and Cron Report of the

the Year 1948-49

idia. India House, nized Bookseller

No. RES/P. 111 of 1950.

Poona-1, 22nd October 1950.

From

Dr. B. N. UPPAL, Ph.D., F.N.I., Director of Agriculture, Bombay State, Poona;

То

THE SECRETARY TO GOVERNMENT, Agriculture and Forests Department, Bombay.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay State for the year ending the 31st July 1949.

Yours faithfully,

B. N. UPPAL, Director of Agriculture.

SEASON AND CROP REPORT OF THE STATE OF BOMBAY FO THE YEAR 1948-49.

SEASON AND CROP REPORT OF THE STATE OF BOMBAY (EXCLUSIVE OF MERGED STATES) FOR THE YEAR 1948-49.

CHAPTER I-SEASON.

1. The agricultural season of 1948-49, taking the *kharif* and rabi seasons together, was fairly satisfactory over the greater part of the State, except in Gujarat where scarcity conditions prevailed due to deficient rainfall especially in the northern and western parts of the Division. In Gujarat, the rainfall was not only inadequate but was unevenly distributed in June and the subsequent months, with the result that the *kharif* crops in the districts of Ahmedabad, Kaira and Broach withered away due to lack of adequate moisture in the soil. The rainfall in the second half of November caused the shedding of flowers of cotton in some parts of Gujarat, but these rains were beneficial to other crops and improved the water supply. There was practically no rain after November, and the condition of *rabi* crops was below normal. Scarcity of fodder and drinking water prevailed in parts of the Ahmedabad, Kaira and Broach Districts. In the other Divisions of the State, the monsoon commenced in June as usual, but the precipitation was not adequate in parts of South Decemp precipitation was not adequate in parts of South Deccan and the Karnatak. On the other hand, the rainfall in Khandesh and the Kanara District was particularly heavy. In July, the rainfall was widespread and quite adequate in the Konkan, the northern and western parts of the Deccan and West Karnatak. Else-where, the rainfall was light and scattered, and there was not sufficient moisture in the soil for field operations to be undertaken and for promoting normal growth of seedlings. About the end of July, heavy rainfall was received at some places in the Kanara District causing floods in the rivers. Cultural operations in parts of the East Khandesh District were hampered due to continuous and excessive rains received during the latter part of the month of July. In August, the rainfall was fairly substantial and widespread in the Konkan and West Karnatak, but the precipitation was light to moderate elsewhere. From September to the middle of November, the weather conditions were generally favourable to crop growth and the rains were adequate and well distributed, with the result that the standing kharif crops continued to make good progress and there were good prospects of a large kharif harvest over the greater part of the Deccan, Karnatak and Konkan. These hopes were, however, frustrated due to untimely heavy rains received during the third week of November, causing damage to crops ready for harvest and the harvested crops lying in threshing yards. A severe cyclonic storm was experienced about the same time in the Konkan Division and some places in the Deccan, which caused heavy damage to crops. There were practically no rains during the months of December, January and February, but the standing *rabi* crops were generally in a good condition as a result of the heavy rains received in the month of November. During the year under review, grasshopper attacks were reported from many places on the Godavari and Pravara Canals in

к Bk Q 14--1

•

the Deccan and in the Karnatak and timely control measures were undertaken against this pest. Rust on wheat was reported from places in the Deccan and Karnatak. Blue beetle was reported on paddy in the Dharwar District and karpa pest was found to be doing damage to this crop in the Kanara District.

2. Distribution of rainfall.—Table I (pages 20-21) compares the rainfall during the year under review with the average annual rainfall at each headquarters station in the State. The average rainfall figures for each station were obtained from the India Meteorological Department. The undernoted observations may be made from the study of this table :-

Kharif rains .-- The kharif rains were considerably below the average throughout Gujarat, being about one-third or even less than the average at most of the places in the Division. In the Deccan, these rains were also much below the normal at Nasik and Satara, almost normal at Poona and in the hilly tracts and much above the normal at other places, viz., Ahmednagar, Sholapur and in Khandesh. In the Karnatak, the kharif rains were almost normal at all the stations. In the Konkan, the and in rains were much below the average in the northern pertion, but they exceeded the average in the southern part of this region.

Rabi rains.-The rabi rains were almost normal at Ahmedabad but much below normal at Godhra and in Kaira, in Gujarat and in Khandesh in the Deccan. At other stations in the State, these rains were much above the average, probably due to the cyclonic storm experienced in November, which was accompanied by heavy rains.

Hot weather rains.—There were no hot weather rains in Gujarat, but they were far in excess of the average in the Karnatak and Konkan (except Alibag), being very heavy at Belgaum and Karwar and in the hilly Karnatak tracts. In the Deccan, these rains were light and below normal at Jalgaon, Ahmednagar and Poona, but they were almost normal at Sholapur. At the other stations in the Deccan, viz., Dhulia, Nasik and Satara and in the hilly Deccan tracts, the rains exceeded the normal precipitation.

CHAPTER II-AREA CULTIVATED AND UNCULTIVATED

3. Number of villages.—The total number of villages in the Bombay State remained stationary (i.e. 22,471) during the year under report.

4. Total area and reporting and non-reporting area.-The total area, i.e., the geographical area of the Bombay State and the non-reporting area, i.e., the area for which no returns are received, showed a considerable increase over the corresponding areas in the preceding year. This increase was shared mainly by the Poona and Satara Districts in the Deccan and the Dharwar District in the Karnatak, due to inclusion of some extra-territorial area and survey correction in the Poona District, and inclusion of seven villages belonging to the Ramdurg state in Ron and Nawalgund talukas and Nargund mahal of the Dharwar District. The reporting area, i.e., the area for which statistics are available, on the other hand, showed a decrease below the corresponding area in the preceding year, mostly in the Poona District in the Deccan. This was due to increase in the occupied fallow lands and conversion of these lands into areas for non-agricultural use.

5. Cropped area.—The gross and net cropped areas decreased by 1.4 and 1.8 per cent respectively, as compared with the preceding The decrease was marked in Gujarat due to the famine year, conditions prevailing in that area. The twice cropped area increased by 98,000 acres, or 10.4 per cent, as compared with the preceding year. Gujarat showed a decrease of 54,000 acres, or 25.6 per cent, as compared with last year, but this decline was more than made up by the increase of 73,000 acres, or 13.9 per cent, in the Deccan and 70,000 acres, or 58 per cent, in the Karnatak, as compared with the preceding year. The area under this category remained stationary in the Konkan. The assessed area remained almost the same as last year, but the unassessed area increased by 21,000 acres, or 6.6 per cent, as compared with the preceding year. An area of about 1.6 lakh acres of forest land was given out for temporary cultivation, and of this area, 1,3,,000 acres were in the Decom and 24,000 acres were in the Konkan. About 1.34,000 acres of cultivable waste area or other uncultivable land, excluding current fallows, were also utilised for cultivation. Of this area, 29,000 acres were in Gujarat, 79,000 acres in the Deccan, 9,000 acres in the Karnatak and 17,000 acres in the Konkan. An area of 42,000 acres from "others" was also given out for temporary cultivation. The total area an ler cultivation, including current fallows, was slightly more than the area in the preceding year, the increase being 55,000 acres, or 0.2 per cent.

CHAPTER III-CROPPED AREAS

(Table III, pages 25-33) (Appendices B and C, pages 13-17)

6. Total area under crops and under irrigation.—The total area under crops in the Bombay State showed a decrease of 4,09,000 acres, or 1.4 per cent, below the area in the preceding year. Gujarat showed a decline of 5,75,000 acres due mainly to the failure of rains in that Division, whilst the areas in other Divisions of the State showed slight increases. The total area under irrigated crops decreased by 6,000 acres, or 0.4 per cent, as compared with the preceding year. The decrease was marked in the Deccan Division only, while there were slight increases in the other three Divisions in the State.

7. Foodcrops—Total area.—Among the main foodcrops, the area under rice decreased by 81,000 acres, or 4.0 per cent, below the area in the preceding year. The areas under rice showed slight increases in the Karnatak, Konkan and Deccan, but there was a considerable decline in the area in Gujarat by about 1,05,000 acres, or 25.7 per cent, as compared with the previous year, due to the failure of the *kharif* rains in that Division. The area under wheat decreased by 1,47,000 acres, or 9.3 per cent, as compared with last year, due to the failure of rains over a large part of Gujarat. The area under wheat in Gujarat decreased from 4,72,000 acres in the preceding year to 1,63,000 acres during the year under report. This decrease was partly made up by an increase in area of 1,44,000 acres under wheat in the Karnatak and 17,000 acres in the Deccan. The area under jowar (grain) and bajri was almost the same as in the preceding year. The area under gram decreased by 56,000 acres, or 7.8 per cent, the decrease being almost exclusively in Gujarat, where the area under gram, during the year under report, was 48,000 acres as compared to 1,05,000 acres in the preceding year. The area under gram in the preceding year.

Non-food crops.-The area under cotton increased by 2,15,000 8. acres. or 15.2 per cent, as compared with the preceding year mainly due to the relaxation of the provisions of the Bombay Growth of Food Crops Act. The area under tobacco decreased by 23,000 acres, or 15.5 per cent, as compared with last year. The area under oilseeds decreased by 31,000 acres, or 11 9 per cent, in Gujarat, but this decrease was more than made up by an increase in area of 65,000 acres, or 4.5 per cent, in the Deccan and 39,000 acres, or 5 per cent, in the Karnatak. In the Konkan, the area under oilseeds remained stationary. Among oilseeds, the area under sesamum and castor fell by 40,000 acres, or 22.3 per cent, and 9,000 acres, or 18.8 per cent, respectively, below the area in the previous year. This decrease was, however, more than made up by an increase of 1,02,000 acres, or 6 per cent, under groundnut, with the result that there was a net increase in the area under oilseeds by 2.9 per cent over the previous year.

9. Kharif and rabi areas.—The following table compares the areas under kharif and rabi crops during the year under report with those of the previous two years :—

			1946-47.	·		1947-48.		1948-49.		
Area,	Cere- als &nd millets.		Total cereals, pulses and millets.	Cereals and millets,	Pulses.	Total cereals, puises and millets.	Cereals and millets.	Pulses.	Total cereals pulses and millets	
Kharif	•••	11,283	2,370	18,653	10,007	2,494	12,501	10,184	1,797	11,981
Rabi	•••	7,133	953	8,086	7,851	864	8,715	7,407	1,991	8,728
Total		18,416	3,323	21,739	17,855	3,558	21,216	17,591	3,118	20,709

۰.

(Area	in	thousands	of	acres.)
-------	----	-----------	----	---------

It will be seen from the above table that the *kharif* area, during the year under report, showed a decrease as compared with the preceding two years. The *rabi* area, however, showed a slight increase over the two previous years. The net result of these variations was that the total area decreased by 5,07,000 acres, or 2.4 per cent, and by 10,30,000 acres, or 4.7 per cent, as compared with the respective areas in the preceding two years.

CHAPTER IV-IRRIGATED AREAS

(Tables IV and IV-A, pages 34-38)

(Appendix D, page 18)

10. (a) Irrigated area.—The irrigated area under jowar (grain), bajri, barley and other cercals and pulses increased by 6.0, 40.0, 22.2 and 14.4 per cent, respectively, whilst the irrigated area under rice, wheat, maize, other foodcrops and sugarcane decreased by 8.6, 1.8, 6.5, 12.2 and 11.2 per cent, respectively. Among the non-food crops, irrigated cotton showed a large decline in area, the area during the year under report being 2,000 acres as against 5,000 acres in the previous year, i.e., a decrease of 60 per cent. The area under "other non-food crops", however, showed a slight increase of 4.8 per cent over the area in the preceding year. The net result of these changes was that the total area under irrigated crops was lower by 0.4 per cent during the year under review, as compared with the preceding year.

(b) Area irrigated under different sources of irrigation.—The area irrigated by Government canals, during the year under report, decreased by 44,000 acres, or 12.4 per cent, as compared with last year. The area irrigated by private canals as compared with the preceding year, showed an increase of about 9,000 acres or 14.1 per cent. The area irrigated by wells showed a slight increase of 22,000 acres, or 3.1 per cent, as compared with last year. Tank irrigation, however, fell by about 8,000 acres, or 6 per cent. The area irrigated by other sources of irrigation increased by 8,000 acres, or 23.6 per cent, as compared with the preceding year. The total area irrigated under all sources of irrigation showed a slight decrease of 13,000 acres, or 1 per cent, as compared with last year.

The percentage of irrigated area to the net cropped area was 4.6 during the year under report.

CHAPTER V-OUTTURN OF CROPS

(Table V, pages 39-41, and Table V.A, pages 42-59)

11. Kharif crops.—Among the main foodcrops, the estimated outturn of rice in the different districts of the State ranged from 52 per cent to almost normal, except in the Bijapur District where it was 30 per cent of the normal, and in Gujarat where it varied from 8 to 45 per cent of the normal. The outturn of *jowar* was comparatively better, varying from 50 to 83 per cent• of the normal. As regards

Season and Crop Report

bajri, its yield ranged from 8 to 83 per cent of the normal in Gujarat, 42 to 50 per cent in the Karnatak and 52 to 75 per cent in the Deccan. The yield of tur was comparatively low in Gujarat, ranging from 9 per cent of the normal in the Broach District to 58 per cent of the normal in the Panchmahals District. It was also low in the Karnatak, varying from 42 to 58 per cent of the normal. In the other two Divisions of the State, viz., the Deccan and Konkan, the yield of tur was higher, ranging from 51 to 83 per cent of the normal. The yield of sesamum was between 8 and 42 per cent of the normal in Gujarat and 42 and 50 per cent of the normal in the Karnatak. In the Deccan and Konkan, on the other hand, it varied from 58 to 90 per cent of the normal. The yield of cotton was low in Gujarat and the Karnatak, ranging from 13 to 58 per cent of the normal in the former Division. In the Deccan, it varied from 50 to 75 per cent of the normal. The low yields of crops in Gujarat were due to the failure of rainfall in that area.

12. Ribi crops.—The estimated outturn of wheat was as low as 8 per cent of the normal in the Broach District and ranged from 15 to 63 per cent of the normal in the other districts of Gujarat. It was 25 per cent of the normal in the Bijapur and Belgaum Districts, but it was 67 per cent of the normal in the Dharwar District. In the Deccan districts, the yield of the crop ranged from 48 to 75 per cent of the normal. The yield of rabi jowar varied from 42 to 83 per cent of the normal in the different districts of the State. The outturn of gram varied from 11 to 52 per cent of the normal in Gujarat, 38 to 58 per cent in the Karnatak and 54 to 83 per cent in the Deccan and Koukan. The outfurn of tobacco ranged from 22 to 58 per cent of the normal in Gujarat, 42 to 50 per cent in the Karnatak and 51 to 83 per cent in the Deccan. Among the oilseeds, linseed yielded between 50 and 67 per cent of the normal in the Deccan and 42 and 50 per cent of the normal in the Karnatak and 75 per cent of the normal in the Kanara District in the Konkan, where the acreage under the crop was only 7 acres. In the case of rape and mustard, the yield ranged from 23 to 58 per cent of the normal in Gujarat, 58 to 71 per cent in the Deccan and 50 per cent in the Dharwar District, which is the only district in the Karnatak growing this crop. Sugarcane, which is the perennial crop, practically failed in the Broach district where it yielded only 8 per cent of the normal. Its yield was also low in the Bijapur District, i.e. about 34 per cent of the normal. In the other districts of the State, the outturn varied from 42 to 94 per cent of the normal. The exceptionally low yields of crops in the rabi season in Gujarat were due to the deficiency of soil moisture owing to failure of rains.

13. Cotton.—The total area under cotton in the Bombay State, during the year under review, was 16,31,000 acres, showing an increase of 2,15,000 acres, or 15.2 per cent, as compared with the preceding year. The total outturn of the crop, as estimated by the number of bales of 392 lbs. of lint each, however, decreased

٤.

6

by 52,000 bales, or 19.8 per cent, below the estimated yield in last year. The decrease in the yield of the crop was due to the failure of the crop in a large part of Gujarat. The crop was also poor in parts of East Karnatak. The total area and outturn of cotton in the Bombay State were as under :--

	1	948-49.	1947-48.			
	Area in acres,	Outturn in bales (of 392 lbs. of lint each).	Area in acres.	Outturn in bales (of 392 lbs, of lint each).		
Bombay State	1,631,445	209,184	1,416,526	260,986		

The outturn per cent of the normal shown in Table V of the Report is based on the district anna-valuation of the crop.

CHAPTER VI-PRICES

(Table VI, pages 60-61)

14. The major variations in the average prices, prevailing at harvest time, of the principal commodities, as compared with those of the previous year, are summarised below :--

The average price of rice was higher by about one seer per rupee in Gujarat, a little over one seer per rupee in the Deccan and about four-fifths of a seer per rupee in the Karnatak and the Konkan. The average price of wheat was lower by about one and one-third scers per rupee in Gujarat and about four-fifths of a seer per rupee in the Konkan, but it was almost stationary in the Deccan and Karnatak, although there were some variations in price in the districts of West Khandesh, Ahmednagar, Sholapur and Satara in the Deccan and Bijapur in the Karnatak. As regards jowar, its average price was higher by about one and one-third seers per rupee in Gujarat, a little over one seer per rupee in the Deccan and about three-fourths and four-fifths of a seer per rupee in the Konkan and Karnatak, respectively. The average price of bajri was higher by a seer and quarter per rupee in Gujarat and about two-thirds of a seer per rupee in the Deccan, whilst there was practically no change in the price in the Karnatak and Konkan. Among the pulses, the price of *tur dal* and gram showed slight variations from the prices of these two commodities in the last year. Thus, the average prices of foodgrains and pulses were, on the whole, higher in the year 1948-49, as compared with the preceding year. The average price of gul was higher by one and one-third seers per rupee in the Karnstak and about one-third of a seer per rupee in the Konkan, whilst it was lower by about one-third of a seer per rupee in Gujarat. In the Deccan, the price was almost

stationary. The price of tobacco was practically the same as in last year. The average price of cleaned cotton was higher by about one-fifth of a seer per rupee in Gujarat, but lower by about the same extent in the Deccan and Karnatak.

15. The following table compares the prices of Broach cotton ruling at Bombay during the year under report with those of the previous year and the average of the preceding five years:—

		Priceg	per kh andi o	Variations.		
Variety of	cotton.	Average for five years ending 1947.		seven months e 31st July,	Compared with the average price.	Compared with the price of 1948.
		_	1948.	1949.		1940.
		Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach		519	865	Spot rate		
Jarila	•••	451	638	not fixed. 620	+ 37-5	- 2.8

N.B.—Whilst the prices of "Broach" and "Jarila" given in table for 1948 are for 3/4" staple, those for 1949, i.e., the season under report, are for 25/32" staple.

It will be observed from the table that, although the price of *Jarila* cotton was slightly lower (by 2.8 per cent) than the price in the preceding year, it was considerably higher (by 37.5 per cent) as compared with the quinquennial average of the period ending 1947, due to cotton continuously being in short supply.

In the sub-joined table, the prices of cotton (fine Broach) ruling at Bombay have been given for those months for which these prices were available.

Year and Month. 1948.			Price per kbandi of 784 lbs.	Year an	d Month.		Price per khandi of 784 lbs.

Scason and Crop Report

CHAPTER VII—AGRICULTURAL STOCK

(Table VII, pages 62-65)

(Appendix E, page 19)

16. Agricultural Stock.—Under instructions from the Government of Bombay, the annual census of livestock was held in February, 1949, and the results of this census are given in Table VII.

Appendix E summarises the total number of cattle under each main head during the year under report, compared with the numbers under the respective heads in the preceding year.

Cattle and buffaloes.—The total number of cattle and buffaloes in 1949 was 1,06,43,000 as against 1,02,72,000 in 1948, thus showing an increase of 3.6 per cent.

Bulls and bull-buffaloes for breeding purposes.—The total number of animals under this head decreased by 7,000 during 1949, or 6.4 per cent, below the number in the previous year.

Cows and she-buffalocs for milk production.—The total number of animals under this head showed an increase of 81,000, or 2.8 per cent, as compared with last year.

Young stock.—The number of animals under this head showed an increase of 57,000, or 1.9 per cent, over that of the preceding year.

Sheep and goals.—The total number of sheep increased by 1,33,000, or 6.8 per cent, over that of last year. The number of goats increased by 2,60,000, or 9.8 per cent, over the number recorded in the preceding year.

There was an increase in the number of animals under all categories, except bulls and bull-buffaloes for breeding purposes, due, probably, to the ban on indiscriminate slaughter of animals.

CHAPTER VIII---AGRICULTURAL OUTLOOK.

17. As already stated in Chapter I of the Report, the season was satisfactory over a large part of the State, except in Gujarat where famine conditions prevailed due to failure of rains.

в Bk Q 14—2

9

Division.		Area in the act	ousands of res.	Estimated outturn in thousands of tons.		
			1948-49.	1947-48,	1948.49.	1947-48.

Total, B	ombay State		20,710	21 ,216	3,268	3,719

18. The following table compares the actual acreage sown and the estimated tonnage of foodgrain crops produced in the different Divisions of the State during the years 1948.49 and 1947-48 :---

19. It will be seen from the above table that the area under foodgrain crops in Gujarat decreased to the extent of 5,09,000 acres, or 19 per cent, below the area in the year 1947-48. The decrease in the outturn of foodgrain crops was even greater than that in the area under these crops, being 2,83,000 tons, or over 49 per cent of the outturn in 1947-48. The decrease in the area under and the outtorn of foodgrain crops in Gujarat were due to the extremely unfavourable season experienced in that Division. In the other three Divisions, the acreage under foodgrain crops was practically the same as that in the preceding year.

Owing to the unfavourable conditions of rainfall and other 20.adverse factors resulting in low crop yields, there was a deficiency of food and fodder in some areas of the State, whilst in Gujarat, famine or conditions of acute scarcity prevailed in many places. However, the system of monopoly procurement of foodgrains and their equitable distribution through a well regulated system of rationing, greatly eased the situation in the State. Special measures, such as the opening of fair price shops and rationing shops, afforded considerable relief to the population of the State, which would otherwise have suffered great hardships as a result of scaroity conditions prevailing in many parts of the State. The incidence of insect pests and crop diseases was favoured by cloudy weather which prevailed during the rainy season. Grass-hopper attacks were reported from the Pravara and Godavari Canals in the Deccan and also on jowar crops in the district of Belgaum, Dharwar and Bijapur. Rust on wheat was also reported from some places in the Deccan and the Karnatak. Blue beetle was found to be doing some damage to rice crops in the Dharwar District, and karpa pest in some parts of the Kanara District.

21. The condition of the cattle was generally satisfactory, excepting in Gujarat where, due to the prevalance of famine conditions, scarcity of fodder was experienced in many places, although the opening of grass depots and cattle feeding centres by Government greatly eased the situation. Hamorrhagic senticamia, **1948-4**9]

rinder pest, foot and mouth, black quarter and other animal diseases were reported from Khandesh, Sholapur, Satara, Belgaum. Dharwar and the Konkan Districts during the year under report, but these diseases did not assume epidemic proportions.

22. The following is a statement of prices of agricultural produce prevailing at harvest time during the years 1944-45 to 1948-49 :---

Cotton	Bombay-Broacl	Per Rs. 1 468	Khandi Rs. 530	Rs. 497	R.s. 865	Rs. 620

The centres given in the above table are the most representative markets, and accordingly the prices of agricultural produce in these markets indicate the general tendency in the variation of prices of these commodities in the State.

CHAPTER IX--CONDITION OF AGRICULTURAL POPULATION.

23. During the year under review, the economic condition of the rural population was almost the same as in the previous year, except in Gujarat where the condition of the rural population was less satisfactory due to scarcity conditions prevailing in that area. Shortage of consumers' goods, resulting from low crop yields due to adverse seasonal conditions and speculative and inflationary tendencies of the market, continued to maintain the prices of food and commercial crops at high levels. Despite these handicaps, the price control had a steadying effect on the prices of principal foodgrains and other commodities. The economic condition of the agriculturists, however, remained much the same as the benefits realised by the agriculturists from the high prices of agricultural produce and the concessions granted to them under the "Grow More Food" Campaign were counterbalanced by the continuance of the upward trend of prices, scarcity of agricultural labour and high wages, resulting in increased cost of cultivation. But for the prompt relief measures undertaken by Government in the famine-striken areas of Gujarat, the condition of the rural population there would have greatly deteriorated.

Poona 1.

B. N. UPPAL, Director of Agriculture.
