A Study on Floating Exchange Rate Experience During the 1970s and '80s

A THESIS SUBMITTED TO THE UNIVERSITY OF POONA

FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY
IN ECONOMICS

BY
D. SAMBANDHAN

GOKHALE INSTITUTE OF POLITICS AND ECONOMICS

JANUARY 1991.

FORM A

Certified that the work incorporated in the thesis,

A Study on Floating Exchange Rate Experience During the 1970s and 1980s

submitted by D. Sambandhan was carried out by the candidate under my supervision. Such material as has been obtained from other sources has been duly acknowledged in the thesis.

B.G. Bapat

Thesis Supervisor

PREFACE

Prof. A.K.Das Gupta (1986) observes in his "Epochs of Economic Theory": the fundamental methodological position of economics is that it is essentially "relativist" in contrast to "absolutist" natural sciences. To quote him: "the propositions of economic science do not satisfy what one might call universality criterion. The reality with which physical sciences are concerned is supposed to be given and constant. The assumptions that a scientist makes concerning the occurrence of physical phenomena are thus valid universally not only with respect to space, but also with respect to time. Economists deal with a universe where data are freakish and are not valid universally, and where phenomena emerge which were not only not known before, but had not existed before... In economics old theories do not die. And they do not die, not because one is built on the other, but because one is independent of the other" (p.2).

Although one would not unquestioningly accept Prof.Das Gupta's point of view, it is extremely fascinating and applicable to exchange rate economics. Indeed, one can look upon the evolution of a host of balance of payments theories as a sequence of models on devaluation, each shaped by a set of particular circumstances and the then prevailing analytical tools of economic theory. The evolving new perspectives on exchange rate economics under the impact of recent currency experience can be also treated as a measured

response to specific economic issues and the special circumstances prevailing during the '70s and '80s.

With the emergence of floating rates in the early '70s and the recurring oil crisis through the '70s and the concomitant stagflationary impacts, followed by the U.S. policy engineered monetary shock, the world economy has now become vastly different than what it was during the era of Bretton Woods system. The decade of 1980s has come to a close with the unification of Germany and Saddam's oil shock. With a steep erosion in its economic and political hegemony and unilateral economic excursion in adopting autonomous policies in pursuit of domestic objectives, the U.S. no longer serves as an anchor for the market based current managed float. The great deal of integration among international financial markets and their relative domination over the real sector behaviour of the world economy has intensified the growing macro economic and monetary interdependence generating thereby perennial conflicts between the markets and national governments.

Against this backdrop, the work aims at assessing the exchange rate experience, of the '70s and '80s. While accomplishing this objective Robert.M.Solow's words are kept in mind: "The interests of scientific economics would be better served by a more modest approach. There is enough for us to do without pretending to a degree of completeness and precision which we can not deliver... the true functions of analytical economics are best described informally: to

organize our necessarily incomplete perceptions about the economy to see the connections that the untutored eye would miss to tell plausible -sometimes even convincing causal stories with the help of a few central principles and to make rough quantitative judgements about the consequences of economic policy and other exogenous events. (Robert. M. Solow, American Economic Review (1985). p.329.)

It is explicitly acknowledged that the tremendous insight shown by erudite scholars formed the basis for this interpretative study. In view of the vastness and complexity of the subject it has become difficult to incorporate all aspects in the main text and hence additional interpretations have been included under 'Notes' and "Appendices". They do not hang in isolation but instead carry the flavour of the main text.

The central theme of this work is that the macro economic behaviour of the U.S. under floating regime, especially during the '80s appears to be a great exogenous disturbance to the world economy and a major irritant in the dynamic functioning of floating rates and therefore any attempt towards reform proposals and international policy coordination will be a futile exercise, unless the fundamental financial discipline begins at the U.S. first and percolate down to the rest of the world.

ACKNOWLEDGEMENTS

At the very outset I record my thanks to **Professors V.M. Dandekar**, **Nilakanta Rath** and the present **Director Prof. V.S. Chitre** for having given me an opportunity to learn at Gokhale Institute of Politics and Economics, Pune under the UGCs' Faculty Improvement Programme.

I express my profound gratitude and regards to my guide Prof.B.G.Bapat for his valuable comments and suggestions. Among the faculty members who laid the foundation for this work, special mention must be made to Prof. S.V. Bokil, my one time thesis supervisor for his continued intellectual interaction and concern. I am extremely thankful to him. I am also grateful to Prof. Rath and Prof. B.S.R. Rao for goading me to action. I also record my thanks to Prof. N. Venkatasubramanian, the Director, Centre for Post-Graduate Studies, Pondicherry for ensuring an extremely pleasant academic climate and extending the necessary administrative support. I am very much indebted to another young scholar in the South for breathing fresh life into my work.

In the course of my academic journey over an extended period of time, I derived immense benefit and cooperation from the Library Staff of Gokhale Institute of Politics and Economics, Pune, USIS and IFMR, Madras, Central

University, Hyderabad and Pondicherry University. I owe a great deal to them. Among friends, I must acknowledge my indebtedness to P.R.Srinivasan of Pondicherry K.Vaithilingam of Madras, for their assistance in the academic and financial spheres. My thanks are also due to my senior colleague Prof. N. Santhalingam who has been always a source of intellectual inspiration.

Finally I thank R. Saravanan and S. Sivasoupramaniane of Pondicherry for the neat computer word process work.

January 21, 1991.

D. Sambandhan
