ADMINISTRATION REPORT OF THE FOREST CIRCLF® IN THE BOMBAY PRESIDENCY, INCLUDING SIND, FOR THE YEAR 1915-1916.

CONSERVATORS IN CHARGE OF CIRCLES DURING THE YEAR :-

Northern Circle.

W. F. D. Fisher, Esquire.

Central Circle.

O: H. L. Napier, Esquire, 1st July 1915 to 21st September 1915 and 2nd November 1915 to 30th June 1916.

D. A. Thomson, Esquire, 22nd September 1915 to 1st November 1915.

Southern Circle.

T. R. Bell, Esquire.

Sind Circle.

E. G. Oliver, Esquire, 1st July 1915 to 13th November 1915 and 15th December 1915 to 14th April 1916.

H. L. Newman, Esquire, 14th November 1915 to 14th December 1915. G. R. Duxbury, Esquire, 15th April 1916 to 30th June 1916.

CONSTITUTION OF STATE FORESTS.

1.—Alteration in Area.

Northern Circle.

CHAPTER I.

The changes in area during the year have been unimportant, being 995¹/₂ acres in South Násik and 371¹/₂ in North Násik disforested from reserved forest for cultivation, etc., and 368 acres being added to protected forest in South Násik, besides a few alterations of negligible magnitudes and the transfer of management of 169 square miles and 107 acres of reserved forest (Kalwan range) of the North Násik to South Násik as per Government Resolution No. 3506 of 24th March 1915.

Class of forest.		Area on 1st July 1915.		Add during t	led he year.	Excl during t	uded he year.	Area on 30th June 1916.

	Total	3,834	₊137	169	520 et	171	225	3,832	432	

The resultant totals for the circle are -

мн 1495—1

Central Circle.

At the close of the year the forest area of the circle stood 'at 5,436 square miles 431 acres as against 5,475 square miles 23 acres at its commencement. The main cause of the decrease was the disforestment, in the interests of cultivation, of 39 square miles 30 acres of pasture forests already in charge of the Revenue Department in the Ahmednagar and Sholápur Districts. Afforestation during the year comprised an area of 1 square mile 433 acres, consisting of isolated numbers in several districts within the demarcation line. Protected and leased forests ' remained practically unchanged.

In West Khåndesh 54 square miles 115 acres of pasture forest, transferred to the management of the Revenue Department in 1898-99, were now retransferred to the Forest Department, for the purpose of the preservation of the existing tree growth, and of production of grass for grazing and cutting; while in Poona 3 square miles 480 acres of pasture forests were cleared of growth by the 'Forest Department and handed over to the Revenue Department; the clearance of all such lands in Poona will be completed within the current year. The actual area of forests under Forest Department management thus rose during the year, from 3,686 square miles 291 acres to 3,738 square miles 135 acres.

Southern Circle.

An important event of the year was the organization of a 5th Forest Divisionin Kánara entailing, as a consequence, the amalgamation of the Dhárwár and Bijápur Divisions. Those changes were introduced from 1st February 1916 as per Government Order No. 11396 of 27th October 1915, abolishing the Bijápur Division and inaugurating the Kánara Central Division. The re-adjustments were :---

- (a) the Kánara Central Division was formed out of the Sirsi range of the Kánara Southern Division and the Ankola and Kumta ranges of the Kánara Western Division together with a bit of the Eastern Division;
- (b) the Supa and Gund ranges of the Kánara Northern Division were transferred to the Kánara Western Division;
- (c) the Kalghatgi and Bankápur ranges of the Dhárwar Division were added to the Kánara Northern and Kánara Eastern Divisions, respectively;
- (d) the remaining unorganized portion of the Dhárwár Division was amalgamated with the Bijápur Division, the combined charge being styled the Dhárwár-Bijápur Division.

By these arrangements the Kánara Divisions were reduced to two-thirds of their former size; the changes were effected with a view to the amelioration of the condition of the Kumri Maráthas in Kánara and for the better protection and more intensive management of the valuable forests in Kánara and Dhárwár.

The present report deals with the divisions as they now stand.

The total area of forest, though unaffected by the above readjustments, was reduced during the year by 11 square miles and 541 acres, as shown in the following statement :----

Class of forest.		of forest. Area on 1st July 1915.			Added Excluded during the year. during the year.			on 30t	Arca on 30th June Rem 1916. Rem	
		Sq. m.	Acres.	Sq. m.	Acres.	Sq. m.	Acres.	Sq. m.	Acres.

Total		4,600	232	× 2	271	14	172	4,588	331	

The real additions to, and the exclusions from, the area were 2 square miles and 29 acres, and 393 acres, respectively. Some scattered waste lands which were fitted for forest were constituted reserves in Belgaum, Dhárwár and Kánara. Disforestments in Kánara, Dhárwár and Bijápur were in the interests of • • agriculture. . • 2 **,** • •

The alterations in area were-

i -

In the previous year the total erosion was 15,070 acres.

The value of the material exploited from eroded areas (vide Government Resolution No. 804 of 2nd February 1900) was-

· - · ·		Acres.

Two thousand one hundred and seventy acres and 38 gunthas were temporarily alienated to other Departments.

2.—Forest Settlements.

Northern Circle.

Work under this head was limited to small local adjustments by the exofficio Settlement Officer. All settlements are complete.

Central Circle.

Settlement work consisted of the notification of 33 acres under section 19 of the Forest Act in Sátára and West Khándesh, and of 37 acres under section 4 in Kolába. Rs. 1,760 were spent on the acquisition of these lands which were either for inclusion in forest or for building sites for forest posts.

Outstanding work in the circle consists of the acquisition of lands within the demarcation line in the Poona and Sátára Divisions, a very large question to which attention was drawn in last year's report, and for which Government have ordered that a systematic programme should be framed. The settlement of $25\frac{1}{2}$ square miles of waste lands in West Khándesh, of which Government had approved the afforestation, is now in progress.

Southern Circle.

The progress made in settlement work during the year was:--Notification of 2 square miles and 29 acres under section 19 of the Forest Act and 8 square miles 24 acres under section 4. Final proposals for afforestation of 56,896 acres in Belgaum and those for Kánara, referred to in sub-section 2 of Chapter I of last year's report, were submitted to the respective Collectors. The proposals for the appointment of special Forest Settlement Officers for Kánara and Belgáum, referred to in last year's report, are still under the consideration of Government. Without special officers for this kind of work no real progress is possible.

Sind Circle.

Total	7,781
Area actually settled under section 19 of the Indian	,
Forest Act	7,108
Balance awaiting settlement	673
Expenditure	Nil.

The work done was very satisfactory.

3.—DEMARCATION.

Northern Circle.

The only new work done was in South Násik where it is chiefly limited to the erection of intermediate cairns. Satisfactory progress is being made. Elsewhere only current repair and painting of former cairns was carried out, demarcation being complete.

Central Circle.

Expenditure under this head was Rs. 5,174, of which Rs. 2,613 were on 221 miles of new work, and Rs. 2,561 on maintenance of 4,931 miles of already demarcated boundaries. The new work comprised the survey of over 100 miles and the demarcation of 38 miles in the Poona Division; the demarcation of 48 miles in West Khándesh, and of 135 miles in Kolába. Outstanding, work. consists solely of 162 miles in Kolába, and of 658 in the Akola and Rájur ranges of the Nagar District which form part of the Poona Division. The former it is hoped to complete within the year, while the latter will be pushed on as fast as funds and establishment permit.

Southern Circle.

Expenditure under this head was Rs. 2,743 on 1,068 miles of new work, and Rs. 698 on repairs to 656 miles of already demarcated boundaries. Much of the expenditure on new work was incurred on the following important frontier lines :-

	Line demarcated.	Cost.	Cost per mile.
The Mysore State frontier line in the Kánara Southern Division.	Miles. 11]	·Rs. 1,477	Rs. 131
The Portuguese Territory frontier line in the Kánara Western Division.	14 7	856	. 57
The Sávantwádi State frontier line in the Belgaum Division.	5	245	49

The expenditure on the Mysore frontier line was very heavy on account of the hilly and precipitous nature of the country and the difficulty of securing labour in the unhealthy tracts. Only 3 miles now remain to be demarcated. Betta demarcation was continued in the Sirsi and Siddápur Tálukas; 1,026 miles were demarcated at a cost of Rs. 270. The work in Siddápur is not yet finished.

In the Kánara W. D., 14 miles of the Goa frontier line were completely demarcated and a further 15 miles were surveyed. When this surveyed line is cut next year, there will remain about 20 miles still to be surveyed and, cut. Scarcity of labour prevented the surveying and line cutting work from proceeding simultaneously. The line surveyed in the Supa Range this year has been given out on contract for cutting.

In the Belgaum Division, besides the 5 miles of the Sávantwádi State frontier line, 6 miles of internal lines were cleared at a cost of Rs. 24. Old lines were cleared, cairns repaired and R. F. stones erected in the Khánápur and Gokák ranges.

In the Kánara Northern Division demarcation work is complete.

In the Kánara Eastern Division about 300 miles of old lines were cleared. About 4 miles of 132 feet strips were demarcated around cultivated lands in six villages of Yellápur Range. The Divisional Forest Officer reports, as last year, that the people have no use for these strips, and that the Government Orders regarding it, which were issued 7 years ago, might well be revised in the light of the experience of the local officers.

In the Kánara Central Division old lines were systematically gone over and cleared. Betta demarcation in Sirsi was completed very shortly after the creation of the Division.

In the Dhárwár-Bijápur Division 3 miles of line were newly demarcated at a cost of Rs. 24, and some old lines were gone over and cleared departmentally at a cost of Rs. 30. About 290 miles of line between the forest and cultivations in the Bijápur sub-division were cleared by the cultivators concerned on the concession of removing for their own use wood and thorns cut on the line. About 630 miles remain still to be cleared and this work may still take a couple of years to complete.

Sind Circle.

Internal Boundaries .--- The forests are divided into half-mile squares by rides 20 feet wide. Eighty-nine and a half miles of new compartment lines were cut during the year. This important work received most attention in Jerruck. Two thousand three hundred and six and a half miles of previously cut rides were kept clear by free labour valued at Rs. 4,712.

One hundred and nineteen thousand one hundred and forty-six acres remain \cdot round which rides have still to be cut. Much of this area at present contains young growth and the work here will not be taken in hand until the stock is more advanced.

External Boundaries.-Thirty-four miles and 860 feet were demarcated by 396 new boundary marks round newly afforested areas. Eighteen thousand seven hundred and thirty-one old boundary marks on 2,045 miles 4,665 feet of line were repaired free of cost.

м н 1495—2

4.—FOREST SURVEYS.

Northern Circle.

None were carried out.

Central Circle.

None were undertaken by the Survey of India.

The total expenditure on the "Constitution of State Forests" was Rs. 6,934 as against Rs. 4,834 in 1914-15.

Southern Circle.

No survey was carried out in this circle during the year.

The total expenditure on the "Constitution of State Forests" was Rs. 6,630 during the year as against Rs. 5,692 last year.

Sind Circle.

The work done by the Working Plans Assistant and his staff and the surveyors attached to each division is given below separately :---

By whom.	Division. River course aries surve					mpart-	No. of maps pre- pared,	c n an	No. of coupes narked id their area.	Levelling of bunds and dram- age pro- jects.

Divisional sur- veyors.	Sukkur Hyderabad Jerruck	106 0		97 463 129	0 41	1,063	29 456 12	0 3 0	19 167 43		 = 1,321 = 978	 14 0
•												

The survey of river frontages and marking of coupes was carried out as usual by the Range Forest Officers, the number of miles of river frontage surveyed being 71 and that of coupes demarcated and laid out being 132. Range Forest Officers in the Lárkána and Hyderabad Divisions also prepared 105 tracings.

CHAPTER II.

MANAGEMENT OF STATE FORESTS.

1.-REGULATION AND MANAGEMENT.

(a) Preparation and Control of Regular Working Plans.

Northern Circle.

Preparation.—A working plan for the South Dángs forests was completed by the Divisional Forest Officer during the year and, after approval by the Collector of Surat, the Conservator of Forests, Northern Circle, and the Commissioner, Northern Division, has been sent to the press for printing.

The working plan of the Eastern Maháls (Dohad and Jhálod of Panch Maháls) was examined and discussed by the Conservator and the Divisional Forest Officer and a revision decided upon involving the introduction of clear fellings in the place of coppice with standards. Owing to various urgent circumstances, the revision has been given effect to, in anticipation of Government sanction. The working plan report under preparation by the then Divisional Forest Officer has not yet been received. It is hoped the plan of the western maháls will be taken in hand in the coming season.

Good progress was made in the revision of working plans of the three Thána divisions in spite of two changes of the officer in charge. The preliminary report will be ready shortly and will be considered by the Inspector-General of Forests on the ground in the coming season, thus enabling its introduction, it is hoped, in 1917-18.

An attempt is to be made to take the plans of the forests of the Násik Divisions in hand in the coming season if the reduced staff of the Imperial officers can cope with the work.

The above efforts when completed will have dealt with all the forests of the circle except those of Mándvi and Central Dángs of the Surat Division, the plan for North Dángs of that division having been sanctioned last year.

Control.—Prescriptions under existing working plans were given effect to as far as possible as formulated in the respective plans of operations. There was no material variation from them except all possible reduction in capital expenditure on communications and buildings owing to necessity for economy on account of the war.

Central Circle.

During the year working plans for the following areas received the sanction of Government :---

Sq. miles. 38
90
2
4
. 44

The Working Plans Officer was employed during the fair season on the collection of data for a plan for the teak forests in the Jávli, Wái and Sátára ranges of the Sátára Division, an area of 97 square miles. The plan is now under preparation. The Divisional Forest Officer, Poona, continued his work of the revision of the teak and babul plans of his division, a work necessitated by the transference to the Revenue Department a few years back of large areas covered by both original plans; the area under the revised plans will be 589 square miles, and both are practically completed so far as writing and mapping are concerned, while work according to the new prescriptions has already commenced.

The revised plan of the East Khándesh Sátpuda forests, 400 square miles, referred to in last year's report, is still incomplete, the delay being solely due to the difficulty in reconciling the silvicultural necessities of the forests with the privileges and practices of the surrounding population. It is hoped however that the matter will be satisfactorily settled before long, and that the new provisions may come into force in 1917.

Sixty-two per cent. of the forest area of the circle is now under organized working, and for the remaining 38 per cent. plans are in preparation for roughly one-eighth part, while for seven-eighths plans are not yet a matter of any urgency. Revision is still of more importance than new work, and will be pressed on.

The prescriptions of sanctioned plans were on the whole carried out. Minor deviations as usual resulted from such causes as shortage of labour and inaccessibility of coupes; to which were added financial stringency and lack of demand for any but the most valuable material.

Southern Circle.

Preparation.—The following working plans were sanctioned during the year:—

- (1) The Chandavar fuel plan—coppice with standards—in Kánara S. D. for the supply of fuel to the Kumta town.—Area 13 square miles, cost Rs. 1,837 or Rs. 141 per square mile.
- (2) A revised plan for Block VII-A—in Kánara N. D.—Teak Pole—coppice with standards.—Area 7 square miles, cost Rs. 790 or Rs. 113 per square mile.
- (3) A revised plan for the Nagargali high forests (Block XIX) in the Belgaum Division—Improvement felling system.—Area 14 square miles: cost Rs. 12-8 expended on a few photos illustrative of the plan. This plan was compiled by Mr. Hodgson, Divisional Forest Officer, Belgaum, in the course of his ordinary duties with no extra cost, for which he was granted an honorarium of Rs. 2,000 by Government.

The following plans were completed during the year :----

- (1) Gokak working plan-submitted for Government sanction;
- (2) Revised Khánápur fuel plan-ready for submission;
- (3) Kirwatti teak pole plan-sent to Press;
- (4) Kalghatgi range plan, and
- (5) Bankápur and Hangal range forest plan-approved by the Collector;
- (6) Revised plan for Blocks VIII, IX and XX of Kánara N. D.—provisionally approved in Government Order No. 806 of 22nd January 1916, was sent to press.

The following plans are in course of preparation :---

- (1) Revised plan for Block XII—Yellápur slopes in Kánara C. D.—Area 28 square miles, cost during the year Rs. 5,805 or Rs. 208 per square mile.
- (2) Revised plan for Mundgod high forest—Blocks XXII, XXIII and portions of Blocks XVI, XVIII and XXI.—Area 157 square miles, cost during the year Rs. 5,390 or Rs. 35 per square mile.
- (3) Revised plan for the Mundgod teak pole area.—Ten square miles, cost during the year Rs. 414 or Rs. 41 per square mile.
- (4) The Honáwar Bhátkal fuel plan.
- (5) Revised Golihalli Godoli teak pole plan.
- (6) Belgaum range plan.

Nos. 1 and 2 of the plans completed during the year and Nos. 5 and 6 of the plans under preparation were compiled by Mr. Hodgson, Divisional Forest Officer, Belgaum, and the rest by Mr. Miller, Divisional Forest Officer, Working Plans.

The field work done by the Working Plans party during the year was entirely confined to Kánara E. D. and a portion of Kánara C. D.

Control.-The work under high forest plans in Kánara N. D. is up to date; that under the Dhárwár plan is a little in arrears, some coupes remaining unsold for want of demand. In Kánara E. D. the work in two out of the four plans is 1 to 3 years behindhand due to difficulties of labour and transport, and the Divisional Forest Officer is strongly in favour of a light railway (a scheme for a line is presumably under the consideration of Government) that would tap the forests of Kánara E. D. and C. D. On account of cattle disease and plague some work remained in arrears in Kánara C. D. In Kánara S. D., Belgaum and Dhárwár-Bijápur Divisions the work is almost up to date. In Kánara W. D. the Gund working plan fellings are six years in arrears, and there are still heavy arrears of work remaining in the old fellings undertaken before that, in the shape of some thousands of logs in jungle depôts, and even trees not yet cut in the jungles. These arrears are chiefly due to difficulties of transport, and it is hoped they may soon be reduced by improving the bed of the Kaneri river and opening another outlet from the Gund plateau to relieve congestion on the Holegadda slide. Mr. Haines, Executive Engineer, Dhárwár District, who was deputed to the Forest Department during the year on the work of improving transport facilities, made a preliminary examination of the bed of the Kalinadi river above Kadra with a view to facilitating the floatage for logs. In the Kalinadi slopes working circle, there are still some logs to be removed and the main fellings are a year behindhand. The improvement fellings prescribed in the working plan have never been begun owing to scarcity of money and labour. This is serious but unavoidable.

Sind Circle.

Excepting new kachas and recent reservations, all forests in Sind have been organised under regular working plans. These are under process of revision. The prescriptions of the revised working plan were carried out in Jerruck. In Hyderabad, where the plan has been finished this year and forwarded to Government for sanction, the revised prescriptions were introduced in advance except in the Miani Range. The field work of the revision of the Lárkána working plan was completed by the 31st March 1916 and in addition to valuable re-survey work of the external boundaries and compartment lines of the forest and of the course of the Indus, detailed examination of compartments was made with a view to the preparation of stock maps. The total cost of the field work of the revision inclusive of the pay of the Working Plans Assistant and his staff amounted to Rs. 6,800 or Rs. 29-5-8 per square mile. In April and May the work of revision of the Sukkur working plan was started.

(b) Preliminary Working Plan Reports.

Northern Circle.

There were none.

Central Circle.

The only one submitted was that for the forests of the Sátára Division mentioned above.

Southern Circle.

Remarks on these have been included above.

Sind Circle.

Nil:

(c) Plans of Operations.

Northern Circle.

See above under "Control."

Central Circle.

These were prepared in all divisions and carried out with a few minor and unimportant exceptions, and subject to some reductions of funds by Government.

Southern Circle.

These were prepared in all divisions and carried out as far as possible; some of the unremunerative works, such as buildings and wells, were postponed with a view to economy in expenditure during the year.

· Sind Circle.

Plans of operations were submitted for each division and duly carried out with minor and unimportant modifications. Some dead wood was worked out in every division.

2.—Communications and Buildings.

(a) Roads and Bridges.

Northern Circle.

New road work was confined to the Dángs of the Surat Division where immediate return will be realised by permitting the progress of working plans both sanctioned and prepared.

The following work was executed :	•	Rs.
Mahal-Dulda road, 2½ miles,	• •	2,000
Pandwa-Borkhal road, 1½ miles Pandwa-Holbari road, 2 miles	••	2,500
Waghai-Malegaon road, $4\frac{1}{2}$ miles	• •	4,500

м н 1495-3

A considerable amount of alignment for new roads was also carried out in this (Surat Dángs) and Peint of the South Násik Division.

A sum of Rs. 2,360 was spent on the repairs of unmetalled tracks in other divisions and a sum (annual) of Rs. 1,100 was paid to the Public Works Department as a contribution towards the up-keep of the Harsul-Goldari road in the South Násik Division.

The Divisional Forest Officer, South Násik, has called attention to the prospective advantage of developing the two Peint ranges comparing their potential value to that of the Dángs. The facts noted are recognised, as in the adjoining maháls of Mokháda and Talasari of the Thána District, but for realization it requires as a preliminary the prime factor accorded to the Dangs, *viz.*, a full-time officer of special ability with a fairly free hand and suitable powers, or we shall merely accentuate the present evil of robbing the forests of capital. When such officer, funds and other essentials indicated are available, the development of a very valuable property can be commenced.

Central Circle.

Owing to financial considerations expenditure under this head was considerably reduced, and only the most urgent works were taken in hand. Two hundred and ninety-three miles of roads and paths were repaired at a cost of Rs. 5,034, while 18 miles of new roads and paths were constructed at a cost of Rs. 3,243. The total expenditure was Rs. 8,277 as against Rs. 17,435 in 1914-15.

In North Khándesh, metalling was continued of the Wasardi-Bhurki road, 3 miles long, and which was commenced in 1912-13; and cutting and levelling of an extension of one mile to Kodit was completed. The total cost was Rs. 778. The Hisala-Bhoiti road, commenced in 1913-14, was extended by one mile at a cost of Rs, 792; its value will be evidenced during the next four years, for it taps important coupes now due for working. In the Akrani communication has been much improved by the realignment, broadening and repair of 109 miles of bridle tracks costing Rs. 724, the alignment being, wherever possible, made with a view to the eventual conversion of the tracks into fair weather roads. Already there are indications of carts being introduced into this hitherto cartless area, but only for use within the area itself. The difficulties of ascent to it are such that it must be many years before there can be cart traffic between it and the plains, and bridle tracks for the present must remain the sole means of communication.

In this connection reference may be made to the road aligned by the Public Works Department to connect Dhádgaon viâ Kothar with Taloda. From the forest point of view such a road, passing through forests of small value, can be of little use, whereas a road connecting Dhádgaon with Sháháda, though slightly longer than the former, would, it is believed, be easier of construction, and would pass through really valuable forest which cannot now be touched for lack of good means of communication with the plain. It is suggested therefore that reconsideration of the scheme by the Public Works Department is very desirable, a view held also by the Collector, who writes: "The Collector is in full agreement with Mr. Starte in his remarks on the Kothar-Dhádgáon road; there is nothing in the circumstances of the Akrani to justify the heavy expenditure which this road will necessitate. It has been advocated chiefly as facilitating the transport of liquor from the Dhulia distillery, and so leading to the abolition of the distillery at Dhádgáon. It does not appear to the Collector that ' the game is worth the candle '."

In West Khándesh Rs. 798 were spent on new roads and on repairs to existing roads.

In East Khándesh no new work was undertaken; Rs. 1,220 were spent on improving alignments and on repairs. The Collector writes: "The need for providing roads is still acute; until communications are opened out, there is no hope of improved revenue or even of more close supervision." With this view the Conservator is in full agreement; the revised working plan contains many valuable suggestions from Mr. Copleston, and effect will be given to them as soon as funds and personnel, now reduced by the permanent Divisional Forest Officer having gone on military duty, admit. In Poona 1½ miles of the ghat crest bridle path near Lonávla was converted into a cart track, making the total length of road now accessible in this way up to eight miles. Other work consisted of repairs only to bridle paths in the Poona District itself and in the Akola and Rajur ranges of the Nagar District, a work which much facilitates the removal of minor forest produce by pack animals, and which will in time open up a trade in charcoal from forests which are now untouched.

In Sátára repairs to the Vang valley and Koyna valley roads cost Rs. 1,947. New work on the latter consisted of further alignment by the Forest Department and of measuring of the lands traversed by the road by a Circle Inspector lent by The future of this road needs serious consideration; at present the Collector. work is stopped for want of funds, and in the opinion of the Conservator this is a matter for little regret, for as a Forest Department scheme it seems to him to have been ill-advised from its commencement. The Public Works Department has a project for a metalled road up the valley, but the Forest Department has neither the funds nor the technical knowledge to follow their alignment in this region of excessive rainfall, and perforce must take the line of least resistance with any track that it constructs-this involving endless crossings of the river. While an even more important consideration is that in this valley, denuded as it is by kumri cultivation and with the forests situated on inaccessible hill tops or up side valley remote from the main road, there is little, if any, forest material which can hope to pay the cost of extraction. At present the Conservator inclines to recommend to Government the definite abandonment of the road as a Forest Department work, but defers doing so until he has visited the lower end of the valley, which he will do in November with the Divisional Forest Officer. A more feasible scheme than the road would seem to be for the upper half of the valley a bridle path connecting with the main road near Pratapgadh, and which would facilitate the export of minor produce, such as hirda, fuel and charcoal, which alone the forests are capable of yielding; for the lower half of the valley, where there is some good timber though no teak, the utilization of the river itself for floating.

Speaking generally it is bad policy to spend money on a road with no prospect of a return, and to starve other forest areas which if opened up by good communications would prove immediately remunerative.

In Kolába repairs to two existing roads cost Rs. 85.

Southern Circle.

The expenditure under this head was Rs. 39,616 against Rs. 48,538 last year. Of this Rs. 12,846 were spent on new works and the rest on repairs. The most important items were :---

Kánara N.D.—Repairs to about 70 miles of roads. The District Local Board handed over the Haliyál-Kavalwad road (12 miles) to the Forest Department. Thirteen miles of cycle paths were made. Nothing further could be done with the proposed light railway from Bhistenhatti to Dandeli, no money being available for the survey of the line.

Kánara E. D.—Special repairs to 7 miles and current repairs to about 100 miles of road. Three wooden bridges were built on the Bilki-Chipgeri road and one on the Chipgeri-Bhidesgaon road. Fourteen miles of cycle paths were repaired.

Kánara C. D.—No new work was undertaken. A small wooden culvert was constructed on the Hattikeri-Gule road.

Kánara S. D.—The Nagarbastikeri-Gersi road (1 mile) and Chittar-Hadikal road (1 mile) were continued. The imcomplete bridges on the Haldipur-Hebbankeri and Chittar-Hadikal roads were completed. Eight miles of old roads were also repaired.

Kánara W. D.—The Hattikeri-Gule road extension (before transfer to Kánara C. D.)—21 miles—Santgal-Markal road—11 miles—(also before the transfer) and 11 miles of Kadra-Shivpur road were newly made. Five miles of cycle paths were also constructed. Existing roads were repaired. Rs. 257, including temporary establishment, were spent in blasting rocks in the bed of the Káneri nalla to make a waterway for logs from the north of Gund range to the Kálinadi river.

Belgaum.—No new roads were undertaken. Existing roads were repaired. Rs. 6,253 were spent on the completion of bridges on the local fund roads. Thirtytwo miles of cycle paths were made. The development of the future revenue of this division depends chiefly on these roads and better protection from fires. The usual contribution of Rs. 5,000 was paid by each of the Kánara N. and W. Divisions for repairs of local board roads.

Sind Circle.

The 20-feet rides through the forest are available as roads and used as such. They were repaired where necessary free of cost in all divisions.

(b) Buildings.

Northern Circle.

In Surat (North and Central Dángs) the following buildings were constructed :----

	1.8.	
Songad depôt	1,000	
Addition to Ahwa Hospital	500	
Godad utara	500	
Total of new works	2,000	
Repairs in the rest of the district	5,139	
New buildings in other districts	2,193	
Repairs to buildings in other districts	1,431	
Grand total for new works	4,193	•
• Grand total for repairs	6,570	
•	10.763	

Central Circle.

New work was almost at a stand-still for lack of funds. One guards' post was built in the Sátára Division; elsewere posts commenced in the previous year were completed, and all necessary repairs carried out. The total expenditure was Rs. 4,290 as against Rs. 20,689 in 1914-15.

Southern Circle.

Rs. 16,566 were spent under this head, of which Rs. 12,439 were incurred on new works and Rs. 4,127 on repairs to existing buildings on all divisions.

Rest Houses.—The old rest house at Nagargali (Belgaum) was pulled down and a new one constructed. The new rest houses at Katur (Kánara E. D.), Pattanpar (Kánara W. D.) and Shiroli and Parle (Belgaum) were completed.

Head Quarter Houses.—A new range office at Sirsi (Kánara C. D.), clerks' quarters at Khánápur (Belgaum) were constructed, and the range office at Kadrá (Kánara W. D.) was completed.

Houses for Subordinate Establishment.—A náka at Sirsi (old Kánara S. D.) was newly built; houses at Ramanguli (old Kánara W. D.) and Makarwalli (Dhárwár-Bijápur) were partly constructed; quarters at Chaudalli and Amatgar (Kánara E. D.), Tavag, Kanbargi and Katgali (Belgaum) were finished. A house was bought at Tambur (Kánara E. D.) for Rs. 155 for the use of forester and guards.

A good many buildings, though urgently required, had to be postponed for the sake of economy.

Sind Circle.

Sukkur—	Rs.
Purchase of 6,334 square feet of land for Range Forest Officer's quarters at Rohri and cost of demarcation Construction of pucca brick floor in Ranger's quarters at Mirpur.	206 192

Total.	879

The Public Works Department spent Rs. 273 on repairs to buildings in Sukkur.

Northern Circle.

	Sinking	01 1	ive wells		••	
•	Repairs	ţo	wells and	compounds	and	wire fences
				Central Cir	مآم	

One well in West Khándesh was completed, and two deepened in Sátára, at a cost of Rs. 299.

Southern Cirele.

The expenditure under this head was Rs. 1,613. A new well was sunk at Bhátkal (Kánara S. D.) at a cost of Rs. 110. The remaining expenditure was on repairs to existing wells and tanks, clearing compounds, fencing rest houses and other buildings. The telephone connections in Yellapur-Kirwatti (Kánara E. D.) and Tavargatti-Dandeli (Kánara N. D.) were maintained.

Under Government Order No. 611 of 19th January 1916 an Engineer was deputed to survey the bed of the Kálinadi river. The work was commenced during the year, but it was not possible to make much headway.

Sind Circle.

New minor irrigation works were only undertaken by the Department in the Jeriuck Division where excavation of two karias in Budka forest cost Rs. 75.

Repairs to existing works cost Rs. 2,326.

The Public Works Department constructed the following sluices during the year :---

Construction of a sluice in the Choi loop to irrigate	Rs.
Mohromari forest	2,818
2 sluices ex-Korai wah for Hingoro forest	363
Conversion of 7 submerged sluices ex-Masuwah into	
open sluices for Wasir forest	1,357
Forest sluice ex-Choi branch mile 3	182

Rs. •538

.. 588

There was a general absence of serious crime. In Dohad of Panch Maháls, Tansa catchment of South Thána and Dindori of South Násik incendiarism of the forests is undoubtedly practised, but the reasons are for small local gains, such as clearing the forests for early grazing, hunting and local quarrels over grass, giving no reason to suspect any local grievance against forest regulations.

One extensive unauthorized felling by a jagirdari contractor in the Dángs has come to light. The case is pending.

The total number of offences shows an increase of 353 over the past year, but is 157 less than the average of the past three years.

The chief increase is in the Panch Maháls of 526 cases, due mainly to the influx of cattle from Káthiáwár and North Gujarát where scarcity existed, the owners of which showed themselves lawless and turbulent. North Thána showed an increase of 124, due to more complete reporting of illicit fellings, though the Divisional Forest Officer says only a small percentage of these cases are even now reported.

On the other hand, South Násik shows a decrease of 224 cases, doubtless largely due to slackness in reporting, though some decrease in grazing cases in Dindori is due to greater grazing facilities given. The Divisional Forest Officer, South Thána, draws attention to the decrease in cases reported in Salsette as entirely due to slackness on the part of the Range Forest Officer. Suitable steps have been taken.

There was a decrease in cases taken into Court from 222 of the last year to 141 in the year under report. This was chiefly due to 27 extra cases last year in the Dángs during the Bhil unrest and 17 fewer cases this year under "Fire" in Central Thána, which the Divisional Forest Officer accounts for by the reduction in the number of fires from 110 to 60. In North Násik there were 11 fewer cases of illicit grazing taken into Court which the Divisional Forest Officer explains as due to the success of the prosecutions in the last year resulting in less crime.

The number of cases compounded increased by 612, chiefly due to the increased grazing offences in the Panch Maháls already alluded to.

Communal punishments were usefully employed, except that in Igatpuri range of the South Násik District it is reported that the doubling of grazing fees for bad protection had no effect, and the quadrupling of the fee is recommended.

Increasing value of forest produce and the yearly development of exploitation is rendering protection more difficult and all duties more exacting, so that the staff in the absence of any automatic scale of increase, or any increase for many years, has become quite inadequate to efficiently protect its charge. Six new ranges and twelve new rangerships are urgently required to avoid increasingly serious loss of capital. Proposals are before Government to effect this increase in efficiency without incurring present extra expenditure.

Illicit Fellings.

As noted last year mere figures are no index to the state of protection.

Panch Maháls.—There was a general increase in cases reported, East Dohad maintaining its character of exceptional badness. The vicinity of Native States on all frontiers renders protection in this district always difficult. The increase in the present year has already been noted as chiefly due to general dislocation of circumstances by scarcity.

The revision in the working plans should aid protection, economise labour, and be at once financially profitable while improving future capital.

Surat.—One serious case of unauthorised felling by a contractor has been referred to under "General Protection." Otherwise the protection was good and calls for no comment.

North Thána.—The Divisional Forest Officer reports as follows :---

"The increase in the total number of offences is mainly due to illicit fellings of valuable material, such as teak and tiwas. Notwithstanding this increase the work of the protective establishment was far from satisfactory and only a small percentage of offences were reported. In some grounds, for instance in Veoji and Boisar rounds, the round officers and guards rarely reported any offences though illicit fellings of teak poles were common. This constant nibbling all along the coastal forests from the north of Umbergaon to the south of Máhim Táluka and in the vicinity of the Vaitarna river from Manor westwards greatly reduces the sale value of the coupes, in many cases by two-thirds or more.

In one closed coupe near Girgaon (Umbergaon range) during the past 4 or 5 years 176 teak shoots had been cut illicitly and no report made by the protective staff. In another instance near Manor 600 stumps of teak illicitly cut during the past five years or so were found on an area of 15 acres. This means that a good teak forest is practically destroyed. In some cases to avoid attracting attention by the strokers of the axe the thieves felled the trees with the saw and the stumps were burnt or uprooted to prevent detection.

With a view to improving forest protection the rangers' charges are being reduced and the number of ranges increased, but adequate staff to hold these charges is lacking."

Central Thána.—A decrease of 70 cases of illicit fellings is recorded, the Divisional Forest Officer remarking :—

"The decrease is certainly not due to any better protection or stricter supervision and there must have been a few cases which were either not reported or not detected. Owing to the transfer of the permanent Range Forest Officer and the delay of three months in the arrival of his successor, the staff must have got a little slack in detecting offences."

Put shortly it is the lack of adequate staff which is felt everywhere.

South Thána shows a considerable decrease in one range, which is entirely due to the ranger's slackness.

North and South Násik.—There was some decrease due to other reasons than better protection.

Special measures to improve supply and thus reduce Unauthorised fellings.

Tahal Cutting.—General efforts to maintain this on an economical basis were satisfactorily continued.

Special Coupes.—The sale depôt system involving supply from special coupes was maintained and increased; though results are not marked at present and the system is rather costly, it will be maintained until found ineffectual.

Plantations for Firewood.—Seed from the Philipines of Leucæna glanca was not received; another application will be made. Good progress in Casuarina plantations in North Thána was made.

Central Circle.

The following table classifies the number of offences reported during the year as compared with those of the 3 previous years :---

							•											•	
verage of past three years.	53	251	116	59	83	9,577	8,225	549	267	787	19	` 9	403 ·	3,609	8,353	610	6,975		

The total shows a decrease of 926 as compared with 1914-15, the decreases being under the heads of "Fires" (53), and "Fellings" (932), with increases of 3 and 56 under "Grazings" and "Other offences" respectively. Comparing the figures with the average of those of the three preceding years, the total decrease is 700, with an increase of 77 under "Grazing", and decreases of 26, 687 and 63, under respectively "Fires", "Fellings" and "Other offences".

Fires, felling and grazing offences are dealt with in detail later, and it will suffice to mention here that the first named decreased in the three Khándesh Divisions and Kolába, but rose in Poona and Sátára; the second decreased in every division, while the third decreased in West Khándesh and Sátára, but rose, though to triffing extents, in East Khándesh, North Khándesh, Poona and Kolába. The increase under other offences was mainly due to the detection of a large number of cases of encroachment on the forest boundary in Kolába.

Cases taken into Court numbered 428 as against 434 in 1914-15, the only noticeable variations being a decrease in Sátára, where the proper policy was more followed than perhaps had previously been the case of only dealing in this way with really serious offences, and an increase in East Khándesh consequent, it is reported, on refusal of offenders in many cases to compound.

Of the 425 cases disposed of during the year by prosecution, 400 or $94 \cdot 6$ per cent. involving 878 persons resulted in convictions, 25 or $5 \cdot 4$ per cent. involving 46 persons in acquittals: In two divisions, North and West Khándesh, the percentages were 100, in Poona 96 \cdot 8, in Kolába 92 \cdot 6 and in Sátára 90 \cdot 8, all testifying to the care with which prosecutions were instituted and conducted. Punishments awarded are reported to have been generally adequate, except in one instance in Sátára in which the Divisional Forest Officer was compelled to represent to the District Magistrate that misplaced clemency towards offenders, apparently in the face of clear evidence of their guilt, and an unsympathetic attitude towards the Forest Department were making good forest protection an impossibility.

The number of cases compounded fell from 5,061 to 4,230; those which were disposed of by simple warning rose from 520 to 569; and in 1,098, as against 1,186 in the previous year, no offenders could be traced. The amount of compensation taken was Rs. 31,973, or an average of Rs. 3.5 per head from 9,056 persons.

The Central Circle being within the jurisdiction of two Commissioners, for convenience of review offences may be summarized as below :--- Communal rewards and punishments were freely resorted to, and with generally good effect, but steady persistence in the policy for many years will be required to make the public realize that the proper protection of the forests is entirely in their own interests, for so far it is too often the case that an improvement in one year is followed by a lapse in the next, the continuance of the reward being taken as a matter of course rather than as an obligation for continued good behaviour.

In the Poona Division eight villages in Akola had their grazing fees enhanced by the Collector of Nagar for persistent thefts, while an improved attitude towards the forests led to the removal of the Javle-Baleshwar punitive police post. In Kolába for similar offences 6 villages were punished by enhancement of fees, or suspension of privileges, in one case permanent suspension. As a preventive measure, the system started some years back in Kolába of working several coupes for the special supply of fuel to the coast towns and villages has had good results. Provision is made for their requirements in fuel and timber for agricultural implements at fixed prices, and they no longer have to depend on the illicit trade in such material that formerly wrought havoc in the forests. The improvement in protection is patent to the eye, and is evidenced by the decreasing number of felling offences. In the year under report this decrease was 332 for the division, and the system is being extended as occasion demands.

Southern Circle.

The following statement shows the number and classification of forest offences reported during the year as compared with those of the previous year and with the average of the past three years :---

•	Tak	en into (Court. ·	Co	mpoun	deđ.	U 10	Indetect	eđ.	Total.

The total number of offences were less than those of the previous year and the average of the past three years by 174 and 260, respectively.

In all the divisions there was an increase in the number of fires and decreases under the other three classes of offences. The number of offences reported represents only a fraction of those committed, which is the reason for decrease to some extent; to a certain extent the decrease is also due to better protection of forest. Subordinates found guilty of neglect in reporting offences are duly punished, those vigilant in detection being, on the other hand, duly rewarded. Forest villagers are similarly rewarded for good protection of forests and punished for neglect or mischief. The joint responsibility for the protection of forests, thus placed on the forest villagers on the one hand and on the protective staff of the Department on the other is productive of good results.

The result of cases tried by Courts are compared in the following statement :---

м п 1945—5

A correct comparison between the two years' figures is not possible, since the figures of 1914-15 pertain to the old divisions and those of 1915-16 pertain to the divisions as reconstituted on 1st February 1916. There is, on the whole, a slight increase in the percentage of acquittals, which may be ascribed to want of care and experience in legal matters on the part of the prosecuting officials. In one case of acquittal in Kánara W. D. the Third Class Magistrate gave a wrong finding and neglected to call an obvious witness whose evidence would have procured a conviction. For this he was reprimanded by the District Magistrate. This officer again drew the attention of subordinate Magistrates to the necessity of appraising damage to the forests at its proper value.

There were four important cases during the year, 1 in Kánara E. D., 1 in Kánara S. D. and 2 in the Dhárwár-Bijápur Division. In Kánara E. D. there was a good deal of looting of small timber near the Dhárwár frontier. One serious case was detected and 38 offenders were convicted by Mr. Desai, the Mahálkari of Mundgod, and fined Rs. 770 in all. The forest guard, patil and some others were afterwards convicted of giving and taking bribes in connection with this case, and sentenced to imprisonment and fines. In Kánara S. D. there was a serious fraud detected in connection with house-building timber. A forester and a guard were prosecuted for taking bribes to hush up the case, the offender being allowed to stand as a witness for the prosecution. The guard was convicted and sentenced to 7½ months' imprisonment and Rs. 100 fine; the forester was discharged by the Sub-Divisional Magistrate, Kánara S. D., but was dismissed departmentally. In Dhárwár-Bijápur the kulkarni of Nandikeshwar, Táluka Badámi, was prosecuted and convicted for abusing the authority given to issue forest passes but was finally acquitted by the High Court. The people of Chimalgi in the same táluka assaulted the beat guard, as he tried to catch them in the act of smuggling forest produce; in this case the accused were sentenced under section 41 of the Forest Act for illicit removal of forest produce, and were sentenced to different terms of imprisonment for the assault. In the assault case sanction was also given by the Sub-Divisional Magistrate for the prosecution of a witness who gave false evidence to favour the accused.

~ The total of cases is greater by 1,369 than that of 1914-15 and 1,049 more than the average of the past 3 years. · .

Cases compounded rose to 3,718 from 2,639 while the amount of compensation accepted was Rs. 12,919 as compared with Rs. 8,886. The average amount accepted per case was Rs. 3-7-7 as against Rs. 3-5-10.

Under cases compounded there is an increase of 315 under unauthorised fellings, almost entirely in the Sukkur Division where the staff have shown vigilance owing almost entirely to the Divisional Forest Officer's own energy. Illicit grazing cases have risen by 848. The abnormally low inundation and the absence of rain in the hills affected the supply of grass and grazing and caused an extraordinary influx of cattle into forests, the hill tribes often trying to evade the pay-ment of the usual fees and to graze in closed compartments. Undetected cases rose from 416 to 550, the principal increase being due to fires lighted largely to obtain early grazing.

In 153 cases offenders were warned and discharged. There were 78 such cases in the previous year.

The offences taken into Court are detailed below :---

Pending from last year	••	30
Cases of the year	••	180

Total .. .210

Of these 154 were decided during the year as against 102 in the previous year, one was compounded and one was withdrawn, leaving 54 pending at the close of the year. Of the 154 cases 135 resulted in conviction and 19 in acquittal, the percentage of acquittal being 12.34 as against 14.70 in the previous year. The percentages of acquittals in Šukkur, Lárkána, Hyderabad and Jerruck Divisions were 13.7, 20, 7.69, 6.9 as compared with 18.9, 16.6, 3.84, and 5.9 in the previous year.

Eight fire cases were taken to Court during the year. The results were as follows :---

No. of cases. Division.

Result.

Remarks.

Sukkur . 2.

.. (i) Acquittal.

(ii) Case pending.

- Jerruck 6
- .. (i) One month's imprisonment.
 - (vi) One case pending. (ii) 21 days' imprisonment.
 - (iii) 15 days' imprisonment and
 - [•] Rs. 25 compensation.
 - (iv) 3 months' rigorous imprisonment.

(v) 2 months' rigorous imprisonment.

There were 14 prosecutions laid for assault and obstruction of forest guards in the execution of their duty. In these 4 convictions were obtained, 1 acquittal, and 9 are pending (8 of these in the Hyderabad Division). In the Lárkána Division one assault resulted in the death of the guard; but the evidence being insufficient to convict on a charge of murder, only a month's imprisonment was inflicted . on the chief offender.

(b) Protection from Fire.

Northern Circle.

Prescribed Form No. 15 shows the number of fires and their origins.

On the whole fire protection was satisfactory, the only material increase was in North Násik and there the area burnt was mostly hill tops and grass lands.

Panch Maháls.—As already noted, the fires and area burnt were only half the usual figures due to local scarcity.

Surat .- Protection was good.

North Thána.-The number of fires and area burnt were about the average. The presence of the Divisional Forest Officer in South Mahim prevented the area burnt being greater owing to that officer taking steps personally to make the villagers render assistance in extinguishing fires.

Central Thána showed a large decrease in the number of fires and area burnt, the reason being given as the disappearance of dead bamboos. Probably the presence of bamboo seedlings also rendered the forests less inflammable, and early rain contributed to the same result.

South Thána figures were practically the same as last year. The Divisional Forest Officer writes as follows :--

"Results are exactly the same this year. Out of a total of 11,625 acres burnt, 7,277 of these were in Shahápur range.

In order to try and find out the causes of these fires undersigned camped in the Tansa forests during the Shimga holidays, about which time most of the fires occur.

The number of fires and the mysterious way in which they originated were very extraordinary. On one day three different fires started from the heart of the forest within a mile of undersigned's camp, and nearly every day a new fire broke out in a fresh place.

On one occasion the report of a gun was heard quite close, but in no case could any offender be found.

The fire guards (local Thákurs) always promptly reported the fires and went for assistance, but declared they never met anyone in the forest before or after a fire.

The report of the gun and the fact that the forests were clearly being ignited in a systematic and thorough manner pointed to wilful incendiarism, and facts have since come to light which help to solve the matter. The local Thákurs, some of whom have been employed for years as fire guards, are the culprits themselves. Hence the reason why no offender is ever caught. The forests it seems have been regularly burnt and shikarred for years either by or under the protection of the fire guards and their friends.

In the light of this knowledge undersigned hopes to be able to take steps next season to improve matters. The harm that has been done in Tansa is very great. Hundreds and possibly thousands of standing teak trees are burnt to the ground every year."

South Násik shows some reduction in the number of fires but a considerable increase in area burnt. Out of a total of 68 fires, 61 occurred in grass kurans of Dindori, Násik and Igatpuri and, as the Divisional Forest Officer remarks, "must be due wholly or partly to malice and enmity among the grass contractors and villagers." Only 7 fires (burning 1,962 acres) occurred in forest proper.

North Násik shows a large increase in the number of fires and area burnt, but the Divisional Forest Officer explains that the area burnt is chiefly hill tops and other areas without value.

The following statement required by Government Resolution No. 248 of 12th January 1904, shows the area protected :---

Central Circle.

The number of fires decreased by 33 (from 465 to 432), and the area burnt by 30,122 acres (from 184,593 to 155,471), a state of affairs which still leaves much room for improvement. Separating the figures for the Southern and Central Revenue divisions, the former shows 47 fires burning 833 acres in Kolába, as against 112 burning 1,565 in 1914-15, the latter 385 burning 154,638 acres as against 353 burning 184,028, the majority of the area burned as usual being in Khándesh.

Poona and Sátára call for few comments, for comparatively speaking their forests contain little grass, while there is keen desire on the part of the public to utilize to the full what grass there is. In Poona it may be noted that the increased number of fires (146 as against 88), and the increased area burnt (4,964 acres as against 2,691), mostly occurred in forest lands permanently or temporarily leased to the Military Department, and were in all probability deliberately caused by the villagers, who also withheld in such cases the assistance which, in areas in charge of the Forest Department, they as a rule readily give. The erroneous impression that Government property can be destroyed with impunity, in whose-so-ever charge it may be, is being adequately dealt with by the Collector. In Sátára also there was a small increase in the number of fires and area burned, the latter for want of ready assistance from villagers for which punitive measures have been imposed.

The case of the three Khándesh divisions is very different, and it must be admitted that the fire problem here is still far from solution, though progress has undoubtedly been made within the last ten years. The difficulties arise, partly from natural factors such as immense areas of practically uninhabited country, covered with highly inflammable grass, partly from the careless habits of a less civilized people, partly from a system of administration which has hitherto allowed the unrestricted access to the forests, at their flost inflammable time, of privilege-holders under the Tapti Code and permit-holders from the non-privileged villages of the Tapti plain. This system it is hoped to change, when a corresponding improvement in fire protection may be hoped for. With the example of the Surat Dángs before one, it cannot be said that the Khándesh problem is incapable of solution.

East Khandesh.—The number of fires was 72 as in the previous year, but the area burnt rose from 44,100 acres to 70,244. As usual the Division far exceeds all others in one unsatisfactory feature, viz., bad work by some subordinates and the number of fires caused by carelessness in burning fire lines, there being no less than 17 cases of this, with a resulting area burned of 24,181 acres. The lack of continuity in administration, of which this division for the last seven years has been the victim, and to which the recent transfer to the Indian Army Reserve of officers of Mr. Dalley has again added, is undoubtedly also responsible to a large extent for this unsatisfactory feature, for with constant changes in personnel and no knowledge of either staff or people by superior officers, work inevitably suffers. Since September 1909, the division has changed hands 15 times, 7 different officers have held charge, and none for a longer period than 14 months continuously. Under such conditions progress is hardly to be expected. And when it is pointed out that the East Khandesh Satpuda forests are practically uninhabited, are situated on most difficult country, are almost waterless in the hot season, that the grass grows several feet high, and that help in burning lines or in extinguishing fires has to be sought from villagers living some miles away in the plains who, being non-forest villagers, give help with reluctance, it will be seen that successful protection is a matter of difficulty. The Divisional Forest Officer in the case of one fire worked for 4 days almost continuously.

Reference was made above to a contemplated change in the system of working the forests; this applies particularly to East Khándesh, for which a revised working plan will shortly be submitted to Government. In it stress is laid on the yearly destruction of forest growth which is going on, and on the impossibility of effecting any improvement unless fires can be kept out, which can never be the case until people, living miles from the forest, and having no interest whatever in thier protection, are prevented from wandering in them at will in search of grass and fuel at the most dangerous time of the year. The plan, while providing for all the legitimate necessities of the public, will curtail to some extent the license hithertc enjoyed by privileged and non-privileged villagers, but will at the same time enable the Forest Department to work at fire protection with some reasonable hope of progress; and as such it is hoped that the measures proposed will meet with Government approval. Rewards to deserving villagers by the Conservator, and punishments to those that failed to help, have been freely resorted to in the past few years, and with some effect, but nothing but a change in system as indicated above, and the creation of In-Forest Settlements which will provide the necessary labour, can be of much avail.

North Khåndesh showed a considerable improvement on last year, the number of fires falling from 71 to 42, and the area burnt from 103,901 acres to 61,261, the larger portion of which was fortunately in inexploitable areas. This is a division where under systematic measures there has been a very marked improvement, for prior to 1909 the forests were as a rule burned from end to end, whereas in the year under report the percentage of failure in the area sought to be protected was 11.02, and has been as low as 5.03 in 1911-12, 1.71 in 1912-13, and 9.11 in 1913-14. Personal influence and continuity of administration under two Divisional Officers only and the fact that the forests are not so much resorted to for grass by outsiders make the problem easier than in East Khándesh, but the drunken Bhil in his peregrinations from village to village at Holi time is an ever present danger, and a fire once started on the inaccessible cliffs in Taloda, Sháháda and the Akráni has almost to be left to burn itself out. Such fires accounted for the greater part of the area burned in 1915-16. For good assistance numerous free grants of money and wood were given to Akráni patils and others and 10 villages were given free grazing; while for the reverse 4 villages had their privileges altogether suspended and 11 had to pay double grazing fees.

West Khåndesh.—Here also there is steady improvement, the result of system, strenuous supervision, and communal punishment and reward, while it is interesting to record that the large Deomogra reserve, the most valuable area in the division, though inhabited and surrounded by Bhils, has mainly through the personal influence of a Bhil round forester; remained practically untouched by fires for many years, with most evident benefit to the forest growth. The Bhil therefore is not an insuperable obstacle to progress. The number of fires in the division fell from 78 to 57, the area burnt from 31,572 acres to 17,174, and the percentage of failure in areas under special measures from $14 \cdot 4$ to $6 \cdot 79$.

For the whole circle the area under special protection was 2,392,455 acres, and the cost was Rs. 18,468; 2,236,984 acres or 93.5 per cent. were saved. Of the 155,471 acres burnt 22.2 per cent. was closed forest; the remainder open.

The statement required by Government Resolution No. 248 of 12th January 1904 is given below, details in column 4 being omitted. Without exact maps being kept, showing each year the site of every fire that occurs, it is an impossibility to say what areas have, or have not, been continuously protected. Such maps are not kept, and hence any figures would be valueless.

Form No. 15 analyses the origins of fires. Of the total of 432, 134 were from causes unknown, 164 were due to carelessness of workmen or travellers in the forests, 10 originated from railway engines, 23 from faulty departmental work, 42 came from outside forests, generally from ráb burning, while 59 are said to have been malicious or intentional, though direct evidence of the same is generally wanting, as indeed it is in most cases of fire, whether accidental or intentional. In 30 cases only was there sufficient evidence to warrant the prosecution of offenders.

Southern Circle.

The system of fire protection remained the same as in previous years. The following statement shows the areas over which protection from fire was attempted, the areas successfully protected, the cost per square mile and the percentage of success as compared with that of 1914-15:--

The figures for 1914-15 in the above statement refer to the old divisions and those for 1915-16 refer to the new divisions and a comparison between them would not be accurate; the total figures for the circle, however, give an approximate idea of the work done and the results attained. The area in which protection was attempted during the year was 3,603 square miles against 2,435 square miles during 1914-15, or an increase of about 50 per cent. Of the area under protection 3,288 square miles were successfully protected as against 2,383 during the preceding year.

In Kánara the year was the worst for fires in the last 10 years, and this was all the more disappointing as the previous year had been the most successful ever known. The causes assigned are an exceptionally dry-hot weather and the large numbers of dead bamboos. These causes, added to the continued apathy of the villagers, made the conflagrations unusually extensive. The damage was specially great in the teak forests round Tamange and Gund, where material for thousands of sleeper pieces has been entirely wiped out. The danger from dead bamboos will continue for several years to come.

In Belgaum fire protection was satisfactory in the Gokak, Belgaum and Khanápur west ranges, but was extremely bad in the Khánápur central and east ranges, where large areas were maliciously burnt resulting in enormous damage. With a view to remedy matters and secure the co-operation of the villagers the Divisional Forest Officer has made a special report to the Collector and it is hoped the matter will receive due attention.

In Dhárwár-Bijápur also the area burnt was larger than in the previous year on account of the hot weather. In Dhárwár forest boundary lines are cleared by villagers under circular orders of the Collector since the year 1907: the Collector of Bijápur has been requested by the Divisional Forest Officer to introduce similar practice in Bijápur. Co-operation of villagers is the most important

tor in fire protection.

The policy of rewarding villagers for good protection or punishing them communely for bad cases was continued during the year as under :---

Besides the above communal awards, patils and other villagers in Belgaum and Kánara were rewarded with turbans, ornamented coats, etc., for assistance rendered in general protection of forests.

In Kánara E. D. one forester was reduced, one guard dismissed and several were fined for slackness in fire protection. In Kánara W. D. one forester and one guard were fined.

Form No. 15 shows the number and origin of fires; the causes shown therein are more or less speculative. The total number reported during the year was 976 as against 696 during the preceding year. Of the cases reported only 9.8 per cent. were detected, and 2.8 per cent. prosecuted. Details are given in the following statement :—

The statement showing areas enjoying continuous immunity from fire for a period of 7 years, prescribed in Government Resolution No. 248 of 12th January 1904, is not given here, as it was found that the areas shown annually in previous years' reports had been calculated on a wrong basis. It is hoped that correct figures will be available in the next annual Report.

Total for 1914-15	[3	100	1	1	27	519	15	426	•••	 	46	.1,046

The year was a bad one for fires, the total number having risen from 46 to 163, and the area burnt from 1,046 to 6,451 acres as compared with the year previous.

The large number of fires was due to a very low inundation during the year which resulted in the growth of large clumps of dry sar and kanh grasses which on poor soil become dry and easily ignitible; and máldárs were not slow to perceive that there would be an advantage to their cattle in its removal. In consequence of the failure of the rains in the hills distressed graziers from Kohistan and from Cutch swarmed into the forests of lower Sind and remained there until June, firing the grass now and then in the hope of obtaining a little green fodder.

New fire tracing work done has been recorded in the Jerruck Division where 22 miles were cleared at a cost of Rs. 27 per 50-feet trace and Rs. 60 per mile for those 100 feet in width. Other new work was done over 16 miles on traces varying in width from 30 to 100 feet with the gratuitous assistance of Zamindars and cattle owners. In Larkana 11½ miles of new boundary lines of forest recently added were cleared at a cost of Rs. 222. In all divisions forests have been divided into half mile squares and these lines were kept clear without expense. A fire tracing scheme has been ordered to be submitted in October for each division detailing the work for the ensuing working season.

Concessions in the shape of free grazing and small free grants of timber have been made to persons who have rendered active assistance in fire operations.

Fire watchers were entertained in the Mulchand, Tatta and Shah Bunder ranges of the Jerruck Division.

The statement required by Government Resolution No. 248, dated 12th January 1904, regarding areas enjoying continuous immunity from fires for a period of seven years, is given below from 1909-1910 (vide Government Resolution No. 4081 of 22nd April 1908).

The total increase is entirely explained by the increase in the Panch Máhals, accounted for below :---

Panch Maháls.—The number of cases of illicit grazing and the number of cattle affected were both double last year's figures. The reason seems two-fold, viz., an influx of large numbers of cattle from the surrounding areas of scarcity coupled with the necessity of protecting the local grass crop which had to be reaped for fodder. While the excess impoundings must be regretted, the fodder rendered available (estimated at 100 lákhs pounds) for the ensuing hot weather was most important. This will be the more evident when it is remembered that unless reaped, the greater portion of such fodder is absolutely lost. To give the utmost possible relief all forests except two coupes (instead of ten) out of thirty in each block were thrown open to grazing in the month of March.

Surat.—Impoundings were normally few.

North Thána.—Impoundings were normal and comparatively few. Only 14 animals other than goats were impounded from closed forest and 45 per cent. of the total cattle impounded were goats.

Central Thána.—Impoundings showed a material reduction. The Divisional Forest Officer fears that this reduction does not denote improved protection and there is every reason to know that grazing rules do not press hardly on the people. There is some reason to think that figures of former years were inflated by rewards given for grazing offences detected. This system was objectionable and has been stopped where it existed. The total number of cattle impounded was only 5 per cent. of the number given free grazing, 15 per cent. being goats.

South Thána.—While the total number of cattle impounded was the same as last year, there was a marked decrease in Sálsette due to slackness. The Divisional Forest Officer remarks of other ranges that greater attention to cultural operations has stimulated guards to take more trouble to protect their forests. This is very satisfactory.

South Násik.—The figures for impoundings for the year call for little comment except that slight increases in Násik, Sinnar and South Peint ranges were largely off-set by a considerable reduction in the Dindori range, the latter factor being due to some modification of grazing arrangements in the village of Wani.

North Násik.—The number of animals impounded showed a material decrease due, it is stated, to greater facilities given to the people. More than 75 per cent. of the animals impounded were sheep and goats. Only sheep and goats were impounded from open forest. 20 per cent. fewer cows, bullocks and buffaloes were impounded from closed forests, while the number of goats impounded from closed forest rose 75 per cent. These facts go to show that the incidence of impounding is satisfactory.

Central Circle.

· · .

Of the total forest area of 5,437 square miles, 624 were closed to all animals throughout the year, 121 for part of the year, the former representing areas under regeneration, the latter the areas in Poona and East Khándesh which are primarily worked for fodder, and in which grazing is allowed in the hot weather after removal of the grass crop and when pasturage is so badly needed. 2,993 square miles of forest proper were open throughout the year for grazing of horned cattle, while sheep and goats were allowed solely in 1,699 square miles of pasture forests.

The following statement compares the numbers and kinds of cattle impounded from open and closed forest respectively, the total impoundings for the jurisdiction of the Commissioner, C. D., being 46,820 of which 14,491 were from open forest and 32,329 from closed, as against 46,025, 18,287 and 27,738 in 1914-15. For the circle the noticeable point is that while impoundings of horned cattle have increased by 6,715, those of sheep and goats have decreased by 5,505. The net increase for the year, including all animals, is 1,355; impoundings of horned cattle found grazing in open forest without a permit took place only when the owners refused to pay the fees. Each division receives separate comment below :---

Statement of Impoundings.

East Khandesh.—Impoundings of horned cattle both in open and closed forest increased, a result which is partly attributable to contractors of areas sold for grass-

cutting seeking to minimize the losses that a poor grass season undoubtedly caused them by the deliberate admission of cattle on payment into the areas in their charge.

West Khandesh.-Showed a decrease all round.

North Khåndesh.—Showed an increase of 2,706, mostly in horned cattle, the result partly of a deficiency of grass in open forest owing to the poor rainfall leading to trespass in closed forest, partly to a large influx of cattle into the division, partly to areas due for closure under working plan being nearer to villages than previously.

Poona.—Sheep and goat trespass largely decreased, but impoundings of horned cattle from open forest increased from 430 to 1,146, the offenders being not so much forest villagers as inhabitants of alienated villages or of the Bhor State, who deliberately preferred to have their cattle impounded rather than pay the forest fees. The Collector of Nagar in reviewing the divisional report noted that impoundings in Akola were still heavy, but added that he had satisfied himself that the plantations in which the trespass took place were reasonably planned and that their conservancy must be rigidly insisted on.

The Poona Division exhibits to a notable degree the persistent attempts that are made by the people to evade the Government grazing dues, no less than 11,683 cattle being paid for after the prescribed date, and then only on their being caught in the forests and taken to the villages. This habit entails endless extra work on the staff, and it would be a good thing to check it by an order from Government that such attempted evasion would entail the levy of a double fee.

Sátára.—The total impoundings decreased by 2,906, the result mainly of the heavy punishments inflicted in 1914-15 for sheep and goat trespass and the consequent diminution of this class of offences. Nevertheless it is to be feared that many such offences go undetected, and the only remedy is to raise pound fees till the graziers realize that it is more to their advantage to avoid forest areas altogether than to risk their animals being impounded. The scanty Sátára forests can ill afford the destruction caused by these animals.

Kolába.—Showed a small increase due to new blocks coming under working, thus creating fresh centres of closure.

Southern Circle.

It is satisfactory to note that impoundings have on the whole decreased in all divisions, which shows that people are beginning to learn that cattle are not to be grazed in closed areas or without payment of grazing fees in open areas. The only increase over last year's figure, noticeable under "Goats", impounded in open areas of Kánara Central and Southern Divisions, is ascribed to ignorance of grazing rules on the part of people in some cases and in a few others to their obstinacy in grazing goats in contravention of rules. It is hoped that a few judicious prosecutions will reduce the offences of illicit grazing.

Sind Circle.

Ninety-four per cent. of the forest area was open to the grazing of cattle except goats and camels. The latter animals were admitted to 621 square miles or 54 per cent.

Impoundings.

Sukkur and Hyderabad showed a decrease owing to more cattle having been registered by the maldars who found the yearly grazing fees much cheaper than those levied under the bi-monthly system. In Lárkána and Jerruck there was an increase in impoundings. In Lárkána many cattle without passes were found in the closed forests, while in Jerruck, where subordinates appear smarter in grazing collections, the increase in impoundings was almost entirely from cattle with passes for open forest which had been driven into closed forest. The cattle pounds mentioned as sanctioned last year to impound •gormal wild cattle were introduced.

The Divisional Forest Officer, Sukkur, reports that no animal was impounded in the gormal pounds of the A'bad range, and the Rohri Ranger attempted nothing.

The Divisional Forest Officer, Lárkána, reports that 15 cows and 20 asses were impounded in Dosu forest semi-wild cattle pound; 16 cows and 4 asses in the Amrote forest gormal pound. No animal was impounded in Madeji forest.

The Divisional Forest Officer, Hyderabad, reports that gormal pounds were opened in Hala and Sakrand ranges. In all 8 cows were caught in such pounds during the year.

The success of the scheme will depend on a thorough campaign, to impound a few animals now and then will do no good.

The animals impounded during the year compared with those of the preceding year are shown in the subjoined table as required by Government Resolution No. 4081 dated 22nd April 1908, Revenue Department.

Newly exploited coupes were fenced with the waste branch wood. The total length of new fences put up was $266\frac{1}{4}$ miles. Repairs to existing fences were made on $668\frac{1}{2}$ miles. This work was done free of cost with the help of maldars and coupe contractors.

(d) Protection against injuries from natural causes.

Northern Circle.

Creepers were cut as part of the duties of the staff.

Central Circle.

In Poona Rs. 108 were spent on eradication of prickly pear, and a small amount on similar work in Sátára. The construction of "Táls" to check erosion received attention in the former division, $1\frac{3}{4}$ running miles being constructed at a cost of Rs. 75, while in 4 villages the work was undertaken free of cost by the villagers, benefit thus accruing both to the forest and to the occupied lands adjoining.

Southern Circle.

Defoliating insects (Eupterote castanea and Hybloea puera) attacked the teak over a considerable area in Kánara Northern and Eastern Divisions in the month of October. In the teak nurseries of the Kulgi range, the grub of the rhinoceras beetle (Oryctes rhinoceros) attacked the seedlings and destroyed many. The grubs of these beetles were collected and destroyed as soon as they appeared. Elephants and pigs in the former division and bison and other wild animals in the latter did some damage to nurseries and plantations. Elephants are on the increase and not only damage forest growth but are dangerous to man. One wood-cutter was killed and since the close of the year a forester and a guard have been injured by the wild elephants. The Divisional Forest Officer, E. D., Kánara, reports that wild animals like to sit in the weeded nurseries which are comparitively free from ticks, and states that if they persist in doing so, sharp stakes will have to be driven into the ground to make things less comfortable for them. In Kánara, S. D., many casuarina trees under 5 years of age in the Kasarkod plantation died for want of sufficient moisture in the soil in the hot weather, and these were replaced by new seedlings from the nursery. In Bijápur prickly pear is spreading to such an extent that it has made the exploitation of some of the coupes difficult. Though the plant is a recognised cattle food in times of fodder famine, it is in ordinary years little used by people for fodder. Its eradication at Government expense is prohibitive; some of it along the demarcation lines was removed by guards and, in a few places, by villagers without cost to Government. Lantana is said to be spreading in the Haliyal teak pole area in Kánara, N. D., and in parts of Dhárwár. The Divisional Forest Officer, Dhárwár-Bijápur, reports that cutting of stems by guards makes matters worse by causing a larger number of coppice shoots. The floods of the Krishna and other rivers of Bijápur as usual cause some damage in kurans along their banks and the Divisional Forest Officer reports that planting of Zili (Sesbania Aegyptiaca) has been undertaken along the river banks with a view to minimise damage by erosion.

Sind Circle.

Frost was severe in Lower Sind and most of the seedlings in young plantations and sowing suffered. In Hyderabad big trees were affected upto a certain height and babul blossom and foliage suffered, also the mango crop in the Hyderabad forest gardens. The defoliating caterpillar did less damage than usual. In upper Sind owing to the low inundation rats increased and did considerable damage by gnawing the base of seedlings and young saplings.

4.—Sylviculture.

(a) Natural Reproduction.

Northern Circle.

(i) From seed.—With the exception of South Násik all divisions report satisfactory germination of seed. The future of the seedlings depends almost entirely on early recognition and attention by being freed from surrounding growth of grass and weeds, and where the locality is dry and exposed subsequent shelter from the sun is also required. Probably earlier recognition in the Násik District would prove that reasonable germination occurs there also. Satisfactory progress in the tending of natural seedlings is being made, but lack of establishment and inefficiency of the individuals is a great handicap.

(ii) By coppice.—This is everywhere satisfactory, but future tending is most essential to success. Working plans are being revised largely to provide for this and for the tending of young seed produced saplings. We must be prepared for considerable extra outlay on establishment and works if our forests are to have the attention they deserve.

Central Circle.

The year was generally favourable for production and germination of seed, but successful reproduction by seed depends less on this factor than on subsequent ones, the difficulty being not so much to obtain a plentiful crop of seedlings as to protect those seedlings during the first year of their existence against drought, fire and grazing. Of the myriads that cover the ground after the first rains, few survive if left to themselves, except of course in the moister regions, while elsewhere even if fire and cattle be kept out, the hot-weather drought has fatal results. Fires and drought are the great obstacles in Khándesh, cattle and drought in Poona and Sátára. The system of mulching and shading natural seedlings in areas closed for regeneration, first introduced by Mr. Copleston in Kánara, has been adopted in the Central Circle and promises to give most valuable results. To give one instance only, it may be recorded that of 10,000 seedlings so treated in the Poona Division 70 per cent. survived the hot weather.

Southern Circle.

(i) From seed.—It was a good seed year for teak, matti, honni, sissum and other forest trees, probably one of the best in the last 10 years. As a result of this, matti and honni seedlings particularly are coming up in great numbers; teak seed often lies dormant for a year or two. In the Dhárwár District, though Lantana has been found to be a pest in many respects, the ground covered by it is favourable for sandalwood growth; sandalwood seedlings are found to come up in larger numbers under Lantana than elsewhere.

(ii) By coppice.—Regeneration by coppice shoots in past fellings was also good, though fires were a great hindrance and caused much damage, particularly in Belgaum. The Divisional Forest Officer, Kánara, N. D., reports the following interesting observation on the effect of fire noticed in two coupes of different ages in the same block :—

"Both coupes contained a rank growth of grass, but in the coupe where the coppice was older and stood about 12 feet high it was not damaged to any extent, while in the coupe with younger coppice about 5 to 6 feet in height a good many of the shoots were ruined and much damage was done. Moreover, in the former coupe where a number of teak seedlings and transplants had been tended and were about a foot high the plants had been burnt but the roots had thrown up fresh shoots. These shoots, two months after the fire occurred (in the beginning of June), were as high as the original plants, and much more vigorous and healthy."

Mr. Dodgson is being asked to experiment with regard to this and submit a further report on the subject.

Sind Circle.

The area flooded during the year under report was only 271,093 acres against 568,856 in the previous year. In Upper Sind natural reproduction by coppice of bahan (*Populus euphratica*) and kandi (*Prosopis spicigera*) was good and babul (*Acacia arabica*) germinated well in flooded areas. The monsoon rain was very scanty and in Lower Sind owing to the deficiency of inundation water natural regeneration by seed was very poor. Severe frost in February did not improve matters but the young tree growth of recent years in many instances survived these unfavourable conditions, and there was no serious loss.

(b) Artificial Reproduction.

Northern Circle.

۱

Sowing.—This was confined to a few babul areas and results were satisfactory.

Plantations.—The only systematic plantations are those for casuarina along the coast, operations of the year lying chiefly in North Thana. Results which had not been very successful up to date promise to be better in future as the result of the experience and personal effort of the present Divisional Forest Officer, North Thana.

Central Circle.

Regular Plantations.—Under this head may be included babul and casuarina forests, both of which depend for regeneration on artificial means. In East Khándesh 55 acres of exploited coupes were ploughed and broad-casted with seed, with generally successful results; in Poona 181 acres. In the Kolába casuarina forests, 17,577 seedlings, reared in nurseries, were planted out, the majority in the coupes just felled, the remainder to replace casualties in older coupes; results are very satisfactory, though the working plan anticipation that no watering of the young plants would be required was not in all cases fulfilled. The area of these useful forests is unfortunately small, 108 acres only.

Cultural Operations.—The more or less haphazard system of the past of sowings and dibblings by guards has now been largely dropped, as showing few tangible results, and in its place efforts are concentrated on the mulching of natural seedlings in closed areas, on agriculture-cum-forestry, and on sowings in selected areas. The first named has already been dealt with; the second was in force in West Khándesh 330 acres, and in Poona 411 acres. Moderate results are reported from the former, the Bhil being an indifferent cultivator in his own interests, and apt to be still more so in Government interests ; reports from the latter are much more satisfactory, and the area under this system is likely to show a considerable increase judging from the demand for land on these terms in the Akola range. Sowings in selected areas were carried out to a small extent in all divisions, and with great energy in Poona under the continuous interest shown in this matter by Mr. Thomson during his four years' charge of the division ; that his and his subordinates' efforts have met with success is evinced by a remark by the Collector of Nagar, that, "I inspected many of the agriculture-cum-forestry plots in the Akola range this year with Mr. Gupchup (Ranger), including certain nala lands under reclamation by Thákurs, and I must congratulate the department on the progress being made.'

Speaking generally, there is more scope for cultural operations and artificial regeneration in the Deccan divisions with their denuded and over-grazed hills than in Khándesh where fire protection is the main object to be attained, or in Kolaba where the climate naturally favours tree growth.

The expenditure during the year was on "Regular Plantations" Rs. 926, on "Cultural Operations" Rs. 2,868.

Southern Circle.

Regular Plantations.—The casuarina plantations on the Kánara and Ratnágiri Coast were extended by 39 and 2 acres, respectively, at a total cost of Rs. 3,214. The condition of the plantations is reported to be excellent in Kodibag and good in all other places, except Harwada, Gangawali and Arge where it is not altogether satisfactory principally because of the unsuitability of the underlying soil.

Cultural Operations.—Kánara, N. D:—About 2,50,000 natural teak seedlings were tended by weeding and mulching and the results are said to be most encouraging. Dibbling was done in the Kulgi range and was satisfactory. About 85,000 teak were transplanted from local nurseries with satisfactory results.

Kánara, E. D.—Much work was done in the teak pole area, where about 1,65,000 teak seedlings were tended in the coupes felled last year. Many of these were left where found, and were weeded, earthed up and sheltered; others were picked out from thick clumps of seedlings or from roadsides and fire lines and planted where needed, and similarly tended. In the High Forest areas, also large numbers of teak seedlings about 53,000 were planted in all Ranges. Teak, honni and matti seed was dibbled in patches where dead bamboos, chips and other dry material had been burnt, and seedlings came up well in such patches.

Kánara, C. D.—About 58,000 teak and 1,40,000 matti seedlings were planted in felled areas and 68 bags of teak and 300 bags of junglewood seeds were sown in various forests.

Kánara, S. D.—The casuarina coupe cut in 1914-15 was planted up with casuarina seedlings. No other work was undertaken.

Kánara, W. D.—Attempts were made to introduce some teak into areas where it was absent; about 2,500 seedlings were thus planted at various places in Kadra range and 4,000 more were left for future planting. In High Forest Block XXVI, about 19,560 seedlings were planted. The Divisional Forest Officer, Mr. Marjoribanks, states that most of this work is due to an excellent nursery at Shivpur. In Supa range 1,425 matti, 500 kindal and 700 honni plants were raised by guards and planted in felled fuel areas. In Gund range some 225 teak plants were transplanted from nurseries.

Belgaum.—Plants were obtained from nurseries and from natural seedings and put out where necessary. Seed was also sown; teak broad-casted near Golihalli 2 years ago produced many plants this year. Harda dibbled in during the past 2 years in Uchwade coupes resulted in numerous strong harda plants during the year.

Dhárwár-Bijápur.—In Dhárwár range teak and other junglewood seeds were sown in 1,000 pits made by guards; nim and sandalwood seeds were also sown in 40 pits in the Mandihal naka compound. About 1,000 nim seedlings were raised in Doni forests. In Kod range $1\frac{1}{2}$ maunds of teak and junglewood seeds were sown at various places. In Hangal range, 7 bags of teak, sandalwood, matti, etc., were sown in felled coupes and other areas.

In the babul areas of Bágalkot a few sandalwood and shendi palm seedlings were raised by local guards. The latter were also sown along sides of nallas. Sandalwood seed is reported to have germinated more freely in Kolhar than elsewhere. The seedlings of teak and sissum transplanted in Mamdapur coupe throve well. Seeds of teak, sissum, shivani, bamboo, etc., were obtained from outside and sown in the babul areas. The agriculture-cum-forestry operations tried in the Mamdapur coupe No. 12 are reported to have failed owing to excessive rain, thereby entailing loss to cultivators. As a result of the year's operations there were only a few sickly looking babul seedlings, and Government got a paltry revenue of Rs. 6 as price of their share of the poor cereal crop. A similar operation in the Kolhar survey No. 368 previously exploited is reported to have been successful. The seedling crop of babul is here most satisfactory and the Government share of the value of the cereal crop was Rs. 64. Agriculture-cum-forestry is said to be not sufficiently popular in all the babul areas of Bijápur and departmental operations have therefore been undertaken by the Divisional Forest Officer in Chickgulbal coupe No. 5 of Bagalkot range with a view to advertise the system.

Ratnágiri.—The nurseries at Dapoli, Dahmapur and Tondávli were maintained with due care and about 2,555, 50 and 2,000 seedlings were grown in them, and about 1,600, 60 and 1,200 from the respective nurseries were transplanted in the plantations attached thereto.

Sind Circle.

The "Regular Plantations" in Sind are those of tali (*Dalbergia Sisoo*). There were 298 acres under "Regular Plantation" at the commencement of the year, 3 acres were added and nothing abandoned, so the total at the close of the year was 301 acres.

In Kot-Sultan plantation of Sukkur Division tali (Dalbergia Sisoo) cuttings were put out to replace casualties and most did well. Crooked growth was cut back and the stools coppiced well. Thinnings were also carried out. The Zerkale plantation was well irrigated by a kasi from the Sher wah, some of the tali trees here were partly uprooted owing to excess water but were kept upright with supports and are now well established. Kandi and babul seed was sown in blanks but the resultant seedlings suffered much from frost. In Lárkána 3 acres were added altogether to the existing tali plantations in Madeji, Amrote and Bhour. In Khatro tali plantation of Jerruck Division seed was sown in nursery beds and 600 seedlings transplanted in Khathar forest, the majority throve well. Tali crops of previous years were pruned : these had been planted too far apart.

The old established gardens were maintained as under :---

	•	Rs.		
Rahu		1,169		
	. Hyderabad	Divisio	m.	
Miani	bungalow ga	rden ')	
**	monument	"	. }	1,317
>>	mango	")	
			Total .	. 2,486

Cultural Operations.—One thousand two hundred and seventy-five acres were treated under the system of forestry with agriculture, the assessment (amounting to Rs. 3,218) being credited to the Revenue and Public Works Departments by book transfer; this is for land which gets water from Public Works Department canals. Results were reported fair in Sukkur, Lárkána and Hyderabad. In Jerruck the work was confined to Khathar forest owing to the low inundation. Here in addition to the area mentioned in last year's report 137 acres of blanks have been given out for cultural operations for a period of 3 years from June 1915. Some of this land was poor and germination of both cereals and forest crops has partially failed, but about 70 per cent. has given good results in the strip sowings of the first year which were made on slightly raised bunds. In six months some seedlings showed a height growth of 3 feet and were rarely less than 18 inches. Babul was associated with nim (Melia Azedirachta) and ber (Zizyphus Jujuba) in this case.

The other system of cultural operations adopted is the broad-casting of seed on blanks and exploited coupes which receive flood water. Under this system 1,455 maunds of babul and kandi seed were sown throughout the circle over an area of 5,093 acres. Results were satisfactory. A little nim seed was sown under this system in Hyderabad and Sukkur but failed to germinate in the latter division.

(c) Operations for the improvement of growing stock. Northern Circle.

These at present are not provided for under the working plans to the extent required, and are limited to the tending of seedlings and coppice referred to under "Natural and Artificial Regeneration." Even these efforts are restricted by the shortcomings in the staff and lack of funds. The revised working plans provide adequate staff and operations, the future depends on the realization of those proposals.

Central Circle.

These consisted as usual of creeper cutting by guards' labour.

Southern Circle.

In Kánara Northern Division climbers were cut and teak saplings were freed from interfering growth. Trees were also marked for felling in the Haliyal and Sambrani ranges, according to the prescriptions of the working plans for improving the growing stock.

In Kánara Eastern Division, though the operations had to be curtailed for lack of funds, 3,000 junglewood trees and 7,000 inferior teak trees were cut back; 3,000 obstructing branches, 58,000 bamboos and 29,000 creepers were cut; and 20,000 teak seedlings and saplings were freed from suppressing growth.

In Kánara Southern Division teak trees were freed from interfering growth, and creepers and inferior trees were cut. Standards in closed coupes were freed from inferior growth.

In Kánara Western Division thinning, cleaning and pruning operations were carried out in the casuarina plantations at Kodibag and Chitkule and in the teak plantations at Kadra and Sulgeri. In Gund range, 3,265 natural teak seedlings were mulched round with grass and loose earth, and 1,330 teak saplings were freed from interfering growth. In Kadra 330 badly grown teak trees were cut back. The Divisional Forest Officer, Mr. Marjoribanks, states that his subordinates have been taught to realise the importance of sylvicultural work.

In the Belgaum Division thousands of teak and junglewood seedlings were freed from interfering growth; creepers were cut and badly grown trees were marked for improvement fellings in accordance with the provisions of the working plans.

In the Dhárwár-Bijápur Division valuable trees including sandalwood were freed from creepers and interfering growth; weeding and soil mulching were applied to seedlings raised in Bagalkot range.

· · ·

Sind Circle.

Cutting of kamo creeper was carried out in Lárkána, Hyderabad and on a larger scale in Jerruck Divisions.

(d) Experiments.

Northern Circle.

None were undertaken.

Central Circle.

In the three Khandesh divisions attempts to cultivate and propagate lac were continued, but with no results that can be considered satisfactory. Infection of fresh tree is a matter of no difficulty, but it is labour thrown away, for the new brood is almost invariably destroyed by black ants, and no measures to defeat these pests have so far been found to be of use. The development of what gave hopes of being a valuable industry has been entirely thwarted.

In Poona the question of hirda seed germination received further attention; removal of the outer, dried up, fleshly covering appears to have a good effect.

In Sátára the Mahableshwar orchards produced a fair crop of pears, but hardly of a quality to justify the expenditure of much money or labour on the continuance of the experiment. Elsewhere in the district the orchards are complete failures and will be abandoned.

Southern Circle.

'The teak and jamba paving blocks sent to the Bombay Municipality for trial, as stated in the last year's report, are reported to have been put down on the streets in the 1915 dry season and the experiment is being watched.

The Forest Economist, Dehra-Dun, has timber pieces of different species seasoning under different methods in the Dandeli range in Kánara N. D. and at Kodibag in Kánara W. D. The final results of the experiments will be known after two years.

A minor experiment undertaken by Mr. Marjoribanks in Kánara W. D. was the collection of "lurrs" on various species of trees, which are being sent for trial in veneering work.

Sind Circle.

Seed of bamboo (*Dendrocalamus strictus*) was sown in the Jerruck, Sukkur and Lárkána Divisions and that of *Bambusa arundinacea* in Hyderabad. The seed germinated but after past experience its development on a commercial scale is not likely in Sind. Ber was introduced into felled coupes in the Katiar range of Jerruck Division and is worth persevering with. Experiments were also made with a view to sow tali direct into felled coupes which have carefully regulated flow irrigation. Most of the present existing tali plantations are mechanically watered at great expense.

Attempts to assist in the further propagation of the lac insect were made in Hyderabad and Jerruck Divisions but were attended with little success. Lac has however appeared naturally and prospects are hopeful.

5.—Exploitation.

* Prescribed by working plan but found unworkable pending improved communications.

Clear Fellings.—This system was limited to babul coupes in the North Násik Division. 10 coupes were exploited.

Selection Fellings.—This system is prescribed by working plans for the forests of Mokhada and Talasari Maháls of North and Central Thana respectively, but exploitation is found impossible pending improved communications for which both staff and funds are lacking. A small subsidiary selection felling was made in the Tulshi forests of South Thána under the existing plan. Forty-nine coupes in the below ghat forests of the South Násik Division were worked under this system. Even here the system is not satisfactory but the best makeshift pending better communications, buildings, and staff. It is a valuable property deteriorating for lack of funds.

Coppice with Standards.—This has been the favourite system up to date common to all divisions but proving unsatisfactory in many ways is likely to be superseded by clear fellings. The revisions of existing plans are in hand and the work is being pressed on. A considerable increase in staff and works will be well repaid if sanctioned.

Improvement Fellings.—The working plans of the Dángs prescribe this system and it appears justified as a preliminary to high forest clear fellings. It is also applied to the anjan forest of North Násik.

Central Circle.

Clear fellings were undertaken in babul and casuarina forests only, 22 babul coupes aggregating 235 acres being felled in Poona and East Khándesh and 1 coupe of 1 acre only of casuarina in Kolába. In addition, the babul growth in the forests of 45 villages of the Poona Division was sold, standing prior to transfer of the lands to the Revenue Department; the price realized on this was Rs. 24,782.

Improvement fellings comprising mainly a system of selection of over-mature and unsound trees were carried out in the Satpuda forests of East and North Khándesh, in the Umarpata, Deomogra and Dhulia and Pimpalner forests of West Khándesh, on the Mahableshwar and Matheran plateaus of Sátára and Kolába, and in the Akola and Lonavla forests of the Poona Division. The selection system, pure and simple, is nowhere in force in the circle.

Coppice fellings took place in the teak forests of Poona, Sátára and Kolába, and in the Edlabad range in East Khándesh, though in the last named, owing to the denuded state of the forests and the poor demand for material, the fellings are more nearly improvement than true coppice fellings.

Of the total organized areas of the circle amounting to 2,301 square miles, working plans prescribe for 33 square miles the system of clear fellings, for 1,516 that of improvement fellings and for 752 that of coppice with standards.

Unregulated fellings in forests consisted solely of material for free grants in all divisions, and of clearance of rides at Mahableshwar; outside forests; of the sale of royalty trees in occupied lands in all divisions and of reserved trees in unassessed Government waste, the latter wholly in West Khándesh.

Southern Circle.

The systems of management remained unchanged during the year.

Clear Fellings.—These were made in the coast plantations of Kánara on an area of about 16 acres realising Rs. 129 per acre, and in babul forest of Bijápur, where a coupe of 21 acres fetched Rs. 60 per acre.

Selection Fellings.—These were undertaken in accordance with the provisions of the sanctioned working plans as shown below :—

The drop in value per acre on the whole is ascribed to dislocation of business caused by war and consequent want of bidders for standing coupes.

Unregulated Fellings.—In Kánara C. D. and Dhárwár-Bijápur 252 junglewood trees were exploited in various jungles and fetched Rs. 2,348. In Kánara Eastern, Central and Southern Divisions, and in the Belgaum and Dhárwár-Bijápur Divisions dead sandalwood trees exploited from various jungles were converted into billets amounting in all to 118 khandies of good heartwood, which realised a revenue of Rs. 30,675. Seven hundred and sixty-three sandalwood trees were also sold standing to be worked by purchasers.

Sind Circle.

Clear Fellings.—Sixteen thousand, six hundred and ninety-one acres of forest were exploited under this system in accordance with the provisions of the working plans as compared with 15,082 acres during the previous year. After exploitation whatever branchwood is left is burnt wherever feasible and advisable, and the soil either ploughed up and resown with babul and kandi seed broadcasted, or sowings are made in drills.

The system is not strictly one of clear fellings. Under the revised working plans a few standards are reserved from the young stock in the coupe, and in Upper Sind the coppice of bahan and kandi stools is carefully preserved.

Improvement Fellings.—The removal of fallen and dead trees was carried out over an area of 4,392 acres 'as compared with 14,205 acres in 1914-15. In Jerruck thinnings were carried out in Khokhar, Khathar and Malirri forests, the operations extending over 285 acres and the material realising Rs. 1,100.

Unregulated Fellings.—Under this head come clearance of trees from erosion strips, and various other cuttings to provide wood for free grants and to meet emergent indents from the Public Works Department The area of erosion strips cleared was 1,902 acres against 5,208 acres in the previous year.

ii) Minor Forest Produce.

Northern Circle.

This is worked without fixed plan as public demand requires, consistently, with the well-being of the forests.

Central Circle.

This is disposed of as occasion demands, by departmental collection and sale, or by farming the right of collection, or on permit. Under the first method mhowra seed and hirda form the main item, yielding respectively Rs. 6,094 and Rs. 12,484; under the two latter, hirda yielded Rs. 10,379, and grass and grazing Rs. 2,45,516. Other minor products, silk cotton, rosha grass, leaves, pods and fruits, bamboos, earth and stone, brought the total revenue realized to Rs. 2,97,384 as against Rs. 3,00,104 in 1914-15.

Southern Circle.

Form No. 20 gives the details. The systems of collection of revenue for minor produce remained as before: bamboos, quarry produce and grazing are sold on permits; other minor product farms are sold by auction usually for a term of one year. The total revenue from this source was Rs. 1,89,089 against Rs. 1,64,776 during 1914-15.

Sind Circle.

Details are given in Form No. 20.

Lac, fish, babul, bahan and kandi pods, sar and kanh grass were farmed out to contractors. Other grass is either allowed free or sold on permits at fixed rates. Lac appeared naturally during the year and contracts were sold early in the year in the Hyderabad and Miani ranges for Rs. 525 and in Katiar range of the. Jerruck Division for Rs. 120. Prices realised after the close of the year under report are much better.

(b) Agency of Exploitation.

(i) Departmental Agency.

Northern Circle.

This was confined to the North Dángs: 99,526 cubic feet were removed and sold at the railway sale depôt 25 miles distant for Rs. 1,20,278-8-0.

Central Circle.

• . •

In the case of timber and fuel, departmental extraction is little resorted to, most coupes being sold standing to contractors; the only notable exceptions being those in which, owing to their inaccessibility or paucity of growth, purchasers do not come forward, and also the coupes that are worked for the fuel supply of Mahableshwar and Matheran. At Mahableshwar Rs. 4,076 were spent on the extraction of 93,541 cubic feet of firewood, the resulting price being Rs. 7,435; at Matheran 15,207 maunds were extracted, the cost being Rs. 3,309 and the revenue Rs. 5,308. In Poona 1,08,772 cubic feet from dead and fallen trees, the results of floods and erosion in the riverain babul forests, were departmentally cut and sold for Rs. 8,114.

As regards minor products, the hirds crop in the Rajur and Akola ranges of the Poona Division had perforce to be collected departmentally, no other system being possible in a locality where the hirda trees in occupied lands so largely outnumber those in forests, where the villagers themsleves carry on such a large trade in the fruits, and where no contractor will purchase the forest hirda on the trees for fear of its finding its way to the villagers' depôts rather than to his. The share system of collection is adopted under which each forest village by agreement contributes a fixed quantity free of charge, all balance over and above such quantity being at its disposal, but the system throws much work on the Forest Department in keeping the villagers to their agreements, and in the subsequent transport of the hirds to central depôts where it can be sold to Bombay merchants. With great difficulty and only after much personal exertion by the Divisional Forest Officer was a satisfactory sale effected of the 1915-16 crop and of that which had remained unsold from the previous year. The net profit on the operation was Rs. 4,318.

For much the same reasons mhowra seed has to be collected departmentally in North and West Khándesh. In the former division the crop was poor and the net profit was Rs. 624 as against a loss of Rs. 305 in 1914-15; in the latter it was good, the profit being Rs. 2,679 as against Rs. 167.

The total value of produce removed by departmental agency was Rs. 43,440 as against Rs. 26,342 in 1914-15.

Southern Circle.

The following table shows the work done by departmental agency :---

		Average of	three pr	eceding ye	ars.		1915-16.

The quantity of timber exploited during 1915-16 was 980,423 cubic feet against 893,126 cubic feet in 1914-15, an increase of 87,297 cubic feet. The percentage of timber exploited departmentally to the total outturn was 55 against 53 in the previous three years. The comparison with the preceding three years as shown in the above table is not of much value on account of the inaccuracies explained in the last two reports. There is no question that a very much greater outturn ought to be made from the Gund, Kadra and Supa ranges of Kánara W. D. Great difficulty is, however, experienced in getting contractors . to take up new works in other than a careless and speculative fashion. Personal supervision and a determination to carry the work through in proper time are wanting. The advance of cash is the chief attraction. On the other hand, the employment of workmen directly under departmental control cannot be greatly extended until the supervising staff and communications are improved. This matter is under the consideration of Government and a scheme of improved communications is being drawn up.

The quantity of fuel exploited departmentally during the year was 3,660,641 cubic feet against 3,212,110 cubic feet in the previous year, an increase of 448,531 cubic feet. The percentage of fuel extracted by Government agency to the total outturn was 31 against 34 in 1914-15.

The outturn of sandalwood depends more or less on the number of mature or dead trees available for extraction. The quantity extracted during the year was more than in the previous year, the prices realized being Rs. 30,675 against Rs. 28,963.

In the Belgaum Division grass was cut, baled and carted to Belgaum for sale at a total cost of Rs. 802; for want of demand some quantity remained unsold at the close of the year. Experiments in ensilage were continued at a cost of Rs. 155. Grass from one of the silos was given free for Government buffaloes at the Tavargatti Saw Mill and the remaining was sold for Rs. 76.

	Material.		Outturn.

The following table shows the work done by the two saw mills in Kánara N. D.

The outturn of 1915-16 was not so satisfactory as in previous years for the following reasons.

(a) One mill was closed down for repairs for three months;

(b) both mills were moved during the year.

The value of the year's outturn is estimated to be Rs. 57,360, the charges being Rs. 49,987; the net income from both mills was Rs. 7,373. With more favourable conditions in the new sites and with closer supervision, it is hoped that the next annual account will show better results.

In Kanara E. D. a contractor's saw mill, which has been standing idle at Kirwatti for some years, resumed work this year and is reported to be useful to the Department. In the six months during which the mill was working the output was as follows :---

6 feet teak sleepers	• •	No.	10,966	
7 doì. do.	••	• • 37	258	•
Teak planks, cubic feet	••	• • >>	1,400	
Do. scantlings do.	••.	,	· · 200	
Do. battens, running feet	••		1,00,000	

For sleepers the contractor gets the usual wages fixed in his contract agreement; for planks, scantlings and battens he is paid a § share on the sale price of the material, the remaining § share going to the Department. Government gets this § share on the material which would have been wasted in the jungle without the help of the mill. The value of the material in the present instance is over Rs. 4,000 and the Government share is Rs. 1,500.

The work of the two Government elephants in the Gund range of Kánara N. D. is reported to have been satisfactory during the year, the profit on the working being estimated at Rs. 1,200 against the loss of Rs. 600 in the previous year. On 1st May 1916 the animals with the Gund range forests were transferred to Kánara W. D. and, at the close of the year, they were sold for cost price, viz., Rs. 6,500, to the contractor to whom the departmental work in Gund had been transferred in the early part of the year; the sale was reported to Government, vide Government Order No. 6,933 of 13th July 1916.

The Government buffaloes in Kánara N. D. worked at a loss this year. The Divisional Forest Officer reports that some of the animals have become old and unfit for work. This is probably true and others will have to be purchased. These carts are not popular with the officers as they entail a good deal of supervision and bother, but they are undoubtedly useful and necessary.

The cart depôt (established in the year 1915 as per Government Resolution No. 2198 of 9th March 1914) is independent of the above establishment and continues to work as reported to Government shortly after the close of the year.

м н 1495---11

Sind Circle.

Departmental operations were confined to the supply of fuel to Government steamers of the Indus. The quantity supplied was 181,404 cubic feet and the value Rs. 4,794. The expenditure incurred was Rs. 3,908. The amount of wood required was considerably lessened by the absence of some of the Government steamers on other duty.

(ii) Purchasers. Northern Circle.

This agency was the usual one in vogue in all divisions. All major and minor forest produce excepting that abovementioned and that removed by privilege holders or free-grantees is thus disposed of (to contractor). For quantities, see the statement under "(c) Outturn and Sources of Forest Produce."

Central Circle.

By this agency is removed the greater part of the produce of the circle. Two • hundred and thirty-three coupes in all divisions were sold as against 246 in 1914-15, the deficit being due to a few failing to attract offers on account of inaccessibility or inferior growth; the resulting revenue was Rs. 2,32,849 as against Rs. 2,36,113. Two coupes were sold for extraction of dead wood in West Khándesh, and a large quantity of the same was removed on permit in East Khándesh.

One hundred and twenty-three thousand, seven hundred and sixty-eight royalty trees standing in revenue lands were sold to occupants or purchasers for Rs. 1,00,661 as against 124,362 for Rs. 1,25,911 in 1914-15; this is a source of revenue that cannot be indefinitely counted on, for the number of teak in occupied lands still remaining to be disposed of is now comparatively small, and the major part of the income is derived from the clearance of waste lands in West Khándesh which are needed for cultivation.

Under "Minor Produce" grass and grazing is the chief item, the revenue falling from Rs. 2,57,860 to Rs. 2,45,516; grass sales decreased by Rs. 20,361 in East Khándesh, the natural, though merely temporary, result of periodic changes of the areas in the plains ranges sold for grass cutting; but both in Poona and Sátára there was a substantial increase as a result of the tendency which villagers are showing to make the most of this product by cutting and storing it rather than adopt the wasteful method of grazing, a satisfactory tendency which will receive every encouragement. Grazing fees increased by Rs. 5,740, 868,069 animals being paid for as against 800,839. Free grazing was enjoyed by 66,700 animals.

Bamboo revenue declined from Rs. 13,041 to Rs. 8,301; that for hirda and shikekai increased by Rs. 8,599; Rosha grass receipts fell by Rs. 3,192 and the net results of removal of all kinds of minor produce by purchasers amounted to Rs. 2,77,861 as against Rs. 2,94,296 in 1914-15.

Southern Circle.

Grand	total	••[••••	5,14,268	••••	5,68,738	

· Value of produce removed by purchasers was-

The increase in the amount and value of the major produce removed is due to the larger number of coupes sold during the year. The number and value of bamboos decreased, as the clumps in most of the accessible localities have seeded and people have to go further for good culms. The grazing revenue is a varying item being enhanced or remitted according to bad or good forest protection. The receipts under "Other Minor Produce" show an increase owing to the recovery of instalments postponed last year owing to bad trade conditions.

Division.		Description of area exploite	d.	Acreage.	Value realized.	
					Rs.	
Sukkur	••	Coupes Dead wood		7,063 • 952	99,655	
Lárkána	••	Coupes Dead and fallen trees		3,360 70	24,391	
Hyderabad	• •	Coupes Burnt area Dead wood	•••	2,477 810 • 2,361	68,956	
Jerruck		Coupes		3,643	60,111	
Total, 1915-16		····· ,	•	20,736	2,53,113	
Total, 1914-15				20,055	1,76,435	

Sind Circle.

There has been a satisfactory increase in receipts under this head to which all divisions contributed except Jerruck. The dead wood has now been largely worked out of the forests and there was little available in Lárkána and none in Jerruck Division.

The revenue realised by the sale of fuel under the permit system was Rs. 6,704 against Rs. 7,265 of the previous year. There were decreases in Sukkur and in Hyderabad at the Matiari Ghat, and an increase at Tatta in Jerruck. The system is necessary in some cases for the very poor, but the forests undoubtedly suffer where it is carried out on any large scale.

Grazing.-The grazing fee collection was as under :---

Division.	1914-15.	1915-16.
	Rs.	· Rs.
Sukkur	10,415	13,136
Lárkána	6,833	6,797
Hyderabad ·	14,700	- 14,815
Jerruck	9,194	11,435
Total	41,142	46,183

There was an increase in all divisions except Lárkána. The cause of the large increase in Jerruck has been already mentioned, but apart from the great influx of herdsmen owing to scarcity of grass outside forests, grazing collection depends largely on the Rangers' personal efforts under the new rules.

Minor Forest Produce.—The revenue derived from minor forest produce farmed out, and from assessment levied on lands leased out for cultivation is detailed below and compared with last year's results.

Produce.	L	•	1914-15. Rs.	х ,	1915-16. Rs.
Lac Babul pods Grasses Fishery Cultivation		•••	35 21,488 3,674 5,995 9,088		645 24,284 3,888 4,341 13,325
•	Total	••	40,280	·	46,483

(iii) Rights and Privileges.

Northern Circle.

These remained as before with the exception of a few instances of easements in the matters of local grazing and loppings for manure. There were no serious complaints. Full details are to be found under Forms 19 and 20 and the statement under "(c) Outturn and Sources of Forest Produce."

Central Circle.

The value of the produce removed under this head was-

				Rs.
•	Timber		• •	165

Total .. 43,178

the major part representing privileges in Khándesh enjoyed under the Tapti Codes. In addition Rs. 6,692 were paid in cash as khoti shares on the forest revenue in the Kolába Division.

Southern Circle.

Right-holders do not exist in this circle, and there are no means of recording with any accuracy the value of produce removed under privileges. The villagers remove what they want without obtaining any formal permit from the Department. The abuse of these privileges is common and must go on as long as the villagers are not required, under the existing rules, to obtain privilege-permits before entering a forest; it is at the same time doubtful whether if any such check were introduced the present establishment could efficiently cope with the increase of work involved. The estimated quantity removed and its value are practically the same as in the previous year.

• This is inclusive of the figures for the Direction, Working Plans and Famine Fodder Divisions. N. B.-In the following notes figures are rounded off.

Panch Maháls.—The decrease of Rs. 13,500 in coupe receipts was due to fewer coupes sold owing to less demand on account of local scarcity of rain which depressed trade and progress generally. Much material consequently remained on hand in Contractors' yards. Nevertheless rates remained steady for the amount was sold owing to good competition.

r

.

ï

The *increase* of Rs. 5,750 under grass was due to better rates and more extensive purchase due to local scarcity in neighbouring districts.

An increase of Rs. 6,200 was realised under apta and temburni leaves (the normal figure being Rs. 3,500) owing to this commodity being sold by blocks local men. The result is remarkable.

Surat. An increase of Rs. 59,000 under departmental operations was due to better outturn from saw mills and better rates at sales on the station depôt (the figure is on gross receipts).

There was a *decrease* of Rs. 8,500 on dead and fallen trees owing to the smaller realization on conversion than estimated due to many trees proving hollow. (The figure is on net receipts and will probably be recovered in the next year.)

North Thána.—A decrease of Rs. 94,100 on last year's figures for coupes in spite of 3 extra being sold is attributed to dullness in trade due to the war.

Decreases of Rs. 1,800 on gurcharan sales in spite of more trees being sold and of Rs. 1,850 under bamboos were probably due to the same reason.

A decrease of Rs. 19,800 for malki trees sold was chiefly due to the smaller number disposed of.

The decrease of Rs. 4,000 under grass was due to a grant of forest land to a private milk concern and will be an annual loss to net forest revenue.

Central Thána.—A decrease of Rs. 12,850 on coupe sales was due to lower rates due to slack trade.

There was a *decrease* of Rs. 2,700 on gurcharan receipts, but rates were better than last year, the number of trees being proportionately fewer. The total quantity was small and probably the quality better.

A decrease of Rs. 2,300 on bamboos was due to dull trade.

South Thána.—An increase of Rs. 11,850 on coupe sales was due to better demand, more coupes finding purchasers while rates were maintained.

A decrease of Rs. 40,350 in gurcharan receipts is due to fewer trees sold.

North and South Násik.—These two divisions must be considered together owing to the Kalwan range changing hands from the one to the other.

An increase of Rs. 7,400 was due to more coupes being sold owing to greater demand.

An *increase* of Rs. 16,850 in malki sales is due chiefly to larger number of trees sold.

Increases of Rs. 5,100 and Rs. 1,750 on grass and grazing receipts respectively indicate a general rise in demand for fodder.

A decrease of Rs. 10,000 on mhowra seed is due to the war, also a continued loss of Rs. 2,000 on rosha grass. These products are said to have provided "Olive oil made in Germany" and the bases of Austrian perfumes respectively. If so, there is comfort in the loss.

The year represented the maximum local effect of the war on our forest revenue and there is cause for congratulation that it has not been greater.

Fortunately, forest sales of the last year were mostly concluded just before the war broke out, and its effect in that year only necessitated a granting of extra time for payment of a small portion (about roth amounting Rs. 86,000) of forest dues in the year under report. Thus the effect was spread over the two years.

Since the close of the year under report the forest sales of 1916-17 have practically been completed, prices all round (the raw products for German olive oil and Austrian perfumes excepted) have shown a sharp rise practically to normal prices if not beyond (there has not been time for minute examination).

The magnitude in the fluctuations of receipts under different heads will convey some idea of the capital value of the forest estate and the value of the privileges enjoyed from it by the local people which is equal to what Government realise in revenue. That estate has still some valuable portions hardly touched. In "Gurcharans," "Traverse" numbers and "Protected Forests" there is

мн 1495—13

much latent wealth which only requires skilled management unfettered by prejudice and provided with reasonable staff and funds to add materially to the annual revenue for all time.

Central Circle.

Excluding famine fodder operations, the financial results of the past two years and the average of the five preceding years are as follows :----

Year.	Revenue.	Expenditure.	Surplus.
- COI.	Rs.	Rs. Rs.	$\mathbf{Rs.}$
1915-16	$7,72,218 \begin{cases} A. \\ B. \end{cases}$	$\left. \begin{array}{c} 1,04,365 \\ 4,00,991 \end{array} \right\} \hspace{0.1 cm} 5,05,356$	2,66,862
1914-15	$7,77,531 \begin{cases} A. \\ B. \end{cases}$	$\left. \begin{array}{c} 1,27,320\\ 4,07,938 \end{array} \right\} 5,35,258$	2,42,273
1910-1911 to 1914-15. (5 years' ave		$\left. \begin{array}{c} 1,39,743\\ 3,78,519 \end{array} \right\} 5,18,262$	2,12,590

and separating the jurisdictions of the two Commissioners the figures are-

Central Division.

Year.		Revenue.	Expenditure.	Surplus.

1915-16	••	1,78,669	91,489	87,180
1914-15	••	1,51,120	98,754	52,366
5 years' average	. • •	1,23,378	1,01,702	21,676

Thus a slight fall in revenue of Rs. 5,313, due to causes explained below, has been far more than counterbalanced by an expenditure decreased, by the necessity for economy, by Rs. 29,902, resulting in a net increased surplus of Rs. 24,589. For divisions under the jurisdiction of the Commissioner, Central Division, revenue in 1915-16 is less by Rs. 32,862 than that of 1914-15, and less by Rs. 13,925 than that of the five year average, results which are due mainly to the three Khandesh Divisions, where the effects of the war have been more pronounced than in Poona and Sátára. In the two latter divisions, although Sátára continues to show a deficit on the year's working, the demands on the forests are so intense, and markets so close to centres of consumption that the value of forest materials is steadily increasing, and appears likely to continue to do so independent of outside factors; in Khándesh, on the other hand, material is in excess of demand and markets are far off, and exceptional prosperity all round is necessary for produce to compete with that from centres of supply, such as the forests of Baroda and the Northern Circle, which are far more favourably situated for the trade towards the coast, in which direction much of the Khándesh material, more especially that of North and West Khándesh, would ordinarily go. The same arguments apply to the Kolába Division, under the jurisdiction of the Commissioner, Southern Division, where the proximity of the Bombay market guarantees an ever increasing demand for forest material and an ever increasing revenue.

As regards expenditure little need be said other than that the economies necessitated by the war less affected Kolába, where few roads and buildings are ordinarily constructed, than Poona, Sátára and Khándesh.

The financial results of the various divisions are commented on below:---

East Khåndesh.—Revenue decreased by Rs. 9,864, and was also lower than that of any of the five years preceding. The main falling off was in sales of grass, and was due to circumstances already explained under the head "Grass and Grazing." Timber and fuel showed slight increases of Rs. 1,967, which however was an outstanding of the previous year, and Rs. 4,872, the result of the constant demand which is ensured by the absence of any forests in the plains talukas. Decrease in expenditure was mainly under salaries.

North Khándesh.—Absence of demand for timber and fuel and poor prices obtained for rosha grass caused a decrease in revenue of Rs. 13,127 as compared with 1914-15, and of Rs. 25,940 as compared with the five year average. Curtailment of the roads and buildings programme resulted in expenditure being less by Rs. 5,426.

West Khåndesh.—Rs. 27,345 less revenue than in 1914-15 was the result of the effects of the war, purchasers being unobtainable for the waste and malki numbers, the clearance of which is ordinarily the main source of income in the division. Economies on roads and buildings effected a decreased expenditure of Rs. 4,425.

Poona.—The surplus here was RS. 74,217, as against Rs. 60,080 in 1914-15, and Rs. 38,041, the previous five year average, a state of affairs which is more especially satisfactory when it is pointed out the surplus owes nothing to decreases in expenditure, which have also risen, but entirely under establishments, from Rs. 73,162, the five year average, to Rs. 85,238 in 1914-15 and Rs. 88,562 in the year under report. The ever increasing demand for forest material in this division which has already been alluded to, and the rise in prices for the same, may confidently be expected to result in further progress in the future, at any rate so far as the forests themselves are concerned, but at the same time one item of revenue will disappear, viz., the proceeds of the lands which have been cleared for transference to the Revenue Department, a work which is now completed. Demand however is so great that forest areas hitherto unworked will certainly be called on to make good the deficiency. To the practically continuous and most efficient administration of Mr. Thomson during the last $4\frac{1}{2}$ years the progress made is largely due.

Sátára.—A small increase in revenue of Rs. 1,803, mainly from grass and grazing, and a decrease in expenditure of Rs. 6,267 imposed by the necessity for economy in roads and buildings, was more than counterbalanced by increased establishment charges, and resulted in a deficit of Rs. 9,329 as against Rs. 9,181 in 1914-15. The forest resources of the division are extremely poor, but such as they are it is satisfactory to be able to report that the prospects of increased revenue in the current year are already assured.

Kolába.—This division exhibits most consistent progress. Revenue has risen from Rs. 1,23,376, the five year average, to Rs. 1,51,120 in 1914-15 and Rs. 1,78,669 in the year under report, while expenditure having decreased with changes in the pay of officers holding charge, the surplus has risen from Rs. 21,675, the five year average, to Rs. 52,366 in 1914-15 and Rs. 87,180 in 1915-16. These satisfactory results are due partly to fresh areas under the working plan coming under exploitation, but mainly to high demand and high prices realized for the coupes. In these Kolába forests, Government possess a property of great present and greater potential value, a state of affairs to which not only the proximity of the Bombay market and the easy access thereto by water, but also the excellence of much of the material in the forests contribute.

Further classification of the revenue and expenditure of the circle is as follows :---

Revenue.

It is most satisfactory to note that, notwithstanding the fall of prices due to the congestion of the timber market and absence of demand for timber, the total revenue of the year shows an advance of Rs. 1,26,979 over the previous year and of Rs. 3,26,283 over the average of the preceding five years; had all the material of the year realised its normal value, the receipts would have certainly beaten the record revenue of the year 1913-14 (Rs. 20,18,753).

The main revenue heads I and II are responsible for the increased revenue from larger quantities of material exploited and disposed of during the year. There are prospects of further increasing the revenue under these heads and it is hoped that, with increased facilities of extraction for the large locked-up forest capital and with the speedy and successful termination of the war followed by expansion and improvement of the timber market, the revenue will continue to improve year by year. The revenue under III and V is always variable and the small differences need no comment.

Expenditure.

The total expenditure under A and B increased by Rs. 73,300 over the last year's figure. The increase under A-I was due to payments of arrear contract wages withheld in the previous year for lack of provision and to payments of wages for larger quantities of timber and fuel exploited during the year. The curtailment of 'expenditure on roads, buildings, wells, sowing, planting and fireprotection with a view to economy during the war accounts for the decreases under A-VII and A-VIII. The decrease under A-IX was due to the smaller amount spent in payment of rewards to informers of forest offences and to smaller number of articles of uniform paid for . The excess under B-Establishments was in consequence of (1) a senior Imperial Officer holding charge of the Kánara, N. D., during the whole year, (2) a senior Imperial Officer having been appointed to Kánara, W. D., in place of a junior Officer gone on long leave, (3) a Sub-Divisional Forest Officer serving in Kánara, E.D., during the whole year and (4) increase in the rates of pay of officers and establishments under the time-scale. The variations under the other heads are trivial.

• The following statement shows the proportion of revenue and expenditure under the different heads :--

мн 1495—14

1490-14

The outstandings of revenue at the opening and close of the year were Rs. 2,55,995-15-1 and Rs. 4,92,395-9-8 respectively. Three items amounting to Rs. 359-8-8 were written off as irrecoverable revenue under the orders of the Conservator.

The outstandings due to the Department from contractors and disbursers amounted to Rs. 2,02,267-11-5 against Rs. 1,95,228-3-8 in the previous year.

The estimated value of timber and other produce in depôts rose from Rs. 8,48,942 to Rs. 10,85,650 and that of live and dead stock fell from Rs. 4,28,846 to Rs. 4,27,739.

Sind Circle.

The financial results of the year as compared with those of the preceding year and with the average of the past five years are as under :---

Head.	Average of last 5 years.	1914-15.	1915-16.
Revenue	Rs. 4,10,937	Rs. 4,18,718	Rs. 3,79,875
Expenditure A	43,575	42,745	32,511 1,83,151
Total, Expenditure	2,09,376	2,22,134	2,15,662
Surplus	2,01,561	1,96,584	1,64,213

The decrease in gross revenue is due to the following reasons :---

(a) The coupe revenue of the year being greater and the collection of such revenue being spread over two years Rs. 17,000 more than last year are outstanding and will be collected in 1916-17; also poor results were obtained by the sale of coupes in the Jerruck Division.

(b) A less quantity of fuel was supplied to the Government steamers on the Indus.

The decrease of Rs. 10,234 under A—Conservancy and Works is due to the postponement of new works on account of the war.

The increase of Rs. 3,762 under B-Establishment is due to increase of pay to officers of the Imperial and Provincial Services, to members of the clerical establishment under the time-scale and also to the grant of Sind allowance to Mr. Robinson (vide Government Resolution No. 3060, dated 19th August 1915).

The revenue and expenditure of the year are further classified as follows :---

I.-Revenue.

Particulars.		Receipts.	Percontage.
•		Rs.	Rs.
Major produce		2,70,665	71
Minor produce	••	1,09,210	29
Total	••	3,79,875	100

Particulars.		Charges.	Percentage.
		Rs.	5
Extension and constitution	••	••	••
Improvement	••	26,334	81
Exploitation	•••	6,177	19
Total		32,511	100
IIIExpend	ITURE	В.	
Administration	••	32,456	18
Executive	••	78,925	43
Protective	••	71,770	39
Total	••	1,83,151	100

The revenue outstanding on 30th June 1916 was Rs. 77,510 against Rs. 60,706 on the same date last year. This represents instalments payable by coupe contractors and others which are not due or recoverable until after the close of the year.

Bhai Jethmal had to pay Rs. 6,500 on account of the lac contract of the Jerruck Division for 1908-09 of which Rs. 4,285-5-11 have been recovered and credited. The Collector of Hyderabad has been requested to recover the balance.

The Commissioner in Sind has been requested to sanction the writing off of the sum of Rs. 3,038-4-0 due from Mr. Chandiram Karamsing as an irrecoverable revenue.

CHAPTER IV.

ADMINISTRATION.

Northern Circle.

The charge of the circle was held by Mr. W. F. D. Fisher throughout the year. Divisional Charges were held as follows :---

Panch Maháls { Till 3rd December 1915 Mr. R. W. Inder. From 4th December 1915 till 30th June 1916 Mr. W. C. Milne.
Surat J 111 19th January 1916 Mr. G. E. Marjoribanks. From 5th May 1916 till 30th June 1916 Mr. R. W. Inder
North Thána { Till 1st December 1915 Mr. J. B. Brooks. From 2nd December 1915 to 30th June 1916 Mr. W.E. Copleston.
Central Thána Throughout the year Mr. B. H. Dalal (except for six weeks' privilege leave when Mr. Copleston held charge in addition).
South Thána Throughout the year .: Mr. P. E. Aitchison.
South Násik Do Mr. D. R. S. Bourke
North Násik Do Mr. H. A. Bhadbhade.
Working Plans Till 3rd December 1915 Mr. W. C. Milne. From 4th December 1915 till 4th May 1916 Mr. R. W. Inder.

From 5th May 1916 to 30th June 1916 . . Mr. P. E. Aitchison.

All Divisional Forest Officers worked well. Mr. Marjoribanks' transfer to the Southern Circle was a material loss to this circle which just after the close of the year became the more serious by the departure for military employ of his successor in Surat (Mr. R. W. Inder) who had not only been selected for that charge but had for its sake been given special facilities to tour in it with Mr. Marjoribanks for a period of six weeks before handing over charge in order to preserve continuity in a charge of prime importance, both from forest and political aspects.

Sub-Divisional Officers.

Messrs. B. J. Patel, R. K. Kanitkar and V. G. Bhalerao were employed in Panch Maháls, Surat and Central Thána respectively, throughout the year, except that Mr. Patel was lent to Balasinor State from 20th January 1916 to 3rd March 1916.

Mr. L. S. Koppikar served in North Thána till 1st December 1915 when he proceeded oo sick leave till 4th June and on his return acted as Personal Assistant to the Conservator.

Mr. K. B. Gokhale served in South Thána till 25th August 1915 when he died suddenly.

Mr. D. N. Damle served in South Násik till 30th November 1915 when he took leave prior to retirement.

Mr. K. E. Kotwal was attached to the Working Plans Division till 21st September from which date till the close of the year he was Sub-Divisional Forest Officer, South Thána.

All worked satisfactorily, Mr. Kotwal especially doing well at working plan data.

All divisional offices were examined during the year except North Násik, which has been examined since.

The office establishment worked satisfactorily on the whole. The standard of efficiency is not what it should be, and if it were, two-thirds of the present number of clerks would be sufficient. Much more economy in routine work is also possible. Mr. Anderson's system of record would probably be suitable for introduction. Special study is being made of this, and when a man as Superintendent of record is available the matter will be taken up.

The protective staff throughout the circle is, with exceptions, very inefficient especially in control. Rangers and Foresters have too large charges. The result is that while the uses to which Provincial officers can be put is limited, the guards are lazy, indifferent and lacking prompt obedience. Thus the Divisional Officers carry a burden that hampers progress and is most disheartening. Of course some Rangers and Foresters have done very well. Among the former Mr. Kazi in Panch Maháls, Messrs. Mankikar and Dubhashi in Surat, Mr. Sathaye in North Thána, Mr. Nagarkar in Central Thána, Mr. Tendulk r in South Thána and Mr. Kundalkar in South Násik merit special mention.

During the year six ranges were sub-divided, thus creating six new range charges. This helps control but does not provide more establishment.

Casualties.—Deaths 25 (being 21 per cent. of the total staff, viz., 1 Provincial Officer, 1 Ranger, 5 Foresters, 18 Guards); retirements 18; resignations 16; total 5 per cent. (These figures are about normal.)

Discipline.—Dismissals 14, services dispensed with 21, degradation 11, fined 174, total 20 per cent., which figures are about normal.

Recruitment.—While the standard of applicants for Ranger recruits is good and numbers ample, there is great need for open recruitment of Foresters. It is hoped to initiate this system shortly as the guards' grades do not form a suitable recruiting ground for Foresters. The limit of Rs. 12 for beat guards must be raised to Rs. 15 if we wish to obtain suitable though illiterate men, especially in the very valuable Thána District. Vacancies in the guards' grades will, it is hoped, also be open by public notification of vacancies, and all "Umedwars" and candidates prohibited, acting men in the lowest grade having no more claim than any other applicant, for these are the doors by which the inefficient and otherwise undesirable now wriggle into the Department.

The same is true of the senior clerks' grade. Umedwars, candidates and others have usually secured acting appointments and become confirmed without any enquiry whether more suitable persons are available, with the consequence that now it is difficult to find men suitable as head clerks and inefficient men have secured several of these important posts. Last year for the first time public notice was given for applicants to fill two vacancies in the senior clerks' grade. About 30 applicants appeared, about 7 were admitted as qualified and out of these two were eventually selected. Even thus the standard might have been higher, but it will doubtless improve when such opportunities of securing Government service are better known, and the back door found closed.

The junior clerks' grade is the most unsatisfactory in the whole service. Any man who can do the clerical work in a range office is good enough though a working knowledge of English is desirable. Yet the idea has got about that the junior clerk grade is the recruiting ground for senior clerkships. In reality it is the most undesirable source for recruitment to the senior places. These junior clerks are recruited on Rs. 20 and are expected to spend the rest of their lives on the same pay. If they were recruited on Rs. 15 and had a yearly increment of 8 annas to Rs. 30, probably the difficulty now experienced would disappear.

Training.—The training our Ranger probationers get at Dehra Dun is a very great asset, though training at a Presidency centre would have still greater advantages. Such a Presidency training centre for Forester probationers similarly selected would be *invaluable*. The local Forest Class has had to be abandoned for many reasons. Of these the shortness of the course and absence of a practical period, the unsuitability of the instruction, and fundamentally the absence of suitable men to receive instruction made such action imperative. When we realise that a comparatively small outlay and a little organization would quadruple the value of our staff, it is difficult not to be impatient for their advent. Even for clerks some methodical instruction is required, apart from any system of examination of selection for first appointment. A material portion of present routine work of all offices is the correction of mistakes or the disposal of work caused by them due to the fact that "experience" is the only instructor our clerks have in their business. Day after day and year after year the same mistakes, silly, ignorant, careless mistakes, are made just because new clerks must make those mistakes before they know better. A six months' training in office routine would add vastly to the value of each individual in the office, and by friction.

The relations of Forest with Revenue officers have been satisfactory in all districts.

Central Circle.

Mr. L. Napier held charge of the circle throughout the year except for the period from 22nd September to 1st November, when he was deputed on special duty for famine fodder operations, and Mr. D. A. Thomson, Divisional Forest Officer, Poona, held additional charge.

Messrs. R. P. Da'ley and R. V. Pethe were Divisional and Sub-Divisional Officers in East Khándesh throughout the year.

In North Khándesh Mr. H. W. Starte held the division and Messrs. B. J. Joshi and G. R. Patkar the sub-division.

Mr. A. F. Gonsalves held West Khándesh from the beginning of the year to December 7th, and again from April 25th to the close of the year. In the interval Mr J. B. Brooks was in charge, ill-health causing him to take leave. Mr. R. A. Shirali held the sub-division.

Poona was held by Mr. D. A. Thomson with Messrs. T. N. Koppikar, B. J. Joshi and A. N. Master as Sub-Divisional Officers for varying periods.

In Sátára Mr. C. E. L. Gilbert held the division combined with the duties of Superintendent of Mahábleshwar, and Mr. E. O. Sampson was Sub-Divisional Officer from October 20th.

In Kolába Messrs. C. G. Dalia and G. S. Dangi were Divisional and Sub-Divisional Officers throughout the year.

Mr. V. D. P. Rebeiro was Divisional Forest Officer, Working Plans.

One Ranger joined the circle from Dehra Dun, having obtained a Higher Standard certificate with honours, and two students were sent there for the 1916—18 course.

The Foresters' class of 11 students was held in Poona with Mr. Sampson as Instructor in addition to his duties as Sub-Divisional Officer, and 10 passed the examination.

In East Khándesh the services of a Ranger had to be dispensed with for general inefficiency and such gross laxity as to make possible the criminal misappropriation of Government funds which led to the prosecution and conviction of his clerk as referred to in last year's report. Another Ranger in the same division was reduced to Forester for persistent neglect of duty. Both were trained Rangers of the Poona Forest class and of considerable service. In Satára a guard was convicted of criminal misappropriation and sentenced to one month's imprisonment.

Casualties were 17 deaths, 19 resignations, 41 dismissals and services dispensed with, and 35 retirements.

One civil suit was instituted against Government by a contractor in North Khándesh for cancellation of his contract by the Forest Department on account of his misdeeds, but is not yet decided.

Recruitment for the protective establishment showed no improvement in the class of men coming forward, the difficulty being especially felt in Kolába and in Khándesh. In the former the Bombay labour market, with its high wages, absorbs all who want work, in the latter those who are willing to take forest employ are too illiterate and irresponsible to be of much value under the conditions of service at the present day. Recruitment of junior clerks is also a difficulty, and not a few unqualified men have perforce to be employed. The prospects of stagnation for several years in a range office on the same pay offers few attractions to good men.

With the exceptions above mentioned the protective establishments worked on the whole satisfactorily as did also office establishments.

Relations between the Forest and Revenue Departments were everywhere most satisfactory and few comp aints were made as to the inadequacy of punishments inflicted by Magistrates on offende s in forest cases.

All Divisional Officers worked with great energy, and without except on were well supported by their Sub-Divisional Officers, a fact to which the Conservator can testify from personal observation. The services of several Rangers have received special commendation in divisional reports, and due consideration will be given to such men as opportunity occurs.

The Akrani Pargana was administered by the Divisional Forest Officer, North Khándesh, with the Range Forest Officer as ex-officio Mahalkari. A simple working plan is in force to supply the people with fire-wood free and hutting material at low rates, and for the present this meets all requirements. No further exploitation is at present carried out, although on the east of the Pargana there are valuable teak areas which would not only be the better for being worked, but which would yield a good return were there any means of getting the produce to market. This however cannot be the case until the road from Shahada referred to earlier in this report has been constructed. The Divisional Forest Officer brings to notice again the urgency for the provision of a Government dispensary Sickness is rife in the Akrani, and Government servants are at Dhadgaon. dependent on the Taloda dispensary 28 miles distant. The Swedish Mission is accomplishing much good work, more especially amongst women and children, but their limited means need supplementing by a Government institution. The area under cultivation is steadily increasing, the assessment received having risen from Rs. 2,507 to Rs. 3,356 in the last four years; the Collector has called for a report from the Divisional Forest Officer as to the necessity of increasing the assessment and the advisability of introducing the permanent revenue settlement. Rs. 4,000 were advanced as tagai, the demand for the same being less by Rs. 2,520 than in the previous year; but, on the other hand, recoveries of tagai outstandings considerably increased, facts which taken in conjunction with the increased area under cultivation point to a steady rise in prosperity. The rainfall was satisfactory, crops good and there were no epidemic diseases. The Government stud bulls, one Sonkairi in charge of a patil and one Khilari in charge of the Reverend A. P. Franklin, covered 57 cows, of which 37 of the produce are living and healthy; both bulls however are said to be somewhat too large a variety to be suitable for the local cattle. The primary school at Dhadgaon is doing well, but a second one at Kamod is not popular. The Range Forest Officer is invested with 3rd class powers for the trial of Abkari cases, and 5 offences were disposed of by him during the year, all resulting in convictions; the result of it being possible to dispose of such cases within the Pargana itself should lead to a reduction in this class of offence.

The Collector in his review of the Divisional Forest Officer's report writes that "Mr. Starte has given an interesting account of the Akrani, which he has administered successfully during the year."

As regards reports from other divisions all special comments made by the Collectors have been noted in various paragraphs above.

Southern Circle.

The charge of the circle was held by Mr. T. R. Bell throughout the year. The charges of forest divisions and sub-divisions were held by the following officers :---

Division.	•	
.Mr. J. Dodgson		Mr
. Mr. A. G. Edie		Mr
Mr. G. S. Butterworth.	•	
on	-

Mr. W. A. Miller. sion.

Changes.-Mr. Duxbury was transferred to Sind as Deputy Conservator in charge of that circle, Mr. Hiley went on 6 months' leave and Mr. Hodgson returned from leave during the year.

Mr. M. S. Tuggarse, Ranger, Ankola in Kánara, C. D., promoted to the Provincial service during the year, continued in charge of the range.

Forest Students-Dehra Dun.-The candidate Mr. Madan Lal Khanna, nominated by Government for the Provincial Service course of 1916-18, satisfactorily underwent his 6 months' practical training in this circle and joined the Imperial Forest College in July 1916.

Rangers' Course of 1914-16.-Of the two candidates nominated, one left the course soon after joining and the other passed out with a Ranger's certificate and was posted as a Ranger in the Belgaum Division.

Rangers' Course of 1915-17.-The two candidates sent up are due back in April 1917. They are said to be doing well.

Rangers' Course of 1916-18.-Five candidates were sent up during the year.

Vernacular Forestry Class, Belgaum.—The Forestry Class, Belgaum, was, as usual, conducted by Mr. Hattiangadi, Sub-Divisional Forest Officer, Belgaum, in addition to his own duties. For the Foresters' course of 1915 there were 7 students picked out from guards' grades of the several divisions, all of whom passed.

Inspection .- All the divisions of the circle except Ratnágiri were visited by the Conservator during the year, and all the divisional offices in the circle, and 20 range offices, 68 round offices, 10 depôts and 44 nakas in the Kánara Divisions were inspected by his Personal Assistant with a view to establish uniformity in procedure and office work.

Casualties and Punishments.-The casualties and punishments in the subordinate service were :---

<u> </u>			Casu	altics.	. .		Punisl	iments.

shikar.		r		

for good behaviour for 6 months.,

The revised game rules, sanctioned for the Southern Circle shortly before the close of the year, are being introduced.

The relations between the Forest and other Government Departments were throughout most satisfactory.

Land Revenue Administration.

Kánara, E. D.-The Bilki Mahal of the Yellápur Taluka was administered by the Divisional Forest Officer as Assistant Collector and by the Range Forest Officer, Bhartanhalli, as Mahalkari. The Divisional Forest Officer, Mr. Edie, states that it would be better if the Divisional Forest Officer were given magisterial powers and the powers of a Forest Settlement Officer in the Mahal. His further remarks are-

"The creation of this Mahal has made it much easier for the Forest Department to get the people to come on forest works. The people seem to be quite contented under the control of this Department."

Belgaum Division .- The Belgaum Range Mahal and the Khanapur West Range Mahál were administered by the Divisional Forest Officer, Mr. Hodgson, as Assistant Collector and by the Range Forest Officers of the respective ranges Efforts were made towards inducing the villagers to help with as Mahálkaris. forest operations. Mr. Hodgson is taking a keen interest in the administration of the kumri villages under his charge. In Government Order No. 5249 of 22nd May 1916 he was appointed as Forest Settlement Officer for the Khánápur Forest Mahál.

The management of the Devikop Forest Mahál has presented no difficulty during the year.

The following new forest maháls were sanctioned during the year to be constituted from 1st August 1916 :---

	Forest Mahál.	No. of villages.	Mahálkari.
Kánara, N. D. Haliyal.		12	Range Forest Officer, Virnoli.
	Kulgi	11	Range Forest Officer, Kulgi.
Kánara F D Valle	Dandeli	23	Range Forest Officer, Dandeli.
Kánara, E. D. Yellápur Kánara, W. D. Kárwár	Kirwatti	8	Range Forest Officer, Kirwatti,
Hopara, W. D. Larwar	Supa	120	Mahálkari of Supa.

The Divisional Forest Officers have been appointed ex-officio Assistant Collectors within the limits of the respective maháls.

Services.—The executive and clerical staffs have worked satisfactorily during the year and I should like to mention particularly the services of Messrs. Chandavarkar, Hemmadi and Taggarsee, Extra Assistant Conservators, amongst the former—Mr. Chandavarkar for hard and careful work in the inspection of all the divisional, range and round offices of the circle during the last two seasons. He is my Personal Assistant and was deputed to see that all the recent orders issued for the more systematic and economical working of all branches of forest work were being properly carried out as regards the keeping of registers, forms and other necessary means of control and the reduction within reasonable limits of correspondence and clerical work in the ranges, rounds and beats. Mr. Hemmadi I commend for energetic assistance rendered to his Divisional 'Forest Officer and Mr. Taggarsee for good work in sylvicultural operations.

Amongst the clerks Mr. Bellare of my own office has kept up his reputation for good, hard work; and Mr. R. S. Nagarkatti, who was my camp clerk during much of the season, is a hard-working, conscientious and reliable member of the establishment. Mr. Hodgson speaks highly of his Head Clerk, Mr. A. N. Saldanha, and I can vouch for the fact that he is correct in doing so. The best Rangers we have got are Messrs. V. N. Hasabnis of Virnoli, V. S. Kanitkar of Bhartanhalli and J. D. Rego of Mundgod.

Sind Circle.

The Sind circle was in charge of Mr. E. G. Oliver from 1st July 1915 to 13th November 1915 when he took a month's leave, Mr. Newman acting in the circle in addition to his own duties. Mr. Oliver went on furlough on the 15th April 1916 and Mr. G. R. Duxbury held charge to the end of the year.

All Divisional Forest Officers and Sub-Divisional Officer, Sukkur, have worked well throughout the year. Owing to the low inundation and the absence of rain the year was a trying one, the forest being difficult to protect against grazing and fire.

The work of the Range Forest Officers left much to be desired in the Sukkur Division, especially in the Kot Sultan, Sukkur and Rohri Ranges. Incapacity for vigorous outdoor work was the standing defect. Most of the Rangers sent to Upper Sind at once complain of the climate and try to get sent away. Some of the present Sind Rangers have no real liking for the active life of a Forester. There are exceptions; Messrs. Bulchand Parumal, Rodrigues and Nenumal in the Jerruck Division have shown exceptional good work, while Messrs. Pinto and Badlani in Sukkur and Messrs. Dalpatrai and Kotumal in Lárkána have been praised by their Divisional Forest Officers.

The office establishment have worked well and to the best of their ability. In the circle office my predecessor specially praised the work of Mr. Imdadali Mahomed Ashraf Kazi, Head Clerk, and Mr. Ramchand Manghanmal, 2nd Clerk. Arrangements have been made that all clerks capable can learn account work; at present this work has remained in the hands of a few.

Only the Divisional Forest Officer, Jerruck, reports an improvement in the efficiency of the lower protective establishment. The class reported as most necessary to improve is the class of Sub-Ranger, both as regards education and morals.

Two Government stipendiary students (i) Gulam Mahomed Abdul Hamid Kureshi, and (ii) Parsram Khemchand Mirchandani were sent to Dehra-Dun for training as Rangers.

м н 1495---16

The casualties of the year were as follows :---

THO COOL				*							
			Casualties.				Discipline.				
Division.	-	Deaths.	Retire- ments.	Resig- nations.	t_	Services dispens- ed with.	4	Degra- dations.	Fines,	Super-	Percen- tage.

Mr. Lekhraj Lachiram, Head Clerk, died of consumption in Hyderabad Division.

A Sub-Ranger died of pneumonia in Lárkána Division.

One forest guard died of fever in Sukkur Division and another of sunstroke in Hyderabad Division. In Jerruck there was one death and one retirement.

In Lárkána a guard was assaulted and murdered in Dosu forest when catching thieves illicitly cutting wood. Another guard in the Garhi Yasin range has been missing since 15th March 1916; the Divisional Forest Officer reports that it is believed that the man has been murdered and the corpse buried in the jungle.

Forester Gobindram Jechandrai was dismissed for bad protection work in the Rohri range of the Sukkur Division.

• The relations between the Revenue and Forest Departments continued to be satisfactory.

All range offices and ghat records were inspected by their respective Divisional Officers and some by the Conservator who also examined all divisional offices during the year.

Good progress was made during the year in the classification of both English and vernacular records.

CHAPTER V.

GENERAL REMARKS:

Northern Circle.

Panch Mahals.—The Divisional Forest Officer calls attention to the increasing demand for land for cultivation, especially for cotton crop in the Halol Táluka. The Charans—professional graziers—are among the applicants and much of the land allotted to them as grazing grounds is suitable for such cultivation, but they are bad cultivators.

The Collector makes remarks and suggestions on the same subject.

The Conservator will confer with both officers on the subject and on cognate matters which are of equal importance. If practical proposals can be formulated, they will be duly incorporated in a full report to Government.

The Collector draws attention to surplus irrigation water available and suggests its utilization for forest nurseries.

The Conservator thinks that general experience warns us that a year of severe scarcity of rainfall might at a blow wipe out the labour and expenditure of many years. But the matter will receive his attention and consideration during his tour this autumn.

Surat.—The Divisional Forest Officer having been in charge for a very short time refrained from any remark.

۰,

The Collector writes :-

"The undersigned made several camps in the Dángs and was much impressed by the signs of efficiency and progress that was noticeable everywhere. Road-making in particular is receiving the attention it deserves, and the results reflect credit on all concerned; Mr. Marjoribanks has administered the Dángs for five years with energy and tact, and his name will not be forgotten there."

The Conservator cordially endorses the Collector's remarks.

North, Central and South Thána .- There was an absence of any outstanding feature of the year except an attempt to organize better control by the protective establishment by the formation of five new ranges already mentioned in this report, but little real improvement can be made until funds for the establishment are better utilised and subsequently added to. Scientific forestry is impeded accordingly and though rising prices obscure facts serious loss in the future must result.

The Collector suggests a liberal scale of rewards for detecting offences of illicit cutting. The Conservator fears the results would be illusory and the main trouble remain unaffected. 'Essential control is lacking, and no rules, orders nor mere prescriptions will take the place of efficient staff, authority and funds.

The other important matter the Collector touches on is the control of gurcharans. It is not thought advisable to put this vastly valuable woodland property into the hands of the Forest Department. It is suggested that "a trained Forest Officer with a small staff should look after the Thana gurcharans under the orders of the Revenue Department." When it is considered that these gurcharans are generally adjoining reserved forests, indistinguishable from them except by cut lines and boundary pillars, it is not clear why it is necessary to have a separate staff for their control. Additional staff for the forests is necessary, and given that, the added control of gurcharans would only make for efficiency all round. The Thána gurcharan corresponds exactly with the protected forest of the Dángs except that latter includes the cultivation as well. What is required would seem to be a better utilization of the Forest Department generally and of the Divisional Forest Officers in particular. They are under revenue control in every instance, and experience shows that the more intimately they are in touch with the people the smoother and more economical the running of the administrative machinery.

Lastly the Collector deplores the destruction of malki injaili, but that is a trivial matter compared with the control of gurcharans, and would probably be largely mitigated were the intelligence of the Forest Department brought in closer touch with the needs of the people as above indicated.

South Nasik .-- The Divisional Forest Officer remarks :---

"The position of the protected forests of Peint Táluka is in my opinion very unsatisfactory.

These forests form an extensive and very valuable property of more than They should be put under some sort of regular 55,000 acres in extent. sanctioned working plan as soon as possible, their management should be entirely in the hands of the Forest Department, and the coppice shoots resulting from the fellings should be kept and sold by Government under a regular plan. The detailed facts of the case have already been reported." The Collector in forwarding the report writes :-

"Mr. Bourke's report is most interesting. It is a pity that such a keen and observant officer could not stay longer in this charge, the importance of which has in my humble opinion never been sufficiently appreciated. I. believe that the forests of Peint are a most valuable property and at present almost wasted for want of expenditure on communications. It is practically the same country as the Surat Dángs, but while the latter has got everything it wanted, Peint has unfortunately escaped notice and has got very little.

I entirely agree with what Mr. Bourke says in paragraph 90 about protected forests in Peint, but the matter has been dealt with separately."

The Conservator thinks Mr. Bourke's observations and conclusions as regards the Peint Range are correct in the main. Sylviculturally they are only new as applied to that area. Similar observations and conclusions by others form the basis of recent working plans sanctioned and under preparation in other parts of India including the revised working plan for the Thána District. The report referred to by Mr. Bourke is with the Conservator pending the inspection of the Peint forests this season both by the Conservator and Working Plans Officer,

if possible. Mr. Bourke's comparison of the liberality of provisions for the development of the Dángs with the apparent total neglect of the very similar property in Peint breaks down in failing to recognise the fundamental factors of justification and success of the liberality of provisions granted to the Dángs, viz., the selected Divisional Officer, his powers and general administrative position. The success in the Dángs could be repeated and even surpassed in Peint if the Divisional Forest Officer were similarly qualified and paramount there. It is what the country requires and it is hoped the matter will receive favourable consideration when the special report is made. The preliminaries are in hand.

North Násik.—There is no matter of special remark at present.

The feature of the year has been economy on account of war, but an error (if any) has been made by overcurtailment in expenditure of funds originally sanctioned for development. It is a difficult question for the Conservator who feeling the pressing needs of local works has felt bound to surrender the utmost for the war.

Central Circle.

A year which at one time threatened to be overshadowed by famine, with its attending results of dislocation of trade and diversion of the energies of the Forest Department from their duties proper to the conduct of famine fodder operations, was eventually redeemed by the unprecedented and unexpected rainfall in October, thus enabling satisfactory progress to be made in the exploitation of the forests and in the collection of revenue. The war however put an end to progress in the important works of the development of communications and the housing of the forest establishments.

As regards famine fodder operations no detail is called for here other than that the 25 lákhs its. of grass in reserve in West Khàndesh was of the greatest value in meeting the requirements of famine-stricken areas in Gujarát and Káthiáwár; the reserve has been duly renewed by Mr. Bhiladwala under his contract with Government. The timely rains put a sudden end to the further large operations for the supply of grass that had been arranged for in Poona, Kolába, and West Khándesh, not, it is true, without considerable financial loss to Government, due to those operations being already in train and to the necessity of paying compensation on the contracts that had been made, but at the same time at a loss that was triffing compared to the direct and indirect loss that a continued absence of rain would have caused.

Speaking generally, it may safely be said that given normal conditions for trade, the further progress of the forests is assured. Their nature and location offer less scope for large schemes of development than elsewhere, but the demand on them is steadily increasing. The enquiries of the Industrial Commission may open out fresh markets for minor products such as tanning materials, rosha grass and mhowra seed, but not, it is expected, to any great extent; the main revenue of the circle must always be derived from the small timber, fuel, and grass which alone the forests are capable of producing, and which local markets will absorb. And it must be remembered also that fresh industries would encroach on the already all too limited labour market, and so while beneficial in one way, would react unfavourably in others. The needs of the circle are continuous : fire protection in Khándesh to bring the forests into the improved condition of which they are undoubtedly capable of being brought, and a steady policy of road development on the comparatively restricted scale which will meet the requirements of each ensuring period of years.

Southern Circle.

The year has been full of promise for the development of the forests in the circle, more particularly for those of Kánara District and those portions of Dhárwar lately transferred to the Northern and Eastern Divisions thereof. The creation of a fifth division in Kánara and the consequent interchanges of area has already been fully explained in the body of this report (section 1 of Chapter I.) Although the fifth division was administratively necessary from a purely forest point of view, the existing charges being too extensive for proper management by one Divisional Forest Officer, its creation would not have been sanctioned had the case not been strengthened by a scheme for the amelioration of the condition of the Kunbi Marathas in the Supa Petha submitted to Government by the Collector of Kánara. Under this scheme, Supa is now a forest mahal with the Divisional Forest Officer, W. D., as Assistant Collector. The fifth division and all the changes connected therewith has entailed no extra cost to Government beyond the pay of 5 peons or puttewallas. The Bijápur Division has been added on to the old Dhárwar Division minus the portions transferred to Kanara, E. D. and N. D. and forms the new Dhárwár-Bijápur Division. Thus the number of divisional charges in the circle is the same as before and, while the areas of the five in Kánara have decreased and become more compact, that of Dhárwár-Bijápur has increased both in size and in the number of component parts or blocks of forest separated by long dis-It is a most unmanageable charge as it stands now. tances.

The general necessity for making the most of all the resources of the empire likely to produce revenue having become apparent during the course of the war in Europe, enquiries have also been started into the possibility of further development of the utilization of forest produce. The Commissioner of the Southern Division, visited the Kánara jungles during the season and made notes with this object. These notes became the subject of correspondence between him and Government with the result that it seems to have been recognized that Bombay possesses in its jungles a source of potential revenue the existence of which has up to the present been more or less unknown to those unconnected with the direct management of the forest estate. A scheme for a light railway to tap the eastern parts of the Eastern and Central Divisions of Kánara is being considered by Government, to run from Hubli via Kalghátgi to Mundgod. This is to be built by private enterprise. The scheme for the Dandelli-Bhistenhatti Railway which is to be built by Government and which has been the subject of correspondence for years past was again postponed for want of sanction to Rs. 5,000 for a regular survey by an experienced Railway Engineer.

His Excellency the Governor of Bombay in the month of May visited the Northern Division of Kánara where the line is to be built and devoted several days to an inspection of the forests and work going on with the result that the money has now been provided after the close of the year. His Excellency went into the matter of forest development on the spot and summoned – the local forest officers to a conference at Astoli which was also attended by the Commissioner. As a result of this, the Conservator was ordered to prepare a statement of requirements for the fuller working and general development of the Kánara jungles. This has now been submitted and it is hoped that, in due course, means will be provided for at least a beginning to be made towards the realization of part of the interest on the enormous capital locked up in these forests.

The seeding of the dowgi bamboos (*Bambusa arundinacea*) is practically complete; a few small areas still remain alive in certain nallas in the Kalinadi valley in W. D. Kánara. It is probable that all will be dead even there in the next two years. Enquiries have been started bearing upon the utilization of bamboopulp for paper and Government have under consideration certain schemes for the installation of factories for the purpose in the Kánara District.

Tanning materials have also received some share of attention and Mr. Pilgrim, the Government tan-extract expert, visited Belgaum shortly after the close of the year to report upon the question of their utilization. A preliminary report has been submitted.

The services of an Engineer, Mr. Haines, Executive Engineer, Dhárwár, were temporarily lent to the Forest Department to examine the bed of the Kalinadi river above the tideway as far as the Holegadde slide in Gund, W. D. Kánara,

мп 1495—17

with a view to improving the waterway for floating timber. Before Mr. Haines could do anything with the Kalinadi it was found imperative, in the interests of immediate revenue, to open a channel in a tributary, the Kaneri nalla, to relieve the glut of logs on the road to the Holegadde slide and on that slide itself. Large arrears of logs had accumulated on the further side of Gund above the Kaneri nalla from past years and, these, added to those from the present year's fellings, cannot be brought out in time for sale without making another way of exit. The work in the Kaneri consisted in blasting a fairway between and past great boulders and masses of rocks. It was started rather late for various reasons and the early rains put an abrupt end to it before much could be done. A whole-time Forest Engineer is badly wanted in Kánara for such work and the laying out and maintenance of the forest roads, the building of bridges on them and to look after the saw mills and their machinery. Another P. W. D. Engineer is, in the meantime, to be deputed in November next to finish the above work commenced by Mr. Haines.

The Forest Economist again visited Kánara to inspect the log-seasoning experiments inaugurated by him. The work is not yet finished and the results are, therefore, not yet known.

The Instructor, Provincial Forest Class, Dehra Dun, went through the circle with his students again this year, being convinced of the educational value of this tour from last year's experience.

Betta assignments for the provision of green leaf-manure in the spice gardens of Sirsi Táluka were finished and it is hoped the rules will be working shortly. The work of taking agreements from the individual gardeners has been carried out with very little difficulty or friction. The spice gardens of Siddápur are being treated in the same way and assignments are also finished there; leases are being taken.

• Government have sanctioned the privilege of *soppu*, in the below-ghat Tálukas of Ankola, Kumta and Honáwar and in the Bhátkal Petha (Government Notification No. 5797 of 9th June 1916) the removal of green leaf-manure of unreserved trees in the areas of forest assigned for that purpose for the use of gardens, rice-lands and manure-pits. This privilege is exercisable only in the months of August and September in each year.

Hakkal assignments in Supa Petha of the W. D. Kánara continued to be intermittently cultivated by the Kumri Marathas and others. The supervision (which was *nil* up to now) and collection of revenue has been transferred to the Forest Department at the time of the creation of the fifth Kánara Division and Supa forest mahál.

Five new forest maháls were sanctioned at the end of the year as already mentioned in Chapter IV.

Rinderpest was again bad this time in Virnoli and Kulgi ranges where it chiefly attacked the bison. Great numbers of these died in the monsoon months with the result that these animals, which were formerly numerous in those areas, are now reported to be almost extinct. It will be necessary to close Kulgi, Virnoli and the Dandeli range where last year's visitation took place with similar results, to shooting of bison for some years to come. Fortunately the disease died out before the contractors started carting work in Virnoli and Kulgi this year and their work was not interrupted.

A new timber depôt was opened in Kánara, C. D., at Tadri on the coast for logs from Sirsi Range and the Soppinhosalli High Forest of S. D. Kánara.

The tram-rails and trolleys in Kodibag depôt of the W. D. Kánara were taken up as local prejudices were too strong against using them; it is also a fact that the rails were not heavy enough for continued work with large timber.

The monorail in Belgaum was again not used as the new contractor refused to work it. It now traverses the current coupe and a broken bridge on the road has been repaired, so the Divisional Forest Officer hopes to utilize it in the year 1916-17.

In Belgaum the Divisional Forest Officer reports that Berad labour was interfered with by the police who called off men to hunt for "fararis" or absconders and for "roll-call" purposes. Labour is scarce in the west of the Belgaum Division and much time has to be wasted by the forest staff from the Divisiona Forest Officer downwards in procuring sufficient to work the jungles and bring is the revenue. Some working arrangement has now been arrived at with the Polic Department, however, and matters may improve. Mr. Hodgson acknowledges the valuable assistance rendered by the Revenue Department in helping to pro cure carts and men and particularly mentions the Mámlatdár of Khánápur is this connection.

No further charcoal experiments were carried out by Mr. Hodgson but he states that charcoal-manufacture is now well established in Gokák and Belgaum Ranges and further endeavours are being made to start kilns in the three Khánápur ranges.

Mr. Puransing, the Forest Chemist, Dehra Dun, visited Belgaum Division and carried out some distillation experiments at Tambulwadi with *Lantana* and *Blumea malcolmi* or "Panjrut", proving that the former contains nothing valuable in the way of oil, while the latter has sufficient to work with. A further report is awaited. Mr. Hodgson sent the following to Dehra Dun for analysis :--

Lantana fruits. Phyllanthus emblica (Awla) fruits. Spondias mangifera (Ambada or hog plum). Trema Orientalis (Gol). Careya arborea (Kumbha or Kowl). 24 coloured earths.

Sandalwood has also attracted more attention during the year and further observations go to show that the tree is rapidly spreading in all the areas affected by *Lantana*. Mr. Hodgson states that, while fires severely damage scattered bushes in grass lands, these never develop beyond the mild ground-fire stage which does practically no damage to any growth where *Lantana* is dense.

As a matter of fact the Conservator has himself noticed that the Lantana thickets often entirely extinguish an ordinary fire if it is not too violent. Sandal plants are parasitic on the roots of many species of trees and bushes and Lantana, while protecting them against damage from burning, gives them all the nourishment they want. Sandalwood is too valuable to waste and every effort should be made to protect and propagate it. We know hardly anything about it as yet and certainly have very little idea how much there is in the circle outside the areas under the management of the Department. Enumeration of the trees was begun in the Dhárwár District (where it is perhaps most plentiful) in the year 1913-14, but was not proceeded with. It has been recommenced this year and the artificial propagation of the species is also engaging the attention of the Divisional Forest Officer and his staff. It is certain that everywhere a great deal of looting goes on without our knowledge, but it is only lately that we have been able to arrive at even a hazy estimate of its extent. Without further legislation for the better protection of the trees than that now existing, little can be done and the question is still under consideration.

The transfer of the forests of Ratnágiri to the Revenue Department, already recommended to Government, is presumably still under consideration and the Collector states that a further report on the subject has been called for by the Commissioner, S. D.

The Collector of Kánara makes no remarks in forwarding the five reports appertaining to his district. The Collector of Dhárwár says that "the employment of a special Forester for enumerating sandalwood trees growing outside the forest areas is recommended in order to protect the rights of Government." Steps are being taken. The Collector of Bijápur, while commending Mr. Koppikar for his sympathetic treatment of the people, endorses the latter's statement that "the relations of the Forest Department with the Revenue Department and the people have been satisfactory and goes on to say :—,

"The decrease in the number of offences dealt with and of those sent to Court is satisfactory. It should be borne in mind that not every offence coming to notice is worth being investigated. Even the Police stop investigation under section 157 (b), Criminal Procedure Code, of a large number of offences which are really comparatively more important than a good many of the forest offences which are still fully investigated in this division. If fewer offences were taken up for investigation with discrimination, it would leave the guards and Rangers more time for patrolling and other necessary conservancy work in their charges. "I would have no objection to hand over to the Forest Department certain pasture forests for management provided, as far as possible, an equivalent area of reserved forest in each case is turned into pasture, or disforested. This can be done in several places, particularly those close to village-sites where the reserved forest is but one mass of prickly pear and is of little use as forest. If thrown open to cultivation, these tracts could be quickly cleared of prickly pear to the mutual advantage of the Forest Department and the rayats."

The Conservator cannot agree with the Collector's remarks *re* offences. He toured through the Bijápur forests, visiting every one, a few years ago and again saw some of them last year and was struck with the amount of petty looting that goes on. Thefts of forest produce are necessarily of a petty nature as the whole of the Lamani population are engaged in them. These people live either in, or on the very edges of, the forests which are scattered about in isolated blocks in Hungund, Bágalkot and Bádámi talukas; and their petty depredations are extremely difficult to prevent. Any laxness in punishing even the smallest must inevitably lead to more. It is important to preserve what forest there is—it is all on dry, excessively stony hills which are absolutely unfit for cultivation with the exception of, perhaps, a few acres along the bases here and there—for climatic reasons if for no other; the revenue, also, though at present small, is capable of large expansion with careful management.

As regards Mr. Kabraji's remarks about exchanging lands, something is being done year by year to rectify matters and make conditions of protection easier by changing the boundaries where they interfere with villagers and cultivation. The prevalence of prickly pear, however, in most cases, is directly due to the habit of villagers of fencing their fields with it—planting live hedges of it to keep animals off the crops; not only pig but also village cattle. The largest areas of prickly pear are invariably found round villages. Why? And, although several such areas have been disforested upon representations made, the Conservator does not remember to have noticed a single one that had been cleared and made use of subsequently for cultivation.

Sind Circle.

No fuel was supplied to the Military Department by coupe contractors through the agency of the Forest Department.

Chil and deodar logs and sleepers were as usual imported into Sukkur for local use from the Punjab.

Large quantities of timber and fuel were imported into Sukkur, Rohri, Shikárpur and Lárkána from the Khairpur State and to Lárkána from the land of the Jagir Nawab Gaibi Khan.

There was no civil suit during the year.

Arrangements were made to give instructions in arboriculture to subordinates of the Public Works Department, District Local Boards and Municipalities at Rahuja in Sukkur and Miani in Hyderabad.

At Rahuja 3 men passed out of 4 candidates, one having left the class almost immediately; while at Miani all six candidates passed the final examination. It has been found impossible with the present inadequate Range staff to appoint a specially qualified Ranger as mentioned last year.

Ranger Bulchand Parumal was appointed to act as Probationary Extra Assistant Conservator in the month of January 1916, but it was found imperative to keep him in the Mulchand Range as no officer fit to hold charge was available.

The Divisional Forest Officer, Jerruck, remarks as follows :----

"The value of the forests to the cattle owners of the Sind Kohistan tract and of Cutch has been well demonstrated during a year of drought. Many thousands of cattle were admitted free in the forests from January to May where an unusually abundant pod crop carried many of them through the most critical period of the season. But for the crops the horned cattle would have perished without exception as there was no fresh grass whatever in the forests after the end of the cold weather. Even as it was many did die, being in a condition of semi-starvation before they ever reached the forests."

Hunting and shooting-

Rules to regulate hunting, shooting, poisoning of water and setting traps or snares in the reserved and protected forests of the Province of Sind were prescribed and applied under Government Notification, Revenue Department, No. 5291 of the 12th May 1915. These were introduced for the preservation of the hog deer and certain game birds it was desirable to protect during the breeding season and also to help to guard forests against incendiarism.

The following remarks have been made by the Collector and by the Deputy Commissioner, Upper Sind Frontier, when forwarding the Administration reports of the Divisional Forest Officers :---

Sukkur Division :--By Mr. J. W. Smyth, Deputy Commissioner, Upper Sind Frontier :--

Alteration in areas.—Of the four undecided claims to kachas only one belongs to this district. The land involved is under dispute with the Bahawalpur State.

General Protection.—The Magistrates still experience difficulty in deciding forest cases owing to the occasional failure of the subordinate forest officers to appear in Court on the prescribed dates.

Protection from Cattle.—To check this evil it has been proposed to levy enhanced fines for unauthorized grazing. No objections to the draft notification prescribing these fees have been received, and the orders of Government may be expected shortly.

Grazing.—It is possible that the increase in the fees derived from grazing may also be due to the reduction of the fees. It is difficult to believe that the striking increase in the figures of the Kashmore Range is altogether due to the vigilance of the Range Forest Officer.

Larkana Division .- By Mr. A. Mackie, Collector of Nawabshah :--

The decrease in net income is very striking.

Jerruck Division .- By Mr. A. S. A. Westropp, Collector of Karáchi :--

"The report chronicles a satisfactory administration of the division during a year of low inundation and total failure of rains which caused a fodder scarcity in the district but more acutely in the hilly region. The Collector is glad to acknowledge that the situation on being brought to the notice of the Forest Department received sympathetic treatment at their hands. This is evident from paragraph 74 of this report showing that free grazing passes were issued for 5,198 cattle in the 3 ranges of the Karáchi District. This concession combined with Ráo Bahádur Seth Vishindas' generosity in issuing free passes to the Kohistan people for the collection of babul pods for their cattle, as well as for sale from the 15 riverain forests taken up on contract by him, afforded substantial relief to the distressed graziers who however in spite of such assistance, it is much to be regretted, lost much of their stock.

The increase of forest offences commented upon in paragraph 24 et seq of this report is a natural consequence of the adverse conditions which prevailed during the year and the Forest Department is to be complimented on the exercise of vigilant supervision which checked serious da mage and on the successful result of the prosecutions lodged in criminal courts as well as of the large number of minor offences compounded departmentally in a liberal spirit.

The price of firewood has greatly increased in Karáchi owing, it is said, to a combination among sellers. It would have been in teresting to see this point briefly noticed in this report.

The reduction of the ghat fees at Tatta referred to in paragraph 65 of the report had the approval of the Collector. It was evidently a well conceived step both in the interests of the poor wood-cutters and the townspeople of Tatta."

мн 1495—18

REMARKS OF THE COMMISSIONER, NORTHERN DIVISION, ON THE FOREST ADMINISTRATION REPORT OF THE NORTHERN CIRCLE FOR THE YEAR 1915-16.

No., F.O.R.-47.

Ahmedabad, Shahi Bagh, W. D., No. 1, 23rd October 1916.

REVENUE DEPARTMENT.

Submitted to Government.

2. The changes in the forest area were unimportant. The North Dángs working plan was sanctioned last year, while the year under report saw the completion of that for the South Dángs, leaving only the Central Dangs to be dealt with. In Surat, the Mándvi forest still remains to be dealt with, while in the Panch Máháls the Eastern Maháls working plan is under preparation, and that for the Western Maháls is still to be taken up. In Thàna good progress is reported in connection with the revision of the working plans of the three Thána divisions.

3. Progress in the construction of new roads was not as good as in the year preceding, only 15¹/₂ miles of new roads having been constructed at a cost of Rs. 10,500 as against 37 miles at an aggregate cost of Rs. 18,294 in the past year. The expenditure on new buildings also declined from Rs. 20,138 to Rs. 4,193.

4. The Panch Maháls and North Thána are principally responsible for the increase in the number of forest offences. In the former it is ascribed to the scarcity in North Gujarat and Káthiáwár, which brought down larger numbers of cattle in search of pasture, and in the latter to the better, though not yet complete, reporting of illicit fellings. Cases of injury to forest by fire were fewer by 152 than in the year preceding. Communal punishments are reported to have produced good results.

5. Fire conservancy appears on the whole satisfactory. There was an appreciable decrease in the area burnt as compared with the preceding year.

6. The number of cattle impounded rose from 52,034 to 60,973. The Panch Maháls owing to the scarcity referred to in paragraph 4 above showed a large increase of 12,496 over last year's figures.

7. Having regard to the effects of the war on the working of the forests, the financial results of the year may be regarded as satisfactory.

8. Mr. Fisher's proposals with regard to increasing the number of ranges in the circle were submitted to Government under this office No. F.O.R.-74, dated 28th September 1916.

9. The undersigned has no personal knowledge of the working of the circle, but gathers from the report itself that the circle has been administered with success and efficiency by Mr. Fisher and his subordinate officers.

A. H. A. SIMCOX,

Acting Commissioner, N. D.

REMARKS OF THE COMMISSIONER, CENTRAL DIVISION, ON THE FOREST ADMINISTRATION REPORTS OF THE NORTHERN AND CENTRAL CIRCLES FOR THE YEAR 1915-16 SO FAR' AS THE AREAS IN THE CENTRAL DIVISION ARE CONCERNED.

No. Gen!.—1401 of 1916.

Camp Nasik, 15th November 1916.

The following review of the Administration Reports of the Northern and Central Circles for the year 1915-16, so far as the areas in the Central Division are concerned, is submitted to Government in the Revenue Department. The Conservators' reports have already been submitted by those officers direct to Government.

2. The area of the Central Circle was further reduced by 49 square miles during the year under report, the chief reason for this decrease being the disforestment of certain areas of pasture forest already in charge of the Revenue Department.

3. Two hundred and twenty-one miles of the outer boundaries of forests were demarcated during the year at a cost of Rs. 2,613 against 223 miles at a cost of Rs. 2;241 in the preceding year. Satisfactory progress is being made in South Násik in the erection of intermediate cairns.

4. Working plans in the Central Circle for only 44 square miles received the sanction of Government against 157 square miles during the preceding year. Mr. Napier explains the reason for the delay in the completion of the revised plan of the East Khándesh Satpuda forests. Mr. Fisher reports that an attempt is to be made to take in hand during the coming season plans for the forests of the Násik Divisions if the reduced staff of Imperial Officers can manage it.

5. As regards roads, expenditure was considerably reduced in the Central Circle owing to the financial stringency and only very important works were undertaken, expenditure showing a reduction of Rs. 9,158 as compared with the previous year. The Commissioner thinks that the Conservator of Forests, Central Circle, is probably right in thinking that a road connecting Dhadgaon with Shahada is preferable to one connecting it with Taloda, via Kothar, and the Public Work's Department may be directed to frame a project and estimate for the former. It will be useful for the Forest Department and it will also serve to open up the Akrani to the outer world. Mr. Napier's remarks about the Koyna valley road deserve attention and his final conclusions will be awaited with interest.

6. The desirability of developing the two Peint Ranges in the South Násik Division of the Northern Circle is apparent, and when a full-time officer with the requisite qualifications is available, the matter will no doubt receive consideration. Expenditure on buildings also decreased in the Central Circle by Rs. 16,399.

7. A statement showing forest offences committed in the districts of the Central Division has been prepared and appended to this review to facilitate comparison of this year's figures with those of last year. Offences reported have declined from 7,817 to 6,998, a reduction of 10.4 per cent. There have been fewer offences reported in every district: it is not so certain that there have been fewer committed. It is unpleasant to note that in both circles the Conservators notice the negligence of their subordinates, *e.g.*, Mr. Napier as regards fire-tracing and Mr. Fisher as regards reports upon illicit fellings by his protective staff and as regards incendiarism done with the knowledge and connivance of fire guards. The number of offences of injury by fire shows an increase of 15 (438 against 423 in the previous year) but the area burnt this year (168,940 acres) was smaller than that (188,551 acres) burnt in 1914-15.

	Current year.	Past year.
East Khándesh West Khándesh North Khándesh Poons Sátára North Násik South Násik	 11,580 10,045 8,082 11,562 5,571 16,537 11,484	49,211 20,897 10,176
• •	74,841	80.284

8. There was a small reduction in the number of cattle of all kinds and sheep and goats impounded during the year—74,841 against 80,284 during the past year. Mr. Napier remarks that in Poona the people are in the habit of evading payment of grazing fees till long past the fixed date and suggests that nothing short of double fees will result in any improvement.

9. The receipts from hirds in the Central Circle show an increase of Rs. 14,989 over the previous year's figures under this head. In respect of the crop in the Poona District the Conservator reports that "it had perforce to be collected departmentally, no other system being possible in a locality where the hirds trees in occupied lands so largely outnumber those in forests, where the villagers themselves carry on such a large trade in the fruits, and where no contractor will purchase the forest hirds on the trees for fear of its finding its way to the villagers' lepôts rather than to his. The share system of collection is adopted under which each forest village by agreement contributes a fixed quantity free of charge, all balance over and above such quantity being at his disposal, but the system throws much work on the Forest Department in keeping the villagers to their agreements, and in the subsequent transport of the hirda to central depôts where it can be sold to Bombay merchants. With great difficulty, and only after much personal exertion by the Divisional Forest Officer, was a satisfactory sale effected of the 1915-16 crop and of that which had remained unsold from the previous year. The net profit on the operation was Rs. 4,318."

10. Fires caused considerable loss in East Khándesh, and the Conservator notes that in at least 17 cases this was due to the bad work of forest subordinates and carelessness in firetracing. The protection of forests from fire is probably the most important and the most difficult of all the operations of the Department.

11. Excluding famine fodder transactions, the year's working in the Central Circle as now constituted resulted in a decrease of Rs. 5,313 in receipts as compared with those of the preceding year and in a corresponding decrease of expenditure to the extent of Rs. 29,902. There was a net surplus of Rs. 2,66,862 in this circle. In the two Násik Divisions of the Northern Circle the receipts rose from Rs. 2,02,316 in 1914-15 to Rs. 2,28,261 in the year under report, while expenditure fell from Rs. 1,22,029 to Rs. 1,03,683.

12. The question of providing a dispensary at Dhadgaon is still under consideration, being delayed only by want of funds. It was impossible to provide for it either this year or last year.

13. Mr. Napier's remarks are most interesting. Reference has already been made to the Dhadgaon dispensary and road, and the Koyna valley road. Special attention is also invited to the Conservator's remarks about East Khándesh fires, trespass and the evasion of grazing fees in Poona, and the evils resulting from a lack of continuity in administration. It is pleasant to notice the spirit of co-operation which now exists between the Forest and Revenue Departments. Excellent work has been done throughout the year by the forest officers of this Division.

> C. N. SEDDON, Commissioner, C. D.

REMARKS OF THE ACTING COMMISSIONER, SOUTHERN DIVISION, ON THE FOREST ADMINISTRATION OF THE SOUTHERN CIRCLE, FOR THE YEAR 1915-16.

No. 4856.

REVENUE DEPARTMENT. Belgaum, 31st October 1916.

The sub-joined table shows that the revenue has increased by $1\cdot 3$ lákhs and that the figures of revenue and expenditure do not compare unfavourably with those of 1913-14 which showed a remarkable excess over the average of five years previous to that year :---

	verage of years upto 1912-13.	1913-14.	1914-15.	1915-16.
	(Figures	in lakhs of	f rupees.)	-
Revenue Expenditure	 15-5 9-2	20·2 10·9	18·7 10·7	20• 11•4 👟
Net surplus	 6.3	9.3	8.	8.6

The value of sales has increased by 5 lákhs of rupees.

Satisfactory exploitation is hampered by labour difficulties. The question of labour supply in the Khánápur forests of Belgaum by the establishment of a settlement of Berads is under consideration of Government.

The transfer of the revenue management of the in-forest villages to the Forest Department is likely to solve the labour supply difficulty to a certain extent in those regions.

Forest Settlement.—I have issued orders that the Sub-Divisional Officers in Belgaum and Kánara should expedite the forest settlement work in addition to their other duties. The Collector of Kánara has been asked whether Kánara cannot do without a special Forest Settlement Officer and his report is still awaited. As to Belgaum, I do not think a special officer is now necessary. 17,705 acres out of 56,898 acres proposed for afforestation in this district lie within the area transferred to the Forest Department for revenue management for which the Divisional Forest Officer who is ex-officio Assistant Collector has been appointed Forest Settlement Officer in Government Notification No: 9982 of 17th October 1916. A portion of the remaining area consists of occup ed land which it is not considered necessary to acquire at Government expense during this period of financial stringency. I am trying to see whether the work that remains can be performed by the Sub-Divisional Officers without extra expense to Government.

Communications.—Rupees twelve thousand eight hundred and forty-six were spent on new works against Rs. 15,378. Measures for providing facilities of communication such as a lumber railway, improved waterways on the Kalinadi and Kaneri, etc., are under consideration.

Crime.—Crime does not show a tendency to increase except in the case of injury to forests by fire, the number of cases of which increased by 280 and the area burnt by 173,200 acres. This excessive conflagration is attributed to an exceptional dry weather and the existence of dead bamboos which are a source of great danger. When they burn they cast flaming fragments for long distances. In view of the potential value of the forests burnt the loss to Government is very considerable and more effective measures should be taken in the matter. A remedy has been proposed by amending section 78 of the Forest Act so as to impose on all who enjoy privileges certain liabilities as regards fires.

Administration.—Punishments have again increased from 419 to 465.

General.—The question of management of Ratnágiri forests by the Revenue Department is still under consideration. The question of control over sandalwood trees by legislation is under discussion with the Forest Department. Sandalwood is of great value and there is no doubt that with proper control a large revenue could be derived. As it is, it is difficult to prevent theft of sandalwood. The question is a difficult one and has already been discussed by me at two conferences. It was decided in Government Resolution No. 1442 of 10th February 1912 to follow the Mysore rules, but these rules are substantive law and we have no law of sandalwood. A short Bill has been drafted by the Conservator, but before I can put it before Government, it is necessary to show the value of the property to be protected and the increased income likely to be secured. These details the Forest Department have some difficulty in collecting.

Enquiry is proceeding with a view to developing the resources of the forest estate more fully. Recently I have put before the Forest Department the question of dry wood distillation and have arranged to have certain woods tested with a view to the exploitation of charcoal and dry distillation of the most favourable woods.

Communications are also engaging attention. I am having prepared a map of all roads existing and proposed in each forest division showing what amount is required to be spent on each and what the extra return will be. Government will then be in a position to know where money can be expended with the best prospects of a return.

By the amalgamation of the Bijápur Division with Dhárwár, a fifth Forest Officer has been provided for the Kánara forests.

The relations of the Forest Department with other Departments have been , most satisfactory and its affairs have been adminit ered most efficiently with due regard to the interests of the public by all forests officers.

L. J. MOUNTFORD,

Acting Commissioner, Southern Division.

REMARKS OF THE COMMISSIONER, SOUTHERN DIVISION, ON THE FOREST ADMINISTRATION REPORT OF THE CENTRAL CIRCLE (ONLY SO FAR AS THE KOLABA DIVISION IS CONCERNED) FOR THE YEAR 1915-16.

No. 4481.

REVENUE DEPARTMENT.

Belgaum, 11th October 1916.

This Division is only concerned with the Kolába District in the present report.

2. In Kolába, the valuable forest is 269,327 acres out of a total in the Central Circle of 1,833,141; the net surplus is Rs. 87,180 out of Rs. 2,66,862, *i.e.*, the area which is $\frac{1}{7}$ th of the whole produced $\frac{1}{3}$ rd of the surplus.

3. Out of 155,471 acres burnt, only 833 were burnt in Kolába.

4. The expenditure in Kolába is 10 per cent. less than the five years' average.

5. From the above figures the administration of Kolába forests appears satisfactory and with the improvement of forest roads the value of the forest estate in that district should improve even more.

L. J. MOUNTFORD,

Acting Commissioner, Southern Division.

REMARKS OF THE COMMISSIONER IN SIND ON THE FOREST ADMINIS-TRATION REPORT OF THE SIND CIRCLE FOR THE YEAR 1915-16.

No. 2959 of 1916.

REVENUE DEPARTMENT.

Office of the Commissioner in Sind. Government House, Karachi, 14th October 1916.

Submitted to Government.

2. The revenue of the year amounted to Rs. 3.8 lákhs against an average of Rs. 4.1 lákhs for the last 5 years and the expenditure to Rs. 2.15 lákhs against an average of Rs. 2.09 lákhs, the surplus revenue being thus reduced from Rs. 2.01 lákhs to Rs. 1.64 lákhs.

This decrease of revenue is due to the fact that payments of coupe revenue are spread over two years, and the arrears on account of 1914-15, which were recovered in the year under report, were Rs. 90,000 less than the similar sums recovered in 1914-15.

On the other hand, grazing fee collections rose from Rs. 41,000 to Rs. 46,000; the revenue from minor forest produce from Rs. 40,000 to Rs. 46,000 and the price of coupes from Rs. 1.76 lákhs to Rs. 2.53 lákhs.

3. The statement of penalties included in Chapter IV reveals a very unsatisfactory state of affairs. In the Jerruck Division 43 per cent. of the establishment resigned or were dismissed; in the other divisions dismissals and resignations varied from 13 to 17 per cent. Further, in the Sukkur and Lárkána Divisions punishments of degradation and fine amounted to 46 and 41 per cent.

The Commissioner is enquiring into the necessity of these disciplinary measures. It is not stated what proportion of the men punished belonged to the lower grade of Forest Guards or to the superior ranks—a fact which should always be noted in the report of the Deputy Conservator. Seeing that the cost of the establishment has within the last 10 years been raised from Rs. 1.12 to Rs. 1.83 lákhs, it is reasonable to expect a higher standard of efficiency, but these figures would indicate that this result has not yet been attained.

4. The year was undoubtedly a difficult one from the administrative standpoint. The area flooded by the river was only 271,000 acres against 568,000. There was no rain, and the forests were invaded by large quantities of cattle in very poor condition with graziers from the hills on the west or the deserts on the east wholly unused to discipline. The result was necessarily a very large increase of forest offences.

The area burnt rose from 1,046 acres to 6,451 acres. This, though a remarkable increase, does not represent any serious loss, and was the natural result of the very dry condition of the grass and of the anxiety of graziers to save their cattle by obtaining some green fodder at any cost.

Unauthorised fellings similarly increased from 1,269 to 1,642 and illicit grazings from 1,865 to 2,752. The increase in unauthorised fellings occurred chiefly in the Sukkur Division and is attributed to the stricter supervision of the Divisional Forest Officer. Cases of illicit grazing were most frequent in the Hyderabad and Sukkur Divisions, the absence of rain in the hills having caused a great influx of Brahui and Baluchi graziers with their cattle into the riverain forests of those divisions.

The results of prosecutions were satisfactory, 87.66 per cent. ending in conviction. The number of cattle impounded rose from 17,300 to 18,158.

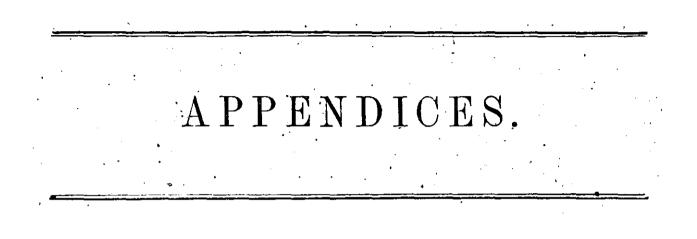

5. Experiments in the propagation of lac failed once more. It is, however, desirable to persevere in the hope of eventual success.

6. The revision of the working plans made good progress, 235.9 square miles being taken in hand and completed.

7. It is satisfactory to note that the relations of the Forest Department with the people and the Revenue Department have been most harmonious, and in particular, that in a season of acute distress for the cattle of the province, the forest Administration threw open their grazing liberally and accorded substantial relief.

H. S. LAWRENCE,

Commissioner in Sind.

Administration Reports.

Administration Report of the Forest Circles in the Bombay Presidency, including Sind, for the year 1915-16.

GOVERNMENT OF BOMBAY.

REVENUE DEPARTMENT.

Resolution No. 7741.

Bombay Castle, 25th June 1917.

Letters from the Deputy Conservator of Forests in charge Sind Circle, No. 1005 dated 18th September 1916, No. 1068 dated 21st idem, No. 1088 dated 22nd idem and No. 1342 dated 23rd October 1916.

Letter from the Conservator of Forests, C. C., No. 1400 dated 2nd October 1916.

- Letter from the Conservator of Forests, N. C., No. 1401 dated 5th October 1916.
- Letter from the Conservator of Forests, S. C., No. 2376 dated 19th October 1916.
- Memorandum from the Commissioner, S. D., No. 4481 dated 11th October 1916—Forwarding his remarks on the Forest Administration Report of the Central Circle for the year 1915-16 so far as the Kolába Division is concerned.
- Memorandum from the Commissioner in Sind, No. 2959 dated 14th October 1916—Forwarding his remarks on the Forest Administration Report of the Sind Circle for the year 1915-16.
- Memorandum from the Commissioner, N. D., No. F.O.R.-47 dated 23rd October 1916-Forwarding his remarks on the Forest Administration Report of the Northern Circlé for the year 1915-16.
- Memorandum from the Commissioner, S. D., No. 4856 dated 31st October 1916-Forwarding his remarks on the Forest Administration Report of the Southern Circle for the year 1915-16.

Memorandum from the Commissioner, C. D., No. Genl.—1401 dated 15th November 1916—Forwarding his remarks on the Forest Administration Reports of the Northern and Central Circles for the year 1915-16 so far as the areas in the Central Division are concerned.

RESOLUTION.—During the year 1915-16 the total forest area decreased from 15,060 square miles to 15,018 square miles of which 13,985½ square miles were reserved and 1,032½ were protected forests. The main reason for the diminution of 42 square miles was the disforestment in the interest of cultivation of 39 square miles of pasture forests in the Ahmednagar and Sholápur districts. The figure from the Southern Circle was reduced by a change of 13 square miles due to rectification of errors in survey and remeasurement of certain areas. Small areas amounting to 1½ square miles in the Central Circle and 2 square miles in the Southern Circle consisting of isolated numbers within the demarcation line were afforested during the year. In Sind the surplus of additions over exclusions, mainly caused by alluvial accretion, was 8 square miles. The area in charge of the Revenue Department decreased from 2,627 to 2,537 square miles owing mainly to the retransference of land in West Khándesh to the Forest Department for the preservation of tree growth and production of grass for grazing. There were few alterations in charges during the year. 169 square miles of reserved forest were transferred from North Násik to South Násik, while in the Southern Circle the Dhárwár and Bijápur Divisions were amalgamated and

L Rev 1224-1

Forwarding the Forest Administration Reports of their respective Circles for the year 1915-16. a fifth Forest Division was formed in Kárwár. The work of settlement in the Presidency proper is practically complete and was confined to the small areas added to the forests. The question of the settlement of the area proposed for afforestation in the Kánara and Belgaum districts is under consideration. In Sind the area awaiting settlement was reduced from 7,772 to 673 acres, the progress made being very satisfactory. The boundaries of 1,343 miles of forests were demarcated during the year leaving 1,131 still to be done. The greater portion of this is in the Central Circle, particularly in the Akola and Rajur ranges of the Poona Division where 658 miles remain to be completed. A very satisfactory amount of demarcation was done in the South Kánara Division of the Southern Circle. No surveys were undertaken during the year with the exception of the usual survey of the river frontages in Sind.

2. The progress made with working plans during the year was not very striking, only 50 square miles being added to the area under working plans, while revised plans were sanctioned covering an area of 265 square miles. Working plans for 1,013 square miles are under preparation while revisions. of plans affecting 2,366 square miles are in progress. The working plan of the South Dángs forest was completed during the year while a revised working plan was introduced in the Eastern Maháls. The plans sanctioned in the Central and Southern Circles were not of great importance. In the Southern Division the control work is reported to be considerably in arrears chiefly owing to difficulties of transport, and also in some cases to scarcity of money and labour. It is hoped that the arrears will be reduced by the improvement of transport by the work in progress and in contemplation in the beds of the Kaneri and the Kalinadi rivers. In the Eastern Division of Kánara, the arrears can only be reduced by the improvement of communications, and the construction of a Light Railway for which a preliminary survey has been made is strongly supported by the local officers. In Sind the whole area is under sanctioned working plans but a large amount of revision is necessary and is in progress.

3. The expenditure during the year on communications and buildings was greatly cut down owing to the financial stringency and amounted to Rs. 1,06,347 against Rs. 1,89,515 in the previous year. The sum spent on new works was only Rs. 47,766 against Rs. 1,19,384 in the previous year. Two-thirds of the expenditure was incurred on improvements of roads and pathways, work on new buildings being reduced to a minimum. In the Northern Circle attention is drawn by the Conservator to the necessity for developing the Peint ranges. In the Central Circle considerable improvement was effected in the communications in the Akráni tract. The recommendation of the Conservator regarding the alignment of the Public Works Department road between Dhadgaon and Taloda in North Khándesh will be taken into consideration. The Conservator doubts the wisdom of the forest road proposed to be constructed in the Koyna valley. Mr. Napier's further conclusions in the matter should be submitted to Government through the Commissioner. The expenditure in Sind was, as usual, chiefly on small irrigation works. In addition to the expenditure of Rs. 1,238 on new works the Public Works Department constructed sluices for the forests costing Rs. 4,720.

4. The number of offences against the forest rules was 22,444 against 21,822 in the previous year, being an increase of 622. In the Northern Circle there was an increase of 353 but the number was below the average of the previous three years. The increase was due to a rise in the Panch Maháls by 526 cases due to the influx of cattle from Káthiáwár and Gujarát, the owners of which disregarded the forest rules laid down. In South Násik, on the other hand, there was a decrease of 224 cases, but the Conservator regards the decrease here, as in Sálsette, as due to slackness in reporting. The Conservator considers the present staff to be insufficient, especially as regards the number of Rangers, to check the offences that occur. In the Central Circle there was a decrease of 926 cases. It is satisfactory to note that the setting aside of coupes for the special supply of coast towns and villages in the Kolába Division reduced the illicit trade and consequently the number of offences. In the Southern Circle there was a small decrease of 174 cases, but

the Conservator points out that such variations cannot be relied upon as the number of offences reported represents only a fraction of those that occur. In Sind there was a considerable increase from 3,237 to 4,606 cases. This was due to the abnormally low inundation and the influx of cattle from the hills, the owners of which not only broke the ordinary forest rules but in many cases caused fires to get green grass for their animals. Generally speaking, the offences in the Presidency were not of a serious nature, a comparatively small number having to be taken to Court. The high percentage of convictions obtained in these cases shows that they were brought with proper care. In the Southern Circle there was a good deal of looting of timber and 38 offenders were convicted in one case. In the same circle there were two cases in which subordinates were convicted of taking bribes in connection with offences against the forest. The effect of communal punishment where it was necessary to be employed is reported to have been good.

The number of fires increased from the low figure 1,717 of the previous 5 year to 1,939 while the area increased from 279,166 to 414,457 acres. In the Northern Circle the number of fires and the area burnt decreased. In the South Thána Division the number of destructive fires continued large and was undoubtedly due, in many cases, to the connivance of the Forest Guards who belong to the local wild tribes. In the Central Circle there was a decrease of 33 cases and of 30,000 acres, but, as the Conservator remarks, there is still much room for improvement. In Poona and Sátára where the grass is valuable there were no fires except in land leased to the Military Department where the villagers had less personal interest in preventing and extinguishing fires. Some progress was again made in the checking of fires in Khándesh, but the scanty population of the country, the highly inflammable nature of the grass, the careless habits of the wild tribes and the thoughtlessness of persons with privileges in the forest combine to make fire-prevention difficult. These causes were specially noticeable in East Khándesh where the area burnt increased from 44 to 70 thousand acres much of which was caused by carelessness. The Conservator's proposals for checking the licenses allowed to villagers will be awaited. It is satisfactory to note the steady improvement observable in the West Khándesh district, particularly in one area inhabited and surrounded by Bhils, where it is stated to be mainly due to the personal influence of a Bhil Round Forester. In the Southern Circle the area burnt increased very largely from 40,759 acres to 213,959 acres, the number of fires being 982 against 696. In Kánara the year was the worst for fires for 10 years, the causes assigned being an exceptionally dry hot weather and the very large number of dead bamboos which still remain in the jungles. These causes were aided by the continued apathy of villagers in the extinguishing of fires. In Sind the number of fires increased from 46 to 163, but the area burnt, 6,451 acres, was comparatively small. The reason for the increase was the low inundation which not only rendered the grass much drier and more inflammable than usual but also, as already noted, led to an influx of cattle from the hill districts and from Cutch, the owners of which freely set fire to the forests in order to obtain green grass.

6. The number of cattle impounded was 142,970 against 135,394 in the previous year. The increase was confined almost entirely to the Northern Circle where there was a large influx of cattle from the surrounding areas of scarcity where also it was necessary to take special steps for the protection of the local grass crop. In the Central and Sind Circles there were small increases in the number impounded while the impoundings in the Southern Circle show a considerable decrease. It is satisfactory to note that in some of the Sind divisions the graziers are appreciating the advantage of paying a yearly grazing fee. It does not appear that the efforts to catch the semi-wild cattle in the Sind forests have yet met with much success. The amount realized in grazing fees was Rs. 3,19,710 against Rs. 3,03,612. This was due to the larger numbers brought in for grazing purposes, the number of cattle permitted to graze on payment of either full or privileged fees being 1,935,655 against 1,775,413 in the previous year, while the number of animals allowed free grazing was 541,769 against 502,142 in the previous year. The increase is probably largely due to the number of cattle brought in from areas of

scarcity. The amount of fees that would have been realized had grazing been charged at full rates would have been Rs. 19,66,743.

7. The damage due to causes other than those noticed was not great. The growth of prickly-pear is complained of in the Central and Southern, Circles and of lantana in the Southern Circle. As pointed out however by the Conservator elsewhere, lantana may have its uses not only in assisting the growth of young sandalwood but also in checking forest fires. Elephants are stated to have done a certain amount of damage in the Southern Circle. In Sind damage was done by severe frosts, while, as usual, in a year of low inundation the number of rats increased and did considerable harm in the forests.

The natural reproduction from seed is reported to have been good in 8. - all circles especially in the Southern, where it was the best for many years. Reproduction by coppice was also satisfactory though hindered by fires in the Southern Circle. The Divisional Forest Officer, Kánara Northern Division, however, reports that the degree of damage depended upon the age of the coupe and that in a coupe where the coppice stood about 12 feet high a number of teak-seedlings about a foot high, though all burnt, threw up fresh shoots more vigorous than the original plants. The success of artificial reproduction in the plantations of casuarina seems to have been very varying. The system of agriculture cum forestry in the Central Circle succeeded in Poona, but was a failure in West Khándesh, largely owing to the inferiority of the Bhil as a cultivator. In the Southern Circle it was successful in one coupe and unsuccessful in another while in Sind the results were fair. In North Kánara the tending of $2\frac{1}{2}$ lakhs of natural teakseedlings by weeding and mulching is stated to have been very satisfactory. In Sind successful work appears to have been done with cuttings of tali while the sowing of babul and kandi seed appears to have given good results. Little was done in the way of fresh experiment. The result of the trial of teak and jamba for paving blocks for the Bombay Municipality is not yet known. A further attempt was made to grow bamboo in Sind, but though the seed germinated the experiment is very doubtful. The attempts to cultivate lac in the Khándesh district were again unsuccessful owing to the destruction caused by black ants. The artificial propagation of lac in the Sind Circle was also unsuccessful, but the quantity is stated to be increasing naturally in some parts and the prospects seem fairly hopeful.

The departmental extraction of timber was very little resorted to 9. in the Northern and Southern Circles and in Sind, where it was confined to the supply of fuel to Government steamers. In the Southern Circle the percentage of timber exploited to the total outturn was 55 against 53 in the Great difficulty was experienced in getting contractors previous year. to take up new work. While there can be no doubt that the extension of departmental control would be remunerative, an increase of staff and improvement of communications are necessary. The latter question is under the consideration of Government. The two Government saw-mills in the Northern Division of Kápara did not do so well as in previous years owing to the necessity of closing down one mill for three months and of moving both The net income, however, was Rs. 7,373 and better mills to fresh sites. results are hoped in the future. A contractor's saw-mill was re-opened in the Eastern Division of Kánara and did some useful work. The year's results of the charcoal-making experiments carried on by Mr. Hodgson are, not mentioned in the report.

10. The gross revenue realized during the year amounted to Rs. 47,36,661 while the expenditure (revenue, and expenditure on account of famine fodder operations being excluded) was Rs. 24,71,326, leaving a surplus of Rs. 22,65,335, an increase of nearly Rs. 94,000 on the previous year. In the Northern Circle there was an increase in receipts and decrease in expenditure, the surplus revenue thus increasing by about Rs. 48,000, but the timber trade is stated to have been dull and the increase is largely due to better outturn from the saw-mill in the Surat Division. In the Central

.

. .

Circle the revenue was practically identical with the previous year showing a small decrease of Rs. 5,000 on a gross revenue of nearly 8 lakhs. The expenditure, however, decreased by nearly Rs. 30,000 resulting in a net increased surplus of Rs. 24,500. The demands on the forest supply in Poona and Kolába are stated to have been large and to guarantee an increase in revenue. In Khándesh, on the other hand, there was stated to be an absence of demand for timber owing to the war. Since the close of the year there has been a sharp rise in the price of timber and better results should, therefore, follow. The improved results from the Kolába forests are especially satisfactory since their proximity to Bombay greatly enhances both their value and their utility. In the Southern Circle there was a net increase of over half a lakh in the surplus; both revenue and expenditure increased. The receipts notwithstanding the fall in prices and the temporary congestion of the timber market were $1\frac{1}{4}$ lakhs more than in the previous year, the increase being due entirely to the larger quantities of materials exploited and exported. This quantity could be largely increased with improved methods and facilities of extraction. The expenditure increased by Rs. 73,000, but this was chiefly due to larger payments of wages for labour and fuel extracted. In Sind there was a decrease of revenue by about Rs. 39,000 while the expenditure only decreased by Rs. 7,000 leaving the The decrease in revenue is ascribed to the surplus smaller by Rs. 32,000. collection of coupe revenue being spread over this and the succeeding year while poor results were obtained by the sale of some coupes in the Jerruck Division. It may be assumed that owing to the great demand for fuel that has since arisen in Sind this decrease in revenue has proved only temporary. On the whole the financial results appear to have been extremely satisfactory considering that during the period covered by the report there was considerable dulness in the timber trade and congestion of stocks and having regard also to the smaller staff available for supervision.

11. Although the fear of extensive scarcity was fortunately falsified by the heavy falls of rain late in 1915, a considerable amount of work connected with the prevention of famine was thrown upon the Forest Department. Not only were large numbers of outside cattle provided with grazing whereby their lives were saved in the forests of the Northern Circle and of Sind but extensive grass operations had to be undertaken in the Northern and Central Circles. The utility of the forest as a reserve against famine was once more proved.

12. The Department worked under considerable difficulties owing to officers being taken away for military duties and this difficulty has been accentuated since the completion of the year under report. The subordinate staff proved in some respects deficient both in the number of Rangers and in the quality of the work of some branches, more especially of the Foresters. The Governor in Council is pleased to record his opinion that the administration of the Department, in view of the difficulties that had to be met, reached a high level of efficiency during the year.

A. F. L. BRAYNE,

Under[•] Secretary to Government.
