MONOGRAPH ON WOOD-CARVING IN SOUTHERN INDIA WITH TWENTY-TWO PLATES.

MADRAS: PRINTED BY THE SUPERINTENDENT, GOVERNMENT PRESS. 1903.
DESCRIPTION OF PLATES.

I—V. Sandal carving, Mysore.

VI. Ivory inlaid door, and top of sandal casket, Mysore.

VII. Carved pillars and door, Mysore palace.

VIII. Carved panels over doors, Mysore palace.

IX, X. Travancore architecture.

XI—XIII. Types of Hindu carving.

XIV, XV. Carved sideboards, Madras School of Arts.

XVI. Copper repoussé panel, and base of sideboard, Madras School of Arts.

XVII—XXII. Wood-carving and copper repoussé work, Madras School of Arts.
FOR the following excellent account of sandal and other wood carving in the Mysore Province I am greatly indebted to Mr. J. E. A. D'Cruz of the Mysore Public Works Department:—

Mysore includes in its rich and varied flora the sandal (Sandalum album: agarwood) and the teak (Tectona grandis) trees. Their importance and value were early recognized, and, in the first arrangements for the conservancy of forests, these woods were reserved, and any wood, except teak and sandal, was allowed to be felled on payment of a small seigniorage. Sandal has been for a long time a State monopoly, and has yielded the largest portion of the forest revenue. The girth of a mature tree varies from 18" to 36", or sometimes attains 40". The tree takes many years to mature. In its colour and marking, which depend greatly on its age and locality, four varieties of the wood are recognised:—bill (white), kempu (red), naga (cobra), and navilu (peacock). The two latter are the best, because they were employed in their own country as carvers and painters in the ornamentation of temples. The best heart-wood is used for carving, and the roots, said to be richest in oil, with the chips and shavings, find their way to Bombay, China, France, Germany, and America. The oil forms the basis of many scents, and is also used medicinally. The wood is highly scented, close-grained and tough, and, from the fineness and evenness of its structure, is capable of the most delicate carving.

The art of sandal-wood carving is confined to a few families, belonging to the Gudigars, in the Sorab and Sagar taluks of the Shimoga district in the north-west corner of the province. There are two or three families in Sagar, and about six in Sorab, which contribute in all about thirty-five artisans at present employed in the craft. The art is also practised by their relations, who found a domicile in Hanavar, Kumpta, Sirsi, Siddapur, Biligi, and Banavasi in the North Canara district. But the work of the latter is said to be by no means so fine as that executed by the artisans of Sorab and Sagar. The artisans of North Canara, however, excel in pitch-work (an allied art) of the most exquisite beauty. They usually make basings—special forehead ornaments, richly inlaid with pearls, and worn by men and women on the occasion of marriage.

The Gudigars are reported to have come originally from Goa, their migration to the towns named above having been occasioned by the attempts of the early Portuguese invaders to convert them forcibly to Christianity. The fact that their original language is Konkani corroborates their reputed Konkanese origin.

They say that the derivation of the term Gudigars is from gudi, a temple, and that they were so called because they were employed in their own country as carvers and painters in the ornamentation of temples. Another possible derivation of the word is from the Sanskrit kuttaka (a carver). They assure us that their fellow castemen are still employed in turning, painting, and other decorative arts at Goa. The Gudigars, in common with the Chitrakaras (ornamenters or decorative artists), claim to be Kshatriyas, and tradition has it that they adopted the profession of carvers, car-builders, or Gudigars “to escape the wrath of Parasa Rama in the sixth incarnation of Vishnu, who vowed to destroy all Kshatriyas.” It may be that, as a once dominant and opulent class, they took to the fine arts as a pastime, and, when times changed, adopted them as a means of livelihood. The sandal-wood carvers are also expert in carving ivory. As the Hindu caste system is connected with the profession followed, it seems possible that the Gudigars of Mysore may be distantly connected with the Kondikars or ivory-carvers of Bengal—Rangapur and Midihiddahid.

The tools employed by the artisans are primitive, and, although of many shapes and sizes, may be classified as follows:—

1. The saw, from the ordinary hand-saw for cutting the log into planks, to a very fine hand fret-saw employed for cutting the teeth of combs. The fret bow-saw, which forms a part of the equipment of carvers generally, is not used.
2. The plane, ordinarily manufactured by the village artisan, for smoothing the surface of the plank to be operated upon, and for planing cornices or mouldings.
3. The mallet: a slip of wood about 9" by 1" by 1".
4. The hone: a rough slab of fine-grained, hard stone, with one face rubbed down, for sharpening tools.
5. The chisel, which is of various forms, viz., (1) the firmer, a flat instrument square, curved, or skew-edged, the last for working in sharp corners; (2) the gouge, or hollow chisel of varying size and
curvature of edge; (3) the engraver. The sizes of the chisels vary from $\frac{1}{4}$ to a width scarcely greater than that of the point of a steel nib.

The tools are made from European umbrella spokes, ramrods, and country steel.

As he squats on the ground in characteristic Indian fashion, the carver wants neither table hold-fasts, hand-screws, nor dogs. He holds down the piece he is carving with one hand, while he carves with the other. At times, if need be, he thinks nothing of enlisting the aid of his toes, to supplement his hands in holding the piece which he is engaged on. He generally places it on a tripod about 1½ square and a foot from the ground, so as to have it sufficiently near his eye, and turns it round in any direction he requires, which he proceeds to.

Having selected his wood, the carver cuts it into slabs or whatever article he

The early improvement in the art of sandal-wood carving in Mysore, which far

The only

The stagnation

For the last century, however, the art may be said to have remainder in statu quo. The stagnation may be accounted for by the following facts:

(1) That to the abundance of sandal-wood at Sorab and Sagar, as an artisan, who constantly works on it, cannot but soon become aware of the possibilities of a wood of its characteristic texture for elaborate and delicate carving;

(2) To the patronage of the early Mysore chieftains or Poligars;

(3) To the object lessons in design, afforded by the beautiful and elaborate stone-carvings in the neighbouring temples of Halebid and Belgavi.

Some, or all of these causes have tended to centralise the art, and make it the exclusive property of the few who practise it at the present day.

The stimulus, which the art receives from time to time at the present day, is from orders from the Government, corporate public bodies, or Mahrattas, for address boxes, cabinets, and other articles, specially ordered for presentation, or for the various fine art exhibitions, for which high prices are paid. But it is believed that, although the encouragement thus offered tends to increased excellence in the technique of the art, it has no effect in spreading a knowledge of it, or in calling more craftsmen into existence, as the orders are rarely so large as to be beyond the producing capabilities of the few who are at present engaged in the craft. In conversation with the workmen imported from Sorab and Sagar for work in the palace now being
MONOGRAPH ON WOOD-CARVING IN SOUTHERN INDIA.

Manufactured for the native market mantapas, toys, articles turned out for Europeans are album in public procession. A gold medal awarded, at the recent Delhi Art Exhibition, for a magnificent sandal-wood casket ornamented with panels representing hunting scenes.

The following extract from a note by Colonel C. Bowen, R.E., contains valuable information on the subject:

"In India, as elsewhere, the art instinct of the people first found expression in the decoration of its temples; and, when the instinct grew into the desire for the decoration of dwellings or of articles in ordinary use, the figures, columns, and carvings of the temples were naturally adopted for the purposes, altogether outside of religion. So we find, from the beginning, the sandal-wood carvers followed the models before them on the walls of their shrines. Unfortunately, after the architects and sculptors who elaborated the walls of Belgavi and Halebeld had disappeared, a period of distinct art decadence appears to have set in, and has lasted down to the present day. No original artist arose to treat the subjects of the Hindu Pantheon with entire originality, or to effect improvements on the designs of his predecessors; and the wood-carvers have slavishly adhered to the same original models with the result of establishing in their work a purely conventional style. In every article that we have seen, unless in the few cases when the copy of a European picture or print has been attempted, there is to be found the same ever recurring type of Hindu god or demon, of flower and foliage, of tracery and border. There may be diversity in the arrangement or juxtaposition of each conventional part, but the art impression conveyed on the mind by one carved article, whatever it be, is exactly that conveyed by another.

"In medieval Christian art we find that pictorial teachings in painting and sculpture were the medium of propagating a knowledge of Christian facts and doctrines, and of profane and romantic history. A traditional way of treating these subjects was adhered to by artists of all kinds, and the same mode of treatment was maintained for centuries. Yet we find that the medieval artists were not mere slavish copyists, and, though they retained the traditional elements of the subjects and the conventional arrangement of them with curious fidelity, the style of art varied from time to time, and the artist told his story in the art vernacular of his own day. He worked very freely in the details of his picture, translating the customs and architecture, and..."
other accessories into the fashions of his own time. In ancient Greece the same course had obtained, and it produced the greatest artists and the greatest works of art. Between these and eastern art, as embodied at least in Mysore architecture, sculpture, and carving, a parallel may be drawn as regards the adoption of traditional subjects and modes of treatment, but the parallel stops abruptly when we come to variety in expression and to modifications or improvements of the original examples. Centuries ago, in Mysore, a few beautiful types were created; for a time perhaps slight variations on these were introduced; but stagnation followed, and artists in stone and wood degenerated rapidly into mere copyists, and copyists pure and simple they have remained to the present day."

The following extracts from Mr. L. Rice's Mysore Gazetteer may also be appropriately quoted:

"The designs with which the Gudigars entirely cover the boxes, desks and other articles made, are of an extremely involved and elaborate pattern, consisting for the most part of intricate interlacing foliage and scroll work, completely enveloping medallions containing the representation of some Hindu deity or subject of mythology, and here and there relieved by the introduction of animal forms. The details, though in themselves often highly incongruous, are grouped and blended with a skill that seems to be instinctive in the East, and form an exceedingly rich and appropriate ornamentation, decidedly oriental in style, which leaves not the smallest portion of the surface of the wood untouched. The material is hard, and the minuteness of the work demands the utmost care and patience. Hence the carving of a desk or cabinet involves a labour of many months, and the artists are said to lose their eyesight at a comparatively early age. European designs they imitate to perfection." And again: "The article of their (the Gudigars') manufacture chiefly in demand are boxes, caskets, and cabinets. These are completely covered with minute and complicated scroll-work, interspersed with figures from the Hindu Pantheon; the general effect of the profuse detail being extremely rich. The carving of Sorab is considered superior to that of Bombay or Canton, and, being a very tedious process requiring great care, is expensive. The Gudigars will imitate admirably any designs that may be furnished them. Boards for album covers, plates from Jorrook's Hunt, and cabinets surrounded with figures have thus been produced for European gentlemen with great success."

It will be apparent from the illustrations alone that the Gudigars, though limited in the range of his subjects, is a true artist in the technique of his art, whether it be in surface carving, cameo relief, intaglio or incised work, high relief, or deep under-cutting, in pattern work, scroll, foliage or figurini, and in minutiae of detail and delicate finish. He is also able to execute from a photograph an image, which bears a very fair likeness to the original.

Although much has been done to improve the art by making the Gudigars contribute specimens of their work to exhibitions, thereby enlisting the amour propre of the artist, and by paying well for work of special excellence, it appears that much can still be done both for the art and industry. In connection with the construction of the new palace at Mysore, an endeavour is being made to improve their ideas of human proportions and features by means of clay models executed by men trained in the School of Art. The art instinct of the Gudigars at once tells them by comparison where their old and grotesque ideals of face and form are faulty, but the results are not very satisfactory. The characteristic oriental expression is lost, and a better drawn but insipid mask is substituted. It seems possible that, if photographs of Indian home life and scenery were put before them, a great deal more of reality and expression would be imported to their carvings, apart from the increased range in design. Photographs also of pure Indian design from temples in other parts of Southern India might tend to vary their ornamentation and beautiful scroll-work.

The children of the Gudigars, who are early taught to draw their beautiful scroll-work and designs on a slate, may be educated regularly in free-hand drawing and sketching, and, without departing from the purely oriental style, be made capable of a greater variety and a wider range of subjects in the art.

While the delicacy and costliness of the wood render any extension of its use for industrial purposes impracticable, the same qualities make it peculiarly suitable for the production of works of art. Any improvement, then, in the position of the workmen or their craft will be due to the opening up of new markets for work of the highest artistic value. These would necessarily be sought for in those great cities of Europe and America, where art is highly valued and rewarded. But, if this object is to be attained, Government assistance will be required for some years to come.

Turning now to teak and other wood-carvings, Mysore teak is locally regarded as stronger than, though not so highly developed as the Burma wood, and its superiority in strength is usually attributed to its close grain, and to the presence of oil in its pores, which is driven out of Burma teak in the process of seasoning. It is also supposed to be better suited for carved work, as it responds better than the Burma wood to the tool of the carver.
The best specimens of the ancient teak carvings of Mysore were consumed in the fire of February 1897, which reduced to ashes the frontage and most ornate portion of the old palace, with the valuable relics of the ancient art of Mysore. What can now be seen of the art in Mysore, as in many other towns of Southern India, are acro reliefs, or flat patterns on the lintels and sides of doors, and on columns in Hindu houses, and specimens of figurini and scroll-work on Hindu temple cars which are richly carved with swamis and grotesque figures. Existing photographs of specimens of ancient carvings illustrate how effective and pleasing wood-carving can be made without the labour involved in the modern intricacy of design, as instanced in the beautiful door-frames and panels which have been recently executed for the new palace in course of erection. In the specimens of the old school, consistent purity of oriental design is noticeable, with all the grotesqueness of features, extravagance of pose, and disproportion of the figure; but the work is full of passionate expression. In the modern specimens of the art, by the native artisans from the Madras School of Arts, and from the well-known cabinet makers, Messrs. Deschamp & Co. and others in Madras, there is a decided improvement in beauty of face, regularity of form, and natural pose of figure, with a distinct instigation of western style in the scroll, foliage, and figurini, suggestive of a European rendering of eastern design.

The Mysore carver, it is satisfactory to note, still shows a decidedly oriental style and taste in his design and work, although he is fast learning from the Madras artisans the more advanced technique and better finish of the latter.

The ordinary rate of carving is 10 annas a square inch.

J. E. A. D'CRUZ.

It is stated by the editor of the South Canara Manual that the more well-to-do classes of the Bunts occupy substantial houses on their estates, in many of which there is much fine wood-work, and, in some cases, the pillars in the porches and verandahs, and the door-ways, are elaborately carved. And the author of an article in the Calcutta Review on the Bants of the Tulu, writing that "the wood-work of their houses is often richly and artistically carved. Canara, with its great mountain forests, yielding an abundance of ivory and a wealth of timbers that readily adapt themselves to the most delicate needs of the carver, was at one time the home of the most skilful and artistic wood-carvers, whose descendants in all probability are the Gudigars, who at the present day are found scattered in Goa, Honavar, Mysore, and some other tracts in south-western India. These hereditary carvers had a shastram or science of their own, which, with wonderful exactitude, and the keenest botanical knowledge, defined and described the various kinds of wood suitable for rough or delicate carving; the age, season, and locality in which these woods ought to be felled, those species which require to be used alone, and those that would answer when used conjointly with other varieties, etc."

At Mudabidure, or Mudbidri, in the ruined palace of the Chantor, or local chief who follows the Jain creed, are some splendid carved wooden pillars, two of which bear representations of the pancha-nariturgage, i.e., the horse composed of five women. These are fantastic animals, which are formed by the bodies of a number of shepherdesses for the amusement of their lord Krishna. Writing concerning the Jain temple at Mudbidri, the doors of which are most elaborately carved, Fergusson states * that the architecture of the Jain temples in Tuluva is neither the Dravidian style of the south nor that of Northern India, and indeed is not known to exist anywhere else in India proper, but recurs with all its peculiarities in Nepal. The reverse slopes of the eaves above the verandahs is the feature which specially resembles the style common in Nepal. He describes the exterior of the temples as much plainer than Hindu temples usually are, and he considers that the sloping roofs of the

* "History of Indian Architecture."
Monograph on Wood-Carving in Southern India.

Verandahs are so evidently wooden that the style itself cannot be far removed from a wooden original. In support of this view he mentions that, in many places, on the west coast below the ghauts, the temples are still wholly constructed in wood without any admixture of stone, and almost all the features of the Mudbidri temples may be found in wood at the present day. With regard to the interiors of the temples, he remarks that no two pillars seem alike, and many are ornamented to an extent that may seem almost fantastic, and this again is an indication of their recent descent from a wooden original, as long habit of using stone would have sobered their forms. In this connection Mr. Logan states that the buildings of the kind in Malabar are invariably built of wood in all their characteristic portions, and points out that the style of architecture noted by Fergusson marks out better than anything else the limits of the ancient kingdom of Chera, for the style prevails all along the west coast country from the limits of Cusara to Cape Comorin, having been adopted even for Muhammadan mosques.

Typical examples of the style of architecture met with abundantly in Travancore, are illustrated, from negatives kindly supplied by Mr. Narayana Iyer, in plates IX and X.

Tirupati wood-carving.—An extensive industry is carried on at Tirupati in the North Aroot district and the adjacent villages by members of the carpenter caste, Balijas, Muhammadans, and others. The wood which is most used is red sanders (Pterocarpus santalinus), which is obtained from the neighbouring hills and the forests of the Veduktagiri and Kâlahasti zamindaris. It cannot, under the Forest Act, be removed from the reserved areas without a license fee. It is sold at Tirupati for Rs. 25 to Rs. 50 per ton. The wood-carvers say that they cannot get logs of more than a foot in diameter, as logs of larger size are taken by merchants to Madras and other places, for making house-posts. "Large sums are often given for the wood by rich native gentlemen, who take a pride in having their verandah posts prettily carved and ornamented." (Gamble.) The majority of the carvers get branches only a few inches in diameter, which are sold at the rate of Rs. 1 per head-load. Owing to the increase in the price of red sanders wood and the difficulty in procuring it, the carvers are now using a white wood called repalla or pala (Wrightia tinctoria) for carving figures.

The industry is an old-established one, and has made considerable progress in recent years both as regards the quantity and quality of the work turned out. A good carver can earn a rupee per diem. Thirty years ago there were only two or three shops at Tirupati where the carvings were sold, whereas, at the present day, there are more than a dozen shops, and, in addition, persons from the villages hawk them about the streets.

The original model was the figure of Venkateswara-perumal, which is worshipped in the temple on the Tirupati hill. Old specimens show that the artisans did not pay much attention to the back of the figures, but were satisfied with carving the front only. In recent years they have begun to pay more attention to the external anatomy, and to give a better finish to their work, which though rough, is executed in a bold free style.

Figures of swânis (deities), men, mythological animals, elephants, and miniature temple cars with flying cherubs and winged horses, are most abundantly carved; but domestic utensils in the shape of chombus, kinnis, cups, plates, etc., are turned on the lathe. The largest figures are about twenty inches high, and cost from Rs. 12 to Rs. 15 per pair. Large vessels are sometimes made of the wood of vépi or áhamaram (Hardwickia binata), which resembles red sanders wood, but is more liable to crack. This timber is worked as soon as it is felled, and, as it is heavy, men go to the forest and set up a temporary workshop there. The price of vépi is only about Rs. 12 per ton, and ordinary purchasers cannot distinguish it from red sanders wood.

The carvers sell their wares to shop-keepers, who advance money to them, and supply them with timber. The carved figures are sold to pilgrims and others who visit Tirupati, and are also taken to Conjeeveram, Madura, and other places, at times when important temple festivals are being celebrated. Some petty traders sell their carvings at railway stations, e.g., Rânejunga and Arkonam. In recent years some of the carvers have been patronised by the railway employés, who order the most expensive articles, to send to friends in various parts of the Presidency, and even to Europe.

Vessels made of red-wood carry no pollution, and can be used by women during the menstrual period, and taken back to the house without any purification ceremony. For the same reason, Sanyásis (ascetics) use such vessels for doing púja. Carved human figures, male and female, represented in a state of nudity, are purchased by Hindus. Those who are childless perform ceremonies, e.g., ear-boring, as if they were their children, in the belief that the performance thereof will bring issue to them. Or, if there are grown-up boys and girls in a family who remain unmarried, the parents celebrate the marriage ceremony between a pair of the figurines, in the hope that the marriage of their children will speedily follow. They dress

* "Manual of Malabar."
up the dolls with clothing and ornaments, and go through all the details of a real marriage. Some there are who have spent as much money on a doll’s marriage as on a marriage in real life.

Tirupati seems to have been a centre, where wood-carving for architectural purposes flourished, and even obscure villages bear witness to the fact that the industry was well patronised by bygone days. Old houses, of even comparatively poor people, possess some carvings, e.g., on the door-frames, lintel, etc. Quite recently a native gentleman at Tirupati purchased one of the oldest houses in the town, which possessed many carved pillars, architraves, etc. He pulled down the house, and constructed a new one, which possessed no carvings, but all the pillars, brackets, etc., were made of plain Burma teak painted blue. The old carvings were thrown away, and heaped up in the back-yard. In the construction of houses, the lintel of the main doorway is invariably carved, and in the centre there may be a lotus, figure of Lakshmi, Ganésha, or other household god.

Cocoanut carving was introduced into the Cannanore Jail as an industry about 1888. At first Burmese prisoners were set to the work, and, in course of time, the art was acquired by prisoners of other nationalities, principally the Muhammadan Mappilas of Malabar. Large double cocoanuts (coco-de-mer) are richly carved with Burmese figures and peacocks, and supported on elephants carved in ebony. Cocoanuts intended for sugar-basins, crest sets, teapots, etc., are engraved on panels bearing richly carved figures of peacocks and Burmese men and women. At Karkal, in South Canara, young cocoanuts are, in like manner, neatly carved with conventional, floral, and mythological designs. And in Travancore very spirited and well executed designs are carved in cocoanut shells. Concerning cocoanut carving in Travancore, Mr. Narayana Iyer, Superintendent of the Trivandrum School of Arts, writes as follows:—“The Malayalam proverb, known throughout Malabar, ‘to carry a cocoanut shell,’ means to beg, this shall being the vessel commonly used by beggars for the receipt of alms. The fruit of the bilva tree (holi: Myle Marmelos) used to be ornamented with elaborate carvings, and mounted with silver and gold, for the purpose of keeping the holy ashes by Sivaites. Such carved fruits are still found in many houses, and preserved as sacred. The cocoanut appears to have attained its religious importance from an incident in the Padmanabha-swami temple at Trivandrum, which took place, it is said, nearly 900 years ago. A Namboori Sanyasi, by name Vilwamangalathu Swámi, who was greatly revered throughout Malabar, used a half cocoanut shell, in the shape of a cup, for presenting offerings to the deity. This very cup is said to be still used in the temple, mounted in gold and set with precious stones, in honour of the Sanyasi. Since the foregoing incident, the cocoanut shell has received the title of Padmanabha-swamy's vessel. The shell must have been originally scraped and polished for domestic and culinary purposes. Ornamentation by carving and piercing are of more recent origin. It is now used for the manufacture of bangles, watch-chains, sticks, and other articles. Small shells are used for carving with various artistic devices. The shell is tough, but requires great care and delicacy in carving, or the fine details are liable to crumble. The colour of the shell, when polished, is a fine dark brown, which becomes darker with age. The tender shell, which has an ivory hue at first, is sometimes used for carving, but it becomes yellowish after a time.”

A modest but interesting industry is carried on at Udayagiri in the Nellore district, concerning which the Rev. F. W. Stait writes as follows:—“In Udayagiri, a village of some note before the days of British rule, there lives an old Muhammadan, who twenty-five years ago used his knife with unusual skill in the manufacture of wooden sandals. As he worked he thought, and from his deliberations a wider sphere opened before him, Why not prepare wooden articles that would increase his income? So he tried his hand on the shaping of spoons and forks, watching for new ideas, and carefully copying any new design that he came in contact with. For years he and his son toiled on, barely making ends meet. But, as his skill increased, his circle of customers grew wider and wider. Dainty boxes in delicate fretwork were carved out of solid blocks. Paper-knives in many designs were prepared. Card trays, the work in which seemed more like fine lace than mere wood-carving, were put upon the market. I interested myself in the work of one who showed such a wonderful natural talent, and, through my influence, the articles were introduced into several business centres. At the present time Mohammed Ismail Usuff Nanobai and five members of his family are kept constantly at work, and, even with all their efforts, are unable to meet the demand. The most interesting point in the history of this little industry is the fact that it is all the outcome of personal talent and application, for not only did Nanobai carry on the work and design the articles, but he also made his own tools and instruments as the need unfolded itself. He is unable to make the boxes, which he turns out, during the hot months, as the wood cracks under the knife.”

To Mr. Alfred Chatterton I am indebted for the following note on wood-carving at the Madras School of Arts and Madura Technical Institute.
This institution owes its origin to the disinterested efforts of the late Dr. Alexander Hunter, M.D., who in 1850 established, at his own expense, a school for the promotion and encouragement of industrial arts in the Presidency. The object was to arrest the decay of indigenous arts, and to introduce new industries where the need for such was keenly felt. After a short time the school was taken over by Government, and during the fifty years of its existence as a Government institution, it has done much to achieve the objects with which it was originally founded.

Wood-carving was first started in 1877 in a desultory kind of way, and some years later, a regular wood-carving class was established with one Meenakahi Asri of Ramnad as the maistry (foreman). He was succeeded by his son R. Kalimuthu Asri who is still in charge of the class, so that the father and son, between them, are largely responsible for the nature of the influence which this school has had upon wood-carving in the south of India. Although, at the outset, the class was not very popular, yet, owing to the demand for carved furniture among Europeans being greater than the supply, the pupils of the school were able to obtain good wages, and its popularity, in consequence, soon increased. About the same time, a metal-worker, Ramaswamy Stapathy by name, was also employed in the school to teach repousse work, in copper and silver, of the type which is largely employed in the ornamentation of the vahams which form such an important feature in all the religious ceremonies connected with the great Dravidian temples of Southern India. This repousse work is also found on the doors of temples, on the dwijastambams or flagstaffs and on the walls of the innermost shrines, the plates being usually made of copper plated with silver or gold, or, in some instances, of pure silver.

Throughout the whole period of its existence the wood-carving department of the school has been devoted to the ornamentation of European furniture. The frame work or structure is that of the modern cabinet maker, but the ornamental details are adapted from Dravidian models. Ebony and sandalwood-carving have always been done, to some extent, under the superintendence of native experts in this particular line. But the great bulk of the work done in the school has been in teakwood, and blackwood or 'rosewood' (Dalbergia latifolia), more particularly the latter. Copper repousse panels in blackwood frames are an exceedingly effective combination, and have been largely employed in the furniture manufactured by the school during the last fifteen years. It is an unfortunate fact that, of the earlier work done in the school, but few photographs or drawings have been preserved, and all the illustrations are of work done during the last two years, and the majority from the specimens of wood-carving specially prepared for the Delhi Durbar Exhibition. The general features of the style of wood-carving are directly copied from the stone temples of Southern India. These latter are almost entirely constructed of crystalline rock, which is obtained from the quarries in large slabs or long pillars by the burning process. Such material lends itself readily to a type of construction which is still more easily carried out with wood, so that there is nothing incongruous in the reproduction in wood of the stone carvings of Dravidian temples. The origin of this style of architecture is lost in the mists of antiquity, but it is known that at a very early date the principal features had become crystallized in a series of rules for construction, contained in a set of treatises collectively known as the Silpa Sastras. Of these books there were apparently thirty-two principal, and as many subordinate. The majority of these treatises have disappeared, but from such as still remained, Ram Rax, a native of Tanjore, produced a valuable essay on the architecture of the Hindus, which was published by the Royal Asiatic Society more than seventy years ago. The Hindu orders consist of four principal parts, viz., (1) the upapitha or pedestal; (2) the abhithana or base; (3) the sthamba or pillar; and (4) the pratara or entablature. Of pedestals there are three kinds: the first is called Vedi Bhadra, the second Prati Bhadra, and the third Mancha Bhadra. Each of these is again divided into four sorts, making, in all, twelve, each differing from the other in its formation and ornamentation. Of bases no less than sixty-four are enumerated in the Mamsara; whilst of pillars there are seven kinds, but the entablature of the Indian order admits of but little variation. Hindu architecture reaches its highest flights in the construction of vimanas or pyramidal temples, and in gopurams or gateways consisting of from one to sixteen storeys, each storey being a complete representation of a Hindu order. Elaborate rules have been framed, regulating the proportions of the various parts. On Plate XI are given typical sketches of pedestals modified to suit wood designs, with the names of the various mouldings. Plate XII, Figure 1, is a sketch of a mantapam showing two pillars of typical design. Figure 2 is the elevation of a wooden vimana, showing how readily the stone carving of Southern India lends itself to reproduction in wood. Plate XIII contains sketches of bases and entablatures which find frequent application in the wood work designs made in the School of Arts. Plates XIV and XV are from photographs of two large side-boards recently constructed at the School of Arts. The lower portion corresponds to the pedestal, the frame work upon which it rests being the upans, the cupboards, the cantha or neck, and the mouldings round the side-
board to the pattia or capota. In large structures it is usual to sub-divide cañtha into bays by the insertion of pilasters carved into the form of yalis or rearing horses, and advantage has been taken of this to break up the elevation of the bays to form the cupboards and recesses. The upper part of the sideboard in Plate XV is derived from a mantapam with a flush top, and that on Plate XIV from a vimana of a single storey. The main feature of the latter is a central vimana with a subsidiary one on either side. The bases of the pillars on Plate XIV are relieved with carvings of Gañésha, Natárđá, Mahakali and Krishna. The central panel of copper repoussé work represents Subrahmanya on his peacock. In the sideboard represented on Plate XV the figures are Sankara, Narayan, Bráhma, and Parthasarathy. In the central vimana Siva, the lord of destruction, rides on his bull in the place of honour, attended on one side by Gañésha astride a bandicoot, and on the other by Subrahmanya mounted on a peacock. In the smaller vimánas the presiding deity is Sri Ráma. The central panel is similar to that on Plate XIII with Vishnu, the protector of the universe, riding on the winged Garuda.

As already stated there are seven orders of pillars, varying from six to twelve diameters in height, from base to capital inclusive. The pillars may be of any shape, circular, square, pentagonal, hexagonal, and so forth. The base is generally square, with sometimes a kalása or water-pot. A nágabandam surmounts this, and carries the pillar, the middle portion of which as a simple ornament called the malaikattu or garland band, or a more ornamental kalása with mango leaves and a cocoanut on it. Surmounting the pillar, and carrying the entablature, is the capital decorated with a series of mouldings similar to those used on the pedestals. In Plate XVII, is a photograph of a lampstand in blackwood, which is a fair example of how an article of modern furniture has been derived from the Hindu orders. The lower part with the projecting yalis corresponds to the entablature, and carries the column which corresponds to the base and pillar, and is surmounted by a small table corresponding to the entablature. In Plate XXI is another lampstand, the base being a yali with mouth turned upwards, from which projects a pillar carrying an entablature. In a modified form this design may be seen in some of the aghandams in temples. In Plate XIX are photographs of a sideboard and cabinet of European form, but with all the ornamental details derived from Dravidian architecture. In Plates XVIII and XX are screens, the framework being of black wood elaborately carved, and the panels of copper repoussé work.

Madura is a noted centre of indigenous art handicraft, which has survived from the days when the town was the chief city of the south of India. Then craftsmen were attracted from far and near, and each brought with him his own peculiar style. In process of time these various styles have become merged into what is now a blend characteristic of the town. This is peculiarly so with the wood-carving, which is celebrated for its boldness of form, due to the influence of the stone-carvers, for its delicate tracery on flat surfaces probably first introduced by men from the Bombay side, for the fine carving of panels decorated with scenes from the legend of the Mháháratha, and for the excellent modelling of the swamis, which suggests the influence of sandalwood carvers from Mysore and Western India. At the present day the best work is done in the Madura Technical School, an institution maintained by the District Board, which has done much to revive decadent art industries, and, by finding new markets for the productions of the skilled art workmen, has encouraged them to maintain the old high standard of work. Domestic shrines, carved mantapams, sideboards and small tables are the articles now chiefly made in the school, and the majority of them are sold to visitors.

EDGAR THURSTON.
