ECONOMIC ANALYSIS OF THE COAL MINING INDUSTRY :
WITH SOME EMPIRICAL EXPLORATIONS IN THE BEHAVIOUR
OF COSTS AND INPUT-OUTPUT RELATIONS

A THESIS SUBMITTED TO
THE UNIVERSITY OF POONA

FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY
IN ECONOMICS

BY

N. NAGANNA

GOKHALE INSTITUTE OF POLITICS AND ECONOMICS
POONA - 41

NOVEMBER 1974

ACKNOWLEDGEMENTS

This work, preceded by one year pre-doctoral training programme in Social Sciences research methodology, was carried out at the Gokhale Institute of Politics and Economics, Poona, under the guidance and supervision of Professor P.N. Mathur (now at the University College of Wales, Aberystwyth, U.K.). In fact, it was Professor Mathur who had introduced me to the present field of study. His constant encouragement and incisive comments enabled me to see my way through many complexities of the subject. Professor Mathur gave me a sense of direction even when I was wandering in the wilderness of facts. I cannot adequately put in words the extent of my intellectual indebtedness and gratitude to him.

During the final stages of the study, I had the opportunity of working with Professors S. Paul and C. Rangarajan of the Indian Institute of Management, Ahmedabad, as a member of Research Staff. Professor Paul taught me how to view an economic study from the policy angle. This enabled me to bring out some policy implications in this study. And, but for Professor C. Rangarajan's keen interest in my study and help and encouragement towards it, the completion of the study would have yet been a long way off. I take this privilege to put on record my gratitude to both of them.

I do not know whether I should formally acknowledge my thanks to my two close friends Dr. R. Radhakrishna and Dr. Atul Sarma, for all that they did for me. Both of them went through the earlier version of the entire study and offered a number of useful suggestions and comments. But because of constraints of time and other resources all of them could not however, be incorporated. I acknowledge my sincere indebtedness to both of them.

It will be unfair if I do not express my gratitude to Shri P. Venkataramaiah, Shri R.S. Rao, Dr. K.N. Prasad, Dr. R.G. Paithankar, and Dr. G. Niranjan Rao, who helped me in different ways. I am also thankful to the members of the Input-Output Workshop at the Gokhale Institute of Politics and Economics, Poona. I am also thankful to Mr. K. Ranga Rao for typing the thesis.

I am gratefully thankful to all the 'Coal-men' for their kind help and cooperation during my field-investigations.

This study would not have been possible without the research fellowship and other facilities provided by the Gokhale Institute. For all this I am indebted to the authorities of the Institute.

N. NAGANNA

LIST OF THE TABLES

<u>Table</u>		<u>Page</u>
1.1	Total Value of Mineral Production in India by Different Mineral-groups, 1948-1965	33
1.2	State-wise Coal Production, 1954 to 1965	34
1.3	Output of Minerals in India, 1964 and 1965	36
1.4	Index of Mineral Production by Different Mineral Groups, 1951 to 1965	39
1.5	Index Numbers of Mineral Production, Industrial Production and Agricultural Production	40
1.6	Quantity Index of Mineral Production in India, 1951 to 1965	41
1.7	Index Number of Total Mineral Production in the Principal Mineral Producing States, 1960 to 1965	45
1.8	Total Value of Mineral Production in India by States, 1964 and 1965	46
1.9	Output, Despatches, Stocks and Employment in the Coal Mining Industry, 1954 to 1965	47
1.10	Output and Value of Coal (State-wise), 1961 to 1965	48
1.11	Coal Reserves in India by States	50
1.12	Output of Coal from Different Coal Fields, 1964 and 1965	51
1.13	Industry-wise Despatches of Coal During 1964 and 1965 (or Coal Consumption Pattern in India)	54
1.14	Percent of Collieries Producing 1000 tons and Below Per Month	55
1.15	Classification of Mines According to Size as Determined by Annual Output	56
1.16	Collieries Classified by the Chief Inspector of Mines According to the Average Number of Persons Employed Daily	58
1.17	The Size of Mines as Determined in Relation to Their Output for the 12 Months Ended Dec. 1965	60

Table	Page
1.18 Number of Mines Using Coal Cutting Machines in the All-India Coal Mining Industry	61
1.19 Trends in the Use of Mechanical Ventilators, Safety-Lamps, Mechanical Loaders and Conveyors in the All-India Coal Mining Industry	62
1.20 Number of Mines Using Electric Energy in the All-India Coal Mining Industry	63
1.21 Output per Man-shift in Coal Mines of Selected Countries (1963)	64
1.22 Percent of Cost of Coal (at Ex-colliery Prices) in the Total Ex-factory Value of Output	65
1.23 Percent of Cost of Coal in the Total Ex-factory Value of Products and By-products	66
1.24 Trends in Output, Employment, Productivity, Absenteeism and So on, with Different Breakups, 1953 to 1965 (All-India Coal Industry)	67
1.25 Contribution of the Various Forms of Primary Energy to the Total Consumption of Primary Energy in India (Percentages)	68
2.1 Composition of the Coal Mining Industry in Andhra Pradesh	74
2.2 The Structure of Physical Resource-base of Mines, Comprising Coal Bearing Area, Reserves and the Distribution of Bore-holes by Depth	81
2.3 Number of Coal Seams Under the Mines and Their Features	87
2.4 Quality of Coal in Different Coal Fields, Based on Air-dried and Moisture-free Methods... ..	91
2.5 Output, Age, and Stage of Mining Operations in Different Mines and Coal Fields for the year 1964-65	93
2.6 Distribution of Mines and Output According to Age	96
2.7 Distribution of Mines and Output According to Size	98
2.8 Distribution of Mines by Stage of Mining Operations	100
2.9 Cover Over Present Workings (1965) (or Depth of the Workings)	103

<u>Table</u>	Page
2.10 Depth of the Workings According to Age of Mines (1964-65)	108
2.11 Mine-wise Structure of Mining Operations, Giving the Distribution of Working Faces by Distance and Other Details... ..	114
2.12 Structural Differences Among Mines in Different Age-groups (The Structural Changes Through Time or Age)	122
3.1 Process-by-Process Structure of Pit-head or Production Costs in the Coal Mining Industry (1964-65) - At All-Industry Level	150
3.2 Process-by-Process Structure of Underground Costs (Cost A) - At All-Industry Level	171
3.3 The Structure of Production (Pit-head) Costs, Mine-by-Mine and Process-by-Process, with a Break-up on 'Wages' and 'Materials' Cost Components	174
3.4 Mine-wise Structure of Production (or Pit-head) Costs with a Break-up on 'Wages' and 'Materials' Cost Components in Cost A, Cost B, Cost C, and Cost D	206
3.5 The Structure of Underground Costs (Cost A) in Terms of Percentages - Mine-wise and Process-wise	217
3.6 Stability of Process-wise Cost Components as Revealed by Coefficients of Variation	221
3.7 Total Average Production (or Pit-head) Costs by Stages of Mining Operations	231
3.8 Total Average Production (or Pit-head) Costs by Stages of Mining Operations (Excluding New Mines viz., I, J, J ₁ , K, O and C from D ₁ Stage; and Mine R from 'D ₁ & D ₂ ' Stage)	233
3.9 The Structure of Unit Production (or Pit-head) Costs by Stages of Mining Operations - Process-wise	236
3.10 The Composition of Underground Costs (Cost A) in Terms of Percentages by Stages of Mining Operations - Process-wise	240
3.11 The Structure of Overhead Costs (1964-65) - Field-wise and All-Industry	246

<u>Table</u>	Page
3.12 The Structure of Total Average Costs (1964-65) - Field-wise and All-Industry	259
3.13 The Structure and Behaviour of Costs in Relation to Size of the Coal Fields (The Case of Increasing Costs or Diminishing Returns to Scale in the Coal Mining Industry) ...	270
3.14 The Structural Trends in the Total Average Cost Composition by Fixed and Variable Components, Through Time, Along With Labour-Productivity ...	284
3.15 Evaluation of Rent-element in Different Mines on the Basis of Total Average Cost	308
3.16 Evaluation of Rent-element of Different Mines on the Basis of Average Pit-head (or Production) Costs With a Break-up on 'Wages' and 'Materials' Cost Components	311
3.17 Evaluation of Rent-element of the Mines by Age- Component Method, on the Basis of Total Average Cost	317
3.18 Evaluation of Rent-element of the Mines by Age- Component Method, on the Basis of Production (or Pit-head) Costs	319
4.1 Total Average Variable Costs and Other Operating Cost Components in Relation to Mine-size and Working Face-size	345
4.2 Size-cost Relationship - I (The Levels of T.A.V.C. and Cost A in Relation to Different Mine Output-size Groups)	352
4.3 Size-cost Relationship - I (Regression Coefficients of the Form: $Y = a + bX$; Where Y = Unit Costs; X = Mine Output in '00 Tonnes) ...	354
4.4 Size-cost Relationship - II (The Levels of T.A.V.C. and Cost A in Relation to Working Face Size-group)	371
4.5 Size-Cost Relationship - II (Regression Coefficients of the Second-degree Form: $Y = a + bX + cX^2$; Where: Y = Unit Costs; X = Working Face Size in '000 Tonnes)	375
4.6 Data on Some of the Major Factors That Affect the Unit Operating Cost Levels in the Coal Mining Industry	391

<u>Table</u>	<u>Page</u>	
4.7	Factors Affecting the Unit Operating Cost Levels (Regression Coefficients of the Form : $Y = a + bX_1$; Where: Y = Unit Costs; X_1 = Factors) 392
4.8	Factors Affecting the Unit Operating Cost Levels; (Regression Coefficients of the Form: $Y = a + bX_1$; Where: Y = T.A.V.C., X_1 = Factors - Deleting Some of the Outlying Mines from Table 4.7) 394
4.9	Factors Affecting the Unit Operating Cost Levels; (Regression Coefficients of the Form : $Y = a + bX_1$; Where Y = Cost A; X_1 = Factors - Deleting Some of the Outlying Mines) 395
4.10	Factors Affecting the Unit Operating Cost Levels (Regression Coefficients of the Multiple-regression Model: $Y = a + bX_1 + cX_2 + dX_3 + eX_4 + fX_5$; Where Y = T.A.V.C., X_1 = Factors) 396
4.11	Factors Affecting the Unit Operating Cost Levels (Regression Coefficients of the Multiple Regression Model: $Y = a + bX_1 + cX_2 + dX_3 + eX_4 + fX_5$; Where Y = Cost A, X_1 = Factors) 397
5.1	Classification of Various Kinds of Material-inputs Consumed by the Coal Mining Industry 403
5.2	Cost Composition by "Wages" and "Materials" 419
5.3	All-Industry Input Structure (1964-65) (Structure of Direct Material Input Consumption on Mining Operations at Pit-head - on All-Industry Level) 422
5.4	Mine-by-Mine Input-Output Coefficients for the Year 1964-65, Along With Their Means, Standard Deviations and Coefficients of Variation 426
5.4a	Mine-wise Man-shifts/Man-days, Output, Producti- vities (O.M.S.) and Labour-Coefficients 433
5.5	Regression Coefficients of the Equation : $Y = a + bX$ (Where: Y = Unit Costs; X = Input Coefficients); and Simple and Rent Correlation Coefficients Between Unit Costs and Input Coefficients 450
5.6	Structure and Behaviour of Input-Output Coeffi- cients Over Different cost-size Groups 461
5.7	The Structure and Behaviour of Input-Output Coeffi- cients Over Different Output-size Groups 470

<u>Table</u>	Page
5.8 The Structure and Behaviour of Input-Output Coefficients Over Different Stages of Mining Operations ...	484
5.9 The Structure and Behaviour of Input-Output Coefficients in Relation to Different Age-groups (or age of Mines) 	490
5.10 The Structure of Complementary Material-Input Consumption in Coal Mining Industry on the Maintenance of Overheads, 1964-65 (At All-Industry Level) ...	504
5.11 The Structure of Total Material-input Consumption (i.e., Direct plus Complementary Inputs) in the Coal Mining Industry, 1964-65 (at All-Industry Level) ...	507
6.1 Mine by Mine Costs, Productivity, Capital Equipment, Hauling Distance per Working Face and so on, in Relation to 'Age' of Mines 	537
6.2 Structural Differences Among the Mines in Different Age-groups. (In Terms of Indices with the First Age-group as Base) 	551
6.3 The Behaviour of Total Unit Production (pit-head) Costs, Underground Unit Costs and O.M.S. Over Different Age-groups 	559
6.4 The Structure and Behaviour of Process-by-Process Cost Components Over Different Age-levels ...	563
6.5 The Behaviour of the Proportions (in %'s) of Various Process-wise Cost Components in the Total Underground Per Tonne Costs, Over the Life-span of a Mine (A Case Study in the Life Span of a Coal Mine) ...	576
6.6 The Life-cycle Approach or the Age-cost Relationship (Regression Coefficients of the Third-degree Form: $Y = a + bX + cX^2 + dX^3$) 	589
