ACKNOWLEDGEMENTS

I express my deepest debt of gratitude to my guide Professor K. Sivaswamy Srikantan without whose constant encouragement, acute perception of logical weakness, willingness to discuss difficulties and extremely patient guidance, this dissertation would not have appeared in this form. I am thankful to Professor K. Balasubramanian for many helpful discussions and valuable comments. I am grateful to the authorities and the staff of the Gokhale Institute for providing me an opportunity to do the M.Phil. Programme. I also thank the library staff and my friends for the help and cooperation I received from them. My special thanks are due to my family (especially my sister-in-law) for keeping me in good spirit and humour throughout. Shri H.V. Inamdar did the typing work in a short time and I thank him for his diligent typing. However, I am responsible for all the defects that remain.

"Allegations have been made in several quarters that Muslim fertility is higher than Hindu fertility and this is often advanced as an argument against family planning by Hindus. ... This problem is not a political problem but a technical problem in demographic analysis. It is easy to quote stray figures and mislead the people and arouse passions. I think it is the duty of the demographers and statisticians to analyse this problem in a scientific manner and place before the country the findings of their studies."

- Ashish Bose (1969, p. 78)
