CHAPTER I

INTRODUCTION

1.1-Location:-

Jalgaon district, located in the North of Nasik Division lies between 20° and 21 ° NORTH LATITUDE AND 74°-55' and 76° 28' EAST LONGITUDE.

1.2-Boundaries:

Jalgaon forms an up-land basin, one of the most northerly sections of the Deccan table land and stretches about 123 km. along the Tapi river and breadth of the district varies from 122 to 144 km. Along the whole northern frontier, the district is bounded by the Satpuda ranges, a mountainous tract from 48 to 64-km. wide on the north-eastern side, the district is bounded by the territories of the Madhya Pradesh State. Quite a major portion of the northern boundary is marked by the tributary of river Aner which in the west continues to separate Jalgaon from Dhule district till it joins the Tapi. On the east and South-east a range of low and detached hills and some major streams, without any marked natural boundary, separated Jalgaon district from the districts of Vidarbha. To the south, the Ajantha, Satmala and Chandor ranges may roughly be said to mark the line between Jalgaon and the Marathwada territory. On the west, Jalgaon shares its boundary with Nasik district over about 40 km. and with Dhule district for about 30-km. The Panjhara river is the only natural feature demarcating it over a major stretch.

1.3 - Topography:

Although Jalgaon district belongs to the deccan up lands of the Maharashtra State, it is distinguished from the rest of the up-land districts by its westward aspect. While the rest of the up-land region is drained by the major rivers to the east, the Tapi and its tributaries drain the Jalgaon district to the west towards Arabian Sea. The landscape is typically that of the Deccan lavas.

with residual hill ranges and broad valleys with trap dykes introducing a sharp local contrast as small chains of hillocks. Thus Jalgaon district includes varied topographical features and landscapes consisting of hills and wild forests, rich gardens and groves, stretches of barren plain, low rolling rocky hills and tensely gullied (bad-land) topography near major river banks. Regionally from East to west, paralleled with the river Tapi are three well-marked belts. In the centre there is rich Tapi valley, in the north the high and wild Satpuda and in the south and south-west bare ridges and rich well watered valleys flanked by the Ajanta range.

1.4- Hills and Rivers:-

1.4.1 Within Jalgaon limits, three chief hill ranges, the Satpuda in the north, the Hatti in the south-east, and the Ajanta or Satmala in the south. The Satpudas, a broad belt of mountain land, stretching in a well-like line along the north bank of the Tapi., rise from the first range of hills, ridge behind ridge, to the central crest about 2,000 feet high, and then slope gently to the Namada. Among the peaks that rise upper about 3,000 feet the chief are, in the west, in the east, pancha pandu and Mondhianal looking down on Yawal.

The Hatti hills bounding the purna valley on the east, run north-west and south-east, and for about twenty miles pass through the south east corner of Jalgaon. Rising gradually from the Tapi valley in their first twenty miles, they are rather low and tame. Further east, forming the northern watershed of the frontier of Berar, they rise to nearly 4,000 feet and finally merge in the Nagpur hills. At first bare and rocky, as they near the southern limit of Jalgaon their sides are in places some what thickly covered with brush-wood timber and give shelter to wild beasts.

The Satmala, also known as the Chandor or Ajanta range, breaking off sharply from the Sahyadris in the northwest of Nasik, runs for about fifty miles east in a series of quaint basalt

(Contd.....)

pinnacles and ridges. Near Manned, after a gentle depression, it again rises about 600 feet above the plain, and forms a somewhat monotonous wall-like boundary between Jalgaon and the Deccan. Except for about fifteen miles in the west, actually par its limits, the range skirts and south of Jalgaon for about eighty miles. A few miles beyond Ajanta it turns south, merging into the highlands that form the southern frontier of the Berar districts. As it is a narrow range, little more than the steep northern face of the Deccan tableland, the Satnala contains few forest tracts. The sides, mostly bare or with a few scattered trees, have here and there strands large enough to shelter wild animals. Of late years, tillage has spread to the sides of many of the northern spurs, and in some places come close to the foot of the main range. Besides the picture squeness of its western peaks, the chief interests in the Satnala range are the rockcut Buddhist temples and monasteries at Ajanta, Patna and Chandor. Within Jalgaon limits, besides several foot-paths, two roads cross the hills, one through the Ranjanagan pass near Chalisgaon and the other by the Ajanta pass above Fardapur.

1.4.2 Rivers:

The chief feature of the district, the line to which almost its whole surface drains, is the Tapi. The other important rivers which are flowing in Jalgaon district are Girna, Bori. The following are the irrigation projects as shown against the rivers in the district.

1.5. - Soil:

The broad categories of the soil in the Jalgaon district are deep black, Medium black, forest, loam & a sandy. Deep black is observed in the Northern parts of Amalner, Brandol, Jalgaon, Bhusawal and Edlabaad Tahsils. Medium black is found large in the districts compared with the other soils and is observed in the Southern parts of Yawal, Raver & Chopda Tahsils. Also soils of Brandol, Chalisgaon, Amalner, Bhusawal, Jalgaon & Bhadrachal Tahsils belong to a large extent of this type. Forest soils cover more than half of Northern portion of Raver, Yawal & Chopda Tahsils. Loam Soils are observed to the Southern most part of Amalner, Brandol, Jalgaon, Bhusawal & Brandol Tahsils. Sandy soil is observed on the slopes of Satpuda ranges and near Southern hillacks in Chalisgaon, Pachora, Janner, Bhusawal, Parola, Brandol & Bhadrachal Tahsils.

1.6. - Climate:

The climate of this district is generally dry except in the monsoon. The year may be divided into 4 seasons. The cold season from December to February is followed by the hot season from March to May, June to September is monsoon season and October and November from the post-monsoon season. Jalgaon is the only meteorological observatory centre in the district.

(Contd...)

The data of this station may be taken to be fairly representative of conditions prevailing in the district. December is the coldest month, the Temperature of which is 13.7 Centigrades, whereas May is the hottest, Temperature of which is 42.3 in 1931. As the district is far away from the coastal track, large variation is noticeable in the day and night temperature.

1.7- Rainfall

The average annual rainfall of the district is 843.3 mm. and about 75 percent of the same is received during monsoons. The rainfall is not uniform in all parts of the district. The Central part of the district comprising the talukas of Jalgaon, Bhusawal, Jannor and Pachora receives comparatively more rainfall followed by the talukas of the east and west of this central division. The district receives rainfall almost entirely from the south west. Monsoon, which is very powerful during the June to September.

1.8-Minerals: -

Jalgaon district is composed entirely of trap rocks, which are devoid of important minerals. However, being hard dense and durable, the trap is most suitable for construction of buildings. It is also being used as road metal, railway ballast and in cement concrete.

1.9- Forests:

About 17 percent of the geographical area is covered by the forests, which are mainly found on the slopes of Satpuras in Chopda, Yawal and Eklabad Tahsils. There are also some forests in Jalgaon Bhusawal, Jannor, Pachora, Chalisgaon, Talner and Brandol Tahsils which are on the plains. The main species are Teak, Tiwas, Dhawa, Salai, Haldu, Misar, Bisla, Anjan and Bissu.

Forest Development Corporation :-

The area of operation of this corporation is consists three Tahsils Chopda, Raver & Yawal. The Development Manager, Forest Development Corporation Ltd., Maharashtra is the incharge of this office & his Head. quarter is at Yawal. 4630 hectares area is under control for plantation of Forest Development Corporation.

1.10. Area:

The total geographical area of the district is - 11,771 Sq. km. divided into 13 tahsils. The district consists of 1,423 inhabited and 23 uninhabited villages and 15 Urban areas as per 1971 census. Since independence, there was only one territorial change in the composition of the district, which took place in the year 1950 when 13 villages of Chalisyon Tahsil were transferred to Aurangabad district.

1.11. Population:

As per 1971 population census, the population of the district is 21,23,121 of which 51 percent is male and remaining 49 percent is female. According to population, Jalgaon district stands 6th amongst 25 districts of Maharashtra State excluding Bombay and Bombay sub-urban district. The percentage of scheduled castes and scheduled tribes was about 4 percent and 6 percent respectively @ 1971 Census. No variation is observed in the percentage of male and female population, which remains to be 51 percent and 49 percent to the total population, respectively. However, the percentage of the urban population has increased by one percent in 1971 census over 1961 census. 24 percent population is residing in urban areas while 76 percent in village.

The percentage of literacy is also high in this district. The literacy rate is 45.12 percent in 1971 census.

(Contd.. .)

The literacy percentage, which was already moderate (34 percent of total population) in 1961 has further gone up to 45 percent of the population in 1971. However, there is a decrease in the percentage of working population. The percentage of working population in 1961 has gone down by about 10 percent in 1971 (36 percent of the total population). This decrease in percentage can be attributed to the change in definition of the workers in 1961 and 1971 census. In 1961 census, all those seasonal workers who had some regular work of more than one hour a day throughout the greater part of the season were treated as worker, whereas in 1971 census, the persons who had worked in the current or last working season for the greater part of the season were only treated as workers.

The state of development in respect of different indicators during the years 1980-81 or 1981-82 have been compared with previous years and with the position in 1960-61 & 1970-71.

INDICATOR NO. 1 :- Percentage of gross cropped area to net area sown.

3.2 The following table indicates the talukawise percentage of gross cropped area to net area sown during the years 1960-61, 1970-71, 1979-80 and 1980-81.

Table No. 3.1

Percentage of the year 1980-81 are based on provisional figures.

It will be seen from the above table that no significant changes has taken place in the percentage of gross cropped area to net cropped area in the district, as a whole, during the last 20 years even though irrigation facilities have been extended in many of the tahsils under various schemes of major, medium & minor irrigation projects. Since the maximum percentage of the district is dependent on rains, rabi crops as a second crop was not taken in some tahsil.

INDICATOR NO. 2 :- Percentage distribution of gross area under important crops to total gross cropped area.

Table No. 3.2

3.3 The percentage distribution of gross area under important crops grown in this district is given below in the form of table.

Contd...

It will be seen from the above table that the productivity of most of the crops except Jowar, & Gram has been increased during the last two decades, the credit of which can be attributed to the improved methods of cultivation including irrigation adopted by the cultivators. However yield per hectare has been reduced pertaining to Jowar & Gram if compared to that of previous year i.e. for 1979-80 due to inadequate rainfall in the year.

INDICATOR NO.4 :- Percentage of Net area irrigated to net area sown.

INDICATOR-NO. 5 :- Percentage of area under different irrigated crops to Gross irrigated area.

3.6 As already stated above the utilisation of water from the various projects commissioned after 1960-61 and growing tendency of utilisation of the well water, a significant change is observed in the pattern of irrigation crops. The following table no. 3.5 gives the %age of irrigated area, under some important crops for the year 1960-61, 1970-71, 1979-80 and 1980-81.

Table No. 3.5

If the percentages are compared to those of 1960-61, 1970-71 to 1980-81 it will be revealed that except Rice, Wheat, Gram & Chillies for all the crops percentages of irrigated area is increased. It may be mentioned here that there is a considerable increase in irrigated area in cotton & groundnut i.e. 20.37 & 4.69 in 1980-81 as compared to previous years.

INDICATOR NO. 6 :- Source wise Net Irrigated Area.

3.7 The main source of irrigation in this district are Government Canal and wells. The Table No. 3.6 gives the data for the year 1960-61, 1970-71, 1979-80 and 1980-81.

(Figures in Brackets are Rupees per member).

It can be seen from the Table No.3.7 that no. of societies are more or less the same when compared for the last two decades. However total no. of members increased considerably upto 81-82 and likewise working capital & loan advanced has also been increased substantially if position is compared with that of 1960-61 & 1970-71 to that of 1981-82 overdues percentage.

Similarly loans outstanding per member when compared to 1970-71 it was Rs.657 where as it was more than double i.e. Rs.1453 in the year 1981-82.

INDICATOR NO. 8 :- Agricultural wage rates at selected centres.

3.9 Wage rates for agricultural operations are being collected from three selected centres, viz. Bhadgaon (Bhadgaon Tahsil), Bodwad (Bhusawal Tahsil) and Marwad (Amalner Tahsil). The wage rates prevailing in the years 1978, 1979, 1980 and 1981 are given in Table No. 3.8 for the comparison.

It would be seen from the above table that the wage rates of Bhadgaon centre is showing an upward trend where as the average wages have gone down in respect of skilled labour in other two centres.

INDICATOR NO. 9 :- Livestock population per 100 hectares of cultivable lands.

3.9 Talukawise cultivable land during the year, Bovine & Equine population as per data available from the 1978 live stock census have been taken for comparison & presented in Table No. 3.9.

Table No. 3.9

13	Amalner	71,076	79,200	90
District Total		8,53,675	8,45,700	101

It will be seen from the Table No.3.9 that the number of animals per 100 hectors of cultivable land differ from Tahsil to Tahsil. However the district average comes to 101 where as the maximum 123 is observed in Bhadgaon Tahsil and minimum 79 in Jamner Tahsil. Out of 13 Tahsils Jamner, Pachora, Parola and Amalner Shows the average less than the district average of 101.

INDICATOR NO.10:- Consumption of Electricity

3.11 The consumption of electricity can be treated as barometer of the increase in the standard of living so also industrial development of the country. The number of

villages & Towns electrified, pumps energised and per capita consumption of electricity have been given in Table No.3.10 below for the years 1960-61, 1978-79, 1979-80, 1980-81 & 1981-82.

Table No. 3.10

Consumption of Electricity and pump sets energised.

Sr. No.:	Year	Villages electrified on 31st March.	Pumps energised on 31st March	Per capita consumption in KWH.
1	2	3	4	5

2	1978-79	1451	45306	106.30
3	1979-80	1451	48546	77.30
4	1980-81	1451	53106	80.07
5	1981-82	1451	57080	105.05

From the above table it will be seen that the per capita consumption of electricity has gone up more than 70 time during the year 1978-79 but further again decreased due to power shortage in the country although it was more than 51 times that of 1960-61. All the villages in Jalgaon district were electrified since 1976-77. No. of pumps energised has increased considerably from 45306 to 57080 in the year 1981-82 i.e. by less than 21%.

INDICATOR NO.11 :- Employment Candidates Enrolled and Vacancies Notified.

3.12 The employment exchange office Jalgaon provides the information regarding registration, placement etc. which is given in the following table for the year 1960-61, 1970-71, 1980-81 and 1981-82.

Contd...

Table No. 3.11

3	1980-81	18498	1948	1068
4	1981-82	19736	1624	895

It will be seen from the Table No.3.11 that enrolment of the candidates has increased by more than 12.5% due to extension of educational facilities & increase in the number of entrepreneurs using the media of employment exchange for their recruitment. However during the year 1978-79 to 1979-80 & 1981-82 was comparatively less when compared to the year 1970-71 due to partial restriction on recruitment which are subsequently lifted. However the placement has shown downward trend during 1981-82 as compared to previous year i.e. 1980-81.

INDICATOR NO.12 :- Indoor and outdoor patients treated in public and public aided institution.

3.13 Data on no.of hospitals, dispensaries maternity homes and primary health centres alongwith the no.of patients treated during the year 1961, 1971, 1978 to 1981 are given in Table No. 3.12.

Table No. 3.12

Indoor & outdoor patients treated in public & public aided institutions:

Sr. No.:	Item	Years

It will be seen from the above table, that the number of institutions have increased considerably i.e. from 64 in 1960 to 129 in 1980 & same are stable in 1981. The substantial increase is also observed in the number of patients treated. However from 1979 in case of outdoor patients decreasing trend seems due to opening of private dispensaries by the medical practitioners & specialists.

INDICATOR NO. 13 :- Number of students in different educational institutions.

3.14 Data on educational institutions and their enrolment at various levels is discussed in this indicator. The Table No. 3.13 gives the data for the year 1960-61, 1970-71, 1980-81 and 1981-82 for the institutions & enrolment at various levels.

Table No. 3.13

4	1981-82	1783	395135	253	140984	15	22018

It will be seen from the above table 3.13 that there was constant increase in the number of institutions as well as enrollment of the students. The highest increase can be observed in the institutions & students of higher education.

INDICATOR NO. 14:- Important Ratios in Education.

3.15 A ratio in education can show the tendency of population seeking higher education, so also the pupil teacher

ratio if student can very well tell us about the position of teachers & the No. of students, he ratio if student can very well tell us about the position of teachers & the No. of students, he has to take care. The table No.3.14 shows the various ratios for the year 1960-61, 1970-71, 1979-80 to 1981-82 for the district as a whole as the data at taluka level is not readily available.

It will be seen from the above table no.3.14 that the ratio of institutions of higher level to lower has increased considerably in last two decades. Likewise teacher pupils ratio. It will be seen the ratio in primary school has gone down by 17 if compared to 1960-61, As regards Secondary & Higher education the ratio is given combine as the figures for secondary & Higher Teachers & Pupils are presented combine.

INDICATOR NO.15 :- Increase in commercial banking.

3.16 The growth of trade & commerce is always assessed by the availability of banking services in the area. The Table No.3.15 shows the growth of banking facilities in

the year 1959, 1970, 1979 & 1980.

Table No. 3.15

It will be seen from the above table that the total no. of banking offices in the district has been increased by two times more than that of 1970. Similarly no. of households served per banking office has also shown increasing trend i.e. in the year 1970, the 1444 household were served by one bank whereas due to increase in number now 1515 household could be served by one branch. The number of banking offices are more in Jalgaon followed by Yawal, Raver & Bhusawal. The Jalgaon District Central Co-operative Bank is playing very vital roll in advancing the credits.

INDICATOR NO. 16 :- Road Length per 100 Sq.Km. of Area.

3.17 Ratio of road length to the total Geographical area is a good indicator for comparison of transport facility in the modern economic structure. An attempt has been made to compare the road length existing in the district & villages connected by roads.

The following is the position accordingly to surface classification of various types of roads as at the end of 31-3-82.

<u>Type of Road Category</u>	<u>Length in Km. for district.</u>
1) National Highways	178
2) State Highways	393

6	1980-81	5945	50.51
7	1981-82	6326	53.74

It will be seen from the above table, that the road length have been increased from the year 1979-80 due to number of roads constructed under various programmes thus the road length per 100 Sq.Km. more than double in 1981-82 if compared to the year 1960-61.

INDICATOR NO.17 :- Retail prices at District Head Quarter.

3.18 Prices are collected at the district head quarter for the selected commodities and are restricted to only one quotation that too only from selected shops. The average prices shown in the table No.3.17 for individual commodity can not be said to be fully representative but the data may prove useful as a broad indicator of the trend in retail prices over a period of time.

Table No. 3.17

It will be seen from the above table, that the prices of almost all commodities have gone up if compared to previous years. The responsibility of the increase can not be attributed to any one factor such as short supply of increased demand or monetary inflation etc., but can be said to be the effect of all the factors together which determine the prices at a particular period.

CHAPTER IV

Annual Plan 1981-82

4.1 Introduction :-

The year 1981-82 is the second year of the new sixth five year plan covering period 1980-81 to 1984-85 as decided by the Planning Commission. As per general guidelines given by the Planning Department a top priority has been given for spill over works especially under Minor Irrigation and Medium Irrigation works and inevitable expansion under education & health programme. The New works should be undertaken subject to the availability of funds after providing provision of the schemes wherein the people of weaker section are covered.

Provision for the Tribal Sub plan and also for Modified Area Development Approach Plan was included in the above allocations.

Expenditure incurred during the year 1981-82 was more than provision made by 127%.
