CHAPTER-I.

Location:- The district Thana forms a part of the north Konkan region which lies between the Sahyadri Hills in the east and the Arabian Sea in the west. It has a costal line of about 70 miles.

Boundaries:- The district lies between  $18^{\circ} 42''$  and  $20^{\circ} 20'$  N. latitude and  $70^{\circ} 45'$  and  $73^{\circ} 48'E.$  longitude. It is surrounded by Surat District of Gujarat State and the centrally administered territory of Dadra and Nagar Haveli in the north, Sahyadrian Range and beyond Sahyadri Nasik, Ahmednagar and Poona Districts in the east; Kolaba District to the South; Greater Bombay district to the South-West and Arabian Sea towards the west.

Topography:- The drainage of the district gathers along the two valleys of the Vaitarna and Ulhas rivers which have their source in the Sahyadri range. From Vahigaon village near Kasara where Vaitarna enters the District, the valley is deep and narrow for about sixteen miles. From Kalambhai village at the eastern border of Wada Taluka the valley opens out for about twenty miles till it reaches the spurs of Takmak range. Vaitarna flows for about 20 miles through the fertile coastal region and falls into the Sea at Agashi. Ulhas river rises in Bhor Pass in Poona District and enters the District near Vangani and flows towards Kalyan town. Its two Chief tributaries Parvi and Balu rivers meet Ulhas river near Kalyan town. Beyond Kalyan it broadens into estuary and passes through the marshy lands and hills. As it leaves the main land it widens into a salt water Strait and finally meets the sea near Bassein.

Soil :- The Soil all along the coast and particularly in parts of Dahanu, Palghar and Bassein Talukas is blackish and contains sand; which is suitable for garden crops. Towards the east the soil is red and brown. It is not very deep but is

Suitable for rice. Further east of the hill slope, the soil is poor and is used only for growing grass or coarse grains viz. Nagli, Vari etc. In the valleys, there are patches of black soil in Bhiwandi, Kalyan, Mokhada and Shahapur talukas where rice is grown.

Rivers: Vaitarna is the principal river of the district. It rises in the Trimbak Hills in Nasik District opposite the source of Godavari and enters Thana District at Vahigaon near Kasara. The Chief of its tributaries are the Berjha or Pinjal, Deherja, Surya and Susari from right and the Tansa from the left.

Ulhas is the other important river. It rises near the Bhor Pass and after a north west course of about 80 miles enters the sea at Bassein. Its tributaries are Chilhar, Poshri Barvi, Bhalsa and Kalu.

Hills: The main hill system is the Sahyadri range and its offshoots. The Sahyadri range which runs from north to South form an unbroken boundary in the east. Besides this main range and its western spurs there are outlying ranges and spurs with isolated peaks over the whole district, but none of them rises higher than Sahyadris.

The prominent peaks in this Sahyadrian Range are Valvihir, Kalsubai, over the shoulder of Tiger's terrace known as "Vaghacha Pathar" and Harishchandragad. One of the offshoots of the Sahyadri, which runs west end of Anjairi and Trimbak range, from the watershed between the Damanganga and Vaitarna Valleys.

Minerals: Thana is not rich in workable minerals. Bauxite deposits occur in Tungar Hill in Bassein Taluka. Inferior reddish or yellowish lateric clay is available at Gokhivare near Bassein Road Station and the reserves are estimated at 65000 tons. The material is stated to be suitable for bricks,

drainage pipes, tiles and cheap red glazed ware. There are springs of mineral waters having certain curative value. They are at Kokanur, Satiwali, Vajreshwari and other places. Traces of sulphur are found in the hot springs at Vajreshwari.

Salt producing centres are at Rai-Murdhe, Tuchandra, Bhyandar, Belapur and Bassein.

Administrative Set-up:- The district is at present divided into 10 talukas and 2 Mahals. There are 20 Towns and 1599 villages inhabited in the district. A Zilla Parishad and 12 Panchayat Samities have been established in the year 1962. The areas under jurisdiction of the Zilla Parishad and Panchayat Samities correspond to the district and taluka boundaries separately except in the case of Municipal Towns which are not covered by them. The Zilla Parishad covers 98.9 percent of the area and 75.1 percent of the total population of the district. The population covered by the Zilla Parishad includes total Rural population and 17.81 percent of urban population of the district.

The police force in the district under the District Superintendent of Police who is assisted by three Deputy Superintendents and four circle Police Inspectors. There are (27) Police Station in the district.

The District and Sessions Judge is the head of the Judicial Department in the District. The Judiciary is entirely separated from the executive. The Collector continues to be the District Magistrate and the Deputy Collectors and Mamlatdars are vested with magisterial powers. They do not try criminal cases. The district and Sessions Judge is assisted by two Assistant Judges and additional Sessions Judges.

Territorial changes during the last 15 years:- Twenty Seven villages and eight towns from Borivali Taluka were

transferred to Bombay Suburban district in the year 1956 and the limits of Greater Bombay Municipal Corporation were also extended to include them for municipal purposes. In the year 1960, the taluka of Umbergaon with 47 villages and 3 towns, was transferred to Surat district of Gujarat State and the remaining 27 villages from that Taluka were first included in Dahanu Taluka and later on made into the new Talasari Mahal in 1961. With the Reorganisation of States in 1956, the district was included in Bombay State. Since 1960, it forms a part of Maharashtra.

Climate and Temperature:- Monthly temperature records are available only from Dahanu. For about half the year the climate is moist. The rainy season sets in June and continues till the end of September. The cold weather seldom sets in before December and even then though the nights are pleasantly cool, in the inland parts, the days are almost hot. During March & April hot winds are felt inland but never on the coast. There are thus great variations in the temperature, during the different seasons of the year, the air being sometimes cooled by sea winds and sometimes heated by hot land breezes. Within the district, the seasons show local variations also. While the heat in the hot weather is tolerable near the coast in the west, it is oppressive in the regions below the Ghats in the east. The warmth increases as one proceeds from west to east. The nights however, are not unpleasant even in the eastern talukas.

Rain fall:- The rainfall is not uniform throughout the district. It is considerably more inland than on the coast. Also it is less towards the north than on them towards the South. The rainfall is entirely due to the South-west monsoon. The intensity of rainfall is highest generally in July.

Table 2:- Statement showing the seasons durations and percentage of Normal Rainfall for Thana District.

Sr. No.	Season	Duration	Rainfall in cms. 1964	Percentage of Total Normal rainfall 1964.
1	South West Monsoon	June to September	2276.20	97.78
2	Post Monsoon	October to December.	41.50	1.78
3	Winter Monsoon	January to February	-	-
4	Pre Monsoon.	March to May	10.10	0.44
			2327.80	100.00

The south West monsoon through which maximum rainfall is received (97.78) is the most important rainfall season. The rains in June are very important because it makes the beginning of agricultural operations over a wide area of the district. 7th June is the approximate normal day of the onset of the South West Monsoon in this district. The post monsoon begins with October and extends upto the end of December. It provides approximately (1.78) percentage of annual rainfall. These rains are important for Kharif crops.

In winter monsoon the rainfall is the lowest almost nil. Premonsoon showers roughly amounts to (0.44) percentage of the annual Normal Rainfall, it is beneficial for the beginning of the agricultural operations in the district.

The rainfall of this district shows two main features. The rainfall increases considerably towards the interior where south West monsoons are obstructed by western face of Sahyadri.

The rainfall diminishes as it proceeds in the South direction

The following table gives the talukawise distribution of Normal rainfall(year 1962)

Table No. 3

Sr.No.	Taluka	Normal Rainfall of the Year (1964)
1.	Thana	2477.5
2.	Kalyan	2355.4
3.	Murbad	2533.6
4.	Shahapur	2588.7
5.	Mokhada	2467.3
6.	Bhiwandi	2578.0
7.	Bassein	1911.5
8.	Wada	2534.6
9.	Dahanu	1759.0
10.	Palghar	1730.5

Considering the pattern of heavy rainfall, famine's due to scarcity of rain is practically unknown in this district.

General Features, Growth/Variation:-

According to 1961 census, the population of the district is 16,52,678. The Taluka Kalyan is the most populated having population 3,59,898 and Talasari Mahal least populated having population 42,945. The percentage decade variation in 1961 is +28.86. The net percentage increase since 1901, 1921 and 1951 for the district and for the State are as follows:-

Table No. 4

Period	The net percentage increase	
	Thana District	Maharashtra
1901-1961	148.40	103.97
1921-1961	131.72	89.71
1951-1961	28.86	23.60

The district growth averages are more than Maharashtra averages. This was due to the growth of Industries in Greater Bombay and within the district itself.

Rural & Urban Population:- The rates of variation in rural and Urban population and the percentage to total population of the district since 1901 are as follows:-

Thana District

Table No. 5

year	Rate of variation in Rural Area.	%of rural population to total population	Rate of variation in Urban Area	%of Urban population to total population
1901	-	91.42	-	8.58
1911	+8.57	91.55	+6.80	8.45
1921	-3.24	89.59	+21.83	10.41
1931	+10.31	89.49	+11.50	10.51
1941	+10.80	88.52	+22.35	11.48
1951	+15.76	70.49	+273.56	29.51
1961	+27.57	69.79	+31.92	30.21

In the decade 1901-11 rural population increased by 18.57 percent while during 1911-21 it decreased by 3.24 percent. After that the rates of variation of rural population has shown an increase. The Urban population has increased at the expense of rural population. As a result the rural population increased with a lower rate. The percentage of rural population decreased gradually from 1901 to 1961.

The Thana district is more urbanised than the state. There was a sharp rise in no. of towns in the year 1951. In 1961 due to the declassification of six towns because of redefinition of urban areas, the Urban population showed decrease. The six declassified towns are Bordi, Chinchani, Kelwa, Agashi, Mahim and Kolshet. Naupada town is merged in Thana city in 1961. Five new towns are added viz. Malan, Sandor, Shahapur, Katemanivali and Mohone. Thana Ulhasnagar, Ulhasnagar & Kalyan are the three important towns of the district. The growth in urban population is mainly due to the growth in population of Ulhasnagar to 80,861 in 1951 and to 1,07,760 in 1961.

The Thana district is more urbanised than the state. The following table shows the distribution of population by size of villages for the district.

Table No.6

Thana District,		
Size Class	% of the No. of villages to total No. of villages.	Percentage of population to total Rural population
Less than 500	51.66	19.77
500-999	30.46	30.33
1000-1,999	12.01	21.86
2000-4,999	5.25	21.24
5000 and over	0.62	6.80

The rural population of the district is concentrated in villages with population between 500-999.

Density:- The density of population according to 1961 census is 475 Per/Square mile.

The following Table shows the talukawise and also rural and urban density seperately according to 1961 census!

Grand Total		3479.0	73.1	1153350	499329	386	6830

In the bunder patti (Consisting viz. of talukas Dahanu, Palghar and Bassein) Bassein has got the highest density 659 in rural area.

In case of hilly tracts, (Consisting of Mokhada Jaw har, Talsari Talukas) <sup>has got</sup> the highest density. Along the central line i.e. among Thana, Kalyan talukas the density reaches in Rural area to 735 in Thana taluka and 467 in Kalyan taluka.

In urban areas, the highest density is in Bhiwandi taluka namely 29768 and lowest in Jawhar taluka viz 630. Next to Bhiwandi, Thana and Kalyan urban areas have got high density viz 5187 and 14459 respily. This is due to the rapid expansion of Industrial area and proximity to Bombay. The other towns having high density are Ambarnath, Ulhasnagar and Dombivali.

Sex -Ratio:- This ratio can be taken as an Index to measure the magnitude of inequality in Male & female population in the no. of females per thousand males.

The following table shows the talukawise sex-ratio for Rural & Urban areas Seperately.

Table No. 7.8

Sr. No.	Taluka	Total	Sex Ratio	
			Rural	Urban

11	Kalyan	882	939	857
12	Thana	820	898	775
District		919	964	823

Only Talasari Mahal has a sex ratio higher than equality which is conclusively a rural area. One of the reasons for the

lowest sex-ratio in Thana/Kalyan talukas is the predominance of Males among the emigrants from rural areas to the Industrial areas in this Zone.

Economic Classification of workers:-

In Thana the manufacturing Industries have grown to be a significant factor in its economy and employment structure still this has not diverted the workers from Agriculture. Within the district. In fact, this development in Industries has not relieved the increasing pressure on land or the growing under employment in rural areas to any appreciable extent.

Talukawise distribution of workers in nine categories of economic activities is shown below:-

There is a marked difference in the distribution pattern for non-workers among males and females, 32.62 percent out of Non-workers are full time students while the corresponding proportion for females is 13.03 percent. The reason is that 34.34 percent of females engaged in household duties are also included as non-workers. There are rural urban difference in the proportion of dependents. Other categories have less than one percent non-workers. The percentage of females engaged in household duties is higher in urban than rural areas. The percentage of unemployed is 5.5 percent and 1.07 percent for males in urban and rural areas and negligible in both cases for females. The proportion for females are lower because the group of non-worker contains a large no. of adult women engaged in household duties.

Size of Composition of Household.

Percentage proportion of different types of households are as shown below:-

Table No. 12.

	Total	Rural	Urban
Single member	6.40	5.41	8.76
-3 members	24.75	23.83	26.95
4-6 members	42.80	43.73	40.54

10 members & more	7.15	7.60	6.05
All sizes	100.00	100.00	100.00

Among the different size groups, households with 4 to 6 members are more common (42.80 percent) than others. The percentage distribution of rural and urban households by their size shows that single and small size households are more prevalent (35.71 percent) in urban than in rural area (29.24 percent). The average size of the household is 5.3, in rural areas and 4.9 in urban areas.

Backward Classes

Scheduled Castes:- Actually 24 castes are notified as scheduled castes in the district but only 13 are reported in 1961 census. The 11 scheduled castes which were not reported in census 1961 are

- |                 |            |

\*Inclusive of persons from the Scheduled Castes who have not reported their individual castes. N=Negligible.

Out of the Scheduled castes reported in the district, the largest no. is of chambhars. The second largest is of Mahars and the third and fourth are Bhangis & Mahyavanshis. The remaining scheduled castes make less than 0.2 percent of total population. Holaya, Mukri and Pasi castes each has less than fifteen persons in the district.

The industrial classification of persons at work and non-workers for the district average, for all scheduled caste and for

each scheduled caste is as follows:-

Table "o. 14.

The proportion of workers among the Scheduled castes is slightly lower than the average for the total population of the district. It is so because scheduled castes are more urbanised than the district average. The proportion of workers both in cultivation and agricultural labour are lower than the district average because majority of the scheduled castes are engaged in the work of Scavenging, sweeping and other similar functions 32 percent of the workers amongst the scheduled castes are en-

-gaged in either household or manufacturing industries.

The percentage of literacy for the district population for all schedules castes and each scheduled caste are as shown below.

The Scheduled castes as a group are almost equal in literacy compared to the general population of the district. In the rural areas they are in fact ahead of the general population while in

urban areas they appear to be trying to cover the gap. They seem to be taking full advantage of the educational facilities available in the district.

The district is known as the home of aboriginals or early tribes who are locally known as adivasis. They are in considerable nos in the whole district specially in the talukas Dahanu, Talasari, Mokhada, Jawhar & Palghar. Out of the total population of 16,52,678 in the district, 5,00,558 or 30.29 percent are scheduled tribes.

Eighteen Scheduled Tribes are reported in the district in 1961 census four scheduled Tribes were not reported. These four are 1) Chodhara 2) Dhanka 3) Pomla and 4) Vitolia.

The distribution of the scheduled tribes population by rural and urban areas is shown in the table below.

The largest scheduled tribe in the district, namely Varli has got 2,15,851 persons Koli Malhar with 89,047 is the second, while Thakur with 66, 576 and Kathods with 57,738 are the third and the fourth Konkna and Koli Mahadeo with 27,957 and 22,953 resply. are the other large scheduled tribes. Dubla Dhodia and Koli Dhor have populations between 4,000 to 8,000. The remaining nine tribes together have less than 2000 populations. The Scheduled tribes population has increased from 2,84,949 in 1951 to 5,00,558 in 1961 or by 75.67 percent. This growth is due to the addition of Koli Malhar to the list of Scheduled tribes in the district in 1956 which has added about 90 thousand to the Scheduled Tribes in 1961.

The industrial classification of persons at work and non-workers for the district average, for all scheduled tribes and for each scheduled tribe is as follows.

The proportion of workers among the scheduled tribes

are more than those of the total population of the district.

It is so because the people from scheduled tribes are predominantly rural people and are economically depressed group. The proportion of workers both in cultivation and agricultural labour are accordingly much higher than the district averages.

The percentage of literacy for district population for all scheduled Tribes and each Scheduled Tribe are as shown Below.

18) Varli	4.65	7.75	1.53	11.49	13.57	9.10

The Scheduled Tribes as a group are much behind in literacy than the general population and even than the Scheduled Castes of the district. Among the major Scheduled tribes, Koli Mahadeo appears to be educationally the most advanced and Kathodi the most backward in the district.

CHAPTER II.

Agriculture.

Agriculture is the most important economic activity in the district, as it engages 64.47 percent of the total population. Even a considerable portion of Non-agricultural population depends on agriculture for their livelihood.

Out of the two agriculture seasons Kharif & Rabi, the district has a negligible area under Rabi cultivation. The main crops in Kharif season are rice, ragi, kodra, vari, Udit, Kulthi & Chawli. Gram and wal are grown in Rabi season.

Famine is practically unknown in this district considering the heavy rain fall.

The district has two agricultural zones (1) Bunder Patti-Dahanu, Palghar & Bassein Talukas and (2) Junglepatti consisting of remaining talukas.

In Bunder patti the main crops are fruits like plaitains, chikku, guava, mangoes and betel leave where as in jungle patti the predominant crops are rice, ragi & small millets and pulses.

Rice is the principle crop with almost half of the gross cropped area.

There is very little irrigation in this district. Wells are the chief source of irrigation.

Animal Husbandry, Forest and Fisheries

According to last quinquennial census conducted in 1956 & 1961, Thana District possesses nearly (6.82) and (7.51) lakhs Livestock respily. The proportion of bovine population to the total livestock are near about 84.3% and 83.8% in 1956 and 1961 census respily. Other livestock which play their part in the district economy are (1.3) thousand sheep, (111.0) goats, and (3.1) horses and ponies. But on the whole, the quality of cattle and other Livestock is poor.

In the rural and urban break ups of the livestock popula-

-tion, 96.1% and 3.9% in 1961 are found as against 96.3% and 3.7 in 1956 census respaly. The proportion of cattle in rural and urban areas are 97.6% and 2.4% in 1961 as against 97.8% and 2.2% in 1956 respaly. The corresponding proportion of buffaloes are 93.7% and 6.7% in 1961 and 93.7% and 6.3% in 1956 respaly.

There is no special breed of cattle for which this district is noted but the Konkani(local name) breeds are found everywhere. There is no special breed of buffaloes to mention in this review.

Poultry keeping is widely practised through out the district. The reason that poultry is not the main industry is that the disease like Raniket wipes out a flock in a very few days.

Veterinary Statistics:- There are in all 11 dispensaries and 22 aid centres in the district. Animals are treated mostly in dispensaries. In 1964-65, no.of animals treated in dispensaries was 22132, as against 23704 in 1963-64. The animals inseminated increased from 24 to 58 in 1964-65 and this was in Bhiwandi Taluka only.

Slaughter Houses:- These are at Palghar, Dombivoli, Bassein, Bhiwandi Ulhasnagar, Kalyan & Thana. The largest no.of animals are Slaughtered at Kalyan, Thana, Bhiwandi & Ulhasnagar.

Forest Area:- The total forest area has decreased from 396180 areas in 1963 -64 to 372834 acres in 1964-65. Largest forest area is under Dahanu as compared to Shahapur and Thana.

Largest forest produce is fuel. Quantity increased from 15,668 thousand C.Ft in 1963-64 to 17,401 thousand C,Ft in 1964-65. Sandal Wood trees are not found in this district.

Fishery:- The total coast line is of 112 Killo Metres. There are 41 fishing villages in Thana district.

Co-operative boat building yard has been established at Satpati in Palghar Taluka. For preservation of fish, there is one Cold Storage at Satpati.

Employment, Industry, Mining and electricity Employment:-

The no. of employe taking the advantage of employment exchange increased from 28 in March 1964 to 73 in March 1965. The figure on Live Register of the employment exchange was 9396 in March 1964 and 9583 in March 1965. The largest change in the volume of employment is seen in the industry construction where percentage is 48.5%

Industry:- Due to the high concentration of industries in Bombay area the industries have been dispersed to this district as per the directions of the Government. Total no. of working factories have increased from 532 in 1963 to 575 in 1964. In accordance no. of workers have increased from 39303 in 1963 to 47642 in 1964.

Mining:- There are no mineral products in this district except quarring. The income from quarring to Government is negligible.

Electricity:- Since 1961, when Maharashtra State Electricity Board started to supply electricity to rural & urban areas, the no. of villages electrified are in the increasing order. During the year, 10 villages and 2 Towns were electrified, increasing the figure from 29 villages to 39 villages and 7 towns to 9 towns at the year ending 31-3-54 and 31-3-65 resply. Total Towns and villages electrified by Maharashtra State Electricity Board and Private companies are 63 and population covered is 585,766 at the end of the year 1965 (31-3-65). Total electricity consumed during 1964-65 is 116717243 Kilo watts as against 101499000 Kilo watts in 1963-64.

Co-operation.

The Co-operation movement has completed more than

60 yards and during this long period the movement has taken different shapes as per the experience gained.
