beginning at 17?—I do not know that I should put it above 18, but then I really do not feel that I have the experience to give a definite opinion on that. From our point of view the question resolves itself very much into the further question: what is the boy going to do in order to get through the examination?

23,284. What he is going to do in future life?—No. Supposing you have an examination at the age of from 17 to 20, how is the boy going to prepare for that examination? That is the question that presents itself to us particularly: what is his education going to be? When we see the age of 17 to 20, we know that that means that the boy is almost sure to spend a great deal of time preparing for that examination and nothing else, and that is the thing we object to.

23,285. Taking your school as typical is there any age above 17 which will coincide with the termination of a distinct educational programme?—Yes, I think 18 years would.

23,286. Would there be a programme which would be finished above 18, say at 19 or 19½?—No, I think

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

not, because after 18 the boys who stay at my school and at most secondary schools are boys who are preparing for something definite—specialising for scholarships or something of that kind. We push the specialising age back and make it as old as we possibly can, but after 18 they are practically all specialising. They do three things: they go in for the London University Intermediate B.A. or B.Sc. Examination, they go in for scholarships at Cambridge, or they go in for the junior appointments.

23,287. When is the secondary course of education in the county council schools supposed to terminate—at what age?—You mean the schools actually organised by the county councils?

23,288. Those schools that are managed by the special committees about which we spoke in the early part of your examination?—Do you mean schools such as mine or do you mean schools that are directly governed by committees of county councils?

23,289. The latter is what I mean?—I do not think there would be any great difference. They would put the minimum age at which it was supposed to end at 16; but you will find in many parts of England there is extraordinary difficulty in keeping the boys to that age.

23,290. Will you find in the greater part of England that boys will have left these schools when they get to the age of 18?—Yes.

23,291. You will not find boys remaining on unless they are preparing for particular examinations up to the age of 19?—No.

23,292. But do you find them there when they are preparing for a particular examination?—Yes.

23,293. For the second division say?—Yes; but I am bound to say that applies to a very small number of schools. The difficulty about giving any general answer about secondary schools is that there is so much difference in the conditions.

23,294. We have been told as a rule that the extreme limit of age of a boy remaining at an elementary school is 16 and not longer; and that 18 may be taken as the top limit in secondary schools?—I should not have thought that they remain in elementary schools until 16.

23,295. We are told 15 to 16 is the age?—In London they leave on their 14th birthday as a rule, and they disappear from school life; and I should think in the country they are quite as keen on leaving as that.

23,296. (*Mr. Shipley.*) Do not they finish the term?—No; not the week even.

23,297. (*Miss Haldane.*) In Scotland they do?—Yes; but in London they think it a great favour to the schoolmaster if they stay out the week in which their 14th birthday occurs. I have been told that over and over again.

23,298. (*Sir Donald MacAlister.*) But they are allowed to stay for half a year after they have reached 14 if they wish?—Yes, I think so.

23,299. (*Chairman.*) Am I entirely mistaken in thinking that there is a limit of age of 16 for elementary education?—I think so.

23,300. The leaving age for secondary schools is 18?—But in a quantity of secondary schools up and down the country the average leaving age is 15½. We have been conducting an investigation into that on behalf of my own Association, and we were ourselves shocked to find this sort of thing was going on. We do not feel it so much in London, but I have had a father writing to me saying, "Now my boy is 14 it is time he left school," though that is uncommon with us.

23,301. You say in your memorandum: "The case of the second division and that of boy clerkships belong particularly to the second of the four questions submitted to us"—the second question being "whether experience tends to show that a boy's education is interrupted in order to make special preparation for Civil Service examinations, and, if so, whether such interruption is harmful, and, if it is harmful, how this result is to be avoided"—and you add: "preparation for the second division examinations has not hitherto been found generally consistent with a reasonable scheme of school work." What scheme of school work would you consider to be appropriate

for preparation for the second division examination?—I was rather thinking of the subjects included in that examination which no schools would teach for their educational value, such as copying manuscripts, book-keeping, and stenography. It is the necessity for spending time upon those non-educational subjects that makes the examination bad for schools.

23,302. Was that all you meant? Had you in your mind any reference to the age, too?—What I meant was that the consequence of that is that a boy who wants to go in for a second division clerkship is apt to leave school, say at 16 or 17, and devote the whole of his time to getting through that examination. His studies are interrupted if he is going to do that; he cannot do it in his school career.

23,303. Would you think it desirable that the boy intending to go into the Civil Service should have a certain time beyond the age of 18 allowed, or would you prefer if he were going in for the second division that the age should be fixed at 18. Do you think educationally he would be better equipped for the work of the Civil Service if the age were fixed, say, at 19 or 19½?—It should not go beyond 19, because I have in my mind such an organisation of the education of this country as would enable one to say: "These things have to be done in schools."

23,304. Would you say it would be a reasonable scheme to fix the age for the competitive examination for the lowest division in the Civil Service at 17, and to fix the age for the division above that at 18 to 19?—Yes, I think so.

23,305. Fixing the age at 18 to 19 would give the candidate two chances, would it not?—Yes, if there were two examinations in the year.

23,306. If there was one examination in the year it would only give him one chance?—It could be arranged to give him two.

23,307. Are you familiar with the facilities which exist in the shape of scholarships enabling boys from the secondary schools to proceed to the university?—I am quite familiar with the conditions in London, but with regard to the conditions over the rest of the country I only rely upon what I have been told.

23,308. Restricting yourself to the conditions in London, do you think that the arrangements are adequate to enable, if not all, yet the majority of clever boys to get from the secondary schools to the university?—I think so, as far as I can see. I judge from the boys who have desired to proceed to the university from my own school, and I judge also from the fact—though I do not know how much reliance one should put on that—that whereas the London County Council proposed to offer not more than 100 scholarships with that object, it does, as a fact, award something under 50, and therefore presumably all that are deserving of them get them.

23,309. Do the London County Council award their scholarships after competition?—Not at all by open competition. They award them upon an examination of the record of the boy.

23,310. Upon the record of the boy as kept in the school?—I am not using the word "record" in a technical sense, but simply for an account of what he has done; that is to say, if a boy has obtained an open scholarship at Oxford or Cambridge he sends in a statement of that fact together with any other distinction he may have obtained during his school career. That is sent in on an application for a senior scholarship to the county council, and they take all that into consideration.

23,311. But take a boy who has not obtained any distinction; say that a boy has merely worked in a school and done his school work well and stands well in the estimation of the head master of the school, has he any chance of getting a scholarship?—I should say not. That is partly a financial question at present. None of these scholarships are of greater value than 90*l.* a year, and the county council practically assures itself that the boy will on the whole have a sufficient income to keep him up at the university, and that there is a reasonable prospect that his university course will lead to something.

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

23,312. The London County Council assure themselves on both points?—Yes, they try to.

23,313. First that the boy will have sufficient money to keep him at the university?—Yes, they do that.

23,314. They are able to ascertain that; and, secondly, they consider whether he gives sufficient promise of benefiting by his residence at the university?—Yes, and they are rather particular in the questions that they put to the head master of his school as to whether he is likely not only to overcome the general difficulties of a university education but also to be able to make a living out of it afterwards.

23,315. But the boy must have established the fact that his school career was effective and successful by passing a public examination?—As a rule by obtaining a scholarship in a competitive examination. They take the line, which I think is a reasonable line on the whole, that for boys who require so much assistance to go to the university at all, a university education is not likely to lead to much unless they are capable of obtaining a scholarship.

23,316. And then they come with their money and they supplement that scholarship?—Yes.

23,317. Does that plan seem to you to be in any way defective as regards the student who has not taken an open scholarship but who has done well at his school?—I do not think I remember a case of a student who has done well at school without having sufficient ability to get a scholarship, whom I would have recommended to go to the university in his own interest.

23,318. (*Mr. Graham Wallas.*) I want to ask two or three questions upon the hypothesis that Class I. in the Civil Service is recruited still at the age of 22, and, putting that out of sight, that there are two other classes—one recruited at 18, corresponding to the second division plus junior appointments, and the other appointed to the permanent service at 16, corresponding to a sort of permanent boy clerk, proceeding, if he is of good conduct, at once to the position of assistant clerk. Would you think that scheme would be an improvement on the existing scheme?—I should certainly think so.

23,319. How would you meet one or two difficulties which occur to me with regard to it? One is the objection that that would exclude from the Government service the children of the poorer working class who could alone proceed into the Government service if they proceeded straight from the elementary schools. If it were said: "This is excluding the children of the working man," how would you answer it?—That would exclude those who were unable to take advantage of the scholarship system—those who were too poor for that.

23,320. Yes?—I think it is a rather unanswerable objection from that point of view. The answer I should make to it is that one ought not to be satisfied while there are any people to whom it would apply. I see no other answer.

23,321. Do you say, then, that where there is an adequate scholarship system the greater part of the working classes can now, and all of them ought to be able to, avail themselves of it for their more intelligent children, and the Government does not want a child who could not get a junior scholarship?—I think I should say so, but I should like to qualify that in one direction. There was an attempt made a while ago in London to differentiate between what I believe were intended to be different types of secondary schools, by the institution, you will remember, of the central schools. I think part of the trouble in London, and generally, is that we are so convinced that there is only one type of secondary school, and the working classes themselves in London are so convinced that there is only one type, that there is a kind of boy, whether poor or not, who does not get a chance because it is not the type of education for which he is suited, and he ought to be brought in somehow.

23,322. That is to say, in recruiting at the age of 16 you would try and recruit from various types—the boy who wanted largely a semi-manual education in drawing and subjects of that kind as well as the boy who is fitted for a more literary training?—Yes, if that kind of training were treated, as I believe it was intended to be treated, in the central schools in what we

are accustomed to call a humanistic spirit. It has not been done for various reasons.

23,323. Have you followed the changes—I think they took place mainly while you were at St. Paul's—in the pupil teacher system?—No, I knew nothing about that.

23,324. It broadly aimed at taking the boy straight from the elementary school. But since then, with general acquiescence, a period of secondary education has been interpolated?—Yes.

23,325. Another difficulty seems to me rather more important: You, as head master, would then have to advise boys with regard to two examinations, one at 16 leading to assistant clerk and the other at 18 leading to the second division of the new type. Would you find it easy to settle the question whether you should advise a boy to go into so strictly subordinate a class as that of the assistant clerk?—You are speaking of the comparison between these two divisions?

23,326. Yes, I am assuming that the higher directive labour is normally done by first division men coming in at 22, that there is another kind of administrative work which is normally done by those who come in at 18, and that the normal work to be done by those recruited at 16 would be somewhat mechanical and somewhat subordinate. Should you find it easy to decide to what boys you would say, "You are likely to succeed in an examination held at the age of 16, and that examination does not offer very brilliant prospects, but I advise you to take it?"—I think so, that is the kind of question one is always having to answer.

23,327. And you think that would correspond to two types of boys—roughly, the boy who gets his junior scholarship and does not get his intermediate scholarship would be one type, and the boy who gets his junior scholarship and continues with the intermediate scholarship would be another type?—I am not sure of that, because if your lowest division was of the standard that I have been putting forward—that is of the school leaving certificate—those boys would all qualify for intermediate scholarships, and there would be nobody below that standard.

23,328. Then you would advise boys who held intermediate scholarships in London under certain circumstances to go into what would be a third grade in the Civil Service?—Yes I might, but I am bound to say that if what now corresponds with the present second division were improved, as has been suggested, I probably should not advise them to go into the third grade.

23,329. (*Chairman.*) You would probably advise them to stay on at school and go in for the other?—Yes; that would depend very largely whether they could afford to stay on at school or had to earn money at once. That is a problem that comes before me more often than any other.

23,330. And also depends on your appreciation of the boy's capacity?—Yes.

23,331. (*Mr. Graham Wallas.*) Would you be able to find a certain number of boys at that age who would not be put into work which was too good by going into the third division of the Civil Service at that age?—I think so.

23,332. With regard to your evidence based on the St. Paul's experience as to the first division, you say, in the paragraph beginning with "Question 1" in your memorandum, that the conditions of appointment to Class I. determine in many cases, not merely the choice of special studies, but the preference for one university over the other?—Yes.

23,333. The choice of special studies means the choice of such studies as are likely to pay in the Class I. examination?—Yes.

23,334. The choice of one university over another means the university which is most likely to lead to success in the examination?—Yes.

23,335. Will you expand that by saying which are the studies which you believe to pay best in the examination?—Undoubtedly, the general classical curriculum with all that that implied.

23,336. Then a boy of exceptional general ability trying to choose what type of study he should take

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

would be advised by you that if he wanted to serve the Government he should, somewhere about the age of 16, begin to concentrate on the classical studies?—That question did not arise at St. Paul's, because a boy concentrated on classics from the moment he entered the school. The question was whether he should ever give it up.

23,337. You were under Dr. Walker?—Yes.

23,338. But you knew the examination so well that you would have said—in another school where there was an effective choice—that a boy who had great ability of a type which was not marked in any one direction and who had to get into the Civil Service, if he could, would be wise to concentrate on the classics?—Yes, I think he would.

23,339. That is to say, with the same amount of ability and the same amount of industry, classics pays in your judgment much better than any other subject?—Yes, if you could ever get a boy whose ability could be treated in fact in that way—a boy who was capable of turning in either direction.

23,340. Would you say, as a question of psychology, that there is a marked and ascertainable difference at the age of 16 between a boy who will do well in ancient history or modern history and a boy who will do well in ancient languages or modern languages, and that the difference shows itself so strongly?—It is difficult to say, because it is so difficult to get a real comparison.

23,341. What was the university you used to prefer over any other?—Frankly, we always thought things had been invented to suit the Greats school at Oxford. That is exactly how it occurred to us.

23,342. In this respect you have a very wide and intimate acquaintance. You had a large number of successful candidates through your hands at St. Paul's School?—Yes.

23,343. And the opinion held in St. Paul's School during your 23 years was that the thing had been invented in order to provide for the Greats school at Oxford?—Now I think you are putting a little more into what I said. Certainly, if it was a case of advising a boy to make his choice, we should have told him at any time that the Greats school at Oxford would be more likely to get him in. One very important point arising out of that is that he would be more likely to get in without subsequent cramming than he would from Cambridge.

23,344. Or than if he took any other school at Oxford?—Yes.

23,345. (Mr. Boutwood.) With reference to the two grades of clerks that have been suggested, what kind of examination have you in your mind for the higher of the two, the one commencing at the age of 18?—If the work was worth it, I should say an examination very nearly of the standard of the London Intermediate B.A. or B.Sc.

23,346. How does that compare with the existing examination for junior appointments?—Our boys who take junior appointments have generally passed the London Intermediate B.A. or B.Sc. the year before. They would take the London senior schools examination at 16 (generally below 16) in the lower division of the sixth form; two years after that they would take the London Intermediate B.Sc., and then they would take the junior appointments examination.

23,347. That is the sort of examination you would think appropriate for the higher of those two grades?—Yes, I said if the work is really worthy of a boy of that education, because I was in some sympathy with what was said at the Head Masters' Conference a year ago, that the junior appointments were not really worth the education lavished upon them.

23,348. That is another story?—But it does hang together.

23,349. (Chairman.) But is this junior appointments examination standard too severe for boys who have been successful in their studies up to the age of 18?—Not too severe for the best of them, but I think it picks out the best.

23,350. For the average boy of 18 is the junior appointments examination too severe?—For the average boy, yes.

23,351. But not for the best ones?—No, it is pretty near the general standard of a scholarship examination.

23,352. It will not be too severe for a boy of 19?—I think you get away from the question of severity then. Age does not come in.

23,353. You have at the age of 18 your substratum of education, and then you have a special preparation of a year?—Yes.

23,354. (Mr. Boutwood.) Was I right in understanding that you thought it rather important that the limit of age for that examination should not be higher than 18, and it ought to be an examination at 18, roughly speaking?—Yes. I am not so particular to that exact year.

23,355. But I thought you said when you got to boys of 19 and 20 they were probably specialising in other directions?—19 and 20, yes. I should put 19 as the absolute upward limit.

23,356. I was very much interested in what you said to Mr. Wallas, although I did not understand it, as I am not a Londoner. You spoke of the central schools, and of a certain type of boy in the elementary school who somehow was not provided for by the ordinary secondary schools?—Yes.

23,357. Would you mind telling me in a little more detail what all that means, because I did not quite follow it?—The junior scholarships from the elementary to secondary schools are scholarships given by the county council in open competition at a certain age, at which all the boys in the elementary schools in London are supposed to enter. I say "supposed," because, as a matter of fact, they do not all enter. They get those scholarships on a simple examination which is supposed to test their fitness for the ordinary secondary school curriculum, which is mainly a curriculum in mathematics and English, and eventually science and modern languages. Then there are a certain number of boys in the elementary schools who may be quite able boys, but whose ability does not lie in that direction, or who may develop late, and are not caught by the scholarship net. The county council has invented two means of dealing with those boys. They attempt to deal with the boys who develop late by a system of what they call supplementary junior scholarships, which are given at the age of 13 or 14, and I do not think that that system has got very widely into working order yet; they have also attempted to provide for the other kind of boy by means of what they call central schools. The original idea of those central schools—the word "central" having nothing to do with it at all—was that they should provide a means of giving a boy an education through arts and crafts, and trades and manual work—not a trade education which would enable him to learn a trade so as to make his living by it, but an education which should be a real education by means of those things which he could do. But there are very few people either on the county council or engaged on the central schools who understand that idea to this day. It is an extraordinarily difficult idea to bring into action.

23,358. That is what you meant when you said that for certain reasons the humanistic idea had not been very well carried out?—Yes; I can give you a very easy illustration. I went to the opening of one of those schools, and there were a number of county councillors on the platform, with the newly elected head master of the school, and they all made speeches, and nearly every county councillor said, "What a splendid thing it was for boys and girls to be taught a "trade," and it was not until the head master spoke that you had a glimpse of the fact that that was not what was intended.

23,359. How many schools of that kind are there in London?—I could not tell you, but a good many. They are founding them daily.

23,360. What is supposed to happen to boys when they have finished at such schools?—They are supposed to go into various sorts of business.

23,361. I think that what you have just said answers the other question, that practically there is the widest

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

possible door in London from the elementary schools to the secondary schools?—Yes, there is.

23,362. (*Sir Henry Primrose.*) Mr. Graham Wallas, in his examination, discussed with you the question of the lowest class recruited at 16. Looking at page 4 of your statement you say: "To admit that boys may reasonably be taken into the public service at 14, to continue their education along with their official duties, seems to us to involve an unduly pessimistic view of the position." There is an enormous mass of work in the public service of a very simple and very routine kind—the sort of thing that clerks all over the country are doing at small salaries of 150*l.* to 200*l.* Supposing we wanted to recruit men to do that work, and only perhaps the very best of them ever to do any other work, what should you say to taking boys for that class of work at the age of 14?—Speaking as a person engaged in educating boys, I cannot consent to anything that takes a boy into work at the age of 14.

23,363. But you are contemplating an ideal condition of things in which no boy ever ceases his education before 16?—Yes.

23,364. We are a long way from that at the present moment?—Yes.

23,365. Do you think it would be wrong of the Government and that it would be delaying the realisation of that ideal too much if, under existing circumstances, they were to take boys of 14. You would get boys probably from the public elementary schools—boys who would in any case be leaving school at 14—and if the Government did not take them they would go into something else?—Yes.

23,366. They would be much more likely to be satisfied with the sort of prospect which would be offered them in the public service of doing this inferior class of work, which is of a somewhat mechanical kind, at quite moderate rates of pay. Do you feel that the Government would be, as I say, delaying the approach of the millennium by doing that?—I think they would.

23,367. But, as things are now, the boy of 14 who leaves school on the very day that he strikes 14, probably has a future which is not a better one than what would be offered in the public service under those circumstances?—That is possible.

23,368. Now going to the idea of recruiting boys at 16, surely if you recruit a certain number of boys at 16 and a certain number of boys at 18, you have got so very near together that it is difficult to distinguish them, is it not?—I was thinking that as we went on.

23,369. You have said more than once that a great deal depends upon what you are recruiting boys for, and what prospects you are going to give them when they get in?—Yes.

23,370. For instance, you think that the prospects of the intermediate class, as they are now, are hardly sufficiently good to justify getting men of that calibre, and that quite an inferior class, in fact boys at 16, would be perhaps good enough for it?—Yes, for a good deal of the work that they have to do.

23,371. After all, as things are now, the age of 14 is an age which corresponds with something quite definite as regards the school life of a large number of the population, does it not?—Yes.

23,372. And if we were adapting our schemes to things as they are, rather than to things as they ought to be, there would be a good deal to be said for taking, for the quite inferior class of work, the 14-year-old boy?—But that would be basing it on the necessity of finding occupation for these boys in the belief that it was the business of the Government to find it.

23,373. Not quite that. My idea in getting that class of boy is that you then get into the public service somebody who is quite sufficiently good to do the work that you want done, and yet is not so good as to be dissatisfied with the work when he gets it?—Yes, that was the recommendation made by the clerks of the second division. I believe, with a proviso that the Government should continue the education of the boys after they get them there. Was that part of the suggestion?

23,374. I quite see from an educational point of view it is open to objection; but it seems to me that if for that very lowest order of work you wait until a boy

is 16, and he has already had two years of secondary education, you are then getting an instrument that differs very little, or does not differ sufficiently, from the next class above, which you would recruit at 18?—That does, of course, take me rather out of my depth, because I do not really know what the essential differences between the two classes of work are. I have thought of the young Civil servant, and I am bound to say one result was to deepen the impression to which I have always been rather inclined, that there is a limit beyond which the division of labour, even in a Government office, is an abominable thing. If you choose so to organise your office that one man does nothing but lick envelopes all day, you will have your envelopes better licked, but you may pay too dearly for it in other ways.

23,375. Of course there is a risk of that; but, taking education as it is now, you have certain definite points in respect of age. You have got the 14 years' limit, and you have got the 18 years' limit, or perhaps 18 is putting it too high, because you say that while 18 is the theoretical age of secondary education, the practical limit is 16½?—The practical limit over a good deal of the country at this moment is 15½.

20,376. If the Government were proceeding at this moment to arrange its examinations so as to catch boys at certain ages at which they do leave school, you would fix upon 14 as the lowest limit. Your next limit would be something between 16½ and 17. I suppose we need not go so low as 15½?—No, call it 16.

23,377. And then you would have the university limit for the highest class of all?—No, 18 next—14, 16, 18, and 22.

23,378. No, I want nothing but the three. What I am suggesting is that examinations might be adapted to three limits. One the limit of the elementary school, the second the limit of secondary education, and the third the limit of university education. You do not like the idea of the lowest—the elementary school limit?—No, I do not. I think it would provide very definite encouragement for people to believe that it was a reasonable thing that boys should finish their education at 14.

23,379. (*Sir Donald MacAlister.*) The age at which the majority of the boys terminate their secondary education is, according to statistics, 16½ in London and less elsewhere?—That may be so.

23,380. (*Mr. Boutwood.*) When they leave at 16½ it means they leave before their course is finished?—Yes.

23,381. (*Sir Henry Primrose.*) You would be encouraging that which is rather undesirable to encourage by having a 16-year limit?—Yes.

23,382. (*Mr. Boutwood.*) I think we had some witness who said that 16 and 18 did correspond to two clearly-marked stages in education?—That is true.

23,383. (*Mr. Shipley.*) On behalf of Mr. Matheson, who cannot be here, I want to ask you at what age you would fix your secondary-school leaving certificate?—You mean what I have rather spoken of as the first certificate?

23,384. Yes, the qualifying certificate?—I should fix it at 16.

23,385. Who would conduct the examination?—We are asking that there should be some kind of order brought into all the examinations that are at present conducted. At present the nearest one could say to it is that we would like it conducted by the university.

23,386. You do not contemplate a Government examination?—I think not.

23,387. You do not object to a Government examination qualifying for the taking of a Government office?—I would not have the qualifying examination conducted by the Government.

23,388. Would the examination be as severe as the German *Abiturienten* is?—I do not know enough about it.

23,389. You must have seen the painful statistics of the number of schoolboys in Germany who commit suicide?—Is that at that age?

23,390. Between 16 and 18. That is one of the worst things happening in Germany at the present time?—It is, but I have never known a boy brought within measurable distances of committing suicide by

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

the London matriculation, which is the sort of thing I am talking of.

23,391. I think this German examination is somewhat higher. I gather you agree with doing away, wherever it can be done, with boy labour?—Yes.

23,392. I have been very much struck, and rather appalled, since I have been on this Commission, at how much we do live upon boys, some of them almost little children, who are introduced into offices?—Yes, I believe the Education Office is the worst offender.

23,393. Do you advise boys to go in for this boy clerks' examination?—I have had to, because I have had boys who were determined to go in for the second division, or determined to go in for the boy clerks' examination. I have never advised any one to do it. I have said, "If you are bound to get into the Civil Service all I can tell you is that you will not get a junior appointment; but I cannot advise you to go in for the second division straight, and much your best plan is to go in for the boy clerks' division, and make up your mind that you will get out of it into the second division."

23,394. (Chairman.) Do you think the second division, as it is now, such an uninviting prospect? The second division begins at 70*l.* a year and goes up to 300*l.*, with staff appointments up to 500*l.*, perhaps higher. Do you think that is such an uninviting prospect for boys who have no more than a secondary education?—I do not think the second division, at its best, is a very uninviting prospect.

23,395. At its best, or at its worst?—When I say at its best I am thinking of a great many Civil Service appointments, particularly of late, which would appear to an ordinary person as belonging to the second division, but which do not carry with them promotion and pension.

23,396. Will you find an instance?—A good many appointments under the Land Valuation Act and under the Insurance Act.

23,397. But these are quite temporary appointments, and are not in the organised service. The second division carries with it the right to a pension?—Yes, that is why they go in for it.

23,398. And it gets up to a limit of 300*l.* a year, with staff appointments above. Is it not a very attractive future for the young men of 18 to 19 who has a secondary education and not a university education?—Yes, it does attract them. My objection to the second division examination is mainly from an educational point of view, that no school will teach for it, or ought to.

23,399. I quite agree to that. If from an educational point of view it is sufficiently good, the second division is an attractive service?—Yes, but my particular point in answer to Mr. Shipley's question is that I would advise boys, if they wanted to get into the second division to go in as boy clerks and make up their minds to get out of that class into the second division.

23,400. That is what they do now?—That is what the most successful of my boys have done, but it is very hard work, and I understand they do it by neglecting their duties.

23,401. (Sir Kenneth Muir-Mackenzie.) You mean they go in as boy clerks and study somewhere out of office hours?—And in office hours. I had the father of a boy in to see me this morning, who is himself in one of the Government offices, and I put that particular question to him, and he said, "Yes, they have books under the desks, and when a senior official comes in they are popped out of the way." The boy who gets into the second division gets in by neglecting his office work.

23,402. (Mr. Shipley.) Do you recommend any of your boys to become apprenticed to trades and technical pursuits?—Do you mean actually apprenticed to a business? It is extraordinarily difficult to find a business that wants apprentices on reasonable terms.

23,403. My college runs a boys' home at Southwark, and we occasionally find 20*l.* to apprentice a boy to some trade?—What type of boy is that?

23,404. They are much poorer, probably, than your boys—boys whom we take from the workhouse, and

such boys?—With regard to a boy who had had three or four years of secondary education would there be anything worth his while to take?

23,405. I do not know. Some of these boys of 19 are earning, I believe, 2*l.* to 3*l.* a week?—That may very well be.

23,406. It seems to be a solution of a great difficulty if we could get more boys apprenticed to some definite trade which they would enter?—Yes.

23,407. (Sir Kenneth Muir-Mackenzie.) But the class of boys who are capable of taking education will not go in for that?—No.

23,408. (Mr. Shipley.) I gather you feel there is a divergence between the teaching of the school and what the boys go in for?—Yes.

23,409. Have representations been made to the Civil Service Commissioners on this point?—I cannot tell you.

23,410. Your Association has not made any?—No; I do not think my Association has taken any steps. You must remember I am rather a young member of the Association.

23,411. How do your boys learn about the existence of this class of second division clerks, and boy clerks, and so on? Is it advertised in the school, or do they learn it from one another, or come and talk to you about it?—A good many of them are the sons of Civil servants; besides there is always Clark's College.

23,412. Does Clark's College advertise very extensively?—Yes. Have you ever seen a prospectus of Clark's College? I have one here.

23,413. I would like to see it. I gather from your memorandum that they are going to drop science from the second competitive examination for the junior appointments: that is to say, chemistry and physics come out of Class II. (Lower Standard), and out of Class III. (Higher Standard). Is that so?—Yes, I have the new regulations.

23,414. You say, "The decision to remove in the intermediate examination, science subjects from the list of those in which marks can be obtained on the higher scale"?—If I may give you this, the paper of regulations, it will make it clear. (Handing in paper.)

23,415. Do you know at all why that has been done. Class III., the higher standard, now contains mathematics, French, German, Latin, and Greek?—They have knocked science from the list of subjects in which you can get up to a maximum of 4,000.

23,416. (Chairman.) Have they dropped out history also?—They have dropped out history, but it does not make very much difference. Originally you could take English history in the 2,000 list, or combine English history and European history in the 4,000 list. Now you can take European history and English history separately, so that you can get 4,000 marks in the two subjects, and that is all you can get. What they have said is: "We will not have science specialists."

23,417. (Miss Haldane.) Is the leaving certificate you speak of something like the Scotch leaving certificate? Do you know about that?—No, I do not know about that, but I imagine it is about the same level.

23,418. It admits to the universities?—The standard that we are thinking of for the London schools leaving certificate is the matriculation standard.

23,419. In Scotland it is not so much a book examination as a statement of record. Is that your idea?—It is an examination in the school syllabus. What one does in London is to present the school syllabus, and if the university approves of it they will examine on that. I mentioned the school record, which I should like to see added, but it is not taken at present.

23,420. In our Scotch leaving certificate we have the school record taken?—I think that is very important.

23,421. But you said not a Government examination. Our Scotch examination is a Government examination?—Yes.

23,422. Is that a point you are strong about at all?—No, I do not know that it is. I have never contemplated a Government school leaving examination.

23,423. You have not strong views on it?—I think the universities could do it.

17 January 1913.]

Mr. R. F. CHOLMELEY, M.A.

[Continued.]

23,424. It is a national examination, and that is all you go on?—Yes, but we are rather opposed to a Board of Education examination.

23,425. On what ground?—We would much rather have it done by the universities.

23,426. Or in conjunction perhaps with the universities?—We rather want to make the universities responsible for it.

23,427. The lower scholarships you speak of are entirely on examination and not on record at all—scholarships from elementary to secondary schools?—Entirely on examination.

23,428. That is not on record as we have it in Scotland?—No, not at all. They have this paper examination and then they apply at the schools which take them, and we have a kind of oral examination in order to select.

23,429. I suppose you find certain children develop later?—Yes.

23,430. And therefore miss their chance, so to speak?—Yes; and that the county council has attempted to meet by instituting these supplementary scholarships which they give at the age of 13 or 14.

23,431. And those who miss that again may go into the central schools?—Yes.

23,432. What sort of curriculum have they in the central schools? Is it to prepare them only for trades?—That is what it comes to, I think, but what it was intended to be was really an educational curriculum based upon arts and crafts and things of that kind.

23,433. Is there anything corresponding to it in Germany so far as you know. Does not the *Real-schule* correspond to it?—No, I do not think so.

23,434. But they practically do not get any education of a literary description from those schools?—No, they were definitely intended to educate boys who were not literary but who had ability.

23,435. At what age do they go to those schools?—They go I think generally from the end of the elementary school period—from 14—and they are supposed to stay until 16, but I know they have the very greatest difficulty in inducing them to stay.

23,436. But they are given other instruction besides the technical instruction?—Yes; they are not intended to be technical schools.

23,437. Do you consider science is a valuable subject for future Civil servants to take up?—I think so, so far as any particular subject is valuable.

23,438. Do you have in your schools technical subjects taught—handicrafts or anything of the kind?—No, but we have a certain amount of manual instruction.

23,439. Do you consider that an important part of the curriculum?—Yes, so far as I can consider anything is which only a limited number of boys take. I should like to have more of it. It is really rather a junior subject.

23,440. But you have science taught systematically?—Yes, right through the school.

23,441. I gather that you consider the educational ladder is fairly good in London and very uneven throughout the country?—Yes. I think I have instanced the case of a head master in Cumberland who told me that he had, I think, 30 or 40 candidates for seven or eight school places, and he would willingly have taken the whole of the 30 or 40.

23,442. Do you find special preparation or cramming is harmful to the health of pupils? Have you had any experience of it?—I do not know whether it is. The mere fact that the boy has been cramming for an examination does not hurt him except that it very often goes on at night.

23,443. But you object to it from an educational point of view?—Yes, it is not an education in any sense. It is simply a very ingenious method of dodging examiners. In the most successful cramming establishments for the Civil Service there is no teaching at all. They do nothing but test papers for which model answers are given, and when a boy has answered for himself and received a model answer to every conceivable question that the Civil Service Commission can ask, he is likely to get through, and he does.

23,444. You put no educational value upon that?—No, not by itself.

23,445. But may it be useful for future work? Very frequently men have to cram up subjects, and it may be useful from that point of view, but not educationally?—Yes.

23,446. (*Sir Donald MacAlister.*) The chief objection from an educational point of view to the second division examination is that its limits of age are 17 to 20, and these do not correspond to anything in the educational system?—Yes, that and the nature of the examination.

23,447. But that first. The nature of the examination has been largely determined by that anomalous range of age?—I do not know that.

23,448. The subjects contained in the examination are not those that are taught in schools?—I do not know what can have determined the inclusion of copying manuscript. One would not think that particularly appropriate.

23,449. Therefore the preparation for the examination must have taken place outside schools and in special establishments?—That is so.

23,450. And those subjects lend themselves to that particular kind of instruction, I presume?—Some of them.

23,451. In your opinion, if the age for the second division were made to correspond to a definite educational stage there ought to be no difficulty in providing a competitive examination in school subjects which would be educationally sound?—No, none.

## FIFTY-EIGHTH DAY.

Thursday, 23rd January 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Rev. The LORD BISHOP OF SOUTHWARK.

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.

Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B.,

K.C.

Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR BOUTWOOD.

Mr. JOHN ROBERT CLYNES, M.P.

Mr. SAMUEL JOHN GURNEY HOARE, M.P.

Mr. RICHARD DURNING HOLT, M.P.

Mr. PERCY EWING MAIHESON.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. PHILIP SNOWDEN, M.P.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. CLAUD SCHUSTER called and examined. r

23,452. (*Chairman.*) You are the secretary and legal adviser of the National Health Insurance Commission of England?—I am.

23,453. And you come to tell the Royal Commission all about the National Health Insurance Commission?—Yes.

23,454. Would you, before you begin, tell me what has been your experience in the public service; how did you enter the public service?—I was first secretary to a Commission set up under the London Government Act 1899; that was an unestablished position, of course. I served in that capacity until 1902. In

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

February 1903 I became temporary legal assistant to the Board of Education, a whole-time officer, and I held that position until March 1904. I then became part-time temporary legal assistant to the Board of Education, and was employed in the office of the Parliamentary Counsel until February 1907 when I became permanent legal assistant and assistant secretary to the Board of Education. In December 1911 I was appointed chief registrar of friendly societies, and in February 1912 secretary to the National Health Insurance Commission (England.)

23,455. Would you give us very briefly a skeleton outline of the organisation. The chief body is the Health Insurance Commission?—Yes.

23,456. How is the Commission composed? Who are the Insurance Commissioners?—There are four Insurance Commissions for the four parts of the United Kingdom—England, Scotland, Ireland, and Wales.

23,457. That is so; but we are only dealing at the present time with the English Commission, Please concentrate your attention upon the English Commission?—There are eight English commissioners.

23,458. Will you give us their names?—The chairman, Sir Robert Morant; the vice-chairman, Dr. Smith Whitaker; and six commissioners: Mr. Bradbury, Mr. G. S. Robertson, Miss Mona Wilson, Mr. J. Lister Stead, Mr. D. J. Shackleton, and Mr. Thomas Neill.

23,459. These form the English Commission?—Yes, we call it the English Commission, though its proper title is the Insurance Commission.

23,460. Sir Robert Morant is the chairman. Will you tell me briefly what his previous career in the public service has been?—I cannot tell you the exact date when Sir Robert Morant first entered the Service.

23,461. Did he hold permanent office in the Civil Service before he became chairman of the Insurance Commission?—He was, until he was appointed to that office, permanent secretary to the Board of Education.

23,462. Then he was transferred from that post to the chairmanship of the Insurance Commission?—Yes.

23,463. What was Dr. Smith Whitaker?—Dr. Smith Whitaker was medical secretary of the British Medical Association.

23,464. He was not previously in Government employ?—No. Mr. Bradbury is a principal clerk under the Treasury.

23,465. Therefore he must have entered the Service by the Class I. examination?—Yes. Mr. Robertson is chief registrar of friendly societies, and holds his office as a commissioner, *ex officio*, according to the Treasury warrant.

23,466. What was his previous official experience?—He was appointed chief registrar of friendly societies, when I went to the Insurance Commission, as a barrister of 12 years' standing, I think it is, in accordance with the Friendly Societies Act.

23,467. Was that his first experience of the public service?—Yes.

23,468. When was he appointed chief registrar of friendly societies?—In February 1912.

23,469. Was he transferred, then, to the Commission?—He continues to hold the office of chief registrar of friendly societies; he is not paid as a commissioner.

23,470. He is an unpaid *ex officio* member?—Yes. Miss Wilson was not in the public service, but she was closely connected with the Trade Boards set up under the Trade Boards Act, and was doing work for the Board of Trade, I believe, in that capacity. I am not sure, but I do not think she had any actual paid position.\* Mr. Stead was general secretary of the Ancient Order of Foresters, a friendly society.

23,471. That was not a Government appointment?—No, that was a friendly society carrying on operations under the Friendly Societies Act. Mr. Shackleton had been Member of Parliament for the Clitheroe Division of Lancashire, and at the time of his appointment he was labour adviser (I think that was his title), in the Home Office.

\* Miss Wilson was an "Appointed Member" on two Trades Boards, and was paid a fee of three guineas per day while employed.

23,472. He was a permanent official of the Home Office?—He was.

23,473. But of recent date?—Yes, I should think of recent date. I cannot remember the date when he was appointed to the Home Office. Mr. Neill was, I think, manager, certainly he was on the board of the Pearl Insurance Company, an industrial assurance company.

23,474. He was not in public employment?—He was not a Civil servant.

23,475. That being the *personnel* of the Insurance Commission, would you, before we go into the organisation, tell me the relations to the head Commission of the Advisory Committee, the County and Borough Insurance Committees, and the Joint Committee?—May I begin with the Joint Committee?

23,476. If you please?—The Joint Committee is set up under section 83 of the Act, to put it quite briefly, to co-ordinate the relations of the four separate National Commissions. Its functions are such as are assigned to it by regulations made by the Treasury under that section.

23,477. The Joint Committee does not comprise any representation from the Advisory Committee or the County and Borough Committees?—No. The Joint Committee is composed of ladies and gentlemen appointed from the several Commissions, with the addition of Sir John Struthers and Mrs. Creighton, who were put on by the Treasury from outside.

23,478. Are the members of the Joint Committee delegated by the four National Commissions?—They are all members of one or other of the National Commissions, except Sir John Struthers and Mrs. Creighton, who were put on under the powers conferred upon the Treasury by sub-section 1 of section 83 as exercised under these regulations which the Treasury made for the purpose.

23,479. Is there a chairman of the Joint Committee?—Yes, their chairman is Mr. Masterman, financial secretary to the Treasury, and Sir Robert Morant is their deputy or vice-chairman.

23,480. Is the chairmanship of the Joint Committee a paid appointment?—No.

23,481. Can you say what the reasons are why Sir John Struthers and Mrs. Creighton were put on the Joint Committee?—The Act provides for the constitution of a Joint Committee of the several bodies of commissioners, "consisting of such members of each such body selected in such manner as may be provided by regulations, and of a chairman and other members (not exceeding two in number) to be appointed by the Treasury."

23,482. Does the Joint Committee sit in London?—Yes.

23,483. Can it take the initiative in all questions, or does it deal only with questions referred to it?—It takes the initiative in dealing with a number of questions.

23,484. And in taking the initiative can it come to definite resolutions and make definite recommendations?—Yes, it can act.

23,485. Can you tell me the relations between the Joint Committee and the Commission?—In the first place, to test it by the machinery, the Joint Committee has no staff at all. It had some little staff at first, but it was found very inconvenient to run two staffs together in one building dealing with the same set of subjects, and what we do now is that the staff of the English Commission works for and under the direction of the Joint Committee, while their discipline is looked after by the English Commission. That is true of all except the actuarial department; the actuary's work is so common to all the four countries that it was considered that the actuary ought to be the servant of the Joint Committee and borne on their vote, and he is so borne with his professional assistants, but not with his clerical assistants, who will be provided for him by the various Commissions whenever they happen to be wanted.

23,486. Should I be correct in thinking then that the Joint Committee is the really effective body?—It is for some things—not for others. In the early days it was by way of being the most effective, because most of the things that had to be done had to be considered

23 January 1913.]

MR. CLAUD SCHUSTER.

[Continued.]

in concert between the four sets of commissioners; but as the administration of the Commission proceeds, I think each of the four Commissions will more and more become more effective, if I may put it so, to the exclusion of the Joint Committee, and the Joint Committee will meet more seldom. At first it was almost in permanent Session; but now it meets but seldom, because everything that is done by each of the Commissions is done in concert with the other Commissions, whether by the medium of the Joint Committee or otherwise, who keep one another informed, because a decision taken in England would prejudice very seriously what was done in Scotland and *vice versa*; there are national peculiarities in each country of course which the other country does not interfere with at all.

23,487. Shall we, before we go further, dispose of the Advisory Committee?—If you please; the Advisory Committee is what its name implies, merely an advisory committee. It is only set up for the purpose of giving advice to the Joint Committee or to the separate Insurance Commissions as the case may require. It is set up under section 58 of the Act, and again, to be accurate, there are five Advisory Committees; there is an Advisory Committee to the Joint Committee, and an Advisory Committee for each of the four separate Commissions. As a matter of fact, very often all five meet together as one body. They do not pass resolutions; we submit to them various drafts of proposals, and their opinions are elicited in the course of debate.

23,488. Does the Advisory Committee comprise any paid members?—No.

23,489. They are all unpaid?—They are all unpaid.

23,490. Is the Joint Committee an unpaid body?—The Joint Committee are all unpaid, except in so far as they are paid as members of the separate Commissions or by reason of some other office.

23,491. Are all the members of the separate Commissions paid?—They are all paid in one way or another; but Mr. Bradbury, for instance, is not paid anything on the vote of the English Commission, nor is Mr. Robertson; they draw their pay from the Treasury or from the chief registrar's office as the case may be.

23,492. That is to say, they retain a lien upon their original appointments?—They do their original work, I cannot say just as before, because our work takes up a great deal of Mr. Bradbury's time; but he is still a principal clerk at the Treasury and does the work of a principal clerk of the Treasury.

23,493. Do you mean to say that that arrangement has held good from the very commencement?—Yes.

23,494. He was not seconded for this particular work?—I do not think he has been actually seconded, and certainly his salary has never been put on our vote, and we have had the great advantage of being able to get as much of his time as anybody could give to anything, which means a great many hours a day.

23,495. Now we come to the County and Borough Insurance Committees?—The County and Borough Insurance Committees are constituted under section 59 of the Act; there is an Insurance Committee for each administrative county and each county borough. At present their constitution is only provisional, because the various steps that have to be gone through before you can get permanent constitutions have not yet been fully taken; that is to say, they ought to be elected by a particular body which has not yet been ascertained.

23,496. When they are fully constituted will they have original powers of initiative?—They will have original powers of initiative within the area in which they operate.

23,497. Will they operate under the general control of the Commission?—They will operate under the general control of the commissioners in the same sense as the council of a county borough or a county operates with the assistance and under the supervision of the Local Government Board or the Home Office.

23,498. That is, in broad outline, a sketch of the general framework of your organisation?—That is so.

23,499. Will you now tell me what establishment you have—what staff you have under the English

Insurance Commission, the central body?—The scheme of the whole thing is that the secretary is the channel of communication between the commissioners above him and the whole of the staff below; that is to say, in theory everything flows through the secretary to the commissioners. The English commissioners themselves are not departmentalised; they sit as a Board but they also sit in committees a very great deal, those committees being attended by members of the staff as secretaries to those committees. These are temporary arrangements which change from time to time. At the top there is the secretary, that is myself; then all the rest of the thing is to a certain extent provisional, and it is a little difficult to describe, so as at the same time to show what there really is and to give a true idea of the thing. Roughly speaking we have tried to divide the staff according to the functions it has to perform, and in the first place it naturally falls into two rather big parts, that is to say, collection on the one hand and administration on the other. All the more numerous part of the staff is engaged upon one or the other of these two duties.

23,500. We shall get at it, perhaps, more easily if you will tell me into what departments your staff is divided; we shall then be able to see whether your staff is suitable and appropriate to the functions it has to discharge?—We have divided it roughly into eight departments, which are set out on page 5 of the statement I have supplied. I tried to set out on page 4 of that statement a rough division of the kind of work we have to do, and I tried to set out on page 5 the kind of arrangements we have made to deal with those functions. They are as follows: (1) To deal with the provisions of the Act as affecting individual cases; (2) To deal with societies; (3) To deal with Insurance Committees. Those three departments are each of them in charge of an officer who is directly responsible to, and in close daily touch with, the secretary and thence the commissioners. (4) Accounts, which in size, of course, is as big as all the rest of it put together, because that means not only accounting for the money when we have got it, but also the work of receiving cards from the country, sorting them out to the various societies that they belong to, and then carrying in the credits to the societies, which implies in turn the handling, once a quarter, of somewhere between 12 and 14 millions of cards, and counting up the number of stamps on each card—and you can imagine the sort of questions that are likely to arise when you are dealing with that kind of business; the collection of revenue by sevenpences is a difficult and complicated thing. Then there are the three departments which serve all the previous four departments as more or less adjuncts, (5) Legal (advisory) drafting, litigation; (6) Outdoor Staff (inspectorate); and (7) General.

23,501. Let us begin with the first. "To deal with the provisions of the Act as affecting individual cases." That is essentially, I presume, the work of the staff of the Joint Committee?—No, that is rather more, I think, an individual English function. We have to deal, for instance, with the case of the outworkers, that is the kind of problem that that part of the office has to deal with.

23,502. Did I not correctly understand you to say that at the present time the Joint Committee is really the operative body. It may cease, in course of time, to be the operative body, and the English Commission will take its place, but at the present time does not the Joint Committee do most of this work?—No, all the work all through has been done, as I said before, by the staff of the English Commission.

23,503. Which is also the staff working for the Joint Committee?—It is very difficult to distinguish, except when a particular decision is being arrived at in commission or committee, whether it is the work of one body or the other.

23,504. Are we to understand that the staff which deals with the first point in your paragraph 6 is the staff of the Commission?—Yes.

23,505. And that staff is the staff that you show on this paper?—Yes, but that is only part of the staff I show on this paper. The staff shown on this paper is

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

divided among these various heads, which I have tried to give.

23,506. What I want to know is what is the staff that works under the Commission?—The whole of the staff shown on this paper works under the Commission.

23,507. What I want to ascertain is, the central administrative staff. We will come afterwards to the staff that you employ on the accounts and in other ways. We cannot go through the whole of the details, but is not your office organised on the same plan as other Government offices, namely, an administrative staff at the top, and under it the various divisions of clerks in their various grades?—Yes; if you will take the printed paper, the statistical return, what is shown on pages 2 and 3, and the first part of page 4, is what I think you would call the administrative staff.

23,508. That is what I thought?—With the exception of the accountant and comptroller-general, who is the gentleman in charge of all the accounting operations; but, of course, he is an executive and administrative officer.

23,509. Am I not right in saying, that the administrative work of your office is done by those gentlemen shown on pages 2 and 3 and the first part of page 4?—Yes; and then, of course, when you get to the later groups on page 7 to the end—

23,510. These would be working in accordance with directions that they receive from the administrative staff?—Yes.

23,511. Would it not be convenient if you were to divide the staff in that way?—Certainly.

23,512. I find, then, that you are the chief administrative officer?—Yes.

23,513. And you have reached your present position by transfer from another Government office?—Yes.

23,514. Then, under you, there are three assistant secretaries?—There is only one, actually. There are three sanctioned but only one in office.

23,515. And he came into the Service by open competition?—He came in, originally, by open competition.

23,516. And was transferred from his former department to the Commission?—That is so.

23,517. That is quite in the regular course of things. Then you come to the accountant and comptroller-general. He previously was a Treasury officer of accounts, and came into the Service by open competition?—Yes.

23,518. That is also quite regular. Then you come to Group II, the senior clerks?—There are two senior clerks.

23,519. One was appointed under clause 7 of the Order in Council and the other was transferred from another department?—Yes.

23,520. What was the official history of the gentleman who was appointed under the Order in Council?—He was a gentleman, who, during the whole of the year 1911, and indeed from an earlier time, had been at work on the Bill, not for the Government but for various committees or groups of members of the House of Commons. He was a gentleman who certainly had very exceptional knowledge of the Bill (which was rather a complicated measure) and he was taken in on that ground.

23,521. He was taken from outside because of his knowledge of the origin of the Bill, its gradual growth. He is now a Government servant?—Yes.

23,522. Is he now brought on to the establishment?—Yes.

23,523. The other officer was a Civil servant, who came into the Service by open competition in the usual way?—Yes.

23,524. Then there are seven principal clerks, three of whom came in by open competition in the Class I. examination?—Five of them.

23,525. Is that so?—Yes.

23,526. Out of the seven, five came in by open competition in the Class I. examination?—Yes.

23,527. One came in under clause 7 of the Order in Council?—Yes.

23,528. How did the other come in?—The other was a first class staff officer of the Board of Trade. I do not know how he got into the Board of Trade.

23,529. He came from the Board of Trade?—Yes, he also was a person who had worked on the Bill in the Treasury all the time.

23,530. All that seems to me to be regular. You have six out of those seven officers coming in on transfer from another Government department?—Yes.

23,531. And out of the six, five had passed into the Government service by the Class I. examination?—Yes.

23,532. The only appointment that could be objected to, as out of the regular line, is the gentleman who came in because of his knowledge of the various phases of the Bill in passing through Parliament?—Yes. I do not want to argue the point, but it might perhaps be remembered that we had to deal with something that no one has ever had to deal with before. No Government department existed at the time of the passing of the Bill, which was in very close touch with this kind of thing. Of course, the chief registrar of friendly societies knew a great deal about one side of it, and the Board of Trade knew something about another side of it, but there was no organised Government department anywhere that knew anything about insurance.

23,533. I am not making any criticism so far; on the contrary, the impression on my mind up till now is, that you have drawn your staff very largely and properly from the regular staff in the public service?—We have tried so far as we possibly could to take the ordinary Government course and none other.

23,534. Then there is your staff superintendent. He was taken from the Board of Education, and he came in by open competition?—Yes.

23,535. Then there are 12 junior clerks?—There is really only one junior clerk; there are 11 clerkships that will be filled when we reorganise, but there is only one in actual operation, and he was a junior clerk at the Admiralty.

23,536. That is all right, you will fill the other clerkships as necessity arises?—Yes.

23,537. How do you propose to fill them?—As far as we can we shall fill them from among those gentlemen who already appear either as first class clerks or as second class clerks, or else by promotion of second division clerks, or minor staff clerks in the office. We shall not go outside until we have done everything we possibly can to fill them from inside.

23,538. Your intention is to fill these vacancies by promoting men already in your office; you will, if you can, promote deserving men from the lower grades?—Yes.

23,539. That is quite right, but then you will have to fill up the vacancies in the lower grades; how do you propose to do that?—If you look on page 3 you will see that we have 12 junior clerks authorised and only one appointed, and 15 first class clerks. Then on the next page there are 13 second class clerks also authorised, and all filled. We shall certainly not carry an establishment of 15 first class and 13 second class; we shall try to appoint these to be junior clerks, and we shall not fill up the vacancies made by those appointments among the first and second class clerks at present, if ever. That is not an establishment that we should propose as being a proper establishment.

23,540. What do you mean by junior clerks; do you mean clerks ordinarily recruited by the intermediate examination?—No; by junior clerks we mean clerks ordinarily recruited by the Class I. examination.

23,541. Your nomenclature is somewhat misleading, is it not?—I believe they call them by all sorts of names in different offices in the Service. I do not think there is any standard of nomenclature. The reason why we call them junior clerks is because we have already people appointed, the first two or so, called first or second class clerks, and we could not think of anything else to call them.

23,542. You had a great opportunity of reforming a nomenclature, which, in the opinion of some, sadly needs reformation?—I know, but we had so many new things to do at once that we did not feel ourselves up to that effort.

23,543. But the scale of pay sanctioned for these junior clerks is from 200*l.* to 500*l.*?—Yes.

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

23,544. But will you get any of your first class for that grade, because, although the first class clerk's increment is somewhat less than the junior clerk's increment, the first class men begin on a higher scale?—We should transfer them from the first class to the corresponding position in the junior clerkships. The only effect on them would be that they would get 20% increment instead of 15%.

23,545. But they are promoted from second class clerks. Is a second class clerk supposed to be a man who has passed in by the Class I. examination?—The ordinary entrance to a second class clerkship, I suppose, would be by the intermediate examination.

23,546. No, second class clerk is a name earmarked in the Treasury, at all events, to the grade into which a man passes by the Class I. examination. The second class is the grade in which he is placed immediately on entry into the public service?—I agree, if I may respectfully say so; but I do not think that these names can be used so as to indicate classes. I do not think that because a man is called a second class clerk you can say with any certainty what kind of creature he is; you have to look at the kind of pay he gets when he is appointed, what his salary is, and his range of maximum to find out what he is, and these scales that are set down for first and second class clerks are scales appropriate to the intermediate class on entrance. But, as a matter of fact, we have taken five persons into the second class clerk grade from the Class I. examination. Those are the only five we have taken at all from outside.

23,547. That is to say, you have transferred them from other departments?—Some of them we have transferred from other departments, but we have taken five from the Class I. examination.

23,548. Has a Class I. examination been held for these appointments?—We took them from the general Class I. examination held the year before last; but the rest of the second class clerks have all been taken by transfer from the public service from one position or another; they are of all sorts of origins.

23,549. (Mr. Matheson.) Are these 54 Colonial Service and Indian Civil Service men?—No, there are five taken directly. If you look at column 4 b on page 4, you will see, "Open Competition, 5."

23,550. (Chairman.) Does that exhaust the administrative staff of your central office?—Yes.

23,551. Then you have the accounts, which is, of course, a great division?—Yes; the head of the accounts is the accountant and comptroller-general, who is shown on page 2. He is a gentleman who has had the ordinary Class I. career; he entered by the ordinary Class I. examination; I think he was a clerk in the War Office, and subsequently, Treasury officer of accounts.

23,552. Then there are five accountants shown on page 4?—Yes.

23,553. They were all taken from the public service?—All except one, who was an unestablished officer, the last one who came in, who was secretary to the Trades Board; when we found him he was in the public service.

23,554. He was working in the Board of Trade?—Yes, but, I believe, he was not established.

23,555. That is clear enough. Then you have 14 assistant accountants?—We have actually 12, but we have 14 sanctioned. They are shown immediately below the accountants. Then come the examiners—that is the lowest grade of the accounting people.

23,556. They have all been in the public service?—Yes.

23,557. You have merely transferred them?—Except that we have appointed 12 of them by open competition in the intermediate examination. They are shown on page 6, column 4 b.

23,558. By "examiner," I suppose you mean a kind of subordinate accountant?—Yes, I believe, it is a term used in the Accountant-General's office.

23,559. There are 56 of these officers, 12 recruited by open competition?—Yes.

23,560. Twenty-nine transferred from another department?—Yes, and 11 promoted—obtained by pro-

motion. Those are people who previously passed an open competitive examination, except one.

23,561. They had all previously been in Government employment?—Yes, and all entering the Government service by open competition, except one, who was, in a sense, a Government servant, but not an open competition person.

23,562. It cannot be said that there is any improper exercise of patronage, or indeed any patronage, in all this?—I hope not.

23,563. Does this next group deal with accounts too?—No, Group V. will be returned as the administrative head office. These gentlemen next shown are the second division clerks and assistant clerks and their supervisors, working either at Wellington House, or some of them at Maida Hill, under the other people; the appointments of all of them are very straightforward.

23,564. Those all come from the second division and minor staff clerks?—Yes.

23,565. By examination?—Yes.

23,566. The appointments in Group V. are unobjectionable so far as I can see. Group VI. are second division officials; they are recruited from the second division?—Yes; they are just ordinary second division clerks.

23,567. Twenty-two of them entering by open competition?—Yes.

23,568. That is a clean bill, too. Then Group VII.?—Group VII. are the supervising assistant clerks who are proper to the intermediate establishment, which the accounting side of the office will be. Next come the assistant clerks, who are found, of course, in any office, and then a few boy clerks; we have kept that class down as much as we could.

23,569. Did the 158 assistant clerks pass in in the regular way?—Yes, they passed in in the ordinary way.

23,570. By open competition?—Yes.

23,571. And the typists?—The typists passed in in the ordinary way.

23,572. Then you pass on to the messengers and pensioner messengers, and so on?—Yes.

23,573. And on page 12 we come to your law department?—Yes.

23,574. These gentlemen were appointed under clause 7 of the Order in Council. They are professional officers?—Yes.

23,575. And the medical officers?—Yes.

23,576. Then you come to your divisional inspectors. You have nine vacancies?—I am sorry to say there are now 10 vacancies. One of the gentlemen shown here as a divisional inspector has died since the date of this return.

23,577. Who has died?—Mr. Shearme, the gentleman marked as an Indian civil servant (retired).

23,578. Had he any special qualification for being appointed divisional inspector?—He was a gentleman who had had considerable Indian experience; he had passed the Indian Civil Service examination.

23,579. Was he a pensioned officer of the Indian Service?—He had been a pensioned officer. He retired on grounds of health. He was reported by his doctor to have recovered from the ailment that caused him to retire from the Indian Civil Service. He was a gentleman certainly of very great capacity, both as judged beforehand and as judged by experience.

23,580. What is the duty of the inspector grade?—The duties are two-fold: the first to see that the Act is being carried out; that is to say, that persons are properly insuring their employes, and secondly to afford assistance to societies and Insurance Committees throughout the country in carrying out their duties.

23,581. Would an inspector be justified in going into a factory and ascertaining from the operatives whether they were insured?—Yes, an inspector has conferred upon him by section 112 of the Act the same powers as are conferred upon an inspector under the Home Office "To enter at all reasonable times any premises or place . . . where he has reasonable grounds for supposing that any employed contributors or workmen in an insured trade are employed," and "to make such examination and inquiry as may be necessary," and the rest of it just like the section in the Factory Act.

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

23,582. There are 50 male inspectors, 20 of whom were appointed by limited competition. How was that limited competition carried on?—In the first place a committee was set up by the Treasury over which Sir Francis Mowatt was good enough to preside, which made recommendations as to how the officers should be selected. According to their recommendations a committee of selection was set up, presided over by Mr. Stanley Leathes, the Chief Civil Service Commissioner, and that committee received all applications. In the first place there was advertisement, and then they received all applications from persons who wished to go in for the examination, and they selected from the applicants such people as they thought might reasonably be expected to be good public servants; they interviewed them and made a further selection, and then sent the persons so selected in for an examination which the Civil Service Commissioners conducted.

23,583. Who formed the Committee of Selection; how many were there?—The Committee of Selection consisted of Mr. Stanley Leathes, Mrs. Deane Streatfeild, Mr. Baddeley of the Admiralty, Mr. Mallory and Sir Arthur Tedder of the Customs. Mr. Mallory was a gentleman appointed on the suggestion of the Civil Service Commissioners: I believe he had done other work for them. Mrs. Deane Streatfeild, Mr. Baddeley, and Sir Arthur Tedder you probably know.

23,584. Then those who were selected were examined by the Civil Service Commissioners?—Yes.

23,585. Was it a simple examination?—Yes, there was a sort of three-fold list. It was thought that it was desirable to obtain persons who had a special knowledge of trade union conditions and persons who had a special knowledge of friendly society conditions, and it was not fair to send them in to a simple competition against the outside world; accordingly the Commissioners decided in advance what proportion of persons they wanted in each of those directions, friendly society persons and trade union persons, and these people all went in for the same examination with three separate lists kept.

23,586. So that they were practically examined in selected subjects?—They were examined partly on general subjects, and they had a paper on the Act.

23,587. They were divided into three classes?—Yes.

23,588. And the competition was within each class?—Yes.

23,589. Did that method of selection apply to the assistant inspectors?—It applied to all these various kinds of inspectors, but not to the health insurance officers, inspectors and assistant inspectors, and of course not to the women.

23,590. There are women inspectors?—Yes, they were also appointed by limited competition.

23,591. How were the male Health Insurance officers selected?—In that case another selection committee was set up which consisted of Dr. Colquhoun as chairman, Mrs. Deane Streatfeild, and Mr. R. T. Wright, and they selected people for the Health Insurance officers' examination, which was only a qualifying one. It was impossible to examine people of that grade competitively—we should not have got any result at all; at any rate that is what the Civil Service Commissioners thought.

23,592. Was any preference shown to people already in Government employment?—Yes, the persons who came from Government employment did not go in for this examination at all, they were transferred direct from their present situations to the position of inspector or assistant inspector as the case might be, also after having been seen by Mr. Stanley Leathes' Selection Committee.

23,593. Was anything like a certificate of the Civil Service Commissioners required?—Yes, they required certificates, but the Commissioners had nothing to do with that beyond telling the Selection Committee how many they wanted from the public service, and how many from outside, and then they appointed or did not appoint the people whom they recommended. They did not select the people.

23,594. Shall we turn now to page 14?—Yes.

23,595. There we come to the organiser of the female staff: how was she selected?—The organiser of the female staff is Mrs. Deane Streatfeild; it is only a temporary appointment.

23,596. She had been in the Government service?—She had been in the Government service as an inspector under the Home Office and had retired.

23,597. Then there are 50 female inspectors; how were they selected?—Just in the same way, their applications went to the Selection Committee, and then there was a sifting process and then some were sent in for examination and appointments were made.

23,598. You only show ten so far as I can make out?—That is all there are.

23,599. There are 50 shown in the first column?—I am afraid it is rather confusing. The 50 who appear on page 14, column 1, are the same 50, if I may so put it, as appear on page 12, column 1. It means a total establishment, men and women, of 50. There are only 10 women inspectors.

23,600. You show ten here, of whom five were appointed after a qualifying examination. Was that a competitive examination?—No, it was intended to have been a competitive examination, but when it came to the point the committee only put forward as many names as there were vacancies, or one or two more, and it appeared ridiculous to send six people in to compete for five places. As a matter of fact I think one dropped out for some reason, and the others were left to pass a qualifying examination.

23,601. Was there any reason why the committee did not select more and make the examination more effective?—It was too late. I have not looked into the matter lately, but my recollection is that the committee, who had had very long labours, had dispersed to the country, and when we found their recommendation it was this, and we could not collect them again, and we had to do the best we could. My impression is that they proposed six for the qualifying examination, and one of them did not qualify.

23,602. Were the lady assistant inspectors selected in the same way?—They were all selected in the same way until you come to the Health Insurance officers, who again passed only a qualifying examination.

23,603. You have a considerable lump sum that you spend outside?—Yes. The lump sum shown for the first five items there is my own lump sum, as it were.

23,604. Does that lump sum tend to show an increase or a decrease?—I think it is too early really to know. I am hoping very greatly that some of the gentlemen who are remunerated out of that lump sum will become public servants. I very much dislike the lump sum arrangement myself. I see no object in it whatever, and I dislike it very much indeed.

23,605. If the work fluctuates, is it not a reasonable arrangement?—So far as the third heading, "Temporary professional clerks (barristers)," etc., is concerned, that observation I think is just; but so far as the earlier people there set down are concerned it is perfectly certain that this department, like any other, will always require professional clerks, and you cannot take them on and turn them off; you have to treat them reasonably when once they come into the Service—you cannot turn them into the street after five or 20 years' service because the work is up or down a bit. The temporary barristers are a different thing altogether, because the department is in such a very exceptional state at present, and it is a convenient way of getting temporary people; but the other lump sum people I think are the sort of people you find anywhere except in the Labour Exchanges and the Customs, and I hope as time goes on that the establishment will standardise itself more.

23,606. I have no further criticism to make on your mode of manning your office, but having appointed your staff you will be soon confronted with questions of promotion. Your staff is at present in a somewhat fluid state, and you will have to apportion them off into more clearly defined grades if you want to have an effective system of promotion?—Yes.

23,607. That work is before you, and you are hardly in a position to speak upon it now; it is a thing

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

of the future?—Yes. I should only like to say what this statement does not show, that we had and still have working for the Commission (the number of course has varied from time to time) somewhere between 10 and 15 gentlemen who have been detached from other offices in the Service; some of them are acting as heads of departments, while others are acting as ordinary clerks, and when they go back, as I am afraid many of them must, to their departments, then perhaps the question of organisation and promotion will arise.

23,608. You have not thought out that matter?—We have considered it vaguely, but we have not come to any conclusion.

23,609. You have not thought out the question whether your office shall be organised on a second division basis or otherwise?—I think that such sanctions as have been given by the Treasury indicate what I think the Commission also think, that, quite roughly, the organisation of the office will be, as to a small part, Class I. clerks with second division clerks and minor staff clerks and staff clerks, and, as to a very large part, on the intermediate basis.

23,610. Has the question been thought out as to whether it should be on the intermediate basis or on the second division basis?—I think so, quite distinctly, as far as regards the accounts side.

23,611. What is the reason why you prefer to have it on the intermediate basis, that is to say, clerks recruited by the junior standard; why should it be organised on that more expensive basis, and not on the basis of the second division?—I do not know. I was not offering any opinion on the subject; I was only stating the fact.

23,612. But it would be useful for this Commission to know if you have gone far enough in your designs, and feel yourself justified in telling us the reasons which have induced you to proceed on the intermediate basis and not upon the second division basis?—On the accounts side do you mean?

23,613. Well, on the accounts side?—May I put it like this: We had to begin, of course, in a great hurry in late December, when we did not exist, and in January of last year, when we were just beginning to exist, and there is a great deal of precedent in the public service at present for the appointment of an accounting staff by the intermediate examination joined with assistant clerks; that we have found as almost a regular practice in the Government service, as I understand (it is not a matter on which I had any personal experience at all before I came to this business), and not unnaturally it was adopted. I personally could not express an opinion whether there is any advantage in recruiting by the intermediate examination as against the second division examination, but I do notice this fact that we have five accountants—

23,614. In your case it will not be a matter of recruiting; it will be a matter of organisation—you have your men. Why should you organise your office on an expensive basis when the less expensive, and the historical and traditional basis of the second division is open to you?—But the traditional basis of the second division implies a Class I. on the top of the second division, and that would be even more expensive.

23,615. I understood you to say that you intend to preserve a *cadre* of Class I. officers?—Yes, but not on the accounting side.

23,616. Why should you have a separation between your accounts and your second division?—I am not prepared to argue it; I cannot express an opinion on it. I have had no previous experience of an accounting department.

23,617. I am putting to you questions that must be decided one way or the other for the Civil Service generally. I wanted to know the reasons on which they were decided for your Commission?—I know the reasons on which they were decided, and I should be glad to indicate them.

23,618. The only reason you have given me for the choice of the intermediate basis is that the feeling of the Service nowadays is that accounts should be organised on that plan?—I think I might answer to that—though now I am expressing not the view of the Com-

mission, but my view just as an individual, which I have picked up in the last twelve months—that the choice, as I understand, is between an office with a Class I. at the top (I am not talking about the ideal, but what one finds), then the second division, and then assistant clerks; that is one normal arrangement. Another normal arrangement is intermediate grade at the top and assistant clerks with supervising assistant clerks below. As between those two organisations, if that is the choice, for the accounting staff, I have no hesitation in saying that the intermediate grade is better, because I think the Class I. people are too expensive for the job.

23,619. It is not a choice between a gradation of Class I. clerks, second division clerks, and assistant clerks. I want you to concentrate your attention on the one hand upon an organisation of second division clerks and assistant clerks, and on the other hand upon intermediate clerks and assistant clerks?—For accounting?

23,620. Why should not an accountant be a second division clerk; why should he be an "intermediate" clerk?—I have not an idea.

23,621. If the second division were recruited by a somewhat higher standard than is now taken, why should the intermediate grade be introduced at all?—I could not answer that question because I had no experience of the intermediate grade of people until I went to this office, and most of the people on the intermediate scales that I have known in the office of the Insurance Commissioners are, as a matter of fact, gentlemen who entered as second division clerks.

23,622. Well, I will not pursue the matter as it seems to be somewhat beyond your personal experience?—That is so.

23,623. (*Sir Donald MacAlister.*) I have only one question to ask you: What are the duties of the principal medical officer?—His present duty has, up to now, been to assist the Commission, and to assist what I may call the Medical Commissioner with his advice and assistance in dealing with the sort of medical problems that we have hitherto had to deal with wholly in the abstract. We have not had any practical work to do as yet on this side except drawing regulations.

23,624. He has been the professional adviser to the Commission on medical questions?—Yes.

23,625. But he is appointed permanently?—Yes, quite.

23,626. Will that continue to be his duty?—I cannot tell how it will shape. It is intended to appoint, as you might gather from his title, not only a principal medical adviser but also other medical officers, and no doubt it will be necessary to set up to some extent a medical inspector staff, but I should not like at this moment to lay down what line the thing will precisely take; it is a good deal in the air.

23,627. (*Miss Haldane.*) You employ a large number of women; I think a larger number than we have had before us hitherto. Can you tell me what the proportion of women employed is to men?—34 per cent.

23,628. Could you tell me about the typists, how they were appointed?—As far as possible we obtained them by transfer, and so far as they were not obtained by transfer they were obtained in the ordinary way; that is to say, people applied, and then we sent them on to the Civil Service Commissioners to pass an examination, and if they passed it they were appointed on to the staff.

23,629. Do you know whether those in other Government departments had notice of vacancies?—They certainly knew of them; it was certainly known throughout the Service that up to quite lately we have wanted typists.

23,630. But you do not know whether they really had notice that they might apply?—No notice was given, but we know in fact that they did know because they did apply.

23,631. No notice was sent round?—No.

23,632. Then you have a principal woman clerk at 150*l.*, by 10*l.* to 200*l.*; eight first-class women clerks at 115*l.*, by 5*l.* to 140*l.*; and 59 women clerks at 65*l.*, by 5*l.* to 110*l.*; most of whom appear to have been appointed by transfer: could you tell me from what departments they came?—Three came from the Board

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

of Education, one from the Board of Trade, and 60 from the General Post Office.

23,633. Mainly from the General Post Office?—Yes.

23,634. To what positions on the male side do these women correspond?—I do not think there is any exactly corresponding position—shall I just say what they do? They are divided into two parts: one works at Barton House, Queen Anne's Gate, where they keep the ledger accounts of the societies and committees; and the others work at our very big establishment at Maida Hill, where they look after the unestablished clerks and card-tellers. There is a considerable staff engaged at Maida Hill who want a good deal of looking after, I suppose.

23,635. Do the card-tellers work at Maida Hill?—They are all at Maida Hill.

23,636. I see that there are 120 at 14s. by 1s. to 16s.; are they young girls?—I do not know how old they are; they are from 16 onwards.

23,637. I see they go from 14s., by 1s. to 16s., and then by 2s. to 30s.; when do they go on to 30s.?—After two years. They begin at 14s. a week and rise by 1s. for two years to 16s., and then they go on by 2s. immediately to 30s.

23,638. Can you tell me how these girls were appointed?—24 of them were female sorters at the General Post Office who were transferred to us, 26 were unestablished card-tellers in the Census Office, and 61 were girls who had been in and qualified but not succeeded in the female sorters' examination for the Post Office.

23,639. They all entered by a competitive examination?—They all entered in a sense by a competitive examination; that is to say, the 61 who came from the female sorters' examination for the General Post Office qualified, and would have been appointed to be sorters had there been room for them.

23,640. Then with regard to all your women clerical staff, have they entered by a competitive examination?—The typists do not compete.

23,641. Practically all but the typists?—Not practically all—actually all.

23,642. Then the typists who were appointed by you did not come in from other offices?—As a matter of fact, what happened was that we saw that we could do with them more or less, and we saw whether they were worth sending on; if we thought that they were we sent them to the Civil Service Commissioners to pass the typists' qualifying examination, and if they passed that we appointed them. That is the way all Government typists are appointed at all offices.

23,643. Did you advertise for them?—No, we got plenty of applications; although I cannot say it is very easy to get them.

23,644. Will they have any opportunity of rising from typist to any higher post?—They can rise from typist to shorthand writer if they are qualified for the post, and from shorthand writer to superintendent; and there is a regular hierarchy ending at present with the chief superintendent.

23,645. That is the ultimate post that a typist can reach?—I do not want to say that. I hope that some day we may be able to promote the chief superintendent to something more.

23,646. You look forward to being able to promote the typists to another grade?—I hope so. I look forward to it, but I have not got anything definite in my mind; but on the other hand, I do not want to say anything that would shut the door against them.

23,647. Then I see there are 11 divisional inspectors; are any of them women?—No.

23,648. Then there are 40 temporary card-tellers at 18s. a week, are they also women?—Yes.

23,649. Are they appointed at rather a higher rate because they are temporary?—Yes.

23,650. Coming to the outdoor staff, can you tell me how does the work of the women differ from that of the men. Supposing you take the female inspectors, how does their work differ from men's work?—You notice, of course, to start with, that there are not so many women as men, but an attempt has been made as far as possible to share out between the men and women,

respectively, the trades in which men and women, respectively, are principally or normally employed. That is the real distinction, I think.

23,651. Do you find that it works out so, or is it practically the case that both men and women do much the same work?—No, I do not think they have up to now. It is very difficult to generalise as to what is going to happen to the outdoor staff yet, because they have all been employed all the time upon temporary jobs succeeding one another. We have been in a period of emergency the whole time, and it has been constantly necessary to take off a man from his regular work to do a particular thing for the, for instance, Insurance Committees; and similarly with the women, the very first thing we had to take all the women we had got, practically to deal with the outworker problem, which is not exclusively, but very mainly, a woman's problem.

23,652. Will you not probably find that the women work in connection with men and *vice versa* as regards the inspectors?—They have no doubt very often to do so.

23,653. Ultimately will it not be so, apart from those special jobs. I mean that the men's and women's work will come to be pretty much the same so far as sex goes?—I should not like to prophecy. I find it very difficult indeed to make up my mind how the thing will shape itself in future, and the best we can do is to experiment at present.

23,654. Have you had sufficient experience to know whether the work done by the women has been satisfactory?—Yes, I have quite sufficient evidence to know that it is quite satisfactory, if you are talking of the outdoor staff.

23,655. I am talking both of the inspectorial staff and of the clerical staff?—I am only speaking of the inspectorial staff, but I think I may say that the clerical staff is quite satisfactory.

23,656. (Chairman.) Have you any women clerks?—Yes, we have a great many.

23,657. Do they work in the same room as men?—No, none of them.

23,658. (Miss Haldane.) They work separately from the men?—Absolutely.

23,659. But the women's inspectorial staff, of course, must work in conjunction with men?—No doubt, but it is rather a different problem dealing with individual men from dealing with great gangs of men.

23,660. (Chairman.) How do the inspectorial staff work; do they not work with men in the same sense that clerks do?—No.

23,661. They go out and inspect independently?—Yes, but no doubt they meet together to confer and advise one another.

23,662. (Miss Haldane.) But the male inspectors and the women inspectors must work together a good deal?—No doubt they confer with one another, and they keep one another informed of what they are doing and make joint reports.

23,663. Is it not a fact that the women insurance officers have to deal with men constantly?—Yes.

23,664. (Mr. Matheson.) They do not share an office?—We have no provincial offices at present. We have a nucleus head office for the chief inspector himself and some clerks.

23,665. (Miss Haldane.) As regards the remuneration of the women inspectors, I see that in some cases it is slightly below that of the men; do you know on what principle the difference has been made?—What happened was that Sir Francois Mowatt's committee thought themselves justified in proposing scales for the men, and they did so propose, but for some reasons best known to themselves they did not think themselves justified in proposing scales for the women, and consequently the scales for the women remained to be fixed by the Treasury, and were finally fixed by the Treasury.

23,666. Did not the Treasury at that time rather express the view that they wished to settle the question?—Yes.

23,667. (Chairman.) What conclusion did they come to?—The conclusion they came to was that women should be paid less than men.

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

23,668. (*Miss Haldane.*) In comparing these figures I find, for instance, that the health insurance officers, men and women, are paid the same rate?—Yes.

23,669. Do you happen to know the reason why the women inspectors and assistant inspectors are paid at a lower rate while the insurance officers are paid at the same rate?—I can only give the same opinion as a man in the street might give, and say that you do find universally throughout the Service that women inspectors are not paid at the same rate as men inspectors, and not only inside the Service but outside the Service. I can only assume that the Treasury applied the ordinary economic doctrine to the situation they had to deal with.

23,670. Did they apply it to the post of commissioner?—I do not know anything about that; that was before my time. I found the lady commissioner appointed and her salary fixed.

23,671. The lady commissioner I find is paid the same rate as the others?—Yes, that is so.

23,672. Are the charwomen all-time people?—They come in in the morning and they come in in the evening; they are not about the building during the day. They work seven hours.

23,673. As regards the pensioner messengers, it would appear that there is not the same rule as there is in the rest of the Government Service where usually one-fourth rise to a higher scale. Is not that so in regard to those who are employed by you?—I think so. There are 36 pensioner messengers at 21s. a week, and one quarter rise, or may rise, to 24s. a week.

23,674. It does not say so in the statement?—I am sorry; it is our fault. It is a fact that one quarter of them do, or may, rise.

23,675. (*Mr. Hoare.*) Why do not the commissioners themselves appear in the statement?—We thought when we read the form of return that it was not applicable to the case of the commissioners.

23,676. I ask only for information. What are their salaries?—The chairman is paid 2,000l. a year; the deputy chairman, 1,500l.; Mr. Robertson is not paid anything as a commissioner; Mr. Bradbury has an allowance, which is not borne on our vote, of 300l. a year; and the remaining commissioners are paid 1,000l. a year each.

23,677. I see the secretary and legal adviser has a salary of 1,200l. and an allowance of 300l. p.—Yes.

23,678. What is the allowance for?—For legal advising.

23,679. Would it not have been more convenient to have it all put into one sum?—It would be much more convenient, but my convenience was not consulted on the subject.

23,680. Is it the usual practice?—It is very unusual indeed to combine the offices.

23,681. (*Chairman.*) Does the 300l. count for pension?—Yes. It is very unusual. I think what was desired was that it should be clearly indicated to my successor when he came to think whether he desired to succeed me or not, that all he had to look to was 1,200l.

23,682. (*Mr. Hoare.*) None of these sums are permanent sums?—No.

23,683. With regard to your buildings, where are they?—The chief head office of the Commissioners is Wellington House, Buckingham Gate, and the first annexe is Burton House, just by Queen Anne's Gate. Then there is a very big place at Maida Hill, and another at Leonard Street, Shoreditch. At Maida Hill all cards are dealt with, which is an enormous work amounting to very many millions a year, and at Leonard Street, Shoreditch, all the actuary's work on the cards will be carried out; not the actuarial highly technical work—the chief actuary works at Buckingham Gate; but all the mechanical part, preparing the figures for him, will be done at Leonard Street, Shoreditch; he will have to be there part of the day, no doubt.

23,684. Is that regarded as a permanent arrangement?—Yes. I hope that some day or other we may be able to combine Burton House and Wellington House together. It is very difficult to get a building suitable for the purpose. So far as Leonard Street and Maida Hill are concerned, I think we shall always require to

have buildings like that some way off. We want a large floor space, and it would not be justifiable to take such a floor space in this part of the world where it is so expensive.

23,685. It is not convenient, is it, to have the greater part of your unskilled work done at a distance?—It is not convenient, but I think the inconveniences are outweighed by the very great economy. I cannot imagine our ever being able to substantiate a claim to carry on all that card telling anywhere down near Westminster.

23,686. I wanted to ask you about the number of vacancies on your full staff; there are a considerable number of vacancies that you said you did not contemplate filling up?—That is really fallacious. If you would look at the printed return there are three assistant secretaryships, two of which are vacant. We shall fill those up when we come to reorganise, that is to say when the gentlemen who at present are serving temporarily with us go back to their respective offices and we can see more or less what is in front of us, we shall promote, I hope, two people to fill these secretaryships. At the same time, or shortly afterwards, we shall fill up the four vacancies in senior clerks and 11 vacancies in junior clerks (as a matter of fact one has been filled already), the effect of which will be to deplete the 15 first class and 13 second class clerks who are shown, but so far as promotions are made from among those first class or second class clerks we shall not fill the vacancies so created—they will be redundant.

23,687. The effect of that, of course, will be that your office expenses will be higher?—Yes, certainly.

23,688. Presumably the higher appointments will be paid more?—Yes. On the other hand, of course, you must remember that we are at present getting a good deal of service for nothing; there are gentlemen serving us from other offices who are not being paid for it.

23,689. They come entirely on their own votes?—Yes, they come entirely on their own votes, except in so far as some of them receive gratuities from us on going back; otherwise we are not concerned with what their payment may be. Some are merely working for the love of the thing, and others are taking a small gratuity.

23,690. Had you any difficulty in getting this number of officials from other offices?—Do you mean permanently or temporarily.

23,691. Permanently?—We had the very greatest difficulty.

23,692. With the heads of the various offices, do you mean, or with the people themselves?—I think that some offices would be exceedingly unwilling to let us take any men. If I had been allowed to go and pick men all through the Service I should have picked many more.

23,693. What do you think was the reason why so many clerks wished to come to you?—I think they all got some immediate advantage, but I think most of them really came as a sporting chance.

23,694. (*Mr. Shipley.*) Are you satisfied with the results of the method of selection of this large body? There were 9,172 applications received, I gather, and then those who were not in the Civil Service already were given a qualifying examination?—That is as regards the outdoor staff; there was a competitive examination except in one case.

23,695. Are you satisfied with the results of that method?—I think we have got as good material as we could possibly have hoped to get considering what we were offering and the duties they would have to perform.

23,696. Last week we were shown a paper that was set for these gentlemen, apparently about 30 years old, and going to receive salaries of some 150l. to 200l. a year, and I understand that the questions on the paper were the sort of questions that you would set to a little child: "If you add together 2s. and 3s. and 2s. 6d., what does it come to"?—Was that a paper of ours?

(*Mr. Shipley.*) It was a Civil Service examination paper.

23 January 1913.]

MR. CLAUD SCHUSTER.

[Continued.]

23,697. (*Sir Henry Primrose.*) Was not that for the Labour Exchange?—(*Witness.*) If it was for the Labour Exchange we have nothing to do with the labour side of it.

23,698. (*Mr. Shipley.*) Do you have all the cards sent from all parts of the United Kingdom?—Yes.

23,699. Or are they merely the English cards?—I mean the English cards.

23,700. And every stamp is counted?—Yes.

23,701. And that is done by your card tellers?—Yes.

23,702. You have no mechanical device for doing it?—No. I have not got a very mechanical mind, but I find it difficult to see how any machine could be invented which would count the stamps already on the cards.

23,703. Could you not put on a stud instead of stamp, or puncture holes. In the American census apparently the calculations were made by machinery?—All the calculations are made by machinery.

23,704. But the actual counting, I believe, was done by machinery in the census?—I know, but in the census people do not indicate their existence by putting stamps on anything; you have only to count the number of things that come in. But our people have to count on every card the number of spaces that are filled, and they have got to see what the value of each stamp is, because there are a great number of different values. It is not enough to see that 13 stamps are in 13 spaces, but you have to see what the value of each stamp is. I hope the pressure of necessity will cause people to invent easier ways of doing it, but I do not at present see any easier way.

23,705. I suppose the Commissioners have a good deal of judicial work to do?—Yes.

23,706. And I suppose a good deal even of legislative work?—Yes.

23,707. Have any of them had any training in that work?—*Mr. Robertson*, of course, is a barrister of 12 years standing who in his time did a great deal of work for the Treasury; but, of course, in dealing with judicial matters, the Commissioners have the assistance of a trained legal staff, and, in dealing with legislative matters, some of them have had very considerable experience.

23,708. Another question I wanted to ask is whether the *Mr. R. T. Wright* on the supplementary committee is the *Mr. R. T. Wright* who a short time ago resigned the secretaryship of the Cambridge University Press?—I do not know. I have nothing to do with that committee; it was really a Civil Service Commission committee.

23,709. The paper I spoke to you about just now is headed, "Copy of arithmetic paper for Civil Service examination for appointments under the Insurance Act"?—I could not say dogmatically, of course, but I should be inclined to say that it is a Board of Trade Labour Exchange thing.

23,710. The sort of question is this: "When taking a railway ticket which costs 15s. 7d. a man pays a sovereign; how much change ought he to receive"?—Well, I think long ago I lost any power of accounting that I ever had, but I believe if I was given time I could grapple with that.

23,711. I do not know that it is worth reading any more of these questions?—We cannot tell exactly and no doubt we have got poor material as well as good, but it seems to us on the whole we have got very much better material than we could reasonably have expected to get.

23,712. Are you satisfied with it?—I am not completely satisfied, because one never is, but I am much more satisfied than I expected to be.

23,713. (*Mr. Matheson.*) You have had some experience of business outside the Government service?—I have been employed in a bank.

23,714. Have you any opinion as to the comparative efficiency in the conduct of business outside Government offices and inside them?—Yes, I have a very strong opinion.

23,715. Would you tell us what it is?—I do not think that in outside commerce you find anything like

the zeal or the applied efficiency that you get in the Civil Service.

23,716. I suppose at the Board of Education and at your present office you have had considerable experience of Class I. men?—They are not actually Class I. men in the Board of Education, but an analogous class.

23,717. Analogous in status?—Yes.

23,718. How should you say that they would compare in business powers with men of the directing class in outside affairs?—There is always this difficulty, of course, with a Civil servant, that you take him so young from the world that unless he gets something responsible to do fairly early he tends to be rigid and unresponsive.

23,719. (*Chairman.*) Might I ask what your age is?—I am 43.

23,720. Have you had sufficient experience of the Civil Service to enable you to speak with authority upon this point; and in comparison with the practice in commercial life?—I have seen a great deal of the Civil Service; I have been in and out of a great many different offices in the last 14 years and I have seen a good deal of commercial life in the outside world.

23,721. Will you continue your answer to *Mr. Matheson's* question?—I think on the whole that the Class I. Civil servants compare very favourably with the directing class, if they are given a chance early enough.

23,722. Would you develop further what you mean by a chance early enough?—I think it is a very deadening thing to go into an office, at whatever age, and to do merely mechanical work and nothing more in an office in which promotion is quite settled and the routine is quite settled and the duty is never changed. I think they do tend to ossify.

23,723. Do the Class I. men ever do mechanical work; does the youngest officer recruited by the Class I. examination do what you call mechanical work?—In some offices, certainly.

23,724. Could you give me a concrete illustration?—I do not like to criticise in such a way as appears to be criticising other people's behaviour.

23,725. It will not be taken in that sense at all?—I think, and I think we all thought in the Board of Education, that some of the work that was done by a junior examiner was of too mechanical a type, all things now considered.

23,726. The Board of Education is perhaps not the best office to take; but will you just tell me what you mean. In the Board of Education what did they do that was mechanical?—There was a great amount, I think, of what we should, without any disrespect, call mere clerk's work—work that ought to be able to be done by any person with an ordinary orderly mind, not requiring any very special qualities of brain or experience; and I am sure that that is so in other offices.

23,727. Would you call that mechanical work?—I should myself. I did not mean by "mechanical," working a machine.

23,728. In order to train a clerk well it is desirable, is it not, that he should have that kind of experience in his earlier years, in order that he may be able to control that description of office work later on?—Yes, but I think it should be for a very short time. I think, for example, that promoted second division clerks ought to be promoted very early in their career.

23,729. Does your criticism aim at reducing the number of Class I. clerks in an office?—I am inclined to think on the whole (but feeling that I am very presumptuous in offering an opinion at all) that if there is any tendency it ought to be towards keeping the number of the higher staff down.

23,730. (*Bishop of Southwark.*) When you spoke about a man getting his chance early in life, what did you mean exactly by his chance?—Getting into a position where he will feel that he is making some advance. I do not mean necessarily an increase in salary, but, for instance, in the Board of Education there are a great many posts such as secretaries to committees doing particular work, and private secretaries to Ministers, and so on, all of which tend to brighten a man's faculties and keep him alert. Of course, he has

23 January 1913.]

MR. CLAUD SCHUSTER.

[Continued.]

to satisfy his superiors over him, and it is desirable that he should sometimes be compelled to do something more than enter his office at a particular time in the morning and go away at a particular time in the evening.

23,731. Of course, the number of chances are limited as compared with the number of people?—Yes; but I think that possibly in some offices there is a tendency to become overstaffed with the upper division.

23,732. What you really mean, I take it, is that you would leave it to the person in charge of the department to select the men to whom he would give chances?—Yes; once in the Service you must leave it to the responsible head of the department; nobody else can tell.

23,733. There is one question I was going to ask you arising out of some remark you made when we were discussing the question of examination and promotion, and transfer. For instance, with regard to the staff superintendent, I understand that he was transferred; he was, of course, previously a Civil servant?—Yes.

23,734. When he was transferred, I suppose, it was to better himself?—It was to better himself.

23,735. It was improvement?—Yes. I do not think it was very great improvement considering what his prospects were where he came from.

23,736. By whom was he selected for transference?—He was selected as much as by anybody else by Sir Robert Morant and myself, from a very long previous experience of his ability for the particular kind of work that we wanted him to do.

23,737. Did you fix upon him because he was clearly the right man, or did you consider other men as well?—We fixed upon him because we believed him to be the right man from experience.

23,738. There was nobody else whom you considered?—We considered others, but we were so clearly convinced that he was the man we wanted for efficiency that we selected him.

23,739. And was that the usual method of selection by transference; were those the conditions that more or less obtained?—No, I could not say that; most of the people who were transferred we took on the recommendation of the then heads of their offices, and after getting as much information as we could, but without any direct personal knowledge. I do not think I knew any of the other transferred people—I may be exaggerating—except some of the clerks whom we also chose for special reasons.

23,740. Would it, in your opinion, be possible to apply that general principle more generally with regard to promotion within an office?—Do you mean promotion strictly by merit?

23,741. Say from Class II. to Class I., improving generally the position of the clerks in an office?—Yes, I think so, supposing that other difficulties were not in the way. The great obstacle to the promotion of the second division has been a mechanical obstacle as far as I have always understood the question. I mean the mere fact that those who were most likely to receive promotion lost salary on promotion.

23,742. There is just one more point to clear my own mind about the examination. You spoke of an examination when ultimately the applicants had been sifted out, and a certain number were left who were considered suitable to be examined?—Yes.

23,743. What sort of proportion were left in to the number of places that could be obtained?—There were 23,000 applications, 1,052 were interviewed, and 281 were examined, because 60 were taken straight from the Civil Service.

23,744. Then a large number were interviewed to sift them out further?—Yes.

23,745. How long did it take to interview them?—I believe it took five weeks.

23,746. How many people interviewed them?—They were all interviewed by the whole body.

23,747. The whole body interviewed them all?—They kept a quorum. There were five members of the body and, I think, the quorum was four; and they sat continuously all day. Some of the interviews were

very long and some of them were very short, I believe.

23,748. (*Sir Henry Primrose.*) How far may the organisation of your office be regarded at this moment as tentative—I suppose very largely?—Very largely.

23,749. I suppose that a great many of those very large number of officers described in paragraph 13 of your brief as the indoor temporary staff will eventually be absorbed on to the permanent staff?—Yes, a great many of them probably will have to be absorbed. We cannot tell, for instance, what establishment of second division clerks or assistant clerks we shall want finally, because I am afraid there must always be a time during the year, even when we get permanent conditions, when the work will be much greater than at other times. The cards come in once a quarter, and there must be a rush once a quarter. I do not see how we are ever to get quite so stable an establishment as an ordinary office.

23,750. Do you suppose that you will permanently retain some of those highly skilled Civil servants mentioned in paragraph 10, or do you think you will get rid of them all?—I hope to retain some of them permanently, but it is only a faint hope.

23,751. With regard to the people who have been placed permanently on the establishment, do the scales of salary correspond pretty closely to those originally contemplated in paragraph 7, or have you departed from them a good deal?—We have really advanced beyond what is indicated on paragraph 7. It was a matter of bargain, and naturally we did not hold out any more enticing temptations than we thought likely to be successful, and so far as we found that they failed we were obliged to put our price up.

23,752. In the case of the people you brought in from outside upon the understanding that they might be permanently appointed, what amount of probation have you insisted upon. I suppose you have the power, if you find it necessary, to dispense with their services?—I do not know that we have any power. I think we have to take them for better or for worse. People coming in by examination or from outside the Service are subject, of course, to the ordinary probation, but I am afraid that the people we have taken by transfer we have taken for good and all, and we cannot get rid of them.

23,753. Was not that rather rash?—It was perhaps rather rash, but there are circumstances in which rashness is the only course.

23,754. (*Chairman.*) I should have thought that they would themselves like to have a chance of getting back to the offices from which they were transferred?—Yes, no doubt, but that would have cut against us just as much as it would have been in our favour. We did take on two people on the terms that if they did not like it they might go back, and we have induced them to sacrifice that privilege by offering them other advantages since. It is a very inconvenient arrangement when you get so high up in the office as these people would necessarily be.

23,755. (*Sir Henry Primrose.*) As regards the men you brought in from outside, there are not a great many—you give the number as six on page 9 of your brief—three of those are law clerks—they are technical men; but all of those men, I take it, would be subject to probation?—Yes.

23,756. You could get rid of those men within a year or even two years?—Two years.

23,757. Did you, yourself, have much to do with actually choosing the men and seeing them?—Yes, for the first few months I think I saw, personally, everybody over the rank of second division clerk who came into the office except the actuaries—I did not know anything about them.

23,758. As regards the second division clerks you have power to get rid of them if they do not suit you?—I can send them back to the Civil Service Commissioners, not after probation.

23,759. (*Chairman.*) They belong to the Civil Service as a whole, and are liable to be moved to any department?—We could, perhaps, move somebody else to remove them. I am not quite sure that we could remove them ourselves.

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

23,760. (*Sir Henry Primrose.*) On the whole are you satisfied that you have got together an efficient body of men?—Certainly. We made a mistake, I may say, in the first instance in regard to what I am about to say, but subject to that I think we have got a most extraordinary body of men really. They have had right through from top to bottom to work under very great stress indeed for 13 months, and they have done so, so far as I know, without any complaint, and they have constantly worked for more than in their contract and with perfect cheerfulness and zeal and devotion.

23,761. Comparing as a body, for instance, the men who are what we call first class clerks in the public service with the men who occupy more or less corresponding positions whom you got from outside, how would you compare them; do the civilian first class clerks compare favourably?—I think they compare favourably with any body of men anywhere of a like type. I do not think that the people who were brought from outside into the Insurance Commission would furnish much guide, because if you take the six people who came in from outside they were not really from outside; that is putting it as high as we can against ourselves. One is really an ex-Civil servant, another is a man who passed the ordinary Home Civil Service examination (although he took the India) and the others are technical officers.

23,762. Did you lay down any maximum limit of age above which you would not take men?—No, but we looked to have young men.

23,763. Are they just all young men?—With two exceptions I am the oldest of any in the office; I do not include the commissioners.

23,764. As regards the second division clerks that you have got, should you say that they represent the pick of the second division?—So far as I can judge I think so. It is very difficult to judge the whole of the second division—it is a very large thing; but we did our best to get the best we could.

23,765. Should you say, that, as a class, those men that you have got show any marked difference in quality from Class I. men?—They are different.

23,766. Have you amongst them any men who you feel would be quite capable of taking almost any position in the office either now or at some future time?—I have among them a number of men whom I most sincerely hope to persuade the Commission to promote to the first division.

23,767. Would they be quite a substantial proportion of the total number?—The total proportion of Class I. posts in the office to the total number of second division clerks cannot be very large.

23,768. (*Chairman.*) I do not think that is what Sir Henry Primrose wanted to know. He asked what percentage of the second division men in your office do those excellent men bear who are fit for promotion to the first division?—What I meant was (and I thought I was answering the question) that as necessarily all the Class I. posts in the office are comparatively a small percentage to the second division posts, it must follow that the number that can be promoted is small.

23,769. Sir Henry Primrose wanted to know what proportion do those men who are fit to be promoted to Class I. if there are vacancies, bear to the total number of second division clerks in the office?—It is very difficult to put it in the form of percentage.

23,770. I only want it roughly. Let me put the question in this way. You stated that the second division clerks in your office are picked men?—Yes.

23,771. You also stated that of those picked men you would be glad to induce the commissioners to promote some to the first division?—Yes.

23,772. What proportion do those men whom you would thus promote bear to the total number of your second division clerks?—I am afraid that I cannot put it in the form of percentage, but may I just say what we have done up to now, which is perhaps some guide. We have already promoted to be first class clerk one minor staff clerk. We have promoted a minor staff clerk to be a second class clerk; he came to the office as an ordinary second division clerk, and received his promotion to minor staff clerk in the office. We have promoted—though it does not appear on the return

because it happened later—another second division clerk to be equivalent to first class clerk on the accounting side; that is to say, to be assistant accountant; and we have promoted 21, or so, to various positions corresponding either to those of second or first class clerk, on the accounting side, and we certainly have in view others whom we hope to put forward to the commissioners to promote to the upper division when it becomes organised.

23,773. (*Sir Henry Primrose.*) By the upper division do you mean the division that would be recruited mainly by the intermediate examination?—No, I mean Class I.

23,774. I understand that you are not to have a great many Class I. men at any time?—No.

23,775. But you are going to recruit a certain number of superior places by the intermediate examination?—Yes.

23,776. That is rather peculiar to your department, I think?—Yes, we shall have to separate the work done by the intermediate people from the work done by the Class I. people; you cannot work the two things together—it is impossible.

23,777. I do not know of any other department, unless you take a large department, which is a sort of congeries of departments, like Somerset House, which recruits for one and the same staff by all three methods, namely, Class I. the intermediate, and the second division examinations?—We shall have to separate them.

23,778. They will have to be in quite separate branches?—Yes.

23,779. Have you many men who have come into the Service really by the intermediate examination?—We have some, but not very many. Most of the people we have of the intermediate establishment are people who came originally into the Service either as second division clerks or assistant clerks.

23,780. And they have been converted?—Yes. We have some who came in by the intermediate examination, but the great majority, I am sure, were originally second division clerks.

23,781. Have you been able to form any estimate of their quality, as a class?—I cannot myself distinguish the people who came in by one examination from the people who came in by the other. There may be a distinction, but, so far as my experience has gone, I am unable to draw it. It may be too early to judge, but I cannot tell, at present, by talking to the people, or working with them, of which class they were.

23,782. There are two other questions of rather a general kind I want to ask you. Taking your experience in organising this department, do you think it would have been possible for you to do the work if you had not had men of the calibre of the first class clerk?—No, I am sure it would not.

23,783. That is to say, it would not have been possible for you to do it with the best of the second division men, and nothing better than the second division men?—No, I am quite certain it would not. In saying that I do not want to cast any slur on the best of the second division men.

23,784. But I mean you probably would not have found in the second division a sufficient number of men of the calibre that you required, to be able to do the work?—No, as far as it is possible to judge, I am perfectly certain we could not.

23,785. My other question is this. How far do you think it would have been possible to carry out this work of organisation if you had been dependent upon an entirely outside authority for the supply of your staff, and had no voice whatever in the selection of them?—I do not think we could have got on unless we had been allowed some selection amongst the limited class from which we could select.

23,786. Of course, in organising a department of this kind you want men of all ages?—Yes.

23,787. You cannot recruit the whole thing from the bottom?—Yes.

23,788. And it would have been impossible for an outside body to have provided you with men to fill the superior posts?—No, indeed I do not think you ever can fill the superior places except by selection, and selection by the people who are actually responsible for

23 January 1913.]

MR. CLAUD SCHUSTER.

[Continued.]

the work of the department, and who have to bear the brunt of failure.

23,789. (*Mr. Boutwood.*) I did not understand in the early part of your evidence about the relationship between the Joint Committee and the English commissioners. Which is the actual authority that issues all the circulars and memoranda we see in the papers?—Sometimes one and sometimes the other, according to the nature of the subject dealt with.

23,790. So the Joint Committee has really a vital part in the supreme conduct of the business?—Yes.

23,791. Perhaps you have only a very vague idea on this point, but, roughly speaking, what do you think would be the normal number of your Class I. establishment?—In future?

23,792. Yes?—We have an authorised Class I. establishment of 21, besides the secretary.

23,793. And the rest of your clerical establishment is about what?—The rest of the clerical establishment it is very difficult to put. We actually possess 27 first and second class clerks, and five principal clerks on the secretariat side.

23,794. I thought most of those men were actually Class I. men?—You mean in origin.

23,795. Some of the posts that are now held by men of Class I. origin will not always be held by men of Class I. origin?—Probably not.

23,796. You have 21 now?—Twenty-one.

23,797. The rest of the staff will probably go to some hundreds?—Yes, many hundreds.

23,798. On the question of the intermediate class, I do not know whether I am wrong, but, roughly speaking, out of 70 people in your accounts branch, that is, in Group III., so far as I can make out only five of them actually came into the Service by the intermediate examination?—I do not know whether that is so or not. To test that you must add in, if you please, the whole of the group, including the examiners.

23,799. I was thinking of Group III., Sub-Groups (1), (2) and (3)?—Then if you go to Group III. to begin with, 12 of them entered by the last open competition; that is on page 6, column 4 (b). You will see the examiner and 12 who entered by open competition.

23,800. Those 12 actually came into office by the open competition?—Yes, by the last intermediate open competition.

23,801. And the five who entered by the intermediate examination were men transferred from some other office?—Yes, those are five people who came in from other offices, having entered there by the intermediate examination. In the same way, in regard to the 29 shown in the next column, at least 11—I cannot say exactly how many—entered by the intermediate competition. I should have to analyse it all out to see the exact number.

23,802. In any case you have a very large number of men in that department who are not of intermediate origin, and that fact would seem to have some important bearing upon the future constitution of the department. That is the only point that occurred to me?—Of course, that is a general service question.

23,803. You mention in this type-written statement certain selection committees. At what stage did they get to work? For what class of men were they used?—The selection committees were used for the outdoor staff only, and for the whole of the outdoor staff.

23,804. Then, was the indoor staff appointed by the commissioners?—Appointed by the commissioners, either by transfer from other offices or directly by competition.

23,805. So that really the whole of your indoor establishment, except the men you recently took in after examination, has its origin in nomination by the commissioners. It is outside the work of these selection committees?—It is not so in origin, but it is outside the work of those selection committees.

23,806. In origin so far as your office is concerned?—That is true of every second division clerk to start with.

23,807. Surely not?—Some of the people were obtained by sending to the Civil Service Commission, asking for so many second division clerks. Some were obtained by second division clerks applying from other

offices and being taken. Some were obtained from the upper division coming in in the same way, and some by upper division people taken in by direct examination.

23,808. But, setting aside the men you got in the ordinary way from the Civil Service Commission, the rest of your considerable indoor establishment was actually obtained by selection by the commissioners?—Yes.

23,809. And was outside the range of those selection committees?—Certainly; the selection committee only dealt with the outdoor staff. All the indoor people were taken in, with two or three exceptions, from persons already in the Service or else from the ordinary examinations.

23,810. (*Chairman.*) Selected by the commissioners?—Yes.

23,811. (*Mr. Philip Snowden.*) Did not the Civil Service Commissioners send some?—The Civil Service Commissioners have to be parties to every selection made, because we cannot take them without a certificate.

23,812. (*Mr. Boutwood.*) I was only clearing my mind as to the actual machinery employed?—What happens is, you open a treaty, as it were, with another office. Somebody applies, and you take him or do not take him. Those are only preliminary steps. Then he has to go to the Civil Service Commissioners and to the Treasury for leave to be transferred. I am putting it in a popular way.

23,813. I know, but the thing I want to get clear in my mind in this: We have heard a good deal about these selection committees as an important experiment, and I wanted to make quite certain what was the range of their work?—That was for the outdoor staff only.

23,814. (*Sir Kenneth Muir-Mackenzie.*) It is necessary to have the leave of the Civil Service Commissioners for a transfer?—Yes, you require a fresh certificate.

23,815. (*Mr. Boutwood.*) For transfer?—Yes, not a second division clerk, of course. The certificate has to be endorsed by the commissioners. They could refuse to certify. We could not take anyone that the Civil Service Commissioners would not let us take.

23,816. (*Sir Kenneth Muir-Mackenzie.*) Certify what?—That they are fit people to be transferred, I think.

23,817. (*Mr. Boutwood.*) You are not speaking of promotion?—No, of transfer.

23,818. If you take a second division man?—I am not talking about a second division man.

23,819. I was.—I beg your pardon. The whole of the second division, you know, are common to the Service, and they do not require a certificate on transfer.

23,820. (*Sir Kenneth Muir-Mackenzie.*) That is what I meant?—I beg your pardon, I misunderstood.

23,821. (*Mr. Boutwood.*) I want to put a purely general question, not relating specifically to your office, but you have seen something of other offices and you might have an opinion on the point. It is about staff posts. First of all, do you think staff posts can ordinarily be regarded as transitions to the higher division?—No.

23,822. They are the termination of an independent branch, so to speak?—Yes, not absolutely, but I should have thought, roughly speaking, they were an avenue of their own which ended not in promotion to the other division.

23,823. Do you think there is any tendency to create posts of that sort?—I will not say on purely personal grounds—but do you think that personal considerations rather than the actual needs of the Service sometimes enter into the creation of posts of that sort?—I have never known such a thing.

23,824. To put it in another way, do you think that staff posts are sometimes created because you think you have got to do something for a man and you cannot promote him?—I have never known such a thing happen. You have to bear down the very strongest pressure, to start with, on the part of the Treasury against increasing your establishment by the creation of staff posts.

23,825. (*Mr. Philip Snowden.*) What is the number of the English commissioners?—Eight.

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

23,826. Are they in constant session?—Yes.

23,827. Do they sit as a body every day?—Not every day now, but two, three or four times a week—more usually two.

23,828. Are the commissioners in attendance on the days when they are not sitting as a body?—Always in attendance, with the exception of the chief registrar who has his own office.

23,829. During that time are they dealing with departmental matters?—Yes, but not in departments. They deal very often with them in committee—in various sub-committees.

23,830. Each commissioner has not a special branch of the work which is under his own supervision?—No.

23,831. This is probably not a question you would care to give an opinion upon. I suppose now that the Act has got into working order the work of the commissioners is not so arduous as it has been during the last 12 months?—I would not like to say that. I think it is probably about as arduous as it ever has been for them.

23,832. But is this work that the commissioners are doing work which is of a character similar to that which is being done by principal clerks or assistant secretaries?—No. Roughly speaking, the staff would prepare the material on which a regulation might be drawn. Then there might be a committee appointed, and the committee would consider the matter and come to the conclusion that a regulation was required on certain lines. Then the staff would take the thing back again, work it all out in its ramifications, see what it amounted to, and the thing would go to the legal department and the regulation would be drawn up and sent to the sub-committee which directed it to be drawn. After it was passed by them, they would report it to the commission, and the commission might make it—probably after discussion. That is one field of work. Another is sitting judicially to decide questions arising under section 66, which takes a very long time. The commissioners sit themselves to decide those things, but they are worked out for them in the first place by the staff, and, after they have sat, the facts are worked up again, and they sit again to recommend the commission what decision to give, because the decisions are the actual work of the commission themselves. That runs all through. Then there is an enormous amount of interviewing.

23,833. During the last 12 or 18 months you have issued some hundreds of circulars, regulations, and sheets of instructions, and that sort of thing?—Thousands, I am afraid.

23,834. I suppose those have been drawn up, if not by the commissioners, on the instructions of the commissioners, and they have received the approval of the commissioners?—Yes. I would not like to say that every single circular has been formally adopted at a sitting of the commission; I really do not know that.

23,835. But the work in connection with those regulations and orders will have occupied a good deal of the time of the commissioners up to the present?—Certainly.

23,836. You do not anticipate that you are going to turn out circulars in such quick succession in the future as you have done in the last 12 or 18 months?—I have a fervent hope that we may not.

23,837. Therefore, is the work of the commissioners likely to increase in other directions that will keep them as fully employed as they have been hitherto?—It is very difficult to foresee, we being in the middle of a time of great stress, but it looks to me as if, when that stress came to an end, there would be a great many subjects which would require much more mature consideration than they could have yet received, and then I suppose for some little time still there will be a great deal of work for the commissioners to do by way of considering, not very large questions perhaps, but, still, questions of policy.

23,838. Is this number of eight the number of the commission as originally constituted?—I really do not know. My impression, and it is only an impression, is that seven were appointed first and the eighth later.

23,839. One for the industrial insurance companies later?—I fancy so. You will remember the Chancellor of the Exchequer announced a certain number of names in the House, but I do not remember how many he announced.

23,840. Do you know of any body of commissioners in the public service so large in number as the Insurance Commissioners?—I do not think I do—in fact, I am sure I do not know of so large a body; but I do not know whether there is such a body or not.

23,841. Are they all appointed permanently, or are some of them appointed for a limited number of years?—The chairman is appointed permanently. Of course Mr. Bradbury and Mr. Robertson have their own Civil Service offices, and, as I say, they are not paid on the commission vote. I think all the others are appointed for five years. Five of them for five years.

23,842. You do not know the reason why their appointments are limited to five years?—No, that was a matter of policy decided on by the Government before I came on the scene at all.

23,843. I understood you to say that the joint committee have no separate staff now?—That is so, except the actuaries.

23,844. But all the actuaries are entirely under the joint committee?—That is so.

23,845. You do not have a separate staff of actuaries for the different commissions?—No, a portion of the chief actuary's staff is stationed in each of the four capital towns, if I may call them so.

23,846. The joint committee had a secretary, I believe?—Yes.

23,847. He has left the Insurance Commission and gone to some other post in the public service?—Yes, he has gone to be a special commissioner of income tax.

23,848. Has anybody been appointed to the position he held?—No, the position has been abolished. A gentleman has been appointed to be clerk to the joint committee, and that gentleman was at that time on the staff of the joint committee, and has now been transferred to the staff of the English Commission, and been appointed to act as clerk to the joint committee.

23,849. A word or two about the advisory committee. What is the number of that committee?—It is very large indeed—179.

23,850. How often is the advisory committee called together?—There is no regular interval. In the early days it was called together pretty frequently, but latterly not so frequently.

23,851. Could you roughly say how many meetings of the advisory committee have been held?—I could not offhand, but I could supply the information.

23,852. Would it be 100 or 5?—It would not be 100, but it is more than 5.

23,853. I suppose these people live in all parts of the country?—They do.

23,854. Is it not rather an expensive thing to bring 179 persons to London to meet?—Very.

23,855. Perhaps this might be a question which would be more properly addressed to someone else, but do you think that the advice that is given by the advisory committee, or the benefit that comes from the meetings of the advisory committee, is worth the very great expense that is incurred to call the committee together?—I would prefer not to answer the question because I do not think it is an appropriate question for me to answer, if I may say so, with great respect, not because I intend to suggest that the answer is in the negative.

23,856. I will put the question in another form. Could the results which are obtained from the meetings of the advisory committee be obtained in any other way which would not involve the bringing to London of this large number of persons from all parts of the country?—May I answer the question indirectly? I am quite certain that we could not carry on the work of the commission unless from time to time we called together considerable bodies of persons who had the particular skill in relation to the particular things we were dealing with. Unless, for instance, we could get from time to time the representatives of trades unions who are engaged in the working of the Act, and the representatives of the friendly societies together we certainly

23 January 1913.]

MR. CLAUD SCHUSTER.

[Continued.]

could not have carried on, nor could we at present carry on the work.

23,857. Would not you agree, as a general rule, that the larger the body is the less useful it is as a deliberative body?—Yes; but though personally, if I may put it in that way, I regarded this thing at first as a great nuisance, I am quite certain now that we have got a great deal of benefit from even big and unwieldy meetings of these people; they have been able to put their point of view to us in a way we could not have been able to apprehend otherwise; and, on the other hand, we have been able to put our view before them. I am not defending the section of the Act, because it is not my province, but I am afraid for a time we must have bigish meetings of people, and I am afraid expensive meetings.

23,858. Now that you have got the scheme in working order you do not anticipate these meetings of the advisory committee will be required so frequently?—No, I do not.

23,859. (*Chairman.*) Where does such a large body meet?—First we met in the big room of the Foreign Office, but we found it a most inconvenient room for the purpose, and we now most usually meet in the theatre of the Civil Service Commission, in Burlington Gardens, which is a very good room for the purpose.

23,860. (*Mr. Philip Snowden.*) Now one or two questions about the transfer to your department of persons already in the public service. In the case of those who were already on the established higher grade of the Civil Service, when they were transferred to your department they received increments of salary, I believe?—Yes.

23,861. In some cases that increment was fairly substantial, I gather from the table you have supplied?—Yes.

23,862. Would you mind referring to page 3 of the printed list of the staff. You have 15 first class clerks who were graded at 350*l.* to 500*l.*?—Yes.

23,863. And in the last column you give the record of those clerks in the Service; that is, the name of the office from which they were transferred. Might I ask if you could say what length of service these clerks had, either taking individual cases or on an average?—I could give you the individual cases in every case. Shall I read them out?

23,864. Yes, you might?—And their ages at the same time?

23,865. We do not want any names?—I will read out merely the number of year's service—6 years, 8 years, 2 years—and the next gentleman came from outside, and had no previous service—7 years, 6 years, 9 years, 3 years, 9 years, 2 years, 8 years, 15 years. The next is 15 years, but it has been broken; that is to say, this gentleman was a clerk in the principal probate registry.

23,866. I do not think you need go any further. It quite meets my point. Those clerks had, say, from five to nine years' service, because most of them seem to fall within that category?—That is roughly it.

23,867. They would, if their promotion in the Service had been, I will not say normal, but average, be already in receipt of a salary of 350*l.* a year?—That is so.

23,868. (*Chairman.*) You could give the salary each drew?—Yes.

23,869. (*Mr. Philip Snowden.*) But if they were in receipt of a higher salary than this initial salary of 350*l.*, I suppose they would take their existing salary with the two years' increment of which you speak in your statement?—None of those first class clerks were in fact in receipt of more than 350*l.* a year.

23,870. But if they were higher division clerks they began at 200*l.* a year?—They were not. They were mostly higher division clerks who began at 150*l.* There were two who began at 200*l.*, but they were very junior men.

23,871. Is not this scale of yours for second class clerks, 100*l.* to 120*l.*, something rather unusual in the Service?—I understand—but I am talking about what I do not know—that that is the normal beginning for the intermediate scale; but it is misprinted in this statement; it ought to be 100*l.*, and then I think for

two years there is no increment, and then 120*l.* and then 250*l.* by 10*l.* to 350*l.*

23,872. These really are not second class clerks as we understand them?—Not at all.

23,873. They are not the lower grade of the higher division?—No. This class, when these gentlemen were appointed to it, was something that might turn into one or other—either into the lowest grade of the intermediate or into the upper division.

23,874. You made a discrimination in the matter of increment between the higher division staff who were transferred, and the second division staff?—Yes.

23,875. You gave an immediate increment or promotion to the higher division?—Yes.

23,876. But no increment to the second division?—That is so.

23,877. The reason you gave for that discrimination is that the second division clerks were common to the whole Service, and the higher division are supposed to be attached to some particular office?—Yes.

23,878. But do you think that is quite satisfactory. Are not higher division clerks equally liable to serve in the various departments of the Civil Service?—I do not think so.

23,879. Are they not very frequently transferred from one department to another?—But not against their will. My impression is so, but this is a Service point and I ought not really to speak to it.

23,880. You say a higher division man has a sort of right to remain attached to the office and not to the public service?—Yes, I think he is certified to his office, and cannot be transferred from it except by his own consent.

23,881. But surely the reorganisation of the public service may sometimes require that higher division clerks shall be transferred from one department to another?—No doubt.

23,882. I will give a case in point. Some time ago a Class I. grade was abolished in a certain department of the Inland Revenue, and their place taken by the intermediate. According to what you say the higher division men in that department might have objected to that transfer and refused to be transferred?—But those gentlemen were not transferred; they remained where they were, if I may say so, greatly to the damage of their prospects in life, and I believe only now, with the transfers to the Insurance Commission—which I believe exhausted the last of them, but I am not quite certain—have come to an end. They were not transferred against their will. Those who could get transferred were transferred.

23,883. Some were transferred, because we have had evidence of it here?—Yes, at their own desire. Naturally when that happened to the Estate Duty Office everybody wanted to get out of it as quickly as they could, and, if you trace through the career of clerks in the Civil Service, I think you will find a great number of persons who have been transferred from the Estate Duty Office to all sorts of offices; but that was because they wanted to be.

23,884. This is a very important point, I think, that we are bringing out—that there is this distinction between the right of a higher division clerk and the right of a second division clerk. You offered this two years' increment then as a sort of inducement for them to come to the Insurance Commission?—Yes. You will understand it was not for us to decide one way or the other what was to be done with regard to the second division clerks.

23,885. All these higher division appointments were made then by the commissioners themselves?—Yes.

23,886. On the recommendation of the head of the departments?—Conveyed through myself.

23,887. Could you say how many of them came from the Board of Education?—None. The staff superintendent, that I spoke of before, came, but no higher division person except myself.

23,888. You have promoted a considerable number of your second division clerks?—Yes.

23,889. Something like 21 per cent. of the number?—I believe so.

23,890. You are perhaps not in a position to say whether your second division staff is superior to the

23 January 1913.]

MR. CLAUD SCHUSTER.

[Continued.]

average of the second division?—It is a very difficult thing to answer a question like that, because in answering it one may appear to cast a slur on a very deserving body of men one does not know. I believe what we have got is the *corps d'élite*.

23,891. How did you recruit your second division?—By practically going all round the offices and asking the heads of the offices whom they had got who was really good. We kept on saying: "We do not want men you want to plant off, and we shall regard it as a point of honour that you send us your best men. Whom have you got who is very good, but who has not much prospect with you?" There are, no doubt throughout the Service people who, through no fault of their own, have no immediate prospects, and those are what we got. I infer they are the *corps d'élite*, partly because of that method of selection, partly by the excellent work they have done since they came, and partly by the comparison I have instituted between them and the general run of second division clerks elsewhere, although I have seen excellent second division clerks elsewhere.

23,892. And they were prevailed upon to come to you without the inducement of an immediate increase of salary, on account of the better prospects they thought there would be in your department in the matter of promotion?—I suppose so. There was no bargain of any sort or kind, and no promise was made to them.

23,893. Have you had any part of your second division staff recruited from the Civil Service Commission by new entrants to the Service?—Yes, a few. We have a good many temporary clerks. Open competition, 6—that means taken straight from the Civil Service Commission—out of an establishment of 46. But then besides that, we have a number of temporary second division clerks, and they are all taken straight from the Commission, and, perhaps, we shall return some of them.

23,894. You have a few men in your department who entered by the intermediate examination?—Yes.

23,895. And I understood you to say in reply to one question, that in the matter of ability and capacity you cannot distinguish between a second division man and an intermediate man?—Yes; I did not mean that nobody can distinguish. I meant I cannot, so far as my experience goes, say that I can distinguish. You must remember I am comparing these, the very pick of the second division, with the intermediate people.

23,896. (Chairman.) It is not the very pick of the second division?—The people I am comparing are not the people we have chosen haphazard from other offices, but people who have got already promotion. We have people we take over as intermediate who had already obtained promotion into the intermediate class by reason of their merits, and they are the people I am talking about.

23,897. (Mr. Philip Snowden.) How many intermediate men have you?—I could not say off-hand. We can add them up and supply the figure.

23,898. Did they come straight to your department when they entered the Service?—12 came straight to us, and those we cannot form any opinion about yet.

23,899. What experience had the other intermediate men?—They came from all parts of the Service where there are intermediate offices.

23,900. Had they been employed mainly upon accounting work?—Yes, and a good many were surveyors of taxes, and doing that kind of duty.

23,901. The fact that these intermediate men had been employed at work of a different character to what second division men had been employed upon, vitiates your comparison to some extent?—I was not making a comparison.

23,902. And if any comparison can be made, would it not be fair to the second division to say that they had not been employed upon this accountancy work previously; but when they were put to that work they immediately showed a capacity equal to that of men of longer experience?—Certainly. I was not instituting a comparison unfavourable to either side. I only said I could not myself make up my mind.

23,903. What reason have you to think that you would not get an efficient accounting staff recruited

from the second division examination, if these young fellows were put straight to the work when they entered the Service? Do not you think the second division could be trained to do this work as efficiently as it is being done by the intermediate men at present?—I think it is very possible, but I also think that the effect of the institution of the intermediate examination has been, as I think Sir Henry Primrose pointed out earlier, to skim the cream off the second division examination to some extent.

23,904. You have been at the Board of Education?—Yes.

23,905. Is not a good deal of the work done by the second division there of the nature of accountancy?—Yes, and it is very well done too.

23,906. Then what need do you see for the institution of the intermediate grade, which is more expensive, if the work is very well done by the other men?—It is rather difficult to press me with that question, because this question as between the intermediate and second division is really a general Service question, and I do not think it can be answered by anybody who has not had some experience of the run of promotion and recruitment for all the accounting offices.

23,907. When you were considering the question of manning one of your departments, whether by intermediate or assistant clerks, did you take into consideration that by doing that you were abolishing the opportunity of promotion for the assistant clerk who now is eligible to be promoted to the second division, but not to the intermediate?—Of course, he is supposed to be given the position of supervising assistant clerk as a method of promotion. I do not know whether it is the fact that his career is definitely stopped then. I do not know enough about it.

23,908. May I ask what are your examiners?—It is just a name for people who come in a grade just below the assistant accountants. They examine accounts. It is the lowest of the three grades of intermediate people—accountants, assistant accountants, and then examiners.

23,909. How is an examiner recruited?—By the intermediate examination.

23,910. You have in your department work which if not precisely, is mainly identical, done by men and by women. Have you had a sufficiently long experience to be able to make a comparison between the efficiency of the woman's work and the man's work?—I do not think we have any work which is actually identical done by men and by women indoors.

23,911. But the outdoor department?—That I do not think I can give an opinion about as yet. We must wait and see how things work out. As things are at present I do not think I could hazard an opinion.

23,912. How do you obtain your women clerks?—Through the ordinary Service channels by examination; but the ones we have at present we have taken mostly on transfer from the Post Office.

23,913. You have had no special examination of women for clerical appointments in the Insurance Commission?—No.

23,914. Do you propose to have one?—I do not think so, as at present advised.

23,915. How will you recruit them in future?—The women inspectors?

23,916. No, the women clerks in the office?—We shall recruit them through the ordinary women clerks' examination.

23,917. But the only women clerks' examination is for the Post Office?—No.

23,918. What other is there?—There are women clerks at the Board of Education who come from the same examination as the Post Office women clerks.

23,919. But that is the only public examination, so far as I am aware, that is held for women clerks?—Then that will be the examination we shall get them from. Look at the people we have got—3 from the Civil Service Commission and 64 by transfer, 3 of whom came from the Board of Education, 1 from the Board of Trade, and 60 from the General Post Office. It is very similar sort of work to the work of women clerks at the Post Office.

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

23,920. I suppose you need a good many actuaries?—Yes, the establishment of actuaries is 1 chief actuary, 5 actuaries, 4 assistant actuaries, and 13 computers, that is, 23 persons in all. All the more mechanical part of the operations, anything below the rank of something which is going to lead to actual actuarial work—all the clerical assistants—would be supplied by the English Commission from its own staff.

23,921. Who is going to do the triennial valuations?—The chief actuary.

23,922. But he cannot do them all?—No, he will be assisted by his 5 actuaries, 4 assistant actuaries, and 13 computers.

23,923. Will these 20 men be quite sufficient when the work comes in all at once?—I do not know whether he is going to make requisitions for further staff.

23,924. Are they all qualified actuaries?—They are all people who have passed some one of the stages of the examination which are necessary to qualify you to be an actuary.

23,925. You stated in reply to one question that you thought it was very discouraging for a man to be kept for a considerable length of time upon work of a routine character, and work that did not give him much opportunity for initiative. May I take it that it is the aim of your department to prevent the sterilising of your men?—Yes. I feel there always must be in our own and other offices a good deal of sacrifice of the individual. What I meant was that if you are going eventually to get good work out of these men—that is, work of a higher type—you must not sterilise them in their younger days; but, unfortunately, the routine work has to be done.

23,926. Is it to be your definite policy to look out for merit wherever you find it and to give it every encouragement?—Yes, and to promote as freely as we can.

23,927. Have you had much difficulty with the Treasury in regard to these promotions that you have made?—No, the Treasury have met us very reasonably indeed in that respect. We have not made any actual promotion from the second division to the higher division. We have not put anybody into the higher division, but we have made promotion from the second division to the intermediate, and for that purpose the Treasury devised a plan which gets over the difficulty about the sacrifice of money. That was done specially for us.

23,928. (Chairman.) When was that done?—Some time in the spring, or perhaps the summer, of this last year.

23,929. Was it after this Commission began to sit?—Yes.

23,930. (Sir Henry Primrose.) Do you think that your proportion of higher appointments, say down to the examiners, is reasonable as compared with the total number of officials you have?—Do you mind adding together for that purpose these vacant places. We have 11 vacancies for junior clerks, and they will absorb some of those first class and second class clerks, so will the assistant secretaryships and senior clerkships. Taking those into consideration I am inclined to think so, but it is very difficult to tell for a little time yet.

23,931. You have spoken of instances where first class men were employed on work that might have been done by men not quite of the same capacity as those. You have nothing of that sort in your department?—No. When I was talking about that it is notorious that the Estate Duty Office people, as is well within your own knowledge, were doing work which was considered by everybody, including the office itself, to be not suitable for them.

23,932. You have stated the number of applications made for the outdoor posts—21,000, if I remember rightly. Have you no knowledge of the way in which the selection committee sifted these applications?—I have the actual knowledge. I saw it done from mere curiosity. I did not interfere with it in any way.

23,933. How did they do it?—There was a staff of clerks borrowed from various public offices, and examiners lent from the Civil Service Commission, who sat in a room in 55, Parliament Street, and went

through the applications, just as they would deal with any other official papers, passing them when they were difficult to the person graded above them, the whole thing being under the immediate direction of the committee, acting through Mr. Leathes.

23,934. What was the standing of those who dealt with the applications?—Upper division people, mostly. I think the simplest plan would be, if I read a memorandum, which was written for me for this purpose by the gentleman who actually had charge under Mr. Leathes, giving an account of what he really did:—“21,980 forms of applications—that is for male posts—were returned from persons outside the Civil Service. On receipt these were at once registered according to the grade applied for, and were passed to the officers to examine them. These were partly officers of the Insurance Commission.” That is not strictly accurate; he means people we had borrowed from other offices, and then passed on for that purpose—and partly examiners appointed by the Civil Service Commission. Instructions were given for their guidance, and in considering the applications attention was directed to the candidate's education, the nature and variety of his employment, the positions he had held, his experience of the work of friendly societies, trades unions, and insurance companies, his acquaintance with local government, his personal experience of administrative social work, the character and weight of his testimonials, and the general impression derived from his application as a whole.”

23,935. How do you propose in future to fill the vacancies in the outdoor staff?—We have not thought about it at all.

23,936. I suppose you are constantly receiving applications for posts in the department?—Yes; I think the effect of all this has been to stop the heavy flow. I get myself, about once a week, an application from somebody who wants to be made something, but I do not think people are any longer applying in their hundreds and thousands. We do not do anything with them if they are.

23,937. You say you have not considered what methods you are going to adopt in future?—No. I have not considered it in such a way that I could possibly produce it. Of course I have thought about it.

23,938. (Sir Kenneth Muir-Mackenzie.) When you speak about promotion, does not promotion, in the ordinary sense of the Service, mean where a man gradually gets his opportunities of going up after long service. Your office has been going on about 12 months?—Yes.

23,939. So that promotion means, practically, for a man giving him, after a short service, a post with higher pay?—Yes; but, of course, in all cases he has had considerable service before he came to us.

23,940. Yes; but not a service that would have produced anything like that rise?—I do not know that at all. We took the best people we could get, and they came to us, no doubt, hoping that they were going to fill the very highest posts, if, by their merits, shown in their early days, in times of stress they showed themselves worthy to fill them. We deliberately told these people at the Board of Education, when we had that meeting, that we should get as many as possible of the higher paid posts, which were vacant, filled after a year or two years on the result of merit. Just in the same way with the second division clerks. They have all come with experience gained in other offices to fill the staff posts, which have since been created, and to get such promotion, as we can give them, to the upper division, if we can give any. They are merely putting the coping stone on their life in the public service.

23,941. Could anything at all like this happen, that you get a man out of another office offering him, say, 200*l.* a year with the ordinary prospects of a man in the Civil Service, and then within a few months having a post of 500*l.* a year to fill, you observe that this fellow has done very well with you, and you give him that. Could anything like that happen?—Certainly nothing like that has happened.

23,942. Would you call that promotion?—I do not know what I should call it, but we certainly have not

23 January 1913.]

Mr. CLAUD SCHUSTER.

[Continued.]

done anything which could be described in that sort of way at all.

23,943. (*Sir Henry Primrose.*) We might call it translation rather than promotion?—That is so.

23,944. (*Chairman.*) I understood you to say that your grades are still unformed?—Yes, to a great extent.

23,945. And the promotion which Sir Kenneth contemplates, that is to say promotion in the regular course by merit and length of service from one grade to another, cannot yet come into operation because your grades are not formed, but you intend to form the grades?—That is so. I ought not to be construed too literally.

23,946. But still it is in course of formation?—Yes.

23,947. (*Sir Henry Primrose.*) With reference to a question asked you about accounting officers, you have just had the experience of organising a large new department for new business, and so on, and I would rather like your opinion upon this: Whether accountancy should not be treated as a separate branch by itself, not in your department only, but throughout the public service, and more or less of an expert branch with special recruitment for it, not by means of the intermediate nor by the second division, but that you should have a special more or less expert examination for accountants. After all, in the public service a very large number of men are engaged in accountancy, and that particular line gives within itself great opportunities of promotion. You could have high paid places. What should you say to recruiting a special body of men as accountants, and not recruiting, as we have been doing up to now, second division men who might be sent either to secretarial work or to accounting work without any particular regard to their particular qualifications?—The difficulty is this: Our people are all that lot of people shown in the white paper. The accountants, assistant accountants, and examiners are all engaged more or less on accountancy; but of course some of them have to deal with the practical problems arising out of accountancy which require consider-

able knowledge of general service conditions, and the sort of way in which Government is run. They have to fit in their accountancy with the way in which friendly societies live and move, and with the way in which the Treasury lives and moves. The proposition is a little new to me. I am not quite certain whether the effect of it would be to stereotype them too early to a particular branch. If the suggestion is that they are to come in at 17, and to do accountancy and nothing else, with no possibility of a change, I think it would be a great pity.

23,948. (*Chairman.*) Would you have sufficient scope to create in your office a service. Would the accountants have sufficient scope for promotion?—One a little doubts. I do not quite know. We must wait on circumstances for it.

23,949. (*Sir Henry Primrose.*) It would have to be applied, not to one office, but to the whole Service?—Quite so.

23,950. And that would give in different accounting branches opportunities of transfer. Taking the War Office, the Admiralty, Inland Revenue and the Customs, you have very highly paid places, and any qualified man might be transferred to those offices?—Yes. In case I was misunderstood may I say this: I was asked several times about the promotion of second division clerks. I have all along suggested that we were certainly going to promote, and could do very well with promoted, second division clerks; but, in saying that, I have always had in mind that the corps into which they would be promoted would be a corps composed predominantly of men who continued their education until 23 or 24, and entered by the Class I. examination; and I think the value of the second division clerk would be enormously diminished if the corps into which he was promoted was only a lot of other second division clerks like himself promoted. We all assist and learn from one another. It is because the predominant note of the place is a higher standard of education, and a longer continued education, that these people get made use of and are so useful.

Mr. THOMAS JOHN HUGHES called and examined. Professor JONES was in attendance.

23,951. (*Chairman.*) You are the Chairman of the Welsh Insurance Commission?—Yes.

23,952. Of how many members is the Welsh Insurance Commission composed?—Five, including the Chief Registrar of Friendly Societies, who is *ex officio* a member of all the Commissions.

23,953. What are the names of the other four?—The deputy chairman is Dr. Richards. In each case the deputy chairman is a medical man. The Hon. Violet Douglas-Pennant and Mr. John Rowland are the other two commissioners.

23,954. Is this your first introduction to official life?—Yes, to Civil Service life.

23,955. Are all the other members you have mentioned, except Miss Douglas-Pennant, fresh to official life to?—All except Mr. John Rowland, who was Private Secretary to the Chancellor of the Exchequer.

23,956. Was he an official private secretary or taken from the outside?—He was at the outset taken from the outside. He was a secondary school teacher.

23,957. He passed from being a secondary school teacher to be private secretary to the Chancellor of the Exchequer?—Yes.

23,958. And from there he was translated into this Commissionership?—Yes.

23,959. So that in your Commission there is no member having knowledge of official life?—Not of official life.

23,960. We are desirous of knowing how you made your appointments. May I divide the appointments into indoor and outdoor as a general classification? The indoor appointments may, I suppose, be divided into the administrative and general and clerical?—Yes.

23,961. How many administrative officers have you in the first place?—I should be glad to know what I am to gather by the expression "administrative."

23,962. The secretary, assistant secretaries, and principal clerks?—The secretary of the Commission, who is with me here—Professor Jones—was appointed by the Treasury, not by us. We have two assistant secretaries, one of whom we have just appointed.

23,963. The secretary was appointed under clause 7 of the Order in Council?—Yes, by the Treasury.

23,964. Was he taken from outside?—Yes, from outside. He had been professor of economics at the Belfast University, and was secretary to the King Edward VII. Welsh National Memorial Fund, and the Treasury appointed him secretary to our Commission.

23,965. You have two assistant secretaries?—Yes.

23,966. One was appointed under clause 7 also?—Yes.

23,967. Was he taken from outside?—Yes.

23,968. Was the other assistant secretary also taken from outside?—No, transferred from the office of the chief registrar of friendly societies.

23,969. He was an actuarial clerk?—Yes.

23,970. Your accountant was transferred from the Office of Works?—Yes, but his assistant accountant was appointed under clause 7 from outside.

23,971. The medical officer was taken from outside?—Yes.

23,972. And your legal adviser?—Yes.

23,973. Were your first class clerks, of whom you have two, taken from outside?—Yes.

23,974. The assistant accountant was taken from outside?—Yes.

23,975. Of your second class clerks two were taken from outside and four were transferred from another department?—Yes.

23,976. Your first class woman clerk was taken from the Post Office?—Yes.

23,977. The four second class women clerks were also all taken from the Post Office?—Yes. In fact all our women clerks were taken from the Post Office.

23 January 1913.]

Mr. THOMAS JOHN HUGHES.

(Professor JONES was in attendance.)

[Continued.]

23,978. Your second division clerks were taken by open competition. Did you apply to the Civil Service Commission for them?—No, they were all transferred.

23,979. Can you say from what departments?—A number of different departments—the Local Government Board, the Board of Trade, the India Office, the Admiralty, and Somerset House, were the main departments. We got them where we could.

23,980. Then the assistant clerks in Group VII seem to be all taken from other departments?—Yes.

23,981. Is the organisation of your office complete?—No, we have asked for further sanction from the Treasury. You are probably aware that under section 82 of the Insurance Act the Commissions for Wales and for Scotland and Ireland have not the same status as the English Commission. The sanction of the Treasury is necessary, not only to the class of appointment, but to the man or woman who is to be appointed in the case of all the Commissions excepting the English Commission. We have applied to the Treasury for sanction for a number of first class clerks, second class clerks and assistant clerks. It is proposed that our department shall be an intermediate office; that is to say, with a certain number of first class clerks, second class clerks and assistant clerks, and it is proposed that, when we have recruited our staff of second class clerks, we shall in due course promote where we can the more brainy second division clerks after their qualifying period of service expires and declare the other second division clerks redundant.

23,982. Then you intend to have your office on a second division basis?—I think it is called an intermediate basis; that is to say, a certain number of first class clerks and second class clerks, but no second division clerks.

23,983. You intend to have clerks recruited by Class I. examination?—No.

23,984. And also to have clerks recruited by the intermediate examination?—Yes.

23,985. That is an unusual arrangement?—First class clerks, not higher division clerks.

23,986. What do you mean by first class clerks?—A man who starts at 350*l.* and goes to 500*l.*

23,987. The top of the intermediate appointments?—Yes, I think they are now called first class clerks.

23,988. You do not then intend to have university men recruited by the Class I. examination?—We intend to do it in this way: Our proposals are awaiting, I hope, the sanction, any day, of the Treasury. They have received the assent of the Civil Service Commission. We propose to ask the Civil Service Commissioners to prepare a special form of examination rather more severe than the ordinary intermediate examination, with knowledge of Welsh as an optional subject only, and our hope and belief is that, while the examination will be quite an open one, we shall in that way catch, so to speak, the good graduate with honours from the Welsh University.

23,989. (*Mr. Matheson.*) But what age will you put for that?—We are asking for an age higher than the average minimum, 20 to 25.

23,990. (*Chairman.*) You give them five years?—Yes. Of course, this would be an *ad hoc* examination for the first recruiting of the staff. One has to take the Welsh position as rather different from the English position. Probably it would resemble Scotland; our system has now reached the point where the rungs of the ladder are complete—where it is quite possible for a boy to enter the first standard of an elementary school and proceed to his degree at the Welsh University without any cost to his parents.

23,991. Is it your object of excluding the Englishman?—Not at all. I am very glad that question has been asked, because it is so far from our policy. We think that the examination is more difficult and we can attract a better class of men at the same salary. The Welsh Appointments Board has just come into existence, and the object of that Board, as I understand, is to try, on the same basis as has proved successful in the older universities, to act as a clearing house for young men.

23,992. Assuming for a moment that the Treasury will sanction that arrangement regarding Class I., why should not you continue with your second division which is the organisation of the Civil Service generally. You would then have Class I., the second division, and the assistant clerks?—With great respect our system is not Class I.

23,993. I mean this higher division which you propose to recruit from young men aged 20 to 25 by this superior style of examination which you wish to introduce. I am calling that Class I. or first division, or whatever you may prefer; but must you not have the second division under it? You propose to have a second division recruited on the intermediate system—the basis of the junior appointments, as they are called now?—No, I am afraid I have not made myself clear. We are proposing to get rather a better kind of man than the intermediate examination produces, and he will be our top man. We have got a certain number of men at the top now, and we shall promote from that rank to the top rank.

23,994. What do you desire to call the top rank?—The top man of all I should like to call the first class.

23,995. Let me assume you have your first class division recruited, that is to say, a man educated in a superior way recruited between the ages of 20 and 25?—Yes.

23,996. Under that class you will want another class?—Yes.

23,997. What other class do you want immediately under the first class?—We want a class from whom the first class are recruited, and permanently we shall be content with the intermediate examination.

23,998. Therefore you will have to recruit by that intermediate examination?—Yes.

23,999. Why should not you be satisfied with the second division instead of the intermediate division?—The answer to that is that, as I understand, the Treasury's desire is that we shall be what is called an intermediate office.

24,000. The Treasury is a very powerful force, no doubt; but, putting it out of consideration for the moment, why should not you in the nature of things be satisfied to recruit men of the second division?—I should like to consider that for a moment.

24,001. The intermediate division is a more expensive division than the second division; the pay is higher?—The difficulty, as I understand, is that, if you have the second division men at the one end, you want a much better kind of man at the top, and you cannot get that quality of man to come to Wales.

24,002. But you tell me that your educational ladder is complete from the school to the university?—Yes.

24,003. And the university is well staffed and is capable of conveying excellent instruction, and if you determine to introduce a specially severe examination will not you get a good class of man after all that preparation?—But this examination which we propose is, after all, only for second class clerks, and not for the higher division men. I am afraid I have not made it clear.

24,004. Let us begin again. At the present time the organisation of the Civil Service consists at the top of a class of men recruited by what is known as the Class I. examination, with which you are familiar?—Yes.

24,005. No one, unless he be exceptionally clever, passes it without having gone through a university course and taken a degree with honours. Now you intend, I understand, to recruit men of that character for your highest class in Wales?—No, not directly by this examination. We intend to recruit men by this examination who will be second class clerks and to promote from those.

24,006. Do you not intend to have a staff of superiorly educated men at the head of your organisation?—Yes, to pick out the very best of this body of men that we shall bring in under this examination.

24,007. You intend this examination to produce a class of man on an average not first rate but containing first rate men?—Yes.

23 January 1913.] Mr. THOMAS JOHN HUGHES. (Professor JONES was in attendance.) [Continued.]

24,008. And if it does contain first rate men you will promote them to the highest places?—That is it.

24,009. (Mr. Boutwood.) To clear up one point which is still doubtful in my mind, this examination, I think you said, was temporary?—Yes.

24,010. Is the situation this then, that you are going to adopt the intermediate scheme as the permanent basis of your office, but for the first year or two or a few years, in order to give the higher grade of the intermediate scheme a start, you propose to have this special examination?—Yes.

24,011. Is that the position?—That is the proposal. May I say as a reason for it that we have utterly failed to get by transfer from the existing Civil Service in London a sufficiently good class of man to come down to Wales. They feel it is a *cul de sac* and will not come.

24,012. (Chairman.) Do not you think you would get them if you applied to the Civil Service Commission and offered the same scale of pay as in England is given to men recruited by the Class I. examination?—They have not succeeded hitherto.

24,013. Have you asked them?—Yes, and we have had Treasury sanction to offer two increments of salary, and that has not tempted them. You see there are no other Government offices in Cardiff at all. In Dublin and Edinburgh there are other Government departments, and in London they are everywhere, but we are quite at a *cul de sac*, so to speak, and they will not go far away from the hub of things. They think their chances of promotion are better if on the spot where they can hear of things, and they will not come, and we have to take the situation as we find it.

24,014. You are going to invent an examination which shall be more severe than the existing intermediate examination, and you are going to recruit a class of man by that examination?—Yes, we hope so.

24,015. That will be the main stock of your organisation. From that, in course of time, certain men will show themselves better than others, and you are going to pick out these men and put them into a higher division?—Yes.

24,016. And give them higher pay?—Yes.

24,017. Will you recruit that higher division in the same way for the future by taking men from the intermediate division and promoting them?—Unless, meanwhile, as we hope may be the case, the men will come to Cardiff when they see matters more developed than they are now.

24,018. Supposing they do come, then will you recruit them specially for the top division?—It is very difficult to legislate far ahead, but what I gather we should do when the time comes is, if there was a vacancy we should try to get the best man for it, and if the best man came from outside we should have the second best man from inside; we should have two strings to our bow at any rate.

24,019. Have you got the Treasury to consider that scheme of yours?—It is under consideration by the Treasury at this moment. The Civil Service Commissioners have blessed it.

24,020. Is it possible to see the document. Is it a confidential document so that the Commission would be precluded from seeing it?—I cannot see that there can be any possible objection except that the examination paper has not been prepared. We have arranged with the Civil Service Commissioners, subject to the sanction of the Treasury, to prepare an examination paper, and we have discussed the lines of it.

24,021. But we would like to see the scheme of the service which you want to establish?—There can be no possible difficulty about that, I should say. I should like, of course, to ask Mr. Bradbury of the Treasury about that, but I cannot conceive any difficulty. It is simply a letter from us to the Civil Service Commissioners, and a letter to the Treasury. I do not quite know what the etiquette on these matters is, and I should like to ask, but I cannot conceive any sort of difficulty.

24,022. Have you recruited any lady inspectors or any lady clerks?—Yes, three or four on the outdoor staff.

24,023. Are they inspectors?—Three are assistant inspectors and the other is a Health Insurance officer.

24,024. How were they recruited?—Generally speaking, the whole of the outdoor staff, both men and women, were recruited purely on the lines of the report of the departmental committee, upon which Miss Haldane and I sat. I have the report here.

24,025. Was it a mere personal inspection, or was there an examination?—First of all there was an advertisement, and after the advertisement appeared the applications were carefully sifted one by one on a rough basis of marking, and ultimately about 20 times as many as we wanted were chosen.

24,026. How were marks allotted—on examination of the papers and personal interviews with the candidates?—We had first of all a rough system of marking of the papers themselves.

24,027. The testimonials?—Yes, and the applications themselves. For instance, there would be so many marks given for secondary education, so many for good service and testimonials, and, if the man had been to the university, something would be added for that. It was admittedly a rough method—something to divide the absolutely hopeless from those worth looking into. Then we got about 20 times as many candidates as we wanted, and went through their papers again more closely, and reduced them to 10 times as many, and when we got to that stage we interviewed the candidates personally. The commissioners were assisted by the representatives of the Civil Service Commission, and ultimately the applicants were reduced to about five times as many—sometimes three and sometimes five—and were sent up for examination.

24,028. You sent them to the Civil Service Commissioners for examination?—Yes.

24,029. In what were they examined?—There was a different degree of difficulty having regard to the post—a more difficult examination for the inspector than for the assistant inspector. We also divided them roughly with the assent of the Civil Service Commissioners, into more or less sub-heads. For instance, we divided those who had friendly society qualifications, those who had trade union qualifications, and those who had general qualifications.

24,030. Was it a literary examination?—Yes, partly literary and partly on the Insurance Act, and the geography of Wales and so forth. The subjects were English, arithmetic, précis writing, Insurance Act, and geography, in varying degrees of stiffness.

24,031. Are the salaries that the ladies and men get on the same level, or are women paid less than men?—The ladies get somewhat less than men. We failed to carry their equality through at the inter-departmental committee. Some of us thought they ought to get the same, but that was not decided, and the Treasury did not so decide. Miss Jones, one of the women inspectors, gets 250*l.* a year. She was already in the service, and was transferred. A lady health insurance officer gets 80*l.* a year, but as to the whole of the outdoor staff we acted purely on the straight lines of the report of the inter-departmental committee.

24,032. Have you got a lady inspector?—She is called assistant inspector. She receives rather a high salary. She is quite an able woman. She was organising inspector for the whole of Wales under Part II. of the Act.

24,033. What salary does she get?—250*l.* a year.

24,034. Where is she shown on this statistical table?—Almost at the end of the list—Group XI.—Assistant inspectors (female), 100*l.* by 10*l.* to 300*l.* There are two female inspectors.

24,035. Three female inspectors?—Two in that column and one in another.

24,036. But that is much less pay than you said?—Pardon me, Miss Jones came on at that scale of 250*l.*

24,037. The two other ladies came on at 100*l.*?—One at 100*l.*, and another at 200*l.*, if I remember correctly.

24,038. (Sir Donald MacAlister.) I see you have a medical officer. Is he a whole-time officer?—Yes.

24,039. What are his functions?—He has a good deal to do with our relations to the sanatoria and dispensaries. There is the King Edward VII. National Memorial Association which received a Royal Charter

23 January 1913.] Mr. THOMAS JOHN HUGHES. (Professor JONES was in attendance.) [Continued.]

last year. This body is attacking consumption from a national standpoint, and we are brought into close relation with them, because the functions which in England and Scotland are vested in the Local Government Board as to sanatoria, are in Wales vested in the Commission. The functions of the medical officer now consist a good deal in keeping in touch with various dispensaries and sites for sanatoria and so forth, and generally assisting the deputy chairman, who is the head of that department, and is a medical man himself.

24,040. You are authorised to enter into close relation with the King Edward Association?—Yes.

24,041. Has that been done?—Only in this sense, that the immediate relations of the Welsh National Memorial are with the Insurance Committees with regard to sanatorium benefit. Our functions as commissioners relate to the capital grant. We have also under section 83, sub-section 2, to make grants out of the Budget (capital) fund, and out of the Hobhouse money, as it is popularly called now. The administration of the grant which the Government proposes to make to county councils, roughly 50 per cent. of the entire cost of dealing with consumption, is now vested by the Treasury in the commissioners (in England in the Local Government Board) so that we hope to get into very intimate relations with the National Memorial in that sense too.

24,042. Was not there a provision in the Bill, if not in the Act, authorising the commissioners to take still more immediate charge of that fund?—Section 82, sub-sections (3) and (4) is the section in question. That association was chartered, and is providing sanatorium benefit in Wales by agreement with all the Welsh insurance committees.

24,043. So that is a delegated function of the commissioners to that extent?—Not quite, because under the Act the insurance committees are not entitled to provide sanatorium benefit, but only to make arrangements with other people to provide them. The insurance committees have, therefore, contracted in every case with the Welsh Memorial Association, with our good offices in bringing it about, to pay them 75 per cent. of the money, retaining a small sum for emergencies, in consideration of which the National Memorial Association on their part undertake to provide all the sanatorium benefit necessary for Wales and Monmouth.

24,044. So the existence of this body in Wales has enabled you to unify the tuberculosis part of your work in a way not possible in other parts of the kingdom?—Yes, and to take it from a national point of view.

24,045. This medical officer has been of service in this respect?—Of immense service.

24,046. Is that his only function?—No, he was at the time of his appointment a whole-time county medical officer.

24,047. But I mean now?—No, he has been using his good offices in relation to the panels and so forth, and generally he acts as a deputy to the deputy chairman, if I may put it in that way. The deputy chairman has a good deal of work to do, and must also, sometimes, be in London, and it is very desirable that a medical man should be on the spot in his absence, to deal with problems that arise.

24,048. So that I may put it that the medical officer is a permanent member of your staff, and is the understudy of the medical commissioner?—Yes.

24,049. (Miss Haldane.) One or two questions about your women staff. How were your typists brought in, from outside?—Through examination by the Civil Service Commissioners. We advertised and nominated a certain number whom we thought hopeful. Most of them we had in for some time to see what really they could do. We had any amount of work for them to do, and saw they were good typists, and so had them examined.

24,050. Was the superintendent brought in from another department?—She was promoted from within. She had been with us from the beginning, and we were quite satisfied she was an excellent woman and promoted her.

24,051. With regard to women clerks, does the second class proceed automatically into the first class

or is there an examination between?—I do not know, and if I make any *faux pas* I must be excused because I know very little of the ramifications of the Civil Service, and I have had a very strenuous year since I was appointed. The point has not arisen yet.

24,052. I suppose you do not know whether the female clerk will have an opportunity of rising to the higher posts?—I do not, but the point has not arisen yet.

24,053. Is it your general idea that there should be the same promotion among the female staff as amongst the men?—Yes. I should like to say that I am all in favour of a very free flow of promotion right through.

24,054. You would apply that even to the typists possibly?—Yes.

24,055. You would approve of the open way right through?—Yes.

24,056. Have you had much experience of the work of the women, and can you compare it in any way with the work of the men?—I have had a good deal of previous experience of women's appointments as member of the Glamorganshire County Council but not in the Civil Service; but I should like to say that the work done in the past year has been most admirably done by the women and by the men. We have had the whole-hearted service of all ranks under most trying conditions.

24,057. Can you compare the amount of work done by women and the amount of work done by men. Do the men do more work than the women?—I think the women do more work than the men while they are at it.

24,058. (Chairman.) What do you mean by "while they are at it"?—My experience has been that there is a greater likelihood of women breaking down and not being able to be at work during the whole year; but hour by hour I believe the women do better than the men, but we do not get as many hours out of them in the year.

24,059. There is greater danger of women breaking down by work than men?—That is my experience.

24,060. But while the women are working they do more than the men?—Yes, I say that without hesitation.

24,061. (Miss Haldane.) Do you mean they work longer hours or are keener?—They are keener and more industrious in my judgment.

24,062. Have you had the men and women working together?—No, except in one case only, where for a short time the superintendent of the department was in the same room as the typists.

24,063. Were your women inspectors transferred, or did they come in straight to you?—One was transferred from another department; the others came from outside as the result of selection and examination.

24,064. What you have said applies to the inspectorial staff as well as the clerical staff?—I cannot say that of the outdoor staff, because they have been appointed only a short time, and are not so closely under my eye, but the reports that come in from women inspectors are quite admirable. They come to me very often, and the reports they write upon the matters they inspect are quite admirable.

24,065. Do I gather that you have fewer Health Insurance officers than in England; you have one female and 10 men?—I am afraid I do not know how the English Commission have arranged, but we are within our maximum. We think possibly we shall have to appoint another Health Insurance officer, but we thought we ought to go more quietly at the outset.

24,066. The salaries of women on the outdoor staff are somewhat below those of the men?—Yes.

24,067. I rather gather you feel that equal work deserves equal pay?—That is my own view very strongly. The Welsh Commission passed a resolution unanimously on those lines. It has been my own strong view for many years.

24,068. And that there is certain danger, in introducing women doing the same work at less remuneration, of reducing wages all round?—I can only say, after 20 years' experience, where I have seen a woman doing the same kind of work as a man and she

28 January 1913.] Mr. THOMAS JOHN HUGHES. (Professor JONES was in attendance.) [Continued.]

does it as well as a man, I think she ought to be paid at the same rate for doing it.

24,069. (*Mr. Shipley.*) In this proposed examination you say Welsh would be an optional subject; say there are 10 subjects, one of them may or may not be Welsh?—The subjects will have the same marks. It will not be loaded at all.

24,070. How many people in Wales would not be able to manage the insurance cards unless the officer could speak Welsh? Are there many people left in Wales that speak nothing but Welsh?—The last census returns show they are something less than 10 per cent. of the entire population. I think it is an inflated percentage myself.

24,071. You do not think it is as big?—I think it is inflated.

24,072. (*Chairman.*) You say 90 per cent. speak Welsh?—No; 10 per cent. are monoglot Welsh.

24,073. (*Mr. Shipley.*) You spoke of an open competition, but you seemed to confine it to the universities of Aberystwyth, Bangor and Cardiff. Do not you think the examination would attract Scotchmen and Englishmen?—Yes, some of them, but not to any great extent, because the work would have to be done at Cardiff and they would have to settle at Cardiff. I think that the brainy young Englishman would put in for the second class examination, which is not so severe but which gives him the same opening salary, and that we should get the honours product of the Welsh University taking these examinations at the same salary because they will have to live at Cardiff.

24,074. The commissioners do not appear in this return?—No.

24,075. Could you tell me what salary they get?—Yes, I get 1,500*l.* a year, the deputy chairman 1,200*l.* a year, and the other commissioners get 1,000*l.* a year. They are non-pensionable, except myself. They are appointed for five years.

24,076. Who appoints them?—The Treasury—I believe the First Lord of the Treasury nominally?

24,077. Do you think there is any suspicion in any case you have known of politics playing any part in the appointment of any officer?—Of the commissioners?

24,078. Or of any other officer?—As far as the commissioners are concerned it is not a question that should be put to me as to my colleagues, or the members of the English or Scotch Commission, but as far as the other appointments are concerned, in the appointments that we have ourselves made, politics have played no part at all.

24,079. None?—None absolutely?

24,080. And you think on the whole the organisation you have established is turning out to be efficient?—We hope to make it efficient. We have been worked off our feet, and we have scarcely had time to look into internal economy and administration. We are doing the best we can under very trying circumstances, but we get very good work out of our people. I have had many years' practical experience in administrative work myself and keep my fingers on the threads, and I am perfectly satisfied with the volume and quality of work turned out.

24,081. (*Sir Henry Primrose.*) What is your impression as regards the future of the department? At present you are organising the whole system under the Act, and considering regulations on difficult and complicated questions, and so on. When the time comes, if it ever does come, when all that has been settled, would not the work of the office be comparatively routine work?—An answer to that is very difficult to give. It is quite in the lap of the gods. No one in the least knows what the permanent nature of the work can be, but I think there will always be a very considerable amount of work requiring initiation. There will always be problems occurring and recurring upon a hundred and one matters, and I also think that by the time the routine period arrives the department, which is the first national department in Wales, will be used very much as an administrative waste-paper basket by the Government which happens to be in power; when anything fresh comes along they will say, "Let the Insurance Commission do it"—for instance, Old Age Pensions. I cannot see why, at

a time not far off, a person who receives 5*s.* a week for disablement until he is 70 is to be handed over to another department to receive 5*s.* a week after he is 70. That is only one illustration.

24,082. But still it is conceivable that in the course of years—I do not say how long—a staff of much less high calibre than the one you want at the moment would be sufficient for the purposes of the office?—Yes, and the Treasury have that clearly in their mind, because they have limited us closely in the higher departments in the sanctions that they have given and are giving, and it has been a matter of discussion between Mr. Bradbury and myself. The point of view you have expressed he shares, and has clearly in his mind in the present sanctions.

24,083. In this scheme you have laid before the Treasury what is the maximum limit of age for your candidates?—Twenty-five.

24,084. Why do you go as high as 25?—The Welsh University differs from the older universities; it takes the son of the peasant and of the artisan, and the product of the elementary schools; 94 per cent. of those who enter the secondary schools in Wales under the Welsh Intermediate Education Act go there from elementary schools, and they go on from the secondary schools by exhibitions to one of the three university colleges, and from there to the Welsh University. So the Welsh University student may be the son of a Welsh peasant or artisan, and cannot therefore come on as quickly in point of years as other men.

24,085. (*Mr. Shipley.*) What percentage of secondary school boys go to the Welsh University colleges?—I do not know the percentage, but they are very largely recruited from that body.

24,086. (*Sir Henry Primrose.*) Do not you think that is putting it off very late. If you have a maximum limit of 25, nobody who is very much below that has much chance in the examination, and you are cutting out all possibilities from the boys who do not go on to the university?—Frankly, we want this stiffer examination, and we are quite satisfied we shall be able to get men who will sit for it at the salary which would only attract the ordinary second class men in England because of the advantages of London.

24,087. (*Chairman.*) But Scottish universities have men from the same sound class—very largely sons of farmers?—Yes. But you have Edinburgh, which has other Government offices. That is just the point.

24,088. (*Lord Bishop of Southwark.*) The extension of the age really gives a better chance than he would otherwise have to the less able man?—Yes.

24,089. (*Sir Henry Primrose.*) One danger you must guard against is that your limit of age is higher than the examination for the Civil Service here, and if your idea is to have mainly Welshmen, there will be a great temptation to the men who have failed in the examinations in this country, if they cannot get a place in England, to go to Wales?—The answer to that is, that our examination is stiffer than theirs. We are purposely making it essentially stiffer than the intermediate examination.

24,090. Yes, stiffer than the intermediate, but you will have men who may have failed in the first class examination in London, and who are not ready for any other profession, coming and flooding you?—We shall be very glad if they will. Now the really first class man will not look at us. If we can get him in that way we shall be delighted.

24,091. But I thought you rather hoped to have Welshmen?—No. I do hope the Commission will clearly understand that I am no party to this parrot cry of "Wales for the Welsh." I should never have had any chance myself if I had built a brick wall around myself and said, "Nobody must come inside this," because I should shut myself out from anything else outside the same wall.

24,092. (*Sir Donald MacAlister.*) Your idea is to let the Welsh graduate in rather than keep anybody else out?—That is exactly it.

24,093. (*Mr. Philip Snowden.*) I take it, from what you have said, that no member of the Commission, or even the secretary, was in the public service before their appointments to these posts?—Not in the Civil

23 January 1913.] Mr. THOMAS JOHN HUGHES. (Professor JONES was in attendance.) [Continued.]

Service. I regard myself as being in the public service for many years but not in the Civil Service.

24,094. What was your own experience of public work before your appointment?—I was 20 years a member of the Glamorgan County Council, for 14 years Chairman of its Finance Committee with an annual Budget of a million, and for 8 years Vice-Chairman of the Council.

24,095. What were you in business or profession?—A solicitor.

24,096. May I ask whether you took any prominent part in the politics of Glamorganshire?—Yes.

24,097. Did you, at the time of your appointment, hold any official position in connection with either of the political parties?—Yes, I was secretary of my constituency Association, but it was an unpaid post.

24,098. You were fairly well known then as an active politician?—I gather so, yes.

24,099. Not a conservative, I suppose?—No.

24,100. Mr. Rowland you said was a secondary school teacher in Wales before appointment?—Yes.

24,101. He came first of all to the Board of Trade when Mr. Lloyd George was there?—Yes, I believe so, to be his private secretary.

24,102. What is the maximum salary of a secondary school teacher in Wales. You have had experience on the Glamorgan Education Committee?—I should think about 200*l.* to 250*l.*, but of course there are avenues open to inspectorships and so forth.

24,103. Then Mr. Rowland, when he came to London, would not be receiving more than 200*l.* a year?—I should think not—probably less—I do not know at all. He was a Cardiff teacher and I am a Glamorgan man.

24,104. When you talk of these appointments having been made by the Treasury, what you mean is really that they were made by Mr. Lloyd George?—I only know myself that my appointment was offered me in writing by the Prime Minister—I prefer to put it in that way.

24,105. Then Mr. Rowland has had the good fortune to rise from a salary of less than 200*l.* a year to 1,000*l.* a year in something like six years' time?—I do not know what the period was. It was possibly like that.

24,106. It is only six years since Mr. Lloyd George first took office?—Yes.

24,107. You have one or two assistant secretaries?—Two.

24,108. Have you made an appointment recently?—Yes, quite recently.

24,109. Did you advertise the appointment?—It came about in this way: We advertised the appointment and we had a large number of applications. We nominated a person whom we thought the best, and the Treasury were unable to sanction that appointment, because the gentleman we nominated had no knowledge of Welsh. We then advertised again, making a knowledge of Welsh essential, and we had a certain number of applications, but we were unable to recommend to their Lordships anybody from the list as being, in our judgment, suitable. We thereupon nominated the Registrar of the South Wales University College, and that appointment has been confirmed by the Treasury. The gentleman has not come to us yet, but is under notice to come to us.

24,110. (Mr. Shipley.) Would you mind giving me the Registrar's name?—Mr. Percy Watkins.

24,111. (Mr. Philip Snowden.) I take it you first of all selected an assistant secretary who did not speak Welsh?—Yes.

24,112. And the Treasury, you told us, refused to ratify the appointment, because of this man's ignorance of Welsh?—Yes, their Lordships regarded a knowledge of Welsh as essential in that post.

24,113. Did the Treasury tell you that they regarded a knowledge of Welsh as being essential?—Yes.

24,114. Why did not they tell you that before you inserted the first advertisement?—I am simply saying what did happen.

24,115. Should I be far wrong if I said that as a matter of fact the Treasury were prompted to raise

that objection to the appointment?—I really have no right to discuss that.

24,116. (Chairman.) If you do not know and cannot give an answer, please say so?—I do not know.

24,117. But if you can give an answer, give it?—I do not know; but the bare reply to the question of "I do not know" in print sounds as if there was some reflection about it.

24,118. If you are unable to say, it does not convey any meaning beyond the fact that you do not know anything about it?—Very well.

24,119. (Mr. Philip Snowden.) The man you first of all selected was an Englishman?—Yes.

24,120. He had a very considerable experience of the working of the Act and of putting the Act into operation here in London?—Yes.

24,121. You selected him for the appointment because you considered he was eminently suitable?—Yes.

24,122. And the commissioners themselves did not think his ignorance of Welsh would be any detriment to the efficient discharge of his duties?—The commissioners, except one of them, did not think so.

24,123. And of course that one was Mr. Rowland; there is no secret about that?—That is so.

24,124. The matter has been raised in Parliament. What I am saying is fairly public knowledge?—May I say quite shortly what is the position we take up in that matter.

24,125. My point is this, putting it plainly: Is it not a fact that the only opposition to the appointment of this admittedly very efficient and suitable man came from Mr. Rowland himself, and that his objection was to the appointment of a man who was not a Welshman and who did not know Welsh?—He took that standpoint, as he had every right to do, and no doubt he was perfectly sincere. We took another point of view, and ultimately the Treasury did not sanction the appointment.

24,126. Was this the first instance where the Treasury refused to ratify an appointment on those grounds?—As far as we are concerned, yes. Our principle was this: We took care that in every department, either the first or the second man in the department should have a knowledge of Welsh, and wherever the first man in the department had a knowledge of Welsh, but was lacking in some technical qualifications, we sought to complement his lack of knowledge on that technical side by taking care that the second man should have that technical knowledge, even if he did not have the knowledge of Welsh that the first man had.

24,127. Is much of the correspondence that comes to your Commission in Welsh?—A proportion. I do not know what the figures are.

24,128. Mr. Jones, who is with you, speaks Welsh?—Yes.

24,129. Therefore there really would not have been any difficulty in the office through the fact that an assistant secretary, who was admittedly very well efficient in the working of the Act, and who had proved his capacity to administer the Act, did not know Welsh?—That was the view we obviously took, because we recommended him.

24,130. But you will admit that it is necessary you should have in the office people who do know Welsh?—Yes, and the answer is that we have, out of the ladies and gentlemen we have appointed hitherto, about 60 per cent. of them Welsh speaking.

24,131. That will apply more particularly to your outdoor staff?—And the indoor staff and the secretariat.

24,132. Do you make it a condition of employment of your outdoor staff that they must know Welsh?—Yes, we think it quite necessary. In the secretariat there are several who can speak Welsh, and in every department either the first or the second in command speaks Welsh.

24,133. With reference to this proposed appointment of what you call the higher first class division men, about which so much has been said, how many appointments of that character do you suppose it will be necessary to make?—About eight or 10 men, and then it is over; it does not recur.

23 January 1913.] Mr. THOMAS JOHN HUGHES. (Professor JONES was in attendance.) [Continued.]

24,134. Your intention is to recruit them afterwards by the intermediate?—Yes, unless we are fortunate also to get the higher.

24,135. (Chairman.) Will not you keep up the 10 men?—No.

24,136. (Mr. Philip Snowden.) That is to say, you will have only one examination in which you will recruit about eight men?—Eight or 10.

24,137. The reason for that is because your intermediate grade is not yet sufficiently experienced and mature to be able to fill these higher posts; but by and by you hope they will, and any future vacancies in your first class division will be filled by the promotion of experienced intermediate men?—Yes.

24,138. (Chairman.) But you mean to maintain your first class men at that strength—eight or 10?—They will not all be first class.

24,139. But the grade which you say will consist now of eight or 10 men will continue at that level for the future, no matter how you recruit them?—Possibly.

24,140. (Mr. Philip Snowden.) If the higher work in your office does not increase, you will not increase the number of that grade?—No.

24,141. But if it should increase, and you require a larger number of this higher class you would fill them by the promotion of intermediate men?—Yes.

24,142. And also fill vacancies in those brought in by this special examination, by the promotion of intermediate men?—Yes.

24,143. (Chairman.) That is what I say: You will always keep your higher division at the level of eight or 10 men, and that will be a permanent division?—No, I am afraid we are not quite at one. Our idea is to have 10 men brought into the office upon a scale of 100*l.* to 350*l.*—a man who is a good deal better than the ordinary intermediate man, but who is not as good as the higher division man. The next step is, as and when we want one, two, or three men of the first division rank, we shall promote them out of that 10.

24,144. I understand all that; but what I want to know is, will you maintain the higher division for the

future with its 8 or 10 men if the work remains?—Certainly, and then we shall feed the supply at the other end through the intermediate examination.

24,145. (Mr. Philip Snowden.) But, of course, if the higher grade work of your office should become less, and there were vacancies by resignation or otherwise from the higher grade men, of course you would reduce the number of your higher grade men?—Yes.

24,146. It is a matter of office organisation?—Entirely.

24,147. (Chairman.) And the pay is to range from 100*l.* to 350*l.*?—Exactly the same as the intermediate clerk.

24,148. (Mr. Philip Snowden.) Do you think you are likely to attract young university men of 24 or 25 by a salary such as that?—We are convinced of that for this initial examination, but I do not say permanently. There is an output from the universities of brilliant young lads who have gone on and taken their degrees, who suddenly find they have nothing to do. We have at present temporary clerks who are honours men at 30*s.* a week, and who are glad to get it.

24,149. (Chairman.) Welshmen?—Yes.

24,150. Honours men of the university?—The Welsh university. The degree of the Welsh university is quite a good one I may tell you.

24,151. No doubt; but you will not get men from Oxford and Cambridge to do that?—No, because there has been in existence at each of those universities this Appointments Board. We have had nothing of the kind in Wales. The thing has come on too quickly to be grappled with. The Welsh Appointments Board, which came into existence six months ago, contains members of both Houses of Parliament and prominent men in Wales, and the secretary has just been appointed, and it will be the clearing house to find the round men for the round holes—places for the men, and men for the places; but meanwhile they are at a loose end, and I am perfectly certain they will jump at this examination, and we shall therefore get for the same salary a better class of man than the ordinary intermediate examination produces.

## FIFTY-NINTH DAY.

Friday, 24th January 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (Chairman).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.

Sir KENNETH AUGUSTUS MUIR-MACKENZIE, G.C.B., K.C.

Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR BOUTWOOD.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (Secretary).

Mr. J. LEISHMAN and Miss M. M. PATERSON called and examined.

24,152. (Chairman.) (To Mr. Leishman.) You are chairman of the National Health Insurance Commission (Scotland)?—I am.

24,153. When was the Scottish Commission created?—On the 30th December 1911.

24,154. How many members constitute the Scottish Commission?—Five. Really one is a sort of honorary member you might say, the chief registrar of friendly societies.

24,155. He is an *ex-officio* member?—Yes; there are four besides him.

24,156. Would you mention their names?—There is myself, Dr. McVail, Mr. John McNicol, and Miss M. M. Paterson.

24,157. Will you tell me what your own credentials were?—At the time of my appointment I was a merchant in Edinburgh, and I also had a private school which I ran, and I was Treasurer of the City of Edinburgh, that is really an honorary post, and I had been

a member of the Edinburgh School Board, Convener of the Higher Education Committee, chairman of the Edinburgh Burgh Committee on Secondary Education, Governor of George Heriot's Trust, and an ex-member of the University Committee for Training of Teachers, and various other committees too numerous to mention, I am afraid.

24,158. Had you taken a prominent part in politics in Edinburgh?—Previous to my start in business I was in the Civil Service for some years.

24,159. How many years is it since you left the Service?—About 17, I think. Up to that time I had taken no part whatever in politics, and for some years after that I did not. Latterly I did for two or three years take not a very prominent part, but certainly I did take a considerable part.

24,160. I do not ask the question in any invidious sense whatever, but do you attribute in any way your selection for your present appointment to the fact that

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

you were a prominent politician?—No, I did not apply for the post, either directly or indirectly. It was offered to me by the Government and I took it with very great hesitation, knowing the kind of post that it was, and also I had other ambitions in view, I may say frankly.

24,161. You were prominent in local politics rather than in politics in the wider sense. In everything connected with the management and administration of the City of Edinburgh you did take a prominent part?—Yes.

24,162. Then Dr. McVail was selected on account of his professional qualifications?—Yes, one of the commissioners must be a doctor.

24,163. That we understand. He was Medical Officer of Health of the counties of Stirling and Dumbarton?—Yes.

24,164. Was he employed in the service of Local Government?—Yes, on what you might call the Public Health service. He was an exceedingly prominent man.

24,165. Naturally, the attention of the Government would be drawn to him for such an appointment?—Yes, he was an investigator. He had done very marked service in connection with the Poor Law Commission. For example, he was really an outstanding man in public health in Scotland.

24,166. What was Mr. McNicol?—Mr. McNicol had been general secretary of a large friendly society, and, I suppose, although I do not know, the Government considered it necessary to have a man of that type on the Commission.

24,167. (To Miss Paterson.) And you, Miss Paterson, were an inspectress under the Home Office?—An Inspector of Factories.

24,168. Did you hold that position for a long time before your appointment as a commissioner?—Since 1893, between 18 and 19 years.

24,169. (To Mr. Leishman.) May I divide your staff into two broad classes, indoor and outdoor?—Yes.

24,170. I will, first, ask you some questions with regard to your indoor staff, as to the mode of appointment, and so on. You have given me a full, suggestive and interesting paper, but I would like to ask just a few questions. What was the procedure that you followed in appointing your staff?—Almost the entire staff, so far as the indoor staff are concerned, are Civil servants, with comparatively few exceptions.

24,171. Were they appointed for you, or did you appoint them yourselves?—Some were transferred from other departments.

24,172. Please look back to the time of the first appointments when the Commission was created, and tell me, had you at the time of your first meeting any staff of officers ready for your orders?—No, just the secretary had been appointed, of course, and he had got hold of one or two temporary clerks to help him with the correspondence.

24,173. Who appointed your secretary?—That was the Treasury.

24,174. And the secretary was a Civil servant at the date of the appointment?—Yes.

24,175. He was general superintendent of the poor, and inspecting officer under the Public Health Acts of the Local Government Board for Scotland?—Yes.

24,176. Was he a Civil servant of many years standing?—Yes, fully 20 years.

24,177. Was he known as an efficient public servant?—Exceedingly. He had been an assistant secretary to the Poor Law Commission, and I think it was fully recognised that he had done very valuable work; besides which I might say that he had very accurate professional knowledge of the Highlands of Scotland, which is a very difficult subject.

24,178. You found the secretary in existence and he had, temporarily I presume, employed a few clerks to help him?—Yes, just shorthand writers and so on.

24,179. How did you proceed to collect your staff; did you appoint a sub-committee to recruit them?—Not at that moment.

24,180. How did you proceed?—The secretary and myself, I think, went round the other Government departments of the city and represented that we

required a number of men, and asked if they would be good enough to recommend some of their staff.

24,181. Did you make out a sort of scheme of your office arrangements beforehand?—Not precisely at that moment; later on we did.

24,182. At the beginning you said: "We want a certain number of clerks"?—Yes.

24,183. "And we can count on various public offices to supply them"?—Yes.

24,184. Then you went round and made inquiries and heard from each office how many they could give you?—Yes.

24,185. And I presume you made sure of the class of officer?—Yes; indeed, we had received a considerable number of applications from men immediately it became known who the secretary and the commissioners were.

24,186. Did you publish any advertisements in newspapers inviting applications, or mentioning that certain appointments carrying such and such pay would be available?—On the 27th December, which really was at a date before the Commission was actually appointed, though it had been nominated, we sent out a circular briefly stating what the procedure of the Commission would be; that was formally adopted later on, and we acted upon it.

24,187. And you got a certain number of applications, I presume?—Yes, a very large number, over 20,000 in one way and another.

24,188. Then you proceeded to deal with them?—Yes.

24,189. What method did you pursue in dealing with them?—In regard to the first staff we really made some inquiries as to the kind of men they were from the heads of departments, and, if they were good men,—pushing men with some zeal and capacity—we took about a dozen or thereby who had been thoroughly recommended by the heads of their departments; that was the first step. Later on, practically the whole of the clerical staff of the Commission were simply taken from the Civil Service Commissioners as they chose to send them.

24,190. Dealing with Civil servants transferred from other employment was easy enough; the difficulty arose, I suppose, in dealing with outside applications?—Yes.

24,191. How did you proceed to deal with those—we are dealing now merely with your indoor staff?—The commissioners sat down and thought out something of the nature and kind of staff they required, and they thought they would require one or two lawyers, one or two accountants, and so on, and then they proceeded later to advertise for these, and got them.

24,192. It was some time later, I suppose, that you made out this very elaborate scheme of organisation?—Yes, that was when we began to develop.

24,193. To gradually grow?—Yes.

24,194. You issued your advertisements and got applications, and then proceeded to select the men?—Yes.

24,195. Did the Commission select the men, or did they appoint a sub-committee to select them, or give over the selection to anybody?—The chief appointments we were very anxious, of course, to be good men, and we asked, in connection with legal appointments, three of the leading lawyers in Scotland whether they would be good enough to help us; they very kindly agreed, and spent a good deal of time upon it. We had a list of the applicants, and we asked them if they would be good enough to make a long list of the applicants, what we call a list. They did so, and then later on they met and went over that long list and reduced it to a certain number, and then, along with the commissioners, they saw all the reduced number of applicants.

24,196. The commissioners saw them?—And this committee, too.

24,197. So that in that way you got your legal men?—Yes, and I may say—this is very interesting if I might interpolate it—that the committee along with the commissioners, independently, I think, practically selected five or six, and they all selected the same five or six men, with almost one exception.

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

24,198. That accounts for your legal men. How did you proceed to select your accountants?—We adopted the same procedure.

24,199. You applied to the Institute of Accountants?—Yes, we asked the president if he would act, and the president of another society if he would act, and then we asked the Vice-President of the Local Government Board if he would act. They all agreed and helped us just exactly in the same way.

24,200. And a very good way. Then when you came down to the clerks, second class clerks of course, you got them by transfer?—Yes, with one or two exceptions.

24,201. How did you proceed to get the men from outside?—There, again, in every respect the commissioners acted absolutely up to the pledges given to Parliament, and otherwise, with possibly one or two exceptions, that they would all be advertised or taken from the Civil Service. One man, for example, had been a Civil servant for many years; he had gone out to South Africa where he had been what they call "retrenched," and he came back. He called and asked if he could render any assistance; we were very badly needing a man at the time, and we took him on and he did so well, being a very experienced and competent officer, that we ultimately appointed him; but, if I may say so, we really considered that he was a Civil servant, although he was not so at the moment. The other man, though he was not actually a Civil servant, had been for some dozen years or thereby in the office of the registrar of friendly societies, and he had a very considerable knowledge of that kind of work, and though he was not actually a Civil servant the commissioners really considered that in essence he was and they took him. One other man, just as an example, was an actuary; the commissioners thought that they would really require an actuary, and they got him under the name of a second class clerk.

24,202. You got your typists by transfer, too, did you?—No, the first time they were got by a special examination.

24,203. In your list I find nine typists obtained, as I understand it, otherwise than from outside the Civil Service?—They were examined by the Civil Service Commissioners, and I expect it is put down in that way. There has been considerable discussion about it, and, if I might be allowed to say so, I should like to be asked any questions upon it.

24,204. You would like to explain it?—Yes, there was considerable criticism on that point, it was a very small point, and I would like to be asked any questions the commissioners might choose to ask me.

24,205. You say in your proof: "The members of the female staff, although they had to be certificated afresh under clause 7 of the Order in Council of 10th January 1910, were, with the exception of nine card-tellers, who were unestablished census clerks, established officers of the Post Office. They were all transferred to this department at their own desire" ?—Yes.

24,206. I understand that that covered the typists?—No, it did not cover the typists.

24,207. How did you get the typists?—The typists in all Government departments I know are selected as the result of nomination for examination by the head of the department, and that was the exact procedure that was adopted in this case. There was a certain number, 15 or so, nominated for six vacancies, and they were examined by the Civil Service Commissioners, and they were appointed precisely as they came out of the examinations; but it was suggested that I, having been connected with a business of this kind, had favoured certain people.

24,208. And that is your answer?—Yes.

24,209. That is clear enough. I see that 29 card-tellers have been taken from outside, and 20 seem to have been transferred. How were the card-tellers taken from outside chosen; were they chosen by a committee?—No, we went along to the Post Office, and asked if they had any suitable people, and they were very good—very kind all the time. They said they thought they had quite a number of people in the telephone department, and otherwise, and we took these particular

people from a list made up, after an interview. We went to the census for the remainder. There had been quite a number of girls working on the census, and the census people were also very kind; they took a great deal of trouble in the matter, and recommended a number of girls for us to interview; we selected a number of those and took them.

24,210. (Mr. Boutwood.) So that really hardly any of the members of your indoor staff came from outside the Service?—That is so.

24,211. (Chairman.) Twenty-nine?—Rather less. (Miss Paterson.) I think just 20 card-tellers in all.

24,212. Twenty card-tellers are shown here, as I understand, as transfers, and nine card-tellers taken from outside?—The nine are included in the 20.

24,213. Then there is a mistake here?—Eleven were established Civil servants and nine unestablished. All were transferred.

24,214. (Sir Donald MacAlister) (To Mr. Leishman.) All the 20 had been in the Civil Service in one capacity or another?—Yes.

24,215. (Chairman.) Including the nine?—Yes.

24,216. That is very curious, because 23 are shown as in the Civil Service, and that is corrected in the paper I have to 20, and nine are shown separately. Then there are some second class clerks that came on transfer?—Yes.

24,217. Twenty-four are on the establishment, and there are seven vacancies?—Yes.

24,218. I understand that they have all come by transfer?—With the exception that I mentioned before of the ex-South African, the employee of the Registrar of Friendly Societies, and the actuary.

24,219. The superintendent of the female accounting staff was a Civil servant?—Yes.

24,220. Have you got a section of your accounting department officered by females alone?—Yes, to that extent.

24,221. That is the only one?—They are actually working on what they call the deposit contributors' accounts.

24,222. Are there many women working in that section of your office?—It is a comparatively small section; I think about 10.

24,223. Are they all in a room by themselves, or are there men working with them?—I rather think they are in a room by themselves, but we do not lay very much stress upon that, if I may say so.

24,224. Have you up to the present time placed women and men clerks in the same room working together?—I do not know that we have, but that has not been because we wanted to separate them; it was simply because it was more convenient, at the moment, to put them in a room by themselves.

24,225. At all events they are working at the present time separately; no matter what your views may be, you have segregated them up to the present time?—No, because it might be that if there are six people in the room it is all the room will hold. (Miss Paterson.) Might I say with regard to the cardtellers, that, while it was intended that they should work in one department together, it has been necessary to lend them to other departments, and some girl cardtellers have been working in the same room with men. Where the staff is short, and there has been pressure in one department they have been transferred temporarily.

24,226. (To Mr. Leishman.) Has the question of employing men and women working together side by side in the same room been brought under the consideration of the Commission?—Yes. We have had it in front of us several times.

24,227. Have you come to any definite finding in regard to it?—I do not know that we have.

24,228. Your own personal opinion I already infer from what you have said; now I ask you for your opinion as chairman of the Commission. You know that hitherto it has been the rule, except in the Post Office—and I am not quite sure that it has not been the rule there—that men and women clerks should not work together in the Government service?—Yes; of course, I suppose the employment of women in most departments has been rather limited.

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

24,229. I asked you that as preparatory to this question: If you are aware that it has not been the practice hitherto, for men and women clerks to be employed in the same office working together in the same room, do you think you would be justified in introducing a different practice without consulting the Treasury?—Yes; I think we would do it without consulting the Treasury, though, as a general rule, we like to take the Treasury with us.

24,230. Have you employed any boy clerks in your office?—No.

24,231. Was that because of any objection on the part of the commissioners to the employment of boy clerks?—No, I do not know that it was specifically considered, but some of us have very strong views about the question.

24,232. But the Commission as a body has not considered the matter?—No, not in its corporate capacity.

24,233. You have not found it necessary to employ boy clerks?—No, though there is a great deal of work that could be done by boy clerks, I admit.

24,234. But, notwithstanding that fact being present to the mind of the Commission as a body, you still deliberately did not employ them?—That is so. We would rather have more experienced clerks, if we could get them, of course.

24,235. Does that exhaust what you have to say, or would you like to make any further remarks in regard to the indoor staff?—Yes, if you will just allow me to summarise the matter thus. A very considerable amount of criticism was passed on the commissioners with regard to some of the staff; I make no complaint, but I think it is important that the public should have confidence in the Commission and, therefore, I would like to emphasise this point. The first thing that the Chancellor of the Exchequer did was to draw my attention personally to certain pledges which had been given by him to Parliament and the public with regard to the appointment of the staff, and he said that he expected the Commission to honour those pledges. In conformity with that we sent out a notice which stated to the public what the position was. Amongst other points we said that we would not allow political influence to have any weight, nor would we have any other consideration but the real interest of the public service. That we have absolutely carried out in the spirit and the letter. The Government have never directly or indirectly sought to influence us. The other conversation I had with the Chancellor—I think it is due to the Commission and to him to say this—was that he asked me personally to take the best men without any other consideration whatsoever; he also directed our attention to a pledge that, with certain exceptions where special experience was required, Civil servants would be mainly taken.

24,236. They would have a prior claim?—Yes, these were the words: "The staff should be largely recruited from the Civil Service, but that it would not be wise to confine the choice to Civil servants for the reason that it is necessary to get officials of experience, an experience which Civil servants do not always possess," those were the technical appointments. We have carried that out absolutely in the spirit and the letter; we have made no inquiry as to the politics of any applicants; with regard to an immense number we do not even know their politics, and we have given no consideration whatsoever to that factor. There is one further thing, if I might be allowed to say it, and it is this: The Chancellor drew our attention to the fact that he thought it was advisable that we should take advantage of the services of the Civil Service Commissioners in every possible way for selecting candidates. We not only did that by taking men they actually sent, but we took advantage of their representative to act in an advisory capacity in selecting men prior to examination.

24,237. We are coming to that; that applies more particularly to your outdoor establishment?—Yes.

24,238. If these figures are correct they show that for your indoor staff you recruited altogether 159 people?—Yes, there are rather more now at this date.

24,239. I exclude the charwomen. If I exclude all these menial servants, the lift attendant, porters,

superintending charwomen and charwomen, you recruited altogether 149 people. Of these 125 were taken by transfer and 24 were taken from outside; but if, as Miss Paterson tells me, a mistake has been made regarding the cardtellers and you took the whole of them by transfer, there would be 134 by transfer and 14 only taken from outside?—That is the correct figure.

24,240. That is to say you staffed your indoor establishment by transfers of officers already employed in the public service to the extent of 134 against 14 taken from outside?—Yes.

24,241. Now shall we pass on to the outdoor establishment, and the first is the medical officer. There are two medical officers, a senior and a junior medical officer?—Yes.

24,242. How were they selected, were they selected by the Commission themselves, or were they selected by any board of selection?—No, after advertisement. We would have consulted the doctors, but we were not on very good terms with them at the time; they refused to help us in any way.

24,243. Did they resist your blandishments?—They resisted any blandishments at the time, and we had to do the best we could without them; in fact they published advertisements that people were not to apply for posts under the Commission. In spite of that they did apply, though.

24,244. How did you get them?—By advertisement.

24,245. Did many apply?—Yes, we had over 100 apply directly, and a considerable number rang me up on the telephone to say that they did not want to be thought to apply, but if we thought they were, good enough they were on the spot.

24,246. You got your men?—Yes.

24,247. Have they turned out quite satisfactory?—Very excellent men indeed, splendid.

24,248. Then we come to the inspectors. There are five male inspectors. What is the duty of an inspector?—He has to see that the Act is carried out as well as possible.

24,249. What would be the main points to which he would direct his attention? You divide Scotland into certain local areas?—Yes, six districts.

24,250. To each district there is an inspector?—Yes.

24,251. Not more than one?—No, but he has some assistants, of course.

24,252. I notice that you have only one female inspector?—That is so.

24,253. Is she made inspector of a particular local area?—She is under the Glasgow office, and that is under the deputy chief inspector.

24,254. But is her jurisdiction limited to a particular local area, one of those six districts, or does it extend over the whole six?—No, she works in a certain place. (*Miss Paterson.*) She has charge of the Glasgow district, which includes all of Glasgow and Stirlingshire and Dumbartonshire and part of Argyllshire.

24,255. (*To Mr. Leishman.*) Why are Edinburgh and the rest left out? Why is there not a lady inspector there?—There could only be a certain number, and they have to go somewhere.

24,256. Is any man appointed for the Glasgow district?—Yes, the deputy chief inspector is resident there.

24,257. Who looks after the women throughout the other five districts of Scotland?—The inspector of the district, whoever he is.

24,258. Why should Glasgow be specially favoured?—It is a very large industrial place, with almost a fourth of the insured population of Scotland there.

24,259. So that if you have only one lady inspector she cannot be better employed elsewhere than there?—No.

24,260. Would it be within the functions of the Commission to propose an increase of inspectresses?—Certainly. They were very reluctant to put on any more people than could be helped, being Scotch and being economical.

24,261. Still you are spending the Saxons' money?—Well, we are spending our own too.

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

24,262. At all events, it would be within your functions, if you see advantage arising from the presence of an inspectress in the Glasgow district, to apply for similar appointments elsewhere?—Yes; it is rather a debatable question, the employment of women as against men.

24,263. We will come to that in a moment; let us come back to what I asked first, what are the functions of an inspector? You tell me he has to see that the Act is carried out, but to what does he direct his particular attention?—First of all, of course, we had to see that the people were insured, and inspectors generally went round everywhere and saw that things were no the move; if they were a little weak anywhere they touched them up, of course.

24,264. They get their information, do they not, in regard to the extent in which people are insured, from the Health Insurance officers?—Yes, and from the officials of friendly societies.

24,265. Am I not right in thinking that the Health Insurance officers are the lowest in the scale of inspecting officers?—Yes.

24,266. The business of a Health Insurance officer is to go round and see that people have insured themselves?—Yes, they are supposed to be more the penal staff, if I may call it so, but it has not been possible at present to draw a very sharp distinction.

24,267. When you say the penal staff, that is to say, if a person is not insured the penal provisions of the law are put in force?—Yes, they are more like policemen or detectives in a sense.

24,268. What class of men have you as Health Insurance officers?—They are surprisingly good.

24,269. I notice the various classes of men that you mention. Take these 13 men, 12 appointed and one vacancy; they are very various—insurance agent, shorthand writer, joiner, compositor, clerk, secretary to Aberdeen Trades Council, traveller, farmer, and ship's purser. They are of very various callings?—Yes, I think undoubtedly these men came in—in fact, they said so—with a view to seeing whether there was any opportunity for promotion afterwards.

24,270. Then you think you got a better stamp of man than you will ultimately settle down upon?—Of course, we think we cannot get too good men for anything, but they are surprisingly good, and, as a matter of fact, some of them have done so well that I would have no hesitation in making them assistant inspectors, provided that there were vacancies.

24,271. We will come to that in a moment. How were these men appointed?—In the same way as the inspectors.

24,272. I have not asked you yet how the inspectors were appointed; I am going back to the Health Insurance officers; I want to get from the bottom to the top. How were the Health Insurance officers appointed?—Through advertisements.

24,273. Did you make use of the Civil Service Commissioners?—Yes.

24,274. You first issued advertisements?—Yes.

24,275. Then you sent on the replies you received to a committee, on which the Civil Service Commissioners were represented?—There was a selection of them. We went over the list of applicants.

24,276. Who went over them?—I think we appointed a sort of office committee, two or three of our chief officials, and asked them to throw out people who were obviously unsuitable—badly educated, and so on—and then, after they had done that, the commissioners, including myself, went over the names and drew up a comparatively long list; then the Civil Service Commissioner and ourselves interviewed the applicants and put forward out of that number a certain number of people to sit for the examination.

24,277. And you got a very good type of men?—Splendid men; they turned out magnificently.

24,278. Were the women Health Insurance officers selected in the same way?—In the same way.

24,279. Was the examination in their case a competitive or a qualifying examination?—Within limits.

24,280. Did you nominate for examination more than you required?—Yes; but on that point, if you will

allow me to say so, there has been some criticism as to the examination being very simple.

24,281. I am coming to that. Now we will go to the inspectors. The inspectors, you say, were selected in the same way?—Yes.

24,282. Will you tell me what their duties are?—Amongst others, they have to see that people are insured, investigate complaints, go and advise employers, visit secretaries of approved societies, and the officials of insurance committees, and investigate difficult questions; for example, there is the question of share fishermen in Scotland, which is rather troublesome—that is, people paid by a share of the catch, instead of wages—I merely take that as an example. They have to investigate all these questions, get all the information they can, and work it up, and, generally speaking, in a sense, educate the public up to the Insurance Act.

24,283. When they give a decision on these contested points, is there an appeal from their decision to any higher authority?—I do not know that they actually give a decision.

24,284. Take, for instance, those share fishermen that you have just mentioned; when a dispute is brought before them, do they have to adjudicate upon it?—No, I would not put it in that way, they get all the information ready for the officials of the commissioners.

24,285. They prepare the case for them?—So far as it affects the outdoor staff.

24,286. Then they do not come to any finding on the facts, they do not express an opinion?—Sometimes they do express an opinion.

24,287. Is that opinion submitted to the head inspecting officer?—Yes.

24,288. And is the head inspecting officer then competent to pronounce finally upon it, or does it go to the Commission?—For example, he would advise the Commission whether a man should be prosecuted or not, but he does not himself pronounce upon it.

24,289. All these cases have to go to the Commission?—Yes.

24,290. But the head inspecting officer may be overruled?—Yes, and, of course, we have had to work very hard.

24,291. Do these cases come before you individually, or do you delegate powers of dealing with them?—All the important decisions come before the commissioners.

24,292. The most important ones no doubt would, but would small cases?—If it was a routine thing that was settled, it would merely come before us as a matter of form.

24,293. Besides the Health Insurance officers and above them you have the inspectors?—Yes.

24,294. With their deputy chief inspector?—Yes.

24,295. Then you have assistant inspectors who are of the same class and selected, I presume, in the same way?—Exactly in the same way.

24,296. Both men and women?—Yes.

24,297. That completes your outdoor establishment?—Yes.

24,298. Your accounting department must be a very extensive one?—Yes, and very intricate.

24,299. It is the largest of all, is it not?—Yes, now it is.

24,300. Have you any source of income besides what comes from the stamps and from the Government contribution?—No, I do not think so, except interest on investments.

24,301. So that it is a matter of the utmost consequence that you should keep a very close watch over the stamps?—Yes, very.

24,302. Yesterday some question arose about some mechanical means of adding up the number of stamps on the cards, and it was stated that, whatever means might be employed to add up the figures, you must examine each individual stamp because they vary in value; that is so, is it not?—Yes, every card that comes in has to be examined separately, and, of course, it is a very enormous business.

24,303. And is there a system of check and counter-check?—Yes, a very complete check.

24,304. Who does that very detailed work; is it done by women?—Yes, these are what are called the card-tellers; that is the first process.

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

24,305. Are they all women?—Yes.

24,306. No men are employed on that work?—No, except occasionally to supervise in some respects.

24,307. As regards your office scheme of organisation, I would like to ask you how many grades of clerks there are in your office?—There are practically only two grades, except that we have a few higher officials.

24,308. The few higher officials are the administrative staff?—Yes, mainly.

24,309. And are they separated from the clerical staff by a well-marked line?—Yes, they have a higher salary, of course.

24,310. That is one distinguishing mark, but also does not their work differ from that of the men below them?—They have got responsibility, and, I think, on the whole, more difficult duties.

24,311. And duties which involve great consideration, looking ahead and making plans—not merely dealing with the actual daily work of the office?—Yes, on the whole, that is true.

24,312. Therefore they are what you may call the administrative staff in contradistinction to the clerical staff?—Yes.

24,313. Among the administrative staff I suppose you would say were the secretary, the assistant secretary, the head of the intelligence department, and the chief accountant, if indeed you would call the chief accountant an administrative officer, having regard to his particular work? But these are what you would call the administrative staff?—Yes, and the first class clerks we should call administrative, too.

24,314. There are only two of them?—Yes; that is not the Class I. clerk as you have it in England.

24,315. I am just coming to that. You have employed no Class I. clerk?—No.

24,316. Now, were you warned against employing Class I. clerks?—(After a pause.) No, I do not think we were warned; I could not say that.

24,317. I am interested to know. Were you encouraged to look outside Class I. for the men that you wanted?—Well, we were very anxious to get very experienced men, men of very considerable capacity and proved power of work.

24,318. May I say you knew that you would find such men in Class I.?—Well, I speak with great hesitation.

24,319. The probability was that if you had full liberty of looking into Class I. you would find the sort of man you wanted. I do not want to press you, but if you answered my last question in the affirmative my next question would be this: Knowing that you would find the sort of man that you wanted in Class I., were you anxious to see whether you would not find the sort of man you wanted outside?—No. I could not say we knew that we could find the sort of man that we wanted in Class I.

24,320. But were you anxious to see whether you could not find the sort of man you wanted outside Class I.?—For example, we wanted some lawyers with a knowledge of Scots law. One of these was a first class clerk.

24,321. These are outside altogether; these do not come into account; these are professional men, not in Class I.?—Then that wipes out the first class.

24,322. I am talking of the ordinary Civil servant recruited by a high examination?—They are not employed in Scotland at all, so far as I know.

24,323. Are there not some in the Scottish Office?—There might be some in the Scottish Office in London, but, so far as I know, they are not employed in Scotland.

24,324. Then your first class clerk is a different person altogether from a Class I. clerk?—Yes.

24,325. Of your first class clerks you say that you have only two, one of whom is a lawyer, and we put him out of account?—Yes.

24,326. The other is an ordinary civilian?—Yes, he was in a Government department in Edinburgh.

24,327. But was he a Class I. man?—No, he was a second division man.

24,328. Do you think you could get from the second division the sort of man you want for your first class?—In Scotland, do you mean?

24,329. Yes?—Yes.

24,330. Therefore, you propose that the highest clerical class in your office shall be taken from the second division?—Except that, personally, I should rather like, as a policy, to be open to go outside, or even to go elsewhere if I wanted a man with special experience or other qualifications.

24,331. If you wanted a man with special experience of the work of friendly societies say, you would like to go outside?—Yes.

24,332. You mention here the intermediate class. What do you mean by intermediate? Here, in England, intermediate conveys a particular signification; it means a person recruited by examination of a higher standard than the second division examination?—We mean a second class clerk.

24,333. You have mentioned the second division also. Am I to understand that the intermediate class and the second division are synonymous terms in your mind?—No.

24,334. What is the difference. Your second class would be the highest?—Yes.

24,335. What is the gradation of classes you would like to have in your office?—The lowest are assistant clerks; above that second division clerks, and above that first class clerks.

24,336. By what examination would you have the first class clerks recruited?—Of course, we are dealing with a new department, and a rather complicated business it is, and one has to speak somewhat carefully in the matter. I think if I may criticise my own department just now, we have barely sufficient men of really varied experience, good education, and mental power. The men we have got are very good indeed, but they are too few I think on the whole. If one is dealing with insurance or actuarial work or friendly society work, or dealing with the outside public in a great many ways, I think we ought to have as an ideal arrangement several other men of proved capacity and power in the office.

24,337. In the first class?—Yes, if we can call them that.

24,338. For the purposes of this discussion call them first class clerks?—Yes.

24,339. And they are not to be understood as being Class I. in the English sense?—No.

24,340. The requirements of your office with regard to the number of men must vary as the work grows, but would you be disposed to say at the present time how many men you would like to have in your first class?—As a matter of ideal arrangement, from the point of view of theory at the moment and not actual practice, I think we could quite well do with half a dozen additional first class clerks or thereabouts.

24,341. Of the first class?—Yes, men of that type.

24,342. By what examination would you recruit them if you recruited them by examination at all?—These are very difficult questions.

24,343. Do you think that your first class clerk should be a university honours man if possible?—I would not like to rule out a university man because he was a university man, but if I may put it in another way, speaking from a comparatively limited experience of this office, but speaking from a very large experience of men who have been in the Service otherwise, there are men in Scotland in the Service now in very subordinate capacities indeed, who with proper opportunity of further training could practically fill any post to which they could be appointed.

24,344. What higher certificate could you give to the university than that?—None, so far as I know.

24,345. Because, if these admirable men you mention had had a university education, they would be much better than they are now?—I do not know. I have known the university absolutely spoil some men.

24,346. That is true also I believe. However, do you think that this first class of your gradation should be manned by men of the best education available?—Yes, but of course you have to define education all the time.

24,347. So far we are on common ground I think—that you ought to have for your highest grade in

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued,

the office men of the best education procurable?—I admit that if you have the right kind of education.

24,348. Sir Donald MacAlister has mentioned something about promotion. Of course, I understand that if you have all your various grades filled up there would be a flow of promotion from the bottom to the top. Is that your idea?—Yes, if the men were fitted for the post.

24,349. But would you have between each grade a line preventing promotion by mere seniority, and insist that promotion should be by merit alone?—I would always have a check of some kind.

24,350. Would that check be on grounds of merit, or would it depend on an educational qualification?—It might be both.

24,351. You would have both?—Yes.

24,352. I understand that you would not restrict your first class to men of the best education as testified to by the university?—Yes, I hold that education can be obtained otherwise than at the university.

24,353. How would you recruit your first class? Would you have an examination at all?—Having directed some considerable attention to this for the last 10 years, my own view would be that the Government ought to take very much more interest in the education of their servants than they do now. As one who has developed further instruction very much otherwise, I would be inclined to take the staff in hand all the time if the exigencies of the Service permitted, and provide them with an education either inside the office or outside it, so as far as possible to equip them for higher work in the Service.

24,354. But if they themselves on the inducement of a well paid appointment provide themselves with that educational equipment, is it not better that they should do so than that the Government should do it for them?—I am not sure. I lay considerable stress upon practical training as well as theoretical training.

24,355. You could test that by your system of examination?—Supposing you bring in a man from outside with nothing but book learning and theory, how are you going to test him to begin with?

24,356. I was going to ask you whether, if you admit that a public competition would give you, as amongst particular men, the best of those competing, their practical ability of doing things could be tested in some other way?—But, if I may say so, I think that rather begs the question.

24,357. No, take it in this way: Say you have two vacancies and there are 10 honours men from your universities competing for those two vacancies, you see those men beforehand, and you judge that five out of these 10 men are clever and bright, and altogether the likely sort of men to appoint. You might get those five men to compete among themselves for the two vacancies?—Yes, but they would be theoretical men who had never been in an office of any kind before, I take it.

24,358. Then the alternative in your mind is that people should have experience in the world before they get into the public service?—Possibly. I lay great stress upon that.

24,359. Then they can only get into the public service at an advanced age?—Not necessarily.

24,360. A man does not make his mark, with very rare exceptions, in the world until he gets to about the age of 30, but that is rather late to enter the public service, is it not?—Yes, I was not thinking so much of that age, but of a considerably less age than that.

24,361. What age do you think would be the maximum at which he should be allowed to enter the public service?—My theory would be that if men who are in the Service and have gained experience in the Service or elsewhere do prove themselves capable, bright, and zealous men, they ought to have a chance.

24,362. If they are in the Service?—Yes, in the Service at the time, or even outside the Service.

24,363. If they are in the Service they will have their chance in the Service by promotion?—Is not promotion very seldom given to the first division.

24,364. But you are not having a first division?—Yes.

24,365. I asked you that question in deference to what Sir Donald MacAlister said, and I understood you to say that you wished to have a free flow of promotion from the bottom to the top?—That is right.

24,366. You said passing from one grade to another you would like to have two checks, namely, a check of merit, and also a check of education?—Yes.

24,367. I am striving to see how you would work in those two checks. Will you say whether for recruitment for the first division you would prefer to rely upon a competitive examination. Part of the vacancies, of course, would be filled by promotion from the lower division if good and capable men were there and could be found, but as the main way of recruiting your first division would you have a competitive examination?—I have considerable doubts as to whether you get the best men by competitive examination. It is going into a very difficult and complicated question I know, and I have great doubts about it.

24,368. Would you prefer a competitive examination as the main mode of entrance into your highest class, or promotion by mere selection—or is your mind not made up about it?—I am not against a competitive examination as such—quite the reverse—but I doubt whether it produces the best men always. It may now and then do it.

24,369. I take it to be that you are in favour of competitive examination, but that you are rather oppressed by the doubt that a competitive examination may not give you the best men?—Yes, I have seen actual cases of the best man not going through.

24,370. If you admit that in regard to the first division, is your mind in the same attitude regarding the three other classes, namely, that competitive examination would be the main way of entrance, while there is a reservation to you if you find a good man outside to appoint him direct. The Government always must retain that liberty?—Of course, it would be very difficult to get younger men with experience; one easily sees that, and you would have to lay greater stress then on some selection and examination.

24,371. We are speaking of the indoor staff. Experience is wanted in your outdoor establishment, and there, I understand you to say, you want men of more mature years to whom the competitive examination system would not be so applicable?—Yes, but still I think there is considerable field for organising power and experience inside Government departments.

24,372. Would you apply the competitive system to these other three classes in the same limited way that you would agree to in the case of the first class?—One is always to a certain extent governed in these things by fear of public criticism and charges of jobbery and influence.

24,373. That is one of the principal reasons why the competitive examination was introduced?—Yes.

24,374. Because the public service had been reduced to a lamentable state by the misuse of patronage?—While the other system is a safeguard it has some defects.

24,375. Admitting that, do you think as the main mode of entrance into the service public competition is, taking all things into consideration, a safer means of doing justice in a democratic country than patronage?—Yes, except this, that the best man is not always brought out by the written examination which is not necessarily the best test.

24,376. It may not bring out the best man, but do you think, having regard to the necessity of avoiding jobbery in making these appointments, and also on the experience of open competition, it does on the whole produce a good class of man. Do you think, having these two considerations in your mind, that the main mode of admission to these three classes should be by open competition?—Yes, but possibly modified a good way.

24,377. (Mr. Boutwood.) Then by what examination would you ordinarily recruit your second class?—I think the present examination.

24,378. What is the present examination?—For the second class there are a certain number of subjects of rather a higher grade than for the second division.

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

24,379. Is it what we call in England the intermediate examination?—Yes, practically.

24,380. Not the same, but practically?—Yes, the same class.

24,381. Are your lady inspector's duties in Glasgow confined to women, or does she look after men as well?—She looks after both.

24,382. You said something about political influence in the selection of your candidates. As a matter of fact, did the commissioners find that candidates made any considerable attempt to use political influence in getting testimonials from political men?—As a matter of fact they did not, so far as I know. There was a very strong warning issued that any attempt to do so would be regarded as a disqualification, and at the moment I cannot call to mind that any of them did use any such influence.

24,383. With reference to your answers to the Chairman's questions about what we have agreed to call the first class, does your evidence really amount to this, that you prefer to recruit that class by selection?—We, of course, have been dealing with a rather special and a rather new department. In that department a good deal of special technical knowledge has been necessary, and I do not know that these qualities—for example, knowledge of Scots law and actuarial work—are found even in university men, except they have been specially trained for that particular piece of work.

24,384. But that seems to be rather a Scotch answer. You have two first class clerks now, and you would like to have, you said, half-a-dozen more?—Yes, speaking very roughly.

24,385. That would be an establishment of eight. Supposing you had that, would your real personal preference be to recruit that class of eight men by selection from inside or outside?—So far as my own opinion is concerned, I would very carefully select the men.

24,386. You prefer that to any system of examination?—Yes.

24,387. (*Mr. Shipley.*) What qualifications have these doctors who are mentioned here. They are said to have high university qualifications. Does that mean M.B. and M.D. degrees?—I think one of them is both a graduate of Glasgow and Oxford if I am not mistaken, but that is apart from his medical qualifications, of course.

24,388. The junior one who has been demonstrator in physiology is said to have had great experience of general practice and to have been an official lecturer on the National Insurance Act. Do you know what his age is?—Speaking from memory 45.

24,389. You have been telling us that your staff is "surprisingly good," and that many of the members are "splendid" and "magnificent." Do you think, on the whole, the Act is working well?—Extremely and marvellously well, considering the difficulties we have had.

24,390. And the staff is efficient but not large enough?—Yes; I am talking very generally, you understand. It is certainly efficient.

24,391. We have had a good deal of evidence about Scotland, and you said some of your people, when you were selecting them, were left out because they were badly educated. That is the first piece of evidence we have ever had that anybody in Scotland could be badly educated. They may have come from the south?—Of course, Scotch people are much better educated than English as a rule, but amongst working people one can easily understand that a man may have a fairly good education for a working man, but that his education is not quite good enough for higher work.

24,392. Can you tell me what the total cost of administering the Act in Scotland is?—Apart from benefits?

24,393. I want to compare the total cost of administration with the total benefits that are given. How much does it cost the country to administer the Act. I want to compare the amount of money spent on that with the benefits if I can get the figures?—Just now, I think, the total estimate for next year would be on a certain basis, about 471,000*l.* That is for the entire thing.

24,394. (*Chairman.*) That is the expenditure—the cost?—Yes, including the Parliamentary grant, of course.

24,395. (*Mr. Shipley.*) How much of that comes out of the Parliamentary grant, and how much do the stamps pay for?—There are two-ninths of the benefit paid by Parliament.

24,396. And what is the total amount of the benefits you hope to give in Scotland?—Well, roughly, I suppose well over 1,000,000*l.*, but it depends on estimates of the population which have not yet been verified, and I use these figures with very great reserve.

24,397. (*Chairman.*) There is 471,000*l.* expenditure?—That is including the Parliamentary grants and everything, and cost of State part of benefits.

24,398. Mr. Shipley wants the benefits on the one side and the costs of administration on the other?—Out of the total sum there would be a sum of about 63,000*l.* or thereabouts supposed to be spent on administration, but it is considerably less than that as a matter of fact.

24,399. 63,000*l.* on administration, and the benefits conferred would be over 1,000,000*l.*?—Yes; for example, the actual salaries, wages and allowances on the estimate for the year coming in—1913-14—would be about 37,000*l.* Then there is travelling and special inquiries, law charges, and so on, which brings the sum up and which might be all included under administration.

24,400. That brings it up to about 60,000*l.*?—Yes, about that.

24,401. (*Mr. Shipley.*) Have you had many prosecutions in Scotland?—About seven. There are a considerable number of people under observation, and we are watching them, and if they do not toe the line, they will all be prosecuted immediately.

24,402. What sort of number, 300, or 400, or 25,000?—Roughly speaking about 700 or 800 are under special observation just now, and they are giving way. They have been standing on the result of a test case which has been decided, and they will amount to nothing at all immediately.

24,403. Your senior medical officer was Medical Officer of Health for Fife?—Yes.

24,404. Did he lose considerably in income when he took the post at 500*l.* a year?—He gets more than 500*l.*

24,405. It says here "Two medical officers 500*l.* for first three years"?—He gets 800*l.* as a matter of fact.

24,406. But the Act has not been begun three years?—No, it has only just begun, but he got a certain salary to start with.

24,407. Then this statement as to his getting 500*l.* for the next three years, 600*l.* for the next five years, and so on, is not correct?—But we had permission to start him at higher than the initial salary, you understand.

24,408. Then this statement is rather misleading?—No, it is headed "Scale."

24,409. Who is the deputy chairman?—Dr. McVail.

24,410. And the two commissioners?—Mr. McNicol and Miss Paterson.

24,411. (*Miss Haldane*) (*To Miss Paterson.*) Is your salary the same as that of the gentlemen who are on the Commission?—Yes.

24,412. What previous experience have you had of Government service?—In 1893 I was appointed factory inspector under the Home Office, the date at which the first appointments of women were made. I was one of the first two appointed, and I occupied that post to the end of 1911 when I went to the Scotch Commission.

24,413. So that you have had a good deal of experience of the work in the Civil Service?—Yes.

24,414. Will you tell me about the system of promotion of the female staff. Is there an opportunity of passing up from one grade to another?—The indoor staff?

24,415. I should like to know about the indoor staff first?—Amongst the typists in the indoor staff, there is no opportunity of going beyond the post of superintending typist. With the women clerks there is also no opportunity at present of going any further than the head woman clerk, or passing into any other grade.

24,416. Has the Commission been satisfied on the whole with the work of the female indoor staff?—Yes, I believe so.

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

24,417. Would you anticipate that in the future, supposing there were other departments open to women, women would be employed to a considerable extent as is the case under the Insurance Commission?—Yes, I think the Scottish Insurance Commission have given openings for a good many women.

24,418. If there was any future new Government department would you anticipate that women would be employed to a considerable extent in it from the experience you have had in the Insurance Commission?—Yes, I think so.

24,419. That being the case would you think it desirable to have some more definite organisation of the women's clerical staff throughout the Service?—I think it is a great drawback to the women at present that there is no opportunity for their going further, and that they are kept in watertight compartments, so that they have no opportunity of promotion from one department to another.

24,420. Do you mean one department of the Government service or one grade?—From one grade to another.

24,421. I have gathered how the appointments have been made hitherto under the Insurance Commission. I suppose the future appointments of both the indoor and outdoor staff would be made on rather a different system?—They might be recruited directly to the indoor staff.

24,422. Of course, the larger part of your staff was brought in from other departments, but how would you anticipate future vacancies being filled up?—I think this matter with regard to the women indoor staff has not been considered by the Commission as a Commission, so I should like this to be taken as my personal opinion.

24,423. Yes, you have had a great deal of experience?—Yes, but chiefly of outdoor work. I should think if we are to get the best kind of women available we must offer them possibilities of going on to other grades of the Service if their work justifies it, and they are able to pass the necessary examinations. For that reason, I think, we should set a higher standard of admission. I think the standard now for admitting women into the Service, say the standard of education for typists, is too low.

24,424. Would you suggest for Scotland using any of the national certificates?—I think the higher leaving certificates seem to really certify a very good general education, and, I think, in taking women on to the indoor staff in future I should like to see leaving certificates insisted on.

24,425. Would you have, in addition, a competitive examination, or how would you propose to appoint them?—For the indoor staff, I should not like to see them taken on at any less age than 18 to 20. I think a competitive examination probably secures the results we want as well as any other way.

24,426. And you would do away with the nomination which, I understand, at present exists?—I think so.

24,427. Do you find it useless?—I think, as far as I can judge the work of the typists, they do their work very satisfactorily, but I think not any better probably than if we had got them through an open competition.

24,428. Have you thought out how to bring in these young women at 18 years of age. Would they have a clear course right through?—I should like to see other grades open to them. In my experience there is a great deal of work that they might very well do—second division work and second class work—and while I think they would probably find their spheres in certain departments or certain sub-departments of an office, I see no reason why they should not have an opportunity of doing that work. I think it would bring in a more highly educated young woman than, perhaps, we get now.

24,429. Would you have another entry further up for the higher grades?—Yes, I think there might be another opportunity of going direct into the second division.

24,430. We have heard to-day of the second class. Is that what you mean?—Yes, or into the second division.

24,431. (Chairman.) Is this promotion that you have been talking of promotion for women typists?—For women taken on to the clerical staff in any capacity.

24,432. I understand you to say that the women typists have no future?—No future.

24,433. And you are desirous of providing for them a certain future?—Yes.

24,434. And then you say you do not see any reason why they should not have a free field through all the classes, but that they probably would find suitable work in some of the lower classes?—Not especially the lower classes; it might be others.

24,435. I thought you said they probably would find suitable work in some of the departments?—Yes.

24,436. What would be the maximum scale which would satisfy them in this particular line?—I would not recommend myself any maximum or any artificial barrier to their going into any department that they were fit for.

24,437. I inferred you probably did mean that—and I was strengthened in the inference by what Miss Haldane had said—namely, that you would like to have another means of entry for women higher up?—I mean that they might come in directly higher up, but at the same time I should not make it impossible for even the typist to go into the higher grade if she could satisfy the requirements.

24,438. (Miss Haldane.) In exceptional cases?—Yes, in exceptional cases.

24,439. When you say entering higher up, would that be a university grade?—I think probably the university educated woman would be the one who would get into it most readily.

24,440. Would you agree that university education for women would be valuable in the Civil Service?—Yes, I think that would be valuable.

24,441. Would you prefer that they should have had a course of university education if possible, but you would not bar the way to others?—I should not make it the only way of getting in.

24,442. As regards the inspectorate, if I understood rightly the woman inspector also deals with cases concerning men's employment?—Yes, with men's employment and also directs men, including the men assistants and Health Insurance officers.

24,443. Would the woman deal with men's employment and the men deal with women's employment?—Yes.

24,444. There is a good deal of interchange?—Yes, I think coming into new work of this kind it is better to make the conditions the same, and to make no too hard and fast lines to start with between the men's duties and the women's duties, but let them develop. There are certainly some duties under the Insurance Act which might be better done by men and more appropriately done by men than by women, and, conversely, there are some duties that the women could do more appropriately than the men, but I should like to have it develop gradually, and I think we have started in what I consider the best way.

24,445. Is there any overlapping at present?—I think there is no danger of overlapping just now, because it is all under one direction.

24,446. Could you tell me if you have had much experience of overlapping in your earlier work between women inspectors and men inspectors?—In the factory department the women inspectors were organised quite separately from men inspectors, but covered the same ground, subject to the fact that there were very few women, and they had to go over a great deal more ground. There was a certain amount of overlapping, but a good deal of that was avoided by rather elaborate arrangements for communication between the two, and the women did a good deal of special inquiries work—special work relating to health—but as they had also a great deal of routine work and inspected as the result of receiving complaints, there was a certain amount of overlapping. If I may say so, I think an old department cannot be treated quite the same as a new one, because when the women came into the factory department the ground was covered by the men, and it would have been diffi-

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

cult for them to get opportunities of initiating new work or new methods of work.

24,447. From your experience would you say that there might be a better organisation in regard to the factory inspectorate?—As time has gone on, there has been a good deal of reorganisation, and the women have now been more planted out into divisions. There are six senior women inspectors who have charge of certain things in a division of the country. They have some charge of certain industries, and they investigate all accidents in the 'clothing and laundry trades and all cases of industrial disease that happen to women.

24,448. (Chairman.) Am I to understand that the reorganisation is devised with the object of bringing them more into touch with the women, and bringing the women more under their supervision and less under the supervision of men?—I do not think it is entirely so, but also to avoid the overlapping. The work of the women factory inspectors, where they have been most useful, has been in the big industries in which both men and women are very largely employed, and I think there is no intention to reduce their work in that respect. They have always had parallel duties and powers, and I should like to explain that the women inspectors of factories have done, with regard to prosecutions, just as the men inspectors have done; that is to say, we have taken our own prosecutions, prepared our own case, precognosed our own witnesses, and conducted the prosecutions.

24,449. Your functions were not exercised in regard to women solely, but also applied to men?—Yes, but more incidentally to men. The primary object was to deal with women.

24,450. That is what I meant by saying the reorganisation was intended to restrict your functions more to women?—I am sorry to differ. I think the later developments of later years have had the effect of bringing us more into the industries where men and women are largely employed together, but it is not possible to do the work for the women in factories without affecting the men.

24,451. Is it the fact that after the reorganisation to which you refer, men inspectors do inspect factories which women inspectors also inspect?—Yes.

24,452. (Miss Haldane.) That is what I meant by overlapping?—Yes, it is very largely so.

24,453. Was it your experience that there were sufficient women inspectors to undertake the work?—Oh, no. We were very much understaffed indeed.

24,454. And from your long experience you think that the women inspectorate should be very much increased in the Home Office?—Yes, and in other departments, as far as I have knowledge of them, as well.

24,455. Have you worked in any other department?—No, but one comes in contact with them in the Home Office.

24,456. Did you find the women's work in the women's trades very valuable?—Yes, I think it was. One found especially that one got more information from the women, and the women employed valued it very much. The number of complaints we received was very large, and also employers employing a large number of women made very great demands on us for advice and suggestions.

24,457. And they never resented the calls of women inspectors?—I should not like to say that. They resented inspection altogether—a good many of them.

24,458. But not particularly inspection by women?—No. I think possibly to the men inspectors there was very often a complaint that they did not like women inspectors; but there was very often the other complaint made to us.

24,459. Coming back to the administration of the Insurance Act, do you as commissioner restrict your duties to indoor work?—No, I have been out a good deal.

24,460. The other commissioners do the same, I suppose?—Yes.

24,461. Do you restrict your activities outside to women's meetings?—No, I think I have taken a good deal of general work outside.

24,462. Would you, for instance, have to do with the meetings of men—say farmers, or other classes of men?—I think I have never gone to a meeting of farmers, but I have been to a good many meetings of men. I have held a public inquiry to hear objections by farmers to a special order under the Insurance Act.

24,463. Then the work of the different commissioners is interchangeable?—Yes.

24,464. We have had some evidence from Mr. Leishman about the working together of men and women. Have you had any experience of men and women working together independently of what Mr. Leishman has told us?—In the factory department, although we were separately organised from the men inspectors, we did work alongside them a good deal. When I was in charge in Scotland and the North of England my office in Glasgow was in the same building, merely part of the same rooms—some of the rooms were mine and some belonged to the men's staff, so that we worked constantly together with, I think, excellent results.

24,465. Have you the feeling that in the Government service women should be separated from men?—No. With the indoor staff I think it would be a question with the young girls and young men whether there might not be more loss of time if they worked in the same room; but that is a matter of supervision. I am afraid of nothing more than that.

24,466. I notice the salaries of women are slightly less in regard to the inspectorate?—That is so.

24,467. But not in regard to the Health Insurance officers?—No.

24,468. Nor the commissioners?—No.

24,469. There is no difference in the lower and higher grades?—No.

24,470. Is there any explanation of that difference which you could suggest?—No, except I am afraid that it was found rather hard to overcome precedent, as I have already said.

24,471. I gather your view is that if the work is the same the pay should be the same; but does the woman's work correspond, so far as you can tell, with men's work?—I think it corresponds very largely to the men's work. It may go on rather different lines, but I have no doubt it is equal in value to the men's work.

24,472. You cannot compare the work of the women to that of the men in your office?—We have had very short experience. I did ask the chief inspector for what could not be much more than impressions, because of the short experience we have had, and I had some papers from him on the subject, and they entirely go to show that it is valuable to have the women in the department, and that there is no ground for saying that their work is less valuable than the men's.

24,473. As the payment is rather less do you get a rather less good class of women than men for these posts?—The choice of women is rather more restricted than the choice of men. Scotland, of course, has been very far behind England in offering openings for women inspectors, so that there has been very little preparation for it. I think in the special department where the commencing salary is lower, where the woman inspector begins at 50*l.* a year lower than the men, there we have an inspector who is quite equal to the men.

24,474. At the lower salary?—At a salary that commences 50*l.* lower and does not go on so far.

24,475. That being so, if you can get the same class of women at a lower salary, why deprecate women being employed at a lower salary than men?—I think one of the principal reasons for it is that it does seem unfair to the men inspectors that you should have any women competing against them who are doing equally good work and are paid less. It does not seem to be quite fair to underpay them.

24,476. It is rather from the men's point of view that you consider it is an injustice?—It is a strong point. I have often thought that the question of paying women an equal salary to men was strongest from the point of view of the men employed.

24,477. Have you considered the argument as to the breadwinner, and so on?—Yes; I do not think one can apply that quite between men and women, though there

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

might be something to be said if one did it between individuals.

24,478. (*Chairman.*) What did you mean by saying that the argument was strongest on the point when the women were compared with the men?—My feeling is that women object to come in to do equal work at a lower salary; and one ground of their objection is that they are really tending to lower the scale of salaries, not only for themselves but also for the men.

24,479. You think it reduces the average of salaries for the men?—Yes; it has been so in all industries, I think. Where women have been brought in to do the same work as men at lower pay it has been always bad.

24,480. (*Miss Haldane.*) You deprecate it from an economic point of view?—I do.

24,481. (*Sir Donald MacAlister.*) (*To Mr. Leishman.*) Do you draw a clear line in the office between the work of first class and second class clerks and the work of the second division clerks?—In theory there is a line, but in beginning the work of a department of this sort, where there is an immense amount of work to be got through very rapidly and under pressure, it was impossible to draw that line, and as a matter of fact here and there inferior officers, as it were, have been doing rather responsible work.

24,482. I was speaking of it in what you call theory; that is to say, your scheme of organisation implies, when all things are settled down, the first class clerk and the second class clerk will be divided as to their work by a clear line from the second division clerk. Is that so?—Yes.

24,483. With regard to the first class clerks, you have two of them at present, and I notice both of them are heads of branches?—Yes.

24,484. They are not, therefore, the kind of officers that you would recruit from outsiders or from beginners in the service unless you choose senior men from the outside?—Yes, or promoted a man from the inside.

24,485. They are not a grade to be directly recruited?—No, I do not think so on the whole.

24,486. (*Chairman.*) You say the number is too small, and you would like to have eight men in that grade?—I am using it somewhat roughly.

24,487. (*Sir Donald MacAlister.*) But it is a grade to which, other things being equal, persons in the second class would naturally look for promotion?—Yes.

24,488. It is therefore not a grade to be recruited otherwise than by promotion, except in exceptional cases?—Subject always to this, that in a new department—

24,489. I am not speaking of a new department, but of your scheme when it is complete?—Yes.

24,490. You never intended the first class clerks to be mainly recruited from outside without reference to the office at all?—No, I would not like to say that.

24,491. (*Chairman.*) Please remember the answer you gave to me, because I asked you whether the main recruitment would not be from outside for the first class and also promotion available to that class subject to two qualifications, namely, that the man was meritorious and that he had a sufficiently good education?—Yes. I would not like either to bar a man in the Service, or bar myself from going outside the Service, if the exigencies of this particular department required it. That is my sole point.

24,492. Of course, exigencies may require it. But if you have a grade of servants, say eight men, which has to be kept up to eight men. Sir Donald MacAlister seems to accept an answer that it will be kept up to the full eight men by promotion only. I understood you to say that the main entrance would be open competition with a flow of promotion qualified by those two bars?—Yes. I would neither like to bar out a good man from the inside nor a good man from the outside.

24,493. (*Sir Donald MacAlister.*) I think there is a misapprehension. To me it is quite clear that these first class clerks, being heads of branches, are not a grade requiring recruitment?—Not necessarily.

24,494. (*Chairman.*) There are two now, but if you had eight they would not be all heads of branches, but would correspond to the principal clerks of the first grade?—But may I say, with great respect and deference, that it may be we should really have to organise

another department or two. We cannot just say that our organisation is complete at the moment.

24,495. (*Sir Donald MacAlister.*) So that the function of those first class clerks would be rather to be at, or near, the head of some particular branch?—Yes, practically.

24,496. Therefore they would be corresponding to principal clerks, and you do not have a competition for principal clerks. What would be the age of those two gentlemen at present?—One man is 34, I think, and the other man 41 or 42.

24,497. And it is ages something like those that you contemplate for the first class in future?—I would not quite like to say that. There are one or two men in the office who have done so very well at just round about 30, and shown such zeal, ability, activity and capacity in grappling new work, that I think the commissioners might fairly say they have well-earned promotion.

24,498. Might I say that your idea of the age of the first class clerks is to be somewhere between 30 and 40?—Yes, but I would not stand on ages.

24,499. But is not what you have in mind a group of men somewhere about that age, and certainly not 22?—No, I would not say 22.

24,500. (*Chairman.*) Would you say 24?—That may be rather young for experience then.

24,501. (*Sir Donald MacAlister.*) Therefore the age of your first class clerks would not be one suitable for open competition from the outside?—No, except as an experiment. We did experiment with a comparatively young man for a very important post, and he has turned out extremely well indeed.

24,502. But you did not get him by open competition?—No, we advertised.

24,503. Therefore that corresponds to the organisation of a new department and not the carrying on of a scheme when completely established?—No.

24,504. A first class clerk is a person, I take it, of older age than could be expected to be obtained by open competition for that grade only?—Yes, at that particular moment.

24,505. When everything is working smoothly, the normal way of recruiting your first class clerk would be promotion, tempered by the power of selection from outside if you had no one to promote?—That is correct, I think.

24,506. The work of the second division clerk, when all things are settled down, you distinguish clearly from what you expect from these first and second class clerks—more responsibility?—Might I say that our experience has been very limited, and one always has to make that remark, and also that we had about a dozen second division men, which is not a fair comparison, because these men were specially selected on special recommendation, and they were men obviously very keenly alive to the future and to chances of promotion.

24,507. Then your second division men are picked men?—Yes.

24,508. But you contemplate that in future the second division shall have work to do which is different in responsibility from that of the first and second class?—Yes, I think so, on the whole.

24,509. And it is quite possible that picked second division men may be capable of promotion to the first or second class?—Yes; absolutely.

24,510. Because of qualities which they develop under your observation?—Yes, and by special study and training otherwise.

24,511. You recognise that the educational grade of a second division clerk, apart from special examples, requires to be supplemented by something which is required in the first class?—Yes, I think so on the whole.

24,512. So if you recruit the first and second class clerks from outside, because they would naturally enter the second class, you would require a test higher than ordinarily required for the second division?—Yes, on the whole—either a very careful report from men who had observed and were capable of basing an opinion, or an actual examination of some kind or other.

24,513. Of a higher kind?—Yes, I think so.

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

24,514. So as to use the language which applies to other branches of the Service, your office will be graded on intermediate, second division, and assistant clerks?—Yes; I am afraid the second division might disappear.

24,515. Then it might be intermediate and assistant clerks?—Yes.

24,516. And that rather corresponds to the other offices in Edinburgh?—The other offices in Edinburgh are mainly second division offices.

24,517. And what corresponds to the first and second class would be promotion of specially selected second division men?—Yes.

24,518. Then at present you say your office represents, as a transitional stage—intermediate, second division, and assistant clerks?—Yes, it does.

24,519. But you do not contemplate the continuance of the second division as a practical arrangement?—No, I do not think we do specially.

24,520. If you had intermediate and assistant clerks only, would you be satisfied that you would be able to find among the assistant class, whose examination is still lower than the second division, men likely to be able to be promoted to the second class?—Yes; I do not know that we would have a very great number; but there again purely as an accident—and I am quite prepared to say we should be criticised for it—because of the pressure of work, and no one else being there, there were individual cases of comparatively young men doing work which, in theory, they ought not to have been doing; but they did it, and have done it very well indeed.

24,521. I think we all realise that under the extraordinary urgency of the work which has to be done by you, you have been particularly lucky in having a pick of trained men from so many sources, and they have done the work extremely well?—I think it is also fair to say that for anybody coming into the Insurance Commission, it meant hard work, and no slackers or lazy people would look near the place.

24,522. (*Miss Haldane.*) What hours do you work?—The nominal hours are seven; but as a matter of fact, we have had no hours—even at 12 o'clock at night you would find some there.

24,523. (*Sir Donald MacAlister.*) Of the two first class clerks appointed and made heads of branches one was a senior clerk in the Civil Service already, and, therefore, a man who had already achieved a considerable position, and the other was a distinguished university man?—Yes.

24,524. Would it not be conceivable that what had been so successful in regard to these two would be equally successful in regard to the remaining six to be appointed?—Quite.

24,525. An experienced lawyer and a distinguished university man might fill the other posts?—The Commission wanted one or two lawyers, and having seen this man, who had been an applicant for another post, and as he was an outstanding man, and very highly recommended, and had been at the top of his class in the university, and done excellent work outside, they thought they would put him in as head clerk, with a distinct understanding that he was one of the legal advisers to the Commission.

24,526. Are both of them legal gentlemen?—One only, but the assistant secretary is legal.

24,527. So that the university man had also a legal qualification?—A legal training. He had been 10 years head clerk in a large office.

24,528. You will always want one, or more than one, of your first class clerks to be a lawyer?—Yes, certainly.

24,529. Supposing you depended on promotion for first class clerks, you could not always expect to get that qualification?—No, they are not in the Service, so far as I know, or I have not heard of them.

24,530. Are there opportunities to enable a second class clerk in the Service to get a legal training, or to become a writer to the signet?—I think there are one or two departments, the Inland Revenue, for instance, and possibly others, where there are one or two lawyers, but they are not very numerous.

24,531. Men who have become lawyers since they entered the Service young?—No, I think they were taken in because they had been lawyers.

24,532. Then to recruit this first class with men of legal training, you will practically always have to go outside?—I should say so, especially if we wanted men with experience.

24,533. Will you kindly tell me the functions of the medical officers?—Of course, medical benefit and sanatorium benefit is a very large function under the Act. Insurance committees are set up in every county and burgh, and a vast number of questions arise with regard to administration and benefits, and official work in connection with these committees, where these men are asked to advise and help. They are doing that, and also minuting on practical and important medical questions in the office. A question arises, and one of the doctors has to deal with it.

24,534. So that they are acting as advisers on medical matters to the commissioners?—Yes, and even to outside people.

24,535. But they are not inspecting the practice of medical men?—No, very far from it.

24,536. The English Commission is much bigger than yours, and the Welsh Commission is not so large, but they have only one medical officer each. Why have you two?—I do not want to say anything about the English Commission by way of criticism, you understand, but, I think possibly, they have not made other appointments, though I am not entitled to speak for them, because of the somewhat strained relations with the doctors some time ago. That would be my explanation. One doctor is obviously quite insufficient in England.

24,537. But they have a medical commissioner in England?—Yes, but he can only do a certain amount of work, and if he works practically all night, he cannot do 10 men's work.

24,538. So you are sure that in England they will require more than one?—Yes, but I do not want to be held as criticising the English Commission.

24,539. (*Chairman.*) Have you an Advisory Committee?—Yes, both official and unofficial.

24,540. Does it consist of many members?—About 50 I think—men and women.

24,541. Have you county and burgh committees also?—Yes.

24,542. Do they assemble and give you advice?—As a matter of fact the Commissioners, or one of their representatives, have gone to practically every meeting that has been held; and the Advisory Committee sits by itself also.

24,543. Do you propose to have an examination for admission to the assistant clerk's grade?—They are the usual Civil servants—the usual examination.

24,544. Then you have an examination for the second division?—Yes.

24,545. And I think you said an examination like the intermediate examination for the second class clerks?—They are second class clerks.

24,546. We do not call them second class clerks here, but junior clerks?—It is a mere name.

24,547. You have an examination for them?—Yes.

24,548. But for the first class clerks, you have no examination?—No.

24,549. The explanation you have given to Sir Donald MacAlister is different from what I understood in the first instance. Am I to understand that for the first class clerks there is to be no examination?—We have no first class clerks in the sense of Division I., as you have in England.

24,550. But you are going to create a first class, and when your work expands, instead of having two you will probably have eight?—I would like to have them. I do not say I shall get them.

24,551. Will those eight appointments be filled up in the course of promotion from the second class or the junior class, or will any clerks be admitted into the first class by examination?—I would rather not like to commit the Commission at this stage on that. I would like a free hand, with this proviso, that as we have had

24 January 1913.]

Mr. J. LEISHMAN and Miss M. M. PATERSON.

[Continued.]

some men who have done exceedingly well, I would like that those men should be considered for promotion.

24,552. You are unable to give me an answer on that point. You have not made up your mind?—I have not. I would like to consider it further.

24,553. (To Miss Paterson.) Would you like to add anything to the evidence you have given?—There is not anything specially I should like to add about the staff of the Commission, except that I should like to emphasize what I have said about women having opportunities of entering or going on into other grades. With regard to women's work in the Civil Service, outside the Commission's work from my experience, of recent years there is a good deal to be said.

24,554. (To Mr. Leishman.) Have you anything more you would like to add?—There have been some criticisms on the standard of examination for inspectors. May I say no great stress was laid by the Civil Service Commissioners on the actual examination, which was mainly in the nature of a qualifying examination; but great stress was laid upon the selection because they then saw that these men were really well educated. In proof of that, I may say, the first man had already passed a Civil Service examination, although he was asked to pass another one. The second man had already passed an examination in London.

24,555. For what did he pass an examination?—For the London County Council.

24,556. For a post under the County Council?—Yes, and he was, as a fact, there at that time. The next man was well educated to our knowledge; the fourth man had already passed a college examination; the fifth man was an M.A.; the sixth was an M.A.; the seventh was an M.A.; the ninth had passed a factory examination; and the eleventh man was a qualified lawyer. I merely use these facts to show that those people had already passed examinations of one kind or another before they sat for this qualifying examination. (Miss Paterson.) There is one thing I should like to say, and that is that I feel very strongly about the selection of candidates for inspectors. I feel the importance of selecting them before the competitive examination which ought to follow; but I also feel that if that selection is going to be of real value there ought to be some way of attaching marks to the qualities which decide the committee selecting in making the nomination.

24,557. You touch upon a difficult point?—I know it is a difficult point, but I feel sure where the candidate

qualifies under the competitive examination such marks should be given.

24,558. For these inspectorships you would like to have a public advertisement issued, and then a selection committee, on which the Civil Service Commissioners should be represented, to interview these men and to select, say, for one appointment the five most likely men, and to give marks for their personal qualities, such as precision of thought as exhibited in conversation, their address, manners, demeanour, and so on. It would be very difficult?—I think it would be very difficult, but I think it could be done by a committee.

24,559. It might be done for all candidates by one committee, which would preserve the same standard; but if you had two committees working in that way there would be no common standard. Assuming it was possible to do that, then you would afterwards submit the five men to a competitive examination?—Yes.

24,560. And the best man would win?—Yes. I should not give it to any man who did not qualify. I would not bring his marks up to the qualifying standard by adding the marks allotted to him for his personal qualities.

24,561. But if there is only one appointment, and, say, five men out of 20 are selected for competition by the personal interview we have been talking of, the first of the five would get the appointment. There would be no qualifying marks, it would be a competition, and the man who got most marks would get the appointment?—Yes.

24,562. Then what do you mean by "qualifying" marks?—Supposing in the case of the two men who came out first and second, one of them took 800 marks and the other 750, and to the second man the committee had allowed 100 marks for his personal qualities, then I think the second man should get the appointment, as personal qualities count for so much. Those are only rough figures.

24,563. I did not take it in that sense. I thought nobody would be selected out of the five unless the committee were satisfied that in these externals all the five were up to the mark. That would be, perhaps, easier to work than the way you now mentioned?—I want personal qualities to count.

24,564-5. (Sir Donald MacAlister.) When you have selected five men out of 20 you have practically given them all 100 marks for personal qualities?—I think you might very well give some 100 and some 50 marks.

Professor JAMES JOHNSTON DOBBIE, D.Sc., LL.D., F.R.S., called and examined.

24,566. (Chairman.) You are the Government chemist?—Yes.

24,567. Will you just give us a brief sketch of the creation and constitution of your office? The earlier years you may pass over very lightly, but when you come to the latter part perhaps you will deal with it in more detail?—The laboratory was established first in 1843, in connection with the Inland Revenue. The object of instituting a laboratory at that time was mainly to check the adulteration of tobacco. Then the scope of the laboratory was afterwards extended and came to include the analysis of nearly every excisable commodity. A laboratory was also established at the Customs House for the analysis of wines, spirits, and other articles liable to import duty. In 1894 the two laboratories were placed under one principal, who was appointed by, and was responsible to, the Treasury; and from that time the combined laboratories were known as the Government Laboratory. Each branch of the laboratory remained, as formerly, subject to the administrative control of the department with which it was immediately connected; that is to say, the excise laboratory remained under the authority of the Inland Revenue department, and the Customs laboratory under the authority of the Commissioners of Customs. This state of things continued until the amalgamation of the Customs and Excise services in 1909. While the laboratories were established primarily to assist the officers of the Excise department in the performance of

their duties, other Government departments obtained the permission of the Treasury to make use of the services of the Somerset House chemists—that being the term by which they were familiarly known. This larger sphere of work was gradually extended, until in course of time the laboratory came to undertake work for nearly every public department. In 1875, by the Food and Drugs Act of that year, the chemical officers of the Inland Revenue were made the official referees in disputed cases under the Act. That, of course, enlarged the scope of the laboratory's work, and by the same Act provision was made for the examination of all tea imported into the country, by persons to be appointed by the Commissioners of Customs, and the persons appointed were the officers of the laboratory. At a later date the principal of the laboratory was appointed chief agricultural analyst by the Board of Agriculture in connection with the Fertilisers and Feeding-Substances Act. That, I think, my Lord, answers your first question as to the origin of the laboratory.

24,568. Yes. Now will you be good enough to tell me what chemical work is at present carried on. For what departments does the laboratory do work at the present time. You have already said that all departments had access to the laboratory even while it was under the Customs and Inland Revenue, but has there been any further regularisation of that general access?—Yes, with the view of placing all departments on the same footing as regards the use of the laboratory and

24 January 1913.]

Professor JAMES JOHNSTON DOBBIE, D.S.C., LL.D., F.R.S.

[Continued.]

of promoting the centralisation, as far as practicable, of Government chemical work, the laboratory was removed from under the control of the Customs and Excise on 1st April 1911, and constituted an independent department with a separate Parliamentary vote. With regard to the first part of the question, I may first indicate in a general way the scope of the work, and then give you a more particular statement of the principal departments with which we are concerned and the nature of the work that we do for them.

24,569. Yes, please do?—The work might be classified in this way, including work for the Revenue and other departments: the analysis of samples in connection with the assessment of revenue or drawbacks; the examination of stores supplied to the Government departments on tenders and on contracts; the examination of dairy produce imported into the country; the examination of samples referred by magistrates under the Food and Drugs Act, and by the Board of Agriculture officers under the Fertiliser and Feeding-Substances Act. Then the laboratory staff deals every year with a large number of questions referred to it by Government departments for advice. It conducts investigations in connection with such references when necessary and also in connection with the inquiries of Royal Commissions and departmental committees. The chemical work of the following departments and other public bodies is carried out wholly or in part in the Government Laboratory: The Board of Customs and Excise, the Admiralty, the Board of Agriculture and Fisheries, the Colonial Office, the Crown Agents for the Colonies, the Foreign Office, the Home Office, the India Office, the Board of Inland Revenue, the Local Government Board, the Post Office, the Public Record Office, the Stationery Office, the Board of Trade, Trinity House, the War Office, and the Office of Works in London and in Dublin. The whole of the chemical work of certain departments is done at the Government laboratory, viz., all the chemical work of the Board of Customs and Excise, of the Board of Agriculture and Fisheries, of the Board of Inland Revenue, of the Trinity House (which, although not a public department, is for this purpose recognised by the Treasury as a public department), and of the Office of Works both in London and in Dublin. I ought to explain that we have in London the principal laboratory at Clements Inn Passage, and also a laboratory of considerable size at the Customs House. The total number of samples examined and analyses made during the year ended 31st March 1912 was approximately 200,000. The exact figure was 196,000 or 197,000. Then we have, in addition to the laboratories in London, a number of small laboratories or chemical stations situated in the principal ports and elsewhere, and if you include the number of examinations and analyses done in them, the total number is, roughly, 350,000 for last year.

24,570. Will you be good enough to tell us what is the staff employed in that work?—The staff at present consists of two parts. We have a permanent staff consisting of men who are on the establishment: that is to say, men who are pensionable Civil servants; and we have a temporary staff. The temporary staff consists partly of men who are seconded or lent by the Commissioners of Customs and Excise for laboratory work, and partly of men who are selected from the outside market. The permanent and scientific staff of the laboratory consists now of the Government chemist, the deputy Government chemist, four superintending Government analysts, and 22 analysts divided into two grades, first and second class. These are all pensionable servants.

24,571. Can you give the scale of pay?—The Government chemist gets 1,200*l.* a year, rising after five years to 1,500*l.* The deputy Government chemist receives 700*l.*, rising to 800*l.* The superintending analysts—there are four of them—get 600*l.*, rising to 650*l.* The first class analysts, of whom there are nine, get 400*l.*, rising to 550*l.*, and the second class analysts of whom at present there are 13, get 160*l.* rising to 350*l.*

24,572. Then there are temporary chemical assistants?—They enter at 120*l.* and rise to 160*l.*

24,573. Will you tell us what are the duties of the Government chemist and his assistants very briefly?—The duties of the Government chemist are to take general charge and supervision of the whole work of the laboratory; much of his time is also occupied with committee work, either acting as a member of a committee or giving evidence before committees. The deputy chemist is concerned mainly with the administrative details of the laboratory, and in the absence of the Government chemist is authorised to act for him.

24,574. Then the four superintending analysts?—In the first place, each superintending analyst is responsible for one main section of the analytical and advisory work of the laboratory, and, of course, is responsible for the men immediately attached to that section. In the second place, he is required to be familiar with the Acts of Parliament with the administration of which his section is particularly concerned, and also with the departmental regulations. In the third place, he has to write the reports on the work of his section and submit them to the Government chemist. He directs whatever research work has to be conducted in his section, and he is also available for consultation with the officers of the department with which the section is more particularly concerned.

24,575. What are the functions of the nine first class analysts?—They, with the second class analysts, perform the more important analytical operations. They are actually engaged in the work of analysis, and they also control the work of the non-established assistants—the seconded officers of the Customs and Excise, and of the temporary assistants.

24,576. That really completes your statement of the functions of the operative staff. We are not now concerned with the clerical staff; they follow the usual second division and assistant clerk type?—That is so.

24,577. Have you read the evidence that has been given to us by Sir William Tilden and Sir William Ramsay?—Yes.

24,578. They have taken exception to the organisation of the chemical establishment for the War Office and to the scale of pay that is adopted there. Will you be good enough to give the Commission the benefit of your advice on that question of the scale of pay and the establishment that exists?—It is difficult for me to express an opinion upon that because I am not really conversant with the duties which the War Office chemists have to perform. I have given you information with regard to the duties of the staff of the Government laboratory, and perhaps it might help you if I add to what I have said upon that head that each superintending analyst—because I think it is largely with regard to that you wish for information—has a staff under him of at least 15 men. In the larger sections the superintending analyst has 35 men working under him, and in the smaller sections about 15 men.

24,579. Comparing the scale of pay shown in the Army Estimates for the War Office chemists with the scale of pay in operation in your department, would you say that the scale of pay shown in the Army Estimates is much inferior or at all inferior to that which prevails in your department?—I should think that it is inferior in the case of some of the staff.

24,580. In the War Office laboratory there are three classes of chemists put down. The first class begins at a minimum of 360*l.*, rising to a maximum of 450*l.* Having regard to the character of the work which they do, are they comparable or not with your first class analysts?—I should think certainly the head man would be comparable with a first class analyst, so far as I can judge. He has under him about the same number of men as a first class analyst in the Government laboratory; but then it is to be remembered that he must, of course, as the head of an independent department, have duties which would not fall to a first class analyst in the Government laboratory.

24,581. On the other hand, may it not be said the work he has to handle is less varied than the work which falls to a first class analyst?—I should not like to say that, I should say it is certainly less varied than the work which falls to a superintending analyst, but not less varied than the work which falls to a first class

24 January 1913.]

Professor JAMES JOHNSTON DOBBIE, D.S.C., LL.D., F.R.S.

[Continued.]

analyst; but I should wish to make it clear that I am speaking without full knowledge of the work of the War Office laboratory.

24,582. With regard to the second grade of chemists in the War Office laboratory, I suppose these chemists are comparable to your second class analysts?—Yes, I should think so.

24,583. Your second class analyst gets 160*l.*, rising by 15*l.* to 350*l.*?—Yes.

24,584. And the War Office second class chemist gets from 260*l.*, rising by 10*l.* to 350*l.*?—Yes.

24,585. There is no disparity there against the War Office except in the point of the increment?—That is so.

24,586. Would you say that the third class chemists in the War Office may be compared with the temporary chemical assistants. They are, I think, a fluctuating body?—I do not think I can give you any useful answer to that question.

24,587. We were told that they make use of this appointment more to mark time or for the purpose of gaining experience while looking out for a better appointment, but they would be of the same class of men?—I should think probably they are men of the same class. One can judge of that probably to some extent from the answer given by Sir William Ramsay to Question 22,542, where he refers to a student of his own who has entered Class III. That student was a Fellow of the Institute of Chemistry and a Bachelor of Science of the University of London with first class honours. We have men with exactly those qualifications in our class of temporary chemists.

24,588. And your temporary chemists are unestablished?—Yes.

24,589. Do you manage to keep these unestablished chemists for any length of time. Do they stay with you?—Yes, I ought to explain that the system is a comparatively new one, and has only really been in operation for about two years, but we have had no difficulty in keeping together the staff during that time.

24,590. If a man or half a dozen men left you to better themselves there would be no difficulty in filling their places?—None whatever. We have a long waiting list in the laboratory of men who are honours graduates and Fellows or Associates of the Institute of Chemistry.

24,591. Are you satisfied that your scale which you have now explained to me is adequate to attract and retain the services of competent and efficient men?—It is adequate to attract them at the present time. There is no difficulty in getting men to take the posts at the present time. As to retaining them, it is a more difficult question to answer, because once the men are in an establishment it becomes extremely difficult for them to retrace their steps, so that I should not like to say in retaining them we are always retaining contented and satisfied men.

24,592. Am I to infer that there is in the staff a degree of discontent and dissatisfaction with the existing scale?—No; I should not put it so strongly as that, but I should say that it would be wrong to say that the staff are entirely contented or satisfied with the present scales, and perhaps I may be allowed to add that I think there is room for rectification and readjustment in certain cases.

24,593. Which rectification would lead to an increase in expenditure?—Yes, but not to a large increase.

24,594. For the temporary chemical assistants your scale is really less favourable than the scale of the War Office, because yours is 120*l.*, rising by 10*l.* to 160*l.*, and the War Office scale is 110*l.*, rising by 10*l.* to 250*l.*, so that comparing your temporary assistants with the permanent chemists of the War Office, the latter are on better terms?—Yes, undoubtedly.

24,595. As regards the second class analysts in your department compared with the chemists in the War Office laboratory, the War Office chemists get 260*l.*, rising by 10*l.* to 350*l.*, and your analysts get from 160*l.*, rising by 15*l.* to 350*l.*, so the maximum is the same but the initial salary is poorer in your department?—Yes.

24,596. The head chemist, as compared with your superintendent analyst, gets much less?—Yes.

24,597. But in the War Office, am I not right in saying that the office corresponding to the superintendent analyst of the Government laboratory has been removed to another branch of the Service—that is to the research branch. The office has not been abolished, but removed to the research department, so although it is not open to the chemists in this War department laboratory to hope for that promotion, still the promotion may be given. Do you know if that is so?—I cannot answer that question.

24,598. Have you read Sir William Ramsay's statement in answer to Question 22,564?—Yes.

24,599. That is a reply of a general character as regards the attractions of outside employment and those of the Government service?—Yes.

24,600. I suppose the answer to that is that if the outside employment is more attractive the applicants for employment will go there?—Yes.

24,601. But others will come to the Government?—Yes.

24,602. Sir William Ramsay said, the people who come to the Government will be less efficient than the people who have taken outside employment; and to that, I suppose, the answer is that the Government will insist upon having its work done well?—Certainly.

24,603. And if it does not have its work done well, if it cannot get men to do its work well for the pay it gives, it will have to increase the pay?—Yes.

24,604. Up to the present time it has not increased the pay, and the inference is that the work must be done well?—I do not think the work has ever been found fault with. I think the public departments and the public generally have been satisfied with the way in which the chemical work of the Government has been carried out.

24,605. Are you ever employed to do any work for the War Office?—Yes.

24,606. Are you ever employed to do any work in connection with explosives?—No, never. Our laboratory is not suited for such work.

24,607. (*Sir Donald MacAlister.*) I notice Sir William Ramsay, on behalf of the Council of the Institute of Chemistry, wound up by saying that his council expressed the opinion that the attitude of the Government generally in matters of chemistry was not calculated to attract the most highly trained and competent men for the Government service for the benefit of the State. Would you endorse so wide a statement as that?—No; I think not in that form.

24,608. In the same document attention was called to the fact that the chemists of the War Office laboratory at Woolwich "undertake duties and responsibilities similar to those of the superintending and first and second class analysts at the Government laboratory, but at far lower salaries." Sir William Ramsay was asked what the salaries were in the Government laboratory, and he could not tell us at the time. Now you have told us, and you have had an opportunity of comparing the salaries of the chemists at one laboratory and the salaries at the other. Would you endorse the statement that the salaries are far lower at one than at the other?—I do not think so, but it all depends upon which class in the Government laboratory it is right and fair to compare with the position of the first class chemists in the War Office, and that is why I am in a difficulty in dealing with the question.

24,609. We were told that at the Woolwich laboratory the chemists Class III., who are non-pensionable, receive 110*l.* to 250*l.*, and they are a class which tend to pass away and better themselves?—Yes.

24,610. Would not they correspond very much to your temporary chemical assistants?—I think so.

24,611. The salaries of the temporary chemical assistants are 120*l.*, rising to 160*l.*?—That is so.

24,612. The class which I presume corresponds, begins at 110*l.* and rises to 250*l.* at Woolwich. You would not say that was lower or far lower than the others?—No, but there again comes in the difficulty of knowing whether we make a fair comparison in comparing the temporary chemists at our laboratory with the Class III. chemists at Woolwich.

24,613. Sir William Ramsay informed us that, so far as he knew, applicants for Class III. would not be

24 January 1913.]

Professor JAMES JOHNSTON DOBBIE, D.Sc., LL.D., F.R.S.

[Continued.]

so well qualified as demonstrators in an ordinary university chemical laboratory?—With reference to that, I can only say that we get as temporary assistants men who are quite of the class usually employed as demonstrators in a university laboratory. We have for example, at the present time, 21 temporary assistants, and of these 16 are graduates, 13 with honours; we have eight Associates or Fellows of the Institute of Chemistry, and we have six who are both graduates and members of the Institute of Chemistry.

24,614. I asked Sir William Ramsay, "Am I to understand you to say that the chemist Class III." (that is at Woolwich) "is not so well qualified as the "ordinary demonstrator." And he answered, "No; he is a man one would not make a demonstrator." Does not that seem to give a definition of Class III. as it existed in Sir William Ramsay's mind, which will enable you to compare it with your temporary chemical assistants if he is correct?—If I had to choose a demonstrator I should have no hesitation in selecting one of the men who are employed as temporary assistants in the Government laboratory for the post.

24,615. From that it would follow that these temporary chemical assistants are not inferior at least to those of Class III. at Woolwich, if Sir William Ramsay be accurate?—Yes.

24,616. And they are not paid in the Woolwich laboratory far lower salaries than you pay them?—That is obvious.

24,617. Then, I suppose, the class above them who are pensionable—Class II.—most probably correspond to the next class above them with you—the second class analysts?—Yes.

24,618. You pay your second class analysts 160*l.* a year, rising by 15*l.* to 350*l.*?—Yes.

24,619. They, I understand, are pensionable officers?—Yes.

24,620. The lowest class of pensionable officers at Woolwich, the second class chemists, begin at 260*l.*, and rise by 10*l.* to 350*l.* One could not describe that as far lower than you pay?—No.

24,621. Then the next class at the top—Class I.—I presume corresponds to your next class as nearly as one can say?—I have already expressed the hesitation I have in giving a definite answer to that question.

24,622. You are not quite sure of Class I.?—I do not know how one is to make the comparison. My knowledge of the circumstances is not sufficient.

24,623. Sir William Ramsay seemed to think there was a little doubt about the comparison?—May I say that it has to be remembered that most of the first class analysts with us have the chance of promotion to higher posts, and no doubt that counts for a good deal. The first class analyst may become a superintendent analyst, and in time deputy chemist.

24,624. But apart from the chances of promotion you would not go so far as to say that the salaries are far lower at Woolwich than with you for the class we have discussed?—Not if you are making a fair comparison between class and class.

24,625. Have the analysts Class I. in your laboratory any duties of direction, or are they entirely engaged in analytical operations?—The first class analyst always has under him a group of men—second class analysts and assistants. We have some small sections in the laboratory which are entirely under the control of first class analysts; that is to say, they report directly to me, so that they have important duties, apart altogether from their analytical work.

24,626. So a first class analyst some time before he got to his maximum salary would have to undertake direction and responsibility?—Undoubtedly. Another very important duty they have to perform is, that they have very often to appear as expert witnesses in the law courts. That will give you an idea of the standing of the men; they have to take their place in the witness box often in conflict with the most experienced analysts in the country.

24,627. With regard to the grade which is apparently not represented at Woolwich on the list which was presented by the Council of the Institute of Chemistry, the superintendent analyst with you has duties other than the mere conducting of analyses.

He has to be an administrative officer also?—Undoubtedly.

24,628. And in virtue of that responsibility his salary was fixed higher than that of even a first class chemist?—Yes.

24,629. That part of the duty of a superintendent analyst would I suppose be discharged by the head of the laboratory at Woolwich—the War Department Chemist?—Yes.

24,630. And he receives a salary of 650*l.*, which is the maximum assigned to your superintendent analyst?—But is not there some misunderstanding on that point? The duties I speak of would be discharged by the chemist at the head of the Woolwich laboratory, who only gets 450*l.*

24,631. No, the War Department Chemist is the administrative head?—But is he a chemist?

24,632. I do not know, but he is called a "War Department Chemist," and is the administrative head?—There are two different places—the research laboratory and the Woolwich laboratory. I understand that the head of the Woolwich laboratory is a chemist of the first class with a maximum salary of 450*l.*, and that there is no chemist over him, but he is immediately under the direction of a military officer. At the research laboratory there is a chemical head with a maximum salary of 650*l.*

24,633. The administrative duties falling to be discharged by your superintendent analyst are otherwise apparently provided for at Woolwich?—That I cannot say.

24,634. At the Government laboratory you do not distinguish between a research department and an analytical department?—No.

24,635. All or any of the superior officers may be required or expected to undertake research work?—Certainly.

24,636. Have you any knowledge of the reasons for the War Office dividing their laboratory into research and analytical departments?—No.

24,637. But I suppose you would admit that the research laboratory represents a higher service than the analytical?—I hesitate to place myself in opposition to so great an authority as Sir William Ramsay on a point of that kind. His evidence went to show that a great deal of the work in the analytical laboratory was of the nature of, and, I think he said, in some cases, superior to, research work. I cannot go so far as that myself, but I think there is a great deal of research work necessarily involved in the analytical work that has to be done in the Government laboratory. For instance, we get foods to examine from the War Office and Admiralty. It very often happens that the examination of a food means an elaborate research to get at the root of some defect in the supply.

24,638. But that is not an average and everyday occurrence in the analytical department?—Not in regard to that one part of the work, but I think it is an everyday occurrence in one branch or other of the work—or, at any rate, it frequently occurs.

24,639. But when that occurs you regard that research as requiring to be done by more highly skilled officers than the ordinary analytical chemists?—Yes. As our laboratory is organised there is a superintendent analyst or first class analyst to take the direction.

24,640. So if a research problem does arise it would naturally be put in the hands of a senior rather than a junior on the staff?—That is so.

24,641. Are your chemists under the disability that we heard the chemists of the Woolwich laboratory are under, namely, that they have no opportunity of making a name for themselves in the chemical world, for the reason that they are not allowed to publish in their own names any contributions to chemistry?—A great deal of the work is confidential work, which cannot obviously be made the subject of communication to scientific societies. On the other hand, a great many papers communicated to scientific societies have been based upon the work done in the Government laboratory. Many of these papers have been published by the head of the laboratory conjointly with men who were associated with him in the work. In other cases, papers have been contributed by members of the staff on their

24 January 1913.]

Professor JAMES JOHNSTON DOBBIE, D.Sc., LL.D., F.R.S.

| Continued.

own responsibility, but with the sanction of the head of the laboratory. I have here a list of something like 80 papers which have been contributed to the Chemical Society chiefly, some to the Royal Society, and some to the Society of Public Analysts and various other scientific societies.

24,642. I asked that question because I was familiar with the names of a good many who have distinguished themselves as chemists by publications in scientific societies, and who I knew were also engaged in the Government service. Can you tell me whether it is the fact that the Woolwich chemists are prevented doing the same thing so far as it does not involve revelation of confidential matter?—I cannot answer that question.

24,643. Do you know what papers are published by chemists in current Transactions, and so on?—Yes.

24,644. Are there never any from the Woolwich chemists?—Not, I think, in recent years, so far as I have observed; but whether they are prevented from publishing or not I do not know.

24,645. (*Miss Haldane.*) Are there any women employed in your office?—No, we have none.

24,646. Have you had any women applicants for posts?—Yes, a few.

24,647. Have you any reason for not employing them. Have you considered the matter?—The reason is that we have no accommodation for women in the present laboratory. I may say that every available inch of the laboratory is in use, and it would be absolutely impossible to make provision for women in the present premises.

24,648. Do you mean by that, separate provision?—I mean such accommodation as would be necessary with due consideration to their comfort. They could, of course, work in the rooms side by side with the men. I do not think there would be any insuperable difficulty about that; but there is absolutely no other accommodation.

24,649. Do you think it is objectionable that they should work beside the men? I gather you do not think so?—No, I do not think so.

24,650-1. I suppose you have had other experience of women chemists who have worked alongside men?—Yes, when I was a teacher of chemistry I had quite a number of women students working side by side with men, and I do not remember that it gave rise to any serious inconvenience.

24,652. Is it necessary that you should be close to the Law Courts?—No, that is not necessary, but it is essential that we should not be far away from the public offices for which we do work.

24,653. I suppose you may look forward to having further accommodation at no very distant date?—I think that is certain.

24,654. That would relieve the congestion and want of accommodation as far as women are concerned?—It would.

24,655. (*Mr. Shipley.*) When you were in the Royal Scottish Museum, were you doing the sort of work you are now doing in London, or was it quite different work?—To a large extent my work in Edinburgh was purely administrative work as head of the museum. We had no chemical work there.

24,656. (*Sir Henry Primrose.*) What were you doing before you were in the service of the Royal Scottish Museum which you entered in April 1903?—I was professor of chemistry in the North Wales University College, Bangor.

24,657. (*Mr. Shipley.*) Had you formed any opinion of the efficiency of the work of the Government laboratory in London? Did your work at Edinburgh bring you up against the analyses and researches going on in London?—No, not at all.

24,658. So you came with quite a clear mind as to how far the work was efficient?—Yes.

24,659. Do you think on the whole it is efficient?—I think so, certainly.

24,660. How long ago is it since any of these gentlemen at the Government laboratory have had their scale of salaries raised; take, for instance, the analysts?—It is nearly 20 years since the scale of pay was revised. It was last revised in 1894.

24,661. We have had a good deal of evidence that the cost of living has increased lately. That has not been taken into account, and no effort has been made to improve their position?—That is why in answer to the chairman I said there were some cases in which I should like to see a readjustment of salaries. What I mainly had in view was that it is nearly 20 years since the present scale was fixed, and the cost of living has greatly increased in that time.

24,662. It certainly strikes me that the salaries are low if one remembers that some of these men are university honours men. Out of the 13 second class analysts 12 were transferred from another department. Where did they come from?—They came from the service of Customs and Excise. There has recently been a change made in the mode of appointment of the permanent staff. Until two years ago the laboratory was staffed entirely from the Customs and Excise service. No man could get into the Government laboratory except through the Customs and Excise.

24,663. What sort of hours do these gentlemen work?—Seven hours a day.

24,664. I suppose there is supervision as to when they come and when they go?—Certainly, the usual supervision exercised in all Government departments. They enter their names in a book when they arrive and when they leave.

24,665. I suppose if they publish the results of the researches, as they evidently do, they do not publish them alone, but with the name of the chemist above them as well?—That depends. Sometimes a chemist is doing a piece of work on his own account, sometimes quite original work, but more frequently based upon work that he has been doing in the laboratory. If he has done it entirely himself he may get the permission of the head of the laboratory to publish it in his own name, and that has been done repeatedly.

24,666. You know how difficult it is, when adjudicating on a thesis sent in, for a doctor of science degree to dissect out of a joint paper what one has done and what another has done, and the credit very often goes to the senior man?—That is so.

24,667. How many of these analysts have left your service in the last two or three years?—None, except one who has been superannuated since I came to London.

24,668. We have had some evidence that the Service does not attract the most highly-trained talent; but do you think it would be in the interest of the country if it did? The work is, obviously, largely of a routine character, and we might be losing the services of really very eminent men since their time would be devoted to detail?—I think it is entirely in the public interest that the Service should attract men who are potentially fit to take the highest place.

24,669. That is in the interest of the Service?—I think, in the interest of the country, it would be a most unfortunate thing if you had only a second class service associated with public departments. I feel that very strongly. The conditions ought to be such as to tend to attract to the Service men who are capable of rising to the highest positions. It is not necessary that they should be all of that class.

24,670. (*Sir Henry Primrose.*) It is the case, I think, judging by this statistical return before us, that practically every man who is occupying a pensionable position in the Government laboratory, is a man who entered the public service as an assistant of Excise or an assistant of Customs?—That is so.

24,671. And his entry into the Service has not been as a chemist at all?—No.

24,672. Then his training as a chemist was given to him, to a certain extent, at the public expense?—Yes.

24,673. And in the case of all these men, whether they are well paid or not, the people they have to compare themselves with are Customs and Excise people rather than chemists outside?—Quite a considerable proportion of them have added to the education that was given them at the expense of the State, an education of their own. Quite a number of them have taken university degrees, as well as qualifying for the Institute of Chemistry, and I think, therefore, they are entitled to rank themselves with scientific chemists.

24 January 1913.]

Professor JAMES JOHNSTON DOBBIE, D.S.C., LL.D., F.R.S.

[Continued.]

24,674. Quite so; but the staff as it stands now is not a very good standard by which to judge of what it might be necessary to pay in order to attract chemists from the outside world. As a matter of fact, these are all men who entered the Service for quite another purpose, namely, for the purposes of the Customs and Excise, and who, having got in there, were given a certain amount of training at the Government's expense at South Kensington, and many of them have carried that on in a very meritorious way and become very capable chemists—I am speaking of the pensionable people. It ought to be made quite clear that from that point of view there is something to be said for not taking this too much as a standard of what it might be necessary some day or other to pay in order to attract people from outside?—That is so.

24,675. Your present method of recruitment is that you get a certain number of men as temporary assistants who are not Customs or Excise officers?—That is so.

24,676. Who selects those men?—I do.

24,677. You have absolute power of selection?—Yes.

24,678. You have a number of applicants waiting, I suppose?—Yes, a large number.

24,679. I assume you have laid down certain qualifications that they must have?—Yes.

24,680. What ages must they be?—We have no lower limit with regard to age. As a matter of fact, most of them are between 20 and 25.

24,681. What pledge or prospect do you hold out to them as regards permanent employment. Is there any understanding as regards that?—Only this, that if their work in the laboratory marks them out as being men suitable for the permanent staff, I nominate them for examination by the Civil Service Commissioners for the next vacancy that occurs on the permanent staff.

24,682. Do you nominate more than one candidate for each vacancy?—Yes.

24,683. Then they compete among themselves?—Yes. For example, we are having an examination in a few weeks, and for that I think I have nominated 12. Fifteen men applied to me for nomination.

24,684. For how many vacancies?—Two.

24,685. Those are all men at present employed under you?—Yes.

24,686. You would not admit to that examination anybody from outside?—We do not bind ourselves to exclude them, but obviously there is a great advantage in selecting from men with whom one has been in touch for a length of time, and with whose capacity for work one is familiar.

24,687. What is the limit of age at which a man may become a second class analyst?—30.

24,688. Do you make any arrangement by which, if men, by the time they have got to 30, have not been promoted on to the permanent staff, they must leave you?—Yes, we tell them that there can be no career for them beyond the age of 30 in the Government laboratory, and they must seek service elsewhere, and we do what we can to help them.

24,689. It would not suit you to keep them on, because then you would not have a recruiting ground for your permanent staff?—Quite so.

24,690. And you have no difficulty in attracting men with this salary of 120*l.* rising by 10*l.* to 160*l.* plus the prospect of possibly getting on to the permanent staff?—At present none.

24,691. About how long do you keep these officers of Customs and Excise—long enough just to train them in the analysis of alcohol, wine, and so on?—We keep them now two years, and we have a system of allowances whereby we can retain 12 for two years more, as it is necessary to have some men of greater experience than can be acquired in two years to assist with the more difficult work.

24,692. Is there much competition between officers of Customs and Excise to get sent to the laboratory now?—That is a little difficult for me to answer. The men are selected by the Commissioners of Customs and Excise.

24,693. You have a small clerical staff, and this is the first year in which you have had second division clerks. You now have two for the first time?—That is so.

24,694. What made you think it necessary to have second division clerks?—There are certain duties which are considered to be superior to those commonly expected of assistant clerks, and the assistant clerks who were called upon to do those duties thought they were rather hardly used in having duties put upon them, which were commonly discharged by a higher class, and they petitioned the Treasury, and as the result of their petition we were allowed two second division clerks.

24,695. Were those second division clerks assigned to you by the Civil Service Commission, or did you draw them from some other department?—The second division clerks were promoted from the assistant clerks who were in our service.

24,696. Otherwise it would be a very unfortunate thing for a second division clerk who got in, say, by an open competition and was assigned by the Civil Service Commissioners to one of those two places, because it would be a *cul de sac* for him for the rest of his life?—That is so.

24,697. But as long as you merely have a promoted assistant clerk there is no particular danger in that way?—Not at present.

24,698. (*Mr. Boutwood.*) Are you the administrative as well as the scientific head of your laboratory?—Yes.

24,699. You have not any non-scientific man, over you?—No.

24,700. Do I understand that in future your permanent scientific staff is to be recruited in the way you have just described by that limited competition?—Yes.

24,701. What, roughly speaking, is the standard of examination that the Civil Service Commissioners set. How does it compare with the examination, for instance, for the Institute of Chemistry?—The examination is a slight one compared with that required by the Institute of Chemistry. I do not mean it is low in standard, but it is not a complicated examination. The reason is this: In the first place the men taken into the laboratory as temporary assistants are all men who have had either a university education and taken their degree, or have had a thorough chemical education, and have had experience in some public works. After they have been in the laboratory they get a nomination, if they are deserving of it, and there again a process of selection comes in, because only the men who have shown by their work in the laboratory that they are fit to be on the staff, are nominated. Then the final selection is made by means of the examination by the Civil Service Commissioners.

24,702. What sort of an examination is it?—It is an examination in chemistry and in physics—practical and theoretical—and there is also an examination in English and *précis* writing, as it is a very important matter for us that the men on the staff should be able to write a clear report of the work they do. But the examination is principally in physics and chemistry.

24,703. Then does it come to this, that men who have high technical qualifications are selected by an examination of a lower grade than the technical ones they have already passed?—No, I should not say that. We have had only one set of papers so far, but I could not say it was a low standard by any means.

24,704. (*Sir Henry Primrose.*) Would it be true to say that the purpose of that examination is not so much to ascertain the different qualifications of men as to enable you to select, or to make men select among themselves from a certain number of qualified men, any one of whom you would be willing to take in?—That is exactly the position.

24,705. And you provide some machinery by which they select themselves rather than that you should make the selection; and the examination is for that purpose rather than for the purpose of testing scientific knowledge or attainments with which you are already satisfied?—That is so. The idea is that no man should be nominated who would not be a suitable member of the permanent staff.

(*Handed in by Mr. R. Cary Gilson, M.A.*)

Q. 22,147.

### STATEMENT RECEIVED FROM THE HEADMASTERS' CONFERENCE.

#### QUESTIONNAIRE ADDRESSED TO HEADMASTERS.

**URGENT.**—*Answers to be of any use must be in by the date of the Conference, viz., December 20th. Members unable to attend the Conference are requested to send their replies to the Secretary, W. A. Evans, Esq., 12, King's Bench Walk, Temple, E.C., before December 20th.*

**DEAR SIR,**

A letter has been received from the Royal Commission on the Civil Service asking for the attendance of a representative of the Conference to give oral evidence on certain important subjects. The following words are quoted from the letter:—

"Among the questions upon which expressions of opinion are desired from representatives of the Headmasters' Conference are the following, viz.:—

"(1) The relation between the Schools represented by your Conference and examinations for the Civil Service:

"(2) Whether experience tends to show that a boy's education is interrupted in order to make special preparation for the Civil Service

examinations, and, if so, whether such interruption is harmful:

"(3) What are the facilities which exist under present conditions to enable boys from elementary schools to proceed to higher schools, and from them to the Universities:

"(4) Whether it is important in the interest of the country that all members of the Civil Service should, before admission thereto, have completed a higher school course?"

"With regard to the second of the above questions, the Commission desires particularly to be informed whether, in the opinion of your Conference, from the point of view of educational efficiency, it is considered that the present age limits fixed for the Civil Service examinations are satisfactory, viz., for Intermediate Clerks 18-19½, for the Second Division Clerks 17-20, and Boy Clerks 15-16, and, if not, what limits of age would be suggested as desirable in the interests of education."

The Conference will be asked at its next meeting to appoint a representative, but it is extremely

desirable, and, indeed, necessary, that he should be in full possession beforehand of the views of the Headmasters generally on the subject. In these circumstances will you be so good as to fill in replies to the following questionnaire:—

- (1) Have you any special comment to make on the relation between your School and examinations for the Civil Service?
- (2) Do you find that the education of any of your boys is interrupted in a harmful way in order to make special preparation for Civil Service Examinations?
- (3) What facilities exist enabling boys from elementary schools to proceed to your School, and from your School to the University?
- (4) Do you consider the present age-limits of competition, viz., for Intermediate Clerks 18-19½, for the Second Division Clerks 17-20, and for Boy Clerks 15-16, satisfactory? If not, what objections do you see to these ages, and what limits of age would you suggest as desirable?
- (5) Please add any further comments you care to make on the subject generally.

#### REPLIES RECEIVED FROM HEADMASTERS.

(1) Have you any special comment to make on the relation between your School and examinations for the Civil Service?

About 25 Headmasters answer No.

*Highgate.*—About 50 per cent. of the Sixth Forms are preparing for Class I. Clerkships and the Intermediate Clerkships. In the former case they take the examination after residence at Oxford or Cambridge; in the latter case direct from School.

*Guernsey.*—Intermediate C.S. a boon to boys from Intermediate Schools in cases where a university course is impracticable.

*St. Bees.*—No special C.S. class.

*Portsmouth.*—Pass boys for all these examinations.

*Christ's Hospital.*—Boys enter for all three examinations, viz., Intermediate, Second Division, and Boy Clerkships. But as the average age of leaving School is 16-17 comparatively few boys enter for the first two examinations direct from School.

*Leeds.*—As we have too few boys aiming at C.S. (Second Division and Intermediate) to make a separate class, and it is necessary for the candidates to devote almost the whole of their last six months to examination practice, I allow them to take one six months' *Correspondence* class at King's College, London, before going in, while they are at School. If I could afford the time of a master to look over their frequent papers it would be better done by the School.

*Birmingham.*—Pupils or ex-pupils frequently pass all four examinations. I look with satisfaction upon those who obtain Class I. Clerkships via the University, and upon those who enter the Intermediate Service direct from School. The Second Class age is too high and the standard of examination too low. Boy Clerks are too young and the examination unsatisfactory. I try to dissuade boys from the latter, and able and enterprising boys from the former.

(2) Do you find that the education of any of your boys is interrupted in a harmful way in order to make special preparation for Civil Service examinations?

About 15 Headmasters answer No.

*Oundle.*—Little experience.

*Chester.*—Transcripts and précis rather inconvenient.

*St. Bees.*—No; but the examinations do not find the best boys.

*Rugby.*—Yes.

*Bedford.*—Yes. The burden of examinations in general is becoming oppressive.

*Monmouth.*—Yes. Why cannot the Civil Service examinations be brought more into line with the Oxford and Cambridge Scholarship examinations?

*Christ's Hospital.*—The present system tends inevitably to the encouragement of the crammer. In my experience very few boys succeed in passing the two first-named examinations without having recourse to a crammer for at least a short period. All crammers, however, are not harmful.

*Birmingham.*—No interruption, of course, so far as School is concerned and very little, if any, so far as the University is concerned, in respect of Class I. Scholarships, the conditions of which are eminently adapted to secure the ablest and best educated men. The Intermediate Examination secures some but not all of the most suitable boys, the reason being that its special character, particularly in Mathematics, favours a candidate who has spent much time (to his educational disadvantage) in practising the answering of examination questions of a particular type. The Second Division would secure better men if the age were lowered and the range and standard of the examination improved, but it can hardly be said to dislocate secondary education at present. I never send in a boy for Boy Clerkship if I can help it, and refuse to make "special arrangements" for this examination. Those who have entered have nevertheless nearly always passed.

(3) What facilities exist enabling boys from Elementary Schools to proceed to your School, and from your School to the University?

About five Headmasters answer None.

*Ipswich.*—10 per cent. free placers.

*Oundle.*—Some of the best boys of 16½-17 came originally from P.E. Schools and gain scholarships to the Universities.

*Portsmouth and Chester.*—10 per cent. free placers.

*Clifton and Highgate.*—Scholarships open; otherwise no free places.

*Guernsey.*—Complete scholarship ladder from Elementary Schools through Intermediate Schools to this School and on to Oxford.

*St. Bees.*—I can say with perfect confidence that any Elementary School boy of promise can easily go via St. Bees School either direct into the Intermediate C.S. or to the University, and thence into I.C.S., &c. Four Elementary School boys have recently gone to Oxford and Cambridge with scholarships.

*Rugby.*—Boys from Elementary Schools are admitted to free places in the Lower School of Lawrence Sherriffe, and thence enter for Major Foundationerships, which entitle them to free education at Rugby School.

*King's College School.*—Five scholarships offered annually to Elementary School boys.

*Merchant Taylors.*—By Entrance Scholarships only.

*Bedford.*—Two boys admitted annually as Exhibitioners.

*St. Paul's.*—By Entrance Scholarships only.

*Monmouth.*—Facilities good.

*Merchant Taylors, Great Crosby.*—10 per cent. free placers and County Junior Exhibitions. Passage to the Universities with County Scholarships and School Leaving Exhibitions tenable with Open Scholarships. One boy went to Christ Church with emoluments to the amount of 180*l.* per annum.

*Christ's Hospital.*—A great number of facilities exist by which boys can enter Christ's Hospital from the Elementary Schools, and all those boys who enter and are clever enough to gain scholarships can proceed to the Universities.

*Leeds.*—We have on an average eight Elementary Scholars every year. In cases of special poverty there is a maintenance grant of 6*l.* per annum for two years and 10*l.* per annum afterwards in the case of three of the Scholarships. Numerous School Leaving Exhibitions and Senior Art Scholarships enabling boys to proceed to the University.

*Birmingham.*—A most complete chain of Scholarships throughout all stages. Many of my

ablest pupils began their education in P.E. Schools, but with rare exceptions these passed into the Secondary School at or before 12 years of age. A boy who remains in the Elementary School up to 14 seldom achieves success.

(4) Do you consider the present age limits of competition, viz., for Intermediate Clerks 18 to 19½, for the Second Division Clerks 17 to 20, and for Boy Clerks 15 to 16, satisfactory? If not, what objections do you see to these ages, and what limits of age would you suggest as desirable?

*Haileybury.*—I do not know.

*Sherborne.*—Yes.

*Epsom.*—Age limit fair.

*Chester.*—No criticism.

*Clifton.*—No opinion.

*Highgate.*—Satisfactory.

*Guernsey.*—Age limit suitable.

*Malvern.*—Cannot answer this.

*St. Bees.*—Members of the C.S. should before admission thereto have completed their Higher School course.

*Rugby.*—Do not think that anyone should enter the Service under 16½.

*King's College School.*—Regret boys leaving so young.

*Merchant Taylors.*—Age limit satisfactory.

*Portsmouth.*—Upper age limit of 19½ to 20 too high.

*Bedford.*—I see no reason why the age limit should be altered, but have had little experience of Second Division or Boy Clerkships.

*St. Paul's and Monmouth.*—Satisfactory.

*Shrewsbury and Radley.*—No comment.

*Christ's Hospital.*—Yes.

*Merchant Taylors, Great Crosby.*—About Boy Clerks I know nothing. Is there any reason why age limit for Second Division should be higher than for Intermediate, which latter seems very satisfactory?

*Leeds.*—Intermediate, 18 to 19½, satisfactory. Second Division, 17 to 20, unsatisfactory. A very large proportion of the successful candidates are those who have tried several times. 17 to 18½ would be better, as it would give a boy who failed a better chance

of getting some other start in life. Boy Clerks, 15 to 16, most unsatisfactory. The prospect of immediate pay attracts parents, but I consider it a blind-alley occupation. The few boys of mine who have entered have left the Service as soon as they realised what it was.

*Birmingham.*—I concur with Leeds at practically every point, and think that those Headmasters who pronounce the age limits satisfactory can have had very little experience in preparing boys to enter the Civil Service *direct*.

(5) Please add any further comments you care to make on the subject generally.

*Epsom.*—For boys good in Classics the standard in Mathematics is excessive, and the marks given seem high.

*Highgate.*—Classical candidates appear to be unfairly handicapped in comparison with those who offer several Science subjects. It takes years of careful training for boys to reach the standard in Classics. I have known higher marks scored in Physics and Chemistry after two years of work than in Latin and Greek after six or seven.

*King's College School.*—For I.C.S. would suggest one paper in Mathematics and of a higher standard.

*Portsmouth.*—The syllabus of the Intermediate examination suits our curriculum very well.

*Bedford.*—The whole system of examinations is absurdly complicated. Age 18–19½ is the best.

*Monmouth.*—It is unfortunate that the curriculum required for Intermediate (Part III. Mathematics) and that required for Oxford and Cambridge Mathematical Scholarships do not run on parallel lines.

*Birmingham.*—The conditions for I.C.S. and 1st Class Clerkships are quite satisfactory, conduce to sound and advanced education, and secure the best men. The Intermediate could easily be modified so as to secure most of the next ablest boys without interfering in any way with their proper education. The 2nd Class Clerkship examination needs remodelling and Boy Clerks should be abolished.

## APPENDIX XLVII.

(Handed in by Mr. W. M. Hicks, Sc.D., F.R.S.)

Q. 22,312.

### THE UNIVERSITY OF SHEFFIELD.

#### STATEMENT OF REPLIES TO QUESTIONS ASKED BY THE ROYAL COMMISSION ON THE CIVIL SERVICE.

1. It is doubtful whether it would be to the advantage of the Public Service, or to the best interests of University Education, that the formal curricula for degrees, either pass or honours, should be modified with special reference to the particular and various needs of civil clerkships. If this were done, it would be necessary to nominate young men of from 18 to 19 years of age, before those personal qualities on which the efficiency of the Public Service so largely depends were fully developed. On the other hand, it would be useful if selected candidates were required to attend courses of higher education for a year in branches bearing specially on the duties of the particular office to which they had been appointed, supplementing that branch of Arts or Science which they had studied for a degree.

2. That whilst the present Examination Scheme seems well arranged to meet the cases of able men who have received a good University Education, an examination of this kind could not be a test for "the greatest promise of administrative capacity." It would probably achieve the purpose better, if the

possible range of subjects taken by a candidate were diminished. This could obviously be effected by reducing the maximum number of marks obtainable below 6,000.

3. There are local scholarships in connection with this University probably sufficiently numerous at present to ensure that a student of requisite ability for the Public Service would be able to obtain one. There would, however, seem to be a need of scholarships open to students from a distance. Also in case the extra year for special preparation suggested under (1) were required, some pecuniary assistance would be called for on behalf of students of slender means.

4. Up to the present, the examinations conducted by the Civil Service Commissioners have had no influence on the curricula of the University. Local requirements give many openings for men of special ability, and few, if any, of our students have become candidates for Civil Service appointments. The University, however, would encourage such students if they appeared.

20th November 1912.

## APPENDIX XLVIII.

(Handed in by Sir W. S. McCormick, LL.D.)

Q. 22,390.

## MEMORANDUM RECEIVED FROM THE SECRETARY TO THE CARNEGIE TRUST.

## PRÉCIS OF EVIDENCE.

I understand that the question upon which my evidence is more particularly desired is:—

What is the effect of the Carnegie benefaction (more especially that portion of it under Clause B. of the Trust Deed which is applicable for assistance in the payment of class fees), on—

- (a) Secondary education
- (b) University education

in Scotland?

The question is rather difficult and complicated, and I am not sure that as yet—the Trust has been in operation for but ten years—even those most closely connected with the Carnegie Trust are in a position to give any definite answer.

The following outline seems to me to embrace the various points that may be of interest to the Commission.

## A.—Secondary Education.

The influence of the Trust on secondary education in Scotland has been indirect, but perhaps none the less effective.

As to Regulation III. regarding preliminary education (*see* Appendix A.), the policy of the Trust in now demanding, where possible, from applicants the school Leaving Certificate rather than the University preliminary examination is due primarily to the inherent inadequacy of a written examination in single subjects as a test of capacity, training, and general fitness for University studies. In fact it is carrying out the ideal the Universities Commissioners of 1889 had before them when instituting the present preliminary examination system. They said, page xiii of their Report:—

“We believe this to be the best arrangement that could be made in the present condition of secondary education in Scotland. But we should think it far from satisfactory if it were to be regarded as final and permanent. The object of all such arrangements should be to secure that before he begins his University course, a boy should have been for a certain number of years under good and trained teaching. This cannot be secured by a mere examination, although an examination at the end of the school course may be a very useful test of his training. We do not consider that either an Entrance Examination or a Certificate which can be obtained in single subjects can be an adequate test of school training. . . . The regulations we have framed may be usefully revised, when good secondary schools have been made available throughout Scotland.”

The following table shows the proportion of new beneficiaries entering the four Scottish Universities through the *Leaving Certificate* alone for the past two years:—

Winter Session.	St. Andrews.	Glasgow.	Aberdeen.	Edinburgh.	Totals.
1911-12	77·6	68·0	79·8	79·0	74·5
1912-13	85·7	86·7	88·7	87·2	87·1

Details under this head are given in Appendix B.

This increasingly high percentage is all the more remarkable in that no applicant (except one in very special circumstances) has yet been refused the benefits of the Trust on account of his not having obtained the *Leaving Certificate*,

## B.—University Education.

1. The total number of matriculated students at the four Universities has increased from 5,755 in 1900-1 to 7,188 in 1910-11; *i.e.*, by 1,433, or exactly 25 per cent. (These figures omit Dundee University College, as its finance is not included in the Annual Parliamentary Returns, but this omission does not affect the percentage of increase.) Difficult to say how far due to the Trust.

Increase mainly, if not entirely, in Faculties of Arts and Science. Details are given in *Appendix C.* (where the numbers given under St. Andrews include Dundee Students).

2. In accordance with the hope expressed by Mr. Carnegie the Trust has avoided “the invidious task of inquiring into the circumstances of each candidate,” and the only qualifications demanded are those set down in the first three Regulations. The statistics given in *Appendix D.* regarding the occupations of the parents of entrants to the Trust for Winter Sessions 1908-9 and 1912-13 respectively are evidence of the social classes from which beneficiaries are drawn.

3. Regulations IV. to VIII. regarding the University studies of beneficiaries have undoubtedly had some influence in raising the quality of University work, and probably in raising the proportion of students who are successful in taking a degree.

4. But the most remarkable feature, which may perhaps be credited in great measure to the Trust, is the increase in the number of Honours degrees in Arts (the only Faculty in which Honours degrees are differentiated), and in degrees in Science. (The degree in Science—B.Sc.—may be regarded as an Honours degree.) For details, see *Appendix C.*

## C.—Advanced Study and Research.

Although coming under Clause A. of the Trust Deed the Research Scheme of the Trust should perhaps also be mentioned. The assistance offered is of three kinds—Scholarships, Fellowships, and Grants—in order, so far as possible, to reach all classes of workers, from students who have just graduated to graduates who have already entered upon professional careers. Selection is made, not by competitive examination, but for Fellowships on the merits of original work already published, and for Scholarships on the evidence of experts regarding the applicant's special fitness for the work proposed. Instead of separate allotments to individual Universities, a common scheme was established for all the Universities, administration of which is retained in the committee's own hands. Finally, no fixed number of foundations, nor even a definite total sum, is assigned to any one year. In short the aim of the Scheme is, within the limits of the Trust Deed, to discover, and if at all possible to supply, the demand for assistance in higher study and research throughout Scotland.

I may add that before becoming Secretary to the Carnegie Trust I had a good deal of experience in School and University Examinations as (1) a representative on the Universities Joint Board of Examiners in Scotland, (2) as Chief Examiner in English for the *Leaving Certificate* Examination of the Scotch Education Department, and (3) Adviser to the General Medical Council on Preliminary Examinations for Medicine in the United Kingdom. I am also at present Chairman of the Advisory Committee on the Distribution of Exchequer Grants to Universities and University Colleges in England, and a member of the Royal Commission on University Education in London,

in both of which capacities I have had to consider the examination problem, more especially with a view to the co-ordination of Secondary and University Education. I may refer in this connexion to the précis of my evidence before the Consultative Committee on

Examinations in Secondary Schools, given in their Report, pages 555 to 561, where I advocate the organisation of a national system of school examinations.

(Signed) W. S. McCORMICK.

7th January 1913.

## APPENDIX A.

## THE CARNEGIE TRUST FOR THE UNIVERSITIES OF SCOTLAND.

*Regulations for Assistance in the Payment of Class Fees in the Universities and Extra-Mural Colleges of Scotland.*

I. AGE.—Applicants must be over 16 years of age.

II. NATIONALITY.—Applicants must be of Scottish birth or extraction, or must have given two years' attendance after the age of 14 at a school or institution under inspection of the Scotch Education Department.

III. PRELIMINARY EDUCATION.—Applicants qualified under the two previous regulations who have been pupils of schools under the Scotch Education Department will be eligible for assistance in the payment of class fees if they have obtained the Leaving Certificate of the Department, provided that it bears evidence of such preliminary education as is required by the Universities for their respective graduating curricula, or if it does not, provided that it is supplemented by such passes either in the Scottish Universities Preliminary or other examination as will satisfy the above requirement of the Universities.

Where applicants have not been pupils of schools under the Scotch Education Department, or where other good ground for not having obtained the Leaving Certificate can be shown, the Executive Committee have power to accept instead what they deem equivalent evidence of attainments in the shape of passes gained either in the Scottish Universities Preliminary or other examination, provided that no applicant will be considered eligible who has to pass any further preliminary examination before completing his graduating curriculum.

IV. COURSE OF STUDY.—Applicants must have had their course of study for each academic year approved by the University Adviser of Studies, or, in Faculties where no Adviser of Studies has been appointed, by the Executive Committee of the Trust.

V. ORDINARY CLASSES.—Applicants are not eligible for assistance in the payment of fees of classes belonging to a further stage of their curriculum until they have passed the graduation examinations belonging to a previous stage.

VI. EXTRA-ORDINARY CLASSES.—Applicants are not eligible for assistance in the payment of fees of other than ordinary qualifying classes until they have passed the ordinary graduation examination in the relative subject.

VII. REPORTS ON ATTENDANCE AND WORK.—Beneficiaries come under an obligation to submit to the Executive Committee at the end of each session particulars as to their attendance and work, any distinctions they may have gained, and any graduation examinations they may have passed.

VIII. CLASS CERTIFICATES.—Beneficiaries also come under an obligation to refund the fee of any class in which they have failed to obtain a certificate that they have given regular attendance and duly performed the work of the class during the session.

July 1912.

## APPENDIX B.

## THE CARNEGIE TRUST FOR THE UNIVERSITIES OF SCOTLAND.

*Tables showing Numbers and Ages of new Beneficiaries for 1912-13.*

1. Percentages of Leaving Certificates obtained by new Beneficiaries for Winter Session 1912-13 in the various Faculties over the four University centres:—

	St. Andrews.			Glasgow.			Aberdeen.			Edinburgh.			Totals.

## APPENDIX XLIX.

*(Handed in by Sir W. S. McCormick, LL.D.)*

COPY of a LETTER addressed by Professor CARSLAW, PROFESSOR of PURE and APPLIED MATHEMATICS in the UNIVERSITY of SYDNEY, N.S.W., to an OFFICER of the SCOTCH EDUCATION DEPARTMENT.

MY DEAR MACDONALD, Australian Club, Sydney,  
3rd December 1912.

YOU will be interested to know that last week our Parliament passed into law a Bill brought in by the Labour Government amending our University Act in two directions.

- (i) In the constitution of our Governing Body, allowing for four nominated members, one of whom will certainly be the Director of Education for N.S.W., and making other changes.
- (ii) In making full provision for the Leaving Certificate system in the schools, and providing that 200 scholarships be given per annum to those gaining the L.C., carrying with them their fees at the University.

The University gets compensation for this loss of revenue in an increased subsidy:

in the end it is promised an increase of 20,000*l.*

The object is, of course, to put the highest education in the reach of the best boys (and girls) in the schools, and to enable the ablest of these to go right through their university course, even if they come from quite humble homes. With the remission of fees, extra bursaries can be granted, in case of such assistance being necessary.

I shall send you details later, but we shall guard against making the L.C. Examination competitive, and no list of order of merit will be issued.

I have helped on this movement—strengthening the State Secondary Education system and broadening the University—with all my power.

Yours sincerely,  
H. S. CARSLAW.

## APPENDIX L.

*(Handed in by Sir William Augustus Tilden, D.Sc., LL.D., F.R.S., and Sir William Ramsay, K.C.B., D.Sc., LL.D., F.R.S.)*

Q. 22,636.

THE INSTITUTE OF CHEMISTRY OF GREAT BRITAIN AND IRELAND.

*(Founded 1877. Incorporated by Royal Charter 1885.)*

STATEMENT FOR THE ROYAL COMMISSION.

In April last the Royal Commission on the Civil Service published a statement in the Press to the effect that they desired to take evidence from associations, societies, and organisations representing classes common to the whole Civil Service, and to receive from any officer now serving in, or retired from, the public service, written statements on any matters which concern the organisation or administration of a particular department; further, that the Commission proposed to consider applications to tender evidence by persons not connected with the public service.

In view of this announcement the Council of the Institute of Chemistry have had under consideration the conditions attaching to professional chemical appointments under the Civil Service. They find in some instances that the status of chemists employed is far from satisfactory. The Council, therefore, applied to the Royal Commission on the Civil Service to be allowed to send representatives to state their views on these matters, and the Royal Commission have invited the Council to forward a statement for their consideration.

The Council have been further informed that when the statement has been considered the Commission will be in a position to decide whether it desires to supplement the statement by oral evidence. In that event the Institute will be represented by one or more of the following Fellows of the Institute:—

Sir WILLIAM A. TILDEN, D.Sc., LL.D., F.R.S.,  
*Past President.*

Sir WILLIAM RAMSAY, K.C.B., D.Sc., LL.D.,  
F.R.S.

Professor PERCY F. FRANKLAND, LL.D., F.R.S.,  
*Past President.*

Professor RAPHAEL MELDOLA, D.Sc., LL.D.,  
F.R.S., *President.*

*The Objects of the Institute.*

The Institute of Chemistry of Great Britain and Ireland was founded in 1877 and incorporated by Royal Charter in 1885 for reasons and objects, including those specified in the following abstracts from the petition:—

“That the profession of Analytical and Consulting Chemistry is one of great importance to the public, and having regard to the rapidly increasing application of chemistry to legal investigations, to public health, to the adulteration of food, to agriculture, and to the arts and manufactures, it is desirable that persons practising the profession of Analytical and Consulting Chemistry should have both a practical and scientific knowledge thereof.”

“That it is a matter of increasing importance to Government Departments, corporate bodies, and others requiring the assistance of persons competent to practise in Analytical Chemistry, and to advise in Technological Chemistry that such persons should be properly trained, and that their qualifications should be attested by certificates of competency granted by a scientific body possessing sufficient status, and that at present there is no institution or corporate body which has power to issue such certificates.”

Accordingly, the Council have prescribed Regulations with which candidates are required to comply before admission to the membership.

*Qualifications for Membership.*

Every candidate is required to pass three examinations:—

I.—Preliminary, in subjects of general education. The standard is equal to that demanded by other professional bodies.

II.—The Intermediate,\* in general Theoretical and Practical Chemistry extending over four days.

III.—The Final,† in a special branch of Chemistry, to be selected from a list prescribed by the Council, extending over five days, theoretical and practical, with an oral examination in general Chemistry, and translations from French and German technological literature.

The education of a professional chemist is analogous to that of other professional men, extending as it does over at least four years' systematic training, and involving at least an equal standard of general culture and the maintenance of an equal social status.

Candidates for the Fellowship of the Institute must have been registered as associates for at least three years, and have been continuously engaged during that period in the study and practical work of Applied Chemistry in a manner satisfactory to the Council.

\* Under the provisions of the Royal Charter and the byelaws the Institute elects censors who exercise control over the professional conduct of the Fellows and Associates.

The professional education of the Fellows and Associates of the Institute is of University character, and over 40 per cent. hold Degrees.

The Register of the Institute contains the names of over 1,400 Fellows and Associates, of whom rather more than 15 per cent. are engaged in Government service at home or abroad.

The qualifications F.I.C. and A.I.C. are recognised by the principal Government Departments as evidence of competency for appointments requiring chemical knowledge and skill.

With this statement are forwarded copies of:—

- (a) The Royal Charter and Byelaws.
- (b) The Register.
- (c) The Regulations for the admission of Students, Associates, and Fellows.
- (d) A "List of Official Chemical Appointments," containing information as to the appointments held by professional chemists in various parts of the British Empire and the Indian Empire.

#### PROFESSIONAL CHEMICAL APPOINTMENTS IN THE CIVIL SERVICE.

1. The Council of the Institute of Chemistry desire to express their opinion that the importance, to the country, of the technical service rendered by consulting and analytical chemists in the Civil Service is generally under-estimated, and that the remuneration and conditions of service are not such as to attract and retain permanently the most efficient chemists for the public service.

2. In several Government Departments there does not appear as yet to be any very definite idea as to what a professional chemist is and what he does.

##### (b) Staff of War Department Chemist.

1 War Dept. Chemist	-	-	650l.‡	-
1 principal Assistant	-	-	550l.,	-
			650l. after a year.	
2 Senior Assistants	-	-	350l.,	-
			500l. by 20l.	
3 Junior Assistants	-	-	130l.,	-
			300l. by 15l.	

##### Chemical Staff of Chief Inspector, Woolwich.

(Replaced by military head.)	-	-	-	-
1 Chemist, Class I.	-	-	360l.-450l.	-
			by 10l.	
2 Chemists, Class II.	-	-	260l.-350l.	-
			by 10l.	
3 Chemists, Class III.	-	-	110l.-250l.	-
			by 10l.	

\* Every candidate for admission to the Intermediate Examination must have been trained for at least three years in a university or college recognised by the Council in Chemistry, Physics, and Mathematics, and one other scientific subject, and have passed the class examinations in the subjects taken; or have worked for two such years in a recognised university or college, and for two years in the laboratory of a Fellow of the Institute; or have taken a degree in Science, including Chemistry, Physics, and Mathematics.

† Every candidate for admission to the Final Examination must have passed the Intermediate Examination or have taken a degree in Science in a university with First or Second Class Honours in Chemistry, and have complied with the regulations as to training in Physics and Mathematics; or obtained a diploma of similar standard recognised by the Council for this purpose.

‡ Over 30 years ago, Professor Abel (afterwards Sir Frederic Abel, Bart.) had a salary more than double this figure.

Chemists in Government Departments should have a recognised status as professional men.

3. There is probably not more than one chemist in the Civil Service receiving a salary of more than 1,000l. per annum. Chemists holding very responsible positions do not receive salaries commensurate with the incomes of leading private practitioners in consulting chemistry, nor comparable to those provided for many other appointments, which involve professional technical training.

4. Where the prospects are unsatisfactory, the Government will not be able to retain the services of young chemists who are anxious to make progress in their profession. They may take temporary appointments in the Civil Service to obtain experience, but they will be constantly on the alert for openings offering scope for ambition.

##### War Office.

5. In the opinion of the Council of the Institute the continuance of the present unsatisfactory conditions of service will prove disastrous, particularly in a Department such as the War Office.

In expressing this opinion the Council of the Institute do not reflect on the ability of the Chemists now holding the more responsible positions under the War Department; on the contrary, they feel every confidence in their work and in their loyalty to duty. As to the juniors and temporary assistants, however, the Commissioners will find on inquiry that the more promising Chemists are disheartened with the poor prospects in view, and that their natural inclination must be to leave the Service at the first favourable opportunity.

##### Chemical Staff of the Chief Inspector, Woolwich.

6. The Council having considered the evidence taken before the Royal Commission on 4th July 1912 (pages 45-46 of the published Minutes) desire especially to support the representations made by the Chemical Staff of the Chief Inspector, Woolwich (formerly the Department of the War Department Chemist).

7. These representations may be briefly recapitulated as follows:—

I. (See I. below.) That the present compared with recent conditions involve—

- (a) Loss of status;
- (b) Serious reduction of pay of all grades;
- (c) Loss of prospects of promotion.

II. (See II. below.) That the nature of the work is such that it requires chemists of the highest training, but the conditions are inadequate to secure professional men of the requisite standing.

I. (a) Members appointed as higher division civil servants have been reduced, on promotion, in scale of pay and increments to second division, and reduction of leave has also been attempted.

The chemists now on the permanent staff were, with one exception, appointed when the better scale was in force. The scale of pay of those actually serving when the change was made was not altered, so that no one suffered reduction of pay at the time. Any promotion, however, was only made on the new terms. Thus, those who joined under the old scheme found their prospects of advancement and status diminished both as regards the number and the value of the higher appointments.

The present scale of pay, increments, leave, and travelling allowances of chemists, Class III., are practically those of Second Division Civil Service clerks where no technical training is necessary. (Second Division clerks have a prospect of reaching a higher ultimate salary by 50l.) The travelling allowances are inadequate for professional men. Chemists, Class III., are non-pensionable; if promoted to Class II. they

become so, but only half previous service ranks for pension.

Permanent increase of work and unfilled vacancies have been met by the appointment of temporary assistants with the remuneration of 2l. 0s. 6d. per week; they are graded as civilian subordinates, and have practically no status, being on the wages list of the ordnance factories. These are constantly seeking appointments elsewhere owing to the unsatisfactory prospects.

(c) Several promotions stopped, others made without any or with very little increase of pay, e.g., a senior assistant became "principal assistant" and then "head chemist" without increase of pay, despite largely increased responsibilities.

II. The work is consultative and analytical on all military material, i.e., on practically anything and everything. Much of the "routine" work, e.g., the analysis of explosives, rubber goods, and dyed fabrics, is complicated and requires considerable knowledge, skill, and research. The work is also responsible; the large sums of money involved and possibility of litigation on rejections necessitate extreme care and accuracy. This work is sent independently from all military departments and stations, and is consequently irregular in nature. Very little specialising is possible, therefore, and all members of the staff have to be competent to undertake any branch of the work. The work also includes the investigation of, and giving opinions on, inventions and proprietary materials; the suggestion of materials to effect specific purposes; the drawing up and revising of specifications and methods, &c. The professional nature of the work has been recognised by the age of entry for the Civil Service examination being fixed at 20 to 25, and by the appointment being conditional on assistants attaining membership of the Institute of Chemistry within two years.

8. The chemists of this department undertake duties and responsibilities similar to those of the superintending and first and second class analysts at the Government Laboratory, but at far lower salaries.

9. The Chemical Department has been placed under the direct control of a military officer without special chemical qualification.

The Council submit that it is a serious matter for the country that positions of importance which were previously held by distinguished chemists should be filled by military officers who, making no claim to the possession of special knowledge and experience in Chemistry, have been placed in control of scientific departments wherein they find themselves unable to rely on their own knowledge for scientific information, and are, therefore, obliged to refer such matters to men under them who have been technically trained for their profession, and who have devoted their lives to the problems of their department of work, and who bear all the actual responsibility of that work.

10. Col. Sir E. W. D. Ward, in answer to Question 11,311, said: "Men are always keenly disappointed when a thing that they have looked to is removed from them." The Council submit that an injustice is done when higher offices to which the units in a Department have every reason to aspire are abolished, when they are called upon to take the responsibilities and duties of such offices without promotion or improved remuneration. The abolition of higher appointments must render the Service less attractive to men of the best type.

#### Research.

11. The work of the chemists referred to above has been described as "routine," but the Council are of opinion that it is incorrect to call work "routine" when it covers the investigation of a very wide range of materials. The idea of the uninitiated is that all chemical work is equally easy unless it comes under the designation of "research."

As a matter of fact, much of the so-called "routine" work is of the nature of "research," and it would be found on inquiry by those competent to judge that the work undertaken by the chemists concerned has not materially altered since the Research Department was established; that it includes investigations involving research of a very high order, many

of which it would be exceedingly dangerous to entrust to inexperienced chemists.\*

12. As a question of principle, apart from any consideration of the representations made by the present staff, the Council of the Institute of Chemistry regard it as a matter of *vital national importance* that the chemical staff of the Chief Inspector, Woolwich, should be efficient, and should be controlled by a chemist of the highest efficiency.

#### Royal Gunpowder Factory, Waltham Abbey.

13. Very similar conditions to those at Woolwich are to be found at the Royal Gunpowder Factory, Waltham Abbey, except that the staff includes no chemists of Class I. The manager, however, is a qualified chemist, and though his position is one of great importance, the maximum salary is only 500*l.* per annum. The chemists of Class II. and Class III. are on much the same basis as those at the Royal Arsenal, Woolwich. Chemists at Waltham Abbey frequently leave the service for positions offering better prospects.

14. The importance of securing and retaining for the War Department, a staff of chemists of the highest possible competence will be apparent; the number of chemists in the department is so small that a substantial improvement in the conditions of the appointments could be effected without serious cost to the Government; while with improved prospects the positions would be sought after, and the whole status of the chemical staff would be maintained at a higher level.

#### Suggestions.

15. The Council of the Institute would offer the following suggestions for consideration:—

- (a) That chemical departments should be controlled by chemists.
- (b) That chemists occupying responsible positions of control should be placed on a better basis as to remuneration and status.
- (c) That for qualified professional chemists the increments should be not less than 20*l.* per annum.
- (d) That chemists in charge of departments should rise to the positions of Chemists Class I.
- (e) That the remuneration of Chemists Class I. should rise at least to 650*l.* per annum.
- (f) That the remuneration of Chemists Class II. should rise to at least 500*l.* per annum.
- (g) That the remuneration of Chemists Class III. should rise to at least 300*l.*; and that these appointments should be pensionable.
- (h) That chemists engaged as temporary assistants should be placed on the *salary* list, with remuneration of not less than 120*l.*, and increments.

16. In other matters of less importance, the attitude of Government Departments towards scientific officers affords similar evidence indicating lack of appreciation of scientific work.

Subsidiary departments appear to take it on themselves to appoint chemists to meet the exigencies of the service without any specific sanction for creating a chemical sub-department, with the result that they generally secure the services of young men who are looking for opportunities for gaining experience. In the event of there being no margin in the Treasury allowances for the maintenance and upkeep of a chemical laboratory, &c., the chemists have to be content with a makeshift designation, and are treated as if they belong to a non-professional class. Professional technical services should be systematised. It would probably secure greater efficiency for the public service if the chemical work of minor departments were brought under the control of one of the properly organised Government Chemical Departments.

\* Even properly trained and experienced men are liable to meet with accidents in this Department. A Temporary Assistant, Associate of the Royal College of Science, London, lost the sight of an eye through an explosion, in June, 1912. He was at once reduced to half-pay while on injury list, and will receive no compensation unless he resigns his post.

*Chatham Dockyard.*

17. The attention of the Commission may be drawn to the fact that there are chemists engaged at Chatham Dockyard in testing cement. Until recently their official title was "Temporary Draughtsmen on Cement Testing." This the Council hold as derogatory to chemists as professional men, and they are, therefore, glad to know that the title has been changed to "Temporary Cement Analysts." The positions are responsible in view of the fact that cement contracts are accepted or rejected on the results of the tests. The salary is less than 140*l.* per annum, for which sum the Government cannot possibly retain the services of well-trained and reliable chemists for any considerable period.

*Post Office.*

18. There are four chemists employed at Mount Pleasant in the Department of the Engineer-in-Chief's Testing Branch. The President of the Institute has had recent correspondence with the Postmaster-General on the subject. The Postmaster-General, in a letter dated 12th August, 1912, has stated that:—

"The status of the officers to whom you refer has been reviewed from time to time, but the creation of a separate chemical department is not practicable or desirable, owing to the small

amount of such work which exists in the Post Office."

"As much as possible of the work is sent to the Government Laboratory and there is little prospect of any considerable extension of the amount performed at Mount Pleasant. Several members of the staff have in the past been promoted to positions in the engineering department, where they render useful service."

These chemists are known as 2nd Class Test Clerks; their work is of a responsible character, their salaries are very small (several of them less than 100*l.* a year), and they have no prospect of promotion unless they qualify as engineers.

19. In conclusion, the Council express the opinion that the attitude of the Government generally in such matters is not calculated to attract the most highly trained and competent men for the Government Service, for the benefit of the State.

Signed on behalf of the Council of the Institute of Chemistry.

RAPHAEL MELDOLA,  
*President.*

RICHARD B. PILCHER,  
*Registrar and Secretary.*

## APPENDIX LI.

(Handed in by Dr. J. R. Tanner.)

Q. 22,718.

### UNIVERSITY OF CAMBRIDGE.

#### REPLY OF THE UNIVERSITY OF CAMBRIDGE TO THE QUESTIONS OF THE ROYAL COMMISSION.

Magdalene College Lodge, Cambridge.

19th November 1912.

SIR,

I HAVE laid before the Council of the Senate your letter of October 19 relating to the inquiry which is being conducted by the Royal Commission on the Civil Service, and I am desired by the Council to send you the following replies to the questions upon which you ask for an expression of opinion:

(1) *The relation between the highest education given at the Universities and the efficient discharge of their functions by members of the Civil Service.*

For the purpose of an answer to this question, the Council of the Senate assume that members of the Civil Service will discharge their functions efficiently, in proportion as they are men of highly trained intellect and well developed character.

The highest education given at the Universities may be taken to include the training of the intellect by the prescribed courses of study, and the development of character involved both by protracted intellectual effort and by the opportunities offered and the demands made by the conditions of life in the University and Colleges.

For the training of the intellect the policy of the University of Cambridge has now for many years been directed to the provision of the best teaching and most complete equipment for study that can be attained by the use of the resources at its disposal. Further, the extensions of the curriculum which have been steadily in progress for some fifty years have had for their principal aim to provide courses of study in all important branches of knowledge, new and old, and to leave the greatest possible freedom to the individual student to pursue that course which is most in accordance with his own tastes and ability. It would be impossible to enumerate, within the allowable compass of this answer, the subjects which are thus open to the student, but it may be briefly said that

they range from literature ancient and modern to the latest developments of pure and applied science.\*

The principle of freedom of choice, the wide range of study, and the character of the teaching both literary and scientific, which is accessible to the students, provide for the excellence and variety of their intellectual training.

It is the experience of those who have an intimate knowledge of the University that the intellectual development of students during their residence is general and considerable, not least in the case of those students, who in their earlier training either by reason of limited means have had comparatively few advantages or from various causes have failed to make full use of their opportunities.

As regards the development of character, the conditions of life in the University and Colleges are in a high degree favourable.

In the first place, it is a life of wide freedom with definite discipline and supervision. The principle of College and University discipline is to allow as great a liberty of self-government to the individual as is consistent with the orderly life of a society. The object of it is to lessen the risks of the period between boyhood and manhood, without checking the wholesome play of character and the free choice of interests.

In the second place, the social life of the undergraduate world gives many opportunities for the development of interests, for the practice of common action and of leadership, and for gaining experience in dealing with men of every class and kind. There are innumerable societies formed and managed by the

\* The Council of the Senate are forwarding for the use of the Commissioners copies of Lecture Lists showing the subjects in which instruction is being given in the University in the current academical year.

students themselves for the cultivation of all kinds of literary, scientific, social, political, and religious interests. Each society has its president, secretary, treasurer, and committee. In some cases these societies are highly organised, as for instance the Union Society, which is at once a social club, a literary society, and a parliament. The main requisites for taking an active part in them are general intelligence, a reasonable power of give and take, and an interest in the subject which forms the basis of combination. Athletics also play an important part in the formation of character. The thorough organisation of games develops the faculty of leadership and educates men in judging character, in managing people of various kinds, and in gaining self-control and self-discipline.

Experience shows that in a large proportion of cases a steady and wholesome development of character takes place during the three years which the majority of the students spend at the University.

It may not be irrelevant to observe, in support of this conclusion, that in recent years there has been a marked and rapidly increasing tendency among persons responsible for the direction of large business concerns, both at home and abroad, to come to the University for recruits. The records of the University appointments Board would provide ample evidence for this statement.

If the views here expressed are correct, it would appear that the University offers a valuable preparation for the Civil Service, especially on the ground that it combines an intellectual training of a high order with the opportunity of a development of character, particularly in the direction of dealing with and leading men.

(2) *The suitability of the open competitive examination for the Home Civil Service ("Class I"), as at present regulated, to secure the supply of candidates possessing the highest education, and giving the greatest promise of administrative capacity.*

This question raises two points:

- (a) whether the examination secures a supply of candidates possessing the highest education;
- (b) whether the candidates chosen are such as give the greatest promise of administrative capacity.

(a) The examination undoubtedly attracts a large number of candidates from Cambridge, who show by their success in University examinations, as well as in the open competition, that they have taken advantage of the best education open to them in the University, and this education, we believe, may properly be described as "the highest education."

It should, however, be pointed out that the age limit, which allows competition up to the age of 24 (so far as it affects the condition of this University, where most men take their degree at the age of 22), deters some who might otherwise compete, but are unable or unwilling to spend a year in special preparation for the examination. The Council, however, do not understand that they are asked to express an opinion as to the desirability of lowering the age limit or otherwise modifying the character of the examination.

(b) The Council have in their answer to question (1) dealt with the preparation for administrative duties which is, in their opinion, afforded by the education and training given in the University. They believe that men chosen under the present regulations for the open competition have proved themselves capable and efficient in the duties which they are called upon to perform. The heads of the great departments of the Civil Service would be able to answer this question from their experience of the men chosen.

(3) *The facilities which exist under present conditions to enable persons of slender means to obtain University education.*

It has not been possible within the time allowed to ascertain with completeness the facilities which exist under present conditions to enable persons of slender means to obtain University education. The funds available for scholars and exhibitioners are contributed partly by the university and colleges, partly by schools, County Councils, and other authorities external to the University. It is possible to state with considerable accuracy the aggregate of funds administered within

the University for the benefit of all scholars and exhibitioners in residence at one time, students belonging to different years being taken together. But there are no statistics readily available of the aggregate of funds administered for the benefit of these same scholars and exhibitioners by outside authorities. In response, however, to a request from the Council of the Senate, the tutors of colleges have furnished particulars of the assistance received from outside authorities by those college scholars and exhibitioners who entered the University in the single academical year 1911-12. The clearest way, therefore, in which to state the available facts will be, first, to give the aggregate of funds distributed in 1911 from sources within the University to all scholars and exhibitioners whether in their first or a later year of residence; and then to analyse in more detail the emoluments from all sources received by those scholars and exhibitioners who were in their first year of residence in the academical year 1911-12. It should be added that the latter of these two statements includes no funds administered by the University, as distinguished from the Colleges, since no University scholarships are awarded until after entrance; and that it does not include funds granted by external authorities to students who are not also scholars or exhibitioners of their college. In comparing the total sums available within the University with the sums offered at entrance in a single year, it must be borne in mind that, in addition to the sums offered by the colleges in entrance scholarships and exhibitions, further sums are available for increasing the emoluments of scholars and exhibitioners after they have come into residence, for prolonging entrance scholarships and exhibitions after the first tenure of two years has expired, and for furnishing scholarships for able men who for various reasons have not obtained scholarships or exhibitions by open competition at entrance. The figures given below do not include the provision made for post-graduate studentships for study and research.

The aggregate of funds administered within the University and brought to account in 1911, for the benefit of scholars and exhibitioners in all years of residence, amounted to about 47,000*l.*, of which about 44,500*l.* was contributed by the Colleges and 2,500*l.* by the University.

The total emoluments received by those scholars and exhibitioners who were in their first year of residence in the academical year 1911-12, amounted, as shown in the annexed table,\* to 20,178*l.*, distributed among 220 scholars and exhibitioners. This sum was provided from the following sources:—

Scholarships and exhibitions offered by the Colleges—9,869*l.*

Further supplementary grants made by the Colleges—1,186*l.*

School scholarships and exhibitions—4,518*l.*

County Council scholarships—2,765*l.*

Grants from other public funds and from the City Companies—1,840*l.*

To the question how far these funds are administered for the benefit of "persons of slender means," the following facts respecting the 220 scholars and exhibitioners entering the University in 1911-12 will furnish a partial answer.

It may be safely assumed that students receiving assistance from county councils or from other public funds are of slender means, and it will be seen that out of the total of 220 scholars and exhibitioners, 79 are so assisted.

But the experience of college tutors and others engaged in teaching and administrative work in the University goes to show that a large number of the students who are assisted only by college and school scholarships also come under the same description. Many of these are the sons of clergymen or of professional men with small or moderate incomes and large families, who could not send their sons to the University unless they receive assistance. This view is borne out by an analysis of the schools at which the entrance scholars and exhibitioners of the year in question were educated. Out of the total of 220 in

\* See Appendix A.

that year, 84 came from the great boarding schools (25 in number, including Eton, Harrow, Winchester, &c. Christ's Hospital, and Epsom and Dover Colleges); 30 from minor boarding schools; 44 from great day schools (including such schools as King Edward's School, Birmingham, and a large number of London schools, such as St. Paul's School, the City of London School, and Latymer School, Hammersmith); 37 from local grammar schools; 19 from public secondary schools and polytechnics; 4 from other Universities; and 2 unclassified. It may be pointed out that under the conditions now existing the line between local grammar schools, most of which are partly supported from public funds, and public secondary schools, is not easy to draw. Many of the great day schools also receive assistance from public money.

There is ground for believing that there is enough money available from various sources for all students of slender means who now present themselves for scholarship examinations and whose intellectual qualifications give promise of ability to distinguish themselves at the University. This class includes a large proportion of those who pass into the Higher Civil Service under the conditions which at present exist. The opinion is widely held by those who have experience of the candidates presenting themselves for entrance scholarships that, until improvements have been made in the facilities existing outside the Universities for the education of persons of slender means below the age of nineteen (the normal age for entrance into the University) and in the methods of selecting those who are to be thus educated, it will not be possible to increase very greatly the number of entrance scholarships awarded to such persons without lowering unduly the standard of ability required. In support of this statement it may be mentioned that a joint inquiry, conducted in the summer of 1912 by representatives of the colleges, suggested the conclusion that a number of the students to whom grants had hitherto been made by an important public body, had failed to show sufficient ability to justify the amount of public money spent on them. The results of this inquiry were laid before the authorities concerned, and, as a consequence, the system on which these grants are made is under revision.

Besides scholarships and exhibitions there are other ways in which facilities are offered to men of slender means. All college buildings contain a certain number of small and cheaply rented rooms which are in practice reserved for poor men. Some college make an inclusive charge for each of the three terms in the the academical year, covering nearly all necessary university and college payments; while by the institution of non-collegiate students the expenditure

at Cambridge can be considerably reduced. At most colleges there is a private fund, administered at the discretion of the tutors for the benefit of poor students; and it is not unusual to make loans or to give credit to students who need such help. At some colleges, by a confidential arrangement made through the tutors, the men of slender means pay a reduced subscription to the more important undergraduate clubs.

In response to a request from the Council of the Senate, the tutors of colleges have furnished a number of typical cases showing that under present conditions poor men of ability succeed in obtaining admission both to the Higher Civil Service and to the learned professions. Among these are the sons of small farmers and tradesmen, village shopkeepers and schoolmasters, policemen, commercial travellers, and office clerks, and working men belonging to various trades (*e.g.*, shoemaker, carpenter, blacksmith, general labourer, agricultural labourer, engine driver, coal miner, warehouseman, carman). It has been thought desirable to append a selection of these cases,\* although they are not the result of any exhaustive inquiry, and it is therefore impossible to say what proportion they bear to the whole membership of the University in recent years.

(4) *The results produced by the examinations which are conducted by the Civil Service Commissioners upon the curricula of the Schools of the Universities.*

In the opinion of the Council of the Senate, the examinations conducted by the Civil Service Commissioners have not affected the curricula of the Schools of the University.

There is no doubt, however, that the prospect of competing in these examinations has a marked effect upon the course of reading adopted by some students, and it may be added that special teaching in certain subjects is provided by the University and by the Colleges for the preparation of students who are intending to be candidates at the open competitive examination for Home Civil Service ("Class I.").

You have already been informed that the Council of the Senate have appointed one of their members, Dr. Tanner, Fellow and late Tutor of St. John's College, as their representative to give oral evidence before your Commission.

I have, &c.

Vice-Chancellor of the  
University of Cambridge.

The Secretary,  
Royal Commission on  
the Civil Service.

\* See Appendix B.

#### APPENDIX A.

*Return of Entrance Scholarships and Exhibitions awarded to Students commencing Residence in the University in October 1911.*

Index Number.	Subject for Proficiency in which the Scholarship or Exhibition was awarded, and its Value.	Value of any Supplementary Grant made by the College.	Value of any School Scholarship or Exhibition held by the Student.	Value of any County Council Scholarship held by the Student.	Grants from other Public Funds or from City Companies.	Total.
	£	£	£	£	£	£
44	Natural Science . . . . .	80	—	20	—	154
55	Mathematics . . . . .	80	—	—	—	80

## APPENDIX B.

*Special Cases.*

*A*, the son of a mould-filler in glass-works, and entrance scholar, took First Class Honours in Natural Science, and is now in the Indian Civil Service.

*B*, the son of a clerk, and entrance scholar, took First Class Honours in Mathematics, and is now in the Indian Civil Service.

*C*, the son of a bricklayer, was a Junior Optime in the Mathematical Tripos, and is now in the Indian Education Department.

*D* and *E*, coming from small schools, were wholly supported at Cambridge by college, school, and county

council scholarships, obtained high places in the Mathematical Tripos, and are now in the Indian Civil Service.

*F* and *G*, of slender means, passed successfully through the University into the Indian Civil Service, and one of them is now occupying a position of considerable importance.

*H*. The tutor of one college gives a list of 10 men of limited means who have obtained positions in the Indian Civil Service during the last few years.

*I*. The tutor of another college gives four cases of men of slender means, coming from small schools, who have passed into the Indian or Colonial Civil Service since 1906.

*J.*, of slender means, recently obtained a First Class in both Classics and History, and is now in the Home Civil Service.

*K.*, the son of a small farmer, educated at a local grammar school, obtained a good place among the Wranglers in the Mathematical Tripos and a First Class in Natural Science and is now in one of the Government Scientific Departments.

*L.*, the son of a retired Petty Officer R.N., educated at a local technical college, obtained a Second Class in the Mathematical Tripos and a First Class in Natural Science, and is now in one of the Government Scientific Departments.

*M.*, the son of a small village shopkeeper, educated at a county school and partly maintained by a college scholarship, obtained a First Class in Natural Science and the Diploma in Agriculture, and is now Agricultural Adviser to a county council.

*N.*, the son of poor parents, educated at a small school and partly maintained by scholarships, obtained a First Class in Mathematics and in Natural Science, and is now in the Home Civil Service.

*O.*, the son of a shopkeeper in the eastern counties, and partly maintained by scholarships, has been a University Extension Lecturer, and is now in a Government Department.

*P.*, the son of a London carman receiving under 23s. a week, almost entirely maintained by College and London County Council Scholarships, is now a Government Inspector.

*Q.*, formerly a pupil-teacher, is now a member of the Civil Service in South Africa.

*R.* A tutor supplies a list of 10 men, all of slender means and educated at small schools, who since 1906 have obtained the following positions:—Indian Forest Department, Indian Customs Department, Headmastership of a Secondary School, research appointments, medical profession, Fellowship of a College in Cambridge.

*S.*, the son of an artisan, obtained a place among the Wranglers in the Mathematical Tripos, and now has a post in the Egyptian service.

*T.*, educated at an elementary school, obtained a First Class in a Tripos Examination, and is now a Junior Inspector under the Board of Education.

*U.*, the son of a small shopkeeper, obtained a place among the Wranglers in the Mathematical Tripos, and is now in the Home Civil Service.

*V.*, the son of a small tailor, educated at a higher grade school, was a Wrangler, and is now a Lecturer in an English University.

*W.*, the son of a domestic servant, is now a Junior Inspector under the Board of Education.

## APPENDIX LII.

(Handed in by Dr. J. R. Tanner.)

Q. 22,804.

### CAMBRIDGE MEN AND THE CIVIL SERVICE OPEN COMPETITION OF 1912.

A list of 73 candidates, successful at the recent Open Competition for the Higher Civil Services, was published by the Commissioners in September. This list contained 24 Cambridge names. Subsequent information shows that 6 more Cambridge men, though below the 73rd in general order of merit, have received official appointments.

Of this total of 30 Cambridge successes: King's and Trinity have five each; Pembroke and St. John's have four each; Caius, Christ's, Emmanuel, and Jesus have two each; and Sidney Sussex, Magdalene, and Trinity Hall have one each. The other successful candidate was from Fitzwilliam Hall.

Our 30 successful candidates, in the course of their University careers, obtained an aggregate of 24 first classes, 21 seconds, and five thirds. The open competition thus seems to offer a very fair chance of success to candidates who are not of the highest academic honours. As regards individual distinctions, congratulations are due to Mr. Conder, St. John's, who is first on the general list in chemistry, physics, geology, botany and English

Law; to Mr. Godbolé, Fitzwilliam Hall, first in Sanskrit; to Mr. Whitelegge, of Pembroke, first in Greek Literature; to Mr. Nixon, Pembroke, first in English Literature; to Mr. Mächtig, of Trinity, first, both in French and in German Translation; to Mr. Puckle, of King's, first in English History, Section I; and to Mr. Coxwell, of Christ's, first in Roman Law. Mr. Basu, of Emmanuel, was first among the successful candidates in Political Economy, but actually second in this subject among all the candidates on the list.

Of the 30 successful Cambridge candidates, 28 had availed themselves of the system of instruction and advice provided at Cambridge by the Indian Civil Service Board and the associated colleges. Fifteen had spent at least a year and four less than a year in special preparation at Mr. Taylor's establishment in London. In addition to the candidates dealt with above, it should be mentioned that another Cambridge man, Mr. Tuson, of Jesus College, passed into the Chinese Consular Service, the examination for which is held concurrently with that for the Higher Civil Services.

## APPENDIX LIII.

(Handed in by Mr. C. B. Heberden, D.C.L.)

Q. 23,025.

### REPLY BY THE HERDOMADAL COUNCIL OF THE UNIVERSITY OF OXFORD TO THE QUESTIONS OF THE ROYAL COMMISSION.

#### Questions.

(1) The relation between the highest education given at the Universities and the efficient discharge of their functions by members of the Civil Service.

(2) The suitability of the open competitive examination for the Home Civil Service ("Class I"), as at present regulated, to secure the supply of candidates possessing the highest education, and giving the greatest promise of administrative capacity.

(3) The facilities which exist under present conditions to enable persons of slender means to obtain University education.

(4) The results produced by the examinations which are conducted by the Civil Service Commissioners upon the curricula of the Schools of the Universities.

#### Answers.

(1) "The highest education given at the Universities" implies, in those who are able to assimilate it,

qualities of a high order, and indeed, as a rule, a combination of such qualities. The student capable of receiving an education of the highest reach, in Language and Literature, in History, in Philosophy, in Mathematics, or in Natural Science must possess gifts and aptitudes of no common or average kind. Such capability implies, for instance, the possession, in various degrees of combination, of memory, accuracy of observation and reproduction, imagination, power of reasoning, whether by deductive or inductive methods, power of interpreting documents, of weighing evidence and discounting bias, sense of proportion, and mental adaptability.

Further, to attain a high degree of excellence in the use of such gifts, so as to compete successfully with other possessors of them, implies certain moral and physical qualities, continuous and judicious industry, stamina, and self-control.

Success in examination, too, implies qualities if perhaps of a lower order, yet of much practical value, such as rapid selection, and ready, proportionate, lucid, and forcible presentation.

Again, education at a University may be said to imply interchange of ideas, give and take of suggestion and criticism, and all the product of discussion and sympathy, not to mention practice in the methods of recording knowledge. These must bear their fruit in trained capacity for intellectual work, for the perusal and digestion of documents, for estimating statements and statistics, for distinguishing between the temporary and the permanent, the essential and the unimportant, and again, for the noting of precedents and parallels, qualities which can hardly fail to be of special value to the Civil Servant.

To these advantages must, of course, be added accurate and thorough knowledge in one or more of the main branches of University study, which may be expected to be possessed, in varying degrees, by men who have received a high University education.

We wish to add that in our opinion powers adequate "for the efficient discharge of their functions by members of the Civil Service" are not, as a rule, developed in the early life of the individual, and therefore that the process of education desirable for such persons cannot be reasonably expected to be carried out in a short time. We think, therefore, that the efficiency of the Services would be likely to suffer if the education which leads to them were shortened in length, or diminished in thoroughness and variety.

(2) It is difficult to gauge the promise of administrative capacity by an examination, except by testing the results of a candidate's education. In this respect the present system seems adequate. There are no doubt some drawbacks. With so wide a range of subjects it is almost impossible to hope for a uniform standard in the comparative strictness with which marks are awarded in the different subjects. The practice likewise of having any papers marked by only one examiner is not unattended by dangers; we think it desirable that each paper should be read and marked by two examiners, and that they should have the opportunity of conferring with one another. In spite of these defects, the examination as now constituted, seems deserving of confidence, and we believe that it fulfils, roughly but effectively, its function of selecting the best men. It may, however, be noted that for certain posts special excellence in particular branches of knowledge may be required, as knowledge of Modern Languages is by the Foreign Office. For example, distinction in Experimental Science might be desirable for certain appointments.

If a further test be wanted, written examination might be supplemented (though not replaced) by personal inquiry and interview.

(3) So far as concerns the University of Oxford, of which alone we are competent to speak, the facilities for enabling persons of slender means to obtain a University education are very considerable. Under the non-collegiate system a student can limit his annual expenses (comprising board and lodging, university and delegacy dues, examination fees, and tuition) to about 52*l.* As regards students who are members of colleges, our experience shows that there is a very large number of undergraduates who would be unable to afford a University education without the emoluments which they hold. We desire to call attention to the following facts:—

- (i) College scholarships, whether open or close, are awarded by competitive examination, and are generally held by men who could not afford to come to Oxford without assistance;
- (ii) Many exhibitions and some scholarships at Oxford are expressly limited to candidates who are in need of assistance;
- (iii) Colleges administer privately considerable sums in grants to men of slender means;
- (iv) Scholars and exhibitors often have further help from county council or school scholarships, from exhibitions of city companies, and from other sources.

There is no reason why any boy of real ability, whose education begins at an elementary school and is continued at a secondary school where further provision for assistance is made by the local authority, should not look forward to completing it at the University. When such a boy has once reached a secondary school, his passing on to the University need not present any serious difficulty.

(4) The actual subjects prescribed for the various University examinations at Oxford have not been modified in view of the Civil Service examination. It is possible, however, that this examination has affected the comparative amount of attention which different subjects have received. The effect of the Civil Service examination on the students themselves is a different question. Some years ago there was much complaint that the men reading for the Civil Service were apt to approach their work in a temper injurious to real education, and with a view solely to the possibility of mark-getting. The reforms promulgated in 1904, whereby the number of subjects was limited, and the margin of age for India raised to the same limit as that for the Home Service, have greatly abated this mischief. There is much less of the hurried and feverish getting up of subjects, and on the whole we believe that little substantial harm is now done to the University work.

(5) The first two questions appear to refer mainly to studies and examinations, and accordingly the answers which have been given, deal almost entirely with those subjects. But there are other considerations which we desire to emphasize, viz., the value of social intercourse, and the training of character, which is no less indispensable for the Civil Servant than the cultivation of the intellect. University and college life, in which men drawn from all parts of the world and from the most various surroundings are brought into close contact in associations of every kind, affords an experience and a discipline which, it is believed, cannot be supplied to the same extent in any other way. Men are thus insensibly trained in co-operating with other men, and their outlook is widened while they learn to hold their own. It would be a great mistake to neglect this side of the question when considering the effect of a University education in preparing men for the efficient discharge of their functions as members of the Civil Service.

## APPENDIX LIV.

(Handed in by Mr. C. B. Heberden, D.C.L.)

Q. 23,116.

## RETURN OF ENTRANCE SCHOLARSHIPS AND EXHIBITIONS AWARDED TO STUDENTS BEGINNING RESIDENCE IN THE UNIVERSITY OF OXFORD IN OCTOBER 1911.

Subject for Proficiency in which the Scholarship or Exhibitioner was awarded, and its Value.*	Value of any Supplementary Grant made by the College.	Value of any School Scholarship or Exhibitioner held by the Student.	Value of any County Council Scholarship held by the Student.	Emoluments from all other Sources including City Companies.	Total.

\* The division between subjects is not so clearly defined as the above classification seems to imply. For in the examination for Classical Scholarships there are always included an English Essay and a General Paper containing Questions on Modern Literature and History, and in awarding these Scholarships great importance is attached to good work in these; and papers are often set in French and German. Similarly in the examination for History Scholarships, an English Essay and a General Paper (as well as passages for translation into English from at least one ancient or modern language) are generally set, and importance is attached to work in these. In the examinations for Mathematical and Natural Science Scholarships, an English Essay and a Language Paper are also usually set.

\* The discrepancy between this column and the aggregate total of the other columns is due to the non-acceptance of the emoluments of scholarship No. 66.

A SELECTION FROM THE SPECIAL CASES REPORTED BY THE COLLEGES.

- A, the son of a railway employé, Exhibitioner in Natural Science, obtained a Second Class in Natural Science Finals and is now a Probationer for the Soudan Civil Service.
- B, the son of a College employé, is now in the Indian Forest Service.
- C, the son of a shoemaker, has obtained an ecclesiastical appointment.
- D, the son of a clerk in a bookseller's office, is in the Home Civil Service, First Class.
- E, the son of a labourer, is Professor in a local University.
- F, a hatter's apprentice, a Scholar, took First Class Honours in Literæ Humaniores and is now Professor in a northern University.
- G, the son of a railway-guard, an Exhibitioner, took Second Class Honours in Classical Moderations and in Literæ Humaniores and now holds a high post in the Egyptian Civil Service.
- H, the son of a postman, a Scholar, took First Class Honours in Modern History and three University prizes. He is now Fellow of an Oxford College.
- I, the son of an engine-driver, a Scholar, took First Class Honours in Modern History and is now Professor in an Irish University.
- J, the son of a commercial traveller, a Scholar (with extra grants for his last year) and School Exhibitioner, is now a clerk in the India Office.
- K, the son of a draper, a Science Scholar and County Council Exhibitioner, to whom the College gave help after he took his degree to give him time to get a good post, is now Fellow of another College and a researcher.
- L, the son of a Nonconformist minister (formerly a collier), a Mathematical Scholar, is now a Member of Parliament.
- M, a Scholar, with School Exhibition, with very small means (if any), won University prizes and is now Canon of a Cathedral.
- N, the son of a very poor clergyman, is now high in the British Museum and eminent in Literature.
- O, the son of a labourer, an Exhibitioner, is now very high in the Scottish Education Department.
- P, the son of a farmer, a Scholar, is now high in the India Civil Service.
- Q, without means, an Exhibitioner and eventually supported by grants and loans (afterwards repaid) from the College, is now high up in the Colonial Office.
- R, the orphan son of a Scotch minister, a Scholar, is now a Professor in South Africa.
- S, the son of a postmaster, a Science Scholar, is now in a good mastership at a Public School.
- T, the son of a foreman in the Great Western Railway works at Swindon, is now a naval Chaplain and Instructor.
- U, the son of an organist of a parish church, is now in the Indian Educational Department.
- V, the son of a small shopkeeper, is now in the India Civil Service.
- W, the son of a farmer, a Scholar, took First Class Honours in Classical Moderations and Literæ Humaniores and is now a master at one of the best Public Schools.
- X, the son of a commercial traveller, a Scholar, took First Class Honours in Classical Moderations and Second Class Honours in Literæ Humaniores and is now in the India Civil Service.
- Y, an orphan who assisted his step-father, took First Class Honours in Classical Moderations and in Literæ Humaniores and is now in the Home Civil Service.
- Z, whose parents keep a boarding-house, a Scholar, took First Class Honours in Classical Moderations and Second Class Honours in Literæ Humaniores and is now foreign correspondent on a leading newspaper.
- AA, the son of a fishmonger's salesman, took a Second Class in Modern History and is now a master at a training college.
- AB, the son of a Customs House officer, a Scholar, is now head master of a Grammar School in a large town.
- AC, the son of a working man, obtained an Open Scholarship, and is now employed as an Inspector under the Board of Education.

- AD, the son of a widow of very slender means, an Exhibitioner, obtained a lectureship in a University College.
- AE, the son of a working man wholly unable to give him any assistance, is now holding an important position as lecturer under a University organization.
- AF, a commercial clerk's son who so far from receiving any assistance from home was required to contribute towards the expense of his living during the vacation, a Scholar, is in the India Civil Service.
- AG, the son of a prison-warder, came out head in the India Civil Service Examination.
- AH, the son of a foreman, took First Class Honours in Classical Moderations and Modern History and Second Class Honours in Literæ Humaniores and is now in the Home Civil Service.
- The following list of Special Cases has been supplied by one College alone, and only includes men who matriculated in the last 30 years, and is far from complete except for the last 20 years. Contributions are only made from the fund referred to as a "College fund" in cases of insufficiency of means :
- A. Son of widow with large family and insufficient means. First Class (Literæ Humaniores), University Prize. College Lecturer (Oxford) (died early).
- B. Special contribution had to be made for him. First Class (History). Professor in Colonial University.
- C. Father small tradesman. First Class (Classics), Ireland and Derby Scholarships, Craven Fellow. Professor at a University; Fellow and Tutor of College (Oxford).
- D. Son of widow; had to be helped with loan—Non-Collegiate, then Scholar of College. First Class (History). Fellow of College (Oxford); Editor.
- E. Son of widow in domestic service. First Classes, University Scholarships (Mathematics). Fellow and Tutor of College (Oxford).
- F. Son of widow of small means; supported himself by Scholarships, and helped a fellow student by anonymous gift. First Classes (Classics), Hertford, Ireland, Boden (Sanskrit), Taylorian (Modern Languages), Eldon and Derby Scholarships. Fellow of College (Professor), Oxford.
- G. Impoverished by family misfortune. He writes : "What my case proves is, that it is perfectly possible for a boy with no means to go to Oxford and to keep himself there." First Classes (Classics), Ireland and Derby Scholarships. Fellow of College (Oxford); Board of Education (England), Chief Inspector.
- H. Son of a distinguished man who died penniless. Family supported by subscription of friends. India Civil Service.
- I. Son of a man in good position, but insufficient means; helped from a College fund. India Civil Service.
- J. Son of banker's clerk; supported by endowments with some help from a College fund. First Classes (Mathematics and Natural Science), University Scholarship (Mathematics). Education Office (England); C.B. In interval, Private Secretary to Chief Secretary of Ireland.
- K. Penniless, depended on endowments. First Class Moderations (Classics). Successful novelist (died early).
- L. Son of tradesman. First Classes, Craven Scholarship, University Prizes. Barrister and Sub-Editor of great daily paper.
- M. Son of widow with small means; had no help from home. First Classes (Classics), University Prizes. Fellow and Tutor of College.
- MM. Son of clergyman with large family; had no help from home. First Classes (Classics), Craven Scholarship. Fellow and Tutor of College.
- MMM. Helped from a College fund. University Lecturer.
- N. Son of engine-driver. First Classes (Classics). Home Civil Service.
- O. Son of coachman. First Classes, Craven Scholarship. Eastern Cadetship.
- P. Son of gardener. First Class Moderations (Classics). Inspector of Schools (Scotland).
- Q. Son of widow who kept boarding house. First Class Moderations (Classics). India Civil Service.
- R. Son of widow; helped from a College fund. Assistant to University Professor.
- S. Son of carpenter (deceased). Head Master of Grammar School.
- T. Son of quarryman; educated at village Elementary School, whence he got Scholarship to Manchester Grammar School. First Classes (Classics and Modern History), Craven Scholarship. Fellow and Tutor of College (Oxford).
- U. Son of Scottish Minister. India Civil Service.
- V. Impoverished by family misfortune. First Classes (Classics), Hertford, Ireland and Derby Scholarships. Fellow of College (Oxford); Home Civil Service.
- W. Son of miner. Professor of History in a Colonial University.
- X. Son of small tradesman. First Classes and University Scholarships (Mathematics). India Civil Service.
- Y. Son of widow poorly off. First Classes (Classics), Craven Scholarship. Home Civil Service.
- Z. Helped from a College fund. First Classes (Classics), Ireland Scholarship, University Prize. Home Civil Service.
- AA. Father, clerk and accountant in glass-works. First Classes (Classics and Mathematics), Ireland Scholarship. Fellow and Tutor of College (Oxford).
- AB. Son of widow in narrow circumstances; father (deceased) in Home Civil Service; helped by resignation in his favour of emoluments of a Scholar. Eastern Cadetship.
- AC. Mill-hand; helped by private subscriptions and a College fund. First Class (History). Fellow of College (Oxford); Inspector of Schools.
- AD. Father secondary schoolmaster; lived on Scottish endowments for first three years, then two more by help from home and a College fund. First Classes (Classics and History). Assistant Secretary, Irish Agricultural Board; Professor and Fellow of College (Oxford).
- AE. Son of Congregational minister in poor circumstances; helped from a College fund. Second Class (History). Professor, London University.
- AF. Father secondary schoolmaster; helped from a College fund. First Class Moderations (Classics). India Civil Service.
- AG. Helped from a College fund. First Class (History). Professor in a Colonial University.
- AH. Son of widow, poor; helped himself by journalism while undergraduate. First Class Moderations (Classics). Head Master of a Public School.
- AAH. Son of poor clergyman; entirely dependent on funds subscribed for him. First Class Moderations, Craven Scholarship, University Prizes. Died early.
- AI. Son of widow; father was in good position, but mother seems to have been left poorly off. Helped from a College fund. Second Class Moderations First Finals (Classics). Professor in a Colonial University.
- AJ. Helped from a College fund. First Classes and University Scholarship (Mathematics). Fellow of College; Demonstrator in University Museum.
- AK. Pupil-teacher. Second Classes (Mathematics and Natural Science). Professor in Indian Education Service.
- AL. Son of widow, dressmaker. First Class and University Scholarship (Mathematics). Senior Mathematical Master, County School.
- AM. Son of clergyman, poor. First Class (Modern History). Fellow of College (Oxford); University Professor.
- AN. Began at Elementary School of which his father was master; besides Scholarship had local assistance and help from a College fund. First Class Moderations and Second Finals (Mathematics). Mathematical Master in great Grammar School.

- AO. Father, small tradesman; helped from a College fund. Second Class (Natural Science). Professor in Indian Educational Service.
- AAO. Son of poor clergyman; helped from a College fund. West African Civil Service.
- AP. Son of widow, lodging-house keeper. Second Classes (Classics and History). Professor in Colonial University.
- AQ. Insufficient means; helped from Canada and a College fund. First Class (History). Assistant Professor in Colonial University.
- AR. Son of widow, insufficient means. First Classes (Classics). Home Civil Service.
- AS. Ruskin College, employed at University Press. Head Master of County School.
- AT. Elementary Schoolmaster. First Class (History). Private Secretary to Minister.
- AU. Father, packman on wages of 35s. a week. First Classes and University Scholarship (Mathematics). Senior Mathematical Master in Secondary School.
- AV. Pupil-teacher. Second Class (Natural Science). University Lecturer (Sheffield).
- AW. Means sufficient; helped from a college fund. First Classes (Classics). Indian Civil Service.
- AX. Elementary Schoolmaster, Leathersellers' Exhibition. First Classes (Classics). Permanent Examiner on staff of Civil Service Commission.
- AZ. Entirely supported by contributions. Second Class (Natural Science). Science Master at Secondary School.
- BA. Poor; helped from a College fund. Second Class (History). Journalist on leading weekly.
- BB. Son of bricklayer, afterwards contractor; helped from a College fund. First Class (Classics and Mathematics), University Prize (Philosophy). Fellow and Tutor of College (died early).
- BC. Son of commercial traveller. County Council Scholar. First Class (Mathematics). India Civil Service.
- BD. From Glasgow University with some endowments; helped from a College fund, Research Degree; University Lecturer (Glasgow).
- BE. Could get no help from parents. First Classes (Classics). Home Civil Service; Private Secretary to Minister.
- BF. County Council Scholar. First Classes (Classics and History). Fellow of College (Oxford); Professor.
- BG. Son of small tradesman. First Classes and University Scholarship (Mathematics). Fellow and Tutor of College (Oxford).
- BH. Son of artist, poor; helped from a College fund. First Class Moderations (Classics). Eastern Cadetship.
- BI. County Council Scholar. First Class (History). English Education Board.
- BJ. Elementary schoolmaster, son of tram-driver; helped from a College fund, and by special anonymous gift from fellow student. First Class (History). English Education Board; Inspector of Schools.
- BK. Entirely without support from parents. First Classes (Classics), Craven and Derby Scholarships, University Prize, Craven Fellow. Assistant to University Professor.
- BL. Father working organ-builder; mainly supported by contributions. First Class (Natural Science). Lecturer at Agricultural College.
- BM. Son of Scottish minister; helped from a College fund, and by anonymous gift from fellow student. First Class (Modern History). Lecturer British University, and Assistant Professor in Colonial University.
- BN. Son of tradesman; helped from Scottish endowment, and a College fund. First Class (History). Lecturer in a British University.
- BO. Son of Scotch clergyman; of insufficient means, but provided for by Scottish endowments. First Classes (Classics). Fellow and Tutor of College (Oxford).

## APPENDIX LVI.

(Handed in by Mr. R. F. Cholmeley.)

Q. 23,222.

EVIDENCE of Mr. R. F. CHOLMELEY, HEADMASTER of OWEN'S SCHOOL, ISLINGTON,  
representing the INCORPORATED ASSOCIATION of HEADMASTERS.

The Association which I represent is open to the Headmasters of all Secondary Schools which are administered under a definite form of public or corporate control.

A Secondary School is taken to mean a school recognised by the Board of Education under Regulations for Secondary Schools. The number of Headmasters on the roll for the year 1912 was 552; this number included, besides Headmasters of schools with which the title secondary is commonly associated, several Headmasters of schools more closely connected with the Universities of Oxford and Cambridge, e.g., Westminster School, Clifton College, and Wellington College.

My own acquaintance with Civil Service examinations, and with the general influence upon education of those examinations, and of the conditions of employment in the Civil Service, is derived from the following experience:—

As an Assistant Master at St. Paul's School I prepared boys for the old Indian Civil Service examination in the years immediately preceding the alteration in the age limit, and later—beginning, I think, with the year 1903—for Naval Store Clerkships and other posts now grouped under the title of Intermediate; and since April 1909 I have been Headmaster of Owen's School, which supplies candidates for Intermediate clerkships, Boy clerkships, and very rarely for Second Division clerkships.

It will probably be convenient if I take the four questions submitted by the Commission in turn, reserving any evidence upon other points until after these have been dealt with. I may, perhaps, be allowed to say that my Association, in sending me to represent it, does not confine me to the expression of views which it has formally adopted as its own; where, however, my evidence is based exclusively on my own experience I shall be careful to indicate the fact.

Q. 1.—What is the relation between the schools represented by the Association and examinations for the Civil Service? To most of the schools represented by the Association the preparation of boys for Civil Service examinations is of great and ever increasing importance. The Second Division and the Boy Clerks are recruited mainly from those schools which contain

a large proportion of boys admitted from public elementary schools; candidates for Intermediate appointments come largely from the most prosperous of those schools; and even the conditions of appointment to Class I. have a very important influence on the schools which send a large number of boys with open scholarships to Oxford and Cambridge, determining in many cases not merely the choice of special studies, but the preference for one university over the other. Thus the evidence already received by the Commission shows that in the 15 years ending in 1910, three great London schools supplied 137 of the successful candidates in the First Class competition, and that between 1906 and 1910 247 successful candidates were supplied by Oxford and 142 by Cambridge. Candidates for Intermediate ("Junior") appointments are sometimes boys of less special power in one subject but often of more general ability than boys who win open scholarships at Oxford or Cambridge; and it has happened that a boy who would probably have won such a scholarship but was deterred by the cost of an university course with special preparation to follow, or whose circumstances made it necessary for him to begin earning money at once, has preferred to enter for one of these appointments. One London school—the Strand School—has made a special study of this examination, and supplied 41 out of 113 successful candidates between 1906 and 1910.

The case of the Second Division and that of Boy clerkships belongs particularly to the second of the four questions submitted to us; for preparation for the Second Division examinations has not hitherto been found generally consistent with a reasonable scheme of school work, and no Headmaster willingly acquiesces in boys leaving school within the limits of age now prescribed for Boy Clerks.

Besides the purely educational aspect of these examinations, there is another which seriously affects the members of my Association. We find ourselves made responsible in a constantly increasing measure for advising parents as to the careers which their sons should adopt; and therefore the conditions of service and the general prospects of advancement in the various branches of Government employment are matters to which we cannot be indifferent. Just as we have to warn parents that the desire of many commercial firms to obtain, as junior clerks, boys with

initiative and readiness to promote their employers' interests is consistent with a complete unwillingness to provide them with any incentive to those qualities, so in advising those who look to the Civil Service as likely to afford a safe career we cannot be blind to the facts which make that expectation largely delusive. We have to tell them that a Boy clerkship, except for the exceptional, is a blind alley employment, that the safety of the Second Division is counterbalanced by a lack of opportunities of promotion, that the work of those who obtain junior appointments will not in all probability seem to them to justify the educational standard set up in the examination through which those appointments are obtained. Since a very large proportion of parents are inclined to wish their sons to enter the Civil Service in preference to something more adventurous, these considerations are of great importance to us.

Q. 2.—Whether experience tends to show that a boy's education is interrupted in order to make special preparation for Civil Service examinations, and if so, whether such interruption is harmful and, if it is harmful, how this result is to be avoided.

Special preparation for Civil Service examinations does in very many cases involve the interruption of a boy's education. Even in the case of Junior appointments, which are generally understood to have been instituted in order to attract Public School boys, or at any rate well educated boys who have been through a complete course of secondary education, it would appear that only about 30 per cent. of the successful candidates come straight from school. In the case of the Second Division examination the proportion is much smaller, partly owing to the different age limit (17-20 as compared with 18-19½), but still more because the syllabus of that examination is unsuited to school work. As for the Boy Clerks, probably most of those who enter after joining secondary schools succeed without having to leave school for special preparation; but in any case their education is cut short, and it appears to us deplorable that these boys should be enticed away from the education which the very Government which entices them has been at some pains to provide. We observe that those who make a special business of preparing for Civil Service examinations urge the early withdrawal of boys and girls from school ("Candidates should leave school and commence specialized preparation as early as possible"); and that 2,000 students of one institution have lately expressed their gratitude for having been induced to follow this advice.

It has been suggested that as a remedy for this state of things the age limit for Boy Clerks should be lowered so as to catch them as they leave the elementary school; and that the Government should be responsible for their further education after office hours. That is not a proposition which will commend itself to anyone who believes in secondary education, and in the possibility of inducing the nation to believe in it. A better remedy would be to insist upon the obtaining of a secondary school certificate as a preliminary qualification for all Civil Service appointments; in the present chaotic condition of our examination system that may be difficult, but it is not impossible even now, and there appears to be some chance of reform in examinations. No more powerful impulse could be given to that reform than by the adoption, as a qualifying examination or scheme of examinations for the Civil Service, of something that should stand in some real relation with the kind of education that we are trying to build up in our schools.

With regard to the specific question as to the age limits of candidates, there seems to be no very general opinion about the age for Intermediate Clerks. I myself should prefer 17 to 18½, or at most 17½ to 19, because I think that the present limits narrow the field, and force some boys to stay on at school longer than is desirable; but that is mainly a personal opinion. The limits of age for Second Division Clerks appear to be a survival from the time when candidates for the Second Division were very largely those who had left school at 16 or 17 to earn their living and continued their education at evening schools and classes. I do

not know whether there is any good reason for maintaining those limits; so far as we regard the Civil Service as aiming at obtaining the products mainly of school or university education, the balance of argument would seem to be against it; but the conditions of the Second Division examination as a whole bear so little relation to what we understand by secondary education that it is difficult to make a suggestion as to the proper age limit. As to the Boy Clerks, I think we should have no doubt at all in urging that the present age limits are too low, and that if Boy Clerks are to be retained at all, the age limits of 16-17 should be restored, with a proviso that a school certificate must be obtained before admission to the competitive examination, showing that the candidate has completed a satisfactory course. I am certain that we are unanimous in condemning the present Boy Clerk system in every particular.

Q. 3.—What are the facilities which exist under present conditions to enable boys from elementary schools to proceed to higher schools, and from them to the Universities?

These facilities are provided in five main ways:—

1. By free places offered in secondary schools to children from elementary schools in a certain proportion to the number of admissions, in accordance with the regulations of the Board of Education; this provision is limited to those schools which the Board controls by means of its grants.
2. By open scholarships tenable at secondary schools awarded on the results of a competitive examination and paid out of the endowments of the schools.
3. By scholarships tenable at secondary schools by children from elementary schools only, awarded on the results of competitive examination by Local Education authorities, and paid for out of the rates.
4. By open scholarships to the Universities awarded on the results of a competitive examination and paid for out of endowments.
5. By scholarships in aid, awarded by Local Authorities, as a rule, to those who have won open scholarships, but who require further assistance to enable them to take an university course. Scholarships awarded by various charitable foundations and exhibitions, or leaving scholarships awarded by endowed schools may be considered as supplementary means of providing the same facilities.

The sharp difference of opinion that exists as to the adequacy of these facilities is probably due to the variety of conditions in different parts of the country. In London it rarely happens that a boy who is capable of distinguishing himself at the university, finds himself prevented by poverty from doing so; when this does happen, it is due rather to somebody's failure to recognise his ability than to the want of resources or the unwillingness to give him the benefit of them. Probably the same could be said of Birmingham, of Manchester, and of many other large towns and many rural districts. But there are undoubtedly parts of the country where the demand for education, higher than elementary, is not met and cannot be met without a considerable increase in expenditure. A Headmaster who had a Secondary School in Cumberland told me recently that for the few free places he was able to award he had from five to ten times as many candidates as could be successful, and that often all of these candidates were boys who would have profited by secondary education. In London we are more often perplexed by feeling ourselves obliged to accept boys for whom the type of education hitherto exclusively known as secondary does not appear likely to do much, and some of whom leave school as soon as they reach the age of 14, although they usually pay the secondary school the compliment of staying until the end of the term in which they reach that age, instead of leaving on the 14th birthday, as is the common practice in elementary schools. On the other hand, it may not be quite irrelevant here to say that the best of the boys who come into our schools with scholarships awarded by the local education authority are among the very best we have in every respect.

Q. 4.—Whether it is important in the interest of the country that all members of the Civil Service should have completed, before admission thereto, a higher school course.

I think we should be unanimous in stating that this is so. Believing as we do in the value of secondary education we could hardly think otherwise; to admit that boys may reasonably be taken into the public service at 14, to continue their education along with their official duties, seems to us to involve an unduly pessimistic view of the position. We believe that it would be bad for the boys, bad for the service, and therefore not to the interest of the country. The completion of a higher school course, attested by a certificate partly based upon examination and partly upon a boy's school record, ought in our opinion to be an indispensable preliminary qualification for all grades of the Civil Service; and there can be no doubt that if such a qualification were adopted it would act as a powerful lever for raising the general level of education and increasing the opportunities of bringing higher education within the reach of all who can profit by it.

There is one point not covered by the questions set upon which many members of my association hold a very strong view; I mean the decision to remove, in

the Intermediate examination, Science from the list of those subjects in which marks can be obtained on the higher scale. That examination is as it stands, or has hitherto stood, on the whole calculated to attract the very best boys that we have—boys as I have stated elsewhere of not less, and sometimes of more general ability than those who win open scholarships at universities; and we believe that to exclude from the chance of success those boys whose strong point is science, is both unfair, and from the educational point of view, indefensible. No recent decision of the kind has done more to encourage the belief that there exists a desire to confine the competition for good appointments to boys who have been educated upon the classical tradition, and that this again arises from a desire to confine those appointments to one social class. Whether these particular appointments deserve the high educational standard required for them is another question, which I have already touched upon; for the discouragement of a high qualification in science as contributing to that standard, there appears to be no justification whatever.

ROYAL COMMISSION ON THE CIVIL SERVICE.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION

ON THE

CIVIL SERVICE.

At the Shelbourne Hotel, Dublin.

SIXTY-FIFTH DAY.

Monday, 17th February 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B.,  
C.S.I.

Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR BOUTWOOD.

Mr. GRAHAM WALLAS.

Mr. S. ARMITAGE-SMITH (*Secretary*).

The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O., called and examined.  
Mr. W. P. J. CONNOLLY was in attendance.

26,643. (*Chairman*.) You are Under-Secretary to the Lord Lieutenant?—I am.

26,644. How long have you held that office?—Since 1908.

26,645. Before that you were Assistant Under-Secretary?—I was Assistant Under-Secretary, having been appointed in 1895.

26,646. Were you appointed by Lord Lieutenant's minute?—I was; and therefore I hold under the Crown because I was appointed in virtue of the Lord Lieutenant's patent.

26,647. As Assistant Under-Secretary section 4 of the Superannuation Act did not apply to you?—Not as Assistant Under-Secretary.

26,648. But as Under-Secretary it does?—It does apply.

26,649. With a view to enabling us to form a general idea as to the sufficiency and appropriateness of the staff engaged, we have been in the habit of forming a general preliminary conception of the character of the work which the staff of an office has to do and the general organization of the office. Would you be good enough to give us very briefly a sketch outline of the organization of the Irish Government so far as it depends on Dublin Castle?—The Chief Secretary's office is the central office of the Irish Government. It is called the Chief Secretary's office, but everything is done in the name and by the authority of the Lord Lieutenant. Our letters are written in his name and all our minutes are in his name and by his authority. The amount of work originated in the department is less than the work which comes to us from other departments.

26,650. Is the work which passes through your office subject to examination and supervision in your office?—It is subject to examination and supervision.

26,651. Does that refer to the departments over which you exercise administrative control, or are you speaking also of offices over which your administrative control is less?—Not exclusively to the offices under our immediate control. It applies to all departments, and when I come to describe the various departments

of our own office probably it will come out perfectly clearly. I had better mention it now because it is a matter of some importance in relation to the questions that you have to discuss. We have three principal divisions in the office. First I must put in order of importance the Finance division. Our office is the accounting department for the Parliamentary votes for a large number of public departments, and the Finance division has charge of the preparation of the annual estimates and of appropriation accounts for services which are set out as follows in the printed paper that has been submitted: The Lord Lieutenant's household, the Chief Secretary's office, law charges, criminal prosecutions, reformatory and industrial schools, universities and colleges, Ireland Development Grant, hospitals and charities; and we have a great deal to do with the local taxation account. Then the estimates for all the public departments are communicated to the Treasury, through the Finance division, having been carefully examined there.

26,652. Is this examination of the estimates for other departments of a character which enables the Lord Lieutenant to keep control over either the estimates or the expenditure of the money?—The ultimate decision, of course, rests with the Treasury. All the Lord Lieutenant can do at the stage when the estimates pass through our Finance division is to criticise and suggest, but if we send forward an estimate—I had an example of it the other day—without making any suggestion on the part of the Lord Lieutenant in respect of suggested expenditure that is new, the Treasury will promptly ask us what our view of the case is, and we have then to give His Excellency's view, which involves, of course, close examination.

26,653. But the ultimate decision rests with the Treasury?—Yes. The public departments whose estimates we send forward after examination are the Local Government Board, the Commissioners of National Education, the Public Record Office, the Registrar-General, the Land Commission, including the Estates Commissioners, the Ireland Development Grant, and the Public Trustee, the vote for Resident Magistrates

17 February 1913.]

The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

which is part of the County Courts vote, the Royal Irish Constabulary, the Dublin Metropolitan Police, the General Prisons Board, the Criminal Lunatic Asylum, Dundrum, and the small vote, the Endowed Schools Commissioners.

26,654. Do you leave over for later mention the Department of Agriculture?—The Department of Agriculture is independent of us as regards its estimates. It does not submit its estimates to us, but as regards the Congested District Board they sent forward, I think last year, their estimates direct to the Treasury, and they were returned with a request to submit them through the Chief Secretary's office, and, I presume, that will be the practice followed in future. All correspondence with the Treasury regarding the financial administration of the Land Law, the Land Purchase Acts, and in connection with any of the votes I have just mentioned is conducted through the Finance division.

26,655. You spoke of the Ireland Development Grant as one of the things for which estimates are submitted: am I not right in thinking that it is absorbed in connection with the recent arrangement made under the Land Purchase Act of 1909?—I think that is so. The Development Grant is now practically gone. We have numerous applications which come to us in reference to the construction of public works, and we have correspondence with the Board of Works in regard to these applications; and we have a great deal of correspondence on the subject of grants for public works from whatever source the money may come, for there are always people in Ireland who are very anxious to get public money for useful purposes, and sometimes for purposes not so useful.

26,656. I understand, in reference to the 11 departments on page 9 of the paper submitted to us, that they are directly under the control of the Lord Lieutenant?—That is so.

26,657. Taking the broadest view of the matter, should I be correct in saying that your office in Dublin Castle is the administrative agency for these 11 departments?—I don't know that our connection is quite so complete as your question would imply.

26,658. Looking through the details of these various departments one sees that the clerical establishments are very small and more calculated for purely routine work than for work of an administrative character. The administration is done by you?—Certainly.

26,659. That is in broad outline?—In that sense.

26,660. These are executive departments under Dublin Castle, and Dublin Castle directly controls the operations of these departments?—Yes.

26,661. Then there are other departments in which the administrative control of Dublin Castle is less defined, as I infer from what you say here?—I might take next the three great outside departments which practically originated in recent years.

26,662. Take these three departments—the Land Commission, the Public Record Office, and the Commissioners of Charitable Donations and Bequests—you have a certain control over these departments?—They are partially controlled by us. Our control does not amount to much except in the financial way. But as regards their work they are independent of us, except that if a case of difficulty arises they refer of course to the Irish Government for information and advice.

26,663. Then, going a step further, you say that there are certain departments, two departments especially, which are not under the control of Dublin Castle, but own allegiance, as it were, to the Chief Secretary because he is their president *ex officio*—I mean the Local Government Board and the Department of Agriculture. You are a member of the Local Government, but you do not attend?—My sole function in connection with the Local Government Board is signing the annual report of proceedings of which I know nothing. Formerly the appointments of the Local Government Board came through the Chief Secretary's office, and the business of the Local Government Board was largely transacted through the Chief Secretary's office, because the Lord Lieutenant was nominally the head of the Board; but the Act of 1898 reconstituted the Local Government Board

with the Chief Secretary as President, and the Vice-president of the Board now transacts directly in respect of all the business of the Board with the Chief Secretary, and we in the Chief Secretary's office know nothing about it.

26,664. So in regard to these two important departments the Irish Government really know nothing?—The department of Agriculture and Technical Instruction stands on a footing of its own, because the department is exceedingly independent so far as the Irish Government is concerned.

26,665. The following departments seem to be also exempt from the control of the Irish Government except as regards appointments, and, in some instances, the Lord Lieutenant's assent to rules framed by them. I refer to the Board of National Education, the Board of Intermediate Education, and the Commissioners of Endowed Schools?—One has to distinguish here. The Commissioners of National Education are dependent upon an annual vote, and in respect of finance, therefore, the Irish Government does exercise a certain amount of control, subject of course to Treasury sanction.

26,666. But in regard to the actual administration you exercise no control?—We exercise no control and they absolutely repudiate any right on our part to interfere.

26,667. Then I take it the Government of Ireland has nothing to say to the administration of the National Education of Ireland?—Except in an indirect way. I have known Resident Commissioners who are Civil servants, and are supposed more or less to represent the Government on this Board, to consult with permanent officials of the Irish Government in regard to difficult questions arising in the course of administration from time to time, but they are under no obligation to do so.

26,668. The Congested Districts Board is also quite independent?—Quite independent, except as regards the portion of its income, which is derived from voted moneys. The Treasury, through the Irish Government, exercises a certain control.

26,669. But the Irish Government even there can exercise no control except through inducing the Treasury to exercise its control?—And whatever moral influence may attach to the fact that the Chief Secretary and the Under-Secretary are *ex-officio* members of the Board.

26,670. Is the Chief Secretary president of the Board?—He is Chairman of the Board.

26,671. Is he legally?—I think so.

26,672. Perhaps you would verify that if you have not looked into it?—I have not looked into it, but I am pretty certain that he is, and he presides under the regulations made by the Lord Lieutenant for the proceedings of the Board on every occasion when he is present. In his absence the Under-Secretary presides.

26,673. Is that by arrangement of the Board or by statutory provision?—The power to make regulations was vested in the Lord Lieutenant, and the Lord Lieutenant made a regulation to that effect.

26,674. There are various bodies exercising functions in Ireland not controlled by the Irish Government; for instance, the Treasury Remembrancer, that is a purely Treasury office?—Quite. We have nothing whatever to do with him.

26,675. And the Commissioners of Public Works?—They are entirely outside our control. They are a department of the Treasury.

26,676. We were told by Sir John Barton, the Valuation and Boundary Commissioner, the other day that his department was entirely outside the functions of the Irish Government?—That is so. Then there is a small office, the Teachers' Pension office, which is very small, and that also is outside.

26,677. The Local Registration of Titles is connected with the Judicial department?—Yes.

26,678. That and the Registry of Deeds are also outside the control of the Irish Government?—Yes.

26,679. And of course the judiciary includes recorders and county court judges?—Yes, and the whole establishment of the Four Courts, the whole clerical

17 February 1913.] The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

establishment, is entirely outside the jurisdiction of the Irish Government.

26,680. And all the English civil departments which operate in Ireland are completely outside the control?—Quite so. We have an inspector of mines, and I believe Ireland is attached to the Manchester district. We have inspectors of factories who are controlled by the Home Office. They live in Ireland, one in Belfast, one, I think, in Dublin, and one perhaps in Cork, but we have no knowledge of their proceedings, which are regulated entirely by the Home Office. Then there are Board of Trade officers in Dublin and other ports.

26,681. And Customs and Inland Revenue and General Post Office?—Yes, the Board of Trade offices, the Quit Rent office which is under the Commissioners of Woods and Forests, and the new departments, the Labour Exchanges and the Insurance Commissioners. The Labour Exchanges work under the Board of Trade, and the Insurance Commissioners work under the Treasury.

26,682. Have you got any representative of the Civil Service Commissioners in Ireland?—No. The fact is that the Civil Service Commissioners are represented in Dublin by a clerk.

26,683. (*Sir Donald MacAlister.*) In what office?—They have an office, and he is here for the purpose of conducting correspondence and keeping his principals in touch with Irish matters.

26,684. (*Chairman.*) You have said there are three divisions in the Chief Secretary's office. Unless you have something more to say as to the Finance division you might go on to the next division?—The next division would be, I should think, what we call the Judicial division, which has to do with all matters relating to the preservation of law and order in the country. Questions arising in connection with the magistracy and police are referred directly to the Judicial division. One large part of the business of the division is to receive reports from the police. This division receives the reports which come to us from day to day, and if, on examination, they disclose a reason for it, the police reports are forwarded by the division to the Attorney-General, through the Under-Secretary, at once, for his advice and direction as to the institution of criminal prosecutions. The Attorney-General is the director of criminal prosecutions in Ireland. Any orders made by him are issued by the Judicial division to the police and the Crown solicitors concerned, and any correspondence that arises in connection with these matters, such, for example, as correspondence regarding extradition, with the Home Office, is conducted by the Judicial division. Then the division deals with all matters affecting the control and discipline and distribution of the Royal Irish Constabulary and the Dublin Metropolitan Police. That is a very important part of the work of the division. The Inspector-General is very tightly bound by legislation, and practically every question of any importance in administration is referred to the Chief Secretary's office, nominally to the Lord Lieutenant. The Inspector-General is in constant communication with the Under-Secretaries, not only by minute, but he occupies an adjacent office.

26,685. Under the same roof?—Yes. The Chief Commissioner is, perhaps, less tightly bound by legislation than the Inspector-General, but still a great number of questions come up to us, as regards administration of the police, from the Chief Commissioner.

26,686. It would be interesting to the Commission to know why there is no separate provision for police made in Belfast. In Dublin there is a Chief Commissioner of Police with a separate police force, while in Belfast the police force is part of the Royal Irish Constabulary?—That arrangement is due to the fact that the local force which policed Belfast completely broke down, I think it was in 1864. A very serious riot occurred in Belfast, and a commission appointed to inquire into the matter reported very strongly against the continuance of the local police force.

26,687. Was the decision of the commission due to the difficulty of recruiting an impartial police force owing to local sectarian feeling?—I believe it was, and perhaps the commission felt that the management of

the force under the local authority was not all that could be desired.

26,688. Without that explanation it would be difficult to understand why in Dublin there should be an independent police force, while in the even larger city of Belfast there is none?—Belfast has now got an excellent police force at a very moderate cost, while the citizens of Dublin pay 8d. in the pound, the maximum rate leviable.

26,689. Am I correct in saying that no imputation has ever been cast upon the police force in Belfast on account of want of thorough impartiality?—None with any foundation. An important part of the work of the Judicial division is to prepare what really amounts to a modern history of Ireland. Notes on the condition of the country are carefully prepared, and are printed for the Chief Secretary's use. These notes date from the year 1885, and they furnish really a most valuable and nearly complete record of the various agitations, political and agrarian, which have taken place since that date, and the action which has been taken by the Government, from time to time, to maintain order.

26,690. (*Sir Donald MacAlister.*) Are they published?—They are private, but they are available for the Chief Secretary's use. Naturally they are confidential, but we keep them thoroughly up to date. The division also prepares and submits daily for the information of the Lord Lieutenant extracts from the newspaper press of the country on all subjects of any public interest, and one part of the duty of the division is to call attention to any language of an intimidatory character, which, I am sorry to say, they sometimes find, not in the metropolitan press, but in the obscure local press in various parts of the country, and not in all parts but in some parts. Reports of meetings at which men have been threatened for various reasons, will be noticed by this division, and sent to the police for report. Sometimes the report is confirmed, and sometimes it is found that there is not much foundation for it, but that the reporter has been exercising his imagination, and that when he has described a large and enthusiastic meeting at such a place on such a day, and has given a speech of rousing eloquence, that was addressed by some local celebrity, really there were only a few people gathered together to hear some man on top of a barrel, who did not say anything like what was attributed to him by the reporter. We refer these reports to the police, and get from them what is supposed to be a true account of these transactions, and if any reason is disclosed in the police reports for further reference to the Attorney-General, we send them to the Attorney-General for his advice as to the course to be taken.

26,691. (*Chairman.*) Will a member of the police force in ordinary circumstances attend such a meeting?—Very often; nearly always.

26,692. So he is able to give you his own impression of what happens?—That is so, but sometimes they don't think it worth while to report about a meeting which appears in the newspapers, and we have to call attention therefore to it.

26,693. Does that exhaust what you desire to say about the Judicial division?—No. The Prisons administration is conducted through the General Prisons Board. Questions arising in connection with that are submitted through the Judicial division, which conducts all correspondence in relation to these matters. Then the Reformatory and Industrial Schools Department is also dealt with by the Judicial division, and a very considerable amount of work there is in connection with reformatory and industrial schools. Questions arise constantly as regards the committal of children, whether they have been committed on proper grounds, and whether they have been committed at the proper age, and these questions are considered by the Judicial division and by the Law officers to determine. Then we have considerable correspondence with local authorities in various matters not belonging to the administration of the Local Government Board, and this department, strange to say, is also the department that deals with educational matters.

17 February 1913.]

The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

26,694. The judicial department?—Yes. It conducts the correspondence with the Commissioners of National Education, and with the Board of Intermediate Education, apart from the correspondence relating to finance.

26,695. Is that due to mere reasons of convenience of office distribution of work, or has it an historical origin?—There is no historical origin, because it was only done, I think, from your own time. It was for the purpose of convenience that this distribution of work was made. The third and last and principal division is the Administrative division. That division conducts all correspondence with English departments on various subjects, the Home Office, the Foreign Office, the Board of Trade, and portion of its work is to prepare memoranda which are sometimes called for by the Foreign Office for the information of foreign embassies and governments. Then all appointments, whether paid or unpaid, are made through the Administrative division. It is a portion of its duty to submit the names of applicants to the Chief Secretary and Under-Secretary, and through them to the Lord Lieutenant. In some cases, in one case at least, the department of resident magistrates, for which we have many applications, the division keeps a register of these applications. That is not necessary in connection with some of the offices dealt with, because vacancies occur very seldom, and at considerable intervals of time, but in the case of the resident magistrates vacancies occur pretty frequently, and there is a great competition for these posts, and therefore it is desirable to have a record so that we are not left simply to deal with a person who applies for a particular vacancy, but have before us men who may have been passed over and who may be worthy of consideration. Then questions arising as to the relation of the military and civil power and other matters will be dealt with by this division. At present we have a considerable number of applications which are dealt with in this division for the recognition of cadet corps rifle clubs. The War Office naturally depend on us for advice in these matters. I should have said that confidential correspondence with the Army Council and with the Admiralty in respect of national defence and questions arising therefrom are all dealt with in the Judicial division and not in the Administrative division. They seem to fall more naturally into the Judicial division, which has to do with police. The work of the resident magistrates is supervised very closely by the Administrative division, and their attendance at petty sessions and their explanations for absence, if they happen to be absent, from a particular petty session held in their district which they should have attended.

26,696. When you say their work is supervised very closely by the Administrative division I suppose you do not mean their judicial work?—No. I only mean their movements. We have nothing to do with their judicial work. Formerly the resident magistrates were pretty closely associated with the executive government, but that has passed away, and the resident magistrates, as regards their judicial functions, are independent of the Government. Then there are various Acts, the administration of which is looked after by the Administrative division. For instance, the Anatomy Act. That is comparatively a small matter, but we have an inspector of anatomy who makes returns from time to time giving lists of subjects supplied to medical schools; and we have the Cruelty to Children Act and the Cruelty to Animals Act, the Vivisection Act it may be called.

26,697. All that is managed by the administrative department?—Yes. We have constant applications for charters and licences of one kind or another. They come through the Administrative division.

26,698. I think you have given us a very clear idea of your three divisions. I am anxious now that you should say a few words about the Privy Council Office?—Formerly it was an independent office in the good old times with two clerks of the Council, but later it was made part of the Chief Secretary's office, the two clerks of the Council were abolished, and the Chief Clerk or Assistant Under-Secretary—he has been known by both names—was appointed Clerk of the

Council, and he has taken that duty on for the salary which he previously received, the Treasury saving to the extent of the salaries of the two clerks who were reduced. The work of the Council is considerable. A good many matters are dealt with by Order in Council, or by the Order of the Lord Lieutenant in Council, as the phrase goes. We have Orders in Council dealing with such matters as the present rules and regulations under the Inebriates Act, rules under the Judicature Act, made by judges, not by the executive government. They have to be confirmed by the Lord Lieutenant in Council. In the rules under the Officers and County Courts Act the same thing applies, and also in the case of the Local Bankruptcy Act. All these are judicial matters, but an Order in Council is necessary to bring them into operation. Then we have the Act which gives us a little trouble—the Pharmacy Act. The society which administers that Act in Ireland is very exact and—shall I say—meticulous. Suggestions are made, and we have Orders in Council dealing with them. Then there are a number of miscellaneous matters like the time for holding Quarter Sessions and the Revision Courts to be dealt with. If a county wants an additional Revision Court it has to apply to the Lord Lieutenant in Council to get it confirmed, and the time and place for holding the Revision Court has to be fixed by Order in Council. Then the alterations of the boundaries and surveys have been considerable since the passing of the Local Government Act of 1898; there are further matters, such as municipal by-laws, County Council by-laws, harbours and fisheries by-laws, and an important part of the work is hearing appeals under the Fisheries Acts from orders made by the Fishery Commissioners, who are now a branch of the Agricultural Department, and appeals under the Tramways Acts which have not been so numerous in late years.

26,699. This body has a considerable amount of work to perform; it cannot be described as performing merely negligible functions?—It has a considerable amount of work—not a steady flow—sometimes it is worked very hard, sometimes there is little to do. I have utilised the services of the deputy clerk to the Council, who is a first class clerk, as my private secretary.

26,700. Shall we pass on now to the establishment?—There are two other minor departments I should like to refer to—one is the convict department. There is a large amount of work in this department in the way of memorials from convicts and prisoners for modification of sentences. I do not know to what to attribute it, but certainly in Ireland we seem to have more than the average supply of these memorials. I think there are professional memorial writers in various parts of the country who derive revenue from it. Sometimes we get letters ending with the phrase "apologising for trespassing on your valuable space," which rather indicates the writer's customary occupation. All this involves a very large amount of work, and it is done here by one staff clerk whose health has broken down. I hope the breakdown is only temporary, but if it becomes permanent it is due entirely to the fidelity with which he carried out his duties. His temporary absence is a great loss, because he is a man with the fullest information and knowledge of precedents of all sorts. This department is under the direct control of the Assistant Under-Secretary.

26,701. Could not that clerk have had leave? Are you so hard pressed you could not afford to have let him off?—He got his leave, but the fact is he has too much work to do. I think I am correct in saying he is one of the hardest worked men in the office. Then there is the registry department which I need not spend time upon, because that department is on all fours with the same department in other offices.

26,702. And the Irish Office is merely a branch?—I should say about the Irish Office that we differ from Scotland in this respect. Our principal office is in Dublin, and the office in London is merely a subordinate branch which is staffed from our office in Dublin. Formerly there was only one first class clerk in the office in London, in addition to the private secretary to the Chief Secretary, but of late years, owing to the

17 February 1913.] The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

tremendous pressure in connection with Parliamentary questions, we have been obliged to send a second division clerk to assist the first class clerk in the work of answering the Parliamentary questions, many of which are of an exceedingly trivial character. That work has become very exacting.

26,703. Let us hope it will diminish. I pass on now to the establishment. You have on your establishment in Group I. an Under-Secretary and an Assistant Under-Secretary—they hold their offices directly from the Crown—and in Group II. you have a number of clerks for each of the divisions described, one for the finance, one for the judicial, and one for the administrative division?—That is so.

26,704. Have they entered the public service by means of an open examination?—Not all. One of the principal clerks at least was promoted from a lower division to the higher. He was promoted from the second division, not to a principal clerkship in the first instance, but to Class I., and then from Class I. he became a principal clerk. Another of the principal clerks was appointed originally a clerk to the Church Temporalities division by nomination.

26,705. Purely by nomination?—No; with a qualifying examination. That was in 1874. The Church Temporalities Commission was a commission appointed in connection with the disestablishment of the Church in Ireland. He became a pensionable clerk connected with the higher division of the Royal Irish Constabulary; I do not quite know what that means or whether he was on the same footing as a first class clerk. I believe he was. He was then transferred to the Chief Secretary's office as a third class clerk, but that was under a system of organisation I know nothing about.

26,706. Have we such a thing?—There was such a thing, I believe, at that time.

26,707. It is not so now?—The office was reorganised by a Treasury letter of 31st March 1876, there were then two third class clerks; it is very difficult to say now to what they corresponded, and it is not necessary to go into it. First division clerks were originally appointed in 1891. The third principal clerk entered by open competition; he was appointed to the Inland Revenue Department, and was transferred to the Chief Secretary's office in 1894, and appointed principal clerk.

26,708. You have then two first class clerks—one appointed by open competition, Class I. examination, and one appointed to the second division, and I suppose promoted from the second to the first division?—Yes.

26,709. Is it long ago since he was promoted, the gentleman promoted from the second division to Class I. division?—He was promoted before my time—about 1890 or 1891.

26,710. Then we have a grade in which there are three clerks only coming from a principal clerkship in the Local Government Board, one from Class I. of the Admiralty, one from a clerkship in Customs and Excise?—Yes; they all entered by examination.

26,711. By Class I. examination?—Yes.

26,712. By open competition in Class I.?—Yes.

26,713. That is quite regular?—Yes.

26,714. Is that provision in the higher administrative group of offices sufficient for the full discharge of the functions of which you have told us? Do you ever feel the want of a larger provision of Class I. officers?—Undoubtedly, from more than one point of view, although the objection of the Treasury is we have too many Class I. officers. But the restriction of the number of first class clerks has a very serious bearing from this point of view; that you have men of now comparatively short service—five or six years' service—these three clerks in the lower division of the first class are very junior—and in a comparatively short time we shall have our principal clerks going out and it will be extremely difficult to find within the office men with sufficient experience to succeed them.

26,715. Within your experience have men been brought from outside the office to fill those administrative positions within the office?—You mean without examination.

26,716. I do not mean from other offices?—Without examination?

26,717. Yes, without examination?—No.

26,718. No men who have not passed the open competition examinations have been brought in?—No; but I am reminded that a long time ago there was a resident magistrate brought in in stress of circumstances in the very disturbed times.

26,719. Did he remain?—No.

26,720. If he was brought in for temporary service, of course, that was different?—He was brought in for a few years.

26,721. What strikes me is this: Here are three great administrative departments—judicial, finance, and administrative—at the head of each of which is one principal clerk. Then you have only five clerks of the Class I. character to assist?—Yes; but two of these are in London during the Parliamentary session, which means really the whole year, leaving only three first class clerks.

26,722. That leaves only one first class clerk for each division?—Yes; I may say, as regards that, the Treasury have pressed over and over again, and it is very strongly resisted by the Irish Government, that the Assistant Under-Secretary, who was at one time known as the chief clerk, should take upon himself in addition to his existing duties the duty of principal clerk.

26,723. In one of the departments?—Yes.

26,724. Do you think that possible?—I think it would be impossible, and we wrote a letter to the Treasury, who renewed the demand so lately as 1908, to the following effect:—

"It is necessary that there should be an officer of a higher rank than a principal clerk who could take charge of the Chief Secretary's office, and conduct all the business of the office, during the absence of both the Chief Secretary and the Under-Secretary. That office deals not merely with official matters originating in the Chief Secretary's office but also with matters submitted to the Irish Government by subordinate departments, such as the Royal Irish Constabulary, the Dublin Metropolitan Police, the General Prisons Board, the Land Commission, etc. And in the absence of the Under-Secretary the Assistant Under-Secretary must give directions on all papers submitted to him, and must sign all letters issuing from the office. When the Under-Secretary is in Dublin the Assistant Under-Secretary has general supervision of the office, and is responsible for the maintenance of all discipline. He undertakes so much of the work of the various branches as may from time to time be assigned to him by the Under-Secretary, and he has authority to initial minutes, to revise and to deal with all matters coming before him which do not require special directions of the Chief Secretary."

Our arguments prevailed for the time at all events—and the Treasury had reluctantly to give way, but hoped when the next principal clerkship fell vacant something should be done; it is not to be filled without previous reference to Their Lordships.

26,725. The question is not settled?—I do not know that anything is settled in our relations with the Treasury. If you look at the estimates you will find in the pages dealing with our votes hardly a single one of them that is not noted for further reference such as "to be reconsidered on the next vacancy," and so forth. The result is that young men coming to us, not having seen those estimates previously, are surprised at not finding their prospects improved when vacancies occur. To be hung up like Mahomet's coffin between earth and heaven is very prejudicial to the position of the office. I may mention also that it seems to us that the young gentlemen who come over here from the Treasury do not quite understand that here we have a quasi separate Government, and that the people of Ireland look to what they call "The Castle," despised as it is by many, for advice and guidance, and, above all, they make it the repository of their complaints. You know, I am sure, my Lord, that a great deal of the time of the Under-Secretary is taken up in interviewing people who come from all parts of the

17 February 1913.]

The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

country, not only those connected with the public departments, but others who have a right to be heard.

26,726. People of high social standing?—Yes, and who will not be satisfied unless they get an interview from a person of the highest standing, and therefore maintaining the position of Assistant Under-Secretary is essential.

26,727. Is it not the case that you, in the discharge of your duties, have frequently to visit particular localities; frequently also to interfere in the interest of the preservation of the peace and good order, and while you are away is it not essential that there should be somebody here of rank and position to represent you?—Yes. One has also to go to London to confer upon matters that cannot be dealt with by correspondence between the Chief Secretary and the Under-Secretary.

26,728. When I was Under-Secretary I was constantly going to London, summoned by the Chief Secretary, to consult with him. Correspondence was inadequate?—Yes, perhaps my absences have not been so frequent because the need has not been the same.

26,729. Let us see whether the deficiency—if there be a deficiency—is made up by the second division clerks. You have got, so far as I can see, only six second division clerks and two staff clerks?—We have three staff clerks; the registrar is a staff clerk; he is a second division man.

26,730. He is not available for ordinary work?—No, his work as registrar is amply sufficient. One of the other staff clerks is a second division clerk in the Finance division. He has very responsible work to do, and the third is the gentleman to whom I previously referred as the clerk in charge of the convict department. Then we have, in addition to these six second division clerks, two in the higher grade and four of the ordinary section.

26,731. That is an average of two clerks for each great division?—Yes, but as a matter of fact we have only one second division clerk in the judicial division, with all its important work. We have no second clerk there at all. There is a confidential shorthand writer.

26,732. Has he been pressed into service to do work for the judicial division?—Yes, as occasion arises; then there is a temporary clerk employed in preparing extracts from newspapers.

26,733. He is not shown in your statement?—No, I do not think he is. He is paid by the hour; he is a temporary clerk in the most hopeless position of all.

26,734. Would he come under the description that we have here, of a "lump summer," as to his payment?—No, he is paid by the hour—10*d.* per hour.

26,735. Are you given a lump sum to obtain this temporary assistance?—Yes, that is so.

26,736. You have these six division clerks and two abstractors?—Yes, they were in the position of temporary clerks. We are trying to get rid of the temporary clerks.

26,737. You make them abstractors, and, as abstractors, they become pensionable?—Yes.

26,738. They were appointed by means of examination?—Yes; they qualified as abstractors by examination. They were appointed originally as temporary clerks.

26,739. But these assistant clerks, or abstractors, had been boy clerks and passed an examination and then became abstractors?—We have no boy clerks in our office, but we have a system, which is thoroughly bad, of temporary clerks; they have no security of tenure, and they have nothing to look forward to.

26,740. These two abstractors were originally temporary clerks?—Yes; and had to qualify by examination for abstractorships.

26,741. It was not a competitive examination?—No.

26,742. That is unusual. We have not found that before?—The Treasury make provision for it; it is with Treasury sanction.

26,743. Don't you think it would be better to have those boys up to the ages of 16 or 17 selected by competitive examination?—I quite agree. Anything would be better than appointing temporary clerks. I never appoint a temporary clerk.

26,744. We have found in the various offices boy clerks recruited at 15 to 16 years of age; their tenure is that of a temporary clerk unless they get a permanent appointment before 18. There is, we are told, a great deal of discontent with the boy clerk system—it is a kind of blind alley employment—and the suggestion is that it should be got rid of, and that the class of assistant clerk selected from the schools at the age of 16 to 17 by competitive examination should be substituted for it. Would that be a better system?—Speaking from experience I should prefer boy clerks to temporary clerks.

26,745. But would you prefer to the boy clerk system a system of selecting for permanent employment boys between, say, 15½ and 17 years of age?—I have no experience of boy clerks.

26,746. You are quite clear that the system of temporary clerks is thoroughly bad?—Yes; thoroughly bad.

26,747. Have you any instance of promotion from the second division to the first? You have given some, but they came from outside. Have you any instances of such promotions in your own office?—Yes. I recall the case of a most capable officer.

26,748. Was he promoted to the first division in your office?—He was.

26,749. He was a very capable officer, no doubt?—Yes, and I understand there were three other cases. One of our principal clerks was originally a second division man.

26,750. Can it be said that there is anything like a very marked line of division between the first and second division in the Irish Office?—I think not. I think we agree that every second division clerk carries his baton in his knapsack, although, of course, he may not become a field-marshal.

26,751. As a matter of fact, there is, from the point of view of the second division, nothing to find fault with as regards promotion. Promotion from second to higher division is good enough, but you say your office is understaffed and that you have on your establishment not enough of the higher division men?—I think so.

26,752. Is it understaffed in men of the second division?—I think, at present, perhaps, the staff is adequate to the work, but if you look a year or two ahead, even perhaps a month or two ahead, our difficulties emerge very clearly.

26,753. Do Chief Secretaries as a rule bring their private secretaries with them?—Mr. Balfour, Lord Morley, and Mr. Gerald Balfour had private secretaries from our office.

26,754. Then came Mr. Wyndham, who brought his private secretary from another office, and Mr. Bryce, who brought his from the Education Department?—Yes. Then we worked back to the original plan and found private secretaries amongst our own clerks. That was the case of Mr. Beard who acted as private secretary to Mr. Birrell, and also in the case of the present secretary, Mr. Le Fanu, and both quite justified their appointment.

26,755. You say you are just able to carry on with your present staff?—Just able to carry on.

26,756. If there was any increase of work or breakdown of any of the present staff you would find yourself in a difficulty?—Quite so.

26,757. We will get from other departments their opinions about their staffs. I think I have asked you all?—Would you like to know anything about the staffing of other departments and our relations with other public departments.

(Chairman.) We will get that from the heads of the departments.

26,758. (Sir Donald MacAlister.) One question as to the Finance division. Has the Chief Secretary's office to do with the distribution of the funds under the Irish Universities Act?—Yes.

26,759. In what way?—Take, for example, the building grant; they send up the estimate; we have to forward it to the Treasury, and the Treasury must sanction it before it can be expended. The estimate, of course, has to pass through the Finance division; the correspondence would, of course, be conducted by that division. As regards the building fund, that is

17 February 1913.]

The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

merely temporary, but so long as money is paid to the various colleges for building purposes the Finance division has to furnish the estimates.

26,760. Is that provided in the Act?—Yes.

26,761. For money not fully expended?—Yes, not yet fully expended.

26,762. So that the relation of the Chief Secretary's office to the finance and the universities is only temporary?—Only temporary until the new universities are absolutely set going.

26,763. When the specified sum provided in the Act to be expended with Treasury sanction is expended, the Chief Secretary's office would have nothing further to do with the finance arrangements and the new universities?—Except in so far as voted moneys are paid to those universities. I presume from year to year an estimate must be made, and in that way, at any rate, a connection would exist between the universities and the Treasury.

26,764. You are referring now to the annual votes?—Oh, yes; we have nothing to do with the details of the administration in any way whatever.

26,765. Has the Chief Secretary's office anything to do with the allocation of the funds which were left over after the Royal University came to an end?—No, that was a legal question which was decided, I think, by a general meeting of the Commissioners of Belfast and Dublin.

26,766. Without the intervention of the Chief Secretary?—Yes; I think we had nothing to do with it. I could refresh my memory, but I believe I am accurate in saying we had nothing to do with it.

26,767. Suppose, for example, the new universities were to make an appeal to the Treasury for further annual grants, would a judgment be passed upon that by the Chief Secretary's office?—It is quite certain if such an application were made direct to the Treasury it would be referred to the Lord Lieutenant, that is to the Irish Government, for opinion and advice, and if it were made to us to forward to the Treasury we should be expected to pass some judgment upon it.

26,768. Would you tell us, apart from the high officers whose usefulness you underrated—I mean the Under-Secretary and the Assistant Under-Secretary—is there need in the Irish Government department for Class I. clerks?—Undoubtedly, and we could not do without them.

26,769. Tell us why, in your opinion?—Well, because the work to be done is of a character that demands grasp, intelligence, knowledge of affairs that a first clerk possesses in an eminent degree. I don't say there are not second class clerks equal to first class, nor do I say that all first class clerks are on the same footing as regards ability; but there is undoubtedly a line of demarcation which anyone dealing with administration easily detects between first and second class clerks.

26,770. There is a clear case for the man whose education is carried on up to 22 or 23, and enters the Service about that age?—Undoubtedly.

26,771. (Sir Henry Primrose.) Does the Chief Secretary's office exercise any supervision or control over the estimates of the departments submitted through that office, or is it merely a channel or post office, as it were?—No, the ultimate control rests with the Treasury, but the Irish Government is expected to exercise independent judgment. Of course, as regards a considerable number of these items, no question arises, from year to year they are the same. But, take for example, an increased demand from the Commissioners of National Education for various purposes, and various novel purposes, such, for instance, as dental treatment of children, and other matters of that kind, the Irish Government is expected by the Treasury, and is called upon by the Treasury, to exercise its judgment.

26,772. Let us take the case of the Royal Irish Constabulary. Supposing the Lord Lieutenant and the Chief Secretary had made up their minds that there might be a large reduction in that vote could they enforce that before it went to the Treasury, or would they not revise the estimate at all until the Treasury

agreed that such a reduction might be made?—I think the usual course would be to send forward an estimate prepared in the Constabulary office with an expression of opinion that circumstances would justify a considerable reduction.

26,773. Don't you think the Chief Secretary would have authority if he chose to do it, and insist that the estimate should be cut down?—Clearly; or rather the Lord Lieutenant, but of course that is a course he would hesitate to take.

26,774. (Chairman.) The Lord Lieutenant would not do that unless in agreement with the Chief Secretary upon that point?—No, clearly, not in an act of Irish administration.

26,775. Not in a matter of high policy like that?—No step in a matter of high policy is taken without an understanding between the Chief Secretary and the Lord Lieutenant. The strength of the Royal Irish Constabulary Force depends upon the decision of the Lord Lieutenant from time to time—that is as to the number of men. If we think the numbers are excessive, we stop recruiting.

26,776. You remember that in 1903 as a *quid pro quo* for the bonus then granted, the Irish Government undertook to reduce the cost of the Irish administration by a certain sum; the greater portion of the reduction was effected by stopping recruitment for the Royal Irish Constabulary with a view to its reduction?—Yes; but circumstances obliged us to go back upon our decision, and I see no immediate prospect of reduction.

26,777. (Sir Henry Primrose.) I only suggested that from the point of view of ascertaining what amount of control the Chief Secretary's office exercised. I only took that as an illustration?—Yes; I quite understand.

26,778. Your office is divided into three divisions? Do you keep these divisions separate or do you move men round; for instance, would any one of your principal clerks be able to take charge of any one of those divisions?—In my experience it is not the custom to remove a principal clerk from one division to another. As regards the principal clerk in the finance division, he was promoted to that position only in the last two years. As regards the administrative division, the clerk there is approaching the end of his service, and has only held the office for a few years, in fact, since 1901; and as regards the judicial department the principal clerkship there has been held by the man who holds it now, Mr. Connolly. The principal clerkship for that division was established in 1904. I see very great difficulty and no great advantage in shifting clerks from one division to another. By the time a man has acquired the position of principal clerk he has acquired a very considerable knowledge of the office.

26,779. My question referred more perhaps to the next batch of men. What I want to know is, supposing you have a vacancy in one of the three divisions do you find it necessary, in selecting a man to promote into his place, to take a man who was in his division, or might you find a man in the administrative division who could become principal clerk in the judicial division?—As a matter of fact the last vacancy was in the Finance division, and we then took as successor to Sir F. Cullman, who retired, a man who had been associated with the Finance division, who had had a very wide experience, having acted as clerk at the Irish Office, and who had been private secretary to the Chief Secretary.

26,780. What I want to get at is this. If a vacancy occurs in a principal clerkship in ordinary circumstances no doubt you would promote the senior competent man to the place vacant in the ranks above the one he holds in each of your divisions?—We have only two first class clerks as a matter of fact. They won't allow us a first class clerk for the police division.

26,781. Which division is that?—The police—the judicial.

26,782. You want a first class clerk in the judicial. Assuming the principal clerkship falls vacant you have no one in that division you could promote into it?—That is so.

26,783. Would you be sure to find anyone in the other divisions competent to take charge?—I think so.

17 February 1913.]

The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

26,784. You don't make regulations which are designed to make every man competent to take up the work in any one of the three divisions?—No. We do not make regulations to that end; but, as a matter of fact, those first class clerks to whom we should ordinarily look to fill a vacancy of this kind have got long experience of the office, and one way or another acquired a very good knowledge of the work of each department, sometimes having actual service in the department. The present head of the administrative department was attached to the finance division before he was made head of the administrative division, and he had also considerable acquaintance with the administrative division, partly, I think, by serving in it, and certainly by serving as private secretary to a succession of Chief Secretaries.

26,785. You are bound by the general service rules as regards the method of recruiting, and so on, and that results, in your case, in your having in these three divisions, as far as I see, eleven men of whom two are not on the staff—one a confidential shorthand writer and one a temporary clerk. You have no assistant clerks in these divisions?—No.

26,786. Assistant clerks of the abstractor kind?—No. We have none of them in any of those divisions. (Mr. Boutwood.) There are two assistant clerks set out in the printed paper, page 8?—Yes, they are in the registry.

26,787. (Sir Henry Primrose.) There must be in each of these divisions a certain amount of work of a simple and routine kind that is not good enough for second division men?—That, I think, is answered by what is already stated about the character of the work. A great deal of the mechanical work is done in the outside departments before it comes to us, and that is the justification for having a higher proportion of first class clerks than would otherwise seem to be necessary, having regard to the size of the establishment.

26,788. In an office of the size of the Chief Secretary's, any difficulty that exists about keeping men to the particular group for which they were recruited—either assistant clerks or second division clerks—is very much accentuated in a small office, because you have no method of rewarding the best men except to pick them out and give them some of those places ordinarily available to a higher division?—There is considerable scope in the Irish offices for men who have capacity and who desire promotion, and we have sometimes at least an opportunity of finding places for men outside. We found a place recently for one of our clerks, a most deserving man—he was a second division clerk; he amply justified his promotion to a post on the Land Commission, and got 500*l.* a year.

26,789. The Chief Secretary's office being the office for the whole of the Government of Ireland, there are opportunities for placing men out?—That is so.

26,790. But, supposing you were not tied up by any general rules laid down by the Treasury, would you work your office, or would you organise it, very much on those lines. You told us you would have a certain number of men of university training?—Yes; first class clerks.

26,791. What would you do below that?—I should have very much the same establishment now of second division clerks. If we required a number of men to do work not good enough for second division men, I would be strongly in favour of having abstractor clerks and should forward them as they showed capacity for promotion to the second division, and leave it possible for the second division men to pass into the first division, if they showed capacity to do so.

26,792. How is it you have not had boy clerks?—I think the system of appointing temporary clerks had existed before the class of boy clerks came into existence.

26,793. Has that really become a system?—As far as the Chief Secretary's office is concerned, it had. We abandoned it because the temporary clerk occupied a perfectly hopeless position without any security of tenure.

26,794. How did you get authority from the Treasury for temporary clerks? Did they not resist

it?—We have not recently asked for them. They gave us a lump sum which we might employ in any way we liked.

26,795. This is a comparatively new arrangement?—I don't think so—not in the case of our office.

26,796. How much did they give you?—They gave us 300*l.* in 1912-13; in the previous year 450*l.*, but in past years the allowance has been as much as 1,000*l.* a year. So you see we are gradually getting rid of the system.

26,797. You would not object to a system of taking on temporary clerks to meet a passing pressure. Do you have occasions when there is a large amount of ordinary writing work, copying, and so on?—Undoubtedly.

26,798. Is there any objection to taking on men temporarily for that?—That is hardly what I mean by temporary clerks. What I mean is men brought in, not to do a day's work in time of crisis, but employed from year to year.

26,799. I quite understand. Is your draftsman for Bills fully occupied every year?—During the Parliamentary session he is very hard worked.

26,800. You don't have Bills every year?—Well, his business is to look after all the Bills in which Ireland is interested as well as drafting Bills for Irish purposes.

26,801. You mean his actual drafting of Bills in some years is blank?—We generally have a number of irons in the fire; in addition to that he watches local Bills and Provisional Orders.

26,802. (Chairman.) For several years past you have been very busy with important Bills, and Bills are left over anticipating the time you might get them through?—Yes.

26,803. Have you not at present Bills on the stocks for a long time?—Yes, several Bills on the stocks.

26,804. They are waiting?—Yes, and I am afraid are bound to wait.

26,805. (Sir Henry Primrose.) The mere watching of Irish Bills could be done in your office?—I don't think so. Watching Bills is a very important matter; and quite recently the Treasury were surprised to find that very imperfect vigilance on the part of somebody let them in for payments in Ireland which they objected to very much; for example, the administration of the Children Act.

26,806. There are one or two special appointments that seem to me very highly paid. There is the registrar. He has merely to record the papers received and put them into proper boxes and to distribute them?—He is head of a department and supervises the work done by second division clerks, two assistant clerks, and a temporary clerk. It is a very responsible post which involves constant vigilance, because if a mistake is made in the registering of papers it may lead to tremendous confusion, and I must say the work of registering has been extremely well done. If a paper is called for we are never at a loss to know where it is, we can produce it in the office at the very shortest notice.

26,807. Yes, but after all, it is a purely mechanical process; it is merely keeping the papers in order?—Yes, but supervising an important mechanical process involves very considerable ability and care.

26,808. I should have thought 350*l.* to 500*l.* is a very large sum to pay to a man unless he has something else to do besides seeing that papers are properly recorded and distributed?—350*l.* is his allowance as a second division clerk.

26,809. That is a fixed scale?—Yes; rising to a maximum of 500*l.*; he has 50*l.* more than the other two special clerks, whose maximum is 450*l.* I suppose the Treasury made a distinction on the ground that the work the registrar did was really important work. In former times a first class clerk was always in charge of the registry. I believe all our papers are by Act of Parliament State Papers, and therefore, it is supposed that considerable responsibility devolves upon whoever is in charge.

26,810. Maybe there are confidential papers that he himself must take charge of and not pass through the hands of subordinates?—As a matter of fact, we don't register our secret papers.

17 February 1913.]

The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

26,811. They would not pass into his hands at all?—No, they would not pass into his hands.

26,812. (Chairman.) How many letters are received and issued?—I cannot say at the moment, but I could easily get you a return of the number of papers.

26,813. (Sir Henry Primrose.) I don't know whether it is worth while, we don't want to go into that sort of details?—I believe the average is about 25,000 to 30,000 in the year.

(Sir Henry Primrose.) I only referred to it as being illustrative of the general scale of pay. It seems to me after all to be a subordinate branch of which he is the head, and it represents a high scale of pay for such a small office. However, I don't want to press it.

26,814. (Chairman.) He registers the documents as they come in; he also registers the documents as they pass to the various offices?—Yes; what happens is this: The letters as they come in in the morning go to the registrar. They are then put in the files to which they belong, and these files are referred to the various departments; if the business is new they are registered and sent to the departments concerned.

26,815. The same file goes to the Chief Secretary; he marks it for the Finance Department, and the Finance Department sends the file on for further consideration to the Administrative Department. Are the changes from the Under-Secretary to the Finance Department, and from the Finance Department to the Administrative Department registered?—Yes, they all pass through the registry.

26,816. It is much more than 25,000 to 30,000 transactions a year?—Yes; we can tell at any moment where a particular paper is. If I want it I send to the Registry Department and I am informed at once.

26,817. (Mr. Boutwood.) You mentioned a Public Trustee in one of your answers? Who is he?—He is a person appointed in connection with the Land Purchase Acts. He has not the same functions as the English public trustee. His function at present is to receive certain securities in which money derived from land purchase is invested and approve of them.

26,818. You said your connection with the Local Government Board was confined to signing a report?—It is sent to me and I sign it.

26,819. (Chairman.) You are a member of the Board?—Yes, ex-officio by statute.

26,820. (Mr. Boutwood.) You answered about the promotion of your first class clerks to higher appointments. Does your answer apply to the appointment of staff clerks? You have two staff clerks. Are they in watertight compartments? If one of the two staff clerkships became vacant would you choose a successor from the whole of the second division or from a particular department?—We should promote the most deserving man of the second division.

26,821. It would be open to the whole office?—Yes.

26,822. You said something in an incidental reference that the Lord Lieutenant makes the appointments. What is your function there? Do you simply transmit names or do you select for His Excellency?—So far as the division is concerned and so far as the office is concerned we should submit the whole list of applicants to the Chief Secretary, who would either indicate his preference in writing on the list so submitted or by a private conference with the Lord Lieutenant. If he had not power to make a certain nomination we should then go to His Excellency.

26,823. You do not sort out applications by making a preliminary selection?—No, we do not.

26,824. In the Irish papers submitted there is a phrase which is new to me—I think it occurs in the papers relating to your office—it is the phrase "Endowment Fund." What is that? I see it is used in connection with intermediate education for instance; it occurs also in connection with the Agricultural Department?—Yes, the principal endowment for the Commissioners of Intermediate Education is derived from the Irish Church Surplus Fund—1,000,000*l.*—granted under the Intermediate Act of 1878, for the purpose of endowing intermediate education. That is known as the endowment fund, in addition

to other moneys, but the principal portion is derived from that.

26,825. You have a series of Parliamentary Votes for these?—Yes.

26,826. On which does the cost of establishment fall?—I think it falls upon the endowment fund, but that is a point upon which possibly you might ask those who work the Intermediate Act.

26,827. (Mr. Graham Wallas.) In the ordinary work of your office, when an official, for instance, takes his leave, do officials from other divisions take his work?—Sometimes. Sometimes the leave is taken at a time of the year when work is slack, so that there is no need to appoint a substitute.

26,828. But in a small office officials help each other?—That is so.

26,829. That is also true of the second division clerks?—Yes, as regards a particular clerk he is assisted by his division clerk, and when the head of a division goes away the first division clerk carries on the work of the department.

26,830. I want to refer to the temporary clerks appointed out of your lump sum. May I take it the temporary clerks when appointed generally hoped that they would be recommended to the abstractor class of the public service?—Yes, and before the abstractor class, they hoped to get on somehow or other.

26,831. They hoped for permanent public employment, and ultimately to be established?—Yes.

26,832. And that is still their view?—Yes.

26,833. Do you keep a waiting list of such applicants?—No. Our present policy is to discourage that class of clerk altogether.

26,834. I am not speaking necessarily of your own office, but offices for which you appoint the staff. Some of these have a large number of temporary clerks?—I think only one or two. I admit that in the Land Commission there is a large number.

26,835. Do you appoint them or do the Land Commission?—They appoint them, but, of course, subject to the formal assent of the Lord Lieutenant; but with regard to all these departments where the heads are allowed to appoint their own staff, the sanction of the Lord Lieutenant is purely formal.

26,836. Men wanting such temporary appointments, hoping them to become permanent, would naturally arm themselves with letters of recommendation?—Yes.

26,837. You have no female typists in your offices?—No. I don't think it was deliberately decided not to have them, but I don't think we have had any applications from women; but we should find it extremely inconvenient to employ female typists, because our buildings are limited, and public opinion in Ireland would insist on the segregation of the sexes.

26,838. You make very small use of women in the Civil Service generally?—Very small.

26,839. In the case of reformatory schools, you have one lady assistant inspector?—Yes.

26,840. Do you remember how she is paid in comparison with the man?—Yes, I do. The man assistant inspector who has held office for a considerable time is on a scale of 250*l.*, rising by annual increments to 500*l.* The Treasury refused to give the lady assistant inspector more than 250*l.* as her maximum.

26,841. You would recommend she should be given more?—Yes, I am pretty sure she should.

26,842. You believe her work to be equally valuable to that of the male assistant inspector?—At least. It is a new departure, but I think it has been more than justified by results.

26,843. I want to ask a question about the working of your system of Boards. You have given a list of the Boards. The Loan Fund Board, the Prisons Board, the Local Government Board, the Congested Districts Board, the Land Commission, with a variety of members from 20 down to 3. Do they meet as Boards?—The Commissioners of Intermediate Education certainly do; the National Education Board also. The Prisons Board, I believe, does meet, but I do not know to what extent. There is a broad distinction between a Board composed of a number of unpaid members, and a small body which is called a Board, but which has purely

17 February 1913.] The Right Hon. Sir JAMES B. DOUGHERTY, K.C.B., K.C.V.O.  
(Mr. W. P. J. CONNOLLY was in attendance.)

[Continued.]

administrative functions like the General Prisons Board.

26,844. Take the Local Government Board. Does that meet as a Board?—As I have said, I am quite ignorant of its deliberations.

26,845. When you receive recommendations from any one of these Boards you take it to be that of the Board, without inquiry as to whether the Board has met as a whole?—Oh, yes.

26,846. You do not raise the point whether there had been a quorum present, for instance?—No, I don't think we ever did that.

26,847. If one wants to know anything more one must go to the individual bodies?—Yes, that is so.

26,848. (Chairman.) Do you ever transfer to the Central office in the Castle any of the staff of these outside departments under your immediate control?—That is our frequent practice.

26,849. By such transfer it may happen that in time a man would get promotion?—Yes, as you see from the history of the office.

26,850. So they are by no means so isolated as I thought at first?—We naturally prefer men of whom we have had some experience in outside departments if we can get them, but the Treasury come in again on the question of salary.

26,851. Were you ever prevented from effecting transfers by reason of pay?—That difficulty regarding pay is ever present to our minds and has probably prevented us on occasions from making transfers we should otherwise have liked to make, but I cannot recall a particular case; but it is a fact we constantly keep before us.

26,852. (Sir Henry Primrose.) Your office is the only one in Ireland that has higher division men?—Not the only one.

26,853. Surely the Treasury would never object, provided the offices agree one to surrender and the other to take over a first division man or a second division man, on the question of salary?—I think they would.

26,854. It is a matter entirely between the two departments, especially with the second division, they are Service men and can be put anywhere?—But if we were to take a man of the second division, high up, who has earned nearly his maximum salary; it makes a great difference in our estimates compared with taking a man at the initial salary of a second division clerk.

26,855. (Sir Donald MacAlister.) A simple transfer does not raise the question of salary at all?—Not as regards the individual clerk.

26,856. It arises only on promotion to another grade?—Yes.

Mr. ARNOLD GRAVES, called and examined.

26,857. (Chairman.) You are the Secretary of the Charitable Donations and Bequests Board for Ireland?—Yes.

26,858. Who composes the Board, Mr. Graves?—There are 13 on the Board, and of these practically half are Protestant and half Catholic.

26,859. It is one of the Boards constituted on the principle of balancing Catholic and Protestant?—Yes. There are two secretaries, and when the Bill passed through the House of Commons in 1854 the Home Secretary gave an undertaking that one should be Protestant and another a Roman Catholic.

26,860. Your Board of 13, I notice, comprises some of the highest dignitaries in the island?—Yes. We have generally two archbishops, but the present Protestant archbishop, not being a robust man, asked to be excused, and the Church of Ireland is represented by the Bishop of Meath at present.

26,861. There are two archbishops, the Master of the Rolls, the Lord Chief Baron, and so on?—Yes.

26,862. Now under what statutory provision does your Board exist?—We exist under three Acts of Parliament. Under the 7 & 8 Victoria, chapter 97, the 30 & 31 Victoria, chapter 54, and the 34 & 35 Victoria, chapter 102. Then considerable additional powers are thrown upon us by the Educational Endowments (Ireland) Act, 1885, which gave us power to amend the scheme framed by the Educational Endowments (Ireland) Commissioners when their term of office came to an end.

26,863. From what source do you derive your funds?—We hold a great deal of the funds belonging to charities. We hold about 1,200,000*l.* for charities, and we administer them according to the trusts of the charity. Our expenses are paid out of the votes.

26,864. Parliamentary votes?—Yes.

26,865. They are not charged to the funds?—No.

26,866. Are the funds pooled—the income from all the funds, whether coming from Protestant or Catholic sources?—They all go into the one lump sum, and then we make a distinction between the different funds in our book-keeping. We hold 600,000*l.* or 700,000*l.* in Consols in accounts A and B, which are kept separately in our books.

26,867. For the purpose of administration and distribution of your funds, is the income pooled or not?—It is pooled.

26,868. So that in distributing the funds you do not distinguish between Protestant and Catholic?—We distribute the funds according to the terms of the trust. If, for example, a fund was for the Church of Ireland poor of a parish then the practice would be to administer it by the rector, and if it was for the

Catholic poor, the priest would be made the charitable administrator.

26,869. Then your answer to my question whether the income was pooled or not was made under a misunderstanding?—I did not comprehend your question.

26,870. You misunderstood my question in regard to the pooling?—Yes.

26,871. Altogether with what income do you deal, but first let me ask this question: Is your annual income, taking one year with another, pretty level?—It is very steadily increasing. I have been secretary for 28 years, and I think myself, from my recollection, that when I became secretary the funds were less than one third of what they are now. I see that in 1874 the stocks and securities held by the Board amounted to only 240,661*l.*

26,872. What annual sum have you to deal with?—I don't think I could answer that question without notice. We invest our funds in a very large number of different trustee securities. Formerly we used to invest almost entirely in Consols, but as Consols are not as popular now as they were some years ago we have not put much money in them of late, and we have money in different securities at different rates of interest.

26,873. Is the nature of the investment determined by the Board?—Entirely by the Board, and the Board, as a matter of practice, consult the trustees of the charities, or the local administrators. They do this as a rule, but not necessarily, and they ask them to suggest alternative trustee securities, and then make a selection.

26,874. Do you deal with one firm of brokers or several?—With one firm of brokers.

26,875. Although you are unable to tell me the exact amount of money you dealt with last year, could you give me anything approximate?—I know what our payments last year are, but payments out are not necessarily income, because we sometimes pay out capital. I know our payments exceeded 50,000*l.* last year.

26,876. What do you mean when you say you pay out capital?—Take, for example, a case when a rectory or a Presbyterian or Methodist chapel is sold. We make it a condition of giving consent to the sale that the purchase-money is lodged to our credit, and when we get the money, and having power to decide how it is to be applied, our usual practice is to pay it out for the purpose of erecting or buying a new rectory or chapel, and in that way a fair amount of capital goes out every year.

26,877. You have told us that in the last 35 or 40 years your capital fund has increased from 250,000*l.* to about 1,200,000*l.*?—Yes.

17 February 1913.]

Mr. ARNOLD GRAVES.

[Continued.]

26,878. From what source did the increase come—charitable people making bequests?—No. Trustees who hold funds hand them over to us under section 9 of 30 and 31 Victoria, cap. 54, which enables any trustee to transfer a charity fund to the Commissioners.

26,879. Therefore it is not that charitable bequests have increased 500 per cent.?—No. I think they have not increased at all. Trustees are naturally anxious to be relieved of responsibility, and it is for the interest of charities that their fund should be vested in us. Suppose, for example, there are three trustees of a charity, when two die all the trust remains in the hands of a surviving trustee, and if he dies there is a great danger of the trust being mixed up with his assets. Whereas, if the funds come to us they are in safe keeping, and the charity is saved the constantly recurring expense of appointing new trustees.

26,880. But the trust must be of a charitable description?—Yes.

26,881. Do you interpret the word "charity" in a wide sense?—Roughly speaking, almost anything for public purposes is a charity, such as a life boat, a parish pump, a hospital. Trinity College is a charity, a church is a charity, the representative church body is a charity. A parson is a charity.

26,882. Would a board of poor-law guardians be a charity?—I think not. I think a friendly society is held not to be a charity, because it is run on co-operative lines.

26,883. (*Mr. Boutwood.*) What governs your definition of charity in Ireland—is it the Act of Elizabeth?—The Act of Elizabeth and the Act of Charles I.

26,884. (*Chairman.*) Is the chairman, or members, of your Board paid?—No.

26,885. But you and your fellow secretary are paid officials?—We are paid officials.

26,886. Are you regarded as Civil servants?—Yes. We are entitled to pensions.

26,887. On the ordinary Civil Service scale?—Yes.

26,888. You have a small staff, Mr. Graves?—Very small.

26,889. I notice you suggest that it is too small?—I think we do suggest it is too small, but I don't propose to raise that point.

26,890. You have a clerk and book-keeper—is he a pensionable officer?—Yes; he is appointed on transfer from another office.

26,891. From the Chief Secretary's office?—Not necessarily from the Chief Secretary's. There was a departmental inquiry in 1874—Judge Longfield and Mr. Murray held the inquiry—and they recommended that an accountant should be appointed on transfer from another office. The reason of that was that he is dealing with a large sum of money. He is single-handed, and it was thought it would not be desirable to appoint an inexperienced clerk, and so the appointment has been made since then by transfer from another office.

26,892. It is noted on this statement that your present clerk was transferred from the Chief Secretary's office?—Yes.

26,893. Of course he was a salaried official?—Yes.

26,894. You say he works single-handed?—Yes.

26,895. He has an assistant clerk?—The assistant clerk has nothing to say to accounts. I think it is an undesirable thing that where there is such a large account there should be only one clerk. Of course one of the secretaries always works as financial secretary, and he exercises a check over the issues of finance, but he cannot check book-keeping. Personally I think it would be desirable, if there was a reorganisation of the department, that some arrangement could be made by which there should be some other clerk assisting in the keeping of books so as to have one clerk a check on the other. Not that I have not quite confidence in the present clerk, but as a matter of principle.

26,896. Have you in your own practice, Mr. Graves, found it necessary to have two secretaries—do you think if the religious considerations did not rule the business one secretary would be adequate to do all the secretarial work?—I think one secretary could do all the secretarial work, but of course if one did it, it would be necessary to have an additional clerk, because the secretaries do a great deal of writing, and if there were

only one secretary he would have to be relieved of anything in the nature of clerical work. Of course that would be a substantial saving of the Parliamentary vote.

26,897. Do you think it at all possible, having regard to the character of your Board, that anything like an allocation to deserving cases of one religion of funds contributed by another religion could be applied?—I don't think it could.

26,898. You have your accounts audited every year?—Yes, but I don't think that is the point. Really the question is one of establishing the confidence of the country in the Board. It seems a curious thing, but I know that when Mr. Sweetman was appointed joint secretary to the Board about three years ago, the question was raised as to the necessity for a Catholic and a Protestant secretary, and the matter was discussed at a Board meeting. The view of the members of the Board at which there were clergy of the different denominations present—I cannot remember exactly the number—was that the Board would not retain the confidence of the country if they had not a Protestant and a Catholic secretary.

26,899. If, for instance, the Government of the day were to pass an Act establishing a public trustee in Ireland, and making him responsible for the administration of all these trust funds, would the public consider of moment whether the public trustee was a Catholic or a Protestant?—We do a great deal of other work besides administering this money. We are like a small Court of Chancery for trustees for charitable purposes, and we can do for them for nothing what ordinary people would have to go to law over and pay lawyers. We can draft schemes and authorise leases, sales and so on, and we do a great deal of other work besides the work of a public trustee.

26,900. Have the orders you make got to be verified or approved by any judicial authority?—No.

26,901. Then do you submit orders to your legal advisers in every case?—The secretaries are both barristers, and must be barristers, and are supposed to be able to look after the law.

26,902. Are you both practising barristers?—No. We were practising barristers, but we are not now. We are appointed under schedule B, and we are supposed to have the qualification of practising barristers. We are therefore expected to assist the Board in matters of that kind, to see that their orders are carried out in a proper legal way.

26,903. Have you ever had litigation with people who brought you into court?—No, not as defendants.

26,904. (*Mr. Boutwood.*) Is there any appeal from your schemes?—No. We have two sets of schemes. One are orders amending schemes framed by the Endowed Schools Commission. Then there are schemes framed under 34 and 35 Victoria, chapter 102, similar to the schemes framed by the Charity Commissioners in England, and in neither case is there any appeal from our orders.

26,905. (*Sir Donald MacAlister.*) Are the schemes laid before Parliament?—No.

26,906. (*Mr. Graham Wallis.*) Has there been any such transference of the educational work of your body to an educational body such as has taken place in England?—No.

26,907. A large part of your work is educational?—A good deal is educational.

26,908. With regard to the work in the office, how is it divided?—I take anything that is educational, and so far as religion is concerned we don't draw any distinctions. I take just as many Catholic cases as my brother secretary. We take them quite indiscriminately, but of course, if the question arose of a moot point of religion, we should consider ourselves bound to consult the secretary of the other religious denomination.

26,909. Then if the two of you disagree there is no appeal from you except to the Board?—We are not supposed to have any authority except through the Board. We don't make orders. It is the Board makes the orders.

26,910. The Board must always have your recommendations before it when it meets?—Quite so.

17 February 1913.]

Mr. ARNOLD GRAVES.

[Continued.]

26,911. Supposing you disagree on some question which is not religious, as to what recommendations should be laid before the Board, what procedure would be taken?—As a matter of fact it has not occurred in my time. We have always worked perfectly harmoniously. I have no recollection of any case in which there was a difference of opinion before the Board, but I take it what would happen would be that the Board would hear both secretaries.

26,912. Is it the case that during the whole period of yourself and your colleague there never was a case where you have taken different views?—Never.

26,913. Your views on all the administrative questions coming before you are identical?—If I take up a case my brother secretary leaves it in my hands. If he takes a case up I leave it in his hands. It is only in the case of his asking my assistance that I should become acquainted with the details of his case.

26,914. When a matter is laid before the Board you don't know anything about the recommendations of your colleague till it appears?—Unless he consults me. My present colleague has only been there in office a short time, and he consults me in cases of importance, because his experience is limited.

26,915. (*Chairman.*) So that the Catholic secretary may deal with a Protestant matter, and the Protestant with a Catholic matter without any objection on the part of one or the other?—Yes.

26,916. So that common sense redresses the extravagance of sectarian suspicion?—That is so. As a matter of fact a point of religion hardly ever arises.

26,917. Then how do you decide as to who should take the cases?—It just depends on the state of the business. If my list is full and my brother secretary's list is not full, he takes up the cases.

26,918. He goes on and takes the next ten cases, say?—Yes.

26,919. How often does the Board meet?—Once a week during the law sittings.

26,920. What is a quorum of the Board?—A quorum is three.

26,921. Do you always obtain a quorum?—I suppose we have about three failures in the year.

26,922. Who appoints your officials as clerk and book-keeper, and assistant clerk. All appointments ought to be made under section 7 of 7 and 8 Victoria, chapter 67, which provides that appointments should be made by the Lord Lieutenant.

26,923. Do you send in recommendations in these cases?—No. As a matter of fact, if I take the staff right through, I can tell you how they are appointed. The two secretaries were appointed by the Lord Lieutenant, the accountant was appointed by the Lord Lieutenant on transfer. We have one assistant clerk. He was originally an allowance to the secretaries for clerical assistance. He became an excellent official and became necessary to us, and the Board applied to the Treasury to have him put on the permanent staff. The Treasury after considerable hesitation appointed him as assistant clerk.

26,924. (*Mr. Graham Wallas.*) It is not unusual in Ireland where there is a vacancy for a permanent clerkship, that a temporary clerk can be found in that office?—Oh, yes.

26,925. (*Mr. Boutwood.*) Do you pay income tax on your endowments?—Charities don't pay income tax in Ireland. Where it is a case of dividends, the income tax is stopped in the first instance, but we recover it periodically. We have not a large staff, and cannot afford to recover it every year, so we recover it every third year, and then remit it to the administrators. Income tax is not deducted from Consols.

26,926. How many schemes and orders of different sorts do you make on an average?—I should say probably half a dozen schemes under the Educational Endowments Act, perhaps half a dozen others, I should think not more, and about 440 orders in the year.

26,927. Then virtually you and your brother secretary do those things yourselves I suppose?—What do you mean?

26,928. In this statement we have a clerk who is a book-keeper, and an assistant clerk—who actually drafts

the scheme?—I draft it, or else I dictate it to the typist, but the Board makes the order.

26,929. In making your schemes are you subject to any sort of limitation or can you do just what you like?—With regard to the schemes framed under the Educational Endowments Act, 1885, they must be under the Act, and there must be nothing in our schemes contrary to the Act, and they must be made on the application of the governors.

26,930. Then have you to make a scheme for eleemosynary charities?—Yes, but for eleemosynary charities our schemes must be *cy pres*.

26,931. Is it under the statute?—Yes, under section 6 of 34 and 35 Victoria, chapter 102, it is provided that whenever there shall be any charitable donation or bequest not exceeding in amount the sum of 300*l.*, or any case in which there shall be payable for a charitable or pious purpose an annual sum not exceeding 30*l.*, and it shall be found unlawful or impracticable to apply the same according to the direction or intention of the donors, it shall be lawful for the Commissioners to apply or to order and direct the application of the sum by the trustees in whom the same may be vested, or the person or persons whose duty it shall be to pay the same to such charitable or pious uses as they shall judge to be best having regard to the directions and intentions of the donor. So that we cannot work our wicked will, as we must apply the funds *cy pres*.

26,932. Where do you get your definition of charity from? As far as I understand, the English position is this, that there is no formal definition of charity in the English law, but there is a preamble in the Act of Elizabeth, and that preamble is regulative?—It is exactly the same in Ireland as in England.

26,933. (*Chairman.*) Who takes the place of the clerk and book-keeper when he goes on his leave?—No one, his books are closed.

26,934. Does he get a fair amount of leave in the year?—He gets six weeks.

26,935. And you don't find any inconvenience?—He manages to keep his books very well.

26,936. Who audits these books?—The Local Government Board.

26,937. (*Sir Donald MacAlister.*) You say his books are closed, and yet he manages to keep them in shipshape?—Well, there is no entry made in his absence.

26,938. Do you present a report to Parliament every year?—Yes.

26,939. Does it go through the Lord Lieutenant and the Chief Secretary?—It goes to the King. Our commissioners are appointed by the King. I think we are the only Board in Ireland in which the commissioners are appointed by the King. The report goes to the King, and we send copies to the Houses of Parliament. As a matter of courtesy we send them to the Lord Lieutenant. As a matter of fact, although it is ancient history now, when the first Charity Act for Ireland was passed, it was the contentious measure of the session, as it was thought that we were going to oppress Catholic charities. It was found necessary to establish confidence in the country by showing there would be no Castle jobbery, and accordingly, I believe, the appointments were made by the King.

26,940. When you say you send your report to the King, is it through the Home Office in London?—Yes.

26,941. And not through the Chief Secretary's office in Dublin?—As a matter of fact, except appointing the commissioners, the Home Office and the King do not interfere at all. All our other communications are with the Chief Secretary and the Lord Lieutenant. Even our communications with the Treasury have to be communicated through the Chief Secretary.

26,942. Then you are not independent of the Treasury?—Oh, no, we are not.

26,943. And you are not independent of the Chief Secretary's office?—Not entirely. I take it, as a matter of course, the Lord Lieutenant nominates the commissioners to the King.

26,944. Through what channel would the Lord Lieutenant's suggestion as regards the appointment of a commissioner get to the King—is it through the Secretary of State to the Home Department?—Oh, no; through the Lord Lieutenant.

17 February 1913.]

Mr. ARNOLD GRAVES.

[Continued.]

26,945. Direct to the King?—I don't know what the Lord Lieutenant would do. I know I have been communicated with myself, personally, on the subject, and have interviewed an Under-Secretary on the subject. I have been consulted as to names, and my Commissioners have occasionally been asked to suggest names to the Lord Lieutenant, but, as a rule, the appointments are made without consulting the Commissioners.

26,946. And the machinery for the suggestion of an appointment would be the machinery of the Home Office?—Yes.

26,947. Have you any other relations with the Chief Secretary's office than those I have mentioned—I understand your relations are to send your annual report out of courtesy to the Chief Secretary's office for the Lord Lieutenant, and that communications with regard to the appointments on the staff go through the Chief Secretary's office?—Yes.

26,948. Are there any other relations?—I think not. We are only an administrative body, so far as paying interest on the funds in our hands. Our work is mainly judicial, framing schemes, and making orders, and that being so we are left largely in an independent position.

26,949. I notice that as regards the Chief Secretary's office, it is mentioned that there are certain bodies which were in a certain sense under the jurisdiction of the finance division of that office?—We are.

26,950. You come under that?—Yes.

26,951. So that you only come into the Chief Secretary's office in regard to the vote for the expenses of your department?—I think so.

26,952. And as secretary you have not had any other occasion, as it were, to consult the Chief Secretary's department, or refer matters to it?—No, and I have been there over 28 years.

26,953. Is there any other body or department in Dublin which performs similar functions to your Board?—I don't know what you mean by similar.

26,954. Educational endowments?—The Educational Endowments Commissioners, yes, they do perform some similar functions.

26,955. I presume they have to make schemes?—No, they don't make schemes. They can't make schemes. When they want to have schemes framed for their schools they have got to come to us and we frame them. We have framed several schemes for them.

26,956. They carry on the administration of schemes which you must frame or vary?—Yes.

26,957. Hospitals and charities is another department I observe which is under the accountant's department of the Chief Secretary's office—a service which is apparently under the Chief Secretary's department, because there is a vote for its administration—is that anything like yours?—That could not be our vote.

26,958. It seems to be another department—the word "charities" occurring in it made me ask whether there are other organisations in Dublin performing functions similar to yours?—I think there is some Government grant to the Dublin hospitals, but I am not quite sure.

26,959. "Miscellaneous, charitable, and other allowances, 16,883*l.*," that has nothing to do with your charity?—Nothing to do with us. I rather think there is some Government grant to the Dublin hospitals.

26,960. But it is not one of the things you administer?—No.

26,961. Supposing it were decided on grounds of economy or simplification of organisation to diminish the number of separate individual Boards in Ireland, have you any idea as to what your particular department might be most suitably combined with?—I can't say: I should not like to answer that question off-hand. I have not given it consideration, and this is a very important Commission, and I should not like to give a casual reply to such an important question. If you wish me to consider the matter at leisure and write to you on the subject I shall be prepared to do so.

26,962. It is one of the questions we shall have to consider, and any assistance from an expert will be very valuable to individual members, at least, of the

Commission?—Do you wish me to write you on the subject?

26,963. If you have any views on the subject you wish to put before us I shall be very grateful. With regard to the educational bequests that you have, I understand as far as they are concerned that almost half of your work in framing the schemes is devoted to educational endowment?—Yes.

26,964. Do you come in contact with any other educational bodies in Ireland on that?—No.

26,965. National?—As a matter of fact if I am drafting a scheme affecting primary schools, my practice is to communicate with the secretary of the National Board, and ask him to consult his inspector in connection with the district where the school is, and ask for his report on the subject and his suggestions. That assists me very much, but I am not in any way obliged to do this. It is only for the purpose of assisting myself in arriving at the right conclusion and getting the best information. In the same manner, if I am drafting a scheme for an intermediate school, I have on many occasions consulted Mr. Brady or Mr. Johnston, the Assistant Commissioners of the Intermediate Education Board.

26,966. That illustrates, I think you will see, the point I was trying to make. You have to make an educational scheme for a particular locality, and in order to administer the endowment properly, as you have no inspectors, and no means of ascertaining the local conditions or checking what may be reported, you have to depend on another Board to give you any information they may choose to give you?—Yes.

26,967. And you are perfectly free to use it or not?—Yes.

26,968. There is no co-ordination, except what happens by courteous collaboration of a different department?—No. The difficulty of transferring our power of framing schemes, we will say, to another Board, would be this: You have not got one educational department here in Ireland as you have in England. In England you have an education department which takes charge of primary and, to a large extent, of intermediate education, and therefore that is a Board which can frame any educational scheme. Here, in Ireland, you have got the Commissioners of National Education; you have got the Commissioners of Intermediate Education, and you have got the Agricultural Department, and there is no co-ordination between them. Therefore if you were to transfer our powers of framing schemes to someone else, you would have to split it up into three.

26,969. They might draft schemes, even if there was a quasi-judicial body like yours to approve of them?—That is so.

26,970. Having the means of getting local knowledge they might draft schemes for judicial approval?—Yes.

26,971. And, perhaps, they have better means of getting to know what is wanted on the spot?—I agree with you that they would have a better knowledge of educational requirements of the country than we would have, and if there was a single education department for Ireland I should be very glad to see that power of framing schemes handed over to them. But then, of course, that would not get rid of the ordinary schemes for charities—non-educational charities. I am speaking only of education, because there are so many and diverse educational authorities in Ireland. I was trying to speculate how they might be co-ordinated.

26,972. (Mr. Graham Wallas.) Have you power to hold local inquiries?—No, we have not, and we ought to have the power. Frequently cases come before us, and we have simply got to say, "We can't deal with this question because we can't examine witnesses on oath." There is a difference of evidence—one man says one thing and another another, and we have simply got to let it slide.

26,973. You have to form a rather mechanical rule, and anything you give for the benefit of the poor with out distinction is divided between the two clergymen?—We don't divide it between them. We send it to them as joint administrators.

26,974. So that if there is anybody in the village who has not made up his mind as to which body he belongs, or who belongs to some third body, he would be

17 February 1913.]

Mr. ARNOLD GRAVES.

[Continued.]

included?—In the north of Ireland, where there are a considerable number of Presbyterians, we sometimes join the Presbyterian minister, but it is not a general practice.

26,975. (*Chairman.*) You have had a very considerable experience during the time you have been secretary of this body, and as a result of your experience are you satisfied that the actual working of your Board is, in fact, an illustration of the amicable relations of Catholic and Protestant in business matters, and that the suspicion pointing the other way, which traditional prejudice in Ireland conjures up, is, in fact, a baseless suspicion?—Absolutely, and I have been secretary to the Board for 28 years. I may mention that we have power to appoint religious committees but we have never done it. It has never been found necessary.

Sir WILLIAM THOMPSON, called and examined. Mr. G. A. NEWNHAM was in attendance.

26,978. (*Chairman.*) Sir William Thompson, you are Registrar-General?—Yes.

26,979. Will you kindly give us a sketch of the organisation at work for the registration of statistics in Ireland. Please begin with the local unit of area, and work up to your central office?—For births, deaths, and for Catholic marriages the area corresponds to the dispensary district and the dispensary doctors (I might say 99 per cent. of them) are the local registrars. The dispensary districts of each Union are grouped into one area, and the clerk of the Union is our superintendent-registrar. Well then, for other marriages the areas are different, they correspond to the Unions themselves. The system of registration is this: the local registrar attends on certain days in the week, depending upon the density of the population. In a city like Belfast they would probably attend the office every day, and in rural districts once or twice a week. At the end of the quarter they bring their registration books to the superintendent-registrar who examines the books. The registrar makes copies, and the superintendent examines these and sends them to my office. They are then checked again in my office. There are usually two or three men set apart for examining these so as to find out from the beginning any discrepancies, as often a slight discrepancy arises. The person giving the information may not be the legal person. The statute provides that certain people will be the informants, and if these copies are found to be wrong communication is at once set up with the registrar.

26,980. You have thus brought the books locally compiled into your office. Are all the materials you have got to work on, these books that have been sent to you by the local registrar?—Yes.

26,981. Are there any others?—These are our only records.

26,982. I want to know the character of the information which reaches your office from the local areas. Superintendents or the dispensary doctors deal with births, marriages and deaths, and with nothing else?—Yes.

26,983. Do you get from them any details of sickness?—No, we don't deal with sickness at all—only the death returns and the birth returns, and also we get returns from the registrar of marriages.

26,984. How is your office organised to deal with the mass of information which reaches you?—The office is divided into three sections. One section is the Administrative Branch. That deals with all the correspondence and the appointment of registrars, and all general questions of administration, especially dealing with marriages. Our marriage Acts are very complicated, and the correspondence concerning the marriage acts is dealt with in that department.

26,985. That department deals with all questions of administration, and all interpretations of Acts?—Yes.

26,985A. What are the other departments?—Another department is the Records Department. All those records sent up from the superintendent-registrars and the registrars of marriages are kept there and examined. They are sent in quarterly, and there is a very full index made from these, so that later on the public can come in and consult the index.

26,976. Don't you find that the common sense of Catholic and Protestant, when they come together to discuss a matter of business, always asserts itself, and that these religious animosities and sectarian prejudices do not enter into ordinary work of business life?—I don't like to speak outside my experience, but speaking from my experience I entirely agree with you, and certainly, so far as my Board is concerned, I have never seen the faintest suspicion of anything like that.

26,977. The public, I fancy, believe that the Protestant secretary only deals with Protestant matters, and the Catholic secretary with Catholic matters, while as a matter of fact they are dealt with indiscriminately by both secretaries as common sense business men, without regard to one creed or another, would deal with them?—That is so.

26,986. Are the original documents sent up to you for preservation?—We don't get the original documents. The original documents are kept in the local Unions, in each of which we have an office and strong-room. We only get certified copies.

26,987. Certified copies prepared on the spot locally?—Yes, and sent on to us by the superintendent.

26,988. When you get these documents you prepare an index?—Yes.

26,989. So that the public can with ease consult it and find out what they want to know?—Yes.

26,990. What is the third department?—The third department is the Statistical Branch. That deals with the tabulation and classification of the causes of death. All the death returns are dealt with in that department. All the medical certificates of death are examined. Periodical returns are published from that branch, the most important of which is the annual report.

26,991. You work up the materials into all these various statistical forms which are published for general information, and they furnish the basis of your annual report?—Yes.

26,992. Do you furnish any other report except such as is based upon these registers of births, marriages, and deaths?—We also furnish an emigration report, and then we also furnish a report on judicial statistics.

26,993. From what source do you get the information for the emigration report?—In different ports where emigrants leave, the constabulary act as our emigration enumerators, and we get returns weekly and then monthly, and publish monthly returns; at the end of the year we publish yearly returns.

26,994. That return shows the number of people who leave the country by emigration?—Yes.

26,995. Does it state the countries to which they emigrate?—Yes.

26,996. And gives details of men, women, and children?—Yes.

26,997. Does it give details of religion?—Yes, we get that, but we don't publish it. It is for private information.

26,998. And the locality from which the emigrants come?—Yes.

26,999. Do you get similar returns regarding immigrants coming into the country?—No, that is just our weak point. We have a complete system as regards emigration, but as regards immigration we have got none.

27,000. Is there any intention of enlarging your operations in that direction?—Well, I have been pressing it because it is important in estimating our population. We have the number of births and the number of deaths and the number of emigrants, and from these we estimate the population annually. We would estimate it nearer the mark if we had a return of immigrants. But, as a matter of fact, last census (1911) for the whole country, we were less than 25,000 out in our estimate.

27,001. Would that information as to immigrants be of any use except in regard to making more accurate your estimate of the population?—It would, in my opinion, from a public health point of view, in this way. Quite a lot of sick people are deported, especially

17 February 1913.] Sir WILLIAM THOMPSON. (Mr. G. A. NEWNHAM was in attendance.) [Continued.]

- from the United States and Canada, and if a return was made of these saying they were deported, to this country say, for tuberculosis—which the majority of them are—they could be traced.
- 27,002. If you don't wish to answer this question, please don't answer. Do the police keep a record of the immigrants landing in the country?—Not that I am aware of.
- 27,003. Besides your report on emigration and your series of reports with regard to births, marriages, and deaths, you publish no reports, I understand, regarding statistics of health?—No.
- 27,004. Do you publish any other reports?—We do, a judicial report.
- 27,005. What is the meaning of that?—From returns furnished to us from the Chief Secretary's office we prepare a report of judicial statistics, civil and criminal. Certain returns are sent to us, and we report on them.
- 27,006. What is the character of the returns sent to you by the Chief Secretary's office. For example, are they statistics of the gaol population?—Some of them deal with the gaol population, others with bankruptcy, and others with the number of cases heard in different courts. They are, roughly speaking, divided into civil and criminal cases.
- 27,007. Am I right in thinking you deal with these in a different way from the other statistics which reach you from your own organisation?—Yes.
- 27,008. The Chief Secretary's office makes use of you as a statistician to prepare tables and make inferences from certain figures which they send you?—Yes.
- 27,009. And these figures are so diverse as statistics of gaol population, bankruptcy, and other judicial figures?—Yes.
- 27,010. So that you fulfil more than one function?—Yes, in preparing that report we do.
- 27,011. You are not only Registrar-General of births, marriages, and deaths, etc., but you are also statistician to the Irish Government?—Yes; and in addition we publish annual returns about vaccination.
- 27,012. From whom do you get materials for the vaccination reports?—From our registrars.
- 27,013. Then, do you control the vaccination operations?—No, we only get returns. The Local Government Board control the operations.
- 27,014. You tabulate these returns?—Yes, we tabulate the returns.
- 27,015. Do you publish the annual report on them?—Yes.
- 27,016. Do you publish periodical reports as well as an annual report?—Every ten years we publish what is called a decennial report.
- 27,017. But do you publish reports at shorter intervals?—Yes, we publish weekly reports, monthly reports, and quarterly reports.
- 27,018. On what?—We publish weekly reports of births and deaths in the principal urban districts.
- 27,019. Now we come to the office establishment shown in page 44. You are Registrar-General?—Yes.
- 27,020. When were you appointed?—I was appointed on 1st December 1909.
- 27,021. Under what method?—I was appointed by the Lord Lieutenant—by warrant of the Lord Lieutenant.
- 27,022. Do you hold directly under the Crown?—Yes. If, as I presume it does, in this country the Lord Lieutenant's warrant corresponds to that of the Crown in England.
- 27,023. Are you under section 4 of the Superannuation Act?—Yes, section 4 of the Act.
- 27,024. Do you get an addition of years to your pensionable service?—No.
- 27,025. Previous to your appointment you were in medical practice in Dublin?—Yes. I was clinical physician to one of the hospitals, and consulting physician to other places.
- 27,026. You were an independent medical practitioner?—Yes.
- 27,027. Well, then, the secretary (Group I.)—he was appointed under section 7—when was he appointed?—He was appointed in April 1909.
- 27,028. What was he before his appointment?—He was a solicitor, a practising solicitor.
- 27,029. So he was brought into the Government service from outside?—Yes.
- 27,030. (Sir Henry Primrose.) Any special qualifications?—No, the ordinary legal qualifications.
- 27,031. (Chairman.) To whom did he succeed in the post?—He succeeded Mr. O'Connor, who had been appointed, but who contracted typhoid fever and never took up his post.
- 27,032. Mr. O'Connor never joined?—No.
- 27,033. Then who had held the post before the present incumbent?—Mr. Kelly.
- 27,034. Did he hold it for long?—For a comparatively short time—about three years.
- 27,035. Had he been previously in the Government service?—He had been in the office.
- 27,036. He was promoted in the office?—Yes.
- 27,037. Was there no officer in the office fit for this post, that a gentleman from outside was brought in?—Well, the appointment was made before I came into office.
- 27,038. If you don't wish to speak about it I will not press you. What I wish to know is whether the vacancy might not have been effectively filled by promotion in the office; whether it was absolutely necessary to bring a man in from outside?—I scarcely feel able to answer that question—my predecessor was in office at the time.
- 27,039. Then you have a Medical Superintendent of Statistics—has he held the appointment long?—He has 13 years' service.
- 27,040. Is he a qualified medical man?—Yes, a qualified medical man.
- 27,041. Is he a whole time officer?—Yes, a whole time officer.
- 27,042. Then the Index Compiler?—That is a survival of an obsolete class. He is the only one in the office, and on his retirement in a few years his place will not be filled up.
- 27,043. Then you come to Group V. There are two superintendents, two minor staff clerks, and one minor staff clerk. What is the business of each superintendent?—Each superintendent is in charge of a different section. One superintendent is in charge of the Administrative Branch, the other of the Record Branch, and Dr. Falkiner is in charge of the Vital Statistics Branch.
- 27,044. Who is Dr. Falkiner?—He is the superintendent of the Vital Statistics.
- 27,045. That is the gentleman we have been talking about?—Yes.
- 27,046. He supervises medical statistics?—Yes, and the issue of all the reports.
- 27,047. One superintendent has control of the Administrative Branch?—Yes, and the other has control of the Record Branch.
- 27,048. Then the minor staff clerk: He supervises the second division clerks, does he?—He is assistant to the superintendent. The old division was superintendent and deputy-superintendent. Then there was some change made, and the name was changed to minor staff officer.
- 27,049. You have 14 second division clerks?—Yes.
- 27,050. And they all came in by open competition with the exception of one, who was appointed after a qualifying examination?—Yes.
- 27,051. I suppose he is an old officer?—He was abstractor, and was promoted from being an abstractor.
- 27,052. That is in regular order?—Yes.
- 27,053. You have five assistant clerks?—Yes.
- 27,054. How did they get in—did they pass an examination?—Open competition.
- 27,055. From among whom?—From outside.
- 27,056. You have no boy clerks?—We have no boy clerks.
- 27,057. Then, I suppose, these assistant clerks must have been recruited from outside?—From outside.
- 27,058. What style of examination did they pass?—It is the competitive examination for the assistant clerks (abstractor) class.
- 27,059. Was it held by the Civil Service Commissioners, or by a local body in Dublin?—It was held by

17 February 1913.] Sir WILLIAM THOMPSON. (Mr. G. A. NEWNHAM was in attendance.) [Continued.]

the Civil Service Commissioners. It is a class of examination held like the second division clerks' examination, but different.

27,060. Are they all Irishmen, or are there any Englishmen?—Not among the assistant clerks,

27,061. They may have been recruited in England from Irish boy clerks. There are many Irish boy clerks in London—they may have been recruited there and sent over there?—I don't think any of our staff were in England.

27,062. Have you got a contented staff?—Personally our relations are very cordial.

27,063. I do not doubt that, but are your clerks satisfied with their position?—They handed me a statement sent into the Commission, from which it would appear, as regards the administration of the office, they are not satisfied.

27,064. What is the ground of their dissatisfaction?—Well, I have the statement before me, and in paragraph 3 they say—

27,065. What class of clerks present this memorial?—Second division clerks. They say: "The work in which we are engaged is, we submit, of a specially important character and requires knowledge of a highly technical and specialised order. The complex Registration Acts, especially those relating to marriage, with the many books of regulations, rules, etc., issued under these Acts, are very intricate and indeed even puzzling. It requires a keen intellect and great attention to detail to administer these Acts accurately and efficiently." Well, that is really far-fetched, because as a matter of fact they have nothing to do with the administration. It is the superintendents or their deputies and the secretary and myself who deal with administration.

27,066. Do these second division clerks get their promotion to the position of minor staff clerks?—Yes, and go on to superintendents and inspectors.

27,067. You have two superintendents here. Were those two formerly second division clerks?—Yes.

27,068. And the two minor staff clerks were second division clerks?—Yes.

27,069. And the one minor staff clerk—was he a second division man?—Yes, and our inspector was also of the second division.

27,070. So that you have five higher appointments for 14?—As a matter of fact, six—the inspector comes down in Group IX. He was a second division clerk also.

27,071. So that in your judgment there is a fair run of promotion for them?—Yes.

27,072. I notice here you have no Class I. men—your secretary is a Class I. man, but he did not pass in by competitive examination?—No.

27,073. Do you think you want in your office the intellectual qualifications which passing the Class I. examination is supposed to give?—I don't think so in my office.

27,074. You think you are satisfactorily staffed?—Yes, satisfactorily officered. I might say, perhaps, we are an exceptional case. All our second division men have comparatively short service. The senior man has just under 12 years.

27,075. They have got fairly rapid promotion in their grade?—Yes, they have in their grade.

27,076. What pay is the senior man of all drawing—the senior second division clerk?—He is drawing 170*l.*

27,077. He has got a long run before him yet, hasn't he?—Yes, 130*l.*

27,078. (Sir Henry Primrose.) How is it he got to that in 12 years?—He got a special increment.

27,079. (Chairman.) When they get up to the maximum of 200*l.* will they not be able to go on to 300*l.*?—Yes, they will go directly on to 300*l.*

27,080. And the highest, the most senior of them, has only got 170*l.* yet?—That is so.

27,081. He has got a long run before him?—Yes.

27,082. He got his increments of 10*l.*?—Yes.

27,083. Will the 200*l.* to 300*l.* men get increments of 10*l.* or 15*l.*?—10*l.*

27,084. (Sir Donald MacAlister.) As to the second division clerks, their grievance seems to be that none of them recently has been appointed Registrar-General or

Secretary or Superintendent?—Well, there are two superintendents who were second division clerks.

27,085. They say here, "Lately the three most important of these posts have been filled from outside the office and this has affected us in two ways. It reduced our prospects of promotion very materially," and so on. I take it these posts had been filled up from outside?—I might point out, the office is constituted as it was when the signatories joined it.

27,086. In your opinion is there anything very substantial in these alleged grievances?—No.

27,087. (Mr. Boutwood.) What is the meaning of that paragraph—"Lately the three most important of these posts have been filled from outside"?—I came from outside; the Secretary has been brought in from outside; and the Medical Superintendent of Statistics has been brought in from outside.

27,088. (Sir Donald MacAlister.) These were all professional men, such as can be got only from outside?—Yes, professional men.

27,089. (Chairman.) Am I to understand that the secretary must necessarily be a lawyer?—Not necessarily.

27,090. The present secretary is a lawyer?—He is.

27,091. Do the duties of secretary make it desirable that he should have experience as a solicitor?—Some of the laws, such as the marriage laws, are so complicated that it is considered better to have a legal man in the office.

27,092. Is he the only person of legal experience in the office?—That is all.

27,093. Then, in a sense, there was a justification that he should have professional experience?—Yes; prior to this arrangement frequent reference was necessary to the law officers of the Crown. These complex marriage questions are constantly cropping up.

27,094. And the Superintendent of Medical Statistics must be a medical man?—Yes, he must, necessarily.

27,095. And as the work of the Registrar-General is largely medical, isn't it desirable he should have medical experience?—In Ireland the Registrar-General has nearly always been a medical man.

27,096. So that whenever these three posts have been filled up otherwise than by second division clerks, there are substantial reasons for appointing from outside?—Yes.

27,097. (Sir Henry Primrose.) Was there any particular reason why these three deputy-superintendentships, which they mention further on, and which in future are to be minor staff clerkships, should not have been given, or some one of them, to a second division clerk?—The positions are all held by second division clerks.

(Sir Donald MacAlister.) It is the name that has been abolished, not the office.

27,098. (Sir Henry Primrose.) There are five of these—two superintendents, two minor staff clerks, and one minor staff clerk, and they were all added to Schedule B—you have got them in this return. I don't quite understand that; who are these five gentlemen?—They were second division clerks.

27,099. Then that is all right?—All the higher positions in the office are filled by second division clerks, except that of the Registrar-General, the Secretary, and the Medical Superintendent of Statistics.

(Sir Henry Primrose.) They seem to imply these men also had been brought in from outside.

27,100. (Sir Donald MacAlister.) It is suggested that three higher posts were abolished, viz., the deputy-superintendents. These offices were then called minor staff clerkships, and filled by second division clerks?—Yes; that applies to the whole Service generally, and not to this office in particular.

27,101. (Sir Henry Primrose.) You mentioned that you have finished the business of the census. During that time you had a large number of temporary clerks brought in?—We had; it is necessary at each census to bring in a large temporary staff.

27,102. How were they appointed?—They were appointed first by nomination of the Lord Lieutenant—that is the male and female clerks—and then a competitive examination was held by the Civil Service Commissioners. The boy clerks were appointed simply by

17 February 1913.] SIR WILLIAM THOMPSON. (Mr. G. A. NEWNHAM was in attendance.) [Continued.]

open competition. The male and female clerks were certificated after the passing of their examination, the boy clerks were not.

27,103. The certificates they were given by the Civil Service Commissioners—did they certify them merely for that particular employment?—Merely for that particular employment.

27,104. They were not certified as boy clerks in the Service, only as boy clerks for that particular purpose?—Yes, for that particular purpose.

(The Secretary.) Their proper title is boy assistants—not boy clerks.

27,105. (Sir Henry Primrose.) What has happened to all these people?—As the work neared completion they were dispensed with. I have made a return on that. We dealt altogether with 67 men clerks. Out of that places were got for 55, and I returned the other day to the Labour Exchange, when they asked me, the names of six of these assistants, and they could only get two of them, the other four had probably got employment.

27,106. These 55 that have got other places, have they had a further examination or only the certificate?—Some have entered the Civil Service by competitive examination. Some of them have become abstractors.

27,107. Having passed an examination and been certified for a special service, viz., the Census service, have they now, some of them, got into the public service permanently, simply on the strength of that examination?—Well, quite a number of them got into the Insurance Commissioners' office and the Labour Exchange, and some of them have, I think, got permanently placed, but it is expected that the majority of them will get permanently placed.

27,108. Probably those who have gone into the Insurance have only been taken on temporarily?—Only temporarily for the present.

27,109. And very likely the same for the Labour Exchange?—The same for the Labour Exchange.

27,110. How many women clerks had you for the census?—We had 15 such posts—we dealt with 18 persons, and out of that 18 we know 12 have got placed since.

27,111. Also with the Insurance?—Yes, Labour Exchange and National Insurance took the greatest part of them.

27,112. Do you find their work satisfactory?—Very satisfactory.

27,113. What kind of work do you put them on?—Work on the census means picking out certain information from certain schedules or from certain returns. The work is divided into different sections such as ages, education, religion, etc. After this material is extracted statistical tables are compiled.

27,114. Do you find them quick at that sort of work?—Yes.

27,115. And your men were doing the same work?—The same work.

27,116. Was there any marked difference between the work of the men and the women?—I don't think so.

27,117. You didn't find the women quicker than the men, or the other way?—No, I don't think so. I think they were about equal.

27,118. (Chairman.) Do you find the women easier to deal with or more difficult?—Well, I must say we did not find any of the staff difficult to deal with. They were a very satisfactory staff.

27,119. (Sir Henry Primrose.) They were not brought from other parts of the country?—Probably 90 per cent. of the staff were Dublin people.

27,120. (Chairman.) Were the women young or old?—The age limit is from 18 to 30. The average age was about 20 to 24. I issued a memorandum to all candidates for census clerkships in which it is specially mentioned that the work is of a temporary nature during a special period, and at the bottom it says that it is to be distinctly understood that the business of the Census Commission is of a temporary character, and the number of clerks and task workers will be gradually reduced as the work progresses; but, as far as possible, I arranged that the staff should not be so large as at former censuses, so as to give them a longer time to work.

27,121. What rates of pay had the lady clerks?—The lady clerks had the same as the men clerks, 4s. a day, or 24s. a week. They could go up to 5, 6, or 7s. per day, but only in exceptional cases. The great bulk of them had 4s.

27,122. The rate is the same for men and women clerks?—Exactly the same.

27,123. What do you pay a woman superintendent?—I gave her the highest pay we could, 7s. a day.

27,124. Did she appear to be a person of higher age?—Yes. She had been connected with the two previous censuses. This was her third census.

27,125. Do the women work separately from the men?—Yes, in a separate room, practically a separate building.

27,126. Could you have done the whole work with women clerks?—The accommodation would be insufficient.

27,127. Apart from that, if you had suitable accommodation would you have been satisfied to have worked with a female staff, of course with yourself and the secretary, and so on, at the head directing?—I think on the whole I prefer a mixed staff.

27,128. (Mr. Boutwood.) What was the scale of pay for the three deputy-superintendents that were abolished?—They went up to 350l., the same as the minor staff clerks.

27,129. The minor staff clerks seem really to be identical with the second division scale?—Yes.

27,130. That means that unless a man gets it fairly early it is a matter of indifference to him whether he gets it or not?—That applies to all the Service, not to my office particularly.

27,131. Suppose a second division man did not get one of these minor staff posts fairly early, and stayed on until he was getting 200l. or 250l., what has he in front of him in your office?—First, the three minor staff clerks.

27,132. They are no good to him?—After that the two superintendentships and inspector.

27,133. Take that paper signed Duggan, Murphy and McCraith; is that paper from some of the men about whom you have been explaining?—In our office we have six temporary people, four ladies and two men. I think that is what you are referring to.

27,134. What is Mr. Duggan, he calls himself H.M.C.S.—by examination?—I understand he is in the Public Record Office. He was a temporary assistant. Now he has become a permanent assistant; but he is honorary secretary to the Irish Temporary Clerks' Association.

27,135. In the estimates you have a sum of 1,225l. for copying. Are temporary people paid out of that?—Yes.

27,136. (Mr. Graham Wallas.) How do you regard these temporary people who are paid out of the 1,225l.?—They were here when I came here. My idea is that when vacancies occur they should not be filled up with temporary people, but that permanent people should be appointed.

27,137. You have no wish for temporary employment?—No.

27,138. You do not intend in future to appoint any such temporary people to what is really the permanent service of the office?—No.

27,139. You mention in your memorandum about your ordinary registration work, that you superintend 2,700 local officers?—Yes.

27,140. You have stated that among them are practically all the dispensary doctors and all the clerks of unions?—Yes.

27,141. What proportion of the 2,700 is made up of those two classes?—There are about 160 clerks of unions, and nearly 900 medical officers. There is a deputy to each one. Every superintendent-registrar and registrar must have a deputy to take his place if he is ill. Then we have the registrars of marriages and they also must have deputy-registrars.

27,142. How are these deputy-registrars appointed?—They are nominated by the registrar and approved by me.

27,143. How do you satisfy yourself as to their qualifications?—There are certain query sheets which

17 February 1913.] Sir WILLIAM THOMPSON. (Mr. G. A. NEWNHAM was in attendance.) [Continued.]

come before us which have to be filled up with answers to questions.

27,144. When the man gets his post, does he become practically permanent?—No. If the chief vacates his office the deputy loses office.

27,145. Do you find the system satisfactory?—On the whole it is.

27,146. You have no means of knowing how the deputy is chosen?—No. The deputy must comply with certain general conditions. Then we have our inspector going round to these places, and he reports both on the registrar and on the deputy-registrar.

27,147. Practically this post, given qualifications, is in the patronage of the registrar?—Quite so.

27,148. The only women employees in your office are temporary?—Yes.

27,149. Are they practically permanent appointments?—Some of them have been there a great number of years. One has been there for 22 years.

27,150. Have you ever considered whether it would be desirable to employ women in the permanent service of the office?—If a vacancy occurred in the present temporary staff that would be a consideration, because they do all the shorthand, typing, and that sort of thing.

27,151. There is a class of permanent shorthand typists, why not employ that class?—Yes.

27,152. If a vacancy for a typist occurred, would you employ a permanent woman typist?—I rather think so. My idea would be to fill the office with a permanent official if the vacancy was temporary.

27,153. Have you thought whether it is desirable to have woman clerks in your office?—I have not considered that. Some of these temporary people are doing clerks' work. They are not altogether typists.

27,154. If one of these women were doing clerks' work, would you then consider it desirable that work which is done in other offices by women should be done in your office through the employment of women?—Yes; that would be a matter for consideration as vacancies occurred.

27,155. In England in the last census a great deal of the work was done by using a very ingenious machine; was the same machine used by you?—No, and for this reason: I followed the thing very closely. The machine was not ready until the end of March or the beginning of April. The system of recruiting clerks here is rather tedious and slow. There is nomination by the Lord Lieutenant, and the fixing of an examination by the Civil Service Commissioners, whereas in England the greater part of the temporary staff is got from the second division clerks who have just passed and are not allocated. So we could not afford to wait so long as to know when the machines would be ready. Otherwise we should have had those machines as in England and Scotland.

27,156. If you take any other census you will be careful to use those machines as far as possible?—Yes.

27,157. That would reduce the number of temporary clerks considerably?—Yes.

27,158. (Chairman.) You have got certain representations before you from the Temporary Clerks?—Yes.

27,159. There is a statement here by Mr. Duggan, who is organiser of the Temporary Clerks' Association, that these temporary clerks in your office as census clerks have been selected by an open competitive examination conducted by the Civil Service Commissioners?—That is scarcely correct. They had to get a nomination from the Lord Lieutenant. It is a limited competition.

27,160. There was an examination among them afterwards?—Yes.

27,161. Were they clearly given to understand that their employment was only temporary?—Yes.

27,162. Look at the representations. There is one addressed to the secretary of the Royal Commission on the 8th August 1912. The other, which is dated 7th February 1913, follows on the same lines. The third is undated, but is addressed from Charlemont House, and is on the same general lines. These various representations set forth that there are 175 situations in the office of the Irish Census Commission occupied up to a recent date

by persons who had secured the posts after examination. The examination conducted by the Civil Service Commission was on the open competitive basis, and the competition was fairly keen. The candidates who had successfully passed the literary test were subsequently examined by a medical man appointed by the Civil Service Commissioners. On receiving the certificate of qualification from the Civil Service Commission the clerks took up the duties assigned to them in the Census Office, Dublin. The work in general consisted in dealing with population statistics in connection with the population of Ireland for the year 1911. The satisfactory manner in which these duties were performed by the several clerks was recognised by Sir William Thompson, the Registrar-General for Ireland, and by other prominent officials in the department, and at the meetings of the Commissioners the question of rewarding diligent officers was frequently brought up with very satisfactory results, as several extraordinary promotions and increases of pay were granted. No census clerk was placed on the permanent staff as a result of such rewards, as the terms of their employment state distinctly that the posts are of a purely temporary nature, and that the clerks would be discharged as the work progressed. From the month of July the census work showed a marked diminution, consequently the clerks received notice of discharge, until the whole staff of officials was gradually reduced, throwing 175 clerks out of employment. On behalf of these clerks it is urged that steps be immediately taken to provide suitable work for these certified ex-Civil servants, or to consider in what manner they may be employed in Irish public. That is the representation which is made on behalf of the clerks, and we are told "they do not assert that they have any claims upon the Registrar-General, but undoubtedly they have claims to urge upon the Civil Service Commissioners and His Majesty's Government." Now my question to you is: Were they employed on the perfectly clear understanding that when the work was finished they would be discharged?—Yes.

27,163. Now they make their employment on admittedly temporary work a ground on which to urge a claim on His Majesty's Government for permanent employment?—Yes.

27,164. Legally they have no claim whatever?—That is so.

27,165. Morally, do you think they have any claim on the Government for further employment?—Personally I don't think they have, especially when it was distinctly understood that when the work ceased their services would be dispensed with. I dare say that what they are thinking of is, if there is any other temporary work they should get a preference over people who have not been employed before.

27,166. Have you personally interested yourself in tracing these people?—Yes.

27,167. (Sir Donald MacAlister.) What percentage have got employment to your knowledge?—I have a return showing the number of male clerks employed. There were 67; of these 13 resigned, and they only, as a rule, resign on getting some fresh position, 2 died, and 18 went to the Labour Exchange, 6 to the Inspector of Audits Department, 8 to the Congested Districts Board, 6 to the Civil Service second division, Customs and Excise and assistant clerks, 1 to the Post Office, and 1 to the Irish Land Commission. That left a balance of 19. Out of these 19 names I sent 6 names the other day to the Labour Exchange, and out of the 6 they could only get 2, showing that the other 4 had probably got employment.

27,168. So as far as we know there are only 13 left?—Yes. Then we come to the female clerks. We dealt with 18; 3 resigned on getting posts in different places; 1 we transferred from the General Register Office to be superintendent—she will come back again; 2 went to the Labour Exchange; 6 to National Health Insurance work. I have got the names of the other 6, and the Insurance Commissioners hope that some of the other 6, at all events, will get places.

27,169. So altogether out of the lot how many are left unemployed now?—There are next the boy assis-

17 February 1913.] Sir WILLIAM THOMPSON. (Mr. G. A. NEWNHAM was in attendance.) [Continued.]

tants. The total employed was 94; 17 resigned on getting other posts, 9 were employed in banks and railway companies, 1 in the Post Office, 1 in the War Office, 1 in the Dublin Corporation, 2 in the Royal Irish Constabulary, 1 in the Civil Service, 1 in the Inland Revenue solicitors' offices, 7 in the Labour Exchange, 2 in the Land Registry, 3 in the General Valuation Office,

4 with the Inspector of Audits, and 1 with the Congested Districts Board. That makes 50 out of 94, and 117 out of the total staff who have got employment.

27,170. Out of the 175?—Yes.

27,171. (Mr. Graham Wallas.) It may be that two-thirds of the others are already employed?—Yes. I am quite satisfied that that is the case.

## SIXTY-SIXTH DAY.

Tuesday, 18th February 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B.,  
C.S.I.  
Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR BOUTWOOD.  
Mr. GRAHAM WALLAS.  
Mr. S. ARMITAGE-SMITH (*Secretary*).

The Right Hon. Sir HENRY ROBINSON, K.C.B., called and examined:

27,172. (*Chairman*.) Sir Henry Robinson, how long have you held the office of Vice-President of the Local Government Board for Ireland?—For 15 years.

27,173. Before that time what offices did you occupy?—I was eight years as a commissioner and ten years as an inspector, and two years as a temporary inspector, and I held a lot of other smaller offices before that.

27,174. The bulk of your Government service has been with the Local Government Board?—Yes.

27,175. You have held so many offices in it that you possess a complete and detailed knowledge of the whole operations of the Board?—Yes, and before I entered the Local Government Board I was Secretary to the Poor Law and Lunacy Inquiry Commissioners. They had to travel about studying poor relief administration in every part of the country, and in that way I acquired a knowledge of the poor law.

27,176. Would you describe the constitution of the Board?—The Board consists of a president, who is the Chief Secretary for the time being, the vice-president, who can exercise all the powers of the president in every respect, and three commissioners, one of whom is the Under-Secretary for the time being, a medical commissioner who must be a medical officer of ten years' standing, and another commissioner.

27,177. You can exercise the powers of the president?—Yes.

27,178. Is that by delegation or is there a statutory provision enabling you to exercise the president's power?—A statutory provision which provides that an act will be valid which is the act of the president, vice-president, or the under-secretary.

27,179. Do you meet as a Board?—Every day.

27,180. Does the Board distribute the work among the members of the Board?—It distributes the work among the members of the Board, but as every final act requires the consent of the president or vice-president, the members get through the work up to a certain point, and when the final act has to be done the papers are brought into the meeting, and they go through them and discuss them, and the final order is made by the vice-president unless it is deemed necessary to refer the matter to the president.

27,181. So practically the final act is the act of the Board in its corporate capacity, in which all the members of the Board participate, or may a quorum act?—No, because the commissioners have no power to act for the Board, except when in the absence of the vice-president he delegates to one of them the powers to act

for the Board. The final act must therefore be done by the president or vice-president, and, when the permanent members meet and discuss matters, they determine if there is any matter which is of so great importance that it should be referred to the president.

27,182. But for ordinary purposes of administration you divide the work among the members?—Yes.

27,183. The medical member takes everything connected with medical relief?—And public health matters.

27,184. And the commissioners?—They take up different matters from time to time. The lay commissioner does not always stay at the same work. When I go away he acts for me. At present he is taking poor law and Labourers Acts and one or two other matters, and I am taking local government and Parliamentary work and loans. He might take the loans sometimes and I might take them another time. The only thing the vice-president always keeps is Parliamentary work.

27,185. The broad division of your office staff would be indoor and outdoor?—Yes.

27,186. Let us take the indoor first. How is your office divided?—By divisions, first and second, abstractors, typists, and boy clerks.

27,187. I was thinking more of the nature of the work? The secretariat, the local government branch, the public health branch, the labourers' branch, the poor law branch, the financial statistics and miscellaneous, the legal department, the audit department, the old age pensions department, the engineering department, and the architects' department—which is a separate one, and then the registry and copying.

27,188. Your office is staffed by three gradations of clerks, the upper division, the second division, and the abstractor class: have you got any boy clerks?—We have one boy clerk. We had a number of them. They have all done very well.

27,189. What is your upper division? Is it recruited by examination?—The department has not been long an upper division office. I got it made one when I was made vice-president 15 years ago. We get a certain number from the Civil Service Commissioners as vacancies arise from time to time, or if we have a very suitable second division man and think him fit for the work we promote him.

27,190. I begin with Group I of this statistical statement. Is your secretary a public servant who entered by the Class I. examination?—Yes.

27,191. Did he enter your department at the outset?—Yes.

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

27,192. And he has risen in it to his present position?—Yes.

27,193. The assistant secretary?—He was an old Class II. man. He is the only one we have got of that class.

27,194. When you say that, do you mean the modern second division?—No, some old arrangement. He came to us from some other department.

27,195. Is there a difference between the existing Class II. and the other Class II. of which your assistant secretary was a member?—Yes, it is totally different. I think that this Class II. man is a man who has had about thirty or forty years' service. I think it was some form of competitive examination that is obsolete now. I don't really know what the class was.

27,196. Your senior clerk got his promotion to your department from some other department?—Yes.

27,197. When vacancies occur in these positions of senior clerk and assistant secretary, would you be disposed to employ a Class I. man in the post?—I don't think we have power to employ anybody else. We call our head upper division man secretary, but he is really chief clerk of the whole department. He used to be called chief clerk in the old days.

27,198. Why do you say you could not do it?—I don't think we could take a man from outside and plant him into the upper division without passing the upper division examination.

27,199. It is not impossible: the Government could do it if they considered that a proper man did not exist in your office for such appointment. I understand that the appointment is an administrative appointment, and as such not necessarily restricted to men already in the public service?—It is, but it is the first division appointment. He is our senior clerk in the first division and is styled the secretary, but he is not mentioned in the Local Government Board Act. I was not aware you could do what you say.

27,200. You could, if the necessity existed, go outside the public service and appoint under section 7 of the Order in Council, but it would be an extreme thing to do?—Yes. The necessity has never arisen so far. Of course the commissioners are another thing, and I think that our commissioners are more equivalent to what the secretary or the assistant secretary would be in the English Local Government Board, and their work is very much the same, and they could of course be taken from outside.

27,201. Your assistant secretary controls the work under the labourers' Acts?—Yes.

27,202. Is he an administrative officer?—He prepares all the minutes and brings up the matters to the Commissioners to decide, but he cannot give a decision himself. No act is an act of the Board that is not signed by the president, the vice-president, or somebody appointed for them, and we don't delegate those full powers to the staff.

27,203. Group II. in our statistical table is appropriated to officers who have entered the Service by the Class I. examination, and Group I. as you show it here, is appropriated to the administrative officers?—The man you referred to as the assistant secretary was a second division man, for instance. He was promoted.

27,204. In Group II. you have three officers, senior clerks, 600*l.* to 700*l.*, two of whom entered the Civil Service after open competition for the lower division clerkships: that is to say, somewhat in the same way as the officer we have been discussing?—Yes.

27,205. Then there are those who entered the Civil Service after open competition for higher division clerkships; what do you mean by "higher division clerkships"?—Class I. We call them upper division and second division.

27,206. You have 13 junior clerks in that upper division?—Yes.

27,207. Three entered by open competition, five were transferred from another department, and five were promoted from a lower stage?—Yes. Taking all the men in the upper division we have 19. Of these nine were originally Class I. men, nine were promoted from the second division, and one was the old Class II. man to whom I have already referred. Of course, that is in a period of 15 years.

27,208. Of course, when a man is promoted from the second to the upper division he is an upper division man as well as if he passed a Class I. examination?—Exactly.

27,209. That is a nomenclature which is peculiar to your department—senior and junior clerks; in the Treasury nomenclature it is first and second class clerks?—We call them senior and junior. It would be a great convenience if there was uniformity.

27,210. I agree. When talking about a man in a certain grade of one department it would be well to know what would be the corresponding grade in another department?—Yes.

27,211. So far there have been no appointments by patronage except the Commissioners? All these gentlemen have got into the Service by examination, one way or another?—That is quite correct.

27,212. Let us come to Group III. The legal adviser has been appointed by nomination?—Yes. We originally used to send the legal adviser a case and pay him a 2*l.* 2*s.* fee whenever we wanted advice. He was a barrister in good practice. When the Local Government Act passed there was such an enormous number of these cases that he had no time to attend to his private practice, and we appointed him as a permanent whole time officer. But feeling it would not do to have a legal adviser who was not practising in the courts, we made a special arrangement with the Treasury that in any very difficult case we might always call in any senior counsel we liked. So we have this special arrangement by which a permanent legal adviser is appointed, and we can also get outside counsels' opinions.

27,213. Was your legal assistant a practising barrister or a solicitor?—One of them was, but the present man is not. He is only engaged in drafting orders, and making up case law, and in the preparation of provisional orders and drafting sealed orders; and we like a man who has legal training. He was in the office and became a barrister, but we do not take his opinion on matters which we would otherwise refer to our legal adviser.

27,214. He was appointed under section 4 of the Superannuation Act?—The legal adviser was. The legal assistant was a second division man who passed the second division examination, and subsequently got qualified as a barrister during the period he was in the office.

27,215. He is shown in the return as appointed under clause 7 of the Order in Council of 1910. Was he the first man to fill this particular appointment?—No. That man has died quite recently. That man we took on at the time of the Local Government Act, and he was not a barrister. He was the attorney-general's secretary at the time he came over to us. We filled the post, when it became vacant, by a young second division man who qualified as a barrister during the period in which he was in the office.

27,216. Was the registrar of old age pensions also in the office before that?—Yes. He was a barrister taken in in a time of great pressure on the department after the passing of the Local Government Act. We had a lot of drafting to do. When the Old Age Pension Act passed we made him a permanent officer.

27,217. You appointed him under clause 7 and got a certificate from the Civil Service Commissioners?—That is so.

27,218. Did your legal assistant also get a certificate from the Civil Service Commissioners under clause 7 of the Order in Council?—I think the original assistant did, but I don't think the present man did.

27,219. Was the stationery clerk taken in later?—We have always had a stationery clerk. I think he was an abstractor.

27,220. If he was an abstractor he ought not to have been shown as a clause 7 appointment?—He was a temporary man.

27,221. And got a permanent appointment?—Yes.

27,222. If he was an abstractor he would not have been temporary?—In our office at the time of the Local Government Act we got in such a number of temporary men, many of whom became abstractors, and temporary

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

men whom we have kept on, that sometimes I am not quite certain how some of these men came in.

27,223. The point is how far these appointments have been made in the ordinary course of promotion of men in the service in lower grades, and how far through the exercise of patronage?—As to this stationary clerk my impression is he was a temporary man, but temporary, by patronage, and then he became an abstractor.

27,224. Then he is properly shown as brought in under clause 7?—Yes.

27,225. Have you an independent accounts branch in your office?—Yes.

27,226. Take these clerks shown here, clerk in charge of accounts, audit clerk, local stocks clerk; does their work connect them with the outdoor staff, or are they merely dealing with figures relating to your office, and not with the outside local bodies?—They have a great deal to do with outside local bodies. The accounts clerk has to settle all the accounts of the travelling officers, and pay all those, and a great deal of money has to be invested for housing funds, labourers' cottage funds. He has to look after all these funds and the investment of them, subject to the control of the Board, and the preparation of the certificates, and to keep accounts of them from time to time. We have 351,000*l.* as labourers' cottage fund invested, and 178,000*l.* invested under the Irish housing Fund. All these are used to reduce the charge for principal and interest on the borrowed moneys for the housing schemes; and he has charge of all those.

27,227. He was promoted in the office. He had a lower division clerkship, and he got promotion to a staff clerkship, and was then appointed to his present post?—Yes. He also has to recover all the money from local authorities in respect of local audit fees.

27,228. What is the difference between an audit clerk and an account clerk?—This is his assistant.

27,229. Is the registrar shown here the person who receives and registers the correspondence?—Yes.

27,230. He entered the Civil Service as a copyist?—Yes.

27,231. (*Mr. Boutwood.*) What was your local stocks clerk?—We have to issue orders authorising the issue of stock by local authorities if they want to borrow money. We issue regulations. All these local authorities have to pay a certain amount into the sinking fund every year, and certain arrangements have to be made. He makes a record of all the local authorities' stocks issued under our regulations, and sees that the moneys are invested at the proper time.

27,232. What was the post he was promoted from?—Temporary staff clerk under the Labourers Acts. We had a lot of heavy extra work under that Act, and as it was rather above second division man's work he was given something extra until the pressure was over.

27,233. (*Chairman.*) You publish, I presume, a volume of statistics from time to time?—The local taxation returns every year, and the statistics of the annual report.

27,234. Do those staff clerks we see here supervise the work of the second division clerks?—Yes. They are men who had some experience in the department and know all the ropes, and the second division men work under them.

27,235. How do you recruit your assistant clerks? Do you apply to the Civil Service Commissioners for them?—Yes. Some of them are recruited from boy clerks. Others come forward who pass the examination.

27,236. Do you ever promote abstractors to the second division?—Very often.

27,237. Is there any effective way in your office of getting to know the clever promising young fellows among the abstractors and second division men?—Yes. They are spotted at once. Each second division man has an upper division man over him. The upper division man goes away on holidays, or for some other reason is away, and this man takes up his work. We cannot compel him to do it, but he will probably like to do it, and he may learn something. He brings up papers to me or to the Commissioners.

27,238. Do you allow the second division men to

bring up papers direct?—In the absence of a principal we do. There is such tremendous competition for really good men that a man who is very much overworked may tell us that he wants so-and-so, and then his department say they cannot spare him and beg us to take anyone but this man. Everyone is competing for this man, and you mark him down at once as a good man.

27,239. Your ordinary promotion is from the second division to a staff appointment?—Yes. The staff clerk would always be over the second division.

27,240. Within recent times have you ever promoted a second division man to the first division?—Nine during 15 years.

27,241. Were they staff clerks before promotion?—Some of them. One or two, I think, were not. You may have a staff clerk who would like to be promoted but cannot afford it, he loses so much money.

27,242. That has been brought to our notice. It is a difficulty, but, with the assistance of the Treasury, not an insuperable difficulty?—It explains why we have not always appointed staff clerks to the upper division when a vacancy occurred.

27,243. Are you quite satisfied that it is necessary to maintain an upper division in your office?—Yes.

27,244. You have had large experience of the work of the upper division men and the second division men; do you think there is a marked difference in the character of the work of both?—On the whole, yes; but you may get an extraordinarily good second division man. We have some second division men now as good as anyone who could be named, but if you take the whole class I think the second division men are a little more limited in their scope than the upper division men. One of the reasons I was very anxious to get the office turned into an upper division office was that at the time I became Vice-President we were on the eve of a great experiment. The grand juries were abolished, and the high qualifications of the Board of Guardians were abolished under the Local Government Act, and the whole administration of the country was placed in the hands of people elected on a Parliamentary franchise who had absolutely no experience of local government. Politics and religion find their way into many matters of local government in some parts of Ireland, and as things stood then our staff was nearly all Irishmen and knew almost too much of the political and religious aspect of affairs. I was therefore very anxious to leaven them if I could with a few Englishmen and Scotchmen. I thought they would be perhaps ignorant of these political questions, and might look upon things in a new and fresh light, and break fresh ground of thought in our brains. The reason that we had nearly all Irishmen in the second division was because the salary is very small, and if an Irishman is appointed to England it is hard to live on his salary, and his first idea is to get an exchange over here and live with his people, and, similarly, if we get an Englishman here his first idea is to get back to England. It really turned out to be a great advantage to us to have in our upper division a few strangers who looked upon our political dissensions with a certain amount of indifference; I have seen the characteristics of the three, English, Irish, and Scotch, and, working together, they make a really perfect combination. The Englishmen we have had from the upper division examination have been stolid, sensible, highly competent persons. The Scotchman is a rock of common-sense, accurate, and cautious. The Irishman is brilliant, resourceful, and quick, but he is rather impulsive and wants the steadiness of the English and Scotch. An office with all three nationalities represented is perfectly equipped.

27,245. Even apart from these moderating and steadying influences, do you think that an upper or Class I. division, composed of these men, would be very much better than a second division?—It is quite remarkable to observe the effect of the university education, and the wider range of thought that you get in the upper division men. I remember the case of an upper division man, an Irishman, who came to my office at a time of very hard work. I had to put him in charge of provisional orders, which is about the most difficult work a man can have to do. He has to go into all the arguments for and against the schemes of the local

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

authorities, and think over all the negotiations which may have taken place with the people opposing the orders. I had not the least idea he would be able to do it straight off, but as he would have to do it under my direction, and the direction of the secretary and others, I thought it safe to let him try his hand. We was able to do the work almost immediately. He went a little slow at first, but he was most unerring. My experience is that you can take a higher division man who comes in at 24 and put him on to some responsible work and he will undertake it with confidence; but if you take a second division man who began younger, I don't think he is quite so self-reliant. When the Local Government Act passed, and we were working under great pressure, some of the men whom we promoted absolutely broke down under the sudden access of responsibility.

27,246. May I infer from what you say that in your opinion the time spent in university education between 18 and 24 makes a better officer for the State than if the time were spent in the routine of a Government office?—I suppose it must be. I am only taking what I found. I presume that is the natural inference.

27,247. You don't see any other explanation of the great difference you mention between the two classes except the effect of higher education and a better cultivated mind?—Yes, and of course they come to the office later in life and have a little more confidence in themselves.

27,248. (*Sir Henry Primrose.*) Of what university was this particular young man a graduate?—I think of Trinity College, Dublin. We had some Oxford and Cambridge men, and self-reliance was a most marked characteristic among them all.

27,249. (*Chairman.*) Do you find Oxford and Cambridge graduates dissatisfied with life in Ireland, and anxious to get back to England?—Naturally. The Treasury don't pay them the same as the men in the English Local Government Board.

27,250. Please explain that. It is very important?—When a man comes from the upper division into the Local Government in England he begins with 200*l.* and goes up by 20*l.* to 500*l.* When he comes to us he begins at 150*l.* and he goes up by 15*l.* to 300*l.* and 20*l.* to 500*l.*

27,251. Have you had representations made as to that?—Yes. We fought it tooth-and-nail with the Treasury.

27,252. (*Sir Henry Primrose.*) It is quite recently that the clerks in the Local Government Board in England begin at 200*l.* They used, like yours, begin at 150*l.*?—At all events they go up to 1,000*l.* a year in England, and our men go up to 700*l.* a year; and I think the work is really more difficult in Ireland than in England. I studied a great deal of the work of the Local Government Board in England and Ireland, and there seems to me to be a steady continuity of policy and administration in England which we have not over here; our policy changes so much with each change of Government. Of course, men won't stay here if they get a chance of being transferred to better paid English offices, and some of our men have removed to other offices.

27,253. (*Mr. Boutwood.*) What did the Treasury say?—They said the same thing—living was so cheap in Ireland.

27,254. (*Chairman.*) Do your clerks find any difference between living in Dublin and in England?—They tell me there are much greater facilities for living upon a small income in London than in Dublin.

27,255. Apart from the dissatisfaction you have mentioned, is there dissatisfaction existing to your knowledge in your own office?—So far as the first division men are concerned I think they like the work very much. We have one man who came to us from the Admiralty, and he told me that he never drafted a minute the whole time he was there and spent most of his time with a red pencil in his hand checking accounts.

27,256. The assistant clerks in your office made a representation to us, and, so far as I understand, the gravamen of their complaint is that there is no distinction between the work they do and the work the second division men do, and therefore, that there ought

not to be any distinction of pay or rank. I suppose the work of the abstractors and the assistant clerks dovetail into that of the second division clerks?—Yes, but it is a lower grade.

27,257. And although the distinction may be blurred at the point of junction, is there a marked distinction in the work of the two classes?—Yes, a marked distinction, but of course there are times when you have a very good abstractor and he works with a second division man and does a good deal of the work.

27,258. The time may come when he becomes a second division man?—Yes, when you have a good man like that he nearly always becomes a second division man.

27,259. Is it a complaint that admits of any remedy?—I think it is a small salary for these men. They commence at 40*l.* or 45*l.* and go to 150*l.*; it is very hard to live on the salary at the beginning.

27,260. Do you think the maximum too low?—I think it ought to be from 50*l.* to 200*l.*

27,261. A man of this description who has had a substantial commercial education ought, in your opinion, to get 1*l.* a week to start with?—At least.

27,262. (*Sir Henry Primrose.*) Is it not 55*l.* to start with?—No, it was reduced.

27,263. (*Chairman.*) Would you go up so far as 200*l.* as a maximum?—I would; it keeps them cheerful, it is something to look forward to.

27,264. Do you think the reduction of the maximum in the second division clerks grade from 350*l.* to 300*l.* has been a difficulty as far as the working of the clerks is concerned—the maximum is now 300*l.*, it used to be 350*l.*?—I don't think it makes much difference. Good men are always promoted.

27,265. To staff clerkships?—Yes.

27,266. And a few to the first division?—Yes.

27,267. Evidently it is not brought forward?—No, we have not heard much discontent.

(*Chairman.*) If there is nothing else you wish to say in regard to your indoor staff we will pass on to the outdoor staff, but perhaps my colleagues have questions to ask at this stage.

27,268. (*Sir Donald MacAlister.*) I note the assistant clerks in their statement say, quoting your own words, "It was found practically impossible in most cases to differentiate between the work assigned to the assistant clerks and the clerks of the second division"?—Yes. A good assistant clerk working with a second division man does almost the same class of work.

27,269. What you say is, his class of work is different to that assigned to the second division clerk?—Yes, to start with.

27,270. You mean that as an assistant clerk becomes senior his work becomes that of a senior; he works along with the second division clerk?—When first attached to his department he is given a line of work of his own, then in the great pressure of work we have to get in extra hands and then it happens that, knowing the work and having worked with a second division man, he is perhaps temporarily pushed in to do the work of a second division man, and so he is from time to time doing a little of the work which might be done by a second division clerk, if he happens to be a good man. If he is not, he would do nothing but routine work.

27,271. The distinction is as to the class of work for second division and assistant clerks. You have often to give the work of one class to another?—Yes. There is a good deal of work sometimes which it is very hard to say to which it belongs. Sometimes it might go to one class of man in one branch and to a different class in another. It depends upon the personnel of the staff in each case.

27,272. (*Sir Henry Primrose.*) Would it be possible or advantageous to abolish the present system. As I understand it, you have at present three groups—assistant clerks, second division clerks, and upper division clerks. If you had only two divisions, that at any rate would give only one boundary line. Your lowest grade would be rather better than now, and you would have a higher minimum and a higher maximum, but you would get rid of the difficulty that now arises

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

of classifying your work into three categories; then you would only have to classify into two, the lower and the higher. Would you think starting afresh you would be prepared to consider a scheme of that kind?—Well, I would rather leave it to someone else to speak upon that. I think the second division examination bring up a very good class of men.

27,273. Perhaps too good? I want you to imagine we are to get rid of the present idea of second division, assistant clerks, and so on. Supposing we were starting afresh to organise the Service on these lines, that you would have two categories of men, and only two—one for inferior work and one for superior work; as regards those for the superior work there would be no question, I think, that the present forms of examination are about right because they catch a university man who has completed his education and has gone through his university course. Then we should have to come to a new scheme of examinations, and a new scheme of salaries for the inferior class. Perhaps it would be right to recruit that class more or less as boys aged between 15 and 16 or something of that kind, and give them better pay than the 45*l.* now given, and let them go higher than 150*l.* Do you think it possible to measure up all the work that is suitable for a particular division with a class of that kind?—That is a very important question, and I should not really like to answer it in a hurry. While no doubt it would be productive of greater contentment in the office, I would not like to give an expression of opinion further. It is much too serious for an off-hand opinion.

27,274. It has not suggested itself to you as a way out of the difficulty that you no doubt do find, of discriminating adequately between the work of one grade and the next grade?—It has; it has just flashed across my mind that it might be done, but others are in a much better position to judge than I am, and I think on the whole we have got on very well with what we have got.

27,275. (Chairman.) Broadly speaking, you would be disposed to agree that the work in Government offices might be divided into three categories—first, the administrative work requiring thought and judgment and tact such as your Provisional Orders call for; next the general clerical work of the office, minuting, drafting letters, and so on; and thirdly, the lesser routine mechanical work of the office, fetching and carrying papers, keeping of the registry, docketting letters, and issuing letters, and so forth. Would you consider that to be a fairly accurate description of the work of the office?—I think so. The idea in my mind as regards Sir Henry Primrose's suggestion is on the whole favourable. I like the idea as it presents itself to my mind.

27,276. We won't press you on it further at present. Am I not right in thinking that up to this the idea of recruitment by competitive examinations for these appointments that we have been dealing with has been the dominant idea, and that making such appointments by the exercise of patronage has been the exception in this class of case?—There is no patronage at all.

27,277. Now should I be right in saying that with regard to your outdoor staff—for example, the inspectors—these appointments are made by patronage, the method of appointment being by Royal Warrant or under section 4 of the Superannuation Act, or under clause 7 of the Order in Council, or under schedule B of that Order?—Yes, but, of course, they are not pure patronage, because they are selections from men in our own office.

27,278. I do not suggest otherwise. What I mean is these appointments are not made by competitive examination?—No.

27,279. Take your general inspector. Was he appointed from outside?—There are 9 or 10 general inspectors now.

27,280. What are their functions?—They have to inspect workhouses, to hold inquiries, to attend meetings of Boards of Guardians, to supervise the collection of the poor rates in the country, and generally to advise us on all matters of interest in local government, looking after the administration of the Distress Act, conducting Labourers Act inquiries, housing inquiries—and generally to do what they are told outside the office.

27,281. Were these ten general inspectors appointed by the Lord Lieutenant?—Oh, no, he has nothing to do with it.

27,282. Not even the formal appointment?—No, nothing whatever to do with it.

27,283. Are they appointed by the President?—By the Board.

27,284. After careful selection?—They are not now appointed from outside at all. We could not very well take a man from outside and put him into the position of an inspector right off.

27,285. The inspectors would probably be promoted from a lower grade?—There is no lower grade. Let me explain. Some twenty years ago it was the usual practice to select inspectors from outside, but it was a risk. If the man proved a bad bargain we were saddled with him and could not get rid of him. After the passing of the Local Government Act we got a permanent staff of inspectors rather below our requirements and followed them up with temporary men, and used them in their turn either as Labourers Act Inspectors, Distress Inspectors, or Housing Inspectors. The advantage of our system is this: When a man asks for the position of an inspector we offer him temporary employment for a certain period. If he proves unsuitable he goes when his time expires. If he has the makings of a valuable official he is nearly always kept on, and if not too old he generally gets on to the permanent staff. We thus avoid the risk of getting a man on to our permanent staff of inspectors until we know he is thoroughly trained and has been tried.

27,286. That is your explanation of your method of selecting these ten gentlemen?—Yes.

27,287. Besides the permanent inspectors there are four temporary inspectors?—These are inspectors under the Old Age Pensions Act. From time to time we have a great many more. If, for instance, there was distress or pressure under the Labourers Acts there would be many more temporary inspectors appointed. Since I have been Vice-President we have had about 125 of these temporary inspectors, and from these we have selected the permanent staff. Suppose pressure is put upon the President of the Board to put a man in. He says to me, "Here is a man who is spoken highly of. I would like the man to be appointed if he is good enough." We don't mind putting him on for six months to see how he shapes. He goes on, and gets his chance. I do not remember any case of any man having been appointed straight away from outside in recent years until he has been thoroughly tested.

27,288. Does the ultimate appointment of the temporary inspector rest with the President; I mean, might the President override the opinion of the Board. I wish to ascertain the legal status?—Under the Local Government Act the Vice-President has the same power of appointing an inspector that the President has, but he would not exercise this power without the President's concurrence.

27,289. The question I am asking is whether the President has legal power to override the opinion of the Board in regard to the appointment of an assistant inspector?—I don't suppose he has the legal power, but he has the recognised power.

27,290. But the legal power?—He has not the legal power. The Act says: "Any act or appointment shall be valid if made by the President or the Vice-President." He is responsible to Parliament for the appointment, and therefore the Vice-President would not make an appointment without consulting him.

27,291. But if the President said, "I appoint this person as temporary inspector," that appointment would be valid?—Certainly; he would send it over to me and say, "I appoint this man."

27,292. I understand that in practice the appointment is made after consultation, but I wanted to know what the legal status was?—The appointment is made under a warrant; it must be signed under the seal of the Local Government Board, so that if the President made the appointment, the warrant would be brought to me to sign unless the President was in the office.

27,293. And in like manner, if you made the appointment it would be legal?—Yes.

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

27,294. Has the President ever presided at a meeting of your Board?—Yes; Mr. Long used to come in as often as he could, and Mr. Birrell has come three or four times, but nobody else, so far as I know. Sometimes we might have a meeting in London, and I go over to the President, to London, once a month and discuss matters with him, and also I see him at the Castle when he comes here.

27,295. Are the medical inspectors appointed by the same method of testing?—No, it is not necessary. We have 740 men to choose from under the Irish Medical Charities Act. They are all under our control. We know their merits, and we are under statutory obligations not to appoint any medical man who has not had seven years' experience as a medical officer.

27,296. You have two lady inspectors?—Yes, they are engaged with reference to boarded-out children.

27,297. Do you employ lady inspectors in any other department of your work?—No; we have a staff of ladies in connection with the Old Age Pensions Act. Very often, if there is an old woman, and there is doubt about her age, we send one of the pension staff to see her.

27,298. Has there been any employment of ladies in your office in connection with correspondence?—There is, and I hope to get the Treasury to agree to something of this kind; but at present, with Home Rule pending, it is almost impossible to get the Treasury to agree to new departures.

27,299. Very likely, but the Commission are anxious to know whether there is any opportunity for the employment of women in the inspectorate?—Yes. We have them for the boarded-out children, and I should like to have one or two women doctors to go round the workhouses, and to visit the female wards. I hope to get the Treasury to agree, but the salaries they offer women doctors seem to me too low to attract well qualified women.

27,300. Do you see any logical reason for differentiating between the salaries of men and women?—No, not as a rule. Of course there is this to be said, in regard to lady clerks and typists, that when you take a man you know you are going to make something out of him, but when you train your lady, and when she has become very useful and efficient, she will marry, and retire. You never can be certain of keeping her.

27,301. But with regard to the medical inspectors, is there any sufficient reason why a doctor of medicine, who is a female, should be paid at a lower rate than a man for doing the same work?—I really cannot see any reason, except in one respect. So far as the inspection of female wards of workhouses is concerned they do it as well, and perhaps better, than men; but with regard to the holding of inquiries, that in Ireland is rather a troublesome business. You have a noisy turbulent people sometimes, and sharp solicitors, and it is not the sort of task that you would like to set a lady to. It is the only work, I think, they would not do as well as men.

27,302. I suppose they would not be physically as strong as men to undertake their long journeys round the country?—That is so. We find that the ladies working in the office are knocked up much more easily than men; there are more casual absences, and more complaints of headache, and so forth. Also, when faced with very great pressure of work, they are inclined to lose their heads and not to get on so quickly. They get disheartened more quickly; we have only about 20 altogether.

27,303. Have you tried them at all as clerks?—Yes.

27,304. On what kind of work?—We have them as clerks in the Old Age Pensions Department.

27,305. Is not that more in the nature of keeping registers and of accounting than of clerks' work?—They have to write minutes, and to file all papers of persons sending in claims, and things of that sort, and they do it just as well as men.

27,306. (Mr. Boutwood.) Where are these clerks shown in your statement?—I think they are called temporary typists.

27,307. Your other inspectors—engineering inspectors, and so on—they are professional men selected upon grounds of professional qualification?—Yes.

27,308. You have a very large staff of auditors?—Yes.

27,309. And the majority of them are appointed after a qualifying examination; they are nominated?—Yes.

27,310. Do you insist upon their having a professional qualification?—They must be barristers or solicitors or accountants in the public service.

27,311. What is the character of their examination? There is no examination if they possess any of these qualifications.

27,312. There are 12 entered here who, after certification, passed a qualifying examination?—Some of them passed before we made that rule. Before we had the professional qualification they had to pass their examination. We found, so far as auditors are concerned, it is not so much a matter of accountancy. The papers come before them, and the auditor sits there and asks what is the legal authority for each payment? Barristers make as good auditors as anyone. The examination we found did not work very successfully, because what happened was this: You nominated a barrister or accountant in the old days; he was appointed, and was told he would have to satisfy the Civil Service Commissioners by passing an examination in book-keeping or poor law. The candidate then crammed for a fortnight or so and passed, but it only caused delay.

27,313. (Sir Donald MacAlister.) There is now no set examination for auditors, but by recent regulation every auditor must have a professional qualification, either as barrister, solicitor, chartered accountant, or have been in some auditing branch of the public service?—Some accounting branch.

27,314. How long has that rule been made?—I think seven or eight years; probably more, perhaps 10 years.

27,315. Then apart from these professional qualifications all these men are appointed by patronage—by nomination?—Yes.

27,316. Have you a waiting list of applicants?—Well, yes. There is a waiting list for almost everything. There is a waiting list of auditors, but I do not think it is a big one. They generally know when there is a vacancy just on the eve of a retirement and possibly they are all looking out for that.

27,317. What steps are taken to make a preliminary selection?—We interview them and find out what a man's experience has been, and a very careful inquiry is made as to a man's merits. It is not difficult to select a man. You can generally tell from a man's previous work whether he is likely to have the experience which will facilitate him in dealing with local authorities.

27,318. Is it the vice-president with whom they ask the interview?—Yes, and possibly the president. What would happen is that a man who wants the post would try and get an introduction to the president, and then he would interview all the members of the Board down to the secretary, and he would see everybody who he thinks is likely to recognise his merits. We would never dream of appointing a man we had not seen.

27,319. Have you any temporary auditors?—Very frequently.

27,320. You have no instance of men passing through a temporary stage before being appointed to the position of auditors?—No. We tried a system of audit clerks but they did not do.

27,321. Must every one who wants to be an auditor pass through a waiting stage?—Yes.

27,322. So all these applications and attempts to influence the Commissioners are for the purpose of gaining appointment as assistant auditors?—Yes.

27,323. The salaries are from 350*l.* to 400*l.* a year?—Yes, and then they get to be county auditor.

27,324. From the class of assistant auditors and auditors of the third class they get these terms and go even beyond?—Yes.

27,325. It is not easy for a man to be an inspector or an auditor right away?—No. We would not as a rule put a man on at once.

27,326. What is the auditors' scale?—Originally they commenced at 450*l.* and went up to 700*l.* Then

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

we started assistant auditors who begin at 300*l.* to 400*l.* and from that their scale goes up to 800*l.*

27,327. What is your pharmaceutical chemist?—Well, that is rather peculiar, I do not think it happens in any other department. What happens is that in the case of medicine sold half the cost is paid by the Government.

27,328. Half the cost of medicines supplied to hospitals?—And dispensaries as well, subject to the fact that the medicines supplied to the local body are satisfactory; it was very hard to tell, when a man tendered for a supply of medicines to the guardians, whether the tender was satisfactory. He might tender for a medicine that was hardly used at all at a very low price and for a medicine that was greatly used at a very high price. We now make contractors tender at a price fixed by us, and they say what percentage they will take off the total cost of the total sale, and the firm that gives the greatest percentage off gets the contract, provided the medicines are up to a certain standard, and the pharmaceutical chemist looks into that.

27,329. He is your analyst in a sense?—He is our analyst. We have a bacteriologist as well.

27,330. If it was found that a particular man was supplying inferior drugs, specimens would be sent to your pharmaceutical chemist?—Yes, to our analyst.

27,331. And he would tell whether they were up to standard?—We recoup the guardians one half of the cost, and if the medicines were not up to standard the person supplying them would not be paid.

27,332. If the guardians choose to pay they would lose?—Yes.

27,333. Can you say, as a matter of fact, whether this system of contract leads to good?—It saved us 10,000*l.* the first year we started it.

27,334. And the drugs supplied are good?—Yes, splendid. In fact, in the old days the drug contract was taken by little local shop-keepers in the towns who got all kinds of cheap, worn-out drugs and retailed them at a profit. We abolished that system altogether, and we get the drugs now from the manufacturer who can give the largest percentage off.

27,335. Has the introduction of the Insurance Act required any reorganisation in your department?—Yes, it is very troublesome. The sanatoria provisions occupy a good deal of our time, and questions about the Insurance from local authorities are very numerous, and there is a heavy correspondence at the present time. I presume when things settle down it will not be quite so troublesome.

27,336. It has not yet affected your machinery?—Yes. It has given us more work.

27,337. But you are independent?—Our medical men have a great lot to do and we are short-handed in that department.

27,338. Why have your medical men more to do?—Because the county councils have to establish and run the sanatoria and the dispensaries and they have to carry out domiciliary treatment, all of which requires the Board's approval. We have to refer the sanatorium and domiciliary treatment to our inspectors.

27,339. Although Ireland has no medical benefit the tuberculosis benefit has caused considerable work under the Poor Law?—Yes, very considerable.

27,340. How are your dispensary doctors appointed? You say they are under the Local Government Board and that you have 700 or 800 of them?—Yes, 740. They are appointed, subject to prescribed qualification, by the Poor Law Guardians. They have charge of districts, and all poor persons unable to pay for a doctor can obtain gratuitous medical relief. These medical appointments have to be sanctioned by us, and the holders of them can be dismissed by us and their books are inspected by us.

27,341. The appointments are made by the local Poor Law Guardians subject to your confirmation?—Yes.

27,342. So you are responsible for the appointment in that sense?—Yes.

27,343. And they can be dismissed by the Local Government Board without consulting the guardians?

—Yes, and they are visited and supervised by our inspectors.

27,344. Can they be dismissed by the guardians without your sanction?—No.

27,345. The guardians have only the initial step subject to your approval?—Yes, selecting and paying.

27,346. They pay the doctors their salaries?—Yes, they pay the salaries and they get a recoupment of one half from the local taxation account.

27,347. So that in regard to cost as between you and them they contribute one half and you contribute one half?—Yes.

27,348. Are these tuberculosis arrangements entirely subject to your approval also?—Yes.

27,349. Supposing it is a question between your dispensary doctor and a new tuberculosis officer being appointed?—The doctor would have to give up the dispensary because the tuberculosis officer must be a whole time officer.

27,350. Has that been done to any extent?—Oh, yes, a good many dispensary doctors have been appointed as tuberculosis officers.

27,351. The tuberculosis officer comes within your jurisdiction?—Yes. He requires to have our sanction as tuberculosis officer under the county councils. That is not under the Insurance Act but under the Tuberculosis (Ireland) Act. The Tuberculosis Act is linked up with the Insurance Act. It enables accommodation to be provided for insured persons and others suffering from tuberculosis—half of the cost of maintenance would be paid out of the rates and half from public funds, so although he will not be a charge upon the local taxation account as in the case of a dispensary doctor, one half of the salary will be paid from the new grant which the Chancellor of the Exchequer has promised for maintenance purposes.

27,352. What is the relation of the Insurance Commissioners to the appointment of the tuberculosis officer?—They have to approve of the manner of treatment and of the arrangements made by the insurance committees for the treatment of insured persons, they would therefore have to approve of the arrangements made for sending a man for domiciliary treatment to this officer or for sanatorium treatment.

27,353. Yes; but what I want to know is what is the relation of the Insurance Commissioners to the appointment of the tuberculosis officer?—They have no responsibility for it.

27,354. So that in a sense he is still under the Local Government Board?—Yes.

27,355. And the Insurance Commissioners have nothing to do except to approve the arrangements he makes?—The arrangements made by the insurance committees to send people to him and to pay for the treatment of the people sent to him.

27,356. So that the Tuberculosis (Ireland) Act has added considerably to the number of appointments which are made under your supervision?—Yes.

27,357. Is there one in every county?—Yes, one tuberculosis officer for every county.

27,358. And the initial step there is taken not by the board of guardians but by the county councils?—Yes, by the county councils.

27,359. Does that require you to establish a new special department of officers?—We established a new special department by starving another department; we have taken one medical inspector and appointed him to this particular work. I have not approached the Treasury yet for an additional staff; they are pressing very much to cut down expenses until we will see what will happen under Home Rule.

27,360. So that almost every change that takes place in regard to legislation for Ireland seems to add complication to your complicated office?—Yes, every year.

27,361. Now to come to another point, you mentioned in answer to the chairman that you had only one boy clerk?—We had 20.

27,362. How did you get down from 20 to one?—Ten qualified by competitive examination for assistant clerkships, three of them were promoted to the position of typists in the Local Government Board, and one of them went into the Dublin Metropolitan Police, two of

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

them went into commercial appointments, one became a Baptist minister, one became a supplementary clerk in the Record Office, one became a novel writer, and one we could not trace—I think he emigrated.

27,363. You didn't fill up their places?—Because the Treasury wanted typists instead; they were copyists.

27,364. The Treasury intervened and said you must have no more boy clerks?—They wanted us to bring in lady typists.

27,365. Was there any other reason?—Not that I know of.

27,366. Did you find in your experience of the boy clerks any drawback to the existence of that group?—No; but, of course, one always fears for those boys coming in lest they may be thrown out when they reach a certain age, not having much time to work up to secure other posts. There is almost always some misgiving about these boys, but in the case of our 20 nearly all of them did well.

27,367. You feel the difficulty these boys are in by being kept on up to a certain age with their minds divided in their hours of duty between their business and thoughts of coming examinations?—They are often rather unhappy, no doubt as to what is going to happen.

27,368. So you are not sorry that you are done with them?—No.

27,369. You propose to get rid of the last of them?—Yes; the moment he retires we will get a lady typist in his place.

27,370. Now you are taking in lady typists in considerable numbers to do their work. Do they exactly do the work of boy clerks?—Well, the boys were hustled about a good deal; of course, the ladies are treated with greater respect.

27,371. The boys ran about and did messages?—Yes, they acted as messengers.

27,372. That was part of their proper business?—Yes.

27,373. Do you keep your lady typists apart from the male clerks?—They mix with the male clerks in the Old Age Pensions Office; in the Local Government Board we have much better rooms and there they are separate.

27,374. We were told by another head of an Irish department that public opinion in Ireland would not tolerate lady clerks working in the same room with male clerks?—Well, I hope public opinion will not penetrate into our Old Age Pensions Department.

27,375. Do you think it is a difficulty?—I think it works very well indeed; they get on very well with one another. I never heard anything to the contrary.

27,376. (*Mr. Boutwood.*) What is the relation between your office and the Chief Secretary's office, or have you any?—In this way we have. The president of our Board is the Chief Secretary for Ireland and the Under-Secretary is ex-officio a member. Also the Treasury requires all applications relating to finance made by any public department in Ireland to go through the Chief Secretary's office. Therefore, if I wanted an increase of salary for any member of my own staff I would not write direct to the Treasury, but I would write to the Under-Secretary and ask him to send it forward. That is rather waste of time, because I would not ask that increase without speaking to the President, and if he, in his capacity of President of the Board, desired it, he is not likely, in his capacity of Chief Secretary, to decline to send it forward.

27,377. Has the Chief Secretary's office any administrative control over the action of your Board?—No, nothing whatever to do with it.

27,378. What sort of work do your staff clerks do?—A staff officer has to do the accounts, and he has to pay all the officers; he has to recover all moneys on loans from the local authorities; to look after inquiries, provisional orders, auditing fees; and the staff clerk in charge of the registry would have all the registration to do.

27,379. I was thinking of their four staff clerks?—They are in the Labourers' Act department. It is most complicated and difficult work which requires great care and great knowledge of the Acts. They

have to prepare the papers for the inspectors before the holding of inquiries, and they have to go through their reports, and they have to send out the drafts of the Orders. They have a very technical class of work to do which requires rather a legal mind so to speak, and requires a knowledge of the previous schemes and of the districts at the same time. It is, however, the same thing for each district; it is of a routine character though very responsible work.

27,380. I suppose that is the feature which differentiates it from Class I. work?—Yes.

27,381. (*Mr. Graham Wallas.*) What is the difference between the working of your Board system and the system with which we are familiar in England, where we have a responsible minister with a permanent secretary? Your Board must meet to sanction things?—Yes, but I do not know it is correct to call it a Board. We do not put things to the vote, and the members could not outvote the President or Vice-President, for instance.

27,382. Then the action of the Board is the action of the President or the Vice-President?—Yes.

27,383. So that in your case when you meet the other members of the Board they are present in an advisory capacity?—They have their own powers over their own particular branches; but anything that requires a final act, or anything leading up to a final act, in giving instructions to guardians or other public bodies and all the correspondence dealing with that matter, is brought forward.

27,384. I am thinking solely of the responsibility. As far as responsibility goes they advise you, but the decision has to be your decision?—Exactly.

27,385. On the other hand, you report your decision to the President for ratification?—Oh, no, not in all cases.

27,386. In matters of great importance?—Yes.

27,387. Now if on matters of great importance a member of your Board has a conscientious opinion adverse to yours, has he, in fact, the right to appeal to the President, or is his opinion communicated to the President?—There is nothing to prevent him writing if he thought fit.

27,388. There is no definite customary right for him to submit a minute on the subject to the President?—If he did not agree, and if it was really a very important matter, I would ask all the members of the Board what they all thought, and in writing to the President I would say, "Mr. Blank thinks so-and-so ought to be done; but, on weighing the whole thing, "I think so-and-so ought to be done," and I would tell him that it was very important, and that he ought to think it out.

27,389. Can you sum up in any way the working of your organization as compared with the working of the Board of Trade, or other departments in England which are worked by one responsible minister and one responsible chief permanent official?—That is exactly what we have here. You have the Minister responsible to Parliament who is the President, and then you have the Vice-President who is the head of the department. The only difference between this public department and the department in England is that the responsible Minister in England can do things which the permanent secretary cannot do. For instance, in England the permanent secretary to the Local Government Board cannot sign an order, he can do nearly any other act, but he cannot sign an order; that has to be done by Mr. John Burns. In Ireland the Vice-President can sign the order without going to the President at all.

27,390. Do you think there would be certain advantage, in the way of public responsibility, if what you call the English system was substituted for the existing system of Boards?—That is, if you call it a Board. It really is not a Board. We do not put things to the vote at all. We never differ. We talk the whole thing out and decide. There is no vote. Very often in a very difficult matter I would call the secretary and the assistant secretary and the legal adviser, and they would sit round the table with the Commissioners and we would discuss it, but the decision would be given by the President or Vice-President.

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

27,391. There would be no advantage in substituting a definite chief for your existing system, which almost amounts to that?—There is responsibility from the president to the vice-president, and from the vice-president to the Commissioners, and from the Commissioners to the upper division clerks, and so on.

27,392. (*Sir Henry Primrose.*) Does the Chief Secretary, or the Under-Secretary, ever, as a matter of fact, come and attend?—I go to the Chief Secretary regularly. They have attended at our office at times in their own department at the Castle and they have not much time to attend at the Custom House, but there is a great deal of work done. Mr. Long, having been President of the English Local Government Board, used to take very great interest in our work, and used to come in very often, but with other Chief Secretaries important matters have been discussed generally at their office in the Castle or at the Irish Office.

27,393. (*Mr. Graham Wallas.*) Do you submit your papers to the Chief Secretary directly or through the Under-Secretary?—I submit them directly. Many years ago papers were submitted to the Under-Secretary, and he sent them to the Chief Secretary, and the Chief Secretary sent them back to the Under-Secretary, who sent them back to us; but that became absolutely impossible when the Local Government Board Act was passed and when the work simply quadrupled.

27,394. You are practically a parallel department to the Under-Secretary's department and not a subordinate department?—We never were subordinate except to Parliament.

27,395. Then you have very considerable legislative powers, or rather the Viceroy exercises very considerable legislative power by your advice by Orders in Councils?—No, that is under the Privy Council; we do everything by Provisional Order.

27,396. Under the Local Government Board Act of 1898 the Viceroy can decide what are the qualifications and disqualifications of voters for county councils?—When the Local Government Act first passed there were a number of transitory provisions and Orders in Council which had to be made, but these are over and done with long ago.

27,397. Can these Orders in Council so made be changed?—They can be amended and extended by Parliament only.

27,398. For instance, women are not eligible for county councils or borough councils under your Act?—They are for district councils.

27,399. But not for county councils or borough councils?—Yes, they are eligible for borough councils; for instance, there is a woman in the Dublin Corporation.

27,400. They are not eligible for county councils? They were made eligible by the Local Authorities (Ireland) Act of 1911.

27,401. Could that be done by Order in Council?—I do not think it could.

27,402. The original disqualification was by Order in Council?—But that applied to certain English enactments; I do not think you could alter that.

27,403. You gave a very rapid list of your departments; I did not catch the names. How many sub-departments have you in your office?—We have got 13.

27,404. As compared with the English and the Scotch offices of the same size, that is rather a large number?—Perhaps it is, but you cannot compare us very well with the Scottish Local Government Board, because we have far larger duties than they have. We have about 125,000 registered papers in the year, and they have only about 23,000.

27,405. Has it ever been considered whether that number might not be lessened by merging some of these departments?—It could be lessened no-doubt, but long experience in Irish local government has shown us that on the whole it is more satisfactory; there is a better division of responsibility in the department.

27,406. You told us that persons applying for permanent appointment, such as auditors, and so on, leave no stone unturned in the way of visits to responsible officers, and so on. I think I am right in saying that in England such a series of visits would be

held to be a disqualification. Has any attempt been made to make regulations to that effect?—No; we are rather glad to have an opportunity of seeing them sometimes.

27,407. A hitherto unknown man begins a series of visits to a number of gentlemen from the Chief Secretary downwards?—So far as auditors are concerned there is not a very great rush for that position, because the qualification is very restrictive. You won't find many barristers who will come for 350*l.* a year to start with, and unemployed chartered accountants are not very numerous. As the matter stands at present, we have only about half a dozen people to choose from, and we generally manage to see them all. In Ireland there has been such a large number of positions given under the Insurance and under the Land Commission and such things that it is very hard to find good men out of work.

27,408. You rather welcome the uninvited office-seeker?—If there is anything to give; when there is a vacancy and a man is a qualified man I would rather the man came, but we would not receive a mere office-seeker when there was no vacancy.

27,409. You are glad he comes without being asked to come?—Of course, I would not see him as a matter of course, my private secretary would see him, and he would say to me, such and such a man was here. I would ask what sort of a man he was; if he seemed to be a man who is well equipped his name would be put upon a list, and when a vacancy occurred I would then see him.

27,410. Dublin is not only the seat of Irish Government, but there is a large university organisation in Dublin?—Yes.

27,411. Do you find at any point in your actual administration that you get assistance from university organisation?—In what way.

27,412. There would be several ways in which your officials could improve their qualifications with the help of the university during their official career?—We have two or three upper division men who passed through the university.

27,413. But that would be before their examinations?—No, I do not think that we have very much to say to them. Sometimes Fellows of Trinity have called upon me and recommended young men who had got degrees and were looking for Local Government appointments.

27,414. In London we find a considerable number of Government officials at the London University where they acquire qualifications that are of great assistance in their future careers?—Yes. Several of our second division men have gone through Trinity College.

27,415. Working after office hours?—Yes, they study for law; the lectures take place early in the morning, about 9 o'clock, and they are able to attend them.

27,416. That is only in the case of Bar examinations?—Yes, I do not know of any other.

27,417. Do you get help upon the scientific side of your work? Do you call in any university professors?—We get great help from the Royal College of Surgeons and the Physicians, but I do not know that we call in any professors.

27,418. There is not any connection between the university and official organisations?—No.

27,419. (*Sir Henry Primrose.*) I notice as regards your messengers that as a vacancy occurs you are going to employ only pensioners?—Yes.

27,420. The rate you pay is laid down by the Treasury?—Yes.

27,421. A guinea a week and no more. I see you have one man who rose from a guinea a week by 1*s.* to 2*s.*?—Yes.

27,422. Why was he privileged in that way?—He is probably one of the older class.

27,423. You have nine boy messengers. You have got rid of the boy clerks. Are you going to get rid of boy messengers?—No.

27,424. The blind alley objection, so to speak, applies more strongly, I think, to boy messengers than to boy clerks, because it does not qualify them for any work?—I think the class of boys who come in as mes-

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

sengers would be content with a class of work afterwards that boy clerks would not be content with.

27,425. But when you are done with the boy messenger, say at 20, he is more incompetent to earn his living?—He would be taken in some commercial undertaking; he would have learned smartness and to obey orders.

27,426. The only thing is that commercial firms are apt themselves to do the same thing for boys?—I do not quite know what the practice is in that matter.

27,427. Then as regards boy clerks. I gather you used to employ them almost entirely upon typing, but there are a great many other duties on which in England these boy clerks are employed. For instance, some of the clever boys would manage some of the work done by those four assistant clerks; it could be done by boy clerks?—I think it could. It is purely mechanical—stamping papers, posting the registers, and all that sort of thing.

27,428. Then as regards your inspectors, like the English Board you have three classes, the general, the medical, and the engineering, and I think that with you they are all paid about the same scale. The engineering inspectors are paid more?—No, they are paid less, but the head engineering inspector stands by himself.

27,429. At any rate, your general and medical inspectors are paid exactly the same rate. Do you consider the duties are practically of an equivalent value?—Yes.

27,430. Because it was brought before us in the English office that it was rather a grievance on the part of the medical inspectors that they were paid less than the general?—I say they are of equivalent value, certainly.

27,431. It is possible there are differences in the work between here and in England?—We have the dispensary system here.

27,432. You would find no reason in your department for paying the medical inspectors less than the general inspectors?—None whatever. The whole medical charity system is under them.

27,433. (*Mr. Boutwood.*) What is the medical charity system?—It was an Act passed in 1851 which enabled poor persons to get medical attendance and medicines at their homes or at the dispensaries free if unable otherwise to obtain it. There are 700 doctors, and about the same number of midwives, who attend the people.

27,434. (*Sir Henry Primrose.*) Is the Insurance Act adapted to fit on to that system?—Owing to the existence of the Medical Charity Acts they did not apply the medical benefits of the Act to Ireland.

27,435. Ireland is exempt?—Yes, and a Commission is now about to sit to consider whether Ireland should be brought under the medical clauses of the Act.

27,436. Under that dispensary Act you have practically all that is wanted?—Yes, but, of course, we would have the choice of doctors which is the great desideratum under the Insurance Act; poor persons have to deal at present with the dispensary doctor whether they like him or not.

27,437. Has the Insurance Act added to your work, or is it likely to diminish it? Will the Insurance Commissioners take over certain work that you might have done?—I think it has increased our work. It has done so far, at all events; so many questions arise as to the Poor Law, and as to where the Poor Law clashes with the Insurance Act.

27,438. You mentioned that as regards staff clerks you found difficulty in promoting them to Class I. on account of the loss of pay that it might entail upon them?—Yes.

27,439. Is that likely to happen very often? A staff clerk wants, as you explained just now, to exercise great care and to have great knowledge of particular Acts which are administered. It does not in the least follow that a man eminently suitable for a staff clerk is suitable for promotion to the sort of work you want Class I. to do. It is work that requires initiative, also self-reliance, and so on. So I suppose it is more likely than not that a staff clerk is not the man you want to promote to the first division?—Perhaps by his experi-

ence as a staff clerk he might have rather bound down his faculties in a certain direction. At the same time, whenever we have appointed a staff clerk he has always proved worthy, and there are many staff clerks whom I would like to promote to the upper division. No man would have a chance of getting to be a staff clerk unless he was above the run of the second division men; but a man cannot resist the chance of getting 100*l.* extra at the time, although it might run him into a position that would ultimately prevent him getting to the upper division.

27,440. Of course what you want in a staff clerk is a man who has a very accurate knowledge of the particular business he has to deal with. What you want in the upper division is a man who has not only that knowledge but also who has some clear idea of its relation to business and to things outside. A man who has been all his life in an office in a subordinate position is as a rule very well up in the business of that office, but does not always realise what its proper relations are to things outside?—I think that is so, but it is hard for the head of a department, when there is a vacancy for a staff well-paid position, to give it to a man who is a steady, trustworthy man who will do very well, and to pass over a much better second division man because it may crystallise his mental faculties and render him less anxious and fit for promotion to the upper division at a later period.

27,441. That would be one advantage of the by-partite organisation of the Service as against what we have now. You would have a much clearer distinction between two sets of men?—Would you abolish staff clerks by that arrangement?

27,442. No, I would retain staff clerks as a line of promotion for subordinate clerks. Some of the places ought to be pretty well paid. For men who are superintendents over a large number of men and direct the work generally I would have places that went up to 400*l.* or 500*l.* a year?—Certainly, I think that would be an advantage.

27,443. You told us that it was your impression that men recruited on higher examination were, speaking generally distinctly, of a superior calibre?—Yes.

27,444. You have in Dublin only two offices in which men of the higher division are employed, namely, the Chief Secretary's and your own office?—There is one other office called the Public Record Office, which has one or two upper division men.

27,445. But there are a good many other offices that have only men of the second division. I don't think you have people who come in by what is now called the intermediate examination?—No.

27,446. In the second division offices, so to speak, it is quite conceivable that while you could work the office with a clerical establishment recruited wholly from the second division you might not get from amongst them men competent to take the headship of the office. Take for example the office of the Registrar-General: Is there any machinery by which higher division men from the Chief Secretary's office or the Local Government Board might be considered for an appointment such as the head of the Registrar-General's office?—I cannot conceive anybody leaving our office for the Registrar-General's.

27,447. Not for a post in the office, but for the post of Registrar-General itself?—He has generally been a medical man who deals with health statistics.

(*Sir Donald MacAlister.*) We were told yesterday that was almost an unbroken tradition.

(*Mr. Graham Wallas.*) That he was always a professional man.

27,448. (*Sir Henry Primrose.*) It is not so in England. What I have in my mind is this. Clause 7 of the Order in Council authorises the filling up of a post like the headship of a department of this sort by nomination from any quarter and with the concurrence of the Civil Service Commissioners; the qualifications required are of a kind that are not ordinarily to be acquired in the Civil Service. That seems to suggest that qualifications that are ordinarily to be found in the Civil Service ought to give a sort of prior right to any appointment in the public service?—I have that feeling.

18 February 1913.]

The Right Hon. Sir HENRY ROBINSON, K.C.B.

[Continued.]

It is rather hard to take men from outside when you have good men available in the Civil Service.

27,449. I was rather wanting to know whether, taking the Dublin offices as a whole the first division men who come to you, and to the Chief Secretary's office, besides having such prospects as each of those offices offer, may also have the hope of being appointed to the headship of one of these minor departments?—Of course there is no reason why a good man should not be taken out of our office and made a Commissioner of Prisons, or something like that. There is generally in Ireland an outcry if a man is appointed as the head of a department who is not an Irishman. I do not know whether they have the same feeling in England about the heads of

English departments. But, at all events, ministers on the whole would, I think, prefer to appoint an Irishman, and this might militate at times against such promotions from the upper division which would otherwise be desirable.

27,450. Of course if you take a more or less corresponding department in England, that is the Treasury, there have been so many instances of men from the Treasury being given appointments outside as heads of offices that the same sort of thing might prevail here and, perhaps, with advantage?—It might and with advantage. We have men in our upper division capable of being heads of many of the smaller departments.

Mr. JOHN J. DUFFY and Mr. ANDREW WALSH, called and examined.

27,451. (*Sir Henry Primrose.*) You come to represent the assistant clerks in the Local Government Board?—(*Mr. Duffy.*) Yes.

27,452. There are 33 altogether?—There were at the time our statement was compiled. There have been some additions to the staff since then.

27,453. Were you all recruited in the same way, or how did you begin?—We were all boy clerks.

27,454. In Dublin?—Not in Dublin. I myself served in London, and so did my friend who is with me here, Mr. Walsh. We got transferred to Dublin.

27,455. You passed to the rank of assistant clerk by means of an examination?—Yes, sir.

27,456. And then, when you got on to the list of assistant clerks, you got an appointment in Dublin?—No, sir. I was appointed to the Board of Trade in London, and then I got transferred to the Local Government Board.

27,457. At your own request?—Yes, sir.

27,458. What are the ages, roughly speaking, of these 33 or more assistant clerks?—I would say that the youngest would be about 21 or 22, and the oldest would probably be about 31 or 32.

27,459. So that you have no very old men?—I think there is no man over 35.

27,460. How long have you been in the Local Government Board in Dublin?—Since September 1906, but I am assistant clerk since December 1903.

27,461. And you are now on the new scale which is 55*l.* to 150*l.*?—Yes.

27,462. Your point is that while you are limited in salary you work side by side with another body of men called second division clerks, and that there is no real distinction between the work?—Quite so, sir. That is my point exactly.

27,463. It is very difficult for us to say whether that is the case or not, other people would tell us there is a distinction between the two?—If you refer to the concluding paragraph of my statement you will see that I refer to a minute of the Vice-President of the Local Government Board in which it is stated that "It was found practically impossible, in most cases, to differentiate between the work assigned to assistant clerks and clerks of the second division, and the Board, therefore, consider that the memorialists have a reasonable claim to have the conditions under which they are employed inquired into and re-considered."

27,464. Yes, but does that really mean all clerks of the second division or only the junior workers of the second division, because it is quite probable that a clerk of the second division has to do work very similar to that of the assistant clerk, and eventually he has to do more difficult work?—I have in my mind senior second division clerks who perform duties similar to assistant clerks.

27,465. Let us take a single branch—the accounts branch, how is that composed?—It is composed this way—one clerk in charge, one assistant, three second division clerks, and two assistant clerks.

27,466. Do you say that those two assistant clerks are practically doing the same work as all three second division clerks, or only the same as one or two?—Comparing the duties of one assistant clerk with a second division clerk, their duties are practically the same.

27,467. Is the work of this branch sub-divided? I mean are there separate branches of duty?—Do you mean is the work allocated in any special manner?

27,468. Yes?—I don't think so.

27,469. Then what exactly are they doing?—Take the case of our inspectors and auditors, they furnish returns of their work and how they spend their time. It is necessary for a clerk of this branch to go through these and see that everything is legal—to see that they have not put in any excessive expenditure. That work is referred either to the second division clerk or to the assistant clerk.

27,470. Does it go straight into the hands of the assistant clerk before it goes to the second division?—Yes.

27,471. Supposing an account is put into your hands; to see that the charges have been made in accordance with the subsistence allowance, proper travelling, and so on, when you have gone through that and you found certain mistakes, what do you do with it?—I would make a minute on it, and refer it to my superior officer.

27,472. You would not pass it on to a second division clerk?—Possibly.

27,473. Between passing from you to the clerk in charge of accounts it would not go through the hands of a second division clerk, in order that he might check what you have done?—This might occur.

27,474. You say an account of that kind is given to a second division clerk or an assistant clerk without any discrimination?—I don't think there is any discrimination, to the best of my knowledge.

27,475. Have the assistants any superior work to do beyond merely checking accounts?—I had in my mind the case of what I might term the senior assistant clerk in the branch. He had the preparation of what are called in the Local Government Board negotiable receipts for the payment of salaries.

27,476. What are those?—Cheques drawn for the amount of each man's monthly salary on the scale. A Civil servant only gets 8 per cent. of his salary each month, and gets his balance, minus income-tax and other deductions, at the end of the quarter.

27,477. Is not that merely accounts?—I don't think it is quite looked upon in that light.

27,478. A man has a salary, say, of 120*l.*, and you have got to see that he is paid 8 per cent. upon that each month—that is a simple sum in arithmetic?—It resolves itself into a calculation certainly.

27,479. But you cannot call that superior work?—It is not superior in the strict interpretation of the word "superior."

27,480. I mean that seems to me the very simplest work that any school-boy could do?—I don't know whether he could or not.

27,481. Could you specify any other work which you would consider was rather of a superior kind?—Weekly payments to temporary staff. They come under the duties assigned to assistant clerks in the branch, and the temporary staff consists of a number of female typists, messengers, fire lighters and cleaners.

27,482. He merely calculates the amount due?—He has the actual payments to make of all the temporary hands in the office.

27,483. The paying is done by some one single person?—Yes, sir.

18 February 1913.]

Mr. JOHN J. DUFFY and Mr. ANDREW WALSH.

[Continued.]

27,484. Is that done by the assistant clerk?—It is done by a second division clerk who was formerly an assistant clerk. In his absence it would be done by an assistant clerk.

27,485. Payments in connection with advertising and the reporting of local inquiries?—That would come under the heading of negotiable receipts, except in the case of payments for preparation of minutes of evidence at local inquiries. The folios are sent to another department for counting.

27,486. Those particular duties, specified in the first paragraph of your memorial, are of a simple kind—I mean they don't require a person of any great skill, and you have only got to do arithmetical duties, and do you say that a second division clerk is employed upon work no better than that?—The very same work.

27,487. Then the question would arise, not so much whether only second division clerks ought to be employed, but whether the assistant clerks could not do all this work?—That is, of course, a question we could not decide.

27,488. (*Chairman.*) Do you mean to say second division clerks perform no other sort of work than that. Don't second division clerks write memorandums or documents?—So does the assistant clerk.

27,489. In the Labourers' (Ireland) Act branch there are five assistant clerks employed, and their duties consist of the marking of important matters in the minutes of proceedings of rural district councils—is it that you have to read through the minutes of the proceedings and draw attention to anything of importance?—Yes.

27,490. In order to do that, what amount of knowledge do you require?—You must have a knowledge of the work of the branch, inasmuch as you don't want to mark matter that is not of importance.

27,491. Have you to understand the Acts?—You must have a knowledge of the working of the Acts.

27,492. Then drafting of letters—what sort of letters do you draft?—General work in connection with the Labourers' Acts.

27,493. Preparation of files for inspectors—that merely means putting things together in connection with an inquiry?—Yes, and bringing out the salient features in connection with the inquiry.

27,494. (*Mr. Boutwood.*) If an assistant clerk drafts a letter in that branch what happens to it?—It is passed on, say, to the staff officer. He reads it, and if he is satisfied with its general tone, he initials it and sends it on for typing. It is then submitted for signature.

27,495. Is the same process gone through in the case of the second division clerk?—Yes.

27,496. (*Sir Henry Primrose.*) How many second division clerks have you in the Labourers' (Ireland) Act branch?—About 7 or 8 roughly.

27,497. Then they would do the greater part of the drafting of letters?—Yes, proportionately.

27,498. And the assistant clerks, as a rule, would be doing the more simple matter—preparation of files and putting together of papers. What do you mean when you say the "assistant clerks in the branch eligible for promotion"?—I mean they have got their requisite number of years' service.

27,499. Yes, but it is not a privilege of the branch?—Oh, no, sir.

27,500. Of course, this question of whether or not in a particular office, second division clerks and assistant clerks are really doing the same kind of work is a question of minute detail which it is impossible for us to form any judgment on, but coming more to the general question, what I think you really feel is that your possibilities of promotion and employment at higher rates of pay are unduly limited—that is to say, you feel you are capable of doing better work, and earning better pay?—Yes, but even in the case of this particular office we contend that we actually perform this high work at a smaller rate and that our prospects are not, I won't say as good, because the Local Government Board have treated us well.

27,501. Do you mean to say that the prospects in the Local Government Board in your class differ materially from the prospects of assistant clerks in

any other department?—The prospects are very limited except there is an actual vacancy.

27,502. An assistant clerk can be promoted quite irrespective of vacancies?—Yes, if you increase the second division establishment.

27,503. If he is a man fitted to be promoted to the second division he might be promoted and go somewhere else?—I have never heard of such a case.

27,504. But surely the Local Government Board should afford better opportunities than many others in that respect. You have got 46 second division clerks, and there must be a certain number of vacancies?—Yes, but the majority of those 46 men are there for a large number of years, and vacancies for higher posts do not occur frequently.

27,505. All the more likely to have vacancies?—I don't think so.

27,506. As a matter of fact, since you have been in the Local Government Board how many assistant clerks have been made second division clerks?—There are in the Local Government Board what I might call two classes—old and new, and, of the latter, there have been 10 since 1904 or 1905.

27,507. That is a considerable proportion; it is a good proportion—I mean unless you are to promote them all—unless you are to break down the whole theory upon which assistant clerks are supplied?—

27,508. It seems to me a liberal number?—We admit that the Local Government Board have treated us considerably, but an assistant clerk should not be asked to do the same work as a second division clerk, having regard to the different scales of pay. I think it is unjust when a man is eligible to do the work to bring in a man outside. Take the case of a second division man who dies. His place cannot be filled for some time, and then you frequently have the assistant clerk doing the work of the man deceased.

27,509. (*Chairman.*) Your assistant clerk is recruited for particular duties, and if he is considered eligible and fairly fit for promotion he has a claim to promotion?—He has, and I would not advocate it otherwise.

27,510. But there have been a considerable number of promotions from assistant clerks to second division clerks in the Local Government Board?—I would not say considerable, but substantial.

27,511. That is a liberal reading of the words of the Order in Council?—Yes.

27,512. (*Sir Donald MacAlister.*) I can conceive assistant clerks making one of two complaints, either that the whole system is rotten, or that they themselves are not treated and have not been treated in a fair way, and in accordance with the prospects which were held out to them?—Yes, sir.

27,513. I don't see as regards the second complaint that you are able to make out any very great case, because when you became an assistant clerk you knew it would carry no higher remuneration than 150*l.* unless you got promoted?—Yes.

27,514. In your department the percentage of people promoted seems to me a reasonable amount?—I think our department is really an exception, inasmuch as, so far as I can gather, the heads of our department are in sympathy with our demands.

27,515. Of course, the vice-president does not suggest that the whole class of assistant clerks should be done away with. He merely, in consideration of the work that assistant clerks are doing, suggests that possibly a better scale of remuneration might be assigned to them?—Yes.

27,516. But you see the difficulty in these things is this, that if you are going to give superior work to these clerks, then that entirely alters the aspect of the case, and the men who are now assistant clerks would not belong probably to the new class because the tests would be very much severer?—The new tests.

27,517. I mean if you alter the conditions of employment for the clerks altogether, you also alter the conditions for getting in, and the majority of the men who are now assistant clerks would not be in this class?—You mean they would not have entered the class at all.

27,518. I mean the examination by which they

18 February 1913.]

Mr. JOHN J. DUFFY and Mr. ANDREW WALSH.

[Continued.]

entered was one which they were able to pass; but if you do superior work, and get superior pay, then the entrance would be much narrower and the competition keener. Look at yourself from the departmental point of view—do you say you are doing work that is superior to what you were engaged to do?—Yes, sir.

27,519. You say that men engaged to do superior work are doing work the same as yours—it is not the same thing?—I would imagine it was. The second division clerk was not brought in to do routine or mechanical work.

27,520. I am bound to say that I don't see anything in the first branch that is not quite in accordance with the definition of the work which is appropriated to the assistant clerks. I think it is quite possible that there are second division men doing the same work. That is wrong, but that means that there ought to be more assistant clerks and fewer second division clerks. Supposing there is a vacancy in your branch now—there are practically no boy clerks in Dublin now?—We have only got one in the Local Government Board.

27,521. Therefore, when a vacancy occurs the Board write to the Civil Service Commissioners, saying they have a vacancy and asking them to send an assistant clerk?—Yes.

27,522. And he may be an Englishman, a Scotchman, or an Irishman?—Yes.

27,523. Are the majority of your class Irishmen?—As far as the Local Government Board is concerned, I think I might say the whole lot.

27,524. How does that come about?—Some of them waited until they got a chance of going to the Dublin office, others like myself went to London and got transferred back at their own request.

27,525. How did you get transferred from the Board of Trade—did you exchange?—No, I approached the Local Government Board, and when there was a vacancy they applied for me. It was a matter of arrangement at the time.

27,526. Is not that avenue there now?—It is, but I had to get a new certificate of qualification.

27,527. (Chairman.) From the Civil Service Commissioners?—Yes. My application had to go through for Treasury sanction first.

27,528. (Sir Donald MacAlister.) At what age do assistant clerks enter the Service?—Formerly from 19 to 21 years, now from 17 to 18.

27,529. They have an opportunity of going up for the second division examination?—Yes, and the Customs and Exchequer.

27,530. The assistant clerks of whom you speak—don't they take advantage of that opportunity?—Some of them do, of course, but you must recognise that on account of being engaged at work they have not the same facilities for study.

27,531. So that we may take it a number of the assistant clerks would have a difficulty in passing into the second division examinations?—I would not say that if they had facilities for study.

27,532. Is your contention that 40 second division clerks, and 46 assistant-clerks should be made into one class, because they are practically doing the same work?—My contention is that assistant clerks are performing the duties of second division men. The second division clerks have better prospects. Their pay and holidays are better, and they have better opportunities of promotion. The facilities for promotion should be extended to us. The assistant clerk who has 150*l.*, if he does not get promotion, stays there for the remainder of the service; except in exceptional cases he may reach 170*l.* after a further period of 10 years' service.

27,533. Is your idea that one grade should be all second division, or all assistant clerks?—Of course, it would be a matter of appellation.

27,534. You were a boy clerk?—Yes.

27,535. You did not get into the assistant clerks grade without an examination?—No, sir.

27,536. Why do you say that assistant clerks should get into the second division without examination?—I am not saying that. What I say is that when he reaches his maximum salary he should not stop there.

27,537. (Mr. Boutwood.) Are there any minor staff posts in the Local Government Board for assistant clerks?—No, sir.

27,538. Why did you not sit for the second division?—I did sit for it as a matter of fact.

27,539. (Mr. Graham Wallas.) Work in the Local Government Board is largely seasonal?—Of course in the finance, audit, and statistical departments the work is more or less seasonal.

27,540. And when work is seasonal the whole staff has to be put on to it?—Yes, sir.

27,541. Would you mind giving me your educational history?—I was at several schools. I started in a national school, and I afterwards went to a Christian Brothers High School, in Clonmel.

27,542. Did you sit for the boy clerkship examinations from that school?—Yes.

27,543. Had the Christian Brothers special classes for that examination?—No, but I had correspondence courses.

27,544. If you had not got into the Civil Service would you have stayed longer at school?—I suppose I would, but I cannot tell you.

27,545. What age were you then?—I was just over 16 years.

27,546. (To Mr. Andrew Walsh.) Would you mind telling us your educational history, Mr. Walsh?—I went to a national school, and I got from there through the boy clerks' examination.

27,547. Did you take correspondence courses?—No; not prior to boy clerks' examination, but did so while serving as boy clerk.

27,548. How old were you when you left the national school?—About 15½ years; and I was about 3½ years as a boy clerk before I passed into the assistant clerks.

Mr. PATRICK MCGUINNESS, called and examined.

27,549. (Chairman.) You are a second division clerk in the General Registry office?—Yes.

27,550. What is your complaint?—It is against these three patronage appointments which have been made.

27,551. There are three minor staff clerkships, and the two superintendships in the office?—Yes.

27,552. These five appointments are at present held by promoted second division clerks?—They are.

27,553. The higher appointments in the office are—Medical Superintendent of Statistics, the Secretary and the Registrar-General?—Yes.

27,554. Do you complain of not being eligible for promotion to the medical superintendship?—An ordinary clerk held that position before the present medical superintendent.

27,555. It is now considered desirable that the post should be held by a professional man?—Yes, but not by us.

27,556. Do you object to that—is it not a matter for

the Government of the day to decide?—Oh, yes, of course it is. We don't complain so much against one doctor.

27,557. But apart from the Registrar-General there is only one doctor in the department?—There was an arrangement whereby a doctor was consulted about any medical matters required.

27,558. The secretary at the present time was taken from outside, wasn't he?—Yes.

27,559. Do you object to that?—Well it was held all the time up to that by an ordinary promoted clerk without any legal qualification.

27,560. If, in the opinion of the Government, or in the opinion of the head of the office, there was no particular second division clerk suited for that appointment, would you deny the Government the power of going outside the office and taking a suitable man?—No, but we deny that there was not a man in the office suitable for the position.

27,561. You think there was?—I think so.

18 February 1913.]

Mr. PATRICK MCGUINNESS.

[Continued.]

27,562. You think he ought to have been promoted?  
—Yes.

27,563. There was a vacancy lately in the registrar-generalship?—Yes.

27,564. Do you also claim that a second division clerk ought to have been selected for that position?—Or else at least one of the two men already brought into the office.

27,565. The secretary or the medical superintendent?  
—That was taking a third appointment from us.

27,566. When did it come to be an article of faith in your office that the highest appointments should be reserved for you?—We don't claim it, but we raise the point for your consideration that we have a better right to them than any one outside.

27,567. Still you are rather exclusive, are you not?—No; it means three appointments out of five or six taken away. If I might explain. The three deputy-superintendents are to be minor staff clerks in future, and they cannot be of any use to us, as it will mean no promotion for us to get these appointments.

27,568. What is your maximum at present—is it 200*l.* or do you go to 300*l.*?—300*l.*

27,569. And here you have two appointments of 350*l.*, and two of 500*l.*?—The last appointment we complain about. When the last appointment was made to that 350*l.* position it was cut down to 300*l.* It was made from 200*l.* to 300*l.* instead of 250*l.* to 350*l.*

27,570. So that really the maximum there is no greater than the maximum for the second division?  
—No.

27,571. The superintendentships do come to you?—These are two open appointments at present.

27,572. In other words your office is on a second division basis. There are many offices in England on a second division basis, and in Scotland a very large number of offices are on that basis. There are no Class I. men brought in over you?—Oh, no; there is no Class I. man. I understand the Registrar-General in England said he did not require any Class I. men there either. We submit the second division men are quite qualified to perform the duties of any position in the office.

27,573. I am pleased to find you have such a good opinion of yourselves?—They are taking the three appointments away from us.

27,574. You say that, even though one of them is a doctor's appointment?—Two are doctors and one is a solicitor.

27,575. (*Sir Donald MacAlister.*) Has not the Registrar-General generally been a doctor?—Yes, but the man who held the position before Sir William Thompson was appointed was an ordinary promoted clerk.

27,576. Isn't it true he has been generally a doctor? Yes, before him I believe he was generally a doctor.

27,577. In what sense was the appointment, taken from non-professional people?—The man who held it before was not a doctor.

27,578. It has generally been held by a doctor?—Sir Robert Matheson held it for a long time, and he was an ordinary clerk promoted to the position.

27,579. Do you think there are advantages in the Registrar-General having medical knowledge?—We submit that two doctors are hardly required in the office.

27,580. Do you think the Registrar-General, the head of the office, should be a doctor?—I understand he got the position as a medical man.

27,581. Is there any advantage in the secretary having legal knowledge?—We don't see any advantage. Several ordinary men held it time after time up to then.

27,582. The question is whether it is not an improvement to have a secretary with legal knowledge?—An experienced man of 25 or 30 years' experience of the Registration Acts, and well versed in the routine of the office, I think, would be better qualified for the post. We think so, at all events.

27,583. Did you have to go outside for legal advice and assistance?—Except to the law officers of the Crown.

27,584. You had to seek legal advice?—Very seldom.

27,585. You had to seek official legal assistance every now and then when the secretary was not a legal man?—At odd times, and we have to do the same still.

27,586. Doesn't it sound like an improvement to have somebody with legal knowledge on the spot instead of going outside?—We don't admit that. His legal knowledge makes no difference whatever.

27,587. Why?—All the legal knowledge required is for prosecuting people for not registering births, deaths and marriages. In these cases we have to employ a solicitor, a local solicitor. The legal expenses in that way were very small.

27,588. Do you think it is quite possible that higher officials in the Registrar-General's department may have looked at the question from a broader point of view than the promotion of clerks?—I expect they did. We submit it would be more efficient to have men of great experience in the office. The work is rather difficult. There are men with 25 or 30 years' experience of the work there in the office of superintendent. We hold they would be more efficient for the post.

27,589. Even in the absence of any legal qualification?—Even in the absence of legal qualification.

27,590. (*Sir Henry Primrose.*) Has your whole service been in the Registrar-General's office in Dublin?  
—Yes.

27,591. Were you appointed by the Civil Service Commissioners?—Yes.

27,592. You are objecting to the reduction of that minor staff post from 250*l.*–350*l.* to 200*l.*–300*l.*, but still it might be a very great advantage to a second division clerk who might jump to 200*l.* long before he would have reached the 200*l.* by the mere process of time. It is quite true that 300*l.* is the same maximum as the second division maximum, but a second division clerk takes many years to get to that maximum merely by the process of time, whereas if he was selected for that post he might get it in a much shorter time?—Owing to these men being brought in from outside, no promotion is likely to take place for years—seven of us have salaries ranging from 140*l.* to 180*l.*—some of us have reached 180*l.*, so that in two years' time we will have reached 200*l.* in the ordinary way.

27,593. These three minor staff clerks now in existence were all men who were second division clerks?—Yes, these three men.

27,594. Were they the second division clerks who were in the Registrar-General's office?—Yes.

27,595. The office as an office has had that amount of promotion?—Yes, in the past, but now prospects are very materially altered. It is a very remote thing if we get any promotion whatever. There are only two posts, the two superintendents—the three staff clerkships will be of no value to us, therefore there only remain two posts.

27,596. Still, there are not a great many of you—I mean, there are not too many as it is. I notice you have got five assistant clerks?—Yes.

27,597. Is their work quite distinct from yours as second division clerks?—There is a line drawn—they do some different work.

27,598. Take the English Registrar-General's office where the work is exactly analogous to yours; their staff is equally divided between second division clerks and assistant clerks. They have almost as many assistant clerks as second division clerks, which seems to indicate that a very large amount of the work is of a simple kind which could be done by assistant clerks. Do you know, are any of the 14 second division clerks doing work which might perhaps be assigned to assistant clerks?—Possibly some of the junior men are.

27,599. You see, of course, it might not benefit you, but it would benefit the office as an office, if the number of men who had to aspire to these few places were so reduced as to give each one of them a better chance?—That is so.\*

27,600. It is quite true that the Registrar's office, as it stands now, is not a favourable prospect for a second division clerk; he would do better probably if he went into the Local Government Board?—In any other office.

27,601. Because the proportion of higher places to the Service places is small. But now, if it was found that the number of second division clerks could be reduced

18 February 1913.]

MR. PATRICK MCGUINNESS.

[Continued.]

to eight or nine, and a good deal of the work relegated to assistant clerks, that would make it rather better for the men?—It might, of course. But with the 14 second division men crowded there on the top of one another there is practically no prospect of promotion and no stimulus.

27,602. After all, a very large number of the second division men, in the nature of things, never attain to anything beyond what we call the Service scale; is not that so?—I understand in the Registrar-General's office in London they go up to 900*l.* a year for the chief clerks.

27,603. I will put it this way: When you entered the Civil Service you knew a certain body of men were promised a certain rate of pay?—Yes.

27,604. They are also promised they shall have certain opportunities of being promoted to better rates of pay than that?—Yes.

27,605. But that clearly can only apply to a percentage of the whole body?—Oh, no, not to the whole body.

27,606. Therefore, although the percentage of prospects of being promoted to a higher grade place is undoubtedly less good with you than it is with others,

still it must be the fate of a large number of men who never get anything better than the service rate of pay?—Of course, for a minority of them.

27,607. That Inspectorship of Registration—is that a place, you think, a good second division man could properly fill?—A second division man holds it at present. But the late Registrar-General, Sir Robert Matheson, told us they might appoint a man from outside. We never know where this patronage will end.

27,608. It all depends. We don't know what the qualities are of the second division clerks in the office. It is conceivable you might have 14 men not one of whom is really qualified for these particular places. The head of the office must judge of that?—Of course he must, but we hold they judged wrongly.

27,609. I take it, if there was a man qualified, that the head of the office has every inducement to give it to one of his own men unless he thinks he is not fit. You don't suggest there is any influence at work which makes the authorities who are responsible for the office desirous to keep back second division men who are in the office?—I don't suggest that, but we deny that there was any justification to look for men outside the office.

Mr. T. W. SMITH, called and examined.

27,610. (*Chairman.*) You are a Second Division clerk in the General Valuation Office?—Yes.

27,611. Will you tell us what you want to represent to us?—Since the year 1891-2 the position of valuer and surveyor has been closed to the clerical staff of the office. The position was open to us before that time, and was much sought after.

27,612. In 1892?—Yes.

27,613. Up to that time professional qualifications were not demanded from the valuers?—No.

27,614. And now a person to be admitted to the grade of valuer must have professional qualifications?—He has to serve two years in an architect's office.

27,615. Or a surveyor's office?—Yes.

27,616. I suppose being second division clerks, you could not now qualify for these valuers' positions?—We could not qualify now. We are appointed rather young. I was appointed at 17.

27,617. You could not get a certificate from an architect or surveyor by attending his office in the evenings?—No.

27,618. So that you are debarred?—Yes.

27,619. Is there anything else you wish to say?—We think there should be more staff appointments. The deputy-superintendent should be graded as a staff officer or minor staff officer, as is done in other departments.

27,620. You have five staff clerks have you not in the office?—Yes.

27,621. And there is a superintendent clerk?—He is not in our branch of the office, but in another branch recently established.

27,622. That is Finance?—Yes.

27,623. You don't count him?—Not amongst those.

27,624. Not amongst those appointments to which you can get promotion?—He was promoted from our staff, but we thought when that office was established that more of us would be appointed there. Instead of that they brought in a good many temporary clerks. In fact, he superintends over 30 temporary clerks, and some of these have responsible duties entrusted to them which we consider should be entrusted to us.

27,625. (*Sir Donald MacAlister.*) He is a promoted second division clerk?—Yes, he is. We consider that in what we call our branch of the office that deputy-superintendents should be appointed.

27,626. (*Chairman.*) You think a deputy-superintendent should be created?—Yes, because the deputy has charge many weeks of the year while the superintendent is on leave. The superintendent has 55 days leave in the year, and it is a rather responsible position.

27,627. Who is the superintendent of your branch?—Mr. Rice. It is like this: Our office is divided into two parts since the Finance Act of 1909-10; the office

as it existed before the Finance Act of 1909-10, and the portion dealing with the Finance Act of 1909-10. In our branch there are four superintendents of rooms and an accountant.

27,628. Are these four superintendents of rooms the same as the staff clerks that we see mentioned here?—Yes, 250*l.* to 400*l.* is their salary. These are the officers referred to.

27,629. And I suppose one of these is the accountant?—One is the accountant.

27,630. These five appointments are open to you?—They are open to us, but there has been no promotion since 1896, and in the ordinary course of affairs there won't be any for 16 years.

27,631. Were not the last promotions made from the second division to these appointments?—Yes.

27,632. And probably the next promotions will be made to these appointments from your grade?—Yes.

27,633. Should you not, then, wait for the vacancies? We considered when the finance section was created there would be more than one appointment to staff posts.

27,634. You hoped to get promotion into the Finance Act department?—We consider there should have been more than one staff post created in the finance department. A great many temporary clerks were brought in. Some of them are working under temporary valuers. Branches were established in Belfast, Cork, and Londonderry. We thought it very hard that valuers should superintend clerks, and that clerks could never aspire to be valuers.

27,635. But the valuers are necessary for the purpose of valuing land?—Yes.

27,636. You don't object to that?—We don't object.

27,637. Under the valuers there are clerks who happen to be temporary?—Yes.

27,638. You don't look to supplanting these clerks, do you?—We don't look to supplanting temporary clerks, but some of them are entrusted with very responsible duties.

27,639. Some of these temporary clerks, and you think you ought to be employed on those duties?—Yes.

27,640. Well, the finance branch is a temporary branch, is it not?—It is at present, but we don't think it should be temporary. As far as we can see the work will last for years and years.

27,641. The fact is you are questioning the wisdom of the Government. All that you are justified in looking forward to, under the terms of your engagement, is promotion in your own line. If any additional establishment is created, and you are promoted into it, so much the better for you, in fact, some of your men have been so promoted. Are you ever selected for

18 February 1913.]

Mr. T. W. SMITH.

[Continued.]

transfer to other offices in Dublin, and in that way have any of you got promotion?—There have been a good many men transferred from the department at different times, and all got on very well.

27,642. That is so much to the good?—Yes.

27,643. When you hear of vacancies in the other Government departments in Dublin it is always open to you, is it not, to apply for a transfer if you think it would improve your prospects?—We can't very well get the transfer after serving a few years in one office. Another department will not have you for one thing.

27,644. Some of your men have applied to Sir John Barton for transfers, have they not?—An application for transfer usually comes from the other department. First of all you get another department to agree to take you, and then they apply for your transfer.

27,645. We have been told that a number of men from the Valuation Office have obtained promotion by transfer to other offices?—Yes. They did not get promotion immediately they went, but after some time.

27,646. They get in the way of promotion?—It is very hard to get a transfer. You have to have some influence to get a transfer to another department. I have tried several times, but always unsuccessfully.

27,647. What salary are you drawing now?—167l. 11s.

27,648. You have got a clear run up to 300l.?—Yes.

27,649. So that the future is not altogether dark for you, it is rather bright. Is there anything else you would like to say to us?—I think these are all the points.

27,650. (Mr. Boutwood.) Do you know roughly about what age these men get transferred from your valuation office?—One was about 30; I remember he went just before I came to the office.

27,651. I thought you said after a few years there was a difficulty of getting a transfer?—It is, unless you have some influence.

27,652. (Sir Henry Primrose.) You mentioned up to 1891 second division clerks were sometimes appointed to the post of valuer and surveyor, and then certain qualifications were held to be necessary?—Yes.

27,653. Do you consider these qualifications are not necessary, or do you consider second division clerks have these qualifications?—We consider that we should be eligible to compete, and that these qualifications are unnecessary.

27,654. Unnecessary?—Yes.

27,655. It is not your business to say that?—Well, it is not. As a matter of fact the second division clerks are employed in checking work which has been returned by valuers.

27,656. Do you suggest any second division clerk has the qualifications that are specified as required, and would satisfy the conditions laid down by the authorities?—I don't mean that. I mean to say the second division clerks could do the work which is entrusted to the valuers. As an instance of that I may say the present chief valuer was formerly a second division clerk, and the head valuer under the Finance Act was formerly a second division clerk.

27,657. But we don't know what opportunities they had to qualify; possibly they studied?—Yes; we would study too if we knew we would have the chance of getting appointments.

27,658. That is another point. You mean if you were allowed to compete you could acquire the necessary qualifications?—Yes.

27,659. How are valuers appointed?—The Civil Service Commissioners hold examinations.

27,660. What are the limits of age?—22 to 28.

27,661. A second division clerk would be excluded now?—Yes, unless he has been in a valuer's office.

27,662. You must have outside knowledge?—Yes.

27,663. As regards this finance division do you suggest they ought to have created a certain number of staff posts in order to give promotion, or do you hold the work required it?—We consider the work required more staff appointments.

27,664. Have you any reason to suppose if the staff appointments had been made that men from your branch would have been selected for them?—I am sure they would.

27,665. Are you quite certain? It does not seem to follow necessarily. It would have been worse than anything if there had been a number of staff posts created and none of you selected, and that might have happened, mightn't it?—I think it hardly would have happened. It might, of course.

27,666. You really seem to imply it is a hardship on a man to get no more than what he was promised when he entered the premises—that is to say, a maximum of 300l. a year. After all that is a very good prospect. It is a prospect thousands of people outside would be only too delighted to get. Take your own school fellows, have you kept sight of many of them?—I don't remember many of them.

27,667. Are there many of them you know doing better than you are yourself?—Our family changed from the north of England to the south just at the time I left school, so I rather lost sight of them.

27,668. In the outside world a position which ensures you 300l. a year in middle-life is regarded as a very tempting thing, isn't it? You know what men are earning outside, don't you?—Yes.

27,669. And it is not to be sneezed at, is it?—From that point of view it is not.

(Sir Henry Primrose.) Reading your paper seems to suggest if any man is confined to what after all is the prospect which is held out to the vast majority of men who come in for the second division, that it is really injurious to confine any man to that. You want an army of major-generals.

27,670. (Chairman.) You say your family migrated from the north of England to the south. Did you pass the second division examination in London?—Yes, I was a boy copyist in the Post Office Savings Bank.

27,671. Did you get transferred to Ireland at your own desire?—When I passed for the second division I was appointed to Dublin.

27,672. How long have you been in Dublin?—Since I was appointed—2nd July 1900.

27,673. Did you ever feel a desire to go back to England?—I should be very glad if I could.

27,674. You prefer to serve in England?—I think I would, in a provincial town. I would not care to go to London.

27,675. Do you find it expensive living in Dublin?—I think it is more expensive than in London.

27,676. Have you lived in London for any time?—I lived in London for three years.

27,677. How many years ago was that?—From 1897 to 1900.

27,678. Well, you are able to institute a sort of comparison at all events. Do you find living here dearer than it was in London?—I consider it is the houses that are dearer than they are in London. You don't get such good accommodation. You don't get the same number of rooms, and they are not as well fitted up.

27,679. You would have to go further out in London, would you not, from your office than you are compelled to do in Dublin?—I think you would.

27,680. You think house rent is dearer in Dublin than in London?—I do.

27,681. How about the ordinary necessities of life?—Provisions are about the same, certainly not cheaper.

27,682. (Sir Donald MacAlister.) Is the qualification of a valuer something that a second division clerk could acquire in the office at all. I mean the special knowledge a valuer ought to have?—Well, the time the second division clerks were eligible they took lessons in surveying in their spare time. That was practically all the outside qualification required. It was looked upon as promotion to be made a valuer.

27,683. He took lessons after hours?—Yes, in surveying.

27,684. He hadn't any practical experience?—Oh, no. Of course he worked with a senior valuer for the first six months, and got the necessary experience.

27,685. The charge now is that instead of asking

18 February 1913.]

Mr. T. W. SMITH.

[Continued.]

the second division clerk to supplement what he may know by some evening lessons, they insist that a valuer shall have practical experience?—Yes.

27,686. Isn't that, from the point of view of the service of the State, an improvement?—Well, from that point of view it may be.

27,687. Isn't he a better valuer when first appointed?—He is supposed to be. But you acquire a certain

knowledge in the office, from the fact of having to go over the valuer's books and see that they carry out the provisions of the Act of Parliament and the Commissioner's instructions.

27,688. That is very much to the point, but as to actual valuing of land?—We have not.

27,689. You have no opportunity of acquiring that kind of skill?—No.

## SIXTY-SEVENTH DAY.

Wednesday, 19th February 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B.,  
C.S.I.

Sir DONALD MACALISTER, K.C.B.

Mr. ARTHUR BOUTWOOD.

Mr. GRAHAM WALLAS.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Professor JOHN MACNEILL, called and examined. Mr. MICHAEL SMITHWICK and Mr. DIARMID O. CROWLEY were in attendance.

27,690. (*Chairman*.) Mr. MacNeill, you appear on behalf of the Gaelic League?—Yes.

27,691. Dr. Douglas Hyde has not been able to favour us with his presence?—He has not been able to come.

27,692. I know, Mr. MacNeill, he has got a thoroughly efficient substitute in you. Before you commence your general evidence I would like you to tell the Commission how far Gaelic is a living language in Ireland. On page 2 of the paper you were good enough to give me, you state: "Apart from the public right in this matter a knowledge of Irish will tend to greater efficiency in the Civil Service. Over extensive areas, comprising the greater parts of the counties from Donegal to Waterford, a Civil servant who does not know Irish cannot perform his duties except through an interpreter." From Donegal to Waterford is a diagonal line drawn from the farthest corner in the north-west to nearly the farthest corner in the south-east?—I noticed that statement in the paper this morning. It should be the seaboard counties from Donegal to Waterford, the western counties.

27,693. The whole of the western and southern seaboard is Irish-speaking?—Yes.

27,694. The eastern and northern seaboard is not Irish-speaking?—Except in a few isolated districts.

27,695. The statement is perhaps not so true of Cork as of the seaboard of Kerry?—Not of the eastern parts of Cork.

27,696. Nor is it true of the western part of Limerick, or the seaboard of Clare?—Limerick does not come right out to the coast, but it is true of West Clare.

27,697. What is the number of the Irish-speaking population?—The Irish-speaking population is returned by the Census Commissioners as 582,000 odd.

27,698. Are those people who speak Irish in their every day life, or people who know Irish—who can read and write it?—It is very difficult to know how the census returns are compiled. In many of these districts the returns are not made by the people themselves, but by those who collect the figures for the census.

27,699. Owing to the action of your League a knowledge of Irish has been very largely spread throughout the country?—Yes, especially in the towns and other parts of the country where Irish was not spoken for some time.

27,700. That is notably so in Dublin?—Yes.

27,701. It is part and parcel, would you say, of the political propaganda?—We have always worked quite apart from political work of every kind.

27,702. Your efforts were certainly removed from

the arena of politics, but they did interact upon each other, without any exertion to that end on your part?—I suppose that is natural.

27,703. A strong Nationalist would learn Irish, and a pronounced Unionist would not?—So we should expect, but it does not always happen.

27,704. Have you well-authenticated instances of Unionists, men in the north of Ireland, learning Irish?—Yes.

27,705. Within recent times?—Yes, personal friends of my own, and also in Dublin.

27,706. But resident in the north of Ireland?—Yes. We had an Irish class instituted, I am informed—I don't know from personal knowledge—in an Orange lodge in Belfast.

27,707. Now will you state your case?—The case has been sketched in a rather rough and vague way in the statement sent in already. The main aspects of the case are first with regard to the discharge of the duties of Civil servants in a number of departments, notably in those new departments of pensions and insurance; we believe a knowledge of Irish is absolutely necessary for many of the officials, and where the officials can be changed from one district to another, a knowledge of Irish is necessary to all of them.

27,708. Otherwise they would be restricted to Irish-speaking localities?—Yes, and their case would be regarded as a disadvantage. Take the case of pension officers having to deal in all those districts which I have described mainly with Irish-speaking people, that is to say, with people whose natural language is Irish, and who cannot express themselves very well in English. For example, in Donegal there are over 12,000 Old Age Pensioners, and I should say that probably 8,000 of those are people whose ordinary language of intercourse, and ordinary means of expression is, and has been, since their earliest days, Irish only. They can tell you the time of day, or show you your way in a locality in English, but they cannot use English familiarly to explain things. A pension officer who does not know Irish, in dealing with those, is at a very serious disadvantage. A number of complicated questions have to be asked, and the officer is instructed, in case of doubt as to the evidence, to oppose the getting of the pension. A case of doubt may very easily arise if an officer is unable quite to understand the person from whom he is getting the evidence. Again, the officer has a selfish interest in opposing the granting of pensions. I don't say he may do it, but the temptation is there.

27,709. You use the word "selfish" in a wide sense, in the interest of the State, not in his personal interest?—He has a strong personal interest, because the greater

19 February 1913.] Professor JOHN MACNEILL. (Mr. MICHAEL SMITHWICK and Mr. DIARMID O. CROWLEY were in attendance.)

[Continued.]

number of persons whose claims he admits the more work it will entail on him in future, and he has a strong temptation to oppose on the ground of doubt. To a less extent, but still to a considerable extent, similar difficulties may arise in the case of insurance. In the case of an inspector of national schools the same difficulty in a far more important degree may arise, because there you are concerned with the education of the people. I am informed in Donegal, for example, the inspectors of national schools do not understand Irish with two exceptions, and my information is, also, in Donegal there is only one pension officer over a large area who understands Irish. Besides this difficulty of dealing with the people we put the case that as a matter of education—

27,710. You are going now into another branch. I would like you, first, to exhaust what you have to say as to the necessity, from an official point of view, that an official should possess a knowledge of Irish?—I can give a very important illustration of the necessity from that point of view. The Congested Districts Board has already adopted Irish as a subject in which their officers may qualify. I don't know to what extent they require them to qualify. At all events, they have adopted Irish as one of the subjects of examination for their officers.

27,711. An optional subject?—Yes. The Insurance Commissioners have circulated all their leaflets, have found it necessary to circulate all their leaflets, in Irish. So far as I know they have no machinery by which they can insure that their own officials are able to read this literature which is circulated by them.

27,712. Are their leaflets not bi-lingual?—Yes, they are circulated in English also, but the Irish leaflets are circulated separately. I have a batch of them here.

27,713. That shows that two of the great departments of State at the present time make Irish an optional subject for admission to the public service?—So far as I know a knowledge of Irish has not been officially required on the part of the Insurance Commissioners up to the present, though here in the report of the inter-departmental committee which inquired into the setting up of a staff for the Insurance Commissioners, the committee reported that in Wales, Ireland, and Scotland, there are districts in which a knowledge of Welsh or Gaelic would be indispensable.

27,714. (Mr. Boutwood.) What committee was that?—Some of the members of this Commission were also members of that committee. It is dated the 16th of May 1912. It is called the inter-departmental committee. Its object was to inquire into what steps were to be taken to create a staff for the Insurance Commissioners under the Insurance Act. Then there is a Department of Agriculture here in Ireland which employs a large number of people in the Irish-speaking districts, instructors in horticulture, agriculture, sewing, lace-making, bee-keeping, butter-making, and various things of that kind. I don't know how their officers for these purposes are admitted to the Service, but, so far as I know, there is no present machinery for ascertaining that they have a knowledge of Irish, a knowledge of which in their case would be quite necessary. Then, again, in the post offices a knowledge of Irish would be very desirable and necessary in many of these districts, especially now that the postmasters in country districts are themselves engaged in the distribution of pensions.

27,715. (Chairman.) Does the Irish Post Office accept letters addressed in Irish?—It does.

27,716. And, of course, delivers them?—Yes, though I think the arrangements are purely casual. They rely on the fact that owing to the number of people who have learned Irish they can always rely on having members of the central staff who will deal with matters of the kind.

27,717. In the Irish-speaking districts is the man who delivers the letters required to have a knowledge of Irish?—No, but he is usually chosen from the people who are likely to have a knowledge of Irish. My attention has been drawn to the fact that if an untrue statement is made in a claim for a pension under the Act it becomes a criminal offence, and that is a thing which might easily arise in that way.

27,718. Would the application be written in English or Irish?—It would be taken down by the pension officer in English.

27,719. Then the applicant would be the person who would make the untrue statement?—Yes.

27,720. What effect would it have?—If the pension officer understood him to have made an untrue statement he would direct a prosecution.

27,721. If the pension officer does not know Gaelic he may possibly write down a statement which is not the statement which the applicant made?—Quite so, or if the applicant is unable to express himself properly in English he might make a statement which would be misunderstood.

27,722. If he were allowed to express himself in Irish there would not be the same danger?—Yes.

27,723. That illustrates the general principle already enunciated that in these Irish-speaking districts it is desirable that the officials should know Irish?—Yes. The pension officer visits all the people in the district twice a year, and examines them as to whether there is any change in their circumstances, whether they have come into the possession of new means, and so on.

27,724. So far, you have told us of the necessity that exists for the Government officials in these Irish-speaking districts having a knowledge of Irish. Your position is that, inasmuch as Government officials are not bound to any particular place, and may be transferred in the ordinary course of promotion, it is desirable that a wide range of officer, the whole of the Service, should know it, as otherwise they would be impeded in the free flow of transfer?—Yes.

27,725. Is there any other point as to which you wish to speak regarding the necessity of knowing Irish?—No; perhaps I might, as a graphic illustration, hand in a case which arose here in the Dublin courts quite recently, in which a revenue officer came into collision with some people who were Irish-speaking people, and a prosecution arose out of it. It is an interesting illustration of the difficulties that may arise. A witness was examined here the other day through an interpreter in the Four Courts as to the facts of the case.

27,726. What does it illustrate?—It shows that the revenue officer might very easily get into a very difficult situation through his being unable to understand the people among whom he works.

27,727. Now let us see how far efforts have been made to popularise a knowledge of Irish: Is Irish taught in the national schools of the country?—It is. Before 1877 Irish was not permitted to be taught.

27,728. Irish was excluded?—Yes. In 1877 a small permission was given to teach Irish as an extra subject outside of school hours, and a few schools began to teach it. Since then the facilities have been increased by the Board of National Education, and the number of schools and students taking up Irish has increased also. I cannot give the exact figures, but we have given the return up to 1910.

27,729. You say that in 1893, the year in which the Gaelic League was founded, Irish was taught in 50 out of 8,559 schools?—Yes.

27,730. And was taught to 903 pupils; those were in the national schools?—Yes.

27,731. You say that in 1909-10 Irish was taught in 3,066 national schools out of a total of 8,401, and was taught to 182,000 pupils?—Yes.

27,732. In the intermediate schools I understand that in 1893 there were examined under the intermediate system 5,265 boys and 1,719 girls, and of these 426 boys were examined in Irish and five girls. In 1911 the total number examined was 7,963 boys and 4,142 girls, showing a considerable increase, and the number examined in Irish was 5,143 boys and 1,965 girls?—Yes, a very large majority of the boys and a considerable minority of the girls.

27,733. The first condition for teaching Irish in the schools is that the teachers should know Irish themselves?—Yes.

27,734. What measures are being taken to instruct the teachers in the primary schools in Irish?—The training colleges in recent years have commenced

19 February 1913.] Professor JOHN MACNEILL. (Mr. MICHAEL SMITHWICK and  
\* Mr. DIARMID O. CROWLEY were in attendance.)

[Continued.]

to make provision. Previously it was left entirely to the teachers themselves. I think I was one of the first to teach Irish in a training college, and it was done as extra work, in the evenings.

27,735. Is the acquisition of Irish in training colleges compulsory on the teachers now?—It is not.

27,736. Is it compulsory in any training college in Ireland?—In no training college.

27,737. Are the supporters of the Irish movement satisfied that it should be made compulsory?—We asked that it should be made compulsory, but we were willing to accept a compromise which was actually proposed to us, but never carried out, that an additional language should be made compulsory, so that in case a teacher did not wish to take up Irish he might take some other language. This would give an option, and a large number of teachers would take Irish. That has never been carried into effect.

27,738. Could you give me the number of teachers, roughly speaking, who are undergoing training in the several training colleges in Ireland at present?—There must be upwards of 1,000 or 1,200.

27,739. How many training colleges are there, private and public?—I think seven.

27,740. There are about 1,200 teachers undergoing training in those colleges?—Yes. That is only an estimate.

27,741. About how many of these are learning Irish?—I should say that perhaps one-third are learning Irish at present. We have no information on that point.

27,742. Are the teachers trained in training colleges bound to serve wherever the department of Public Instruction sends them?—The teachers being trained are selected by the managers of schools.

27,743. The managers of schools under the national system have the appointment of the teachers?—Yes.

27,744. And also their dismissal?—Yes.

27,745. Who are the managers of the schools as a rule?—The majority are the clergymen of the parish.

27,746. Of all denominations?—Of all denominations.

27,747. They select the prospective teacher?—Yes.

27,748. And send him to a training school?—Yes, or advertise in the newspapers. They may either write to the principal of a training college or put an advertisement in the newspapers.

27,749. When a manager finds that the position of head teacher of a school is about to become vacant he naturally looks out for a successor?—Yes.

27,750. And he selects as successor a person he knows, or he advertises for one?—Yes, or he writes to the principal of a training college to send him a suitable person.

27,751. Am I to understand that people do go of their own motion to training colleges with a view to preparing themselves for the teaching profession?—At present the teachers must have passed through a training college.

27,752. Are there any teachers in training colleges except those who have been sent there by the managers of schools?—In most cases they have gone on a sort of understanding with the managers of schools, but I don't think it necessary that that should be so. They could pass in from a secondary school, for example.

27,753. When the manager of the school selects the teacher and sends him to a training college, is it discretionary with the manager of the school to insist on that teacher learning Irish?—It is. He can insist on Irish as a qualification.

27,754. If only one-third of the students attending training colleges are learning Irish, then probably only one-third of the managers of schools seem to be anxious that Irish should be learned?—Possibly that is so. However, in the majority of cases, the manager does not send up the teacher to be trained. The majority of teachers who go through training are in a speculative state as to their future employment.

27,755. They enter the training college on the chance of getting to be teachers afterwards?—That is true of the majority of them.

27,756. Who built the training colleges and who supplies funds for maintaining them?—The training colleges originally were built from voluntary sources, but about twenty years ago the Government made a special grant to the training colleges, repaying part of the voluntary expense that had been incurred in setting them up.

27,757. Who set them up originally?—They were set up by private enterprise originally, except one, which is a Government training college, here in Dublin.

27,758. What do you mean by private enterprise?—For example, one of the oldest of training colleges here in Dublin is out at Drumcondra, and I believe it was the Catholic Archbishop of Dublin who did all that was necessary for the establishment of the college.

27,759. The Archbishop of Dublin controls the priests in his archdiocese?—Yes.

27,760. The priests are the managers of these schools and appoint the teachers?—Yes.

27,761. The Archbishop naturally thought it right that the teachers should be trained?—Yes.

27,762. Therefore he collected funds and subsequently established the college?—Yes.

27,763. And does he control the education of teachers, indirectly at all events?—Of course the National Board is in official control of the education. All its acts are carried on under regulations laid down by the Board.

27,764. Rules have been laid down for the managers of training colleges by the National Board?—Yes.

27,765. Am I to understand that if the manager of a school appoints a teacher the National Board have power to disallow the appointment?—They have.

27,766. Unless he complies with certain qualifications?—Yes. They frequently do so.

27,767. If the National Board refuses approval to a particular appointment may they appoint themselves or do they call on the manager to appoint another person?—So far as I know they cannot make a direct appointment in any case, so long as a school is worked under a manager.

27,768. Am I to understand that the training colleges turn out about twelve hundred teachers a year?—No. It would be about half that number, as the course of training is two years.

27,769. Is that a sufficient output to supply trained teachers to all the national schools in Ireland?—More than sufficient. A large number of Irish teachers go over to England to get employment.

27,770. Do they seek employment because the pay is better there than in Ireland?—Yes.

27,771. So Ireland educates the teacher, and having been educated at Ireland's expense the teachers go and get employment in England?—That is so.

27,772. At all events you have a large number of schools in which no provision is made at present for teaching Irish?—Yes.

27,773. Is that large margin being gradually diminished?—Yes.

27,774. Do you think the teaching of Irish is extending?—We don't regard the facilities yet as being anything like what they should be. Under the present facilities for teaching Irish a maximum was reached about two years ago. That is to say, there has been no increase during the last two years.

27,775. Do you think that that is at all due to less interest being taken in the question of Irish learning?—I should say possibly it is due to the fact that people who have been interested up to that point had their interest very largely distracted by other affairs during the last two years, especially by the Home Rule question.

27,776. Is it that they have ceased to give the same attention to Irish that they gave before?—During the last two years they certainly have not been quite so keen as up to that point.

27,777. I am going to ask you a question, not with the object of introducing politics, but on account of what it leads up to. Do you think within the last two years people in Ireland are more satisfied that they would get Home Rule than they were before?—Certainly.

19 February 1913.] Professor JOHN MACNEILL. (Mr. MICHAEL SMITHWICK and Mr. DIARMID O. CROWLEY were in attendance.)

[Continued.]

27,778. Is there any connection between the assurance that Home Rule was to come and the lessening interest in the propagation of Irish?—Possibly there might be. There might be a notion that in a short time they would have the regulation of these affairs in their own hands. But my view is that it is rather the intensity of political interest in the last two years that accounts for people not being so keen in matters concerning the Irish language. The interest in matters concerning the Irish language was very intense up to that point, and this dulling of interest is only a comparative one.

27,779. The National University has adopted Irish as a compulsory subject for matriculation?—That is so.

27,780. That was done largely through the influence of the Gaelic League?—I should say so. It was the Gaelic League that stimulated the public interest.

27,781. (Mr. Boutwood.) Does the compulsion extend to an examination, or is it simply compulsory attendance at teaching?—The compulsory provision is entirely with regard to matriculation, so it does not concern the teaching within the university.

27,782. (Chairman.) Irish is compulsory at the entrance examination?—Yes.

27,783. And the study of Irish afterwards in the university is not compulsory?—Yes. I can send for a calendar to show that.

27,784. Perhaps you will be good enough later on to send us an extract from the university calendar?—I will do so.

27,785. How has that been accepted throughout the country?—With general satisfaction.

27,786. Is it not rather hard upon boys who wish to matriculate in the National University, and who come from parts of the country where no Irish is spoken?—No, because it is not an oral examination. It is practically a literary examination. Those who have an oral knowledge of Irish have a great advantage, but the others are not at any very serious disadvantage.

27,787. Is the examination of such a character that a clever boy could acquire all that is necessary to pass it in six months?—Perhaps six months would be too short a time to give, but the boy who is good material for a university education could acquire the necessary knowledge with an ordinary year's study.

27,788. Is French compulsory?—One Continental language is required. It is generally either French or German.

27,789. And also Irish?—Yes.

27,790. Irish is not placed in the list of languages of which one may be chosen?—No. It has no alternative.

27,791. Is a greater knowledge of Irish required than is required of the compulsory modern Continental language that has to be taken?—So far as possible the standard is regulated to the same pitch.

27,792. Have there been any objections brought forward to the inclusion of compulsory Irish in the subjects for matriculation?—Yes. There was a considerable amount of controversy about it.

27,793. Is Irish opinion still divided upon the point?—I should say that there is some difference of opinion still.

27,794. Is there any system like that existing in the Belfast or Dublin university?—No. They have no such provision.

27,795. Has Belfast established a chair in Irish?—They have a lectureship in Irish.

27,796. There is a lectureship in Irish in Dublin University?—There is a professorship in Irish in Dublin university, and also a special lectureship.

27,797. Are the teachers who have been trained in Irish employed mostly in the Irish-speaking tracts?—No. A very large number of them are employed in districts where Irish is not generally spoken.

27,798. Do they have attendance at Irish classes in these schools?—Yes.

27,799. Irish is not compulsory?—It is not compulsory. These schools are nearly always one man schools, and if the teacher teaches Irish everyone in the school above a certain age learns Irish.

27,800. If he gives an Irish lesson every student at the school has to attend it?—Suppose he commences with a certain class, every student from that class upwards would be learning Irish at that school.

27,801. Have you ever heard instances of parents desiring that their children should be excused from attendance at Irish lessons?—I have heard one or two instances of the kind.

27,802. Not many?—No; it is very rare. In nearly every case parents are quite satisfied that their children should learn Irish.

27,803. Is that state of things independent of religion? Do schools where Protestant and Catholic boys attend teach Irish to all the boys attending class?—The Irish-speaking people in Ireland are nearly all Catholic. I think there is only one district, Rathlin Island, in which there is an ordinary Protestant Irish-speaking population with whom Irish is the traditional language. And then a certain amount of political feeling enters in in which a study of Irish is looked upon as part of a general political state of things. The study of Irish in the schools under Protestant management is rather exceptional.

27,804. (Sir Donald MacAlister.) In your answers to questions with regard to the advantage of Civil servants understanding Irish I seemed to gather that you were referring to the outdoor staff only, such as pension officers, school inspectors who travel in various districts, postmen, revenue officers, and so on?—It was only to those that I particularly referred.

27,805. You have no particular point to make as regards the necessity for Irish among Civil servants, for example, at the Castle?—Yes. I should say it would be a great advantage for every Irish Civil servant to have a knowledge of the Irish language and Irish history.

27,806. What would be the advantage to those conducting the ordinary business at the Castle in English?—The first advantage would be from the general educational point of view as a part of their Civil Service education.

27,807. That is not greater than a knowledge of Latin or French?—No. I am putting it on the same level as a knowledge of Latin or French as an educational subject, except that probably it increases his personal interest in the country itself.

27,808. Apart from that merely general educational view you would not apply what you have stated as to the public right of the matter to the indoor administration?—No.

27,809. Your point is that some special requirement as to Irish should be made regarding outdoor Civil servants in Ireland?—I would not like to confine the thing absolutely to outdoor Civil servants, but at all events in the other case I think there should be a requirement.

27,810. It would not be enough merely that Irish should be introduced into the examination by which these outdoor officers enter the Service, as an optional subject?—No, I don't think that that would secure the end.

27,811. Do the outdoor staffs of the various departments interchange with corresponding departments in England?—I think that is so with the revenue department which deals with pensions. It is not so in the insurance department.

27,812. But the Civil Service at present is so far unified that certain classes of the Service can be transferred from one place to another?—Yes, a very large class. In fact the special Irish services are limited. The "Civil Service Year Book" shows the limited number of services that are special to Ireland.

27,813. Would you not therefore think that a requirement of that kind would practically confine a man who was subject to it to the Irish service?—I think with regard to the interchangeable officers that the qualification in Irish should be optional, but at the same time I think there would be a great deficiency in the arrangement, if under that optional arrangement officers were sent to places where a knowledge of Irish was necessary without having the qualification of knowing Irish.

19 February 1913.] Professor JOHN MACNEILL. (Mr. MICHAEL SMITHWICK and  
Mr. DIARMID O. CROWLEY were in attendance.)

[Continued.]

27,814. You see my distinction?—Yes.

27,815. If you made it a compulsory requirement for certain grades of the Civil Service to know Irish practically, those subject to that compulsion would be confined to Ireland, and their prospects of transfer to England or Scotland would be diminished?—That I suppose is so.

27,816. Therefore, if it was made an optional subject, those who take it would do so by choice, and in selecting from the whole body of Civil servants men to serve in certain parts of Ireland, those who have taken that option should be preferred?—In general, the optional arrangement, the selection would meet the case.

27,817. You don't want to impose practically a disability on Irish Civil servants compared with their English brethren of the same grade?—Certainly not.

27,818. Next as to the kind of knowledge of Irish that is required from these outdoor Civil servants; it is a colloquial knowledge only that you have in mind?—A colloquial knowledge mainly, but if they have to deal with matters like these leaflets sent out by the Insurance Commissioners they would require also a certain knowledge of reading and writing.

27,819. I was looking at these insurance leaflets in Irish, and I am quite sure they were not drawn up by outdoor Civil servants?—They were not drawn up by Civil servants at all. The Insurance Commissioners had to go to outsiders to get these leaflets drawn up, but they were drawn up by their authority.

27,820. But whoever drew them up had much more than a colloquial knowledge of the language?—Yes.

27,821. They would have to go to a scholar to find the amount of knowledge required for these leaflets. A Civil servant would not be able to compile documents like these?—That is so, but if officials have to deal with documents of the kind a mere oral knowledge would be quite insufficient.

27,822. So something much higher is wanted than a mere colloquial knowledge?—Yes.

27,823. Suppose for these grades of the Civil Service there was an optional examination in colloquial Irish, would not that practically limit it to those who were native speakers?—No.

27,824. Could a candidate for one of these positions in the Civil Service, who had learned Irish say in Dublin, be trusted to understand a peasant in Donegal or Aran?—I think he could. We have remodelled the teaching of Irish as far as we could, and we have been very successful in that respect. We have taken up modern methods altogether with regard to teaching of Irish, and the present system is to give a literary knowledge on a basis of oral teaching. In fact, Irish is taught now generally, even in secondary schools in Ireland, on a better system than it had been the custom to teach languages like French or German.

27,825. Could you guarantee that, in a good school where the teacher is an Irish teacher, a student who did not know Irish from his birth could be taught so to speak as to be understood in Donegal, if he had been taught in Cork; or in Aran, if he had been taught in Dublin?—He could. I come across instances like that constantly of students who have only learned Irish here in Dublin, and who are quite able to keep up an ordinary conversation in Irish. It is quite usual nowadays.

27,826. And they would not make a mistake as to the answers regarding pensions, for example?—I could not guarantee they would not make a mistake, but they would be in a very superior position to the men who knew no Irish.

27,827. I admit it would be important, but I have my doubts that it would remove all the difficulty. You know as well as I do about the dialects and how they differ?—The dialect difficulties are great, but a week's experience would remove them in any case.

27,828. If a man was well grounded from a literary point of view?—Yes, especially if he had a literary knowledge.

27,829. But, coming to the optional Irish examination—we seem to have got to that—it would, I think, apply only to the lower grades of the Civil Service?—Yes, for this absolutely necessary purpose of intercourse

with the people. In general, I think, it would. I do not know enough of the details of the work. But, supposing a superior officer was sent round on an inquiry into the work of the inferior officers, he would require some knowledge of Irish.

27,830. The superior officer does not become a superior officer all at once; he has to rise through his several grades, and the superior officer will not have to acquire Irish at 40?—No, but the superior officer in the Civil Service does not always rise from a corresponding place.

27,831. Yes, but pension officers and post office officials actually in contact with the people are not recruited from outside or from the top. They are recruited largely from the bottom?—Quite the contrary. The insurance inspectors, for instance, are taken from certain stations, and were taken from the top.

27,832. They were transferred from other services, and so on?—Yes.

27,833. Supposing we were recruiting the lower grades, from which promotions may come about to the higher grades, what sort of examination in colloquial Irish would you institute? Would it be an oral examination?—An oral examination in colloquial Irish, certainly.

27,834. You know the qualifications for the Civil Service?—I have a rough idea. I was a Civil servant myself for a considerable time.

27,835. There are assistant clerks, second division clerks, and, the highest of all, Class I.; you understand these divisions roughly?—Yes.

27,836. Assistant clerks hoping for service in Ireland might have an optional examination in Irish, and you think it ought to be oral only?—Oral and written.

27,837. What would the written examination be?—I should say some piece of composition and some piece of translation.

27,838. Of modern Irish?—Yes.

27,839. Would you not give a bit of ancient literary work?—Yes.

27,840. Would the examination be simply to see if a man had a knowledge of vocabulary and grammar?—Yes.

27,841. Something less than is required in French?—Not something less. I should not like to see anything less, because a little more than might be required would be desirable in any case.

27,842. (Chairman.) You would not have the same range of literature to select from as you would in French?—Oh, no.

27,843. (Sir Donald MacAlister.) I understand that the Irish Land Commission have rules for the examination of Civil servants in which French, German, and Latin count each for 200, and Irish Gaelic for 100 marks?—Yes.

27,844. They obviously regard it as of a different standard to the examination in the more scholarly languages. Does that represent your idea?—Oh, no. There are special reasons which give Irish a high value as a branch of knowledge.

27,845. We are not speaking of it as a branch of knowledge at present.—I will come to it as a branch of knowledge. We are speaking of it as an optional qualification?—These are not the terms that govern the subject now.

27,846. Don't you think the scale of marks suggested by the Irish Land Commission argues that?—I presume the Irish Land Commission in requiring a certain knowledge of French or German is not looking forward to the mechanical use of these languages in reading correspondence in French or German or in writing composition.

27,847. No, but they are asking evidence of good general education?—Certainly.

27,848. And that the Irish language is not thought so good a subject of education?—That only shows that the Irish Land Commission has not come up to our standard.

27,849. I thought you did not need it as a subject of general education in every case?—Oh, yes; I hold that it is of very great educative value for any Civil servant.

19 February 1913.] Professor JOHN MACNEILL. (Mr. MICHAEL SMITHWICK and Mr. DIARMID O. CROWLEY were in attendance.)

[Continued.]

- 27,850. Not for every Civil servant?—Yes.
- 27,851. Better than French or German?—I think it is always wiser to avoid comparisons.
- 27,852. So do I. How many marks would you assign to the examination in Gaelic that you think desirable?—Taking the condition of things as we find them, I would put Irish on a par with French or German.
- 27,853. And with Latin?—Yes.
- 27,854. Do you think it would take a boy as long to learn the necessary amount of Irish as it would to acquire the amount of Latin that is required?—Latin is very largely philological in points of grammar and so forth.
- 27,855. And not easier therefore?—Not easier, but of a different class.
- 27,856. Especially to those who have not spoken it all their lives?—That is so.
- 27,857. I notice in the estimates of the Education Inspection Department there are six organisers of Irish language instruction—I take it, that is with reference to national schools—with salaries rising from 120*l.* to 200*l.* Do you know anything about these officials? What do they do?—Oh, yes. They visit the schools and look into the method of Irish language instruction and the programme and so on, and they give advice to the teachers.
- 27,858. They are called organisers, not inspectors?—They are not inspectors.
- 27,859. But they initiate Irish classes in schools where they were not in existence before?—I don't think they initiate. I think their work is concerned with improvement of the teaching of Irish where it is taught.
- 27,860. There are no corresponding organisers for French or German?—These subjects are not taken up at all in the primary schools in Ireland; but there are corresponding instructors in a variety of other subjects, such as domestic economy in the case of girls' schools.
- 27,861. Organising that kind of instruction where it does not exist already?—Where it does not exist or has not been properly provided for previously.
- 27,862. I notice there are also prizes and grants for Irish in connection with training colleges from some public education fund, grants for Irish—King's scholarships for example, prizes of 5*l.*, grants of 10*l.*, grants for summer courses, and so on?—They are very small, they are a quite recent introduction.
- 27,863. 900*l.* in the aggregate seems to have been given in prizes?—Not to the training colleges.
- 27,864. And in the national schools for evening work prizes for Irish to the amount of 500*l.*?—Yes, there is a great deal of work done in the evening schools in connection with Irish.
- 27,865. So it is the case that in the public education vote the State is directly encouraging the study of Irish?—Oh, yes.
- 27,866. In the national schools, in the evening elementary schools, and in the training colleges?—Besides these, there is a good deal more expended on the teaching of the Irish language.
- 27,867. Could you obtain for us the actual amount expended on the teaching of the Irish language and the encouraging of the Irish language by public departments?—The only body I think that could give you separate information upon that point would be the Commissioners of the Board of National Education who are in charge of the primary schools.
- 27,868. Is it anything like 10,000*l.* or 11,000*l.* a year?—It amounted, I am told, to 14,000*l.* or 15,000*l.*
- 27,869. 14,000*l.* or 15,000*l.* in one year spent in encouraging the study of Irish in primary schools?—Yes.
- 27,870. Apart from prizes and so on?—Yes, these prizes only deal with the preparation of teachers and so on.
- 27,871. With regard to the higher divisions of the Civil Service, say the second division, which represents a very large division of the Service, would you suggest that Irish should be an optional subject?—Yes.
- 27,872. With a view to selecting second division clerks serving in Ireland?—Yes.
- 27,873. What would be the kind of examination at that stage for young men who enter the Civil Service

between the ages of 17 to 20?—I would suggest that such examinations should be based upon an actual course of instruction in the secondary schools.

27,874. Are there courses of instruction in secondary schools in Ireland? I have heard only of primary schools up to now?—There are four-year courses provided under the Board of Intermediate Education in Ireland.

(Chairman.) They call it the Intermediate.

27,875. (Sir Donald MacAlister.) Do you know where it is shown that they make a considerable grant towards Irish teaching in those secondary schools?—They make no special separate grant for any subject. Their grants are not divided in that way. Their method of spending their money for the benefit of the secondary schools is through what is called "result fees" on written examinations. They added to that in recent years a system of inspection and report, but still, in the main, the results of the written examinations are the basis of their awards which are granted on marks.

27,876. The examination is in each particular subject taken out in the school?—It is.

27,877. So there is an examination in Irish?—That is so, and a contribution to that extent is given to Irish, I suppose, but it would have to be estimated by a sum in proportion, taking Irish and the number of marks attached to it in relation to the other subjects.

27,878. But it could be arrived at. There is no question but that they devote a certain amount of their grants to results which include Irish?—Yes, the schools are very keen to get as much of the intermediate grant as they can, and a return is sent in showing that in a considerable majority of the schools for boys Irish is taught, and in the minority of the schools for girls Irish is taught. I think in nearly half the schools for girls.

27,879. Is there any advance in recent years in the educational attention given to Irish in secondary schools?—There has been a continual advance during the last 14 or 15 years.

27,880. As evidenced by the number who take up Irish in the intermediate examinations?—That is so, a continual advance from a very small minority of schools to the majority of schools.

27,881. In a four years' course at a secondary school of that kind, something more than a colloquial knowledge would be gained?—Oh, yes. In our secondary schools the oral knowledge has not been very much cultivated, the system does not lend itself to that.

27,882. Can you tell us what the basis of the literary study of Irish in the secondary schools is?—Text-books are prescribed and exercises in composition precisely analogous to the programme in French and German.

27,883. Is there a sufficient number of text-books now to make a good basis for the literary study of the subject?—Quite sufficient.

27,884. Can you give me some examples?—I should like to send you a bundle of examples.

27,885. I want it down on the evidence?—We have a large number of text-books especially adapted for secondary schools, prepared and annotated, and so on.

27,886. Not text-books other than of a modern character?—Quite recent productions; and we have stories, and so on, going back for the last 300 years.

27,887. Including later middle Irish?—No, not so far back as that, not going back beyond the modern Irish.

27,888. Keating for example?—Keating for the higher grades.

27,889. About as late, but not later than that?—Oh, yes, continuing down to the commencing of the nineteenth century, when the production of Irish literature begins to fall away.

27,890. What I was anxious to find out was whether you went in for early forms of Irish?—Not for the secondary schools.

27,891. So that from a philological or historical point of view, in the secondary school course not much can be done?—Beyond historical lessons in Irish grammar; that is the treatment of grammar from the modern historical standpoint.

19 February 1913.] Professor JOHN MACNEILL. (Mr. MICHAEL SMITHWICK and Mr. DIARMID O. CROWLEY were in attendance.)

[Continued.]

27,892. Your practical course would not be like in all respects to a four years' course in Latin?—No, more analogous to a four years' course in a Continental language.

27,893. So that might form with justice an optional subject, in the second division examination?—Yes, there is quite sufficient provision in Ireland now from every point of view to justify it being introduced as an optional subject.

27,894. And for the higher and superior officers of all who are represented in Ireland only in certain departments, and who have had a university training, or some equivalent before entering the Service, is there any place for Irish in their examinations?—Yes. The three Irish Universities now all provide courses for the degrees in arts, in which Irish forms an important part.

27,895. It has been found from experience that a university graduate has not much chance of getting into Class I. competition successfully unless he has taken honours. Is there anything equivalent, such as Irish honours?—Yes, there is an Irish honours course in the three universities—the old University of Dublin, the National University, and the Queen's University, Belfast.

27,896. Would there be one candidate for higher honours a year?—In the three universities combined, I should say there must be 20 or 30. In the National University, to which I belong, there is always an honours course.

27,897. I mean actual graduates in honours?—Yes.

27,898. Because they are assumed to have taken their degree before coming up for this Class I. examination?—I could give the actual numbers of those taking the honours degree in the last two years.\* I am sorry I have not got the figures at present.

27,899. Would there be one a year from the University of Dublin?—I could not say as to the University of Dublin, but this year in the university colleges there is a constant supply of honours students in Irish.

27,900. If there was a Class I. examination in the subject of Irish, the supply of candidates who would come up would come practically from the National University?—Mainly, yes.

27,901. For that examination you would require something much more than modern Irish?—Oh, yes.

27,902. For the subject of the honours examination, or this Class I. post-honours examination?—Yes, old and middle Irish enters into the course.

27,903. Are you satisfied that the course of instruction provided affords sufficient scope for the scholarly knowledge of Irish, comparable with that of Greek?—Yes, very satisfactory courses are provided now. Of course, the subjects are not of the same character as Latin or Greek, but from a university standpoint satisfactory courses are provided.

27,904. Supposing you had your way, would you suggest to the Civil Service Commissioners that in Class I. examinations, Irish should be put down as a subject equivalent to Latin, Greek, French, German, Sanscrit, or would you go a little further and suggest it should be Celtic?—You mean to bring in other languages.

27,905. Can you study Irish at present for an honours degree without bringing in old Welsh?—Not without bringing in some valuable knowledge of Welsh.

27,906. Or without knowing anything of Scottish Gaelic?—Yes, Scottish Gaelic.

27,907. You must bring in these then?—Yes, to some degree. It is not necessary to make a separate study, but a knowledge of them must be used.

27,908. Of course, you are aware that there are other Celtic claims besides those of Ireland. Wales, for example, wants its language recognised, and I have no doubt that claims can be made out for Scotland too. Can you imagine a single honours examination applicable to the language of all three countries? You would have to leave out the colloquial knowledge. Is there a sufficient residuum of philological, literary, and historical matter?—Quite sufficient.

27,909. So an examination in Celtic, as part of the present examination in honours, would leave it open to Irish scholars and Welsh scholars and Scottish scholars? I think that would be a very satisfactory arrangement in which anyone of the Celtic languages could be made a main feature of the examination.

27,910. With a very considerable part of the examination common to all?—At all events with a certain part of it. I should not like to say a considerable part.

27,911. You mean the philology?—Yes, and the history of literature perhaps in common.

27,912. So, briefly, you would desire an optional test for colloquial Irish for the indoor staff?—Yes.

27,913. Secondly, a written test, again optional, for the second division class?—Yes.

27,914. And an honours test of a higher character in Celtic for Class I.?—Yes.

27,915. Are all these part of your programme?—We have not shaped it out to that extent, but from my point of view that seems very satisfactory.

27,916. And you are clear that the amount of instruction provided in primary schools, in secondary schools, and up to the university level, would justify the country in recognising Irish to that extent?—Yes.

27,917. By means of examination?—I have no doubt at all upon that point.

27,918. You are not attached to the Irish chair in the university?—No. Early Irish history is my subject.

27,919. You have half a dozen professors in the Celtic department?—We have in Dublin a professor of old and mediæval Irish and a professor of modern Irish, a lecturer in modern Irish, two professors of Irish history—one for early and one for modern—and one professor for Celtic archæology in general. There is further provision in the colleges of Cork and Galway.

27,920. It is right to say therefore, about six professors?—Yes, about six.

27,921. Are the numbers of students in these professors' classes increasing to any extent?—I cannot give the figures for the classes, but I am practically certain they are, and have been, increasing since the commencement.

27,922. I think with reference to this Class I. examination it would be very desirable if you could get for us an account of the extent to which this new, and very important, school of Irish learning has been supported by students?—Yes, I will give the return from the beginning.

27,923. (Sir Henry Primrose.) I think it would be very useful to have a return. You could easily get that?—Yes, quite easily.

27,924. Do you propose to carry it back five years? (Sir Donald MacAlister.) The university is not older than that. You will let us have it from the beginning?—We can get the return from the beginning.

27,925. One more question with regard to what I asked about the secondary schools. The number of text-books to prepare in a literary and scholarly manner for the higher grades of university instruction is now sufficient?—It is. For the higher grades of instruction we have had first-rate philologists at work for years on the preparation of texts.

27,926. By the Irish Text Society and others?—Yes, and various other publications.

27,927. So that for the higher work you are not solely dependent upon manuscript sources as you were 20 years ago?—That is so.

27,928. These texts are now accessible to all students?—Yes.

27,929. (Mr. Boutwood.) Since I have been in Ireland I have heard something about county council scholarships to universities: have not they some regulation about Irish in connection with those scholarships?—Yes, the scholarships instituted by the General Council of County Councils under the scheme require an honours examination in Irish at matriculation.

27,930. You spoke of a controversy about the compulsory Irish at matriculation. Did that controversy run largely on lines of politics?—Politics did not enter in at all.

\* Vide Appendix LXIII.

19 February 1913.] Professor JOHN MACNEILL. (Mr. MICHAEL SMITHWICK and Mr. DIARMID O. CROWLEY were in attendance.)

[Continued.]

27,931. What happens in the police service? Is Irish known to the constabulary or to the magistrates?—It is purely a matter of accident if Irish is known in the police service. Cases continually arise in the local police courts in which an interpreter is required.

27,932. You said you thought the movement under existing regulations attained its maximum about two years ago. What proportion of the ground, do you think, had been covered by Irish teaching in primary schools all down that western coast?—That I could not exactly say, but there is still a large number of schools which do not make provision for teaching Irish.

27,933. Even in the Irish-speaking districts?—Yes, but the Board of National Education has, I understand, been using a great deal of pressure lately to remedy that.

27,934. What sort of pressure can they use?—They can require qualifications on the part of the teacher and a standard of efficiency in the teaching through their inspectors.

27,935. Have they the power of prescribing a syllabus?—Yes, they can do that.

27,936. (Mr. Graham Wallas.) You are a teacher of history?—Yes.

27,937. I have here a syllabus for Class I. and what we call the intermediate examination. In each case modern history is divided into European history and English history. Do you think it would be an educational advantage if for the word English history you substituted the word British history, and if the examination made provision for optional alternative questions for knowledge of the special points of the non-English parts of the British Isles?—To include the history of Ireland you cannot with advantage group it under English history. There would have to be made a separate subject or a separate sub-head; but, at all events, it would have to be a separate thing in the syllabus of the examination.

27,938. But it might be included in the general subject—history of the British Isles?—Yes.

27,939. It would be true that the histories of the Irish poor law or the Irish land system have taken very different courses from those of the English systems?—Not only that, but the history of practically everything in Ireland down to and even since the Act of Union is different.

27,940. Has your society ever considered the point of the syllabus for a history examination?—No. They have never gone in detail into that question.

27,941. Have you ever looked up the papers?—No, I have not. There is one point on which I wish to supplement my evidence. I notice on reading the evidence of the first Civil Service Commissioner, he adopts the principle that the examination should follow the ordinary education of the class from which the Civil servants desire to be drawn. That has not worked out with regard to education in Ireland, and I think it is a very serious educational grievance for us. Instead of that the model of the Civil Service examination has very seriously dictated and controlled the character of the three grades of teaching in Ireland—primary, secondary, and university; but most of all of the primary and secondary. Instead of the requirements of the Civil Service taking into account what was necessary for general educational purposes in Ireland, the effect has been the opposite to that. It has dictated and controlled the form of both primary and secondary education in Ireland to an extraordinary degree.

27,942. (Chairman.) I don't know that we have had any evidence as regards primary and secondary education in England, but, without any exception, I think every one of the universities in England and Scotland declared that the scheme of examination of the Civil Service Commissioners had not affected their teaching at all?—The influence on the universities must necessarily be very much less, but in Irish primary and

secondary education nothing has more given the mould and form in this country than the requirements of the Civil Service.

27,943. (Mr. Boutwood.) Can you give any illustration of that?—The best illustration I could offer would be the actual syllabus prepared by the Intermediate Educational Commissioners and the style of the examination. The intermediate schools in Ireland afford an almost perfect training for the requirements of the Civil Service Commissioners. They are efficient in that respect, although in every other respect their efficiency has been very seriously questioned.

27,944. (Sir Donald MacAlister.) Which examinations of the Civil Service Commissioners tend to mould primary education in Ireland?—Even in primary education there is a constant looking towards Civil Service requirements. In the most remote rural districts in Ireland candidates are actually prepared in primary schools with a view to subsequently passing through a Civil Service examination.

27,945. Which examination?—The Customs and Excise and Post Office especially.

27,946. Those that are open to boys?—Yes.

27,947. With regard to secondary schools I should have thought that the Intermediate Board had much more to say to the curriculum than any external examination like that for the Civil Service?—The Intermediate Board is constantly in touch with the demands of the head masters of schools, and the head masters of schools are in very intimate touch with the "Civil Service Year Book" and continually consult it. The result is there is a general shaping of secondary education in Ireland to the model of Civil Service requirements.

27,948. (Mr. Boutwood.) Could you not put that in another way, that the action of the Civil Service Commissioners on Irish education is, so to speak, unconscious, and that the moulding arises from a sort of avidity in certain circles in Ireland for employment under the Crown?—Yes, and avidity on the part of the people engaged in education to adapt themselves.

27,949. (Sir Donald MacAlister.) The Intermediate Board could counteract that effect if they thought fit?—Of course, the Intermediate Board is a body with great authority, but at the same time it is liable to influences.

27,950. (Sir Henry Primrose.) You know the syllabus of the second division examination?—I passed a sort of examination fairly analogous to the second division examination.

27,951. Is that the examination you would say specially influences the teaching and curriculum in Irish schools?—Undoubtedly.

27,952. Surely its influence on primary education must be very remote because it is for young men up to 20 years of age, and the Customs and Excise are even higher?—People in Ireland look very far forward to the prospects of their children.

27,953. (Mr. Graham Wallas.) You would say that if the master of an intermediate school is determined to cram his school for a particular examination it would be very difficult for the Intermediate Board to prevent it?—Of course, if the head master has the examination in view, but that is not exactly what I pointed to, but that the general character of the intermediate examinations is really based on the sort of examination you have for a clerkship in the second division.

27,954. (Sir Henry Primrose.) From my own personal experience in the Customs and Excise I always understood that there was a larger proportion of Irish in those two services than one would naturally have expected, and I was told that the Irish schools devoted themselves very much to preparation for these particular examinations?—That is so. Even the remotest country schools, and I think you will find that a very large proportion of candidates for the Customs and Excise and Post Office came from the Irish-speaking districts of Donegal, Kerry, and Cork.

## SIXTY-EIGHTH DAY.

Thursday, 20th February 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
 Sir DONALD MACALISTER, K.C.B.  
 Mr. ARTHUR BOUTWOOD.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
 Mr. GRAHAM WALLAS.  
 Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. T. P. GILL, called and examined. Mr. CANTRELL, I.S.O. and Mr. WALSH were in attendance.

27,955. (*Chairman*.) Mr. Gill, you wrote me a letter in which you pointed out that your department, the Department of Agriculture and Technical Instruction in Ireland, had been overwhelmed with work for a long time past in connection with the foot and mouth disease and other difficulties that followed from that calamity in Ireland, and you have asked me, if possible, to postpone taking your evidence until you had had time to prepare a statement for the Commission. We should have been glad to have met your convenience in the matter, but for some time past all our dates in Dublin, including the date for taking your evidence, have been fixed and notified to those concerned; and we could not postpone your evidence unless we could manage to effect an exchange with some other department. We found that was not possible, and though I regret any inconvenience to which you may be put, still it was inevitable in the circumstances?—I thank you for making that statement and having it on record, because I trust that both the Commission and those who may read this report afterwards may understand the difficulty and make allowance for the character of my evidence. I have been for the past three days and until a late hour last night engaged upon urgent work which I could not leave, and consequently have been quite unable to prepare my evidence.

27,956. You have had such a long experience of this department that I am quite sure your evidence will not be wanting in any matter into which the Commissioners must inquire. In the first place, please give the Commission a brief sketch of the main features of the Act under which you carry on your operations. We desire especially to hear from you the constitution of your Board and Council?—The Department is constituted differently in some respects from any other department in Ireland. It is differently constituted in this respect, that it follows the organisation of the usual modern State department, such as the great departments of State in England. That is to say, it has a ministerial head directly responsible to Parliament. It has a permanent head and a permanent staff, and the other Irish departments have usually been Boards of Commissioners, sometimes co-equal commissioners. Another difference is that it has been constituted with a view to fitting in with the representative local government system of the country on one hand, and also with the classes of the country, agricultural and industrial, with whom its work is chiefly concerned. Thus it has a Council of Agriculture, which is representative of every county council in Ireland to the extent of two-thirds, and to the extent of one-third is nominated by the Department.

27,957. Kindly say how the two-thirds are selected or appointed?—Each county council once every three years elects two representatives to the Council of Agriculture. The Department nominates the remaining one-third. During that period the Council of Agriculture elects to the extent of two-thirds a body with more administrative powers, called the Agricultural Board. The remaining one-third of the Agricultural Board are again nominated by the Department.

27,958. Of how many members does the Council consist?—One hundred and three members.

27,959. Your Council is elected by the county councils as to two-thirds and nominated by the Department as to one-third?—Yes.

27,960. The Council as a body elects two-thirds of the Agricultural Board, and the Department appoints the other one-third?—Yes. The number of the Agricultural Board is 12, eight members from the Council of Agriculture and four from the Department, and these eight are elected on a provincial plan in this way. The members of the Council of Agriculture coming from counties in Munster form themselves every three years into a sort of electoral college, called the Munster Provincial Committee. It is that body which elects two members who come from Munster, and so on round the other three provinces.

27,961. In electing the Council do the provinces also form electoral committees or colleges?—No. Each county council elects its own representatives. There is another Board, called the Board of Technical Instruction, which is concerned with education applied to industrial purposes, chiefly in towns. To that body the Council of Agriculture elects two members. The remainder of the elective portion of that body is chosen by the municipal authorities, by the county boroughs, and a certain number are nominated by the Department. It consists of 23 members plus the President and the Vice-President of the Department, who are ex-officio members.

27,962. The method of election of this body is described in section 10 of the Act?—Yes. Those bodies only cover a portion of the total work of the Department. The Department itself represents a co-ordination of a number of previously existing departments. For example, the Veterinary Department of the Privy Council was taken over to form part of this Department. The work of the Registrar-General and the Land Commission in relation to agricultural statistics was also taken over, and the administration of certain Acts, such as Markets and Fairs (Weighing of Cattle) Acts, and other Acts of that kind were added to our work. Also the functions of the Board of Education in South Kensington in relation to what was called the science and art grants, which were given for technical instruction purposes and for science and art in secondary schools, and were administered from South Kensington, were added to our functions. Some of these functions are exercised in an executive way without the concurrence of the Agricultural Board or the Board of Technical Instruction. They are paid for out of the Parliamentary Vote, for which we are directly responsible to Parliament. These two Boards, the Agricultural Board and the Board of Technical Instruction deal with a fund, called an endowment fund, that was handed over to the Department as the equivalent of similar money that went to technical instruction in Great Britain, but went there directly to the local authorities, both municipal and county. We thus have a fund called the endowment fund for the purpose of agricultural education and technical education and fisheries—I forgot to mention that the Fisheries Department was also transferred to us—and the fund is administered with the advice of these two Boards. Take the Council of Agriculture first.

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O. and Mr. WALSH were in attendance.) [Continued.]

That is purely an advisory body, and in the Act its functions are described as those of discussing matters of public interest in connection with any of the purposes of the Act. In addition it acts as an electoral college in the manner I have described.

27,963. The Council then has advisory functions?—

Yes. It meets now about twice a year, though in the past six months it has met oftener, because a special meeting was called in reference to the foot and mouth disease situation. That body is a most useful means of obtaining a reflex of the public opinion of the country in reference to agricultural questions.

27,964. It is open to the Vice-President to summon a meeting of the Agricultural Council for any purposes he considers of sufficient importance?—It is.

27,965. At any time?—It is.

27,966. There is no limitation to the number of meetings to be held, although there is a minimum?—

Yes. There is a minimum of one meeting a year. The Agricultural Board advises with regard to all matters relating to purposes of agriculture and other rural industries, as these are defined in the Acts.

27,967. Does that exhaust its functions? Has it any financial functions?—It has, because the endowment fund, so far as it relates to these purposes, must be administered with the concurrence of this Board. If they withheld their concurrence, no money would go to the purposes for which they withheld it. That gives it a very great power indeed.

27,968. There is a budget prepared every year, and laid before the Board?—Yes. We have one meeting in the year, which is a sort of a budget meeting, but the Board does not meet at fixed times. One year it met 10 times, and another eight times, according as occasion requires. They never meet less than about five times a year. The method we follow in consulting it is that of bringing forward a scheme, and not of bringing forward details of executive administration. That method enables us to get from them, and enables the Board to give us, the most efficient sort of help and advice, because they deal with questions of policy on which they can bring their minds to bear with real effect, and their time and attention are not frittered away on executive matters. These they trust to the Department on whom is the responsibility to carry out effectually the thing decided on.

27,969. The Council and the Boards deal with all matters connected with agriculture, technical instruction, and fisheries?—Yes.

27,970. Do they deal with all matters connected with the Veterinary Department?—No. The Veterinary Department is one for which we are directly responsible to Parliament under the Vote.

27,971. I wish to divide your functions into those which are within the purview or control of your Council and Boards, and those outside the sphere of that control and advice, and with which your Department deals directly. Shall I be exhaustive if I say that the Council and the Boards deal with all matters connected with agricultural and technical instruction and with fisheries?—Yes.

27,972. And all the other activities of the Department are dealt with as a department of State, under the Vice-President's authority, subject to the usual checks and control?—Yes. That is a good rough general division.

27,973. Please give us an idea how you work in with the local bodies in connection with agriculture, technical instruction, and fisheries? Upon these things you are advised by your Council and your Board; do you work also in co-operation with the local authorities?—Yes.

27,974. Please explain to us the form which that co-operation takes?—In each county there is another body, a committee appointed by the local authority for the purpose of carrying out the local administration of this Act. That is called the county committee of agriculture, or the county committee of technical instruction, or in some cases it is a joint committee of agriculture and technical instruction.

27,975. But they are two distinct bodies?—Yes, but they are appointed by the county council. It need not consist wholly of members of the county council, but other people who have an interest in these subjects may

be added to it. Similarly in the towns, the municipal council appoints a committee of technical instruction. In each county now we have a scheme of agriculture and a scheme of technical instruction. These will involve agricultural education. Agricultural education consists of instruction given by the agricultural instructor, who is attached to each county; instruction given in relation to butter-making, dairying, poultry keeping, horticulture, and similar subjects by other instructors and instructresses in the county. That is the subject of agricultural education in very rough outline.

27,976. Do they give that instruction in the national schools of the country, or independently of the national schools?—It is worked in both ways. We have classes held in the national schools. We have itinerant classes held in the most convenient places available. Sometimes it is a courthouse. Sometimes, curiously enough, it is a jail. Sometimes it is a farmer's house.

27,977. I hope an abandoned jail?—Yes. Sometimes it is in a village hall. Then we have more systematic classes held throughout the winter, called winter agricultural classes for young farmer's sons. All that would be under agricultural education. That is one category of schemes. There are other schemes for improving horse-breeding, improving the breed of cattle, improving the manner in which labourers keep their plots, and so on. At the beginning of each agricultural year all these schemes are brought up to be considered by the county committee. A day is fixed for the meeting, and one of our agricultural inspectors attends the meeting, and all the details of these schemes are threshed out. When the committee have threshed out the scheme fully, it is sent up to the Department for its approval.

27,978. With an estimate of the cost?—Yes, a budget of the whole affair, because each local authority has to raise its own rates in support of these schemes, and funds from our endowment funds are given afterwards into a joint fund, consisting of that contribution and the amount provided by the rates. The scheme comes up to the Department for approval, and is generally approved, because the inspector's report is attached, and then the local body carry out the administration of that for the remainder of the year. They have a local staff. All the instructors are under them; their movements are directed by them. They have a local secretary, who makes all the local executive arrangements. They meet frequently, and carry these things out, and, in certain localities throughout the country, form sub-committees for attending to the work in smaller areas.

27,979. During the year do you keep yourselves informed, by means of your inspectors, as to how the thing is being worked?—Frequently.

27,980. That explains to us how, in regard to agricultural schemes, you work in co-operation with local bodies, in close and intimate relationship?—Yes. It is a close and intimate relationship. We don't depend merely on inspectors. I go myself every time I can get the opportunity, and meet these people on such questions as arise, and I find that one of the most essential things to do.

27,981. Will what you have told us regarding agriculture apply to the technical side?—It does in a general way.

27,982. What does your "technical instruction" comprise?—There is a famous definition here, because it gave rise to discussion. It says, technical instruction means "instruction in the principles of science and art applicable to industries, and in the application of special branches of science and art to specific industries or employments. It shall not include instruction given in elementary schools or the teaching or practice of any trade or industry or employment." That is one of the points about which some difficulty has arisen, but it is generally known that these are protecting words to save the educational side of the work. Technical instruction is not merely taking a boy and teaching him to make boots, as he might learn it from a shoemaker, but giving him some knowledge of the science and arts lying behind his industry, and giving him an

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O. and Mr. WALSH were in attendance.) [Continued.]

intellectual conception of his trade. In the giving of an intellectual conception of a trade lies all the difference between technical instruction and mere trade teaching. And, of course, technical instruction has a broad significance with us. It applies to all preparations for practical life that may be given through an educational system. We, in administering the science and art grants which were formerly administered by South Kensington, to which I referred a little while ago, in the secondary schools, are laying the foundation for scientific and artistic training, which is of the greatest value to the future of the boys who receive it.

27,983. Have you got any institution which may be regarded as the climax or apex of your system of technical instruction? May your College of Science be regarded in that light—as the completion of your scheme of technical instruction?—Yes; I would say that the Royal College of Science is the completion of it in reference to one great branch of it, and the School of Art is the same in reference to another branch of it. A thing at which I have been working of late is co-ordinating these institutions with the universities and the other institutions for higher education.

27,984. In regard to fisheries there is perhaps less to be said. Do these include both sea fisheries and inland fisheries?—They do. Work through local authorities is not carried on to the same extent in fisheries as it is in agricultural and technical instruction, because it would not be practicable. A great deal of the fisheries administration consists of the executive functions of a State department. We are the fishery authority for all Ireland, for the administration of all the fishery laws governing both sea and inland fisheries, the application of laws relating to close seasons, trawling, etc., to which the local authorities have nothing to say. The local authorities come in in this way: if a pier or harbour is to be built for some maritime county we see on almost every occasion that the county council contributes a proportion of the cost. The scheme is thus considered in consultation with the county council and a great deal of co-operation goes on.

27,985. Does the provision of boats and nets and so on for backward fishing villages come within your purview?—Yes, we have a fishery loan system which works very well. It has about the smallest percentage of bad debts that almost anything can show in Ireland.

27,986. When you make your loans do you take security?—Certainly.

27,987. The security of the fisherman or any other kind of security?—The security of the fisherman, and some sureties.

27,988. Have you ever thought of introducing a system of co-operative banks among the fishermen?—That has often been discussed and considered.

27,989. You don't give the boats out to hire as part of your system?—No. We think the system by which we lend for the boats is about the best that could be devised. Another body I know lends on a different system; that is to say, it keeps the ownership of the boat until the loan is paid off. I consider that a bad system for this reason, that the man never acquires a sense of ownership and responsibility for that boat. He thinks it belongs to the Government.

27,990. You lend the money and take a mortgage on the boat?—Yes. The men feel they are owners of it from the first day, and they care for it in a manner in which they otherwise would not do.

27,991. Do your loans for fisheries reach a high amount?—Yes, about 30,000*l.* is out at present.

27,992. Does your interest in it go so far as the provision of steam trawlers, for instance?—Of late we have favoured the development of motor fishing boats, and we have given loans for the transformation of existing fishing boats into motor boats and for building motor boats. In recent cases the question of steam trawling has arisen. We have not given any loans yet. Steam trawling is a rather bigger idea, and these craft are usually owned by capitalist companies.

27,993. Does your care for fishermen extend to the provision of ice ships at depots where fish are landed,

cured and sent off?—We co-operate in that and in every sort of thing they do. For instance, in reference to these motor boats we have established on the fishing grounds a repair ship with a staff on board, so that if anything goes wrong with the machinery they can see to it and have it put right. We have also introduced branding for herrings with very good results.

27,994. Do your operations overlap with those of the Congested Districts Board?—Not necessarily.

27,995. You do not operate in the congested districts?—Not in reference to this loan work or building, or anything except this, that we and the Congested Districts Board work in common with regard to marine works. We have a common engineering staff between us.

27,996. But in regard to building boats?—No. They have a plan of their own for that. We don't trench upon their ground, but we are the fishery authority for that part of the country as well as for the other, and the fishery laws have to be administered there by us.

27,997. The fishery laws have to be administered in the congested districts by you?—Yes, that is in such matters as close seasons, trawling ground laws, etc.

27,998. We have dealt with agriculture, technical instruction, and fisheries. In other words, we have covered the ground under the general control and advice of your Council and your Agricultural Board, and the other local boards who work with you. In what follows you act, I understand, as a department of State without the assistance of statutory local bodies?—Yes.

27,999. Before we pass on, would you like to say anything further about the College of Science, the Museum, the Botanical Gardens, and the School of Art?—We administer all those directly ourselves.

28,000. The first branch which you administered directly that I have noted here is the Veterinary Department. I am right in thinking that you administer it directly yourselves?—Yes.

28,001. Please briefly outline the work of the Veterinary Department?—The Veterinary Department administers the Diseases of Animals Acts, all the Acts for the detection and suppression of contagious diseases in animals. That involves seeing the condition in which animals are imported into and exported out of Ireland. It involves the administration of funds called the cattle pleuro-pneumonia account and the swine fever grant-in-aid. That is the general scope of the work involved. I should have mentioned that the transit of animals is one of the functions that come under these Acts, that is the condition in which animals are carried through the country and out of the country, disinfection of the wagons and ships, the lairages in which they are kept, and so on.

28,002. Would it be within your functions to see that cattle brought from the west of Ireland, say to Dublin, are watered *en route*?—It would, if it were a practicable matter to effect it.

28,003. If you saw your way to making it a practicable thing would you be justified in issuing an order that the cattle shall be watered, after, say, every eight hours?—What we have done is to issue an order that there shall be provided water troughs at each station, so that the cattle may have an opportunity of watering.

28,004. It would be difficult, I can understand, to unload cattle at a railway station and entrain them again. But would it be within your functions to require that there should be water troughs in each cattle truck?—It would if it were a practicable matter, but I think you have often seen what carrying cattle in a truck means. You cannot provide them with first-class compartments. Besides, they are whirled rather quickly from the country to the port, and one of the things we have recently been arranging is a longer period of detention at the Irish ports for the purpose, among other things, of enabling the cattle to be fed and watered and rested a little.

28,005. At the same time both you and I have seen long trains of inarticulate misery on our railway journeys in Ireland?—Yes, frightful things.

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O. and Mr. WALSH were in attendance.) [Continued.]

28,006. So if it were possible to invent a better style of cattle truck with troughs for water, it would be within your jurisdiction and power to direct that such trucks should be used?—Yes. The provision of better and more humane methods of carrying cattle is a constant occupation with us, and with the Board of Agriculture in England, and joint conferences about it with them and the trade, and the carrying companies, take place quite frequently.

28,007. That is an organisation, broadly speaking, for the prevention and cure of cattle disease. Have you got also an organisation for the detection of disease among plants, such as potato disease?—Part of our agricultural work consists in a series of observations and experiments with that end in view.

28,008. Where are these experiments carried out?—In all parts of the country, and they are directed mostly from the Royal College of Science. We have a system there, too, for testing the seeds that the farmers buy. We have a seed-testing station at the College of Science, on the plan of the seed-testing stations on the Continent and America, but with this difference: we have had the whole thing revised and arranged according to the latest experience, and we believe that the system which we carry out is better than others. There is more control. Then under an Act passed only a few sessions ago, called the Weeds and Seeds Act, our inspectors can walk into any seedsman's establishment, take a sample of his seeds and send it up to the seed-testing station, and have the seeds tested. We also can get from the trader the wholesale house that supplied him with this seed. If we find, as we have often found, gross adulteration, almost unspeakable adulteration, we are entitled to post the name of the sellers of these seeds, and this system, which has been in operation for only two years, has had a very salutary effect.

28,009. One question about the geological survey. Is that merely a local survey, or does it extend to the United Kingdom?—There was a branch always here of the geological survey for the United Kingdom, and the administration of the branch has been transferred to the Department. It deals only with Ireland, but Irish work is co-ordinated with that of the whole United Kingdom.

28,010. Is your staff a local staff?—Yes.

28,011. Looking altogether to the Irish Government for promotion and prospects?—Yes.

28,012. Unless there is anything else you wish to tell us about the duties of your Department, we may come now to the consideration of your staff by which these duties are carried out?—Of course, there is a lot one might tell the Commission about our educational institutions, our agricultural schools, from the college at Glasnevin down to the under schools in the country.

28,013. My colleagues who are interested in one portion or another of these matters will ask you questions on them. My object has been to bring out the nature, in general outline, of the functions of your Department. Now we shall inquire whether your staff is properly devised to give effect to these functions. The administration of your office is directed by a secretary, that is yourself?—Yes.

28,014. Then you have an assistant secretary for agriculture, and an assistant secretary for technical instruction?—Yes.

28,015. You, yourself, were appointed as a pensionable officer under section 4 of the Superannuation Act?—Yes.

28,016. When were you appointed?—I was appointed, I think, in February 1900, before the date on which the Department was to come into operation, which was the 1st of April 1900.

28,017. Previous to that you had been in Parliament?—I had been seven years out of Parliament at the time that I joined the Department.

28,018. You were an efficient member of the well-known Recess Committee?—I was a member of the Recess Committee, and I acted as its honorary secretary.

28,019. (Mr. Shipley.) What was the Recess Committee?—It was a body of Irishmen of different parties, including members of Parliament, unionists and nationalists, leading agriculturists and representatives

of industry and educationalists, public men generally, who got together during one parliamentary recess.

28,020. (Chairman.) Mention the year?—1895, I think it was. Its object was to see whether there was any subject of utility to Ireland which might be promoted in common by Irishmen. The committee was convened by Mr. Horace Plunkett, as he then was, who became its chairman. I was the honorary secretary myself. We studied the problem how best to develop the agriculture and industries of the country by means of State aid, and we drew up a report, which was known as the Recess Committee Report, in which a scheme for establishing a department of agriculture and industries was outlined rather fully. That scheme formed the basis of the Act subsequently passed by Mr. Gerald Balfour, which established the Department.

28,021. (Mr. Shipley.) I knew about the committee, but I did not know it was called the Recess Committee?—After the committee had reported, the Local Government Act, that was also framed by Mr. Gerald Balfour, had come into existence, and he fitted the constitution described in the Recess Committee's Report on to the new local government system which he had created.

28,022. (Chairman.) The assistant secretary in respect of agriculture was appointed under the Order in Council?—Yes.

28,023. What had been his experience before his appointment to the Department?—When we appointed him he was actually professor of agriculture at Yorkshire College at Leeds.

28,024. He was a man of distinguished scientific acquirements?—Decidedly.

28,025. Therefore he was appointed as an expert?—He was the best man we could find in the United Kingdom. We made a most exhaustive search.

28,026. Had the assistant secretary for the technical instruction division also expert knowledge?—He had, but he was not the first man that was appointed to the post. The first man was Captain Shaw, who was in the South Kensington Science and Art Department. After a time he resigned, and then we appointed a Mr. Blair, who had been one of the chief inspectors of the Scotch Education Department. He was selected too, after considerable search. After serving some years with us he was appointed to the post of executive officer for the London County Council, and he now administers the whole educational scheme of the London County Council. The present holder of the office, Mr. Fletcher, had also been an inspector under the English Board of Education, and had a great deal of experience of technical instruction. He was first appointed one of our inspectors, and on Mr. Blair's departure he was appointed to Mr. Blair's position.

28,027. Therefore he was an expert officer transferred from another branch of the public service?—Yes.

28,028. Does your deputy assistant secretary, the chief agricultural inspector, also possess technical or professional qualifications?—Yes. Mr. Gordon is a B.Sc. of Edinburgh in agriculture. He was the head of an agricultural school in Cheshire. He was a practical farmer, besides, in the north of Ireland, and a man of very great expert qualifications in reference to agriculture.

28,029. Was he selected by the Department out of a number of applicants?—He was one of the very earliest appointments, like Mr. Campbell and Mr. Fletcher, and he was sought out, so to speak, with a searchlight. We went round looking for the best men we could possibly find.

28,030. Please state the previous qualifications of your chief clerk of the Department?—He came at the time the Department was established. He was chief clerk of the Veterinary Department of the Privy Council. He was transferred to us with the service and made chief clerk of the whole Department. That is Mr. Cantrell.

28,031. Is he the present officer?—Yes.

28,032. It is then a mere case of transfer?—Yes.

28,033. The chief inspector of fisheries?—Mr. Green—he was transferred too.

28,034. He was a man with a great reputation as a fishery expert?—Yes, a man of world-wide reputation.

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

28,035. Then as to the chief inspector of your veterinary branch?—He was also transferred with the Veterinary Department of the Privy Council.

28,036. Your superintendent of transit and veterinary inspectors?—He is the next in command to the chief veterinary inspector and has his own particular function, the superintendence of all the transit of animals of which we were talking just now, and the inspection work done at ports.

28,037. What was he originally?—He was transferred too. He was a veterinary officer in the old department.

28,038. In Group II. you have no one recruited by the Class I. examination?—No.

28,039. In Group V., one gentleman is shown as recruited by Class I. open competitive examination?—That was an officer who had got into Class I., but he decided to come and serve in Ireland, and was taken on by our Department.

28,040. Had he been selected by the Class I. examination in England?—He had.

28,041. From what department was he transferred?—The Post Office.

28,042. Is your Department one in which you think you can altogether dispense safely with officers of the highest educational qualifications?—I don't think so. If you would like me to go into the question of Class I., I have formed some views about it.

28,043. Very well?—I start by saying that for the highest work we want the highest or the most suitable education is a question apart, but I would like it to be the highest. There is no department that I know that calls for a higher degree of administrative capacity among its staff than such a Department, so very varied in its work and having such relations with the development of the country as ours, but I am against the idea of the separate Class I. coming in in the manner which is now provided. I am not against that grade of men by any means, or that type of education, on the contrary, but I am against the method by which they now come into offices. I am only giving my opinion from observation. I think it is a fallacious and injurious method, looking at the effects upon a staff as a whole. These men come in with the notion, from the manner in which they have been brought in, and the privileged position in which they are placed in the Service from the first, that they are, so to speak, of superior clay to the men of the other divisions they find in the office, and it would take a very strong, and very fine character indeed for such a man to rid himself of that notion and to put himself in the attitude which I, at any rate, think best for the *esprit de corps* and good work of an office. Human nature being what it is, I should say—I am not speaking, of course, of the best of the men but of the average—that in most cases he would not rid himself of that feeling. The Civil Service is not like the Army with a large number of common soldiers and a small *élite* of officers of a different class. In one sense they are all officers in the Civil Service, and it cannot be good for the man who comes in in that way, and it must also tend to spoil the feelings of those with whom he works, if this sort of unreal, or rather artificial, distinction is maintained between them. After all, the second division man with whom he has to deal is not a private soldier. He is not a Tommy or even a non-commissioned officer. He is a commissioned officer like the other man. For these reasons, even *a priori*, I would say it would be a defective system, but from anything I have heard of relations that have been developed in offices and the interplay of the two classes of men, I am confirmed in my view that it is not the soundest way of managing. And it produces discontent. Moreover, on the merits of the question, and quite apart from this problem of distinctions between two grades of officers, on the question whether that is the best way of finding the best men for the higher and more responsible posts, I think there is a great deal to be considered. What you want in the higher posts is something which education might improve, but which it certainly does not provide. You want character to act, power of manag-

ing men above all. How these qualities are to be obtained is a very mixed question. I attach myself more importance to rearing and breeding than to subsequent education. I mean if they come from a good home, from a decent stock of people with right traditions, you will have a chance of getting better original material; and when I speak of decent traditions, I am not speaking of aristocratic traditions, though I include them in my idea. I think the home of a farmer or a working-class home, in which independence, religion, honesty, truthfulness, loyalty, and these old principles were not merely names, but were revered and practised, would be just as likely to give you the original qualities as any other. But if you take young men without the original material and send them to a university, of course some of the universities might improve them a great deal, while others might not, but I don't think that merely putting in a few years in a university and letting a man pass a brilliant examination at the end will make him a much better man for exercising control over a staff and for getting the best qualities out of a staff in their work, and I think in all such cases I would have a pretty long period of probation with the men who came in in that way. My view is, I would have a door of admission for that class of man, but I would arrange to merge them in with a new class, into which I would also merge much of your present second division. I believe rather in levelling up the general quality of the Service and thus broadening the base of supply than depending so much on a special class with a privileged status—a thing which always leads to difficulties in an office. I think the present system ought to be changed. I would be in favour of having two grades. I speak of them as grades in order to avoid the confusion that comes from speaking of classes and divisions. I would have Grade I. and Grade II.

28,044. Would you have a Grade I. and a Grade II. because you consider that there is a difference in the character of the work to be done in each grade?—Well, that is very, very hard to answer.

28,045. May I put it another way: Would you admit, Mr. Gill, that the administrative work of the department, the highest work of the department, work that calls for the tact and judgment and initiative which you have mentioned, requires a different type of mind to perform it, from the type necessary for the performance of the ordinary clerical work of the department?—Well, my Lord, it is extremely hard to distinguish in practice, because, though of course generally the distinction may appear to be obvious, yet in practice it is very hard to distinguish. It is quite easy to see that there is a large category of routine work of the lowest type, and that your lower grade man can always do it, but if you had a man on work that would even seem to be routine work, if he has the right stuff in him he is able to make his mark even there.

28,046. Very likely. But do you admit that between the highest class of work that I have endeavoured to define and a lower class of work there is a broad line of demarcation, if you look upon the work as a whole. There is a dovetailing of the lower class of work into the higher, although you cannot define the exact point of meeting between the higher type of work and the lower?—Yes.

28,047. But you have no doubt that the work on one side of the point of meeting or fusion is different from the work on the other side?—Yes.

28,048. So far I am disposed to agree?—Yes, and you must shape your education so as to get the proper man for the higher work.

28,049. Then do you not think that for the higher class of work you require a better educated man, and that such a man should be better paid than the man employed in the lower class of work which doesn't call for such high education?—Yes.

28,050. And if you have this distinction between each class of work, and this distinction between the education fitting men for each class, does it not follow that for the lower class of work men who are satisfied with the lower rate of pay should be recruited, and for the higher class of work men should be recruited on higher rate of pay?—Generally speaking, yes.

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O. and Mr. WALSH were in attendance.) [Continued.]

28,051. That would seem to be a sufficient justification for the Government in having, at all events, two classes of officers?—Yes.

28,052. One higher than the other?—Yes, but with good provision for enabling the good men of one class to rise into the other. I would rather differentiate them by scales of pay than by "classes."

[28,053-4. Then as regards the moral character of the men would there not be difficulty in verifying your requirements? We cannot well visit the homes from which the candidates come, where no doubt morality and good conduct are inculcated. These matters we cannot determine by methods apart from the system of direct examination. Examination must enter into our plans; and a classification dependent on it?—I would have two grades—I explain it this way for the sake of clearness—Grade I. and Grade II. In Grade II. I would include the lower ranks of the present second division, a considerable proportion of the present second division men who remain on the lower work—I would include them in that grade. I would include also the present abstractor class, or rather I would replace the present abstractor class and these lower ranks of the second division, as well as the boy clerks, by Grade II. The plan of taking on boy clerks and then throwing them out after a few years is utterly wrong.]

28,055. You condemn that?—Yes.

28,056. (Sir Henry Primrose.) Are you saying this for your own department or for the whole of the Service?—I have my own department in view, but I don't see why it should not apply all round.

28,057. You say that it is a proposal that might have a universal application to all offices and not merely to your own?—Yes. The examination to enter Grade II. would in Ireland equate, so to speak, with the middle grade Intermediate, which would be something above the level of the present abstractor's examination with a little grit in it from the educational point of view.

28,058. (Mr. Graham Wallas.) What is the Intermediate?—It is our secondary education in Ireland. There are three grades in it—the junior grade, the middle grade, and the senior grade. The middle grade is usually represented by boys of 16 or 16½ years of age, and I would equate the examination to enter that class with the middle grade course.

28,059. (Sir Henry Primrose.) This would correspond with Grade II.?—Yes; so that the schools would prepare for it, and I would make the age of entrance 16½. When a candidate goes into that class I would hold before him this idea—that he for at least two years should attend courses of evening instruction which can easily be arranged for him now, and should pass a qualifying examination, not a competitive, at the end. No candidate who failed to do that would be eligible for the supervisory posts within Grade II., or for promotion into Grade I. I would have a certain proportion fixed of the numbers that might be chosen from the eligibles of Class II. to pass into Class I., and they should only be chosen by the heads of their departments for meritorious service.

28,060. Then you come to Grade I.?—Well, the examination into Grade I. I would equate in Ireland with the honours senior grade of our intermediate system. The age would be about 19. I would have it an examination which would include, in addition to the senior grade intermediate subjects, certain subjects intended for preparing men for the Civil Service, such as are now included in the second division examination, and in Ireland I would have some of the subjects specially related to Ireland, such as Irish history, institutions, administration, resources. When a fellow enters that grade I would set this before him: that he should attend—if they were available, and I would recommend the Government to take steps to have them made available—evening university lectures that could be easily arranged in Dublin, and that he should later on take a degree of the university, and if he did so he would *ipso facto* become eligible for promotion to higher posts.

28,061. (Chairman.) So that you would have higher posts. Would you have a still higher grade than Grade I.?—No; he would become eligible for higher

posts—staff posts of 400*l.* a year and upwards, but he would not be eligible unless he had taken out these courses or taken out his degree.

28,062. The reason I asked that question was because I understand you to say that above Grade I. you found it necessary to have a grade of officers—call them staff officers—possessing higher education than your Grade I. men?—That is, possessing more general education than those entering Grade I. at 18 or 19, but I go on to say that I would allow entrance into Grade I. at 22. These entrants would not come into a separate class, but would come into Grade I. at 22, which would permit their having attended their university, and they would come in at a higher rate of pay than if they came in at an earlier age. They would be at once eligible for the higher posts.

28,063. What do you mean by higher rate of pay?—If you take the bottom scale of Grade I. at 100*l.*, and a maximum of 350*l.*, a fellow enters at the age of 18 or 19 and starts at 100*l.*—well, a man who takes out his university degree and does not come in until he is 22 should start at least at the point the man would have reached at the same age who had not taken this course and had begun at 18. I cannot put a figure to it but, say, 150*l.*, or something like that. I think that scheme would work in Ireland. I find in our own Department, and on many of the staffs of the Irish Departments, many of the best clerks in them have taken out degrees in the Royal University and Trinity, and some of them with considerable distinction. If evening lectures were provided by the university it would mean that practically all the men worth considering who come into Grade I. at the lower age would follow these lectures and take out their degrees. I think it is well worth the while of the Government to assist the universities in providing these lectures.

28,064. All this is very interesting, and I think you have quite properly introduced it at this stage. Let us now pass on. I notice "superintendent of statistics" here—that is very considerable pay, is it not—600*l.* or 700*l.* a year?—Well, it is a very important office. It is now held by Mr. Butler. His predecessor was Mr. Adams, now professor of political science at Oxford. It is the economic watch-tower of the Department, so to speak.

28,065. He was a second division clerk?—Mr. Butler's origin was that of second division clerk, but he had been trained in the Registrar-General's office and had become assistant-superintendent under Mr. Adams, who trained him, and he is quite an expert now.

28,066. That was a pretty considerable promotion for him?—Yes.

28,067. May I ask you whether promotions like that are pretty frequent in Dublin?—Well, no.

28,068. We have been told that the Registrar-General's department affords no great prospects of promotion for the second division clerks, but in the way you indicate substantial promotion is open to them?—I don't see why a great many of these promotions would not be made available if the system I have in view could be adopted, because the second division clerks that come into a branch of that description would be taught to specialise in university studies that would make them eligible for that promotion—courses in political science and economics.

28,069. Is the senior staff clerk placed over the whole Department?—In status he is next to the chief clerk and above the other staff officers.

28,070. What was his origin?—He held a permanent position in the office of the Royal University. He is an honours graduate and a member of the Irish Bar. He has most useful official experience in connection with Commissions of Inquiry into Irish Educational Systems, and when the Department was established we were glad to get him to come to us.

28,071. Let us get on to Group V. These are the staff clerks and minor staff clerks. Are not these men promoted ordinarily from the second division?—Normally they would be, but some of those men were not.

28,072. I suppose that when you were creating your Department you could not follow strict rules, and that a number of them have been brought in under

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

clause 7?—There are four staff clerks mentioned there. The first of these was attached to the veterinary department and came over to us. It was a transfer. The next is a man who was in the Collector-General of Rates' office and we took him over and appointed him. The next was a man who was brought specially from South Kensington to be placed over the technical instruction branch because of his knowledge of that administration, and the next was the Class I. man mentioned before.

28,073. That seems reasonable. You have four other clerks, a lower maximum and lower minimum. Are you sure that these came on by open competition in the second division?—Yes.

28,074. And then you have 14 minor staff clerks at varying rates of pay?—Yes.

28,075. How did these men come in—did they all come in the second division?—No, there were two that did not come.

28,076. Did all the others?—Yes.

28,077. Well, the return has not been made out clearly on that point?—They were promoted.

28,078. It would be well to show that they were promoted?—One was a temporary clerk.

28,079. (Sir Donald MacAlister.) What does a temporary clerk mean in your Department?—Well, there are three meanings. The primary meaning is—one who is taken in under pressure of work for a few weeks, and who is kept on from week to week.

28,080. And appointed by whom?—By the Department.

28,081. Without any examination?—Yes.

28,082. And, then, how does he come into the Service?—He came in like that. Again, the Treasury have insisted that one whole section of the agricultural branch should be manned by clerks not paid from the Vote. They contend that we should pay these clerks from the endowment and not from the Vote. The distinction is a subtle one, and the effect is that all these clerks are on a temporary footing. We cannot pay them out of the Parliamentary Vote.

28,083. Is this one of these clerks?—The man you refer to is not. He was at one time in that section, but he has now got a staff post from the Department. He is an exceptionally able man, and one of those that took out his university degree, and took it out with honours. He is an outstanding man.

28,084. But he got into the Service without any examination?—Yes, in that way.

28,085. (Sir Henry Primrose.) If you look at section 16A, dealing with the payment of moneys at your disposal, doesn't it seem to suggest that some of the salaries should be paid not out of the fund, but out of the moneys at your disposal?—No. The distinction is this, that our endowment fund that I talk of applies to local charges and work in counties, municipalities, and so forth, and covers a certain class of officers who are sometimes employed direct by us, and sometimes by the local authorities. Take, for instance, the case of the agricultural instructor. We place him in a county but he is paid by us out of that endowment. The section that I refer to is the section dealing with the supervision of creameries, and the distinction drawn was that these creameries were not administered by the local authorities. If they were administered by local authorities, like our county schemes that I have explained, the staff employed in centrally dealing with them, inspectors and clerks, could be paid out of the Vote. But as the work is administered by ourselves the staff must be paid for from the endowment. Such is the distinction of the Treasury. The effect of it is that we have a staff of clerks which, under rule of the Treasury, are not put on the Civil Service.

28,086. It seems to me to be a quite logical change. You are doing a certain work which might be done locally or by local committees, and you are doing that, and you are given a certain endowment for doing it. Therefore it seems to be quite right that the payment of these people should come out of the endowment?—But the distinction is drawn in this way, that the work done by the central authority in the nature of supervision is all paid for by Parliamentary Vote, while that, although it is also central work, is not.

28,087. (Chairman.) It is merely a quarrel between you and the Treasury?—Yes.

28,088. The Treasury say that these clerks must be paid out of the endowment fund, and you say that they should be paid for out of the Vote?—Yes. We are compulsorily obliged to have these clerks, non-Civil servants.

28,089. (Sir Donald MacAlister.) You have thus, necessarily, to support a lot of temporary clerks, and then these permanent men are those that are put into the Civil Service, having passed through the usual portal?—Yes.

28,090. (Chairman.) Well, we will pass on. Do you, Mr. Gill, regard the clerks of Group VIA, as belonging to the second division?—Some of them were transfers. The first man mentioned was transferred from the Registrar-General's office, and two others were transferred from the Veterinary Department.

28,091. But do you regard them as belonging to the second division?—Number one has left on pension.

28,092. Well, they seem to be open to the same objection. They seem to have been brought in as temporary clerks, and were afterwards established?—They were transferred just as they were from existing departments. One came from the Registrar-General's office, one from the Veterinary Department, and another from the National Museum.

28,093. But the scale of pay differs from the authorised second division scale?—It is really a nondescript class.

28,094. Well, let us pass on to your Technical Instruction Group, on which I have one or two questions to ask you. Your agricultural inspector entered as a lay assistant commissioner—I suppose you use that term in contradistinction to legal commissioner?—Yes. He was transferred to us. When we took over the agricultural work of the Land Commission the staff came with it.

28,095. You have five altogether—one chief agricultural inspector and four inspectors?—Yes.

28,096. And they go about inspecting in the way that you told us?—I had better explain that one of the agricultural inspectors mentioned here does not represent a regular scale. His transfer was somewhat unique. The chief agricultural inspector is also the deputy assistant secretary, and under him come a class of inspectors. The scale of one class of full inspectors is 420*l.* to 600*l.*, and of the junior class from 200*l.* to 400*l.*

28,097. You have given us an indication of what their duties were? They go about inspecting and seeing that these schemes are properly carried into effect?—Yes, and inspecting the agricultural classes and schools.

28,098. Then as to the agricultural inspector, who is shown as veterinary?—Yes. He is an agricultural veterinary inspector. He has to do chiefly with the horse-breeding schemes of the Department.

28,099. Has he got any assistants?—Well, not fixed assistants, but sometimes we put on extra men.

28,100. Do the ordinary agricultural inspectors assist in his work?—Yes, in a certain way, but his special work is examining the horses that are put on the register, both from a veterinary point of view and their other qualities.

28,101. Ireland is a great horse-breeding country; is one inspector found to suffice?—In each county, when the annual shows of mares and stallions take place, we employ local judges, and he comes in as a court of appeal on the high-class stallions.

28,102. And the inspectors for technical instruction and the junior inspectors for technical instruction also perform the duties that you have mentioned?—Yes. There is one mentioned as not pensionable.

28,103. Why is he not pensionable?—There is no reason to my mind why he should not be, but the Treasury have not agreed up to the present.

28,104. What is the reason? When was he appointed?—I find that he was our chief forestry inspector. We have had the chief forestry officer a considerable number of years. He is a whole-time officer, and we paid him out of the endowment. When we got the forestry service established, and got the report of our forestry committee, and the usual grant from the

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

Treasury for the purpose of acquiring ground and woods, this man's work became of a permanent and established character, and we desired that he should be put on the Vote, and placed in the same position as any of the other inspectors. Up to this we have not succeeded in persuading the Treasury to do it.

28,105. (*Sir Donald MacAlister.*) Would it not be possible to provide for him under a pension endowment scheme?—We have not a pension endowment fund, but one of these days we shall probably have to have one.

28,106. Have you large forestry operations?—In one sense, yes; and in another, no. The acreage available for forestry in Ireland is not as extensive as it is in other countries, but we have taken the problem in hand. We have had a departmental committee of inquiry, of which I was chairman myself, and we examined into the whole problem, and made a report, and on that report the Treasury was approached to give us a grant to prevent the waste of timber that was taking place owing to the operation of the Land Acts. I don't mean waste merely by the tenant purchasers cutting down the timber, but owing to the landlords, seeing that the Acts did not put a price upon the timber, and putting it in danger of being cut down. It was this waste land that became available under the operation of the Land Acts—mountain lands and others suitable for forestry—we got a development commission to come in and assist us with a grant. We have purchased a number of woods, and we have established a school of forestry, and in the College of Science they have established a number of courses for forestry.

28,107. (*Chairman.*) What do you mean by a "portal" veterinary inspector?—At every port there is one or more inspectors stationed to examine the animals that are shipped, and to see that the ports are kept in proper sanitary condition.

28,108. (*Sir Henry Primrose.*) Are all these officers professional officers, and are they appointed by competition?—They are professional officers, and are not appointed by open competition.

28,109. (*Mr. Graham Wallas.*) Does what you call the endowment fund include the grant in lieu of the whisky money or only the church fund?—What that fund includes is this—it includes a sum of 78,000*l.* from the local taxes and Customs and Excise.

28,110. That is in lieu of the whisky money?—Yes. It includes also a sum of 70,000*l.* of the church temporalities, that is the Irish fund, and that is liable to be reduced under certain contingencies; in fact, we are warned by the Treasury that it may be very considerably reduced within the next few years. It also includes the equivalents of certain Irish judgeships that were abolished, coming to about 12,000*l.*, and some other amounts.

28,111. I understand that you have to pay the temporary clerks that you appoint out of the endowment fund?—There are some clerks that have to be paid out of the voted money—the male shorthand writers, for instance. I am against the employment of these temporary clerks. I think it is a wrong to the temporary clerks themselves, and it is a wrong to the men that come in by open examination.

28,112. It would seem rather absurd that you should be obliged to appoint clerks in your central offices by these ways and methods merely because of the source of the fund?—Yes; there was an inquiry into the Department, and the report recommended that that type of clerk should be transferred from the endowment and put on the Vote.

28,113. (*Mr. Boutwood.*) When was that, Mr. Gill?—The report was published in 1907.

28,114. (*Mr. Graham Wallas.*) Your work brings you into contact with the organisations of the Irish educational system at very many points?—Yes.

28,115. And perhaps at more points than is the case with any other official?—Probably.

28,116. You have given us very interesting evidence as to the co-operation between the university system and the Civil Service. You have told us that the latter should correspond with certain grades of examinations, and that the Government should co-operate so that the younger officials should add to their knowledge. Would you say that the universities

should aid the Government by developing a certain kind of study that would be sufficiently useful to the Government?—Yes, certainly. I think, in the case of such men in the new grade that I have described, it would be encouraging to go in for university instruction if they could give their degrees in special subjects that would be particularly useful for public administration. For example, such students might take out degrees in political science and economy.

28,117. I find it very difficult to get at an impartial history of the development of the institutions of Ireland, and do you think that study of that kind might be undertaken by a university?—I think it would be a very good subject indeed. We have in connection with the National University, a very interesting sort of scholarship. One of our officers who was the head of the statistics and intelligence department was a gentleman named Coyne. He was a very distinguished student of economics, and made his mark before he died while yet young. He had left a great impression among many of his friends, and a scholarship was established in his name. It is called the Coyne Scholarship, and it is tenable at the National University, and its object is the study of political and social science, especially as applied to Ireland. I am one of the trustees of the scholarship, and it will be interesting to say that we have had the scholarship awarded for inquiries and reports upon such subjects as these: "The existing industries of Ireland"; another subject was "The agricultural labourer in Ireland"; another was "The history of industries and employment since 1678, in any one of the following cities, "Dublin, Cork, or Galway." The winner in the latter case chose Dublin. The scholar is continuing his studies, and he presented as his second theme an essay on the silk industry of Dublin. These two essays are so good that I hope that they will be published. It is interesting to know that the scholarship was won on each of these occasions by a second division clerk. The first man was a second division clerk in our own Department, and is now in the Four Courts. Suppose he had remained in our Department and had done a course of study enabling him to win a scholarship on a series of subjects like those I have mentioned, his work would have been of value to the department, and would have made him a more efficient officer and put him in line for promotion, and put him under the observation of his chiefs. That, I think, would be the good of correspondence between the universities and the public service. The second occasion on which the scholarship was won was by a second division clerk in the Land Commission.

28,118. (*Sir Donald MacAlister.*) For whom are these scholarships available?—These are only available as post-graduate scholarships. It was attached to the National University because Mr. Coyne was a professor of the Royal University before he became attached to us.

28,119. Did he get a special premium for writing on that theme?—The sum that we collected produces only about 20*l.* per annum, but such as it is it has enabled us to do good work, and if that type of scholarship were multiplied so that it would be possible for men to study specially, it would be a very useful way in which a correspondence between the universities and the public service might be promoted.

28,120. (*Mr. Graham Wallas.*) In natural sciences, such as fisheries, and so on, you get help already from the universities. Do you think that is useful to you?—Certainly, because we have to employ a number of men as inspectors and officials who must have high qualifications in natural science, and most of these of course get their training in the universities or such institutions as the Royal College of Science.

28,121. And your hope is that the same co-operation might take place in the social sciences?—Yes.

28,122. Now the organised system of Irish education is extremely complex, is it not? Are there not a great many departments?—Yes, there are; but I think it is far less complex than your system in England. It is rather a simpler system.

28,123. Can you give me from memory a list of these departments?—There are only three. One is the

20 February 1918.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

Board of National Education, which deals exclusively with primary education, and the other is the Intermediate Board which deals with secondary education.

28,124. And the third?—The third is our Department, which deals with technical education and also with science and art education in the secondary schools.

28,125. And the Board of Charity?—Yes, there is a body called the Board of Charitable Donations and Bequests, but it is not an educational body. It is a body that regulates certain charitable and educational endowments made to certain schools, and it is a body for seeing that these endowments are properly applied. The bequests go to schools that nearly all come into the systems of the departments. This body rarely interferes with educational programmes or an educational department. You may leave that body out of your mind when dealing with educational authorities in Ireland.

28,126. But they do work in preparing work for educational purposes, which in England is done by the Board of Education?—Yes, I think they do, but they deal with the question of how the bequests are to be administered. Money is left in wills for schools, and they see that it goes to these schools. I have a case of a County Down will in my mind just now, and they are dealing with that.

28,127. I have only one final question. Have you ever surveyed the work of your Department to see to what extent you can avail yourself of the use of highly educated women?—We have some highly educated women in our employment at present. There are three or four of these women attached to our museum, and we have in our office a translator, a very highly educated woman. We have also a lady employed in the College of Science, and we have several, of course, employed in the School of Art.

28,128. You have them in the permanent service of the museum?—Yes.

28,129. And you find no inconvenience arising from that?—No.

28,130. There is nothing that suggests that any apprehension that would arise from having women in the permanent staff service would be well founded?—No.

28,131. (Chairman.) Is there any difficulty or inconvenience caused by men and women working together in your Department?—Not so far as the employment of women has gone in our Department. Of course, we have no women in any very responsible position, save that we have women inspectors in the subjects of domestic economy.

28,132. (Mr. Graham Wallas.) Do they work in the same room as the men?—Well, we have lady typists, and they all work in one room by themselves, though some of them have to attend officers from whom they receive correspondence.

28,133. (Chairman.) Are they paid on the same scale as the men?—They are paid on the same scale as the lady typists throughout the Service.

28,134. But as the men in your office?—Yes, the assistant in the museum gets the same as the male assistants. The women inspectors are not pensionable officers.

28,135. Are the women inspectors—the outside inspectors not pensionable?—No; but the translator is pensionable, and the lady assistant in the museum is pensionable. These inspectors ought to be pensionable.

28,136. Will you go to the outside inspectors?—We have two lady inspectors, in fact, we have three. Two of them are engaged for domestic economy, and the other for lace.

28,137. Are they pensionable?—No. They are all paid from the endowment.

28,138. And consequently non-pensionable?—Yes.

28,139. And so are the inspectors that are paid from the endowment not pensionable?—None of them are, but there is no logical reason why these ladies should not be pensionable.

28,140. (Mr. Boutwood.) Does your Council of Agriculture and Technical Instruction only meet when summoned by the Vice-President?—Yes.

28,141. Only when summoned by the Vice-President?—Yes. There is no regulation, but that is the custom.

28,142. And can they come of themselves?—No.

28,143. And when they meet can they discuss matters not prescribed by the Vice-President?—Certainly. What usually happens is that when the meeting is summoned by the Vice-President, they are asked to send in matters they wish to appear on the agenda, and the matters they wish discussed are put down for discussion. Or the Department may suggest a subject for discussion itself.

28,144. So that in a very real sense they are an independent deliberative body when once they get together?—Oh, yes.

28,145. You spoke in your evidence of the investigation of plant diseases. You said they were controlled by the College of Science, but by whom are they carried out locally?—We have a system of investigations and experiments. They are planned at headquarters, so as to keep them in co-ordination. The county agricultural experts that I spoke of some time ago are under the control of the local public authority, but are paid by us. In the course of their administrative work, they are asked to carry out locally a certain number of these investigations, testing several questions that may be submitted, such as the yield of seeds, and so on.

28,146. And how do they do that? How do they get the land?—Well, the County Committee arranges in this way. The farmers are willing enough to lend a bit of their land for demonstration purposes, because the test costs the farmer nothing, and his land is manured and worked and the crop becomes his property. Then we have a certain number of agricultural stations and schools in different parts of the country, such as at Athenry in County Galway, Ballyhaise in County Cavan, and Clonakilty in County Cork. There a certain number of these demonstrations are carried out. Then our experts might go to the country to make special investigations. One of them has gone down to the West of Ireland to investigate a new disease in potatoes. He is carrying on experiments there and has established a laboratory *in loco*.

28,147. And the agricultural stations, what are they established for?—They keep records of the livestock; they attend to the improvement of the breeds of cattle and sheep and swine, and deal with them. Field demonstrations are also carried out as part of the general work.

28,148. In dealing with the seeds you said something about posting the names—what was that?—It consists of the publishing of the names—the result of the analysis and the names of the firms from which the seeds were got.

28,149. (Sir Henry Primrose.) Do you have these seeds analysed for the man who purchases in the market?—Yes, and we make only a small charge.

28,150. Do many of them avail themselves of that?—Yes.

28,151. That is very good. Please proceed?—The seed merchants are doing a great deal now. We have settled a procedure in these matters in conference with the trade. We have taken care to bring the trade with us to show them what we were going to do and how they could adjust themselves to carrying on the trade on a proper basis.

28,152. (Mr. Boutwood.) You said something about agricultural and technical training being given in primary schools: did you mean the use of the building or teaching being given to the children?—I meant the use of the building. There is no agricultural training given to children in primary schools, but there is a scheme being developed now in co-operation between the Department and the National Board for the purpose of introducing rural science and school gardening. The object of that is not to give agricultural training, but to give instruction that will lead the minds of the rural population more in the direction of agriculture, and prepare them for an agricultural calling.

28,153. Are your College of Science and your School of Art State institutions in the sense of being founded and maintained by the State?—Both of them are.

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

28,154. They are really branches of your office, so to speak?—Yes.

28,155. What does the College of Science do?—The College of Science is an institution for higher technical instruction. It has a faculty of agriculture, a faculty of engineering, and a faculty of applied chemistry. It trains agricultural experts in the faculty of agriculture, mechanical and electrical engineers, and men in applied chemistry, brewing, distilling, dyeing, etc., and it trains science teachers.

28,156. Is it practically a college of university status?—It is.

28,157. It is not in connection with any Irish university?—There is no express connection. It is an independent institution. It has existed for nearly sixty years, but it has been developed enormously by the Department since it was taken over. Perhaps the best way to describe it is to say that it is our Irish Charlottenburg. It is being co-ordinated with the university system. In fact, I expect that before the end of this year, by next session, co-ordination with all the universities in Ireland will have been arranged.

28,158. What will be the precise effect of that?—The effect will be this. Take the National University in Dublin, or Trinity College. These universities will agree, say, to have a degree in agriculture, and a course taken out by their students in the College of Science will be recognised by them as counting towards that degree. The college on the other hand will regard certain work done at the university as counting towards its associateship.

28,159. I suppose in your rural teaching your instructors are mainly concerned with labourers and small farmers?—Yes, and with their sons and daughters.

28,160. Is there any linguistic difficulty?—In the Irish-speaking parts of the country many of our people are able to speak Irish, and we encourage them to be able to do so.

28,161. To give instruction in Irish?—Yes, and we have issued leaflets in Irish.

28,162. When you were giving that very interesting account of your conception of the organisation of the services you used the word "unreal" in speaking of the difference between Class I. and the subordinate grades: what do you mean by "unreal"?—I had this in mind, leaving aside the educational distinction—because I want to diminish that as far as possible by levelling up the educational requirements of that grade, which I would now call Grade I.—what I mean by unreal is what would be left, a sort of social or caste distinction resulting from a privileged position in the office for men as a class; and while such a distinction is real as between an officer in the army and a private soldier, it is an unreal and unsound distinction to establish between two officers of the Civil Service serving in the same office.

28,163. (Chairman.) Is it ever established in any office in the sense in which you are now attaching to it? Is any office ever recruited from the point of view of caste or social distinction?—No, but I mean that when a man comes in in a privileged position from the first, the effect is apt to be to separate men into classes, and to generate between them a feeling which I consider to be unsound for the office and for the men themselves. From the first he is apt to look upon himself as a superior being to the other men.

28,164. But is it not necessary to have the higher capability and the higher educational qualifications for the higher work?—Of course, but I provide for the higher education in the way I have described, and I want not to draw a strict line between one class of men and another class of men below them.

28,165. But would you not compass the same end if you make it easy for the class of men who now come into the second division from the national schools and the intermediate education schools, to get into the universities by means of scholarships, and so get a degree?—Before he enters the Service?

28,166. Before entering the Service, working up through the educational ladder?—I do not think that that would meet the case, because only a comparatively

small number could wait to take out their degree before they came in.

28,167. The number would be sufficient for our purposes? We are only interested in getting efficient public servants. We are not interested in providing a career for everyone?—Quite so, from the point of view of the efficiency of the Service; that is my point of view. You are bound to have a large proportion of men who must come in at 18 or 19. If you reconcile yourselves to the idea that they must be on a low plane of education, and that you must recruit for your higher posts in another way, from men who come in at a later age, then you reconcile yourselves to a degree of inefficiency in that body of Civil servants that I do not think is sound for the Service. I would prefer, first of all, to broaden the character of the examination by which the candidate enters at the age of 18; and then I would say—let him have facilities by means of evening or late afternoon lectures at a university to take out a university degree, and ensure that he will be eligible for promotion to higher posts in the same way as the man who comes in at 22, if he does obtain his degree, and that he will not be eligible otherwise. By that means I would put a great premium upon levelling up the whole body who would be included in Grade I. I hope I have made it quite clear about the reality of the distinction. I believe it does arise in practice. The Class I. men are charming fellows with those whom they regard as equals, but I am told some of them won't even salute second division men when they meet them in the street. It is most dangerous for the Civil Service to have that sort of feeling permeating its ranks. Even the second division men sometimes may come to look down on abstractors, and abstractors on temporary clerks. I have a document in my hand a case in which there is a protest against promotion from the lower ranks, signed by ten or eleven men, who were themselves promoted from the ranks, for, as happens in more exalted spheres, when brought into the coveted place people here become exclusive, too, and want to keep all others out. That is a thing that has to be guarded against, in any case, all through your Civil Service. It is certainly not to be fostered, and I think that the arrangement about Class I. does tend to foster it.

28,168. Make any arrangements you like will you not still have Horace's dictum true: *Naturam expellas furca, tamen usque recurret*?—Yes, but you must make what arrangements you can to prevent this happening. These artificial distinctions of men into classes always lead to difficulties—they breed them. I am speaking from the mere practical point of view of a head of a department.

28,169. (Mr. Boutwood.) Am I right in thinking you get power to spend the endowment fund for salaries under 16 (1) G.?—Previous to that section there are several sections allotting portions of the endowment fund to specific purposes, and the part that is left after these purposes are met constitutes the endowment fund of the Agricultural Board.

28,170. About these temporary clerks, as I understood from what you said to the Chairman they are taken on roughly for two reasons, partly because of the difficulty between yourselves and the Treasury, and partly in exceptional stress of work?—Yes. There is also a category of temporary clerks employed in the swine fever portion of the veterinary branch.

28,171. Some of them I understand were taken over from the department that preceded yours?—Yes, and the veterinary department contains a number of these who were put on swine fever work.

28,172. Leaving those out and taking the new men you appointed yourself, what sort of men are they? What would they be doing if they were not temporary clerks?—They are good men. Those we have appointed in connection with this permanent section are the best we could get. One of them, who has since been promoted to a staff post, was a man who had a distinguished university record. Another had been employed in a commercial office and had a very good record there. They were as good men as we could pick out.

28,173. Some, I gather, were taken on almost for technical reasons. You referred to one with a uni-

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

versity record; you did not take him on as a clerk?—I took him because we knew he was a very good man. He had been assisting one of our men who was secretary to three separate Commissions, and he knew the sort the work it was. He is a smart man and we were very glad to get hold of him.

28,174. I suppose it is considerations of that sort that account for the comparative highness of the salaries in some cases?—Yes. I may say that the description "temporary clerk," as applied to some of these men in the statement, is rather misleading. For instance, one man was not at any time a temporary clerk in the Department. Another was a clerk in one of the abolished offices and was in charge of other men. He was employed by us as one of the earliest picked men we were looking for, but he could not come in on the ordinary status, and it is misleading to call him a temporary clerk.

28,175. Why could not he come in on the permanent staff?—On the spur of the moment I cannot exactly recall it. It is a Treasury point. There were three men from the same office brought over in these circumstances.

28,176. Are there many applications for appointments of that sort?—We have discouraged as much as we can the practice of employing temporary clerks, and the employment of these men on the permanent section has been against our protest; but as for applications, no post passes that I don't get applications for employment as a temporary clerk or anything at all in the Department.

28,177. A distinguished colleague of yours the other day rather surprised me by saying that he virtually encouraged personal interviews with people who want appointments of that sort. In your experience is there any attempt made to influence you in the exercise of patronage of that sort?—If you mean friends of applicants trying to exert pressure, of course there is. You would get testimonials from numerous friends of theirs; they look especially for testimonials from people who may be friends of yours. That, of course, is inevitable in any employment of the kind, but I have never encountered anything in the shape of undue or illegitimate pressure.

28,178. That is what I had in mind?—Not so far, but if you had ever a system which was one really of appointment without competitive examination I have not the least doubt that such pressure would become an appalling abuse.

28,179. So far as one can gather, the chief point of this second division statement is that second division men object to the appointment of temporary men to staff posts of different sorts. What would you say to that?—These clerks quote in an appendix certain minutes that passed between myself and them relative to these appointments, and these minutes rather explain the situation though a great deal of the text surrounding the minutes is somewhat misleading, such as what I explained just now with regard to the temporary clerks. Those men whom they describe as temporary clerks, whom they refer to here, were men whom we appointed in the very earliest days of the Department. The Department started with nobody but Sir Horace Plunkett, myself and one second division clerk, and we had to set to work to organize a whole Department from that beginning, and we had to look for men in all directions, to seek the best we could get. I am bound to say this: getting our men—I am speaking now of the clerical staff—mainly from the second division, or from such men of a different character as I am referring to now, we were singularly fortunate, and if I were forming an opinion of the second division solely from my own experience within the Department in manning the higher posts of a difficult office, I would be bound to conclude that the second division could provide without difficulty men for the highest classes of posts; but my experience has shown me in the first place that these men were rather exceptional in themselves, and we had the pick of a number of offices, and that you could not depend upon the type of education exacted by the second division in normal times for a permanent supply of men for the higher posts. That is the reason I come to the other conclusion. These men referred to here came into the Service in the

very earliest days, and the objections raised here are to their having been promoted to staff posts although some of them were not originally second division men.

28,180. (Chairman.) Some of them were?—Some of them were in the public service but under a different classification. The majority of staff officers had been promoted from the second division, but a certain number had not, and the promotion of these is the cause of the grievance that is mentioned in this letter. You will see that I deal with that matter here. I say: "With regard to the question of temporary officers it should be borne in mind that this was a new Department established to do work of a kind not previously attempted in the country, and had to undertake the organization of work under circumstances of unusual pressure, for which reason, among others, it was necessary in the beginning to engage men other than established Civil servants to take charge of work of a responsible character." I add that this necessity does not now exist, and the Department is opposed to encouraging the employment of temporary clerks.

28,181. (Mr. Boutwood.) So far as you are concerned, if you could come to an understanding with the Treasury the temporary clerk system would die out?—It would.

28,182. (Chairman.) Then it would come to pass that your promotions to staff clerkships would be from the second division?—Certainly.

28,183. (Sir Henry Primrose.) Is it not the case that in the year 1905-06 a Committee was appointed to inquire into the way in which these appointments had been made when the Department was established? Did not Sir Kenelm Digby preside over the Committee?—That was into the whole working and organisation of the Department.

28,184. As part of their work did not they inquire into the way in which these appointments had been made?—I rather think not. They did not touch staff questions.

28,185. I find it difficult to understand why these gentlemen have troubled themselves or the Commission with all this, because the very principle for which they contend has been conceded no later than November last—is not that so?—I think it is a statement which should not have been put in that shape. Some officers among them don't seem to have correct ideas of discipline.

28,186. I should say certainly not, because most of this correspondence took place in 1907—six years ago—and yet last November they return to the charge on an apprehension which proves to be ill founded, and on that occasion the principles for which they contended were so fully conceded that they themselves at once said they wished to withdraw the memorial?—Yes.

28,187. Then all that is so much waste of time?—Quite true. It illustrates some of the difficulties one has to meet. In a way it is a result of defective education, defective rearing, and want of perspective. They don't know where they are, in short.

28,188. But it gives a very bad impression of the judgment of the gentlemen who put it in?—I quite agree. I think, as generally happens, it was only two or three men who worked the others up to that; 35 of these gentlemen have under three years' service.

28,189. Take page 3, prospects of minor staff posts: What they seem to suggest is that the moment a man is given work of any importance at all, apparently if it is the least bit above what is given to the assistant clerk, thereupon he ought to have some extra pay over and above what he is paid as a second division clerk. Do you agree with that?—No. I think a man should be glad when he is put on higher work. I am reminded that probably the reason is that a minor staff clerk is put on work that involves the superintendence of others. Often in that sense he thinks he is entitled to extra pay.

28,190. But what they say is a man cannot become a minor staff clerk unless the place involves superintendence. They say: "We want to have minor staff clerks' pay, and minor staff clerks' positions, when we are put upon work which is important though it does not involve supervision." But what are they paid

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

for?—Men ought to be glad to be taken off an inferior class of work and put on work of a higher kind.

28,191. Taking the office staff the number according to the estimates is 178, taking everybody from the Vice-President down, how many divisions are there in the office?—Do you mean branches?

28,192. Take section 2 of your Act. It describes no less than nine categories of duties which are assigned to the Department?—The Department is divided in this way. We have a number of branches. The agricultural branch is one; technical instruction is another; fisheries another; statistics and intelligence another; and then there are the secretariat and the veterinary branch. These are the main divisions. Here is a sort of family tree showing how the Department is constituted. (*Produces diagram.*)

28,193. We have our pyramid here. At the head of each one of these branches you want a responsible man who would be paid either as a minor staff officer or as a superior officer?—At the head of each of these branches is an officer of the first rank. The head of the agricultural branch is the assistant secretary in respect of agriculture; similarly the head of the technical instruction branch is the assistant secretary for that. The head of the fisheries branch is the chief inspector for fisheries; the head of the veterinary branch is the chief inspector for veterinary administration.

28,194. That seems to show that the head of the branch very often is not a clerical man but an outdoor man?—The head of each of these branches is an administrative officer and not a clerical officer, but in each of these branches there is a chief clerical officer, who, in the language of the English organisation, would be called the head of the branch; we call him staff officer. He is in charge of the whole clerical staff of each branch, and he is assisted by minor staff officers. Usually one of them who is superior to the rest is second in command. Then there are several other minor staff officers in charge of sections.

28,195. The inspector of fisheries is the head of this branch in the office?—Yes.

28,196. Is he very often away? Is he a peripatetic officer?—Yes, but as all chief inspectors are he is mainly in the office, and then he has got an inspector who will be there in his absence, and, moreover, all these branches are in connection with the secretary, so that if a question arose and the chief happened to be away the branch could not deal with it; it is brought to the secretariat.

28,197. That seems to me to be rather peculiar to your Department. You practically incorporate in your secretariat your inspectorial officers?—No.

28,198. I mean as far as their work is concerned?—No; the inspectorial officers are attached to each branch.

28,199. Has the inspector of fisheries got a room in that part of the offices where that branch sits, and is he regarded as practically the head of that branch?—Yes; the inspectors of each branch are associated with the branch itself, the agricultural inspectors with the agricultural branch, and so on. The name of the chief inspector of fisheries is perhaps a little misleading. He would be more strictly an assistant secretary in respect of fisheries, but that was the statutory title under the old fisheries department, and he came along with his title with him. All of these heads of branches are strictly so in the English sense of the word.

28,200. I think it is rather different from the general rule in departments with which I have been acquainted. As a rule the secretariat acts as the centralising office and controls any outdoor people. Now it seems to me that your inspectors control, or almost seem to control, the secretariat officers who deal with that branch of business?—That is not quite so; if you will regard each branch as a separate entity to begin with, it has very clearly defined functions of its own, and a staff employed upon them. Then the head of each branch, that is to say, the assistant secretary in charge of each branch, is directly responsible to the secretary, and through them the secretary governs all the branches and keeps the work in co-ordination. The secretariat is merely a staff directly to assist the secretary in doing

that. For example, all the correspondence of importance comes through the secretariat.

28,201. With regard to your interesting suggestion for reorganisation generally, taking your total staff at somewhere between 153 and 180, if you were reorganising it on the lines you were indicating, what proportion of the total number of your men would belong to Grade II. and what proportion would belong to Grade I.?—You are speaking of the clerical staff solely?

28,202. That is rather a difficulty for me, because it seems to me you make use of your inspectors in a way which is unusual, that you treat them almost as part of your secretarial staff when they are in the office?—That is not so. You are clearly under a misunderstanding. The only inspectors who have direct relations with the secretariat are two men who are called, one, inspector for fisheries, and the other chief inspector for veterinary purposes. The name "inspector" in each of these cases is a misleading name. Do away with the idea of them as inspectors, and regard them as assistant secretaries. We have to call them inspectors, because they came from these old departments, and those titles are in the statutes. Neither is an inspector in the ordinary sense. They have their own staff of inspectors whom they themselves direct.

28,203. What sort of proportion of your total number would belong to Grade II., and how many would belong to Grade I., and how many places would there be above Grade I.? What you may call staff places, heads of divisions, assistant secretaries, and perhaps even the second men in the division, would be above the general body of clerks belonging to Grade I.; what proportion of the whole would be in Grade I.?—You eliminate from both grades administrative officers of the type of assistant secretaries and inspectors and professional officers who would not come through the grades at all. If the grades be only grades for the clerical staff, and for the higher ones of these who might be qualified eventually for one of the administrative posts, it is a proportion I find it rather hard to put a figure on, though the great majority of course would belong to the lower grade; they would be employed upon the lower class of work.

28,204. Would you say 75 per cent.?—Probably 60 per cent. would be nearer to it. Taking the department as a whole, I should say roughly about 60 per cent. would belong to the lower ranks. Then you could pick out the number of minor staff posts and staff posts, but that number would not represent those who were on higher work, because there would be a number of men under them and a number of men on their way to promotion who would have to be of the character that you would require for higher work, so that, as nearly as I could get, there would be about 20 per cent. of the higher. But these figures are mere guesses. Remember I am giving my evidence without the opportunity of preparation.

28,205. What number of men have you in the agricultural branch at the present moment?—Speaking of the clerical staff alone, we have 2 staff clerks, 4 minor staff clerks, and 28 second division clerks, and 4 assistant clerks or abstractors, and 8 or 10 temporary clerks with a female typist, 5 boy clerks, and 2 draftsmen.

28,206. Now you have got to divide 28 second division between upper and lower grades in your scheme; how would you apportion that number?—For your purpose here, I think you had better add assistant clerks and temporary clerks to these, because really, assuming that temporary clerks in normal circumstances would belong to the lower grade or second division, that would be 44 altogether, consisting of second division clerks, assistant clerks, and temporary clerks. There are five boy clerks, so that would be 49.

28,207. We are assuming that you merge the whole of your subordinate classes—temporary, assistant, and so on. You merge them all in your second grade?—Yes.

28,208. What I want to know is, I have got here nearly 50 people in your agricultural branch; now then, how many upper grade men would you want in a branch consisting of 50 men?—You have here in staff posts six men.

28,209. Those clearly would be outside the grade?—But then amongst those mentioned—28—there would

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

have to be a considerable proportion who would be quite capable of doing a higher sort of work that is quite worthy of promotion.

28,210. I am getting away altogether from the existing staff. I want you to deal with it in the abstract?—I am dealing with it in the abstract.

28,211. You know you have got work for subordinate men, and how many men do you want to supervise that work?—I want actually to supervise on working six men. A good deal of it is higher class work.

28,212. In other words, we should have 18 out of 50?—I make the total 56. That would be 18 out of 56; that is my proportion.

28,213. That would be about one-third?—Yes.

28,214. (Chairman.) Looking at it from a general point of view, would routine and mechanical work occupy the time of as many men as higher clerical work? I should have thought that clerical work would occupy more time in the doing than the more mechanical routine of preparing the papers for submission to the higher clerks?—There is a great deal of preparation, making out of abstracts, and that sort of work, and it takes a lot of time.

28,215. Let us regard an office organisation as constructed on a pyramidal plan, with a wide base. The organisation will consist of three grades—the administrative grade at the top; under that comes the clerical grade, and under that again, at the base of the pyramid, comes the routine or mechanical grade. Is that your idea of a proper office organisation?—It is.

28,216. We have not formed any opinion as to the relative extent of the clerical and routine duties that are to be found in the average office. Do you think the routine the more extensive?—I think the view is that it is more extensive in amount.

28,217. Have you got more abstractors, assistant clerks and boy clerks in your office than you have second division clerks?—I think it amounts to pretty much the same thing. A lot of the second division men are employed at a lower type of work. It is those lower ranks of the second division whom I would add to my second grade.

28,218. It might be so if you were reorganising the Service, but is there a concrete basis for such a reorganisation in the facts before us now?—We have, because I am pointing out that, in addition to abstractors, and such like, a considerable number of second division men are on a lower class of work, which is practically of the same nature as that on which abstractors are employed.

28,219. But they must necessarily begin with lower work?—Yes, and it is there to be done.

28,220. And it has to be done as an introduction to work of a higher character?—Yes, but I would put a lot of that work into Grade II., and only open the door to Grade I. for the superior man, the man who passed a qualifying examination.

28,221. (Sir Henry Primrose.) Roughly, your idea would be to have one-third in the upper grade, and two-thirds in the lower grade?—I am in a bit of a fog as to the exact proportion. I did not go into this point before coming here.

28,222. I forget for the moment how you suggested that men in the lower grade should make themselves eligible for promotion to the upper grade?—I suggested that men should come into the lower grade at about 16½ by examination, and when they get in, if they desire to be eligible for promotion into Grade I., they would have to attend prescribed courses, or a syllabus of lectures, or evening instruction, and pass a qualifying examination before they would be held to be eligible. Having passed that examination they would be eligible for promotion, and then each department would have a fixed proportion to the numbers of its staff for promotion into Grade I. to be selected from amongst those eligible, who were most meritorious in their service.

28,223. What sort of a maximum would the men have who remained on, who were not selected, but had become eligible?—200l. Of course you would have in this lower grade certain supervisory posts available for men who made themselves eligible.

28,224. Do you not think it would be possible, unless you made your examination so stiff as to exclude a large number of men, that you would run the risk of a large number of these men being officially declared to be eligible for promotion, and that you would then have to debar a large number of them from promotion on the grounds that you had not places for them?—But that is what happens to the second division men at present. They are all eligible for promotion.

28,225. In a sense they may be eligible, but here you put them to a certain definite test. They would be able to produce a certificate, and then you would have to say, "I'm sorry, I have promoted A last year, but you, B, have got to remain at 200l. a year for the rest of your life?"—But then, put it this way: nobody will be eligible to go into Grade I. who has not obtained this qualification. We have always to face this sort of difficulty with the question of promotion—even with the question of allotting "special increments."

28,226. Now let us go to Grade I. You propose that a certain proportion of those vacancies should be reserved for men who enter later, and who have completed their education at a university. I assume you have 18 men; what proportion would you reserve for university men?—I have not got the proportions in my head, but about the same proportion as reserved for Class I. men now.

28,227. If you don't reserve a sufficient number of places for university men they won't think it worth their while to trouble about the Service at all, and you practically exclude from the Civil Service all university men, except those who have passed through the university and succeed in getting nothing else to do?—I would certainly reserve a proportion, but when you ask the proportion I could not put a figure before you, but I would suggest such a proportion as is reserved now for Class I. men.

28,228. You, as head of a department, must surely feel that there is a great risk about your plan. Let us assume that it is true that a man who completes his education at a university has made better use of his time for the purposes of the public service than if he had gone in at 18 years and spent there four years in the office. Then if that was true what would happen is this, that the university man, who came in four years later than another man, would show his superiority; the proportion of university men selected would be very much greater than those who had come in earlier, and thereupon would arise a complaint against the head of a department that he was favouring the university men?—That would be quite so if you did not provide something of the kind I suggest here, for enabling those men who came into Grade I. at the lower age to obtain their university degree and to complete their education—if I may assume a class of men like that, who had come in knowing that all this was before them; the class of men who would come in at 18 years, and take out a university degree during the following three or four years. I am not so sure from my experience that that is not in some way a better preparation for the higher posts in the Civil Service than coming in at 22 years, and starting in rather a high place.

28,229. (Chairman.) Would it not be hard on the Government during the four years? The boys who would take these continuation courses would possibly attend more to their studies and less to their duties in the Government service during the four years?—My experience is that the men who have taken out their university degrees while attending the office were the best men for the work of the office both during that period and after it.

28,230. You would possibly find people to differ from you on that point?—I don't see why it should be. I should like to hear Sir Donald MacAlister's views on that point. The hours of the Civil Service for junior men are very easy. Their office hours are from 9 in the morning until 4 in the evening, or from 10 in the morning until 5 in the evening.

28,231. We have evidence to show that boy clerks studying for examinations do frequently neglect their official duties; and that the boy clerks who pay most

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O. and Mr. WALSH were in attendance.) [Continued.]

attention to their official duties often have small success at these examinations?—I don't think the comparison at all holds, for two reasons. One is that this boy clerk examination is a competitive examination, which is a different thing from attending evening courses for general culture to be completed afterwards by a qualifying examination. The other reason is that the boy clerk who has only got as far as 14 years of age or thereabouts in his examination is a very different subject for studying from a well-educated young man who is at school until the age of 18 years. To him these courses, if they are rightly conceived, ought to be a recreation and a stimulus and not a fatigue.

28,232. Is it not only a difference in degree?—I think it is a substantial difference, and the fact that I mention, that the best men who have come under my observation, that the men who have taken university degrees by studying out of office hours are among the best of those working in the office that I have been able to observe, is proof of what I say. These young men of 18 or upwards leave off at 4 or 5 in the evening. They may lounge round the town, they may go to picture palaces, billiard-rooms, and so forth. If there were properly arranged university lectures, I think it would not press on them at all to go and make a better use of their idle time. On the contrary, joining college clubs and societies and so forth would do them a lot of good in every way. And four years of university lectures would not mean that they would be asked to attend a lecture every afternoon or every evening.

28,233. (*Sir Henry Primrose.*) At the end of that time would they take an ordinary pass degree, or would they have a stiff examination?—I should like to see men for the public service take out their degrees in such subjects as political science, but I would not tie them down at all in that way. So long as they followed their bent and got a good course of broadening education, I should be satisfied.

28,234. (*Chairman.*) Is it possible to do that under the existing university system of Ireland?—It is not possible at this moment, because the old Royal system is at an end, and they must now be all intern students to qualify for degrees; but at a meeting of the Senate of the National University to take place on this day week there is a motion on to consider the question of evening courses. If evening courses are provided it would be quite possible for such men to qualify for their degrees. I think there is much to be gained for the efficiency of the public service in general in seeing that the education of these men is continued and broadened, and I believe much importance attaches to that point; and if you broaden the examination for entrance, make it much broader than that for second division now, you will have started these men with an educational preparation which will make it much easier for them to follow up.

28,235. (*Sir Henry Primrose.*) Of course, in this attendance at classes that you suggest there is a certain inequality. If a man is stationed in a place like Edinburgh or Dublin it may be much easier for him to attend continuation classes than if he was in London?—There are great facilities in London now. London University has evening courses, and there are certain institutions affiliated with London University.

28,236. You think that the amount of time a man could give to that would not really diminish his efficiency during the years he was expected to work for his pay, and that it would enable him to take a degree at the end of four years?—I think it would enable a good man to take a good degree and an average man to take a passable degree. And it should not diminish his efficiency in the office for the time being. All over the country we are inducing young men in employment to attend evening technical schools, and employers are giving them premiums for doing so, as they find it improves their efficiency.

28,237. I see you have got a large vote in Class IV., but I suppose all supervising work in connection with that vote is done in your Department of Agriculture and Technical Instruction?—That science and art work is being done chiefly from the technical instruction branch.

28,238. There is no clerical department under that particular vote?—No.

28,239. But the work of central administration is done in your other office?—Except that over at the museum we keep a small staff for clerical work, but that is rather for convenience of location than for anything else.

28,240. (*Sir Donald MacAlister.*) In order to make it a little clearer, about your proposal for getting some kind of university education for the higher half of the second division clerks, do I understand you to suggest that these clerks who come in at 18 or 19, and spend four years over a university evening-class course, could attain anything like honours degrees?—It would depend on the men. You know yourself, Sir Donald, that some of the finest students are to be found in evening institutions.

28,241. Your idea is that if they attend university classes in the evening, in four years they should obtain a reasonable pass degree?—Yes, and of course those who got an honours degree would be more eligible.

28,242. You are aware, however, that those who pass into Class I. are practically all honours men?—Certainly, and I forgot to mention that I would equate an examination for men coming in at 22 with that for an honours degree.

28,243. So with regard to those university half-timers who got a pass degree, and the university whole-timers who got an honours degree, there would still be a distinction?—There would.

28,244. And you would not efface such distinctions?—No, we cannot efface distinctions between man and man.

28,245. Would you have done anything real to efface any distinction?—I think you would in Ireland. So many things in England go to produce the type of man known as a university man, especially if his university is Oxford or Cambridge, that it would probably be a long time before you would eliminate any such distinctions. Those who have been taught in the atmosphere of a university like Oxford must feel themselves at an advantage as compared with those who have not. Here in Ireland we have not got anything of that sort.

28,246. But in Ireland the distinction would still remain between those who entered at 18 and got a pass degree ultimately, and those who entered at 22 and 24 and had already got an honours degree?—Yes, but those who entered at 18 and succeeded in getting an honours degree would not have that against them. There is also this to be borne in mind, that it encourages men who enter at 18 to continue their education, and thus you would have a new stock of educated men from which to draw. That stock of men have something which I would call an addition as compared with those who come in at 22 years. They would have the addition of training in the mill during the years between 18 and 22, and you may find that even men of that type who get only a pass degree may be better administrators.

28,247. The honours man who enters between 22 and 24 is not merely an honours man, but he has competed in a competitive examination with other honours men, many of whom have been unsuccessful, whereas your pass man would be only required to qualify?—That is so.

28,248. Would it not be the case that the honours man who was successful in a severer competition would naturally regard himself as better educated than the man who had got his qualification degree by work done out of office hours?—He would so regard himself, but you regard the fact that he has been skilful in passing a competitive examination as—

28,249. (*Sir Donald MacAlister.*) But you are really getting beside the question. You are trying to address yourself to the feeling that already exists inside the Service?—You could not efface it from that point of view; but it would diminish it to some extent. But the present arrangement fosters it—you put it in a hot-house by the present arrangement.

28,250. What would you say to those who get into the first grade early, and afterwards succeed in getting a university pass?—"You are eligible for promotion,

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

"and if you don't get that degree you won't be eligible for staff posts at all."

28,251. (Chairman.) Not if he were an excellent official?—Well, you take him in at 18 years and say to him, "Now, boy, you must get your B.A. degree if you want to get on in the Service. If you don't think it worth your while to do that you won't get promotion."

28,252. (Sir Donald MacAlister.) Would you not deprive the Service of getting good servants?—Of course, extreme cases always will occur in everything, and you may hold yourself in readiness if you discover a genius for administration, who cannot take a pass degree with all these facilities, to make exception to the rule.

28,253. But you told us when you organised the Department you took over a number of second division men, and that practically you could pick out men for the highest posts, and that none of them had got degrees?—I said a number of them had degrees.

28,254. Did you test them for them?—Nearly all the men had got degrees, and some of them had been called to the Bar. Some of them had got honours degrees, and one of these temporary clerks had got an honours degree. It is because I have that sort of experience before my mind that I am very strong about this point.

28,255. Would you restrict your boy from promotion until he passed some examinations?—I did not mean my plan to operate against anyone now in the Service.

28,256. (Chairman.) But you would be keeping out a second division man?—No, because he would have every opportunity.

28,257. Suppose there is a second division clerk with great capacity. He attends to his work, and gives proof of the possession of great mental capabilities, and the promise of becoming a good administrator. Would you debar him from promotion if he did not go to a university class?—I would not have you put it that way. He will not develop the qualities of a great administrator during his first two years of service. Remember we are only talking of the boys who have just come in, and whom I think it wise to keep a while longer *in statu pupillari*.

28,258. (Sir Donald MacAlister.) You would require him to pass into the Service, and then matriculate for the university?—Yes.

28,259. What I wanted to ask you is, would you restrict competitive examinations for entrance to the Service to those who had got senior or intermediate grade, or middle grade intermediate?—I don't know that I should go as far as that.

28,260. Why?—Because the opportunities may not be available for all who would wish to go up for this examination. If I were looking solely to the public service I would say "Yes"—if we could eliminate from our minds everything but that; but we cannot, for you have the problem of opening the door to the poor man's son to consider.

28,261. Supposing it were possible for the poor man's son to get to the middle grade, you would favour requiring that certificate to be got by every man entering the Service?—I would; and we are near that point in Ireland now, because a large proportion of our intermediate schools take in as the majority of their pupils the children of the working classes, and the bright boys in these schools can nearly always get up to the middle grade, and you only want to encourage the brighter ones to go into the Civil Service.

28,262. You regard the system as nearly complete already in Ireland?—It is on its way to completion, and we look forward to the time in the near future when it will be completed.

28,263. Is there any means whereby the boy who might otherwise leave school at 14 may carry on his education to 16?—In the Irish intermediate school system there is no general scheme of scholarships with that end in view, but there is a plan which amounts to a scheme of scholarships of a very valuable kind. It comes to this, that it is of so much advantage to the schools to have brilliant boys earning exhibitions and otherwise distinguishing themselves, that nearly every intermediate school in Ireland is on the look out every

year for such bright boys, offering to take them in and to educate them free.

28,264. You mean there is at present in Ireland a system by means of which any boy in a primary school who shows promise can be educated to a higher stage?—I would not say every boy. A very considerable number of boys in these primary schools who are brilliant boys are taken on by intermediate schools for the purpose of winning exhibitions and other distinctions for the school, and taken further.

28,265. These exhibitions do carry them further on?—No, that is one of the mischiefs of that sort of thing. They receive a type of education which is really not good for them. I have seen brilliant exhibitioners from an intermediate school driving cabs, and railway porters, and making pretty bad railway porters at that, because they were spoiled.

28,266. (Chairman.) Who gets the exhibitions—the student or the school?—The student gets it, but the school is able to placard in the newspapers, when these results come out, the number of exhibitions it won.

28,267. Do you mean to say the education they give these boys is the same as the crammer gives?—In present conditions it is. The conditions have been improved since the Intermediate Board was able to introduce inspection as well as examinations; but still the universal written examination is to be continued, and there is all this competition for these exhibitions between pupil and pupil.

28,268. (Sir Donald MacAlister.) I gather that the intermediate school gives a brilliant boy a free education, and he may win from the Intermediate Board what will provide him with maintenance. Is that so?—That is so. As a matter of fact, many intermediate schools will take a boy in and board him as well as give him education.

28,269. And the exhibition is then something over and above?—Yes. Recently a scheme of scholarships to enable boys to proceed from primary to secondary schools has been introduced by the Government, but there are some conditions attached to it which up to this has prevented county councils accepting it.

28,270. You mentioned the distinction between paper-examination certificates and such certificates combined with inspection and school record. Are not these so-called certificates of the Intermediate Board purely examination certificates?—Yes.

28,271. There is no evidence that a particular approved curriculum has been followed or that the school at which instruction was given had been approved after inspection?—Since the introduction of the inspection by the Intermediate Board that purely written examination certificate is modified, because the schools must now be inspected, and the school at least must be approved in certain important particulars before it would be entitled to receive an intermediate grant.

28,272. That is a step in the direction of making the intermediate certificate more truly a leaving certificate as we understand it in other parts of the kingdom?—It is.

28,273. That leads me to ask whether you approve of the employment of the 18 boy clerks that I see here in the table?—I don't approve of boy clerks as they are under present conditions at all.

28,274. What is the objection to employing boy clerks for the merely mechanical work so many of them have to do?—It is a very bad thing to bring a boy of that age in.

28,275. Bad for the boy?—Certainly; and then to send him about his business in a few years' time, as happens to the majority of them. I think that is a most unjustifiable thing to do. The only justification that can be alleged for it is the financial one that you get them cheaper. But I think that economy is purchased very dearly, and I think it would be better economy to abolish the system and only take in boys at 16½ years of age and pay them 50l. to begin with.

28,276. Have you seen sufficient examples of the mischief of this method of employing boy clerks to make you condemn it utterly?—Yes, it is a shocking thing. Here we are in our educational system, people like myself going about the country, preaching against blind-alley occupations and endeavouring to devise

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

means for leading boys out of the blind-alley occupations; and here we are in our own office with a series of blind-alley occupations. Boy messengers, too, are as bad as the others. You see the unfortunate boy in the hobble-de-hoy stage under what really amounts to demoralising conditions, and then sent about his business.

28,277. We have been told that if we close the doors of the Civil Service to boys of 14 we will be cutting out a whole social class who cannot afford to keep their children idle after that time. What answer do you give to that?—I give two answers. First, I say I am examining this problem from the point of view of the efficiency of the public service, and that if you make that service efficient you are doing good to all classes of society, including the working classes, and I will under no consideration interfere with them. My next answer is this: If I am obliged to consider this problem from another point of view, that of providing employment for a certain class, then I will say by fixing 16 or 16½ as the age, and by improving your educational system and your educational ladders, I don't see that any disability is put on the bright boy of the poorer classes.

28,278. The bright boy—you don't want any other kind?—I don't. And why should you? Here in Ireland, I think, we will very soon be at the point at which the opportunity of being educated up to the age of 16 will be before every class of the population.

28,279. Every class?—Every class of the population. And then I think there will be no cutting out of a particular class by fixing your age at 16½ for these examinations. Furthermore, at the present time we have so developed in our technical schools, in which we have a general course of great value besides a technical course, that a boy who at the age of 14 has to go out and get an occupation to earn his bread, can go and get a very good education in the evening hours at the technical school. Supposing a boy of that type has a desire to enter the Civil Service or, what I think would be a very much better thing, to go and become a very highly educated, capable artisan, he can during the evening hours get his education continued so that he would be able to enter with good prospects for an examination at the age of 16½ years.

28,280. Would that be costly—that evening education?—Not at all; it is practically free. It is provided now under our system in every town in the country.

28,281. And if a boy of the working class who has to leave school at 14 and earn something until 16½ took advantage of this practically free system of evening classes, and did not get into the Civil Service, he would not be damaged by reason of his failure?—Certainly not. What is more, we have established now under our system a scheme of apprentice scholarships, which are offered to boys of that class, and which I consider far more valuable to them than entering the lower grade Civil Service. I think, for example—if I may say so, I hope the labour men won't have my life for saying so—that they exaggerate from the point of view of the working-class boys the value of entering the lower ranks of the Civil Service. I don't think it is a good class of employment for them. Necessarily, from the restricted nature of their education, the majority of these boys can only remain in the lower ranks, and what is their life there compared with the life of a highly educated artisan? These apprentice scholarship classes provide a free training to apprentices at such an age and of such a nature as to make a highly educated artisan—a man whom I would call the gentleman of labour. A boy of 14 or 15 can get one of these scholarships, which will entitle him to free teaching at one of our trade preparatory schools—that is a sort of day technical school, in which his general education will be continued on very broad lines. It will enable him to enter as an apprentice to a high class trade or firm which is chosen for him by the Department. His period in that apprenticeship is under the inspection of the Department all the time. He goes into a high class business something like the engineering works at Inchicore or some big firm in the building trade. All that time he is obliged to continue his education at an evening technical school or an afternoon class, and during all that time the scholarship

provides him with what amounts to 15s. a week. At the end of the time he is really a man of his hands and his brain and his eye, fit to go anywhere, and has a better life before him than that of the lower grade in the Civil Service.

28,282. So that if you cut off the avenue to the Civil Service between 14 and 16, you think there are much better avenues for the class disestablished, so to speak, if they only choose to take them?—I do, and I say you don't even cut off the avenue to the Civil Service by doing so, for the reason I have explained.

28,283. Perhaps one thing was not brought out clearly in the previous questions—the nature of the co-ordination you proposed to establish, or which is partly established, between the Royal College of Science and the University. Has any approximation to that co-ordination been actually established, or are you speaking only of something you hope to establish?—Considerable negotiations have been going on between the Department and the National University and Trinity College on that subject, and the basis for the scheme that is being considered is one you are familiar with, because it is the same basis as has been adopted in the case of Belfast University and the Royal College of Science; that is to say, we have at the Royal College of Science a four years' course for, to take an example, the agricultural students. The two first years are years of a course of general science preparatory to two applied years. We will recognise, in the case of university students, two first years if taken out at a university, and the university will recognise the two second years if taken out at the Royal College of Science; and the student who has gone through the whole four years successfully is free to present himself for the degree.

28,284. Of B.Sc. at the University and also the diploma at the College?—Yes, for associateship of the College.

28,285. That is to say, by half attendance at one institution and half at the other he would be able to have the four years' course which qualifies both for the degree and the associateship—that is a very intimate association?—Yes. That is the basis we have been considering with the universities, and negotiations so far lead me to believe will be adopted.

28,286. That is only for the Bachelorship of Science in Agriculture?—There is also a scheme for mechanical engineering and electrical engineering on the same basis.

28,287. Two years at the College and two at the University in whatever order?—Yes. We place, in fact, the very important equipment and staff that is now available at the Royal College of Science at the service of the universities as well as at the service of our own school.

28,288. So that these may avoid unnecessary duplication of curricula and equipment?—Yes; that is a continuation of the work I had the honour of having had a certain hand in, with yourself, at Belfast, in connection with the Technical Institute there.

28,289. Are the Technical Institutes also under your Department?—They are directly administered like that at Belfast by the Technical Instruction Committee of the local authority, but they are under our inspection and supervision.

28,290. And the arrangement amounting to affiliation between the Technical Institute and the University in Belfast has your approval?—Certainly.

28,291. And has received it?—It received it.

28,292. (Mr. Shipley.) The head of your office is the President?—Yes; he is the Chief Secretary.

28,293. Does he ever preside?—No. The effective head or Minister of the Department is the Vice-President.

28,294. Is he a paid officer?—He is a Minister; he is a member of the Government of the day.

28,295. He is paid as a Minister?—Yes.

28,296. I was only wondering whether a man had time to perform such very big functions as he has?—He represents the Department in Parliament.

28,297. Are there very close relations with all the other departments, the Local Government Board, the Congested Districts Board?—We have, and with the

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

other educational departments, the closest correspondence between our work on the educational side and that of the Intermediate Board on the one hand and the National Board on the other. We train numbers of their teachers in special subjects and arrange for certain work in common.

28,298. If there is a divergence between one or two of these boards who co-ordinates them?—I have never come across a case of the kind yet. There is a certain blending between us. For example, Dr. Starkie, who is resident commissioner of national education, is a member of our Board of Technical Instruction. I am a member of the Intermediate Board myself, and I am also on the Senate of the National University, and we manage to look at our work from such a common standpoint that if we differ at all it is only as amongst colleagues, and we come to a conclusion about the lines of action. Similarly with the congested Districts Board. We meet that Board occasionally for the purpose of co-ordinating the work.

28,299. You have a list of 650 Civil servants in this printed document—of course a good many of them are technical instructors, and so on—could you tell me how many have passed in by open competition out of the 650?—A great number of these are people outside in the country—teachers, inspectors, etc.—who are not Civil servants at all. I don't think the 650 are Civil servants.

28,300. I wanted to ask you about the fisheries. Have the maritime counties anything like they have in England—local fishery boards?—In Ireland there are a series of fishery conservators, as they are called—boards of conservancy—just as they are in England, for the main rivers and estuaries.

28,301. About the research vessel—you have at least one—who lays down the policy as to what lines of research your boat should take up?—The head of our fisheries branch is Mr. Green, and next to him is Mr. Holt, who had charge of the research mainly until he had to take up a good deal of inspection work. Then another man about research is Mr. Charles Green, son of Mr. Green. He is an example now of the type of man we get from the university. He was a classical scholar of Trinity College, Dublin, and he took out his degree in natural science and took honours and a gold medal and moderatorship in natural science. He went up for Class I. and got first place in the whole three kingdoms in natural science. He is one of our naturalists in the fishery branch working at research principally.

28,302. He is very efficient, don't you find?—He is a very efficient man, indeed.

28,303. There is a director of the geological survey put down here at 100*l.* a year. I suppose that is because he is professor of geology?—Yes, he is professor, and that is a fee for acting as director.

28,304. He is able to manage the double work?—One fits in with the other.

28,305. About the National Library, is that a kind of British Museum for Dublin?—It is. There is a librarian and board of trustees who administer it under the Department.

28,306. Do you have anything to do with the International Agricultural Institution at Rome?—We are represented on that. I had the honour of being a member of the first conference for the foundation of the institute.

28,307. Can you correspond directly with them or must you go through the Foreign Office?—Usually full dress, coked hat communications are through the Foreign Office, but there is a considerable amount of direct correspondence.

28,308. Is it in connection with the development of forestry that our reader at Cambridge is leaving us?—It is. He comes to be professor of forestry at the College of Science and take charge of our research and demonstration work.

28,309. Have you any first-class men in the office now?—No, we only had one man who was in the first division but elected to come into our office.

28,310. You have not had really direct personal experience of them?—No, not in our office. I really can't undertake to speak from direct knowledge of their

work. I was speaking of them chiefly in relation to this distinction—

28,311. You mean you are not opposed in your office to the kind of talent and education a first class clerk possesses?—On the contrary, I want to emphasise the need for them, and I want to get as many more of the staff as possible moved up towards that level.

28,312. You don't object to people entering the Service with these qualifications?—Not at all; but I want to contrive some other door by which they would come in.

28,313. My point is, whether Class I. represents the distinction of education, and not of caste or class. I have some considerable experience at Cambridge, and many of the people who come in to the first class category come from lowly homes such as you describe?—I mention the tendency in this sort of little castes getting up.

28,314. There, again, wouldn't you find the caste feeling just as sharp between your second and third grade men as it is between first and second classes?—There would be an inevitable distinction in the work to be done. But I would have doors and facilities for passing from one class to the other, and as I said before, I would rather think of the differences less in terms of classes than of grades or rates of pay.

28,315. It seems to me the caste distinction is very largely a distinction of education. We have had a certain amount of evidence that there is a deep, widespread discontent amongst Class II. clerks, and that it seriously interferes with the efficient conduct of business in most departments. Do you think there is that profound feeling?—I don't know that I would use the term profound. There is a discontent, and I think the distinction I refer to was one of its causes. Speaking as one who has had a good deal to do with the handling of men, I know how important it is to have your atmosphere such that there would be a certain hope and enthusiasm spread amongst your ranks. If any distinction like that comes in, it poisons the air, you cannot put your finger on it, but it does not add to efficiency.

28,316. Life at a residential university leads rather to develop those qualities you attach importance to. Contact with other men in their games, and their Officers' Training Corps, and the life in common, leads to a certain amount of tact and command of men. Would you agree with that?—Of course.

28,317. You also agree that there are posts in the Civil Service which require the highest talent the country can give?—Most decidedly. Some of the highest posts, I think, you will find difficult to recruit, even from within the Service. They require a sort of outside experience.

28,318. We have some evidence, and possibly we shall have more, that in the business world they are waking up to the importance of very highly trained university graduates, and that they are taking them in increasing quantities. That has been for some time true in America, and is greatly spreading in England?—Yes, I have come across that fact in my inquiries about educational results in America, and also in my own experience—that the men who have got the broad training and liberal culture, generally connoted by classical education—I would rather speak of humanities—are those who get the furthest. That is beyond all question. I am continually emphasising that fact myself in connection with our work in technical education.

28,319. Without saying a word against evening schools, you wouldn't think you would get that kind of thing there?—You have been talking of life in the university. Of course, in a university like Cambridge or Oxford, those who have had the advantage of living there have got something which cannot be got by any other means. But leaving that question of life in the universities apart, and looking at the subjects of studies, I see no reason why, confining ourselves to the subjects of study, that a good man, in an evening course, who would be well prepared in a secondary school, should not do as good a classical course as the others if they had the right teacher. Moreover, the evening or afternoon work—certainly in Ireland—

20 February 1913.] Mr. T. P. GILL. (Mr. CANTRELL, I.S.O., and Mr. WALSH were in attendance.) [Continued.]

would mean the man having some share in university life, such as it is.

28,320. Do you think your office is adequately housed, or is it in one building or scattered all over the place?—Scattered all over the place.

28,321. Does not that mean a great increase of expenditure?—It does, and waste of time, etc.; but there is a scheme for providing us with new buildings on foot.

28,322. (Chairman.) If you were organising your great Department again, and if you were free in regard to money, and had only to look to efficiency of work, would you be disposed to split it into two Departments under two Ministers of State?—I would not. There is amongst the different sections of the work of that Department an organic unity which, I think, has been preserved throughout the administration; take any branch you like and compare it with any other of the most seemingly diverse kind. Take agriculture on the one hand and the School of Art on the other.

28,323. Take fisheries?—Fisheries probably you could cut off, but I don't see what particularly would be gained by doing so. Fisheries is rather helped on by being linked to a department like ours, having the resources of such a department behind it. I mean the resources both of administrative power and of finance to some extent. It loses nothing by being put on to the Department. That particular section might go without great loss but still even it benefits. For example, a good deal of technical instruction work is done in connection with the fisheries. Take that very motor-boat industry we were speaking of, the transformation of fishing boats into motor-boats, the establishment of a system of motor fishing boats. I spoke of a workshop being in the fishing ground for the purpose of repairs. We have to get all the skippers

of these boats trained to understand motor craft. In our technical school at Pembroke, which has specialised rather on motor instruction, we have put up marine motor-engine equipment for the training of these men. We get up in the off season young fishermen and skippers from these boats from the congested districts as well as our own parts of the country and we have them trained there. A good deal of the instruction given in the promotion of fisheries is of a technical character, and the fisheries branch benefit a good deal by our being able to join these two things together. The head of the fisheries branch comes to the head of our technical branch and has a chat with him and they both together go down to the Pembroke school and the thing is arranged.

28,324. (Sir Donald MacAlister.) And the Museum and the Royal College of Science would also have relations to the ordinary departmental work?—A very close relation. Also the School of Art. You might say what has the Department got to do with art instruction. Art, as well as science, is at the basis of technical instruction, and we train teachers of drawing for all the technical schools in that art school, and there is no technical school in the country in which the work of that art school is not concerned.

28,325. (Mr. Boutwood.) You have several departments in your office. When there is a vacancy amongst your staff posts, is it regarded as the privilege of the particular department in which it occurs or do all your men come under review for it?—All our men come under review for it. But of course, in practice, in most cases it is natural enough, if there is a very large branch, the men are coming up for promotion in that branch. But that is not invariably the rule.

(Chairman.) We are much obliged to you, Mr. Gill, for the evidence you have given us.

Mr. SAMUEL SLOAN, Mr. QUANE, and Mr. MUNRO, called and examined.

28,326. (Chairman.) You come to speak for the second division clerks in the Department of Agriculture?—Yes.

28,327. We have read your statement, and at the end of it you print an appendix?—Yes.

28,328. And in that appendix you give two letters, one dated 24th October 1912, to the secretary of your department, enclosing a memorial which you had addressed to the Treasury?—Yes.

28,329. That memorial to the Treasury seems to me to cover almost the whole of the complaints you mention in your statement to this Commission?—Yes, it does as regards the particular branch concerned. That is the agricultural branch.

28,330. It covers the complaint referring to temporary clerks that is to say, your objection to the employment of temporary clerks. It also covers the complaint regarding the duties of the second division clerks?—I might explain, though, that this objection was drawn up by one branch; that is, the agricultural branch of the Department.

28,331. It was represented here as coming from the second division clerks?—"Serving in the agricultural branch of the Department of Agriculture."

28,332. (Sir Henry Primrose.) "Serving in the Department"; there is nothing about branch?—"We, the undersigned clerks of the second division serving in the agricultural branch," pages 14-15.

28,333. (Chairman.) The claims, so far as the clerks serving in the agricultural branch are concerned and yours, are the same?—No, not exactly. Outside the agricultural branch—I, personally, am not in that branch—we have not been directly affected to the same extent by such matters as those mentioned in the memorial.

28,334. Do you come here to represent the second division clerks of the Agricultural and Technical Department or not?—Yes, generally. I might just mention I am not in the agricultural branch.

28,335. This application before the Commission purports to proceed from the second division clerks in the Department of Agriculture and Technical Instruction?—Yes, quite so.

28,336. The clerks of the agricultural branch of that Department last year presented a memorial to the Secretary of State which substantially covers the representations which the clerks of the Department make now to us?—Substantially.

28,337. These gentlemen also, on the 16th November last year, professed themselves to be quite satisfied with the reply given to the claims which they made; you will find it so stated in the last letter on page 16 of the appendix. They expressed themselves as quite satisfied?—There were some alterations in the assignment of certain duties.

28,338. I now suggest to you that, so far as the second division clerks of the agricultural department are concerned, they are, on their own admission, out of court?—The thanks were expressed, I understand, from the agricultural branch for certain alterations and arrangements made in the allocation of work in the agricultural branch.

28,339. The facts are that a few months ago these clerks made certain complaints which cover the complaints which were made in these documents. They presented their memorial. They had an interview with the authorities of the Department, and they professed themselves quite satisfied with the explanations given, and they withdrew their memorial. What justification have they for coming up again and renewing the same complaints?—Since that time, I understand, the second division clerks in the agricultural branch have presented a further memorial to the secretary. They expressed thanks for the carrying out of certain alterations in the arrangements in that particular branch. These alterations were, I understand, carried out subsequent to the time at which the memorial for transmission to the Treasury was submitted to the secretary of the Department.

28,340. Well, go on, please?—Of course, I might explain, I have only a general knowledge of occurrences in the agricultural branch, I was more especially—

28,341. You have been sent here to represent the clerks of that branch before this Commission. You were selected for the duty, I presume, because you were acquainted with the facts and competent to represent

20 February 1913.]

Mr. SAMUEL SLOAN, Mr. QUANE, and Mr. MUNRO.

[Continued.]

their case to this Royal Commission. You are really not acquainted with the facts; and, therefore, I must say, you are not treating the Royal Commission with proper respect in appearing before them. Again, I must point out to you that the complaints which the Agricultural branch of your Department now make to us were considered so late ago as November last year, and with the replies then made, your principals professed themselves absolutely satisfied, and withdrew their memorial. You are not justified in coming before us again and making the same representations. You are only wasting the time of the Royal Commission?—May I offer my explanation? We were only asked by telephone message to-day to give evidence. There had not been anyone selected by the office, and the office committee got together and asked myself and Mr. Munro to appear.

28,342. I understand that you were warned that you were in readiness to appear before the Commission?—The point I want to make—

28,343. I cannot hear you any further in regard to the agricultural branch. In regard to the Department of Technical Instruction what is your complaint? Is it that expressed in these—the three conclusions stated on page 8 of the memorial?—Yes.

28,344. Your first point is that your salaries are not commensurate with the duties you are called upon to discharge?—Yes.

28,345. You were recruited for the second division, weren't you?—Yes.

28,346. And the second division is organised for the performance of certain duties which you are called upon to discharge. You say that the duties are more onerous than you were recruited to discharge. But really you are not the judges of that. The Department is the judge of what should be the duties you should discharge?—Of course, we may not be the judges, but it is our opinion.

28,347. It is your opinion. Surely you as a Government servant must know that the duties you are to discharge are those which are allocated to you by the head of the Department?—Quite so.

28,348. And if more difficult work than you think ought to be given to you is actually given, you ought to be grateful for the opportunity of showing what stuff you are made of—in that way proving your fitness for promotion?—Quite so.

28,349. That is the way a young man should look at hard work given to him in a Government office. It is not a good spirit which suggests to him to regard difficult work in any other light?—We are quite gratified at the opportunity of doing the work, but we think we have a good case for the consideration of the question of increased emoluments when we discharge superior duties efficiently.

28,350. How many years' service have you?—I have 11½ years' service.

28,351. What pay do you draw?—156l.

28,352. Isn't that a very substantial and respectable pay for a young man? What age are you?—I am just 30.

28,353. And you have a clear run before you up to 300l.?—Yes.

28,354. That is a good prospect. You have the self-same prospect as second division men in England have.

You must allow me to say I really have no sympathy with the young man who says, I am being given harder work to do than I ought to be given. You are not the judge. It is the head of the Department who is the judge?—Our point, sir, is that we don't object to the work. We don't object to the work at all.

28,355. Now about the increase in the cost of living: Is there much increase in the cost of living in Dublin?—Very considerable.

28,356. What years can you compare? Have you got any figures?—No, we have not any figures other than those of the Board of Trade which, as we mentioned, apply to London.

28,357. Your judgment must tell you when you make an application on the ground of increasing cost of living, the elementary thing to do is to produce figures. It is a question at all events which does not apply to you alone. It applies to all the offices in Ireland; indeed, to all the second division throughout the United Kingdom. Although you have not prepared any figures we will look into the matter?—We have not prepared any figures affecting Dublin. We have not been able to get official figures.

(Chairman.) Well, it is a matter we shall not overlook.

28,358. The third point is, that the promotion of temporary clerks to established positions is contrary to recognised public policy. Have any temporary clerks, except at the outset, been appointed to positions of staff clerkships to which you naturally aspire?—Six.

28,359. Six, you say, have been appointed?—Five of these had no previous established service, and one entered the Service as a temporary clerk and was an established officer, an assistant clerk, before coming to the Department.

28,360. What was his name?—Maccabee.

28,361. When was he brought into your Department?—He was transferred from the General Prisons Board, I should say it was about 1902.

28,362. (Sir Donald MacAlister.) Before you joined the Service?—Not before I joined the Service.

28,363. (Chairman.) In normal times and in normal circumstances these staff posts should probably be filled by promotion from the second division, that is the natural course of events; and you may look forward to promotion to staff posts if your conduct is meritorious and your work is good; there may of course be occasions when that normal rule may be departed from, but the exceptions should be few?—We pointed out how it has been possible in other cases of quite recently formed public departments to recruit the staff—that is the indoor administration staff—altogether from the ranks of the Civil Service.

(Chairman.) I think it is right that that should be done and that departures from the normal rule should be avoided; but when you have a general principle like that established you may surely look forward with confidence to its being observed. Now, gentlemen, I do trust that as we have had this conversation, a better spirit will prevail amongst you, and that you won't object to do work because you consider it is more difficult than ought to be given you. You ought to be glad to get difficult work to do, because you can thereby show what you are capable of doing.

Mr. JAMES DOWLING, called and examined. Mr. EDMUND MURPHY (Chairman of the Irish Temporary Clerks' Association), was in attendance.

28,364. (Chairman.) Mr. Dowling you are a temporary clerk?—(Mr. Dowling.) Yes.

28,365. And is Mr. Murphy a temporary clerk?—Yes.

28,366. How long have you been in the Government service?—Twelve years.

28,367. How long have you been, Mr. Murphy?—Twenty years.

28,368. What branch are you engaged in, Mr. Dowling?—I was taken in from a commercial office when the Department was started 12 years ago as expert shorthand writer and typist. After two or three years I was put on as confidential shorthand writer and then made personal clerk to the assistant secretary. In this

capacity I have to do highly confidential work, and I have been engaged for the last seven years upon work, which, in the course of events, would be done by a second division clerk.

28,369. Other than shorthand writing and typing?—Yes, work of equal responsibility.

28,370. What character of work—minuting on papers?—Yes, and interviewing people who come to the Department.

28,371. Do you ever draft letters?—Yes, drafting letters every day—official documents of all sorts. Also the preparation of material for the meetings of the Agricultural Board.

20 February 1913.] Mr. JAMES DOWLING (Mr. EDMUND MURPHY was in attendance.)

[Continued.]

28,372. What salary do you get?—170*l.* is my present salary, which includes overtime—a very big item.

28,373. What did you begin on?—35*s.* a week.

28,374. Are you on a scale now?—No; my case was sent forward to the Treasury on three occasions, I believe, to be made a permanent officer, but the Treasury refused.

28,375. Are there many like you—do you represent yourself alone or a class?—I represent a class.

28,376. Are there many in the Department like you?—Five expert shorthand writers and typists—four and myself, as well as five men acting in the capacity of clerks—doing work of equal responsibility to second division clerks, work for which the Treasury have refused to provide the clerical staff. This I have explained in the statement submitted.

28,377. Do they all do other work?—To a certain extent, so far as the shorthand writers are concerned, yes, but not nearly so much as I do myself.

28,378. Have they shorter service than you?—One of them has about equal service and the rest less.

28,379. What is your claim?—We claim that having been so long in the Government service that we should have pensionable rights, or permanency of tenure.

28,380. You claim pensionable rights; that is, you wish to be brought on the establishment?—Exactly.

28,381. Do you claim to be placed in any particular class?—We claim that the shorthand writers and typists should be made a class in themselves after a certain number of years approved service equal to the standard of the second division, because we consider ourselves experts.

28,382. Mr. Murphy, what has been your experience?—(Mr. Murphy.) I am a shorthand typist.

28,383. You say you have 20 years' service?—Yes; 12 of which were spent in the Land Judges Court.

28,384. What pay do you draw now?—2*l.* 10*s.* a week. I have charge of six other shorthand typists, and am responsible for their work, in addition I act as confidential shorthand writer to the Estates Commissioners, and report their proceedings in court under the Act of 1903 and 1909, and the Evicted Tenants Act of 1907.

28,385. You do nothing except shorthand writing and typing?—Oh, yes; I sometimes minute letters, etc., and, as I say, I report the cases heard before the Commissioners in open court. I am also responsible for and distribute all the typing work, and see that it is correctly done.

28,386. Has any application ever been made for you?—Yes, I was recommended for an abstractorship on the maximum salary of that class some years ago, but the Treasury refused the application, but granted me an increase in my salary, which was to include all overtime.

28,387. Is the staff of the Estates Commissioners on a temporary basis?—No, the office is a permanent one.

28,388. But are not all the clerks of the Estates Commissioners who were not taken from the Government established service still on a temporary basis?—The majority of the temporary clerks were made permanent under Act of Parliament. I am not quite sure of the

Act, but there are some 16 or 17 temporary clerks still remaining who were not made permanent. I did not come here prepared to give evidence on behalf of the Irish Land Commission clerks.

28,389. On behalf of whom do you come?—As Chairman of the Temporary Clerks' Association in attendance on Mr. Dowling. I am not really representing the Land Commission clerks.

28,390. But you do represent the temporary clerks?—As Chairman of the Temporary Clerks' Association.

28,391. And your main claim as such is to be brought on the establishment?—Yes, as pensionable officers. There are 16 or 17 temporary clerks now in the Land Commission whose services range from 23 years down to 11, the highest salary paid to any officer of this class being 2*l.* 10*s.* weekly.

28,392. You are President of the Temporary Clerks' Association?—Yes.

28,393. Are there many temporary clerks in Dublin?—At least 400 or 500. Our association comprises, I should say, about 250.

28,394. (Mr. Boutwood.) What is the Treasury objection to placing you on the establishment?—(Mr. Dowling.) My own individual case you speak of. That is rather an awkward question to answer, because I have only been unofficially informed by one of my superior officers that my case had ever been sent to the Treasury. I know it has been, he has told me unofficially on three different occasions, and the Treasury gave no reason for refusing.

28,395. (Chairman.) I think we understand what your complaint is. Substantially, it is that you want to be brought on pensionable service. You point out that at first you were a shorthand writer and typist, and that gradually you were given regular secretarial work to do, and that that work is of a character not very different from that of the ordinary second division?—Exactly.

28,396. And under these circumstances you claim to be brought upon the establishment?—Yes, that is our claim.

28,397. That Mr. Murphy is your claim, too?—(Mr. Murphy.) Yes, we consider that anyone who has spent a considerable period in the service of the State should automatically be placed on the permanent staff.

28,398. What length of service would you think?—I would say any man with 15 years' service or upwards who has given his life to the State should have provision made for his future, and should automatically be placed upon the established service.

28,399. Have either of you subscribed to any insurance society, any scheme of pension?—I have not. (Mr. Dowling.) Nor I. I have inquired, but I never saw a scheme which would really commend itself; I have not gone into the thing very carefully on the assumption that year by year my case would be considered favourably by the Treasury. In any case, with the salaries paid to temporary clerks, they could not afford to do so, and further we are giving our best work to the State, and we consider the State should provide for our future.

(Chairman.) Very well, gentlemen, we will look into the matter.

## SIXTY-NINTH DAY.

Friday, 21st February 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (Chairman.)

The Right Hon. Sir HENRY PRIMROSE, K.O.B., O.S.I.  
Sir DONALD MACALISTER, K.C.B.  
Mr. ARTHUR BOUTWOOD.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.  
Mr. GRAHAM WALLAS.  
Miss HALDANE.

Mr. S. ARMITAGE-SMITH (Secretary.)

Sir HIRAM WILKINSON, B.A., LL.D. called and examined. Mr. J. FINNEGAN, B.A. was in attendance.

28,400. (Chairman.) You are a member of the Senate of the University of Belfast?—Yes.

28,401. You have been deputed to give evidence before this Commission by the university?—Yes; and

in the second paragraph of the memorandum \* which I have had the honour to submit to you, I say that as an

\* Vide Appendix LXIV.

21 February 1913.] Sir HIRAM WILKINSON, B.A., LL.D. (Mr. J. FINNEGAN, B.A., was in attendance.) [Continued.]

opportunity has not occurred of placing this memorandum before the senate it is desirable that it should be considered as my own personal views; but on Wednesday last the senate sat and this memorandum was submitted to them, and though I did not ask them to homologate all those details from my memorandum I asked them to give expression to the submissions which are contained on page 12 of the memorandum, and they have authorised me to present them as resolutions of the senate to you. I have to express my regret that my memorandum was not earlier in your hands. Circumstances over which I had no control prevented me putting it in hand. After re-reading the memorandum sent in to you I came to the conclusion that some re-arrangement of the chapters would be desirable, and they have been re-arranged, and with the exception of re-arrangement there is no addition to the memorandum except paragraph 99, in which I justify my request for a full consideration for the interests of universities other than Oxford and Cambridge.

28,402. We will begin with the letter\* which we addressed to the authorities of the Belfast University?—Yes.

28,403. The point raised in our letter was the relation between the highest education given at the universities and the efficient discharge of their functions by members of the Civil Service. There are two theories, if I may so express myself, before the Commission as to the provision of the most efficient agency for the Civil Service of the Crown. One is that for the discharge of the highest functions of public offices Civil servants should have received the highest university education within the limits of the ages laid down for the competition. The other theory is this: Boys, recruited at the age of 18 or 19 on the results of a secondary or intermediate educational system, would supply a fully efficient service of officers for the discharge of the highest duties that fall to the lot of a public officer?—My opinion on that point is that they would not; and may I justify my opinion by the results of experience. When, as your Lordship knows very well, the limit of age for Indian Civil servants was reduced to such an extent that it became impossible for university men to join the Indian Civil Service, that system was tried for a time, and though men went up from the English public schools and, as mentioned here, were precluded by poverty from going from the Irish public schools, four successive Governors and Viceroy of India expressed the opinion officially that the change was not to the advantage of the public service. If your Lordship wants the reference to that I think I could produce it. It is in the correspondence between the India Office and the Civil Service Commissioners, and it was decided after very careful consideration that a return should be made to the former system by which the services of university men were secured, and it was considered then that it was well worth even having a man come in as late as 24 to go at a still later period to India after probation in England, and it was decided that the results were to the advantage of the Service.

28,404. That is an illustration of what might be expected if boys of immature age, boys who had not had the advantage of university training, were employed in the administration of public affairs in India at all events; does your opinion hold equally good in regard to the work of public departments in England?—So far as my knowledge goes it does?—I cannot claim very large knowledge, and I have been very careful to draw the attention of the Commission to this limitation of my knowledge on the subject of the Civil Service, but I am satisfied that the man who has had a university training is so far superior that it justifies His Majesty's Government in procuring his services at a much higher cost than the services of men who have not had university training, though perhaps your Lordship would allow me to point out that there are great exceptions which take place, and I may mention my old chief, Sir Harry Parks, who entered the China consular service at the age of 14 as private secretary to Sir Harry Pottinger, and rose to the most distinguished position in the diplomatic service; and no man who knows

China is not prepared to say that since we went to China there was no man who did his work as well.

28,405. That is to say, under all systems and in all circumstances you will have the exceptional man?—That is what I wanted to bring out.

28,406. But you don't legislate for exceptional cases; you legislate for the average?—We legislate for the average man, leaving a loophole for the exception.

28,407. Leaving a way for the exceptional man to come to the front by means of his personal qualities?—Yes.

28,408. It has been stated that the experience which work in a Government office affords to a youth entering it at the age of 18 is the equivalent, so far as his future development is concerned, of the time spent in a university between the age of 18 and the age at which a university man would compete for a public service department?—I do not consider it is a sufficient equivalent. It supplies a part of the equivalent, but only a very small part.

28,409. Do you place much value upon the formative process on character which results from residence in a university?—I do, most assuredly.

28,410. Does that process go on in universities which are not residential to any extent?—Yes. Take my own university. The formative process began there at a very early stage of its history and has gone on more and more as the university life has developed. The students in Queen's University, Belfast, have now got a common home for the day time. They have a common room and they meet there. They have also all the societies almost which could be imagined in any university in which they meet and discuss things, and they have an Officers' Training Corps, on which I should like to lay very great stress, which teaches them habits of discipline and makes them feel they are citizens of an empire, and with the exception of the fact that they do not reside within the walls of a university they have in this university of which I have knowledge the real university life at the same high stage as they have in Oxford or Cambridge.

28,411. Do you think that any portion or degree of that process takes place in secondary or intermediate schools?—Part of it does, undoubtedly, in the public schools in England and the public schools that are modelled on them up to a certain extent, where the tradition which Arnold introduced is effective.

28,412. I am not talking of such schools. I am talking of the schools from which the second division clerk is drawn. Are you acquainted with the general characteristics of the second division of the public service?—Yes.

28,413. The schools to which I refer are those secondary schools which teach up to the age of 18 a good commercial education?—No. The discipline and training which men receive in a university are not represented in any large degree in those schools, and the man who goes into the public service from those schools goes in with the defect of wanting those advantages which university training gives.

28,414. On the subject of competitive examinations I would like to hear what your views are. Do you think that our present system of open competition is well adapted to get us the best class of public servants?—I believe that the open competitive system is, but not under present regulations. I believe that with all its defects the open competitive system is the best system which has yet been devised, but like all other systems it has to be watched and guarded and brought into conformity with the facts of life, and the facts of life with which it has to be brought into conformity here are the present trend of education of the universities from which the men come, so that the men from all universities may be able to go up with a fair prospect of taking a place.

28,415. That is dealing with a different aspect of the case from what I was contemplating. What I meant was whether the competitive system as now carried out is well adapted to give you men not only with memories well developed, and stored with book-learning, but also men endowed with the kind of mind, and the firmness of will, and the tact and the resolution which are required by those called on to deal with great public affairs?—I do. I think it is calculated to produce those men and

\* Vide Appendix XXXII.

21 February 1913.] Sir HIRSH WILKINSON, B.A., LL.D. (Mr. J. FINNEGAN, B.A., was in attendance.) [Continued.]

has produced them, and that the State has secured some of the very best men who are to be got in the universities through open competition.

28,416. Are you of opinion that success in the open competition gives grounds for thinking that a man who shows that he has made use of his time at school and college and acquired a wide range of information does possess those capacities which a competitive examination may not be able directly to test?—I do.

28,417. Kindly develop that answer a little?—The man who succeeds at a competitive examination may be placed in such circumstances that he has been compelled to go to a crammer. That is to be regretted. But even a man who can succeed with a crammer shows powers which in the public service are desirable. But I take it that that is one of the defects of the competition. The advantages are that the competition cannot be taken by men who cram and cram only, that it is taken by men who have had a university education of the best sort, who bring to the Service that they enter not merely the knowledge that they acquire, but who come to the Service after having gone through a certain university life which is associated with the knowledge of which the examination is intended to be evidence.

28,418. Do you think that anything in the way of personal interviews or any inquiry into the candidate's school and college life in addition to the written competition would be of any use in enabling you to form a forecast as to what the candidate would turn out to be?—I think that that is immeasurable; that is to say, I think an inquiry of that sort should be instituted in every case as a preliminary, but the extent of it, I should think, should only go to show that the man has been diligent at school, and that after he went to college he has shown himself not merely a clever pot hunter, if I may use the expression, but that he is a man who has through a high university life been able to secure the good opinion of his teachers and fellow-students. Up to that point I should think an inquiry might be instituted, but the moment you go beyond that you run the danger of introducing patronage, which I think would be a far greater evil than any incidental allowance of men not perfectly fitted entering the Service.

28,419. For the results of these inquiries and investigations, even to the limited extent of which you would approve, do you think any allowance should be made in the marking at the examinations?—No. I think that every man ought to be able to pass through, and the man who, for instance, at school received from his colleagues what is in many schools the prize for gentlemanly conduct, ought not to receive any allowance for that at the competitive examination. I should like to see him enter the Service and I think he would be a good man to be in the Service.

28,420. Would you restrict the competition to men who came from the schools and colleges with unblemished character?—That might shut out men. If a man was lazy at school and he made up for it in college I think that the former ought to be wiped out.

28,421. What I want to get at is, before the candidate sits down in the examination hall, would you practice any sifting process? Would the examination be open to all candidates or would it be open only to the persons whom you consider from their past characters would make good public servants?—I think the present system should be continued by which the Civil Service Commissioners test the character of the candidates, and, whether before they have passed or after they have passed, have marked them as eligible—that occurs in the reports over and over again.

28,422. Does it?—I could refer you to many reports, with a star against a man's name. He has passed but down below it is stated "this candidate was considered ineligible on the ground of character."

28,423. Might it not be that in the examination hall he was detected copying? Would it have any reference to the candidate's previous life?—I think it has reference to his previous life.

28,424. Further than that you would not go?—Further than that I would not go.

28,425. Do you think that the present character of the examination excludes poor men?—I do, most assuredly. I have written that memorandum to no

purpose at all if I have not shown that the examination is based upon the Oxford Greats, that the man who has not succeeded in getting up to the standard of Oxford Greats is at a very serious disadvantage indeed in going into that examination. A poor man who cannot send his son to Oxford to go through it, or cannot send him to the university for four years, is at a great disadvantage, and in the new universities I have not the slightest doubt but that the poor man's son is excluded from this examination for the reason that he cannot afford to give him four years' education. I have come in contact with many students whose fathers were of limited means, clergymen and others, and these sons of these men were well qualified to enter the public service, but they could not afford to give an additional year for it. They could not afford to go to Oxford and they could not afford to give the time to study for this examination, sure of the result that Lord Macaulay's Committee pointed out as desirable, that if they failed they would not regret the time that they had devoted to their studies. I say that poor men's sons are in many cases debarred from entering this examination with any prospect of success.

28,426. Is there any effort made in connection with the Belfast University to redress that disadvantage by the provision of scholarships leading from the primary through the secondary schools up to the university?—Yes. In the Belfast University we had the question of scholarships up before us. There are two points of view. One is the point of view that every man ought to be graded and that the prizes he received ought to be an indication of the place that he took in the examinations. The other point of view, in urging which, if I may say so, I took a strong part, was that, placed as that university is, to serve a district such as it does, it was the duty of those concerned to see that as many men of limited means as possible should obtain the means of getting through the college, and for that purpose we fixed our arts scholarships at a level amount, and an amount which though not sufficient to carry a man through without external assistance gave him very material help in passing through his college course. That was so far as the university itself could do. It had but a small amount at its disposal. After very mature consideration the university came to the conclusion that that was the direction in which their efforts should be applied. The question of men bridging the period from the primary school to the university has occupied the serious attention of the public mind in Ireland, and there is some provision. There are some independent public schools which provide scholarships for the first year or two.

28,427. What do you mean by "independent" public schools?—Not under the control of the Commissioners of Education.

28,428. Do you mean the Royal Schools?—No. The Royal Schools are under their control. I mean such schools as the Royal Academical Institution, Belfast, the Methodist College, and the Campbell College.

28,429. I was thinking more of the ordinary educational organisation of the country?—I was going to speak of these Royal Schools which are under the control of a national institution.

28,430. But I am anxious to know in the first instance whether any provision of scholarships is made by public bodies, such as the county councils, supported from the rates?—The county council scholarships do not commence earlier than the university scholarship, and I think there is no power to do it. They have power under the Irish Universities Act 1908 to provide scholarships in any universities in Ireland.

28,431. They have no power under the Local Government Act to strike a rate for the provision of scholarships?—Not at an earlier stage.

28,432. If not, do you think it desirable that they should provide themselves with such power?—I think it would be. Your Lordship is aware of the proposal which has been made to provide 12,000*l.* for scholarships between the primary school and the university, and that was put to the county councils with the idea that these scholarships could be associated with the scholarships which the county councils are authorised by the Act of 1908 to provide in the university itself, so that a man

21 February 1913.] Sir HIRAM WILKINSON, B.A., LL.D. (Mr. J. FINNEGAN, B.A., was in attendance.) [Continued.]

of limited means who could not even run the risk of his son remaining at a secondary school without some hope of his obtaining a scholarship in the university, and so going on to a profession for which education is required, should be assured that his son's career should be secured so long as his son acquitted himself as he ought to do; but I regret that that has not matured.

28,433. The county councils at present have legal power to strike a rate for providing scholarships at the university for a certain number of clever boys?—Yes.

28,434. Who selects these boys? Would the scholarship go to the successful boy at a competitive examination?—Yes.

28,435. Have all counties in the north of Ireland, the district served by the Belfast university, struck this rate?—Not all yet, but they all have it under consideration. In the north the question came up later than it did in the south, but it is under consideration by all the county councils.

28,436. Was it in that connection that the chief secretary offered a grant of 12,000*l.* a year?—I understand so.

28,437. These scholarships supported from Government grants were to be on all fours with scholarships derived from the county council rate?—They were to begin at an earlier stage.

28,438. At what stage?—At the exit from the primary school.

28,439. They were to be held in the secondary schools?—Yes.

28,440. So, though the provision may not have been very great in the commencement, you had in it the nucleus of a scheme of scholarships leading from the primary school to the university?—Yes.

28,441. Was the offer of the 12,000*l.* not accepted then?—As I understand it is this. The Irish county councils in many cases limited their scholarships to one university. At the bottom of it was the question of Irish, and they limited the scholarships to the university that would make Irish compulsory.

28,442. For matriculation?—Yes. The proposal as I understand was that the 12,000*l.* should be given in proportion to every county council, subject to the condition that the scholarships to be given by the county council, and which should be associated with the Government scholarship by way of continuation, should be tenable in any university in Ireland.

28,443. Was it settled that the holder of the scholarship in the secondary school would also be the holder of a scholarship in the university when it came to his time?—That was the intention I believe.

28,444. The Government imposed the condition that if this scholarship were given the continuation scholarship should be tenable in any university?—That is what I understand.

28,445. And the county councils have not yet accepted that?—They have not accepted that condition.

28,446. Was the grant made conditional on being accepted by all the county councils, or could some county councils accept it?—That I am not quite sure of.

28,447. At all events the thing is in train—the creation of a ladder leading from the primary schools to the university?—I should have said so a fortnight ago, but I am afraid that the information which I have since received leads to the supposition that the ladder is broken, and I regret it. I may not be right, but there has been so much said about it that that is the conclusion at which I have arrived.

28,448. The thing is of such enormous importance to the youth of Ireland, especially to those not blessed with much means, that the common-sense of the country will insist, would you not say, upon the provision of such a ladder?—When it comes to a question of the common-sense of the country I feel in some difficulty. I have no doubt if I were asked as to what the country ought to do there is only one answer, and that is entirely in accord with your Lordship's intimation. I think it most lamentable that the opportunity of giving this great opportunity to the youth of Ireland should be thrown away.

28,449. Although you cannot predict it, a poet is to some extent a prophet; and a great poet has said "The common-sense of most shall hold a fretful world

in awe." We may look forward to the common-sense of most having its way?—I sincerely hope so.

28,450. In regard to the second question—the "suitability" of the open competitive examination to secure "a supply of candidates possessing the highest education, and giving the greatest promise of administrative capacity"—you are disposed to answer that in the affirmative, though, as I understand, you think the existing system of examination does not give a fair chance to students, not of Oxford or Cambridge?—Yes.

28,451. What is your ground for the limitation you insist on?—As a justification of the opinion which I hold, I wish to point out in some detail how under different regulations of the same system, Queen's College, Belfast, was most successful, on one occasion taking 25 per cent. of the places. What I argue is that we have got to look for some cause or other why that success has died away. It cannot be laid to the teaching of the university. The teaching is as high as ever it was. I turn then to the regulations, and one can only look into them for a short time to see the explanation of this great discrepancy.

28,452. Before you enter into that let me ask if you have considered whether the change in the age has not had some effect? At what age do men graduate as a rule in Belfast?—They have graduated at a later time than they did in the old days. I have a return showing the ages in which they entered in the old days. Of late years they have been entering at a later age. I think that is common all round the country.

28,453. At what age do they now enter as a rule?—I find here that in the year 1871 one man entered at the age of 14.

28,454. Restrict yourself, say to the ages after 1900?—17 to 19 is about the time.

28,455. How many years does the arts course take?—Three years.

28,456. So entering at 18 they would get their B.A. degree with honours at 21 years?—Yes.

28,457. Are the men who frequent the university of Belfast sufficiently well off from a worldly point of view to be able to spend a year or two after they graduate with honours in post-graduate work, or preparing for the examination?—One has got to consider the two sides of the university, that is, the professional and the arts side.

28,458. I am talking of the arts side?—In a great many cases they are not, and they would be tempted to take up scholastic work which would present itself to them say at 22; but any of them who had the ambition of going on for the India Civil Service, if they had a fair prospect of success at the examination, would certainly be willing even to take further classes and go on, or, if not to take further classes, at least to learn better the subjects that they had taken, and work for another year and go up at 22 for the examination.

28,459. Were not your greatest successes secured when the age for the Indian Civil Service did not exceed 22?—In 1866 the maximum age, which had been lowered from 23 to 22, was further lowered to 21. It was in 1866.

28,460. Your greatest successes were secured before 1866?—Yes.

28,461. Do you think that the fixing of the age for the Indian Civil Service in common with the Home Civil Service at 22–24 has had the effect of knocking Ireland out of the competition?—I think it tended in that direction.

28,462. The Belfast men graduate about 21 or so, and cannot afford to wait. They suffer if they are not permitted to go in for the examination at the time?—That is so.

28,463. Even if they graduate at 22 they are no match for Oxford or Cambridge men who graduate at 24?—That is the case.

28,464. Will you now tell us what you desire to say regarding the subjects of examination?—What I want to point out is, if one turns to page 6, and the comparative statement given there by the Civil Service Commissioners with regard to the subjects, it will be seen that the Oxford *littère humaniores* comprise English composition, Greek, Latin, Greek history, Roman history, logic,

21 February 1913.] SIR HIRAM WILKINSON, B.A., LL.D. (Mr. J. FINNEGAN, B.A., was in attendance.) [Continued.]

psychology, moral and metaphysical philosophy, political economy, and political science. Those are almost the subjects of two honours schools in many of the universities, I think it will be found, and there is no honours school in the Belfast university which would cover anything like that ground. That it is necessary to cover that ground would seem to be not the case, because you have got the Cambridge classical tripos confined to English composition, Greek, Latin, Greek history, and Roman history, and Oxford goes in for a much longer course. Therefore, in saying that the new universities limit themselves very much in the same way that Cambridge does, there can be no reflection upon the new universities. Therefore I should propose that the number of subjects to be taken up should be limited, bearing in mind what the subjects are that Cambridge requires. At present it is suggested by the Commissioners that a Cambridge man after he has taken his honours school should add four extra subjects, and when he has taken four extra subjects he only gets 100 extra marks over the Oxford man, who has taken no extra subject. Four extra subjects seem to me, even for the Cambridge man—and they are proved so by the numbers—so severe a tax that I should suggest that the 6,000 marks allowed indicate too many subjects, and I would suggest that about 5,000 based upon the present basis would be about right. With regard to the consideration given to Oxford and Cambridge, if one turns to the table on page 5, it will be seen there that the new scheme of 1904 has been changed in 1909 in two directions. The modern languages were divided, giving 400 for translation, and 200 for history of the language and literature in each case. The object was, as stated by the Civil Service Commissioners, to enable a man who had a working knowledge, say of French, to take that subject up, and encourage him to take it up, and that he need not trouble himself with the history of the language and literature, which is a difficult subject. That handicaps the man who takes up the honours school in modern languages, because he is supposed to, and as a fact does, learn modern languages thoroughly according to the latest ideas on the subject; that is, going back to mediæval French or mediæval German, and into phonetics, and a great many other things that, when men of my age learned French, were very little heard of. So the tendency all along has been to encourage the student of Oxford. Again, come to the question of Greek and Latin verse, it was suggested at an earlier stage by the Civil Service Commissioners to give an advantage to verse composition, and Mr. Brodrick would not have anything to do with it. The Civil Service Commissioners consider that the best scholars are those who take Greek verse. Now, I deny that. I should not like, in a matter of that sort, in the presence, I have no doubt, of men who are as finished in that respect as any people would be, to deny for a moment that the very highest scholarship is consistent with a knowledge of Greek verse and Latin verse, but what I want to show is that the very lowest scholarship is consistent with a knowledge of it. I have no doubt that you have got the Civil Service Commissioners' examination paper for August 1912, and might I point out there that the 190th man took 20 for verse composition in Greek, and 48 in Latin verse composition, and failed in his English essay. There are several instances of that, and if you are not satisfied with my proposition I am prepared to go on. The serious point of it is this: Whatever opinion one might have with regard to Greek verse and Latin verse, in many of the universities it is not taken up at all. It is not taboo in any way; but the time and attention which it would require, it is felt, can be much better employed in learning what Greek and Latin, and Greek and Roman history, and everything concerned with them, have in store for a man who devotes his attention to them.

28,465. Should I be right in saying that what you want to impress upon this Commission is this—that as the examination for Class I. is at present fixed, and under the present syllabus, Belfast men compete at a disadvantage with Oxford and Cambridge?—Yes, at an enormous disadvantage.

28,466. Well, I don't think I need trouble you with any further questions on Head III., because you have fairly covered the point. The fourth point is the result

produced by examinations conducted by the Civil Service Commissioners upon the curriculum of the Universities and the schools?—Yes, the effect that they would have if they were brought together more. The division in the case of the new universities is so enormous now—the universities pay no regard to the Civil Service examinations, and the Civil Service examinations have no regard for the curriculum of the universities.

28,467. So that the examinations of the Civil Service Commissioners are not calculated to glean the best products of your University training?—That is my contention.

28,468. (Mr. Graham Wallas.) The main basis of the existing system was laid in the scheme adopted in 1904?—Yes.

28,469. You gave us some extracts from a letter written by the Civil Service Commissioners to the India Office in that year explaining the principles upon which that scheme was founded?—Yes.

28,470. This sentence occurs in the letter which you quote: "It is, of course, assumed that classical and mathematical studies have formed the basis of their education at school and the university"?—Yes.

28,471. And you contend that that "of course" will not be accepted by many students of higher education now in its present development?—Yes.

28,472. And you say that the Commissioners give certain specimen courses showing how the examinations fit into the courses of the Universities? Do these courses relate solely to Oxford and Cambridge?—Yes.

28,473. And in another sentence they speak of "the natural rivalry between the two ancient English universities, from which, of course, much the greater number of candidates is drawn"?—Yes.

28,474. And again you would say that not all people would accept that "of course"?—Yes.

(Chairman.) I think there is a statement of fact there.

28,475. (Mr. Graham Wallas.) Surely it is not a mere statement of fact. What do you say to it?—That is not the meaning that I put on it. I put the meaning on the "of course" "as it ought to be."

28,476. (Chairman.) Do you think so?—Yes, my Lord.

28,477. And you think that the majority of the successful candidates ought to be furnished by Oxford and Cambridge?—No, but I think that the Civil Service Commissioners think so.

(Chairman.) As a matter of fact, I think the greater number, the majority, do come from Oxford and Cambridge, and I understood the words "of course" to mean that.

28,478. (Mr. Graham Wallas.) And you infer that the meaning is "as it ought to be"?—In sending in my statement I think that that was my view, "as it ought to be."

28,479. And in another sentence they say that the scheme should be framed "to suit the different systems of training prevailing at the great universities"?—Yes, that is what the Commissioners say. In the original letter there were no italics. These italics got in by mistake.

28,480. You now say that the "great universities" means the two principal universities?—Yes, I have no doubt that their meaning is that the great universities are Oxford and Cambridge.

28,481. You point out that the scheme was modified in 1909?—Yes.

28,482. And the reasons for that modification were given in a letter of the Civil Service Commissioners to the Treasury on 18th December 1908?—Yes.

28,483. You point out that while that letter argued for the retention of Greek verse, and the marking of it separately from prose, it does in fact lead to the desirability of additional marks for Latin and Greek?—Yes, that the letters not published appear to have done so.

28,484. And that addition was made?—Yes. We have not got the whole correspondence there. It appears that there is a letter in which reference is made to letters which do not appear, and that in these letters

21 February 1913.] Sir HIRAM WILKINSON, B.A., LL.D. (Mr. J. FINNEGAN, B.A., was in attendance.) [Continued.]

the question of the increase had been mentioned, because these letters are referred to as advocating the increase. I refer to the absence of any such letters as leaving out why it was that that increase was granted. What the arguments were we do not know.

28,485. That is to say, that in the arguments published for the change no argument is introduced showing the desirability of the increase of marks?—Yes.

28,486. At the same time certain changes in the direction of greater difficulty were made in the way of modern languages?—No, less difficulty. They lowered the difficulty because—that is the point I make out, that modern languages ought to be placed in such a position as to present a subject to the university man who wants to take up an extra subject in addition to his already large number of subjects, and that is what it now provides. It provides half a subject, and it distinctly points out that they ought to be made easier, and the man that knows French thoroughly has no means of showing all the knowledge in him. I think one paper should be made easy and another paper be left for the honours man.

28,487. Any additions of marks in that case?—The honours paper should have higher marks.

28,488. You propose to deal with the difficulty that is created by cutting down the maximum from 6,000 to some lower number?—Yes. I would propose the abolition or rescission of the decision arrived at in 1909 with regard to the two things—making the verse competition separate from the other subjects and the addition of marks to Greek and Latin, and also the lowering of the examination papers in French. I am in sympathy with the object of lowering it, up to a certain point. I think that every man that enters the public service ought to have what the Commissioners themselves call a working knowledge of a modern foreign language, and I think there ought to be an opportunity for every candidate showing that he has a working knowledge of that; but I want also to urge that separate examinations should be framed on a different scale to give to the man who has taken an honours course in modern languages an opportunity of showing what work he has performed.

28,489. You think that that difficulty would arise if the marks were cut down? You may take the high science specialist, or the linguistic specialist, who would not have any knowledge of special use to the Service?—I think some subjects should be made compulsory. One of them is arithmetic. In looking over the papers presented to this Commission, I have observed some remarks with regard to the first division being taught their business by the lower division. A similar case has occurred to me. I know that men, who were excellent in other directions, were called upon in the course of their duties in the public service to perform accountants' duty—and one particular case in my mind occurred to me on reading the memorial to you, where he could not do his ordinary accounts without assistance, and I know that the result of that was that one of the men under his control expressed contempt for him for not knowing it. I think that was unfair, because he knew things that the other man did not know, but I don't think it was quite fair to him that he was allowed into the Service without having that working knowledge of things that he would be compelled to know in the Service, and which he ought not to have to learn for these courses. That is the matter of arithmetic. My idea is that every man in the higher branches of the Service here, at home, and abroad ought to have at least a working knowledge of one modern language, and I think that that working knowledge should be secured in some way or other. I would make it a compulsory subject. There is another thing. Nowadays, both in the home Civil Service and the foreign Civil Service, there ought to be some stage of the examinations for the man to show some knowledge of economics. A man who now enters the public service without that is at a great disadvantage, and I don't think that without some knowledge of the trend of economics in late years, a man is fit to take the higher grades in the Service. These are three points that I think an examination might lead to.

28,490. Would you make an examination in modern history compulsory?—Well, I remember the case of two diplomats who were conversing—I will not say what nationality they belonged to, but one said of the other afterwards, "He knows everything that happened in Greece and Rome, and he knows nothing of what happened in the last century."

28,491. I did not gather from your evidence what is the actual position of secondary education in Ireland, and how boys at the present moment get into the intermediate?—Just as it is in England. The men that can afford to send their sons to secondary schools do so, but the secondary schools consist of what I refer to as the independent schools, that is to say, under no control at all, and those that are under the control of the Commissioners of Education in Ireland, who are quite distinct from the Commissioners of National Education. They are what are called the Royal Schools and other schools. Their system was framed under a scheme which was to settle some questions of dispute between Catholic and Protestant endowments.

28,492. (Chairman.) You are referring now to the endowed schools?—Yes.

28,493. But you said that the intermediate system of education is under no control. Is it not under the control of the Intermediate Commissioners?—But not the intermediate schools. That is to say, that intermediate schools can, by sending their students up to the examinations, obtain result fees which are of great value to them, but they are not yet under the same control as the endowed schools.

28,494. Oh no, I think that the intermediate schools fees are fixed for them. There are two bodies governing secondary education in Ireland—the Commissioners of Endowed Schools and the Intermediate Commissioners. In the intermediate schools you have a system of inspection gradually creeping in?—Yes.

28,495. (Mr. Boutwood.) And there is no provision for secondary education in Ireland by the local authorities?—No.

28,496. (Sir Donald MacAlister.) Is it clear that the exact proposal that you made before us, as regards the modifying of the examinations is, first, in order to diminish the advantage given to certain universities by reason of the large maximum, that you would cut down the maximum of marks to something like 5,000?—Yes.

28,497. And you would cut down Greek and Latin, which were recently increased by 200, by 200, or to the old marks?—Yes.

28,498. You would raise the modern languages to the full honours standard?—Yes.

28,499. And you would introduce a pass figure in modern languages, as distinct from an honours figure, to enable candidates to show a working knowledge of the subject?—Yes.

28,500. And you would introduce compulsory subjects to be taken by all candidates?—Yes.

28,501. These would include the branch of arithmetic, and a pass in a modern language?—Yes. One might, perhaps, assume a knowledge of English history but I would also include modern European history and the elements of economics. That would put them on the track of interesting themselves in the subjects and make them follow them up. There is an honours course of economics in the universities, and every man who has taken that course ought to be able to show himself proficient in that department.

28,502. Again, you say you would have a pass figure in economics?—Yes; and the full honours course could be taken up afterwards.

28,503. You rely upon the compulsory part of the examination to counteract the chances of the candidates who specialise in a very few subjects?—I would rely upon that to a certain extent; but I do not think that would be sufficient in every case. I can imagine a man going up in an honours course prepared to make a man a proficient mechanical or civil engineer, and he would not alone take these subjects, but he would not be allowed to take only mathematics and science subjects. There was a point on which there was a correspondence between the Civil Service Commissioners and the Treasury with regard to the chances of a mere mathematician going into the Civil Service without a know-

21 February 1913.] SIR HIRAM WILKINSON, B.A., LL.D. (Mr. J. FINNEGAN, B.A., was in attendance.) [Continued.]

ledge almost of anything else, and that was the reason why the number of science subjects was limited to three subjects in addition to higher and lower mathematics, and they enabled them to take 4,200 altogether. It was limited to three subjects so that they would be compelled to take some other subject to show a general knowledge. A knowledge of arithmetic can scarcely be taken as evidence of a liberal knowledge of other subjects too. The test would be so low as to be an insufficient test of liberal education. I would have a restriction of marks to 5,000, with a reconstruction of the subjects on the mathematical and science side to see whether some literary subject ought not to take the place of one of the subjects in science.

28,504. If you cut down the Greek and Latin, would it not be reasonable to ask that the mathematics maximum should be cut down too?—I don't think the Greek and Latin had any business to be put up. They were put up without consultation with the universities. I think it would be quite fair to reduce the mathematics, but I don't think I could found my argument for it upon the reduction of the 200 that had no business to go in at all.

28,505. Then are you not satisfied with the present restrictions upon mathematical and science men?—Not if it were 5,000. The mathematical man can get 4,200 marks, but he would have often really only one subject to take in addition to them, and he can get up to 4,800 with another subject, which is near enough to the border line. I think that in some way the mathematics ought to be kept down, so that the number of science subjects should allow of some literary subjects taking their place.

28,506. So you go still further, in order to discourage narrow specialism?—Yes.

28,507. Would these changes throw open, not only to your university, but to the modern faculties of the older universities, an examination on fairer terms than at present?—Yes, first of all the cutting down of the mathematics and the raising of the foreign languages to honours standard, and then the reconsideration of the marks of the philosophical subjects.

28,508. That also?—What I have pointed out is that the Civil Service Commissioners considered that philosophical subjects would not get more than their due at 700 marks, but they put them down at 600 marks in obedience to Cambridge. In putting this forward I am only dealing with what has been said to me as to the desirability of these subjects getting higher marks, and also the importance that these subjects get in the reports of the Commissioners. I don't profess to be able to give a first-hand opinion whether 700 is the right marks or not. I merely say that this correspondence is such as to show that a reconsideration of these marks should take place.

28,509. If you increase the marks for the philosophical subjects are you not restoring the advantage of the Oxford man?—No, I think not, if the maximum marks are limited to 5,000, and the difficulty of the papers set in the subjects is increased. Then the other people who take the honours school in philosophy may compete on more favourable terms.

28,510. You have cut down his Greek and Latin by 400, and you propose to increase his philosophy by 200?—I hope you won't take it that I say it ought to be raised. I say that the conclusion that I draw from the correspondence is that the question of raising the marks in philosophy should be considered.

28,511. Have you considered the general question whether the particular kind of education that is usually described as a classical and philosophical one is, or is not, more adapted to develop Service qualities than the education and the studies which are described as modern?—I have the greatest opinion of classical studies, and I hope that nothing I have said will be taken as intended to depreciate them. I think that a man that studies Greek and Latin and Greek and Roman history as properly taught, acquires a knowledge of Greek and Latin affairs and of mankind, which is still the same as it was, has a wider knowledge than the man who studies merely scientific pursuits, and that is why I desire that the specialist in mathematics or in other subjects should not be able to go in without showing some

knowledge of these subjects. My own idea is that an appointment in the Civil Service ought not to be a research scholarship, and that you should not have on the one hand a specialist or, on the other hand, a sciolist. I think that the examinations should be so framed as to furnish a test that the man has had a liberal education, that he has devoted himself to his studies, and that he has a thorough knowledge in one or other department.

28,512. But you are satisfied that a liberal education can be obtained without Greek or Latin?—Yes. I think it is possible, but I have never advised any man who wanted a liberal education to leave these outside. In the school of modern languages I think that Latin should be associated with the Romanic languages. The question whether Greek should go or not is a moot one, and I can only express my feeling when I say I would see its departure with very great regret as a means of education.

28,513. But what you have said now would seem to lend some colour to the action of the Civil Service Commissioners in giving preference to classics?—Yes, preference I would say, but not preponderance.

28,514. I don't catch the distinction?—Well, then, perhaps I should put an adjective before preponderance, and say, "excessive preponderance."

28,515. (Mr. Shipley.) You think that the Civil Service as a whole does efficiently perform its functions?—Yes.

28,516. Have you any experience to guide you as to whether the Civil Service in India is better qualified to discharge its functions than the Civil Service in this Kingdom?—Well, I am speaking in the presence of your Chairman now.

28,517. (Chairman.) I should be delighted to hear you, but I understand that your description of the Indian Civil Service would be second-hand?—Yes, and I particularly desire to mark the limitation of my knowledge.

28,518. (Mr. Shipley.) Perhaps you can better compare the Home Civil Service and the Consular Service?—Yes, in a way. Forty years' absence has of course its defects. What I would like to point out is that a man in the East, and, of course, this applies to India, comes into contact with a different state of things from what he comes into contact with in a public office in England. His mind is widened and he learns things that a man who stays at home does not. It is not a matter of acquired knowledge. It is a matter of knowledge that cannot be measured, but it is still real knowledge, and an advantage.

28,519. If he gets into a position of responsibility does not it shape him sooner than the Home Service?—Yes.

28,520. You told us that it is admitted that the limit is too high, but you don't seem to think that it is too high for the Oxford and Cambridge men. If you lower the limit would you not miss some of the best men?—The limit is too high. I say that you would get as good men as the man who has gone through the Oxford course from the other universities who had not taken so many subjects as the Oxford man. It is not a matter of the number of subjects poured into a man. The limit would be really a limit in a great measure to the subjects that are studied in three years. I think that if a man could take four years all the better, but the fourth year would be best employed in learning more thoroughly the subjects already studied.

28,521. Have you considered the percentage of Oxford and Cambridge successes?—Well, I have read through 56 reports of the commissioners.

28,522. Have you considered the percentage of successes of Oxford and Cambridge. Cambridge sends less than half the number of men that Oxford sends, and the percentage of passes from Cambridge last year was slightly higher than from Oxford. That does not look as if Cambridge really were at much disadvantage?—When Oxford sends up so many more than Cambridge—

28,523. I don't think our men have the same craving to enter the Civil Service that Oxford men have. We have many established avenues which have only recently come into existence in Oxford; an engineering school, a big medical school, a big agricultural school, and our

21 February 1913.] SIR HIRAM WILKINSON, B.A., LL.D. (Mr. J. FINNEGAN, B.A., was in attendance.) [Continued.]

students go off in a variety of different ways. Have any of your students in Belfast gone in for the Egyptian and Sudanese service?—No.

28,524. Most of the candidates you examine have their career already settled for them before they graduate or before even they matriculate?—Take the Queen's College, Belfast: in the early days the fixing of a career began early too, and a boy then would look forward to the Indian Civil Service as a possible career, but in universities, as everywhere else, men's purposes are fixed by their belief in possibilities, and I am quite sure that men now do not talk of the Indian Civil Service there, because they look on it as something which they cannot attain, and therefore their careers are fixed for them in other directions.

(Mr. Shipley.) You say there is no interaction between your university and the Civil Service Commissioners, but that is the same evidence as we have had from every other university, so that in that particular you are in the same position as the other universities.

28,525. (Miss Haldane.) Have you any women students in the Belfast University?—A very large number, indeed. About one-fifth.

28,526. What careers are they looking forward to?—I believe that the majority of them look forward to a scholastic career.

28,527. Do they feel that there is a lack of opportunity of finding careers other than scholastic?—I believe they do. Sixteen of them are going in for medicine. One young lady, a relative of my own, is now established as a doctor near Dublin. Another career for a few is inspector of factories under the Factories Acts.

28,528. Have you any experience of women Civil servants?—No, except in quite subordinate positions.

28,529. You could not tell me whether the women who are now studying in the university are competent, on leaving, to undertake higher work in the Civil Service?—I am not in a position to say. My experience is experience in the East, and of course no person with responsibility would undertake such a wide departure from the existing practice there.

28,530. Does the scholarship system of which you spoke apply to girls as well as boys?—Yes. I am happy to say that the County Council of Donegal has scholarships some of which are tenable in Belfast University, and that the first scholar is a lady.

28,531. Those scholarships may be held by young men or young women?—Some may. I have not gone fully into it. I give an instance in which they certainly may, but the use of the word "boys" in some cases might, as I read it, possibly be against that.

28,532. You mean they are restricted to boys?—I think in some cases.

28,533. Can you tell me generally, are the opportunities for boys and girls equal?—In the universities they are quite equal.

28,534. From the point of view of scholarships?—Inside the university itself the scholarships are quite as available for women as for men, and a very large proportion of the scholarships are taken by women.

28,535. That applies to the endowments of the university as well as to the open scholarships by which they come in from outside?—Yes. I have not gone into the subject of whether the county council scholarships are open to women. I think in some cases they are not tenable by women. That was the impression left upon my mind by reading through without having that purpose in my mind.

28,536. What is the cost in fees per student attending the Queen's University?—About 12l. 12s. per annum. The total medical fees are about 105l., including hospitals.

28,537. Have you inclusive fees?—No. That is what they amount to. There is an inclusive fee for engineering.

28,538. Are external degrees now given in the Queen's University?—No. That is given up. There are some students who are still entitled to come for degrees under the old system, but that is dying out at present. No man commencing his university career now can go through it without going to the classes of the university.

28,539. I suppose you consider that a very important advance on your former system?—Yes. At first attendance in classes was necessary. Then, under the Royal University, it ceased to be compulsory. Now we have returned to the system with which we began, and that I look upon as an immense advantage.

28,540. Have you got the hostel system at all?—I am glad to say there are two ladies who have devoted a large sum of money for the building of a hostel for women. That is a beginning. We have not one for men yet. I hope we will get one. Women students at present have a separate common room provided.

28,541. (Mr. Graham Wallas.) What would be a fair estimate of the cost of board and lodging and maintenance for a student, outside of university fees for a year?—For ladies 11. 1s. a week, and men 15s. and upwards.

28,542. A man would do very well who spent on board and lodging about 40l. a year?—Yes.

28,543. So that an arts student would do well if he spent 40l., plus 12l. 12s. fees plus pocket money?—Yes.

28,544. A man might go through his course, paying his fees and board and lodging, and not be remarked for penury with about 80l. a year?—Yes.

28,545. (Miss Haldane.) That is inclusive of clubs and extras?—Yes.

28,546. (Mr. Shipley.) But not of clothes and travelling expenses?—The wants of the students in my days, however strong the desire, were very limited by the facts, and economy prevailed very largely in the university, and though, I believe, the standard has risen since then, economy is very prevalent in the university still.

(Witness.) I mentioned the question of student inter-preterships. I understand the Commission is not going into that subject now, but should you think I can give you evidence on the subject I shall be very happy to do so.

Rev. J. P. MAHAFFY, C.V.O., D.D., D.C.L., S.F.T.C.D., and Mr. ALTON called and examined.

28,547. (Chairman.) Dr. Mahaffy, the Commission are at a disadvantage in not having received from the Dublin University a reply to the paper of questions which they sent for the university's consideration. Your university is the only one in the United Kingdom which has not favoured us with such a reply, and, as I say, we are placed at a disadvantage in endeavouring to gain from you the assistance and advice which we have obtained from every other university. But I have no doubt you will give us most valuable assistance even without the preliminary paper which we had hoped to receive.

We addressed to all the universities four questions, which we thought would throw light upon the relations between the highest grade of education and the efficient discharge of their duties by the highest class of public officials. We have had a considerable body of evidence submitted to us with the object of showing that university education was not necessary for the public service; some witnesses even went so far as to say that the

type of officer recruited by the Class I. examination were unnecessary for the Civil Service of the State. You are familiar with the Class I. examination?—Yes.

28,548. It has been said that a thoroughly efficient officer, one who might be trusted to conduct the secretariat duties of any of the great departments of State, and fill, say, the position of Under-Secretary, might be ordinarily recruited by the second division examination, with which you are familiar. Moreover, it has been said that an officer recruited by that examination between the ages of 18 and 19, and placed in a Government office for four years would, at the end of the four years, give as good promise of being an efficient public servant as a young man who had spent four years in a university, and taken his degree with honours. I ask you whether that statement commends itself to your judgment?—Not in the least. I am altogether of the other opinion. I think the higher the education is, the much more valuable.

21 February 1913.]

Rev. J. P. MAHAFFY, C.V.O., D.D., D.C.L., S.F.T.C.D., and Mr. ALTON. [Continued.]

28,549. Kindly develop that view, and explain to us what your opinion is as to the influences in the university which make for the production of good character, tact, and judgment? What are the influences at work during university life which tend to produce the higher type of public officer?—In the first place there are educational influences. There is mature intellectual training. Not only does he learn certain more or less great subjects, but he is in contact with people who know them intellectually. There is then the social influence of living in a college like ours among students, playing games, giving and taking, learning the use of bodily activity, and altogether, when turned out at 22, he is a man, to my mind, far superior in every way to the other. He is very much more competent to turn his mind to perfectly new things.

28,550. In that your opinion coincides with that of the gentlemen sent to represent the great universities of England and Scotland. Do you think that the boy who has passed through the secondary school, or the intermediate school, is during his residence or attendance at these schools in any way influenced by those matters to which you refer as influencing boys in university life?—In Ireland very little. I cannot answer for the great English public schools, which may do something of the kind.

28,551. We are not thinking of the great English public schools, but of the system of secondary education which is generally controlled by religious bodies?—I think, naturally, in Ireland, for example, the schools worked by religious bodies, the Jesuits and those excellent religious bodies, there is not the same breadth of influence at all, even in their social life, that there is in the university.

28,552. Have you sufficient information regarding the Christian Brothers schools and the great Jesuit schools to be able to say whether they prepare students in Ireland for the public service?—They do; they prepare a great many for it.

28,553. Do they pass into the class of university students?—Yes.

28,554. Do they prepare to any extent candidates for the second division of the Civil Service in Ireland?—Yes.

28,555. So far there would be some, though not to the extent you mention, of that formative process at work while the boys were living at these schools?—Some.

28,556. I would like very much to have your opinion upon the competitive examination. Do you think that the competitive examination, as now conducted, is a good method of selecting men for the public service, and if it does not quite commend itself to you are there any suggestions you could make to us with a view of improving it?—First, with regard to its being the best method of choosing men for the public service, in the abstract I should say not. I should clearly prefer a system by which Oxford and Cambridge and ourselves were given the nominations of so many boys every year. We could say then to the Civil Service Commissioners, "Such and such a lad has been with us for four years, and so we recommend him to you." Then I think that the initial examination ought to be dispensed with, and then the boy should be put into training, say the training in Indian languages, or whatever else he had to do. I think that that would be the ideal thing.

28,557. Would you favour a limited competition among the men nominated by Oxford, Cambridge and yourselves, and some of the great Scotch universities?—Certainly that would be a very good thing, but the difficulty I see in carrying out that better system is that there are so many new universities, all of which would naturally make a claim, that the thing would become too complicated. If we had only the three to deal with it could be easily done.

28,558. It would also be open to the objection that outsiders who have not attended a university would thereby be debarred from competition?—That is true, but could not you let him join any one of the universities?

28,559. Does it seem to you that anything like limiting the area of competition in these democratic days is a proposition worthy of being discussed? If

any means could be devised by which that objection could be overcome the suggestion, which has been made by other academic witnesses also, is worthy of consideration?—I do not see why the candidate who shows evidence of great proficiency in some subjects might not be admitted to the examination. Under the intermediate system in Ireland all prizes, scholarships, etc., are confined to boys and girls who go to schools, and the boys or girls whose parents have brought up him or her most carefully at home are not allowed to compete.

28,560. Does the intermediate system exclude from examination all boys and girls who don't belong to particular schools?—Yes.

28,561. You were never an advocate of the payment by results?—Never.

28,562. You were the protagonist of inspection?—Certainly.

28,563. Do you think that any good is to be found from a personal interview with the candidates?—Certainly. It is most important.

28,564. Do you think that any advantage would result from an extension of the *viva voce* system of examination?—Yes. I have the highest opinion of *viva voce* examinations, and I think on the whole they are the best general test for after life.

28,565. It is very important to have that information from you because we have had the most diverse opinions on *viva voce* examinations. It has been told us by a very high authority that *viva voce* examinations are not fair to the candidate as he does not do himself justice?—If he does not do himself justice when called upon by the examiner is he likely to do himself justice when called upon suddenly in the world? Readiness is one of the first qualities you want in the Civil Service.

28,566. It would be most interesting if you would develop a little further the argument in favour of the extension of a *viva voce* system. At present in the Civil Service examination there is no *viva voce* examination except in regard to foreign languages for the purpose of testing conversation. Formerly at all events for the Indian Civil Service, there was a much more extensive employment of a *viva voce* system. Would you explain what are your arguments for thinking that an extension of the *viva voce* system would be advantageous for the purpose of a better selection of candidates for the public service?—I lived in a university which may be said to be the real home of *viva voce* examination. In the old times there was nothing but *viva voce* examinations, and they were held in public. The great men of the last generation were examined in that way for fellowships. People like George Salmon and Samuel Haughton were examined *viva voce* only for their fellowships, and it was thought the best test even in such subjects as mathematics. It was a public competition, and the public came in and scored down the marks for the answers. It was a great public affair. That was the fashion up almost to the time when I entered Trinity College. We then began to introduce examinations by papers. They afforded an additional test; and gradually, I think as much for convenience of the examiners as anything else, the papers got the pre-eminence, because a *viva voce* examination is a test not only for the candidate but for the examiner. Ever since then we have maintained a great deal of *viva voce* examination, and we think it most important. In our pass examination we are never satisfied, except of course in a thing like English composition, with a mark on paper. We always require a mark on *viva voce* also.

28,567. In all subjects in which there are written papers you also insist on a *viva voce*?—Yes.

28,568. (Sir Donald MacAlister.) In the pass examination?—Yes, also in many of the honours, and in the pass examination we pass on what is practically a very low percentage, but then when you consider that they have to answer *viva voce* as well as on paper the percentage is much higher than appears. I have examined for 35 years for fellowships in philosophy. My business was to set a paper and then to give an hour's *viva voce*, which for three or four candidates meant 70 or 80 questions. It was about the hardest intellectual work I ever had to do. During the whole of that period I never yet failed to find out the best man, except one.

21 February 1913.] Rev. J. P. MAHAFFY, C.V.O., D.D., D.C.L., S.F.T.O.D., and Mr. ALTON. [Continued.]

There was one case where there was a difference between the *viva voce* and the paper, but in every other case I was able to tell the best man before I looked at the paper.

28,569. (Chairman.) So your mature judgment is that the existing system of higher class examinations is defective, inasmuch as it excludes *viva voce* examinations?—Certainly.

28,570. Do you consider that a *viva voce* examination properly conducted will give you an insight into the powers of a man in facing the problems presented to him in life, and displaying initiative, readiness, tact, etc.?—Yes; for example, in translating Latin or Greek into English, you give a man a paper; and he sits down and looks at the paper, and writes out his translation; but at a *viva voce* you put a book into his hand and ask him to translate it into English, and the man who has any gift of speech, or is at all eloquent, will read his English fluently, and you will see at once the quality of being ready. It is a treat to hear a man of literary talent doing that sort of thing.

28,571. Has the University of Dublin been consulted in regard to the regulations which should govern examinations for the public service?—Yes. (Mr. Alton.) Mr. Stanley Leathes was over two years ago for three days in Dublin, and we put in documents.

28,572. Did he come over for the purpose of consulting the university authorities in reference to such a subject as *viva voce*, or with reference to the allocation of marks?—It was in reference chiefly to the Indian Civil Service, and I think at that time there was a question of extending the period of probation from one to two years, and he was consulting us chiefly on that point. He put questions to us regarding the examination and we made some suggestions.

28,573. I may take it that really you were not consulted in recent years in regard to such a question as the inclusion of *viva voce* in the method of conducting examinations, nor in regard to the allocation of marks?—No.

28,574. The marks for Latin and Greek were raised in 1909, the enhanced marks to come into operation in 1911. Were you consulted in reference to the raising of the marks?—Not to my knowledge.

28,575. And you were not consulted as to the division of Greek into translation, verse composition, and prose composition?—I think not.

28,576. That is a matter you could verify?—Yes. (Dr. Mahaffy.) Certainly it was not a matter of general policy, because it did not come before the Governing Board.\*

28,577. You very naturally think that the university is the best recruiting ground for men for the first class division?—Yes.

28,578. In order to reconcile that principle with the principle that the poor man's son should not be excluded from competition, it is desirable that there should be sufficient ladder established by which the clever boy in the primary school may be enabled, by scholarships and so on, to find his way to the secondary school, and from the secondary school find his way to the university?—I think that view is very much overdone. I think there ought to be several ladders for the best boy in the primary school. The top of his ladder should be to become a good farmer, a thing which is very badly wanted in this country, and then other boys should have other ladders. But to think there is only one ladder of education, like Jacob's ladder, is absurd.

28,579. We are not now dealing with the question of producing good farmers, we are dealing with the production of good Civil servants, and with a view to meeting the democratic objection which might be urged with great strength if some way for the poor man getting into the Service was not provided. I put that question whether you would not approve of such a policy?—We pursue that policy in Trinity College, Dublin. There are what we call sizarships, and any boy can walk in out of the

street and compete for a sizarship. We ask nothing about him, except that he is an educated boy.

28,580. But he has to get an education to win a sizarship?—Yes.

28,581. Boys attending national schools in Ireland pay no fees?—Yes.

28,582. Is the suggestion you make of this nature, that there should be provided for clever boys in the primary schools such bursaries or allowances as would enable them to go to a secondary school, and that from the secondary school there should be provided for them, not necessarily by the university, but by outside bodies, the county councils and local bodies of that description, scholarships that would enable them to attend a university? In that way, at all events, you will meet the objection that no provision is made for the sons of poor people?—That is met so far as we can meet it by the county councils, and by the prizes given by the intermediate system.

28,583. I am anxious to have an expression of your approval or dissent on that point?—I think it most unreasonable to prevent a boy with brilliant talents from getting a post under the State, but the great danger is that if you give too many of those prizes you will get a number of second-rate boys started from the lowest places who, when they get on, and get a certain amount of education in the university, will be put out of their natural positions, and will not be fit to take a higher position, and will not take a lower position, and they will be added to the large class of malcontents, which are most dangerous.

28,584. Is your university course in any way influenced by the Civil Service examinations?—Very little as yet, though I think the tendency is to make them agree a little, but as yet we have not modified it.

28,585. Do you think the ages for Civil Service examinations, 22 to 24, are suitable for the university?—I think so.

28,586. At what age do your students matriculate as a rule?—On that point an average is very delusive, because if one man matriculates at 40 or 50 you cannot get a baby on the other side to balance him, but the great majority would be from 17 to 19.

28,587. Should I be justified in taking the average as 18?—Yes.

28,588. How long is the honours course for the B.A. degree?—Three and a half years.

28,589. That would bring it to nearly 22?—Yes.

28,590. Can the honours graduate of Dublin University compete on equal terms with the honours man of Oxford of the age of 24?—I think so; the results show he can. (Mr. Alton.) This year, for instance, we had 12 candidates who went in for the open examination, and four were successful, six were offered Eastern cadetships and two of these six are under age for the open examination this year—two only were altogether unsuccessful.

28,591. You have nothing to complain of in this syllabus or scheme?—Not of the standard of the examination.

28,592. Have you anything to complain of in the most recent allocation of marks? Have you any complaint to make of the increase of marks for Latin and Greek from 900 to 1,100. (Dr. Mahaffy.) No.

28,593. You don't object to prominence being given to Latin and Greek verse?—Certainly not. Of course, we think it would be fair for other universities, such as ours, to be represented among the examiners more frequently than they are. There cannot but be some difference of style, and we think perhaps it has been run a little too much on the Oxford model.

28,594. You have a large number of ladies?—About 200.

28,595. Are they admitted to all your courses?—Yes.

28,596. Do they get degrees?—Yes, and scholarships and studentships, anything but fellowships.

28,597. You exclude them still from fellowships?—We do.

28,598. The number of fellowships is limited?—There is one every year.

\* Mr. Alton explained that he could not speak with certainty regarding events which happened prior to his appointment as Fellow. He has since ascertained that the Civil Service Commissioners did consult the college with regard to the changes mentioned in previous queries.—J.P.M.

28,599. Is there a total limit to the number of fellowships in the University?—We elect one every year. The average is 35.

28,600. Probably the ladies will monopolise the fellowships in course of time?—They don't go into the divinity classes—they are not allowed to preach yet—and the lawyers, of course, have kept them out of pleading in court, and therefore, they do not become law students.

28,601. (*Miss Haldane.*) May they become solicitors?—I don't know. I am not aware that there is any legal bar. They don't go in for the solicitors' examinations. I examine for that examination and I never saw a girl there.

28,602. I merely want to know whether it is possible?—I cannot answer that.

28,603. Have you any women teachers?—Yes. We have a girl who got a very high degree in history. We recently wanted help in our history school, we appointed her lecturer in history?—She lectures a class of boys and girls together with perfect success and order.

28,604. There is no difficulty in having the boys and girls together?—None whatever. We tend to separate them. If we have two lectures in Latin we generally give one to the girls and another to the boys, but that is merely a matter of convenience.

28,605. Do any of the women reside in college?—No. We have a hostel outside Trinity Hall, which I would strongly recommend you to go and look at. It is a women's hostel where the girls who attend our lectures live.

28,606. Do most of them live there?—No, a good many live with their parents. A good many of the girls go home to their own houses. We have a good many medical students, and the women have separate dissecting rooms. That is not done along with the men.

28,607. What is the future to which most of them look?—I think the majority of them look to be teachers.

28,608. Do you find there is a great desire among women to get other openings beside teaching?—Yes.

28,609. Have you knowledge of their wishing to go into the higher departments of the Civil Service?—I have not heard them speak of that.

28,610. Do you think that there are women who might suitably fill some of these positions were they open to them?—Certainly. There are some of them who practice as doctors very successfully in Dublin.

28,611. Have you any experience of their taking up administrative posts of any kind after they leave college?—Yes, inspectors of factories and heads of schools.

28,612. So you consider that they might suitably fill posts also in the Civil Service?—Certainly.

28,613. Could you tell me something about the cost of education in Trinity College, both of the fees and the cost of the hostel?—The entrance fee is 15*l.* and the yearly fees are 16 guineas for the arts course. The whole thing amounts to 83*l.*

28,614. For the year?—For the degree, spread over three and a half years.

28,615. Eighty-three pounds, is the complete sum for the degree course?—Yes.

28,616. How does a student enter?—By matriculation, or giving evidence that he has passed a similar examination in the subjects which we require.

28,617. At school?—Yes, a leaving examination, or at the intermediate examinations in those subjects which we require.

28,618. I don't quite understand about your intermediate examination?—It is a system by which all the secondary schools in Ireland are brought under one examination every year. The candidates are divided into junior, middle and senior grades, they are all examined in certain courses with many subjects and may go in merely for passes or honours. About 50,000*l.* a year is spent in scholarships and prizes. Suppose a student brings a certificate of having passed the senior intermediate examination, we ask him what subjects he passed in, and if he passed in our subjects we say that will do, but if he is deficient in any one we impose an examination in that subject.

28,619. Do a large proportion come to you in this way?—No, most of them come up to our own examinations which we hold several times a year.

28,620. Do only those attending schools go in for this great national examination?—Yes; for all this division of money under the intermediate system they must come from a school.

28,621. The schools are inspected?—We try to have them inspected but we only have six inspectors.

28,622. Are some of these women inspectors?—No, but we certainly will have women if we have more.

28,623. But they inspect girls' schools as well as boys'?—Certainly.

28,624. (*Sir Donald MacAlister.*) In the present Class I. examination, do you think the present allocation of marks and the present maximum which students may offer is very favourable indeed to the Oxford system of education, but is less favourable to the corresponding systems of other universities?—Yes.

28,625. Would that be the idea of Trinity College?—I think so.

28,626. Can a student who takes a classical degree also take up the philosophical subjects which are included in the Oxford Greats, or does he take them in a separate honours school?—A separate honours school. The nature of our examination in philosophy is much more accurate and severe than what you might call the talky-talky of Oxford.

28,627. So the student at Trinity College who proposed to enter for exactly the same subjects as a Greats man in the highest Civil Service examination would have to take two honours schools in order to cover the same ground?—He would.

28,628. Is not that a disadvantage to Trinity College?—(*Mr. Alton.*) Most of my own pupils take two schools. You rarely find a man confining himself to one school. The classical man takes up history or literature or philosophy.

28,629. Can he compass the two honours schools within the three and a half years?—He generally can. He won't get the first class probably in one of them; but it is a habit in Trinity to go in for two moderatorships. (*Dr. Mahaffy.*) We have a habit in Trinity College, from the beginning, of reading a number of subjects, and all who have got fellowships have got fellowships by knowing several subjects. We have never been much given to granting a special degree in one topic, and we require the honours man to answer in other topics during most of his course, so that the breadth of the examination does not trouble them much.

28,630. So you are able to say that the number of subjects included in the Oxford Greats in one honours school is commonly taken by your students in two honours schools in about the same time?—Yes.

28,631. Would that be equally true of more modern subjects—modern languages and history, combined with modern philosophy?—Yes. Classic and modern languages are often taken together. You cannot take more than two of them. Of course it is too heavy. Philosophy and history are sometimes taken together, and literature, and even pure mathematics and experimental science are taken together.

28,632. I gather from what you say that it would be equally true of Trinity College as it is of Oxford, that the combination of classics and philosophy is the most advantageous to offer in the Civil Service examination, other things being equal. Your arrangements are such that a combination of classics and philosophy would be the natural one to take?—Quite.

28,633. And much more profitable from the point of view of getting marks than a combination of modern languages and science?—I cannot answer that. I am not *au fait* at the marks.

28,634. I was wondering whether you have found it so?—(*Mr. Alton.*) You mean subjects like classics, mathematics and philosophy, and English literature.

28,635. (*Chairman.*) Can your students take the subjects corresponding to Oxford Greats in one year?—All except the last two subjects, political economy and political science. I imagine they can acquire sufficient knowledge in one year, but I am not conversant with either of them.

21 February 1913.] Rev. J. P. MAHAFFY, C.V.O., D.D., D.C.L., S.F.T.C.D., and Mr. ALTON. [Continued.]

28,636. (*Sir Donald MacAlister.*) If they took classics they would require fewer other subjects to make up the maximum?—(*Dr. Mahaffy.*) Yes.

28,637. To that extent they would have a handicap?—Yes.

28,638. Would you favour maintaining that handicap against the more modern subjects?—Yes. My experience of the more modern subjects is they are not as good education.

28,639. Would you say that was due to the fact that the subjects do not admit of being treated educationally up to the same standard, or because of a deficiency in the subjects themselves of something that you find in classics?—I think that some of these subjects, like pure mathematics, are so very special that, although they may exercise a student in mathematical thinking, they do not exercise him in the same wide manner.

28,640. Having regard to the duties which a Civil servant would have to perform—let us say that, e.g., history, modern languages, and economics were desirable things for him to know for their own sake—would that make it a more desirable thing in your view that these subjects should have considerable weight in the Civil Service examination?—I consider that a subject like history can be learned by a man after he has learned his classics and philosophy. He can read his history or English literature for himself.

28,641. Suppose he had chosen to read his history under great teachers in a university, should he be penalised in the examination on that account?—I don't think so, but I think the people who have read the great subjects which they cannot study at college are the better men.

28,642. The great teachers are not so necessary to enable them to take in the modern subjects?—No.

28,643. It has been suggested to us that it would be fairer if the maximum number of marks were reduced somewhat, so that the student would not be encouraged to spread himself so much over many subjects as at present?—He ought not to spread himself over too many. It is desirable that he should take up more than one or two, but I think very often there is a danger of taking up too many. The way I would cure that is by adopting a sliding scale in giving credit. I would take a subject of which the maximum is 100. If a student answers from 40 to 60 I would give him the marks which he has got for his answers. Over 60 I would begin to add half the difference between 60 and that amount, and if he went below 40 I would begin to subtract half the difference between that and 40.

28,644. What is the object which you desire to attain by that?—Supposing he answered 70 he gets 75, and if he answers 93 he would get full marks. The reason is that marks above 60 are very much harder to get than marks below that, and marks below 40 or 30 are so easily got that they are worth nothing. If you did that you would not require to limit the subjects.

28,645. (*Mr. Shipley.*) Has that ever been done?—I have been doing it constantly in fellowship examinations, and now the college have just adopted my principle. It has not become a law yet.

28,646-7. (*Sir Donald MacAlister.*) Is not the same idea at work in the present regulation, that no marks below 100 or 150 shall count at all?—Yes, but I think not so well, for a gradual principle is better than a hard and fast line; also, taking off 25 per cent, below takes no account of the greater excellence than the marks above 60 per cent.

28,648. So you would supplement the present system by a sliding scale?—Yes.

28,649. It has also been suggested that in order to prevent one effect of a diminished maximum, and not to encourage too narrow a specialisation, some subjects should be made compulsory in the Civil Service examination, such subjects as a modern language and a certain amount of history or economics, in order to prevent, for example, a distinguished mathematician, who also has done some experimental science, from getting in on these lines alone?—I think that is quite right. I think the pure mathematician or the experimentalist may be quite unfit to be a Civil servant.

28,650. Do you think a good classical man who also takes philosophy would be sure to be fit to be a Civil servant, even if he did not know arithmetic?—Yes, because thinking is general in classics, and it is not general in mathematics. Proving a proposition, for instance, is particular thinking, and not general thinking.

28,651. I recognise your position, but don't assent to it. Would you think it desirable in the interests of the Civil Service to ensure that every candidate, even if a distinguished classical man, could do accounts, for example?—Ordinary accounts, not double entry of the Italian method.

28,652. Practical arithmetic?—Yes.

28,653. There is no test at present, either at the university or outside it, in the case of a classical man?—A man has to pass a pretty strict arithmetical examination on matriculation whether he is a classical man or not.

28,654. Is he required to know for working purposes a single modern language?—No; with us he can take his choice. Instead of Latin and Greek he can take French and German.

28,655. But I am thinking of the classical man; is not it desirable that he should know something of a modern language?—I think it is.

28,656. Is he required at present to know any modern language?—Except he has to read books in many languages which are not translated for all these higher examinations.

28,657. He is not compelled to show a working knowledge of the language?—No, but I should be very much in favour of it.

28,658. It has been also represented to us that if he has not a knowledge at this moment of economics, for example, he is less likely to be an efficient public servant, even if he is a good classical man. Would you agree to that?—No, except in the particular department of public service where economics may be necessary.

28,659. In a word, you can see from the scale of marks that it is possible for a classical man to go through the schools and be a student of ancient literature, history and philosophy, and get in successfully on these alone without having touched on any modern subject whatever. Would you regard his educational qualifications as sufficient for the chief posts of the Civil Service?—Yes. He will adapt himself.

28,660. You think his education will enable him to acquire what is necessary afterwards?—Yes.

28,661. (*Sir Henry Primrose.*) In reference to what you said as to the desirability of a  *viva voce*  examination for the Civil Service, I gather that you spoke of it as an examination which should be supplementary to the written examination?—Yes.

28,662. Would not that be a great practical difficulty with very large numbers of candidates competing?—That is why we have not adopted it in the intermediate system in Ireland. There are 6,000 candidates. We would willingly adopt it if we could.

28,663. (*Mr. Boutwood.*) When you give 83l. as the total cost, that was the total amount of fees?—Yes.

28,664. What does a hostel cost?—Where the girls live costs 30s. a week.

28,665. Do the men who take the first place in the examination from Trinity College usually take your teaching or go to crammers?—(*Mr. Alton.*) They take it, as a rule, direct from the college. Very few go to crammers. Within the last five years, I think, only two men have gone to London.

28,666. For how long did they go?—One six months and another 12 months. Then, of course, we get men back from London. Men not connected with Trinity often come over to us. This year we have got two who were last year in London. They have decided to come to Dublin.

28,667. They have found you more successful crammers?—I don't know. Students often get curious ideas into their heads. One man gave me as a reason that he thought there was a very good lecturer in Law in Dublin. He is taking English and Roman Law.

28,668. In speaking of your proposals for nomination you rather pointedly limited them to three or four of the older universities; why did you exclude the modern ones?—(*Dr. Mahaffy.*) I suppose because there is not

the same college life in the modern ones. They are in a different sense universities. The boys live in lodgings in the town. They are universities without colleges, whereas we have a college life and the men live together.

28,669. Does that mean that you think that the modern universities would not be able to give such a certificate as you would give, or is there more behind it than that?—I think we would know the character and life of one of our students infinitely better than the heads of universities where the boy would live in the town, and where he was not under control, and where he came in for lectures. Take a place like Birmingham, what do they know about the private life of their students there?

28,670. (*Chairman.*) You have something like 1,100 students?—About 1,400.

28,671. You have only residential accommodation for about 300?—Yes.

28,672. Therefore the rest of them have to live in the town?—Yes, with their parents, but they come in to lectures every day, and many of them come to commons.

28,673. But with regard to the 1,100 students who cannot be accommodated in the college, you are in pretty much the same condition as Birmingham and many of the other universities?—Yet not so, because we have our playgrounds and clubs.

28,674. They are getting these up too in the other universities?—Yes, if they have them they will come into the same condition.

(*Mr. Alton.*) A student cannot reside in any lodgings in Dublin. We have licensed lodgings.

28,675. (*Miss Haldane.*) Or in his home?—Yes.

28,676. That applies to women also?—Yes.

28,677. (*Mr. Boutwood.*) In speaking of this system of scholarship for poor boys in universities, in one of your answers you said that the poor boy who came up to the university would not be fit to take the higher position. What did you mean by that? You were rather suggesting the limitation of access to the university. I gathered from your answer that you thought a great extension of the scholarship system might be bad, and one of the things you said was that a boy so introduced would not be fit to take the higher positions?—(*Dr. Mahaffy.*) It is very seldom that a boy risen absolutely from the people becomes fit to take the higher positions. We have remarkable instances to the contrary. Trinity College in Dublin had in one year the first Lord Plunket and the first Magee. One became Lord Chancellor and one Archbishop of York, and both began with sizarships.

28,678. (*Chairman.*) They came from the class of gentry who were not very well off?—I much doubt it.

28,679. What I understood you to say was, that if one of those boys, say a farmer's son, got a scholarship in a primary school and went on to the intermediate school and got a scholarship and came into Trinity College, he would in the beginning find himself a little out of his element with the generality of students. Exactly the same thing happens at Oxford and Cambridge, but they do settle down and assimilate?—The first-rate ones always come through very well, but the second-rate ones don't.

28,680. (*Mr. Graham Wallas.*) I have here the results of an examination for the Indian Civil Service, which was at that time the only competitive higher examination, for 1860. That shows that Oxford got 14 successful candidates, Cambridge 19, and Trinity College, Dublin, 13. I think there are other indications that at that time Trinity College, Dublin, was more nearly equal in success to Oxford and Cambridge than is now the case. Have you that impression?—I have, because I think the examination is quite a different examination. It was much less specialised and much less Oxfordy.

28,681. We also have had figures given to us that during the years 1906 to 1910 Oxford got 247 successes, Cambridge 142, and Trinity College, Dublin, 23. That shows a great falling off from what used to prevail?—A great falling off. I remember the time quite well, because I was within an ace of going up for the Indian examination myself; I was only prevented by an accident from doing so. In the first place there was a high age limit, and clever men about that time were able to compete at a higher age than they do now;

therefore, we had the field open to us, and I think there were some changes made in the examination after a few years that greatly damaged us.

28,682. You have indicated that even when, in Trinity College, Dublin, a man now makes a combination of classics and philosophy, he will meet in the examination papers with an Oxford type of classics and an Oxford type of philosophy?—Yes, and the slight disadvantage to us, I think, ought to be met by examiners being appointed who are not Oxford men, and who would not examine that way.

28,683. (*Chairman.*) And would you also suggest that there should be much more frequent discussion between the universities and the Civil Service Commissioners as regards the character of the examination?—Certainly. That would be very valuable. One reason why we are not zealous to examine is that the examiners are so very badly paid. It is all very well for Oxford and Cambridge men, whom a few shillings will take to London, to do that kind of work, but there are certain expenses in going to London, and if the pay is as poor as it is now many of us would not take it.

28,684. Would you think that in examining for the public service considerations like the difficulties in *viva voce* examinations ought not to be permitted to interfere?—Certainly not. At all events you might have a selected list of candidates, and if the papers were pretty well sifted you might examine all your better ones *viva voce*.

28,685. (*Mr. Graham Wallas.*) I understand that Trinity College, Dublin, is not residential to the extent that Oxford and Cambridge are?—That is true, though many students live in the town at Oxford and Cambridge, and not with their parents.

28,686. Quite a considerable portion of the students live with their parents in Dublin?—Yes, but they attend lectures and many of them come to commons.

28,687. Your opinion is that the formative effect on character of a university does not depend solely on the question whether a boy is living and sleeping in his parents' house or not, but on the question of the part he is induced to take in the corporate life of the university or its college?—That is right, and I think that a boy away from home influences, living in lodgings, is very much worse off than a boy living at home and also in the university every day.

28,688. (*Mr. Boutwood.*) With the modern tendency for universities to spring up in all the great districts, would you say that universities, mainly attended by students living at their parents' homes, might be highly organised as regards the corporate life of their students?—They might.

28,689. And under these circumstances might represent an ideal form of college or university influence?—I think so.

28,690. (*Mr. Shipley.*) Is there any special facility at Trinity College for preparing men for these examinations?—There is a special class with special lectures.

28,691. You do get students from England?—We do.

28,692. Are your lodgings inspected annually?—(*Mr. Alton.*) Yes; they are licensed, and we have got a doctor who inspects them from time to time.

28,693. If every examiner were allowed his railway fare to London for examining, that would get over the difficulty of examiners coming from a distance?—(*Dr. Mahaffy.*) Certainly.

28,694. At present fares are not allowed?—No.

28,695. Would you allow the college record in those examinations?—Oh, certainly. It is most important. The college record is the most important thing we could have.

28,696. (*Chairman.*) We were informed to-day by the gentleman who represented Belfast University here, that the age limit was now too high for these Civil Service examinations, that young men cannot afford to wait longer than the age of 21, and that they find themselves unable to compete with Oxford students at 22 or 24 for these examinations—do you think, that as far as Trinity College is concerned, there is anything in that?—No.

28,697. At what age do your honours men graduate?—At 21 or 22 years.

## SEVENTIETH DAY.

Saturday, 22nd February 1913.

## PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

The Right Hon. Sir HENRY PRIMROSE, K.C.B., C.S.I.  
 Mr. ARTHUR BOUTWOOD.  
 Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.  
 Miss E. S. HALDANE.  
 Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. DENIS J. COFFEY, M.A., M.B., B.Ch., LL.D., called and examined.

28,698. (*Chairman*.) Dr. Coffey, in the letter from our secretary to the National University four points were stated on which an expression of opinion of the university was invited. The first was the relations between the higher education given at the university and the efficient discharge of their functions by members of the Civil Service. You are of the opinion, so far as I can gather from your paper,\* that a very intimate relation does exist between the higher education given at the university and the work of the officers selected by the Class I. examination for the public service?—Yes; when we had the matter before us in the Dublin College, we were satisfied that appointment to Class I. on the lines of an examination of high standard was most desirable.

28,699. Are you speaking here for the National University as a whole or for the University College, Dublin?—The questions which the Commissioners forwarded to the university were forwarded to the three colleges for report. The three colleges sent up substantially the views in the paper, and I am asked to speak on these matters.

28,700. I believe that Sir Bertram Windle looks at some of these questions from a point of view somewhat new to us. We have thought it right to ask Sir Bertram to come before us, and we have arranged that he should come on Wednesday next?—I am glad of that.

28,701. There is, so far as I understand, no contradiction between the views that you express in your paper and Sir Bertram Windle's views. But he seems to me to look at some of the matters that we are dealing with from a new point of view?—Yes.

28,702. Are you altogether satisfied with the grouping of subjects and with the marks allotted to each at the open competition for Class I.?—That is the principal point that we had under discussion.

28,703. Would you explain to the Commission what were the views you came to entertain upon this matter?—As the paper points out, in the universities there are groups of subjects appointed as courses for degrees with honours, and the best students do not all devote themselves to a particular group. In Class I. examination the greatest advantage appears to fall to the classical group, and after that to mathematics, so that a candidate who takes these courses will find that the arrangements for the examination correspond in a large degree with the courses for the university. Outside of classics and mathematics there is very little correspondence. We find that students of very considerable ability, men whose ability is quite as marked as those who succeed in obtaining honours in classical studies, take courses for degrees in experimental science, in modern languages, or in history and economics. Such men in the examination for Class I. find it very difficult to effect a grouping of subjects that will make a successful examination possible.

28,704. Would such a grouping, as you contemplate be from an educational point of view equally effective as, let me say, the Honour Greats course at Oxford?—One must be guided very much by the results of the present examination. Looking into the marks obtained at the Class I. examinations there is a very remarkable

difference in the marks obtained by those who are placed high and those who are placed low in a successful list. That is remarkable if the examination aims at an average standard of performance. There would be no such difference in the proportionate number of marks between men with first honours, and men with second honours in the university. Again, comparing it with another examination in the Civil Service—the junior appointments—there is in the latter examination a closer approximation as between the higher and the lower men. I take it then that in Class I. the men who get the places in the lower half of the successful list are on a very different footing with respect to standard in subjects from those who get the higher places in the examinations. I would gather from that that in the lower half of the list in Class I. examination it is not the man who has pursued a systematised group of studies for a university degree of high standard that has a chance, but the man of marked ability who has spread himself over a considerable number of subjects. It seems to me that, without interfering at all with a certain larger value to be attached to classics and to mathematics, an examination with a limited range of subjects, in which a larger proportion of marks would be assigned to subjects such as physics, biology, and modern history, would give you a larger average of the better men among the university graduates. I hope I make the point clear.

28,705. I see your point. Do you think that in the higher or more difficult subjects competition is keener and closer than it is in the subjects which can be prepared more speedily, the subjects, I mean, in which a passable knowledge can be acquired more easily?—I think competition must be higher in respect of these two large groups, mathematics and classics.

28,706. Touching your contrast between Class I. examinations and examinations for junior appointments, are the latter not examinations in the subjects of a good general commercial education, while, on the other hand, the examinations for Class I. appointments are in the higher region of classics and mathematics, and moral sciences, in which it is more difficult to mark? And would you not expect to have more equality in the lower grade than in the higher grade?—I was not thinking so much of the standard of the subject as of the character of the examination as a whole, judged by the number of subjects required and by the proportion of marks given to the respective subjects. In the type of examination for junior places you secure that the ability of the candidates is brought to a more common standard of test than in the case of Class I. With a limited number of subjects you get candidates who are able to find in the subjects a sufficient test to bring out a comparatively full knowledge, relative to the stage at which they are examined.

28,707. Would you admit the proposition that there are some subjects which are not suitable for competition at all; for example, arithmetic? In arithmetic the candidates must either tie or be far apart. There is only one way of adding a series of figures together. The addition must be either right or wrong. Those who add correctly will be equal. But if you take subjects which admit of a gradation in the test between utter failure and complete success, such as the classics, the higher mathematics and philosophy, do you

\* Vide Appendix LXV.

22 February 1913.]

Mr. DENIS J. COFFEY, M.A., M.B., B.CH., LL.D.

[Continued.]

not think that the examination in such subjects affords an effective means of competition and of distinguishing the best candidates from the less good? And would not a competitive examination in such difficult subjects be a better test than in history or political science, which might be more easily worked up for the occasion?—I think the examination should be of a very advanced character in the case of the experimental sciences and in history, to test the ability to the same degree as in the case of classics.

28,708. Do you think that these groups of subjects are as good a mental exercise, and intellectual preparation for the higher work of administration as a classical education?—That is a large question, my Lord, and not an easy one to answer. I would rather suggest a point of view than answer the question directly. It is, I think, the case in professional training, that when students take up their professional studies in a university, that is when they come to a new study, provided they have had a good general education to start with, that the results frequently run in very different lines from their school records. They find the interest of a new subject, a new stimulus is given to the powers of mind, and not merely to the exercise of ability in acquiring knowledge, but also to character, and an initiative and something of an original bent is excited by these studies. Taking the leading men in the professions, whether in medicine or law or engineering, I don't know that it could be established that their success—not merely their professional success, but their power of dealing with men and general capacity would bear any special relation, if tested by numbers, to the question of an extended classical or mathematical education.

28,709. Are you uncertain as to whether the mathematical or the classical groundwork is the better, or whether the groundwork afforded by the more modern sciences to which you have referred furnishes an equally good preparation for success in life and professional work?—I think that as regards studies in classics, if not accompanied by a definite literary bent, the final effect of that type of study will vary very much with the individual.

28,710. Assume that he has taken the classics from natural bent; assume, also, that his inclinations have not been forced, do you think that that study is as likely to produce the high type of mind as the study of the other subjects?—I quite agree.

28,711. I want to find out whether from your experience and your observation you can tell me what is in your opinion the line of study most calculated to equip a man most efficiently for the public service? Is it possible to give a categorical answer?—Men who pursue the honours courses for degrees in the university generally will have had a very good record in respect of their secondary education before entering the university. Taking the case of such men, if they possess the ability to obtain a degree with first class honours in a group of science subjects, I should say that the advanced study of science does not render a man less efficient for the public service than the man whose advanced studies have been mainly classical.

28,712. Very good. Do you think from your experience in University College that young men of equal mental ability are attracted to the various schools in similar proportions, or do more gravitate to the classics, or more modern schools?—In Dublin they go in about equal proportions to the various schools of studies for their degrees, excepting philosophy and modern languages. I should point out that the courses of the first year are of a general character. Specialisation does not begin then, it comes after the first year. In the University College, Dublin, in the first examination in arts, out of more than 130 candidates that came up, 40 candidates entered for honours in all the subjects. The subjects are Latin, another language, either Greek, French, English or Irish, physics or mathematics, and logic. And of the 40 candidates that entered for honours the number that would go to the B.A. honours degree in classics, mathematics or history, and science groups would be about four in each. In philosophy, modern languages, and Celtic studies the number is larger.

28,713. I understand you to think, Dr. Coffey, that the maximum number of marks in the Class I. exami-

nation as at present arranged, namely 6,000, is rather hostile to effective competition than otherwise?—Well, to put the case of those that are in the lower half of the examination list, it would appear to me that their marks were made up rather by a low average over a long and considerable range of subjects. If a candidate could work out the maximum of marks on subjects corresponding to his degree course, and two other subjects not included in his degree, the examination would, I think, be effective in selecting men of ability, and you would get men of more pronounced interest in certain subjects.

28,714. And better grounded in certain subjects?—Yes, and on the whole a closer approximation to the best products of the universities.

28,715. You make the knowledge of Irish compulsory for the matriculation in the National University?—It will be compulsory at the next examination, but it is not so far.

28,716. It becomes compulsory next year?—The matriculation examination held later on this year.

28,717. Are the facilities for learning Irish in the preparatory and secondary schools throughout the country sufficient to admit of the class of men who come to the university preparing themselves in Irish for the matriculation examinations?—It is possible that some time ago the facilities were not sufficient. For a number of years, however, the study of Irish has been extending in the Intermediate Schools, and the figures published from time to time when the Intermediate examination results were declared went to show that Irish was extending rapidly in the schools. When the National University had the question of compulsory Irish for matriculation under consideration some three years ago, it was not considered possible at that time to make Irish compulsory, but the growth of Irish in the schools during the preceding seven or eight years went to show that within a very short time Irish would be in a position as good as that of other subjects in the schools.

28,718. That was the inference that you drew?—Yes.

28,719. We had Mr. John MacNeill before us as a witness. He is an authority on Irish learning?—Yes, he thoroughly understands the question of Irish in the schools.

28,720. We were told by him that there was, shall I say, no progress, at least that there was a marking of time in the Irish language movement for the last two years, and that no advance was made?—No progress in the schools?

28,721. I asked him why it was, and he gave me an explanation?—I am rather surprised to hear that Irish has not extended during the last few years.

28,722. What I asked him was, whether there was the same enthusiasm for the propagation of Irish as there had been some time ago?—That is, I think, a different question. I have no personal knowledge of the recent progress of the Gaelic League, but merely as an observer I should say that recently probably the public or social propaganda by the Gaelic League has been less pronounced than it used to be. On the other hand, the educational work in Irish has been more effective, and has been extending more steadily in the secondary schools.

28,723. Do you think so?—Yes.

28,724. And do you think now that the teaching of Irish in the secondary schools, from which I presume you draw this matriculation class of students, is sufficiently advanced as in no way to impede the progress of boys to the university, who before this question had arisen would naturally come to the university?—On the whole, yes. Of course, there is a certain risk in making Irish compulsory even at the present day, but I have no fear of it, and I do not think that we shall be injured by it.

28,725. Do you think that the requirement of Irish for matriculation will exclude from the National University any class, social or otherwise, of students who otherwise would have come?—I do not think it will exclude a class.

28,726. Will it exclude any section of a class?—Some people may take the view that the Irish language

22 February 1913.]

Mr. DENIS J. COFFEY, M.A., M.B., B.CH., LL.D.

[Continued.]

is useless. Others may be prejudiced against the subject, regarding it as an innovation, and might refrain from entering the National University on account of that prejudice.

28,727. Would you say that that prejudice is commensurate with political prejudice?—I think it has no necessary relation to politics.

28,728. No relation?—Yes, I am perfectly clear about that.

28,729. But has it relation to people's perception of the usefulness or uselessness of Irish?—I think so. I think it depends on that.

28,730. Now is that perception entertained more by the better classes, say the smaller gentry, than by the mass of the commercial trading and farming population?—The prejudice, as such, might be held by individuals of any class.

28,731. They don't see any good in Irish?—No. That would probably represent their point of view.

28,732. Do you mean the commercial classes, or do you include the smaller gentry?—It is really difficult to define.

28,733. Do you think the smaller gentry participate in that feeling—men with, let me say, landed property giving 400*l.* or 500*l.* a year?—Amongst the gentry there appears to be a very mixed view with regard to Irish. Some of the gentry are among the strongest and warmest supporters of it. Some are opposed to it, and probably in that case they would take the line of politics, but the number of people among the best classes in the country who have shown sympathy with the Irish movement is remarkable.

28,734. But you are satisfied in your own mind that the cause of Irish is gradually gaining ground?—As an educational subject, but not in the direction of making it the language of the people to the exclusion of English. I think that is impossible.

28,735. You think that is impossible?—Yes.

28,736. Do you think that the Irish educational movement, if even entirely successful, would produce the revival of Gaelic speaking in the country?—I think it would be impossible to restore it to its ancient position.

28,737. You impose for your university matriculation a very moderate standard of Irish?—Yes.

28,738. You don't require any colloquial knowledge. The entrance examination is, I take it, a written examination?—Yes. All the professors of Irish are most anxious to introduce the *visà voce*, but the matriculation examination for the convenience of schools is held at a great many centres, so that it is impossible to hold an oral examination.

28,739. And you don't, owing to the difficulty which you mention, insist on an oral examination?—Not at matriculation.

28,740. When the student gets into the university is he under any compulsion to take the Irish classes afterwards?—The university has introduced Irish as an essential subject for matriculation, fixing the date at which it is to begin as 1913. A knowledge of Irish for matriculation becomes compulsory only this year, and that rule was adopted some three years ago. At the same time another rule was adopted, that in the intervening years, between 1910 and 1913, Irish not being compulsory at matriculation, students coming into the university who had not taken Irish as a voluntary subject of matriculation, should attend a course of instruction in Irish at some time during their university course, in the early years, if possible; but no range was assigned. It becomes very difficult on account of the pressure of other subjects, and timetable difficulties, to require students to take anything like a satisfactory course of instruction, inasmuch as such students have not studied Irish before. It thus becomes an introductory course of lectures for such students. That is all that has been done in that direction during the past two or three years. I should mention that our first university examination is a very good test at present of the growth of Irish in the schools. In the first university examination, at the end of the first year, after matriculation, Irish may be taken as an optional subject, in place of one or other of the modern languages. The students in the Faculty

of Arts of the first year, in the Dublin College, number about 130. All have to take Latin for the examination. They all take English or History, but may substitute Irish for a modern Continental language or Greek. Of the class of 130 students in 1910–11, 50 students took Irish voluntarily, as a substitute for some other language. In 1911–12, 67 took Irish voluntarily, out of 130, and this year I think over 80 will take it, although in no case is it compulsory on them.

28,741. Is the standard of Irish expected from the men who matriculate rising or not?—The pass standard in all subjects is, of course, fixed, and so far the answering in Irish has been satisfactory.

28,742. I do not want you to answer this question if you desire not to; but is it the intention of the University authorities to enforce a regular course of Irish upon students during their undergraduate time?—I may say definitely that that has not been the intention, that it has never been suggested or thought of in the university. On making Irish a compulsory subject for matriculation we leave it to the students afterwards.

28,743. You have appointed professors, and you allocate time for a course?—There are courses for degrees in Arts, so that students may include Irish if they wish. We have a special school of Celtic study. The course in Celtic studies for degrees, includes old Irish, Welsh, modern Irish, and Celtic archaeology. As well as that Irish can be taken for an honours degree, as part of a modern language course. Many of the women students take this group—German or French, English, and Irish.

28,744. I am curious to know if women take Irish as an optional subject more freely than men?—I should say they do, for the reason that most of our women students' studies are mainly in modern languages, and they look forward to becoming teachers.

28,745. (*Miss Haldane.*) They will be teaching Irish later on?—Yes.

28,746. Therefore they must know it?—Oh, yes, and it is very popular.

28,747. (*Chairman.*) What do you mean by "intermediate" class, because the word has different significations?—In the memorandum sent in it refers to the Civil Service class called junior appointments.

28,748. I understood you to say that the idea of a fusion of the intermediate class with Class I. would be desirable in the view of the university?—Of course on that question I am unable to say anything as to its possibility from the point of view of the Civil Service.

28,749. But the ages for recruitment would preclude the possibility of that. The age for recruiting the intermediate class is 19½ years, and I should say nothing would be further from the idea of the Government than to raise that age?—I cannot speak in regard to the Civil Service arrangements, but we have already lost two or three students—one of them a very good man—who, having spent a year and a half in the college, went in for that examination, passed, and are now in the Civil Service. If they had remained on they certainly would be candidates for Class I.

28,750. With regard to the examiners, do you think it is desirable that examiners for Class I. examinations should be chosen from University tutors?—It would help, I think, to bring about a closer relation between the universities and the Civil Service. In most universities there are extern examiners, who are professors in other universities. These extern examiners will often have experience of three or four universities, and, I think, a common standard is being established in that way, in respect of degrees all over the United Kingdom. I have since seen the list of examiners appointed by the Civil Service Commissioners, and a great many of them are university professors.

28,751. (*Miss Haldane.*) Does a secondary teacher in Ireland require to know Irish?—Not every teacher, but I should say that in all the schools established by Roman Catholics teachers of Irish are included in the staff.

28,752. Therefore it is extremely important for future teachers to study Irish?—Oh, very important.

28,753. What proportion of women students have you?—In the last session, 1911–12, out of 765 students 137 were women, that is a little over one-sixth.

22 February 1913.]

Mr. DENIS J. COFFEY, M.A., M.B., B.CH., LL.D.

[Continued.]

28,754. Do you find there is a lack of some other outlet besides teaching for women?—Yes, and I think that women feel that. We have women professors, and they are most anxious to have some means put forward in reference to the admission of women to the Civil Service.

28,755. Can you speak for them?—Their point of view was that there was a desirability of admitting women to the Civil Service; but as to the particular offices or conditions of service they put forward no views. It was suggested that it should be stated to the Commission that the women professors, and women students, would consider it highly desirable that competition should be open to them.

28,756. That expresses all they wish to say?—I think so; and then we were not in a position to give them any information as to the arrangement of the Service.

28,757. They referred, of course, to the higher administrative posts?—I think to all posts.

28,758. Yes, but I mean university women would consider the higher posts?—Quite so.

28,759. You have women professors on your staff?—Yes. We have three professors and one lecturer.

28,760. Have you women on your senate?—Yes, there is one lady on the senate.

28,761. And does that apply to the governing body of the college?—We have two on the governing body of the college.

28,762. Does that apply to the other colleges connected with the university?—I think, as a result of the recent elections, there is one in Cork and one in Galway, so that there are ladies on all the governing bodies of the colleges.

28,763. Do men and women work together?—Yes.

28,764. You have no difficulties?—No; of course we pay attention to the question of discipline between men and women. We have no trouble of any kind.

28,765. You have, I suppose, the students meeting at unions?—Yes, the debating society is common to men and women, and there are women students on the committee.

28,766. Your students do not reside in the college?—No, but they have a great many students' societies, and the corporate life among the students is very strong in that way. The debating society is a very important one, and I think includes probably 180 students.

28,767. Is there anything in the nature of hostels in connection with the college?—Not controlled by the college. They are provided by orders of nuns, and there are 40 and 50 students in each hostel.

28,768. These are for women students who have not got homes in Dublin?—Yes.

28,769. Do the men; reside in hostels at all?—A very fine hostel was recently erected by the Jesuits and will provide for 70 students. A number of other colleges, secondary colleges, make arrangements for smaller groups of students.

28,770. Does that refer to men studying to be teachers?—At the present time we have nothing to do with the ordinary training of the teacher of the primary school. That is done in the training colleges under the Board of National Education, but, so far, no arrangements exist for sending students in training through the university course for degrees; but this year in Dublin arrangements have been made by which students who have already been at work teaching in the country can take a course for a diploma in education. It arose out of a provision made by the National Board by which these people could obtain further training. That training is now being taken in university work for the diploma. One large body has taken a house in Dublin, and there are some 20 teachers in residence.

28,771. A body of what?—A body controlling a training college in Waterford, the De la Salle Brothers. They have taken a house in Dublin, and they have in residence 20 teachers who have come to University College to take the diploma course in education.

28,772. Those are recognised by the Board of Education?—I understand so, as between the Board of National Education and the De la Salle Brothers.

28,773. Do you look forward to all your teachers having university degrees?—I think all the secondary teachers will have degrees.

28,774. (Chairman.) Are all those teachers who come to study primary or secondary teachers?—The men of the De la Salle house are all primary teachers. I think teachers of secondary schools will have degrees in future. A great many of them in the past have obtained degrees, but as regards the primary teachers at present, it is impossible to bring them into the university, unless the training colleges already established abandon their own teaching and send students to the university.

28,775. (Miss Haldane.) I understand that those primary teachers you mention have already gone through their own training college, and they are now taking this post-graduate course?—Yes.

28,776. Are they being paid?—I presume that they have got permission for their year of absence.

28,777. Does that apply to women?—Those are men.

28,778. No women are sent to be trained to the university?—So far, none.

28,779. The women who are studying are studying with a view to becoming secondary teachers?—Yes; many of them go to England.

28,780. Could you tell me something about the cost of your course?—The arts degree classes cost about 30*l.* for three years. Examination fees are extra.

28,781. What do you regard as the whole cost, including the living of a student attending the National University?—I think in respect of living, travelling, and purchase of books, that the average cost would be 60*l.*, and then fees are extra, and vary in the different faculties.

28,782. Is there sufficiency of scholarships to take young men and women to the university?—I think so, for those who have been through the secondary schools. In addition to County Council Scholarships there are College Scholarships. We have an average of 16 scholarships in arts each year.

28,783. Are you talking of university scholarships?—Yes. They are in the college for the purpose of the university. They are on the funds of the college.

28,784. Are they restricted to a certain area?—No. They are open to the competition of all students who come to the college. There are also at present 94 county council scholars in the Dublin College.

28,785. Are those 50*l.* a year?—The great majority are 50*l.* a year.

28,786. There is no difficulty in a poor boy coming on to the university?—I think not, provided that he has been able to get a good secondary education. There is a question however of scholarships for students in primary schools.

28,787. They are open to women as well as boys?—Yes.

28,788. (Mr. Shipley.) Have you many students going in for Class I. in the Civil Service?—Of course, the National University is only established for three years, and the Royal preceded it. Taking both, in the last 10 years, I think, about 20 students have entered.

28,789. Your idea would be to limit the number of subjects until a higher standard is reached?—That is my view. Take physics, chemistry, and a branch of biology, a man who presents all has but three subjects for a Class I. examination with a limited recognition in marks.

28,790. I am taking the large examination for what we used to call the I.C.S.—elementary physics and elementary chemistry obviously could be of a higher standard?—If the standard is that of a degree course with honours it is very sparingly rewarded in marks. Take the proportion of marks, 600 for chemistry or physics, as against 2,400 for higher and lower mathematics.

28,791. Yes, but take the three sciences?—On the honours degree standard the subjects would form a strong group.

28,792. Have your students licensed lodgings?—Yes, we have deans of residence, and the dean of residence has to visit the student in his lodgings.

28,793. The standard in Irish, I gather, would be fairly low?—I think the standard in Irish at the university examination is very good, but the results of the first matriculation examination in which Irish is compulsory may show some failures. Nothing has been

22 February 1913.]

| Mr. DENIS J. COFFEY, M.A., M.B., B.CH., LL.D.

[Continued.]

done by the university to suggest that it should be lower in the first year.

28,794. Are there very many people in Ireland who don't speak anything but Irish?—I think the number of people who speak Irish only is very small, probably not more than 20,000.

28,795. I suppose there is an important literature as regards the subject?—The early and middle literature has attracted general attention.

28,796. Of course, I am not a scholar in Irish myself, and can hardly speak upon it. Does the same rule as to Irish which applies in Dublin also apply in Cork and Galway?—Yes.

28,797. If an Irish Catholic objects to sending his son to Trinity or to Belfast, and if that son knows no Irish, where can he get a university education in Ireland?—I don't quite understand.

28,798. Suppose a Catholic Bishop refused to allow his nephew to go to Belfast or Trinity College, and the boy knew no Irish, is there any place he can get a university education in Ireland?—It seems to me that the same question applies to Latin, or any other subject compulsory for matriculation. Why should the boy refuse to learn Irish?

28,799. Latin is more common than Irish?—I think our schools will be quite prepared for the teaching of Irish. I think they are prepared at present, and as time goes on it should have even a better place in the schools.

28,800. (*Sir Henry Primrose.*) What really was the motive of the governing body of the university in making Irish a compulsory subject of matriculation? That is a very large question.

28,801. Was it educational or political?—Of course I can only offer a personal view, and I cannot speak for the views of other members of the Senate. I am certain that there was no political question. Of the educational value of Irish for Irishmen I have no doubt. It also made a national appeal. For a great many years the spoken language had been declining. It became neglected in the schools and in every way a despised language. Some 20 years ago the Irish people began to take a different view of Irish. The Gaelic League and other bodies were formed, and in that way a great public opinion was built up in Ireland in favour of the restoration of Irish, more especially on the educational side. Now restoration was quite an easy matter for men whose fathers and mothers spoke Irish. In that case it would be incorrect to speak of it as restoration, because the subject should always have been taught to the children of those parents. In other parts of the country Irish had disappeared as a spoken language for two or three generations, and there restoration was more properly applied. In any case you can well understand how a great public opinion was built up that this national language deserved a place in the education of the country. The testimony of the intermediate or secondary schools examinations showed that Irish was extending and spreading in the schools. The new university was being founded in Ireland, a great deal of interest attached to it, and a great mass of Irish opinion, not merely the opinion of people who were propagandists of the Gaelic League, or advocates of the special study of Irish, but the opinion of the people of the whole country practically came to the university that it was desirable to make Irish one of the essential subjects of study in the new university.

28,802. (*Chairman.*) Would you say the whole country, or the Nationalist part of the country?—Well, the part of the country that was interested in the work of the National University. In these circumstances in considering what should constitute the subjects for entrance to the university the question of Irish was one of degree. Many people in the university held that there should be no subject compulsory for entrance. On the other hand, in view of the general circumstances of education in Ireland, also the training afforded by the secondary schools, the university decided that Latin, and a number of other subjects should be required for matriculation with certain modifications in respect of the different faculties. I should say that the only point in question in regard to making Irish compulsory was

not the educational value of Irish, for that is not alone high, but in Ireland has a special value, but that if Irish was made compulsory the number of students coming to the university would be influenced in any appreciable degree. If it were the case that the university could hope to matriculate 600 or 700 students in one year, but after making Irish compulsory 400 only matriculated in the year, then I think the university would not have made Irish compulsory. If it eliminated a small number then, I think, the position would be that we were losing nothing by making Irish compulsory, because the small number that may not come will be compensated for later on. Undoubtedly the National University did something to add to its prestige as a public institution, making a strong appeal to Irish enthusiasm by adopting Irish as one of its subjects for matriculation. On the other hand, if the National University, in the circumstances in which the appeal was made, refused to make Irish compulsory it would have, I think, by a formal act cut itself off from a great Irish tradition.

28,803. Would it have cut itself off by abstaining from making it compulsory?—From what you have said it would make very little difference one way or the other, and under these circumstances I think they might have let it alone. Of course, it is an extremely complex question.

28,804. (*Chairman.*) Have you any considerable section of Protestants among the students?—The number in Dublin is very small. We have not more than, I think, 15 out of some 850 students.

28,805. So that in Dublin the enormous bulk are Roman Catholic?—They are, but possibly in Cork and Galway they have a larger proportion.

28,806. (*Mr. Boutwood.*) Would it be true to say in connection with that question of compulsory Irish that a very potent factor in determining the position of the university was the county councils?—Except in so far as the county councils represent the general opinion of the country.

28,807. One or two witnesses before this Commission have urged very strongly that the examination for Class I. should be very closely adapted to some university honours course and the exclusion of extra subjects. I gather from your evidence that you do not object to one or two extra subjects?—I think they would be necessary.

28,808. Why?—Well, the examination is a competitive one. In a university course for a degree with honours there is specialisation in a particular group, and the examination is limited to that group. Owing to the competitive character of the examination for Class I., I think certain extra subjects, over and above the courses read for a particular degree, should be taken.

28,809. Do you think those extra subjects would have any particular educational value to the man?—I think they would have educational value. A man entering a university after a good secondary education will spend his first university year at, say, five subjects, and after that year pass on to an honours group. I think the best men in any honours group are quite capable of carrying on outside that honours group general reading in a second honours group, and I think it would be very well that they should keep up reading in such subjects.

28,810. I do not know whether I quite rightly understood your answers to the Chairman on the general question of classical education; but this was the impression left on my mind, and perhaps you will tell me if I am right. Practically, you thought that if a man had a good secondary basis it did not really matter very much, so far as his ultimate capacity went, on what line he developed in the university?—Quite so, with certain limitations. To my mind large experimental subjects, and all subjects that require a great deal of theory are, excellent subjects. In respect of literary subjects, history and economics and modern languages, if a man with a good secondary education specialises in any one of those he is, for general purposes, in intellectual power and in that kind of capacity required for administrative work, as likely to be as effective as any other. On the other hand, I do not wish to minimise classical education, but I assume that the man who takes history, and

[ 22 February 1913.]

Mr. DENIS J. COFFEY, M.A., M.B., B.CH., LL.D.

[Continued.]

economics as a subject in the university has had a good grounding in Latin and Greek before entering on the study of history.

28,811. Have you any opinion yourself about holding examinations in Dublin?—Not as regards Class I., but I know generally as regards examinations for admission to another service—the army medical service—there is a feeling that it would be desirable to hold examinations in Dublin. I should say if a Civil Service examination were held in Dublin for Class I. it would direct the attention of the graduates in the Irish universities far more fully to the examinations than is the case now.

28,812. What is the average age at which men enter the National University?—18.

28,813. (Mr. Graham Wallas.) The definite proposals which you put forward are set out at page 4 of the memorandum?—Yes.

28,814. The first point is that maximum marks should be reduced to 5,000?—Yes.

28,815. Then that there should be six groups of study which should have equal marks assigned to them, which would involve, I understand, the effect of lowering the comparative marking in some and raising it in others?—I may say that the suggestion of 5,000 was tentative; that represents an average.

28,816. Might I put to you the relative marks at present in these six groups in order to see how you propose that those which are above the average in the relative marking at present should be lowered to it, and those below should be raised to it. At present of your six groups, classics have 2,200; modern languages, 1,800; history and economics, 1,900; economics and law, 1,600; mathematics, 2,400; and the three sciences, 1,800?—And ancient history 1,000, is it not, giving classics 3,200?

28,817. You would include ancient history as well as modern?—Yes.

28,818. Then history and economics, including ancient history—2,900?—Ancient history would be preferred by the students taking classics.

28,819. What I want to know is whether in your group which you set down here of history and economics you include ancient history or not?—Men going on to the degree in economics also take history in the university, but the curriculum varies in the different universities in the different subjects, included in one or the other head, very much in fact; so that any group of this character should be so arranged as to permit of advanced knowledge in special branches of history and not a general inclusion of all branches of history. The group should correspond roughly to what you find is the rule in the universities, and, as a group, should relatively be equal in marking with other groups. In marking, as I have said, I would attach slightly greater value to the classics than to the others, but roughly they should be equal.

28,820. What I put to you is that, speaking quite roughly, the effect of such equality would be that the relative positions of classics and mathematics would be somewhat lowered as compared with the others?—Yes.

28,821. History and economics would count very much the same, and the modern languages and experimental science would be nearly the same?—Yes.

28,822. That is rather what you intended?—Quite so.

28,823. Then you propose that having produced that equality each group should be given 3,000 marks?—Yes.

28,824. So that a man has to take three-fifths of his marks in his main subject?—Yes.

28,825. Of the remaining two-fifths—2,000—he is required to give 500 to English composition?—I assume they all would have that.

28,826. Then that leaves him 1,500 which you propose to divide into two subjects of 750 each—extra subjects?—Yes.

28,827. For which he may draw from the whole range of the examination. The effect of that would be slightly to equalise the various subjects of specialisation and considerably to raise the value of a specialised university course, would it not?—Yes, that is so.

28,828. As compared with a widely scattered university course?—That is quite clear.

28,829. Leaving the allocation of marks, I want to consider the method of study in these various subjects. You have, I suppose, a classical faculty?—Yes, a department of the Faculty of Arts.

28,830. In the Irish National University?—Yes.

28,831. In the classical faculty is there much attention paid to Greek and Latin verse composition?—We have introduced verse composition into the degree course, and it is included in the scholarship examination—the college entrance scholarship examination.

28,832. Does it in fact prevail at present?—It is a small section, but it is part of the programme.

28,833. So that as far as you are concerned the assigning of 400 marks to these two subjects, making them equal to two-thirds of the marks for the whole German language and literature, would represent a disproportionate amount?—It represents a very high standard of scholarship in Latin and Greek—the verse composition—but I think it is quite clear that there is no proportion in the 400 for verse composition, and the 600 for German.

28,834. Then in philosophy one may either study it in main relation to the great philosophers of antiquity or in main relation to the thinkers of the Middle Ages, or in relation to definitely modern thinkers of to-day?—Yes.

28,835. Now of these three types of the study of philosophy, which would you say mainly prevails in the Irish National University?—In the Dublin College the principles and matter of scholastic philosophy receive full treatment, and having got that, the principles of the other systems of philosophy are studied in relation thereto, and in general.

28,836. Therefore any examination in philosophy which took as its main basis the study of the philosophers of antiquity, would not correspond to your teaching of philosophy, which takes as its main basis the mediæval teachers?—I think our men would be found quite competent in ancient philosophy. I think we are very strong in philosophy.

28,837. You don't mind, although you mainly use mediæval thinkers as the basis, you think you are so strong?—I think we are quite strong in philosophy, and that our men would be prepared in respect of the various systems.

28,838. You think you would compete on an equality with those whose main line of approach is the philosophy of antiquity?—I am satisfied so. We have a very strong body of teachers of philosophy. They have all worked over the whole ground.

28,839. Taking history teaching in the National University, is there a tendency to lay special emphasis on the history of Ireland?—Not for the B.A. honours degree course. In the degree course, if anything our course in history is specialised in the direction of European History; for the degree course last year the special subject was the Empire and Papacy, and all that mediæval history studied from original sources. For the preceding year the special subject was the French Revolution. In addition there was general modern history.

28,840. And by specialisation you exclude specialisation on the history of Ireland?—Irish history is taken for the first university examination. It may also be taken as an ordinary subject for the pass B.A. degree. Further, a student who has pursued the history course for a B.A. degree with honours may proceed to M.A. degree by a research course in Irish history. Then ancient Irish history is taken in connection with courses for degrees in Celtic studies. Mr. John MacNeill is the professor of ancient Irish history, and he has done much original work in this subject.

28,841. Would you think it desirable in the Class I. examinations, that a student who had specialised in, among other things, Scotch or Welsh or Irish history, should be given an opportunity of showing his knowledge?—There should be options in respect of the special subjects of history.

28,842. Which would enable him to show his special knowledge?—Yes.

22 February 1913.]

Mr. DENIS J. COFFEY, M.A., M.B., B.CH., LL.D.

[Continued.]

28,843. (*Mr. Boutwood.*) You would not confine that to Irish?—No, any special branch of history.

28,844. (*Mr. Graham Wallas.*) How many matriculated students have you in the National University?—The number of matriculated students entering in 1910 was approximately 800; in 1911, 488; and in 1912, 685.

28,845. How many matriculated and graduate students have you at the present moment?—In the Dublin College about 850 students. Of that number about 80 are students who are taking diplomas, or students who are doing post-graduate courses. The number of undergraduates at present in the Dublin College is about 770.

28,846. Speaking roughly, in the case of the Cork and Galway Colleges, what would the figures be?—I think in Cork last year over 460, and in Galway over 150. In the present year the figures are higher.

28,847. Have you had experience of the corporate life of other universities besides your own?—Of continental universities, yes; but no special experience of English universities.

28,848. Would you say from your experience that the corporate influence of a university is not solely dependent upon residence in the university, in a definite group of university buildings?—I am quite satisfied it is not solely dependent on residence in a definite group of buildings, although I should like very much that we had residence for ease of working. But so far as corporate life is concerned, it can be developed in other ways. Our students have a great facility for forming societies, for having all sorts of organisations, and for free interchange of ideas.

28,849. You have in your university an administrative and clerical staff working probably under your directions?—I have nothing to do with the administrative staff of the university; we have a staff in the college.

28,850. Then taking administrative and clerical work as distinguished from the teaching work, do you employ women in that administrative and clerical work?—There are no women employed at present, but there is no reason why they should not. I mean there is nothing against it.

28,851. In many universities a good many women are employed in that way. What was the body which took

the actual decision, the effective decision with regard to the compulsory Irish for matriculation?—The Senate of the university.

28,852. How large a body is that?—Thirty-eight members.

28,853. There was a definite vote in the Senate?—Yes.

28,854. Therefore the decision must have been a decision of many men, at least 20?—Nearly all the members were present, I think, when the matter was discussed.

28,855. It must be presumed different members of that body had different motives?—Yes, there were different views.

28,856. (*Mr. Shipley.*) One or two questions about finance. It seems to me the university is extremely well provided with professors for the number of students. Are the professors paid from 600*l.* or 800*l.* a year?—An average of the full-time professors in the Dublin College is less than 600*l.* The number of the professors is merely commensurate with the faculties which the charter of the University provided for.

28,857. You have a very fair number of good scholarships. Where does the money for the National University come from—is it voted by the State?—The Parliamentary Vote to the Dublin College is 32,000*l.*; Cork, 20,000*l.*; and Galway 12,000*l.*

28,858. The State gives these sums?—Yes.

28,859. The fees the students pay are presumably not high?—The fees are similar in standard to the Scottish universities and the University of Belfast.

28,860. Are there any other sources of income?—The county scholarships which provide, in respect of revenue, only the fees of the students holding the scholarships.

28,861. Is there any endowment?—No private endowment. Endowments for scholarships and special prizes are growing up, they may come in in a larger way later on.

28,862. (*Miss Haldane.*) As to the county scholarships, is the university prescribed?—Each county makes its own arrangement. A great many limit the scholarships to the National University, and according to the locality of the county some are limited to a particular college as well. But on the other hand there are, I think, five or six counties that do not limit their scholarships to one university.

## SEVENTY-FIRST DAY.

Monday, 24th February 1913.

### PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Mr. ARTHUR BOUTWOOD.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. F. OLIVER LYONS, F.S.I., and Mr. GEORGE WARWICK, F.S.I., called and examined.

28,863. (*Chairman.*) You, Mr. Lyons, belong to the Boundary Survey and Valuation Department?—(*Mr. Lyons.*) Yes.

28,864. You are a surveyor?—A valuer and surveyor.

28,865. How long have you been in that office?—About nineteen years.

28,866. Were you recruited by open competition?—Yes.

28,867. Had you expert qualifications?—Yes. I was a graduate in civil engineering of Dublin University, and I had practised for four years before I entered the Valuation Office. I am a Fellow of the Surveyors' Institution, and so is Mr. Warwick.

28,868. When, Mr. Warwick, were you recruited?—(*Mr. Warwick.*) About twelve years ago.

28,869. What qualifications had you?—I was a member of the Surveyors' Institution.

28,870. Were you recruited on your professional qualifications or did you submit yourself to public competition?—(*Mr. Lyons.*) I was appointed by open competition, after an open competitive examination.

28,871. With gentlemen of qualifications similar to those of yourself?—Yes.

28,872. Was that also the case with Mr. Warwick?—(*Mr. Warwick.*) I was appointed in the same way. (*Mr. Lyons.*) We are a special technical professional body.

24 February 1913.] Mr. F. OLIVER LYONS, F.S.I., and Mr. GEORGE WARWICK, F.S.I. [Continued.]

28,873. Did you enter on a particular scale of pay?  
—Yes.

28,874. What did you begin with?—100*l*.

28,875. What is the maximum of the scale?—It has been altered several times.

28,876. What is the existing maximum?—The existing maximum is 500*l*., but in order to explain, I should tell you what has happened. Before 1893 the valuers and surveyors were appointed by the head of the department without any professional examination, except a mere certificate obtained from a local engineer that the man knew how to use a chain and had a satisfactory knowledge of surveying. When Sir John Barton was appointed Commissioner of Valuation on the 1st of July 1892, he thought after a year that he would like to have better qualified men. The men who had been taken under the old system were second division clerks, whom the former head of the department made his valuers at the starting salary of 80*l*. a year. Sir John Barton at the end of 1892 got the Treasury to institute the open competition system of a special examination for men professionally qualified, and I was one of the first body of men who came in by open competition as a professional man. The salary then offered by the Treasury was 100*l*., rising by 10*l*. a year to 300*l*. for the second section valuers; and 315*l*., rising by 15*l*. to 450*l*. for the first section. There was a break at the 300*l*. At the examination at which I came in, there were 18 candidates for five posts. After some years capable candidates began to fall off, and Sir John Barton applied to the Treasury for leave to raise the minimum salary from 100*l*. to 120*l*., which permission the Treasury gave. The result was rather curious, I might almost say without precedent in the Civil Service. A man about two years junior to me was appointed in December 1894 at 100*l*. a year. Consequently in the normal course of events he did not reach the 120*l*. until December 1896. It was in 1896 that the Treasury sanctioned the increase of minimum from 100*l*. to 120*l*. The result was that another man was appointed in 1896 at 120*l*. a year, and he actually gets a higher salary than the man who is almost two years longer in the Service. Mr. Ryan had a little under two years' service when the other man, Mr. Murphy, was appointed. We have pointed that out in the written memorandum which we have placed before the Commission.

28,877. You point that out as an abnormality, but not as the basis of any particular claim you make now?—We do in this way, that of course it is the most striking anomaly in the salaries of the valuers. There are others, but that is the most striking.

28,878. But it will not occur again?—No. It cannot occur again now.

28,879. It occurred in 1896 on the occasion of the raising of the pay?—Then the pay has been raised since.

28,880. The minimum pay?—Yes. It was raised in the year 1901 from 120*l*. to 150*l*.

28,881. That is not an uncommon incident of the public service?—We look on it in this way. We have equal qualifications to men who came in at the higher minimum salary. We can give written evidence of that if you like. The result has been that the men in what I may call the middle of the valuers are at a disadvantage in salary in reference to their length of service when compared with the junior and senior men.

28,882. But they are not at an absolute disadvantage. They get all the salary which they bargained for when they entered the Service, though the other men who entered later may perhaps get a better salary. The same thing happened, I think, to the men recruited by the Class I. examination some time ago for the Local Government Board. The minimum was 150*l*., and afterwards, for certain reasons, it was raised to 200*l*. The same sort of difficulty would present itself there as in your case, but it would not be a general difficulty. It would only be an inequality in reference to particular gentlemen who happened to enter at that particular time. The hardship, if you can call it a hardship, is relative between you and the men who entered at the higher pay. It does not affect the Service as a whole in the future. You have not been

worse treated than you bargained for?—No, we have not, but there is another point which I was going to explain. I told you a moment ago that the minimum was raised to 150*l*. Then there would still remain two sections, first section valuers and second section valuers. The Superannuation Act of 1890 had a curious effect on our department. Our department had more men in it over 65 in 1890 than any other department in Ireland. I was not in it at the time, but I believe I am right in saying that there were 15 men over 65 who were retired compulsorily in 1890 under the Act. The result was that a number of very junior men got put up much higher in the second section than otherwise they would have had any expectation or chance of for years. The result was that after I came into the department those men who were put up from the second section to the first section by promotion got an enormous jump in their salaries. One man, I think, got an increase of about 106*l*. when he was moved from the second to the first section, but the men who were further down on the list, that is, the two or three men at the bottom of the non-competitive examination men, and the first seven or eight men at the top of the competitive men, were, if I may say so, between the devil and the deep sea. We have seen the men above us getting things by luck and the men below us getting things by luck, and we have got nothing.

28,883. Still, the way was cleared for you to a certain extent. The compulsory retirement of those 15 gentlemen led to the promotion of a number of young men who must have made room for you. They would have blocked you if these gentlemen had not been retired?—If these gentlemen had not been retired there would have been no vacancies, no competitive examination at all.

28,884. Their retirement made room for the promotion of 15 or 16 men, which must have facilitated the flow of promotion in which, I presume, you must have participated?—No, because none of us were in the department in those days.

28,885. Do you mean to say that certain young men got promotion to upper grades and there they remain? They are young men and will remain there until they are 65, blocking your promotion?—No. They don't block promotion, because early in 1910, as a result of a memorial we presented to the Treasury, the Treasury amalgamated the two sections, and they made the salary 150*l*., rising by 15*l*. to 500*l*., so that there is no possibility of any of us ever getting a jump. The sections are amalgamated, so that there is no promotion from one section to another. We are all in the one boat.

28,886. Is 500*l*. the furthest you can hope to reach?  
—Yes.

28,887. But you get your increment of 15*l*. every year?—Yes.

28,888. What pay are you now drawing?—301*l*. 17*s*.

28,889. You have got a run to 500*l*.?—Yes. As regards the position of the men below us, the result is that a man entering the Service at 150*l*. attains the same salary after 10 years that it has taken me 20 years to attain.

28,890. But you forget the proper reading of the parable?—We have heard that before. At the same time we have looked at it in this way: The labourer who came in at the eleventh hour only got a penny, whereas in our department the labourer who came in at the eleventh hour got three half-pence. That is where we think the parable does not apply to our case.

28,891. What remedy do you think should be applied to that state of things? You would not deprive the men who entered on the higher wages of their luck?—Certainly we would not.

28,892. Would you ask the Government to give you an addition in order to equalise it?—Yes; we have already applied to the Treasury a few times on that point.

28,893. What justification could you offer the Treasury for an increase of wages, not because of the work you do, but because of the better luck of other men?—We thought it a more or less recognised thing that salaries in the Civil Service should approximate propor-

24 February 1913.] Mr. F. OLIVER LYONS, F.S.I., and Mr. GEORGE WARWICK, F.S.I. [Continued.]

tionately in some way to the length of service, and the present condition of things in the Valuation Office is not in accordance with that principle. I have pointed to the case of Mr. Ryan and Mr. Murphy, which is a gross violation of that principle.

28,894. Is that the substance of the representation you wish to make to us?—Yes, as regards the pressing grievance of seven or eight men in the middle compared with their seniors and juniors, but as regards our body as a whole there is a much more important point than that. The second point in our memorandum is what we lay most stress on, and that is the fact of our being compelled to make valuations under the Finance Act. That duty has been imposed on us without our consent, although we were appointed long before the passing of that Act to carry out the provisions of the Irish Valuation Acts only.

28,895. Your complaint is that these duties, imposed on you by recent legislation, are in addition to the duties which you had previously discharged?—Yes.

28,896. Do you claim an enhancement of pay on that ground?—I don't think it is quite correct to say that they have been imposed on us by legislation.

28,897. Certain functions consequent upon recent legislation have fallen to your lot?—Yes.

28,898. And because they have fallen to your lot you claim extra pay?—Yes, because they were not in the bond when we entered the Service. They were not part of our duties.

28,899. Do you work more than seven hours a day?—We do.

28,900. There may be presses of work, but do you say that, as a rule, these additional duties caused you to work longer hours than the Government are entitled to claim?—Yes, because since this other work has been thrown on us, when we value an urban district, the head of our department insists upon our making the gross and full site valuations of every tenement whose rating valuation we alter, and he expects the district to be completed in the same time as formerly, so that no special time is allowed for the Finance Act valuations.

28,901. It compresses the work?—Yes, and we have to work a greater number of hours per day.

28,902. How long will this valuation last?—In the county boroughs and urban districts of Ireland—I speak now as an ex-Finance Act valuer, because I was the first district valuer for Dublin under the Finance Act—there are 335,000 tenements, leaving out altogether towns in the rural districts and rural districts themselves, and I believe that there are some 35,000 of the 335,000 provisional valuations issued up to date.

28,903. How long will it take to have the whole of this work finished?—It depends very much on the staff.

28,904. With the staff which you have now how soon does Sir John Barton expect to have the work done?—That I cannot say.

28,905. Can you form any estimate yourself?—I have not thought over it, but with the present staff I should think it would take 20 or 25 years at least. You are aware that Sir John Barton is employing a brand new staff for doing the Finance Act work in Ireland, but we at the beginning did a certain amount of Finance Act work for him, and we are still doing it. There are four of us at present in the country, one in the south and one in the west, and two in the north, making valuations for increment value duty and estate duty. There were six until the other day, two are back, but there are still four at it. When we go to our districts every year we make all the Finance Act valuations for every house we touch in our urban districts.

28,906. Do you work much more than seven hours a day?—I should say, that taking one day with another, we work fully one hour to one hour and a half over, and in saying one and a half hours I would be under the mark.

28,907. But is it work that falls naturally within your duties?—No, my Lord. We submit that it does not, because our warrants, which each of us has given to him on appointment, define our duties. The warrant certifies that I have "been appointed in pursuance of " an Act passed in the session of Parliament held in the

" fifteenth and sixteenth years of Her present Majesty, " and of Acts amending the same for the general valuation of Ireland, and of an Act passed in the session of " Parliament held in the seventeenth year of Her present " Majesty, and Acts amending the same for the survey of " Ireland," and I am " authorised to enter upon all lands " and buildings to value them, and do all necessary acts " to perform those duties." That is dated the 10th day of May 1894, or 15 years before the Finance Act, and we submit therefore that the valuations under the Finance Act, which we are directed and compelled to do, is outside the scope of our duties, and, as we have been compelled to do them, we ought to be paid for them.

28,908. But might not a critical objector say that under that warrant you are entitled to no more pay than is fixed by it?—Yes, if other duties were not imposed.

28,909. Yet your maximum pay is higher now than when you entered the Service?—Yes, our maximum is higher, but it has been recognised by the Treasury that we have got no extra pay for doing the present work.

28,910. I assume that; but the critic might urge that the warrant appointed you for certain purposes at a certain rate of pay, the maximum of which is higher now than when you entered the Service. In raising the maximum the Government conferred on you a benefit, while, the critic might urge, in objecting to this extra work you are in return treating the Government badly?—No, because that increase was given long before the working of the Finance Act began.

28,911. And therefore you say the Government cannot hold you to the exact terms?—No, and the Secretary of the Treasury has already informed the House of Commons that no extra remuneration has been given to us. On Thursday, 11th July 1912, Mr. Horner, the member for South Tyrone, asked a question regarding the remuneration granted to the surveyors and valuers for this work, which is outside the scope of their duties under the Irish Valuation Acts, and Mr. Masterman, the Financial Secretary, gave as his reply that "no extra remuneration has been paid for the " valuation work in question, which did not involve " an extra hour's work."

28,912. An extra hour's?—Yes, but we do not say that. We have been asked over and over again by the Commissioner of Valuation, and pressed to do the districts in the same time as formerly.

28,913. Is there any other point of view that you wish to bring under our notice?—Yes, there is the first clause in our memorandum, that our transfers or promotion to other posts was blocked by the Department by agreement with the Board of Inland Revenue.

28,914. What have you to say on that matter?—There are a number of men in our Department who are Englishmen, and who are anxious to get back to England. When the Valuation Department of the Inland Revenue was created in England for the purpose of the Finance Act, several of us—and I myself, although I am not an Englishman—made application to be transferred, and were told at first that our transfers would be sanctioned, but an agreement was arrived at between Sir John Barton and Sir Robert Chalmers, the then Chairman of the Board of Inland Revenue, and the transfers did not take place.

28,915. Are you speaking from hearsay?—I am quoting what Sir John Barton told me and what I learned from Sir Robert Thompson, the late chief valuer of the Board of Inland Revenue. Sir John Barton told me himself that he had made arrangements with Sir Robert Chalmers that he should not take any men from this side of the water on the ground that Sir John Barton would want all the staff he had in Ireland and could not spare them. Several of us—I myself among the number—had been promised appointments. I had been promised a post under that Act worth from 550l. to 700l., and but for that block I would have got it. There are two or three other cases in the Department of men whom the block affected in the same way. One of them has now gone to Bombay, and though I wrote to him I have not been able to get his letter as evidence, as it has not arrived. But I can show you a letter that I had myself, proving the statement that

24 February 1913.]

Mr. F. OLIVER LYONS, F.S.I., and Mr. GEORGE WÆRWICK, F.S.I.

[Continued.]

I have made, and we think that if, on account of the circumstances of the public service, it was found necessary to prevent our promotion to England, we should be rewarded in some way or other, and receive some *quid pro quo* in exchange for the prohibition that was enforced against us.

28,916. Most of us who have served the State know of instances of the kind that pressed hard on the individual. The exigences of the public service often do inflict hardship of that sort?—We recognise that, and it is for that reason we feel that the really important point that we submit to you is the second, that the making of these Finance Act valuations was not in the bond that we were appointed under.

28,917. The important point is the time. Is this work an addition that compels you to work over the seven hours?—It is.

28,918. You would not object, I gather from your evidence here to-day, to giving an additional hour or so to the public service, if it were for a limited time?—No, my Lord, I have worked at short stretches fourteen hours a day, until I burst a blood vessel.

28,919. No doubt most of us have done that sort of thing, but you say that it does impose a very great addition to your work, that it is not temporary, and the result of it is that you cannot finish your work within the seven hours, and you think you are entitled to some consideration at the hands of the Government?—Yes.

28,920. Is there any other point?—I wish to put one point before you. When you referred to the fact of the maximum salary having been raised from 450*l.* to 500*l.* did you remember that that was done before the Finance Act was in operation here?

28,921. Please do not ask me a question. I put the matter before you as a view which a critical objector might put forward?—Well, I think I have met it by saying that that increase was made by the Treasury before the Finance Act work was in operation. So the Treasury have said in their reply, and Mr. Masterman in the House of Commons stated that we do not get the least remuneration for this extra work.

28,922. His answer was, that while you had derived no increase of emoluments there was no increase of labour imposed upon you compelling you to do more than the seven hours a day?—We dispute that altogether. There is one other little point that occurs to me. I may tell you that in the nineteen years I have been in the Department we memorialised the Treasury seven times. We memorialised them since the Finance Act was passed in 1911 and 1912, and neither time did they give us anything though we asked to be paid for this Finance Act work. But in our memorial of the 21st May 1912, we asked for an inquiry into the working of the Department, and the Treasury in their reply did not say that they would grant an inquiry or would not grant an inquiry. They merely said that they would not give us any extra pay, and we thought, perhaps as Civil servants are apt to think, that our memorial did not receive adequate attention; in fact, we thought it had not been read, if I may say so, because if the memorial had been read the very first point in it is a request for an inquiry, and not for an increase of pay. We asked for an inquiry into our salaries and conditions of service.

28,923. Are you satisfied with the conditions of service—leave and pension?—Yes, my Lord, we are. We don't grumble about our pension, which is the ordinary pension of the Civil Service. We were all given the option of the exchange from the sixtieth to the eightieth, and most of us took it, except the men who are nearly 60 years of age; and, as regards leave, I think we are fairly treated.

28,924. And what is there about the conditions that you express dissatisfaction with?—I would say that the chief would be the compulsion upon us to make these Finance Act valuations.

28,925. Oh, that is what you mean. Without that explanation I should not have understood it?—The Treasury, in their letter of the 8th August 1912, did not say whether they would grant an inquiry or whether they would not.

28,926. (Mr. Boutwood.) The only question I want to ask you is this: When your scale of pay was revised two or three times was any change made in the character of the examinations?—A slight change was made for a short time, and then the change was abolished again. For a short time there was a stipulation that every man going up for examination should have served two years in a surveyor's office. That did not hold good at first; it held good for a few years and it was abolished; and it does not hold good now if a man has other professional qualifications which are equivalent. As a matter of fact, it was a matter of very little importance for this reason, that, as a fact, the men who came in before that little alteration was insisted on had rather longer professional experience and higher qualifications than the men in whose time that alteration was enforced, so there is nothing in that point. A university engineering degree or a college diploma is considered as a full equivalent, and accepted as such, and all the men who got in before the rule, except one, had either of these, and experience with a surveyor as well.

28,927. (Mr. Graham Wallas.) When you came into the Service I understand your maximum was 300*l.*?—Yes.

28,928. And if you were promoted to vacancies on the high scale your maximum went to 450*l.*?—Yes. Of course we were really all the one class. I mean there was nobody else to be promoted. When a vacancy occurred in the first class we must be promoted. The bar was only put there so as to give the head of the Department a convenient lever for not promoting a man whom he did not think fit to fill the higher office.

28,929. Do all the Finance Act valuations take place in the country?—Well, in the early days we were engaged in the City of Dublin. We fixed 13,000 gross and full site valuations.

28,930. And the valuations now take place in the country?—Yes.

28,931. What allowance do you get doing that work?—We get a subsistence allowance of 12*s.* 6*d.* a night.

28,932. Is it the fact or the custom that you don't spend the whole of that 12*s.* 6*d.* a night during the whole of your stay in the country?—Well, the increase in the cost of living in Ireland has been very great in the last 10 years. When I became a revising valuer, as we are called, the scale of charges in the hotels was 25 per cent. less.

28,933. You don't contend that you all spend the whole of that 12*s.* 6*d.* a day on your subsistence?—Well, we don't contend that we all spend it, but some years ago we asked the Treasury to give us 15*s.* a night, the same as they give to the assistant surveyors in the Post Office. Other officers were drawing 15*s.* a night with approximately the same salaries, and we asked to be put on the same basis, and they said to us: "Your work lasts for a large proportion of the year, and, as a rule, you stay for a good while in one centre, and we think that your 12*s.* 6*d.* a night is as good as the 15*s.* a night of the man who does not stay beyond a night or two in the same place." We don't grumble when we are some time in the one centre, but we don't think it fair when we are constantly moving about. I found when I was sent down to County Armagh last year, to make valuations under the Finance Act, that, by running about, I went beyond the subsistence allowance of 12*s.* 6*d.* a night.

28,934. If it was declared that none of the group of valuers and surveyors to which you belong should, in future, be employed on the Finance Act valuations, would that satisfy you?—Yes, certainly, if we are not to be paid for Finance Act valuations.

28,935. And you would be quite satisfied if you were to lose that work, and the subsistence allowance, and everything connected with it?—Of course, we get a subsistence allowance when doing the Finance Act work, but there is a loss. If I am sent to the country to-morrow on Finance Act work I am a loser. As a matter of fact, at this very moment there is a Treasury memorial in process of manufacture amongst us in the Department, asking to be relieved of this work.

28,936. (Mr. Shipley.) At what age did you enter the Service?—At 27. I was 46 yesterday,

24 February 1913.] Mr. F. OLIVER LYONS, F.S.I., and Mr. GEORGE WARWICK, F.S.I. [Continued.]

28,937. Will you just give me an account of a day's work in the country?—We usually begin about nine and not later than half-past nine. Of course, it depends upon the time of the year, but in summer time it is nearly half-past six or seven before we stop. Of course, in winter time we don't stay out so much.

28,938. I want to know what you do in the country—whether you are measuring fields, or what? I want you to give me an idea of your country work quite shortly?—The whole of Ireland was valued by Sir Richard Griffiths between the years 1853 and 1865, and the last county valued was Armagh in 1865. This is a valuation for rating which has to be kept up to date.

28,939. (*Chairman.*) Sir Richard Griffiths's tenement valuation has to be kept up to date?—Yes.

28,940. The town land valuation was corrected afterwards?—Yes, and was made into a tenement valuation. The valuation that holds now is a tenement valuation. Tenements get altered and lands get divided and sold, and new buildings are put up and old buildings thrown down, and there is the work of the Congested Districts Board, what is known as "striping," which has changed the whole face of the country. All this has effected changes, and that forms the work for us. It is the rate collector's business to report to his urban district council or his county council as to these changes, and put them on the list for us before the 15th of June. Under the Valuation Act they are open for inspection from the 15th to the 27th of June, and on the 27th of June they are sent to our office, and consequently our country work begins every year about the first week in July. We must have the work finished before the 1st of March, according to the Valuation Act, so that some years I have had to work 14 hours a day. It has happened when the work has been very heavy that we have on occasion to do 12 and 14 hours a day in order that the revision should be completed in time, and this was altogether apart from the Finance Act.

28,941. Now give us a statement of the additional work that is thrown upon you by the Finance Act?—The foregoing applies mostly to the country work—the farmhouses and the division of lands and that class of work. In some parts of the country, though, you have large factories and mills that take a long time to do. We do the rural districts first, and so get the worst part of the driving work over before the depth of winter. Then we do the urban centres for new buildings put up and old buildings thrown down, and inspect the gas works and water works and railway stations and everything that is subject to valuation. The work that we do at present under the Finance Act is this. In every case of a tenement which we value for rating we make out the gross and full site value, which is practically making the entire Finance Act valuation. The only reason we are not asked to complete it is that Form 4 is not yet issued, and the fixed charges, if any, consequently not known. When Form 4 is issued and returned these can be easily calculated, so that we have practically done the Finance Act valuation.

28,942. Take an ordinary town tenement, how long do you take to value it?—Well, my Lord, the best idea I can give you is this. When we make valuations in the country we not only make them in our note-books but we enter them upon the valua-

tion lists. We send up our books and maps, and we put all the alterations on the maps.

28,943. Do you not put them on the maps when you come to head-quarters?—No. We must have the maps with us in the country to enable us to identify the tenements. I think 42 list cases is certainly a revising valuer's work a week. He certainly does not do less work. That is about six list cases a day—that is six cases on the lists furnished us by the county councils.

28,944. Well, what addition to the day's work would you have to put in on account of the Finance Act valuations?—I think it would take up at least from an hour to an hour and a half. I don't think I am overstating when I say that it would do that.

28,945. Would you say that 12 per cent. is added to your work by that?—Yes, and more.

28,946. (*Miss Haldane.*) Is it not the case that there have been other recent cases in which additional work has been thrown on Civil servants without their being paid more?—No, I don't think so, unless it was in their agreements when they entered the Service.

28,947. I had in my mind the Customs and Excise under the Insurance Act. I merely want to arrive at whether your class is the only one or whether there may be other classes of persons with a similar grievance?—You will understand the point I am making is this. Since I entered the Department 19 years ago, our ordinary duties have increased to a great extent, and we might not complain about that because it was in our bond, but this Finance Act valuation is work that we say was not in our bond when we entered the Service.

28,948. I was speaking of cases in which additional work was thrown on the Customs and Excise officers in connection with the Insurance Act?—It may be. We submit that our duties are contained in that warrant, and if we are asked to do any work that is not in that bond, we are asked to do work that is not in our agreement when we entered the Service.

28,949. I merely wanted to know whether you are the only class that is treated in this manner?—I have never known of a case in Ireland where extra duties have been imposed upon Civil servants that were not in the original bond of service where the Civil servants have not received extra pay.

28,950. (*Chairman.*) You speak of an original bond, do you know there is no bond?—You know what I mean, my Lord.

28,951. Yes, but let us be clear. If we are going to talk about a bond, let us realise what we are saying. In the strict interpretation there is no contract whatever. You know a Civil servant may be dismissed at a moment's notice without reason given. There is no bond, but there is an honourable understanding?—I thought that as long as he was efficient—

28,952. The Government makes itself the judge of the efficiency. We will attend to your case, Mr. Lyons, and the case of the other gentleman. I suppose you are both exactly in the same position?—(*Mr. Warwick.*) I am exactly in the same position, except that I am somewhat junior. I was just sent here to say, first, that we have no recompense for working the Finance Act; and, secondly, that there is no extra prospect, no outlet by way of promotion, no co-operation between this Department and the English Department.

(*Chairman.*) We will give the matter our attention.

Mr. E. J. O'SULLIVAN, called and examined.

28,953. (*Chairman.*) You come here to represent the assistant clerks of the Valuation Office?—Yes, my Lord.

28,954. How did you become an assistant clerk?—I first passed the boy clerks' examination.

28,955. Were you a boy clerk originally?—I was, my Lord. I first served in London as a boy clerk, and then I passed the assistant clerks' examination.

28,956. When?—In 1898.

28,957. You are an Irishman?—I am, my Lord.

28,958. What do you complain of?—The Treasury held out that, after four years' service as an abstractor, should our conduct be satisfactory and our work satis-

factory, we would be eligible for promotion to the second division. I have had upwards of 14 years' service.

28,959. Was that the precise condition of things?—Yes.

28,960. There was a period within which your promotion could not be considered?—Not before four years.

28,961. After those years had passed your promotion to the second division became possible, provided otherwise you were eligible?—Yes.

28,962. You know, don't you, that the promotion from the assistant clerk's class to the second division was, under the Orders in Council, to be an exceptional

24 February 1913.]

Mr. E. J. O'SULLIVAN.

[Continued.]

matter?—No, but hope was held out to us that after four years' service in that grade, provided our work and behaviour was satisfactory—

28,963. No, pardon me, that was not the hope held out to you. The position is this: no matter how distinguished your service was as an assistant clerk you were not eligible for promotion until you had spent six years in the Service. When six years' service was completed then, if your service was specially meritorious, you might be promoted. The words of the Order in Council are: "A permanent Civil servant of a rank below the second division may be appointed to that division on the ground of special merit, with a certificate from the Commissioners under clause 7 of this Order, but such certificate shall only be granted exceptionally after no less than six years established service, towards which not less than one year, and not more than two years of registered service in the boy clerks may be allowed." So the position is this, that you could not be considered for promotion until you had served six years. Having served those six years, if your merit was of an exceptional character, then the head of the department could promote you, but you must consider this: the examination for entering into the second division is of a much higher kind than the examination for assistant clerks. If every assistant clerk who was well conducted and whose service was meritorious could claim promotion into the second division there would be little room for men to enter that division by examination?—I would respectfully suggest that a fourth of the vacancies should be apportioned.

28,964. I am prepared to hear your opinion on that point, but at the present time there is no precise number of places in the second division earmarked for the assistant clerks?—You say the examination for the second division is much harder. Of course it is, but if an assistant clerk is intended for the second division by the head of a department, he has to pass a qualifying examination.

28,965. He gets a certificate from the Civil Service Commissioners, but they very rarely examine him?—He has to pass a certain number of subjects, my Lord.

28,966. Is that necessary?—It is, my Lord. I have never known an instance where they were not examined.

28,967. Yes, but they also may dispense with the examination. It rests with the Civil Service Commissioners doesn't it?—They have to sit for an examination and must qualify in the second division subjects.

28,968. You have had an opportunity of sitting for the second division examinations?—Yes, I have had an opportunity.

28,969. Why did you not take advantage of it?—I was up, and qualified, but subsequent events precluded me.

28,970. Other persons were deemed better than you?—I could not stand after that.

28,971. If a large proportion of assistant clerks were promoted to the second division, there would be very little left for men passing in by the higher examinations?—In the office I am employed in, there were 14 vacancies in nine years, and I think two were promoted from the assistant clerks, and one of these was a temporary clerk.

28,972. (Mr. Boutwood.) Is that the table in front of your appendix?—Yes, there was one appointment made out of 14 in nine years.

28,973. (Chairman.) How many are there?—There are 13 assistant clerks.

28,974. That was at the rate of one a year?—I believe I have the longest service of any of the new class in Dublin, and I have not been promoted although my work has been satisfactory and my conduct also.

28,975. Have you taken out any evening lectures at the university?—No, my Lord.

28,976. Your complaint is that the assistant clerks don't get sufficient promotion in the second division?—Yes.

28,977. You say about one-fourth or 25 per cent.—do you really claim that one-fourth of the appointments to the second division should be reserved for assistant clerks?—I would suggest that, my Lord, because there are a number of us doing the work that second division men should do.

28,978. What do you mean by the work that second division men should do?—Well, checking office copy.

28,979. You consider that second division work?—That is work which the second division men do.

28,980. I should have thought they did higher work than that—don't they draft letters?—No.

28,981. Checking is only mechanical?—Yes, of course, and copying is only mechanical too. The assistant to the accountant is only an assistant clerk, and he does the work of the accountant during the latter's absence. Then there is an assistant to the registrar. He is also an assistant clerk, and he does his work while the registrar is away, and he receives less than one-third of his salary.

28,982. But that is only for a short time?—He does it for a month, and it shows he is able to do the work.

28,983. (Mr. Shipley.) You don't complain of the rate of pay?—It is want of promotion I complain of, and I think the maximum is rather low.

28,984. The maximum is 150l.?—Yes.

28,985. (Mr. Graham Wallas.) There have been 14 vacancies, and if the rule you apply here had been in action there would have been three appointments out of 14?—Yes.

28,986. And 11 assistant clerks during that time were both competent and deserving of promotion?—Yes.

28,987. But only three of the eleven men would have been promoted to the second division?—Yes.

28,988. (Mr. Boutwood.) What class of work is it in your office?—Checking office copy and county copy, and checking lists of changes.

28,989. So they put second division clerks on that?—Yes.

28,990. In the section of your paper headed "The Commissioner's Absolute Power," I gather that your commissioner has refused to recommend for the consideration of the Treasury eligible men. Does that mean that he did not regard those particular men as eligible, or had he some general policy? Did he give any indication of that?—He did not wish to promote anybody at all.

28,991. Let us assume, for the purposes of the next question, that it is true that you have a chief who will not exercise the powers under the Order in Council, how would you remedy that?—I don't know what we could do. We have petitioned him more than once, but he turned a deaf ear to all our entreaties. He does not wish to promote anyone.

28,992. (Chairman.) Is there anything else?—I think it is very hard that I have not been promoted after 14 years service.

28,993. I don't want to make any personal allusions at all, but you will admit that promotions cannot go by seniority. Under the rules that exist at the present time promotion must go by exceptional merit?—I don't see any difference from the point of view of ability between the second division men and the assistant clerks. I do second division men's work, fairly frequently, and I am quite prepared to sit for an examination, as I told the Commissioner, if he would nominate me.

## SEVENTY-SECOND DAY.

Tuesday, 25th February 1913.

## PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).Mr. ARTHUR BOUTWOOD.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.Mr. GRAHAM WALLAS.  
Miss HALDANE.  
Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. GEORGE A. STEVENSON, C.B., C.V.O., called and examined.

28,994. (*Chairman*.) You are a Commissioner of the Public Works Department in Ireland?—Yes.

28,995. How long have you been a commissioner?—Since 1892.

28,996. Previous to that you were in the Civil Service?—Yes. I entered the Civil Service in open competition under what is called the Class I. scheme.

28,997. Was that the existing Class I. scheme?—I have not followed the changes, but it was the highest form of competition.

28,998. The highest examination, common to the Indian Civil Service?—The highest of all.

28,999. In what year did you enter?—In 1880.

29,000. Were you in the Treasury between 1880 and your appointment as commissioner?—Yes, except in 1892, when I was away from the Treasury to serve as private secretary to the Chief Secretary for Ireland.

29,001. Did any interval exist between your service as private secretary and your appointment as commissioner?—No.

29,002. Please give us in brief outline a sketch of the organisation of the Board of Public Works?—There are three commissioners appointed by royal sign manual on the nomination of the Treasury. In that warrant the three commissioners are named equally. Then the Treasury selects from them one to be chairman, and he is the medium of communication with the Treasury on all semi-official matters, and generally on similar matters with the Irish Government and other departments.

29,003. He represents the Board?—Yes, and he presides at the Board meetings.

29,004. For the purpose of conducting business do you divide the country between you, or do you divide the subjects?—We divide it by districts. Each commissioner has a district assigned, and in that district, with some exception, he deals with all business which comes into the office relating to the district or originating from it.

29,005. A district may consist of several counties?—Yes.

29,006. In your paper you mention that the districts are determined by two lines drawn from Dublin to Limerick and from Dublin to Sligo?—Roughly that is the line. It follows the county boundaries.

29,007. One of the commissioners takes the northern and the other the southern portion, and I am right in thinking that the chairman usually takes the central district?—Yes.

29,008. In addition to that allocation of districts you also allocate among yourselves the city of Dublin and its surroundings?—Yes, by division into three districts. Then following that division we have for the architects staff a division of surveyors and assistants for each district, and dealing directly with each commissioner.

28,009. You have given me an instructive paper which has been circulated among my colleagues and I will follow the general outline of it. You divide the duties of the Board into four classes; please mention the classes?—Duties based on engineering works, duties based on architectural works, finance duties including loans, and miscellaneous administrative, consultative, or advisory duties.

29,010. You enumerate here under 14 heads the duties based on engineering works; could you not

group them broadly under Harbours, Piers, Drainage, and Railways?—Generally speaking, that is so.

29,011. Each commissioner has these subjects fully represented in his jurisdiction?—Yes. I gave them here in detail because, generally speaking, every separate item is under a different Act of Parliament.

29,012. It is very useful to have them in detail. Passing on to duties based on architectural works, those are buildings of some kind or description?—Yes.

29,013. Do you deal with roads at all?—We have roads of our own in the Phoenix Park, a fair mileage, but outside that we don't deal with roads, unless that a local authority might come to us for a loan for making roads.

29,014. But it would not be a proper description to class any part of your work as Roads and Buildings?—It would not.

29,015. There are no main trunk roads kept up by the Government in Ireland?—No. In the early years of the commissioners, in the early 'thirties, I see from reading the old reports, that they had a good deal to do with the making of new roads.

29,016. Coming to your financial duties. You make loans in Ireland for all manner of purposes?—Yes.

29,017. You make loans to public authorities in connection with roads and bridges, and you make loans for drainage and land improvement, all under separate Acts of Parliament?—Yes. When I say we make loans for all classes of purposes, I mean purposes based on works. We don't make loans for industries.

29,018. You don't make reproductive loans?—One time we had a small fund which was managed by us and which has since been transferred to the Congested Districts Board. It was called the Irish Reproductive Loan Fund. That we have ceased to deal with.

29,019. Will your loans for drainage come under loans secured by undertakings?—No. They come under loans secured on lands. That is Class III.

29,020. What kind of loans are those secured on undertakings?—Loans for railways, harbours, docks, labourers' dwellings in towns, the housing of the working classes, i.e. where buildings are put up by private owners, or public companies as distinguished from localities.

29,021. Before you make the loan you inspect the site and generally you form some sort of conception as to whether it is desirable to make the loan or not?—Certainly. In some cases, of course, we make loans to existing harbour boards whose financial position is perfectly well known, and it is a mere matter of seeing what the receipts are and the surplus revenue to judge what the security is, but in the case of a new railway or the extension of an existing line, we should have a very careful inquiry both by an engineer and a specially appointed railway expert.

29,022. Then when application is made to you, say for a loan of 100,000*l.* and when you have made your inquiries, is it within your power to say, "No; we don't think we can lend 100,000*l.* on this; we will lend "75,000*l.*"; is that a usual procedure of yours?—It has not happened in my experience because loans for railways are of infrequent occurrence now. The only one I remember in recent years, is one to the Cork,

25 February 1913.]

MR. GEORGE STEVENSON, C.B., C.V.O.

[Continued.]

Blackrock and Passage Railway Company, when we were satisfied after inspection that we had security for it. I think, however, it would be quite competent for us to say, "We don't see security for 100,000*l.* We see security for 60,000*l.* or for 70,000*l.* and we will offer you that."

29,023. If that be not your usual practice in regard to loans secured on undertakings, would it be a more usual practice with you regarding loans for such purposes as drainage?—Drainage loans are of different kinds. There are loans to drainage boards formed to carry out large works in new districts, where the security is the agricultural improvement that will be derived from the work, and we have an estimate made by an inspecting engineer, and we also put one of our own experienced land inspectors on it, and unless the estimated improvements from the work is more than sufficient to cover the statutory rate charged on the money that the district will have to pay, that is, an annuity of 6*l.* 10*s.* per cent. for 22 years or of 5*l.* per cent. for 35 years, the case does not proceed.

29,024. You say unless the income from the improvement is likely to reach a certain sum you exercise your judgment in keeping down the amount of the loan. Is the loan secured by mortgage on all the lands or is it merely secured upon the increasing value which may be expected to accrue?—It is now, under the Act of 1863, secured on any lands of the same proprietor in the same townland. It is not solely on the little plot that may be improved.

29,025. It is a general mortgage on the property?—Yes, in the same townland.

29,026. Are there any such loans as that now being made?—Yes, generally speaking for comparatively small amounts, that is to say, running from 700*l.* to 8,500*l.* In the old times loans sometimes ran up to a 100,000*l.* or more.

29,027. But in the old days you had considerable landlords clubbing together?—And in the old times the charge was on the landlord, and we collected the money due to us from them generally in large amounts.

29,028. Has that kind of loan fallen into desuetude since the land purchase scheme has come into operation?—Except for some half dozen instances within the last few years.

29,029. Of course the whole of the land of Ireland has not been sold yet, but are they landlords mostly who apply for loans of that description. I want to bring into contradistinction loans given to landlords and loans given to tenants?—Under the Drainage Acts no loans were given to tenants at all. They were given entirely on the landlord's interest.

29,030. Would not they be given to the tenants now if for other reasons you were satisfied?—Under the Land Purchase scheme the tenant now would be a proprietor, and he is an owner and comes in as a landlord. But I should mention that in an Act in 1892 power was given under certain conditions to substitute tenants for landlords where the landlord did not want to agree, but the tenant wanted to agree and was willing to take on the burden of the landlord. That has not been of very frequent application.

29,031. Many of those loans were for the drainage of a large tract of country. You remember the Suck?—I have good reason.

29,032. In connection with the overflowing of the Suck and the water-logging of the country, you know the landlords clubbed together, made out their scheme, presented it to you, and borrowed a large amount of money. Is it possible in a country where land purchase has largely extended to proceed still in that way, seeing that for one landlord whom you had in the old days you may have 500 tenant purchasers now?—Yes, there are so many land purchasers that it is extremely difficult for them to unite on these matters.

29,033. Is there any legal provision by which tenant purchasers can borrow a drainage loan from the Board of Works on condition that if the Government grants the loan, it will itself carry out the whole drainage project at the tenant's expense and charge the land benefited with the interest and sinking fund on the loan?—No, there is no provision for that at present.

29,034. Do you think it would be desirable that some such provision as that should be made, having regard to the enormous extent to which inundation and water-logging goes on throughout the river valleys of Ireland?—That would be a reversion to the original scheme of land drainage in Ireland where the Board of Works carried out the work themselves and imposed a charge on the landlords.

29,035. Precisely?—Then in 1863 that system was given up and the initiation and the carrying out was left to persons locally interested. What has been proposed in recent discussions about drainage of lands in Ireland is that local government bodies should be allowed to take the initiative and impose the charge as an addition to the local rates.

29,036. Does it not seem to you that with this enormous multiplication of tenant proprietors in Ireland any large scheme of drainage, especially of main drainage, which proceeds upon any other principle than the execution of the work by an official authority is unlikely to succeed. In the first place, you will hardly ever get unanimity?—You will never get any large schemes. As regards the charging of annuities on tenants, the River Suck was a special case. It was originally started on the basis of the landlords paying the charge, but as it went on special legislation was introduced, charging on the occupiers the proportion according to the improvement of what was called the occupiers' annuity, which was never to exceed the estimated improvement on that particular land. The result was in the end the expenditure was divided almost equally between the landlords and tenants, and the landlords' expenditure was entirely infructuous, and about 2,000 occupiers were charged; and, as showing the complications that the mere numbers of such people lead to, I had to hold the inquiry as to the apportionment of the charge among these occupiers; 1,100 of them appeared and gave evidence, and I had to inspect and practically to walk the whole River Suck district, about 56 miles long, wherever there was a question of fact, to see for myself. Of course that took me a month on the inquiry and a long time after it.

29,037. Would you be inclined to agree to this proposition that the drainage of the great river valleys in Ireland is very necessary?—Yes.

29,038. And that a main drainage scheme commensurate with the evil that exists cannot be carried out by agreement among the tenant purchasers, and can only be effectually carried out by the Government?—Or, I should add, by some representative body.

29,039. Some great representative body?—Yes.

29,040. My own experience in India points that way altogether. What are the loans you make on rates?—Generally speaking, either to the county councils for county works or to other local bodies for public health.

29,041. From what source do you get your funds for loans?—From the Local Loans Fund, which gets its money from the National Debt Commissioners by the issue of Local Loans stock.

29,042. Are these the Local Loans Commissioners whom we examined in London?—No, you examined the Public Works Loan Commissioners; they are a body corresponding to us in our lending capacity, but they are confined now to Great Britain.

29,043. Do you get your money through the Treasury?—We are authorised by Act of Parliament each year to draw a certain amount from the Local Loans Fund, and then when we want money write to the National Debt Commissioners.

29,044. What is the Local Loans Fund?—It is a fund established by Mr. Goschen, as he then was, when he was Chancellor of the Exchequer, to separate local loan finance entirely from the finance of the year, before that there was a great deal of confusion between receipts from loans and other receipts. He established a separate fund which was created with all the existing loans then outstanding, and there was power given to issue local loans stock to the public to raise the money, and we are the agents of that fund in Ireland.

29,045. Who are the administrators of the fund, are there commissioners?—No, the National Debt Commissioners finance it. The Public Works Loans Board in London would be supplied in precisely the same way.

25 February 1913.]

Mr. GEORGE STEVENSON, C.B., C.V.O.

[Continued.]

29,046. What you have said gives us in broad outline a statement of the functions you discharge. We come now to your statistical table showing the staff by which you discharge them. After the commissioners the secretary is at the head of your office?—Yes.

29,047. He entered the Service as a third-class clerk in 1868 after limited competition, and was promoted from a first class clerkship. I don't understand what you mean by promoted from a first class clerkship?—That has reference to an old classification. The secretary is the sole survivor of the pre-Playfair system.

29,048. Your accountant entered the Service as a lower division clerk after open competition and has been promoted?—Yes.

29,049. Your assistant secretary was appointed under clause 7. Was he brought from outside?—Yes, he was brought from outside in 1896. There was a vacancy in the post of chairman. The Government was about to enter on some active railway schemes and appointed Mr. Thomas Robertson, general manager of the Great Northern Railway, to be chairman; and in view of the possible development of railway work and the necessity of somebody conversant with the technical details to advise, Mr. Shanahan was taken from the Great Northern Railway Company and appointed assistant secretary.

29,050. Mr. Robertson, in fact, brought him with him?—He came shortly after Mr. Robertson was appointed.

29,051. And he has remained?—Yes.

29,052. In Group III., you have a clerical assistant, engineer's department, also appointed under clause 7. Was he taken from outside?—Yes.

29,053. Was he appointed in your time?—Yes. He was a technical assistant with experience of contractors' accounts and works, and general commercial and banking experience too.

29,054. Could you not have found a man suitable for the post in the office and promoted him?—No, I think not.

29,055. Then you have a "cost-of-works" clerk in the engineer's department. He was promoted from a registered copyist, and entered after open competition. What is the style of competition you have for copyists?—That would date some time back.

29,056. Have you copyists any longer?—No.

29,057. It is a survival from some early stage of organisation?—At that time the engineering and architect's branches had clerks assigned to them more or less outside the secretariat, and they were supposed to be doing this semi-technical work. That was the origin of this type cost-of-works clerk. He was supposed to be occupied in keeping the accounts of the cost of works as they progressed.

29,058. What is meant by the three heads of divisions?—In the accountant's department the word "division" is used for "sub-department." In the secretary's departments we don't use the word "division"; we have a staff clerk at the head of each branch.

29,059. I am striving to see if I can identify your organisation with anything that I have seen elsewhere. Your organisation seems to have gradually grown up on a plan of your own?—It is based on the work to be done.

29,060. Do you start on the basis of a first division or a second division? Do you provide your staff clerks and other superior officers from the second division on promotion?—Yes, I should say that it is entirely a second division office clerically.

29,061. The first division clerk is not here at all, there is no trace of him?—There is no first division in the office. There are staff clerks and what are called heads of divisions.

29,062. Were these heads of divisions promoted from second division clerks?—All.

29,063. They all entered the public service as lower division clerks after open competition. Do you mean by lower division clerks what we call second division now?—Yes.

29,064. Would you regard these heads of divisions as staff clerks?—Yes.

29,065. This Group IV. represents your accountant's section, and the three heads of divisions that are shown

in this statement are the staff clerks at the head of each branch of the accountant's department?—That is so.

29,066. In Group V. your staff clerks were all promoted from the second division?—Yes.

29,067. May one of those promoted second division men hope to become the Assistant Secretary?—The post of Assistant Secretary is marked by the Treasury to be reconsidered on a vacancy.

29,068. As matters stand, may a second division man in your office hope to get promotion to any higher grade appointment in the office, not being of a technical character?—I think he may reasonably hope to have a chance of going to the secretariat. The Treasury would not be bound to appoint one in the office, but he would certainly have a chance.

29,069. In the same way you get your assistant clerks by examination from the boy clerks?—We get them from the Civil Service Commissioners in the usual way.

29,070. What is your opinion regarding boy clerks? Do you think they serve a useful purpose in your office?—I think they are troublesome to train. Personally, I don't see their work very closely. I occasionally come across it, but I should say that a boy cannot do anything like a man's work. He has to be trained, and then in three years or so he goes out, and unless he comes back as an assistant clerk or a second division clerk all his training is wasted.

29,071. Do you think that the system by which he goes out of the Government's service at the age of 18, unless he previously gets a permanent appointment, is a bad system, and that it would be better to recruit for permanent service at a somewhat older age than you do now?—May I speak personally, and not as representing the Board? I think it a great hardship. I read the evidence which has been given before the Commission, and I can see the extent of the hardship. I had no idea there were such numbers.

29,072. Have you any personal experience?—I have seen cases of hardship of boys having to go out.

29,073. As far as the work of the office is concerned, do you think it would be more satisfactory if the boys, instead of being recruited at the age of 15 or 16, were recruited later for permanent service and fused or amalgamated with the assistant clerks class?—I think that would be very desirable. What we have to guard against is allowing a standard of education which would not be suitable for doing the better work.

29,074. That is a difficulty. If such a system were adopted and carried out would you be disposed to adhere to the existing rule that promotion from the lowest grade of clerks, the assistant clerks, to the next or second division, should be of rare occurrence and only for exceptional merit, or would you be inclined to make a wider ladder?—It occurred to me that if you could have a boy of thoroughly good primary school education to begin with, and then a qualifying examination for the combined class, and after approved service and showing he was fit for the clerical work of the Government, which is rather distinct from ordinary clerical work—if followed by a subsequent examination in higher subjects, it would be quite possible for such a clerk to continue his studies and improve his education, and so get on and qualify himself for higher promotion.

29,075. You would recruit clerks at the age of 16 or 17 for the lowest grade of clerkship in the office. Recruited at such an age, your clerk recruit would be a person who had passed not only through the primary stage of education, but through a considerable portion of the secondary stage?—Yes.

29,076. And therefore you would get into the lowest class of the service a better educated boy?—Yes.

29,077. Then you would give that better educated boy a permanent tenure and encourage him to look, if he showed himself exceptionally meritorious, to promotion to a higher class. Do you think you would thereby get the stamp of clerk you want?—I should doubt whether you would get the educational test. I should like to have the additional further educational test.

29,078. Do you think it is the part of the Government after they have recruited boys for this sort of service to educate them for the higher offices?—No, but

25 February 1913.]

Mr. GEORGE STEVENSON, C.B., C.V.O.

[Continued.]

I think the Government might require the boy to supply the better education.

29,079. The higher grade—the second division—is recruited by a higher examination for which a boy must have completed the secondary course. That is a very different thing from the course by which a boy is recruited for the lower class. If you promote boys from the lowest grade in large numbers to the second division you will have a second division which is educationally unfit?—That is the danger, certainly.

29,080. Do you agree that the main entrance to the second division must always be by examination, and not by special promotion from a lower grade?—Yes, I agree with that.

29,081. Well, let us pass on. All your surveyors come to you with professional qualifications?—Yes.

29,082. How do you recruit them?—They used to be recruited by Civil Service competitive examination.

29,083. In professional subjects?—Yes. Then on particular occasions we wanted a couple and the examination was advertised and nobody appeared. The Civil Service Commission could not supply us with candidates.

29,084. What was the reason of that?—I don't know. We then applied to the Treasury, and said "If you cannot supply us we must supply ourselves." Since then we have adopted a system under which we advertise vacancies in the Irish papers and the technical papers in England and elsewhere, stating the qualifications we want, and inviting people to apply for nomination, and send in their testimonials, diplomas, etc. Out of that we get a considerable number of applicants. Those are all carefully considered, and we nominate generally five or six for each vacancy for a competitive examination conducted by the Civil Service Commissioners.

29,085. Do they conduct it here in Ireland?—No, in London. It is open to people coming from England and Scotland, and those who are examined apply to us from all parts.

29,086. Are all your surveyors and assistant surveyors now recruited in that way by competitive examination?—Except on a sudden vacancy or a sudden increase of staff, when we have had to take single men on our own responsibility and present them for certificates under clause 7.

29,087. The general rule is that your expert officers, your surveyors at all events, are recruited by competitive examination among men having these professional qualifications?—Yes.

29,088. Subject to the exception that you supply yourselves when urgent necessity arises?—Yes, only then.

29,089. That covers the architectural staff. Now about the engineering staff?—The engineering staff of the Board has only three engineers, an engineer and two assistants. Those were all appointed separately without competitive examination.

29,090. On their certificates?—On their professional records, and in the case of the two assistants after considerable training and experience on the actual work of the Board of Works. One, for instance, was in charge of fishery piers and harbours for some years. There is another branch of technical officer called the land loans inspectors.

29,091. Are the draftsmen appointed by competitive examination?—Two of them were. At present we select our own. For future entries there will be a qualifying examination.

29,092. You select them first and submit them to a qualifying examination?—Yes, if a vacancy should arise.

29,093. Would there be any difficulty in applying to them the same rule that you apply to the assistant surveyors, that is, issue a notification inviting those who have the requisite qualifications to present themselves for a competitive examination?—We think the other simpler, quicker, and more direct.

29,094. Very likely; but public opinion may demand that there should be a fair field and no favour and nothing like nomination?—Of course, if nomination includes the idea of favouritism, then, I think, it is objectionable; but speaking as the head of a depart-

ment I should say that our objection is to having to appoint people at all, the trouble and difficulty of selecting people.

29,095. Would not you get rid of that difficulty and trouble and save yourself a lot of worry if you were, for example, to say: there are vacancies for three draftsmen, and a competition would be held on such and such a day between candidates who possess the requisite qualifications (*mentioning the qualifications*)?—I think we would have to adopt the same plan as with the assistant surveyors. We should have to select them beforehand. A mere examination would not be sufficient. A draftsman has to deal with a large body of surveyors, and he must also be capable of taking hints and instructions and sketches.

29,096. Do you say the surveyors are nominated and that there is a limited competition among the nominated men?—Yes, there is a competition generally between four or five men for each vacancy.

29,097. You think that is better than open competition?—I think so. Every nominated man has to be inspected either by a member of the Board, or by the secretary to see whether on the view he is suitable for the work he would have to do. Then we satisfy ourselves generally from the professional record that he is able for the work, and then by competition among the men who are selected we get the best man.

29,098. You will probably admit that system is not free from the possible objection that only those are nominated whom the department likes. You understand that my remarks are perfectly impersonal?—I see the point, but I think the advantages of the system outweigh that objection. Our surveyors have to deal with contractors and managers of national schools all over Ireland, and with representatives of other departments all over the country, and we want a man who will be able to represent us.

29,099. A great deal of pressure may be brought to bear upon the men having the power of nomination. We have had it represented to us by many witnesses that pressure is brought to bear upon them to procure either a nomination or an appointment?—I can understand that where there is a direct appointment, but I think where a man has only one chance out of six there is not the same amount of pressure to get the nomination, and it has less effect.

29,100. That system of "limited competition" was one of the phases through which the open competition system struggled into its present position in public estimation?—We only have limited competition for these professional posts, where besides the professional qualifications a great deal depends on the personal qualifications of the man.

29,101. Exactly the same thing may be said of competition generally. We are told that the great objection to open competition is that it may tell you what a man knows, but it cannot tell you what he is capable of doing, still less what he will be capable of doing 10 or 15 years hence, or how he will turn out, whether he will be a good, all-round, practical man of business or merely a book-worm?—I think the personal inspection gives us a very good security that we will get the right sort of man for our work. We cannot afford to nominate an unsuitable man.

29,102. Well, let us pass on. The land loan inspector is selected in the same way as the principal surveyor, that is to say, by limited competition?—He is nominated for a qualifying examination.

29,103. Is there a different system of selection applied to them?—Yes.

29,104. How are they selected?—They are selected after a publication of the vacancy, and an examination of all the applicants' certificates and an inspection by the Board.

29,105. What sort of an examination?—An examination of the professional record.

29,106. What do you require in these land loan inspectors?—General engineering training combined with some knowledge of farming and farm buildings, and some agricultural chemistry.

29,107. Is not it possible that you would get these men from the College of Science? They pass through their courses and get their certificates in natural science,

25 February 1913.]

• Mr. GEORGE STEVENSON, C.B., C.V.O.

[Continued.]

or whatever it may be. Don't you think they would give you very good material from which to choose?—I have no doubt we could get the professional qualifications, but there again we are face to face with the difficulty of finding a man who is suitable for dealing with the people he will have to deal with. These men have to go on farms of any size, farmed by men of different classes, and have to be able to deal with them firmly and courteously, and at the same time keep their heads.

29,108. I inspected the College of Science yesterday with Mr. Shipley and saw there some clever-looking, respectable young men, and was told they were the sons of gentlemen farmers who had been sent up to the College of Science to get a professional education in matters connected with agriculture. I am only thinking that they would be of the class you might select from?—The work of these men has to do with inspecting the security for making loans, and on their report we must largely depend as to whether the works are suitable, and as to the value of the security.

29,109. (*Mr. Boutwood.*) Does that mean that you want a practical qualification rather than a merely academic one?—Yes, as far as we can get it. Of course, we cannot expect to get a trained farmer, because he would not have the engineering knowledge. We must get some one who has had acquaintance with land, either by doing a little farming himself or from having had opportunities of observing the farming operations of others.

29,110. (*Chairman.*) You make loans for land improvements?—Yes.

29,111. And loans for drainage, and all these agricultural loans. What amount do you lend in the year in that way?—In the year ended 31st March 1912, we lent for improvement of lands, including the second kind of drainage which I omitted to mention before, that is a minor drainage as distinguished from arterial drainage, a sum of 58,000*l.* This was advanced under the Land Improvement Act to owners of land, including tenant purchasers, and 45,000*l.* was advanced under the Land Law Act of 1881, which covers loans to occupiers, and in our annual report we have outstanding 8,153 loans under the Land Improvements Act, and 12,572 loans under the Land Law Act.

29,112. What would be the value of these?—The total outstanding, which is not the original amount, was 742,534*l.* under the Land Improvements Act, and 481,437*l.* under the Land Law Act.

29,113. Have you read the Government of Ireland Bill which passed through the House of Commons and was rejected by the House of Lords?—Not the final edition of it.

29,114. Could you tell me whether there is a provision made in it for providing funds for loans of this description?—My general impression is that the issue of loans by the Treasury through us would cease in Ireland on the passing of the Act.

29,115. If that be so, no loans could be made in Ireland unless the new Irish Government put itself in possession of funds from which to make them?—Yes.

29,116. It would have to borrow the money?—Yes.

29,117. It would be a serious thing in the interests of Ireland if these loans were suddenly checked?—I think it would be a great loss to the agricultural community not to be able to get this money, because not merely is the money lent, but our inspectors are advisers and see that the work of building, and so on, is thoroughly well done.

29,118. Are the loans punctually repaid, or have you many bad debts?—We have a great deal of unpunctuality and a good deal of arrears.

29,119. May I sum up? The impression left on my mind by your evidence is that your Board's functions are very various, that they confer great advantages on the country generally, that for the performance of these functions your office is based on the second division, and that the second division clerks may look forward in the ordinary course to promotion to any appointment under the commissionerships; that in several instances men from outside have been brought into the office over the heads of the existing staff; and that your expert appointments are made on the basis of a limited competition. I think that is the gist of

what you have said?—Yes. About the second division clerks I might give an interesting account. Since the year 1876 we have had 96 second division clerks appointed to the office. Of these 18 have resigned or been pensioned, or died, 21 have left for other departments, either by transfer or to take up better posts, and we have 57 left, one of them is a head of a department, that is the accountant, 14 have staff posts, 7 have minor staff posts, 3 of the old higher grade second division have risen to 350*l.* a year, and 32 are on the ordinary scale. I mention that to show the career which the second division clerk coming into our office has before him, and that he has a chance of rising in the office.

29,120. (*Mr. Boutwood.*) You said something I did not catch when you were talking about the River Suck—about the landlord's expenditure being unproductive?—Infructuous.

29,121. What did you mean?—I meant that the whole estimated annual benefit derived from the work amounted to so much, and it fell short of the annual cost—interest and sinking fund—by the amount of the landlord's contribution.

29,122. I see. There is another thing which I do not quite understand: miscellaneous loans to non-vested schools and training colleges. What does "non-vested" mean?—There are three classes of schools in Ireland—vested schools, that is, vested in the Commissioners of National Education, and those vested in local trustees, and there is the third class, non-vested, that is, practically owned by private persons who have undertaken the expense of building, and had endowed the schools. The schools vested in the Education Board and maintained as public buildings are nearly 800 in number. The schools vested in trustees are maintained by the trustees, and the non-vested schools are maintained by private contributions in some way we know nothing about. The training colleges, of course, are different; they are for training national school teachers.

29,123. Is the examination for your surveyors a competitive examination in technical subjects?—Yes.

29,124. In technical subjects only?—I have no doubt there are general subjects, such as English composition. They have to satisfy the Civil Service Commissioners in English composition and drawing; all the other subjects are technical.

29,125. I do not understand about your land loans inspectors. Is the selection in this case followed by inspection?—Oh, yes, they are put to a very severe scrutiny and practical test. After two years' service, if we are satisfied they are fit for their work they are presented to the Civil Service Commissioners for strict examination in the subjects special to their class.

29,126. Is that competitive or qualifying?—Qualifying.

29,127. Their period of two years is one of probation?—Yes.

29,128. Is the work of your office at all fluctuating?—It fluctuates in different subjects, but apart from large schemes of government, such as railway legislation, and so on, I should say, on the whole, it presents a very fair average amount and quantity taking it together.

29,129. Is that the reason why you have not many temporary clerks?—Some of the offices whose representatives we have examined seemed to have a lot of temporary clerks. As far as I can make out, you have only two temporary assistant drainage clerks?—Yes, only two.

29,130. Why are they temporary?—Because that works fluctuates in that department. At the present time it has increased owing to land purchase operations; One of the duties of this branch is to apportion between the different occupiers purchasing their holdings any drainage maintenance charges upon the land before the sale. The landlord may have had one drainage charge upon a large area of ground; that has to be divided and apportioned between the purchasers, and that has to be done by this drainage department.

29,131. That sounds as if it may go on for years and years?—Well, yes; it may.

25 February 1913.]

MR. GEORGE STEVENSON, C.B., C.V.O. °

[Continued.]

29,132. Well, if that is so, why should they be temporary?—They were taken on at a time when we did not know how long the work would last.

29,133. (*Mr. Graham Wallas.*) The leaders of your Board meet from time to time to do its work in its collective capacity as a Board? That is to say, papers are circulated, and the Board comes to a decision?—Yes, once a week we have a meeting.

29,134. In case of divergence of opinion on a matter which is the collective concern of the Board, can a vote be taken?—In my experience, I have known of no instance when a vote was necessary. The thing is done either by consent or, perhaps, after modifications are made. I have never known a division necessitating a vote.

29,135. There is no binding rule, either of law or publicly accepted custom, which would prevent any two members of the Board outvoting the third?—No.

29,136. And the chairman of the Board, in these circumstances, if there was a vote, would only have one vote as against the other two?—The practical way of working would be this. Theoretically, any commissioner who is in a minority, supposing there was such an acute difference of opinion as to necessitating a vote, would have the right to go to the Treasury and state his case, but I think that is very unlikely to happen. If the chairman was outvoted, he would certainly appeal to the Chancellor of the Exchequer.

29,137. Your are aware that in many of these departments in England, such, for instance, as the Board of Trade, every member was equally responsible, but as time went on, a division became very unusual, and, finally, it was frankly agreed that the principal member of the Board, the chairman or president, after receiving advice, was to be responsible in the name of the whole Board?—Yes, generally speaking, I agree, but in the case of the Board of Trade it was not so much that they did not agree, as that the members did not attend.

29,138. Yes, but you have had considerable experience now of one system in which you have an avowed chairman who acts, after receiving the advice of his colleagues, and is publicly and definitely responsible, and of another where the Board retains its legal power to vote, although voting is not usual. I should like to ask you, have you formed any opinion as to whether that, or the English system of having one responsible head, is the better plan?—The comparison is scarcely fair, as a comparison of the two kinds of Boards. The members of the English Boards, except the chief man, have no duties to perform, and no familiarity with the work. In our Board, each member of the Board has, every day and all day, the duties and business of the department to look after, and he is daily in consultation on matters with his colleagues, and in addition there is the weekly Board meeting at which matters are dealt with which require to be dealt with by the Board. We have occasionally to produce a definite order of the Board in courts of justice.

29,139. I am comparing your Board, not with the more or less imaginary Board of Trade, of which, I believe, the Archbishop of Canterbury is a member, but with the system where the permanent non-political chief of the Board of Trade is the highest official and the head of a definite hierarchy in constant consultation. Your Board is at least nominally a Board of persons of equal power, who can outvote each other?—Yes, you would like my opinion upon the general question.

29,140. Yes, on the general question?—Historically, it was carefully considered by what was called the Crichton Commission in 1878, whether there should be a Board of Works. That was a commission which was appointed in consequence of complaints about certain actions of the Board of Works, and it was a very thorough and quite exhaustive inquiry. They came to the conclusion, which they expressed in their report, that, considering the whole question, in a case like the Board of Works, with all its varied duties, some of which are not great in quantity although important in quality, dealing with all classes of people in Ireland, the Board was best organised when it was a working Board such as ours is, and, I presume, the Treasury accepted that view, because they have never

taken any action to change the constitution of the Board, although they might have had the opportunity in 1883, when General Sankey was appointed, shortly after this report. Again, in 1891, under the Age Clauses of the Civil Service Order in Council, a unique opportunity occurred of making any change they thought desirable, because at that time two members of the Board retired within a short interval, and there was only the chairman left, and if the Treasury wanted to change to a one-man system, that was the time at which they could have done so. There have been two other appointments as chairman since, and two appointments of commissioners, and, therefore, I presume that the Treasury satisfied themselves the Board is a good organisation for the work we have to do. If I may go on to other points, I think that in Ireland people like to be able to get at a responsible head, and to be able to do business with him, and that power is certainly given by the existence of our Board. For instance, if we have business with a harbour board, or a railway company, or a public body, one of the commissioners would go down and interview the members of the body, and deal with them on terms of equality, as responsible persons, and would largely, if not entirely, decide what is to be done.

29,141. (*Chairman.*) On the spot?—Yes, on the spot, quickly. I negotiated, for instance, as you will remember, a grant to the Tralee and Dingle Railway, which had to be negotiated on the spot, with representatives of the county council and local bodies and persons interested. I spent two days there, and, by interview, settled the whole thing. The terms of the Order in Council were settled in my sitting-room in the hotel. I do not think that would be practical under the other system. A single head of a Board would, I think, scarcely ever be able to get away. He would have Treasury business, parliamentary business, and the decision of a number of questions, and very important questions in his office, and he would be always tied there. The people under him would be subordinate, and I do not think the public would feel the same confidence when dealing with them, as when dealing with the members of our Board.

29,142. When you went down on that occasion—and that is only a type of many similar occasions—you made quite sure your views were acquiesced in by your colleagues?—Oh, certainly.

29,143. (*Mr. Graham Wallas.*) Can you see no objection, from the point of view of public and definite responsibility, to a corporate responsibility of three men who are equally responsible in the eyes of the public for a corporate decision, but who, as a matter of fact, never put such matters to the vote?—We settle matters by agreement.

29,144. (*Chairman.*) Your orders would be orders of the Board in the case you mentioned?—Yes, I did not do anything which would not be confirmed formally by the Board.

29,145. (*Mr. Graham Wallas.*) You deal directly with the Treasury, and not through the Chief Secretary?—Yes, and there I come to another branch of the same subject. In dealing with the Treasury we have to act very carefully, and to consider reports on a great variety of subjects. I think it is a protection to the Treasury and to the Irish Government, when they get these reports, to know that they are the considered reports of three men who carefully discuss them, instead of being the opinion of one man. I should also like to mention that we have a very large professional staff. Some of these men are highly paid. I am quite certain, without undervaluing an organisation such as you describe, that professional men would be much more difficult to work with under it than under the present system, by which they come to the commissioners and discuss things with them. Where there are professional executive officers and clerical secretarial work there is always a tendency to a little friction between the control of the secretarial and the professional men. That is minimised by our present system, where the professional officers are dealing with members of the Board. Then, again, it seems to me, that a Board of three men is a great protection to the staff, and that the claims and merits of men are much more likely to be fairly dealt with when you have

25 February 1913.]

Mr. GEORGE STEVENSON, C.B., C.V.O.

[Continued.]

the knowledge that three men will take them into account before a decision is come to. I am, of course, now only talking of my own experience of the Board of Works, which is a comparatively small department, and where we are able to know a good deal about everything that goes on. I am not thinking of other departments.

29.146. (*Chairman.*) Neither. I take it, are you desirous of suggesting that, although a Board may usefully work in the circumstances you have now detailed, a similar Board would be useful for the control, for instance, of the Department of Education?—No. I have nothing to do with any department except my own, with its peculiar circumstances.

29.147. (*Mr. Graham Wallis.*) Would the system work equally well if, instead of three members of the Board, you have seven?—I think it would be grossly extravagant to have seven.

29.148. Well, if you had a smaller number than seven?—I have not considered the point, because there have never been more than three. You must have a minimum of three, but at the present there is no need for more.

29.149. In your view, do you think you develop the second division system rather more highly than in other offices? You carry your men on, advancing them from the second division? Do you give your second division clerk any varying occupation or anything that would prepare him for higher administration?—It is almost impossible to prevent a man getting into a groove. If a man gets into the accountants' department, the effect on his mind is such that it is scarcely likely he will get out of it, but in each department we move a man about as far as possible so that he may get varying experience.

29.150. That is to say, a promising young man is moved about from each section to another?—Yes.

29.151. Do you send these men out of the office ever, to superintend or to see your work done in the country?—Not to supervise the work, but we occasionally send a clerk, for instance, with an inspector. When the inspector of the Shannon is making an inspection we may send a clerk to travel with him in order that he may see the work he is dealing with on paper in the office, and, similarly, if we are building a railway, we might take the opportunity of sending a clerk to go over the work when the engineer is making an inspection, so that he would know what it is he is dealing with on paper.

29.152. You consider it important, and you make it part of your duty, to train him for wider and larger duties?—Yes, we encourage heads of divisions, if there is a promising young man, who is looked upon as a good clerk, to take some opportunity of sending such a man to a personal interview with the Commissioner. A little encouragement goes a long way with young men.

29.153. You use direct verbal communication rather than written, as compared with most other offices?—Yes, with heads of divisions and staff clerks, and in communication with the Commissioners, taking down directions upon important questions as to the action to be taken in the writing of drafts and so on.

29.154. You have been for some time in the English Treasury?—Yes, 12 years.

29.155. There the higher work of the office is done by first division clerks, and in practice the second division clerks are not promoted at any time of their career?—I saw that statement.

29.156. Do you think, comparing your smaller office with the bigger ones, that if your office had been staffed upon that line of verbal communication, the general intellectual life in the office would have been made more difficult if the clerks had been divided by a line between the various divisions which in practice was never overstepped?—Yes, I think so.

29.157. If you had freer promotion from one section of the work to another, you would get easier intellectual intercourse in the office?—If there was the sub-division you mention, into two classes, probably then it would be difficult for the Commissioners to become acquainted with the men of the lower class. At present we see them in all grades, staff clerks and ordinary clerks, and know something more or less about every one of them.

29.158. You have one sharp division, that is the

division between assistant clerks and the second division clerks?—Yes.

29.159. Do you find it, in practice, in an office of your type, easy to separate the work of the second division clerk from the assistant clerk?—When there are two classes, it is always difficult to keep members of each class down to a particular work. I think in practice you cannot help overlapping, but our objects ever are to keep the assistant clerks to the business they are intended to do under the Order in Council.

29.160. (*Chairman.*) Have you seen their representation to us?—Yes.

29.161. Do you think that representation expresses a real grievance?—No.

29.162. (*Mr. Graham Wallis.*) Let us put it in two parts. They make certain statements of fact as to the overlapping of their work with second division clerks. Is that on the whole accurate?—After going through it carefully, I find there is only one case in which an assistant clerk is doing work also done in the same department by a second division clerk, and the explanation is, that the second division clerk in that department is a junior second division man, and he will not be kept very long at that particular work.

29.163. If you get a very promising assistant clerk, an unusually able young fellow, do you give him any chance of showing his ability in doing what would be second division work?—Of course, personally, I should not come across him, but the secretary or accountant would deal with him, but I should say he would get second division clerk's work if he showed special ability, and his case would be considered when the time came.

29.164. Your assistant clerks point out that at one time a very great amount of routine work was saved by the use of particular envelopes, that is transparent envelopes, through which the addresses could be seen. Do you happen to know where the suggestion of using them as a labour-saving device came from?—I am not sure. It might be that I myself got such an envelope from some business man down the country. I remember I did mention it, but whether that was the originating cause or not I do not know.

29.165. So far as you know the Government of the United Kingdom has no department by which these suggestions of labour-saving devices are made?—No.

29.166. (*Chairman.*) About the assistant clerks. You say you call to mind only one instance in which an assistant clerk is doing the work of a second division clerk, and you explain that?—I think I put it slightly different. I recall one case in which an assistant clerk and a second division clerk were doing similar work in the same branch. I am not saying that the work that second division clerk was doing was second division work, because he is a junior.

29.167. He may have been doing work that would fall to an assistant clerk, and not that the assistant clerk was doing second division clerk's work. Broadly speaking, would you say that the assistant clerks in your office are doing, and still do, the work that should be done by their grade?—Broadly speaking, I would say they are, and that where a second division clerk is doing similar work is where there is responsibility placed upon the second division clerk to check that work.

29.168. Of course, the work of both divisions may overlap?—It is almost impossible sometimes to prevent it.

29.169. Yes, it is almost impossible. There must be a point where one class of work dovetails into the other?—Yes.

29.170. (*Mr. Shipley.*) Was your department responsible for the building of the Royal College of Science?—Yes.

29.171. There is always divergence, so far as my experience goes, which is very considerable at Cambridge, when people are erecting a building, between the wish of those who are to use it to have more windows, and the wish of the builder to have a beautiful architectural façade. Had you any difficulty of that sort?—It was all settled in conference with the professors of the college and the representatives of the Department of Agriculture.

29.172. And did the professors get their way, or did

25 February 1913.]

Mr. GEORGE STEVENSON, C.B., C.V.O.

[Continued.]

the architect?—I never heard of any dispute or disagreement between them.

29,173. I will not press that point; I only wanted to know whether your Board acted as mediator?—The architect had already done similar work for South Kensington, and also had built a college, so he had great experience of work of that kind.

29,174. What is a glebe residence loan?—The loans for glebe residences are loans for private houses and a certain amount of land for clergymen of any denomination. They are made to owners or trustees, or to the person who takes the responsibility for the loan, on the security of the land and buildings, and also on the security of three sureties.

29,175. Of any denomination?—Oh, yes. I can give the exact figures if you like to have them. On the 31st of March there were 1,010 loans outstanding to Roman Catholic clergymen.

29,176. (*Chairman.*) To Roman Catholic clergymen?—Yes.

29,177. You provide for them also?—Yes, they are more than half. There are 323 for clergymen of the Protestant Church of Ireland, 232 to Presbyterians, and 105 to Wesleyans. The total amount advanced is 697,000*l.*, of which 440,000*l.* is for Catholic clergymen.

29,178. (*Mr. Shipley.*) You do not administer the sum that came when the Irish Church was disendowed?—At a certain time, under the Relief of Distress Act, 43rd Victoria—I think that was in 1880 or thereabouts—certain funds were advanced to us from the Irish Church surplus fund. We made loans under that Act for the relief of distress. These have since ceased to be made. Such loans are not made now, but we have in addition a sum of 50,000*l.* coming from the Irish Church Fund for the endowment and conservation of ancient national monuments taken over from the Church.

29,179. To some extent that is like Queen Anne's Bounty in England?—That is a new theory to me. I never heard that before.

29,180. You look after a good many of the fishery piers. Do you overlap at all with the Department of Agriculture?—No. We do not look after them in the sense of maintaining them, except the recent ones. The older procedure was, we built them with funds partly provided by the locality and partly by the Government, and when we built them we transferred them for maintenance to the grand juries or the county councils. Under a later Act of 1902, the Marine Works Act, we have not only to build them, but to maintain them. The Department of Agriculture occasionally builds them, though I do not know whether it has any power to transfer for maintenance as we have.

29,181. It struck me as a little odd?—It is; I think really that is a case of overlapping, and the Government sooner or later will have to deal with it; the Department does similar work.

29,182. If two Government departments in England overlap, that is, if two Government offices differ and could not be brought into line, the Cabinet would ultimately interfere. Is that the case here, or would the Lord Lieutenant or the Chief Secretary settle it?—Well, I think it would rest between the Chief Secretary and the Treasury.

29,183. It seems a little odd you should run one steamer from Sligo to Belmullet?—That was substituted for a railway. We had not funds for a railway, and this small service was substituted, and is running still. In fact the funds were not sufficient, and it was found that a railway would not maintain itself.

29,184. You do not find that there is any profound or widespread feeling of discontent in the office you preside over?—No, I think they are fairly content and united.

29,185. (*Miss Haldane.*) I want to know how you get the inspection of your multifarious work done. For instance, take the example of "checking, designing, fitting," and so on, schools up to a certain size. How do you get the necessary skill for this work which is done in England and Scotland by the Educational Department?—We have a large architectural staff, and we get the educational side from the Education Department, and the officers of the different departments work together.

29,186. You work in conjunction with the officers of the Education Department?—Yes. In the Post Office it is the same way.

29,187. Does that apply to prisons and criminal lunatic asylums?—Yes, always in conference with the medical superintendent, as regards the Dundrum Asylum; we do not deal with prisons.

29,188. You don't send your people to look after vested schools?—Oh yes, we maintain nearly 800 national schools; that is, keep up the fabric and make any necessary alterations. Then we do all the planning for the new schools.

29,189. Supposing a new school is to be erected, what happens?—The manager first of all provides a site, and when he has got the site the National Board asks us to inspect it as to suitability from every point of view. Then after that difficulty is got over he gets a grant if the Education Board approve of having the school for so many children. That grant is based upon what we call a standard plan; that is, there is a standard estimate for so many children, and if it is a school for which we have no standard plan the manager's architect prepares the plan, and this plan is criticised by our architect not merely from the professional point of view, but from his knowledge of educational requirements.

29,190. Is he an expert in educational requirements, which are very complicated?—I think so. Our architects are continually operating on plans, and they deal with national school inspection throughout the country.

29,191. The plans generally come before the Education Office?—Yes, the Education Office looks at them from their point of view.

29,192. Are they inspected by both departments?—Yes, ours from the point of view of the architectural and structural side, and the question of education from the Education Department point of view.

29,193. Your office sends them to the Education Department?—Or *vice versa*.

29,194. And they go back approved to the local manager?—Yes, and he carries them out through his architect.

29,195. You deal also with the fittings?—Yes, it is furniture.

29,196. Is that checked also by the Education Department?—We decide in conjunction with them.

29,197. You own property; does that mean working class property?—Oh, no; it is land and buildings and harbours.

29,198. Do you deal with dispensaries?—Yes, the Local Government Board there deal with the plans from the point of view of the suitability of the dispensary; we deal with the architectural and structural side.

29,199. What does this mean on page 13: "In recent years our responsibility has been greatly increased by the fair wages resolution and the National Health Insurance Act"?—Every one of our workmen (between 300 and 400) has to be insured, and we have had to answer elaborate questions arising on that.

29,200. Not more than they have to answer in any other employment?—Not more than other employers, but the difficulties of accounting in the Government departments are rather more than in the ordinary employers' case.

29,201. How many women do you employ altogether?—We have four typists in the secretary's office.

29,202. And a housekeeper?—Yes, a housekeeper and maid.

29,203. You employ one man typist on a higher rate. Does he do a different sort of work?—He is a survival; he is supposed to do a higher rate of speed; he would attend the Commissioners instead of the lady typists.

29,204. If he retired would you find a woman in his place?—I think probably, yes.

29,205. Do you find the work done satisfactorily by the women?—I don't see it; it is supervised by the secretary.

29,206. Are the typists appointed by nomination and subsequent examination?—Yes.

25 February 1913.]

Mr. GEORGE STEVENSON, C.B., C.V.O.

[Continued.]

29,207. Have you had any demand for promotion amongst the women?—No, not that I know of; of course, the whole scales of pay are arranged by the Treasury.

29,208. Do you think there is scope for a higher kind of work for women in your office?—I think it would be very difficult to work it in with the present staff. There are difficulties of accommodation, and so on. Then there is no work in our office like the postal order business and so on.

29,209. I was thinking of the higher work, and whether there would be work for more educated women of the higher clerical class?—No, I think not.

29,210. (Chairman.) You have 23 surveyors and assistant surveyors of buildings, but you have only one engineer and two assistant engineers on your staff?—Yes.

29,211. Are surveyors ever engaged in engineering work?—No, never.

29,212. If you had to construct a railway you would give the work out under contract?—Yes, but if we had to supervise it we would take on a resident engineer temporarily just the same as an ordinary man in the profession is taken on for a job.

29,213. What is the exact work of a surveyor?—The assistant surveyors are responsible for the proper maintenance of the buildings in their charge and the surveyors for doing what is called new work.

29,214. They do dovetail in that way into the engineers' department?—No, there are no new architectural works in the engineers' department.

29,215. That is the distinction. You have very much more in the way of maintenance of buildings than in the way of new works?—Yes, I think we have over 1,800 public buildings to maintain, and in that

number the College of Science would go as one, and the museum as one; over 700 of them are national schools, and there are post offices, coast guard stations, etc.

29,216. (Mr. Boutwood.) Who answers for you in Parliament?—The Financial Secretary to the Treasury.

29,217. (Mr. Graham Wallas.) I understand you provide furniture for schools, including the provision of infants' desks. Do you originate the design as to the size and shape, and having made them do you submit them to the Education Department?—I would not say that; we settle with the Board of Education the type of furniture that is required, and they approve, and then we are responsible to see that that type is supplied by the manufacturer. We don't settle it ourselves. The schools are built by the manager who is the contractor; it is our business to see that the fittings that are supplied are in accordance with what was agreed upon between us and the Board of Education.

29,218. Don't you think this is a somewhat clumsy arrangement, that the question of the shaping of desks for infants should originate with you, and should be submitted to the Board of Education?—It is not so formidable as it sounds. After all, one child is like another child, and when you settle the fittings for a child of a certain age or size, it would be the same all over the country.

29,219. Oh, but there has been a great deal of very serious medical controversy in England and America, as to the very serious effect on children's spines of desks?—That is for the Education department.

29,220. (Miss Haldane.) They would be the persons responsible for the badly designed furniture?—We are responsible for the construction.

Mr. F. J. DONNELLAN, Mr. BRENNAN and Mr. MALONEY, called and examined.

29,221. (Chairman.) Mr. Donnellan, you are an assistant clerk in the department of Board of Works?—Yes.

29,222. Did you join as a boy clerk?—Yes.

29,223. How long since did you pass your examination for assistant clerk?—It was in 1900.

29,224. Have you been the whole time in Ireland?—No, I spent seven years and four months in the Admiralty in London, and the remainder of the time at the Board of Works.

29,225. Were the two other gentlemen with you, also boy clerks?—Yes.

29,226. Did you, Mr. Maloney, serve any time in England?—(Mr. Maloney.) Yes, I served two years in the Custom House in Liverpool, and spent the rest of my time in the Board of Works.

29,227. How long?—Since the 28th of October 1901.

29,228. And you, Mr. Brennan?—(Mr. Brennan.) Since the 28th of October 1901.

29,229. You all have about the same service?—Yes.

29,230. Now, what is your complaint?—(Mr. Donnellan.) The real complaint is this, we claim that we are doing the same work as second division men in the same room with us, and we should get some promotion to the second division class, as we do practically the same work side by side.

29,231. You know the second division is ordinarily reached by an examination of a much more difficult kind than the examination you passed for the assistant clerkship?—I am aware of that, but there are some of the assistant clerks who got more marks in the second division examination than some of the men who succeeded in the second division.

29,232. Did you stand for the second division examination?—Yes.

29,233. You were not successful?—No.

29,234. But at your examination you got more marks than some of the successful second division men got in later examinations?—Yes.

29,235. The subsequent examination might have been more difficult than the preceding one?—That is so, my Lord.

29,236. At all events, you did not succeed, and now you are in the assistant clerks' class?—Yes.

29,237. And you can only get into the second division either by exceptionally good and effective work in your class, or by passing the second division examination if your age still permits you, which I suppose it does not?—It does not.

29,238. What do you mean by saying you are doing practically the same sort of work as the second division men? Do you mean to say you are doing the same sort of work as the generality of second division men, or of junior second division men?—In my room there are two second division men. One is a man of the higher grade of the second division, and the other is a man who is comparatively a junior. I claim, and my colleagues claim, that we do the same work as these men, one of them a junior but of considerable service.

29,239. How many years' service has the junior second division man to whom you refer?—In my room the junior second division man has about eleven years' service.

29,240. What sort of work do you do? Do you draft letters?—My own work is largely under the head of land law service and land improvement service; it is set out in our statement more completely. I have written some letters—I think I can claim that I have written some letters—but you will find it all on page 7 of our statement.

29,241. You write letters, let us say under the land law loans. Do you draft the letters that issue from the office in connection with that grant?—I have done so.

29,242. What was the nature of these letters?—Letters notifying a defaulting borrower that he is in arrear on his loan, and requesting him to make payment by a certain date.

29,243. As a rule, is not that form of letter a printed form with blanks that you have to fill in?—Oh no, that letter is not a printed letter.

29,244. I have a number of letter forms here before me; they are printed forms with blanks for figures, dates, and so on. Is it not the fact that the clerk has to fill in these particulars, and then issue the letters from the office?—That is a fact, my Lord, but the point I was trying to explain was, that I have written letters

25 February 1913.]

Mr. F. J. DONNELLAN, Mr. BRENNAN and Mr. MALONEY.

[Continued.]

requiring a certain amount of initiative, stating the fact that a borrower is in arrear with his instalments, and that he must pay by a certain day.

29,245. You get instructions upon which you write these letters?—Yes.

29,246. The instructions come down from the second division clerks?—They come from the staff officer.

29,247. And you submit your draft to the staff officer?—Yes.

29,248. Do you mean to say that the bulk of the work you do is exactly of the same description as the second division work? Do you mean to say that?—I do on my own service.

29,249. We have been assured by the head of your department that that is not the case. It is admitted that your work does in certain instances dovetail into the second division work. Work of every class must dovetail into the class above or below it. Where both join there is a blurred line; but the substantial work of your division is different from the substantial work of the higher division, otherwise the higher division would probably be abolished?—I don't altogether agree with that, that the two join, because this is work I have been doing daily for the land law loans, and it is done by a second division clerk indiscriminately with me; and, furthermore, upon the land improvement service, there are no assistant clerks borne upon the normal complement, therefore, it logically follows that second division men are doing on one service similar work to what assistant clerks are doing upon another service. I could go further, and state that in the land law loans division, a second division clerk is doing in one room similar work to what an assistant clerk is doing in another. In the land loans division the "even number" loans are dealt with in one room and the "odd number" loans in another, and the officers do similar work in each room, yet in one room there are two second division clerks, and in the other a second division clerk and an assistant clerk, so I maintain that the assistant clerk there is doing the same work as the second division clerk.

29,250. If the head of the office thinks that a particular sort of work is suitable for an assistant clerk, and may also be suitable for a second division clerk, may he not distribute it as he thinks fit amongst both?—Certainly; but I think that is an admission that the assistant clerk is as good a man as the second division man.

29,251. Even if that is so, does it entitle the assistant clerk to claim a higher rate of pay than the pay for which he contracted?—Well, it does; if two men do similar work, I think they are entitled to similar rates of pay.

29,252. (Mr. Boutwood.) Before you leave that point, can you tell me the length of service of the four clerks to whom you referred? You said there are two second division men in one room, and in another one second division man and one assistant clerk. Can you tell me the length of service of each?—The assistant clerk has 17 years' service and the three second division men have an average of 11 years' service, I think. I am certain of the assistant clerk's service.

29,253. (Chairman.) Have you anything else to say? I understand the gravamen of your complaint is that you are called upon to do work which is really second division work, and that being so, you ask to have an increase in pay. You doubtless know that you can only be promoted to the second division under the rules of the Civil Service. These lay down that an assistant clerk can only be promoted to the second division if he is of exceptional merit. I do not suggest that you are not of exceptional merit, but that is the sole ground at present upon which an assistant clerk can be promoted?—I would like to add this, that beside the matter of exceptional merit, the assistant clerk has also to pass a qualifying examination. If you get a man of exceptional merit he must also have the educational qualification.

29,254. The examination he passes is a qualifying test, and is not competitive?—No, it is qualifying. The contention I make is, that if this man has got to pass a qualifying examination he must naturally be of a

superior educational type, and at all events he must be up to the same level as the second division man.

29,255. (Miss Haldane.) It is not as hard an examination as the second division man has to pass. All you want is a qualifying examination?—A qualifying examination, which is usually in one or two subjects which the assistant clerk has not taken at his former examination. That forms part of the educational test which is required for the examination of assistant clerks on promotion.

29,256. (Chairman.) If you were chosen now, what two subjects would you take?—If I were chosen, I could claim exemption, because I have already got the qualifying examination.

29,257. What subjects did you take?—Indexing and précis writing, and a language—French.

29,258. (Miss Haldane.) How was the typist promoted? Did he enter with a qualifying examination?—I am not quite sure of the qualifying examination. I understand he has qualified in typing, but I am open to correction on that point.

29,259. I want to know the nature of the examination—you are not acquainted with it—which a typist would have to pass on entering. He would have to pass a qualifying examination?—You refer to the typists.

29,260. To the typist you speak of who was promoted?—He qualified in the subjects of assistant clerk, with the exception of "digesting"—I think typing was substituted.

29,261. (Mr. Graham Wallas.) You spoke of four clerks, both assistant clerks and second division clerks, working in two rooms, and you said of the second division clerks the average service was 11 years. I want to know the exact service of the junior second division clerk in the room where there were only two second division clerks working?—I think it is 11 years.

29,262. Is the service of the three of these second division clerks 11 years?—Yes; but there is this curious position, that one of them has recently been transferred from London, and, from the office point of view, he is the junior.

29,263. This man, doing work in one room done by an assistant clerk in another room, is a man who has just arrived from London, and he might be expected to have to learn the routine part of his job and of the work in which he is engaged on his arrival?—I think every man who comes into the Service, no matter in what position, must learn the routine of the office. I would like to add that that work has always been done by a second division man, that is, I mean the work in that room.

29,264. (Chairman.) While doing that work, does he supervise the assistant clerk?—There is no assistant clerk in that room. There are three men in each room. In one there is a staff officer and two second division men. In the other there is a staff officer, a second division man, and an assistant clerk. There is a senior second division man, of course, in each room.

29,265. (Mr. Boutwood.) About the middle of page 5 of your statement you say, as to the state of things in your office, that 22 second division clerks have been appointed, but there has been only one promotion of an assistant clerk since 1902?—Yes, that is the point we want to bring out. In the Irish Land Commission which is reputed to be the second worst office in Dublin—ours is the worst—there were 97 second division appointments created since 1903, and in that 97, 11 assistant clerks were promoted to the second division. In our office 22 second division clerks were appointed, and only one assistant clerk was promoted.

29,266. (Chairman.) But during that period did not the Land Commission create a new department? Was it not during that period—1903—that the Estates Commissioners were appointed and had to get together their establishment? They took the most promising of the assistant clerks and put them into the second division? Was not that so?—Yes, but I respectfully submit if you are appointing a new man in any of the divisions of our own office that a man of mature age with considerable service, in some cases 12, 13, 16, 17, years, would be more suitable for the work than a youngster.

25 February 1913.]

Mr. F. J. DONNELLAN, Mr. BRENNAN and Mr. MALONEY.

[Continued.]

29,267. In this particular instance what you suggest is that the senior men in your office might have been taken up to the Land Commission, but the fact that they were not so taken was your misfortune?—Taken from the Board of Works?

29,268. When the Land Commission was creating its new department in 1908, it looked about for second division clerks and it took some men from the assistant clerks and promoted them. If you had been sufficiently fortunate to have had your name brought to the Commissioners' notice you might have been appointed?—It is not usual to promote an assistant clerk outside his own office.

29,269. When creating a new office you get your men from where you can. When the Labour Exchange and Insurance offices were created they got their men from where they could?—The Land Commission clerks were serving in the office of the Land Commission, and I wish to make a similar claim on behalf of our office, that the men in our office who are more suitable from official experience and from being older should get promotion.

29,270. What I want to point out to you is that there is a difference between the creation of a new office and ordinary promotion. In the case of the Land

Commission, a new office was being created and new men were wanted. That is a different thing from ordinary promotion, and you can hardly quote the promotion given at that time as a precedent for ordinary promotion or a departure from rules?—In every office in town—treating the Land Commission as an exception—the assistant clerks are promoted. Take the Department of Agriculture. There were 14 promotions there; in the Local Government Board there were 12, in the Stamps and Taxes office there were 6, although there were only 11 assistant clerks on the establishment. Our office, the Board of Works, as regards the promotion of assistant clerks, has an unenviable record. It is a harsh statement to make, but nevertheless it is true, my Lord.

29,271. I see what you mean?—Some of us have been recommended, and it seems very hard that a man of 16 or 17 years' service when a vacancy occurs in his own room should be ignored, and a youngster, practically taken from school, should be put in his place. It seems hard that a youngster of 19 to 20 should be put over a man of 30, who had done the work and done it satisfactorily.

(Chairman.) I think we quite understand your position now.

Mr. MAX GREEN, called and examined.

29,272. (Chairman.) Mr. Green, you are Chairman of the Prisons Board?—Yes.

29,273. You were appointed at a comparatively recent period?—About six months ago.

29,274. From what time does your Government service date?—21st January 1897. I have had 16 years' service.

29,275. In what situation did you serve first?—As engineering inspector in the prisons service.

29,276. Will you tell me how the Prisons Board is constituted?—It is constituted by Act of Parliament of 1877, and it took over the prisons which were then administered by the county authorities, and also the convict prisons which were administered by the convict authorities. Subsequently the Inebriates Act was passed in 1898, establishing a State Reformatory, and in 1908 the Prevention of Crime Act creating a Borstal Institution, both of these Acts placing the administration of these institutions under the Prisons Board.

29,277. That is the Borstal institution at Clonmel?—Yes.

29,278. At the present moment you are the chairman. Is there also a vice-chairman?—Yes.

29,279. Is the vice-chairman an old prison officer?—Yes.

29,280. What length of service has he?—He was 10 years an inspector of prisons.

29,281. And there is also a medical member?—Yes.

29,282. Is the medical member a whole time member?—No. He gets 250*l.* a year as advisory member. He is also an inspector of reformatories and industrial schools.

29,283. He is not a whole time officer?—No; a part time officer.

29,284. But he is a member of the Board?—Yes.

29,285. And also an inspector of reformatories and industrial schools?—Yes.

29,286. Does he give you much of his time?—We make very considerable demands on his time, and he gives us as much as he can spare from his other work.

29,287. Does he go on tour inspecting the industrial schools and reformatories?—Yes; he is a very busy man.

29,288. He occupies the place which Dr. Fagan held?—Yes, he succeeded Dr. Fagan.

29,289. Then he is a whole time officer. Do you have Board meetings?—Yes, regular meetings of the Board are held, but not at any set time; there is a Board meeting whenever there is anything special to consider.

29,290. Do you sit under the same roof?—Yes.

29,291. And do you distribute the work amongst yourselves?—Yes.

29,292. Will you please tell us what is the character of the work you take, and also the character of the

work of the vice-chairman?—The work is arranged by the Lord Lieutenant, and I deal with all matters of discipline and transfer of officers; the preparation of the annual estimates and reports, and the other matters that require to be dealt with by the chairman or the accounting officer, such as the annual appropriation account and the annual statement of the manufacturing department for the audit office, superannuation claims, and the classification of prisoners.

29,293. And the vice-chairman?—He has the ordinary papers in connection with the accounts and stores and prison industries, ordinary repairs, and the supply of materials, the transfer of prisoners, the salaries of prison officers, etc.

29,294. When a paper raises questions of importance, is it marked for the Board?—Yes, any question of policy or administration is marked for the Board, and full consideration is given to it.

29,295. Do letters that emanate from you or from the vice-chairman issue from the Board or from yourselves?—They issue from the Board through the secretary.

29,296. You have a common secretary?—Yes.

29,297. And in issuing the letters he states, "I am directed by the Board?"—Yes.

29,298. The secretary was promoted from a lower division, but he entered the service by open competition?—Yes.

29,299. Was he a second division man?—Yes.

29,300. Is your office based on the second division?—It is practically a second division office. I think every one of them is in the second division.

29,301. I don't see that you have any officer recruited by Class I. ?—No.

29,302. Well, then, it must be a second division office. Now, was the clerk in charge of the accounts promoted from the second division?—Yes.

29,303. And was the comptroller of industries promoted from the second division?—He entered previous to the second division being established, from old Class II.

29,304. Well, they must be second division men?—Yes.

29,305. Would you say that the prison clerk is a second division officer?—No, he is not a second division officer.

29,306. Now, the clerks of the habitual criminals register; were they policemen?—They were policemen with special knowledge, and have been since made part of the permanent establishment.

29,307. They were brought in on account of their special knowledge in connection with finger prints?—Yes.

29,308. Now let us pass on to Group V. You have a staff clerk who was a second division man?—Yes.

25 February 1913.]

Mr. MAX GREEN.

[Continued.]

29,309. And the minor staff clerk was a boy clerk who entered by open competition?—Yes.

29,310. But he passed into the assistant clerks class?—He entered the second division by promotion from the abstractor class.

29,311. Did he become an abstractor?—Yes, and he entered the second division afterwards.

29,312. Therefore, he would be quite in order. Your highest appointments all came from the second division?—Yes.

29,313. Then you have two second division men on the regular scale, and you have three on the new scale and one second. Then you have two assistant clerks?—Yes.

29,314. Did you get them from the Civil Service Commissioners?—We got them by transfer.

29,315. But they entered by open competition?—Yes. They entered as boy clerks.

29,316. Let us come to the Group XI.; your inspector of prisons. How was he appointed?—He was appointed under section 5 of the General Prisons (Ireland) Act, 1877, and his office is scheduled under section 4 of the Superannuation Act.

29,317. But was he taken from outside?—He was taken from outside. He was originally a deputy-governor.

29,318. Well then, he can scarcely be considered to be taken from outside. You took him from the staff?—Well, in that way he has been taken from the staff.

29,319. How long was he a deputy-governor?—He was appointed in 1904 for Mountjoy Prison.

29,320. How long did he remain there?—He was there for practically two years, and he was transferred to Dundalk and made a second class governor. Ultimately he was made a first class governor of Mountjoy Prison, and he was selected as inspector of prisons.

29,321. Your clerk of works was promoted from the ranks of prison warders?—Yes.

29,322. We now come to your governors. How are your governors selected?—All the superior officers of the prison are appointed by the Lord Lieutenant.

29,323. You have 17 altogether?—Yes.

29,324. It is noted that nine of these had already served as subordinate officers in the prisons' service?—Yes.

29,325. Had they been warders?—Yes, they had come in as warders or clerks.

29,326. Were they, before promotion, submitted to any examination test, qualifying or otherwise?—I think not. I think they were selected as being the best men in the service. One or two had been promoted from clerks, and as clerks they must have shown Civil Service qualifications.

29,327. Is there a gradation in your gaols?—Yes; there are three grades, proportionately to population. We have three first class prisons, with the salaries of the governors rising from 360*l.* by 10*l.* a year to 450*l.* with free quarters and free medical attendance.

29,328. How many have you in the first class?—Three.

29,329. And the second class?—Two.

29,330. And the third class?—They are the balance of the 17.

29,331. Then in five prisons you have deputy-governors?—Yes.

29,332. Do you promote from the third class to the second class and then on to the first class?—That has been the practice.

29,333. When an officer becomes a deputy-governor, does he on promotion get into the third class?—There are two classes of deputy-governors—the first class with salaries of 200*l.* rising by 10*l.* to 300*l.* with quarters, and the second class, local deputy-governors, have salaries of 130*l.* a year with quarters and allowances.

29,334. What I am anxious to know is the way you promote them. Does promotion go from the deputy-governor into the third class governor, or may the deputy-governor become a second class or first class?—It is open to the Lord Lieutenant to promote to any grade.

29,335. But what has been the practice?—The deputy-governor of the first class has the same emolu-

ments as the third class governor, and it is simply the transfer of a man who has had second charge of a prison to sole charge of a prison.

29,336. You have five deputy-governors, and I suppose they are in the most important prisons?—Yes.

29,337. Take Mountjoy prison: if the governor is removed does the deputy-governor succeed?—Not in Mountjoy.

29,338. Would you take a more experienced man?—Yes, Mountjoy is practically a training ground for governors—Mountjoy and Maryborough are on the same lines.

29,339. Is your medical officer a full time officer?—We have three full time medical officers—two at Mountjoy and one at Maryborough. They are appointed by the Lord Lieutenant, and merely taken on their record. There is no qualifying examination.

29,340. The appointments are by the Lord Lieutenant's patronage?—Yes.

29,341. Take your clerks of prisons: is that a graded clerical service or a prison service of clerks?—There are two classes. One begins at 75*l.* and rises to 110*l.*, and Class I. goes from 110*l.* to 130*l.*

29,342. Do they pass a qualifying examination?—They are promoted from warders to clerks, and if they are selected they have to pass a qualifying examination by the Civil Service Commissioners.

29,343. Has that been the invariable rule—that these men were selected from warders?—Yes, for many years past, but formerly clerks were sometimes appointed from outside the service.

29,344. Is it laid down by order of the Lord Lieutenant?—No, it has been the practice for very many years, but the men selected must satisfy the Civil Service Commissioners that they are able to pass in certain subjects.

29,345. Do the warders enter under any competitive test?—No.

29,346. They are merely appointed, but how?—Upon their physical and general fitness for the position.

29,347. Are they required to pass a minimum examination of some sort?—Yes, they have to pass a qualifying examination.

29,348. What are the subjects?—They are writing, copying manuscript, and arithmetic.

29,349. They are nominated first and then submitted to that examination?—Yes.

29,350. How are they nominated?—According to regulations. Any man can practically apply for a nomination. We get a large number of applications every year—between 350 and 400 every year. In 1912 there were 340 applications received. In the same year 31 were placed on the candidates book, of these 31 27 were nominated. Of the 27 nominated 8 withdrew, 7 failed to pass the examination, and 7 passed the examination, and 5 are still awaiting disposal.

29,351. Well, there is no lack of candidates?—No, we have a very large number of applications, but they are reduced to practically a few by the elimination of the unsuitable.

29,352. You register the names of the residuum?—Yes.

29,353. And do you take them in the order in which their names occur on the register when vacancies occur?—No, not necessarily. We select the best on the register.

29,354. Say there is a vacancy, and you pass four or five men under review, if you take the fifth do you exclude the other four from the register then?—Not necessarily.

29,355. From what class of people do the warders come?—The warders are as a rule ex-soldiers, ex-police-men, tradesmen, clerks, teachers, men-servants like grooms, shop assistants, and farmer's sons. We do not require many warders every year. The average is about eleven.

29,356. But you have a large staff of them—357?—Yes, we have about 357.

29,357. And they are all pensionable?—Yes.

29,358. Who is the superintendent? Is that a superintendent of warders?—No. That is a woman superintendent.

25 February 1913.]

Mr. MAX GREEN.

[Continued.]

29,359. You have 101 matrons and assistant matrons?—Yes.

29,360. They begin at a salary of 40*l.*?—Yes, 40*l.*, rising to 50*l.*

29,361. And then they go up to 100*l.* as the maximum?—Yes, there is only one getting the 100*l.*

29,362. What class of women take up the position of wardresses in your prisons?—Dressmakers and laundresses, nurses, domestic servants, shop assistants, asylum attendants, and farmers' daughters.

29,363. Do you have as many applicants for the post of assistant matron as you have for warders?—Practically the same number, but more in proportion to vacancies.

29,364. That is in proportion to the women population in the gaols?—Yes.

29,365. Do you find that the service is at all popular with them?—It is popular when they are coming in, but when they are in for a little time they find that it is not quite what they expected.

29,366. And is there often an exodus?—No, there is no exodus. The number of resignations from the service is very few. I am talking now of the male officers. It is only about one per cent. It is larger among the women, because a number of them resign to get married. There are just 100 women in the service, and about four per cent. of them resign every year with a gratuity to get married. After six years' service the matron gets a month's salary for every year's service when she is going out on marriage. She must resign when she is getting married.

29,367. What is the full time for qualifying for a pension?—Forty years. The same as under the ordinary Civil Service rules.

29,368. Do the assistant matrons live in the gaols?—Yes.

29,369. Within the walls?—Yes. They are practically in prison the whole time except when on leave.

29,370. And do the warders also live within the walls?—Yes, a certain proportion of them. All the unmarried men live within them. A certain number of married men live outside in private houses, or in prison cottages.

29,371. What is the criminal population at the present time?—The daily average is 2,462.

29,372. In how many gaols are they confined?—16.

29,373. Is that a larger figure than 10 years ago?—No, it is less. It is gradually falling.

29,374. Has it fallen within the last five years?—Speaking from memory, it has. In 1907 the number of commitals to local prisons was 32,240; in 1911 the number was 26,572. The daily averages were 2,466 and 2,250.

29,375. Do your statistics enable you to say what the daily averages are as for terms over a year and for terms over six months?—The persons sentenced to 12 months and over are less than 2 per cent. of the whole. There are 10 per cent. sentences for three months.

29,376. I want to know whether the crime is of a heinous character, or is it light?—Oh, it is very light.

29,377. Is your office staff fairly contented?—They are fairly contented, as a rule; but they have great difficulties as regards the future. The staff is a peculiar one. It is a small department, and there is small chance of promotion.

29,378. You have only nine second division clerks and assistant clerks all told, and even then you have five staff appointments to which they may look. You have the secretary, the clerk in charge of accounts, the comptroller of industries, a staff clerk, and a minor staff clerk?—That is so, but they are filled by men of practically the same age as the men who might hope to succeed them and who are their understudies.

29,379. That may be for a time, but you will not deny that for a department which has five staff posts, with nine second class clerks, the chances of promotion are fair?—Looking at it like that you would say so. But the Prisons Department is in reality a miniature of one of the great departments of the State. We have every year 26,000 prisoners, every one of whom has to be examined and the record taken just like a recruit for the army. There is no routine work in our office in

the ordinary sense; the clerks have to do special work of a very varied character. We have to do as is done in the army or in the Admiralty. We have the auditing of accounts; we have got the administration affecting the 26,000 prisoners; we have the maintenance of a high order of discipline amongst the prisoners and staff and the 500 officers required for their control; we have the task of providing the prisoners with suitable industries and finding a market for their work. There is the work of building construction, and improvements involved in providing for the housing and safe custody of the prisoners committed to prison, etc. The proof of the excellence of the training which the staff receives is to be found in the success of the men who have obtained transfers out of the Department.

29,380. Yes, quite so. Sir James Dougherty told us that he regards your Department and the other 10 or 11 departments that acknowledge the control of Dublin Castle as the executive agencies of Dublin Castle. Promotion from your Department would naturally be to any of those 10 or 11 departments the Under-Secretary had in view. Thus your clerks might look forward not merely to the five staff appointments, but to others, owing to the possibility of transfer. From that point of view your position is not so bad?—Well, we have had very few transfers from our Department into other departments or branches of the executive service, but those that have gone out have done uncommonly well, so much so that those that remain feel that they have not had the same chance. A certain number of men get into water-tight compartments and remain in the one branch all their service. In the Prisons Department the men become experts at the work generally. In a small Department like ours the few clerks employed have an opportunity of acquiring a thorough knowledge of the working of the Department in all its branches. I would like to state as a proof of the value of the training so imparted, that a former clerk in charge of our accounts was selected from the Prisons Department to undertake the organisation of the finance work in connection with the Department of Agriculture and Technical Instruction, and he did that so well that he was eventually selected as accountant of the Land Commission, which, I understand, has some of the most complex accounts in the Imperial Service. I think it is a matter for congratulation that a man who received his training in our Department was able to undertake such a peculiarly difficult work, and I think it shows that this staff does get a large view of affairs, because being a small staff they have individually to deal with a great number of different matters which in a larger office they would not have an opportunity to do.

29,381. Of course a good deal would depend upon the head of the Department and also on the secretary. If it was known that a vacancy was about to occur in some other department in Dublin it could be brought under the notice of the men. Gentlemen in the position of a secretary of a department know pretty well what is going on?—They may, and I suppose they do their best to find out. I should say it would be a thing to be aimed at to establish some central authority where these vacancies could be registered.

29,382. Why should there not be such a thing, for instance, as a central bureau in reference to all the offices that are affiliated, as one might say, to Dublin Castle?—I should say something even larger, something for the Civil Service generally. I think it desirable where you have a small office such as ours, in which the men get a high training, that they should have an opportunity of utilising their experience and of giving the State the advantage of that training in wider fields.

29,383. What would you say to taking the promotions out of the hands of the departmental head and putting it in the hands of a body which would have wider opportunities of knowledge than an individual departmental head?—I think it would be highly desirable that something should be done. I would not like to say exactly: Take all the promotions from the head of the Department; I think the Department ought to have a say in the matter. Take, for instance, the heads of our branches. In the Prisons Department you have got clerks in charge of accounts and others in control of men

25 February 1913.]

Mr. MAX GREEN.

[Continued.]

who are very highly trained and are retained in this office in second rate positions.

29,384. You would not like to trust the head of a department to bring the claims of a very useful subordinate under notice?—I think it is too much to expect the head of a department to take active steps in a matter which would deprive his department of the assistance of a highly trained and experienced subordinate, especially as there is no recognised procedure to be followed in the indicated direction. Second division clerks have often said to me: "We don't think we have been justly treated, because when we entered the Civil Service we thought we were to have our chance against the entire Civil Service, and we have not got it. We have been assigned to a department against which we have nothing to say, but in it our lines have been laid down for us, and we have not had anything to say to the very limited field for our work."

29,385. Do you think that is a substantial ground of grievance?—Expressing my own views, I think it is.

29,386. But views based on what you have heard?—No; views based on 16 years' work amongst them.

29,387. And what you have heard?—Yes. I think I would be safe in voicing it from the Irish point of view in saying that, at any rate, that is the feeling of Civil servants.

29,388. (Mr. Graham Wallas.) Your Board occasionally meets as a whole for the transaction of important business?—The chairman and vice-chairman sit in neighbouring rooms, and they are in constant communication.

29,389. Does it sit formally?—Yes.

29,390. When it sits formally as a whole has the chairman a deciding voice, or is he only one among a number of equals?—As far as voting power is concerned they would be equal, but such a thing as a divergence of opinion would never take place.

29,391. You cannot conceive a circumstance in which members of the Board would differ?—Everything like that must be settled by compromise.

29,392. Then decisions of the Board on questions where they are not agreed are always the result of compromise?—They are decisions of the Board. I could not think of any case where we would have a conflict of opinion. The secretary informs me that such a case when it has arisen has been decided by a majority.

29,393. It has occurred?—Yes.

29,394. The Board consists of three persons—the chairman, vice-chairman, and medical member?—Yes.

29,395. The medical member is only a part time officer?—Yes, so far as the Board is concerned.

29,396. So that he can go in and form one of a majority against either of two other people who are full time?—Yes.

29,397. (Chairman.) Possibly that may be misrepresented as regards the part time. He is really a full time officer, but he has got other functions. He is, as a member of the Prisons Board, co-equal with any of the others?—Yes.

29,398. (Mr. Graham Wallas.) His vote is equally valid on any subject whether medical or otherwise?—As a matter of fact, the matters he deals with are practically all medical matters. He would be reluctant to oppose his opinion to that of the other members in outside matters.

29,399. You have a number of other doctors in the service?—Yes.

29,400. Are any of them women?—Yes, in one case—in the female prison in Cork we have a female visiting physician.

29,401. Do you keep a list of applicants for warderships?—Yes.

29,402. Do applicants for warderships come to see you?—The procedure, as far as the Board is concerned, is this: When a man applies for an appointment he is sent a form in which are set forth the qualifications of the candidates and conditions of service, with an intimation to the effect that should he consider himself eligible for the appointment he may renew the application. His name is registered in what is called the first application book. The next act is, that should he send back the form filled up he is then asked to present

himself at the office of the district inspector of Royal Irish Constabulary for the district in which he resides in order that he may obtain and fill up Form B, and forward it through the district inspector, who is at the same time directed to inquire into the life-history and antecedents of the candidates. Candidates in Dublin have to attend at Mountjoy Prison, and are reported on by the governor of that establishment as to fitness, etc.

29,403. Do you require letters of recommendation?—Yes. We get testimonials, and require them.

29,404. Those are filed?—Yes.

29,405. With the applications?—Yes.

29,406. When you appoint a man you know not only his general appearance, but what letters have been sent in recommending him?—That is so. We take the greatest care in selecting the candidates as regards their antecedents and history.

29,407. (Mr. Shipley.) How long have you been chairman?—Six months.

29,408. Did you pass into the service by examination?—No.

29,409. Could you give us a short history of your experience in the public service?—I can. I am an engineer by profession. I passed through the arts course in Trinity, and then took an engineering diploma in the College of Science. Afterwards I was apprenticed to a well-known engineer, and was a student of the Institute of Civil Engineers. When I finished my apprenticeship I was engaged on the construction of public works as a contractor's agent. I had to deal with large bodies of men, involving the management and control of some thousands of men from day to day. In 1897 I was appointed engineering inspector to the Prisons Board. I was engineering inspector for 10 years. I was then transferred in 1907 to the Local Government Board, and I was inspector of the Local Government Board for three or four months.

29,410. (Chairman.) Was your appointment as inspector to the Prisons Board abolished?—Yes.

29,411. (Mr. Graham Wallas.) Was it a full time appointment?—Yes; when it was offered to me I understood it was to be that of an inspector of prisons with engineering qualifications, but my services were never availed of as an inspector; as engineering inspector I was called on to design and erect the only prison built in Ireland for the last 70 years. It was the first large building in Ireland built of reinforced concrete.

29,412. (Mr. Shipley.) It is quite safe. Satisfactory?—Yes. And was built at about half the cost of any other prison that has been built.

29,413. In 1907, I gather, you left the Prisons Department?—In 1907 I left the Prisons Board, and was transferred as inspector to the Local Government Board. I was in that position for six months, when I became private secretary to the Lord Lieutenant, and was with him for about five years.

29,414. And from that you were given this appointment?—Yes.

29,415. Is it usual to give it to somebody like that, or is it usual to promote the secretary or vice-chairman?—The last vice-chairman was private secretary to the Lord Lieutenant, Lord Londonderry.

29,416. Is the lady doctor at Cork responsible for the female prisoners only?—The prison to which she has been appointed is one for females only.

29,417. There is a certain amount of discontent, we gather, among the under officers, because they do not be promoted quickly. Could you suggest any change which would meet that state of things?—Is it the head staff or prisons staff?

29,418. Let us take the head staff first?—With the head office staff there is a question of having some outside promotion from the office, that it should not be a water-tight compartment.

29,419. To have the office grouped with some others?—Yes.

29,420. What other office could come in with it advantageously?—Personally, I think, the men in my office would be qualified for most other work. They have got a great deal of very varied work, and, if I may say so, they are an extraordinarily intelligent body of

25 February 1913.]

MR. MAX GREEN.

[Continued.]

men. I consider myself very lucky indeed to have such a staff.

29,421. That is the chief change you would suggest as regards the central office?—Yes.

29,422. With regard to the prisons staff what would you suggest?—The point most urged by warders and matrons is the possibility of retiring on superannuation at a much earlier period in life. It is rather an interesting fact that in the last five years none of the prison staff has retired with full service.

29,423. I suppose that is partly due to the trying nature of their work?—It is a very hard strenuous life, and there is a great strain on the men. Comparatively few are able to endure the strain of their duty up to 60 years. The majority retire on pension before that age on grounds of health.

29,424. (*Mr. Boutwood.*) How does that affect the women?—It is much the same. I do not think that anybody within the last five years at any rate has qualified for the full pension, man or woman.

29,425. (*Chairman.*) Would you recommend a lower age for superannuation?—I certainly would—50 or 55 years. One of the great difficulties a head of a Department like this has, is that a number of men who are extremely good, in the passage of years become less alert, and we have to keep them on, because it would be cruelty to retire them. Some of them get over-zealous, and they are the cause of great trouble in the prisons.

29,426. Do you mean to say that their zeal increases in accordance with their years?—That is the case, especially as regards one poor man whose zeal so far outran his discretion, that as the result of an assault upon him by a prisoner he was obliged to retire.

29,427. (*Mr. Shipley.*) Would you think that this necessity for diminishing the number of years is even more urgent in the case of women warders than in the case of men?—I think it is about equal. I do not think I could commit myself to saying that it is more the case as regards women.

29,428. (*Miss Haldane.*) Have you ever had a woman as deputy-governor?—No, our difficulty in the Irish prisons service is that it is a shrinking service, and we are gradually narrowing down. When the Board took over the prisons we had 42 in Ireland. There are now only 16.

29,429. Are the existing prisons larger?—No; the existing prisons are practically the same size as when we took them over.

29,430. But you require fewer prisons?—They are very much fewer in numbers.

29,431. How many prisons for women have you?—We have two such prisons, one at Mountjoy and one in Cork. We have also accommodation for women in 10 other prisons.

29,432. Is Dundrum Criminal Lunatic Asylum under your Board?—No.

29,433. Are the reformatories and industrial schools of Ireland under your Board?—No.

29,434. Then how many women inspectors have you?—None.

29,435. Have you considered the question of appointing women inspectors?—It has been considered.

29,436. And it has not been carried out?—The superintendent who is here was brought from England, and her services were availed of on a number of occasions.

29,437. She is not a medical woman?—No.

29,438. What is the corresponding male position to hers?—She was brought here when it was intended to make her a governor of a prison, but the Act of Parliament prevented it. The governor of a prison must be a man.

29,439. And your Board considered it would be desirable to have a woman?—At the time the experiment was tried, of course, it was considered desirable. For some years she was practically governor of Grangegorman Prison.

29,440. What interfered?—The question was raised in Parliament as to her status.

29,441. And was it then discovered to be illegal?—Yes.

29,442. And she was deposed?—She has still charge

of a prison practically, but there is a governor over the prison.

29,443. Is her work practically the same?—It is not, because the governor is by law responsible. She has got the work without the responsibility.

29,444. Does she still receive the same salary?—She receives a better salary. Her salary is 150*l.*, rising by 5*l.* to 180*l.*, with furnished apartments, fuel, light, medical attendance, and medicine.

29,445. (*Chairman.*) What was it formerly, when she was governor?—The maximum was, I think, 150*l.* It was the then maximum of a third class governor.

29,446. (*Miss Haldane.*) The women warders are called matrons and assistant matrons?—Yes.

29,447. Do they correspond absolutely to the men male warders?—Yes.

29,448. How does their salary compare with the corresponding men?—The assistant matrons begin at 40*l.*, rising by 1*l.* annually to 50*l.* Warders begin at 52*l.*, and go up annually by 1*l.* to 70*l.*

29,449. Therefore the women have considerably less?—Yes.

29,450. They must resign on marriage?—Yes.

29,451. Have you widows?—Yes. Widows who have no children residing are eligible.

29,452. Have you any schoolmasters or school-mistresses of any kind attached to the prison?—There are a certain number of the matrons who are qualified.

29,453. Do you ascertain if these women are qualified to teach?—We endeavour to get qualified teachers for these posts, coming in as matrons.

29,454. They come in as teacher matrons?—Yes, as matrons with teaching qualifications.

29,455. Does that hold good as regards the men as well?—It is the same with the men. They are not all qualified. I mean from the point of view of the skilled schoolmaster. The schooling is not very elaborate in prison. The standard is low, equal to the third standard of the National School Board.

29,456. Is it any lower than is the case in England?—About the same.

29,457. Do you find it difficult to get a good class of women?—No, I think our matrons are a very good class, as a rule.

29,458. Have you tried to get women who have had some nursing experience?—Yes.

29,459. Have you been successful?—We have three hospital nurses, and two of them have had experience of nursing.

29,460. Where are they?—They are not registered as nurses, but as assistant-matrons.

29,461. There are three such assistant-matrons, I think?—No, they are amongst the 89.

29,462. Some are trained nurses?—Two of them were hospital nurses before they entered. There are three hospitals—Cork female prison, Belfast, and Mountjoy. The trained nurses were enlisted, so to speak, as assistant-matrons, and receive a special allowance of 10*l.* Before they entered the service two of them were hospital nurses.

29,463. Have they had their complete training?—Two of them had.

29,464. Do they get rations as well as the allowance?—No; their allowances are quarters, fuel, light, and uniform.

29,465. Is the hospital a separate building from the prison?—It is, in most cases.

29,466. Do they nurse male patients?—No, the male patients are nursed by warders.

29,467. Have they got any training?—Some of them have.

29,468. What sort?—The medical staff corps. Three were in the Royal Army Medical Corps, and two were male nurses, trained before they entered the service.

29,469. Do you nurse all your prisoners in prison, or do you send some out to general hospitals?—We have not the power to send them out. If they are so very ill as to require hospital treatment the Lord Lieutenant orders their discharge.

29,470. (*Mr. Shipley.*) Do they come back again?—We cannot bring them back.

25 February 1913.]

Mr. MAX GREEN.

[Continued.]

29,471. (*Miss Haldane.*) There is a woman doctor—how is she paid?—There is a scale fixed by the Treasury according to the numbers. She gets the same pay for a prison of her rank and class as a male doctor.

29,472. (*Chairman.*) What about your manufactures, are there complaints of competition with outside labour?—We endeavour to avoid that by not engaging in any manufacture that would be likely to bring us into conflict with the public.

29,473. There had been, I suppose, conflict of the kind?—Yes, there has been in the past.

29,474. Now you put your prisoners upon work which will not lead to conflict?—Yes. The position as regards Ireland is that it is an agricultural country; the population is agricultural and industries are few. So that the prisoners would be better employed upon agricultural land were it possible to give them such employment. As much as possible is done, but Irish prisons are very badly equipped with extra land. They are much better off in this respect in England and Scotland, although these are manufacturing countries.

29,475. Therefore you have no difficulty now, no conflict?—We have had no conflict recently—none worth speaking of.

29,476. (*Miss Haldane.*) I notice you bring in occasional hospital nurses—I suppose that is in cases of severe illness?—Yes, severe illness.

29,477. And the chaplains—how are they paid?—We have no whole-time chaplains. The chaplains we have are paid according to numbers—a scale is fixed by the Treasury as regards the number of people under their charge. The scale is fixed on the average number of

prisoners for the three years preceding the vacancy, viz. over three and not exceeding 25, 40*l* a year; over 25 and not exceeding 60, 60*l*; over 60 and not exceeding 120, 80*l*; over 120, 100*l* a year.

29,478. (*Chairman.*) I think that will do, Mr. Green, we are much obliged to you?—There is one point I would like to mention about the warders, as regards the pay of the warders. The pay of our men warders, as a rule, is a good deal less than it is in England or Scotland.

29,479. It is less?—Yes, it averages approximately 10*l*. per annum less than in England or Scotland. Our warders have not made any collective representation as regards this, but they have individually repeatedly called our attention to the question. They say they don't think they are being fairly treated, and because they have been very quiescent in the matter they think it should not be used against them as evidence of their being contented. Really they think they are not being, I was going to say, as handsomely treated as they are in England.

29,480. We will look into the matter. We should have gone away with the idea that they were quite satisfied if you had not spoken of it?—The other matter is the custom in Ireland to compare the prison service with the Royal Irish Constabulary. It is a fallacious comparison, because the R.I.C. man after 25 years' service can retire on a reasonable pension, with the result that we have men in the prison service who are pensioners from the R.I.C. acting as warders. Our men think they have just as hard and strenuous a life, in fact much more so than the R.I.C. men, because they as it were, spend all their lives in the prisons, and they think they ought to be as well treated, at any rate as far as pensions are concerned, as the R.I.C.

## SEVENTY-THIRD DAY.

Wednesday, 26th February 1913.

### PRESENT :

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Mr. ARTHUR BOUTWOOD.

Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.

Miss E. S. HALDANE.

Mr. S. ARMITAGE-SMITH (*Secretary*).

Mr. W. F. BUTLER, M.A., and Mr. W. A. HOUSTON, M.A., called and examined.

Mr. S. A. O. FITZPATRICK was in attendance.

29,481. (*Chairman.*) Mr. Butler, what is your official designation?—(*Mr. Butler.*) Assistant Commissioner of Intermediate Education.

29,482. Mr. Houston is your colleague?—Yes.

29,483. How long have you held that appointment? Since April 1910.

29,484. Before that what position did you hold?—I was professor of modern languages for 15 years in the Queen's College, Cork, and for four years of that time I was registrar of the college.

29,485. When were you appointed, Mr. Houston?—I was appointed on the 14th of February last year. Before that I was four years in University College, Galway, as professor of mathematics, and before that I was five years under the Ministry of Education in Cairo.

29,486. Mr. Butler, be good enough to explain to us what is the constitution of the Intermediate Board?—The Board was founded by Act of Parliament in 1878 by an Act entitled the Intermediate Education (Ireland) Act, which was intended to promote secondary secular education in Ireland. The Act laid down that this was to be done by introducing a system of public examinations, by awarding money prizes to students who were successful at these examinations, and by paying the secondary school fees dependent on the results of these examinations. The system might be described as one of payment of results fees to schools calculated on the success of individual students at the examina-

tions, and of money rewards to the individuals. The Board was first a body of seven commissioners appointed by the original Act. These commissioners are appointed by the Lord Lieutenant, and hold office at his pleasure, and serve without remuneration. By a subsequent Act in 1900 the number was raised from seven to twelve, which is the present number.

29,487. Are the functions of the Intermediate Board limited to any particular class of schools, or can any school above the national school grade take advantage of these examinations?—I think that any school can take advantage of them except the national schools, which are excluded by the schedule to the Act; but pupils attending national schools may go up for our examinations and pass them, although the school cannot earn school grants in respect of them.

29,488. But the student can gain prizes or exhibitions?—Yes. Otherwise, I think, there is no limitation. The school cannot earn fees both from our Board and the National Board.

29,489. Are these examinations held yearly, or at more frequent intervals?—They are held yearly, generally in the month of June.

29,490. Are they held in different centres or in the one centre?—They are held in different centres. There were something like 320 centres last year throughout the country, that is, including Dublin, where there were a good many centres.

26 February 1913.]

Mr. W. F. BUTLER, M.A., and Mr. W. A. HOUSTON, M.A.  
(Mr. S. A. O. FITZPATRICK was in attendance.)

[Continued.]

29,491. Is that examination all by written papers?—Except as regards music, in which there is a practical test, and as regards a pass in science, which is determined by the report of an inspector. The examinations in all other subjects are entirely written.

29,492. Is there no *viva voce* examination, then, even in the two subjects?—In music there is a practical examination. The student performs a piece. In science the classes are inspected by the science inspectors of the Department of Agriculture and Technical Instruction, and they report to our Board whether such and such a class, or the students in it, deserve to pass or not, and our Board accepts their report, and it comes to this, that, as a rule, a class is passed *en bloc*.

29,493. Then, at the June examination there is no examination in science; that has been conducted beforehand?—The inspectors further report that certain students are qualified to present themselves in science for an examination in honours, and the examination in honours is conducted by us, and is entirely a written one, but the students cannot go up for that examination in honours without having been previously certified to do so by the Department's inspectors.

29,494. How many grades of examinations have you?—At present only three. There were for a considerable number of years four grades, the preparatory, junior, middle, and senior grades. The preparatory was abolished by the Board last year. The last examination for the preparatory grade was held in 1912.

29,495. Are these examinations in the junior, middle, and senior grades determined by the age at which the students present themselves, or by the difficulty of the subjects?—At present, theoretically, any student between the ages of 14 and 19 could go in for any grade for which he was considered fit; but in practice there is an age limitation with regard to honours, exhibitions, and prizes. One might say that the junior grade is for students up to the age of 16, the age in the middle grade would be 16 to 17, and for the senior grade it would be 17 to 18, but they can go in for our examinations up to the age of 19.

29,496. Does your intermediate examination take in Ireland the place taken in Scotland by the examination closing the secondary school course?—The senior grade examination, the final one of the three, would correspond to what a boy is supposed to have done in his school course, and the three existing Irish universities admit our senior grade certificate as exempting from their entrance examination in the proper subjects.

29,497. It is in the proper subjects equivalent to the matriculation of the three universities?—Yes, and up to this year it was accepted also by the University of London, but they have decided to withdraw this this year.

29,498. What funds are placed at your disposal?—The Board originally received the sum of 1,000,000*l.* sterling, portion of the funds derived from the disendowment of the Irish Church. This has been redeemed and reinvested in Irish land stock. It brings in just under 31,000*l.* a year. In addition to that, in 1890, a further endowment was provided out of the proceeds of the Customs and Excise, what was generally known as the "whiskey money." This used to vary. In the year 1900 we received 71,000*l.*, but in 1910 it fell to just under 17,000*l.* In consequence of that, by the Revenue Act of 1911, the Board received a share of the local taxation duties, calculated on the amount they had received in the year 1909, amounting to 46,500*l.*, and apparently the Treasury have fixed that that is to be our full contribution from that source. It is a loss on the average of the preceding 10 years to the Board of 7,000*l.* a year. There are various small sources of revenue. The Board has a certain reserve invested, and the total income of the Board is between 82,000*l.* and 83,000*l.* a year.

29,499. May we take last year as giving a fair indication of the number of students presenting themselves for the examinations at the present time?—We find a slight increase every year, about 500 a year.

29,500. Take last year: how many presented themselves for examination, distinguishing boys from girls?—Last year the number of pupils on the rolls of the

schools, was about 18,000, and over 12,000 presented themselves for examination.

29,501. On the rolls of the schools which usually avail themselves of the Intermediate Boards' examinations, there were 18,000?—18,500. Last year a total of 9,039 boys and 4,815 girls gave notice of intention to present themselves for examination.

29,502. That was out of a school population of 18,500 on the rolls?—Yes.

29,503. Could you give me an opinion as to whether that is a fair percentage of children to be at secondary schools?—I think it certainly is as regards the population of the country.

29,504. The population of Ireland is, let us say, four and a quarter millions?—There are, of course, a certain number of schools in the country giving secondary education, especially among the better class of girls' schools, I mean schools that charge expensive fees, and so on, who do not come under us at all. There are also certain boys' schools in the country giving a regular grammar school education, which do not come under our system. Then, of course, I only give the figures between 13 and 19, so that there would be a good many students outside the 18,500, but we have no means of estimating the numbers.

29,505. On the average of 12 per 1,000, which has been mentioned in reference to England as indicating the secondary school population, you would require a secondary school-going population of about 50,000?—Yes, but secondary education there might be held to include students down to a very juvenile age. There were some figures given in the census for 1901 showing, according to classification, that there were 36,000 students in the country receiving what they called superior education, but they included in those figures universities, Queen's Colleges, and Maynooth, and they included, I think, a large proportion of schools under the National Board, where they take up one or more foreign languages.

29,506. Having regard to all these considerations which you have specified, do you consider that the number of students on the rolls of the schools who present themselves for examination indicates that secondary education has attained in Ireland a fair amount of extension?—Yes.

29,507. Are you able to institute a comparison with secondary education in England and Scotland?—No. I have not been able to institute a comparison, because without a personal investigation of the systems the figures published do not seem to throw very much light on the subject.

29,508. What are the subjects of examination for the junior middle and senior grades; I want to have an idea of the standard?—The actual subjects which the students can take up are the same practically for all three grades, with the exception of some of the mathematical subjects. They are Greek, Latin, English, Irish, French, German, Italian, Spanish, history, and geography, mathematics, including arithmetic, algebra, and geometry common to all grades, and trigonometry confined to the two higher grades, experimental science with a great many sub-divisions, music, shorthand, and book-keeping.

29,509. How many of these subjects may be taken by a candidate?—There is really, at present, no limit to the number that a student may take if he desires. The Board have laid down certain conditions as to what a student must take, but outside that he can enter really in all the subjects if he wants to.

29,510. Will he not be limited by the time apportioned for the examination?—We construct a time-table of the examination every year, based on the lines that it is highly improbable that certain students will take two or more of a number of given subjects, but I think, as regards all the main subjects of our course, we so construct the time-table that it would be possible for a student to be examined in practically all of them.

29,511. If he desired, a student could present himself in all the modern languages?—They often present themselves in Greek, Latin, French and German, or French and Irish, Greek and Latin are taken up. There are a good many colleges where these last four subjects

26 February 1913.]

Mr. W. F. BUTLER, M.A., and Mr. W. A. HOUSTON, M.A.  
(Mr. S. A. O. FITZPATRICK was in attendance.)

[Continued.]

are taught, and I understand that the students of those colleges present, very often, in all four.

29,512. But could a student take Greek, Latin, French, German, Italian, Spanish, Irish, with geometry, algebra and arithmetic?—There is really nothing in our rules to prevent it. If a student sent up such a programme we should have to re-arrange our timetable and make every possible effort to examine him. I think we are bound to do it, in fact, by our present rules.

29,513. As a matter of practice, does a student ever take more than four or five subjects, such as Greek, Latin, French or German or Irish, and arithmetic?—For the purpose of a pass we require, as a minimum, five subjects, and a very large number of students take at least one more, and I should think some students take seven.

29,514. What are the ages at which students present themselves for each of these examinations?—Under the regulations for the coming year no student under the age of 14 can present himself for an examination. Then the age for junior grade might be taken to be 14 to 15. There is nothing to prevent a student of 16 going up for an examination to pass it, but he would not be eligible for any prizes, medals or exhibitions. A middle grade student, in order to gain prizes, must be under 17. You may take it that the middle grade students would be between 16 and 17, though there is a certain number both over and below it. Then the senior grade are between 17 and 18, but a certain number of students stay on to the extreme limit of 19. No student over 19 can be examined.

29,515. Are you familiar with the ordinary procedure in the schools from which these students come, and whether at the end of each school term there is a school examination?—I have been through an intermediate school myself, and there were there at the end of each term class examinations which were not looked on as of great importance, but I do not know as to the actual custom in schools at present. My colleague might be able to tell. (*Mr. Houston.*) At a good many of them they have a class examination at the end of each term.

29,516. Has that practice of having a school examination at the end of each term been at all reduced by the appointment of inspectors? I notice from your paper that six inspectors were appointed in 1908?—(*Mr. Butler.*) I don't think we have any means of ascertaining that. We don't really go into the internal details of the school very much. That is a point that we have no official information on. (*Mr. Fitzpatrick.*) I happen to know that in one of the large Roman Catholic schools in Leinster, in consequence of the abolition of the preparatory grade, they intend holding an examination of their own for preparatory grade students every year. They value the examination so much that they intend to hold an examination on our lines for preparatory students, who are excluded from our system now.

29,517. Are preparatory students those preparing to enter the schools, or those who have entered?—Students in the schools who are under the age for our junior grade.

29,518. They have such a love for examinations?—Yes.

29,519. Without asking you the name of the school I should like to know if it is a well staffed school with trained teachers?—It is excellently staffed, as well staffed as any school. Mr. John Murray, of London, who has large experience of English public schools and universities, came to the school, and he said he did not believe that there was anything of the kind to be found in Ireland. He thought it would compare favourably with Harrow or Eton. It is the Jesuit college at Clongowes Wood.

29,520. Do you mean to say they have term examinations there?—They have always had term examinations in addition to our examination, and they are now having special attention paid to examinations for the preparatory grade.

29,521. Are there any scholarships established in these secondary schools which can be taken on to the

university?—(*Mr. Butler.*) Do you mean scholarships independent of our examinations?

29,522. Yes. Do the county councils, for instance, give such scholarships to be competed for in the national schools, and to be held in the secondary schools which present their students to you?—As far as I know there have not been any such as yet instituted. Of course, scholarships have been instituted for the purpose of entering the new university colleges, and they no doubt would be offered for competition to boys leaving our schools.

29,523. You have told us about your system of examinations and what they mean. Is there any proposal before you or likely to be made with a view to modifying the system of payment by results?—The Board, when permission was obtained to appoint inspectors, were desirous of introducing some modification into the scheme of payment by results on the individual students. They wished to make the results of inspection a factor in calculating the school grant. They found, however, when they came to attempt to do this that the restrictions on their powers imposed by their present Act of Parliament prevented them from carrying this out in the way they desired, and until the Board obtains further legislation it does not appear at present possible to modify that system.

29,524. So that really the inspectors are an excrescence upon the system?—As far as the effect of inspection upon the payment of results to schools is concerned that may be said. Of course, they have played a very important part in shaping the curriculum and methods of teaching in the schools.

29,525. They can only do that by giving advice?—Yes.

29,526. They cannot impose their will upon the school authorities?—No.

29,527. Let us come to the staff by which you carry out this great system of examinations: what permanent staff have you?—We have in addition to the assistant commissioners and the six inspectors, a chief clerk, Mr. Fitzpatrick, and we have authority from the Treasury to have eight other members of the permanent staff.

29,528. What you might call the clerical staff?—Yes, permanent officials.

29,529. You have at the head of your permanent clerical staff the chief clerk, and you are authorised to have eight clerks?—Yes. At present we only have seven, because we have a vacancy caused recently by death.

29,530. Are these seven clerks and the chief clerk all pensionable officers?—The Board by the Act of 1900 obtained power to grant pensions if they so desired with the consent of the Treasury. We have had a great deal of trouble with the Insurance Commissioners trying to convince them that these clerks were pensionable, and incidentally we took legal opinion on the matter, and it appeared from that and also from certain correspondence with the Treasury and the Insurance Commissioners that our clerks are not as regards pensions under the same conditions and have not the same privileges as Civil servants.

29,531. Would the pensions come out of the ordinary funds of the Board, the 82,000?—Yes.

29,532. Have you granted a pension in any case up to the present?—So far only one pension has been granted since the Board received power to do so. That was in the case of the late assistant-commissioner, Mr. Swift Paine Johnston, who retired last year.

29,533. Are your salaries also charged against the endowment?—The whole of the salaries come out of the endowment of the Board.

29,534. Have you formulated any pension scheme?—The Board had such a proposal before them last year, and the law officers of the Crown decided that they had no power to formulate a scheme, that they could only treat each case as it arose; they could neither promise a pension to an individual, nor pass a scheme for all classes. Under the Bill which Mr. Birrell brought in the other day and which was withdrawn, it was intended to remove that disability, and give the Board power to make a pension scheme if they so desired.

26 February 1913.]

Mr. W. F. BUTLER, M.A., and Mr. W. A. HOUSTON, M.A.  
(Mr. S. A. O. FITZPATRICK was in attendance.)

[Continued.]

29,535. Have you established any method of recruiting your staff?—We are at present negotiating with the Treasury on that point. When the office was originally founded the clerks were appointed by nomination by the Board, without any restriction on the Board's power, except that they had to get the consent of the Treasury to the institution of the officers and also of the Lord Lieutenant, but in the year 1907 an agreement was made with the then Treasury Remembrancer, Sir Robert Holmes, to the effect that the office should recruit itself in the first place from the boy clerks, that a certain number of boy clerks should be assigned to us by the Civil Service Commissioners when needful, and that if the boy clerks gave satisfaction they might be promoted to what we call the quasi permanent staff. These are clerks who really have no permanent footing in the office, but who have had very long service, and are always kept on. Then the arrangement was that as vacancies came on the permanent staff they should be filled up from the quasi permanent staff, so that ultimately a boy clerk might be promoted first to the quasi permanent staff, and then as vacancies arose be promoted to the permanent staff. The Board accepted that scheme, but the Treasury made the proviso that the accountant and, I think, the chief clerk might be recruited as before by nomination from outside. The scheme entirely broke down, and we are at present negotiating with the Treasury with a view to getting appointments made to our office by some system of limited competition.

29,536. Will the limited competition apply to the lowest grade in your office or would you only apply it to the higher grade as vacancies arose?—We think it would be better that this limited competition should not apply to the very lowest grade of all, say the office boy or a boy clerk, but that we should try to obtain persons who would be first put on the quasi permanent staff on probation.

29,537. What salaries would you think they ought to come in at; I wish to know the minimum salary you would adopt in such a scheme of limited competition?—The quasi permanent staff have had their salary fixed at from 60*l.* to 90*l.*

29,538. If the staff becomes permanent, on what scale would they begin?—The Board have had a very long controversy with the Treasury on this point. At present the arrangement is that our permanent staff begin at 90*l.* a year and rise by annual increments to 200*l.*, and stop at that unless one of them happens to be promoted to the position of senior clerk or the position of accountant, both of which can go up to 350*l.* a year. The Board have been most anxious to obtain for these clerks the prospect of going up to 300*l.* a year, such as is enjoyed by persons who do similar work in other offices.

29,539. You mean to say that you are anxious to obtain a maximum limit of 300*l.* for the ordinary clerks who would begin at 90*l.* and rise by 10*l.* a year to 200*l.*?—Yes.

29,540. Then you would have above them two staff appointments with a maximum limit of 350*l.*?—Yes, and the chief clerk's salary, which I understand is the lowest of the kind in any of the Dublin offices, is 500*l.* a year.

29,541. Why, when entering on this reorganisation, do you not bring your scale more in accordance with that in existence in most Government offices, where you have assistant clerks who begin at 45*l.* or 50*l.* and rise to 150*l.*, and then second division clerks who begin at 70*l.* and go up to 300*l.*?—We did not go into the question as to what we might give the quasi permanent staff. We did not discuss the question with the Treasury. We merely accepted the present arrangement of a permanent staff beginning at 90*l.* and going to 200*l.*

29,542. Is there discontent in your office with the scale of salary?—I should not like to use the word discontent. It is more that the Board and my colleague and myself feel that the men in the office who have done many years service should have a better position. We have men with 20 and 24 years' service. One man with 24 years' service is only getting 140*l.* We think that if these persons had entered an ordinary Civil Service office in

the beginning they would probably all be minor staff officers now and drawing much larger salaries.

29,543. They might or they might not?—I am only speaking from my opinion of the individuals. (*Mr. Fitzpatrick.*) We have had a considerable number of our permanent men who have been transferred to other offices. In fact they have been snapped up by other offices. Mr. Sheridan of the Congested Districts Board was a temporary clerk with us, and I can think myself of six or eight men who have gone away who are now drawing salaries of from 400*l.* to 600*l.* who were in the service of our Board. Had they remained with us they would now have reached salaries of from 140*l.* to 190*l.*

29,544. That is so, but these are exceptional cases, and we cannot legislate for exceptional cases. What I want to suggest is, that if you reorganise your staff and introduce new grades, it might be well to have regard to the second division grade in other offices in Dublin, and also to the system of assistant clerks?—(*Mr. Butler.*) We brought something of the kind to the notice of the Treasury Remembrancer.

29,545. At all events it is under discussion?—Yes.

29,546. At present your appointments depend purely upon patronage. You have the patronage of appointments and you appoint direct?—The Board had up to the year 1907. Since then the Board's powers have been limited. We have, as it happens, filled all the vacancies that have arisen in the permanent staff since that date by promotions from the quasi permanent staff, but we have been unable to fill the quasi permanent posts from the boy clerks, because all the boy clerks who are any good pass into the abstractor division, or even the second division of the Civil Service, and then they have to leave us.

29,547. Are not your quasi permanent staff really men whom you have on probation?—They are men whose tenure is dependent on the Assistant Commissioners on receiving one month's notice, but one man has been 12 years in our service. There are only three of them left. The others have been promoted. One is seven and the other is five years in his position.

29,548. (*Mr. Boutwood.*) What is the reason that the scheme broke down?—All the boys who were useful in the office and who are likely to make suitable additions to the higher ranks passed into the Civil Service proper and then had to leave us. (*Mr. Fitzpatrick.*) Two or three who actually reached the quasi permanent staff passed a higher examination and went away to English offices.

29,549. (*Chairman.*) Do you regard your staff as Civil servants at all?—(*Mr. Butler.*) That is a very difficult question to answer, as to the meaning of the words "Civil Service." In the Government of Ireland Bill I believe we are held to be covered by the term, but in practice we are not Civil servants.

29,550. Do you come under the Civil Service regulations?—We are under Treasury regulations to a certain extent. We have adopted them partly by direction of the Treasury and partly on our own initiative. We have adopted Civil Service regulations as regards hours and leave and rates of increment, but we are not regarded as Civil servants by the Civil Service Commissioners or by the law authorities.

29,551. (*Mr. Boutwood.*) There is one thing I am not quite clear about. Why cannot you have a system of second division clerks in the ordinary way without having a special scheme of your own?—Simply because the Civil Service Commissioners have not anything to say to us. We are not Civil servants, and they cannot transfer any of their men to us. If they did he would lose all his former status, and in the same way none of our men are transferable from us to any other offices, so as to preserve all their previous years seniority, as would be the case with ordinary Civil servants.

29,552. Is the real reason the difficulty about pensions?—No, I think the real reason is more a question of the funds out of which we are paid. We are in the employment really of the Board. The great majority of us are held to be in the employment of the Board and not directly of the Crown. We are paid out of the ordinary income of the Board and do not come in any way under the purview actually of the Civil Service Commissioners.

26 February 1913.]

Mr. W. F. BUTLER, M.A., and Mr. W. A. HOUSTON, M.A.  
(Mr. S. A. O. FITZPATRICK was in attendance.)

[Continued.]

29,553. This quasi permanent staff you speak of, I do not see any mention of it in this return?—I think it is just under the permanent staff, heading 2.

29,554. You give the actual authorised number with some details?—I think it is the third page of our document dealing with the staff. I think your return only deals with the permanent officers. I think none of these people come into this under that heading. (*Return handed in.*)

29,555. Why do you want such a staff. As I understand it, you really use it as a matter of probation, but is there any other reason?—The first reason is that the eight who are on the permanent clerical staff, which is the whole number that has been sanctioned by the Treasury, are not nearly sufficient to do the work of the office. We have, of course, to do the work somehow or other, and we have been allowed by the Treasury to take in a certain number of persons who have no permanent rights and are dismissible by the Assistant Commissioners and who are nominated by the Assistant Commissioners without the Board really interfering with the matter at all. The authorised number of these is seven. We only have three at present, but sometimes we have to take more as temporary assistants. The work is not continuous, although there is a great deal of continuous work all through, but at one period, two or three months after the examinations and just before them, we want a largely increased staff for that work.

29,556. That is what I have been trying to find out, whether or not there was a fluctuating element?—That class of temporary assistants, we do not count to be the same as the boy clerks, who are partly permanent, and are not the same class as temporary assistants. These latter are engaged for longer or shorter periods, and we generally get time-expired boy clerks from other places. We get any persons we happen to know of. We had, some time ago, 13 of these in the office. At present we are engaged in tabulating the students in the different centres and the subjects for the year which they are taking up.

29,557. These are just temporary assistants who are taken on for the variations of the work?—Yes.

29,558. There are variations in your office similar to those in other offices, where in some cases they are taken on from day to day instead of being permanent, does that happen?—(*Mr. Houston.*) I think it will happen under the present method. We ought to have an extra one on the permanent staff. There are four vacancies on the quasi permanent staff which is really permanent. At present the work is being done by temporary people because we cannot, under the present system, make an appointment permanently, and we cannot do without them. (*Mr. Fitzpatrick.*) It was suggested to us by the present Treasury Remembrancer that the permanent system had broken down and was bound to break down. It had been instituted by his predecessor. It was suggested that we might fill up by means of a quasi permanent staff for the present and appoint anybody we liked. I think it is a very inadvisable thing to act upon anything like that. I would rather see the place dealt with in some way which would be permanent.

29,559. At present you have a permanent staff, a quasi permanent staff which is really permanent, and a temporary staff which tends to become permanent?—(*Mr. Fitzpatrick.*) And is largely permanent. (*Mr. Butler.*) The present Treasury Remembrancer has admitted that the whole thing requires investigation. He promised that he would investigate it, but he has put it off until he knows what is to become of the various grants which Mr. Birrell has been proposing to give to the Board. Until he finds whether or not we are to get the extra money grant, and until that is settled it would be very little use reorganising the office. If we have to distribute 50,000*l.* a year more it would involve a reclassing of the staff. He has promised as soon as the matter has been decided one way or the other, whether we get it or not, that he will hold a thorough investigation into the whole matter, and will devise some scheme that will rectify the present anomalies as far as possible.

29,560. What do you pay a temporary assistant?—(*Mr. Fitzpatrick.*) From 4*d.* to 6*d.* per hour.

29,561. How much is that per week?—15*s.* 9*d.* to 1*l.* 1*s.*

29,562. I see on the same table you make a reference to section 3 of the Act of Parliament; what is that section?—(*Mr. Butler.*) It is the section which enables the Board to give pensions.

29,563. I just wanted to know generally what it was. Then, to go into another matter, you speak of prizes to scholars and you also make grants to the schools; do you also give certificates?—Yes, every student who passes an examination gets a certificate.

29,564. What I want to get quite clearly is what is your actual relation to the schools; primarily you seemed to be a purely examining body?—That was really the position of the Board up to the year 1908 when we had the institution of the inspectors. The Board however have a general power to make their grants dependent upon the fulfilment by the schools of almost any condition that has passed the two Houses of Parliament, and the Board have laid down certain conditions, one of which is that all schools which intend to receive grants shall submit to inspection and shall furnish the Board with certain necessary details of the work to be carried on and to be inspected. That is the only interference we have with the schools.

29,565. You know the elementary education code in England, I suppose, the general sort of thing it is?—Yes.

29,566. That is full of all sorts of regulations as to school buildings, the nature of the instruction, and the qualifications of the staff; could you make similar regulations for the intermediate schools in Ireland if you wanted to?—We have made no such regulations; we have one general clause as regards buildings, sanitary accommodation, and appliances.

29,567. (*Mr. Graham Wallas.*) I see it here "that they shall comply with the rules of the Board" with regard to the provision of recreation, sanitation, physical exercise, etc.?—(*Mr. Butler.*) The Board have never made such rules so far.

29,568. (*Mr. Boutwood.*) You seem to have the code-making power if you choose to exercise it?—We have, but if we did some of the schools might prefer the old system and would probably agitate to have the particular rule to which they objected disallowed by Parliament.

29,569. Could you prescribe the qualifications of the teachers if you wanted to?—That question is rather a matter for the law authorities, I think it is safer not to express an opinion upon it.

29,570. With regard to the syllabus of your examinations, do you simply base that upon the instruction actually given in the schools, or do you define for yourselves?—We define it entirely for ourselves.

29,571. So that really your syllabus becomes the normal one for the intermediate schools?—Yes.

29,572. (*Mr. Graham Wallas.*) The examination is based upon the inspection of the instruction in the schools?—(*Mr. Fitzpatrick.*) The inspectors consult now and again with the commissioners and give them advice upon it. There is a good deal of the curriculum of the schools which is more or less modifying the system of examination of the Board. (*Mr. Butler.*) The inspectors are really consulted by the Board before the programme is published. The Board has full liberty to reject these suggestions if it chooses.

29,573. You have 12 members of the Board appointed by the Lord Lieutenant, does it usually happen that they are appointed for life?—We have; they are appointed during pleasure but that is really for life.

29,574. And the action of the Board is the action of the majority of those 12 who are present and voting, I suppose?—Yes.

29,575. How often does the Board meet?—There is no very fixed rule about it. I would say that, taking one year with another, they meet on an average once a month.

29,576. And what is roughly the average attendance of the 12 commissioners?—That is rather hard to say; I should say about seven or eight would be a fair average. I should say the average attendance is more than half the Board, and frequently practically the whole Board is there.

29,577. They have before them certain recommendations made to them by the Assistant Commissioners?—We send out to them a certain number. It is a

26 February 1913.]

Mr. W. F. BUTLER, M.A., and Mr. W. A. HOUSTON, M.A.  
(Mr. S. A. O. FITZPATRICK was in attendance.)

[Continued.]

printed agenda setting out all the business which is to come before them. It is not usual for us to make recommendation except in matters which are almost entirely routine, such as dealing with penalties inflicted upon schools.

29,578. That recommendation is the joint recommendation of the two Assistant Commissioners?—Yes.

29,579. Have you two any arrangements between yourselves as to how you will settle questions on which you may not be agreed?—We have really a very small power of recommendation. We can only recommend in some minor matters. A thing of the kind you refer to would go to the Board to decide. We really have very little power; the only point upon which we have any power of recommendation was that given last year as to certain formal transgressions of the rule under which penalties are laid down at the discretion of the Board, and we may suggest an appropriate penalty in certain cases. Practically, our power to make recommendations is confined to that.

29,580. How long do the commissioners usually sit?—Taking the average meeting, it will last two or three hours.

29,581. The important business is done, in fact, by discussions among those 12 gentlemen, or those of them who are present?—Yes.

29,582. Are appointments made by the Board at their sittings?—The appointments of the examiners, who annually conduct the examinations, are made by the Board at their sittings; also of the superintendents, who supervise the examinations. When the six inspectors were appointed, the Board made the appointments in the same way.

29,583. I suppose that a gentleman who wanted to be appointed as an examiner or inspector, would apply to the individual members of the Board?—He would formally apply to the Board through the Assistant Commissioners, but would, in fact, as a rule, apply to certain individuals on the Board.

29,584. To certain individual members of the Board; and he would ask his friends to write to those individual members of the Board?—I suppose he would.

29,585. Have you any women inspectors on your staff?—No, we have only six inspectors in all; the first appointments were all men, no women. Among the examiners we have a fair number of women.

29,586. I want to ask you some questions as to the distribution of the work of educational superintendents in Ireland, such as that which is done by the Board of Education in England. As I understand it, you divide this work among several bodies. Do you agree that the work done by the Board of Education in England is done by several bodies in Ireland?—Yes.

29,587. I have a list here. There is the National Board; there is the Board of Agriculture and Technical Instruction; there is the matter of instruction in workhouses; there is school superintendence by the Local Government Board in finance and scholarships?—The Local Government Board have certain powers with regard to scholarships. I know that.

29,588. And they probably inspect workhouses for purposes of education?—That I do not know.

29,589. Then there is the charitable donations and bequests fund?—That deals with certain funds of endowed schools; whether they deal with education or not I do not know.

29,590. They make schemes?—Yes.

29,591. The Endowed Schools Commission?—They created a great many schemes at one time, and I understand there is a special office, called the Educational Endowments Commission. We have a little to do with that ourselves.

29,592. Then there are the industrial schools. In respect to the education in reformatory and industrial schools there is another body?—That is so.

29,593. (Mr. Graham Wallas.) And also the Board of Works?—The Board of Works provides buildings, etc.

29,594. So that there are eight bodies in Ireland who divide among themselves the work of education done in England by the Board of Education. The Board of Works superintends the buildings and plans, which is work done by the Architectural Department

of the Board of Education in England. Can you add any more to those eight?—I do not think so.

29,595. With regard to those grants which are earned, so to speak, by the individual scholar in a particular school, you might have correspondence and contact with at least five or six out of these eight authorities?—I hardly think it would be so many as that. Practically all our schools have something to do with the Department of Agriculture and Technical Instruction, because they examine in science. Some of the bodies which conduct schools under our Board also conduct schools under the National Board in an adjoining building, but that is quite a separate school.

29,596. In some cases children attending the national schools sit for your prizes?—Yes, there are several of those schools from which the children go up for our examinations.

29,597. Do you have correspondence with the Board of Works?—I should not think any of our schools would have anything to do with the Board of Works. (Mr. Fitzpatrick.) I think the managers of the national schools would be the persons who would be in correspondence with them.

29,598. Now, take the children from the national schools who are examined for your prizes, and also children from the endowed schools, and they may also sit for the technical instruction examinations, would not that mean correspondence with the Department of Agriculture and Technical Instruction, and the National Board and the Board of Works, and the Endowed Schools Commission? (Mr. Houston.) I do not think there would be much correspondence in that case.

29,599. (Chairman.) Is it not correct to say that the national schools merely send some of their children to your examinations? (Mr. Butler.) We treat them as private students.

29,600. They come as individuals; the national school has nothing to do with it?—No.

29,601. (Mr. Graham Wallas.) Would not that mean corresponding with the manager?—It might as a matter of courtesy. (Mr. Fitzpatrick.) It would be a question as to where students could be conveniently examined, or something of that kind. (Mr. Butler.) Or correspondence with the manager of a school as to some problem that might arise with regard to children coming under our rules. We would answer him as a matter of courtesy.

29,602. I suppose your Board would correspond by letter in Dublin with at least five or six of these departments in the course of a year?—No, I should say that the only body that we have any close connection with is the Department of Agriculture and Technical Instruction. We have one school which forms a connecting link with the Endowed Schools Commission. I do not think we have anything whatsoever to do with the Charitable Bequests Office.

29,603. Do you constantly correspond with the Department of Agriculture and Technical Instruction?—They supply us with certain returns.

29,604. And often with the National Board?—No, I should say very rarely. We furnish certain returns. They appoint as pupil teachers people who have passed certain of our examinations and upon a certain number of marks, and we are asked to supply certain marks and to verify certain statements, but we have very little official correspondence with them.

29,605. You will agree that the whole system represents a very complex method of educational administration?—Yes.

29,606. (Mr. Shipley.) I do not know why your Board does not follow the Civil Service?—I am afraid we do not quite understand ourselves why we are not accepted. The Treasury always treat us as if we were Civil servants whenever it suits them. (Mr. Fitzpatrick.) We are not on the Estimates, that is the first thing. (Mr. Butler.) Then, I take it, there is the method of appointment, and the method by which we are paid, and the Treasury always refuse to give way to our men on any claim corresponding to what Civil servants would get. On the other hand, where it suits the Treasury, where it is a limitation, they impose certain hours upon us and they look very strictly into such matters as sick leave and pensions.

26 February 1913.]

Mr. W. F. BUTLER, M.A., and Mr. W. A. HOUSTON, M.A.  
(Mr. S. A. O. FITZPATRICK was in attendance).

[Continued.]

29,607. (*Chairman.*) In such a case they throw all that off conveniently by saying you must look to your endowment; everything is charged to the endowment?—Yes.

29,608. (*Mr. Shipley.*) Do you inspect the schools annually?—Yes.

29,609. Do you inspect anything except the teaching—hat pegs and so on?—Sanitary arrangements and playgrounds, and as a rule provision for recreation are looked into, and if any school wishes it the dormitories of the schools are inspected.

29,610. You inspect the actual teaching?—That is fully inspected.

29,611. Can you go into any school in Ireland?—We can go only into those which have consented to inspection; where they have signed various documents and entered students for our examinations. Each manager of a school gives his written consent to inspection if he desires to earn grants from us, and the school will be inspected.

29,612. Are there many schools where there is no inspection; convent schools and cases of that kind?—Practically every convent school giving secondary education, with few exceptions, comes under us.

29,613. (*Chairman.*) Many of the national schools are convent schools?—I know that some of the convent schools are not under us, but the vast majority are under us and are examined in the same way as the others.

29,614. I understand there is no exception to inspection?—(*Mr. Fitzpatrick.*) Among the nuns, the sisters of mercy are those who have the largest number under the National Board. The Loretto nuns, the Presentation nuns, and certain other orders have intermediate schools, and the tendency is for the number coming under our Board to constantly increase.

29,615. This is a different thing from the inspection of convents; the inspection of convent schools is a different thing?—Yes.

29,616. (*Mr. Shipley.*) Do the boys more or less leave at a fixed age?—(*Mr. Butler.*) It was my experience in Cork, where I was registrar, and we took the age of every student entered in the college, who was taking a university course, that the vast majority who were entered by us would describe themselves as between 17 and 18 years of age.

29,617. They did not all come to the university?—No, there are about half of the students who only proceed to the junior grade course. About 45 per cent. leave school after attaining the junior grade at about 16 years of age. The rest go on, some for one year and some for two years. In some of the schools, where they give them a more complete grammar school course, the larger number stay until 18.

29,618. (*Miss Haldane.*) Have you any private scholars coming up for examination who are not taught

in the schools?—(*Mr. Fitzpatrick.*) A very small number indeed.

29,619. They are eligible?—Quite eligible.

29,620. Do you have examinations in domestic science?—(*Mr. Butler.*) Domestic economy is one of the subjects. The Department's inspectors inspect it, and decide as to whether students have passed for it or not; the Department report to us whether or not they will sit as well for honour papers.

29,621. Who carries out that examination?—The Department nominates an examiner every year for that subject. As in other science subjects, it is usual to accept the nomination of the Department in making the appointment of examiners. In domestic science, as well as in science, it is nearly always one of the Department's inspectors.

29,622. How many of your examiners are women, what is the proportion?—In some subjects there is a very considerable proportion. I should say in French fully half last year, and in German, I think, three out of five examiners were ladies, and in English and history about half. In classics and mathematics there were not so many: taking all the subjects with which we deal, including classics and mathematics, about a quarter. (*Mr. Fitzpatrick.*) I should say one-third; even in classics there are some. (*Mr. Butler.*) In classics there are one or two and in mathematics I think one.

29,623. You have no women inspectors?—None.

29,624. Am I right in thinking that 50 per cent. of those who come up for examination are girls?—I think it is less; I think one-third are girls. (*Mr. Houston.*) The figures are roughly 9,000 boys and nearly 5,000 girls—4,800.

29,625. Why are there not quite so many girls in proportion to the boys?—(*Mr. Butler.*) For one reason a great many parents object to their girls going in for our examination. They consider the strain is too much. There are some schools, which are the largest numerically, which do not furnish anything like the whole number of pupils for our examination. Only a certain number of the pupils in the school enter.

29,626. Have you any knowledge as to whether or not many of them break down through these examinations?—I do not think we have accurate knowledge upon that point.

29,627. Have you a scheme of subjects which the children must take; do you plan out a scheme which must be taken and is essential?—We prescribe in our examinations that every student who is desirous to pass must pass in English and mathematics, and either Greek or Latin or two modern languages, and then one other subject at their discretion. They must pass in four subjects if one is Greek or Latin, and in five if not in either Greek or Latin; we insist upon English and mathematics in every case.

29,628. As regards the future of the teachers, you have nothing to do with that?—No.

Mr. P. E. LEMASS, I.S.O., called and examined.

29,629. (*Chairman.*) Mr. Lemass, you are one of the secretaries to the Board of National Education?—Yes.

29,630. Mr. Starkie, the Commissioner of National Education, is at present ill and unable to give evidence before us. Without desiring to anticipate the evidence he will give in London, we desire to have information from you on certain points especially as some of your clerks, your assistant clerks and second division clerks, have made certain representations to us which we wish to consider while in Dublin, but which we cannot very well understand without a little preliminary conversation with you. To begin with, please give us very briefly a sketch of the system of national education in Ireland?—The Board of National Education was founded about the year 1831 by a letter from Mr. Stanley (afterwards Lord Derby) addressed to the Duke of Leinster, and the principle on which the Government wished the new system of education to be based was, that as far as possible there should be separate religious instruction and united secular instruction; that is to say, the children of all denominations, Roman Catholics, Episcopalians, Presbyterians and others attend-

ing these schools should get secular instruction in common but their religious instruction was to be separate. The system was to be one, not of Government endowments in the accepted sense of the word, but a system of aid to local people. The schools were to be established by local persons interested in education; if possible, by all the different denominations. They were to make application to the Board for aid, and the aid was to be given in the shape of help to pay teachers' salaries, free grants of books, and so on. At first the system did not catch on, especially with the Protestant denominations in Ireland. The Catholics took to it more kindly because they had no organised system of education, but the Protestants, especially the Episcopalians, kept rather aloof from the system for many years. It is only within the last 25 years that the Episcopalians have really given cordial support to the system of national education. They had schools of their own, Church education schools, and I think they have some of them still. But a considerable number of them have come under our Board. The Christian Brothers came under the Board for a while, but they did not care for our rules.

26 February 1913.]

Mr. P. E. LEMASS, I.S.O.

[Continued.]

The Board had to make very stringent conscience clauses, and these rules, with regard to religious instruction and things of that kind, did not suit the Christian Brothers, so they withdrew from the system and have never come under it since, though some years ago, in Mr. Morley's time, a very determined effort was made to bring them in, but it did not succeed. The Commissioners of National Education, in addition to establishing primary schools, also wished to have technical education largely introduced into Ireland in connection with their system. In fact, it was more than what we now call technical education. They wanted to have agricultural teaching, and they established a number of agricultural model schools and three or four large agricultural farms or training institutions, one of which at Glasnevin is now under the Department of Agriculture. For several years these institutions did fairly good work. After some time there was objection made to them, I think, on the part of some association, or something of that kind, which did not like the idea of interference with commercial life that seemed to be involved in training stewards and people as overseers of farms and in purely technical work. I cannot say exactly whether that was the sole cause, but the Government and the Treasury intervened, and ultimately the Commissioners had to dispose of nearly all the model farms and close them, but they kept on the model farm at Glasnevin until the new Department of Agriculture was established, and also an institution in Cork. These two have been handed over to the Department, and since then there has been nothing in the shape of practical teaching of agriculture in connection with the national schools. There was some book teaching, but that was abolished in 1900.

29,631. That is the general outline?—Yes. The system expanded and developed, and at the first there was great opposition on the part of the Catholic clergy to schools that were established by the Commissioners. The Commissioners were empowered under the original letter to establish schools of their own—model schools.

29,632. In addition to the model farm schools you have mentioned and in addition to the aided local schools established by local people?—Yes. These were special schools which were to be models for the other national schools.

29,633. They were a different kind of model school from the agricultural model schools?—Entirely different. The agricultural model schools were for purely technical work and agriculture, but a number of agricultural model schools were established in connection with these other model schools. We had places like Kilkenny with an ordinary model school and an agricultural model school.

29,634. As I understand your statement, local committees or local people were encouraged to establish national schools for joint secular and separate religious instruction, and were given grants in aid by the Government for that object?—Quite so.

29,635. But the Government retained the power to establish national schools of their own, which were called model schools, to serve as models upon which the aided national schools were to frame their procedure?—Yes.

29,636. Over and above that, other model schools were established by the Government for the purpose of technical and agricultural education; thus three grades of schools were established—the aided national schools established locally; the model national schools established by the Government, and the schools for technical instruction, also established by the Government, which were of a higher character and not directly connected with ordinary education?—Yes. The first class is much the largest class.

29,637. With whom did the appointment of teachers rest in the first class of schools; that is, the aided schools established by the local people?—With the local managers.

29,638. How were the local managers appointed?—They were generally the people who applied in the first instance to the Commissioners for aid.

29,639. Were they a local education committee?—Sometimes a committee, sometimes one person, and in many cases only the parish priest or rector.

29,640. As a general rule, who now is the manager of the national schools?—The majority of managers of national schools are parish priests and other clergymen.

29,641. I understand that national schools may be divided into "vested" and "non-vested"?—Yes.

29,642. Does that division cover the whole ground?—Yes.

29,643. What are non-vested schools? Are they schools controlled by "managers"?—Yes, necessarily. The distinction between the vested and non-vested schools is this: that the vested schools have been built by aid of a grant, through the Board of Works. The Commissioners of National Education make the grant to build a national school. The Board of Works carry out all the details, and in many cases even build the school-house. They have the money; they hold the purse.

29,644. Is such a school vested or non-vested?—That is a vested school when built by aid of a grant from the Commissioners of Education.

29,645. In whom is it vested?—It may be vested in local trustees, or it may be vested in the Commissioners of National Education in their corporate capacity.

29,646. What are the non-vested schools?—All the other schools.

29,647. To the building of which the Board does not contribute?—Yes.

29,648. Who controls them?—The local managers and patrons. In the case of some of these non-vested schools, which have been built by the lords of the soil or the owners of the property, the landlords or the owners of the property on which they stand, are called the patrons of the schools.

29,649. How many national schools are there in Ireland, all told?—There are 8,289 in operation.

29,650. How many are vested and how many non-vested?—I can let you know that later.\*

29,651. Please insert the figures when you correct the proof of your evidence. You stated that the appointment of the teachers rests with the manager?—Yes.

29,652. In the case of vested schools, with whom does the appointment of the teachers rest?—With the manager, except in the case of the model schools. They are schools vested in the Commissioners. In these schools the Commissioners directly appoint the teachers and enter into agreement with them.

29,653. In all other cases the teacher is appointed by the manager and the agreement is entered into between him and the manager?—Quite so.

29,654. With whom does the dismissal of the teacher rest?—With the managers also. They have a power of dismissal under terms of their agreement.

29,655. Against such dismissal is there any appeal to the National Board?—We have four forms of agreement. Under one form, if the teacher is summarily dismissed, he may appeal to the Commissioners of National Education to determine whether the dismissal was for sufficient reason. We have another form, which is more generally signed, under which, if a teacher is summarily dismissed, or if there is any dispute about the dismissal, an appeal may be made to the law courts. That is the one more generally signed. It is the only form, practically, signed by the Catholic managers.

29,656. The teacher is given, under that agreement, an appeal to the law courts?—Yes, if a dispute arises it must be settled by the courts. It is not specifically laid down that there is an appeal to the law courts, but there is no appeal to the Commissioners. Then there are two other forms, in which there is an appeal to a referee, or referees, who are named in the agreement.

29,657. Is there any agreement at present in use in which no appeal lies from the order of dismissal by the manager?—Under a rule, comparatively recently introduced, a teacher has an appeal to the Commissioners of National Education in any case in which he may feel aggrieved. He may appeal to the Commissioners against the manager and inspector, even against a dismissal, and in a recent case the Commis-

\* 3,419 vested; 4,870 dot-vested.—P.E.L.

26 February 1913.]

Mr. P. E. LEMASS, I.S.O.

[Continued.]

sioners intervened where a manager had given a dismissal under an agreement.

29,658. Is the form of agreement to be entered into prescribed by the Commissioners of Education, or may the manager and the teacher enter into any form of agreement they please?—The forms are prescribed by the Commissioners. There are four forms, and managers and teachers have the option of choice.

29,659. Has the teacher a more secure tenure now than he had some time ago?—There is no comparison between the position of the teacher now and what it was, say, before the results system was introduced. That was about the year 1872. They had no fixity of tenure then. They were absolutely dependent on the whim of the manager. About 1872, at the time of the introduction of the results system, it was made a condition that there should be an agreement between the teachers and the managers, or otherwise results fees would not be paid.

29,660. The results fees were paid on examination?—Yes. This was a modified form of the system of results fees which had obtained in England prior to 1872, and now completely abandoned.

29,661. We are now talking of national schools alone?—Yes.

29,662. Does the system of paying by results still prevail in national schools in Ireland?—No. That was all swept away in 1900.

29,663. Although that was swept away the four forms of agreement still continue?—Quite so.

29,664. I understood you to say that the four forms of agreement were accepted by the managers because of the advantages which they derived under the system of paying by results?—It was made a condition by the Government of paying results to any school that an agreement should be executed, and if the manager would not enter into an agreement with the teacher the school got no results fees.

29,665. The results system was swept away in 1900, but the four forms of agreements are still retained?—Yes, and we insist on the execution of an agreement now in every case.

29,666. So there is now, compared with formerly, a very effective protection for national school teachers?—They have as much protection, and possibly more protection, I think, than the average employé.

29,667. What do you mean by the average employé? Is it the average Government servant?—No; I mean an employé in commercial life, say a shopman in a commercial establishment or a servant in a household.

29,668. What protection has he except a month's notice?—The teacher has three months' notice.

29,669. But if the manager says he is dissatisfied with him and gives him three months' notice, then, if I understood you properly, the teacher has an appeal in one case to the law courts and in another case to the Commissioners of Education, as against the manager?—I don't want to be misunderstood about that. The appeal which the teacher has to the law courts in the case of agreement No. 2 is not against the dismissal, but against the penalty that is to be paid by the manager for summarily dismissing him. If a manager dismisses a teacher on three months' notice and allows him to remain in the school for the three months the teacher has no appeal to the law courts, or if he pays him three months' salary in lieu of notice he has no appeal. But if he dismisses him summarily and will not pay him the three months' salary he has the appeal. In all cases of dismissal the teacher has the power under the recent practice, and a recent regulation, No. 96 of the Commissioners' Rules, to appeal to the Commissioners on the ground of harsh treatment.

29,670. (Mr. Graham Wallas.) Can he exercise that appeal when he has been given three months' salary or three months' notice?—Certainly, and in some cases teachers have done it. In a recent case the Commissioners intervened and told the manager they disapproved of his conduct in dismissing a teacher.

29,671. Have the Commissioners the power of reversing the order of dismissal made by the manager in such a case as that?—No, they have no power to do that.

29,672. Can they only express their judgment?—They can do more; they can tell the manager that in their opinion he has acted wrongly, and if he persists in his action they can say, "We do not think it is for the educational interests of the district that you should be any longer manager of that school, and we will hold an inquiry into your conduct, and, if necessary, we will remove you."

29,673. Have they got the power of removing the manager?—They have.

29,674. (Chairman.) For what kind of action?—They may remove the manager or patron if it should appear to them, after inquiry held after due notice, at which the manager is allowed to appear and make any defence he wishes, that the educational interests of the locality require it.

29,675. What would happen if the local people who had appointed him manager take a different view of the case from the Commissioners and re-elect him to the managership again?—Then the Commissioners have another resource. They can say, "If you persist in retaining this manager we will suspend or withdraw our grants."

29,676. Are all head masters of national schools required to pass through a training college?—All principal teachers must now be trained, and all male assistant teachers. In the case of women teachers, we appoint them as assistants without being trained, but the Commissioners desire that all their teachers should be trained, and a very large percentage of them are now trained.

29,677. When a woman is appointed an assistant teacher is she given the opportunity of going to a training college and getting trained?—Certainly. We allow her to go to a training college and continue to pay her salary while she is in the training college, but she has to provide a substitute.

29,678. Can they continue as assistant teachers beyond a certain time unless they become trained?—In the case of assistant teachers we do not dispossess them.

29,679. Do you insist that all future assistant teachers shall be trained?—All future men assistants in ordinary national schools.

29,680. Do you propose to proceed further with the female teachers?—I should hope so, after some time.

29,681. What is the reason of the difference? Is it that you have not got sufficient applicants for the teaching profession among women, or is it that you have not got sufficient training colleges?—I believe that there is nearly a sufficiency of candidates for all the vacancies we have, but it is this way: in connection with the system we have monitresses and pupil teachers. These are untrained persons, but if they pass their examination sufficiently well at the end of their career as monitresses or pupil teachers we recognise them as assistants.

29,682. (Miss Haldane.) Are they apprenticed in such a case, as they used to be in Scotland?—No, we never had apprenticeship in connection with the teachers in Ireland.

29,683. They simply go on teaching as unqualified teachers?—In the case of the pupil teachers it is students from intermediate schools who have passed with honours whom we appoint now as a rule, and they are appointed for two or three years. There is no agreement entered into with them, but they give an undertaking that they will pursue their studies and become teachers of national schools. That is the only undertaking we require from them. If they abandon that idea and, say, they go into the Civil Service, if the Civil Service Commissioners write to us and ask, have we any charges against them, we should say we have certain charges against them for their training.

29,684. (Chairman.) Have you seen the complaint made to us by the assistant clerks in your office; and if so, do you think there is any substance or foundation for their complaint?—No, they did not send me a copy. I saw a statement that was furnished to you by the Ridley clerks, as they call themselves.

26 February 1913.]

Mr. P. E. LEMASS, I.S.O.

[Continued.]

29,685. What they say is, that the duties of the assistant clerks in your Department are, generally speaking, of an advanced and responsible nature, involving the constant exercise of initiative, and requiring from them intimate acquaintance with office procedure, and so on; and that the duties discharged are identical in the majority of cases with those performed by clerks of the second division. Is that the case?—Without examining the work done by each assistant clerk I could not answer off-hand, but you can readily understand that in a large place like the Education Office, where there is a variety of work of a very complex kind, it is a very difficult task to draw the line between the work that might be assigned to an assistant clerk and the work that might be assigned to a second division clerk, and in some cases when we find—I have done it myself—a smart assistant clerk, a man who, we think, at some future time, would be deserving of promotion, we have given him a little work that might be assigned to a second division clerk to test him. When we make our recommendation that such a man should be promoted, the Treasury, as a rule, require to know whether the man is fit to do the work of a second division clerk, and we are in a position to say he is; that he has been tried and found equal to it.

29,686. Are you prepared to say that—not taking into account such individual instances as you mention and not concentrating your attention on the border line between the second division and the assistant clerks division—the bulk of the work done by the assistant clerks is essentially distinct from the bulk of the work done by the second division clerks?—Certainly; as far as it is humanly possible we try to give the assistant clerk work of a simpler and more routine character than is given to the second division clerk. The work done by the second division clerks in the office is in fact rather of a higher character than that performed by the second division clerks in most other Government offices so far as I am aware.

29,687. Your office is on a second division basis: you have no clerks recruited by Class I. examination?—No, but we have clerks of a corresponding kind. When the Commissioners started the office in 1831 they had very few clerks. After some time, I think about 1838, the Treasury insisted on having a fixed staff for the office appointed. At that time the Commissioners were comparatively independent. They assumed they had the right to do what they liked with the money given them, and practically they had that right until then. They appointed clerks, a secretary, and other officers at their own free will, but about that time the Treasury insisted on getting financial control of the establishment and they made the Commissioners say what number of clerks they would want, and the Commissioners then made some experiments. They had first four classes of clerks with salaries ranging from 40*l.* a year to 425*l.* Then they tried for some time an experiment of apprenticed clerks, boys taken from the central model schools or from some of the ordinary national schools, smart boys brought in at very meagre salaries of from 10*l.* to 30*l.* per year. In the case of the boys who were brought in at 10*l.* they got in addition food and lodging in the training college.

29,688. I thought you were going to tell us why you dispensed with Class I. clerks. We are not going

at present into the whole establishment. We are going to do that later. I only want to know from you about these gentlemen who are appearing before us, whether they have got in your opinion a substantial reason for their objection?—Subsequently there were three classes of clerks, first, second and third. The first class clerks went to 500*l.* a year. Some years ago the Treasury sent a circular out to all public departments to inquire whether these departments were places where Class I. clerks could be employed, and our Commissioners said at that time, that they did not think it was necessary to have clerks of that class, but they had clerks going to 500*l.* a year, first class clerks. In 1900 there was a change made and what were called staff clerks were introduced, and the staff then consisted of senior and junior staff clerks, second division clerks, abstractors and assistant clerks.

29,689. (*Mr. Boutwood.*) What are your staff clerks?—We have six senior staff clerks ranging from 400*l.* to 500*l.* a year, and six other staff clerks ranging from 300*l.* to 500*l.* a year.

29,690. Where did you get them from?—From the second division. In my opinion assistant clerks are no worse off in our department than in many others, and I think they are better off in a way. At present we have a staff of about one hundred and thirty clerks of all grades, and with one exception the higher grades have all been recruited from the second division. There are two clerks having salaries from 520*l.* to 600*l.* a year who are called examiners. The Treasury recently sanctioned an additional examiner. There is another set described as senior staff clerks and they have from 400*l.* to 500*l.* a year. Another set are junior staff clerks who have from 300*l.* to 400*l.* a year. These are all recruited from the second division. Some of the second division clerks at present in the office have been assistant clerks, and are going on to and will be eligible for these higher appointments. So far as the Commissioners are concerned they are very anxious to promote more of the assistant clerks to the second division but the Treasury won't allow them to do it. They have had a stand up fight with the Treasury in one or two cases, where they found exceptionally efficient assistant clerks, to get the Treasury to recognise them, and quite recently asked for the promotion of another of these assistant clerks, and after a great deal of negotiation the Treasury consented.

29,691. How many of those higher appointments are there above the grade of second division to which the second division man is eligible?—There are fifteen or sixteen.

29,692. What is your second division staff?—Forty-five.

29,693. How many promotions have you had from the assistant clerks to the second division within recent years?—I could not say right off, but we have had a number of them.

29,694. It is an appreciable number?—Yes, I suppose we have had six or seven certainly.

29,695. Once or twice you spoke of "the letter" as though it were some authoritative document at the beginning of things?—That was the letter from Mr. Stanley, then Chief Secretary for Ireland, afterwards Lord Derby, which was addressed to the Duke of Leinster in 1831.

Sir BERTRAM WINDLE, M.A., M.D., D.Sc., LL.D., F.R.S., called and examined.

29,696. (*Chairman.*) Sir Bertram, we gave you short notice, and are obliged to you for coming here. We wanted specially to hear your opinion as to the suitability to the conditions of the National University of the Class I. examination. Do you think that the conditions of the Class I. examination, as it is at present arranged, are fair to the National University students, or are they arranged more in the interests of Oxford and Cambridge?—I have not taken very much interest, to be honest, in the subjects of the examination. In years gone by, of course, we used to have a considerable number of students going up for them, as you very well know, from the old Queen's Colleges, now

the University Colleges. But that has come to an end; and the thing has become so academic a matter with me that really I have not looked into the subject. Perhaps you might like to have my opinion as to why it has come to an end?

29,697. Yes, I should?—It is really a matter of age. Students come to a college like mine at the age of about 17, and finish the degree course by the time they are 19 or 20. In 90 per cent. of the cases the parents cannot afford to retain them any longer, and the consequence is that they cannot afford to wait until 22 for one of these appointments. I have a student at present in Cork who is going up for the

26 February 1913.]

Sir BERTRAM WINDLE, M.A., M.D., D.S.C., LL.D., F.R.S.

[Continued.]

Indian Civil. He has taken up classics and philosophy and political economy; his father is in a fairly good position, and can afford to keep him; but I will give you another kind of case. A sort of boy that I should like to put forward for the Civil Service, and who probably would have done himself great credit, is a young fellow that obtained the best scholarship that we can give in the mathematical group, and on a percentage of over 80, which is a most remarkable thing, and a percentage that we very seldom get, the grade of the examination being the honours grade of the senior grade intermediate. This boy was just under 16—he may have been just over 16. Very wisely, he has taken the engineering course, which he can finish in three years—that is, he will have finished at the age of 19. What I want to point out is that the position of his family is such that they could not under any circumstances afford to retain him at the university till he is 22. Yet there is no doubt that he is a very brilliant boy.

29,698. And to such circumstances you attribute the fact of so very few students of your college going up for the Class I examination?—I think so. You see, about 90 per cent. of my students are the sons of men who have very great difficulty in putting them through the university, and it is essential for them that at the very first possible moment they should be earning their living, and they cannot wait till 22 for the purpose of this Class I. examination. I should wish to add that I have heard from these students that they consider that they have very little hope of success unless they go to a grinder in London, and many of them cannot afford that. In the old days they used to pass in considerable numbers direct from these colleges, according to what I heard.

29,699. Yes, that is so?—They have that in their heads now. This very brilliant student who is studying with us this year is doing all his work in Cork.

29,700. The maximum age at the time you are speaking of was 21, I think. If the age were now fixed at 21, would it help your college—it is 24 now?—I think it would to some extent; but, of course, to be quite candid, 20 is the age that would fit in best. At the same time, I think we could help the most suitable students by scholarships to go on for a year after taking their B.A. degree. We have a special system for the M.A. degree, which, I think, does not exist elsewhere, which is that a student who chooses to stop for a year after his B.A., and to do a dissertation on any subject which is accepted by the college under the control of a professor, at the end of a year may, on that dissertation, obtain his M.A. degree. It is an excellent preparation. In addition to my duties as president I profess archaeology in my college, and I happen at present to have three students doing theses under me in that subject.

29,701. (*Mr. Shipley.*) Is that confined to Cork, or is it for the whole of the National University?—It is for the whole of the National University. The students who wish to go away from the college must spend two years between the B.A. and the M.A., but if they spend a year in the college and do a thesis on any subject they like, and we give them the widest possible range, they can then take their M.A. at the end of that year. Last year a lady who took the subject under me got the M.A. with honours on a thesis on the early shore-dwellers of Ireland. If the age was changed to 21 we might provide by means of scholarships, in which we are pretty well off, for students that get the B.A. degree at 20, and enable them to spend another year with us.

29,702. (*Chairman.*) You say that you are pretty well off in scholarships: are these foundation scholarships, or scholarships brought to the university from the county councils?—A very large proportion is provided by the county councils.

29,703. Are you well provided with such scholarships in Cork?—Yes. I think as our numbers go we are sufficiently provided.

29,704. Quite sufficiently?—Well, the County Cork alone gives us ten scholarships and eight bursaries every year.

29,705. What are the scholarships worth?—They have a curious system there, for each scholarship is worth 24l.; but they give me power after investigating the circumstances of the student's people to raise it to 50l. or any intermediate figure I think fit. The idea is that it would be hardly fair to oblige a man to disclose his financial position in the presence of trade rivals, and so they leave the decision in the hands of one person. However, we are well provided.

29,706. The rule of compulsory Irish at the matriculation examination will apply to Cork from this year?—Yes.

29,707. Do you regard that with any apprehension as likely to shut out a desirable class of students?—Well, to be quite candid, I think it is a leap in the dark. About 65 per cent. of my students are Catholics.

29,708. Sixty-five per cent.?—Yes, or 70 per cent.

29,709. Is there such a large proportion of Protestants and Presbyterians as that percentage indicates?—Well, last year we had 90 non-Catholic students out of 440, and these covered all denominations, including one or two Jews. They were mostly Church of Ireland, but there were a good many Presbyterians and Methodists and Congregationalists and Baptists.

29,710. I was not quite prepared for that large percentage, because we were told that in the University College here in Dublin, out of something like 850 students there were only 15 non-Catholics?—But you have got Trinity College next door here; whereas in Cork it is the only college. I have a fair number of non-Catholics on my governing body, and a considerable proportion of the professors and so on.

29,711. Do you think that making Irish compulsory will exclude some of these non-Catholic students in the future?—I think that is a possibility, but how it is going to turn out I cannot prophesy.

29,712. Are there Irish-speaking districts in the counties served by your college?—Well, there are three or four very Irish-speaking districts, such as Dingle in Kerry, and portions of Cork like Inchigeela and Ballyvourney, and the Ring peninsula in Waterford. They are all very Irish-speaking, but they are very poor.

29,713. Do they speak English too in all these districts?—Not wholly. In Dingle I have met quite a number of people who speak nothing but Irish.

29,714. We have heard a good deal about higher university culture as being necessary for the higher classes of Civil servants, and on the other hand we have heard that men capable of performing the highest duties of Civil servants may be supplied from the second division, who you know are recruited by a moderate examination. Have you any views on that?—None at all. I never come in contact with any student going in for the second division. Within the last week I had papers about a student who is going in, but it is the first experience I ever had of such a thing. The student was only a few months in the university, having to leave, I think, for financial reasons.

29,715. So you are not prepared to express any views as to the second division examination being a suitable means of entry to the highest grades of the Civil Service?—No; I cannot give you any views.

29,716. (*Mr. Graham Wallas.*) I don't know if you are aware that in the offices in Dublin there are very few Class I. clerks that come in by the highest examinations?—I understand that.

29,717. Seeing that the age of graduating in Ireland is apparently different from the age of graduating in England, suppose the Civil Service Commissioners should hold in Dublin an examination of a high type, but that the age should be from 20 to 22 instead of from 22 to 24, and that there should be a special grade made considered suitable for the Irish offices, with perhaps not so high an entrance salary, for which boys of that age could compete—would that fit in with your existing university system?—Oh, yes, I think it would, but that would not do for the Indian Civil Service.

29,718. I am thinking of the desirability of bringing the products of the Irish universities into contact with Irish administration?—That would open a field for a

26 February 1913.]

SIR BERTRAM WINDLE, M.A., M.D., D.S.C., LL.D., F.R.S.

[Continued.]

considerable number of students who are at present kept out.

29,719. You can see no result in that which would not be good?—No.

29,720. Since your graduating age is somewhat younger than that of any of the other universities you are anxious to maintain post-graduate studies?—Yes. That is what we are anxious to do.

29,721. Do you think it would be wise if some of the results of that post-graduate work were brought into the Government service?—Yes. They are the pick of the students, the pick of those who can afford in any way to stay, either by means of scholarships or through their parents.

29,722. If there were certain posts in the Civil Service for which the preliminary qualification was the obtaining of a higher degree in a modern university, do you think that some of your best students would compete for these posts?—Oh, yes, undoubtedly.

29,723. Now, I am familiar in the University of London with a certain number of Irish students who are sent to us by the Board of Technical Instruction with scholarships, and who come there for the purpose of studying details of administrative machinery in their own and other countries, and for the general study of economics. Have you had anything to do with these students?—No.

29,724. You have none of these in Cork?—No.

29,725. Have you yourself developed any considerable section of your university work in the direction of economics, and political science, and political philosophy?—Oh, yes, we have a very flourishing commercial faculty there which is really a faculty of what I might call theoretical and applied economics, and I am glad to say that it is growing in numbers, because I may say that one of the dangers of this country is the turning out of an undue number of Bachelors of Arts. It leads to nothing in this country, and it leads to little in England. But there is an educational field there that there is not in this country. The teaching in this country is mostly in the hands of religious orders. When a boy gets the B.A. degree, he imagines that he has the knife that opens the oyster of the world, but he finds that he has not. He is disappointed, and may become a centre of mischief instead of a centre of usefulness. In our commerce faculty he gets a great deal of commerce and commercial technique, which afford very good prospects for a first-rate man. He learns accountancy thoroughly. He has got to do one or two foreign languages; he has got to translate books on commercial foreign matters, and comment upon them; he has to study constitutional history and law, and the ordinary political economy, and the student that goes through that I consider to have gone through a very broadening and very comprehensive course. In the first year we had, I think, only one student who entered for it. He took his degree, and Mr. Chapman, our extern examiner, said that he was immensely struck by the answering of this man, who is a county council scholar from the County Tipperary. Some of the best students this year went in for this faculty, and it is a most excellent thing. They are going into business, or they will try to get such things as consular appointments. It is an excellent preparation for them.

29,726. It affords them, of course, a real opening in business. But would you say that a certain leavening of these men might be brought into the public service?—Of course, we hope that a certain proportion will bring their college knowledge into the offices of secretaries of county councils and positions of that kind, as things develop.

29,727. You think it necessary that that examination should take place at 20 to 22, and not from 22 to 24?—Yes. That is too late.

29,728. If there was a scheme that attempted to adapt the Civil Service examinations to the particular phases of Irish education, such a scheme ought to provide a sufficient number of marks for that class of subjects to make it worth the while of the students to take them up?—Yes.

29,729. What proportion of your students are women?—Very nearly one-fourth. I think we have very nearly 100 women students, and three women professors.

29,730. Are the women nearly all preparing for a life of teaching?—No, a certain number are going on for medicine. We have actually one woman going in for engineering. It rather puzzled me when her father brought her, and I asked him if he thought it was a fit life for a woman, but he said there should be a good chance for such a woman in an engineering drawing office.

29,731. (*Mr. Shipley.*) There are one or two at Cambridge?—Yes, but that is mechanical engineering, and we only do civil engineering.

29,732. (*Mr. Graham Wallas.*) Now looking back for a moment at your past women students, can you think of one or two who would have done well in some form of administration?—Well, when I went to the college nine years ago there were only four women students there—those were the days of our difficulties, as the chairman knows. A considerable number of the women students have been with me only for a short time, but I have had several students that also prepared themselves for secretarial work by going to offices outside, where they were taught typewriting and so on, and I think they are doing quite well in that direction.

29,733. If it was thought desirable to make an opportunity for these women that have been through the university courses, and fit them for administrative work, some other arrangement than merely the appointment of typists would be necessary?—Yes. There is no reason why they should not go through the commerce faculty. There is nothing to prevent them.

29,734. Special arrangements, in your judgment, would have to be made to secure for them such an opening in the Civil Service?—Yes. Clearly, if they are going to admit women into it, there must be.

29,735. (*Miss Haldane.*) Have you a lady on the governing body?—We have one.

29,736. Have you a women's hostel?—We have got a men's hostel, but, I am sorry to say, we have not a women's hostel. I have been endeavouring to get one, but so far without success. I had one run by the Ursuline nuns out at Blackrock—two or three miles out—but it is too far, although very comfortable and run very well. Coming in and out was too much, and I have not succeeded in getting another.

29,737. Do you find the health of the poorer students is apt to suffer from living in a very restricted way?—I don't think so. A great many of them are the sons of the farmers.

29,738. I was thinking of the women students particularly?—I don't think so. The great bulk of them are living with their parents or their friends.

29,739. You have not got any system of endowments for post-graduate work?—The Cork County Council have, under my advice, devised a very good scheme to come into operation. That is to say, they have set aside six post-graduate studentships of 150*l.* a year, tenable for three years, in various subjects, which are to fall to the lot of those who have held their scholarships, and are not to be got by examination, but on the recommendation of the academic council, that is, the professors. One of these is in commerce and administration. The idea of that would be, that if he gets one of these for three years, the student would study and learn how to be a county secretary, or secretary of some committee. That is only coming into force, as the first three years of these Cork County Scholarships will terminate next October. There is another in agricultural chemistry; one in engineering; one in Irish; one in pathology, especially diseases of animals; and one in botany and agriculture. These are the six things. I think by that means we should keep a really good man for three years after he had got his degree and give him an opportunity. It is also provided that these scholars are to carry out, in one of our laboratories, any research work that the county council asks him to carry out in connection with the subject of his scholarship; say, diseases of animals—foot-and-mouth disease, or any other thing.

29,740. (*Mr. Graham Wallas.*) You are aware in America the State holds competitive examinations on behalf of the municipal bodies?—Yes.

29,741. Do you think the introduction of such a system might have a valuable effect in Ireland?—Well,

26 February 1913.]

SIR BERTRAM WINDLE, M.A., M.D., D.S.C., LL.D., F.R.S.

[Continued.]

you know already some of the bodies are doing that themselves.

29,742. That examination will necessarily be very small?—Yes. At this moment I am conducting, not myself, but arranging for examinations for clerkships in the Cork County Council. The examination will be held in my college by one of the professors. The Cork County Council, in order to avoid various difficulties, which need not be mentioned, have set up a system of their own, Civil Service examinations for the various rate collectorships and other positions which they have under them, and I arrange for the conducting of these. I select some one to conduct this examination in the college.

29,743. If the various municipal bodies in Ireland, large municipal bodies, could agree to draw their clerks from a common examination to be held on their behalf by the State in Ireland, do you think that might be a valuable arrangement?—Yes, I should say valuable, but impossible. I think the county councils would not like to part with their own right to deal with these matters. They are quite satisfied to hold examinations locally through somebody whom they may choose, but

I don't think they would at present come into any general scheme. I should very much doubt if the English county councils would either, from my experience of them.

29,744. (Chairman.) You have professors of Irish in Cork?—Yes.

29,745. Do the students attend their classes in increasing numbers? Does it appear to you that the desire to learn Irish is growing in popularity among your students or not?—Up to three years ago I had only a lecturer in Irish, and I altogether failed to attract classes for him although I did the best I could. We have got now a lecturer in modern Irish and a professor of the old and middle Irish. He is a most distinguished man and studied under Zimmer and took his degree of Ph.D. abroad. He is a really first class man. The things he has written are most admirable. I have read some myself. He has a certain number of genuine students who are working at the subject scientifically. There are a certain number of the others who are working at the modern Irish. I cannot say whether the thing is growing; it is not growing very rapidly at present, but, of course, it has been but a short time in operation.

Mr. W. J. CAIRNS and Mr. FLOOD called and examined.

29,746. (Chairman.) Mr. Cairns, will you say what you desire to represent to the Commission?—(Mr. Cairns.) We wish to represent that the position of the second division clerks in the Education Office is rather unfavourable compared with second division clerks in other offices of the Service; that we have not obtained the same amount of promotion and consideration that men of our own rank and service, and even of less service, have obtained elsewhere.

29,747. Your scale of pay is the same as that of the second division clerks in any other office?—Oh, yes.

29,748. I assume then that you have no complaint regarding the scale of pay. What you do complain of is that second division men in other offices obtain quicker promotion than you do?—Precisely.

29,749. How do you propose to remedy that?—It is remedied in other offices by the creation of a grade which is called generally "minor staff officers."

29,750. Have you any minor staff officers?—We have only one.

29,751. You have at the head of your department the Resident Commissioner?—Yes.

29,752. And then two secretaries?—Yes, we have two secretaries.

29,753. Are these two secretaryships open to second division men?—Not absolutely. One of the secretaries, Mr. Dilworth, did not formerly belong to the staff.

29,754. Did Mr. Lemass?—He did.

29,755. May you not count on the secretaryships as open to the second division officers?—We can't absolutely.

29,756. Perhaps not absolutely. After all, it remains in the power of the Government to bring in an outsider if there be sufficient cause for so doing?—That is generally done in our office, if it is done at all, by the Board.

29,757. By the Board, if the Board is the governing body?—For that reason we can't rely on the secretaryships absolutely as falling to the second division.

29,758. At all events there is a probability?—There is a possibility. (Mr. Flood.) We think generally the precedent in the appointment of Mr. Lemass won't be followed in future.

29,759. There are three examinerships; are these appointments open to the second division?—(Mr. Cairns.) Yes, they are open to the second division.

29,760. There is a book-keeper—is that open?—Yes, that is open.

29,761. There are five senior staff clerks—they are open?—Six senior staff officers.

29,762. So that you have one of the secretaryships, at all events, the accountant, the examiners. In all you have 16 staff appointments open to a second division staff of 45?—Yes.

29,763. Ordinarily speaking that should afford a fair amount of promotion, should it not?—It would seem so, but we are in a position to say that, as it works out in practice, it means there is a very long interval before any second division clerk usually gets promotion in our office. The average period of service is 23 years, and we think that is immoderately long, and we are sure it is too long compared with the service for promotion in other offices.

29,764. What other office do you think supplies a good example of quick promotion for a second division clerk?—We have given a schedule in our statement of the offices in Dublin with the number of clerks of our grade that were appointed since 1890 who have obtained promotion. It will be seen from that that the National Education office, although a large office, occupies the bottom of the list so far as promotion is concerned. For example, the Revenue office the Department of Agriculture, the Local Government Board and the Registry of Deeds, give a far greater opportunity for early advancement to second division clerks. Another point is, that so slow is promotion, that by the time a second division clerk obtains it he has already attained, if not passed, the minimum salary attached to the superior grade. It seems to us that the idea of promotion is that it should provide an incentive in the form of an immediate increase of salary. If promotion does not bring an immediate increase of salary naturally it loses its value. The way it works out in our office is this, that by the time a man obtains promotion it is of no great value to him. He has probably attained the minimum of the grade in the ordinary course of things, and in some cases has passed it; therefore, we think that the creation of an intermediate grade of minor staff officership would provide an incentive to men in the early years of their service. It is difficult for a man to carry out his duties with that efficiency which promotion naturally encourages if he can't look forward to some reward until after some 23 years.

29,765. How do you propose to remedy it?—It has been remedied, as I have said, in other offices by the creation of minor staff officerships. These positions vary in value. Sometimes they have a value of from 190*l.* to 350*l.*, and sometimes 250*l.* to 350*l.* But in any case the creation of a number of these posts would bridge the gap which at present undoubtedly exists between the efficient second division clerks of a considerable number of years' service (the Treasury has fixed eight) and the junior staff posts. It might also arise in connection with what I have said, that the junior staff posts, having a value of from 300*l.* to 400*l.*, and that value having been fixed a considerable number of years ago, are not of the same real value now; the junior staff posts ought to be increased in value in order that

26 February 1913.]

Mr. W. J. CAIRNS and Mr. FLOOD.

[Continued.]

men who might attain to them should obtain an increase of salary of some appreciable degree.

29,766. That is your complaint and your proposed remedy?—There is another count in the complaint; that is, that the organisation of the office is such that at present second division clerks—I, for example, am one of them—are called upon, without any increase of pay whatever, to discharge what is practically supervising duty.

29,767. But your office rests on a second division basis, you have got no higher paid appointments?—Our argument is that it is not merely for sentimental considerations that the minor staff posts should be created; that there is actual supervising work sufficient for these posts; therefore, for the officers who would occupy these posts, there is work to do, and they are at present doing it—that is the argument, that the work is actually being discharged and is not being adequately paid for.

29,768. Work of supervision?—Yes, work of supervision.

29,769. How many supervising officers do you admit are in the office at present?—You have enumerated some 16.

29,770. But I want to know how many of these do you think are really supervising officers?—They are all supervising officers, but in the aggregate they are not sufficient to supervise the work to be done.

29,771. You think 16 officers are not sufficient to supervise the work of 45 clerks?—It works out so in our office.

29,772. That is, one supervising officer is not enough for every three clerks?—There is a considerable amount of checking to be done in our office. A good many of the officers who are senior officers are superintending, but, naturally, supervising an entire room, they are not able at the same time to check such things as we check, such as promotion dockets, etc. They are not able at once to superintend a whole room and engage in minor checking duties. It is minor checking duties I am more immediately speaking of.

29,773. Have complaints been made that the work in your office is badly done?—I don't think there have been mistakes, because there is a very considerable amount of checking done. The checking is done, but it is not adequately paid for. (Mr. Flood.) Also the amount of supervising work required in the Education Office is much more than in any of the larger offices. There is an immense amount of money paid in teachers' salaries and that kind of thing, and a large amount of supervising is actually required. You could not compare it with other offices as being of the same standard. You could not say the same number of men would be adequate as in another office. (Mr. Cairns.) I have reason to believe, though I am not absolutely in a position to say, that there are a greater number of examiners in the Education Office in England than in the Education Office in Ireland, which would show that education work requires an amount of supervision which may not possibly obtain in any other department. Certainly my experience is that there is a tremendous amount of supervision required in the form of checking in our office.

29,774. You mean to say, Mr. Cairns, that there is a greater proportion of supervising and checking officers to clerks in England than in Ireland?—I understand so. There are more examining officers in the Education Office in England than here. Of course, naturally, I am not able to say that absolutely.

29,775. Do you say they are in greater proportion than here?—I could not say that. We have three examiners. There are a greater number of examiners, I understand, in the English offices. Naturally, as there are only three examiners here, a good deal of the work which examiners might do has to be put down to lower grades.

29,776. Do you contend that any of the lower grades—not senior or staff clerks—do any of the examiner's work?—They do work which in another office might be delegated to an examiner. Not only so, but the ordinary second division clerks, subject to the scrutiny and approval of the examiners, who subsequently examine,

actually suggest action which might be taken on correspondence and reports.

29,777. Are you talking now from probabilities or from actual facts?—I am talking of actual facts. It is an act of everyday occurrence. I do it every day of my life—prepare suggested action on reports and correspondence which is generally approved by the examiner. (Mr. Flood.) That kind of thing is rather expected from men. We don't do it on our own initiative. It is rather expected that second division men in our place should do that.

29,778. You say it is always expected?—It is expected from the men.

29,779. Then, I understand, you are not altogether in favour of Mr. Cairns' proposal of an increased examining staff?—You must not understand me that way. That kind of work is expected from men, but, I think, it is rather unfair it should be expected from men without some little inducement being offered to them.

29,780. Practically what is expected from them is that the points will be noted to which the attention of the examiner is to be called?—Yes, by the man in charge. To give you an idea of the actual amount of money that may pass through an individual's hands, I may say, for instance, I am put in charge of one of the counties in Ireland. Personally I am in charge of County Dublin, and the amount of salaries of teachers that would pass through my hands is about 80,000l. That is not an over-estimate, I am sure.

29,781. How many hours do you work in the day, Mr. Flood?—Seven, generally.

29,782. And you also Mr. Cairns?—(Mr. Cairns.) The same.

29,783. Do you ever do overtime?—(Mr. Flood.) We are engaged on it at present.

29,784. You are paid for it?—Yes.

29,785. You have no complaint to make of the rate of overtime pay?—(Mr. Cairns.) The rate of overtime pay is standardised for the whole Service. It sometimes works out at less than the rate of ordinary pay, but we are not pressing that.

29,786. Well, the Government pays you for the seven hours, and employs you on the sort of work it thinks you capable of performing; and if it requires from you more time than seven hours, it pays you for the overtime. Ought you then to look very closely into the character of the work you are called upon to do during the seven hours?—It is a pleasure to do superior type of work. I voice the sentiments of my colleagues when I say so; but, at the same time, it naturally causes a feeling of dissatisfaction when superior work is done in our office for a lower rate of pay than is given for similar duties in other offices. After all, we are all working for money to some degree. We have to earn our living, and when we find that the work we are doing in our office would command more generous recognition elsewhere, it naturally causes a feeling of dissatisfaction.

29,787. I doubt it would command more generous recognition, but the circumstances of the other offices, I understand you to say, lead to quicker promotion?—Very possibly. (Mr. Flood.) It is the most tangible recognition a man could get, after all.

29,788. (Mr. Boutwood.) I gather, Mr. Cairns, that, in your view, some sort of a jump in salary is really the most valuable part of promotion; is that your view?—That is the view pretty widely held, I think.

29,789. I mean, you don't think it sufficient to say to a man, "We will promote you, and you shall go on to a new scale, and in 10 years' time you will begin to feel the benefit?"—I don't think that would create a very great amount of enthusiasm. I am a promoted officer, having got no value for my promotion.

29,790. Speaking again of minor staff posts, I can see very well that that might help the junior members of your body, men of a few years' service, but, I imagine, from this table you have put on page 4, that the senior members of the second division, who have got nothing, are men of considerable standing and long service?—They are.

29,791. That would not help them at all?—Of course, some of them would naturally be too late to derive any great benefit from the proposal, if adopted.

26 February 1913.]

Mr. W. J. CAIRNS and Mr. FLOOD.

[Continued.]

29,792. What does a second division man get after 22 years' service?—He generally reaches about 300*l.* a year.

29,793. That is the maximum of the minor staff post?—And the minimum of the next grade.

29,794. So that you have two things in mind. Really you want a number of minor staff posts for your junior members, and then you want an increased number of staff clerks for your senior members?—I don't think I said so. I said, I thought, at the same time, that the value of the staff posts might be increased, because the rate of payment for the staff posts was fixed a considerable number of years ago, when everyone knows a salary of 300*l.* meant more than it does now.

29,795. That is my difficulty. At present you have six staff clerks at a certain scale from 300*l.* to 400*l.* Then you have these 45 second division clerks. Up to the present you have asked for minor staff clerkships that would satisfy, perhaps, a certain number of your junior men?—Yes.

29,796. But would very likely leave at the top 20 senior men untouched?—If we had these minor staff clerkships what value would you put on them?

29,797. I mean a value of 190*l.* to 300*l.*?—It would.

29,798. It would leave them untouched—half of your second division men at the top untouched. And I suppose if this Commission came back in two years' time these 20 men would come up still. What would you propose for the existing 20 senior men who would get no benefit from the minor staff posts—what would be your proposal for them?—If the posts to which they naturally look forward—that is junior staff posts—are not increased in value some special arrangement might be desirable for them, something in the nature of a special allowance for their doing supervising work.

29,799. Now we come to that supervising work—what do you mean by supervising work?—The supervising work that I, for example, discharge is—I am one of those principal circuit officers referred to in the statement—

29,800. Do they belong to the 45 second division clerks?—They do, and they have to do with the checking of the work of a number of the subordinates, and they have to do with the training of these subordinates.

29,801. I suppose checking is really what you mean by supervising?—Well, of course, there is personal supervision as well, but the checking is a very considerable item. For example, we have all the checking to do in connection with the preparation of memoranda for the Board, and the preparation of the dockets on which the teachers are granted increments and on which junior assistant mistresses are granted bonuses, and beyond that we do the absolutely final checking upon payments to pupil teachers and monitors.

29,802. Does that mean you have to verify certain calculations and certain statements of fact?—And see that certain rules are properly carried out.

29,803. That is not what from one's experience one would call supervision. The second division clerks service covers a long term of years, and what would be your idea of the difference in duties between the first five years and the last five years. You would not expect a man to be kept at the same character of work?—Oh, no; I expect that as a man's years increase in the Service his work becomes more valuable.

29,804. If he starts at 70*l.* he can get up to 300*l.* Should not a difference of four times in salary cover such a comparatively small operation as checking calculations and statements of fact?—But I may point out that there is no essential difference between the checking of these statements of fact and the checking done by the staff officers, and I may further point out that something like 30,000*l.* in salaries is dealt with every year by each of these principal circuit officers.

29,805. You think that goes beyond the margin between 70*l.* and 300*l.*?—I think that class of duty is generally more liberally rewarded elsewhere.

29,806. There is one thing in this statement I do not quite understand, the second statement on page 4. You say you have 44 second division clerks, and only one

promoted: does that mean that the men who filled all the other 16, or whoever does the supervising posts in your office, come in from other offices?—When we say that only one second division clerk has been promoted, we mean second division clerks appointed under the Ridley Commission since 1890. We do not take into consideration the appointments under the former scheme, which is called the Playfair.

29,807. These 16 supervisory posts must be held by Playfair men?—Yes.

29,808. (Chairman.) They must soon go out then, for they must be all old?—(Mr. Flood.) If we saw any chance of vacancies occurring we should not feel this grievance.

29,809. (Mr. Boutwood.) What do your three examiners do?—(Mr. Cairns.) They deal with reports and correspondence. It is only subject to the final scrutiny of the Secretary in cases where letters under his signature have to issue, but all correspondence of a routine character goes to the examiners. The examiners direct that such action as they may deem proper shall be taken. The action is taken by the second division clerks, and sometimes, when it is of a routine type, it goes out without being scrutinised by the Secretary.

29,810. They are really a superior correspondence staff?—They direct what form the correspondence is to take.

29,811. (Mr. Graham Wallas.) I understand your real grievance is that work which is assigned to you now is of a distinctly higher type than was contemplated when your class was created by the Ridley Commission?—I should imagine so. Of course, I am not in a position to say absolutely.

29,812. But that difficulty would be avoided if there was a definite Class I. grade introduced doing all the work?—I don't think so.

29,813. Would not the difficulty come to an end if there was such a grade as that corresponding to the examiners in the English office?—I do not see how that would do away with the barrier to promotion which at present lies in the way of second division clerks.

29,814. But it would get rid of the higher work being placed on your class?—We do not complain of higher work being placed on us. We complain that we do not get adequate remuneration for superior work.

29,815. What happens above you is a block?—Not an absolute block, but promotion is extremely slow.

29,816. That generally occurs in an office if there are a number of senior clerks of the same age?—That would bring it about, of course.

29,817. And the clerks who hold these posts are rather in a bunch as far as it is concerned?—That does not apply to our office. There is not a gap of more than three years between the junior Playfair man and the senior Ridley man.

29,818. There is not a block in the ordinary sense?—No.

29,819. (Mr. Shipley.) I think there are about a dozen offices connected with education in Ireland. If they were consolidated into one big board of education, and all the clerks were in this big organisation, would it help your difficulty in any way?—Of course it would be hard to say how it would be constituted and staffed. Naturally, there would be a great deal more work to do. If the supervising work was increased, it would tend to help all below.

29,820. Do you think it is feasible at all to consolidate the numerous offices?—It is so considered by numerous authorities—Dr. Starkie, I think, had the idea that they could be consolidated, and I think he has the idea still.

29,821. Would it lead to a diminution in the total number of the clerical staff?—If it led to a diminution in the total number of the clerical staff it would hardly touch our grievance.

29,822. I suppose a great many of you are not entirely exhausted at the end of a seven hours' working day, and I suppose you do a lot of remunerative work in the evening?—I do not think that is true to any great extent.

29,823. There are no journalists or writers?—I do not think there are any journalists or writers in the

26 February 1913.]

Mr. W. J. CAIRNS and Mr. FLOOD.

[Continued.]

office. I do not think there is much money to be made out of journalism.

29,824. (*Miss Haldane.*) Is it the case that assistant clerks do work belonging to your grade?—There are a number of assistant clerks whose work could hardly be distinguished from that of the second division clerks, but I think that is an accident, for, as a rule, they do not discharge the same duties as the second division.

Mr. HAYDOCK, Mr. HEARNE, and Mr. MCCARTHY called and examined.

29,823. (*Chairman.*) Tell us what your complaint is, Mr. Haydock?—It is entirely a question of promotion, our contention being that the majority of assistant clerks are engaged on responsible duties, in our opinion analogous to those performed by the clerks of the second division. Some of these men have 10 to 15 years' service. That roughly is our case.

29,829. Will you admit, Mr. Haydock, that, generally speaking, the work which the assistant clerks do is easier than that done by the second division?—No. We are of opinion that essentially the work performed by the majority of the assistant clerks is substantially the same in character as that performed by the majority of the second division.

29,830. It is surprising then that the class of assistant clerks should have been created, if the assistant clerks only do the same kind of work as the second division. The basis of the division between the two kinds of clerks is that one does the higher class of work and the other the lower. In Government offices generally there is that difference between the work done by both classes?—That presumably is the assumption on which the grade was based.

29,831. You now tell me that that difference is not in accordance with fact?—Yes.

29,832. How many promotions have been made from the assistant clerks to the second division in your office within the last five years?—There were three promotions made in 1908 and one in 1910.

29,833. That is four in five years—something less than one a year?—Yes.

29,834. How many assistant clerks are there in your office?—There are 29.

29,835. Were you all boy clerks formerly?—With the exception of, I believe, four who were previously typists, and were promoted for service in the Education Office.

29,836. Did you all pass the examination of the Civil Service Commissioners?—Yes.

29,837. How many years service have you?—I have 13½ years.

29,838. What pay do you get now?—I get 123l. a year.

29,839. Your maximum is 150l.?—Yes.

29,840. And what really is your claim—do you claim that you ought all to be put into the second division, or do you claim that the rate of promotion should exceed the rate you tell me—something less than one a year?—We claim that where assistant clerks efficiently perform duties analogous to those performed by the second division men, those assistant clerks ought to be promoted to the second division.

29,841. The evidence before us shows that even in your department there is a well-marked substantial difference between the work of second division men and that of assistant clerks, and that, although occasionally the assistant clerk does perform second division work, it often happens that he is selected for that work in order to test him to see whether he is suitable for promotion to the second division. That is what we have been told?—That may be so in two cases, but it is not generally so.

29,842. You know of two cases of which that description is true?—I have no official knowledge, but these two gentlemen to whom I refer were, I surmise, appointed to these particular duties for that reason.

29,843. But did they get promotion?—They have not yet been promoted.

29,844. Well, the assigning of these duties to these two gentlemen was presumably with the object of

29,825. Is it possible to draw a very distinct line between the various grades of work?—It is possible to draw a line in our office between the assistant clerk and the second division.

29,826. Occasionally they do work of a superior class?—Very occasionally.

29,827. Just as you do work occasionally for the higher grade?—I should say not even to that extent.

testing them, and if they responded to the test the inference is that they would in time be promoted. I am afraid you won't get the Government to accept the proposition you lay down, that every assistant clerk who does work which in his opinion is substantially second division work should therefore be promoted?—We may not, but we think it reasonable.

29,845. (*Mr. Shipley.*) Your day is a seven hour day?—Yes.

29,846. Do you do much overtime?—Overtime occurs occasionally. Once a quarter there might be three weeks of overtime.

29,847. You are paid for that, of course?—Yes.

29,848. Have you any other means of earning any money?—I don't think there are any in the office who supplement their earnings.

29,849. It would not be very easy?—It is a difficult matter to get suitable work outside.

29,850. (*Mr. Graham Wallis.*) What department are you in?—Correspondence, Branch I.

29,851. Register of documents, making abstracts, keeping books, and so on, surely that is the work of assistant clerks of the same service all over the United Kingdom?—Yes, that would be true generally. I would like to explain that I have charge of the Board's order book, in which all miscellaneous matters to be presented to the Board are entered. This is regarded as confidential work.

29,852. But a man in receipt of 123l. a year would occasionally be employed at work that is confidential?—Yes.

29,853. Have you any figure in your mind as to what would be fair on those promotion appointments in the second division?—Personally, I think 50 per cent. of the second division vacancies would be a reasonable figure.

29,854. (*Mr. Boutwood.*) On the last page of your statement you say that since the year 1896 there have been four promotions of assistant clerks, and 29 vacancies in the second division. Am I right in thinking that those four promotions from the assistant clerks have all taken place within the last five years—since 1908?—Yes.

29,855. So that from 1896 to 1908 there were no promotions from the assistant clerks to the second division?—No promotions of assistant clerks (new class).

29,856. Were there any from the old class?—There were.

29,857. How many?—Two.

29,858. Since 1908, when apparently the promotions from the third class began, had you any promotions from your class?—We had three.

29,859. How many second division vacancies were there since 1908?—Unfortunately, I have not got the figures since 1908.

29,860. (*Chairman.*) The second division is recruited by an examination of a much higher type than the assistant clerks?—Yes.

29,861. That being so, what justification have you for claiming that 50 per cent. of the second division appointments should be filled by men who pass into the Service on a much lower type of examination than the second division examination?—A large number of assistant clerks have been up for the second division, and failed only by a small margin.

29,862. Still they failed; and no argument alters the fact. You cannot maintain that, by working in the Service in a subordinate class, they can undo the effects of the failure to the extent of 50 per cent. of the higher

26 February 1913.]

Mr. HAYDOCK, Mr. HEARNE, and Mr. MCCARTHY.

[Continued.]

posts?—From the office point of view the men have shown that they are capable of performing second division work.

29,863. But 50 per cent. requires much more justification, as being a reasonable proportion, than you supply. (*Mr. Hearne.*) Mr. Haydock said that

two gentlemen had been placed in certain responsible positions in order that they might qualify for the second division. In one of the cases he refers to, the man has been in that position for five years, and I just wanted to say that that was rather a long period of probation for the second division.

## SEVENTY-FOURTH DAY.

Thursday, 27th February 1913.

PRESENT:

THE RIGHT HON. THE LORD MACDONNELL, G.C.S.I., K.C.V.O. (*Chairman*).

Mr. ARTHUR BOUTWOOD.  
Mr. ARTHUR EVERETT SHIPLEY, F.R.S.

Mr. GRAHAM WALLAS.  
Mr. S. ARMITAGE-SMITH (*Secretary*).

The Right Hon. Mr. Justice WYLIE and The Right Hon. W. F. BAILEY, C.B., called and examined.  
Mr. C. T. BEARD, I.S.O., and Mr. J. T. DRENNAN, B.L., were in attendance.

29,864. (*Chairman.*) Mr. Justice Wylie, when were you appointed to the Land Commission?—In October 1906.

29,865. You were appointed from the Bar to be a Puisne judge of the High Court of Justice?—Yes.

29,866. Could you give the Commission a brief statement of the constitution of the Land Commission, dwelling principally upon your own, the judicial side, because we shall get from Mr. Bailey information regarding the land purchase side?—Do you wish it from both sides?

29,867. If you can do it conveniently, we shall be very glad to have it for both sides, but if you desire to restrict yourself to the judicial side you can leave to Mr. Bailey to speak for the other side?—I can tell you a little of both sides. I am myself at the head of both the fair rent and land purchase sides. The fair rent work is done first by sub-commissioners with a legal assistant commissioner presiding in the court, and assisted by a lay commissioner. Then there may be an appeal from that Commission after fixing a fair rent to the Land Commission. That work is done at present by my colleague, Mr. Commissioner Fitzgerald, sitting as a judicial commissioner with all the powers of a judicial commissioner. Then there is an appeal from that to the Court of Appeal if necessary.

29,868. In order to give us an idea of how the business works in actual practice, let us assume that a tenant sues his landlord for an abatement of rent. That case is tried in the first instance, is it not, by a legal assistant commissioner and a lay assistant commissioner?—The application is made by the tenant to fix a fair rent. That is heard by the legal assistant commissioner, sitting with the lay assistant commissioner. They hear evidence on both sides in court. The holding is inspected by the lay assistant commissioner, and he makes a report to the legal assistant commissioner, who fixes a rent based upon the evidence given in court and the report of the inspector.

29,869. Is that procedure conducted locally?—Yes.

29,870. From the decision come to by the legal assistant commissioner and the lay assistant commissioner sitting together there is an appeal to the Land Commission?—Yes.

29,871. But for the purposes of hearing the appeals the Land Commission consists practically of yourself and Mr. Fitzgerald?—Or if necessary, if the work is excessive, to a judge of the High Court delegated by the Lord Chancellor for the purpose.

29,872. But you are not justified in calling in any of your colleagues in the Land Commission?—Not since 1903.

29,873. The case is heard as an ordinary appeal case and is disposed of?—Yes, the judicial commis-

sioner hearing the appeal has the assistance of an assessor who sits with him hearing the case, and he inspects again the holding.

29,874. Are the assessors that sit with the judicial commissioner on a panel?—They are on a panel fixed by the judicial commissioners.

29,875. Are they taken from the same body as the lay assistant commissioners who sit with the legal assistant commissioners?—Yes, they are selected from the body of lay assistant commissioners.

29,876. But I suppose in no case would a gentleman who sat with the legal assistant commissioner be chosen to sit with the judicial commissioner?—Never.

29,877. From that decision there is still a further appeal to the High Court?—Yes, by leave of the Court of Appeal.

29,878. Is the ultimate appeal on matters of law alone, or on matters of fact and law?—It is principally on matters of law.

29,879. When did the fixation of rents begin?—Under the Act of 1881.

29,880. For what period are fair rents fixed?—Fifteen years.

29,881. At the end of the 15 years does the right accrue to have another fair rent fixed on the same holding?—Yes, any time during the last year of the 15 years or afterwards.

29,882. And when the second 15 years have expired is there a right to have a third fair rent fixed?—Yes, in the same way, during the last year of the second period, or afterwards.

29,883. From the year 1881 when this process commenced 30 years would bring you to 1911?—Yes.

29,884. Therefore, the rents that have been fixed for a second period now are due, or falling due, for a third fixation?—A good many have been already fixed for the third period.

29,885. If a rent has not been fixed for the first period but comes on for fixation during the second 15 years, is it fixed with reference to the considerations which determine the fixation for the second time?—It would be fixed with reference to the basis at the time of fixing.

29,886. That is to say, if a tenant coming into court for the first time sought to have a fair rent fixed, say, in the year 1903, the case would be dealt with as for a second rent fixation?—For certain purposes it would be a rent fixed after 1896, but it must be a first term rent. That is the first time a rent has been fixed on that holding.

29,887. But will the determination of that rent depend on the considerations which would prevail if the rent had come up for a second term of fixation?—Yes, for purposes prescribed by the Act, the subsequent Act

27 February 1913.] The Right Hon. Mr. JUSTICE WYLLIE and The Right Hon. W. F. [Continued.  
 BAILLY, C.B. (Mr. C. T. BEARD, I.S.O., and Mr. J. T. DUFFY, B.L., were in attendance.)

dividing rents into rents fixed prior to 1896 and rents fixed after 1896 for certain purposes.

29,888. Say you have a tract of country in which rents have been fixed for the second term, but a few tenants remain who have no rents fixed at all, and they come up to have rents fixed for the first time, would the rate of rent, or the considerations which determine the fixation of rent for the second time, be applied to the fixation of rent for the first time?—Yes. They fix what they consider a fair rent for the time being.

29,889. Having reference to existing circumstances?—Yes.

29,890. You say rents are now coming up to be fixed for a third time?—Yes.

29,891. Has the third term fixation gone far?—There are 2,207 applications received altogether for the third term fixing, and 1,461 are disposed of.

29,892. That is a very small number compared with the number of second term rents fixed?—But the great proportion of holdings are already bought out.

29,893. What proportion of the holdings, of which rents have been fixed for the second time, have been now sold?—I think about two-thirds.

29,894. So the judicial section of the Land Commission will have to deal in the future fixation of rents, with only one-third of the holding as they existed in the year 1881?—Yes, or less perhaps.

29,895. That, of course, has a very important bearing on your establishment?—Yes.

29,896. In view of this certain diminution of the work imposed upon you, have you considered the desirability of in any way reducing the establishment?—It has been gradually diminishing on the fair rent side. We are now reduced to practically two sub-commissions.

29,897. From how many?—At one time up to 15, but for a long time seven. We are gradually cutting down both the legal assistant commissioners and the lay assistant commissioners.

29,898. The work which remains for you to discharge will be greatly influenced by the extent of land purchase in future?—Yes.

29,899. I presume you have not been able to form any estimate of how long your work will last, because it depends so much on the progress of land purchase?—The whole work?

29,900. Yes?—I think on consideration of the whole facts that if land purchase goes through completely it will take about 12 years, assuming that practically all agricultural holdings are sold.

29,901. In regard to your procedure in distributing the assets, am I right in thinking it is somewhat like this: the Estates Commissioners go through their part of the purchase procedure—I need not enter into that just now—and when they have finished it they hand the case over to you?—Yes.

29,902. And you then distribute the assets?—Yes.

29,903. One effect of distributing the assets is, I presume, that where the purchase money is paid in stock you are under an obligation to sell that stock in order to distribute the money among the chargeants?—If the parties so wish.

29,904. If the parties agree to take the money in stock you are competent to give it?—We transfer so much stock as will meet the claims.

29,905. Do many accept stock?—Not many of the encumbrancers. The owner himself will often take stock rather than sell it, because it is his own loss if he sells at a loss, but the encumbrancers and others who have claims on the purchase money generally insist on getting cash.

29,906. The result is you have to sell out stock?—Yes.

29,907. That depreciates the stock, and the more stock becomes depreciated the harder it is upon the proprietor?—Yes.

29,908. He has to part with more stock?—Yes, and pay in cash.

29,909. The consequence is that there is a constant selling of stock; you are compelled constantly to sell stock?—Yes.

29,910. Am I justified in saying that the purchasers of the stock that you sell are purchasers at their own

price?—At the market price of the day. It is given into the hands of stockbrokers to sell at the market price of the day.

29,911. Is there a good market for Irish land stock?—There is a fairly good demand at the price of the day, but it is low.

29,912. Are the transactions effected mostly in London or partly here?—I think generally here, through stockbrokers here in Dublin. I don't know who the buyers are, but it is sold through Dublin stockbrokers.

29,913. If a change in the law were effected enabling you to compel encumbrancers to take payment in stock, would it have the effect of raising the price of stock?—I suppose the less stock there is in the market the more the price would tend to rise; otherwise I am not sufficiently acquainted with commercial matters to give an opinion on that.

29,914. Is your staff shown separately from the staff of the Land Commission generally?—The legal staff is practically separate. Perhaps I might say there are two branches of the legal staff. The smaller branch works in Merrion Street, while the estates are passing through the hands of the Estates Commissioners in dealing with matters that arise. The larger portion of the staff works in Nassau Street, in chambers there, dealing with distribution.

29,915. The staff that deals with distribution is directly under you?—Yes.

29,916. And has no connection with the Estates Commissioners?—No.

29,917. There is a secretary in the judicial branch?—The secretary of the Land Commission is common to both. In one sense the legal staff of the Land Commission there works under the Estates Commissioners, and in the other place for distribution, both to some extent under me.

29,918. From that point of view it will not be very easy to diminish the common staff, and it will not necessarily follow from a reduction in your work that the common staff can be reduced?—The common staff for land purchase must be reduced as soon as land purchase in bulk has been reduced.

29,919. But if means are provided by the Government to facilitate the purchase of estates, as has been promised by the Prime Minister, we may expect that land purchase will go on as quickly as it did in 1904 and 1905?—Yes, I think so.

29,920. If that be the case there would be no reduction?—I think not.

29,921. Therefore, the officers who do the common work for you and the Estates Commissioners will not admit of any reduction for some years to come?—I don't think so, as long as land purchase is kept on.

29,922. But in proportion as the land purchase work progresses, the judicial work would diminish?—Certainly. The fair rent work will disappear practically entirely.

29,923. Where am I to find in these tables the establishment which deals with fair rent?—(Mr. Beard.) They are not segregated; they are on a common vote.

29,924. Is their work segregated?—Yes, to a large extent.

29,925. Is their work specialised to them?—Yes.

29,926. Does the second division clerk who is engaged on fair rent work, do any other work but fair rent work?—No.

29,927. That is the case through the whole office?—Yes.

29,928. Then it would be easy for you to divide them for me?—Yes. I have a statement which I could hand in.\* You have fair rent at the bottom of the two last pages.

29,929. The legal and vesting branch is under you, Mr. Bailey?—(Mr. Bailey.) Yes; that is under us.

29,930. On the third page we get officers under the land purchase department, agreements for purchase branch?—That is under us too; in fact, all that page.

29,931. Then we come to registrars' branch, fair rent side: one assistant registrar, one second class clerk,

\* Vide Appendix LXVI.

27 February 1913.] The Right Hon. Mr. Justice WYLLIE and The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and Mr. J. T. DRENNAN, B.L., were in attendance.) [Continued.]

two third class clerks, six temporary clerks, and some boy clerks. The indoor staff is very little?—(Mr. Justice Wyllie.) That is the registrars' department for carrying through orders, and arranging lists, and that kind of thing. No. 2 gives you the outdoor staff, and the secretariat is common to both.

29,932. I thought Mr. Beard told me that the second division clerks dealing with fair rents would have no other sort of work to do?—(Mr. Beard.) That is so. (Mr. Justice Wyllie.) As long as a man is in the branch he would be a transferable officer. (Mr. Beard.) In a certain number of branches the work is common to both sides, and a certain number of other branches are engaged separately on land purchase, and there is a small staff engaged separately on fair rent work.

29,933. Is this the only staff engaged separately on fair rent?—Yes.

29,934. Are there no clerks?—With one exception. On the first page under the Land Commission secretariat there is a small statistical branch, consisting of two second class clerks with an abstractor and two boy clerks. They compile the fair rent statistics that are published in our blue books.

29,935. (Mr. Boutwood.) In the common branches of the secretariat is the work all mixed up, or is the work divided between the clerks. Does one clerk do fair rent work exclusively, and another clerk do purchase work in the common branches?—(Mr. Beard.) That is not quite the case. The secretariat of the Land Commission deals with the secretariat work of the Land Commission side of the work. That includes certain secretarial work in connection with the fair rents. Letters come in the morning, and have to be referred to different branches to deal with. To that extent, one man may be doing work for both sides at the same time.

29,936. You could say that any part of your secretariat was exclusively one or exclusively the other?—No, with that exception which I have referred to—the fair rent statistics. They are solely engaged on statistics.

29,937. (Chairman.) You have a registrar who receives your letters?—Yes. Our post bag contains about a quarter of a million letters per annum.

29,938. Is the registrar shown here common to both sides of the office?—No. He is not a registrar for correspondence. He is the court registrar who sits with the judicial commissioner.

29,939. He is concerned altogether with issuing and seeing that the orders passed in cases by Mr. Fitzgerald are properly dealt with?—That is so. (Mr. Justice Wyllie.) And he sits in court with him on the hearing of appeals.

29,940. Does he sit on the bench with him?—No, below it.

29,941. It is very difficult to form any conception as to the numbers of your staff which are employed on fair rent alone, and those who are employed on land purchase?—With the exception of those on the last page they are nearly all employed on the land purchase.

29,942. When you say that your staff has been gradually reduced on the fair rent side, I understand that the legal assistant commissioners and the lay assistant commissioners for fixing fair rents have been reduced, and the indoor staff has been reduced, *pari passu* with the reduction in that work?—(Mr. Beard.) It has. That is to say, persons who have been specially engaged in the fair rent work of the office have been transferred from time to time, as required, to the land purchase side where they were more wanted. The fair rent staff is now extremely small.

29,943. Would you say there has been a gradual reduction in the entire staff of the office?—Dealing with fair rent, there has been a reduction.

29,944. If men who are dealing with the fair rent side are transferred to the land purchase side, would there be a reduction?—Yes. They are transferred to fill vacancies. There is a very large staff altogether, and there is a constant wasting by death and otherwise, and vacancies arise constantly.

29,945. If they had not been transferred you would have had to bring in men from outside?—Certainly.

29,946. May I call your attention to the outdoor staff. You have three legal assistant commissioners and 28 non-legal assistant commissioners. The 28 non-legal assistant commissioners have been there as long as I can remember?—(Mr. Justice Wyllie.) There are only 13 of those now on the fair rent work.

29,947. What are the others working as?—Inspectors under the Estates Commissioners.

29,948. Formerly, how many of these 28 were engaged on fair rent work?—All.

29,949. Are there two chief inspectors altogether for land purchase?—Yes.

29,950. And 21 temporary inspectors?—For land purchase solely.

29,951. And 16 assistant inspectors?—For land purchase solely.

29,952. Three registrars to the Commissioners?—These are for fair rents.

29,953. These are the three registrars for the three legal assistant commissioners?—Yes. One of the legal assistant commissioners will be going out under the age rule in about a month.

29,954. Will you replace him?—No. Only two will be left.

29,955. Will one of your registrars go out also?—Yes.

29,956. Does he go out by effluxion of time?—No, but by the office ceasing to be necessary. (Mr. Beard.) He is due for retirement in a month afterwards.

29,957. The 18 examiners of title are under you?—(Mr. Justice Wyllie.) Yes.

29,958. Do you require 18 examiners of title?—Certainly.

29,959. You never had more?—We never had more. The land purchase work is increasing. The distribution is increasing every year. We are now up to 8,000,000*l.* a year.

29,960. According as the work comes in you have to do it, but you look forward to finishing with the thing if land purchase goes on in 10 or 12 years?—I should think so. That is, on the assumption that practically all the agricultural tenants will buy.

29,961. (Mr. Shipley.) I understand that your Board operates in parts of the country where the Congested Districts Board does not operate?—Yes.

29,962. Is the whole country divided under two Boards?—Yes. The Congested Districts are defined by statute.

29,963. Do they run with the counties?—Sometimes a county and sometimes a part of a county.

29,964. Who settles on which part?—That is done by statute, the Act of 1909.

29,965. Suppose the conditions varied; if a county became congested could it be made over to that Board from you?—No; if there is a congested portion of a county outside the congested districts counties, that is under the Estates Commissioners.

29,966. And once congested it is always congested?—Generally.

29,967. Very shortly, can you tell me what the Estates Commissioners, whom I take to be part of you, do and what the Congested Districts Board does?—Under the Estates Commissioners there are two modes of sale, direct sale by the landlord to the tenant on a particular estate, and then there is sale from a vendor to the Estates Commissioners who purchase, direct from the vendor, and they can also purchase untenanted land.

29,968. When you buy the land you sell it again?—Yes. It is sold to the tenants as soon as they have the estates properly fixed for sale, or they may sell to persons other than tenants to whom they are justified in selling under the statute.

29,969. Do you get a percentage or anything like that for the transaction?—Nothing, except so far as the Estates Commissioners can make anything out of the land while it is in their hands before resale, and the public fund will get the benefit of that.

29,970. Then the expense of this office is on the taxes?—It is all on the Vote.

29,971. We have nothing like this office in England, but it seems to me that the salaries are on a very

27 February 1913.] The Right Hon. Mr. JUSTICE WYLIE and The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and Mr. J. T. DRENNAN, B.L., were in attendance.) [Continued.]

handsome scale throughout the office?—We are dealing with a very big work and a very difficult work.

29,972. You contemplate that everybody will have bought up all the land they want in about 12 years?—Yes, if we can get through as fast as they wish to sell.

29,973. What will happen to the Board at the end of 12 years?—The Land Commission, so far as land purchase and fair rent fixing are concerned, will not be wanted at all, but all the annuities will have to be collected from the owners. There will be about 6,000,000l. which will have to be collected in small sums from the different land purchasers by way of annuities, and a large staff will be required to carry that out.

29,974. Then it won't really disappear. What does the church property on page 73 of your return mean?—That was the property that passed under the Irish Church Act from the Church to the Church Commissioners, and became practically a public fund for public purposes in Ireland. Then by the Church Act of 1831, the particular portion of the fund that had not been used up in any way was transferred to the Land Commission for the same purposes.

29,975. What, in your view, has been the effect throughout the country of selling estates?—There has been a tremendous improvement.

29,976. The people appear to be more contented?—There is no question about it. They are absolute owners now without anybody to vex them in any way.

29,977. They are holding up their ends and going on well on the whole?—Yes.

29,978. You have no lady typists?—None.

29,979. You have a considerable number of boy clerks. We have had a lot of evidence about boy clerks on the other side of the Channel. What is your opinion about them? Do you think it would be wise to recommend their abolition?—There is a great deal of work which a boy clerk does quite as well as a better paid clerk. That is the only thing in its favour that I know of.

29,980. What becomes of the boy clerks that come into your office?—A good many are absorbed. They pass a further examination and become second division clerks. A good many go out and get other appointments. (Mr. Beard.) Sixty-five per cent. of our boy clerks, a rather bigger number than usual, within the last five years have passed into the assistant clerkships, the Customs and Excise or the second division. In five years, of 186 boys who reached the age limit 11 became second division clerks, 5 entered the Customs, and 105 obtained assistant clerkships. That is 121 out of 186, or 65 per cent.

29,981. I don't think you have touched more than the fringe of this subject in Ireland. Is there anything

here corresponding to the Boy Clerks' Friendly Association in London?—(Mr. Justice Wylie.) I don't know.

29,982. (Mr. Graham Wallas.) Have you formed any plan as far as your side of the work is concerned for dealing with the various classes of officials during the period of reduction and ultimate extinction of the work?—(Mr. Justice Wylie.) No. There is no chance of my branch going down practically until the end of the period.

29,983. Twelve years is not a very long time?—Probably during the last three or four years we will not fill up vacancies, so as not to bring in men who will afterwards be shunted.

29,984. That is the only plan you have in your mind?—Yes.

29,985. (Mr. Boutwood.) In the general scheme of your office is the whole of your office under the Land Commission?—Yes. That is the general scheme. Then in 1903 a certain portion of that work was given exclusively to the Estates Commissioners.

29,986. The Estates Commissioners are one side of your office?—Yes.

29,987. And the other side is the fair rent side?—Yes, but the Estates Commissioners only carry sales to a certain length. As soon as they carry through a sale and vest the lands and lodge the purchase money in bank to the credit of the estate, then I take it up with my staff of examiners for the purpose of distributing that purchase money to the persons entitled to it.

29,988. Then on your side there are two kinds of work, distribution of money and fair rent?—Yes.

29,989. When you speak of fair rent what sort of rent is it? Is it anything like land valuations under the Finance Act, or is it supposed to be a commercial rent?—It is the rent which the legal commissioner, with the assistance of the lay assistant who inspects the holding, considers a fair rent for the tenant to pay at that particular time and for 15 years to come, having regard to his interest in the holding by reason of improvements and otherwise.

29,990. I understood you sometimes sold to people who are not tenants?—Yes.

29,991. Do you often do that?—Yes. The statute provides that certain persons therein defined can purchase land though they are not tenants.

29,992. What is the price of Irish land stock?—It is low.

29,993. What is the reason for that?—Probably one reason is that trustees prefer a security that gives a higher rate of interest. They are now entitled under recent Acts to invest in securities that formerly they could not invest in.

29,994. It is part of the general effect of that legislation?—The general commercial reason.

The Right Hon. W. F. BAILEY, C.B., called and examined. Mr. C. T. BEARD, I.S.O., and Mr. J. T. DRENNAN, B.L., were in attendance.

29,995. (Chairman.) To go very rapidly over the ground from the beginning, would you say, Mr. Bailey, that we should commence with the Act of Mr. Gladstone in 1870?—Yes.

29,996. Briefly, what was the effect of that Act?—Before I explain that, I must mention one other Act. In 1860 an Act was passed known as Deasy's Act, which provided that the relation in Ireland between landlord and tenant of land was to be a contractual one based on contract instead of tenure, which was the old Irish method. This was entirely inapplicable to the real condition of things in Ireland, and the result of that was that it really meant, to put it plainly, the confiscation of the improvements made by the tenant. In Ireland all the improvements made on a holding were made by the tenant—the houses, fences, drainage, and reclamation, and, broadly, the relation under contract meant that if a tenant failed to pay one year's rent he was liable to eviction, and all his improvements went over to the landlord.

29,997. We will pass over the next 10 years. They were years of great political unrest in Ireland?—Yes.

29,998. A great portion of which was due to the very Act you have mentioned?—Quite so.

29,999. You had the Fenian outbreak and so on. Then the Government took up the question of Irish land, in the belief that Irish land was at the bottom of Irish discontent?—Yes.

30,000. And a fresh Act was passed in 1870?—Yes. That Act sought to remedy the state of things resulting from the Act of 1860 by providing that if a tenant were evicted from his holding he should get compensation for any improvements he could prove were made by him or by his predecessors, and compensation for disturbance. It was supposed that this power of giving compensation of that kind would get rid of the state of things resulting from the Act of 1860, but another 10 years' experience showed that that was not so, for the Act of 1870 did not touch the question of rent, and a landlord was entitled to raise the rent still on the tenant's improvements, the only obstacle being that if he evicted the tenants he had to pay him a certain sum for his improvements; but if he did not evict he could raise the rent as he pleased.

30,001. What was the essential change introduced by the Act of 1881?—It was seen that you could not

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. G. T. BEARD, I.S.O., and [Continued.  
Mr. J. T. DRENNAN, B.L., were in attendance.)

settle the question unless you also settled the question of rent, and the Act of 1881 provided that the agricultural rents of Ireland should be fixed and determined by a Government tribunal.

30,002. A judicial tribunal?—Yes, and the Irish Land Commission was formed with that object.

30,003. That is the origin of the Irish Land Commission, of which you are now a member?—Yes.

30,004. The next notable Act was the Act of 1885, known as the Ashbourne Act?—Yes.

30,005. It is necessary to mention that Act, because that involved a provision for land purchase?—Yes. In the Acts of 1870 and 1881 there was a germ of land purchase. The Bright clauses, introduced by Mr. John Bright into the Act of 1870, gave certain facilities to tenants to purchase their holdings, but under these Acts the tenant had to advance a large proportion of the purchase money himself, and the State only helped him. The Act of 1885, known as the Ashbourne Act, which was introduced into the House of Lords by Lord Ashbourne, changed the system, and introduced another method under which the entire purchase money was advanced to any particular tenant who agreed with his landlord to purchase his holding, and it was provided that the purchase money should be repaid by the tenant by an annuity of 4 per cent. on the purchase money for 49 years; three one-eighth per cent. was for interest, and seven-eighths per cent. was for sinking fund. 10,000,000*l.* was advanced under that Act for that purpose.

30,006. Is it necessary that you should refer to any of the intermediate Acts before the Act of 1903?—Except to this extent. In 1891 when the 10,000,000*l.* that were voted by Parliament for the purpose of land purchase were exhausted it was then recognised that Parliament would not go on advancing money in that way and a new method was introduced, an ingenious method of paying the selling landlord in a specially created stock, and the interest on that stock was charged on the consolidated fund, and the consolidated fund was to be recouped by the annuities to be paid by the tenant purchasers. If they failed it was to fall upon what was known as the guarantee fund, which meant the ratepayers of the county. That continued for another 10 or 11 years.

30,007. Then came the Act passed by Mr. Wyndham in 1903?—Yes. All previous Acts proceeded on the principle of selling individual holdings.

30,008. Land purchase progressed steadily but slowly. It was measured by the amount of money advanced by Parliament for the sale of holdings; and now will you explain how it was that the sale of holdings came to be superseded and the sale of estates adopted under Mr. Wyndham's Land Act?—The total amount advanced under the Acts up to 1903 was 24,000,000*l.* in 17 years. The work began to fall off for various reasons which I need not go into now, and a private committee or organisation here in Dublin took the matter in hand, and certain matters were considered, which you know better than most people, which resulted in a scheme being prepared and put forward which it was considered would result in the entire agricultural land of Ireland being sold, and that was to be based on the principle of selling estates, that each owner of an estate instead of picking out certain of his holdings and selling them to the tenants would not be allowed to sell at all unless he sold the entire estate; and to encourage him in doing that it was provided that he should get a bonus. 12,000,000*l.* was voted for this purpose under the Act, which gave him a sum of 12 per cent. on his purchase money. Also to facilitate that system of sale provisions were introduced known as the "zone provisions," under which it was provided that where the tenant who entered into an agreement for sale held under a fair or judicial rent that had been fixed by the Land Commission no further inquiry into the case would be made as to the question of security, provided that the price came within certain zones laid down in the section; that is, if the annuity or the purchase money was from 10 per cent. to 30 per cent. less than the second term judicial rent, the sale was within the zone (i.e. within the 10 per cent. to 30 per

cent. limit), and there was no further inquiry to be made as to security.

30,009. Because it was assumed that an estate held under the system of judicial rents afforded an adequate basis of security for the advances that would be made?—Quite so.

30,010. Under the Act of 1903 land purchase has gone on to a very large extent?—Yes. The Act became immediately an immense success.

30,011. Please mention the extent to which land has been sold. Am I right in saying that originally when the business was taken in hand in 1903 it was estimated that the total value of the land of Ireland to be sold was about 100,000,000*l.*?—Yes.

30,012. That was found to be an under estimate?—Yes.

30,013. And you now estimate that the entire land of Ireland will cost 180,000,000*l.*?—Yes.

30,014. Under the Land Purchase Acts to the year 1903, 24,000,000*l.* worth of land had been sold?—Yes.

30,015. Under the Act of 1903 from its inception until the year 1909, when the next legislation took place, what was the value of the land sold or agreed to be sold?—The amount that had been either sold or agreed to be sold under the Wyndham Act up to the present has been 80,000,000*l.*

30,016. What was it up to 1909?—You may take off 5,000,000*l.*

30,017. From the time the Act of 1903 came into operation up to 1909 land has been sold or agreed to be sold to the extent of 75,000,000*l.*?—About that.

30,018. Then in the year 1909 the Government found that they lost a great deal of money in floating the loans?—Yes.

30,019. And that the guarantee fund which had been created to meet the loss on flotation was not to be relied on?—Yes. The Irish ratepayers were to be called on, and they did not see it.

30,020. On account of the loss on flotation land purchase was brought to a standstill?—Yes. An agitation was got up in the country by the ratepayers objecting to pay the loss.

30,021. That led to the Act of 1909?—Yes.

30,022. By which payment for land, which was in cash under the Act of 1903, was converted into payment in stock at the discretion of the Government?—Quite so.

30,023. Was not that the change?—That was the change.

30,024. After the Act of 1909 up to the present have there been any land purchase operations going on?—Comparatively speaking there have been few new transactions. There has been a certain amount, but compared with the old rate it has been very small; but land purchase has been going on at its full rate so far as the office is concerned, for the arrears were so immense that accumulated in the five years between 1903 and 1908 that we still have not got through them.

30,025. These are the agreements which had been entered into but not completed to which you have already referred?—Quite so.

30,026. We have brought down the history of land purchase to the present time. At the present time there is this suspension in regard to new purchases, and it is with a view of removing the causes that prevent new purchases that the promise has been made of fresh legislation?—Quite so.

30,027. Thus we reach the present time?—Yes.

30,028. Will you very briefly give us an idea of what your procedure is in purchasing estates: first where the landlord deals direct with his tenants, and next where he passes over the heads of his tenants and deals direct with the Land Commission?—The first class of cases comprises, I suppose, over 80 per cent. of all the cases, and in that case the procedure is this: The landlord negotiates through his agent generally with the body of his tenants, and after various negotiations they agree to buy their holdings, usually at a certain scale of reduction on the rent, it may be 20 per cent. or 25 per cent. Having agreed to that they then proceed to sign, each individual tenant, a purchase agreement setting forth the particulars of his holding and the amount of purchase money that he agrees to pay the landlord.

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and [Continued.  
Mr. J. T. DRENNAN, B.L., were in attendance.)

Then the landlord gets filled up what is known as an originating application or document setting forth details generally of the estate, and the other circumstances required by our rules. That document is lodged on behalf of the landlord in our office with the Estates Commissioners. The particulars, including the individual purchase money of each individual tenant, are checked in the various branches of our office, and the papers are put in their proper place to be sent to the inspector when the turn of the estate comes.

30,029. The estates are entered upon a rota?—Yes, in their order, and record numbers are put upon them, and as the turn of the estate comes these agreements are checked and the other papers are checked, and the maps are sent to the surveyor from the staff of the department, and he goes out and checks them.

30,030. When you say the agreements are checked, do you mean that the documents are checked to see whether they carry out the agreement?—Yes, they are checked for the purpose of finding out if they are zone cases, if they come within the zones. If they are not zone cases, when it comes to inspection, we have to send out one of these inspectors who examines each of these non-zone cases, in which no fair rent has been fixed, to see whether or not the purchase money is secured on the holding.

30,031. Whether or not the holding, if sold, would fetch the amount of the advance?—In the zone cases, as I have pointed out, it is not necessary, because the Act of Parliament assumes they are security, so that the first thing in checking the agreement is to see whether it is within the zones or outside the zones.

30,032. Then you pass the document on to the local inspector?—To our inspector, and he reports in non-zone cases whether they are security, and he also gives a general report on the estate as to whether there are any special circumstances that have to be taken into account, whether the lands are subject to flooding from a river or anything of that kind. There may be a general danger or there may be some special circumstances that would make us refuse to declare the property to be an estate under the Act. Unless we declare it to be an estate it cannot go on, and no bonus can be given. The inspector having inspected the holding for the purpose of seeing whether it is security against the purchase money, and the surveyor having checked the boundaries with the maps provided by the owner to see that they are right, and having reported that the individual tenants are in occupation of the holdings, these agreements then come back to the office and are sent to the special sales branch. The reports are brought in by the officers and are gone over by the officers of that department, and are then brought before the Commissioners for their rulings. The Commissioners give their rulings on the various matters that may arise, and these rulings are then sent out to the landlord, and he is required through his agent or solicitor to answer these rulings. Such a ruling, for example, may be that he may have agreed with a tenant that he shall pay 500*l.*, whereas we really think that it is only security for 400*l.*, and we will not advance the larger sum, and we say we are not prepared to do so.

30,033. These are non-zone cases?—Yes, non-zone. There are various rulings of that kind.

30,034. Assuming that the rulings are satisfactorily disposed of, what would happen?—We sanction the property to be sold as an estate, and we sanction the advance to each individual tenant, and when that is done it is sent to the vesting department, and the purchase money of the estate is paid into the bank.

30,035. How do you get the purchase money of the estate? What is the method by which, when you have ruled it is an estate and sent it to the vesting department, the vesting department gets the money?—It is done by a paper transaction; an order is given to the bank.

30,036. I want to know who initiates the order?—The order is sent by the Commissioners and is drawn weekly from the National Debt Commissioners, the required sum for each week.

30,037. The Estates Commissioners draw from the National Debt Commissioners the sum required to meet the demand during a particular time; that sum is at your

disposal at the bank. It is in stock or it may be in cash?—In cash up to the present under the Wyndham Act.

30,038. Under the new Act it would be in stock?—That is a different Act.

30,039. And the order would be to transfer to the Estates Commissioners so much in cash and so much in stock?—Yes.

30,040. And when that is done, what happens?—Then the matter leaves us, and it goes to Mr. Justice Wylie, who proceeds to consider to whom he is really to pay the money.

30,041. We got from him what he does. Is the order of transfer upon the bankers made in favour of the judge?—No, in favour of the estate.

30,042. The estate is in your hands, and it passes from you to the judge?—Yes.

30,043. Therefore the proprietor of the estate cannot borrow upon the strength of it?—No.

30,044. Then you pass it to the judge, and he distributes the purchase price first to the encumbrancer and lastly to the proprietor in the manner in which he has told us?—Yes.

30,045. After you have passed the vesting order, does it vest the tenant with the proprietary right in the holding?—We make an order in each case on the tenant's agreement vesting the holding in him subject to the payment of the annuity on the purchase money.

30,046. And the annuity becomes payable from that date?—From that date, and this holding is registered in the Land Registry in Henrietta Street as being his particular property.

30,047. The holding goes upon the land register as the property of this particular tenant?—Yes.

30,048. And the annuity then has to be paid to the Land Commission?—There is a very simple system known as the receivable order system. It is a bit of paper with a certain number of columns in it. That is sent to the tenant, and each half-year he takes that bit of paper to the local banker. It specifies what his annuity is; if it is 10*l.* he pays the 10*l.* with that receivable order, and it is sent back to our offices and written up.

30,049. (Mr. Shipley.) Supposing he should die?—If he dies, the charge is on the land and not on the man; it is on his successor.

(Mr. Graham Wallas.) Like the title.

30,050. (Chairman.) That is a case of direct sale—sale directly by the proprietor to his tenants. Now in an indirect case, where the proprietor sells to the Land Commission, is the procedure the same *mutatis mutandis*?—In that case the owner begins by saying to us, "I offer you my estate, what will you give me for it?" and then we begin a system of inspection, and in that case the zones do not operate.

30,051. Mr. Justice Wylie told us that in distributing the assets he issues a notice to anybody having a charge upon the property to appear?—Yes.

30,052. All persons having mortgages, and charges of every description upon the property, have to make their application before him, and he considers the whole of them and distributes the assets?—Yes.

30,053. If there was an estate of, say, 1,000 acres, of which 300 are congested, inhabited by very poor people, small tenants, and the remainder is a fine cattle ranch, what would happen in such a case?—We are now dealing with the declaration of a congested estate. We do not allow the congested estates to be sold in the ordinary way. We require that these estates should be sold to us. If they happen to come outside the nine counties which are under the Congested Districts Board we deal with them.

30,054. Your functions are limited; you are excluded from the Congested Districts counties except under a particular arrangement?—Mr. Shipley's question was put to Mr. Justice Wylie, I think, under a misapprehension. In the nine congested counties no estate or untenanted land can be sold to the Estates Commissioners except with the consent of the Congested Districts Board, which has the first option of purchasing. However, landlords and tenants may agree amongst themselves to sell and purchase, and come to the Land Commission for advances to enable the sale to be carried out; and if

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and Mr. J. T. BRENNAN, B.L., were in attendance.) [Continued.]

the estate is not congested advances may be made in the same way as in the other counties.

30,055. (Mr. Shipley.) Might not the Congested Districts Board exercise a veto?—If a proposal is made to sell an estate under the second method of procedure of which Lord MacDonnell spoke, we cannot purchase the estate unless we get permission from the Congested Districts Board, and we cannot buy untenanted land unless we get the permission of the Congested Districts Board, but in all other cases land purchase goes on in these nine counties in the same way as in the rest of Ireland.

30,056. As to whether they are congested or not you cannot have an absolute definition. Is there any definition?—Yes, there is one in the Act. We know whether it is within or outside of the statutory definition of a congested estate; that is easily done.

30,057. (Chairman.) Go on please with the description of the process?—In the case of the Congested Districts Board a great deal of the work is done by our machinery. It goes through us. When the Board have entered into an agreement with a landlord for the purchase of his estate, after the preliminary negotiations, they apply to us to settle and fix the agreement under which they can buy. We have to settle the agreement, and it is duly executed and they enter into possession of the estate.

30,058. In order to distinguish between your functions and those of the Congested Districts Board, will you tell us how you deal with a congested estate which is sold to the Land Commission and is not situated in a congested district?—In that case, where the estate purchased is a congested one, but is outside the congested districts, we ask that the estate should be sold to us. We do not allow the landlord to sell direct to the tenants. He must sell to us. We also purchase any untenanted land he may have in connection with the estate, and then we proceed to improve and ameliorate the position of the various congested tenants upon it. We enlarge their holdings by dividing up the untenanted land we have purchased among them, and we bring it up to what we may consider to be a normal condition. We improve it in a variety of ways. If there are intermixed holdings, as you often find them, in the West of Ireland and other parts, we deal with those intermixed holdings. Sometimes you will find a holding with a rental of 4l. or 5l. in 15 or 20 pieces, many of them not larger than this room. We try to put an end to that. We try to amalgamate all these pieces into one continuous holding. We improve the land by fencing and draining wherever required, and we also improve the housing. The housing, as a rule, is very bad on these congested estates, they are mere mud hovels. We try to do away with that, either by building new houses or by giving help to the tenants to enable them to improve their houses. After we have made all these improvements and brought the estate to what we consider to be a fairly satisfactory state, we proceed to vest the holdings in the tenants.

30,059. (Mr. Boutwood.) Does this process ever involve a reduction in the number of tenants?—Yes; sometimes we try to take out one or two of the large tenants so as to enlarge the small holdings; we sometimes do that by giving them other land in exchange.

30,060. I did not mean that, what I meant was this: The congested estate is one with a large number of tenants, is it not?—Yes, a large number of tenants compared with the amount of land.

30,061. And having finished these various operations which you have described, have you the same number or a smaller number?—As a rule, the same number.

30,062. (Chairman.) Having had from you this clear explanation of the Land Commission's functions and of the object of your work, we now come to the staff through whom you work. Please give us briefly an account of the organisation of your office. If you prefer it, you may go through the statistical statement?—If you will allow me, perhaps the simplest plan would be to show how the organisation arrived. The Land Commission when created in 1881 was a temporary office. The Commissioners, when they were appointed, excepting the Judge, were appointed for seven years only, and the office, as we have just seen, was then established

mainly for fair rents, and it was staffed by drawing upon a body of clerks and officials who had been appointed under the Irish Church Act, and this organisation was handed over to the Land Commission. For the first 10 years of the existence of the Irish Land Commission its clerks were not in any way under the Civil Service organisation. They were appointed by nomination with a certain qualifying examination in certain cases, and that continued for a period of ten years. In 1891, when the first Balfour Act was passed, that for the first time made the Land Commission permanent and provided for the permanent organisation of the department. Under that permanent organisation a system was established of having three classes of clerks—namely, first class, second class, and third class clerks.

30,063. The first class have no reference to Class I. of the Civil Service?—No; this classification had nothing to say to the ordinary Civil Service organisation. It was *ad hoc*, specially for this department. These officers were classified in this way, together with a certain number of higher outdoor officers, who were also made permanent, and formed the new organisation of the Land Commission from the 1st January 1892 and afterwards. They also kept a kind of floating body of temporary clerks who were not included in that organisation, and as vacancies arose in those three main clerical classes they were filled up for a few years out of that floating temporary body of clerks whom we had attached to the office. From 1896, that is four years after this, the organisation began for the first time to be established upon a basis of competitive examination for these three classes of clerks.

30,064. For the three classes?—Yes; the second class and the first class were recruited from the third class.

30,065. By promotion?—Yes. That went on until 1904.

30,066. Was it ever permissible after 1896 to introduce an outsider into the second or the first class who had not passed through the third class?—No; there were outsiders introduced, but they were not put into those classes. In 1904, after the Wyndham Act was passed, an immense increase in the staff was rendered necessary by the great accession of work owing to land purchase. It was then agreed that the Treasury should reorganise all these appointments and provide a staff for the first time, and introduce ordinary Civil Service clerks into the place. They were second division clerks with abstractors and boy clerks. They were introduced in 1904.

30,067. When that took place, were the first, second and third class clerks of your own office amalgamated with them?—No; they ran side by side, and you have a mixed organisation as regards clerks as the result of that. You have first the boy clerk, the abstractors or assistant clerks, and the second class division clerk running alongside the others.

30,068. From 1904?—Running with and among these you have the old Land Commission organisation of first, second, and third class clerks.

30,069. Were these three classes of clerk pensionable?—Yes.

30,070. On ordinary Civil Service terms?—Yes.

30,071. Does promotion at present go from the third class to the second and first in the old classes?—It does.

30,072. Does it go on in the same way in the Civil Service classes?—The first, second, and third class of our own will gradually disappear. The third class are not being filled up. They will all go into the second class; they will disappear and will die out.

30,073. Do the abstractors take the place of the third class as the third class get depleted?—No, not the abstractors. The old third class men are now getting up into a higher grade as they gain more experience.

30,074. In the new organisation, the Civil Service organisation, what particular class corresponds with the third class?—The second division.

30,075. What particular class of the new organisation corresponds with the second class? I suppose there are still fewer of the first class, and that the second division is the highest of that organisation?—We have no first division but we have a number of staff officers.

27 February 1913.] The Right Hon. W. F. BAILBY, C.B. (Mr. O. T. BEARD, I.S.O., and [Continued.  
Mr. J. T. DEENAN, B.L., were in attendance.)

30,076. How many officers remain in the three sections of your old classification?—In the third class there are ten left.

30,077. And in the second class?—Twenty.

30,078. And the first?—Twelve.

30,079. They are manageable numbers?—There are 12 of the first class, including those who have special work, 20 of the second class, and 10 of the third class.

30,080. Will their promotion go on unaffected by the parallel system that has been going on since 1904?—Yes.

30,081. What pay do you allocate to the old first class?—(Mr. Beard.) 350*l.*, rising to 450*l.* The second class 180*l.* by 10*l.* to 300*l.*, and the third class 80*l.* rising by 5*l.* to 100*l.* and then by 7*l.* 10*s.* to 150*l.*

30,082. That corresponds with the abstractor class?—It does very nearly. You will notice that up to a few years ago the position of the third class staff was that they entered our service by very much the same sort of examination as the second division examination of the Civil Service. The Treasury agreed in 1905 that the third class clerks might proceed to the maximum of the second class, 300*l.*, without a break.

30,083. They might do that?—Yes, practically all the third class clerks. There is an efficiency bar at 250*l.* similar to the efficiency bar in the second division. They are all practically second class, excepting in name, and they can proceed to the maximum of 300*l.*

30,084. Why do you not amalgamate; although I see that there would be this hardship that they could not get up to 450*l.* If the second and third class were amalgamated with the second division it would be a hardship upon men who are now in this office because they have a right, as I understand it, to proceed by promotion to the first class?—An expectation.

30,085. Hitherto granted and fulfilled?—Yes.

30,086. To go to the 350*l.* and up to 450*l.*?—Yes, I do not think we can take away the existing rights of the old staff of clerks.

30,087. It would be hard to do it?—They are peculiar to the office. The second division clerks, owing to the nature of their service, can be transferred according as the necessity for them falls away.

30,088. The Treasury do not want you to abolish the first class?—No, they show no indication of it; on the contrary, they have agreed upon the number.

30,089. When you say that the Treasury has allowed the third class to proceed straight to the 300*l.* limit, do you think they mean by that that they desire to amalgamate them with the second division?—No.

30,090. On that occasion when they conveyed this notice to you, did you bring to their notice the fact that there is a right on the part of these people, or an expectation, to proceed to the 350*l.* and 450*l.* limit of pay?—It was not necessary, because the Treasury are fully acquainted with the fact that we make promotions from time to time as the necessity arises.

30,091. Apart from that special peculiarity your office is a second division office?—Yes.

30,092. What staff posts have you. Among the administrative officers I see one secretary. He came in from the Chief Secretary's Office?—(Mr. Bailey.) That is Mr. Beard.

30,093. You, Mr. Beard, came from the Chief Secretary's Office?—(Mr. Beard.) Yes. (Mr. Bailey.) There are two assistant secretaries in the department, one on the Estate Commissioners side and one on the Land Commission side. We call it the Land Commission side, of course it is all Land Commission.

30,094. The fair rents side?—Yes.

30,095. These two gentlemen were transferred, I understand, from other departments. One was a first class clerk in the department when promoted from that peculiar Class I., and the other went up from the post of chief clerk to the Estates Commissioners. Another officer is the accountant, you got him from the Department of Technical Instruction?—(Mr. Beard.) Yes, he started with the Church Temporalities Commission and went about to other departments, and at last came back to the Land Commission as accountant.

30,096. Referring to the registrar on your list, is he the gentleman we were talking about?—No, it is another gentleman. The one is registrar to Mr. Justice

FitzGerald, and the other is registrar to the Land Commission; court registrar to Mr. Justice Wylie. (Mr. Bailey.) He deals with the allocation of money.

30,097. Then there is the superintendent of the Church Property Department?—Yes.

30,098. Have you got anything to do still with the Irish Church Fund?—Yes, a great deal of it is still outstanding.

30,099. And you have to deal with it?—With the income of it.

30,100. Is it a substantial income?—Yes, about 250,000*l.* a year of income yet, and another 250,000*l.* comes into it from redemptions.

30,101. From what source does the money come; is it from investments?—No, it is charges under the heading of the Old Irish Church. Various charges, tithes and charges of that kind, have brought in a very big rental, and, although a great number have been redeemed and got rid of, still the present income amounts to about 250,000*l.*

30,102. Is that income a diminishing income: will it disappear in the course of time?—Yes.

30,103. Is it income from tithes, and such like, that have been paid and redeemed?—Yes, as the sale of Irish land goes on Mr. Justice Wylie allocates the purchase money, and he also requires the redemption of these tithes among other outstanding matters.

30,104. You get the capital amount and you invest it?—Yes; most of it is earmarked for various purposes; some of it goes to the Congested Districts Board as part of that body's endowment.

30,105. And part to intermediate education?—Yes. (Mr. Beard.) We have paid that off altogether, namely, a million.

30,106. In course of time, then, you will have no income from that source?—It is estimated, that when land purchase is carried through, there will remain an income of 30,000*l.* a year.

30,107. Will there be any charges on that sum?—This income consists of charges upon land.

30,108. Will this income be entirely to the good; will it be your property?—(Mr. Bailey.) No, it is mortgaged. (Mr. Beard.) It is mortgaged up to the hilt; it is over mortgaged by the charges imposed by the Government. We have to pay 70,000*l.* a year to the Department of Agriculture. We can go on for some years, but we cannot pay that in perpetuity.

30,109. Under the Irish Government Bill, are not these Irish funds made over to the Irish Government?—(Mr. Bailey.) I am afraid they won't get much out of it.

30,110. That is interesting. Has there been an actuarial examination of this Church fund lately?—(Mr. Beard.) Not for some time.

30,111. As regards the actual condition of the fund at the present time, you are unable to speak with accuracy; is that so?—That is so. The capital value of the fund is being constantly reduced by redemptions. There is a loss of 30 per cent. in every redemption that takes place, 30*l.* per cent. of the capital.

30,112. It is well to know that. Now we come to Group IV., staff clerks. You have a chief clerk of the Estates Commissioners; was he promoted from the first, second, or third class, or from the second division?—(Mr. Bailey.) He was originally in the third class, and was promoted right through.

30,113. You have six first class clerks; these are six of the 12 you mentioned?—Yes.

30,114. The second division clerk will have no chance of promotion to that first class?—(Mr. Beard.) Not as such, but he would have to a corresponding post as they die out. There is no reason why a second division clerk should not be equally well paid, but it will not be under that name.

30,115. I was thinking what was the prospect of the second division man. You put a prospect of moving into the first class before the second class clerks. May I ask how do you make out six first class clerks?—The division of your table has necessitated that; staff officers over 500*l.* and under 500*l.*

30,116. Then we must put these men, for the present, out of the category of staff clerks, having regard

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O. and [Continued.  
Mr. J. T. DRENNAN, B.L., were in attendance.)

to the second division?—Possibly, but I think not, so long as the work keeps up to the present standard which justifies a post equally well paid. There is no reason why they should not be promoted.

30,117. Yes; and this promotion will go on until you have got all the first and second class clerks provided for. These appointments are earmarked for the second and third class?—That is so. In a sense they have got a right of succession, but if the Commissioners at any time find an able second division clerk who is more fitted to occupy one of these posts now filled from the first class, they would promote him.

30,118. They would promote him out of the second division into the old classification which existed before the second division was created in your office; is that so?—Not necessarily by name, but to an equivalent post, which would probably be described, under the Treasury ruling, as a staff post.

30,119. You have 12 first class clerks, 20 second class, and 10 third class. These 12 first class clerks are in possession, and of course we may ignore them. They stay. But there are 30 men who are either second or third class. If you promote to Class I. any men from the second division you defeat the legitimate expectation of these 30, for you have already said that they have a legitimate expectation?—An expectation, though, probably, a few of them will never be promoted; they have got almost to the end of their tether.

30,120. That is reasonable; if a man is not fit for promotion he should not get it?—There are some worth 300*l.* but may not be worth more.

30,121. (Mr. Boutwood.) If you put a second division man into such a position you would not call him first class?—We will call him a staff clerk.

30,122. (Chairman.) You are, I am afraid, piling up a mass of complaints for yourselves?—There is such a variety of claims from the different classes that the only thing you can do is to say that the various complaints more or less counterbalance each other.

30,123. You have 19 staff clerks, three of them at 500*l.* Are these second division men at the bottom of page 75?—There are none second division.

30,124. Will the second division naturally have a claim to promotion to any of these 19 posts?—Yes.

30,125. Have you earmarked them for the satisfaction of the second division, or for promotion from the second division?—(Mr. Bailey.) No; if one of these posts falls vacant, the Commissioners will consider all their staff as to who is suited for the post. They may appoint a second division man, but if they have another man who is better suited to fill it they will give it to him.

30,126. Have you any other class in your office now except the former first, second, and third class; the second division, the abstractors, and the boy clerks?—No, that is all.

30,127. That is exhaustive. If you are not going to promote the second and third class, the second division will be justified in looking forward to these promotions?—Certainly.

30,128. You have 96 second division clerks and 173 assistant clerks and 94 boy clerks?—Yes.

30,129. These are the usual type?—Yes.

30,130. I have here a memorial from the second division. Have you seen it?—Yes.

30,131. It is a general statement. It says a number of appointments have been made by the Estates Commissioners; the men have been brought from outside their office and put into appointments which they think ought to have been reserved for them?—Yes. Generally, with reference to that, I would like to say that we must remember that the Land Commission in 1904 was practically a new office in organisation of staff. It was then for the first time that second division men were brought in, but there were no second division men put in to some of the higher posts; newly appointed second division clerks would not have been competent. We did what every department which is organised afresh does for these important posts. We naturally looked out for men, and found out from inquiry into their previous record and history whether they were really men who would do the work in the best possible way, and we selected the men with that idea.

30,132. The head of the management of the Estates Commissioners branch at 450*l.* was previously a land agent's clerk, was he not?—It was promised, I think, at the passing of the Act of 1903 that some employment would be given to land agents' clerks. Mr. Wyndham stated in the House of Commons that he would do what he could to give some employment to them.

30,133. Yes. Although not a Parliamentary promise, it was something of that nature?—A kind of undertaking was given that he would consider them, and as regards that particular officer, he was selected to do work which was eminently land agent's work, and it would be absurd to think of putting a second division clerk into it at that time. It required a man with an outside knowledge.

30,134. (Mr. Boutwood.) Do I understand that the second division came in for the first time in 1904?—Yes, practically. A few came in in the years before 1891, but they were taken out again.

30,135. They are existing on your staff since 1904?—Yes. (Mr. Beard.) At least half of them have less than six years' service.

30,136. (Chairman.) They say on page 6 of their statement that they wish to emphasise the inadequacy of the number of the higher positions which are open to them. They also mention the fact that salaries attached to such posts are considered personal, and are liable to revision in case of a vacancy; and they add that this practically amounts to a denial of any prospect of promotion?—It is merely the usual practice of the Treasury in preparing estimates, particularly in an office where there is great extension and salaries are increasing. They mark them personal by a note and "subject to review in case of a vacancy," simply to safeguard themselves. There is nothing sinister about that so far as our department is concerned.

30,137. They sum up on page 7 by saying, "We accordingly beg to suggest that examiners of title and clerks to examiners should constitute a separate legal branch." The examiners of title do constitute a separate legal branch in fact?—(Mr. Bailey.) Yes.

30,138. These gentlemen are chosen from the Bar because of their professional qualification?—Yes, they are barristers and solicitors.

30,139. And they are chosen carefully?—Yes, chosen carefully.

30,140. They go on to say that the remainder of the clerical staff of the department should be classified into two grades in accordance with the scheme in the statement submitted by the association of clerks of the second division on the 25th of February last. That raises the general question of the organisation of the whole Service?—(Mr. Beard.) In connection with that I would like to point out that they include there what we call legal clerks under the second heading. You must distinguish between clerks to examiners and the legal clerks. They put in a claim that vacancies for these legal clerks should be filled up out of the second division clerks. The work of these legal clerks is connected with the preparation of vesting orders, and also comprises legal work connected with the devolution of tenancies. It is work that really requires an intimate knowledge of the Land Acts and also of conveyancing.

30,141. Do you select these clerks with reference to their legal qualifications?—Yes, they have all got professional qualification.

30,142. You say they must have been clerks to solicitors; they must have had some previous professional training. Do you ever take them out of your own office?—(Mr. Bailey.) The majority are men who have been called to the Bar or have acted as solicitors. (Mr. Beard.) I think one was a solicitor. (Mr. Bailey.) They are men at least who have gone through the law school of the university.

30,143. (Mr. Boutwood.) Where in this statement are the legal clerks?—(Mr. Beard.) Page 80, about the fifth item; examining clerks.

30,144. They are the examining clerks?—Yes.

30,145. (Chairman.) They say a more adequate number of staff posts should be provided?—(Mr. Bailey.) We have a fairly good number of staff posts.

30,146. (Mr. Boutwood.) I suppose from that point of view the difficulty is that none of these posts are at

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and Mr. J. T. DRENNAN, B.L., were in attendance.) [Continued.]

present held by second division men, is that so?—(Mr. Beard.) They have such short service. Several minor staff posts have been created in favour of those second division clerks. (Mr. Bailey.) A number of them are quite competent, and in course of time others will be competent.

30,147. (Chairman.) Do you think it is quite fair to take these men at 350l. to 450l. in the first class grade as being staff posts?—(Mr. Beard.) I think so.

30,148. (Mr. Boutwood.) Ultimately?—Ultimately.

30,149. (Chairman.) And for the future if there is a good man in the 180l. to 300l. grade he will have a preferential claim for promotion into the first grade, and if there is not a good man in it you will take him from the second division?—(Mr. Bailey.) Yes. (Mr. Beard.) These men who are already in the second class of whom you are speaking have had a good many years' service, they have had a lot of experience in the work, and naturally would have first claim to any vacancy. The junior second division clerk is a man who has been recently appointed. (Mr. Bailey.) These are all very young men in the second division.

30,150. (Mr. Boutwood.) I do not see these minor staff posts?—You will find them in the middle of page 77. Promotion of four second division clerks.

30,151. (Chairman.) Assistant clerks, abstractors, you got, I suppose, from the Civil Service Commissioners?—Yes.

30,152. Are they employed on work which you clearly define from the second division work; is their work substantially different from the second division work?—Yes, it is; very distinctly. In an office like ours there is a great deal of work which is rather a low order of work, such as merely classifying papers and addressing envelopes, and all that kind of work. We have an immense amount of that kind of work; some of that is done by boy clerks, it is a very low grade. There is also an immense amount of it which is really not suited to the second division and is done by the assistant clerks.

30,153. Do you get these boy clerks from the Civil Service Commissioners?—Yes.

30,154. What do you think of those boy clerks?—I agree with most of the witnesses who consider that in that respect it is far better to get rid of them at as early an age as possible, but to encourage those who have the capacity to get into the next grade and help them in every way. They are cheap, undoubtedly. It is a cheap method of getting the work done, but, personally, I am not sure that it would not be better if it were taken by the grade above them, the assistant clerks.

30,155. Would it not be well to recruit for the lowest grade of clerk from the age of 16 to 16½?—I am inclined to think so.

30,156. If recruited in that way you would fuse the boy clerks and abstractors into one grade?—That is my personal view, I am not too keen upon it; some of them do well; I am not sure it is a good system.

30,157. What is the position in an office, Mr. Beard, like yours?—(Mr. Beard.) In our own office it is pretty much what Mr. Bailey indicates. Our heads of branches in which boy clerks are largely employed agree that if you have to send boys back into the world, it is better to send them out at 18 than at 20. I would like to see what was advocated by many witnesses before this Commission: If you are to have a system of boy clerks you should so regulate the number of boy clerks taken into the Service as to secure that a greater proportion of them than at present may have a reasonable prospect of permanent employment.

30,158. Do you wish to abolish the grade altogether and make the abstractor class the lowest class in the Service?—(Mr. Bailey.) I have not, and I do not think our officers have, considered that. They tell me that many of the boy clerks do very good work, and we have an exceptionally good lot of boy clerks in our office. There is this consideration with reference to Dublin—I do not know whether it has been brought before the Commission before—the supply of these lower grade clerks, boy clerks and assistant clerks in Dublin, is greatly in excess of the demand. We are positively having to turn out boy

clerks who have passed for abstractors. We have five serving in the office who have actually passed. We have one serving as a temporary clerk who passed as an abstractor, and he preferred to remain in a temporary position, rather than go to London and start there at 45l. a year. We have on our books the names of dozens of young men who have gone to London and are trying to get back. We take them back whenever we can. Some time ago the Civil Service Commissioners said to us that they had many men waiting for positions who had recently passed examinations in Dublin and that we must not take back any more of these young men.

30,159. Is that due to the belief that living is cheaper in Ireland than in London?—The position is, more particularly, that they would be probably living here with their parents or friends.

30,160. We have been told that living in Dublin is not cheaper than it is in London?—I doubt that.

30,161. I doubt it also. With regard to assistant clerks—before we pass away from the subject—I want to ask a question. They also have made an application?—(Mr. Beard.) I have not seen it. (Mr. Bailey.) Nor have I.

30,162. They go on to summarise the position of assistant clerks as follows: "We perform similar and equally important duties in many cases to those done by the second class clerks. That is due to two causes: first, there is not a sufficiency of work to engage the number of assistant clerks employed; and, second, we are quite competent to perform these duties satisfactorily." That is the second division duties. They say that they can perform these duties. It was in contemplation of that complaint that I asked the question whether there was a marked distinction between the duties of the two classes. No doubt the work of the second division and the assistant clerk do dovetail into each other; you may consequently have a particular clever abstractor doing second class work, and you can scarcely say whether a lower second division clerk is doing his own or abstractor's work. But, speaking generally, is there a clear line of distinction between the two classes of work?—Clearly.

30,163. Which justifies the maintenance of the two classes?—Certainly.

30,164. And you would not be justified, having regard to considerations of economy, in paying the lower at the same rate as the higher?—No, I should think not.

30,165. Do you think the scale of pay of assistant clerks is sufficiently fair; it is 45l. to 150l.?—Yes, it is. Of course every clerk thinks he is underpaid and makes a case, but so far as the Service goes it seems to me a fair rate, especially when you consider that these men have only a certain period to go on until they get higher, or at least they have the expectation of it.

30,166. Would you be disposed to mark off a special number of second division appointments to be filled from the lower grade by promotion?—We have done that in practice.

30,167. Would it be difficult to say, "We will mark off 25 per cent. for you," having regard to the fact that the two classes are recruited by entirely different examinations?—(Mr. Bailey.) That is so; but, of course, in the vacancies that have arisen they have got a very large proportion of promotions from the assistant clerks into the second division.

30,168. Can you give me any figures?—During the past five years there have been 38 vacancies for second division clerks in our office; of these 14, or more than one-third, have been filled by the promotion of assistant clerks.

30,169. That is a large proportion. They go on to say: "The assistant clerks have proved their ability and satisfied the head of their department that they should be promoted to a higher grade." That betrays, they say, a complete misapprehension of the conditions of their service?—Quite so.

30,170. Then they say: "We submit that the initial salary should be 60l. and that the maximum should be 200l." Have you any remark to make upon that?—I have no remark. The Treasury have to take into account the pay given to outsiders.

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O. and [Continued.  
Mr. J. T. DRENNAN, B.L., were in attendance.)

30,171. Is there any dearth of applicants for the appointments?—None. As Mr. Beard said, the difficulty is to find places for them.

30,172. (Mr. Graham Wallas.) You have a large, what we call lump sum service?—Yes, there is a large sum. (Mr. Beard.) Between 8,000*l.* and 9,000*l.*

30,173. How are the persons appointed in that lump sum service?—(Mr. Bailey.) There are a number of temporary clerks paid out of that. (Mr. Beard.) And boy clerks.

30,174. There are a certain number of boy clerks included in it. They do not include the lump sum in the boy clerks returned on their paper. I think it is page 82 of the statement. Do the boy clerks appear twice?—94 boy clerks cost 3,700*l.*

30,175. That is the same as the boy clerks on page 78?—Yes.

30,176. You have been using that lump sum in the ordinary sense; you have got it cut down from 9,000*l.* to something over 5,000*l.*?—Yes.

30,177. You have, in the ordinary sense, about 5,000*l.* What are these 5,000*l.* worth of people, 32 temporary clerks, and so on—how are they appointed?—(Mr. Bailey.) Some of these, in fact the majority of them, were clerks in the old establishment who were not, for one reason or another, brought into the permanent organisation, and they still remain temporary clerks. We have quite a number of these, about 17.

30,178. Do you still fill vacancies in that body?—No.

30,179. These lump-summers are a moribund body, none of the vacancies are filled?—That is so, except as regards typists.

30,180. How are the surveyors, draftsmen, and mappers appointed?—They are appointed by a system of selection. It is a body that has grown gradually as the work of land purchase has gone on, and is a very important part of it. It is the testing and examination of the maps, and the checking of the boundaries of particular holdings, and also discovering whether or not the purchaser is in occupation of the holding. Under the old system that work was done by highly paid persons, the inspectors; but, of course, that was a very expensive and improper way of using those inspectors, who were doing work that could be done by a cheaper paid officer, and so, when we organised the Estates Commissioners Office, we provided that the zone cases, which I have told you do not require to be examined for security, might be reported on by these surveyors. This is mechanical work to some extent. He goes down with a map in his hand, and examines the boundaries and sees whether the map has correctly stated them, and whether the tenants are in occupation or not.

30,181. How is he appointed?—He is appointed by selection. When we have to appoint a certain number of these to add to our staff we have a large number of applicants on our books. We send for these applicants and examine them, and the Commissioners interview them and get their report of what they have been doing, where they were educated, and what are their general qualifications, and inspect them and pick out what we consider to be the most suitable men.

30,182. The man who wants to get one of these posts puts his name on a waiting list, and gets others to write to you?—He sends in his papers and testimonials and qualifications.

30,183. Does he sometimes call upon you?—We see them all.

30,184. Without being sent for, does he call?

30,185. (Chairman.) He uses all the influence he can?—Yes, we do not appoint any until we have inspected them, and satisfied ourselves that they are men who will do the work.

30,186. (Mr. Graham Wallas.) Apart from the process of using all the influence he can?—Yes, in that sense, that he sends in all the papers and recommendations and testimonials he can collect. We file all those, and each man has his own file.

30,187. Do you find that process is a somewhat burdensome process for you?—Having satisfied ourselves that the man has got a good record we select him, and send him on to the head of the department, who tests him and finds out if he really is a thoroughly

competent man by giving him some of the work to do. It is a kind of qualifying examination, and he makes a report to us of what he thinks is the order of their merits and standing, and we really take them according to that.

30,188. Do you find that a considerable part of your time is taken up with these applications and recommendations from every person who wants an appointment which lies with you?—Not very much of our time; it is only very rarely we have to fill up these posts.

30,189. Take one rather big subject. You heard Mr. Justice Wylie say that the fair rent work is rapidly coming to an end, and that the land purchase work would, he thought, come to an end in about 12 years, and all that will be left will be the financial process of collecting certain annuities?—Yes, I would like to say on that suggestion of 12 years for bringing it to an end, that you cannot count it as 12 years from the present time. We have four or five years of arrears still to make up, and I do not think that 12 years would practically complete the work. If the arrears are to come in you would have to extend that.

30,190. (Chairman.) How much can you possibly do in a year, measured by money; what is the utmost you can satisfactorily do in a year with the present staff?—Eight millions now, and unless you have a larger staff you cannot do any more.

30,191. You have at least sixty millions to come, besides the arrears of which you spoke?—Yes, about thirty-two millions more.

30,192. That is nearly 100,000,000; divide eight into that and give three years over for a margin?—There are a great number of these cases which are extraordinarily complicated, and to deal with them would extend for three or four years.

30,193. The work remaining to be done by the Land Commission will, assuming that money is provided, take not less than 15 years to complete?—15 or 16 years.

30,194. (Mr. Graham Wallas.) There is a measurable future, say, of 12 or 15 years, in which the diminution of your staff will be so great as to bring it near extinction?—Undoubtedly.

30,195. When that takes place there will be a large number both of legal and moral claims for compensation, pensions, and so on?—As regards that, we must remember that at that period the collection department would have been growing in every one of those years. The collection department will grow into a very big department in 15 or 16 years, and a great number of these clerks who are now employed in other departments can be utilised in that department.

30,196. It will not be anything near the size of the present Land Commission?—It will absorb a fair number of them.

30,197. The extent both of legal and moral claims which would come at the end of your period of activity will depend upon steps that must be taken many years beforehand. These claims must be kept down, and if so, there must be a plan formed at least now to prevent large claims accruing?—Yes, quite a number of those officers' time will have expired by that time; the lapse of time will clear them out.

30,198. Will you claim that there is in existence in the minds of the Commissioners, any policy or plan for preventing large claims accruing at the end of your period of activity?—To a certain extent we have never been able to consider it from that point of view. The work runs with such an ebb and flow we cannot tell that it may not go on at a slow rate. Five millions per annum is all that the Treasury gives in the way of cash. The reason we are able to get up to 8,000,000*l.* is that a number of landlords consent to take stock instead of cash. I think the taking of stock will come to an end very quickly, and unless a new Act of Parliament is passed that will give us a new start, I am not quite sure that the Land Commission may not go on for 20 or 30 years.

30,199. Take the higher officials, the assistant secretary, the accountant, the registrar, and so on. Do you still go on from time to time filling vacancies in these high posts?—Yes.

27 February 1913.] \* The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and [Continued.  
Mr. J. T. DRENNAN, B.L., were in attendance.)

30,200. Are any steps taken of a character that would make it clear to a man that he might be transferred to another department without right of compensation if his work with you should come to an end?—No; for the reasons I have mentioned. We ourselves have no idea. We could not say to a man, you must be prepared to clear out at the end of 12 years, because we do not know ourselves whether it might not go on for 20 to 25 years.

30,201. But it might come to an end?—It might come to an end, but he knows that as well as we do.

30,202. Do you take steps to point that out to them so as to prevent them from having a definite moral claim for compensation for the abolition of their office at the end of 12 years?—No, we do not enter into a discussion of that kind with them. They come into the office; they know what the future is likely to be as well as we do; and they come on their own responsibility.

30,203. If his work comes to an end in 12 years he knows he would have no moral claim?—He is a pensionable officer.

30,204. Suppose he had not reached a pensionable age?—His office might be abolished altogether.

30,205. You are not taking any steps to diminish or lighten the claim which would accrue if a man now in your office finds his office is no longer required before he reaches a pensionable age?—No, we do not really see what steps we can take, having regard to the uncertainty of the future. We would not be justified in doing so as so much depends upon the legislation of this year, or next year, or years to come. The effect of that legislation may be to bring it to an end more quickly, but you cannot bring it to an end in the whole of Ireland almost at once, and we must also remember that the work of the office may still go on slowly.

30,206. One way would be to inform him that the Government might require his services in another capacity when his services in his present capacity came to an end?

30,207. (Chairman.) Might not the Government transfer him to another department?—(Mr. Beard.) The great body of the clerks are second division clerks and abstractors who are transferable.

30,208. (Mr. Graham Wallas.) I am dealing with the higher officers who are appointed on the same conditions and at the same rates as to an office which is likely to be quite permanent?—(Mr. Bailey.) These are men like the accountants and the heads of divisions.

30,209. (Chairman.) I don't think, as a matter of fact, that in the Civil Service organisation a man who gets to be secretary in a department has got any permanent claim to put in the whole of his time in that office. If the Government required him in a similar office they could transfer him, if it implied no diminution of pension or pay. Mr. Beard was employed in the Chief Secretary's office, he was transferred to the Land Commissioners' office, and I venture to say he would have no claim whatever for compensation if he was transferred to-morrow to the Chief Secretary's office again at the same rate of pay?—Yes, I suppose so.

(Chairman.) That is my own view, but I do not speak authoritatively.

30,210. (Mr. Graham Wallas.) The second division can clearly be transferred on the terms of their engagement to any office where their services may be required?—Quite so.

30,211. As to the people who entered into your service between 1881 and 1894, can they be transferred with the same certainty from one office to another as if they were in the second division?—I think you may take it that these officers will see out their service with the Land Commission. There are not many of them and they will gradually die out, the third class will be absorbed by the second class and the second class will be absorbed by the first class, and there will always be work for them in the Land Commission. There is no need to look forward; there is no fear of their being left without work.

30,212. With regard to the lump-summers, in view of the work coming to an end, would they have either legal or moral claim to consideration?—It is a question of moral claim. We have several officers who are now

unpensionable, but who have still very good services and are doing good work. I do not think it is quite right that these officers, and a great number of others who have been doing good work, should have no pension rights now. We have tried ourselves to get it in the case of several of them and have failed.

30,213. You told us, Mr. Bailey, that there were no women typists in your office. Has the question ever been considered?—Well, when we were organising our department after the passing of the Act of 1903, I myself suggested that we should employ a certain number of women typists and the matter was considered, but the difficulty that arose was owing to the nature of the accommodation and the fact that our office was scattered among a large number of very unsuitable houses and buildings, and it was felt that it would be impossible to give the necessary separate accommodation for the women.

30,214. Have things improved in that way since then?—Well, the accommodation has improved. We have got very large buildings built at the back of the old premises and these are filled with a very large number of clerks, but the difficulty that still remains, and I think the secretaries would perhaps explain to you, is that a number of these typists are divided up. They are not together in one room. They are divided up among the sub-departments, and it would be impossible to employ women unless we give them special rooms for themselves.

30,215. In the Post Office in London and other offices they use women clerks for work not very different from some of your work. Has that ever been considered by you?—No, that matter has never been suggested. If it could be done there is, I am sure, a good deal of work that would be very suitable for women; but those that are at the head of the different departments seem very satisfied with the men they have got, and it is a question that you might ask one of our secretaries about.

30,216. The question of employing women is a general question and not one peculiar to any one office?—Yes, quite so.

30,217. (Chairman.) Would you see any difficulty in having men and women working in the same room?—No, not for a certain class of work, but on the whole I think it would be undesirable unless you gave the women special accommodation for themselves. I suppose the women would express an opinion on that.

30,218. Have you any experience on the point, Mr. Beard?—(Mr. Beard.) Not personal experience, but there is a certain amount of work which might be done by women, particularly in our collection branch, where these annuities are received up to the amount of four millions a year in small sums and the payments are entered up in books, the very same kind of work as is done in the Savings Bank Department where women are employed. That is the only class of work that we could offer to women in large quantities. We are housed in eight different houses—some of these houses are close together and some are separated at some distance—and we could not segregate the women to any extent in the way that it is done in the offices where they are employed.

30,219. (Mr. Graham Wallas.) In the envelope you gave us containing one of your official forms, there was an opening that reveals the name and contents inside. How did these envelopes come into use?—(Mr. Beard.) That form of envelope has been in use for many years, and it saves the writing of nearly a million envelopes per annum, that would otherwise have to be done by clerks. One writing of the name and address on a receivable order suffices for passing through the post twenty times.

30,220. That would have been a monotonous and deadening work to be done by clerks?—Yes.

30,221. How did the idea of this envelope begin?—It was suggested by one of the officers who was doing this work.

30,222. (Chairman.) You will see it in other places. I know that the electric lighting company in sending in my bill for electric lighting, always send it in that way?—We had some difficulty with the Post Office before we could get them to recognise it.

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and Mr. J. T. DRENNAN, B.L., were in attendance.) [Continued.]

30,223. (Mr. Graham Wallas.) As far as you know it is not the business of any governmental organisation outside your department to make such suggestions about the use of labour-saving devices?—(Mr. Bailey.) No, we had not any such suggestions.

30,224. Was it the business of anybody to communicate to other offices that you had adopted this system with success?—No, we have not informed anybody else. (Mr. Beard.) I think we suggested it in the first place. We have now also got three adding machines in operation.

30,225. (Mr. Graham Wallas.) It was not the business of any Government department to make such suggestions to you, nor to find out whether your experiment had been a successful one, and suggest its adoption anywhere else?—I think not.

30,226. Your office is what is called a second division one?—(Mr. Bailey.) Yes.

30,227. You take in young men of 18 to 20 by a comparatively simple examination, and later on in life the best of them are promoted to rather high administrative posts?—Yes.

30,228. Do you feel that anything is required in addition to the educational tests of that comparatively simple examination, if they are to be thoroughly satisfactory officials doing the higher work later on?—Yes. It is my opinion that it adds to the efficiency of an official if he goes on and finishes his education after he has joined the Service. I think it very undesirable that a young man coming into the Service at 19 should think that he has completed his education, and should be merely satisfied with coming into the office. The best class are those that try and enter the university and take out a degree. Several of our clerks have done that, and did it with a great deal of difficulty, as they find some difficulty in attending lectures and at the same time doing their official work.

30,229. You think it would be desirable that the universities and the Government in Dublin should co-operate to a certain extent?—I think it would be desirable. Dublin is now in the peculiar position of having two universities. I don't think there is any other city in the same position. If these universities could provide facilities for young men, such as we have in our second division, attending night classes, or whatever they would be, it would enable them to take out a university course, and it would add to their efficiency.

30,230. Such co-operation has not yet taken place?—No.

30,231. Nor has it been discussed?—No. I have not heard of it. But, at present, I hear that a proposal is being mooted in the National University to start night lectures.

30,232. If you were asked to advise the authorities as to what kind of lectures it would be desirable, from the point of view of the Government, that they should attend, what would you suggest?—I would not suggest lectures merely on the technical subjects that they could learn in the course of their work. The value of university education is that it is an education for broadening and widening the point of view of persons, and making them more valuable in their work by giving them a broader knowledge of life in general, and a knowledge of history and law, and the economics that govern the country.

30,233. Not the details, but the wider intellectual background of their work?—Yes.

30,234. Such as modern history, and such kindred subjects?—Yes.

30,235. As well as the second division clerks you have a number of boy clerks and abstractors in your office?—Yes.

30,236. Would it not be possible to arrange that a few of the very cleverest of those might avail themselves of such opportunities?—Oh, yes. There is no reason why the abstractor class could not avail themselves of these opportunities.

30,237. And do you consider that the office would consider the advancement of such a boy if he made such use of his time?—As a rule, we find that the men that come on in that way, and make use of their time that way, are the best men we have.

30,238. You spoke of bringing pressure to bear on the department with regard to those *quasi* technical appointments, which obviously cannot be made by mere competitive examination. Would you welcome any arrangement by which an organised system might be organised by the department and the Civil Service Commissioners jointly for making such appointments through a responsible committee?—I think that appointments for special work require special qualifications. We try to fill these posts by getting in the best type of men that we can hear of or discover, and make such inquiries that can test their powers, but if you had some method by which you could effect that object in the case of other departments as well as ours I think it would be a very good plan. I understand you to mean that there should be some body to investigate the qualifications of candidates.

30,239. (Chairman.) I want to make sure that Mr. Bailey understands the proposal. One of the objects is to relieve the head of a department of the responsibility of choosing his men. The head of a department, at the present time, chooses his men for these professional posts, such as legal examiners and surveyors and so forth. The proposal is that the selection should not be made by him as head of the department, but by a body on which the department should be represented, say a body of three, to whom the applications might be submitted, and who should inquire into the capacity and the professional attainments of the candidates for the appointment. That is the proposal that Mr. Wallas submits to you, and I want to make it clear that the responsibility is to be removed from the head of the department?—I understood Mr. Wallas to mean that the head of the department would be assisted by others, but that the final voice should remain with him.

30,240. (Mr. Graham Wallas.) I was referring to machinery like that adopted in the case of the filling of posts under the Labour Exchanges in England, in which the head of the department delegated his authority for appointments to a committee that was appointed by the Civil Service Commissioners for the purpose?—I am of opinion that it might be a considerable help to the head of a department to have such a body as Mr. Wallas refers to, to select certain persons and their claims, but in the ultimate resort, I think, there are certain appointments in our office that the heads of the department should have the final voice in making, because they require such peculiar qualifications that it is only the men working with them can see who is the best man for the post.

30,241. When we get back to London we shall have to consider the question of the political rights of Civil servants. You are in charge of a large Irish office, and has the question ever been raised with you as to the limitations of political action for Civil servants?—Well, we had an interesting case a few months ago in Dublin, where one of our second division clerks attended a political demonstration, and made, what was reported in the papers, as a rather violent political speech, and our attention was called to it. We asked him to explain his action in making this speech, which was rather a violent one. He was at first inclined to stand on his rights as a citizen, but we thought that it would be contrary to the discipline of an office like ours, which, as Lord Macdonnell knows, is watched very closely, to have the idea go abroad that such action passed without question, and so we required him to apologise and undertake not to act in such a way again.

30,242. As regards the Irish offices, do you know of the policy of the Government in that respect as laid down in any paper or minute?—(Mr. Beard.) It is laid down in ancient Treasury circulars. Beyond that we have no authority.

30,243. If you are asked for your authority you would base it on certain Treasury circulars that passed?—Yes.

30,244. (Chairman.) And it was raised the other day in Parliament?—It was on that occasion.

30,245. Was your case the occasion?—Yes, our case was the occasion.

30,246. (Mr. Boutwood.) Have you seen the statement from the Surveying and Mapping Department?—(Mr. Bailey.) Yes.

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and [Continued:  
Mr. J. T. DRENNAN, B.L., were in attendance.)

30,247. Will you tell me something about these men. Begin with the surveyors?—There are five Surveyors of Improvements; and they don't really belong to the Surveying Department particularly. They belong to the Inspection Department of the Estates Commissioners. The method in which that department is worked is this—you have first inspectors, highly paid men who do the work of valuing and the rest of it; and then you have assistant inspectors, who, when schemes are prepared for the division of townlands, lay out these schemes and prepare them. The carrying out of these schemes and the doing of the work is entrusted to the Surveyors of Improvements.

30,248. Are these inspectors pensionable?—The higher ones are. There is a certain proportion of them on the permanent staff, and some of them are not.

30,249. Are the two chief inspectors permanent?—Yes.

30,250. And the twenty-one temporary inspectors?—No, they are not.

30,251. And sixteen assistant inspectors?—They are all temporary.

30,252. It is only the two chief inspectors who are permanent?—Yes, the two inspectors, and a certain number of other inspectors whom you will find on the previous page—page 78.

30,253. These Surveyors of Improvements are only temporary?—Yes.

30,254. They were appointed under the Act of 1903?—Yes.

30,255. So that they have not been long in office?—No, only since that time.

30,256. In what sense are they temporary? Is it their work or their status?—Well, their work is temporary, as when we have sold all the land of Ireland, as we hope to do, in a certain number of years, the reason for their employment will cease.

30,257. At page 11 it is stated that their conditions of service are in all respects permanent, and that even when all the land of Ireland is sold you will still require a surveying and mapping staff to deal with the questions of title, registration, etc. That contemplates perpetuity?—That would not require more than four or five to deal with these purposes.

(Chairman.) Of course it must be remembered that when the annuities are paid off either through the Sinking Fund or by lump payment the tenant becomes the owner of his farm and there is no further dealing with him.

30,258. (Mr. Boutwood.) As regards these men, they make two comparisons that convey nothing to my mind because I know nothing of the circumstances. They say that in the Congested Districts this work is carried out by inspectors who are paid at a much higher rate and have much greater prospects of advancement. Is there any comparison?—The Congested Districts Board have a special staff of their own, and they employ a staff of surveyors.

30,259. Inspectors they say?—They really do the same duties. I think the Congested Districts Board men have certain additional duties to perform in addition to the ones that we give to our men. But they have adopted a scheme that will give them a somewhat higher rate of pay. Our maximum is 180*l.*, and I understand that the Congested Districts Board have made theirs 200*l.*

30,260. I don't know how it is, but they show their qualifications, and some of them have all sorts of qualifications—Bachelors of Engineering and so on—and yet they start at 90*l.* a year?—Yes.

30,261. Well, I don't say that that is not right, but I cannot help thinking, and it has struck me once or twice in Ireland, that you seem to have over here a very large number of educated people, people with degrees, who are tumbling over each other's heels for 100*l.* a year?—I am afraid that is true, because when we have one of these posts vacant commencing at 90*l.* a year, we have had a very large number of applications.

30,262. They also seem to want pensionable rights and promotion to the staff of assistant-inspectors. What are the assistant inspectors?—The assistant inspectors are gentlemen appointed at a salary of 500*l.* a year, and they require to have a certain knowledge of

the value of land, and are men who are capable of dividing up estates according to its value from their practical experience of valuations. In two instances we have promoted surveyors to these posts. They happened to be men who had that special knowledge, but the ordinary surveyor would be entirely unsuited for promotion to these posts.

30,263. But they are two different classes of men?—Yes, quite different.

30,264. I see the surveyors put in a paper—a Parliamentary Return, 1912—and comparing that with their own list of qualifications, their own list seems to be chiefly a list of educational qualifications of various sorts. Turning to the inspectors, they seem to be men who in various ways have been practical agriculturists, or otherwise connected with the management of agricultural affairs. So, really, it would be right to infer that the inspectors have a wider and higher range of qualifications?—Oh, undoubtedly. The qualifications of the two classes, although they may appear to approximate on paper, differ very widely. The inspectors are men that have a personal knowledge of farming and working land, and getting an income out of land, from their own experience and training.

30,265. These assistants don't seem to deal with the surveying in its largest sense, but rather with small details?—Yes, the surveying is largely, in many cases, checking the work of other surveyors. The maps are already prepared by outside surveyors, and submitted to us, and we send out our surveyors who check their work.

30,266. What do they mean by this: "The scales of salaries, as at present fixed, bear no proportion to those existing prior to the Act of 1903"?—We had then a very limited surveying staff compared with what we have now. There were two surveyors whose salaries rose to 300*l.*, and they may be referring to those.

30,267. But they were not strictly comparable?—No.

30,268. (Chairman.) In reference to these bachelors in engineering, and so on, is a bachelor's mere pass degree worth much? A degree in honours means something, but is not this a different matter? Is it your experience that it is of much value?—It means that they have passed through the Engineering School and obtained the hall mark of their profession; but it does not necessarily follow that they have much experience.

30,269. On the other hand, there are many of these inspectors who farm from 200 to 400 acres of land, substantial yeoman, who have been doing that sort of work all their lives?—Yes; if you put one of these surveyors out to do valuation he would probably make a regular hash of it.

30,270. Neither would he be able to classify land?—Quite so.

30,271. (Mr. Boutwood.) Tell us something about the field and office examiners, on page 6?—They are men who supervise the work of the draftsmen, and occasionally they may have to go out on the land for the purpose of testing and examining the work.

30,272. A comparison is made by all the parties to this representation between the Irish and English officers. Without going into details, I should like to know what you think on the general topic. Are there not so many differences between England and Ireland, size and social condition, and wealth, and all that, that such a comparison cannot be taken without considerable criticism?—I really think that in some of these things they compare things that are not to be compared. The duties and position are quite different. Some of the men who fill our posts are very competent, and, as it is proved they have benefited by their competence, because, I think, two of them have been promoted to be assistant inspectors at 500*l.* a year. If they are very good men who emerge from the general class they have their chance of getting on.

30,273. So these temporary officers, who are parties to this statement have occasionally passed on to the permanent staff?—Not to the permanent staff, but to the higher staff. The higher is, unfortunately, not pensionable.

27 February 1913.] The Right Hon. W. F. BAILEY, C.B. (Mr. C. T. BEARD, I.S.O., and [Continued.  
Mr. J. T. DRENNAN, B.L., were in attendance.)

30,274. (Mr. Shipley.) You sometimes put up cottages?—Yes.

30,275. What is the average cost?—The cottages are built, I would say, at an average cost of about 160*l.*

30,276. How many rooms?—There are five rooms.

30,277. And a little entrance hall?—Yes. An entrance hall; a large kitchen, which they live in; a room, which they call a parlour, where they give a parish priest, or any outsider who calls, tea; together with two or three bedrooms.

30,278. Is there an outhouse?—It would be an extra 20*l.* or 30*l.* for an outhouse.

30,279. It is a great deal cheaper than we can do it in England?—Yes.

30,280. They last?—Oh, yes. They are quite good. In one estate alone we have built 60 of them, and they are all excellent buildings. These were done very cheaply, because circumstances happened to help and they did not cost more than 120*l.*

Mr. ANSTEAD, Mr. KENT, and Mr. BALL, called and examined.

30,281. (Chairman.) Mr. Anstead, you will speak for the second division clerks?—Yes.

30,282. Tell us what you desire to bring under the notice of the Commission. I have your statement here, and I have gone through it, but I would like to have, in your own words, what you desire to bring to our notice?—The important points which we desire to bring under the notice of the Commission are, first, the high class of duties performed by second division clerks in the Irish Land Commission; second, the fact that we have to deal with a large and varied public; the third point we want to discuss is the preferential treatment accorded to the temporary staff compared to the treatment meted out to the second division staff. We would also like to bring under your notice the disadvantages under which second division clerks in the Irish Land Commission serve as compared with other departments, and lastly we would, if possible, like to explain our first paragraph on page 7 of the statement which you have.

30,283. Take your first point and read it again?—The high class of duties performed by second division clerks in the Irish Land Commission.

30,284. Your office is a second division office?—It has been so since 1904.

30,285. You have no clerks recruited by the Class I. examination?—None.

30,286. Therefore it is a second division office?—Yes.

30,287. You have 96 second division clerks?—That would be correct.

30,288. How many staff posts have you to look forward to?—We have no staff posts to look forward to, but there are five minor staff posts created from the second division, four carrying salaries of 150*l.* to 250*l.*, and one carrying a salary of 200*l.* to 300*l.*

30,289. Am I right in thinking that in addition to your organisation, second division, abstractors, and boy clerks, there is also a classification existing in the Land Commission of first, second, and third class Land Commission clerks?—Yes.

30,290. Now, the third class is no longer being recruited?—Not since 1904.

30,291. They will soon be absorbed, and I have been informed on high authority that the six first class clerkships shown in our return should be regarded by you in the light of staff clerkships, to any of which you might be appointed?—We took that into consideration, but as against that we took into consideration the fact that the last two vacancies in the first class have not been filled. That seems to be the general practice now, not to fill vacancies in the first class Land Commission clerkships.

30,292. Have these two appointments been reduced?—Yes.

30,293. Has an order gone out to reduce them—I did not understand that from the evidence we had from the head of the Department?—We refer to one case in page 6 of our statement, but as to whether there was any order we have no knowledge. Since then another first class clerkship became vacant, but it has not been filled.

30,294. Well, if these six first class clerkships were available, and were recruited from the second division clerks, your complaint, as regards promotion, would *pro tanto* be reduced?—It would, of course.

30,295. And if the whole of the first class clerkships—there are 12 of them—were available for promotion from the second division, your grievances would still further be reduced?—The number of Land Commission

clerks existing then would have to be taken into consideration.

30,296. If that classification were gradually got rid of by the lapse of time, or by retirement, it would be a great alleviation of the complaint which you now make?—It would, but we would like to remark that it appears to be the practice in the Land Commission to fill the larger proportion of higher appointments by introducing men from outside or men from other Departments.

30,297. If it were recognised that when a vacancy occurred, and suitable second class men were available, and would be promoted, would that meet the case? You cannot absolutely deprive the Government of the right of bringing in an outsider, when it is in the opinion of the Government essential to do so. That exists in every organisation?—We don't insinuate anything of the kind. When you said second class did you mean second division?

30,298. I did. What is your next point?—Our next point is that we deal with a large and varied public.

30,299. Do you think more than any other second division?—I think so. That is the general opinion of our office. If you would allow me I would give you an instance of the class of public with which we have to deal. There is what is called a "public office" in every branch of the Department. The callers include solicitors and their clerks, land agents, vendors of estates, and tenant purchasers, mortgagees, ministers of religion of all degrees and denominations, members of Parliament, ladies, etc.

30,300. But still, what is that but your daily routine work. You don't mean to say that your pay should be measured by the civil treatment you mete out to the public?—We are of opinion that for dealing with such a varied public certain qualities are required. You must have judgment and tact, and you also require address.

30,301. How many years have you been there?—I have eight years' service.

30,302. And what pay do you receive?—I received one special increment under clause 33 of the Order in Council, of 10th January, 1910, and my salary is 129*l.* 14*s.*

30,303. What age are you?—I am 26 years of age.

30,304. And you have a clear run before you to 300*l.* a year without any special promotion?—I have to pass the efficiency barrier at 200*l.* It is the practice for the callers to be referred to the clerk in charge of the estate to which their business relates, usually a second division clerk. We have to furnish information, and also to advise the public, including solicitors and their clerks, on matters of procedure.

30,305. That is, if they don't know what to do, you tell them what to do?—Yes.

30,306. With reference to the forms necessary and things of that description?—Yes.

30,307. You do not mean to say you instruct them in the law, in the interpretation of the Act, or anything of that kind?—We instruct the solicitor what to do in a certain case.

30,308. What kind of case would be put before you? Would it be a matter requiring instruction as to procedure?—I can only speak of my own case on this question. A solicitor might inform me that a vendor of an estate had died, and ask what would he do to continue the proceedings. I would find out the tenure under which the late vendor held the estate, and then direct him to bring in the necessary documents which would be required.

30,309. I think that would not be a frequent occurrence at your office?—It is very technical.

27 February 1913.]

MR. ANSTEAD, MR. KENT, and MR. BALL.

[Continued.]

30,310. What is the third point?—The third point is what appears to us to be the preferential treatment accorded to the temporary staff compared to the treatment we receive.

30,311. Give me an instance?—If you look at page 5 of our statement we have set out six instances there, A, B, C, J, K, and L.

30,312. Were these taken from the temporary staff?—A is a permanent official now, but all the remainder are still temporary.

30,313. What appointment did he get?—A is Assistant Secretary to the Estates Commissioners, and entered our office as chief clerk.

30,314. In what year?—In 1904.

30,315. And what was he before he entered your office?—He was chief clerk, I understand, in the Local Registration of Title Office, now the Land Registry.

30,316. Then he was an official of experience?—He had experience in several Government offices as a temporary clerk.

30,317. And he was chosen by the secretary, did you say?—I said he was appointed to our office as chief clerk.
