DECEMBER 1979

ACKNOWLEDGEMENTS

This study is an attempt to focus a pointed attention to the problem of small farmers in drought-prone areas. It gives an assessment of the economic effects of long-term co-operative loans advanced to them for new irrigation wells. The economic conditions of these cultivators are also examined. Lastly, our attempt is to know, in addition to irrigation, the possible solutions to the problem of low and unstable income.

This work has been completed under the research guidance of Prof. V.M. Dandekar, Director, Gokhale Institute of Politics and Economics, Poona. I consider it a privilege to have obtained an opportunity to work under so eminent an economist as Prof. Dandekar. I benefited immensely from the critical comments he made from time to time. My debt to him is too great to be expressed adequately in words. I wish to keep on record my sincere gratitude to him for the invaluable and inspiring guidance which he patiently gave in spite of his busy schedule.

I am grateful to the authorities of the Gokhale Institute for the award of the University Grants Commission's Research Fellowship as also Research Assistantship and the numerous other facilities extended including the excellent library. I am also grateful to the University Grants Commission, New Delhi, for the Fellowship which made this research possible.

(ii)

I acknowledge with gratitude the help I have received from Dr. Niranjan Rao, Dr. M.B. Padki and Mr. M.P. Khare of the Gokhale Institute.

This study could not have been completed without the cooperation of the Land Development Bank and the farmers. I thank the officials of the Maharashtra State Cooperative Land Development Bank Ltd., Bombay, and its District Branch at Ahmednagar and the Taluka Branches at Ahmednagar and Parner.

I shall be failing in my duty if I do not thank the farmers for the patience shown and cooperation extended to me at the time of the field survey. My discussions with them is the most memorable phase of my Ph.D. work.

I owe a special debt of gratitude to Late L. Desai, a close family friend, who was a great source of inspiration and affection to me. Mere words are inadequate to express my gratitude to him.

My heart-felt thanks are also due to Dr. Lederle of Snehasadan, Pune and Fr. Bacher of the Social Centre, Ahmednagar for the help and encouragement I received from them in various ways.

I would also like to thank my friends Mr. P.D. Shirsath, Mr. Pratap Pandit, Mr. Thomas Palghadmal and Mr. Rex Edwards who were a source of help at one or the other time during this work.

(iii)

My special thanks are due to Mr. V.N. Inamdar who did an excellent job of typing out the thesis.

Finally, I wish to express my indebtedness and gratitude to my wife, Jayanti, who cheerfully bore the unwanted externalities of my research, ungrudgingly did all that she could do to keep up my morale and smilingly suffered my long hours of silence.

Gokhale Institute of
Politics and Economics,
