Information Scientist

Gokhale Institute of Politics and Economics (GIPE)

Pune (India)

**On**

**Friday, 05<sup>th</sup> December 2014**

**Venue**

**GIPE Seminar Hall**

---

**Abstract**

There are different types of software packages that can be used use to manage the bibliographic details of information and the documents, like Mendeley, Endnote, Zotero, Refworks, Papers etc. **Mendeley** is a free reference management tool available with desktop version as well as web base version that helps researcher to organize their own library which is accessible at any time anywhere. By organising reference documents in different folders researchers can get access to their library within single click and they can generate bibliography, reference in word format by using mendeley library.

Mendeley can synchronise the collection over several computers so researchers are always up to date with new research; their collections are fully searchable. As it is web based tools it has added facility of social networking like creation group, follow any author or researcher etc.
