Chapter I.

INTRODUCTION.

1.1 Location:

Akola district lying between 19°51' and 21°16'N latitude and 76°38' and 77°44' E longitude, with an area of 4091 Sq.miles is surreunded by Buldhana, Amravati and Yeotmal districts of Vidarbha and Parbhani district of Marathawada.

1.2 Boundaries:

The northern boundary of the district is of Melghat hills; and it is bounded on the east by Daryapur,Amravati and Chandur tahsils of Amravati district and Darwha and Pusad tahsils of Yeotmal district. Buldhana district lies to the west of this district, while Parbhani district of Marathawada forms the southern boundary.

1.3 Administrative Set-up :

For administrative purpose, the district is divided in 6 tahsils; the details about number of villages, population, area covered by each tahsil are given in the following table.

Tahsil			No.of inha-: bited vill- ages.		: 1961 popu- lation.

. 1 ...

The **Goll**ector is in charge of general administration; law and order, land revenue and civil supplies and is assisted by few Deputy Collectors including Resident Deputy Collector in his office and 6 Deputy Collectors (Sub-Divisional Officers) who are in charge of 6 revenue divisions. Each revenue division corresponds with tahsil and each Sub-Divisional Officer is assisted by a Tahsildar and few Naib Tahsildars.

As is customary now, there are many other State Government offices at the district headquarter for facilitating smooth and coordinated working of the government machinery.

Under the Maharashtra Zilla Parishad and Pancha --yat Samities Act of 1962, a parallel set-up of Zilla Parishad and Panchayat Samities came into existence with their jurisdiction over entire district except the municipal towns. These being the democratic institutions, Zilla Parishad as well as Panchayat Samities have two wings namely deliberative or decision making wing and executive wing. At Zilla Parishad level, the policy making body has 47 directly elected councillors, one co-opted lady member and few associate councillors; and at the Panchayat Samiti level, the policy making body consists of elected, coopted and associate councillors. The executive wing at the Zilla Parishad level is headed by the Chief Executive Officer, assisted by various departmental heads; and these executive powers at Pancha -yat Samiti level are vested in the Block Development Officer. There are 13 Panchayat Samities in this district.

The developmental and administrative subjects transferred to Zilla Parishad and Panchayat Samitics cover, by and large, all functions of Government administration including developmental activities, but excluding matters relating to law and order, judicial and quasi-judicial functions etc. The Zilla Parishad works through various committees. The finance of these /name local bodies comes from two major sources/and the assistance ly given by the Government.

and 1.4: lev Arca and Population:

ies In the complete overhanling affected in the im districts of the Berar in 1905, Akola district, in more or less by the present form, came into existance; and there were no major these changes in the boundaries of the district and its tabsils since bodies 1911 till now. With the re-organisation of States in 1956 Akola district, which till then was part of Madhya Pradesh State, was transferred to Bombay State. The district formed part of Maharashtra State on 1st May 1961. But all these transfers did not affect the territorial boundaries of the district. As per 1961 census total population of this district is 11,89,354 and the geographical area is 4091.0 Sq.miles. The total geographical area of this district forms 10.8% of the total area of Vidarbha Division and 3.5% of the total area of the Maharashtra State. The population of this district accounts for 12.9% of that of Vidarbha division and 3.0% of the total population of the State.

1.5 KHills:

1.6

Akola district has no mountains of importance; but the Satputa plateau exists on its northern border, and a range of steep hills of Ajanta mountains run accross the middle of the southern tahsils. On one of the Satputa hills stands the large ancient fort of Narnala. To the southern side ranges of hills are very distinct along the junction of Washim with Balapur and Akola tahsils and again in the middle and south-cast of Mangrulpir tahsil.

River-System:

The chief river of the district namely Purna rises in Betul district of Madhya Pradesh and flows due west through northern parts of Akola district, and is an important tributary of the river Tapti. The chief tributaries of the river Purna are Pendhi, Lonar, Man, Uma, Katepurna, Morna and Nirguna. Ratepurna, which is the largest of all tributaries, rises within a few miles of Washim and flows accross the castern part of Akola tahsil and north-west cover of Murtizapur tahsil. Penganga, which flows south-east accross Washim tahsil is another important rivers of the district. Its major tributaries namely Aran,_ Arnawati and Pus rise in Washim tahsil and flow through Mangrulpir tahsil, finally joining Penganga.

Soil :

The soil is basically derived from Volcanic trap rock and are quite fertile. The surface soil of most of the area of the district is rich, black soil. Most of the northern half of the district, central part of Washim tahsil and north-western part of Mangrulpir tahsil have rich, black soil. On the other hand, south of Balapur' and Akola tahsils, most of the border of Washim tahsil, south of Mangrulpir tahsil and the cast and north-east of Murtizapur tahsil are shallow, sony and less productive. On the castern side of the road leading from Akola to Akot there is a saline tract on both sides of river Purna in which formerly salt used to be manufactured.

1.7 Climate and Rainfall:

This district has extremes of climate scorching heat in summer and pinching cold in winter. Maximum temperature was 45.0 centigrade during 1961, 45.4 centigrade during 1962 and 45.2 centigrade during 1963 and minimum was 7.7 centi -grade, 6.4 centigrade and 8.8 centigrade, during 1961,1962 and 1963 respectively.

Within the district the seasons show local variations. The hilly tracts of the district consisting of Washim and Mangrulpir tabsils have slightly heavier rainfall and slightly cooler climate than others.

When the rains break in June, there is marked fall in temperature. The intensity of rainfall is greatest in July. The rainfall is more in southern part than in the northern part. Washim centre registered rainfall of 1238.3 M.M. during 1961, 1470.6 M.M. during 1962; and the Balapur centre registered rainfall of 741.2 M.M. during 1961 and 677.3 M.M. during 1962.

Akola is one of the districts where there is more or less assured rainfall. The district has therefore suffered from scarcity on very few occasions. The Fact Finding Committee appointed by the Government of Bombay in 1960 has therefore reported that no area in Akola district can be regarded as scarcity area. - 5 -Chapter II.

Population.

2.1 Abla district stands fourth as regards the size, while fifth as regards the population among the districts of the Vidarbha Region, its area being 10.84 percent of the total area and its population being 12.88 percent of the total population of the Vidarbha Region. Total area over which this district is spread comes to 4091 Sq.miles, and the population according to 1961 census is 11,89,354. This area forms 3.5 percent of the total area of the Maharashtra State, and the percentage of the population of this district to the State population works out to 3.0 per-cent.

Akola district is the land of peasant proprietors. There is absence of numerous large towns and big industrial establishments. Naturally, therefore, bulk of the population is either engaged directly in agriculture or indirectly dependent on the land for means of subsistance. The gist of the population statistics is that 9,26,521 persons of the total population are in rural areas, while only 2,62,833 persons reside in Urban areas, and the urban rural ratio is 22:78. The male and female population is 6,13,832 and 5,75,522 respectively and the percentage of males to the total population comes to 51.61 and that of females to 48.39.

Variations in the population of Akola district during last 50 years can be known from the following table.

Year	Males	Populatio	یوک جما ہے یہ یہ بجار میں میں میں میں	variation	Decennial growth in population (%).	
- 1	2	3	4	5	6	
1911	3,99,504	3,86,538	7,86,042	+ 33,976	4⊌5	
1921	4,05,923	3,88,924	7,94,847	+ 8,805	1.1

Source :- District Census Hand Book :1961.

.

The net increase in the population during the last

50 years is 4,03,312 and works out to 51.3 per cent. The population has shown a continuous increase during last 50 years, but the growth during 1951-61 is phenomenal and makes a striking departure from the growth rates observed during last 50 years. The dimention of the situation would be clear if it is noted that net population increase from 1901 to 1951 was 1,98,928, while the corresponding increase during the decade ending with 1961 was 2,38,360. ^This growth of 25.1 per cent during the decade under report would not however appear abnormal if it is viewed in the light of the fact that State population increased by 23.6 per cent during the decade ending with 1961.

2.2 Density:-

....

The density of population per Sq.mile of the district is worked out to 291 according to 1961 census as against the density of 232 as per 1951 census. The density per Sq.mile in this district is much higher than that of Vidarbha Region which is only 245 persons per Sq.mile. This may be expalained by the existance of rich black cotton soil, which produces both cash and food crops and provides a maintenance for a large population.

In the table below is presented the talukawise area and population, both rural and urban, and the average density of the population.

Area and Population.

Name of	Area	in Sq.	mile	P	opula-ti	.on	Average
taluka -	Rural	:Urban	:Tota	l Rural	:Urban	:Total	density per Sq. mile.

Washim	1030	16	1046	221138	26494	247632	237
District	4015	76	4091	926521	262833	1189354	291
							· –

Source :- District Census Hand Book :1961.

The density of population in Akola and Akot talukas is much higher than and that in Mangrulpir taluka is much lower than the average density of the District. The urban density of population for the district as a whole is 3,458 while the rural density is 231 and can favourably be compared with any district of the State.

Percentage distribution of Rural and Urban Population.

Source :- District Census Hand Book : 1961.

هما ها و های همه برس بدو ها ها ها

In Akola district 77.9 per cent of the total population resides in rural areas and only 22.1 per cent in urban areas. In Mangrulpir and Washim talukas, however, very large percentage of the population(92.5 and 89.3, respectively) resides in rural areas. On the other hand, in Akola taluka only 60.2 per cent of the population resides in rural areas and 39.8 per cent of people stays in urban areas. The existance of relatively large city of Akola has raised the urban percentage of the district.

It can be observed that there has not been any remarkable change in the distribution of population in rural and urban areas and the generally expected tendency of increased flow from rural to urban areas is not at all in evidence in this district during last ten years. In most of talukas, the percentages of the distribution of the population in rural and urban areas is un-changed over last ten years.

Akola city, the district headquarter is one of the most important towns of the region. Its population has increased from 29,289 in 1901 to 1,15,760 in 1960 or by 295% during last 60 years. The town had all along been a commercial centre; and in recent years, a start has been made towards industrial development. Washim, Akot, Murtizapur and Karanja are other important towns of this district.

When the sex ratios in urban, rural areas and the urban rural distribution of population are considered together, it is observed that there has not been any migration from rural to urban areas on major scale.

If there had been any large scale flow of males to urban areas, the sex ratio in rural areas would have shown the females out-numbering the males. But in rural areas, this tendency is nowhere observed. The fertile soil of the area, and good returns from agriculture especially due to cash crops like cotton can partly explain the phenomenon of the absence of permanent migration from rural to urban areas. 2.4 Sex Ratios :-

The following table shows the sex ratios for each taluka in this district.

Tahsil	Rural	Urban	 Total	
Akot	941	896	932	
Balapur	956	905	947	
Akola	946	854	909 .	

Sex Ratios in Akola District.

Tahsil	Rural	Urban	Total	
Murtizapur	947	903	935	· •
Mangrulpir	962	934	959	
Washim	969	900	96 1	
District	954 [°]	881	938	

Source :- District Census Hand Book: 1961.

The sex ratio i.e.number of females per 1000 males is observed to be such that males out-number the females in all tahsils. The sex ratio for the district as a whole is 938 and all the tahsils do not show any remarkable variation from this ratio. Akola tahsil, which includes Akola city, has the lowest sex ratio of 909; and Washim tahsil has the highest sex ratio of 961;

The rural urban differentials within tahsils are more striking than the differences from tahsil to tahsil. Urban sex ratios are lower than rural in all tahsils; and this might be partly because of the migration, boys for education and of adults for employment to urban areas.

2.5 Economic Classifications:-

The concept of dependency has been abandoned for economic classification at the 1961 census. Instead, the population is classified into workers (economically active) and non-workers (economically in-active). The emphasis is now on work and not on income or economic dependence. The following table shows the distribution of population by workers and nonworkers.

Classific	ation	of popu	lation	according
t	o work	ing sta	tus.	
	وينياه ستعالج وتبدأ طرب يتنا			

Category	*	Wor	kers		Non-Vor	kers	Total

	Sou	rce :-	Distri	ct Censu	us Hand	Book : 19	61.

11

Source :- District Census Hand Book : 1961. N.B.:- (Bracketed figures indicate percentage to the total).

. Slightly more than half of the total population of the district has returned in 1961 census as non-workers. Considering the rural and urban distribution of economically active population it is observed that 46.6 percent of the total rural population and 65.5 per cent of the total urban population are non-workers. The higher percentage of non-workers in the urban areas is mainly because opportunities for women to work are limited since number of household enterprises, which absorb sizeable proportion of females, is less in urban creas. An evidence is also provided by the fact that 26.0 percent of the women are non-workers in rural areas, while 40.0 percent of the women are non-workers in urban areas. In urban areas, more -over, the education of children would tend to be prolonged, and the need for children and old persons to work in urban well-dodo families would not be acute. Naturally, for all these reasons, out of the total population of urban areas, only_34.5 per cent are found to be workers and 65.5 per cent as non-workers.

In rural areas, on the other hand, workers and nonworkers strike a balance, their percentages being 53.4 and 46.6 respectively. The female members for the rural population participate in cultivation together with the males. 22.8 per cent of the females in rural areas were returned as workers in contrast with only 6.8 per cent of the females in urban areas. This shows that comparatively large number of females in urban areas are non-earning dependents as compared to the females in rural areas. - 12 -

The basis of classification of population has been economic in 1961 census and hence effects of planning on the industry and occupationwise distribution of population and employment in general can be fairly guaged. The table below gives the percentage of workers engaged in each of the main occupations.

.

Source :- District Census Hand Book : 1961.

The Agriculture:-

A large percentage of rural population generally implies a larger proportion of people working in the agricultural sector. While this district has a comparat#ively high percentage of rural population(77.9), the percentage of workers in agriculture as a sector is even higher (81.4). Agriculture thus engages 81.4 per cent of the total workers and the remaining 18.6 per cent of the total workers are having non-agricultural pursuits. WMME Owner and tenant cultivators account for 34.2 per cent and agricultural labourers 47.2 per cent of the total workers. It is workhnoting that female workers mainly work in agriculture, the percentage being 94.5 and a megligible number of females (5.5 percent) seek other occupations. As regards males in the other hand, 72.8 per cent of the total males derive their working status from agriculture, and 27.2 per cent of them are employed in non-agricultural occupations.

The largest agricultural class is that of agricultural labour. In rural areas, out of the 90.9 percent of the rural workers engaged in agriculture, 52.3 per c ent are agricul --tural labourers. The high ratio of agricultural labour to the cultivators is a factor of great economic and social importance as this class constitutes the landless proletoriat. This comment must not, however, obscure the fact that mixed means of livelihood are not un-common and that agricultural labour might be important means of livelihood in the case of workers belonging to cultivators' families. In rural areas, 62.6 percent of the total female workers in rural areas, work as agricultural labourers. In urban areas, also agricultural labour provides employment to 46.8 percent of the total urban female workers. In self and tenant cultivation 38.6 per cent and 9.6 per cent of the total rural and urban workers are engaged. Non-Agricultural Categories:-

Approximately one fifth of the total workers of the district are found in non-agricultural sector. Obviously the population living in the urban areas show a higher proportion of persons having non-agricultural pursuits as their main occupations; thus non-agricultural occupations absorb 71.1 per cent of the total workers of urban areas. Neverthless there is a considerable percentage of agriculturists in urban area and non-agriculturists in rural areas. 28.9 per cent of the workers in urban areas depend on agriculture; and 9.1 per cent of workers in rural areas depend on non-agricultural occupations. In urban areas, trade and commerce and manufacturing industries(other than households industry) provide employ -ment to about one third of the total workers in urban areas; are 16.3 per centAengaged in the former and 12.8 per centAengaged in the latter. Transport and communication is also an important occupation in urban area, and 8.2 per cent of the total urban workers find place in it. As regards the female workers, household industry, other manufacturing industries, and to some extent trade and commerce are the occupations wherein females seek employment.

In rural areas, on the other hand, out of the 9.1 per cent of the total workers in rural areas depending on nonagricultural occupations, household industry takes in 2.0 per cent, trade and commerce absorbs 1.4 per cent and mining and quarrying and allied activities employ 1.0 per cent of the workers. It is remarkable that females in Akola district are employed in each of the various important occupations in small or large number, both in urban and rural areas.

2.6 Non-Workers:-

The following table gives distribution of non-workers.

Source :- District Census Hand Book :1961.

Non-workers included 42.7% males and 57.3% of females. The two types of activities which accounted for very large number of male non-workers were "Dependents, permanently disabled, infants and children not going to schools" (61.4% of males), and "Fulltime students" (35.7% of males); and in the former category, children below 14 years formed more than 90% of the total males engaged in that type of work, and in the latter case persons upto 34 years of age constituted more than 90% of the total males coming under that type of work. As regard females, non-workers were mostly enlisted under two types of activities namely " persons engaged in household duties only " and "Dependents, disabled, infants, and children not going to schools"; and the former type of activity engaged 1,23,754 females (35.8% of females) which were distributed in all the age groups, and the latter type of activity engaged 1,76,461 female. (51.0%) of females), which were mostly of the age group of 0 to 14 years.

At the time of 1961 Census, 3,217 persons were returned as un-employed in this district and they included 3052 males and 165 females, and accounted for only 0.5% of the total non-workers. Out of this 3,217 persons, 1,529 persons were seek -ing employment for the first time and remaining 1,688 were previously employed but presently un-employed and were seeking work.

Distribution of non-workers among rural and urban areas revealed that 71.5% of the non-workers were resident of rural areas, and 28.5% resident of urban areas. In both rural and urban areas, female non-workers exceeded male non-workers.

^Distribution of un-employed persons is given in the following table.

Source :- District Census Hand Book : 1961.

During 1961 census, 3,042 persons, aged 15 and above were returned as un-employed in this district; and 94.9% of them were makes and 5.1% were females. Persons, who were educated upto primary level, were observed to have remained un-employed to the extent of 52.4% of the total un-employed persons.

These un-employed persons were more in urban areas than in rural areas; out of 3,042 un-employed persons, 2,017 (66.3%) were in urban areas and 1,025(33.7%) in rural areas. The un-employment prevalent among persons with different educational level Was more or less same in both rural and urban areas of this district. Persons with primary or junior basic level constituted about 50%, illiterate persons about 20%, persons with martriculation and above standard about 18% of the un-employ -ed persons in rural and urban areas.

2.7Literacy:-

A person is regarded as literate if he is able to read **xri** and write a simple letter in print or in manuscript. Substantial progress has been made by this district during last decade in education especially in respect of literacy among the women. The average literacy rates of the district were higher than the State averagesboth for males and females. The literacy percentage of this district has increased from 22.60% during 1951 to 31.20% during 1961.

Within the district Akola tahsil had the highest literacy for total persons, total males and total females; and lowest percentage was in Mangrulpir tahsil for total persons and total males and in Washim tahsil for total females. For rural areas, Akot tahsil had the highest literacy rates for total, male and female population; and Mangrulpir tahsil had lowest rates for total and male population and Washim tahsil had lowest rate for female population. For urban areas, Akola had highest rates and Balqur had lowest rates for total, male and female population.

The literacy rates were high for males in both the age grups 5-14 and 15-34; and they were higher for females in the age group 5-14. It shows that educational improvement of males started about thirty years ago and of females comparatively in recent years.

2.8 Age-group and Marital Status:-

معرف المراجعة المراجع

During the decade the proportion of never married increased, and that of married decreased for both male and female. The percentage of widowed also decreased during 1961 as compared to that during 1951 for both the sexes. During 1961 the percentages of married, widowed as well as divorced were observed to have been more in rural areas than those in urban areas; on the other hand the percentage of never married was kless in rural areas than in urban areas, and might be partly explained by higher age at marriage in urban areas.

0.8% of males and 4.4% of females upto the age of 14 years were listed to have been married in 1961; (few of whom were divorced or widowed in 1961) and the proportion of married persons upto this age was less in urban areas than in rural areas. The year 1961 witnessed an increase in the age at marriage; and the proportion of never married both among male and female in 0-14 years age-group was higher in 1961 than that in 1951. 2.9 Size and composition of households:-

On the basis of the information collected of sample _ households at the time of 1961 census, the percentage distribution of different types of households is given below.

	· .	$(1,1) \in \mathcal{F}_{1} \cap \mathcal{F}_{2}$	•	• •

Size of the households.

Source :- District Census Hand Book :1961.

Households with 4-6 persons accounted for 43.89% and this size seemed to have been more common in both rural and urban areas than any other. It was surprisingly observed that large sized households had higher percentage in urban than in rural area; 6.98% of the urban households had 10 or more members compared to 3.93% of the rural households of the same size. The average size of the household, on sample basis, was 4.7 for the district, 4.6 for rural areas and 4.9 for urban areas.

Consideration of the composition of sample households revealed that 38.39% of the males were the heads of households as against 3.50% of the females. 50.37% males and 50.28% females, which incidently formed the largest group, were never married, widowed or divorced relations; and essentially majority of them were un-married children of the head. The difference in the pattern of the household composition of rural and urban households was the higher percentage of never married, widowed or divorced relations in urban areas and also the low percentage of married sons.

2.10 Housing :-

At the time of 1961 census, 68% of the houses were reported to have been used as dwellings, 19% as cattle shed etc.,8% vacant and remaining as shops, schools, workshops etc.

Classified by owned and rented, 76% of the dwellings in the district were owned and 24% rented. The percentage of owned was higher (84%) in rural areas; and was much lower (47%) in urban areas.

Out of the various materials used for walls,mud appeared to have been predominant in the district with a proportion of 53.5% of occupied houses. Mud was used for walls more in rural areas(61.3%) than in urban areas (23.6%). Out of the materials of roof, corrugated iron or zinc sheets and tiles were predominant in the district with 44.6% and 33.9% of the houses using former and latter respectively.

Classified by number of rooms occupied, 66.7% of households were occupying one-room dwellings, and 22.1% were occupying two-room dwellings. The households occupying more rooms were more in urban areas than in rural areas.

2.11 Backward Classes:-

As per 1961 census, scheduled caste population in ^Akola district was 55,866, out of which 44,241 persons resided in Rural areas and 11,625 in Urban areas; and there was no scheduled tribe population in this district.

Out of the 14 scheduled castes enumerated in this district, the largest number was of Mang with 30,701 persons, and second largest group was of Chambhar with 12,499 persons in this district. The percentage of scheduled castes to total population decreased from 21.04% in 1951 to 4.70% in 1961, because large number of scheduled castes persons were enumerated as Budddist or Nav-Bauddha during 1961 census.

The percentage of literacy of all scheduled caste persons was 15.56 in rural areas and 25.01 in urban areas as against 27.29% in Rural areas and 44.97% in Urban areas of the total population of this district.

The industrial classification of persons of scheduled castes is given below.

Source :- 1961 Census Hand Book.

Out of the total scheduled caste population, 55.8% were workers and 44.2% were non-workers. As large as 36.4% of the scheduled caste population was engaged as Agriculrural labourers; and 6.5% was cultivators. The percentage of cultivators to scheduled caste population (6.5) was much lower than the percentage of total cultivators to total district popu lation (16.8); and the percentage of Agricultural labourers to scheduled caste population (36.4) was much higher than that of total agricultural labourers to the total district population (23.2). This was due to the association of the scheduled castes with certain services as well as to fewer persons owning lands amongst them.

Out of the total 24,718 non-workers, 83.1% were illiterate, 10.1% were literate without educational level, 6.4% were educated upto primary level, and 0.4% were Matric and above. The percentage of the female illiterate to total female non-workers was much more than that of male illiterate to total male non-workers.

Chapter III.

Agriculture.

3.1 Introduction :-

A orucial aspect of the success of Indian Economic Development is the prosperous agricultural sector, on which about 70% of the total population is directly dependent and whose contribution to the National Income is about ---50%. Akola district is predominantly agricultural area: As the industrial and commercial activities undertaken in the district provide negligible employment opportunities and contribute meagre amount to the national income, the prosperity of Akola district depends at least in the present state of affairs, on how the agriculture sector is managed.

The soil of this district, in general, and of northern half of the district, central part of Washim tahsil and north-western part of Mangrulpir tahsil in particular, is rich black boil. On the other hand, south of Balapur, Akola and Mangrulpir tahsils, most of the border of Washim tahsil, and the east and north-east of Murtizapur tahsil are shallow and stony. Akola district is one of the districts which has generally assured rainfall; and naturally famine has been unknown calamily for this district during last many years. Scarcity conditions, however, sometimes prevail in some pockets of this district; but such incidents are minor.

In Akola district there are two agricultural seasons namely Kharif and Rabi; but the district has much more area under kharif crops that under Rabi crops. The principal crops grown in Kharif season are Jowar, Cotton, Groundnut, Tur, Wheat and Gram are the main Rabi Crops.

3.2 Land Utilisation :-

In a predominantly agricultural economy like that of India, the utilisation of land resources in the best possible manner holds the key to the success of the programme of agricultural planning. The land utilisation statistics reveal the extent of un-utilised or un-systematically exploited land resources and incidentally show the possible ways of using land for more and better production. A study of the land utilisation statistics together with prevailing croppattern and the yield rates provides a measuring rod to determine whether the agrarian economy of the district is in healthy state or not. +

The land can be divided into different gories such as area under forests, barren land, area sown, fallows, area under pastures and grazing grounds, land put to non-agricultural uses etc. The land utilisation statistics are given below for the years 1960-61, 1961-62 and 1962-63.

Salient features of Land Utilisation:-

The net area sown represents the actual geographical area under the crops, area cropped more than once being counted only once. During the priennium under review, acreage of about 18,98,786 acres, on an average, was under crops and this constituted about 73% of the total geographical area. The increasing tendency was observed in the net area sown from 1960-61 to 1962-63; the percentage of net area sown to total geographical area increased from 72.3% during 1960-61 to 72.4% during 1961-62 and 73.6% during 1962-63. In absolute terms, addi -tional area of 32,107 acres of land was brought under crops during 1962-63 as compared to total acreage under crops during 1960-61.

Gross cropped area comprises of net sown area and area cropped more than once. Comparison of the figures revealed that acreage increased from year to year during three years under review. The gross cropped area in relation to net area sown provides a measure of the area, which has been brought under more than one crops. The double cropped area was negli -ble portion of the total area under crops in this district and was only 9,943 acres during 1962-63. Increasing the area under double cropping depends upon irrigation facilities avail (-able and as such the extent of double cropping is less in

- 27 -

Akola district, because of lessk irrigation facilities in this district.

Area not available for cultivation includes forests, barren and un-culturable lands, land occupied by roads and under canals etc; and this land cannot be brought under cultivation except at a very high cost. Marginal variation in the total acre -age under these sub-categories was observed during the years under review. The barren and un-culturable land marginally decreased from 1,00,908 acres(3.9%) during 1960-61 to 98,413 acres (3.8%) during 1962-63.

Other un-cultivated land excluding fallow land consists of land under pastures and meadows, land under trees and groves, and culturable waste. Negligible variations over the years have taken place under these sub-categories. "Cultur -able Waste" still covers an area of 17,629 acres during 1962-63, and accounted for 0.7% of the total geographical area. A remarkable change was noticed in the case of current fallow; the area under current fallow came down from 34,004 acres (1.3%) during 1960-61 to 30,863 acres (1.2%) during 1961-62 and further to only 7,505 acres(0.3%) during 1962-63. The substantial increase in the net area sown during 1962-63 over that during 1961-62 can partly be explained by the decrease in the area under current fallows during 1962-63.

3.3 Crop Pattern:-

Use of land, crops grown and the yield rates per acre are the barometers of the agricultural economy. Akola district is one of the most fertile tracts in the state. The staple foodgrain is Jowar while the principal cash crop is Cotton; these two cropscommand three fourth of the total cropped area and can be regarded as the most important crops of this district. Ground -nut, Wheat and Tur also cover considerable area. The other crops worthy of notice are Gram and Linseed.

The following table gives cropwise acreage and their percentages to the gross area under cultivation for important crops during 1960-61, 1961-62 and 1962-63.

Area under crops.

	(A1	rea in acres)

Source :- Statistician, Department of Agriculture, M.S. Poona. E.B.:- (Figures in the brackets indicate percentage to the total)

÷

A striking feature that is revealed by the table is that crop pattern has not undergone any remarkable change during last three years. The gross cultivated area increased from year to year during this period raising the area from 1,895 thousands acres during 1960-61 to 1,930 thousand acres_during 1962-63. Out' of the gross cropped area food crops and non-food crops accounted for 52.1% and 47.9% during 1962-63_as against 51.7% during 60-61. The areas under food crops and non-food crops increased during 1962-63 as compared to the areas under these categories during 1960-61, But this expansion of acreage under food crops was at increasing rates, while the expansion of acreage under non-food crops was at decreasing rate, with the result that percentage of acreage under food crops to gross cultivated area increased from 51.7 during 1960-61 to 52.1 during 1962-63 while the same under non-food crops decreased from 48.3 during 1960-61 to 47.9 during 1962-63.

- 30 -

3.4 Survey of principal crops:-

Out of the total area under food crops, cereals commanded more than three fourth of the area. Jowar dominated in this category and kard 5,99,398 acres were under it during 1962-63. The area under it decreased from 586 thousand acres(30.9%) during 1960-61 to 572 thousand acres (30.1%) during 1961-62 and again increased to 599 thousand acres (31.0%) during 1962-63. Next in the order of importance was Wheat and it occupied 1,36,406 acres of land during 1962-63. The area under this crop, which is one of the major Rabi crops of this district, declined from 7.3% of the gross cropped area during 1961-62 to 7.1% during 1962-63. The other cereals worth the name were Rice and Bajri and they accounted for 1.0% and 0.6% of the gross cropped area respectively during 1962-63. The areas under both these crops have shown consistently declining tendency during all the years under review. Among the pulses, Tur and Gram occupied some respectable position, the percentage of the area under them having been 4.2 and 1.8 respectively during 1962-63. It was noticeable that more acreage of land was brought under these crops from year to year during three years under consideration.

Jowar is grown as major crop in all the tahsils; however, Akola and Washim tahsils had comparatively very large areas of 1.20 lakh acres and 1.38 lakh acres respectively during 1962-63. Wheat was grown on substantial scale in Akola,Akot, Washim and Murtizapur tahsils; and areas under Wheat was only 9,345 acres in Balapur tahsil and 3,288 acres in Mangrulpir tahsil during 1962-63. Rice is sown on major scale only in Washim tahsil, and covered area of 13,342 acres_out of 18,936 acres under Wheat in Akola district during 1962-63. Tur and Gram were grown in all tahsils in more or less evenly manner.

Among the non-food crops, nay among all the crops, cotton enjoyed the pride of place commanding 40.8% of the gross area sown during 1962-63. The cotton was sown over the area of 779 thousand acres during 1960-61 and this acreage increased to 799 thousand acres during 1961-62 but came down to 788 thousand acres during 1962-63. In percentage terms these fluctuations in acreages commanded by cotton resulted in cotton claiming 41.1% of the gross cropped area during 1960-61, 42.0% during 1961-62 and 40.8% during 1962-63. The groundnut, next among cash crops, had under it 5.3% of the gross area sown during 1960-61; but this acreage slumped to 4.6% during 1961-62 and slightly recover -ed to 5.0% during 1962-63. Among other oil seeds grown in this district, Linseed had some acreage and accounted for 1.1% the gorss area sown during 1962-63. Sugarcane is sown on a very minor scale and is seldom used for preparing Gur in Akola district.

Cotton is important crop in all the tahsils and each of the tahsils had brought under it areas of more than one lakh of acres except Balapur tahsil, wherein 91,152 acres of land were under Wheat during 1962-63. Groundnut had significant area under it in all tahsils except Akot and the same ranged from 12 thousand acres to 20 thousand acres during 1962-63; Akot tahsil, however had only 1,806 acres during 1962-63. Linseed was observed to have been grown mainly in Akola, Akot,Balapur and Murtizapur tahsils. These observations about tahsilwise acreages are not only applicable to 1962-63 but even for two earlier years under review.

3.5 Irrigation:-

Irrigation together km with the improved seeds, implements, fertilisers etc. is likely to help increase the agricultural production. In Akola district, major source of

_ _ 31 __

irrigation has been the wells; the construction of tanks and canals for providing irrigation facilities is recent development.

Irrigated area by sources.

Source of	Area irrigated (in acres)				
irrigation.	1960-61	1961 – 62	1962-63	-	
Wells	7,889	8,176	8,203		
Tanks	212	231	233		
Govt.Canals			-		
Private Canals	-	25	20		
Other cources	-	8	186		
Net area irrigated		8,440	8,642		

Source :- Statistician, Department of Agriculture, M.S. Poona.

It can be noticed that most of the irrigated area was irrigated by wells. Out of the total irrigated area of 8,642 acres during 1962-63; 8,203 acres i.e. 94.9% was irrigated by wells only. Among other sources tanks provided facilities to 233 acres. The increase in the total irrigated area over years has been mostly due to increase in the acreage served by wells.

Washim tahsil had a lion's share of 2,200 acres (25.5%) out of 8,642 acres of the total irrigated area of the district; the tahsils with less than one thousand acres of irrigated land were Akola with 982 acres and Mangrulpir with 961 ax acres. Wells have been the only source of irrigation in Akola, Akot and Mangrulpir tahsils and major source in remaining tahsils during 1960-61 to 1962-63. It was only in Washim tahsil that private canals irrigated 25 acres and 20 acres during 61-62 and 1962-63 respectively and it was only in Washim and Murtizapur tahsils that small acreage of land was irrigated by Tanks.

Below is the table giving cropwise distribution of irrigated area for last three years.

۔ ان میں جب میں اس کا ان کا چین ای کا ان کا		<u>(area</u>	in <u>acres)</u>

•

1962-63 - Out of the total irrigated area, food crops commanded vary la-rge proportion; thus 92.0% of the gross irrigated area was under food crops and only 8.0% under non-food crops. Minor fluctuations were observed in the areas under these, two major categories during three years under review; the percentage of the area under food crops increased from 91.0% during 1960-61 to 93.7% during 1961-62 but again declined to 92.0% during 1962-63. Chillies seemed to have been the most important crop getting preference in irrigatted area overall, other, crops, the percentage of the gross irrigated area under it having been 30.3% during 1962-63. A notable feature about the chillies was that irrigated area under it dwindled considerably from 4,099 acres (50.6%) during 1960-61 to 2,663 acres (31.5%) during 1961-62 and further to 2,615 acres(30.3%) during 1962-63.

A shift in the acreage from chillies to other food crops including fruits and vegetables, contiments and spices ះ (ធរុំ ស៊ីស ខះ ten_____

etc. seems to have taken place during 1961-62 and 1962-63; increase in the percentages of the area under other food crops from 26.3% during 1960-61 to 47.0% during 1961-62 and further to 48.9% during 1962-63 proves this tendency. Other important crop to which the benefits of irrigation facilities were accrued was wheat. Irrigated area under it however declined from 757 acres(9.0%) during 1961-62 to 306 acres (3.5%) during 1962-63. Consideration of the distribution of crops grown

- 34

in irrigated area revealed that Wheat was grown mostly in Washim tahsil. Sugarcane also had been sown on comparatively more area (249 acres during 1962-63) in Washim (tahsil only; Balafur tahsil however, increased its area under Sugarcane to 282 during 62-63 from 45 acres during 1960-61 and 97 acres during 1961-62; remaining tahsils had very small concers on der Sugarcane. Areas under Chillies had more or less even distribution among all tahsils; neverthless Murtizapur had comparatively more area under Chillies during all the three years under review. 3.6 Production:-

•The gross cropped area and acreages under various crops remaining more or less same the same during last three years, it is the yield rates and changes therein that will indicate the dynamic forces emanating as a result of developmental activities in the agricultural sector. The following table shows briefly the areas under few important, crops and the production trends.

		ing states and states and States and states and s States and states and st		an ch <u>eal</u> Cap I Airthean Airthean Airthean Airthean		4

Source :- Statistician, Department 4351. Agriculture, M.S. Poona.

Total production of Jowar, Tur and Groundnut continuously declined from 1960-61 to 1962-63; and this feature was_ more disturbing in the case of Jowar and Tur, total acreage under which was more during 1962-63 than that during 1960-61. Wheat registered healthy tendency of continuous increase; and Cotton recovered during 1962-63 after a lean year of 1961-62. Strikingly most of the major crops have shown declining tendency in the average yield rates from year to year. Jowar, Tur and Groundnut have struck a consistent note in revealing downward trends in the yield rates during subsequent years starting from 1960-61. Magnitude of the decline in the yield rates during 1962-63 as compared to earlier years becomes revealing if it is noted that yield rate of Jowar was less by 32%, Tur by 43% and Groundnut by 45% during 1962-63 as compared to the. yield rates during 1960-61. Cotton experienced different fluctuations in its yield rates; its yield rate went down from 93 bales per acre during 1960-61 to 39 bales during 1961-62 and again raised to 66 bales during 1962-63. A favourable trend was observed only in the case of Wheat; it recorded _ increase of yield rates from 352 Lbs. per acre during 1960-61 to 379 Lbs. during 1961-62 and further to 378 Lbs. during 62-63"

of 82.1% the cultivating households cultivated the land owned by them or held from Government; 4.7% households cultivated tenanted land, and remaining 13.2% cultivated land partly owned and partly taken on lease.

•

4955 households(21.3%) had a holding within the range of 15.0 to 29.9 acres; and the next largest group comprised 3504 households (15.0%) having the holding of 2.5 to 4.9 acres. There were only 7.3% of the households with 50 acres and more of land. The average size of the cultivation holding in this district in 1960-61 was 18.45 acres.

3.8 Sown area per worker, per plough etc.:-

The net area sown per agricultural worker, per pair of bullocks and per plough are given below; herein the net area pertains to the year 1962-63; but the number of agricultural workers are as per 1961 Census and number of bullocks and ploughs are as per Livestock Census 1961.

						worker, per

Washim	3.83	4.00	47.87
Akola distr	ict. 4.03	4•37	53:03

On an average, 4.03 acres of sown area was there per Agricultural worker during 1962-63 in Akola district, lowest area per worker having been in Mangrulpir tahsil and highest in Murtizapur tahsil. Sown area per pair of bullocks during 1962-63 was 4.37 acres for entire district; and Akot tahsil had maximum of 5.33 acres and Mangrulpir tahsil had minimum of 3.59 acres per pair of bullocks. Akola district had 53.03 acres of sown area per plough during 1962-63, and Balapur - --tahsil had maximum area and Mangrulpir tahsil had minimum area per plough during 1962-63.

3.9 Agricultural Wages:-

In rural areas, the wage rates of agricultural labour fluctuates depending upon the availability of work; and the rates are high during peak season from July to December and comparatively low during remaining months. It is observed on the basis of the data about rural wage rates available from three rural centres in Akola, Akot and Washim Blocks that males were paid from Rs1.00 to Rs1.62 during peak season and average daily wage rate during peak season was Rs1.20 per male; females were paid from Rs0.44 to Rs1.00 and average wage rate per female per day worked out to Rs0.67 during peak season; and children were paid, on average, Rs0.53 per day during the peak season from July 1963 to December 1963.

Chapter IV.

Animal Husbandary, Forest & Fisheries.

4.1 Livestock :-

Livestock plays an important part in the country's economic life. The cattle and buffaloes are maintained not only for milk and for use in agricultural work, but also because they supply large part of the manures used by the farmers. Following table shows the livestock population as per 1956 and 1961 livestock consus.

Livestock in Akola district.

The male cattle numbered 301938 and female cattle 263396 during 1961 and population of both of these categories were slightly less in 1961 than that in 1956. 6326 males were utilised for breeding as against 179908 females used for breeding during 1961. Male cattle were mainly used for agricultural occupations; 216344 males out of total males of 301938 were used for work in 1961. On an avorage, there was one working bullock for 9 acres of net cultivated land during 1961. 4.2 Total buffaloes as per 1961 census were 90683, out of which 11816 were males and 78867 were females. The number of males slightly declined during 1961 as compared to those in 1956, while the females increased in number in 1961 as compared to those in 1956. The ratio of breeding males to breeding females was 1:42 during 1961. Unlike cattle, the young stock constituted very high percentage of buffaloes; the male youngstock formed 80.2% of total males, and femaloyoungstock formed 33.6% of total females.

4.3 There was remarkable variation in the number of sheep in 1956 and 1961 consus; the number of sheep, which were

87788 in 1956 declined to 47791 in 1961. The number of goats in 1961 were 149677 and registered a slight decline from their number in 1956. The sheep were mainly concentrated in Akot, Balapur and Akola tabsils; but the goats were more or less evenly distributed among all the tabsils of the district in 1961 4.4. The population of horses and ponies also decreased from 6457 in 1956 to 4088 in 1961.

4.5 Other livestock which numbered 7625 in 1961 includcd pigs (4317), Donkeys(3294) and others like camels and Mules etc. in negligible number.

4.6 <u>Poultry</u> :- Population of poultry increased considerably from 117239 in 1956 to 174921 in 1961. The Fowls dominated in the poultry population; they numbered 173668 and constituted 93.6% of the total poultry population in 1961. Other worth mentioning category was Ducks which were 576 in 1961. Among the Fowls, the Hens were 66318 and Cocks were 23041 and remaining 84309 were Chickens. Improved varieties are supplied by the government agencies; and this work has been intensified by Panchayat Sanities during last few years. But as per 1961 census there were only 2371 (1.4%) improved Fowls out of total 173668 Fowls in this district.

In Akela district there were 3 centres of poultry devel pment, where pedigree birds are supplied, eggs are sold and hatched. During 1963-64, 703 pedigree birds were supplied, 377 cockrels were freely supplied, 3152 eggs were sold for hatching.

4.7 <u>Dairy Development</u>:- A town milk supply scheme is in operation in Akola town only in this district. The milk supply is undertaken on government account with a view to ensuring supply of pure and wholesome milk to the town dwellers. The milk is purchased from rural producers of milk through their cooperative societies and is sold to the public through the centres opened in various localities of the town. Out of the total 3rd plan provision of Rs.7.00 lakhs, Rs.2.38 lakhs were spent upto the end of March 1964 on this scheme in this district.

The main objective in organising Cooperative Dairy S cictics of milk producers is to develop milk producti n as a subsidary means of livelihood for persons dependent on agriculture and ensuring adequate supply of nilk to Town Milk Supply Project. At the end of 1962-63, there were 11 Cooperative Dairy Societies with membership of 266 and working capital of Rs.69349; Rs.57850 were given as leans to the members of these societies for purchase of cattle and instruments.

One Federation of C operative Milk Societies is formed and it functions as a coordinating agency between societies.

4.8 <u>Slaughter Houses</u>- Slaughter houses are situated at all the tahsil places and at few important rural areas also. They are given licences every year by local bodies. Following table shows the number of slaughter houses and animals slaughtered. The 'other' under number of slaughter houses implies slaughter houses which undertake slaughtering on minor scale and which are not licenced slaughter houses.

1963-64	16	9	7	15661	4227	3468	24449	

Source :- District Animal Husbandry Officer, Zilla Parishad, Akala.

4.9 <u>Veterinary Facilities</u>:- In order to neet the requirement of veterinary facilities of about 9000 livestock in Akela district, there were 11 veterinary dispensaries and 44 veterinary aid centres as an 31st March 1964; few of them were run and maintained by Zilla Parishad and few by municipalities.

Every year livesteck veccination and innoculation and castration programme is undertaken vig rously. Following table shows the work dime during last three years.

•

Ycar			Castrations	Cases treated.
	& Vac	cinations.	· .	**
1961- 6	2	41438	2741	37907
1962-6	3	110616	- 3503	55398
1963-6	4	44 7 259 • ···	5547	5599 7

For production of healthy livestock, pedigree bulls and cows of improved breeds are supplied. It is reported that 102 pedigree bulls and 84 cows of Hariyana breed were supplied during 1963-64. Artificial insemination is also done through 2 main centres, 12 rural units and 3 sub-centres and 400 and 387 cows were reported to have been artificially inseminated during 1962-63 and 1963-64 respectively; and 371 and 606 buffaloes were artificially inseminated during 1962-63 and 1963-64 respectively.

4.10 <u>Agricultural Implements</u>:- As per the information collected at the time of livestock consus of Akola district, there were 34941 ploughs including 13638 wooden ploughs and 21303 iron ploughs during 1956, and the number of these ploughs increased to 36202 in 1961, and included 13305 wooden ploughs and 22897 iron ploughs. Numerically the carts were in largest number among all types of implements; the number of carts, which were 50724 during 1956, decreased to 50510 during 1961. It is only the oil engines with pumps and electrical pumps used for irrigation purposes that registered considerably increase over the period from 1956 to 1961; the former increased from 238 in 1956 to 437 in 1961 and the latter increased from 109 in 1956 to 504 in 1961.

4.11 Forest :- Akola district is not well-wooded; neverthless good number of trees and groves are scattered over the entire district. Forests are mainly in Balapur,Akola, Mangrulpir and Washim tahsils on the Balghat plateau of Ajanta hills, the Narnala reserves of the Satpura ranges and in the Payanghat along the plains of Purna river. Following table _ shows the distribution forest area among tahsils as per Season and Crop Report.

Area under Forest in Akela district. (Area in Acres)

> 2) Statistician, Forest Department, Maharashtra State, Poona.

The area under forest during 1963-64 was of 223245 acres and seems to have not undergone any substantial changes during three years under review. Out of total forest area, 91.0% was categorised as the reserved forest and 9.0% as protected forest during 1963-64. Major portion, forest under Forest

Ak la.

Department was of 'A' class category and only 59004 acres was of 'C' class category during 1963-64.

4.13 The forest in this district is of deciduous type, containing varieties of species. The most valuable species is Teak, which is largly used for posts and rafters of buildings; Ain is the species next in value to Teak; Dhawada, Lenda, Bijasul, Behda, Harda etc. also occupy important positions. The following table gives an idea of the value of produce.

	Value in Rs	
1961–62	8,32,081	
1962-63	7,55,561	
1 96 3–6 4	9,42,034	
	· · · ·	

Value of Produce.

Timber and firewood constitute the major forest produce. The value of the produce decreased from Rs.832 thousands during 1961-62 to Rs.756 thousands during 1962-63 and again increased to Rs.942 thousands during 1963-64.

4.14 In Akela district entire 'C' class forest of 59004 acres and 85411 acres out of 'A' class forest was open for grazing during 1963-64. Most of this area was kept open to all animals for the entire year; but some portion of 'A' class area was restricted to particular type of animals for short period in a year. Total revenue derived from grazing land was Rs.70154 during 1963-64.

There were two Forest Labour Contract Societies during all the years from 1960-61 to 1962-63; the membership, _ however, increased from 70 during 1960-61 to 72 during 1961-62 and remained constant at 72 during 1962-63. These societies, were not only given financial help, but they were given preferences in the allotment of coups by the Forest Department for cutting wood in forests.

4.15 <u>Fisheries</u>:- Fishing activity is restricted only to inland water like rivers, tanks, pends in this district. Purha and Penganga rivers and their tributaries afford a length of 540 Km. of waters for fishing. The tanks at Rised, Haral and Karanja are good sources. Twe reservoirs, one at Katepurna and one at Ekburjee are under construction and when completed, will offer large field for development of fishing industry. 4.16 The important varieties, from connercial point of view, are Murrel, Dhoara, Tambu, Kanheri etc. These varieties are, however, not of fast growing type. In order to increase the yields of fish, carp fry of select quick growing varieties are imported from West Bengal under the 3rd plan scheme FSH 7, and are released in the tanks for propagation of pisciculture. It is reported that RsQ.07 thousands were spent on this scheme during 1961-62 to 1963-64 in this district.

Fishing is generally done with the help of lecal nets called Udan or Tangar or Bhawan Jal. In order to encourage fishernen to purchase essential fishing accessories like nylon, hemp twing, cotton twing, fish hock etc. so as to increase their output of fish, subsidy is granted by the Government to them under 3rd plan scheme FSH 2.

There was only one comporative society of fishermon during 1960-61 to 1962-63 with the membership of 12 during 1960-61 and 32 during 1962-63. This society advances leans to members to enable then to purchase requisite accessories.

- 46 -

Industries, Mining and Electricity.

5.1 Introduction:-

In Akola district 81.33% of the total workers derive their livelihood from Agriculture and the remaining 18.67% depend on other non-agricultural occupations. As the agriculture has its own limitations for absorbing larger number of workers, it is the industrial development that offers an opportunity of giving grater employment to vastly increasing labour force. If number of workers per lakh of population employed in registered factories is taken as criterion of industrial advancement, Akola district stands 12th among 26 districts of the State and 3rd among 8 districts of the Vidarbha division during 1963, 663 having been the workers per lakh of population of Akola district during 1963. If, however, establishments using electricity-registered under 'Factories Act'as well as not-registered-are also to be accepted. as good indicator of industrial growth, Akola district occupies 7th place among 26 districts of the State and 2nd place among 8 districts of the Vidarbha division, as per the information published in 1961 census hand book.

5.2 Factory Establishments:-

A number of textile mills, ginning and pressing factories oil mills and the biggest hydrogenated oil industry in Vidarbha are located in this district. The number of industrial establishments registered under Factories Act and average daily number of persons employed therein are given below.

Industry:		1961	•	1962	1963	، • • • • •

Total :-	85	6,979	89	8,072	87	7,888

The number of factories increased from 85 during 1961 to 89 during 1962, but decreased to 87 during 1963; the average daily employment similarly increased from 6,979 during 1961 to 8,072 during 1962, and decreased to 7,888 during 1963. From the point of view of employment, the textile

establishments were important and provided employment to, on an average, 838, 1,420 and 1,517 persons per day per establishment during 1961,1962 and 1963 respectively. The Hydrogenated oil industry also employed, on an average, 467 persons during 1963. The Ginning and Bailing factories were next to provide employment to large number of persons i.e. 84 during 1961, 85 during 1962 and 77 during 1963 per establishment per day. 5.3 Following table shows the distribution of registered factories according to power operated and non-power operated and number of workers in them.

Distribution of registered working factories during 1963 - Akola district.

Source :- Chief Inspector of Factories, M.S. Bombay.

Large scale factory is defined as one having 50 or more workers and run on power, or 100 and more workers and run without power. Such factories numbered 30 out of 87 total registered factories in Akola district during 1963 and

- 49 -

constituted 34.5% of the total factories. All of these large scale factories were power-operated and on an average,219 persons were employed by one factory. On the other hand, there were 57 small scale factories, which accounted for 65.5% of the total factories. Out of these 57 small scale factories, 54 were power-operated and 3 were non-power-operated. On an average, one power-operated small scale factory employed 22 persons perday, as against 39 persons provided with employment by one nonpower-operated small scale factory.

5.4 Industrial Area:-

In spite of some efforts during last few years, Industrial Estate could not be established in Akolamdistrict. Maharashtra State Industrial Development Corporation has, however proposed to undertake an establishment of Industrial Area near Akola. As at the end of March 1964, the matter was at proposal stage and some officials of the said Corporation had visited Akola. Under this scheme Industrial Area is to be developed and facilities like roads, water supply, electrical supply etc., are to be made available in the Area and the plots are to be leased out on nominal charges so that prospective_ entrepreneurs will be attracted to establish industrial concerns within the Area.

5.5 Cottage and Small Scale Industries:-

The Cottage and Small Scale Industries, which serve as subsidiary occupations to the agriculturists are comparatively in large number. Handloom, Shoemaking, Carpentry, Brick making, Pottery, Oil Ghanies, etc. are some of the important household industries in this district. There are also considerable non-registered small scale establishments like dal mills, oil presses, confectonery, soap making etc.

As per the 1961 census, there were in all 28,388 workers engaged in industries, out of which 13,407 (47.23%) were working in household industries, 6,979(24.58%) were employed in registered factories, and remaining 8,002 (28.19%) were engaged in non-household industries except registered factories fiz; un-registered small scale establishments. The detailed type of industrywise information about manpower engaged in household and small scale industries is not readily available; however ۰,

- 51 -

About one fourth of the total workers i.e. 3,428 out of all engaged in household industries are working in manufacturing of wood and wooden products such wooden furniture, doors and windows, and materials from cork, bamboo leaves. Manufacture of miscellaneous textile goods like garments, pillow cases, umbrellas etc. engages 2,037(15.2%) persons; this group mostly includes tailors engaged in making garments for men and The third largest group of 1,974(14.7%) persons are is women. working in manufacture of bricks, tiles, potteries and allied non-metallic mineral products. Leather and leather products is also an important household industry and engages 1,317(9.8%) persons. Cotton spinning and weaving including handloom weaving engages 902(6.7%) persons; these persons, who are mostly Momins and Koshtis are spread over all the district and are mainly in Akot, Washim and Balapur tahsils. This household industry is however on the decline due to competition from the mills. 5.6 Industrial Cooperatives:-

In order to give advantage of the cooperative movement to the artisans and craftsmen engaged in household industries, societies have been registered and financial assistance is given to them.

Industrial Societies in Akola district.

- 52 -

The above table shows a steady rise in number of societies, memberships, share capital, sales. It indicates healthy progress of industrial societies. Weaving Societies have nore membership than any other type of society. Other important type of societies are pottery societies(11 societies) leather workers' societies(8 societies), carpentry societies (7 societies). The table given below shows that these industrial societies were functioning steadily without abnormal changes in membership.

5.7 Mineral Products:-

This district is not, known to have any mineral resources. Mining activity in Akola district is therefore restricted only to the quarrying of stores. In 1961 census 865 persons were reported as working on quarrying of stones, clay etc. out of which 600 were males and 265 females.

5.8 Electricity:-

Power development and the extension of electricity to more urban and rural areas pave the way for more industrialisation, better irrigation by installation of pumping sets. In Akola district, electricity is supplied from Ballarshah-Khaparkheda-Gondia grid. During 2nd plan period, a thermal power station with 30 M.W. capacity was constructed at Paras, about 18 miles from Akola, for generating electricity and this thermal station is proposed to be expanded-during 3rd plan period.

5.9 More and more villages are being provided with electricity from year to year. By March 1964, not only all 9 towns, but all the Block Headquarters, except Manora and large number of villages were electrified. Following table shows the position as on 31st March 1964.

District	1,516	55	19	16	65	155	10.2

No.of electrified villages and towns.

- 54 -

Hardly 10.2% of the total inhabited villages and towns of Akola district were electrified upto 31st March 1964 and this work of taking electricity to remote villages .was lagging behind especially in Washim tahsil, wherein only 13 villages and towns (4.0%) of the total 326 villages and towns have been served with the electric lights. As is already stated, Paras thermal station is 5.10 the only generating centre in Akola district. The centre started operating from 15-10-1961 and it is reported that the station generated 26,381 thousands K.W.H.during 1961-62, 1,43,963 thousands K.W.H.during 1962-63 and 1,60,987 thousands K.W.H. during 1963-64. The electricity is supplied to Akola district from Ballarshah -Khaparkheda -Gondia grid, of which Paras generating centre is one of the centres. The consumption of electric power is given in the following table.

Consumption	of	electric	energy in

Akola district.

Year		K.W.H.	Sold to th	e Public	- 	
	Domestic:	Commercial: light and small power	power.	: Public lighte ing.		:Total

			•			

Source :- Executive Engineer, M.S. Electricity Board, Akola.

Increasingly more and more electric energy was consumed in Akola district from year to year; the total energy consumed thus was 10,758 thousands K.W.H.during 1961-62, 11,621 thousands K.W.H.during 1962-63 and 13,289 thousands K.W.H.during 1963-64. Taking into account the entire population of the district, it is observed that electric energy consumed per person was 9.0 K.W.H., 9.8 K.W.H. and 11.2 K.W.H.dur-ing 1961-62, 1962-63 and 1963-64 respectively.

5.11 This tendency of progressively more consumption over years was noticed in the case of consumption for Industrial Power and Public Lightening. Consumption for Domestic Purpose and Commercial light purpose however, showed different development. The consumption for Domestic Purpose increased slightly during 1962-63 but decreased considerably during 1963-64 as compared to consumption during 1961-62. Commercial light and Small Power - consuming units consumed less during 1962-63 than during 1961-62 and consumed considerably more during 1963-64 than during 1962-63.

5.12 Electricity Rates:-

The rates of electric energy charged by the M.S. Electricity Board vary according to the purpose for which energy is used. Rates excluding meter rents and government duty are given below.

Domestic and Commercial:-

The rates applicable to lighting and fans in residential, commercial and business premises are minimum of Rs.2.00 per month for 6 units, Rs.0.31 paise per unit above 6 units upto 30 units and Rs.0.25 paise per unit above 30 units. <u>Snall Power</u> :-

Electrical energy consumed for Refrigerators, Snall cookers, Heaters etc. is chargable at minimum of R\$5/per month for single phase and R\$10/- per month for three phases per installation; and above 40 units the rate is R\$0.12 paise per unit. Irrigation :-

The minimum charges for energy are Rs 3.75 per month per B.H.P.of connected load; and the rates fixed are Rs 0.13. paise per unit for the first 50 units, Rs 0.12 paise per unit for next 150 units and Rs 0.10 paise per unit for all additional units consumed during a month.

Industrial :-

The minimum charges applicable to general Motive Power Service(including non-agricultural pumping loads) requiring not more than 50 K.W.of demand are Rs.4.50 paise per month per B.H.P.of connected load. The unitwise rates charged are Rs.O'.15 paise per unit for first 50 units, Rs.O'.13 paise per unit for next 150 units and Rs.O'.10 paise per unit for all additional units consumed during a month. Chapter VI

Co-operation.

6.1 Introduction.

It was the considered opinion of the All India Rural Credit Survey Report(1951-52) that the cooperative movement had not been able to provide the credit in time and in adequate quantity to the agriculturists and that the agriculturists were still in the firm grip of the blood-thirsty money lenders. Since then however, great strides have been made in the cooperative movement. Upto 1951-52, whatever little activity there was, it was mainly confined to agricultural credit cooperatives. In recent years, especially after the publication of the All India Rural Credit Survey Report, attempts are being made to broadbase the functions of the primary credit societies with the objective of embodying more aspects of the life of the agriculturists.

The table below shows the position of the movement in Akola district during last three years.

			•

Source :- District Deputy Registrar, Coop.Societies, Akola.

N.B. :- (Figures in the brackets indicate percentage to the total).

It would be evident from the above table that Agril. Credit Societies dominated the field from the point of view of number, membership and working capital, percentage of their number to the total number of cooperative societies having been 77.2, the percentage of the membership having been 69.2 and the percentage of the working capital having been 82.1 during the year 1962-63. They were followed by Non-agril.non-credit societies only in respect of number of societies, percentage of their number to the total number of. societies having been 9.7 during 1962-63. But as regards membership and working capital, Agril.non-credit societies came next to Agril.credit societies, their membership accounting for 14.7% of the total membership and their working capital 8.8% of the total working capital of all the societies.

•

6.2 District Central Cooperative Bank:-

The cooperative structure in this district has appex bank at district headquarter and is named as the Akola District Cooperative Central Bank limited and is working through its 16 branches situated at all the Community Development Block headquarters and at some large villages as at the end of 1962-63.

Particulars.	· 1960–61	1961 – 62	1962-63

Working of District Cooperative Central Bank, Akola.

Source :- District Deputy Registrar, Coop.Societies,Akola.

The Central Bank is steadily expanding its activities. Its share capital increased from 3,166 thousands during 1960-61 to Rs.3,549 thousands during the year 1961-62 and further to Rs.3,567 thousands during 1962-63. Deposits did not show any appreciable increase during 1961-62 but this phenomenon was due to general crop failure. The same however increased during 1962-63. The loans outstanding amounted to Rs.18,804 thousands during 1962-63 as against Rs.20,305 thousands in 1961-62 and Rs.16,878 thousands in 1960-61. 6.3 District Cooperative Land Development Bank :-

To meet the need of the agriculturists for the long term finance, the District Cooperative Land Development Bank limited was established and it had 6 branches at all the taluka headquarters during 1962-63. The following table indicates the working of the Bank.

Particulars	1960-61	1961-62	1962-63	
No.of Banks(includ ing Branches.	1	4	7

Frimary Land Mortg.ge Bank, Akola.

Source :- Dis

- District Deputy Registrar, Coop.Societies, Akola.

The table above shows an allround progress of the Bank. Membership and share capital increased from 1,011 and 1s.65,520 in 1960-61 to 1,868 and Rs.1,31,414 in 1961-62 and increase under these items during 1962-63 was still more substantial, the membership and share capital having been 3,289 and Rs.4,14,023 respectively at the end of 1962-63. Appreciable increase in the deposits was evident during 1961-62 and 1962-63 as compared to that during 1960-61. Advances of loans is the main function of the Bank and Rs.734 thousands were advanced by it during 1960-61 and Rs.1,297 thousands during 1961-62. The loans were mainly advanced for construction of new wells, repairs to **xs**old wells and installation of pumping sets.

6.4 Agricultural Credit Cooperativos:-

In the initial stages of cooperative movement in India, primary purpose of cooperatives was provision of easy credit to cultivator members; and even though presently other activities are also undertaken by the cooperatives, the advanc -ing of credit still remains major activity of most of the primary societies. It is therefore natural that agricultural credit societies predominate the cooperative movement. Of late, however, emphasis has shifted from the purely credit aspect of the movement and attempts are being made to cover as large sector of the rural economic activities as possible by cooperatives. With this object in view, service societies and multipurpose societies are being formed instead of the purely credit societies. These societies undertake variety of functions such as supply of agricultural implements, seeds, fertilisers, processing and marketing of agricultural produce besides the provision of credit.

The link between credit and marketing has been strengthendd by converting purely credit societies into service and multipurpose societies. Not only the problem of marketing of the produce of the member-cultivators is solved, but the repayment of the loans advanced by the society to the members_ is also ensured out of the sales proceeds of the member-cultivators.

The following table will indicate the working of these societies during the years under review.

Particulars.	Unit	1960–61	1961-62	1962-63
No.of Societies.	No .	8 35 .	835	835

Working Capital	Ħ	22,294	25,072	25,669

Agricultural Credit Societies in Akola district.

Source :- District Deputy Registrar, Coop.Societies, Akola. The number of agricultural credit societies was 835 during last three years; however, there had been considerable increase in membership, share capital and working capital. The average membership per society_increased from 82 in 60-61 to 86 in 1961-62 and to 93 in 1962-63.

The total working capital of the societies increased from Rs.22,294 thousands in 1960-61 to Rs.25,669 thousands in 1962-63. The total working capital per society and per member thus showed and increase from Rs.26,700 and Rs.327 in 1960-61 to 3.30,741 and Rs.330 in 1962-63 respectively. Detailed analysis of the working capital of these societies showed that share capital increased by Rs.1,216 thousands in 1962-63 over that in 1960-61. Deposits, on the other hand decreased from Rs.1,542 thousands in 1960-61 to Rs.503 thousands in 1962-63 and was due to the mature deposits having been withdrawn by the members and non-members and also due to the large portion of the member deposits having been adjusted towards the repayment of their loans.

There was continuous decrease in the amounts advanced as loans during all the years under consideration. The loans advanced per member was of Rs 232 during 1960-61, Rs 176 during 1961-62 and Rs.158 during 1962-63. These societies which cater to the needs of the agriculturists only, had advanced, on an average, Rs.8 during 1960-61, Rs.7 during 1961-62 and Rs.6 during 62-63 per acre of the gross cropped area. The recovery of the loan was however not satisfactory in 1961-62, as only Rs.8,796 thousands were recovered in that year as compared to the recovery of Es.13,683 thousands in 1960-61; and this shortfall was reported to have been due to the crop failure during 1961-62. Position slightly improved during 1962-63 in this respect due to the strenuous efforts put in by the officials, resulting in Rs 11,910 thousands having been recovered during 1962-63. 6.5 Non-Agricultural Credit Societies:-

The cooperative movement in urban areas is making steady progress in this district. The non-agricultural credit societies have been helping small traders, employees in factories and mills with the credit they require. By and large, loans advanced are within the repaying capacity of the members; naturally repayments are regular and in many cases employers cooperate with the institutions by effecting deductions from the monthly pay-rolls.

Non-Agricultural Credit Societies.

Coop.Societies, Akola.

The societies numbered 74 during 1961-62 and 75 during 1962-63 compared to 60 existing during 1960-61. However the everage membership per society declined from 98 during 1960-61 to 88 during 1961-62 and considerably improved to 117 during 1962-63. The advances of loans to the members is the main function of these societies; and these societies reported to have advaneed Rs.531 thousands during 1961-62 and Rs.1,180 thousands during 1962-63 as against Rs.530 thousands during 1960-61. On an average credit facility of Rs.90 during 1960-61, Rs.82 during 1961-62 and Rs.135 during 1962-63 per member was provided by the society and it appears that working in this respect during 1962-63 was considerably better than the working during earlier two years.

6.6 Agricultural Non-Credit Societies:-

The following table gives an idea of the working of these societies.

Agricultural Non-Credit Societies.

	1960–61	1961–62	1962-63

District Deputy Registrar, Coop.Societies, Akola. Source :--

(N.B. :- Figures in brackets indicate percentage increase over earlier year.)

The societies registered overall continuous progress under during the years under review kall major heads, such as membership, working capital, loans advanced etc. But this expansion has been remarkably substantial in case of their number, member -ship, working capital during the year 1962-63 as against the expansion achieved during the year 1961-62. The year 1962-63 witnessed 43.5% increase in number of societies as compared to only4.5% increase witnessed by the year 1961-62. Increase in the membership was also of the order of 91.5% during 1962-63 as against only 19.9% increase during 1961-62. Comparatively better progress was also observed during 1962-63 than during 1961-62 under working capital and reserve and other funds. On the other hand share capital increased at a declining rate during 1962-63 even though number of societies and membership increased substantially during 1962-63. These societies being non-credit societies, loans would not normally be advanced by them; but it seems that they were undertaking credit functions also to some extent for their members. Even though the loans advanced were more in absolute terms during 1962-63(Rs. 301 thousands) as compared to loans during 1961-62(Rs.178 thousands), the percentage increase was observed to have been less during 1962-63(69.1%) as against that during 1961-62(100.0%).

The type of societies which predominated in this category of Agricultural Non-Credit Societies was cooperative furming, numbering 30 during 1962-63. These societies were reported to have brought 1,276 acres of land under cultivation and had the production valued about Rs.44,700 during 1961-62. The Diary Societies, numbering 12 during 1962-63, were doing good business and had sales of milk of about Rs.78,900 during 1961-62. Sale and Purchase Societies, numbering 10 during 1962-63, tendered valuable service of linking the provision of credit with the marketing of agricultural produce. In addition, these societies worked as agents of Vidarbha Cooperative Marketing Society and distributed iron and steel, fertilisers, cement etc. to the agriculturists.

6.7 Non-Agricultural Non-Credit Societies:-

The position of these societies at the end of three different years has been given in the following table. Non-Agricultural Non-Credit Societies.

Items	1960–61	1961-62	1962-63	• • • • • •

Source :- District Deputy Registrar, Coop.Societies, Akola.

A smooth continuous progress has been registered by the societies during all the three years under review. The number of societies thus showed 47.9% increase, the membership 75.0 percent: increase, share capital 124.3 percent increase and working capital 47.8 percent. increase during the year 1962-63 as compared the position during 1960-61. The

- 65 -

Industrial Cooperatives dominated this category and had 56 societies and membership of 2,332 during 1961-62.

6.8 Marketing Societies:-

Making available proper marketing facilities to the agriculturists was an essential aspect of the cooperative development, in the absence of which the agriculturists were deprived of the reasonable price for their produce. The marketing societies provide such a service to the cultivators. In Akola district, there were 10 marketing societies with 744 affiliated societies at the end of 1962-63. These societies undertook marketing activities both as owner and as agent . Following table shows by itself the services rendered by these societies.

As agent.

6.9 Regulated Markets:-

In Akola district there were 7 regulated markets at the end of 1963-64. At every regulated market place, there is a Cooperative Purchase and Sale Society working as Adtyas on the licence issued by the respective Market Committees. Following table shows the financial position and transaction s undertaken by these Markets during 1963-64.

- 66 -

:

The Regulated Markets were more or less financially self-sufficient and their expenditure was less than income. The transactions undertaken were also significent and value of the transactions of each of the Regulated Markets was more than Rs.50 lakhs during 1963-64, except in case of Akot Market.

68 Chapter VII.

Medical and Public Health.

In country like ours high percentage of the popu-7.1 lation is still deprived of the minimum medical facilities; and hence expansion of medical facilities and promotion of public health measures is essentially an important assignment of the Government. The following table shows in the nutshell, the provision of medical facilities in Akola district.

. . . .

	196 1 *	1962	1963

Medical facilities in Akola district.

The data for 1961 does not cover Allopathic dispensaries).

The medical facilities provided through the hospitals and dispensaries run by the Government, including those administered by the Zilla Farishad were available in all tahsils of the district. No independent maternity hospital was existing; but the necessary facilities were available in the hospitals and fer of the dispensaries. The above tables indicates that number of hospitals and dispensaries increased to 70 during 1962 and to 71 during 1963; the primary health centres remained constant at 12 during all the years under review. On an average about 12614 persons were served by a dispensary in this district during 1963. The staff pattern projects the increase in the number of doctors by one during 1963 as against number of doctors during 1962 and decrease in the number of nurses by 5 during 1963 over those during the year 1962.

All hospitals, all primary health centres and some of the Allopathic dispensaries were equipped with beds for the treatment of indoor patients; and these facilities were available in all the tahsils. The Ayurvedic dispensaries invariably had no provision for the treatment of indoor patients. The total number of beds available for indoor patients were 563 during 1962 and 591 during 1963; and there were observed to have been 50 beds per lakh of population in this district during 1963. The facility of treating the indoor patients was availed of by increasingly more and more persons over years; 24,414 persons were treated as indoor patients during 1963 as against 22,016 persons during 1962. Male, Female and Children constituted 25.8%, 50.5% and 23.7% of the total indoor patients during 1962 and 26.2%, 48.8% _ * and 25.0% of the total indoor patients during 1963. Outdoor patients were 9,66,640 during 1962 and 10,22,539 during 1963; and these persons treated covered 37.9% males, 24.5% females and 37.6% children during 1962 and 37.6% males, 24.4% females and _ 38.0% children during 1963. It is noteworthy that females constituted as much as half of the total indoor patients, but they constituted about one forth of the outdoor patients during both the years.

The distribution of medical facilities among. tahsils and the services rendered to the people is worth examining. Below is a table giving such a tahsilwise distribution.

		No.of di	spensaries	Primary	:No.of	:Patients
Tahsil.	hospi tals.	Allopa-: thic.	Ayurve- dic.	Health Centres.	beds.	treated.
Akola	3	9	6	2	368	279949

Murtizapur	2	3	6	2	81	22 1 858
Washim	— .,	5	4	2	36	121091
District	5	30	36	12	591	1046953

Tahsilwise medical facilities during 1963.

The medical facilities can be said to have been evenly provided throughout the district. Akola tahsil however had larger number of units of 20 including 3 hospitals and had comparatively more beds; and this was natural in view of the district headquarter having been situated in this tahsil. The main hospital at Akola has attached to it a clinic specially for the treatment of the T.B. patients. Hospitals exclusively for ladies were only at Akola and Murtizapur and maternity facilities were made available at both of these centres.

Consideration of the distribution of these units into urban and rural areas show that all 5 hospitals, 14 out of 30 Allopathic dispensaries and 3 out of 12 primary health centres were located in urban areas. On an average, one urban unit served about 11900 persons, while one rural unit catered to the needs of about 15200 persons.

7.2 <u>Primary Health Centres:</u> - Establishment of the primary health centres is comparatively a recent development. These centres cater to the medical needs of the remote villages. Primary health centre is a sort of mobile dispensary in the sense that the doctor moves in the vehicle from main centre to sub-centres. The number of primary health centres remained constant at 12 during 1961, 1962 and 1963, each tahsil having

- 70 -

been provided with two such centres. The number of doctors and nurses are reported to have not undergone any change during this period. Total number of beds were 94 during 1962 and 98 during 1963; and out of these 98 beds, 40 were for males, 55 for females and 3 for children. The facility of treatment of indoor patients was taken advantage of by 1,067 persons during 1962 and 1,125 dur -ing 1963. Outdoor patients treated however decreased from 2,54,746 persons during 1962-to 2,51,759 persons during 1963. The following table summerises the position during last two years.

Items	-	19	62		1963			
	Male:	Fcmale	: Children	n Male	:Female	:Children

Working of the primary health centres.

Source :- District Health Officer, Zilla Parishad, Akola.

7.3 <u>Progress of Leprosy Centres:</u> In this district a leprosy control centre has been established at Murtizapur in 1959-60 to provent the spread of that disease. Besides there were a survey, education and treatment units, partly under the administrative control of the State Government and partly Zilla Parishad. At Karenja one more unit was working under the control of the Municipal Committee. By these units, surveys of population are conducted, persons are examined and leprosy cases are subsequent--ly treated.

- 71 -

\$	n an	~ - 72 -	
Year	: Persons : Total examined. cases	No.of : detected	Total No.of cases treated.
1962	2,00,357	2,780	1,374
1963	86,498	3,307	3,099
1 964	29,617	3,610	3,364
· · ·			· · · ·
	Source :		Health Officer, rishad, Akola.

It is thus evident that there was considerable rise in the number of cases detected and treated. Expenditure incurred on this scheme was of Rs.23,213, Rs.24,600 and Rs.32,714 during 1961-62, 1962-63 and 1963-64 respectively. 7.4 Recent epidemics and steps taken:- During the years 1961, 1962 and 1963, outbreak of cholera or small pox or any other epidemic on large scale was not reported in this district. Stray cases of cholera and outbreak of small-pox in few sca ttered pockets were, however, reported; and as a precautionary measure anti-cholera and anti-small-pox vaccinations were done during all these years by the staff of the Health Department with active cooperation of the staff of the local bodies. As a drive against small-pox, vaccination programme is undertaken on a large scale every year by separate staff appointed for this purpose only.

Year	: Anti-cholera	:	Anti-small-	Anti-small-pox vaccinations			
	vaccinations		Primary	:	Re-vaccinations		
196 1	1,05,307		32,115		1,80,570

Vaccinations done in Akola district.

7.5 <u>Malaria Eradication</u>:- Under the plan programme, Malaria Eradication Scheme is being implemented in this district and separate unit is established at Akola. The programme covered the entire district and D.D.T.Spraying and other measures were taken by the field staff specially appointed under this scheme. It is reported that Rs.0.70 lakhs, Rs.0.70 lakhs_and Rs.3.08 lakhs were incurred during 1961-62, 1962-63 and 1963-64 respectively on this scheme in ^Akola_district.

7.6 <u>B.C.G.Vaccination</u> :- The scheme "B.C.G.Vaccination for Tuberculosis Control " included in the Third Five Year Plan was implemented recently during the year 1963-64 in Akola district. Under this scheme, mass B.C.G. Vaccination campaign was started for securing immunity from Tuberculosis. An expenditure of Rs.71 thousands was reported to have been incurred during the year 1963-64 in this district.

7.7 <u>Family Planning</u>:- Family Planning campaign by encouraging sterlisation as a positive measure for population control was started by establishing an independent unit. There are 2 urban and 15 rural centres for rendering advice, distributing contraceptives and performing operations in this district. One mobile vasectomy unit has also been established for performing vasectomy operations. Compensations to low income group persons, undergoing the operations, towards the loss of working days was also granted.

The campaign of performing operations was intensified by getting close cooperation of C.D.Block personnel for propaganda of the advantages of the operations and by holding large number of camps in C.D.Block areas. It is reported that 30 camps were held and 859 persons were operated upon during 1961, and 35 camps were held and 700 persons were operated upon during 1962, and 71 camps were held and 1467 persons were operated upon during 1963. 7.8 Vital Statistics:-

Year	No.of births	No.of deaths
1961	47,035	25,635
1962	51,866	25,052
1963	44,228	17,637

Number of births & deaths in Akola district.

It is evident from the above table that the general tendency of number of births considerably exceeding number of deaths was observed during all the three years. Even more skriking feature was that while number of deaths declined from 25,635 during 1961 to 25,052 during 1962, the number of births increased from 47,035 during 1961 to 51,866 during 1962. A welcome feature was however noticed in the year 1963, during which number of births were 44,228 as against 51,866 during 1962; and number of deaths also declined to 17,637 during 63 as compared to 25,052 during 1962. The net addition to the population had been of 21,400 persons during 1961, 26,814 during 1962 and 26,591 during 1963; and they revealed that even though number of births during 1963 came down considerably, the number of deaths also decreased to great extent, with the result that net contribution to the total population during 1963 was slightly less than that during 1962; but was much more than that during 1961.

Causes	1961	1962	1963

Deaths according to causes : Akola district.

Source :- Director of Public Health Services, M.S. Poona.

The number of deaths caused by various diseases during 1963 were less than those during 1961 and 1962 except Small-pox by which 202 died during 1963 as against 35 during 1961 and 209 during 1962, and 'other causes' by which 8,233 died during 1963 as against 8,048 during 1962. The persons

- - 74 -

succumbling to Diarrhoe and Dysentery and to Respiratory diseases declined by more than 50% during 1963 as compared to deaths by these diseases during 1962. It is to be noted that not a single case of plague was reported during all the three years and of cholcra during 1962 and 1963.

7.9 <u>Town Water Supply</u> :- Out of 9 urban units in this district, only two towns namely Akola and Washim have protected water supply, piped water supply having been available in these towns. In Akola, the water is supplied from Kapshi Tank and in Washim town, wells are the only sources. In the remaining towns, no tap system is yet introduced and water is drawn from wells, which are the major sources is these towns. As per 1961 census, out of 9 towns, water supply was reported to have been inadequate in 7 towns, Akot and Telhara having been only urban places with adequate drinking water supply.

7.10 <u>Village Water Supply</u>:- The following table shows the distribution of villages according to the sources of drinking water, as per the 1961 census hand book.

Source	: Akot	: Bala- pur.	- :Ako]		i:Mangr r pir.	ul:Wash	im :District

supply k)All sou rces.	- 251	164	298	263	206	325	150 7 (100°0)

Distribution of villages according to source of drinking water. Wells were observed to have been the main source of drinking water in rural areas, 76.9% of the total inhabited villages relied on wells as the only source. The river occupied second place as a source; 8.9% of the total villages got drinking water from river and 10.1% of the total villages had well as well as river as the sources. Thus wells and rivers were the sources of as large as 95.9% of the total villages.

Consideration of talukawise sources revealed that more than 60% of the villages of Balapur and Akola tahsils and more than 75% of the villages of the remaining tahsils depended upon wells for drinking water supply. Washim and Mangrulpir tahsils had comparatively very few villages depending upon rivers as sources. In the villages depending upon rivers, the villagers have to dig 'Zaras' in the beds of the river during months other than mansoon months. A large number of villages of Akola, Akot and Balapur tahsils fall in the saline track areas; and water available in wells is salty and not useful for drinking purpose. The pipe water scheme is only alternative for these villages. During 1961, there was only one village namely Risod in this district which had protected water supply and pipe water supply was available in this village.

7.11 Adequacy of Water Supply:-

Even though each and every village had some or XXX the other source of water supply, many of the villages had not adequate water supply. The same is given below as per information available in 1961 census hand book.

Out of 9 urban areas, 7 had inadequate water supply during 1961; and 255 out of 1507 inhabited villages had not adequate water supply as per 1961 census hand book. 17.3% of the total villages of the district were having inadequate water supply and Washim tahsil had more than one fourth of the total villages with inadequate water supply. . 78 -

Chapter VIII.

EDUCATION.

8.1 Education is the most important single factor in achieving rapid economic development and technological progress and in creating a social order founded on the values of freedom, social justice and equal opportunity. The percentage of literacy of Akola district as per 1961 census is 31.2 and stands in favourable position in comparison with literacy in Maharashtra State, which is 29.8%. The strides made by this district in this respect would be clear from the fact that percentage of literacy increased from 22.6 in 1951 to 31.2 in 1961. This district stands third on the literacy ladder of the Vidarbha Region, Nagpur (35.0%) and Amravati(33.6%) occupying first two positions in the list of literacy percentages. Among all the districts of the State, Akola district ranks seventh in the literacy percentage of the population.

The following table shows the growth in the number of educational institutions catering to the needs of the district.

Type of insti- tution.	Boys:	<u>1961</u> Girls		Boys:	، بلدا سے جب خد سے د	2-63 :Total	• •••••••	96 <u>3</u> - Girl	64 s:Total

Source :- Director of Education, Maharashtra State, Poona.

The table above indicates that there has been steady increase in the number of institutions during both 1962-63 and 1963-64 in case of most of the types of institutions and that this increase has been more remarkable during 1963-64 than during 1962-63.

8.2 <u>Primary Education</u>:- Primary schools which provide institutional set-up enabling the fulfilment of minimum obligation to make minimum educational facilities available to the school going age groups, were 1324 in this district as at the end of March 64. The number of these schools increased from 1237 during 1961-62 to 1238 during 1962-63, and to 1324 during 1963-64 indicating 0.1% increase during 1962-63 and 6.9% increase during 1963-64.

The primary education in this district has been mainly the concern of local authorities like Janpad Sabha upto 1961-62 and Zilla Parishad during 1962-63 and 1963-64 in rural areas and of municipalities in urban areas. The following table shows the number of primary schools under different types of management.

marrabomorry.			
Type of management.	1961–62	1962–63	1963–64
1.Government 2.Janpad Sabha/	41 1108	1 1149	2 123 1
Zilla Parishad. 3.Municipal Committees 4.Private bodies Total :-	79 9 1237	79 9 12 <i>3</i> 8	82 9 1324

No.of primary schools according to management.

Source :-Director of Education, M.S.Poona/Parishad Education Officer, Z.P. Akola. Janpad Sabhas upto 1961-62 and Zilla Parishad from 1962-63 managed very large percentage of schools viz. 92.8% during 1962-63 and 93.0% during 1963-64; and schools run by municipal committees constituted next large group. There was only one primary school run by Government and 9 were under private bodies during 1962-63; and corresponding number during1963-64 were 2 and 9 respectively. It is thus evident that local authorities controlled and run 1228 (99.2%) out of 1238 schools during 1962-63 and 1313(99.2%) out of 1324 schools during 1963-64.

Most of the primary schools in this district imparted instructions to both boys and girls. The number of schools exclusively for girls was very small as compared to the number of schools having co-education. The following table shows the enrolment and number of teachers.

No.of students and teachers in primary schools.

Source :- 1. Director of Education, M.S.Poona. 2.Parishad Education Officer, Zilla Parishad, Akola.

There have been substantial number of primary schools in rural areas in this district. Out of 1238 total schools during 1962-63, 1129(91.2%) were in rural areas and 109(8.8%) in urban areas; and the position improved during 1963-64 during which rural areas had 1211(91.5%) schools and urban areas 113(8.5%) schools out of total 1324 primary schools during 1963-64. The number of students enroled increased by 2829 during 1962-63 and by 9763 during 1963-64; and in percentage terms this increase accounted for 2.3% during 1962-63 and 7.7% during 1963-64 over the immediate earlier year. The number of teachers also increased with increase in enrolment. That the importance of trained teachers seems to have been appreciated is evident from the increase in the percentage of trained teachers to total number of teachers from 54.6% during 1961-62 to 63.7% during 1962-63 and to 71.7% during 1963-64. Neverthless the fact that about one third of the teachers continued to be untrained even during 1963-64 needs due attention.

Assuming children within the age group of 6 to 14 as primary school going children, it is worth comparing the enrolment in schools with the child population of the same age group.

Age group	Year	Boys	Girls	Total	•
6-11 years	1962 63 1963 64	67.4 70.5	41•4 48•7	54.5 59.8	
11-14 years	1962 4 63 1963-64	59•5 63•2	32'•2 30•9	46 ∵ 7 47 ` 5	•

Percentage of enrolment to child population.

Source :- Director of Education, M.S.Poona.

There has been overall improvement in the enrolment during 1963-64 as compared to enrolment during 1962-63,

except in case of girls of the age group 11 to 14 years, percentage of enrolment of whom was slightly less during 1963-64 than that during 1962-63. The above table shows that even at the end of 1963-64, 40.2% of the children within 6 to 11 age group and 52.5% of the children within 11 to 14 age group were not attending the schools at all.

<u>Compulsory Education</u>. Compulsory education was in force in 8 urban and 38 rural centres during 1963-64, and the scheme covered only boys between the age group of 6 to 14 years, girls having been exempted from the scheme. The following table shows the state of compulsory education scheme in this district.

Year	No.of Boys	Fines imposed for				
	enroled.	non-enrolment	:non-attendance.			
1961-62	9082	164	216			
1962-63	9298	77	90			
1963-64	10134	63	165			

Enrolment under compulsory education scheme.

Source :- Parishad Education Officer, Zilla Parishad, Akola.

Number of boys enroling in schools seem to have been rising, while cases of non-enrolment declining from year to year during the years under review. Actions taken against non-attendance were more than those against non-enrolment, indicating that the guardians were not reluctant to enrol their wards, but were not equally insistent on their attendance in schools.

8.3 <u>Secondary Education</u> :- The secondary education marks the end of the scholastic career of many a person in India. These schools, unlike primary schools are mostly managed by the privace bodies in this district. Following table indicates the position in this respect.

ype of anagement.	1962-63	1963–6 4
. Government	1

Source :- Director of Education, M.S. Poona.

- 82 -

The number of schools increased from 79 during 1962-63 to 84 during 1963-64. Out of 79 and 84 schools during 1962-63 and 1963-64 respectively, as many as 58 (73.4%) and 63(75.0%) were controlled and run by private bodies. The secondary schools however seemed to have been more concentrated in urban areas; thus only 30 schools (38.0%) out of 79 schools during 1962-63 and 32 schools(38.1%) out of 84 schools during 1963-64 were located in rural areas.

Number of schools, students enroled and teachers appointed is given in the following table.

Source

- Director, Education ,M.S. Poona. Parishad Education Officer, Z.P. Akola.

From the above table, it can be seen that there has been a steady increase in the number of schools and in the enrolment during the years under review. The number of students admitted to schools showed an increase from 27127 during 61-62 to 30424 during 1962-63 and further to 33356 during 1963-64 and

the corresponding percentage increase came to 12.2 during 1962-63 and 9.6 during 1963-64. The number of teachers employed continued to commensurate with increase in the number of schools; but the ratio of students to teachers slightly increased each year during the years under review. The necessity of trained staff, on whom depends the overall standard of education seems to have not been fully appreciated, as the trained staff constituted only 56.9% of the total staff during 1963-64. Even though the percentages of trained teachers to the total teachers viz. 49.4% during 1961-62, 53.4% during 1962-63 and 56.9% during 1963-64 indicated continuous increase in the number of trained teachers, its space is almost negligible. This tendency of recruit -ing and retaining untrained teachers is reported to be predominant more in private schoolsthan in Government or semi-government schools.

The information about distribution of boys and girls according to standards and ages is not available separately for students going to primary schools and secondary schools. The same is therefore given in the following table in the consolidated form.

Age Group	· · · · · · · · · · · · · · · · · · ·	1962-63		1963-	64

	Distribution of	students by ages	
(Pre-primary, primary	and secondary schools)

Director of Education, Maharashtra State, Poona. Source :--

The students within the age group of 6 to 11 years constituted 58.1% of all the students during 1963-64, and the next largest group of students was within the range of 11 to 14 years. Assuming a student can pass his matriculation examina-

tion by 17 years of age, the fact that as we move up from earlier age group of 6 to 11 years to 11 to 14 and 14 to 17 years the percentage of the students to total students fall

down, gives an indication of a tendency of most of the students of leaving the education prior to matribulation examination. It is also seen that very large percentage of the students leave education before expiry of 11 years of their age. The same tendency has been corraborated by the

following table giving distribution of students by standards.

Standards		1962-63		196	3-64	
والم الحال الحال الحال الحال الحال الحال الحال الحال	Boys :	Girls:	Total	Boys :	Girls:	Total
Pre-Primary	483	453	936 (0.6)	509	454	963 (0.6)
I to IV	67844	40766	108610 (68.8)	71711	44642	116353 (68.1)
V to VII	24031	8434	32465 (20.6)	25360	9476	348 3 6 (20 54)
VIII to XI	1 3023	283 7	15860 (10.0)	15170	3428	18598 (10•9)
Total	105381	52490	157871 (100.0)	112750	58000	170750 (100.0)

Distribution of students by standards (Pre-Primary, Primary, & Secondary Schools.).

Source :- Director of Education, M.S. Poona.

The above table shows that 68.1% of the total students were in 1st to IVth standards, and 20.4% in Vth to VIIth standards and 10.9% in VIIIth to XIth standards during 1963-64; and it is observed that **very** large number of students leave education in primary education stage and do not pursue education after primary standards. Number of secondary students per 1000 primary students were 445 during 1962-63 and 459 during 1963-64.

One more interesting feature is that as we move up from lower to higher standards, the percentages of girls to total students go on falling. Girls constituted 38.4% of total students in I to IV standards, 27.2% in V to VII standards and 18.4% in VIII to XI standards during 1963-64 and it is thus seen that less and less number of girls as compared to boys continued their education as they move up from lower to higher standards.

As the students within the age group of 11 to 17 years attend secondary schools, the table below gives the percentage to enrolment to child population.

Age group	years	Boys	Girls	Total
11-14 years.	1962-63	 59 . 5	32°•2	46 ~7
	1 963 – 64	63.2	30.9	47•5
14 - 17 years.	1962 <u>-</u> 63	42.9	12.1	28.6
	1963-64	41.5	11.3	26-9

Source :- Director of Education, M.S.Poona.

Even at the end of 1963-64, the children of age group of 11 to 14 years not attending the schools constituted 52.5% and children of age group of 14 to 17 years not attending schools constituted 73.1% of the child population. Moreover the percentage of enrolment to child population in the age range of 14 to 17 years reflected undesirable feature of less percentage during 1963-64 than that during 1962-63 in respect of both boys and girls.

8.4 <u>University Education</u>;- In Akola district, 8 colleges were catering to the needs of university education during 1963-64, out of which 4 were located in Akola town, and remaining four in Washim, Akot, Karanja and Murtizapur towns. During 1963-64, two new colleges, one at Akola and one at Murtizapur.were opened. Out of these 8 colleges, one was Govt.Agriculture College at Akola, one was Govt.Training College at Akola, preparing students for B.T.examination and remaining 6 were Arts and Science and Commerce Colleges run by private bodies. Law was an attached faculty in one of the colleges situated at Akola.

Lecturers and Professors.		90	90	112

University Education in Akola.

- 87 -

Source :- Registrar, Nagpur University, Nagpur.

From the above table showing enrolment and professors and lecturers, it can be observed that number of students increased by 606 during 1962-63 and only 237 during 1963-64, in spite of the fact that two new colleges were registered during 1963-64. The number of girls_availing themselves of higher education increased during 1962-63, but decreased slightly during 1963-64. Out of total enrolment, students in Agriculture College numbered 485(boys) during 1963-64 and 381 during 1962-63; and students in B.T.College numbered 54 boys and 10 girls during 1963-64 and 50 boys and 14 girls during 1962-63.

Backward Class Hostel Facilities:- In Akola district there were 14 hostels specially for backward class community students at the end of 1963-64. The sanctioned strength of these hostels was of 608 students and 10% of these seats were reserved for economically backward class students irrespective of caste.

The following table shows the progress of the hestel facilities availed of by the backward class students.

No.of beneficiaries of hestel facilities.

•	Type of Community	1962-63	1963-64
	 Scheduled Castes Other Backward Classes Total :- 	390 50 440	582 75 657

Source :- Social Welfare Officer, Z.P. Akola. These recognised hostels are paid various types of grants such as maintenance grant of Rs20/- per month per boy and Rs10/- per month per girl for 10 months, subject to monthly attendance of more than 50%; pay grant and provident fund contribution grant at the rate of 50% of the expenditure incurred by the management towards pay and allowances and

contribution to the provident fund of the hostel Superintendent. <u>Concessions to Economically Backward Classes</u>:- Free education is provided at the cost of the Government to the students of the edonomically backward classes, and all the students whose parents' or guardians' annual income does not exceed Rs.1200/are covered by this scheme. The following table gives the number of beneficiaries and expenditure incurred.

Special Institutions and enrolment.

Source :- Director of Education, M.S.Poona.

•••

The number of institutions and enrolment during 1963-64 were less than those during 1962-63, not because few institutions were closed down, but because few institutions of typing, which were included in special institutions during 1961-62 and 1962-63, were dropped from this category, resultant upon revision of the diffnition of special institution by Education Department. Among the special institutions mention needs to be made of nursing courses in Main Hospital, and Lady Hardings Hospital, Akola; one Ayurvedic and two Homeopathic training institutions at Akola, Industrial Training Institute, Akola, Sanskrit Pathshalla, Akola.

In order to eradicate illiteracy among adults, measu res such as Social Education Classes and Gram Shikshan Mohim are being undertaken. It is reported that 1254 classes were held dur -ing 1962-63 and 11402 persons attended; and that 939 classes were held during 1963-64 and **98**46 persons attended. 8.6 <u>Villages with education facilities</u> :- The following table gives tahsilwase number of villages and towns having educational facilities, as per the data published in Census Hand Book.

Source :- Director of Education, M.S. Poona.

Number of villages with schools in them increased by 69 during 1963-64; and as a result there were only 84 villages, out of 1516 total inhabited villages and towns of this district, without any schooling facility as at the end of 1963-64.

- 91 -

Chapter IX.

Transport and Communication.

- 92 -

9.1 Transport and Communication facilities are an important factor in the development of economic and social conditions of the people. Well-thought-out development of transport facklities of various types namely road, rail, water and air is pre-requisite to the rapid economic development. The modes and techniques of transportation and communication set limits to the movement of men and commodities and to the expansion of market and eventually their expansion pave the way towards the economic growth. Road and rail are the only means of transport in this district. There is however an aerodrome near Akola city but no regular flights to and from Akola are maintained. Navigation is unimaginable for this district.

9.2 <u>Roads:</u> The basic objective of road development is _to ensure by a judicious combination of various kinds of roads -National Highways, State Highways, District roads etc., that people have all-weather access to places with which they have to keep contacts for the purpose of supplies, education, adminis trative relationships and above all for disposing their produce.

I This district, unkike some districts in Vidarbha Region, has comparatively good transport system. All taluka places of the district and nost of the important rural and urban places are connected with the district place and with each other by road for most of the months in the year, monsoon making some of the roads unmotorable during rainy season. Allweather- roads are thus found throughout the district. The neighbouring district places are connected with Akola city. The Bonbay - Calcutta National Highway passes through Akola district and its length within the district boundaries is of 89 miles.

:- 1) Executive Engineer, B&C Deptt.Akola.

2) Parishad Executive Engineer, Zilla Parishad, Akola. After the establishments of Zilla Parishad, the State sector is in charge of National and State highways, while the Zilla Parishad looks after all the remaining types of roads. The total roads mileage of this district increased from 532.28 miles during 1961-62 to 642.07 miles during 1962-63 but the total length of roads during 1963-64 remained more or less same as during 1962-63/seens to be under the category of village roads, which increased from 10-53 miles during 1961-62 to 77.08 miles during 1962-63. The increase in road mileage under Mejor district roads and Other district roads was often not necessarily due to construction of new roads, but conversion of the one type of road in to other type of road. The position of National Highway and State Highway was conspicuous by absolute absence of any increase in the road mileage during the three years under considerations

As regards the type of surface, there was no cement comprete road; and the black-topped constituted 45.1%, 40.1% and 41.3% of the total road mileage during 1961-62,1962-63 and 1963-64 respectively and the remaining road mileage of 54.9% durinfig 1961-62, 59.9% during 1962-63 and 58.5% during 1963-64 was of water-bound-macadam type. Thus even though total road mile -age during 1962-63 and 1963-64 was considerably more than that during 1961-62, the road mileage of black-topped type did not increased proportionately during these two years as compared to the road mileage in 1961-62. Under State highway, the total road mileage remained constant during all the years; but there had b been increasing convertion of water-bound-macadam type in-to black-topped type of road.

It is estimated that there were 54.48 miles of roads per one lakh of population and road mileage per sq.mile came to 0.16 miles at the end of 1963-64 in this district,

It is worth examining as to how many villages are connectivated by pacea roads. The 1961 census hand book provides valuable information and the same is reproduced below.

No.of villages and towns connected by roads.

District Akola.

Source :- 1961 Census Hand Book.

In general, less than 20% of the villages of each tahsil were connected by the road as at the end of March 1961, Murtizapur tahsil, having the lowest percentage of 11.7. Total rail mileage in this district is of 9.3 Railways:-353 km. out of which about 82 km. are broad guage, about 214 kn.are noter guage and about 57 kn. are narrow guage. The broad guage line connecting Bonbay-Calcutta passes cast to west through Akola and Murtizapur towns in addition to four other villages. The narrow guage line runs from Murtizapur linking Anjangaon and Achalpur in Anravati district on one hand, and Yeotnal in Yeotnal district on the other. The recent -ly started meter guage Khandwa-Hingoli line serves large number of villages and runs through Akole, Akot and Washin tolukes of this district. This meter guage line commissioned in January 1961 provided a link between the meter guage line in South India and that in North India and as a result a direct railway route of neter guage from Delhi to Madras was created.

Mangrulpir taluka among all talukas of this district is the solitary example of a taluka, of which not

; **x**

a single villages is served by the Indian Railway; and it is followed by Balapur taluka, of which only one village is on the railway line. Remaining four talukas are having good-number of villages served by the railway.

9.4 <u>Water Transport and Airways</u>. There are no rivers in this district, which can be utilised for transport. The rivers are obsolutely un-suitable for navigation in this district.

As regards sirways, even though there is a serc-9.5 dr ne near Akola, no regular air flights are run through Akola and aerodrome is used as a stand-by landing strip for planes. 9.6 State Transport:-The passenger read transport services in the district were and presently are in few routes in the hands of numerous individual private operators who carry on . with the sole native of maximum profit, disregarding the welfare and convenience of the travelling passengers. In order to eliminate this situation, which was causing great in-convenience to the passengers, and with a view to improving the transport facilities, initially the Provincial Transport Service and then state transport Service (from March 1963) were introduced in this district. This process of nationalisation of passenger transport services is progressing in accordance with a phased prograpme and the coverage is expanding steadily.

9.7 <u>Meter Vehicles</u>:- The following table shows the number of meter vehicles in operation in this district.

Type of Vehicle.	<u>As_ວ</u> າ		· · ·

Met r vehicles in operation in Akola district.

Source :- Assistant Regional Transport Officer, Amravati.

The total number motor vehicles increased from 1402 as on 1-1-61 to 1498 as on 1-1-62 and further to 1520 . as on 1-1-63; and this expansion in the fleet amounted to 6.8% increase during 1961 as compared to the number as on 1-1-1961 and 1.5% increase during 1962 as against the number as on 1-1-1962. This tendency was observed among all types of vehicles, exception having been only that of Tractors and Trailors, the number of which increased as on 1-1-62 as compared to these as on 1-1-61; but decreased as on 1-1-63 as compared to these as on 1-1-1962.

Communication is as important as 9.8 Post and Telegraphs:transport in social and economic growth. The following table indicates the activities of post and telegraph department in this district.

of Telegraphs, Akola.

There seems to have been a steady increase in all the major facilities provided by the post and telegraph depart -nent as is evident from the table above. Number of telegraph offices however have remained steady at 22 throughout the years under review. Renarkable progress has been achieved in the case of number of telephones especially during 1963-64. Even though number of telephone offices increased by 2 during 62-63 and 2 more during 1963-64, the number of telephone connections. increased only by 9 during 1962-63 as against 110 during 63-64.

- 97 -

-...98 -

In this district Akola, Akot, Telhara, Malegaon, Washin, Murtizapur, Karanja, Balapur, Mangrulpir and Risod have been provided with telephone exchanges as on March 1964.

At the time of 1961 census the information regarding the villages served by post offices and telegrapy h offices was collected and the same is reproduced here from 1961 census book of Akola district.

Source :- 1961 Census Hand Book.

Thus all towns were having post as well as telegraph offices. But if rural and urban areas were taken together it was observed that only 17.7% of the total villages and towns of the district were served by post offices and only 1.2% of the total villages and towns were having telegraph offices as on March 1961.

As at the end of March 1964, there were 306 post offices and 22 telegraph offices in this district; thus on an average, no lakh of population were served by 26 post offices and 2 tolograph offices as at the end of March 1964 in this district.

Chapter X.

Local Self Government.

10.1 Introduction :-

A comprehensive system of local self govern -nent is a valuable link at the lowest level in the democratic setup and it not only represents genuine self-rule but also offers the widest possible opportutnity for the political aducation of the masses. With the ushering in the scheme of democ -ratic Decentralisation in our State from May 1962, a great change has taken place in the institutional set-up of the local self government. The old institution of Gram Panchayat has been retained, but its responsibilities have been increased and it has been linked with the new institutions like Panchayat Samities and Zilla Parishad. In the new three tier system of Pancha -yati Raj the Zilla Parishad is an appex body at the district place, Gram Panchayats are the institutions at the village level and Panchayat Samities are intermediatary units at the Block level. The old institution of Janpad Sabha has been abolished.

10.2 Gram Panchayats:-

The Gram Panchayat is a body elected from the village assembly of adult residents of the village and covers one village or group of villages. It functions as a village administrative council and sometimes even as a local judiciary for small offences.

No.of Gram Panchayats were 860 during 1961-62 to 1963-64 and all 1,712 villages in the district were reported to have been covered by these Gram Panchayats as at the end of 1963-64. Population covered per Gram Panchayat was 1,077, population considered being that of 1961 census.

The income and expenditure of these institutions increased considerably during 1963-64 as compared to those during earlier two years. Income from Grants constituted 57.1%, from Taxes 22.9% and from other sources 200x 20.0% during 63-64. The Gram Panchayats which not only render social services such as providing public lightening and keeping village surroundings clean and hygienic but also undertake developmental activities. The income per Gram Panchayat was of Rs.4,752 and expenditure per Gram Panchayat was of Rs.4,093 during 1963-64. Income and expenditure per person during 1963-64 was Rs.4.41 and Rs.3.80 respectively.

10.3 Zilla Parishad:-

Great hopes have been entertained by those who initially conceived the idea of democratic decentralisation and by the people in rural areas who are the direct beneficiaries of the scheme. With the decision-making body at the district and Block level and elected members in charge of them, it is hoped that the elected members would arouse the enthusiasm of the people and make them conscious of the advantages they can take and that the people in turn would take the initia -tive and reap the benefits and that, in the process, the econo -mic development would be speeded up.

The Zilla Parishad's elected body in general consists of 40 to 60 elected concillors, a co-opted woman member(if needed), chairmen of the Panchayat Sanities and chairmen of the five federal cooperative societies. The authorities charged with carrying on the activities of the Zilla Parishad at the district level are standing committee and subject committees for Finance, Works, Agriculture, Cooperation, Education and Health. On the executive side, the Chief Executive Officer and Deputy Chief Executive Officer have been vested with executive powers and they are assisted by district heads of various departments, directly working under Zilla Parishad.

The functions alloted to the Zilla Parishad range over many subjects excluding law and order etc. which have been retained by the State Government. This delegation of powers has been matched by the provision of sufficient resources to the Zilla Parishad. The Zilla Parishad has been empowered to levy taxes on professions, trade, cess on land revenue etc. The State Government has also undertaken to give grants of various types to Zilla Parishad such as grant of 70% of land revenue, equalisation grant, purposive grant, establishment grant, deficit adjustment grant, local cess matching grant, incentive grant etc. Panchayat Samities:-

This is new body created for each Community Development Block area. Panchayat Samiti consists of elected councillors from the Panchayat Samiti area, Co-opted councillors, chairmen of two cooperative societies, one each coopted member from women, scheduled caste and schduled tribe and surpanchas elected by members of Gram Panchayats.

The policy decisions are made by the elected body and the executing powers are vested with the Block Development Officer. The funds are made available by the Zilla Parishad and Panchayat Samities are free to spend them within the frame-work of overall considerations laid down by the Zilla Parishad.

Following is the table givening incomes and expenditure of Zilla Parishad and it shows the sourcewise variations in the amounts of income and itemwise variations in expen -diture and throws considerable light on the overall working of the Akola Zilla Parishad during its two years of existance.

> Income and Expenditure of Zilla Parishad, Akola.

Source :- Budget of the Zilla Farishad, Akola. (* less than 0.05) (N.B.:- Figures in brackets indicate

percentages).

Both income and expenditure of the Zilla Parishad increased considerably during 1963-64 as compared to the income and expenditure during the year 1962-63. But the Zilla Parishad had very small amount of its total income as its earned income in strict sense of the term; and it had to derive very large income from such sources as government grants, debts etc. Thus 86.7% of the total income during 1962-63 and 86.8% of the total income during 1963-64 was raised as Government grants, Debts and deposits and advances. Income from Land Hevenue cess and Taxes and Levies constituted 6.7% durming 1962-63 and 6.9% during 1963-64 of the total income. A remarkable feature was that work done on agency basis by the Zilla Parishad seemed to have been undertaken on more extensive scale during 1963-64 than during 1962-63; thus grants received by the Zilla Parishad for works done on agency basis formed 7.5% during 1963-64 as against only 0.7% during 1962-63 of the total income.

Total expenditure of the Zilla Parishad increased from Es.13,358 thousands during 1962-63 to Es.22,115 thousands during 1963-64. More expenditure, in absolute terms, seemed to have been incurred on all its activities during 1963-64 than during 1962-63. But the increase in expenditure under some of the activities seemed to have not been proportional to the increase in total expenditure; thus percentage of expenditure to the total expenditure during 1963-64 was slightly less than that during 1962-63 under such activities as Education, Medi-' cal and Public Health, Social Welfare, Community Development.

10.4 Municipalities:-

There are at present 9 municipalities functioning in Akola district. The functions of the municipalities include the provision of free education, medical facilities, water supply, street lightening, public works such as playgrounds and parks etc. To carryx out these activities huge amount of expenditure is required to be incurred. The municipalities derive their revenue from sanitary and conservancy tax, octroi, rents and licence fees on various market places, slaughter houses, hotels, rents on land and buildings etc. In addition they receive grants-in-aid and even loans for specific works involving heavy capital expenditure from the Government.

1962-63	9	68,04,158	68,19,748		
1963 - 64	9	65,17,784	62,21,836		

Total Income and Expenditure of Municipalities.

Source :- Municipal Authorities.

The above table indicates that the overall income as well as expenditure of the municipalities decreased during 1962-63 and further_in 1963-64 as compared to income and expen -diture during 1961-62. The expenditure during 1961-62 and 1962-63 was however more than income and only during 1963-64 the municipalities could restrict their expenditure so as to be able to spend within the available income.

A municipality had, on an average, income of Rs.7,82,338 during 1961-62, Rs.7,56,018 during 1962-63 and Rs.7,24,198 during 1963-64; expenditure, on the other hand, had been of Rs.8,27,328 during 1961-62, Rs.7,57,750 during 1962-63 and Rs.6,91,315 during 1963-64 per municipality. Income per person of these municipalities was Rs.27/- during 1961-62, Rs.26/during 1962-63 and Rs.25/- during 1963-64; and expenditure per person was observed to have been Rs.28/- during 1961-62, Rs.26/during 1962-63 and Rs.24/- during 1963-64, on the assumption of constant population as available in 1961 (Census Hand Book,

Chapter XI.

Plan and Community Development.

11.1 Ever since independence, two main aims have guided India's planned development - to build up by democratic means a expanding and technologically progressive economy and a social order based on justice and offering equal opportunities to every citizen. The general pattern of development envisaged in the 3rd plan is based on and necessarily flows from the vast experience and basic approach of the 2nd plan; neverthless it represents the wider view of the problem of development. Below is an attempt to review the progress of first three years i.e. 1961-62 to 1963-64 of the plan programme in Akola district.

11.2 Agriculture :-

I. Agricultural Productions:- $O_u t$ of the total plan provision of Rs.46.09 lakhs for agricultural production, Rs.11.36 lakhs have been spent during 1961-62 to 1963-64 and this expenditure accounts for 24.6% of the allotment.

In Akola district where no irrigation facilities by tanks or canals are available, the agriculturists have to depend mainly on the rainfall for good harvest; the agricultural production programme therefore had to veer round the schemes such as provision of better seeds and fertilisers; x crop protection measures etc. The scheme for "Propagation of improved agricultural implements" under Local Sector, has a revised provision of Rs.1.80 lakhs and " Integrated oilsceds development" under State Sector has a revised provision of Rs.4.98 lakhs for Akola district. But the former was not implomented and latter had an expenditure of Rs. 3.18 lakhs during first three years. Rs.7.80 lakhs have been earmarked for plan period for " Extension of plant protection services"which is implemented by both Local and State Sectors; out of this, Rs.0.86 lakhs were incurred during 1961-62 to 1963-64. Moreover Rs.1.47 lakhs out of plan provision of Rs.10.24 lahs under " Agricultural Schools", Rs.2.70 lakhs out of Rs.7.15 lakhs provided for " Establishment of Taluka Seed Farms",

Rs.1.40 lakhs out of Rs.7.75 lakhs earmarked for "Coordinated Cotton Extension Scheme" have been spent during first 3 years of the 3rd plan period.

II.<u>Soil Conservation</u>:- For maintaining the fertility of the soil, Soil Conservation Scheme with revised plan outlay of Rs.31.50 lakhs is being implemented by State Sector and Rs.16.77 lakhs were reported to have been spent on this scheme; and the percentage of expenditure to plan provision comes to 53.2.

III.<u>Minor Irrigation</u>:- Provision of more irrigation facilities occupy unique place among various measures contemplated for increased production. The minor irrigation schemes provide for construction of irrigation wells, installation of punping sets and construction of minor irrigation works. The responsibility of implementing all these schemes is placed on both State and Local Sectors. Only Rs.7.44 lakhs have been incurred during first three years of plan period out of the total provision of Rs.40.40 lakhs for entire five years' period for this district; and this expenditure forms only 18.4% of the plan provision.

IV. Animal Husbandary :- Cattle being the wealth of the agriculturists, various schemes are included both to develop the better type of cattle and to make them immune against various discases. Four schemes namely establishment of district veterinary polyclinics (outlay Rs.1.29 lakhs), establishment of veterinary dispensaries(outlay Rs.0.75 lakhs), establishment of supplementary cattle breeding centre and breeders' society(outlay Rs.0.15 lakhs), supply of premium bulls (outlay Rs.0.34 lakhs) are included in the Brd plan for this district and the Local Sector is the implementing authority for all these schemes. It is reported that first scheme noted above is not yet implemented and Rs.0.35 lakhs, Rs.0.10 lakhs_ and Rs.O.12 lakhs respectively have been spent on the remaining schemes during 1961-62 to 1963-64. Thus out of total allotment of Rs.2.53 lakhs, Rs.0.57 lakhs i.e. 22.5% have been incurred during first 3 years of the plan period.

V. Others 1- Rs.9.98 lakhs have been earmarked for "Dairy Development" covering activities like providing incentives to milk production, organisation of milk producers' societies. Execution of all these schemes has been assigned to State Sector. Out of this amount, Rs.3.87 lakhs(i.e. 38.8%) are reported to have been spent. Schemes under "Forestx" had a provision of Rs.0.94 lakhs for activities such as plantation of valuable trees, development of forest pastures etc. and Rs.0.10 lakhs (i.e. 10.6%) only out of this total provision have been spent during the three years under review. Various schemes under "Fisheries" had a revised financial target of Rs.0.51 lakhs, but only Rs.0.99(i.e. 17.6%)lakhs have been spent upto the end of the period of three years. The schemes under "Fisheries" are implemented by State Sector.

11.3 <u>Cooperation:</u> Advancing cheap and timely credit and providing suitable marketing facilities to the agriculturists form important link in the whole programme of agricultural development. All schemes of 'Cooperation'are under State Sector for implementation. The scheme "Extension of Agricultural Credit" with a provision of Rs.9.18 lakhs for Akola district primarily aims at the development of cooperative credit by advancing long term, short term and medium term credits. Rs.3.72 lakhs are reported to have been already incurred under this scheme. Central Cooperative Bank, Akola has opened 12 branches and Land Development Bank 13 branches during 3rd five year plan period to facilitate the easy availa bility of credit to agriculturists.

For ensuring reasonable prices to the cultivators, development of marketing facilities to subserve the interests of cultivators is essential. Major schemes under this head are "Development of Agricultural Marketing" with the privision of Rs.3.05 lakhs for Akola district intending to provide loans and subsidies to marketing committees, "Development of Cooperative Marketing" with the outlay of Rs.7.83 lakhs for Akola district providing mainly for construction of rural and medium godowns. These schemes have absorbed Rs.7.04 lakhs and Rs.2.79 lakhs respectively during 1961-62 to 1963-64. In addition, cooperative farming has been provided with Rs.2.83 lakhs for Akola district; and Rs.2.54 lakhs i.e. 89.8% have already been spent and few cooperative farming societies have been organi -sed.

11.4 <u>Irrigation and Power</u>:- In Akola district, where wells are the only source of irrigation, the construction of some big projects for this purpose waslong-felt need. In view of this need, two medium and one major irrigation projects have been undertaken during 3rd plan period and are executed by State Sector. The Katepurna River Project, which is spillover major project, is estimated to cost Rt 233.32 lakhs and is likely to irrigate 24,000 acres. Up-to March 1964 construction of pick-up weir, approach road to pick-up weir were completed and work on canal was in progress. Work on the medium project namely Ekburjee Tank Project, is in advanced stage; this project involving cost of Rt 42.99 lakhs is having potential of 7500 acres. The second medium project namely Morna River Project is still in preliminary stage.

Under electricity, a thermal power station at Paras is proposed to be expanded by installing one additional set of 30 MW. It is reported that construction of the same is in progress. Electrification of villages is also envisaged primarily for irrigation, agricultural processing and small industries; and 95 villages of this district are reported to_ have been electrified during the period from 1961-62 to 1963-64. 11.5 Industry:-Cottage and Small Scale Industries provide subsidary employment to the rural population and hence the importance of this sector to rural areas cannot be neglected. Two district level schemes with a provision of Rs 3-95 lakhs are meant for organising industrial cooperatives including those of weavers; and Rs.0.73 lakhs (i.e. 18.5%) are reported to have already be . spent during first three years. Moreover efforts are being made to start a Industrial Estate in this district.

11.6 <u>Transport and Communication</u>:- Construction of state highway, district and rural roads have been envisaged under various schemes proposed under this head. Out of the total provision of R\$.59.50 ldk hs for district roads and R\$.7.90 lakhs for rural roads, R\$.14.63 lakhs and R\$.0.94 lakhs are reported to have been already spent. Both these schemes of District Road and Rural Roads are implemented by Local Sector. No road mileage has been added to the already prevalent road mileage under state highway and fotal road mileage as at the end of March 64 stood at 630 miles in this district.

11.7 Social Services:-

I) Education :- Under "General Education" various schemes were directed towards expansion of primary and secondary education by enrolling more students, by giving more assistance in the form of scholarship and loans, by providing training facilities to teachers, by constructing and giving assistance for constructing school buildings etc. All these schemes are implemented by Local Sector. Revised provision of Rs.63.18 alakhs has been made for district level schemes only; but only Rs13.46 lakhs have been incurred during first three years. This expenditure thus constituted only 21.3% of the plan provision. Number of primary and secondary schools however increased from 1230 and 65 respectively as at the end of March 1961 to 1324 and 85 respectively as at the end of March 1964. Enrolment also rose from 1,14,585 and 24,236 as on March 1961 to 1,36,431 and 33,356 as on March 1964 in the primary and secondary schools respectively.

II) Medical and Public Health :- Two schemes namely construction of buildings for hospitals and dispensaries and expansion of facilities in civil hspital with plan provisions of Rs. 3.37 lakhs and Rs. 0.20 lakhs are included in the 3rd plan for Akola district and are implemented by State Sector. The former scheme was not implemented during first three years and Rs.0.80 lakhs have been spent on the latter scheme during the same period. Under " Public Health", Rs.8.56 lakhs have been incurred on Malaria Eradication Progreamme out of Rs 20.27 lakhs, Rs.0.71 lakhs on BCG vaccination out of Rs.1.13 lakhs; Rs.1.54 lakhs on vaccination against Small pom out of Rs.1.10 lakhs and Rs.0.29 lakhs on family planning programme out of Rs.4.13 lakhs. Out of these 4 schemes, first two are implemented by State Sector, third by Local Sector and fourth by State and Local Sectors. In general, R. 11.10 lakhs i.e. 37.5% have been already XEER spent out of the provision of Rs.29.64 lakhs on Public Health for this district.

11.8 <u>Housing</u> :- Rs 10.01 lakhs have been provided for schemes like Low Income group housing scheme (Rs 0.47 lakhs), village housing project scheme (Rs 9.32 lakhs), extension of village gaothans and provision of house sites (Rs 0.22 lakhs) and all schemes seem to have been implemented as per time schedule as is evident from the fact that Rs 9.86 lakhs i.e. 98.5% out of the revised provision of Rs 10.01 lakhs have been already incurred during three years out of five years' period. 11.9 <u>Community Development</u> :- In Akola district, four blocks namely Telhara, Patur, Manora and Karanja were converted from Stage I to Stage II Blocks and Malegaon was given a status of Stage I Block during 1962-63; and Washim Block was added to the category of Stage II Blocks and Risod Block was converted into Stage III Block. At the end of 1963-64, there were 2 Stage I, 10 Stage II and 1 Stage III Blocks covering entire district.

Analytical review of the Government expenditure incurred by C.D.Blocks revealed that increasingly more amounts were spent over the years. Total expenditure was Rs1378 thousands during 1961-62,Rs1461 thousands during 1962-63 and Rs1615 thousands during 1963-64; and shows 6.0% increase during 1962-63 and 10.5% increase during 1963-64.

Out of the total expenditure of Rs.1461 thousands during 1962-63, Rs.480 thousands(32.9%) were spent by Stage I blocks and Rs.981 thousands(67.1%) by Stage II Blocks. During 1963-64, Stage I Blocks accounted for Rs.575 thousands(35.6%), Stage II Blocks Rs.1000 thousands (61.9%) and Stage III Block Rs.40 thousands(2.5%) out of the total expenditure of Rs.1615 thousands.

The pattern of Government expenditure showing amounts spent on various developmental activities is given below

۲

Source :- Bureau of Economics and Statistics, M.S. Bombay.

Agricultural development including Irrigation and Reclamation had a lion's share of 38.2% during 1963-64 and 29.4% during 1962-63; but during 1961-62, the project headquarter had maximum expenditure accounting for 33.6% of the total expenditure of that year. Education, including Social Education also claimed 17.1%, 17.4% and 21.2% during 1961-62, 1962-63 and 1963-64 respectively. Expenditure under Communication, Rural Arts and Industries, and Housing came down considerably during both 1962-63 and 1963-64 as compared to expenditure during 1961-62.

Blocks undertake various types of activities like distribution of fertilisers, improved seeds, construction of better roads, running literacy classes etc. In general most of the Blocks distributed improved seeds of more than 1000 B.mds. during 1962-63 and 1963-64. Murtizapur, Karanja, Telhara, Washim and Balapur blocks distributed **kNEXE** more than 3000 B.Mds. during 1962-63, and Murtizapur and Akot Blocks excelled in this respect by distributing more than 11000 B.Mds. during 1963-64. Distribution of fertilisers was done on remarkable scale by Manora, Akola, Balapur, Telhara and ^AkotBlocks during 1962-63 and by Telahara, Akola, Balapur and Akot Blocks during 1963-64. In the field of Health and Rural Sanitation, 94 drinking water wells were constructed during 1962-63 and 126 during 1963-64 by all the Blocks. Adult literacy classes were undertaken on large scale by Patur and Balapur Blocks during 1962-63 and by Manora and Balapur Blocks during 1963-64. Under communication, about 25 miles of Kachha Roads and 9 miles of Pacca Roads were reported to have been constructed by all Blocks during 1962-63, and about 53 miles of kachha roads and about 22 miles of pacca roads during 1963-64. In this respect Akola,Karanja,Akot and Manora undertook much of the construction work during 1962-63; and **Ratury** Barshitakli, Malegaon and Patur had the distinction of constructing most of the roads during 1963-64.

Chapter XII

Price Trends.

The striking feature of the Indian economy since 1940 has been the continuous rise in the general price level with few intermittent years of falling price level. The index number of wholesale prices of India (Base year 1952-53) published by the Economic Adviser to the Government of India indicated continuous rise in the index numbers from 102.7 in 1956 to 127.2 in 1962 and further to 132.5 in 1963. Here it is intended to take a review of the price trends prevailing in Akola market and in three rural markets based on the weekly prices collected at Akola and fortnightly prices collected at three rural centres in Akcla, Washim and Akot blocks for the period from November 62 to December 1963.

The consideration of the price trends of the various articles in general and cereals and pulses in particular, which constitute major portion of the budget of the average Indian family, reveals two important characteristics. The demand for cercals and pulses being inelastic, the prices seem to have been determined more by supply position and as such the prices slightly come down during harvest season, when crops arrive in the market,_ and they again march ahead in the upward direction. Second characteristic is that even though the rural prices are slightly more than the urban prices, because the stocks move from urban areas to rural areas for most of the months except harvesting months, the prices of those articles which are produced locally in the district and can be sold by the producers in the local rural markets, tend to be slightly less in rural areas than in urban areas during harvesting months. Thus in this district, which produces Jowar, Wheat, Gram, Arhar etc. the prices of these coreals and pulses were observed to have been slightly less in rural markets than in urban markets during harvesting season. But during other months, the consumers in rural areas have to depend on the stocks from urban areas and hence the prices in rural areas become slightly more than those in urban areas. On the other hand, the prices of articles like Rice, which are not produced in the district, were invariably more in rural markets than in urban markets throughout the year, for the simple reason that stocks

had to flow from outside the district to urban areas of this district and then to rural areas.

The average monthly retail price of Gurmuthia variety of Rice was Rs.0.55 per kilogram during November 1962 and continuously rose upto Rs.0.68 per kilogram during Doc.63, with slight fall in the price during July and August 1963 in Akola market. The Wheat(Medium) was sold at an average monthly price of Rs.0.59 per kilogram during Nov.62 in Akola market; but the price declined to Rs.0.50 per kilogram during harvesting months of March, April 1963 and again continuously rose to be at Rs.0.56 during Dec.63. Jowar was costing Rs.0.42 per kilogram during Nov.62 but the price fell down from Dec.62 and was as low as Rs.0.28 per kilogram from April 63 to August 63 and then again went upto Rs.0.35 per kilogram during Dec.63.

As regards pulses in Akola market, Gram(dal) and Arhar (dal) which were sold at Rs.0.53 and Rs.0.69 per kilogram respectively during Dec.62 were sold at Rs.0.66 and Rs.0.88 per kilogram respectively during Dec.63 — a rise of 13 paise and 19 paise per kilogram respectively over a year. The same tendency was observed among the prices of other pulses. The prices of all these pulses however, were observed to have slightly declined during harvesting period.

In rural markets, Rice(Medium) was available for Rs0.61 per kilogram during Jan.63 and the price of the same rose to Rs0.79 per kilogram during Dec.63. Average prices of Wheat (coarse) and Jowar also increased from Rs0.56 per kilogram and Rs0.28 per kilogram respectively during Jan.63 to Rs0.62 and to Rs0.34 per kilogram respectively during Dec.63. This general trend in upward direction was also evident in the prices of pulses. The price of Arhar(dal) thus rose from Rs0.65 per kilogram during Jan.63 to Rs0.85 per kilogram during Dec.63; that of Gram(dal) from Rs0.53 per kilogram during Jan.63 to Rs0.66 per kilogram during Dec.63.

The prices of Groundnut oil (Mill made) and Gur fluctuated depending upon the availability of their raw materials namely groundnuts and sugarcane. Groundnut oil was as high as Rs.2.00 per kilogram in Akola market during November 62, but then its price started falling and was lowest at Rs.1.75 per kilogram during March 63 and went upto Rs.2.17 per kilogram during Sept.63 and then again started falling. The price of Gur in Akola market also was Rs.0.88 per kilogram during Nov.62 and then came down to Rs.0.75 per kilogram during Feb.63 and rose to Rs.1.50 per.kilogram during Oct.63 and then started falling from Nov.63 and was Rs.1.08 per kilogram during Dec.63. Similar tendencies in the prices of Groundnut oil and Gur were observed in rural markets; the price of Groundnut oil which was Rs.1.87 per kilogram during Jan.63 rose to Rs.1.97 per kilogram during Dec.63; Gur, which was sold at Rs.0.75 per kilogram during Jan. 1963 was available at Rs.1.06 per kilogram in Dec.63. The price in rural areas appeared slightly less because inferior variety is generally more demanded and hence sold in those areas.

The prices of Goat Mutton was nore or less constant at Rs.3.00 per kilogram in Akola market, while it varied inbetween Rs.2.50 and Rs.2.83 per kilogram in rural markets during 1963. Eggs were available at the minimum price of Rs.1.50 per dozen and at the maximum of Rs.2.25 per dozen in Akola market; the prices of eggs in rural markets varied from Rs.1.38 per dozen to Rs.1.67 per dozen during the year 1963.

The dry Chillies (Dharmabad variety) varied in its prices from Rs.3.00 to Rs.3.25 per kilogram throughout 1963 in Akola market. The dry Chillies, local variety, was however available in rural market at an average price of Rs.2.71 per kilogram at the minimum and Rs.3.21 per kilogram at the maximum throughout 1963. The Turmeric (Sangli) wasfetching the price of Rs.1.85 to Rs.1.95 per kilogram from Feb.63 to Aug.63 and more than Rs.2.00 per kilogram during other menths in Akola market.

In Akola market, Potatoes were sold at an average price of Rs.0.37 per kilogram from Jan.to May 63 and the price of the same article was Rs.0.62 per kilogram during Sept. to Dec.63. The prices of Potatoes in rural areas were in-between Rs.0.41 to Rs.0.50 per kilogram from Jan.to May 63 and about Rs.0.65 per kilogram during last two months of 1963. The price of Onion varied between Rs.0.25 and Rs.0.31 per kilogram from Jan.to Nov.63, but was Rs.0.37 per kilogram during Dec.63 at Akola. The rural prices of Onion were however as low as Rs.0.20 per kilogram during May and June 63 and were as high as Rs.0.48 per kilogram during Nov.and Dec.1963. The Kerosene, the price of which is more or less fixed by the oil companies, was sold at RsO.35 per litre during Feb.63 in Akola market and consquent upon imposition of excise duty on Kerosene in the budget for the year 1963-64, the same was sold at a price varying from RsO.42 to RsO.44 per litre at Akola and from RsO.44 to RsO.47 per litre in rural areas. The Fire-Wood was sold at RsJ.12 per 40 kilograms during Jan.63; but the price of the same rose during last three months of 63 and was RsJ.50 per 40 kilograms during Dec.63 at Akola.

The Phadia Supari was reported to have been sold at Rs.6.37 per kilogram at Akola during Dec.62 and Rs.7.50 per kilogram during all the months of 1963. Its price in rural areas however varied from Rs.6.91 to Rs.7.50 per kilogram during 1963. The price of Tobacco(leaf) was recorded as Rs.2.80 per kilogram during Jan.and Feb.63, and then upward tendency was observed with price having been Rs.4.00 per kilogram during Dec.63 at Akola. In rural areas also the upward tendency in the price of Tobacco was noticed, the price having give up from Rs.3.37 per kilogram during Jan.63 slowly from month to month upto Rs.4.33 per kilogram during Dec.1963.

Having reviewed the price trends, a point needs to be stressed that the variaties for which prices are collected at Aktla and at three different rural contres are not necessarily the same but in general the prices of these variaties which are regularly sold in the markets and are nost consumed by the people are reported. Moreover the quality of the products which are commonly demanded in urban and rural areas are likely to differ. For both of these reasons, the prices in urban and rural areas of the same article are not likely to be exactly comparable and may not be treated as such.

- 117 -

Chapter XIII-

Miscellaneous.

13.1 Police and Crime:-

Police, who are supposed to be the guardians of the law and order, are posted in good number in this district as in other districts and the police department in this district is controlled by the District Superintendent of Police, assisted by one Assistant Superintendent of Police and two Deputy Superintendents of Folice. The number of Inspectors totaled 7 during 1961, and 1962 and 1963 and Sub-Inspectors totaled 56 during 1961, 1962 and 57 during 1963.

The constables, which formed bulk of the police personnel remained constant at 1,437 during all the years under review. It is understood that the number of cognizible offences reported increased from 7,074 during 1961 to 7,378 during 1962 and declined to 6,939 during 1963.

13.2 Courts:-

The District and Session Judge, who is head of the judicial department in the district, is assisted presently by one Additional Session Judge, and has jurisdiction over the entire district. He attends to civil and criminal work - both original and appellate. There are civil judges of Senior and Junior Division at various tahsil places, and they deal with various types of suits within their jurisdiction. It is reported that vivil cases decided in the courts in this district declined from 9,174(8,734) on the original side and 440 on appellate side) during 1961 to 7,162(6,701 on original side and 461 on appellate side) during 1962 and further to 6,635(6,206 on original side and 429 on appellate side) during 1963. The same trend was observed in respect of criminal cases. The total number of cases . decided in this district during 1961 were 27,306 (26,832 original and 474 appellate cases), during 1962 were 19,325(19,009 original and 316 appellate cases) and during 1963 were 19,259 (18,898 original and 361 appellate cases).

The judiciary is entirely separated from the Executive. The Collector continues to be District Magistrate, the Deputy Collectors and Tahsildars are vested with magisterial powers limited to security proceedings_only. They however try cases regarding disputes of land. 13.3 Journals and Presses:-

Few daily nowspapers and periodicals are published from Akola-town. As on December 1963 two Marathi dailies namely Matrubhumi and Shivshakti, and seven other journals in Marathi including weeklies like Navsamaj, Yashwant, Kisan etc., were published. A 'Nagar Sevak' - a fortnightly issue in Marathi of Municipal Committee, Akola and a 'Parishad Patrika' - a monthly issue in Marathi of Zilla Parishad Akola were journals nainly devoted to the activities of the respective bodies. In addition there were 4 publications - One daily and 3 other periodicals published in languages other than Marathi.

The number of printing presses seemed to have not undergone any change during years under review; the number of presses remained 37 during 1961, 1962 and 1963 in this district. 13.4 <u>Cinema:</u>-

A popular medium of entertainment is a cinema, other medic, except radio, being unknown not only in rural areas but also in small towns of this district. All the six tahsil places had at least one cinema theatre at each tahsil headquarter; Akola town however had 7 cinema theatres, one open-air drama theatre and one closed drama theatre as in March 1964. Some of the C.D.Block headquarters, which are different from tahsil headquarters had also cinema threatres such as Patur, Risod, Malegaon,Karanja etc. The rural areas however are served by few mobile theatres, which move from villages to villages bringing the movie-world to the village folks.

13.5 Fairs:-

Large number of fairs are held in this district throughout the year at numerous villages in this

district. The fair held at Ioni in Washim tahsil is reported to be the only one where the congregation is largest in this district. It is held for about 3 days XXXXX Kartik Vadhhya 12 to celebrate the Punyatithi of Saint Sakharam Maharaj. At Akot, a fair named after Saint Narsing Maharaj is held on Kartik Vadhhya 6. Mangrulpir is equally important for fairs; and a fair is held here to commemorate the death anniversary of Saint Maulana Hajrate Hayat Kalandar Rahanatulla Alam during January; and Birbal Nath fair is also held in Mangrulpir from Magh Sudhha 14 for 4 days to celebrate death anniversary of the Saint Birbal Nath Maharaj. In addition, fairs at Tarala in Mangrulpir tahsil and at Fatur in Balapur tahsil also draw good congregations. 13.6 Employment:-

In the absence of exact data about un-employ -ment, the Employment Exchanges provide a rough indicator of the intensity of un-employment. The Employment Exchange is the only agency giving valuable free service to the employment seekers by providing employment to them. The following table shows the services rendered by the Exchange at Akola during last three years.

Year :	Registra t tions.	:Vacancies : notified.		ive R _e gister at he end of the year.
1961 , 62	8,766	923	695 -	3,421
1962 - 63	9,082	669	624	4 ,1 05
1 963 - 64	7,671	642	586	3,947 -

Employment Exchange Statistics - Akola district.

Source :- Employment Exchange, Akola.

When we consider a case of the persons presently employed, it can fairly be said that Government is the biggest employer. A census of the Government employees was under-taken by the Bureau of Economics and Statistics, Maharashtra State, Bombay. From this census, it appears that the total number of State Government employees as on 1st July 1960 were 5,555 in Akola district and they constituted 2.7% of the total employees of the Maharashtra Government in the State. Out of these 5,555 employees, 173(3.1%) belonged to Gazetted rank, 4,352(78.4%) were Class III Servants and 1,030(18.5%) were Class IV employees. It was observed that for every gazetted officer, there were, on an average, 31 non-gazetted employees in this district.

Consideration of the distribution of the employees according to basic pay ranges revealed that 3,186 (57.4%) out of 5,555 employees drew less than Rs.50/- per monthand 1,524 (27.4%) employees received in-between Rs.51/- to Rs.100/- per month. Thus as large as 84.8% of the total Government employees in Akola district were paid basic salaries of less than Rs.100/per month.

13.7 Financial Statistics :-

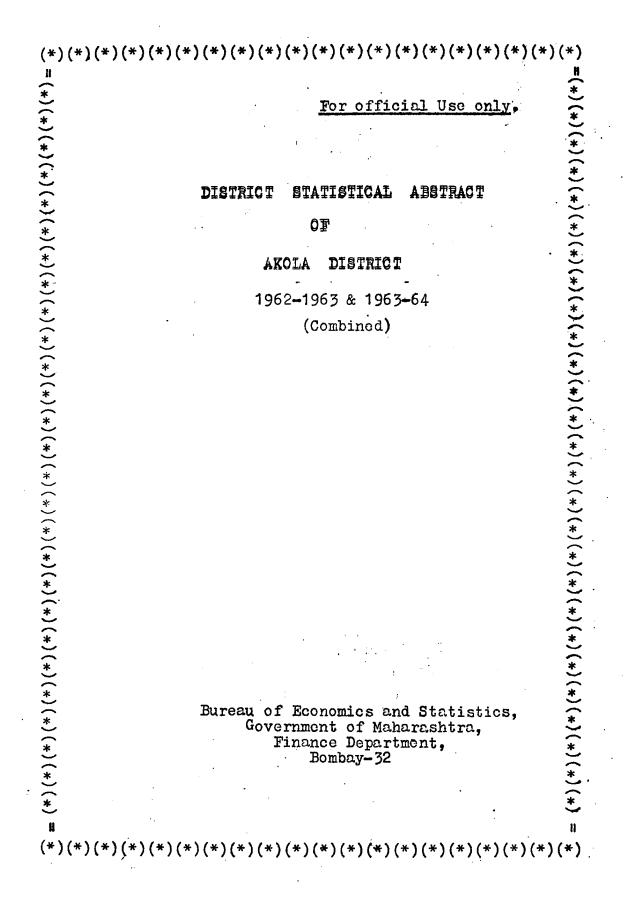

The Akola district was having 12 branches of the scheduled banks as on December 1963, out of which 6 were located in Akola town and 6 in other towns of this district namely Washim, Karanja, Murtizapur and Akot. Thus only few urban areas covering population of 2,19,336 persons were served by scheduled banks and this population constituted 18.4% of the total population of Akola district. On an average there were 5 banks per one lakh of population served in this district.

In additionx, it was reported that there were 17 offices of the Central Cooperative Bank, including its head office and branches, which were located at all the C.D. Block head-quarters and few important villages as on December 1963. If these and the scheduled banks were taken together, it was observed that as at the end of 1963 there was one bank for, on an average, about 41 thousand persons, considering the entire population of Akola district.

The State Exchequer derives the income from various sources such as land revenue, various taxes etc. The contribution of Akola district to the State receipts by way of Sales tax(under both State and Central Sales Tax Acts) had been of Rs. 33,29,425 during 1962-63 and Rs.41,02,862 during 1963-64; by way of Entertainment Tax, Rs.4,54,400 during 1962-63 and Rs.5,60,934 during 1963-64; by way of Excise Revenue Rs.11,342 during 1962-63 and Rs.11,069 during 1963-64. Land revenue collected in this district amounted to Rs.35,82,425 during 1962-63 and Rs.32,51,713 during 1963-64. This district has been among the foremost districts of the State in the collection of snall savings. The collections done during 1962-63 amounted to Rs.1,57,35,472 and during 1963-64 to Rs.1,60,99,189. The net collections however, were only of Rs.29,65,608 during 1962-63 and Rs.42,05,856 during 1963-64 and indicate the un-desirable feature of the small saving drive namely withdrawing of very large amounts of small savings.
