1.1. INTRODUCTION AND LOCATION :

The district of Aurangabad, now a part of the Maharashtra State, is situated in upper Godawari basin and in the extreme north west of Marathwada. It lies in between the parallels of $19^{\circ} 17' 30''$ and $20^{\circ} 40' 10''$ north latitude and between the meridians of $74^{\circ} 39' 30''$ and $76^{\circ} 40'$ east longitude.

The district forms 5.3% of the total area of the State and 3.91% of the population of Maharashtra. A small area in the north and north west lying beyond the Satmala hills is actually situated in the Tapi basin. The northern portion lying between the Satmala hills the central hill range known, Jalna hills is an upland plateau. The southern portion is comparatively low terminating at the banks of the Godawari. In general, the district slopes down towards the south and south-east.

1.2. BOUNDARIES :

It is bounded on the north by the districts of Jalgaon and Dhulia, on the south by Beed district and a portion of Ahmednagar district, on the east by Parbhani and Buldhana districts and on the west by Nasik district and again by a portion of Ahmednagar district. The maximum length of the district from north to south is about 161 Kms. from east to west about 201 Kms.

1.3. AREA :

The area of Aurangabad district as per 1971 population Census publications is 16,200 Sq. Kilometers, the rural area covering 16,059.2 Sq. Kilometres and the urban area 140.8 Sq. Kms. The rural area forms 99.1% and the urban area 0.9%.

The district or any of its taluka underwent no major changes in boundaries during 1901 to 1941. In 1950 twenty five enclave villages of Nasik East Khandesh and Ahmednagar were transferred to Aurangabad district and thus a change in boundary was effected. Consequent upon the integration of Jagirs, the taluka boundaries were reconstituted in April, 1950 and the new mahals of Khuldabad and Jafferabad were created.

Soegaon Mahal was carved out in 1953 by transferring 37 villages from Sillod taluka and 30 villages from Kannad taluka.

With the re-organisation of States on 1-11-1956 the district was transferred to the then Bombay State. Since 1-5-1960, it forms part of Maharashtra State and Aurangabad Revenue Division.

1.4. TOPOGRAPHY :

In general the district slopes down towards south and south east. The general elevation above the sea level varies from 2,000 to 2,200 feet on the north and 1,700 to 1,900 feet towards the south.

1.5. HILLS RIVERS AND SOILS :

Aurangabad district is divided into the, Balaghat or uplands to the north and Ravanghat or low lands to the south the latter termination in the valley of the Godawari. The hills of Balaghat area continuations of the hill range of the same name in Vidarbha. There are important and noted hills in Aurangabad namely, Daultabad, Ajantha, Chowka and Jyotsna hills. All these have a terrace like appearance with flattened summits. Other hills of the district are Satara, Mahadeo, Maholi, Kankura, Surpanth, Satmala, Ajantha ghats and the Aurangabad hills. Their average height is about 2,000 feet above the sea level but in some places they reach a height of about 3,000 feet also. These hills consist mostly of trap rock with nodular limestone at some places.

The most important river of the district is Godawari which runs along the southern boundary for about 203 Kilometres separating Aurangabad district from Ahmednagar and Beed districts. Its tributaries are Purna, Shivana, Dhendā, Dhudhna, Dhamna, Kham (Genda) (which passes through the heart of the Aurangabad town). Dheku, Khelna, Kundalika, Sauki, Sukhna, Koriwad, Katkali, Galathi and Jui.

The other small streams and nallas are Yela, Sabhanga, Virbhadra, Kasner, Nalni, Dhori, Wagora, Sonuj, Bala Hewra, Arnavati and Gulduth.

The soil of Aurangabad district is black cotton soil of "Regur" formed by the weathering of the trap rock. The geological formation of the district is (i) Middle traps of the Deccan territory (ii) Older alluvial deposits of Godawari and (iii) Modern alluvial deposits of Godawari and other rivers forming the upper layer. The black cotton soil is rich in plant nutrients such as lime, magnesia, iron and alkalies on which cotton and some of the dry crops flourish well. It swells and becomes sticky on wetting by water while on drying contracts and develops numerous cracks. The soil varies greatly both in its texture and depth. In the hilly tracts in the north it is shallow and relatively poor, but in the south it is deep and fairly rich. In Godawari valley, specially along the river banks, it is very deep and fertile.

1.6. CLIMATE :

The climate of Aurangabad is pleasant and agreeable during the greater part of the year. The climatic year may be divided into three short seasons (i) a moderately warm wet season from June to September (ii) a cool dry season from October to February and (iii) hot dry season from March to May.

The rainy season which lasts from June to September is warm and pleasant during rains as the temperature does not fall below 17°C. and normally ranges between 21°C. to 30°C. The winter season is comparatively dry and starts from November & ends in February, January being the coldest month of the year. The maximum temperature in the month of May rises even as high as 41°C. Hot dry winds prevail occasionally in April and May. During summer, the days are not but nights are fairly cool. The climate of Aurangabad can thus be called pleasant and healthy.

During the hot season in 1978 the maximum temperature 39.8° centigrade and 40.2° centigrade were recorded in May 1978, at Aurangabad and Chikalhana centres respectively whereas the maximum temperature recorded in May 1977 at Chikalhana centre was 38.7° centigrade.

The minimum temperatures during the cool dry season of 1978 were recorded as 13.0 centigrade at Aurangabad centre, & 11.7 centigrade at Chikalthana centre in the month of January 1978, where as in 1977 the minimum temperatures were recorded as 13.6° centigrade at Aurangabad centre and 11.2° centigrade at Chikalthana centre in the month of January 1977 respectively.

The table below indicates the maximum and minimum temperatures recorded during the year 1977 and 1978 at Aurangabad and Chikalthana centres in Aurangabad district.

1.7. RAINFALL :

In this district the rainfall is unevenly distributed in different parts of the district. According to variation in rainfall, the district can be classified in to three tracts, namely (i) where the rainfall exceeds 750 millimetres (ii) Rather insufficient rainfall with rainfall ranging between 650 to 750 millimetres and (iii) Poor rainrall with rainfall below 650 millimetres.

12. Vaijapur.	571	318	301	447	
13. Chikalhana.	349	543	791	633	

The normal rainfall is shown taking average of 34 years from 1922-23 to 1955-56 for Aurangabad, Khuldabad, Kannad, Sillod, Bhokardan, Jalna, Gangaour and Vaijapur and average of ten years from 1961 to 1970 for Soegaon, Jafferabad, Ambad and Paithan. During 1976 the highest rainfall of the year has been recorded at Soegaon centre and the lowest has been recorded at Vaijapur centre. During the year 1977 and 1978 the highest rainfall has been recorded at Jalna and Aurangabad centres where as the lowest at Vaijapur respectively. Considering the crop conditions, the rainfall during both the years was below the requirement.

The fact Finding Committee appointed by the Government of Bombay in 1960 reported that the rainfall is not dependable in the following areas which are likely to be affected by scarcity conditions.

<u>Area.</u>	<u>Estimated Frequency.</u>
1. Vaijapur Taluka.	Once in Ten years.
2. Gangapur Taluka.	Once in Ten years.

Thus the south western region of the district generably recorded poor rainfall is more susceptible to failure of crops due to inadequate, irregular and untimely rains. The rainfall is unevenly distributed in the district leading sometimes to scarcity conditions.

1.8. INDUSTRIAL DEVELOPMENT.

There are three Industrial Estates established in Aurangabad district; viz 1) Jalna Co-operative Industrial Estate 2) Aurangabad Co-operative Industrial Estate. The 3rd Government Industrial Estate Paithan has been transferred to Maharashtra Small Scale Industries Development Corporation Bombay, and the branch office of Maharashtra Small Scale Industries Development Corporation Aurangabad is looking after it. Permanent pastures and other grazing lands cover all grazing lands, whether they are permanent pastures and meadows or not. Village common and grazing lands within forest areas are included under this head. Under miscellaneous tree crops and groves not included in the net area sown, is included all cultivable land which is not included under net area sown but put to some agricultural use. Lands under Casurina trees, thatching grass, bamboo bushes and other groves for fuel etc. which are not included under orchards are classed under this category. The picture is quite different in 1977-78 where the yield rates for all the crops were higher than those in 1960-61. The reason is adoption of improved agricultural practices.

The following table gives the figures regarding the net area irrigated to net area sown in Aurangabad district.

Livestock per hectare of land.

(22)

This indicator is based on the population of total bovines and ovines. Bovines include cattle and buffaloes and ovines include sheep and goats. The livestock is the major source of power to the agriculturist. The comparison of the livestock population of 1966 and 1972 livestock census population with the cultivable area in the district is given below.

TABLE NO. 8

Sr. No.	Name of the Tahsil.	Livestock population per hectares of cultivable area.

It is seen that the number of livestock per hectare of cultivable land is the highest in Aurangabad tahsil for 1966 and 1972 Census. As per 1966 livestock census the total population of Bovines and Ovines was 13,02,445 and the total cultivable area during the year 1965-66 was 13,95,454 hectares. The same figures for 1972 census and 1972-73 agricultural year were 12,50,224 and 13,89,144 hectares, respectively. It is further seen in the above table that there is a general fall in all the tahsils in the number of livestock per hectares of cultivable land. This was due to continuous drought conditions through out the district since 1970-71.
