P R E F A C E

This issue contains data on farm (harvest) prices of principal crops for the years 1965-66 to 1970-71. The data are based on the returns furnished by the State Governments. An outline of the Scheme formulated for the collection of these data has been given as an Appendix at the end of the Statistical Tables.

The detailed work involved in the compilation of this publication was done in the Agricultural Wages, Prices and Tariff Branch of the Directorate of Economics & Statistics, Ministry of Agriculture, under the supervision of Shri B.N. Srivastava, Dy. Economic & Statistical Adviser and late Shri G.P. Puri, Asstt. Economic and Statistical Adviser.

New Delhi:
August, 1973.

RAM SARAN
Economic & Statistical Adviser
to the Government of India,
Ministry of Agriculture.

The following officers and staff of the Directorate were associated with the preparation of this publication:

Shri A.P. Chakravarti, Research Officer.

Shri S.R. Sawhney, Research Investigator Grade I.

Srimati Aruna Vohra, Technical Assistant.

Shri B.M. Sotie, Technical Assistant.

Shri K.B.K. Jain, Technical Assistant.

Shri Raj Kumar Tathgur, Computer.

Appendix	Scheme for the Collection of Farm (Harvest) Prices	171—172

EXPLANATION OF SYMBOLS

r	Rice
*	Paddy
Rb	Rabi
At	Autumn
Wt	Winter
R	Rapeseed
M	Mustard
A	American
D	Deshi
L	Lint
a	Aghani
@@	Included in the State weighted average prices for Punjab
\$	Information relates to the erst-while State of Punjab
£	Information relates to the Ladakh district
@	Simple arithmetic average
—	Production nil or insignificant which does not warrant collection of price data
**	Sugarcane
P	Procurement price
Rd	Revised
\$\$	Started reporting data from 1970-71

APPENDIX

SCHEME FOR THE COLLECTION OF FARM (HARVEST) PRICES

I. As a part of general scheme for the improvement of agricultural statistics, it is proposed to collect and publish the farm prices of principal crops on an all-India basis. These prices are already being collected by the State Governments regularly. For the sake of uniformity, therefore, it is desired that the States, so far not collecting the farm prices, may start doing so and report the same to the Central Ministry of Agriculture.

II. Farm price of a commodity may be defined as the average wholesale price at which the commodity is disposed off by the producer to the trader at the village site during the specified marketing period after the commencement of harvest.

III. The following procedure is suggested for systematizing the collection and compilation of these statistics :—

(i) A certain number of representative villages may be selected in each district at the rate of one, two or three villages from each Tehsil, depending upon the extent to which the crop is grown in the Tehsil. The total number of villages to be selected in each district should, however, be not less than ten.

(ii) In each selected village, the prices at which the commodity is sold by the producer may be recorded in the specified Form, on every Friday during the peak period of marketing after the commencement of the harvest. If no sales take place on that day, the price at which the commodity was sold last during the week may be recorded instead.

(iii) In cases where village site transactions do not take place, the prices reported should relate to what the farmer receives for his produce and should be obtained by subtracting transport and other marketing charges from the wholesale prices quoted at the mandi where produce is disposed off.

(iv) The price recorded should be the wholesale price of the specified variety in terms of rupees and paise per quintal net weight exclusive of gunny.

IV. The existence of different varieties and qualities with a wide range in price variation makes the task of giving a single harvest price for a commodity for the whole State difficult. In each district, however, it is possible to determine a particular variety which is grown to the largest extent and that variety may be specified for the purpose of quoting the farm price. In some cases, it may be necessary to give the farm prices of two varieties separately if the difference in price is great, as for instance, in the case of prices of American and Deshi Cotton.

V. It is also necessary to fix the period of harvest and the subsequent peak period of marketing for each crop, as it varies widely depending upon the variety of the crop and the nature of cultivation. In some cases, it is even difficult to define strictly the harvest period as, for instance, in the case of cotton where there are more than four pickings in a year. These periods, however, may be fixed in respect of each crop and each State by the State Governments having due regard to the local conditions. Usually in case of most commodities six to eight weeks during the peak period of marketing after the commencement of the harvest may be taken to be the period during which farmers are generally expected to dispose of their produce.

VI. Farm Prices when they are viewed as an integral part of agricultural statistics may best be collected through the agency employed for the collection of statistics of area and yield. It is proposed that the supervisor Kanungos or the Revenue Inspectors or the equivalent officials, who are generally employed for the collection of statistics of area and yield may be entrusted with the task of collecting these statistics also. It is also proposed that if circumstances permit, the services of primary teachers may be utilised for this purpose. However, in view of the wide divergences in the revenue machinery of the different States, the choice of the reporting agency is left to the decision of the State Governments. The reporters should visit the selected villages on the appointed dates, enquire personally the prices at which the commodity has been sold by the cultivator and record them on the specified form.

VII. The method of striking the average price for the State as a whole should be the method of weighted average, with the district production figures for the current year as weights. The average price for the district for each week may be obtained as the simple arithmetic average of the Tehsil prices, which are in turn the simple arithmetic average of village prices. The average price for the season is the simple arithmetic average for the district prices for each week. The computation of the district average may be done at the district headquarters while the prices for the State as a whole may be worked out at the State headquarters.

VIII. It is suggested that the farm prices should be collected in respect of all the important crops and in any case they should be given for all the forecast crops. As the final estimate of every crop is published at least one month after the completion of harvesting, it may be feasible to get the farm prices ready by the time of the final estimate in which case, these prices also may be included in the Final Estimates. Timely publication of these statistics will enhance their value.

IX. The farm prices multiplied by the production figures of the different crops will give an estimate of the income of the producers of the commodity which is the same thing as the contribution of that particular commodity to the National Agricultural Income.
