5. **Famine.**—Famine occurred in 1896-97, mainly due to failure of crops in the affected tracts from want of seasonable rain. An area of 2,987 square miles was specially affected. Relief works were opened and continued for 14 months. The maximum number of persons receiving relief reached 42,075 in September. In 1899-1900 the rains again failed, resulting in famine. An area of 5,241 square miles was affected, the crop outturn being only 31 per cent. of the normal. Relief works were opened in October 1899, the daily average thereon being 254, and were continued till October 1902 with an intermediate break of 5 months. The highest daily average number relieved was 96,190 in May 1900 and the daily average of the gratuitously relieved 28,536. Special relief was also given to weavers in their own craft during the famine. The death-rate in the district was 52·64 per mille. The total number of deaths from all causes on relief work was 1,872, of which 729 were due to dysentery and diarrhoea and 401 to cholera. The percentage proportion of sexes and children among the relief workers of the district was 33 males, 47 females and 20 children. The average wage per worker unit was Re. 0-1-5. In 1900-01, the area affected was the same as in 1899-1900. The highest daily average number in receipt of relief was 35,834, 4,921 being gratuitously relieved. The death-rate during the year was 35·10 per mille. In 1901-02 the total area affected was 1,020 square miles. The daily average attendance on relief works was 5,690 in September 1902. The number in receipt of gratuitous relief was 3,776. The death-rate was 32·99 per mille. The year 1903-04 was unfavourable, but no relief measures were found necessary. In 1904-05 a greater part of the district was affected by the partial failure of crops. Relief works were opened but were subsequently closed for want of workers. In 1905-06 there was an almost total failure of crops and fodder. The area affected was 2,644 square miles and the population 351,000. Test works which were afterwards converted into relief works were started in February 1906, the daily average number of persons thereon being 4,329. The percentage proportion of sexes and children among the relief workers was 34 males, 55 females and 19 children. The year 1907-08 was a year of scarcity. Dole was given to inferior village servants and infirms. On the whole 32,977 units were relieved with an expenditure of Rs. 2,099.

The year 1911-12 was not a year of famine but of scarcity in the eastern division of the district and relief in the form of dole was distributed to the needy persons from October to May. The expenditure on this account was Rs. 14,975-0-6 for relieving 8,334 persons. Similar was the case in 1912-13 with less severity and Rs. 3,500 were spent on distributing the dole. The year 1918-19 was a regular famine year due to want of seasonable rainfall. The famine spread over an area of 3,500 square miles. Relief works were opened and continued for 8 months. The maximum number receiving relief reached 26,696 in May 1919. The percentage of males, females and children respectively on relief works was 28·3, 55·3 and 16·4 and on gratuitous relief 41·5, 31·9 and 26·6. The total expenditure on several heads of famine was 3,93,239-5-0. Scarcity conditions prevailed during the year 1920-21. Six test works were opened and 2,43,746 units were relieved on these test works at a cost of

Rs. 72,509. Dole to needy infirms and inferior village servants was distributed. It afforded relief to 8,52,466 units at a cost of Rs. 1,10,292.

Plague.—The first case of plague occurred in Poona City in January 1897 and the disease soon spread into the district. The total mortality in the district excluding Poona City up to the end of 1921-22 amounted to over 63,000 or 6 per cent. of the total population. The district suffered most in 1899-1900, 1902-03, 1916-17 and 1917-18. The epidemic in Poona City in 1897, 1899, 1906 and 1916-17 were very severe.
