Season and Crop Report of the Bombay State

For the Year 1951-52

BOMBAY

PRINTED AT THE GOVERNMENT CENTRAL PRESS

Obtainable from the Government Publications Sales Depot, Institute of Science Building, Fort, Bombay (for purchasers in Bombay City); from the Government Book Depot, Charni Road Gardens, Bombay 4 (for orders from the mofussil) or through the High Commissioner for India, India House, Aldwych, London, W.C.2. or through any recognized Bookseller.

Price—Annas 13 or 1s. 4d.

1954

No. RES/S. & C. R./7739 of 1954.

Poona-1, 10th June 1954.

From

DR. T. G. SHIRNAME, B.Ag. (Bom.), Ph.D. (Wales), F.S.S. (Lond.),
F.R.Econ.S. (Lond.),

Director of Agriculture, Bombay State, Poona.

To

THE SECRETARY TO GOVERNMENT,

Agriculture and Forests Department,

Bombay.

Sir,

I have the honour to submit herewith the Annual Season and Crop Report of the Bombay State for the year ending the 31st July, 1952.

Yours faithfully,

T. G. SHIRNAME,
Director of Agriculture.

**SEASON AND CROP REPORT OF THE STATE OF BOMBAY FOR
THE YEAR 1951-52**

CONTENTS

SUMMARY TABLES—		
A—Classification of area	25
B—Sources of water supply and the area irrigated therefrom	26
C—Acreage of crops irrigated	27-28
D—Area under all crops	29-32
E—Average yield per acre and the total outturn of the crops	33
F—Farm prices of principal crops	34
G—Agricultural wages	35
H—Number of livestock, poultry and agricultural machinery	36-37
STATISTICAL TABLES—		
I—Rainfall	38-42
II—Classification of area	43-47
III-A—Sources of water supply and the area irrigated therefrom	48-59
III-B—Area of crops irrigated	60-77
IV-A—Area under food crops	78-118
IV-B—Area under non-food crops	119-139
IV-C—Details of cropped area	140-144
V-A—Standard Yield per acre and the yield per acre in lb. of the principal crops	145-180
V-B—Total outturn of principal crops in tons	181-186
VI—Farm prices of certain commodities	187-194
VII—Agricultural Wages	195-207
VIII—Special Cattle Census (Agricultural Stock)...	208-212

SEASON AND CROP REPORT OF THE STATE OF BOMBĀY FOR THE YEAR 1951-52

CHAPTER I—SEASON

1. Considering the *kharif* and *rabi* seasons together, the agricultural year 1951-52 was rather disappointing over the greater part of the State. Judged by the total acreage and output of principal crops, the season was less satisfactory than the preceding one, which itself was not altogether satisfactory. The current season was characterised by rains inadequate in quantity and irregular in distribution—both as regards periodicity and locality—thus resulting in unsatisfactory crop growth. Pre-monsoon showers were confined to the southern parts of the State. The rainfall in June was generally inadequate except in parts of the Konkan division where it was sufficient. The total amount of precipitation in July was not satisfactory in the Gujarat and in most parts of the Deccan, but it was fairly substantial in the hilly tracts of the Karnatak and the Konkan. During this month, the *kharif* sowing operations were in progress and in places where sowing was over, germination was fairly satisfactory. From the end of July till about the third week of August, precipitation was favourable for crop growth over most parts of the State. This was, however, followed by a long drought lasting from about the third week of August till the end of September and this resulted in a serious set-back to crops, which suffered greatly in growth and development and in many parts of the State were actually found withering. Useful showers, however, occurred towards the end of September and in the beginning of October. These showers proved beneficial as they helped to revive the condition of the crops to some extent. These showers were also helpful for *rabi* sowing operations. Late rains which were only light to fair coupled with the prevalence of excessive heat of October and November, were unfavourable for the *rabi* crops. In short, on account of inadequacy and uneven distribution of rainfall during the season, and the long drought of September and excessive heat of October and November, the general condition of the crops remained unsatisfactory resulting in lowering the outturn of principal crops. This also caused scarcity of water and fodder in many parts of the State.

2. *Distribution of rainfall.*—Table I (pages 38-42) compares the rainfall during the year under report with the normal rainfall at each headquarters station in the State. The figures of normal rainfall for each station were obtained from the India Meteorological Department. The following observations may be made from a study of this table.

Pre-monsoon rains.—The pre-monsoon rains exceeded the normal at Mehsana, Godhra (Panch Mahals) and Amreli in the Gujarat, Jalgaon (East Khandesh) and the hilly tracts of the Deccan and Kolhapur, Belgaum, Bijapur, Dharwar and the hilly tracts of the Karnatak. They were below the normal at Ratnagiri and Karwar (Kanara) in the Konkan; Ahwa (Dangs), Ahmednagar, Sholapur and Satara (North Satara) in the Deccan and Sangli (South Satara) in the Karnatak. At other places in the State, these rains were absent.

Monsoon rains.—The monsoon rains were above the normal at Alibag (Kolaba), Ratnagiri and Karwar (Kanara) in the Konkan, Dhulia (West Khandesh) in the Deccan and at Bijapur, Dharwar and in the hilly tracts of the Karnatak. They were below the normal at all the other stations in the State.

Post-monsoon rains.—The post-monsoon rains exceeded the normal at Himatnagar (Sabarkantha) and Ahmedabad in the Gujarat, at all the reporting stations in the Konkan and the Deccan except at Nasik and at Belgaum and in the hilly tracts of the Karnatak. They were below the average at Palanpur (Banaskantha), Broach and Surat in the Gujarat, Nasik in the Deccan and Kolhapur, Bijapur and Dharwar in the Karnatak, but absent at other stations in the State.

Winter rains.—The winter rains were absent at all the reporting stations in the State except at Belgaum and in the hilly tracts of the Karnatak where they were below the normal and amounted to a few cents.

Total rainfall for the season 1951-52.—The total rainfall for the season 1951-52 exceeded the normal at all the district headquarters stations in the Konkan, Poona in the Deccan and at Bijapur, Dharwar and in the hilly tracts in the Karnatak. The rainfall was below the normal at the remaining stations.

3. In the Gujarat, the rainfall during the season was both inadequate and irregular. In June it was only light and scattered although substantial showers were received at the close of the month. The precipitation in July was also not satisfactory being very meagre in the first half of the month. Towards the end of July, however, the precipitation was favourable while the rainfall in the first half of August was also fairly substantial. From the third week of August, however, very little rain was recorded in the division. The abnormal failure of the monsoon seriously affected the acreage and development of the crops, thus resulting in an adverse effect on outturns. The condition of *kharif* crops, over most of the division, was bad and in many localities crops had practically withered for want of adequate moisture in the soil. The crops growing on higher levels either failed or gave very poor yields while the fodder produce was also very much reduced and was of poor quality. The *rabi* crops also did not thrive well for want of sufficient moisture in the soil. The failure of rains thus caused scarcity of water in some areas while fodder shortage was also experienced in many parts of the division. The season under review was generally free from serious infestation of insect pests and plant diseases. Still, appearance of locusts was reported from parts of the northern districts of the division. Aphis trouble and smut on *jowar* were reported from Broach district. Wheat was attacked by white ants in places in Kaira district while hairy caterpillars, grass-hoppers, white ants and root-rot were noticed on the same crop in parts of Banaskantha district.

In the Konkan the ante-monsoon showers were confined to the southern parts of the division. The month of June gave enough rain for *kharif* sowings, while July also recorded fairly substantial amount, causing good germination and satisfactory progress of the crop. In the month of August the rainfall was received with occasional breaks while the rainfall in September was also far below normal requirements. Standing crops consequently were retarded in growth and were actually withering in some areas for want of adequate soil-moisture. Timely rains in the beginning of October proved beneficial to the crops which grew with vigour. The condition of late varieties was considerably improved due to these rains although the early and midlate varieties suffered on account of breaks during the growing period. Some rain occurred in the division in November but the rainfall in

Kolaba and Ratnagiri districts proved rather untimely and harvested crops were damaged to some extent in parts of Kolaba district while vegetables and fodder crops were adversely affected in places in Ratnagiri district. As regards incidence of crop pests and plant diseases, blast and blue-beetles were reported from parts of Thana district while *karpa* was noticed in places in Ratnagiri district. Incidence of woolly aphis, rice case worm, blast and *Kane* was observed in some areas in Kanara district. *Koleroga* was also reported from places in Kanara district.

In the Deccan, there were light showers of rain in the division during the pre-monsoon period. The rainfall in June was light and scattered and July also recorded inadequate rains. Although sowing operations were carried on and germination of crops was fairly satisfactory, more rain was still needed generally. Fairly substantial rain occurred in the first half of August and helped better crop growth. But this was followed by a period of break with intermittent light showers till the end of September. The crops, as a result, suffered considerably in growth and the prospects of the season were thus not bright. A few useful showers occurred in October and proved beneficial and revived the condition of crops to some extent. They also gave an impetus to *rabi* sowing operations. The rainfall, late in the season, was, however, irregular and inadequate. Due to general inadequacy of rainfall of the season and its uneven distribution, the condition of crops remained unsatisfactory. On the whole, both for *kharif* and *rabi* crops, the season was not as favourable as it promised to be at the beginning. As regards crop pests and plant diseases, wheat was affected by a slight attack of rust in places in Sholapur district. Attacks of thrips and mites were reported from West Khandesh district while incidence of *tambora* on potato and aphis on vegetables, pulses and groundnut was observed in parts of North Satara district. Attacks of jassids, aphis and red leaf blight on cotton were reported from many parts of Sholapur district and downy mildew occurred on grapes in some areas of Nasik district. Jassids on cotton, *tambora* on potato, aphis on peas, vegetables and pulses, army worm on *bajri*, stem-borer on sugarcane, sugary disease on *jowar* and caterpillars on gram were reported from a few localities in the division.

In the Karnatak, there was light to fair rain during the pre-monsoon period and the rainfall in the month of June was also inadequate. The precipitation in July was fairly substantial while the month of August also recorded some useful rain. The situation in the western parts of the division appeared fairly satisfactory but in the eastern regions more rain was needed to promote satisfactory growth of crops. Rainfall in the last week of August and in the month of September, however, was far below the requirements having been received sporadically and in small quantities. This gave a set-back to the growth of crops especially in the eastern areas where crops were withering in some parts for want of adequate moisture in the soil. Fortunately fairly widespread rain was received in the last week of September and in the beginning of October. These rains helped to revive the *kharif* crops to some extent and also improved the prospects for the *rabi* season. Absence or deficiency of late rains, however, adversely affected the further development of crops particularly in the eastern parts resulting in reduced yields of crops. As regards crop pests and plant diseases, *kharif jowar* and *bajri* were affected by grass-hoppers in various parts of the division. Incidence of aphis on *jowar* and groundnut was reported from Kolhapur district while the same pest affected to some extent, peas, vegetables, pulses and groundnut in parts of South Satara and Belgaum districts. Sugary disease appeared on *jowar* in parts of Dharwar district.

CHAPTER II—AREA CULTIVATED AND UNCULTIVATED.

(Table II—Pages 43-47)

(Summary Table A—Page 25)

4. *Number of villages.*—During 1951-52, the total number of villages in the State was 36,054 which is less by 101 as compared with the corresponding figure of the previous year. The decrease was mainly noticed in Sabarkantha district where small hamlets which were previously treated as independent villages have now been merged in the neighbouring larger villages. In the case of some other districts also, for administrative convenience a few smaller villages have been merged into or amalgamated with adjoining larger villages.

5. *Total area : reporting and non-reporting areas.*—The total area *i.e.*, the geographical area of the Bombay State was almost stationary being 70,635,100 acres during the current year as against 70,299,100 acres during the previous year thus recording only a small increase of 0.5 per cent.. This increase was mostly due to incorrect area reported for 1950-51 from Sabarkantha, Baroda, Ahmednagar, Poona and Sholapur districts. Of this total area, the reporting area was 64,230,500 acres and the non-reporting area *i.e.*, the area for which no returns exist was 6,404,600 acres as against the corresponding figures of 63,621,200 acres and 6,677,900 acres respectively during 1950-51.

6. *Cropped areas.*—The gross cropped area in the State showed a slight increase from 42,602,600 acres in 1950-51 to 43,182,100 acres in 1951-52 or of 1.4 per cent.. The net cropped area, however, remained almost stationary increasing from 41,144,600 acres during 1950-51 to only 41,311,100 acres during the year under report or by 0.4 per cent.. The twice cropped area showed a considerable increase. It rose from 1,458,000 acres in 1950-51 to 1,871,000 acres in 1951-52 or by 28.3 per cent.. This increase was noticed mainly in the Gujarat and the Deccan divisions, the acreage in the remaining two divisions remaining almost unchanged. The area under forests showed a slight decrease by 1.6 per cent. or by 177,300 acres, it being 10,860,600 acres and 10,683,300 acres in 1950-51 and 1951-52 respectively. During the year under report, the acreage under 'barren and unculturable land', 'land put to non-agricultural uses', 'culturable waste' and 'permanent pastures and other grazing lands'—showed considerable increase over the corresponding figures of last year by 21.1 per cent., 28.6 per cent., 20.5 per cent. and 13.3 per cent. respectively. On the other hand, the acreage under 'land under miscellaneous tree crops and groves not included in area sown', 'current fallows' and 'other fallow land' recorded a large decrease of 42.7 per cent., 14.9 per cent. and 21.3 per cent. respectively. One of the causes of such wide disparity between the corresponding figures of the previous and the current years under different heads of land utilization is lack of strict adherence to the standardised definitions during the first year of its introduction *i.e.*, during 1950-51. As in the course of time, the primary reporting agency gets used to these definitions thoroughly, some of these disparities will get lessened.

CHAPTER III—IRRIGATED AREAS

(Tables III-A and III-B—Pages 48-77)

(Summary Tables B & C—Pages 26-28)

7. *Sources of water supply.*—During the year under report, the number of Government canals reported was 513 as against 739 during 1950-51. This apparent reduction in the number of Government canals is explained as due to wrong reporting and subsequent correction of the number for Nasik district for 1950-51. The total mileage of these canals increased from 987 in 1950-51 to 1186 during the year under

report. The number of private canals, however, almost doubled being 8,341 in 1951-52 as against 4,71 in 1950-51. This was mainly due to a large increase in the number in the case of North Satara district, where it rose from 3,239 to 6,693 during one year. The mileage of private canals also showed considerable increase from 2,909 to 4,475. As the tube wells reported in 1950-51 did not satisfy the specifications prescribed for them by the Agricultural Engineer to Government, Bombay State, Poona, fresh instructions were issued to the Collectors with the result that during the year under report more accurate figures were reported. The reported figure of 303 showed a decline in the number from 1,594 reported for 1950-51. The number of Government masonry wells used for irrigation purposes only declined from 9,065 to 7,679 and this was mainly due to the fact that in the case of Bijapur district the number reported was 'nil' during the year under report as against 4,198 in 1950-51. Similarly, the number of non-masonry Government wells also declined from 10,487 to 4,388 mainly due to the reported decrease in the case of Thana and Bijapur districts from 3,744 and 4,515 respectively of last year to 'nil' for this year. In the case of Thana district, however, the number of Government non-masonry wells reported in 1950-51 has been transferred under private non-masonry wells thus accounting for the increase under that item.

The number of 'Other private masonry wells used for irrigation purposes only' rose from 310,652 in 1950-51 to 325,088 in 1951-52 or by 4.6 per cent.. Similarly, 'Private non-masonry wells' increased from 180,799 recorded during 1950-51 to 214,825 during the year under report or by 18.8 per cent.. The number of wells used for domestic purposes only also rose by 2.5 per cent. or from 176,491 in 1950-51 to 180,927 in 1951-52. The number of wells not in use went down by 10.8 per cent., it being 59,770 during the year under report as against 67,039 in 1950-51. The number of wells having independent ayacut showed a large increase of 84.1 per cent., or from 72,745 in 1950-51 to 133,918 during the year under report. The number of wells supplementing recognised sources of irrigation and the number of reservoirs both decreased from 77,166 and 1,816 in 1950-51 to 33,625 and 1,262 in 1951-52 or by 56.3 and 30.5 per cent. respectively. The number of tanks with ayacut 100 acres or more went down by 32.4 per cent. or from 2,985 to 2,017, whereas the number of tanks with ayacut less than 100 acres went up from 17,568 to 18,684 or by 6.4 per cent., as in Panch Mahals district, the number of tanks, viz., 1,313 shown under the category "tanks having ayacut 100 acres or more" in 1950-51 has been shown under the category "tanks having ayacut less than 100 acres" in 1951-52, and this mainly accounts for the variation.

8. *Irrigated area.*—The total irrigated area increased by 723,100 acres or by 32.5 per cent., during the year under report. The increase in the case of *Kharif jowar*, *rabi jowar*, *bajri*, barley, sugarcane, potato, cotton, groundnut, rape, tobacco and fodder crops was 203.4, 13.3, 145.1, 26.4, 14.0, 23.7, 135.5, 451.1, 56.0, 155.8 and 68.6 per cent. respectively over that of 1950-51.

During the year under report, the percentage of net irrigated area to the net cropped area was 6.4 as against 4.8 of the previous year. The percentage of total irrigated area to the total sown area also rose from 5.2 in 1950-51 to 6.8.

9. *Area irrigated under different sources of irrigation.*—The area irrigated by Government canals, wells and other sources recorded an increase of 92,800, 303,700 and 295,300 acres or 24.9 per cent., 25.4 per cent. and 222.9 per cent., respectively over the corresponding figures of the previous year. The area irrigated under private canals and tanks, however, decreased by 3,200 and 32,600 acres or by 4.5 per cent. and 15.9 per cent. respectively below the corresponding figures of 1950-51.

10. *Irrigated areas under food and non-food crops.*—The total area irrigated by all sources was 2,946,600 acres during the year under report as against 2,223,500 acres during the previous year, thus, showing an increase of 32·5 per cent.. The area irrigated under food crops during 1951-52 was 2,406,400 acres as against 1,924,400 acres in 1950-51, thus, recording an increase of 25·0 per cent.. (The figure for 1950-51 quoted here does not tally with that published in the Season and Crop Report for that year, as in 1950-51 'condiments and spices' were included in 'non-food crops' and in 1951-52 the same have been included under 'food crops' and hence the figures of 'condiments and spices' for 1950-51 have been subtracted from 'non-food crops' and added to 'food crops' for the sake of comparison). The highest significant increase was seen in the case of *bajri*. This increase was by 130,300 acres or by 145·1 per cent.. Besides this increase under *bajri*, there was a big increase under *kharif jowar* also (83,400 acres or 203·4 per cent.). The area under irrigated non-food crops also recorded a big increase of 80·6 per cent. or from 299,100 acres in 1950-51 to 540,200 acres during 1951-52. This increase was mainly due to the rise under groundnut (83,900 acres or 451·1 per cent.), cotton (48,100 acres or 135·5 per cent.) and tobacco (40,200 acres or 155·8 per cent.).

Causes of large variations in some cases *e.g.*, in Government canals, tanks, tube wells, etc., were enquired into with the Reporting Officers and some of the reports received show that these variations were due to the incorrect classification of figures under these heads in 1950-51, as the primary reporters were not thoroughly conversant with the standardised *proforma* of the Season and Crop Report.

CHAPTER IV—CROPPED AREA.

(Tables IV-A, IV-B and IV-C—Pages 78-144).

(Summary Table D—Pages 29-32).

11. *Total area under crops.*—During the year under report the total gross cropped area of 43,182,100 acres showed a slight increase of 579,500 acres or 1·4 per cent. over the corresponding area of 42,602,600 acres during the previous year. Of the total gross cropped area, 13,234,100 acres were in the Gujarat, 2,340,700 acres in the Konkan, 16,540,300 acres in the Deccan and 11,067,000 acres in the Karnatak, the percentage increase in each division being 0·6, 3·6, 2·5 and 0·2 respectively. Food crops occupied 30,518,000 acres or 70·7 per cent., while the non-food crops occupied 12,664,100 acres or 29·3 per cent. of the total area sown. The area under food crops during the year under report remained almost stationary as compared

with the corresponding area of 30,607,600 acres during the preceding year whereas that under non-food crops increased by 5·6 per cent. or from 11,995,000 acres in 1950-51 to 12,664,100 acres in 1951-52.

The table below gives the acreage under food and non-food crops in the four divisions of the State during 1950-51 and 1951-52 :—

(The acreage figures are in hundreds.)

Division.	Food Crops			Non-food Crops		
	1950-51*	1951-52	Percentage increase or decrease.	1950-51*	1951-52	Percentage increase or decrease.
Gujarat ...	82,815	78,808	-4·8	48,725	53,533	+9·9
Konkan ...	17,722	17,853	+0·7	4,875	5,554	+13·9
Deccan ...	127,320	130,186	+2·3	34,100	35,217	+3·3
Karnatak ...	78,219	78,333	+0·1	32,250	32,337	+0·3
State ...	306,076	305,180	-0·3	119,950	126,641	+5·6

*Note.—In 1950-51, the acreage figures under 'condiments and spices' were included in non-food crops' whereas in 1951-52, they have been included under 'food crops' and hence the acreage figures of 'condiments and spices' have been added to the acreage figures of 'total food crops' for 1950-51 and subtracted from the figures of 'total non-food crops' for that year for the sake of comparison with corresponding figures of 1951-52.

It will be seen from the above table, that under food crops there was a decrease of 400,700 acres or of 4·8 per cent. in the Gujarat and an increase of 286,600 acres or of 2·3 per cent. in the Deccan, while in the remaining two divisions the acreage remained practically stationary. On the other hand, the area under non-food crops increased by 669,100 acres and this increase was shared by all the divisions except by the Karnatak but mainly by the Konkan and the Gujarat which contributed 13·9 and 9·9 per cent. increase respectively.

12. *Food crops.*—Among the main food crops, in comparison with the corresponding acreage of the preceding year, the area under paddy declined by 167,500 acres or by 5·1 per cent.. This was entirely due to a large decrease of 17·1 per cent. in the Gujarat, while the remaining divisions actually showed slight

increases. The area under wheat showed considerable decrease of 600,900 acre or of 27·4 per cent.. The decrease was particularly noticeable in the Gujarat being of the order of 468,800 acres or of 58·4 per cent.. The decrease in the Deccan and the Karnatak was 81,200 acres and 51,000 acres or 10·9 and 7·9 per cent. respectively. The area under *kharif jowar* remained almost stationary showing a slight increase of 42,200 acres or of 1·1 per cent.. The decrease by 148,200 acres or by 9·5 per cent. in the Gujarat was balanced by an increase of 85,200 acres and 105,100 acres or of 12·2 per cent. and 6·3 per cent. in the Deccan and the Karnatak respectively. The area under *rabi jowar* declined by 534,800 acres or by 6·8 per cent. for the State as a whole. There was, however, an increase of 16,500 acres or of 3·5 per cent. in the Gujarat, the acreages for the Deccan and the Karnatak declining by 401,200 acres and 149,800 acres or by 7·9 and 6·7 per cent., respectively. In the case of *bajri*, there was an over-all increase of 836,600 acres or of 14·5 per cent. over the figure of last year. This increase was shared by all the divisions, it being 385,700 acres, 346,000 acres and 106,900 acres or 20·5, 11·4 and 12·4 per cent., for the Gujarat, the Deccan and the Karnatak respectively. Area under *ragi*, declined by 26,700 acres or by 3·6 per cent., this decrease being shared by all the divisions except the Konkan where it showed a slight increase of 3,100 acres or of 1·3 per cent.. Area under maize for the State as a whole showed an increase of 113,300 acres or of 25·1 per cent.. This was mainly due to an increase of 115,600 acres or of 31·2 per cent. in the Gujarat, the other divisions showing only a slight decrease. Area under gram declined by 208,200 acres or by 22·1 per cent., this being mainly due to a decrease of 182,800 acres and 34,600 acres or 82·2 and 12·4 per cent. in the Gujarat and the Karnatak divisions respectively. The remaining two divisions, on the other hand, showed a slight increase. The area under *tur* showed an increase of 72,600 acres or of 12·0 per cent. for the State as a whole. This increase was shared by the Deccan and the Karnatak, it being 67,000 acres and 12,200 acres or 37·7 and 5·5 per cent., in these divisions respectively. The area under sugarcane increased by 31,800 acres or by 15·4 per cent. at the State level, this increase being shared by all the divisions of the State. The total area under *kharif* food crops for 1951-52 showed an increase of 9·7 per cent., while a decrease to an extent of 15·2 per cent. was noticed in the case of *rabi* food crops in comparison with the corresponding figures of the previous year.

13. *Non-food crops*.—Area under cotton showed an over-all increase of 401,200 acres or of 11·6 per cent.. The increase was shared by the Gujarat and the Deccan divisions but mainly by the latter where it rose by 235,700 acres or by 57·4 per cent.. Area under groundnut also showed an increase of 305,000 acres or of 11·3 per cent.. This increase was shared by all the divisions being 164,400 acres, 63,500 acres and 77,000 acres or 28·0 per cent., 6·3 per cent. and 6·9 per cent., for the Gujarat, the Deccan and the Karnatak divisions respectively. The total area under sesamum remained almost stationary showing a slight increase of 5,600 acres^s

or of 1·5 per cent.. Area under tobacco showed a decrease of 87,900 acres or of 32·7 per cent., the decrease being shared by all the divisions in the State. The decrease was particularly noticeable in the Gujarat, where it went down by 83,100 acres or by 48·3 per cent.. The total area under *kharif* non-food crops for 1951-52 showed an increase of 13·9 per cent., while a decrease to an extent of 12·2 per cent. was noticed in the case of *rabi* non-food crops in comparison with the corresponding figures of the previous year.

14. On the whole, there has been no appreciable change in the gross area under crops as compared with the figures of 1950-51. The accompanying table gives the gross cropped area, double cropped area, net cropped area and the area under the principal crops in the four divisions of the State during 1950-51 and 1951-52.

1	GUJARAT			KONKAN		
	1950-51	1951-52	Percentage increase or decrease	1950-51	1951-52	Percentage increase or decrease

they have been included in "food crops" and hence the figures of "condiments and spices" have been added to the for the sake of comparison.

CHAPTER V—OUTTURN OF CROPS AND THEIR AVERAGE YIELDS.

(Tables V-A and V-B—Pages 145-186).

(Summary Table E—Page 53).

15. *Outturn of crops.*—The table below shows the outturn in tons for the principal *kharif* and *rabi* food grain crops :—

(Figures in thousands).

Division	<i>Kharif</i> crops.			<i>Rabi</i> crops		
	Cereals	Pulses	Total cereals and pulses.	Cereals	Pulses	Total cereals and pulses.
	Tons	Tons	Tons	Tons	Tons	Tons
Gujarat ...	650	56	706	111	9	120
Konkan ...	543	13	556	35	1	36
Deccan ...	652	120	772	552	101	653
Karnatak ...	557	82	639	381	56	437
Total ...	2,402	271	2,673	1,079	167	1,246

Regarding the outturn of crops, the season under report has been less satisfactory than that of 1950-51. The unfavourable character of the season was reflected in considerable reduction in the estimated outturn of principal crops although there was no corresponding contraction in the area under cultivation of these crops.

The remarks in respect of major crops are given below :—

Rice.—The monsoon started late delaying sowing operations in many parts of the State. In the Gujarat, the unirrigated crop suffered heavily and practically failed over most of the division due to absence of later rains. Even the irrigated crop returned low yields. In the Konkan, the early and mid-late varieties of the crop were affected by drought conditions. In the Deccan also the unirrigated crop suffered to a great extent due to insufficient and uneven distribution of rainfall and the yield was much below the normal. The irrigated crop, however, fared well. In the Karnatak, the germination of the crop was fairly satisfactory but due to inadequate rains during the growth period of the crop, it suffered considerably and returned reduced yields. The total acreage and outturn of the crop viz., 3,099,400 acres and 810,600 tons showed a decrease of 5.1 per cent. and 25.5 per cent. respectively below the corresponding figures of the preceding year of 3,266,900 acres and 1,088,600 tons respectively.

Wheat.—The season for the wheat crop was generally unfavourable all over the State. In the Gujarat, the dry crop suffered considerably due to deficient soil-moisture and almost failed in some areas. The irrigated crop, however, fared better. In the Deccan and the Karnatak also due to long breaks and deficient rainfall, the growth of the crop was not satisfactory and the yield was estimated much below the normal. Attack by flea beetle was noticed in some parts of Broach district, while rust was reported from parts of Amreli and Bijapur districts. As compared to the acreage and outturn figures of 1950-51 viz., 2,191,200 acres and 366,300 tons respectively, this year's area and outturn viz., 1,590,300 acres and 238,000 tons showed a decrease of 27.4 per cent. and 35.0 per cent. respectively.

Kharif Jowar.—In the Gujarat, due to failure of late rains and inadequate soil-moisture, the crop mostly failed in the division. In the Deccan, on account of drought conditions prevailing during early stages of crop growth, the crop suffered but improved to some extent later by the rains received at the end of September and in the beginning of October. The condition of the crop in the Karnatak division was similar to that of the Deccan. Slight attack of grass-hoppers was noticed in some areas of Bijapur and South Satara districts. Smut attack was reported from Kolhapur district, while aphids and rust were reported from places in South Satara district. The acreage remained almost the same, it being 3,978,400 acres during 1951-52 as against 3,936,200 acres during the previous year, thus showing a slight increase of 1.1 per cent.. The outturn, however, went down from 747,700 tons in 1950-51 to 683,100 tons in 1951-52 or by 8.6 per cent..

Rabi Jowar.—Due to inadequate rainfall, the crop in the Gujarat suffered in growth and in yield. Similarly, in the Deccan and the Karnatak, the crop suffered for want of adequate soil-moisture and the yield did not come up to early expectations on account of failure of late rains. Slight attack of smut and aphids trouble were reported from places in Broach district. Stem-borer was noticed in places of South Satara district. The area decreased from 7,813,300 acres in 1950-51 to 7,278,500 acres during the year under report or by 6.8 per cent.. The outturn, however, rose from 634,300 tons in 1950-51 to 666,200 tons in 1951-52 or by 5.0 per cent..

Bajri.—In the Gujarat, the rainfall proved somewhat inadequate for this crop and affected the crop yield. In the Deccan and the Karnatak, the germination of the crop was satisfactory but on account of long breaks in rains, the crop suffered to some extent. The crop suffered heavily due to drought conditions in the months of August and September in parts of North Satara and East Khandesh districts. It was also reported withering in places of Bijapur and Dharwar districts. Attacks of grass-hoppers and beetle-worms were reported from Nasik district in the Deccan. Slight attack of grass-hoppers was noticed in parts of Bijapur district. The area and outturn of the crop increased from 5,783,200 acres and 504,800 tons in 1950-51 to 6,619,800 acres and 553,800 tons in 1951-52 or by 14.5 and 9.7 per cent. respectively.

Maize.—In the Gujarat, the crop condition was fairly good in the beginning of the season but it suffered in growth to some extent due to long breaks in rains during the growing period. In the Deccan and the Karnatak, the crop fared well. The area and outturn of the crop increased from 450,500 acres and 76,800 tons in 1950-51 to 563,800 acres and 122,400 tons in 1951-52 or by 25.1 per cent. and 59.4 per cent. respectively.

Ragi.—In the Gujarat, the rainfall was inadequate and the crop suffered heavily. In the Konkan, the rainfall was generally adequate although in some areas in Ratnagiri district the yield of the crop was affected due to break in rains. The prolonged drought conditions prevailing during the growing period had

adverse effect on the yield of the crop in the Deccan and the Karnatak. The area and outturn of the crop viz., 720,800 acres and 162,200 tons were 3·6 per cent. and 23·5 per cent. respectively below the area and outturn viz., 747,500 acres and 212,100 tons of 1950-51.

Gram.—In the Gujarat, the rainfall was inadequate in many areas of the division. As such the crop suffered considerably and gave reduced yield. Irrigation was resorted to wherever possible. Still area under the crop was reduced considerably in Panch Mahals district. The crop in the Konkan was fairly satisfactory. In the Deccan and the Karnatak also the crop suffered in yield due to failure of late rains. Attack of pod-borers was reported from places in the Karnatak. The area and outturn of the crop were less by 22·1 per cent. and 44·5 per cent. or went down from 943,700 acres and 117,200 tons in 1950-51 to 735,500 acres and 65,100 tons respectively in 1951-52.

Cotton.—In the Gujarat, due to shortage of rain and intense heat, the crop suffered in growth in many parts of the division. Again abnormal cold season and unsatisfactory dew fall resulted in the reduction of total output of the crop, while the quality of the produce was also affected by attack of boll-worm in some parts. In the Deccan, the distribution of rainfall was not satisfactory and continued dry spell during the growing period adversely affected the crop and reduced its yield. In the Karnatak, the crop made fairly satisfactory progress in the early stages of its growth, but due to insufficient moisture in the soil and unfavourable weather conditions later, it suffered much especially in the eastern areas where it was seen withering in some places. The crop was affected by boll-worm, red cotton bug and root-rot in places in the Gujarat. It was also damaged in early stages by flying locusts in parts of Banaskantha district. Attacks of aphids, jassids and angular leaf spot were reported from parts of the Deccan. Jassids damaged the crop to some extent in Kolhapur district. Attack of boll-worms, red cotton bug, leaf roller and red leaf blight were reported from parts of South Satara district. The acreage under cotton increased from 3,451,700 acres in 1950-51 to 3,852,900 acres in 1951-52 or by 11·6 per cent.. The outturn, however, went down by 30·4 per cent. or from 786,900 bales in 1950-51 to 547,700 bales during the year under report.

16. *Yield per acre.*—During the year under review, Statewide crop estimating surveys were continued on seven principal crops, viz., paddy, *tajri*, *klarif jowar*, wheat, *rabi jowar*, cotton and tobacco, while those on maize, groundnut and gram which were restricted to one district each so far were also extended to other major crop growing districts. The survey on *ragi* was continued in Ratnagiri district and was further extended to Dangs district.

17. *Kharif crops.*—The State as well as divisionwise average yield per acre of *kharif* food crops based on crop estimating surveys are given below :—

Division	Yield per acre								
	Rice			Kharif Jowar			Bajri		
	1950-51	1951-52	Percentage increase or decrease	1950-51	1951-52	Percentage increase or decrease	1950-51	1951-52	Percentage increase or decrease
	Lb.	Lb.		Lb.	Lb.		Lb.	Lb.	
Gujarat ..	516	86	—83·3	266	146	—45·1	161	192	+19·3
Konkan ..	963	929	—3·5	560	517	—7·7
Deccan ..	522	550	+5·4	552	528	—4·3	222	196	—11·7
Karnatak ..	948	782	—17·1	521	511	—1·9	177	145	—18·1
State ..	746	586	—21·4	425	385	—9·4	196	187	—4·6

From the table it is seen that for rice the average yield per acre for the State was 586 lb. as against 746 lb. in 1950-51. The highest average yield of 929 lb. was obtained in the Konkan as against 963 lb. during the previous year. In the Gujarat, however, the crop fared very badly yielding only 86 lb. per acre as against 516 lb. in the previous year. The average yield per acre of *kharif jowar* for the State was 385 lb. as against 425 lb. of the previous year. The average yield went down in all the divisions especially in the Gujarat, where the reduction was from 266 lb. to 146 lb. or by 45.1 per cent.. The average yield per acre of *bajri* for the State was 187 lb. as against 196 lb. during the previous year. The average yield for the Gujarat rose from 161 lb. in 1950-51 to 192 lb. in 1951-52 or by 19.3 per cent.. In the Deccan and the Karnatak, however, the yield went down from 222 lb. and 177 lb. to 196 lb. and 145 lb. or by 11.7 per cent. and 18.1 per cent. respectively. This resulted in a decrease of 4.6 per cent. at the State level.

The average yield per acre of *tur* and sesamum (based on anna-valuation figures of the Revenue Department) for the four divisions of the State are as shown below :—

Division	Yield per acre					
	Tur.			Sesamum		
	1950-51	1951-52	Percentage increase or decrease	1950-51	1951-52	Percentage increase or decrease
	Lb.	Lb.		Lb.	Lb.	
Gujarat ...	390	300	—23.1	230	127	—44.8
Konkan ...	327	265	—19.0	257	204	—20.6
Deccan ...	456	425	—6.8	150	148	—1.3
Karnatak ...	555	482	—13.2	189	204	+7.9
State ...	469	407	—13.2	213	139	—34.7

For both the crops viz., *tur* and sesamum, the State average yields per acre have gone down from 469 lb. and 213 lb. to 407 lb. and 139 lb. respectively. In the case of *tur*, the highest yield of 482 lb. was recorded in the Karnatak as against 555 lb. during the previous year. All the divisions, however, shared the decrease. For sesamum, the highest average yield per acre of 204 lb. was obtained in the Konkan and the Karnatak as against 257 lb. and 189 lb. respectively during the preceding year. Thus, in the Karnatak, the average yield rose from 189 lb. to 204 lb. or by 7.9 per cent., whereas in the other divisions it went down.

18. *Rabi crops*.—The State and divisionwise average yields per acre of *rabi* crops (based on crop estimating surveys) are as under :—

Division	Yield per acre					
	Wheat			Rabi Jowar		
	1950-51	1951-52	Percentage increase or decrease	1950-51	1951-52	Percentage increase or decrease
	Lb.	Lb.		Lb.	Lb.	
Gujarat ...	512	742	+44.9	377	285	-24.4
Konkan	448	640	+42.9
Deccan ...	374	291	-22.2	158	209	+32.3
Karnatak ...	204	157	-23.0	196	178	-9.2
State ...	374	335	-10.4	182	205	+12.6

A perusal of the above table shows that the average yields per acre of wheat and *rabi jowar* for the State were 335 lb. and 205 lb. respectively as against the corresponding figures of 374 lb. and 182 lb. of the previous year. The average yield of wheat in the Gujarat rose by 44.9 per cent. being 742 lb. in 1951-52 as against 512 lb. of 1950-51. It was almost five times the average yield obtained in the Karnatak and two and a half times that obtained in the Deccan. The average yield in the Deccan and the Karnatak went down during the current year by 22.2 per cent. and 23.0 per cent. respectively as compared with the figures of the previous year. In the case of *rabi jowar*, the average yield per acre rose from 158 lb. to 209 lb. or by 32.3 per cent. in the Deccan and went down from 377 lb. and 196 lb. in 1950-51 to 285 lb. and 178 lb. or by 24.4 per cent. and 9.2 per cent. in the Gujarat and the Karnatak respectively in 1951-52. The average yield over a small area of about 700 acres in the Konkan rose from 448 lb. in 1950-51 to 640 lb. during the year under report or by 42.9 per cent..

The average yield per acre of *rabi* crops viz., linseed, rape and mustard (based on anna-valuation figures of the Revenue Department) and gram (based partly on crop-estimating surveys and partly on anna-valuation figures) for the four divisions of the State are given below :—

Division	Yield per acre								
	Gram			Linseed			Rape and Mustard		
	1950-51	1951-52	Percentage increase or decrease	1950-51	1951-52	Percentage increase or decrease	1950-51	1951-52	Percentage increase or decrease
	Lb.	Lb.		Lb.	Lb.		Lb.	Lb.	
Gujarat ..	331	175	-47.1	224	203	-9.4	363	360	-0.8
Konkan ..	273	313	+14.7
Deccan ..	265	223	-15.8	147	166	+12.9	280	164	-41.4
Karnatak ..	256	156	-39.1	181	161	-11.0	264	213	-19.3
State ..	273	198	-28.8	170	162	-4.7	356	328	-7.9

The State average yield per acre of gram was 198 lb. as against 278 lb. of the previous year, thus, showing a decrease of 28·8 per cent. Only in the case of the Konkan the average yield rose from 273 lb. to 313 lb. or by 14·7 per cent. In the remaining divisions, viz., the Gujarat, the Deccan and the Karnatak, however, the average yield decreased by 47·1 per cent., 15·8 per cent. and 39·1 per cent, respectively.

In the case of linseed, the average yield per acre for the State was 162 lb. during 1951-52 as against 170 lb. during the previous year, while for rape and mustard, the average yield per acre was 328 lb. during the year under report as against 356 lb. during 1950-51. In the case of linseed, all the divisions except the Deccan recorded a fall in yield, while the latter showed an increase of 12·9 per cent.

19. *Cotton, Sugarcane and Tobacco.*—The table below gives the average yield per acre of cotton (based on crop estimating surveys), sugarcane (based on anna-valuation figures) and tobacco (based partly on crop estimating surveys in major crop growing districts in the Gujarat and the Karnatak and partly on anna-valuation figures):—

Division	Yield per acre								
	Cotton			Sugarcane			Tobacco		
	1950-51	1951-52	Percent- age increase or decrease	1950-51	1951-52	Percent- age increase or decrease	1950-51	1951-52	Percent- age increase or decrease
	Lb. of lint	Lb. of lint		Lb. of gul	Lb. of gul		Lb. of dry leaf	Lb. of dry leaf	
Gujarat ..	106	52	— 50·9	4,480	3,961	— 11·6	672	596	— 11·3
Konkan	3,848	4,535	+ 17·9
Deccan ..	99	84	— 15·2	6,533	6,626	+ 1·4	498	429	— 13·9
Karnatak ..	57	46	— 19·3	6,757	6,129	— 9·3	459	380	— 15·3
State ..	89	56	— 37·1	6,482	6,272	— 3·2	596	492	— 17·5

The average yield per acre of cotton for the State was 56 lb. of lint during the current year as against 89 lb. in the previous year. The yield went down by 50·9 per cent., 15·2 per cent., and 19·3 per cent. in the Gujarat, the Deccan and the Karnatak respectively. The yield per acre of sugarcane for the State was 6,272 lb. (*gul*) as against 6,482 lb. (*gul*) during the previous year. The yield of tobacco was 492 lb. of dry leaf as against 596 lb. during 1950-51.

20. *Cotton.*—During the year under review, the total area and outturn of cotton were 3,853 thousand acres and 548 thousand bales (of 392 lb. each) respectively. The corresponding figures for the previous year were 3,452 thousand acres and 787 thousand bales. Although the acreage showed an increase of 11·6 per cent., the outturn dropped down by 30·4 per cent. thus, reflecting the adverse effect of the season.

The table below gives the total area and outturn of cotton in the different divisions of the State during 1950-51 and 1951-52 :—

(Figures in thousands)

Division	Area in acres			Outturn in bales of 392 lb. each.		
	1950-51	1951-52	Percent- age increase or decrease	1950-51	1951-52	Percent- age increase or decrease

Deccan ...	411	646	+ 57.2	104	139	+ 33.7
Karnatak ...	1,113	1,109	— 0.4	161	131	— 18.6
State ...	3,452	3,853	+ 11.6	787	548	— 30.4

CHAPTER VI—PRICES.

(Table VI—Pages 187-194)

(Summary Table F—Page 34)

21. Table VI of the report gives the average prices during the harvest period of the principal crops in different districts. During the first half of the year, the shortage of food crops resulting from low crop yields due to adverse seasonal conditions continued to maintain prices at high level. The latter half of the year, however, witnessed a downward trend in prices but the continuance of price control prevented sharp fluctuations in the prices of principal foodcrops. The process of readjustment of prices at a lower level does not seem to be complete as yet and this adjustment necessitates measures for arresting the deterioration of the situation which may result in fall in production.

22. The major variations in the average prices at harvest time, of principal commodities at the State level and in its different divisions are summarised below :—

At the State level, the average price of rice (paddy) viz., Rs. 12-15 0 per maund of 82-2/7 lb. was higher by 2.5 per cent. than that of the previous year. The price rose by 3.4, 3.3, 3.2 and 1.1 per cent. in the Gujarat, the Konkan, the Deccan and the Karnatak respectively. The average price of wheat viz., Rs. 17 11-0 per maund was higher by 1.4 per cent. for the State than that of the previous year, it being 0.4, 6.1 and 3.2 per cent. above last year's prices in the Gujarat, the Konkan and the Deccan respectively. It, however, fell by 1.5 per cent. in the Karnatak. The average price of Rs. 11-0-0 per maund of *jowar* was higher by 1.7 per cent. when compared with the price of the previous year, having gone up by 1.7, 5.5, 7.0 and 8.0 per cent. in the Gujarat, the Konkan, the Deccan and the Karnatak respectively. The average price of *bajr* of Rs. 12-1 0 per maund rose by 4.9 per cent. when compared with that of the previous year. The price increased in the

Gujarat, the Deccan and the Karnatak by 2.0, 8.6 and 11.6 per cent. respectively but fell by 8.7 per cent. in the Konkan. The average price of Rs. 10-12-0 for barley ruled higher by 9.6 per cent. than that in the previous year. It rose by 43.8 and 3.4 per cent. in the Deccan and the Karnatak respectively, but fell by 1.1 per cent. in the Gujarat. The apparent large increase in prices in the Deccan is due to non-availability of prices for the last year. The average price of Rs. 10 5 0 for *nachni* was lower than that of the previous year by 2.9 per cent. It rose by 14.1 and 0.1 per cent. in the Deccan and the Karnatak respectively but fell by 4.0 and 12.2 per cent. in the Gujarat and the Konkan respectively. The average price of maize viz., Rs. 10-11-0 was higher by 15.5 per cent. as compared with the price of the previous year and rose by 2.6, 8.7, 23.2 and 4.7 per cent. in the Gujarat, the Konkan, the Deccan and the Karnatak respectively. The average price of kodra of Rs. 10 4 0 was lower by 1.2 per cent. than that of the previous year. It rose by 1.0 and 3.6 per cent., in the Gujarat and the Konkan respectively, but fell by 4.5 and 13.2 per cent. in the Deccan and the Karnatak respectively. Among pulses, the average price of *tur dal* at State level viz., Rs. 18 8-0 was higher by 0.7 per cent. It fell by 9.7 per cent. in the Gujarat and was stationary in the Konkan but ruled higher by 2.6 and 10.9 per cent. in the Deccan and the Karnatak respectively. The average price for gram which was Rs. 18-1-0 per maund rose by 1.4 per cent. having gone up by 2.3 and 9.8 per cent. in the Gujarat and the Karnatak respectively, but fell by 4.4 per cent. in the Deccan. The average price of *gul* viz., Rs. 16-2-0 was lower than that of the previous year by 12.8 per cent. It rose by 2.6 per cent. in the Gujarat while it went down by 5.3, 13.2 and 7.6 per cent. in the Konkan, the Deccan and the Karnatak respectively.

The average price of groundnut viz., Rs. 18-0-0 was lower by 6.5 per cent. than that of the previous year, being 13.5 and 4.4 per cent. lower than the prices of last year in the Gujarat and the Deccan respectively but it rose by 1.4 per cent. in the Karnatak. The average price of tobacco of Rs. 145-6-0 was lower than that in the previous year by 0.4 per cent. having decreased by 2.6 per cent. in the Gujarat. It, however, went up by 1.0 and 2.7 per cent. in the Deccan and the Karnatak respectively. The State level average price of cotton viz., Rs. 35-12-0 was lower by 9.1 per cent. than that in the preceding year. It decreased by 12.0, 10.9 per cent. in the Gujarat and the Deccan respectively, but ruled higher by 4.8 per cent. in the Karnatak.

23. The table below compares the prices of Broach and Jarila cotton ruling at Bombay during the year under review, with those of the previous year and the average of the preceding five years :—

Variety of cotton	Prices per khandi of 784 lb.			Variations	
	Average for five years ending 1950	1951	1952	Compared with the average prices	Compared with the prices of 1951
	Rs.	Rs.	Rs.	Per cent.	Per cent.
Broach ...	718	955	925	+ 29.0	- 3.1
Jarila ...	594	865	820	+ 38.0	- 5.2

At the beginning of the season 1951-52, ceiling levels of cotton prices were fixed by the Textile Commissioner, Bombay, at Rs. 820 for Jarila and at Rs. 925 for Broach (Vijay) in each case per *khandi* of 784 lb.. The prices remained at about this level with slight variations till February, 1952, but owing to large influx of foreign cotton thereafter and due to general slump in commodity prices, there was a recession in cotton prices during April and May, 1952. From June 1952, however, an upward trend was again noticed.

In the sub-joined table, the prices of Jarila fine and Broach (Vijay) cotton ruling at Bombay have been given for those months for which these prices were available :

(Prices per *khandi* of 784 lb.)

Year and month.				Jarila fine (average price).	Broach (Vijay) fine (average price).
				Rs.	Rs.
1951					
August	815	Not available.
September	810	Do.
October	812	Do.
November	817	Do.
December	820	Do.

January	820	Do.
February	820	Do.
March	695	802
April	650	775
May	625	782
June	670	805
July	720	836

CHAPTER VII—AGRICULTURAL WAGES

(Table VII—Pages 195-207)

— (Summary Table G—Page 35)

24. In this State, according to the Manual of Revenue Accounts, agricultural labour is classified under three categories, viz., (a) skilled, (b) ordinary and (c) field labour. Skilled labour comprises carpenters, black-smiths and cobblers; ordinary labour consists of load-carrying coolies, well-diggers, masons or carpenters' assistants, earth workers, etc., while field labour includes ploughmen, sowers, reapers, weeders, transplanters, etc. In this report, (in Table VII—Agricultural Wages) in addition to the above three categories, one more is added, viz., herdsmen, whose main work is to collect livestock from different owners and to feed them in the jungle during the day and bring them back in the evening to the owners' place.

25. Table VII of the report gives districtwise figures of wages of different classes of agricultural labour. A perusal of the Table shows, that during the agricultural season, 1951-52, owing to rise in the cost of essential commodities and the general dearth of agricultural labour, particularly during the harvest period, the agricultural wages continued to be high and ruled somewhat higher than during the corresponding period of the previous year. The annual average wages for each class of labour were higher than in the previous year except in the case of carpenter. In the latter case, although the annual average did not show any variation as compared with the average of the previous year, the wages ruled higher in all the months of the year except in July, 1951, and January, 1952, when it was low and in August and December, 1951, when it remained stationary. A notable feature of the wages during the year was that they remained almost constant throughout the year for all classes of labour.

CHAPTER VIII—AGRICULTURAL STOCK

(Table VIII—Pages 208-212)

(Summary Table H—Pages 36-37)

26. Table VIII of this report gives the details of livestock, poultry and agricultural machinery and implements in the Bombay State as enumerated in the Census of Livestock held in January, 1951. The details were published in the Season and Crop Report for 1950-51, and the same figures and remarks are repeated in the present report and will be continued in the subsequent reports till the next quinquennial census is taken.

Cattle.—There is an increase in the number of cattle from 11,422,021 to 11,915,298 or of 4·3 per cent., over that of the preceding year. The number of breeding bulls over three years remained almost the same as in the previous year, while the number of other males over three years increased by 6·4 per cent. The number of breeding cows over three years, however, went down by as much as 34·1 per cent. as against which there was an increase in the number of other cows over three years by as much as 112·4 per cent. The number of young stock showed an increase of 4·3 per cent. over that of 1949-50.

Buffaloes.—The total number of buffaloes decreased from 4,293,336 of 1949-50 to 4,161,950 or by 3·1 per cent.. The number of breeding bulls over three years showed a considerable drop of 68·2 per cent., while the number of other males over three years, breeding cows over three years and young stock also decreased by 10·0, 18·8 and 13·1 per cent. respectively. The number of other cows over three years, however, increased by 132·2 per cent.

Sheep and Goats.—While the number of sheep went down by 17·0 per cent., that of goats increased by 7·2 per cent. as compared with the corresponding number of the previous year.

Agricultural Machinery and Implements.—During 1950-51 the number of tractors in the State was 1,072. Unfortunately, data for earlier years are not available, but the recent drive for Grow More Food has definitely resulted in an increase in the number of tractors. The number of ploughs was 2,582,286, while the number of carts totalled 1,077,372.

CHAPTER IX—AGRICULTURAL OUTLOOK

27. As mentioned in Chapter I of the Report, the agricultural season of 1951-52 was, on the whole, disappointing over the greater part of the State. The season was characterised by insufficient rains and uneven precipitation. Early rains were not upto requirements, and there was a long drought from about the middle of August till the end of September. This resulted in a serious set back to crops which were retarded in development. The inadequacy of rainfall and prolonged breaks in rains resulted in lowering the outturns of principal crops and also caused scarcity of water and fodder in many areas of the State. The season under review was disappointing as judged by the acreage and outturn of principal crops. It was less satisfactory than the preceding one, which itself was unsatisfactory for crop production.

28. The table below compares for the years 1950-51 and 1951-52, the actual acreage sown and the outturn of foodgrain crops in the State and in its different divisions.

(Figures in thousands)

Division	Area in acres.		Outturn in tons	
	1950-51	1951-52	1950-51	1951-52
Gujarat ...	8,098	7,707	1,285	826
Konkan ...	1,697	1,707	615	592
Deccan ...	12,333	12,529	1,373	1,425
Karnatak ...	7,500	7,501	1,178	1,076
State ...	29,628	29,444	4,451	3,919

29. The Grow More Food measures such as multiplication and distribution of improved seeds, preparation of compost and farm yard manure, supply of manure mixtures, groundnut cake, sulphate of ammonia, etc., were carried on vigorously while propaganda in favour of lift irrigation project, extension of vegetables and fruits, tractor ploughing and boring schemes, etc., was intensified through the agency of the District Development Boards and the Revenue and Agricultural Departments. The cultivators extended their co-operation in these efforts and availed themselves of the concessions and benefits afforded by the above measures. The Government advanced large amounts of *tagai* loans to the needy cultivators to enable them to construct or repair wells, to purchase bullocks, seeds, agricultural implements, etc.. The Government waste lands were leased out to the cultivators for growing food crops. The agriculturists took eagerly to intensive and improved methods of cultivation.

The depressing agricultural situation caused by the unhelpful rains and unsatisfactory character of the season created shortage of food and fodder resulting in scarcity conditions in some areas. Food supply was, however, ensured by systematic

procurement and equitable distribution of foodgrains through a regulated system of rationing. Fodder for cattle was also supplied through Government agency by opening grass depots.

30. The condition of cattle was generally satisfactory. Haemorrhagic septicaemia, rinderpest, foot and mouth and other animal diseases prevailed but these epizootics were brought under control by prompt and effective measures and they did not assume such proportions as would seriously interfere with the normal progress of agricultural operations.

31. The table below gives the average prices of agricultural commodities prevailing at harvest time for the years 1947-48 to 1951-52.

Prices in rupees per maund of 3,200 tolas except for cotton the prices for which are recorded in rupees per khandi of 784 lb.

Commodity	Centre	1947-48	1948-49	1949-50	1950-51	1951-52
		Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
A. Foodcrops—						
Jowar	(1) Sholapur	10 0 0	13 5 4	13 5 4	11 8 0	11 0 0
Bajri	(2) Nasik	13 5 4	20 0 0	11 0 0	11 0 0
Rice	(3) Thana	20 0 0	20 0 0	20 0 0	20 0 0	20 0 0
B. Export Crops—						
Wheat	(1) Ahmedabad	20 2 4	20 5 4
Groundnut	(2) Karad	20 0 0	20 0 0	20 0 0	18 5 4	12 4 11
Cotton (Jarila)	Bombay	865 0 0	620 0 0	620 0 0	865 0 0	820 0 0

The centres mentioned in the above table are representative markets and accordingly the prices of agricultural produce in these markets indicate the general tendency in the variations of prices of these commodities in the State.

CHAPTER X—CONDITION OF AGRICULTURAL POPULATION.

32. The unfavourable seasonal conditions described in Chapter I of the Report had the effect of reducing crop yields and creating scarcity conditions in certain areas. The level of agricultural wages continued to remain high and the rise in prices of essential commodities resulted in the high cost of cultivation. The economic condition of the agricultural population in the State in general and in the scarcity affected areas in particular was also adversely affected to a considerable extent. In order to ease the situation, Government started scarcity works in many centres. Liberal grant of subsidies, suspension of Government dues and remission of land revenue afforded considerable relief to the cultivators. The cattle owners in the scarcity affected regions had to migrate with their cattle to forest areas in search of fodder for their animals and in order to minimise the fodder trouble, Govern-

ment made necessary provision to supply fodder to the needy cultivators. Various schemes were in operation in furtherance of the Grow More Food drive and efforts were exerted by the Government to bring more waste land under cultivation; Procurement and distribution of food grains were also organised to ensure adequate supplies to consuming centres. The statutory control over prices and movement of major food grains were in force during the year under Report. The enforcement of the Bombay Tenancy and Agricultural Land Act has benefited the tenant class and created in it a sense of security from usurious practices of the landlords. The Act also acted as an incentive to the poor tenants for better cultivation of the land and in bringing fallow lands under cultivation. The Bombay Money Lenders Act and the Bombay Agricultural Debtors' Relief Act also afforded protection to the agriculturists from the exploitation of the money lenders and thus helped them to improve their economic condition.

SUMMARY TABLE A.

CLASSIFICATION OF AREA.

(Figures in hundreds)

Heads of Classification.	1950-51		1951-52		Percentage increase or decrease.
	Area	Percentage of total.	Area	Percentage of total.	
	Acres.		Acres.		
Total area (by village papers) ...	702,991	706,351	+0.5
Forests	108,606	15.4	106,833	15.1	-1.6
Barren and uncultivable land ...	44,270	6.3	53,619	7.6	+21.1*
Land put to non-agricultural uses.	10,690	1.5	13,744	1.9	+28.6*
Culturable waste ...	26,257	3.7	31,639	4.5	+20.5*
Permanent pastures and other grazing lands.	22,607	3.2	25,618	3.6	+13.3*
Land under miscellaneous tree crops and groves not included in area sown.	11,480	1.6	6,582	0.9	-42.7*
Current fallows	30,917	4.4	26,317	3.7	-14.9
Other fallow land ...	36,718	5.2	28,888	4.1	21.3*
Net area sown ...	411,446	58.5	413,111	58.6	+0.4
Area sown more than once ...	14,580	2.1	18,710	2.6	+28.3
Total cropped area ...	426,026	60.6	431,821	61.2	+1.4

* Partly due to lack of proper comprehension of definitions occurring in the standardised *pro-forma*, on the part of the primary reporting agency, large disparities are noticed in some cases between the corresponding figures of 1950-51 and 1951-52.

SUMMARY TABLE B.

SOURCES OF WATER SUPPLY AND THE AREA IRRIGATED THEREFROM IN THE BOMBAY STATE DURING 1951-52.

		1950-51.	1951-52.	Percentage increase or decrease.

Total area under irrigated crops ...	22,235	29,466	+32.5

* The high percentage figures do not correctly convey the idea of increase or decrease in the areas, as the area figures under the crops are of small magnitude.

† In the Season and Crop Report for 1950-51, the figures for "Condiments and spices" were included under "Non-food crops". Now the same have been excluded from "Non-food crops" and included under "Food Crops" for obtaining comparative figures.

N. A.=Not available.

Note.—The figures for 1949-50 and 1950-51 are not strictly comparable except for the groups "total of Cattle and Buffaloes" partly due to the fact that the census enumeration forms utilised for 1951 livestock census differed from those used in 1949-50 census and partly to the possible difference in the geographical coverage of the two censuses.
