Note :- Data for Bombay-Division relates to 1965-66.

1.1 Location

Kolaba District, paddy granary of Maharashtra-State, forms part of Bombay-Konkan strip which lies between the Sahyadri in the East and the Arabian Sea (also known as Sindhu-Sagar.) in the West. The geographical situation of this district is in between $17^{\circ} 52'$ and $19^{\circ} 30'$ North latitude and $73^{\circ} 70'$ and $73^{\circ} 20'$ East longitude. Coast-line of this district is about 240 Kms (about 150 Miles). This District is situated in the surroundings of mountains and valleys and scattered with low lands separated by creeks on the sea-side.

1.2 Boundaries

This district is surrounded by the Bombay harbour in the North-West, Thana District in the North-East, the Sahyadri and Poona District in the East, Satara District in the South-West, Ratnagiri District in the south and the Arabian Sea (Sindhu-Sagar) towards the West.

1.3 Topography

The main system of hills is the Sahyadri and its offshoots. The famous hill fort of Rayad is also situated on the Sahyadri ranges. Matheran, the plateau and one of the famous hill stations in the State, is located in the ranges. Kumbhicha Dongar or Dhaⁿer hills in the south-east of Mangaon Taluka is the only notable peak in the main Sahyadrian ranges.

1.3.1

The district can broadly be divided into three zones, viz. i) the coastal zone, ii) the central zone iii) the hilly tract.

1.3.2

The co^astal zone has, apart from Rice cultivation in the low lying areas, plantations of coconut and betelnut. This zone comprises of Alibag, Uran, Murud and Shriwardhan Talukas covering about $1/5$ th (18%) of the total area of the district. A notable feature of this zone is the fishing industry as the coastal line is included in the zone. All the worth seeing places from scenery point of view such as Alibag, Chaul, Nagaon, Revadanda, Murud, Shriwardhan, Haresh^war Diveagar are located in this zone. It is obviously due to avenue of coconut and betelnut trees and attractive sea beaches.

1.3.3

The Central zone comprises of Panvel, Pen and Roha Talukas and western portions of Mangaon and Mhasala. It nearly occupies 1/3rd area of the district. The low lying areas of this zone are more fertile and used for rice cultivation. Ragi and vari are grown on hill slopes. Vegetables are grown and sent to Bombay market from the Northern portion in general and Panvel Taluka in particular.

1.3.4

The hilly tract consists of Eastern part of Karjat and Khalapur Talukas, North east corner of Mangaon and Mahad Talukas and whole of Sudhagad and Poladpur Talukas. This zone has thick forests and received heavy rainfall.

1.4 Soils

The sub-soil stratum consists of Deccan trap rock which is completely impervious to percolation. There is, therefore, no retention of water in the soil and the district suffers from an acute shortage of water although it receives rainfall varying between 2,000 ^{to 3500 mms} MMs. in different parts.

1.4.1

On the hill slopes there is reddish soil, which has best value as grass land. The tract of shell sands near the sea-shore is suitable for the growth of coconut and betel-nut trees. The red type of soil with mixture of shell sands is suitable for growing rice. The brown and brownish black soils are excellent for rice cultivation and are capable of producing a second crop.

1.5 Rivers

The important rivers of the district are Ulhas, Patalganga and Amba which flow through the Northern part of the District, Kundalika through central part and Savitri, Goda and Kal through the southern part of the District. There are in all sixteen rivers and all of them flow from East to West. Most of the rivers are seasonal and are dry for about six months in a year.

1.5.1

Some of the rivers have provided good sites for hydro-electric power generating stations viz. those at Bhivpuri, Bhira and Khopoli. Bhivpuri is situated on high altitudes of Sahyadri in the basins of Pej river in Karjat Taluka, Bhira on Kundalika river in Mangaon Taluka and Khopoli on Khopoli river in Khalapur Taluka.

1.5.2

The Kal river project, the only medium project in Konkan, contemplates the utilisation of Bhira Power House Tail race waters for irrigating about 20,000 acres of land in Roha and Mangaon Talukas of this district by constructing a masonry weir on Kundalika river. This project will prove to be a boon to this district especially to Mangaon and Roha Talukas from economic point of view and is expected to be completed in all respects in 1972.

1.6 Hills

The main system of hills is the Sahyadri and its offshoots. Besides there are numerous minor ranges, which are irregular and have many offshoots. One well marked rugged range runs along almost the whole west of the district. Kankeshwar and Sagargadha in Alibag Taluka are the leading peaks of the Central zone of this range. Between the western belt of hills and the Sahyadris another broken and irregular line centres ^{at} the great plateau of Mirya Dongar, few miles ^a southeast of Pen.

1.7 Creeks

All along the coast there are a number of creeks in this district. Important creeks at Nagathan, Roha, Rajpuri and Bankot are utilised for navigation, trade and fishing purposes. Apart from these important creeks, there are certain minor creeks viz. Karjna, Apta, ^aSkhar etc.

At the time of high tide the mouths of rivers and creeks get blocked and the waters thus impounded spread out in the lower portions and create swamps. These swamps are known as Khar or Khajan lands. Such lands become completely or partially unfit for cultivation. Attempts are being made

to convert Khar lands into cultivable lands by scientific methods. This district would be benefitted significantly if all Khar lands are reclaimed for cultivation or for horticultural purposes.

1.8 Minerals

No notable economic mineral that could be exploited profitably has been discovered in the district so far. However, the traps are considered as one of the best materials for use as building stones, road metal and ballast and there is no dearth of the same in the district.

1.8.1

The most important mineral found in this district is bauxite. It is found in Shekhadi, Wakalghar, Kandivali in Shriwardhan Talukas and Ambegaon, Mandala in Murud Taluka. The quality of bauxite ranges from 55 to 65 percent.

1.8.2

Iron ore of low grade and ochre deposits occur in this district. Ochres are naturally coloured pigments used for manufacture of paints. Building stone of good quality is found everywhere. Large quantities of reddish earth is found in the hills of Alibag Taluka.

1.8.3

There are three well-known springs of mineral waters in this district, namely, the Unhere, Save and Vadavali. First is in Sudhagad Taluka and is about 2 Miles from Pali. Second one is situated on the southern bank of the Savitri creek to the north of the village Save in Mahad Taluka. Third one is situated on the southern bank of the Savitri river at about two miles east of Mahad Town. All these springs are known to possess medicinal values in causing skin diseases and rheumatic complaints. They are also said to stimulate appetite. According to the Taleyar-Khan committee's report, it is considered possible to develop some of the reputed mineral springs into spas and health resorts.

1.8.4

The district has salt producing centres at Uran, Sheva, Karanja, Pen and Panvel, Salt is being produced by the direct solar evaporation of sea water.

1.9 Climate

The climate of this district is typical of that of the west coast of India, with plentiful and regular seasonable rainfall .oppressive weather in the hot months and high humidities throughout the year. The summer season from March to May is followed by the south-west monsoon season from June to Sept. October and November form the Post Monsoon or the retreating monsoon season. The period from December to February is the cold season and this is the only pleasant season. There are no appreciable variationsⁱⁿ temperature during different seasons of the year, the air being cooled by sea winds during hot months and by south west monsoon during the rainy season. In the Talukas adjoining the coast, the Sun is seldom oppressive and the nights though cool are often not cold. Inland^{and} to the south except for few weeks in January and February, the days are hot and the nights especially in the vicinity of streams and forests are sometimes very cold. Along the parts of the district lying in the vicinity of the^{is} main range of Sahyadris, the climate/somewhate cooler. May is the hottest month with a mean daily maximum temperature at 33.2° C. and the mean daily minimum temperature at 26.6° Cd. The highest maximum temperature recorded at Alibag was 40° C. (104-F.) on 19th April 1955 and the lowest minimum was 9.4° C. (49-F) on 13th January 1954. The air is humid throughout the year. Relative humidity varies from 65 percent to 80 percent. Skies are heavily clouded during the south west monsoon season, moderately clouded during May and October and clear or very lightly clouded during the rest of the year.

1.10 - Rainfall

The rainfall is not uniform in all the parts of the district. It is heaviest in the regions near the main range of Sahyadri, Mathern gets on^a an average 5900 MMs. (232 inches) of rain. The rainfall increases as we go from west to east. The western zone (i.e. coastal zone) gets on an average 2,150 MMs. (85 inches), central zone gets 3,000 MMs. (118 inches) and eastern zone ~~xxxx~~ bordering the Sahyadris gets 3,900 MMs. (154 inches) of rain per year. Almost all rainfall (95%) is

received from the south west monsoon between June to September, 4.2 percent rainfall is received during post-monsoon season (i.e. October to December) 0.1 percent is received during winter monsoon (i.e. January to February) and 9.7 % during ~~pre~~ pre-monsoon (i.e. March to May). The rain fall is practically negligible during the period from October to May.

1.11 Forests

The district is fairly rich in forest. The northern talukas of Pen, Alibag and Roha are well wooded and rich in forests. The southern talukas of Mangaon and Mahad are thinly wooded and not so rich in forests. Forest area covers about 24 % of the total geographical area of the district. The most valuable species found in the district is teak. It is also associated with Ain, Dhavadar, Kinjal, Khair etc. Timber and fuel are the major forest products. Wild animals like Panther, Jackals, Khokad, Deer, Sambhar etc. are found in this forest ~~area~~ area. Wild birds present a better variety than wild animals wild birds like Eagles, Hawks, Kites, Honey suckers are found in the forest.

1.12 Fish

Kolaba-District is one of the most important maritime districts of the State with a coastal belt extending to about 100 miles. 1.15 Administrative Set Up

Kolaba District is one of the seven districts in Bombay-Region. For Administrative purposes it is divided into fourteen talukas and three revenue ^{sub-}divisions. The details of which are given below -

 Sr. : Name of Revenue : Name of Talukas included in the sub-
 No. : * Divisional H.Q. : Division

1.15.1 Change in administrative set-up

When the Indian States were merged after Inde-

 Mhasala and Murud Talukas from Janjira-State were merged in
 this district in 1949. This district was in Tri-lingual
 Bombay-State before 1956. It was then transferred to bilin-
 gual Bombay-State after 1st November 1956. Since 1st May 1960
 it forms a part of Maharashtra.

1.15.2

After 1951 Census there are certain territorial
 changes within district which are given below -

Ten villages were transferred from Roha Taluka to
 Sudhagad Taluka and five villages from Mhasala Taluka to
 Mangaon Taluka. All these changes were within the district
 and there were no cases of villages wither being added to the
 district or transferred from the district.

1.16.1 Zilla-Parishad

With a view to promote development of democratic
 institutions and to secure greater measure of participation
 by people in Development Plans and in local and government
 affairs by decentralisation of powers, one Zilla-Parishad and
 14 Panchayats Samities have been established on 1st May 1962.
 The areas under the Zilla Parishad and Panchayat Samities
 correspond to the District and Taluka boundaries respectively

except in case of nine Municipal Towns which are not covered by them . Three Towns viz. 1) Karjat 2) Neral in Karjat Taluka and 3) Revadanda in Alibag Taluka which are having no municipal councils are under the jurisdiction of Zilla-Parishad. The Zilla Parishad covers about 98.8 % of the area and 91.62 of the total population of the district. The population covered by the Zilla-Parishad includes all Rural population and about 16 % of the Urban Population.

1.16.1

The number of villages, number of non-municipal towns and population included under the Zilla-Parishad and each Panchayat Samiti are shown below. The position of each Panchayat-Samiti in the Zilla-Parishad is also shown separately by percentages of area and 1961 Population.

Chapter-II

Explanatory-Note

Purpose - This chapter is devoted to describe the coverage and limitations of statistics presented in this publication. The main object of Dist. Statistical Abstract is to make available statistical data which reflects general features of the economy of the district and the stage of development reached in various social and economic fields.

In the present issue of this publication the reference period is 1967-68 for most of the Tables. The data is supplied by various departments of State-Government, Local Bodies and in some cases Government of India's Offices. A few Tables at the beginning of the Abstract are repeated from previous year's Dist. Statistical Abstract as data is for the year 1961 only.

District at a glance - In this table salient features and district indicators under various heads like population, agriculture etc. are presented. The scope and limitations of the information in this Abstract is discussed in the following paragraphs.

I) Climate - In this group, there are two tables. Table No.1, the data collected from Tahasildars regarding Monthly Rain-fall and ^{no. of} Rainy-days is given for the year 1966 and 1967. Also the figures of normal rain-fall for each centre are given month-wise. This data is given for the Head-Quarter's of all Tahasils. The Table No.2, is given mean-maximum, mean-minimum and average Temperature for all the Months of 1966 and 1967, in respect of two Centres namely Alibag (Dist.H.Q.) and Bhira in Mangaon Tahsils.

II) Area and Population - In this group there are five tables, all of which are based on 1961 Population Census. Table No.3 gives the variations between 1951 and 1961 population census, for rural and urban areas and tahasilwise. Table No.4 and 5 give classification of villages and towns, respectively, according to population ranges. Table No.6 is useful to know the economic classification of population such as workers engaged in nine different categories and non-workers

Table No.7-A-B-C give further information about population such as age-wise, mother tongue-wise and religion-wise classification. Table No.8 is regarding Schedule-Caste and Scheduled Tribes Population.

III) Agriculture - In this group there are 11 Tables regarding Agriculture, Irrigation, Wages Rates etc. The provisional figures of Agril. statistics are given for the year 1965-66 and 1966-67. Also Table No.14 and 15 about irrigation are the same reference years. Table No.16 about Major and Medium Project give-s the position as on 30th June 1968. In this next Table No.17 the data of Agriculture/ Wage rates for 3^{al} Centres namely Neral(Karjat), Nagothana(Roha), and Borli-Panchatan (Shriwardhan) is given for all months of 1966 and 1967. The Table of Agricultural Implements has 1966 as ~~ref~~ reference year.

IV) Animal Husbandary, Forests and Fisheries - There are five Tables in this group. All the Tables except Table No.20 give the data for 1966-67 and 1967-68, while Table No.20 gives the data as per 1966 Live-Stock Census.

Chapter - III

Analytical Review of Selected Trends

In this chapter, important economic indicators are presented, so that comparison between tahasils and over a period of time can be undertaken.

3.1 Agriculture

Indicator No. 1 :- Percentage of Gross Sown area to net sown area

This percentage shows the extent of double cropping practice in various tahasils. For the district as a whole the percentage was 105.7 in 1961-62, 105.4 in 1965-66 and 105.5 in 1966-67. This shows negligible changes in this indicator over the period of five years.

Table No.3.1

Table showing the tahasilwise percentage of gross cropped area to net cropped area in Kolaba District in 1961-62, 1965-66 and 1966-67

Sr. No.	Name of Tahasil	Percentage of Gross Cropped Area to net Sown Area during the year		
		1961-62	1965-66	1966-67
1	Karjat	109.93	107.54	107.72
2	Panvel	105.35	103.15	105.02
3	Uran	101.79	103.43	101.69
4	Khalapur	102.72	101.43	102.03
5	Alibag	105.02	104.61	104.54
6	Pen	102.63	102.88	102.88
7	Sudhagad	104.47	103.29	105.62
8	Roha	110.37	109.77	110.66
9	Murud	105.51	108.03	107.59
10	Mangaon	107.02	105.61	104.53
11	Shri wardhan	106.62	105.91	106.10
12	Mhasala	102.93	101.75	101.68
13	Mahad	107.38	107.89	107.43
14	Poladpur	101.14	101.26	101.25
	Di st. Kolaba	105.71	105.39	105.52

It will be seen that the extent of double cropping was the highest in Roha Tahasil, followed by Karjat and Murud tahasils. The percentage was very low in Uran, Mhasala and Poladpur tahasils during 1966-67. The range of variations was 101.14 to 110.37 in 1961-62, 101.26 to 109.77 in 1965-66 and 101.25 to 110.66 in 1966-67.

Indicator No. 2 :- Productivity of important crops

Estimates of production of important crops are available for district level only. The yield rates of these crops for years 1961-62, 1965-66 and 1966-67 are given below.

Table No. 3.2

Crops	Yield per Hectare in Kg. during		
	1961-62	1965-66	1966-67
1) Rice	1531	1162	1182
2) Ragi	727	525	828
3) Kodra	N.A.	461	434
4) Tur	305	304	295
5) Gram (Black)	N.A.	157	159
6) Chillies	N.A.	544	395
7) Sesamum	249	187	198

It will be seen from above figures that the yield rates were higher in 1966-67 than the previous year in respect of Rice, Ragi, Black-Gram and Sesamum, but the yield rates of Kodra, Tur and Chillies were lower in 1966-67 than in the previous years. Comparison with 1961-62 is possible in respect of four crops only. It will be seen that except in the case of Ragi, the yield rates in the recent years are lower than ^{those} obtained in 1961-62.

Indicator No. 3 :- Percentage of Irrigated area

Kolaba district get ample rain-fall and hence irrigated area is not considerable. The percentage of net irrigated area for Maharashtra State was 6.76 in 1966-67 for Kolaba district the percentage was 2.00. The tahasil-wise figures are given below.

Table No. 3.3

Tahasil		: Percentage of Net Irrigated Area to : Net Cropped Area during		
		: 1961-62	: 1965-66	: 1966-67
1	Karjat	7.05	9.21	8.41
2	Panvel	2.74	3.24	5.04
3	Uran	0.76	-	-
3	Khalapur	1.29	1.64	1.28
5	Alibag	3.65	3.45	3.39
6	Pen	0.30	0.86	0.87
7	Sudhagad	0.04	-	0.04
8	Roha	0.31	0.52	0.83
9	Murud	3.70	3.71	3.70
10	Mangaon	-	-	-
11	Shriwardhan	3.55	3.58	3.62
12	Mhasala	-	-	-
13	Mahad	-	-	-
14	Poladpur	-	-	-
Dist. Total		1.80	2.00	2.17

From the above table, it will be seen that, in five tahasils, viz. Sudhagad, Mangaon, Mhasala, Mahad and Poladpur there was no irrigated areas. Even in other tahasils, the position of irrigation is not very satisfactory except in Karjat tahasils, where the percentage was more than district average. It was also higher than State average for the year 1966-67.

Indicator No. 4 :- Changes in the Crop-pattern

The crop pattern of Kolaba-District is pre-dominated by food-crops. This will be seen from the following table.

Table No. 3.4

Sr. No.	Item	Unit	Year		
			1961-62	65-66	66-67
1	Area under Food-Crops	Lakh Hectares	1.78	1.79	1.80
2	Area under Non-food Crops	-do-	0.48	0.52	0.52
3	Total Cropped area	-do-	2.26	2.31	2.32
4	Percentage of area under food-crops to Total Cropped area	Per cent	78.26	77.49	77.59
5	Percentage of area under non-food crops to total cropped-area	-do-	21.24	22.51	22.41

It will be seen that the food-crops accounted for more than three fourth of the total cropped area throughout the period under review. Even within the group of food-crops, cereals was the most important category, which will be seen from the following figures.

Table No. 3.5

Sr. No.	Item	Unit	Year		
			1961-62	1965-66	1966-67
1	Area under cereals as percentage of gross cropped area		72.35	72.16	72.12
2	Area under Pulses as percentage of gross cropped area		4.87	4.95	4.97

Indicator No. 5 :- Percentage of Net sown area to total geographical area -

Kolaba district has large proportions of barren uncultivable and fallow lands, and as a result the proportion of net sown area to total geographical area is

smaller than State average. The comparative percentages for the district and Maharashtra-State are given below for the year 1966-67.

Table No. 3.6

Sr. No.	Item	Kolaba-District	Maharashtra-State
1	Percentage of Barren and unculturable area to total geographical area.	17.66	5.25
2	Percentage of fallow lands to total geographical area.	10.90	7.70
3	Percentage of Net Sown area to total geographical area.	32.04	59.40

Indicator No. 6 :- Increase in agricultural credit, outstanding dues, etc.

Total credit out-standing, and advances by primary agriculture credit societies and their ratio per member shows the extent of co-operative finance. The policy of Government has been to help the agriculturists to help themselves by extending the co-operative movement. The comparative figures of 1961-62, 1966-67 and 1967-68 are given below.

Table No. 3.7

Year	No. of Members of Pry. Credit Societies	Agril. Credit Co-op. Societies Advances (Rs.000)	Out-standing dues (Rs.000)	Advance per Member (Rs.)	Out-standing amount per member (Rs.)
1	2	3	4	5	6
1961-62	56,000	61,37	63,78	110	114
1966-67	81,999	99,13	135,49	121	165
1967-68	83,387	124,00	154,38	149	185

It should be noted that Kolaba District is mainly Rice producing district and there are no cash-crops for which co-operative finance can be made available.

Indicator No. 7 :- Agricultural Wage Rates

The selected centres for collections of data of wages rates are Neral in Karjat Tahasil, Nagothana in Roha Tahasil and Borli-Panchatan in Shriwardhan Tahasil. From table No. 17 it appears that the wage rates for field labour at Neral were higher than at other places. The annual average rates of important categories of labour for both years are given below.

Table No. 3.8

Centre	Year	Annual average wage rate for			
		Field Labour		Carpenter	Black-smiths
		Male	Female		
1	2	3	4	5	6
1-Neral	1966	2.62	1.48	5.50	3.52
	1967	2.27	1.48	5.17	4.17
2-Nagothana	1966	2.53	1.41	5.83	4.83

	1967	2.46	1.92	4.50	3.17

Indicator No.8 :- Live-Stock per Hectare of land

In India, Cattle is the main motive-power in agriculture, due to backward nature of agricultural economy. As per 1966 Live-Stock Census, the total number of working bullocks in Kolaba district was 1,64,108 and total number of tractors was 18 only. The tahasilwise figures of working bullocks and their ratio to cultivable areas shown in Table below.

Table No. 3.9

Cultivable Area per Pair of Bullock

Sr. No.	Tahasil	Working Bullocks (1966)	Cultivable Area (66-67) (000 Hectares)	Cultivable area per pair of Bullocks (Hectares)

1	Karjat	16,185	40	4.9
2	Panvel	20,082	32	2.9
3	Uran	3,132	11	7.0
4	Khalapur	8,408	20	4.7

6	Pen	8,195	26	6.3
7	Sudhagad	10,124	22	4.3
8	Roha	14,101	39	4.5

14	Poladpur	5,732	26	9.0
	Dist. Total	1,64,108	392	4.7

It will be seen that the ratio of cultivable area to bullocks was considerably higher than district average in Uran and Poladpur Tahasils, while it was very low in Panvel Tahasil. Comparative figures of neighbouring districts are -

Thana - 4.5 Hectares per pair of working bullocks

Ratnagiri-4.8 Hectares per pair of working bullocks

The ratio of total bovine to total cultivable area was 128 animals per 100 Hectares in Kolaba district, as per 1966 Census.

Indicator No. 9 :- Poultry as compared to Population.

Poultry is an important source of subsidiary income to farmers. The table below shows the tahasilwise ratio of poultry to population as per 1961 and 1966 Live-Stock Census.

Table No. 3.10

Table showing the ratio of Poultry to Population, in 1961 and 1966 Live-Stock Census

13	Mahad	592	478
14	Poladpur	590	435
	Dist. Kolaba	555	643

It will be seen that for the district as a whole, the ratio of poultry to population has improved in 1966 as compared to 1961. This improvement was not seen in seven tahasils, viz. Khalapur, Pen, Sudhagad, Roha, Mangaon, Mahad and Poladpur. The most remarkable increase was in Alibag-Tahasil.

Indicator No. 10 :- Per capita consumption of Electricity.

The consumption of electricity is increasing from year to year in Kolaba-District, mainly due to increase in use as domestic consumption. The per capita ratio of consumption was 33 KW in 1966-67 from which it increased to 42 KW in 1967-68. The following table shows the purposes for which electricity was used in 1966-67 and 1967-68.

Table No. 3.11

Indicator No.11 :- Increase in number of candidates enrolled in Employment Exchange and vacancies notified.

In Table No.28 of Abstract is presented the month-wise data of working of Employment Exchange, for years 1966-67 and 1967-68. It will be seen that the number of un-employed persons has increased from 2,490 in March 1967 to 2,615 in March 1968. Enrolment during 1966-67 was 5,224 and during 1967-68, it was 5,077. It would be interesting to compare these figures with the position in 1961-62.

Table No. 3.12,

Table showing the number of Registration and Vacancies filled in Employment Exchange, Kolaba, during 1961-62, 1966-67 and 1967-68

Year	No. of	No. of vacancies filled
	Registration	throughly Employment Exchange
1- 1961-62	2,892	552
2- 1966-67	5,224	835
3- 1967-68	5,077	578

It will be seen that for 1967-68, the number of vacancies filled was less than in the previous year. In registration, there is more demand over last six years, but the registration in 1967-68 was less than in 1966-67. As the recruitment throughly Employment Exchange is now compulsory for all public-sector employers, the lower figure of vacancies filled indicates the policy showing down of recruitment by various agencies.

Indicator No.12

Patients treated in Hospitals, Dispensaries etc.

The medical facilities through public hospital and dispensaries are availed by the patients and the position in various Tahasils is given below

	Total	32,583	35,050	3,66,210	4,40,058

It will be seen that the number of ^{in door} patients treated in six tahasils, viz. Uran, Sudhagad, Murud, Shriwardha, Mhasala and Poladpur was either nil or less than 100. The facility of Primary Health Centres is made available in each tahasil. Regarding out-door patients, the number of beneficiaries is on the increase.

Indicator No.13 :- Students in different categories of Schools.

This indicator shows the increase in school going population since 1961-62.

It will be seen that there was increase in enrolment in all types of educational institutions. In higher education, the enrolment in 1967-68 was three times the figures of 1961-62, while in Secondary-Schools, the enrolment increased by 82 percent in six years.

Indicator No.14 :- Increase in Road-Length per thousand Sq. KM. of area.

There was an increase in road mileage in Kolaba-District from 1,874 KM in 1960-61 to 3,200 Km. in 1967-68. The ratio of road mileage to area is given in the table below

Table No.3.15

Table showing Road-Length and its ratio to total area for the years 1960-61, 1966-67 and 1967-68

Year	Total Road Length (KM)	Road Length per 100 Sq.KM of area
1960-61	1,874	26.7
1966-67	2,687	38.3
1967-68	3,200	45.6

The above figures of road mileage are inclusive of Municipal roads.

Indicator No. 15 :- Banking facilities

For modern economy, banking facilities are considered to be very essential. The growth of Offices of banks (Scheduled, Non-Scheduled and Co-operative) will be seen from the following Table.

Table No. 3.16

Table showing the Banking facilities

As on 1st January	No. of Banking Offices	No. of Villages covered by Banking Offices	Towns covered by Banking Offices
1961	16		7
1967	43		20
1968	47		22

The main reasons for increase in banking facilities is that the District Central Co-operative Bank has opened its branches in 22 places by June 1968. It will be seen from above that the number of banking offices in 1968 was three times that of 1961. The population per branch comes to 22,529 in 1968.

Indicator No. 10 :- Prices

Price movements are interesting, because they indicate the changes in cost of living. In the recent past, there has been a continuous increasing trend in price level. The prices at Alibag, which is the head-quarter of Kolaba district were collected from November 1962 onwards on weekly basis. The following table gives comparative prices of important commodities.

Table No. 3.16

Price quotations of Rice, Jowar for last two years are not available from open market. Prices of Sugar are Government control rates. In the case of Shirting, there is a change in variety and hence lower prices.

Annual Plan 1967-68

The year 1965-66 marked the completion of the Third Five Year Plan. The work of formulating the Fourth Plan was delayed due to uncertainties about foreign exchange and the plan schemes were implemented on annual basis, for 1966-6 onwards. This 1967-68 is the second year for which schemes were implemented on Annual basis. Pending the fixation of five year plan targets, the Annual Plans emphasised the productive sectors of economy and included provisions for the key programmes. The main object, therefore, was "to consolidation of the gains already made, to avoid inflationary spending and so enlarge those areas of operation where optimum gains accrue within the shortest possible time and with the utmost economy." *

It would not, therefore, be surprising to find that the total expenditure on district level schemes, implemented in Kolaba-District, in 1967-68, was Rs.192.21 lakhs which was much smaller than the expenditure incurred during the preceeding year, viz. Rs. 195.01 lakhs. The decrease was seen only in State Sector Schemes. The following figures show the break-up of Plan expenditure

Sector	Year		Variation over preceding year
	1966-67	1967-68	
1) State Sector	140.99	128.57	(-) 12.42
2) Local Sector	54.02	63.64	(+) 9.62
Total	195.09	192.21	(-) 2.80

* Preface to Annual Plan 1967-68, Part-I, out-line. Government of Maharashtra.

If we consider the comparative figures of expenditure head-wise, it will be seen that there was decrease in expenditure under agricultural programmes, irrigation and power, and transport and communications, while expenditure under social services was higher in 1967-68 than in 1966-67.

The detailed description of important schemes under these major heads, which is given below will show salient feature of the Annual-Plan.

I-Agricultural Programme

The schemes under this major head accounted for 28.8 percent of total expenditure during 1967-68 as compared to 34.1 % in 1966-67. By referring to Table No. 66 of the

Abstract, it will be seen that the most important sub-head was Soil Conservation, on which Rs.34.67 lakhs were spent, in 1967-68 as compared to Rs. in the previous year. Area terraced was 967 hectares in 1966-67 and 1,110 hectares in 1967-68. Total expenditure of Rs.24.27 lakhs was incurred on the scheme of Terracing. Another important scheme was Khar Land Development, on which an expenditure of Rs.6.02 lakhs was incurred during 1967-68 and area developed was 1,620 hectares. The expenditure on the scheme of land development-cum-horticulture was Rs. 4.38 lakhs in 1967-68, the physical achievement achieved was plantation in 405 hectares. Under the scheme of development of horticulture, loans were distributed through the agency of Zilla Parishad totalling Rs. 1.20 lakh and the achievement during 1967-68 was plantation of 1,517 hectares, rejuvenation in 178 hectares and renovation of old gardens in 791 hectares. II-Co-operation and Community Development

The expenditure on schemes under 'Co-operation', declined from Rs.3.52 lakhs in 1966-67 to Rs.1.77 lakhs in 1967-68, while in the case of 'Community Development', the expenditure incurred from Rs.13.74 lakhs in 1966-67 to Rs. 15.78 lakhs in 1967-68. The scheme of 'Co-operative Consumers Store' on which an amount of Rs.2.18 lakhs was spent during 1966-67, was implemented in 1967-68 by spending Rs.0.17 lakhs only. The reason for low expenditure was that due to low membership and share capital, the proposals of two societies were not considered for assistance.

Under the major sub-head 'Community Development' Rs. 8.88 lakhs were spent under the schemes 'Community Development Projects'. The whole district is already covered

under the project and the expenditure is incurred as per grants released from Government. The scheme 'Local Development Works Programme', was implemented, under which total expenditure incurred was Rs.2.90 lakhs; and physical achievement was construction of 154 Drinking Water Wells. The 'Rural Works Programme' was implemented by spending Rs.4.00 lakhs and the physical achievement was construction of 42.93 Km. of roads and 5 Vasant bandharas, repairs to 14 tanks for fisheries and repairs to all tanks increasing their capacity by 63,000 CFT.

IV-Industry and Mining

The total expenditure under this group was Rs. 0.14 lakhs in 1967-68 as compared to Rs.0.12 lakhs in 1966-67. The only district level scheme implemented was the scheme of industrial co-operatives including co-operatives of handicraft workers.

V-Transport and Communications
