Bombay, or through the High Commissioner for India, India House,
Aldwych, LONDON, W.C.2, or through any recognised Bookshop

Price—Annas 4 or *fid.*

No. P. III of 1947.

From

**Dr. G. S. CHEEWA, C.T.E.,
Director of Agriculture,
Bombay Province, Poona;**

To

**THE SECRETARY TO GOVERNMENT,
Reconstruction Department,
Botnbav.**

Poona 1, 29th April 1947.

Sir,

**I have the honour to submit herewith the Annual Season and
Report of the Bombay Province for the year ending 31st July 1910.**

I have the honour to be,

Sir,

Your most obedient servant,

**(G. S. CHEEMA),
Director of Agriculture.**

SEASON AND CROP REPORT OF THE PROVINCE OF BOMBAY FOR THE YEAR 1945-46.

CHAPTER-1—CHARACTER OF THE SEASON.

1. The agricultural season of 1945-46, considering the *kharif* and *rabi* seasons together, was rather disappointing. The outstanding feature of the season was that the rainfall received during the year was in general unevenly distributed both as regards periodicity of its fall and area and was characterised by breaks which had an adverse effect on the progress of agricultural operations and crop growth. There was a reduction in acreage under crop* due to unfavourable season and the outturns obtained were also much less than those in the preceding year. The regular monsoon commenced somewhat late in June, when adequate rains were recorded in the Konkan, the southern areas of Gujarat and the western regions of the Deccan and the Karnatak adjoining the Sahyadris, and *kharif* sowings were facilitated and the early-sown crops, where germinated, showed satisfactory progress. Excepting the eastern parts of the south Deccan and the Karnatak, the rainfall in July and August was substantial and widespread and enabled sowing, transplanting and other cultural operations being undertaken on a general scale. The precipitation in the second half of July and in the middle of August proved somewhat excessive in parts of Gujarat where cultural operations were held up and crops were damaged to some extent. The rainfall from the second week of August was opportune over most of the Province and crops and field operations progressed satisfactorily. This rainfall proved useful to some extent in the south eastern tracts of the Province in improving the condition of the crops and accelerated field operation. More rain was, however, needed here as some areas in the south east Deccan were left unsown due to inadequate soil moisture. The rainfall in September was heavy in Gujarat and north Deccan, substantial in Konkan but generally inadequate in the south Deccan and the Karnatak. Towards the end of the month it was markedly excessive in the Gujarat and parts of the north Deccan where field operations were suspended and standing crops particularly those on the river banks and in low lying situations, were damaged to a varying extent. This rain was, however, useful for *rabi* operations in these tracts. In the western parts of the Deccan and the Karnatak *kharif* crops (except paddy) and *rabi* seedlings progressed well, but in the eastern areas crops showed unsatisfactory progress due to inadequate soil moisture and *rabi* sowing operations were restricted to favoured localities only. Rainfall in the early part of October had a beneficial effect on the growth of standing crops especially in the northern areas. Unfortunately, however, the failure of later rains impeded field operations and gave a setback to crop growth. The cold wave in the month of December adversely affected *rabi* crops in the south of the Province while the rainfall in the second week of February proved somewhat untimely in Gujarat and Karnatak and slightly affected the cotton crop in places. The season was thus characterised by irregular rainfall which had the effect of reducing the yields of crops. A large block of the country in the south of the Deccan and almost the whole of the Karnatak had deficient and very badly distributed rainfall almost throughout the season and both *kharif* and *rabi* crops in these areas were poor. Shortage of

food and fodder developed in these tracts and scarcity of water was also felt in some areas. In the south eastern areas of the Deccan and the eastern parts of the Karnatak the situation was so serious that existence of scarcity conditions was declared in some of these parts and Government granted remissions and suspensions and distributed tagai loans on a liberal scale to relieve the distressing situation.

2. *Distribution of rainfall.*—Table I (pages 16-17) compares the rainfall during the year under review with the average annual rainfall at each representative recording station in the Province. The average rainfall figures for each station have been supplied by the India Meteorological Department.

Kharif rains.—The *kharif* rains exceeded the average at all the district head-quarter stations in the Province except at Nasik, Ahmednagar and Sholapur in the Deccan, Bijapur and Dharwar in the Karnatak and Batnagiri in the Konkan where they were below normal.

Rabi rains.—The *rabi* rains were below the average at all the district headquarter stations, they being totally absent at Ahmedabad, Broach and Godhra in Gujarat and Alibag (Kolaba) in the Konkan.

Hot weather rains.—This year these rains were in excess of the average in the south Deccan, the Karnatak and the south Konkan. In Gujarat these rains exceeded normal only at Kaira.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Table II, pages 18-20.)

3. *Number of villages.*—The total number of villages in the Province decreased by 39 from 22,085 in 1944-45 to 22,646 during the year under report. Out of the above, 21 villages in the East Khandesh District were amalgamated with adjoining villages for administrative convenience and 18 unsurveyed non-rayatwari and unsurveyed alienated villages in the same district which were wrongly reported in the previous reports, have been omitted from the current year. Forty seven villages from the Bombay Suburban District were transferred to the Thana District while 3 villages in Panch Mahal District and 2 villages in Eatnagiri District were transferred from surveyed group to unsurveyed group.

4. *Total area and Reporting and Non-reporting area.*—The total area of the Province decreased by 15,910 acres, the decrease being mostly marked in Belgaum district where last year's area was incorrectly reported.

Reporting and Non-reporting area.—The total reporting area increased by 132,725 acres while the non-reporting area decreased by 148,635 acres,

5. *Cropped area.*—The gross and net cropped areas showed a slight decrease of 34 per cent, and 30 per cent, respectively, as compared with the previous year. The decrease is shared practically by all the districts in the Province. The twice cropped area showed a set-back of 163,000 acres or by 16.3 per cent, which is shared by the Deccan, the Karnatak and the Konkan while there was a slight increase of 8,000 acres in Gujarat. The assessed area remained almost the same as last year; while the unassessed area increased by 112 per cent, as compared with the previous year. The increase is shared by all the Divisions in the Province and was due to "Grow More Food" campaign. An area of 141,000 acres of forest land was given

out for temporary cultivation of which 4,000 acres were in the Gujarat, 118,000 acres in the Deccan and about 19,000 acres in the Konkan. About 107,000 acres of cultivable waste or "other uncultivated land excluding current fallows" was also utilised for cultivation. Of this 17,000 acres were in the Gujarat, 67,000 in the Deccan and 18,000 acres in the Konkan. An area of about 80,000 acres from others was also given out for temporary cultivation. The total area under cultivation including current fallows showed an increase of 29,000 acres or 0.1 per cent, as compared with the preceding year.

CHAPTER III—CROPPED AND IRRIGATED AREAS.

(Tables III & IV, pages 22-33.)

(Table IV-A, page 34.)

6. *Total area under crops and irrigation.*—The total area under crops showed a decrease of 1,005,000 acres or 34 per cent, during the year under report as compared with the preceding year, and is partly due to seasonal conditions. The total area under irrigation decreased by 17,000 acres or by 1.4 per cent.

7. *Food crops—(a) Total area.*—Among the main food crops, the total area under rice showed a slight increase of 30,000 acres or 15 per cent, as compared with the previous year, the increase being shared by Gujarat, Deccan and Konkan. The area under wheat and *bajri* showed a large decrease respectively of 325,000 acres or 160 per cent, and 802,000 acres or 170 per cent, as compared with the preceding year, the decrease being shared by all the Divisions in the Province. The total area under gram likewise showed a fall of 117,000 acres or 180 per cent, the decrease being shared by Deccan, Karnatak and the Northern parts of Gujarat. The decrease in the above acreages was chiefly due to unfavourable nature of the season. The area under *jowar* (grain) increased by 737,000 acres or by 9.1 per cent. The increase was occurred mostly in the Deccan and in Ahmedabad District in the Gujarat and may be attributed to "Grow More Food" campaign.

(6) *Irrigated area.*—The irrigated area under *jowar* (grain) and sugarcane increased by 2.7 per cent, and 4.2 per cent., respectively, while the irrigated area under rice, wheat, *bajri*, maize and barley decreased by 1.19 per cent., 3.1 per cent., 1.69 per cent., 63 per cent, and 42.9 per cent., respectively. There was no variation in the irrigated area under cotton during the year under report as compared with the preceding year.

8. *Non-food crops.*—The total area under cotton decreased by 174,000 acres or by 13.0 per cent., as compared with the preceding year mainly due to the enforcement of the "Bombay Growth of Food Crops Act" and unfavourable season. The area under tobacco increased by 47,000 acres or by 28.5 per cent. The increase was almost general and was mainly due to the high prices fetched by the commodity. The total area under oil seeds decreased by 166,000 acres or by 6.5 per cent, and was shared by most of the districts in the Province. Among oil seed", area under groundnut, sesamum, and castor decreased respectively by 10,000 acres, 8,000 acres and 14,000 acres or by 7.1 per cent.; 68 per cent, and 20.8 per cent, respectively, as compared with the preceding year—

Season and Crop Report

9. *Kharif and Rabi Areas*.—The following table compares the areas under kharif and rabi crops during the year under report with those of the preceding two years :—

(Area in thousands of acres.)

Details.	1943-44.			1944-45.			1945-46.		
	Cereals.	Pulses.	Total cereals and pulses.	Cereals.	Pulses.	Total cereals and pulses.	Cereals.	Pulses.	Total cereals and pulses.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif	10,916	2,325	13,241	10,405	2,616	12,921	9,713	2,199	11,912
Rabi	6,822	785	7,557	7,977	904	8,881	8,256	855	9,111
Total ...	17,733	3,060	20,798	18,383	3,420	21,802	17,969	3,051	21,013

Table III-A of Kharif and Rabi Crop.*

It will be seen from the above table that the kharif area during the year under report showed a decrease below that of the last two years while the area under rabi crops showed an increase over the preceding two years. The net results of these variations was that the total area under cereals and pulses decreased by 779,000 acres or 36 per cent, below the areas under these crops during last year, i.e. 1944-45 but slightly increased by 225,000 acres or by 1·1 per cent, over the same during the year 1943-44.

10. *Area irrigated under different sources of irrigation*.—The area irrigated by Government canals decreased by 12,000 acres or 33 per cent, as compared with the preceding year. The decrease was noticeable mainly in the Sholapur, Nasik and Poona districts in the Deccan. Irrigation by private canals and wells increased respectively by 13,000 acres or 22·0 per cent, and by 30,000 acres or 5·0 per cent. Area irrigated by tanks and other sources of irrigation showed a decrease respectively of 38,000 acres or 27·0 per cent, and by 1,000 acres or 22·3 per cent, as compared with the preceding year. The total area irrigated under all sources of irrigation showed a decrease of 17,000 acres or 1·4 per cent, as compared with the preceding year.

The ratio of irrigated area to the net cropped area was 4·3 per cent, during the year under report—

CHAPTER IV—OUTTURN OF CROPS.

(Table V, pages 35-37 and V-A pages 38-55.)

11. *Kharif Crops*.—Among the main food crops, the estimated outturn of rice, *jowar* and *bajri* ranged between 33 and full normal 42 and 75 and 25 and 67 per cent, respectively, of the normal in the Province. Sesamum yielded between 25 and 83 per cent, of the normal. Tur yielded between

5 and 78 per cent., of the normal. The yield of cotton varied from 25 to 75 per cent, of the normal.

12. *Rabi crops*.—The outturn of wheat ranged between 25 and full normal except at Dharwar where it was only 21 per cent, of the normal. The outturn of *rabi jowar* varied from 27 to 81 per cent, of the normal, except at Marwar where it was only 17 per cent, of the normal. The yield of gram was between 25 and 83 per cent, of the normal while that of tobacco ranged between 42 and full normal. Among oil seeds linseed returned between 38 and 75 per cent, of the normal except in Ahmednagar and Dharwar, where it was only 25 per cent, of the normal. In the case of Rape and Mustard the yield varied from 25 to 75 per cent, of the normal. Sugarcane which is perennial crop returned between 50 and 86 per cent, of the normal.

13. *Cotton*.—As regards the actual outturn of cotton, as estimated by the number of bales, it may be stated that considering Bombay Province including Indian States, it showed a decrease of 35,000 bales or 4 per cent, in sympathy with the decrease in area which went down by 152,000 acres or by 68 per cent. as compared with the preceding year. The total area and outturn were as under :—

—	1946.46.		1944-45.	
	Area.	Outturn in bales.	Area.	Outturn in bales.
British Districts	1,165,003	180,652	1,339,492	220,092
Indian States	903,893	153,341	881,437	154,637
Grand Total ...	2,068,896	339,498	2,220,929	374,629

CHAPTER V—PRICES.

(Table VI, pages 56-58)

14. The following remarks indicate the major variations in the average prices prevailing at harvest time, of the principal articles as compared with those of the previous year.

The average price of rice ruled cheaper from about one-fourth of a seer to about three-fifth of a seer per rupee, except in Gujarat where it remained about stationary. The price of wheat was almost stationary in all the Divisions of the Bombay Province. The average price of *jowar* was dearer by about one-third seer and by about one-fourth seer per rupee in the Deccan and the Karnatak, respectively, while it was cheaper by one-half of a seer per rupee in the Konkan, the price being nearly stationary in the Gujarat. The price of *bajri* was cheaper by one-fifth of a seer in the Gujarat and by one-fifth of seer in the Karnatak, while it was almost stationary in the Deccan and the Konkan. The price of *tur-dal* was cheaper by about one-fifth of seer in Gujarat and dearer by about three-fourth of a seer per rupee in the Karnatak, the price being stationary in the remaining two Divisions of the Province. The price of gram ruled dearer from about one-sixth of a seer to about one seer per rupee, except in the Konkan where it ruled cheaper by about one-third of seer per rupee. The price of *nachani* was cheaper by one-fifth of a seer in Gujarat and by about one and three-fifth seer per rupee

in the Karnatak but dearer by one-half of a seer per rupee in the Konkan. Except in the Deccan, where the average price of *gur* was almost stationary, and in the Konkan where it was cheaper by about one-sixth of a seer, the price of the article rose by about four-fifths of a seer and three-fourths of a seer per rupee in the Gujarat and the Karnatak, respectively. The average price of tobacco showed slight variations.

15. The following table compares the prices of Broach Cotton ruling at Bombay during the year under report with those of the previous year and the average of the preceding five years. The price of jarila cotton at Boroba; is being given since 1943 and has also been given this year as prices for Khandesh and Kumta varieties of cotton were not available :—

Variety of cotton.	Prices per khandi of 781 lbs.			Variations.	
Variety of cotton.	Average of five years ending 1944.	Average of seven* months ending 31st July.		Compared with the average price.	Compared with the price of 1945.
		1915.	1946.		
	F.8.	Es.	Ks.	Per cent.	Pet cent.
Broach	346	470	fill.	+ 56.4	+ 15.1
Jarila	Not available	428	112	Not available.	- 31

It will be seen from the above table that the price of Broach cotton showed an improvement over the price of the previous year and also as compared with the average of the preceding five years and was mainly due to good demand for this variety of cotton. The price of jarila cotton was a little cheaper than that of the previous year as the demand for the same was comparatively less. In the subjoined table the prices of Broach cotton ruling at Bombay have been given for those months for which they were available :—

Year and month.	Price per khandi of 734 lbs.	Year and month.	Price per khandi of 734 lbs.
1945.	Be.	1946.	Bt.
August	448	January	...**
September	390	February
October	397	March	526
November			585
December	—	May	547
		June	541
			506

16. The average price per Indian maund of dry grass ruled cheaper by about six annas in Gujarat and eight annas in the Deccan, but ruled dearer by about six annas in the Konkan and by about one rupee and three annas in the Karnatak. The average price per Indian maund of *jowar kadbi* was cheaper by about a rupee in Gujarat but dearer by two rupees and two annas in Deccan and by three rupees and six annas in the Karnatak. The price of rice straw in the Konkan was cheaper by about seven annas per Indian Maund.

CHAPTER VI—AGRICULTURAL STOCK.

(Table VII, pages 59-62.)

17. A special Annual Cattle Census was held in January 1946 and the results of the enumeration are given in detail in Table VII, appended to the Report.

Appendix E summarises the total strength under each main head during the year under review (1945-46) as compared with the last annual census of live stock held in 1943-44.

Variations in the total number of cattle and buffaloes.—The total number of cattle and buffaloes is now returned at 9,808 thousand heads or 62 per cent, over the figure of 1943-44. The increase was shared by the Deccan, the Karnatak and the Konkan.

For breeding purposes (bulls and bull-buffaloes).—This showed a decrease of 13,000 in number or by 155 per cent, as compared with the census of 1943-44. The decrease occurred mainly in the Deccan, northern parts of the Konkan and in the eastern areas in the Karnatak and was mainly due to scarcity conditions and prevalence of cattle diseases.

For Milk production (cows and she buffaloes).—The total number under this head increased by 223,000 or by 85 per cent, as compared with the census of 1943-44. The increase was noticed in all the Divisions in the Province.

Young stock.—The number under this head showed an increase of 332,000 or 129 per cent, over that of 1943-44. The increase was shared by parts of Gujarat and many of the districts in other Divisions in the Province.

Cattle for work and not in use for breeding.—The number under this head showed a slight increase of 30,000 or 08 per cent, over that of 1943-44.

Sheep.—The total number of sheep showed a decline of 98,000 in number or 4.9 per cent, as compared with the last census in the year 1943-44. The decrease was shared mainly by Gujarat and the Deccan and mainly due to greater sales owing to high prices.

Goats.—The number under this head decreased by 254,000 or by 92 per cent, as compared to 1943-44 livestock census. The decrease was noticed in the Gujarat, the Deccan and part of the Karnatak and was due to sales on account of high prices.

**CHAPTERS VII & VIII—CONDITION OF THE
AGRICULTURAL POPULATION.**

18. As already stated in chapter I of the Report, the season under review was not favourable over a large part of the Province. The unsatisfactory nature of the season is reflected in the considerable reduction of both area and estimated outturns of principal crops. The season proved disappointing particularly in the south and the east of the Province where shortage of food and fodder was keenly felt and Government declared existence of "scarcity" conditions in some parts and started relief measures to assist the agriculturists in these areas.

19. Taking the Province as a whole the year under report may be regarded as less satisfactory than the preceding year which in itself was not a satisfactory season. The following tabular statement compares the actual acreage sown and estimated tonnage of food grain crops produced in different Divisions of the Province during the years 1944-45 and 1945-46.

Division.	Area in thousand of acres-		Estimated outturn in thousand of tons.	
	1944-45.	1945-46.	1944-45.	1945-46.
	Acres.	Acres,	Tone.	Tons,
Gujarat ...	3,911	2,961	635	665
North Deccan ...	2,286	4,484	731	769
South Deccan	7,732	7,309	1,034	645
Karnatak ...	5,424	4,838	816	549
Konkan ...	1,449	1,431	537	576
Total, Bombay Province ..	31,802	21,023	3,753	3,204

20. The above table indicates that notwithstanding the vigorous propaganda for increased production of food crops, both by intensive and extensive cultivation, continued under the auspices of the "Grow More Food Crops" Campaign and the application of the "Bombay Growth of Food Crops Act," both the acreage and estimated yield showed a considerable reduction as compared with the previous year mainly due to the unfavourable character of the agricultural season detailed in chapter I of the Report.

21. As a result, the year under report was marked by acute shortage of consumer goods on account of the capricious nature of the rainfall over large tracts of the Province and the consequent poor outturns of the crops. In addition to this, with the end of the War, problems of relaxation of controls and of coping with the legacies of the War in the shape of food shortage, stabilisation of commodity prices, wage adjustments, etc., faced the country. However, the monopoly procurement by Government enabled to mobilize internal resources of the Province while the continuance of price control had the effect of preventing sharp rise in commodity prices and of eliminating black marketing and unhealthy speculations prevalent in the market. Movements of food grains were regulated in a manner that would ensure adequate supplies to consuming centres and the extension of the rationing system aided equitable distribution of food-stuffs and other articles of necessities to the consumers.

22. The following is a statement of prices prevailing at harvest time for agricultural products:—

Prices prevailing at harvest time for agricultural produce in seers of 80 tolas per rupee, except for cotton which are recorded in rupees per khandi of 784 lbs:—

Articles.	Centra,	1941-42.	1942-43.	1943-44.	1944-45.	1945-46.
		Seers.	Seers.	Seers.	Seers.	Seers.
A. Food Crops.						
Jowar	Sholapur	16	8	6	6	6
	Naik	11	6	4	4	4
Rica	Thana	6	4	4	3	3
B. Export Crops.						
Wheat	Ahmedabad	6	2	3	4	4
Groundnut	Kard	11	5	6	4	3
Cotton	Bombay-Broach	161	640	425	463	530

23. The season under report maybe reckoned as a year of readjustment and reconversion in as much as in consequence of the cessation of hostilities, the country has been in a process of emerging from a war time to a peace time settling. Prices of food stuff being controlled, remained almost stationary with the resultant benefit to the agriculturists. The continuance of high levels of prices of food and commercial crops helped the cultivators to meet their increased cost of living and cultivation expenses. Grant of tagai loans on liberal scale and supply of agricultural requirements such as seeds, manures, implements, etc., at concessional rates afforded considerable relief to the ryots. Wages of field and skilled labour rose gradually, partly due to the increased cost of living and partly to the great demand of labour from railways, factories and industrial concerns and this improved the purchasing power of the labour class. This, however, resulted in considerable migration of agricultural population from villages to commercial centres to supplement their income and created a paucity of agricultural labour in the villages.

24. The condition of cattle was generally satisfactory, except in south east Deccan and east Karnatak where scarcity of fodder was keenly felt. The prices of working cattle increased abnormally. Epizotics like Hemorrhagic-septicemia, rinderpest, foot and mouth diseases, black quarter, etc. were prevalent but they did not assume such importance as to interfere with the normal progress of agricultural operations.

G. S. CHEEMA,
Director of Agriculture.

From

Dr. B. N. UPPAL, M.B.E.,
Director of Agriculture,
Bombay Province, Poona;

To

THE SECRETARY TO GOVERNMENT,
Agricultural and Rural Development Department
Bombay.

Poona 1, 8th July 1948.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay Province for the year ending 31st July 1947.

I have the honour to be,

Sir,

Your most obedient servant,

B. N. UPPAL,
Director of Agriculture.

SEASON AND CROP REPORT OF THE PROVINCE OF BOMBAY FOR THE YEAR 1946-47.

CHAPTER I—CHARACTER OF THE SEASON.

1. The agricultural season of 1946-47, taking the *kharif* and *rabi* seasons together, was disappointing over the greater part of the Province but, judged by the cropped area and the outturn of the principal crops, it was slightly better than the preceding one. The rainfall received during the year was more than the normal, but it was unevenly distributed as regards its periodicity. The anton soon showers received throughout the Province facilitated *kharif* tillage, and the timely commencement of the monsoon gave promise of a successful *kharif* season. Excepting the eastern parts of the South Deccan and the Karnatak, the rainfall was satisfactory up to mid-July. The precipitation late in July and over a greater part of August was heavy in parts of Gujarat and in the western regions of the Deccan and the Karnatak, where field operations were hampered and standing crops were damaged particularly in low-lying situations. In the Konkan, the rainfall was satisfactory, but in the south-eastern regions of the Deccan and the East Karnatak, it fell short of normal requirements, leading to retarded crop growth. The rainfall in September and October was fairly substantial over a greater part of the Province and had a beneficial effect on crop growth and facilitated *rabi* field operations. The rainfall in the second half of September, however, slightly damaged standing crops in South Gujarat and caused shedding of grain of early varieties of paddy in parts of the Konkan, whilst heavy precipitation received early in October adversely affected crop growth in parts of the Karnatak. The absence or inadequacy of later rainfall arrested the growth of crops particularly in North Gujarat, the South-east Deccan and the East Karnatak. The rainfall in November was particularly heavy especially in the southern regions of the Province and was accompanied by strong winds, resulting in damage to harvested *kharif* crops and the suspension of field operations. These rains, however, had a beneficial effect on *rabi* crops except those in low-lying situations, and enabled the cultivators to take up sowing on a general scale. The unseasonal rains in the second week of December and in the following months of January and February, accompanied by cloudy dull weather, nullified the early promise of a successful *rabi* season and provided conditions favourable to the development of insect pests and fungus diseases of crops, particularly of rust which appeared in the epiphytotic form all over peninsular India and completely destroyed wheat crops in many districts of the Province.

2. *Distribution of rainfall.*—Table I (pages 1G-17) compares the rainfall during the year under review with the average annual fall of rain at each recording station in the Province. The average rainfall figures for each station were supplied by the India Meteorological Department. The following observations may be made from the study of this table:—

Kharif rains.—The *kharif* rains exceeded the average in all places in the Province, except at Ahmedabad and Godhra in Gujarat, at Nasik in the Deccan, at Bijapur in the Karnatak and at Thana in the Konkan, where these were below normal.

Rabi rain.—The *rabi* rains were in excess of the average at all the district headquarters stations, except at Godhra in Gujarat and Sholapur in the Deccan, where these were below normal.

Hot weather rains.—"With the exception of Jalgaon and Poona in the Deccan and Dharwar and the hilly tracts of the Karnatak, these rains exceeded the normal precipitation.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Table II, pages 18-20)

3. *Number of villages*.—The total number of villages in the Province was 22,592, i.e. a decrease of 54. villages as compared with last year. Of these 54 villages, 39 villages in East Khandesh district and 13 villages in West Khandesh district were amalgamated with adjoining villages for administrative convenience. The difference of two villages is due to the fact that last year the number of villages in Dharwar district was wrongly reported.

4. *Total area and reporting and non-reporting area*.—The total area of the Bombay Province was the same as last year. The total reporting area increased by 778,470 acres*, and the non-reporting area decreased by 778,424 acres-

5. *Cropped areas*.—The gross and net cropped areas increased by 3.5 per cent, and 2.6 per cent, respectively, as compared with the previous year. The increase was shared by all the divisions in the Province, and was specially marked in Gujarat, the Deccan and the Karnatak. The twice cropped area showed a considerable increase from 834,000 acres to 1,088,000 acres or of 30.5 per cent. This increase was shared by the Deccan and Karnatak only, while in the other two divisions, namely, Gujarat and the Konkan, there was a slight decrease in the twice cropped area. The general increase in the cropped area was due to "Grow More Food" Campaign. The assessed area remained almost the same as last year, while the unassessed area increased by 24 per cent, as compared with the previous year. An area of 136,000 acres of forest land was given out for temporary cultivation, of which 110,000 acres were in the Deccan, 22,000 acres in the Konkan and 4,000 acres in Gujarat. About 133,000 acres of cultivable waste or other uncultivable land excluding current fallows, was also utilised for cultivation. Of this area, 94,000 acres were in the Deccan, 22,000 acres in Gujarat and 17,000 acres in the Konkan. An area of 67,000 acres from "others" was also given out for temporary cultivation. The total area under cultivation, including current fallow, showed an increase of 36,000 acres as compared with last year.

CHAPTER III—CROPPED AND IRRIGATED AREAS.

(Tables III & IV, pages 21-33.)

(Appendices B and C, pages 4-13.)

(Table IV-A, page 34.)

(Appendix D, page 14.)

6. *Total area under crops and under irrigation*.—The total area under crops showed an increase of 9,2,000 acres, or 3.5 per cent, over the area in the preceding year. This increase was shared by all the four divisions in the

Province and was mainly due to the timely and adequate rains at the sowing time. The total area under irrigated crops increase by '27,000 acra. or 2'3 per cent, as compared with the preceding year.

7. **Food crops—(a) Total area.**—Among the main food crops, the area under rice increased by 13,000 acres or 0G per cent, as compared with the previous year. This increase was shared by Gujarat, the Deccan and the Konkan, while a decrease of about 10,000 acres was registered in the Karnatak. The area under wheat and *bajri* showed a substantial increase of 2-5,000 acres and 285,000 acres, or 15'1 and 7'3 per cent, respectively, as compared with the preceding year. This increase occurred in the Deccan and the Karnatak, although there was a slight decrease in the area in Grujarat. The area under *jowar* (grain) decreased by 104,000 acres, or 1-2 per cent, as compared with the preceding year, the decrease being marked in Gujarat and the Deccan. The acreage under gram increased by 26*2 per cent, the increase being shared by the Deccan and Karnatak.

{b) **Irrigated area.**—The irrigated area under rice, wheat, *bajri* and barley increased by 17-0, 5-3, 14*8 and 50-0 per cent- respectively, while the irrigated area under *jowar* (grain), mtiixe, other food ciops and other non-food crops decreased by 7-8, 10-0, 4-2 and 3'7 per cent, respectively. There was practically **no** change in the irrigated areas under sugarcane and cotton, during the year under report as compared with the preceding year.

8. **Non-food crops.**—The area under cotton increased by 172,000 acres, or 14'8 per cent, mainly due to the relaxation of the provisions of the Bombay Growth of Food Crops Act, The area under tobacco decreased by 34,000 acres or 18*4 per cent. The area under oilseeds increased by 172,000 acres, or 7'7 per cent, the increase being shared by all the divisions in the Province, Among oilseeds, the are under groundnut, xesamum and castor increased by 100,000 acres, 28,000 acres and 1,500 acres, or by 7'1, 24'6 and 3'9 per cent, respectively, as compared with the previous year.

9. **Kharif and rabi areas**—The following tabie compares the area under *kharif* and *rabi* crops during the year under report with these **of** the preceding two year:—

{Area in thousands of acres).

	19U-45,-			1945-46.			1C46-47.		
	C ereals.	Pulses.	Total cereals and pulses.	Ceri'als.	Pulses.	Total cereals and pulses.	Cereals.	Pulses,	Total eereala and pulsar.
	Acre e.	Acres .	Acres.	Aeres.	Acres.	Acres.	Acres.	Acres.	Acres.
<i>Kha.rU</i>	10,405	2,516	12,921	9,713	2,199	11,912	11.2E3	2,370	13,653
Rabi	7,977	004	8,881	P.256	855	9,111 .	7,133	953	8,036 •
Total ...	1B.362	3,431)	31,603	17,369	3,064	21,023 j	18,416	3,323	21.739

It will be seen from the above table that the *kharif* area, during the year under review, showed a slight increase over last year and a slight decrease as compared with the year 1944-45. The *raft** area showed a slight increase over the preceding two years. The net result of these variations was that the total area under cereals and pulses increased by 716,000 acres, or 34 per cent over the areas under these crops during last year, but decreased by 63,000 acres, or 0.3 per cent, below the areas under these crops in the year

10. *Area irrigated under different sources of irrigation.*—The area irrigated by Government canals increased by 1,000 acres, or 1.3 per cent, as compared with last year, the increase being marked in the Deccan and Karnatak. Irrigation by private canals decreased by 10,000 acres, or 13.9 per cent. Area irrigated by wells and tanks increased by 4,000 acres and 42,000 acres, or 0.5 and 41.2 per cent, respectively, as compared with last year. The area irrigated by other sources of irrigation decreased by 9,000 acres, or 24.3 per cent, as compared with the preceding year. The total area irrigated under all sources of irrigation showed an increase of 247,000 acres or 2.3 per cent, as compared with last year.

The ratio of irrigated area to the net cropped area was 43 per cent, during the year under report.

CHAPTER IV—OUTTURN OF CROPS.

(Table V, pages 35-37 and Table V-A, pages 38-54.)

11. *Kharif crops.*—Among the main food crops, the estimated outturn of rice, jowar and *bajri*, in the different districts of the Province, ranged from 38 per cent, to full normal, 21 to 75 per cent, and 33 to 67 per cent, of the normal, respectively. Sesamum yielded between 31 and 83 per cent, of the normal, while the yield of *tur* was between 33 and 75 per cent, of the normal. The yield of cotton varied from 33 to 67 per cent, of the normal.

12. *Rabi crops.*—The outturn of wheat ranged from 30 to 50 per cent, of the normal in Gujarat, was about 17 per cent, of the normal in North Deccan, and varied from 25 to 48 per cent, of the normal in South Deccan. The crop was almost a total failure in East Khandesh and in the three districts of the **Kai**Datak. The yield of *rabi jowar* varied from 42 to 92 per cent, of the normal, except in Nasik district where it was only 28 per cent, of the normal. The outturn of gram varied from 42 to 53 per cent, and that of tobacco from 50 to 83 per cent, of the normal. Among the oilseeds, linseed yielded between 2 and 67 per cent, except in Dharwar where the yield was 29 per cent, of the normal. In the case of rape and mustard, the yield varied from 50 to 67 per cent, of the normal. Sugarcane, which is a perennial crop, yielded between 50 per cent, of the normal and full normal.

13. *Cotton.*—The total area under cotton in Bombay Province, including the Indian States, during the year under review, was 2,290,000 acres, as against 2,069,000 acres during the preceding year. Thus, there was an increase in area of 221,000 acres, or 10.7 per cent. The total outturn of the crop, as estimated by the number of bales each of 400 **lb.** of lint, also

increased by 60,000 bales, or 177 per cent, over the outturn obtained in last year. The total area and outturn of cotton are as under:—

	1946-47.		1945-46.	
	Area in acres.	Outturn in bales (of 400 lbs. lint each).	Area in acres.	Outturn in bales (of 400 lbs. lint each).
British Districts	1,337,466	219,536	1,105,003	180,852
Indian States	952,742	180,059	903,893	158,841
	2,290,208	399,595	2,068,890	339,493

CHAPTER V—PRICES.

(Table VI, pages 56-57.)

14. The major variations in the average prices prevailing at harvest time of the principal articles at compared with those of the previous year, are indicated below.

The average price of rice was higher by about one-fifth of a seer to three-fifths of a seer per rupee, except in Gujarat where it remained stationary. The average price of wheat was higher by about one-fourth of a seer per rupee in Gujarat and one-sixth of a seer per rupee in the Deccan, while in the remaining two divisions of the Province, the price was almost stationary. The average price of *joxoar* ruled lower by about two-fifths of a seer per rupee in the Karnatak and about one-third of a seer per rupee in the Konkan, while it showed no variation in the remaining two divisions. The average price of *bajri* was almost the same as in the previous year. The average prices of *tur dal* and gram were higher by about two-fifths of a seer to three-fourths of a seer per rupee, except in the Konkan where the prices showed slight variations. The average price of *nachni* rose by one-fourth of a seer per rupee in Gujarat, by two fifths of a seer per rupee in the Konkan and by as much as two and one-fifth seers per rupee in the Karnatak. The average price of *gul* was higher by about one-fifth of a seer to three-fourths of a seer per rupee in the different districts of the Province. The price of tobacco was higher by about one-third of a seer per rupee in Gujarat and by two-fifths of a seer per rupee in the Konkan, while it was practically the same as in last year in the remaining two divisions.

15. THE FOLLOWING TABLE COMPARES THE PRICES OF BROACH COTTON RULING AT BOMBAY, DURING THE YEAR UNDER REPORT, WITH THESE OF THE PREVIOUS YEAR AND THE AVERAGE OF THE PRECEDING FIVE YEARS. THE PRICE OF *Jarila* COTTON AT BOMBAY WAS GIVEN SINCE 1943 AND LIAS BSEN GIVEN ALSO THIS YEAR AS PRICES OF KHANDESH AND KUMTA VARIETIES OF COTTON (FOR WHICH PRICES WERE QUOTED IN PREVIOUS YEARS) WERE NOT AVAILABLE.

Variety of cotton.	Prices per khandi of 784 lbs.			Variations.	
Variety of cotton.	Average of five years ending 1945.	Average of seven months ending 31st July.		Compared with the average price.	Compared with the price of 1946.

THE COTTON PRICES REMAINED DEPRESSED OWING TO GOVERNMENT'S EXPERT POLICY AND CONSEQUENT ACCUMULATION OF STOCKS COUPLED WITH THE LOWER MILL CONSUMPTION. IN THE SUB-JOINED TABLE, THE PRICES OF BROACH COTTON RULING AT BOMBAY HAVE BEEN GIVEN FOR THESE MONTHS FOR WHICH THEY WERE AVAILABLE.

Year and Month.	Price per khandi of 784 lbs.	Year and Month.	Price per khandi of 784 lbs.
<i>1946.</i>	Es.	<i>mr.</i>	Bs.
August	536	January	
September	521	February	502
October	524	March	501
November		April	497
December		June	506
		July	511

The average price of dry grass increased by six annas per maund in Gujarat and by about one rupee and four annas in the Deccan, but in the Karnatak and the Konkan it ruled cheaper by two annas and three annas per maund, respectively. The average price of *jowar kadbi* was higher by about one rupee and fourteen annas per maund in the Deccan, but it was almost stationary in the Karnatak. The average price of rice-straw in the Konkan rose by about two annas per maund.

CHAPTER VI—AGRICULTURAL STOCK.

(Table VII, pages 58-61.)

(Appendix E, pages 15.)

16. *Agricultural Stock*.—Under instructions from the Government of Bombay, a special census of livestock was held in January, 1947, and the result is given in Table VII.

Appendix E summarises the total number of cattle under each main heading during the year under report, compared with the strength under the corresponding heads in the previous year.

Variations in the total number of cattle and buffaloes.—The total number of cattle and buffaloes in 1947 was 10,065,000 as against 9,808,000 in 1946, thus showing an increase of about 26 per cent.

For breeding purposes (bulls and bull buffaloes).—The total number under this head increased by 28,000 during 1947, or by 39·1 per cent, as compared with the number in 1945-46.

For milk production (cows and she-buffaloes).—The number under this heading showed an increase of 59,000 or 2 per cent, as compared with the figures of last year.

Young stock.—The number under this head also increased by 37,000, or 1·3 per cent.

Sheep and Goats.—The total number of sheep and goats, taken together, showed an increase of 76,000, or 1·7 per cent, as compared with the figures in the previous year. But when these two heads are compared separately, the sheep show an increase of as much as 150,000, or 8 per cent, as compared with the previous year, while goats show a decline of 74,000 or 30 per cent. This may partly be due to a greater incidence of cattle diseases during the year and the slaughter of a larger number of goats for mutton. There was an increase in the number of all categories of animals in general.

CHAPTER VII AND VIII—CONDITION OF AGRICULTURAL POPULATION.

17. As already stated in Chapter I of the report, the season was unsatisfactory over the greater part of the Province but, judged by the cropped area and the outturn of the principal crops, it was slightly better than the preceding one.

18. The following table compares the actual acreage sown and the estimated tonnage of foodgrain crops produced in the different Divisions of the Province during the year 1946-47 and 1945-46

	Area in thousands of acres.		Estimated outturn in thousands of tons.	
	1946-47.	1945-46.	1946-47.	1945-46.
Gujarat	Acres. 2,873	Acres. 2,961	Tons. 635	Tool. 665
North Deccan	4,493	4,484	638	769
South Deccan	7,586	7,309	885	645
Karnat	5,352	4,838	593	549
Konkan	1,436	1,431	545	576
Total, Bombay Province	21,739	21,023	3,296	3,204

19. It will be seen from the above table that, due to timely rains at the beginning of the season and the vigorous propaganda in connection with "Grow More Food" Campaign, the provincial acreage showed a slight improvement over the previous year.

20. Owing to the unfavourable conditions of rainfall and other adverse factors resulting in low crop yields, there was a deficiency of food and fodder in some areas. However, the system of monopoly procurement of foodgrains and their equitable distribution through a well regulated system of rationing greatly eased the situation in the Province. The cattle feeds, such as oil-cakes, cotton seed, etc., were also in short supply owing to the difficulties of transport and low production of these materials. The incidence of insects pests and diseases of crops was favoured by the abnormal weather conditions prevailing in the *rabi* season. The *kharif* crops were damaged by the late rains received at harvest time, resulting in the shortage of seed for the succeeding year.

21. The condition of the cattle was generally satisfactory. Haemorrhagic septicaemia, rinderpest, foot and mouth and other animal diseases prevailed as usual, but did not assume such proportions as seriously to interfere with the normal progress of agricultural operations. The prices of working cattle increased and the position regarding the supply of good cattle was very precarious in Broach district owing to heavy mortality in the cattle.

22. The following is a statement of prices of agricultural produce prevailing at harvest time :—

Prices prevailing at harvest time of agricultural produce in seers of HO tolas per rupee, except for cotton, which are recorded in rupees per khandi of 184 lbs.

Articles.	Centre.	1943-43.	1943-44.	1944-45.	1945-46.	1946-47.
A. Food crops.		Seers.	Seers.	Seers.	Seers.	Seers.

B. Export crops.	I					
Wheat	... Ahmedabad	2	3	i	4	3
Groundnut	J Kairad	5	6	4	3	
Cotton	..Bombay-Broach	640	425	468	530	497

23. The economic conditions of the agricultural population was on the whole satisfactory as the growers realised better prices for food crops. Shortage of consumers' goods resulting from low crop yields owing to the adverse weather conditions and speculative tendencies maintained the prices of food and commercial crop at a high level. Despite these unfavourable factors, the continuance of price control had a steadying effect on the prices of principal foodgrains and other commodities. Wages of skilled and agricultural labour exhibited an upward tendency as the latter found employment in industrial and Government works. The increase in agricultural wages and scarcity of labour resulted in higher costs of cultivation and, in order to mitigate the condition of the agriculturists, Government undertook the distribution of seeds of improved varieties of crops among the cultivators at concessional rates, and advanced *tagavi* loans to the cultivators for financing agricultural operations and for effecting improvements on their holdings, such as the construction of new wells and repairs to old ones-

24. The conditions described above represent the features of an economy during the period of transition from war to peace. The economic condition of the agriculturists remained much the same and, although the realisation of better prices for food crops and the concessions under "Grow More Food" Campaign afforded some relief to the growers, the continuance of the upward trend of prices, scarcity of labour and high wages resulted in increased cost of cultivation and thus nullified the benefits obtained by the agriculturists from the high prices of agricultural produce.

B. N. UPPAL,
Director of Agriculture.

Season and Crop Report of the
Bombay State

For the Year 1947-48

BOMBAY

PRINTED AT THE GOVERNMENT PRESS, BOMBAY

Obtainable from the Superintendent, Government Printing and Stationery,
Bombay, or through the High Commissioner for India, India House,
Aldwych, London, W.C. 2, or through any recognized Bookseller.

Price—Rs. 10 or 2s. 9d.

1950

No. RES/P. 111 of 1949.

Poona-1, 27th April 1949.

From

Dr. B. N. UPPAL, Ph.D., F.N.I.,
Director of Agriculture,
Bombay State, Poona;

To

THE SECRETARY TO GOVERNMENT,
Agriculture and Forests Department,
Bombay.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay State for the year ending the 31st July 1948.

Yours faithfully,

B. N. UPPAL,
Director of Agriculture.

SEASON AND CROP REPORT OF THE STATE OF BOMBAY FOR

SEASON AND CROP REPORT OF THE STATE OF BOMBAY FOR THE YEAR 1947-48.

CHAPTER I—SEASON.

The agricultural season of 1947-48, taking the *kharif* and *rabi* seasons together, was fairly satisfactory over the greater part of the State and, judged by the total outturn of the principal crops, it was somewhat better than the preceding one. The ante-monsoon showers were received in adequate quantities, but were experienced only in the southern areas of the State. These rains facilitated *kharif* tillage and the sowing of paddy crops in parts of Southern Konkan and West Karnatak. The monsoon commenced later than usual, and the precipitation was not adequate in July and the first half of August, especially in the northern areas of the State, where the sowing operations were delayed and the germination of the crops was unsatisfactory. In the Konkan and the southern areas of the State, however, field operations were carried out in time and the condition of the young crops was satisfactory. The rainfall in the second half of August and in September was satisfactory throughout the State and had a beneficial effect on the growth of crops and facilitated *rabi* field operations. There was practically no rain during the month of October, and accordingly, the crops sown in lighter soils in East Karnatak showed signs of withering and *rabi* field operations were hampered. Paddy crops in some parts of North Gujarat and young *rabi* crops in some regions of the South Deccan also suffered from lack of moisture in the soil. Elsewhere, the standing crops were in a fairly satisfactory condition. The rainfall received in the months of November and December was light and was almost confined to the southern parts of the State. In the last week of November, local rain, accompanied by hailstorm, was experienced in some places of Ahmedabad District and slightly damaged standing and harvested crops. Much of the wheat area in East Karnatak remained unsown as a result of the inadequacy of late rains in the months of November and December, whilst crops grown in lighter soils in the Deccan and the Karnatak were stunted in growth. Cotton crops were also adversely affected in some parts of North Deccan. Untimely rainfall received in the third week of January damaged standing and harvested crops in the Deccan and the Karnatak, whilst cloudy weather conditions prevailing at that time proved very favourable to the development and spread of insect pests and plant diseases of crops in many parts of the State. There was practically no rain after the end of January. The standing crops were reported to be doing fairly well, except in some parts of East Karnatak where, as a result of inadequate rains,

signs of scarcity conditions had begun to appear. During the year under review, grasshoppers were reported from parts of Gujarat, on the Godavari and Pravara Canals in the Deccan and some regions of the Karnatak. Black rust appeared on wheat crops in Gujarat, the Deccan and the Karnatak, whilst paddy crops were affected by *karpa* pest in some parts of the Ratnagiri and Kolaba Districts, and by *Jeanne* peat in parts of the Kanara District.

2. *Distribution of rainfall.*—Table I (pages 18-19) compares the rainfall, during the year under report, with the average annual rainfall at each recording station in the State. The average rainfall figures for each station were obtained from the India Meteorological Department. The following observations may be made from the study of this table

Kharif rains.—The *Tcharif* rains exceeded the average at Broach in Gujarat, at Dbuh'a, Ahmednagar, Sholapur, Satara and the hilly tracts in the Deccan, at Dharwar in the Karnatak and at Ratnagiri and Karwar in the Konkan, but these rains were either normal or below normal at other stations.

Rabi rains.—The *rabi* rains were below normal at all the district headquarters stations, except at Ahmedabad and Kaira in Gujarat and at Aii bag in the Konkan, where these were in excess of the average, and at Dhulia in the Deccan and at Dharwar in the Karnatak, where these were almost normal.

Hot weather rains.—There was no rainfall at any of the stations in Gujarat and in the districts of Nasik, Thana and Kolaba. However, these rains were below normal at all places in the State, except at Dharwar and the hilly tracts in the Karnatak, where these exceeded the normal precipitation.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED

(Table II, pages 20-22)

3. *Number of villages.*—The total number of villages in the State was 22,471, i.e., a decrease of 111 villages as compared with last year. Forty-six villages in the West Khandesh District and 76 villages in the East Khandesh District were amalgamated with the adjoining villages for administrative convenience, whilst there was an increase of one village in the Kaira District due to the inclusion of one village in that district from the adjoining State area,

4. *Total area a->d reporting and non-reporting area.*—The total area of the State was the same as last year. The variations in the reporting and non-reporting areas are so small that they do not need any comments.

5. *Cropped areas.*—“While the gross cropped area remained stationary, the net cropped area decreased by 45,000 acres, or 3·2 per cent as compared with the preceding year. The twice cropped area showed a decrease of 145,000 acres, or 60 per cent as compared with last year, due to deficiency or absence of late rains. This decrease was confined to Gujarat and the Deccan. The assessed area remained almost the same as last year, but the unassessed area showed a decrease of 19,000 acres, or 6·0 per cent as compared with last year. An area of 1·29,000 acres of forest land was given out for temporary cultivation, of which 107,000 acres were in the Deccan and 22,000 acres in the Konkan. About 131,000 acres of the cultivable waste or other uncultivable land, excluding current fallows, was also utilised for cultivation. Of this area, 96,000 acres were in the Deccan, 22,000 acres in Gujarat and 18,000 acres in the Konkan. An area of 51,000 acres from “others” was also given out for temporary cultivation, and of this area, 34,000 acres were in the Deccan, 15,000 acres in the Karnatak and 1,000 acres in Gujarat and the Konkan each. The total area under cultivation, including current fallows, was almost the same as during the previous year.

CHAPTER III—CROPPED AND IRRIGATED AREAS.

(Tables III & IV, pages 23-35)

(Appendices B and C, pages 12-15)

(Table IV-A, page 36)

(Appendix D, page 16)

6. *Total area under crops and under irrigation.*—The total area under crops showed a decrease of 190,000 acres, or 0·6 per cent as compared with last year. The total area under irrigated crops increased by 81,000 acres, or 5·8 per cent as compared with the preceding year.

7. *Food crops—(a) Total area.*—Among the main foodcrops, the area under rice decreased by 75,000 acres, or 3·6 per cent as compared with the previous year. This decrease in the area was registered mainly in Gujarat. The area under wheat decreased by 384,000 acres, or 19·5 per cent as compared with last year. The decrease was shared by all the three wheat-growing areas of the State, viz., Gujarat, the Deccan and the Karnatak. The area under *joicar* (grain) and *bajri* remained almost the same as in the previous year. The acreage under gram increased by 45,000 acres, or 6·7 per cent as compared with the preceding year. The area under gram in the Karnatak and the Deccan increased by 39,000 acres and 15,000 acres respectively, whilst a decrease of 9,000 acres was registered in Gujarat.

(b) Irrigated area.—The irrigated area under wheat, *jowar* (grain), maize and barley increased by 11'0, 5'7, 149 and 50'0 per cent respectively, while the irrigated area under rice and *bajri* decreased by 11'6 and 11'3 per cent respectively, as compared with the preceding year. The area under sugarcane increased by 29'8 per cent, whilst the area under irrigated cotton increased by 5,000 acres as compared to 1,000 acres in the previous year.

8. *Non-food crops.*—The area under cotton increased by 30,000 acres, or 6'0 per cent as compared with the preceding year, mainly due to relaxation of the provisions of the Bombay Growth of Food Crops Act. The area under tobacco showed a slight decrease of about 2'0 per cent. Among the oilseeds, the area under groundnut, sesamum and castor increased by 187,000, 38,000 and 10,000 acres, or by 123, 26'2 and 24'5 per cent respectively, as compared with the previous year.

9. *Kharif and rabi areas.*—The following table compares the areas under *kharif* and *rabi* crops, during the year under report, with those of the preceding two years :—

(Area in thousands of acres).

	1945-16.			1946-47.			1947-48.		
	Cereals.	Pulses.	Total cereals and pulses.	Cereals.	Pulasa.	Total cereals and pulses.	Cereals.	Pulses.	Total cereals and pulses.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif	9,713	2,199	11,912	11,883	2,370	13,653	10,007	3,191	12,501
rabi	8,255	855	9,111	7,133	953	8,086	7,851	664	8,715
Total ...	17,969	3,054	21,023	18,416	3,323	31,739	17,859	3,353	31,216

It will be observed from the above table that the *kharif* area, during the year under review, showed a slight decrease as compared with the year 1945-46 and a slight increase over last year. The *rabi* area, on the other hand, showed a slight increase over last year and a slight decrease as compared with the year 1945-46. The net result of these variations was that the total area under cereals and pulses decreased by 523,000 acres, or 2'4 per cent below the areas under these crops during the last year, but increased by 193,000 acres, or 0'9 per cent over the areas under these crops in the year 1945-46.

10. *Area irrigated under different sources of irrigation.*—The area irrigated by Government canals increased by 1,000 acres, or 0'3 per cent as compared with last year. Irrigation by private

canals increased by 2,000 acres, or 3.2 per cent. This increase in area was registered mainly in the Deccan. The area irrigated by wells increased by 77,000 acres, or 12.2 per cent and this increase was shared by all the divisions in the State. The area irrigated by tanks, on the other hand, showed a decrease of 6.9 per cent as compared with the preceding year. The area irrigated by other sources of irrigation was almost the same as in the previous year. The total area irrigated under all sources of irrigation showed an increase of 70,000 acres, or 5.7 per cent as compared with last year.

The ratio of irrigated area to the net cropped area was 4.3 per cent during the year under report.

CHAPTER IV—OUTTURN OF CROPS

(Table V, pages 37-39, and Table V-A, pages 40-56)

11. *Kharif crops*.—Among the main foodcrops, the estimated outturn of rice, *jowar* and *bajri*, in the different districts of the State, ranged from 34 per cent to full normal, 50 to 83 per cent and 42 to 83 per cent of the normal, respectively. The yield of *jur* was between 38 and 90 per cent of the normal, whilst that of *sesamum* was between 48 and 92 per cent of the normal. The yield of cotton varied from 33 to 75 per cent of the normal.

12. *Rabi crops*.—The outturn of wheat ranged from 43 to 67 per cent of the normal in Gujarat, from 45 to 82 per cent of the normal in the Deccan and from 33 to 42 per cent of the normal in the Karnatak. The yield of *rabi jowar* varied from 50 to 83 per cent of the normal. The outturn of gram ranged from 50 to 83 per cent and that of tobacco from 50 to 75 per cent of the normal. Among the oilseeds, linseed yielded between 42 and 67 per cent and rape and mustard between 50 and 67 per cent of the normal. Sugarcane, which is a perennial crop, yielded between 50 and 80 per cent of the normal.

13. *Cotton*.—The total area under cotton in the Bombay State, during the year under review, was 1,416,500 acres, as against 1,337,500 acres during the preceding year. Accordingly, there was an increase in area of 79,000 acres, or 5.9 per cent. The total outturn of the crop, as estimated by the number of bales of 392 lbs. of lint each, also increased by 27,000 bales, or 165 per cent over the estimated outturn in last year. The

total area and outturn of cotton in Bombay State were a* under:—

1947-48.		1946-47.	
Area in acrtsB.	Outturn in bales (of 492 lbs. lint each).	Area in acres.	Outturn in bales (of 392 lbs. lint each).
1,416,526	260,986	1,337,466	224,010

CHAPTER V—PRICES.

(Table VI, pages 67-59)

14. The major variations in the average prices prevailing, at harvest time, of the principal commodities as compared with those of the previous year, are summarised below.

The average price of rice was higher by about one-fifth of a seer to two-fifths of a seer per rupee, except in Gujarat where it remained stationary. The average price of wheat was higher by one to about two seers per rupee in the different divisions of the State. As regards *jowar*, its average price was higher by about one-sixth of a seer per rupee in Gujarat, and about three-fourths of a seer to one and one-quarter seers per rupee in the other divisions of the State. The average price of *bajri* was higher by about two-thirds of a seer in Gujarat and by about one seer and one and one-half seers per rupee in the Deccan and the Karnatak, respectively. The average price of *nacliani* was higher by as much as about two seers per rupee in the Konkan, but it was higher by only about one-fifth of a seer per rupee in Gujarat. The average price of *tur dal* was higher by about one-third of a seer to about four-fifths of a seer per rupee and that of gram by about one-sixth of a seer to about four-fifths of a seer per rupee in the different parts of the State. Thus, the average prices of food-grains and pulses were higher in the year 1947-48 as compared with the preceding year. The average price of *gul* was almost the same as in the previous year in Gujarat, but it was lower by about half a seer per rupee in the Deccan and the Konkan and by about one and one-third seers per rupee in the Karnatak. The price of tobacco was practically the same as in last year in all parts of the State.

The average price of cleaned cotton was higher by about one-sixth of a seer per rupee in the Karnatak and by about one-half seer per rupee in the Deccan and Gujarat. The price of dried grass was higher by five annas and three annas per maund, respectively, in Gujarat and the Deccan and by about eleven annas per maund in the Karnatak and the Konkan. The average price of *jowar kadbi* was higher by about five annas and seven annas per maund in Gujarat and the Deccan, respectively, but it was lower

by one rupee and two annas per maund in the Karnatak and by about two annas per maund in the Konkan.

15. The following table compares the prices of Broach cotton ruling at Bombay, during the year under review, with those of the previous year and the average of the preceding five years. The price of *Jarila* cotton at Bombay was given since 1943 and has been given also this year as prices of Khandesh and Kuinta varieties of cotton (for which prices were quoted in the previous years) were not available :—

Variety of cotton.	Prices per Khandi of 781 lbs.		Variations.		
	Average of five years ending 1946.	Average of seven months ending the 31st July		Compare with the average price.	(Compare with the price of 1947.
		1947.	1948.		
Broach	Ba 454	Ra, 500	Rs. 865	Per cent. + 90.5	Per cent. + 09.9
Jarila	Not available	430	633	Not available	+ 40.3

During the year under review, the cotton prices remained depressed in the beginning but recovered later on due to the policy of the Government of India for export of cotton varieties of staple lengths below 13/16", and the higher consumption of cotton by the mills. In the sub-joined table, the prices of Broach cotton ruling at Bombay have been given for those months for which these prices were available.

Year and Month.	Price per Khandi of 784 lbs.	Year and Month.	Price per Khandi of 784 lbs.

October	540	March	Do.
November	Not fixed.	April	Do.
December	Do.	May	904
...		June	867
		July	823

CHAPTER VI—AGRICULTURAL STOCK.

{Table VII, pages 60-63}

(Appendix E, page 17)

16- *Agricultural Stock.*—Under instructions from the Government of Bombay, a special census of livestock was held in January, 1948, and the results of the census are given in Table VII.

Appendix E summarises the total number of cattle under each main head during the year under report, compared with the numbers under the different heads in the preceding year. It will be observed that there is a slight increase in the number of livestock under each head in the year under review, as compared with last year.

Variations in the total number of cattle and buffaloes.—The total number of cattle and buffaloes in 1948 was 10,273,000 as against 10,065,000 in 1947, thus showing an increase of about 2 per cent.

Bulls and bull-buffaloes for breeding purposes.—The total number of animals under this head increased by 11,000, or 121 per cent., as compared with the figures recorded in 1947. The increase was registered mainly in Gujarat and the Konkan.

Cows and she-buffaloes for milk production.—The total number of animals under this head showed a decrease of 41,766, or 1.4 per cent, as compared with the figures of last year.

Young stock.—The number of animals under this head increased by 63,000, or 2.1 per cent, over that of the preceding year.

Sheep and Goats.—The total number of sheep and goats, taken together, showed an increase of 1,30,000, or 2.9 per cent., as compared with the previous year, due to the import of goats from other States and the imposition of restrictions on the slaughter of these animals.

CHAPTERS VII AND VIII—CONDITION OF AGRICULTURAL POPULATION.

17. As already stated in Chapter I of the report, the season was fairly satisfactory over the greater part of the State and, judged by the total outturn of the principal crops, it was also somewhat better than the preceding one.

18. The following table compares the actual acreage sown and the estimated quantities of foodgrains produced in the different Divisions of the State during the years 1947-48 and 1946-47

Division.	Area in thousands of acres.		Estimated outturn in thousands of tons.	
	1947-18.	1946-47.	1947-48.	1946-47.
	Acres.	Aores.	Tons.	TOOB.
Gujarat	2,661	2,872	587	630
North Deccan	4,316	4,493	782	638
South Deccan	7,600	7,586	989	885
Karnatak	5,207	5,352	807	613
Konkan	1,432	1,436	554	515
Total, Bombay Stat* ..	21,248	21,739	3,719	3,317

It will be seen from the above table that, although the area sown under foodgrain crops was slightly less than in the previous year, the total production of these crops was higher by over 12 per cent., thus indicating that the season during the year under report was comparatively favourable.

19. Owing to the inadequacy of rainfall received late in the season and the severe infection of wheat crops by rust in all the wheat-growing areas of the State, there was a deficiency of food and fodder in some areas, however, the system of monopoly procurement of foodgrains and their equitable distribution through a well-regulated system of rationing greatly eased the situation in the State. The untimely rains received in the third week of January and the cloudy weather conditions prevailing during that month proved very favourable to the development and spread of insect pests and plant diseases of crops. These weather conditions increased the incidence of wheat rust, which was reported from all the wheat-growing areas of the State.

20. The condition of the cattle was generally satisfactory. Haemorrhagic Septicaemia, rinderpest, foot and mouth and other animal diseases prevailed as usual, but did not assume such proportions as seriously to interfere with the normal progress of agricultural operations-

21. The following is a statement of prices of agricultural produce prevailing at harvest time ;—

Prices, prevailing at harvest time of agricultural produce, in seers of 100 tolas per rupee, except for cotton, which are recorded in rupees per Khandi of 784 lbs.

		Per Khandi				
		E.	*s.	Rs.	Bi.	Rs.
Cotton	Bombay-Broach	425	468	530	497	865

22. During the year under review, the agricultural condition of the rural population was generally satisfactory. Shortage of consumers' goods resulting from low crop yields due to adverse seasonal conditions and speculative and inflationary tendencies of the market, continued to maintain the prices of food and commercial crops at high levels. Despite these handicaps, the price control had a steadying effect on the prices of principal foodgrains and other commodities. The economic condition of the agriculturists, however, remained much the same as the benefits realised by the agriculturists from the high prices of agricultural produce and the concessions granted to them under the "Grow More Food" Campaign were nullified by the continuance of the upward trend of prices, scarcity of agricultural labour and high wages, resulting in increased cost of cultivation.

B. N. UPPAL,
Director of Agriculture.
