DEPARTMENT OF FOOD

The Food Statistics of India

PRINTED BY THE MANAGER GOVERNMENT OF INDIA PRESS, NEW DELHI

PUBLISHED BY THE MANAGER OF PUBLICATIONS, DELHI.

1946.

Price Rs. 5 annas 6 or 8s h, 6d.

## FOREWORD

This compilation of "Indian Food Statistics" has been prepared under the direction of Dr. V.K.R.V. Rao, M.A., Ph. D. (Cantab.), Planning Adviser to the Food Department, to meet an obvious need. This need has been expressed by Legislators and Public men as well as by officials concerned with Food administration. I hope that the publication will prove of assistance to all who have the welfare of the Indian peoples at heart as well as to those directly concerned in food administration.

R. H. HUTCHINGS,

*Secretary, Department of Food,  
Government of India.*

*Dated the 25th April 1946.*

## STATEMENTS

	Page
1. Statement showing population of provinces and states in 1931, 1941 and 1945.	10.
2. Statement showing number and date of issue of all-India forecasts of various crops	11
3. Statement showing time of sowing and harvesting of rice in different provinces and major states	12
4. Statement showing time of sowing and harvesting of wheat, barley and ragi in different provinces and major states	12
5. Statement showing time of sowing and harvesting of jowar, bajra and maize in different provinces and major states	13
6. Statement showing time of sowing and harvesting of gram and pulses in different provinces and major states	14
7. Statement showing normal temperature, rainfall and humidity in some important centres in various provinces and states	15
8. Statement showing classification of area—All-India	18
9. Statement showing acreage under different crops in India for the years 1931-32 to 1942-43	20
10. Statement showing average acreage under different crops in various provinces and states for the 3 years ending 1933-34	22
11. Statement showing average acreage under different crops in various provinces and states for the 3 years ending 1939-40	23
12. Statement showing acreage under different crops in various provinces and states for the year 1942-43	24
13. Statement showing acreage under different cereals, pulses and other food crops in India during the years 1931-32 to 1943-44	26
14. Statement showing yield of different cereals, pulses and other food crops in India during the years 1931-32 to 1943-44	29
15. Statement showing acreage under rice in different provinces and states during the years 1931-32 to 1944-45	30
16. Statement showing yield of rice in different provinces and states during the years 1931-32 to 1944-45	32
17. Statement showing acreage under wheat in different provinces and states during the years 1931-32 to 1944-45	34
18. Statement showing yield of wheat in different provinces and states during the years 1931-32 to 1944-45	38
19. Statement showing acreage under jowar in different provinces and states during the years 1931-32 to 1944-45	40
20. Statement showing yield of jowar in different provinces and states during the years 1931-32 to 1944-45	42
21. Statement showing acreage under bajra in different provinces and states during the years 1931-32 to 1944-45	45
22. Statement showing yield of bajra in different provinces and states during the years 1931-32 to 1944-45	47
23. Statement showing acreage under maize in different provinces and states during the years 1931-32 to 1944-45	49
24. Statement showing yield of maize in different provinces and states during the years 1931-32 to 1944-45	52
25. Statement showing acreage under barley in different provinces and states during the years 1931-32 to 1944-45	54
26. Statement showing yield of barley in different provinces and states during the years 1931-32 to 1944-45	57
27. Statement showing acreage under ragi in different provinces and states during the years 1931-32 to 1943-44	58
28. Statement showing yield of ragi in different provinces and states during the years 1931-32 to 1943-44	59
29. Statement showing acreage under small millets in different provinces and states during the years 1931-32 to 1943-44	60
30. Statement showing yield of small millets in different provinces and states during the years 1931-32 to 1943-44	61
31. Statement showing acreage under gram in different provinces and states during the years 1931-32 to 1944-45	62

	Page
[ 32. Statement showing yield of gram in different provinces and states during the years 1931-32 to 1944-45 ] . . . . .	63
33. Statement showing acreage under different pulses in different provinces and states during the years 1931-32 to 1943-44 . . . . .	64
34. Statement showing yield of different pulses in different provinces and states during the years 1931-32 to 1943-44. . . . .	65
35. Statement showing acreage and yield of different cereals which are published by the Director of Commercial Intelligence and Statistics and those for the non-reporting areas specially collected by Food Department . . . . .	66
36. Statement showing actual yield per acre of rice in different producing areas during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre . . . . .	67
37. Statement showing actual yield per acre of wheat in different producing areas during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre . . . . .	69
38. Statement showing actual yield per acre of jowar in different producing areas during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre . . . . .	71
39. Statement showing actual yield per acre of bajra in different producing areas during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre . . . . .	72
40. Statement showing actual yield per acre of maize in different producing areas during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre . . . . .	74
41. Statement showing actual yield per acre of barley in different producing areas during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre . . . . .	75
42. Statement showing actual yield per acre of gram in different producing areas during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre . . . . .	78
43. Statement showing imports of different foodgrains into India by sea through maritime provinces and maritime states of Kathiawar and Travancore and through the Land Frontier Routes during the years 1931-32 to 1943-44 . . . . .	79
44. Statement showing exports of different foodgrains from India by sea through maritime provinces and maritime states of Kathiawar and Travancore and through the Land Frontier Routes during the years 1931-32 to 1943-44 . . . . .	81
45. Statement showing net imports or exports of different foodgrains into or from India by sea through maritime provinces and maritime states of Kathiawar and Travancore and through the Land Frontier Routes during the years 1931-32 to 1943-44 . . . . .	83
46. Statement showing imports of different foodstuffs into India by sea through maritime provinces and maritime states of Kathiawar and Travancore and through the Land Frontier Routes during the years 1931-32 to 1943-44 . . . . .	85
47. Statement showing exports of different foodstuffs from India by sea through maritime provinces and maritime states of Kathiawar and Travancore and through the Land Frontier Routes during the years 1931-32 to 1943-44 . . . . .	87
48. Statement showing net imports or exports of different foodstuffs into or from India by sea through maritime provinces and maritime states of Kathiawar and Travancore and through the Land Frontier Routes during the years 1931-32 to 1943-44 . . . . .	89
49. Statement showing imports and exports of paddy by rail and river into and from different trade blocks of India . . . . .	91
50. Statement showing imports and exports of rice by rail and river into and from different trade blocks of India . . . . .	92
51. Statement showing imports and exports of wheat by rail and river into and from different trade blocks of India . . . . .	94
52. Statement showing imports and exports of wheat flour by rail and river into and from different trade blocks of India . . . . .	95
53. Statement showing imports and exports of jowar and bajra by rail and river into and from different trade blocks of India . . . . .	96
54. Statement showing imports and exports of gram by rail and river into and from different trade blocks of India . . . . .	96
55. Statement showing imports and exports of other foodgrains and pulse by rail and river into and from different trade blocks of India . . . . .	97

	Page
56. Statement showing imports and exports of groundnuts by rail and river into and from different trade blocks of India . . . . .	98
57. Statement showing imports and exports of rape and mustard by rail and river into and from differert trade blocks of India . . . . .	99
58. Statement showing imports and exports of til or jinjili by rail and river into and from different trade blocks of India . . . . .	100
59. Statement showing imports and exports of cotton seed by rail and river into and from different trade blocks of India . . . . .	101
60. Statement showing imports and exports of castor seed by rail and river into and from different trade blocks of India . . . . .	102
61. Statement showing imports and exports of linseed by rail and river into and from different trade blocks of India . . . . .	103
62. Statement showing imports and exports of vegetable oils by rail and river into and from different trade blocks of India . . . . .	104
63. Statement showing imports and exports of oilcakes by rail and river into and from different trade blocks of India . . . . .	105
64. Statement showing imports and exports of ghee by rail and river into and from different trade blocks of India . . . . .	106
65. Statement showing imports and exports of sugar by rail and river into and from different trade blocks of India . . . . .	107
66. Statement showing imports and exports of gur by rail and river into and from different trade blocks of India . . . . .	108
67. Statement showing imports and exports of tea by rail and river into and from different trade blocks of India . . . . .	109
68. Statement showing imports and exports of salt by rail and river into and from different trade blocks of India . . . . .	110
69. Statement showing production net imports or exports, total available supplies and per adult available supplies of cereals in India . . . . .	111
70. Stafement showing geographical areas covered by the figures of yield classified by trade blocks and for those for which information is not available . . . . .	113
71. Statement showing production, net imports or exports, total available supplies and per adult available supplies of rice in different trade blocks of India . . . . .	118
72. Statement showing production net imports or exports, total available supplies and per adult available supplies of wheat in different trade blocks of India . . . . .	123
73. Statement showing producior, net imports or exports, total available supplies and per adult available supplies of jowar and bajra in different trade blocks of India . . . . .	128
74. Statement showing production, total available supplies and per adult available supplies of maize in different trade blocks of India . . . . .	129
75. Statement showing production, total available supplies and per adult available supplies of barley in different trade blocks of India . . . . .	135
76. Statement showing production, total available supplies and per adult available supplies of ragi in some important provinces and states . . . . .	135
77. Statement showing production, total available supplies and per adult available supplies of small millets in some important provinces and states . . . . .	136
78. Statement showing production, net imports or exports, total available supplies and per adult available supplies of all cereals in different trade blocks of India . . . . .	136
79. Statement showing harvest prices of different foodgrains in various provinces of India during the years 1931-32 to 1943-44 . . . . .	139
80. Statement showing annual average wholesale prices of different foodgrains in important centres for the years 1938-39 to 1943-44 . . . . .	145
81. Statement showing annual average retail prices of different foodgrains in important centres for the years 1938-39 to 1943-44 . . . . .	146
82. Statement showing Economic Adviser's Index Number of wholesale prices of selected foodgrains . . . . .	150
83. Basic Plan—rice-statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1942-43 and 1943-44 . . . . .	152

	Page
84. Basic Plan—wheat and wheat products—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1942-43 and 1943-44 . . . . .	154
85. Basic Plan—Millets—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1942-43 and 1943-44 . . . . .	155
86. Basic Plan—Maize—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1942-43 and 1943-44 . . . . .	156
87. Basic Plan—Gram—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1942-43 and 1943-44 . . . . .	157
88. Basic Plan—Rice—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1944-45 . . . . .	158
89. Basic Plan—Wheat—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1944-45 . . . . .	160
90. Basic Plan—Millets—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1944-45 . . . . .	162
91. Basic Plan—Maize—statement showing declared surpluses or deficits, quantity allotted from or to different provinces and states during 1944-45 . . . . .	163
92. Statement showing size of rationed cereals and sugar in different fully rationed towns and cities of various provinces and states (The position is as on 31st March 1945) . . . . .	164
93. Statement showing the latest position of rationing (as on 31st March 1945) in fully rationed cities and towns with reference to enumerated population, actual offtake, standard requirement, <i>per capita</i> consumption, etc. . . . .	166
94. Statement showing production and utilization of milk in different provinces and states . . . . .	167
95. Statement showing production of sugar in different provinces and states during the years 1931-32 to 1943-44 . . . . .	168
96. Statement showing production of salt in different provinces and states during the years 1932-33 to 1943-44 . . . . .	169
97. Statement showing production of different varieties of fruits and vegetables in India . . . . .	169
98. Statement showing production of different wheat products in India during the years 1932-33 to 1943-44 . . . . .	170
99. Statement showing bovine and ovine population in different provinces and states as per 1940 census . . . . .	171
100. Statement showing number of poultry and production of eggs in different provinces and states . . . . .	173
101. Statement showing districtwise distribution of rice mills in different provinces and states during the year 1943 . . . . .	175
102. Statement showing districtwise distribution of flour mills in different provinces and states during the year 1943 . . . . .	177
103. Statement showing food values of principal foodgrains . . . . .	179
104. Statement showing distribution and annual output of vegetable ghee factories of India in 1945 . . . . .	180
105. Statement showing distribution and estimated annual output of factories connected with manufacture of different processed foodstuffs in various parts of India . . . . .	181
106. Statement showing storage accommodation available and under construction in different provinces and states of India . . . . .	182

## LIST OF MAPS, CHARTS AND DIAGRAMS.

## PREFACE

Agricultural statistics in India cover acreage, estimated yield and harvest prices. There are three official publications dealing with the subject which are issued every year; two of them are central publications, viz., Agricultural Statistics of India, Vols. I and II, and Estimates of Area and Yield of Principal Crops in India. The third is a provincial publication, viz., Season and Crop Report, and, in fact, forms the basic material on which the figures given in the central publications are compiled. Estimates of area by districts are given for the following crops in Agricultural Statistics of India, Vols. I and II :—

Rice, wheat, jowar, bajra, maize, barley, gram, ragi, other foodgrains and pulses, linseed, sesamum, rape and mustard, groundnuts, cocoanut, castor, other oilseeds, condiments and spices, sugarcane, other sugar, cotton, jute, other fibres, indigo, other dyes and tanning material, opium, coffee, tea, tobacco, cinchona, Indian hemp, other drug and narcotics, fodder, fruits and vegetables, other food crops and other non-food crops.

Quotations of harvest prices by districts for rice, paddy, wheat, barley, jowar, bajra, maize, gram, sugar (raw), cotton, jute, linseed, rape and mustard, sesamum, groundnut and tobacco for British Provinces only are given in Agricultural Statistics of India, Vol. I.

Estimates of area and yield for provinces and major States are given for the following crops in Estimates of Area and Yield of Principal Crops in India :—

Rice, wheat, jowar, bajra, maize, barley, gram, sugarcane, tea, cotton, jute, linseed, rape and mustard, sesamum, castor, groundnuts, coffee, rubber, tobacco and indigo.

The Season and Crop Reports contain estimates of area, yield and harvest prices by districts and in addition to the crops dealt with in the two central publications also contain details for the following crops :—

1. *U. P.*—Small millets, potatoes, hemp.
2. *Sind.*—Tur.
3. *C. P. & Berar.*—Small millets and different pulses.
4. *Bombay.*—Small millets and tur.
5. *N. W. F. P.*—Mung and hemp.
6. *Punjab.*—Mung and mash, hemp and poppy.
7. *Madras.*—Small millets, different pulses, chillies, mangoes and plantains.
8. *Bihar.*—Arhar.

All India forecasts of yield are made only for rice, wheat, sugarcane, cotton, jute, linseed, rape and mustard, sesamum, castor seed and groundnut.

The important questions which one is always inclined to ask when dealing with the agricultural statistics of any country are about the comprehensiveness of the statistics which are published, i.e., the extent to which they cover the entire cultivated area, and the reliability of the estimated yields which are put out by Government. Where forecasts are issued the interesting question is as to how far these forecasts are timely and help both producers and the trade to make their arrangements for the coming crop year. From both these points of view, there is no doubt that Indian agricultural statistics leave much to be desired. The cultivated area covered by the statistics falls considerably short of the total area under cultivation, while in the estimated yield from the area covered by the statistics, the general standard of reliability is not very high even the degree of reliability varying with different regions. As regards the forecasts, they are issued as already stated, only for a few crops and even in their case, the final forecast becomes available long after the harvest, as can be seen from tables. The difficulties created by both these sets of facts had been drawn attention to by academicians for some time past, but they became much more important during the war when the food policy with its basic plans depended so much for

its success on Government's knowledge of availabilities of domestic supplies which in turn depended on the comprehensiveness and accuracy of agricultural statistics. Steps have therefore been taken during the war to improve the accuracy of agricultural statisti's and particularly of food statistics in India.

I propose to give below a brief account of the comprehensiveness and reliability of Indian agricultural statistics. The latter will involve an account of the methods followed at present for the compilation of the estimates of area and yield in different parts of the country. I shall then follow it up with a brief account of the steps taken during the war to improve the efficiency of Indian agricultural statistics' with reference to both comprehensiveness and reliability in respect of area and yield. Throughout I shall be dealing with the position only so far as it concerns foodgrains.

The Estimates of Area and Yield published by the Director General Commercial Intelligence and Statistics deal only with 702 million acres of the geographical territory of India. As is to be expected, much the largest portion of British India was covered by these statistics, while the larger portion of the area covered by the Indian states was not included. The areas for which statistics of yield are given in this publication are called " reporting areas " and that expression will henceforth be used in the relevant context in what follows. I give below a statement showing the reporting areas and the non-reporting areas and their distribution by British Indian provinces and Indian States :—

(In million Acres.)

Cereal	British Provinces			Indian States			Total		
	Report-ing	Non-re-porting	Total	Report-ing	Non-re-porting	Total	Report-ing	Non-re-porting	Total
Wheat . . .	400	152	552	269	187	456	669	339	1,008
Rice . . .	506	46	552	134	322	456	640	368	1,008
Jowar . . .	481	71	552	112	344	456	593	415	1,008
Bajra . . .	481	71	552	112	344	456	593	415	1,008
Maize . . .	481	71	552	72	384	456	553	455	1,008
Barley . . .	481	71	552	75	381	456	556	452	1,008

It will be seen that out of a total area of a little more than a million acres reporting areas covered only from 55 per cent. in the case of maize to 67 per cent. in the case of wheat. The maximum area covered was that of wheat and if we assume that in the case of the other crops part of the area not covered did not have any cultivation of the crops in question, the conclusion would be that the non-reporting area constituted as much as 33 per cent. or one-third of the total geographical territory of India. This is an important fact which has not been sufficiently borne in mind by persons who want to institute comparisons between food supplies on the basis of the yield of reporting areas and the population of the country which included the non-reporting areas as well. It must be pointed out, however, that, in British India, non-reporting areas are those areas where cultivated acreage is negligible except in the case of British Baluchistan which was hitherto a completely ' non-reporting ' area. Even in the case of the Indian States, a good proportion of the non-reporting areas consists of non-cultivated and in fact non-cultivable areas with the result that the difference made to the total output of foodgrains in the country including the non-reporting areas is not of the same order of magnitude as may be inferred from the proportion of non-reporting areas to the total geographical area of the country. This was found by actual enquiry as a result of an attempt made by Food Department to get seven-yearly figures of area and yield of the cereal crops from the non-reporting areas in India. Food Department was able to get statistics of area and yield for this period for non-reporting areas covering from 265 million acres in the case of wheat to 325 million acres in the case of maize. It is true that the estimates provided for by the

administrations of the non-reporting areas are even more in the nature of guess work than the statistics furnished by reporting areas. All the same, they do give an idea of the orders of magnitude involved. And it was found that while the difference made in the geographical area covered varied from 40 per cent. in the case of wheat to 59 per cent. in the case of maize, the increase in the area shown as cultivated varied only from 2·6 per cent. in the case of wheat to 28·8 per cent. in the case of maize, the differences in yield also being of the same order of magnitude. The total addition to be made to the estimated production of foodgrains from the reporting areas on account of the inclusion of nearly 70 per cent. of the non-reporting areas was only 4·1 million tons or not more than 8·4 per cent. of the estimated yield of cereals from the reporting areas. Details are given below:—

*Average area and yield of cereals for the seven years ending 1942-43  
(In '000)*

Cereals	Reporting		Non-reporting		Percentage of	
	Area (acres)	Yield (tons)	Area (acres)	Yield (tons)	Col. 4 to Col. 2	Col. 5 to Col. 3

The Collection of this information by Food Department has thus added to the comprehensiveness of Indian food statistics and also makes it more possible to institute a comparison between the country's food supplies and the requirements of its entire population than could be done in the past.

As regards reliability, there is no uniformity in the degree of reliability even of the statistics available for the reporting areas. As far as statistics of area are concerned, the country can be broadly divided under two heads, viz., the temporarily settled areas where there are periodic revisions of land revenue settlement and where therefore there is a permanent revenue agency stationed in different villages whose function it is to keep records of area under cultivation, classification by crops, estimate of yield, etc., and permanently settled areas where the amount of land revenue has been fixed permanently at some time in the past and there has been therefore no permanent revenue agency located in villages with functions corresponding to those of the *patwaris* and the *karnams* in the temporary settled areas. The following statement gives a classified account of British India by permanently settled and temporarily settled areas:—

*Permanently and temporarily settled area in British Provinces of India  
('000 acres.)*

Province	Perma-nently settled	Tempora-rily settled	Total	Year	Name of the districts which are permanently settled
Ajmer-Merwara .	974	797	1,771	1937-38	Kekri and a part of Ajmer.
Assam . . .	3,919	31,566	35,485	1937-38	A portion of each of Garo hills, Goalpara and Sylhet.

Province	Permanently settled	Temporarily settled	Total	Year	Name of the districts which are permanently settled
Bengal . .	39,158	10,100	49,258	1937-38	The whole of Chittagong hill tracts district and a portion of each of the remaining districts are temporarily settled areas.
Bihar . .	39,694	4,630	44,324	1936-37	A portion of each district is temporarily settled area.
Bombay . .	...	48,653	48,653	1935-36	.....
C. P. and Berar . .	...	63,091	63,091	1937-38	Includes 12,435,000 acres under Government forests.
Madras . .	23,589	62,176	85,765	1933-34	(a) A portion of each of Chingleput, Chittoor, Coimbatore, East Godavari, Ganjam, Guntur, Kistna, Madura, Nellore, N. Arcot, Ramnad, Salem, S. Arcot, Tanjore, Tinnevelly, Trichinopoly, Vizagapattam and West Godavari.
N. W. F. P. .	...	8,577	8,577	1937-38	.....
Orissa . .	9,861	10,745	20,606	1936-37	Whole of Koraput and a portion each of all districts except Sambalpur.
Punjab . .	...	60,155	60,155	1937-38	.....
and . .	...	30,180	30,180	1935-36	.....
U. P. . .	7,306	60,660	67,966	1936-37	The whole of Ballia, Benares, Gazipur, Jaunpur and Mirzapur. A portion each of Azamgarh, Bariach, Barabanki, Gonda, Hardoi and Lucknow.
Total . .	124,501	391,330	515,831		

(a) Excluding 5,255,000 acres held under inam.

It will be seen that temporarily settled areas account for about 75 per cent. of the total area in British India. In the case of these areas, statistics of the acreage under cultivation and its classification by crops are reported to be fairly accurate. In fact there is an elaborate system by which the entries made by the village official are subjected to checks by superior revenue officials and it is understood from experienced administrators that this system of checks does operate in practice to prevent inaccuracy. In the case of the permanently settled areas, returns of area under cultivation are made by chowkidars or village policemen. In the U. P., however, the patwari system prevails even in the permanently settled areas. On the other hand, there are no patwaris in the temporarily settled parts of Bengal. As regards the areas where the patwari system does not prevail agricultural returns cannot compare in accuracy with the returns which are made by the revenue officials in the temporarily settled areas and in the United Provinces. A positive proof of this is provided by the analysis which was made by the Famine Inquiry Commission of the Bengal figures. They found that whereas the area under rice as reported by the Director of Agriculture was only 22·39 million acres, the area under rice compiled from the settlement reports totalled 25·54 million acres. The random sample surveys of acreage carried out by Prof. Mahalanobis at the instance of the Bengal Government showed that official returns of the area under rice were under-estimated to the tune of 3·5 million acres. The presence of under-estimation was also proved by a plot to plot enumeration which was carried out by the Bengal Government in 1944-45 which gave a figure

of rice area 2 million acres in excess of the official figures. A random sample survey for determining acreage statistics in Bihar for some crops was carried out by Prof. Mahalanobis in 1943-44 but the results were inconclusive as far as determining the extent of inaccuracy of the official figures were concerned.

As regards estimates of output, the figures are obtained in most provinces on the basis of the following formula :—

Area under the crop  $\times$  Normal yield  $\times$  Condition factor, the last being stated in terms of a percentage of the normal yield.

The normal yield is the yield per acre of a normal crop which is defined as "the average yield on average soil in a year of average character." The figures for this normal yield are fixed by the Directors of Agriculture and Land Records mainly on the basis of crop-cutting experiments made at different places over a different number of years. In many cases, it is based on the crop-cutting operations carried out during settlement. Under this system, plots of land of average quality are selected and the crop grown on them cut and weighed in the presence of the officers of the Agriculture or Revenue Departments as the case may be : the results of this experiment are reported to the Provincial Director of Agriculture who after scrutinising these reports and after comparing them with other relevant information available to him fixes the standard yield for each crop in each district. Another point to be noted is that the size of the cut used for crop-cutting experiments varied from province to province, being 1/10 of an acre in Madras, C P., Bengal, Sind and U. P. between 1/3 and 1/5 of an acre in the Punjab and between 1/20 and 1/80 in N. W. F. P. There is provision for revising the figures once in five years, though actual examination of the statistics reveal in many cases practically no revision in these yields over a series of quinquennial periods. The important thing to note about the determination of the normal yield is that the plots selected are not on a random basis but are left to the discretion of the individual officer and his ability to select average plots. The obvious result is that there is no guarantee of absence of bias in the selection of the plots and the normal yields obtained therefrom do not therefore have the same objective basis which they would have had, if the plots had been selected on a random basis. Revision of these standard yields by the Director of Agriculture on the basis of other data available to him is a further complicating factor that reduces the objectivity of these figures.

The condition factor is a subjective estimate of the crop in terms of the normal and is obviously subject to unknown errors. It is usually expressed in terms of annas with a fixed number of annas representing the normal, while in certain provinces, it is also expressed as a percentage of the normal. The reporting of this factor in most of the provinces is done by an eye estimation of the actual yield at the primary stage and afterwards expressing it in terms of annas. In most of the provinces, this estimate is made in every village by the patwari, village chaukidar or village headman. The Revenue Inspector or Circle Officer or Kanungo, furnishes the estimate of the crop, of villages under his jurisdiction, based on the figures furnished by the respective primary agencies and checked by his personal experience and inspection. For the tehsil or subdivision, the Tehsildar or Sub-Divisional Officer or Mamlatdar gives an annawari estimate on the basis of figures submitted by the Revenue Inspector or Circle Officer and checked by his personal experience on his tours. These tehsil or subdivisional estimates form the basis for the district figures which are made either in the district headquarters of the provinces or in the provincial headquarters. Thus successive officers usually a Tehsildar, a subdivisional officer, a District Collector, the Director of Land Records and Director of Agriculture as the case may be at the top, make their own guesses at the figures reported by the lower officers. In the compilation of these factors for talukas and districts uniform methods are not followed in all provinces. In certain provinces, however, notably Madras, the successive officers take an arithmetic average of the estimates reported by the lower officers. The final figures for the condition factor of the crop in each district are fixed by the Director of Land Records and the Director of Agriculture. These methods have been severely criticised in the past and are believed to give somewhat inaccurate results. For instance, it is found that the average over a series of years of the condition estimate is

less than the corresponding anna equivalent of the normal and this leads to the presumption that estimates of yields as determined at present are under-estimates. This presumption also obtains a certain amount of support from the fact that official estimates of the yield of cotton and jute have usually been found to be below alternative estimates of the output of these crops based on trade figures. As against this however, there is evidence to show that in several provinces, the normal yields are pitched at a higher level than would be obtained by conducting crop-cutting experiments by the random sampling methods. It is, therefore, not possible that the official estimates are under-estimates and in fact there is at present no means of knowing the extent and direction of the bias.

The correct approach is to conduct crop-cutting experiments by means of the random sampling method in numbers large enough to determine the yield per acre for the province as a whole and if possible for each district. Only by adopting this method can the subjective be altogether eliminated from the existing process and further the precision of the estimated yield ascertained through this approach was first suggested by the Board of Agriculture in 1919 and was not tried on an all-India scale till very recently. Experiments in the use of the random sampling methods were carried out by Sir John Hubback in Bihar and Orissa in 1923-25; his results were published in 1927 in a bulletin on "Sampling for rice yields for Bihar and Orissa." In 1937 the use of the random sampling method for improvement of statistics relating to acreage and outturn of the jute crop in Bengal was taken up under a five-year scheme of the Indian Central Jute Committee by the Indian Statistical Institute under the guidance of Prof. P. C. Mahalanobis. This inquiry was completed in 1942. The use of the random sampling method for ascertaining the yield of cotton was carried out in the district of Akola in the Central Provinces by Dr. Panse in 1942-43 under a scheme sanctioned by the Indian Central Cotton Committee; this scheme was extended to two other districts in the succeeding year and covered the entire cotton belt of the province in 1944-45. The Bengal Government also got undertaken for them by the Indian Statistical Institute the use of the random sampling method for ascertaining acreage and yield statistics in their province in 1943-44, while a similar enquiry was also conducted for Bihar for the rabi crops in two districts during the same year. In the meanwhile, the whole question was considered at a meeting of a small inter-departmental committee of the Government of India in March 1943. This Committee came to the conclusion that any scheme for the improvement of agricultural statistics of yield, if it was to result in a lasting improvement, should incorporate only the minimum essential changes in the existing method, consistent with the principle of random sampling, and what is even more important, should fit in with the existing administrative arrangements in the province. A scheme for conducting crop-cutting experiments on these lines was accordingly prepared by Dr. P. V. Sukhatme, Statistician, Imperial Council of Agricultural Research. Its objects were (a) to evolve a random sample technique of conducting crop-cutting experiments which can be handled by the existing staff of the provincial departments of Agriculture and Revenue who ordinarily conduct these experiments and which can be taken up as a departmental routine without heavy additional expenditure on the new staff, (b) to demonstrate to the provinces the practicability of the method so devised, (c) to train the existing provincial staff in the technique, (d) to estimate the yield per acre for the province as a whole in individual years, and (e) to revise the present set of district normal yields.

The first series of experiments under this scheme was carried out on wheat in the Punjab and U. P. in the year 1943; the scheme was extended in the year 1944-45 to the whole of India's wheat belt comprising of the Central Provinces, United Provinces, Punjab, the North-West Frontier Province and Sind. The same year experimental random sampling surveys on paddy were carried out in the Central Provinces, Bombay, Madras and Orissa. In 1945, the scheme was being repeated throughout the wheat belt including Bihar, while it was also extended to all the paddy growing districts of the United Provinces, Central Province, Bombay, Madras, Bihar and Orissa. In addition to these experiments on wheat and paddy, experiments were also being carried out on masur and gram on a full provincial scale in Bihar. As regards Bengal, the random sampling surveys continue to be undertaken by the Indian Statistical Institute.

It may be interesting to mention very briefly the results of these surveys. In the N.-W. F. P., Bengal and Orissa, estimates of yield on the basis of the sample surveys were higher than the official figures while the contrary was the case in the U. P. In the case of the C. P. and Madras, there was fairly close agreement between official figures and the figures based on sample surveys. In every case, excepting in the permanently settled provinces, the staff used for the operations were drawn from the Revenue and Agriculture Departments with, of course, the guidance of the Statistician to the Imperial Council of Agricultural Research; in the case of Bihar and Orissa, a large special staff has been employed under the direction of the provincial governments, while in the case of Bengal the entire work has been carried out with the help of a special staff under the supervision of the Indian Statistical Institute. The results obtained have shown that taking the country as a whole the figures of agricultural output are not likely to be subject to an error of more than about 10 per cent. They have also demonstrated that the random sampling method of conducting crop-cutting experiments is practicable in the hands of the existing departmental staff and can be undertaken as a normal departmental measure without heavy additional expenditure. Almost the whole of the departmental staff in most provinces has also been trained in this method and it is hoped that provinces will now see their way to adopt it as a permanent feature in the estimation of yield not only of wheat and paddy but also of other principal crops.

As regards improving the accuracy of acreage statistics, the provinces of Bihar and Orissa have decided to go for complete enumeration and have appointed a large staff which in course of time is expected to play the same part as the revenue staff of the temporary settled areas in respect of recording statistics of acreage under different crops. As regards Bengal, the provincial governments have been experimenting both with the method of random sample survey and of complete enumeration for ascertaining the statistics of cultivated acreage in the province but no final decision has yet been taken as to which method is to be adopted as a permanent measure.

As regards crop forecasts, it may be stated that Government have now decided to issue all-India forecasts of yield for jowar, bajra and maize. This means that we will now have forecasts for all the major cereals in the country. It is hoped that steps will soon be taken to get the forecasts issued earlier than hitherto.

It will be seen, therefore, that from the point of view of improvement of agricultural statistics in India in respect both of comprehensiveness and reliability considerable work has been done during the course of the war under the direction of the Government of India. Statistics have been collected for including the output over a very large portion of hitherto non-reporting areas, steps have been taken to improve the statistics of acreage in the permanently settled areas and bring them on par with those of the temporarily settled areas, while in addition measures have also been undertaken for putting yield estimates on a more objective and scientific basis by the use of the random sampling method. It will take a little time for the full weight of these measures to be seen in the published agricultural statistics, but it is hoped that within a very short period of time, random agricultural statistics will cease to be the target of the almost universal criticism regarding the accuracy which they have hitherto suffered from. A few words of caution must be added that the new figures cannot be compared with the old figures, as the former will include correction not taken into account in the latter and will be, in many cases, based on a different and more objective method. If this is not remembered, confusion may arise in any single comparison of figures extending over a series of years.

As regards statistics of foodstuffs other than foodgrains and oilseeds, the statistics available at the moment are very largely in the nature of guess work and cannot claim to be on par with the statistics of foodgrains and oilseeds. This is particularly true for the estimates of meat and fish.

As regards statistics of prices, it is not possible to give any indication as to the extent of their accuracy. The harvest prices are mainly collected through non-official agencies (principally branches of the Imperial Bank of India) and represent prices of the principal crops during their harvesting periods at the more important market centres for each crop. The object of these series is to obtain a better indication of the prices which the cultivator actually receives for his crop, than is obtainable

from the records of prices that are now available. It is impracticable to obtain a continuous record of the prices which the cultivator actually receives for his crop, and the prices at the important markets adjoining the major producing areas which are given in this series represent the nearest approximation that it is practicable at present to obtain. The rates given are averages of the weekly quotations at each centre during the harvesting period. It is hoped, however, that after the action at present taken about statistics of acreage and yield similar comprehensive action will also follow regarding statistics of prices. In the meanwhile, Food Department have collected a considerable amount of data on wholesale and retail price quotations in different parts of the country, but as these cover only the years 1944-45, they have not been published.

As regards statistics of stocks, it must be frankly confessed that there are no statistics excepting for some of the agricultural crops like jute and cotton which do not figure in this Manual. With the introduction of rationing and monopoly procurement, however, a substantial portion of the foodgrains today has passed into the hands of the Government and it is possible to get statistics of stocks of foodgrains in the hands of Governmental agencies. It is hoped that with the return of conditions to normal, steps will be taken to obtain compulsory return of stocks of all foodgrains in the hands of traders. It would, however, be more difficult to get this done in the case of producers ; and it would perhaps be necessary to make some kind of a reasonable estimate of the stocks in their hands. As regards trade, statistics of import and export trade are recorded by the customs authorities and are believed to be very accurate. In fact, trade statistics are perhaps one of the most accurate statistics which are published by the Government of the country. As regards internal trade, statistics which are published relate to the movement of selected commodities to and from 22 trade blocks into which the country has been divided for the purpose of recording the statistics. Certain minor improvements are possible both in the sub-classification of the commodities entering into these statistics as well as for re-examination of the regions which would constitute the different trade blocks. It would also be pointed out that there is some vagueness at the present moment about the exact classification of a number of minor states under the trade blocks, but on the whole the statistics of inland trade movement do represent the broad patterns of inter-regional supplies and demands ; it must be emphasised however that these statistics relate only to the trade by river and rail and do not include the trade by road. To this extent the statistics are not complete and this must always be borne in mind when utilising these statistics from the point of view of any individual trade block. A certain number of other miscellaneous statistics of utility in arriving at a picture of the food situation has also been included.

Finally, I would like to express my thanks to the various Government Departments which have, by their ready help and co-operation, enabled me to complete this Manual ; in particular, I would like to record my indebtedness to the Director of Commercial Intelligence and Statistics, Calcutta, the Agricultural Marketing Adviser, Delhi, Secretary, Central Board of Revenue, Delhi and to the Secretaries, Commerce and Agricultural Departments for the help rendered by them. I would like also to express my thanks to the Provincial and State Governments who, by sending me prompt replies to the comprehensive questionnaire I sent them on their methods of compiling agricultural statistics, have enabled me to write this note. I must also place on record my indebtedness to the Statistician, Imperial Council of Agricultural Research, for his having allowed me to use the note he had prepared on the random sample survey experiments carried out by him under I. C. A. R. schemes. Finally, I must express my thanks to Mr. P. C. Mitra, Technical Assistant, and his small staff, who have worked on the preparation of the detailed figures in the Manual with commendable patience.

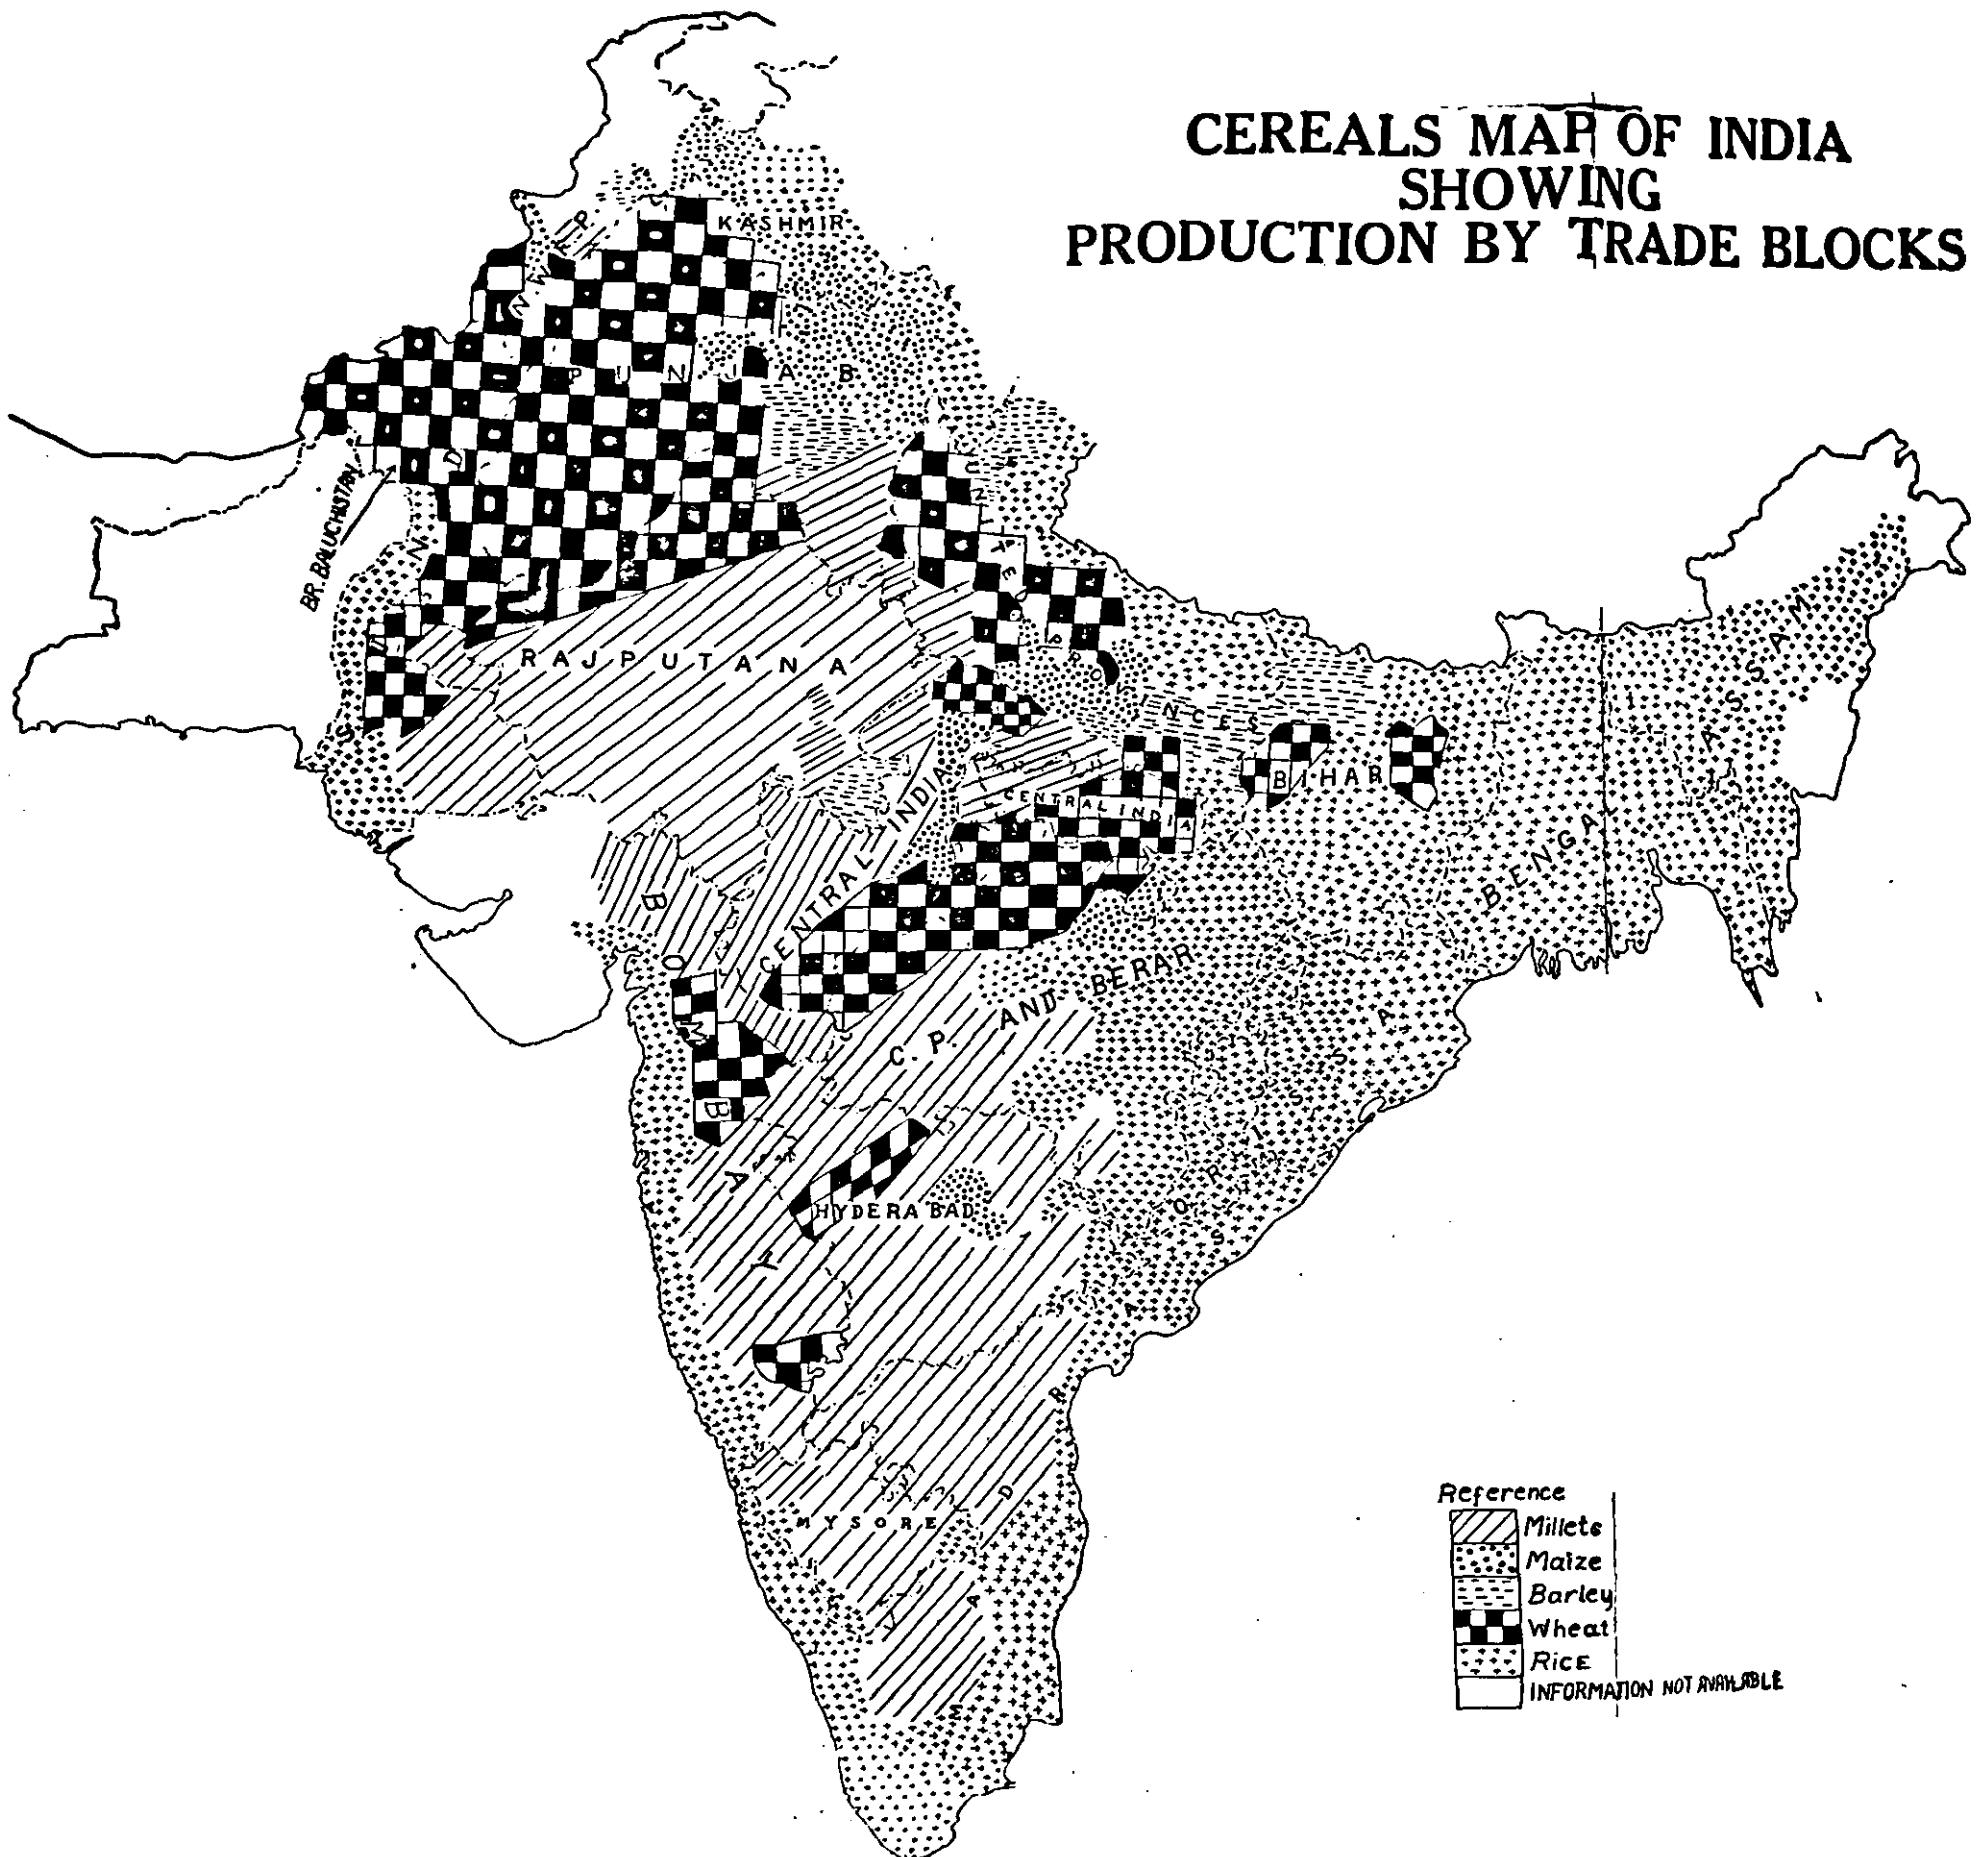

NEW DELHI :

The 12th Feb. 1946.

V. K. R. V. RAO,

## STATEMENT No. II

*Dates on or about which the All-India forecasts of crops are issued by the Department of Commercial Intelligence and Statistics, India*

		Month	Date
RICE—			
1st forecast	.	October	20
2nd forecast	.	December	20
Final forecast	.	February	20
WHEAT—			
1st forecast	.	January	25
2nd forecast	.	March	6
3rd forecast	.	April	15
4th forecast	.	May	20
Final forecast	.	August	6
SUGARCANE—			
1st forecast	.	August	20
2nd forecast	.	October	20
Final forecast	.	February	5
COTTON—			
1st forecast	.	August	15
2nd forecast	.	October	15
3rd forecast	.	December	15
Final forecast	.	February	15
Supplementary forecast	.	April	15
JUTE*—			
Preliminary forecast	.	July	(First week)
Final forecast	.	September	(Third week)
Supplementary Review	.	March	(Last week)
Final Review	.	September	(First week)
LINSEED, RAPE AND MUSTARD—			
1st forecast	.	January	1
2nd forecast	.	March	15
Final forecast	.	June	1
SESAMUM (til or jinjili)—			
1st forecast	.	September	1
2nd forecast	.	October	20
Final forecast	.	January	15
Supplementary forecast	.	April	20
CASTOR SEED	.	February	20
GROUNDNUT—			
1st forecast	.	August	20
2nd forecast	.	October	20
Final forecast	.	February	15

*Source.—Memoirs of the Indian Meteorological Department Vol. XXII (1913-21).*

*NOTE :—The means of the maximum and minimum temperatures have been determined from the whole of the available observations since 1878. In the great majority of cases the normals are derived from the data of the 33 year period 1878-1910. In some of the most recently started observatories the period is shorter, but is never less than five years.*

*The normals of relative humidity have been deducted from the 8 hrs. records of the period 1889-1910 for the great majority of stations.*

The figures as given in table Nos. 8 to 12 are not identical with the figures given in table Nos. 13 to 34. The figures in the former case have been taken from the "Agricultural Statistics of India" Volumes I and II and relate to areas only. The figures in the latter case have been compiled from the publication entitled "Estimates of Area and Yield of Principal Crops in India", and from the final forecasts issued by the Department of Commercial Intelligence and Statistics. These tables also include information for some areas which do not figure in the all India returns published in the "Estimates of Area and Yield" but which was specially collected by the Food Department from various Provincial and State Authorities. The figures in these tables relate to both acreage and yield. A part of the acreage thus included in tables 13 to 34 is also included in the "Agricultural Statistics of India" though it does not figure in the "Estimates of Area and Yield of Principal Crops in India."

Readers are therefore requested to note that the figures given in Tables 8 to 12 are not comparable with those given in Tables 13 to 34.

**STATEMENT No. VIII.**

*Statement showing Classification of area in British Provinces and Indian States during the years 1931-32 to 1942-43*  
 (In 000 acres.)

Source.—Figures for the years 1931-32 to 1937-38 have been taken from "Agricultural Statistics of India". Figures for the years 1938-39 to 1942-43 have been supplied by the Department of Commercial Intelligence and Statistics and are subject to revision.

Note.—It is necessary to point out that the figures given above relate only to the regions which give reports of the classification of their area and this accounts for only 66 per cent. of the whole of India. Non reporting areas account for 35 million acres in British India and 309 million acres in Indian States.

The causes of difference between the figures of area by professional Survey and figures of area by village papers are (a) while the Surveyed area of a district or province is calculated in bloc, the area by village papers represent the added total of field and village areas and (b) the System followed as regards the inclusion or exclusion of areas covered by water, buildings, roads, and railroads is not uniform in the two sets of returns.

Classification of areas as given above is based on the area according to village papers. (a) Excluding figures for Kashmir and Aundh States.

NOTE.—Details of sources, etc. of different foodgrains and pulses may be seen from the footnotes of statement Nos. 15 to 34.

Figures of different edible oilseeds and for sugar for the years 1931-32 to 1939-1940 have been taken from the "Estimates of Area and yield of Principal Crops in India". Gaps in the figures as given in "Estimates of area and yield" have been filled in by estimation on the basis of available data. Figures for the years 1940-41 to 1943-44 have been taken from the forecasts issued by the Department of Commercial Intelligence and Statistics. Figures for "Tea" and "Coffee" for the years 1931-32 to 1940-41 have been taken from "Indian Tea Statistics and Indian Coffee Statistics" respectively. (a) Supplied by the Director of Commercial Intelligence and Statistics. (b) Annual figures for tea relate to Calender years 1931 to 1945.

Source.—Figures for 1931-32 to 1940-41 in PART I have been taken from the publication entitled "Estimates of Area and yield of Principal Crops in India". Figures for the years 1941-42 to 1944-45 have been taken from the Final Forecasts issued by the Department of Commercial Intelligence and Statistics.

Figures in PART II are not included in the all-India Figures published by the Department of Commercial Intelligence and Statistics but have been specially collected from the provincial and State Governments by Food Department.

(a) Figures for the years prior to 1935-36 relate to Bihar and Orissa. (b) Including Sind. (c) Included under Bihar. (d) Included under Bombay. (e) Including Khairpur State. (f) Formerly C. P. States. (g) Included under Bombay States. (h) Figures for the years 1931-32 to 1938-39 have been taken from the Season and Crop Report of Punjab. (i) Taken from Agricultural Statistics of India, Vol. II. (j) Average for the 7 years ending 1942-43. (k) Subject to revision.

Source.—Figures for 1931-32 to 1939-40 in **PART I** have been taken from the publication entitled "Estimates of Area and yield of Principal Crops in India." Figures for the year 1940-41 to 1943-44 have been supplied by the Department of Commercial Intelligence and Statistics. Figures in **PART II** are not included in all-India figures published by the Director of Commercial Intelligence and Statistics but have been specially collected by Food Department from the Provincial and State Governments.

- (a) Figures for the years prior to 1936-37 relate to Bihar & Orissa.
- (b) Taken from the Season & Crop report of Delhi. (c) Included under Bihar.
- (d) Including Sind. (e) Included under Bombay. (f) Including Khairpur State.
- (g) Included under Bombay States. (i) Subject to revision.
- (h) Supplied by the State Government.
- (j) Average for the 7 years ending 1942-43.
- (k) Supplied by the Agriculture Department.
- (l) Relates to 1934-35.

Source.—Figures for 1931-32 to 1940-41 in part I have been taken from the publication entitled "Estimates of Area & Yield of Principal Crops in India".

Figures for the years 1941-42 to 1943-44 have been supplied by the D. C. I. & S.

Figures in Part II are not included in the All-India figures published by the D. C. I. & S., but have been specially collected from the Provincial and State Governments by Food Department.

(a) Figures for the years prior to 1936-37, relate to Bihar & Orissa. (b) Including Sind. (c) Included under Bihar. (d) Included under Bombay. (e) Including Khairpur State. (f) Included under Bombay States. (g) Taken from Season and Crop Report of Delhi. (h) Subject to revision. (i) Supplied by State Governments. (j) Relates to 1934-35. (k) Average for the 7 years ending 1942-43. (l) Supplied by the Agricultural Department.

Source :— Figures for the years 1931-32 to 1940-41 have been taken from the publication entitled "Estimates of Area & yield of Principal Crops in India".

Figures for the years 1941-42 to 1943-44 have been supplied by the Director of Commercial Intelligence and Statistics.

(a) Figures for the years prior to 1936-37 relate to Bihar and Orissa.

(b) Including Sind.

(c) Included under Bihar.

(d) Included under Bombay.

(e) Supplied by the Provincial or State Govts.

(f) Taken from the Season and Crop Report of Delhi.

(g) Average for the 10 years ending 1943-44.

(h) Average for the 8 years ending 1943-44.

(i) Subject to revision.

(j) Supplied by the Agricultural Department.

Source.—Figures have been specially collected from the Provincial and State Governments.

(a) Average for the years ending 1942-43.

(b) Relates to 1942-43.

(c) Relates to "Mung" only.

(d) Yield figures of pulses (excluding Arhar) for all the years except 1941-42 have been estimated by multiplying the acreage figures by the average yield per acre for the 2 years ending 1942-43.

(e) Production figures of pulses (urd (excluding arhar, urd, mung and horsegram)) have been estimated by multiplying the acreage figures by the average yield per acre for the 5 years ending 1935-36.

(f) Estimated by multiplying the acreage figures by the average yield per acre for the 5 years ending 1935-36.

(g) Estimated by multiplying the acreage figures by the average yield per acre for 4 years ending 1935-36.

(h) Average for the 6 years ending 1941-42.

(i) Includes average yield of "mung" and urd for the 3 years ending 1935-36.

(j) Relates to 1941-42.

(k) Relates to "mung" and "masur" only.

(l) Average for the 5 years ending 1935-36.

**STATEMENT No. XXXV**

*Statement showing acreage and yield of different cereals which are published by the Director of Commercial Intelligence and Statistics and the additional data specially collected by the Food Department*

(Figures in '000)

NOTE.—Figures of average yield per acre have been calculated by dividing the yield figures given in the "Estimates of Area and yield of principal crops in India" by the corresponding acreage figures.

Figures of normal yield per acre have been supplied by the Provincial and State Governments and have been arrived at by crop cutting experiments.

(a) Figures for the years prior to 1935-36 relate to "Bihar and Orissa".

88

(b) Including Sind.

(c) Included under Bihar.

(d) Included under Bombay.

(e) Including Khaipur States.

(f) Included under Bombay Sta.

(g) Average yield per acre for the 10 years ending 1942-43.

(h) Winter rice 823 lbs., Autumn rice 658 lbs., Summer rice 741 lbs.

(i) Winter rice—918 lbs., Autumn—840 lbs., Summer—1,120 lbs.

(j) Winter rice—990 lbs., Autumn rice—864 lbs., Summer rice—1,000 lbs.

(k) Taken from the "Quinquennial Report on the average yield per acre of Principal crops in India" and relates to quinquennium ending 1936-37.

(l) Winter rice 800 lbs., Autumn 687 lbs., Summer 741 lbs.

(m) Not available.

STATEMENT No. XXXVII

*Statement showing actual yield per acre of wheat in different producing areas of India during the years 1931-32 to 1943-44 as compared with the latest estimates of the normal yield per acre*

Note.—Figures for the years 1931-32 to 1936-37 relate to imports into India excluding Burma. The figures of Burma have been adjusted from the publication entitled, "Burma Sea-borne Trade". Figures for the year subsequent to 1936-37 also relate to imports into India only.

Sources.—Figures have been taken from the publications entitled :—

(i) "Sea-borne Trade of British India".

(ii) "Trade Statistics relating to the Maritime States in Kathiawar and the State of Travancore" and

(iii) "Trade at stations adjacent to Land Frontier Routes".

(a) Less than 500 tons.

(b) Including gram.

(c) Included under pulses.

(d) Included under other Foodgrains.

(e) Imported on Govt. account.

STATEMENT NO. XLVIII

*Note.—In order to avoid misunderstanding it is necessary to point out that tables Nos. 49 to 68 do not take into account either imports or exports by sea; but the inland trade figures given therein would include rail and river movements of both domestic and imported produce. The figures therefore do not relate to the movement in domestic produce only but to inter-regional movements in all the grains concerned which have been transported either by rail or river.*

Note.—Average figures for the three years ending 1935-36 include figures for gram, jowar and bajra, in addition to barley, maize and pulses. Though details of barley, maize and pulses are not separately available, the last seems to be the dominant item as can be seen from the fact that the exports and imports of maize under the basic plan in 1943-44 totalled 56,000 tons and estimated annual imports and exports of barley as given in the Marketing of Barley in India amounted to 37,000 tons only.

## NOTES

Col. 2.—Includes rice, wheat, jowar, bajra, maize, barley, ragi and small millets.

Col. 3.—Estimated by taking 12½ per cent. of Col. 2.

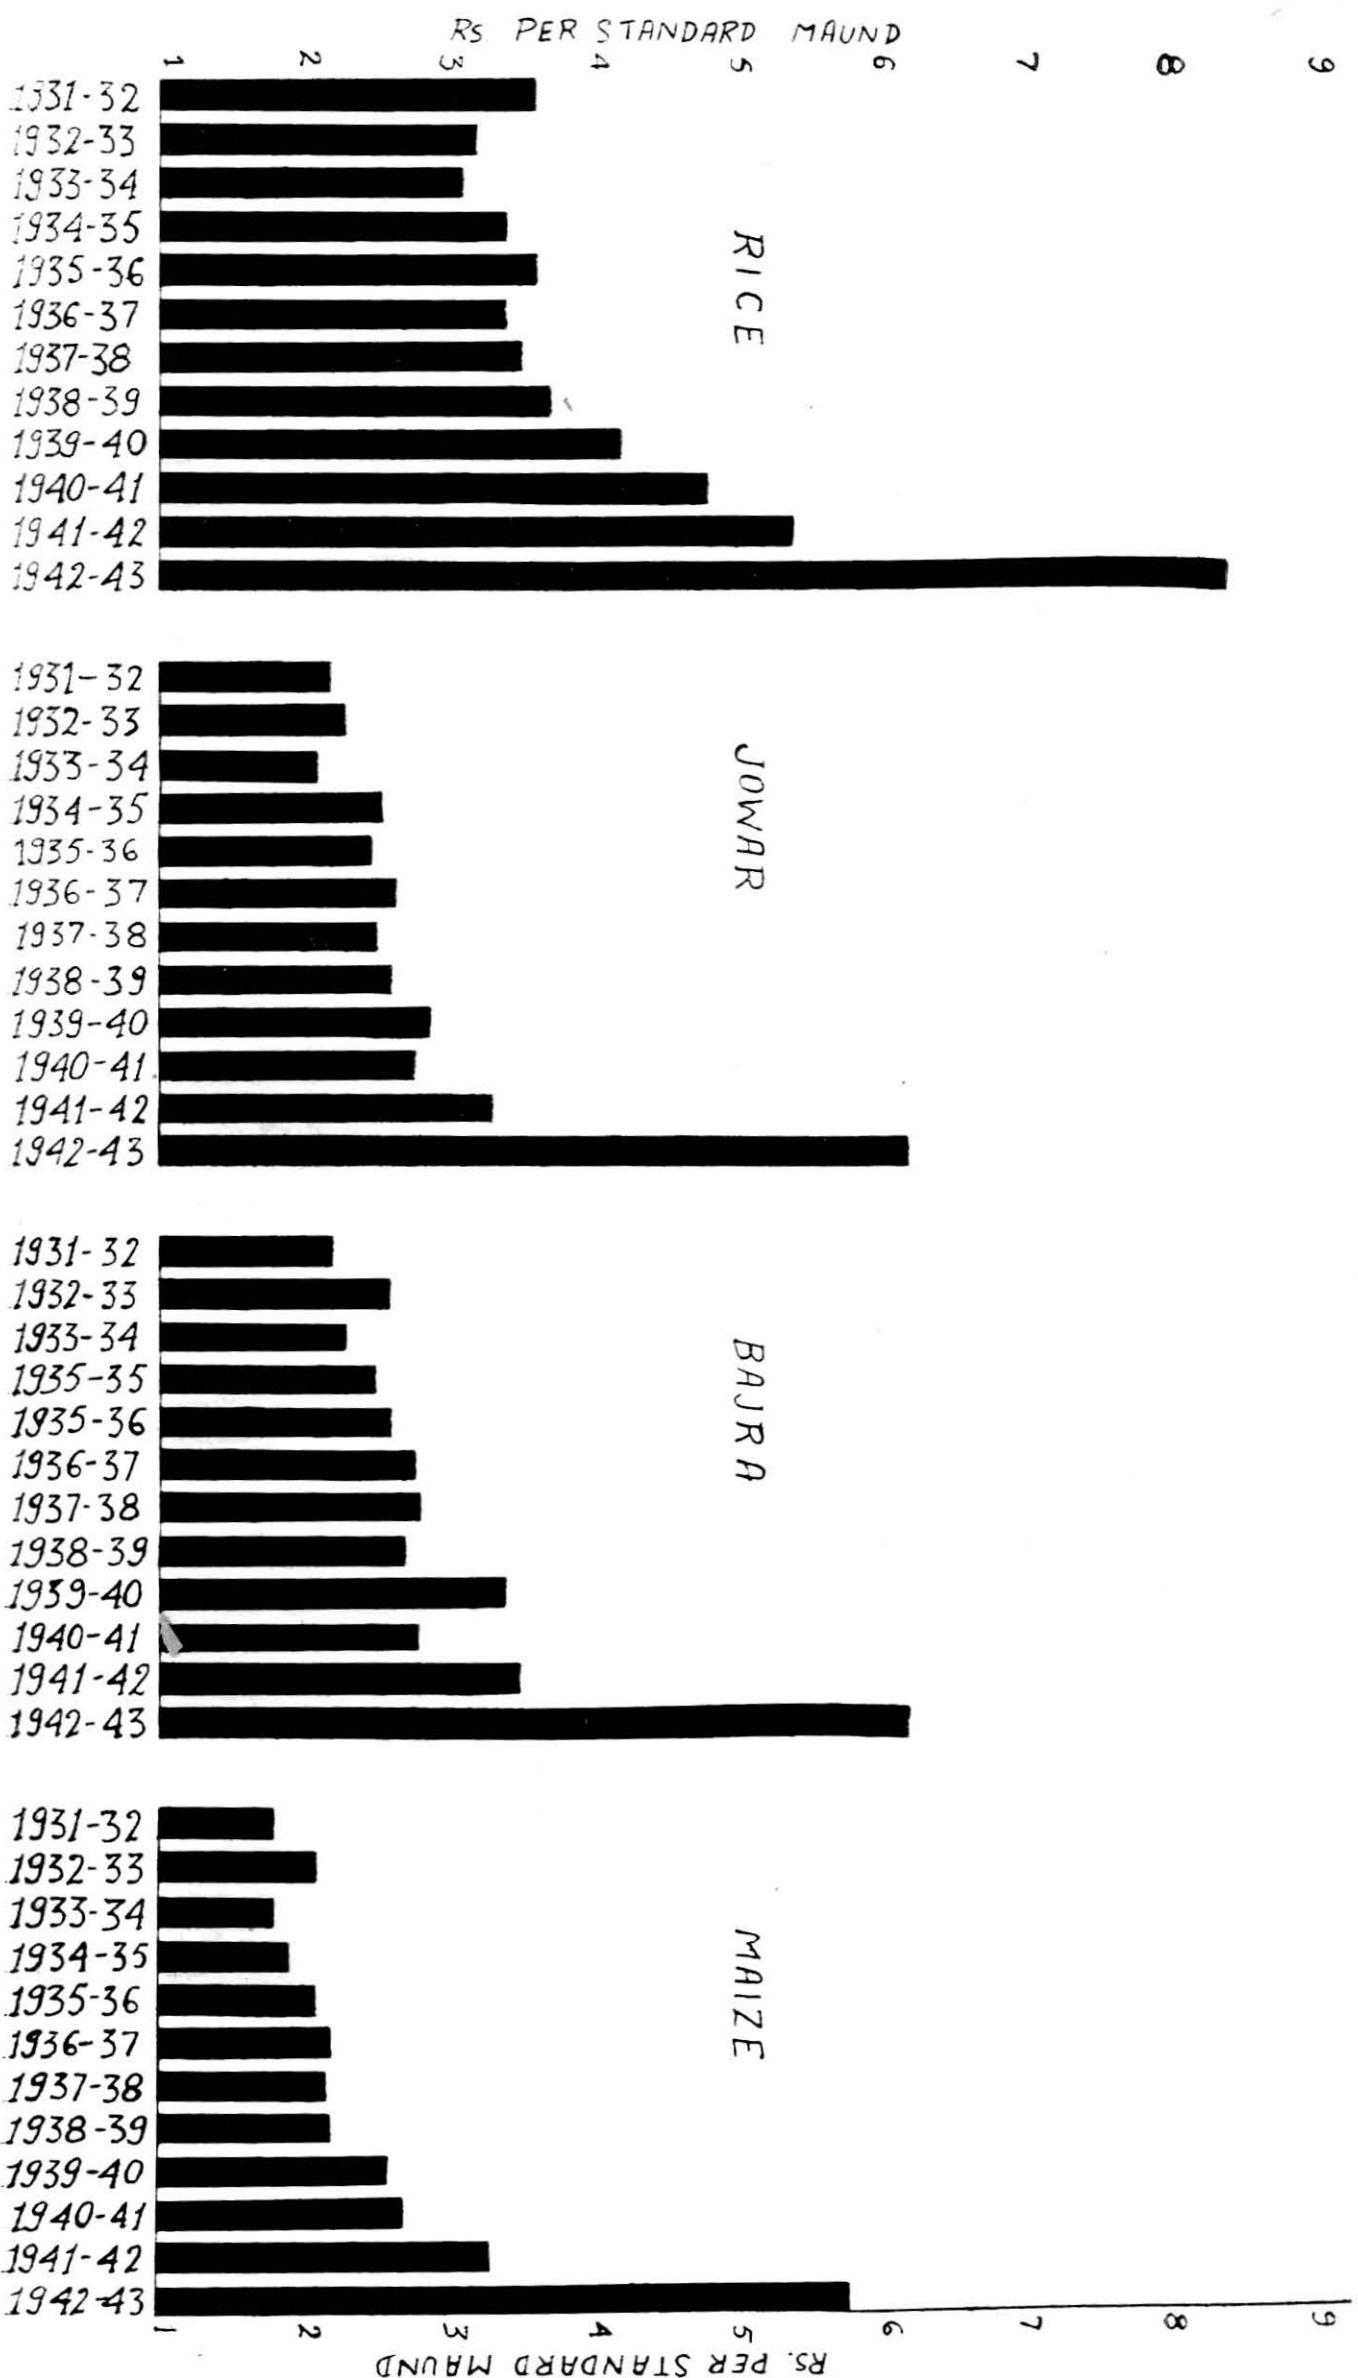

Col. 5.—Imports and exports by land frontier routes have not been included. Trade figures for barley, maize, ragi and small millets have not been included as the same are not available.

Col. 7.—Calculated at a constant unitary rate of increase based upon the difference between 1931 and 1941 census figures.

Col. 8.—Estimated by taking 80 per cent. of Col. 7.

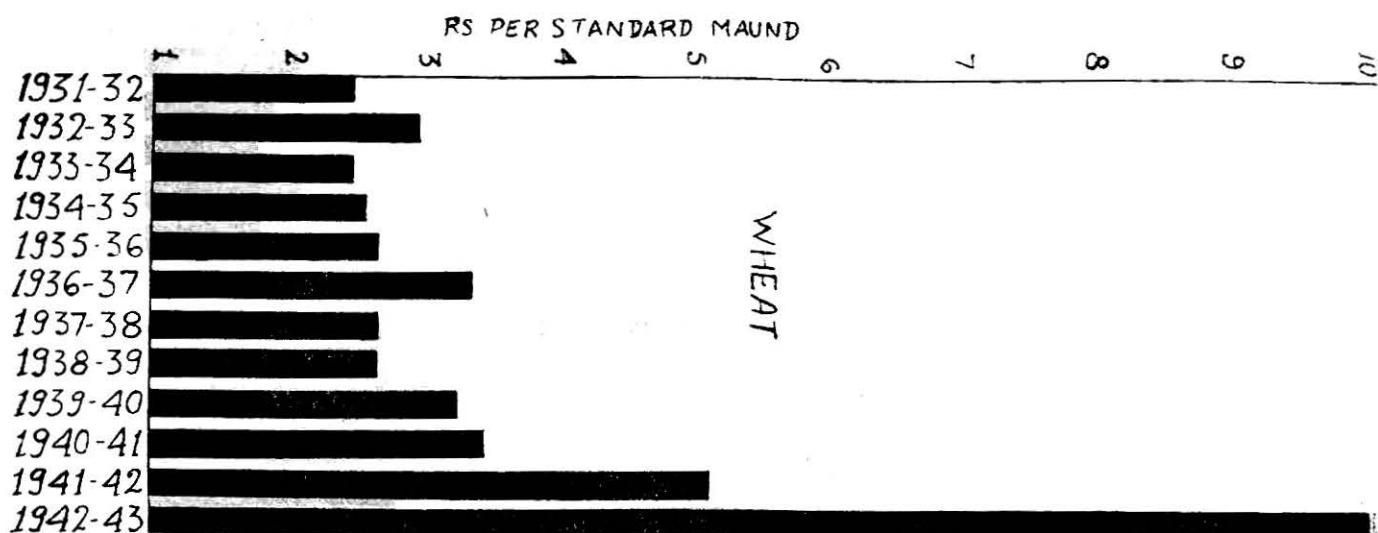

(a) Total figures represent the actual sum of the trade blocks mentioned in the statement.

(b) Excluding States.

1943-44(d)	3,389	7,421	1,866	1,545	344	41	14,606

*Source.*—Figures for the years 1932-33 to 1942-43 have been taken from the publication entitled 'Monthly Statistics of the Production of certain Selected Industries in India'.

Figures for the year 1943-44 have been collected from the Director of Commercial Intelligence and Statistics.

The extent to which production figures for each year are complete is roughly indicated by the percentage of average number of persons employed daily by concerns which have sent returns of production to the Director of Commercial Intelligence and Statistics to the average number employed daily in wheat flour industry.

(a) 60 per cent., (b) 54 per cent., (c) 46 per cent., (d) 56 per cent., (e) 62 per cent., (f) 59 per cent. and (g) 58 per cent.

Source.—Health Bulletin No. 23 of Indian Research Fund Association, Coonoor.

Note.—The figures represent percentages — i.e., grammes per 100 grammes. Gram is expressed as milligrammes per 100 grammes. The Vitamin A and carotene figures are almost entirely based on spectrographic assays, while Vitamin C was estimated chemically. In the case of Vitamin 'B', biological and chemical methods were used. The absence of figures or estimates of Vitamin content means that tests have not yet been carried out.

(a) All whole grain foods are rich in Vitamin 'B', while milled grains are largely deprived of this Vitamin. An exception is parboiled milled rice, which retain Vitamin 'B' after milling.

## STATEMENT NO. CLV

*Statement showing distribution and annual output of Vegetable Ghee Factories  
in different parts of India in 1945*

Province or State	City or Town	No. of Factories	Estimated annual output (Tons)
Bengal . . .	Calcutta . . .	1	5,000
Bihar . . .	Dalmianagar . . .	1	200
Bombay . . .	Bombay . . .	5	68,765
	Pachora . . .	1	6,500
Cochin . . .	Ernakulam . . .	1	1,410
Delhi . . .	Delhi . . .	1	3,700
Madras . . .	Madras . . .	1	1,500
	Mettur Dam . . .	1	2,745
Mysore . . .	Bangalore . . .	1	1,500
Punjab . . .	Lyallpur . . .	1	4,200
U. P. . .	Begamabad . . .	1	8,250
	Ghaziabad . . .	1	6,000
	Cawnpore . . .	1	7,475
	Total . . .	17	1,17,245

## STATEMENT NO. CV

*Statement showing distribution and estimated output of Factories connected with manufacture of different processed Food stuff in various parts of India*

								91,315

Note.—Figures given in this statement relate to particulars of those Factories only under various industries whose output has been utilized for defence services requirements and does not include particulars of factories catering to civil demand. This remark does not however apply to those industries for which there is no civil market. Such industries included in this statement are :—

- (1) Biscuit shakapara.
- (2) Dehydrated potatoes.
- (3) Dehydrated onions.
- (4) Dehydrated Goats' meat.
- (5) Dried processed fruit.
- (6) Powder condiments.
