INTRODUCTORY NOTE

The Indian Trade Classification as revised on the basis of the Standard International Trade Classification (original) was implemented with effect from 1-1-1957. It comprised nearly 4,850 articles with 9-digit codes retaining the framework of the S.I.T.C. (original) classification upto the 5-digit item levels. The list was common for imports, exports and re-exports. Thereafter several proposals for changes in and additions to the list were received from the trade as well as from Government Departments. Only in special cases however the desired amendments in the classification could be carried out.

With the later development and diversification of the country's trade and industry, it was felt that the list should be revised again keeping in view the current requirements of various Government departments, Export Promotion Councils, Chambers of Commerce and other important trade and industrial organisations in the country. Meanwhile the U. N. Statistical Office has revised the original S.I.T.C. by combining it and the 1955 Tariff Nomenclature (BTN) of the Customs Co-operation Council (Brussels). In the S. I. T. C., Revised most of the principal items (5-digit codes) of the original S. I. T. C. reappear as 4-digit sub-groups of the S. I. T. C., Revised. By the use, where necessary, of 5-digit headings a reciprocal one-to-one correspondence was achieved between the headings of the S. I. T. C., Revised and the BTN. This correspondence permits *inter alia* the precision of definition available for BTN items to be applied directly to S. I. T. C., Revised. Following the decision to revise the Indian Trade Classification on the basis of S. I. T. C., Revised, we have adopted it fully upto its 5-digit codes. The Revised Classification was drawn up after sub-dividing them into 7-digit headings according to our requirements. Many unimportant articles of the old list have been replaced by new ones and the total number of commodities in the Revised Indian Trade Classification, according to which the foreign trade of India is to be recorded, has increased to 5,000.

In cases where no sub-divisions after 4 or 5-digit (sub-group and item) levels of the S. I. T. C., Revised have been made, the description of the articles has been repeated with 7-digit code (*i.e.*, by adding 3 or 2 zeroes, as necessary). In some cases the descriptions have been modified on the basis of corresponding BTN headings to make them more explanatory. Relevant BTN code numbers have been shown in brackets against the 5-digit (*including* undivided 4-digit) headings. In a few cases deviations from the S. I. T. C., Revised had to be made to satisfy national needs. In those places, however, adequate indications have also been given so that there may not be any difficulty in correlating those headings with the corresponding S. I. T. C., Revised items. For some articles where a more detailed break-down is required, new Code Nos. have been allotted for the concerned group, sub-group or item of the S. I. T. C., Revised. In all such cases blank spaces of the S. I. T. C., Revised have been utilised. There are also instances where unsplit sub-groups (4-digit) of the S. I. T. C., Revised have been sub-divided into new items (5-digit). There has been minor deviation at the Division (2-digit) level under Sec C

where 054.2 and 055.41 have been shifted to new Codes 049.1 and 049.2 respectively in order to bring together all grain, pulse and flour. The coverages under groups 653 to 657 are also slightly different. Details of deviations from the S. I. T. C., Revised are given at the end of the note.

As against 177 groups of the S. I. T. C., Revised sub-divided into 625 sub-groups, there are 184 groups of the R. I. T. C., sub-divided into 650 sub-groups (4-digit level). Out of the 650 sub-groups, 296 have been sub-divided into 1088 items (5-digit level), 610 of which have been further sub-divided into 4168 commodities (7-digit level). Total number of commodities separately specified in the R. I. T. C. is 5000 (including 354 undivided sub-groups and 478 undivided items).

To facilitate proper classification of different commodities entering in the foreign trade of India, explanatory 'Notes' have been given at the beginning of each section. These are based mainly on the notes preceding each chapter of the BTN (Appendix I—Statistical Papers, Series M. No. 34). For further information regarding coverage of each item, U. N. Statistical Papers Series M. No. 38, Vol. I may be consulted.

An alphabetical Index to the R. I. T. C., is also under preparation. It will cover all commodities which are known to enter the country's foreign trade.

NOTES—

1. Group 211 excludes parings or similar waste of raw hides and skins (291-95) and birdskins with the feather (291-96) but includes waste and used leather (211-8).

Group 212 excludes the following hides and skins with the hair or wool on, *viz.*

(a) Bovine and equine hides including calf and kip skins.

(b) Sheep and goat skins including lamb and kid skin (except astrakhan, caracul, Persian lamb, broad tail and similar lamb and Yemen, Chinese, Mongolian and Tibetan goats and kids).

(c) Swine (*including* peccary) and Dogs.

(d) Reindeer, chamois, gazelle, deer, elk and roebucks.

2. Group 221 excludes coconuts (051-71) and olives (054-5) but includes copra (221-2).

3. Group 231 includes the following products, *viz.*, natural rubber, balata, gutta-percha and similar natural gums, synthetic rubber, factice derived from oils and such substances reclaimed. In sub-group 231-2 the expression 'Synthetic rubber' applies to (a) unsaturated synthetic substances which can be irreversibly transformed into non-thermoplastic substances by vulcanisation with sulphur, selenium or tellurium, and which, when so vulcanised as well as may be (without the addition of any substances, such as, plasticisers, fillers or reinforcing agents not necessary for the crosslinking), can produce non-thermoplastic substances which, at a temperature between 15° and 20° Centigrade, will not break on being extended to three times their original length and will return after being extended to twice their original length, within a period of two hours, to a length not greater than one and half times the original length. (b) Thioplasts (GRP) and (c) Natural rubber modified by grafting or mixing with artificial plastic materials, provided that it complies with the requirements concerning vulcanisation, elasticity and reversibility in (a) above.

Sub-groups 231-1 and 231-2 are to be taken not to apply to rubber containing fillers, reinforcing agents, plasticisers, vulcanising agents, accelerators or colouring matter, or to mixtures of natural rubber with synthetic rubber or to other mixtures of different kinds of rubber (621-0). However, 231-2 is to be taken to include synthetic rubbers to which mineral oils have been added before coagulation, and also to synthetic rubbers containing preservatives or to which colouring matter has been added solely to facilitate identification:

4. Sub-group 241-2 excludes 'activated charcoal'.

Groups 242 and 243 exclude wood of a kind used primarily in perfumery, in pharmacy, or for insecticidal, fungicidal or similar purposes (292-4); in dyeing and tanning (292-1) and Bamboo (292-3).

5. In group 244, Natural cork roughly squared or deprived of the outer bark is to be taken to fall within heading No. 244-02 and not within heading No. 244-01.

6. In group 261, 'Tasar' means wild silk, 'Eri' means silk of silk worms reared on Castor leaves and 'Muga' means silk of silk worms collected wild and subsequently reared.

In group 262 the expression 'fine animal hair' means hair of alpaca-llama, vicuna, yak, camel, Angora, Tibetan, Kashmir and similar goats (but not common goats), rabbit (*including* Angora rabbit), hare, beaver, nutria and musk-rat.

7. In group 266, 'synthetic and regenerated fibres suitable for spinning' relates to Man-made fibres (discontinuous), 'Man-made fibres' means fibres or filaments of organic polymers produced by manufacturing processes, either (a) by polymerisation or condensation of organic monomers, for example, polyamides, polyesters, polyurethanes and polyvinyl derivatives; or (b) by chemical transformation of natural organic polymers (such as cellulose, casein, proteins and algae), for example, viscose rayon, cuprammonium rayon (cupra), cellulose acetate and alginates. Items 266-21 and 266-31 of this group include continuous filament tow not exceeding two metres. Items 266-22 and 266-32 are to be taken to apply to continuous filament tow consisting of parallel filaments of a uniform length equal to the length of the tow meeting the following specifications:

- (a) Length of tow exceeding two metres;
- (b) Twist less than five turns per metre or untwisted;
- (c) Weight per filament less than 6.6 milligrammes per metre (60 denier);
- (d) In case of synthetic fibres, the tow must be drawn, that is to say, be incapable of being stretched by more than one hundred per cent. of its length;
- (e) Total weight of tow:
 - (i) In the case of regenerated filament, more than 0.5 grammes per metre (4,500 denier).
 - Or (ii) In the case of synthetic fibres, more than 1.66 grammes per metre (15,000 denier).

8. In division 27 except where the context otherwise requires, the headings are to be taken to apply only to goods which are in the crude state, or which have been washed (even with chemical substances eliminating the impurities without changing the structure of the product), crushed, ground, powdered, levigated, sifted, screened, concentrated by floatation, magnetic separation or other mechanical or physical processes (not *including* crystallisation) but not calcined or subjected to any further process other than a process specially mentioned in any heading in respect of goods described therein.

Sub-group 276-5 of the S. I. T. C., Revised has been split up into the new sub-groups 276-7 and 276-8 to facilitate sub-division under Mica. Item 276-92 does not cover ferrous earth colours containing seventy per cent. or more by weight of combined iron evaluated as Fe_2O_3 (513-53). Item 276-97 does not include borates separated from natural brine.

In sub-group 276-8 for Mica splitting, minimum size of No. 5½ Mica splittings is 14.5 square centimetres (2½ sq. inches). "No. 6 second quality and better" means that 85 per cent. of the splittings will pass over screen mesh of 1.6 cm. (⅝") mesh. "No. 6 third quality" means that 85 per cent. of the splittings will pass over screen of 1.3 cm. (½") mesh. "No. 6 below third quality" means that 85 per cent. of the splittings will pass over screen of 0.6 cm. (¼") mesh.

9. In Division 28 'Metallic Ores' means minerals of mineralogical species actually used in the metallurgical industry for the extraction of (i) mercury (513-25), (ii) metals falling under Divisions 67 and 68 and (iii) radio active chemical elements and isotopes (515-1), even if they are intended for non-metallurgical purposes but does not include minerals which have been submitted to processes not normal to the metallurgical industry.

Sub-group 282-0 of the S. I. T. C., Revised has been split up into two new sub-groups, viz. 282-1 and 282-2 to provide for imports of scrap for use other than for re-smelting, reforging or for technical use which are not included under Division 67.

284-01 is to be taken to apply only to ash and residues of a kind used in industry either for the extraction of metal or as a basis for the manufacture of chemical compounds of metals.

10. In 291-13 'Ivory' means tusks and teeth of all animals and rhinoceros horns.

291-93 *includes* edible guts, etc. ;

292-2 *excludes* rubber, balata, gutta-percha or similar natural gums (231-1).

292-5 *excludes* seeds used as spices ; cereals, pulses, oil-seeds, oil-nuts or seeds falling under sub-group 292-4, even though for planting.

292-6 does not include potatoes, onions and garlic for sowing.

292-7 *includes* bouquets, wreaths, etc.

Steel hollow bars of any cross-section, suitable for mining drills, of which the greatest external dimension exceeds fifteen millimetres but does not exceed fifty millimetres, and of which the greatest internal dimension does not exceed one third of the greatest external dimension ; other steel hollow bars are to be treated as falling under the headings of 678.2 and 678.3.

(r) Angles, shapes and sections (items Nos. 673.41 ; 673.51)

Products, other than those falling within heading No. 676.1 and 676.2 which do not conform to the entirety of any of the definitions (h), (i and j), (k), (l), (m), (n) and (o) above, and which do not have cross-sections in the form of circles, segments of circles, ovals, isosceles triangles, rectangles, hexagons, octagons, or quadrilaterals with two sides parallel and the other two sides equal and which are not hollow.

2. Headings numbered 672.1 and 674.7 are to be taken not to apply to goods of alloy or high carbon steel.

3. Iron and steel products, described in Division 67 which are clad with another ferrous metal, are to be classified as products of the ferrous metal predominating by weight.

4. Iron obtained by electrolytic deposition is classified according to its form and dimensions with the corresponding products obtained by other processes.

5. Group 676 includes rails and construction materials for tramway track also. Sub-group 676.2 excludes assembled railway or tramway racks. (719.66).

6. The expression "high pressure hydro-electric conduits of steel (heading No. 678·4) means riveted, welded or seamless circular steel tubes or pipes and bends therefor, of an internal diameter exceeding four hundred millimetres and of a wall thickness exceeding 10·5 millimetres.

Division 68.—Non-ferrous metals

1·1. (i) In Group 681 the expression "other metals of platinum group" means iridium, osmium, palladium, rhodium and ruthenium.

(ii) The expression "rolled metal" means material made with a base metal upon one or more surfaces of which there is affixed by soldering, brazing, welding, hot-rolling or similar mechanical means a covering of precious metal. The expression is, also, to be taken to cover base metal inlaid with silver or platinum, etc.

(iii) This group is inclusive of alloys (including a sintered mixture) having two per cent or more by weight of silver or platinum, etc.

1·2. Unless the context otherwise requires, any reference in this classification to a base metal is to be taken to include a reference to alloys which by virtue of the notes relating to the classification of alloys as given below are to be classified as alloys of that metal :

(i) The term "alloy" is to be taken to include sintered mixtures of metal powders and heterogenous intimate mixtures obtained by melting.

(ii) Alloys of base metals other than those included under heading Nos. 671·4 ; 671·5 ; and 682·13 are to be classified as an alloy of the metal which predominates by weight over each of the other metals.

(iii) An alloy not being a ferro-alloy or a master alloy composed of base metals and other elements is to be treated as an alloy of base metal if the total weight of such metal equals or exceeds the total weight of the other elements present.

(iv) Ferro-cerium or other pyrophoric alloys are included under heading No. 599·93.

(v) In Group 682 the expression "master alloys" means (except copper phosphide containing more than eight per cent by weight of phosphorous, 514·93) of copper with other materials in any proportion not usefully malleable and used as raw material in the manufacture of other alloys or as de-oxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals.

2. "Wire" means rolled, extruded or drawn products of solid section of any cross-sectional shape of which no cross-sectional dimension exceeds six millimetres.

3. "Wrought bars, rods, angles, shapes and sections" means rolled, extruded, drawn or forged products of solid section of which the maximum cross-sectional dimension exceeds six millimetres and which if they are flat have a thickness exceeding one tenth of the width. Also, cast or sintered products of the same forms and dimensions which have been subsequently machined (otherwise than by simple trimming or de-scaling).

4. "Wrought plates, sheets and strips" means flat-surfaced, wrought products (coiled or not) of which the maximum cross-sectional dimension exceeds six millimetres and of which the thickness does not exceed one tenth of the width, inclusive of such products whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated provided that they do not assume the character of articles or of products falling within other headings. In case of copper and aluminium the thickness should exceed 0.15 millimetres. In the case of lead and tin the weight per square metre should exceed 1,700 grammes and 1 Kilogramme respectively.

5. "Tubes, pipes and hollow bars and fittings therefor" are inclusive of those which have been polished, coated or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or finned.

6.1. In heading No. 689.5 the following base metals are included :

Bismuth, cadmium, cobalt, chromium, gallium, germanium, hafnium, indium, manganese, niobium (columbium), rhenium, antimony, titanium, thallium, vanadium, zirconium.

6.2. The above mentioned heading also covers cobalt mattes, cobalt speiss and other intermediate products of cobalt metallurgy.

Division 69.—*Manufactures of metal, n.e.s.*

Heading No. 692.11 covers reservoir, tanks, vats and similar containers for storage of manufacturing use, of a capacity exceeding 300 litres whether or not fitted with taps, valves, level gauges, manometers, and whether or not lined or heat insulated, but not fitted with mechanical or thermal equipment. The heading excludes containers for the convenience or packing of goods and road-rail containers. Similar containers of 300 litres or less capacity are classified under heading No. 698-91.

1.2. Heading No. 692.2 excludes Road-rail containers.

1.3. Heading No. 698.6 excludes cloth and watch spring (864.29)-

1.4. Heading No. 698.9 excludes handsieves (899.27).

2. Articles of base metals containing two or more base metals (including alloys) are to be treated as articles of the base metal predominating by weight.
