Chapter I

- 1.1 LOCATION:- The district Thana forms a part of the North Konkan Region which lies between the Sahyadri Hills in the East and the Arabian Sea in the West. It has got a costal line of about 113 Kilometres.
- 1.2 Boundaries:- The district lies between 18° 42' and 20° 20' N. latitude and 70° 45' and 73° 48' E. longitude. It is surrounded by Surat District of Gujrat State and the centrally administered territory of Dadra and Nagar Haveli in the North Sahyadrian Range and beyond Sahyadri Nasik, Ahmadnagar and Poona Districts in the East, Kolaba District to the South, Greater Bombay District to the South West and Arabian Sea towards the West.
- 1.3 TOPOGRAPHY:- The drainage of the district gathers along the two valleys of the Vaitarna and Ulhas rivers which have their source in the Sahyadri range. From Vahigaon village near Kasara where Vaitarna enters the District, the valley is deep and narrow for about 26 Kilometres. From Kalambhai village at the eastern border of Wada Taluka the valley opens out for about 32 Kilometres till it reaches the spurs of Takmak range. Vaitarna flows for about 32 Kilometres through the fertile coastal region and falls into the sea at Agashi. Ulhas river rises in Bhor Pass in Poona District and enters the District near Vangani and flows towards Kalyan town. Its two chief tributaries Barvi and Kalu rivers meet Ulhas river near Kalyan town. Beyond Kalyan it broadens into estuary and passes through the marshy lands and hills. As it leaves the main land it widens into a salt water Strait and finally meets the sea near Bassein.
- 1.4 SOIL:- The Soil all along the coast and particularly in parts of Dahanu, Palghar and Bassein Talukas is blackish and contains sand, which is suitable for garden crops. Towards the east the soil is red and brown. It is not very deep but is suitable for rice. Further east of the

hill slope, the soil is poor and is used only for growing grass or coarse grains viz. Nagli, Varai etc. In the valleys, there are patches of Black soil in Bhivandi, Kalyan, Mokhada and Shahapur talukas where rice is grown.

- 1.5 RIVERS:- Vaitarna is the principal river of the district. It rises in the Trimbak hills in Nasik District opposite the source of Godavari and enters Thana District at Vahigaon near Kasara. The chief of its tributaries are the Berjha and Pinjal, Daherja, Surya and Susari from right and the Tansa from the left.

Ulhas is the other important river. It rises near the Bhor pass and after a north west course of about 129 Kilometres enters the sea at Bassein. Its tributaries are Chilhar, Poshri, Barvi, Bhalsai and Kulu.

- 1.6 HILLS:- The main hill system is the Sahyadri range and its offshoots. The Sahyadri range which runs from North to South from an unbroken boundary in the east. Besides this main range and its western spurs there are outlying ranges and spurs with isolated peaks over the whole district, but none of them rises higher than Sahyadris.

The prominent peaks in the Sahyadrian Range are Valvihir, Kalsubai over the shoulder of Tiger's terrace known as "Vaghacha Pathar" and Harishchandragad. One of the offshoots of the Sahyadri, which runs west end of ~~Arjanari~~ and Trimbak range from the watershed between the Damanganga and Vaitarna Valleys.

- 1.7 MINERALS:- Thana is not rich in workable ~~minerals~~ minerals. Bauxite deposits occur in Tungar Hill in Bassein Taluka. Inferior reddish or yellowish lateric clay is available at Gokhivare near Bassein Road Station and the reserves are estimated at 65000 tons. The material is stated to be suitable for bricks, drainage pipes, tiles and cheap red glazed ware. There are springs of mineral waters having certain curative value. They are at Kokaner, Satiwali, Vajreshwari and other places. Traces of sulphur are found in the hot springs at Vajreshwari.

Salt producing centres are at Rai-Murthe, Tuchandra Bhyandar, Belapur and Bassein.

- 1.8 ADMINISTRATIVE SET-UP:- The district is at present divided into 10 talukas and 2 mahals. There are 20 towns and 1599 villages inhabited in the district. A Zilla Parishad and 12 Panchayat Samities have been established in the year 1962. The areas under jurisdiction of the Zilla Parishad and Panchayat Samities correspond to the District and Taluka boundries seperately except in the case of Municipal towns, which are not covered ^{by} them. The Zilla Parishad covers 98.9 percent of the area and 75.1 percent of the total population of the district. The population covered by the Zilla Parishad includes total rural population of the District. The Population covered by the Zilla Parishad includes total Rural population and 17.84 percent of Urban Population of the District.

The police force in the district under the District Superintendent of Police who is assisted by 4 Deputy Superintendents and 12 Circle Police Inspectors. There are 30 Police Stations in the District.

The District and Sessions Judge is the head of the Judicial Department in the District. The Judiciary is entirely seperated from the executive. The collector continues to be the District Magistrate and the Deputy collectors and Tahsildars are vested with magisterial powers. They donot try criminal cases. The district and Session Judge is assisted by two Assistant Judges and additional Sessions Judges.

- 1.9 TERRITORIAL CHANGES DURING THE LAST 15 YEARS:- Twenty Seven villages and eight towns from Borivali Taluka were transferred to Bombay Suburban district in the year 1956 and the limits of Greater Bombay Municipal Corporation were also extended to include them for municipal purposes. In the year 1960, the taluka of Umbargaon with 47 villages and 3 towns, was transferred to Surat

District of Gujrat State and the remaining 27 villages from that Taluka were first included in Daham Taluka and later in made onto the new Talasari Mahal in 1961. With the Reorganisation of states in 1956, the district was included in Bombay state since 1960, it forms a part of Maharashtra.

1.10 CLIMATE AND TEMPERATURE:- For half the year the climate is moist. The rainy season sets in June and continues till the end of September. The cold weather seldom sets in before December and even then though the nights are pleasantly cool, in the inland parts, the days are almost hot. During March and April hot winds flow from the inlands but never on the coastal/^{Line} There are thus great variations in the temperature during the different seasons of the year, the air being sometimes cooled by sea winds and sometimes heated by hot land breezes. Within the district, the seasons show local variations also. While the heat in the hot weather is tolerable near the coast in the west, it is oppressive in the region below the Ghats in the east. The warmth increases as one proceeds from west to east. The nights however, are not unpleasant even in the eastern talukas.

1.11 RAIN FALL:- The rain fall is not uniform through out the district. It is considerably more inland than on the coast. Also it is less towards the north than towards the south. The rainfall is entirely due to south west monsoon. The intensity of rainfall is highest generally in July.

The rains in June are very important because makes the begining of Agricultural operations over a wide area of the district, 7th June is the approximate normal day of the onset of the South West monsoon in this district. The past mansoon begins with October and extends upto the end of December.

The rainfall of this district shown two main features. The rainfall increases considerably towards

-- 5 --

the interior where south west monsoons are obstructed by western face of Sahyadri. The rainfall diminishes as it proceeds in the South direction considering the pattern of heavy rainfall famine due to scarcity of rain is practically unknown in this district.

An Analytical Review giving Sectoral Trends

In this chapter it is proposed to discuss some talukawise variations in more detail.

The District as a whole has advantage of quite a good rainfall and there is no scarcity or draught. As the yield is dependent on Nature, it varies according to the timeliness of rainfall.

1. Percentage gross sown area

In 1961-62 the gross cropped area was 296900 hectares, i.e, 32 % of the total Geographical area, In 1964-65 this gross cropped area was 311800 hectares, i.e. 33 % of the total Geographical area. This shows that there is no significant increase in the gross cropped area.

Rice occupies the first place among the crops of the District with 148900 hectares in 1961-62 and 151900 hectares in 1964-65. Rice is largely grown in Palghar & Dahanu Talukas.

<u>Area under Rice in hectares</u>	<u>1961-62</u>	<u>1964-65</u>
Palghar	22388	22480
Dahanu	17672	17567

Ragi (Nagli) is the next crop which is largely grown in Mokhada Taluka. Area under Ragi for Mokhada Taluka in the year 1961-62 was 5899 hectares and in the year 1964-65 it was 6218 hectares.

2. Productivity of important crops.

The yield and out turn of some important crops in Thana District for last 4 years is given below

<u>Sr.No.</u>	<u>Crops</u>	<u>Year</u>	<u>Yield per hectare</u> (in kgs)	<u>out turn</u> (in metric tonnes)
1.	Rice	1961-62	1597	238162
2.		1962-63	1379	207200

1	2	3	4	5
		1963-64	1685	252100
		1964-65	1661	250700
2. Ragi (Nagli)		1961-62	604	14800
		1962-63	-	-
		1963-64	-	-
		1964-65	1126	29000
3. Tur		1961-62	301	1118
		1962-63	262	1117
		1963-64	262	1117
		1964-65	353	1500

The improvement in yield is due to use of improved seeds, fertilisers and better farming technics.

3. Percentage of Irrigated area

The gross cropped area of Thana District was 311800 hectares in 1964-65. Total gross area irrigated during 1964-65 was 2860 hectares. In 1962-62 the total gross area irrigated was 4988 hectares. It shows that irrigation in Thana District has decreased over the period 1961-62 to 1964-65. In Thana District, irrigation is mostly by wells.

4. Changes in the crop pattern (Total and irrigated)

Net area sown in the District during 1964-65 was 304800 hectares. The same was 288800 hectares in 1961-62. This shows that there is rise in net area sown.

The following table will give the data over a period of 4 years of the Third Five Year Plan for which figures are available.

Area under important crops 61-62 & 64-65 (in hectares)

Sr. No.	Crop	Area 1961-62	% to total Gross Cropped Area	Area 1964-65	% to total Gross cropped Area	Increase (+) Decrease (-)
