CHAPTER I

- 1.1 Location:- The district Thana is a part of the North Konkan Region. On the eastern side, there is the Sahyadri Hills and on the West, the Arabian Sea. The coastal line is about 113 Kilometers.
- 1.2 Boundaries:- The district Thana lies between 18°42' and 20°20' N. Latitude and 70°45' and 73°48' E. Longitude. It is surrounded by Surat District of Gujarat State and the centrally administered territory of Dadra and Nagar Haveli in the North Sahyadri Range. On the eastern side, beyond Sahyadri lies Nasik, Ahmadnagar & Poona Districts. Kolaba District lies to the South, Greater Bombay to the South West and Arabian Sea towards the West.
- 1.3 Topography:- The drainage of the district gathers along the two valleys of the Vaitarna & Ullhas rivers which have their source in the Sahyadri Range. From Vanigaon village near Kasara where Vaitarna enters the District, the valley is deep and narrow for about 25 Kilometers. From Kalam-bhai village at the eastern border of Wada Taluka the valley opens out for about 32 Kilometers till it reaches the spurs of Takmak Range. Vaitarna flows for about 32 Kilometers through the fertile coastal Region and falls into the sea at Anashi. Ullhas river rises in Bhor pass in Poona District and enters the District near Vangani and flows towards Kalyan Town. Its two chief tributaries Barvi and Kalu rivers meet Ullhas river near Kalyan Town. Beyond Kalyan it broadens into estuary and passes through the marshy lands and hills. As it leaves the main land it widens into a salt water strait and finally meets the sea near Bassein.
- 1.4 Soil:- The Soil all along the coast and particularly in parts of Dahanu, Palghar and Bassein Taluka is Blackish and contains sand which is suitable for garden crops. Towards the east, the soil is red and brown. It is not very deep but unsuitable for paddy cultivation. Further east of the hill

slope, the soil is poor and is used only for growing grass or coarse grains Viz. Nagli, Varai etc. In the valleys, there are patches of black soil, in Bhivandi, Kalyan, Mokhada and Shahapur talukas where rice is grown.

1.5 Rivers:- Two main rivers of the District are Vaitarna & Ullhas. Vaitarna rises in the Trimbak hills in Nasik District and enters in this District at Vahigach near Kasara. Its chief tributaries are the Berjha, Pinjal, Daherja, Surya and Susari and Tansa.

Ullhas river rises in Bhor pass and after a North West course of about 129 Kilometers enters the sea at Bassein. Its tributaries are Chilhar, Poshri, Barvi, Bhalasa and Kalu.

1.6 Hills:- The main hills are the Sahyadri Range and its offshoots. The Sahayadri Range which runs from North to South form an unbroken boundary in the east. Besides this main range and its Western offshoots there are outlying ranges and spurs with isolated peaks over the whole District but none of them rises higher than Sahayadri.

There are numerous peaks in the main Sahyadrian Range. Prominent among them are Valvihir, Kalsubai over the shoulder of Tiger's terrace known as "Vaghacha Pathar" and Harishchandragad.

One of the offshoots of the Sahyadri, which runs west from the west end of the Anjaniri and Trimbak range, forms the watershed between the Damanganga and Vaitarna Valleys.

1.7 Minerals:- District Thana is not rich in workable minerals Bauxite deposits occur in Tungar Hill in Bassein Taluka. The Tungar deposits are reported to contain 0.6 million tons of good grade Bauxite. Also inferior reddish or yellowish lateric clay is available at Gokhivare near Bassein Road Station and the reserves are estimated at 65,000 tons. The material is

stated to be suitable for bricks drainage pipes, Tiles and cheep red glazed wire.

There are springs of mineral waters in the district famous for having certain curative values. They are at Kokaner, Satiwali, Vajreshwari and other places. Traces of sulphur are found in the hot springs at Vajreshwari.

There are also salt producing centres in the District at Rai-Murdhe, Tuchandra, Bhyandar, Belapur and Bassein.

1.8 Administrative set-up:- The district consists of twelve Talukas. There are 20 Towns and 1599 Inhabited villages in the district. In the year 1962, Zilla Parishad and 12 Panchayat Samities were established. Areas under Municipal Towns are not covered by Zilla Parishad or Panchayat Samities otherwise the areas under jurisdiction of Zilla Parishad and Panchayat Samities correspond with the District and Taluka boundries. The population covered by Zilla Parishad includes total rural population and 17.84 percent of urban population of the district.

District Superintendent is the head of the Police Force in the District . He is assisted by 4 Deputy Superintendent and 12 Circle Police Inspectors. Alltogether there are 30 Police Stations in the District.

The District and Sessions Judge is the head of the Judicial Department in the District . He is assisted by two Asstt. Judges and additional sessions judges. The Judiciary is entirely seperated from the executive. The Collector is the District Magistrate and the Deputy Collectors and Tahsildars are vested with Magisterial powers.

1.9 Territorial charges during the year 1966-67:- There were no territorial changes during the year 1966-67.

1.10 Climate and Temperature:- There are great variations in the temperatures during the different seasons of the year, the air being sometimes cooled by sea winds and sometimes heated by hot land breezes. In Thana District, rain sets in early in June and continues till the

end of September. There is pleasant air in the month of October. Cold weather starts in December, nights are cool, but the days are almost hot.

Within the district, the seasons show local variations also. The warmth increases as one proceeds from west to east. The nights, however, are not quite unpleasant even in the eastern talukas.

1.11 Rain fall: The rainfall is not uniform through out the district. It is more inland than on the coast. Also it is less towards North than towards the South.

In Thana District, rainfall is due to the South-West monsoon. The intensity of rainfall is highest in July.

As the district receives heavy and assured rainfall, famine due to scarcity of rain is practically unknown to this District.

AN Analytical Review giving Sectoral Trends.

In this chapter talukawise variations under various sector are increased.

The district as a whole has advantage of quite a good rainfall and there is no scarcity or draught. As the yield is dependent on nature, it varies according to the timeliness of rainfall.

(1). Percentage gross sown area.

In 1964-65 gross cropped area was 311800 hectares, that is 33% of the total geographical area. In 1965-66, the gross cropped area was 305153 hectares, which was also 33% of the total geographical area.

Rice occupies the first place among the crops of the district with 151913 hectares in 1964-65 and 148714 hectares in 1965-66.

Rice is largely grown in Palghar and Dahanu Taluka.

Ragi (Nagali) is the next crop which is largely grown in Mokhada Taluka. Area under Ragi for this taluka in 1964-65 and 1965-66 was 6218 hectares and 7756 hectares respectively.

(2). Productivity of important crops.

The yield and out turn of some important crops in Thana District for last 5 years is given below.

Sr. No.	Crops	Year	Yield per hectare (in kgs.)	Outturn (in Metric Tonnes.)
1.	Rice	1961-62	1597	238162
		1962-63	1379	207200
		1963-64	1685	252100
		1964-65	1661	250700
		1965-66	1065	159600
2.	Ragi (Nagli)	1961-62	604	14800
		1962-63	-	-
		1963-64	-	-
		1964-65	1120	29000
		1965-66	730	19200

		1962-63	262	1117
19		1963-64	262	1117
		1964-65	353	1500
		1965-66	263	1000

It may be seen that there is reduction in yield per acre as well out-turn in respect of each crop. This might be due to the failure of rain during the year under reference

(3) Percentage of irrigated area.

The gross cropped area of Thana district was 311752 Hec. in 1964-65, and irrigated area during the same year was 2860 Hec. The respective figures of 65-66 are 305103 and 2360 Hectars. It may be observed that there is reduction in both the figures during the year 1965-66. This may be due to the failure of rain.

(4) Changes in the crop pattern (Total & irrigated)

Net area sown in Thana district during 1964-65 was 304781 Hect. which reduced to 299411 Hect. in 1965-66.

The following table will give the data over a period of 5 years of the Third Five Year Plan for the figures available.

1. Total gross cropped area has increased from in the period 61-62 to 64-65 but has shown decrease in 65-66.
2. The main crop of this district is Rice. The area under Pady also increased during 65-66.
3. There is no Mabi Jawar during 1965-66 unlike that during other years,
4. The area under total pluses has shown a monotonic increase in each year.
5. In general, it is seen that the area under almost all items increased during the period 61-62 to 64-66 but decreased during 65-66. This may be due to the failure of rain during the year 1965-66.

The comparison of irrigated food crops and Non-food crops would reveal the trend of cropping pattern.

Chapter IV.

The Annual Plan 1966-67.

The Third Five Year Plan period ended in March 1966. The year 1966-67 would normally be the first year of the Fourth Plan. But the finalisation of the country's fourth Plan was delayed due to the preoccupation of Government of India on border troubles and the uncertainties of foreign aid following this situation. As a result the Annual Plan for 66-67 was framed as an interium plan for one year.

Before discussing the Annual Plan 1966-67, it would be useful to note the outlays and achievements of the earlier plans. At the time of implementation of the first plan and Major part of second plan, the Present Maharashtra State was a part of Bombay State, which also included other regions like Gujarat. As a result comparative figures of outlays are not available for those plans. The Third Five Year Plan of the State involved an outlay of Rs. 590-20/- crores, as against this, the actual expenditure during the same period was Rs. 434-7/- crores in spite of economics and curtailment of outlays on schemes of lower priorities as per the Mid-Term Appraisal. The increase in expenditure was mainly due to the greater emphasis on policies and programmes requiring special attention in the context of the National Emergency. The impact of plan outlays can be seen from the growth in the State Income and per capita income of Maharashtra State, viz.

Item	Years			
	1955-56	1960-61	1964-65	1965-66
1. Total State Income (At constant prices 1955-56) Rs.Crs.	1004.2	1370.2	1522.0	1471.4
2. Per capita Income (At constant prices 1955-56 in Rs.)	292	350	357	338
			Provisional	

It will be seen that the state income at constant prices increase by 36 percent in the second five year plan, it further increased by 11.0 percent in the four year period of 1961-65 but in the last year, it showed a decline of 3.3 percent, as a result the increase over five year plan period was only 7.3 percent. Similarly per capita income increased from Rs. 350/- in 1960-61 to Rs. 357/- in 1964-65 but declined to Rs. 338/- in 1965-66. The main reason for the decline the last year was the decline in Agricultural output which factor combined with the growth of population greatly multiplied, the relatively small gains under major heads of development.

During the Third Plan Period, the expenditure incurred on district level schemes implemented in the District amounted to Rs. 696-09/- lakhs. In the year 1966-67, the total expenditure was Rs. 270-68 lakhs. The following summary table shows the comparative figures under heads of developments.

Total :-		696-09	100-00	270-68	100-00

It will be seen that more emphasis was given on Agricultural and Transport Programmes.
