ACKNOWLEDGEMENTS

This study has been completed at Gokhale Institute of Politics and Economics, Poona, where I have studied and worked since July 1964. The stimulating atmosphere of the Institute and the liberal facilities provided by it have been of great help in this work. A pre-doctoral training in Social Science Research Methodology during the year 1964-65, supported by a fellowship under Ford Foundation Scheme at the Institute enabled me to learn elements of mathematical economics and statistics and applied economic analysis which has been of great benefit in this work. The work on the thesis started in July 1965, and was supported by a doctoral fellowship till June 1968, and the substantial part of the work was completed during this period. Thereafter, the award of a senior research fellowship at the Institute helped me to finalize the draft in my spare time. For all this I am grateful to staff and the directors of the Institute.

I cannot fully account for what I owe to Professor P.N. Mathur, under whose guidance this study has been completed. I have drawn heavily upon his time and his intellectual resources. Specially, in the development of the model for optimum location# and flows, I have used his basic ideas and have further benefited from his suggestions and comments. His constant encouragement and interest in the work have made working with him a pleasure. Words are inadequate to express my gratefulness

for Professor Mathur. I am also grateful to other members of the Input-Output 'Workshop' at the Institute, where many aspects of the work have been discussed, from time to time, with benefit.

The elaborate computational work would not have been possible but for the help from Sarvashri D. B. Sardesai, D.B. Unde and S. N. Gadani, who prepared some of the computer programmes, and also helped me learn computer programming which enabled me to handle a substantial part of the computational work myself. The programming ingenuity of Shri V. J. Puntambekar, Manager, Electronic Data Processing Centre (EDPC), Bombay, and his intimate familiarity with the special l.p. programme used, helped to a great extent in getting the solution of the linear programming problem. Shri Puntambekar and other staff of EDPC were always very helpful and co-operative. Shri G. K. Misra was kind enough to prepare a beautiful map devoting many hours to this tedious job. Shri V.N. Inamdar undertook the exacting work of typing and also helped me with getting the thesis bound. To everyone mentioned in this paragraph, I should like to express my sincere gratitude for their assistance and co-operation.

Finally I am grateful to the staff of Servants of India Society Library and to my many friends and colleagues who have helped me in many ways.

February 1969.

Saiyed Raza Hashim.

ACKNOWLEDGEMENTS	1
LIST OF TABLES	vi
<u>PART I : INTRODUCTORY</u>	
Chapter	
I INTRODUCTION	1
1. Spatial Dimension of the Economic Structure and Commodity Flows	1
2. Commodity Flows and the Problem of Regional Development--Some Views	8
3. References to Some Commodity Flow Studies and Some Regularities Observed	13
4. The Present Study	20
5. Scheme of the Work and Conclusions	23
II THE COMMODITY FLOW DATA AND THE DELINEATION OF REGIONS	29
1. Nature and Scope of Commodity Flow Data	29
2. Delineation of Regions	36
III LOCATIONAL STRUCTURE OF THE REGIONS	44
1. Area and Population	44
2. The Land Resources	46
3. The Pre-Plan Pattern of Location of Manufacturing Industries	50
4. A Historical Review of the Evolution of the Pre-Plan Pattern of Industrial Location With Particular Reference to Pattern of Railway Development and Freight-Rate Policy	56

PART II : ANALYSIS OF ACTUAL FLOWS

IV	TRENDS IN THE LEVEL OF INTER-REGIONAL FLOWS	72
	1. Introduction	72
	2. Trends in the Level of Gross Inter-regional Flows	75
	3. Net Inter-regional Flows	88
V	THE PATTERN OF COMMODITY FLOWS AND INTER- REGIONAL LINKAGES	95
	1. The Pattern of Exports and Imports	95
	2. Inter-regional Linkages	106
	3. Distance and the Pattern of Flows	121
VI	STRUCTURAL CHANGES IN THE COMMODITY FLOW PATTERN	137
	1. Measurement of Structural Change	137
	2. The Concept of Uni-directional change	141
	3. Results	145
 <u>PART III : DERIVATION OF OPTIMUM FLOWS</u>		
VII	A MODEL FOR OPTIMUM PATTERN OF LOCATION AND COMMODITY FLOWS	152
	1. Review of Some Earlier Models	152
	2. The Present Model	160
VIII	TRANSPORT INPUTS AND OTHER DATA FOR THE MODEL	174
	1. Regions	174
	2. Sectors	175
	3. Final Demand	178
	4. Transport Coefficients	180
	5. Transport Input Vector	188

IX	RESULTS OF THE OPTIMUM SOLUTION AND COMPARISON WITH ACTUALS	198
	1. Solution of the Problem	198
	2. The Results	200
	3. Comparison of Optimal and Actual Inter-regional Flows	215
APPENDIX I :	LIST OF THE COMMODITIES AND THEIR AGGREGATION	222
APPENDIX II :	FLOW TABLES FOR MAIN EXPORTING REGIONS (FOR 50 COMMODITIES AND 10 YEARS)	225

LIST OF TABLES

<u>Table</u>		<u>Page</u>
2.1	Selected Commodities Carried by Class I Railways in 1950-51 and Government Railways in 1959-60	35
2.2	Scheme of Delimitation of Regions	39
2.3	Territorial Composition of Regions as per 1951 and 1961 Censuses	41
3.1	Area and Population of India and Its Percentage Distribution Among Regions	45
3.2A	Percentage Distribution of Agricultural Production Between Regions - 1950-51	48
3.2B	Percentage Distribution of Agricultural Production Between Regions - 1959-60	49
3.3	Important Minerals : All India Production (Quantity and Value) and Percentage Distribution of Production (Quantity) Over Different Regions in 1950 and 1960	51
3.4A	Distribution of Large-Scale Manufacturing Industries in India in 1950	52
3.4B	Regional Distribution of Selected Industries - 1950 (In Terms of Ex-Factory Value of Output)	53
3.5	Inflows and Outflows of Port Towns and Some Other Regions in Respect of Some Important Commodities (1905-06 to 1909-10)	63
3.6	Regionwise Percentage Distribution of Workers in Important Industries (1911-1945)	69
4.1A	Total Gross Inter-regional Flows	76
4.1B	Total Railways (Goods) Traffic	78
4.2A	Total Inter-regional Flows:Regression Coefficients	79
4.2B	Total Rail Traffic (Goods) : Regression Coefficients	80

<u>Table</u>	<u>Page</u>	
4.3	Indices of Total Rail-Freight Traffic	81
4.4	Indices of Some General Economic Indicators during the Decade	81
4.5	Total Inter-regional Flows and the Percentage Share of Selected Commodities in Total Flows with Their Indices	83
4.6	Share of Some Other Commodities in Total Flows with Their Indices	85
4.7	Percentage of Total Net Inter-regional Flows to Total (Gross) Inter-regional Flows	90
4.8	Percentage of Net Flows to Gross Flows : Average of Ten Years (Ranked in Descending Order of Average)	92
5.1	Commoditywise Main Exporting and Importing Regions and Their Percentage Share in Total Net Exports and Net Imports, i.e., Total Net Inter-regional Flows	96
5.2	Aggregate Inter-regional Commodity Flows, 1950-51	108
5.3	Aggregate Inter-regional Commodity Flows, 1959-60	109
5.4	Percentage Distribution of Imports, 1950-51 (Equal Importer Basis)	110
5.5	Percentage Distribution of Imports, 1959-60 (Equal Importer Basis)	111
5.6	Percentage Distribution of Exports, 1950-51 (Equal Exporter Basis)	112
5.7	Percentage Distribution of Exports, 1959-60 (Equal Exporter Basis)	113
5.8	Frequency Distribution of the Percentage Figures of Imports and Exports	117
5.9	Regionwise Frequency Distribution of the Percentage Figures of Imports and Exports	119
5.10	Distance Between the Regions	125
5.11	Ranking of Regions in Distance and in Exports and Imports	126

<u>Table</u>	<u>Page</u>
5.12 Rank Correlation Coefficients Between Rank in Distance and Rank in Exports and Imports	134
5.13 Rank Correlation Coefficients Between Exports and Imports for the Same Years and Between Imports of 1950-51 and 1959-60 and Between Exports of 1950-51 and 1959-60	136
6.1 Measurement of Structural Change (MC) and Degree of Uni-directional Change (DUC) in Commodity Flow Pattern (1950-51 to 1959-60)	146
8.1 Regional Proportions of Total Production of Primary Sectors	177
8.2 Final Demand	181
8.3 Average Wagon-Load	186
8.4 Sectorwise Wagon-Kilometre Requirements	187
8.5 Distance Between the Regions	188
8.6 Broad Gauge Wagon Equivalent of Wagons of Other Gauges	196
8.7 Transport Input Coefficients 1959-60 (Railways - Goods Transport)	197
9.1 Re-allocation of Final Demand Between the Regions (Based on the First Solution)	201
9.2 Optimum Interregional Flows	202
9.3 Trade Composition of Regions--Optimum	206
9.4 Optimum Production Pattern	209
9.5 Goods Transport Input Requirements Based on the Optimum Flow Pattern	214
9.6 Actual Inter-regional Flows of Selected Commodities	218
9.7 Net Exports and Imports of Regions--Actuals and Optimum	220
