No. P. 11 of 1940.

From

W. J. JENKINS, Esq.,
M.A., B.Sc., C.I.E., I.A.S.,
Director of Agriculture,
Bombay Province, Poona

To

THE SECRETARY TO GOVERNMENT,
Revenue Department, Bombay.

Poona, 7th October 1940.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay Province for the year ending 31st July 1940.

I have the honour to be,
Sir,
Your most obedient servant,

W. J. JENKINS,
Director of Agriculture.

X9(J).231r

HO

22288

SEASON AND CROP REPORT OF THE PROVINCE OF BOMBAY FOR THE YEAR 1939-40.

CHAPTER I—CHARACTER OF THE SEASON.

1. **General.**—From the agricultural stand-point, the year 1939-40 was fair over the greater part of the Bombay Province but judged by crop results, it was less satisfactory than the preceding one. The outstanding features of the season were the prolonged breaks in the rains during the main crop growing period and unduly early cessation of the monsoon. Rainfall in June was deficient while the precipitation received in July and August was inadequate, irregular and unevenly distributed both as regards periodicity of fall and area. There was a prolonged drought from about the middle of July till the middle of August. This check in the monsoon resulted in a serious setback to *kharif* crops which, in many places, were retarded in growth and development. Accordingly, crop prospects in the early part of the season were uncertain, especially in North Gujarat and the eastern regions of the South Deccan and Karnatak. In some areas of these tracts crops failed wholly or partially and scarcity conditions were feared. The opportune and welcome rains which occurred over almost the entire Province in the latter half of August and in the first fortnight of September relieved the situation appreciably, in many areas saving crops from complete failure. These rains also facilitated and expedited *rabi* sowings and gave promise of a successful *rabi* season. Unfortunately the inadequacy and sporadic nature of later rains, combined with other adverse factors such as the prevalence of dry easterly winds, occasional cloudy weather conditions, increased incidence of insect pests and plant diseases etc., falsified these hopes and resulted in a reduction of *rabi* crop outturns in most areas. Accordingly, as a whole, the season under review may be termed disappointing over large tracts of the Province especially in the northern areas of Gujarat and the eastern parts of the South Deccan and Karnatak where prolonged and untimely breaks in rains resulted in deterioration of crops and scarcity of water and fodder in many areas.

The characteristic features of the season under review may be summarised briefly as follows :—

(a) Light ante-monsoon showers in the Karnatak, Satara district in the Deccan and Kanara district in the Konkan, while rainfall in June also below normal over most of the Province except in the Konkan where up to requirements.

(b) Fairly substantial and widespread rain in Konkan in July, August and September. Elsewhere in the Province rainfall only in the first fortnight of July, second fortnight of August and the early part of September with light and scattered showers during the rest of the period. Karnatak, however, recorded some beneficial rain in the latter half of September.

(c) October rainfall satisfactory in many areas in the Karnatak and South Konkan but generally below normal elsewhere in the Province and practically absent in Gujarat

(d) Useful rain in November over most of the Deccan, Karnatak and Konkan, only in the first week and in some areas in the Karnatak and Kanara district also during the third week of the month. Practically no rain in Gujarat except for some local showers in south on the first four days of the month.

(e) In December scanty and irregular showers in the North Deccan on 2 or 3 days in the middle of the month; while light rain in Gujarat, North Deccan and North Konkan in January and in South Gujarat, Deccan and Konkan in the first week of February. In March light to fair rain mostly in Gujarat, North Deccan and North Konkan. Rainfall was practically absent in these months elsewhere in the Province.

There were as usual intermittent attacks of stem-borer, caterpillars, koleroga, field rats, grasshoppers and other insect pests and plant diseases in various parts of the Province varying in extent and intensity. Dry easterly winds prevailed from December onwards in the eastern parts of the Karnatak.

Details regarding the season in its various aspects in different divisions of the Province are described in the following paragraphs.

2. Distribution of Rainfall.—Statement I (pages 30-31) compares the rainfall during the year under review with the average annual fall of rain at each representative station in the Province. The average rainfall figures for each station have been supplied by the India Meteorological Department.

Kharif Rains.—The Kharif rains during the season under report were somewhat above the average at Broach (Broach and Panch Mahals) in Gujarat, Belgaum, Bijapur and the hilly tracts in the Karnatak and Ratnagiri in the Konkan. At all other district headquarter stations in the Province including the hilly tracts in the Deccan these rains were much below the average usually received.

Rabi Rains.—These were also much below the average everywhere in the Province except at Bijapur in the Karnatak and Karwar (Kanara) in the Konkan where they were in excess of the normal.

Hot Weather Rains.—These presented features of no special importance during the season under review.

Nature of the season in different divisions.

3. Gujarat.—The antemonsoon showers were totally absent. Rainfall in June was only light to moderate and sowings had to be postponed to July when fairly widespread rains were recorded throughout the whole division in the first fortnight and sowings

were started on a general scale. Excepting in the Surat district, however, the aggregate rainfall in the division was much below requirements. Besides, the untimely break that occurred from the middle of July till the 20th of August seriously impeded field operations and caused deterioration in the growth of crops. Scarcity of water and fodder prevailed in the northern areas of the division and it was evident that if the rainfall continued to hold off longer crops in many parts would suffer severely. Generally speaking the situation in the Surat district was comparatively better as the precipitation in this tract was more evenly distributed but, even here, more rain was necessary to facilitate transplanting operations. The opportune and fairly substantial rain received in the last week of August and in the first week of September helped to revive crops to some extent while field operations were recommenced in most parts. Rain again ceased at the middle of September and a second drought period ensued which lasted throughout the winter months. As a result standing crops showed poor development and were withering especially in the northern parts due to insufficiency of soil-moisture and inadequacy of water supply in irrigation sources. Paddy suffered most and practically failed in some areas. The early sown cotton in the extreme north of the division also proved a failure in many tracts. Shortage of soil moisture coupled with inadequate dewfall hastened the ripening and opening of bolls and the picking of the crop was undertaken somewhat earlier indicating an early season for the crop. The season, on the whole, was unsatisfactory and necessitated liberal grants of suspensions and remissions in some areas.

The season under review was generally free from insect pests and plant diseases of a serious nature. Irrigated wheat was damaged by field rats in parts of the Broach and Panch Mahals district while *kharif* jowar was affected by "ratado" disease on the coastal tract of Jalalpur taluka in the Surat district. Groundnut was attacked by white ants in a few places in the Kaira district. Caterpillars were reported to have damaged standing crops in some areas in the division.

North Deccan.—There was no rain in the division during the pre-monsoon period. Rainfall in June was insufficient for general *kharif* sowings which were restricted to centres of favourable rainfall. July brought substantial and fairly widespread rain over the greater part of the division and consequently *kharif* sowings were undertaken on an extensive scale while the young germinated crops were in a flourishing condition. Weeding of cotton and other *kharif* crops was in progress and in places transplantation of rice was also commenced. Rainfall in the second half of July and the first three weeks of August was light with occasional breaks and crops in many parts showed signs of retardation of growth due to lack of adequate soil moisture. Rainfall in the last week of August and the first fortnight of September had a reviving effect on the crops which began to grow with renewed vigour. These rains also stimulated *rabi* sowing operations which were progressing extensively under the moderate rains of October and the seedlings,

where germinated, thrived well. Rainfall in November was confined to the first four days while the subsequent winter months recorded only light and scattered showers which helped the late crops in their growth. In the absence of any insect pest and plant disease of a serious nature *rabi* crops attained successful maturity and returned fairly satisfactory yields.

No insect pest or plant disease of a serious nature was reported from this division during the year under report. Spotted boll worm on Jarilla cotton was noticed in places in the Khandesh area affecting the opening of bolls. Sugarcane was affected by stem-borer to some extent while smut was observed on *kharif jowar* in places in the division. Rust attack on wheat was reported from the Sakri taluka of the West Khandesh district. Standing crops were damaged to some extent by caterpillars in parts of the Nasik district. The usual downy mildew appeared on grape-vines in Nasik area but the pest was controlled by dusting.

South Deccan.—There were no ante-monsoon showers over the major portion of the division. The regular monsoon started about the second week of June but the rainfall during the month was barely enough for general *kharif* sowing operations which were accordingly confined to favourable localities mostly in the west. July rainfall was generally favourable for field operations and crop growth although it proved somewhat heavy in parts of the Satara district and had a damaging effect on crops. Towards the end of July and in the first half of August, however, rainfall was light and irregular in the west while it was practically absent in the eastern parts of the division. This gave a setback to the progress of crops which, on the lighter types of soil, showed signs of withering and on heavy types of soils remained stunted in growth. Precipitation in the second fortnight of August and in the first week of September was satisfactory in the areas adjoining the Western Ghats and considerably improved crop conditions. In the eastern tracts, on the other hand, viz. parts of Ahmednagar, Poona and Satara districts and practically the whole of the Sholapur district the rainfall was far short of normal requirements of crops which began to wither for want of adequate soil moisture. Rainfall in the second half of September appreciably improved the situation and provided ample moisture for *rabi* cultivation. Rainfall in October was again deficient and more was needed to accelerate *rabi* operations and to promote normal growth of the crops already sown. November recorded rainfall on the first four days but there was practically no rain thereafter except for a few light showers in February. As a result, late crops did not show satisfactory growth especially in the eastern areas and were considerably reduced in yields.

With regard to insect pests and plant diseases in the division sugarcane suffered from attacks of grasshoppers and stem-borer in places in the Satara district and from grasshoppers in some areas on the Godavari and Pravara Canals. Cotton was affected by wilt and aphid on the canal areas. Damage to crops by field rats was reported from the Sholapur district and from the Nira and

Godavari Canals and by various insect pests from other centres of the division. Rice and *kharif jowar* suffered in many areas of the division from attacks of "army worm" caterpillars while *bajri* was affected in places by blister beetles during the flowering stage. The *rabi jowar* crop was affected by "Khairya" disease (Scab mite) in the Ahmednagar district. The same crop suffered from sugary disease (*chikta*) in the eastern parts of the Poona district and in some areas of the Sholapur district and from smut in parts of the Satara district. The disease "Haldya" appeared in the Ahmednagar district on a small scale. Potatoes were affected by "Tambera" to some extent while tobacco suffered from cut-worm and stem-borer attacks in some areas in the division. Stray cases of black smut attack on wheat were reported from the Ahmednagar district.

Karnatak.—There were light to fair ante-monsoon showers in many parts of the division and the regular monsoon set in by about the second week of June. Precipitation from June to September was generally favourable in the west, excepting in some low lying areas in the Belgaum district, where the rainfall in July and at the end of August proved excessive and crops suffered somewhat from stagnation of water. September rains also stimulated *rabi* sowing operations. In the eastern tracts of the division, comprising practically the whole of the Bijapur district and the talukas lying on the eastern border of the Dharwar district, the rainfall from June till the middle of September was very deficient and this condition checked the growth of crops which, in some areas, were withering due to inadequate moisture in the soil. Rainfall in the latter half of September, however, benefited crops considerably and enabled the cultivators to commence normal field operations. Rainfall in October was recorded over most of the division but the heavy rains received in the latter half of the month caused suspension of field operations and damage to crops in some places. Otherwise the outlook during the month in the division was, on the whole, fairly satisfactory. Harvesting of early sown crops was progressing generally while *rabi* sowings were in brisk progress and the crops already sown thrived well. Some useful rain occurred in November, but the rainfall ceased thereafter. Crops fared well in the west but suffered in the east on account of deficient rainfall coupled with the prevalence of adverse dry easterly winds and occasional cloudy weather conditions. The season, on the whole, was fairly satisfactory in the west and moderate to fair in the east.

In addition to the dry easterly winds and cloudy weather conditions referred to above, standing crops were damaged by grass-hoppers in various parts of the division. Caterpillars were reported from places in the Dharwar district. Rice and sugarcane were attacked by "army-worm" caterpillars and *kharif jowar* by grass-hoppers in many parts of the Belgaum district. Wheat was affected by rust in places in the Belgaum and Dharwar districts and *jowar* by smut and borer, rice by black beetle and groundnut by "Tikka" in many places in the division. Cotton suffered rather

seriously from "Rhyzoctonia" in the Dharwar district due to excessive soil-moisture. Aphis on Kumta and Jayawant cottons and red-leaf blight on Dharwar-American and Gadag No. 1 cottons were observed in some areas. Standing crops were damaged to some extent by insects and locusts in places in the Belgaum district and by field rats in many parts of the Bijapur and Dharwar districts.

Konkan.—The ante-monsoon rains were practically absent in this division. The rainy season commenced in the first week of June both in the coastal and upghat talukas and the precipitation in this month, as also in July, being favourable, sowing operations were in full swing and transplanting was also in progress although, in some areas, more rain was necessary for the latter operation. Rainfall in the first fortnight of August was received in light amounts and in consequence crops on shallow soils began to show signs of withering and transplantation of rice was retarded. The situation was considerably relieved by the substantial and wide-spread rain received during the latter half of August and in the first week of September. Crops improved in vigour and growth as a result. The early sown crops were nearing maturity and their harvesting was commenced in some localities. Light and scattered showers received in the latter half of September had an adverse effect on the late rice and nagli crops but the rainfall and climatic conditions in the following two months, viz. October and November, were generally favourable for the successful growth of crops. However, the heavy showers received in October proved somewhat injurious to standing crops and to those being harvested along the coastal tract in the southern areas. Garden crops progressed satisfactorily except that the heavy rains about the middle of August and at the end of October were harmful to the betelnut crop as they encouraged the spread of "Koleroga". Thereafter, the activity of the monsoon declined, there being only sporadic and local showers in the division. All the standing crops including garden crops, however, thrived well and returned fairly satisfactory yields.

With regard to insect pests and plant diseases "Koleroga" appeared as usual in betelnut gardens in the Kanara district. Standing crops of rice, nagli and vari were attacked by caterpillars in the Ratnagiri district while rat damage to crops was reported from certain talukas in the Kanara district. Damage to rice by stemborer was reported from places in the north of the division. Kanne pest (black smut) appeared sporadically on the late rice crop in the Kanara district, while red rot was noticed in certain types of thick sugarcane in some areas. Wild elephants caused damage to crops in some talukas of the Kanara district.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Statement II, pages 32-38.)

4. **Number of Villages.**—The total number of villages in the Province (22,846½) dropped by six. A noticeable change occurred

in the Ahmednagar District where four villages in Kopergaon taluka and one in Nagar taluka were amalgamated with the adjoining villages for administrative convenience. In Thana district there was a decrease of one village due to the amalgamation of two villages into one.

Total Area and Reporting and Non-reporting Area.

5. **Total area.**—The total area showed a slight decline of 1,438 acres. This was mainly accounted for by a decrease of 1,701 acres in the Thana district, 519 acres in the Ahmednagar district and 254 acres in the Broach and Panch Mahals district due to proper adjustments and corrections in survey records. Against the above decline, there was an increase of 1,072 acres in Kaira district owing to some land from the Baroda territory being added to the British territory in Borsad taluka.

6. **Reporting area.**—The total area for which statistics are regularly collected and reported in the Province rose by 16,149 acres. The most noticeable increase occurred in Dharwar District (16,392 acres) due to the classification of the area as "Surveyed" which was previously shown as "Unsurveyed".

7. **Non-reporting area.**—The variations under this head generally correspond with those under "Reporting Area" referred to above and hence call for no remarks.

Cropped Areas.

8. **Gross and Net Cropped Areas.**—In the Province, both the gross and net cropped areas decreased by 1.9 per cent. as compared with the previous year. The gross cropped area showed a decline of 326,623 acres from 29,740,000 acres in 1938-39 to 29,414,000 acres in 1939-40 or by 1.1 per cent. and the net cropped area a decrease of 239,000 acres, from 28,779,000 acres in 1938-39 to 28,540,000 acres in 1939-40 or by 0.8 per cent. The fall in area was noticeable in most of the districts of Gujarat, the Deccan, and the Konkan as a result of insufficient and irregular rainfall. There was a slight increase in area in the Karnatak.

9. **Twice cropped area.**—This showed a decline of 87,000 acres or by 9.1 per cent. as compared with the previous year, having fallen from 961,000 acres in 1938-39 to 874,000 acres in 1939-40. The decrease was specially marked in Gujarat (-79,000 acres) and the Deccan (-16,400 acres). There was however, an increase in the area (+11,000 acres) in the Karnatak due to improved water facilities.

10. **Assessed and Unassessed Areas.**—These remained almost stationary as compared with the previous year, the former showing an increase of only 7,000 acres i.e. from 33,481,000 acres in 1938-39 to 33,488,000 acres in 1939-40 and the latter a fall in area of 9,000 acres i.e. from 293,000 acres to 284,000 acres.

11. **Temporary cultivation in Forest lands and culturable waste.**—An area of about 141,000 acres of forest land was given out for temporary cultivation mainly in the Deccan (108,000 acres) and Konkan (28,000 acres) while about 103,000 acres of culturable waste or “other uncultivated land excluding current fallows” mainly in the Deccan 93,000 acres and in Konkan (5,800 acres) were similarly dealt with.

CHAPTER III—CROPPED AREA.

(Statement III, pages 40-61.)

12. **Variations in Cropped Area.**—The main features of the season and its effect on the area and yield of crops have been described elsewhere in the report. Appendix B (page 25) shows the effect of the season under review and the areas sown as compared with the *average* (of ten years from 1928-29 to 1937-38) and the preceding year's area under the principal crops.

13. **Food Crops.**—The area under food crops i.e. cereals, pulses, sugarcane, and fruits and vegetables declined by 1·3 per cent. below the previous year but showed an increase by 1·5 per cent. over the average of the last decennium. Among the main food crops, *jowari* and *bajri* showed an appreciable increase in area in Gujarat and the Deccan but, in the Karnatak, the area under *bajri* fell by 223,000 acres while, under *jowari*, it showed an increase of 62,000 acres. The area under rice and wheat fell by 155,000 acres and 175,000 acres or 7·7 per cent. and 9·4 per cent. respectively when compared with the previous year. The area under gram declined by 13·1 per cent. while sugarcane showed an appreciable increase by 31·6 per cent.

14. **Non-food Crops.**—The area under non-food crops, which include cotton, tobacco and oil seeds, showed a slight decrease of 0·5 per cent. below the previous year but an increase of only 0·1 per cent. when compared with the average of the preceding decennium. Though there was a slight fall in the area under this head as a whole, the area under tobacco showed an increase of 18·1 per cent. and 20·4 per cent. respectively over the previous year and the decennial average and under cotton, of 0·6 per cent. over the previous year but a decline below the decennial average by 6·5 per cent. The area under oil-seeds advanced by 0·6 per cent. and 38·8 per cent. respectively over the previous year and the average of the past ten years.

The net result of these variations in the food and non-food crops as noticed above, was that the total area showed a decrease of 326,000 acres or 1.1 per cent. as compared with the previous year although there was an increase of 315,000 acres or 1.1 per cent. as compared with the decennial average of the past ten years.

15. **Kharif and Rabi areas.**—The following table compares the areas under the *kharif* and *rabi* crops of the year under report^t with those of the preceding two years :—

(Area in thousand of acres).

Details.	1937-38.			1938-39.			1939-40.		
	Cereals.	Pulses.	Total Cereals and pulses.	Cereals.	Pulses.	Total Cereals and pulses.	Cereals.	Pulses.	Total Cereals and pulses.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.
Kharif ...	9,662	1,875	11,535	10,261	1,993	12,274	9,995	1,891	11,886
Rabi ...	7,761	885	8,646	7,133	872	8,005	7,303	763	8,065
Total ...	17,423	2,758	20,181	17,414	2,865	20,279	17,298	2,654	19,951

It will be seen from the above table that the *kharif* area during the year under report showed a decrease of 388,000 acres below the *kharif* area of the last year (1938-39) but an increase of 351,000 acres over the year previous to the last (1937-38). The *rabi* area exhibited an increase of 60,000 acres over the last year (1938-39) but declined by 581,000 acres when compared with the year before the last (1937-38). The net result of these variations was that the total area under cereals and pulses decreased by 328,000 and 230,000 acres respectively below the area under these crops during the last year (1938-39) and the year previous to the last (1937-38).

16. **Variations under Principal Crops.**—The detailed remarks given below explain the variations under the principal crops.

Jowari and Bajri.—The sub-joined table compares the extent of variations in area under these staple crops in the different divisions of the Bombay Province :—

(Area in thousands of acres).

Division.	Jowari.									Bajri.		
	*Average.			1938-39.			1939-40.			*Average.	1938-39.	1939-40.
	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.	Kharif.	Rabi.	Total.			
Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres	Acres
Gujarat ...	471	155	626	470	191	661	669	153	822	923	346	418
Deccan ...	859	4,154	5,013	831	3,891	4,722	907	3,903	4,810	2,963	3,159	3,321
Karnatak ...	1,076	1,390	2,466	1,240	1,105	2,345	1,011	1,397	2,408	403	748	594
Total Bombay Province...	2,406	5,699	8,105	2,541	5,187	7,728	2,587	5,453	8,040	3,689	4,253	4,258

* Average of the decennium 1928-29 to 1937-38.

It will be seen from the above table that the area under *jowari* and *bajri* showed an increase over the last year of 312,000 and 5,000 acres or by 4.1 and 0.1 per cent. respectively but when compared with the decennial average *jowari* showed a decline of 65,000 acres or by 0.8 per cent. while the area under *bajri* rose by 569,000 acres or by 15.4 per cent. There was a general increase in area under *jowari* in the Province but in the case of *bajri* the increase was marked in Gujarat and the Deccan while in Karnatak the area fell by about 223,000 acres due to want of timely rain.

Rice.—The area under this crop decreased by 155,000 acres, i.e. from 2,015,000 acres in 1938-39 to 1,860,000 acres during the year under review or by 7.7 per cent. The most noticeable decline in area was in Gujarat where it was as much as 154,000 acres as a result of insufficient rain in the beginning of the season.

Wheat.—The area under wheat declined by 175,000 acres or 9.4 per cent. as compared with the previous year. The decrease was shared by almost all the districts in the Province, the most noticeable fall in area being in the Deccan (-128,000 acres) as a result of deficiency of late season rains over most of the rabi areas occupied by this crop.

Oil-seeds.—The area under oil-seeds rose by only 15,000 acres or 0.6 per cent. over the previous year but showed a considerable increase of 701,000 acres or 38.8 per cent. as compared with the decennial average. The area under groundnut crop showed an increase of 80,000 acres against a decrease of 52,000 acres under sesamum as compared with the previous year.

The following table and the appended remarks explain the variations in area under the principal oil seeds as compared with the previous year.

Increase or decrease in thousands of acres as compared with the last year.

Oil-seeds.	Increase or decrease as compared with last year.
1. Linseed	- 2
2. Sesamum	- 52
3. Rape and Mustard	+ 3
4. Groundnut	+ 80
5. Castor-seed	- 5

Groundnut.—The area under this crop as already stated above rose by 80,000 acres or 5·6 per cent., i.e. from 1,436,000 acres in 1938-39 to 1,516,000 acres in the year under report. The increase was shared by the Deccan (+29,000 acres) and Karnatak (+83,000 acres). Against this there was a decline of (-32,000 acres) in Gujarat due to more area being sown under other *kharif* crops.

Sesamum.—The area under sesamum decreased by 52,000 acree from 210,000 acres in 1938-39 to 158,000 acres in the year under review. The decrease was shared by all the Divisions in the Province.

Castor-seed.—The area under this crop showed a decline of 5,000 acres as compared with the previous year. The fall in area was noticed in almost all the districts in the Province except at Ahmedabad (+3,100 acres) in Gujarat and in Dharwar (+400 acres) in Karnatak.

Linseed.—There was a fall in area under this oil-seed crop of 1,500 acres in the Province as a whole, the decrease being most marked in the Ahmednagar district (-7,000 acres). Against this there was an increase of about 5,000 acres in the Karnatak.

Rape and Mustard.—These oil-seeds are of minor importance and their cultivation is mainly restricted to North Gujarat. The area rose by about 3,000 acres, as compared with the previous year, the increase being marked in the district of Broach and Panch Mahals (+6,000 acres). Against this there was a decrease in area in Ahmedabad district (-3,700 acres).

Cotton.—The area under cotton showed a slight increase of 23,000 acres or 0·6 per cent. from 3,699,000 acres in 1938-39 to 3,722,000 acres in the year under report. The increase was marked in Gujarat (+39,000 acres) and in the Karnatak (+197,000 acres) while in the Deccan there was a decline in area of as much as 213,000 acres, the decrease being general in all the districts as a result of trade depression.

Sugarcane.—The area under this crop expanded by 21,000 acres or 31·6 per cent. from 76,000 acres in 1933-39 to 100,000 acres during the year under report. The increase was general throughout the Province, the Deccan accounting for an increase of 21,000 acres.

Tobacco.—The acreage under tobacco showed an increase of 28,000 acres or by 18·1 per cent. from 155,000 acres in 1938-39 to 183,000 acres in the year under report. The increase was most marked in Kaira district (+25,000 acres) in Gujarat and in Satara district (+2,800 acres) in the Deccan.

Fruit and Vegetables.—The area under these crops showed a small rise of 3,000 acres as compared with the previous year. The increase was chiefly marked in Gujarat (+1,300 acres) and the Karnatak (+2,300 acres) against a fall in area of about 1,000 acres in the Deccan.

17. Appendix C (pages 26-27) shows as usual the distribution (in each district of the Province) of the principal food and non-food crops in terms of percentage of the gross cropped area.

CHAPTER IV—IRRIGATED AREA.

(Statements IV, pages 62-79 and IV-A, pages 80-83)

18. **Variations in the irrigated area and crops.**—Appendix D, (page 28) exhibits variations under the several heads of irrigation and crops irrigated as compared with similar details of the previous year.

19. **Area irrigated.**—This showed a slight expansion of 68,000 acres or 5·9 per cent. as compared with the previous year, having increased from 1,147,000 acres in 1938-39 to 1,215,000 acres in the year under report. The increase was chiefly noticeable in Gujarat (+22,000 acres) and in Dharwar district (+47,000 acres) in the Karnatak, and in parts of the Deccan (+33,000 acres). Against the above, there was a fall in area of (–11,000 acres) in Ahmednagar district (–12,000 acres) in the Satara and Sholapur districts in the Deccan and (–11,000 acres) in the districts of Belgaum and Bijapur in the Karnatak.

20. **Area irrigated from different sources of irrigation—Government Canals.**—The area irrigated under Government Canals showed an increase of 39,000 acres or 15·5 per cent. when compared with the previous year. The increase was most marked in the Karnatak (+35,000 acres). The Deccan showed an increase of about 6,000 acres against the same amount of reduction in the area in Gujarat owing to insufficient rain.

Private Canals.—Irrigation from private canals showed a decline of 9,000 acres or 10·3 per cent. from 87,000 acres during previous year to 78,000 in the year under review. Almost the whole of this decrease took place in the Deccan, except in the district of Nasik

where there was an increase of 3,000 acres. In the Karnatak and the Konkan, irrigation by private canals remained almost stationary while in Gujarat irrigation from this source was practically absent.

Wells.—Well irrigation extended by 32,000 acres or 4·6 per cent. when compared with the previous year. Except in the Karnatak, Sholapur district in the Deccan and Ratnagiri district in the Konkan, where there were declines in this area, the increase was shared by almost all the districts in the Province, as, owing to deficient rains, greater need was felt to resort to this source of irrigation.

Tanks.—The area irrigated by tanks showed a slight increase of 3,000 acres or 2·9 per cent. only when compared with the previous year. The increase was of 5,000 acres in the Deccan and 9,000 acres in the Karnatak against a decrease of 7,000 acres in Gujarat and 4,000 acres in the Konkan.

Other Sources.—The area under other sources increased by 4,000 acres or 19·0 per cent. chiefly in Gujarat and the Karnatak, from 21,000 acres in 1938-39 to 25,000 acres in the year under report.

21. **The ratio of the irrigated area to the net cropped area.**—This was 4·3 per cent. during the year under review. Out of this Government Canals represent 1·0 per cent., private canals 0·2 per cent., wells 2·7 per cent., tanks 0·3 per cent. and other sources of irrigation 0·1 per cent.

22. Crops irrigated.

Rice.—The area under irrigated rice increased by 32,000 acres or 18·6 per cent. when compared with the previous year. The increase was chiefly in the Deccan (+2,600 acres) and the Karnatak (+46,000 acres) but there was a fall in this area (−17,000 acres) in Gujarat due to insufficient water supply in irrigation sources.

Wheat.—The area under irrigated wheat was almost stationary when compared with the previous year. The only noticeable change was that Gujarat showed an increase of 16,000 acres against the same amount of reduction in this area in the Deccan.

Jowar.—The area under irrigated *jowar* rose by 20,000 acres or 7·8 per cent. over the previous year. The increase was almost general in the Province, except in the Ahmednagar and Belgaum districts, where there was a slight fall in the area due to extended cultivation of sugarcane.

Bajri.—Irrigated *bajri* also showed an increase of 9,000 acres or 12·5 per cent. as compared with the previous year. The increase was almost general in the Province except in the Ahmednagar district in the Deccan, where there was a fall in area due to greater area being sown under non-irrigated *bajri* owing to favourable early rains.

Cotton.—The area under irrigated cotton showed a rise in area of 6,000 acres or 17·1 per cent. as compared with the previous year. There was an increase of 10,000 acres in Gujarat but the Deccan showed a decrease of 4,000 acres due to increase under other crops and also to trade depression.

23. **Sugarcane.**—As already noted when dealing with the crop in Chapter III, the increase of 24,000 acres or 32·0 per cent. in the area under sugarcane during the year under review was mostly in the South Deccan and was due to greater facilities of canal irrigation and to the extended cultivation of this crop by sugar factories.

CHAPTER V—OUTTURN OF CROPS.

(Statements V, pages 84-85 and V-A, pages 86-100)

24. **Yield of Principal Crops.**—Statement V (pages 84-85) shows the estimated yield of the principal *kharif* and *rabi* crops taking 100 as representing the normal. It is prepared from the district estimates which are returned in annas on the basis of twelve annas denoting the normal crop. The figures are, therefore, only approximate. The character of the season has already been described elsewhere in the Report.

25. Outturn of crops in parts of the normal.

A.—Kharif Crops—

Jowar.—The outturn of *kharif jowar* was 58 per cent. of the normal in the Karnatak. It was between 60 and 75 per cent. of the normal in the Kanara district in the Konkan and in the Deccan except in the Poona district where it was only 52 per cent. of the normal. In Gujarat the outturn was below 50 per cent. except in the Surat district where it was 80 per cent. of the normal.

Bajri.—The yield of the crop ranged from 60 to 75 per cent. of the normal in the Deccan except in the Sholapur district where it was only 35 per cent. of the normal. In Gujarat, the outturn was 77 per cent. of the normal in the Surat district and 58 per cent. of the normal in the Broach and Panch Mahals district, but, in the remaining districts of the division it was below 43 per cent. of the normal. In the Karnatak, it was 53 per cent. in the Belgaum district and 67 per cent. in the Dharwar district but only 42 per cent. of the normal in the Bijapur district.

Rice.—Except in Gujarat where the outturn was rather poor being below 33 per cent. of the normal, it ranged between 67 and 80 per cent. of the normal in the Deccan and the Karnatak except in the Sholapur district where it was only 48 per cent. of the normal.

Cotton.—The outturn of the late varieties of cotton was between 53 and 79 per cent. of the normal in Gujarat and the Karnatak except in the Ahmedabad district where it was only 34 per cent. of the normal. In the Deccan, where early varieties are cultivated,

the yield of the crop ranged between 65 and 77 per cent. of the normal except in the Nasik and Ahmednagar districts where it was 83 per cent. of the normal.

Sesamum.—This oil seed yielded between 58 and 83 per cent. of the normal throughout the Province, except in the Broach and Panch Mahals district and the Bijapur district where it was only 50 per cent and the Ahmedabad, Kaira and Sholapur districts where it was rather poor and was below 33 per cent. of the normal.

26. B.—Rabi Crops.—

Jowar (Rabi).—The *rabi jowar* was 58 per cent. of the normal in the Karnatak and between 52 and 75 per cent. of the normal in the Deccan. In the Surat and Thana districts the yield varied from 80 to 83 per cent. of the normal while it was below 50 per cent. of the normal in the remaining three districts of Gujarat.

Wheat.—Except in the Surat district, where the yield was 82 per cent. of the normal, yields ranged between 43 and 51 per cent. in the rest of Gujarat. In the remaining part of the Province, the outturn was between 56 and 79 per cent. of the normal.

Gram.—In the Deccan, the Karnatak and the Konkan, the outturn was between 58 and 83 per cent. of the normal, except in the Poona and Sholapur districts, where it was less than 56 per cent. of the normal and in the Kolaba district where it was 92 per cent. of the normal. In Gujarat, the yield of the crop was 63 and 50 per cent. of the normal in the Surat and Broach and Panch Mahals districts respectively but it was below 33 per cent. in the Ahmedabad and Kaira districts.

Tobacco.—The outturn of the crop ranged between 58 and 75 per cent. of the normal in the Province except in North Gujarat and Sholapur district in the Deccan where it was below 49 per cent. of the normal.

Linseed.—The cultivation of this oil-seed is almost exclusively confined to the Deccan and the Karnatak. In the former tract, the outturn ranged from 58 to 75 per cent. of the normal, except in the Poona and Sholapur districts where it was only 50 per cent. and between 58 and 67 per cent. of the normal respectively.

Rape-seed and Mustard.—In the Deccan and Karnatak, the outturn of these oil-seeds ranged from 53 to 75 per cent. of the normal but, in Gujarat, only Broach and Panch Mahals district gave 67 per cent. while in the remaining districts of this division it was below 51 per cent. of the normal, the yield at Ahmedabad being only 33 per cent. of the normal.

Sugarcane.—The outturn of sugarcane varied from 67 to 92 per cent. of the normal in the whole of the Province except in the Ahmednagar district where it approached the full normal.

OUTTURN OF FOOD GRAINS AND COTTON.

27. **Crops.**—Statement V-A (pages 86-100) compares the acreage under food grain crops (cereals and pulses) in each district

of the Province and their approximate outturn in tons during the year under report with similar statistics for the two preceding years.

The following table sums up the results :—

Division.	Area in thousands of acres.			Outturn in thousands of tons.		
	1937-38.	1938-39.	1939-40.	1937-38.	1938-39.	1939-40.
	Acres.	Acres.	Acres.	Tons.	Tons.	Tons.
Gujarat ...	2,458	2,400	2,324	692	608	417
North Deccan ...	3,714	3,779	3,783	748	745	714
South Deccan ...	7,532	7,423	7,513	1,000	1,055	984
Karnatak ...	4,867	4,973	4,726	631	859	834
Konkan ...	1,515	1,614	1,605	678	632	541
Total, Bombay Province ...	20,181	20,279	19,951	3,749	3,999	3,490

It will be seen from the above table that both the area and outturn of the food grain crops declined by 1·6 per cent. and 10·5 per cent. respectively as compared with the previous year. This decrease was chiefly marked with regard to area in Gujarat and the Karnatak but, in regard to yield, the fall was general throughout the Province, Gujarat suffering most as a result of adverse seasonal conditions.

Cotton.—As regards the actual outturn of cotton as estimated by the number of bales, it may be stated that, so far as the area factor was concerned, there was a decline in area of 628,000 acres or 10·8 per cent. when compared with the previous year. Thus the total area in the Province including the Indian States stood at 5,195,000 acres during the year under report against 5,823,000 acres in the preceding year (1938-39). The outturn also showed a corresponding reduction of 97,000 bales or 9·2 per cent. below the previous year, thus reflecting the unfavourable character of the season for the crop during the year under review. Of the outturn of 953,000 bales, 434,000 bales or 45·5 per cent. represented the yield of long stapled cotton viz. Broach, Dharwar and Kumpta varieties, while the remaining 519,000 bales or 54·5 per cent. belonged to short stapled varieties of North Gujarat, Western India States Agency and Khandesh. As compared with the previous year the outturn of long staple rose by 2·5 per cent. while that of short staple cotton fell by 38·5 per cent.

CHAPTER VI—PRICES, TRADE AND STOCK.

(Statement VI, pages 102-103).

28. **Prices of Principal Articles.**—Statement VI—Prices—shows the retail prices of the principal staple crops and of fodder, ruling at harvest time at each district head-quarter station in the Bombay Province. The following remarks show major variations in the prices of the principal articles as compared with those of the previous year.

Jowar.—The price of *jowar* ruled dearer at almost all the head-quarter stations in the Province by about three to five and a half seers per rupee except at Broach and Thana where it was higher by three-fifth and one-third of a seer respectively. Only in Dharwar and Kanara, the price was cheaper by one-fifth and two-fifth of a seer respectively.

Bajri.—The price of *bajri* also ruled higher throughout the Province by two and three-fourth to five and three-fourth seers per rupee, Kaira in Gujarat, Ahmednagar and Sholapur in the Deccan and Belgaum in the Karnatak showing the most marked fluctuations of more than five seers per rupee and Bijapur as much as eight and three-fourth seers per rupee. In Ahmedabad and Surat in Gujarat, Nasik in the Deccan and Thana in the Konkan, the increase in price was from one seer to one and three-fourth seers per rupee.

Wheat.—Except in Karnatak, Sholapur in the Deccan and Alibag in the Konkan where the price of wheat ruled easier by half a seer to two and three-fourth seers per rupee, it was dearer by one to three seers per rupee elsewhere in the Province.

Rice.—The price of rice ruled higher by half a seer to two and a half seers per rupee in the Province except at Godhra (Panch Mahals), Jalgaon (East Khandesh), Ahmednagar and Thana where it was cheaper by one-fifth to half a seer per rupee.

Gram.—The price of gram ruled dearer throughout the Province by one and one-fourth to three and a half seers per rupee, only a few stations showing a rise of less than a seer per rupee.

Turdal.—Except at Dhulia (West Khandesh) and Sholapur in the Deccan, Dharwar in the Karnatak, Karwar in the Konkan, where the price of *turdal* was a little cheaper by about one-third of a seer or less, it was dearer elsewhere in the Province by one-fifth of a seer to one and one-fourth seers per rupee. The price in Konkan remained almost stationary.

Gul.—The price of *gul* ruled easier by about one-half seer to three seers per rupee except at Ahmedabad, Kaira and Godhra (Panch Mahals) in Gujarat, Satara in the Deccan and Thana, Alibag and Karwar in the Konkan where it was dearer by one-fifth of a seer to one seer per rupee.

Tobacco.—Except at Sholapur in the Deccan and Belgaum in the Karnatak, where the price of tobacco ruled cheaper by one-fourth of a seer to half a seer per rupee, it was dearer by three-fourth of a seer per rupee at Satara but in the rest of the Province it was almost stationary.

Cotton.—The variations in the area and outturn of this crop as compared with the figures of the last year have already been noted in the respective chapters and hence need no repetition here. The following table compares the prices of the article during the year under report with those of the previous year (1938-39) and the averages of the preceding five years :—

Variety of cotton.	Average of five years ending		Average of the seven months ending 31st July				Variations.	
	1938.		1939.		1940.		Compared with the average in columns 2 and 3.	Compared with the prices in 1939.
	Price per khandi of 784 lbs.	Price per bale of 400 lbs.	Price per khandi of 784 lbs.	Price per bale of 400 lbs.	Price per khandi of 784 lbs.	Price per bale of 400 lbs.		
1	2	3	4	5	6	7	8	9
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Per cent	Per cent.
Broach	214	109	183	83	231	118	+7.9	+41.7
Khandesh	184	94	141	72	202	103	+9.7	+43.2
Kumta*	Not available.		183	93	233	118	Not available.	+27.3

*As it was not found possible to quote above prices of "Saw ginned Dharwar" cotton, this variety being more or less non-existent from the trade point of view, "Kumta" cotton has been substituted since 1936-37. The prices of this variety for the previous years, however, are not available.

It will be seen from the above table that the price of all the three varieties, viz. Broach, Khandesh and Kumta showed an appreciable improvement over those of the previous year and also the averages of the five years ending 1938 in the case of the first two varieties. The rise in prices till February 1940 was mainly due to the outbreak of war and the possibility of increased internal consumption of cotton but the fall thereafter was the result of the discouraging war situation and export difficulties.

The actual fluctuations in the cotton prices will be seen from the following statement which gives the prices in rupees per *khandi* of Broach cotton at Bombay during the year under report :—

Year and month.	Price per <i>khandi</i> of 784 lbs.	Year and month.	Price per <i>khandi</i> of 784 lbs.
1939	Rs.	1940	Rs.
August	163	January	267
September	182	February	267
October	March	258
November	April	251
December	May	226
		June	174
		July	173

Dry Grass.—The price of dry grass ruled dearer by about fourteen annas to a rupee per Indian maund in Gujarat, except at Broach where only it was cheaper by eleven annas. At Nasik in the Deccan and Thana in the Konkan, it was dearer by four and half annas per maund while at Jalgaon, Satara in the Deccan and Ratnagiri in the Konkan it was cheaper by two to four and half annas per maund. In the remaining part of the Province, it was almost stationary.

Jowari Kadbi.—The price of *jowari kadbi* rose by about two to eleven annas per Indian maund in the Province except at Jalgaon (East Khandesh), Poona and Satara in the Deccan, Dharwar in the Karnatak where it was cheaper by two to ten and a half annas per Indian maund.

In the Konkan where rice straw is used in place of *jowari kadbi*, the price of rice straw ruled cheaper by one and a half annas to three annas per Indian maund at Alibag (Kolaba) and Ratnagiri while at the two remaining stations the price of the article was stationary.

CHAPTER VII—AGRICULTURAL STOCK.

CENSUS OF LIVESTOCK AND AGRICULTURAL MACHINERY AND IMPLEMENTS.

29. The quinquennial census of livestock and agricultural machinery and implements was held in January 1940 and the result of it is given at length in statement VII (pages 106-205).

Appendix E (page 29) summarises the total strength under each main head during the year under review (i.e., 1939-40) as compared with the last two censuses—1929-30 and 1934-35.

Variations in total number of cattle and buffaloes.—The total number of cattle and buffaloes is now returned at 97·34 lakhs. This is 2·3 per cent. below the figure of 1934-35 but an increase over that for 1929-30 by 3·4 per cent.

Variations under principal heads.—Under the orders of the Government of India, the enumeration of the agricultural stock in the census under review has been done separately for rural and urban areas in each district and is shown in the statement (pages) as revised.

For breeding purposes (bulls and bull-buffaloes).—The total number under this head increased by 2,000 or 3·9 per cent. as compared with the census of 1934-35. The increase was contributed

by almost the whole of Konkan, West Khandesh, Ahmednagar and Satara districts in the Deccan and Bijapur district in the Karnatak and Surat district in Gujarat but, elsewhere in the Province, the number showed a decrease varying from 100 to 1,700 due partly to want of adequate fodder supply and partly to the apathy of the cultivators to maintain stock at additional cost.

For milk production (cows and she-buffaloes).—These showed an increase of 326,000 in number or 11·1 per cent. as compared with the census of 1934-35. The increase was shared by almost all the districts in the Province except Kaira and Broach and Panch Mahals districts in Gujarat, Bijapur district in the Karnatak and Bombay City in the Konkan. The tendency of the people to rear milk cattle on a large scale on account of greater demand for milk and its by-products in the market contributed to the general rise in the number of milch cattle.

Young stock.—The number under this head showed a decline of 183,000 in number or 5·9 per cent. as compared with that of 1934-35. The decrease was shared by many of the districts in the Province except Broach and Panch Mahals district in Gujarat, West Khandesh, Nasik and Satara districts in the Deccan, Dharwar district in the Karnatak and Kolaba and Ratnagiri districts in the Konkan where only there was some increase.

Sheep and goats.—These together showed an advance by 1,162,000 in number or 30·7 per cent. when compared with the census of 1934-35. The increase is marked in almost all the districts in the Province except in Bombay City and Bombay Suburban district only. The increase in Gujarat was mainly due to temporary settlement of wandering tribes from outside the Province but in other divisions it was due to the increasing tendency of the cultivators to rear sheep and goats, as their rearing is both inexpensive and profitable, while at the same time the milk, wool, manure and mutton obtained from them bring in an appreciable return.

Horses and ponies.—The total number under this head slightly increased by 1,000 in number or 0·9 per cent. when compared with the census of 1934-35. The increase is chiefly noticed in Gujarat and the Konkan but in the Deccan and the Karnatak there was a slight decrease due to the introduction of the cheaper and speedier means of transport which are displacing carriages and riding horses.

Ploughs.—The total numbers of ploughs increased by 92,000 the wooden ploughs showing an increase of 77,000 or 6·7 per cent., the iron ploughs 15,000 or 21·4 per cent. and the tractors only 6 or 3·5 per cent. over the census of 1934-35. This shows that iron ploughs are getting more popular among the cultivators. Against the above increase, there is a decrease in the Ahmedabad district, Bombay City and Bombay Suburban district, which being negligible, calls for no remarks.

Carts.—The number of carts for riding and transport together increased by 26,000 or 3·8 per cent. over the census of 1934-35. The increase is marked in Gujarat, the Karnatak and almost the whole of Konkan and West Khandesh, Nasik and Satara districts in the Deccan due to the increased agricultural activities among small villages.

Sugarcane crushers.—The number of crushers worked by engine power increased by 39 or 6·3 per cent. and those worked by bullocks, by 368 or 3·8 per cent. when compared with similar figures for the census of 1934-35. This shows that greater preference is being given to the use of crushers worked by mechanical power over those worked by bullocks.

Oil engines with pumps for irrigation.—The number under this Head showed an increase of 1,264 or 86·6 per cent. over that of the census of 1934-35 and was due to the tendency of the cultivators to make more use of machinery with a view to minimise time, labour and cost of irrigation.

Electric pumps for tube wells.—There was an increase under this head of 301 in number or 212·0 per cent. over the census of 1934-35 and was due to the increasing tendency of the cultivators to make use of machinery with a view to minimise time and labour.

CHAPTERS VIII AND IX—CONDITION OF THE AGRICULTURAL POPULATION.

30. As already stated in Chapter I of the Report, the season under review was fair over most of the Province and rather disappointing in the northern areas of Gujarat and the eastern regions of the South Deccan and Karnatak. The unsatisfactory nature of the season is reflected in the considerable drop in the estimated outturn of food grains. In North Gujarat and the south-eastern tracts of the Province, which suffered most from the insufficient and unevenly distributed precipitation, scarcity of water and fodder prevailed as most of the food and fodder crops in these areas fared badly and the quantity of grass was also limited. Accordingly, scarcity was declared in some talukas of the Ahmedabad district in Gujarat and scarcity works were started to afford relief to the rayats.

31. So far as the available supply of food grain crops to the general population is concerned, the year under review may be regarded as less satisfactory than its predecessor. The following tabular statement compares the actual acreage sown and the estimated tonnage of food grain crops produced in different divisions of the Province during the years 1938-39 and 1939-40.

Division.	Area in thousands of acres.		Estimated outturn in thousands of tons.	
	1938-39.	1939-40.	1938-39.	1939-40.
	Acres.	Acres.	Tons.	Tons.
Gujarat	2,490	2,324	608	417
North Deccan	3,779	3,783	745	714
South Deccan	7,423	7,513	1,055	984
Karnatak	4,973	4,726	859	834
Konkan	1,614	1,605	632	541
Total, Bombay Province ...	20,279	19,951	3,899	3,490

The above table indicates that, notwithstanding the fact that the area under food grain crops in the Province remained almost the same as last year, the resulting outturn showed a considerable drop in all divisions of the Province.

32. Owing to the uncertain conditions of rainfall and other adverse factors resulting in low crop yields and on account of the effects of the war, the prices of agricultural produce at principal centres in the Province exhibited an appreciable improvement over last year. The prices of both food and cash crops ruled dearer than in the preceding year, except those of rice, which remained stationary as shown in the table below. Due to speculation, there were sharp variations in prices at the outset of the war but the price control orders promulgated by Government exercised a steadying influence over the market and helped to maintain prices at a satisfactory level.

Prices prevailing at harvest time for agricultural produce in seers of 80 tolas per rupee except for cotton which are recorded in rupees per khandi of 78½ lbs.

Articles.	Centre.	1935-36.	1936-37.	1937-38.	1938-39.	1939-40.

Wheat	Abmedabad ...	8	7	10	11	9
Groundnut	Karad ...	13	10	14	15	13
Cotton	Bombay (Broach) .	Rs. 207	Rs. 2¼	Rs. 168	Rs. 160	Rs. 254

33. The condition of cattle was generally satisfactory. Rinderpest, foot and mouth disease and other animal diseases occurred as usual but did not assume such proportions as to seriously interfere with the normal progress of agricultural operations.

34. Wages of agricultural labour remained generally the same as in the previous year.

W. J. JENKINS,
Director of Agriculture.

APPENDIX A

CULTIVATED AND UNCULTIVATED AREA

[Area in thousands of acres (i.e. 000 omitted)]

Details	Bombay Province.		
	1939-40	1938-39	Increase (+) or Decrease (-)
1	2	3	4
A.—Cultivated Area.			
Gross cropped area	29,414	29,740	- 1.1
Area cropped more than once	874	961	- 9.1
Net area cropped	28,540	28,779	- 0.8
Current fallows	5,232	4,995	+ 4.7
Assessed	33,488	33,481
Unassessed	284	293	- 3.1
Total Cultivated Area	33,772	33,774
B.—Uncultivated Area.			
Other uncultivated land excluding current fallows	951	913	+ 4.2
(a) Culturable area (included in above column).	203*	148*	+ 37.2
Not available for cultivation. { Forest	8,331	8,321	+ 0.1
{ Others	5,665	5,713	- 0.8
Total Uncultivated Area	14,947	14,947
Total Area	48,719	48,721

(a) Definitely known as culturable.

*Included under the previous heading.

APPENDIX B

CROPPED AREA

[Area in thousands of acres (i.e., 000 omitted)]

APPENDIX D.

IRRIGATED AREA.

(Area in thousands of acres.)

Details.		Bombay Province.		
		1938-39	1939-40	Increase (+) or decrease (-) per cent.
1		2	3	4
A—Area irrigated.		Acres	Acres	Per cent.
Irrigated from Government canals	...	245	263	+ 15.6
Do. private canals	...	87	78	-10.3
Do. wells	...	689	721	+4.6
Do. tanks	...	105	108	+ 2.9
Do. other sources	...	21	25	+19.0
Total, A—Area irrigated		1,147	1,215	+ 5.9
B—Crops irrigated.				
Rice	...	178	204	+18.6
Wheat	...	202	203	+ 0.5
Barley	...	11	19	+ 9.1
Jowari	...	258	278	+7.8
Bajri	...	72	81	+12.5
Maize	...	23	23
Other crops and pulses	...	104	82	-21.2
Sugarcane	...	75	99	+32.0
Other food crops	...	183	191	+ 4.4
Cotton	...	35	41	+17.1
Other non-food crops	...	212	194	-8.5
Total, B—Crops irrigated		1,347	1,408	+ 4.5

Note.—The difference in totals A (Area irrigated) and B (Crops irrigated) is due to the inclusion in the latter of the area cropped more than once.

APPENDIX E.

AGRICULTURAL STOCK, MACHINERY AND IMPLEMENTS

TABLE VII

Return of Agricultural Stock (Cattle Census), Implements and Machinery, 1940

U = Urban.

R = Rural.

N.B.—Enumeration has been done separately for rural and urban areas in each district. For this purpose any self-governing urban unit, irrespective of size, including every Municipality, every Cantonment, all Civil Lines not included within the Municipal limits, and also every other continuous collection of houses ordinarily inhabited by not less than 5,000 persons and having an Urban character though not necessarily self-governing has been treated as Urban area and the rest as Rural area.
