Key ■ DHS survey data²⁴ ● INCIEN data⁸⁵ ▲ CDC study ◆ WHO study²⁰ • International Violence Against Women (I.V.A.W.) Study

* Study population: I = all women; II = currently married/partnered women; III = ever-married/partnered women; IV = women with a pregnancy outcome; V = married women – half with pregnancy outcome, half without; VI women who had a partner within the last 12 months.

^a Sample group included women who had never been in a relationship and therefore were not in exposed group.

^b Although sample included all women, rate of abuse is shown for ever-married/partnered women (number not given).

^c Physical or sexual assault.

^d During current relationship.

^e Rate of partner abuse among ever-married/partnered women recalculated from authors' data.

^f Weighted for national representativity.

^g Within the last five years.

^h Includes threats.

ⁱ Since the age of 18.

^j Since the age of 16.

^k Nonrandom sampling methods used.

^l Publication date (field work dates not reported).

[Updated from Helse et al., 1999.]
