Jalgaon	94	34,020	3,060	8,663	8,663	1,369	2,027	3,396	12,059	<p><i>Public Works.</i></p> <p>These are mainly metal collection and road construction works. The metal collection works are useful for providing means for famine labour. The road construction works will be useful for communications. The field embankment and terracing works which are included in the programme are very useful and are well suited for famine labour. The rain water which would otherwise run to waste will be held up and allowed to soak in the soil which will be considerably improved in quality.</p> <p><i>Village Works.</i></p> <p>A majority of these are road works which will improve communications. Provision is also made for tank works and silt clearance which will improve water-supply.</p>

Dhulia	129	Talukar figures are not available. Figures are given for the District, works 34,000 ; provisionally relieved 10,800 ; total 60,800.	4,770	11,923	584	...	12,507	5,513	5,513	18,020	Out of the works in the programme of public works 8 are metal collection works, 15 are metal or murrum road constructions and 24 are silt clearance, tank or repairs to tanks works. One is a Tajti crossing and the rest are field embankments, terracing, etc. The new road construction works would be useful for improving communications; metal collection works would give labour in times of famine; silt clearance original tank works and repairs to tanks would improve village water-supply; and irrigation and the field embankment works would improve land for agriculture. Out of the works in the programme of village works about 50 per cent. are works of repairs to tanks and silt clearance which would improve village water-supply. The rest are road repairs and forest works. The latter would be useful for providing congenial labour to the wild tribes of the Sâtpudas.

Junnar	115	14,220	4,320	15,109	626	...	15,735	15,735	The works proposed for this district consist of irrigation tanks, road constructions and improvements and metal collection. The road and tank works will improve irrigation and communications of the district, while the metal collection works are only useful for providing means for famine labour. Provision is also made for independent terracing works, which are useful and are well suited for famine labour. The village works chiefly comprise field embankments and terracing works. If these are carried out rain water, which would otherwise run to waste, will be held up and allowed to soak in the soil, which will be considerably improved in quality.

Two tanks, Páthri and Wadshivna, have been completed and only the canals for them have been included in this programme under small works, but it is probable that these canals will be constructed as ordinary works. The remaining works are improvements to and collecting materials for some of the principal roads in the district and will be useful as aiding future maintenance. A few new roads are also included in the programme. The village works comprise roads, wells, tanks, silt clearance works and the construction of <i>tais</i> for the improvements of fields.

Dhárwár ...	107	321 (Famine of 1896-97.)	1,916	77,856*	550	...	86,438	5,252*	375	...	9,419	95,857	Nearly half of the large works consist of road construction and metal collection only useful for providing famine labour. The rest are repairs to tanks and canals (useful for irrigation and drinking water supply) and terracing and embankment of fields. The small works are chiefly village tanks construction and repairs to village roads and tal works all of a more or less useful nature.
