INTRODUCTORY NOTE

The Revised Indian Trade Classification, 1965 (RITC) which is based on the standard International Trade Classification (SITC), Revised of the United Nations is in vogue since April 1965. It comprises nearly 5000 articles with 7-digit codes retaining the framework of the SITC—Revised up to the 5-digit item levels. The list is common for imports, exports and re-exports. Thereafter several proposals for changes in and additions to the list have been received from the trade as well as from Government Departments. Only in special cases, however, the desired amendments in the classification were carried out.

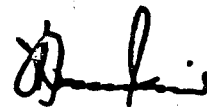

With the later developments and increasing diversification of the country's foreign trade and industry it has become necessary to revise the present RITC again keeping in view the current requirements of various Government Department, Export Promotion Councils, Chambers of Commerce and other important trade and industrial organisations in the country. Meanwhile the U. N. Statistical Office has amended SITC—Revised again in May, 1975 because of (a) the marked improvement in the international comparability of external trade statistics which has resulted since 1960 from the implementation by Governments and International Agencies of the Standard International Trade Classification—Revised, and (b) action taken by the Customs Co-operation Council to maintain the correspondence of its Brussels Tariff Nomenclature (BTN) with the SITC. The new UN trade classification is called the Standard International Trade Classification (SITC)—Revised 2. With a view to conforming to international practice, it has been decided to revise the Revised Indian Trade Classification (RITC) also on the basis of SITC—Revision 2. Accordingly the new Indian Trade Classification—Revision 2 has been drawn up and its framework at the levels of Sections and Divisions is same as in the old classification. In evolving individual commodity specifications, the 5-digit codes of the SITC—Revision 2 have also been fully adopted and each is subdivided into 7-digit headings according to current requirements of the country's trade and industry.

2. In cases where no sub-divisions after 4 or 5-digits (sub-group and item) levels of the SITC—Revision 2 have been made, the description of the articles has been repeated with 7-digit code (*i.e.* by adding 3 or 2 Zeroes as necessary). Relevant BTN Code Nos. have been shown against respective 4 or 5 or 7-digit Codes Nos. of the new classification. In a few cases, deviation from the SITC—Revision 2 have to be made to satisfy national needs. In those places, however, adequate indications have also been given so that there may not be any difficulty in correlating those headings with the corresponding SITC—Revision 2 items. For some articles, where a more detailed breakdown is required, new code nos. have been allotted for the concerned sub-group or item of the SITC—Revision 2. In all such cases blank spaces of the SITC—Revision 2 have been utilised.

The new classification contains 10 sections which are divided into 63 divisions as in the case of the previous RITC. These divisions are sub-divided into 239 Groups, as against 184 in the old RITC. These 'Groups' in the new classification have further been divided into 793 'Sub-groups' (4-digit level). Out of these sub-groups, 452 have been broken up into 1658 items, (5-digit level), 944 of which have been further split up into 4693 commodities (7-digit level). The total number of commodities separately specified in the ITC—Rev. 2, is 6660 (*including* 132 undivided sub-groups and 714 undivided items).

To facilitate proper classification of different commodities entering in the foreign trade of India, explanatory notes have been given at the beginning of each section.

An Alphabetical Index to the new classification (ITC. Rev. 2) covering all the commodities specified therein has been published separately as a special supplement to the Indian Trade Journal, dated 6th July, 1977.

In Subgroup 233.1 the expression "Synthetic rubber" applies to (a) unsaturated synthetic substances which can be irreversibly transformed into non-thermoplastic substances by vulcanisation with sulphur, selenium or tellurium, and which, when so vulcanised as well as may be (without the addition of any substance, such as, plasticisers, fillers or reinforcing agents not necessary for the crosslinking), can produce nonthermoplastic substance which, at a temperature between 15° and 20° centigrade, will not break on being extended to three times their original length and will return after being extended to twice their original length, within a period of two hours, to a length not greater than one and half times the original length; (b) Thioplasts, (GRP) and (c) Natural rubber modified by grafting or mixing with artificial plastic materials, provided that it complies with the requirements concerning vulcanisation, elasticity and reversibility in (a) above.

3. Subgroups 232.0 and 233.1 are to be taken not to apply to rubber containing fillers, reinforcing agents, plasticisers, vulcanising agents, accelerators or colouring matter, or to mixtures of natural rubber with synthetic rubber or to other mixtures of different kinds of rubber (621.0). However 233.1 is to be taken to include synthetic rubbers to which mineral oils have been added before coagulation, and also to synthetic rubbers containing preservatives or to which colouring matter has been added solely to facilitate identification.

45.2. Unless the context otherwise requires, any reference in this classification to a base metal is to be taken to include a reference to alloys which by virtue of the notes relating to the classification of alloys as given below are to be classified as alloys of that metal :

(i) The term "alloys" is to be taken to include sintered mixtures of metal powders and heterogenous intimate mixtures obtained by melting.

(ii) Alloys of base metals other than those included in sub-group 671.6 and 682.13 are to be classified as an alloy of the metal which predominates by weight over each of the other metals. If, however, nickel constitutes more than 10 per cent of such alloy it should be classified as a nickel alloy.

(iii) An alloy not being a ferro-alloy, or a master alloy, composed of base metals and other elements is to be treated as an alloy of base metal if the total weight of such metal equals or exceeds the total weight of the other elements present.

(iv) Ferro-cerium or other pyrophoric alloys are included under heading No. 899.39(a).

(v) In Group 682 the expression "master alloys" means (except copper phosphide containing more than eight per cent by weight of phosphorus, (523.92) of copper with other materials in any proportion not usefully malleable and used as raw material in the manufacture of other alloys or as deoxidants, de-sulphurising agents or for similar uses in the metallurgy of non-ferrous metals.

46. "Wire" means rolled, extruded or drawn products of solid section of any cross-sectional shape of which no cross-sectional dimension exceeds six millimetres.

47. "Wrought bars, rods, angles, shapes and sections" means rolled, extruded, drawn or forged products of solid section, of which the maximum cross-section dimension exceeds six millimetres and which, if they are flat, have a thickness exceeding one-tenth of the width. Also, cast or sintered products, of the same forms and dimensions, which have been subsequently machined otherwise than by simple trimming or de-scaling.

48. "Wrought plates, sheets and strips" means flat-surfaced, wrought products (coiled or not) of which the maximum cross-sectional dimension exceeds six millimetres and of which the thickness does not exceed one-tenth of the width inclusive of such products whether or not cut to shape, perforated, corrugated, ribbed, channelled, polished or coated provided that they do not assume the character of articles or of products falling within other heading. In case of copper and aluminium the thickness should exceed 0.15 millimetres. In the case of lead and tin the weight per square metre should exceed 1,700 grammes and 1 Kilogramme respectively.

49. "Tubes, pipes and hollow bars and fittings therefor" are inclusive of those which have been polished, coated or which have been shaped or worked, such as bent, coiled, threaded, drilled, waisted, cone-shaped or finned.

50.1. In heading No. 689.99 the following base metals are included :

Bismuth, cadmium, cobalt, chromium, gallium, germanium, hafnium, indium manganese, niobium (columbium), rhenium, antimony, titanium, thallium, vanadium, zirconium.

50.2. The above mentioned heading also covers cobalt matter, cobalt speiss and other intermediate products of cobalt metallurgy.

53. Item 682.11 differs from 682.11 of RITC by excluding cement copper, now classified in 287.12.

54.1. Items 689.11 and 699.91 comprise item 689.41 of RITC.

54.5. Items 689.99 and 699.99 comprise sub-group 689.5 of RITC.

Division 69—Manufacturing of metal, n.e.s.

56.1. Heading No. 699.4 excludes clock and watch spring (885.29).

56.2. Heading No. 699.8 excludes handsieves (899.81).

57. Articles of base metals containing two or more base metals (including alloys) are to be treated as articles of the base metal predominating by weight.

58. Group 691 differs from group 691 of RITC by excluding fabricated building components of zinc, now classified in item 699.85.

59. Sub-group 692.1 differs from sub-group 692.1 of RITC by excluding reservoirs, tanks, vats, and similar containers for any material, of a capacity exceeding 300 litres, of copper, now classified in 699.81.

60. Group 693. differs from group 693 of RITC by excluding gauge, cloth, grill, netting, fencing, reinforcing fabrics and similar materials, of aluminium wire and expanded metal of aluminium, now classified in item 699.83.

24.3. Heading No. 896.03 is to be taken not to apply to mass-produced re-productions or works of conventional craftsmanship of a commercial character. Separate provision has, however, been made for "handicrafts (other than mass-reproduced reproductions of work of conventional carftsmanship of commercial character) under a new heading No. 896.07 instead of showing them under different heads, classified according to material.

24.4. Heading No. 896.06 excludes articles classifiable under heading Nos. 896.01 to 896.05. Frames around painting, drawings, pastels, engravings, prints or lithographs are to be treated as part of those articles, provided they are of a kind and of a value normal to those articles.

25.1. For the purposes of heading No. 897.2, the expression "imitation jewellery" means articles of jewellery within the meaning of paragraph 25.3 (a) below (but not *including* buttons, studs, cuff-links or other articles of heading No. 899.83 or dress combs, hair-slides or the like of heading No. 899.85 not incorporating pearls, precious or semi-precious stones (natural synthetic or reconstructed) nor (except as plating or as minor constituents) precious metal or rolled precious metal, and composed :

(a) Wholly or partly of base metal, whether or not plated with precious metal ; or

(b) Of at least two materials (for example, wood and glass, bone and amber, mother of pearl and artificial plastic material) no account being taken of materials for example, necklace strings) used only for assembly.

25.2. Sub-group 897.3 and 897.4 comprise sub-group 897.1 of RITC.

25.3. For the purpose of heading No. 897.31, the expression "articles of jewellery" means :

(a) Any small objects of personal adornment (gem-set or not) (for example, rings, bracelets, necklaces, broches, earrings, watch-chains, fobs, pendants, tie-pins, cuff-links, dress-sutds, religious or other medals and insignia) and

(b) Articles of personal use of a kind normally carried in the pocket, in the handbag or on the person (such as cigarette cases, powder boxes, chain purses, cachou boxes).

25.4. For the purposes of heading No. 897.37, the expression "articles of goldsmiths' or silversmiths' wares" includes such articles as ornaments, tableware, toiletware, smokers' requisites and other articles of household, office or religious use.

26. Group 898 differs from group 891 of RITC by *excluding* "Phonographs, tape recorders and other sound recroders and reproducers (891.1 of RITC), which are covered in the new classification under group 763 and item 764.99. This group (898 of ITC, Rev. 2) also excludes, (a) microphones, amplifiers, loud-speakers and head phones and other instruments, etc. for use with but not incorporated in or housed in the same cabinet as instruments of this group ; (b) sound recorders or reproducers combined with a radio receiver (762.8). Bows and sticks and similar devices used in playing the musical instruments of heading No. 898.19 and 898.24, clearly intended for use therewith, are to be classified in the same heading as the relative instruments. Perforated music rolls (898.9) and gramophone records and the like (898.3), are to be treated as separate articles and not as forming a part of such instrument.

27.1. Group 899 differs from group 899 of RITC, by (a) *including* ferro-cerium and other pyrophoric alloys, formerly classified in 599.93 of RITC and (b) by *excluding* (i) plaits and similar products of plaiting materials (899.21 of RITC) and (ii) catapults and similar aircraft launching gear and ground flying trainers, and their parts (899.99 of RITC) which are now classified under 659.7 and 792.83 respectively of the new classification.

27.2. Sub-group 899.1 excludes handicrafts as artware (896.07).

27.3 Definition of "plaiting materials" is given in Para. 24.3 Notes of Section 26.

27.4. In item 899.72(c) the expression "prepared knots and tufts for broom or brush making" is to be taken to apply only to unmounted knots and tufts of animal hair, vegetable fibre or other material, which are ready for incorporation without division in brooms or brushes, which require only such further minor processes as glueing or coating the butts, or trimming to shape at the top, to render them ready for such incorporation.

27.5. Heading No. 899.39(b) is to be taken to apply to :

(a) Metaldehyde, hexamethylenetetramine and similar substances put up in forms (for example, tablets, sticks or similar forms) for use as fuels ; fuels with a basis of alcohol, and similar solid or semi-solid fuels ;

(b) Liquid fuels (for example petrol) of a kind used in mechanical lighters, in containers of a capacity not exceeding three hundred cubic centimetres, and

(c) Resin torches, firelighters, and the like.

27.6. Heading No. 899.49 is to be taken not to apply to parts, trimmings or accessories of textile material, nor to covers, tassels, thongs, umbrella cases or the like, of any material. Such goods imported with but not fitted to articles falling within heading No. 899.41 or 899.42 are to be classified separately and are not to be treated as forming part of those articles.

ALPHABETIC INDEX

INDIAN TRADE CLASSIFICATION
REVISION 2

PREFACE

The Revised Indian Trade Classification, 1965 (RITC) followed till now for recording commoditywise statistics of foreign trade of India has necessitated revision in the wake of the revision of the *United Nations' Standard International Trade Classification—Revised*. It will be recalled that the RITC was based on this U.N. Classification. The revised Indian classification is called the 'Indian Trade Classification—Revision 2' (ITC-Rev. 2). This has been adopted with effect from April, 1977. This new classification while retaining the broad structure of the previous classification, has been made more comprehensive by the incorporation of a larger number of items than before.

With a view to facilitating easy and quick location of the various commodities included in the new classification (ITC-Rev. 2), an Alphabetic index of commodities called "Alphabetic Index to the Indian Trade Classification—Revision 2" has been prepared. This special Supplement embodied in the present issue of the Indian Trade Journal represents the first effort in the direction of its dissemination in printed form.

In order to correlate this Alphabetic Index with the ITC-Rev. 2 referred to above, the appropriate code number has been indicated against each name in the list. The code number determines the classification of the commodity to which it relates. In addition, with a view to facilitate ready reference of the pages the alphabetic index also carries bolder type forms on the right hand corner of each page.

This Alphabetic Index is principally intended for the use of the importers, exporters and Customs authorities by ascertaining the correct classification under the new ITC-Rev. 2 of the commodities that enter the foreign trade of India. In using the Index, a commodity should first be looked for by its specific name and not by a generic name. To illustrate, 'face creams' should be looked for under 'Creams' and not under 'Cosmetics' ; 'Sulphadiazine' should be looked for under that name and not under 'chemicals'.

Where the name of a commodity consists of two words, it has, as far as practicable, been shown under both the relevant alphabets.

Suggestions for improvement of this Index are requested from all categories of users and all communications on this may be addressed to the undersigned.

Sd./- (B. N. Nair),
Director General.
