Tabulation By

Shri N. K. Suregaonkar

PREFACE

Knowledge of causes of morbidity and mortality is indispensable for objective planning of health programmes and also for epidemiological studies. Unfortunately, in India, information is very scanty even at present in this respect. A beginning was however made to get reliable data on causes of mortality for sizeable population by introducing medical certification of causes of death on International Form in the urban areas of Maharashtra in 1969. This report prepared by Dr. H.N. Ranganathan, Chief of the State Bureau of Health Intelligence & Vital Statistics, describes briefly the background of our efforts and the pattern of mortality causes observed in urban areas of Maharashtra during 1970-72. Although the data pertain mainly to the urban population, however, they have a value due to total absence of reliable data in the field.

Bombay.
20-12-1974.

I
CAUSES OF MORTALITY IN MAHARASHTRA

(Urban areas)

1970-1972

Introductory Note

This is a brief report on the causes of mortality certified by the attending physicians on the International Form of Medical Certification of Causes of Deaths (IFMCCD). The report covers deaths that occurred in the urban areas of Maharashtra State during the years 1970-1972. The 1971 census population of urban areas is 15,711,000 (31% of the States population). Deaths in respect of the rural areas are not included since certification of cause of death is not widely prevalent in the rural areas at present.

The IFMCCD was introduced for the first time in Maharashtra in Poona City probably in 1951. It was later started in Nagpur (1957), Greater Bombay (1962) and Sholapur (1969) cities. The remaining urban areas were covered in 1970. With the encouragement of the Director General of Health Services, Government of India and the WHO and with the cooperation of the Director of Municipal Administration, a directive was issued to all the municipalities towards the end of 1969 to bring into effect IFMCCD in their respective areas for certifying the cause of death under the Maharashtra Municipalities Act 1965.

It is noteworthy to mention that all the municipalities readily cooperated for the introduction of IFMCCD. However, many of them had difficulty in providing funds immediately for the printing of forms. To tide over this initial problem, the Officer in Charge of the State Bureau of Health Intelligence & Vital Statistics (SBHI & VS), printed the forms from his funds and supplied them to the concerned municipalities. From 1971 onwards, however, all the municipal authorities made their own arrangement for getting the printed forms. The printed forms are supplied to all the hospitals and private medical practitioners by the municipalities, so that they may indicate the cause of death on IFMCCD only. Further, a printed copy of "Physicians Handbook of Medical Certification of Cause of Death" prepared by the WHO was supplied to all the major hospitals for their guidance regarding the procedure to be followed while indicating the cause of death on the IFMCCD.

The municipalities are expected to collect the certificates from all the hospitals and private practitioners and prepare duplicate copies. The originals are sent to the SBHI & VS, Directorate of Health Services and duplicate copies are kept in the municipalities for reference purposes. From the original certificates received in SBHI & VS, causes of deaths are coded according to the detailed four digit coding by trained medical coders following the Eighth Revision of the ICD*. From practical consideration, however, abbreviated A list of causes is presented in this report.

* The only exception to this arrangement is Nagpur City from which prepared data (three-digit classification, are received.

II

Out of 226 municipalities in the State, small sized municipalities (population of 15,000 or less) numbered 92. From such municipalities, certificates were not received, their total population being 911,000.

The number of deaths for which certified causes were available was 64,992 in 1970. It increased to 71,221 in 1971 and further increased to 77,914 in 1972. Their percentage of the total registered deaths also increased from 50 per cent in 1970 to 55 per cent in 1971 and to 59 per cent in 1972.

One of the criteria adopted by the WHO for analysis of causes of mortality is that the annual number of deaths due to all causes should not be less than 5000. In the present report, the number of officially certified causes of death is well over 5000 as can be seen above. Another criterion laid down by the WHO for the analysis of causes of mortality is that the percentage of deaths due to "Symptoms and ill-defined conditions" should not exceed 25% of deaths due to all causes. This percentage was observed to be not more than 9% during 1970-1972.

The ten leading causes observed during 1970-1972 are given below with their percentage of total deaths due to all causes.

Sr. No.	A list	Leading causes of death	Percentage of total deaths		
			Years		
			1970	1971	1972
1.	A 6 to A 10	Tuberculosis (All types)	10.4	10.3	10.5
2.	A 15	Prematurity - other causes of perinatal morbidity and mortality	9.5	9.0	7.8
3.	A 92	Pneumonia	7.5	7.8	9.0
4.	A 5	Enteritis and other diarrhoeal diseases	6.7	6.6	7.0
5.	A 83	Ischaemic heart diseases	5.4	5.5	5.8
6.	A 20	Tetanus	5.4	3.2	2.7
7.	A 85	Cerebrovascular diseases	3.3	3.3	3.3
8.	A 67	Anaemias	2.4	2.6	2.4
9.	A 102	Cirrhosis of liver	1.6	1.4	1.4
10.	A 72	Meningitis	1.3	1.3	1.3

III

The above causes were responsible, on an average for about 51 per cent of total mortality during 1970-1972. Deaths due to all communicable diseases formed nearly 30 per cent of total mortality and the leading communicable diseases (Tuberculosis, Enteritis, Pneumonia and Tetanus) were responsible for as high as 28 per cent of total deaths due to all causes.

It has been reported in the WHO reports* that during 1957-68 almost all the health authorities in the developing countries mentioned communicable diseases as their main public health problems. As noticed above, communicable diseases continue to take a heavy toll of life even at present. In this report, the urban areas are considered. If the whole State is considered, the proportion of deaths due to communicable diseases might be more than the one seen in the urban areas because of poor environmental sanitation, lack of adequate protected water supply and poor immunity status persisting in the rural areas.

It is felt that the pattern of causes of mortality observed in Maharashtra might be prevailing more or less in other parts of India. Hence the high proportion of deaths due to communicable diseases emphasises the need to continue our national long and short term efforts for the control of these diseases.

Detailed information is furnished in Tables I to VI.
