CHAPTER-I

INTRODUCTION

1.1 Location and Boundaries:-

1.1.1 The Bombay Division of Maharashtra State comprising seven districts viz. (i) Greater Bombay, (ii) Thana, (iii) Kolaba, (iv) Ratnagiri, (v) Nasik, (vi) Dhulia and (vii) Jalgaon is somewhat crescent-shaped. Unlike other Divisions, it is particularly marked with length rather than breadth. Peculiarly this Division spread through-out the whole length of nearly 700 Km⁴. of Maharashtra State, touching the far north and south ends of the State. Whole of the western portion of Maharashtra is thus belted by this Division.

1.1.2 The Bombay Division is situated between 22°-2' and 15°-30' north latitude and 72°-45' and 76°-28' east longitude. Its northern portion is formed by districts of Nasik, Dhulia and Jalgaon, which seem to have clustered to some extent, whereas the southern half of the Division is nothing but a strip of about 65 Km⁴. breadth, formed by the districts of Greater Bombay, Thana, Kolaba and Ratnagiri talling one another.

1.1.3 At its north, the Bombay Division is bounded by Madhya Pradesh and at its south, there are States of Mysore and the Union Territory of Goa separated by Terkhol Creek. The east portion of the Division is adjacent to the districts of Buldhana, and Aurangabad, from Nagpur and Aurangabad Divisions and Ahmednagar, Poona, Satara, Sangli and Kolhapur districts of Poona Division. Whole of the length of about 720 Km⁴. of the Arabian Sea-Coast of Maharashtra State at its west-side is shared by this Division. At the north-west corner of this division there lies Surat District of Gujrat State and Union

Territory of Daman. The natural boundaries of this Division are provided by Arabian sea towards the west, Sahyadri Range towards the north-west and east of the southern half, Satpuras towards the north and Terekhol Creek at the south,

1.1.4 Geographically this Division can be sub-divided in two zones, (i) Konkan, comprising mainly Greater Bombay, Thane, Kolaba and Ratnagiri districts and (ii) Ghat or Desh, constituted by the districts of Nasik, Dhulia and Jalgaon.

1.2 Topography:-

1.2.1 While considering topography of the Bombay Division, the two zones of Konkan and Desh are necessary to be kept in view. The three characteristics of the topography of Konkan at once come to the forefront and on the coastalline lies, almost parallel to it the plain strip of about 25-30 Km. breadth, which is locally known as "KHALATI". Most of this portion is a sight of flat low lying rice tracts. Apart from rice cultivation, noticeable feature, in the economy of this "Bunder Patti" or "Khalati" is the fodder cultivation, which is accounted for by flourishing trade in grass and hay. Another noticeable feature of the coastal strip is the fishing industry carried on, on a large scale, in the villages around the coast. The noticeable feature of this tract is that whatever industrialisation in the backward region of Konkan has taken place, pertains to this area. Particularly in Thane District (excluding Greater Bombay) organised industries of ~~different~~ ^{different} types such as manufactures of Rayon, Silk, Bricks, Medicines, Chemicals, etc. have been located. In the districts of Kolaba and Ratnagiri also, industrial belts are now formed. On the east of Valati stand the mountainous ranges of the Sahadri. This hilly strip of Sahyadri has about 8 Km breadth and these ranges at some points rise more than 900 m. above the mean sea level. The land is well watered in rainy season and well-wooded. The slopes of Sahyadries are well-clothed with teak, Ain Khari, Sesum and other species and the ranges

Khair

..... (3).

rise from plain level in outline and during the rainy season

-:3:-

have fine evergreen grove. On all sides, hills, the country near the foot of Sahyadri is specially beautiful. The forest industry gives seasonal employment to labour in this area. Most of the area in this tract has been classified as a "Scheduled Area", as it is inhabited by Adiwasis comprising of Warli, Katkari, Thakur, Dhondia, Dabla, Dhor-Koli and Mahadeo-Koli, etc. This tract is mostly a depressed economy pocket, as the local population subsists on the meagre returns. As in the case of Konkan the topographical study of the Desh brings forth three main features.

Towards the western border on the Nasik and to west and south Dhulia district lie the ranges of Sahyadries. The Northern borders of Dhulia and Jalgaon are bounded by the steep southern face of the "Satpuras". There are high peaks in these mountains (are full of forest inhabited by wild-life and Adiwasis) rising from 500 to 900 ft. The mountainous ranges. Considering the backward character of the tract and its people, this area has been declared as the "Scheduled Area". From the slopes of Sahyadris and Satpuras spreads long plain tract scarcely unevened by hilly spots. In Dhulia and Jalgaon Districts most of the portion of these plains come under an ~~xxxx~~ upland basin, drained into Tapi river and her tributaries. In these plains cultivation is wide-spread and the region is quite rich with production of food crops as well as Cash Crops.

112.2. Hills:- The hills of the lofty Sahyadri ranges are quite picturesque. All along with eastern border of Konkan a mighty wall of Sahyadris 600 to 1200 M. high stretches, its sheer back cliffs broken by narrow horizontal belts of grass and forest and its crest rising in places in isolated peaks and rocks butts from 300 to 450 M. above its general level. There are flat-topped as well as peak topped mountains in Desh Region. The height of Selebari range in Nasik varies from 950 to 1300 M. The peak of Katsubai near Igatpuri is the highest one in this

..... (4).

district, being 1660 M high. The mountains of Salher Mulher, Rameshej, Chancherej etc., have added to the beauty of the landscape. The hills in Dhulia district belong to the ranges of Sahyadri as well as Satpura, and possess height of 900 to 1000 M. The highest peak in these ranges in Dhulia district is Torannal having the height of 1010 M. In Jalgaon district, there are three chief hill ranges, the Satpura in the north, the Kattis in the south-east and the Ajantha also known as Chander or Satmala in the south.

1.2.3. Rivers:- Rising in the Western slope of Sahyadris, none of the Konkan rivers drain large enough area to gain any size or importance. Their waters gather at the base of the cliffs and along rocky deep-cut-channels, force a passage from among hills. During the rains they bring to the sea large volume of water but in fair seasons the channels of most of them mere chains of pools, divided by walls of rocks. The size and importance of these rivers increase only in proportion to the distance upto which they are tidal and navigable. Vaitarna and Ulhas are the important rivers in the district of Thana. These west flowing rivers, offer suitable dam and storage sites and enormous possibilities of power generation. The Vaitarna and Tansa lakes are important sources of water supply to the cities of Thana and Greater-Bombay. The important rivers of Kolaba district are Ulhas, Patalganga and Anba, Kundalika, Savitri, Goda and Kal. Some of the rivers, especially Rej, Ulhas, Kundalika and Patalganga are considered as boons to the cultivators, *as they facilitate the growing of summer paddy* vegetables by means of minor irrigation. Most of the rivers in Kolaba district are seasonal and dry for six months in the year. High altitudes of Sahyadri in the basins of some of the rivers in the district have provided good sites for these hydro-electric power generating stations. There are in all about 21 small

and big rivers flowing through Ratnagiri District. Seven of these are Major and Navigable during fair season. These are Savitri, Vashisthi, Jagbudi, Muchakundi, Rajapur, Kharapathan and Karli. The rivers of Desh region bear far more importance in making the soil fertile by depositing silt on either sides of their banks. Most of these rivers remain flowing throughout all the seasons and provide major, medium and minor irrigation facilities to the region. The important rivers of the Desh region are Godavari, Girna, Donna, Mosam, Tapi and Purna. The course of Tapi in Dhulia district is 86 Km. Its banks are too high to enable the use of its water for irrigation. The great river Narmada passes through the northern boundary of Dhulia district for 56 Km. Almost all the rivers in the district Jalgaon are the feeder rivers of river Tapi.

1.2.4. Creeks:-

Creeks form an important aspect of the Konkan Region. Creeks are formed mainly by reaching the sea water deep inland. All along the Konkan coast there are many creeks, some of these are broad at their mouth and deep, others becoming narrow within 15 Km of coast. These creeks provide for inland waterways and navigation so also fishing industry. Some of these creeks are Thana, Dassein, Satpati, Dativare Manor, Kalyan in Thana District. In Kolaba district there are some creeks like Ravas, Dharamtar, Nagothana, Devdanda, Rajapuri etc., which play an important role in inland water transport and fishing. In Ratnagiri district there are number of major and minor creeks such as Bankot, Farnagad, Jaitpur, Vijay Durga, Deogad and so on.

1.2.5: Soil:-

The natural and geographical conditions in Konkan cause four-fold classification of its area according to its soil. The land along the coastal lines consisting of fertile mixtures of sand, clay and humus coming from the sea.

.....(6)

banks

The alluvial deposits are also found along the ~~banks~~ banks of large rivers. At some places there are nearly black-rocks rendering cultivation difficult. The Kharland popularly known as "Kajans" caused by tides in the creeks. In most of the field of Khanjan cultivation is impracticable while in some of them only some inferior variety of paddy can be grown. So the major problem before the Konkan districts has been to reclaim the cultivable land from these Kajans. The upland generally consists of an open trap soils which is reddish brown in colour and specially adopted for forest growth and fodder grass. In Kolaba district there is no retention of water in the soil so the district is suffering from an acute shortage of water although it receives rain-fall ranging between 2000 to 35000 ~~mm~~ mm. *The* tract of shell sands near the sea shore is suited for growth of coconut and bettlenut trees. The red type of soil with mixture of shell sands is suited for growing rice. The brown and brownish black soil in Kolaba district are excellent for rice production and capable of producing second crop. The soil in Thana district is blackish and contains sand which is suitable for garden crops. In some parts of Thana district the soil is poor and used only for growing grass and coarse grains viz Nagli and Vari etc.,. In the valleys of Thana district there are some patches of black-soil where rice is grown. The Desh region is proud in having superior and fertile land. Broadly the soil of the district Jalgaon can be classified in-to three major tracts. The northern tract mostly consists of rich black soil. In the coastal tract there are deep black red and brown types of soil. The deep black soil is most fertile and yields rich crops. The lighter red soils sufficiently good for raising cash-crops. The general quality of the soil in the southern tract of Jalgaon district is inferior to that of central and northern tracts. On either side of the Tapi runs an unbroken plain of the deep black *forming a strip of alluvium covered lands. The black soil* soil in Nasik district is found mostly in the plain country

Cotton

near the beds of rivers. It yields excellent Rabi crops of wheat and gram. Red-soil is found chiefly on hills top and yields good rainy season crops. Eastern part of Nasik district have poor soils.

1.2.6: Climate:-

Climate of Konkan is saltry and even though it is moist and damp, on the whole it can be said to be healthy one; excepting some areas, which are somewhat malarious, especially from the close of rains to the end of December. The range of temperature between maximum and minimum is comparatively small. In the hot season the heat is very aggressive during the day, but many times the nights are not unpleasant. The hill tops are having pleasant climate during the summer due to the west winds. Humidity is greater on the coast than is in the interior. It reaches its maximum during the south-west monsoon. The climate of Desh is dry except in Monsoon. The year can be divided in-to dry hot period during February and March, Summer during April, May and June, Rainy from July to September, Asultry period in September, and October and winter in November, December, and January, April is normally the hottest months, while January the coolest month.

1.2.7: Rain-fall:-

The south-west monsoon brings rains to this division. The western-sea-coast stands first in experiencing on set of monsoon. The monsoon setting in ^{June} July spreads all over the division gradually. The rainfall is not uniform in all parts of Kolaba and Thane districts. It increases as we go from west to east. The rain in Thane district is less

-(8):-

towards the north than towards the south. The intensity of rainfall is highest generally in July. Along the coastal line the rainfall is about 1800 M.Ms., whereas in the interior parts of Konkan it is near about 2500 M.Ms. On the slopes of Sahyadries it is more and at the peaks it reaches even the magnitude of 5000 M.Ms. The rain-fall is usually uniformly distributed throughout the Desh region ranging from 640 M.Ms. to 800 M.Ms. The western, south-western, northern parts of Desh receives more rainfall than the plains. In the Desh the rains are intermittent. At no time the rainfall is very heavy in Desh region. The rain-fall is heaviest in the Western part of Nasik district comprising of Surgana, Peint and Igatpuri. In the eastern part of the rainfall is very moderate with an uneven and scanty distribution. ^{West and south-west} ~~The part of the~~ ^{Dhulia} district Dhulia (~~West and South-west~~) as it is having ranges of Sahyadries ~~in it~~ experiences good rains. The rains are recorded in the months of June and October, in Dhulia district.

Out of 12 towns in this State having population of one lakh and above, five towns namely Greater Bombay, Nasik, Kalyan, Solapur and Dahanu are included.

and Thana are in this Division only.

2.1.3: As per 1961 Census, 61 lakhs of persons in the Division were workers i.e. 45% of the total population. Out of these 61 lakhs, 38 lakhs resides in rural and 23 lakhs in urban area. The working population in Greater Bombay covers nearly 17 lakhs of population of the total workers in this Division.

(In lakhs)

Gr. Bombay	41.52	16.87	24.65
<i>Rest of the</i> Bombay Division	95.10	44.60	50.40
Total Bombay Divn.	136.62	61.47	75.15
M. State	395.54	189.48	206.05

Out of 38 lakhs workers in rural areas, over 86% were engaged in agriculture. Even in Thana, Nasik and Jalgaon, the industrially advanced districts of this division, these percentages are as high as 64.5, 73.5 and 78.9 respectively. The percentage of population engaged in Mining, Quarrying etc. to the total workers is higher in Konkan than in Desh region. This can be explained by the fact that the larger mineral deposits, such as ^{iron ore} Bauxite, Manganese etc. are found in the Konkan. On the other hand, "Households Industries" provides comparatively more employment to Desh districts than the Konkan. The highest percentage of working males is in Thana district.

2.1.4: According to 1961 Population Census, total number of literates in this division were 51 lakhs, the percentage of literacy being 37.7 of the total population as shown below.

	(Percentage)		
	Males	Females	Total
Greater Bombay	65.10	48.81	58.60
Rest of the Bombay Division	41.4	15.9	28.06
Total:	49.61	24.41	37.75
M. State:	42.04	16.76	29.82

The percentage of literate male population in the districts of Bombay Division varies from 36 to 50, the highest percentage being in Jalgaon, where nearly half of the male ~~of~~ population is literate. The percentage of literate females ^{total} to/females is the lowest (12.5) in Dhulia district and highest (19.1) in Thana district.

2.1.5: Total number of scheduled castes and scheduled tribes in Bombay Division enumerated in 1961 Census were 3.75 lakhs and 16.87 lakhs respectively. Total:	3.76	16.87	20.63
M. State:	22.27	23.97	46.63

In the case of scheduled castes nearly 50% of ^{their} total population is urbanised, on the other hand ^{for} scheduled tribe, it is only 4.7% of the ^{their} total population. The low rate of urbanisation of scheduled tribe is suggestive of its depressed conditions.

2.2: AGRICULTURE:

2.2.1: The pattern of agriculture economy is different in Konkan and Desh regions, owing to variation in weather, rainfall and soil conditions, which exercise great influence over total area cultivated, as well as well crops sown in each region. There are two main seasons, Kharif and Rabi in this division. The quality of soil in Konkan is inferior to that of Desh region, where the soil is black and fertile. Over the whole Bombay division, the chief supply of rain is from the south-west monsoons.

Along coastal line, rainfall is 1800 mms. whereas in the interior parts of Konkan it is near about 2500 mms. The rainfall in Desh region is more or less uniformly distributed and is from 640 mms. to 800 mms.

Among the principal crops, rice is grown in Kharif season in the Konkan district, Jowar is grown in both the Kharif and Rabi seasons in Desh region. Among the principal non-food crops, cotton and ground-nut are grown in Desh districts. The area under sugare-cane is insignificant in this division i.e. 0.3% of total gross cropped area. larger share under oilseeds. Area under fruits and vegetables in Ratnagiri, Nasik and Jalgaon constitutes 18.9%, 37.5% and 30.5% of the respective gross cropped area. Among the fruits, Nasik is known for grapes, Jalgaon for Bananas and Ratnagiri for famous Alfonso Mangoes.

2.2.4 IRRIGATION:

The Bombay Division suffers from lack of irrigation facilities as is seen from the table below:

(Area in lakh hectares)

	Total Gross Cropped area	Total gross irriga- ted area	Per- centage
Gr. Bombay	0.07	Nil	Nil

Desh	25.91	1.57	6.1
Total:	35.18	1.80	5.1
M. State:	191.74	13.14	6.9

It can be seen from the table above that only 13.7% of the gross irrigated area of the State is shared by this Division. *against the gross cropped area 18.3%.* Out of 1.80 lakhs hectares under gross irrigated area, the Desh districts share is as high as 1.57 lakhs hectares which

is 87.2%. The source-wise distribution of the net irrigated area is:

So also one cart is for every 9.21 cultivators in 1961 as against 8.49 cultivators in 1956. There is practically no scope for tractors in Konkan region on account of its topography and uneconomic land holdings. Due to rural electrifications, electric pumps have increased from 199 to 591.

2.6 VETERINARY FACILITIES:

There are 4 veterinary hospitals one each ⁱⁿ Ratnagiri, Nasik, Dhulia and Jalgaon; 65 Veterinary Dispensaries and 184 Aid Centres. 67 Veterinary Doctors and 183 Vets. stockmen were engaged to look after the health of Live-Stock population in Bombay Division. The response to these Veterinary
