Sums applied to the extraordinary amortisation of the 7% 1924 Loan .	144,774	9	4
Various per-contra accounts	374,422	13	11
	£14,656,148	15	1

(Note. — For the purposes of the present balance-sheet, the conversion of drachmæ is made on the basis of the average of our conversions of pounds sterling to drachmæ since the constitution of the Commission up to March 31st, 1930, *i.e.*, 350,841. It should be noted that this average varies from quarter to quarter, which explains the variations of the figures in the quarterly balance-sheet. Thus, at the date of the drafting of the balance-sheet, as at December 31st, 1929, the average was 346,532. Naturally, these variations only occur in the drachmæ accounts.)

The following notes facilitate the reading of this balance-sheet:

LIABILITIES.		£	s.	d.
<i>Receipts</i>		773,575	12	0
The analysis of this chapter is as follows:				
	£	s.	d.	
Interest on balances	339,958	6	1	
Caution money forfeited	9,074	17	4	
Various receipts	96,745	2	0	
Tithe collected from agricultural refugees settled on lands belonging to the R. S. C.	218,833	17	5	
Share of the R. S. C. in payments by refugees (25 per cent of capital repayments and 100 per cent of the payments of interest)	108,963	9	2	
	<u>£773,575</u>	<u>12</u>	<u>0</u>	
<i>Bonds deposited by refugees, etc.</i>		336,605	0	0
	£	s.	d.	
Payments by urban refugees	109,246	5	0	
Payments by agricultural refugees	227,358	15	0	
	<u>£336,605</u>	<u>0</u>	<u>0</u>	
<i>Various liabilities</i>		201,053	17	7
Share of the International Financial Commission 75 per cent of repayments of capital by refugees (£143,568 1s. 3d.) and 100 per cent of the proceeds of sales to non-refugees (£1,206 8s. 1d.)	£	s.	d.	
	144,774	9	4	
Rents to be refunded	3,198	19	7	
Caution money and sundry creditors	53,080	8	8	
	<u>£201,053</u>	<u>17</u>	<u>7</u>	
ASSETS.				
<i>Balances available</i>		933,075	14	11
By balances available, we mean the sums which still remain at our disposal at banks and at the Head Office in sterling, dollars and drachmæ. Naturally, these do not refer to balances available in the budgetary meaning of the word. With the exception of a sum of £141,020 representing a special reserve of £100,000, and an amount for unforeseen expenses of £41,020, all available balances are engaged in order to meet the various credits opened.				
<i>Bonds deposited by refugees, etc.</i>		336,605	0	0
	£	s.	d.	
Bonds of the 6% 1923 Loan for compensation to immigrants from Bulgaria (69,899,500 drachmæ)	174,748	15	0	
Bonds of the 8% 1926 and 1928 Loan for compensation to exchangeable refugees from Turkey (62,695,000 drachmæ)	156,737	10	0	
Bonds of the 8% 1927 Loan for compensation to refugees from Turkey of Hellenic nationality (2,047,500 drachmæ)	5,118	15	0	
	<u>£336,605</u>	<u>0</u>	<u>0</u>	
<i>Sums applied to the extraordinary amortisation of the 7% 1924 Loan</i>		144,774	9	4
	£	s.	d.	
75 per cent of capital repayments by refugees	143,568	1	3	
100 per cent of payments by non-refugees	1,206	8	1	
	<u>£144,774</u>	<u>9</u>	<u>4</u>	
<i>Various per-contra accounts</i>		374,422	13	11

Various deposits	22,477	8	4	
	<u>£374,422</u>	<u>13</u>	<u>11</u>	

B. BUDGET 1930.

We give below the budget of the R.C.S. for the financial year 1930 as finally approved.

<i>Receipts</i>		(on the basis of 375 drachmæ to the £.)	
I. Balance at December 31st, 1929:		£	£
(a) Funds deposited with the Bank of England	246,540		
• (b) Funds deposited with the National Bank of Greece, £62,419 15s. 3d. plus 21,304,171.15 drachmæ at 375	119,231		
• (c) Funds deposited with the Bank of Greece, £3,745 15s. 3d. plus \$3,951,802.56 at 4.90	810,236		
(d) Funds deposited with the Head Office of the R. S. C., 35,823.65 drachmæ at 375	95		
• (e) Funds deposited with provincial bureaux of the R. S. C., 108,966,784.82 drachmæ at 375	290,578		
	<hr/>		1,466,680
II. Recoverable advances, £5,415 11s. 10d. plus 1,848,880.10 drachmæ at 375			10,346
III. Interest and sundries (1930)			25,000
IV. 25 per cent of capital repayments and 100 per cent of interest payments by refugees (1930)			15,000
		Total I-IV	<hr/> £1,517,026
V. Receipts to be applied in accordance with Article 18 of the Bankers' Agreement and Article 16 of the Organic Statutes:			
(a) Payments by refugees 1930			15,000
(b) Tax on the yield from refugees' lands in 1928, 26,587,847.97 drachmæ at 375			70,901
(c) Tax on the yield from refugees' lands in 1929			See note
		Grand total	<hr/> £1,602,927
<i>Expenditure</i>		(on the basis of 375 drachmæ to the £.)	
I. Credit balances of the 1929 budget: 439,719,005.53 drachmæ at 375 (see Tables 1 and 2 attached)		£	1,172,584
II. Repayable deposits, £7,677 7s. 10d. plus 17,154,360.90 drachmæ at 375			53,422
<i>New Credits, 1930.</i>			
III. Agricultural establishment, 3,000,000 drachmæ at 375			8,000
IV. General Expenses 1930:		Drachmæ	
(a) Head Office	15,000,000	(See table	
(b) Reinforcement of the accounting staff in provincial offices of the R. S. C. by additional employees	1,000,000	3 attached)	
(c) D. G. C. M.	20,000,000		
(d) D. C. T.	5,000,000		
(e) D. C. O. G.	3,000,000		
	<hr/>		
	44,000,000 at 375		117,333
V. Cadastral survey, 8,500,000 drachmæ at 375			22,667
VI. Construction of Trans-Nestos roads, 3,500,000 drachmæ at 375			9,333
VII. Reserves:			
(a) To cover difference in ex- change, £1,200,000 at 0.50 drachma	600,000 at 375	£	1,600
(b) Special reserve	37,500,000 „ „		100,000
(c) Unforeseen	12,032,498 „ „		32,087
		<hr/>	133,687
		Total I-VII	<hr/> £1,517,026
VIII. (a) Receipts to be paid over to the I. F. C. for the extraordinary amorti- sation of the 7% 1924 Loan			15,000
(b) Receipts to be paid over to the I. F. C. for the ordinary service of the 7% 1924 Loan, subject to the conditions of Article 16 of the Organic Statutes			70,901
		Grand total	<hr/> £1,602,927

Rents	540,000
Furniture and fittings	70,000
Upkeep of motor-car	125,000
Water	30,000
Unforeseen	100,000
	15,000,000

15,000,000 drachmæ at 375 = £40,000.

C. SERVICE OF THE 7 % 1924 LOAN.

For the financial year 1929, the yield of the State revenues assigned to the service of this Loan was as follows:

	Drachmæ
Receipts earmarked for the Loan	886,715,377
Surplus receipts assigned as a subsidiary guarantee for the Loan service	2,242,395,599
	3,129,110,976

The sum required for the interest and ordinary amortisation service this year was 342,134,025 drachmæ.

Consequently, the revenue assigned was sufficient to cover nine times the service of the Loan. In addition to the ordinary amortisation, which amounted to £64,000 and \$71,000, the I. F. C. allocated a sum of £15,000 and \$17,000 (part of the 75 per cent of capital repayments by refugees paid over to it by the Commission) to extraordinary amortisation.

D. COLLECTIONS.

Collections credited during the three months January-March 1929 amounted to:

- (a) In cash, £15,119 10s. 2d., of which sum £5,529 13s. 2d. (75 per cent of capital repayments) was paid to the I. F. C. for additional amortisation of the 7 % 1924 Loan.
- (b) In bonds, 13,195,500 drachmæ or £32,988 15s. 0d. (at the rate of £2 10s. per 1,000 drachmæ).

The distribution of these payments between agricultural and urban refugees is as follows:

	Agricultural			Urban			Total		
	£	s.	d.	£	s.	d.	£	s.	d.
In cash	9,074	12	9	6,044	17	5	15,119	10	2
In bonds	20,152	10	0	12,836	5	0	32,988	15	0
	29,227 2 9			18,881 2 5			48,108 5 2		

(a) Payments by Agricultural Refugees.

Payments made during the three months January-March 1930 amounted to 16,323,403 drachmæ (in bonds and cash). Payments for the corresponding quarters of the previous year were 8,898,760 drachmæ, or an increase of 7,424,643 drachmæ.

(b) Payments by Urban Refugees.

Payments made during the three months January-March 1930 amounted to 8,003,860 drachmæ (in bonds and cash). Payments for the corresponding quarter of the previous year were 3,903,390 drachmæ, or an increase of 4,100,470 drachmæ.

GENERAL.

As the Commission proposes to submit, during the month of August, a comprehensive report, which will summarise in detail the activities of the Commission from the time of its creation in the year 1923, it is not considered necessary at the present time to do more than call attention to the progress which has been made with plans for the liquidation of the Commission since the date of the last Quarterly Report.

The Convention providing for the dissolution of the Commission, which was referred to in the last Quarterly Report, was submitted to the Chamber of Deputies for consideration. After a long discussion, a Law was finally passed on April 12th, 1930, authorising the Government to ratify the Convention formally, after approval of the Council of the League.

The Council of the League, having formally approved the Convention at a meeting held on May 14th, 1930, the Greek Government is in a position, in accordance with the law above referred to, to give its final approval to the Convention. It is expected that this approval will be given within a short time.

In the last Quarterly Report, an explanation was given of the arrangements contained in the Convention for the ascertaining of the debts and credits of agricultural refugees.

On March 27th, 1930, an agreement was reached between the Commission and the Government relating to all matters which, according to the above provisions of the Convention, were open for discussion. The substance of the agreement was as follows:

1. The balance of the debts of the agricultural refugees shall be reimbursed in fifteen years from January 1st, 1931. Interest to be charged only as from January 1st, 1931.
- 2. The rate of interest on these debts is reduced from 8 per cent to 3 per cent.
- 3. The rate of interest on arrears is fixed at 8 per cent.
- 4. Interest will not be charged on sums due by agricultural refugees prior to January 1st, 1931. All payments made up to that date will be placed to the capital account.
5. The agricultural refugees will not be charged with the administrative expenses of the R. S. C.
6. The agricultural refugees will be debited with the value of the land they have received at an average price of 400 drachmæ per stremma of cultivable land (1 stremma = 10 ares).

This price of 400 drachmæ also represents the average price at which the State is to indemnify those proprietors whose estates have been expropriated in accordance with the Agrarian Law.

One of the services of the R. S. C. is charged with the valuation of the indemnities due by the Government to the agricultural refugees who were exchanged in virtue of the terms of the Convention of Lausanne for the exchange of Greco-Turkish populations. The work of this service progresses, and it can be foreseen, after study of the dossiers examined up to date, that the total of the indemnities in question will amount to about £8,500,000. The total of the refugees' debts, after deduction of the indemnities, will amount to approximately £8,500,000. With a total of 145,000 families in question this figure represents an average debt of £56 10s. 0d. per family. Consequently, the average annual sum to be paid towards the liquidation of this debt is, under the new conditions, approximately £4 10s. 0d.

The Law which was passed by the Chamber of Deputies on April 12th, 1930, above referred to, in addition to authorising the Government to give formal ratification of the Convention after its approval by the Council of the League of Nations, also authorises the Government, through the issue of decrees, to settle all questions which, under the terms of the Convention itself, require legislative approval. The Commission is preparing to initiate discussions with the Government upon all matters requiring settlement before the dissolution of the Commission, and hopes prompt settlement may be made of all questions, so that the final transfer of the properties of the Commission, subject to the terms of the Convention, may, if possible, be made before December 31st next.

(Signed) Charles B. EDDY,
Chairman.

Geneva, May 31st, 1930.

LEAGUE OF NATIONS

INTRODUCTION.

The Fiscal Committee has the honour to submit to the Council the following report relating to the work of its second session held at Geneva from May 22nd to 31st, 1930.

The following members of the Committee were present:

M. BLAU (Chairman *per interim* in the absence of M. BORDUGE).
Professor Th. S. ADAMS, assisted by M. ALVORD and Mr. CARROLL.
Dr. Gino BOLAFFI.
M. CLAVIER.
M. Diez DE MEDINA.
Professor Dr. FLORÈS DE LÉMUS.
M. MANTZAVINOS, assisted by M. BERTZAS.
M. PAASCHE (replacing Professor DORN).
Dr. SINNINGHE DAMSTÉ.
M. TETREL (replacing M. BORDUGE), assisted by M. BOISSARD.
Sir Percy THOMPSON, K.B.E., C.B.

Representing the International Chamber of Commerce:

M. R. JULLIARD.

I.

EXAMINATION OF RECENTLY CONCLUDED INTERNATIONAL CONVENTIONS FOR THE AVOIDANCE OF DOUBLE TAXATION.

On February 22nd, 1928, Hungary and Yugoslavia concluded a Convention¹ for the prevention of double taxation in the matter of direct taxes (including contributions levied on account of subordinate public corporations, communes, etc.). The Convention is based on the distinction between impersonal and personal taxes, both the terms being interpreted in their ordinary sense.

In so far as concerns important taxes, the Convention follows the principles embodied in the 1928 model conventions. There is a slight difference as regards directors' fees: if these are paid in respect of services at a branch, the State in whose territory the branch is situated has the right of assessment (compare Article 7 of the Convention with Article 6 of draft *Ia*). It may be noted further that under Articles 6 and 7, in determining the domicile of juridical persons, not only the real centre of management of the undertaking (*vide* Article 4 of draft *Ia*) but also the head office of the company is taken into account, the latter having priority over the said centre of management. This stipulation recurs in Article 9 (personal tax).

In principle, the personal tax is levied in the taxpayer's State of domicile, with the exception of income from immovable property (including mortgage debts) and industrial and commercial undertakings, and earned income (the latter forms of income are not excepted in the above-mentioned article in draft *Ia*). The tax on total wealth is based on the same principles as the personal tax on income. As regards administrative and legal assistance, there is only one provision dealing with this matter (Article 14).

As regards the exemption of shipping, the Committee can mention, in addition to Article 12 of the above-mentioned Treaty, seven Agreements: between Belgium and Sweden (May 31st, 1929), Canada and Japan (September 21st, 1929, Exchange of Notes), Canada and the Netherlands (September 23rd, 1929, Exchange of Notes), Canada and Greece (September 30th, 1929, Exchange of Notes), Canada and Sweden (November 21st, 1929, Exchange of Notes), France and Sweden (December 19th, 1929, January 25th, 1930, Exchange of Notes), Canada and Germany (April 17th, 1930, Exchange of Notes).

Total or partial exemption from the road-tax has been provided for in arrangements between the Netherlands and certain other countries—namely, Belgium, Denmark, Germany, Great Britain and Northern Ireland, and Sweden. These arrangements have been brought into operation by enactment of simultaneous internal legislation.

Finally, a Treaty was concluded between Austria and Hungary (June 25th, 1928), providing for administrative and legal assistance; the whole of this Treaty corresponds to the Treaty between Austria and Czechoslovakia of July 12th, 1926 (document C.345.M.102.1928.II, p. 224).

II.

GENERAL POSITION WITH REGARD TO THE PROBLEMS OF DOUBLE TAXATION AND TAX EVASION.

The Fiscal Committee has taken note of the draft law recently submitted to the Congress of the United States of America with a view to avoiding double taxation. The Committee welcomes this attempt, the more so because the system of combating the superimposing of taxes by internal legislation has already shown itself as very efficacious. Proof of this is given in the Collection of Agreements (document C.345.M.102.1928.II, pages 185-211) and in Supplement I (document C.365.M.134.1929.II, pages 36-40). It is to be hoped that several States will be influenced to follow the same path, which will lead to the disappearance of the law of double taxation in a considerable field.

¹ The Fiscal Committee only received communication of this Convention during its session in May 1930.

III.

EXAMINATION OF THE QUESTIONS LEFT OPEN BY THE GENERAL MEETING OF GOVERNMENT EXPERTS.

The Fiscal Committee continued at its second session the study of the various questions which the General Meeting of Government Experts in 1928 had not been able to go into sufficiently thoroughly.

A. *Definition of the Term "Autonomous Agent" in Relation to the Term "Permanent Establishment"*.

The Committee examined on second reading the definition of the term "autonomous agent" in relation to the term "permanent establishment" which it had provisionally accepted at its previous session, and adopted the following text:

In its endeavour to determine the principles which it might adopt as a guide in defining the terms "autonomous agent"¹ and "permanent establishment", the Committee found that four criteria were employed in different countries.

(a) The first is a criterion of a legal nature, it being considered that the only agents dependent on an enterprise are those having sufficient powers to conclude contracts binding upon that enterprise.

The Committee considered that this criterion was admissible, but was not applicable to every case.

(b) According to the second system, there is no "permanent establishment", unless the agent has a fixed depot.

There are cases, however, in which the presence of an agent of an enterprise may connote, for that enterprise, the existence of a permanent establishment, although the enterprise undoubtedly has no fixed depot; this is particularly the case with insurance companies and certain buying agencies.

(c) The third system takes into account the relations between the agent and the enterprise, the only agents regarded as not autonomous being those in receipt of fixed emoluments.

This may be a determining but it is not an indispensable factor in deciding whether there is a non-autonomous agent, *i.e.*, a permanent establishment.

(d) The fourth criterion is that of the continuity of the relations between the agent and the enterprise.

This criterion is not absolute and requires closer definition.

Taking the above systems into consideration, the Committee concluded that it would be advantageous to disengage a general principle governing the matter.

The fundamental principle is:

When a foreign enterprise regularly has business relations in a country through an agent established there who is authorised to act on its behalf, it shall be deemed to have a permanent establishment in that country.

A permanent establishment will thus exist when the agent, being established in the country:

(a) Is a duly accredited agent (*fondé de pouvoir*), who habitually enters into contracts on behalf of the enterprise for which he works;

(b) Is bound by an employment contract and habitually transacts commercial business on behalf of the enterprise in return for remuneration from the enterprise;

(c) Is habitually in possession, for the purposes of sale, of a depot or a stock of goods belonging to the enterprise.

As evidence of the existence of an employment contract under the terms of (b) may be taken, moreover, the fact that the administrative expenses of the agent, in particular the rent of premises, are paid by the enterprise, or the fact that the latter's intervention is manifested by outward signs.

A broker who places his services at the disposal of an enterprise in order to bring it into touch with customers does not in his own person constitute a permanent establishment of the enterprise, even if his work for the enterprise is to a certain extent continuous or is carried on at regular periods.

Similarly, the fact that the commission agent (*commissionnaire*) acts in his own name for one or more enterprises, and receives a normal rate of commission, does not in principle imply the existence of a permanent establishment for any of those enterprises. This may not be the case, however, if he is required to devote the whole of his activities to a single enterprise.

Lastly, there cannot be held to be any permanent establishment in the case of commercial travellers not coming under any of the above-mentioned categories.

British Government Bill.

At this session Sir Percy Thompson, the British member of the Committee, communicated to his colleagues a clause (Appendix I) which the British Government had submitted to Parliament in the Finance Bill of the year in order that it might be possible for Great Britain to conclude international agreements for the avoidance of double taxation resulting from divergent definitions of the term "autonomous agent".

¹ In this report, the term "agent" is employed in the broad commercial sense rather than in the strict legal sense.

The Committee noted Sir Percy Thompson's communication with great interest and thanked him for showing them this proof of confidence.

The contents of the clause do not differ materially from the conclusions adopted by the Fiscal Committee in the above report. The British clause would appear of a nature greatly to facilitate the conclusion of international agreements on the basis of the recommendations adopted by the Fiscal Committee.

B. *Rules for Apportionment of Profits or Capital from Undertakings operating in Several Countries and Measures designed to avoid Double Taxation of International Trusts and "Holding Companies"*¹.

At its previous session the Fiscal Committee had framed a detailed questionnaire on this question which it had forwarded to all its members and corresponding members in order to obtain full information concerning the practices at present followed in the different countries.

The Committee received replies concerning some twenty countries. This copious and very important documentation has been summarised in a report prepared by Professor Adams (Appendix II).

The Committee has also received communication of the conclusions arrived at by the International Chamber of Commerce.

The Committee held an exhaustive discussion, which revealed the complexity of the question and the numerous obstacles which face any attempted solution. Nevertheless, while fully realising the difficulty of the task, the Fiscal Committee is of opinion that the moment has come to deal with the real substance of the question, since, until this is settled, one of the principal causes of double taxation will continue to exist.

The Committee decided to concentrate chiefly on this point. It feels that for the same reason the grant of the Rockefeller Foundation (see hereafter) should be employed primarily for this object.

The Committee requested a Sub-Committee composed of M. BLAU, M. BORDUGE, Professor DORN, Professor Dr. FLORÈS DE LÉMUS and Sir Percy THOMPSON to prepare the discussion for the next session.

C. *Study of the Principles for the Avoidance of Double Taxation of Author's Rights and Patents.*

As in the case of the preceding question, the Committee had forwarded to all its members a questionnaire on authors' rights and patents. The replies received have been summarised in a report drawn up by M. Clavier (Appendix III).

The General Meeting of Government Experts, which was held at Geneva in October 1928, suggested that the Fiscal Committee should endeavour to discover a method for the avoidance of double taxation levied on the income derived from authors' rights and patents. At its first session, the Fiscal Committee made a preliminary study of this subject.

Certain members were of opinion that the régime had been fixed by Article 9 of the draft Ia, drawn up by the Government experts (document C.562.M.178.1928.II). This article is worded as follows:

"Annuities and income from other *sources* not referred to in the previous paragraphs shall be taxable in the State of *fiscal domicile* of the creditor of such income."

Other members pointed out that, at previous meetings, no decision had been taken either with regard to authors' rights or the income derived from patents. This appeared to be confirmed by the fact that the Government experts' report recommended the Fiscal Committee to study the question.

Certain members of the Committee also observed that the above-mentioned Article 9 contained a printer's error, since the word "*sources*" should have been "*créances*". In support of this argument, they advanced the following reasons:

1. In all previous documents the word "*créances*" had always been employed (document F. 212, page 32, litt. H. document C.216.M.85.1927.II, pages 11 and 16);
2. The text of Article 9 had been taken from the above documents and had been adopted without alteration by the General Meeting of Government Experts;
3. The last part of the article refers to creditors ("*créanciers*") which implies the existence of a "*créance*";
4. The commentary on this article twice employs the expression "*créances*", but makes no mention of "*sources*" (document C.562.M.178.1928.II, page 13);
5. Article 8 of draft Ic, based on the Article 9, referred to above, also contained the word "*créances*" (document C.562.M.178.1928.II, page 20), so that, if the word "*sources*" is maintained in Article 9, draft Ia, the provisions of draft Ic would differ from those of draft Ia, which would be contrary to the intention expressed by the Government experts.

Lastly, certain members thought that, in certain cases, the income derived from authors' rights or patents might come under Article 5 of draft Ia, which refers to industrial, commercial or agricultural undertakings and any other trades or professions carried on in the person's own place of residence.

Without wishing to offer any opinion on the text of Article 9 of draft Ia adopted by the Government experts, the Fiscal Committee, at its first session, came to the conclusion that, before any decision was reached as to the method of avoiding double taxation on authors' rights and patents, it would be advisable to enquire into the fiscal systems at present applicable to them in the various countries. It accordingly drew up a questionnaire which was sent to the regular and corresponding members of the Fiscal Committee.

¹ In the Report of the Fiscal Committee on its first session, document C.516.M.175.1929.II, page 5, the text of the Resolution voted by the International Chamber of Commerce at the Amsterdam Congress in July 1929 has been misprinted. The correct text is as follows:

"The fact that an undertaking has business dealings with a foreign country through a local company the stock of which it owns in whole or in part, should not be held to mean that the undertaking in question has a permanent establishment in that country."

No correction is necessary in the French text.

During the present session, the Fiscal Committee has considered the replies received to this questionnaire and which have been summarised by M. Clavier (Appendix III). On the basis of these data the Committee has adopted in first reading the following conclusions:

The Committee did not wish to offer any opinion on the drafting of Article 9, as it appears in draft *Ia*, which is incorporated in the Government experts' report.

The Committee was of opinion that, without going into these questions, one could solve the problem by determining the category in which income derived from authors' or inventors' rights should be placed for the purpose of the application of the model conventions.

This would obviously make it possible to bring such income under the system contemplated for income of a similar nature in the model conventions, and it would thus have the effect of preventing such income from being taxed simultaneously in more than one country.

The examination of the replies received from Governments led to the following conclusions:

(a) *Fees collected by the Author or Inventor himself.*

In most countries, when the fees are collected by the author or inventor himself, they are treated as *professional earnings* (with a few exceptions, particularly in one country, where income of this kind is regarded as income derived from movable capital).

The Committee considered that this system was fair and consistent with the economic nature of income of that kind.

That amounts to saying that in the international sphere the income will follow the rule laid down in the model conventions for professions carried on in the person's own place of residence when he has no permanent establishment abroad, and will consequently always be taxable in the country of the author's or inventor's domicile.

(b) *Fees collected by the Heirs or Assigns (Legatees, Donees, etc.) of the Author or Inventor.*

Certain countries take the view that the personality of the heirs and assigns is a continuation, in a sense, of the personality of the author or inventor, and that the nature of the rights in question is not modified by their free transfer. They therefore consider that income derived from authors' rights and patents is in the nature of *professional earnings* in the case of heirs or assigns, just as much as in the case of authors and inventors.

Another group of countries hold that the transfer of authors' rights or patents to heirs or assigns *modifies* the nature of the rights and makes them similar to rights the income from which is taxed as income from *movable capital*. This argument is strengthened by the fact that on the transfer a succession or donation duty is collected, similar to that imposed in like circumstances on transfers of movable capital.

Whether the income in question is regarded as professional earnings or income from movable capital in the international sphere, by following the rules laid down in the model conventions one always finds, that the right of taxation belongs to the country in which the heir or assign is domiciled.

(c) *Authors' or Patents' Fees collected by Grantees.*

The same problem arises when copyright or patent fees are collected by grantees.

In this case, however, it should be observed that the income received by the grantee is entirely different in nature from that received by the author himself or his heirs or assigns. The income received by the latter, whether in the form of a transfer fee paid once for all or in the form of royalties or shares, follows the rules for the income from authors' rights referred to under (a) and (b) above, and is therefore taxable in the country in which the intitulee is domiciled. The income received by the grantee, on the other hand, will always be in the nature of industrial or commercial income, and will be taxed as such in the international sphere, according to the rules established for the taxation of the income of undertakings operating in the territory of one or more countries. In most of these cases the authors' rights and patents become part of the assets of the grantees' undertaking, and the income derived therefrom cannot be separated from the aggregate income of the undertaking. This applies, for example, in the case of a publisher who buys a writer's work in order to publish a book and place it on sale; and it applies also to a manufacturer who buys a patent to use it in manufacturing his goods.

There are also cases, however, in which income from authors' rights and patents is distinguishable from the grantee's other income. We may mention the case of a publisher who buys the copyright of a musical composition in order to sell the performing rights to theatre and concert managers, or the case of a trader who buys patents from different inventors in order to sell them or lease the right of exploitation to a manufacturer or manufacturers.

As we have already observed, however, in both cases the income is industrial or commercial and should in principle be taxed as such.

(d) *Authors' or Inventors' Fees collected by Persons or Bodies (Authors' Societies, Inventors' Societies, etc.) specially entrusted with the Collection of such Income.*

1. The person or body entrusted with collection, whether he receives a commission or takes a share in the income from the authors' rights or patents, will only be taxed on his own profits and by the country in which he carries on business, while the income received by the author or inventor is taxed by the country in which the latter is domiciled.

2. Where special bodies exist for the purpose of collecting authors' fees or patent fees (authors' societies, inventors' societies, etc.), certain countries impose a flat-rate tax on the society which collects the fees in the capacity of the author's or inventor's agent, and this applies even if the author or inventor is resident abroad. Inasmuch as the latter pays income-tax in the country in which he is domiciled, it is undeniable that this system may give rise to double taxation. Such is the case if the amount of the flat-rate tax imposed on the body which acts on the author's or inventor's behalf exceeds the tax that would be payable on the commission actually drawn by that body. The Committee is of opinion that, in order to avoid this double taxation, the country in which the body is domiciled should limit itself to taxing only the commission actually drawn by the body.

From what has been shown in the foregoing report, the conclusion may be drawn that income from authors' rights or patents, which is characteristically such and does not fall into the class of industrial or commercial income, should always be taxed by the country in which the intitulee is domiciled.

D. The Question of Reciprocity and of the Most-favoured-nation Clause as they affect the Problem of Double Taxation.

The General Meeting of Government Experts had recommended that this question should be examined by the Fiscal Committee. The latter arrived at the following conclusion:

In view of the fact that the bilateral or multilateral agreements on double taxation are based on the principle of reciprocity, that is to say, involve reciprocal treatment for the nationals of the contracting parties, the Fiscal Committee, while not wishing to give an opinion on an exceedingly difficult point of international law, considers that the application of the most-favoured-nation clause to the nationals of a country which had not acceded to the said agreements would constitute a treatment of those nationals contrary to equity and to the spirit of the clause.

Nevertheless, in order to prevent this point from arising, it is desirable that in commercial or establishment treaties concluded in the future it should be made clear that the most-favoured-nation clause in its application to fiscal matters does not extend to special provisions for the avoidance of double taxation.

IV.

GRANT BY THE ROCKEFELLER FOUNDATION.

The Fiscal Committee has been informed that a gift of 90,000 dollars has been offered to the League of Nations by the Rockefeller Foundation to enable the League to carry on its work relating to double taxation. The Committee unanimously desires to add its thanks to those already expressed by the Council to the Rockefeller Foundation for its generous action.

The members of the Committee also express their particular gratitude to their distinguished colleague, Professor Adams, who, in taking the initiative to which this most generous donation is due, has given fresh proof of his devotion to the work undertaken by the Fiscal Committee in the matter of double taxation.

The Fiscal Committee, having been invited by the Secretariat to express its opinion as to the kind of work it would be desirable to undertake in order to make the best use of the funds placed at the League's disposal by the Rockefeller Foundation, makes the following recommendations:

1. In order to enable the Fiscal Committee to pursue the studies it has undertaken in the vast field of double taxation, the Committee should be provided with a staff of specialists who would be recruited and directed by the League Secretariat and who would work on lines laid down by the Fiscal Committee and in contact with its members.
2. This staff would, primarily, carry out research work in regard to the methods of allocating or apportioning profits made or distributed by undertakings operating in two or more countries.

For that purpose the following subjects should be examined in detail:

(a) The laws in force in the different countries; regulations, decrees, orders and decisions; administrative practice and procedure; working principles and methods of accounting; their effect upon international double taxation;

(b) Methods—more particularly accounting methods—of ascertaining taxable profits which could be adopted by the fiscal administrations of the various countries and which would at the same time be equitable and reasonable from the point of view of the undertakings taxed, and would as far as possible prevent international double taxation, more particularly:

- (i) When the taxable profits are computed on the basis of separate accounts;
- (ii) When empirical methods are employed to obtain an approximate estimate of such profits;
- (iii) When a system of fractional apportionment is employed.

3. The staff should undertake any other studies relating to double taxation which might be required of it by the Secretary-General of the League of Nations in consultation with the Fiscal Committee.

4. The staff should further keep up to date and render accessible so far as possible the information it has collected.

The Fiscal Committee, being of opinion that the Rockefeller grant should be used primarily for the study of the question of the apportionment of profits, requested the Sub-Committee of five members appointed to prepare discussion of the problems, namely, M. BLAU, M. BORDUGE, Professor DORN, Professor FLORÈS DE LÉMUS and Sir Percy THOMPSON, to be good enough to give the Secretary-General of the League of Nations, should he so request, an opinion on any questions relating to the use of this gift.

V.

POSSIBILITY OF CONCLUDING MULTILATERAL CONVENTIONS FOR THE AVOIDANCE OF DOUBLE TAXATION ON POINTS ON WHICH A SUFFICIENT NUMBER OF COUNTRIES SEEM TO BE IN AGREEMENT.

The Fiscal Committee has accepted the following proposals which it believes might be adopted by a considerable number of States if carefully formulated.

The adoption of a multilateral convention on the proposed lines would not wholly prevent double taxation among the contracting States even on the classes of income enumerated, but it would materially encourage the movement to reduce double taxation by uniform law—a method which in important respects is obviously superior to the method of reducing double taxation through the instrumentality of bilateral conventions.

The Fiscal Committee has appointed a Sub-Committee consisting of Dr. BOLAFFI, Mr. CAREY, M. CLAVIER and Dr. SINNINGHE DAMSTÉ with instructions to submit at the next meeting of the Fiscal Committee a draft multilateral convention based upon the following general proposals and embodying such other measures to reduce international double taxation as are likely, in the opinion of the Sub-Committee, to secure the acquiescence of a considerable number of countries:

Proposal 1. — That the following classes of income shall be taxable only in the State of fiscal domicile of the recipient or creditor of such income:

- (a) Annuities;
- (b) Authors' royalties or rights;
- (c) Interest on (public ?) debt (except from mortgages) issued after a future date to be agreed on;
- (d) Wages of workers living on one side of a frontier and working on the other.

Proposal 2. — That salaries of officials and public employees who are serving abroad and public pensions shall be taxable only in the State which pays such salaries or pensions.

Proposal 3. — Immovable property (land and houses) shall be taxable only in the country in which they are situated.

Proposal 4. — The profit derived by a company from the operation of industrial, commercial or agricultural undertakings shall not be taxable in a country other than that in which the real centre of management of the company is situated unless the company has one or more permanent establishments in such other country.

Branches, mines and oilfields, fixed plants, factories, workshops, agencies, warehouses, offices and depots shall be regarded as permanent establishments. The fact that an undertaking has business dealings with a foreign country through a *bona fide* agent of independent status (broker, commission agent, etc.) shall not be held to mean that the undertaking in question has a permanent establishment in that country.

Nevertheless, income from maritime shipping and air navigation concerns shall be taxable only in the State in which the real centre of management is situated.

The Sub-Committee will have to consider, in connection with this proposal:

- (a) Whether the term "company" should be defined.
- (b) Whether it would be desirable to add the following proposal:

"Should the undertaking possess permanent establishments in two or more countries, each of those countries may tax the portion of the income produced in its territory. The competent administrations of the two contracting States shall come to an arrangement as to the basis for apportionment."

(c) Whether it would be desirable also to add the following proposal :

“ The fact that an undertaking has business dealings with a foreign country through a local company, the stock of which it owns in whole or in part, should not be held to mean that the undertaking in question has a permanent establishment in that country.”

VI.

TAXATION OF FOREIGN MOTOR VEHICLES.

The draft Convention which had been prepared by the Fiscal Committee is being discussed by the Permanent Committee on Road Traffic. The Fiscal Committee requested a Sub-Committee composed of Dr. SINNINGHE DAMSTÉ (*Chairman*), Dr. BOLAFFI and M. CLAVIER to be good enough to study the conclusions that the Permanent Committee on Road Traffic might reach, and to discuss them, if necessary, with the representatives of that Committee.

VII.

CUSTOMS DUTIES AND FISCAL CHARGES APPLICABLE TO NEWSPAPERS.

The Fiscal Committee was informed that the Advisory and Technical Committee for Communications and Transit, at its last session, held at Geneva from March 10th to 15th, 1930, adopted the following resolution:

“ The Committee notes the results secured by the European Conference on the Transport of Newspapers and Periodicals and the resolution on that subject adopted by the Council at its session in January 1930,¹ and decides:

- “ (a)
- “ (b) To propose to the Fiscal Committee the formation of a joint committee of the Fiscal Committee and the Transit Committee, to consider the question raised in Chapter IV of the Final Act of the Conference (Customs and fiscal taxes applicable to newspapers). The joint committee will report to the Fiscal Committee and to the Transit Committee. The members of the joint committee appointed by the Transit Committee will be selected by the Chairman, who is requested to choose for that purpose one member of the Committee and two or three experts from persons concerned with the publication or the distribution of newspapers.

The Fiscal Committee accepted the proposal to form a joint committee and invited M. CLAVIER (*Chairman*), M. BLAU, M. BORDUGE, Professor DORN and M. KNEPPO to represent it on this joint committee.

VIII.

DRAFT RESOLUTION SUBMITTED BY SIR PERCY THOMPSON.

Sir Percy Thompson has submitted to the Fiscal Committee the following draft resolution:

“ That the prevalent view that an undesirable economic result, *viz.*, the creation of an artificial barrier which impedes the free flow of capital into the channels in which it can be most usefully and profitably employed, is produced by *double taxation* is fallacious: that *origin taxation* is solely responsible for this undesirable economic result which would remain unaffected if all taxes based on residence were everywhere abolished and in consequence double taxation ceased to exist.”

After discussion, the Fiscal Committee has decided to adjourn the decision on this question until its next session.

¹ The Council resolution, adopted in January 1930, is as follows:

“ The Council:

“ Observing with satisfaction the results obtained by the European Conference on the Transport of Newspapers and Periodicals, which met at Geneva from November 25th to 29th, 1929;

“ Noting that the Governments, Administrations and organisations concerned will take all necessary steps to enable the measures recommended by the Conference to be carried into effect as soon as possible;

“ Instructs the Advisory and Technical Committee for Communications and Transit to keep itself informed of the results obtained, to report on this question to the Council, and, with the assistance of the other technical organs of the League of Nations, to pursue the investigations recommended by the Conference.”

Appendix I.

GREAT BRITAIN.

Clause 16 of Finance Bill, 1930.

16. — (1) Subject to the Provisions of this section if His Majesty in Council is pleased to declare:

(a) That any profits or gains from the sale of goods arising directly or indirectly to a person resident in any foreign State or in any part of His Majesty's dominions outside the United Kingdom through an agency in the United Kingdom or to a person resident in the United Kingdom through an agency in any foreign State or in any part of His Majesty's dominions outside the United Kingdom are chargeable both to United Kingdom income-tax and to income-tax payable under the law in force in that foreign State or that part of His Majesty's dominions; and

(b) That arrangements as specified in the declaration have been made with the Government concerned with a view to the granting of relief from such double taxation,

then unless and until the declaration is revoked by His Majesty in Council, the arrangements specified therein shall, so far as they relate to the relief to be granted from United Kingdom income-tax, have effect as if enacted in this Act, but only if and so long as the arrangements, so far as they relate to the relief to be granted from the income-tax payable in the foreign State or in the part of His Majesty's dominions, have the effect of law in the foreign State or the part of His Majesty's dominions.

Provided that no arrangements made under this section shall exempt from United Kingdom income-tax any profits or gains which either:

- (i) Arise from the sale of goods from a stock in the United Kingdom; or
- (ii) Accrue to a person resident in the United Kingdom; or
- (iii) Accrue to a person not resident in the United Kingdom directly or indirectly from the sale of goods effected in the United Kingdom through any branch or management in the United Kingdom or through any agency in the United Kingdom where the agent has and habitually exercises a general authority to negotiate and conclude contracts.

(2) Any declaration made by His Majesty in Council under this section shall be laid before the Commons House of Parliament as soon as may be after it is made and, if an address is presented to His Majesty by that House, within twenty-one days on which that House has sat next after the declaration is laid before it, praying that the declaration may be revoked, His Majesty in Council may revoke the declaration and the arrangements specified in the declaration shall thereupon cease to have effect, but without prejudice to the validity of anything previously done thereunder or to the making of a new declaration.

(3) The obligation as to secrecy imposed by any enactment with regard to income-tax shall not prevent the disclosure to any authorised officer of the foreign State or part of His Majesty's dominions mentioned in the declaration of such facts as may be necessary to enable relief to be duly given in accordance with the arrangements specified in the declaration.

Appendix II.

APPORTIONMENT OF PROFITS OR CAPITAL FROM ENTERPRISES OPERATING IN SEVERAL COUNTRIES.

Summary by Professor Adams of the Replies received to the Questionnaire.

The replies to the questionnaire reveal great diversity of law and practice regarding most of the subjects to which the questions are addressed. Moreover, many of the replies are incomplete. In the case of such questions, it is difficult to make a satisfactory summary, and it is plain in general that an accurate comparison of law and practice can only be made by a group of experts who will devote their entire time to this subject for a period of a year or more. The principal significance of the questionnaire is the proof which it supplies of the need for systematic and continuous study.

Nevertheless, on one or two points of importance, the replies reveal a close approach to uniformity of law and practice. It appears clear, for instance, that, in assessing the profits of a branch of a foreign company (and more particularly in assessing the profits of a subsidiary or filiale of a foreign holding company), a large majority of States avowedly seek to determine the profits of the branch separately and for that purpose pay regard only to the accounts of the branch itself, without reference to the accounts of the foreign company. In the absence of separate

accounts, or where the separate accounting is unsatisfactory, various methods of approximation are widely used. But only in a small minority of States is preference given to the "method of apportionment" by which the income of the branch or subsidiary is computed as a fraction of the entire income of the foreign corporation or holding company.

The following summary is neither accurate nor complete. But, under some questions, it reveals uniformities which are real and significant and, under others, diversities of law and practice which are highly important.

Question (a):

By what general methods does the administration of your country arrive at the ascertainment of the profits of undertakings operating in several countries?

A. Undertakings domiciled¹ in one State with Branches in Foreign Countries.

Practically all States call for a full declaration of profits in such cases, and a large majority of States hold the entire income subject to taxation in some manner or degree. Nevertheless, the most significant aspect of the replies is their evidence of the growing extent to which some amelioration or reduction is granted in respect of profits earned abroad.

1. A number of States practically exempt profits allocated to establishments located in foreign countries (hereafter called "foreign establishments") — Bolivia, Danzig, Estonia, France, Hungary, Italy (for certain classes of undertakings), Japan (business-profits tax), Netherlands (as regards unincorporated undertakings), Spain (as regards the trade-licence tax), the United States of America (by deduction against its tax).

2. An important group of States, by deduction or reduction of rate, exempt the greater part of the profits allocated to foreign establishments, reserving a minimum part for the home country — Austria, Belgium, Greece (limited companies only), Netherlands (tax on distributed profits of corporations), Spain, Switzerland.

3. Canada, Germany, Great Britain, Greece (unincorporated undertakings), Japan (for income tax), Roumania, Poland, South Africa and Sweden, tax the entire profits as a general rule, but important deductions or offsets for profits taxed in certain other jurisdictions are given in Great Britain (Dominion taxes only), Canada and probably other States here mentioned.

4. The practice of exempting profits allocated to establishments located in countries with which the home country has a bilateral convention for the prevention of double taxation is apparently spreading.

B. Local Branches of Foreign Undertakings.

This case is considered under question (b).

Question (a) bis:

By what general methods does the Administration of your country arrive at the ascertainment of the profits of trust and holding companies operating in several countries?

A. Where a Holding Company domiciled in one State controls one or more Foreign Subsidiary Companies.²

The replies indicate that, in a majority of the countries, no distinctive status is given to the holding company for purposes of taxation, and the dependent or affiliated corporation is taxed as an autonomous corporation. In such States, if the dividends received by an ordinary corporation are taxable (e.g., Japan), the dividends received by a holding company are taxable: if dividends are exempt to an ordinary corporation, they are exempt to the holding company (e.g., South Africa and the United States of America). In Austria, the Netherlands and Spain, a partial exemption is granted. A foreign subsidiary of a German holding company is taxed with the parent company if the two constitute an economic unit.

B. Where a Subsidiary Corporation is controlled by a Foreign Holding Company.

This case is considered under question (c).

¹ The term "domicile" has been used here in a generic sense, but it is understood that the definition of "domicile" differs between various countries.

² Many States dealt in their replies with the relation between the mother corporation and a domestic subsidiary, but this point is not of immediate concern to the Committee.

Question (b):

What are the methods for determining the income of branches of foreign business concerns doing business in your country ?

The method followed by most countries in the first instance is to base the assessment on the separate accounts of the branch which is taxable only on income derived within the taxing State. Belgium and Poland specifically require special accounts for the branch, and it is the practice in other countries for branches to keep separate accounts. If the special accounts of the branch establishment are inadequate or misleading, they may be corrected to reflect the true income, or various empirical methods may be employed to estimate the taxable profit.

The principal methods employed are the following:

(a) The accounts of the entire undertaking are demanded in order to determine the amount of profit allocable to the branch. This amount may be determined by an apportionment taking into account the assets, turnover, expenditure or number of employees of the branch as compared with the assets, turnover, expenditure, or number of employees of the entire undertaking.

(b) The income of the branch may be determined by basing the assessment on a comparison with the earnings of local undertakings engaged in similar business, for example, by ascertaining the percentage of net profit to gross turnover of such undertakings (Belgium, France, Great Britain, etc.). The law of one country (Germany) provides that, when such method is employed, the assessment cannot be less than a minimum equal to the normal rate of interest on the capital invested in the local branch.

(c) The income of the local establishment is estimated by reference to a certain extent on external indications, such as salaries of employees, rent paid for premises and other expenditure.

(d) The income may be assessed in a lump sum which serves as the basis for taxation for several years (Germany).

A very few countries base the tax in the first instance on a certain proportion of the total income of the foreign undertaking (Spain and a few Swiss cantons). Another country may assess the profits of the branch in that manner when it has no regular separate accounting and certain other prescribed methods are not applied (Germany). The law of another country provides for an apportionment corresponding to the ratio of assets, but ordinarily employs the separate accounting method, condemning the method of proportional allocation on the ground that there is no necessary relation between the local situation of a capital asset and the income earned in the area in which it is situated, and that it is unsatisfactory in practice and productive of anomalies (South Africa).

Question (c):

Ditto for affiliated corporations.

Practically all the replies state categorically that the local company, which is a subsidiary of a foreign corporation, is a separate legal entity and enjoys the same treatment as other national companies. It is therefore taxed on the basis of its own accounts. A number of replies mention measures that may be taken to assess the profits of a subsidiary company correctly when its accounts are inadequate or misleading, and notably the following:

(a) A profit may be ascribed to the subsidiary company based on a comparison with the profits of other companies engaged in a similar business. In making such comparison, the law of one country (Belgium) authorises taking into account the capital invested, turnover, number of workers, rental of real estate, motor power employed and other relevant data.

(b) Where the subsidiary is rendering services to the foreign parent, its profit may be fixed on a commission basis.

(c) When the subsidiary and the foreign parent constitute a "single economic unit", the subsidiary may be treated as a branch (Germany, Spain).

(d) In order to prevent evasion or show true income, the fiscal authorities may allocate income as between the foreign parent company and the local subsidiary (United States of America).

(e) Where the profits of a subsidiary are artificially concealed, a charge may be made upon the parent company based upon the true profits of the subsidiary (Great Britain and Spain).

The question of allocation as between a foreign parent and a subsidiary corporation organised in the Netherlands or in Greece is evidently of secondary importance, as such corporations are not taxed until profits are distributed.

Question (d):

(d) *In the case of (1) branches and (2) affiliated corporations:*

- (i) *Is the income of the branch or affiliated corporation determined separately? or*
- (ii) *Is it determined as a fraction of the entire income of the company of which the taxpayer is a branch or to which it is affiliated? or*
- (iii) *Has the Administration the option of following either method?*

Answered under questions (a) and (b).

Question (e):

If the method (ii) is followed, what system is employed for checking the income of the mother-company?

In practically no reply is any regular system described for checking the income of the mother-company. The balance-sheet and profit-and-loss account and other pertinent information may be requested from the parent company and carefully examined, but the difficulties of checking such information are admitted.

Questions (f) and (g):

- (f) *When the branch or affiliated corporation in your country operates at a profit, whereas the entire concern operates at a loss, is any cognisance taken of the loss in determining the income of the branch or affiliated corporation?*
- (g) *What is your practice if the branch or affiliated corporation in your country operates at a loss, whereas the entire enterprise realises a profit?*

Practically all the countries which base the assessment of the branch on separate accounting answer categorically that no attention is paid to the profit or loss of the parent company in determining the liability of the branch. The branch is taxed in accordance with the showing of its own accounts, provided they are properly kept. One country (Spain) allocates to the branch a proportion of the profit or loss of the entire concern, because it treats the branch and the entire concern as a unit. Similarly, the Swiss cantons which tax on the proportional allocation basis, and the few other countries which exceptionally tax on that basis, declare that they take into account the profit or loss of the entire concern.

Subsidiary companies are, according to the replies, always taxed independently of the foreign parent, except that Spain merges the subsidiary with the foreign parent for purposes of ascertaining tax liability, and the German law authorises the taxation of the subsidiary with the foreign parent when they form a single economic unit.

Question (h):

When a company has its real centre of management in your country, but its other operations (for example, manufacture) in another country, is a fraction of the profits ascribed to the head office and, if so, how is that fraction determined?

Summarily stated:

1. The largest number of responding States tax the entire profits in such a case — Bulgaria, Canada, Great Britain, Greece (except for limited companies), Germany, Japan (income tax), Poland, Roumania, South Africa (when sales are controlled in South Africa).
2. A smaller number attach minor importance to the real centre of management, and allocate profits primarily to the countries or establishments of manufacture and sale — Estonia, Danzig, France, Hungary, Japan (business profits tax), United States of America.
3. Other countries, in effect, ascribe a fraction of the profits to the head office: Austria (not less than one-tenth for limited companies and one-quarter for commercial partnerships or private companies), Belgium (rate reduced to one-quarter on profits realised and taxed abroad), Bolivia (less taxes paid abroad), Italy (when Article 9 of the Royal Decree of August 12th, 1927, is not applicable), Netherlands (taxable distributed profits accruing outside reduced by two-thirds),

Spain (Spanish companies taxable in respect of not less than one-third of the profits), Switzerland (a minimum profit varying from 10 to 25 per cent).

Question (i):

When a company has its real centre of management in some other country than yours, but other operations (for example, manufacture), in your country, is a tax imposed in your country and, if so, how is it assessed?

Practically all the answers to this question are in the affirmative, but in South Africa, "if an intermediary stage in a series of business transactions which resulted, as a whole, in the production of income were carried out in the Union, no attempt would be made to assess for Union taxation a portion of the profit derived from transactions which, as a whole, were controlled from outside the Union".

The method of assessment is usually not stated in detail, but in a majority of States profits are determined on the basis of a separate accounting or balance-sheet, where available. Only two replies (from Spain and Switzerland) state that a fraction or portion of the profits may be ascribed to the centre of management situated in another country. In the Netherlands, "when the company has its real centre of management in a country other than the Netherlands, but its other operations are carried on in the Netherlands, the total profits are deemed to be realised in the Netherlands".

In Italy, the tax is assessed "on the industrial income—that is, on a part of the profits representing the difference between the cost of production and the sale price of wholesale merchants in the country".

Question (j):

If a company, with its head office in one State, has a branch in your State which makes sales in a third State without having there a permanent establishment, are the profits derived from the sales in the third State ascribed to the branch or to the head office or partly to each?

In a large majority of the States, such profits are ascribed to the branch. For Great Britain, the answer depends upon whether the trade in the third State is controlled by the branch. In Spain, such profits "are always ascribed to the head office". In Sweden, such profits would be exempt from Swedish taxes if manufacture did not take place in Sweden.

Question (k):

With regard to any of the above cases, is any special method of assessment followed where there are permanent establishments in your country belonging to the following foreign enterprises, and, if so, what method?

- (a) Banks and banking companies;
- (b) Insurance companies;
- (c) Railroad, motor-omnibus and other transport companies;
- (d) Power and light companies;
- (e) Gas companies;
- (f) Telegraph and telephone companies;
- (g) Mining and extractive industries;
- (h) All other kinds of firms for which special methods would be necessary.

Most of the countries consulted apply the general rules contained in their law to the enterprises mentioned under (k) with the possible exception of insurance companies. The special methods indicated by them for determining the income of these enterprises are only in many cases methods of checking or supplementing the ordinary accounts of the branch, which as a general rule continue to be the basis of assessment.

In Bolivia, a 40 per cent deduction is made on gross profits in respect of expenses; the remaining 60 per cent are regarded as net profits and are taxed.

(a) *Banks.* — The taxable profits, in relation to the total profits, of a bank in a country where the bank possesses agencies is determined by the ratio of expenditure on staff in that country to the total expenditure on staff (agreements made by Austria with Hungary and Czechoslovakia, Free City of Danzig).

In other countries—more particularly for the purpose of checking the accounts—the ratio is taken of the gross receipts obtained in the country to the total gross receipts (Germany, Danzig), or the ratio of local transactions to total transactions (Italy, Spain).

In the Netherlands, the Administration has issued detailed rules for the calculation of the profits realised by a branch bank. These rules are to some extent associated with those relating to the apportionment of working capital.

(b) *Insurance companies.* — The methods of assessment most generally adopted for the purpose of determining the share of the total profit falling to a specific country consists in taking the proportion of the premiums collected in that country to the total premiums collected by the company (Austria in the treaties of that country with Hungary and Czechoslovakia, Danzig, Finland, Germany, Italy, South Africa, Spain, Switzerland).

Certain countries calculate the profits as a lump sum and apply for this purpose a coefficient to the amount of the premiums collected; thus, in the Netherlands, profits are as a general rule estimated at 10 per cent of the premiums collected in that country (companies may, however, if they so request, be assessed as laid down in the previous paragraph). In Sweden, the taxable income is also a percentage of the gross premiums collected: 5 per cent for marine insurance, 6 per cent for fire, 15 per cent for life insurance, 10 per cent for other branches of insurance.

Other countries fix profits, not in proportion to the total profits of the company, but by comparison with national undertakings: the percentage of profits in relation to the amount of the premiums collected in the country must be the same. This is the principle applied in France (the method is, as a matter of fact, optional) and in Portugal.

(c) *Railroad and other transport companies.* — The profits earned in a country may be assessed in relation to the total profits of the company, either by taking the mileage in the country (Danzig, Switzerland), or by reference to the comparative amount of the revenue obtained (Spain, Italy), or, on the other hand, to the expenditure incurred in the country (United States of America).

In Bolivia, 45 per cent of gross profits are regarded as expenses, and 55 per cent are taxed.

The Netherlands fix the taxable income of railways by applying a coefficient of the amounts collected in the Netherlands. In South Africa, the taxable profits of shipping companies is fixed at 10 per cent on freight for passengers, live-stock, mails and goods shipped in the Union.

(f) *Telegraph and telephone companies.* — South Africa determines the income of submarine telegraph and wireless telegraph companies by taking 5 per cent of the amount payable in respect of all messages delivered for transmission from any office within the Union.

Question (1):

Are any special methods of assessment employed in the following cases:

- I. *Enterprises manufacturing or buying in another country and selling through a permanent establishment in your country: what is your method of determining the profit of the latter establishment?*

Apparently, all countries with an income tax impose it on profits derived from selling through a permanent establishment in their territory goods that have been manufactured or bought in another country. The basis of assessment in most cases is evidently the net sales of "merchandising" profit realised within the country, allowing, in the case of goods manufactured in another country, a manufacturing profit to the latter. In some instances, however, where goods are purchased in one country and sold in another, the entire profit is taxable in the country of sale (Great Britain, United States of America).

South Africa usually accepts the Customs evaluation as the basis for determining the sales profit.

The Swiss cantons in most instances tax the excess realised over current market prices, or base the assessment on the profit realised by an independent Swiss firm.

Greece allows a deduction from the net sales profit equal to 5 per cent for general expenditure of the head office.

Austria has adopted arbitrary allocation fractions, being half-and-half where an undertaking buys in one State and sells in Austria or *vice versa*, and two-thirds of the profit for the State of manufacture and one-third for the State of sale.

2. *Enterprises manufacturing in your country and selling elsewhere: is a profit ascribed to the manufacturing establishment?*

The general rule seems to be that a certain profit should be ascribed to manufacturing in a given State, although the goods are exported and sold elsewhere. South African law goes farther and

declares the whole of the profits taxable if the control of the enterprise is in its territory. Austria allocates two-thirds to the country of the manufacture and one-third to the country of sale.

3. *Enterprises continuously buying in your country through a permanent establishment, but selling in another country: is any profit ascribed to the buying establishment?*
4. *Enterprises purchasing raw materials from other companies in your country with a view to manufacturing and selling elsewhere: is the foreign enterprise deemed to be carrying on business in your country and taxable on a presumed profit?*

The great majority of States declare categorically that they do not endeavour to allocate a profit to buying establishments situated in their territory and do not try to tax a foreign concern which buys raw materials directly from local enterprises. A few States, however, assimilate the buying establishment to an export house (Bulgaria, Portugal) or assess the buying establishment on the basis of a commission (e.g., the Netherlands, Spain). France and Germany hold such a foreign company taxable on profits derived through a permanent establishment for the purposes of the tax on industrial and commercial profits.

Austria also allots a fraction of the profit to a buying office and, where there is no buying office, it allots a fraction of the profits for tax purposes if the materials purchased are exported through the commercial travellers employed by the head of the undertaking, or the latter himself.

Question (m):

When a company has a debenture debt, is the charge on this debt ascribed solely to the real centre of management or is it distributed between the different permanent establishments? In the latter case, what is the system of distribution?

Practically all countries recognise the rule of apportioning the interest charge on a debenture debt of the company to the various branches or sources as a part of the overhead or debt in the proportion that they are concerned, or in proportion to capital employed (Italy, Sweden), to assets (Japan), to profits (Spain), or to income, receipts or some other factors (Germany), or to gross income (United States of America).

Belgium regards such charges as attaching exclusively to the foreign central office responsible for the issue, unless a part of the loan has been especially allocated for the requirements of the Belgian establishments. Where the head office is abroad, Portugal takes no account of debts. As Great Britain does not allow interest to be deducted in determining assessable profits, no question of apportionment arises.

Questions (o) and (p):

- (o) *What are in this connection the chief difficulties of an international character which the administration in your country has experienced?*
- (p) *Are there any particular suggestions or recommendations which you would like to communicate to the Fiscal Committee in this connection?*

A considerable number of States, while not alleging that the international difficulties which they have experienced in connection with the taxation of undertakings operating in several countries are important, nevertheless mention the practical difficulties they have encountered and suggest the lines on which they think a solution might be found.

One of the questions most often referred to is the difficulty of exactly determining the profits on manufacture and the profits on sale. Denmark suggests meeting this difficulty either by applying a general coefficient to the business turnover or, preferably, by imposing taxation only in the country in which the business operations yielding the profits were carried on (the effect of this would be to eliminate the country in which the head office is situated in all cases when neither the manufacture nor sale took place in that country, but the problems would still remain when manufacture and sale took place in different countries).

As regards balance-sheets separately drawn up by each establishment, Austria and Hungary indicate practical difficulties which may arise in this way (when, for example, one of the countries concerned objects to the balance-sheet in so far as it is concerned and desires to include profits which have already been taxed in another country), and they suggest that international agreements should lay down detailed and uniform rules for the allocation of taxation. For example, Austria proposes conventional percentages of allocation. Other countries, such as the United States of

America, consider the method of "separate accounting" as decidedly preferable to any hard-and-fast formula for allocation.

Canada desires that the principle of reciprocity should be established in regard to exemption; the United States of America, on much the same lines, recommends that the country of the head office should grant a credit or offset for taxes already paid in foreign countries.

Switzerland asks that the Fiscal Committee should not adopt too wide a definition of the term "permanent establishment". This would limit the number of cases to which the rules regarding the allocation of profits would apply and would improve political and commercial relations between the countries.

Finally, Canada recommends the translation of foreign legislation on the taxation of the profits of industrial and commercial undertakings.

Appendix III.

TAXATION OF AUTHORS' RIGHTS AND PATENTS.

Summary by M. Clavier of the Replies received to the Questionnaire.

Twenty-one countries replied to the questionnaire concerning the fiscal system applicable to: (1) authors' rights, and (2) periodic payments derived from patents. The following tables¹ give a summary of the replies received by the Secretariat.

We think it may be useful to analyse the data set out in the above tables, so as to obtain a general survey of certain points of special interest.

I. AUTHORS' FEES.

Many countries have combined their replies to questions Nos. I and II. That is logical, because the manner in which income is taxed depends on the *nature* of the income.

This being borne in mind, the replies on the main points may be grouped as follows:

(1) When the income from authors' rights is collected by the *author* himself, it is usually regarded as *professional* earnings. In Spain, however, it is treated as income derived from capital in the form of movable property.

(2) When the income is collected by the *heirs or assigns* (legatees, donees), it is regarded as:

(a) Income derived from *movable* property: in Austria, Belgium, Germany, the Netherlands, Spain and Switzerland;

(b) Income derived from the *exercise of a profession*: in Bulgaria, Czechoslovakia, Greece, Hungary, Italy, Roumania and Sweden.

(3) When the income is collected by *grantees*, it is regarded as:

(a) Income derived from the *exercise of a profession*: in Belgium, Bulgaria, France, Greece, Italy, Sweden and Switzerland (if derived habitually in the exercise of a profession);

(b) Income derived from *movable* property: in Great Britain, Netherlands, Poland, Roumania, Spain and Switzerland (if only derived from time to time).

(4) When the income is collected by *companies or other bodies specially instructed to collect it*:

In Belgium, the tax of 2 per cent on *professional* earnings is levied at the source. This, however, is treated only as an instalment on the regular payments which will have to be made by the authors themselves subsequently, if they are domiciled or resident in the country.

In Canada, the agent (trustee) or collecting company must declare the income, but the person on whose behalf it is collected pays the tax.

In France, such income is taxed in the name of the *beneficiaries*. This is also the case in Denmark.

There seems to have been a misunderstanding concerning this question. Most countries have replied as though the question referred, not to companies entitled to collect income derived from authors' rights *for and on account of the authors*, but to companies exercising rights acquired by themselves for their own benefit. This question has therefore been confused with the next concerning *transfers* or grants.

Sale or Grant of Authors' Rights. Division of income.

Division between a number of years is the practice in Austria, Belgium and France.

In other countries, the tax is levied as and when the income accrues, only if the sale is effected against periodical payments or payment by instalments. This is the case in Bolivia, Denmark, Finland, Great Britain, Italy, Poland, Roumania and Spain.

There is no division in Bulgaria, Czechoslovakia, Germany, Great Britain, Greece, Hungary, the Netherlands, Sweden and Switzerland.

In Canada, no tax is levied in respect of the sale or grant of authors' rights, the transaction being regarded as equivalent to a sale of *capital*.

¹ In these synoptic tables, the countries have been grouped in French alphabetical order—the rule adopted by the Secretariat with a view to convenience of discussion.

Foreigners.

In Austria and Germany, foreign authors only pay taxes if they have some permanent establishment or agent in the country.

In Belgium, the 2 per cent tax on professional earnings deducted at source is final. No other taxes than this are subsequently levied on *foreign* authors.

In France, taxation is only leviable if the author is domiciled or resident in the country.

In Sweden, foreign authors are only liable to taxation if they have a *fixed* establishment in the country or collect income in the form of royalties paid by a Swedish enterprise.

In Norway, foreigners are not taxed unless they rent a studio in which to work or premises for the exhibition, on payment of an entrance fee, of works of arts or for their sale.

II. PERIODICAL PAYMENT ON ACCOUNT OF PATENTS.

No special comments. The system is everywhere practically the same as that applied in the case of authors' fees.

FISCAL SYSTEM APPLICABLE TO AUTHORS' RIGHTS.

Questions I and II.

I. What is the fiscal system applied to *authors' rights* when the latter are collected:

- (a) Directly by the author, his heirs or assigns (donees, legatees, etc.);
- (b) By grantees;
- (c) By companies or other bodies especially entrusted with the collection of such income?

II. According to circumstances, is such income regarded as derived:

- (a) From transferable securities;
- (b) From the exercise of any trade or profession;
- (c) From any other claim or source?

Replies.

Germany.	Austria.	Belgium.
<p>The tax is payable by the person or company for whose account the sums are collected.</p> <p>The income may be derived from a trade or industry or the exercise of an independent profession.</p> <p>Otherwise, the income is deemed to be derived from the <i>lease</i> or <i>transfer</i> of articles or rights.</p> <p>As regards persons or companies subject only to restricted taxation, the sums in question are liable to <i>income tax</i> and to the <i>corporation tax</i>, unless they have already been taxed as income derived from an industry exercised in Germany through a permanent establishment or representative.</p>	<p>Authors' rights are taxable in all cases, except in respect of foreigners who exploit their rights in Austria without maintaining a special establishment for that purpose.</p> <p>Income is deemed to be derived from <i>undertakings for gain</i>, except where the right is exercised indirectly under an <i>assignment</i> for payment to a third person (publisher, heirs or legatees). In this latter case, it is regarded as the exploitation of <i>working capital</i>.</p> <p><i>Companies</i> exploiting authors' rights are taxable in the same way as undertakings engaging in a lucrative operation.</p> <p>The remuneration paid to the author for the assignment of his rights is deducted from the profits if it includes definite sums or a percentage of the gross receipts.</p> <p>If the rights are collected in the form of shares in the company, the deduction is not allowed.</p>	<p>1. — Income collected directly by the author: <i>professional earnings</i>. Taxes payable: tax on professional earnings and super-tax.</p> <p>2. — Income collected by the heirs or authors' assigns: use of a <i>transferable right</i> (publication or reproduction). Tax payable: movable property tax.</p> <p>3. — Income collected by grantees: this is liable to the <i>professional earnings tax</i> leviable on the person who collects them, less the amortisation of the price of the grant (number of years remaining to run before the work becomes public property).</p> <p>The grantor (author) is taxable on the proceeds from the grant, less the expenditure mentioned (see later: Division).</p> <p>4. — Income collected by companies or bodies especially entrusted with the duty of collection.</p> <p>In order to avoid certain difficulties, the professional earnings tax is deducted at <i>source</i> at the rate of 2 per cent of the amount of the income, less <i>only</i> the cost of collection.</p> <p>Deduction of tax is <i>final</i> as regards foreign authors.</p> <p>As regards authors domiciled or resident in Belgium, this payment only constitutes provisional taxation subject to subsequent adjustment.</p>
Bolivia.	Bulgaria.	Canada.
<p>Author's rights, being considered as intellectual capital, are the exclusive property of the author, his heirs or grantees as are the profits derived from their exploitation.</p> <p>Income derived from these rights is considered to be derived from the <i>exercise of a profession</i>, and is therefore taxed as professional earnings, (personal services).</p>	<p>The authors themselves are not liable to taxation on <i>profits</i> (schedular tax).</p> <p>The profits of assigns and grantees are taxable as <i>commercial profits</i> for the year in which they were collected.</p> <p>All beneficiaries (including the authors themselves) are liable to the <i>supplementary tax on total income</i> in respect of income collected.</p>	<p>I (a) and (b). — If the <i>author</i> or <i>grantee</i> is resident in Canada, he is taxable on the total income derived from all sources, and credit is given for taxes paid to foreign countries.</p> <p>I (c). — While the agent (trustee) or <i>company</i> collecting the income must make a return, it is the person on whose behalf the income is collected who pays the tax.</p> <p>II. — The income from authors' rights is deemed to be received from <i>carrying on business in Canada</i>.</p>

FISCAL SYSTEM APPLICABLE TO AUTHORS' RIGHTS.

Replies to Questions I and II (continued).

<p>Denmark.</p> <p>Authors' rights are subject to <i>income tax</i> and—if they are assigned—to the <i>capital tax</i>.</p> <p>The tax is levied on the person who collects the rights (authors or assigns).</p> <p>The tax is not deducted at source if the income from the rights is collected by companies. It is collected only from the author.</p> <p>Nature of income.</p> <p>As regards the author: income derived from <i>personal work</i>.</p> <p>As regards the grantee: profit on the <i>capital</i> used for the purchase of the right.</p>	<p>Spain.</p> <p>From the <i>fiscal</i> point of view, authors' rights are regarded as income from <i>movable</i> property.</p> <p>The rate of the tax is reduced when the income is collected by the children or widow.</p> <p>There is at present no definite case-law on the matter.</p>	<p>Finland.</p> <p>There are no special legal provisions with regard to authors' rights.</p> <p>Income derived from those rights, and the rights themselves, are liable to <i>income and capital tax</i>.</p> <p>No distinction is made as regards the persons who receive the rights or the income derived from different sources.</p>
<p>France.</p> <p>1. — Income collected by the author himself, his heirs or assigns, is subject to the <i>tax on profits derived from non-commercial professions</i> and to the <i>general income tax</i>, (if the beneficiaries are domiciled in France).</p> <p>2. — Income collected by companies or other bodies: tax levied on the <i>beneficiaries</i> (as profits from non-commercial professions).</p> <p><i>Nature of Income.</i></p> <p>Derived from the exercise of a profession or lucrative occupation.</p> <p><i>Note.</i> — At the request of the persons concerned, the <i>annual</i> taxable profit may be determined by deducting from the average receipts for the previous five years the average amount of expenditure incurred during those same years.</p> <p>Taxpayers must adhere to this system for the following years.</p>	<p>Great Britain.</p> <p>1. — When rights are collected by the <i>author</i> himself: an author resident in the United Kingdom is assessable to United Kingdom income tax. An author not resident in the United Kingdom is liable to bear United Kingdom income tax by deduction at the source from all royalties relating to sale of books, etc., in the United Kingdom.</p> <p>2. — The same system applies when the rights are collected by <i>grantees</i>.</p> <p><i>A person transferring rights</i> is assessable to income tax in respect of the profits derived.</p> <p>1. — Rights collected by the author himself: income <i>derived from the exercise of a profession or vocation</i>.</p> <p>2. — Rights collected by grantees or by authors not resident in the United Kingdom: the income is regarded as arising from the <i>ownership of property</i>.</p> <p>3. — Profits from the purchase or sale of authors' rights are regarded as derived from the <i>carrying-on of a trade or business</i>.</p>	<p>Greece</p> <p>Tax on authors' rights where the income does not exceed 150,000 drachmæ. Over that sum, the income is subject to the 8 per cent tax on the net income from liberal professions.</p> <p>In practice, however, authors are not taxed, since they are not, as a rule, very wealthy.</p> <p>As there are no special legal provisions, income collected by the <i>heirs</i> or <i>assigns</i> is taxable under the law concerning the taxation of net income (commercial transactions)—<i>i.e.</i>, tax on authors' rights up to 150,000 drachmæ and tax of 10 per cent on the remainder.</p> <p>Consequently:</p> <p>(1) Income from a profession where the taxable party is the author himself;</p> <p>(2) In all other cases, income from a commercial enterprise.</p>
<p>Norway.</p> <p>Income derived from the cession of author's rights or of rights in artistic property is regarded as having been earned by personal activities.</p> <p>It is therefore taxable at the place of residence of the owner or at the head offices of the company to which the rights have been transferred.</p> <p>Persons residing abroad are not taxed in Norway on income of this kind, unless they rent in that country a studio in which to work, or premises for the exhibition, on payment of an entrance fee, of works of art or for their sale. The same rules apply when the rights are transferred to a company or commercial undertaking. National companies or companies engaged in business within the country are alone taxable. If the company has its head offices in Norway, it is also taxed in respect of income acquired abroad by the exploitation or sale of rights.</p>	<p>Hungary.</p> <p>Income collected:</p> <p>(a) By the author: <i>tax on personal profits</i> in the place of his fiscal domicile;</p> <p>(b) By his heirs, etc., or grantees: same system;</p> <p>(c) By an institution set up for the purpose: at the seat of the institution;</p> <p>(d) By a company: at the place of its registered head offices.</p> <p><i>Nature of Income.</i></p> <p>As income derived from an enterprise if an institution has been set up or if the person concerned exercises a profession in connection with this object.</p> <p>If no profession is exercised, the income is regarded as income "from another source" (but never as income from a claim).</p>	<p>Italy.</p> <p>Authors' rights are subject to the tax on movable property:</p> <p>(a) As <i>professional earnings</i> in the name of the author, his heirs or assigns;</p> <p>(b) As <i>income derived from an enterprise</i> when the income is collected by a grantee.</p> <p>As <i>professional earnings</i> when the income is collected in the name of the grantee, but on behalf of the author if the latter draws a fixed annual sum or percentage on turnover, sales, etc.</p> <p>If the author draws a percentage of the net profits, he is regarded as a partner, and a tax is levied on the whole of the profits. Consequently: <i>professional earnings</i> in the case of the author and his assigns and <i>income from an enterprise</i> in the case of a grantee exploiting the rights which he has acquired.</p>

FISCAL SYSTEM APPLICABLE TO AUTHORS' RIGHTS.

Replies to Questions I and II (continued).

<p>Netherlands.</p> <p>As <i>earned income</i> when the author himself collects the income or delegates certain rights to a publisher.</p> <p>Income collected by heirs, donees, legatees or grantees: income from <i>movable property</i> (capital sum) or from an <i>occupation carried on at the person's own place of residence</i> (his assent to the performance).</p> <p><i>Cession</i> in return for an annuity. There is at present no law concerning the classification of such annuities—<i>i.e.</i>, whether they should be taxable as income from movable property (the amount of the capital sum) or as earned income.</p> <p>If the heirs, etc., ceded the right in return for an annuity, such income would <i>probably</i> be taxable as income from movable property (the amount of the capital sum).</p>	<p>Poland.</p> <p>As <i>income tax</i> only when authors do not carry on their own business (such as printing, publishing, etc.); otherwise, they are liable to <i>income tax and to the industrial tax</i>. Authors are treated very generously in the matter of the amount of costs and expenditure to be deducted.</p> <p>Income collected by companies: this is dealt with under the fiscal regime applicable to commercial enterprises.</p> <p>Income collected:</p> <p>(a) By the author: professional earnings;</p> <p>(b) By heirs, assigns or grantees; income from <i>claims</i> and other similar sources (capital);</p> <p>(c) By companies or other bodies: system applicable to commercial enterprises.</p>	<p>Roumania.</p> <p>Income collected:</p> <p>(a) By the author, his heirs or assigns: <i>professional earnings</i>;</p> <p>(b) By grantees: <i>transferable income</i>;</p> <p>(c) By companies or other bodies: <i>transferable income</i> accruing from the cession of rights in property. Income considered to be derived from movable property (<i>capital</i>) in the event of participation in the profits of the enterprise to which the rights are ceded.</p>
<p>Sweden.</p> <p>In general, foreigners are only liable to taxation if they have a permanent establishment in Sweden, or if they receive a royalty from a business in Sweden.</p> <p>Income collected by a professional author is treated as income derived from <i>carrying on a business</i>.</p> <p>Income collected by the heirs, etc., of a professional author: income derived from <i>carrying on a business</i>.</p> <p>Grantees: if the income is collected in the form of a royalty: <i>income from carrying on a business</i>.</p> <p>If the grantee is a publisher or theatre manager (a professional), the income derived from exploiting the rights is regarded as <i>income from a business</i>.</p> <p>The total amount paid for the rights is deducted <i>at once</i>, as expenses.</p>	<p>Switzerland.</p> <p>Income collected:</p> <p>(a) By the author: <i>product of his labour</i>;</p> <p>(b) By his heirs or assigns: the authors' works are regarded as <i>transferable securities</i>: this capital is thus liable to the tax on capital, and in certain cantons, to income tax;</p> <p>(c) By grantees: if they exploit the rights as a profession, the sums received are liable to <i>income tax (or to the tax on the product of labour)</i>. In all cases, the tax on capital is payable in respect of the price paid.</p> <p>Consequently:</p> <p>(a) Tax on <i>transferable securities</i> levied on heirs and assigns and on grantees who concern themselves only occasionally with the exploitation of the rights;</p> <p>(b) <i>Professional income</i>: in the case of authors, companies and grantees collecting fees by way of business.</p>	<p>Czechoslovakia.</p> <p>Income collected (a) by the author or his heirs, if they exploit the rights as a profession: <i>income tax and general profits tax</i>.</p> <p>If the author carries on this profession solely as a subsidiary occupation, the income is not taxable.</p> <p>If the heir (legatee or donee) is a <i>company</i>, it is not liable to income tax, but to the <i>general or special tax on profits</i>. For purposes of taxation, account is taken of the number of years the profession from which the income is derived has been carried on.</p> <p><i>Cession</i> against a single payment: <i>Grantor</i> (author): income tax.</p> <p><i>Grantee</i>: income tax and general profits tax in respect of the income derived from the exercise of the right. If the grantee is a company, it is only liable to the general or special tax on profits.</p>

FISCAL SYSTEM APPLICABLE TO AUTHORS' RIGHTS.

Question III.

III. In the case of the sale or cession of authors' rights either against immediate payment of the actual price or in the form of securities or shares in an undertaking exploiting the authors' rights referred to, is the income from such sale or cession divided between several years for purposes of taxation?

Replies.

<p>Germany.</p> <p>In the case of sale or cession, the proceeds are only taxable if the assigned authors' rights formed part of a working capital. In that case the profit constitutes a part of the working profit.</p> <p><i>Distribution</i> over a number of years is not allowed.</p>	<p>Austria.</p> <p>In practice, the income is <i>divided</i> between a number of years equal to the years during which the author has exercised his activity.</p>	<p>Belgium.</p> <p><i>Division</i> between a number of years equal to that for which the establishment of the instalments is authorised (together with the year of the cession regarded as the <i>last</i>).</p> <p>Taxes payable: tax on professional earnings and super-tax leviable on the grantor.</p>	<p>Bolivia.</p> <p>Profits derived from <i>sale</i> or <i>cession</i> of author's rights are regarded as taxable income in respect of all sums collected by the beneficiary or beneficiaries <i>during each year</i>.</p>
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

FISCAL SYSTEM APPLICABLE TO AUTHORS' RIGHTS.

Replies to Question III (continued).

<p>Bulgaria. <i>There is no division.</i></p>	<p>Canada. <i>Sale or cession.</i> — Whatever the form of payment, the transaction is treated as the sale of a <i>capital</i> asset. The moneys received are <i>not taxable</i> as income.</p>	<p>Denmark. <i>Sale or cession.</i> The profits are taxable in their entirety as income acquired at the time of sale and without distinction as to how the price was paid (cash or shares). In the case of <i>shares</i>, taxation is levied as and when the profits accrue.</p>	<p>Spain. The tax is payable in so far as the price of sale can be demanded by the author or his assigns. There is as yet no definite case-law on the subject.</p>
<p>Finland. Whether the tax on the income is payable in a lump sum or spread over several years depends on the conditions governing the sale or cession.</p>	<p>France. <i>Cession</i> to a publisher for a lump sum or against a royalty fixed per year or per copy sold. <i>Grantor</i>: tax on income derived from non-commercial professions and general income tax. The Council of State may, however, decide—as it has already done with respect to patents—that this profit is not taxable. <i>Grantee</i>: liable in his capacity as publisher to the tax on industrial and commercial profits (and to the general income tax).</p>		<p>Great Britain. <i>There is no division.</i> Any receipts liable are regarded as entering into the income or profits of the year in which they are paid.</p>
<p>Greece. In case of <i>cession</i> to a joint-stock company, the system of joint-stock companies applies. <i>There is no division.</i></p>	<p>Hungary. <i>There is no division.</i></p>		<p>Italy. The tax is levied at the time of the cession on the basis of the actual or computed price. In some cases, there is an <i>annual tax on the periodical payments.</i></p>
<p>Norway. The <i>sale</i> or <i>cession</i> against immediate payment in cash is a taxable transaction. In the case of payment effected in any other manner, the income is assessed at the selling value of the property at the time of cession. When payments are effected as and when sales or performances take place, or when payments are made in instalments, the income is held to be acquired on the date of each payment. No cases are known in which author's rights or artistic property have been transferred in Norway in return for securities or shares in an undertaking.</p>	<p>Netherlands. <i>Sale</i> against immediate payment. Up to the present, the <i>administrative authorities</i> have never taxed the grantor, unless the latter operates the same undertaking. <i>There is no division.</i></p>	<p>Poland. <i>Division according to existing circumstances.</i></p>	<p>Roumania. <i>Cession</i>: (a) Against immediate payment: the total income is taxed at the time of the cession; (b) Against periodical payments: the incidence of the tax is at the time of such payments; (c) Payment in shares: the <i>dividends</i> are taxed at the time of their declaration.</p>
<p>Sweden. <i>There is no division.</i> Taxation is levied at once.</p>	<p>Switzerland. <i>There is no division.</i> The sum obtained is included in the income of the year of payment.</p>	<p>Czechoslovakia. <i>Cession</i> against periodic payments. <i>Grantor</i>, the heir: income tax and tax on annuities. <i>Grantee</i>: as above. If the heir cedes the rights against immediate payment, the proceeds are not taxed unless the sale occurs in connection with the operation of an undertaking for gain. <i>There is no division.</i></p>	

FISCAL SYSTEM APPLICABLE TO PERIODICAL PAYMENTS DERIVED FROM PATENTS.

Question IV.

IV. Same questions as under I to III concerning *income from patents*, if the fiscal system applied to the latter differs from that applicable to authors' rights.

Replies.

<p>Austria and Germany. Same system, <i>mutatis mutandis</i>, as applied to authors' rights.</p>	<p>Belgium. The amounts paid for the <i>use</i> or <i>concession</i> of a patent are liable to the tax on <i>movable</i> property. If the use of the concession is granted <i>professionally</i>, the proceeds therefrom are considered as income liable to the <i>tax on professional earnings</i>. <i>Sale or cession.</i> If the operation is directly or indirectly connected with the grantor's professional occupation, he is liable to tax in respect of the proceeds of the sale, less the price paid for acquiring the patent or its constitutive value (cost of research and study). <i>It is distributed</i> over several years: same system as applied to authors' rights.</p>	<p>Bolivia. Income derived from industrial patents is liable to the tax on capital <i>investments</i>. If, however, the patent is not exploited on an industrial scale by the inventor, who merely receives an annual payment, such income is liable to the tax on professional earnings (personal services).</p>	
<p>Bulgaria. <i>Inventors</i> are subject to taxation as persons exercising a <i>liberal profession</i> and their assigns as persons exercising a <i>trade</i>, with respect to the year in which the profit was collected. Profits are taxable at source.</p>	<p>Canada, Denmark and Finland. Same system as for authors' rights.</p>	<p>Spain. Income from patents worked by an <i>industrial undertaking</i> is taxable as part of the net profits of the said undertaking. Where the person receiving such income is economically independent of the undertaking, deduction is allowed, but not otherwise. Neither is it allowed in the case of a foreign branch.</p>	
<p>France. An inventor who <i>sells</i> his patent is not liable to income tax (decision of the Council of State), even if the sale is made against annual or periodical payments. <i>Grant of working licences:</i> the income received is liable to the <i>tax on profits derived from non-commercial professions and to the general income tax</i>. This also applies to licences granted abroad, provided the beneficiary is domiciled in France. <i>Grantee</i> (generally a <i>manufacturer</i>): the profit is included in the working profits and is liable to the <i>tax on industrial and commercial profits and to the general income tax</i>. <i>Companies:</i> same system as applies to authors' rights. <i>Nature of income:</i> derived either from the exploitation of an undertaking or lucrative occupation. <i>Distribution</i> over several years: see Note to the table concerning authors' rights.</p>	<p>Great Britain. I. — (a) A <i>patentee</i> is liable to United Kingdom income tax in respect of all payments collected by him. Payments from British sources are received after tax has been deducted. In the case of a patentee not resident in the United Kingdom, the tax is deducted at the source from all royalties or periodical payments which he is entitled to receive from persons in the United Kingdom. (b) The same system applies when payments are collected by <i>grantees</i>. II. — (a) Payments collected by patentees or by grantees: the income is regarded as arising from the <i>ownership of property</i>. (b) Profits derived from the purchase or sale of patents are regarded as derived from the <i>carrying on of a trade or business</i>. III. — There is no division. Any receipts liable are regarded as entering into the income or profits of the year in which they are paid or payable.</p>	<p>Greece and Hungary. Same system as applied to authors' rights.</p>	<p>Italy. Same system applied to authors' rights. Periodical payments are, however, <i>always</i> held to be income derived from industry where the invention has involved the inventor in a considerable outlay of capital.</p>
<p>Norway. Same system as applies to authors' rights. It should, however, be noted that payments made against the cession of rights in connection with patents are usually made in the form of an annual payment or in the form of an industrial participation. If the holder of a patent takes an active part in its exploitation, income is not considered to be derived therefrom until the person concerned has received his share in the profits of the undertaking. In cases of cession in return for an industrial participation, profits are assessed on the actual market value at the time of cession.</p>	<p>Netherlands, Poland, Roumania and Switzerland. Same system as applied to authors' rights.</p>	<p>Sweden. Same rules as applied to authors' rights. However, income derived from exploiting a patent is almost without exception regarded as income derived <i>from carrying on a business</i>.</p>	<p>Czechoslovakia. Same system as applied to authors' rights. Payments for concessions are taxable even if the rights are exploited abroad, in so far as the grantor is resident in Czechoslovakia.</p>

VI. Riches of the Sea (Protection of Whales)	8
<i>Annex: Preliminary Draft Convention for the Regulation of Whaling.</i>	8

The following members of the Committee were present:

Sir Sydney CHAPMAN (<i>Chairman</i>),	MM. ITO,
M. DI NOLA (<i>Vice-Chairman</i>),	JAHN,
MM. BARBOZA-CARNEIRO,	NECULCEA,
BRUNET,	PEROUTKA (replacing M. DVOŘÁČEK),
DOLÉZAL,	SCHÜLLER,
EASTMAN,	SERRUYS,
GUPTA (replacing Mr. LINDSAY),	STUCKI.
IMHOFF (replacing M. TRENDELENBURG),	

Also present during part of the session:

M. LAVONIUS, Finnish Corresponding Member of the Economic Committee.
M. SCHLINGEMANN, Member of the Consultative Committee on Communications and Transit.
M. BRIZI, Secretary-General of the International Institute of Agriculture.

**I. WORK RESULTING FROM THE PRELIMINARY CONFERENCE WITH A VIEW TO
CONCERTED ECONOMIC ACTION.**

I. REFERENCE TO THE ECONOMIC COMMITTEE.

At its meeting of May 12th, 1930, the Council instructed the Economic Organisation to give effect as far as it was concerned to the decisions of the Conference contained in the official acts¹ adopted by the latter.

¹ See document C.203.M.96.1930.II.

The Commercial Convention of March 24th, 1930, calls for no official action on the part of the Economic Committee.

The Protocol regarding the programme of future negotiations, on the other hand, contains a series of decisions and recommendations referring either to new work which the Economic Organisation is asked to undertake or to work already being undertaken by the Committee.

In accordance with Article 1 of the Protocol, the Economic Organisation is asked to study the replies of the Governments to the questionnaire annexed to the said article and to formulate proposals on the concrete points on which the future negotiations should bear.

The Secretary-General having asked the Governments to send their replies by September 1st, 1930, the question will be placed on the agenda of the Committee's autumn session.

2. GENERAL REVIEW OF NON-TARIFF QUESTIONS.

Article 2 of the same Protocol provides for studies and negotiations on a very large number of questions with the majority of which the Economic Committee has already had occasion to deal in the course of its previous work. Certain of these questions have already been settled in whole or in part by international acts, while others have been discussed by international conferences.

In reviewing the various subjects, the Committee gave careful attention to the Memorandum submitted to the recent Conference by the French delegation and reproduced as an appendix to the Protocol. The third section of this Memorandum expresses the idea of an international convention whose aim would be to settle in a satisfactory manner, and to group in a coherent and logical whole, all the connected and subsidiary questions, except the Treatment of Foreigners, which surround the central problem of tariff agreements in bilateral commercial treaties.

Leaving on one side for the moment the question whether a single Convention covering these different subjects constitutes the best method of achieving the desired end, the Committee thought that the idea contained in embryo in Section III of the French Memorandum seemed particularly opportune at a time when—pending the commercial negotiations contemplated in Article 1 of the Protocol—it is important to prepare the ground for a possible agreement in this sphere by seeking partial solutions for subsidiary questions.

As the list of thirteen points given in this section of the French Memorandum is not intended to be exhaustive, the Economic Committee was led to extend the guiding idea on which this section is based to all non-tariff questions relating to the international exchange of goods and normally dealt with in bilateral agreements.

Thus, the Economic Committee devoted part of its present session to a rapid review of the state of these different questions and divided among its members the work still remaining to be done, in such a way that all these enquiries could be simultaneously undertaken or pursued by small groups of Rapporteurs. To its Bureau, assisted by a few members, it entrusted the central task of co-ordinating all the different partial studies, with the idea of embodying the results in a general agreement, unless in the case of certain subjects another method seemed preferable.

In the enumeration which follows, the different questions are grouped according to their nature and irrespective of the formal reasons to which, at different times, their inclusion in the Economic Committee's programme was due. The order in which these questions are placed implies no idea of priority.

3. DISTRIBUTION OF WORK.

First Group (Sections I and II of the French Memorandum) : Expression of Specific Duties as Percentages of the Value of Goods and Method of ascertaining Value.

The Committee appreciated the importance of the two proposals put forward in this connection by the French delegation, and it is convinced that their judicious application, perhaps by methods somewhat different from those recommended in the Memorandum, might materially facilitate comparison between Customs charges, and hence the adjustment of the interests of the various national economic units, particularly on the occasion of the collective agreements contemplated for the future.

It was struck, however, by the difficulties which any attempt to translate these specific duties at present in force in the different countries into a percentage of the value must necessarily encounter, as long as the indispensable basis for an operation of this kind constituted by a unified Customs nomenclature is lacking.

As regards the determination of value the Committee, as will be seen below, is approaching this subject indirectly by a study of the different methods employed in countries making a large use of *ad valorem* duties.

Second Group: Permanent Organ of Conciliation and Arbitration in Commercial Matters.

The Committee cannot but be sympathetic in principle to any proposal calculated to extend the practice of conciliation and arbitration.

Any action on the lines indicated should, however, be preceded by a study, to be made by the Secretariat in conjunction with the Legal Section, bearing on the different systems of conciliation and arbitration already provided for in international agreements, whether bilateral or multilateral.

It is also necessary to examine from a juridical point of view the possible effects on relations between States of the co-existence of bilateral and new multilateral agreements, at the same time bearing in mind the rights and obligations devolving upon the various countries as a result of their accession to the Permanent Court of International Justice or to arbitration agreements at present in force.

Third Group: Customs Formalities.

Points 6, 7, 8, 11 and 12 of Section III of the French Memorandum will be examined by the Rapporteurs who have for a long time past been considering the means by which progress can be made in regard to Customs formalities.

In addition to the points enumerated above, therefore, the following questions which attracted the special attention of these Rapporteurs must also receive consideration.

Customs Treatment of Goods en route.

The enquiry which has been undertaken in regard to this question by the Secretariat may be of considerable value provided that it is not confined to indicating the methods of applying the provisions in force in countries which allow goods despatched prior to the increase in duties to benefit by the former more favourable rates. It should also explain the reasons which have led those countries to institute this régime (special position of the countries in relation to their principal buying markets, etc.).

Procedure for Appeal.

The Committee considers that Article 7 of the 1923 Convention on Customs formalities contains all that it is necessary to insert on this matter in an international agreement and is doubtful whether there would be any real advantage to be gained from unifying the regulations in force in the various countries relating to recourse, the differences in which are due to many causes (tradition, commercial customs, etc.). It recognises, however, that it would be very useful to prepare a list of these regulations, showing the points on which they are in agreement and those on which they differ, especially as regards the question whether and in what form it is possible for industrialists and traders to state their views at any stage of the proceedings, and it has requested the Secretariat to collect all useful information on the matter.

Commercial Travellers, Samples of No Value, and Advertising Matter.

While recognising the utility of grouping these three factors of commercial propaganda, the Committee thought that the fact should be borne in mind that the treatment of commercial travellers as regards the exercise of their occupation is being dealt with by the International Conference on the Treatment of Foreigners.

As regards the granting of increased Customs facilities to samples of no value and advertising matter, the Committee considers that the documentation collected for this purpose by the Secretariat might be submitted for examination to a carefully selected group of experts who would also be requested to consider the possibilities of exempting articles made of precious metals, temporarily imported as samples, from *compulsory stamping*.

Fourth Group: Application of Specific Tariffs (gross weight, net weight, tare, packing, etc.).

The Secretariat had prepared a detailed note on these various questions. The Committee, while it recognises that this note constitutes a useful basis for the proposed subsequent examination of the questions, thinks it would be better to ascertain before making definite proposals the principal abuses to which the various systems for the collection of specific duties referred to in the memorandum on indirect protectionism give rise, and which the States participating in the preliminary Conference with a view to concerted economic action have undertaken to communicate to the Secretariat before September 1st, 1930.

By enlarging the problem in this way it may be possible to consider, not only the eventual unification of the meaning and scope of terms relating to weight, but also to prevent certain practices of indirect protectionism, more especially as regards various classes of goods liable to heavy Customs duties.

The Committee decided to submit the Secretariat's note, supplemented as mentioned above, to a group of experts selected so as to represent the various systems in force in this matter to include representatives of the interests concerned, and to ensure co-operation with the Sub-Committee for the Unification of Customs Nomenclature.

The task entrusted to these experts would be to ascertain the means of:

1. Standardising definitions relating to weight and packing;
2. Preventing certain practices of indirect protectionism resulting from the arbitrary application of rules relating to weight, tare, etc.;

3. Ensuring more equitable methods of Customs clearance in respect of certain goods of considerable value.

The same experts will be entrusted with the examination of the questions referred to in the previous group.

Export charges, internal charges and the regulation of trade not subject to duty (points 4, 5 and 10 of Section III of the French Memorandum) will also be examined by this group of Rapporteurs.

Fifth Group: Most-favoured-nation Clause.—Nationality of Goods.
(Points 1 and 9 of Section III of the French Memorandum.)

The Economic Committee has already examined very fully the question of the most-favoured-nation clause, the results of its examination having been communicated by the Council to the various Governments. Pending their observations, it will carefully consider the special question of the various methods applied to determine the nationality of the goods and the duties applicable to them.

Sixth Group: Marks of Origin.

The Secretariat has collected very full and detailed information regarding the laws and regulations in force in the various countries and their application. Its investigations will be completed under the direction of the Rapporteurs appointed for this question, and the Committee will judge later whether the result of its enquiries should be published, as it might be of real interest both to administrations and to traders.

Seventh Group: Export Bounties and Subsidies.
(Paragraph 5 of Article 2 of the Protocol.)

Seeing that an official enquiry would not be likely to yield all the necessary information, and that it is possible to reach, through the regular and corresponding members of the Economic Committee, nearly all the countries that have signed the Protocol concerning future negotiations, it has been thought more expedient to arrange for a preliminary enquiry within the Committee on the points covered by the said paragraph 5.

Eighth Group: Calculation of ad valorem Duties.
(Point 3 of Section III of the French Memorandum.)

Enquiries into the methods followed for determining the value of the goods in countries which apply *ad valorem* duties on a large scale have already been undertaken by the Secretariat at the time of the World Economic Conference of 1927. Rapporteurs have been appointed to complete these enquiries and afterwards to make a thorough examination of the various methods in use, in order to judge of the practical value of each.

Ninth Group: Appellations of Origin.
(Point 13 of Section III of the French Memorandum.)

The Rapporteurs are asked to study this problem as one of the aspects of unfair competition and to examine the desirability of a revision of the Madrid Arrangement. In this investigation they should take into account the protection to be given, not only to products deriving their special properties from the soil or the climate, but also to products deriving their properties from regular special methods of manufacture (typical products).

As a basis for this work, the Secretariat has been asked to undertake a preliminary study of the Arrangement, and of the regulations in force in the various countries and the provisions of commercial treaties applying to the products mentioned above.

Other Questions.

The work on the *unification of Customs nomenclature* and on *veterinary police measures* is following its normal course, under the direction of the Rapporteurs who have been dealing with those matters from the beginning.

The *questions connected with transport* which were raised in the Protocol concerning future negotiations have already been referred by the Council to the Communications and Transit Committee for consideration.

II. AGRICULTURE.

In conjunction with the International Institute of Agriculture, represented by its Secretary-General, M. Brizi, the Economic Committee discussed the principle and decided upon the details of a series of studies and investigations which were thought desirable in consequence of the meeting of agricultural experts held at Geneva in January 1930.

The Secretary-General of the International Institute of Agriculture described the work in progress on the various questions to the importance of which the agricultural experts had called attention—the position and operation of co-operative societies in the various countries, agricultural credit, the rapid circulation of agricultural information, the improvement of agricultural statistics, and the present depression, etc.

It is particularly necessary for the Economic Committee to consider the questions which relate to *co-operative societies*, because these questions were raised by the World Economic Conference in 1927. Since the prevailing agricultural depression set in, they have assumed an enhanced importance.

The Economic Committee learned with interest of the deliberations of meetings of a co-operative group which took place at Paris on December 2nd, 1929, and at Geneva on May 2nd, 1930, under the chairmanship of M. Albert Thomas, and was attended by representatives of farmers' co-operative societies as well as consumers' co-operative societies. Both the International Institute of Agriculture and the Secretariat were represented at the Geneva meeting, which considered all the questions on which there is any possibility of joint action by these two categories of co-operative societies.

The problem of *international agricultural credit* was also discussed by the Economic Committee, which considered the question of the development of definite action, whether in particular cases that might arise, or from the point of view of an examination of a more general nature. Obviously the problem is not capable of a quick solution, and, notwithstanding the work which has been done upon it for several years past by the International Institute of Agriculture, any possibilities of action still seem so indefinite that there is no point in submitting the matter to financial experts at the present time.

In any case, it seems advisable to await the reports which the agricultural experts have been asked to make on the *agricultural situation* in their respective countries; a number of these reports have already been received. The Committee considers it really important to be first acquainted with the special aspects of the depression in different parts of the world, and to have the views of qualified persons in the various countries as to possible remedies.

The resulting survey, at once general and detailed, will furnish the Committee with valuable information, on the basis of which it will no doubt be able to specify the points of an international character that might profitably be discussed by the experts at their next meeting.

III. SMUGGLING.

The Assembly resolution of September 24th, 1928,¹ as a result of which the Council asked the Economic Committee to study the question of smuggling, refers (a) to smuggling in general and (b) to the smuggling of alcohol.

(a) *Smuggling in general.*

In its report on its twenty-ninth session (document C.307.M.106.1929.II), the Committee submitted to the Council certain conclusions regarding the international aspects of this problem. It also expressed its opinion that more detailed enquiries should be made to ascertain whether the majority of States were in favour of instituting preparatory work with a view to establishing an international convention for the repression of smuggling.

Accordingly, the Secretary-General of the League of Nations sent to the Members of the League and to the non-Member States on October 12th, 1929, Circular Letter 265.1929.II., containing the questionnaire given below, to which twenty-seven² replied. The questions put were as follows:

1. Importance of smuggling, particularly from the economic and fiscal points of view. What are the chief commodities smuggled? What are the reasons for this smuggling?
2. Are the measures taken by your Government individually to prevent or suppress this smuggling sufficient and has your Government endeavoured to arrange for reciprocal assistance, particularly with the nearest countries or those bordering upon the same sea?
3. Has your Government concluded bilateral or multilateral conventions? If so, what conventions? Please give the text or a summary of these conventions. Do they operate to the satisfaction of the Governments concerned?

¹ Text of the resolution:

“ The Assembly:

“ Having had a draft resolution on the subject of alcoholism submitted to it by the Finnish, Swedish and Polish delegations:

“ Decides to ask the Council to request the Health Organisation of the League of Nations to collect full statistical information regarding alcoholism, considered as a consequence of the abuse of alcohol, giving prominence, *inter alia*, according to the data available, to the deleterious effects of the bad quality of the alcohols consumed;

“ And, considering that, while it is for the Governments to put a stop to the contraband trade carried on in violation of the conventions in force between them, it may nevertheless be useful to examine the terms in which such conventions or agreements might be drawn up, for the prevention of smuggling in general and that of alcohol in particular:

“ Decides to ask the Council to request the Economic Committee to carry out this investigation and to submit any proposals to the Council arising out of its conclusions.

“ It is understood that this resolution does not refer to wine, beer or cider. ”

² These States were the following: Australia, Austria, Belgium, Bulgaria, China, Egypt, Estonia, Finland, France, Germany, Great Britain, Greece, Haiti, India, Ireland, Japan, Latvia, Luxemburg, New Zealand, Norway, Panama, Portugal, South Africa, Switzerland, Turkey, United States of America, Yugoslavia.

4. Would an international agreement involving certain obligations such as mutual assistance in regard to information, judicial assistance, the right to search vessels outside territorial waters, etc., be likely to be of any practical utility for the prevention of smuggling?

These replies showed that only a few States were prepared to consider favourably the possibility of preparing an international convention under which the contracting parties would assume certain obligations such as providing each other with information and judicial assistance.

The replies of these States do not seem to indicate that they regard the question as very urgent or of capital importance.

The replies of Finland and Norway show that they are mainly concerned with the smuggling of alcohol, and they would like to see a wide application given to the Convention of Helsingfors.

Most States, however, stated that they preferred bilateral conventions.

The Economic Committee therefore feels that it need not study the question further and informs the Council that the enquiry already conducted does not tend to show that it would be desirable at present to take any action for the preparation of a collective agreement on smuggling.

(b) *Smuggling Alcoholic Beverages.*

The above-mentioned Assembly resolution was proposed by the Finnish, Polish, and Swedish delegations with a view to endeavouring to terminate the smuggling which is practised on a large scale, mainly off the Baltic coasts. It suggested the conclusion of a general international convention the effect of which would be to extend, in practice, to the vessels of all countries the provisions of the Convention concluded at Helsingfors between the Baltic Sea Coast States, which has not in actual fact secured all the results the signatories expected of it.

Subsequently, the Finnish Government, noting the practical difficulty of obtaining this result, made several suggestions to the Economic Committee.

Before pronouncing on these suggestions, the Economic Committee consulted the Communications and Transit Committee. The report of this Committee, with its Chairman's covering letter, is set out in an annex (document E.581). In view of this opinion the Committee submits to the Council the following conclusions:

Having been informed of the special importance which certain States attach to the prevention, or at all events the reduction to a minimum, of the smuggling along their maritime frontiers of alcoholic liquor, the importation of which is prohibited or subject to special restrictions in these States:

1. The Committee recommends the Council to draw the attention of the Governments of the Members of the League to the fact that it is highly important that the authorities competent to issue documents attesting the nationality of a vessel should satisfy themselves before issuing such documents that the conditions required by their national laws are actually fulfilled:

2. It notes that, without prejudice to the state of existing law, if arrangements in respect of specified vessels manifestly engaged in contraband traffic in alcohol are concluded with the State whose flag these vessels fly, with a view to instituting over these vessels measures of control applied outside the territorial waters, such arrangements would not be likely in principle to hinder unduly the freedom of communications, and that States desirous of guaranteeing the application of conventions concluded *inter se* against vessels engaged in smuggling and flying the flag of a third State, may conclude arrangements of this kind with such third States, and it may be hoped that requests to this effect would be favourably considered, save in exceptional circumstances. Nevertheless, the fact that the Government of a State, which is not a contracting party to these conventions, abstains, in virtue of the arrangements referred to above, from protest, if the measures for supervision and repression resulting from the clauses of these conventions are applied exceptionally to vessels flying its flag and manifestly engaged in smuggling, should be regarded solely as the application of special arrangements between certain countries and not as a precedent that could imply a change in the general practice of States or in the rules of international law in these matters.

3. The Committee is further convinced that the States concerned will use their best endeavours to ensure that every precaution is taken, in connection with the exceptional measures to which they may thus have recourse, to safeguard the rights of third parties and the principle of the freedom of navigation, and to ensure that appropriate compensation is granted in case of error.

IV. EDUCATIONAL FILMS.

As requested by the Council, the Economic Committee has examined the preliminary draft International Convention for the Abolition of Customs Barriers against Educational Films¹ drawn up by the International Educational Cinematographic Institute.

¹ See document C.212.M.100.1930.XII.●

The Committee is of opinion that this preliminary draft would serve as a useful basis of discussion for a diplomatic Conference. It recommends, however, that attention should be given to securing as close a correspondence as possible between this convention and other conventions concluded under the auspices of the League and in particular that of 1921 relating to the freedom of transit and that of 1927 on the abolition of import and export prohibitions and restrictions.

V. INTERNATIONAL INSTITUTE FOR SCIENTIFIC MANAGEMENT.

The Committee has considered the following reports submitted by the International Institute for Scientific Management:

1. Report on the work carried out by the Institute for the League of Nations since April 1929;
2. The annual report of the Institute for the year 1929-30;
3. An interim report on the Terminology of Management.

It has further received oral explanations from Mr. L. Urwick, the Director of the Institute. It was represented by him that the Institute had been given the following tasks under the resolution of the World Economic Conference of 1927 and of the Economic Consultative Committee:

1. To promote an agreement in regard to the terms, subject-matter and methods of rationalisation;
2. To study suitable methods of standardisation in the types and specifications of manufacture;
3. To furnish the Economic Organisation with information enabling it to judge the expediency of international measures for the simplification of processes and reduction of types of products;
4. To promote uniformity in methods of investigation into the economic situation through Governments or institutions, so far as progress of rationalisation is concerned, so as to allow of comparison between the results obtained;
5. To submit an annual report showing the progress made in rationalisation and containing proposals.

It was explained that the Institute had made some progress on the first of these subjects; that annual reports had been submitted in the last two years; that the tasks suggested under points 2 and 3 were suitable for further work; and that the question under 4 should, for the moment, be postponed as not likely to furnish practical results.

After explaining its statutes, structure and administration, it was pointed out that the claims upon its resources for work on behalf of the private institutions which contribute to its support as members and associate members, had grown so much, that the Institute could no longer undertake to continue public work of the kind required of it under the recommendations of the Consultative Committee, of little or no immediate interest to such private institutions, unless it received appropriate financial support for this special purpose.

The Committee has carefully examined the whole situation so disclosed, and has come to the following conclusions. It has had regard, in doing so, to the recommendation of the Preliminary Conference with a View to Concerted Economic Action held in February-March 1930 that the collaboration between the Economic Organisation and the International Institute of Scientific Management should continue, as well as to the previous recommendation of the Economic Consultative Committee approved by the Council.

1. It is, in the view of the Economic Committee, right and necessary that specific work required of the Institute by the Economic Organisation should receive due payment, appropriate provision being inserted in the budget corresponding to the work approved for any given financial year. (It should be noted that owing to the existence of a subvention in kind from the International Labour Office, the accounts of the Institute are already audited by the League auditors.)

2. The Committee proposes payment, not in respect of work done in the past or during the current year at the request of the League but in respect of work in the future in continuation of work already begun.

3. As regards the year 1931 the Committee contemplates asking the Institute to undertake certain work in 1931 and has appointed a Rapporteur to examine this question. In these circumstances it is necessary that financial provision should be made for the expenses that may be incurred.

VI. RICHES OF THE SEA (PROTECTION OF WHALES).

In pursuance of the decision taken by the Economic Committee at its twenty-ninth session (July 1929), a Committee of Experts¹ met at Berlin on April 3rd, 1930.

In pursuance of the above-mentioned decision of the Economic Committee, the experts were requested to consider more particularly "whether and in what terms, for what species and in what areas, international protection of marine fauna could be established".

The experts unanimously agreed that it would be possible to help the whaling industry by means of an international convention.

After studying the Norwegian Law, which came into force on June 21st, 1929, a Royal Decree dated August 2nd, 1929, of notification by the Ministry of Commerce dated July 4th, as well as proposals submitted by some of the experts, the experts drew up a statement of certain principles and of certain rules which they submitted to the Economic Committee in the form of a draft convention.

The Committee, with the assistance of the Legal Section, introduced certain modifications in the draft, particularly in regard to the formal clauses. The modified text is attached herewith.

The Committee, after reviewing the position, proposes that the Council should transmit this text to the various Governments in order to obtain their views thereon.

It would seem expedient to wait until the replies have been received from the Governments before considering the desirability of convening a conference at some future date or of simply opening, during one of the forthcoming Assemblies, a protocol for signature by any States wishing to become parties thereto.

ANNEX.

PRELIMINARY DRAFT CONVENTION FOR THE REGULATION OF WHALING.

Article 1.

The High Contracting Parties undertake to take, within the limits of their respective jurisdictions, appropriate measures to ensure the application of the provisions of the present Convention and the punishment of infractions of the said provisions.

Article 2.

The present Convention applies only to baleens or whalebone whales.

Article 3.

The taking or killing of right whales, which shall be deemed to include North Cape whales, Greenland whales, Southern right whales, Pacific right whales and Southern Pigmy right whales, is prohibited.

Article 4.

The taking or killing of calves or suckling whales, immature whales and female whales which are accompanied by calves or suckling whales, is prohibited.

Article 5.

The fullest possible use shall be made of the carcasses of whales taken. In particular:

I. There shall be extracted by boiling or otherwise the oil from all blubber and from the head and the tongue and, in addition, from the tail as far forward as the outer opening of the lower intestine.

¹ Members of this Committee were:

M. A. HODT, Hamburg.
E. R. DARNLEY, Colonial Office, London.
J. O. BORLEY, O.B.E., Fisheries Adviser, Colonial Office, London.
Dr. Remington KELLOGG, National Museum, Washington.
Professor Ed. LE DANOIS, secrétaire général de la Commission de la Méditerranée, directeur de l'Office scientifique et technique des Pêches maritimes, Paris.
M. OHTA, expert attaché à la Section de la pêche du Ministère de l'Agriculture et de la Forêt, Tokio.
Professor J. HJORT, de l'Université, Oslo.
Dr. A. DE MAGALHAES RAMALHO, directeur de l'Acquarium Vasco da Gama, Lisbon.

The provisions of this sub-paragraph shall apply only to such carcasses or parts of carcasses as are not used for human food.

2. Every factory, whether on shore or afloat, used for treating the carcasses of whales shall be equipped with adequate apparatus for the extraction of oil from the blubber, flesh and bones.

3. In the case of whales brought on shore adequate arrangements shall be made for utilising the residues after the oil has been extracted.

Article 6.

Gunners and crews of whaling boats shall be engaged on terms such that their remuneration shall depend to a considerable extent upon such factors as the size, species, value and yield of oil of whales taken and not merely upon the number of whales taken, in so far as payment is made dependent on results.

Article 7.

No vessel of the High Contracting Parties shall engage in taking or treating whales unless a licence authorising such vessel to engage therein shall have been granted in respect of such vessel by the High Contracting Party to which she belongs or unless her owner or charterer has notified his Government of his intention to employ her in whaling and has received a certificate of notification from the said Government.

Nothing in this article shall prejudice the right of any High Contracting Party to require that in addition a licence shall be required from his own authorities by every vessel desirous of using his territory of territorial waters for the purposes of taking or treating whales, and such licence may be subject to such conditions as may be deemed by such High Contracting Party to be necessary or desirable, independent of the nationality of the vessel.

Article 8.

The geographical limits within which the articles of this Convention are to be applied, shall include all the waters of the world, including both the high seas and territorial and national waters.

Article 9.

The High Contracting Parties shall obtain with regard to their vessels engaged in the taking of whales information comprising the following particulars with regard to each whale taken:

1. Date of taking;
2. Place of taking;
3. Species;
4. Sex;
5. Length measured when taken out of water; estimated, if cut up in water;
6. When foetus is present, length and sex if ascertainable;
7. Where practicable, information as to stomach contents.

Protocol ad 5 of Article 9.

The length referred to in sub-paragraphs 5 and 6 of Article 9 shall be the length of a straight line taken from the tip of the snout to the notch between the flukes of the tail.

Article 10.

Each High Contracting Party shall obtain from all factories, on land or afloat, under their jurisdiction, returns of the number of whales of each species treated at each factory and of the amounts of oil of each grade and the quantities of meal, guano and other products derived from them.

Article 11.

Each of the High Contracting Parties shall communicate statistical information regarding all whaling operations under their jurisdiction to a body which shall be established in order to collect and distribute statistics of whaling. The information given shall comprise at least the particulars mentioned in Article 10 and: 1. The name and tonnage of each floating factory; 2. The number and aggregate tonnage of the whale catchers; 3. A list of the land stations which are in operation during the period concerned.

Such information shall be given at convenient intervals not longer than one year.

Article 12.

The present Convention shall remain open until the 19....., for signature on behalf of any Member of the League of Nations or of any non-Member State (invited to the Conference or) ¹ to which the Council of the League of Nations has communicated a copy of the Convention for this purpose.

¹ Words in brackets will not be appropriate if the Convention is drawn up at the Assembly.

Article 13.

The present Convention is subject to ratification. Ratifications shall be deposited with the Secretariat of the League of Nations.

The Secretary-General shall give notice of the deposit of each ratification to the Members of the League of Nations and to the non-Member States mentioned in Article 12, indicating the date of its deposit.

Article 14.

As from, any Member of the League of Nations and any non-Member State mentioned in Article 12, on whose behalf the Convention has not been signed before that date, may accede thereto.

Accession shall be effected by an instrument deposited with the Secretariat of the League of Nations. The Secretary-General of the League of Nations shall give notice of each accession to the Members of the League of Nations and to the non-Member States mentioned in Article 12, indicating the date of the deposit of the instrument.

Article 15.

The present Convention shall enter into force on the ninetieth day following the receipt by the Secretary-General of the League of Nations of ratifications or accessions on behalf of not less than..... Members of the League or non-Member States.

As regards any Member of the League or non-Member State on whose behalf a ratification or accession is subsequently deposited, the Convention shall enter into force on the ninetieth day after the date of the deposit of a ratification or accession on its behalf.

Article 16.

At any time after the coming into force of the present Convention any two Members of the League or non-Member States with regard to which the Convention is then in force may request the Council of the League of Nations to take measures with a view to the convening of a Conference for the revision of the Convention. Those Members of the League or non-Member States on whose behalf the Convention has been signed or accessions thereto deposited undertake to be represented at any Conference so convened.

Article 17.

1. The present Convention shall be concluded for a period of three years from the date of its entry into force (*or*, continuing until 19...).

2. It shall continue in force for further successive periods of one year as between such Members of the League and non-Member States as do not denounce it at least six months before the expiration of the current period.

3. Denunciation shall be effected by a written notification addressed to the Secretary-General of the League of Nations, who shall inform all the Members of the League and the non-Member States mentioned in Article 12.

Article 18.

1. Any High Contracting Party may, at the time of signature, ratification or accession, declare that, in accepting the present Convention, he does not assume any obligations in respect of all or any of his colonies, protectorates, overseas territories or territories under suzerainty or mandate; and the present Convention shall not apply to any territories named in such declaration.

2. Any High Contracting Party may give notice to the Secretary-General of the League of Nations at any time subsequently that he desires that the Convention shall apply to all or any of his territories which have been made the subject of a declaration under the preceding paragraph, and the Convention shall apply to all the territories named in such notice after its receipt by the Secretary-General of the League of Nations.

3. Any High Contracting Party may, at any time, declare that he desires that the present Convention shall cease to apply to all or any of his colonies, protectorates, overseas territories or territories under suzerainty or mandate; and the Convention shall cease to apply to the territories or to the parts of their population named in such declaration..... after its receipt by the Secretary-General of the League of Nations.

4. The Secretary-General of the League of Nations shall communicate to all the Members of the League of Nations and the non-Member States mentioned in Article 12 all declarations and notices received in virtue of this article.

Article 19.

The obligation of a High Contracting Party to take measures to ensure the observance of the provisions of the present Convention in his own territories and territorial waters, and by his own vessels, shall not apply to those of his territories to which the Convention does not apply, and the territorial waters adjacent thereto, and to vessels registered in such territories.

Article 20.

The present Convention shall be registered by the Secretary-General of the League of Nations as soon as it has entered into force.

Article 21.

The French and English texts of the present Convention shall both be authoritative.

IN FAITH WHEREOF, etc.

OBSERVATIONS.

I.

The Economic Committee would like to point out that in elaborating the attached draft Convention, they had examined carefully the question of including a provision similar to that appearing in the Norwegian Law of June 21st, 1929, namely, that the prosecution of whaling in tropical and sub-tropical waters might be made unlawful within certain prescribed limits. They were, however, unable at present to recommend the inclusion of such a clause, but, in agreement with the views expressed by the experts consulted on this question, thought that it should be strongly recommended to the High Contracting Parties to pursue such scientific investigations as might enable a conclusion to be reached as to whether the closure to whaling of any areas would be in the interest of the industry and, if so, what areas should be thus closed.

II.

While the Economic Committee recognised the lack of precision attaching to the word "immature" appearing in Article 4, they were of opinion that at present it was undesirable to attempt a closer definition.

They expressed the hope that the Governments of the High Contracting Parties might be in a position to arrive at a more precise definition when scientific researches have progressed sufficiently to enable conclusions to be reached.

III.

As regards sub-paragraph 2 of Article 5, the attention of Governments was drawn to the desirability of ensuring that floating factories should so conduct their operations that the remains of whales should not be allowed to drift ashore in localities where this would cause a nuisance.

IV.

It should be observed that in drafting Article 6 regard has been had to the terms of contracts generally used in some of the countries especially interested in whaling.

V.

It is understood that in supplying the body mentioned in Article 11 with the statistical data referred to in Article 9, the High Contracting Parties will indicate in their returns the units employed in the statistics so communicated.

VI.

It is understood that provision would have to be made to give the necessary exemptions for scientific investigations.

Geneva, July 10th, 1930.

LEAGUE OF NATIONS

SETTLEMENT OF BULGARIAN REFUGEES

4

Fifteenth Report

by the Commissioner of the League of Nations in Bulgaria

Period from February 15th to May 15th, 1930.

[Translation.]

A. Settlement of Bulgarian Refugees.

I. 1926 REFUGEE SETTLEMENT 7% LOAN.

Appendix No. 1 of the present report shows the position of the 1926 Refugee Settlement 7% Loan at April 31st, 1930, including the accrued interest on the unexpended balance of the loan which is on deposit in London and New York. The sterling value of the sums still available in foreign moneys is about £567,592.

II. YIELD OF REVENUES ASSIGNED AS SECURITY FOR THE LOAN.

The amounts paid into the account for revenues assigned as security for the 1926 7% Loan in February, March and April 1930 are shown below in leva:

Chapters of the budget	Receipts			Monthly average of budget estimates	
				Year 1929-30	Year 1930-31
	February	March	April	February-March	April
Chapter 15 (excise duty on alcohol, etc.) . . .	2,044,805	2,046,130	3,849,203	6,666,666	5,416,666
Chapter 16 (excise duty on salt, etc.)	22,675,175	21,437,577	25,855,808	25,416,666	27,500,000
Chapter 21 (sale of matches)	6,201,000	7,578,000	9,279,000	9,166,666	9,583,333
Total	30,920,980	31,061,707	38,984,011	41,249,998	42,499,999

The receipts from the assigned revenues are usually at their lowest at this period of the year. They amounted to 120,229,284 leva in the previous quarter, but fell to 100,966,698 leva in these three months. The service of the loan was, however, fully assured, since it required only about 42 million leva.

The income from taxes etc., has been considerably affected lately by the present crisis and the general receipts of the Treasury have decreased as compared with last year. Consequently, the yield from the assigned revenues was slightly lower during the period under review than during the corresponding period last year, when receipts amounted to 105,574,963 leva.

Payments by refugees as interest and for the repayment of expenditure incurred in settling them were (in leva) as follows:

	February	March	April	Previous payments	Total payments up to the end of April
Interest	55,991	114,513	72,077	816,535	1,059,116
Amortisation	319,570	671,891	354,951	8,432,034	9,778,446
Total	375,561	786,404	427,028	9,248,569	10,837,562

These payments, almost all of which still represent payments in advance, have remained at the same level as in the preceding quarter. Payments in respect of the few contracts which fell due (two years after signature) during this period were effected without difficulty. In view of the present critical position, this is an encouraging sign of the refugees' desire to carry out their obligations punctually.

III. BUDGET ESTIMATES FOR THE ASSIGNED REVENUES FOR THE YEAR 1930-31.

The budget for the fiscal year 1930-31, voted by the Sobranje on May 13th, contains the following estimates for receipts from the revenues assigned as security for the service of the 1926 7% Loan.

(Leva)

	Estimates for the year 1930-31	Estimates for the year 1929-30	Difference
Chapter 15 (excise duty on alcohol, etc.)	65,000,000	80,000,000	— 15,000,000
Chapter 16 (excise duty on salt, etc.) . .	330,000,000	305,000,000	+ 25,000,000
Chapter 21 (sale of matches)	115,000,000	110,000,000	+ 5,000,000
Total	510,000,000	495,000,000	+ 15,000,000

The annual amount required for the service of the loan is about 170 million leva. The receipts from the assigned revenues in the past year, as compared with the estimates for the year 1930-31, are as follows:

(Leva)

	Estimates for the year 1930-31	Receipts in the year 1929-30	Difference
Chapter 15 (excise duty on alcohol, etc.)	65,000,000	57,942,232	— 7,057,768
Chapter 16 (excise duty on salt, etc.) . .	330,000,000	346,193,326	+ 16,193,326
Chapter 21 (sale of matches)	115,000,000	110,874,353	— 4,125,647
Total	510,000,000	515,009,911	+ 5,009,911

The estimated receipts are, therefore, no greater than the actual receipts of the preceding year. The surpluses in Chapter 16 will, if they continue, offset the deficit in Chapter 15 which, as I have repeatedly stated in my preceding reports,¹ is mainly due to the poor yield of the excise duty on alcohol.

¹ Since the opening of the assigned revenues account, there has every year been a regular decrease in the estimated receipts for Chapter 15.

Estimated receipts for Chapter 15:

Year	Leva
1926-27	120,000,000
1927-28	100,000,000
1928-29	80,000,000
1929-30	65,000,000

IV. EXECUTION OF THE SETTLEMENT PLAN.

There was an unusually wet spring this year and, at the time of sending the report, settlement work had only just begun. The position has therefore remained almost unchanged during the quarter, and the figures below are practically the same as those given in the report. The General Directorate for the Settlement of Refugees has, however, taken the necessary steps to ensure that, in spite of the delay in beginning the work, this year's programme should be carried out—that is, to say, that the greater part of what has still to be done should be completed by the winter. It seems, therefore, that, unforeseen contingencies apart, only a little work remains for next year, such as the draining of the marshes, the construction of the railway and the building of houses in the Karaboas district.

This winter the refugees passed through an extremely difficult period. The effects of the poor harvest were keenly felt, and had not the General Directorate distributed seed in some districts, the refugees would not have had enough food. It is of good augury for the future of the work that, in spite of this fresh period of trial, the refugees have not allowed themselves to become disheartened and have retained unshaken their confidence in better times to come. Everywhere land has been put under cultivation, and much wooded ground was cleared during the winter to make it ready for the spring sowing. It is too early as yet to express a definite opinion with regard to the coming harvest, but it promises so far to be an unusually good one, and there is reason to hope that the refugees will at last be rewarded for their persistence.

(a) *Various Supplies.*

Less seed was distributed during this quarter. Large quantities were supplied in the autumn, when, as the result of the very bad harvest, a large number of refugees had to be provided with seed. These supplies, the accounts for which were drawn up only during these last months, amounted to 3,227,551 kilogrammes, representing 20,226,273 leva.

Since the start of the work, 10,939,811 kilogrammes of seed (worth 65,102.416 leva) have been distributed.

This spring, 708 head of *livestock* were delivered.

The amount of livestock distributed from the beginning is as follows:

	Animals	Value
Horses and mules	5,937	53,292,487 leva
Oxen and cows	12,145	71,492,112 „
Buffaloes	2,510	15,375,001 „
	20,592	140,159,600 leva

In the distribution of *material* there was no important change.

(b) *Houses.*

The position at the time of sending the report is summed up in the following table:

	Houses		Sheds		Byres	
	Finished	Contracted for	Finished	Contracted for	Finished	Contracted for
Built by private enterprise	3,339	2,241	2,546	1,495	2,905	2,051
Built on a monopoly basis by the General Directorate for the Settlement of Refugees . .	365	958	279	893	309	577
Built by the refugees themselves	174	400	129	268	137	308
Total	3,878	3,779	2,954	2,656	3,351	2,936
Figures at the end of the previous quarter . . .	3,731	1,962	2,869	1,468	3,257	1,736

It will be seen from the above figures that, while there has been little change in the number of houses finished, this year's building programme has been considerably extended.

Up to the present, the number of applications for houses received is	9,330
Number of houses ready	3,878
Number of houses now being built	3,779
	7,657
Number of houses still to be built	1,673

Now that the General Directorate has acquired more experience in this kind of work, I expect that the obstacles formerly encountered (difficulties in connection with supplies of raw materials, disputes with the contractors) will not recur, and that almost all the houses now building will be finished by the autumn.

The majority of the 1,673 houses still to be built, for which no provision has yet been made, are intended for refugees who are to be removed from the frontier zones and settled on land in the lower plain of Karaboas. The building of these houses depends, therefore, upon the completion of the dyke, and it will hardly be possible to begin this work before next year.

As I have said, building work began this year later than had been expected. Advantage was taken, however, of this forced delay to collect the stocks of material and place them on the sites.

The price of houses under recent contracts are practically the same as last year, varying, for a finished house, between 65,000 and 78,000 leva, *i.e.*, about £100.

(c) *Land.*

The position, which is practically the same as at the end of the previous quarter, is shown in the following table:

Department	Land surveyed (decares)	Land allotted (decares)	Number of families	Average area allotted (decares)
Burgas	549,393	485,759	11,747	41.35
Varna	68,626	61,098	1,555	39.29
Vidin	8,929	8,929	282	31.66
Petritch	120,470	110,352	4,952	22.28
Vratcha	22,621	21,872	639	34.17
Plovdiv	24,505	23,971	1,290	18.58
Plevna	18,761	17,201	517	33.27
Rustchuk	47,789	32,043	855	37.47
Stara Zagora	14,051	12,886	395	32.62
Tirново	17,111	17,012	455	37.39
Haskovo	156,876	131,729	3,012	43.73
Schumen	40,778	38,443	1,120	34.32
Mastanla	81,410	51,701	1,441	35.88
Total	1,171,320	1,012,996	28,260	35.84
Figures at February 15th, 1930. .	1,164,787	1,008,755	28,249	35.71

The Land Valuation Committee has done a great deal of work and it has valued the land of 20,900 families (14,146 at the end of the previous quarter). The General Directorate has drawn up plans of plots and presented them to the owners (23,753).

The area mechanically ploughed has increased from 50,570 decares to 57,263 decares. A total area of 39,000 decares has been cleared since the beginning, as compared with 28,000 on February 15th.

So far 48 million leva have been spent on the land—12,500,000 on mechanical ploughing, and 35,500,000 on clearing work.

(d) *Supply of Drinking Water.*

The position is unchanged.

(e) *Means of Communication.*

Work having only just been resumed at the time of sending the report, there has been no important progress with regard either to the railways or to the roads.

I stated in my last report that resort had been had to arbitration in order to settle the disputes with the contractors for the Rakovsky-Mastanla Railway, due to the rise in the price of materials and labour. Agreement was finally reached; the sum to be paid to the contractors, over and above the prices fixed by the contracts, being settled at approximately 15,500,000 leva.

As I explained in the same report, I decided that the expenses for the construction of the line to be borne by the loan should be restricted to the sum laid down in the Settlement Plan,

300 million leva. The payments already made amount to 255 million leva, and to these must now be added the increase in the prices paid to the contractors. Consequently, a sum of 29,500,000 leva is still available. It is understood that the expenses that will necessarily be incurred in opening the line shall be charged to the railways budget.

(f) *Draining of Marshes.*

(i) The construction of the dyke in the lower plain of *Karaboas* is being pushed forward rapidly, the Danube spring floods having been less serious than usual.

It will be remembered that this important work was entrusted to the Directorate of Compulsory Labour. There is now every reason to expect that it will be completed by the time anticipated. At present, 2,900 workmen are employed, and the number will be increased to 4,500 on July 1st.

(ii) The draining of the *Messemvria* marsh is proceeding regularly and according to programme.

This is not the case with the *Stralja* and *Mandra* marshes. At *Stralja*, only 15 per cent of the work had been completed at the end of seventeen months. The undertaking has had to be wound up, and negotiations have been opened with a view to making the Directorate of Compulsory Labour responsible for the continuation of the work. At *Mandra*, after seven months' work, hardly any progress has been made, and the General Directorate will probably be obliged to cancel the contract.

(g) *Health.*

1. *Anti-malaria Campaign.* — The anti-malaria service, established in 1927 in the Department of Burgas under Professor Swellengrebel's plan, was taken over, as arranged, by the Public Health Authority on April 1st.

I stated in my last report that the expenses which would be incurred in completing certain work undertaken last year would be met by a supplementary credit for health expenses of 2,500,000 leva, which was approved by the Financial Committee at its January 1930 session. We have also been obliged to provide for the maintenance of part of the medical staff until the autumn, in order to facilitate the transition from the old to the new organisation.

The additional expenses for the Burgas anti-malaria service, which have thus been made chargeable to the loan, amount to 1,865,750 leva:

	Leva
For sanitary work	1,390,250
For staff expenses.	475,500

2. *Extension of our Health Services.* — In accordance with the request received from the Bulgarian Government in September last, the Health Organisation of the League of Nations appointed an expert—Professor Jessner, of Breslau—to enquire into the conditions for an extension of the health services in the Department of Burgas. Professor Jessner, accompanied by Dr. Olsen of the Secretariat, came to Bulgaria in April.

After visiting the area, Professor Jessner worked out a plan which will be laid before the Health Organisation. Professor Jessner intends to supervise the carrying out of the plan, and proposes to spend several weeks in the Department of Burgas next summer. We are extremely grateful to Professor Jessner for the valuable assistance he is kindly giving us in improving the health of the people of this district, where such a large number of refugees is settled.

The expenditure that will necessarily be incurred in the establishment of the new service, and its maintenance until April 1st, 1931 (when it will be taken over by the Public Health Authority), have not yet been fully ascertained, but will probably exceed the credits provided for. After 1,865,750 leva have been appropriated for the winding-up of our share of the work in the anti-malaria campaign, out of the supplementary credit of 2,500,000 leva approved by the Financial Committee, only 634,250 leva remain for the proposed extension. The expenditure on Professor Jessner's programme will probably considerably exceed this sum.

B. 7 ½ % Stabilisation Loan of 1928.

The position of the 7 ½ % 1928 Loan at April 30th, 1930, is shown in Appendix II of this report. The available amount on deposit at London and Paris in foreign exchange is about £695,000.

I. YIELD FROM THE ASSIGNED REVENUES.

During February, March and April 1930, the sums received by way of revenues assigned as security for the loan were (in leva) as follows:

February	March	April	Monthly average of budget estimates	
			Year 1929-30 (Feb.-March)	Year 1930-31 (April)
51,736,154	66,311,028	59,602,648	113,333,333	108,333,333

The decrease in receipts from the assigned revenues which began in the previous quarter (when these receipts came to 281,926,561 leva) became still more marked in the last three months, the total sum received being only 177,649,830 leva, as compared with 360,804,753 in the corresponding period last year.

The drop in imports has meant a rapid falling-off in Customs receipts, which will continue without any appreciable change so long as it is not possible to dispose of the stocks accumulated in the country as a result of last year's excessive imports.

The service of the loan was, however, assured without any difficulty, since only about 72 million leva (approximately 40 per cent of the available sum) were employed for this purpose.

Receipts from the assigned revenues for the year ended on March 31st, 1930, compared with the estimates, were as follows:

(Leva)

Chapter of the budget	Budget estimates for the year 1929-30	Receipts in the year 1929-30	Difference
Chapter 11 (import duties)	1,185,000,000	1,236,209,845	+ 51,209,845
Chapter 12 (export duties)	80,000,000	63,113,528	— 16,886,472
Chapter 13 (3% <i>ad valorem</i> tax on exported goods)	10,000,000	3,833,527	— 6,166,473
Chapter 14 (warehousing and statistical dues)	85,000,000	103,965,125	+ 18,965,125
Total	1,360,000,000	1,407,122,025	+ 47,122,025

During these twelve months, the service of the loan required about 291 million leva, that is to say, approximately only one-fifth of the total assigned revenues.

II. BUDGET ESTIMATES FOR THE ASSIGNED REVENUES FOR THE YEAR 1930-31.

The budget for the fiscal year 1930-31 contains the following estimates for receipts from revenues assigned as security for the 7 ½ % 1928 Loan:

(Leva)

Chapter of the budget	Estimates for the year 1929-30	Receipts in the year 1929-30	Difference
Chapter 11 (import duties)	1,200,000,000	1,236,209,845	— 36,209,845
Chapter 12 (export duties)	40,000,000	63,113,528	— 23,113,528
Chapter 13 (3 % <i>ad valorem</i> tax on exported goods)	—	3,835,527	— 3,835,527
Chapter 14 (warehousing and statistical dues)	60,000,000	103,965,125	— 43,965,125
Total	1,300,000,000	1,407,122,025	— 107,122,025

There are no longer any receipts under Chapter 13, as a result of the application of the law of July 1st, 1929, on trade in foreign exchange, which abolished the 3% tax on goods.

The law on exports, voted on March 27th, 1930, exempted certain products from payment of export duties and various other taxes. The estimated receipts under Chapters 12 and 14 were consequently reduced.

In accordance with the stipulations of Article II (4) of the Protocol of March 10th, 1928, the Trustees of the 7 ½ % 1928 Loan agreed to the two laws above mentioned.

III. EMPLOYMENT OF THE LOAN.

I. £1,250,000 Sterling Block for Means of Communication (Article VI of the Protocol).

(a) Railways:

The following figures summarise the position at February 1st, 1930:

Leva

Total works authorised	630,000,000
Value of contracts concluded and work undertaken on a monopoly basis by the Administration	480,000,000
Sums already allotted to the railways	389,693,207

(b) *Roads.*

The progress has not been so satisfactory as we had hoped, and it is now certain that a large part of the programme cannot be completed until next year. Out of a total credit of 176,266,179 leva, commitments amount to only 119,209,300 leva, which the actual expenditure (excluding an advance of £10,000,000 to the Directorate of Compulsory Labour), viz., 11,310,758 leva, is still negligible.

I regret that my suggestions for hastening the drawing up of the plans, to which I referred in my last report, have not been adopted by the Administration of Bridges and Highways.

Additional undertakings have been entrusted to the Directorate of Compulsory Labour, representing an increase, according to the specifications, of 3,440,000 leva.

The following figures summarise the position at April 30th, 1930:

	Expenditure approved	Commitments on contracts (in leva)	Sums actually expended
(a) <i>By contracts:</i>			
• Roads	57,760,000	49,779,300	8,292,503
Bridges	54,800,000	39,221,000	3,018,255
(b) <i>By the Directorate of Compulsory Labour:</i>			
Roads	35,540,000	30,209,000	10,000,000 ¹
(c) <i>Purchase of material:</i>			
Motor tanks	1,000,000	—	—
	149,100,000	119,209,300	21,310,758

2. £500,000 *Sterling Block for Reconstruction of the Devastated Areas*

(Article VIIA of the Protocol).

The total expenditure hitherto approved is 350,669,100 leva, a larger sum than the proceeds from the block earmarked for the devastated areas — 336 million leva. In point of fact, as I have explained in preceding reports, savings are always effected as compared with the specifications when the contracts are actually placed, and the total commitments will not exceed the equivalent of the £500,000.

Except for the construction of a bridge over the Maritza, which will not be completed until next year, all the work will, unless unforeseen circumstances arise, be finished by the winter.

The following figures summarise the position at May 1st, 1930:

(Leva)

	Expenditure approved	Commitments on contracts	Sums actually expended
Public buildings	267,448,100	229,578,084	139,291,641
Roads and bridges	46,725,000	39,334,820	13,172,549
Railways	7,375,000	6,342,850	5,854,072
Water conduits	10,421,000	9,694,262	4,975,184
Regulation of rivers	9,700,000	8,825,000	6,533,937
Overhead and various expenditure . . .	9,000,000	—	3,353,454
Total	350,669,100	293,769,016	173,180,837

IV. BUDGET.

According to particulars given by the Ministry of Finance, the 1929-30 budget results (including the budget for railways and harbours, the "special funds" incorporated in the budget and the

¹ Advance on account for the work to be carried out.

sum paid by the Greek Government—130 million leva—under the Molloff-Caphandaris Convention) were, as appears from the closed accounts at March 31st, 1930, as follows:

	Results of the budget for the year 1929-30, ended at March 31st, 1930	Budget estimates for the year 1929-30 (In thousands of leva)	Difference
Receipts	7,580,876	7,933,450	— 352,574
Expenditure	6,482,939	8,725,960	— 2,243,021
Book surplus	1,097,937	— 792,510	— 1,890,447

In order to ascertain the actual Treasury position at March 31st, the following sums must be deducted from the anticipated surplus:

	In thousands of leva
Book surplus	1,097,937
(a) Expenditure under the extraordinary budget of 1927-28 and 1928-29	28,280
(b) Expenditure on account of supplementary credits voted during the war	113,061
(c) Orders and commitments on account of the year 1929-30	758,664
	900,005
Actual surplus	197,932

According to Article VI of the Protocol of March 10th, 1928, the Bulgarian Government was to keep the 1929-30 budget (excluding the special funds) within the limit of 7,000 million leva. Expenditure has amounted to 6,482,939,000 leva, to which must be added the expenditure not yet actually effected, viz., 900,005,000 leva. The total expenditure under the ordinary budget and the railways budget was 7,382,942,000 leva. Deducting the special funds (223 millions), expenditure amounts to 7,159 million leva, a slightly higher figure than the maximum fixed.

The actual surplus may be reduced as a result of the budget system in force, which allows expenditure made during the three months following on the financial year—*i.e.*, up to June 30th—to be included in the accounts for the financial year ended at March 31st.

Further, a supplementary budget of 463 millions was voted on April 3rd, 1930. It is specially laid down in the finance law on the supplementary budget that expenditure on account of this budget is to be met by the savings effected on the ordinary budget, as also by the surplus receipts of this budget.

The following table shows the receipts collected during the year 1929-30:

	(In thousands of leva)			
	Results of the year 1928-29	Results of the year 1929-30	Estimates for the year 1929-30	+ or — in the year 1929-30, as compared with the estimates
Direct taxes	706,064	574,619	920,000	— 345,380
Indirect taxes	2,797,763	2,807,416	2,818,000	— 10,583
Duties	748,413	803,230	717,000	+ 86,231
Fines and confiscations	103,853	85,970	93,000	— 7,029
Railways and harbours	—	—	140,000	— 140,000
Posts, telegraphs, telephones	275,672	293,998	290,000	+ 3,998
State domain and capital	240,543	362,033	498,000	— 135,966
Share of the communes in teachers' salaries	449,454	515,203	477,000	+ 38,203
Miscellaneous revenue	114,587	92,004	121,000	— 28,996
Revenue from closed budgets	439,423	415,947	200,000	+ 215,947
Total	5,875,774	5,950,426	6,274,000	— 323,575
Funds	275,597	242,427	466,150	— 223,723
Railways	1,205,263	1,258,023	1,193,300	+ 64,723
Sum paid by the Greek Government	—	130,000	—	+ 130,000
Grand total	7,356,634	7,580,876	7,933,450	— 352,574

The 140 million leva entered under the heading "Railways" in the estimated receipts for the year 1929-30, represents the sum paid by the railways under the new railway organisation law, in amortisation of their debt to the State. The corresponding deficit should disappear when the railways have drawn up their balance-sheet and profit and loss account for the year 1929-30.

The above figures show that receipts were very much lower than the estimates. This is directly due to the economic crisis, which, by paralysing production in all its branches, quickly reduced the tax-paying capacity of the country. As already stated, the drop in imports led to a rapid falling-off in Customs receipts, which represent almost one-sixth of the total receipts. Further, the Government was obliged to postpone collection of the land tax and house duty until next year, since these taxes cannot be collected before the harvest. There were considerable surpluses in the first months of the year, but deficits appeared in the autumn and rapidly increased. In the last three months the yield was particularly poor, as is shown by the following table.

	Receipts of the ordinary budget		Difference
	Year 1929-30	Year 1928-29	
	(In thousands of leva)		
January	376,259	435,882	— 59,623
February	460,457	497,613	— 37,156
March	388,714	545,419	— 157,705
Total	1,285,430	1,478,914	— 193,484

The receipts in the last three months of the year 1929-30 represent only 72 per cent of the budget estimates. In the corresponding period last year, they amounted to 116 per cent of the estimates.

There will be no permanent improvement until the economic crisis is past—in all probability in the autumn, when the harvest, which so far promises to be a very good one, has been gathered. In the meanwhile, the budget must be strictly adhered to and the policy of economy initiated by the Finance Minister must be carried out more energetically than ever.

The results of the railways budget have, on the other hand, been satisfactory, although, since October 1929, there has been a considerable falling-off in receipts, due both to the economic crisis and to the seasonal decrease in traffic.

	Results of the	Railways budget	Difference
	railways budget for the year 1929-30, as shown on March 31st, 1930	estimates for the year 1929-30	
	(In thousands of leva)		
Receipts	1,258,023	1,193,300	+ 64,723
Expenditure	789,679	1,280,771	— 491,092
Book surplus	468,344	— 87,471	+ 565,815

The balance-sheet and profit and loss account for the past year had not yet been drawn up at the time of sending this report. The results of the first year's administration under the new system cannot yet, therefore, be ascertained with certainty. Very probably, however, the anticipated surplus at March 31st will, even if reduced, be enough to meet the liabilities incurred by the railways under the reorganisation law.

The ordinary budget for the new financial year was voted on May 13th, 1930. It is summarised in the following table:

(In thousands of leva)

Expenditure		Revenue	
Head of State	75,486	Direct taxes	942,000
Public debt	2,290,000	Indirect taxes	2,731,000
Audit office	21,818	Duties	759,000
Foreign Affairs and Public Wor- ship	144,500	Fines and confiscations	89,000
Interior and Public Health	442,396	Railways and ports	125,850
Education	898,760	Posts, Telegraphs and Telephones	306,000
Finance	192,500	Revenue from the domains and capital	530,000
Justice	207,054	Share of the communes and the salaries of schoolmasters	485,000
War	1,087,040	Miscellaneous	806,000
Commerce, Industry and Labour	135,451	Receipts on account of past budgets	226,000
Agriculture and Domains	200,600		
Public Works	393,669		
Railways	54,703		
Posts, Telegraphs and Telephones	227,500		
Aeronautics	36,706		
Bulgarian Commissariat for Reparations	37,000		
	6,445,186		
Incorporated Funds	553,657		
Total	6,998,843	Total	6,999,850

The ordinary budget for the year 1930-31 (including special funds and sums paid by the Greek Government), compared with the preceding year as at March 31st, 1930, is as follows:

	Results of the year 1929-30 as at March 31st, 1930	Budget estimates for the year 1930-31
	(In thousands of leva)	
Receipts	6,322,853	6,999,850
Expenditure	5,693,260	6,998,843

No important change, as compared with the preceding year's budget, was introduced by the finance law on the 1930-31 budget. Certain provisions of this law should, however, be mentioned. The Minister of Finance is required, in view of the present difficulties in collecting taxes, to effect a total saving of 500 millions as compared with the estimated expenditure. Government clerks engaged by the day are no longer to be employed. No payment to a foreign country may be made without written authorisation by the Finance Minister, who is further directed to draw up during the year regulations establishing officials' salaries on a uniform basis.

At the time of sending the report, the railways budget for the year 1929-30 had not yet been laid before the Sobranje.

V. NATIONAL BANK.

The Bank has continued the policy that it adopted in view of the difficulties caused by last year's poor harvest. A restriction of credits is still justified as a necessary consequence of the present critical state of affairs, which—although there are signs that an early improvement may be hoped for—still renders the greatest caution imperative.

By May 15th, industrial investments were reduced to a total of 1,048 millions, viz.: 680 millions for bills and 368 millions for advances. At the beginning of the quarter, industrial investments represented 1,237 millions, having reached their highest point since the stabilisation—1,718 millions—on October 31st, 1929.

The net amount of gold exchange used as cover further declined from 576 to 344 millions (it should be noted that gold exchange holdings have remained practically stable since May 31st, when they amounted to 366 millions). As against this, the Bank's total exchange holdings, including, not only gold exchange used as cover, but also all other exchange, have not greatly altered—759 millions on May 15th, as compared with 773 millions on February 15th. Following activity in the tobacco market, there was a slight rise in exports in the last months, while imports, on the other hand, show a heavy decline. It may therefore be inferred from the present trend of foreign trade that the depression which has influenced exchange holdings since the beginning of 1929 is becoming less marked.

It would be rash to express a definite opinion now with regard to the value of the next harvest. The prospects, which are at present excellent, will—it is to be hoped—be borne out by the results. Winter cultivation was carried out under very good conditions, and circumstances were favourable for the spring sowings. From the only crop the quantity of which can at present be anticipated—the colza crop, largely exported—more than 20 million kilos will be obtained. If, therefore, the expectations of the 1930 harvest are fulfilled, it will be possible to export large quantities and, even should world prices remain at last year's level, a considerable yield from exports may be counted upon from the autumn onwards.

The reduction of the National Bank's commercial credits was made easier by the stagnation that still prevails in every branch of the country's economic life. Business is slack, and business men who have discharged their existing liabilities decline to contract fresh ones. The opposition to the National Bank's policy which, as I stated in my last report, was at first almost violent, has been succeeded by a more objective understanding of the facts. The various credit houses have moreover greatly restricted their investments and increased their available funds. In spite of the comparative easiness of capital, the rate of interest has remained practically at last year's level, and the world reduction in money rates has not, on account of the crisis, had any great effect.

There has been a welcome advance in the tendency of the credit houses towards concentration (in particular, the three leading purely Bulgarian banks have lately amalgamated). A law exempting amalgamation proceedings from duties and taxes has been voted; and this rationalising policy cannot be too much encouraged. The depreciation of the leva led to the creation of an unduly large number of small and insecurely established banks which, now that normal conditions have been restored, find it very difficult to carry on, and would, if maintained in their present state, be an obstacle to the organisation of banking on more rational lines.

An important step recently taken by the Co-operative General Board¹ should be mentioned here. The co-operative movement in Bulgaria is deeply rooted, and has greatly developed since the war, as will be seen from the following figures. Twenty per cent of the active population belong

¹ The Co-operative General Board, the research and supervisory organ of the co-operative societies, which was set up by the law on the Co-operative Central Bank, is an autonomous institution, which is in direct relations with the Ministries and Departments with regard to questions with which it is concerned. It includes the members of the Board of the Co-operative Central Bank, and representatives of the co-operative societies elected at the societies' annual congress.

to the co-operative societies, and on December 31st last the credits of these societies with the banks to which co-operative credits are entrusted (the Agricultural Bank and the Co-operative Central Bank) amounted to 1,898 millions, while the societies' own resources were 2,485 millions. The results obtained by the Bulgarian co-operative societies are, however, clearly not as good as they should be in comparison with the work done. A general reform of the system is called for, and, with this end in view, the Co-operative General Board has directed a committee specially appointed for the purpose (including representatives of the Government Departments and of the co-operative societies) to examine what reforms should be introduced into the organisation and work of the societies in order that they may give larger returns. Further, the Board has decided to lay the conclusions of this enquiry before the Economic and Financial Section of the League and to ask the latter to assist it in achieving its object.

This action on the part of the Co-operative General Board is an important step forward in the economic reconstruction of Bulgaria.

VI. LEGISLATION.

Article 3 of the Stabilisation and Monetary Law fixed at 680/1000ths the fineness of the silver coins to be put in circulation. This fineness was reduced to 500/1000ths by a law voted on February 26th, 1930, amending Article 3 of the first mentioned law.

VII. STATISTICS.

(Supplied by the National Bank.)

A. Foreign Trade in the First Four Months.

	(In thousands of leva)		
	1928	1929	1930

			(Deposited with the National Bank of Bulgaria.)

Appendix II.

STATEMENT OF THE 7 ½ % STABILISATION LOAN OF 1928 AS AT APRIL 30TH, 1930.

	Sterling block			Dollar block	French francs block
	£	s.	d.	\$	
Nominal amount	1,800,000	0	0	13,000,000	130,000,000
Net amount	1,656,000	0	0	11,960,000	121,000,000
<i>Deduct:</i>					
Stamp duties and expenses	39,286	7	0	49,250	5,200,000
Total	<u>£1,616,713</u>	<u>13</u>	<u>0</u>	<u>\$11,910,750</u>	<u>Fr. 116,350,000</u>
Leva					
Equivalent in leva				3,365,249,061	
Add				5,000,000 ³	
Total				<u>3,370,249,061</u>	
Utilised up to April 30th				2,666,982,630	
Surplus available on that date				<u>703,266,431⁴</u>	

¹ The equivalent of the half-year's reserve was refunded by the Bulgarian Government out of the proceeds of the Stabilisation Loan in execution of paragraph 2 of Article VI of the Protocol of March 10th, 1928 (Item 6 of Annex III to that Protocol).

² Not including a sum of £24,144 os. 1d. which was used direct to pay in sterling for material supplied for the Rakovsky-Mastanla Railway.

³ The equivalent of interest collected by the Bulgarian Government on money deposited abroad and paid into the loan account to make up the sum earmarked for road improvement (see twelfth report, page 9, (b) Roads).

⁴ This figure represents:

- (a) The unexpended balance of the block of £1,250,000 earmarked for improvement of means of communication, namely:
 - Leva 75,164,013 deposited with the National Bank of Bulgaria;
 - Frs. 6,311,483.30 deposited with the Bank of France;
 - £645,213 13s. 0d. deposited with the Bank of England.
- (b) The unexpended balance of the block of £500,000 earmarked for the reconstruction of devastated areas, namely:
 - Leva 161,000,000 deposited with the National Bank of Bulgaria.

-

A. INTRODUCTION.

Many endeavours have been made to unify the law on bills of exchange. The first go back many years; the most recent and the most important were the Conferences held at The Hague in 1910 and 1912 at the instance of the Netherlands Government.

The latter Conference led to the conclusion of a convention and the establishment of a Uniform Regulation, which were adopted by the delegates of twenty-seven States. For various reasons, however, the convention was never ratified.

In 1920, the Brussels Financial Conference passed a resolution inviting the League of Nations to take action in this matter, and the Economic Committee was accordingly instructed by the Council to take up the question. The investigation which it undertook, with expert assistance, lasted from 1921 to 1929, and led to the establishment of draft conventions realising a certain uniformity in the laws of what is called the continental system regarding bills of exchange, promissory notes and cheques.

These drafts were accompanied by two other draft conventions for the settlement of certain conflicts of laws, together with the sanctions resulting from failure to observe the stamp laws, the former dealing with bills of exchange and promissory notes, the latter with cheques.

As decided by the Council, these drafts were communicated to all States, Members and non-Members of the League, who were invited to transmit their observations, and to say whether they considered that these drafts could usefully serve as the basis of discussion at an international conference to be held later. This communication was made in a circular letter from the Secretary-General of the League of Nations, dated July 19th, 1928.

Of the replies received, thirty-four contained detailed observations, and the general effect of all the replies was in favour of calling a conference on the basis of the proposed drafts.

In these circumstances, the Secretary-General of the League of Nations, as instructed by the Council, wrote on August 27th, 1929, to the Members of the League and the non-Member States, inviting them to attend an international Conference at Geneva on February 17th, 1930. This date was afterwards changed.

The Conference finally met on May 13th, 1930, under the chairmanship of Dr. J. Limburg, member of the Council of State of the Netherlands, who had been invited to hold this position by a decision of the Council on January 14th, 1930.

* * *

The International Conference for the unification of laws on bills of exchange, promissory notes and cheques held thirty-five meetings between May 13th and June 7th, 1930. It was attended by delegates from the following Members of the League of Nations, and non-Member States:

Austria, Belgium, Brazil, Colombia, Czechoslovakia, Danzig, Denmark, Ecuador, Finland, France, Germany, Great Britain and Northern Ireland, Greece, Hungary, Italy, Japan, Latvia, Luxemburg, Netherlands, Norway, Peru, Poland, Portugal, Roumania, Siam, Spain, Sweden, Switzerland, Turkey, Venezuela and Yugoslavia.

The United States of America sent an observer.

On the invitation of the Council, representatives of the Economic Committee of the League of Nations, the International Chamber of Commerce, and the International Institute for the Unification of Private Law at Rome attended in an advisory capacity.

As a basis of discussion, the Conference took the drafts drawn up by the League of Nations Committee of Legal Experts, which had been communicated to the States in 1928. These drafts were fully discussed at plenary meetings.

The Conference appointed five of its members to form a drafting committee, whose chief duty was to draw up a general report explaining the texts adopted.

After more than three weeks of discussions, the Conference unanimously adopted three conventions, the first providing uniform law for bills of exchange and promissory notes, the second for the settlement of certain conflicts of laws in connection with bills of exchange and promissory notes, the third relating to stamp laws in connection with bills of exchange and promissory notes together with the Protocols to each of these conventions, which were to have the same force and the same effect.

The Conference also adopted a Final Act containing a record of its discussions, together with a number of recommendations, and a resolution relating to the next session of the Conference, which is to be devoted to the study of drafts concerning the laws affecting cheques. This resolution also provides for a number of preparatory measures to facilitate the work of the Conference at its second session.

These three conventions were signed on June 7th, the last day of the Conference, by twenty-two States — namely, Austria, Belgium, Brazil, Colombia, Czechoslovakia, Danzig, Denmark, Ecuador, Finland, France, Germany, Italy, Luxemburg, Netherlands, Norway, Peru, Poland, Portugal, Spain, Sweden, Switzerland and Turkey.

The third convention on stamp laws in connection with bills of exchange and promissory notes was also signed by the delegate of Great Britain.

In the interval between June 7th and September 6th, 1930, end of the period during which the three conventions remained open for signature, the convention providing a uniform law on bills of exchange and promissory notes was also signed by Greece, Hungary, Japan and Yugoslavia, the convention for the settlement of certain conflicts of laws in connection with bills of exchange and promissory notes by the same four countries, and the convention on the stamp laws in connection with bills of exchange and promissory notes by Hungary, Japan and Yugoslavia, which brings the total of signatures to twenty-six.

**B. LIST OF GOVERNMENT DELEGATES
AND OF REPRESENTATIVES OF VARIOUS BODIES INVITED
TO THE CONFERENCE.**

President appointed by the Council: Dr. J. LIMBURG, Member of the State Council of the Netherlands.

His Majesty the King of Yugoslavia:

M. Ilija CHOUMENKOVITCH, Permanent Delegate accredited to the League of Nations, Envoy Extraordinary and Minister Plenipotentiary accredited to the Swiss Federal Council,

Lesquels, après avoir communiqué leurs pleins pouvoirs, trouvés en bonne et due forme, ont convenus des dispositions suivantes:

Article I.

Les Hautes Parties contractantes s'engagent à introduire dans leurs territoires respectifs, soit dans un des textes originaux, soit dans leurs langues nationales, la Loi uniforme formant l'Annexe I de la présente Convention.

Cet engagement sera éventuellement subordonné aux réserves que chaque Haute Partie contractante devra, dans ce cas, signaler au moment de sa ratification ou de son adhésion. Ces réserves devront être choisies parmi celles que mentionne l'Annexe II de la présente Convention.

Cependant, pour ce qui est des réserves visées aux articles 8, 12 et 18 de ladite Annexe II, elles pourront être faites postérieurement à la ratification ou à l'adhésion, pourvu qu'elles fassent l'objet d'une notification au Secrétaire général de la Société des Nations, qui en communiquera immédiatement le texte aux Membres de la Société des Nations et aux Etats non membres au nom desquels la présente Convention aura été ratifiée ou au nom desquels il y aura été adhéré. De telles réserves ne sortiront pas leurs effets avant le quatre-vingt-dixième jour qui suivra la réception par le Secrétaire général de la notification susdite.

Chacune des Hautes Parties contractantes pourra, en cas d'urgence, faire usage des réserves prévues par les articles 7 et 22 de ladite Annexe II, après la ratification ou l'adhésion. Dans ces cas, Elle devra en donner directement et immédiatement communication à toutes autres Parties contractantes et au Secrétaire général de la Société des Nations. La notification de ces réserves produira ses effets deux jours après la réception de ladite communication par les Hautes Parties contractantes.

Article II.

Dans le territoire de chacune des Hautes Parties contractantes, la Loi uniforme ne sera pas applicable aux lettres de change et aux billets à ordre déjà créés au moment de la mise en vigueur de la présente Convention.

Article III.

La présente Convention, dont les textes français et anglais feront également foi, portera la date de ce jour.

Elle pourra être signée ultérieurement jusqu'au 6 septembre 1930 au nom de tout Membre de la Société des Nations et de tout Etat non membre.

Article IV.

La présente Convention sera ratifiée.

Les instruments de ratification seront déposés avant le 1^{er} septembre 1932 auprès du Secrétaire général de la Société des Nations, qui en notifiera immédiatement la réception à tous les Membres de la Société des Nations et aux Etats non membres Parties à la présente Convention.

Article V.

A partir du 6 septembre 1930, tout Membre de la Société des Nations et tout Etat non membre pourra y adhérer.

Cette adhésion s'effectuera par une notification au Secrétaire général de la Société des Nations pour être déposée dans les archives du Secrétariat.

Le Secrétaire général notifiera ce dépôt immédiatement à tous ceux qui ont signé ou adhéré à la présente Convention.

Article VI.

La présente Convention n'entrera en vigueur que lorsqu'elle aura été ratifiée ou qu'il y aura été adhéré au nom de sept Membres de la Société des Nations ou Etats non membres, parmi lesquels devront figurer trois des Membres de la Société des Nations représentés d'une manière permanente au Conseil.

La date de l'entrée en vigueur sera le quatre-vingt-dixième jour qui suivra la réception par le Secrétaire général de la Société des Nations de la septième ratification ou adhésion, conformément à l'alinéa premier du présent article.

Who, having communicated their full powers found in good and due form, have agreed upon the following provisions:

Article I.

The High Contracting Parties undertake to introduce in their respective territories, either in one of the original texts or in their own languages, the Uniform Law forming Annex I of the present Convention.

This undertaking shall, if necessary, be subject to such reservations as each High Contracting Party shall notify at the time of its ratification or accession. These reservations shall be chosen from among those mentioned in Annex II of the present Convention.

The reservations referred to in Articles 8, 12 and 18 of the said Annex II may however, be made after ratification or accession, provided that they are notified to the Secretary-General of the League of Nations, who shall forthwith communicate the text thereof to the Members of the League of Nations and to the non-Member States on whose behalf the present Convention has been ratified or acceded to. Such reservations shall not take effect until the ninetieth day following the receipt by the Secretary-General of the above-mentioned notification.

Each of the High Contracting Parties may, in urgent cases, make use of the reservations contained in Articles 7 and 22 of the said Annex II, even after ratification or accession. In such cases they must immediately notify direct all other High Contracting Parties and the Secretary-General of the League of Nations. The notification of these reservations shall take effect two days following its receipt by the High Contracting Parties.

Article II.

In the territories of each of the High Contracting Parties the Uniform Law shall not apply to bills of exchange and promissory notes already issued at the time of the coming into force of the present Convention.

Article III.

The present Convention, the French and English texts of which shall be equally authentic, shall bear this day's date.

It may be signed thereafter until September 6th, 1930, on behalf of any Member of the League of Nations or non-Member State.

Article IV.

The present Convention shall be ratified.

The instruments of ratification shall be deposited before September 1st, 1932, with the Secretary-General of the League of Nations, who shall forthwith notify receipt thereof to all the Members of the League of Nations and to the non-Member States Parties to the present Convention.

Article V.

As from September 6th, 1930, any Member of the League of Nations and any non-Member State may accede thereto.

Such accession shall be effected by a notification to the Secretary-General of the League of Nations, such notification to be deposited in the archives of the Secretariat.

The Secretary-General shall notify such deposit forthwith to all High Contracting Parties that have signed or acceded to the present Convention.

Article VI.

The present Convention shall not come into force until it has been ratified or acceded to on behalf of seven Members of the League of Nations or non-Member States, including therein three of the Members of the League permanently represented on the Council.

The date of entry into force shall be the ninetieth day following the receipt by the Secretary-General of the League of Nations of the seventh ratification or accession in accordance with the first paragraph of the present Article.

Le Secrétaire général de la Société des Nations, en faisant les notifications prévues aux articles IV et V, signalera spécialement que les ratifications ou adhésions visées à l'alinéa premier du présent article ont été recueillies.

Article VII.

Chaque ratification ou adhésion qui interviendra après l'entrée en vigueur de la Convention conformément à l'article VI sortira ses effets dès le quatre-vingt-dixième jour qui suivra la date de sa réception par le Secrétaire général de la Société des Nations.

Article VIII.

Sauf les cas d'urgence, la présente Convention ne pourra être dénoncée avant l'expiration d'un délai de deux ans à partir de la date à laquelle elle sera entrée en vigueur pour le Membre de la Société des Nations ou pour l'Etat non membre qui la dénonce; cette dénonciation produira ses effets dès le quatre-vingt-dixième jour suivant la réception par le Secrétaire général de la notification à lui adressée.

Toute dénonciation sera communiquée immédiatement par le Secrétaire général de la Société des Nations à toutes les autres Hautes Parties contractantes.

Dans les cas d'urgence, la Haute Partie contractante qui effectuera la dénonciation en donnera directement et immédiatement communication à toutes autres Hautes Parties contractantes et la dénonciation produira ses effets deux jours après la réception de ladite communication par lesdites Hautes Parties contractantes. La Haute Partie contractante qui dénoncera dans ces conditions avisera également de sa décision le Secrétaire général de la Société des Nations.

Chaque dénonciation n'aura d'effet qu'en ce qui concerne la Haute Partie contractante au nom de laquelle elle aura été faite.

Article IX.

Tout Membre de la Société des Nations et tout Etat non membre à l'égard duquel la présente Convention est en vigueur pourra adresser au Secrétaire général de la Société des Nations, dès l'expiration de la quatrième année suivant l'entrée en vigueur de la Convention, une demande tendant à la révision de certaines ou de toutes les dispositions de cette Convention.

Si une telle demande, communiquée aux autres Membres ou Etats non membres entre lesquels la Convention est alors en vigueur, est appuyée, dans un délai d'un an, par au moins six d'entre eux le Conseil de la Société des Nations décidera s'il y a lieu de convoquer une Conférence à cet effet.

Article X.

Les Hautes Parties contractantes peuvent déclarer au moment de la signature, de la ratification ou de l'adhésion que, par leur acceptation de la présente Convention, elles n'entendent assumer aucune obligation en ce qui concerne l'ensemble ou toute partie de leurs colonies, protectorats ou territoires placés sous leur suzeraineté ou mandat; dans ce cas, la présente Convention ne sera pas applicable aux territoires faisant l'objet de pareille déclaration.

Les Hautes Parties contractantes pourront à tout moment dans la suite notifier au Secrétaire général de la Société des Nations qu'elles entendent rendre la présente Convention applicable à l'ensemble ou à toute partie de leurs territoires ayant fait l'objet de la déclaration prévue à l'alinéa précédent. Dans ce cas, la Convention s'appliquera aux territoires visés dans la notification quatre-vingt-dix jours après la réception de cette dernière par le Secrétaire général de la Société des Nations.

De même, les Hautes Parties contractantes peuvent, conformément à l'article VIII, dénoncer la présente Convention pour l'ensemble ou toute partie de leurs colonies, protectorats ou territoires placés sous leur suzeraineté ou mandat.

Article XI.

La présente Convention sera enregistrée par le Secrétaire général de la Société des Nations dès son entrée en vigueur. Elle sera ultérieurement publiée aussitôt que possible au *Recueil des Traités* de la Société des Nations.

The Secretary-General of the League of Nations, when making the notifications provided for in Articles IV and V, shall state in particular that the ratifications or accessions referred to in the first paragraph of the present Article have been received.

Article VII.

Every ratification or accession effected after the entry into force of the Convention in accordance with Article VI shall take effect on the ninetieth day following the date of receipt thereof by the Secretary-General of the League of Nations.

Article VIII.

Except in urgent cases the present Convention may not be denounced before the expiry of two years from the date on which it has entered into force in respect of the Member of the League or non-Member State denouncing it; such denunciation shall take effect as from the ninetieth day following the receipt by the Secretary-General of the notification addressed to him.

Every denunciation shall be immediately communicated by the Secretary-General of the League of Nations to all the other High Contracting Parties.

In urgent cases a High Contracting Party which denounces the Convention shall immediately notify direct all other High Contracting Parties, and the denunciation shall take effect two days after the receipt of such notification by the said High Contracting Parties. A High Contracting Party denouncing the Convention in these circumstances shall also inform the Secretary-General of the League of Nations of its decision.

Each denunciation shall take effect only as regards the High Contracting Party on whose behalf it has been made.

Article IX.

Every Member of the League of Nations and every non-Member State in respect of which the present Convention is in force, may forward to the Secretary-General of the League of Nations, after the expiry of the fourth year following the entry into force of the Convention, a request for the revision of some or all of the provisions of this Convention.

If such request, after being communicated to the other Members or non-Member States between which the Convention is at that time in force, is supported within one year by at least six of them, the Council of the League of Nations shall decide whether a Conference shall be convened for the purpose.

Article X.

The High Contracting Parties may declare at the time of signature, ratification or accession, that it is not their intention in accepting the present Convention to assume any liability in respect of all or any of their colonies, protectorates or territories under suzerainty or mandate, in which case the present Convention shall not be applicable to the territories mentioned in such declaration.

The High Contracting Parties may at any time subsequently inform the Secretary-General of the League of Nations that they intend to apply the present Convention to all or any of their territories referred to in the declaration provided for in the preceding paragraph. In this case, the Convention shall apply to the territories referred to in the notification ninety days after its receipt by the Secretary-General of the League of Nations.

They further reserve the right to denounce it, in accordance with the conditions of Article VIII, on behalf of all or any of their colonies, protectorates or territories under suzerainty or mandate.

Article XI.

The present Convention shall be registered by the Secretary-General of the League of Nations as soon as it comes into force. It shall then be published as soon as possible in the League of Nations *Treaty Series*.

EN FOI DE QUOI les plénipotentiaires susnommés ont signé la présente Convention.

IN FAITH WHEREOF the above-mentioned Plenipotentiaries have signed the present Convention.

FAIT à Genève le sept juin mil neuf cent trente, en simple expédition qui sera déposée dans les archives du Secrétariat de la Société des Nations; copie conforme en sera transmise à tous les Membres de la Société des Nations et à tous les États non membres représentés à la Conférence.

DONE at Geneva, the seventh day of June, one thousand nine hundred and thirty, in a single copy, which shall be deposited in the archives of the Secretariat of the League of Nations, and of which authenticated copies shall be delivered to all Members of the League of Nations and non-Member States represented at the Conference.

ANNEXE I.

LOI UNIFORME CONCERNANT LA LETTRE DE CHANGE ET LE BILLET A ORDRE

TITRE I
DE LA LETTRE DE CHANGE

CHAPITRE I. — DE LA CRÉATION ET DE LA FORME DE LA LETTRE DE CHANGE.

Article premier.

La lettre de change contient :

1. la dénomination de lettre de change insérée dans le texte même du titre et exprimée dans la langue employée pour la rédaction de ce titre;
2. le mandat pur et simple de payer une somme déterminée;
3. le nom de celui qui doit payer (tiré);
4. l'indication de l'échéance;
5. celle du lieu où le paiement doit s'effectuer;
6. le nom de celui auquel ou à l'ordre duquel le paiement doit être fait;
7. l'indication de la date et du lieu où la lettre est créée;
8. la signature de celui qui émet la lettre (tireur).

Article 2.

Le titre dans lequel une des énonciations indiquées à l'article précédent fait défaut ne vaut pas comme lettre de change, sauf dans les cas déterminés par les alinéas suivants :

La lettre de change dont l'échéance n'est pas indiquée est considérée comme payable à vue.

A défaut d'indication spéciale, le lieu désigné à côté du nom du tiré est réputé être le lieu du paiement et, en même temps, le lieu du domicile du tiré.

La lettre de change n'indiquant pas le lieu de sa création est considérée comme souscrite dans le lieu désigné à côté du nom du tireur.

Article 3.

La lettre de change peut être à l'ordre du tireur lui-même.

Elle peut être tirée sur le tireur lui-même.

Elle peut être tirée pour le compte d'un tiers.

Article 4.

Une lettre de change peut être payable au domicile d'un tiers, soit dans la localité où le tiré a son domicile, soit dans une autre localité.

Article 5.

Dans une lettre de change payable à vue ou à un certain délai de vue, il peut être stipulé par le tireur que la somme sera productive d'intérêts. Dans toute autre lettre de change, cette stipulation est réputée non écrite.

Le taux des intérêts doit être indiqué dans la lettre; à défaut de cette indication, la clause est réputée non écrite.

Les intérêts courent à partir de la date de la lettre de change, si une autre date n'est pas indiquée.

Article 6.

La lettre de change dont le montant est écrit à la fois en toutes lettres et en chiffres vaut, en cas de différence, pour la somme écrite en toutes lettres.

La lettre de change dont le montant est écrit plusieurs fois, soit en toutes lettres, soit en chiffres, ne vaut, en cas de différence, que pour la moindre somme.

Article 7.

Si la lettre de change porte des signatures de personnes incapables de s'obliger par lettre de change, des signatures fausses ou des signatures de personnes imaginaires, ou des signatures qui, pour toute autre raison, ne sauraient obliger les personnes qui ont signé la lettre de change, ou du nom desquelles elle a été signée, les obligations des autres signataires n'en sont pas moins valables.

Article 8.

Quiconque appose sa signature sur une lettre de change, comme représentant d'une personne pour laquelle il n'avait pas le pouvoir d'agir, est obligé lui-même en vertu de la lettre et, s'il a payé, a les mêmes droits qu'aurait eu le prétendu représenté. Il en est de même du représentant qui a dépassé ses pouvoirs.

ANNEX I.

UNIFORM LAW ON BILLS OF EXCHANGE AND PROMISSORY NOTES

TITLE I.
BILLS OF EXCHANGE.

CHAPTER I. — ISSUE AND FORM OF A BILL OF EXCHANGE.

Article 1.

A bill of exchange contains:

1. The term "bill of exchange" inserted in the body of the instrument and expressed in the language employed in drawing up the instrument;
2. An unconditional order to pay a determinate sum of money;
3. The name of the person who is to pay (drawee);
4. A statement of the time of payment;
5. A statement of the place where payment is to be made;
6. The name of the person to whom or to whose order payment is to be made;
7. A statement of the date and of the place where the bill is issued;
8. The signature of the person who issues the bill (drawer).

Article 2.

An instrument in which any of the requirements mentioned in the preceding article is wanting is invalid as a bill of exchange, except in the cases specified in the following paragraphs:

A bill of exchange in which the time of payment is not specified is deemed to be payable at sight.

In default of special mention, the place specified beside the name of the drawee is deemed to be the place of payment, and at the same time the place of the domicile of the drawee.

A bill of exchange which does not mention the place of its issue is deemed to have been drawn in the place mentioned beside the name of the drawer.

Article 3.

A bill of exchange may be drawn payable to drawer's order.

It may be drawn on the drawer himself.

It may be drawn for account of a third person.

Article 4.

A bill of exchange may be payable at the domicile of a third person either in the locality where the drawee has his domicile or in another locality.

Article 5.

When a bill of exchange is payable at sight, or at a fixed period after sight, the drawer may stipulate that the sum payable shall bear interest. In the case of any other bill of exchange, this stipulation is deemed not to be written (*non écrite*).

The rate of interest must be specified in the bill; in default of such specification, the stipulation shall be deemed not to be written (*non écrite*).

Interest runs from the date of the bill of exchange, unless some other date is specified.

Article 6.

When the sum payable by a bill of exchange is expressed in words and also in figures, and there is a discrepancy between the two, the sum denoted by the words is the amount payable.

Where the sum payable by a bill of exchange is expressed more than once in words or more than once in figures, and there is a discrepancy, the smaller sum is the sum payable.

Article 7.

If a bill of exchange bears signatures of persons incapable of binding themselves by a bill of exchange, or forged signatures, or signatures of fictitious persons, or signatures which for any other reason cannot bind the persons who signed the bill of exchange or on whose behalf it was signed, the obligations of the other persons who have signed it are none the less valid.

Article 8.

Whosoever puts his signature on a bill of exchange as representing a person for whom he had no power to act is bound himself as a party to the bill and, if he pays, has the same rights as the person for whom he purported to act. The same rule applies to a representative who has exceeded his powers.

Article 9.

Le tireur est garant de l'acceptation et du paiement.
Il peut s'exonérer de la garantie de l'acceptation; toute clause par laquelle il s'exonère de la garantie du paiement est réputée non écrite.

Article 10.

Si une lettre de change, incomplète à l'émission, a été complétée contrairement aux accords intervenus, l'inobservation de ces accords ne peut pas être opposée au porteur, à moins qu'il n'ait acquis la lettre de change de mauvaise foi ou que, en l'acquérant, il n'ait commis une faute lourde.

CHAPITRE II. — DE L'ENDOSSEMENT.

Article 11.

Toute lettre de change, même non expressément tirée à ordre, est transmissible par la voie de l'endossement.

Lorsque le tireur a inséré dans la lettre de change les mots « non à ordre » ou une expression équivalente, le titre n'est transmissible que dans la forme et avec les effets d'une cession ordinaire.

L'endossement peut être fait même au profit du tiré, accepteur ou non, du tireur ou de tout autre obligé. Ces personnes peuvent endosser la lettre à nouveau.

Article 12.

L'endossement doit être pur et simple. Toute condition à laquelle il est subordonné est réputée non écrite.

L'endossement partiel est nul.

L'endossement au porteur vaut comme endossement en blanc.

Article 13.

L'endossement doit être inscrit sur la lettre de change ou sur une feuille qui y est attachée (allonge). Il doit être signé par l'endosseur.

L'endossement peut ne pas désigner le bénéficiaire ou consister simplement dans la signature de l'endosseur (endossement en blanc). Dans ce dernier cas, l'endossement, pour être valable, doit être inscrit au dos de la lettre de change ou sur l'allonge.

Article 14.

L'endossement transmet tous les droits résultant de la lettre de change.

Si l'endossement est en blanc, le porteur peut :

- 1^o remplir le blanc, soit de son nom, soit du nom d'une autre personne;
- 2^o endosser la lettre de nouveau en blanc ou à une autre personne;
- 3^o remettre la lettre à un tiers, sans remplir le blanc et sans l'endosser.

Article 15.

L'endosseur est, sauf clause contraire, garant de l'acceptation et du paiement.

Il peut interdire un nouvel endossement; dans ce cas, il n'est pas tenu à la garantie envers les personnes auxquelles la lettre est ultérieurement endossée.

Article 16.

Le détenteur d'une lettre de change est considéré comme porteur légitime, s'il justifie de son droit par une suite ininterrompue d'endossements, même si le dernier endossement est en blanc. Les endossements biffés sont à cet égard réputés non écrits. Quand un endossement en blanc est suivi d'un autre endossement, le signataire de celui-ci est réputé avoir acquis la lettre par l'endossement en blanc.

Si une personne a été dépossédée d'une lettre de change par quelque événement que ce soit, le porteur, justifiant de son droit de la manière indiquée à l'alinéa précédent, n'est tenu de se dessaisir de la lettre que s'il l'a acquise de mauvaise foi ou si, en l'acquérant, il a commis une faute lourde.

Article 17.

Les personnes actionnées en vertu de la lettre de change ne peuvent pas opposer au porteur les exceptions fondées sur leurs rapports personnels avec le tireur ou avec les porteurs antérieurs, à moins que le porteur, en acquérant la lettre, n'ait agi sciemment au détriment du débiteur.

Article 18.

Lorsque l'endossement contient la mention « valeur en recouvrement », « pour encaissement », « par procuration » ou toute autre mention impliquant un simple mandat, le porteur peut exercer

Article 9.

The drawer guarantees both acceptance and payment.
He may release himself from guaranteeing acceptance; every stipulation by which he releases himself from the guarantee of payment is deemed not to be written (*non écrite*).

Article 10.

If a bill of exchange, which was incomplete when issued, has been completed otherwise than in accordance with the agreements entered into, the non-observance of such agreements may not be set up against the holder unless he has acquired the bill of exchange in bad faith or, in acquiring it, has been guilty of gross negligence.

CHAPTER II. — ENDORSEMENT.

Article 11.

Every bill of exchange, even if not expressly drawn to order, may be transferred by means of endorsement.

When the drawer has inserted in a bill of exchange the words "not to order" or an equivalent expression, the instrument can only be transferred according to the form, and with the effects, of an ordinary assignment.

The bill may be endorsed even in favour of the drawee, whether he has accepted or not, or of the drawer, or of any other party to the bill. These persons may re-endorse the bill.

Article 12.

An endorsement must be unconditional. Any condition to which it is made subject is deemed not to be written (*non écrite*).

A partial endorsement is null and void.

An endorsement "to bearer" is equivalent to an endorsement in blank.

Article 13.

An endorsement must be written on the bill of exchange or on a slip affixed thereto (*allonge*). It must be signed by the endorser.

The endorsement may leave the beneficiary unspecified or may consist simply of the signature of the endorser (endorsement in blank). In the latter case, the endorsement, to be valid, must be written on the back of the bill of exchange or on the slip attached thereto (*allonge*).

Article 14.

An endorsement transfers all the rights arising out of a bill of exchange.

If the endorsement is in blank, the holder may:

1. Fill up the blank either with his own name or with the name of some other person;
2. Re-endorse the bill in blank, or to some other person;
3. Transfer the bill to a third person without filling up the blank, and without endorsing it.

Article 15.

In the absence of any contrary stipulation, the endorser guarantees acceptance and payment.

He may prohibit any further endorsement; in this case, he gives no guarantee to the persons to whom the bill is subsequently endorsed.

Article 16.

The possessor of a bill of exchange is deemed to be the lawful holder if he establishes his title to the bill through an uninterrupted series of endorsements, even if the last endorsement is in blank. In this connection, cancelled endorsements are deemed not to be written (*non écrits*). When an endorsement in blank is followed by another endorsement, the person who signed this last endorsement is deemed to have acquired the bill by the endorsement in blank.

Where a person has been dispossessed of a bill of exchange, in any manner whatsoever, the holder who establishes his right thereto in the manner mentioned in the preceding paragraph is not bound to give up the bill unless he has acquired it in bad faith, or unless in acquiring it he has been guilty of gross negligence.

Article 17.

Persons sued on a bill of exchange cannot set up against the holder defences founded on their personal relations with the drawer or with previous holders, unless the holder, in acquiring the bill, has knowingly acted to the detriment of the debtor.

Article 18.

When an endorsement contains the statements "value in collection" ("*valeur en recouvrement*"), "for collection" ("*pour encaissement*"), "by procuration" ("*par procuration*") or any

tous les droits dérivant de la lettre de change, mais il ne peut endosser celle-ci qu'à titre de procuration.

Les obligés ne peuvent, dans ce cas, invoquer contre le porteur que les exceptions qui seraient opposables à l'endosseur.

Le mandat renfermé dans un endossement de procuration ne prend pas fin par le décès du mandant ou la survenance de son incapacité.

Article 19.

Lorsqu'un endossement contient la mention « valeur en garantie », « valeur en gage » ou toute autre mention impliquant un nantissement, le porteur peut exercer tous les droits dérivant de la lettre de change, mais un endossement fait par lui ne vaut que comme un endossement à titre de procuration.

Les obligés ne peuvent invoquer contre le porteur les exceptions fondées sur leurs rapports personnels avec l'endosseur, à moins que le porteur, en recevant la lettre, n'ait agi sciemment au détriment du débiteur.

Article 20.

L'endossement postérieur à l'échéance produit les mêmes effets qu'un endossement antérieur. Toutefois, l'endossement postérieur au protêt faute de paiement, ou fait après l'expiration du délai fixé pour dresser le protêt, ne produit que les effets d'une cession ordinaire.

Sauf preuve contraire, l'endossement sans date est censé avoir été fait avant l'expiration du délai fixé pour dresser le protêt.

CHAPITRE III. — DE L'ACCEPTATION.

Article 21.

La lettre de change peut être, jusqu'à l'échéance, présentée à l'acceptation du tiré, au lieu de son domicile, par le porteur ou même par un simple détenteur.

Article 22.

Dans toute lettre de change, le tireur peut stipuler qu'elle devra être présentée à l'acceptation, avec ou sans fixation de délai.

Il peut interdire dans la lettre la présentation à l'acceptation, à moins qu'il ne s'agisse d'une lettre de change payable chez un tiers ou d'une lettre payable dans une localité autre que celle du domicile du tiré ou d'une lettre tirée à un certain délai de vue.

Il peut aussi stipuler que la présentation à l'acceptation ne pourra avoir lieu avant un terme indiqué.

Tout endosseur peut stipuler que la lettre devra être présentée à l'acceptation, avec ou sans fixation de délai, à moins qu'elle n'ait été déclarée non acceptable par le tireur.

Article 23.

Les lettres de change à un certain délai de vue doivent être présentées à l'acceptation dans le délai d'un an à partir de leur date.

Le tireur peut abrégé ce dernier délai ou en stipuler un plus long.

Ces délais peuvent être abrégés par les endosseurs.

Article 24.

Le tiré peut demander qu'une seconde présentation lui soit faite le lendemain de la première. Les intéressés ne sont admis à prétendre qu'il n'a pas été fait droit à cette demande que si celle-ci est mentionnée dans le protêt.

Le porteur n'est pas obligé de se dessaisir, entre les mains du tiré, de la lettre présentée à l'acceptation.

Article 25.

L'acceptation est écrite sur la lettre de change. Elle est exprimée par le mot « accepté » ou tout autre mot équivalent; elle est signée du tiré. La simple signature du tiré apposée au recto de la lettre vaut acceptation.

Quand la lettre est payable à un certain délai de vue ou lorsqu'elle doit être présentée à l'acceptation dans un délai déterminé en vertu d'une stipulation spéciale, l'acceptation doit être datée du jour où elle a été donnée, à moins que le porteur n'exige qu'elle soit datée du jour de la présentation. A défaut de date, le porteur, pour conserver ses droits de recours contre les endosseurs et contre le tireur fait constater cette omission par un protêt dressé en temps utile.

Article 26.

L'acceptation est pure et simple, mais le tiré peut la restreindre à une partie de la somme.

Toute autre modification apportée par l'acceptation aux énonciations de la lettre de change équivaut à un refus d'acceptation. Toutefois, l'accepteur est tenu dans les termes de son acceptation.

other phrase implying a simple mandate, the holder may exercise all rights arising out of the bill of exchange, but he can only endorse it in his capacity as agent.

In this case, the parties liable can only set up against the holder defences which could be set up against the endorser.

The mandate contained in an endorsement by procuration does not terminate by reason of the death of the party giving the mandate or by reason of his becoming legally incapable.

Article 19.

When an endorsement contains the statements "value in security" ("*valeur en garantie*"), "value in pledge" ("*valeur en gage*"), or any other statement implying a pledge, the holder may exercise all the rights arising out of the bill of exchange, but an endorsement by him has the effects only of an endorsement by an agent.

The parties liable cannot set up against the holder defences founded on their personal relations with the endorser, unless the holder, in receiving the bill, has knowingly acted to the detriment of the debtor.

Article 20.

An endorsement after maturity has the same effects as an endorsement before maturity, Nevertheless, an endorsement after protest for non-payment, or after the expiration of the limit of time fixed for drawing up the protest, operates only as an ordinary assignment.

Failing proof to the contrary, an endorsement without date is deemed to have been placed on the bill before the expiration of the limit of time fixed for drawing up the protest.

CHAPTER III. — ACCEPTANCE.

Article 21.

Until maturity, a bill of exchange may be presented to the drawee for acceptance at his domicile, either by the holder or by a person who is merely in possession of the bill.

Article 22.

In any bill of exchange, the drawer may stipulate that it shall be presented for acceptance, with or without fixing a limit of time for presentment.

Except in the case of a bill payable at the address of a third party or in a locality other than that of the domicile of the drawee, or, except in the case of a bill drawn payable at a fixed period after sight, the drawer may prohibit presentment for acceptance.

He may also stipulate that presentment for acceptance shall not take place before a named date.

Unless the drawer has prohibited acceptance, every endorser may stipulate that the bill shall be presented for acceptance, with or without fixing a limit of time for presentment.

Article 23.

Bills of exchange payable at a fixed period after sight must be presented for acceptance within one year of their date.

The drawer may abridge or extend this period.

These periods may be abridged by the endorsers.

Article 24.

The drawee may demand that a bill shall be presented to him a second time on the day after the first presentment. Parties interested are not allowed to set up that this demand has not been complied with unless this request is mentioned in the protest.

The holder is not obliged to surrender to the drawee a bill presented for acceptance.

Article 25.

An acceptance is written on the bill of exchange. It is expressed by the word "accepted" or any other equivalent term. It is signed by the drawee. The simple signature of the drawee on the face of the bill constitutes an acceptance.

When the bill is payable at a certain time after sight, or when it must be presented for acceptance within a certain limit of time in accordance with a special stipulation, the acceptance must be dated as of the day when the acceptance is given, unless the holder requires that it shall be dated as of the day of presentment. If it is undated, the holder, in order to preserve his right of recourse against the endorsers and the drawer, must authenticate the omission by a protest drawn up within the proper time.

Article 26.

An acceptance is unconditional, but the drawee may restrict it to part of the sum payable.

Every other modification introduced by an acceptance into the tenor of the bill of exchange operates as a refusal to accept. Nevertheless, the acceptor is bound according to the terms of his acceptance.

Article 27.

Quand le tireur a indiqué dans la lettre de change un lieu de paiement autre que celui du domicile du tiré, sans désigner un tiers chez qui le paiement doit être effectué, le tiré peut l'indiquer lors de l'acceptation. A défaut de cette indication, l'accepteur est réputé s'être obligé à payer lui-même au lieu du paiement.

Si la lettre est payable au domicile du tiré, celui-ci peut, dans l'acceptation, indiquer une adresse du même lieu où le paiement doit être effectué.

Article 28.

Par l'acceptation le tiré s'oblige à payer la lettre de change à l'échéance.

A défaut de paiement, le porteur, même s'il est le tireur, a contre l'accepteur une action directe résultant de la lettre de change pour tout ce qui peut être exigé en vertu des articles 48 et 49.

Article 29.

Si le tiré qui a revêtu la lettre de change de son acceptation a biffé celle-ci avant la restitution de la lettre, l'acceptation est censée refusée. Sauf preuve contraire, la radiation est réputée avoir été faite avant la restitution du titre.

Toutefois, si le tiré a fait connaître son acceptation par écrit au porteur ou à un signataire quelconque, il est tenu envers ceux-ci dans les termes de son acceptation.

CHAPITRE IV. — DE L'AVAL.

Article 30.

Le paiement d'une lettre de change peut être garanti pour tout ou partie de son montant par un aval.

Cette garantie est fournie par un tiers ou même par un signataire de la lettre.

Article 31.

L'aval est donné sur la lettre de change ou sur une allonge.

Il est exprimé par les mots « bon pour aval » ou par toute autre formule équivalente; il est signé par le donneur d'aval.

Il est considéré comme résultant de la seule signature du donneur d'aval, apposée au recto de la lettre de change, sauf quand il s'agit de la signature du tiré ou de celle du tireur.

L'aval doit indiquer pour le compte de qui il est donné. A défaut de cette indication, il est réputé donné pour le tireur.

Article 32.

Le donneur d'aval est tenu de la même manière que celui dont il s'est porté garant.

Son engagement est valable, alors même que l'obligation qu'il a garantie serait nulle pour toute cause autre qu'un vice de forme.

Quand il paie la lettre de change, le donneur d'aval acquiert les droits résultant de la lettre de change contre le garanti et contre ceux qui sont tenus envers ce dernier en vertu de la lettre de change.

CHAPITRE V. — DE L'ÉCHÉANCE.

Article 33.

Une lettre de change peut être tirée:

- à vue;
- à un certain délai de vue;
- à un certain délai de date;
- à jour fixe.

Les lettres de change, soit à d'autres échéances, soit à échéances successives, sont nulles.

Article 34.

La lettre de change à vue est payable à sa présentation. Elle doit être présentée au paiement dans le délai d'un an à partir de sa date. Le tireur peut abrégé ce délai ou en stipuler un plus long. Ces délais peuvent être abrégés par les endosseurs.

Le tireur peut prescrire qu'une lettre de change payable à vue ne doit pas être présentée au paiement avant un terme indiqué. Dans ce cas, le délai de présentation part de ce terme.

Article 35.

L'échéance d'une lettre de change à un certain délai de vue est déterminée, soit par la date de l'acceptation, soit par celle du protêt.

En l'absence du protêt, l'acceptation non datée est réputée, à l'égard de l'accepteur, avoir été donnée le dernier jour du délai prévu pour la présentation à l'acceptation.

Article 27.

When the drawer of a bill has indicated a place of payment other than the domicile of the drawee without specifying a third party at whose address payment must be made, the drawee may name such third party at the time of acceptance. In default of this indication, the acceptor is deemed to have undertaken to pay the bill himself at the place of payment.

If a bill is payable at the domicile of the drawee, the latter may in his acceptance indicate an address in the same place where payment is to be made.

Article 28.

By accepting, the drawee undertakes to pay the bill of exchange at its maturity.

In default of payment, the holder, even if he is the drawer, has a direct action on the bill of exchange against the acceptor for all that can be demanded in accordance with Articles 48 and 49.

Article 29.

Where the drawee who has put his acceptance on a bill has cancelled it before restoring the bill, acceptance is deemed to be refused. Failing proof to the contrary, the cancellation is deemed to have taken place before the bill was restored.

Nevertheless, if the drawee has notified his acceptance in writing to the holder or to any party who has signed the bill, he is liable to such parties according to the terms of his acceptance.

CHAPTER IV. — “ AVALS ”.

Article 30.

Payment of a bill of exchange may be guaranteed by an “ aval ” as to the whole or part of its amount.

This guarantee may be given by a third person or even by a person who has signed as a party to the bill.

Article 31.

The “ aval ” is given either on the bill itself or on an “ allonge ”.

It is expressed by the words “ good as aval ” (“ *bon pour aval* ”) or by any other equivalent formula. It is signed by the giver of the “ aval ”.

It is deemed to be constituted by the mere signature of the giver of the “ aval ” placed on the face of the bill, except in the case of the signature of the drawee or of the drawer.

An “ aval ” must specify for whose account it is given. In default of this, it is deemed to be given for the drawer.

Article 32.

The giver of an “ aval ” is bound in the same manner as the person for whom he has become guarantor.

His undertaking is valid even when the liability which he has guaranteed is inoperative for any reason other than defect of form.

He has, when he pays a bill of exchange, the rights arising out of the bill of exchange against the person guaranteed and against those who are liable to the latter on the bill of exchange.

CHAPTER V. — MATURITY.

Article 33.

A bill of exchange may be drawn payable:

- At sight;
- At a fixed period after sight;
- At a fixed period after date;
- At a fixed date.

Bills of exchange at other maturities or payable by instalments are null and void.

Article 34.

A bill of exchange at sight is payable on presentment. It must be presented for payment within a year of its date. The drawer may abridge or extend this period. These periods may be abridged by the endorsers.

The drawer may prescribe that a bill of exchange payable at sight must not be presented for payment before a named date. In this case, the period for presentment begins from the said date.

Article 35.

The maturity of a bill of exchange payable at a fixed period after sight is determined either by the date of the acceptance or by the date of the protest.

In the absence of the protest, an undated acceptance is deemed, so far as regards the acceptor, to have been given on the last day of the limit of time for presentment for acceptance.

Article 36.

L'échéance d'une lettre de change tirée à un ou plusieurs mois de date ou de vue a lieu à la date correspondante du mois où le paiement doit être effectué. A défaut de date correspondante, l'échéance a lieu le dernier jour de ce mois.

Quand une lettre de change est tirée à un ou plusieurs mois et demi de date ou de vue, on compte d'abord les mois entiers.

Si l'échéance est fixée au commencement, au milieu (mi-janvier, mi-février, etc.) ou à la fin du mois, on entend par ces termes le premier, le quinze ou le dernier jour du mois.

Les expressions « huit jours » ou « quinze jours » s'entendent, non d'une ou deux semaines, mais d'un délai de huit ou de quinze jours effectifs.

L'expression « demi-mois » indique un délai de quinze jours.

Article 37.

Quand une lettre de change est payable à jour fixe dans un lieu où le calendrier est différent de celui du lieu de l'émission, la date de l'échéance est considérée comme fixée d'après le calendrier du lieu de paiement.

Quand une lettre de change tirée entre deux places ayant des calendriers différents est payable à un certain délai de date, le jour de l'émission est ramené au jour correspondant du calendrier du lieu de paiement et l'échéance est fixée en conséquence.

Les délais de présentation des lettres de change sont calculés conformément aux règles de l'alinéa précédent.

Ces règles ne sont pas applicables si une clause de la lettre de change, ou même les simples énonciations du titre, indiquent que l'intention a été d'adopter des règles différentes.

CHAPITRE VI. — DU PAIEMENT.

Article 38.

Le porteur d'une lettre de change payable à jour fixe ou à un certain délai de date ou de vue doit présenter la lettre de change au paiement, soit le jour où elle est payable, soit l'un des deux jours ouvrables qui suivent.

La présentation d'une lettre de change à une Chambre de compensation équivaut à une présentation au paiement.

Article 39.

Le tiré peut exiger, en payant la lettre de change, qu'elle lui soit remise acquittée par le porteur. Le porteur ne peut refuser un paiement partiel.

En cas de paiement partiel, le tiré peut exiger que mention de ce paiement soit faite sur la lettre et que quittance lui en soit donnée.

Article 40.

Le porteur d'une lettre de change ne peut être contraint d'en recevoir le paiement avant l'échéance.

Le tiré qui paie avant l'échéance le fait à ses risques et périls.

Celui qui paie à l'échéance est valablement libéré, à moins qu'il n'y ait de sa part une fraude ou une faute lourde. Il est obligé de vérifier la régularité de la suite des endossements mais non la signature des endosseurs.

Article 41.

Lorsqu'une lettre de change est stipulée payable en une monnaie n'ayant pas cours au lieu du paiement, le montant peut en être payé dans la monnaie du pays d'après sa valeur au jour de l'échéance. Si le débiteur est en retard, le porteur peut à son choix, demander que le montant de la lettre de change soit payé dans la monnaie du pays d'après le cours, soit du jour de l'échéance, soit du jour du paiement.

Les usages du lieu du paiement servent à déterminer la valeur de la monnaie étrangère. Toutefois, le tireur peut stipuler que la somme à payer sera calculée d'après un cours déterminé dans la lettre.

Les règles ci-énoncées ne s'appliquent pas au cas où le tireur a stipulé que le paiement devra être fait dans une certaine monnaie indiquée (clause de paiement effectif en une monnaie étrangère).

Si le montant de la lettre de change est indiqué dans une monnaie ayant la même dénomination, mais une valeur différente dans le pays d'émission et dans celui du paiement, on est présumé s'être référé à la monnaie du lieu du paiement.

Article 42.

A défaut de présentation de la lettre de change au paiement dans le délai fixé par l'article 38, tout débiteur a la faculté d'en remettre le montant en dépôt à l'autorité compétente, aux frais, risques et périls du porteur.

Article 36.

Where a bill of exchange is drawn at one or more months after date or after sight the bill matures on the corresponding date of the month when payment must be made. If there be no corresponding date, the bill matures on the last day of this month.

When a bill of exchange is drawn at one or more months and a-half after date or sight, entire months must first be calculated.

If the maturity is fixed at the commencement, in the middle (mid-January or mid-February, etc.) or at the end of the month, the first, fifteenth or last day of the month is to be understood.

The expressions "eight days" or "fifteen days" indicate not one or two weeks, but a period of eight or fifteen actual days.

The expression "half-month" means a period of fifteen days.

Article 37.

When a bill of exchange is payable on a fixed day in a place where the calendar is different from the calendar in the place of issue, the day of maturity is deemed to be fixed according to the calendar of the place of payment.

When a bill of exchange drawn between two places having different calendars is payable at a fixed period after date, the day of issue is referred to the corresponding day of the calendar in the place of payment, and the maturity is fixed accordingly.

The time for presenting bills of exchange is calculated in accordance with the rules of the preceding paragraph.

These rules do not apply if a stipulation in the bill or even the simple terms of the instrument indicate an intention to adopt some different rule.

CHAPTER VI. — PAYMENT.

Article 38.

The holder of a bill of exchange payable on a fixed day or at a fixed period after date or after sight must present the bill for payment either on the day on which it is payable or on one of the two business days which follow.

The presentment of a bill of exchange at a clearing-house is equivalent to a presentment for payment.

Article 39.

The drawee who pays a bill of exchange may require that it shall be given up to him receipted by the holder.

The holder may not refuse partial payment.

In case of partial payment the drawee may require that mention of this payment shall be made on the bill, and that a receipt therefor shall be given to him.

Article 40.

The holder of a bill of exchange cannot be compelled to receive payment thereof before maturity.

The drawee who pays before maturity does so at his own risk and peril.

He who pays at maturity is validly discharged, unless he has been guilty of fraud or gross negligence. He is bound to verify the regularity of the series of endorsements, but not the signature of the endorsers.

Article 41.

When a bill of exchange is drawn payable in a currency which is not that of the place of payment, the sum payable may be paid in the currency of the country, according to its value on the date of maturity. If the debtor is in default, the holder may at his option demand that the amount of the bill be paid in the currency of the country according to the rate on the day of maturity or the day of payment.

The usages of the place of payment determine the value of foreign currency. Nevertheless, the drawer may stipulate that the sum payable shall be calculated according to a rate expressed in the bill.

The foregoing rules shall not apply to the case in which the drawer has stipulated that payment must be made in a certain specified currency (stipulation for effective payment in foreign currency).

If the amount of the bill of exchange is specified in a currency having the same denomination, but a different value in the country of issue and the country of payment, reference is deemed to be made to the currency of the place of payment.

Article 42.

When a bill of exchange is not presented for payment within the limit of time fixed by Article 38, every debtor is authorised to deposit the amount with the competent authority at the charge, risk and peril of the holder.

CHAP. VII. — DES RECOURS FAUTE D'ACCEPTATION ET FAUTE DE PAIEMENT.

Article 43.

Le porteur peut exercer ses recours contre les endosseurs, le tireur et les autres obligés:

A l'échéance:

si le paiement n'a pas eu lieu;

Même avant l'échéance:

- 1^o s'il y a eu refus, total ou partiel, d'acceptation;
- 2^o dans les cas de faillite du tiré, accepteur ou non, de cessation de ses paiements, même non constatée par un jugement, ou de saisie de ses biens demeurée infructueuse;
- 3^o dans les cas de faillite du tireur d'une lettre non acceptable.

Article 44.

Le refus d'acceptation ou de paiement doit être constaté par un acte authentique (protêt faute d'acceptation ou faute de paiement).

Le protêt faute d'acceptation doit être fait dans les délais fixés pour la présentation à l'acceptation. Si, dans le cas prévu par l'article 24, premier alinéa, la première présentation a eu lieu le dernier jour du délai, le protêt peut encore être dressé le lendemain.

Le protêt faute de paiement d'une lettre de change payable à jour fixe ou à un certain délai de date ou de vue doit être fait l'un des deux jours ouvrables qui suivent le jour où la lettre de change est payable. S'il s'agit d'une lettre payable à vue, le protêt doit être dressé dans les conditions indiquées à l'alinéa précédent pour dresser le protêt faute d'acceptation.

Le protêt faute d'acceptation dispense de la présentation au paiement et du protêt faute de paiement.

En cas de cessation de paiements du tiré, accepteur ou non, ou en cas de saisie de ses biens demeurée infructueuse, le porteur ne peut exercer ses recours qu'après présentation de la lettre au tiré pour le paiement et après confection d'un protêt.

En cas de faillite déclarée du tiré, accepteur ou non, ainsi qu'en cas de faillite déclarée du tireur d'une lettre non acceptable, la production du jugement déclaratif de la faillite suffit pour permettre au porteur d'exercer ses recours.

Article 45.

Le porteur doit donner avis du défaut d'acceptation ou de paiement à son endosseur et au tireur dans les quatre jours ouvrables qui suivent le jour du protêt ou celui de la présentation en cas de clause de retour sans frais. Chaque endosseur doit, dans les deux jours ouvrables qui suivent le jour où il a reçu l'avis, faire connaître à son endosseur l'avis qu'il a reçu, en indiquant les noms et les adresses de ceux qui ont donné les avis précédents, et ainsi de suite, en remontant jusqu'au tireur. Les délais ci-dessus indiqués courent de la réception de l'avis précédent.

Lorsqu'en conformité de l'alinéa précédent un avis est donné à un signataire de la lettre de change, le même avis doit être donné dans le même délai à son avaliseur.

Dans le cas où un endosseur n'a pas indiqué son adresse ou l'a indiquée d'une façon illisible, il suffit que l'avis soit donné à l'endosseur qui le précède.

Celui qui a un avis à donner peut le faire sous une forme quelconque, même par un simple renvoi de la lettre de change.

Il doit prouver qu'il a donné l'avis dans le délai imparti. Ce délai sera considéré comme observé si une lettre missive donnant l'avis a été mise à la poste dans ledit délai.

Celui qui ne donne pas l'avis dans le délai ci-dessus indiqué n'encourt pas de déchéance; il est responsable, s'il y a lieu, du préjudice causé par sa négligence, sans que les dommages-intérêts puissent dépasser le montant de la lettre de change.

Article 46.

Le tireur, un endosseur ou un avaliseur peut, par la clause « retour sans frais », « sans protêt », ou toute autre clause équivalente, inscrite sur le titre et signée, dispenser le porteur de faire dresser, pour exercer ses recours, un protêt faute d'acceptation ou faute de paiement.

Cette clause ne dispense pas le porteur de la présentation de la lettre de change dans les délais prescrits ni des avis à donner. La preuve de l'inobservation des délais incombe à celui qui s'en prévaut contre le porteur.

Si la clause est inscrite par le tireur, elle produit ses effets à l'égard de tous les signataires; si elle est inscrite par un endosseur ou un avaliseur, elle produit ses effets seulement à l'égard de celui-ci. Si, malgré la clause inscrite par le tireur, le porteur fait dresser le protêt; les frais en restent à sa charge. Quand la clause émane d'un endosseur ou d'un avaliseur, les frais du protêt, s'il en est dressé un, peuvent être recouverts contre tous les signataires.

Article 47.

Tous ceux qui ont tiré, accepté, endossé ou avalisé une lettre de change sont tenus solidairement envers le porteur.

CHAPTER VII. — RECOURSE FOR NON-ACCEPTANCE OR NON-PAYMENT.

Article 43.

The holder may exercise his right of recourse against the endorsers, the drawer and the other parties liable:

At maturity:

If payment has not been made;

Even before maturity:

- (1) If there has been total or partial refusal to accept;
- (2) In the event of the bankruptcy (*faillite*) of the drawee, whether he has accepted or not, or in the event of a stoppage of payment on his part, even when not declared by a judgment, or where execution has been levied against his goods without result;
- (3) In the event of the bankruptcy (*faillite*) of the drawer of a non-acceptable bill.

Article 44.

Default of acceptance or of payment must be evidenced by an authentic act (protest for non-acceptance or non-payment).

Protest for non-acceptance must be made within the limit of time fixed for presentment for acceptance. If, in the case contemplated by Article 24, paragraph 1, the first presentment takes place on the last day of that time, the protest may nevertheless be drawn up on the next day.

Protest for non-payment of a bill of exchange payable on a fixed day or at a fixed period after date or sight must be made on one of the two business days following the day on which the bill is payable. In the case of a bill payable at sight, the protest must be drawn up under the conditions specified in the foregoing paragraph for the drawing up of a protest for non-acceptance.

Protest for non-acceptance dispenses with presentment for payment and protest for non-payment.

If there is a stoppage of payment on the part of the drawee, whether he has accepted or not, or if execution has been levied against his goods without result, the holder cannot exercise his right of recourse until after presentment of the bill to the drawee for payment and after the protest has been drawn up.

If the drawee, whether he has accepted or not, is declared bankrupt (*faillite déclarée*), or in the event of the declared bankruptcy of the drawer of a non-acceptable bill, the production of the judgment declaring the bankruptcy suffices to enable the holder to exercise his right of recourse.

Article 45.

The holder must give notice of non-acceptance or non-payment to his endorser and to the drawer within the four business days which follow the day for protest or, in case of a stipulation "*retour sans frais*", the day for presentment. Every endorser must, within the two business days following the day on which he receives notice, notify his endorser of the notice he has received, mentioning the names and addresses of those who have given the previous notices, and so on through the series until the drawer is reached. The periods mentioned above run from the receipt of the preceding notice.

When, in conformity with the preceding paragraph, notice is given to a person who has signed a bill of exchange, the same notice must be given within the same limit of time to his *avaliseur*.

Where an endorser either has not specified his address or has specified it in an illegible manner, it is sufficient that notice should be given to the preceding endorser.

A person who must give notice may give it in any form whatever, even by simply returning the bill of exchange.

He must prove that he has given notice within the time allowed. This time-limit shall be regarded as having been observed if a letter giving the notice has been posted within the prescribed time.

A person who does not give notice within the limit of time mentioned above does not forfeit his rights. He is responsible for the injury, if any, caused by his negligence, but the damages shall not exceed the amount of the bill of exchange.

Article 46.

The drawer, an endorser, or a person guaranteeing payment by *aval* (*avaliseur*) may, by the stipulation "*retour sans frais*", "*sans protêt*", or any other equivalent expression written on the instrument and signed, release the holder from having a protest of non-acceptance or non-payment drawn up in order to exercise his right of recourse.

This stipulation does not release the holder from presenting the bill within the prescribed time, nor from the notices he has to give. The burden of proving the non-observance of the limits of time lies on the person who seeks to set it up against the holder.

If the stipulation is written by the drawer, it is operative in respect of all persons who have signed the bill; if it is written by an endorser or an *avaliseur*, it is operative only in respect of such endorser or *avaliseur*. If, in spite of the stipulation written by the drawer, the holder has the protest drawn up, he must bear the expenses thereof. When the stipulation emanates from an endorser or *avaliseur*, the costs of the protest, if one is drawn up, may be recovered from all the persons who have signed the bill.

Article 47.

All drawers, acceptors, endorsers or guarantors by *aval* of a bill of exchange are jointly and severally liable to the holder.

Le porteur a le droit d'agir contre toutes ces personnes, individuellement ou collectivement, sans être astreint à observer l'ordre dans lequel elles se sont obligées.

Le même droit appartient à tout signataire d'une lettre de change qui a remboursé celle-ci.

L'action intentée contre un des obligés n'empêche pas d'agir contre les autres, même postérieurs à celui qui a été d'abord poursuivi.

Article 48.

Le porteur peut réclamer à celui contre lequel il exerce son recours :

1^o le montant de la lettre de change non acceptée ou non payée avec les intérêts, s'il en a été stipulé;

2^o les intérêts au taux de six pour cent à partir de l'échéance;

3^o les frais du protêt, ceux des avis donnés, ainsi que les autres frais.

Si le recours est exercé avant l'échéance, déduction sera faite d'un escompte sur le montant de la lettre. Cet escompte sera calculé, d'après le taux de l'escompte officiel (taux de la Banque), tel qu'il existe à la date du recours au lieu du domicile du porteur.

Article 49.

Celui qui a remboursé la lettre de change peut réclamer à ses garants :

1^o la somme intégrale qu'il a payée;

2^o les intérêts de ladite somme, calculés au taux de six pour cent, à partir du jour où il l'a déboursée;

3^o les frais qu'il a faits.

Article 50.

Tout obligé contre lequel un recours est exercé ou qui est exposé à un recours peut exiger, contre remboursement, la remise de la lettre de change avec le protêt et un compte acquitté.

Tout endosseur qui a remboursé la lettre de change peut biffer son endossement et ceux des endosseurs subséquents.

Article 51.

En cas d'exercice d'un recours après une acceptation partielle, celui qui rembourse la somme pour laquelle la lettre n'a pas été acceptée peut exiger que ce remboursement soit mentionné sur la lettre et qu'il lui en soit donné quittance. Le porteur doit, en outre, lui remettre une copie certifiée conforme de la lettre et le protêt pour permettre l'exercice des recours ultérieurs.

Article 52.

Toute personne ayant le droit d'exercer un recours, peut, sauf stipulation contraire, se rembourser au moyen d'une nouvelle lettre (retraite) tirée à vue sur l'un de ses garants et payable au domicile de celui-ci.

La retraite comprend, outre les sommes indiquées dans les articles 48 et 49, un droit de courtage et le droit de timbre de la retraite.

Si la retraite est tirée par le porteur, le montant en est fixé d'après le cours d'une lettre de change à vue, tirée du lieu où la lettre primitive était payable sur le lieu du domicile du garant. Si la retraite est tirée par un endosseur, le montant en est fixé d'après le cours d'une lettre à vue tirée du lieu où le tireur de la retraite a son domicile sur le lieu du domicile du garant.

Article 53.

Après l'expiration des délais fixés :

pour la présentation d'une lettre de change à vue ou à un certain délai de vue;

pour la confection du protêt faute d'acceptation ou faute de paiement;

pour la présentation au paiement en cas de clause de retour sans frais;

le porteur est déchu de ses droits contre les endosseurs, contre le tireur et contre les autres obligés, à l'exception de l'accepteur.

A défaut de présentation à l'acceptation dans le délai stipulé par le tireur, le porteur est déchu de ses droits de recours, tant pour défaut de paiement que pour défaut d'acceptation, à moins qu'il ne résulte des termes de la stipulation que le tireur n'a entendu s'exonérer que de la garantie de l'acceptation.

Si la stipulation d'un délai pour la présentation est contenue dans un endossement, l'endosseur, seul, peut s'en prévaloir.

Article 54.

Quand la présentation de la lettre de change ou la confection du protêt dans les délais prescrits est empêchée par un obstacle insurmontable (prescription légale d'un État quelconque ou autre cas de force majeure), ces délais sont prolongés.

Le porteur est tenu de donner, sans retard, avis du cas de force majeure à son endosseur et de mentionner cet avis, daté et signé de lui, sur la lettre de change ou sur une allonge : pour le surplus, les dispositions de l'article 45 sont applicables.

The holder has the right of proceeding against all these persons individually or collectively without being required to observe the order in which they have become bound.

The same right is possessed by any person signing the bill who has taken it up and paid it. Proceedings against one of the parties liable do not prevent proceedings against the others, even though they may be subsequent to the party first proceeded against.

Article 48.

The holder may recover from the person against whom he exercises his right of recourse:

- (1) The amount of the unaccepted or unpaid bill of exchange with interest, if interest has been stipulated for;
- (2) Interest at the rate of 6 per cent from the date of maturity;
- (3) The expenses of protest and of the notices given as well as other expenses.

If the right of recourse is exercised before maturity, the amount of the bill shall be subject to a discount. This discount shall be calculated according to the official rate of discount (bank-rate) ruling on the date when recourse is exercised at the place of domicile of the holder.

Article 49.

A party who takes up and pays a bill of exchange can recover from the parties liable to him:

- (1) The entire sum which he has paid;
- (2) Interest on the said sum calculated at the rate of 6 per cent, starting from the day when he made payment;
- (3) Any expenses which he has incurred.

Article 50.

Every party liable against whom a right of recourse is or may be exercised, can require, against payment, that the bill shall be given up to him with the protest and a receipted account. Every endorser who has taken up and paid a bill of exchange may cancel his own endorsement and those of subsequent endorsers.

Article 51.

In the case of the exercise of the right of recourse after a partial acceptance, the party who pays the sum in respect of which the bill has not been accepted can require that this payment shall be specified on the bill and that he shall be given a receipt therefor. The holder must also give him a certified copy of the bill, together with the protest, in order to enable subsequent recourse to be exercised.

Article 52.

Every person having the right of recourse may, in the absence of agreement to the contrary, reimburse himself by means of a fresh bill (redraft) to be drawn at sight on one of the parties liable to him and payable at the domicile of that party.

The redraft includes, in addition to the sums mentioned in Articles 48 and 49, brokerage and the cost of stamping the redraft.

If the redraft is drawn by the holder, the sum payable is fixed according to the rate for a sight bill drawn at the place where the original bill was payable upon the party liable at the place of his domicile. If the redraft is drawn by an endorser, the sum payable is fixed according to the rate for a sight bill drawn at the place where the drawer of the redraft is domiciled upon the place of domicile of the party liable.

Article 53.

After the expiration of the limits of time fixed:

- For the presentment of a bill of exchange drawn at sight or at a fixed period after sight;
- For drawing up the protest for non-acceptance or non-payment;
- For presentment for payment in the case of a stipulation *retour sans frais*,

the holder loses his rights of recourse against the endorsers, against the drawer and against the other parties liable, with the exception of the acceptor.

In default of presentment for acceptance within the limit of time stipulated by the drawer, the holder loses his right of recourse for non-payment, as well as for non-acceptance, unless it appears from the terms of the stipulation that the drawer only meant to release himself from the guarantee of acceptance.

If the stipulation for a limit of time for presentment is contained in an endorsement, the endorser alone can avail himself of it.

Article 54.

Should the presentment of the bill of exchange or the drawing up of the protest within the prescribed limits of time be prevented by an insurmountable obstacle (legal prohibition (*prescription légale*) by any State or other case of *vis major*), these limits of time shall be extended.

The holder is bound to give notice without delay of the case of *vis major* to his endorser and to specify this notice, which he must date and sign, on the bill or on an *allonge*; in other respects the provisions of Article 45 shall apply.

Après la cessation de la force majeure, le porteur doit, sans retard, présenter la lettre à l'acceptation ou au paiement et, s'il y a lieu, faire dresser le protêt.

Si la force majeure persiste au delà de trente jours à partir de l'échéance, les recours peuvent être exercés, sans que ni la présentation ni la confection d'un protêt soit nécessaire.

Pour les lettres de change à vue ou à un certain délai de vue, le délai de trente jours court de la date à laquelle le porteur a, même avant l'expiration des délais de présentation, donné avis de la force majeure à son endosseur; pour les lettres de change à un certain délai de vue, le délai de trente jours s'augmente du délai de vue indiqué dans la lettre de change.

Ne sont point considérés comme constituant des cas de force majeure les faits purement personnels au porteur ou à celui qu'il a chargé de la présentation de la lettre ou de la confection du protêt.

CHAPITRE VIII. — DE L'INTERVENTION.

I. DISPOSITIONS GÉNÉRALES.

Article 55.

Le tireur, un endosseur ou un avaliseur peut indiquer une personne pour accepter ou payer au besoin.

La lettre de change peut être, sous les conditions déterminées ci-après, acceptée ou payée par une personne intervenant pour un débiteur quelconque exposé au recours.

L'intervenant peut être un tiers, même le tiré, ou une personne déjà obligée en vertu de la lettre de change, sauf l'accepteur.

L'intervenant est tenu de donner, dans un délai de deux jours ouvrables, avis de son intervention à celui pour qui il est intervenu. En cas d'inobservation de ce délai, il est responsable, s'il y a lieu, du préjudice causé par sa négligence sans que les dommages-intérêts puissent dépasser le montant de la lettre de change.

2. ACCEPTATION PAR INTERVENTION.

Article 56.

L'acceptation par intervention peut avoir lieu dans tous les cas où des recours sont ouverts, avant l'échéance, au porteur d'une lettre de change acceptable.

Lorsqu'il a été indiqué sur la lettre de change une personne pour l'accepter ou la payer au besoin au lieu du paiement, le porteur ne peut exercer avant l'échéance ses droits de recours contre celui qui a apposé l'indication et contre les signataires subséquents à moins qu'il n'ait présenté la lettre de change à la personne désignée et que, celle-ci ayant refusé l'acceptation, ce refus n'ait été constaté par un protêt.

Dans les autres cas d'intervention, le porteur peut refuser l'acceptation par intervention. Toutefois s'il l'admet, il perd les recours qui lui appartiennent avant l'échéance contre celui pour qui l'acceptation a été donnée et contre les signataires subséquents.

Article 57.

L'acceptation par intervention est mentionnée sur la lettre de change; elle est signée par l'intervenant. Elle indique pour le compte de qui elle a lieu; à défaut de cette indication, l'acceptation est réputée donnée pour le tireur.

Article 58.

L'accepteur par intervention est obligé envers le porteur et envers les endosseurs postérieurs à celui pour le compte duquel il est intervenu, de la même manière que celui-ci.

Malgré l'acceptation par intervention, celui pour lequel elle a été faite et ses garants peuvent exiger du porteur, contre remboursement de la somme indiquée à l'article 48, la remise de la lettre de change, du protêt et d'un compte acquitté, s'il y a lieu.

3. PAIEMENT PAR INTERVENTION.

Article 59.

Le paiement par intervention peut avoir lieu dans tous les cas où, soit à l'échéance, soit avant l'échéance, des recours sont ouverts au porteur.

Le paiement doit comprendre toute la somme qu'aurait à acquitter celui pour lequel il a lieu.

Il doit être fait au plus tard le lendemain du dernier jour admis pour la confection du protêt faute de paiement.

Article 60.

Si la lettre de change a été acceptée par des intervenants ayant leur domicile au lieu du paiement, ou si des personnes ayant leur domicile dans ce même lieu ont été indiquées pour payer au besoin, le porteur doit présenter la lettre à toutes ces personnes et faire dresser, s'il y a lieu,

When *vis major* has terminated, the holder must without delay present the bill of exchange for acceptance or payment and, if need be, draw up the protest.

If *vis major* continues to operate beyond thirty days after maturity, recourse may be exercised, and neither presentment nor the drawing up of a protest shall be necessary.

In the case of bills of exchange drawn at sight or at a fixed period after sight, the time-limit of thirty days shall run from the date on which the holder, even before the expiration of the time for presentment, has given notice of *vis major* to his endorser. In the case of bills of exchange drawn at a certain time after sight, the above time-limit of thirty days shall be added to the period after sight specified in the bill of exchange.

Facts which are purely personal to the holder or to the person whom he has entrusted with the presentment of the bill or drawing up of the protest are not deemed to constitute cases of *vis major*.

CHAPTER VIII. — INTERVENTION FOR HONOUR.

I. GENERAL PROVISIONS.

Article 55.

The drawer, an endorser, or a person giving an *aval* may specify a person who is to accept or pay in case of need.

A bill of exchange may, subject as hereinafter mentioned, be accepted or paid by a person who intervenes for the honour of any debtor against whom a right of recourse exists.

The person intervening may be a third party, even the drawee, or, save the acceptor, a party already liable on the bill of exchange.

The person intervening is bound to give, within two business days, notice of his intervention to the party for whose honour he has intervened. In default, he is responsible for the injury, if any, due to his negligence, but the damages shall not exceed the amount of the bill of exchange.

2. ACCEPTANCE BY INTERVENTION (FOR HONOUR).

Article 56.

There may be acceptance by intervention in all cases where the holder has a right of recourse before maturity on a bill which is capable of acceptance.

When the bill of exchange indicates a person who is designated to accept or pay it in case of need at the place of payment, the holder may not exercise his rights of recourse before maturity against the person naming such referee in case of need and against subsequent signatories, unless he has presented the bill of exchange to the referee in case of need and until, if acceptance is refused by the latter, this refusal has been authenticated by a protest.

In other cases of intervention the holder may refuse an acceptance by intervention. Nevertheless, if he allows it, he loses his right of recourse before maturity against the person on whose behalf such acceptance was given and against subsequent signatories.

Article 57.

Acceptance by intervention is specified on the bill of exchange. It is signed by the person intervening. It mentions the person for whose honour it has been given and, in default of such mention, the acceptance is deemed to have been given for the honour of the drawer.

Article 58.

The acceptor by intervention is liable to the holder and to the endorsers, subsequent to the party for whose honour he intervened, in the same manner as such party.

Notwithstanding an acceptance by intervention, the party for whose honour it has been given and the parties liable to him may require the holder, in exchange for payment of the sum mentioned in Article 48, to deliver the bill, the protest, and a receipted account, if any.

3. PAYMENT BY INTERVENTION.

Article 59.

Payment by intervention may take place in all cases where, either at maturity or before maturity, the holder has a right of recourse on the bill.

Payment must include the whole amount payable by the party for whose honour it is made.

It must be made at the latest on the day following the last day allowed for drawing up the protest for non-payment.

Article 60.

If a bill of exchange has been accepted by persons intervening who are domiciled in the place of payment, or if persons domiciled there have been named as referees in case of need, the holder

un protêt faute de paiement au plus tard le lendemain du dernier jour admis pour la confection du protêt.

A défaut de protêt dans ce délai, celui qui a indiqué le besoin ou pour le compte de qui la lettre a été acceptée et les endosseurs postérieurs cessent d'être obligés.

Article 61.

Le porteur qui refuse le paiement par intervention perd ses recours contre ceux qui auraient été libérés.

Article 62.

Le paiement par intervention doit être constaté par un acquit donné sur la lettre de change avec indication de celui pour qui il est fait. A défaut de cette indication, le paiement est considéré comme fait pour le tireur.

La lettre de change et le protêt, s'il en a été dressé un, doivent être remis au payeur par l'intervention.

Article 63.

Le payeur par intervention acquiert les droits résultant de la lettre de change contre celui pour lequel il a payé et contre ceux qui sont tenus vis-à-vis de ce dernier en vertu de la lettre de change. Toutefois, il ne peut endosser la lettre de change à nouveau.

Les endosseurs postérieurs au signataire pour qui le paiement a eu lieu sont libérés.

En cas de concurrence pour le paiement par intervention, celui qui opère le plus de libération est préféré. Celui qui intervient, en connaissance de cause, contrairement à cette règle, perd ses recours contre ceux qui auraient été libérés.

CHAPITRE IX. — DE LA PLURALITÉ D'EXEMPLAIRES ET DES COPIES.

I. PLURALITÉ D'EXEMPLAIRES.

Article 64.

La lettre de change peut être tirée en plusieurs exemplaires identiques.

Ces exemplaires doivent être numérotés dans le texte même du titre; faute de quoi, chacun d'eux est considéré comme une lettre de change distincte.

Tout porteur d'une lettre n'indiquant pas qu'elle a été tirée en un exemplaire unique peut exiger à ses frais la délivrance de plusieurs exemplaires. A cet effet, il doit s'adresser à son endosseur immédiat, qui est tenu de lui prêter ses soins pour agir contre son propre endosseur, et ainsi de suite, en remontant jusqu'au tireur. Les endosseurs sont tenus de reproduire les endossements sur les nouveaux exemplaires.

Article 65.

Le paiement fait sur un des exemplaires est libératoire, alors même qu'il n'est pas stipulé que ce paiement annule l'effet des autres exemplaires. Toutefois, le tiré reste tenu à raison de chaque exemplaire accepté dont il n'a pas obtenu la restitution.

L'endosseur qui a transféré les exemplaires à différentes personnes, ainsi que les endosseurs subséquents, sont tenus à raison de tous les exemplaires portant leur signature et qui n'ont pas été restitués.

Article 66.

Celui qui a envoyé un des exemplaires à l'acceptation doit indiquer sur les autres exemplaires le nom de la personne entre les mains de laquelle cet exemplaire se trouve. Celle-ci est tenue de le remettre au porteur légitime d'un autre exemplaire.

Si elle s'y refuse, le porteur ne peut exercer de recours qu'après avoir fait constater par un protêt:

- 1^o que l'exemplaire envoyé à l'acceptation ne lui a pas été remis sur sa demande;
- 2^o que l'acceptation ou le paiement n'a pu être obtenu sur un autre exemplaire.

2. COPIES.

Article 67.

Tout porteur d'une lettre de change a le droit d'en faire des copies.

La copie doit reproduire exactement l'original avec les endossements et toutes les autres mentions qui y figurent. Elle doit indiquer où elle s'arrête.

Elle peut être endossée et avalisée de la même manière et avec les mêmes effets que l'original.

Article 68.

La copie doit désigner le détenteur du titre original. Celui-ci est tenu de remettre ledit titre au porteur légitime de la copie.

must present the bill to all these persons and, if necessary, have a protest for non-payment drawn up at the latest on the day following the last day allowed for drawing up the protest.

In default of protest within this limit of time, the party who has named the referee in case of need, or for whose account the bill has been accepted, and the subsequent endorsers, are discharged.

Article 61.

The holder who refuses payment by intervention loses his right of recourse against any persons who would have been discharged thereby.

Article 62.

Payment by intervention must be authenticated by a receipt given on the bill of exchange mentioning the person for whose honour payment has been made. In default of such mention, payment is deemed to have been made for the honour of the drawer.

The bill of exchange and the protest, if any, must be given up to the person paying by intervention.

Article 63.

The person paying by intervention acquires the rights arising out of the bill of exchange against the party for whose honour he has paid and against persons who are liable to the latter on the bill of exchange. Nevertheless, he cannot re-endorse the bill of exchange.

Endorsers subsequent to the party for whose honour payment has been made are discharged.

In case of competition for payment by intervention, the payment which effects the greater number of releases has the preference. Any person who, with a knowledge of the facts, intervenes in a manner contrary to this rule, loses his right of recourse against those who would have been discharged.

CHAPTER IX. — PARTS OF A SET, AND COPIES.

I. PARTS OF A SET.

Article 64.

A bill of exchange can be drawn in a set of two or more identical parts.

These parts must be numbered in the body of the instrument itself; in default, each part is considered as a separate bill of exchange.

Every holder of a bill which does not specify that it has been drawn as a sole bill may, at his own expense, require the delivery of two or more parts. For this purpose he must apply to his immediate endorser, who is bound to assist him in proceeding against his own endorser, and so on in the series until the drawer is reached. The endorsers are bound to reproduce their endorsements on the new parts of the set.

Article 65.

Payment made on one part of a set operates as a discharge, even though there is no stipulation that this payment annuls the effect of the other parts. Nevertheless, the drawee is liable on each accepted part which he has not recovered.

An endorser who has transferred parts of a set to different persons, as well as subsequent endorsers, are liable on all the parts bearing their signature which have not been restored.

Article 66.

A party who has sent one part for acceptance must indicate on the other parts the name of the person in whose hands this part is to be found. That person is bound to give it up to the lawful holder of another part.

If he refuses, the holder cannot exercise his right of recourse until he has had a protest drawn up specifying:

- (1) That the part sent for acceptance has not been given up to him on his demand;
- (2) That acceptance or payment could not be obtained on another of the parts.

2. COPIES.

Article 67.

Every holder of a bill of exchange has the right to make copies of it.

A copy must reproduce the original exactly, with the endorsements and all other statements to be found therein. It must specify where the copy ends.

It may be endorsed and guaranteed by *aval* in the same manner and with the same effects as the original.

Article 68.

A copy must specify the person in possession of the original instrument. The latter is bound to hand over the said instrument to the lawful holder of the copy.

S'il s'y refuse, le porteur ne peut exercer de recours contre les personnes qui ont endossé ou avalisé la copie qu'après avoir fait constater par un protêt que l'original ne lui a pas été remis sur sa demande.

Si le titre original, après le dernier endossement survenu avant que la copie ne soit faite, porte la clause: « à partir d'ici l'endossement ne vaut que sur la copie » ou toute autre formule équivalente, un endossement signé ultérieurement sur l'original est nul.

CHAPITRE X. — DES ALTÉRATIONS.

Article 69.

En cas d'altération du texte d'une lettre de change, les signataires postérieurs à cette altération sont tenus dans les termes du texte altéré; les signataires antérieurs le sont dans les termes du texte originaire.

CHAPITRE XI. — DE LA PRESCRIPTION.

Article 70.

Toutes actions résultant de la lettre de change contre l'accepteur se prescrivent par trois ans à compter de la date de l'échéance.

Les actions du porteur contre les endosseurs et contre le tireur se prescrivent par un an à partir de la date du protêt dressé en temps utile ou de celle de l'échéance, en cas de clause de retour sans frais.

Les actions des endosseurs les uns contre les autres et contre le tireur se prescrivent par six mois à partir du jour où l'endosseur a remboursé la lettre ou du jour où il a été lui-même actionné.

Article 71.

L'interruption de la prescription n'a d'effet que contre celui à l'égard duquel l'acte interruptif a été fait.

CHAPITRE XII. — DISPOSITIONS GÉNÉRALES.

Article 72.

Le paiement d'une lettre de change dont l'échéance est à un jour férié légal ne peut être exigé que le premier jour ouvrable qui suit. De même, tous autres actes relatifs à la lettre de change notamment la présentation à l'acceptation et le protêt, ne peuvent être faits qu'un jour ouvrable.

Lorsqu'un de ces actes doit être accompli dans un certain délai dont le dernier jour est un jour férié légal, ce délai est prorogé jusqu'au premier jour ouvrable qui en suit l'expiration. Les jours fériés intermédiaires sont compris dans la computation du délai.

Article 73.

Les délais légaux ou conventionnels ne comprennent pas le jour qui leur sert de point de départ.

Article 74.

Aucun jour de grâce, ni légal ni judiciaire n'est admis.

TITRE II.

DU BILLET A ORDRE.

Article 75.

Le billet à ordre contient:

- 1^o la dénomination du titre insérée dans le texte même et exprimée dans la langue employée pour la rédaction de ce titre;
- 2^o la promesse pure et simple de payer une somme déterminée;
- 3^o l'indication de l'échéance;
- 4^o celle du lieu où le paiement doit s'effectuer;
- 5^o le nom de celui auquel ou à l'ordre duquel le paiement doit être fait;
- 6^o l'indication de la date et du lieu où le billet est souscrit;
- 7^o la signature de celui qui émet le titre (souscripteur).

If he refuses, the holder may not exercise his right of recourse against the persons who have endorsed the copy or guaranteed it by *aval* until he has had a protest drawn up specifying that the original has not been given up to him on his demand.

Where the original instrument, after the last endorsement before the making of the copy, contains a clause "commencing from here an endorsement is only valid if made on the copy" or some equivalent formula, a subsequent endorsement on the original is null and void.

CHAPTER X. — ALTERATIONS.

Article 69.

In case of alteration of the text of a bill of exchange, parties who have signed subsequent to the alteration are bound according to the terms of the altered text; parties who have signed before the alteration are bound according to the terms of the original text.

CHAPTER XI. — LIMITATION OF ACTIONS.

Article 70.

All actions arising out of a bill of exchange against the acceptor are barred after three years, reckoned from the date of maturity.

Actions by the holder against the endorsers and against the drawer are barred after one year from the date of a protest drawn up within proper time, or from the date of maturity where there is a stipulation *retour sans frais*.

Actions by endorsers against each other and against the drawer are barred after six months, reckoned from the day when the endorser took up and paid the bill or from the day when he himself was sued.

Article 71.

Interruption of the period of limitation is only effective against the person in respect of whom the period has been interrupted.

CHAPTER XII. — GENERAL PROVISIONS.

Article 72.

Payment of a bill of exchange which falls due on a legal holiday (*jour férié légal*) cannot be demanded until the next business day. So, too, all other proceedings relating to a bill of exchange, in particular, presentment] for acceptance and protest, can only be taken on a business day.

Where any of these proceedings must be taken within a certain limit of time the last day of which is a legal holiday (*jour férié légal*), the limit of time is extended until the first business day which follows the expiration of that time. Intermediate holidays (*jours fériés*) are included in computing limits of time.

Article 73.

Legal or contractual limits of time do not include the day on which the period commences.

Article 74.

No days of grace, whether legal or judicial, are permitted.

TITLE II.

PROMISSORY NOTES.

Article 75.

A promissory note contains:

- (1) The term "promissory note" inserted in the body of the instrument and expressed in the language employed in drawing up the instrument;
- (2) An unconditional promise to pay a determinate sum of money;
- (3) A statement of the time of payment;
- (4) A statement of the place where payment is to be made;
- (5) The name of the person to whom or to whose order payment is to be made;
- (6) A statement of the date and of the place where the promissory note is issued;
- (7) The signature of the person who issues the instrument (maker).

Article 76.

Le titre dans lequel une des énonciations indiquées à l'article précédent fait défaut ne vaut pas comme billet à ordre, sauf dans les cas déterminés par les alinéas suivants.

Le billet à ordre dont l'échéance n'est pas indiquée est considéré comme payable à vue.

A défaut d'indication spéciale, le lieu de création du titre est réputé être le lieu du paiement et, en même temps, le lieu du domicile du souscripteur.

Le billet à ordre n'indiquant pas le lieu de sa création est considéré comme souscrit dans le lieu désigné à côté du nom du souscripteur.

Article 77.

Sont applicables au billet à ordre, en tant qu'elles ne sont pas incompatibles avec la nature de ce titre, les dispositions relatives à la lettre de change et concernant :

l'endossement (articles 11-20);
l'échéance (articles 33-37);
le paiement (articles 38-42);
les recours faute de paiement (articles 43-50, 52-54);
le paiement par intervention (articles 55, 59-63);
les copies (articles 67 et 68);
les altérations (article 69);
la prescription (articles 70-71);
les jours fériés, la computation des délais et l'interdiction des jours de grâce (articles 72, 73 et 74).

Sont aussi applicables au billet à ordre les dispositions concernant la lettre de change payable chez un tiers ou dans une localité autre que celle du domicile du tiré (articles 4 et 27), la stipulation d'intérêts (article 5), les différences d'énonciation relatives à la somme à payer (article 6), les conséquences de l'apposition d'une signature dans les conditions visées à l'article 7, celles de la signature d'une personne qui agit sans pouvoirs ou en dépassant ses pouvoirs (article 8), et la lettre de change en blanc (article 10).

Sont également applicables au billet à ordre, les dispositions relatives à l'aval (articles 30 à 32); dans le cas prévu à l'article 31, dernier alinéa, si l'aval n'indique pas pour le compte de qui il a été donné, il est réputé l'avoir été pour le compte du souscripteur du billet à ordre.

Article 78.

Le souscripteur d'un billet à ordre est obligé de la même manière que l'accepteur d'une lettre de change.

Les billets à ordre payables à un certain délai de vue doivent être présentés au visa du souscripteur dans les délais fixés à l'article 23. Le délai de vue court de la date du visa signé du souscripteur sur le billet. Le refus du souscripteur de donner son visa daté est constaté par un protêt (article 25) dont la date sert de point de départ au délai de vue.

ANNEXE II.

Article 1.

Chacune des Hautes Parties contractantes peut prescrire que l'obligation d'insérer dans les lettres de change créées sur son territoire la dénomination de « lettre de change » prévue par l'article I, N° I de la loi uniforme, ne s'appliquera que six mois après l'entrée en vigueur de la présente Convention.

Article 2.

Chacune des Hautes Parties contractantes a, pour les engagements pris en matière de lettre de change sur son territoire, la faculté de déterminer de quelle manière il peut être suppléé à la signature elle-même, pourvu qu'une déclaration authentique inscrite sur la lettre de change constate la volonté de celui qui aurait dû signer.

Article 3.

Chacune des Hautes Parties contractantes se réserve la faculté de ne pas insérer l'article 10 de la loi uniforme dans sa loi nationale.

Article 4.

Par dérogation à l'article 31, alinéa premier de la loi uniforme, chacune des Hautes Parties contractantes a la faculté d'admettre qu'un aval pourra être donné sur son territoire par un acte séparé indiquant le lieu où il est intervenu.

Article 76.

An instrument in which any of the requirements mentioned in the preceding article are wanting is invalid as a promissory note except in the cases specified in the following paragraphs.

A promissory note in which the time of payment is not specified is deemed to be payable at sight.

In default of special mention, the place where the instrument is made is deemed to be the place of payment and at the same time the place of the domicile of the maker.

A promissory note which does not mention the place of its issue is deemed to have been made in the place mentioned beside the name of the maker.

Article 77.

The following provisions relating to bills of exchange apply to promissory notes so far as they are not inconsistent with the nature of these instruments, viz.:

- Endorsement (Articles 11 to 20);
- Time of payment (Articles 33 to 37);
- Payment (Articles 38 to 42);
- Recourse in case of non-payment (Articles 43 to 50, 52 to 54);
- Payment by intervention (Articles 55, 59 to 63);
- Copies (Articles 67 and 68);
- Alterations (Article 69);
- Limitation of actions (Articles 70 and 71);
- Holidays, computation of limits of time and prohibition of days of grace (Articles 72, 73 and 74).

The following provisions are also applicable to a promissory note: The provisions concerning a bill of exchange payable at the address of a third party or in a locality other than that of the domicile of the drawee (Articles 4 and 27); stipulation for interest (Article 5); discrepancies as regards the sum payable (Article 6); the consequences of signature under the conditions mentioned in Article 7, the consequences of signature by a person who acts without authority or who exceeds his authority (Article 8); and provisions concerning a bill of exchange in blank (Article 10).

The following provisions are also applicable to a promissory note: Provisions relating to guarantee by *aval* (Articles 30-32); in the case provided for in Article 31, last paragraph, if the *aval* does not specify on whose behalf it has been given, it is deemed to have been given on behalf of the maker of the promissory note.

Article 78.

The maker of a promissory note is bound in the same manner as an acceptor of a bill of exchange.

Promissory notes payable at a certain time after sight must be presented for the visa of the maker within the limits of time fixed by Article 23. The limit of time runs from the date of the visa signed by the maker on the note. The refusal of the maker to give his visa with the date thereon must be authenticated by a protest (Article 25), the date of which marks the commencement of the period of time after sight.

ANNEX II.

Article 1.

Each of the High Contracting Parties may stipulate that the obligation to insert in bills of exchange issued in its territory the term "bill of exchange", as laid down in Article 1, 1, of the Uniform Law, shall not apply until six months after the entry into force of the present Convention.

Article 2.

Each of the High Contracting Parties has, as regards undertakings entered into in respect of bills of exchange in its own territory, the right to determine in what manner an actual signature may be replaced by an authentic declaration written on the bill which evidences the consent of the party who should have signed.

Article 3.

Each of the High Contracting Parties reserves the right not to embody Article 10 of the Uniform Law in its national law.

Article 4.

By way of derogation from Article 31, paragraph 1, of the Uniform Law, each of the High Contracting Parties shall have the right to decide that an *aval* may be given in its territory by a separate instrument specifying the place in which the instrument has been executed.

Article 5.

Chacune des Hautes Parties contractantes peut compléter l'article 38 de la loi uniforme en ce sens que, pour une lettre de change payable sur son territoire, le porteur sera obligé de la présenter le jour même de l'échéance; l'inobservation de cette obligation ne pourra donner lieu qu'à des dommages-intérêts.

Les autres Hautes Parties contractantes auront la faculté de déterminer les conditions sous lesquelles elles reconnaîtront une telle obligation.

Article 6.

Il appartiendra à chacune des Hautes Parties contractantes de déterminer, pour l'application du dernier alinéa de l'article 38 de la loi uniforme, les institutions qui, selon la loi nationale, sont à considérer comme chambres de compensation.

Article 7.

Chacune des Hautes Parties contractantes a la faculté de déroger si elle le juge nécessaire, en des circonstances exceptionnelles ayant trait au cours du change de la monnaie de cet Etat, aux effets de la clause prévue à l'article 41 et relative au paiement effectif en une monnaie étrangère en ce qui concerne les lettres de change payables sur son territoire. La même règle peut être appliquée pour ce qui concerne la création des lettres de change en monnaies étrangères sur le territoire national.

Article 8.

Chacune des Hautes Parties contractantes a la faculté de prescrire que les protêts à dresser sur son territoire peuvent être remplacés par une déclaration datée et écrite sur la lettre de change elle-même, signée par le tiré, sauf dans le cas où le tireur exige dans le texte de la lettre de change un protêt par acte authentique.

Chacune des Hautes Parties contractantes a également la faculté de prescrire que ladite déclaration soit transcrite sur un registre public dans le délai fixé pour les protêts.

Dans le cas prévu aux alinéas précédents l'endossement sans date est présumé avoir été fait antérieurement au protêt.

Article 9.

Par dérogation à l'article 44, alinéa 3 de la loi uniforme, chacune des Hautes Parties contractantes a la faculté de prescrire que le protêt faute de paiement doit être dressé soit le jour où la lettre de change est payable, soit l'un des deux jours ouvrables qui suivent.

Article 10.

Il est réservé à la législation de chacune des Hautes Parties contractantes de déterminer de façon précise les situations juridiques visées à l'article 43, numéros 2 et 3, et à l'article 44, alinéas 5 et 6 de la loi uniforme.

Article 11.

Par dérogation aux dispositions des articles 43, numéros 2 et 3, et 74 de la loi uniforme, chacune des Hautes Parties contractantes se réserve la faculté d'admettre dans sa législation la possibilité pour les garants d'une lettre de change d'obtenir, en cas de recours exercé contre eux, des délais, qui, en aucun cas, ne pourront dépasser l'échéance de la lettre de change.

Article 12.

Par dérogation à l'article 45 de la loi uniforme, chacune des Hautes Parties contractantes a la faculté de maintenir ou d'introduire le système d'avis à donner par l'officier public, savoir: qu'en effectuant le protêt faute d'acceptation ou faute de paiement, le notaire ou le fonctionnaire qui, d'après la loi nationale, est autorisé à dresser le protêt est tenu d'en donner avis par écrit à celles des personnes obligées dans la lettre de change dont les adresses sont soit indiquées sur la lettre de change, soit connues par l'officier public dressant le protêt, soit indiquées par les personnes ayant exigé le protêt. Les dépenses résultant d'un tel avis sont à ajouter aux frais de protêt.

Article 13.

Chacune des Hautes Parties contractantes a la faculté de prescrire en ce qui concerne les lettres de change qui sont à la fois émises et payables sur son territoire, que le taux d'intérêt, dont il est question à l'article 48, numéro 2 et à l'article 49, numéro 2 de la loi uniforme, pourra être remplacé par le taux légal en vigueur dans le territoire de cette Haute Partie contractante.

Article 14.

Par dérogation à l'article 48 de la loi uniforme chacune des Hautes Parties contractantes se réserve la faculté d'insérer dans la loi nationale une disposition prescrivant que le porteur peut réclamer à celui contre lequel il exerce son recours un droit de commission dont le montant sera déterminé par la loi nationale.

Il en est de même, par dérogation à l'article 49 de la loi uniforme, en ce qui concerne la personne qui, ayant remboursé la lettre de change, en réclame le montant à ses garants.

Article 5.

Each of the High Contracting Parties may supplement Article 38 of the Uniform Law so as to provide that the holder of a bill of exchange payable in its territory shall be obliged to present it on the actual day of maturity. Failure to comply with this obligation may only give rise to a right to damages.

The other High Contracting Parties shall have the right to determine the conditions subject to which such obligation will be recognised by them.

Article 6.

For the purpose of giving effect to the last paragraph of Article 38 of the Uniform Law, each of the High Contracting Parties shall determine the institutions which, according to its national law, are to be regarded as clearing-houses.

Article 7.

Each of the High Contracting Parties shall have the right, if it deems fit, in exceptional circumstances connected with the rate of exchange in such State, to derogate from the stipulation contained in Article 41 for effective payment in foreign currency as regards bills of exchange payable in its territory. The above rule may also be applied as regards the issue in the national territory of bills of exchange payable in foreign currencies.

Article 8.

Each of the High Contracting Parties may prescribe that protests to be drawn up in its territory may be replaced by a declaration dated and written on the bill itself, and signed by the drawee, except where the drawer stipulates in the body of the bill of exchange itself for an authenticated protest.

Each of the High Contracting Parties may also prescribe that the said declaration shall be inscribed in a public register within the limit of time fixed for protests.

In the case provided for in the preceding paragraphs, an undated endorsement is presumed to have been made prior to the protest.

Article 9.

By way of derogation from Article 44, paragraph 3, of the Uniform Law, each of the High Contracting Parties has the right to prescribe that a protest for non-payment must be drawn up either on the day when the bill is payable or on one of the two following business days.

Article 10.

It is reserved to the legislation of each of the High Contracting Parties to determine the exact legal situations referred to in Article 43, Nos. 2 and 3, and in Article 44, paragraphs 5 and 6, of the Uniform Law.

Article 11.

By way of derogation from the provisions of Article 43, Nos. 2 and 3, and Article 74 of the Uniform Law, each of the High Contracting Parties reserves the right to include in its legislation the possibility for persons guaranteeing a bill of exchange to obtain, in the event of recourse being exercised against them, periods of grace which may in no case extend beyond the maturity of the bill.

Article 12.

By way of derogation from Article 45 of the Uniform Law, each of the High Contracting Parties shall be entitled to maintain or introduce the following system of notification by the public official, viz., that, when protesting for non-acceptance or non-payment, the notary or official who, under the national law, is authorised to draw up the protest, is required to give notice in writing to the persons liable under the bill of exchange whose addresses are specified in the bill, or are known to the public official drawing up the protest, or are specified by the persons demanding the protest. The costs of such notice shall be added to the costs of the protest.

Article 13.

Each of the High Contracting Parties is entitled to prescribe, as regards bills of exchange which are both issued and payable in its territory, that the rate of interest mentioned in Article 48, No. 2, and Article 49, No. 2, of the Uniform Law may be replaced by the legal rate in force in the territory of that High Contracting Party.

Article 14.

By derogation from Article 48 of the Uniform Law each of the High Contracting Parties reserves the right to insert in its national law a rule prescribing that the holder may claim from the party against whom he is exercising his right of recourse a commission the amount of which shall be determined by the national law.

The same applies, by derogation from Article 49 of the Uniform Law, to a person who, having taken up and paid the bill of exchange, claims the amount from the parties liable to him.

Article 15.

Chacune des Hautes Parties contractantes est libre de décider que, dans le cas de déchéance ou de prescription, il subsistera sur son territoire une action contre le tireur qui n'a pas fait provision ou contre un tireur ou un endosseur qui se serait enrichi injustement. La même faculté existe, en cas de prescription, en ce qui concerne l'accepteur qui a reçu provision ou se serait enrichi injustement.

Article 16.

La question de savoir si le tireur est obligé de fournir provision à l'échéance et si le porteur a des droits spéciaux sur cette provision reste en dehors de la loi uniforme.

Il en est de même pour toute autre question concernant le rapport sur la base duquel a été émise la traite.

Article 17.

C'est à la législation de chacune des Hautes Parties contractantes qu'il appartient de déterminer les causes d'interruption et de suspension de la prescription des actions résultant d'une lettre de change dont ses tribunaux ont à connaître.

Les autres Hautes Parties contractantes ont la faculté de déterminer les conditions auxquelles elles reconnaîtront de pareilles causes. Il en est de même de l'effet d'une action comme moyen de faire courir le délai de prescription prévu par l'article 70, alinéa 3 de la loi uniforme.

Article 18.

Chacune des Hautes Parties contractantes a la faculté de prescrire que certains jours ouvrables seront assimilés aux jours fériés légaux en ce qui concerne la présentation à l'acceptation ou au paiement et tous autres actes relatifs à la lettre de change.

Article 19.

Chacune des Hautes Parties contractantes peut déterminer la dénomination à adopter dans les lois nationales pour les titres visés à l'article 75 de la loi uniforme ou dispenser ces titres de toute dénomination spéciale pourvu qu'ils contiennent l'indication expresse qu'ils sont à ordre.

Article 20.

Les dispositions des articles 1 à 18 de la présente annexe, relatives à la lettre de change, s'appliquent également au billet à ordre.

Article 21.

Chacune des Hautes Parties contractantes se réserve la faculté de restreindre l'engagement mentionné dans l'article premier de la Convention aux seules dispositions sur la lettre de change et de ne pas introduire dans son territoire les dispositions sur le billet à ordre contenues dans le titre II de la loi uniforme. Dans ce cas, la Haute Partie contractante qui a profité de cette réserve ne sera considérée comme partie contractante que pour ce qui concerne la lettre de change.

Chacune des Hautes Parties contractantes se réserve également la faculté de faire des dispositions concernant le billet à ordre l'objet d'un règlement spécial qui sera entièrement conforme aux stipulations du titre II de la loi uniforme et qui reproduira les règles sur la lettre de change auxquelles il est renvoyé, sous les seules modifications résultant des articles 75, 76, 77 et 78 de la loi uniforme et des articles 19 et 20 de la présente annexe.

Article 22.

Chacune des Hautes Parties contractantes a la faculté d'édicter des dispositions exceptionnelles d'ordre général relatives à la prorogation des délais concernant les actes conservatoires des recours et à la prorogation des échéances.

Article 23.

Chacune des Hautes Parties contractantes s'engage à reconnaître les dispositions adoptées par toute Haute Partie contractante en vertu des articles 1 à 4, 6, 8 à 16 et 18 à 21 de la présente annexe.

Article 15.

Each of the High Contracting Parties is free to decide that, in the event of extinctive prescription (*déchéance*) or limitation of actions (*prescription*), proceedings may be taken in its territory against a drawer who has not provided cover (*provision*) for the bill, or against a drawer or endorser who has made an inequitable gain. The same right exists in the case of limitation of action as regards an acceptor who has received cover or made an inequitable gain (*se serait enrichi injustement*).

Article 16.

The question whether the drawer is obliged to provide cover (*provision*) at maturity and whether the holder has special rights to this cover remains outside the scope of the Uniform Law. The same applies to any other question concerning the legal relations on the basis of which the bill was issued.

Article 17.

It is for the legislation of each of the High Contracting Parties to determine the causes of interruption or suspension of limitation (*prescription*) in the case of actions on bills of exchange which come before its courts.

The other High Contracting Parties are entitled to determine the conditions subject to which they will recognise such causes. The same applies to the effect of an action as a means of indicating the commencement of the period of limitation* (*prescription*) laid down in Article 70, paragraph 3, of the Uniform Law.

Article 18.

Each of the High Contracting Parties has the right to prescribe that certain business days shall be assimilated to legal holidays (*jours fériés légaux*) as regards presentment for acceptance or payment and all other acts relating to bills of exchange.

Article 19.

Each of the High Contracting Parties may determine the denomination to be adopted in the national laws for the instruments referred to in Article 75 of the Uniform Law, or may exempt them from any special denomination, provided that they contain an express mention that they are drawn to order.

Article 20.

The provisions of Articles 1 to 18 of the present Annex with regard to bills of exchange apply likewise to promissory notes.

Article 21.

Each of the High Contracting Parties reserves the right to restrict the undertaking mentioned in Article 1 of the Convention to the provisions dealing with bills of exchange only, and not to introduce into its territory the provisions dealing with promissory notes contained in Title II of the Uniform Law. In this case the High Contracting Party making use of this reservation shall only be regarded as a contracting party in respect of bills of exchange.

Each of the High Contracting Parties further reserves the right to embody the provisions concerning promissory notes in a special regulation, which shall exactly conform to the stipulations in Title II of the Uniform Law and which shall reproduce the rules on bills of exchange to which reference is made, subject only to the modifications resulting from Articles 75, 76, 77 and 78 of the Uniform Law and from Articles 19 and 20 of the present Annex.

Article 22.

Each of the High Contracting Parties has the right to adopt exceptional measures of a general nature relating to the extension of the limits of time for conservatory measures in relation to recourse (*actes conservatoires des recours*) and to the extension of maturities.

Article 23.

Each of the High Contracting Parties undertakes to recognise the provisions adopted by every other High Contracting Party in virtue of Articles 1 to 4, 6, 8 to 16 and 18 to 21 of the present Annex.

PROTOCOLE DE LA CONVENTION.

Au moment de procéder à la signature de la Convention, en date de ce jour, portant Loi uniforme sur les lettres de change et billets à ordre, les soussignés, dûment autorisés, sont convenus des dispositions suivantes:

A.

Les Membres de la Société des Nations et les Etats non membres qui n'auraient pas été en mesure d'effectuer avant le 1^{er} septembre 1932 le dépôt de leur ratification sur ladite Convention s'engagent à adresser, dans les quinze jours suivant cette date, une communication au Secrétaire général de la Société des Nations, pour lui faire connaître la situation dans laquelle ils se trouvent en ce qui concerne la ratification.

B.

Si, à la date du 1^{er} novembre 1932, les conditions prévues à l'article VI, alinéa 1, pour l'entrée en vigueur de la Convention, ne sont pas remplies, le Secrétaire général de la Société des Nations convoquera une réunion des Membres de la Société des Nations et des Etats non membres qui auraient signé la Convention ou y auraient adhéré.

Cette réunion aura pour objet l'examen de la situation et des mesures à prendre, le cas échéant, pour y faire face.

C.

Les Hautes Parties contractantes se communiqueront réciproquement dès leur mise en vigueur, les dispositions législatives qu'elles établiront sur leurs territoires respectifs en exécution de la Convention.

PROTOCOL TO THE CONVENTION.

At the time of signing the Convention of this day's date providing a Uniform Law for bills of exchange and promissory notes, the undersigned, duly authorised, have agreed upon the following provisions:

A.

The Members of the League of Nations and the non-Member States who may not have been able to deposit their ratifications of the said Convention before September 1st, 1932, undertake to forward, within fifteen days from that date, a communication to the Secretary-General of the League of Nations informing him of their situation as regards ratification.

B.

If on November 1st, 1932, the conditions laid down in the first paragraph of Article VI for the entry into force of the Convention are not fulfilled, the Secretary-General of the League of Nations shall convene a meeting of the Members of the League and the non-Member States which have signed the Convention or acceded to it.

The purpose of this meeting shall be to examine the situation and any measures to be taken to remedy it.

C.

The High Contracting Parties shall communicate to each other, immediately upon their coming into force, the legislative measures taken by them in execution of the Convention in their respective territories.

EN FOI DE QUOI, les plénipotentiaires ont signé le présent Protocole.

FAIT à Genève, le sept juin mil neuf cent trente, en simple expédition qui sera déposée dans les archives du Secrétariat de la Société des Nations; copie conforme en sera transmise à tous les Membres de la Société des Nations et à tous les Etats non membres représentés à la Conférence.

IN FAITH WHEREOF the Plenipotentiaries have signed the present Protocol.

DONE at Geneva, the seventh day of June, one thousand nine hundred and thirty, in a single copy, which shall be deposited in the archives of the Secretariat of the League of Nations, and of which authenticated copies shall be delivered to all Members of the League of Nations and non-Member States represented at the Conference.

Her Royal Highness the Grand-Duchess of Luxemburg:

M. Ch. G. VERMAIRE, Consul at Geneva.

His Majesty the King of Norway:

M. C. STUB HOLMBOE, Barrister-at-Law.

Her Majesty the Queen of the Netherlands:

Dr. W. L. P. A. MOLENGRAAFF, Professor Emeritus of the University of Utrecht.

The President of the Republic of Peru:

M. José Maria BARRETO, Head of the Permanent Office of Peru accredited to the League of Nations.

The President of the Polish Republic:

M. Józef SUŁKOWSKI, Professor at the University of Poznan, Member of the Polish Codification Commission.

The President of the Portuguese Republic:

Dr. José CAEIRO DA MATTA, Rector of the University of Lisbon, Professor in the Faculty of Law, Director of the Bank of Portugal.

His Majesty the King of Sweden:

Baron E. MARKS VON WÜRTEMBERG, President of the Stockholm Court of Appeal, former Minister for Foreign Affairs;
M. Birger EKEBERG, President of the Civil Legislation Commission, former Minister of Justice, former Member of the Supreme Court.

The Swiss Federal Council:

Dr. Max VISCHER, Barrister-at-Law and Notary, First Secretary of the Swiss Bankers' Association.

Le Président de la République tchécoslovaque :

Le docteur Karel HERMANN-OTAVSKÝ, Professeur à l'Université de Prague, Président de la Commission de codification du droit commercial au Ministère de la Justice.

Le Président de la République turque :

MEHMED MUNIR Bey, Envoyé extraordinaire et Ministre plénipotentiaire près le Conseil fédéral suisse.

Sa Majesté le Roi de Yougoslavie :

M. Ilija CHOUMENKOVITCH, Délégué permanent auprès de la Société des Nations, Envoyé extraordinaire et Ministre plénipotentiaire près le Conseil fédéral suisse.

lesquels, après avoir communiqué leurs pleins pouvoirs, trouvés en bonne et due forme, sont convenus des dispositions suivantes :

Article premier.

Les Hautes Parties contractantes s'engagent, les unes vis-à-vis des autres, à appliquer pour la solution des conflits de lois ci-dessous énumérés, en matière de lettre de change et de billets à ordre, les règles indiquées dans les articles suivants.

Article 2.

La capacité d'une personne pour s'engager par lettre de change et billet à ordre est déterminée par sa loi nationale. Si cette loi nationale déclare compétente la loi d'un autre pays, cette dernière loi est appliquée.

La personne qui serait incapable, d'après la loi indiquée par l'alinéa précédent, est, néanmoins valablement tenue, si la signature a été donnée sur le territoire d'un pays d'après la législation duquel la personne aurait été capable.

Chacune des Hautes Parties contractantes a la faculté de ne pas reconnaître la validité de l'engagement pris en matière de lettre de change et de billet à ordre par l'un de ses ressortissants et qui ne serait tenu pour valable dans le territoire des autres Hautes Parties contractantes que par application de l'alinéa précédent du présent article.

Article 3.

La forme des engagements pris en matière de lettre de change et de billet à ordre est réglée par la loi du pays sur le territoire duquel ces engagements ont été souscrits.

Cependant, si les engagements souscrits sur une lettre de change ou un billet à ordre ne sont pas valables d'après les dispositions de l'alinéa précédent, mais qu'ils soient conformes à la législation de l'Etat où un engagement ultérieur a été souscrit, la circonstance que les premiers engagements sont irréguliers en la forme n'infirmes pas la validité de l'engagement ultérieur.

Chacune des Hautes Parties contractantes a la faculté de prescrire que les engagements pris en matière de lettre de change et de billet à ordre à l'étranger par un de ses ressortissants seront valables à l'égard d'un autre de ses ressortissants sur son territoire, pourvu qu'ils aient été pris dans la forme prévue par la loi nationale.

The President of the Czechoslovak Republic.

Dr. Karel HERMANN-OTAVSKÝ, Professor at the University of Prague, President of the Codification Commission for Commercial Law in the Ministry of Justice.

The President of the Turkish Republic:

MEHMED MUNIR Bey, Envoy Extraordinary and Minister Plenipotentiary accredited to the Swiss Federal Council.

His Majesty the King of Yugoslavia:

M. Ilia CHOUMENKOVITCH, Permanent Delegate accredited to the League of Nations, Envoy Extraordinary and Minister Plenipotentiary, accredited to the Swiss Federal Council.

Who, having communicated their full powers, found in good and due form, have agreed upon the following provisions:

Article 1.

The High Contracting Parties mutually undertake to apply, for the settlement of the conflicts of law hereinafter mentioned, in connection with bills of exchange and promissory notes, the rules set out in the following articles.

Article 2.

The capacity of a person to bind himself by a bill of exchange or promissory note shall be determined by his national law. If this national law provides that the law of another country is competent in the matter, this latter law shall be applied.

A person who lacks capacity, according to the law specified in the preceding paragraph, is nevertheless bound, if his signature has been given in any territory in which according to the law in force there, he would have the requisite capacity.

Each of the High Contracting Parties may refuse to recognise the validity of a contract by means of a bill of exchange or promissory note entered into by one of its nationals which would not be deemed valid in the territory of the other High Contracting Parties otherwise than by means of the application of the preceding paragraph of the present article.

Article 3.

The form of any contract arising out of a bill of exchange or promissory note is regulated by the laws of the territory in which the contract has been signed.

If, however, the obligations entered into by means of a bill of exchange or promissory note are not valid according to the provisions of the preceding paragraph, but are in conformity with the laws of the territory in which a subsequent contract has been entered into, the circumstance that the previous contracts are irregular in form does not invalidate the subsequent contract.

Each of the High Contracting Parties may prescribe that contracts by means of a bill of exchange and promissory note entered into abroad by one of its nationals shall be valid in respect of another of its nationals in its territory, provided that they are in the form laid down by the national law.

Article 15.

La présente Convention n'entrera en vigueur que lorsqu'elle aura été ratifiée ou qu'il y aura été adhéré au nom de sept Membres de la Société des Nations ou Etats non membres, parmi lesquels devront figurer trois des Membres de la Société des Nations représentés d'une manière permanente au Conseil.

La date de l'entrée en vigueur sera le quatre-vingt-dixième jour qui suivra la réception par le Secrétaire général de la Société des Nations de la septième ratification ou adhésion, conformément à l'alinéa premier du présent article.

Le Secrétaire général de la Société des Nations, en faisant les notifications prévues aux articles 13 et 14, signalera spécialement que les ratifications ou adhésions visées à l'alinéa premier du présent article ont été recueillies.

Article 16.

Chaque ratification ou adhésion qui interviendra après l'entrée en vigueur de la Convention conformément à l'article 15 sortira ses effets dès le quatre-vingt-dixième jour qui suivra la date de sa réception par le Secrétaire général de la Société des Nations.

Article 17.

La présente Convention ne pourra être dénoncée avant l'expiration d'un délai de deux ans à partir de la date à laquelle elle sera entrée en vigueur pour ce Membre de la Société des Nations ou pour cet Etat non membre; cette dénonciation produira ses effets dès le quatre-vingt-dixième jour suivant la réception par le Secrétaire général de la notification à lui adressée.

Toute dénonciation sera communiquée immédiatement par le Secrétaire général de la Société des Nations à toutes les autres Hautes Parties contractantes.

Chaque dénonciation n'aura d'effet qu'en ce qui concerne la Haute Partie contractante au nom de laquelle elle aura été faite.

Article 18.

Tout Membre de la Société des Nations et tout Etat non membre à l'égard duquel la présente Convention est en vigueur, pourra adresser au Secrétaire général de la Société des Nations, dès l'expiration de la quatrième année suivant l'entrée en vigueur de la Convention, une demande tendant à la revision de certaines ou de toutes les dispositions de cette Convention.

Si une telle demande, communiquée aux autres Membres de la Société des Nations ou Etats non membres entre lesquels la Convention est alors en vigueur, est appuyée dans un délai d'un an, par au moins six d'entre eux, le Conseil de la Société des Nations décidera s'il y a lieu de convoquer une Conférence à cet effet.

Article 19.

Les Hautes Parties contractantes peuvent déclarer au moment de la signature, de la ratification ou de l'adhésion, que, par leur acceptation de la présente Convention, elles n'entendent assumer aucune obligation en ce qui concerne l'ensemble ou toute partie de leurs colonies, protectorats ou territoires placés sous leur suzeraineté ou mandat; dans ce cas, la présente Convention ne sera pas applicable aux territoires faisant l'objet de pareille déclaration.

Les Hautes Parties contractantes pourront, dans la suite, notifier au Secrétaire général de la Société des Nations qu'elles entendent rendre la présente Convention applicable à l'ensemble ou à toute partie de leurs territoires ayant fait l'objet de la déclaration prévue à l'alinéa précédent. Dans ce cas, la Convention s'appliquera aux territoires visés dans la notification quatre-vingt-dix jours après la réception de cette dernière par le Secrétaire général de la Société des Nations.

De même, les Hautes Parties contractantes peuvent à tout moment déclarer qu'elles entendent que la présente Convention cesse de s'appliquer à l'ensemble ou à toute partie de leurs colonies, protectorats ou territoires placés sous leur suzeraineté ou mandat; dans ce cas, la Convention cessera d'être applicable aux territoires faisant l'objet de pareille déclaration un an après la réception de cette dernière par le Secrétaire général de la Société des Nations.

Article 20.

La présente Convention sera enregistrée par le Secrétaire général de la Société des Nations dès son entrée en vigueur. Elle sera ultérieurement publiée aussitôt que possible au *Recueil des Traités* de la Société des Nations.

Article 4.

Les effets des obligations de l'accepteur d'une lettre de change et du souscripteur d'un billet à ordre sont déterminés par la loi du lieu où ces titres sont payables.

Les effets que produisent les signatures des autres obligés par lettre de change ou billet à ordre sont déterminés par la loi du pays sur le territoire duquel les signatures ont été données.

Article 5.

Les délais de l'exercice de l'action en recours restent déterminés pour tous les signataires par la loi du lieu de la création du titre.

Article 6.

La loi du lieu de la création du titre détermine si le porteur d'une lettre de change acquiert la créance qui a donné lieu à l'émission du titre.

Article 7.

La loi du pays où la lettre de change est payable règle la question de savoir si l'acceptation peut être restreinte à une partie de la somme ou si le porteur est tenu ou non de recevoir un paiement partiel.

La même règle s'applique quant au paiement en matière de billet à ordre.

Article 8.

La forme et les délais du protêt, ainsi que la forme des autres actes nécessaires à l'exercice ou à la conservation des droits en matière de lettre de change et de billet à ordre, sont réglés par les lois du pays sur le territoire duquel doit être dressé le protêt ou passé l'acte en question.

Article 9.

La loi du pays où la lettre de change ou le billet à ordre sont payables détermine les mesures à prendre en cas de perte ou de vol de la lettre de change ou du billet à ordre.

Article 10.

Chacune des Hautes Parties contractantes se réserve la faculté de ne pas appliquer les principes de droit international privé consacrée par la présente Convention en tant qu'il s'agit:

- 1^o D'un engagement pris hors du territoire d'une des Hautes Parties contractantes;
- 2^o D'une loi qui serait applicable d'après ces principes et qui ne serait pas celle d'une des Hautes Parties contractantes.

Article 11.

Dans le territoire de chacune des Hautes Parties contractantes, les dispositions de la présente Convention ne seront pas applicables aux lettres de change et aux billets à ordre déjà créés au moment de la mise en vigueur de la présente Convention.

Article 12.

La présente Convention, dont les textes français et anglais feront également foi, portera la date de ce jour.

Elle pourra être signée ultérieurement jusqu'au 6 septembre 1930 au nom de tout Membre de la Société des Nations et de tout Etat non membre.

Article 13.

La présente Convention sera ratifiée.

Les instruments de ratification seront déposés avant le 1^{er} septembre 1932 auprès du Secrétaire général de la Société des Nations, qui en notifiera immédiatement la réception à tous les Membres de la Société des Nations et aux Etats non membres parties à la présente Convention.

Article 14.

A partir du 6 septembre 1930, tout Membre de la Société des Nations et tout Etat non membre pourront y adhérer.

Cette adhésion s'effectuera par une notification au Secrétaire général de la Société des Nations pour être déposée dans les archives du Secrétariat.

Le Secrétaire général notifiera ce dépôt immédiatement à tous ceux qui auront signé ou adhéré à la présente Convention.

Article 4.

The effects of the obligations of the acceptor of a bill of exchange or maker of a promissory note are determined by the law of the place in which these instruments are payable.

The effects of the signatures of the other parties liable on a bill of exchange or promissory note are determined by the law of the country in which is situated the place where the signatures were affixed.

Article 5.

The limits of time for the exercise of rights of recourse shall be determined for all signatories by the law of the place where the instrument was created.

Article 6.

The question whether there has been an assignment to the holder of the debt which has given rise to the issue of the instrument is determined by the law of the place where the instrument was issued.

Article 7.

The question whether acceptance may be restricted to part of the sum or whether the holder is bound to accept partial payment is governed by the law of the country in which the bill of exchange is payable.

The same rule governs the payment of promissory notes.

Article 8.

The form of and the limits of time for protest, as well as the form of the other measures necessary for the exercise or preservation of rights concerning bills of exchange or promissory notes, are regulated by the laws of the country in which the protest must be drawn up or the measures in question taken.

Article 9.

The measures to be taken in case of the loss or theft of a bill of exchange or promissory note are determined by the law of the country in which the bill of exchange or promissory note is payable.

Article 10.

Each of the High Contracting Parties reserves to itself the right not to apply the principles of private international law contained in the present Convention so far as concerns:

1. An obligation undertaken outside the territory of one of the High Contracting Parties;
2. Any law which may be applicable in accordance with these principles and which is not a law in force in the territory of any High Contracting Party.

Article 11.

In the territory of each of the High Contracting Parties the provisions of the present Convention shall not apply to bills of exchange or promissory notes already issued at the time of the coming into force of the present Convention.

Article 12.

The present Convention, the French and English texts of which shall be equally authentic, shall bear this day's date.

It may be signed thereafter until September 6th, 1930, on behalf of any Member of the League of Nations or non-Member State.

Article 13.

The present Convention shall be ratified.

The instruments of ratification shall be deposited before September 1st, 1932, with the Secretary-General of the League of Nations, who shall forthwith notify receipt thereof to all the Members of the League of Nations and to the non-Member States parties to the present Convention.

Article 14.

As from September 6th, 1930, any Member of the League of Nations and any non-Member State may accede thereto.

Such accession shall be effected by a notification to the Secretary-General of the League of Nations, such notification to be deposited in the archives of the Secretariat.

The Secretary-General shall notify such deposit forthwith to all States which have signed or acceded to the present Convention.

Article 15.

The present Convention shall not come into force until it has been ratified or acceded to on behalf of seven Members of the League of Nations or non-Member States, which shall include three of the Members of the League permanently represented on the Council.

The date of entry into force shall be the ninetieth day following the receipt by the Secretary-General of the League of Nations of the seventh ratification or accession, in accordance with the first paragraph of the present article.

The Secretary-General of the League of Nations, when making the notifications provided for in Articles 13 and 14, shall state in particular that the ratifications or accessions referred to in the first paragraph of the present article have been received.

Article 16.

Every ratification or accession effected after the entry into force of the Convention in accordance with Article 15 shall take effect on the ninetieth day following the date of receipt thereof by the Secretary-General of the League of Nations.

Article 17.

The present Convention may not be denounced before the expiry of two years from the date on which it has entered into force in respect of that Member of the League or non-Member State; such denunciation shall take effect as from the ninetieth day following the receipt by the Secretary-General of the notification addressed to him.

Every denunciation shall be immediately communicated by the Secretary-General of the League of Nations to all the other High Contracting Parties.

Each denunciation shall take effect only as regards the High Contracting Party on whose behalf it has been made.

Article 18.

Every Member of the League of Nations and every non-Member State in respect of which the present Convention is in force may forward to the Secretary-General of the League of Nations, after the expiry of the fourth year following the entry into force of the Convention, a request for the revision of some or all of the provisions of that Convention.

If such request after being communicated to the other Members of the League of Nations or non-Member States between whom the Convention is at that time in force, is supported within one year by at least six of them, the Council of the League of Nations shall decide whether a Conference shall be convened for the purpose.

Article 19.

Any High Contracting Party may, at the time of signature, ratification or accession, declare that, in accepting the present Convention, he does not assume any obligations in respect of all or any of his colonies, protectorates or territories under suzerainty or mandate; and the present Convention shall not apply to any territories named in such declaration.

Any High Contracting Party may give notice to the Secretary-General of the League of Nations at any time subsequently that he desires that the Convention shall apply to all or any of his territories which have been made the subject of a declaration under the preceding paragraph and the Convention shall apply to all the territories named in such notice ninety days after its receipt by the Secretary-General of the League of Nations.

Any High Contracting Party may at any time declare that he desires that the present Convention shall cease to apply to all or any of his colonies, protectorates or territories under suzerainty or mandate and the Convention shall cease to apply to the territories named in such declaration one year after its receipt by the Secretary-General of the League of Nations.

Article 20.

The present Convention shall be registered by the Secretary-General of the League of Nations as soon as it comes into force. It shall then be published as soon as possible in the League of Nations *Treaty Series*.

EN FOI DE QUOI les Plénipotentiaires susnommés ont signé la présente Convention.

IN FAITH WHEREOF the above-mentioned Plenipotentiaries have signed the present Convention.

FAIT à Genève le sept juin mil neuf cent trente, en simple expédition qui sera déposée dans les archives du Secrétariat de la Société des Nations; copie conforme en sera transmise à tous les Membres de la Société des Nations et à tous les Etats non membres représentés à la Conférence.

DONE at Geneva, the seventh day of June, one thousand nine hundred and thirty, in a single copy, which shall be deposited in the archives of the Secretariat of the League of Nations, and of which authenticated copies shall be delivered to all Members of the League of Nations and non-Member States represented at the Conference.

PROTOCOLE DE LA CONVENTION

Au moment de procéder à la signature de la Convention, en date de ce jour, destinée à régler certains conflits de lois en matière de lettre de change et de billet à ordre, les soussignés, dûment autorisés, sont convenus des dispositions suivantes :

A.

Les Membres de la Société des Nations et les Etats non membres qui n'auraient pas été en mesure d'effectuer avant le 1^{er} septembre 1932 le dépôt de leur ratification sur ladite Convention s'engagent à adresser, dans les quinze jours suivant cette date, une communication au Secrétaire général de la Société des Nations, pour lui faire connaître la situation dans laquelle ils se trouvent en ce qui concerne la ratification.

B.

Si, à la date du 1^{er} novembre 1932, les conditions prévues à l'article 15, alinéa 1, pour l'entrée en vigueur de la Convention, ne sont pas remplies, le Secrétaire général de la Société des Nations convoquera une réunion des Membres de la Société des Nations et des Etats non membres qui auraient signé la Convention ou y auraient adhéré.

Cette réunion aura pour objet l'examen de la situation et des mesures à prendre, le cas échéant, pour y faire face.

C.

Les Hautes Parties contractantes se communiqueront réciproquement, dès leur mise en vigueur, les dispositions législatives qu'elles établiront sur leurs territoires respectifs en exécution de la Convention.

PROTOCOL TO THE CONVENTION.

At the time of signing the Convention of this day's date for the settlement of certain conflicts of law in connection with bills of exchange and promissory notes, the undersigned, duly authorised, have agreed upon the following provisions:

A.

The Members of the League of Nations and the non-Member States who may not have been able to deposit their ratifications of the said Convention before September 1st, 1932, undertake to forward within fifteen days from that date a communication to the Secretary-General of the League of Nations informing him of their situation as regards ratification.

B.

If on November 1st, 1932, the conditions laid down in Article 15, paragraph 1, for the entry into force of the Convention are not fulfilled, the Secretary-General of the League of Nations shall convene a meeting of the Members of the League and the non-Member States which have signed the Convention or acceded to it.

The purpose of this meeting shall be to examine the situation and any measures to be taken to remedy it.

C.

The High Contracting Parties shall communicate to each other, immediately upon their coming into force, the legislative measures taken by them in execution of the Convention in their respective territories.

EN FOI DE QUOI les Plénipotentiaires ont
signé le présent Protocole.

FAIT à Genève, le sept juin mil neuf cent

Dr. José CAEIRO DA MATTA, Rector of the University of Lisbon, Professor in the Faculty of Law, Director of the Bank of Portugal.

His Majesty the King of Sweden:

Baron E. MARKS VON WÜRTEMBERG, President of the Stockholm Court of Appeal, former Minister for Foreign Affairs;
M. Birger EKEBERG, President of the Civil Legislation Commission, former Minister of Justice, former Member of the Supreme Court.

The Swiss Federal Council:

Dr. Max VISCHER, Barrister-at-Law and Notary, First Secretary of the Swiss Bankers' Association.

Le Président de la République tchécoslovaque :

Le docteur Karel HERMANN-OTAVSKÝ, Professeur à l'Université de Prague, Président de la Commission de codification du droit commercial au Ministère de la Justice.

Le Président de la République turque :

MEHMED MUNIR bey, Envoyé extraordinaire et Ministre plénipotentiaire près le Conseil fédéral suisse.

Sa Majesté le Roi de Yougoslavie :

M. Ilija CHOUMENKOVITCH, Délégué permanent auprès de la Société des Nations, Envoyé extraordinaire et Ministre plénipotentiaire près le Conseil fédéral suisse.

Lesquels, après avoir communiqué leurs pleins pouvoirs, trouvés en bonne et due forme, sont convenus des dispositions suivantes :

Article premier.

Dans le cas où telle ne serait pas déjà leur législation, les Hautes Parties contractantes s'engagent à modifier leurs lois de telle sorte que la validité des engagements pris en matière de lettres de change et de billets à ordre, ou l'exercice des droits qui en découlent, ne puissent être subordonnés à l'observation des dispositions sur le timbre.

Elles peuvent toutefois suspendre l'exercice de ces droits jusqu'à l'acquittement des droits de timbre qu'elles ont prescrits ainsi que des amendes encourues. Elles peuvent également décider que la qualité et les effets de titre immédiatement exécutoire qui, d'après leurs législations, seraient attribués à la lettre de change et au billet à ordre, seront subordonnés à la condition que le droit de timbre ait été, dès la création du titre, dûment acquitté conformément aux dispositions de leurs lois.

Chacune des Hautes Parties contractantes se réserve la faculté de restreindre l'engagement mentionné à l'alinéa premier aux seules lettres de change.

Article 2.

La présente Convention, dont les textes français et anglais feront également foi, portera la date de ce jour.

Elle pourra être signée ultérieurement jusqu'au 6 septembre 1930 au nom de tout Membre de la Société des Nations et de tout Etat non membre.

Article 3.

La présente Convention sera ratifiée,

Les instruments de ratification seront déposés avant le 1^{er} septembre 1932 auprès du Secrétaire général de la Société des Nations, qui en notifiera immédiatement la réception à tous les Membres de la Société des Nations et aux Etats non membres parties à la présente Convention.

The President of the Czechoslovak Republic.

Dr. Karel HERMANN-OTAVSKÝ, Professor at the University of Prague, President of the Codification Commission for Commercial Law in the Ministry of Justice.

The President of the Turkish Republic:

MEHMED MUNIR Bey, Envoy Extraordinary and Minister Plenipotentiary accredited to the Swiss Federal Council.

His Majesty the King of Yugoslavia:

M. Ilia CHOUMENKOVITCH, Permanent Delegate accredited to the League of Nations, Envoy Extraordinary and Minister Plenipotentiary accredited to the Swiss Federal Council.

Who, having communicated their full powers found in good and due form, have agreed upon the following provisions:

Article 1.

If their laws do not already make provision to this effect, the High Contracting Parties undertake to alter their laws so that the validity of obligations arising out of a bill of exchange or a promissory note or the exercise of the rights that flow therefrom shall not be subordinated to the observance of the provisions concerning the stamp.

Nevertheless, the Contracting Parties may suspend the exercise of these rights until payment of the stamp duties they prescribe or of any penalties incurred. They may also decide that the quality and effects of an instrument "immediately executory" which, according to their legislation may be attributed to a bill of exchange and promissory note, shall be subject to the condition that the stamp law has, from the issue of the instrument, been duly complied with in accordance with their laws.

Each of the High Contracting Parties reserves the right to restrict the undertaking mentioned in paragraph 1 to bills of exchange only.

Article 2.

The present Convention, the French and English texts of which shall be equally authentic, shall bear this day's date.

It may be signed thereafter until September 6th, 1930, on behalf of any Member of the League of Nations or non-Member State.

Article 3.

The present Convention shall be ratified.

The instruments of ratification shall be deposited before September 1st, 1932, with the Secretary-General of the League of Nations, who shall forthwith notify receipt thereof to all the Members of the League of Nations and to the non-Member States Parties to the present Convention.

Article 4.

A partir du 6 septembre 1930, tout Membre de la Société des Nations et tout Etat non membre pourront y adhérer.

Cette adhésion s'effectuera par une notification au Secrétaire général de la Société des Nations pour être déposée dans les archives du Secrétariat.

Le Secrétaire général notifiera ce dépôt immédiatement à tous ceux qui ont signé ou adhéré à la présente Convention.

Article 5.

La présente Convention n'entrera en vigueur que lorsqu'elle aura été ratifiée ou qu'il y aura été adhéré au nom de sept Membres de la Société des Nations ou Etats non membres, parmi lesquels devront figurer trois des Membres de la Société des Nations représentés d'une manière permanente au Conseil.

La date de l'entrée en vigueur sera le quatre-vingt-dixième jour qui suivra la réception par le Secrétaire général de la Société des Nations, de la septième ratification ou adhésion, conformément à l'alinéa premier du présent article.

Le Secrétaire général de la Société des Nations en faisant les notifications prévues aux articles 3 et 4 signalera, spécialement que les ratifications ou adhésions visées à l'alinéa premier du présent article ont été recueillies.

Article 6.

Chaque ratification ou adhésion qui interviendra après l'entrée en vigueur de la Convention conformément à l'article 5 sortira ses effets dès le quatre-vingt-dixième jour qui suivra la date de sa réception par le Secrétaire général de la Société des Nations.

Article 7.

La présente Convention ne pourra être dénoncée avant l'expiration d'un délai de deux ans à partir de la date à laquelle elle sera entrée en vigueur pour ce Membre de la Société des Nations ou pour cet Etat non membre; cette dénonciation produira ses effets dès le quatre-vingt-dixième jour suivant la réception par le Secrétaire général de la notification à lui adressée.

Toute dénonciation sera communiquée immédiatement par le Secrétaire général de la Société des Nations à toutes les autres Hautes Parties contractantes.

Chaque dénonciation n'aura d'effet qu'en ce qui concerne la Haute Partie contractante au nom de laquelle elle aura été faite.

Article 8.

Tout Membre de la Société des Nations et tout Etat non membre à l'égard duquel la présente Convention est en vigueur, pourra adresser au Secrétaire général de la Société des Nations, dès l'expiration de la quatrième année suivant l'entrée en vigueur de la Convention, une demande tendant à la révision de certaines ou de toutes les dispositions de cette Convention.

Si une telle demande, communiquée aux autres Membres ou Etats non membres entre lesquels la Convention est alors en vigueur, est appuyée dans un délai d'un an, par au moins six d'entre eux, le Conseil de la Société des Nations décidera s'il y a lieu de convoquer une Conférence à cet effet.

Article 9.

Les Hautes Parties contractantes peuvent déclarer, au moment de la signature de la ratification ou de l'adhésion, que, par leur acceptation de la présente Convention, elles n'entendent assumer aucune obligation en ce qui concerne l'ensemble ou toute partie de leurs colonies, protectorats ou territoires placés sous leur suzeraineté ou mandat; dans ce cas, la présente Convention ne sera pas applicable aux territoires faisant l'objet de pareille déclaration.

Les Hautes Parties contractantes pourront, dans la suite, notifier au Secrétaire général de la Société des Nations qu'elles entendent rendre la présente Convention applicable à l'ensemble ou à toute partie de leurs territoires ayant fait l'objet de la déclaration prévue à l'alinéa précédent. Dans ce cas, la Convention s'appliquera aux territoires visés dans la notification quatre-vingt-dix jours après la réception de cette dernière par le Secrétaire général de la Société des Nations.

De même, les Hautes Parties contractantes peuvent à tout moment déclarer qu'elles entendent que la présente Convention cesse de s'appliquer à l'ensemble ou à toute partie de leurs colonies, protectorats ou territoires placés sous leur suzeraineté ou mandat; dans ce cas, la Convention cessera d'être applicable aux territoires faisant l'objet de pareille déclaration un an après la réception de cette dernière par le Secrétaire général de la Société des Nations.

Article 10.

La présente Convention sera enregistrée par le Secrétaire général de la Société des Nations dès son entrée en vigueur. Elle sera ultérieurement publiée aussitôt que possible au *Recueil des Traités* de la Société des Nations.

Article 4.

As from September 6th, 1930, any Member of the League of Nations and any non-Member State may accede thereto.

Such accession shall be effected by a notification to the Secretary-General of the League of Nations, such notification to be deposited in the archives of the Secretariat.

The Secretary-General shall notify such deposit forthwith to all States which have signed or acceded to the present Convention.

Article 5.

The present Convention shall not come into force until it has been ratified or acceded to on behalf of seven Members of the League of Nations or non-Member States, which shall include three of the Members of the League permanently represented on the Council.

The date of entry into force shall be the ninetieth day following the receipt by the Secretary-General of the League of Nations of the seventh ratification or accession in accordance with the first paragraph of the present Article.

The Secretary-General of the League of Nations, when making the notifications provided for in Articles 3 and 4, shall state in particular that the ratifications or accessions referred to in the first paragraph of the present Article have been received.

Article 6.

Every ratification or accession effected after the entry into force of the Convention in accordance with Article 5 shall take effect on the ninetieth day following the date of receipt thereof by the Secretary-General of the League of Nations.

Article 7.

The present Convention may not be denounced before the expiry of two years from the date on which it has entered into force in respect of that Member of the League or non-Member State; such denunciation shall take effect as from the ninetieth day following the receipt by the Secretary-General of the notification addressed to him.

Every denunciation shall be immediately communicated by the Secretary-General of the League of Nations to all the other High Contracting Parties.

Each denunciation shall take effect only as regards the High Contracting Party on whose behalf it has been made.

Article 8.

Every Member of the League of Nations and every non-Member State in respect of which the present Convention is in force, may forward to the Secretary-General of the League of Nations, after the expiry of the fourth year following the entry into force of the Convention, a request for the revision of some or all of the provisions of that Convention.

If such request, after being communicated to the other Members or non-Member States between whom the Convention is at that time in force, is supported within one year by at least six of them, the Council of the League of Nations shall decide whether a Conference shall be convened for the purpose.

Article 9.

Any High Contracting Party may, at the time of signature, ratification or accession, declare that, in accepting the present Convention, he does not assume any obligations in respect of all or any of his colonies, protectorates or territories under suzerainty or mandate; and the present Convention shall not apply to any territories named in such declaration.

Any High Contracting Party may give notice to the Secretary-General of the League of Nations at any time subsequently that he desires that the Convention shall apply to all or any of his territories which have been made the subject of a declaration under the preceding paragraph and the Convention shall apply to all the territories named in such notice ninety days after its receipt by the Secretary-General of the League of Nations.

Any High Contracting Party may at any time declare that he desires that the present Convention shall cease to apply to all or any of his colonies, protectorates or territories under suzerainty or mandate and the Convention shall cease to apply to the territories named in such declaration one year after its receipt by the Secretary-General of the League of Nations.

Article 10.

The present Convention shall be registered by the Secretary-General of the League of Nations as soon as it comes into force. It shall then be published as soon as possible in the League of Nations *Treaty Series*.

EN FOI DE QUOI les plénipotentiaires susnommés ont signé la présente Convention.

FAIT à Genève, le sept juin mil neuf cent trente, en simple expédition qui sera déposée dans les archives du Secrétariat de la Société des Nations; copie conforme en sera transmise à tous les Membres de la Société des Nations et à tous les États non membres représentés à la Conférence.

IN FAITH WHEREOF the above-mentioned Plenipotentiaries have signed the present Convention.

DONE at Geneva, the seventh day of June, one thousand nine hundred and thirty, in a single copy, which shall be deposited in the archives of the Secretariat of the League of Nations, and of which authenticated copies shall be delivered to all Members of the League of Nations and non-Member States represented at the Conference.

PROTOCOLE DE LA CONVENTION

Au moment de procéder à la signature de la Convention, en date de ce jour, relative au droit de timbre en matière de lettre de change et de billet à ordre, les soussignés, dûment autorisés, sont convenus des dispositions suivantes:

A.

Les Membres de la Société des Nations et les Etats non membres qui n'auraient pas été en mesure d'effectuer avant le 1^{er} septembre 1932 le dépôt de leur ratification sur ladite Convention, s'engagent à adresser, dans les quinze jours suivant cette date, une communication au Secrétaire général de la Société des Nations, pour lui faire connaître la situation dans laquelle elles se trouvent en ce qui concerne la ratification.

B.

Si, à la date du 1^{er} novembre 1932, les conditions prévues à l'article 5, alinéa 1, pour l'entrée en vigueur de la Convention, ne sont pas remplies, le Secrétaire général de la Société des Nations convoquera une réunion des Membres de la Société des Nations et des Etats non membres qui auraient signé la Convention ou y auraient adhéré.

Cette réunion aura pour objet l'examen de la situation et des mesures à prendre, le cas échéant, pour y faire face.

C.

Les Hautes Parties contractantes se communiqueront réciproquement, dès leur mise en vigueur, les dispositions législatives qu'elles établiront sur leurs territoires respectifs en exécution de la Convention.

D.

1. Il est convenu que, pour ce qui concerne le Royaume-Uni de Grande-Bretagne et d'Irlande du Nord, les seuls titres auxquels s'appliquent les dispositions de la présente Convention sont les lettres de change présentées à l'acceptation, acceptées ou payables ailleurs que dans le Royaume-Uni.

2. La même limitation s'appliquera en ce qui concerne toute colonie, protectorat ou territoire placé sous la suzeraineté ou le mandat de Sa Majesté Britannique auquel la Convention deviendrait applicable en vertu de l'article 9, pourvu, cependant, qu'une notification ayant pour objet cette limitation soit adressée au Secrétaire général de la Société des Nations avant la date à laquelle l'application de ladite Convention entrera en vigueur pour ce territoire.

3. Il est également convenu que, pour ce qui concerne l'Irlande du Nord, les dispositions de la présente Convention ne s'appliqueront qu'avec telles modifications qui seraient estimées nécessaires.

4. Le gouvernement de tout Membre de la Société des Nations ou Etat non membre, désireux d'adhérer à la Convention en vertu de l'article 4 sous les limitations spécifiées à l'alinéa 1 ci-dessus, peut en informer le Secrétaire général de la Société des Nations. Celui-ci communiquera cette notification aux gouvernements de tous les Membres de la Société des Nations et des Etats non membres au nom desquels la Convention aura été signée et au nom desquels il y aura été adhéré, en leur demandant s'ils ont des objections à présenter. Si, sans un délai de six mois à partir de ladite communication, aucune objection n'a été soulevée, la participation à la Convention du pays invoquant la limitation en question sera considérée comme acceptée sous cette limitation.

PROTOCOL TO THE CONVENTION

At the time of signing the Convention of this day's date on the stamp laws in connection with bills of exchange and promissory notes, the undersigned, duly authorised, have agreed upon the following provisions:

A.

The Members of the League of Nations and the non-Member States which may not have been able to deposit their ratifications of the said Convention before September 1st, 1932, undertake to forward within fifteen days from that date a communication to the Secretary-General of the League of Nations informing him of their situation as regards ratification.

B.

If on November 1st, 1932, the conditions laid down in Article 5, paragraph 1, for the entry into force of the Convention are not fulfilled, the Secretary-General of the League of Nations shall convene a meeting of the Members of the League and the non-Member States which have signed the Convention or acceded to it.

The purpose of this meeting shall be to examine the situation and any measures to be taken to meet it.

C.

The High Contracting Parties shall communicate to each other, immediately upon their coming into force, the legislative measures taken by them in execution of the Convention in their respective territories.

D.

1. It is agreed that, in so far as concerns the United Kingdom of Great Britain and Northern Ireland, the only instruments to which the provisions of this Convention shall apply are bills of exchange presented for acceptance or accepted or payable elsewhere than in the United Kingdom.

2. A similar limitation shall apply in the case of any colonies, protectorates or territories under suzerainty or mandate of His Britannic Majesty to which the Convention may become applicable in virtue of Article 9, provided that a notification claiming such limitation is addressed to the Secretary-General of the League of Nations before the date on which the application of the Convention to such territory takes effect.

3. It is further agreed that in so far as concerns Northern Ireland the provisions of this Convention shall only apply with such modifications as may be found necessary.

4. The Government of any Member of the League of Nations or non-Member States which is ready to accede to the Convention under Article 4, but desires to be allowed the limitation specified in paragraph 1 above, may inform the Secretary-General of the League of Nations to this effect, and the Secretary-General shall forthwith communicate this notification to the Governments of all Members of the League and non-Member States on whose behalf the Convention has been signed or accessions thereto deposited and enquire if they have any objection thereto. If within six months of the date of the communication of the Secretary-General no objections have been received, the limitation shall be deemed to have been accepted.

EN FOI DE QUOI les Plénipotentiaires ont
signé le présent Protocole.

FAIT à Genève, le sept juin mil neuf cent

ACTE FINAL

Les Gouvernements de l'ALLEMAGNE, de l'AUTRICHE, de la BELGIQUE, du ROYAUME-UNI de GRANDE-BRETAGNE et d'IRLANDE DU NORD, des ETATS-UNIS DU BRÉSIL, de la COLOMBIE, du DANEMARK, de la VILLE LIBRE DE DANTZIG, de l'EQUATEUR, de l'ESPAGNE, de la FINLANDE, de la FRANCE, de la GRÈCE, de la HONGRIE, de l'ITALIE, du JAPON, de la LETTONIE, du LUXEMBOURG, de la NORVÈGE, des PAYS-BAS, du PÉROU, de la POLOGNE, du PORTUGAL, de la ROUMANIE, du SIAM, de la SUÈDE, de la SUISSE, de la TCHÉCOSLOVAQUIE, de la TURQUIE, du VENEZUELA et de la YOUGOSLAVIE,

Ayant accepté l'invitation qui leur a été adressée en vertu d'une décision du Conseil de la Société des Nations, en date du 14 juin 1929, pour prendre part à une Conférence internationale pour l'unification du droit en matière de lettres de change, billets à ordre et chèques,

Ont, en conséquence, désigné comme délégués, conseillers techniques et secrétaires:

ALLEMAGNE.

Délégués:

M. Leo QUASSOWSKI,
Le docteur Erich ALBRECHT,
Le docteur Fritz ULLMANN,

Conseiller ministériel au Ministère de la Justice du Reich.
Conseiller de Légation au Ministère des Affaires étrangères du Reich.
Juge au Tribunal de Berlin.

AUTRICHE.

Délégués:

Le docteur Guido STROBELE,
Le docteur Paul HAMMERSCHLAG,

Conseiller ministériel au Ministère fédéral de la Justice.
Membre du Conseil d'administration et ancien Directeur de l'Institut de Crédit pour le Commerce et l'Industrie, Vice-Président de la Chambre de Commerce et d'Industrie à Vienne.

Délégué adjoint:

Le docteur Max SOKAL,

Directeur de la Société de Virement et d'Encaissement à Vienne.

BELGIQUE.

Délégués:

Son Excellence le vicomte POULLET,
M. J. DE LA VALLÉE POUSSIN,
Le baron Edmond CARTON DE WIART,
M. Paul VAN ZEELAND,

Ministre d'Etat, membre de la Chambre des Représentants.
Secrétaire général du Ministère des Sciences et des Arts.
Docteur en droit et en sciences politiques et sociales,
Directeur de la Société générale de Belgique.
Professeur à l'Université de Louvain, Directeur de la Banque nationale de Belgique.

Délégué adjoint:

M. Jean-Jacques VINCENT,

Docteur en droit, Chef du Service des études à la Banque nationale de Belgique.

Secrétaire:

Le docteur François-Xavier SIMONIS,

Industriel.

FINAL ACT.

The Governments of GERMANY, AUSTRIA, BELGIUM, the UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND, the UNITED STATES OF BRAZIL, COLOMBIA, DENMARK, the FREE CITY OF DANZIG, ECUADOR, SPAIN, FINLAND, FRANCE, GREECE, HUNGARY, ITALY, JAPAN, LATVIA, LUXEMBURG, NORWAY, THE NETHERLANDS, PERU, POLAND, PORTUGAL, ROUMANIA, SIAM, SWEDEN, SWITZERLAND, CZECHOSLOVAKIA, TURKEY, VENEZUELA and YUGOSLAVIA,

Having accepted the invitation extended to them in virtue of a decision by the Council of the League of Nations, dated June 14th, 1929, to take part in an international Conference for the unification of laws on bills of exchange, promissory notes and cheques,

Have in consequence appointed as delegates, technical advisers and secretaries:

	GERMANY.
<i>Delegates:</i>	
M. Leo QUASSOWSKI,	Ministerial Counsellor in the Reich Ministry of Justice.
Dr. Erich ALBRECHT,	Counsellor of Legation in the Reich Ministry for Foreign Affairs.

M. Virgilio DEL RIO, Directeur du Service financier de la Chambre de Commerce internationale.

YUGOSLAVIA.

Delegate:

Dr. Berthold EISNER,

President of Chamber at the Supreme Court of Sarajevo.

Substitute:

M. Yvo ANDRITCH,

First Secretary of the Permanent Delegation accredited to the League of Nations.

UNITED STATES OF AMERICA.

(Attended the Conference as an Observer.)

Mr. Martin Herbert KENNEDY,

Technical expert. Member of the American Bar Association and Member of the American Association of International Law.

Substitute:

Mr. James W. RIDDLEBERGER.

Attended the Conference in an Advisory Capacity.

REPRESENTATIVE OF THE ECONOMIC COMMITTEE OF THE LEAGUE OF NATIONS.

M. J. A. BARBOZA-CARNEIRO,

Commercial Attaché to the Brazilian Embassy accredited to His Britannic Majesty, member of the Economic Committee.

INTERNATIONAL CHAMBER OF COMMERCE.

Delegates:

M. Albert TROULLIER,

Former President of the Commercial Tribunal of the Seine, ex-President of the " Société de législation comparée ", Vice-President of the " Société d'études législatives ", Head of the Delegation

M. Geh. Kom. Richard SCHMIDT,

President of the Leipzig Chamber of Commerce, of " Hammer und Schmidt Bank-Geschäft ", Member of the Bureau of the German Congress of Commerce and Industry, President of the Stock Exchange Court of Honour, President of the Senate of the Higher School of Commerce.

M. Virgilio DEL RIO,

Director of the Financial Department of the International Chamber of Commerce.

INSTITUT INTERNATIONAL DE ROME POUR L'UNIFICATION DU
DROIT PRIVÉ.

M. René DAVID,

Secrétaire général adjoint de l'Institut.

Qui se sont réunis à Genève, le 13 mai 1930, sous la présidence de M. le Dr J. Limburg, Membre du Conseil d'Etat des Pays-Bas, désigné par le Conseil de la Société des Nations.

M. Ch. Smets, membre de la Section économique du Secrétariat, a assumé les fonctions de Secrétaire général de la Conférence. Il a été assisté de MM. Arcoleo, Bernier et Xenakis, membres du Secrétariat de la Société des Nations.

La Conférence a désigné un comité de rédaction composé de :

M. Giannini, président, M. Percerou, rapporteur général, M. Ekeberg, M. Quassowski et M. Sułkowski.

M. Joseph Nisot, membre de la Section juridique du Secrétariat, a agi comme conseiller juridique.

A la suite des délibérations consignées aux procès-verbaux des séances, la Conférence a élaboré, avec les protocoles y relatifs, les trois Conventions suivantes :

1. Convention portant loi uniforme sur les lettres de change et billets à ordre;
2. Convention destinée à régler certains conflits de lois en matière de lettre de change et de billet à ordre;
3. Convention relative au droit de timbre en matière de lettre de change et de billet à ordre.

La Conférence a également émis les vœux ci-après :

I.

La Conférence, dans le but d'éviter que soient adoptés des textes de la loi uniforme dans la même langue, qui présentent des divergences de traduction, émet le vœu que les Etats qui ont la même langue officielle veuillent établir d'un commun accord la traduction officielle de la loi uniforme.

II.

La Conférence émet le vœu que les Hautes Parties contractantes se notifient entre elles les listes des jours fériés légaux et des autres jours où le paiement ne peut être exigé dans leurs pays respectifs.

III.

La Conférence émet également le vœu que les parties à la Convention, portant loi uniforme sur les lettres de change et billets à ordre, se communiquent entre elles le texte des plus importantes décisions judiciaires intervenues sur leurs territoires respectifs et tombant sous l'application de ladite Convention.

IV.

La Conférence, considérant le développement que prennent dans la pratique les garanties extra-cambiales des titres de crédit, émet le vœu que l'Institut international de Rome pour l'unification du Droit privé mette à l'étude les problèmes concernant la fidéjussion et l'assurance des créances cambiales en connexion avec le système général de la lettre de change et particulièrement avec l'aval.

V.

La Conférence, ayant terminé la première partie du programme de ses travaux, décide de renvoyer à une session ultérieure la discussion des projets de convention relatifs au chèque, et demande au président de la Conférence de fixer, avec l'autorisation du Conseil de la Société des Nations, la date de la seconde session de la présente Conférence qui, autant que possible, devrait avoir lieu dans le courant du mois de janvier 1931.

INTERNATIONAL INSTITUTE FOR THE UNIFICATION OF PRIVATE LAW
AT ROME.

M. René DAVID,

Deputy-Secretary-General of the Institute.

Who assembled at Geneva on May 13th, 1930, under the presidency of Dr. J. Limburg, Member of the Netherlands Council of State, appointed by the Council of the League of Nations.

M. Ch. Smets, member of the Economic Section of the Secretariat, acted as Secretary-General of the Conference and was assisted by M. Arcoleo, M. Bernier and M. Xenakis, members of the Secretariat of the League of Nations.

The Conference appointed a Drafting Committee consisting of M. Giannini (*Chairman*), M. Percerou, General Rapporteur, M. Ekeberg, M. Quassowski and M. Sulkowski.

M. Joseph Nisot, member of the Legal Section of the Secretariat, acted as legal adviser.

In the course of discussions, which are recorded in the Minutes of the Meetings, the Conference ramed, together with the protocols relating thereto, the three following conventions:

1. Convention providing uniform law on bills of exchange and promissory notes;
2. Convention for the settlement of certain conflicts of laws in connection with bills of exchange and promissory notes;
3. Convention on stamp laws in connectfon with bills of exchange and promissory notes.

The Conference also made the following recommendations:

I.

In order to avoid the adoption of texts of the Uniform Law translated in different ways in the same language, the Conference recommends that countries whose official language is the same should agree to establish an official translation of the Uniform Law.

II.

The Conference recommends that the High Contracting Parties should communicate to one another a list of the legal holidays and other days on which payment cannot be demanded in their respective countries.

III.

The Conference further recommends that the Parties to the Convention providing Uniform Law for Bills of Exchange and Promissory Notes should communicate to one another the text of the most important judgments given in their respective territories coming under the application of the said Convention.

IV.

The Conference, having regard to the development of the practice of giving guarantees for instruments of credit in a form not coming under the law of negotiable instruments, recommends that the International Institute for the Unification of Private Law at Rome should study the problems concerning the guaranteeing (*fidejussio*) and insurance of debts in connection with bills of exchange in their relation to the general system of bills of exchange and the "aval" in particular.

V.

The Conference, having concluded the first part of its programme, decides to postpone to another session the discussion of the draft conventions on cheques, and asks the President of the Conference to fix, with the authorisation of the Council of the League of Nations, the date of the second session of the present Conference, if possible, in January 1931.

Dans l'intervalle, et afin de faciliter les travaux ultérieurs:

I. Les gouvernements représentés à la présente Conférence, tenant compte de l'expérience de cette première session, soumettront les projets dont la Conférence est saisie relativement au chèque à un examen supplémentaire en consultant, le cas échéant, les milieux intéressés. Cet examen pourrait notamment porter sur l'état de la législation et sur les points suivants:

1. Convient-il d'interdire l'émission des chèques sur des personnes n'exerçant pas la profession de banquiers ?

2. Le tireur doit-il avoir une disponibilité liquide auprès du tiré et à quel moment, à la présentation ou au paiement ?

3. « Guthabenklausel » (mention obligatoire de la provision).

4. Le chèque doit-il être toujours à vue ?

5. De quelle manière doivent être réglés les délais pour la présentation ?

6. Faut-il reconnaître au tireur, et dans quelle mesure, le droit de faire opposition au paiement du chèque (révocation) ?

7. Quels sont les effets du barrement ? Ne serait-il pas possible de ramener à un type unique le chèque barré et le chèque seulement pour compensation (nur zur Verrechnung) pratiqué par certains pays ?

8. Le tireur est-il responsable, même si le chèque n'est pas dûment présenté dans le délai fixé ?

9. Quels sont les effets du transfert de la provision au porteur ? — Action d'enrichissement.

10. A la charge de qui faut-il imputer les risques de faux et d'altération ?

11. Le tiré peut-il refuser le paiement partiel d'un chèque qui ne serait pas entièrement couvert ?

12. N'y a-t-il pas lieu de prescrire des règles spéciales et lesquelles pour le cas où un titre, remplissant par ailleurs toutes les conditions requises pour la validité d'une lettre de change, stipule qu'il est payable, non en espèces, mais par un chèque, spécialement par un chèque sur l'étranger ?

13. Chèque rédigé à la machine à écrire.

14. Perte ou vol du chèque (procédure d'amortisation).

15. Conflits entre les clauses de transmission.

16. Chèque domicilié.

17. Duplicata (pluralité d'exemplaires).

18. Prescription.

19. Exonération de garantie de l'endosseur.

20. Effets des chèques postdatés.

21. Acceptation, certification et visa.

II. Les délégations communiqueront au Secrétaire général de la Société des Nations, avant le 15 octobre 1930, le résultat de l'examen visé au N° I, en y joignant tous amendements, propositions ou considérations qu'elles jugeraient utiles.

III. La documentation supplémentaire ainsi obtenue sera coordonnée, classée et réunie en un document, par les soins du Secrétaire général de la Société des Nations.

Le Président de la Conférence, M. le Dr Limburg, est prié de revoir le document établi par le Secrétariat et de donner à celui-ci toutes directives utiles avant la transmission dudit document aux gouvernements représentés à la présente Conférence.

IV. La Conférence prie le Conseil de la Société des Nations d'autoriser le Secrétaire général de la Société à entreprendre les tâches que comporte l'exécution des dispositions ci-dessus.

Meanwhile, and in order to facilitate subsequent work:

I. The Governments represented at the present Conference will, in the light of the experience of this first session, devote further examination to the draft conventions on cheques submitted to the Conference and will, if necessary, consult circles technically concerned. This examination might deal in particular with the present state of legislation and with the following points:

1. Is it desirable to prohibit the drawing of cheques on persons who do not carry on the profession of banking ?

2. Must the drawer have funds in the hands of the drawee, and at what moment, at the time of presentation or at the time of payment ?

3. " Guthabenklausel " (compulsory mention of cover in the cheque).

4. Must a cheque always be payable on demand ?

5. How must the time-limits for presentation be fixed ?

6. Must the drawer be given the right to object to payment of the cheque (withdrawal) and how far ?

7. What are the effects of a crossing ? Would it not be possible to combine in a single type the crossed cheque and the cheque only for collection (nur zur Verrechnung) in use by certain countries ?

8. Is the drawer liable even if the cheque has not been presented within the fixed period of time ?

9. What are the effects of the transfer of cover to the holder ? — Action for inequitable gain ?

10. Upon whom do the risks of forgery and alteration fall ?

11. Can the drawee refuse partial payment of a cheque when there are not sufficient funds to meet it ?

12. Is it not desirable to prescribe special rules to meet the case in which an instrument which otherwise satisfies all the conditions required for the validity of a bill of exchange stipulates that it is payable not in money, but by a cheque, especially by a cheque drawn on a bank abroad ? If so, what rules should be prescribed ?

13. A type-written cheque.

14. Loss or theft of a cheque (amortisation procedure).

15. Conflicts between transmission clauses.

16. Domiciled cheque.

17. Duplicates (parts of a set).

18. Limitation of actions.

19. Release of the endorser from his liability.

20. Consequences ensuing from post-dated cheques.

21. Acceptation, certification and visa.

II. The delegations will communicate to the Secretary-General of the League of Nations, before October 15th, 1930, the result of the examination referred to in I, adding thereto any amendments, proposals or considerations they may deem fit.

III. The additional documentation thus obtained will be co-ordinated, classified and incorporated in a single document on the instructions of the Secretary-General.

The President of the Conference, Dr. Limburg, is requested to revise the document prepared by the Secretariat and to furnish the latter with any useful instructions before the document is transmitted to the Governments represented at the present Conference.

IV. The Conference requests the Council of the League of Nations to authorise the Secretary-General of the League to undertake the duties necessary for the execution of the above provisions.

EN FOI DE QUOI, les délégués susmentionnés ont signé le présent Acte final.

IN FAITH WHEREOF, the above-mentioned delegates have signed the present Final Act.

FAIT à Genève, le sept juin mil neuf cent trente en un seul exemplaire, qui sera déposé dans les archives du Secrétariat de la Société des Nations. Une copie certifiée conforme sera transmise par les soins du Secrétaire général de la Société à tous les Membres de la Société des Nations et à tous les Etats non membres invités à la Conférence.

DONE at Geneva the seventh day of June one thousand nine hundred and thirty, in a single copy, which shall be deposited in the archives of the Secretariat of the League of Nations. Authenticated copies shall be delivered by the Secretary-General of the League to all Members of the League of Nations and to all Non-Member States invited to the Conference.

D. REPORT BY THE DRAFTING COMMITTEE.

Chairman: M. GIANNINI (Italy).
General Rapporteur: M. PERCEROU (France).
Members: M. EKEBERG (Sweden).
M. QUASSOWSKI (Germany).
M. SUŁKOWSKI (Poland).

I.

GENERAL REMARKS.

1. The Council of the League of Nations, rightly anxious to avoid leaving the task of unifying the laws on bills of exchange unfinished, and to bring to fruition the hopes that had been raised by the Conferences held at The Hague in 1910 and 1912, convened a third International Conference at Geneva for the purpose of unifying the laws on bills of exchange, promissory notes and cheques. The present report deals only with bills of exchange and promissory notes.

2. In 1912, the Hague Conference drew up a unifying instrument in two parts.

One part, entitled "Uniform Regulation", contained a statute for bills of exchange and promissory notes.

The other part was in the form of a Convention whereby the contracting parties undertook to introduce the regulation into their respective territories, either in the original text or in their national tongues, with the force of a law of the country. The Convention further contained a number of reservations enabling the contracting parties to adhere to their own laws on the points to which the reservations related, and it also laid down that the contracting parties could not subordinate the validity of obligations arising out of a bill of exchange to the observance of the provisions concerning the stamp. A very small number of rules of private international law relating to conflicts of laws were embodied in the Regulation (Articles 74 to 76) and in the Convention (Article 18). Lastly, it was agreed that the Convention could not be denounced until the lapse of three years from the date of the first deposit of ratifications, and that denunciation would not take effect until one year after it had been notified.

3. In actual fact, this Convention, which was signed on July 23rd, 1912, was not ratified. The great war was undoubtedly the main cause of this, but it was not the only one. In some countries the view was taken that the formula that had been adopted for the introduction of the uniform text into the national laws was a violation of parliamentary prerogative, and could, indeed, hardly be reconciled with constitutional law, because its effect was to deprive the Parliaments for four years (three years during which denunciation could not take place and one year before it could take effect) of the right to amend an internal law.

4. The question was left in that position until, in 1921, as a result of a recommendation by the International Financial Conference held at Brussels in 1920, the League of Nations instructed its Economic Committee to consider how the work of unification might be resumed. After various preliminary investigations, a Committee of Legal Experts appointed by the Economic Committee drafted a Uniform Regulation directly based on the Hague Regulation. Realising, however, the parliamentary difficulties that had interfered with the ratification of the Hague Convention, and being anxious to avoid encountering them a second time, the Committee of Legal Experts proposed a much safer method, namely, the establishment of a model law, it being intended that the Governments of the different countries should simply undertake to bring in Bills based on this uniform text, but not necessarily reproducing it word for word, and that the Parliaments could amend it from the outset.

5. The Conference held that this system was not adequate to ensure the unification of the laws on bills of exchange. Desiring, however, like the Committee of Experts, to secure effective ratification, it agreed upon a system that had been proposed at the start of its proceedings by two delegations. Briefly, this system, after undergoing certain modifications of detail introduced by way of compromise, now works as follows: The Governments undertake, as at The Hague, to introduce in their territory the Uniform Law as adopted by the Conference, and at the outset

¹ Adopted by the Conference at the meeting of June 5th, 1930.

this text cannot be amended except on those points on which—now, as at The Hague—reservations have been allowed. It is stipulated in the Convention, however, that the period that must elapse before denunciation is reduced to two years (instead of three years, as at The Hague), denunciation to take effect one year later. Furthermore, “urgent cases”, which are left to the discretion of each State, are reserved, and in such cases—which it is to be hoped will not arise, and which do not seem at all likely to arise—denunciation may take place without a time-limit and will have immediate effect. This system combines the two advantages of ensuring genuine and effective unification—inasmuch as it is the actual text of the Uniform Law which is to be introduced into the legislation of each country—and complying with the legitimate desire that may be felt by Parliaments to preserve unimpaired their right to amend an internal law at any moment.

6. The instruments established by the Conference for the purpose of putting this system into effect are three in number, the first having two annexes.

A. A Convention whereby the Parties undertake to introduce, as it stands, the text known as the Uniform Law in their respective territories. This Convention has two annexes:

(a) The text of the Uniform Law;

(b) The text of the reservations and assimilated articles—the number of which is approximately the same as in the Hague Regulation—enabling the contracting parties, with reference to the points dealt with, to substitute the special rules of their own laws for the provisions of the Uniform Law, to specify the conditions for the application of those provisions, or in some cases to amplify them.

B. A Convention embodying a few provisions with reference to the solution of certain conflicts of laws on bills of exchange or promissory notes.

C. A Fiscal Convention, whereby the contracting parties undertake not to subordinate the validity of obligations arising out of a bill of exchange or promissory note to the observance of the provisions concerning the stamp.

These three Conventions are mutually independent, that is to say, a country can be a party to one without being a party to the others.

II.

CONVENTION PROVIDING A UNIFORM LAW FOR BILLS OF EXCHANGE AND PROMISSORY NOTES.

7. Under Article I, the contracting parties undertake to introduce the Uniform Law in their respective territories either in their own languages (with the elasticity necessary to reproduce the terms of the provisions in their own legal terminology) or in the original text (French or English); this is the system adopted at The Hague. There is, further, the recommendation passed by the Conference (Final Act, I) to the effect that States which have the same official language should adopt translations of the Uniform Law to be established by joint agreement.

8. The acceptance of the Uniform Law may not be made subject to any reservations other than those indicated in Annex II of the Convention. The reservations which any one of the contracting parties may desire to adopt must be notified at the time of ratification or accession. Certain reservations—those mentioned in Articles 12 and 18 of Annex II—may, however, become necessary by reason of particular situations which could not be foreseen at the time of ratification or accession; accordingly, any contracting party is allowed to submit such reservations after the aforesaid date, provided that they are notified to the Secretary-General of the League of Nations, who will communicate them to the other contracting parties.

Lastly, the reservations mentioned in Articles 7 and 22 of Annex II may be made at any time, but they must immediately be communicated direct to all the contracting parties and to the Secretary-General of the League of Nations, and shall take effect two days after the receipt of the notification.

9. Article II contains a provision regulating the situation as regards bills of exchange and promissory notes created before the entry-into-force of the Convention.

10. The other provisions governing signature, ratification, accession, entry-into-force of the Convention, etc., are based on similar provisions adopted for the international Conventions concluded in recent years. They are sanctioned by experience and do not seem to call for comment.

11. Article VIII alone would appear to acquire special mention. Apart from the usual procedure of denunciation, provision is made for denunciation in urgent cases, with immediate effect. Economic developments in the different States may give rise to exceptional situations demanding complete and absolute liberty of action. In such a case the State concerned cannot be required to observe the ordinary period laid down for denunciation. Again, it is necessary, in such a contingency, to safeguard the interests of the other contracting States, which must be duly informed when States intend to employ this procedure of urgent denunciation in order to release themselves from their obligations under the Convention. That is why a State which finds it necessary to make use of this right is required itself immediately to inform the other States that are bound by the Treaty. It must also notify its decision to the Secretary-General of the League of Nations. Urgent denunciation, the necessity for which it is left to the several contracting parties to determine, takes effect two days after the receipt of the relevant notification by the other contracting parties. This period of two days represents the minimum required to enable the contracting parties, when thus informed to issue the necessary notices in their respective territories.

12. It was observed that, as the exceptional situations in question might be only of a transitory and temporary character, it was possible to contemplate the provisional suspension of the Convention. This possibility, however, was rejected on the grounds that it might readily lend itself to abuse, to the detriment of States which, in conformity with the Convention, had decided not to employ the procedure of urgent denunciation except in case of absolute necessity.

13. The Protocol embodies two rules designed to obviate certain difficulties which might occur at the moment of ratification (A and B).

14. It stipulates that the contracting parties shall communicate to one another the texts of legislation enacted in the matter of bills of exchange (C). This last-named provision is based on the principle that every contracting party has the right to see that the Treaty is being integrally applied by the other contracting parties; it also embodies a principle of co-operation and agreement, which is in the interests of the unification of laws. There is, further, the recommendation (Final Act, III) to the effect that the contracting parties should also inform one another of the chief legal decisions relating to the application of the Convention. The value of such a practice is obvious. Not only does it make it possible to follow the future application of agreements, but it should lead to useful suggestions, on the basis of practical everyday experience, as regards both the interpretation of the uniform law and its possible revision under the terms of Article IX.

Annex I.

UNIFORM LAW ON BILLS OF EXCHANGE AND PROMISSORY NOTES.

15. The text of the Uniform Law follows very closely that previously adopted at The Hague. Title I, however, contains only twelve chapters instead of the thirteen in the Hague Regulation, Chapter XIII—dealing with conflicts of laws—having been dropped. Some advance has also been made towards greater uniformity. For example, all the countries have agreed (which was not found possible at The Hague) to require the term “bill of exchange” to be inserted in the body of the instrument.

TITLE I. — BILLS OF EXCHANGE.

CHAPTER I. — ISSUE AND FORM OF A BILL OF EXCHANGE.

Article 1 (old Article 1, U.R. and Exp).¹

“A bill of exchange contains:

- “1. The term ‘bill of exchange’ inserted in the body of the instrument and expressed in the language employed in drawing up the instrument;
- “2. An unconditional order to pay a determinate sum of money;
- “3. The name of the person who is to pay (drawee);
- “4. A statement of the time of payment;

¹ The initials “U.R.” indicate the Uniform Regulation adopted by the Hague Conference of 1912. The abbreviation “Exp.” indicates the text of the Regulation proposed by the League of Nations legal experts which served as the basis for discussion at the Conference of Jurists in 1930.

- “ 5. A statement of the place where payment is to be made;
- “ 6. The name of the person to whom or to whose order payment is to be made;
- “ 7. A statement of the date and of the place where the bill is issued;
- “ 8. The signature of the person who issues the bill (drawer).”

16. Article 1 enumerates the particulars that must be given in the instrument to make it a bill of exchange. This article is a reproduction of the corresponding text in the draft of the Committee of Experts, which itself was taken from the Hague draft. The position has, however, been changed by the omission of a reservation, and certain explanations must be given with regard to the scope of the text adopted.

17. The Hague Convention of 1912 contained a reservation whereby “ In derogation of Article 1, 1^o of the Regulation, every Contracting State may provide that bills of exchange issued in its own territory which do not contain the expression ‘ bill of exchange ’ shall be valid, provided that they contain an express statement that they are payable ‘ to order ’ ”. This reservation had been inserted at the request of France, where it is not necessary to mention the expression “ bill of exchange ” in the instrument, but where it is necessary for every bill of exchange to contain the “ to order ” clause. An amendment to the same effect had been put forward at Geneva by another delegation. In order to facilitate the unification of laws on bills of exchange, and also for practical reasons (because the clause provides a formal mark to distinguish a bill of exchange at once from a cheque), France announced that she would no longer ask for that reservation. As regards the amendment, it was rejected. Accordingly, it becomes obligatory for all contracting parties that the words “ bill of exchange ” shall be embodied in the instrument. This is a noteworthy advance in the direction of unification. As, however, some time must elapse before those countries in which this measure is an innovation can take the necessary steps to put it into effect, it was laid down that each of the contracting parties might stipulate that the obligation to insert in bills of exchange issued in its territory the term “ bill of exchange ” should not apply until six months after the entry-into-force of the Convention (Annex II, Article 1).

18. Again, in the first paragraph of Article 1, it had been proposed to replace the words “ employed in drawing up the instrument ” by the words: “ employed in formulating the order to pay ”. This proposal was made by countries in which bills of exchange are sometimes drawn up in more than one language; but the proposed formula “ order to pay ” was too comprehensive, because the order itself consists of several words (“ pay to Mr. . . . the sum of . . . ”), which may be in different languages. It was therefore agreed to revert to the original formula of Article 1, 1^o but the Conference unanimously recognised that the term “ bill of exchange ” must be written in the same language as the word “ pay ”, which is the essential word in a bill of exchange.

19. The word “ order ” is not taken here in the strict legal sense, and the use of the word does not predetermine the exact nature of the operation of which the legal issue of a bill of exchange consists.

20. The Japanese delegation observed that, in Japan, the national custom is to affix to the instrument, not a written signature, but the private seal of the drawer beside or beneath his written name, and asked that that custom should be respected by the Uniform Law. It did not seem necessary to introduce a special clause for the purpose, but it is clearly understood that the word “ signature ” is used here in a wide sense, meaning any material sign serving, according to the custom of the country, to identify in papers or deeds the person affixing it. The Japanese delegation’s wish has therefore been met. The same remark, it may be added, applies not only to the signature of the drawer but to all signatures that may be affixed to a bill of exchange (signatures of the endorser, acceptor, the giver of an *aval*, etc.).

The question thus settled arises not only in regard to bills of exchange issued in Japan, but to those issued in the colonies of various countries as well.

21. Further, this question should not be confused with that of the form—generally an authentic act—in which a person physically incapable of signing—through sickness, disablement, illiteracy, etc.—can bind himself by a bill of exchange. This problem is left to be settled by the laws of each individual country, as laid down in Article 2 of Annex II of the Convention.

22. The question was raised in connection with Article 1 (6) whether the beneficiary could be designated simply by indicating his office (*e.g.*, “ Please pay to the Mayor of such-and-such a commune ”), and a text in that sense was proposed, on the basis of the British Act of August 18th, 1882, Article 7, section 2. The Conference did not think it necessary to draft a text to settle this question, but preferred to leave it to the judges to decide whether the beneficiary was clearly enough identified.

Article 2 (old Article 2, U.R. and Exp.).

“ An instrument in which any of the requirements mentioned in the preceding article is wanting is invalid as a bill of exchange, except in the cases specified in the following paragraphs:

“ A bill of exchange in which the time of payment is not specified is deemed to be payable at sight.

“ In default of special mention, the place specified beside the name of the drawee is deemed to be the place of payment, and at the same time the place of the domicile of the drawee.

“ A bill of exchange which does not mention the place of its issue is deemed to have been drawn in the place mentioned beside the name of the drawer.”

23. Article 2 lays down the rule that the omission of any of the particulars enumerated in Article 1 invalidates the instrument as a bill of exchange except where the omissions are made good by this Article 2. This article, which also reproduces the texts of the Uniform Regulation of The Hague and the Committee of Experts' draft, was adopted without change.

24. Some delegations, however, asked in connection with Article 2 that the Uniform Law should also contain provisions for the case where an instrument is originally issued without all the essential requirements of the bill of exchange but with the maker's authorisation to the holder to complete the instrument (bill of exchange in blank), and accordingly special provisions to meet this case are contained in Article 10.

Article 3 (old Article 3, U.R. and Exp.).

“ A bill of exchange may be drawn payable to drawer's order.

“ It may be drawn on the drawer himself.

“ It may be drawn for account of a third person.”

25. Article 3 prescribes how a bill of exchange may be drawn. It simply reproduces Article 3 of the Hague draft and of the experts' draft. Its adoption gave rise to no difficulty.

Article 4 (old Article 4, U.R. and Exp.).

“ A bill of exchange may be payable at the domicile of a third person either in the locality where the drawee has his domicile or in another locality.”

26. The word “ locality ” was substituted in the text for the word “ place ”, which appeared in the Hague draft. The object of this substitution is to indicate that in any one locality—town, commune, etc.—there may be a number of places of payment (the exact address at which the instrument must be presented for payment). It was proposed to substitute the word “ commune ” for “ locality ”, but that term was rejected because this administrative area does not exist in every country.

27. Further, the words “ domiciled bill ”, which appeared in the Hague text and in the Committee of Experts' text, were omitted, because the idea of domiciliation seems not to be quite the same in the different countries. In some, the term “ domiciled bill ” even covers bills payable without specifying any third person at whose address payment is to be made, the bill being drawn payable in a locality other than that of the drawee's domicile. Other countries, on the other hand, do not regard a bill of exchange as domiciled unless it is payable at the address of a third person. In order to make due allowance for these different conceptions, the term “ domiciled bill ” was dropped. Article 22, which relates to acceptance, was modified accordingly.

The question as to the exact meaning of “ domicile ” is left to be settled by the national laws.

Article 5 (old Article 5, U.R. and Exp.).

“ When a bill of exchange is payable at sight, or at a fixed period after sight, the drawer may stipulate that the sum payable shall bear interest. In the case of any other bill of exchange, this stipulation is deemed not to be written (*non écrite*).

“ The rate of interest must be specified in the bill; in default of such specification, the stipulation shall be deemed not to be written (*non écrite*).

“ Interest runs from the date of the bill of exchange, unless some other date is specified.”

28. The Conference adopted the text proposed by the experts, which differs from that of The Hague in that the latter provided that, in default of specification of the rate of interest in the instrument, that rate would be 5 per cent. The reason for this change is the difficulty of agreeing upon the rate of interest to be prescribed by law by interpreting the presumed intention of the parties, if the bill is not explicit on the point. Some proposed the legal rate, others a fixed rate of 5 or 6 per cent, others again the rate of the bank of issue or the market rate. The Conference rejected these proposals as being all more or less arbitrary or likely to raise great difficulties in their application, and ultimately adopted the experts' text.

Article 6 (old Article 6, U.R. and Exp.)

“ When the sum payable by a bill of exchange is expressed in words and also in figures, and there is a discrepancy between the two, the sum denoted by the words is the amount payable.

“ Where the sum payable by a bill of exchange is expressed more than once in words or more than once in figures, and there is a discrepancy, the smaller sum is the sum payable.”

29. This text, which is simply a reproduction of the Hague and experts' text, was adopted without discussion.

Article 7 (old Articles 7 and 68, U.R. and Exp.).

“ If a bill of exchange bears signatures of persons incapable of binding themselves by a bill of exchange, or forged signatures, or signatures of fictitious persons, or signatures which for any other reason cannot bind the persons who signed the bill of exchange or on whose behalf it was signed, the obligations of the other persons who have signed it are none the less valid.”

30. The text of the Committee of Experts simply provided that “ if a bill of exchange bears the signature of persons incapable of contracting, the obligations of the other persons who have signed it are none the less valid.” It thus restricted to the special case of the incapacity of a signatory the principle that signatures are independent of one another, with the consequence, in this particular connection, that notwithstanding the invalidity of the obligation of a person incapable of binding himself by a bill of exchange, the other signatories are still bound by the bill. Actually, however, this principle of the independence of signatures has a much more general scope, and Article 68 of the Hague Uniform Regulation applied it also to the case of a bill bearing a forged signature. Other applications of the same principle will readily be conceived. It was therefore decided that all these cases, coming under the same rule (the independence of the signatures on a bill of exchange), must be brought under a single provision. The text of this provision is this Article 7, the adoption of which, as indicated above, involves the omission of Article 68 of the Hague text. Chapter X, although it thus contains only Article 69, is none the less useful, because, apart from the case of forged signatures, other alterations are possible in the text of a bill of exchange (increase of the amount and so on).

Article 8 (old Article 8, U.R. and Exp.).

“ Whosoever puts his signature on a bill of exchange as representing a person for whom he had no power to act is bound himself as a party to the bill and, if he pays, has the same rights as the person for whom he purported to act. The same rule applies to a representative who has exceeded his powers.”

31. Two points must be explained in regard to this article:

(a) When the drawer (or any other signatory) has put his signature on a bill of exchange, signifying that he is acting as representative for a person for whom he had no power to act, and has paid the bill, the question arises again whether he has the same right of recourse in the matter of bills of exchange as the party represented would have had. This might seem doubtful, as the bill is not in the name of the representative. The Conference, however, did not retain this objection. If the representative takes the place of the party represented from the standpoint of liabilities, that is, from the standpoint of obligations arising out of the bill of exchange, it is only right that he should take his place also from the standpoint of assets, that is of the rights flowing from the bill. Accordingly, when he has paid he is entitled, under the text, to the rights (including the right of recourse in the matter of bills of exchange) which the party represented would have had.

(b) When the signatory has not acted without having power to act, but has exceeded his powers (when, for example, having power to draw a bill of exchange for 10,000 francs he has drawn one for 20,000 francs) he is bound personally in respect of the whole amount (hence, to continue the above example, in respect of the 20,000 francs and not the 10,000 francs only); this was the sense in which the Conference interpreted paragraph 2 of Article 8. The relations between the representative and the party represented are still governed by the rules of common law.

Article 9 (old Article 9, U.R. and Exp.)

“ The drawer guarantees both acceptance and payment.

“ He may release himself from guaranteeing acceptance; every stipulation by which he releases himself from the guarantee of payment is deemed not to be written (*non écrite*).”

32. This text was adopted without modification, but not without discussion. One proposal to the effect that the drawer might release himself from guaranteeing payment was rejected as being contrary to the very essence of the bill of exchange. An amendment as follows had been submitted: “ Every stipulation by which the drawer releases himself from his guarantee is deemed not to be written”, which would have implied the impossibility of release not only from the guarantee of payment but also from guaranteeing acceptance, or, in other words, the impossibility of creating non-acceptable bills of exchange. It was pointed out that the acceptance of a bill of exchange was one of the principal bases of its credit and that to provide for the possibility of creating non-acceptable drafts facilitated the putting into circulation of instruments of doubtful value. These arguments did not prevail; it is for the persons discounting bills of exchange to decide whether, despite the stipulation “ non-acceptable”, such bills, in their opinion, offer adequate guarantees of payment. Further, the drawer may have very legitimate reasons for prohibiting presentment for acceptance before maturity. Lastly, non-acceptable bills of exchange are in current use in many countries. These various considerations appeared decisive to the Conference, which agreed to keep the experts' text as it stood.

Article 10 (new).

“ If a bill of exchange, which was incomplete when issued, has been completed otherwise than in accordance with the agreements entered into, the non-observance of such agreements may not be set up against the holder unless he has acquired the bill of exchange in bad faith or, in acquiring it, has been guilty of gross negligence.”

33. This article is new. The Conference thought it expedient to recognise incomplete instruments and instruments in blank and to establish rules determining their value as bills of exchange. Although certain countries do not use this type of security, in many others it is employed as a useful instrument for purposes of credit and guarantee. It thus appeared necessary to establish legislative rules applicable to this particular institution, in order to eliminate as far as possible any drawbacks to which it might give rise. The Conference therefore decided not to adopt the course agreed upon at the Hague Conference (1912), namely to leave the question outside the Uniform Regulation.

34. Some delegations, however, having stated that it was not their countries' intention to legislate on bills of exchange in blank on account of the abuses to which they might give rise, a reservation was introduced into the Convention whereby any one of the contracting parties is free not to embody Article 10 of the Uniform Law in its national law (Annex II, Article 3).

35. As regards the substance of Article 10, the underlying principle may be summed up as follows:

The Conference considered the case of an instrument designed to become a bill of exchange according to the express intention of its signatory, even if such instrument was not originally complete in every particular (*e.g.*, maturity, amount, etc.).

An instrument in blank raises numerous questions, the most important being whether, when the holder has filled in the blanks improperly, that is to say, otherwise than in accordance with the agreements entered into between himself and the signatory, and when the instrument thus improperly filled in has passed into the hands of a third holder acting in good faith, an objection can be set up against the holder on the grounds of such improper action.

The text decides this question in the negative, by providing that if the instrument, after being completed, has been acquired without proof of bad faith or gross negligence, objections on the grounds of the insertion of stipulations which are not in accordance with the agreements entered into cannot be set up against a holder in good faith. This is a consequence of the more general principle (consideration for the legitimate confidence of the holder) which is found in a different connection in Article 16.

A further question was whether, when the instrument was acquired before the blanks had been filled in, the person acquiring it had the right, like the original recipient, to fill in those blanks. It was laid down simply that if the acquirer filled in the blanks, even improperly, and if, after so doing, he passed on the bill to a third party in good faith, objections on the grounds of the insertion of improper stipulations could not be set up against that third party.

36. The foregoing considerations also apply *mutatis mutandis* to the insertion in the instrument of any non-essential stipulation not in accordance with the agreements entered into.

CHAPTER II. — ENDORSEMENT.

Article 11 (old Article 10, U.R. and Exp.).

“ Every bill of exchange, even if not expressly drawn to order, may be transferred by means of endorsement.

“ When the drawer has inserted in a bill of exchange the words ‘ not to order ’ or an equivalent expression, the instrument can only be transferred according to the form, and with the effects, of an ordinary assignment.

“ The bill may be endorsed even in favour of the drawee, whether he has accepted or not, or of the drawer, or of any other party to the bill. These persons may re-endorse the bill.”

37. Paragraphs 1 and 2 of this article, which merely reproduce the text of The Hague and that of the experts, were adopted without discussion.

38. As regards the third paragraph, it was proposed to substitute for the last sentence—“ These persons may re-endorse the bill ”—the words “ If the bill is endorsed to the drawee, the latter may no longer endorse it ”. This proposal was based on the idea that, if the bill was endorsed in favour of the drawee himself, the debt was extinguished by reason of the identity of persons. Against this, it was urged that the idea was highly questionable from a theoretical point of view owing to the impersonal character of exchange debts, and that it might be very useful in practice, if the drawee, who was frequently a bank, was able, after buying a bill of exchange which had been drawn on himself but had not yet matured, to put it into circulation again in order to facilitate the mobilisation of his holdings. Again, such a device is likely to be of great service in most countries, the more so since an endorsement made by the drawee in such circumstances is not regarded, even from a fiscal point of view, as involving the issue of a new instrument of exchange, and does not entail the payment of fresh stamp duty. The proposed amendment was therefore rejected and the text adopted without change.

Article 12 (old Article 11, U.R. and Exp.).

“ An endorsement must be unconditional. Any condition to which it is made subject is deemed not to be written* (*non écrite*).

“ A partial endorsement is null and void.

“ An endorsement ‘ to bearer ’ is equivalent to an endorsement in blank.”

39. The first two paragraphs, which reproduce the text of the Hague Regulation and that of the experts, were adopted without discussion. Whereas, however, the third paragraph of the text of The Hague and of the experts did not recognise an endorsement “ to bearer ”, the present text assimilates an endorsement “ to bearer ” to an endorsement in blank. This change was made

with the desire to give effect as liberally as possible to the clauses contained in the bill of exchange and in consideration of the fact that, in practice, blank endorsements enable the instrument to circulate almost as though it were a bearer security.

40. This provision has the further advantage of bringing the Uniform Law into closer accord with English law on this point.

Article 13 (old Article 12, U.R. and Exp.).

“ An endorsement must be written on the bill of exchange or on a slip affixed thereto (*allonge*). It must be signed by the endorser.

“ The endorsement may leave the beneficiary unspecified or may consist simply of the signature of the endorser (endorsement in blank). In the latter case, the endorsement, to be valid must be written on the back of the bill of exchange or on the slip attached thereto (*allonge*).”

41. This text was substituted for that of The Hague and of the experts in order to make it clear that, if the endorsement consists merely of the affixing of the signature, and may therefore be confused with other exchange entries (*aval*, acceptance), the endorsement, thus limited to signature, should be written on the back of the bill in order to avoid this confusion. When, however, it contains, in addition to the signature, any particulars which are characteristic of endorsement and distinguish it from any other exchange transaction (*e.g.*, “ pay to the order of . . . ”), such an endorsement can be written even on the face of the bill and remains none the less valid.

Article 14 (old Article 13, U.R. and Exp.).

“ An endorsement transfers all the rights arising out of a bill of exchange.

“ If the endorsement is in blank, the holder may:

“ 1. Fill up the blank either with his own name or with the name of some other person;

“ 2. Re-endorse the bill in blank, or to some other person;

“ 3. Transfer the bill to a third person without filling up the blank, and without endorsing it.”

Article 15 (old Article 14, U.R. and Exp.).

“ In the absence of any contrary stipulation, the endorser guarantees acceptance and payment.

“ He may prohibit any further endorsement; in this case, he gives no guarantee to the persons to whom the bill is subsequently endorsed.”

42. These articles, which correspond exactly to the texts of The Hague and of the Experts, were adopted without change.

Article 16 (old Article 15, U.R. and Exp.).

“ The possessor of a bill of exchange is deemed to be the lawful holder if he establishes his title to the bill through an uninterrupted series of endorsements, even if the last endorsement is in blank. In this connection, cancelled endorsements are deemed not to be written (*non écrits*). When an endorsement in blank is followed by another endorsement, the person who signed this last endorsement is deemed to have acquired the bill by the endorsement in blank.

“ Where a person has been dispossessed of a bill of exchange, in any manner whatsoever, the holder who establishes his right thereto in the manner mentioned in the preceding paragraph is not bound to give up the bill unless he has acquired it in bad faith, or unless in acquiring it he has been guilty of gross negligence.”

43. With respect to this article, one delegation submitted a proposal to the effect that the second paragraph should be worded as follows:

“ When a person has lost a bill of exchange in any manner whatever, the holder who shows his right thereto in the manner mentioned in the preceding paragraph is not bound to give up the bill unless he has acquired it in bad faith.

“ He has acted in bad faith if, in acquiring the bill, he was aware, or through negligence, unaware, of the fact that the transferer was not the legitimate holder or his representative, or else that he was not entitled or legally able to dispose of the bill.”

After discussion, this amendment was rejected, since it appeared impossible to give an accurate definition of bad faith which would meet the views prevailing on the subject in various countries and, further, because the amendment seeks to give a ruling as to the fate of an endorsement given by a legally incapable person, a question which has been left to the various national legislations (Convention on Conflicts of Laws, Article 9).

44. It was, moreover, understood that, when a first endorsee was unaware of the loss or theft of the bill of exchange (or more generally of the fact that the holder was unlawfully dispossessed of it), the defect thus attaching to the bill is thereby eliminated and the bill can subsequently be transferred to another endorsee, even though the latter should be aware that it had previously been unlawfully appropriated.

Article 17 (old Article 16, U.R. and Exp.).

“ Persons sued on a bill of exchange cannot set up against the holder defences founded on their personal relations with the drawer or with previous holders, unless the holder, in acquiring the bill, has knowingly acted to the detriment of the debtor.”

45. The last part of this text: “. . . unless the holder, in acquiring the bill, has knowingly acted to the detriment of the debtor”, differs both from the Hague text and from that of the experts.

The Hague text read as follows: “. . . unless the transfer has taken place in pursuance of a fraudulent understanding.” The Committee of Experts thought that this wording was too limited and they therefore suggested: “. . . unless the holder has acquired the bill in bad faith”. The latter phrase, however, was held by the Conference to be too comprehensive. Finally, after a long discussion, the Conference agreed to the compromise worded as above. It wished to make it clear that it is not sufficient for the holder to have been aware of the defences but that he must also, when acquiring the bill, with knowledge of the defences, have knowingly acted to the detriment of the debtor. The actual facts to which this formula (*exceptio doli generalis*) might apply are left to the decision of the Court.

Article 18 (old Article 17, U.R. and Exp.).

“ When an endorsement contains the statements ‘ value in collection ’ (*valeur en recouvrement*), ‘ for collection ’ (*pour encaissement*), ‘ by procuration ’ (*par procuration*) or any other phrase implying a simple mandate, the holder may exercise all rights arising out of the bill of exchange, but he can only endorse it in his capacity as agent.

“ In this case, the parties liable can only set up against the holder defences which could be set up against the endorser.

“ The mandate contained in an endorsement by procuration does not terminate by reason of the death of the party giving the mandate or by reason of his becoming legally incapable.”

46. The first and second paragraphs of this article, which agree with the same paragraphs of the corresponding article of the Hague Regulation, were adopted without change. The Conference also adopted the third paragraph added by the Committee of Experts; but, in order to make the wording more precise, the words “ does not terminate ” were inserted instead of “ is not revoked ”.

47. It was pointed out that with the present wording of this article there might be some doubt whether the bill of exchange, after endorsement by procuration, could be validly transferred by endorsement. Such endorsement could not be regarded as null and void; moreover it must and can only be regarded as endorsement by procuration. Consequently, the proposal was made that the following sentence should be added to supplement this article: “ An endorsement by this party shall be equivalent to endorsement by procuration, even if it does not mention the mandate ”. The Conference agreed that this was the correct interpretation, but deemed it unnecessary to state the fact in the text.

Article 19 (old Article 18, U.R. and Exp.).

“ When an endorsement contains the statements ‘ value in security ’ (*valeur en garantie*), ‘ value in pledge ’ (*valeur en gage*), or any other statement implying a pledge, the holder may exercise all the rights arising out of the bill of exchange, but an endorsement by him has the effects only of an endorsement by an agent.

“ The parties liable cannot set up against the holder defences founded on their personal relations with the endorser, unless the holder, in receiving the bill, has knowingly acted to the detriment of the debtor.”

48. According to the first paragraph of this article, which reproduces the Hague text, the person who has accepted the bill of exchange in pledge may exercise all the rights flowing from the bill, but an endorsement by him has only the effects of an endorsement by an agent.

49. Nevertheless, in the course of the discussion it was pointed out that, in certain circumstances, when it is a question of realising the pledge, it is very important that the person holding the bill as collateral security should be able to transmit the bill by means of an ordinary endorsement. On the assumption that the effects of endorsement should be regulated uniformly, it was proposed that the pledgee should be granted an unlimited option to make ordinary endorsements, and, consequently, that the words “ but an endorsement by him has the effects only of an endorsement by an agent ” should be deleted. But it was objected that this would diminish the degree of protection afforded to the debtor. In addition, as, in many laws, this question is not expressly regulated, and as even in countries which make special provision for a pledgee’s endorsement, the matter does not assume any particular importance, it was also proposed to omit all reference to this matter, leaving the question to be settled by the law of the various countries. The Conference rejected both these proposals.

50. The Conference, however, approved a proposal to the effect that the phrase: “ without prejudice to the right of the creditor who holds the pledge to realise the pledge when the debt falls due ”, which the Committee of Experts suggested as an addition to the Hague Regulation, should be omitted. The Conference felt that the question of realising the pledge was a matter coming within the domain of the ordinary law, and not within that of the law on bills of exchange.

51. The Conference also approved the second paragraph of this article. In order, however, to bring the text into line with Article 17, it substituted for the words “ unless the holder has acquired the bill in bad faith ”, the phrase: “ in receiving the bill, has knowingly acted to the detriment of the debtor ”.

52. It is understood that the holder mentioned in the second paragraph is the pledgee.

Article 20 (old Article 19, U.R. and Exp.).

“ An endorsement after maturity has the same effects as an endorsement before maturity. Nevertheless, an endorsement after protest for non-payment, or after the expiration of the limit of time fixed for drawing up the protest, operates only as an ordinary assignment.

“ Failing proof to the contrary, an endorsement without date is deemed to have been placed on the bill before the expiration of the limit of time fixed for drawing up the protest.”

53. As regards the first paragraph it should be noted that the Conference endorsed the interpretation proposed by one delegation to the effect that, when a bill of exchange payable at sight is presented for payment and when, after refusal of payment, the protest has not been drawn up, the limit of time for drawing up such protest has not expired according to Article 20.

54. The second paragraph puts a case which does not need any justification.

55. It was at first proposed to add a third paragraph containing certain rules for establishing that the endorsement was prior or subsequent to the protest, but, as the application of these rules is complicated by the fact that, in some countries, the protest does not reproduce all the endorsements, the Conference thought it unnecessary to enter into these details and considered that on this point each country should adapt its legislation to the particular features of the protest.

CHAPTER III. — ACCEPTANCE.

Article 21 (old Article 20, U.R. and Exp.).

“ Until maturity, a bill of exchange may be presented to the drawee for acceptance at his domicile, either by the holder or by a person who is merely in possession of the bill.”

56. This article reproduces the corresponding text of The Hague and the experts.

Article 22 (old Article 21, U.R. and Exp.).

“ In any bill of exchange, the drawer may stipulate that it shall be presented for acceptance, with or without fixing a limit of time for presentment.

“ Except in the case of a bill payable at the address of a third party or in a locality other than that of the domicile of the drawee, or, except in the case of a bill drawn payable at a fixed period after sight, the drawer may prohibit presentment for acceptance.

“ He may also stipulate that presentment for acceptance shall not take place before a named date.

“ Unless the drawer has prohibited acceptance, every endorser may stipulate that the bill shall be presented for acceptance, with or without fixing a limit of time for presentment.”

57. This article, which corresponds to the text of The Hague Regulation and the experts, contains only a purely formal change, in the second paragraph. As it was desired in the Uniform Law to avoid the expression “ domiciled bill ”, it was necessary to specify the different cases referred to in the present article.

58. Some doubts were expressed as to the usefulness of a non-acceptable bill of exchange, it being feared that by this means bills might be made out to fictitious persons. It was decided, however, to allow the possibility of prohibiting the presentment of a bill of exchange for acceptance, as this clause is applied in some countries and is of recognised utility. The debtor is sometimes afraid to accept a bill of exchange drawn on himself, in view of the strictness of the obligation it entails. He would be prepared, however, to pay the bill at maturity, even though he were unwilling to accept it. Moreover, it is important to the creditors to be able to dispose of the debt before maturity, by means of a bill of exchange. For these reasons it was decided to allow the issue of bills stipulated to be non-acceptable.

Article 23 (old Article 22, U.R. and Exp.).

“ Bills of exchange payable at a fixed period after sight must be presented for acceptance within one year of their date.

“ The drawer may abridge or extend this period.

“ These periods may be abridged by the endorsers.”

59. This text reproduces that of The Hague and the experts, except that the period of six months provided in the first paragraph has been extended to a year.

60. It was further proposed to say in the third paragraph: “ These periods may be abridged by the endorsers in respect of the effects of their endorsement ”, the intention being to show that the reduction of time was operative only in respect of the endorser inserting it. This stipulation, however, seemed unnecessary, as the question is settled in the last paragraph of Article 53.

Article 24 (old Article 23, U.R. and Exp.).

“ The drawee may demand that a bill shall be presented to him a second time on the day after the first presentment. Parties interested are not allowed to set up that this demand has not been complied with unless this request is mentioned in the protest.

“ The holder is not obliged to surrender to the drawee a bill presented for acceptance.”

61. The text of this article corresponds to that of the Hague Regulation and the experts, except that, for the sake of clearness, the order of the paragraphs is reversed. The Hague text and that of the experts laid down first the principle that the holder is not bound to leave the bill in the hands of the drawee, and add a second paragraph according to which the drawee may demand that a bill be presented to him a second time on the day after the first presentment, but that the parties interested are not allowed to set up that this demand has not been complied with unless this fact is specified in the protest. According to the former order of the paragraphs, it might have been assumed that the drawee could only claim the period for reflection mentioned above if the drawer had not surrendered the bill. This interpretation, however, would be unreasonable. The reasons in favour of allowing the drawee time for reflection are the same whether the drawer surrenders the bill or not. For these reasons the drawee must, if he so requests, be granted time for reflection in all circumstances, and in order to obviate the possibility of a different interpretation the order of the paragraphs was reversed. The general principle is first laid down that the drawee may claim time for reflection until the day after the first presentation, and then follows the special provision whereby the drawer is not bound to surrender the bill to the drawee.

Article 25 (old Article 24, U.R. and Exp.).

“An acceptance is written on the bill of exchange. It is expressed by the word ‘accepted’ or any other equivalent term. It is signed by the drawee. The simple signature of the drawee on the face of the bill constitutes an acceptance.

“When the bill is payable at a certain time after sight, or when it must be presented for acceptance within a certain limit of time in accordance with a special stipulation, the acceptance must be dated as of the day when the acceptance is given, unless the holder requires that it shall be dated as of the day of presentment. If it is undated, the holder, in order to preserve his right of recourse against the endorsers and the drawer, must authenticate the omission by a protest drawn up within the proper time.”

62. This article reproduces unchanged Article 24 of the Hague text and that of the experts.

Article 26 (old Article 25, U.R. and Exp.).

“An acceptance is unconditional, but the drawee may restrict it to part of the sum payable.

“Every other modification introduced by an acceptance into the tenor of the bill of exchange operates as a refusal to accept. Nevertheless, the acceptor is bound according to the terms of his acceptance.”

63. This article reproduces the text of the Committee of experts, which in the first paragraph differs slightly from that of The Hague. The change of wording by the experts is intended to avoid any error of interpretation as to the meaning of the clause.

64. By “modification” is meant both limitation, to an amount less than that of the bill, of the figure for which the acceptance is given, and the introduction of a condition into the acceptance.

65. The question was discussed whether the Uniform Law should not contain the Anglo-Saxon principle that the holder is not bound to admit a partial acceptance. After discussion, the principle was rejected, because the primary consideration must be the interests of the guarantors, whose liability is discharged to the extent of the partial acceptance.

Article 27 (old Article 26, U.R. and Exp.).

“When the drawer of a bill has indicated a place of payment other than the domicile of the drawee without specifying a third party at whose address payment must be made, the drawee may name such third party at the time of acceptance. In default of this indication, the acceptor is deemed to have undertaken to pay the bill himself at the place of payment.

“If a bill is payable at the domicile of the drawee, the latter may in his acceptance indicate an address in the same place where payment is to be made.”

66. The change in the first paragraph of this text was made in order to bring it into line with Articles 4 and 22 above.

67. The word “place” is, of course, used here as synonymous with “locality”, and the text means that in the case provided for, the drawee may, when accepting, specify another address in the same locality where payment is to be made.

68. It is also laid down that, in the case mentioned in paragraph 2, when the drawer has not specified a third party at whose address payment must be made, the drawee may name such third party at the time of acceptance.

Article 28 (old Article 27, U.R. and Exp.).

“By accepting, the drawee undertakes to pay the bill of exchange at its maturity.

“In default of payment, the holder, even if he is the drawer, has a direct action on the bill of exchange against the acceptor for all that can be demanded in accordance with Articles 48 and 49.”

69. No change.

Article 29 (old Article 28, U.R. and Exp.).

“ Where the drawee who has put his acceptance on a bill has cancelled it before restoring the bill, acceptance is deemed to be refused. Failing proof to the contrary, the cancellation is deemed to have taken place before the bill was restored.

“ Nevertheless, if the drawee has notified his acceptance in writing to the holder or to any party who has signed the bill, he is liable to such parties according to the terms of his acceptance.”

70. This article includes several changes, compared with the Hague text, which was accepted without change by the Committee of Experts. It was only adopted after long discussion. It was first proposed that a rule should be adopted to the effect that acceptance once given could not be withdrawn. This rule, however, was considered too strict, as the drawee might have affixed his signature in error and there is no reason in such a case to hold him responsible. Further, such a solution would have meant that, acceptance being deemed to hold good despite cancellation, the holder would have no right of recourse against the guarantors, which would be contrary to his interests. In point of fact, if the drawee cancels his acceptance, the likelihood is that he will not pay the bill of exchange at its maturity. In these circumstances there is no valid reason for depriving the holder of the right of recourse before maturity. It was decided, for these reasons, to maintain in principle the solution embodied in the Hague Regulation and by the Experts', namely, that the drawee can cancel his acceptance before the delivery of the bill. The words “ before the bill has left his hands ” were, however, replaced by the words “ before restoring the bill ”.

71. The fact of having cancelled acceptance before the delivery of the bill to the holder is not shown by the bill of exchange, and it was accordingly considered expedient to add a rule relating to proof, namely: “ Failing proof to the contrary the cancellation is deemed to have taken place before the bill was restored ”.

72. Paragraph 2 deals with the case of a drawee who has notified his acceptance in writing and provides that in such a case the drawee is liable according to the terms of his acceptance. The bill of exchange does not show at what moment such notification was given, that is, whether it was before or after the cancellation of acceptance, and accordingly it was decided to delete the words “ after he has in writing informed . . . ”, to be found in the Hague and the Experts' texts. For the sake of clearness, it was specified, further, that the drawee remains liable in such a case according to the terms of his acceptance only to those signatories to whom notification has been given.

CHAPTER IV. — “ AVALS ”.

Article 30 (old Article 29, U.R. and Exp.).

“ Payment of a bill of exchange may be guaranteed by an *aval* as to the whole or part of its amount.

“ This guarantee may be given by a third person or even by a person who has signed as a party to the bill.”

73. The Conference modified the corresponding article of the Hague Regulation and the experts' text by adding in the first paragraph the words “ as to the whole or part of its amount ”. It thus recognised the validity of an *aval* limited to part of the sum. The principle, moreover, has also been adopted in connection with the acceptor, under the first paragraph of Article 26. This last-named provision was designed to cover possible relations between the drawee and the drawer, and there are practical reasons for adopting the same rule in the case of *avals*.

Article 31 (old Article 30, U.R. and Exp.).

“ The *aval* is given either on the bill itself or on an *allonge*.

“ It is expressed by the words ‘ good as *aval* ’ (‘ *bon pour aval* ’) or by any other equivalent formula. It is signed by the giver of the *aval*.

“ It is deemed to be constituted by the mere signature of the giver of the *aval* placed on the face of the bill, except in the case of the signature of the drawee or of the drawer.

“ An *aval* must specify for whose account it is given. In default of this, it is deemed to be given for the drawer.”

74. This article is the same as the Hague and the experts' texts.

75. One delegation had proposed that express provision should be made for the case of several *avals* being given for the same person and that the legal right of recourse as between givers of *avals* should be determined. The Conference was of opinion that no relations could be deemed to exist between them in regard to bills of exchange, the only relations being those existing under common law, a question which the Uniform Law on bills of exchange was not intended to regulate.

76. In order to enable countries which employ what is known as “ *aval* by separate document ” to retain this institution, the Committee of Experts (which had avoided the system of reservations) had proposed an Article, 31bis, as follows: “ The above provisions do not apply to what is known as “ *aval* by separate document ” (“ *aval par acte séparé* ”). The Conference simply to reproduce the reservation on this point already framed in Article 5 of the Hague Convention, whereby any contracting party has the right to prescribe that an *aval* may be given in its territory by a separate document indicating the place in which it has been given.

Article 32 (old Article 31, U.R. and Exp.).

“ The giver of an *aval* is bound in the same manner as the person for whom he has become guarantor.

“ His undertaking is valid even when the liability which he has guaranteed is inoperative for any reason other than defect of form.

“ He has, when he pays a bill of exchange, the rights arising out of the bill of exchange against the person guaranteed and against those who are liable to the latter on the bill of exchange.”

77. This article reproduces the Hague and the experts' texts, except for a formal modification introduced in the third paragraph, stating expressly that the giver of an *aval* has the right of recourse not only against the endorsers but also against the drawee who has accepted the bill.

CHAPTER V. — MATURITY.

Article 33 (old Article 32, U.R. and Exp.).

“ A bill of exchange may be drawn payable:

“ At sight;

“ At a fixed period after sight;

“ At a fixed period after date;

“ At a fixed date.

“ Bills of exchange at other maturities or payable by instalments are null and void.”

78. This article, which indicates the various methods of determining the time of payment, is, except for the order of the paragraphs, identical to the corresponding Hague and experts' texts.

Article 34 (old Article 33, U.R. and Exp.).

“ A bill of exchange at sight is payable on presentment. It must be presented for payment within a year of its date. The drawer may abridge or extend this period. These periods may be abridged by the endorsers.

“ The drawer may prescribe that a bill of exchange payable at sight must not be presented for payment before a named date. In this case, the period for presentment begins from the said date.”

79. This article differs in some respects from the corresponding Hague and experts' texts. In those texts, reference was made, as regards presentment for payment, to the legal or contractual limits of time fixed for the presentment for acceptance of bills payable at a fixed period after sight. This reference has been replaced by an explicit provision. On account of the amendment to Article 23 (old Article 22), the legal time-limit has been fixed at one year instead of six months.

80. In certain countries, there are bills of exchange drawn at sight which are only payable after a fixed date or after the expiry of a certain period, starting from the date of issue. In connection with bills of this type, the following questions arise: (a) Should effect be given to the prohibition to present the bill before the named date? (b) If so, how should the periods for presentment be calculated?

If these points had not been mentioned in the text, doubts might have arisen in regard to them; to obviate that possibility, a provision has been inserted in the second paragraph of Article 34 expressly authorising the drawer to prohibit the presentment of a bill of exchange for payment before the date named in the bill and stipulating that, in this case, the period for presentment begins from the said date. The wording of the text also makes it clear that an endorser may neither abridge nor extend the period before the expiry of which presentment for payment is not allowed, but that, as is always the case, the endorser has the right to abridge the period for presentment.

Article 35 (old Article 34, U.R. and Exp.).

“ The maturity of a bill of exchange payable at a fixed period after sight is determined either by the date of the acceptance or by the date of the protest.

“ In the absence of the protest, an undated acceptance is deemed, so far as regards the acceptor, to have been given on the last day of the limit of time for presentment for acceptance.

81. If this article is compared with the Hague Regulation and the text of the Committee of Experts, it will be found that there is only one drafting amendment at the end of the second paragraph for the purpose of bringing it into line with the preceding article.

Article 36 (old Article 35, U.R. and Exp.).

“ Where a bill of exchange is drawn at one or more months after date or after sight, the bill matures on the corresponding date of the month when payment must be made. If there be no corresponding date, the bill matures on the last day of this month.

“ When a bill of exchange is drawn at one or more months and a-half after date or sight, entire months must first be calculated.

“ If the maturity is fixed at the commencement, in the middle (mid-January or mid-February, etc.) or at the end of the month, the first, fifteenth or last day of the month is to be understood.

“ The expressions ‘ eight days ’ or ‘ fifteen days ’ indicate not one or two weeks, but a period of eight or fifteen actual days.
“ The expression ‘ half-month ’ means a period of fifteen days.”

Article 37 (old Article 36, U.R. and Exp.).

“ When a bill of exchange is payable on a fixed day in a place where the calendar is different from the calendar in the place of issue, the day of maturity is deemed to be fixed according to the calendar of the place of payment.

“ When a bill of exchange drawn between two places having different calendars is payable at a fixed period after date, the day of issue is referred to the corresponding day of the calendar in the place of payment, and the maturity is fixed accordingly.

“ The time for presenting bills of exchange is calculated in accordance with the rules of the preceding paragraph.

“ These rules do not apply if a stipulation in the bill or even the simple terms of the instrument indicate an intention to adopt some different rule.”

82. These two articles are identical in substance with the Hague Regulation and the experts' text.

CHAPTER VI. — PAYMENT.

Article 38 (old Article 37, U.R. and Exp.).

“ The holder of a bill of exchange payable on a fixed day or at a fixed period after date or after sight must present the bill for payment either on the day on which it is payable or on one of the two business days which follow.

“ The presentment of a bill of exchange at a clearing-house is equivalent to a presentment for payment.”

83. This text differs on two important points from the experts' text.

84. Whereas, in the first paragraph of the experts' text, it was provided that “ the holder must present a bill of exchange for payment ”, the present text stipulates that “ the holder of a bill of exchange payable on a fixed day or at a fixed period after date or after sight must present . . . ” The object of this stipulation was to make it clear that the first paragraph of Article 37 does not refer to bills of exchange payable at sight, which are governed in this respect by Article 34 (old Article 33). On the other hand, the second paragraph covers all bills of exchange.

85. The experts' text contained a third paragraph providing that the contracting States should themselves designate the institutions to be regarded as clearing houses. The Conference thought it better to deal with this question in a reservation (Annex II, Article 6).

86. In certain countries, the law makes it compulsory for a bill of exchange to be presented for payment on the actual day of maturity. The holder who fails to comply with this legal requirement is liable in certain cases to damages. This requirement is considered to be of great utility in those countries and to ensure, on the part of traders, respect for the date of maturity, since they know that the bill must be presented to them on that day. The delegations of those countries requested that their law should be respected in this connection. It should also be noted that the obligation to present the bill of exchange at maturity is imposed not only in countries which propose to adopt the Uniform Law, but also in Great Britain and the United States of America.

To enable countries whose laws stipulate that bills shall be presented on the actual day of maturity to retain this provision, a reservation has been inserted in the Convention (Annex II, Article 5).

Article 39 (old Article 38, U.R. and Exp.).

“ The drawee who pays a bill of exchange may require that it shall be given up to him receipted by the holder.

“ The holder may not refuse partial payment.

“ In case of partial payment the drawee may require that mention of this payment shall be made on the bill, and that a receipt therefor shall be given to him.”

87. This article has been adopted without alteration. The question whether the holder can be obliged to accept partial payment against his will was, however, discussed at length. As against this, it was pointed out that, in general a creditor is not obliged to accept partial payment. It was also remarked that in some cases the debtor omits to pay a small part of the amount, alleging various reasons, but with the real intention of tiring the holder, because he knows that the latter will not have recourse to the drawee and endorsers and invoke their responsibility on account of a trifling sum. Lastly, it was argued that most bills of exchange are presented for payment by banks and that the clerks who give receipts are not allowed to give a partial receipt, unless they have received special instructions—which would make the service of collection very much more complicated. In reply, it was stated that partial acceptance had been allowed by Article 26, and that it would accordingly be difficult to prohibit partial payment without inconsistency. Some delegates also pointed out that, in principle, the endorsers should be relieved as far as possible of their responsibility. If the possibility of partial payment were ruled out, recourse might be had to the endorsers for the payment of the whole amount of the bill of exchange.

The Conference therefore decided to adhere to the solution proposed in Article 38 of the Hague and the experts' drafts, namely, to require the holder, if necessary, to accept partial payment.

Article 40 (old Article 39, U.R. and Exp.).

"The holder of a bill of exchange cannot be compelled to receive payment thereof before maturity.

"The drawee who pays before maturity does so at his own risk and peril.

"He who pays at maturity is validly discharged, unless he has been guilty of fraud or gross negligence. He is bound to verify the regularity of the series of endorsements, but not the signature of the endorsers."

88. As regards paragraphs 1 and 2, the provision to the effect that the holder of a bill of exchange is not obliged to receive payment before maturity, and that the drawee who pays before maturity does so at his own risk and peril, is in conformity with the principle laid down in various laws (see in particular Articles 144 and 146 of the French Commercial Code).

89. A suggestion was made that in paragraph 2 the words "at his own risk and peril" should be replaced by the words "makes himself responsible for the validity of the payment", which seemed to be more precise from a juridical point of view and clearer; nevertheless, this suggestion was not adopted since the phrase "at his own risk and peril", as ordinarily interpreted, seemed to be a clearer warning to the drawee who pays before maturity of the possible consequences of his act.

90. When paragraph 2 was being discussed, the point was raised as to how payment by the drawee, after maturity, but before protest, should be regarded. It was decided without opposition that in that case the drawee should be placed on the same footing as the debtor who pays on the date of maturity.

91. In the third paragraph, the experts' draft substituted for the last words of the phrase: "He who pays at maturity is validly discharged, unless he has been guilty of fraud or gross negligence", the words: "unless he has been guilty of *bad faith* or gross negligence". This change was made in order to bring the phraseology of Article 40 into line with that of Article 16 (old Article 15); but it was rightly observed that the situation of the drawee who is called upon to make payment is different from that of the person who acquires the bill of exchange, and who is referred to in Article 16 (old Article 15). The acquirer has not acquired the bill of exchange in order to carry out an imperative prior obligation, whereas the drawee is bound to fulfil, by payment, an obligation of this kind which is implied by his acceptance. If he refuses to fulfil this undertaking, he exposes himself to rigorous proceedings at law, which, if he loses his case, will not only involve him in heavy expense but will adversely affect his commercial and personal reputation when it becomes known that he has only fulfilled his obligation after the bill has been protested against him. In this case, therefore, account has to be taken not only of the material damage that the drawee may suffer, but also of the moral injury which may be done him. The drawee finds himself in a situation which has, so to speak, been imposed upon him owing to the particular nature of the instrument. He cannot therefore be required to investigate every doubt he may have as to the rights of the person in possession of the bill, at the risk of becoming involved in a law-suit. He can only be required to refuse payment if he has definite evidence in his possession by which he can prove that the holder has no proper title.

92. But this opinion, expressed from the point of view of the drawee, and the subjective considerations which precede it, are not the only arguments in favour of this solution. The nature and principal aim of a debt incorporated in the form of a bill of exchange is to render that debt as elastic as possible, so that it may become a reliable instrument of credit—reliability being one of the pre-eminent characteristics of the bill of exchange in commercial and banking usage.

In order that the bill of exchange may adequately answer its purpose, refusal of payment must not be possible owing to some doubt as to the holder's proper title; the bill should only be refusible when the drawee has in his possession such convincing evidence of the holder's lack of title that he can no longer entertain any serious doubts on the subject. It is, however, not sufficient that the drawee should have a doubt regarding the holder's *bona fides*; his doubts must be backed up by proof. Otherwise the bill of exchange could not fulfil its essential purpose.

Article 41 (old Article 40, U.R. and Exp.).

"When a bill of exchange is drawn payable in a currency which is not that of the place of payment, the sum payable may be paid in the currency of the country, according to its value on the date of maturity. If the debtor is in default, the holder may at his option demand that the amount of the bill be paid in the currency of the country according to the rate on the day of maturity or the day of payment.

"The usages of the place of payment determine the value of foreign currency. Nevertheless, the drawer may stipulate that the sum payable shall be calculated according to a rate expressed in the bill.

"The foregoing rules shall not apply to the case in which the drawer has stipulated that payment must be made in a certain specified currency (stipulation for effective payment in foreign currency).

"If the amount of the bill of exchange is specified in a currency having the same denomination, but a different value in the country of issue and the country of payment, reference is deemed to be made to the currency of the place of payment."

93. With regard to bills of exchange drawn payable in a currency which is not that of the place of payment, the Hague texts of 1910 and 1912 and most laws on bills of exchange lay down the main rule that, unless it has been expressly stipulated that payment shall be made in a given currency, the debtor may pay either in the foreign currency, or, if he prefers, in the currency of the place of payment. This principle, which is based on considerations of a practical order, has been retained in the present text.

If payment is effected at maturity, this rule involves no difficulty. Generally speaking, the rate of exchange quoted on Exchange in the place of payment may be consulted to determine the value of the foreign currency on the date of maturity, or local custom may be followed.

94. The problem becomes more difficult, however, if, as the result of delay on the part of the debtor, payment is only made at a later date, and if the exchange rate as between the foreign currency and the currency of the country has varied after maturity. One delegation proposed that the words "when payment can be demanded", be replaced by the phrase "when payment is made". It adduced the following arguments in favour of its proposal: the holder would be detrimentally affected if the debtor, owing a specified sum in a stable currency, were entitled to meet his obligation by paying, in the currency of his own country, a sum which, converted at the current rate on the date of maturity corresponded to the debt, but which in the meantime had so depreciated that the creditor, when converting it into foreign currency, no longer obtained the original amount of the debt. On a majority vote the Conference rejected this proposal.

95. The question, however, was again discussed whether, as a set-off to the debtor's right to pay in the currency of his own country, some means could not be found of protecting the holder against a debtor who, in order to obtain undue profit at the expense of the holder, delays the payment of his debt. As a result of the discussion, it was proposed that the Conference should insert a stipulation to this effect in Article 41.

96. If in such cases the debtor is still allowed to choose between payment in foreign currency or in the currency of the country, various legislative alternatives are possible as regards the rate that should govern payment. The legislator may also decide in favour of applying the rate current at the date of maturity, to the exclusion of that current at the date of effective payment. It may, however, be argued against this solution, that if the foreign currency rate has fallen since the date of maturity, the debtor, who will naturally choose to pay in that currency, will, by delaying payment, realise a profit at the expense of the holder. But the debtor has the same possibility of making inequitable gain if the opposite solution is adopted, namely, that the foreign currency should be calculated according to the rate of exchange at the date of payment. If the rate of this currency has risen in the period between maturity and the date of payment, the debtor will certainly effect payment in the depreciated currency of the country.

The only effective method which does not unduly favour the dilatory debtor is, it would seem, to deprive him, from the moment at which delay occurs, of his right to choose between the two currencies, and to allow the holder of the Bill of exchange to demand that payment should be made in the currency of the place of payment, and also to allow the holder to choose between the rate current at the date of maturity and that current at the date of effective payment.

97. Article 41 is concerned primarily with the acceptor, as is shown by the position of the article in the text of the Uniform Law. The Uniform Law does not, any more than the previous drafts, contain any express provisions with regard to the calculation of the rate of exchange in case a holder has recourse against the drawer and the endorsers. As, however, these debtors — the drawer and the endorsers — as guarantors of the acceptor, are responsible to the same extent as the latter, any such provisions would be superfluous.

98. A reservation to this Article 41 was adopted (Annex II, Article 7).

Article 42 (old Article 41, U.R. and Exp.).

"When a bill of exchange is not presented for payment within the limit of time fixed by Article 38, every debtor is authorised to deposit the amount with the competent authority at the charge, risk and peril of the holder."

99. This article, which reproduces the Hague text and that of the experts, was retained by the Conference without any alteration.

CHAPTER VII. — RECOURSE FOR NON-ACCEPTANCE OR NON-PAYMENT.

Article 43 (old Article 42, U.R. and Exp.).

"The holder may exercise his right of recourse against the endorsers, the drawer and the other parties liable:

"At maturity,

"If payment has not been made;

"Even before maturity,

"(1) If there has been total or partial refusal to accept;

"(2) In the event of the bankruptcy (*faillite*) of the drawee, whether he has accepted or not, or in the event of a stoppage of payment on his part, even when not declared by a judgment, or where execution has been levied against his goods without result;

"(3) In the event of the bankruptcy (*faillite*) of the drawer of a non-acceptable bill."

100. The above text is a word for word reproduction of the corresponding article in the Hague Regulation and in the draft of the Committee of Experts, with the sole difference that, in No. 1 the words "if acceptance has been refused" have been replaced by the words "if there has been *total or partial* refusal to accept". The object of this change is to bring the text into line with Article 26.

101. As regards the last two paragraphs of Article 43, certain delegations, feeling that the terms employed in the formula could not be exactly translated into their languages, or did not exactly cover the similar situations contemplated by their national laws, asked for a reservation which was inserted under Article 10 of Annex II.

102. Further, as certain countries wished to enable the courts in the cases referred to in Nos. 2 and 3 of Article 43 to allow the guarantors of a bill of exchange periods of grace which would in no case extend beyond the maturity of the bill, a reservation to that effect was introduced into Article 11 of Annex II.

103. It had been proposed to draft Nos. 2 and 3 of this article in the same terms, but it was pointed out at the Conference that it would be difficult to specify the means by which a stoppage of payment not announced by a judgment declaring the bankruptcy of the drawer of a non-acceptable bill or, the levying of execution against his goods without result could be established (seeing that a protest cannot be made against the drawer). The Conference accordingly decided to adhere to the text of The Hague and the Committee of Experts. This text as maintained therefore implies that the right of recourse before maturity can only be exercised in the event of the drawer of a non-acceptable bill of exchange becoming a declared bankrupt.

Article 44 (old Article 43, U.R. and Exp.).

"Default of acceptance or of payment must be evidenced by an authentic act (protest for non-acceptance or non-payment).

"Protest for non-acceptance must be made within the limit of time fixed for presentment for acceptance. If, in the case contemplated by Article 24, paragraph 1, the first presentment takes place on the last day of that time, the protest may nevertheless be drawn up on the next day.

"Protest for non-payment of a bill of exchange payable on a fixed day or at a fixed period after date or sight must be made on one of the two business days following the day on which the bill is payable. In the case of a bill payable at sight, the protest must be drawn up under the conditions specified in the foregoing paragraph for the drawing up of a protest for non-acceptance.

"Protest for non-acceptance dispenses with presentment for payment and protest for non-payment.

"If there is a stoppage of payment on the part of the drawee, whether he has accepted or not, or if execution has been levied against his goods without result, the holder cannot exercise his right of recourse until after presentment of the bill to the drawee for payment and after the protest has been drawn up.

"If the drawee, whether he has accepted or not, is declared bankrupt (*faillite déclarée*), or in the event of the declared bankruptcy of the drawer of a non-acceptable bill, the production of the judgment declaring the bankruptcy suffices to enable the holder to exercise his right of recourse."

104. This text is a reproduction of a corresponding article in the draft of the Committee of Experts, except as regards the third paragraph. In the experts' text that paragraph provided that protest for non-payment might be made either on the day when the bill is payable, or on one of the two following business days; in short, it might be made even on the day when the bill is payable. The Conference took the view that the whole day on which the bill is payable should be left to the debtor for him to release himself, and that, consequently, protest might only be made on one of the two following business days. In the case of a bill payable at sight, on the other hand, if presentment for payment takes place on the last day of the period fixed, it should be possible for protest to be made on the following day as is provided in the case of protest for non-acceptance in the second paragraph of Article 44. It was in view of these two considerations that the above text of paragraph 3 of Article 44 was drafted.

105. With reference to bills payable at sight, one delegation raised the following question: "Are we to conclude that the mere fact of having unsuccessfully presented for payment a bill of exchange at sight, without making protest, may have the result of depriving the holder of the right to make protest within the proper time?" The delegation in question was of opinion that the answer must be in the negative and thought that there could be nothing to prevent the holder from again demanding payment (adhering to the time-limit of twelve months specified in Article 34); and that Article 44, paragraph 3, must be interpreted as meaning that the holder is not deprived of his right to make protest. This latter article simply means that a protest for refusal to pay, must be made within two days after such refusal.

The present wording of the text, which states at the end of paragraph 3 that "in the case of a bill payable at sight, the protest must be drawn up under the conditions specified in the foregoing paragraph for the drawing up of a protest for non-acceptance", entails the solution indicated above by the delegation in question and thus satisfies it completely.

106. At the request of one delegation, a reservation with reference to Article 44, paragraph 1, regarding the necessity of protest being made by an authentic act was accepted (Annex II, Article 8).

107. Lastly, another reservation relating to paragraph 3 of Article 44, which provides that protest may not be made on the day on which the bill is payable, was also accepted (Annex II, Article 9).

Article 45 (old Article 44, U.R. and Exp.).

“ The holder must give notice of non-acceptance or non-payment to his endorser and to the drawer within the four business days which follow the day for protest or, in case of a stipulation ‘ *retour sans frais* ’, the day for presentment. Every endorser must, within the two business days following the day on which he receives notice, notify his endorser of the notice he has received, mentioning the names and addresses of those who have given the previous notices, and so on through the series until the drawer is reached. The periods mentioned above run from the receipt of the preceding notice.

“ When, in conformity with the preceding paragraph, notice is given to a person who has signed a bill of exchange, the same notice must be given within the same limit of time to his *avaliseur*.

“ Where an endorser either has not specified his address or has specified it in an illegible manner, it is sufficient that notice should be given to the preceding endorser.

“ A person who must give notice may give it in any form whatever, even by simply returning the bill of exchange.

“ He must prove that he has given notice within the time allowed. This time-limit shall be regarded as having been observed if a letter giving the notice has been posted within the prescribed time.

“ A person who does not give notice within the limit of time mentioned above does not forfeit his rights. He is responsible for the injury, if any, caused by his negligence, but the damages shall not exceed the amount of the bill of exchange.”

108. Despite a modification of form, this text has in substance the same meaning as that of the Committee of Experts, with this one difference: that it is specified in the first paragraph that each endorser should advise the preceding endorser of the notice he has himself received within the *two following business days*, whereas the original text refers only to a period of two days.

109. At the request of one delegation, the Conference recorded the view, in connection with the third paragraph of Article 45, that if the drawer should not adequately specify his address the holder would not be required to give him notice, any more than he is bound to notify an endorser in such a case. Such notification is, in fact, impossible both in the first and in the second case contemplated.

110. One delegation explained that—according to the law of its own and of several neighbouring countries—the notice to be given to the guarantors had to be served by the public official who was responsible for drawing up the protest, and that this was a long established practice which worked in a manner entirely satisfactory to the parties concerned. The delegation requested that a reservation to that effect should be embodied in the Convention, and the Conference complied with this request. This reservation is set forth in Article 12 of Annex II.

Article 46 (old Article 45, U.R. and Exp.).

“ The drawer, an endorser, or a person guaranteeing payment by *aval (avaliseur)* may, by the stipulation ‘ *retour sans frais* ’, ‘ *sans protêt* ’, or any other equivalent expression written on the instrument and signed, release the holder from having a protest of non-acceptance or non-payment drawn up in order to exercise his right of recourse.

“ This stipulation does not release the holder from presenting the bill within the prescribed time, nor from the notices he has to give. The burden of proving the non-observance of the limits of time lies on the person who seeks to set it up against the holder.

“ If the stipulation is written by the drawer, it is operative in respect of all persons who have signed the bill; if it is written by an endorser or an *avaliseur*, it is operative only in respect of such endorser or *avaliseur*. If, in spite of the stipulation written by the drawer, the holder has the protest drawn up, he must bear the expenses thereof. When the stipulation emanates from an endorser or *avaliseur*, the costs of the protest, if one is drawn up, may be recovered from all the persons who have signed the bill.”

111. This text differs appreciably both from the corresponding article of the Hague text and from that of the Committee of Experts.

To begin with, it provides that the stipulation “ *retour sans frais* ”, “ *sans protêt* ”, or any other equivalent expression, may be written in the bill, not only by the drawer or by an endorser, but also by an *avaliseur*. Again, the texts of The Hague and the experts did not state how it could be ascertained who had written in the stipulation. The present clause requires the stipulation to be signed by the person writing it in the instrument. Finally, the previous texts did not settle the question whether the stipulation when written by an endorser or by an *avaliseur* was only operative in respect of the said endorser or *avaliseur*, or whether it was also operative in respect of subsequent endorsers. In accordance with a general principle previously laid down (independence of endorsements), the third paragraph of Article 46 above decides that the stipulation, when emanating from an endorser or *avaliseur* is only operative in respect of the said endorser or *avaliseur*.

Article 47 (old Article 46, U.R. and Exp.).

“ All drawers, acceptors, endorsers or guarantors by *aval* of a bill of exchange are jointly and severally liable to the holder.

“ The holder has the right of proceeding against all these persons individually or collectively without being required to observe the order in which they have become bound.

“ The same right is possessed by any person signing the bill who has taken it up and paid it.

“ Proceedings against one of the parties liable do not prevent proceedings against the others, even though they may be subsequent to the party first proceeded against.”

112. With reference to this article, the Conference recorded the opinion that when several of the parties liable occupy a position of the same degree (case in which a number of *avaliseurs*

join in giving their guarantee for one and the same person) even if these parties signed in succession they cannot exercise one against the other the right of recourse arising out of the bill of exchange. Failing any agreement to the contrary, their mutual relations are in that case governed by the provisions of ordinary law on joint liabilities.

113. The Conference considered, however, that, in the event of partial acceptance, the right of recourse may be exercised in respect of the balance not covered.

Article 48 (old Article 47, U.R. and Exp.).

“ The holder may recover from the person against whom he exercises his right of recourse:

“ (1) The amount of the unaccepted or unpaid bill of exchange with interest, if interest has been stipulated for;

“ (2) Interest at the rate of 6 per cent from the date of maturity;

“ (3) The expenses of protest and of the notices given as well as other expenses.

“ If the right of recourse is exercised before maturity, the amount of the bill shall be subject to a discount. This discount shall be calculated according to the official rate of discount (bank-rate) ruling on the date when recourse is exercised at the place of domicile of the holder.”

114. Except for a modification of form in No. 3, which involves no change of substance, this article corresponds to Article 47 of the Committee of Experts' draft.

115. It differs from the corresponding article of the Hague Regulation in this respect, that No. 4 of that article, which provided for a special commission, no longer appears. The Conference, endorsing the view of the Committee of Experts, felt that, since this commission was not a matter of general practice, the decision on the subject should be left to national legislations. A reservation to that effect has been included and is set forth in Article 14 of Annex II.

116. Furthermore, a reservation (Article 13 of Annex II) has been inserted to enable each contracting State to prescribe as regards bills of exchange which are both issued and payable in its territory that the rate of interest mentioned in No. 2 of Articles 48 and 49 may be replaced by the general or special legal rate in force in the territory of that State.

Article 49 (old Article 48, U.R. and Exp.).

“ A party who takes up and pays a bill of exchange can recover from the parties liable to him:

“ (1) The entire sum which he has paid;

“ (2) Interest on the said sum calculated at the rate of 6 per cent, starting from the day when he made payment;

“ (3) Any expenses which he has incurred.”

Article 50 (old Article 49, U. R. and Exp.).

“ Every party liable against whom a right of recourse is or may be exercised, can require, against payment, that the bill shall be given up to him with the protest and a receipted account.

“ Every endorser who has taken up and paid a bill of exchange may cancel his own endorsement and those of subsequent endorsers.”

Article 51 (old Article 50, U.R. and Exp.).

“ In the case of the exercise of the right of recourse after a partial acceptance, the party who pays the sum in respect of which the bill has not been accepted can require that this payment shall be specified on the bill and that he shall be given a receipt therefor. The holder must also give him a certified copy of the bill, together with the protest, in order to enable subsequent recourse to be exercised.”

117. The three articles — 49, 50 and 51 — set forth above reproduce those proposed by the Committee of Experts.

Article 52 (old Article 51, U.R. and Exp.).

“ Every person having the right of recourse may, in the absence of agreement to the contrary, reimburse himself by means of a fresh bill (redraft) to be drawn at sight on one of the parties liable to him and payable at the domicile of that party.

“ The redraft includes, in addition to the sums mentioned in Articles 48 and 49, brokerage and the cost of stamping the redraft.

“ If the redraft is drawn by the holder, the sum payable is fixed according to the rate for a sight bill drawn at the place where the original bill was payable upon the party liable at the place of his domicile. If the redraft is drawn by an endorser, the sum payable is fixed according to the rate for a sight bill drawn at the place where the drawer of the redraft is domiciled upon the place of domicile of the party liable.”

118. The practice of drawing redrafts having fallen into disuse in most countries, the Conference considered the suppression of this article. Several delegations having pointed out that the practice was still followed in their countries, the article was finally retained.

119. It differs from the corresponding text of the Committee of Experts only as regards the end of the first paragraph; the words “ redraft which is not domiciled and which is drawn at sight on one of the parties liable to him ” being replaced by the words “ redraft to be drawn at sight on one of the parties liable to him and payable at the domicile of that party ”. This change was made in order to avoid using the expression “ domiciled ” bill of exchange, since the concept of domiciliation does not appear to be exactly the same in all countries, as already explained.

Article 53 (old Article 52, U.R. and Exp.).

“ After the expiration of the limits of time fixed:

“ For the presentment of a bill of exchange drawn at sight or at a fixed period after sight;

• “ For drawing up the protest for non-acceptance or non-payment;

“ For presentment for payment in the case of a stipulation *retour sans frais*,

the holder loses his rights of recourse against the endorsers, against the drawer and against the other parties liable, with the exception of the acceptor.

“ In default of presentment for acceptance within the limit of time stipulated by the drawer, the holder loses his right of recourse for non-payment, as well as for non-acceptance, unless it appears from the terms of the stipulation that the drawer only meant to release himself from the guarantee of acceptance.

“ If the stipulation for a limit of time for presentment is contained in an endorsement, the endorser alone can avail himself of it.”

120. In the event of extinctive prescription (*déchéance*) or limitation of actions (*prescription*), the question arises whether, notwithstanding such extinctive prescription or limitation of actions, proceedings may not be taken against the drawer who has not provided cover (*provision*) for the bill or against any other signatory of the bill of exchange who may have made inequitable gain.

A number of amendments had been submitted with the object of answering this question. Seeing that the solutions to be found vary according to legislations, and that it would not seem possible to devise a formula on this point which would be acceptable to all the contracting parties, the Conference decided that the solution of this question should be left to the national legislations. Annex II (Article 15) therefore reproduces Article 13 of the Hague Convention.

121. The Conference further decided to take the same line as the Hague Conference and as the experts' draft, and to omit from the Uniform Regulation any reference to cover (*provision*) and to the special rights over such cover (*provision*) that are granted to the holder of a bill of exchange by certain legislations. Annex II therefore contains an Article 16, which reproduces Article 14 of the Hague Convention with the addition of a final paragraph.

Article 54 (old Article 53, U.R. and Exp.).

“ Should the presentment of the bill of exchange or the drawing up of the protest within the prescribed limits of time be prevented by an insurmountable obstacle (legal prohibition (*prescription légale*) by any State or other case of *vis major*), these limits of time shall be extended.

“ The holder is bound to give notice without delay of the case of *vis major* to his endorser and to specify this notice, which he must date and sign, on the bill or on an *allonge*; in other respects the provisions of Article 45 shall apply.

“ When *vis major* has terminated, the holder must without delay present the bill of exchange for acceptance or payment and, if need be, draw up the protest.

“ If *vis major* continues to operate beyond thirty days after maturity, recourse may be exercised, and neither presentment nor the drawing up of a protest shall be necessary.

“ In the case of bills of exchange drawn at sight or at a fixed period after sight, the time-limit of thirty days shall run from the date on which the holder, even before the expiration of the time for presentment, has given notice of *vis major* to his endorser. In the case of bills of exchange drawn at a certain time after sight, the above time-limit of thirty days shall be added to the period after sight specified in the bill of exchange.

“ Facts which are purely personal to the holder or to the person whom he has entrusted with the presentment of the bill or drawing up of the protest are not deemed to constitute cases of *vis major*.”

122. As regards the essential question which is settled by the above article, namely, the effect of *vis major* on the exercise of recourse, the draft of the experts differed substantially from that of The Hague.

Bearing in mind the practice which was very generally followed during the events of 1914-1918, the draft of the Committee of Experts ruled that all recourse would remain in suspense so long as *vis major* operated.

Under the Hague system, on the contrary, if *vis major* continues to operate beyond thirty days after the original date of maturity, recourse may be exercised without presentment or the drawing-up of a protest being necessary.

123. After discussing the matter, the Conference reverted to the Hague system, not without some modification, however. In the first paragraph, the words “ Should the presentment of a bill of exchange be prevented by an insurmountable obstacle (case of *vis major*) . . . ” have been replaced by the words: “ Should the presentment of a bill of exchange or the drawing up of the protest within the prescribed limits of time be prevented by an insurmountable obstacle (legal prohibition (*prescription légale*) by any State or other case of *vis major*), these limits of time shall be extended”. The Conference thereby intended to indicate that action by the public authorities prohibiting the drawing up of protests in a State (moratoria) constituted *de plano*, even in respect of other States, a case of *vis major*, whereas, according to the Hague Regulation, such action might simply “ be a contributory factor in inducing the courts of other countries to acknowledge the existence of *vis major*, without such courts being legally bound to comply with the provisions laid down in this way by a foreign authority ” (page 25 of the report, submitted to the Hague Conference on behalf of the Revision Committee by M. Lyon-Caen (France) and M. Simons (Germany)).

This new provision thus seems definitely to compel each of the contracting parties to respect the moratoria proclaimed in another State, but provides that such moratoria, as well as any other

case of *vis major*, shall only exert their effects, as regards the suspension of recourse against parties liable, for a maximum period of thirty days. In order to enable contracting parties to suspend the exercise of recourse against liable parties, by legal enactment, for a longer period than thirty days, the Conference authorised a reservation (Annex II, Article 22).

124. Lastly, attention should be drawn to an addition to paragraph 5 of Article 54 (corresponding to paragraph 5 of the Hague text): it is stated that, in the case of bills of exchange drawn at a fixed period after sight, the time-limit of thirty days is added to the period after sight specified in the bill of exchange.

CHAPTER VIII. — INTERVENTION FOR HONOUR.

I. GENERAL PROVISIONS.

Article 55 (old Article 54, U.R. and Exp.).

“ The drawer, an endorser, or a person giving an *aval* may specify a person who is to accept or pay in case of need.

“ A bill of exchange may, subject as hereinafter mentioned, be accepted or paid by a person who intervenes for the honour of any debtor against whom a right of recourse exists.

“ The person intervening may be a third party, even the drawee, or, save the acceptor, a party already liable on the bill of exchange.

“ The person intervening is bound to give, within two business days, notice of his intervention to the party for whose honour he has intervened. In default, he is responsible for the injury, if any, due to his negligence, but the damages shall not exceed the amount of the bill of exchange.”

125. Intervention for honour, and particularly acceptance by intervention, is to-day no longer of the same importance as in past centuries; nevertheless, it may still be of some utility. Since it has been admitted that simple non-acceptance is sufficient to give a right of recourse, acceptance by intervention may not impossibly assume great practical importance in the future.

126. The above article lays down a number of general principles which are valid both for acceptance and for payment by intervention.

The first paragraph, supplementing the formula contained in the Hague Regulation, provides that a person giving an *aval*, as well as the drawer and the endorser, may specify a person who is to accept or pay in case of need.

The second paragraph aims at establishing clearly that intervention for the honour of the acceptor is not admissible. If, notwithstanding, anyone wished to pay in lieu of the acceptor, he would not acquire rights under exchange law; the payment he had made would be governed by the principles of common law.

127. This article shows that there may be two cases of intervention: (1) Intervention provided for and caused by a special clause inserted in the bill of exchange (intervention of the person *specified in case of need*); (2) intervention by a third person who intervenes in the absence of such a clause. Some of the principles laid down in the following articles are to be applied to both cases of intervention, while others are applicable only to one or other of the two cases, as will be explained in the respective articles.

2. ACCEPTANCE BY INTERVENTION (FOR HONOUR).

Article 56 (old Article 55, U.R. and Exp.).

“ There may be acceptance by intervention in all cases where the holder has a right of recourse before maturity on a bill which is capable of acceptance.

“ When the bill of exchange indicates a person who is designated to accept or pay it in case of need at the place of payment, the holder may not exercise his rights of recourse before maturity against the person naming such referee in case of need and against subsequent signatories, unless he has presented the bill of exchange to the referee in case of need and until, if acceptance is refused by the latter, this refusal has been authenticated by a protest.

“ In other cases of intervention the holder may refuse an acceptance by intervention. Nevertheless, if he allows it, he loses his right of recourse before maturity against the person on whose behalf such acceptance was given and against subsequent signatories.”

128. The first paragraph has not been modified.

129. On the other hand, very important changes have been made in the second paragraph. The Conference has desired, generally speaking, to return to the principles adopted by the Hague Conference of 1910. If, in the bill of exchange, a person is specified to accept it or pay it in case of need at the place of payment the holder may not exercise his rights of recourse for non-acceptance unless he has first applied to the said person and, unless this person having failed to accept, he has had a protest drawn up. If the holder does not observe these provisions he loses his right of recourse against the person who has made the specification and against subsequent persons liable for the bill. When the bill does not indicate by whom the “referee-in-case-of-need” clause has been inserted, it is deemed to have been inserted by the drawer according to the principle laid down in the second sentence of Article 57.

130. The third paragraph has also been modified, either as a consequence of the modifications made in the previous paragraph or to ensure greater clearness. The third paragraph stipulates that “in all other cases the holder may refuse an acceptance by intervention”. This formula therefore covers either acceptance by a third person or acceptance by a person specified in case

of need who is domiciled in a place other than the place of payment; in the latter case the holder is not obliged to observe the second paragraph, and intervention by the person specified in case of need is assimilated to intervention by a third person. It has further been added that if the holder allows this intervention he loses his right of recourse against the signatory on whose behalf the intervention was made and against subsequent persons liable for the bill.

Article 57 (old Article 56, U.R. and Exp.).

“Acceptance by intervention is specified on the bill of exchange. It is signed by the person intervening. It mentions the person for whose honour it has been given and, in default of such mention, the acceptance is deemed to have been given for the honour of the drawer.”

131. No changes.

Article 58 (old Article 57, U.R. and Exp.).

“The acceptor by intervention is liable to the holder and to the endorsers, subsequent to the party for whose honour he intervened, in the same manner as such party.

“Notwithstanding an acceptance by intervention, the party for whose honour it has been given and the parties liable to him may require the holder, in exchange for payment of the sum mentioned in Article 48, to deliver the bill, the protest, and a receipted account, if any.”

132. No changes, except the addition of the words “and a receipted account” in the last paragraph.

3. PAYMENT BY INTERVENTION.

Article 59 (old Article 58, U.R. and Exp.).

“Payment by intervention may take place in all cases where, either at maturity or before maturity, the holder has a right of recourse on the bill.

“Payment must include the whole amount payable by the party for whose honour it is made.

“It must be made at the latest on the day following the last day allowed for drawing up the protest for non-payment.”

133. The first paragraph of Article 60 of the Experts' text has been inserted in this Article as a second paragraph.

Article 60 (old Article 59, U.R. and Exp.).

“If a bill of exchange has been accepted by persons intervening who are domiciled in the place of payment, or if persons domiciled there have been named as referees in case of need, the holder must present the bill to all these persons and, if necessary, have a protest for non-payment drawn up at the latest on the day following the last day allowed for drawing up the protest.

“In default of protest within this limit of time, the party who has named the referee in case of need, or for whose account the bill has been accepted, and the subsequent endorsers, are discharged.”

134. A slight change of form has been made in order to make the article clearer.

Article 61 (old Article 60, U.R. and Exp.).

“The holder who refuses payment by intervention loses his right of recourse against any persons who would have been discharged thereby.”

135. The first paragraph of this article was inserted in Article 59. Consequently the second paragraph, remaining all by itself, had to be modified in form.

Article 62 (old Article 61, U.R. and Exp.).

“Payment by intervention must be authenticated by a receipt given on the bill of exchange mentioning the person for whose honour payment has been made. In default of such mention, payment is deemed to have been made for the honour of the drawer.

“The bill of exchange and the protest, if any, must be given up to the person paying by intervention.”

136. No change.

Article 63 (old Article 62, U.R. and Exp.).

“The person paying by intervention acquires the rights arising out of the bill of exchange against the party for whose honour he has paid and against persons who are liable to the latter on the bill of exchange. Nevertheless, he cannot re-endorse the bill of exchange.

“Endorsers subsequent to the party for whose honour payment has been made are discharged.

“In case of competition for payment by intervention, the payment which effects the greater number of releases has the preference. Any person who, with a knowledge of the facts, intervenes in a manner contrary to this rule, loses his right of recourse against those who would have been discharged.”

137. The experts made a slight change in the third paragraph of the Hague Regulation with the sole object of making this text clearer. The Conference also modified paragraph 1 in order to adopt a more precise formula, and one which would include the recognition of the rights of the person intervening, even against the acceptor. As in the case of Article 32, paragraph 3, concerning a person who gives an *aval*, no mention has been made of "subrogation to the holder's rights", since the right of the person giving the *aval* and of the person intervening is always independent and originating, whereas, at ordinary law, the person subrogated has the same rights as the creditor in whose place, as regards these rights, he stands.

CHAPTER IX. — PARTS OF A SET, AND COPIES.

I. PARTS OF A SET.

Article 64 (old Article 63, U.R. and Exp.).

"A bill of exchange can be drawn in a set of two or more identical parts.

"These parts must be numbered in the body of the instrument itself; in default, each part is considered as a separate bill of exchange.

"Every holder of a bill which does not specify that it has been drawn as a *sola* bill may, at his own expense, require the delivery of two or more parts. For this purpose he must apply to his immediate endorser, who is bound to assist him in proceeding against his own endorser, and so on in the series until the drawer is reached. The endorsers are bound to reproduce their endorsements on the new parts of the set."

138. This article deals with the issue of a bill of exchange as part of a set. On this point, there were differences regarding the basic conception between the Hague Regulation and the experts' draft. According to the former, the holder of a bill of exchange which does not specify that it has been drawn as a *sola* bill, may, at his own expense, require the delivery of two or more parts. According to the experts' draft, he had no such right. At the same time, the draft of the Committee of Experts laid down that the various parts must not only be numbered but also indicate the number of parts issued. The Conference was of opinion that, in certain circumstances, the holder of a bill of exchange issued as a *sola* bill may legitimately need to obtain further copies thereof. Such a possibility is already allowed under the law of several countries. After some discussion, the Conference therefore decided on this point to revert to the Hague text.

Article 65 (old Article 64, U.R. and Exp.).

"Payment made on one part of a set operates as a discharge, even though there is no stipulation that this payment annuls the effect of the other parts. Nevertheless, the drawee is liable on each accepted part which he has not recovered.

"An endorser who has transferred parts of a set to different persons, as well as subsequent endorsers, are liable on all the parts bearing their signature which have not been restored."

Article 66 (old Article 65, U.R. and Exp.).

"A party who has sent one part for acceptance must indicate on the other parts the name of the person in whose hands this part is to be found. That person is bound to give it up to the lawful holder of another part.

"If he refuses, the holder cannot exercise his right of recourse until he has had a protest drawn up specifying:

- "(1) That the part sent for acceptance has not been given up to him on his demand;
- "(2) That acceptance or payment could not be obtained on another of the parts."

139 These two articles are drafted with the same wording as the corresponding provisions of the Hague Regulation and the experts' draft.

2. COPIES.

Article 67 (old Article 66, U.R. and Exp.).

"Every holder of a bill of exchange has the right to make copies of it.

"A copy must reproduce the original exactly, with the endorsements and all other statements to be found therein. It must specify where the copy ends.

"It may be endorsed and guaranteed by *aval* in the same manner and with the same effects as the original."

140. This article reproduces the text of the Hague Regulation and the experts' draft.

Article 68 (old Article 67, U.R. and Exp.).

"A copy must specify the person in possession of the original instrument. The latter is bound to hand over the said instrument to the lawful holder of the copy.

"If he refuses, the holder may not exercise his right of recourse against the persons who have endorsed the copy or guaranteed it by *aval* until he has had a protest drawn up specifying that the original has not been given up to him on his demand.

“ Where the original instrument, after the last endorsement before the making of the copy, contains a clause ‘ commencing from here an endorsement is only valid if made on the copy ’ or some equivalent formula, a subsequent endorsement on the original is null and void.”

141. With a view to bringing this article into line with the last paragraph of the previous article, the words “ *or guaranteed it by aval* ” were inserted in the second paragraph of Article 68.

142. The third paragraph was not contained in the experts’ draft. It has been added to enable the holder of a copy of a bill of exchange to prevent the endorsement of the original bill, a subsequent endorsement would be prejudicial to the interests of the holder of the copy who could not claim the original bill against a holder in good faith.

CHAPTER X. — ALTERATIONS.

143. In the former texts this chapter was entitled “ Forgery and Alterations ” and it contained in Article 68 the following provision: “ The forgery of a signature, even if it be that of the drawer, in no wise affects the validity of the other signatories ”. The principle of the independence of the various signatures having been expressed in a way which gives a general force to this principle, in Article 7—which also deals with the case in which a signature is false—Article 68 was omitted as being unnecessary, while, at the same time, the heading of the chapter was modified.

Article 69 (old Article 69, U.R. and Exp.).

“ In case of alteration of the text of a bill of exchange, parties who have signed subsequent to the alteration are bound according to the terms of the altered text; parties who have signed before the alteration are bound according to the terms of the original text.”

144. This text, which reproduces that of the Hague Regulation and of the experts’ draft, was adopted without change.

CHAPTER XI. — LIMITATION OF ACTIONS.

Article 70 (old Article 70, U.R. and Exp.).

“ All actions arising out of a bill of exchange against the acceptor are barred after three years, reckoned from the date of maturity.

“ Actions by the holder against the endorsers and against the drawer are barred after one year from the date of a protest drawn up within proper time, or from the date of maturity where there is a stipulation *retour sans frais*.

“ Actions by endorsers against each other and against the drawer are barred after six months, reckoned from the day when the endorser took up and paid the bill or from the day when he himself was sued.”

145. The causes of interruption and suspension of actions differ in the various national laws. It was therefore proposed, in order to avoid a conflict of laws in this matter, to replace time-limits for the limitation of actions (*prescription*) by time-limits after which the right of action would be forfeited (*déchéance*). But as the differences between *prescription* and *déchéance* were not identical in the various laws, it was objected that the consequences of such a change would not be clear, and that the question needed more careful consideration. In these circumstances, the Conference decided to adhere to the notion of *prescription*.

146. Moreover, a reservation was adopted in Article 17 of Annex II.

Article 71 (old Article 71, U.R. and Exp.).

“ Interruption of the period of limitation is only effective against the person in respect of whom the period has been interrupted.”

147. This article was adopted without change.

CHAPTER XII. — GENERAL PROVISIONS.

Article 72 (old Article 72, U.R. and Exp.).

“ Payment of a bill of exchange which falls due on a legal holiday (*jour férié légal*) cannot be demanded until the next business day. So, too, all other proceedings relating to a bill of exchange, in particular, presentment for acceptance and protest, can only be taken on a business day.

“ Where any of these proceedings must be taken within a certain limit of time the last day of which is a legal holiday (*jour férié légal*), the limit of time is extended until the first business day which follows the expiration of that time. Intermediate holidays (*jours fériés*) are included in computing limits of time.”

148. This article was approved without change, but the Conference adopted a reservation in Article 18 of Annex II.

Article 73 (old Article 73, U.R. and Exp.).

“Legal or contractual limits of time do not include the day on which the period commences.”

Article 74 (old Article 73bis, Exp.).

“No days of grace, whether legal or judicial, are permitted.”

149. These articles were adopted without change, but, in connection with Article 74, a reservation in Article 11 of Annex II was adopted.

TITLE II. — PROMISSORY NOTES.

Article 75 (old Articles 74 Exp. and 77 U.R.).

“A promissory note contains:

- “(1) The term ‘promissory note’ inserted in the body of the instrument and expressed in the language employed in drawing up the instrument;
- “(2) An unconditional promise to pay a determinate sum of money;
- “(3) A statement of the time of payment;
- “(4) A statement of the place where payment is to be made;
- “(5) The name of the person to whom or to whose order payment is to be made;
- “(6) A statement of the date and of the place where the promissory note is issued;
- “(7) The signature of the person who issues the instrument (maker).”

150. With regard to (1) of this article, it was pointed out that in certain laws there was no provision to the effect that the words “promissory note” should appear on the bill itself, provided the bill contained the “to order” clause, and that in countries under the laws of which the term must appear, that term was not in all cases the usual one.

In order to meet these various usages, the unification of which would seem to be less necessary than that of the forms of the bill of exchange, because promissory notes are of less importance in international trade, the Conference admitted a reservation set out in Article 19 of Annex II.

151. The remarks relating to the signatures on bills of exchange and to the language used in drawing up the instrument are applicable to promissory notes.

Article 76 (old Article 75 Exp. and 78 U.R.).

“An instrument in which any of the requirements mentioned in the preceding article are wanting is invalid as a promissory note except in the cases specified in the following paragraphs.

“A promissory note in which the time of payment is not specified is deemed to be payable at sight.

“In default of special mention, the place where the instrument is made is deemed to be the place of payment and at the same time the place of the domicile of the maker.

“A promissory note which does not mention the place of its issue is deemed to have been made in the place mentioned beside the name of the maker.”

Article 77 (old Article 76 Exp. and 79 U.R.).

“The following provisions relating to bills of exchange apply to promissory notes so far as they are not inconsistent with the nature of these instruments, viz.:

- “Endorsement (Articles 11 to 20);
- “Time of payment (Articles 33 to 37);
- “Payment (Articles 38 to 42);
- “Recourse in case of non-payment (Articles 43 to 50, 52 to 54);
- “Payment by intervention (Articles 55, 59 to 63);
- “Copies (Articles 67 and 68);
- “Alterations (Article 69);
- “Limitation of actions (Articles 70 and 71);
- “Holidays, computation of limits of time and prohibition of days of grace (Articles 72, 73 and 74).

“The following provisions are also applicable to a promissory note: The provisions concerning a bill of exchange payable at the address of a third party or in a locality other than that of the domicile of the drawee (Articles 4 and 27); stipulation for interest (Article 5); discrepancies as regards the sum payable (Article 6); the consequences of signature under the conditions mentioned in Article 7, the consequences of signature by a person who acts without authority or who exceeds his authority (Article 8); and provisions concerning a bill of exchange in blank (Article 10).

“The following provisions are also applicable to a promissory note: Provisions relating to guarantee by *aval* (Articles 30-32); in the case provided for in Article 31, last paragraph, if the *aval* does not specify on whose behalf it has been given, it is deemed to have been given on behalf of the maker of the promissory note.”

152. The last paragraph of Article 77 has been added to settle a question that is the subject of controversy in several countries; namely, when an *aval* is given on a promissory note without

any indication of the person on whose behalf the *aval* has been given, on whose behalf should it be deemed to have been given? Some say that, in this case, it should be presumed to have been given on behalf of the first endorser, others that it should be presumed to have been given on behalf of the maker. The latter solution has been adopted in the above-mentioned paragraph.

Article 78 (old Article 77 Exp. and 80 U.R.).

“ The maker of a promissory note is bound in the same manner as an acceptor of a bill of exchange.

“ Promissory notes payable at a certain time after sight must be presented for the visa of the maker within the limits of time fixed by Article 23. The limit of time runs from the date of the visa signed by the maker on the note. The refusal of the maker to give his visa with the date thereon must be authenticated by a protest (Article 25), the date of which marks the commencement of the period of time after sight.”

153. As regards a promissory note at sight which has not been presented for payment within the time-limit fixed for presentment, the question arose whether the period for limitation began to run as from the date on which the note was made or only as from the date on which the time-limit for presentment expired. The Conference decided in favour of the latter solution.

154. With regard to “ Title II ” above, it was pointed out that not all countries have independently regulated promissory note law by reference to the corresponding provisions on bills of exchange, and that in some cases, the law deals mainly with promissory notes and, as regards bills of exchange, merely refers to the provisions concerning promissory notes. The reservations embodied in Article 21 of Annex II have been inserted in order to meet the wishes of these countries.

Annex II.

155. Annex II contains provisions determining which articles in the Uniform Law can be made the subject of reservations, and under what conditions, or determining which points can be left to be settled by the national laws.

Article 1.

“ Each of the High Contracting Parties may stipulate that the obligation to insert in bills of exchange issued in its territory the term ‘ bill of exchange ’, as laid down in Article 1, 1 of the Uniform Law, shall not apply until six months after the entry into force of the present Convention.”

156. This article was adopted in order to provide a certain limit of time for the introduction of the use of the term “ bill of exchange ” in countries whose national law has not hitherto imposed this requirement.

Article 2.

“ Each of the High Contracting Parties has, as regards undertakings entered into in respect of bills of exchange in its own territory, the right to determine in what manner an actual signature may be replaced by an authentic declaration written on the bill which evidences the consent of the party who should have signed.”

157. Article 2 reproduces Article 3 of the Hague Convention and provides that each contracting party shall have the right to fix certain conditions under which actual signature may be replaced in the case of persons who, in accordance with the provisions of Article 1 of the Uniform Law, are required to sign a bill of exchange but are unable to do so.

Article 3.

“ Each of the High Contracting Parties reserves the right not to embody Article 10 of the Uniform Law in its national law.”

158. This article allows States whose legislation makes no provision for a blank bill of exchange not to introduce Article 10 of the Uniform Law into their national law.

Article 4.

“ By way of derogation from Article 31, paragraph 1, of the Uniform Law, each of the High Contracting Parties shall have the right to decide that an *aval* may be given in its territory by a separate instrument specifying the place in which the instrument has been executed.”

159. This article reproduces Article 5 of the Hague Convention and is a concession to the law of countries which allow an *aval* to be given by a separate instrument. That is to say, these countries are allowed to insert in their national law on bills of exchange provisions corresponding to this practice. The other contracting parties must recognise an *aval* of this sort whenever the law of the place where it has been executed permits this and when that place is specified in the

instrument. The Conference was unwilling that a rule on this matter should appear in the Uniform Law, being of opinion that the *aval* by separate instrument does not come within the scope of an exchange obligation, is not accepted in many countries, and, lastly, has not stood the test of adequate experience.

160. Nevertheless, the question of guarantees and insurance in the matter of bills of exchange is deserving of close study, and the Conference, at the request of one delegation, adopted a recommendation inviting the International Institute for the Unification of Private Law to undertake these enquiries (Final Act, IV).

Article 5.

“ Each of the High Contracting Parties may supplement Article 38 of the Uniform Law so as to provide that the holder of a bill of exchange payable in its territory shall be obliged to present it on the actual day of maturity. Failure to comply with this obligation may only give rise to a right to damages.

“ The other High Contracting Parties shall have the right to determine the conditions subject to which such obligation will be recognised by them.”

161. This article corresponds to Article 7 of the Hague Convention and takes account of a special feature in the laws of certain countries. Each country may require that a bill of exchange shall be presented on the actual day of maturity and may make failure to present the bill liable to damages.

162. Contrary to the general provision in Article 23 of Annex II, the other contracting parties are not bound to recognise such an obligation straightway, but may determine the conditions subject to which they will do so.

Article 6.

“ For the purpose of giving effect to the last paragraph of Article 38 of the Uniform Law, each of the High Contracting Parties shall determine the institutions which, according to its national law, are to be regarded as clearing-houses.”

163. In view of the varied organisation of clearing-houses in each country, this article reserves to the national law the duty of determining what institutions are to be recognised as clearing-houses, and, as a consequence, what persons are to belong to them and to be entitled to benefit from them.

Article 7.

“ Each of the High Contracting Parties shall have the right, if it deems fit, in exceptional circumstances connected with the rate of exchange in such State, to derogate from the stipulation contained in Article 41 for effective payment in foreign currency as regards bills of exchange payable in its territory. The above rule may also be applied as regards the issue in the national territory of bills of exchange payable in foreign currencies.”

164. This article permits each of the contracting Parties, in exceptional circumstances connected with its rate of exchange, to derogate from the clause laid down in Article 41 of the Uniform Law for effective payment in foreign currency as regards bills of exchange payable in its territory. The same right may also be exercised as regards the creation in the national territory of bills of exchange payable in foreign currency. These provisions were adopted in order to enable the contracting parties to deal with certain economic situations which may arise at certain times, in their countries, without their being compelled to denounce the Convention.

Article 8.

“ Each of the High Contracting Parties may prescribe that protests to be drawn up in its territory may be replaced by a declaration dated and written on the bill itself, and signed by the drawee, except where the drawer stipulates in the body of the bill of exchange itself for an authenticated protest.

“ Each of the High Contracting Parties may also prescribe that the said declaration shall be inscribed in a public register within the limit of time fixed for protests.

“ In the case provided for in the preceding paragraphs, an undated endorsement is presumed to have been made prior to the protest.”

165. This article is borrowed from Article 9 of the Hague Convention and is a concession to the laws of certain countries which do not require an authenticated protest in cases when the drawee declares on the bill of exchange that he is not willing to accept or pay (see Article 44 of the Uniform Law).

166. Paragraph 3 gives countries the right to make a presumption corresponding to that contained in Article 20, paragraph 2, of the Uniform Law.

Article 9.

“ By way of derogation from Article 44, paragraph 3, of the Uniform Law, each of the High Contracting Parties has the right to prescribe that a protest for non-payment must be drawn up either on the day when the bill is payable or on one of the two following business days.”

167. This article corresponds to Article 10 of the Hague Convention (see the observations on Article 44 of Annex I).

Article 10.

“ It is reserved to the legislation of each of the High Contracting Parties to determine the exact legal situations referred to in Article 43, Nos. 2 and 3, and in Article 44, paragraphs 5 and 6, of the Uniform Law.”

168. This article leaves it to each State to determine in accordance with its law what are the legal situations referred to in Article 43 (Nos. 2 and 3) and Article 44 (Nos. 5 and 6).

Article 11.

“ By way of derogation from the provisions of Article 43, Nos. 2 and 3, and Article 74 of the Uniform Law, each of the High Contracting Parties reserves the right to include in its legislation the possibility for persons guaranteeing a bill of exchange to obtain, in the event of recourse being exercised against them, periods of grace which may in no case extend beyond the maturity of the bill.”

169. This article allows the national laws to derogate from the provisions of Articles 43 (Nos. 2 and 3) and 74 of the Uniform Law in such a way that the guarantors of a bill of exchange may obtain, in the event of recourse being exercised against them, periods of grace which may in no case extend beyond the maturity of the bill of exchange.

Article 12.

“ By way of derogation from Article 45 of the Uniform Law, each of the High Contracting Parties shall be entitled to maintain or introduce the following system of notification by the public official, viz., that, when protesting for non-acceptance or non-payment, the notary or official who, under the national law, is authorised to draw up the protest, is required to give notice in writing to the persons liable under the bill of exchange whose addresses are specified in the bill, or are known to the public official drawing up the protest, or are specified by the persons demanding the protest. The costs of such notice shall be added to the costs of the protest.”

170. This article corresponds to Article 11 of the Hague Convention and authorises the contracting parties to derogate from the principle of the Uniform Law (Article 45) in that notice of payment has to be given by the public official. It takes account of the system adopted in Russian law and still obtaining in the Baltic States; the delegation of one of these States—namely Latvia—has asked that this system shall be maintained.

Article 13.

“ Each of the High Contracting Parties is entitled to prescribe, as regards bills of exchange which are both issued and payable in its territory, that the rate of interest mentioned in Article 48, No. 2, and Article 49, No. 2, of the Uniform Law may be replaced by the legal rate in force in the territory of that High Contracting Party.”

171. This article reverts to a derogation already laid down in Article 12 of the Hague Convention and authorises each of the contracting parties to replace the rate mentioned in Article 48 (No. 2) and Article 49 (No. 2) by the legal rate.

Article 14.

“ By derogation from Article 48 of the Uniform Law each of the High Contracting Parties reserves the right to insert in its national law a rule prescribing that the holder may claim from the party against whom he is exercising his right of recourse a commission the amount of which shall be determined by the national law.

“ The same applies, by derogation from Article 49 of the Uniform Law, to a person who, having taken up and paid the bill of exchange, claims the amount from the parties liable to him.”

172. The Conference thought that there was no occasion to insert in the Uniform Law rules concerning commission, partly because commission is not a universal and uniform practice in every country, and partly because of the impossibility of fixing a strict rule as to the amount of the commission, which may change according to the practice in each country and also from one moment to another. It was, however, agreed to make an express reservation and to leave it to the laws of the contracting parties to decide whether they will adopt commission in the cases referred to in Articles 48 and 49 of the Uniform Law.

Article 15.

“ Each of the High Contracting Parties is free to decide that, in the event of extinctive prescription (*déchéance*) or limitation of actions (*prescription*), proceedings may be taken in its territory against a drawer who has not provided cover (*provision*) for the bill, or against a drawer or endorser who has made an inequitable gain. The same right exists in the case of limitation of action as regards an acceptor who has received cover or made an inequitable gain (*se serait enrichi injustement*).”

173. The provisions in this article correspond to Article 13 of the Hague Convention. They reserve to the national laws — by reason of their close association with general civil law — the right to decide whether, in the event of extinctive prescription or limitation of action, proceedings may be taken in the territory of each country against a drawer who has not provided cover or against a drawer or endorser who has made inequitable gain. The same right is reserved in the case of limitation of action as regards an acceptor who has received cover or made inequitable gain.

Article 16.

“ The question whether the drawer is obliged to provide cover (*provision*) at maturity and whether the holder has special rights to this cover remains outside the scope of the Uniform Law.

“ The same applies to any other question concerning the legal relations on the basis of which the bill was issued.”

174. This article corresponds to Article 14 of the Hague Convention, except for the second paragraph.

Article 17.

“ It is for the legislation of each of the High Contracting Parties to determine the causes of interruption or suspension of limitation (*prescription*) in the case of actions on bills of exchange which come before its courts.

“ The other High Contracting Parties are entitled to determine the conditions subject to which they will recognise such causes. The same applies to the effect of an action as a means of indicating the commencement of the period of limitation (*prescription*) laid down in Article 70, paragraph 3, of the Uniform Law.”

175. This article corresponds to Article 16 of the Hague Convention. One delegation drew attention to the essential importance of having less variable rules in this matter, but in the absence of adequate preparatory study, the Conference thought that, although the problem was one which ought to be studied by another conference, it could not be solved at the present stage.

Article 18.

“ Each of the High Contracting Parties has the right to prescribe that certain business days shall be assimilated to legal holidays (*jours fériés légaux*) as regards presentment for acceptance or payment and all other acts relating to bills of exchange.”

176. This article also appeared in the Hague Convention (Article 17). It enables the contracting parties to assimilate certain business days to legal holidays.

Article 19.

“ Each of the High Contracting Parties may determine the denomination to be adopted in the national laws for the instruments referred to in Article 75 of the Uniform Law, or may exempt them from any special denomination, provided that they contain an express mention that they are drawn to order.”

177. Having abandoned the reservation concerning the denomination of bills of exchange, the Conference thought that it ought to be retained for promissory notes. In point of fact, the denomination is not uniform in every country and sometimes varies from one district to another in the same country. For this reason, and also because this instrument is essentially intended for circulation within the country, the Conference adopted this article, which reverts to the formula found in Article 2 of the Hague Convention.

Article 20.

“ The provisions of Articles 1 to 18 of the present Annex with regard to bills of exchange apply likewise to promissory notes.”

178. This article corresponds to Article 21 of the Hague Convention.

Article 21.

“ Each of the High Contracting Parties reserves the right to restrict the undertaking mentioned in Article 1 of the Convention to the provisions dealing with bills of exchange only, and not to introduce into its territory the provisions dealing with promissory notes contained in Title II of the Uniform Law. In this case the High Contracting Party making use of this reservation shall only be regarded as a contracting party in respect of bills of exchange.

“ Each of the High Contracting Parties further reserves the right to embody the provisions concerning promissory notes in a special regulation, which shall exactly conform to the stipulations in Title II of the Uniform Law and which shall reproduce the rules on bills of exchange to which reference is made, subject only to the modifications resulting from Articles 75, 76, 77 and 78 of the Uniform Law and from Articles 19 and 20 of the present Annex.”

179. This article corresponds to Article 22 of the Hague Convention and leaves it to the contracting parties to restrict the undertakings of the Convention to bills of exchange only, and grants them a certain freedom of action as regards national regulations concerning promissory

notes. The Conference retained this article at the request of the Latvian delegation for the reason already mentioned, that this instrument is of fundamental national importance and in some countries is the only instrument circulating within the country, the bill of exchange being reserved exclusively for international circulation.

Article 22.

“ Each of the High Contracting Parties has the right to adopt exceptional measures of a general nature relating to the extension of the limits of time for conservatory measures in relation to recourse (*actes conservatoires des recours*) and to the extension of maturities.”

180. The purpose of this provision is to furnish the contracting parties with the necessary powers in the event of public disasters which might affect the whole or part of the national territory, or in the case of general economic disturbances, and to prevent the economic situation from being aggravated by a strict observance of the provisions of the Uniform Law. The words “ of a general nature ” were adopted in order to exclude measures of an individual character. Measures adopted in view of the special situation of a single district, a single province, or any part of a national territory, will also be regarded as measures of a general nature. The Conference thought, however, that the article as a whole successfully reconciled national interests with the endeavour to unify laws on bills of exchange.

Article 23.

“ Each of the High Contracting Parties undertakes to recognise the provisions adopted by every other High Contracting Party in virtue of Articles 1 to 4, 6, 8 to 16 and 18 to 21 of the present Annex.”

181. This article, which refers to all the provisions of Annex II, obliges the contracting parties to recognise the provisions adopted by each of them in virtue of Articles 1-4, 6, 8-16 and 18-21. In the case of Articles 5 and 17 the obligation is less rigid and may be conditional. In the case of Articles 7 and 22 the contracting parties have freedom of choice within their territory.

* * *

182. It is understood that, in regard to points for which the Uniform Law contains no general regulations, each contracting party remains free to issue such legislative provisions as it deems fit. This is the case, for example, as regards the form of protest and the measures to be taken in the event of the destruction, loss, or theft of a bill of exchange.

183. The Conference did all it possibly could to reduce the reservations to a minimum, but, in the end, it had to accept a substantial number in order to reconcile the separate interests of the contracting parties and, at the same time, to further the ratification and entry-into-force of agreements, that is to say, to secure in regard to the unification of laws on bills of exchange some practical results.

III.

CONVENTION FOR THE SETTLEMENT OF CERTAIN CONFLICTS
OF LAWS IN CONNECTION WITH BILLS OF EXCHANGE AND
PROMISSORY NOTES.

REPORT SUBMITTED BY M. DIENA (ITALY).

Article 2 (old Article 3, Exp.).

184. The Conference began the main discussion of the Draft Convention for the settlement of certain conflicts of laws in connection with bills of exchange and promissory notes by examining Article 3 of the experts' text. This article is undoubtedly of far-reaching importance, since it deals with a question—the capacity of contracting parties—which is not settled in the Uniform Law.

185. The substance of the first paragraph of this article, which has become Article 2 of the final text, was approved as it stood, except that the words “ or promissory note ” were added after the words “ bill of exchange ”, in order to obviate any possibility of doubt, and because the other articles of the draft expressly mention bills of exchange and promissory notes together.

186. During the discussion it was pointed out that this provision, whereby the capacity of a person is governed by the national law of his country or by the law declared applicable by that national law, was tantamount to the adoption of the theory which, at private international law, is known as the “ *renvoi* ” theory. It was pointed out that in the article under discussion

this theory was adopted to a limited extent, so as to avoid all the drawbacks which might be involved if the theory were applied generally. Its adoption, moreover, as provided for in the first paragraph, affords the great practical advantage of securing the support of countries where capacity is governed by a law other than the national law, such as the law of domicile or the *lex loci actus*.

187. Further, this system may make it easier for the British Empire (and perhaps also the United States of America) to accede to the Convention for the Settlement of Certain Conflicts of Laws in connection with Bills of Exchange and Promissory Notes. For that reason, at the request of the British delegation, the word "country" or "place" was substituted throughout for the word "State" in the text of the Convention, and more particularly in the first paragraph of Article 2, even though the law in question there is the national law.

188. The Conference did not adopt the suggestion made by one delegation to define exactly how far the rule regarding the law governing the capacity of a person to bind himself by a bill of exchange or promissory note is applicable to commercial companies, as the subject of companies was not one with which the Conference had to deal.

189. A particularly keen discussion took place on the second and third paragraphs of the same article. The second retains the system whereby an obligation in respect of a bill of exchange is valid, as far as the capacity of the person assuming the obligations is concerned, if that person is capable according to the law of the country in which he assumed the obligation.

190. It was proposed to state explicitly that the capacity of a person without nationality is determined by the law of the country in which he assumed the obligation. This addition, however, was rejected, it being held that the Conference must not concern itself with the regulation of matters which do not directly relate to the law on bills of exchange and are settled in other international Conventions by different criteria. Nevertheless, on the basis of and under the conditions laid down in the second paragraph, the *lex loci actus* may apply even to persons without nationality.

191. Strong objections were raised to paragraph 3, which enables any contracting State to refuse to recognise the validity of a contract arising out of a bill of exchange or promissory note entered into by one of its nationals which would not be deemed valid otherwise than by the application of the second paragraph. Those who opposed its adoption maintained *inter alia* that such a provision destroyed all security as regards the circulation of bills of exchange and promissory notes, and might encourage acts of bad faith. Nevertheless, the proposal to omit this paragraph was rejected.

192. According to its actual wording, however, any High Contracting Party wishing to avail itself of this last provision may do so only in respect of its own nationals, and the exercise of this option will be legally effective only in the territory of the High Contracting Party which has so availed itself.

Article 3 (old Article 4, Exp.).

193. Article 3 relates to the form of contracts entered into by means of a bill of exchange or promissory note, and the first paragraph of this article, which constitutes an application of the rule *locus regit actum*, was approved by the Conference after the rejection of an amendment.

194. The second paragraph of the same article, however, provides for a derogation from the rule adopted in the first paragraph, with a view to ensuring security for circulation of such instruments, in the interest of commerce. This provision lays down that a contract entered into by means of a bill of exchange in country X, for example, in the forms prescribed by the *lex loci* is not invalidated solely because a *previous* contract, entered into in country Z, is not valid according to the law of that country, provided that the contract in that country, Z, complies with the formal requirements of the law of country X.

195. Lastly, as the result of an amendment, a third paragraph was added to the same article empowering each of the High Contracting Parties to regard as valid contracts entered into abroad arising out of bills of exchange or promissory notes, in the form prescribed by the national law of the respective Parties rather than those of the *lex loci*. The application of this rule, however, is subject to a twofold restriction: (1) the contract must have been entered into between a national of one of the High Contracting Parties which intends to avail itself of the above-mentioned option and another national of the same High Contracting Party; (2) the validity of such a contract is limited to the territory of the High Contracting Party which has availed itself of the option mentioned and of which the Parties are nationals.

Article 4 (old Article 5, Exp.).

196. Article 4, which relates to the effects of obligations entered into through a bill of exchange or promissory note, was also keenly debated. During the discussion the suggestion was made that the article should be abolished altogether, but, if that suggestion had been accepted, one of the most important points of the Convention would have remained unsettled.

197. Accordingly, the experts' text and various amendments were considered. In the experts' text, the first paragraph, in determining the law which should govern the effects of the obligation, retained the same criterion of international private law for each of the obligations

entered into through a bill of exchange or promissory note, except the effects of the obligation of the person giving an *aval* or the acceptor for honour governed by the second paragraph; but the first amendment to this article distinguished three categories of effects:

(a) (First paragraph.) In the case of the obligations of the acceptor of a bill of exchange or maker of a promissory note, the law applicable was that of the place of payment;

(b) (Second paragraph.) As regards the obligation entered into by the person giving an *aval* or by the acceptor for honour (in accordance with paragraph 2 of the experts' text), it is necessary to adhere to the law applicable to the obligation entered into by the person on whose behalf the *aval* or acceptance for honour was given.

(c) (Third paragraph.) As regards the effects of the signatures of the other parties liable on the bill of exchange, these were determined according to the law of the place specified as being the place of signature or, in the absence of such specification, by the law of the place in which the signature was affixed.

After lengthy discussion, the rules laid down in the first and third paragraphs of this amended text were adopted, but the formula was simplified by a reference, as regards the effects of the signatures, to the law of the country in which each was affixed.

The second paragraph, both of the amended text and of the experts' text, was deleted. Consequently, the obligations entered into by the person giving an *aval* and by the acceptor for honour will be governed by the law indicated in paragraph 3 of the amended text, which has now become paragraph 2 of Article 4 of the final text.

Article 5.

198. Another amendment was submitted by a delegation prior to the examination of the provisions relating to conflicts of law. This delegation was of opinion that, even if paragraph 1 of Article 5 of the experts' draft had been adopted, it would have been necessary, if a bill of exchange or promissory note was circulated in the territory of several countries to take into account and apply at the same time several different laws in order to determine the effects of the obligations entered into by the makers. This would have raised very serious difficulties, especially as regards the limits of time for the exercise of rights of recourse; that delegation accordingly proposed—for reasons, not of a theoretical, but of a strictly practical nature—that the limits of time for the exercise of rights of recourse should be determined for all signatories by a single law, namely, the law of the place where the instrument was created. It was pointed out that the object in view was mainly to leave no room for doubt as to the rule to be applied.

This amendment was approved, and it was subsequently decided that it should form a separate article, which has become Article 5 of the final text.

199. It is hardly necessary to add that this rule will not apply as between the High Contracting Parties which have undertaken to adopt the Uniform Law without making any reservations as to its provisions determining the limits of time for the exercise of rights of recourse.

Article 6 (old Article 6, Exp.).

200. Strong objections were raised by several delegations to Article 6 of the experts' draft, which stipulated that the question whether the beneficiary and succession holders of the bill had special rights on the cover (*provision*) should be determined by the law of the country in which the bill of exchange was payable. In view of a proposal to delete this article, one delegation pointed out that serious difficulties would arise if this question were not regulated by an international rule, and the proposal was rejected. The Conference finally decided to adopt a compromise text, which now appears as Article 6.

Article 7 (old Article 7, Exp.).

201. Objections were also raised to Article 7 of the experts' draft, which states that the question whether partial acceptance or payment is admissible is governed by the law of the country of payment. According to one delegation, this provision would overlap Article 4 (corresponding to Article 5 of the experts' text), concerning the effects of obligations entered into in regard to bills of exchange and promissory notes. As, however, the majority of the delegations were not convinced by this argument, Article 7 was adopted as it stood.

Article 8 (old Article 8, Exp.).

202. As regards Article 8 of the experts' draft, which provides that the form of and limits of time for protest and the other proceedings necessary for the exercise or preservation of rights concerning bills of exchange and promissory notes shall be regulated by local law, an amendment was submitted to replace the first words of this provision by the following: "The form of, place of, and limits of time for protest or equivalent declarations, as well as the form of and limits of time for the other proceedings . . ." This amendment was rejected, as it was considered that the scope of the text of Article 8 of the experts' draft was already sufficiently wide.

Article 9 (old Article 9, Exp.).

203. With reference to Article 9 of the experts' draft, which reads: "The steps to be taken in case of the loss or theft of a bill of exchange or promissory note, or *in the case of*

the holder's bankruptcy, are determined by the law of the country in which the bill of exchange or promissory note is payable", it was proposed that the words: "or in the case of the holder's bankruptcy" should be deleted.

It was pointed out that the true scope of the latter phrase was not sufficiently clear; that international questions relating to bankruptcy were very complicated and difficult to settle; that it was not advisable to adopt incidentally a rule of private international law concerning bankruptcy when this question had already formed the subject of a special Convention drawn up at The Hague. In view of these considerations, the Conference adopted Article 9, with the omission of the phrase relating to bankruptcy, after rejecting a proposal for the deletion of the whole article. During the discussion, it was explained and noted that the experts, in their reference in Article 9 to the *loss* of a bill of exchange or promissory note, had also meant to include the *destruction* of the instrument.

Article 10 (old Article 10, Exp.).

204. Article 10, which is a purely formal provision, was approved as it stood after an exchange of views and a few drafting amendments.

205. Accordingly, the Conference has drawn up a number of rules for the settlement of certain conflicts of laws in regard to bills of exchange and promissory notes, and it is hoped that these rules will be applied in a considerable number of countries for the purpose of regulating their mutual relations in this matter.

IV.

CONVENTION ON THE STAMP LAWS IN CONNECTION WITH BILLS OF
EXCHANGE AND PROMISSORY NOTES.

REPORT SUBMITTED BY M. DE LA VALLÉE POUSSIN (BELGIUM).

206. Under the fiscal laws of most countries, bills of exchange and promissory notes are subject to the provisions relating to stamp duty. As a general rule, the non-observance of the law on this subject is penalised only by fines, but in certain countries the penalties are much heavier. The laws of those countries make commercial instruments issued under contravention of their provisions regarding stamp duty null and void or cancel the rights arising therefrom.

207. This extreme severity is the cause of serious difficulties in the international circulation of commercial instruments. It is a constant source of insecurity for the holders of bills of exchange. For a long time it has been complained of in business circles which are most anxious that this insecurity should be remedied.

208. Several countries which find it difficult owing to the peculiarities of their legislation on bills of exchange to accept the Uniform Law on the subject, or even the Convention on the Conflict of Laws, would nevertheless be very glad if an international arrangement to abolish cancellation and the loss of rights for infringements of the same laws were brought into force. They would be in a position to ratify a convention dealing with this question alone. It is the desire to obtain the agreement of these countries that has decided the Conference to deal with this particular subject in a separate diplomatic instrument.

209. For those countries that ratify the unification law, this Convention will put the final touch to the unification of the laws on bills of exchange. For the other countries, it is to be hoped that the Convention will be the first step on their part towards unification.

210. The essential object of the Convention, then, is to place the validity of bills of exchange and promissory notes and the exercise of the rights arising therefrom out of reach of fiscal penalties.

211. According to paragraph 1 of Article 1, those States whose laws still provide these severe penalties undertake to alter them in that respect. By acceding to the Convention they bind themselves to bring their laws into line with the fundamental principle it lays down—that infringements of the stamp laws shall not affect the validity of commercial instruments. For these countries, therefore, the adjustment of their laws to concord with the stipulations of the Convention will be an essential preliminary operation before the Convention can be ratified and put into force.

212. Paragraph 2 of the same article specifies the limit of the penalties which the contracting States remain free to inflict for infringements of their stamp laws: they may suspend the exercise of the rights arising out of the bill of exchange until the stamp duty has been paid.

213. The Conference has decided to add the payment of fines to the experts' draft. This amendment calls for no comment.

214. The final provision of paragraph 2 was introduced in the Convention drawn up at The Hague in 1912, and was textually reproduced in the experts' draft for the benefit of certain legislations which attribute the effects of an "executory" instrument to bills of exchange. After the conclusion of the Convention, just as before, it will be open to the national laws of any country to recognise this privileged status of an "executory" instrument as attaching only to bills of exchange on which the drawer has paid the duties at the time of issue.

215. It was hoped that the countries represented at the Conference would be almost unanimous in accepting unreservedly the principle laid down in the draft, but that has not been entirely the case. In order to secure nearly universal acceptance it has been deemed necessary to allow two distinct kinds of restriction.

216. The first is established by the Convention. It has not been found possible for certain countries to recognise the validity of promissory notes issued in contravention of the stamp laws. A restriction on this point has accordingly been introduced in paragraph 3 of Article 1.

Further, it has been pointed out that this restriction only very slightly impairs the safety of international transactions. In the countries which propose to avail themselves of this restriction, promissory notes are not in normal use except for internal operations, and it is quite accidentally that a few such notes are occasionally in circulation abroad, as bills of exchange are normally used for transactions of foreign markets.

217. The second restriction has a much wider scope and is embodied in the clause inserted in the Protocol to the Convention (lit. D). It was introduced at the instance of the British delegation, which urged that the validity of unstamped bills of exchange might be admitted without too much opposition in respect of a certain clause on bills but not in respect of others. The bills which may benefit by the provisions of the Convention are those which are "presented for acceptance or accepted or payable elsewhere than in the United Kingdom". In respect of all other bills, Great Britain remains free to adhere to her existing laws.

218. The provisions of the Protocol call for two further observations:

The first relates to paragraph 4 lit. D of the Protocol. This paragraph was introduced for the sake of any British Dominions which may hereafter find themselves in a position to accede to the Convention. Its object is to enable them, like Great Britain, to limit the effects of their accession to bills of exchange presented for acceptance or accepted, or payable elsewhere than in their territory.

The second observation concerns paragraph 3 lit. D of the said Protocol. The object of this clause is to safeguard the financial autonomy of Northern Ireland which can only be infringed so far as concerns fiscal matters in certain special circumstances.

Second Part.

- A. MINUTES OF THE MEETINGS.
 - B. ANNEXES.
-

FIRST MEETING.

Held on May 13th, 1930, at 11 a.m.

President: M. J. LIMBURG.

1. Opening of the Session.

The PRESIDENT spoke as follows :

Gentlemen, — Before I invite you to begin the work for which you have been called together, it is my duty to thank the Council of the League publicly for having asked me to undertake the delicate and responsible task of presiding over your labours. It has done me a signal honour, for which I am deeply grateful. I am aware that this was intended more especially as an acknowledgment of the special position of the Netherlands Government, whose untiring and persevering endeavours in an important matter of commercial law will, I hope, through your efforts, be crowned with success. I can, however, feel some justifiable pride at having been chosen in these circumstances to ensure the continuance of the prolonged labours which this problem entails, and I take pleasure in the thought that I shall be able to contribute with you towards bringing about an improvement for which the business world has been waiting with some impatience.

It is but fair, at this point, to refer to the patient work which was performed in this field, more than forty years ago, by the Institute of Private International Law and by the International Law Association, and to the attempts at unification made, as far back as 1885 and 1888, at the Conferences held at Antwerp and Brussels at the instance of the Belgian Government. It was not until 1910, however, at the Hague Conference convened by the Netherlands Government, that signs of concrete results began to appear. It was at the 1912 Conference, convened under like circumstances and for a purpose similar to that for which we have met at Geneva to-day, that the feeling first arose that the goal was in sight.

The 1910 Hague Conference had prepared a preliminary draft Uniform Regulation on Bills of Exchange and Promissory Notes. This Regulation was accompanied by a draft Convention for the Settlement of the Conflict of Laws.

The second Conference, that of 1912, which was attended by no less than thirty-seven States, improved this Regulation and Convention and added, in the form of resolutions, a draft Uniform Regulation on the Law of Cheques.

The object in view at that time was a general unification of national laws on these subjects. In signing the Convention, the Governments undertook to embody the provisions of the Uniform Regulation in their national laws.

Although the British and United States delegates clearly intimated that their Governments did not anticipate that it would be possible for them to adopt the rules agreed to by the majority of States represented, the Convention nevertheless secured a large number of signatures. Unfortunately, the ratifications necessary for the confirmation of these signatures could not be subsequently obtained. There is no need for me to enquire in detail into the reasons for this abstention, but the war, which broke out shortly after the conclusion of the Convention, may be said to have been the main cause of failure.

Does this mean that the influence of the Hague Conferences was nil? Quite the reverse. Apart from the numerous scientific publications to which they gave rise, it has been noticeable that the regulations they drew up have greatly influenced legislative developments in a number of countries. It should also be mentioned that the Pan-American Conference held at Havana in 1928 passed a resolution recommending that the South American Republics should adopt uniform rules of law on commercial bills modelled on the Hague Regulation of 1912.

In 1920, the Brussels Financial Conference, being convinced of the importance of this question, expressed the opinion that the League of Nations might usefully take action in this field. Accordingly, in 1921, the Economic Committee instituted enquiries with the principal object of exploring the possibilities of achieving the aims pursued up till then, and of taking up again the Hague work which the war had brought to a stop.

In 1923, it referred the results of its enquiries for consideration to four experts, all of whom were eminent specialists in these questions and had already devoted to them the greater part of a long and brilliant career. I refer to Professor D. Josephus Jitta, Sir Mackenzie D. Chalmers, Professor Dr. Franz Klein and Professor Charles Lyon-Caen. Science has unfortunately suffered a great loss in the death of the first three; we shall, however, have the honour of numbering among us the senior of the four experts, who is also the senior member of this Conference, Professor Charles Lyon-Caen, who will represent France. I have just been informed that, owing to other duties which have detained him in Paris, Professor Charles Lyon-Caen is unable, to his great regret, to attend the first meeting, but I hope that he will soon be able to be with us, and I would ask you to join me on this occasion in expressing to him our profound respect and admiration.

Endorsing the opinion of these experts, the Economic Committee decided, in 1923, that the moment did not appear favourable for the convening of a new conference in the near future.

In 1925, however, certain signs, more especially a resolution adopted in June of that year by the Brussels Congress of the International Chamber of Commerce, convinced the Economic

Committee that there was a keen desire in the circles concerned for an improvement of the existing position.

In 1926, therefore, the Committee convened a Committee of jurists and business men to specify the principal points which gave rise in practice to the most serious difficulties and which would, in their opinion, justify an attempt to bring into closer harmony the divergent provisions of the laws of countries belonging to the so-called Continental system.

The 1912 Conference had already shown the impossibility of achieving the uniformity previously sought, and the experts consulted by the Economic Committee in 1923 had also declared that such an object appeared to them unattainable in practice, owing to the great differences between the fundamental principles of Anglo-Saxon law and those of Continental law, but that an assimilation of Continental laws seemed both desirable and possible.

For these reasons, the jurists recommended to the Economic Committee in 1926 that it should concentrate its efforts on an attempt at assimilation, which would doubtless make it easier to bring the Continental system and the Anglo-Saxon system into closer accord at some later date.

In the meanwhile the International Chamber of Commerce continued its enquiry and, in 1927, at its Stockholm Congress, passed a resolution recommending that the League should convene a third international congress to work on the draft Uniform Regulations for Bills of Exchange and Cheques which had emerged from its discussions.

It was in these circumstances that the Economic Committee called in the assistance of a third Committee of Experts, which drew up the draft regulations and Conventions subsequently communicated to Governments for their opinion and now, following their replies, submitted to us as a basis of discussion.

You will have noticed the care and regard for practical exigencies with which the experts have examined the numerous questions before them. Hence it is not surprising that, in their replies, the Governments expressed their unanimous opinion that these drafts would afford an excellent basis of discussion for a new international conference.

It is quite natural that the Anglo-Saxon countries should have made express reservations on these drafts, which are designed solely for the assimilation of legislation of the so-called Continental system. I am glad to note, however, that the British Government has marked its interest in this attempt by sending a representative in the person of Professor Gutteridge, whom I am pleased to welcome.

I also note with pleasure the presence of Mr. Kennedy, who has been instructed by the United States Government to attend the Conference as a technical expert. Both these gentlemen will, I feel sure, be anxious to facilitate the Conference's work by supplying their colleagues with all requisite information concerning the rules of law in force in their countries.

Several other countries, whose laws are of the Anglo-Saxon type, whilst intimating for this reason that they would not attend, have nevertheless informed the Secretariat that they will follow its work with interest.

You will have observed that, in the report which accompanies the drafts before us, the experts have drawn attention to the difference between the methods they propose and those which were employed at The Hague. Experience has shown how difficult it is to secure the ratification of a convention involving an undertaking to embody in national laws a large number of provisions which may not be modified in any way and are to remain in force for a specified period. The experts have consequently suggested, both for bills of exchange and promissory notes and for cheques, a more elastic form of procedure whereby Governments would first be asked to undertake, in a first agreement, to lay before the competent authority, within a period to be specified, a draft law which would give effect, in the form best suited to the special circumstances of the country, to the provisions laid down in the regulation, as far as they are not identical with those already in force in their countries. The regulations adopted by the Conference would form an annex to this first agreement.

A second agreement, which would take the form of a convention, would be designed :

1. To make the validity and the effects of the undertakings given in regard to bills of exchange and promissory notes independent of compliance with legal provisions on stamp duty ;
2. To set up rules governing conflicts of laws in connection with bills of exchange and promissory notes.

In the view of the experts, the former of these two agreements, which would involve merely an undertaking within the normal powers of the executive, would not be subject to ratification. Ratification would, however, be required for the second.

I have already said that the Governments consulted on the League of Nations drafts expressed their desire to attend the Conference with these drafts as a basis of discussion. It will obviously be for the Conference to come to a definite decision on the subject, but, failing a decision to the contrary by the Conference, I take it that this will be the method it proposes to follow.

I ought, I think, to say how carefully and conscientiously this Conference has been prepared. The subject-matter, after being considered by the most highly qualified specialists, has been examined and discussed in all its aspects. Without going back to the beginning, I would merely mention that the Regulation drafted in 1910 was revised in 1912, that it was amended by a special Commission of the Chamber of Commerce and that the League of Nations experts have had these texts constantly before them and have drawn on them largely in preparing the drafts which are now before us.

You will, furthermore, find in the preparatory documents the observations submitted by the Rome International Institute for the Unification of Private Law.

The same remarks apply to the Regulation on Cheques. It may therefore be said that the League of Nations, whilst anxious to see the success of our Conference, has followed the precept

of Boileau, which will remain at all times a sound rule of work : “ Vingt fois sur le métier remettez votre ouvrage”.

We have the privilege of seeing among the delegations most of the experts who were associated in the preparation of the drafts before us. I desire to associate myself with the tributes which have already been paid to their work. As President, I particularly welcome their presence, since it will enable me, if they kindly consent, to have special recourse to their advice and to benefit by the experience acquired in the preparation of this Conference.

I also hope that the representative of the Economic Committee, as well as those of the International Chamber of Commerce and of the International Institute for the Unification of Private Law, whom I desire to welcome, will give me the benefit, where necessary, of their advice and their wide experience.

In the circumstances, I feel that our prospects of success are excellent and that we can take up our work with confidence. The replies received from the Governments and their observations should, in themselves, give us the courage required for this difficult task. The subject-matter is, moreover, particularly suitable for international unification. Neither politics nor national interests nor social legislation are involved. We all have but one desire — to facilitate commercial transactions. Day by day the commercial life of nations grows more intense, mutual relations develop and the interdependence of nations calls more and more for the existence of rules enabling a prompt, easy and uniform administration of law.

Eighteen years have elapsed since the last Hague Conference. The States there represented were, as a whole, favourable to the principle of the Uniform Regulation. I know that, at the present time, other States have been added to those which, in 1912, marked their determination to achieve some progress. I know that the face of the world has changed, but I know also that private commercial relations, far from decreasing, are growing day by day and that, in this respect at least, frontiers tend to disappear.

I know also that during the last ten years, since the League of Nations has been exerting its beneficent influence in the world, the spirit of international co-operation and conciliation, the spirit of mutual confidence, has developed in a very conspicuous manner. I would urge all members to work in this spirit with a genuine desire to succeed and with unreserved goodwill, without ever losing sight of the goal. That is the only appeal I would make to you, gentlemen, and I feel sure that you will respond to it and that you will be indulgent towards your President.

Let us pursue our international aim in this atmosphere ; it is unquestionably the best way of ensuring success.

I declare the International Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques open.

2. Appointment of Committee on Credentials.

The PRESIDENT proposed that a Credentials Committee should be appointed. He requested delegates to deposit their credentials immediately or, if they had none, to apply for them to their Governments. He suggested that the Credentials Committee should consist of the following delegates : M. DUZMANS, first delegate of Latvia ; M. OHNO, first delegate of Japan ; and M. RESTREPO, first delegate of Colombia.

The proposals of the President were adopted.

3. Appointment of a Drafting Committee.

The PRESIDENT proposed that a Drafting Committee should be appointed during the first few days. The texts resulting from the discussions would be submitted to the Drafting Committee to be prepared for the second reading. This Committee would not be a Drafting Committee in the strict sense of the word ; it would have power in particular, to propose improvements with a view to ensuring the concordance of the various articles.

The proposal of the President was adopted.

SECOND MEETING.

Held on May 13th, 1930, at 3 p.m.

President: M. J. LIMBURG.

4. Procedure to be followed by the Conference.

M. HAMMERSCHLAG (Austria) said that, having represented his country at the two Hague Conferences, he wished to emphasise the importance he attached to the work carried out there ; the value of that work had been appreciated throughout the whole world by students of law as well as by practitioners. He was surprised that it was now suggested that the Conference should follow a method completely different from that adopted at The Hague. It was now proposed that, instead of preparing a draft convention under which States would give an undertaking to embody

uniform regulations in their law, the Conference should confine itself to drawing up a model law and preparing a convention where by the contracting parties would agree to submit the model law to their Parliaments.

Business men and bankers in Austria considered that the drawing-up of a model law would be of no great practical value.

According to the method adopted at The Hague, a convention could be accepted or rejected by each Government, but, once it had been accepted, the text — and that was the important thing from the practical point of view — was absolutely definite. Under the system recommended by the Committee of Experts, not only could the law be accepted or rejected, but it might also undergo modifications which it was impossible for the Conference to foresee.

The change in method proposed was all the more surprising in that since the war the International Chamber of Commerce, which contained representatives of nearly all the States taking part in the Conference, had declared in favour of a uniform law.

No reasons for this change were to be found in the documents prepared by the Secretariat of the League. On the contrary, Professor Jitta and Professor Klein had recommended a uniform law, and even the third meeting of experts in 1926 had seemed to be in favour of this method. What, then, were the unknown reasons for this change of method?

M. Hammerschlag supposed that the countries which had adduced reasons in favour of this new system had thought that the procedure followed at The Hague would restrict their Parliaments' liberty of action. He did not agree with that view, since every Parliament reserved the right to reject a convention, and there were numerous precedents for that.

But even if the arguments put forward had been very cogent, M. Hammerschlag still wondered whether the Conference had the right to abandon the work accomplished at The Hague without having essayed the method employed there. Should not an attempt be made to draw up a uniform law? For bankers and men of business, the essential thing was to have a uniform text, even at the price of a few reservations for certain States; those reservations would be known beforehand and, moreover, they could hardly be avoided.

This aim would not be attained by a model law which could be modified in every imaginable way by the various Parliaments.

It was incomprehensible that the present Conference should abandon the work of The Hague without having tried to continue on the same lines, and M. Hammerschlag personally thought that it would be quite possible to agree on a uniform text.

If the Hague method were adopted, the delegates would do their best to secure the adoption of their respective countries' views, and, in the end, a compromise would be reached, whereas if the Conference confined itself to a model law, delegates might say that whatever the decisions of the Conference their Parliaments would be able to act at their own discretion. The discussions would consequently be much more valuable if the Conference took as its aim the preparation of a uniform text to be embodied in a Convention.

It might be possible to arrive at some compromise, to allay certain misgivings, but M. Hammerschlag wished to urge the Conference not to begin by abandoning the Hague programme which would be like putting a full stop before finishing the sentence. The present Conference was the heir to a very valuable patrimony, which it must endeavour to preserve.

The PRESIDENT asked M. Percerou, Chairman of the Committee of Experts, to explain exactly what had been the intention of the Committee of Experts as expressed in their General Considerations contained in the preparatory documents.¹

M. PERCEROU (Chairman of the Committee of Experts) wished first to give the reasons which had led the Committee of Experts to depart from the method followed at The Hague. He would deal afterwards with the compromise method mentioned by M. Hammerschlag.

The principal reason why the Committee of Experts had not adopted the Hague method without further ado was to some extent obvious. It was the difficulty of getting Parliaments to ratify a convention resulting from that method. It might be very interesting to draw up international conventions and to adopt reforms, but if the proposals contained in them were to be rejected by the Parliaments, it would have to be admitted that no great advance would have been made.

The Committee of Experts had wished to arrive at a practical result. One of the main reasons why the Hague draft Convention had not, except in very few cases, been ratified, had been the fact that Parliaments were averse from relinquishing their right of amendment. That was why the Committee had thought that certain concessions must be made to the right of amendment of which Parliaments, and especially the French Parliament, were rightly jealous. Consequently, the Committee had merely proposed that Governments should be asked to agree to present to their Parliaments a uniform text, in the hope that they would adopt it more easily than if an attempt was made to impose on them a hard-and-fast text which, it might be feared, would run the risk of being rejected without even being examined.

The Committee had not tried to hide the fact that this method involved certain practical drawbacks. To a large extent, it risked the sacrifice of uniformity, since parliamentary amendments might leave a text which would be uniform in nothing but name. Even a uniform text was sometimes interpreted differently by jurisprudence in various countries. If there was not even a uniform text, the ideal of uniformity would obviously be further off than ever.

M. Percerou, therefore, in his capacity as French delegate, proposed a compromise which would consist in laying down a uniform text which Parliaments would be called upon to reject or accept "en bloc", the Hague method being abandoned in one very important point. At The Hague, Parliaments had been asked, not only to ratify a uniform text, but also — and that was a more serious matter — to bind themselves not to modify that text, not only in its capacity as

¹ Cf. Preparatory Documents — document C.234.M.83.1929.II (C.I.L.C.I); chapter III, p. 50.

an international convention, but also in its capacity as an internal law, for a period which might last as long as three years. Would it not be possible to do away with the undertaking to maintain the law as an internal law without Parliaments having the right to amend it? The Hague method could be employed in regard to the remainder.

In these circumstances, M. Percerou proposed the following method. A text of laws or regulations would be drawn up — he preferred the word “ laws ” for reasons that he would give later. This text would be uniform, but would contain reservations which States might make, but which, it was to be hoped, would be as few as possible. Parliaments would be called upon to adopt the text thus drawn up on the understanding that it would only enter into force if a certain number of States adopted it.

This last condition appeared necessary. If, in order to adopt such a system of law, a State made important sacrifices, if it altered its existing legislation in many respects, and if other States did not adopt the same type of law, the former would have made a sacrifice to which there would be no counterpart in the form of concessions made by other States which would have adhered to their own legislation.

If the entry into force of the uniform law in the States that had accepted it were made subject to the condition that a certain number of the contracting parties which had taken part in the Conference themselves adopted the text as a national law, reciprocity between the States would be assured.

To sum up, the compromise proposal would be as follows : The Conference would draw up a uniform text which might allow for reservations. The contracting States would undertake to submit the uniform text to their Parliaments. The text voted by the different Parliaments would only come into force in each of the States that had accepted it if, after a certain delay, a minimum number of States taking part in the present Conference had adopted it.

Such was the system as a whole. It would naturally be understood that, once the law had been put into force, Parliaments would reserve their right to modify it whenever they wished to do so, but in all probability that would not be a serious danger, because once the uniform law had been put into force it was difficult to imagine circumstances of such gravity as to force the Parliaments to modify a law which would have conferred on their countries the inestimable benefits of the unification of the laws on bills of exchange.

M. QUASSOWSKI (Germany) pointed out that the President had mentioned at the previous meeting the attempts that had been made over a period of forty years to unify the laws concerning bills of exchange and cheques. Germany was closely associated with that movement. As a matter of fact, it had been on the initiative of the German and Italian Governments that the first Hague Conference had been convened by the Netherlands Government; and, in accordance with Germany's previous attitude, M. Quassowski recommended that the Conference should choose a method which would make unification as certain as possible.

There were two possible methods. First, there was the system of The Hague, namely, the conclusion of a collective convention by which the contracting parties undertook to adopt uniform regulations for bills of exchange subject to reservations determined by the Convention.

In opposition to this method, there was that recommended by the experts, which consisted in the drawing-up of a model law whereby the contracting parties would only undertake to submit to their respective Parliaments a draft law containing the provisions of a uniform regulation on bills of exchange, it being understood that the Governments would have the right to make derogations in case of necessity.

The method chosen by the Hague Conference appeared to M. Quassowski to be that most likely to lead to unification, since the chances of arriving at a genuine agreement were greater if Parliaments were faced with the alternative of accepting or rejecting a convention than if each had the right to vote any amendments it thought desirable.

He did not think that the constitutional objections to this method were justified. In adopting any international convention, every Parliament committed itself to something that went beyond its national legislation. That resulted from the very nature of international conventions; but, apart from the right to reject the convention outright, a Parliament might, on its own initiative, make provision in regard to matters that had been reserved. It was therefore for the Conference to determine a number of broad reservations, so that the Parliaments of the different States would retain sufficient freedom of action. It might further be said that the experts themselves had had in view an obligatory regulation, for they had suggested that in the law on cheques States should enjoy wider powers of amendment than in the law on bills of exchange.

Moreover, it must not be forgotten that the experts had also recommended that certain questions should be settled by an obligatory collective convention. These questions included the form of the bill of exchange, acceptance, endorsement, maturity, loss of rights, *vis major*, and the sanctions laid down in the fiscal regulations on stamp. These questions were numerous and complex enough; but in character they were not very unlike the questions of which the unification had been determined at The Hague, where they had been considered as a whole.

Should the Conference be unwilling to decide in favour of the Hague method, M. Quassowski urged that this system should not be rejected outright in favour of that proposed by the experts. He would suggest rather that the Conference should discuss the question objectively, so as to find out how far agreement was possible. The Conference might perhaps be able to content itself with drawing up a simple model law, since the matters on which agreement was difficult were neither numerous nor important.

In his opinion, it was not impossible that the present discussions would end in real agreement.

M. SULKOWSKI (Poland) reminded the Conference that although his Government had assumed no international obligation of the kind under consideration, it had nevertheless realised the

importance of unification to the development of international relations : it had introduced in 1924 a law which reproduced almost textually the Uniform Regulations adopted at The Hague in 1912, and had completed these by certain provisions which, at The Hague, had been held to be confined to the purview of national legislation. The law on cheques which had been introduced in Poland at the same time was based on the resolutions passed at the 1912 Conference.

M. Sulkowski, in accordance with his country's policy in this matter, trusted that unification would be achieved on the broadest possible basis. Poland was convinced that the system of unification followed at The Hague was much better than that suggested by the legal experts. The Hague system assured the achievement of as complete a unification as was possible in existing circumstances. On the other hand, the method suggested by the experts would have the danger that States might make such ample use of their right of amendment that the principle of unification would be more restricted and would lose all practical value.

For these reasons, the Polish delegation was in favour of adopting the Hague method. Should that method, however, prove unacceptable to a certain number of States and consequently unworkable, the Polish delegation was prepared to collaborate in any other essay at unification, provided that all the more important points of law relating to instruments of trade received due consideration and that the results were accepted and put into application by the largest possible number of States.

M. HERMANN-OTAVSKY (Czechoslovakia) said that his Government had hastened to seize the opportunity of being represented at the Conference. It appreciated the practical importance of the Conference from the point of view of international trade, as well as the moral value, if not of complete unification, at least of the assimilation and harmonisation of the Continental systems of law and those of Latin-America in the matter of bills of exchange and cheques. The Czechoslovak Government would second this important work to the best of its ability, and expressed its sincerest hopes for the success of the Conference.

As regarded bills of exchange in particular, the Czechoslovak delegation was in agreement with the Committee of Legal Experts and considered that the ideal solution of the problem would be for all the States belonging to the Continental group to adopt uniform regulations, which each of them would bind itself, by the Convention, to embody in its own law. The Czechoslovak delegation had been instructed to do its best in bringing about a solution of that kind — one that would include the two groups of Continental law.

The situation indicated in the report, however, made it doubtful whether present conditions would permit the realisation of this ideal. The Conference might have to content itself with more modest results, the harmonisation of different legislations and the conclusion of conventions with absolutely uniform regulations for only certain of the graver questions. The Czechoslovak delegation was also instructed by its Government to collaborate to the utmost of its powers in the work of the Conference, in the hope of securing this less ambitious result, if it were found impossible to achieve the wider, the ideal, solution.

Baron MARKS VON WÜRTEMBERG (Sweden) reminded the Conference that the three Scandinavian countries had long ago achieved a uniform law on bills of exchange and promissory notes. Another northern country, Finland, had also a law that differed only in a few points from that of the Scandinavian countries. In these circumstances, it was natural that the Governments of these four countries should have conferred on the reply to be sent to the proposals of the Committee of Experts. The replies resulting from these joint consultations were practically identical, particularly in regard to the point under consideration, namely, whether unification in this matter of bills of exchange should be established on the lines followed at the last Hague Conference by the means of an ordinary convention, or whether, on the contrary, the methods suggested by the experts should be followed, the Conference confining itself to the conclusion of an agreement by which the Governments would undertake to propose to their respective Parliaments the adoption of corresponding texts.

Without wishing to reject the method suggested by the experts, the four Governments in question considered that it was preferable to adopt the Hague system. In their opinion, " if the various Parliaments were offered the alternative of accepting or rejecting a convention submitted to them which, within limits, clearly defined within the convention itself, would allow them the right to modify the annexed regulation, the prospects of reaching a real agreement between the co-operating States would appear to be much better than if each Parliament remained free to introduce into the Government bill any amendments it pleased ".

The Swedish delegation adhered to that view, and Baron Marks von Würtemberg was authorised to say that it was shared by the three other nordic delegations, which had not been convinced by the arguments put forward in the Conference in favour of the methods suggested by the experts.

The nordic delegations did not, of course, feel themselves competent to judge for other countries the value of the constitutional objections that had been made against the Hague method. Nevertheless, it seemed to them that these objections would lose much of their force if it was decided to suppress, in the convention to be concluded, any provision regarding its duration. If every Parliament knew that, in adopting the convention, it reserved the right to denounce it whenever it thought fit, without the conventions thereby becoming invalid for the other contracting parties, the Swedish delegation did not think that there could be any talk of an infringement of national sovereignty.

It was for these considerations that the Swedish delegation regarded as meriting consideration the idea of a convention of the same type as that drawn up at The Hague, but differing in the

sense that paragraph 2 of Article 28 of the 1912 Convention would be suppressed (the paragraph dealing with the impossibility of denouncing the convention until three years after the date of the first deposit of ratification), and that the contracting parties would be consequently free to denounce the convention at any time. The objection might perhaps be made that the right of unrestricted denunciation would greatly detract from the value of the convention ; but Baron Marks von Würtemberg did not think this objection justified, because, when a new uniform law on bills of exchange had been established a State was not likely to make use of the right of denunciation. On the contrary, this system would lead to the desired result, the unification of the systems of law, more surely than the other method, that consisting in allowing each Parliament to carry out such modifications as it might consider necessary.

M. GIANNINI (Italy) said that his delegation had carefully considered the proposals of the Committee of Experts and had listened with special interest to the French delegate, particularly because the latter had dealt with certain compromise proposals.

Two questions were involved : the first a question of substance and the second one of form. For the moment, the Conference was discussing merely a question of form.

The Italian position in regard to these two classes of problems was quite clear. For a long time Italy, together with Germany, had been asking that this question should be dealt with by an international conference. It was only one aspect of the whole movement for the unification of law which had been begun in Italy in 1865. Italy was consequently entirely favourable to any movement for unification relating to questions of substance.

Italy would thus be strongly opposed to the idea of departing from the Hague method. It was desirable that the movement of unification should extend to those States which practised the Anglo-Saxon system. If that was impossible, this particular problem must not, in any case, be lost to sight. Italy could not favour a movement which would not achieve real unification and which would leave an unduly wide measure of freedom to national law, or result in reservations which would practically nullify the work of unification. The Italian delegation was therefore against any proposal which did not provide for unification or would allow of any considerable number of reservations.

The report of the experts had mentioned the recent example of the Brussels Convention on Bills of Lading. As was known, this latter Convention had been the outcome of a proposal for a system of uniform regulations on bills of lading, which regulations were not to take the form of a convention, but to be left optional. As the result desired by the International Law Association had not been achieved, a convention had been made, which offered no final solution of the problem, but contained certain common regulations. States were left a wide latitude as to the adoption of regulations in harmony with the Convention. It might be said that this method was not one of unification, but of harmonisation.

For the above-mentioned reasons, M. Giannini did not think that this method could be followed in a question like that of bills of exchange.

What were the arguments put forward by the French delegate? There had only been one, and that a psychological, argument, which was vague and difficult, both to refute and to defend.

Parliaments adopted daily legislative measures which originated in conventions. The French Parliament itself had already passed certain conventions on private law, it had recently adopted the Warsaw Convention on the Unification of Certain Regulations concerning Air Transport, as well as the Conventions of Brussels. There had also been a number of other Conventions, among them that on intellectual or industrial property.

When a State entered into such engagements, it was not necessarily binding itself for eternity. It could always request a revision, if the convention no longer suited its national needs ; and if revision was impossible, it could denounce the convention.

In these circumstances, the fear that the prerogative of Parliament would be diminished by the fact that a uniform draft law was submitted to it seemed to be somewhat exaggerated. A uniform law was nothing more than an annex to the convention, and Parliaments adopted conventions daily, only to modify them later.

The idea of a " model law " had been mentioned, but that term was not very clear. Was it a law incapable of amendment, or was it a model that could be modified? The expression " uniform law " was more precise.

M. Giannini could not understand why it was still desired to allow such wide powers to make reservations. Parliaments were, as it was, given the right to modify the so-called model law ; if reservations were to be added, it seemed useless to do anything at all. A country that wished to have the right to modify a text at will and to add reservations could hardly be anxious to adopt the text at all. It was better to be frank ; whatever the form in which a text of that sort was proposed, M. Giannini would refuse to accept it.

As a matter of fact, States were forced, for reasons of national interest, to accept this or that international agreement. When a Government found itself faced by a draft uniform law, it asked itself if for its country the advantages of uniformity were greater than those of freedom, which the country would in principle be anxious to preserve. Naturally, consideration would have to be given to the reciprocity of such agreements. It would be of undoubted utility to establish uniform regulations which would give trade and industry advantages for which they had been clamouring for forty years. Consequently, M. Giannini saw no reason for departing from the point of view that had governed the whole exchange law movement and according to which uniform regulations should be adopted, with the fewest possible reservations.

There was still a psychological problem, but it was very difficult to discuss a psychological problem since in such matters arguments were not very convincing. When a Parliament was confronted with the final draft, it could always reply that it was not prepared to accept it, and no powers of eloquence would then have any effect.

M. Giannini wondered if a compromise was really possible. He was thinking of a compromise on the point of form and not on that of substance. If the convention contained two parts, the first covering regulations for bills of exchange and the second regulations relating to the settlement of conflicts of laws, every psychological argument would fall to the ground. In these circumstances, it would not be necessary to have many reservations ; the important thing was to have a form of regulation that was really uniform without leaving room for too many reservations or for rules of harmonisation so called. To M. Giannini's mind, the word " harmonisation " had no very clear meaning. He might cite the Brussels Convention, which contained a large measure of common law ; but whereas the Belgians had introduced a law which was, so to speak, a faithful translation of the Convention, many other countries had deviated from it.

For these reasons, the arguments advanced by certain delegations could not be taken into account. He thought that agreement might be possible if, instead of aiming at uniform regulation, the Conference adopted a convention containing one chapter for rules of substance and another giving rules to solve conflicts of laws. Its effects would be the same and parliamentary misgivings would be allayed. Finally, reservations should be very few and clearly defined.

M. OHNO (Japan) said that the Japanese delegation considered the regulations concerning bills of exchange, promissory notes and cheques could be presented, either in the form of a treaty or in the form of recommendations or resolutions ; but having regard to the importance of the problems, it wished to state that, in the event of the regulations taking the form of a treaty, the latter should include a ratification clause. If, on the other hand, the object of the draft regulations was merely to bring before the legislative bodies draft laws concerning the questions covered by the regulations, the Japanese delegation considered that it would be preferable to draw them up in the form of simple resolutions or recommendations.

M. VISCHER (Switzerland) wished to give a few explanations as a member of the Committee of Experts. The Committee had been accused of defeatism, but he believed that defeatism could be justified up to a certain point. On three occasions he had attended discussions during which the Hague Regulations had been examined : first, in the International Chamber of Commerce ; secondly, in a Committee of the League ; and thirdly, in the Committee of Experts. On each occasion, the conclusion reached was that while it might be possible to make a few improvements to the draft regulations on matters of secondary importance, the draft constituted, generally speaking, an excellent basis for the unification of laws on bills of exchange. Notwithstanding the fact that this conclusion had been confirmed three times and notwithstanding the formal engagements entered into by the Governments in 1912, no country had so far ratified the Hague Convention as it stood. The replies from the Governments represented in the Conference were known, and it might be noted with satisfaction that the majority were animated by the best will in the world to achieve complete uniformity in the law on bills of exchange.

This encouraged M. Vischer to hope that the present Conference would be able to find a solution enabling a uniform regulation to be put into force in the near future.

Speaking in the name of all the experts, M. Vischer said that they were the first to agree that a solution which would allow of the achievement of unification was the ideal to be aimed at. In his opinion, a new essay should be made to reach agreement. It might be supposed that the result of the present proceedings would be practically the same as the Regulations drawn up in 1912, and that the putting into force of the uniform regulation would depend on the goodwill of the Governments, and especially the Parliaments.

The Conference would certainly be able to congratulate itself if it arrived at an agreement.

Speaking in the name of his Government, M. Vischer recalled the fact that the Swiss Federal authorities had, as long ago as 1914, drawn up a draft message concerning the accession of Switzerland to the Hague Convention. He was certain that the Uniform Regulations would long ago have been in force in Switzerland but for the outbreak of the world war and the failure of other countries to advance likewise along the same road.

In conclusion, M. Vischer hoped that the Conference would come to an agreement ; but it seemed to him impossible to say at the present moment whether the Hague method could be accepted, since the signature of the new convention would naturally depend on the provisions it contained. That was a point that would have to be examined later.

M. MOLENGRAAFF (Netherlands) said that, in the opinion of the Netherlands Government, it would be better to follow the method followed at The Hague in 1912 ; States would bind themselves to submit to their Parliaments a draft law reproducing textually the provisions of the Uniform Regulations, with the exception of certain points determined by the convention, for which they could reserve the right to derogate from the Regulations.

M. Deoclecio DE CAMPOS (Brazil) recalled that his country had taken part in the Hague Conferences of 1910 and 1912, when Professor Rodrigo Octavio de Langaard Menezes had submitted to that high assembly of jurists the new Brazilian national law, the juridical and practical basis of which — in so far as it could be fitted in with the legal traditions of the country — had been founded on the principles of the most advanced laws of those times.

Brazil had given practical evidence of her interest in the work of The Hague. As far back as 1912, the National Congress had ratified the 1912 Hague Convention. That meant that Brazil would have no difficulty in accepting the Hague procedure, neither would she have any difficulty in agreeing to that proposed by the experts. M. Deoclecio de Campos, nevertheless, supported

the compromise suggested by M. Percerou, provided that the system of reservations was the same as that adopted at The Hague, namely, that they should be general reservations and not individual reservations authorised by the Conference in favour of specific countries. Brazil would therefore support and warmly collaborate in the endeavour to secure the desired unification.

Viscount POULLET (Belgium) said that the Belgian delegation had prepared a note embodying its view, that the present Conference should adopt the procedure that had been followed at The Hague. He would not read the note, for the arguments contained in it had been admirably developed by most of those who had spoken already. He would merely express the hope that the ideas advanced by the majority of the delegates who had spoken would be shared by a considerable majority of members, if not unanimously.

Mr. GUTTERIDGE (Great Britain) desired to make a statement on behalf of Great Britain and Northern Ireland and those parts of the British Empire which were not separate Members of the League. It was his duty to reaffirm that it was not possible for His Majesty's Government to depart from the attitude which had been held by Great Britain since the commencement of those discussions at the Hague Conference of 1910. Consequently, it would be impossible for Great Britain to become a party either to the draft regulations or to the draft conventions now before the Conference.

He did not think it was necessary, however, to recapitulate the difficulties arising from the fundamental differences between the Anglo-Saxon system of law and the Continental system, or to dwell on any of those features of judicial policy and organisation which were peculiar to the Anglo-Saxon system of the administration of the law. It would be superfluous for him to do so, as those questions had already on several occasions been stated with such great force and lucidity by that very great jurist, Sir Mackenzie D. Chalmers, to whose lamented death the President had referred in such moving terms. His departure was a loss not only to the English-speaking countries but, Mr. Gutteridge ventured to think, to jurists throughout the world.

Mr. Gutteridge would emphasise one point — that the attitude taken up by His Majesty's Government was not dictated by mere considerations of national *amour-propre*; it could be justified by reference to the actualities of the situation, which must, of necessity, control the policy of Great Britain in this matter. A law which applied to approximately one hundred and fifty million people and which governed the commercial relations of some of the most important commercial communities of the world represented in itself a great achievement in the field of unification. For Great Britain to attempt single-handed to legislate would only imperil this achievement. It was, of course, obvious that the United States of America could not be dictated to; but, moreover, Great Britain could not legislate for many of her overseas dominions, and any attempt to do so would, he thought, so far from achieving the aim of unification, probably jeopardise it and render it more difficult in the future.

He was, however, authorised to say that His Majesty's Government viewed with the greatest sympathy the proposal to unify the laws of the Continental type. It seemed clear that, if the existing divergencies, which were highly inconvenient not only to business men but also to lawyers, could be removed or lessened and if the number of systems in existence could be limited to two great systems, that achievement would be one which was certain to be beneficial both from the point of view of world commerce and from that of those comparative lawyers who looked to some future date — were it near or far — for the unification of a much more comprehensive character than the present Conference was able to undertake.

He desired to say that, although his instructions were such as to debar him from taking any very active part in the discussions, it was the desire of His Majesty's Government that he should assist in every possible way. He was instructed to place himself fully and freely at the Conference's disposal in order to give, to the very best of his ability, such information as it might require on English law.

In conclusion, although he had no authority to sign the regulations or conventions which were before the Conference, he thought there was some hope that Great Britain might in certain circumstances be able to become a party, subject to certain limitations and reservations, to a convention which had as its sole object an attempt to remove those injustices which arose from purely fiscal considerations and which at the present moment constituted a blot on the laws of so many different countries.

Prince VARNVAIDYA (Siam) said that it might be a matter for surprise that the delegate of Siam should speak on such a highly technical subject as that at present under consideration. The foreign trade of Siam had been growing during the last fifty years at a rapid rate and, when European intercourse was developed, the first Powers that came to Siam in the middle of the nineteenth century were the British and American. Consequently, it was natural that the commercial practice which had developed in Siam had been British commercial practice, and the law adopted in practice had been English commercial law. In order, however, to get rid of extra-territoriality, the Siamese had had to codify their national laws so as to make them satisfactory to the treaty Powers, and in doing so they had been inspired by a broad view of the different systems of legislation. In fact, in the particular instance of bills of exchange, they had been bold enough to try the experiment of establishing a compromise between the Continental and the Anglo-Saxon systems. They had adopted the Regulations of The Hague as the basis of the provisions of their Commercial Code, with adaptations from English commercial law to suit local commercial practice. Therefore, he was glad to be able to announce to the Conference that not only could Siam take as

the basis for discussion the drafts submitted by the League, which were founded mainly on the Hague Regulations, but also accept most of the provisions, because the substance of those provisions was already to be found in her present Commercial Code. On the other hand, because the commercial practice which obtained in Siam was largely British, there was a number of provisions in the Siamese Code which were modelled on British commercial law. He hoped that formulæ might be found which would enable the Siamese Government to adhere to the majority of the provisions to which they might have to take exception in their present form. But as he understood that the system of reservations would be allowed in accordance with the Hague methods, he was glad to think that Siam would in the end be able to adhere to a convention drafted on the line indicated.

Mr. KENNEDY (United States of America) said he had been delegated by his Government in a very limited capacity — that of adviser and technician and observer — and he was therefore not in a position to bind his Government in any way.

The position of his Government had already been set forth in the Preparatory Documents.¹

The history of legislation concerning uniform negotiable instruments in America was, shortly, as follows: In 1872, California had commenced the movement towards codification. This had been followed by the English Act in 1882, fathered by the late Judge Chalmers. After that, a High Commission had been appointed in America to consider the question of codification in the States. That Commission had followed the English system rather closely, and in 1895 the Code had been submitted to the States, which shortly began to fall into line, the last of the States to ratify being Georgia, in 1925.

For these reasons, the United States Government could not at present entertain the adoption of any other laws.

After the presentation of the Code of the High Commission in 1895, Alaska, District of Columbia, Hawaii and the Philippines had adopted it and, at a later date, Colombia, the Dominican Republic and Panama.

At the International Economic Conference at Geneva in 1927, a statement had been made which indicated the importance of the present Conference. It had been said that the sum of international trade was 70 billions of dollars a year. In view of the fact that probably 50 billions of this sum were paid by means of that international negotiable instrument, the bill of exchange, the importance of a general agreement as to its meaning, validity and acceptance became apparent.

The United States Government had instructed Mr. Kennedy to place himself at the disposal of the Conference for the purpose of furnishing any information which might be found necessary with regard to the laws and practices of the American system. He was also instructed to say that the Government of the United States was greatly in sympathy with the deliberations of the Conference, which it would follow with care and interest.

The PRESIDENT was glad to observe that all speakers had declared themselves in favour of the unification of the laws on bills of exchange, at any rate of the so-called "Continental" type. They had, further, all said that they were in favour of a system involving as few reservations as possible. The great majority of the speakers were in favour of the Hague system.

If the Hague system was considered on the one hand — and the significance of that system had been developed very clearly by the different speakers — and if the system suggested by the experts, according to which the States concerned would only be asked to lay before their Parliaments the uniform regulation which was to be drawn up, was considered on the other hand, the President thought he might state that the great majority, in fact almost the whole, of the speakers had pronounced in favour of the Hague system. Naturally, at the moment, the Conference was dealing with the broad lines of these two systems, and there was no question of entering into details. For example, the question of denunciation (Article 28 of the Convention) would be held over and examined later. The same remark applied to the idea suggested by M. Giannini, that the draft Convention should contain two separate headings, one containing rules of substance and the other rules for settling conflicts of laws.

But, broadly speaking, the very great majority of the speakers were in favour of the Hague system, and the President thought he might go as far as to state that that was the almost general opinion of the Conference. He proposed, consequently, that at the next meeting the Conference should take up the first article of the Regulations in its latest form, working provisionally on the lines followed at The Hague.

¹ Document C.234.M.83.1929.II (C.I.L.C.1), page 100.

THIRD MEETING

Held on May 14th, 1930, at 10 a.m.

President: M. J. LIMBURG.

5. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes :¹ First Reading.

The PRESIDENT called on the Conference to examine the draft Regulation article by article.

ARTICLE 1, NO. 1.

The Netherlands delegation proposed the following amendment to Article 1, No. 1 :

“ As an exception to Article 1 of the Regulation, any Contracting State may enact that instruments drawn in its territory and not containing the term ‘ bill of exchange ’, but otherwise satisfying the requirements of the Regulation, shall be valid as bills of exchange, provided that they contain an explicit statement that they are drawn to order.”

The French delegation likewise proposed an amendment as follows :

“ In derogation of Article 1 (No. 1) of the uniform law, each Contracting State may stipulate that the necessity for inserting the term ‘ bill of exchange ’ in the body of bills of exchange issued in its territory shall not apply until six months after the entry into force of the Convention.”

M. MOLENGRAAFF (Netherlands) reminded the Committee that the system of law at present in force in the Netherlands made no distinction between orders to pay which were bills of exchange and orders which were not bills of exchange. All orders to pay were considered to be bills of exchange and subject to the laws covering the latter, irrespective of whether they contained the term “ bill of exchange ” or another term or whether they contained no denomination at all, whether drawn to order or to a person specified by name.

Consequently, the Netherlands Government could not accept a measure whereby it would be compulsory to insert the term “ bill of exchange ”, for that would exclude from the operation of the law on bills of exchange instruments which had hitherto been governed by it. It would be preferable to leave States the power to regard as bills of exchange all instruments issued in their territories which satisfied the requirements of the Uniform Regulation, even if they did not contain the term “ bill of exchange ”, provided, however, that they did contain a mention that they were drawn to order.

M. Molengraaff did not refer to instruments not bearing the term “ bills of exchange ” and payable to a person specified by name because they were rarely used.

It should be pointed out that the term “ bill of exchange ” was not required either under French and Belgian law or under English and United States law. Moreover, it would be necessary to modify the text of the amendment before the Conference, if the amendment to the Uniform Regulation relative to the admission of bills of exchange drawn to bearer was adopted.

M. DAVID (International Institute for the Unification of Private Law at Rome) drew attention to the suggestion of the Rome Institute² to add as a compromise to No. 1 of Article 1 the words : “ or any other expression serving to describe the instrument ”.

M. PERCEROU (France) explained that the obligation to insert in the instrument itself the words “ bill of exchange ” in the language of the country concerned would have the great practical advantage of making it possible to recognise the nature of the instrument at first sight and in particular to see whether it was a bill of exchange or a cheque. The expression was not required in France ; it was sufficient for the instrument to be drawn to order. France, however, was prepared to relinquish this feature of her national law in order to secure unification, provided that the other countries made sacrifices for the same purpose. She simply asked that a certain amount of time should be allowed to the countries which would be obliged to alter their commercial practice. In particular, the necessary commercial forms would have to be printed bearing this expression, and business men should be given time to adapt their arrangements to the new system. A period of six months would appear to be enough. It would be regrettable if uniformity could not be obtained on such a small point. If it were not, France would retain her liberty of action.

M. GIANNINI (Italy) noted that the proposal of the Netherlands delegation amounted to a reversion to the rule proposed by the Central Committee at the 1910 Conference. No. 2 of Article 1, proposed by the Committee said :

“ It is left to the national law to decide whether the words ‘ to order ’ are sufficient to confer on an instrument the character of a bill of exchange, even when it does not bear that denomination.”

¹ For text of the draft Regulation, see Preparatory Documents — document C.234.M.83.1929.II (C.I.L.C. I p. 51).

² Cf. Preparatory Documents, page 125.

The report submitted by the Central Committee explained the reasons for which, after considering the solution which consisted in leaving the States entirely free, as under the Anglo-Saxon law, and after likewise considering the strict rule laid down in the German, Hungarian, Swiss, Scandinavian and other systems, the Committee had proposed the above rule as a compromise. In the discussion that followed, those delegations which favoured a strict rule to the effect that the words "bill of exchange" should be inserted had pressed for the adoption of that system. The Italian delegation had supported that view. Without wishing to repeat the arguments which had then been put forward, M. Giannini drew attention to the fact that in the discussions which took place in 1910 it had been held that even that solution was not enough to gain the approval of the countries with the Anglo-Saxon system of law. In the circumstances, the Italian delegation was unable to support the Netherlands proposal.

The French proposal, on the other hand, which differed in scope, deserved consideration.

It would be legitimate to allow a suitable period of time for putting the new provision into practice, and the period proposed by the French delegation was very reasonable. Consequently, the Italian delegation supported the French proposal. If it constituted the only reservation, it could be inserted in the text. If, however, there were others, it would be preferable to draw up a special protocol. Moreover, it was not desirable to insert in the text of the Convention itself stipulations which had only provisional force.

M. PERCEROU (France) said that if the Netherlands proposal were adopted, the French delegation would withdraw its proposal.

M. HAMMERSCHLAG (Austria) was glad to note that the Conference appeared to be almost unanimous in wishing to retain the mention of the term "bill of exchange". The Netherlands delegation alone proposed that that term should be replaced by the expression "to order".

What M. Giannini had said concerning the 1910 Conference was quite correct. In 1912, however, the concession now demanded by the Netherlands delegation had been granted and Article 2 of the 1912 Convention said :

" . . . Every Contracting State may provide that bills of exchange issued in its own territory which do not contain the expression 'bill of exchange' shall be valid, provided that they contain an express statement that they are payable 'to order' ."

If the text adopted in 1912 were maintained, the amendment proposed by M. Percerou would become unnecessary.

The suggestion of the Rome Institute would appear to be very dangerous in practice. It would be like closing one door and opening another, since it would amount to prescribing, on the one hand, that bills of exchange should contain the term "bill of exchange", or, where necessary, the words "to order", and, on the other hand, allowing any other expression serving to describe the instrument and this would be far from precise.

The PRESIDENT pointed out that, speaking strictly, no proposal by the Rome Institute was under discussion. The Rome Institute was giving its valuable assistance in an advisory capacity only.

M. QUASSOWSKI (Germany) was of the same opinion as the experts, who had not proposed that the term "bill of exchange" might be replaced by the clause "to order". No reservation was necessary in that connection and it would seem that on such an important point the Conference should endeavour to arrive at complete unanimity. A reservation in favour of the clause "to order" would cause practical difficulties, for it would mean that a bill of exchange bearing only the expression "to order" would be valid or invalid as a bill of exchange according to the place of issue. A bill of exchange "to order", drawn in the countries which adopted the mention of the term "bill of exchange", would not be valid as a bill of exchange even in the countries which employed the term "to order".

M. Quassowski had objections to the suggestion of the Rome Institute as well. He was therefore of opinion that the Conference should accept the proposal of the French Government and should support neither the proposal of the Netherlands nor that of the Rome Institute.

M. DE LA VALLÉE POUSSIN (Belgium) emphasised the great advantage of reducing the number of reservations in the uniform law to a minimum and of allowing only those which were of really vital importance. The particular case covered by Article 1, No. 1, concerned only a formality with which the commercial world would doubtless fall in quite easily. Bills of exchange, apart from very rare exceptions, were made out on printed forms. They would be adapted to the provisions of the uniform law as soon as it came into force.

The question had not arisen in the same manner during the 1910 and 1912 Conferences. The importance of allowing a reservation to Article 1, No. 1, had been greater than at present. At that time, it had certainly been hoped to gain the accession of the countries with the Anglo-Saxon system to the uniform law. These countries, however, had been very anxious to retain their own practice, which was informal in character and did not require the mention of the expression "bill of exchange". It now appeared that only the Continental States and those of South America would be able to accede to the Convention under discussion. The value of the reservation referred to had therefore disappeared and the matter had lost much of its importance. The only Continental States whose regulations were less formal were, M. de la Vallée Poussin believed, France, Belgium and the Netherlands. The Belgian delegation supported the idea that it was desirable in future to require the insertion of the expression "bill of exchange". That would raise no serious opposition in Belgium. The period of six months did not appear to be necessary, but he was prepared to accept it.

M. HAMMERSCHLAG (Austria) asked whether, in view of the statements of the French, Belgian and Italian delegations, the Netherlands delegation was prepared to withdraw its proposal, provided the French amendment was adopted.

M. SULKOWSKI (Poland) was opposed to the Netherlands amendment. He urged that the complete unification of the rules regarding the validity of bills of exchange was of great importance to the safe circulation of bills. Moreover, the Polish delegation was of opinion that reservations should be avoided, except where agreement could not be reached otherwise.

M. TROULLIER (International Chamber of Commerce) said that the International Chamber was of the same opinion as M. Percerou. Originally, the optional use of either the term "bill of exchange" or the words "to order" had been considered attractive in France, but closer examination of the question had shown the necessity of unifying these terms. The object being to set up a uniform law, it was desirable to avoid any reservations which were not absolutely essential.

The allowance of a period of six months seemed necessary. Important firms had large stocks of forms which they should be allowed to exhaust. In addition, bankers should have time to accustom their clients to the new state of affairs.

M. MOLENGRAAFF (Netherlands) said that his Government considered that there was a question of principle involved in their amendment. Its adoption or rejection would influence the ratification of the Convention. He was therefore obliged to press his amendment.

The PRESIDENT put the two amendments to the vote and explained that the Drafting Committee would consider the appropriate place for the insertion in the Convention of the text adopted.

The amendment proposed by the Netherlands delegation was defeated.

The amendment proposed by the French delegation was approved.

M. HERMANN-OTAVSKY (Czechoslovakia) pointed out that his delegation had asked that the end of Article 1, No. 1, should be drafted as follows: "... in the language employed in the instrument in formulating the order to pay".

M. GIANNINI (Italy) raised a question of order. As the President, with the approval of the Conference, had decided to give the Drafting Committee a certain latitude, it would be better for the progress of the Conference to discuss in plenary session only questions of some importance, those of lesser importance being referred to the Drafting Committee. The President might ask the delegations wishing to submit amendments whether they would agree to refer them to the Drafting Committee.

The PRESIDENT considered that a middle course might be adopted. All questions should be discussed in substance by the Conference itself, matters of form being referred to the Drafting Committee. The Conference would decide in case of doubt as to whether a question was one of substance or not.

In accordance with the normal procedure all amendments must be submitted in roneod form and he would therefore ask the Czechoslovak delegate to present his amendment in that form at the next meeting. No. 1 of Article 1 would accordingly be held over.

ARTICLE 1, NOS, 2, 3 AND 4.

Approved.

ARTICLE 1, No. 5.

The PRESIDENT pointed out that the Netherlands delegation proposed the omission of No. 5.

M. MOLENGRAAFF (Netherlands) explained that it was of no importance that the place of payment should be stated. It was obvious that payment would be made at the domicile of the drawee, even when not mentioned, unless some other place was expressly indicated.

M. PERCEROU (France) admitted that if there was no indication, it would be understood that the bill was payable at the domicile of the drawee. At the same time, it would be necessary for the bearer to know where the domicile was. The place of payment must therefore be mentioned.

M. HAMMERSCHLAG (Austria) shared M. Percerou's opinion. A bank which received a bill of exchange had to obtain information concerning the drawee. He did not see how it could do so, if the bill of exchange contained no mention of the domicile of the drawee.

M. MOLENGRAAFF (Netherlands) withdrew his amendment.

Article 1, No. 5, was approved.

ARTICLE 1, No. 6.

M. BOUTERON (France) proposed that the scope of this paragraph should be extended to include the holder of an office among the beneficiaries. This provision appeared in Article 7, paragraph 2, of the English Act of August 18th, 1882, which was as follows :

“ A bill may be made payable to two or more payees jointly, or it may be made payable in the alternative to one of two or one or some of several payees. A bill may also be made payable to the holder of an office for the time being.”

That provision was perhaps self-evident, but in order to avoid difficulties in the circulation of bills of exchange it would be desirable to mention it. No. 6 of Article 1 might be re-drafted as follows :

“ An indication of the person to whom or to whose order payment is to be made.”

M. GIANNINI (Italy) agreed with the French delegation on this point. Moreover, the question was already solved in practice. He added that for similar considerations No. 3 of Article 1 should be modified by the substitution of the word “ designation ” for the word “ name ”.

Baron CARTON DE WIART (Belgium) supported M. Giannini's proposal.

M. PERCEROU (France) also agreed that the word “ designation ” should be substituted for the word “ name ” in the two paragraphs in question.

M. HERMANN-OTAVSKY (Czechoslovakia) foresaw certain complications if the beneficiary were only indicated by his office. For instance, when the rector of a university endorsed a bill of exchange, would he endorse it with his name? In Czechoslovakia rectors were appointed for a year. Difficulties might arise when the rector was replaced by his successor.

Mr. GUTTERIDGE (Great Britain) called attention to the fact that the question raised by M. Giannini was, to some extent, dealt with in Section 6, Sub-section 1, of the Bills of Exchange Act, 1882, which stated that the drawee must be named or otherwise indicated in a bill with reasonable certainty.

M. QUASSOWSKI (Germany) was unable to accept the French proposal, which was too wide. It would, in fact, lead to the use in bills of exchange of such expressions as “ the rector of ‘ X ’ university ” or “ the landlord of the house in ‘ Y ’ street ”.

The PRESIDENT asked whether the French delegation would accept the wording : “ the name or the title of the person to whom . . . ”. The words suggested, “ indication ” and “ designation ”, were not legal terms.

M. GIANNINI (Italy) proposed the word “ designation ” in both cases.

M. BOUTERON (France) said that the French delegation supported the President's suggestion. The word “ charge ” had been proposed, but certain unimportant offices could not be described in that term.

M. TROULLIER (International Chamber of Commerce) considered that in practice the word “ designation ” was sufficient. For instance, cheques were signed daily in the name of the collector of taxes.

M. HAMMERSCHLAG (Austria) feared that the acceptance of the French proposal would endanger the precision required in bills of exchange. He concurred in the observations of the Czechoslovak delegate and asked how, if the French proposal were accepted, it could be ascertained that the chain of endorsements was uninterrupted. If the bill of exchange circulated and was endorsed, for instance, by “ the collector ”, the bearer would not be certain that the chain of endorsements was uninterrupted. If such endorsements were accepted, serious difficulties would arise.

M. MONTEJO (Spain) asked whether it would not be preferable to say “ public office ” instead of “ title ”.

M. HERMANN-OTAVSKY (Czechoslovakia) drew attention to cases where there would be designation only by title or office. In the case of a civil servant, it might be said that it was the State which was the beneficiary or the drawee, and that the physical person appeared only in the capacity of representative of the State.

Who would be responsible in the case of an office held for short periods? Would it be the immediate successor or would the physical person concerned remain personally liable?

M. PERCEROU (France) considered that all parts of a bill of exchange constituted a single whole. The matter under discussion was connected with that of endorsement. If it were admitted that the beneficiary could be described by his title, for instance the title of university rector, endorsement could only be made by adding the signature to the title. The text submitted to the Conference, however, provided for endorsement by simple signature. It would therefore be necessary in this case also to say that when the beneficiary was described by his title the signature should be preceded by the title. In these circumstances, the French delegation was of opinion that the present text should be kept and it withdrew its amendment.

M. GIANNINI (Italy) said that he would present the French amendment. He instanced the case of a town mayor. That was a temporary office. The mayor might issue a bill of exchange as mayor of the town. When his term of service came to an end, the town's liability remained.

A mayor might also endorse a bill of exchange. M. Giannini saw no difficulty with regard to the necessity for the uninterrupted chain of endorsements. He proposed to say, in accordance with English law, "the name or a sufficiently clear description".

M. QUASSOWSKI (Germany) considered that the words "title or designation" had too wide a range. If the text had to be amended, he would prefer the expression "public office" proposed by the Spanish delegate, but it would be preferable to keep to the original text submitted to the Conference.

MUNIR Bey (Turkey) was of opinion that it was essential to mention the name. Any provisions which were adopted should be as clear and as simple as possible. The phrase "the name or a sufficiently clear description" might give rise to difficulties of interpretation between the States parties to the Convention.

M. SCHELTEMA (Netherlands) suggested that the text proposed by M. Giannini should be modified as follows: "The name *or other* sufficiently clear designation."

The amendment submitted by the Italian delegation was defeated by 16 votes to 6.

Article I, No. 6, was approved.

ARTICLE I, No. 7.

Approved.

ARTICLE I, No. 8.

M. OHNO (Japan) said that in all cases where a signature was required on bills of exchange, promissory notes and cheques, in connection, for instance, with issue, endorsement, acceptance, "aval" and intervention, the Japanese delegation desired that, in accordance with the national custom, the signature might be replaced by an indication of the name accompanied by the apposition of a mark in the case of internal bills issued and payable in Japan. The Japanese delegate therefore wished to make a reservation in regard to No. 8 of Article I.

M. HERMANN-OTAVSKY (Czechoslovakia) thought it undesirable to draw a distinction between internal and international bills of exchange. The former might become international bills of exchange. If the exception for which Japan has asked in regard to signature was to be allowed, it would be preferable to make it general.

M. SHIMADA (Japan) explained that according to Japanese custom, sanctioned by the Law of February 16th, 1900, a signature might be replaced by an indication of the name accompanied by a seal, a mark made by means of a wooden or metal object or a thumb-mark.

M. ASZTALOS (Hungary) thought that the point arose in connection with the provisions of Article 4 of the Convention on the Conflict of Laws, which said:

"The form of any contract arising out of a bill of exchange or promissory note is regulated by the law of the State within whose territory this contract has been made."

M. PERCEROU (France) pointed out that the affixing of a seal beside the signature had been customary for a long time. He asked the Japanese delegate whether he drew a distinction between the signature, which, as a general rule, had to be made by the hand of the person concerned, and the name, which might be merely printed.

M. SHIMADA (Japan) replied that the signature was written by hand, whilst, in accordance with Japanese custom, the name might be printed or inscribed with an instrument.

M. SULKOWSKI (Poland) said that the Japanese delegation had raised a question which went beyond the scope of the article and was of particular interest where illiterates were concerned, namely, whether it was permissible to put something else in place of the signature. Provision had been made by Article 3 of the Hague Convention for States to settle this question in respect of liabilities contracted on their territory by internal legislation. The Conference would have to return to his reservation. For his part, M. Sulkowski reserved his right to submit a formal proposal when the Conference came to discuss the draft Convention.

M. HAMMERSCHLAG (Austria) agreed.

Mr. GUTTERIDGE (Great Britain) thought it might be of interest to the Conference to know that there was a parallel to the difficulty of the Japanese delegation in the case of British India. It was dealt with in a section of the Indian Negotiable Instruments Act of 1881, which expressly saved all native methods of signing instruments of exchange. He believed that in a great many cases in India a bill of exchange was signed by means of a thumb-mark. The question was one which might extend beyond Japan.

Baron CARTON DE WIART (Belgium) pointed out that the 1912 Hague Conference had been faced with the same difficulty. The signature was the essential element of a bill of exchange. After lengthy discussions, it had been agreed that the word "signature" should be understood in the widest possible sense. The difficulty in question arose, not only in Japan and India, but also in the Near East, in Turkey and Egypt. The Belgian delegate thought that the word "signature" should be maintained, but that it should be interpreted according to country.

M. HAMMERSCHLAG (Austria) proposed that the discussion of this question should be postponed until the discussion of Article 3 of the Convention. The Polish delegate was right in holding that the point was governed by Article 3.

The PRESIDENT replied that that article would not be discussed. It appeared in the Hague Convention, not in the draft submitted to the Conference. Nevertheless, in order to give satisfaction to M. Hammerschlag, the question could be reserved until the Conference came to examine the convention on the conflict of laws.

M. HAMMERSCHLAG (Austria) accepted this proposal.

M. MONTEJO (Spain) said that Article 444 of the Spanish Bills of Exchange Law required the signature of the holder by his own hand or by that of a person authorised to that effect and having the necessary power.

M. GIANNINI (Italy) considered that the question raised by the Polish delegate should be dealt with in the Convention. Rules must be laid down for persons who were unable to sign, for instance, disabled soldiers.

The question raised by the Japanese delegation should be considered in a more general manner. From the international point of view, the problem did not exist, or at any rate it was outside the Convention. The Convention could not prevent the issue of bills of exchange which were not intended for international circulation. If a bill of exchange was drawn in Japan on a Japanese subject and if it was not intended for international circulation, it certainly did not fall within the scope of an international convention. In the opposite case, it came within the scope of the Convention, which must be applied *in toto*.

M. SHIMADA (Japan) considered that a bill of exchange, even intended for home circulation, might always circulate internationally.

M. PERCEROU (France) added that the idea of drawing a distinction between international and internal bills of exchange had been abandoned. It was impossible to say that a bill of exchange would never circulate outside the country in which it had been issued.

In regard to signature, M. Percerou, like Baron Carton de Wiart, wondered whether the Conference was able to decide that question. Should not the question of determining what was meant by signature be settled by national law? Signature was the external representation of a personality. It was usually written by hand, but it might, in certain countries, be made by means of a sign, such as the affixing of a thumb-mark. The formula proposed was therefore calculated to satisfy Japan,

Baron CARTON DE WIART (Belgium) pointed out that in practice it was not on the basis of the signature as determined by the title or name that endorsements were given, but on that of the type of the signature. Banking-houses possessed specimens of signatures, which were, however, often illegible, and they checked the signatures on the specimens in their possession.

The PRESIDENT concluded from the discussion that No. 8 of Article 1 could be adopted as it stood. The word "signature" would be understood in the widest sense in accordance with the explanations of Baron Carton de Wiart and M. Percerou. Any other questions would be considered when the Convention was under discussion. Satisfaction would thus be given to M. Hammerschlag.

Article 1, No. 8, was approved.

6. Report of the Committee of Credentials.

M. DUZMANS (Latvia), Rapporteur, read the following report :

"The Committee appointed by the Conference to examine the credentials of the delegates proceeded to examine the documents communicated to it by the Secretariat. It notes that the thirteen following delegations are provided with full powers both for the negotiations and for the signature of the Convention :

Austria	Ecuador	Japan	Poland
Colombia	Finland	Luxemburg	Siam
Danzig (Free City of)	Germany	Netherlands	Turkey
Denmark			

"The delegates of the other States represented at the Conference have either received powers signed by the head of their States or the Minister for Foreign Affairs of their Governments authorising them to participate in the Conference, or have been accredited by means of a notification addressed to the Secretary-General of the League either by the permanent accredited representative to the League of Nations or by another diplomatic representative of the Government concerned. These States, who number nineteen, are as follows :

Belgium	Great Britain and	Latvia	Spain
Brazil	Northern Ireland	{Norway	Sweden
Bulgaria	Greece	Peru	Switzerland
Czechoslovakia	Hungary	Portugal	Venezuela
France	Italy	Roumania	Yugoslavia

“ The criterion which the Committee has applied in dividing the delegations into two groups is therefore that of the power to sign the acts of the Conference. The various documents by which the delegates in the second group of States have been accredited to the Conference, to the number of nineteen, authorise the delegates to take part in the Conference, and therefore to negotiate in regard to the acts to be drawn up, without mentioning expressly the power to sign.

“ On the other hand, while all the delegates in the first group of thirteen States are provided with full and formal powers, the documents accrediting to the Conference the delegates in the other group of States, numbering nineteen, have a certain diversity of form. They also include full and formal powers drawn up by the authorities of the central Governments. The number of States represented at this Conference is therefore thirty-two.

“ The Committee proposes that the Conference should ask the delegates belonging to the second group of States who have not been empowered to sign such documents as may be adopted to be good enough to procure authority to do so before the end of the Conference. The Czechoslovak delegation has asked the Committee to mention in its report that the full powers for signature by this delegation will arrive in a few days.

“ If the Conference should desire the Committee to make a second report some days before the end of its work, the Committee will be glad to do so.”

The conclusions of the report were approved.

FOURTH MEETING.

Held on May 14th, 1930, at 3 p.m.

President: M. J. LIMBURG.

7. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continued).

ARTICLE I, No. 6. — DECLARATION BY THE ITALIAN DELEGATE.

M. GIANNINI (Italy) wished it to be made clear in the Minutes that the decision taken with regard to Article I, No. 6, did not mean that the problem had been settled in a negative sense, since that would hinder a practical solution which was applied in many States without causing any difficulty.

AMENDMENT OF ARTICLE I, NO. 1, SUBMITTED BY THE CZECHOSLOVAK DELEGATION.

The PRESIDENT said that the Czechoslovak delegation had proposed the following addition : “ ...in the language employed in the instrument in formulating the order to pay ”.

M. SRB (Czechoslovakia) said that the reasons for this amendment would be found in the Preparatory Documents.¹ He only wished to remind the Conference that in countries like many of those in Central Europe, which had large and important racial minorities, it might happen that a bill of exchange was not drawn up entirely in one language. According to the text proposed by the experts, it would be difficult to say whether a bill of exchange drawn up in that manner would be valid or not. It might even be maintained that a bill of exchange, the text of which was not drawn up in a single language, was not valid ; if that interpretation was correct, many bills of exchange could be declared invalid, a result which would be at variance with the needs of commerce. The Czechoslovak delegation had presented its amendment in order to obviate an interpretation of that sort.

The order to pay, which was mentioned in No. 2 of Article I, was the most important part of the text of a bill, and, consequently, it would be enough if the same language was used for the denomination of the bill and for the wording of the order to pay.

The Czechoslovak proposal was essential for countries where several languages were spoken, but it might also be very useful for countries which had a considerable foreign trade. It was dangerous to no one, and therefore the Czechoslovak delegation hoped that the Conference would accept it.

M. BOUTERON (France) wondered whether the Czechoslovak amendment was not too narrow and even whether it was the best solution of the question, in the sense desired by the Czechoslovak delegation itself. It merely made it obligatory to translate the order to pay into the language in which the instrument was drawn up. In these circumstances, a bill of exchange might be drawn up in several languages, since the Czechoslovak amendment did not prevent that being done. It would perhaps be as well to have one and the same language for the issue of the bill, since all the terms relating to issue should be expressed in the same language.

¹ Document C.234.M.83.1929.II (C.I.L.C.1), page 51.

M. VISCHER (Switzerland), as representative of a country where several languages were used, wished to support the Czechoslovak proposal. In order to promote the extended use of bills of exchange, any undue attachment to form should be avoided. It would be enough to mention the material part of the bill, namely, the order to pay. Hitherto, the requirement that a bill of exchange should be drawn up in the same language had not existed in Switzerland. No undue importance need, however, be attached to this question, because, from information in his possession, it appeared that bills of exchange in Switzerland were nearly always drawn up in the same language.

The PRESIDENT said that the text of the draft regulation assumed that only one language was used in the instrument. There was therefore a legal question, namely: What was the validity of a bill of exchange drawn up in several languages? There would, he thought, be certain advantages in accepting the amendment put forward by the Czechoslovak delegation.

The amendment proposed by the Czechoslovak delegation was put to the vote and approved by 7 votes to 5.

Article 1 as a whole was approved at the first reading.

ARTICLE 2.

M. MOLENGRAAFF (Netherlands) announced that the Netherlands delegation had withdrawn its amendment to this article.¹

The PRESIDENT read the following proposal by the Italian delegation:

“ That the Conference should adopt the following rule:

“ ‘ Each State may prescribe the conditions under which a bill of exchange bearing one or more signatures but in which any or even all of the other requirements mentioned in Article 1, paragraphs 2 to 7, are wanting may be completed.’ ”

M. WEILLER (Italy) observed that the Italian proposal was based primarily on practical considerations.

A bill of exchange had many different functions and these functions were cumulative, so to speak. One of them, which grew daily in importance, was that the bill might serve as a guarantee. It was not only a promise to pay, but also an obligation to pay a sum which might be undefined. It might happen that the date on which a bill matured had not been fixed. Briefly, a bill might be a very elastic or dynamic instrument of credit and finance. This might be attained in many ways. One way was to issue an incomplete bill in which the date, the amount, or some other requirement indicated in Article 1, was omitted. It was customary to allow that a bill of that sort could be filled in by subsequent *bona fide* holders; and that often happened in Italy, where the so-called incomplete bills (*lettres d'échange en blanc*) were very important.

English law contained a particularly significant precedent.

According to Article 2, a bill which did not fulfil all the provisions of Article 1 would not be valid; but that seemed to prevent the possibility of completing later. Legal doctrine had made this point clear. There could be no doubt about the possibility of completing a bill of exchange; but the question was so important that M. Weiller did not conceive of the possibility of creating a modern law on bills of exchange without making at least some brief mention of this problem.

What the Italian delegation proposed had already been admitted, apparently everywhere, by legal doctrine and case law and it was also admitted by English law. This was a matter that should be clearly expressed in order to avoid difficulty.

M. SULKOWSKI (Poland) said that it was true that incomplete bills of exchange were frequently met with in practice. He therefore agreed with the Italian delegation that this question would have to be settled. The Italian delegation's object, however, was merely to permit each State to enact measures regulating the way in which such bills could be completed.

M. Sulkowski himself thought that the Conference could not be satisfied with a merely formal unification, but that the matter should be settled in substance. He drew attention to the following clause in the Polish law:

“ Any person signing a document not containing all the particulars which are required to constitute a bill of exchange incurs liability under the bill of exchange, unless he can prove that the document was subsequently completed against his will. He is, nevertheless, liable to a *bona fide* holder who has acquired the bill of exchange after it has been completed, even though the bill has been completed in an irregular manner.”

Polish law thus distinguished between two cases. If the bill had been put into circulation before it had been completed, the person who had signed the incomplete bill could object as against the holder that the bill had been completed against his will; but if the bill had been put into circulation after being completed, the debtor could set up no defence, provided the holder has acted in good faith.

The Polish delegation therefore proposed that not only should each State be allowed to reserve the right of making rules for incomplete bills, but also that the matter should be thoroughly investigated and finally decided. The problem should be settled in all countries in the same manner, whereas, if the Italian delegation's suggestion was followed, each State could adopt different provisions.

¹ Document C.234.M.83.1929.II (C.I.L.C.1), page 52.

M. QUASSOWSKI (Germany) thought that the meaning of the Italian proposal was not quite clear. In his opinion, two cases must be differentiated : the first, in which the bill was delivered and received with the intention that the holder should complete the blank portions ; and the second, where there was no such intention. If the Italian proposal covered only the first case, he had no objection to it, but if it covered the second case as well, he was unable to accept it, for he thought that the consequences of all defects in the issue of a bill should be settled uniformly

M. HERMANN-OTAVSKY (Czechoslovakia) supported M. Sulkowski's proposal on the understanding that all drafting modifications would be left to the Drafting Committee.

The PRESIDENT pointed out that there was no proposal by the Polish delegation.

M. GIANNINI (Italy) said that the question of substance would raise a long debate. He was quite ready to discuss the matter if the Conference wished to do so, but it was very difficult to proceed in that manner at the moment. The Italian delegation, therefore, had thought it more prudent and useful to keep to this formal solution, which left States free to settle the matter themselves. Incomplete bills of exchange existed ; that was a fact. The Italian delegation would, of course, be only too happy to agree to any solution that would settle the question of substance. Polish law was not the only law containing a rule on the matter. There were likewise Article 20 of the English Act and Article 550 of the draft Italian Commercial Code, which said :

“ Instruments which do not include certain of the provisions specified in the preceding article can be completed by the holder before presentation for payment. The completion of the bill must take place in conformity with any agreements which may have been made with the drawer ; but failure to observe such agreements cannot be set up against a *bona fide* holder.

“ The right to complete an incomplete bill of exchange expires three years after the date of issue of the bill, but this limitation cannot be set up against a *bona fide* holder who received the bill of exchange in its completed form.”

The Italian system was the result of long years of learning and great experience. M. Giannini thought it impossible to settle the question in plenary session, and suggested that a sub-committee should be appointed to draw up a formula on which the Conference would take a decision.

A previous question, however, had been raised by the German delegation. M. Quassowski has differentiated between two cases ; the second did not occur in practice, and M. Giannini thought it difficult even to imagine it. He drew the German delegation's attention to the provision that the completion of a bill must be carried out in conformity with the agreement made between the drawer and the holder. If a bill of exchange were issued without such agreement having been made, it would be no more than a scrap of paper. M. Giannini therefore did not think that M. Quassowski's apprehensions were justified.

In conclusion, he said that if the Conference was prepared to adopt a very cautious measure, it would be preferable, in his opinion, to keep to the Italian proposal, subject to drafting revision ; but his delegation was ready to discuss the substance of the question provided it was agreed that a sub-committee should draw up a formula based on the English and Polish laws, the draft Italian Code and any other proposals that might eventually be submitted, so that the formula selected could be examined later by the Conference.

M. HAMMERSCHLAG (Austria), while expressing his gratitude to the Italian delegation for having drawn attention to the question of incomplete bills of exchange, would have the greatest objection to any proposal that the question could be settled by a reservation to be made by each country, especially when a reservation of that kind was formulated in such general terms as those of the text proposed by the Italian delegation. In this connection, he was in complete agreement with M. Quassowski. A clear distinction must be made between bills which the drawer had left incomplete with the intention that they would be filled in by the drawee and bills in which some specifications were missing. True, it was not always possible to detect the difference ; but it was a question of proof. In conclusion, M. Hammerschlag thought that it would be better to adopt M. Giannini's proposal that the question should be decided in substance, and he agreed that the matter should be referred to a sub-committee.

He added that Austria had a law very similar to those cited by the representatives of Poland and Italy.

Finally, any general reservation would involve a complete revisal of Article 1.

M. SULKOWSKI (Poland) explained, first, that the Polish delegation had been unable to present a formal amendment, since the Italian proposal had only been distributed at the beginning of the meeting.

He emphasised the importance of the substance of the question and thought that a decision should be taken. He did not press for the acceptance of the Polish solution, if the Conference thought it too complicated. It was quite possible that the provisions of the Italian Code or those of the English law were preferable. He thought, too, that the matter should be referred to a sub-committee.

The PRESIDENT, before putting the Italian proposal to the vote, wished to point out that Article 2 dealt with the validity of bills of exchange and not with the establishment of the rights of the holder or any other signatories of a bill. Article 2 provided for an exception to the essential parts of Article 1, which the Conference had just adopted. As Tartuffe said, adjustments may be made with Heaven, and it was the same with the essential points of Article 1. The adjustments in regard to the validity of bills of exchange could be found in Article 2.

The President was surprised that M. Giannini, who was usually the soul of logic, did not appear at the moment to be acting up to his own principles. He had often said that it was essential that as few reservations as possible should be made ; yet the first reservation proposed was an Italian one.

The President trusted that the Conference would not adopt a reservation at the present stage. He pointed out that there was really no question at the moment of the holder's rights. He stressed the fact that Article 2 contained not even one single word printed in italics. This meant that, after careful examination, the Committee of Experts had entirely agreed with the text of the article as laid down at The Hague in 1912. In fact, there was complete agreement between the text of The Hague and that of the Committee of Experts. This should make the Conference especially cautious.

The President would put the Italian amendment to the vote, but he asked the Italian delegation if it would not be better to say at the end of its amendment "Nos. 2 to 7" instead of "paragraphs 2 to 7", since the reference was to the numbers of Article 1.

M. HAMMERSCHLAG (Austria) thought that before a vote was taken on the Italian amendment it would be better to refer the question to a sub-committee.

The PRESIDENT disagreed with this suggestion, because the question raised by M. Giannini referred to the matter of the holder's rights which did not come under Article 2. The Conference could consequently accept or reject the Italian amendment without touching in any way upon the question of rights.

M. GIANNINI (Italy) drew the President's attention to the fact that the Italian proposal dealt with the first paragraph of Article 2, and pointed out that if the Conference adopted Article 2 without having taken the Italian amendment into account, it would be very difficult to reconsider the amendment later.

He wished, therefore, to raise a point of order : since the proposal presented by the Austrian and Polish delegations was much further removed from the text of Article 1 than the Italian amendment, he would be prepared to withdraw his proposal if the Conference decided to adopt the text of the Austrian and Polish delegations.

The PRESIDENT found himself in a very embarrassing situation, for, at the moment, he did not know the text of the Polish proposal in favour of which M. Giannini was prepared to withdraw his amendment.

M. GIANNINI (Italy) thought that the best way would be for the Conference to appoint a sub-committee to produce a formula. If this formula proved acceptable to the Conference, M. Giannini would withdraw his proposal, but if not, the Italian amendment could then be re-considered.

M. PERCEROU (France) pointed out that Article 2 dealt with the case of a bill from which certain of the essential requirements had at the outset been unintentionally omitted, and did not take the question of incomplete bills of exchange into account. The latter question was very complete and seemed to be beyond the scope of exchange law ; also, the Hague draft Convention did not deal with it at all.

The PRESIDENT suggested that the Conference should vote on the Italian amendment, on the understanding that the question of the holder's rights remained open.

M. QUASSOWSKI (Germany) supported the suggestion that the proposal should be referred to a sub-committee. The Italian delegation's amendment was quite new and he was unable to give any opinion on it at the moment.

The PRESIDENT thought that the Conference might agree with M. Percerou's argument that Article 2 referred only to instruments which were intended to be complete bills, but in the drawing-up of which one or more of the essential items had been omitted, whereas the question raised by M. Giannini concerned the legal consequences of an incomplete bill.

He therefore suggested that the Italian delegation should hold over its amendment and confer with M. Sulkowski, M. Hammerschlag and M. Quassowski on the question of incomplete bills of exchange. A draft could be submitted later to the Conference.

M. GIANNINI (Italy) accepted the President's proposal and suggested that Mr. Gutteridge and M. Percerou should also be asked to help in this work.

M. PERCEROU (France) and Mr. GUTTERIDGE (Great Britain) were pleased to accept this invitation.

The PRESIDENT reminded the Italian delegation that it could consult any member of the Conference.

The first and second paragraphs of Article 2 were approved provisionally.

The PRESIDENT said that the Czechoslovak delegation had proposed the addition of the following sentence to paragraph 3 of Article 2 :

"If more than one place is specified beside the name of the drawee, the foregoing provision shall apply to the first-named place."

M. HERMANN-OTAVSKY (Czechoslovakia) explained that the question raised by this amendment was not a theoretical one ; the question was that of a practical provision, which had for that reason been embodied in Czechoslovak law. It related to the case where there were several drawees and where the place of residence was mentioned beside the name of each drawee. There was, too, the case of a company which had its centre of operations in a different place from that of its head office. The provision proposed by the Czechoslovak delegate would settle the question of the place where payment was to be made in cases where a company was mentioned in the following terms : " The X Co., Paris and London."

M. ARCANGELI (Italy) said that cases of this kind raised a number of delicate problems. Two questions had been covered by the Czechoslovak proposal, but there were others which had been disregarded and which occurred in practice. It might happen that where there were several drawees they all had the same habitual residence or different habitual residences. The drawees might be mentioned jointly on the bill or, alternatively, one only might be mentioned. Again, they might be mentioned successively, one after the other.

Each of these cases required careful investigation and the solutions might be different. That proposed by the Czechoslovak delegation did not appear perfect to M. Arcangeli.

For example, if several places were specified, might it not be held that the intention of the drawer had been to allow the holder the possibility of choosing between them ? An instrument issued by the Italian bank of issue offered the holder the possibility of cashing it at any branch of the bank. The Czechoslovak proposal was quite different and, while it was justified in certain cases, it would not apply to all.

The literature of all countries on bills of exchange was conspicuous for the great variety of arguments and solutions in connection with this problem. The best course would be to mention the question in order to bring out its complications, but at the same time to make it clear that it would be better not to settle it, and that jurisprudence would find the most appropriate solution for individual cases.

This question raised a number of others. It would be possible to consider the case of several endorsers, several beneficiaries, several givers of " avals ". All these were questions which had been solved by legal doctrine, but which were very difficult to determine in a law, especially when that law had to be uniform and to apply to all countries.

The best course would be to put all these complicated questions on one side, to leave them to be solved by legal doctrine and to keep silence ; silence had not so far hampered the development of the bill of exchange and would allow of appropriate solutions for different cases.

The PRESIDENT reminded M. Hermann-Otavsky that it might be difficult to determine the first place, since the names of the places might not be put one after the other, but more or less together and on the same footing.

M. HERMANN-OTAVSKY (Czechoslovakia) realised that in that case the question would be difficult to settle, but legislation could only be made for general cases and, in principle, people wrote from left to right.

He was very grateful to M. Arcangeli for emphasising the practical importance of the question ; moreover, he knew that jurists had concerned themselves with it. He himself had already pointed out, and he wished to stress the point, that, in his opinion, the only object was to attempt to solve the question. He did not wish to say that the proposed provision was the true solution ; in spite of that, it existed in the Czechoslovak exchange law and had been borrowed from Hungarian law. M. Arcangeli had said that the question was a practical one which should be left to legal doctrine, but it was surely to settle such cases as these that the present Conference had been convened.

The PRESIDENT hoped that he would not be criticised for entering into legal subtleties. It was from a sense of conscientiousness that he had pointed out that a case might arise in which the different places were not mentioned in order. In such a case, it would be very difficult to decide which was the first place.

M. HERMANN-OTAVSKY (Czechoslovakia) wondered whether a bill in which several places of payment were mentioned was valid. If it were valid — and he thought it was valid — where should presentment and protest be effected as conservatory acts ? That was a very delicate question, and the Czechoslovak delegation had suggested a compromise which, in its opinion, was at least calculated to provide a definite solution for the question in its most practical aspects.

The amendment proposed by the Czechoslovak delegation was put to the vote and defeated.

ARTICLE 2 THIRD AND FOURTH PARAGRAPHS.

The third and fourth paragraphs of Article 2 were approved at the first reading.

Article 2 as a whole was approved at the first reading.

ARTICLE 3, FIRST PARAGRAPH.

The first paragraph was approved at the first reading.

ARTICLE 3, SECOND PARAGRAPH.

The PRESIDENT said that the Netherlands delegation had submitted an amendment that Article 3 should read as follows :

" A bill of exchange may be drawn payable to drawer's order.

" It may be drawn for account of a third person.

" A bill of exchange drawn on the drawer himself shall be deemed to be a promissory note."

M. MOLENGRAAFF (Netherlands) pointed out that a bill of exchange drawn on the drawer himself was not an order to a third person, but was really a note by which the self-styled drawer bound himself to pay.

M. ARCANGELI (Italy) said that the Italian delegation were not in favour of the Netherlands amendment. From the economic standpoint, it might be said that a bill drawn upon the drawer was equivalent to a promissory note. From the legal standpoint, it was necessary to discriminate. When the drawer accepted the bill, he contracted a principal liability, just in the same way as a person who signed a promissory note ; but before acceptance the drawer who had drawn on himself had contracted a liability in recourse ; if he did not accept, the liability in recourse subsisted, and all provisions relating to persons against whom recourse might be exercised applied to him.

M. QUASSOWSKI (Germany) suggested that it would be better to keep to the text of the experts for the following reasons :

First, the drawer should be allowed to determine the conditions under which he assumed his liability. In particular, he should be allowed to make them depend on the drawing-up of a protest. In his opinion, the intention of the drawer should be respected, and this would be completely ignored if the Netherlands proposal was adopted.

Secondly, the form of the bill should be decisive. A bill of that sort had the same character as a draft, and this external circumstance should be decisive.

The amendment proposed by the Netherlands delegation was put to the vote and defeated.

The second paragraph of Article 3 was approved at the first reading.

ARTICLE 3, THIRD PARAGRAPH.

The PRESIDENT said that the Japanese delegation had submitted a proposal that this paragraph should be deleted.

M. SHIMADA (Japan) said that the Japanese delegation had no objection to the third paragraph in substance. They asked for its suppression merely because the relations contemplated in that case were not, properly speaking, within the sphere of bills of exchange, but rather within that of the law of agency (*mandats*).

The proposal proposed by the Japanese delegation was defeated.

The third paragraph was approved at the first reading.

Article 3 as a whole was approved at the first reading.

ARTICLE 4.

M. HAMMERSCHLAG (Austria) pointed out that Article 4 was the first article which differed somewhat in text from that adopted at The Hague. The Committee of Experts had used the word "locality" instead of the word "place". He asked if it was clear that the word "locality" referred to a geographical situation.

M. PERCEROU (France), speaking as Chairman of the Committee of Legal Experts, explained that "locality" comprised several possible "places" of payment. For example, if a bill was payable at Geneva, the locality was Geneva, but the bill might be payable at different places in the town, either at the residence of the drawee or in a bank. It was therefore quite possible to have several "places" of payment in the same "locality".

M. HAMMERSCHLAG (Austria) was satisfied by M. Percerou's explanation.

M. GIANNINI (Italy) asked whether, from the linguistic point of view, it was certain that this definition of "locality" was correct.

M. PERCEROU (France) replied that, according to the usual legal phraseology, the word "locality" had the meaning which he had indicated. If M. Giannini could find a better expression, M. Percerou would be quite ready to accept it. The Committee of Experts had considered the possibility of using the expression "*commune*", but this word had a very precise meaning and could only apply to an administrative district which did not exist in all countries. The Committee had therefore preferred the word "locality".

The PRESIDENT opened the discussion on the following German amendment :

"A bill of exchange may specify a place of payment other than the residence of the drawee. It may specify a third person by whom it is payable, either at the drawee's residence or elsewhere."

M. QUASSOWSKI (Germany) explained that, in the opinion of the German delegation, a definition of domiciled bills of exchange ought to take two different cases into account : the bill might be payable elsewhere than at the residence of the drawee, either by the drawee himself or by some other person. It seemed essential to differentiate between the place of residence of the drawee and the place of payment, for payment could be effected in a place other than the residence of the drawee. In such a case, there was difference of place.

It might also happen that there was a difference of person ; the drawee and the person who had to pay might be different. But there was a domiciled bill of exchange in both these cases.

M. SHIMADA (Japan) said that, as the results of the German amendment would be the same as those of an amendment which the Japanese delegation had intended to move, the latter would withdraw its amendment.

M. BOUTERON (France) felt some doubt about the wording of the German proposal. He could not understand how a bill of exchange could be domiciled, namely, how it could be made payable at the address of a third party at the residence of the drawee (*chez un tiers au domicile du tiré*). He could find no example in French law for a person being his own domiciliary (*domiciliataire*).

On the other hand, M. Bouteron feared that the text of Article 4, as drawn up by the Committee of Experts, might be open to misunderstanding. It might, be thought that the words within brackets at the end of the article, "domiciled bill"; referred only to the phrase "or in another locality", whereas in reality they referred to "the residence of a third person either in the locality where the drawee resides or in another locality". To avoid all misunderstanding, he suggested the following text :

"A bill of exchange may be payable at the residence of a third party (domiciled bill), either in the locality where the drawee resides or in another locality."

Mr. GUTTERIDGE (Great Britain) understood there would be two authentic texts for the document under discussion. He warned the Conference that it would be necessary to be very careful about the use of the word "domiciled", because in English practice "domiciled" would include a case where a bill was payable elsewhere than at the residence of the drawee. If it was payable at a different address in the same locality, it would be called a domiciled bill in English practice. He believed that French practice was the same, but he was not certain whether the German delegation had that point clearly in mind.

M. PERCEROU (France) thought that the Conference was unanimously agreed on the substance of the matter and that the only difficulty was one of terminology. He was afraid that the German amendment used the word "domicile" in a sense that did not correspond to the French meaning of the word. He took the example of a bill of exchange drawn on a drawee inhabiting a certain number in a certain street in Berlin, with the stipulation that it was payable at a German bank, for example, the Diskonto Gesellschaft. It was impossible to say that such a bill was payable at the residence of the drawee, at such a street and such a number in Berlin. The instrument was payable at the Diskonto Gesellschaft.

The PRESIDENT thought that he ought to point out that the German amendment was to a very considerable extent at variance with the idea of Article 4 as proposed by the Committee of Experts. According to Article 4 of the Committee of Experts and of the Hague Convention, a bill was only termed "domiciled" if it was payable at the residence of a third party. The first sentence of the German amendment related to something different, namely, a question for which reference would have to be made to the paragraph of Article 2, which said : "In default of special mention..."

As for the question raised by Mr. Gutteridge concerning the word "domicile", it should be remembered that the International Conference for the Codification of International Private Law, held at The Hague in 1928 had, to avoid all confusion, replaced the word "domicile" in all cases by the expression "habitual place of residence"; but that was a question which could be examined later by the Drafting Committee.

M. HAMMERSCHLAG (Austria) emphasised the difference between the German proposal and the text of Article 4. Article 4 covered two cases. There was, however, a third case, namely, that of a bill payable in a locality different from that of the drawee, but without any mention of a domiciliary (*domiciliataire*). There might, for example, be a bill of exchange drawn on a person living at Geneva, but payable in Zurich. This case, which was not covered by the text of the Committee of Experts, was covered by the German amendment. For that reason, he thought the German proposal was entirely justified, subject to drafting amendments.

The PRESIDENT replied that a bill of exchange drawn upon a person inhabiting Geneva but payable in Zurich was not dealt with in Article 4, but in Article 1, in which it was said that a bill of exchange must specify the place where payment was to be made. A bill of exchange drawn on Mr. "A" living at Geneva but payable in Zurich was not a domiciled bill within the meaning of Article 4.

Baron CARTON DE WIART (Belgium) agreed with the President.

The text might perhaps be simplified by eliminating the idea of domiciled bills, which was not familiar to all legislations. The text might read "payable at the address of a third person" (*chez un tiers*).

M. QUASSOWSKI (Germany) said that the point which interested him was as follows :

If the bill was payable in the place of residence of the drawee but at the address of a person other than the drawee, would that be a domiciled bill ?

From the Hague Regulations it would follow that in this case the bill would be a domiciled bill. That at least was the view of the German Government. The observations made by the German Government on Article 4 of the Hague Regulations were to the effect that the term "domiciled bill" within the meaning of the Hague Convention applied not only to bills of exchange payable at the residence of the drawee, but also to bills which were payable by a third person at the place of residence of the drawee.

M. Quassowski held that a bill was also a domiciled bill if it were payable at the residence of the drawee, but at the address of a person other than the drawee. The object of the German proposal was to settle this question. Perhaps it would be necessary to improve the proposed draft. It might, for example, be formulated as follows :

“ A bill of exchange may indicate a place of payment other than the residence of the drawee ; it may indicate a third person at whose address it is payable either in the locality where the drawee resides or in another place (domiciled bill).”

M. PERCEROU (France) thought that, in the example given by M. Hammerschlag, that of a bill drawn on Mr. “ A ” in Geneva and payable in Zurich, without any other indication, the bill would be an incomplete bill and not a real domiciled bill, since the place of payment at Zurich had not been specified.

He thought that when a bill was payable at a branch establishment it was to be considered as payable at the address of the same drawee (*chez le même tiré*). That was not what was usually understood by a domiciled bill. The latter was payable at the address of a third person living in the same place as the drawee or elsewhere. But a bill payable at the address of the drawee was not domiciled. That at least was the view of the Committee of Experts. In the example given by M. Hammerschlag, the bill, being payable at the address of the drawee, irrespective of the establishment of the drawee where it was payable, was not really domiciled, that was to say, payable at the address of a third person.

M. HAMMERSCHLAG (Austria) pointed out that Article 26 read :

“ When the drawer of a bill has specified a place of payment other than the residence of the drawee, without mentioning the domiciliary, the acceptance must specify the person who is to pay the bill.”

It followed from this that the example he had quoted might occur.

The bill in question was therefore a domiciled bill which did not specify the domiciliary. This case, which did not seem to be covered by the text of the Committee of Experts, would be covered by that of the German delegation.

M. PERCEROU (France) was of opinion that Article 26 dealt with another question, namely, acceptance.

M. HAMMERSCHLAG (Austria) thought that a bill drawn upon Mr. “ A ” at Geneva and payable at Zurich was a domiciled bill according to Article 26. It was the acceptance which indicated at whose address the bill was payable at Zurich, but this fact was unknown at the time of issue. This case was not covered by the present wording of Article 4.

The PRESIDENT considered that Article 4 had no other object than to define a domiciled bill. In Article 26 the point was to know who was to accept the bill and in what place. If the latter article was not well drafted, it should be improved. At the moment, however, the only point under discussion was the definition of domiciliation.

M. HAMMERSCHLAG (Austria) thought Article 26 very well drafted. In any case, it was necessary to know whether the bill which he had given as an example was a domiciled bill.

The PRESIDENT agreed that the question would have to be settled.

The Committee of Experts had not recognised as a domiciled bill one drawn upon Mr. “ A ” at Geneva and payable at Zurich. The Conference would decide the point.

M. HAMMERSCHLAG (Austria) said that under German and Austrian jurisprudence such a bill was regarded as domiciled. Moreover, a case of the kind he had mentioned might certainly arise in practice.

M. PERCEROU (France) did not think that the question had much practical importance. When the bill fell due, it was necessary for the holder to know the place where he would have to present it. How would he know this fact ?

The PRESIDENT recalled that, in the view of the Committee of Experts, the criterion of domiciliation was that there should be a third person in the case.

M. HAMMERSCHLAG (Austria) said that in the case under discussion there was certainly a third person, but he was unknown at the time of issue.

The PRESIDENT thought that, according to the example quoted, the drawee himself would be obliged to pay at Zurich.

M. PERCEROU (France) thought that, in these circumstances, a text might be found which would satisfy M. Hammerschlag. He would suggest, for example, the formula : “ A bill of exchange payable at the address of a third party specified or to be specified before maturity.”

This was a question which might be thought over. Bills of exchange drawn on one locality and payable in another without any indication of a definite residence were not, he thought, very common in French and Belgian practice.

M. GIANNINI (Italy) thought this question of no importance. It sufficed that under No. 5 of Article 1 the place of payment should be specified. Personally, he was inclined to propose the suppression of Article 4. He did not think that the question of domiciled bills need be settled. The domiciled bill might be allowed to subsist to a certain degree.

What it was essential to avoid was the address being inadequately specified. The cases to be considered were not covered by the provision of No. 5 and a formula must be found to cover them. In 1910, the following formula had been adopted :

“ A bill of exchange may be payable at the residence of a third party in the place of the residence of the drawee. It may be also paid in another place.”

In the present formula, the word “ locality ” had been substituted for the word “ place ”. There did not seem to be much use in covering these two cases in Article 4, thus explaining No. 5 of Article 1 again, and in an international convention it was better to omit things which served no useful purpose. In these circumstances, M. Giannini would prefer the suppression of Article 4. In any case, if the Conference so desired, it was possible to retain what had been decided by the Conferences of 1910 and 1912. The formula proposed by the experts did not involve any serious disadvantages. Were there any other cases to be covered ? The German delegation appeared to think so. It said, in its amendment : “ A bill of exchange may specify a place of payment other than the residence of the drawee.” That case could be covered by No. 5 of Article 1. The German proposal continued : “ The bill may specify a third by whom it is payable either at the drawee's residence or elsewhere.” The German delegation had, in brief, repeated No. 5 of Article 1 in a more extensive form.

In conclusion, M. Giannini would leave the matter to the Drafting Committee, as the question did not deserve prolonged discussion in plenary session.

M. VISCHER (Switzerland) thought that the provisions of Article 4 were of practical importance, as the article defined the cases in which a bill might be regarded as a domiciled bill. A domiciled bill must be presented at the residence of the domiciliary and protested against the latter.

He agreed with the German delegate that, according to the rules adopted at The Hague, a domiciled bill was a bill which fell under the two cases covered by Article 4. It would perhaps be clearer to adopt the proposal of M. Bouteron and say : “ A bill of exchange may be payable at the residence of a third person (domicile bill), either in the locality where the drawee resides or in another locality.” Thus it would be clear that the expression “ domiciled bill ” related to the two cases. Except for this amendment, the text of Article 4 as proposed by the experts might be maintained. The cases discussed were covered by the article. M. Vischer did not think that the present text excluded bills of exchange payable at the branch office of a third party, as appeared from the proposal of the German delegation. He believed that in the minds of those who had drafted the Hague Regulations, for the case mentioned by M. Hammerschlag, the intention had been to refer not to a domiciled bill, but to an ordinary bill of exchange as covered by No. 5 of Article 1. If, however, the Conference thought that the draft Regulations were not sufficiently clear, it would be necessary to add a clause which would remove all doubts.

M. SCHELTEMA (Netherlands) pointed out that the proposed amendment began by saying that a bill of exchange might indicate a place of payment other than the domicile of the drawee. He did not think that such a provision was necessary, since Article 1 stipulated that the bill must indicate the place where it was payable, but did not say that it must be payable at the domicile of the drawee.

What was a domiciled bill ? M. Percerou had said that it was a bill which must be paid at the address of a third person. M. Scheltema would prefer the expression “ by a third person ”.

M. PERCEROU (France) said he must maintain the expression “ at the address of a third person ”.

M. VISCHER (Switzerland) observed that a domiciled bill was a bill of which payment must be demanded of a third person.

M. PERCEROU (France) rejoined that payment must be demanded at the address of a third person.

M. VISCHER (Switzerland) said that Article 4 stipulated that a bill of exchange could be payable at the residence of a third person. It was possible that the drawee had a residence at the address of a third person. In that case, the bill was no longer a domiciled bill.

M. PERCEROU (France) said that, if the bill was payable at the address of the drawee, it was clear that the bill was not domiciled at the address of a third person. The drawee might have several establishments ; and he determined the establishment at which the bill was payable. It was, nevertheless, payable at this address and not at that of a third person.

M. VISCHER (Switzerland) thought that, if the bill was payable by the drawee in a place other than his residence, the bill was no longer a domiciled bill. It might be a bill payable at the residence of a third person. For that reason, he thought the criterion applied in Article 4 not quite correct. He would agree to a text saying that a bill of exchange might be payable “ at the address of a third person ” or, still better, “ by a third person, either in the locality...”

The PRÉSIDENT, with reference to the proposal of the Netherlands delegate, observed that due credit must be given to the Hague Convention and the Committee of Experts. In connection with the provision in Article 4 that a bill of exchange might be payable at the residence of a third person, the Latin maxim of the Digests, *verba valent usu*, must be borne in mind. The experts had evidently meant at the residence of a third person to the exclusion of the residence of the drawee. If by chance the drawee had his residence at the address of the third person, the bill

was not a domiciled bill, but a bill payable at the residence of the drawee, which happened by chance to be the residence of a third person. He therefore thought that Article 4 was quite clear. To replace the expression "residence of a third person" by the expression "address of a third person" would amount to saying exactly the same thing in different words. The expression "by a third person" would imply an entirely different conception.

He would ask the German delegation whether, as he understood the matter, it wished to modify its amendment.

M. QUASSOWSKI (Germany) replied that the effect of the German amendment was to include in the idea of a domiciled bill the two cases of *distinctio loci* and *distinctio hominum*. The German delegation thought that such had been the intention of the Hague Conference. He had also understood that the Swiss delegate was of the same opinion. He maintained the German amendment, subject to drafting amendments.

The amendment submitted by the German delegation was defeated by 14 votes to 9.

The PRESIDENT, before putting Article 4 as a whole to the vote, asked whether the Conference was prepared, in principle, to substitute in all cases for the word "domicile" the expression "habitual place of residence".

M. ASSER (Netherlands) observed that a distinction must be made between cases in which a physical person was involved and those in which a moral person was involved. In the latter case, it was impossible to refer to habitual place of residence; it would be necessary to refer to the office of management.

The PRESIDENT agreed with M. Asser that, if the Conference replaced the word "domicile" by the words "habitual place of residence", it must find another expression to cover the case of moral persons, such as companies, etc.

He proposed that the Conference should accept the proposal of M. Bouteron, that Article 4 should be drafted as follows:

"A bill of exchange may be payable at the residence of a third person (domiciled bill), either in the locality..."

M. Bouteron had proposed to use the expression "at the address of a third person". This question, however, might be settled by the Drafting Committee.

M. SCHELTEMA (Netherlands), in reply to the President's observations, pointed out that Article 26 of the draft covered the case of a domiciled bill in which the name of the domiciliary was not indicated and stipulated that the acceptance must specify the person who was to effect payment. It did not seem to him that there was any very great difference between the person who was to effect the payment and the person who was to pay.

Article 4 as a whole, with the amendment proposed by M. Bouteron, was approved at the first reading.

FIFTH MEETING.

Held on May 15th, 1930, at 10 a.m.

President: M. J. LIMBURG.

8. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes: First Reading (Continued).

ARTICLE 5, FIRST PARAGRAPH.

The PRESIDENT read the following amendment submitted by the Netherlands delegation:

"The drawer may stipulate in the body of the bill of exchange that the sum payable shall bear interest."

M. MOLENGRAAFF (Netherlands) pointed out that the specification of interest was admitted by Anglo-Saxon law in all bills of exchange. Why should it not be admitted for bills payable at a certain date? It might be said that the stipulation was not necessary in such bills, because the drawer could include the interest in the sum payable, but that was not a decisive argument for prohibiting the stipulation. The amendment had the advantage of diminishing the divergence between the Anglo-Saxon law and the unified law which it was hoped to establish.

M. DA MATTA (Portugal) pointed out that the French Government's letter of August 21st, 1929, stated in regard to Article 5:

"Stipulations with regard to interest in a bill of exchange are rare and likely to cause difficulties. Accordingly, it would be desirable either to declare non-written the stipulations with regard to interest in all bills of exchange to omit in the draft any provision concerning those stipulations. . ."

The Portuguese Government fully supported this declaration. Portuguese law was absolutely incompatible with the proposed amendment.

M. QUASSOWSKI (Germany) said that, according to German law, a clause in bills of exchange stipulating interest was deemed to be unwritten. The German delegation, however, admitted that the clause could be introduced into bills payable at sight or at a certain time after sight. On the other hand, there was no reason for allowing the clause for other bills, seeing that when a bill was payable on a specified date, or at a certain time after that date, interest could always be included in the sum stated in the bill. He agreed that a stipulation with regard to interest in a bill of exchange was rare and might give rise to difficulties. The clause should therefore be admitted as rarely as possible. For these reasons, the German delegation was unable to support the Netherlands proposal.

Mr. GUTTERIDGE (Great Britain) said that, whenever a proposal was one which brought the Continental system nearer to the Anglo-Saxon system, he desired to be taken as supporting it.

M. HAMMERSCHLAG (Austria) said that from his experience it was not necessary to make a stipulation with regard to interest in bills of exchange, except those payable at sight or at a certain time after sight. If the proposed clause were introduced into the law and if the custom spread, there would be great difficulties for the banks which would have to calculate the interest.

Prince VARNVAIDYA (Siam) supported the Netherlands amendment. The Siamese Government considered that the right to stipulate with regard to interest when once granted in principle should be extended to all bills and not confined to certain bills.

M. DE LA VALLÉE POUSSIN (Belgium) thought it might be of use to remind the Conference that in authorising the stipulation with regard to interest in bills of exchange the Hague Conference had been prompted by practical considerations. It had had in view the protection of shipping interests. In the case of long distance sea transports, the date of the receipt of the goods could not be foreseen exactly. It was impossible to know exactly the date of maturity within eight or fifteen days ; and, like his Austrian colleague, the Belgian delegate felt that the general introduction of the stipulation of interest in bills of exchange payable at a specified date was undesirable.

M. Deoclecio DE CAMPOS (Brazil) said that Article 44 of the Brazilian law laid down as a strict principle that the stipulation with regard to interest was deemed not to be written. For that reason, he supported the French delegate's argument, which was supported by the Portuguese delegation likewise.

*The amendment proposed by the Netherlands delegation was defeated by 20 votes to 4.
The first paragraph of Article 5 was approved.*

ARTICLE 5, SECOND PARAGRAPH.

The PRESIDENT said that the Polish delegation had submitted the following text :

“ The rate of interest must be specified in the bill ; in default of specification, the legal rate of the place of payment shall apply.”

M. NAMITKIEWICZ (Poland) pointed out that the uniform regulation, as modified by the Committee of Experts, stipulated that the rate should be 5 per cent. In stating that the clause was deemed to be unwritten, they had desired to indicate that, when the rate of interest was not specified, it would not be fixed at 5 per cent, because it did not seem very practical to specify any definite rate. What they had actually said, however, was that in that case nothing would be payable as interest, notwithstanding an agreement for the payment of interest in the bill itself.

The Polish amendment was based on Polish law and took into consideration the economic situation of the various countries. At the same time, it was more logical, since under the first paragraph of Article 5 it was allowed in principle that bills of exchange payable at sight or at a certain time after sight might be productive of interest. That had the advantage of not favouring the debtor unduly to the detriment of the holder.

The International Chamber of Commerce, moreover, had suggested that, in default of specification, the rate of interest should, at the option of the bearer, be either the rate of interest of the bank of issue or the market rate. It was true that the rate of the bank of issue was perhaps more elastic than the legal rate, but was that extreme elasticity really indispensable ? The Polish Government were in favour of the official rate, which was usually nearly the same as that of the bank of issue.¹ Finally, in M. Troullier's report, it was stated that it was necessary to take into account the market rate and the legal rate at the holder's place of residence. All the above views appeared, therefore, to favour the Polish proposal.

M. DE LA VALLÉE POUSSIN (Belgium) supported the Polish proposal in principle. If the drawer of a bill of exchange inserted a clause stipulating that it should bear interest but neglected through inadvertence to indicate the rate, it would be desirable to make good his omission by the stipulation of a specified rate of interest. To say that the stipulation with regard to interest should be deemed to be unwritten would constitute too severe a sanction for a mere case of forgetfulness. It would be more legal to make good the negligence of the parties by specifying a rate of interest than by nullifying an engagement, of which the existence, if not the scope, was certain.

¹ See Preparatory Documents — document C.234.M.83.1929.II (C.I.L.C.1), page 52.

On the other hand, M. de la Vallée Poussin preferred the proposal in the Hague Uniform Regulation that the rate should be 5 per cent to the solution of the Polish delegation. In the first place, it was not sure that there were any legal provisions fixing the rate of interest in all the countries in which a bill was payable. Secondly, in countries passing through a severe economic crisis, the legal rate fell into disuse and the business rate might be much higher.

M. GIANNINI (Italy) considered that since the Hague Conference all possible systems had been examined. The simplest possible formula should be adopted.

The French delegation, with the support of the Portuguese, had proposed the deletion of the article, which would amount in practice to a system of complete liberty, for when no undertaking existed each State could settle the problem as it thought fit. That solution was dangerous; the advantage of a rule was that it gave an adequate measure of security. The Hague Regulation instituted a very simple, if somewhat mechanical, system in specifying that the rate of interest should be 5 per cent. On the other hand, the experts had suggested a system which seemed to be illogical, because, if the parties agreed that the sum should bear interest but failed to specify the amount, it would be contrary to their desire to state that the clause should be deemed to be unwritten.

The Polish proposal was logical, perhaps too logical. It thought that the situation of the market should be taken into account. Did that mean the state of the market at the time when the instrument was issued or at the time when it was payable? The rate might fluctuate from time to time.

The Polish delegation had also endeavoured to find a logical system and had proposed the legal rate. The same objection arose, however. Did it mean the legal rate at the time when the bill was put into circulation or at the time of payment?

M. NAMITKIEWICZ (Poland) explained that he meant the legal rate at the time of payment.

M. GIANNINI (Italy) replied that the rate might vary between the two dates. The objection to the legal rate was that it would be very difficult for the drawer to know what would be the situation in the country in which the bill of exchange would be paid. The Italian delegate therefore came back to the advantage of specifying a contractual rate, namely, 5 per cent, and proposed that the Conference should return to the Hague formula.

M. BOUTERON (France) observed that those who had drawn up the draft law, in their anxiety to avoid anything wanting in legal force, had rightly established an assumption of intention in certain cases where the statements that usually appeared in a bill of exchange (maturity, place of payment) were lacking but he thought that the Conference should not add to the assumptions already allowed for.

As the Belgian delegate had pointed out, there was no doubt that the drawer, in inserting a stipulation for interest, had given evidence of a certain intention, but as this clause was not normal and as its introduction into the text of the uniform law was not essential, there was no reason to grant additional interest *ipso facto* in cases where the rate had not been expressly mentioned. It was inadmissible that a trader who made a demand of so special a character as a provision for additional interest should not pay particular attention in drawing up the bill, since he alone had the indispensable information for fixing the rate.

Moreover, the proposal for the application of the legal rate or the market rate did not appear desirable. Though there was at present no need to fear the frequent and wide fluctuations in rates that had occurred since the war, it should be remarked that a legal rate did not exist in every country, and this rate was not always appropriate to business requirements. On the other hand, if the rate of interest was fixed, as had been proposed, by reference to the discount rate, it might be awkward for certain markets to determine the latter rate.

In these circumstances, if in order to protect shipping interests it was thought necessary to allow the drawer to stipulate additional interest in the case of the issue of a bill of exchange at sight or at a certain time after sight, it would be desirable to decide that if the drawer had neglected to fix this rate of such interest the clause should be deemed not to be written.

M. SULKOWSKI (Poland) recognised that the Italian proposal, which consisted in fixing the rate at 5 or 6 per cent, was extremely simple. Nevertheless, a solution of that sort would not be acceptable to countries like Poland, where money was extremely dear. Though he did not oppose a rate of 5 or 6 per cent, M. Sulkowski wished to reserve the right of countries where the legal rate was much higher to prescribe that for bills issued in their territory the rate laid down in Article 5 could be replaced by the legal rate. The same question would arise during the discussion of Articles 47 and 48, dealing with the question of the rate for the calculation of the interest to which the holder was entitled in the event of non-payment of the bill. M. Sulkowski would revert to this question at a later stage.

M. QUASSOWSKI (Germany) felt that the proposal of the experts was preferable both to the provision adopted at The Hague and to that submitted by the Polish delegation. In most cases, a bill of exchange was drawn up on a printed form. If the drawer omitted to insert the rate of interest, it was permissible to conclude that it was his intention that no interest should be payable. The solution of the experts avoided all difficulties and all complications. The present discussion had given proof of that, for it had shown that it would be difficult, indeed almost impossible, to determine an additional rate in the absence of any stipulation.

The amendment proposed by the Polish delegation was defeated.

The PRESIDENT said that, although he had not received a written amendment from the Italian delegation, he would consent, as an exception, to submit to the Conference the Italian proposal for the restoration of the Hague text. In that case, paragraph 2 would be drafted as follows :

“ The rate of interest must be specified in the bill ; in default of specification, it is 5 per cent.”

The amendment proposed by the Italian delegation was put to the vote and defeated by 16 votes to 10. The second paragraph of Article 5 was approved at the first reading.

ARTICLE 5, THIRD PARAGRAPH.

Mr. GUTTERIDGE (Great Britain) observed that, if the proposals to be brought forward by M. Giannini in regard to the completion of blank bills of exchange were carried, it might be necessary to consider the question. It had already arisen in England, where blank bills of exchange bore a date that had been filled in. In a case of that kind, the interest ran, not from the date which was inserted in the bill, but from the date of the issue of the instrument.

The PRESIDENT said that the question raised by Mr. Gutteridge would be examined later. M. Giannini would take it into account in the amendment which he intended to propose in regard to Article 1 at the second reading.

The third paragraph of Article 5 was approved at the first reading.

Article 5 as a whole was approved at the first reading.

ARTICLE 6.

Approved at the first reading.

ARTICLE 7.

The PRESIDENT said that the Danish, Finnish, Norwegian and Swedish delegations had proposed the deletion of Article 7 and the adoption of the following new text for Article 68 :

“ If the bill of exchange bears forged signatures or the signatures of persons incapable of being bound as parties to a bill of exchange, or signatures which for any other reason cannot bind the persons on whose behalf they are affixed, the obligations of the other persons who have signed it are none the less valid.

He did not suppose that any member wished to deal with the subject of Article 68 at the present stage.

M. EKEBERG (Sweden) explained that Article 7 of the draft Regulation dealt with the incapacity of persons who had signed a bill of exchange and that Article 68 dealt with the case of forged signature. Both articles provided that a defect in one signature did not affect the validity of the other signatures.

There might, however, be several other cases, such as error, intention to defraud or violence, where, in order to safeguard the circulation of bills of exchange, the same principle should be applied. It should be brought out clearly that the very important principle of the validity of the other signatures applied in these cases as well.

If the Conference was of that opinion, the more general provisions suggested should be inserted, not in Chapter I, but in Chapter X, where they would replace Article 68. In that case, it would be necessary to change the heading of Chapter X in the sense indicated in the proposal of the four delegations.

M. ARCANGELI (Italy) observed that the rejection of the proposed amendment might be taken to mean that the Conference had rejected the principle contained in it. The Italian delegation, however, was in agreement with the principle and believed that it was implicit in the spirit of the law. It had been stated very clearly at The Hague in 1910 :

“ The same rule should, for the same reasons, apply to cases in which the obligation of the signatory is void by reason of defective consent, “ dol ”, violence ”, etc.

The proposed amendment would perhaps prevent any dispute. For that reason, the Italian delegation was prepared to vote for it, but it wished to state that if the amendment was not adopted, it would not signify that the principle was also rejected.

M. QUASSOWSKI (Germany) supported the amendment of the Scandinavian delegations. As the Swedish delegate had observed, certain cases were not dealt with in Articles 7 and 68. Some bills of exchange were signed in the name of a non-existent person and these were called *Kellerwechsel* in Germany. It might be asked whether such cases were covered by Article 68, and it was not clear whether the other signatures affixed to a bill of that kind were valid. The Scandinavian proposal, which covered all cases where the signature was not valid and laid down that the validity of the other signatures in the bill did not depend on that of earlier signatures, was in conformity with the German law and offered a solution to a controversial question.

M. HERMANN-OTAVSKY (Czechoslovakia) also supported the Scandinavian proposal and concurred in the reasons given by M. Quassowski.

M. SULKOWSKI (Poland) was in favour of the Scandinavian amendment. He proposed that the question of the place where it should be inserted in the text should be referred to the Drafting Committee. Personally, he would prefer the matter to be dealt with in Chapter I.

M. Deoclecio DE CAMPOS (Brazil) supported the Scandinavian proposal, which contained principles of law that were common to all countries.

The PRESIDENT thought that the Conference was in agreement in regard to the substance of Articles 7 and 68. The amendment of the Scandinavian countries was not confined to combining those two articles. It extended their scope, since it also provided for cases such as error, fraud and violence. Did the Conference consider, for instance, that physical violence should not affect the validity of a bill in respect of all the other signatures? That would be at variance with Anglo-Saxon law, and there were many writers who held that, setting aside the abstract obligation, physical violence could never entail the binding of the signatory.

M. GIANNINI (Italy), while considering that the point put by the President merited the Conference's attention, pointed out that Article 7 (a), which had been approved by the 1910 Conference, was explained in the report as follows :

“ All obligations arising from bills of exchange are independent. In virtue of this principle, the incapacity of a signatory does not affect the validity of the other signatures. The same rule must for the same reasons apply in cases in which a signature is void by reason of defective consent, fraud (“ dol ”), violence. . . ”

The object of the Scandinavian amendment was to eliminate all doubt by dealing with the problem as a whole in a systematic manner. Consequently, it dealt with the two problems referred to in Articles 7 and 68 of the Draft. There was no doubt that Article 7 dealt also with defective consent. That had been stated theoretically, but it would be still better to state it in the text, and M. Giannini considered that the amendment submitted by the Scandinavian delegations deserved the full approval of the Conference.

M. MONTEJO (Spain) accepted the amendment of the Scandinavian delegations. He wished to point out, however, that while Article 7 of the draft referred to persons incapable of contracting in general, the amendment referred to “ persons incapable of being bound as parties to a *bill of exchange* ”. If the experts' text were adopted, perhaps the words “ to a bill of exchange ” might be added ; if, however, the Scandinavian amendment was accepted, it would be preferable to refer to persons incapable of contracting *in general*.

M. PERCEROU (France) made an observation on a point of form. Everyone appeared to be in agreement on the principle of the independence of the signatures in the matter of bills of exchange and the desirability of embodying this principle generally in the law in so far as concerned incapacity, defective consent and even insufficient authority. He wondered, however, whether it was desirable to incorporate this principle in Article 68 and to delete Article 7, thus requiring a change in the numbering of the articles. It would be better to introduce the principle in Article 7.

The PRESIDENT asked the Swedish delegate whether he would agree to the Drafting Committee's considering the question of deleting the words “ to a bill of exchange ” after the words “ incapable of being bound ”.

Baron MARKS VON WÜRTEMBERG (Sweden) replied in the affirmative.

The PRESIDENT added that, if the Scandinavian amendment was adopted, it would be understood that Article 68 had been given a first reading, but it would not follow that Article 7 was deleted.

Baron MARKS VON WÜRTEMBERG (Sweden) thought that the place of the proposed amendment in the text could also be considered by the Drafting Committee.

M. DE LA VALLÉE POUSSIN (Belgium) considered that, if the contents of Article 68 were discussed in connection with Article 7, it would be necessary to deal in the same way with Article 69, which also concerned the effects of a forged signature on the liabilities of the other signatories.

The PRESIDENT thought that the question could be examined later, together with that of the place to be finally taken by the article. A vote would now be taken on the article.

The amendment submitted by the Scandinavian and Finnish delegations was approved unanimously, with the exception of the British delegate who abstained from voting.

The PRESIDENT proposed that the latter part of the Scandinavian proposal, reading : “ The heading of Chapter X to be accordingly drafted as follows : ‘ Invalid Signatures and Alterations ’ ”, should be reserved until the discussion of Chapter X.

The Conference agreed.

ARTICLE 8.

The PRESIDENT said that the Yugoslav delegation had proposed the addition of the following sentence to Article 8 :

“ But the person represented is himself bound as a party to the bill within the limits of the powers which he gave to the representative.”

M. EISNER (Yugoslavia) thought that it resulted from the text proposed that, if the representative had exceeded his powers, he was bound, as a party to the bill, for the whole amount, and the person represented was only bound within the limit of the powers he had given. The text, however, was not sufficiently clear in regard to the liability of the person represented, and it might lead to different interpretations by the courts of the various countries. The Yugoslav law on bills of exchange made good this omission and defined the situation in law in terms which were reproduced in the Yugoslav amendment.

M. HAMMERSCHLAG (Austria) asked the Yugoslav delegation whether it was intended that the representative and the person represented would both be bound on the bill.

M. EISNER (Yugoslavia) replied in the affirmative.

M. LA LUMIA (Italy) thought that the proposed amendment was not in accordance with the fundamental principle that the bill of exchange must be interpreted literally or was an independent document. For instance, if the person represented had given power to his representative to bind him to the extent of 10,000 francs, and if the representative had bound himself for 20,000 francs, it could not be admitted that the person represented was also bound for the smaller amount, for that would be contrary to the above principle. A bill of exchange was valid for the amount stated on it. For that reason, the Italian delegation was unable to accept the proposed amendment.

M. GRÖNVALL (Finland) wondered what would be the legal position of a person who had made a payment in the circumstances covered by Article 8. Article 62 contained rules covering the position in exchange law of the acceptor for honour, but there was nothing in the Regulation in regard to the other question. Was it to be concluded that the signatory referred to in Article 8 would have no recourse in exchange law ?

Personally, M. Grönvall was not attracted by the stipulation contained in Article 8. If it were deleted, the result would be that the question there dealt with would be relegated to the field of common law, but a proposal to delete the article would doubtless not be approved by the Conference.

The PRESIDENT understood that the Finnish delegate wished to know whether the representative referred to in Article 8 had a right of recourse or whether there was a relationship between the representative and the acceptor for honour in Article 62.

M. PERCEROU replied that there was no relationship. The question of a representative's right of recourse against the person for whom he acted was not one that concerned bills of exchange. Each State would retain its liberty on that point.

M. GRÖNVALL (Finland) explained that he had not said that there would be a relationship between Article 62 and Article 8. He had simply said that in Article 62 there were rules concerning the position in exchange law of the acceptor for honour, but the Regulation said nothing in regard to the question which he had raised. Was it to be concluded that the signatory referred to in Article 8 would have no recourse in exchange law ?

The PRESIDENT thought that it might be replied that Article 8 regarded the representative as being unconsciously a signatory in exchange law, but none the less as a signatory. According to Article 8, the representative was one of the parties to the bill covered by the law and the latter involved him in all the consequences arising from that situation in exchange law. The connection between the signature of the representative and the person represented was another matter. The Yugoslav amendment dealt with this latter question, but the President wondered whether it would not cause some confusion. Without the amendment, and with Article 8 alone, there were, on the one hand, the liabilities in exchange law, and, on the other, the relations between principal and agent in common law. That question was not raised at the moment. It was outside the scope of Article 8.

M. HAMMERSCHLAG (Austria) supported the President's view. The Yugoslav amendment related, for instance, to a case where a representative had been given power to issue a bill of exchange for 10,000 francs but had issued one for 20,000 francs. Under Article 8, the representative would be liable to the extent to which he had exceeded his powers, and the person represented would only be liable for 10,000 francs. That was natural. It would be impossible to introduce a clause under which the person represented and the representative would be liable for the total amount.

The amendment submitted by the Yugoslav delegation was put to the vote and defeated.

M. GRÖNVALL (Finland) considered that, if the regulation was to be interpreted in the sense indicated by the President, this should be stated clearly and the Drafting Committee should be asked to see that account was taken of it.

The PRESIDENT did not think it necessary to add anything to the article. The Drafting Committee, however, could consider the question.

Baron MARKS VON WÜRTEMBERG (Sweden) supported M. Grönvall's proposal.
Article 8, with the above reservation, was approved at the first reading.

SIXTH MEETING.

Held on May 15th, 1930, at 3 p.m.

President: M. J. LIMBURG.

9. Nomination of the Drafting Committee.

The PRESIDENT proposed that a Drafting Committee of five members should be nominated. The Committee could, of course, seek the advice of the members of the Committee of Experts, of the International Chamber of Commerce and of the Economic Committee present at the Conference. In general, they could consult any delegate. The President suggested the following as members of the Drafting Committee: M. EKEBERG, delegate of Sweden, M. GIANNINI, delegate of Italy, M. PERCEROU, delegate of France and Chairman of the Committee of Experts, M. QUASSOWSKI, delegate of Germany, and M. SULKOWSKI, delegate of Poland.

The proposal of the President were adopted.

10. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes: First Reading (Continued).

ARTICLE 9, FIRST PARAGRAPH.

M. DA MATTA (Portugal) said that, if it was laid down that the drawer was the guarantor of acceptance and payment, it should be stated for whom he was the guarantor. Was it for the holder? Was it for the holder and the drawee? As the two systems existed in the different systems of law, it would be useful to make the text of the article clearer. He believed that the intentions of the experts had been to establish the liability of the drawer to the holder only. This, however, should be stated explicitly.

The first paragraph was approved at the first reading.

ARTICLE 9, SECOND PARAGRAPH.

The PRESIDENT said that the Czechoslovak delegation had proposed an amendment the object of which was to make the guarantee a general one. The amendment was as follows:

“Every stipulation by which he releases himself from his guarantee is deemed to be unwritten.”

M. SRB (Czechoslovakia) said that the text proposed by the Czechoslovak delegation was borrowed from paragraph 7 of the new Czechoslovak Law on Bills of Exchange. The idea behind the proposal, however, was not that of bringing the Uniform Regulation which the Conference was drawing up into concordance with Czechoslovak legislation. It has been suggested by the Union of Czechoslovak Banks an organisation which comprised the majority of the great financial institutions of the country. Competent persons had pointed out that the guarantee of the drawer was considered in practice to be one of the principal bases on which the value of these instruments in economic life reposed. The Preparatory Documents, page 53, contained the following observation by the Dutch Government:

“The Netherlands Government cannot support the provision laid down in paragraph 2 of this article.

“It seems essential to respect the wishes of the drawer who has released himself from the guarantee of payment.

“It will be necessary, however, to provide that such a document, although valid in ordinary law, is not in the nature of a bill of exchange.”

It was true that in regard to the legal effects of a stipulation for release, the suggestion contained in the Dutch Government's observation was contrary to the Czechoslovak proposal. M. Srb did not know the reasons for which the Dutch delegation had not submitted to the Conference a definite proposal on the lines of its Government's suggestion.

The Dutch Government's view, however, like the Czechoslovak proposal, appeared to indicate that it would be preferable to restrict the power to introduce stipulations for release in bills of exchange.

M. TROULLIER (International Chamber of Commerce) said that the International Chamber of Commerce had been very unfavourably impressed by the proposal to grant the drawer the possibility of release from his guarantee. Those who made use of negotiable instruments with bankers and traders feared that this exemption would cause very grave dangers.

Cases might occur in which dishonest drawers would release themselves from guaranteeing acceptance and take advantage of this right to indulge in kite-flying; they would say: “I shall put the name of a drawee who is well known to be solvent and release myself from guaranteeing acceptance. My bill will therefore be accepted and I shall be able to borrow money on it. Between now and the date of maturity, I shall have time enough to find the necessary funds”.

The objection might perhaps be made that the real debtor on a bill of exchange was always the drawer. At the previous meeting, the Conference had again stated this to be the case and had observed that a bill was valid even when wrong. The drawer, however, might be insolvent and, with a stipulation permitting release from acceptance, there would be nothing to prevent him from issuing duds.

M. HAMMERSCHLAG (Austria) was in favour of neither of the modifications suggested. If the drawer was prevented from releasing himself from guaranteeing acceptance, this would prevent the use of non-acceptable drafts which were still current in many countries, among them, he believed, France, and which the drawer did not wish to be presented for acceptance in order to avoid the costs of protest.

Non-acceptable drafts should not be prohibited, since traders regarded them as being of some use in some circumstances. In Austria, there was considerable propaganda in favour of non-acceptable drafts. The same was, M. Hammerschlag thought, the case in a number of other countries. Further, it would be quite contrary to the nature of a bill of exchange to allow the drawer to release himself from payment and it would make bills entirely worthless. M. Hammerschlag therefore urged the Conference to accept the text of the Committee of Experts.

Baron CARTON DE WIART (Belgium) did not understand how the drawer could release himself from the guarantee for payment, but he supported M. Hammerschlag's observations in regard to the drawer's right of release from the guarantee of acceptance. The practice of non-acceptable drafts existed and, in fact, very many drawees, although they were quite determined to pay, disliked being presented with drafts for acceptance — which was perhaps a regrettable practice. That was especially so in regard to very large firms. As this custom was very widespread in certain countries, the stipulation for release from the guarantee of acceptance should not be prohibited.

M. SULKOWSKI (Poland) was in favour of adhering to the text adopted at The Hague and endorsed by the experts. Private persons were often afraid to accept a bill because of the very strict liability falling upon them as the result of exchange law; they were, however, ready to pay the bill if it was presented to them on maturity. This had been very rightly pointed out by the Belgian representative.

Accordingly, the extension of non-acceptable drafts at present in use in some countries should not be prevented. The holder apparently ran no danger, for he was always free to accept payment or to refuse a draft in which the drawer had released himself from his liability for acceptance.

Prince VARNVAIDYA (Siam) said that, according to present Siamese law, release was allowed both from the guarantee of acceptance and from the guarantee of payment. The views of his Government were exactly the same as those of the Netherlands Government, as set forth in the Preparatory Documents, page 53. If the Netherlands delegation had put forward a formal amendment in that sense, he would have supported it, but as it had not done so he would be content with the declaration which he had made. He regretted that he was unable to support the amendment proposed by the Czechoslovak delegation.

M. VISCHER (Switzerland) thought that the Czechoslovak proposal should be discussed at the same time as Article 21, for it was directly connected with the question of the issue of non-acceptable bills of exchange. The latter were unknown in Switzerland, but they apparently met a need in certain countries, more particularly France and Austria. He was ready, therefore, to accept the proposal. The Hague text, as it was, had been adopted with the object of achieving agreement.

The question would, in any case, be better dealt with in Article 21.

The PRESIDENT thought that there was no need to adjourn the question of guarantee until Article 21, since the latter did not deal with exactly the same subject.

The amendment submitted by the Czechoslovak delegation was put to the vote and defeated.

The second paragraph of Article 9 and the article as a whole were approved at the first reading.

CHAPTER II. — ENDORSEMENT.

ARTICLE 10, FIRST AND SECOND PARAGRAPHS.

The first and second paragraphs were approved at the first reading.

ARTICLE 10, THIRD PARAGRAPH.

The PRESIDENT observed that the French delegation had proposed that the words " these persons may endorse the bill afresh " should be replaced by the sentence : " If the bill has been endorsed to the drawee, the latter may not endorse the bill afresh ".

The French delegation considered that if the bill had been endorsed to a drawee who accepted, the latter thus became his own creditor and the bill lapsed by the mergence of identity.

M. HAMMERSCHLAG (Austria) agreed that if the bill was endorsed by a drawee who accepted it, this involved mergence of identity. On the contrary, if the drawee endorsed the bill afresh, the debt would revive. Some such procedure was desirable in order to avoid fresh expense for stamp, etc. Was there any serious reason for preventing that?

M. VAN NIEROP (Netherlands) quite understood the French delegation's objections. Legally, the debt was extinguished and, from the French legal point of view, the bill also lapsed. Practical considerations must, however, be taken into account, for the Conference had been called to draw up a law for traders and bankers. The buyers of acceptances were the banks, which bought them in order to have a very liquid portfolio. Generally speaking, the banks found enough paper on the market; they found a sufficient number of bills accepted by others than themselves. Nevertheless, there were cases where the market for acceptances was very limited and where the banks did not find the paper they preferred. They were then forced to take their own acceptances. They acted in this manner, not in order to extinguish their debts, but simply in order to have liquid assets at their disposal. For that reason, though it was a legal heresy, banks should be allowed to endorse their own acceptances. It was a question of a banking necessity. M. van Nierop would regret it if the French delegation's proposal were accepted.

M. NAMITKIEWICZ (Poland) recalled that there were two opinions on this matter in French doctrine, both supported by distinguished experts in the science of law. According to M. Lyon-Caen and M. Renaud, transfer to the drawee meant that the bill lapsed though merging or rather by a kind of anticipated payment. The bill could not be revived even if it were endorsed by the drawee to a third party.

The second opinion was that expressed in the Treatise by Thaler and Percerou. It was to the effect that endorsement by the drawee, if he was also the acceptor, produced the usual consequences it being impossible to set up against third parties the fact of the merging of identity. According to the first opinion, endorsement in favour of the acceptor was of a special kind; it conferred limited rights. True, the acceptor who was at the same time the holder might enjoy the protection conferred upon him by Article 15, but he was deprived of the rights resulting from Article 10 in particular, the fundamental right of transferring the bill by endorsement.

The French delegation, led by Professor Percerou, had sacrificed the opinion of Thaler and Percerou in favour of that of French case-law, which did not admit the acceptor's endorsement.

The Hague draft Regulation, if adopted, would better safeguard the circulation of bills and the interests of the parties. The desire to safeguard the interests of other persons bound on the bill would not justify the immobilisation of the bill acquired by the acceptor in virtue of an endorsement and the creation of a kind of surety to guarantee that the liability would expire at the time of maturity.

The acceptor did not redeem the bill before maturity, but acquired it by endorsement. He acted in his own interests, which ought to be protected by the law if not detrimental to the rights of others. Sometimes he acquired the bill before maturity in the hope of profiting by the discount and extinguishing his liability. Sometimes, too, he decided to acquire the bill which he had accepted because it represented the maximum guarantee and security he could obtain. Why, then, should the acceptor be forbidden to intervene as an endorser in respect of the liability if the law allowed everyone else to do so?

In conclusion, M. Namitkiewicz thought that the Hague text should be retained.

Baron CARTON DE WIART (Belgium) said that the Belgian delegation completely agreed with the conclusions of M. van Nierop's very lucid statement.

M. PERCEROU (France) remarked that the advantage of the provision lay in the fact that the acceptor, after redemption of the bill, could put it back into circulation and thus keep his portfolio liquid. It was suggested that this would result in a diminution of costs, since, according to the practice current in Austria and Belgium, a bill of exchange that was put back into circulation was not subject to further stamp duties. M. Percerou wondered whether the Treasury in France would agree to the same solution.

M. GIANNINI (Italy) considered that the question had two aspects, a practical and a theoretical aspect.

From the practical point of view, there were several possible causes of the situation dealt with by this provision. A person might, at a certain moment, find it necessary to get back possession of an instrument put into circulation, but without having on that account any intention to pay it. The adoption of the radical solution, whereby the person who resumed possession of the instrument was considered as bound to pay it, would handicap the working of a practical system which met certain special exigencies.

In Italy, a bill could be put back into circulation and the Treasury had never raised any difficulties. There was an Italian bill the object of which was to confirm this practice.

There was a theoretical objection to that, and in this connection M. Giannini would not try to make M. Percerou the professor contradict M. Percerou the delegate. Such situations arose fairly often, but in M. Giannini's opinion the proposed amendment was negligible and he doubted whether there was any considerable danger of confusion. No such confusion existed in Italy at all events.

In conclusion, M. Giannini hoped that, if the question was put to the vote, the French representatives would support the original text without the French amendment.

M. PERCEROU (France) would not press the French amendment.

The PRESIDENT, without wishing to re-open the discussion, thought that the Conference ought not to attach too much weight in the discussions to fiscal arguments. Its aim was to draw up a law on bills of exchange and promissory notes, and it would be for the different Governments to take such measures as suited them in regard to stamp and duties.

The third paragraph of Article 10 was approved at the first reading.

Article 10 as a whole was approved at the first reading.

ARTICLE II.

The first and second paragraphs were approved at the first reading.

ARTICLE II, THIRD PARAGRAPH.

The PRESIDENT pointed out that an Italian amendment suggested that the third paragraph should read as follows :

“ An endorsement to bearer is regarded as an endorsement in blank.”

M. MOSSA (Italy) said that the Italian amendment was intended to keep the endorsement to bearer, which was considered to be an endorsement in blank. In the Italian delegation's opinion, an endorsement in blank was nothing less than an endorsement to bearer. The necessities of the circulation of bills made it very useful to keep the endorsement to bearer. The Italian proposal, far from being detrimental to the system of bills of exchange, was really connected with the fundamental principles of bills of exchange.

Prince VARNVAIDYA (Siam) and Baron MARKS VON WÜRTEMBERG (Sweden) supported the Italian amendment.

M. GIANNINI (Italy) pointed out that the Italian amendment tended to bring the Uniform Regulation nearer to the Anglo-Saxon system of law.

M. HERMANN-OTAVSKY (Czechoslovakia) feared that the Italian amendment might cause certain difficulties in the application of Article 13. Might an endorsement to bearer be filled in? In that case, would it be necessary to cancel the words “ to bearers ”?

M. PERCEROU (France) asked if it was logical to refuse to admit the validity of a bill of exchange to bearer but nevertheless to admit that of an endorsement to bearer. Was there not some inconsistency?

M. ARCANGELI (Italy) reminded the Conference that an endorsement in blank was contemplated by the draft. Legal literature was unanimous in agreeing that, in practice, an endorsement in blank had the same effect as an endorsement to bearer. The Italian delegation did not wish to lay undue importance on a question of mere words; but, as M. Giannini had pointed out, the proposal advanced the draft Regulation a step nearer the Anglo-Saxon system; and, in these circumstances, the Italian delegation would press its proposal.

M. HAMMERSCHLAG (Austria) thought that perhaps M. Percerou was logically right in asking whether it was not inconsistent to allow endorsements to bearer and to refuse to allow bills of exchange to bearer; but the principal reason for which it was impossible to allow bills of exchange to bearer was the opposition of the banks of issue. This practical argument was of real importance. It appeared that there was no such opposition to endorsements to bearer, since an endorsement of that kind did not create a bill of exchange that was capable of being a substitute for bank-notes.

M. PERCEROU (France) thought that, in practice, banks of issue might have objections to the issue of bills to bearer, and he wondered whether they would not also have objections to transferring bills endorsed to bearer. Moreover, he did not think that the endorsement to bearer and the endorsement in blank had absolutely the same effects.

M. Percerou therefore asked the Italian delegation to make a slight change in its proposal by saying that an endorsement to bearer was equivalent to an endorsement in blank.

In reply to a question from the President, he said that there was no real difference in French between the expressions “ l'endorsement au porteur est considéré comme un endorserment en blanc ” and “ l'endorsement au porteur vaut un endorserment en blanc ”.

M. GIANNINI (Italy) accepted the formula proposed by the French delegation.

M. PERCEROU (France) added that the expression “ endorsement en blanc ” had been used in the French Law of June 14th, 1865.

M. SULKOWSKI (Poland) thought that the inconsistency pointed out by M. Percerou might be taken up again at the second reading.

The Austrian delegate had considered that it was impossible to admit bills of exchange to bearer, because they would be detrimental to the prerogatives of the banks of issue. Personally, M. Sulkowski did not think this fear justified, for the fundamental reason that bank-notes were legal tender and must always be accepted by a creditor; a bill of exchange, on the other hand, was not legal tender.

He pointed out that, even if an endorsement to bearer was allowed, a bill of exchange would not be converted into an instrument to bearer, since the rights of a bearer who availed himself of his rights by endorsing the bill to bearer would nevertheless be established by an unbroken chain of endorsements preceding the endorsement to bearer.

The PRESIDENT said that Article 12 of the German law as well as Article 134 in the Dutch Commercial Code allowed endorsements in blank.

Mr. GUTTERIDGE (Great Britain), M. HAMMERSCHLAG (Austria), Prince VARNAIDYA (Siam) and M. MONTEJO (Spain) pointed out that it was the same in the law of their countries.

The amendment proposed by the Italian delegation was unanimously approved at the first reading in the following revised form: "An endorsement to bearer is equivalent to an endorsement in blank".

Article II as a whole was approved at the first reading.

ARTICLE 12, FIRST PARAGRAPH.

The PRESIDENT said that the German delegation proposed to restore the Hague text of 1912, the first paragraph of which read :

"An endorsement must be written on the bill of exchange or on a slip attached thereto (*allonge*). It must be signed by the endorser."

M. QUASSOWSKI (Germany) explained that the German delegation did not think it advisable to suggest as a general rule that an endorsement should be written on the back of the bill. Causes of nullity should be avoided as far as possible, and a distinction must be made between completed endorsements and endorsements in blank. True, the latter must be written on the back of the bill, since otherwise it would be impossible to ascertain in what manner the signatory had bound himself and whether it was by an acceptance of an "aval" or an endorsement. In any case, there was no reason to declare ordinary endorsements made on the face of a bill null and void. Obviously, according to commercial custom, endorsements were usually made on the back of a bill ; but an endorsement on the face might occur, and there was no sufficient reason to regard it as invalid. It should be also observed that the custom was not to write endorsements on the back of *allonges*, and that was the reason for which the German delegation had proposed that only endorsements in blank should be written on the back of bills of exchange.

The first paragraph of the amendment proposed by the German delegation was approved at the first reading by 14 votes to 9.

ARTICLE 12, SECOND PARAGRAPH.

The PRESIDENT thought that, as the Conference had adopted the first part of the German amendment, it should also adopt the second part, which read as follows :

"An endorsement is valid even though the beneficiary is not specified or the endorser has done nothing more than put his signature on the back of the bill or *allonge* (endorsement in blank)."

M. PERCEROU (France) was afraid that the meaning of the proposed text might be misunderstood and suggested that the second paragraph should read as follows :

"An endorsement is valid even though the beneficiary is not specified or the endorser has confined himself to putting his signature to the bill. In this case, nevertheless, an endorsement will be valid only if it is written on the back of the bill of exchange or on an *allonge*."

M. ARCANGELI (Italy) agreed that this wording was clearer.

M. QUASSOWSKI (Germany) accepted the modification proposed by M. Percerou.

M. PERCEROU (France) proposed the following draft :

"The endorsement need not specify the beneficiary, or may consist only of the signature of the endorser (endorsement in blank)..."

M. ARCANGELI (Italy) observed that an endorsement was in blank when the name of the person in whose favour the endorsement had been made was omitted. An endorsement in blank might contain the words "to order". The text before the Conference covered both endorsement with the words "to order" and endorsement by signature alone.

As for the question whether endorsement should be made on the back or face of the bill, it should be remarked that if endorsement included the words "to order", there was no possible doubt ; the person who had signed had quite demonstrated his intention to endorse the bill, even though his signature had been written on the face.

M. Arcangeli asked whether M. Percerou meant that even in this case the signature should be written on the back of the bill.

M. PERCEROU (France) believed that everyone was in agreement on the substance of the question. It was important to avoid all confusion between endorsement and the apposition of another signature for an "aval" ; but as yet there was no fixed rule for the way in which the signature should be written. It would apparently be better to hold over this latter point and refer it to the Drafting Committee.

The PRESIDENT reminded the Conference that it had already adopted the German amendment to the first paragraph. If the amendment to the second paragraph was rejected, the result would be that the German system would apply to one part of the article and the system of the Committee

of Experts to the other part. It would therefore be best if the Conference adopted the second part of the German amendment, too, which now read as follows :

“ The endorsement may leave the beneficiary unspecified or may consist simply of the apposition of the signature of the endorser (endorsement in blank). In that case, the endorsement, to be valid, must be written on the back of the bill of exchange or on the slip attached thereto (*allonge*).”

The second paragraph of the amendment proposed by the German delegation was approved at the first reading in the above form.

Article 12 as a whole was approved at the first reading.

ARTICLE 13.

Approved as a whole at the first reading.

ARTICLE 14.

Approved as a whole at the first reading.

ARTICLE 15, FIRST PARAGRAPH.

Approved at the first reading.

ARTICLE 15, SECOND PARAGRAPH.

The PRESIDENT said that the observations by the German Government contained the following amendment :

“ Where a person has lost a bill of exchange in any manner whatever, the holder who shows his right thereto in the manner mentioned in the preceding paragraph is not bound to give up the bill unless he has acquired it in bad faith. He has acted in bad faith if, in acquiring the bill, he was aware, or through gross negligence unaware, of the fact that the transferer was not the legitimate holder or his representative, or else that he was not entitled or legally able to dispose of the bill.”

M. QUASSOWSKI (Germany) said that this amendment was of considerable importance and he would not be exaggerating if he said that this was the most controversial and doubtful point in the whole of exchange law. Members might imagine how many conflicting opinions there would be if the interpretation of a provision of that kind was left to the discretion of the different countries. There was general uncertainty as to the notion, bad faith. What was bad faith? The answer given by German common law was quite clear. If a person was aware of an irregularity or was unaware of it owing to gross negligence, that was bad faith ; but the draft contained no definition, and the question remained extremely doubtful. Perhaps bad faith might be compared to the idea of conspiracy to defraud. It might perhaps mean the knowledge of certain facts, or it might have yet some other meaning. In order to avoid all these doubts, it would be better to replace this rather hazy expression by a more precise paraphrase.

In addition, the facts to which the expression “ bad faith ” referred would have to be determined. The draft made it impossible to know whether the bad faith of the person who had acquired the bill depended on the fact that the preceding endorser had had no right to it, or whether it depended on some other fact, such as that a previous endorser had lost the bill.

Under the text proposed by the German delegation, the only decisive facts were that the acquirer of the bill was aware, or, through gross negligence, unaware, of the defects in the transferred bill.

Consequently, if the acquirer realised that his immediate endorser had no right to the bill, or if he was ignorant of this fact through gross negligence, he did not acquire the bill. But if he was aware, or if through gross negligence he was unaware, of the fact that some previous endorser had lost the bill, then he would have full right to hold the bill.

This solution would, M. Quassowski believed, probably settle many difficulties and at the same time it appeared to be in conformity with equity, for if a person in acquiring a bill was unaware of the fact that the bill had been purloined from the legitimate holder, and if he acquired it in a lawful manner, then he ought to be able to transfer it, in the same conditions, even in the case when the acquirer realised that the bill had been lost.

This question was as important as it was difficult and subtle. M. Quassowski did not think that the formula proposed by the German delegation was perfect. The question certainly deserved careful examination, and he personally was ready to welcome any helpful modification. He suggested that a sub-committee might be set up to deal with this question, as had already been done for incomplete bills of exchange.

M. SULKOWSKI (Poland) thought that the idea of bad faith was sufficiently clear. If the words “ bad faith ” were taken in connection with the following words, “ gross negligence ”, there could be no possible doubt. Bad faith obviously depended on knowledge, on the fact that the person who acquired the bill knew that the person who had transferred it had no right to dispose of it. He could not acquire it in such a case, just as he could not do so where he was ignorant of these facts through gross negligence.

Apart from that, the German proposal involved a modification to the provisions of Article 15, paragraph 2, which only related to the case of defect of right in the person transferring the bill. The German delegation was proposing that the principle of protecting the person who had acquired a bill in good faith should be extended to cases where such a person had acquired a bill of exchange from a person who was not capable. In this way, the German proposal would certainly make for greater security in the circulation of bills of exchange.

But he wondered whether this modification was justified in substance. Should the interests of an incapable person be sacrificed for the benefit of a person who acquired a bill in good faith?

This question was related to the provisions of Article 3 of the draft Convention drawn up by the experts. The Conference would have to define the provisions of a law which would determine the capacity of a person, and a choice would have to be made between national law and the law of the place where the bill of exchange had been signed. If the national law were adopted, it would be inconsistent to admit that the obligation contracted by an incapable person was not valid, and to admit, at the same time, that a bill of exchange might nevertheless be validly acquired from such an incapable person.

The German proposal therefore appeared to go too far. The problem was of such extraordinary complexity that it would be useful for a sub-committee to examine it.

M. GIANNINI (Italy) said that his delegation had considered the German proposal very sympathetically. It had noted, however, that M. Quassowski, when raising the problem, had himself realised the difficulties which would be met in drawing up a text. He desired to draw attention to a general problem; when a general problem was defined in a convention, or in a special provision of any kind, the scope of its interpretation should be limited. For that reason, in the first place, it should be stated, not that the bearer "was acting in bad faith" but that he was "considered to be acting in bad faith".

It was dangerous to insert a definition of a general character in a special Convention, for the very simple reason that either it meant nothing, and was in that case useless, or else it meant something that was not in conformity with the general principles of the question, and in that case it could only be accepted with difficulty.

The object of the German proposal seemed to be to make the definition of bad faith clear. Italian theory and practice had never encountered any difficulties in regard to this expression. It seemed, however, to be the fate of international Conventions to include things which were not strictly useful and which were sometimes even useless. An endeavour should, however, be made to keep down the number of useless insertions. What was it that the German delegation proposed? It proposed to state that "the holder had acted in bad faith if, in acquiring the bill, he was aware or, through gross negligence, unaware of the fact that the transferrer was not the legitimate holder or his representative, or else that he was not entitled or was legally unable to dispose of the bill". In that latter case, however, he was not the legitimate holder, and the two cases contemplated were, in reality, merely additional explanations to an explanation. If the last words were unnecessary, since they had added nothing, what divergence was there between the German delegation's text and that of the experts? There seemed to be no difference, for the text of the experts said: "unless he has acquired it in bad faith, or unless, in acquiring it, he has been guilty of gross negligence".

This text omitted to deal with the question whether gross negligence could in all cases be considered an act of bad faith. To assimilate it in all respects in this special Convention to the intention to defraud would be going somewhat too far and might establish a dangerous precedent. It would be preferable to adopt a somewhat more elastic formula which would nevertheless allay all apprehensions.

The Hague Conventions, though not in force, had a very great influence, not only in the States which had adopted them, but also in the other States, either owing to the special laws which had been voted, or because of the interpretations and guiding principles which they had furnished for the law on the subject. They had had a considerable influence on legal theory.

The formula adopted had caused no apprehension to Italian thinkers nor probably to French thinkers either. That did not appear, however, to be the case in Germany, since the German delegation had made certain observations on the point. But did the formula which it proposed allay their apprehensions? M. Giannini would not care to press the formula, for the German delegation itself had maintained that its terms could be amended by a sub-committee. Was it, however, really necessary to appoint a sub-committee? He did not think that it would be competent to settle the question of substance. The question was that of finding the best possible formula, and that was a task for the Drafting Committee. If the latter was merely instructed to convert the decisions unanimously adopted by the Conference into a text, its practical utility would be very small. That was not the idea which the President had had in mind in proposing the Drafting Committee. Such a course would not be in conformity with the general practice of conferences.

If there were any doubts on the point, the entire question should be sent to the Drafting Committee. He did not oppose the examination of the German proposal, but he thought that it merely formulated a doubt and did not solve the problem. The proposal itself gave rise to certain apprehensions which the movers themselves shared, since they were anxious for a formula to be found.

Both in order to gain time and for technical reasons, M. Giannini proposed that the entire problem should be submitted to the Drafting Committee. While awaiting the results of its investigations, the words "bad faith" could be passed, unless it were decided later to change the formula.

Mr. GUTTERIDGE (Great Britain) agreed that the present question was one of the most important in the whole draft. He desired to inform the Conference of the attitude of English law towards the question of bad faith. The test which English law applied was one which worked well from both the commercial and the juridical points of view. The test was simply this: were there any elements of suspicion present in the mind of the holder when he took the instrument? If there were no elements of suspicion present in his mind, then he had acted like an honest man and in good faith. If, on the other hand, he had any suspicion whatever, he was not acting honestly nor in good faith.

The importance of this point of view lay in the fact that it entirely ignored the element of negligence. According to English law, negligence did not enter into the matter at all; it was merely a question whether a man had been dishonest, not whether he had been careless.

Mr. Gutteridge had always felt the strongest aversion to the use of the term "gross negligence". That term had found its way into both English and Continental law, and its origin, presumably, was to be found in Roman law. In England, there was the greatest difficulty in distinguishing between simple negligence and gross negligence. One of the English judges had summed up the matter very aptly when he said: "What is gross negligence? Gross negligence is merely negligence with the addition of an abusive epithet". There was no real distinction between the two, and Mr. Gutteridge felt that, if the element of "gross negligence" was introduced into the matter, difficulties were likely to arise in any discussion before a court of law.

M. SCHELTEMA (Netherlands) emphasised the fact that the object of the German amendment was not merely to define "bad faith".

The German delegate's argument was as follows: "If I endorse a bill of exchange and if, being the bearer, I learn that the bill has been lost or stolen at some other time, but if I knew also that the person who directly preceded me as holder was acting in good faith, am I acting in bad faith?"

To put it in other words: In cases of bad faith, must only the relations of the holder and his direct predecessor be taken into account, or what may have happened in the past as well?

The German amendment raised also the question to what the bad faith mentioned in Article 15 referred.

M. QUASSOWSKI (Germany) explained that the object of the German delegation's proposal was to obviate, as far as possible, the difficulties arising in this matter.

In the first place, the meaning of the term "bad faith" must be defined. This was not so clear as the Polish delegate seemed to consider. Did bad faith cover cases of fraudulent understanding?

The second object of the German delegation's proposal was to lay down that paragraph 2 of Article 15 covered only cases in which the act of transfer was incomplete. These were the cases mentioned by the Netherlands delegate.

The provision proposed by the German delegation was therefore indispensable for the sake of clearness.

M. PERCEROU (France) was certain that the importance of this problem had escaped neither the Hague Conference nor the Committee of Experts. Its study, however, had shown that the idea of bad faith could not be defined in a manner which would satisfy all States. The attempt to define its meaning in the present regulation would lead to the great objection that it might leave uncovered cases which really ought to be included in that idea.

It would be best to adopt the text submitted to the Conference and leave it to the Drafting Committee to propose a better wording, if they could discover one.

M. SULKOWSKI (Poland), referring to M. Quassowski's observations, thought that the notion of fraudulent understanding was different from that of bad faith.

The words "fraudulent understanding" had been struck out by the experts from Article 16 and replaced by the expression "bad faith". The German delegation's proposal was to the effect that the expression "fraudulent understanding" should be restored in Article 16. If that proposal was adopted, there would be no possible doubt that "fraudulent understanding" differed from "bad faith". The first of these two ideas covered cases of collusion; that was to say, cases where the person who transferred the bill and the person who acquired it acted with the common intent of defrauding the debtor by depriving him of the defence he might set up.

The PRESIDENT was glad to note that several members considered that there was no need to have a special committee to study the question. The Conference should not recoil before the first difficulty, and, if the question was reduced to its simplest proportions, could it really be said that the difficulties were either so great or so numerous? The President did not think so.

The Conference had before it a text which had been drawn up with the greatest care, first in 1910, then in 1912, and later by different committees. That text had resisted all assaults and remained unchanged. One single amendment had been made in it, the words "fraudulent understanding" being replaced by the words "bad faith".

The German delegation, in its amendment, replaced the words: "Where a person has been dispossessed of a bill of exchange" by the words: "Where a person has lost a bill of exchange." The draft proposed by the Committee of Experts was preferable, for the word "lost" could not cover, for example, the theft of a bill.

Secondly, the German amendment said: "The holder has acted in bad faith if, in acquiring the bill, he was aware or, through gross negligence, unaware . . ." The President thought that it was a legal heresy to maintain that the holder was guilty of bad faith when he "was unaware through gross negligence".

The passage stating that "he (the holder) was not entitled or legally able to dispose of the bill" did not concern the holder, as M. Giannini thought, but his predecessor.

On this point, the President urged the need for the greatest caution. In the first place, a special article would be inserted in the Convention on conflicts of laws. Secondly, and this was more important, the Conference would have to examine an article laying down that, even if an endorsement was not valid because of some defect inherent in the person endorsing it, the next holder, nevertheless, received the bill with all the rights attaching to it.

If the text of the Committee of Experts was compared with the German delegation's amendment, certain important differences would be noted. The Committee's text said:

"The holder is not bound to give up the bill unless he has acquired it in bad faith, or unless, in acquiring it, he has been guilty of gross negligence."

The German delegation's amendment, however, stated that :

“ The holder has acted in bad faith if in acquiring the bill he was aware or, through gross negligence, unaware of the fact that the transferer was not the legitimate holder.”

On this point, the German amendment left less freedom to the judge than the text of the Committee of Experts. The article in the draft left the judge free to decide whether it was only in respect of the immediate transferrer that the holder should be guilty of bad faith, or whether this also might happen in respect of a predecessor.

Which was the better wording? The President could not decide this point at the moment.

There remained the question of bad faith or gross negligence. The British delegate who had described the English law might be answered as follows : “ Do not take too much for granted. You say you are not in favour of the slight difference in meaning between *culpa lata* and simple negligence, but the question will none the less have to be settled by your judge. In one case the judge will say : ‘ Yes, there has been negligence, but it is simple negligence ’ ; while in any other case the judge will say : ‘ You are wrong ; you have committed gross negligence which you ought to have avoided ’ ”.

This question would therefore arise in practice and in commerce, even in England.

So far as the question of bad faith was concerned, the judge must be left a certain margin to decide whether in special cases there had or had not been bad faith.

The continuation of the discussion was postponed to the next meeting.

SEVENTH MEETING.

Held on May 16th, 1930, at 10.30 a.m.

President : M. J. LIMBURG.

11. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continued).

ARTICLE 15 (Continuation).

M. GIANNINI (Italy) said that a private exchange of view had taken place with regard to the problem raised by the German delegation in connection with the second paragraph of Article 15 and the conclusion reached was that the second paragraph should be retained as it stood, since the doubts which had been expressed could be considered as removed as a result of the explanations which would appear in the Minutes or in the general report of the Conference. During the exchange of views, it had become clear that it might be very dangerous to explain in a special Convention what was understood, from the general point of view, by “ bad faith ”. The problem did not arise only in regard to bills of exchange, it might arise again in other spheres of international law. It had seemed preferable from the general point of view not to raise the question in order to avoid the assumption that the interpretation was doubtful from the international standpoint. The delegates who had taken part in the exchange of views had considered certain particular cases which were the same as those referred to in the German amendment. As to the problem of capacity, they had noted that, in the Hague Convention, there was an article which laid down that it was for the national legislations to draw up rules governing the matter. The framers of the Hague system had defined their attitude towards the problem. With regard, on the one hand, to the facilitation of the circulation of bills of exchange which was the particular object of the uniform regulation, and, on the other hand, to the problem of the protection of incapable persons not possessing capacity, the Hague Convention laid down that the national law operated always.

The delegates in question had considered that the German preoccupations regarding the two other problems mentioned in that delegation's proposal would be fully covered by the explanations in the general report, which would explain the solution adopted for the problems. Those explanations would be of service in practice in the interpretation of the Convention. It was in that spirit that the delegates had agreed to retain the second paragraph of the draft.

M. Giannini added that there had also been an unofficial exchange of views on the relationship between Articles 15 and 16 ; but, owing to lack of time, it had been impossible to conclude it, and he asked the Conference to be good enough to adjourn the discussion of Article 16.

The PRESIDENT thought that the time had come to consider the appointment of a Rapporteur. In his opinion, the Drafting Committee should elect one of its members. It was regrettable that there had been no general reports on the 1910 and 1912 Conferences. This Conference should avoid making the same mistake.

M. QUASSOWSKI (Germany) said that the German delegation would withdraw their proposal for Article 15, M. Giannini's explanations having given them entire satisfaction. They therefore accepted the text of Article 15 as it stood.

The second paragraph of Article 15 was approved at the first reading.

Article 15 as a whole was approved at the first reading.

ARTICLE 16.

The PRESIDENT pointed out that the Italian delegation had asked that the discussion of this article should be held over. For his part, he saw no objection to that suggestion, in view of the fact that there was no close connection between Article 16 and Article 17. He therefore proposed that the Conference should discuss Article 17.

The Conference agreed.

ARTICLE 17, FIRST PARAGRAPH.

Approved at the first reading.

ARTICLE 17, SECOND PARAGRAPH.

The PRESIDENT pointed out that this paragraph had some relation to Article 16, and could be adopted subject to the discussion on that article.

The second paragraph was approved provisionally at the first reading.

ARTICLE 17, THIRD PARAGRAPH.

The PRESIDENT pointed out that the Italian delegation had submitted an amendment to substitute the words "is not terminated" for the words "is not revoked".

M. NAMITKIEWICZ (Poland) accepted the Italian amendment, which, in his opinion, made the text clearer.

Nevertheless, the Polish delegation had some explanations to make concerning this paragraph. In the observations on the article, the Committee of Experts had stated that the provision had been inserted with a view to increasing the credit of the bill of exchange and facilitating its circulation. It would, however, appear necessary to introduce the third paragraph for other reasons. In the interest of the parties, it should be laid down that the mandate was not revoked by the death of the party giving the mandate or by the fact that he had become incapable. In the case of incapacity or death, it was in the interest of the party giving the mandate or his assigns that the mandate should be executed promptly. On the other hand, it was of great importance to the agent that his mandate could be executed, especially when he was in relations outside the scope of exchange law with the party giving the mandate.

For those reasons, the Polish delegation was in favour of the third paragraph as amended by the Italian delegation.

M. TROULLIER (International Chamber of Commerce) pointed out that the International Chamber of Commerce had at first raised objections to the insertion of the paragraph. The International Chamber had observed that, if the agent was ignorant of the reasons for which the mandate was terminated, what he had done in ignorance thereof was valid. Nevertheless, after reflection, it considered that it was desirable to accept the text of the experts.

M. PERCEROU (France) proposed that, in the Italian amendment (French text), the words "*ne cesse pas*" should be replaced by "*ne prend pas fin par...*".

The third paragraph was approved at the first reading in the following form:

"The mandate contained in an endorsement by procuration is not terminated by the death of the person giving the mandate or by the fact that he has become incapable."

M. QUASSOWSKI (Germany) stated that he would not press the observations submitted by the German Government.

Article 17 as a whole was approved at the first reading.

ARTICLE 18.

The PRESIDENT pointed out that the German delegation had submitted an amendment to delete the words "...but an endorsement by him only avails as an agency endorsement, without prejudice to the right of the creditor who holds the pledge to realise the pledge when the debt falls due".

M. QUASSOWSKI (Germany) pointed out that the provisions of Article 18 had been discussed very closely at The Hague. There was a difficulty of substance which it was not easy to avoid. The problem was as follows: it was necessary, on the one hand, to protect the rights of the endorser, who was the creditor holding the pledge until the debt secured by the pledge had matured; and, on the other hand, to give to the creditor holding the pledge the right to sell the bill and to transfer it when the debt secured by the pledge fell due. The experts wished to solve the problem by distinguishing between the two cases. Until maturity, the endorsement made by the creditor holding the pledge was only valid as an agency endorsement. After the debt had matured, however, the creditor holding the pledge had the right to realise the pledge; that was to say, to transfer the bill by means of an ordinary endorsement. As M. Hammerschlag had pointed out at the Hague Conference, it could not be admitted that the question whether such an endorsement was transferable or not should be solved in a different manner according to whether the debt had matured or not, since that fact could not be ascertained from the bill of exchange.

It appeared essential to determine the effects of the endorsement made by the creditor holding the pledge on uniform lines ; but how should those effects be determined? There appeared to be three possibilities : (1) to prescribe that the endorsement of a holder was only equivalent to an ordinary assignment ; (2) to decide that it was only equivalent to an agency endorsement ; (3) to give the holder the right to endorse the bill by means of an ordinary endorsement. M. Upka, Professor at Vienna, had suggested a provision on the lines of the first solution. The second solution appeared in the Hague text, which left it to the common law of the various countries to determine the rules for the realisation of the pledge.

The German delegate considered that if the debt secured had fallen due the creditor holding the pledge should be able to transfer the bill by means of an ordinary endorsement. The realisation of the pledge — that was to say, the discounting of the bill — would seem to be almost impossible if an ordinary endorsement were not permitted.

M. Quassowski was of opinion that the effects of the endorsement should be regulated on uniform lines, and therefore proposed that the creditor holding the pledge should have an unrestricted right to make ordinary endorsements. Doubtless, the objection would be raised that this solution did not sufficiently protect the debtor who had given the bill as a pledge. In the same way, it might be said that the solution decreased the differences between pledged and unpledged bills, but there was no other satisfactory solution.

For Germany, the introduction of the " endorsement by way of pledge " would be an innovation. The determination of the endorsement would raise difficulties, and for that reason M. Quassowski wondered whether it was, in fact, necessary to introduce such endorsements. He would ask the delegates of the countries with experience of that kind of endorsement whether the provisions in their law were of practical value.

M. SULKOWSKI (Poland) pointed out that the Hague regulation went far to assimilate endorsement of a bill by way of pledge nearer to the endorsement by the holder in the ordinary way. The uniform regulation said that the persons liable could not invoke defences against the holder which could be set up by the endorser ; in other words, the creditor who held the pledge was in this respect treated as an owner.

The German proposal would tend to assimilate more the endorsement by way of pledge and the ordinary endorsement by a holder, and to recognise the right of the creditor who held the pledge to transfer the bill of exchange as if it were his property. If that proposal were adopted, there would be no difference between a creditor holding the pledge and a holder in the ordinary way. The former would always have the legal status of the holder, whether it was a question of the defences which could be set up or of the transfer of the bill of exchange.

In substance, the German proposal seemed justified. The creditor who held the pledge should be able to transfer the bill of exchange as if it were his property, if, for instance, he assigned the debt secured by the bill of exchange. On the other hand, that possibility should exist in cases in which the debt secured by the bill of exchange had matured.

At the same time, it might be asked whether the question was really worth settling. Article 18 would always be a fragmentary solution. A bill of exchange could be given in pledge, not only by the means provided in Article 18 — that was to say, by an endorsement by way of pledge — but also in other ways. It could be made over as a pledge by an ordinary endorsement without any mention of pledge. Under some legislations, a bill could be made over as a pledge merely by surrendering possession of it.

Further, in view of the close relation between the provision of Article 18 and the provisions of civil law, which it was not proposed to unify, the stipulation might lead to confusion if that special point were settled while other cases were disregarded. M. Sulkowski wondered whether it would serve any practical interest to settle the question. Before the war cases of pledge had occurred sometimes. In Germany, in particular, there had been a practice of putting bills of exchange in pawn (*en pension*) in France in order to take advantage of the difference in the discount rate, which was higher in Germany than in France. At the present time, cases of pledging were rare. When a person in possession of a bill of exchange needed the sum which it represented he discounted the bill.

In conclusion, the Polish delegate suggested that the provision should be deleted, and the matter left to be settled by the civil law of each country.

M. EKEBERG (Sweden) believed that endorsement involving a pledge was unknown in the exchange law of most countries. If those countries were in future to accustom themselves to the system, it was reasonable for them to ask that the relevant provisions should be drafted as clearly as possible. The proposed text did not altogether fulfil these requirements.

Suppose, for instance, a bank received a bill of exchange as security for a debt by means of an endorsement " by way of pledge ". The bank might, for one reason or another, desire to withdraw from the transaction, and for that purpose to transfer the pledge together with the principal debt. If Article 18 were interpreted literally, the bank would nevertheless be unable to dispose of the bill of exchange, except by an endorsement by procuration ; but that would obviously not be satisfactory to the person to whom the principal debt had been ceded. The endorsement by procuration did not give him the right to sell the bill of exchange when the principal debt fell due, and did not release him from the defences which might be set up against the endorser.

Was it really intended, in the draft under discussion, that, on the assignment of the principal debt, a bill of exchange could only be assigned with the effects of an endorsement by procuration ?

The German delegate had raised a still more important objection. If a bill of exchange was, in the first place, endorsed by procuration and afterwards by an ordinary endorsement, the result would be a lack of clearness that would be particularly undesirable in the law on a matter such as bills of exchange. The value of the ordinary endorsement would, in that case, depend on a

circumstance which was independent of the bill of exchange. It was necessary to know whether or not the principal debt had fallen due when the endorsement was made, which fact was, as a general rule, absolutely unknown to the third party. A provision of that sort would not meet the requirements of security in economic matters, and would not conform to the need for clarity and precision that characterised the law on these subjects.

In those circumstances, was this provision, which was foreign to a number of countries and which hardly seemed to be used, really necessary for the greater number of States? Even if the legislation of a few countries mentioned endorsement "by way of pledge", was not the pledge currently given by means of an ordinary endorsement? It might be asked whether a uniform regulation should provide for the employment of that method in all countries. It was inevitable that the uniform regulation should be relatively complicated and difficult to understand on some points at first sight; but, as far as possible, an effort should be made to limit its provisions.

As far as the substance was concerned, the Swedish delegation saw no objection, in principle, to supporting the German proposal, but wondered whether it would not be preferable simply to omit Article 18, and to make a reservation that States who desired to do so had a right to maintain the rules already in force in their territory, at any rate during a certain transitional period.

The PRESIDENT was under the impression that the members who had spoken so far had not taken into consideration the fact that the article referred to cases where the expressions "value in security" or "value in pledge" were contained in the endorsement of the bill itself. It was obviously possible that neither of those stipulations would be found in the endorsement, but that, nevertheless, it had been intended to pledge the bill of exchange. For the moment, however, the Conference was not concerned with that possibility; the question was whether, in actual practice, there existed bills of exchange of which the endorsement contained one or other of the above stipulations. If the answer was in the affirmative, it was necessary to regulate the legal effects of the terms "value in pledge" and "value in security".

M. WEILLER (Italy) considered that the question whether an endorsement "by way of pledge" in the special form of an endorsement with a special clause was a practical one or not could never be settled conclusively. Nevertheless, if a bill of exchange was to be as perfect an instrument as possible, it must fulfil all possible requirements. Endorsement by way of pledge was a legal instrument that existed, and there was no good reason for discontinuing its use. If it was not very useful, at any rate it rendered some service, and might prove still more serviceable in the future. Moreover, it offered no danger.

In the second place, M. Weiller considered that the legal provisions governing this instrument should be simple. That should serve as a test for the German proposal. Theoretically, the latter appeared very valuable, but from the practical standpoint it seemed very complicated; in fact, there were two kinds of pledges for the transfer of bills of exchange. The first was the fiduciary pledge referred to by the President. A bill of exchange had been surrendered as a pledge. It was a question of a contract between the parties, and the endorsement was an ordinary endorsement. That implied great confidence between the parties. The special form of endorsement showed that confidence did not exist. If confidence did not exist before maturity, there was no reason why the parties should deserve it more after maturity.

The German proposal divided the position into two periods of time: the period up to maturity and the period after maturity of the principal debt — and not of the exchange debt — for which the bill had been given in pledge with the special form of endorsement. It was clear that until maturity, the creditor who held the bill with the special endorsement could only dispose of it by endorsing it by procuration, since he could not do so himself. When maturity supervened, the creditor had a claim on the principal debt. He could demand payment, and the debtor could set up his defences. The question, however, was one of a pledge, and at that moment civil law entered into the realm of exchange law. It would be said that the bill had become a commodity, which could be sold to cover the principal debt. But, according to the law of the different countries it could only be sold with the permission of the court; the creditor could not take the law into his own hands. If, however, the endorsement "by way of pledge" were given the effect of an ordinary endorsement, the creditor would have to take the law into his own hands and would treat the bill like any commodity which he could transfer to the possession of another person. It should not be forgotten, however, that it was not a commodity, but a bill of exchange that was involved, and the new holder must be able to see that the endorser had a limited right, which would not lose its character as a limited right because the bill had matured. It was possible that the debt did not exist, and the debt did not afford any proof at all that the relationship was real and effective. The German proposal could be supported for theoretical reasons, if greater stress were laid on the character of the original acquisition of the ownership of a bill of exchange sold under the above condition; but, as the new holder was obliged to obtain information as to his predecessors, he had not acted in absolutely good faith.

Finally, the abstract nature of the transfer obtained by endorsement "by way of pledge" was not made clear. There was always a second endorsement of a causal character, which was bound up with the fundamental relationship and subsisted after maturity.

In conclusion, it appeared to M. Weiller that the solution by which the second endorsement would be an endorsement for procuration — that was to say, an endorsement which transferred the possession of the right existing before maturity — was entirely correct; and he believed that M. Sulkowski, who was a specialist in the matter, was of very nearly the same opinion. M. Weiller therefore proposed the adoption of Article 18 as it stood, apart from possible revision in the drafting of the phrase: "without prejudice to the right of the creditor who holds the pledge to realise the pledge when the debt falls due".

M. VISCHER (Switzerland) did not attach very great practical importance to the system of endorsement in security. Nevertheless, if that system were to be introduced, the article should be so drafted that such endorsement did not become entirely useless. It was valuable by reason of the fact that the endorsement of the creditor who held the pledge was only equivalent to an endorsement by procuration, and that it secured to the person who had pledged the bill against all subsequent holders the defences which could be set up against the creditor who held the pledge. It would therefore be necessary, if endorsement in security were introduced into the uniform law, to provide for the protection of the debtor holding the pledge. In those circumstances, M. Vischer was unable to accept the proposal of the German delegate.

The Swiss delegate did not believe that the institution of the endorsement in security was really needed. It was unknown in Switzerland. However, there was no opposition to its introduction, and it was realised that, in certain cases, it might perhaps be of use, and M. Vischer would be prepared to accept it if the other delegations considered it necessary. Personally, he could also agree to delete Article 18, but on condition that those States that had the practice of endorsement in security gave their consent.

M. HAMMERSCHLAG (Austria) recognised that the question was extremely delicate. It had already given rise to long discussions at The Hague. There was the following alternative. If an endorser "by way of pledge" were given the same rights as those which existed in the case of an ordinary endorsement, as was proposed by the German delegate, he would, in fact, be given rights which exceeded those usually granted to a person who received a pledge. In that case, the endorser "by way of pledge" would be able to realise the bill before the debt fell due. On the other hand, if the endorsement by way of pledge were given the character of an endorsement by procuration, and that was the Hague solution, the endorser "by way of pledge" would not have sufficient right to be able to realise his pledge on the maturity of the debt. Moreover, an injustice would be done to the latter, who would be deprived of the right of setting up defences against his predecessors.

The Committee of Experts had endeavoured to find another solution by making what he might term a separation between the rights of the endorser "by way of pledge" before and after the maturity of the debt guaranteed; but certain legitimate criticisms had been put forward in connection with separation of that kind, because the maturity of the debt guaranteed did not depend on the bill of exchange. Whatever solution the Conference might adopt, criticisms would probably be raised by the professors and experts. For that reason, M. Hammerschlag wondered whether it was necessary or even desirable to deal with the problem of the endorsement in security. He would be glad to have the opinion of the delegations who were in favour of regulating the question.

In his country, particularly before the war, banks drew or gave bills of exchange in pledge (*en pension*) although there was no rule on the subject, and no difficulty had arisen. In those circumstances, it would be better not to deal with the point, but simply to delete Article 18. The consequence of such a solution would be that the courts would have to decide what effects would result from the expression "endorsement by way of pledge" in a bill of exchange. The Austrian Supreme Court had decided in cases of that kind that the holder of the bill of exchange could legitimately ask for payment by the acceptor. That was sufficient, in M. Hammerschlag's opinion. He did not believe that the suppression of Article 18 would cause difficulties. Nevertheless, if certain delegations felt that it was absolutely indispensable to settle the question by a uniform rule, he would make no objection, but in that case he would support the Hague text.

The PRESIDENT considered that the Conference should take as its starting-point the fact that such bills existed, as had been done in the Uniform Regulation of The Hague and that of the Committee of Experts. There were in circulation bills of exchange with the endorsements "value in pledge" and "value in security", and the endorser attached a servitude to them. He wondered whether, in those circumstances, it was necessary to give subsequent endorsers more right than the original endorser had desired to give. *Beneficia non obtruduntur.*

M. PERCEROU (France) explained the situation in France.

The French Commercial Code contained the following provision in Article 91, paragraph 2 :

"A pledge in connection with negotiable instruments can also be established by a regular endorsement, indicating that the instruments have been surrendered in security."

What, then, was the exact effect of the endorsement in security when it was established in that manner?

The endorsee in security could not sell the instrument surrendered as security before the maturity of the secured debt. If the instrument matured before the principal debt arose, he could recover the instrument. If, on the contrary, the principal debt secured by the bill matured before the bill itself, what was the right of the creditor who held the pledge? He must conform to Article 93 of the French Commercial Code—that was to say, call on the debtor who had surrendered the bill as security to pay it. If the debtor did not do so, he could, without any further notice, realise the bill eight days later, but by auction.

Those were the legal effects in France of endorsement in security. It should at once be added that those effects were, in general, hardly in conformity with practical needs, and, consequently, endorsements in security were somewhat rare in France. Nevertheless, they existed. When, however, it was desired to surrender a bill as security, when, for example, a banker wished to take bills in pawn (*en pension*), the endorsement was made in the same manner as an endorsement to transfer (simple signature of the endorser). The banker who received the bill as security was in a very favourable situation. His rights were greater than those of an ordinary creditor who held a pledge. He had the same rights as an owner.

It was permissible to ask whether, from the strictly legal point of view, that practice could withstand criticism. Indeed, it resulted in a kind of *commissorium pactum* (*pacte comissoire*).

The creditor obtained a bill which, in his relations with the debtor, could only be a pledge on which, in theory, he had only the rights of a creditor by way of pledge — *i.e.*, a pledge which he ought only to be able to realise in the circumstances previously indicated. But, in reality, it was at his disposal as though he had received the bill by transfer.

Nevertheless, in spite of that situation in France, provision was made for endorsement in security under the law. Was it possible in these conditions to disregard it?

What was the solution? It would be desirable to maintain the provision regarding endorsement in security while permitting States who did not wish to allow it in their territory to make a reservation. That was the solution which had been accepted at The Hague and which seemed to be the least undesirable.

As to the criticism of the experts' system on the ground of inconsistency—namely, that it admitted that an endorsement could be at the same time an endorsement by procuration until the maturity of the principal debt, and then an endorsement of transfer (since on maturity of the principal debt the bill could be sold), M. Percerou did not think that that criticism was justified. Indeed, as endorsement, the endorsement in security was only an endorsement by procuration. If on maturity the creditor could sell the bill, that was not by virtue of the ordinary form of endorsement but in virtue of the realisation of the pledge (sale by auction). That was what was understood by the addition of the paragraph which read: "Without prejudice to the right of the creditor who holds the pledge to realise the pledge when the debt falls due"; that was to say, to realise it in accordance with the ordinary rules governing the pledge. To that paragraph could be added "according to the particular rules on the pledge in each State".

Indeed, the system accepted at The Hague — with the preceding reservation — could be adopted with advantage.

M. BARBOZA-CARNEIRO (Economic Committee) said that the Conference was faced with one of the cases which required a solution which he would not care to see adopted very often; that was to say, the adoption of the reservation made at The Hague. Nevertheless, placed as the Conference was between the radical proposal to delete Article 18 and the maintenance of the article, and in view of the difficulty which would result for certain countries if the Hague reservation were not adopted, the Conference would, M. Barboza-Carneiro believed, be acting wisely if it supported M. Percerou's suggestion.

Baron CARTON DE WIART (Belgium) stated that the system of putting bills of exchange in pawn (*en pension*) had been employed for many years. It had caused no difficulty. On the contrary, he believed that the method referred to in Article 18 had been very little used. Nevertheless, he saw no objection, since several delegates requested it to maintain the article which was very kely to fall into complete disuse.

M. GIANNINI (Italy) said, in the first place, that he was of opinion that, by their proposal, the German delegation, though they had not the courage to kill Article 18, nevertheless removed the reason for its existence. If the German amendment were adopted, the endorsement containing the expression "value in security" would become an ordinary endorsement. In other words, the results would be the same if the rule were simply deleted.

The position in Italian law was as follows. The Code contained a rule, and a draft rule was under discussion. In the Code, it was laid down that the endorsement which contained the expression "value in security" or some equivalent expression did not transfer the ownership of the bill of exchange, but authorised the holder to exercise all the rights of the bill, to make protest and endorsement by procuration. In the draft regulation, it was provided that the endorsement which contained the expression "value in security", or any other expression involving a pledge, enabled the holder to exercise all rights arising from the bill of exchange identical to those of endorsement by procuration, but that defences founded on personal relations with the endorser could not be set up against him.

Finally, what was the practical importance of the question? A distinction should be made between its national and international importance.

In Italy, its importance from the national point of view was very small and tended, moreover, to diminish.

From the international point of view, on the other hand, the problem existed even if it were disregarded; and, although it had a very limited bearing, it was necessary to consider it. M. Ekeberg had suggested that the question should be disregarded, fearing that the insertion of a provision in the Convention would incite those States for whom the question did not actually arise to deal with it. The Conference must, however, provide for cases in which an instrument issued in certain countries circulated in another country. If the German proposal, which reduced the endorsement in security to an ordinary endorsement, were adopted, the effect would be to remove all security. Either a cautious rule should be laid down or the question should be left to national law, as had been proposed.

M. Giannini would be glad to be able to support the formula adopted at the Hague Conference in 1912, and even to say simply that the endorsement in that case was considered as an endorsement by procuration. That rule was a very cautious one, and would allay the preoccupations of certain members of the Conference.

If it was desired to leave the question to national law, the fact should be expressly stated in the Convention; but it would then be necessary, in practice, each time such a bill was presented, to study the national laws so as to discover the provisions relating to that particular form of endorsement, whilst the adoption of a moderate but uniform rule would limit the disadvantages to a minimum. In conclusion, if the Conference preferred to support the method of leaving the matter to national law, M. Giannini would raise no objection. On the contrary, he would find it very difficult to accept the German proposal.

The continuation of the discussion was postponed to the next meeting.

EIGHTH MEETING.

Held on May 16th, 1930, at 3 p.m.

President: M. J. LIMBURG.

12. Discussion of the Draft Uniform Regulations concerning Bills of Exchange and Promissory Notes : First Reading (Continuation).

ARTICLE 18 (Continuation).

M. TROUILLIER (International Chamber of Commerce) said that two cases might arise :

1. When the debt guaranteed by the bill fell due after the bill itself fell due, a case which presented no serious difficulties ;
2. Where the debt guaranteed fell due before the maturity of the bill itself.

It was the difficulty in the second case that had drawn the attention of the German delegation. According to Article 18, endorsement by the creditor holding a pledge before the maturity of the debt guaranteed only availed as an agency endorsement ; but, on the other hand, endorsement by the creditor holding a pledge after the maturity of the debt guaranteed was subject to the ordinary rules. According to the German delegation, the difficulty would then be the following : how to distinguish the moment at which the endorsement by the creditor holding a pledge began only to be of avail as an agency endorsement or the moment at which it began, on the contrary, to produce its ordinary effects. Surely it would be very simple to provide that, in the case of a bill of exchange given as a guarantee or a pledge, the date of the maturity of the debt guaranteed should be stipulated on the instrument ?

He thought that there would be no disadvantage in that procedure ; such at least was the impression that several members of the Committee of the International Chamber of Commerce had had.

If, for any reason, this solution did not satisfy the Conference, the International Chamber of Commerce would suggest that Article 18 should be kept as it stood, with the reservation that the Drafting Committee could amend it. The main fear of the International Chamber of Commerce was that the Conference might be led to provide for certain questions concerning the suspension of payment and the realisation of pledges which were the object of special provisions in every country, which provisions, for the moment at least, could not be included in a uniform law. In such a case, they would have to have recourse to the provisions of Article 4 of the Convention of the experts, which reserved each State the right to legislate for itself on the matter. The dangers and inconveniences resulting from this had been clearly pointed out by M. Giannini.

M. Trouillier himself had tried to view the matter from the commercial point of view.

In conclusion, he said that the International Chamber of Commerce would suggest that the date of the maturity of the debt guaranteed should appear on the bill of exchange.

M. Gomez MONTEJO (Spain) said that the Commercial Code that was in force in Spain at the present moment dated from 1896 ; but since its initiation many attempts had been made to improve it, and in 1926 the Minister of Justice had instructed the General Committee of Codification to draw up a preliminary legislative draft in which the exact text of Article 18 of the 1912 Hague Convention had been inserted as Article 547. Consequently, if the text of this article was put to the vote, the Spanish delegation would support it.

Mr. GUTTERIDGE (Great Britain) said that the practice of endorsing bills specially by way of pledge was unknown in England. It was true that a great many bills were pledged by way of security for advances, chiefly by bill brokers with the banks, but the method adopted was a very simple one and had already been referred to by Baron Carton de Wiart. The bills were endorsed in blank and deposited, and if any juridical question arose the matter was dealt with by the ordinary law of England which applied to the hypothecation of movables.

His object in speaking, however, was to call attention to the fact that a question of principle was involved which might go somewhat further than the particular article under discussion. It was true that there was no endorsement of the kind in question in England, but it would be a bold man who would prophesy that no bill of exchange endorsed in that way would ever find its way to the London money market. Several members had said that such endorsements were still in use, and from the point of view of the Anglo-Saxon countries, without going into any of the juridical questions involved, it would be very useful if the Conference could see its way to define the legal obligations following from an endorsement of the kind in question, so that if the question had to be dealt with they would have some indication of what the law was without having to make a prolonged search through all kinds of foreign codes dealing with the matter.

M. SULKOWSKI (Poland) said that the discussion had shown how very complicated was the question of endorsement as pledge. As he has already pointed out at the previous meeting, this question was intimately connected with civil law, and he thought that if the provisions of Article 18 were kept there would be the risk that this article might contradict other provisions of civil law which were in force in some countries, and which could not be unified because of their considerable differences.

It had been suggested at the previous meeting that this article should be kept in the Regulation, with the addition of the reservation provided for by the Hague Convention. As a matter of fact, Article 4 of the Hague Convention of 1912 laid it down that "every Contracting State may provide, in derogation of Article 18 of the Regulation, that, so far as relates to an endorsement made within its territory, a statement implying a pledge shall be deemed to be unwritten".

Personally, M. Sulkowski did not think that the solution provided by Article 4 was an ideal one, because, if the reservation under Article 4 was maintained, the situation of the creditor would become very ambiguous; in certain countries he would be considered as a creditor holding a pledge; in other countries as an owner. As a result, there would be many conflicts which it would be extremely difficult to settle by regulations concerning the conflicts of exchange laws.

M. Sulkowski wished to propose a solution diametrically opposite to that which had already been suggested. In his opinion, Article 18 of the Regulation should be deleted and a reservation should be made allowing each country to regulate the juridical effects of an endorsement in security by the provisions of its own national legislation. He thought, however, that this right should be confined to bills of exchange which had been drawn up and which were payable in the country of the State concerned, so that such a provision, if it were undertaken by a State, ought to be recognised by the other States, too. That might prove important in the case when a bill of exchange of a purely internal character passed into circulation abroad.

M. Sulkowski submitted the following proposal:

"Each State shall have the right, as far as bills of exchange and promissory notes drawn up and payable in its own territory are concerned, to regulate the juridical effects of an endorsement containing a clause implying a pledge. Such provisions shall be recognised by all the other Contracting States."

M. Sulkowski asked the Conference to come to a decision on the fundamental point whether the question of the endorsement by way of pledge should be settled in the Regulation itself or whether a special reservation should be drawn up for this purpose. If the Conference thought that a reservation ought to be inserted in the Convention, then the Drafting Committee could be asked to draw up a formula.

M. SCHMIDT (International Chamber of Commerce) said that Article 18 had given rise to a great difference of opinion and he thought that the Conference had been attempting to join two problems which could only be settled separately.

During the discussion, mention had been made of bills of exchange "*en pension*". Recourse was often had to that system in Germany. These bills of exchange were used when it was desired to obtain German money for bills of exchange drawn in foreign currency. When the debt matured (and it always matured before the bill of exchange fell due), the money was usually received, the bill handed back to the endorser and the whole transaction concluded. In such a case, there was no necessity for an endorsement in pledge; a blank endorsement was quite sufficient.

A case had also been mentioned in which a French wine merchant sold wine to a merchant in Sweden. In that case the bill of exchange was sold, and in order to give the holder greater security he was also given the goods in pledge. It was only for a transaction of that nature that it would be necessary to make such a stipulation as that contained in Article 18.

M. Schmidt thought, however, that it was necessary to know quite definitely whether Article 18 would regulate both the questions or only one of the two.

M. EIGTVED (Denmark) doubted whether the provisions of Article 18 were of great importance in practical life. In any case, the endorsement of a bill of exchange in pledge was not known in Denmark, and he thought that it would be more advisable to make some provision which would limit the rights of holders of bills of exchange. For that reason, the Danish delegation agreed with the Swedish delegation that it would be best to delete the article in question and to adopt the reservation proposed by M. Sulkowski.

M. LOEBER (Latvia) pointed out that Article 18 would establish quite a new provision as far as Latvia was concerned. According to Latvian law, the holder of a bill of exchange had the right to establish a sufficient security by other means so long as they were in conformity with the civil law, admitting documents or credits as the object of the pledge. For that reason, the provisions of Article 18 could not be accepted by Latvia.

During the discussion, it has been suggested that a reservation might be made in favour of States who found themselves unable to accept this article, but the reservation as it stood in the Hague Convention (Article 4) did not provide sufficient security for States which were unable to accept Article 18 of the Regulation. Article 4 of the Convention gave every State the right to declare the above-mentioned endorsement unwritten, if it had been made within its territory, but this article did not give States the right to regard as "unwritten" an endorsement that contained a stipulation "value in security" which had been made within the territory of a foreign State. Article 4 of the Hague Convention did not, therefore, provide sufficient security for States that found themselves unable to accept Article 18 of the Regulation, unless the Convention might be completed by such a provision as he himself had suggested.

M. BOUTERON (France), wished to add to the statement which had been made by M. Percerou at the previous meeting and to support the suggestion made by the British delegate. The question at stake was to know whether uniform legislation would validate endorsement in security and, if the answer was in the affirmative, to know what scope it would give such endorsement.

M. Bouteron reminded the Conference that it was not only commercial effects that were governed by the legislation on bills of exchange and which could consequently receive an endorsement of security. For example, life assurance policies were very common in France and could be remitted as a pledge with a formal endorsement of security.

The French delegation therefore thought that there was a serious reason for keeping the provisions of Article 18, which preserved the remittance of a commercial instrument as a pledge.

M. HAMMERSCHLAG (Austria) said that the representatives of certain countries were opposed to the deletion of Article 18. If the Conference agreed, there would be no need to discuss the Polish proposal, but if not, and should it be decided to keep the article in question, it would be dangerous to accept the Polish proposal because, to begin with, it was necessary to avoid discriminating between national and international bills of exchange. A bill of exchange could quite well be drawn up in Poland and payable in Poland, but between its issue and its maturity it might become an international bill. Consequently, it was impossible to make this distinction and, if the article were not omitted, the matter would then have to be settled in the best way possible.

On the other hand, it appeared from the discussion that the German proposal, which suggested that an endorsement for a pledge should be equivalent to a regular endorsement, had not been approved by most of the members of the Conference. M. Hammerschlag thought indeed that this proposal went a little far, and consequently he favoured M. Giannini's proposal that the text of too the Hague Convention should be reproduced.

M. Deoclecio DE CAMPOS (Brazil) said that his delegation agreed with the other delegations that reservations ought to be made regarding stipulations of endorsements in security. The Brazilian delegation (in conformity with Brazilian law and the commercial customs of that country) had accepted this reservation at The Hague.

He agreed with M. Giannini that, from the international point of view, it would be useful to draw up the text with a certain discretion, but always subject to the reservations of the juridical provisions of the countries concerned. In agreement with his colleague M. Berboza-Carneiro, the representative of the Economic Committee, he was in favour of adopting the text of The Hague.

M. EKEBERG (Sweden) said that it appeared, in the first place, from the discussion that a large number of countries represented at the Conference did not recognise pledge endorsements and did not wish to introduce them into their legislation. It also appeared that the importance of this kind of endorsement was decreasing more and more in States where it was recognised by law, such as France and Italy. It seemed clear from the discussion that had taken place that such endorsements were of almost no practical importance in international relations.

What conclusion should be drawn from these facts when the Conference had to choose between the various proposals that had been presented? He recalled a proverb which had been current in ancient Rome and which he thought ought also to be well known in modern Italy : *De minimis non curat lex*.

In Sweden it was customary to speak of the principle of legislative economy, and it was not the duty of the law to settle questions which were only of theoretical value. This principle was even more important when it came to drawing up laws whose scope had to be international.

Countries that did not recognise endorsements in pledge, and which did not wish to recognise them, were being asked to introduce a dead provision into their legislation which would deal with cases rarely met with in practice, namely, cases in which bills of exchange furnished with an endorsement in pledge might go astray in one of these countries. That was too much to ask. There was a Swedish proverb which said that a gnat should not be killed with a hammer. M. Ekeberg warned the Conference not to apply this method. There was a large number of questions of much greater importance which had been left on one side in order not to overload the text of the Uniform Regulation. If the Conference began to regulate all sorts of questions of exchange provisions, it would never come to an end.

The matter, therefore, ought to be settled by a reservation in favour of those countries that wished to preserve pledge endorsements and he himself had no hesitation in asking for the suppression of this article, while leaving the Convention to deal with exceptions. If this proposal were adopted, it could be submitted to the Drafting Committee.

M. HAMMERSCHLAG (Austria) drew the attention of the Conference to the difficulties that would arise from the Swedish proposal. The Hague Convention had made certain reservations on this subject, but each of these showed how the question ought to be settled. There was no question of any reservation that should give each State the possibility of settling the question in any way it liked.

It was therefore indispensable that, if there was any desire to make a reservation on this point, its contents should be made quite clear.

The PRESIDENT had had the same intention as M. Ekeberg. He wished to summarise the discussion. Once more the truth of the adage : *Si duo faciunt idem non est idem* would be apparent. The conclusion he had drawn from the discussion was different from that drawn by M. Ekeberg. In any case, it could not be maintained if the article were deleted that it had died *unsung*. In listening to the discussion, the President had felt pity for the article in question.

The following points were to be noted :

1. The Conference had been asked to decide whether the article should, or should not, be deleted. A negative answer had been received from M. Troullier and a reply which amounted to a negative from M. Schmidt, both speaking on behalf of the International Chamber of Commerce.

2. The British delegate had urged the Conference to settle the matter and had pointed out that no such article as Article 18 existed in England, which therefore desired to know how to act in the future.

3. It had been said that in practice the article would be very rarely applied, and some delegates had gone so far as to quote the maxim : *De minimis non curat prætor*. But that

maxim did not mean that the prætor must pay no attention to circumstances which only rarely occurred. Even if they only had a certain degree of importance, the prætor must pay attention to them.

The President asked the Swedish delegate what objection there could be to the maintenance of this article if it were true that in practice it would hardly ever come into play. The article laid down that, when the endorsement contained the stipulation "value in security" or "value in pledge", the consequences stated in the article would follow. It was quite possible to take the view that that article should be made part of the Uniform Regulation and introduced into the national legislation of the various countries. It was quite possible, too, that the article would be a dead-letter for twenty-two States out of twenty-five, because they possessed no bills of exchange in which the endorser had included the stipulation "value in security" or "value in pledge". What harm would be caused? There would be three States in which this stipulation would have effect. The Swedish delegate might urge that a bill of exchange issued in one of the three States recognising this stipulation might, when put into international circulation, reach countries which did not recognise this system. If this happened, where was the harm? In the articles which had been, or were to be, examined, all kinds of restrictions made by the drawer himself, were contemplated, as well as restrictions which could be made by the endorser. Why should a drawer or an endorser be prevented from including the stipulation in question in the bill of exchange? The President did not understand the objection. In view of the fact that, on the one hand, various restrictions were allowed, particularly "endorsement by procuration", why should not countries who possessed, or might possess, this article in their legislation be allowed the use of it naturally with reservations regarding its wording? This was what the representative of Spain had pointed out. M. Bouteron had drawn attention to other securities which in practice had become promissory notes. He had not referred to bills of lading, but to insurance policies.

The objection could be made that if the Conference accepted all articles which gave rise to no inconvenience, where would it stop?

The President made two observations in reply. The first was that the Hague Conference of 1912 and the Committee of Experts had been composed of persons with intimate knowledge of practical affairs.

The second was that, in this reply, *latet anguis in herba*, certain delegations wished to allow a reservation to be made, and in regard to this reservation the "executioners" of the article were not in agreement. As far as the President was concerned, he was not in favour of reservations for the reasons which he had given and which were similar to those put forward by the French and Italian delegations.

M. Giannini had suggested — the President did not think that he had actually made a formal proposal — that the Conference should return to the wording adopted at The Hague, which would mean the deletion of the words "without prejudice to the right of the creditor who holds the pledge to realise the pledge when the debt falls due". The President would prefer to accept the deletion of this phrase rather than the total deletion of the article. Here, however, arose the question whether the experts had not added these words in order to insert something which, in their view, was quite usual but which should, in future, be absolutely certain. If the Conference should return to the wording of The Hague, would the creditor holding the pledge who possessed the bill of exchange at the moment when the main debt for which he had received the pledge fell due have the right to realise the pledge? The President thought that he should have this right. The only object, therefore, of the words added by the Committee of Experts was to prevent any doubt on the matter.

If the words in question were deleted and the article maintained, several theses might well be written on it, but two opinions would be expressed in these theses. Some would maintain that the Conference deleted the words because it did not desire to retain them. Others would say it deleted them because it was the natural thing to do.

In conclusion, the President was in favour of maintaining the article unchanged.

M. EKEBERG (Sweden) recalled the arguments of substance which he had put forward in favour of deleting the article. In his view, its stipulations would not strengthen the security which that instrument of credit known as a bill of exchange should have from the point of view of legitimate commerce, for it would be impossible for a third party to discover whether an endorsement was in the nature of a procuration or whether it should possess the ordinary value attaching to an endorsement.

It was not enough to ask for the maintenance of the article on the pretext that it did no harm. In his view, an article whose sole merit was to do no harm was of necessity bad, for it might lead to confusion. Consequently, M. Ekeberg maintained his proposal to delete the article.

The PRESIDENT pointed out that he could not take part in the discussion except to clear up doubtful points. He would therefore refrain from replying to M. Ekeberg's arguments.

M. GIANNINI (Italy) asked for a return to the principles adopted at The Hague, for the following reasons. What were the cases which might arise? The first hypothesis was that the date upon which the debt fell due and the date on which the bill of exchange fell due might coincide. In that case, no difficulty would arise. There might, however, be cases in which the debt would fall due before the bill of exchange or *vice versa*.

What would be the position in the first hypothesis? M. Giannini would take an example. Supposing that he possessed a bill of exchange and that the debt having fallen due he decided to wait until the bill of exchange reached maturity. It could be maintained that he could negotiate the bill of exchange. He wondered, however, who would want to buy it when the debt had already fallen due?

To take the opposite hypothesis—that was to say, that in which the bill of exchange had fallen due—supposing he confidently kept it while waiting for the debt to reach maturity. He would in

that case run two risks — first, the risk of not receiving the sum due on the bill of exchange, and secondly, of not receiving the amount of the debt either. He would be in an unfortunate situation either way, for in the first case he would be unable to find anyone to buy the bill of exchange, and in the second he ran the risk of obtaining nothing at all. It was for reasons of prudence that M. Giannini proposed that the Conference should maintain the wording adopted at The Hague.

M. Giannini returned to the Polish proposal to the effect that each State should be allowed to settle the legal consequences of an endorsement containing the stipulation implying a pledge. That proposal ran the risk of preventing that uniformity which it was the object of the Conference to attain. In his view, it would be preferable to have fewer but clearer provisions.

The PRESIDENT thought the moment had now come when the Conference could vote on the article. He would recall the several proposals made :

1. The Polish delegation asked for the deletion of the article with a reservation which had been laid before the Conference ;
2. The Swedish delegation also asked for the article's deletion with a reservation that had not yet been drafted ;
3. The German delegation had submitted an amendment to Article 18.

As a general rule, amendments were first of all voted upon, but in this case it would be more practical to vote first on the deletion or maintenance of the article. Consequently, the President proposed to vote by roll-call on this point.

The vote by roll-call took place.

There voted in favour of the maintenance of the article the representatives of : Belgium, Brazil, Colombia, Czechoslovakia, France, Great Britain, Italy, Japan, Luxemburg, Portugal, Roumania, Siam, Spain, Switzerland, Turkey and Venezuela.

There voted in favour of deletion the representatives of : Austria, Danzig, Denmark, Finland, Germany, Hungary, Latvia, the Netherlands, Norway, Poland, Sweden and Yugoslavia.

The representatives of Bulgaria, Cuba, Ecuador, Greece, and Peru were absent.

The article was maintained by 16 votes to 12.

The PRESIDENT said that the Conference could now be called upon to take a decision on the various amendments.

M. QUASSOWSKI (Germany) said that the German amendment was withdrawn.

The PRESIDENT asked the Conference to vote on the Italian amendment to delete the last words of the first paragraph : “ without prejudice to the right of the creditor who holds the pledge to realise the pledge when the debt falls due ”.

By 18 votes to 5, the Conference adopted the Italian amendment.

The first paragraph of Article 18 was approved at the first reading.

ARTICLE 18, SECOND PARAGRAPH.

M. SULKOWSKI (Poland) thought the Conference should adjourn its decision until it had decided on the final wording of Article 16 with which the second paragraph of Article 18 was closely connected.

M. SCHELTEMA (Netherlands) desired a word of explanation. He took the following example. A creditor holding a pledge endorsed a bill of exchange. The endorsement was by procuration and in this case all the defences set up against the endorser could be set up against the creditor holding a pledge since it was an endorsement by procuration. Nevertheless, the second paragraph of Article 18 laid down that the parties liable could not set up against the holder defences founded on their personal relations with the endorser. He thought that what the article really meant was that the parties liable could not set up against the creditor holding a pledge pleas based on their personal relations with the endorser. He would prefer, therefore, to substitute the words “ creditor holding a pledge ” for the word “ holder ”.

M. PERCEROU (France) proposed that the expression “ beneficiary of an endorsement given as a guarantee ” should be substituted for the word “ holder ”.

The PRESIDENT thought that the words “ creditor holding a pledge ” were clearer.

M. PERCEROU (France) thought that M. Scheltema would be satisfied if the word “ holder ” were maintained and if the Conference stated in its report that this term meant the creditor holding a pledge and not his successor.

M. SCHELTEMA (Netherlands) accepted this suggestion. It was quite clear that the person receiving the endorsement by procuration was not the holder under exchange law.

The PRESIDENT proposed to put Article 18 to the vote, it being understood it should be discussed again when Article 16 was before the Conference.

With this reservation, Article 18 was approved at the first reading.

ARTICLE 19.

The PRESIDENT said that the Czechoslovak delegation had proposed the following amendment :

“ I. (a) Instead of the first sentence, insert the following text :

“ ‘ If the bill of exchange has been endorsed after the expiration of the limit of time fixed for drawing up protest for non-payment, the endorser acquires against the acceptors the rights resulting from acceptance if there has been acceptance. He also

acquires rights to take proceedings against persons who have endorsed the bill of exchange after the expiration of this limit of time.'

"(b) In the second sentence of Article 19, delete the words 'or after the expiration of the limit of time fixed for drawing it up'."

M. SRB (Czechoslovakia) proposed that the Conference should deal with the principle of the Czechoslovak amendment and leave the wording to another occasion.

What was the difference between the text of that amendment and that of the experts? According to the experts' text, a distinction should be drawn between two categories of endorsements made after maturity: (1) an endorsement made after the maturity of the bill of exchange but before the protest for non-payment had been made and before the expiration of the limit of time fixed for drawing up that protest; (2) an endorsement made after the protest or after the expiration of the limit of time fixed for drawing up the protest. For both categories, a special provision had been laid down by the experts. According to the Czechoslovak amendment three categories of endorsements after maturity must be drawn up. The first category was that mentioned in the first sentence of the experts' text and concerned endorsements made after maturity but before the protest for non-payment and before the expiration of the limit of time fixed for drawing up that protest. As far as the legal effects of such an endorsement were concerned, the Czechoslovak delegation approved the text of the experts and recognised that an endorsement did not differ from the endorsement made before maturity.

Nevertheless, he thought that it was not absolutely necessary to say this in the text. Naturally, if the Conference did not share this opinion and if it wished to keep the first sentence of the experts' text, the Czechoslovak delegation would not oppose such a procedure.

What it desired was that a distinction should be made between the endorsement of a matured and not protested bill of exchange (*lettre de change préjudiciée*), that was to say, an endorsement made after the expiry of the limit of time fixed for drawing up the protest and the endorsement of a bill of exchange which had been protested. No reliance deserved to be placed any longer on such a bill; it had failed to fulfil its normal object. Consequently, it was quite right to exclude any possibility that the endorsement of such a document should make any proceedings under the laws of bills of exchange possible. In so far as that category of endorsements was concerned, therefore, M. Srb also agreed with the text of the experts. The situation, however, was not the same in the case of a matured and not protested bill of exchange (*lettre de change préjudiciée*). Cases might occur in which such a bill was paid by the acceptor. There was no legitimate reason, therefore, why the person who had acquired a matured and not protested bill of exchange (*lettre de change préjudiciée*) by endorsement should not have rights to take proceedings in regard to the acceptor.

He thought, therefore, it would be more just to recognise that the relations between the endorser of a matured and not protested bill of exchange (*lettre de change préjudiciée*) and subsequent endorsers should be settled by the laws governing bills of exchange.

This did not appear to be an isolated point of view. A similar solution to that contemplated in the Czechoslovak amendment was, for example, to be found in Article 16 of the Austrian law and appeared also in Swiss legislation. Finally, M. Srb quoted the letter of the Latvian Government, which emphasised the following point:

"In practice, however, and in legal theory, a distinction is made between the endorsement of matured and not protested bills of exchange (*lettre de change préjudiciée*) and endorsement after protest."

The Latvian Government, however, had moved no amendment.

To sum up: the Czechoslovak amendment gave rise to two questions — one of substance, the other subsidiary. The main question was to ascertain whether a distinction should, or should not, be made between the legal effects of the endorsement of a matured and not protested bill of exchange (*lettre de change préjudiciée*) and those of the endorsement of a bill of exchange which had been protested. If an affirmative reply were to be given to this question of substance, the second question would arise, which was: What should be the legal effects of the endorsement of a matured and not protested bill of exchange (*lettre de change préjudiciée*)?

M. MOLENGRAAFF (Netherlands) presented an amendment with a view to adding to article 19 a new paragraph reading as follows:

"In the absence of proof to the contrary, an undated endorsement shall be regarded as having been made before the protest or before the expiration of the limit of time fixed for drawing it up."

His delegation had merely wished to express an idea designed to complete the provisions of Article 19 of the Uniform Regulation.

He thought the amendment was in harmony with the views of the Conference and that the experts could have no objection against the proposed solution. Its object was to improve the delicate situation which arose in regard to the proof to be furnished by the holder of a bill of exchange acquired by an undated endorsement in the case in which he asked payment from the drawee who has accepted the bill. According to the Dutch proposal, the onus of proof fell on the acceptor who maintained that endorsement had occurred before the expiration of the limit of time fixed for drawing up the protest.

The objection might be made that the words "before the protest" were not necessary, because it followed from the act of protest that endorsements had been made on the bill of exchange. That objection, however, was only valid in the case of an authentic protest and not for the case of the simplified protest which was used in a number of countries.

M. LA LUMIA (Italy) noted that this proposal covered two hypotheses. In the first, the undated endorsement was considered in the light of the protest and, in the second, the same

that case run two risks — first, the risk of not receiving the sum due on the bill of exchange, and secondly, of not receiving the amount of the debt either. He would be in an unfortunate situation either way, for in the first case he would be unable to find anyone to buy the bill of exchange, and in the second he ran the risk of obtaining nothing at all. It was for reasons of prudence that M. Giannini proposed that the Conference should maintain the wording adopted at The Hague.

M. Giannini returned to the Polish proposal to the effect that each State should be allowed to settle the legal consequences of an endorsement containing the stipulation implying a pledge. That proposal ran the risk of preventing that uniformity which it was the object of the Conference to attain. In his view, it would be preferable to have fewer but clearer provisions.

The PRESIDENT thought the moment had now come when the Conference could vote on the article. He would recall the several proposals made :

1. The Polish delegation asked for the deletion of the article with a reservation which had been laid before the Conference ;
2. The Swedish delegation also asked for the article's deletion with a reservation that had not yet been drafted ;
3. The German delegation had submitted an amendment to Article 18.

As a general rule, amendments were first of all voted upon, but in this case it would be more practical to vote first on the deletion or maintenance of the article. Consequently, the President proposed to vote by roll-call on this point.

The vote by roll-call took place.

There voted in favour of the maintenance of the article the representatives of : Belgium, Brazil, Colombia, Czechoslovakia, France, Great Britain, Italy, Japan, Luxemburg, Portugal, Roumania, Siam, Spain, Switzerland, Turkey and Venezuela.

There voted in favour of deletion the representatives of : Austria, Danzig, Denmark, Finland, Germany, Hungary, Latvia, the Netherlands, Norway, Poland, Sweden and Yugoslavia.

The representatives of Bulgaria, Cuba, Ecuador, Greece, and Peru were absent.

The article was maintained by 16 votes to 12.

The PRESIDENT said that the Conference could now be called upon to take a decision on the various amendments.

M. QUASSOWSKI (Germany) said that the German amendment was withdrawn.

The PRESIDENT asked the Conference to vote on the Italian amendment to delete the last words of the first paragraph : “ without prejudice to the right of the creditor who holds the pledge to realise the pledge when the debt falls due ”.

By 18 votes to 5, the Conference adopted the Italian amendment.

The first paragraph of Article 18 was approved at the first reading.

ARTICLE 18, SECOND PARAGRAPH.

M. SULKOWSKI (Poland) thought the Conference should adjourn its decision until it had decided on the final wording of Article 16 with which the second paragraph of Article 18 was closely connected.

M. SCHELTEMA (Netherlands) desired a word of explanation. He took the following example. A creditor holding a pledge endorsed a bill of exchange. The endorsement was by procuration and in this case all the defences set up against the endorser could be set up against the creditor holding a pledge since it was an endorsement by procuration. Nevertheless, the second paragraph of Article 18 laid down that the parties liable could not set up against the holder defences founded on their personal relations with the endorser. He thought that what the article really meant was that the parties liable could not set up against the creditor holding a pledge pleas based on their personal relations with the endorser. He would prefer, therefore, to substitute the words “ creditor holding a pledge ” for the word “ holder ”.

M. PERCEROU (France) proposed that the expression “ beneficiary of an endorsement given as a guarantee ” should be substituted for the word “ holder ”.

The PRESIDENT thought that the words “ creditor holding a pledge ” were clearer.

M. PERCEROU (France) thought that M. Scheltema would be satisfied if the word “ holder ” were maintained and if the Conference stated in its report that this term meant the creditor holding a pledge and not his successor.

M. SCHELTEMA (Netherlands) accepted this suggestion. It was quite clear that the person receiving the endorsement by procuration was not the holder under exchange law.

The PRESIDENT proposed to put Article 18 to the vote, it being understood it should be discussed again when Article 16 was before the Conference.

With this reservation, Article 18 was approved at the first reading.

ARTICLE 19.

The PRESIDENT said that the Czechoslovak delegation had proposed the following amendment :

“ 1. (a) Instead of the first sentence, insert the following text :

“ ‘ If the bill of exchange has been endorsed after the expiration of the limit of time fixed for drawing up protest for non-payment, the endorser acquires against the acceptors the rights resulting from acceptance if there has been acceptance. He also

acquires rights to take proceedings against persons who have endorsed the bill of exchange after the expiration of this limit of time.'

"(b) In the second sentence of Article 19, delete the words 'or after the expiration of the limit of time fixed for drawing it up'."

M. SRB (Czechoslovakia) proposed that the Conference should deal with the principle of the Czechoslovak amendment and leave the wording to another occasion.

What was the difference between the text of that amendment and that of the experts? According to the experts' text, a distinction should be drawn between two categories of endorsements made after maturity: (1) an endorsement made after the maturity of the bill of exchange but before the protest for non-payment had been made and before the expiration of the limit of time fixed for drawing up that protest; (2) an endorsement made after the protest or after the expiration of the limit of time fixed for drawing up the protest. For both categories, a special provision had been laid down by the experts. According to the Czechoslovak amendment three categories of endorsements after maturity must be drawn up. The first category was that mentioned in the first sentence of the experts' text and concerned endorsements made after maturity but before the protest for non-payment and before the expiration of the limit of time fixed for drawing up that protest. As far as the legal effects of such an endorsement were concerned, the Czechoslovak delegation approved the text of the experts and recognised that an endorsement did not differ from the endorsement made before maturity.

Nevertheless, he thought that it was not absolutely necessary to say this in the text. Naturally, if the Conference did not share this opinion and if it wished to keep the first sentence of the experts' text, the Czechoslovak delegation would not oppose such a procedure.

What it desired was that a distinction should be made between the endorsement of a matured and not protested bill of exchange (*lettre de change préjudiciée*), that was to say, an endorsement made after the expiry of the limit of time fixed for drawing up the protest and the endorsement of a bill of exchange which had been protested. No reliance deserved to be placed any longer on such a bill; it had failed to fulfil its normal object. Consequently, it was quite right to exclude any possibility that the endorsement of such a document should make any proceedings under the laws of bills of exchange possible. In so far as that category of endorsements was concerned, therefore, M. Srb also agreed with the text of the experts. The situation, however, was not the same in the case of a matured and not protested bill of exchange (*lettre de change préjudiciée*). Cases might occur in which such a bill was paid by the acceptor. There was no legitimate reason, therefore, why the person who had acquired a matured and not protested bill of exchange (*lettre de change préjudiciée*) by endorsement should not have rights to take proceedings in regard to the acceptor.

He thought, therefore, it would be more just to recognise that the relations between the endorser of a matured and not protested bill of exchange (*lettre de change préjudiciée*) and subsequent endorsers should be settled by the laws governing bills of exchange.

This did not appear to be an isolated point of view. A similar solution to that contemplated in the Czechoslovak amendment was, for example, to be found in Article 16 of the Austrian law and appeared also in Swiss legislation. Finally, M. Srb quoted the letter of the Latvian Government, which emphasised the following point:

"In practice, however, and in legal theory, a distinction is made between the endorsement of matured and not protested bills of exchange (*lettre de change préjudiciée*) and endorsement after protest."

The Latvian Government, however, had moved no amendment.

To sum up: the Czechoslovak amendment gave rise to two questions — one of substance, the other subsidiary. The main question was to ascertain whether a distinction should, or should not, be made between the legal effects of the endorsement of a matured and not protested bill of exchange (*lettre de change préjudiciée*) and those of the endorsement of a bill of exchange which had been protested. If an affirmative reply were to be given to this question of substance, the second question would arise, which was: What should be the legal effects of the endorsement of a matured and not protested bill of exchange (*lettre de change préjudiciée*)?

M. MOLENGRAAFF (Netherlands) presented an amendment with a view to adding to article 19 a new paragraph reading as follows:

"In the absence of proof to the contrary, an undated endorsement shall be regarded as having been made before the protest or before the expiration of the limit of time fixed for drawing it up."

His delegation had merely wished to express an idea designed to complete the provisions of Article 19 of the Uniform Regulation.

He thought the amendment was in harmony with the views of the Conference and that the experts could have no objection against the proposed solution. Its object was to improve the delicate situation which arose in regard to the proof to be furnished by the holder of a bill of exchange acquired by an undated endorsement in the case in which he asked payment from the drawee who has accepted the bill. According to the Dutch proposal, the onus of proof fell on the acceptor who maintained that endorsement had occurred before the expiration of the limit of time fixed for drawing up the protest.

The objection might be made that the words "before the protest" were not necessary, because it followed from the act of protest that endorsements had been made on the bill of exchange. That objection, however, was only valid in the case of an authentic protest and not for the case of the simplified protest which was used in a number of countries.

M. LA LUMIA (Italy) noted that this proposal covered two hypotheses. In the first, the undated endorsement was considered in the light of the protest and, in the second, the same

endorsement was considered in the light of the expiration of the limit of time fixed for drawing up the protest.

In both cases, the Dutch delegation proposed the application of the principle *præsumptis juris tantum*; that was to say, that without proof to the contrary the undated endorsement should be regarded as having taken place before the protest or before the expiration of the limit of time fixed for drawing it up. In the first hypothesis, however, there were no grounds in Italian legislation for accepting the amendment, for in that legislation the protest reproduced in full the bill of exchange, including the undated endorsements. There were, however, two cases. Either the endorsement was reproduced in the protest, in which case the endorsement had been made beforehand, or else the endorsement had not been reproduced, in which case it had undoubtedly been made afterwards. Subject to these observations, the Italian delegate agreed with the Dutch proposal.

The PRESIDENT read the following amendment submitted by the Japanese delegation :

“ The Japanese delegation interprets the provision in Article 19, which says that ‘ an endorsement after protest for non-payment or after the expiration of the limit of time fixed for drawing it up operates only as an ordinary cession ’, as meaning that the person in favour of whom the bill is endorsed only acquires the rights which belonged to the endorser.

“ Should this interpretation not be accepted, it would be preferable to modify the provision as follows :

“ ‘ When the holder has made the endorsement after the expiration of the limit of time fixed for the protest for non-payment, the person in favour of whom the bill is endorsed shall only acquire the rights which belonged to the endorser.’ ”

The President thought that he could reply on behalf of the Conference that the article clearly meant that the person in whose favour the bill was endorsed only acquired the rights belonging to the endorser because he was the transferee. That case therefore was governed by civil cession.

If the Japanese delegation was satisfied with this reply, which would be recorded in the Minutes, it might not maintain its amendment.

M. SHIMADA (Japan) said that the Japanese delegation was satisfied with the explanation given by the President and withdrew its amendment.

M. PERCEROU (France) understood the Dutch proposal to mean that an undated endorsement was presumed to have taken place before the expiration of the time-limit for protest and before the protest itself.

As far as the presumption of priority to the expiration of the time-limit of the protest was concerned, he saw no objection.

In so far as the presumption of the priority of the drawing up of the protest was concerned, he thought the amendment impossible from the French point of view. According to French law, protests must contain the exact description of the document and consequently must mention the endorsements already made upon it. If an endorsement was not contained in the protest, which was a deed in good and due form, it could not be presumed that that endorsement had been made previously to the protest. Consequently, upon this point it was impossible for M. Percerou to accept the Dutch proposal. It was not possible to make a presumption which was contrary to the terms of a deed in good and due form.

M. VISCHER (Switzerland) said that the Czechoslovak delegation had pointed out, when questioning this proposal, that the object was to maintain the legislation in force in certain countries, among others, in Switzerland. The Swiss delegation did not in any way desire the maintenance of present Swiss legislation and would prefer the Hague solution, which seemed simpler and more in conformity with the desired object. The Swiss delegation could not therefore agree with the Czechoslovak proposal.

M. Vischer agreed with M. Percerou in thinking that the Dutch proposal should refer only to cases in which no protests had been made.

M. LA LUMIA (Italy) noted that the observation of M. Percerou was based on the assumption that the question of protest was dealt with in the legislation of all countries in the same way as it was dealt with in Italy and France, where the protest reproduced the bill of exchange in its entirety. But the legislations of some countries dealt more summarily with the question of protests where there was no mention of endorsements.

For those reasons, the first part of the Dutch delegations' amendment was unnecessary in so far as the Italian and French legislation was concerned ; but it was justified in the case of Dutch law and of those legal systems in general that provided for summary protest. For that reason, the Italian delegation was prepared to support it.

M. QUASSOWSKI (Germany) thought that the question raised by M. Percerou was one of form. He proposed, therefore, that it should be submitted to the Drafting Committee.

The German delegation also thought that the Dutch proposal was a very practical form of simplification and should therefore be approved in principle.

M. BOUTERON (France) wished to draw the Conference's attention to the scope of the expression contained in Article 19 : “ an endorsement after maturity has the same effect as an endorsement before maturity ”. In France the Commercial Code released the circulation of commercial paper from all opposition, except in cases where an instrument was lost or where the holder became bankrupt. Consequently, from the moment of maturity, there was nothing to prevent the creditors of the holder from enforcing a seizure on the drawee, or the holder from making over to a third party on the date of maturity a cession of his debt and that that cession should be notified

to the drawee. If this case were taken into consideration, could the drawee, without regarding the opposition or the cession of which he had been notified, make a valid demand? In the present state of French law, it would be decided that the drawee was not released, for Article 145 of the French Commercial Code laid down that the presumption of freedom established in favour of the drawee only existed if payment had been made at maturity.

It was in this connection that the present wording of Article 39 of the Uniform Regulations was somewhat similar to the provisions of the French Commercial Code. That article laid down that the drawee who had paid before maturity did so at his own risk and that if he paid at maturity then he was legally released.

M. BOUTERON did not think that the article covered the situation of the drawee when he paid after maturity. Consequently, he thought that a reservation should be made immediately, at any rate in regard to the final wording of Article 19 until Article 39 has been adopted.

The PRESIDENT called upon the Conference to vote on the first part of the Czechoslovak amendment (paragraph (a)).

Paragraph (a) was rejected.

M. HERMANN-OTAVSKY (Czechoslovakia) said that, since paragraph (a) of the Czechoslovak amendment had been rejected, the Czechoslovak delegation would withdraw paragraph (b).

The PRESIDENT put the Dutch proposal to the vote.

M. MOLENGRAAFF (Netherlands) asked the Conference to vote on the principle contained in this text. The final wording should be entrusted to the Drafting Committee.

M. PERCEROU (France) would willingly agree to the second part of the amendment, but, for reasons which he had explained, he could not accept the proposal that a presumption should be set against the terms of a deed in good and due form. He asked whether the Dutch delegation still maintained the words "made before the protest".

The PRESIDENT asked the Dutch delegation whether it agreed that the Conference should vote on the amendment in two parts. The first vote would concern the following words: "in the absence of proof to the contrary, an undated endorsement shall be regarded as having been made before the protest". The second vote would concern the end of the amendment: "or before the expiration of the limit of time fixed for drawing it up".

M. MOLENGRAAFF (Netherlands) accepted this suggestion.

The first part of the amendment was adopted by 9 votes to 8.

The second part was adopted unanimously.

The PRESIDENT, in reply to a question from M. Percerou, said that the Drafting Committee would be asked to define what was meant by "protest".

M. MONTEJO (Spain) thought that the matter would be made clearer if a system of numbering were adopted similar to that inserted in Article 1, where it was stated that a bill of exchange was composed of a number of elements, among which was the date. This was numbered 7. The Spanish Code used a similar system in regard to endorsements. No. 3 in the list concerning endorsements was the date. He thought that a system could be adopted by which the date should be inserted with an endorsement. It could be said that circumstances required similar references in Articles 10, 11 and 12. It was obvious that in Article 19, which referred to endorsement after maturity, the date of the endorsement was an essential matter. He thought, therefore, that it would be useful to stipulate that the date should be inserted.

Article 19 was approved at a first reading with the reservation that the Conference should perhaps return to it when it was discussing Article 32.

CHAPTER III. — ACCEPTANCE.

ARTICLE 20.

Article 20 was approved at a first reading.

ARTICLE 21, FIRST PARAGRAPH.

The first paragraph was approved at a first reading.

ARTICLE 21, SECOND PARAGRAPH.

M. SHIMADA (Japan) said that the holder of a bill of exchange could not assert his rights unless he could present the bill for acceptance. If the drawer could prevent the presentment of the bill for acceptance by words inserted in the bill, it was to be feared that an incomplete bill might be put into circulation. It was to prevent this practice that the Japanese delegation proposed to substitute the following text for the second paragraph of Article 21:

"He cannot prohibit in the bill of exchange the presentment for acceptance."

M. SCHELTEMA (Netherlands) said that the Dutch law contained practically the same rules as those laid down in paragraph 2 of the article. It possessed the rule that the drawer could prohibit the presentment of a bill for acceptance, and he saw no reason why this right should be refused to the drawer. Further, Dutch law contained the two exceptions provided for in the second paragraph of Article 21, with, however, a small difference. In the Netherlands, it was impossible to prohibit the presentment for acceptance in the case of a bill drawn payable at a certain time after sight, for in that case acceptance was necessary in order to define maturity. Further, it was impossible to prohibit the presentment for acceptance in the case of a bill which was domiciled but which contained no mention of the domiciliary, for in the case of such a bill it must necessarily be presented for acceptance in order that the drawee could record upon it the name and domicile of the domiciliary. These two exceptions appeared, therefore, rational. Nevertheless, the exception provided for in paragraph 2 was wider; M. Scheltema saw no necessity for it. He would prepare a paragraph to run as follows :

“ Except in the case of a domiciled bill without designation of the domiciliary, or a bill drawn payable at a certain time after sight, he may prohibit presentment for acceptance.”

This was not a formal amendment, for the proposal had not been submitted in writing to the Conference. It was an observation upon which M. Scheltema desired to draw the attention of his colleagues.

The PRESIDENT said that the German delegation had submitted an amendment which seemed to have the same purpose as M. Scheltema's proposal. It suggested to amend the second paragraph as follows :

“ Except in the case of a domiciled bill *or a bill payable in a locality other than the domicile of the drawee* (if the third party is not indicated in the bill), or in the case of a bill drawn payable at a certain time after sight, he may prohibit on the bill presentment for acceptance.”

M. SCHELTEMA (Netherlands) had submitted his proposal in ignorance of the German proposal, which he was quite willing to examine.

M. ALBRECHT (Germany) did not think that the meaning of the German amendment was the same as that of the Dutch amendment. The object of the Dutch amendment was to reduce the restriction contained in the second paragraph of Article 21. The German amendment was designed, on the contrary, to extend it.

According to German legislation, a drawer could not prevent a bill of exchange from being presented to the drawee for acceptance, and it was not without hesitation that the German delegation had accepted the system laid down in the Uniform Regulation. He thought, however, that it was necessary to restrict the case in which the drawer could forbid the presentment for acceptance of a bill of exchange. A restriction was already expressed in paragraph 2 of Article 21. According to this provision, the drawer could not prohibit in the bill the presentment for acceptance if it was a domiciled bill of exchange. Evidently, the reason was that if the drawer was allowed to prohibit the presentment of a domiciled bill to the drawee for acceptance, the drawee might be unable to make the necessary arrangements to pay the bill. It might be presented when he had not even had the opportunity of seeing it.

According to the decision which the Conference had adopted regarding Article 4 of the Uniform Regulation, a domiciled bill of exchange was merely a bill payable by a third party. The reasons in favour of the restriction contained in paragraph 2 of Article 21 in the case of a domiciled bill of exchange should be, he thought, equally applied to cases covered by Article 26 ; that was to say, when the drawer had indicated a place of payment which was different from the domicile of the drawee. Cases where a protest might be made against a bill without the drawee even having seen it could not be admitted.

For those reasons, the German delegation proposed to insert the words in paragraph 2 : “ or a bill payable in a locality other than the domicile of the drawee (if the third party is not indicated in the bill) ”. The object of this proposal was to deal uniformly with the case of a domiciled bill of exchange and a bill which stated that the place of payment was other than that of the domicile of the drawee.

M. PERCEROU (France) thought that there was an essential difference in the object of the Dutch and German amendment. The object of the Dutch amendment was merely to let the holder know the place where he would have to present the bill falling due in order to obtain payment. If the domiciliary was not shown, the holder must be in a position to present it to the drawee in order that the latter could indicate the domiciliary. Logically, the Dutch amendment meant that, if domiciliation showed at the same time the domiciliary, the provision they were dealing with lost its *raison d'être*. The German delegation, on the other hand, was dealing with the protection of the drawee. Cases might arise in which the drawer, having domiciled the bill in the residence of a third party, the drawee being in ignorance of this fact, the holder might present the bill to this third party who, knowing that the drawee was his correspondent, might settle it contrary to the wishes of the drawee.

This amendment was not necessary, because the text was drafted in general terms and covered the two cases raised by the German amendment. Whether the bill was domiciled in the same locality as that of the domicile of the drawee or whether it was in another locality, the existing text should completely allay the apprehensions of the German delegation. M. Percerou shared the views of this delegation as to the point of substance, but thought the formula proposed was not necessary.

To sum up : basing his views on the statements of the German delegation, M. Percerou thought that the Dutch delegation's amendment should be rejected, but that it would be unnecessary to amend the present text to give satisfaction to the German delegation.

The PRESIDENT pointed out that, properly speaking, there was no Netherlands amendment at all. M. Scheltema had merely made a simple suggestion.

M. SULKOWSKI (Poland) thought that, in spite of that, the substance of the German proposal was justified. The question was the same as that which had been discussed at the time of the debates on Article 4. The idea of a domiciled bill had been fixed in such a manner that the expression "domiciled bill" had to mean a bill of exchange payable at the address of a third party. But this idea did not cover the cases under Article 26, when a bill of exchange had a place of payment other than the residence of the drawee and when the drawer had not mentioned the domiciliary.

Two possible cases might arise under Article 26. The drawer might mention the domiciliary or he might leave this to be done by the drawee, who would mention the domiciliary himself at the time that the bill of exchange was accepted.

The possibility would have to be taken into account that the domiciliary might have been mentioned. In such a case, it was true, some person must exist who had been mentioned by the drawer as domiciliary. However, the drawee did not know this person, since it was possible that the drawer had not given him warning.

In the latter case, it was necessary for the drawee to take note of the designation of the domiciliary by the drawer so that he might be in a position to arrange for the bill of exchange to be payable at maturity. He would only be able to undertake these arrangements in the case when the bill of exchange had been presented to him for acceptance; consequently, in this case, presentment for acceptance could not be prohibited.

M. SULKOWSKI therefore thought that the German proposal was justified, whereas the Netherlands proposal was inclined to exclude the obligation to present such a bill for acceptance.

M. VISCHER (Switzerland) supported the German proposal for the same reasons as M. Sulkowski.

The PRESIDENT asked the German delegation if the words between brackets in its amendment could not be put after the words "domiciled bill".

M. ALBRECHT (Germany) thought that the wording of the German amendment was preferable as it stood.

The PRESIDENT thought that the German amendment had a good chance of being adopted and for that reason he did not wish any misunderstandings to be allowed to exist. According to the view the Conference had taken of Article 4, a domiciled bill was a bill payable at the address of a third party or payable in a locality other than that where the drawee was domiciled. In the second case, taken into account by the German delegation, there was no other person than the drawee. For that reason, the President asked if the words between brackets ought not to be put after the words "in the case of a domiciled bill", for the parenthesis applied to both cases.

M. PERCEROU (France) suggested that it should read as follows :

"Except in the case of a bill domiciled at the address of a third party or payable in a locality other than the domicile of the drawee and containing no mention of the domiciliary, he may prohibit on the bill presentment for acceptance."

M. ALBRECHT (Germany) was willing to accept the suggestion that the words "if the third party is not indicated in the bill" should be put after the word "or".

M. GIANNINI (Italy) pointed out that these questions had already been discussed under Article 4 and that the solution that was now being proposed had then been rejected but had re-appeared in connection with paragraph 2 of Article 21. M. Giannini declared that he could not change his opinion and the question was one not merely of drafting, but really of the extension of the scope of domiciled bills of exchange. He would therefore vote against the German proposal.

In reply to a question of Baron Carton de Wiart, the PRESIDENT said that Article 4 had not been amended, but that the words "domiciled bill of exchange" had been placed after the words "at the residence of a third person".

The German amendment did not constitute an extension of domiciled bills, but it made provision that the presentment for acceptance in the case of domiciled bills should not be forbidden.

In conclusion, the President asked if it would not be better to avoid saying "a bill of exchange domiciled at the address of a third party", since a domiciled bill was a bill at the address of a third party. Would not the following wording be better? :

"Except in the case of a domiciled bill of exchange payable at the address of a third party or payable in a locality other than the domicile of the drawee."

Baron CARTON DE WIART (Belgium) proposed the following text :

"... except in the case of a bill of exchange payable elsewhere than at the domicile of the drawee."

M. ALBRECHT (Germany) found himself unable to agree to this proposal, for a domiciled bill might be payable at the domicile of the drawee at the address of another person. Two different cases might occur : (1) a bill of exchange might be domiciled — *i.e.*, payable at the address of a third party ; (2) a bill of exchange might be payable in some other place than that of the drawee's domicile, but without any indication of the domiciliary.

The PRESIDENT asked the German delegation if it was ready to accept the suggestion of M. Percerou.

M. ALBRECHT (Germany) declared that the German delegation wished to keep its proposal as it stood, and in reply to an observation of M. Bouteron (France) he added that the German proposal would naturally be subject to certain modifications of drafting.

The German amendment was adopted by 15 votes, subject to a revision of its wording.

M. GIANNINI (Italy) said that, as the Conference had modified Article 21 by adopting the German amendment, it was perhaps illogical to keep Article 4 in the form in which it had been adopted. This matter would have to be examined.

The PRESIDENT replied that the Drafting Committee would be instructed to compare the texts of Articles 4 and 21 and to submit to the Conference either a small amendment to Article 4 or a small amendment to the German amendment to Article 21.

M. SHIMADA (Japan) declared that the Japanese delegation withdrew its amendment.

Paragraph 2, as amended by the German delegation, was approved at a first reading.

Paragraphs 3 and 4, as well as Article 21 as a whole, were adopted at a first reading.

NINTH MEETING.

Held on May 17th, 1930, at 9.30 a.m.

President: M. J. LIMBURG.

13. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes First reading (Continuation of the Discussion).

ARTICLE 22, PARAGRAPH 1.

The PRESIDENT read the text of the British amendment to paragraph 1 :

“ Bills of exchange payable at a certain time after sight must be presented for acceptance within a time which is reasonable, having regard to all the circumstances of the case.”

If that proposal were not accepted, the British delegate suggested that the period should be extended from six to twelve months.

On the other hand, the Czechoslovak delegation had also submitted an amendment prolonging the period from six months to two years.

M. HERMANN-OTAVSKY (Czechoslovakia) stated that the Czechoslovak delegation would agree to decrease the period laid down in their amendment from two years to twelve months.

M. SRB (Czechoslovakia) found the first British amendment somewhat vague. It was preferable to fix an exact time-limit, and a period of twelve months appeared to be reasonable.

Mr. GUTTERIDGE (Great Britain) apologised for the form in which he had drafted his amendment, but explained that he had been in some doubt as to the period which ought to be fixed. It had occurred to him that it might save time if he put down the British rule in the amendment, which would make it unnecessary for him to say anything about the law of England on the matter.

The British Government regarded the question as of very great practical importance. It was the experience of English bankers that bills which were drawn in certain parts of the world were in circulation for a considerable time. He had been at pains to ascertain the views of the English banking community on the matter, and believed he was authorised to say on their behalf that their opinion emphatically was that the period of six months was too short and would result in inconvenience. He had himself seen bills drawn in the interior of South America which had taken nearly a year to reach London.

On mature reflection, he had come to the conclusion that the best course would be to suggest the period of twelve months proposed by the late Sir Mackenzie Chalmers and Mr. Jackson, Governor of the Bank of England at the Hague Conference of 1912. It was not absolutely certain that twelve months would cover every case. Mr. Jackson had pointed out at The Hague in 1912 that a bill might be in circulation for even longer in certain extreme cases and had shown the Conference a bill drawn on London in Bolivia which had been circulated in Jerusalem and elsewhere in the East and presented for acceptance only after fourteen months of wandering.

A bill of exchange was the most ambulatory and adventurous of all commercial documents — even more so than a bill of lading. The British Government would be very glad if the Conference could see its way to extend the time-limit. The question was simply one of business convenience.

Baron CARTON DE WIART (Belgium) accepted the arguments put forward by Mr. Gutteridge. He had consulted various persons interested in overseas trade, and the period of six months seemed rather short. At the same time, the wanderings of bills of exchange should not be encouraged. It was not in the interest of the drawee, the drawer or the endorsers that they should be prolonged. To sum up, he was opposed to the proposal of a period of two years, but he accepted the period of twelve months.

M. Deoclecio DE CAMPOS (Brazil) stated that, although Article 9 of the Brazilian law fixed a period of six months, the amendment of the British and Czechoslovak delegations would correspond with the interests and the needs of commerce in Brazil. He therefore approved the period of twelve months.

Paragraph 1, as amended by the British and Czechoslovak delegations, was approved at a first reading.

ARTICLE 22, SECOND PARAGRAPH.

Paragraph 2 was approved at a first reading.

ARTICLE 22, PARAGRAPH 3.

The PRESIDENT pointed out that there was a British amendment to delete paragraph 3.

Mr. GUTTERIDGE (Great Britain) explained that some doubt had been raised in England as to the exact purpose of the third paragraph. If it meant that the endorser was entitled to abridge the time so far as he himself was concerned, he had no objection and would withdraw his amendment. Perhaps M. Percerou could give some information which would render the amendment unnecessary.

M. PERCEROU (France) replied that the Committee of Experts had not discussed the point, but had merely confined itself to reproducing the Hague text. In his opinion, when an endorser abridged the time for presentment, this clause would not operate as far as his predecessors were concerned, but would probably operate as far as subsequent endorsers were concerned.

Mr. GUTTERIDGE (Great Britain) ventured to think that, after what M. Percerou had said, it should not be difficult to arrive at a formula which would put the matter on a proper footing. It appeared to be obvious that it would be far too drastic to allow an endorser to modify the duties of his predecessors, but there was no reason why his modification should not affect his successors. Baron Carton de Wiart had handed to him the following suggestion, which would meet the situation more accurately than would a mere cancellation :

“ These times may be abridged to the endorsers as regards the effect of their endorsements.”

He would like, therefore, to withdraw his amendment in favour of Baron Carton de Wiart's proposal.

M. SULKOWSKI (Poland) considered that the abridging of the time for presentment could not affect the predecessors, nor, in his opinion, did it bind future endorsers. The scope of a clause abridging the time for presentment was strictly limited to the endorser who had inserted it. Subsequent endorsers were held responsible in accordance with the terms of the fundamental bill of exchange. M. Sulkowski took as an example the clause without security. If an endorser inserted that clause, it only limited his own responsibility, but had no effect on the successive endorsers. The same must be the case for a clause abridging the time for presentment. In any case, it was essential to explain in the text itself the exact bearing of the clause in question.

M. ARCANGELI (Italy) was also of opinion that, although its scope was limited, the question should be cleared up. He himself supported M. Percerou's view. There was, however, a third possibility : that the insertion of the clause bound all the endorsers, previous or future. Indeed, according to the article, the drawer was obliged to retain the amount of the bill of exchange at the disposal of the holder for a whole year, since the holder might present it when he thought desirable. In those circumstances, the situation of the drawer was only made worse when an endorser asked for the discharge of the sum before the end of the year, whereas the situation of the preceding endorsers was improved.

In the Italian Code, the Hague formula had been adopted and the question was settled in the sense indicated by M. Percerou. The new Italian draft code was silent on this specific point, but the rapporteur — M. Arcangeli himself — was of the third opinion for the reasons which he had just developed. If, however, the Conference adopted M. Percerou's explanation, M. Arcangeli would support it.

The PRESIDENT said that he could not, at present, ask the Conference to take a decision on the Belgian and British amendments. Even after its acceptance, the same question would continue to arise. On the other hand, he would point out to the Italian delegate that sometimes it was considered preferable to pay a sum at as late a date as possible.

M. DE LA VALLÉE POUSSIN (Belgium) did not believe that the problem was as complicated as it appeared. It was dominated by a fundamental principle ; the endorser who abridged the time carried out an act of a unilateral character, an act which could affect only the engagements of that endorser, and not those of other signatories. The situation created by the endorser, who had

abridged the time, bound the holder, at the earliest date of maturity, to present the bill for acceptance. If he did not do so, he lost his right of recourse against the endorser who had abridged the period. For the rest, however, the situation remained the same as before. The authors of the Hague draft had not lost sight of the preoccupation which led the British delegation to submit its amendment. It had understood the provision which was the object of the third paragraph in the sense that the abridging of the time, a unilateral act of an endorser, affected only the endorsement of that endorser and not of the others.

M. Lyon-Caen and M. Simon had commented on that provision in their report in the Second Hague Conference, as follows :

“ It would be exorbitant if the endorser were allowed to increase the time during which the drawer wished to remain as security to the endorser and the last holder. It is understood, however, that an endorser may desire to be released from uncertainty sooner than the drawer can expect to be released.”

In the view of the Belgian delegate, they should have added : “ and the other endorsers who have not abridged the time ”.

That passage of the report sufficiently explained the bearing of paragraph 3 and gave it the meaning which Baron Carton de Wiart and the British delegation wished it to have.

The Belgian delegate was in favour of the adoption of the Hague text, as explained in the preparatory works of the Conferences of 1910 and 1912. Nevertheless, if the Conference considered that the position was not sufficiently clear, he would be prepared to accept the British amendment.

M. VISCHER (Switzerland) fully supported M. Sulkowski's point of view. That conception, moreover, had been introduced into the present legislation of all those countries whose laws were more or less based on the *Deutsche Wechselordnung*. In Switzerland, Germany and the Scandinavian countries, it was admitted that the effects of the abridging of the time by an endorser could only apply to that endorser, but that his successors were bound by the prescriptions of the drawer. That rule appeared to be quite equitable. There was no reason why any endorser should not be permitted to reduce the value of the bill of exchange by means of an abridging of the period for presentment. It was a question of giving an endorser the right to restrict his security and his undertaking.

In conclusion, the delegate of Switzerland proposed that paragraph 3 be completed in the following manner : “ The time may be abridged by an endorser as regards the effects of his endorsement ”.

M. QUASSOWSKI (Germany) considered that an endorser should be allowed to prescribe a period for special presentment ; that was a practical necessity. Such prescription, however, should affect only the endorser himself, and the observance or non-observance of the time-limit could only affect the endorser. That was the logical consequence of the independence of persons possessing exchange obligations. It was a fundamental principle of exchange law which could in no case be neglected. From the practical point of view, that solution was sufficient, for the succeeding endorsers could themselves prescribe a special time. On that point, M. Quassowski was in agreement with the delegates of Poland, Belgium and Switzerland. It would be desirable to state clearly either in the report or in the text of the draft Regulation itself what was the legal situation. It would, however, be preferable to establish it in the text of the draft itself in the sense indicated by the Swiss delegate.

M. PERCEROU (France) admitted that the third paragraph was not sufficiently clear, since there were different opinions in the Conference itself as to the meaning to be given to it. With still more reason, the public would not know exactly what was meant by the text.

In regard to the principle, the importance of the question was more general. It was necessary to know what would be the effect of an expression inserted in an endorsement. The question arose not only in regard to the clause of acceptance, but also in regard to the clause of security and the clause of *retour sans frais*.

When an endorser inserted the clause *retour sans frais* in a bill, it was understood that the holder was dispensed from the requirement to protest the bill in order to retain his right of recourse against the endorser who had stipulated *retour sans frais*. Was he also dispensing from protesting it in order to retain his recourse in connection with future endorsers? The question was controversial, but it was generally admitted in France that dispensing with protests concerned not only the endorser who had stipulated the clause *retour sans frais*, but also future endorsers. M. Percerou therefore considered that when an endorser had inserted in his endorsement a stipulation which modified the original text of the draft, future endorsers, even when they did not repeat that expression, should in principle be considered as accepting it. If that point were admitted in the case in question, it would also have to be admitted that the abridging of the time for acceptance affected first the endorser who had stipulated it and afterwards future endorsers who had accepted the bill thus modified but not the preceding endorsers.

If that solution were accepted, M. Percerou would propose that the formula should be drafted as follows :

“ These times may be abridged by the endorsers ; that abridgment affects only the endorser who has stipulated it and future endorsers.”

If, on the contrary, the Conference was of opinion that the abridgment affected only the person who made it, that should be stated clearly.

M. SCHELTEMA (Netherlands) could not accept M. Percerou's view. In his opinion, the endorsement was a kind of cession of rights, and for that reason the endorsee acquired the rights of the endorser, except in so far as those rights, in accordance with Article 17 of the Regulation, were greater in extent than those of the endorser. Moreover, a question of succession was involved.

The obligations of the endorser were not a consequence of succession. He had not altogether the same obligations as his predecessor. His obligations arose from the fact that he himself had endorsed the bill of exchange. It was from that action that his obligation arose: *das Endossament ist eine neue Tratte*. M. Scheltema therefore considered that there could be no succession in regard to the obligations assumed by an endorser. That was also the reason why, when an endorser made a restriction on a bill of exchange, that restriction could not affect his successors.

M. HERMANN-OTAVSKY (Czechoslovakia) supported the views expressed by the representatives of Poland, Germany and Switzerland and agreed that the endorser who inserted a clause should alone be bound by the consequences of that clause. The endorser repeated the mandate of the drawer of the bill. He could not settle such exchange relations as were general in character; those were fixed by the drawer. In spite of that, the delegate of Czechoslovakia wondered, in the light of the interesting explanations given by M. Percerou and M. Arcangeli, whether his Italian and French colleagues were not starting out from a conception peculiar to Romanic exchange law. The problem appeared to him more fundamental and wider in scope than the particular question with which they were dealing at present.

Summarising the discussion, M. GIANNINI (Italy) said that Article 22 as it stood, with either the formula of the experts or that of the British delegation, was liable to differences of interpretation. That was regrettable.

Was the endorsement absolutely autonomous? That was the problem. There were three possible solutions, which might be drafted as follows:

1. This period of time might be abridged by the endorser in regard to the effects of his endorsement. The situation of the previous and subsequent endorsers is not affected.

2. This period of time might be abridged by the endorser. The effects of this abridgment extend to all subsequent endorsers. That solution had been proposed by M. Percerou and was in conformity with the French and Italian legislations.

3. This period of time might be abridged by the endorser. The effects of this abridgment extended to all parties, whether previous or subsequent.

The second solution laid down a general rule: the effects of an intermediate endorsement bound only the subsequent endorsers. In his opinion, it could therefore be adopted. The Conference, however, should now take a decision on the three formulæ before it.

In view of the independence of exchange acts, M. HAMMERSCHLAG (Austria) accepted the view of M. Sulkowski. There was no reason for preventing an endorser from restricting his responsibility.

That question, moreover, was fundamental and did not concern only the article under discussion. Article 21, paragraph 4, provided: "Every endorser may stipulate that the bill shall be presented for acceptance . . ." That referred to a clause made by a single endorser. Article 45 raised the same question; the Committee of Experts had deleted the words "or an endorser" and added the words "emanating from an endorser". The clause is deemed unwritten, because otherwise a doubt might be raised as to the possibility of setting up defences against that clause in regard to subsequent endorsers.

In those circumstances, it was necessary to deal with the problem in a general manner.

M. ASZTALOS (Hungary) pointed out that the last paragraph of Article 52 contained the solution to the whole question.

The PRESIDENT observed that in fact the last paragraph of Article 52, which was as follows: "If the stipulation for a limit of time for presentment is contained in an endorsement, the endorser only can avail himself of it", solved the problem. At the same time, that did not prevent the Conference from taking a decision on the question. It would simply not be necessary to do so when Article 52 was under discussion.

He believed that the Conference was not opposed to the elimination of the third solution; it remained for it to decide, therefore, between the system of Article 52, according to which the abridgment bound only the endorser who inserted the clause, and the system explained by M. Percerou, according to which the clause affected all subsequent endorsers.

The system laid down in Article 52 was adopted by 18 votes to 7.

In order to harmonise the text adopted with that of Article 52, the PRESIDENT proposed that the former should be drafted as follows: "These times may be abridged by the endorser. At the same time, the endorser only can avail himself of that stipulation" with the reservation that the wording could be revised by the Drafting Committee.

M. HAMMERSCHLAG (Austria) wondered whether, in view of the fact that the question was settled by Article 52, the amendment was still necessary.

The PRESIDENT replied that it was not absolutely certain as yet whether Article 52 referred only to presentment. He proposed for the time being to leave the text as it stood, on the understanding that the Drafting Committee would consider the question.

M. GIANNINI (Italy) drew the attention of the Conference to the fact that Article 52 regulated a certain series of problems, whilst Article 22 contained the general principle according to which the time-limit for presentment could be abridged. He accepted the President's proposal to refer the question to the Drafting Committee.

Paragraph 3 of Article 22 as amended was adopted at a first reading.

Article 22 as a whole was approved at a first reading.

ARTICLE 23.

M. BOUTERON (France) said that the French delegation did not wish to submit an amendment to Article 23, but only to propose a new form of drafting. In its present form, it did not prevent the drawee from demanding a second presentment, even if the holder was prepared to give up the bill. The drawee might indeed prefer not to keep the bill in his possession, but to have it presented on the following day. M. Bouteron did not believe that the holder should be exposed to such a possibility. If the Conference agreed with that view, it would be preferable to redraft the second paragraph of Article 23 as follows :

“ If the holder does not give up the bill, the drawee may ask that it be presented to him a second time on the following day.”

The importance of that observation from the point of view of French commercial practice was much greater, since the holder, in conformity with the prescriptions of Article 125 of the French Commercial Code, could always leave the bill with the drawee, who could keep it for twenty-four hours.

In view of the observation of M. Bouteron, the PRESIDENT considered that the two paragraphs of Article 23 should be discussed together ; the Czechoslovak delegation had moved to omit the second paragraph.

M. SRB (Czechoslovakia) said that Czechoslovak legislation did not give to the drawee the right to ask for a second presentment of the bill of exchange on the following day. The necessity for a provision such as that contained in the second paragraph of Article 23 had never been felt in practice.

M. Srb considered that the provision was contrary to the nature of transactions in bills of exchange and to the principles regarding rapidity and stability of procedure in connection with those bills.

Apart from a few quite exceptional cases, it was not difficult for the drawee to decide at once whether he wished to accept or refuse the bill. It was therefore superfluous to give him time for consideration. For that reason, he proposed the omission of paragraph 2.

Mr. GUTTERIDGE (Great Britain) called attention to the fact that the article in its present form was expressly approved of by Sir Mackenzie Chalmers in the report he had made in 1923 ; it expressed the practice not only on the Continent but also in England.

The Czechoslovak amendment was put to the vote and rejected by a large majority.

The PRESIDENT called on the Conference to take a decision on the amendment submitted by M. Bouteron. He regretted to observe that the amendment changed the paragraph more than had been expected at first sight.

M. SULKOWSKI (Poland) considered that the French amendment was not acceptable. It was in contradiction with paragraph 1 of Article 23, which stipulated that the holder was not compelled to give up the instrument. Moreover, the right of delay provided for by the article in question, even when the holder had given up the instrument, had its reason and importance. This delay allowed the drawee to get information from the drawer concerning the bill which had been presented for his acceptance and of the issue of which he had perhaps not been warned. M. Sulkowski declared himself in favour of keeping to the text of the experts' draft.

In reply to a question by M. de la Vallée Poussin, who asked whether the French proposal excluded the second part of paragraph 2 of Article 23, beginning with the words “ Parties interested are not allowed . . . ”, the PRESIDENT replied in the affirmative.

M. STUB HOLMBOE (Norway) asked what would be the position of the holder who gave up the instrument if the French amendment were adopted. Within what time-limit would the drawee have to take his decision ?

The PRESIDENT said that with the French amendment, if the holder wished to give up the instrument, the drawee would have no right to demand a second presentment on the following day.

If the holder refused to give up the instrument, the drawee would immediately take his decision.

M. STUB HOLMBOE (Norway) did not agree with that opinion, and considered that the drawee should be allowed a time-limit of twenty-four hours.

Mr. GUTTERIDGE (Great Britain) said that that was English practice ; the bill was left for 24 hours, and if it was not given up it was immediately noted.

M. QUASSOWSKI (Germany) proposed that consideration of the French proposal be referred to a later meeting, in order that the delegates might be enabled to consider its exact bearing.

The PRESIDENT proposed that a vote should be taken at once with the reservation that there should be a further discussion of the amendment if requested.

Baron CARTON DE WIART (Belgium) drew attention to the fact that Article 43 provided that if the bill were not accepted protest should be made within the time-limit fixed for presentment for acceptance. That stipulation should give satisfaction to the representatives of Norway.

The PRESIDENT put M. Bouteron's amendment to the vote with the above reservation.
The amendment was rejected by 12 votes to 5.

Before taking a vote on the second part of the second paragraph of the article, the PRESIDENT proposed to make the following change in its terms :

“ Parties interested are not allowed to make this demand unless this fact is specified in the protest.”

Paragraph 2 as modified was put to the vote and adopted at a first reading.

The article as a whole was also adopted at a first reading.

ARTICLE 24, PARAGRAPH 1.

The first paragraph was approved at a first reading.

ARTICLE 24, PARAGRAPH 2.

M. MONTEJO (Spain) wished to refer to the heading of the chapter, which was entitled “ Acceptance ”. Article 21 to 23, however, dealt with the presentment of bills of exchange, while from Article 24 on it was dealt with acceptance. M. Montejo explained that in the draft Spanish Commercial Code there was a chapter entitled : “ Presentation and acceptance of bills of exchange.” He asked whether that formula could not be adopted for Chapter III, which was at present under discussion.

M. TROULLIER (International Chamber of Commerce) pointed out that the International Chamber of Commerce had received a number of complaints from merchants in regard to an apparent contradiction between paragraph 2 of Article 24 and Article 34. According to Article 24, in order to preserve his right of recourse, the holder had always to make protest. Article 34 laid down that there might be an absence of protest.

M. Troullier did not believe that there was really a contradiction, but in order to make the text clearer, Article 34 should perhaps be slightly modified by the addition of the words “ of the acceptor only ”.

The PRESIDENT pointed out that this observation, together with that of M. Montejo, would be taken into consideration when Article 34 was examined.

Article 24 was approved at a first reading.

The PRESIDENT observed that the question whether a bill of exchange could be filled in in blank was still in suspense.

ARTICLE 25, FIRST PARAGRAPH.

The PRESIDENT pointed out that the British delegation had submitted the following amendment :

“ An acceptance is unconditional, but the drawee may, *with the consent of the holder of the bill*, restrict it to part of the sum payable.”

Mr. GUTTERIDGE (Great Britain) wished to state the point as briefly as he could, but hoped that it would not be assumed that the point was not regarded as one of very considerable importance.

The objection to a partial acceptance was twofold. In the first place, it made the amount of the bill uncertain. Secondly, it might in certain events involve the taking of separate proceedings against the acceptor on the one hand and the remaining parties on the other, a matter which must of necessity involve a great deal of unnecessary trouble and expense. He spoke with some diffidence, because he was not sufficiently familiar with Continental procedure to say how far that would be the case in every system of law, but he thought the best thing he could do would be to refer to the views of Sir Mackenzie D. Chalmers, who had said :

“ The Uniform Regulation (Article 25), in accordance with the universal Continental rule, allows a partial acceptance, but makes any other qualification equivalent to a refusal to accept. Under English law, the holder has the option to take or refuse a partial acceptance, and this seems the sounder rule. If a partial acceptance could be forced on an unwilling holder, it practically makes the amount payable by the bill uncertain. Moreover, if the bill is dishonoured at maturity, the holder has to go back on the drawer and endorsers by two separate proceedings, which is both vexatious and costly.”

He did not want to prolong his argument, but would like to repeat that his Government regarded it as a point of considerable importance and for that reason he would ask the Conference to consider it.

M. HAMMERSCHLAG (Austria) pointed out that on that point there was a difference between the Anglo-Saxon and Continental law. Article 22 of the Austrian legislation on bills of exchange

stipulated that the drawee could restrict acceptance for part of the amount of the bill of exchange. Before taking a decision, it would be necessary to know whether it was rather the interests of holder that were to be defended in this matter or those of the drawer and the endorsers.

M. Hammerschlag felt that it would be more equitable to allow partial acceptance without the consent of the holder, for, as a result of that partial acceptance, a certain number of persons would be exonerated from part of their responsibility. On the contrary, if partial acceptance depended on the consent of the holder, and if the holder refused consent, the drawer and the endorsers would have full responsibility.

The British amendment was rejected.

Paragraph 1 was approved at a first reading.

ARTICLE 25, PARAGRAPH 2.

The PRESIDENT pointed out that there was an Italian amendment to replace the word "modification" by "limitation" or "condition".

The Italian amendment was rejected by 10 votes to 10.

M. GIANNINI (Italy) said that he would be satisfied if the report made it clear that the word "condition" was implied in the word "modification".

Article 25 as a whole was approved at a first reading.

ARTICLE 26, PARAGRAPH 1.

M. HAMMERSCHLAG (Austria) drew the attention of the Drafting Committee to the desirability of replacing "lieu" by "localité", in conformity with the wording that the Conference had decided upon for Article 4.

The PRESIDENT replied that the Drafting Committee's attention had already been drawn to that point in connection with several other articles.

He submitted the following proposal to amend paragraph 1 of Article 26 brought forward by the Japanese delegation :

"In the case provided for in paragraph 1 of Article 26, in which it is stipulated that the acceptor is deemed to have undertaken to pay the bill himself at the place of payment, the latter should be able to specify an address at the place of payment."

M. GIANNINI (Italy) considered that satisfaction could be given to the Japanese delegate. There was nothing to prevent the address from being indicated.

Paragraph 1 was approved at a first reading.

ARTICLE 26, PARAGRAPH 2.

The PRESIDENT submitted the following Japanese proposal to amend the paragraph :

"Paragraph 2 of Article 26 should add that when the drawer has not mentioned the domiciliary on the bill of exchange the drawee may also designate him in the acceptance."

M. SHIMADA (Japan) said that he would be satisfied if his interpretation were included in the Conference's report. The Japanese delegation, moreover, desired that the legal position of the domiciliary should be explained.

The PRESIDENT said that, as the Conference agreed to this interpretation, it could consequently appear in the report. He then read the following observations of the Japanese delegation, which concerned not acceptance but payment :

"In Article 26, the legal position of the domiciliary should be defined on the following lines :

"When the holder makes a request for payment, he must submit this request to the domiciliary specified on the bill of exchange, at the same time presenting the said bill.

"If the domiciliary refuses to effect the payment, the holder must have a protest for non-payment drawn up.

"If the holder omits the formalities prescribed in the foregoing paragraph, he loses the rights resulting from the bill of exchange as against the acceptor, the drawer and the previous endorsers."

M. SHIMADA (Japan) felt that, in all matters connected with bills of exchange and promissory notes, it would be preferable that the drawer or the drawee should indicate the domiciliary. That observation should therefore appear either in an article or in the report.

The PRESIDENT asked M. Shimada whether he would agree that the question should be studied at the same time as the question of payment.

M. SHIMADA (Japan) agreed.

Paragraph 2 was approved at a first reading.

Article 26 as a whole was approved at a first reading.

ARTICLE 27, PARAGRAPH 1.

M. BOUTERON (France) asked that, for the reasons given when Article 19 had been discussed, a reservation should be made in regard to the drafting of Article 27 until Article 39 was under consideration. The first paragraph of Article 27 provided that, "by accepting, the drawee undertakes to pay the bill of exchange at its maturity". It did not, however, prevent the drawee, in accepting, from undertaking to pay the bill of exchange, not only at its maturity, but also after its maturity.

The PRESIDENT did not agree with M. Bouteron on that point. The object of the paragraph was to point out that the drawee had to pay; he had to pay at maturity. There was, however, no objection to saying in another article that, if he did not pay at maturity, he could still do so afterwards. The same was the case when the drawee was justified in any particular case in paying after maturity. Paragraph 1 of Article 27 raised a great principle in exchange affairs, which, in his opinion, should be dealt with there.

M. BOUTERON (France) withdrew his observation on Article 27, but reserved his right to return to it in regard to the connection between Article 39 and Article 19.

Paragraph 1 was approved at a first reading.

ARTICLE 27, PARAGRAPH 2.

Paragraph 2 was approved at a first reading.

Article 27 as a whole was approved at a first reading.

ARTICLE 28.

The PRESIDENT pointed out that amendments had been submitted by the Czechoslovak, German, Norwegian and Danish delegations. The Czechoslovak amendment was as follows:

"When once the bill has been accepted, acceptance may not be withdrawn by the acceptor."

M. SRB (Czechoslovakia) stated that the principle, according to which, once acceptance was made, the acceptor could not withdraw it, that was to say, the principle contrary to — that stipulated in Article 28 — was considered by many of its authors, in particular the German authors, as a principle resulting from the nature of bill of exchange.

The Czechoslovak delegation considered that the provision contained in the Hague text and in that of the experts was dangerous in practice. In a great many cases, it would be very difficult and even impossible to prove the date of cancellation, and the stipulation contained in Article 28 was such as to give rise to many disputes. According to the text of the experts, cancellation could only produce the legal effects referred to in the text if it were made before the drawee gave up the instrument. M. Srb took as an example a case in which the drawee had accepted the bill of exchange, but has retained it in order to consider whether or not he should cancel his acceptance. The bill of exchange was stolen from him. He was therefore unable himself to give up the instrument. If the bill of exchange was returned to him a few days later, could he, according to the text of the experts, cancel his acceptance, even if the bill of exchange had already been endorsed in good faith by other persons?

According to the text of the experts, the drawee who had cancelled his acceptance was bound by that acceptance if the cancellation was made after the drawee had informed the holder or any signatory in writing that he had accepted the instrument. Was the drawee bound only in regard to those whom he had informed of his acceptance or to all persons who had claims arising from the bill of exchange?

M. Srb believed that the text of the experts could be interpreted in the wider sense — that was to say, that the drawee was bound in regard to all persons who had any claim resulting from the bill of exchange. How could those persons, however, have proof that the drawee had informed any signatory that he had accepted the bill of exchange?

Still other questions might arise. In order to avoid any doubt or misunderstanding, the Czechoslovak delegation proposed a very clear provision; that was to say, "acceptance once given cannot be withdrawn by the acceptor". There might be cases in which that provision would appear to be a little too hard on the acceptor, but these cases would, in the opinion of the Czechoslovak delegation, be extremely rare.

M. GRÖNVALL (Finland) stated that the exchange laws of the northern countries did not allow the cancellation of acceptances. It had to be admitted that, in the case referred to in Article 28 of the Regulation, the acceptor often put himself into the undesirable situation in which he found himself. He wondered, therefore, whether it was necessary to be so indulgent towards him, especially if that could only be done by the adoption of a provision introducing into exchange law an element of uncertainty which should be avoided. The Finnish delegate therefore did not wish to participate in what appeared to him to be so undesirable a decision.

M. LOEBER (Latvia) was against the second part of Article 28 of the Regulation, by which the drawee was bound by the terms of his acceptance if he had cancelled it after having informed in writing the holder or any signatory that he had accepted the bill. In this respect, M. Loeber would refer to the well-known principle of exchange law: "*quod non est in cambio non est in mundo*".

M. Loeber was in favour of the deletion of the second part of Article 28, beginning with the words : " Nevertheless, the drawee. . ." On the other hand, the first part of Article 28, according to which a cancelled acceptance was deemed to be refused, could be accepted by Latvia, for it was fully in conformity with Latvian law on bills of exchange (Article 29, paragraph 2). That law laid down that a bill of exchange upon which was recorded the cancellation of the acceptance was deemed not to have been accepted.

M. SULKOWSKI (Poland) was unable to accept the point of view of the Czechoslovak delegation that the responsibility of the drawee should remain when he had accepted the bill of exchange, even if later he cancelled that acceptance. Such a provision was too severe, for it might very well be that his signature had been affixed in error.

Nor did the solution proposed by the experts in the text under discussion seem to him to be more satisfactory.

Indeed, Article 28 laid down the principle that the drawee was responsible when he had accepted the bill of exchange, even if he afterwards cancelled his acceptance, if that acceptance had been signified in writing to the holder or to some signatory before cancellation of the acceptance. That, however, did not result from the bill of exchange itself. In those circumstances M. Sulkowski was of opinion that the Conference should not accept the article in its present form.

Such an acceptance in writing was not without legal importance, but it was a question of civil law, and the Conference should refrain from inserting in the Convention precise provision in that connection.

Moreover, the problem had a general bearing. It was not the acceptor alone who could be called on to cancel his signature, but all the other signatories to the bill of exchange. Why, therefore, should the question be settled only in regard to the acceptor?

The provision, which was, moreover, very complicated, had a very limited practical importance. It was such as to give rise to a certain amount of confusion, and he considered that it would be preferable not to introduce it into the Uniform Regulation.

In conclusion, if the provision proposed by the experts were adopted, it would appear as though a decision had been taken on the very controversial question of whether the obligation under exchange law began from the time when the signature was affixed or whether the signatory only became responsible when the bill of exchange was put into circulation and only when that had been done at his desire ; or, finally, whether that responsibility existed in all cases when a bill had been put into circulation, even when it had been circulated against his desire. Article 28 would give rise to arguments in connection with the solution of the problem in the sense of the second of the solutions proposed, which would not help to increase the security of the circulation of bills of exchange.

M. Sulkowski therefore proposed that the article be deleted and that the question be left to be dealt with under civil law.

M. DE LA VALLÉE POUSSIN (Belgium) noted that the omission of the article would raise no difficulty in countries in which the matter was settled only under civil law. That, however, was not the case everywhere, and in certain countries it was dealt with under exchange law. It was the case in Belgium, in particular, where the law of 1872 on bills of exchange provided for cancellation and its effects after acceptance. If the Uniform Regulation did not settle this question, ambiguities would inevitably result. It was necessary to deal with the matter, either by absolutely prohibiting cancellation or by accepting it and regulating its consequences.

TENTH MEETING.

Held on May 19th, 1930, at 10 a.m.

President: M. J. LIMBURG.

14. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes First reading (Continuation).

ARTICLE 28 (Continuation).

The PRESIDENT said that there were five amendments to this article : that proposed by the Netherlands delegation, which consisted in suppressing at the end of the article the words " nevertheless, the drawer has been. . ." ; that from the Czechoslovak delegation, which was as follows : " When once the bill has been accepted, acceptance may not be withdrawn by the acceptor " ; and that from the Danish delegation, which proposed the following text :

" Where the drawee who has put his acceptance on a bill desires to cancel it, he must have the cancellation legally recorded before the bill leaves his hands, failing which, the cancellation shall be deemed null and void."

It appeared that the word " legally " might raise certain difficulties. Ought the drawee to announce this cancellation by a deed executed before a notary, or was it sufficient if he merely carried it out before witnesses?

M. EIGTVED (Denmark) explained that the idea of the Danish amendment was to complete the Czechoslovak proposal, for the Danish delegation thought that once acceptance had been given by the acceptor no cancellation was possible. For that reason, M. Eigtved was ready to support the Czechoslovak proposal.

Cases might, however, arise (not very often, it was true) when the acceptor ought to have the right to suppress acceptance. In such cases, it seemed just that the burden of the proof should fall on the acceptor and logical that the acceptor should be obliged to furnish this proof in due time — namely, before the bill had left his hands.

The Danish delegation therefore proposed that the drawee ought to make a legal statement of the cancellation before allowing the bill to leave his hands ; but apart from that, M. Eigtved admitted that the expression “legally” was perhaps a little too wide and suggested that it might be replaced either by “deed executed before a notary” or “public deed” or even by “protest”.

M. QUASSOWSKI (Germany) said that a cancelled acceptance was deemed to be refused. The result of such a cancelled acceptance was the same as the ordinary effects brought about by a refusal of acceptance ; for example, the holder had the right to appeal for want of acceptance. The second part of the text of the preliminary draft did not say that in these circumstances acceptance, although cancelled, was as valid as ordinary acceptance ; it only laid down the same responsibility for the drawee either towards the holder or towards the other signatory to whom he had communicated the acceptance.

That was certainly the best system. It avoided the radical solution proposed by the Czechoslovak delegation, according to which, once acceptance was given, it could not be withdrawn by the acceptor. Such a solution was grossly unjust, and for that reason it had been rejected by the Hague Conference and by the experts.

The text of the draft was in conformity with the juridical position of exchange law. It was in no way detrimental to the principle *quod non est in cambio non est in mundo* ; more than that, the cancelled acceptance was equivalent to an acceptance that had been refused except for the special responsibility of the drawee under the second part of the article.

It seemed unnecessary from the point of view of exchange law to make any official declaration such as that in the Danish proposal without taking into account the fact that it was almost impossible for a public officer to say at what moment an acceptance, which he had not witnessed, had been granted.

M. Quassowski approved of Article 28 in principle, but wished to make an observation concerning its drafting. According to the second part of the article, acceptance ought to be recorded before being cancelled, but it was obvious that notice would always be given before an acceptance was cancelled. That was obvious, because it seemed impossible for the drawee to notify his acceptance after he had cancelled it. Another difficulty presented itself ; at what moment did the notification of acceptance become valid ? That was a question of common law, the regulation of which differed in every country.

The question was to know what was the decisive moment : was it the moment when notification was drawn up, was it the moment when notification was sent or the moment when notification was received ? If, as was laid down by common law, the reception of notification was the decisive moment, notification would only become valid after it had been received by the person to whom it was addressed, and that would take place even if notification had been sent before acceptance had been cancelled. In this case, the drawee was not connected with the matter. Consequently, it was a matter of indifference whether the notification arrived before or after the moment when acceptance was cancelled. For that reason, it seemed best to modify the wording of the second part of the article in the following way : “If he has informed. . .”.

M. MOLENGRAAFF (Netherlands) reminded the Conference that under the Netherlands amendment the second part of Article 28, which began with the words “nevertheless, the drawee is bound. . .”, would be suppressed.

This provision took it for granted that the drawee had cancelled his acceptance before the bill had left his hands. In other words, the drawee gave up the bill of exchange, on which acceptance had been cancelled, to the holder who had asked for acceptance. This holder and all later holders, even those who had claims arising out of the bill, would know merely by examining the instrument that acceptance had been cancelled before the bill had left the drawee's hands. Under Article 28, that was equivalent to an acceptance that had been refused.

The situation was in no wise modified by the fact that the drawee had made known before he had crossed out his acceptance by writing to some signatory that he had accepted the bill, for a special undertaking in writing did not result from the cancellation of the bill of exchange — it was only to the person destined to receive such a communication that the drawee pointed out that he had accepted the bill before cancellation.

Even if the drawee made it known by writing to the holder who had asked him for acceptance that he had given acceptance, the bill of exchange did not remain any the less a bill of exchange whose acceptance had been cancelled — *i.e.*, under Article 28 a bill of exchange of which acceptance had been refused. In the same way, other signatories and later holders would not be able merely by examining the instrument to realise what had been said in the communication made to the holder.

As a result of this, it might be said that this communication from the drawee only concerned the relationship between the person destined to receive this communication and the drawee himself. It could not influence the relationship between the drawee and the other persons whose rights depended on the bill.

Consequently, this written statement sent by the drawee was outside the domain of exchange law, and the right of the person who received such a communication came under civil law.

For all these reasons, the Netherlands delegation thought that the words that it proposed to suppress were not pertinent in any uniform regulation on bills of exchange.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that the Conference ought to take special account of the question of the security of the circulation of bills of exchange. The revocability of the acceptance ought only to be affected when a charge of wilful misrepresentation could be legitimately brought against the holder. Cancellation was too easy a form of revocation ; it had nothing personal about it, since it consisted in a mere stroke of the pen. It was impossible to say that its effects came under the scope of exchange law ; at the most, they might be covered by civil law. The drawee who had accepted by mistake a bill of exchange might, according to the circumstances, notify the person who had acquired the bill of this fact or, better still, he might expressly write his revocation on the bill as the result of his error. In this case, the holder who had acquired the bill and knew of the acceptance by mistake would no longer be acting in good faith in this respect and would be consequently exposed to a charge of wilful misrepresentation. But a mere cancellation that gave no clue to the origin or reason of this cancellation ought not to be brought up against a *bona fide* holder.

The PRESIDENT said that the importance of Article 28 was to be found, not in what it said, but in what it did not say. As a matter of fact, it contained a negative principle : acceptance once given could not be withdrawn. It was quite natural that, when it came to the recognition of a debt, it should be impossible for anyone to withdraw his signature.

It had been pointed out that the acceptor who had already signed his acceptance, but who still had the bill in his possession, might reflect upon the matter and finally cancel his signature. There was no reason to take this case into account in a special article, but it had been thought that, if no provision was made in the Uniform Regulation, it might happen that the acceptor's signature would be cancelled after the bill had left his hands. There might also be connivance between one of the signatories and someone else in order to cancel later what ought to have been cancelled before the bill had left their hands. Was this possibility so dangerous that it ought to have a special article to itself ?

M. SULKOWSKI (Poland) could not agree with the rigid formula proposed by the Czechoslovak delegation. To say that the acceptance could not be withdrawn was equivalent to saying that it still existed and if it were to be considered as being in force the result would be that the holder would not have the right of immediate recourse provided for in the event of non-acceptance. A drawee, however, who cancelled his acceptance would scarcely ever pay when the matured bill was presented to him. Why, in such cases, should the holder be deprived of the right of recourse ? That, however, would be the result of adopting the Czechoslovak proposal.

M. Sulkowski thought that if the drawee cancelled his acceptance his signature must be considered, from the point of view of the laws on bills of exchange, as refused. The holder had, therefore the right of recourse. As far as the case in which the drawee, before cancelling his signature had informed one of the signatories in writing, was concerned, in the view of M. Sulkowski, this should be settled by the provisions of civil law. That question should, therefore, be left to the national legislation and should not be settled by the Conference.

This being so, M. Sulkowski thought that the best formula would be that proposed by the Dutch delegation by which only the first part of Article 28 would be kept. Nevertheless, M. Sulkowski took the view that the words " before the bill has left his hands " were still dangerous. Various theories were current in regard to this question. According to the first, the undertaking began to be binding on the signatory from the moment that it was put into writing. This was the *Kreationstheorie*. According to the second, the undertaking bound the signatory from the moment that he had voluntarily abandoned the bill. This was the *Vertragstheorie*. According to the third, the undertaking came into force at the moment when the bill was put into circulation even if this had occurred contrary to the desire of the signatory. M. Sulkowski supported the last view, for it took account of the necessity of preserving the security of circulation. If, however, the words " before the bill has left his hands " were allowed to remain, it might be thought that the question was solved in accordance with the *Vertragstheorie*, since the words indicated that it was the drawee who abandoned the bill. It might be thought that this provision would merely come into force in cases where the drawee voluntarily abandoned the bill. For that reason, M. Sulkowski proposed to replace the words " before the bill has left his hands " by the words " before the bill has entered into circulation ".

The President had asked in what way it was possible to deal with cases in which the drawee had cancelled his acceptance after having got rid of the bill, and whether such cases often arose.

M. Sulkowski did not think that this question had any practical significance. Further, this was a case similar to that which the Conference would have to examine in the chapter on forgery and alterations. It could always be proved that the sum noted on a bill of exchange had been changed and the holder who furnished proof that he had signed the bill before that change had been made was only responsible for the sum inserted in the bill at the moment when he had signed it. The same was true in cases where the acceptance had been cancelled after the drawee had abandoned the bill. Each holder could prove that the acceptance had appeared on the bill at a particular moment and he could invoke the rights brought into being by this acceptance.

In conclusion, M. Sulkowski was in favour of the Dutch proposal with the amendment he had proposed.

M. STUB HOLMBOE (Norway) said that the proposal which he had made¹ was subsidiary to that put forward by the Czechoslovak delegation. Consequently, he would first vote for that proposal. If it were rejected, the question of the onus of proof would have to be settled. The Norwegian proposal covered cases in which the holder of a bill approached his predecessors in order to exercise his right of recourse if acceptance had been refused. In such a case, it would be for the holder to prove that acceptance had really been refused. In normal cases it would be sufficient, in order to furnish this proof, to draw up an urgent protest if acceptance were

¹ See Annex No. 2.

refused. In the special case now under consideration, however — that in which acceptance once given had been cancelled — it was to be doubted whether the protest, after acceptance, had been refused furnished proof that the cancellation had taken place by the proper date. This was the question which the four Scandinavian Governments had raised in the observations which they had made on Article 28. It was important for the Uniform Regulation to settle this question, and the Norwegian delegation took the view that it should be answered in the affirmative.

The protest if acceptance was refused, if drawn up in time, should at any rate be regarded as valid proof that the acceptance had been really refused even if the refusal took the form of a cancelled acceptance.

M. Stub Holmboe added that, at the moment when he had submitted his proposal to the Bureau of the Conference, the Danish proposal had not yet been put forward. This proposal seemed to him to be also satisfactory. He would therefore support the Danish proposal and vote in favour of one or the other according to whichever was first put to the Conference.

Baron MARKS DE WÜRTEMBERG (Sweden) said that the Swedish delegation would, in the first place, vote for the Czechoslovak proposal. This decision was not based upon theoretical, but upon practical, considerations, and they were, in his view, of some considerable importance. The legal revocability of an acceptance, once signed, left, the door open he thought, to certain doubtful proceedings. Cases frequently occurred in which a drawee who had regretted having signed his acceptance wished to cancel it. He might, for example, have discovered, after his signature, that the goods, for which the bill was to pay, had not been sent off in time or had arrived in a dilapidated condition. He might then determine to make an arrangement with the holder by persuading him, perhaps through an offer of compensation, to return the bill of exchange, and to declare that its cancellation had taken place before the drawee had allowed the bill to leave his hands. If the holder knew that the endorsers, and perhaps the drawer, were persons of very solid reputation, he would run no economic risk from this act, while on their side the drawer and the endorsers would lose, in so far as the drawee was concerned, the right of recourse which acceptance had already conferred upon them. The risk of a fraudulent agreement of this kind was not removed either by the Norwegian or the Danish amendment. The Swedish delegation did not see how to cover this risk except by deleting all legal effects consequent upon the cancellation of the acceptance. The Swedish delegation, however, thought that the two amendments in question, particularly the Norwegian amendment, possessed a number of advantages, and would, therefore, if necessary, vote for one or other of them.

M. GIANNINI (Italy) said that the Italian delegation supported the Dutch proposal for the following reasons.

The formula proposed by the Czechoslovak delegation would, in practice, prove extremely dangerous. The drawee could not be held to an obligation if he had signed a bill of exchange by mistake.

The solution proposed by the Danish delegation, which had met with the support of several delegates, was very logical and might perhaps be of great use. It was necessary, however, to avoid too complicated formalities. If every time a person desired to cancel anything he was compelled to give legal notice, it would gravely interfere with the circulation of bills. In other words, the Danish proposal was not practical.

The formula suggested by the German delegation, though it reduced the inconveniences arising out of the second part of the article, did not remove them altogether. The expression "if he has informed the holder of the cancellation" would always give rise to a number of difficulties.

M. DE LA VALLÉE POUSSIN (Belgium) could not approve the proposal to delete Article 28 altogether. This would be equivalent to maintaining that the manner of determining the consequences of cancellation of acceptance was left to the common law of every participating State. Common law, however, had not been unified and the solutions would therefore be different according to the country. The resulting inconvenience would be all the greater, since the banking laws of a large number of countries, more particularly Belgium, contained definite provisions on this question. It was clear, therefore, that the maintenance of a provision corresponding more or less to that contained in Article 28 was necessary.

In order to conciliate, if possible, the various points of view and to meet a number of difficulties, M. de la Vallée Poussin proposed the following formula :

"The drawee who has put his acceptance on a bill can cancel this before it has left his hands, provided that he informs the holder within twenty-four hours following his acceptance."

The danger of collusion between the drawer and drawee mentioned by the representative of Norway was chimerical. If it existed at all, it would exist in any case, for collusion could take place just as easily before as after acceptance. The limit of time granted to the drawee validly to cancel his acceptance being only twenty-four hours, it would be very surprising if the circumstances leading to that collusion occurred within that period. It was much more likely that this collusion would have taken place before. The danger would therefore exist both under a system which prohibited cancellation and under one which tolerated it.

The PRESIDENT proposed the following compromise, which the Chairman of the Committee of Experts, M. Percerou, was ready to accept :

"The cancellation of acceptance made by the acceptor after a bill has been put back into circulation has no effect."

Mr. GUTTERIDGE (Great Britain) thought that, for the reasons which had been so admirably stated by M. Giannini, it would be very difficult to say nothing in the Regulation about this matter. He called attention to the fact that the amendment proposed by the German delegation would

the law exactly into line with the English law as laid down in Section XXI (1) of the Bills of Exchange Act of 1882. That was a circumstance which might have some weight, in view of the great divergence of opinion which existed on this extremely difficult and important question.

M. VAN NIEROP (Netherlands) referred to the amendment proposed by the President and asked how a person who had accepted a bill could cancel his acceptance after the instrument had been put back into circulation. He did not think that such a case could ever arise.

This article had been inserted to provide for cases where a drawee who had given his acceptance changed his idea and cancelled his signature before returning the instrument to the holder or to the bank.

The PRESIDENT asked if it was necessary in the circumstances to introduce a special provision into the Convention, for, when it came to a recognition of debt, for example, such cancellation was in force everywhere.

M. VAN NIEROP (Netherlands) replied that the recognition of a debt could not be compared with that of a bill of exchange, for the acceptor had no instrument at hand to sign. It was the holder who held it and merely submitted it to him at a given moment for signature. From the juridical point of view, the principle ought to be allowed that once a signature had been given and a bill of exchange put into circulation the question of cancellation no longer arose, but that it was possible to cancel the signature so long as the instrument had not been returned to the holder.

M. HAMMERSCHLAG (Austria) said that the Austrian law laid it down quite simply that acceptance could not be revoked. If it was wished to soften the rigidity of this principle, the Conference must confine itself to cases when acceptance was cancelled before the drawee had informed a signatory of his acceptance. There was no need for the Conference to take into consideration the case when acceptance was cancelled after the bill had been put back into circulation.

In his opinion, therefore, the Conference should accept the text of The Hague, with the simplifications that had been suggested by the German delegation.

M. GIANNINI (Italy) thought that the problem raised by Article 28 was of great importance, for everyone knew that an instrument could be erased — *i.e.*, so well and definitely cancelled that it was absolutely impossible to see what had originally been written. There certainly was a problem, but its solution ought to be as simple as possible. M. Giannini proposed the following text :

“ The drawee may cancel his acceptance of a bill before putting it back into circulation.”

The PRESIDENT drew M. Giannini's attention to the fact that he himself had drawn up a similar text in the following terms :

“ The cancellation of acceptance made by the acceptor after a bill has been put back into circulation has no effect.”

He also reminded him that at first he had proposed the expression : “ after the bill of exchange has left his hands ” instead of “ after the bill of exchange has been put back into circulation ”, but he had changed his text as a result of the observations of M. van Nierop. Personally, he preferred the words “ after the bill of exchange has left his hands ”.

M. VAN NIEROP (Netherlands) thought that the expression “ put back into circulation ” was not accurate, since the drawee did not put a bill into circulation.

The PRESIDENT then proposed the following text :

“ The cancellation of an acceptance made by the acceptor after the remittance of the bill of exchange has no effect.”

M. HERMANN-OTAVSKY (Czechoslovakia) reminded the Conference that the principle aim of its work was to obtain a regulation for bills of exchange, chiefly in their international relations.

For the most part, difficulties arose that were due to distance, which made it impossible to get information about the actual circumstances of the cancellation, about the person who had made it, his intention in so doing, the time it was done, etc. He realised that the Czechoslovak amendment was somewhat rigid, but, on the other hand, he thought that there was no reason why third parties who were actuated by good faith should support the consequences of any error committed by the drawee. If the drawee made a mistake, he ought to be the one to suffer the consequences. In spite of that, he was not deprived of all means of protection. He could always bring a charge of wilful misrepresentation against a third party who was not acting in good faith.

M. SULKOWSKI (Poland) thought that the problem raised by Article 28 might be considered from two aspects. In the first place, they had to know whether the holder had the right of appeal in the case when acceptance had been cancelled and, in the other case, if the acceptor who had cancelled his acceptance remained none the less responsible. These were two quite different aspects of the problem. Personally, he thought that holders' rights of recourse in cases where acceptance had been cancelled ought always to be recognised. From the point of view of exchange law, a cancelled acceptance should be considered as null and void.

The question of deciding if the acceptor who had cancelled his acceptance after the bill of exchange had left his hands was nevertheless responsible was a problem which, in his opinion, ought not to be taken into consideration during the discussion of this article. The Conference could examine it when they came to the article under the heading of “ Forgery and Alterations ”.

In conclusion, the Polish delegate proposed the following formula as a compromise :

“ Where the drawee who has put his acceptance on a bill of exchange has cancelled it, acceptance is deemed to be refused.”

The PRESIDENT pointed out that this amendment came to exactly the same thing as the Netherlands proposal.

M. SULKOWSKI (Poland) did not agree with the President, because the Netherlands amendment contained the words “ after the bill has left his hands ”. As he had already said, this was an aspect of the problem that ought not to be treated here.

M. PERCEROU (France) thought that the question under discussion was not of great practical interest. In actual fact, acceptance was considered by the drawee as an obligation only from the moment when the bill had left his hands. So long as he had it in his possession the undertaking which he has assumed was not final. Consequently, M. Percerou proposed the following formula :

“ The drawee may cancel his acceptance, provided that he has not remitted the bill of exchange to the holder.”

The question whether there had been an exchange of correspondence between the parties, during which the drawee had promised his acceptance, was really a question of damages and not of exchange law.

M. Sulkowski had had in mind the case of a bill being stolen by a third party who handed it to the holder though the acceptor himself had not remitted it. That was a special case which the Conference was not required to examine.

M. GIANNINI (Italy) pointed out to M. Percerou, who had criticised his formula, that the latter was identical to M. Percerou's own formula.

M. PERCEROU (France) proposed the following formula :

“ The acceptor may cancel his acceptance ; in this case, it is deemed to be without effect.”

Mr. KENNEDY (United States of America) said he had in his hand the report of the United States Section of the Inter-American High Commission, which included a digest of the American laws on the subject of bills of exchange and promissory notes, and a comparison of these with the recommendations of the Hague Conference of 1912, made with a view to attaining a greater degree of uniformity of legal and commercial practice throughout the American continent. It has been suggested by one or two members of the Conference that possibly the results of the deliberations of the United States Section of the Inter-American High Commission might be of interest to the Conference. The United States Section made the following observations with reference to Article 28 :

“ This conforms to the law of the United States, which defines acceptance as meaning acceptance completed by delivery or notification. By implication, it is in accordance with the Codes of Peru and El Salvador, which provide that acceptance is irrevocable when the bill has been returned to the holder, and omit reference to revocation prior to that act. In Argentine, Brazil, Chile, Ecuador and Uruguay, acceptance once signed cannot be erased or annulled, even though the bill has not been returned to the holder. Costa Rica must be considered as coming under the same rule, as the Code provides that acceptance once given cannot be withdrawn excepting as set forth above.”

At this point reference was made to Article 27 of the Uniform Regulations :

“ And in incorporating the British Bills of Exchange Act into her code, she failed to include the definitions of terms which are substantially identical with those of the United States Act previously referred to.”

The Commission went on to say that :

“ This is not a matter of very great importance, but inasmuch as it is believed that Anglo-American practice and that of the Hague Regulations is to be preferred, it is urged that this article be generally adopted.”

Since the Inter-American High Commission, in compiling the work to which he had referred, had proceeded along practically the same lines as the present Conference, he hoped that the above quotation would prove of interest.

M. ASSER (Netherlands) thought that the discussion really turned on a question of drafting. The amendment furthest from the text of Article 28 was the Czechoslovak amendment ; it should therefore be put to the vote immediately. M. Asser was in favour of the amendment, which was in accordance with Dutch law. Questions of drafting would be referred to a special Committee appointed for the purpose.

The PRESIDENT thought the situation somewhat more complicated. There were in the different amendments that had been submitted certain shades which touched the substance of the matter. The Conference must pronounce on these different conceptions.

He pointed out that the text of M. Percerou and that of M. Giannini were alike at all points. The one read : “ The drawee may cancel his acceptance on the bill before putting it back into circulation ” ; while the other said : “ The drawee may cancel his acceptance, provided that he has not remitted the bill to the holder ”. He suggested that the movers of these two proposals should agree on a single text.

M. EIGTVED (Denmark) wished to know on whom would lie the onus of proof in the event of the cancellation of the bill before remittance to the holder being contested. He was prepared to withdraw the proposal he had made provided that it was understood that in this matter legal decision might be obtained in one way or another.

The PRESIDENT replied that Article 28 did not contemplate the question of proof.

M. QUASSOWSKI (Germany) preferred the text of the experts, notwithstanding the objections it had aroused. According to that text, an acceptance, if cancelled, was deemed null and void, but the drawee was responsible for this cancellation to the holder to whom he had communicated his acceptance. This rule seemed practical and fair. No provision was made in M. Percerou's proposal for the responsibility of the drawee, and M. Quassowski thought it necessary to make such provision. He was therefore in favour of the text of the experts, subject to the small simplification he had already proposed.

M. VISCHER (Switzerland) thought that, in view of the number of amendments before the Committee, if the latter wished to come to a clear issue which would enable the delegates to vote with a full knowledge of the situation, the various proposals must be referred to a sub-committee consisting of the delegates who had moved the amendments. In this way, part of the amendments would be got rid of and the Conference would have before it a number of definite proposals on which it would be easy to come to a decision.

M. Vischer, like the German delegate, thought that Article 28 as it stood in the Hague Regulation offered the most definite text and the neatest solution. He would, however, be glad of a short time for reflection, so as to be able to vote with a full knowledge of the facts.

Prince VARNVAIDYA (Siam) informed the Conference that the text of Article 28 had already been incorporated in the Siamese Code. He understood that the German delegate wished to propose a certain drafting modification, and he would like to know what that drafting modification was before he voted.

M. SHIMADA (Japan) said that the Japanese delegation supported the German proposal.

Mr. GUTTERIDGE (Great Britain) said he wished to put the same question to the German delegation. As he understood it, the only object of their amendment was to do away with the necessity for written notice, and he would be glad to know if that was really the case.

Baron CARTON DE WIART (Belgium) observed that the Conference had voted the following text for Article 24 :

“ The acceptance is expressed by the word ‘ accepted ’, or any other equivalent term, and it is signed by the drawee.”

The question now was that of the withdrawal of this acceptance. The word “ biffage ” (cancellation) was certainly not very precise, and Baron Carton de Wiart wondered whether, irrespective of the text adopted for the substance of the matter, it would not be possible to add the following paragraph : “ The intention to cancel must be expressed by the words ‘ acceptance withdrawn ’, or any other equivalent words, signed and dated by the acceptor.” This amendment would go far to meet the observation of the Scandinavian delegations. It was only useful if the amendments on the substance submitted by the previous speakers were adopted.

Baron Carton de Wiart recognised the need for great caution in everything appertaining to the wording of bills of exchange. That was a very serious objection. The Conference, however, had adopted a form of wording for acceptance ; logically, it should adopt that wording also in the case of the withdrawal of acceptance.

M. ARCANGELI (Italy) asked whether acceptance must also be dated.

Baron CARTON DE WIART (Belgium) replied in the negative. He thought that the Conference should have stipulated this, but it was perhaps more important to date the suppression of acceptance than acceptance itself.

M. MOLENGRAAFF (Netherlands) said that if M. Giannini's or M. Percerou's proposal were adopted, his amendment would obviously become superfluous.

The PRESIDENT requested the movers of the various amendments to confer before the next meeting, so as to enable a decision to be reached, by the great majority at all events.

M. GIANNINI (Italy) pointed out that the solution would be facilitated if the Conference pronounced on the substance of the question by voting on the Czechoslovak proposal. If that proposal were rejected, an attempt must be made to come to agreement on that of the experts.

The PRESIDENT accepted this proposal, and put the Czechoslovak proposal to the vote.

The Czechoslovak amendment was rejected by 18 votes to 7.

ELEVENTH MEETING

Held on May 19th, 1930, at 3.30 p.m.

President: M. J. LIMBURG.

15. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes First reading (Continuation).

ARTICLE 29.

M. DA MATTA (Portugal) submitted the following amendment :

“ Payment of a bill of exchange may be guaranteed, *as regards the whole or part of the sum*, by an “aval”.

“ This guarantee may be given by a third person, or even by a person who has signed as a party to the bill.”

In the interests of trade, it is necessary to allow all possible latitude to the parties. Apart from the making of conditions which might alter the character of the aval, the giver of the aval ought to be allowed to limit its scope. Everyone had a right both to limit and to extend his obligations. It might happen that a person prepared to guarantee an obligation in certain conditions and for a certain sum did not desire that that obligation should subsist in other conditions. On the other hand, so far as M. da Matta was aware, there was no objection in principle from the legal point of view to accepting the idea contained in the Portuguese amendment. Moreover, Article 304 of the Portuguese Commercial Code affirmed the principle, and the provision under consideration was constantly applied in practice in Portugal.

In M. da Matta's opinion, there was no reason for not allowing the “aval” to be limited to part of the sum accepted.

M. SULKOWSKI (Poland) could not accept the proposal of the Portuguese delegation. He considered that, as far as possible, an endeavour should be made not to render less easy the operation of bills of exchange. The proposal would, however, particularly complicate the legal position. With the desire that the bill of exchange should remain as simple as possible, the principle of bills of exchange payable by partial or successive maturities had been rejected. For a similar reason, M. Sulkowski was opposed to the idea that the “aval” might be given for part of the sum.

On a vote being taken, *the Portuguese amendment was adopted by 10 votes to 9.*

Article 29 as amended was approved at a first reading.

ARTICLE 30, PARAGRAPH 1.

The PRESIDENT recalled that the French delegation had made the following observations regarding Article 30 :

“ The French delegation requests that provision may be made in the Convention or in some other form for the following reservation :

“ By derogation from Article 30, paragraph 1, of the Uniform Law, any contracting State shall have the right to decide that an ‘aval’ may be given in its territory by separate document showing the place in which it has been constituted.

“ *Grounds.*

“ The ‘aval’ by separate document is of the greatest utility. In the first place, the party whose signature has been guaranteed may not wish the bill of exchange to circulate with the mention of an ‘aval’ implying that the persons concerned are not entirely satisfied as to his solvency ; further, the ‘aval’ often applies not to a specific bill of exchange but to all the bills of exchange that the drawer may issue on the drawee during a certain period up to the amount of a specified sum.”

The President believed that it would be preferable to discuss the French proposal with paragraph 1. That did not mean that, if the proposal were adopted, it would be necessary to make any addition to the paragraph.

The following question arose : Was the “aval”, which in France could be made by separate document, simply a civil guarantee or was it an “aval” of exchange ?

M. PERCEROU (France) explained that the “aval” by separate document was frequently used in France. It was not an ordinary guarantee, but a commercial guarantee. Was it a true “aval”? That was a question on which there was disagreement. Personally, M. Percerou did not believe that such an “aval” could be considered as “aval” of exchange properly so called, because the “aval” was not written on the bill. It did not establish a direct relation between the giver of the “aval” and successive takers. It was given to a specified holder and not necessarily transferred automatically with the bill itself.

The PRESIDENT considered that the question should be discussed when Article 31, which stipulated that the "aval" was given on the bill of exchange or on an "allonge", was considered.

On the other hand, Article 31(a) stipulated that the preceding provisions did not apply to what was known as "aval" by separate document.

In regard to the principle, if he had rightly understood M. Percerou, the President concluded that the "aval" by separate document as it existed in France was not, in the opinion of the representative of France, a document of exchange, but a commercial guarantee of a special character, very important in France where there were commercial courts. In those circumstances, the President wondered whether it was desirable to deal with the question in a uniform regulation such as that drawn up by the Conference. He believed that it would be preferable to leave countries free in the matter. It might be said, for instance, that "aval" by separate document was not a document of exchange and that the Conference had not considered it desirable to deal with the matter. In those circumstances, Article 31(a) could be omitted. If the members of the Conference accepted that view, the situation would be greatly facilitated.

M. PERCEROU (France) gave the following explanation in regard to the "aval" by separate document :

For the beneficiary of the "aval" by separate document — who was generally a banker — the "aval" had the same effects as the "aval" of exchange. If, however, the beneficiary rediscounted the bills included in the "aval" by separate document, that "aval" could not be transferred to the discounter since it was not mentioned on the instrument. It could only be transferred by a distinct document of cession. It acted indeed as an "aval" of exchange, but was not transferable automatically with the bill of exchange.

M. TROULLIER (International Chamber of Commerce) explained that the custom of "aval" by separate document was spreading more and more in the commercial world. The International Chamber of Commerce had carefully considered it, and Italian and French bankers were very much in favour of that kind of "aval".

M. Troullier gave a practical example of the employment of the "aval" by separate document.

An important manufacturer was interested in one of his customers who was intelligent and serious, but was for the moment short of capital. He could obviously supply the capital, but did not wish to act in that way, since a liability or an "aval" on a bill would prove to his other customers that the manufacturer had a preference for a certain person and the result might be that he would be in danger of losing several customers. In such a case, what happened in practice was that the trader went to the manufacturer and explained that he was in need of capital. The manufacturer went to a banker and guaranteed by a separate document that he would pay the drafts of the said customer to the amount of a specified sum and within a given time. It was not necessary, therefore, that the existence of "aval" should be known outside the three contracting parties. That, as M. Percerou had explained, was why the "aval" by separate document was not transferred. Nevertheless, traders were greatly in favour of it, and the International Chamber of Commerce had asked M. Troullier to make a point of urging that it be maintained.

From the exchange point of view, it was a question of pure law, which he did not wish to discuss. Nevertheless, in principle, the general opinion was that the "aval" by separate document should be assimilated to the "aval" of exchange in view of proceedings which might later be taken.

M. GIANNINI (Italy) observed that Article 142 of the French Commercial Code simply stipulated that "this guarantee (the 'aval') is given by a third party on the bill itself or by separate document", whilst the other laws did not mention "aval" by separate document. Nevertheless, the problem arose in practice and had a certain importance. M. Giannini felt, however, that it should be considered in a more general manner.

As M. Percerou had said, the "aval" by separate document was not part of the exchange law ; nevertheless it could be introduced at a given moment into exchange procedure. It could not be said that the Conference should not consider the question. At the same time, it might be asked whether the problem was ripe enough for solution in a uniform regulation. It might also be asked whether it would not be better for the Conference to confine itself to making a reservation.

For his part, M. Giannini did not see any advantage in inserting Article 31(a), which stipulated that the above provisions did not apply to what was known as the "aval" by separate document. That article was not absolutely clear, and the observations which followed it, whose object was to explain it, had not altogether succeeded in doing so. There was no reason for putting the formula in a uniform regulation. Was it, then, necessary to make a reservation? The French delegation had proposed a text which M. Giannini thought should be interpreted as follows :

Each contracting State had the right to maintain its national legislation in settling the problem. At the same time, he believed that it would be in the spirit of the French delegation to admit that that particular situation of certain States should be recognised internationally. A sentence should therefore be added in that sense, otherwise the reservation would serve no purpose. Then, however, the question arose as to whether in a uniform regulation it could be asked that the particular situation of certain States should be recognised internationally, and it was therefore necessary to return to what might be called the substance of the problem.

Could a negative conclusion only be reached? The Italian delegation had considered the problem in a general manner. It believed that certain tendencies in connection with the extra-exchange guarantee of credit instruments should not be neglected. Those tendencies were

developing from day to day and were worthy of close attention. Consequently, the Italian delegation submitted to the Conference the following recommendation :

“ The Conference,
“ Considering the development in practice of extra-exchange guarantees for credit instruments,

“ Recommends :

“ That the International Institute of Private Law should undertake a study of the problems relating to the guaranteeing and insurance of exchange debts in connection with the general system of bills of exchange and with the ‘ aval ’ in particular.”

The Italian delegation considered that it was necessary to lay down a strict doctrine. For that reason, it did not desire the insertion at the moment either of Article 31(a) or of the reservation of the French delegation.

The PRESIDENT said that the Conference could take a vote on the recommendation at the end of its work.

He asked M. Percerou for the following information : Personally, he would be disposed to say in Article 30 : “ The ‘ aval ’ is given on the bill of exchange or on an ‘ allonge ’ or by separate document.” There would then be no need for Article 31(a).

If there were any objection to that, it would be advisable to add a few words to Article 31(a) and to say : “ The above provisions do not apply to what is known as, ‘ “ aval ” by separate document ’, which is settled by the national legislation.”

M. PERCEROU (France) observed that M. Giannini’s recommendation was very interesting. The question of general regulations in regard to extra-exchange guarantees deserved careful consideration. That question was, however, rather one for the future ; the “ aval ” by separate document, on the contrary, should at once be the object of a regulation. Positive laws existed in that connection, and they could not be neglected. M. Percerou persisted in believing that the reservation of the French delegation was not useless — it would produce the same effects as that introduced at The Hague. M. Giannini had observed that the reservation did not contain the sentence : “ These bills shall be recognised as valid by other States ”, but that could not be applied to the “ aval ” by separate document, since that “ aval ” was not mentioned in the bill of exchange. Nevertheless, the reservation implied that the validity of the transaction itself, when it was carried out in France, would be recognised by other States. It was obvious that if Article 31(a) was completed by the words suggested by the President, the reservation itself would be unnecessary since the text of the Convention recognised the right of every State to regulate the “ aval ” by separate document in the way it desired. It was for the Conference to choose the best solution.

The PRESIDENT stated that he saw no objection to inserting in Article 30 : “ The ‘ aval ’ is given on the bill of exchange or on an ‘ allonge ’ or by separate document ”. Indeed, the “ aval ” by separate document was frequently employed in France and Belgium. In other States there was no such “ aval ”, and in England the “ aval ” itself was unknown. In those circumstances, what objection could there be to inserting the words : “ or by separate document ”? If there were any objection, it should come from France. That country might very well raise the objection : “ In those circumstances, this “ aval ” is undoubtedly an exchange document, whereas in France the question has not yet been settled.”

M. VAN NIEROP (Netherlands) stated that the Netherlands legislation recognised the “ aval ” by separate document. He supported the President’s proposal. The “ aval ” by separate document was, in act, an ordinary “ aval ”. The “ aval ” on the bill of exchange was very rarely used, in comparison with the “ aval ” by separate document. In the Netherlands only the latter was employed, and doubtless the same was the case in France and Belgium ; moreover, it was certain that the “ aval ” would become still more customary in the future. The person who gave an “ aval ” never desired to give it on the bill of exchange, because he wished to avoid injuring the credit of the person for whom it was given. Sales by payment in instalments, however, were becoming more and more frequent and should be taken into account. They were nearly always made by means of drafts drawn on the purchaser and then discounted by a bank. Those drafts were at the same time guaranteed or assured by assurance companies. The latter could carry out that transaction much more easily by giving the “ aval ” by separate document to the bank which re-discounted the drafts.

For those reasons, M. van Nierop supported the President’s proposal to say : “ The ‘ aval ’ is given on the bill of exchange or on an ‘ allonge ’ or by separate document ”.

M. GIANNINI (Italy) felt that the President’s proposal was unwise. The question was one aspect of a more general problem ; that was why M. Giannini had asked that the International Institute of Private Law should study the problems relating to the guaranteeing and insurance of exchange debts in connection with the general system of bills of exchange and with the “ aval ” in particular. He believed, with the representative of the Netherlands, that the problem would arise in future in connection with the whole system of the guarantee of insurances. M. Giannini pointed out that the problem had already arisen in practice in Italy. It had been settled by the guarantee system. The problem should be studied closely. Great disadvantages might result from the subsidiary guarantee, certain frauds in particular. In any case, the problem was not, at present, ripe for discussion. The legislations which accepted the system could not be asked to give it up ; all that could be done was to make the necessary investigations. M. Giannini added, however, that he saw no objection to discussing later the recommendation which he had submitted. He considered that for the moment the Conference should return to the formula of Article 5 of the Hague Convention, which was almost analogous to that submitted by the French delegation.

M. QUASSOWSKI (Germany) agreed with the President in regard to the reservation proposed by the French delegation. The decisive legal point depended on whether an "aval" was by separate document a true "aval" or an ordinary guarantee. In the latter case, no reservation was necessary. In giving proof, it was necessary to know whether the special provisions of the regulation concerning the true "aval" were applicable to the "aval" by separate document or not. Article 31, paragraph 2, prescribed that the undertaking of the giver of an "aval" was valid, even when the liability which he had guaranteed was inoperative for any reason other than defect of form. It resulted from that provision that if, for instance, the signature of the acceptor was forged, the giver of the "aval" was none the less responsible. M. Quassowski was convinced, however, that that was not so in the case of an "aval" by separate document.

The following example showed the difference between an ordinary guarantee and an "aval". Supposing that an "aval" were given beside the signature of a drawer and that for some reason the signature of the drawer was valueless. The giver of the "aval" was none the less liable. If, on the other hand, an ordinary guarantee were given for a debt which became null and void, the guarantee would also be invalid. Indeed, under common law, the validity of a guarantee depended on the validity of the principal debt, while the validity of an "aval" was independent of the validity of the exchange debt for which the "aval" had been given. M. Quassowski believed, however, that that provision did not apply to the "aval" by separate document, which was a proof that an "aval" of that kind was only an ordinary guarantee. M. Quassowski asked M. Percerou whether that interpretation was correct.

He saw certain objections to the President's proposal to consider the "aval" by separate document in the same way as a true "aval" and considered such an assimilation was inadmissible. It had been stated, for instance, that the claims connected with an "aval" were not transferred to the person who acquired the bill. On the other hand, Article 31, paragraph 2, did not apply to the "aval" by separate document. If the "aval" by separate document were introduced into the regulation itself, all those differences would disappear, and M. Quassowski believed that that would certainly not be in conformity with the intentions of the French delegation.

Mr. GUTTERIDGE (Great Britain) found it rather difficult to appreciate the exact boundary line between an "aval" by separate document and an ordinary guarantee. As, however, he gathered that this was the point which M. Quassowski had discussed, it was not necessary for him to put a separate question.

M. DA MATTA (Portugal) agreed with the Netherlands delegation. Undoubtedly, according to the principles of modern exchange law, the "aval" by separate document was a controversial matter. If a bill of exchange had itself to contain the reasons for its existence, the "aval" should also be inserted. It could not be conceived that an "aval" which was not contained in the instrument could have no exchange effects. Nevertheless, M. da Matta accepted the practical considerations submitted by the Netherlands delegate. Article 35 of the Portuguese legislation contained the following provision :

"An 'aval' may be written on the bill of exchange or given in a separate document or in an ordinary letter."

The application of that provision was becoming more and more frequent in Portugal.

The PRESIDENT called on the Conference to vote on the following proposal of the Netherlands delegation, which would, he believed, give satisfaction to the French delegation. "The 'aval' is given on a bill of exchange on an 'allonge' or by separate document."

On a vote being taken, this proposal was rejected by 16 votes to 7.

The PRESIDENT considered that, in view of the rejection of the amendment, it was desirable to discuss Article 31(a) again in the following form :

"The above provisions do not apply to what is known as 'aval by separate document' which is settled by the national legislation."

M. GIANNINI (Italy) considered that that provision should not be inserted in the Uniform Regulation. It should appear in Article 5 of the Convention.

The PRESIDENT observed that in drawing up the draft Uniform Regulation the experts had inserted Article 31(a) while, on the other hand, maintaining Article 5 of the Convention. He proposed to deal with the question at once. It would be for the Drafting Committee to propose, if it thought fit, the omission of the two articles.

Baron CARTON DE WIART (Belgium) noted that the text of the article referred to "what is known as 'aval' by separate document", as though it was a transaction whose form was definitely fixed. That, however, was not the case. He therefore proposed the words : "The above provisions do not apply to the 'aval' by separate document." The more general formula would be more acceptable.

The PRESIDENT accepted the amendment and proposed that a vote be taken on the text thus amended.

M. ASSER (Netherlands) asked the President whether he maintained his suggestion to add to the article "which is settled by the national legislation of the contracting States". In that case, was it desired to say that the national legislation should settle the whole matter but without giving the "aval" by separate document the character of a document involving exchange effects? Would the States be free to introduce into their law provisions under which the "aval" by separate document would be equivalent to an "aval" with exchange effects?

The PRESIDENT replied that that depended on the legislations. Article 5 of the Convention was as follows :

“ The effects of the obligation entered into by the person giving an ‘ aval ’ and by the acceptor for honour are governed by the laws applicable to the obligation entered into by the person on whose behalf the ‘ aval ’ or acceptance for honour has been granted.”

The Drafting Committee would put that article into harmony with Article 31(a). In order to avoid complicating the discussion, it would be better to vote only on Article 31(a) as it appeared in the Uniform Regulation but with Baron Carton de Wiart's amendment. The Conference would then consider what should be done in regard to Article 5 of the Convention.

M. ASSER (Netherlands) asked whether, in voting on that article, the right of the contracting States to settle the matter as they desired would be left intact.

Baron CARTON DE WIART (Belgium) replied that that right would not be affected.

M. ASSER (Netherlands) considered that in those circumstances a decision had already been taken.

The PRESIDENT said that Article 31(a) would put the “ aval ” by separate document outside the Uniform Regulation.

M. ASSER (Netherlands) thought that this question would thus be left to the discretion of the various States.

M. GIANNINI (Italy) drew the Conference's attention to the fact that the draft Convention to be discussed did not contain Article 5. For that reason, he proposed that Article 31(a) should be adopted in the following form :

“ The above provisions do not apply to ‘ aval ’ by separate document.”

Article 5 of the Hague Convention would then be re-inserted in the Convention, but instead of referring to Article 30 a reference should be made to the corresponding article.

The PRESIDENT pointed out that the wording proposed by M. Giannini was identical with that to be found in the preparatory documents on page 58, for the verb “ apply ” did not markedly differ from the expression “ concern ”¹.

M. Giannini should remember that Article 5 of the Convention made no reference to Article 30. Article 5 quoted by the President was to be found on page 23 of the preparatory documents and was part of the draft Convention which would be discussed by the Conference, whereas Article 5 quoted by M. Giannini was to be found on page 43 of the preparatory documents and formed part of the Hague Convention of 1912.

M. GIANNINI (Italy) replied that this provision had been repeated in the French proposal.

The SECRETARY said that Article 31(a) had the same effect.

The PRESIDENT added that this was the reason why the Committee of Experts had also inserted Article 31(a) in the Uniform Regulation.

M. PERCEROU (France) said that the Conference was faced with two questions which were distinct though connected.

If, as was to be feared, agreement was not reached that the “ aval ” by separate document should be subject to uniform rules (which would in that case have to appear in the Uniform Regulation), it would be necessary, in the first place, to know whether the silence of the Regulation on that point did not at least imply for the countries acceding to the Convention the prohibition of the “ aval ” by separate document. In his opinion that was obvious, but it would be still better to say so expressly.

Then — admitting that each country preserved the right to settle “ aval ” by separate document in any way it liked — there remained the question of conflicts of laws. If, for instance, the French law retained the “ aval ” by separate document whilst other laws did not permit it, what exactly would be the conditions regarding “ aval ” by separate document which would be governed by the French law ? At present, that problem of conflicts of laws was not settled.

In regard to the first question, it would be desirable to settle it at once, and certainly, in his opinion, in the liberal sense ; that was to say, by maintaining the right of each State to subject the “ aval ” by separate document signed on its territory to the rules which it considered preferable. This right could be recognised expressly in two ways.

Either Article 31(a) of the draft Regulation of the experts could be maintained and completed by the addition suggested by the President : “ The above provisions do not apply to the ‘ aval ’ by separate document which is settled by the national law of each contracting State ”, or, as would be preferable, Article 31(a) could be deleted and an article similar to Article 5 of the Hague Convention inserted in the Convention.

The PRESIDENT proposed that the Conference should vote on Article 31(a) in the following form :

“ The above provisions do not apply to ‘ aval ’ by separate document, which is settled by the national legislation of each contracting State.”

The drafting Committee could be instructed, if necessary, to transfer this article from the Regulation to the Convention.

¹ This remark concerns the french text only.

M. DIENA (Italy) thought that by this solution the question of the law applicable to "aval" by separate document would be prejudiced. All that was desired was to express the idea that this question was outside the Convention, in order that each State might settle it in the manner it thought best.

In those circumstances, the PRESIDENT proposed that the Conference should vote on Article 31(a) in the form in which it appeared in the preparatory documents. The Drafting Committee would be instructed to discuss whether an allusion should be made to the national legislation.

M. PERCEROU (France) thought that it would be simpler to decide merely to delete Article 31(a), it being understood that the Convention would include a reservation granting each State the right to make rules for the "aval" by separate document drawn up on its territory.

M. VISCHER (Switzerland) supported the proposal of M. Percerou. He was also in favour of the suppression of Article 31(a), with the introduction of a reservation in favour of an "aval" by separate document.

M. SULKOWSKI (Poland) also thought that this question could not be included in the Uniform Regulation since the practices of "aval" by separate document was not universal. He would therefore support M. Percerou.

M. QUASSOWSKI (Germany) was also of the view that it would be wrong to make any reference in the Uniform Regulation to "aval" by separate document. If the Regulation referred to it, the differences existing between "aval" proper and "aval" by separate document might disappear. M. Quassowski thought, however, that this was not a mere question of drafting, but a question of substance, that the Conference must settle.

M. Deoclecio DE CAMPOS (Brazil) gave some explanations and stated that the Brazilian delegation supported the views expressed by M. Percerou.

M. ASSER (Netherlands) asked M. Percerou if he intended to maintain the French delegation's amendment to the effect that the provisions of Article 5 of the Hague Convention should be inserted in the Regulation.

M. PERCEROU (France) asked the Conference, if it decided to delete Article 31(a), to authorise a reservation similar to that in Article 5 of the Hague Convention.

M. ASSER (Netherlands) supported M. Percerou's suggestion.

The PRESIDENT, summing up the discussion, said that the Conference could vote both on the deletion of Article 31(a) and the insertion of the French reservation in the Convention, at a place to be settled later.

The Conference decided to delete Article 31(a) and insert the French reservation in the Convention.

ARTICLE 30, PARAGRAPHS 1, 2 AND 3.

Paragraphs 1, 2 and 3 were approved at a first reading.

ARTICLE 30, PARAGRAPH 4.

The PRESIDENT submitted the following amendment proposed by the Italian delegation for the last sentence :

"In default of this, the 'aval' is deemed to be given for the person accepting the bill of exchange or, if the bill is not accepted, for the drawer, in whatever place the signature has been affixed."

The Czechoslovak delegation had submitted the following amendment for the lost sentence :

"In default of this, it is deemed to be given for the acceptor and, if the bill of exchange has not yet been accepted, for the drawer."

The PRESIDENT asked for whose account the "aval" was given when it was given before the acceptance of the bill of exchange.

M. ARCANGELI (Italy) said that the principle underlying the Italian proposal was that according to which the "aval" was given for the person having the greatest liability — that was to say the drawee, if he accepted the bill. That was the fundamental principle of exchange law.

In reply to the President's question, M. Arcangeli said that, according to the Italian proposal and even according to the text of the experts, the "aval" was to be held as being given for the drawer. If the bill was accepted later, in accordance with the general principles governing it, it was invariably the situation resulting from the deed that prevailed. Two cases might occur. First, the various declarations (declaration of the "aval", declaration of the acceptance) might be dated. In that event, the solution of the problem was to be found in the bill itself, since the holder was bound to know whether the "aval" had been given before the acceptance. The Italian proposal in that case could give rise to no difficulty. In the second hypothesis, no declaration was dated. In that event, the holder was entitled to consider that the "aval" was given for the drawee if he had accepted it, since the situation which must prevail was that resulting from the bill itself.

M. SRB (Czechoslovakia) considered that the Italian and Czechoslovak amendments were similar in point of substance. The Italian delegation, however, added the words "in whatever place the signature has been affixed". The third paragraph of Article 30 said :

"It is deemed to be constituted by the mere signature of the giver of the 'aval' placed on the face of the bill, except in the case of the signature of the drawee or of a drawer."

Could the words "in whatever place the signature has been affixed" be considered to mean that a signature on the back of the bill sufficed?

M. ARCANGELI (Italy) replied that it was an accepted principle in all countries that the mention of an "aval" on a bill did not suffice to determine who was the party benefiting by the "aval". It was to solve this question that the experts had proposed the text which appeared in their draft and that the Italian delegation had submitted their amendment. It might, however, be useless to lay down the principle, since it might be held that it was operative without being formulated. The Italian delegation, however, had felt that it was preferable to eliminate any possibility of doubt by saying that the "aval" might be mentioned in one place or another indifferently.

M. SRB (Czechoslovakia) explained that he merely wished to know whether it was enough for the signature of the giver of the "aval" to be affixed on the back of the bill.

M. ARCANGELI (Italy) replied that his personal opinion on this point was as follows: Even if the signature of the giver of the "aval" was affixed on the back of the bill, the opinion of the experts must be accepted. The Italian delegation agreed with the experts on the principle. They hoped that the experts also agreed in thinking that the "aval" might be affixed either on the back or on the face of the bill.

M. SRB (Czechoslovakia) wondered whether the words "in whatever place the signature has been affixed" might not be considered as constituting a derogation to the clause contained in the third paragraph of Article 30.

Baron CARTON DE WIART (Belgium) observed that the last paragraph of Article 30 began by a declaration of principle: the "aval" must specify for whose account it was given. What was the question at issue? It was that of giving a special guarantee in favour of the drawer. That, however, was a point of no great importance seeing that Article 31 stipulated in paragraph 3 that the giver of the "aval", when he paid the bill of exchange, had the right "to go back on the person he had guaranteed and the guarantors of the latter".

Without wishing to impose it as a model, for he did not consider that the delegates could invoke their national legislation as an authoritative argument, since the Conference was endeavouring to draw up a law which would be acceptable to all countries, he felt obliged in this particular case to draw attention to the following clause in Belgian law: "The giver of the 'aval' is bound conjointly with the drawer and the endorser, unless otherwise agreed among the parties." Would not this solution meet all the wishes that had been expressed, and would it not be in accordance with the last paragraph of Article 31?

M. NAMITKIEWICZ (Poland) pointed out that many legislations provided that in case of doubt the "aval" was deemed to be given for the account of the acceptor and, in default of acceptance, for the drawer. A clause of that kind appeared in Hungarian, Bulgarian, Italian, Roumanian, Peruvian and Japanese law. In French jurisprudence, on the other hand, it was presumed that the "aval" had been given for the drawer, for the giver of the "aval" who had paid the bill could go back only on the drawer, but not on the endorsers, M. Namitkiewicz thought this solution preferable.

The first part of the fourth paragraph of Article 30 raised a doubt in the case where, for instance, the signature was affixed near that of an endorser, on the back of the bill, without any indication of the person for whom the "aval" was given. The experts' draft settled the question and said that in case of doubt, in default of an indication of the person in whose favour the "aval" had been given, it was to be presumed that the "aval" was given for the drawer.

Where, however, the signature of a person other than an endorser appeared on the back of the bill, there was an inclination to suppose that the "aval" was given in favour of the endorser. If it were laid down that in default of any indication it must be presumed that the "aval" was in favour of the drawer, M. Namitkiewicz considered that in order to obviate any doubt it should be stipulated that the place where the signature of the giver of the "aval" appeared should not be taken into consideration. That idea was, moreover, very well expressed by the last phrase in the Italian amendment, which said: "in whatever place the signature has been affixed".

M. SRB (Czechoslovakia) said that, in view of the explanations given by M. Arcangeli, whose point of view was in conformity with that of the Czechoslovak delegation, the latter would withdraw its amendment and concur in the Italian proposal.

M. QUASSOWSKI (Germany) said that the formula contained in the draft regulation of the experts was in conformity with German law and appeared to him simpler and more practical than the Italian proposal. According to the latter, there would exist in the first place a guarantee for the drawer, and then, after acceptance, for the acceptor. That rule was a somewhat complicated one. That, however, was not the principal reason for which M. Quassowski preferred the text of the experts. There was another and more cogent reason for preferring the latter text, namely, the fact that the giver of the "aval" might guarantee only in the last place; he might ultimately be liable, except where there was a provision to the contrary, such provision expressing an intention which must be presumed and respected by the law.

M. GIANNINI (Italy) said that his delegation withdrew its amendment.

M. SCHELTEMA (Netherlands) wished, before the Conference voted on the article, to be assured that his interpretation of it was correct. The article said: "an 'aval' must specify for whose account it is given". According to Dutch jurisprudence, an "aval" appearing under the signature of one of the other persons was held to be given for that person. This provision would therefore, in the mind of a Dutch judge, be in conformity with the sense of Article 30. Was the opinion of the experts likewise?

The PRESIDENT observed that, if it were said "the 'aval' must specify for whose account it was given", that formula meant that a name must be specified.

M. GIANNINI (Italy) did not wish to open a discussion. He must, however, say that he could not concur in the interpretation of the German delegation. That interpretation would eliminate the possibility of an "aval" for the acceptor drawee, even when given explicitly.

The fourth paragraph of Article 30 was put to the vote and approved at a first reading.

The article as a whole was approved at a first reading.

ARTICLE 31, PARAGRAPHS 1 AND 2.

Paragraphs 1 and 2 were approved at a first reading.

ARTICLE 31, PARAGRAPH 3.

The PRESIDENT read a proposal by the Dutch delegation to replace the word "guarantors" by the word "debtors". The Dutch delegation feared that the word "guarantors", placed at the end of the paragraph in question, did not cover the acceptor. It was for that reason that it had proposed to substitute for it the word "debtors".

M. GIANNINI (Italy) was in agreement, in principle, with regard to this proposal, but thought that it would be more precise to say "the earlier parties liable".

M. PERCEROU (France) wondered whether the Dutch delegation would be satisfied if the report contained an explanation stating that the word "guarantors" comprised, if necessary, the acceptor as well.

The PRESIDENT thought that the word "debtors" covered the acceptor likewise.

M. DE LA VALLÉE POUSSIN (Belgium) proposed the following text:

"He has, when he pays the bill of exchange, the right to go back on the acceptor, on the person he has guaranteed and on the guarantors of the latter."

The PRESIDENT thought that this amendment was not in accordance with the Dutch proposal.

M. VAN NIEROP (Netherlands) considered, on the contrary, that this text was entirely in conformity with the idea of the Dutch delegation, since the acceptor was always bound by the bill. He was definitely liable.

M. PERCEROU (France) proposed the following text:

"He has, when he pays the bill of exchange, the right to go back on the person whom he has guaranteed and those who are liable to the latter under the bill."

This text was put to the vote and adopted.

Paragraph 3, thus amended, was approved at a first reading.

Article 31 as a whole was approved at a first reading.

TWELFTH MEETING.

Held on May 20th, 1930, at 10 a.m.

President: M. J. LIMBURG.

16. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes (Continuation).

ARTICLE 28.

The PRESIDENT read the following new text of Article 28:

"Where the drawee who has put his acceptance on a bill has cancelled it before the delivery of the bill to the holder, acceptance is deemed to be refused failing proof to the contrary. Cancellation is deemed to have been effected before the delivery of the bill to the holder.

“ Nevertheless, if he has in writing informed the holder or any other party who has signed the bill that he has accepted it, the drawee is bound as regards such parties according to the terms of his acceptance.”

M. WEILLER (Italy) said that Article 25, which dealt with partial acceptance, contained the following formula : “ Nevertheless, the acceptor is bound according to the terms of his acceptance.” In Article 28 the same formula was to be found. In view of the fact that these two questions were quite different, it might perhaps be better not to use the same expression.

The PRESIDENT saw no necessity for changing the formula. He would discuss the matter later on with M. Weiller.

M. ASSER (Netherlands) asked whether the addition to the article proposed by Baron Carton de Wiart was still before the Conference or if it had been withdrawn.

Baron CARTON DE WIART (Belgium) explained that the Belgian delegation maintained its additional proposal for the following reason : in the case of both acceptance and “ aval ”, the principle had been adopted that the desire of the acceptor or of the holder of the “ aval ” must be made clear. For cancellation, which was just as important an act and in some respects even more important, the Belgian delegation had taken the view that this desire should also be clearly and definitely expressed. For that reason, Baron Carton de Wiart had submitted the following text :

“ The desire for cancellation must be expressed by the phrase ‘ cancellation approved ’, or any other equivalent expression, signed and dated by the acceptor.”

The PRESIDENT said that this formula would be discussed at the next meeting and proposed that the Conference should adopt the text of Article 28 which he had read.

The new text of Article 28 was adopted at a first reading.

ARTICLE 32.

The PRESIDENT said that the Portuguese delegation had submitted the following amendment :

“ A bill of exchange may be withdrawn :

- “ At sight ;
- “ At a certain time after sight ;
- “ At a certain time after date ;
- “ On a fixed day.

“ Bills of exchange of other maturities or payable by instalments are null and void.”

This amendment had been submitted for the following reasons :

The order of the specification in that article must be brought into line with the order of the four following Articles : 33 (bill of exchange at sight) ; 34 (bill of exchange at a certain time after sight) ; 35 (bill of exchange drawn at one or more months after date) ; 36 (bill of exchange payable at a fixed date).

The President thought that this amendment should be accepted without discussion by the Conference, for it was logical.

The amendment of the Portuguese delegation was adopted.

The PRESIDENT said that the Dutch delegation had submitted the following observation :

“ A bill of exchange may, according to the Regulation, be drawn payable on a fixed day, at a certain time after date, at sight, or at a certain time after sight, and the Regulation goes on to state that bills of exchange at other maturities or payable by instalments are null and void.

“ A difficulty now arises in regard to bills of exchange which are payable at sight but also payable only after a certain date or after a certain period of time. For example : (1) a bill of exchange at sight payable after November 1st, 1931 ; (2) a bill of exchange at sight payable after fourteen months reckoned from the date of issue.

“ Bills of exchange of this kind are met with in the Netherlands. In both cases, the Netherlands delegation considers that they are bills of exchange payable at sight — *i.e.*, that they are covered by Article 32 of the Regulation.

“ From what moment does the period of sight begin to run ? (twelve months according to Article 22 of the Regulation).

“ Let us suppose that we take as starting-point the date of issue. A serious difficulty will be encountered if the period of sight ends before the fixed day or before the end of the specified period, since in that case the protest cannot be drawn up in the proper time. If, on the other hand, the period of sight is counted from the fixed day or the end of the specified period, no difficulty can arise.

“ Obviously, the second solution should be adopted, and the Netherlands Parliament recently passed a law (July 2nd, 1928) regulating the question in this way.

“ The Netherlands delegation therefore requests the Conference to give a decision in this sense and to embody it in the report. No modification of the text of Article 32 would appear to be necessary in this case.”

M. SULKOWSKI (Poland) thought that a mere reference in the report would not be sufficient, for the question raised by the Dutch delegation shed light on a doubtful point. It might be thought from reading Article 33 in connection with Article 22 that the date of issue must always be taken

as the starting-point. For that reason, if the Dutch delegation kept to its proposal, it was necessary for the sake of clearness to modify the text and to say that the drawer was authorised, not only to stipulate a longer or shorter time, but also to fix the beginning of the time-limit in a different manner.

The PRESIDENT, noting that the proposal of the Dutch delegation was closely allied to the terms of Article 33, proposed that the Conference should discuss Articles 32 and 33 together ; all the more so, as there was the following Polish amendment :

“ A bill of exchange at sight is payable on presentment. It must be presented for payment within six months after date. This time-limit may be shortened or extended by the drawer. It may also be shortened by the endorsers.”

ARTICLES 32 AND 33.

M. SULKOWSKI (Poland) said that the proposal of the Polish delegation mainly concerned Article 33. That article referred to Article 22, for it stipulated that the bill of exchange must be presented for payment within the legal or contractual limits of time fixed for the presentment for acceptance of bills payable at a certain time after sight. References of this kind should, however, be avoided in the Regulation, and each article should contain all the necessary provisions dealing with the question. For that reason, the Polish delegation proposed to return in Article 33 to the contents of Article 22.

Further, Article 33 referred to contractual limits of time. The use of the word “ contractual ”, however, might cause it to be supposed that the Conference had decided in the controversy about the origin of exchange obligations in favour of the *Begebungstheorie*. This impression should be avoided.

In order to satisfy the Dutch delegation's proposal and to prevent it being thought from the text that the time-limit for presentment must always begin from the date of issue, M. Sulkowski proposed to modify the amendment submitted by his delegation, so that it should read as follows :

“ A bill of exchange at sight is payable on presentment. It must be presented for payment within twelve months after date. The drawer may fix another time-limit and settle the date on which the period is to begin by other means. The time-limits laid down in paragraph 1 and 2 may be shortened by the endorsers.”

The PRESIDENT asked whether the British delegation still maintained its amendment to Article 33. He thought it useless, in view of the fact that the Conference had decided to adopt a period of twelve months instead of six months in Article 22.

Mr. GUTTERIDGE (Great Britain) withdrew his amendment¹.

M. HAMMERSCHLAG (Austria) was unable to support the view of the Dutch delegation, for the text could not be interpreted in the light that the time-limit began from a fixed date or from the end of a determined period of time. Obviously, the period as fixed in Article 22 must begin to run from the day on which the bill of exchange was issued.

M. Hammerschlag thought that to insert the proposal of M. Sulkowski would lead to complications. He did not think that it would be necessary to define this case in the law of the participating State, for it was always the drawer's right to prolong the time-limit for presentment.

M. QUASSOWSKI (Germany) asked the President to put to the vote the original proposal of the Polish delegation and then its amended proposal.

The PRESIDENT said that M. Sulkowski had just informed him that he intended to return to his original proposal were his amended proposal to be rejected.

To simplify the discussion, it would be better for the Conference to decide first of all whether it wished to meet the views of the Dutch delegation in so far as the Uniform Regulation was concerned. In the affirmative, it would have to decide whether the Polish amendment with the necessary modifications satisfactorily met the views of the Dutch delegation.

M. SCHELTEMA (Netherlands) proposed to add the following text to the Polish amendment to Article 33 :

“ The drawer may stipulate in the bill of exchange that the date on which the twelve months shall begin to run is other than the date of the bill.”

The PRESIDENT asked the Dutch delegation if it would not be better to insert this amendment before the last paragraph of Article 32, for that article dealt with the different kinds of bills of exchange. After the words “ at a certain time after sight ”, to be found in Article 32, the Netherlands amendment could be inserted in the following form :

“ The drawer may stipulate in the bill of exchange that the period will begin to run on a date different from that of the bill.”

M. SULKOWSKI (Poland) preferred his own formula, for the Dutch amendment did not definitely settle the question. The Polish formula drew a distinction between the length of the time-limit, which could be greater or less, and the date upon which it should begin to run. The length of the time-limit might be changed by the endorser. On the other hand, the endorser could not change the date on which it should begin, which was fixed by law or else by the drawer.

¹ See Annex No. 3.

M. SCHELTEMA (Netherlands) replied that the object of the Polish amendment was to change the time-limit of twelve months, which could thus be lengthened or shortened either by the drawer or by the endorser. The date on which that period would begin to run was another question. It could only be changed by the drawer. For that reason, the Dutch delegation was prepared to support the Polish amendment with the addition of the following paragraph :

“ The drawer can stipulate in the bill that the date on which the time-limit shall begin to run is other than the date of the bill.”

M. QUASSOWSKI (Germany) said that the formula proposed by the Dutch and Polish delegations still left a doubt. According to Article 33, the time-limit could be shortened by the endorsers. Could the endorsers also change the date upon which that limit should begin to run? Obviously not. If, however, the Polish amendment were adopted, why should not the endorser be able to change the date upon which the time-limit would begin to run since the effect of this change would be to shorten that time-limit? If the endorsers had the right to shorten the time-limit, there was no reason why they should not be able to change the date upon which that time-limit should begin to run.

M. SULKOWSKI (Poland) in reply to M. Quassowski, thought that the endorser should not be allowed to change the date on which the period should begin to run, for if he did so great complications would result. If he were allowed to shorten the time-limit, the date upon which it began to run must always be that fixed by the drawer.

M. Sulkowski proposed that the original amendment of the Polish delegation should first be put to the vote, and next the amendment proposed by the Dutch delegation.

M. GRÖNVALL (Finland) pointed out that Article 33 only mentioned the holder's duty to present the bill within a fixed period of time, whereas the Dutch proposal, which everyone seemed to approve, forbade the presentment of a bill before the expiration of a certain period of time. This idea could therefore only be expressed by adding a new paragraph to the original Polish amendment to Article 33, which would read as follows :

“ The drawer may prescribe that a bill of exchange may not be presented before the expiration of a fixed period of time. In this case, the period for presentment begins from the said date.”

The Polish amendment was adopted by 13 votes to 12.

The Dutch amendment was rejected by 9 votes to 6.

The proposal of M. Grönvall was rejected by 10 votes to 7.

M. MOLENGRAAFF (Netherlands) said that the Dutch delegation maintained the interpretation of Article 33, which it had recorded in its observations.

M. GIANNINI (Italy) said that the Italian delegation had refrained from all discussion both on the article and on the amendments submitted to it. It thought that it would be inopportune to include in a regulation points of detail which followed logically from the fundamental principles adopted. It was in this frame of mind that it had voted against the proposed amendments. Though the principle laid down by the Dutch delegation might be agreed to, M. Giannini thought it quite useless to insert it in the text of the draft regulation.

The PRESIDENT proposed that this principle should therefore be inserted in the report.

This proposal was adopted.

Article 32 was approved at a first reading.

Article 33, as amended by the Polish delegation, was approved at a first reading.

ARTICLE 34, PARAGRAPH 1.

This paragraph was approved at a first reading.

ARTICLE 34, PARAGRAPH 2.

The PRESIDENT recalled that during previous discussions it had been suggested that after the word “ acceptor ” the word “ only ” should be added. The text of the paragraph would therefore run as follows :

“ In the absence of the protest, an undated acceptance is deemed, so far as regards the *acceptor only*, to have been given on the last day of the limit of time for presentment, either legal or contractual.”

The Polish delegation had also submitted an amendment to the effect that for the words “ presentment, either legal or contractual ”, the words “ stipulated for presentment for acceptance ” should be substituted.

The President thought that since the Conference had adopted the Polish amendment to Article 33 it should also adopt this amendment to Article 34.

This amendment was adopted.

The PRESIDENT proposed that the Conference should approve the article as a whole, it being understood that the Drafting Committee should examine the question whether the insertion of the word “ only ” in the second paragraph was or was not objectionable.

With this reservation, Article 34 as a whole was approved at a first reading.

ARTICLE 35, PARAGRAPHS 1 AND 2.

Paragraphs 1 and 2 were approved at a first reading.

ARTICLE 35, PARAGRAPH 3.

M. DA MATTA (Portugal) thought that for reasons of legal symmetry this paragraph, which dealt with the bill of exchange payable at a fixed date, ought to be inserted in Article 36 and not in Article 35, which dealt with a bill of exchange drawn one or more months after date or after sight.

The PRESIDENT agreed in principle with M. da Matta but asked him to leave it to the Drafting Committee to decide upon this, all the more so as paragraph 4 of Article 25 raised the same question.

M. DA MATTA (Portugal) accepted the President's suggestion.

Paragraph 3 was approved at a first reading.

ARTICLE 35, PARAGRAPHS 4 AND 5.

Paragraphs 4 and 5 were approved at a first reading.

The article as a whole was approved at a first reading.

ARTICLE 36, PARAGRAPHS 1, 2 AND 3.

These paragraphs were approved at a first reading.

ARTICLE 36, PARAGRAPH 4.

M. QUASSOWSKI (Germany) asked the Conference to decide whether this provision should not be inserted in the Convention rather than in the draft Uniform Regulation. Unless he were mistaken, this proposal had been submitted by the French delegation in its observations.

The PRESIDENT said that this question would be referred to the Drafting Committee. Personally, his own view was that it would be better to insert it in the draft Regulation.

Article 36 as a whole was approved at a first reading.

CHAPTER VI. — PAYMENT.

ARTICLE 37.

The PRESIDENT opened the discussion of the first paragraph of this article and read the following request submitted by the French delegation :

“ The French delegation requests that provision may be made in the Convention or in some other form for the following reservation :

“ Any Contracting State may supplement Article 37 of the Uniform Law so as to provide that the holder of a bill of exchange payable in its territory shall be obliged to present it on the actual date of maturity ; failure to comply with this obligation shall simply involve the payment of damages.

“ The other States shall have the right to determine the conditions under which they will recognise such obligation.

“ *Grounds.*

“ Presentation for payment is required at maturity under the French Commercial Code. Bankers and business men in general consider it essential that this rule should be retained.”

M. BOUTERON (France) stated, in support of the reservation made by the French delegation, that under Article 161 of the Commercial Code “ the holder of a bill of exchange must demand payment on the day of maturity ”. That was an authoritative provision confirmed by long tradition which the business world firmly supported. The bankers and traders were in agreement, in view of the strict interdependence of the manifold interests brought into play by the whole of the bills of exchange in circulation, that it was essential to maintain that principle, which constituted the keystone of credit while strictly ensuring on the dates fixed by the guarantors the liquidation of all the engagements signed. For that reason, the French delegation considered that maturity should fall on one day only.

They did not ignore the fact that, especially in countries subject, like theirs, to the dual observation of the eight-hour law and the English week, an extension of the time for presentment would be attractive, for such a provision would considerably lighten their obligations to the holders by enabling them on heavy settling days to divide their presentments.

Nevertheless, the French delegation considered that these questions must give way before the necessity of keeping in all its force the idea of maturity — respect for maturity, they might say — and of refusing to accept any measure likely to weaken its importance.

The PRESIDENT drew the Conference's attention to the following observation made by the experts in this connection :

“ The experts were of opinion that it would not be desirable to authorise the various countries to maintain or adopt different rules for time of presentment and payment as the

International Chamber of Commerce proposed. If certain countries refuse to adopt this uniform period, the resulting conflict of laws may be settled under an article in the draft Convention to the effect that the matter shall be dealt with according to the law of the place of payment."

This suggestion of the experts was not, however, contained in any article of the Convention, as had been very judiciously pointed out by the Danish, Finnish, Norwegian and Swedish delegations in the following note :

" The draft contains no provisions regarding questions of conflicts of laws relating to the period for the presentment of bills of exchange, although the note to Article 37 of the Regulation mentions the inclusion of a rule on this matter to the effect that it shall be dealt with according to the law of the place of payment."

M. MONTEJO (Spain) said that he would vote for the French proposal, since the Spanish Commercial Code contained a clause similar to that in the French Commercial Code.

M. GIANNINI (Italy) wished to draw the attention of the Conference and, in particular that of the French and Spanish delegations to the spirit that should preside over the work of the Conference. The argument that a country had such and such a practice or such-and-such a legal disposition was not tenable, for, if every delegation sought to safeguard its national provisions, any attempt to lay down a uniform regulation was condemned to certain failure. It must be understood that the advantages of a uniform regulation would largely counterbalance the inconveniences that might result for a country from the relinquishment of certain national provisions.

From the technical point of view, M. Giannini did not think that the term which it was proposed to reserve was, in practice, of such great importance that it could not be modified. Further, he considered that there was no adequate reason for inserting a reservation on this point, and in these circumstances he would vote against the French proposal.

M. SULKOWSKI (Poland) concurred in M. Giannini's observations. The Uniform Regulation was of no real value unless uniformity was achieved on the most important questions. Maturity, the payment of bills, etc., were definitely questions of primary importance.

Polish law stipulated that a bill might be presented for payment at maturity or on the two following days. From a desire, however, to facilitate the adoption of a uniform rule, M. Sulkowski would be prepared to accept even a solution at variance with Polish law provided that it was adopted by everyone without reservations.

M. MOLENGRAAFF (Netherlands) thought that it followed from the text of Article 37, paragraphs 1 and 2, and from the connection of these two paragraphs, that this article was equally applicable to bills of exchange at sight. He pointed out that paragraph 1 of Article 37 might mean only that bills of exchange at sight might be presented for payment on one of the two business days which followed the period of twelve months provided for by Articles 22 and 32. The Netherlands delegation asked if this interpretation was in conformity with the intention of the experts.

Secondly, the Netherlands delegation thought that presentment at a clearing-house could only take place if the holder and the drawee were both, not only members of a clearing-house, but also members of the same clearing-house. The Netherlands delegation wished to know if that was also the view of the Conference.

Paragraph 3 of Article 37 said that " the Contracting States shall themselves designate the institutions to be regarded as clearing-houses ". He wished to know what was meant by " designate ". Did that mean that the contracting States ought to give a definition to describe the institutions that they thought were clearing-houses or that they ought to present a list giving the names of all institutions recognised as clearing-houses ?

M. VAN NIEROP (Netherlands) said that — although the French opinion that, legally speaking, the period that had been fixed for payment ought to be respected was quite right in principle — as a banker, he asked the Conference to examine the practical side of the question, and, in his opinion, it was the practical considerations that had inspired the text of the experts. Since there were certain days when such large numbers of bills had to be collected that the banks could not finish the work in one day, it was necessary to provide a certain period of delay. Although that might be an unsound juridical opinion, he would ask the Conference to adopt the text of the experts.

M. HAMMERSCHLAG (Austria) agreed with M. van Nierop.

Baron CARTON DE WIART (Belgium) expressed entire agreement with the observations of M. van Nierop.

M. QUASSOWSKI (Germany) thought that the problem had to be considered in connection with Article 43. It was clear that there was a difference between the two systems, perhaps not a difference of form, but nevertheless a difference of considerable importance.

In the first system, a bill of exchange had to be presented for payment on the actual day of maturity and the protest could only be drawn on the following day. According to the second system, there was no need for a bill to be presented for payment on the day of maturity. It could even be presented on one of the two business days that followed, but it was necessary for the protest to be drawn up within this period. According to the first system, therefore, there was one period for the presentment of the bill and another for drawing up the protest. According to the other system, there was a single period for the presentment and the protest.

Under the first system, a bill of exchange ought to be presented twice, once for payment and a second time for the protest. The result would be that the exercise of the holder's rights would be made more difficult and expenses would increase.

Moreover, the holder of the bill ran certain risks if he observed the period of protest. He might be made to suffer if he had not observed the period of presentment. On the other hand, if he observed the period of presentment, he ought also to observe the period of protest so as not to lose his right of recourse.

On the other hand, if the creditor could draw up a protest on the day of maturity, he would then be in a position where he could use his right of recourse more quickly, with the result that he would benefit greatly in cases where the situation of the guarantor was uncertain.

There was yet another advantage in deciding on a single delay of three days being allowed to cover both presentment and protest. Because of the large number of bills of exchange received, the Deutsche Reichsbank sent each particular debtor a list of all the bills of exchange which became payable by the same debtor on the same day, and asked if he recognised those bills. If the answer was in the affirmative, the total of those bills was carried over to his "Giro" account without any necessity for him to present them himself. But bills that the debtor did not recognise were presented to him and protested for want of payment. To do that always took a certain amount of time, and the Reichsbank thought that any reduction of the period of three days would lead to practical difficulties.

For these reasons, M. Quassowski approved of the text of the experts.

M. TROULLIER (International Chamber of Commerce) declared that the International Chamber of Commerce had asked whether different countries were authorised to adopt different regulations for the period of presentment and he thought that at the present moment there was considerable advantage in retaining the obligation to pay at maturity. Bills of exchange were not inevitably paid at maturity on the last day of the month. Payment might take place on any date.

From a practical point of view, M. Troullier pointed out that there were a large number of small dealers called hawkers which did a considerable amount of business. These hawkers, who were in an extremely solvent position, had a regular domicile, but they did not often live there because they were continually travelling in order to sell their goods. These hawkers were in the habit of giving a fixed day when they would arrange their payments. He asked if they should be obliged to remain two or three days longer at their homes in order to wait for a bill to be presented.

Mr. KENNEDY (United States of America) said that the matter seemed to be of such great importance that he would bring to the attention of the Conference the report of the United States section of the Inter-American Commission in connection with Article 37 :

"With the exception of those countries that have adopted the Hague Regulations, the American Codes uniformly provide that a bill of exchange must be presented and paid on the day of maturity. No mention is made of clearing-houses, and it must be inferred that presentment to such institutions is not accounted due and sufficient presentation to the drawee. The Hague regulations, although abolishing days of grace for the payer of a draft, allow the holder this privilege. The Anglo-American rule, which is also that followed throughout Latin America, provides that presentment and payment must be made on the date of maturity, and this principle appears to be sound. It is the duty of the acceptor to provide funds to meet the bill when it is due, and it should be the duty of the holder to present it on that date. To allow a postponement of that act is to extend unduly the obligations of other parties to the bill, and in the event of the bankruptcy of the drawee in the interim, they would suffer from the neglect of the holder. The second provision of this article obviously refers to cases where items are not presented by the clearing-house to its members on the same day as received. This is therefore a further abridgment of the rights of the drawer and endorsees of the bill. The clearing-house is merely an intermediary between banks and acts as the carrier agent of the bank sending the draft for collection, not as the paying agent of the bank where the item is payable, and hence presentment to it cannot be considered equivalent to presentation at the place designated in the bill. To apply the Hague rules to central clearing organisations, such as the Federal Reserve Banks, which cover not merely local but nation-wide operations, would involve a serious delay in payment which was evidently not contemplated in the origin of the bill of exchange."

Baron CARTON DE WIART (Belgium) thought that it was essential to respect the date of a bill's maturity from the juridical point of view, but from the practical point of view it was very important that they should adopt the period provision in the Uniform Regulation. M. Troullier had declared that the number of bills of exchange presented at the end of the month was not of great importance; but as a matter of fact all those who had seen the counters of a great bank at the end of a month would not agree. The representative of the International Chamber of Commerce had also spoken of hawkers. That was an interesting argument, but it dealt with only a small side of business, and in any case such hawkers could always have their bills domiciled with their bankers.

Mr. GUTTERIDGE (Great Britain) thought that English business circles at the present day would take up the same attitude as Sir Mackenzie D. Chalmers, the British delegate at The Hague in 1910 and 1912. According to English law, the bill must be presented on the day on which it

fell due. If it was not so presented, the holder lost his right of recourse against the drawer and the endorsers. The theory underlying that rule was that, if the person who was liable to pay did not pay, the drawer and the endorsers were entitled to immediate notice of that fact so that they might take the necessary steps to protect their interests. The English view was that an extension of the period might inflict hardship upon the drawers and the endorsers. Supposing a bill fell due on a Saturday, Sunday was not a business day, and Monday was a holiday. According to the rule proposed, the holder would have until Wednesday for the purpose of presenting the bill ; that was an interval of four days, during which the acceptor of the bill might fail, and this might put the drawer and the endorsers in an awkward position. Of course, the practice was not the same everywhere, and the payment of bills was largely concentrated in London through the clearing-house. Still, he thought that if English bankers were asked to abandon their present rule, they would probably decline to do so.

M. Deoclecio DE CAMPOS (Brazil) declared that, in spite of the fact that Brazilian law was in close harmony with the views of the French delegation, the Brazilian delegation was so anxious to see unification brought about that it declared itself in favour of the Hague text of the provision which was already recognised in Brazilian exchange law consequent on the ratification of the Hague Convention by Brazil. The Brazilian delegation continued to observe the attitude adopted by its Government during the 1912 Hague Convention in regard to this matter.

M. BOUTERON (France) replied that, whatever might be the Conference's desire for uniformity it was impossible to ignore the gravity of the statements made by the delegates of the Governments of Great Britain and of the United States of America. These countries had had considerable commercial experience and also used the regulation for maturity that was valid in France. On the other hand, M. Bouteron thought that in reply to preceding observations he ought to point out that there was no question of preserving legal provisions for the sake of a purely theoretical principle, but of drawing attention to a state of mind of French commerce and of conforming to it. In France, business men had declared themselves definitely in favour of maintaining the provision that instruments should be presented for payment on the day of maturity. M. Bouteron reminded the Conference that in 1912 the French delegation had already made reservations, which had been sanctioned by Article 7 of the Hague Convention.

Moreover, in reply to those of his colleagues who had had special experience in banking affairs, M. Bouteron added that he was not in the least ignorant of the activity that took place in banks which had an important turnover of bills and acceptances at the time when many bills reached maturity. He knew quite well that the pressure on such institutions was often enormous at certain periods of the year, but he pointed out that establishments that were holders managed to clear themselves, and he thought that the development of the practice of domiciliation, referred to by Baron Carton de Wiart, would tend to modify these difficulties.

With reference to the fear shown by the German representative concerning protest, M. Bouteron pointed out that so far it had always been considered that the debtor had the whole day for payment, and that the protest could not be allowed to be drawn up on the day of presentment for payment. Moreover, the French delegation proposed to bring forward an amendment regarding the possibility, at least so far as France was concerned, of only drawing up the protest on the day after maturity or later.

In conclusion, he declared that the French delegation maintained its proposal.

M. GIANNINI (Italy) thought that the Anglo-American system, which the French delegation supported, ought to be put on one side, and he drew M. Bouteron's attention to the fact that the Anglo-American law differed technically from the Continental system.

The essential point was to have a single rule ; and in this connection he drew the attention of his colleagues to the fact that it was not only the main principles of the Convention which were important in practice, but also secondary matters such as that of the period of payment. If the Conference did not adopt a uniform period, the result would be certain inconveniences because of the diversity of national laws. It would be of fairly great advantage in practice to have one single definite rule without the necessity every time of finding out what was the period under the law of each state. In order to obtain a uniform period, M. Giannini was ready to accept the principle in force in the French legislation, but he could not always accept the reasons that the French delegate had put forward in favour of this principle, reasons of a practical order that only concerned internal commerce. M. Giannini quite understood this reason, but he asked if there would be any real inconvenience in adopting a uniform law and allowing different States the right to keep their traditions and their national practices. He wished to draw the attention of the French delegation to the fact that if a practice was of real importance and long standing, it might subsist and some times survive for a long time, even when it was not codified in the law and upheld by the latter. However, he asked the French delegation if it would not consent to make certain small sacrifices in order not to destroy the uniformity that was the aim of the Conference.

M. GASTELU (Ecuador) said that the Government of Ecuador had recently adopted the Hague text and he hoped that the Conference would keep to that text.

The French proposal put to the vote was rejected by 19 votes against 6.

THIRTEENTH MEETING.

Held on May 20th, 1930, at 3.15 p.m.

President: M. J. LIMBURG.

17. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continued).

ARTICLE 37 (Continuation).

Baron MARKS VON WÜRTEMBERG (Sweden) pointed out that, in its present form, paragraph 1 of Article 37 referred to all bills of exchange and consequently to bills of exchange payable at sight. In regard to the latter, however, the provision regarding the two business days following the day on which the bill was payable had no meaning, seeing that for bills of exchange drawn at sight the day for payment was not different from the day of presentment for acceptance. Moreover, Article 33 governed the payment of bills of exchange drawn at sight. It would therefore be desirable to modify the first paragraph of Article 37, and the Drafting Committee might be entrusted with the task of doing so.

M. GIANNINI (Italy) considered that the third paragraph of Article 37 should be put in the Convention.

In regard to the questions on interpretation put by the Netherlands delegation, M. Giannini believed that it would be preferable to deal with them in the report rather than in the Convention.

Finally, he considered the observations made by the Scandinavian delegation worthy of consideration, but thought that they should be referred to the Drafting Committee, together with the observations of the Netherlands delegation.

The PRESIDENT noted that the observation of Baron Marks von Würtemberg was identical with the first observation of the Netherlands delegation. He believed it to be well founded. The first paragraph of Article 37 could not refer to bills of exchange payable at sight.

The President supported the proposal of M. Giannini to refer to the Drafting Committee the observations of the Netherlands and Scandinavian delegations. He added that the observations of the Netherlands delegate also appeared to him to be justified.

This procedure was adopted.

The PRESIDENT proposed the adoption of Article 37, subject to a reservation in regard to the reply of the Drafting Committee.

Article 37 was approved at a first reading.

ARTICLE 28 (RESUMPTION).

The PRESIDENT informed the Conference that after an exchange of views between the delegations several of them proposed the following text :

“ Where the drawee who has put his acceptance on a bill has cancelled it before the delivery of the bill to the holder, acceptance is deemed to be refused failing proof to the contrary. Cancellation is deemed to have been effected before the delivery of the bill to the holder.

“ Nevertheless, if he has in writing informed the holder or any other party who has signed the bill that he has accepted it, the drawee is bound as regards such parties according to the terms of his acceptance.”

The President added that the Conference would also have to take a decision on the addition proposed by Baron Carton de Wiart.

M. VAN NIEROP (Netherlands) asked for some explanations in regard to the above text. It began as follows : “ Where the drawee who has put his acceptance on a bill has cancelled it before the delivery of the bill to the holder...” What exactly was to be understood by the delivery of the bill to the holder ? Was the time of the delivery of the bill the time when it was sent or the time when it was received ? M. van Nierop took as an example a bill of exchange drawn on Amsterdam in Ecuador. The drawee, who lived in Amsterdam, accepted the bill of exchange and sent it to the drawer. On the following day he decided to cancel his signature and telegraphed to the post office at Ecuador asking them not to deliver the bill, but to return it to him. Could he in such a case really cancel his signature ? Was the bill of exchange considered as delivered at the moment when it was sent off or should it only be considered as delivered when it was received by the drawer ? M. van Nierop knew quite well that when it was a question of a declaration of intention the date of the delivery of the declaration was that of its reception by the person to whom it was addressed, but in that case it would be desirable to say so clearly.

In the second place, M. van Nierop believed that it would also be necessary to agree as to the meaning of the word “ holder ”. It might happen that the holder sent a bill of exchange to the drawee before signing it in order that the drawee might himself affix his signature. The drawer only signed it when it had been accepted by the drawee. In that case, might it not be said that the drawer was the holder of the bill ?

In the third place, M. van Nierop emphasised that in general it was not the legal holder who asked for acceptance. More frequently he sent the bill of exchange to a bank and the latter applied to the drawee for his signature. Could the bank also be considered as the holder? For his part, M. van Nierop was ready to reply in the affirmative to that question, and every jurist would reply in the same way. In commerce, however, jurists were not always to be found and for that reason it was essential to have a very clear text.

M. HERMANN-OTAVSKY (Czechoslovakia) put three questions :

1. In regard to the first paragraph, reference was made to “ *biffage* ” and “ *radiation* ”. Was there any difference between those two terms?

2. Doubtless there was a close relation between the two sentences of the proposed text ; the word “ nevertheless ” showed that. It should therefore be understood that if the drawee who had cancelled his acceptance had informed by writing the holder or any other signatory of that acceptance his obligation remained ; and if he had cancelled his acceptance after notification, the cancellation was null and void — all of which apparently only concerned those persons whom the drawee had informed of his acceptance. But the question arose : What was to be the position of the other people interested, especially of the subsequent holders ?

If the text said, “ he is bound as regards these persons ”, to what persons did that refer ?

The PRESIDENT replied that it referred to the holder or to any signatory.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that, from the point of view of the fundamental principles of exchange law the drawee who had accepted the bill became the principal debtor towards all the subsequent holders, it was contrary to these principles for him only to recognise his obligation towards certain definite persons by notification.

3. Reference was made to acceptance in writing. Was it necessary that it should be in writing? Could it not be made by a notarial deed, by a telegram or even, perhaps, by telephone?

The PRESIDENT replied that the words “ *radiation* ” and “ *biffage* ” were synonyms. The first was more elegant than the second.

Article 28 should be read in the following sense : If the drawee has in writing informed the holder or any other signatory to the bill that he has accepted it, he is bound as regards such parties ; that is to say, those parties whom he has informed in writing of his acceptance.

According to paragraph 1, the acceptance had been validly cancelled in time. If, nevertheless, the drawee had informed either the holder or any other signatory that he had accepted, he was bound as regarded them.

M. HERMANN-OTAVSKY (Czechoslovakia) asked whether an exchange or a civil obligation was involved.

The PRESIDENT replied that an exchange obligation was involved.

M. HERMANN-OTAVSKY (Czechoslovakia) considered that that was a new and special exchange obligation.

In reply to the third question put by M. Hermann-Otavsky, the PRESIDENT stated that the acceptance should be notified in writing. If it was made by a notarial deed or by telegram, it was in writing. The same was not the case if it was given by telephone.

In reply to M. van Nierop, the President pointed out that in the text of the experts the phrase “ before the bill has left his hands ” had been used. The expression now employed was “ before the delivery of the bill to the holder ”. The meaning of the article was unchanged. When the return of the bill was requested by telegraph and the acceptance was cancelled, it had not as yet been given up. There had as yet been no delivery.

M. van Nierop had also asked for explanations in connection with the word “ holder ”. On reading the text for the first time, the President himself had had the same scruples. It appeared to him, however, that the logical interpretation was that in such a case the drawer was at the same time the holder.

Finally, a bank could be considered as a holder by procuration. It was obvious that in the latter case the question should be examined by the courts. Provision could not be made in a law for all possible cases. The desire to provide for all possible cases had rendered unreadable the laws drafted during the past thirty years.

M. GIANNINI (Italy) reminded the Conference that the Committee which had been instructed to draw up this article had had thirteen proposals placed before it. It was accordingly obvious that nobody was satisfied with the article. M. Giannini, however, would vote for it, since it had obtained the greatest number of votes.

The report, too, might contain certain explanations. M. Giannini, however, wished to draw his colleagues' attention to the desirability of keeping down such explanations to a minimum otherwise, instead of enlightening the jurists, the report would only puzzle them.

M. Giannini did not see the need for introducing into international conventions a kind of lexicon except in the case of purely technical conventions ; that was not the case of the present Convention, which was intended for the use of jurists, bankers and business men, who would understand it without needing volumes of explanations.

To return to the article under discussion, the Italian representative thought the text sufficiently clear, and without being entirely satisfied with it he would vote for it as it stood.

M. QUASSOWSKI (Germany) observed that the Czechoslovak delegate had asked whether the liability determined in the second paragraph was an exchange liability or a liability in common law. That question showed that there was some doubt on the point, and M. Quassowski thought that the matter should be cleared up in the report to be drawn up by the Drafting Committee.

M. VISCHER (Switzerland) supported the Czechoslovak proposal to strike out the words "in writing", as not being, in his opinion, absolutely necessary. The question was to determine the liability of the drawee as regarded the persons to whom he had notified his acceptance. If the holder or any other signatory could prove that notification had taken place, he was entitled to damages even if the notification had not been made in writing.

M. Vischer, further, thought it useless to insert the last paragraph of the article. As, however, the German delegation had stated that under German jurisprudence this liability would not exist unless it was expressly mentioned, M. Vischer would not oppose the introduction of the last paragraph.

The PRESIDENT put to the vote the Czechoslovak amendment to strike out the words "in writing" in the second paragraph.

This amendment was rejected by 14 votes to 5.

The PRESIDENT put to the vote the first two paragraphs of Article 28.

These paragraphs were approved at a first reading.

The PRESIDENT submitted the following amendment, proposed by the Belgian delegation, to add a third paragraph to read :

"The intention to cancel must be expressed by the note 'Cancellation approved', or any other equivalent note, signed and dated by the acceptor."

Baron CARTON DE WIART (Belgium) explained that though he was averse from any kind of sacramental or formal clause, he had thought that it was logical to stipulate that the intention to withdraw the acceptance should be clearly expressed by a definite statement. The Conference had agreed both in regard to acceptance and in regard to an "aval" that the intention to accept and to give an "aval" must be clearly expressed by a definite signed statement. There was no reason to make a difference between these two acts, which were of equal importance.

In the case of the withdrawal of an acceptance, Baron Carton de Wiart wondered whether it was necessary to stipulate that the statement should be not only signed but dated. Personally, he thought so. He considered that absolute precision was required.

Lastly, he held that the word "biffage" (cancellation) was open to question, but that that would not be the case if the "biffage" or "radiation" (cancellation) were completed by the signature and date.

M. GIANNINI (Italy) did not share Baron Carton de Wiart's opinion. The actual person who cancelled his signature could add, when he liked, the signed and dated declaration proposed by the Belgian delegation. In this way, the proposed requirement would be valueless. A cancelled signature was no longer legible, and it was less so when recourse was had to chemical washing. Thus, from the practical point of view, the Belgian proposal was of no value. But, on the other hand, it raised more than one problem. For example, what would be the value of an undated declaration?

The only consequence of this addition to Article 28 would be to revive the former practice of cancellation in such a way that the signature still remained legible.

M. Giannini would, in consequence, vote against the Belgian proposal.

M. ASSER (Netherlands), speaking in his personal capacity, thought that the Belgian amendment was justified from a legal point of view and helpful from a practical point of view.

It was a principle of law that a written and signed declaration was required in order to give rise to an exchange liability. If a person who had given his acceptance were allowed, by way of exception, to suppress his signature, it was logical to require that such revocation should be made by a signed declaration in writing. In practice, as Baron Carton de Wiart had pointed out, if the acceptor was entitled to revoke his acceptance before the remittance of the bill to the holder, it was desirable to require that such revocation should be accompanied by a date which would constitute proof of the time at which the revocation had taken place. The requirement to date the declaration would, in the majority of cases, prevent the acceptor, who was anxious to revoke his acceptance, after having remitted the bill to the holder, from antedating his declaration, since such an act would come under the Criminal Code.

Baron CARTON DE WIART (Belgium), in reply to M. Giannini's observations, said that the Conference must have in view transactions by honest people wishing to cancel their signature, an operation which they could carry out by means of two strokes of the pen in accordance with a usage which was still very common. It was well that such cancellations should be made clearly and precisely. If no trace remained of the signature, the measure proposed by the Belgian delegation would, of course, be useless, but chemical washing or, as the case might be, the cutting-out of the signature were fraudulent acts which would not be committed by honest people.

M. HERMANN-OTAVSKY (Czechoslovakia) reminded the Conference that he had been opposed to allowing the cancellation of an acceptance, apart from other reasons, because such an act was not one of a personal character and consisted in a mere stroke of a pen for which it was difficult to fix the responsibility. The addition suggested by Baron Carton de Wiart would, however, make it possible for the Czechoslovak delegation to accept the idea of cancellation. He therefore urged those delegations which were opposed to the Belgian proposal not to prevent the adoption of this measure.

M. QUASSOWSKI (Germany) thought that there should be no special rule for cancellation. That would be encouraging it in one way or another. If an acceptance was cancelled without further mention, it was obvious, *prima facie*, that the signature was inoperative. It followed that the German delegation could not adopt the Belgian proposal.

The Belgian amendment being put to the vote, 12 delegations voted in favour and 12 against. The amendment was rejected.

Article 28, consisting of two paragraphs, was approved at a first reading.

ARTICLE 38, PARAGRAPH 1.

Paragraph 1 was approved at a first reading.

ARTICLE 38, PARAGRAPH 2.

The PRESIDENT submitted the following amendment proposed by the British delegation "The holder of the bill may refuse partial payment", and the following request for a reservation asked for by the French delegation :

"The French delegation requests that provision may be made in the Convention or in some other form for the following reservation :

"By derogation from Article 38, paragraph 2, of the Uniform Law any Contracting State may in the case of bills payable in its territory authorise the holder to refuse partial payment.

"The bearer's right as thus recognised shall be recognised also by the other States.

"Grounds.

"An obligation by which the creditors must accept partial payment constitutes a derogation from the general principles of law.

"Hence partial payment should be allowed only with the holder's consent.

"Further, the collection of bills is generally entrusted to collecting clerks, who could not be instructed to give the drawee a receipt and to mention on the bill of exchange the amount actually drawn of the sum named therein."

Mr. GUTTERIDGE (Great Britain) explained that the British amendment dealt with a matter to which his Government attached a good deal of importance. The principle involved was a serious one from the business point of view. It might perhaps be objected that the matter had already been settled to some extent by the adoption of Article 25 in its present form. The principle at stake, however, was not the same. The case in which a person was asked to accept a bill of exchange and refused to do so was quite different from that in which a bill of exchange had already been accepted. In the former case, there was no promise to pay. In the latter, there was a definite assurance on the part of the drawee that payment would be made in accordance with the terms of the bill of exchange.

It was a general principle of the law of contract as he understood it, that the beneficiary under a contract could not be compelled to accept partial performance unless he gave his consent. He believed that that principle had been adopted by the law on bills of exchange, not merely in Great Britain and the United States, but also in other countries. The French Government, in the observations in the preparatory documents, had expressed its adherence to the principle, and he understood that the same view was taken by the Inter-American Commission, at all events at their meeting at Buenos Aires in 1916. It would probably be suggested that due regards should be had to the interests of the drawer and the endorsers of the bill of exchange and that their interests should be protected. There was something to be said for a principle which compelled the holder to accept part payment. Looking at the case from its broadest point of view, however, he ventured to think that in the case in question the interests, not of the drawer and the endorsers, but of the holder should be protected.

Supposing the holder wanted to have 100,000 francs placed at his disposal in Paris. For that purpose he purchased a bill of exchange drawn on Paris, but when the bill was presented for payment, the acceptor said that he would not pay 100,000 francs but only 50,000 francs. If he were at liberty to do so, the consequences might be very serious. The intentions of the holder would be entirely defeated, and he would be placed in a very awkward position from the commercial point of view.

There was also a subsidiary point. He had been told by English bankers that a considerable amount of dissatisfaction was sometimes caused in cases of the following nature : The holder of a bill for 100,000 francs on demanding payment would be told by the acceptor, with whom he had had some kind of disagreement that he did not intend to pay 100,000 francs but only 99,750 francs. The acceptor would set up some case with regard to the odd 250 francs. He did so largely for the purpose of annoying the holder and because he knew perfectly well that the holder would not bother to go back on the drawer and the endorsers for so small an amount. Such cases sometimes occurred, and they caused a good deal of annoyance to British merchants and British bankers.

He did not want to prolong his argument, but would earnestly ask the Conference to give its very serious consideration to a matter to which great importance was attached in English commercial circles.

M. PERCEROU (France) said that in the text submitted to the Conference the French proposal took the form of a request for a reservation, but after hearing Mr. Gutteridge and after certain private conversations, he thought that the proposal might take the form of an amendment.

The British delegate's arguments were strengthened by one very practical consideration. The majority of bills were presented for payment by banks. The bank messenger was not empowered to give a partial receipt without special instructions. Further, if payment was only partial, he could not hand over the bill. A whole series of transactions followed, which could not be carried out by a bank messenger : mention of partial payment on the bill, issue of a separate receipt, etc.

M. HAMMERSCHLAG (Austria), although thinking like M. Giannini that the number of reservations should be reduced as far as possible, would not oppose the reservation made by the French delegation, which was one that concerned many other countries.

The question was dealt with in Article 8 of the Hague Convention, which read :

“ In derogation of Article 38, paragraph 2, of the Regulation, every Contracting State may authorise the holder to refuse the partial payment of instruments payable in its own territory.”

M. Hammerschlag regretted that he was unable to concur in the British delegate's opinion. As partial acceptance had been allowed, it would be difficult not to allow partial payment without being inconsistent. Furthermore, what interest was there to be safeguarded? In principle, the endorsers would be released as far as possible from their liabilities. If the possibility of partial payment were rejected, the endorsers would become liable for the whole sum of the bill, whereas partial payment would restrict their responsibility. In such a case, it would not be right to protect the holder by giving him the right to refuse partial payment ; whether he accepted or refused, he would have difficulties. If he accepted partial payment, he would have to make protest for the balance of the amount. If he refused partial payment, he must also have a protest drawn up. If, however, he accepted partial payment, he received part of the amount of the bill. If the principle put forward by Mr. Gutteridge were adopted, the endorsers would lose without the holder's being able to derive any appreciable advantage.

In conclusion, M. Hammerschlag proposed that the text submitted to the Conference should be retained.

M. SULKOWSKI (Poland) thought that, in theory, the principle proposed by Mr. Gutteridge was the best. Attention must be paid first and foremost to the interests of the holder. The drawer and all the endorsers had given their guarantee for the acceptance and for the payment of the total amount of the bill.

It must, however, be admitted that in regard to acceptance a contrary solution had already been adopted. It had been agreed that the drawee might limit his acceptance to part of the sum. It would be illogical to adopt the opposite principle in regard to payment.

There still remained the question put by the French delegation — whether a reservation would be required in the event of the text proposed by the experts being adopted. The question of payment was very important and should be settled in a uniform way everywhere. It was for that reason that M. Sulkowski thought that the French delegation's reservation should not be allowed.

On behalf of the Polish delegation, however, he wished to say that he would acquiesce in any solution, even that proposed by the British delegation. In that case, however, the principle laid down in Article 25 should be modified.

M. DA MATTA (Portugal) pointed out that there were two systems of legislation in force : the system of the French law, according to which partial payment was optional — that was to say, the holder had a right to refuse it — and the system of the German law, followed by the Italian Commercial Code, according to which partial payment could not be refused by the holder.

The Portuguese Commercial Code had adopted the latter system and had affirmed the principle in Article 321, which stipulated that the holder could not refuse any partial payment, even when the acceptance had been given for the whole amount of the bill of exchange.

M. da Matta very well understood the preference which had been given to that system, for the French system was very harmful to exchange debtors who might remain free until the whole sum had been paid, and did not help the holder, who had to resort to legal means to obtain payment of that part of the bill which had not been paid. It would appear to be quite equitable not to allow the holder arbitrarily to decrease or increase the responsibility of the other parties without any advantage to himself.

Finally, M. da Matta was in favour of paragraph 2 of the article as it had been drawn up by the Committee.

Mr. KENNEDY (United States of America) informed the Conference that the laws of the United States did not expressly state that holders might refuse partial payment, though that was to be inferred from the articles relating to partial acceptances.

M. GIANNINI (Italy) pointed out that Article 292 of the Commercial Code in force in Italy stipulated that the possessor of a bill of exchange could not refuse partial payment. That rule would be inserted in the draft code which was being drawn up. On the other hand, Article 46 of the Belgian Code contained the same formula as the French legislation :

“ Payments made on account of the amount of a bill of exchange are in favour of the drawers and endorsers. The holder must protest the bill of exchange for the balance.”

It continued, however : “ He may not refuse the partial payment which is offered to him.”

The same principle was contained in the German, Austrian, Swiss, Netherlands and Spanish legislations.

In the same way, the Anglo-Saxon legislation admitted that partial payment was optional and the British delegation had submitted a proposal asking for the adoption of that principle.

M. Giannini wondered what were the advantages of the two systems, and thought that there was no need to fix such a strict rule, which had not been adopted for cheques nor in general by private law. Moreover, it was essential, in his opinion, to draw up a uniform law and to come as close as possible to the Anglo-Saxon legislation. The only argument which could be advanced in favour of compulsory partial payment was that, if the holder could refuse partial payment, the situation of third parties who had given guarantees might, to some extent, be prejudiced.

M. Giannini considered that it was necessary to avoid reservations as far as possible; a uniform law with reservations was not really uniform. Consequently, he was ready to adopt the British amendment which, in his opinion, deserved to be kept and was of such a kind as to avoid reservations.

M. DE LA VALLÉE POUSSIN (Belgium) thought that to compel the holder of a bill of exchange to rest momentarily content with partial payment was an incontestable and somewhat grave departure from a principle to be found in universal common law. It was the creditor who was the judge of his own interests in such a case and it was for him to decide whether he would be content with this partial payment or whether he would refuse it and await full payment. The only reason which justified the introduction in a fairly large number of national legislations of the contrary practice was the interests of the guarantors, who were released from their responsibility up to a certain limit. Their interests, however, were not the only ones at stake. There was also the interest of the holder, and he might esteem it preferable to refuse partial payment. The particular case under review was the interest of the holder which had first been taken into account.

Apart from the considerations put forward, the Belgian delegation was ready to renounce the principle contained in the legislation of Belgium and to adopt the principle of common law which was almost universal and according to which the creditor could not be compelled to rest content with partial payment.

Prince VARNVAIDYA (Siam) observed that the British proposal was in conformity with Siamese law and practice, and the Siamese Government attached importance to the maintenance of the law on that point. He had listened to M. Giannini's observations with interest and would appeal to those of his colleagues whose legislation contained provisions contrary to the British proposal to show a conciliatory spirit by supporting that proposal, since no fundamental objection had so far been raised against it.

M. QUASSOWSKI (Germany) noted that the objections raised by the French delegation did not concern the principle that partial payments should be allowed, but were of a technical kind. They desired to avoid instructing the bank messenger to deliver a receipt to the drawee and to record the sum obtained on the bill of exchange. Was it really necessary to make a reservation for a question of such small importance? In Germany, similar difficulties had, in all probability, arisen, but they had not been regarded as insurmountable. If the bank messenger could not give a partial receipt, the debtor could be asked to go to the bank in order to make partial payment, and other similar forms of procedure were possible.

M. Quassowski considered that the regulation proposed by the experts was preferable to that suggested by the French delegation. Partial payment should be allowed in the interests of the endorsers and of the drawer, for if it were not allowed the endorsers and the drawer might be made responsible for the whole amount of the bill, although the drawee had been ready to pay part of it. The result of such a provision would be unfavourable, and on this point M. Quassowski agreed with the observations of M. Hammerschlag.

The representative of Germany next pointed out that it was in the interests of the holder to concede the possibility of partial payments, for it would be better for the holder to receive at least part of the sum due rather than nothing. There was no valid reason to refuse to accept the principle of partial payment, and the business men and traders in Germany attached great importance to the maintenance of the provision contained in the text of the experts. M. Quassowski would therefore vote in favour of this text.

M. TROULLIER (International Chamber of Commerce) said that the International Chamber of Commerce had proposed that Article 38 should be completed by the following addition :

“ However, each country has the right within its own territory to limit the obligation to accept partial payment to ‘ *payments portables* ’ .

This question had been discussed at great length by the International Chamber of Commerce. Many objections had been raised and the conclusion had been reached that in limiting partial payment to payment actually tendered the objections to the delivery of the receipt by the bank messenger would fall.

M. VISCHER (Switzerland) said that Switzerland attached great importance to the maintenance of the following provisions to the effect that the holder could not refuse partial payment.

M. Vischer must therefore make every reservation in regard to the ratification by Switzerland of the Uniform Regulation, should this provision not be maintained. It was obvious, however, that the Swiss delegation would welcome any effort at conciliation and would be ready to accept, if necessary, the reservation submitted by the French delegate.

M. HAMMERSCHLAG (Austria) wished to show by an example that, in this question the interests of the endorsers and of the drawers must be taken into consideration before those of the holder. Supposing that a drawee was in a doubtful financial position. On the day of maturity he sold a part, and perhaps a considerable part, of the bill of exchange and was ready to pay over this sum. The holder, however, refused to accept it. It might therefore happen that on the days following the drawee no longer possessed the same sum in which case the interests of the endorsers and those of the drawer were injured without any corresponding advantage.

M. Hammerschlag said that this question was of practical importance. Unfortunately, the fact must be faced that such cases arose fairly frequently in all countries.

The PRESIDENT said that several delegations had asked him to adjourn the vote until the next meeting in order that they could reflect on the principle of conciliation laid down by M. Giannini. In those conditions, the President proposed to vote on the British amendment and on the French reservation. This vote would take place at the beginning of the next meeting.

The Conference agreed to this procedure.

ARTICLE 38, PARAGRAPH 3.

M. HERMANN-OTAVSKY (Czechoslovakia) said that the Czechoslovak delegation withdrew the amendment. Which it had proposed.

M. VAN NIEROP (Netherlands) thought that there was a close connection between paragraphs 2 and 3.

The PRESIDENT agreed ; he would propose to postpone the vote on the third paragraph to the next meeting.

M. TROULLIER (International Chamber of Commerce) proposed that the article should read : " In case of partial payment, the drawee shall require " and not " may require ". This provision seemed necessary in order to prevent the negligent drawee from being asked to pay in its entirety a bill upon which he had already paid a part.

Article 50 laid down : " The holder must also give him a certified copy of the bill ". This amendment seemed therefore necessary in order that Articles 38 and 50 should not contradict each other.

The PRESIDENT noted that this observation was similar to that made by the Czechoslovak Government in this respect. There would be no objection, he thought, against the proposal, but several delegations had not expressed their views.

M. HERMANN-OTAVSKY (Czechoslovakia) said that, in this connection, his Government had put forward an observation in order to meet the desires of the International Chamber of Commerce. After having examined the question more closely, however, the Czechoslovak delegation considered that there were great difficulties in the way of sanctions. Obligations implied sanctions, and in the case in point the sanctions would have to be applied in civil law. For that reason, the Czechoslovak delegation withdrew its amendment.

The PRESIDENT noted that the discussion on Article 38 was finished, since no delegation proposed to replace the word " may " by the word " shall ". M. Troullier, as representative of the International Chamber of Commerce, only attended in an advisory capacity.

FOURTEENTH MEETING

Held on May 21st, 1930, at 10 a.m.

President: M. J. LIMBURG.

18. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continuation).

ARTICLE 38, PARAGRAPH 2.

The PRESIDENT put the British amendment to the vote in the following terms :

" The holder may refuse partial payment."

The amendment was rejected by 15 votes to 7.

M. PERCEROU (France) said that the French delegation had decided, after the vote which the Conference had just taken and in the interests of uniformity, to wit draw its proposal in order not to increase the number of reservations. ¹

¹ See previous meeting, page 249.

The PRESIDENT thought that the Conference would be grateful to the French delegation for the sacrifice if had consented to make in order to achieve uniformity.

The text of paragraph 2 was approved in its original form at a first reading.

ARTICLE 38, PARAGRAPH 3.

This paragraph was approved at a first reading.

The article as a whole was approved at a first reading.

ARTICLE 53.

The PRESIDENT referred to the Austrian amendment proposing that the text of Articles 53 of the Hague Regulation should be restored. The Czechoslovak and Japanese delegations had also put forward an amendment which, without going so far as that of the Austrian, was of a similar nature. The delegations of the Scandinavian countries had submitted a proposal to the effect that the word "abroad" should be replaced by "any country".

The President noted with satisfaction that the amendments submitted did not affect the principle of the article in the form in which it had been adopted, after long discussions, at the Hague Conference of 1910 and 1912.

M. HAMMERSCHLAG (Austria) recalled that this question had been examined very conscientiously and at great length at The Hague in 1910.

Two opposite opinions had been expressed. The first, defended by the Italian delegation (especially by the famous Professor Vivanti) and the Austrian delegation, urged that the holder should immediately be granted rights of recourse should a general case of *vis major* occur in the country of the drawee making it impossible to carry out all the legal actions prescribed (presentation protest, etc.). The other view was that these rights should remain in suspense until the end of the case of *vis major*, and that the time-limit laid down for the legal actions should be prolonged until a certain date after the case of *vis major* had come to an end. This view had been in the first instance supported by the German delegation.

The majority of the States represented at the Conference had been in favour of the first solution; among others, for example, Italy, Belgium, the Netherlands, and a number of other States.

The contrary view had been put forward, mainly by M. Fischel, a well-known banker. In its desire to approach as closely as possible to the view of a State of the importance of Germany, and taking into consideration the fact that the Conference had been called upon to settle an important question by means of an entirely new provision; apart from that, in view of the fact that experience had not made it possible to discover which of the two systems was the better, the Conference had succeeded, after long discussions, records of which would be found in the acts of the Conference of 1910, in reaching agreement on a compromise.

The principle of this solution had been proposed by the representative of France, the Secretary-General of the Bank of France, M. Ernest Picard, who had said that, though he personally preferred the system proposed by Austria (immediate recourse), he could not under-estimate the value of certain arguments in favour of the German view. He had proposed, therefore, that the German suggestion should be accepted in principle, to suspend the rights of recourse, but he proposed to reduce to one month the period during which recourse could be exercised. If, however, the case of *vis major* which prevented the presentation of the bill lasted longer than one month, the holder could exercise his rights of recourse against the drawer and the endorsers without presentment and without protest. This compromise had finally been accepted by all States and formed Article 53 of the Uniform Hague Regulation of 1912.

This solution had been a compromise in favour of the opinion expressed by the German delegation and by the delegates of several other States, who supported the theory by which the rights of recourse should be suspended in the case of *vis major* because, in general, cases of *vis major* did not endure for many years such as had been the case during the world war. It was to be hoped that such a case would never arise in future.

M. Hammerschlag drew the attention of the Conference to the fact that circumstances of personal *vis major* were not covered by the Regulation as the President had already observed.

The system in Article 53 of the Hague Regulation had been adopted by Austria (law of February 30th, 1912), as well as by Brazil, Ecuador, Czechoslovakia, Hungary, Yugoslavia, Poland and perhaps by a number of other States. The system was, at the moment, in force in those States.

The Committee of Experts proposed, however, that this solution, which had been found with so much difficulty at The Hague, should be abandoned. M. Hammerschlag thought that this was the most important change in the Hague Regulation which the Committee of Experts had proposed. For that reason, the Conference might have expected to receive a full statement of the experts' reasons; but they had contented themselves by saying that it had been found that Article 53 of the Uniform Regulation was too complicated and that it ran counter to the system introduced in most countries.

M. Hammerschlag was happy to be able to quote against the first argument of the Committee of Experts — whose high qualifications were undeniable — the opinion of another authority equally undeniable (that of Professor Lyon-Caen), who had said during the second Conference of 1912 (Acts II, page 136) that this article was perhaps one of the clearest and simplest in the whole law. Opinions therefore differed. M. Hammerschlag also quoted Professor, Hermann-Otavsky, who, in a most interesting monograph, had praised the solution adopted at The Hague. Professor Hupka, of Vienna, and other authorities had equally declared themselves in favour of this formula.

In so far as the observation to the effect that the Hague system did not correspond to the system introduced up to the present in several countries was concerned, M. Hammerschlag did

not think that such an argument should influence the Conference. The members of the Hague Conference had been perfectly well aware that this was the case ; nevertheless, they had agreed on this solution. It was, indeed, not the only novelty which the Uniform Regulation proposed and which it would propose should be made in the law of the various countries.

Up to the moment, therefore, M. Hammerschlag saw no reasons which could lead the Conference to abandon the system set out in Article 53 of The Hague. In his view, it should not abandon, without very serious reasons, a compromise formula reached after so many difficulties. The Conference should accordingly very carefully examine the two systems under review.

In so far as he was concerned, M. Hammerschlag remained in favour of the system of immediate recourse in case of *vis major*. He would not even attempt to propose the adoption of this system, however, but would confine himself to defending the compromise achieved at The Hague, which accepted, in principle, the method by which rights of recourse remained in abeyance; but the length of time of that abeyance had been reduced to thirty days.

M. Hammerschlag summarised the important reasons which, in his view, were against the suspension of rights of recourse until the case of *vis major* had disappeared, even if it endured longer than thirty days. These reasons were legal, economic and arising out of equity.

First, as to the legal reasons. The nature of the obligations arising from a bill of exchange required that such obligations should cease to exist in a short time. All legislation concerning bills of exchange had this tendency. To prolong the period during which a bill could be presented until the end of a case of *vis major* was a principle totally opposed to the nature of a bill of exchange (*contra naturam*), for the endorsers had guaranteed the solvency of the drawee on the day of maturity, but not on a date subsequent to that day. Their responsibility could not therefore be extended beyond reasonable limits. Further, the drawer and the endorsers guaranteed the possibility of presenting the bill of exchange for payment. If, for example, the house of the drawee was closed on the day of maturity, and if the drawee could not be found, the holder had a right of recourse against him. The drawer and the endorsers must run the risk that the holder, because of a case of *vis major*, had found it impossible to present the bill.

Next came reasons of equity and economic reasons. M. Hammerschlag raised the question as to who should support the blow of a case of *vis major* occurring in the place of payment and preventing the presentment of the bill, if it were desired to find a solution in accordance with the economic reasons that had led the drawer to draw up, and the endorsers to sign, the bill. In his opinion, it was the person who had issued the bill and who had been confident that the drawee would pay at maturity — *i.e.*, the drawer, and the first endorser.

On the other hand, future endorsers had paid the bill of exchange, not only because they had confidence in the drawee, but also because they had confidence in the previous endorsers, and in the first place in the drawer. It would be quite unjust to allow all the weight of the public calamity to fall on the unhappy final holder and to force him to wait during an indefinite period before his money was repaid, while he had paid the bill being confident in the solvency of the drawer and the previous endorsers.

According to the theory attached by M. Hammerschlag, chance would very often prove the deciding factor. If the public calamity had occurred a few days earlier or later, the holder might not be the same person. On the other hand, according to the system supported by M. Hammerschlag, chance was entirely eliminated, for it would always be the drawer and the first endorser — that was to say, the person who had direct business relations with the country in which the public calamity had occurred — who would support the *vis major*. He was the *dominus negotii*; he had brought the bill into existence because he had conducted a commercial or industrial operation with the drawee and hoped to obtain profits from this operation, while the following endorsers had no connection with that operation and could not obtain any profit from it. They merely furnished the drawer with the means necessary to carry out the operation. Would it not be the greatest injustice not to cause the author of the operation to bear the brunt rather than the mere holder, who, in discounting the bill, had given the author the opportunity of carrying out the commercial or industrial operation and whose only legal profit had been his modest commission ?

There was another argument of an economic kind of great importance in connection with the theory upheld by M. Hammerschlag.

Very often bills of exchange drawn on the same country or on the same place were collected in the hands of a very small number of persons or firms, generally among the securities of banks or in the private possession of bankers. If the holder could not have immediate recourse against the endorsers in the case of *vis major*, these banks might find themselves in a very embarrassing position. M. Hammerschlag took the case of a bank which regularly discounted bills on a certain country or on a certain town. A general case of *vis major* occurred. The endorsers of those bills were perhaps rich industrialists or traders in a solvent position. A large number of bills of exchange on this country were held by the banker. If he were compelled to wait until the public calamity had come to an end, he might run the risk of ruin, whereas if he could initiate the procedure of recourse after thirty days the risks would be borne by a far larger number of persons or commercial firms. The consequences of a case of *vis major* should not be supported by one person only.

Every argument was therefore in favour of immediate recourse. If the holder could only have recourse after thirty days had elapsed, as the Hague text laid down, the interests of the drawer and of the endorsers would also be protected ; they would even be too carefully protected in the opinion of M. Hammerschlag. Therefore, the Conference should not condemn the unhappy holder to be the only lamb offered for sacrifice, as was proposed in the present text.

M. Hammerschlag had drawn the attention of the Conference to the fact that the Hague formula, which he proposed should be maintained, had already the force of law in several countries. This circumstance had made it possible to see by experience whether the objections raised at The Hague to the system of immediate recourse were or were not justified.

The main argument had been that it would be dangerous, at a moment of public calamity, to confer a right of immediate recourse regarding bills of exchange and that this system might lead to an extraordinary financial crisis. The system of recourse after thirty days, however, had been submitted in Austria, owing to the war, to the most exacting test it was possible to imagine. M. Hammerschlag could maintain with satisfaction that no difficulty had arisen. He could assure his colleagues that had he ever heard of any complaint made in industrial or commercial circles he would have felt obliged, in justice, to voice it, for his ambition was not to obtain success, but to defend a just cause. He had noted, however, that the right of recourse had been exercised throughout the whole period of the war without any complaints against the regulations of the Austrian legislation coming to his notice.

M. Hammerschlag repeated that his profound conviction ought to lead him to propose that they should return to the only just system — immediate recourse — but he was far from trying to do so. The Austrian delegation had given its consent at The Hague to the opposite system, which reduced the period during which the holder was compelled to wait to thirty days. Austria had introduced this system into its legislation in 1912, and M. Hammerschlag did not wish to, and could not, go further than that. But he begged the Conference earnestly to keep to the compromise that had been reached at The Hague so long as all the States represented in the present Conference were in agreement. That was the solution which had been tried by experience and which should not be given up without really serious reasons.

M. PERCEROU (France) said that M. Hammerschlag had shown clearly the fundamental difference separating the Hague system from that which had been proposed after considerable discussion and hesitation by the Committee of Experts. The difference centred round the suspension of the right of recourse. According to the Hague system, when *vis major* lasted for more than a month, the right of recourse was no longer suspended. According to the draft of the Committee of Experts when *vis major* lasted for more than a month then the right of recourse would continue to be suspended until the end of the period of *vis major*.

What were the reasons which had led the Committee of Experts to propose this system after lengthy discussion? Beyond the reasons that had been advanced by the German delegation at The Hague, they had taken into consideration the circumstances during the war of 1914-1918. Then *vis major* had lasted very much longer than one month, and in most cases the right of recourse had been suspended throughout that period. That was a fact that could not be denied, and it, more than anything else, had led the Committee of Experts to propose the text which was now before the Conference.

M. NAMITKIEWICZ (Poland) supported the Hague text. The Hague regulation distinguished between cases of *vis major* which lasted less than thirty days and those which lasted more. In the first case, it was necessary to accomplish the proceedings necessary for the preservation of rights, and in the second case not. But that was not the only difference between the two cases. In the first case, it was necessary to wait for the disappearance of *vis major*; in the other case, it was not necessary to wait. In such case, therefore, immediate recourse was possible after the expiration of a period of thirty days after maturity, provided that notification had been made. This possibility in cases where *vis major* lasted for more than thirty days after maturity distinguished the Hague Regulation from the draft of the Committee of Experts. The draft of the Committee of Experts laid it down, not only that the proceedings necessary for the preservation of rights should be accomplished in every case whether *vis major* lasted for more or less than thirty days, but also that the right of recourse was only possible after *vis major* had disappeared. Was not that the same as saying that the holder could wait for a certain time without exercising his right of recourse? He might, for instance, have to wait one year, two years, even more, without being able to apply to one of the endorsers who was outside the territory where the case of *vis major* existed, and who, for his part, might be willing to acquit his obligation by paying the bill.

The Hague draft not only took into consideration the obstacle that had prevented the proceedings necessary for the preservation of rights, but also suspended the exercise of the holder's rights towards the guarantors for a period approaching thirty days. That was quite in conformity with the important principle of speed in commercial life. As a matter of fact, if *vis major* ceased twenty days after maturity, the holder would exercise his rights in respect of the principal debtor and the guarantors, after accomplishing the proceedings necessary for the preservation of his rights. All these proceedings, therefore, would happen at a period about thirty days after maturity. If the obstacle had not disappeared thirty days after maturity, the holder would, in any case, exercise his right of recourse towards the guarantors, without being obliged to present the bill or to draw up the protest; and he would make this recourse immediately after a period of about thirty days.

It might be said that under the Hague system of regulation a certain liquidation of the obligations of bills would take place within a period of about thirty days.

The Hague system safeguarded holders' rights, and the obligations of guarantors who were not affected by the obstacle might be liquidated in a relatively short lapse of time.

The Hague system, which had been so much discussed, had been almost unanimously adopted in 1910, and it was interesting to remember that the German delegation had then declared itself in favour of freeing the holder from the obligation of accomplishing the proceedings necessary for the preservation of the rights if the obstacle lasted more than a month. The Hague system, as upheld by M. Hammerschlag, had found supporters among the French and Italian delegations. It enforced the two great legal principles: the solidarity of those parties bound by the bill, against whom recourse might be had *per saltum*, and the independence of individual obligations.

The other system, by refusing to allow the right of immediate recourse, extended the effects of *vis major* to all parts of a country's territory, even those which had not been affected by the event, and to all countries where the guarantors were domiciled. Moreover, according to this

system, the holder of the bill was alone to support the whole burden of the misfortune which had overcome the drawee. The supporters of the experts' system argued that the holder could afford to wait. It was only right that each person should bear his share of the burden. The holder could not be freed from his obligation to present the bill, because the endorser had promised payment on presentment.

This way of reasoning did not seem to be just since it punished only the holder who had had the bad luck to acquire a bill whose chief debtor happened to be under the influence of *vis major*. It was he alone who was punished, although he might have been guilty of no fault or negligence.

Should the drawer and the endorsers, as well as the holder, live in a country which was not under the influence of *vis major*, whereas the acceptor lived in a country which was suffering from *vis major*, according to the Committee of Experts the holder ought to wait, whereas according to the Hague draft the holder had recourse against one of the guarantors after thirty days. If the person who redeemed the bill was the debtor of the acceptor, the whole bill might be liquidated in a very short time. That was not a theoretical case. It might quite easily happen, and under the Hague system it would be quite possible for the total obligation of the bill to be liquidated.

While declaring himself in favour of the 1912 text of Article 53, M. Namitkiewicz proposed that the words "without delay" in paragraph 3 should be replaced by a fixed period — *e.g.*, seven days ; and in paragraph 4 of the Hague text it might be said that the supposition under consideration depended also on the cessation of *vis major*. In order to avoid all misunderstanding, he proposed that this paragraph should read :

" If the *vis major* continues to operate for more than thirty days after maturity of the bill, recourse may be exercised *immediately*, and neither presentment nor drawing up the protest shall be necessary."

In conclusion, M. Namitkiewicz thought that it was a decisive argument that Austria had adopted, in 1912, a law that was in conformity with the Hague draft, and that this law had already been put into use and its provisions found useful and satisfactory.

MUNIR Bey (Turkey) informed the Conference that the Turkish Law of May 1926 reproduced almost literally the Hague Uniform Regulation on Bills of Exchange, and consequently under the Turkish legislation the effects of cases of *vis major* were regulated by provisions similar to those contained in Article 53. For this reason, he asked that the list drawn up by M. Hammerschlag might be completed by the addition of Turkey, and he supported the Austrian proposal. He pointed out that the Hague Regulation had already become almost part of the law of many countries, and it was therefore advisable to make as few and as limited modifications in its provisions as possible.

M. VISCHER (Switzerland) had heard with great interest the statement of M. Hammerschlag. It was the view of the experts that Article 53 of the Hague Regulations ought not to apply to cases of legal prescriptions enacted in foreign countries. The Swiss report on the Hague negotiations made it clear that it had been agreed that the most important causes of cases of *vis major* — namely, moratoria — should be excluded from the system. Moreover, this opinion had been confirmed by the Minutes of the Hague Conference. The Committee of Experts thought it was necessary to settle this point, and it consequently proposed that Article 53 should also mention legal prescriptions enacted in a foreign State. If the Conference really wished to take a step forward, it was impossible to leave any cases of moratoria on one side, for those were not only the most important, but also the most frequent, manifestations of *vis major* of practical importance. Other cases, such as earthquakes, epidemics, temporary interruptions of communications, did not usually last for long. Consequently, in these cases, it came to almost the same thing whether they accepted the solution suggested by the experts or that of the 1912 Hague Regulations. But if cases of moratoria were included, they would have to take into consideration the practice and experience acquired during the late war, when, as M. Percerou had pointed out, nearly all countries had accepted the solution suggested by the experts — namely, they had been unwilling to give immediate recourse, but had decided that it was indispensable to wait until the case of *vis major* had disappeared.

If it were shown that the solution proposed by M. Hammerschlag could also be applied to all cases of legal prescription without resulting in any inconvenience, M. Vischer would willingly accept it, but on condition that it also made express mention of cases of moratoria.

M. QUASSOWSKI (Germany) said that German law contained a regulation which corresponded, in principle, to the system proposed by the experts ; this regulation had been found satisfactory. Nevertheless, he realised that the problem under discussion was very complex and it was almost impossible to find a perfect solution. It raised objections and doubts both from the legal and from the economic points of view.

With regard to the legal point of view, there was the question who should bear the risks entailed by *vis major*. Should it be the holder, as creditor, according to the principle *casum sentit dominus*, or the guarantors, especially the drawee, since it was the latter who had created the obligation? In virtue of the above-mentioned principle, the risks that were derived from the circumstances of *vis major* should fall on the holder, and there was no possibility of immediate recourse. Such was the system suggested by the experts. On the other hand, it might be said that the holder ought to bear the risks since it was he who had created the obligation : such was the principle of the immediate right of recourse.

From the economic point of view, it might be asked whether the risks of *vis major* ought to be borne by the endorser and the drawer — *i.e.*, the business man and the industrialist — for in that way the risk would apply to a larger number of parties ; or was it better to admit that business

men and industrialists should be the object of certain consideration since they were more liable to suffer in cases of *vis major* than bankers and financiers? It was difficult to say what was the right solution. Taking into account the doubts expressed and the impossibility of satisfying all, M. Quassowski thought that perhaps the Conference might decide on a compromise such as that proposed by M. Hammerschlag. The provisions of the Hague draft had this character of compromise, for the Regulation did not provide absolute protection for the holder, nor for the guarantors, especially the drawer. It was true that the Hague Regulation allowed recourse without protest, but not before a delay of thirty days. This Regulation amounted to a synthesis of two systems. The German delegation wished the Conference to arrive at an agreement and it supported the Austrian proposal in the hope of arriving at unification of law on this delicate point.

M. LOEBER (Latvia) said that Article 53 laid down a principle that was completely contrary to the Latvian exchange law on cases of *vis major*.

According to Article 35 of the Latvian exchange law, if the holder of a bill failed to comply with any of the provisions that dealt with the responsibility of signatories to the bill, this responsibility lapsed, even if the non-observance of the above-mentioned provisions had been caused by *vis major* or could not be put down to the holder's fault.

In any case, the Latvian delegation raised no fundamental objections to the provisions of Article 53, with were in conformity with the legislation of most countries. Latvia was ready to consent to a sacrifice by keeping Article 53, which was contrary to the Latvian exchange law, actually in force. Latvia would make this sacrifice for the sake of uniformity, which, in this important matter, was of vital necessity.

As for the text of the article in question, M. Loeber declared that his delegation would prefer the version proposed by the International Chamber of Commerce, where the starting-point of the thirty-day period was indicated more precisely. The Latvian delegation also thought that cases of moratoria in foreign countries and also moratoria at home ought to be included in cases of *vis major*. On this point, the Latvian delegation agreed with the Scandinavian amendment.

In any case, it would have to be pointed out that, if the text recommended by the International Chamber of Commerce was rejected, paragraph 2 of Article 53 (text of The Hague and text of the experts) referred to Article 44, on which article there was an amendment by the Latvian delegation. In this case, M. Loeber thought that discussion ought to be opened at the same time on Article 44, and the Latvian delegation reserved its right to return to this question in the course of such a discussion.

M. GIANNINI (Italy) said that the problem concerning the influence of *vis major* on the exercise of rights derived from bills of exchange was always the subject of much discussion.

There was a very stern doctrine which considered that the strict formality of bills of exchange did not authorise any derogation from the principle of punctuality in meeting obligations when they fell due or in registering a protest against previous debtors. The strictness of this interpretation was in conformity with the strictness of the bill itself. In the case of exceptional circumstances (earthquakes, epidemics, floods, martial law), only a law could derogate that principle. The personal situation of the debtor, which was taken into consideration by civil law — e.g., Article 1226 of the Italian Civil Code — in the case of accident or *vis major*, could not, on the contrary, be taken into consideration in connection with exchange law. Endorsers could not consider individual cases, for that would entail too long research, delay the natural process of exchange law and give insufficient guarantees.

The Italian Code forbade any extension of the period of grace for the payment of a bill of exchange (Article 290). The same principle was contained in French legislation under Article 135 of the Commercial Code and, apart from that, Article 157 laid down that "Judges may not allow any extension of the period for the payment of a bill". On the other hand, Article 602 of the Italian draft Commercial Code merely forbade the period of grace; but, in spite of that, Article 678 provided for cases of *vis major* of a general character.

The same strict tendency was to be found in the German legislation. Nevertheless, the jurisprudence of these three countries had tried to find other less absolute solutions.

Article 813 of the Swiss Code also laid down a very strict rule and was followed in this respect by States which had adopted, or which were inspired by Russian legislation, such as Estonia, Latvia and Lithuania.

On the other hand, other legislation had adopted quite a different system. The Spanish and Greek legislations both laid it down that the carrying-out of commercial operations might be suspended under certain guarantees. The Spanish Code even contained a special article concerning bills of exchange. The Scandinavian legislation (Article 92) was very wide on this subject; but express provisions occurred in the codes of the Netherlands, Portugal, Roumania, Mexico, Brazil, the Argentine, Uruguay, Cuba and Salvador. On the other hand, Austria, Poland, Hungary, Yugoslavia, Turkey, Guatemala, Paraguay, Nicaragua and Venezuela had adopted the Hague Regulation.

English legislation, which had been followed at Costa Rica, and the American legislation (Articles 141 and 142), which had been followed at Colombia, the Dominican Republic and Panama, allowed the principle according to which the holder had no absolute duty; if he did not conform to the provisions of the law dealing with protest or presentment for payment or notification, he had to prove that it had in no wise been his fault and that he had done his best. It was sufficient if he established this proof.

During the Hague Conference of 1910, this question had been the object of long discussion, as had been recalled by M. Hammerschlag.

The proposal presented by the German delegation in connection with Article 50 only admitted the influence of *vis major* in the case of *allgemeiner Notstand*.

The two tendencies, the first of which restricted the *vis major* to cases of public disaster, while the other referred to personal situations, had, after long discussion, been reconciled by the adoption of a transactional formula which formed the subject of Article 67. That article had then become Article 53 of the present draft Regulation.

M. Giannini had ventured to recall, as briefly as possible, the way in which the problem had been contemplated in the various legislations and the way in which it had been solved at the Hague Conference. In conclusion, he thought that great caution would be needed before changing the text of this article, even if it were not entirely satisfactory.

If the Hague text were compared with that of the draft Regulation under discussion, it would be seen that the first paragraph of the experts' text reproduced in a more elastic and broader form paragraphs 1 and 3 of the Hague text. Again, Articles 2 and 3 reproduced exactly paragraphs 2 and 6 of the Hague text, while paragraphs 4 and 5 had been abandoned, though the Japanese delegation asked that they should be restored. The German delegation urged that certain points should be cleared up and proposed to reduce the period from one month to two weeks. The Austrian delegation proposed that the Hague text should be restored.

The Czechoslovak delegation, on the other hand, proposed a new article the text of which would be practically the same as that of the Hague text, but with the transposition of the paragraphs. Paragraph 1 would remain where it was, but the second paragraph would become the third and the third would become the fourth, while the fourth would take the place of the second. They suggested a change in the fourth paragraph, and proposed the addition of a sentence at the end of the fifth paragraph.

In point of fact, the three delegations suggested that the Hague text should be restored and M. Giannini thought they were right. If the Conference adopted that solution, the Japanese observations would have no further object, and it might be hoped that the same would be the case with the first German observation.

In regard to the Polish amendments, he did not think that there was any need to change the third paragraph so as to have a period of seven days, nor did he think it expedient to substitute the word "immediately" for the phrase "without delay".

As to the Czechoslovak amendment for the transposition of the paragraphs, M. Giannini hoped that M. Hermann-Otavsky would leave the examination of this matter to the Drafting Committee. He would, however, willingly agree to the new provision proposed for paragraph 5 concerning bills of exchange at a certain period of sight.

Lastly, he thought that the mention of a legal provision enacted by a State should not be adopted in the first paragraph of the experts' text, since the *factum principis* was comprised in the notion of *vis major*. He did not therefore think it necessary to mention it explicitly.

He was well aware that business circles had criticised the rule adopted at The Hague on the ground that it favoured the banks and not traders, but it was very difficult to contemplate any system that would reconcile all the interests involved. The interests must be considered as a whole and it seemed certain that the Hague solution was the most satisfactory.

In conclusion, his own proposal was dictated by the need for caution. He thought that the text of Article 53, which had already been embodied in several legislations, should be changed as little as possible. Nevertheless, he would not oppose certain improvements based on experience — for example, the text proposed by the Czechoslovak delegation — and he hoped that agreement would be quickly reached on this article.

M. HERMANN-OTAVSKY (Czechoslovakia) said that the Czechoslovak proposal was in conformity with the principle underlying the Austrian proposal. Its object was the retention of Article 53 of the Hague Regulation. The latter had been in force in Czechoslovakia as a special internal law since 1918. For two years, it had been contained in the new exchange law.

Speaking from the material point of view and in order not to delay the proceedings of the Conference he endorsed the clear and succinct observation made by the Netherlands Government which was to be found in the preparatory documents and was to the following effect :

" The question to be decided is whether in this particular case the holders' interests take precedence over those of the guarantors.

" The answer must certainly be in the affirmative.

" In the first place, a bill of exchange admittedly represents in the majority of cases an asset which forms a *contra* to the holders' liabilities ; secondly, the factors constituting *vis major* for the drawee do not necessarily apply in the case of the guarantors.

" The real point is that, on maturity, the bill of exchange remains unpaid.

" In ordinary circumstances, such non-payment must be authenticated by means of a protest ; in the case of *vis major* — e.g., in the case of a moratorium or prohibited payment — authentication by means of a protest is superfluous, non-payment being explained by the actual circumstances."

At the end of the discussion, M. Hermann-Otavsky found himself in agreement with the remarks of M. Hammerschlag, the Austrian delegate, who had already helped considerably in settling the problem at the 1910 Hague Conference.

If the question arose which of the two parties, the holder or the guarantors, should run the risks of the impossibility of accomplishing certain conservatory acts in case of *vis major*, there could certainly be no hesitation in deciding in favour of the holder. It was the economic object of the circulation of the bill of exchange which ought to be satisfactorily assured by the protection of the holder.

M. DA MATTA (Portugal) supported the Austrian proposal and concurred in the considerations put forward by M. Hammerschlag and M. Namitkiewicz for the adoption of the text of the Hague Conference, which was conciliatory and represented a compromise. There were legal, economic and practical reasons in favour of this transactional formula, whereas the text proposed by the Committee of Experts had a large number of legislations against it. To the legislations already mentioned should be added that of Portugal, the provisions of which sanctioned a tendency opposite to that contained in the text of the experts and had yielded very satisfactory results in times of emergency. That was an additional argument to those already submitted.

M. HELPER (Denmark) concurred in the proposal made by M. Hammerschlag.

Prince VARNVAIDYA (Siam) said that as one of the main arguments put forward in support of the Austrian proposal was that the Hague system had been adopted by a considerable number of countries, he desired to mention that Siam was one of those countries. He therefore supported the Austrian proposal.

M. MOLENGRAAFF (Netherlands), basing himself on M. Hammerschlag's arguments and on those of other speakers, would vote in favour of the Hague system. Nevertheless, it appeared to him desirable that the first paragraph of the Hague text should be brought into line with the experts' proposal. There should be mentioned expressly, in addition to the case of *vis major*, the case where the exercise or preservation of the rights deriving from the bill of exchange was prevented by a legal provision enacted in a foreign State (or by any State, as proposed by the Danish delegation).

M. Giannini had just said that the phrase "legal provision enacted in a foreign State" was included in the term *vis major*. Personally, M. Molengraaff was of the same view, but it was a fact that that opinion was controverted, and certain delegates, it appeared, were also of the opposite opinion. This controversial point could accordingly be solved in the text itself. It would be desirable to ask the Drafting Committee to make this change if the Conference thought fit.

M. EKEBERG (Sweden) said that his delegation would vote, in principle, for M. Hammerschlag's proposal. The Hague solution had been the result of exhaustive discussions which has led to a solution that had been adopted unanimously. That solution had later been introduced into the legislation of many countries. It had, as M. Hammerschlag had said, passed the ordeal of the world war. The rule adopted at The Hague, it appeared, solved, in a fair and very satisfactory manner, conflicts between divergent interests. The Hague principle should be given a wording which would provide a clear and definite solution of the questions of legal moratoria, irrespective of whether the moratorium had been enacted in the country concerned or in another.

M. Ekeberg concluded by urging the adoption of M. Hammerschlag's proposal, it being left to the Drafting Committee to consider the text.

M. SHIMADA (Japan) said that, if paragraphs 4 and 5 of Article 53 of the Hague Regulation were inserted in the new text, the last sentence of the first paragraph of Article 53 of the experts' text, reading "if the proceeding in question is accomplished as soon as possible after the obstacle has disappeared, and in any case within a period of thirty days", should be struck out. The Japanese proposal, while preserving the principle approved of at The Hague, was a compromise between the Hague Uniform Regulation and the draft of the experts. However, if the majority of the Conference were in favour of the Austrian proposal, the Japanese delegation would not press its proposal.

M. GRÖNVALL (Finland) supported M. Ekeberg's declaration.

M. Deoclecio DE CAMPOS (Brazil) said that his delegation would vote for the restoration of the Hague text.

Mr. KENNEDY (United States of America) said the report of the Inter-American High Commission had been drawn up in 1925. Since that time a great many States had adopted the Hague Regulations, and it had occurred to him that the following paragraphs of the High Commission's report might help the discussion :

"Under the Codes of Argentina, Brazil, Costa Rica, Cuba, Honduras, Mexico, El Salvador and Uruguay delay in presentment or protest is excusable in the case of *vis major*. These Codes do not enter into such great detail in the matter as does the Uniform Law, but it is believed that this article would be acceptable with the exception of the last paragraph . . . In Anglo-American law the duties of the holder are those of reasonable diligence, and his rights under the instrument are not impaired by circumstances beyond his control and not imputable to his default, misconduct or negligence. The provisions of the United States law are to be preferred to those of the Hague Regulations, both from the standpoint of equity and of adaptability to present commercial usage in Latin America ; but as Sir Mackenzie D. Chalmers has pointed out, the injustice of the Uniform Law is not so great as might appear. It must be borne in mind that the consequences of the failure of the holder to perform his duties are quite different under common law and under civil law. In England (and generally in America) the holder loses his right of recourse on the bill and, in most cases, on the consideration as well, whereas on the Continent (and in Latin America) he retains his right

of action on the consideration (*action d'enrichissement*). Then, too, under the Uniform Regulations the holder has two days' grace for presentment, and this provision would, in most cases, suffice to meet the obstacles of personal *vis major*.

"With the exception of the last paragraph, this article may be recommended for adoption by those countries whose Codes are silent on the subject of delay in presentment and protest due to the exigencies of *vis major*."

The Austrian proposal to return to the Hague text was adopted unanimously on the part of delegates voting.

Mr. GUTTERIDGE (Great Britain) abstained from voting.

FIFTEENTH MEETING.

Held on May 21st, 1930, at 3 p.m.

President: M. J. LIMBURG.

19. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First reading (Continuation).

ARTICLE 53.

The PRESIDENT said that, in view of the fact that the Hague Regulation had been adopted, the Japanese amendment¹ could, in accordance with the observation of M. Shimada, be considered as withdrawn. The same observation applied to the Scandinavian amendment², which was unnecessary unless the text adopted mentioned legal provisions enacted abroad. In those circumstances, only the Czechoslovak amendments were before the Conference.

The President said that various delegations had pointed out that the idea of *vis major* should also include legal provisions, the *factum principis* being generally considered in civil law a case of *vis major*.

M. PERCEROU (France) recalled that this question had already been raised at The Hague and dealt with in a totally different manner than in the report. The proclamation of a moratorium in a country did not constitute a legal case of *vis major*, except in the territory of that country, and did not compel other States to consider it as such. The question therefore remained open.

M. DE LA VALLÉE POUSSIN (Belgium) said that, as far as his recollection went of the discussions of 1910 and 1912, it was of set purpose that it had been decided that the Uniform Regulation should say nothing in regard to the laws on moratoria adopted by certain States. This silence should be interpreted as follows: There were still numerous States in which the national legislation made no reference to cases of *vis major*. It was for the law courts to decide whether this had occurred and what were its consequences. When the holder of a bill who had not been able to fulfil the legal formalities within the proper time-limit appeared before the court, the court decided the material question whether there really had been an obstacle to the accomplishment of the formalities. The existence in a foreign State of a provision of a temporary nature suspending the time-limit for the accomplishment of the formalities was considered a material fact to be judged by the courts before knowing whether or not it amounted to *vis major*.

M. de la Vallée Poussin was of opinion that it would be better to maintain this provision and to make no reference in the Uniform Regulation to the legislation enacted abroad establishing moratoria. Contrary to what might be thought, these laws would produce their effects, but instead of being considered as decisive even by the courts of other countries, they would constitute questions of fact of which the value would have to be decided by these courts. This solution would safeguard a number of interests.

The Conference should remember that not every State would accept the Uniform Regulation. The draft prepared by the experts made no distinction in this respect between the two groups of States — those that adhered and those that did not. Some doubts, however, might arise as to the conditions in which a moratorium was imposed in certain non-adhering countries. It would be wise to take precautions in this matter. For that reason, too, therefore, it would be better not to give the legislation enacted abroad establishing moratoria a decisive character, and to leave the judges in other States their freedom of decision. In the same way, the Conference, ought not to lose sight of the fact that a law promulgated by the central authorities might sometimes (especially in time of civil disturbances), and in certain States, only be carried out in a part of the territory. Here, again, the judicial Power's right of appreciation was a useful safeguard.

The PRESIDENT said that the Conference had just re-established the wording adopted at The Hague. In reading the records of the Hague Conference of 1910 and 1912, it would be seen that the question of the moratorium and that of legal provisions had not been settled. In the very detailed report of M. Lyon-Caen and M. Simons included in the Records of the 1912 Conference, column 1, page 97, the following passage appeared :

" b. Il appartient aux tribunaux d'apprécier s'il y a ou non force majeure quand elle est alléguée par une personne qui s'en prévaut pour échapper aux déchéances qui lui sont opposées.

¹ See Annex No. 4.

² See Annex No. 5.

Sur ce point, les appréciations des tribunaux peuvent être différentes, selon les différents pays ou même dans un même pays, car il s'agit d'une question de fait.

"c. La question de savoir si le jugement du tribunal qui a reconnu la force majeure a autorité de chose jugée dans les autres pays, ne peut être résolue qu'à l'aide des règles de droit international contenues dans les lois des pays dont il s'agit ou dans les conventions conclues entre les gouvernements de ces pays.

"d. Il arrive parfois que les pouvoirs publics compétents dans un pays, en présence d'événements s'étendant soit au territoire tout entier, soit à une partie du territoire (inondation, tremblement de terre, suspension d'un service public, révolution, etc.) proclament l'existence de la force majeure et prolongent en conséquence les délais de présentation et de protêt. Ces actes des pouvoirs publics obligent évidemment les tribunaux du pays dans lequel ils ont été rendus. A l'égard des tribunaux des autres pays, ils n'ont qu'une valeur de fait ; ils peuvent contribuer à faire admettre par ces tribunaux l'existence de la force majeure sans que ceux-ci soient en droit tenus de se conformer aux prescriptions contenues dans les actes d'une autorité étrangère."

Did the Conference wish to keep to this view? In the affirmative, the question remained open. Or did it wish to settle the question?

M. HAMMERSCHLAG (Austria) supported the Belgian proposal. In his opinion, no mention should be made of a moratorium in the Uniform Law. The same question would have arisen had the method of the experts been adopted in principle, for in that case the Conference would have had to decide if it was prepared to accept the words of paragraph 1 "by a legal provision enacted abroad".

This problem had been discussed at great length at The Hague. They had considered the possibility that some State (not represented on this Conference) might proclaim a moratorium without the calamity justifying such a step having occurred. In this case, such a State automatically outlawed itself so to speak. There was therefore no necessity to make any mention of such a case in a law. The law ought only to deal with cases of *vis major*. It was for the courts of every country to decide whether or not a case of *vis major* had occurred.

M. GIANNINI (Italy) took the view that the report should interpret the Convention, but not complete it. It was agreed that the report of the 1912 Conference stated that such cases were not covered in the article. Must an article of the Convention, however, always be applied with the aid of the interpretation contained in the report? If someone read the article without having read the report, and in most cases the report was not read, he would not understand why cases arising out of legal provisions could not be taken into consideration. Generally speaking, these cases were included under *vis major*. If it were intended to make an exception to the general rule, this must be definitely stated. The question was of such importance that it could not merely be settled in the report.

On the other hand, there was a problem which it was useless to settle in the Convention itself. It concerned cases of necessity.

Did the Conference wish to follow the interpretation of the Convention of 1912? M. Giannini would have no difficulty in accepting this proposal. In that case, however, the principle contained in the report of 1912 ought to be clearly accepted.

The PRESIDENT reminded M. Giannini that the question had already been raised. Did the Conference wish to decide whether a moratorium or, more generally, the legal provisions, constituted cases of *vis major* or not? If the Conference followed the system adopted at The Hague in 1912, the matter would remain open.

M. GIANNINI (Italy) did not agree with this view.

The PRESIDENT considered that the question had not been settled at The Hague. It had been pointed out at the previous meeting — and the President had agreed with that view — that the *factum principis* was a case of *vis major*.

The President thought that this was true only in respect of the national law. In national law a *factum principis* was a case of *vis major*; but in international law should the *factum principis* occurring in State A be regarded as constituting equally a case of *vis major* for the courts of State B? It was on this point that the Hague Conference had taken no decision.

If it were maintained that it had taken a decision, the decision had been more negative than positive. He would be right in saying that M. Lyon-Caen and M. Simons had been of the view that by the terms of international law as it was in 1912, the courts could be left to settle the question of fact, for in so far as the other State was concerned the legal provisions enacted in State A were a question of fact. Cases might occur, therefore, in which a court in State B might consider a legal provision enacted in State A as a case of *vis major*, but that, on the contrary, in a case where a fraudulent legal provision had been enacted, the courts of another State might consider that no case of *vis major* had occurred. Such was the present procedure of international law.

The President agreed with M. Giannini in thinking that the proposal of the experts solved the question. Paragraph 1 of Article 53 of the experts' draft was to the following effect:

"Should the accomplishment within the proper time of a procedure necessary for the exercise or preservation of rights flowing from a bill of exchange be prevented by a legal provision enacted abroad or by an insurmountable obstacle (*vis major*) . . ."

If, however, the Hague text were maintained, the question would remain in the same position as it had been in 1912.

M. SULKOWSKI (Poland) thought with M. Giannini that the Conference should endeavour to settle disputed points even of the text of the Regulation, for judges would not always be in a position to refer to the report. He took the view, therefore, that the Conference should decide this question. The representative of Austria had pointed out that the Conference should not extend the principle laid down in Article 53 to moratoria, because circumstances might arise in which a moratorium was not justified. M. Sulkowski agreed that such cases might occur. He would add, however, that account should be taken of the facts. In so far as the holder was concerned, a moratorium, even if it legally proclaimed, was always a case of *vis major*. The holder was prevented from presenting his bill of exchange for payment if the drawee lived in a country to which a moratorium had been applied. For that reason, M. Sulkowski took the view that the question ought not to be left to the free decision of the courts. If it were admitted that a court could decide that a moratorium proclaimed by a particular State did not constitute a case of *vis major*, it followed that the holder, who was not by the circumstances in a position to present his bill of exchange for payment, would still lose his right of recourse. Unless the Conference solved this question by means of the Regulation, cases might occur in which courts would differ regarding their decisions on the moratoria proclaimed by a State.

M. QUASSOWSKI (Germany) thought that the Conference should not settle the question in the Regulation. The question whether a moratorium was a case of *vis major* could not, in the view of M. Quassowski, be settled by a general provision. It was a question of fact. Nothing was laid down in regard to other cases of *vis major* such as earthquakes, war, etc., and the same course should be followed in regard to moratoria. All cases of *vis major*, including moratoria, should be submitted to the courts for decision.

M. EKEBERG (Sweden) favoured the inclusion of a definite solution for the question of moratoria. He hoped that it would be agreed that all moratoria, even those not absolutely justified, should be considered as cases of *vis major*. It seemed to him to be illogical to show a desire to protect the holder in the several cases covered by Article 53 and not in the case of an unjustified moratorium. It was not the holder's fault if he were unable to approach the acceptor. In many cases, it was not even the fault of the Government of his own country, but that of the Government of another country, if the moratorium had been proclaimed without adequate reasons.

M. EISNER (Yugoslavia) said that the laws of Yugoslavia had added a provision to the Hague text in accordance with which it was the duty of the national Government to deal with the consequences on its own territory of a moratorium proclaimed in a foreign State. The Yugoslav delegate proposed that the Conference should settle the question in this manner.

The PRESIDENT proposed that the Conference should in principle adopt the following text, reserving the actual wording :

“ When the presentment of a bill of exchange or the drawing-up of a protest in the time-limit prescribed is prevented by an insurmountable obstacle (the legal provisions enacted in any State or another form of *vis major*), this time-limit shall be prolonged.”

This proposal was adopted by 14 votes to 6.

The PRESIDENT drew the attention of the Conference to a certain lack of clearness in the second paragraph regarding the notice of a case of *vis major* which the holder had to furnish without delay. Paragraph 5 of the Hague text was to the following effect :

“ As regards bills payable at sight or at a certain time after sight, the term of thirty days begins to run from the date on which the holder, even before the time of presentment, has given notice of the *vis major* to his immediate endorser.”

Paragraph 2 of the experts' text laid down :

“ The holder is bound without delay to give notice of the case of *vis major* to his immediate endorser.”

He did not think that this stipulation was sufficiently definite, for the expression “ without delay ” was elastic. It could obviously be replied that it was extremely difficult to find the exact moment when the case of *vis major* began. The expression was, however, too vague.

Examining the amendment submitted by the Czechoslovak delegation, which was to read article 53 as follows :

“ 1. When presentment of a bill of exchange or drawing up the protest within the prescribed limits of time is prevented by an insurmountable obstacle (case of *vis major*), these times are prolonged.

“ 2. After the cessation of the *vis major*, the holder must without delay present the bill for acceptance or payment and, if need be, have the protest drawn up.

“ 3. If the *vis major* continues to operate for more than thirty days after the maturity of the bill, recourse may be exercised, and neither presentment nor drawing up the protest shall be necessary.

“ 4. In order to exercise the rights conferred by the foregoing provisions, the holder is bound without delay to give notice of the case of *vis major* to his immediate endorser and to specify this notice, which he must date and sign, on the bill or on an *allonge*; as regards other matters, the provisions of Article 44 apply.

“ 5. As regards bills payable at sight, the term of thirty days begins to run from the date on which the holder, even before the time for presentment, has given notice of the *vis major* to his immediate endorser ; as regards bills payable at a certain time after sight, the term of thirty days is extended by the period after sight specified in the bill.

“ 6. Facts purely personal to the holder or to the person whose duty it is to present the bill or draw up the protest are not deemed to constitute cases of *vis major*.”

the President noted that the amendment drew a distinction between a bill of exchange at sight and a bill of exchange at a certain time after sight. This distinction had not been drawn in the Hague text. Nevertheless, there was a certain lack of precision in regard to the date on which the case of *vis major* began in so far as bills of exchange at a certain time after sight were concerned. It could even be maintained that no one knew at what moment the term of thirty days should begin to run.

M. HAMMERSCHLAG (Austria) agreed that the expression “ without delay ” was not very definite. This lack of precision, however, was not of importance in the case of bills of exchange payable at a certain date, for the term of thirty days would only begin to run from the date of maturity. In so far as bills of exchange payable at sight were concerned, the period began to run on the date on which the holder, even before the expiry of the period for presentment, had given notice of the case of *vis major*. This notice had to be signed and dated on the bill of exchange. He thought, therefore, that this lack of precision would not be a hindrance in the case of either kind of bill.

On the other hand, M. Hammerschlag understood the motives which had led the Czechoslovak delegation to make this proposal. There were a number of difficulties in regard to bills of exchange payable a certain time after sight. For example, the period for presentment might be six months. In that case, according to the Regulation, the holder would have the right to exercise recourse after thirty days, whereas if no case of *vis major* had occurred he would only have had that right after six months. The amendment therefore appeared justifiable, for there was no reason to allow the holder to exercise his right of recourse earlier in a case of *vis major* than he would have been able to do had the case of *vis major* not existed.

The PRESIDENT wondered from what date the term would begin to run in the case of bills of exchange payable a certain time after sight.

M. HAMMERSCHLAG (Austria) explained that the date was settled by the notice of a case of *vis major* which the holder was required to give to his endorser. That notice had to be referred to, dated and signed on the bills of exchange ; according to the Czechoslovak proposal, the period of thirty days would be prolonged by the further period for presentment fixed by the drawer.

The PRESIDENT said that the text of the Czechoslovak amendment would be more definite if the final sentence of paragraph 5 were drafted as follows :

“ As regards bills payable at a certain time after sight, the term of thirty days beginning on the date on which the notice is delivered is added to the period after sight specified in the bill.”

M. HERMANN-OTAVSKY (Czechoslovakia) said that the Hague text drew no distinction between bills of exchange at sight and bills of exchange payable at a certain time after sight. In both cases, the term began to run from the date on which the holder gave notice to his endorser of a case of *vis major*. The special object of a bill of exchange payable at a certain time after sight was twofold. On the one hand, it ensured that within a certain period of time the creditor would have a certain degree of freedom in the exercise of his rights ; on the other hand, it preserved the debtor, the acceptor and the guarantor from receiving a sudden demand and gave them the necessary time to honour their signature. If bills of exchange payable a certain time after sight were assimilated to bills of exchange payable at sight, these advantages would disappear. For that reason, the Czechoslovak delegation proposed to introduce the following phrase into paragraph 5 :

“ As regards bills payable a certain time after sight, the term of thirty days is extended by the period after sight specified in the bill.”

The PRESIDENT agreed with M. Hermann-Otavsky. It was agreed that Article 53, paragraph 5 (Hague text), should be kept and that the full stop at the end of the sentence would become a semi-colon, after which there would be added the words : “ as regards bills payable at a certain time after sight, the term of thirty days is extended by the period after sight specified in the bill ”.

M. QUASSOWSKI (Germany) objected that under the Czechoslovak proposal the calculation of the term might, in certain cases, be extended to twelve months. That was excessive ; he preferred the Hague clause, according to which the term was always thirty days. The day on which the term began was the date of maturity. As to bills payable at sight or at a certain time after sight, the date from which the term began might change, but the term itself was invariably thirty days.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that this was a fundamental question which was connected with paragraphs 2 and 5 of the Hague text. Paragraph 2 did not apply to bills payable at sight or at a certain time after sight. It applied to bills of exchange in general. It referred to the notice which the holder must give in order to exercise his rights. Such notice was necessary, because the bills in question were not yet mature.

M. VISCHER (Switzerland), in reply to M. Quassowski, said that in his view the times for presentment were not identical for bills payable at sight and bills payable at a certain time after sight. In the case of the latter, the notice must be given not later than the date on which the

first term for presentment expired. In those circumstances, there would be no justification for not considering the possibility of waiting a further six months in the case of bills payable at sight. It would be contrary to the principle according to which the thirty days began to run only after the maturity of the bill.

This being so, he agreed to the Czechoslovak proposal.

The PRESIDENT requested M. Hammerschlag to indicate the principal argument in favour of the Czechoslovak amendment, so that the Conference might be quite clear on the point.

M. HAMMERSCHLAG (Austria) recalled that the principle proposed by the Czechoslovak amendment had been considered at the first Hague Conference in 1910. The matter had not been taken up again in 1912, probably from a desire to simplify matters. In his opinion, the meaning of the amendment was as follows: If a bill was payable at, say, six or eight months after sight, the holder could not require payment and could not exercise his right of recourse except after the expiration of that period. If the Czechoslovak clause were not adopted, it might happen that, in the event of a public disaster, the holder would be entitled to exercise his right of recourse before the time at which he would have been able to exercise it if the disaster had not occurred.

M. QUASSOWSKI (Germany) recalled that at The Hague the matter had been considered from the economic point of view. The German Government had submitted the following observations:

"... The period of grace normally begins on the date of maturity. In the case of bills payable at sight or after sight, the result would not, however, in view of the long periods for presentment involved, be satisfactory if the holder was entitled to notification and later to recourse only on condition that the *vis major* continued until the expiry of the statutory time for presentment or the time specified in the bill. It would be better to adopt the principle that, in the case of a bill payable at sight or after sight, the holder is entitled to immediate presentment, and that he must not, through *vis major*, be deprived of the exercise of this right for any long period of time. A bill which is drawn by New York on Berlin and is payable one day after sight is economically on the same footing as a bill which becomes mature ten days after the date on which it was drawn up. For the calculation of the days of grace, we must accordingly take instead of the day of maturity another time-limit — namely, the day on which the bill could have been presented but for the *vis major*. Paragraph 5 accordingly allows the holder of a bill payable at sight or after sight, in the event of a case of *vis major*, to notify his immediate endorser during the course of the period for presentment. If more than thirty days have passed since the date of notification, recourse may be begun."

M. SULKOWSKI (Poland) felt that this argument made no distinction between a bill payable at sight and a bill payable at a certain time after sight.

The PRESIDENT requested the Conference to vote on the introduction of the Czechoslovak amendment after Article 53, paragraph 5 (Hague text).

The Czechoslovak amendment was adopted by 18 votes to 1 and inserted after paragraph 5 of Article 53.

The PRESIDENT proposed that the amendment should be referred to the Drafting Committee.
Agreed.

The PRESIDENT reminded the Conference that the Latvian delegate had drawn attention to the fact that Article 53, paragraph 2, referred to Article 44 which the Conference had not yet discussed. If Article 53 were adopted, it would, of course, be subject to the reservation that if Article 44 were changed it would be permissible to revert to Article 53.

M. DUZMANS (Latvia) agreed with the President and added that paragraph 5 of Article 53 was also connected with Article 44.

M. HAMMERSCHLAG (Austria) thought that an amendment was necessary, seeing that the Conference had decided to include legal provisions among cases of *vis major*. It was obvious that nobody dreamed of placing the nationals of a country which had enacted a moratorium in a more favourable position than that of nationals. To take the following example: country A had enacted a moratorium. A national of that country, who was the endorser of a bill of exchange accepted by a national of that country on the basis of the provisions which the Conference had just adopted, exercised after thirty days his rights of recourse against the national of country B but domiciled in the endorser's country. The latter would be obliged to pay the amount of the bill of exchange to this endorser, whereas he could not obtain payment by the drawee who was a national of country A and would suffer injury. Such a possibility must be eliminated.

M. Hammerschlag requested the President to put to the vote Article 53, leaving it to the Conference to decide later on the point which he had just raised. He had not yet drawn up an amendment, but he thought it might be somewhat as follows:

"In the case of a legal provision, the nationals of a country which has enacted such provision are not entitled to exercise the right of recourse after thirty days against the national of another country."

The PRESIDENT requested M. Hammerschlag to reflect further on this question. He, personally, was not sure that the amendment was advisable. Was it the case that the international law which the Conference would establish did not take precedence over national law, and that a State after introducing the Uniform Regulation would be entitled to enact a moratorium that was at variance with Article 53? The President thought that when the Uniform Regulation had been accepted by all the contracting countries, the clauses of the Regulation would apply to all moratoria.

M. GIANNINI (Italy) thought that the question raised by M. Hammerschlag was solved by Article 53, for the very reason that the Conference proposed in that article to apply the case of *vis major*. He did not think that there would be any injustice whatsoever in that. Either the moratorium law would be in conformity with international law — that was to say, it would be justified and in that case everyone would have to acquiesce and to admit that the case was one of *vis major* — or the case would be that of a capricious act or a violation of international law, and there were means in international law for settling such points. Further, was it possible to admit that in 1930 any country would wish to disturb international trade by measures which in the last resort would rebound against itself? M. Giannini personally did not think so.

M. HAMMERSCHLAG (Austria) stated that, in view of the opposition of the President and M. Giannini, he withdrew his amendment, though he was not convinced.

M. SULKOWSKI (Poland) observed that it might be concluded from the President's remarks that Article 53 limited the right of States to enact moratorium measures. M. Sulkowski stated clearly that, in his opinion, Article 53 did not in any way limit the freedom of States. They remained absolutely free to take whatever measures they considered necessary. Every moratorium measure enacted by a State should be considered as a case of *vis major*, even if it did not appear to be justified.

M. GIANNINI (Italy) did not agree with M. Sulkowski. He did not believe that States had unlimited freedom in the matter. If a State violated the rights of another State, the stipulations of international law came to the assistance of the injured State.

Article 53 was approved at a first reading.

BILLS OF EXCHANGE IN BLANK.

REDRAFT OF ARTICLE 7.

The PRESIDENT submitted the following text :

“ An instrument which has been signed, but which does not contain all the essential requirements for a bill of exchange or the agreed clauses, may be completed by the holder in accordance with the agreements entered into.

“ The non-observance of such agreements may not be invoked against a holder who has acquired the bill in good faith after it has been completed.”

M. GIANNINI (Italy) explained the motives for this Article.

The fundamental moment for deciding whether a bill of exchange was complete — that was to say, whether it contained all the statements required under Article 1, and consequently whether it was valid — was when the bill was presented to the debtor for payment. That the bill should be complete was an essential condition, not for the originating of the obligation, but for making the debt valid. In order to originate the obligation, it was only necessary that there should be a signature on an instrument called a bill of exchange and that the signatory should be capable. If such conditions existed, the bill could be put into circulation, even though it was not complete but only capable of being completed. In reality, a bill of exchange in blank was an incomplete bill of exchange.

When the practice was first introduced, it came up against very strong views, both in doctrine and in the legal practice of several countries. Doubt was raised as to the validity of the bill of exchange in blank. It was even pointed out somewhat hastily that a bill of exchange in blank fell under the Penal Code. Finally, practice prevailed over law or more correctly over legal practice. It then received a certain amount of legislative sanction (Article 20 of the English law, Article 33 of the American law, and paragraph 93 of the Hungarian law).

M. Giannini also quoted a Ministerial Ordinance of October 6th, 1853, which had the force of law in Austria, and Article 3 of the Brazilian law, together with similar rules in the Polish and Yugoslav laws. The Russian law, which had been accepted by three of the Baltic States, stipulated that a bill of exchange in blank was not valid as long as it was incomplete. Finally, a German law of 1923 contained the following rule :

“ An instrument which does not contain all the essential requirements of a bill of exchange is also considered as a bill of exchange within the meaning of the present law if it is given to another person with the authorisation to complete the statements which are missing. It is presumed that this authorisation has been given if the instrument is called a bill of exchange.”

M. Giannini added that the rule appeared in a fiscal law ; the regulation was therefore indirect.

On the other hand, the requirements of practical life continued to show that the problem was of great importance from the economic point of view. M. Giannini did not consider it necessary to insist on the details of the question, which he was sure were well known to his colleagues.

In reality, what legal system had the authors of the new article had in mind? There was agreement that the bill of exchange should be completed. If the party completed the bill of exchange in conformity with the agreements entered into, he was within his right. If, on the contrary, he did not comply with the agreements, there was an abuse, an offence falling under the Penal Code. Finally, if there were alterations or forgeries, there was legal recourse. Even in the States which had no rule on the subject, Italy for instance, the bill of exchange in blank had entered into practice and all the difficulties had been surmounted, whether they were connected with the date, the denomination, the name of the taker, maturity, the place of payment, etc. The problem had now entered into practice. In those circumstances, could it be ignored? The 1910 and 1912 Hague Conferences left it on one side, but twenty years had passed since then, and it would appear to be necessary to make an effort to settle the question. Moreover, several delegations considered that, with prudence, the question could be solved. Prompted by that consideration and taking into account the laws already in force, certain delegations had submitted the text for Article 7 which had just been read by the President. That article contained two paragraphs, and M. Giannini emphasised the fact, because certain members of the Conference had pointed out that the bearing of the two paragraphs was not the same, that one dealt with a problem of substance, while the other concerned only a question of form. To that M. Giannini would reply that in Chapter I it had been very difficult to discriminate between articles of form and articles of substance.

Passing to the terms used in the proposal, M. Giannini drew the attention of members to the use of the expression "an instrument which has been signed" instead of the term "a bill of exchange". This had been suggested in order to avoid discussion on the question whether the article referred to a bill of exchange. The words "essential requirements" for a bill of exchange meant any references contained in the first article of the draft Regulations, paragraphs 2 to 7. The words "or the agreed clauses" would be inserted to satisfy the German delegation which had asked for optional clauses also to be taken into consideration. M. Giannini was not entirely of this view, but was ready to accept the formula in a spirit of conciliation.

The formula "may be completed by the holder" was very prudent. It affected the substance of the problem and meant that a bill of exchange in blank was valid in so far as it had been drawn up in conformity with the agreements entered into.

The second paragraph of the article dealt only with the position of the holder who had acquired in good faith an already completed instrument. It had been asked what would be the position of the holder in such a case. The question was settled by the second paragraph, which laid down that the non-observance of these agreements could not be set up against the holder who had acquired in good faith an already completed instrument. M. Giannini said that the drafting of this paragraph had given rise to long discussions. The group of delegations had been doubtful whether the negative formula should not rather be adopted, which was to the following effect: "The non-observance of these agreements might be set up against a holder who had acquired an instrument in bad faith." The German delegation had been especially desirous to see this second formula adopted. Finally, however, the authors of the proposal had preferred the first formula.

M. Giannini added that the French delegation, which had co-operated in the drafting of the text, had found it necessary to make two reservations. In the first place, it had stated that it could not agree with the principle of a bill of exchange in blank of which the sum was not mentioned. It considered that this type of instrument went beyond exchange law and could not be admitted, for the French fiscal law made the stamping of the bill compulsory at the moment of its creation and in proportion to the sum. M. Giannini thought, however, that, even in cases in which the sum was not shown, the instrument ought in law to be completed in conformity with the agreements entered into. There was no need, therefore, to have any fears on this point.

The second reservation made by the French delegation had been due to fiscal considerations. M. Giannini could not in this share the views of the French representatives. The object of the new article was to facilitate national and international trade. A choice must be made between the claims of the treasury and the claims of economic life. M. Giannini felt sure that the moment the advantages of this procedure from the point of view of trade were demonstrated, the treasury would be the first to withdraw its opposition to any change in the law.

It might be asked whether the object of this reservation was to put on one side the problem which had not been solved. If such were the desire of the majority of the Conference, M. Giannini would be prepared to fall in with it. In that case, however, he asked that the report to be drawn up should refer to his very warm wish to see the settlement of this question. In his view, after twenty years of work, after the Regulations prepared at The Hague in 1910 and 1912, something more than a third confirmation of these Regulations was necessary. It was always possible to ignore life and its problems, but there came a moment when realities gained the day. The bill of exchange in blank which lawyers had regarded as impossible was now used in practice. It had been necessary when the time came for those same lawyers to deal with it and they had had to draw up laws governing it. Those laws had indeed been prudent, but they were quite definite. No member of the Conference desired to encourage dishonest trading, but the bill of exchange in blank, in the view of M. Giannini, was not an instrument of dishonest trade. The Italian delegation would therefore make every effort to cause the Convention to include an article on the point. If, however, the Conference did not share these views, the report and the records should state very clearly that the problem had been contemplated and that every possible effect had been made in order to find a formula. It was in this spirit that the proposal had been made to the Conference and also in order to approach nearer to Anglo-Saxon legislation on the question. It should not be forgotten that in this field the Anglo-Saxon legislation gave good advice, for it was based on long experience.

M. HELPER (Denmark), on behalf of the Danish delegation, was opposed to the proposed solution. The bill of exchange in blank was entirely a matter of common law.

Paragraph 2 which contained the exchange law was superfluous, for that rule was also to be found in other articles of the Regulation, for example in paragraph 16.

Danish legislation compelled M. Helper to oppose the adoption of this article.

M. EISNER (Yugoslavia) thought that the Regulations would be incomplete were this question not to be dealt with. The Yugoslav delegation would, in principle, accept the solution proposed by a group of delegates and put forward by M. Giannini. It could not, however, adopt the text under discussion. The formula might give rise to grave objections in practice. It might mean that the holder would have to bear the onus of proof. That interpretation, however, would greatly reduce the circulation of such bills of exchange. It would also lead to the danger of a strict interpretation of the expression "non-observance of such agreements", for the judge might require, in every case, proof of the acceptance of an agreement and might ignore commercial custom.

M. Eisner was referring in this respect to a very frequent case arising in Yugoslavia and which was probably to be found elsewhere; the case of the future designation of the domiciliary. In Yugoslavia, at any rate, when a bank had a bill to discount, it showed itself as the domiciliary. This, perhaps, was not always foreseen in advance, for the bank often received a bill at third or fourth hand. Traders, however, were well aware of this peculiarity. Nevertheless, when the holder of the protested bill took the guarantors into court, one of the most frequent arguments set up against him was that the domiciliary of the bill had been indicated without the consent of the drawer. If this argument were accepted as valid, the protest made against the domiciliary was considered as null and void and the holder of the bill lost his right of recourse against the endorsers and the drawer. Legal practice in this matter was not uniform. Some judgments took account of these commercial customs and did not admit the validity of such arguments. Other judgments had taken the opposite view.

M. Eisner had chosen the example of the future indication of the domiciliary because the Yugoslav Chambers of Commerce attached particular importance to this question. They had approached the International Chamber of Commerce and asked for its intervention in order that this problem should be satisfactorily settled by means of a uniform regulation. The solution proposed by the group of delegations instead of making the situation clearer only complicated it. On the other hand, the suggestion from the Yugoslav delegation would smooth away the difficulties. Their proposal was to the following effect:

"Defences founded on the fact that certain particulars were omitted from the bill of exchange at the time of signature may not be set up against the holder who has acquired the bill in good faith; such defences are allowed against other persons only if the person bringing forward the plea proves that the bill was subsequently completed in a manner contrary to the agreement made."

This formula, which completed Article 16 satisfactorily, was more precise and made it possible to take account of the needs of commercial life. Such a provision was to be found in Austrian, Czechoslovak, Polish and Yugoslav legislation. M. Eisner asked the Conference, therefore, to accept his proposal.

M. PERCEROU (France) said that the French delegation shared the views of M. Helper for several reasons. In the first place, as long as the blanks were not filled in the bill of exchange did not exist, the document being only a blank signature. The question of ascertaining what results should occur from the use of the right of blank signature, especially as regarded its correct or abusive use, was no part of exchange law. It was a question of general law. The institution of the bill of exchange in blank might give rise to many abuses. Before settling it, which was one way of encouraging it, considerable reflection was necessary. As this point did not appear on the agenda of the present Conference, M. Percerou concluded that many delegations had not examined the question as closely as it deserved.

These abuses were particularly to be feared in countries which did not find a kind of automatic break to them in a financial system similar to that of England. In England, all bills of exchange must be written on paper, previously stamped according to the amount of the bill, an operation which could not be done haphazardly by adhesive stamps. Consequently, the bill of exchange in which the sum was left blank could not show a higher sum than that covered by the paper on which the signature had been made. The subscriber to the instrument in blank always knew in advance the maximum sum for which he could be held liable.

To sum up, in the view of M. Percerou, the bill of exchange in blank went beyond the Conference's terms of reference and, without giving any view as to the merits of the proposed regulations, he asked that this point should once more be omitted from the discussion as had been the case at the Hague Conferences.

M. EIGTVED (Denmark) said that, to his mind, a bill of exchange in blank was not yet a bill of exchange at all. For that reason, the proposed stipulations should not form part of a uniform law on bills of exchange. There were, of course, bills in blank, but exchange law could not concern itself with them until they had been duly completed.

M. VAN NIEROP (Netherlands) concurred in M. Percerou's opinion. This very delicate and very difficult question was not suitable for an international regulation, since the practices and usages of trade were not identical in all countries. A clear distinction must be made between

practices and abuses. It was possible that what was a usage in one country would be an abuse in another. In the Netherlands, for instance, bills in blank had a very bad reputation. They were not used by respectable traders nor by the big banks. They were employed only by certain firms which transacted very peculiar and even shady business. The Conference should protect respectable trade and keep to the old principle of good faith, which was opposed to bills in blank.

That being so, M. van Nierop proposed that the question should be postponed in order to give delegates time to reflect.

M. DE LA VALLÉE POUSSIN (Belgium) entirely shared M. Percerou's point of view. Quite apart from the question of morality, it was bound to be agreed that a bill in blank was not a bill at all. The Conference would be going outside its programme if it took up the matter.

Futhermore, he had no instructions from his Government on this question.

M. HERMANN-OTAVSKY (Czechoslovakia) observed that Czechoslovak law contained a provision concerning bills of exchange in blank. The proposed clause, however, appeared to go far beyond the question of the bill in blank as he understood it.

He would be prepared to allow that a signed instrument which did not contain all the essential statements of a bill might be complete. The text, however, contemplated not only the essential statements of a bill, but the agreed clauses as well. If the instrument contained all the essential statements, it must be regarded as complete. What was meant exactly by these agreed clauses, which were not essentially statements? They were most probably certain optional clauses, such as that dealing with domiciliation. If a clause of that kind was added to a bill, which already contained all the essential statements and was consequently complete, against the wish of the acceptor, the latter was not the acceptor of a blank signature. He had accepted a complete bill. If an optional clause was added later, to his great astonishment, could he not plead that addition which was rather an alteration of the bill, against a *bona fide* holder?

He thought that this question went far beyond the principle of the blank signature.

Mr. GUTTERIDGE (Great Britain) said that, inasmuch as a rule of law which had prevailed in England for nearly a hundred years had been challenged, he felt it his duty to speak. Some of the cases decided by the courts went back further than one hundred years, and the rule had been finally crystallised in Section 20 of the Bills of Exchange Act of 1882.

M. Percerou's statement in regard to the English law was quite correct. Before a bill of exchange could be drawn in England or a foreign bill, it was necessary to obtain a properly stamped piece of paper on which to write the bill. That certainly acted as a safeguard with regard to the amount, but there was a much wider question involved.

Blank bills of exchange, as M. Giannini had pointed out, were in existence and had come to stay. The question was whether they were to be altogether ignored or to be regulated. They were used considerably in England, and in order to show the Conference that that was so, he would mention the famous case of *McDonald v. Nash* in 1924 in the House of Lords which turned on that very question. Goods had been sold and their price was to be guaranteed by means of a bill of exchange. It was not known at the moment when the goods were sold who should receive the price, and the question arose as to which of two firms should eventually receive payment. The result was that the name of the payee was left in blank and was inserted afterwards. Mr. Gutteridge would not go into all the juridical niceties of the question, but the House of Lords held that the case fell within Section 20 and that the holder of the bill had the right to insert the name of the payee.

The theory of the English law was that where a person placed his signature upon a blank piece of paper and issued it with the intention that it should be turned into a bill, he gave a mandate to the transferee to complete the bill in accordance with any authority that might be given to him. The bill had to be filled up in the first place in accordance with authority, but if it was not so filled up and came into the hands of a holder, in due course the holder was entitled to sue on the bill.

He ventured to think that the instrument, though it might be used for purposes which were not altogether pleasant, was on the other hand undoubtedly used as a genuine commercial instrument both in America, in England and also, he understood, in Italy. It seemed to him that if the Conference decided entirely to ignore it, they would be taking up a very drastic position. What would happen? England and America would pursue the even tenor of their way, but were Italian business men to be asked to condemn an instrument which they used and, he understood, used frequently? If the business men of the Scandinavian countries and the Netherlands did not like the instrument, they need not use it, but to say in effect that such instruments should not be allowed seemed to be going very much too far. He hoped the Conference would not take such a decision; first of all, because it would not be in accordance with the general well-being of commerce and, secondly, because an opportunity would be missed of somewhat closing the gap between the Continental and Anglo-Saxon systems. The latter was, however, a secondary consideration. What the Conference had to do was to see whether it could not draw up rules which would facilitate the transaction of business throughout the world.

The rule in question served another very useful purpose which Mr. Gutteridge hoped would not be forgotten. If some part of a bill of exchange had been accidentally omitted, Section 20 was invaluable. If by mistake the date or some other particular were omitted, Section 20 came to the rescue and enabled the bill to be completed. He would support the principle of Section 20 of the English Act on that ground alone.

M. GIANNINI (Italy) said that he had perhaps explained his point too succinctly. He had already indicated the theoretical construction at which the framers of the new Article 7 had arrived. Their work had been carried out not only on the basis of Italian jurisprudence but also on that of French jurisprudence.

Some rules must be elaborated. The question could not be left in abeyance.

What were the arguments that had been advanced against his thesis? There was, first, the argument put by M. Percerou and certain other delegates that a bill of exchange in blank was not a bill of exchange. M. Giannini held that this argument was now nearly obsolete. Further, certain delegates had suggested that the matter lay outside the field of exchange questions, but M. Giannini asked whether the two paragraphs which he had read bore on exchange questions. Was the question whether a bill of exchange, which was incomplete at its origin, could be completed a question relating to exchange matters?

Secondly, was the position of a third party who possessed a bill which had been completed after issue a matter which came within the field of exchange questions? There were, of course, in some domains certain secondary problems which could be settled in connection with one matter or another, but that was not the case in regard to the question now under discussion.

It had likewise been objected that the question was not on the agenda, but M. Giannini pointed out that all delegates at conferences referred to the agenda whether they wished or not to do something. In the present case, the agenda called for the preparation of a uniform regulation on bills of exchange. The experts had submitted a very carefully worked-out draft. That could not prevent the members of the Conference from putting the draft in their pockets and adopting another. Could there be any question that they had the right to do so?

After twenty years' silence, a diplomatic conference was now taking up again the work of bygone days. Could it confine itself to saying that the question of bills in blank could not be considered?

It had also been said that the banks had not asked for the settlement of the problem. M. Giannini personally ventured to question the accuracy of that statement.

The framers of the proposal had also been told that there was a great divergency of rules in the matter. But that was exactly the reason for which it was necessary to draw up a uniform regulation before international practices were set up which would make it more difficult to draw up a regulation.

There was, lastly, the question of the stamp, but, as the British representative had said, that very question prevented the signature of a bill of which the amount was higher than the sum due.

In Germany, the regulations in regard to the stamp had been revised in connection with bills of exchange. Furthermore, everyone knew that stamp laws changed constantly.

In regard to the arguments of lesser importance, M. Giannini pointed out, in the first place, that customs ended by constituting law. The practice followed in regard to bills of exchange in certain countries was known. In Italy, it was desired that the whole problem should be considered clearly and precisely, without hypocrisy, without closing the eyes to what happened in commercial life. That problem should be solved. It could no longer remain vague, for that would be extremely dangerous.

M. Giannini then came to an argument which M. de la Vallée Poussin had raised when he stated that a question of morality was involved. Was it possible to speak of morality when eighteen States had a law on bills of exchange in blank? Among those eighteen States were the British Empire, the United States of America and also Germany, not to speak of Italy, which had, strictly speaking, no laws in that sense. It might even be added that there were other countries which had in their legislation provisions relating to stamp duties. An allusion to morality therefore could not be considered as a real argument.

Moreover, M. Giannini did not consider that the bill of exchange was an instrument of dishonest business. It was possible, if one desired to do so, to consider that any business instrument could become an instrument of dishonest business. In reality, the bill of exchange in blank was a powerful business instrument. In order to be convinced of that, it sufficed to recall the effects of the guarantee and of the part which such bills played in practice.

The problem should be solved. The first question to decide was the following: Did the Conference desire to settle the problem of blank bills of exchange? If it did, M. Giannini would ask the President to allow the delegations time to reach an understanding, in view of the various formulæ which had been proposed. A final text could certainly be drawn up.

If the Conference decided not to deal with the problem in the Uniform Regulation, M. Giannini would make a reservation, because it should not be forgotten that eighteen States had already rules on the subject. What would be the position of those States? It would at least be necessary to make a reservation to the effect that bills of exchange in blank were not prohibited.

M. Giannini adjured his colleagues to reflect well before voting. Should a uniform law be adopted? Should there simply be a reservation? It was obvious that the countries which had laws on this matter would decide to make a reservation if the uniform formula was not adopted; if, on the other hand, it were adopted, it would be the countries which had no law on bills of exchange in blank that would wish to make a reservation. They would not perhaps have a law immediately, but they would soon be led to adopt one.

M. DE LA VALLÉE POUSSIN (Belgium) had been very much surprised to hear M. Giannini state that he had invoked a moral argument for he had said precisely the opposite. M. van Nierop having explained that in his country the reputation of bills of exchange in blank was often suspect, the representative of Belgium had replied that he did not wish to invoke the moral argument. In Belgium, a great number of bills in blank circulated without, however, being legally considered as bills of exchange; they only became bills of exchange when completed. Those bills were used in the following conditions: A bank, for instance, opened a credit of a million for a manufacturer,

In accordance with his needs and within the limits in which it knew that its customer would not be embarrassed, the bank put into circulation bills which had already been delivered to it by the manufacturer and which bore no other mention than the signature of the manufacturer. In Belgium, that was quite a current practice.

The PRESIDENT put to the vote by roll-call the question whether the Uniform Regulation should contain any provision in regard to bills of exchange in blank.

The Conference decided by 15 votes to 9, with 3 abstentions, that the Uniform Regulation should contain a provision on bills of exchange in blank.

For: Austria, Brazil, Czechoslovakia, Danzig, Finland, Germany, Great Britain, Hungary, Italy, Japan, Poland, Portugal, Roumania, Siam and Yugoslavia.

Against: Belgium, Denmark, France, Latvia, Luxemburg, the Netherlands, Norway, Sweden, Switzerland.

Abstentions: Spain, Turkey, Venezuela.

Absent: Bulgaria, Colombia, Ecuador, Greece, Peru.

SIXTEENTH MEETING.

Held on May 22nd, 1930, at 3 p.m.

President: M. J. LIMBURG

20. Absence of the Bulgarian Representative.

The PRESIDENT announced that he had been informed by a letter from the Chargé d'Affaires of the Royal Bulgarian Legation at Berne that Dr. D. Minkoff was prevented from taking part in the work of the Conference.

21. Discussion of the Draft Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continuation).

ARTICLE 39, PARAGRAPH 1.

Paragraph 1 was approved at a first reading.

ARTICLE 39, PARAGRAPH 2.

M. DA MATTA (Portugal) drew the attention of the Conference to the expression "at his own risk and peril". Although that was the usual formula, he wondered whether it would not be preferable to say: "The drawee who pays before maturity is responsible for the validity of payment." Thus modified, the text would gain in clearness and also in legal precision.

At first sight, the PRESIDENT had the impression that M. da Matta's text had a slightly different meaning from the formula proposed by the experts. He suggested that the Portuguese amendment should be referred to the Drafting Committee.

Agreed.

M. BOUTERON (France) pointed out that he had asked that the text of Article 19 should be reserved until Article 39 was examined. Article 19 was as follows:

"An endorsement after maturity had the same effect as an endorsement before maturity. Nevertheless, an endorsement after protest for non-payment, or after the expiration of the limit of time fixed for drawing it up, operates only as an ordinary cession."

Article 39 dealt with the situation of the drawee from the point of view of his discharge before maturity and at maturity, but in the period after maturity and before protest, the situation of the drawee was unknown.

The PRESIDENT replied that anyone who paid after maturity but before protest had paid at maturity; the case had never presented difficulties.

M. BOUTERON (France) stated that he was satisfied with that interpretation.

Paragraph 2 was approved at a first reading.

ARTICLE 39, PARAGRAPH 3.

The PRESIDENT proposed that questions of gross negligence and bad faith should not be considered in connection with this paragraph, but should be dealt with when Article 16 was discussed.

With this reservation, paragraph 3 was approved at a first reading.

Article 39 as a whole was approved at a first reading.

ARTICLE 40, PARAGRAPH I.

The PRESIDENT submitted the following German amendment : That the words " on the day when payment can be demanded " should be replaced by " on the day when payment is effected ".

M. ULLMANN (Germany) pointed out that the experiences of the war and post-war years had shown that it was preferable, in determining the value of foreign currency, to take the rate of exchange on the day on which payment was effected and not on the day of maturity. That was preferable to the solution proposed in the experts' draft, for the following reasons :

The holder should be protected against the possibility of changes in the value of the currency of the debtor and from a fall in the rate in the period between the day on which the bill matured and the actual day of payment. If the day of maturity were taken, it might happen that the holder would be injured by receiving only part of the value of the amount owed to him. That would be unjust.

It was for that reason that, in principle, the drawee should pay the sum indicated in the bill of exchange. If it were admitted that he could pay the equivalent in the currency of his country, that should be the real equivalent ; that was to say, a sum which, converted immediately at the rate of exchange on the day of payment, represented, in foreign currency, exactly the sum which he owed.

That, moreover, would also protect the payer if the rate of exchange of his currency were higher than its value on the day of maturity and fell below that value on the actual day of payment.

The argument could not be opposed to that solution that the holder might speculate to the detriment of the debtor, while asking for payment only at a time when the rate of exchange seemed specially favourable to him, for, in virtue of Article 41, every debtor was authorised to make a deposit of the amount of the draft with the competent authority, in the absence of presentment of the bill for payment within the period fixed by Article 37, and to do so at the charge, risk and peril of the holder.

The only objection would be that, apart from payment, there might be other possibilities for liquidating the exchange debt. It might then be claimed that the formula " the day when payment is effected " was too restricted. It was obvious, however, that the other means of liquidation of debts should be considered on an equal footing with payment and that the same provision should be applied by the courts in such cases in a similar way.

M. SULKOWSKI (Poland) stated that Article 40 referred to cases of bills of exchange in foreign currency. It laid down the principle that the debtor could pay in the currency of his country a bill of exchange expressed in foreign currency. In other words, it gave to the debtor the right to substitute the currency of his country for foreign currency. It was now necessary to know what should be the rate of conversion. Two solutions were possible. The first, which was adopted at The Hague, consisted in taking the rate of exchange on the day on which payment could be demanded. The German delegation had proposed another solution, which consisted in taking the rate of exchange on the day on which payment was effected. The latter solution was, in substance, justified. As a matter of fact, if after maturity the currency of the country had decreased in value in relation to the foreign currency, the holder would suffer a loss should the debt have been converted at the rate current at maturity.

On the other hand, Article 40 operated in a satisfactory manner in ordinary circumstances. Extraordinary conditions, however, had also to be considered. It should be remembered that during the war the States enacted various provisions. They prescribed, for instance, that bills of exchange could not be issued in their country in foreign currency or that the payment of bills of exchange expressed in foreign currency should always be made in the currency of the country. If Article 40 were adopted in its present form, the powers of States would be limited. They would no longer be able to prescribe that a bill of exchange payable in foreign currency could only be paid in the currency of the country. Nevertheless, States passing through an economic crisis might be obliged to adopt similar provisions. M. Sulkowski drew attention to the various provisions that had been enacted for postponing the payment of bills of exchange payable in foreign currency.

In conclusion, M. Sulkowski drew the attention of the Conference to the considerable extent to which the powers of States would be limited if a reservation to Article 40 were not allowed. Every provision contrary to the principle of Article 40 would certainly constitute a violation of international law. It was therefore necessary to draw up a reservation enabling States to derogate from the principle established in Article 40.

M. PERCEROU (France) considered that this observation would only be correct if the States undertook not to modify the text of the uniform law during a fixed period. It had not been considered, however, that the Convention would compel States to maintain the uniform law in force, but that they would be able at any moment to modify certain articles in this law. They would be free in certain exceptional circumstances to derogate from Article 40.

In other words, M. Percerou considered the question whether the Convention involving States in an obligation to maintain the law during a fixed period had been settled in advance in the affirmative. If it did so, the French Parliament would be unable to ratify the Convention.

Baron CARTON DE WIART (Belgium) asked the German delegate whether he had taken into account the following point : If the regulation or uniform law granted the right of making payment in a currency other than that stipulated, an exception of rather grave character would be established. In Article 37, however, another provision which was also of a somewhat exceptional character for many countries, had been adopted. It consisted in allowing a period

of three days for payment. In those circumstances, the drawee as well as the holder would have an obvious interest in delaying payment until the last minute and of benefiting by changes in the rate of exchange, Thus they would be given an excessive latitude which they might unduly abuse.

M. VAN NIEROP (Netherlands) thought that the system proposed by the German delegation was not acceptable because it was very dangerous. It would give rise to bear speculation if the foreign currency had strongly depreciated or if it had a strong tendency to fall in value. In this case, it would be in the drawer's interest not to pay at maturity, since he would hope to be able to cover the bill that was made out in foreign currency at a later date when the rate of exchange would have fallen. Under the system proposed by the experts, the drawee had no interest resulting from the fluctuations of the change to adjourn payment, the rate of conversion being a fixed rate, — namely, that of the day of maturity.

M. SULKOWSKI (Poland) believed that there was a misunderstanding. He was certain that the proposal submitted by the German delegation would, in reality, improve the situation of the creditor. Article 40 referred to the case of a bill of exchange drawn up and payable in foreign currency. In the first place, it was necessary to know whether the debtor would actually pay in foreign currency. What did Article 40 say? It gave to the debtor the right to make a substitution. In other words, it stipulated that the amount of the bill of exchange could be paid in the currency of the country according to the rate of exchange for the foreign currency. As Baron Carton de Wiart had pointed out, that was a questionable principle. Indeed, if reference were made, for example, to the rules adopted by the International Law Association at Vienna in 1926, it would be noted that the principle accepted there was directly opposed to it; that was to say, the debtor of a bill of exchange drawn up in foreign currency was always compelled actually to pay in that foreign currency, even if an effective payment clause did not exist.

• Article 40 laid down a different principle. It gave to the debtor the right to substitute the currency of the country for the foreign currency unless the bill of exchange contained the effective payment clause.

The result of the amendment submitted by the German delegation would be that when the bill of exchange did not contain that clause, and when the bill might be paid in the currency of the country, the rate of conversion to be employed was that in force on the day of payment. In the hypothesis in which the rate of exchange for the currency of the country fell in relation to that of the foreign currency which was the object of the bill of exchange, if conversion was effected according to the rate in force on the day when payment could be demanded, the holder might suffer enormous losses; whilst, if the rate in force on the day when payment was effected was adopted, the holder was safeguarded from any loss resulting from the depreciation of the currency in which payment was made.

It would therefore appear that the German amendment was such as to improve the situation of the holder in the event of the maintenance of the admissibility of the right of substitution in relation to bills of exchange that contained no effective payment clause.

In regard to whether it was necessary to make a reservation in the Convention, M. Sulkowski wished to point out to M. Percerou that if the Uniform Regulation was considered as model law it was not necessary to make a reservation. On the other hand, if it were considered that the Regulation should be accepted by States as it stood without any change beyond those for which provision was made in the Convention, it would be necessary to make a reservation. Otherwise, the legislative freedom of States would be limited by Article 40. They would be unable to enact any provision concerning foreign currencies, although there were moments when a State found itself compelled to restrict the circulation of foreign currency in its territory.

M. PERCEROU (France) feared that M. Sulkowski was mistaken in regard to the compromise which, together with the head of the Swedish delegation, he had submitted. That compromise would be as follows: the text on which a vote would be taken by the Conference could not be modified at the outset in the uniform law except by means of a reservation. On the contrary, once the law was passed, Parliaments would retain their right to make amendments in order to meet exceptional circumstances, and it would not be necessary to make a reservation to modify an article of the regulation. That was a great difference, which would seem likely to render the regulation acceptable to Parliaments.

M. Percerou recognised that a reservation would be necessary if the compromise of which he had just spoken were not adopted. If, on the other hand, this system became — as he hoped it would — that used in the Convention, the reservation proposed by M. Sulkowski would be unnecessary.

M. SULKOWSKI (Poland) considered that the question should be settled when the Convention itself was discussed.

M. QUASSOWSKI (Germany) wished to reply to the objections raised against the proposal of the German delegation which he had submitted in order to obviate the disadvantages in which a delay might involve the parties concerned. The legal situation was as follows:

Article 40 stipulated that the amount of a bill payable in a foreign currency should be calculated according to its value on the day when payment could be demanded. That principle did not appear to M. Quassowski to be equitable or in conformity with practical requirements. He was considering only the normal case; that was to say, the case in which payment was effected on the day of maturity. There would, however, be objections to that rule in the somewhat frequent cases in which payment was made only after maturity, for in these cases variations in the rate of exchange, either of the foreign currency or of the currency of the country, were neglected.

M. Quassowski gave the following example :

A bill for \$100 was payable in Germany on May 1st. On that day the dollar was at the normal rate of 4.20 Marks. \$100 was therefore worth 420 Marks. Payment, however "was only effected on June 1st for reasons for which the parties concerned neither the creditor nor the debtor were responsible. On June 1st, the rate of the dollar had risen. It was worth, for instance, 5.20 Marks. According to the principle laid down in the draft Regulation, it was the rate in force on May 1st which was valid. The creditor therefore received only 420 Marks instead of 520 Marks. He therefore suffered a loss, for with that sum he was unable to buy \$100. To take the opposite case, it might be that the rate of the dollar had fallen and that on the day of payment it was not 4.20 Marks, but only 3.20 Marks. In that case the creditor, according to the principle laid down in the draft regulation, received 420 Marks instead of 320 Marks. Then it was the debtor who suffered loss, although the creditor benefited by an advantage which was not justified. He received a sum of 420 Marks, with which he could buy more than \$100. An infinite variety of such examples could be given.

M. Quassowski drew the attention of his colleagues to the variations in the rate of exchange of the Mark during the period of inflation. If there were ever again so exceptional a period, it would be quite possible, with the present text of Article 40, that the creditor would end by receiving nothing if the period between the day of maturity and the day of payment were sufficiently long.

On the other hand, if the principle were adopted that the rate of exchange on the day on which payment was effected was valid, the creditor would always receive exactly, in the currency of the country, the sum whose value corresponded to the amount of the bill, and neither more nor less than that.

Baron CARTON DE WIART (Belgium) understood the desire for justice in the mind of the German delegation, but recalled that the unjust situation which might be created by the presumption established in the text was no one's fault. On the contrary, if a certain time-limit were allowed to elapse between the moment when the sum could be demanded and the moment when it was actually paid, both of the parties interested would be encouraged to speculate in the interval.

According as to whether the rates rose or fell, they could try to bring nearer or postpone the date of payment, and this procedure would certainly be far more contrary to justice than the procedure which would result from the proposed text.

In accepting the proposed presumption, an exception would be made ; and at the moment of starting on this path, it might even be asked whether it would not be better to return to the moment of the bill's creation in order to fix the rate.

This was a practical question. It was not only during the war that such cases had occurred. The present period during which exchange rates were unstable did not seem to be likely to draw to an immediate close. For that reason, Baron Carton de Wiart thought that the proposal of the German delegation, while based on justice, defeated that end.

Mr. GUTTERIDGE (Great Britain) said that the English rule was that the rate of exchange was calculated on the day on which the bill fell due. Bills in England were always payable in English currency ; payment in foreign currency was not allowed. They must always be paid in English currency if the holder so demanded, and he thought that this was a rule which worked very well.

M. Deoclecio DE CAMPOS (Brazil) thought that the various points of view had now been adequately expressed and that the Conference should vote on the question.

M. VISCHER (Switzerland) was opposed to the adoption of the amendment put forward by the German delegation.

M. SHIMADA (Japan) asked whether the phrase referring to the payment " on the day when payment can be demanded " also included cases in which the holder exercised his right of recourse against the guarantors before maturity.

The PRESIDENT thought that the reply should be in the affirmative.

M. QUASSOWSKI (Germany) reminded the Conference that his country had had an unhappy experience of inflation. It was understandable that representatives of countries which had not endured that catastrophe could not understand the full importance of the German proposal. If the text of the exception, however, were adopted, the following result might occur. A bill of exchange was stipulated as payable in dollars ; the place of payment was Germany. If the Mark sustained an appreciable fall between the day of maturity and the day of payment, the debtor could pay his debt in dollars with a sum of very depreciated Marks. This was unjust and quite unacceptable.

The German courts, particularly the Reichsgericht, had frequently dealt with this question and sometimes — a thing which happened very rarely — a judgment had been delivered by all the judges sitting in that court. That judgement had decided that the rate of exchange was that of the day of payment. The doctrine and legal practice in Germany were therefore in favour of this solution, which was the only possible one.

The German amendment was put to the vote and rejected by 13 votes to 8.

The PRESIDENT referred to the conditional amendment proposed by the Japanese delegation. That delegation did not understand the reason why the endorser should be allowed to determine the rate of foreign currency in the bill. The President thought that it was obvious that the Committee of Experts, as well as the Hague Conference, had no objection to the drawer giving in advance the right to the endorser to determine the rate.

M. SHIMADA (Japan) regretted that the Japanese delegation was not satisfied with this explanation. In consequence, he proposed to delete the words "or to be determined by an endorser".

M. GIANNINI (Italy) supported the Japanese amendment.

The Japanese amendment was put to the vote and adopted by 13 votes to 5.

The PRESIDENT drew the attention of the Conference to the following observations of the Dutch Government: "In the first paragraph between the words 'as stipulated' and 'that payment', the words 'in the body of the instrument' should be inserted in order to ensure that the stipulation referred to in this paragraph has really been introduced by the drawer himself." This addition would improve the wording of the paragraph, would fulfil the intentions of the Committee of Experts and would be in conformity with the spirit of the Hague Regulation.

M. PERCEROU (France) saw no objection to this addition, but thought that the solution it offered was obvious.

M. VAN NIEROP (Netherlands) wished that the clause in question should be mentioned in the text of the instrument and not in the bill. It would be for the Drafting Committee to take the necessary steps.

M. GIANNINI (Italy) asked the Conference to entrust the Drafting Committee with the duty of examining those observations made by Governments which did not affect the substance of the problem.

The PRESIDENT was unable to agree with M. Giannini, for some observations affected the substance and others the form. In regard to a third kind of observation, it was impossible to decide whether it concerned the form or the substance. If it was merely a question of drafting and form, there was nothing to prevent the submission of the observations to the Drafting Committee. Did the Conference accept the insertion of the words: "in the body of the instrument itself"?

This addition was adopted.

The first paragraph thus amended was approved at a first reading.

ARTICLE 40, PARAGRAPH 2.

This paragraph was approved at a first reading.

Article 40 as a whole was approved at a first reading.

ARTICLE 41.

Article 41 was approved at a first reading.

CHAPTER VII. — RECOURSE FOR NON-ACCEPTANCE AND NON-PAYMENT.

M. SHIMADA (Japan) recalled that the question of the legal position of the domiciliary dealt with in the Japanese proposals had been left open when the "Chapter on Payment" had been examined. He wished this question to be dealt with in connection with Chapter VII.

The PRESIDENT proposed to reserve the amendment of this question until the end of the chapter.

M. PERCEROU (France) said that the same question had arisen in connection with Article 21. A formula could be adopted and a decision taken when the Conference examined the report of the Drafting Committee.

The PRESIDENT thought that the Conference should follow this suggestion. When it had received the report of the Drafting Committee, it would decide whether there would be any necessity to make a change or an addition, either to Article 21 or to Article 26 or to the end of the "Chapter on Payment".

ARTICLE 42.

The PRESIDENT read the following Czechoslovak amendment:

"In paragraph 2, sub-paragraphs 2 and 3, after the words 'has failed', insert the words 'or has undergone judicial liquidation'."

M. SRB (Czechoslovakia) explained that, according to Czechoslovak legislation, it was possible for the debtor to demand the procedure known as judicial liquidation. In order to obtain it, the debtor must undertake to pay each non-privileged creditor a sum amounting, according to the present law, to at least 35 per cent of the debt. Without entering into detail, it would be sufficient to point out that to open this procedure of judicial liquidation showed that the debtor would not entirely settle his debts. In these circumstances, it was necessary to insert in Article 42 a clause stating that what was laid down in the case of bankruptcy should also apply to the case of judicial liquidation.

Judicial liquidation was not to be found only in Czechoslovak legislation, but also in that of many other countries. In all those States, the question might arise whether the judicial liquidation should have the same legal effects as bankruptcy. If States whose legislation did not contain any provisions covering judicial liquidation were unable to agree that reference to this should be inserted in the text of the Uniform Regulation, it was indispensable that a provision covering this matter should be inserted in the Convention.

M. PERCEROU (France) was all the more able to understand the observations of the Czechoslovak delegation since judicial liquidation was of French origin. It had existed in France for forty-one years and most legislations which had adopted it were more or less based on the French law. It was not, however, necessary to mention judicial liquidation side by side with bankruptcy in Article 42, for the word "bankruptcy" was followed by a very wide term "or has suspended payment", which included all cases of suspension of payment—that was to say, cases of bankruptcy, judicial liquidation and even cases of duly stated suspension of payment—which had given rise to no proceedings in bankruptcy or judicial liquidation proceedings. In those circumstances, the Czechoslovak delegation might feel satisfied.

M. SRB (Czechoslovakia) replied that a reference to suspension of payments was to be found in paragraph 2, but not in Paragraph 3, of Article 42.

The PRESIDENT said that the question whether paragraph 2 should be brought into line with paragraph 3 would be examined later.

M. SRB (Czechoslovakia) was not entirely satisfied, for Czechoslovak legislation drew a distinction between bankruptcy, judicial liquidation and suspension of payment. These three cases were mentioned in the law. In practice, however, there was no great difference and the Czechoslovak delegation could therefore support the suggestion of M. Percerou.

The PRESIDENT thought that the explanation of M. Percerou could be included in the report.

M. SULKOWSKI (Poland) wished to bring paragraphs 2 and 3 into harmony.

The PRESIDENT replied that that question would be examined when the time came.

Mr. GUTTERIDGE (Great Britain) asked M. Percerou's President of the Committee of Experts whether the word "faillite" was used in the technical sense in which it was used in French law. If so, serious difficulty might arise, because it was impossible to translate the word "faillite" by an appropriate English word. It was not bankruptcy. It might be said that this was a theoretical matter, but he assured the Conference that it was of very great practical importance. There would be two authentic texts of the law, one in French and one in English. It might be that there were countries like Germany which would prefer the English text to the French text, and if words could not be adequately translated difficulty would arise. He hoped that the Conference would abstain, as far as possible, from using in the text of the Regulation words which were technical words in foreign law and which were quite incapable of translation into English. Otherwise, in future, a German judge might say that he would proceed on the basis of the English and not of the French text, and the very object which the Conference had in mind might be absolutely defeated.

M. ALBRECHT (Germany) associated himself with the observations of Mr. Gutteridge. The word "faillite" in the French text of Article 42 could not be translated adequately into the German or English languages. He did not think that French jurists could be well satisfied with the actual wording of the first paragraph of Article 42, which said that the holder of a bill might exercise his right of recourse even before the date of payment "dans le cas de faillite du tiré, accepteur ou non, de cessation de ses paiements. . .". If the French Code of Commerce were consulted about the meaning of the word "faillite", the following would be found :

"Tout commerçant qui cesse ses paiements est en état de faillite."

Thus the same thing was mentioned twice in the wording of Article 42 : "faillite" and "cessation de ses paiements". In French law both were exactly the same, so far as M. Albrecht could see.

When the Hague Convention was presented to the Reichstag for adoption, the official German memorandum stated that it was impossible to translate that very passage by reason of the word "faillite". If the English version of the text contained in the preparatory documents were referred to, it would be found that the word was wrongly translated and had been rendered by the words "has failed", which, so far as he knew, had no specific meaning in English. For those reasons, the word "faillite" had been eliminated in the German amendment and in its place reference was made to a broad principle by the statement that whenever the drawee was in a state of insolvency and his state had become manifest by the institution of judicial proceedings for the general liquidation of his property for the benefit of his creditors the right of recourse could be exercised against the drawer.

The PRESIDENT proposed, in order to satisfy everyone, that the phrase should run as follows :

"In the case of suspension of payment, whether by the drawee or acceptor, but not authenticated by a judgment. . ."

M. PERCEROU (France) said that these questions had been examined at great length at The Hague.

In reply to the objection made by the representative of Germany, M. Percerou thought that it was possible to translate the terms of Article 42 with accuracy. In German, the word "faillite" was translated by "Konkurs" and the "suspension of payment" was translated by "Zahlungseinstellung", M. Quassowski's interpretation of French law was not quite accurate. In France, there were three different situations :

Bankruptcy entailed a judgment declaring it.

Judicial liquidation entailed an opening judgment declaring it.

Suspension of payment was the state in which a trader found himself who had ceased payment, and in regard to whom the judges had noted this suspension without stating that it was a case either of bankruptcy or judicial liquidation.

Finally, in reply to Mr. Gutteridge, M. Percerou agreed that the word "faillite" was not capable of exact translation into English. He was, however, in the somewhat peculiar situation of being compelled to draft a text to take account of legislation which would not include that text. The exact reason why it had been impossible to introduce the term "judicial liquidation" was because certain States made no provision for it.

As far as the translation of the word "faillite" was concerned, would it not be possible to insert in the English text the word "bankruptcy" followed in brackets by the French word "faillite"?

The German delegation would be satisfied if the two expressions "Konkurs" and "Zahlungseinstellung" were similarly used.

M. Percerou was therefore in favour of the maintenance of the text. This question had been discussed at length at The Hague and he thought that it would be dangerous to try to modify it, for other amendments would then be put forward. The text had been carefully examined by the Committee of Experts and it had finally agreed to adopt it.

Mr. GUTTERIDGE (Great Britain) asked the President whether it was justifiable to use an English word and then to add in brackets the actual French word which had been employed. If so, a great many difficulties would be avoided, but he was not certain whether that was the correct procedure in the case of international conventions.

The PRESIDENT thought that in the very special case of an untranslatable word this procedure should be followed.

M. TROULLIER (International Chamber of Commerce) observed that the difficulties which had just been raised were practically the same as those to which attention had been drawn by the International Chamber of Commerce. It had been alleged that the word "faillite" had no full equivalent in English. Similarly, it did not have the same meaning in France and Germany, since, in the latter country, persons other than traders could be "mis en faillite".

The term "cessation de paiement" (suspension of payment) was an omnibus expression, especially when followed by the words "même non suivie d'un jugement" (even when not followed by a judgment). It would therefore suffice if this expression were used.

As to the addition of the word "liquidation judiciaire" (judicial liquidation), it seemed that it would be a mistake to introduce that term into the present text. It had been rightly pointed out by the International Chamber of Commerce that this term was used quite incorrectly, since the peculiar feature of this transaction was that nothing at all was liquidated. It was probable that the expression might be changed within a short time.

M. ALBRECHT (Germany) said that if he understood aright the meaning of the terms "Konkurs", "bankruptcy", and "faillite", the distinction was as follows : In Germany a private person or a company might be in Konkurs. In England, "bankruptcy" applied only to private persons and not to companies. In the case of companies, there was a compulsory winding-up by the court.

Mr. GUTTERIDGE (Great Britain) added that there might be a voluntary winding-up.

M. ALBRECHT (Germany), continuing, said that though "winding-up" was not called bankruptcy, it was practically the same. In France, the term "faillite" was not applicable to private persons, who could only be "en déconfiture", but the latter term was not applicable to companies. The same system of compulsory winding-up by the court existed in France.

He would ask the Conference to imagine a case in which the drawer of the bill was a French company. A German judge, who had to decide whether a claim in recourse was sound, would consult the text and would find the term "faillite". He would say that this was not applicable to a company. M. Albrecht did not know whether it could be said in France that the beginning of the compulsory winding-up of a company by the court was in itself a suspension of payment. In Germany, where an excess of liabilities over assets was a ground for declaring a company bankrupt, it would certainly not be said that a company which became bankrupt on that ground had by that mere fact suspended payment. For those reasons, he thought that the Conference should avoid the use of a legal term of the French language in its international text and should rather try to describe the exact position which it was desired to cover.

In regard to the President's suggestion to strike out the word "faillite" and to be satisfied with the suspension of payment, M. Albrecht's objection was as follows. A company could go bankrupt under German law, even if it had not suspended payment, if its liabilities exceeded its assets. The commencement of bankruptcy proceedings in itself was, in German law, not regarded as a suspension of payment. There might, therefore, be a company which was bankrupt but had not suspended payment, and the text would not apply in such a case. For this reason, he was sorry that the German amendment had not been distributed. It was necessary to use a clause which contemplated the case of bankruptcy in the widest sense of the word, and to describe it in terms which were applicable to all countries.

The PRESIDENT pointed out that point (2) of the German proposal was as follows :

" If the insolvency of the drawee, whether he has accepted or not, is shown by the institution of proceedings for the general liquidation of his property for the benefit of his creditors, or by an equivalent official act, and also if he has suspended payment, even if the suspension is not authenticated by a judgment, or where execution has been levied against his goods without result..."

In a conversation with one of the German delegates, the President had convinced him that the word "insolvency" could not be kept in this amendment as referring to the countries which had the system of "faillite" according to the French Commercial Code, since there were two periods, that preceding insolvency and that following insolvency. In the case of a "concordat" (composition), the second period never began.

The President had drafted the following proposal which he hoped would meet the requirements of the German and English systems :

" 1. If acceptance has been refused ;

" 2. Where there has been suspension of payment on the part of the drawee, whether he has accepted or not, even if the suspension is not authenticated by a judgment, or where there have been any judicial measures for the benefit of his creditors, or where execution has been levied against his goods without result."

M. PERCEROU (France) feared that this formula gave rise to two objections : the phrase " where there has been suspension of payment, even if such suspension has not been authenticated by a judgment ", would not satisfy the Germany delegation, since the latter had said that a company which, although it had not suspended payments, was insolvent could be " mis en faillite ". On the other hand, the fact of levying execution on a debtor did not imply that he was insolvent. Certain bad payers were perfectly solvent, but were unwilling to pay. The point here considered was the insolvency of the drawer ; it was that which gave rise immediately to recourse. The proof of insolvency resulted only from the inefficiency of the measures of execution (execution levied without result). The phrase " any judicial measures for the benefit of the creditors " was too wide, since the fact of these measures being put into force would not necessarily imply the debtor's insolvency.

He feared, therefore, that the formula proposed by the President would be subject to criticism.

The PRESIDENT thought that there was a misunderstanding. The words " any judicial measures for the benefit of the creditors " followed by " where execution has been levied against his goods " indicated clearly that the measure was a specific one taken on behalf of all the creditors and not a special procedure. There could be no question on this point.

M. SRB (Czechoslovakia) thought that the formula proposed by the President was a very happy one. It entirely satisfied the Czechoslovak delegation and the latter would withdraw its amendment if the Conference accepted the President's proposal.

M. SULKOWSKI (Poland) agreed that the text proposed by the President appeared satisfactory. If, however, it were not acceptable to certain delegations, he proposed that the text in the regulations should be kept as it stood and that a reservation should be made on the following lines :

" The contracting countries may indicate the legal situations referred to in Article 42 in accordance with their national legislation."

M. ARCANGELI (Italy) observed that, notwithstanding the very great interest of the present discussion on comparative law with regard to bankruptcy, the question had not been solved. The formula proposed by the President appeared to be a helpful one, but M. Percerou thought that it was too wide. As the question now was only one of drafting and as there was agreement on the principles, why should it not be left to the Drafting Committee to seek for a text? The Drafting Committee would examine the President's formula and the observations which the different delegations might submit, and it would then present a text to the Conference. That was the only way of ending the present discussion, for it was impossible at the present moment to find a formula which would content everyone.

M. VISCHER (Switzerland) felt that the Hague wording was the best, for it was very simple and covered every case. Switzerland had in regard to "faillite" all the institutions existing in Germany. Every case was covered by the Hague formula. It might merely be asked whether "concordat judiciaire" (judicial composition) was also included in the term "cessation de paiements" (suspension of payment). It seemed that the answer must be in the affirmative since in the case of "concordat judiciaire" the court invariably stated that there was a "sursis concordataire" (suspension by composition), and a "sursis concordataire" was synonymous with the term "cessation de paiements".

He therefore proposed that the Hague wording should be kept, but would not oppose the examination of another text by the Drafting Committee.

Prince VARNVAIDYA (Siam) informed the Conference that the prevalent foreign language in his country was English. He understood that in conventions concluded under the auspices of the League both languages were of equal force and value. Therefore, in principle, he would like the English text to be quite clear and independent of the French text. He wished to support the President's proposal, because he believed that it covered the same ground and would enable the English text to be in concordance with the French text. Siam had already adopted the Hague text and had translated the words " a fait faillite " by the English words " has become bankrupt ". In Siamese law, a company could become bankrupt and therefore no difficulty arose. If the Conference did not adopt the President's proposal, he could accept the text of the experts.

M. GIANNINI (Italy) thought it unnecessary to prolong unduly an academic discussion of this kind. It might be deduced from the debate that the precedents were of no importance, and the same was true of the report and of the previous discussions. The question now under consideration had formed the subject of protracted deliberations at previous conferences. They had resulted in the formula which the Conference now had before it. For eighteen years, this article had been generally found satisfactory. Was it, then, desirable to make any change at all? Certainly not, since the facts invariably predominated in this case. The article did not call for criticism, and it was only at the last moment that the German delegates had indicated certain fears. There being so many different systems, the possibility of improving the text could not be contemplated. Lastly, the vast problem of bankruptcy could not be treated in full at the present time. Existing institutions must be taken as they were and a formula to cover the general situation must be found. For eighteen years, the Hague formula had shown that it was satisfactory.

That being so, M. Giannini requested the Conference to keep to the 1912 formula. It would always be possible, if necessary, to make certain improvements of detail in it. The Conference, for instance, had before it a Japanese amendment and a reservation made by the French delegation.

The PRESIDENT pointed out that the discussion dealt with the Czechoslovak amendment, which had not been withdrawn.

He had made a suggestion, but as he was not entitled to submit proposals this suggestion would have to be put forward by one of the delegations.

M. ALBRECHT (Germany) withdrew his amendment in favour of the suggestion put forward by the President.

M. HERMANN-OTAVSKY (Czechoslovakia) said that he, too, accepted the President's suggestion as an amendment.

The PRESIDENT noted that the Czechoslovak and German amendments were withdrawn and that there was now before the Conference a German-Czechoslovak amendment, on which he would ask the Conference to come to a decision, the question of the wording being reserved.

The German-Czechoslovak amendment was rejected by 13 votes to 11.

The PRESIDENT noted that the Conference had pronounced in favour of the original text drawn up by the experts.

The Drafting Committee would seek for the exact English equivalent of the term " a fait faillite " and would submit a proposal.

There remained the following amendment submitted by the Japanese delegation :

" In Article 42, which concerns the conditions of recourse before maturity, the drawee referred to in No. 2 and the drawer referred to in No. 3 should be placed on the same footing. The Article should read as follows :

- " 1.
- " 2. Where the drawee, whether he has accepted or not, has failed.
- " 3. Where the drawers of a non-acceptable bill have failed."

It appeared that the Japanese delegation's object was to bring sub-paragraph 3 into line with sub-paragraph 2. As the Conference had adopted the experts' text for sub-paragraph 2, the President assumed that the Japanese delegation wished to repeat in sub-paragraph 3 the cases mentioned in sub-paragraph 2.

The Japanese amendment was put to the vote and rejected by 10 votes to 6.

The PRESIDENT observed that the French delegation had submitted the following proposal :

" The French delegation asks that provision be made in the Convention, or elsewhere, for the following reservation :

" As an exception to the provisions of Article 42, sub-paragraphs 1, 2 and 3, and of Article 73bis, of the Uniform Law, each Contracting State reserves the right to make provision in its laws to enable persons liable for a bill of exchange to obtain, in the event of the right of recourse being exercised against them, periods of grace which may in no case run beyond the maturity of the bill of exchange."

M. PERCEROU (France) explained the reasons for this proposal. Article 444 of the French Commercial Code stipulated that in the case of "faillite" of the drawer or of the drawee who had not accepted, the endorsers were entitled to choose between immediate payment and the possibility of giving a surety. The solution which had been adopted, and in which France had concurred, aggravated this situation, since the endorsers no longer had the option of furnishing a surety but had to pay immediately. That position might be very awkward for the guarantors.

Even while the present law was in force, and notwithstanding the option granted them, a draft law had, at the request of many of the French Chambers of Commerce, been tabled on July 23rd, 1929, and contained the following clause :

"Nevertheless, they (the guarantors) may apply to the President of the Tribunal of Commerce of the place in which the bill is payable and request periods of grace. If the request is found to be justified, the order will determine the period at which they will be bound to pay the commercial deeds in question, but the periods of grace thus granted may not run beyond the date fixed for maturity."

This draft law was intended to meet the following consideration : The guarantors had not foreseen the necessity of paying immediately ; they might therefore be placed in a very awkward situation as a result of the obligation to procure funds at once. This aggravation of the position was not justified when the guarantors were completely solvent and when there was no question of their being able to meet their liabilities at maturity. Further, strictly speaking, the holder was only entitled to be paid at maturity. It was for that reason that the draft law proposed to authorise the President of the Tribunal of Commerce, if he considered that the guarantors were completely solvent, to grant them periods of grace.

According to the French proposal, the right of the President of the Tribunal of Commerce to grant periods of grace to the guarantors referred not only to the cases mentioned in the second and third sub-paragraphs (cases of "faillite" of the drawee or the drawer), but also to the case of the refusal of acceptance.

The French delegation was prepared to withdraw its amendment in so far as concerned the first sub-paragraph. The text consequently would read :

"As an exception to the provisions of Article 42, sub-paragraphs 2 and 3, and of Article 73bis, of the Uniform Law . . ."

The French delegation therefore was submitting no amendment in regard to immediate recourse in the case of the refusal of acceptance, since such a refusal would often make the situation open to suspicion.

Finally, M. Percerou pointed out that his proposal would meet the wishes, not only of French commerce, but also, he believed, of the International Chamber of Commerce.

The PRESIDENT pointed out that sub-paragraph 3 covered the case of the "faillite" of the drawer of a non-acceptable bill, and asked M. Percerou if it was definitely his intention to grant periods of grace in such cases as well.

M. PERCEROU (France) explained that the periods of grace were to be granted to the guarantors of the bill. In the case of the "faillite" of the drawer of a non-acceptable bill, the guarantors were the endorsers. It was obvious that if the drawer of a *non-acceptable bill* was "en faillite", he could not benefit by a period of grace ; furthermore, in such a case the drawer was not a guarantor, but, of course, the principal debtor. Moreover, it would be possible to make this point clear in the report by pointing out that in this case the drawer was not a guarantor and could not benefit by the provision in question.

M. TROULLIER (International Chamber of Commerce), on behalf of the International Chamber, pressed for the adoption of the French proposal. The International Chamber had been strongly impressed by the fact that as the result of a big disaster a merchant might be obliged immediately to pay 400,000 francs instead of paying them, as a guarantor, only at the end of five months.

The PRESIDENT thought that the French proposal raised no great opposition. As every endeavour should be made to obviate reservations, he asked whether the Conference would be prepared to introduce the French proposal into the text of the law.

Baron MARKS VON WÜRTEMBERG (Sweden) said that he would put forward this proposal.

M. PERCEROU (France) said that he had only put forward his text as a reservation, but he was, of course, in favour of embodying it in the law as an amendment.

M. QUASSOWSKI (Germany) thought that French law presented a peculiar feature on this point. He was not opposed to a reservation being made in one way or another, but he would oppose the introduction of the amendment into the Uniform Regulation.

A provision of that kind would seriously endanger the position of the creditor, who, as a result of the period of grace granted to the guarantor, would be unable immediately to collect the amount of the bill.

In German law no such procedure was known. It amounted to a judicial moratorium. The German delegation must therefore state that it could not embody a clause of that sort in German law.

M. HELPER (Denmark) agreed with M. Quassowski's view.

M. SULKOWSKI (Poland) thought that this question should be settled in a uniform way by the acceptance either of the Hâgüe formula or of that proposed by M. Percerou. In regard to-

the latter formula, why should a period of grace be granted in cases (2) and (3) and not in the first case — that which covered the refusal of acceptance? The situation was the same in all three and the formula proposed was accordingly illogical. M. Sulkowski could only accept an amendment which covered all three situations in the same way.

M. GIANNINI (Italy) considered that the French proposal appeared to present certain advantages at times of economic depression and he thought that it had been drawn up with this object in view. As, however, there was no adequate experience of the matter, it would be inadvisable to embody this formula in the general text. As the national legislative powers would be authorised by the reservations to enact rules of this kind, it would be possible to see whether the practice became so general that it was possible to standardise them and make them universal. That point could be considered at another conference. He expressed this view the more easily seeing that he was entirely opposed to increasing the number of reservations.

The Swedish amendment was rejected by 15 votes to 8.

The French proposal for a reservation was adopted unanimously.

The PRESIDENT said that the Conference would decide later whether these reservations should be embodied in the Convention or whether they should be expressed otherwise.

Article 42 as a whole was approved at a first reading.

ARTICLE 43.

The PRESIDENT submitted the following French reservation :

“By derogation from Article 43, paragraph 3, of the Uniform Law, each Contracting State shall have the right to prescribe that the protest for non-payment may not be made on the day when the bill is payable and to reduce the limit of time for presentment laid down in Article 37 to two days (day of maturity and following business day).”

“Reasons.

“It is inadmissible in France that the protest for non-payment should be made on the day of presentment, for according to French custom the drawee is entitled to the whole of this day in which to pay. This is a time-honoured rule to which much importance is attached in France.

“It was, moreover, in deference to this rule that Article 162 of the French Commercial Code was amended by the Law of February 10th, 1928, whereby if a bill of exchange matures on a legal holiday and is therefore payable on the following day (in conformity with Article 134), the protest is made on the second business day following and not on the day after maturity, as seemed to follow from a narrow interpretation of the letter of the old Article 162.”

The President also read out the following Portuguese amendment on the third paragraph :

“Protest for non-payment must be made on one of the two business days following the day on which the bill is payable.”

“Reasons.

“The introduction in the Uniform Law of the provision embodied in paragraph 3 of Article 43 of the draft would cause difficulties in countries like Portugal, where it is a firmly established tradition that the drawee must be allowed the whole of the day of presentment in which to effect payment.”

He asked M. Percerou whether the French delegation could withdraw its reservation if the Portuguese amendment was adopted.

M. PERCEROU (France) replied in the affirmative.

The PRESIDENT invited the Conference to discuss the Portuguese amendment first.

M. DA MATTA (Portugal) said that the system whereby a protest for non-payment must be drawn up on one of the two business days following the day on which the bill was payable was the most usual system in the different legislations. It was, he thought, fair that the debtor should be allowed the day of payment to effect payment. If it was true that the default of payment must be authenticated within a short period — in the interests of the exchange debtors and of the holder himself — the application of that principle should not be exaggerated unduly, especially since that might injure the interests of the parties liable and of the holder.

The introduction of the provision of paragraph 3 of Article 3 of the draft into the uniform Law would raise difficulties in countries like Portugal, where the tradition was firmly established that the drawee was allowed the whole day of presentment in which to effect payment.

M. PERCEROU (France) gave the reasons why the French delegation had tabled its amendment. The question was primarily one of morals, in regard to which no compromise could be made.

In France, it was held that the entire day of maturity must be allowed to the debtor to effect payment and that was, moreover, in conformity with common law. It was thought, too, that it was somewhat harsh, not to say brutal, to require the debtor to pay immediately the moment the bill was presented. Such an attitude might perhaps be compared to that of a highwayman demanding “Your money or your life”. Offensiveness of that kind was inconsistent with French

manners. There could be no thought of introducing it into France and the fact of not allowing the debtor the entire day for payment would raise a general protest. The truth of this was shown by the fact that quite recently French law had had to be changed in the following circumstances :

French law stipulated that when maturity fell on a legal holiday, or on a day assimilated to a legal holiday, it was carried over to the first following business day. Originally, however, the text of the law, had not added, that in this case, the protest was likewise carried over to the second following business day, so that the whole of the first business day would be allowed to the debtor. A court of appeal, interpreting the law in a doubtful manner, had decided that as only the day of maturity and not the day of protest was postponed, the two transactions might take place on the same day. Such great importance was attached to the question that Parliament had not even waited for the Court of Cassation to be seized of the matter in order to do away with the solution adopted by the Court of Appeal. An emergency bill had been tabled and voted with unwonted speed.

Such were the reasons for which the French delegation had brought in its proposal.

M. QUASSOWSKI (Germany) thought that, when the French and Portuguese proposals were examined, consideration must be had to the fact that the Conference had already adopted Article 37, according to which the holder must present the bill for payment either on the day on which it was payable or on one of the two following business days. The adoption of the Portuguese amendment would compel those creditors who asked for payment on the day of maturity, but did not receive it, to present the bill twice, once for payment and the second time for the drawing up of the protest. That would result in increasing the formalities to be accomplished by the holder and in increased costs. Furthermore, the holder of the bill would also run certain risks in the exercise of his rights, since, if he observed the time-limit for the drawing up of the protest, he might nevertheless fear the danger he would have to run from failure to observe the time-limit for presentment. Furthermore, if he observed the time-limit for presentment, he must also take into account the rules governing the time-limit for protest. In this way, the creditor's risks were greater than if there were a single time-limit for presentment and for the drawing up of the protest.

Consideration, too, must be paid to the fact that, if the creditor could have the protest drawn up on the day of maturity, he was in a position to exercise recourse earlier, a fact which might involve an appreciable advantage for him, particularly when the guarantor's situation was shaky.

For these reasons, M. Quassowski preferred the system recommended by the experts ; it was particularly advantageous in the case, covered by German law, of protest by post. In that case, the competent postal authority had the protest drawn up, but was also instructed to accept payment. It was possible, then, for the payment and the drawing up of protest, if necessary, to take place on the same day.

Nevertheless, in view of the special feature of French law to which M. Percerou had referred, the German delegation would make no objection to the French reservation.

M. GIANNINI (Italy), as he had said in connection with Article 37, would have preferred the question to be settled in the Uniform Regulation instead of having a reservation. For that reason, he associated himself with the Portuguese proposal. To his mind, there was no connection between Articles 37 and 43. There was no reason why the terms of Article 37 should be reproduced in Article 43. The arguments submitted by the German delegation had not convinced him, and he would support the Portuguese proposal.

M. Deoclecio DE CAMPOS (Brazil) had no hesitation in supporting the Portuguese proposal. The law in Brazil was very generous in regard to the power of the creditors to exercise their right. Article 28 of the law read :

“ A bill of exchange protested in default of acceptance or of payment must be remitted to the competent official on the business day (*jour utile*) following that of the refusal of acceptance or that of maturity. The protest must be made within three days.”

This clause was somewhat vague, because it was not clear whether the period of three days applied to the creditor as the time within which he must avail himself of his rights or whether it applied to the official charged with the drawing up of the protest.

The provision which he had quoted, as the Conference would realise, granted three days after maturity or refusal of acceptance.

The Brazilian system differed, generally speaking, from that in other legislations. In the judicial organisation of Brazil, there was to be found an “ official for protesting bills of exchange ”. It was to this official that the bill had to be handed on the day of maturity. The law granted him a period of three days in which to draw up the instrument of protest and hand it to the person concerned—that was to say, to the holder.

M. de Campos agreed that it was quite justifiable to grant a period of one day's grace for payment to the debtor only.

He therefore supported the amendment proposed by the representative of Portugal.

M. HELPER (Denmark) was in favour of the Portuguese proposal. Danish law, as it stood, contained the clauses which had been adopted at The Hague. As in Portugal, however, a practice had grown up and it was desirable that it should be legalised.

M. DE LA VALLÉE POUSSIN (Belgium) also supported the Portuguese amendment, for it was in conformity with Belgian legislation. He would have preferred that it should be laid down in Article 37 that the bill should be presented at maturity without two days of grace being allowed. Those two days of grace, however, given to the holder were one more reason for not holding a pistol to the head of the drawee and for allowing him at least twenty-four hours to free himself.

M. VAN NIEROP (Netherlands) did not see how the Conference could insist that protests should be made on the day of maturity, since it had been decided that a bill might be presented two days after maturity. The Conference might be certain that all bankers who designated the bill would take these two working days into account. That was an extra reason for declaring that protest ought to be drawn up after maturity, but during the two working days. That was, moreover, in accordance with the Netherlands legislation. He consequently supported the Portuguese amendment.

M. STUB HOLMBOE (Norway) agreed with his Dutch colleague, and would therefore support the Portuguese amendment. He did not, however, interpret it in the same manner as the German delegate. The Portuguese amendment left in suspense the question whether the holder must present the bill before protest. It stated merely that the protest could not be drawn up on the first day after maturity. It did not state that the bill must be presented upon that day. With that reservation, M. Stub Holmboe would vote in favour of the Portuguese amendment to avoid reservations as far as possible.

The Portuguese amendment was put to the vote and adopted by 13 votes to 8.

The PRESIDENT said that, in those circumstances, the reservation of the French delegation was withdrawn.

The observation of the Dutch delegation referring to Article 43, paragraph 3, was read :

“ According to Article 43, paragraph 3, protests for non-payment must be made either on the day when the bill is payable or on one of the two following business days. According to Article 33, a bill of exchange at sight is payable on presentment.

“ Is it to be concluded that the mere fact of having unsuccessfully presented a sight bill for payment without drawing up a protest deprives the holder of the right to protest in due time? We consider that the answer to this question should be in the negative; nothing should be able to prevent the holder from demanding payment afresh (subject to observance of the twelve-months limit of time laid down in Article 33); and Article 43, paragraph 3, should be interpreted as meaning that the holder is not deprived of his right of protest. The latter article simply means that if protest is drawn up on refusal of payment it must be made within two days of such refusal.”

The Conference decided, with the exception of the Swedish delegation, to refer to this observation in its report.

M. MOLENGRAAFF (Netherlands) said that the legislation of several countries — among others, those of Belgium, the Netherlands and, unless he was mistaken, of Italy — recognised protest by private deed in addition to protest by deed in good and due form. It was a declaration made by the drawee and recorded on the bill by which he stated that he refused payment.

This simplified protest had been introduced into the Netherlands by the terms of a recent law of 1925 to meet the desires of the persons concerned who had demanded a simpler form of protest. The Dutch Government could not reverse this decision. For that reason, its delegation proposed that the following reservation should be inserted in the Convention :

“ Each Contracting State reserves the right to prescribe that the protests to be drawn up on its territory may be replaced by a declaration dated and written on the bill of exchange itself and signed by the drawee, except in cases where the drawer demands that in the text of the bill a protest by deed in good and due form be inserted.”

M. Molengraaff thought that this reservation could be added to Article 8 of the Convention (text of the experts). Without that reservation, countries who wished to preserve the possibility of protest by private deed could not accept the first paragraph of Article 43, which required a protest by deed in good and due form.

The PRESIDENT asked M. Percerou, as Chairman of the Committee of Experts, whether M. Molengraaff would not be satisfied by Article 9 of the Hague Convention, which was to the following effect :

“ Every Contracting State may provide that, with the assent of the holder, protests to be drawn up in its territory may be replaced by a declaration dated and written on the bill itself, signed by the drawee and transcribed in a public register within the limit of time fixed for protest.

“ Any such declaration shall be recognised by the other States.”

He thought that M. Molengraaff could be satisfied with this text, though not completely satisfied, for it required the transcription in a public register, a system not used by several States. Article 8 of the Convention (text of the experts) was to the following effect :

“ The form of and the limits of time for protest, as well as the form of other proceedings necessary for the exercise or preservation of rights concerning bills of exchange or promissory notes, are regulated by the laws of the State within whose territory the protest must be drawn up or the proceeding in question taken.”

This article was to replace Article 9 of the Hague Convention. He asked the Chairman of the Committee of Experts whether, in his view, this article also covered protest by private deed, the matter raised by M. Molengraaff.

M. PERCEROU (France), Chairman of the Committee of Experts, thought that that article also covered protest by private deed. It covered cases of the mere record of a refusal to pay without the registration of this fact in a public register. He thought, therefore, that M. Molengraaff would be satisfied.

M. SULKOWSKI (Poland) did not agree with M. Percerou. Article 9 did not settle the question because the first paragraph of Article 43 laid down that a refusal of acceptance or of payment must be noted by a deed in good and due form.

To satisfy M. Molengraaff, a special reservation would have to be adopted to this effect.

The PRESIDENT thought that a paragraph could be added to Article 8 of the draft Convention. He asked M. Sulkowski whether he was in favour of the insertion of such a reservation.

M. SULKOWSKI (Poland) said that the number of reservations had been so largely increased that, though he was not unfavourable to the insertion of this reservation, he feared that the Convention would end by containing more reservations than articles.

M. GIANNINI (Italy) thought that it would be premature to discuss immediately problems which would have to be discussed when the draft Convention was before the Conference. It was impossible to take a decision forthwith on this matter. In his view, Article 9 of the Hague Convention was of a general character, and the Conference should avoid confusing it with the text of the experts. For that reason, it should confine itself for the moment to taking a decision on the question whether it was necessary to insert a reservation in the Convention of the kind proposed by the Dutch delegation. In so far as the wording of that reservation was concerned, the Conference could take a decision when it discussed the Convention.

The PRESIDENT said that he had asked the views of the Chairman of the Committee of Experts on the question. Since, however, there was a divergence of views between the experts themselves, the solution proposed by M. Giannini should be adopted, and the Conference should confine itself to deciding whether it wished to accept the principle laid down by M. Molengraaff or not.

The President would therefore put the proposal of the Dutch delegation to the vote, to the effect that protest by private deed should be authorised. It was understood that the final wording of this reservation and the place which it should occupy in the Convention would be reserved for future discussion.

The Dutch proposal was adopted by 17 votes to 2.

M. DA MATTA (Portugal) asked the reason for the provision in paragraph 4 of Article 43 :

“ Protest for non-acceptance dispenses with presentment for payment and protest for non-payment.”

The two protests, although subject to the same formalities, fulfilled different objects from the point of view of exchange law. Nothing was more natural if the drawee had refused to accept the bill, because he had not received notice or because he had made no deposit, etc., than for him to be ready to pay at maturity after these omissions had been rectified.

According to the strict interpretation of exchange law, the delegation of the drawee containing the bill of exchange was made in the case of payment and not in the case of acceptance. The refusal of that delegation could not therefore be logically deduced from the proof of a refusal of acceptance.

M. SULKOWSKI (Poland) said that it was not necessary to present the bill of exchange for payment at maturity, since the Regulation provided that, in the case of a refusal to accept, the holder might exercise his right of immediate recourse even before maturity. For that reason, it had been laid down that protest without acceptance made legal proceedings, in default of payment unnecessary.

Article 43 was approved at a first reading.

21. Table of Comparative Law in regard to Bills of Exchange, drawn up by Dr. Magnus.

M. QUASSOWSKI (Germany) said that Dr. Magnus of Berlin, a distinguished German lawyer, had just published a table of comparative law concerning bills of exchange in co-operation with a large number of jurists. The publisher, Franz Vahlen of Berlin, who had published this table, had submitted a certain number of copies to the German delegation, who desired to offer them to the President and to each delegation in the hope that they might facilitate the task of the Conference.

The PRESIDENT, on behalf of the Conference, thanked M. Quassowski.

SEVENTEENTH MEETING

Held on May 23rd, 1930, at 10 a.m.

President: M. J. LIMBURG.

22. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continuation).

Observations from the Netherlands delegation on Article 19.

The PRESIDENT submitted the following observation from the Netherlands delegation to Article 19 :

“ Article 19 regards an endorsement after the expiration of the time-limit fixed for drawing up the protest as a cession.

“ Let us suppose that payment has been demanded without success on a sight bill, that protest has not been made, that the time-limit laid down in Article 33 has not yet expired and that the bill of exchange is then endorsed.

“ When the endorsee presents the bill for payment, can the plea be advanced against him that the endorsement was made ‘ after expiration of the limit of time fixed for drawing up ’ the protest and that consequently the rigorous provisions of Article 19 are applicable to it. If so, the endorsee would be the victim of circumstances which he could not have known from the bill of exchange. Nevertheless, a decree by the Egyptian Mixed Tribunal, published in the *Journal des Tribunaux mixtes d’Egypte* on February 5th/6th, 1930, adopted this unfortunate conclusion in a similar case.

“ The Netherlands delegation is of opinion that such an interpretation is contrary to that of the Uniform Regulation. It considers that when a sight bill has been presented for payment and when, on refusal of payment, protest has not been made, the time-limit fixed for drawing up the protest has not expired within the meaning of Article 19.

“ If this is the Conference’s opinion on these matters, the Netherlands delegation will propose no amendment.”

He thought that it was in accordance with the spirit of the interpretation of Article 43 adopted on the previous day.

M. GIANNINI (Italy) thought that it would suffice if it were mentioned in the Minutes that the Conference approved the Dutch delegation’s interpretation.

The PRESIDENT thought that it should also be mentioned in the report.

M. GIANNINI (Italy) agreed.

Baron MARKS VON WÜRTEMBERG (Sweden) said that his delegation could not agree to the interpretation given by the Dutch delegation to Article 19.

The interpretation of the Netherlands delegation was approved subject to the foregoing reservation.

ARTICLE 44 : LATVIAN AMENDMENT.

M. LOEBER (Latvia), in presenting the following amendment :

“ When making protest for non-acceptance or non-payment, the notary or official authorised to draw up the protest according to the domestic law of the Contracting States is bound to notify in writing the persons liable under the bill of exchange whose addresses are specified in the bill of exchange or known to the notary drawing up the protest or given by the persons demanding the protest. The costs of such notice shall be added to the costs of the protest ” —

observed that Article 44 of the Regulations stipulated that the notification should emanate from the holder and his immediate endorsers. Latvian exchange law, which reproduced the provisions of the old Russian Imperial law relating to bills, had established a procedure different from that in the Regulation. It was the notary who, in drawing up the protest for non-payment, was obliged to notify the guarantors of the bill whose addresses were specified in the bill.

The procedure laid down in Article 44 of the Regulation was more complicated than that in Latvian law. The notification required by the Regulation might give rise to difficulties and complications, for instance where the holder, who had had the protest drawn up in default of acceptance or payment, did not notify his endorser. In such cases, not only would the endorser himself, but all the preceding endorsers also, receive no notice. As to the penalty prescribed in Article 44, paragraph 6, of the Regulation, that appeared somewhat problematical. It should further be noted that the system laid down by the Regulation had met with practical difficulties in the various countries where it was in force. The procedure laid down by the Latvian law on bills had caused no difficulties in commercial or banking circles, nor in judicial circles either. The same remark applied to the former Empire of Russia.

In regard to the notice, the practical bearing of the provisions of the Regulation was somewhat doubtful, since, generally speaking, the endorsers did not specify their address beside their name or, at any rate, did not inform, and could not even inform, the holder of their changes of address. Lastly, it must be remembered that the Hague Convention had already considered this question (*cf.* Article 11 of the Hague Convention). The Latvian proposal, therefore, was not an innovation. Nevertheless, the reservation mentioned in Article 11 of the Hague Convention, which corresponded simply to Article 44, paragraph 1, of the Regulation, did not altogether satisfy the Latvian delegation, since it would make it possible to prescribe thereby that a notification by the holder to his endorser and to the drawer must be made by the notary. Article 11 of the Hague Convention, on the other hand, allowed no derogation to the principle laid down in Article 44, paragraph 2, of the Regulation. Consequently, if Article 44, paragraph 2, was not altered in the sense of the Latvian proposal, the system of a simple notice would remain in force. Latvia would find great difficulty in acquiescing in such a situation, and that for very serious reasons.

If the amendment proposed by the Latvian delegation was adopted, paragraphs 2 and 5 of Article 53 would have to be drafted in accordance with the new wording of Article 44 of the Regulation.

M. VAN NIEROP (Netherlands) strongly urged the Conference not to accept this proposal. If a small sheriff's officer (*huissier*) or a small provincial notary forgot to send the notice of non-payment, what recourse would there be against him? It would never be possible in these circumstances to obtain damages. The article, as modified by the Latvian amendment, would be very dangerous in practice. Certain reservations had been made at The Hague and the countries had been given the option of stipulating that the sheriff's officer or notary would be compelled to give the notice. According to the Latvian amendment, however, there was no longer any question of an option, but of an obligation. Such a clause would be detrimental to trade, and for that reason should be rejected.

M. GIANNINI (Italy) said that it was but right to recognise that the Latvian proposal was based on the practical results achieved by a system which had been in force in the former Empire of Russia and had given rise to no serious objection. There were, however, objections, both practical and economic, which could be made against it. In the case of bills of exchange for small sums, the additional expenses resulting from these formalities were very heavy. For that reason, M. Giannini was unable to accept the Latvian proposal.

The Latvian proposal was put to the vote and rejected.

M. DUZMANS (Latvia) desired to return to the question. He would put forward another possibility, that of making a reservation.

He agreed that it had been somewhat rash to propose the amendment which had just been rejected, for its adoption would have necessitated a complete change in the provisions of the draft Regulations on this subject. The Latvian delegation, however, was unable to agree with the objection of M. van Nierop in so far as oversight on the part of the public official was concerned. If the idea of oversight were admitted in this case, *a fortiori* it should be admitted in the case of private persons called upon to give notice of the defect in the acceptance. The representative of Latvia thought, therefore, that it was impossible to reject the Latvian amendment merely for this reason, all the more so as the solution suggested by Latvia had been in force in Russia, an immense Empire where every form of civilisation and culture had been represented. The reason why this delegation had made this proposal was because it had been definitely convinced that it was suggesting an improvement.

In those circumstances, he asked the Conference to admit a reservation in the Convention or by some other means. This reservation was already to be found in Article 11 of the Hague Convention, though its scope was much smaller. The Latvian delegation asked, therefore, that the following reservation should be inserted in the Convention or in some other document :

“As an exception to Article 44 of the Uniform Regulation, each Contracting State may maintain or introduce the system of notice to be given by the public official, that is to say that, when drawing up the protest, if there has been no acceptance or payment, the notary or official who, in accordance with the law of the country, is authorised to draw up the protest must give written notice to those persons liable in the bill of exchange or in the promissory note whose addresses are shown on the bill of exchange or on the promissory note or are known to the public official drawing up the protest or indicated by the persons making the protest. The expenses incurred by such notice shall be added to the cost of the protest.”

M. Duzmans submitted his proposal to the consideration of his colleagues with the reservation that its wording might be changed,

The PRESIDENT asked the Latvian delegation to examine the question afresh, for at first sight he did not think it necessary for a reservation to be made. He would recall that every member of the Conference was convinced of the necessity of inserting as few reservations as possible.

The procedure laid down in the Latvian proposal seemed only to be in force in one country — Latvia. All the other States had indicated that the notice should be given by the persons concerned themselves. If that notice were not given by the persons concerned, the penalties provided for in paragraph 6 of Article 44 would be enforced. That paragraph was as follows :

“A person who does not give notice within the limit of time mentioned above does not lose his right of recourse. He is responsible for the injury, if any, caused by his negligence, but the damages shall not exceed the amount of the bill of exchange.”

In those circumstances, the President thought that the Latvian delegation need not urge the adoption of its proposal and he accordingly asked it to reflect.

M. Duzmans could perhaps be satisfied by adding to the text of Article 44 a reference to the fact that the notice could also be given by a public official.

M. VAN NIEROP (Netherlands) thought that the Latvian delegation might perhaps be satisfied if the beginning of the article were made to read as follows: "The holder or *his authorised representative* must give notice".

M. GIANNINI (Italy) was unable to accept this proposal.

The PRESIDENT was also unable to accept it, for it confused private with public law. He returned to his proposal to insert in the text of the article a reference to the fact that notice could be given by a public official.

M. GIANNINI (Italy) was unable to accept the proposal of the President for the result would be to introduce two different procedures into the uniform law and thus make its practical application very difficult. Every State would be able to choose between these two procedures. In spite of his hatred of reservations, a reservation was necessary in this case, all the more so as the practice urged by the Latvian delegation was not only in use in Latvia. After having been in force in the Russian Empire, it had been renewed in Latvia, Estonia, Lithuania and the Union of Soviet Socialist Republics. It was therefore an already well-known and fairly widespread practice.

The PRESIDENT was not convinced by the arguments of M. Giannini.

If it were stated in the Uniform Regulation that the notice must be given by the holder to the various persons concerned or by a public official to those persons, the various States introducing the Uniform Regulation into their legislation might do as they pleased. Italy and the Netherlands might, for example, do away with the public official and remain content with what was, at the moment, in existence.

M. PERCEROU (France) thought there would be no serious objection to satisfying the Latvian delegate. The system of notice given by an official was in use in Estonia, Lithuania and Latvia. In France, there was a provision analogous, though not similar, in the law of December 22nd, 1906, which laid down:

"The official who has drawn up the protest must, further, at the risk of incurring damages, give notice to the drawer when his name and domicile are shown on the bill within the forty-eight hours following the registration of the protest."

This provision did not deprive the drawer of his right of recourse and the notice was furnished only to himself and not to the endorsers. The object of this provision was to prevent the drawer whose bill was not honoured from continuing his deliveries to the drawee. The motives for the provision were practical. In a number of countries, notification by public officials might be advantageous, for the very reason that such notification was in some ways automatic. In view of the fact that the reservation left other States free to act as they desired, he thought it could be adopted.

In reply to the President, M. Percerou said that if it was desired to make the notification by an official compulsory, as Latvia demanded, a reservation would have to be made.

The PRESIDENT thought that the holder could not have the choice without a State regulation, for without such a regulation the public official could not give notice.

Baron CARTON DE WIART (Belgium) thought that the proposal of the President was very wise. He did not think that a public official should be compelled to give notices, but the formula suggested by the President merely allowed him to do so and, for that reason, Baron Carton de Wiart could support it.

M. EISNER (Yugoslavia) said that in his country the law made it possible to avoid a protest in the case of sums lower than fifty dinars by replacing it by a notice such as that just described.

M. SULKOWSKI (Poland) drew the attention of the Conference to the fact that, according to the Uniform Regulation, notice should be given by the holder to his predecessor. The drawer or the endorser who had received the notice must, in turn, warn his immediate predecessor. According to the Latvian proposal, the holder or the endorser would give notice to all the persons liable in the bill of exchange simultaneously. M. Sulkowski considered that Article 44 of the draft offered the best solution, for it might happen that the holder did not know the address of all his predecessors. If the holder was only obliged to give notice to his immediate predecessor, it could be admitted that every endorser knew the address of the person from whom he had received the bill. The principle laid down in Article 44 should therefore be maintained, and the only way of avoiding difficulties was to provide for reservations by the States who wished to act in another manner.

M. Deoclecio DE CAMPOS (Brazil) was in favour of the reservation, although he wished to see as much unity as possible in exchange law. If the Uniform Regulation offered a choice between two methods of giving notice, a certain amount of confusion might result.

According to the Brazilian legislation, it was the parties concerned who had to give notice and not the officer who drew up the protest and simply communicated it to the holder. The latter, together with the other parties concerned, had in their turn to safeguard their rights.

In regard to the legal position, M. QUASSOWSKI (Germany) was of M. Giannini's opinion. If the Uniform Regulation stated that notice could be given by a notary or another official, the contracting States would be obliged to allow them to give such notice. If, however, notice was not given, what would then be the legal position? Would the notary or the holder be responsible? Those questions could easily be settled in the national legislation if a reservation were authorised, which would therefore be preferable to a reference to an official in the Uniform Regulation.

M. GRÖNVALL (Finland) agreed with the German delegation.

The PRESIDENT referred once more to the necessity of avoiding reservations so far as possible. As M. Percerou had observed, the Regulation might state that the various contracting States should offer their nationals a choice. That would be better than a reservation, for if, for instance, in the Netherlands or in Italy the State offered a choice, none of the parties concerned would resort to the sheriff's officer (*huissier*) or to the notary. M. Duzmans should thus have satisfaction.

M. DUZMANS (Latvia) was also desirous of avoiding reservations as far as possible and greatly appreciated the reasons which had led the President to suggest another solution. Nevertheless, M. Duzmans was unable, in principle, to accept the President's point of view. For that reason, he had proposed a reservation. M. Duzmans emphasised the value of the arguments submitted with such authority by M. Giannini, M. Percerou, M. Quassowski and other delegates who had spoken in the same sense.

M. Duzmans stated that the Latvian delegation had made very great sacrifices in connection with the provisions of the legislation of their country with a view to enabling a Uniform Regulation to be laid down. He could quote several examples, but would not emphasise the point. For that reason, however, the Latvian delegation could not consent to make a new sacrifice, particularly in view of the fact that all the reservations were not of equal importance. That, before the Conference, would not greatly harm the uniformity of the Regulation.

M. Giannini had explained very clearly that the practice was not exclusive to Latvia, but was also in force in several other countries. It was impossible to say whether, in future, certain States would not desire to revert to it.

M. DE LA VALLÉE POUSSIN (Belgium) said that the Belgian delegation would prefer the adoption of the double method of notification to the introduction of a reservation.

As several jurists had explained, the insertion of the double method of notification in the Uniform Regulation would enable the parties concerned to choose between two methods of giving notice — by the public officer or by a personal notification. A problem arose, however, which was not settled by the present text. In virtue of Article 44, if notice were not given, the holder did not lose his rights of recourse, but if, owing to his negligence, the debtor of the bill or the endorser to whom application was made suffered loss, he was responsible for damages. If the system proposed were applied, and if neither the public officer nor the party concerned gave notice and a loss resulted, which of the two would be responsible for the damages?

M. de la Vallée Poussin believed that the holder would be responsible, but would it not be desirable to say so expressly in the text? Was it not even necessary?

The PRESIDENT suggested that it should be stipulated that the contracting countries had a choice, but with the proviso that the parties concerned were responsible.

M. BARBOZA-CARNEIRO (Economic Committee) asked the Conference to consider whether it would not be possible to avoid a reservation, as the President had suggested, by laying down somewhere, either in the Protocol or in the report, a provision under which the Governments would undertake, when they deposited the instrument of ratification, to make known to the Secretary-General of the League of Nations which practice they would prefer to adopt. The Secretary-General would draw up a list and would inform the different contracting States what was the position in the various countries. The obscurity which certain delegates feared would then disappear and a reservation would be avoided. Reservations had their use; they made the position more clear. The same result could be obtained, however, by an official communication making known which of the two methods had been adopted by each State.

The PRESIDENT put to the vote the proposal to insert in the Regulation itself, subject to revision by the Drafting Committee, the following principle:

“ This notice may be given through the intervention of a public officer on the responsibility of the holder.”

This proposal was rejected by 15 votes to 8.

The PRESIDENT then called on the Conference to vote on the right to make a reservation, in accordance with the request of the Latvian delegation.

The possibility of making a reservation was adopted by 16 votes to 1.

The PRESIDENT stated that there was a Swiss amendment in regard to the first two paragraphs of Article 44¹ which proposed that the time-limit of four days mentioned in the first paragraph should be altered to six business days and the time-limit of two days mentioned in the second paragraph to four business days.

¹ See Annexe n° 6.

M. VISCHER (Switzerland) stated that the compulsory giving of notice was an innovation for Switzerland. It was obvious that when it was necessary notice was given, but it was not always considered necessary. What was new was that as a result of the provisions laid down failure to give notice would involve the holder in the risk of having to pay damages. Notice had to be given within a certain period, and after that period there was a risk of having to pay damages.

M. Vischer had no intention of making a counter-proposal, for he recognised the value of giving notice. On the proposal of the Federal Bank of Issue, however, and of other credit establishments, he asked the Conference to adopt his proposal to prolong the time-limit. Banking establishments feared that compulsory notice would involve an excess of work on heavy settling days. They would have some difficulty in complying with the new regulation. The prolongation of the time-limit would enable them to divide the work over several days. The army of bank officials was already sufficiently numerous; it should not be increased.

M. SHIMADA (Japan) considered that the period of four days laid down in paragraph 1 was too long. He wished to substitute a period of two days, in conformity with the following proposal:

“The words ‘the four business days’ in paragraph 1 of Article 44 should be replaced by the words ‘the two business days.’”

M. SULKOWSKI (Poland) thought that the drawer should be informed as soon as possible that the bill of exchange had not been paid, otherwise the notice would lose all practical value. Therefore, M. Sulkowski could not accept M. Vischer's proposal, and was in favour of maintaining the text. He could also accept the Japanese proposal.

M. QUASSOWSKI (Germany) considered that the notice would lose almost all its value if the period was unduly prolonged. The object of notification was to enable the endorser or the drawer to make arrangements in the event of non-acceptance or non-payment. That protection would become quite illusory if notice were given too late. It should be taken into consideration that the notice went from one endorser to another, and if the bill of exchange contained a great many endorsements, the delay might become too great. In those circumstances, the speaker approved the proposal made by the Japanese delegation.

Put to the vote, the Swiss amendment was rejected.

The Japanese amendment was rejected by 13 votes to 7.

M. DA MATTA (Portugal) pointed out that the first paragraph of Article 44 stipulated that “the holder must give notice of non-acceptance or non-payment to his immediate endorser and to the drawer.”

On the other hand, the second paragraph stated that “every endorser must, within two days, give notice to his immediate endorser of the notice which he has received. . . until the drawer is reached.”

M. da Matta noted that no mention was made in these two paragraphs of the giver of an “aval”. According to Article 31, however, the giver of an “aval” was bound in the same way as the party for whom he had given security. It seemed, therefore, that Article 44 should also mention the giver of “aval”. It would therefore be necessary to complete the text of Article 44 in that sense.

The PRESIDENT asked M. da Matta to agree that the question should be referred to the Drafting Committee, which, with the delegate of Portugal, would be able to submit a proposal, if necessary. He asked M. da Matta, however, not to return later to the question if the Drafting Committee reached the conclusion that it was not desirable to take account of his suggestion.

M. DA MATTA (Portugal) accepted the procedure proposed by the President.

The PRESIDENT pointed out that the Japanese delegation had submitted an amendment to paragraph 2 to substitute for the words “within two days” the words “within two business days which follow the day on which he has received notice”.

M. SHIMADA (Japan) stated that the Japanese delegation had submitted the amendment because in the two days in question there might be a holiday. In that case, there would only be one business day.

The Japanese amendment was adopted by 13 votes to 5.

The PRESIDENT pointed out that the Japanese amendment also contained the words “and the remainder of the sentence should be modified accordingly”.

The Drafting Committee would deal with that question.

The President then put to the vote the first two paragraphs of Article 44.

These two paragraphs were approved at a first reading.

ARTICLE 44, PARAGRAPH 3.

The PRESIDENT said that the Japanese delegation had submitted the following amendment to this paragraph:

“After paragraph 3 of Article 44, it should be added that in the event of a drawer not having specified his address, or having specified it in an illegible manner, notice need not be given to the drawer.”

M. Molengraaff also had a proposal to submit in regard to that paragraph.

M. MOLENGRAAFF (Netherlands) pointed out that paragraph 3 stipulated that "where an endorser either has not specified his address or has specified it in an illegible manner, it is sufficient that notice should be given to the preceding endorser".

The address of the endorser, however, was hardly ever specified in the bill of exchange. It would therefore be preferable to say :

"Where the address of an endorser is unknown it is sufficient that notice should be given to the preceding endorser."

The PRESIDENT understood that the draft proposed by M. Molengraaff also covered the case in which the name was illegible.

In regard to the Japanese amendment, the President asked whether some such phrase as the following could not be added : "the same rule is applicable to the drawer".

M. ALBRECHT (Germany) said that according to Article 1 every bill of exchange should indicate the place where it was issued, and therefore there would always seem to be a place to which a notice might be addressed. Perhaps the Japanese delegation might modify its proposal in the sense that a notice addressed to the drawer at the place where the bill was issued was sufficient for the purpose of the present article.

H. HERMANN-OTAVSKY (Czechoslovakia) concurred in this view. He thought it entirely in accordance with the spirit of the following provision in Article 2 :

"A bill of exchange which does not mention the place of its issue is deemed to have been drawn at the place mentioned beside the name of the drawer."

The case mentioned by the Japanese delegation might accordingly be solved on these lines.

M. GIANNINI (Italy) proposed that all things considered the formula should be kept as it was. In regard to the drawer, it did not seem necessary to do what the Japanese delegation had asked for or what the German delegation had suggested. As to the Dutch proposal he would have great hesitation in accepting it, for it was always essential to preserve the chain of endorsers.

M. SCHELTEMA (Netherlands) thought that his country's proposal preserved the chain of endorsers better than the present text. It was possible that the address of an endorser might not be specified in the bill, but that it was nevertheless known. The Dutch proposal would thus make it possible to advise this endorser ; that was not the case with the present text.

M. PERCEROU (France) found great disadvantages in the Dutch proposal ; it deviated from the principle whereby the bill of exchange should be self-sufficient, and it raised questions of fact which it would be very difficult to solve. There would be legal proceedings to decide whether the holder knew or did not know the address of the endorser. If an endorser desired to receive notice of payment, he had only to specify his address. The adoption of the Dutch proposal would greatly complicate the working of the system of notice.

The Netherlands amendment was rejected.

The PRESIDENT asked the Japanese delegation whether the following text was in conformity with its desire :

"The endorser need not be notified if he has not indicated his address, or if he has done so illegibly."

M. SHIMADA (Japan) agreed to this wording.

The Japanese amendment was rejected.

M. SHIMADA (Japan) asked whether, if the paragraph was kept as it stood, it could be interpreted in the sense of the Japanese amendment.

The Conference approved this interpretation.

Paragraphs 3, 4 and 5 were approved at a first reading.

ARTICLE 44, PARAGRAPH 6.

The PRESIDENT read the following declaration :

"The Japanese delegation does not know why the last paragraph of Article 44 stipulates that the damages must not exceed the amount of the bill of exchange in the case of injury caused by negligence."

The Japanese delegation in consequence proposed to delete this restriction.

M. SHIMADA (Japan) observed that it was agreed, in principle, that, when the other parties liable had suffered injury as the result of the negligence of the holder or an endorser, they were entitled to damages when they were able to prove the injury. If the same parties liable could prove an injury in excess of the amount of the bill, why should the principle not be applied *in toto*?

M. GIANNINI (Italy) had been unable to find in the reports of the preceding Conferences any explanations of the phrase to which objection had been taken. He did not understand the reason for it, and requested the Conference to delete the words in question, since no change should be made in the general principle of common law unless there were serious reasons.

The PRESIDENT did not think that the Uniform Regulation would be compromised if the words in question were deleted. Generally speaking, the failure to send a notice did not involve greater damages than the amount of the bill.

M. PERCEROU (France) instanced a concrete case. A trader who had effected a first delivery of 10,000 francs might, if he believed that his bill was honoured, effect a second delivery of 20,000 francs, which he would not have effected if he had received notice. The amount of the damages might therefore be very much higher than the amount of the bill.

M. VAN NIEROP (Netherlands) was against the deletion of the phrase to which objection had been taken. There might be important proceedings in regard to the amount of the damages, since the injury might, in point of fact, be greater than the amount of the bill. With the present text, everyone knew where he was.

M. VISCHER (Switzerland) supported M. van Nierop's observations, for he considered that this restriction was of great practical importance.

M. GIANNINI (Italy) was hostile to the — so to speak — exclusively French point of view of the Regulations on Bills of Exchange. Attention must be paid to the point of view of all the interested parties and the circles not represented at the Conference ; that was to say, private persons must also be borne in mind. If the views of the bankers were considered too exclusively, the Uniform Regulation would not be in accordance with the general interest, in the Italian view, and it was the State that should harmonise all national interests.

The Japanese amendment was put to the vote and rejected.

The last paragraph of the article was approved at a first reading.

Article 44 as a whole was approved at a first reading.

EIGHTEENTH MEETING.

Held on May 23rd, 1930 at 3 p.m.

President: M. J. LIMBURG.

23. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continuation).

ARTICLE 7.

The following new text was read :

“ If the bill of exchange, which was incomplete when issued, has been completed otherwise than in accordance with the agreements entered into, the non-observance of such agreements may not be set up against the holder unless he has acquired the bill in bad faith or, in acquiring it, has been guilty of gross negligence.”

The PRESIDENT observed that the former Article 7 had disappeared, for it only contained a stipulation covering incapable persons and that stipulation had, in consequence of the adoption of the Scandinavian amendment, been carried forward to Article 68. If the new Article 7 were adopted, the Drafting Committee would be instructed to see whether the most suitable place for it would be that of the former Article 7.

The new Article 7 was approved at a first reading.

M. DA MATTA (Portugal) asked that the following explanation of the way in which he had voted in regard to bills of exchange in blank might be inserted in the Minutes :

“ Seeing that legislations in general contain no provisions requiring the delivery of the complete bill to the creditor ;

“ That, as the bill may be written out by anyone whosoever, provided it is ultimately signed by the drawer, there is no reason why it should not be written out by anyone whosoever if it is a bill signed in blank ;

“ That in either case there is a mandate from the drawer, not forbidden by the law, which does not require that the bill should be written out by the drawer ;

“ That no disadvantage results from this form of bill, for the reason that the relations between the drawer and the person completing the bill signed in blank are explained by a mandate, and there is no need to consider what has been agreed upon ;

“ Further, that as such bills are most useful in trade, having in their favour the authority of commercial practice ;

“ The Portuguese delegation declares that it is in favour of adopting the text proposed.”

ARTICLE 16.

The following text proposed by a group of delegations was read :

“ Persons sued on a bill of exchange cannot set up against the holder defences founded on their personal relations with the drawer or with previous holders unless the holder, in acquiring the bill, has knowingly acted to the detriment of the debtor.”

M. VISCHER (Switzerland) believed that the delegations who had discussed this proposal were in unanimous agreement upon the substance of the solution proposed. Nevertheless, he wondered whether the wording that had been submitted was satisfactory and was sufficiently precise. The object was to allow defences against previous holders, on condition that the person acquiring the bill had acted with a full knowledge of such defences and at the same time with the intention of injuring the debtor. The term “ knowingly ” (*sciemment*) did not sufficiently explain this idea. The Swiss representative feared that this word covered only the intention of the person acquiring the bill to wish to injure the debtor, but did not cover a knowledge of the defences. He suggested accordingly that the text should be altered as follows :

“ . . . unless the holder, in acquiring the bill, has acted with the intention to injure the debtor and with a knowledge of the defences that might be set up against previous holders.”

M. EKEBERG (Sweden) said that the question of the right of a debtor as regards the law of bills to set up against subsequent holders defences founded on relations with previous holders was one of the most important concrete questions submitted to the Conference. It was therefore of the highest importance, not only to come to an agreement on a formula, but also as to the bearing of that formula. The delegations who had drafted the present proposal had succeeded in coming to an agreement on the question of substance. The discussions had centred, first and foremost, on the search for a formula which, when translated into other languages, would express the intentions of the Conference as clearly as possible. It had accordingly been agreed that where the person acquiring the bill knew that the debtor could, as regards the endorser, set up a defence, for instance in respect of a set off or of a delay in the delivery of the goods or, lastly, in consequence of a defect in the latter, this could not justify the debtor in also invoking a circumstance of that kind in regard to the new holder of the bill.

It was only in cases where it would be *contra bonos mores* to intend with a full knowledge of the facts to acquire the rights given by the law of bills of exchange that the defence would be valid in respect of the new holder.

This principle had been expressed sufficiently clearly in the text of the experts. Nevertheless, M. Ekeberg had accepted the text submitted by the group of delegations who had examined the question. He had done so in order to fall in with the wish expressed in very strong terms by the German delegates. His concurrence in the present formula was, however, contingent upon the maintenance of the following conditions as had been agreed. The report would explain clearly the principle which M. Vischer had mentioned ; that was to say, that the knowledge of a possible defence on the part of a debtor did not suffice, but that an intention to injure the debtor or, in other words, a fact which gave the conduct of the person acquiring the bill the character of an action *contra bonos mores* was also required.

M. QUASSOWSKI (Germany) said that his delegation were glad to see that the notion of bad faith had been eliminated in the new wording. It was accordingly common ground that a mere knowledge of the existence of the objections on the part of the holder did not suffice to set up a defence against the holder ; and, further, that such a defence was valid only in cases where the person acquiring the bill had intended to injure the debtor in the case ; in other words, only in cases of *exceptio dolis generalis*. He thought, however, that the drafting proposed by the Swiss delegation corresponded still better to what the German delegation had in mind¹ ; that was to say, that there was a certain moment at which the person acquiring the bill was dishonest, and likewise that the holder, in acquiring the bill, was pursuing objects which were *contra bonos mores*. In those circumstances, M. Quassowski concurred in the drafting proposed by the Swiss delegate, which seemed to conform still better to the requirements of the situation.

M. PERCEROU (France) thought that the new text of Article 16 was badly drafted. Further, he considered it useless to add the words “ and with a knowledge of the defences that might be set up against previous holders ”. These words added nothing to the idea that the bill must have been acquired with the intention to injure.

M. DA MATTA (Portugal) was in full agreement with M. Percerou's observation.

M. ASSER (Netherlands) put the following question to M. Vischer : Was the amendment which he had proposed intended to indicate that it was not sufficient that the holder should have acted knowingly to the detriment of the debtor, but that he must also have had the intention to injure ?

M. VISCHER (Switzerland) thought that the intention to injure was already expressed in the text proposed. The idea which was not expressed positively was that of the knowledge of the defences that might be set up against previous holders. He thought that this point should be expressed, since it was an essential condition to the right of the person acquiring the bill to set up defences.

M. LA LUMIA (Italy), considering the matter from the practical point of view, observed that the last holder never had a definite intention to injure the previous holders except in cases of

¹ See Annexe n° 7.

collusion or fraudulent understanding, which were referred to in the German amendment. He thought that the text proposed by the group of delegations should allay all fears and proposed that the Conference should adopt it. The solution recommended by the German delegation was too narrow.

M. QUASSOWSKI (Germany) thought that the objections could only be set up as defences against the holder if the person acquiring the bill had a knowledge of them. This was an indispensable condition clearly expressed in the text proposed by M. Vischer. For this reason, M. Quassowski would accept his text.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that it was going too far even to have the intention to injure. The knowledge that injury might result should suffice. A knowledge alone, however, of the defences did not suffice, since a person might acquire a bill and have a knowledge of the exceptions without there being any deceit.

A practical example would show his meaning. The purchaser of goods accepted a bill of exchange drawn on him to the order of the drawer himself. The seller (drawer) had furnished defective goods. The acceptor could therefore, since proceedings against him would be taken by the seller (drawer), set up the defect in these goods as a defence against him. Supposing that the bill had been endorsed to a person who was aware of this fact when acquiring the bill, was he liable to be accused of fraud (*dol*)? The reply must be in the negative. The mere knowledge of the defences or of the position of which they were the result did not imply fraud (*dol*) on the part of the endorsee. He might, for example, have adequate reasons for supposing that the matter would be settled on a friendly basis between the parties and that the acceptor would suffer no injury owing to the payment of the bill of exchange. It was for that reason that in the text proposed by a group of delegations the words "has knowingly acted to the detriment of the debtor" had been chosen. According to the French delegation, the word "knowingly" as it stood implied a certain intention. It meant active knowledge. This term meant, therefore, something other than a mere knowledge of the defences. Despite that knowledge, the holder might still be acting in good faith according to the circumstances. It was his knowledge of the injury threatening the debtor which constituted, in so far as the debtor was concerned, the *exceptio doli*.

The PRESIDENT thought that the intention of the framers of the text before the Conference was the same as that indicated by M. Vischer. The text proposed by the group of delegations stipulated that the holder, when acquiring the bill, must have acted knowingly to the detriment of the debtor. The person acquiring the bill accordingly knew that there were defences. Nevertheless, he acted knowingly to the detriment of the debtor. If such was the interpretation to be given to this text, it appeared that there was agreement between those proposing it and M. Vischer, and in that case the President preferred the text submitted by the group of delegations, as being simpler.

He put to the framers of the text the following question: Was it enough to show that the holder had acquired the bill to the detriment of the debtor that he had wished to acquire the means of execution and of recourse — the defences to the general principles of law relating to obligations — of which he could avail himself when he had acquired a bill of exchange? It did not seem that that could be the intention of the framers of the proposal.

Personally, he was not in agreement with the principle of the article. He would prefer to see adopted the principle according to which it sufficed that the holder was aware of the defences in order that they might be brought against him.

M. MOLENGRAAFF (Netherlands) stated that the Netherlands Government regarded as an improvement the modification to Article 16 of the Regulation proposed by the experts, according to which the expression "fraudulent understanding" had been replaced by the term "bad faith". For that reason, the Netherlands delegation was unable to accept the text proposed by a group of delegations. It was of opinion that more could not be demanded than "bad faith" in the sense of the definition contained in Article 148(a) of the Netherlands Commercial Code, which was as follows:

"In an action on a bill of exchange, the defendant shall not set up against the plaintiff a defence based on his relations with the drawer, the payee and the previous holders, unless, when the bill of exchange was acquired, the holder who was plaintiff in the action did not know, or was unable to know, of the existence of the said means."

That interpretation of the idea "bad faith" was in conformity with the definition given by the German delegation on the occasion of an observation on Article 15, paragraph 2.

The text now proposed, while requiring that the holder should have knowingly acted to the detriment of the debtor, involved the protection of a holder in bad faith. In other words, it protected a person who, in acquiring the bill of exchange, knew that the previous claimant was liable to be met by a defence which could be set up by the person sued by the holder.

That principle was contrary to the law of bills of exchange, according to which the object of the bill of exchange was to facilitate the acquisition of what was owing to someone. On the other hand, the object of the law of bills of exchange was not in any way to confer on any one what was not due to him. This law was based on the protection of the rights of third parties "in good faith". It did not sanction the possibility of a bill of exchange becoming an instrument for the unfair enrichment of a person who had acquired it in bad faith. Such enrichment would, however, be encouraged if the debtor of the bill of exchange were refused the right to set up the defence of bad faith, and if the burden of proof were put on him that there was an intention to defraud him to his detriment.

For those reasons, the Netherlands delegation accepted the draft proposed by the experts.

M. SRB (Czechoslovakia) asked the Conference to delete the word "intention" which appeared in M. Vischer's text, because the employment of that word might give rise to doubts in regard to fraud (*dol, absicht, Vorsatz*). That was a very debated question in penal law.

It seemed that everyone would agree in saying that it sufficed that the holder should have known at the moment of the acquisition of the bill of the defences which could be opposed to the previous holders and that prejudice might be caused to the debtor when, in acquiring the bill, he deprived him of his defences.

M. Srb had drawn up the following text, which M. Vischer accepted. The Conference could perhaps adopt it :

"...Unless the holder, in acquiring the bill with a knowledge of the defences that might be set up against previous holders, had knowingly acted to the detriment of the debtor."

M. LA LUMIA (Italy) considered that the employment of the words "connaissance]" and "sciemment" was a pleonasm.

M. VISCHER (Switzerland) was not of that opinion. It was necessary to have knowledge of the previous defences and also to know that action was being taken to the detriment of the debtor.

M. GRÖNVALL (Finland) thought that M. Vischer put too much emphasis on knowledge by the person acquiring the bill of the defences that might be set up against the previous holders. It might result that the decisions of the courts would attach too much weight to that circumstance by considering it very nearly decisive and unconsciously overlooking the other circumstances which should also be taken into consideration.

M. GIANNINI (Italy) felt somewhat embarrassed after hearing the observations of M. Molengraaff. As a starting-point, the Italian delegation wished that Articles 15 and 16 should be kept entirely parallel.

It had been necessary to do a large amount of work to find a formula, and the discussion, which had lasted at least three hours, had been very arduous. He felt himself right in maintaining that not one word of the formula had been adopted without discussion.

Nevertheless the fact that agreement had been difficult to reach did not constitute a sufficient reason for the adoption of the formula as presented. Two questions arose : What was the scope of the formula and could a better formula be found ?

What was the scope of the formula ? During the discussion, the delegations had agreed that the formula proposed by the German delegation was too narrow and that it must be broadened and made more supple. The proposed text said that :

"Persons sued on a bill of exchange cannot set up against the holder defences founded on their personal relations with the drawee or with previous holders, unless the holder. . ."

Up to this point the agreement was universal, then the text went on :

"...In acquiring the bill has knowingly acted to the detriment of the debtor."

The President had asked what weight was to be attached to the word "knowingly". M. Giannini would base his reply on the following principle, that *scire est scire per causas*. In the present case, "the person who has obtained a bill knowing the defences which may be set up against it".

He obtained the bill — that was the second point — in order to act to the detriment of the holder: What did the word "detriment" mean ? It seemed to him to be the most supple formula possible which could be used to cover an extreme case of fraud and at the same time cover cases in which fraud, in the strict meaning of the word, had not been committed, but in which the person obtaining the bill had intended to prevent the debtor from setting up his defences.

If the word "detriment" was replaced by the phrase "intent to injure", it must be admitted that, without desire to do so, the Conference would return to the idea of fraud in its strictest sense, which was just what it had been desired to avoid.

The proposed formula therefore seemed to eliminate all the difficulties raised by those delegations which did not wish that only fraudulent intent could be covered. It was obvious that this would not entirely satisfy the Dutch delegation nor M. Giannini, but, on the other hand, the other formulæ proposed by M. Vischer and M. Srb went further than the compromise suggested, since that of M. Vischer would be subject to the very just criticisms of M. Percerou if the last part of it were deleted, while if it were adopted in its complete form it would depart from the text proposed by the group of delegations and would be similar to a mere prohibition of fraudulent understanding.

The Czechoslovak proposal went so far in the direction urged by M. Vischer that the latter had been able to accept it without difficulty. If it were laid down that the holder had obtained the bill knowing the defences which could be set up, and if it were added that he had acted knowingly to the detriment of the debtor, the number of conditions was increased and M. Vischer should be very happy.

M. Giannini asked the Conference to realise that, if it were desired to achieve an agreement, sacrifices must be made. The French delegation had given a good example and deserved the Conference's thanks. The formula had been difficult to find. In those circumstances, every criticism so far made led him to the same conclusion as that of M. Ekeberg. That conclusion could be summarised as follows : "Are you content with this formula? No. Will you vote for it? Yes, I will vote for it because I do not like it ; since, however, no one likes it, this means that it is the only formula upon which everyone will agree."

The PRESIDENT referred to an amendment in the text proposed by the group of delegations which might receive universal support. It was to the following effect :

“...Unless the holder in acquiring the bill knowing the possible defences which could be set up against former holders had sufficient reasons for foreseeing that his acquisition of the bill would cause injury to the debtor.”

Mr. GUTTERIDGE (Great Britain) said that the Anglo-Saxon law required something in the nature of “*entente frauduleuse*”. If he were asked what he wanted, he would at once say “*entente frauduleuse*”, which was the only thing that would satisfy him, because it was the nearest to the English law. But he supported the amendment on the same ground as M. Giannini. He did not like it, but believed it was the only rule which had any chance of being adopted in the circumstances. But it was unsatisfactory and could not be accepted by an English lawyer.

M. VAN NIEROP (Netherlands) thought that the proposed formula went very far and wished for explanations. He took as an example the case of a holder who knew that the debtor might raise the defence of set off. The holder endorsed the bill to a third party who was aware that a set off might be claimed. Would the third party be affected by this defence?

M. PERCEROU (France) replied that this would depend on circumstances. If the holder acquired the bill of exchange the day before bankruptcy in order to prevent a set off, there might be an assumption of a possible detriment.

M. VAN NIEROP (Netherlands) said that in that case there would be more than an assumption. There would be fraudulent intent. He would take the case of a holder who endorsed the bill to a third party, but not with intent to prevent a set off.

The PRESIDENT thought that there was no need to pursue a further discussion on this wording, which was a mere suggestion. He would, nevertheless, point out that in the case contemplated by M. van Nierop all the other formulæ would give rise to the same difficulty, for the question of set off was particularly complex.

Before calling upon the Conference to vote, the President desired to point out the procedure to be followed. After having heard M. Molengraaff, who preferred Article 16 of the Geneva Committee of Experts to Article 16 proposed by the group of delegations, the wording of the latter could be considered as an amendment to Article 16 as proposed by the Committee of Experts. There was a sub-amendment, however, proposed by the representatives of Czechoslovakia in agreement with M. Vischer.

M. HERMANN-OTAVSKY (Czechoslovakia) replied that the observations which M. Srb had made did not amount to a proposal.

The PRESIDENT noted that, in those circumstances, the sub-amendment of M. Vischer to the amendment proposed by the group of delegations was the only one that existed. That sub-amendment was to the following effect : to replace “has knowingly acted to the detriment of the debtor” with the words “has acted with the intent to injure the debtor and with a knowledge of the defences that might be set up against previous holders”.

The President would next put to the vote the text proposed by the group of delegations amended or not according as to whether the amendment proposed by M. Vischer was, or was not, adopted. If this text was rejected, he would then put Article 16 of the experts to the vote.

M. SULKOWSKI (Poland) urged that the Conference should first take a decision on the text proposed by the group of delegations and then on the formula proposed by M. Vischer.

The PRESIDENT said that a number of delegates might not wish to adopt Article 16 as proposed by the group of delegations.

M. PERCEROU (France) thought that the order of voting as suggested by the President was logical.

The amendment of M. Vischer was put to the vote and rejected.

Article 16 as proposed by the group of delegations was approved at a first reading by 22 votes against 2.

The British delegate abstained.

The PRESIDENT said that this text would necessarily involve changing the words “gross negligence” for the words “bad faith” wherever found. Article 15 was therefore maintained in the form in which it was to be found in the experts’ text.

As a result of the Conference’s decision which had just been recorded, the Yugoslav amendment¹ to Article 16 would not now arise.

ARTICLE 45.

The PRESIDENT read the following Czechoslovak amendment :

“The drawer or an endorser may, by the stipulation ‘retour sans frais’, ‘sans prôtet’, or any other equivalent expression, allow the holder to dispense with a protest for non-acceptance or non-payment, in order to exercise his right of recourse.

¹ See Annexe n° 8.

“ This stipulation does not release the holder from presenting the bill within the prescribed time nor from giving notice of dishonour to a preceding endorser or the drawer. The burden of proving the non-observance of the limits of time lies on the person who seeks to set them up against the holder.

“ When this stipulation is inserted by the drawer, it takes effect as regards all parties who have signed the bill. If, in spite of this stipulation, the holder has the protest drawn up, he must bear the expenses thereof. When the stipulation is inserted by an endorser, the expenses of protest, if it has been drawn up, can be recovered from all the parties who signed the bill.”

M. SRB (Czechoslovakia) said that the text of the experts made it impossible to insert in the bill the supplementary stipulation “ retour sans frais ” and “ sans protêt ” which had been included in the Hague Conference.

The experts had pointed out that this possibility might make it doubtful whether this stipulation could be set up against subsequent endorsers.

The Czechoslovak delegation deeply regretted that it was unable to accept this opinion. The sole fact that a text raised doubts was not a legitimate reason for entirely rejecting it. If the reply to the question whether the possibility for an endorser to insert the stipulation “ retour sans frais ” or “ sans protêt ” had a practical value or not was in the affirmative, that possibility should be admitted and the text should be drawn up in such a way as to avoid any possible doubt.

The Czechoslovak delegation replied in the affirmative. Article 38 of the Czechoslovak exchange law admitted that possibility in the case of all debtors on bills of exchange. The competent experts in the country held that the stipulation “ sans frais ”, “ sans protêt ” by an endorser was not very rare, and in many cases greatly facilitated the circulation of bills of exchange.

The same point of view was expressed by the Hungarian Government. If that practice existed in a great many other countries, it might be supposed that the complete re-establishment of the Hague text would be essential. Moreover, it might be considered that the text gave to the stipulation inserted in the bill of exchange by an endorser legal effects only in connection with that endorser. That would appear to be the most just and equitable interpretation.

If the Conference adopted the Czechoslovak amendment and if it decided in favour of that interpretation, it would be easy for the Drafting Committee to replace the Hague text, should it consider the latter insufficient and obscure, by a more definitely worded formula.

M. SULKOWSKI (Poland) stated that the Hague Regulation provided for the possibility of the insertion by an endorser of the stipulation “ sans frais ”. The experts, on the other hand, had considered that such a stipulation by an endorser should be deemed to be unwritten. He was in favour of the re-establishment of the Hague text.

The question which arose was whether an endorser was allowed to modify the original draft. In M. Sulkowski's opinion, the endorser could change the original bill of exchange. The stipulation “ sans garantie ” had been allowed, as well as the abridgment of the time for presentment. There was no reason for withholding from the endorser the right to insert the stipulation “ retour sans frais ” if it did not appear in the original bill of exchange.

M. DA MATTA (Portugal) shared the views of the Czechoslovak delegation. There were three systems of legislation concerning the stipulation “ retour sans frais ” or “ sans protêt ” ; that of the Belgian law which recognised the validity of this stipulation whether it was inserted by the drawer or one of the endorsers. In the first case, the drawer was not obliged to draw up the protest. He had, however, to notify the default of payment within fifteen days from maturity to those against whom he wished to bring an action of recourse. In the second case, that was to say when the stipulation was inserted by one of the endorsers, the effect was the same, but only in regard to the endorser who had inserted the stipulation and to the subsequent debtor of the bill.

The second system was that contained in German law, which laid down that the “ sans protêt ” stipulation dispensed the holder from the obligation of drawing up the protest, but not from the obligation of presenting the bill at the proper date.

The third system was that of the Italian Code, which was followed by the Portuguese Commercial Code. It laid down that this stipulation inserted by any of the signatories would be deemed unwritten.

M. da Matta thought that the Belgian system was the best. Obligations in regard to the law of bills being independent, there was no reason to refuse to allow everyone to meet his obligations in any manner he saw fit. It could not be maintained that, in accepting this system, contracting parties would be allowed to destroy the legal guarantees which formed the effective basis of credit. It should not be forgotten that the “ sans protêt ” stipulation should take effect only in regard to those who had inserted it or who had accepted it afterwards. For that reason, M. da Matta thought that the Hague text should be maintained and that, in consequence, paragraph 2 of Article 45 of the experts' text should be deleted.

M. LOEBER (Latvia) said that the provision in Article 45, making it possible to release the holder from drawing up a protest, was diametrically opposed to the principles of Latvian exchange law, which did not recognise this stipulation and which laid down in Article 12 that no stipulation dispensing the holder from observing any stipulation of the law of bills was valid.

The Latvian delegation, however, was ready to make a sacrifice in order to secure uniformity and to make no objection to the text proposed by the experts.

Prince VARNVAIDYA (Siam) agreed with the delegate of Czechoslovakia and supported his amendment. Siam had already adopted the Hague system.

M. QUASSOWSKI (Germany) supported the proposal of the Czechoslovak delegation. The reintroduction of the Hague text was fully justified.

The object of the "retour sans frais" stipulation was to save the expense incurred in connection with the bill which was not paid. There was no reason to forbid endorsers to insert a "retour sans frais" stipulation and thus free the holder from the obligation of drawing up the protest. The experts had taken the view that the possibility for the endorser to insert a "retour sans frais" stipulation should not be admitted, because it might raise a doubt as to the possibility of setting up this stipulation in so far as subsequent endorsers were concerned. This, M. Quassowski thought, was a mistake, as the effects of the stipulation would be different according as to whether it had been inserted by the drawer or by an endorser. The effect of the stipulation as inserted by the drawer would be that the drawing up of the protest might be dispensed with. This meant that the cost of a protest drawn up despite the stipulation would have to be borne by the holder. The stipulation inserted by an endorser only gave the holder the right not to draw up the protest. If the holder, despite that stipulation, drew up the protest, its cost might be recovered, according to the Hague text, from all the signatories. The provision was perfectly clear and the conclusion could be drawn that all the signatories, even the endorser who had inserted the stipulation, would be compelled to refund the cost of the protest.

M. BIAMONTI (Italy) supported the Czechoslovak proposal on behalf of the Italian delegation, but proposed a number of amendments.

In the first place, the Italian delegation thought it useful to take account, not only of the drawer and of the endorser, but also of the person giving an "aval", who might also insert this stipulation.

It should next be laid down that the stipulation must be signed.

In the third paragraph, in order to make the meaning of the text clearer, the Italian delegation proposed the following wording :

"When this stipulation is inserted by the drawer, it takes effect as regards all parties who have signed the bill. If it is inserted by an endorser or by a person giving an 'aval', it takes effect only in regard to the latter. If in spite of this stipulation the holder has the protest drawn up, he must bear the expenses thereof."

The Italian delegation would draft the first paragraph as follows :

"The drawer or the endorser or the person giving an 'aval' may, by the stipulation 'retour sans frais' or 'sans protêt' or any other equivalent expression *duly signed*, allow the holder to dispense with a protest for non-acceptance or non-payment, in order to exercise his right of recourse."

M. PERCEROU (France) had intended to make observations similar to those of the Italian delegation. That it should be possible for the endorser to insert the stipulation "retour sans frais" could meet, he thought, with no objection based on principle. There were, however, two blemishes on the Hague text ; it did not make it possible to ascertain who had inserted the stipulation. It must therefore be signed. Secondly, it did not settle the question whether a stipulation inserted by an endorser took effect only in regard to him or whether it took effect also in regard to subsequent endorsers.

M. Percerou supported the proposals of the Italian delegation.

M. Deoclecio DE CAMPOS (Brazil) said that, although Brazilian legislation did not cover this case, he would, in order to achieve unification, support the Hague text.

He was quite willing to accept the amendments proposed by the Italian delegation.

M. BOUTERON (France) said that if the paragraph — "If the stipulation is inserted by an endorser, it shall be deemed to be unwritten" — were deleted, it might be better to lay down that the "sans frais" stipulation should be included in the text itself.

M. SRB (Czechoslovakia) was prepared to accept the amendments of the Italian delegation. Czechoslovak law gave this permission to each debtor and consequently to each person giving an "aval".

In so far as paragraph 3 was concerned, the amendment proposed by the Italian delegation fully corresponded to the interpretation of the Hague text which the representative of Czechoslovakia had just given.

The PRESIDENT proposed, in order to avoid all confusion, that the Conference should vote first on the proposal that a return should be made to the Hague text, which meant the deletion of the second paragraph of Article 45 of the experts — "If the stipulation is inserted by an endorser, it shall be deemed to be unwritten".

If this proposal were adopted, the Conference would be called upon to take a decision on the Italian amendments.

This procedure was adopted.

The PRESIDENT proposed to return to the Hague text, provided that the Italian amendment were adopted.

By 21 votes to 1, this proposal was adopted.

The PRESIDENT submitted the first paragraph of Article 45, as amended by the Italian delegation :

"The drawer or the endorser or the person giving an "aval" may, by the stipulation "retour sans frais, sans protêt" or any other equivalent expression *duly signed*, allow the

holder to dispense with a protest for non-acceptance or non-payment, in order to exercise his right of recourse."

M. SULKOWSKI (Poland) proposed that the text suggested by the Italian delegation should be adopted, subject to drafting alterations. The word "duly" seemed to him superfluous.

The views of M. Bouteron could be met by inserting after the words "equivalent expression" the phrase "inserted in the text and signed".

M. GIANNINI agreed with the proposal to delete the word "duly".

The PRESIDENT informed M. Sulkowski that the Conference had, in principle, accepted the proposal that "aval" by separate document should be allowed. How could countries which availed themselves of this stipulation stipulate the insertion of the words "sans protêt" in the body of the instrument by the person giving an "aval"?

M. SULKOWSKI (Poland) withdrew his amendment.

The PRESIDENT put the first paragraph as proposed by the Italian delegation, after the word "duly" had been deleted, to the vote.

M. VAN NIEROP (Netherlands) said that when the stipulation had been inserted by the endorser he should not insert it in the endorsement itself, because it would be overlooked. This would be inevitable in practice.

The PRESIDENT said that, to satisfy M. van Nierop, it should be stated that the endorser had the right to add the "sans protêt" stipulation, but that if he wished to do so he must insert that stipulation in the front of the document, while he himself signed the back.

M. VAN NIEROP (Netherlands) said that, in practice, this stipulation would always be found on the front of the document.

The first paragraph was adopted in the form proposed by the Italian delegation.

Paragraph 2 of the Hague text was adopted.

ARTICLE 45, PARAGRAPH 3.

The PRESIDENT read the Italian amendment, as follows :

"The third paragraph should be changed to read :

" 'When this stipulation is inserted by the drawer, it takes effect as regards all parties who have signed the bill. If it is inserted by an endorser or by a person giving, an "aval", it takes effect only in regard to the latter. If, in spite of this stipulation, the holder has the protest drawn up, he must bear the expenses thereof.' "

M. PERCEROU (France) asked whether the final sentence of the article : "When the stipulation is inserted by an endorser, the expenses of protest, if it has been drawn up, can be recovered from all the parties who have signed the bill", still remained.

The PRESIDENT replied in the affirmative.

M. BOUTERON (France) asked for an explanation as to the meaning of the expression "all parties" in the first part of the paragraph. In a recent case which had come before the French courts, the drawer had issued a bill with a "sans frais" stipulation in it. At the request of the drawer, who had expressed fears as to the financial soundness of the drawee, the third holder had protested the bill. But the drawee who had accepted the bill containing the "retour sans frais" stipulation had taken advantage of this stipulation to demand damages, which had been granted to him by the court. In the view of M. Bouteron, this acceptance was equivalent on the part of the drawee to a conditional acceptance, and it might therefore be better not to include the acceptor among "all parties who had signed the bill", at any rate in so far as this paragraph was concerned, for it could not be said that the acceptor was authorised to take advantage of this stipulation. The Convention covered only the drawer or the endorser.

The PRESIDENT wondered whether the proposed amendment would constitute a remedy for this situation. The question was one of common law. In the case in point, the acceptor had said that he had been the victim of an action covered by Article 1382 of the Civil Code. It was common law which had settled the point.

M. BOUTERON (France) thought that the proposed text would make it possible for the drawee to take advantage of the stipulation even without relying on common law.

The PRESIDENT took the view that when the drawer or the holder was not required to draw up the protest from the point of view of exchange law, Article 45 must nevertheless be applied. From the point of view of civil law, the question whether the commercial honour of the drawee had been injured could be raised. This, therefore, lay outside the scope of exchange law.

M. BOUTERON (France) said that common law was unnecessary in order to apply the present text ; it would be enough for the protest to have been drawn up for the drawee to demand damages.
The Italian amendment was unanimously adopted.

The PRESIDENT asked the Czechoslovak delegation whether it considered that the Italian amendment took the place of the remainder of the Czechoslovak amendment.

M. HERMANN-OTAVSKY (Czechoslovakia) replied in the affirmative.
Article 45 as a whole was approved at a first reading.

ARTICLE 46.

The PRESIDENT read an Italian amendment proposing that the following paragraph should be added to the article :

“ When several persons are liable in the same class, even if they sign the bill successively, there is no right of recourse as between them ; their reciprocal relations, in the absence of agreement to the contrary, are subject to the provisions concerning obligations contracted jointly and severally.”

M. WEILLER (Italy) explained that this amendment had been put forward at the request of business men. It covered the case which was not theoretical in which an “aval” was given at the same time or successively by several persons. It was always desired to have bills of exchange guaranteed as well as possible, which meant guaranteed by several signatures. The nature of a bill of exchange required that this should not be prevented, for it assisted the development of the bill. The more the bill was guaranteed, the better it was and the greater its use in trade.

It was a question of discovering the position of these persons who had given an “aval”. Their position was clear in regard to the possessor. They were jointly liable, and the possessor had the right to demand payment from one or other, according to his desire.

What, however, was the connection between the persons giving the “aval”? The person who had paid could not be given a right of recourse against the other or others, for they would merely move round and round in a circle, the first person paying having recourse against the second and the second against the first, which meant that there would never be an end. The question must therefore be settled, and this could be done by presuming the division of responsibility when several persons were liable in the same degree though they had signed successively. Their relationship was then settled by the ordinary principles of common law. If they were two, each would pay half, except in the case of a special agreement concluded between them.

In order to cause exchange law to make progress in a practical direction, the Italian delegation put forward this formula, which was based on a special case, it was true, but which was set out in general terms conforming with the principle of equality of obligation for persons liable in the same degree.

M. SULKOWSKI (Poland) was unable to support this proposal. The scope of the amendment went further than the object in view. On the basis of the very general formula proposed, it would be justifiable to presume, for example, that there might be several beneficiaries, a fact which could not be admitted.

The observations made by M. Weiller led to the belief that the formula referred only to the case of several givers of an “aval”. That case, however, was not covered by the text, as would become apparent from the following possible case. The “aval” had been given on behalf of a drawer. As the chapter dealing with “avals” stipulated that the giver of an “aval” was liable to the same extent as the person for whom he was acting as guarantor, it might be thought that this was precisely the case covered by the Italian formula — *i.e.*, the case of several persons liable to the same extent. What would result from such an interpretation? According to the Italian proposal, it would have to be admitted that there was no recourse between them. Nevertheless, that would be contrary to the solution laid down in the chapter on “avals”, where it was stated that the giver of the “aval” who had paid the bill of exchange acquired the right of recourse against the guarantee and the guarantors.

Finally, the Italian formula endeavoured to establish that there was no recourse under exchange law if there were several givers of an “aval”. M. Sulkowski thought it superfluous to say that in the Regulation there was no provision under which it could be claimed that such recourse on the bill existed. If it was a question of knowing whether a giver of an “aval” who had paid a bill of exchange possessed a right of recourse under common law, that question, which related to civil law, could not be dealt with in the provisions of the Uniform Regulation.

For these various reasons, the representative of Poland was of opinion that the Italian proposal did not fulfil its intention.

M. QUASSOWSKI (Germany) approved the observations of M. Sulkowski. The provision proposed by the Italian delegation did not appear to him to be desirable. It was obvious that the givers of an “aval”, for instance, had no recourse on the bill as between themselves. Apart from the law of bills, it was clear that the question whether one of the parties liable had an action against another who was liable to the same extent was settled by common law, and it was not necessary to note that fact in the Uniform Regulation. Finally, the amendment was not clear. What was meant by the words: “persons liable in the same class”? It might perhaps mean the endorsers, since they were persons liable in the same class. M. Quassowski was unable to support the proposal.

The PRESIDENT asked the Italian delegation whether it was not satisfied with the exchange of views which had just taken place. It was beyond doubt that if, for instance, there were several givers of an "aval" — signatories liable to the same extent jointly, but jointly under the terms of civil law — civil recourse was governed by the provisions of civil law in regard to persons jointly liable.

On the other hand, the observations of M. Sulkowski appeared to be well founded. He had taken as an example the giver of an "aval" on behalf of the drawer. In the eyes of the holder, both were joint debtors, but on the one hand there was no recourse on the bill, and on the other there was in the article concerning "avals" a special provision settling the recourse of the giver of the "aval" against the person for whom he was guarantor. It would certainly be very difficult to find a text which would solve that difficulty.

For those reasons, the President considered that the discussion had given satisfaction to the Italian delegation, since the Conference was in agreement in recognising that signatories liable in the same class were joint debtors who had civil recourse against one another in accordance with the terms of civil law in regard to persons jointly liable.

In conclusion, the President thought that it would perhaps suffice to mention the exchange of views in the report.

M. GIANNINI (Italy) stated that if the Conference was in agreement that some words on the matter should be inserted in the report, the Italian delegation would not insist on its proposal.

The PRESIDENT asked whether the Conference was of opinion that it should be said in the report that the Conference agreed with the views of the Italian delegation.

This suggestion was approved.

M. Giannini (Italy) withdraw the amendment submitted by the Italian delegation.

Article 46 as a whole was approved at a first reading.

ARTICLE 47.

The PRESIDENT pointed out that this article was the object of a Czechoslovak and a Polish amendment.

The Czechoslovak amendment was to add a sub-paragraph 4 as follows :

" 4° A commission which in default of agreement shall be one-third per cent of the principal sum payable by the bill and which in no case can exceed this rate."

M. SRB (Czechoslovakia) pointed out in support of his amendment that in the text of the experts sub-paragraph 4 of the Hague text concerning commission was deleted.

The following reasons had been adduced in favour of this deletion, which had not been accepted unanimously :

" The experts held that it was desirable to raise the rate of interest from five to six per cent, the latter rate being more in keeping with the present economic conditions in most countries. This was also the opinion of the International Chamber of Commerce, which proposed a *minimum* rate of five per cent.

" On a majority vote, the experts have omitted No. 4 of Article 47 of the Uniform Regulation, dealing with the right to commission. They think that, as this right to commission is only customary in a few countries and as it might be levied concurrently with the similar commission mentioned in Article 48, No. 4, it would be preferable not to mention this right as a matter of common usage, but to allow each country to decide as it thinks best."

M. Srb added that, if the question had been merely one of a model law, all countries could have concurred in the experts' point of view. At the outset of its proceedings, however, the Conference had decided to draw up a really uniform regulation. The question of the commission could not accordingly be left to the national legislations and should be settled in the Regulation itself.

Czechoslovakia was one of the countries where the law allowed the holder to recover a commission. That was in conformity with a very old tradition. In order to avoid being obliged to change the national law in this respect, the Czechoslovak delegation proposed that the Hague text should be restored with an amendment in regard to the amount of the commission. The Hague text stipulated a commission of one-sixth per cent, whereas Czechoslovak law allowed a commission of one-third per cent.

The Czechoslovak delegation did not, however, attach any great importance to the question and was prepared to accept the Hague text as it stood; that was to say, a commission of one-sixth per cent.

In conclusion, M. Srb drew the Conference's attention to the fact that there was a considerable number of countries where the law authorised a commission, among them being Germany, Austria, Bulgaria, Denmark, Norway, Poland, Hungary, Siam, Sweden, Switzerland, Czechoslovakia, Turkey, and Yugoslavia.

M. GIANNINI (Italy) saw no difficulty in accepting the Czechoslovak proposal to revert to the Hague text. Nevertheless, he considered that the rate of one-third per cent proposed for the commission seemed high and would prefer to keep to the figure of one-sixth as in the Hague regulation. The usurious practices of bankers should not be legalised.

The PRESIDENT pointed out that M. Srb was prepared to adopt the Hague text as it stood and to accept the rate of one-sixth per cent. He asked whether he might now consider that the figure of one-third mentioned in the amendment had been replaced by that of one-sixth per cent.

M. SRB (Czechoslovakia) replied in the affirmative.

M. ALBRECHT (Germany) supported the Czechoslovak amendment. The commission provided for in the Hague text was justified on practical grounds. M. Vischer had previously alluded to the increased work to be done by the banks, which had to give notice in case of dishonour. A holder incurred a certain risk when a bill was dishonoured. He must see that the bill was duly protested. He had many arrangements to make, and it was only fair that he should receive a certain amount for his additional trouble. For those reasons, the German delegation supported the re-establishment of the Hague text.

Prince VARNVAIDYA (Siam) said that it was true that sub-paragraph 4 had been adopted in the Siamese Code, but in view of the very wide differences in the economic conditions of various countries he preferred the experts' text which left out sub-paragraph 4. Consequently, though he was not opposed to the amendment, because it was already in Siamese law, he would not support it. He would therefore abstain from voting.

M. VISCHER (Switzerland) noted that the Czechoslovak delegation having withdrawn its amendment in favour of the Italian amendment, the Conference was now reverting to the Hague text. He pointed out that, as M. Srb had said, a commission of one-third per cent existed in many countries. That rate was regarded as a compensation which was perfectly justified by the work falling on the bank. If it was desired to settle the question, the Czechoslovak amendment should be taken up again. If that amendment had not been tabled, M. Vischer would have been obliged to make the proposal himself, and he would have suggested a rate of one-third per cent. If this suggestion were not adopted, he would prefer the solution recommended by the experts ; that was to say, to leave it to the national law to fix the rate of the commission.

Baron MARKS VON WÜRTEMBERG (Sweden) said that, in regard to the right to a commission, the exchange laws in the Scandinavian countries contained provisions corresponding to the Hague text of 1912 as well as to the content of the Czechoslovak amendment. He could accordingly support that amendment. Nevertheless, he was inclined to adopt the experts' proposal, which seemed to be the one that had the best prospect of being accepted by the majority of the delegations. Whatever the result of the vote, he would accept it. He would be very glad if his example was followed by a large number of delegations. He did not understand why any country should wish now to have a system different from that adopted by the majority of the countries. The interests of unification demanded the rejection of any insertion of a reservation on this point in the Convention.

M. PERCEROU (France) explained that the practice of commissions referred to in the fourth paragraph of the Hague text, which had been deleted, was not followed in all countries. In France, in particular, it was not in force. It seemed impossible by virtue of a law to impose on commerce a surcharge to which it was not accustomed. The text itself stipulated that an agreement to the contrary was possible. In the countries where this practice was in force, it would be maintained by agreement. If unification were effected, it would be so by an understanding among the parties concerned.

M. SOKAL (Austria) supported M. Vischer's proposal because, to his mind, a commission was justified by the work which had to be carried out for the various recourse proceedings. He proposed, however, that the rate should be one-quarter per cent. As bills of exchange circulated in different countries, it would be well to lay down a uniform rule so as to obviate difficulties.

Mr. GUTTERIDGE (Great Britain) strongly supported the view expressed by M. Percerou. It did not seem to him to be right to impose this liability upon any particular country by means of a rule of law. It was a matter which could always be arranged by private contract, and a law did not seem to him to be appropriate.

The PRESIDENT thought that he should put the experts' text to the vote first.

The text of the experts was adopted by 19 votes to 5.

Prince VARNVAIDYA (Siam) explained that when he had said that he would abstain he meant that he would abstain from voting on the amendment. As the President had put the experts' text to the vote, he had voted in favour of it.

The PRESIDENT read the following Polish amendment :

“ Any Contracting State is entitled to prescribe, as regards bills of exchange and promissory notes which are both drawn and payable in its territory, that the rate of interest mentioned in Article 47 (2) and Article 48 (2) of the Regulation may be replaced by the legal rate in force in that country.”

M. SULKOWSKI (Poland) recalled that he had explained in connection with Article 5 the special conditions existing in Poland with regard to the legal rate of interest, which at present amounted to 10 per cent. If the provision recommended by the Regulation, which fixed the rate of interest at 6 per cent, came into force, it would be to the advantage of the debtor domiciled in a country where the rate was higher not to pay the sum due at maturity so as to benefit by the difference between the rates of interest. In these conditions, he asked that each State should be allowed to make a reservation in order to be able to substitute for the rate of 6 per cent laid down in the Regulation the legal rate in force within its borders. A reservation had already been made in this matter in the Hague Convention, the only difference between the reservation proposed by the Polish delegation and that contained in the Hague Convention was in respect of the legal rate of interest, but it did not specify what that rate was to be.

The Polish amendment was rejected by 12 votes to 9.

M. SULKOWSKI (Poland) asked the Conference to agree in principle to the introduction of a reservation for the purpose of safeguarding Polish interest, this reservation to be inserted in the draft Convention.

M. EISNER (Yugoslavia) supported the Polish delegates proposal and emphasised the fact that Yugoslavia was in the same position as Poland.

The proposal of M. Sulkowski was adopted.

M. HERMANN-OTAVSKY (Czechoslovakia) asked that the Conference might accept in principle the introduction in the Convention of a reservation in regard to the right to a commission.

M. GIANNINI (Italy) thought that no reservation should be made on this subject.

M. HERMANN-OTAVSKY (Czechoslovakia) adhered to his request.

The principle of the reservation requested by the Czechoslovak delegation was rejected by 12 votes to 7.

Articles 47 and 48 were approved at a first reading.

ARTICLES 49 AND 50.

These articles were approved at a first reading.

ARTICLE 51.

M. ALBRECHT (Germany) understood that the French delegation had observed that the provision contained in Article 51 had no practical utility ; therefore, if it were put to the vote, the German delegation would vote in favour of its suppression.

Prince VARNVAIDYA (Siam) supported the observations of the German delegation.

The PRESIDENT pointed out that, if the article were deleted, the result would be to change completely the numbers of the other articles.

M. SHIMADA (Japan) asked the exact meaning of the phrase " in the absence of agreement to the contrary ".

The PRESIDENT said that this term meant except in cases where a redraft is prohibited by agreement between the holder and the drawer.

He called on the Conference to vote on the principle of keeping the article.

The Conference decided by 11 votes to 8 to retain Article 51.

NINETEENTH MEETING.

Held on May 24th, 1930, at 9.30 a.m.

President: M. J. LIMBURG.

24. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continuation).

COMMUNICATION BY THE PRESIDENT REGARDING THE QUESTION OF COMMISSION AND ARTICLE 7.

The PRESIDENT pointed out that the Swiss delegation reserved its right to return, during the second reading, to the question of commission.

The French delegation wished to draw the attention of the Conference to the fact that Article 7 concerning bills of exchange in blank had been adopted, but that no text authorising reservations had been submitted. The French delegation proposed the following text :

“ Each Contracting State reserves the right not to embody Article 7 of the Uniform Law in its legislation.”

In reply to a request from Baron Marks von Würtemberg for explanations, the President pointed out that bills of exchange in blank had been introduced into the Uniform Regulation at the request of several delegations, although the question was not mentioned in the Hague text or in that of the Committee of Experts. The object of the French proposal was to enable those countries who did not desire to introduce this system into their legislation to make reservations.

The text was adopted by 12 votes to 4.

Mr. Gutteridge (Great Britain) abstained from voting.

M. GIANNINI (Italy) asked whether the Drafting Committee could not deal with the text concerning the replacing by an authentic document of the signatures of persons who were unable to sign.

It was a question of the authentic document which would in certain cases replace the signature. Article 3 of the Hague Convention contained the following stipulations :

“ Every Contracting State has, so far as regards bills of exchange obligations, undertaken in its own territory the power to determine in what manner there may be substitutes for signature, provided that a formal declaration inscribed on the bill verifies the intention of the person who ought to have signed.”

In regard to the question raised by Japan, it had been decided that the explanation should be given in the report.

The PRESIDENT noted that the Conference was in agreement with M. Giannini that the Drafting Committee should deal with the question.

ARTICLE 51.

M. ALBRECHT (Germany) said that the first paragraph of Article 51 referred to the redraft. A bill of exchange of that kind must not be domiciled. The paragraph was apparently intended to convey that a redraft must be drawn payable by the debtor at his domicile. In view of the decision already adopted concerning domiciled bills of exchange, there was at present, in his opinion, a doubt regarding the exact meaning of the first paragraph of Article 51. He would therefore propose that it should be read in the sense that a redraft must be drawn payable by the debtor at his domicile. That was a question for the Drafting Committee.

M. Albrecht wished next to draw the attention of the Conference to the third paragraph of Article 51, in the French text of which the word “ domicile ” occurred repeatedly. In the English version, this was translated by “ resides ” or “ resident ”. In his opinion, domicile and residence were two different notions, and the English text should be corrected. He thought that “ domicile ” was a better known legal term and one which could be translated into German, at any rate, with more accuracy than the somewhat ambiguous word “ residence ”.

Mr. GUTTERIDGE (Great Britain) was not quite happy in his own mind about the alteration suggested by the German delegate, because he was not quite sure whether everyone attached the same meaning to the word “ domicile ”. He was obliged to make a reservation in regard to this point, which would require somewhat careful consideration.

Prince VARNVAIDYA (Siam) only wished to say that he had no objection to the word “ domicile ”, because it had been adopted in the English translation of the Siamese Code and was used in the sense in which it was understood on the European Continent.

The PRESIDENT noted that the German delegate had made no proposal but had merely addressed a suggestion to the Drafting Committee. Nevertheless, he believed it to be his duty to point out to the Conference that if it began a discussion on the words “ domicile ” and “ resides ” that discussion would certainly be long and difficult. For that reason, the President would draw attention to the adage : *Quieta non movere*.

Article 51 was approved at a first reading.

ARTICLE 52.

The PRESIDENT pointed out that in regard to this article there was an amendment by the Danish, Finnish, Norwegian and Swedish delegations to add the word “ exchange ” to the first paragraph of the article before the words “ rights of recourse ”.

M. STUB HOLMBOE (Norway) observed that in regard to this article the experts had made the following observation :

“ The question whether the drawer is obliged to provide cover for the bill on maturity and whether the holder has any special rights on this cover is not discussed in these proposals.”

That attitude was quite justified. The same also applied to the "action d'enrichissement", which was recognised in the legislations of Germany, the Northern and several other countries. It was also the solution adopted at The Hague in 1912 (see Article 13 of the Convention).

The four Scandinavian Governments had pointed out in their joint remarks the desirability of explaining clearly the meaning of the draft Regulation in this connection. That could be done by the insertion of the word "exchange" before the word "rights" in the last line but one of the first paragraph.

That was the proposal of the delegations of the four Governments; it would not change the meaning of the text, but would make it more clear. If it were adopted, the reservation expressed in Article 13 of the Hague Convention would be unnecessary.

In that connection, the Norwegian delegate was authorised to state that the four Scandinavian delegations were opposed to any proposal to settle in the Uniform Regulation the question concerning the provision of cover. They were not authorised to discuss such questions which were outside the sphere of the law of bills of exchange. That was the opinion of the Hague Conference and of the experts, and it was right.

M. QUASSOWSKY (Germany) had some doubts in regard to the interpretation of the word "exchange". The "action d'enrichissement" was a special action which was connected with the problem under discussion. Would not a special reservation be necessary? If the Conference considered that in the event of the adoption of that term the "action d'enrichissement" would be assured, M. Quassowski would not insist on a reservation, but would ask that that interpretation should be noted either in the Minutes or in the report.

In view of the statement of the Norwegian delegate, M. GIANNINI (Italy) asked the Conference to consider at the same time Article 52 and Article 53(a) in regard to which the Italian delegation had made a proposal,¹ and also the unnumbered article submitted by the Italian delegation, which was as follows:

"The drawer may transfer the cover by clause entered on the bill of exchange, but the owner of the title, duly confirmed in accordance with Article . . ., shall have no claims on third persons unless he signifies the transfer, reproducing in the signification the exact terms of the title.

"Each State shall be free to lay down rules regarding the said signification in its own laws."

The PRESIDENT noted that there was an obvious relation between the Scandinavian amendment and the Italian proposal.

M. GIANNINI (Italy) stated that the Italian delegation attached a great deal of importance to the proposal which they had submitted.

It concerned, first, the adoption in the Uniform Regulation of a provision for acknowledging the validity of a special stipulation which would give certain safeguards to the possessors of drafts by means of the carrying out of very simple formalities in regard to notification.

The principle had already been admitted in certain legislations — France, Belgium, the Netherlands and Scotland — and appeared in certain recent drafts, the Austrian draft of 1913 and the Swiss draft of 1928.

The question should be examined from the practical point of view, taking into consideration the needs of banking and trade.

When the banks discounted bills relating to commercial transactions, they were convinced that they were undertaking very safe transactions. Indeed, knowing that the buyer had received the goods sent by the seller who was the real creditor of the former and that at maturity the buyer, who had meanwhile sold the goods, would be in a position to pay the bill issued on his account, the bank quite safely discounted the bill — that was to say, bought it — relying in full confidence on the debt owing to the seller-drawer by the buyer-drawee.

Sometimes the bank assured itself that the debt existed by requiring information in regard to the documents concerned before acting in that way.

What would happen in the event of a declaration of bankruptcy (*faillite*) of the drawer before the bank had obtained the drawee's acceptance of the bill of exchange? The official receiver (*syndic de faillite*), noting the drawer's right to payment of the bill — that was to say, that the sum held by the drawee had never been recovered from the estate of the person who had failed — included the amount of the bill in the assets in order that it might be distributed among the creditors. Consequently, the bank which had been absolutely confident that it had nothing to fear was not covered at the very moment when it had most need for protection.

On the contrary, the drawee had no particular interest in paying either the one or the other — that was to say, the official receiver rather than the possessor of the bill of exchange. There resulted the quite unfair consequence that the estate of the drawer, which had already received the value of the goods sold by means of the discounting of the bill by the bank, received the same amount a second time at the expense of the bank.

The Italian banks had therefore asked whether it would not be desirable to refuse to discount bills before acceptance. The question concerned commercial rather than banking circles. The former ran the risk of depriving themselves of the benefit of the discounting of bills of exchange, which deserved the maximum protection.

It should not be forgotten that it had already been stated with authority in the Conference that the use of bills of exchange which did not need to be presented for acceptance was becoming more widespread. The Conference, however, had confirmed the principle authorising the drawer to release himself from guaranteeing acceptance (Article 9), thus recognising the bill of exchange which did not have to be presented for acceptance.

¹ See Annexe n° 9.

It was necessary to consider that some traders were not in the habit of accepting bills of exchange. Often, when the bank presented the instrument for acceptance, the drawee refused acceptance, stating, however, that he would pay at maturity. Such a declaration did not increase the security of the banks ; in fact, if the drawee failed, the bank was treated in the same way as any unsecured creditor.

For that reason, therefore, taking into account the special nature of the discounting of bills which, whatever legal definition might be given to them, were from the economic point of view only purchases of the drawee's debts to the drawer, the Italian delegation had thought it proper to propose the settlement of the question in the Uniform Regulation.

In conclusion, it was a question of regulating a very simple and rapid transfer of a debt in order to make possible, in the interests of trade, the discounting of bills not yet accepted or which were not intended to be accepted.

It would be desirable that the proposed unnumbered article should appear in the Convention. M. Giannini thought that Article 53(a), which laid down the principle that a bill of exchange did not constitute a "novation", expressly settled a question of great importance. Nevertheless, in view of the statement made by the Norwegian delegation in the name of the Scandinavian delegations, the amendment proposed by the latter might, to a certain extent, give satisfaction.

Finally, he proposed that the amendment handed in by the Swiss delegation should be considered at the same time. It referred to the same question.

Mr. GUTTERIDGE (Great Britain), referring to the Scandinavian proposal, said that the word "cambial" was entirely obsolete in England. He therefore suggested that it should be struck out and that the sentence should read :

"The holder loses his rights of recourse under the law of bills of exchange. . ."

The PRESIDENT realised that there was a connection between the Swiss amendment and the Italian proposal. Nevertheless, he considered that the Conference should discuss separately the Swiss and Scandinavian amendments and the Italian proposal, although they might, to some extent, be connected with the question of cover.

He wished to warn the Conference against entering into a discussion on the Scandinavian and Italian amendments, not because he was unable to support them, but possibly because he was entirely in agreement with their content and considered it undesirable to insert the principle in the Uniform Regulation. That Regulation only referred to relations in the matter of bills of exchange, and if it was desired at all costs to have an express statement on the matter, it could be inserted in the report. Looking at the matter from a legal and scientific point of view and considering that the Uniform Regulation referred only to relations in the matter of bills of exchange, he considered that the value of the instrument would be affected if either the Scandinavian or the Italian amendment were introduced into it.

It would be inopportune to say : "Take note that we are only concerned here with relations in the matter of bills of exchange". That would make it necessary to examine all the articles in order to see whether it could be said that "Rechtsgeschäfte" existed. For those reasons, the President suggested that the Scandinavian delegation should withdraw their amendment.

The same was the case in regard to the Italian proposal. To state that "the action arising out of the relationship (transaction) which occasioned the issue or transfer of the bill of exchange shall continue to exist notwithstanding the issue or transfer of the bill of exchange unless it is proved that there has been a novation" would, apart from the idea of "novation", be to break down a door already open. In the doctrine on bills of exchange, it had been recognised on all sides that apart from the bill of exchange "Rechtsgeschäfte" existed behind the scenes and came out from time to time. They appeared, for instance, in regard to Article 16. They came to the front of the stage when there was a question of bad faith, but usually they remained in the background.

The Italian amendment might raise numerous difficulties, for the civil action which was behind the scenes remained there, except if it was proved that there had been a novation. Would the difficulty be solved in that way? It was necessary to know whether, in a special case, there had or had not been a novation. In 1877 Professor d'Abling, one of the most eminent jurists of Holland, wrote a book on "novation" in relation to bills of exchange. That had been a great event in the legal world, for the book in question had shown the deepest erudition. It could be noted from it how difficult it was to say whether or not there had been a "novation". In considering the various codes of States, it appeared that there were special cases, for instance, in French law and in those systems which were based on the French law, there was the case of the "claim in the event of bankruptcy". The law itself said that there had been a "novation". In other cases, it was for science to decide whether there had or had not been a "novation".

In conclusion, and with the greatest conviction, the President advised the delegations to withdraw their amendments ; though they might be absolutely correct from the practical point of view, it was undesirable to insert them in the Uniform Regulation on Bills of Exchange. On the other hand, they might find a place in the report.

M. QUASSOWSKI (Germany) was glad to find himself in entire agreement with the President. The question was not one of the law of bills of exchange. It was a problem either of civil or of bankruptcy law. This was a field outside the terms of reference of the Conference. The very important question of cover was, in principle, a question connected with bankruptcy law. It was, however, vitally necessary not to confuse the law of bills of exchange with common law and bankruptcy law. The Conference could not introduce into the Uniform Regulation rules pertaining

to common law or bankruptcy law. M. Quassowski, however, was ready to accept the insertion of a reservation corresponding to Article 14 of the Hague Convention, for he thought that the question of cover should be settled in the case of those States where such a system was practised. The same was true concerning the "action d'enrichissement". Nevertheless, the German delegation could not consent to a proposal that States which did not follow this practice should be compelled to do so, for their business men thought that it was somewhat dangerous and might hinder the circulation of bills of exchange.

M. HAMMERSCHLAG (Austria) shared the President's view. It was impossible, he thought, to upset the foundations of exchange law. The adoption of the Italian amendment would, however, lead to this result.

M. Hammerschlag thought it unnecessary to recall that this question had been the object of study on the part of lawyers and courts in every country for a long period of years. In his view, it was a problem that must remain outside the Uniform Law, for it was part of civil law. He would not, however, oppose the inclusion of a reservation in the Convention.

M. GIANNINI (Italy) remained of the view that the question whether the issue of a bill of exchange was or was not a "substitution" (*novation*) was a problem of exchange law. The Italian amendment was therefore within the scope of the Uniform Regulation. Nevertheless, to hasten the work of the Conference, the Italian delegation was prepared to withdraw its proposal for the insertion of an Article 53^{1(a)} in favour of the proposal from the Scandinavian delegations.

M. SULKOWSKI (Poland) explained that the object of the amendment submitted by the Scandinavian delegations was to add the word "exchange" before the word "rights". They thought that if this amendment were accepted it would be unnecessary to make any reservation in the Convention in so far as the "action d'enrichissement" was concerned. M. Sulkowski was unable to share this view. In his opinion, it would be necessary to contemplate an express reservation in the case of those States employing the system of cover and another reservation for those employing the system of "action d'enrichissement". The text of Articles 13 and 14 of the Convention of The Hague might perhaps be reintroduced.

M. Sulkowski drew the attention of members of the Conference to the possibility of a conflict which might arise between two States only one of which employed the system of cover. The draft Convention drawn up by the experts contained a stipulation in Article 6 to the effect that "the question whether the beneficiary and succession holders of the bill have special rights on the cover (*provision*) and the nature of these rights is determined by the law of the country in which the bill of exchange is payable".

If a text of that kind were adopted, the Conference could abstain from regulating any question concerning civil law and confine itself to solving problems which were actually covered by the field of law on bills of exchange.

The PRESIDENT drew the Conference's attention to the fact that the Committee of Experts had already provided for a reservation on the part of those countries which used the system of cover. That reservation was to be found in Article 6 mentioned by M. Sulkowski, which could still be completed.

M. PERCEROU (France) noted that the proposals submitted by the Italian and Swiss delegations were nearer the French conception concerning the transfer of cover. He was glad to observe this point. It was generally admitted, however that the transfer of cover and action for inequitable gain "sans cause" were outside the scope of exchange law. This was an almost unanimous opinion, though M. Percerou would personally have liked to make a number of reservations on this word.

This being so, it was obvious that the Conference would not have to settle by means of a law concerning bills of exchange the question of the transfer of cover nor of the action for inequitable gain "sans cause". Nevertheless, he thought it opportune because of the very great practical importance of this problem to state definitely that these questions were reserved for the legislation of each State, and to achieve this the best way would be to return to Article 14 of the Hague Convention by completing it with a reference to "enrichissement sans cause", in order to satisfy the German delegation.

The PRESIDENT thought that so delicate a point should not be drafted hastily. The question was dealt with, in the first place, in Article 6 of the draft Convention and, in the second place, in Articles 13 and 14 of the Hague Convention.

The Conference had unanimously decided, in order to satisfy those who wished that cover should remain outside the Regulation, to say so expressly. It was also desired to satisfy those who wished that an "action d'enrichissement" should exist and that it should be mentioned. The Drafting Committee could be instructed to draw up a text combining the elements of Article 6 of the draft and of Articles 13 and 14 of the former Convention, since the Conference had now reached agreement on the principle.

This proposal was adopted.

M. VISCHER (Switzerland) had proposed a text dealing with the regulation of the transfer of cover, but only in case it had been desired to deal with this question in the Uniform Regulation. He did not especially wish to do so.

It had been said that the question of the transfer of cover and that of the "action d'enrichissement" were questions of common law and for that reason they should not be settled. It might,

¹ See Annex No 10.

however, be desirable to regulate some questions in a uniform manner when the utility of doing so was apparent, even though they concerned common law. In the present case, a uniform regulation would certainly meet the desires of commercial circles.

It was quite impossible to achieve an agreement owing to the point of view of certain countries. It would be better, therefore, not to seek to achieve a complete and ideal uniform regulation which would merely remain on paper but upon which no action would be taken. It would be preferable to have a regulation which, though less complete, was nevertheless ratified by every State. A reservation, therefore, was all that should be allowed, either in the Convention or in the report or in the text concerning conflicts of laws.

M. SCHELTEMA (Netherlands) also thought that everyone agreed in regard to cover. He would desire, however, to refer to the following case, which might arise and which was of great importance in Dutch law. If a bill of exchange had not been paid by the drawee and the protest had not been drawn up in time, the Dutch Code, following in this the French Code, laid down that the endorser had no further obligation but that the drawer remained liable unless he could prove that he had deposited cover with the drawee. That action against the drawer was in accordance with the provisions of Dutch exchange law and was not a point of civil law as was the case, for example, in Germany.

According to Article 52 of the present Uniform Regulation, however, such action could not be taken. By the terms of the reservation made to Article 13 of the Hague Convention, the national laws could provide for this action which concerned exchange law, and for that reason he thought it necessary to make a reservation in the Geneva Convention.

M. PERCEROU (France) said that the only course to take would be to re-insert Articles 13 and 14 of the Hague Convention.

The PRESIDENT considered that the point raised by M. Scheltema had already been partially met by Article 52 of the experts and would be completely met when Articles 13 and 14 had been combined in order to make Article 6 of the Convention.

M. STUB HOLMBOE (Norway) said that if the Conference agreed that the two questions of "cover provided" and "action d'enrichissement" were left to national law, he would not insist on the form of the proposal and would acquiesce in the President's suggestion. The Drafting Committee would consider the matter.

The PRESIDENT took note of the withdrawal of the amendment; the question would be settled in the Convention.

M. GIANNINI (Italy) regretted that the various proposals concerning this question had had to be relinquished and the solution indicated adopted. Nevertheless, he noted that Article 6 of the Convention, which referred only to conflicts of laws, was still accepted. Articles 13 and 14 of the Hague Convention were likewise adopted. The Italian delegation proposed to add to them a paragraph on the following lines:

"The same applies to any other question regarding the legal relation on the basis of which the bill has been issued."

This point was not mentioned in Article 14 and it was desirable that the report should contain explanations on the matter.

The question whether a bill contained a substitution of obligations (*novation*) was a question which was much disputed in practice. Judicial decisions were by no means unanimous in their reply to this question, in regard to which it had been said at the outset of the discussion that it was a very easy one. It was for that reason that M. Giannini thought it useful to have certain explanations inserted in the report.

The PRESIDENT thought that M. Giannini's wishes would be met still better by the insertion, textually, in the report of the Italian and Scandinavian amendments, together with an explanation of the decision taken by the Conference in regard to them.

M. GIANNINI (Italy) accepted this suggestion, but thought that the text which he had read might nevertheless be appended to Article 14.

The PRESIDENT agreed. That was a question of drafting.

Article 52 was approved at a first reading.

NEXT ARTICLE (UNNUMBERED).

The PRESIDENT understood that the Italian and Swiss delegations' amendments had been withdrawn.

M. GIANNINI (Italy) and M. VISCHER (Switzerland) replied in the affirmative.

CHAPTER VIII. — INTERVENTION FOR HONOUR.

The PRESIDENT said that he had hoped that there would be no amendment to this chapter, since it appeared that the case of intervention for honour practically never occurred in actual fact. Unfortunately, several amendments had been tabled.

M. SHIMADA (Japan) said that his delegation wished an express reference to signature to be inserted in the Uniform Regulation because the Japanese Government attached great importance to this question.

M. GIANNINI (Italy) thought that, owing to the explanations which had been given in this connection, the Japanese delegation might find it unnecessary to press this proposal. He drew attention to the danger which might result from a rule of that kind if it appeared either in the Uniform Regulation or in the Convention. Until the Uniform Regulation came into force, it would be possible to disallow the circulation of bills of that kind, since it might be held that signatures affixed by that method were not valid.

The PRESIDENT wished to give a few explanations. The Rapporteurs must know whether a reference was to be made in the report or whether a special reservation was to be allowed.

M. SHIMADA (Japan) wondered whether a formula could not be found so as to obviate the disadvantages mentioned by M. Giannini, and to mention expressly the wishes of the Japanese Government in the Convention.

M. GIANNINI (Italy) thought that the problem did not concern Japan alone, but all countries as well which had colonies ; France, Great Britain, Portugal, the Netherlands, Italy, etc. The Arab races likewise were accustomed to use a mark as a signature. In practice, the problem was of no great importance, since bills of exchange of this kind did not circulate. It did, however, arise in connection with the establishment of a uniform law. It was impossible to make an express reservation merely for Japan. If the Conference decided to allow one, it would have to be far wider. In point of fact, M. Giannini thought the reservation useless, since any expression of personality, whether handwriting or a seal or a mark, was allowed as a signature.

The PRESIDENT thought that the Japanese delegation might be satisfied by M. Giannini's explanations. The countries concerned would be able to follow the present practice without objection.

M. SHIMADA (Japan) said that his delegation would be content if the question were mentioned in the report.

M. PERCEROU (France) wished to have a few explanations concerning Article 37 so as to assist him in drawing up the report. The article contained a clause which fixed the limit of time for presentment at three days. So far as he had been able to gather from the Minutes, the practice of presenting a bill, not on the third day, but on the actual day of maturity, was that obtaining in England and the United States of America. In France, it was an absolutely regular practice and one to which the business world was much attached. M. Percerou quite realised the considerations for which three days had been proposed for presentment, and he had no intention of asking for any change in the uniform law on this point. He would, however, apply to make a reservation similar to that made at The Hague (Article 7), viz :

“ Every Contracting State may supplement Article 37 of the Regulation to this effect — namely, in the case of a bill payable in its own territory, the holder shall be bound to present it on its due date. . . .

“ The other States will be empowered to determine the conditions under which they will recognise such an obligation.”

He merely asked that France might be granted the same reservation as that contained in Article 7.

The PRESIDENT thought that the Conference might concede this reservation to France, seeing that it had already been approved during the discussion.

M. GIANNINI (Italy) said that his delegation had no objection to granting this reservation. If, however, it was desired to be accurate, it should be noted that the Conference had not approved the reservation during the debate.

The PRESIDENT asked whether, in those circumstances, the Conference was prepared to allow it.

The Conference approved the reservation.

M. QUASSOWSKI (Germany) observed that the Conference had adopted an amendment to Article 45 which Germany would find it difficult to accept unreservedly. Under that amendment, a protest could only be drawn up in the course of the two days following the day of maturity. That would be inconvenient to business between small traders in Germany, where protest by post was very widespread. The protest by post was drawn up on the actual day of maturity. For this reason, M. Quassowski requested the Conference to authorise Germany to make a reservation concerning Article 43 so as to allow the drawing up of the protest on the actual day of maturity.

M. HAMMERSCHLAG (Austria) supported the German proposal, seeing that in these cases the bills were very often only for small amounts which played no part in international trade. Furthermore, protest by post would perhaps be introduced in time to come in other countries as well.

M. GIANNINI (Italy) did not wish to oppose the German request for a reservation, but feared that the reservations were becoming too numerous. M. Hammerschlag had just said that this reservation was not one of any great importance, since it related only to bills which did not circulate internationally. No limit, however, had been put to the reservation, and use might be made of it also in regard to bills of exchange of a certain importance.

Care must be taken not to consent to too many reservations, which would overburden the Convention.

M. DE LA VALLÉE POUSSIN (Belgium) said that the practice of protest by post existed in Belgium as well, but did not entail an obligation to draw up the protest on the actual day of maturity. The time-limit in Belgium for the protest by post was the same as that for the protest drawn up by the public officer (*huissier*). There was therefore no reason for not allowing the debtor twenty-four hours' grace. The question was one of organisation, which presented no difficulty in Belgium and in no way justified the introduction of a reservation. The problem, however, was different if it was desired to safeguard a practice existing in Germany.

M. SULKOWSKI (Poland) thought that, if the Conference allowed this reservation, it should be general and should not be made exclusively for the benefit of Germany. Furthermore, the question raised by M. Quassowski was one of great moment to other countries as well, in particular to Poland. The reason why M. Sulkowski himself had not formulated this reservation was only because he had been prepared to sacrifice Polish law from a desire to achieve a uniform regulation. If, however, the Conference was prepared to acquiesce in the reservation for one country, there was no reason why other States should not have the benefit of it.

The reservation requested by the German delegation was approved by 16 votes to 3.

The PRESIDENT added that the reservation would not be made exclusively in favour of Germany, but in favour of all countries.

M. BARBOZA-CARNEIRO (Economic Committee) wished to draw the attention of the different delegations who had submitted reservations to the following point :

The Conference had already adopted a number of reservations to different articles, some of them by a strong majority and others by a very weak majority. Could not the delegations which had taken the initiative in formulating these reservations consider the possibility of withdrawing at least some of them ?

In making this appeal, M. Barboza-Carneiro was convinced that he was serving the cause of the unification of the laws on bills of exchange to achieve which the delegations had met in conference. It would be highly regrettable if the value of the Convention were to be diminished by reservations which would make it inferior to that voted at The Hague in 1912. He felt sure that he was voicing the general desire of the Conference and of the Members of the Economic Committee whom he represented in urging delegations to examine the possibility of withdrawing some of the reservations.

The PRESIDENT supported M. Barboza-Carneiro.

ARTICLE 54.

M. MOLENGRAAFF (Netherlands), speaking on behalf of his delegation, drew the attention of the Conference to the fact that the "referee in case of need" could not be regarded as an intervener as was laid down in Article 54 and the following articles in the draft Regulation. The intervener was a person who, without being asked to do so by the holder, offered to do what the holder had unsuccessfully asked the drawee to do — namely, accept or pay the bill. The "referee in case of need", on the contrary, was a subsidiary drawee, designated as drawee by the drawer in the bill to meet the case where the drawee designated in the first place failed to accept or to effect payment. The "referee in case of need" did not offer to accept or to pay, but the holder was obliged to ask him to accept or pay. If the "referee in case of need" was prepared to accept or to pay, the holder could not refuse acceptance or payment.

If, on the contrary, the "referee in case of need" refused to accept or to effect payment, the holder was obliged to act as if the case were one of non-acceptance or non-payment by some one designated as drawee in the first place. The holder must then have the protest drawn up ; he was afterwards entitled to have recourse against the drawer and the endorsers.

M. Molengraaf asked whether the members of the Conference concurred in the view he had expressed, which was that followed in Dutch law. If that was the case, the Dutch delegation would, in consultation with the Drafting Committee, make such modifications as would become necessary.

M. ARCANGELI (Italy) agreed that the question put by the Dutch delegation was very important. It was partly a question of substance and partly one of form or terminology. The two aspects of the problem must not be confused.

As to the substance of the question, he wondered whether the Dutch delegation's opinion — namely, that the "referee in case of need" was a subsidiary drawee — was correct. Personally, he did not share that view. He was well aware that it was a very widespread principle in practice, but it was not entirely in conformity with the truth, since a person who drew a bill on the drawee generally did so because he was his creditor. The result was that if the drawee accepted he was liable, from the point of view of exchange law, to the drawer. If, on the other hand, the drawer,

or any other party liable, designated a "referee in case of need", he did so, not because he was his debtor, but because he hoped to obtain a signature from this "referee in case of need" — namely, an acceptance "in case of need" — for the purpose of obviating the effects which would result from non-acceptance by the drawee.

The consequence was that if the "referee" accepted, the drawer had no right of action under exchange law against him. Such action existed only in regard to the party liable who came immediately after the person on whose behalf intervention had been exercised and in regard to the other parties liable.

It was, however, true, and on this point M. Arcangeli entirely agreed with the Dutch delegation, that the "referee" must not be confused with a third party who accepted. The situation differed entirely according to whether the case was that of a "referee" who accepted or a third party who accepted. In the case of a "referee" who accepted, the holder must have the signature affixed, and he could not have recourse against the parties liable, since, owing to the specification of this fact in the bill, he was aware that he must be content with acceptance by the "referee". If, on the contrary, it was a third party who accepted, the holder might refuse such acceptance, and he preserved his rights of recourse against the other parties liable.

On this point, M. Arcangeli thought that he was in complete agreement with the Dutch delegation.

As to the terminology, it must be allowed that the various laws had solved this question in different ways.

It might be held that a "referee" who had accepted was an intervener, but an intervener who must be carefully distinguished from a third-party intervener. Both in the Hague draft Convention and the experts' text the word "intervener" applied to the "referee" and to the third party alike. A distinction, however, must be made in regard to the effects, and that distinction had been laid down in the Hague Convention of 1910. In the 1912 Convention and in the text of the experts, on the other hand, there was a certain confusion, and consequently Article 55 would have to be modified. A proposal for its modification had already been made by certain Scandinavian delegations and M. Arcangeli was prepared to support their proposal, the object of which was to correct an error in the text of Article 55.

If the question was solved in accordance with M. Arcangeli's views, Article 54 might apparently remain as it was, for there was no difficulty in agreeing that the "referee" should even be described as an intervener. M. Arcangeli considered that, put in this way, the question could be solved easily.

M. GIANNINI (Italy) thought that M. Arcangeli had very clearly expressed the problem to be examined in regard to the substance while dealing with Article 55. The Italian delegation had confined itself to drawing the Conference's attention to the desirability of reverting to the 1910 formula, but in order to elucidate the discussion it had nevertheless prepared a form of wording.

The discussion on Article 54 might be suspended and the formula proposed for Article 55 examined. When agreement had been reached on the latter, the Conference might return to Article 54 and examine the amendments relating to it.

The PRESIDENT said that he had intended to make the same proposal. Everyone apparently agreed that there was a certain difference between the intervener and the "referee". If agreement were reached on Article 55, the only outstanding question would be that of drafting.

This procedure was adopted.

ARTICLE 55.

The PRESIDENT said that the Italian delegation thought that this Article, adopted by the 1912 Conference (Article 55) should be revised on the basis of the principles proposed by the 1910 Conference (Article 32).

The delegations of Denmark, Finland, Norway and Sweden proposed that the conference :

1. Should adopt the principle that when the drawer has designated, to accept in case of need a person domiciled in the place of payment, the bearer shall duly present the instrument to such person and shall enter protest if acceptance is refused, failing which he shall lose his right of recourse before maturity ;

2. Should request the Drafting Committee to frame a text embodying this principle.

The new wording of the Italian amendment was as follows :

"Acceptance by intervention may take place in all cases where proceedings by way of recourse are open to the holder of an acceptable bill of exchange before maturity.

"Where the drawer or an endorser has, under Article 54, paragraph 1, indicated a referee in case of need as domiciled in the place of payment to accept the bill of exchange, the holder must in due time present the bill to the referee in order to obtain acceptance by intervention and to have the protest drawn up if acceptance is refused. If he omits to do so, he loses the rights of recourse belonging to him before maturity.

"In all other cases, the holder may refuse acceptance by intervention, but if he allows it, he loses, as against the guarantors, the rights of recourse belonging to him before maturity."

M. ARCANGELI (Italy) thought that the first paragraph required no explanation. It was not contained in the 1910 text, but it would be wise to insert it in the Regulation, for it raised the question in general terms.

In regard to the second paragraph, M. Hammerschlag had put a question connected with the wording. He was perhaps right ; the text was that of 1910, which could be improved.

As there was a "referee" designated in the bill, the second paragraph determined the consequences devolving from it — namely, that the holder was obliged to present the bills to the "referee" in order to obtain acceptance — and to perform the consequential formalities.

The third paragraph reproduced the text of the experts, because it contained certain provisions which it would be wise to add. The phrase "in all other cases" covered the case in which acceptance had been given by a third party.

It appeared that the two positions of the "referee" and the third party were thus clearly distinguished.

Lastly, there was a small question which had not been raised by the amendment submitted by the Scandinavian delegations. By adding the words "or an endorser" after the words "where the drawer", the Italian delegation thought that a difficulty which might occur was solved. These words were in direct relation to Article 54, which said that even an endorser might specify a person to accept or pay in case of need.

As to the substance of the question, it would, he thought, be useful to preserve the endorser's right to specify a "referee". It might even be said that it was he who had the stronger reasons for this, stronger even than the drawer himself. It might happen that the position of the drawee underwent a change after the issue of the bill by the drawer. The drawer would no longer be able to designate a "referee" in the bill, if he was not in possession of it. In that case, it was the endorser who, in anticipation of the possibility of non-acceptance or non-payment by the drawee, could designate a "referee" in the bill.

The case therefore might arise, and it would be well to solve the difficulty.

M. HAMMERSCHLAG (Austria) said that the question had already been discussed in the Committee of Experts, several of whom shared the views of the Italian delegation. The Austrian delegation was all the more ready to support this view as it corresponded to the Austrian law, in which Article 57 laid down that acceptance by the intervention of a person who is not designated as a "referee" could be refused. He also drew the attention of the Drafting Committee to the word "come" to be found in the following sentence in the Italian proposal :

"Lorsque le tireur (ou un endosseur) en vertu de l'article 54, alinéa premier, a indiqué un besoin *comme* domicilié au lieu du paiement. . ."

M. MOLENGRAAFF (Netherlands) wished to know why the Italian delegation had used the restrictive expression "domiciled in the place of payment". Why should not the drawee be allowed to designate a "domiciliary referee" in a place other than that of the place of payment?

M. HERMANN-OTAVSKY (Czechoslovakia) thought that the formula proposed by M. Arcangeli might constitute the basis of a general agreement. One observation was, however, necessary.

The second paragraph of the Italian proposal stated that : "The holder must in due time present the bill to the referee in order to obtain acceptance by intervention. . . If he omits to do so, he loses the rights of recourse belonging to him before maturity." This formula was too hard and fast, in view of the severity of the penalty, for the holder lost any right of recourse which he had possessed before maturity. It might perhaps be possible to say in accordance with the new Czechoslovak law and the law of several other countries as well, that the holder "was bound to present the bill of exchange before exercising his right of recourse, etc." Presentment to the holder should precede the exercise of recourse, but it was not in the nature of a conservatory act.

M. EIGTVED (Denmark) stated that the proposal of the Danish, Finnish, Norwegian and Swedish delegations was included in the Italian delegation's amendment. He thought, however, that it would be better to keep the second paragraph of the proposal put forward by the Scandinavian countries, which suggested that the Drafting Committee should draw up a text covering this principle. The Scandinavian delegations also thought that, in order to safeguard the legitimate interests of trade, especially of overseas trade, if the drawer had designated an address to the "referee", the holder must present the bill to him either for payment or for acceptance before drawing up a protest of non-acceptance in cases when the drawee refused to accept. Such a provision was desirable in order to avoid difficulties which might arise in cases where, in the case of documentary bills, for example, the person designated by the drawer was the "referee" or expressly appointed to take charge of the documents.

His main desire was that the Conference should reach an agreement in principle. The Drafting Committee could be left to draw up a text meeting its views.

M. Eigtved added that the intervener could never be regarded as an acceptor, but only as a payer.

M. SCHELTEMA (Netherlands) agreed with the view of the Italian delegation that it would also be possible for an endorser to designate "the referee". Was it necessary, however to say that it was only when the holder had made no protest against the "referee" and had asked no payment from the "referee" that he lost his rights against this endorser and not against previous endorsers and the drawer, since they had not caused their obligations to be dependent upon presentation to the "referee".

M. DA MATTA (Portugal) agreed with the Italian delegation, but drew the attention of the Drafting Committee to the expression used in the second paragraph of the Italian amendment : "where the drawer or an endorser. . . has specified a referee. . .". This was a well-known expression in commercial practice, but was obviously not of a very legal kind. It should be explained that the reference was to a person who could accept the bill in the case of need.

M. ARCANGELI (Italy) recalled that intervention had always raised a very large number of very difficult questions, as was shown in the "Pratique d'Anvers", in M. Thomsen's edition. It was obvious that the Drafting Committee should draw up a final wording, but it must be given sufficient data to enable it to solve the problems involved. The question of the endorser had been settled, but many others had been raised.

M. Molengraaff and M. Hermann-Otavsky had drawn attention to the second paragraph, which stated: "Where the drawer or an endorser . . . has specified a referee domiciled in the place of payment. . .". This domiciliation at the place of payment was not only to be found in Article 32 of the Convention of 1910, but also in Article 54 of the Geneva Convention. The principle underlying this wording was to make it clear that it was not desired that the holder should go at maturity to various places which might be very far away from each other in order to draw up different protests or in order to continue the same protest. The period for protest was short and sometimes it was not possible to perform all the necessary formalities within the time-limit.

Another question had been raised by M. Hermann-Otavsky, who said that the words "in due time" were not necessary. The Conference should show prudence before deleting them. Intervention had been established mainly to avoid protests. The protest was always a danger for the drawer and the endorsers. It was that which it was desired to avoid. A custom established for several countries laid down that the intervention of "the referee" or of the third person at the moment of the protest was effective and took effect. When, however, it was made late, that was to say, if it came after the protest, but before the recourse, it eliminated a number of objections — even recourse itself — but did not eliminate the objection of the protest which had already been drawn up.

This question could be dealt with one way or another according to practical considerations; it could obviously be referred to the Drafting Committee, but there was nothing to prevent it from being settled immediately.

The representative of Denmark had contemplated another and more radical solution — the elimination of the acceptance of the third party. That solution had likewise been followed in the Italian proposal, but it would be difficult to introduce it in a uniform regulation applicable to a large number of countries. Finally, as to the referee designated by an endorser, M. Arcangeli thought that the Conference had already taken two decisions on this point in connection with similar preferences, in the sense that when a special mention was inserted by an endorser, it held good only for such endorser himself and that the holder lost his rights of recourse only as against such endorser himself.

M. QUASSOWSKI (Germany) added that he lost his rights in so far as the successive guarantors were concerned.

M. ARCANGELI (Italy) said that, in principle, he was unable to concur in M. Quassowski's point of view. There was in this connection, however, a question of the concordance of the two texts, which would have to be examined.

M. PERCEROU (France), in agreement with M. Giannini, proposed the following text to form the second paragraph of Article 55:

"When the drawer or an endorser has, in virtue of Article 54, paragraph 1, indicated in a bill of exchange a referee in case of need in the place of payment, the holder must present the bill to the person designated to accept it and, if the acceptance is refused, he shall draw up a protest."

There would be no change in the rest of the Article.

M. SULKOWSKI (Poland) requested the President to ask the Conference to take a decision on the principle, it being understood that the actual wording would be settled by the Drafting Committee.

The PRESIDENT thought that it would be difficult to vote only on a principle. It would be better to take a decision on the Italian amendment as changed by M. Percerou and reserve the question of wording.

The Italian amendment, as modified by M. Percerou was adopted.

The Dutch proposal was also sent to the Drafting Committee, which would revise the complete text of Article 55.

TWENTIETH MEETING.

Held on May 26th, 1930, at 10.30 a.m.

President: M. J. LIMBURG.

25. Departure of a Number of Members.

The PRESIDENT announced that Baron Carton de Wiart, M. Hammerschlag and M. Troullier would be unable to attend further meetings. He was sure that he was voicing the views of the Conference when he said that these three delegates had contributed greatly to the clarity and

value of the discussion, so that each of them might be referred to in the terms used of Molière by the French Academy: "Rien ne manque à sa gloire, il manquait à la nôtre." Baron Carton de Wiart would be replaced by M. van Zeeland, who was already very well known in connection with exchange matter and to whom the President extended a welcome.

**26. Discussion of the Draft Regulation concerning Bills of Exchange and Promissory Notes :
First Reading (Continuation).**

ARTICLE 54 (continuation).

M. Deoclecio DE CAMPOS (Brazil) made the following declaration :

"Certain delegations representing very important countries have informed the Conference that cases of intervention as specified in exchange law are very rare in their countries. Others have even said that this institution has never been applied in practice.

"In Brazil, such cases are allowed by exchange law and often occur on the market. In relations between Brazil and the Portuguese Exchanges, for instance, they are found to occur daily and the legislation and jurisprudence of the two countries — I need mention no others — have had to take action and, in cases of dispute, settle the legal status, the charges and the rights of the interveners. It is to be hoped that this institution will be settled in such a way as to obviate the possibility of another reservation being made in the Convention.

"It may be said in passing that the retention of the article dealing with redrafts at the meeting before the last has made it possible for the Brazilian and other delegations to obviate the necessity of having to propose the insertion of yet one more reservation in the Convention.

"This observation is dictated by the fact that we have noticed during the discussions tendencies towards what I may call 'unilaterality' in regard to certain legal and practical questions which hamper a more complete unification.

"The institution of intervention is provided for by Brazilian law which covers cases of 'claimed' intervention (if I may so translate the Portuguese word 'reclamada'); that is to say, the case of reference in case of need as well as cases of spontaneous or voluntary intervention.

"The legal status differs in two ways, as is generally the case in other countries. It may be proved either at the time of acceptance or refusal or at the time of maturity and at the payment of the bill.

"Without going into details, I may say that according to the law, if the bill is accepted, intervention cannot take place unless the holder gives his consent.

"The legal status of the intervener is then identical to that of the debtor; the consequence is that he becomes liable in exchange law.

"It is accordingly a *sine qua non* that the possessor or holder must give his consent.

"The two interveners — that is to say, the 'referee in case of need' or the voluntary intervener — remain liable in exchange law as a result of acceptance.

"Where the bill is paid, the voluntary intervener is substituted in regard to all rights for the person whose signature he has honoured.

"The legal picture of the institution as laid down in the Hague text satisfies in theory and in practice — except on certain divergent points — the provisions of Brazilian law.

"The Brazilian delegation will therefore follow with interest the discussion of this question, which is so important to it, and will approve the retention of the text established by the 1912 Conference, subject to certain changes which entail no alteration in the fundamental structure of the institution, in conformity with the principles of law."

The PRESIDENT asked whether the amendments to Article 54 submitted by the Japanese¹ and Czechoslovak² delegations might be considered withdrawn in view of the new wording of Article 55.

M. SHIMADA (Japan) replied in the affirmative, provided that Article 55 in its new wording was regarded as implicitly settling the question in the sense of the Japanese amendment.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that a satisfactory basis had been found for the discussion and settlement of this question in M. Arcangeli's proposal, but that the text had not been finally settled.

The article should be confined to mentioning the addresses of the "referees in case of need" who were domiciled in the place of payment. There should be no necessity to consider the others, and the holder could disregard them, since it would be very difficult to settle the question if there were "referees in case of need" in different places.

Article 59, moreover, was cognate to Article 54, since it said "the holder must at the place of payment. . ." and that if there were "referees in case of need" domiciled in another place this provision would then apply — namely, that the holder or notary must nevertheless seek for them at the place of payment — a proceeding which would be very troublesome. It would be necessary to have a protest of absence (*protêt d'absence*).

The Czechoslovak delegation therefore adhered to the condition which it had laid down, but was ready to relinquish it if it appeared in M. Arcangeli's text as seemed probable.

The PRESIDENT thought that the wording adopted at the end of the last meeting entirely met the Czechoslovak delegate's point.

M. HERMANN-OTAVSKY (Czechoslovakia) withdrew his amendment.

¹ See Annex N° 11.

² See Annex N° 12.

M. GIANNINI (Italy) thought that it would perhaps be better to pass over the other Czechoslovak amendment to Article 54 as well, since the formula as proposed applied equally in regard to Article 58. That was a question to be settled by the Drafting Committee.

The PRESIDENT considered M. Giannini's observation important from the point of view of the wording. The Conference, however, need not deal with the matter for the moment. Agreement had been reached on the substance. The only question to be settled was that whether it would not be better to insert the mention of the place of payment by the "referee in case of need" in Article 54 rather than in Article 55, since the question arose also in regard to Article 58. That would obviate the repetition of the same wording in Articles 55 and 58. The Drafting Committee would have to examine this point.

M. QUASSOWSKI (Germany) raised certain objections to the Czechoslovak proposal concerning Article 54, paragraph 1. That proposal had apparently been withdrawn, but it appeared now to have been taken up again by the Italian delegation.

The PRESIDENT observed that the Japanese and Czechoslovak amendments to the first paragraph had been withdrawn, since Article 55 as adopted on Saturday covered the question in a way which satisfied Japan and Czechoslovakia. According to M. Giannini, the question of the place of payment by the "referee in case of need" could be introduced in Article 54, thus obviating a repetition in Articles 55 and 58.

M. QUASSOWSKI (Germany) thought the position to be somewhat different. It was a question of substance that had to be settled.

The PRESIDENT held that this question of substance had been settled at the previous meeting in connection with Article 55. That decision had an effect on Article 54.

M. QUASSOWSKI (Germany) thought that no vote had been taken on the Czechoslovak proposal and on the general question whether it was possible to designate a "referee in case of need" having his domicile in the place of payment or otherwise.

The PRESIDENT replied that the solution depended solely upon the interpretation of Article 55 which had been adopted.

M. Molengraaff had raised an objection similar to that of M. Quassowski. It was desired not to have a "referee in case of need" or an intervener in America when payment had to be made in Europe. It was to meet this point that the text of Article 55 had been adopted.

M. Giannini had been right in affirming that, from the point of view of wording, the question might be considered whether the specification of the domicile of the "referee in case of need" should not be inserted in Article 54, since, if that procedure were followed, there would be no necessity to repeat it in Article 55.

M. QUASSOWSKI (Germany) believed that two distinct questions were involved. The first was whether it was possible to specify a "referee in case of need" who had his domicile at a place other than the place of payment; the other was under what conditions the holder lost his right of recourse if he refused the acceptance of the "referee in case of need". The second question was decided by the Italian proposal, to which he did not intend to make any objection. The first question, however, remained open. M. Quassowski added that the specification of a "referee in case of need" gave an additional right to the holder. The suppression or restriction of that right was not to be recommended. It would, however, be restricted if such specification were admitted only when the person specified had his domicile at the place of payment. Whether the holder who refused acceptance or payment by the person specified lost his right of recourse was another question and one that must be settled differently according to whether the person specified was or was not domiciled at the place of payment. It was fair to restrict the loss of recourse when the person specified had his domicile at the place of payment.

The latter question had been settled by the Italian proposal, but the other question, which was the object of the Czechoslovak amendment, was still open.

The PRESIDENT considered that the distinction which the German delegate had just made had not been drawn during the discussion. Indeed, the Minutes of the previous meeting stated:

"When the drawer or an endorser has, in virtue of Article 54, paragraph 1, indicated in a bill of exchange a referee in case of need in the place of payment. . ."

This passage implicitly settled the question raised by M. Quassowski.

M. QUASSOWSKI (Germany) considered that the problem arose in a different manner in the third paragraph.

The PRESIDENT pointed out that the formula "in all other cases" had not appeared to him to be clear and that he had proposed to refer it to the Drafting Committee.

M. QUASSOWSKI (Germany) would be satisfied if paragraph 3 were to be understood to mean that it related to cases in which the person specified had a domicile other than that of the place of payment.

The PRESIDENT did not believe that by the formula "in all other cases" the Conference intended to cover the case referred to by M. Quassowski.

M. SULKOWSKI (Poland) was of opinion that two different questions were involved. By accepting the Czechoslovak proposal, the Conference would limit the right to specify a "referee in case of need", in the sense that the holder would never be able to apply to a "referee" whose domicile was different from the place of payment of the bill. There was no reason for limiting the possibility of specifying a "referee in case of need", even if he was domiciled in a place other than the place of payment. At the previous meeting, the Conference had only settled the question of the right of recourse when it adopted the Italian proposal in regard to acceptance and Article 59 in regard to payment by intervention. The holder was only obliged to apply to the "referee" specified in case of need who was domiciled at the place of payment. If, however, for certain reasons the holder considered it desirable to apply to a "referee in case of need" who was not domiciled at the place of payment, there would be no reason for preventing him. If the "referee in case of need" domiciled in another place had accepted the bill of exchange, he was bound by that acceptance.

M. Sulkowski considered that the Conference would be able to avoid the difficulty by refraining from completing Article 54 with the Czechoslovak proposal. It would then be obvious that the drawer was not limited in specifying a "referee in case of need", and that, on the other hand, Articles 55 and 59 referred only to the question of recourse.

The PRESIDENT noted the disagreement which appeared to divide the Conference on the question whether a drawer or an endorser could specify a "referee in case of need" in a place other than that of the drawee. Personally, he had had the impression during the discussion of the preceding meeting that in accepting the amendment to Article 55 the Conference had implicitly decided in the negative. He would, however, have no objection to reopening the discussion if the meeting considered it useful to return to the question. It would indeed be preferable to clear up the point.

For these reasons, the President asked the Conference whether it intended to accept the principle that the intervener or "referee" might have a domicile other than that of the drawee. If the Czechoslovak amendment to Article 54, paragraph 1, were rejected, the present text might be interpreted as giving the drawer and the endorser the right to specify an intervener or "referee" domiciled elsewhere than at the place of payment of the bill. Thus there would be nothing to add to the text.

M. VISCHER (Switzerland) had been of opinion at the preceding meeting that in adopting Article 55 the Conference had at the same time rejected the Czechoslovak proposal. If that were not the case, the representative of Switzerland entirely supported the observations of M. Quassowski as well as M. Sulkowski's explanation. There was no reason to exclude the possibility of specifying an intervener or "referee" whose domicile was different from that of the place of payment. What M. Vischer could not accept was the imposition on the holder in that case of the obligation to present the bill. Account had been taken of that point of view when Article 55 had been adopted, but at the same time the Czechoslovak amendment had been rejected. If it were put to the vote a second time, M. Vischer would vote against it.

M. QUASSOWSKI (Germany) believed that the text of the Italian proposal was not inconsistent with his own opinion. He thought that the Italian delegation itself was of opinion that a "referee" domiciled in a place other than the place of payment could be allowed.

The text of the Italian amendment was as follows :

"Where the drawer or an endorser has under Article 54, paragraph 1, specified a referee in case of need domiciled in the place of payment. . ."

If the possibility of having a referee in case of need domiciled in a place other than that of payment did not exist, the text would have been different. Paragraph 3 should therefore be interpreted as including the other cases, that was to say, those in which the "referee" was domiciled in a place other than that of payment.

In conclusion, M. Quassowski supported the opinions expressed by M. Vischer and M. Sulkowski.

The PRESIDENT pointed out that from the moment at which the Italian amendment had been interpreted differently by different delegates, the discussion was reopened on the question as to whether the "referee" should have his domicile at the place of payment or whether he could be domiciled elsewhere.

M. HERMANN-OTAVSKY (Czechoslovakia) explained that the intention of his delegation was to spare the holder the necessity of presenting the bill to the "referee" who was domiciled in a place other than that of payment. It would be extremely difficult to send a bill of exchange from one town to another. The time-limits would be insufficient and it would be necessary to prolong them. The object of the Czechoslovak amendment was also to save the holder the loss and forfeiture of his rights in the event of failure to present the bill. For that reason, the Czechoslovak delegation had suggested the insertion, after the words "specify a referee", of the following words: "resident at the place of payment".

M. Sulkowski had asked that those words should not be inserted, in order to obviate restricting the right to designate referees and so even to make it possible to designate referees who resided in a locality other than the place of payment. Intervention by such persons would not, however, be excluded altogether; it might perhaps be possible to have recourse to them by way of an "aval"; payment by intervention might likewise be offered by a person residing in a place other than that of payment.

M. Hermann-Otavsky repeated that he had simply wished to preserve the holder from the loss and forfeiture of his rights. Nevertheless, if the text of the Italian delegation achieved that result, the Czechoslovak delegation was prepared to withdraw its amendment.

At the same time, it seemed to him that paragraph 3 might give rise to some doubt, but he believed that the Italian delegation had no intention of including cases in which the "referee" was domiciled in a place other than that of payment.

M. GIANNINI (Italy) drew the attention of the Conference to the fact that Article 55 had been adopted. He hoped that it would be possible to reach agreement in regard to Article 54. If the Conference was in agreement in regard to those two articles, M. Giannini was ready to adopt Article 54 as it stood, for the very simple reason that it concerned a practical and not a theoretical problem, and in those circumstances he was willing to leave an illogicality in Article 54. Indeed when the practical problems were definitely settled, such an illogicality might very well be allowed. He did not, however, think that there actually was any such illogicality.

The PRESIDENT thought that the Conference should take a decision. It appeared from the discussion that the first paragraph of Article 54, as it was at present drafted, might very well be interpreted as authorising the specification of a "referee" whose domicile was other than that of payment. If that were the interpretation which the Conference gave to it, the paragraph could remain as it stood. Paragraph 3 would then refer to other cases — that was to say, those in which the "referee" was not domiciled at the place of payment.

The Conference should therefore first take a decision on the interpretation to be given to the first paragraph of the article, and then on the substance of the question.

The President pointed out that there remained an amendment submitted by the Czechoslovak delegation in regard to paragraph 2 of Article 54 to replace the words "for any person who has signed it" by the words "for any of the parties liable by way of recourse".

M. HERMANN-OTAVSKY (Czechoslovakia) held that in paragraph 2 of Article 54 the right of intervention would have to be restricted so that it could only be allowed in favour of any of the debtors liable to an action in recourse. It was difficult to imagine cases in which such intervention could be allowable on behalf of any other debtor, and there seemed no urgent necessity for allowing it on so broad a basis.

The object of intervention was to exclude recourse proceedings and it was entirely logical to allow it on behalf of indirect debtors — namely, the drawer and the endorsers — but it would be unusual to allow it on behalf of the acceptor.

In regard to the acceptor, Article 59, paragraph 2, reading as follows, must be borne in mind :

"In default of protest within this limit of time, the party who has indicated the referee in case of need, or for whose account the bill has been accepted, and the subsequent endorsers, are discharged."

The acceptor would thus be discharged from his obligation. The situation would then be as follows : The drawee, having accepted, would have incurred the principal or direct obligation, that which established the basis of the credit of the bill ; if there was intervention on behalf of the acceptor, the holder would be obliged to present the bill and to draw up the protest in order not to lose his rights against the acceptor. In this way, the drawee would have accepted, but with a very noteworthy restriction — namely, on condition that the bill was presented within a short time-limit and that the protest was drawn up.

Apparently there was an inconsistency here. The acceptor was the principal debtor and by this roundabout method he would become only an indirect debtor. If, however, it was agreed by the majority of authorities that the practical object of intervention for honour was to cut short or exclude recourse proceedings, there were no reasons for allowing intervention on behalf of the acceptor.

The PRESIDENT thought that there was a mistake here and that the Czechoslovak amendment was logical.

The Czechoslovak amendment was adopted by 14 votes to 1.

M. DA MATTA (Portugal) wished to make a few comments and to submit various amendments to Article 54. He would refer first to the declaration made by M. Deoclecio de Campos at the beginning of the meeting.

M. Percerou had said at the previous meeting that it was very rare that a third party was designated to accept or pay. His idea seemed to be that a designation of that kind indicated a lack of confidence in the drawee. Nevertheless, as the Brazilian delegate had rightly pointed out, that situation occurred often and quite definitely in relations between Portugal and Brazil. This fact sufficed to show the desirability of making a special reference to the matter in the uniform law. It would even appear that there were advantages in spreading the practice of intervention, since it facilitated the circulation of bills of exchange, obviated the discredit involved for the signatories in non-acceptance or non-payment and avoided the onerous alternative of providing a surety or paying the bill, an alternative which might arise for a party liable in consequence of non-acceptance.

He regretted, moreover, that the Conference had decided in favour of keeping the first paragraph of Article 54, the result being that the general character which predominated or should predominate the question of intervention, and which appeared in that article, would be counteracted by the sub-articles. That was an illogical situation, but it was not the only one in the draft uniform law.

Article 54, paragraph 1, which said "the drawer or an endorser may specify a person. . ." should, he thought, be supplemented by the words "person giving an 'aval'" after the word "endorser". The drawer, the endorsers and the person giving an "aval" were all equally

concerned in the acceptance or payment of the bill, since they all had their credit to save and expenses to avoid in one way or another. In view of the situation in which the person giving an "aval" was placed as a result of Articles 31 and 46, there did not appear to be any reason for refusing him the right to designate a person to accept or pay the bill.

M. da Matta accordingly proposed that the first article should read: "The drawer, an endorser or a person giving an 'aval' may designate. . .". Further, paragraph 1 referred to the person designated to accept or pay, and paragraph 2 said: "A bill of exchange may, under the conditions hereafter set forth, be accepted or paid by a person who intervenes for any person who has signed it." The paragraph, in order to be clear, should read: "A bill of exchange may, even in the absence of such designation, and under the conditions. . .".

The intention apparently had been to refer in this way to both forms of intervention: in paragraph 1, to intervention by specification of one of the parties liable on the bill — that was to say, the case of "accettazione al bisogno" in Italian law — and, in paragraph 2, to intervention without any designation of any parties liable on the bill — that was to say "accettazione per onore" in Italian law. M. de Matta ventured to call the Drafting Committee's attention to this point and believed that the Czechoslovak amendment represented only a different formula which expressed the idea contained in the words "for any person who has signed it". That question, however, was now solved.

There were certain comments to be made on Article 54, paragraph 3, the first being as follows: paragraph 3 said that the intervener might be a third party, even the drawee "or a person already liable on the bill, except only the acceptor". M. da Matta did not understand this clause. A person already liable on the bill, for instance, the drawer, the endorsers and the respective persons who had given an "aval", could intervene. If, however, they were, in consequence of their legal status, already guarantors for the payment of the bill, their intervention, as provided for in paragraph 1, would be a useless and meaningless formality. It would amount to repeating a promise which had not been fulfilled and would add nothing to their legal position.

Finally, paragraph 4 did not cover the possibility of presentment to more than one person for the acceptance of the bill. He thought that a rule should be formulated similar to that embodied in Article 62 and that reference should be made to the case of competition for payment by intervention; the preference was given to the payment which effected the greater number of releases in each group. M. da Matta proposed, accordingly, a wording similar to that of Article 62 or any other equivalent wording.

In regard to paragraph 4 of Article 54, he considered that it was necessary to explain the expression "without delay", and proposed that a time-limit of two days be allowed for notice of intervention.

The PRESIDENT regretted that the Portuguese delegate had intervened at so late a stage to present five amendments.

His first amendment consisted in inserting in the first paragraph of Article 54 the "drawer and endorser or the giver of an 'aval' may specify. . .".

This amendment was rejected by 10 votes to 5.

M. GIANNINI (Italy) stated that if the Portuguese delegation had not submitted an amendment agreement would have been reached. Now it was impossible to understand the position. He considered that the giver of an "aval" was in the same position as the endorser. It had not been desired to say so expressly, but he wished that the fact should be noted in the Minutes, since the question, however, had not been settled, but remained where it was.

The PRESIDENT considered that the text of paragraph 1 of Article 54 did not cover the case of the giver of an "aval". In Article 45, the Conference had decided expressly to include the giver of an "aval" in connection with the stipulation "*retour sans frais*", "*sans protêt*". Consequently, according to the text of paragraph 1 of Article 54, the giver of an "aval" could not be included. Obviously, if the Conference desired that it should be included, it would have to take a decision in the matter.

M. DA MATTA (Portugal) withdrew all his amendments to Article 54.

M. SHIMADA (Japan) asked the President whether paragraph 1 of Article 54 should be interpreted in a very wide sense — that was to say, whether it was possible to designate both a person domiciled at the place of payment as well as one not domiciled at the place of payment.

The PRESIDENT stated that the Conference desired that the first paragraph of Article 54 should be interpreted in the following manner: The drawer or an endorser may specify a person who is to accept or pay in case of need. That paragraph referred equally to those who were domiciled in the same place as the drawee and those who were domiciled elsewhere.

M. SHIMADA (Japan) regretted that he had withdrawn his amendment. He had understood the President to state that paragraph 2 of Article 53 settled the question in a narrow sense.

The PRESIDENT replied that the Conference, contrary to the Czechoslovak and Japanese amendments, was of opinion that the first paragraph referred to persons who were domiciled either in the same place as the drawee or elsewhere. On the other hand, and this gave satisfaction to the Japanese delegation, in Article 55, which had been adopted at the nineteenth meeting, a decision had been taken in regard to the legal effects, and only cases in which the intervener or the "referee in case of need" were domiciled in the same place as the drawee had been taken into consideration.

M. SHIMADA (Japan) said that the Japanese delegation did not desire the principle that a person not domiciled in the place of payment could be designated to be adopted, for this case sometimes gave rise in Japan to difficulties in practice. The Japanese delegation might have to make a reservation on this point.

The PRESIDENT did not think that the Japanese delegation would have any reason to make a reservation. After reflection, he thought they would readily perceive this to be the case, for the text stipulated that in all other cases the holder could refuse acceptance by intervention. This formula covered the case of a difference in domicile on the part of the drawee and of the intervener.

M. SCHELTEMA (Netherlands) thought that the final paragraph of Article 55, which said that in all other cases the holder could refuse acceptance, did not cover the "referee in case of need". It must be laid down that it was not necessary to present the bill for acceptance.

The PRESIDENT recalled that the Conference had decided to refer this third paragraph to the Drafting Committee for examination. If M. Scheltema wished to make any remarks on the subject, he should make them to the Drafting Committee.

M. LOEBER (Latvia) asked whether Article 54, paragraph 1, included in the expression "endorser" a *sine obligo* endorser. On this point, German opinion was in the affirmative, more particularly that put forward by M. Langen in his work on intervention. M. Loeber thought that this view was not justified. According to Article 14 of the Uniform Regulation, the endorser, unless there was a stipulation to the contrary, was a guarantor of the acceptance. This meant that the *sine obligo* endorser was not the guarantor. Consequently, the provision in paragraph 1 of Article 54 should not be applied to *sine obligo* endorsers. M. Loeber proposed that the Conference should state this either in its report or in some other manner.

M. SULKOWSKI (Poland) observed that M. da Matta had pointed out that Article 45 had made it possible to insert the "*sans frais*" stipulation in the case of the person giving an "aval". M. Sulkowski had first of all taken the view that this possibility should not be admitted, for it would complicate the circulation of the bill. As, however, this right had been allowed, it was essential to insert likewise in Article 54 a stipulation providing that the person giving the "aval" could designate a "referee in case of need". It should not be deduced from the vote of the Conference on this point that it had decided in the negative. Perhaps the question could be sent to the Drafting Committee, with instructions to bring Article 45 into concordance with Article 54.

M. DEOCLECIO DE CAMPOS (Brazil) agreed with the proposal of M. Sulkowski. The amendments submitted by the Portuguese delegation were of a very organic character; they therefore deserved careful examination by the Conference. As the result of the vote on the first of these amendments, M. da Matta had withdrawn them all. If M. da Matta agreed, the representative of Brazil would propose that the other Portuguese amendments, upon which a vote had not been taken, should be submitted to the Drafting Committee for examination. That Committee could lay them before the Conference at a later stage if it thought good to do so.

The PRESIDENT pointed out that the Conference had voted on the first amendment of M. da Matta. It had rejected this proposal with a full knowledge of the facts. It was impossible, therefore, for the Conference to return to it immediately. Nevertheless, if during the second reading the Conference took into consideration any of the other amendments proposed by M. da Matta after they had been examined by the Drafting Committee, should that Committee propose that the Conference should take them into consideration, there would then be time to do so. The President therefore suggested that the Portuguese representative should submit his proposals to the Drafting Committee, which would examine them and might submit them to the Conference at the second reading if it thought good.

M. DA MATTA (Portugal) thanked the representative of Brazil for the suggestion he had made and the President for having accepted it.

The reason why he had withdrawn his amendments was not to protest against the procedure adopted by the Conference, which was free to accept or reject any amendments submitted to it. On the contrary, he would pay a tribute both to the President and to the Conference.

Article 54 as a whole was approved at a first reading.

ARTICLE 56.

This article was approved at a first reading.

ARTICLE 57.

The PRESIDENT said that the Japanese delegation had submitted an amendment to paragraph 2 to the effect that reference should be made to a receipted account.

This amendment appeared logical according to the principle *eadem ratio eadem lex*. The Conference could, he thought, accept it and the Drafting Committee be called upon to settle the final wording.

With this reservation, the Japanese amendment was adopted.

M. GIANNINI (Italy) said that, according to Article 31, the giver of an "aval" was under the same obligations as the person for whom he stood guarantor. Paragraph 2 of the same Article stipulated that his engagement was valid, even when the liability which he had guaranteed was inoperative for any reason other than a defect of form.

Article 57 also made the acceptor by intervention liable to the holder and to the endorsers subsequent to the party for whose account he had intervened in the same manner as the latter, but did not define, as was the case in Article 31 concerning the person giving an "aval", what his position was in cases where the obligation was null and void. Did the silence of this Article imply a different solution for the problem? If such were the case, M. Giannini wished it to be explained why different treatment was granted to accessory debtors, who, in his view, were in the same position. If, on the other hand, it was thought that they deserved the same treatment, a sentence should be added to paragraph 1 of Article 57 reproducing the same provision as that found in paragraph 2 of Article 31.

The PRESIDENT said that in the French Commercial Code, as well as in the Dutch Code, the provision of paragraph 2 of Article 31 did not apply to the intervener. He thought here, too, however, that the principle *eadem ratio eadem lex* should be followed. At first sight, the proposal of M. Giannini appeared logical, but he suggested that it should not be examined immediately, in order to give members of the Conference time to reflect upon it and return to it at the next meeting.

With this reservation, he proposed that the Conference should adopt Article 57 as a whole, together with the Japanese amendment.

With this reservation, Article 57 was approved at a first reading.

ARTICLE 58.

M. SOKAL (Austria) said that paragraph 2 of this article stipulated that payment by intervention must be made at latest on the morrow of the last day allowed for drawing up the protest for non-payment. British law contained no principle of this kind. Franz Klein had stated in his work that there were no valid reasons for upholding this principle. During previous discussions on this point, it had rightly been pointed out that payment by intervention of a bill of exchange sent to Europe from an overseas country might be made impossible. If, on the other hand, it were desired to avoid an exaggerated postponement of the date of payment, it would be possible to do so by establishing, according to the proposal of Klein, a special provision to cover bills of exchange drawn on a foreign country or else by somewhat increasing the period for payment which appeared too short.

This was a suggestion which M. Sokal would submit to the Drafting Committee for its examination.

The PRESIDENT said that this suggestion would be recorded in the Minutes.

Article 58 was approved at a first reading.

ARTICLE 59.

M. SOKAL (Austria) said that in the first paragraph of this article a reference was made to protest for non-payment. This term in its technical aspect, however, applied to the protest for non-payment made against a bill of exchange which was not mentioned in this paragraph, for it concerned a protest for non-payment by intervention. According to this passage, the real protest was referred to simply by the word "protest" instead of "protest for non-payment of a bill of exchange". In the second paragraph, this phrase was again used to mean protest for non-payment by intervention. It would be necessary, in the interests of uniformity, to change the terms used. The Austrian delegation consequently proposed to say in the second paragraph, instead of "in default of protest", "in default of presentation or protest". This was a question which could be submitted to the Drafting Committee.

The PRESIDENT thought at first sight that this amendment was not necessary. The question would, however, be submitted to the Drafting Committee, who would examine it.

M. SHIMADA (Japan) proposed, in order to bring this article into conformity with the second paragraph of Article 55, to add to the second line of the first paragraph, after the words "in case of need", the words "having their domicile in the place of payment".

M. HERMANN-OTAVSKY (Czechoslovakia) said that, in view of the very close relationship between Article 59 and Article 55, which had not yet been given its final form he would suggest that Article 59 should be voted with the reservation that it should be brought into concordance with Article 55.

The PRESIDENT said that the Conference was faced with a proposal that the first paragraph of Article 59 should read as follows: "If a bill has been accepted by intervention or if persons having their domicile in the place of payment have been specified to pay it in case of need. . .".

M. GIANNINI (Italy) thought that this formula should be connected with Article 55.

M. SULKOWSKI (Poland) doubted whether this addition was necessary, for Article 59 already stated that "the holder must at the place of payment. . .".

The PRESIDENT said that the Conference would vote upon this proposal at the next meeting.

TWENTY-FIRST MEETING

Held on May 26th, 1930, at 3 p.m.

President: M. J. LIMBURG.

**27. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes :
First Reading (Continuation).**

ARTICLE 57 (Continuation).

The PRESIDENT said that the Italian delegation wished to complete this article by a provision already accepted at The Hague in the case of the person giving an "aval". It concerned the intervener. The Conference was aware that an "aval" was valid even in cases in which the primary obligation was null and void. M. Giannini proposed to give the same right to the intervener and this course had seemed logical to the President at the previous meeting. He had wished, however, to give the Conference time to reflect and for that reason Article 57 had only been adopted provisionally.

The Italian amendment was adopted, and Article 57 was approved at a first reading subject to drafting amendments.

ARTICLE 59 (Continuation).

The PRESIDENT recalled that the Japanese delegation desired to add the words "at the place of payment" after the word "persons" in the first line.

M. SHIMADA (Japan) had proposed that this addition should be made after the words "in case of need", but he was prepared to support the wording suggested by the President.

The Japanese amendment was unanimously adopted.

The PRESIDENT drew the Drafting Committee's attention to two points :

It would perhaps be better to improve the text by deleting the word "all" in the phrase "all these persons". The case might occur in which only one person was involved.

It was better to insert the phrase "au lieu de paiement" after the words "ces personnes" in order to avoid all ambiguity as to the meaning of the phrase "au lieu du paiement" ("the place of payment" and not "instead of payment").

Article 59 was approved at a first reading.

ARTICLE 60.

The PRESIDENT said that the Japanese delegation had proposed that the following words in paragraph 2 — "The holder who refuses this payment loses his right of recourse against those who would have been discharged thereby" — should be replaced by the words :

"The holder who refuses this payment loses his right of recourse against the person for whom acceptance by intervention has been made and against his successors."

The meaning seemed to the President to be the same, but the Japanese wording was more explicit.

M. SHIMADA (Japan) said that his delegation thought that the words in paragraph 2 of Article 60 — "those who would have been discharged thereby" — meant "the person for whom acceptance by intervention has been made and his successors". According to the second paragraph of Article 62, however, the endorsers subsequent to the party for whom payment had been made were "discharged". Consequently, the Japanese delegation, though it interpreted paragraph 2 of Article 60 in this manner, thought it preferable that it should be replaced by a more definite and clearer form of words.

M. SULKOWSKI (Poland) wished to ask the following question in regard to this amendment. If a "referee in case of need" had not been designated, but if there was an intervener offering payment, was the holder obliged to accept payment by a third party intervening who was not indicated as a "referee in case of need". If the reply was in the affirmative, the Japanese proposal could not be accepted, for it said that "the holder who refuses payment loses his right of recourse against the person for whom acceptance by intervention has been made". The Japanese proposal assumed that acceptance had first taken place by intervention, and this was not in the least necessary.

M. ARCANGELI (Italy) said that this must be an error and that the word "acceptance" should be replaced by the word "payment".

The PRESIDENT agreed.

M. SULKOWSKI (Poland) concluded that the question had been answered in the affirmative. The holder might refuse, but in that case lost his right of recourse.

The PRESIDENT asked the Japanese delegation whether it agreed to modify its amendment as suggested by M. Sulkowski, to read as follows :

“ The holder who refuses this payment loses his right of recourse against the person for whom payment by intervention has been made and against his successors.”

M. SHIMADA (Japan) agreed to this wording.

M. PERCEROU (France) thought that the wording proposed by the Committee of Experts was more concise and clearer.

The PRESIDENT replied that the draft of the Committee of Experts was identical in its legal effects with that proposed by the Japanese delegation. He thought the proposal of the Japanese delegation did not require any mental gymnastics in order to be understood.

The Japanese amendment was rejected by 12 votes to 3.

M. QUASSOWSKI (Germany) considered that paragraphs 2 and 3 of Article 60 covered the case in which payment was complete, but not the case of payment which was not offered in time — that was to say, which was not offered until after the expiry of the period laid down in Article 58, paragraph 2. In such a case, a holder must also have the right to refuse payment without running the risk of losing his right of recourse. To take account of this, M. Quassowski proposed that the second paragraph should be amended to read as follows :

“ The holder who refuses a payment which is not in conformity with paragraph 1 of Article 60, or with paragraph 2 of Article 58, loses his right of recourse against those who would have been discharged thereby.”

The PRESIDENT did not think this addition necessary, for the article stated clearly “ the holder who refuses *this* payment ”, which meant the payment made in the conditions covered by Article 58.

M. QUASSOWSKI (Germany) said that this was not clear from the text. The expression “ this payment ” might mean any payment.

The PRESIDENT proposed, in order to meet the representative of Germany, that Article 60 should be changed to read as follows :

“ The holder who refuses payment by intervention loses his right of recourse against those who have been discharged thereby.

“ This payment must include the whole sum which the party for whom it is made would have had to pay.”

M. QUASSOWSKI (Germany) thought that this amendment was an improvement.

The PRESIDENT asked M. Percerou if, as Chairman of the Committee of Experts, he could agree to it.

M. PERCEROU (France) thought that there would be no objection to changing the order of the paragraphs.

M. DE LA VALLÉE POUSSIN (Belgium) considered that the original wording was better and clearer. By saying in the second paragraph “ the holder who refuses this payment ”, it was quite clear that this did not mean any payment, but the payment provided for in Article 58.

M. PERCEROU (France) replied that when the first paragraph said “ the holder who refuses the payment ”, this was an implicit reference to the second paragraph of Article 58. It was stated clearly that the reference was to payment offered at latest on the morrow of the last day allowed for drawing up the protest. The connection between Articles 58 and 60 was thus better established.

M. DE LA VALLÉE POUSSIN (Belgium) still thought that the advantage of the Presidents proposal was worth nothing. He would not, however, press for the maintenance of the text of the Committee of Experts.

M. SCHMIDT (International Chamber of Commerce) wondered whether it would not be useful to settle in Article 60 the question of partial payment by intervention. In view of the fact that the principle of partial payment had been agreed to in Article 38, partial payment by intervention should also be allowed, in favour of which the same arguments could be put forward as had been expressed during the discussions on Article 38. M. Schmidt therefore recommended the Conference to bring Article 60 into concordance with Article 38, which could be effected by simply adding paragraphs 2 and 3 of that article to Article 60.

The PRESIDENT drew attention to the fact that the experts at the Hague Conference had deliberately made this difference. Article 38 stipulated that “ the holder may not refuse partial payment ”. This referred to the acceptor, but not to the intervener. There had been no omission. If, however, the Conference wished to decide otherwise, it was naturally free to do so.

M. GIANNINI (Italy), after having closely examined the whole of this chapter with M. Arcangeli, who had made what he could only call a classical study of the matter, had reached the conclusion that the regulations not included in this chapter were so numerous that they could be made the object of another Convention. This being the case, M. Giannini thought that the smallest number of special rules possible should be included in this part of the Uniform Regulation. It should deal with problems of a general kind. If the opposite view were taken, what amounted to a convention on intervention would have immediately to be drafted.

The PRESIDENT entirely agreed with M. Giannini. He also desired to make an observation of a general kind. He drew the Conference's attention to the fact that the section on payment by intervention dealt with the idea of the "referee in case of need" and also with the idea of the intervener without establishing any great distinction between the two. Several amendments had been adopted, among others an Italian amendment to the effect that the Conference should return to Article 55 of the Hague text with certain amendments. When the Conference revised this chapter at its second reading, it would realise that everything dealing with the intervener in the strict meaning of the term could not refer to "the referee in case of need" unless the principle were adopted that "the referee in case of need" was also an intervener. This principle, however, had been contested. For that reason, he drew the Drafting Committee's attention to the fact that it might be better to make a more marked difference between the "referee in case of need" and the intervener.

M. SULKOWSKI (Poland) was in favour of the text drawn up by the experts, for he thought it impossible to define the scope of an amendment submitted on the spur of the moment. It appeared that the German delegation would be satisfied with the text of the article as at present worded and that it was not necessary to make any change in the Regulation.

M. QUASSOWSKI (Germany) proposed that paragraph 1 of Article 60 as drawn up by the Committee of Experts should be transferred to the end of Article 58, of which it would form the third paragraph. Article 60 would then be made up only of the present paragraph 2, which could take the following form :

"The holder who refuses payment offered in accordance with the conditions laid down in Article 58 loses his right of recourse against those who would have been discharged thereby."

M. SULKOWSKI (Poland) would have preferred the proposal of the President, which consisted in reversing the order of the paragraphs of Article 60.

The PRESIDENT suggested that the Conference should adopt Article 60 in the form which he had proposed, with a reservation that it should review it once more during the second reading.

With this reservation, Article 60 was approved at a first reading.

ARTICLE 61.

M. SHIMADA (Japan) drew the Conference's attention to the proposal made by the Japanese delegation that a reference should be made in this article to a receipted account.

The PRESIDENT did not think that this reference was necessary in the article, which laid down that a payment by intervention must be authenticated by a receipt given on the bill of exchange.

M. SHIMADA (Japan) withdrew his proposal.

Article 61 was approved at a first reading.

ARTICLE 62.

M. DA MATTA (Portugal) observed that Article 62 stipulated in paragraph 1 that "the person who pays by intervention is subrogated to the rights of the holder against the person for whom he has paid. . .". The subrogation of the person who paid by intervention to the rights of the holder was proved *pleno jure* and by force of law alone. A person who had paid by intervention thus became a creditor in the law of bills of exchange and consequently must be deemed to be an autonomous (*autonome*) creditor exercising a right which was invested in him, notwithstanding the fact that he was subrogated to the holder. The question therefore was that of a subrogation in matters of the law of bills of exchange governed by the content of the instrument and not by the personal status of the holder, who had been satisfied. The result, consequently, was that personal defences which could be set up against the holder were not admissible against the intervener.

It was for that reason that M. da Matta considered that the first paragraph of Article 62 should be amended by the addition of the adverb "cambiairement" or of some more precise formula than that appearing there at present. The adverb "cambiairement" did not, of course, exist in French, but some such wording as follows might perhaps be adopted : "The person who pays by intervention is subrogated to the rights which the holder derives from the bill against the party. . ."

M. da Matta thought it should be made clear that the question here was that of subrogation in bills of exchange law and not of subrogation in common law.

M. HERMANN-OTAVSKY (Czechoslovakia) agreed that subrogation existed in exchange law ; the holder became an autonomous creditor. He suggested that the Drafting Committee should explain this point in the report. Further, it would be possible to add in the first paragraph of Article 61 that the person paying by intervention was subrogated likewise to rights against the acceptor. That provision existed in Czechoslovak and German law. Any doubts on this point should be removed.

The PRESIDENT also thought that the word "cambaiement" was not French. He likewise thought that when a person was subrogated in this respect he could only be subrogated from the point of view of the law on bills of exchange. Subrogation was a kind of "novation". If, however, M. da Matta wished to have still greater precision, there would, of course, be no objection to saying : "The person who pays by the intervention is subrogated to the rights which the holder derives from the bill against the party. . ."

The Portuguese amendment with this alteration was adopted.

The PRESIDENT pointed out that M. Hermann-Otavsky had submitted no formal proposal with regard to the "principal right against the acceptor".

M. HERMANN-OTAVSKY (Czechoslovakia) thought that it would suffice if the Drafting Committee observed in its report that the person paying by intervention, who was subrogated to the rights of the holder against the guarantors, likewise acquired the principal right against the acceptor ; German and Czechoslovak law said so explicitly.

The PRESIDENT pointed out that the Hague system and that of the experts said that the person paying by intervention was subrogated to the rights of the holder against the party for whom he had paid "and against the parties liable to him". The acceptor was not a party liable to him.

M. SULKOWSKI (Poland) thought that the words "and against the acceptor, if any" might be added.

The PRESIDENT did not agree, since this was contained neither in the Hague system nor in that of the experts. Though that system might exist in one legislation or another, that was no reason for adopting it.

In reply to Mr. Gutteridge, who had asked whether the English text was in conformity on this point with the French text, the President said that in his opinion there was no difference. If under Article 54, paragraph 2, acceptance by an intervention could not take place in favour of the acceptor, the Czechoslovak proposal would be entirely justified and the acceptor would also have to be mentioned in Article 62. A decision, however, had been taken to the contrary.

The Czechoslovak delegation had proposed to say in Article 54, paragraph 2, "who intervenes for a party liable by way of recourse" instead of "who intervenes for any person who has signed". The argument advanced was that there must be no intervention for the acceptor. The Czechoslovak delegation now, however, wished to include the acceptor once more.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that there was no inconsistency. To whom could the principal right against the acceptor belong? According to Article 61, it appeared that the person paying by intervention was referred to as being the creditor. If there was any doubt in regard to this interpretation, M. Hermann-Otavsky would propose an amendment on the point.

M. GIANNINI (Italy) invited M. Hermann-Otavsky to expound his view in the Drafting Committee.

The PRESIDENT did not propose to ask the Conference to decide immediately the point whether or no the acceptor was included in Article 62. The Drafting Committee would consider the point. There appeared to him to be no conclusive difference in the English text. He proposed accordingly that paragraph 1 of Article 62 should be adopted.

Paragraph 1 of Article 62 was approved at a first reading.

ARTICLE 62, PARAGRAPH 2.

Paragraph 2 was approved at a first reading.

ARTICLE 62, PARAGRAPH 3.

The PRESIDENT thought that, as the text read "the payment which effects the greater number of releases has the preference", it was for the holder to choose.

M. PERCEROU (France) pointed out that the holder was obliged to choose the intervener who discharged the greatest number of persons.

The PRESIDENT asked whether it was possible for an intervener to know that it was he who discharged the greatest number of persons.

M. PERCEROU (France) explained that if anyone wished to intervene on behalf of an endorser and if another person wished to intervene on behalf of an earlier endorser, the intervener who released the larger number of parties liable was the second intervener ; the other must give way to him.

Paragraph 3 of Article 62 was approved at a first reading.

Article 62 as a whole was approved at a first reading.

CHAPTER IX. — PARTS OF A SET AND COPIES.

I. PARTS OF A SET.

ARTICLE 63.

The PRESIDENT submitted a Czechoslovak amendment proposing the deletion of the words added by the Committee of Experts.

M. SRB (Czechoslovakia), in support of his amendment, quoted the following remarks of his Government :

“ The necessity of indicating in the body of the instrument the number of parts issued may lead to confusion. Thus several parts might be issued, all except one indicating the number issued, and this would lead to the absurd result that all those parts, which indicate in accordance with the regulations the number of parts issued, would have to be regarded as separate bills of exchange. The third paragraph of Article 63 of the Hague draft is, moreover, very useful, and if retained would prevent the possibility of complication.”

In order to avoid these difficulties, the Czechoslovak Government proposed to delete the words which had been added by the experts.

Prince VARNVAIDYA (Siam) supported the Czechoslovak amendment, because it was in agreement with Siamese law and practice and because it constituted a compromise between the English and the Continental systems.

The PRESIDENT considered that the question was purely technical and wondered whether the amendment was feasible. The deletion of the words added by the experts would complicate matters. A person who had a bill bearing the number “ 5 ” would not know, if the Czechoslovak amendment were adopted, how many parts existed and the amendment would not in any way help him to ascertain the number of the draft.

It would be a different matter if the numbering were done away with, since the number of drafts would nevertheless be known.

M. SOKAL (Austria) stated that the Austrian delegation accepted the opinion of the experts that each part of a bill of exchange issued in several parts should indicate, in addition to the number, the total number of parts issued. It would be necessary, however, to redraft the Regulation in such a manner that the body of the instrument itself would show clearly, not only the number of parts issued, but also the number of the particular instrument. It might be said :

“ Those parts must be numbered in the body of the instrument itself and the number of parts issued must be indicated.”

M. QUASSOWSKI (Germany) drew the attention of the Conference to the fact that if the text of the experts were adopted, it would be necessary to follow the experts and to delete the third paragraph of Article 63 of the Hague text. By so doing, however, the right of the holder to require the delivery of several parts would be removed. That right, however, was of considerable practical importance. For those reasons, M. Quassowski wondered whether the change proposed by the experts was desirable.

M. SRB (Czechoslovakia) said that the Hague text provided for one formality only, whereas that of the experts required two. One of those formalities appeared to the Czechoslovak delegation to be unnecessary.

If he had to choose between the two formalities, the PRESIDENT would prefer that which required the indication of the number of parts issued ; such an indication would be more useful.

M. SULKOWSKI (Poland) proposed that, in view of the relation between the two texts, the Conference should at the same time discuss paragraphs 2 and 3 of the Hague Regulation. It would be necessary, in the first place, to see whether the Conference was prepared, by adopting the text of the experts, to do away with the right of the holder to require a certain number of duplicates even after the issue of the bill of exchange.

The PRESIDENT saw no objection to opening a discussion on the second part of the Czechoslovak amendment reintroducing into the Regulation paragraph 3 of the Hague text which the Committee of Experts proposed to delete.

M. PERCEROU (France) wished to indicate in a few words the experts' reasons for requiring that each of the parts should bear an indication of the number of parts issued. When a person took a bill of exchange to discount it, he generally desired to have in his hands all the parts issued in order to avoid finding himself in competition with the holder of another part. Otherwise, his situation would be precarious. In order to have that certainty, he must know the number of parts issued.

That was the main reason for the proposal of the experts. It has appeared and still appeared to M. Percerou to be of capital importance. The present text perhaps expressed that idea imperfectly. With the desire to make it more clear and in agreement with M. Giannini and the other members of the Italian delegation, M. Percerou proposed the following text :

“ These parts must be numbered and each of them must indicate in the body of the instrument itself, in addition to its number, the number of parts issued.”

The Czechoslovak delegation apparently feared that the mere absence of a number on one of the parts would involve the validity of each of them as a separate bill of exchange. Of the two formalities prescribed — the indication on each part of the number of parts issued and the numbering of each part — the former was the more important. M. Percerou recognised that it would be too much in the event of the omission of the number from a part, to provide the sanction referred to in the text. That sanction might be limited to the case of the omission to indicate the number of parts issued and the Regulation might say : “ If the number of parts issued is not indicated, each of them is considered. . . in place of “ in default of which.” Thus mere forgetfulness to number the part would be excluded from the article.

In practice, it appeared to M. Percerou to be necessary that the number of parts issued should be indicated on each part ; otherwise the bill could no longer be circulated with security.

The PRESIDENT pointed out that the experts had proposed to suppress the third paragraph of that article because it had no practical value and in view of the fact that the effect of its provisions would be to increase the risks of the holder.

He put to the vote the first Czechoslovak amendment to delete the words “ and . . . the number of parts issued must be indicated ” from the second paragraph.

The amendment was rejected by 12 votes to 11.

Paragraph 1 was approved at a first reading.

The PRESIDENT proposed that the Conference should adopt M. Percerou's suggestion and that the second paragraph should read as follows :

“ These parts must be numbered and each of them must indicate in the body of the instrument itself, in addition to its number, the number of parts issued. If the number of parts is not indicated, each part is considered as a separate bill of exchange.”

M. DE LA VALLÉE POUSSIN (Belgium) proposed that, in order to make the text more clear, the last sentence should be drafted in a somewhat different form. He suggested the words :

“ If the number of parts issued is not indicated on one of them, that part is considered as a separate bill of exchange.”

He would observe that if four parts were issued, for instance, and that indication was missing from one of the four, it would not be known, with the text proposed by M. Percerou, whether it would be necessary to consider that there were four bills of exchange or only two.

M. PERCEROU (France) accepted the text proposed by M. de la Vallée Poussin.

M. SCHELTEMA (Netherlands) asked whether it was understood that there would be no sanction if the number had been omitted from one part.

The PRESIDENT replied that that was the case. He added that it could not be said that a legal provision which did not provide a sanction was without value.

The second paragraph as modified was adopted.

The PRESIDENT asked the Czechoslovak delegation whether it maintained its proposal to return to the third paragraph of the Hague text.

M. SRB (Czechoslovakia) withdrew his proposal. The third paragraph of the Hague Convention was inconsistent with the second paragraph which had just been adopted by the Conference.

Article 63 as a whole was approved at a first reading.

ARTICLES 64 AND 65.

Articles 64 and 65 were approved at a first reading.

2. COPIES.

ARTICLE 66.

The PRESIDENT pointed out that the Japanese delegation desired that under Article 66 the holder should only be allowed to make a single copy of a bill of exchange, but thought that, if the

right of making several copies were admitted, it would be preferable to adopt a provision similar to that laid down in Article 64.

This was not a formal amendment, but rather a recommendation.

M. SHIMADA (Japan) considered that, if the possibility of making several copies were accepted, abuse might result. For that reason, he asked that only a single copy should be made. Nevertheless, if the Conference could not accept that point of view, the Japanese delegation would desire that a provision similar to that which had been laid down in Article 64 should be inserted in Article 66.

The PRESIDENT asked the members of the Conference whether they could accept the principle that the holder should be allowed to make only a single copy of a bill of exchange.

As no delegation supported the suggestion put forward by the Japanese delegation, the President stated that it was *rejected*.

He pointed out that, in this case, the Japanese delegation had asked that the article should contain a provision similar to that laid down in Article 64. The President considered, however, that the case was absolutely different. Article 64 concerned parts, whilst Article 66 dealt with copies. There was a great difference between "parts" and "copies". Did the Japanese delegation press its amendment?

M. SHIMADA (Japan) replied in the negative.

The PRESIDENT asked M. Percerou, as Chairman of the Committee of Experts, whether it would not be desirable to put between inverted commas at the end of the second paragraph the words "Up to here copy", which appeared in the 1910 text.

M. PERCEROU (France) replied that that would be more precise.

M. GRÖNVALL (Finland) remarked that if the copy was endorsed and if there were endorsements on the original well subsequent to those at which the copy ended, it would be impossible to know which were the earlier endorsements and which the later endorsements. The necessary concordance between the original bill and the copy would therefore cease to exist.

The PRESIDENT said that the original prevailed; if there were later endorsements in the original but not in the copy, it was the original that was authentic.

M. GRÖNVALL (Finland) pointed out that if there were endorsements on the original later than those at which the copy ended, but which did not appear on the copy, this might be detrimental to the rights of the holder of the copy.

The PRESIDENT replied that in any case the original was authentic in the first place. It was impossible to foresee everything that might happen. It might obviously occur that the copy was not altogether in accordance with the original. In that case, it was the original that was authentic. The holder of the copy might, of course, suffer loss by reason of this fact, but that was a question of common or civil law. He could apply for damages.

Article 66 as a whole, with the addition of the words "jusqu'ici copie", was approved at a first reading.

ARTICLE 67.

The PRESIDENT observed that there were two amendments proposed by the Yugoslav delegation. The first consisted in the addition of the words "orguaranteed by 'aval'" after the word "endorsed" in the second paragraph.

M. EISNER (Yugoslavia) said that the question was a simple one of drafting, because, according to Article 66, paragraph 3, the copy might be not only endorsed but guaranteed by "aval" as well. It would consequently be necessary to mention in Article 67, paragraph 3, the right of recourse against persons giving an "aval" as well.

The first Yugoslav amendment was adopted.

The PRESIDENT said that the second Yugoslav amendment proposed the addition of a third paragraph as follows :

"No copy in which the person in possession of the original instrument is not specified is valid."

M. EISNER (Yugoslavia) explained that the "Allgemeine Deutsche Wechselordnung" and the laws on bills of exchange contained a rule that the copy was valid also in cases where the person in possession of the original instrument was not designated in the copy. That rule had provoked a controversy on the question whether the copy alone could be presented for acceptance or payment. In order to avoid disputes, it would be desirable to make an express rule to the contrary — that was to say, that no copy in which the person in possession of the original instrument was not designated was valid.

M. QUASSOWSKI (Germany) said that there was no reason for declaring invalid a copy in which the person in possession of the original instrument was not designated. If the copy did not

contain that designation, under Article 67, paragraph 2, there was no possibility of protest with the copy, and, further, the holder could draw up the ordinary protest, in default of acceptance or payment, with the original. The copy, however, did not lose its entire rise. The holder could use the copy to endorse the bill. This right should not be suppressed. It constituted the principal right of the holder of a copy and the special significance of a copy ; that must be maintained.

In those circumstances, M. Quassowski could not support the Yugoslav proposal and urged that the text of the experts should be retained.

The second Yugoslav amendment was rejected.

Article 67 as a whole was approved at a first reading.

CHAPTER X. — FORGERY AND ALTERATIONS.

ARTICLE 68.

The PRESIDENT reminded the Conference that a new Article 68 had been passed during the discussion on the former Article 7. A question connected with a change in the heading had then been raised as well.

M. GIANNINI (Italy) said that the Drafting Committee had considered the question and that it no longer arose. The question was solely that of forgery (*faux*), since it related to the issue of the bill, whereas fraudulent alteration (*falsification*) took place only after issue.

ARTICLE 69.

Article 69 was approved at a first reading.

TWENTY-SECOND MEETING.

Held on May 27th, 1930, at 10.30 a.m.

President: M. J. LIMBURG.

28. Discussion of the Draft Uniform Regulation concerning Bills of Exchange and Promissory Notes : First Reading (Continuation).

ARTICLE 70.

The PRESIDENT submitted the Czechoslovak delegation's amendment proposing that the period laid down in paragraph 2 should be reduced to six months.

M. SRB (Czechoslovakia) said that the Czechoslovak Law of Bills of Exchange Sections 81 and 82, prescribed that any action against parties liable by way of recourse was generally barred after three months. If, however, the bill of exchange was payable outside Europe, or if the plaintiff lived outside Europe, actions were barred after six months. This period had been thought sufficient by the Czechoslovak legislature, and in practice it had given rise to no objections up to the moment. M. SRB understood that some delegations might think that a period of three months might be somewhat short and he was prepared, therefore, for the period to be fixed at six months in paragraph 3. On the other hand, the same period would be sufficient for actions referred to in paragraph 2 and there was no need to lay down that that period should be a year.

This proposal was also inspired by a desire to unify the periods and thus simplify the provisions of Article 70.

M. NAMITKIEWICZ (Poland) made the following observations :

In reading Article 70, paragraphs 2 and 3, it is doubtful why a holder having recourse against the drawer and the endorsers should be able to take action during the period of one year, while the endorser is granted a period of only six months for recourse against the same persons. This difference in the periods appears unjustified. The quality of the creditor should not determine the extent of the period after which action is barred. It is rather the quality of the debtor and the character of his obligation which should be the determining factor according to the law of bills of exchange.

This diversity in the length of periods after which proceedings are barred on the one hand, in regard to the acceptor, and on the other in regard to the drawer and the endorsers, is justified by the position of the debtors. It is assumed that the acceptor is insolvent, that he is in a difficult situation and must therefore make it possible in every way for his creditor, the holder, to await the moment when his financial situation has improved. That moment may not be very close to the date of maturity, but it is assumed that it will arrive during the three years following maturity. The holder is thus offered the period of three years, which is sufficiently long, instead of being allowed, by taking proceedings, to break a short period of limitation of actions (*prescription*). On the other hand, this presumption of insolvency does not exist as regards the endorsers and the drawer. Quite on the contrary ; it is assumed that it is in their interest for their share in the obligation to be liquidated as soon as possible.

The diversity of the periods during which the guarantors and the drawer are liable to be sued has no logical justification. In that respect the Uniform Regulation is not based on the German law, which in Articles 78 and 79 grants in principle the same period of three months, both in regard to actions in recourse taken by the holder as well as those taken by the guarantor who has repaid the bill or who has himself been sued.

M. Namitkiewicz was therefore in favour of the unification of the periods provided for in paragraphs 2 and 3 of Article 70.

As far as the length of the period was concerned, three months was obviously not sufficient if it were not desired to make any exceptions, as was the case with the German law, to cover cases in which the bill was payable outside Continental Europe.

It would thus be more just to fix the period at six months for all cases. If, however, every possible combination was to be taken into account — those, for example, referred to in the German legislation — it might still be more just to prolong this period and to fix it at one year, as was the case in Japanese law (Commercial Code of 1899). The proposal therefore of the representative of Poland was that the period of prescription on the part of the holder and of the endorser, who had repaid the bill or who had been sued, should be one year.

M. Namitkiewicz added that the expression “sued” at the end of paragraph 3 was lacking in precision. It should be replaced by the phrase proposed by the International Chamber of Commerce and the end of the article should read: “Or from the day on which the summons was served or the action first entered”.

Cases might occur in which the endorser might be informed too late of the fact that he was being sued, especially in the case of absence. The endorser might be compelled to repay the bill without himself being able to have recourse against his predecessors owing to the fact that the period had expired.

This situation would therefore be avoided if it were laid down that the period would not begin to run until the day on which the summons was served or the action first entered, for example, by the production of the creditor’s petition to the judge sitting in bankruptcy.

M. GIANNINI (Italy) asked the indulgence of the Conference if he recalled the history of the matter. The Italian delegation regretted that after twenty years of discussion on the Hague draft the Uniform Regulation was almost entirely silent in regard to prescription. Two questions more particularly were in suspense, and yet were of great practical importance.

The first had been referred to the experts, who gave in Article 71, in the form of an observation, the substance of Article 16 of the Hague Convention, to the effect that it was for the legislation of each State to determine the causes of the interruption and suspension of the prescription. In practice, a creditor who thought that the period of limitation (*prescription*) was suspended or interrupted according to the local law might find the defence of limitation set up against him in the foreign court. The difficulty would arise still more easily after the adoption of the Uniform Regulation for persons utilising it would succeed only with great difficulty in finding the proper path to follow between the provisions of the internal law, which were purely national, and those adopted in order to carry out the Uniform Regulation. M. Jitta had proposed to delete, in so far as bills of exchange and promissory notes were concerned, all personal causes of suspension of limitation of action (*prescription*) and to agree that only actions brought into court, or actions similarly dealt with by the law of the place of procedure, should be regarded as an interruption.

The experts had not followed M. Jitta’s view, but had not indicated any other solution. They had probably considered that the whole problem concerning the limitation of actions (*prescriptions*) in international conventions had been reserved to national law. This preoccupation could be easily understood, but M. Giannini thought also that the Conference should certainly begin to attack a problem of which the solution was indispensable if the exigencies of modern life were to be met. If it was precisely such a problem as this which led to so many difficulties in practice.

Another question, still more grave, concerned the effects of limitation of actions (*prescription*). The German delegation had requested a reservation to the effect that the text of Article 13 of the Hague Convention should be reintroduced. This had been done. Consequently, the effects of the limitation of actions would remain entirely reserved to national law. In other words, in countries whose legislation was based on English law, a subsequent recognition might revive the action. According to German law, action could be taken against the drawer as far as was allowed by the procedure of “*enrichissement*”, and it was with precisely this object that the German delegation had asked for a reservation. Finally, the law of several countries maintained that other actions subsisted in addition to actions arising out of the bill of exchange. The obvious reply at the outset might be that in this case the matter was already outside the sphere of the law of bills of exchange. That argument, however, was of no great importance. M. Giannini recalled that German theory had rightly defined “*action d’enrichissement*” as being what was left over from an action in exchange law that had been barred by limitation of action (*prescription*). He would confine himself to drawing attention to the problem. The absolute silence of the Uniform Regulation in these matters was not helpful either to commerce or to the circulation of bills of exchange. Did the Conference consider it impossible to find any solution at the moment? M. Giannini did not dare think so. Nevertheless, if such was the view of the Conference, the Italian delegation would bow to it, but wished to state that it considered the problem to be one of the questions remaining open. In another conference, Italy would be found to be right. In the movement towards unification, the peoples of the world must be content with possibilities, and the Italian delegation was happy to note that immediate possibilities existed. It thought, however, that the movement would not be stopped by the Convention.

Nevertheless, a certain amount of progress might be achieved along the lines of the Convention itself if the Conference were to adopt a few rules. For example, in regard to paragraphs 2 and 3 of Article 70, the institution of extinctive prescription should be adopted, as was the case at

Warsaw lately in the International Convention for International Aerial Transport. The advantages of such an institution were obvious, and M. Giannini would confine himself to submitting this proposal to the Conference.

The PRESIDENT asked the Italian delegation whether it desired to make a formal proposal to the effect that limitation of actions (*prescription*) should be replaced by extinctive prescription.

M. GIANNINI (Italy) replied that the Conference should decide whether it could follow him. If the Conference agreed with him, a formula might easily be found by the Drafting Committee. His proposal, however, was of a formal nature and represented the minimum for which the Italian delegation asked.

The PRESIDENT said that there was also a Czechoslovak amendment.

M. HERMANN-OTAVSKY (Czechoslovakia) said that the Regulation governing limitation of actions showed an increasing tendency towards extinctive prescription. There were probably several questions which could be more harmoniously settled if the principle of extinctive prescription were taken as a starting-point. There were several other questions, however, which would have to be discussed in detail. A Sub-Committee might perhaps examine them. This question was extremely important and interesting and deserved the closest study.

M. PERCEROU (France) thought that if it were left to national legislation to decide what were the causes for the interruption and suspension of limitation of actions (*prescription*) and likewise what were exactly the effects of such limitation (*prescription*), there would undoubtedly subsist, as M. Giannini had pointed out, a regrettable uncertainty in international relations in the matter of bills of exchange.

If, on the other hand, extinctive prescription was substituted for limitation of actions (*prescription*), that would mean a plunge into the unknown, and it would be necessary first to define what were the differences existing between these two notions and to study them very closely.

The question appeared rather to be one for the future; it might perhaps require the convocation of another conference for the purpose of unifying the national legislations, but at the time it did not seem practicable to enter upon such a course, and owing to the insufficient exploration of the ground the simplest thing would be to keep to the existing provisions of the Uniform Regulation.

The experts had fully realised that the problem existed and that the present situation was not ideal — far from it — but they had thought it right to reproduce the Hague text, and M. Percerou still considered that it would be better to keep to that provision for the moment.

M. ARCANGELI (Italy) explained that his delegation had put forward a general question. M. Percerou had examined principally the points connected with extinctive prescription in comparison with the limitation of actions (*prescription*). It was perhaps possible for the Conference to concentrate its attention on one point only — that concerning the means of obtaining the interruption or suspension of actions.

That was, of course, the most difficult question of all; it would, moreover, cause the most doubt in practice because, if the determination of this point were left to each national law, the situation in every country would be extremely awkward owing to its being unknown whether rights of action had been lost or still subsisted. This uncertainty might continue for a long time, since there might be successive means of interruption and they might relate to a number of different parties liable.

Accordingly, in order to simplify the principles and to safeguard creditors and debtors, would it not be better in the general interest to unify the principle and lay down what should be the means of interruption which would be regarded as universally valid? It would, for instance, be stipulated that judicial action alone and bankruptcy (*faillite*) were legitimate means of interruption. That, of course, would have a very marked effect on certain legislations, but it would afford certainty on this problem, which was one of the most important in the whole question of bills of exchange.

The Italian delegation would be prepared to reduce its proposal to the laying down of a rule designed to regulate in a uniform manner the question referred to above and no other.

The PRESIDENT thought it very difficult to take a decision on the Italian proposal during the present Conference. Proof of this had been afforded by the Italian delegation itself, since it had converted its first proposal to substitute extinctive prescription for limitation of actions (*prescription*) into another which was intended partially to settle the causes of interruption.

Even if the Conference had had another five or six days to deal with this question alone, it would not have been easy to reach agreement. The delegations were probably not equipped to discuss it. For instance, the President himself had brought from The Hague the legislation relating to bills of exchange, but not the Civil Code dealing with the questions of interruption and suspension of the limitation of actions (*prescription*) or the difference between the latter and extinctive prescription.

In regard to the general problem, M. Giannini was, of course, perfectly right. There was a grave omission; but the Governments had apparently all desired this since they had made no remarks on the question whether the difference between extinctive prescription and limitation of actions (*prescription*) should be settled. They were accordingly all in agreement — or rather had been — on the system of the experts.

As to the matter itself, and looking at it from the point of view of actual law, the President thought that there was no argument in favour of extinctive prescription. The case was one of private law and of actions which, though actions on bills of exchange, were none the less actions and must be liable to limitation (*prescription*).

Extinctive prescription had been introduced solely to meet the difficulties of the suspension and interruption of limitation of actions (*prescription*). It would perhaps constitute the solution of the future, but it was improvised and could not, he thought, be adopted at present.

The expedient proposed by M. Arcangeli was attractive. It would be an interesting experiment to say that the only cause for interruption allowed in the Uniform Regulation was bringing of the case before a court (*assignation en justice*), but there was much food for thought in this point as well. In that case, interruption resulting from the recognition in writing of the exchange debt or interruption in consequence of partial payment would cease to exist.

The President felt some hesitation in adopting this solution at the present time, but it was for the Conference to decide.

Obviously a serious and awkward hiatus would subsist, but it was apparently better to hold the question over for another conference.

The President reminded the Conference that M. Giannini, on behalf of the Italian delegation, had tabled a recommendation on suretyship (*fide jussio*) and insurance of exchange debts. The question which arose for the moment was apparently far more important, and perhaps the Italian delegation might substitute for this recommendation another asking the International Institute of Private Law at Rome to examine the question of the suspension and interruption of limitation of actions (*prescription*) and extinctive prescription.

That seemed far more important.

The President announced that the Secretary of the Conference suggested that he should propose the introduction into the Convention of a provision entitling two, three or four contracting countries to request the Council of the League to convene a new conference for the purpose of making changes or improvements in the Regulation adopted. There was a precedent for this. The Convention for the Protection of Industrial Property contained a similar clause. That perhaps might meet the wishes of the Italian delegation.

M. GIANNINI (Italy) pointed out that he had begun by saying that his remarks concerned the history of the question. He could not be criticised for having shown scepticism, since he had admitted that in politics one must be content with what could be achieved immediately. He had also said that he was glad that it had been possible on this occasion to come to a conclusion, even if the solution was not entirely satisfactory.

Having said this in order to explain the spirit in which it had made its proposal, the Italian delegation wished to draw the Conference's attention to the fact that the chapter in question was rapidly becoming obsolete. The Italian delegation thought that it was chiefly on account of this chapter that the Convention would require early revision.

It being impossible to contemplate a radical solution of certain problems, the Italian delegation had accordingly wondered whether something should not be done at any rate to prevent the Convention from giving the appearance of being already obsolete. Such was the purpose of the more general proposal which M. Giannini had made, and which had been taken up again by M. Archangeli in more concrete terms. Both had held that these two proposals were calculated to effect an immediate advance in the solution of a problem. If, however, the Conference considered that it could not take up these proposals, either the wider or the more restricted one, the Italian delegation would acquiesce and would be satisfied with what was possible immediately. But M. Giannini wished to make it clear that, instead of making a progressive convention, the Conference would be taking a retrograde step if it adopted rules which tended to reduce the time-limit for limitation of actions (*prescription*). It was for that reason that the Italian delegation would vote against any reduction of the time-limit.

The President had suggested that the Italian delegation should withdraw its recommendation on the question of guarantees and submit another. M. Giannini did not agree with that suggestion. The problem contained in the Italian recommendation for examination by the Conference would require long and exhaustive studies, which might be entrusted to the International Institute of Private Law. The matter was one which would require minute investigation.

The question at issue could not be examined in the same way as a simple recommendation. In actual fact, it would have the effect of urging the States to apply for revision as soon as possible. It was for that reason that, when the general rules of the Convention were considered, it would be feasible to adopt a provision similar to that passed at the Hague Conference, where it was laid down that after a certain time-limit, which had been fixed at January 1st, 1936, the Members of the League or the States non-Members could make application to the Secretary-General with a view to the revision of the Convention.

M. Giannini did not think that it was possible to put the problem contemplated in the Italian delegation's recommendation and that of extinctive prescription on the same footing. He repeated that the inclusion of this chapter made the Convention obsolete before it was born. Nevertheless, the Italian delegation would acquiesce in the decision of the Conference.

In conclusion, he pointed out that no criticism had been offered on the substance of the Italian proposal. The only question raised had been that of expediency. Nothing could be done in that respect, and it was for a psychological reason that the Italian delegation would acquiesce.

The Italian delegation accordingly would abide by the decision of the Conference, but they drew its attention to the fact that the problem was an immediate one, and one which would in the near future determine the revision of the Convention.

M. VAN NIEROP (Netherlands) observed that the Italian delegation were proposing the substitution of extinctive prescription for the limitation of the right of action (*prescription*). It appeared to the Netherlands delegate that extinctive prescription was at variance with the spirit of the law in exchange matters. A bill of exchange was an instrument of credit. It was the holder who, by purchasing the bill from the drawer or any other holder, afforded credit. It appeared

accordingly that the holder always had a right of recourse, and that the right of recourse would not be restricted by a certain time-limit. Generally speaking, the holder must have the right to recover payment from the person to whom he had furnished credit.

The idea of extinctive prescription was accordingly at variance with the principle that the bill of exchange was an instrument of credit. For this reason, M. van Nierop urged the Conference to vote against the Italian proposal. It could not be denied that the limitation of actions raised difficulties in practice, but those difficulties were not important. M. van Nierop based himself in this matter on the experience of the Dutch banks, which had never had any serious difficulties.

The PRESIDENT considered that it was not desirable for the moment to take a decision on the proposals submitted by the Italian delegation. The Conference might note that there was an omission, but it would be prejudicial to vote immediately on the Italian suggestion. The rejection of their proposals might have an unfavourable influence on the future.

M. GIANNINI (Italy) did not desire to reply to M. van Nierop, for he was of opinion that the problem was not ripe for discussion. He simply wished to point out that some of the arguments advanced by the delegate of the Netherlands were somewhat weak from the legal point of view. Thus, it seemed that M. van Nierop had not sufficiently considered the effects of extinctive prescription.

The Italian delegation, on the other hand, had made a definite proposal but it was prepared to bow before certain arguments of expediency, to the reason that it was very difficult to discuss this subject ; and it recognised that it was not desirable to proceed to a vote.

The PRESIDENT stated that the Conference should take a decision on the Czechoslovak amendment to reduce the period of one year to six months (paragraph 2).

The Czechoslovak amendment was rejected.

M. PERCEROU (France) said that it was well understood that the reservation in connection with extinctive prescription (*déchéance*) referred also to the limitation of actions (*prescription*). He pointed out that Article 13 of the Hague Convention stipulated that :

“ Every Contracting State is free to decide that in the case of loss of right of recourse, *or of prescription*, there shall lie within its territory an action against the drawer who has not provided cover. . . . ”

M. VISCHER (Switzerland) asked whether an article should be included in the sense of Article 16 of the Hague Convention, which stipulated that :

“ The legislation of each State shall determine the causes of interruption or suspension of the limitation of actions (*prescription*) in the case of actions on bills of exchange which come within the competence of the courts of justice.

“ The other States are empowered to determine the conditions under which they will recognise similar causes. The same rule applies to the effect of an action in making the time of limitation of actions (*prescription*) run in the case specified by Article 70, paragraph 3, of the Regulation.”

If the Conference was unable to accept the proposals of the Italian delegation, it would be essential to provide for a reservation in that sense.

The PRESIDENT recognised that since the draft Convention drawn up by the experts did not deal with limitation of actions (*prescription*) and the loss of right of recourse, it would be necessary to consider the insertion of the articles quoted by M. Percerou and M. Vischer. The Conference could do so when it discussed the draft Convention.

Article 70 as a whole was approved at a first reading.

ARTICLE 71.

Article 71 was approved at a first reading.

CHAPTER XII. — GENERAL PROVISIONS.

ARTICLE 72.

The PRESIDENT referred to the Japanese amendment to add to paragraph 1 between the words “ legal ” and “ holiday ” the words “ or customary ”.

M. SHIMADA (Japan) said that the Japanese delegation would not insist on its proposal if the Conference agreed to interpret the term “ legal holiday ” in a wide sense — that was to say, to include holidays fixed by law and holidays allowed by law.

M. PERCEROU (France) pointed out that his delegation had submitted a request for a reservation which it had for the moment withdrawn. It might be able to obtain satisfaction without the insertion of that reservation.

In France, apart from the legal holidays on which a bill of exchange could not be presented and protest could not be made, there were what were known as days assimilated to legal holidays. For instance, when a legal holiday fell on a Friday, the law stated (Law of July 13th, 1905) that

transactions relating to bills of exchange, presentment or protest, could not be carried out on the Saturday. Such a day was called a " jour de pont ". It was not a legal holiday in the sense that the courts and the public authorities were not on a holiday. It was simply a day during which transactions relating to commercial bills could not be carried out.

The French delegation thought it necessary to maintain those assimilated days from the point of view of exchange formalities, and M. Percerou asked whether the Conference would be able to agree, in order to avoid a reservation, to the insertion in Article 72 of a formula which might be drawn up as follows :

" The payment of a bill of exchange which falls due on a legal holiday, or on a day assimilated to a legal holiday by the particular legislation of any State from the point of view of the carrying out of transactions relating to bills of exchange, cannot be demanded until the next business day."

M. Percerou asked the Conference whether it could accept that text or whether it would prefer the French delegation to make a reservation.

M. GIANNINI (Italy) noted that M. Percerou's proposal amounted to reverting to Article 17 of the Hague Convention. He did not imagine a rule such as that suggested by M. Percerou should form the subject of an article in the Uniform Regulation, and if the Conference accepted the principle, it should revert to Article 17 of the Hague for the purpose of assimilating certain business days to legal holidays.

M. VAN NIEROP (Netherlands) was of opinion that this was a practical question and that the Conference could not accept the proposal of the Japanese delegation. He explained his reasons. In the Netherlands, the custom of bank holidays, which came from England, was followed. Were those days, on which the banks were closed, customary holidays or not? On Good Friday, for instance, all the Dutch banks were closed; nevertheless, it was not a customary holiday because the public, in general, worked. The same was the case in regard to certain Saturdays which were " bridged " by the banks. It would be dangerous to speak of customary holidays, for to do so would raise a great many difficulties in practice. If it were desired, in accordance with the advice of the President, to avoid a reservation, the Japanese proposal should not be accepted.

The PRESIDENT believed that the Japanese delegation had to some extent already taken into account the point of view explained by M. van Nierop. It had just said that it would not insist on the adoption of the word " customary ". It had in view only the days assimilated by law to holidays. That was the idea of M. Percerou. The President wondered whether it was necessary to maintain Article 17 of the Hague Convention and whether it would not be sufficient to insert Article 72 in the Uniform Regulation, modified as follows :

" Payment of a bill of exchange which falls due on a legal holiday or on a day assimilated to a legal holiday by law cannot be demanded. . . ."

Mr. GUTTERIDGE (Great Britain) informed the Conference that in England the Bills of Exchange Act and the Bank Holiday Act definitely fixed certain holidays. These were divided into two categories : common law holidays, such as Christmas Day, Good Friday and any day appointed under Royal Proclamation as a day of fasting or rejoicing, and statutory holidays, which were known as bank holidays. The provisions referring to both types were combined in Section 14 of the Bills of Exchange Act of 1882.

It was therefore correct to say that for the purpose of the law relating to bills of exchange all holidays were definitely fixed by Act of Parliament.

M. GIANNINI (Italy) believed that it would be difficult to adopt the proposed formula in regard to the assimilation of holidays. According to the Italian national law there was no assimilation. It existed in certain countries only.

M. SOKAL (Austria) said that in his country and also, he believed, in Germany, a cashier's desk remained open on bank holidays for a few hours in the morning for the payment of bills of exchange.

M. PERCEROU (France) recognised with M. Giannini that special days on which the formalities connected with commercial instruments could not be accomplished were not entirely assimilated to holidays. That was why he had considered it necessary to say in the text of the article : " From the point of view of the accomplishment of formalities relating to bills of exchange ", which indicated that from other points of view the day in question was not a holiday.

In conclusion, M. Percerou believed that, taking everything into consideration, the reservation was more clear and would be preferable. It avoided overburdening the text of the Uniform Regulation.

M. VISCHER (Switzerland) entirely supported the proposal of the President according to which Article 17 of the Hague Convention would be deleted. On the other hand, however, he considered it necessary to adopt a provision in the sense of Article 24, paragraph 3, of the Hague Convention, which stipulated :

" The States also will give to the said Government a list of the legal holidays and other days when payment cannot be demanded in their respective countries."

Such a provision would indirectly impose on the contracting States the obligation to fix the holidays which should be taken into account, and all the difficulties which had been raised would be avoided.

In Switzerland, there were no Federal holidays with the sole exception of the "Jeune Fédéral". Holidays were prescribed by the cantons. At Bâle-Ville, May 1st was considered as a holiday, whilst in other cantons it was a working day. The Swiss Confederation would have to draw up a list indicating the holidays of each canton.

The PRESIDENT noted that nothing remained for the Conference but to revert to Article 17 of the Hague Convention. It went without saying, however, that the stipulation mentioned by M. Vischer would also be included.

Agreed.

Mr. KENNEDY (United States of America) read the general provisions contained in the report of the Inter-American High Commission, Article 72 of which was as follows :

" This coincides with the legislation of Brazil, Costa Rica, Ecuador, Peru and the United States. In El Salvador, the Code prescribes that a draft falls due on the date indicated without any exception whatsoever. In other countries of Latin America, a bill maturing on a holiday is payable on the preceding business day, and the same is true with regard to the protesting of drafts with the exception of Chile, where protest should be made on the day following the holiday. Article 17 of the Convention provides that contracting States may assimilate certain working days to legal holidays for the purposes of this Act. This provision covers the presentation of bills on Saturdays, which, under the United States law, may be postponed to the next business day, excepting that demand bills may, at the holder's option, be presented on Saturday before noon.

" Although it may be urged that it is quite as sound in principle to require presentation of a bill maturing on a holiday on the preceding day rather than on the day following for the sake of uniform practice, it would be desirable to abide by the provisions of the Uniform Law and Convention, in conformity with the recommendations made at Buenos Aires."

Article 72 as a whole was approved at a first reading.

ARTICLES 73 AND 73(a).

Articles 73 and 73(a) were approved at a first reading.

PROMISSORY NOTES PAYABLE TO ORDER.

ARTICLE 74.

The PRESIDENT pointed out that there was a Czechoslovak amendment to sub-paragraph No. 1 which said :

" In conformity with the text of Article 1 (No. 1) adopted by the Conference the text of sub-paragraph No. 1 should run as follows :

" " The denomination of the instrument inserted in the body of it and expressed in the language employed for expressing the " promise to pay " ."

M. GIANNINI (Italy) considered that there was no longer any reason for this amendment. The Czechoslovak delegation had concurred in the formula of the experts for Article 1, No. 1, on condition that explanations were given in the report.

M. HERMANN-OTAVSKY (Czechoslovakia) withdrew his amendment.

M. MOLENGRAAFF (Netherlands) stated that during the discussions on Article 1, No. 1, of the Uniform Regulation the Netherlands delegation had asked for a reservation in the sense of Article 2 of the 1912 Hague Convention. That reservation had not been allowed. Nevertheless, the Netherlands delegation hoped that the Conference would reverse its decision now that so many States had asked for reservations in connection with so many provisions. If that reservation were refused, it would be extremely difficult for the Netherlands to accede to the Convention in so far as it concerned bills of exchange, but it would be still more difficult in so far as promissory notes were concerned if the Conference did not allow a reservation in connection with Article 74, paragraph 1, in the sense of Article 21, combined with Article 2 of the 1912 Hague Convention.

That Convention provided that any Contracting State could prescribe that promissory notes created on its territory which did not contain the denomination " promissory note " were valid, provided that they contained the express specification that they were to order. That reservation was even more necessary than a similar reservation concerning bills of exchange, because promissory notes played an important rôle in everyday life. They were issued by private persons more frequently than were bills of exchange, and they hardly ever contained the denomination " promissory note ". Those instruments, moreover, circulated generally in the interior of the country. They were simply drawn up as follows :

" I agree to pay (or I will pay) to X or to his order 100 florins."

It could not be hoped that the Netherlands Parliament would agree that any such denomination on those instruments should be required.

The Netherlands delegation was of opinion that the Conference could not refuse to allow the Netherlands to make such reservations in regard to both bills of exchange and promissory notes, for that would make it possible for the Netherlands to accede to the Convention. Moreover, there was agreement in 1912 in regard to those reservations.

M. Deoclecio DE CAMPOS (Brazil) said that everyone was aware of the influence of legal terminology when the unification of a law was in question, and in particular such unification as that with which the Conference was occupied. In regard to the denomination "promissory note" he pointed out that the denomination of this exchange instrument was not the same in the Brazilian and Portuguese legislations, although the language might be the same.

The promissory note corresponded to the *nota promissoria* in Brazil, whereas in Portugal this term had, under the most recent law, been lately replaced by the word *livrança*.

At the 1910 Conference, the Brazilian delegate plenipotentiary, M. Rodrigo Octavio, had proposed to the Portuguese delegation the adoption of the term used in Brazilian exchange law, because it was better known. That would have removed certain difficulties in business between these two Portuguese-speaking countries.

The Brazilian delegation had been unable at that time to make any definite proposal. It had, however, succeeded in securing the insertion in the Preliminary draft Convention (Article 21, paragraph 2) of a clause stipulating that the countries would inform the Netherlands Government of the term which, in the language recognised in their territory, corresponded to the terms "bill of exchange" and "promissory note", and also that when the language was the same — and that was the case with Brazil — the countries concerned would agree as far as possible on the choice of one and the same term.

M. de Campos, basing himself on the spirit underlying the above-mentioned clause in the Hague Convention and on the desires of jurists and business men in Brazil, wished to make a friendly appeal to the distinguished Portuguese delegate, M. Caeiro da Matta. He was sure that for the sake of uniformity in exchange law, the latter would extend a sympathetic welcome to his suggestion. He was sure that the Portuguese legislature would have no difficulty in accepting a suggestion coming from their delegate for the use of the term *nota promissoria* in Portuguese bills of exchange law, since that would greatly facilitate the exchange of the instruments in question between the two countries. This same provision had been adopted at The Hague and incorporated in the 1912 Convention, Article 24, paragraph 2.

M. VISCHER (Switzerland) thought that, in the matter of the Czechoslovak amendment, the Conference had taken a formal decision and had adopted it. The Drafting Committee appeared to be proposing that this text, which had been adopted, should now be given up. M. Vischer would reserve his right to return to this question at the second reading, for the matter was one to be decided by the Conference.

M. DUZMANS (Latvia) desired to speak, not on Article 74, but on the whole question of promissory notes. He wished to set forth the following considerations in connection with his Government's attitude :

The draft Regulation adopted by the Conference at the first reading would represent a general law on bills of exchange, with an addition concerning promissory notes in the second part of the last chapter (XII) of the Regulation, the provisions of which (Article 76) referred to the articles on bills of exchange subject only to the modifications resulting from Articles 74, 75 and 77, which were expressly concerned with promissory notes.

This arrangement corresponded to the fact that in the vast majority of countries throughout the world the national legislation on negotiable instruments had been built up on the basis of the bill of exchange and not on that of the promissory note and that in those countries the circulation of bills of exchange was internally more important than that of promissory notes.

That, however, was not the case in Latvia.

In their reply of January 18th, 1929, to the circular letter from the Secretary-General of the League dated July 19th, 1928, the Latvian Government had drawn attention to the fact that the law of Latvia on negotiable instruments differed from those of the Western European countries in that it dealt primarily with promissory notes, though providing at the same time for bills of exchange in the proper meaning of the term. The bill of exchange was dealt with in the second part of the law and, it should be noted, in two ways — viz. ; by reference to the general law and stipulations governing promissory notes and by express and special provisions which were, however, fairly circumstantial and detailed.

The order, therefore was the reverse of that established in the Uniform Regulation under discussion by the present Conference.

This system of law on negotiable instruments in force in Latvia was based on the economic relations existing in that country and on its commercial traditions in the matter of exchanges within the country, where the promissory note had, since the earliest times, been used as a very simple means of payment and credit.

Commerce and finance in Latvia had been governed by this law at the time when the country still formed part of Imperial Russia, for Latvia had adopted almost unaltered the law of the Russian Empire on negotiable instruments — which had been one of the best laws of that Empire.

As regarded Latvia's participation — or the participation of any other country having the same legal exchange system, for Latvia was not the only country in that position — in the exchange Regulation drawn up by the present Conference, the considerations and observations put forward above led to the following consequences and conclusions.

There were two possible contractual situations in this connection ; there was that laid down in paragraph 2 of Article 22 of the Hague Convention of 1912, while the other was laid down in paragraph 1 of the same Article 22.

The first situation was as follows : It was allowed and expressed in the following terms in Article 22, paragraph 2, of the Hague 1912 Convention :

“ Each (Contracting) State reserves to itself the power to make provisions concerning promissory notes by special regulation which shall be in conformity with the provisions of Title II of the Uniform Regulation, and which will reproduce rules concerning bills of exchange to which reference is made, with only the modifications resulting from Articles 77, 78, 79 and 80 of the (Uniform) Regulation and of Article 21 of the present Convention.”

The situation here, accordingly, was that in which a country whose exchange law was based on the promissory note and not on the bill of exchange undertook by treaty to introduce into its national legislation the whole of the Uniform Regulation integrally ; that was to say, the provisions of the Regulation concerning bills of exchange and those covering promissory notes likewise.

M. Duzmans would emphasise the phrase “ to introduce ”, while leaving on one side and reserving the choice of the constitutional method which would yet have to be adopted as to the method of presenting the acts of the Conference to the national legislative power with a view to their incorporation in national law.

In the case of the first contractual situation, the system of a single description of the stipulations concerning bills of exchange and promissory notes, a system which would have made it easiest for the general public to understand their essential character and their differences, was excluded at the outset. The system of a uniform regulation adopted by the Conference made such a course impossible.

There were accordingly the two following methods of incorporating the whole Regulation integrally in national law :

1. The regulations as it stood could be adopted *en bloc* by legislative act subject to any modifications that might be required, and passing over the constitutional method to which M. Duzmans had just alluded and which still had to be chosen.

2. The countries which regarded the latter half of Chapter XII of the Regulation, that concerning promissory notes, as inadequate and as too involved for a clear and rapid understanding of all the provisions concerning promissory notes might be authorised to draw up a separate law on promissory notes ; that was to say, they would be allowed to publish separately all the various provisions on promissory notes devolving from the general law embodied in the Uniform Regulation, thus making it possible for anyone who wished to issue or might have in his possession a bill of exchange or a promissory note to conform, in the former case to the general law on bills of exchange — *i.e.*, to the terms of the Uniform Regulation, and in the second case to the special law on promissory notes.

It was the second method which had been authorised by paragraph 2 of Article 22 of the Hague 1912 Convention, but to which no reference at all was made in the draft Regulation drawn up by the experts of the League and submitted to the Conference.

This omission might be interpreted in two ways ; either the Committee of Experts had not thought fit to allow this power to the contracting countries or it had considered that this power was to be presumed in all cases and that it was reserved to each contracting party, even though not mentioned expressly.

The Latvian delegation thought it obvious that, in the event of Latvia adopting the Regulation integrally, she would, like any other contracting party, be entitled to promulgate a separate law on promissory notes of the kind he had described, but based on the Regulation, and consequently entitled to preserve her existing legal provisions in the matter, amended in conformity with the innovations contained in the Uniform Regulation, even though no express reference to that right were contained in the Convention.

Nevertheless, the Latvian delegation held that an express reference would none the less be of considerable practical importance for two reasons : first of all, for the sake of clearness, since there might be divergent interpretations, and in order to exclude any misunderstanding ; and, secondly, for the purpose of facilitating subsequent adherence to the acts of the Conference, especially in cases where countries which wished to adhere had internal laws based on the promissory note.

M. Duzmans then passed to the examination of the second treaty situation which might exist in this connection. That situation was allowed under paragraph 1 of Article 22 of the Hague 1912 Convention, where it was expressed in the following terms :

“ Every Contracting State reserves to itself the power to restrict the obligation mentioned in Article 1 (of the Convention) to provisions concerning bills of exchange, and not to introduce into its territory the provisions concerning promissory notes contained in Title II of the (Uniform) Regulation. In this case, the State which has made use of this reservation shall only be considered as a Contracting State so far as regards bills of exchange.”

It was with that reservation that the Government of Latvia intended to assume undertakings at the present Conference in regard to her participation in the Uniform Regulation on bills of exchange and promissory notes and in the Convention to be signed.

The Latvian delegation was convinced that the participation of its country with the reservation to which it had just referred would put no obstacle in the way of the international circulation of the exchange instruments covered by the Regulation. The reservation would only have practical effect in so far as the circulation of such instruments within the boundaries of Latvia was concerned. Their circulation therefore would remain, owing to the practical effects of this reservation, outside the needs of international unification and would not be concerned with any international regulations laid down on the subject.

Latvian bills of exchange, as well as those of other nations, would circulate on the international market, and Latvia, just like any other country, certainly needed exchange credit.

It was only by means of bills of exchange and not by promissory notes that commercial relations between Latvia and foreign countries were maintained and developed from the point of view of exchange instruments. Promissory notes were only in circulation in Latvia.

This situation would be fully assured by the undertaking assumed by Latvia to take part in the Uniform Regulation with the reservation already announced, by the terms of which Latvia would only assume undertakings in respect of bills of exchange and not in respect of promissory notes.

The requirements of the circulation of negotiable instruments did not compel Latvia to amend her existing legislation on promissory notes.

For all these reasons, international trade was not and could not be in practice affected by the application of any system upon which the provisions of the Latvian national law in regard to promissory notes might be based.

In those circumstances, there was no reason why Latvia should abandon a series of her national regulations in regard to promissory notes because they differed from the corresponding provisions inserted in the Uniform Regulation and which, for reasons set out in general at the beginning of the present statement, it was difficult for Latvia to accept.

As an example, the representative of Latvia summarised the main points on which his country could not accept the provisions of the Uniform Regulation concerning promissory notes: actual payment in foreign currency (Article 40, paragraph 1, of the Regulation); the provisions of Article 53 in regard to *vis major*; the clause freeing the holder of the bill from the necessity of drawing up the protest (Article 45 of the Regulation concerning promissory notes); recourse before the maturity of a promissory note (Article 42); clause concerning interest (Article 5); intervention in favour of a guarantor (Article 54); endorsement on a promissory note including the phrase: "value in security" and "value in pledge" (Article 18); "aval" by separate act (Article 31); question of copies (Articles 66 and 67), and a certain number of other points.

In so far as the promissory note only was concerned, the provision of Article 1 of the draft Convention drawn up by the experts (Article 19 of the Hague 1912) Convention whereby the validity of a bill of exchange or promissory note should not be subordinated to the observance of the provisions concerning the stamp would cause dangerous confusion in the custom regulating the traffic in promissory notes within the country.

The provisions in Latvia concerning conflicts of law in connection with promissory notes must also be maintained.

On the other hand, in regard to the bill of exchange leaving Latvia for a foreign country, the Latvian delegation was prepared to accept all the points set out, although they amounted to a considerable innovation which would constitute a serious exception to the established law in Latvia concerning exchange.

It was in this manner that the Latvian delegation thought itself able effectively to co-operate in the work of international unification by confining itself to making only those sacrifices which were not unreasonable in the case of Latvia and which might prove useful to other countries.

For all these reasons, the Latvian delegation would propose the re-establishment in the draft Convention to be adopted of the reservation set out in Article 22 of the Hague Convention of 1912.

M. SHIMADA (Japan), on behalf of his delegation, recalled the observations which he had made during the discussion of Article 1, paragraph 8, concerning the use of a seal instead of a signature on the bill of exchange. This observation also applied to the signature on a promissory note. Reference to this should be made in the report.

Article 74 was approved at a first reading with the reservations made by a number of delegations.

ARTICLE 75.

M. DA MATTA (Portugal) thanked M. Deoclecio de Campos for the suggestion which he had made to the effect that Brazilian and Portuguese legislation should be unified in so far as the expression *nota promissoria* was concerned. He was all the more willing to accept this suggestion in view of the fact that Portuguese legal tradition from the beginning of the old laws up to the publication of the Portuguese Commercial Code in 1888, and even current commercial practice, were in favour of the adoption of the phrase proposed by M. Deoclecio de Campos.

Article 75 was approved at a first reading.

ARTICLE 76.

M. WEILLER (Italy) thought that the decision taken by the Conference in regard to bills of exchange in blank would also naturally apply to promissory notes. This should therefore be explicitly stated. M. Weiller proposed that the Drafting Committee should be instructed to make the necessary addition to Article 76.

The PRESIDENT replied that this provision had been inserted in the list of the articles.

The Japanese delegation had submitted an amendment to the effect that the Article 31bis should be added to the list of articles. Since Article 31bis had been deleted, however, it was obvious that the Japanese amendment no longer applied.

Article 76 was approved at a first reading.

ARTICLE 77.

Article 77 was approved at a first reading.

TWENTY-THIRD MEETING.

Held on May 27th, 1930, at 3 p.m.

President: M. J. LIMBURG.

29. Revision of the Uniform Uniform Regulation.

The PRESIDENT asked the Conference whether it was clearly understood that it approved the insertion in the Convention of an article stipulating that on application by four or five States the Council of the League could convene a fresh conference for the revision, if necessary, of the Uniform Regulation. A similar clause had recently been adopted, in the Convention on Nationality, by the Conference for the Codification of International Law at The Hague.

The Conference approved the insertion of this article.

30. Consideration of the Reservation to the Draft Uniform Regulation.

RESERVATIONS TO ARTICLE 74.

M. GIANNINI (Italy) said that at the previous meeting he had listened with great interest to M. Duzmans' very lucid statement. The question which M. Duzmans had raised was one of the most important of those involved, but it was essential to agree on its practical bearing. In all countries, the promissory note was the most important of all internal commercial instruments and in certain countries bills of exchange virtually did not exist internally. A very clear distinction was drawn between a promissory note, which was an internal document, and a bill of exchange, which was an external document. That had been the position in Russia at the time when she attended the last Conference at The Hague, and it was still that of the U.S.S.R. and the Baltic countries.

M. Giannini considered that a certain elasticity should be allowed in regard to promissory notes, which were of special importance in business circles in Latvia.

He drew the Conference's attention to the following fact: A perusal of Articles 21 and 22 of the Hague 1912 Convention showed that three systems or, to be more exact, three possibilities had been contemplated. In the first place, the countries were empowered to have a uniform regulation to cover both bills of exchange and promissory notes. This fact emerged from Article 21, under which the same possibilities in regard to reservations and the same reservations as those adopted for bills of exchange were allowed in the Uniform Regulation on promissory notes. In this case, there was complete concordance between the two systems.

Article 22 allowed two possibilities: first, each contracting country reserved to itself the power to restrict the application mentioned in Article 1 to provisions concerning bills of exchange, and not to introduce into its territory the provisions concerning promissory notes contained in Title II of the Regulation. The State which had made use of this reservation was only to be considered as a contracting State in so far as regarded bills of exchange.

That system was diametrically opposed to the system mentioned in Article 21. Article 21 laid down that promissory notes were subject to the same provisions as bills of exchange, whereas Article 22 allowed them to be kept entirely distinct. From the practical point of view, the countries which wished to make use of this reservation entered into no international undertaking in regard to promissory notes. They held that the promissory note presented advantages so distinctly national in character and importance that it was difficult for them to conform to the Uniform Regulation. In substance, the problem was still strictly an economic one.

Lastly, the second paragraph of Article 22 contained what might be regarded as a compromise system. It stipulated that each State reserved to itself the power to make provisions concerning promissory notes by a special regulation which would be in conformity with the provisions of Title II of the Regulation and which would reproduce rules concerning bills of exchange to which reference was made, with only the modifications resulting from Articles 77, 78, 79 and 80 of the Regulations and of Article 21 of the Convention.

Supposing this mixed system was adopted, M. Giannini asked whether it was to-day still necessary to have a separate regulation for promissory notes. The answer was undoubtedly in the affirmative. Not only those countries which had adhered to the Russian law, but other countries as well demanded it. It should be noted in passing that this Russian law had been modified in the U.S.S.R. The countries concerned were obliged to insist on a certain elasticity in the international provisions concerning promissory notes, and they wished to keep these three possibilities.

It was accordingly very difficult to adopt any other system than that contained in the Hague Convention and to refuse to retain the three systems; that amounted to saying that the Conference should not suppress Article 21, subject, of course, to the adjustment of the articles mentioned therein. It should also keep to the systems laid down in paragraphs 1 and 2 of Article 22.

In this connection, however, M. Giannini had understood from M. Duzmans' statement that the latter was asking for something more than the provisions contemplated in the second paragraph of Article 22, and he requested M. Duzmans to enlighten him on this point.

M. DUZMANS (Latvia) replied that he desired nothing but what was laid down in the article in question.

M. GIANNINI (Italy) observed that, this being so, the two articles must necessarily be adopted in the Regulation on promissory notes.

The discussion to which this question had given rise led the Italian delegation to consider afresh the question of introducing Article 1 of the Hague Convention. The Dutch delegation had sent the Drafting Committee in connection with this article a letter in which it observed that it found it difficult to accept the Convention without the reservation contained in that article.

As it was shown by the recent discussion on promissory notes that it was almost essential to keep this rule, which was part of the Hague Convention, M. Giannini requested the Conference to decide on the problem as a whole. He admitted that quite recently he had been opposed to the adoption of that article, but after having carefully examined the question of promissory notes and heard the explanations of M. Duzmans and M. Molengraaff he felt certain doubts.

The Conference was now at the end of the first reading. It could view the problem as a whole. It saw what was the real position and what were the difficulties to be overcome if the agreements were to be not only signed but ratified as well. It was in this spirit that M. Giannini urged the Conference to look at the problem.

He would repeat what he had said at the previous meeting. In certain cases, it was necessary to be satisfied with what was possible, especially when that involved no tragic consequences. He was therefore prepared to adopt Article 2 and Article 22 of the Convention, but urged the Conference, after settling this question, to find somewhat more precise limits for the reservations that had been adopted, so as to be quite clear in coming to a decision on the other reservations now put forward. M. Giannini therefore proposed to ask leave to address the Conference as soon as the discussion on the articles in question had been concluded and to request the other delegations which wished to propose reservations carefully to consider whether they could not dispense with them.

In connection with the reservations, it had been proposed that the Conference should reconsider certain articles which had already been approved. That, of course, was always possible until the moment of signature, but if that procedure was adopted, it would be difficult to distinguish clearly between the results at present achieved and the form which the Convention would take to-morrow.

M. PERCEROU (France) pointed out that the Conference had before it two main requests for reservations in connection with promissory notes, one from the Latvian delegation and the other from the Netherlands delegation. Both appeared to be prompted by the consideration that promissory notes were employed much less frequently than bills of exchange as instruments of international commerce, that they were employed by countries mainly within their own frontiers, and that in consequence uniformity was of less importance than in the case of bills of exchange.

It was a fact that, in regard to promissory notes, more respect could be had for national peculiarities. For that reason M. Percerou would readily support the Latvian request for a reservation and would propose an intermediary solution for the Netherlands request.

The Netherlands reservation was designed to allow the contracting States to omit from bills of exchange and promissory notes respectively the words "bill of exchange" and "promissory note".

It would be very regrettable, from the point of view of the uniformity of the international law on negotiable instruments, if the words "bill of exchange" were omitted from bills of exchange which were essential instruments of international commerce. It was precisely in order to ensure the most complete uniformity that France, which was at present in the same position as the Netherlands, had renounced that reservation in the case of bills of exchange.

On the contrary, the French delegation saw no objection to respecting the freedom of States in regard to promissory notes and permitting those States which did not at present inscribe on them the words "promissory note" to retain that liberty.

If a difference in legislation resulted, there would not be the same objections as in the case of bills of exchange, since promissory notes circulated mainly within the national frontiers.

There would, moreover, be useless repetition, at any rate for French-speaking countries, in requiring the reference in question on promissory notes, for the nature of a note resulted from the way it was drawn up. The promissory note was worded: "I will pay, at such a date, the sum of . . . to the order of Mr. X." The note which did not contain the "to order" clause would not be a promissory note. In consequence, it would be strange to put "promissory note" and to continue: "I will pay to the order of." That would be useless repetition.

M. Percerou asked the Netherlands delegation whether it would not be content to confine its reservation to promissory notes, in order to maintain uniformity in the wording of bills of exchange, which were primarily bills of international commerce. The Hague reservation, which referred both to bills of exchange and to promissory notes, would be limited to promissory notes if there were no obligatory term which must be used. Would the Netherlands delegation accept that suggestion?

M. VISCHER (Switzerland) pointed out that Article 74 was drawn up as follows:

"A promissory note contains:

"1. The denomination of the instrument inserted in the body of it. . ."

M. Percerou had just explained that, in his opinion, it was necessary to include in a promissory note the words "promissory note", whereas it appeared that in the minds of the delegates who met at The Hague Article 74 did not have that meaning.

In the opinion of the Swiss delegates, it would be sufficient, for promissory notes, to use the word "exchange" to make it clear that they were instruments "to order". It was for that reason that in the German text drawn up by German, Austrian and Swiss experts the promissory

TWENTY-THIRD MEETING.

Held on May 27th, 1930, at 3 p.m.

President: M. J. LIMBURG.

29. Revision of the Uniform Uniform Regulation.

The PRESIDENT asked the Conference whether it was clearly understood that it approved the insertion in the Convention of an article stipulating that on application by four or five States the Council of the League could convene a fresh conference for the revision, if necessary, of the Uniform Regulation. A similar clause had recently been adopted, in the Convention on Nationality, by the Conference for the Codification of International Law at The Hague.

The Conference approved the insertion of this article.

30. Consideration of the Reservation to the Draft Uniform Regulation.

RESERVATIONS TO ARTICLE 74.

M. GIANNINI (Italy) said that at the previous meeting he had listened with great interest to M. Duzmans' very lucid statement. The question which M. Duzmans had raised was one of the most important of those involved, but it was essential to agree on its practical bearing. In all countries, the promissory note was the most important of all internal commercial instruments and in certain countries bills of exchange virtually did not exist internally. A very clear distinction was drawn between a promissory note, which was an internal document, and a bill of exchange, which was an external document. That had been the position in Russia at the time when she attended the last Conference at The Hague, and it was still that of the U.S.S.R. and the Baltic countries.

M. Giannini considered that a certain elasticity should be allowed in regard to promissory notes, which were of special importance in business circles in Latvia.

He drew the Conference's attention to the following fact: A perusal of Articles 21 and 22 of the Hague 1912 Convention showed that three systems or, to be more exact, three possibilities had been contemplated. In the first place, the countries were empowered to have a uniform regulation to cover both bills of exchange and promissory notes. This fact emerged from Article 21, under which the same possibilities in regard to reservations and the same reservations as those adopted for bills of exchange were allowed in the Uniform Regulation on promissory notes. In this case, there was complete concordance between the two systems.

Article 22 allowed two possibilities: first, each contracting country reserved to itself the power to restrict the application mentioned in Article 1 to provisions concerning bills of exchange, and not to introduce into its territory the provisions concerning promissory notes contained in Title II of the Regulation. The State which had made use of this reservation was only to be considered as a contracting State in so far as regarded bills of exchange.

That system was diametrically opposed to the system mentioned in Article 21. Article 21 laid down that promissory notes were subject to the same provisions as bills of exchange, whereas Article 22 allowed them to be kept entirely distinct. From the practical point of view, the countries which wished to make use of this reservation entered into no international undertaking in regard to promissory notes. They held that the promissory note presented advantages so distinctly national in character and importance that it was difficult for them to conform to the Uniform Regulation. In substance, the problem was still strictly an economic one.

Lastly, the second paragraph of Article 22 contained what might be regarded as a compromise system. It stipulated that each State reserved to itself the power to make provisions concerning promissory notes by a special regulation which would be in conformity with the provisions of Title II of the Regulation and which would reproduce rules concerning bills of exchange to which reference was made, with only the modifications resulting from Articles 77, 78, 79 and 80 of the Regulations and of Article 21 of the Convention.

Supposing this mixed system was adopted, M. Giannini asked whether it was to-day still necessary to have a separate regulation for promissory notes. The answer was undoubtedly in the affirmative. Not only those countries which had adhered to the Russian law, but other countries as well demanded it. It should be noted in passing that this Russian law had been modified in the U.S.S.R. The countries concerned were obliged to insist on a certain elasticity in the international provisions concerning promissory notes, and they wished to keep these three possibilities.

It was accordingly very difficult to adopt any other system than that contained in the Hague Convention and to refuse to retain the three systems; that amounted to saying that the Conference should not suppress Article 21, subject, of course, to the adjustment of the articles mentioned therein. It should also keep to the systems laid down in paragraphs 1 and 2 of Article 22.

In this connection, however, M. Giannini had understood from M. Duzmans' statement that the latter was asking for something more than the provisions contemplated in the second paragraph of Article 22, and he requested M. Duzmans to enlighten him on this point.

M. DUZMANS (Latvia) replied that he desired nothing but what was laid down in the article in question.

M. GIANNINI (Italy) observed that, this being so, the two articles must necessarily be adopted in the Regulation on promissory notes.

The discussion to which this question had given rise led the Italian delegation to consider afresh the question of introducing Article 1 of the Hague Convention. The Dutch delegation had sent the Drafting Committee in connection with this article a letter in which it observed that it found it difficult to accept the Convention without the reservation contained in that article.

As it was shown by the recent discussion on promissory notes that it was almost essential to keep this rule, which was part of the Hague Convention, M. Giannini requested the Conference to decide on the problem as a whole. He admitted that quite recently he had been opposed to the adoption of that article, but after having carefully examined the question of promissory notes and heard the explanations of M. Duzmans and M. Molengraaff he felt certain doubts.

The Conference was now at the end of the first reading. It could view the problem as a whole. It saw what was the real position and what were the difficulties to be overcome if the agreements were to be not only signed but ratified as well. It was in this spirit that M. Giannini urged the Conference to look at the problem.

He would repeat what he had said at the previous meeting. In certain cases, it was necessary to be satisfied with what was possible, especially when that involved no tragic consequences. He was therefore prepared to adopt Article 2 and Article 22 of the Convention, but urged the Conference, after settling this question, to find somewhat more precise limits for the reservations that had been adopted, so as to be quite clear in coming to a decision on the other reservations now put forward. M. Giannini therefore proposed to ask leave to address the Conference as soon as the discussion on the articles in question had been concluded and to request the other delegations which wished to propose reservations carefully to consider whether they could not dispense with them.

In connection with the reservations, it had been proposed that the Conference should reconsider certain articles which had already been approved. That, of course, was always possible until the moment of signature, but if that procedure was adopted, it would be difficult to distinguish clearly between the results at present achieved and the form which the Convention would take to-morrow.

M. PERCEROU (France) pointed out that the Conference had before it two main requests for reservations in connection with promissory notes, one from the Latvian delegation and the other from the Netherlands delegation. Both appeared to be prompted by the consideration that promissory notes were employed much less frequently than bills of exchange as instruments of international commerce, that they were employed by countries mainly within their own frontiers, and that in consequence uniformity was of less importance than in the case of bills of exchange.

It was a fact that, in regard to promissory notes, more respect could be had for national peculiarities. For that reason M. Percerou would readily support the Latvian request for a reservation and would propose an intermediary solution for the Netherlands request.

The Netherlands reservation was designed to allow the contracting States to omit from bills of exchange and promissory notes respectively the words "bill of exchange" and "promissory note".

It would be very regrettable, from the point of view of the uniformity of the international law on negotiable instruments, if the words "bill of exchange" were omitted from bills of exchange which were essential instruments of international commerce. It was precisely in order to ensure the most complete uniformity that France, which was at present in the same position as the Netherlands, had renounced that reservation in the case of bills of exchange.

On the contrary, the French delegation saw no objection to respecting the freedom of States in regard to promissory notes and permitting those States which did not at present inscribe on them the words "promissory note" to retain that liberty.

If a difference in legislation resulted, there would not be the same objections as in the case of bills of exchange, since promissory notes circulated mainly within the national frontiers.

There would, moreover, be useless repetition, at any rate for French-speaking countries, in requiring the reference in question on promissory notes, for the nature of a note resulted from the way it was drawn up. The promissory note was worded: "I will pay, at such a date, the sum of . . . to the order of Mr. X." The note which did not contain the "to order" clause would not be a promissory note. In consequence, it would be strange to put "promissory note" and to continue: "I will pay to the order of." That would be useless repetition.

M. Percerou asked the Netherlands delegation whether it would not be content to confine its reservation to promissory notes, in order to maintain uniformity in the wording of bills of exchange, which were primarily bills of international commerce. The Hague reservation, which referred both to bills of exchange and to promissory notes, would be limited to promissory notes if there were no obligatory term which must be used. Would the Netherlands delegation accept that suggestion?

M. VISCHER (Switzerland) pointed out that Article 74 was drawn up as follows:

"A promissory note contains:

"1. The denomination of the instrument inserted in the body of it. . ."

M. Percerou had just explained that, in his opinion, it was necessary to include in a promissory note the words "promissory note", whereas it appeared that in the minds of the delegates who met at The Hague Article 74 did not have that meaning.

In the opinion of the Swiss delegates, it would be sufficient, for promissory notes, to use the word "exchange" to make it clear that they were instruments "to order". It was for that reason that in the German text drawn up by German, Austrian and Swiss experts the promissory

note was called "die Bezeichnung als Wechsel". If the thesis of M. Percerou were adopted, it would be necessary to say "die Bezeichnung als eigener Wechsel".

The German, Austrian and Swiss experts were thus of opinion that it was not necessary to say in the body of the instrument that it was a promissory note, because it followed from the text of an instrument which contained all the other essential statements that it was a promissory note.

In Switzerland, the official term sanctioned by the national legislation was "billet de change". That term had to appear expressly on the instrument, with the word "Wechsel" or "cambiale" in brackets (Article 825 of the "Code des obligations").

The Swiss delegation was therefore of opinion that it sufficed for a promissory note to contain the word "exchange". If it had to be considered that according to the Uniform Regulation a promissory note must bear the words "promissory note", the Swiss delegation would be obliged to reserve the possibility of being content with the word "exchange".

M. QUASSOWSKI (Germany) would regret a reservation in regard to Article 2 of the Hague Convention concerning bills of exchange. On that main point, it was important to reach complete uniformity.

In regard to the difficulty resulting from the words "denomination of the instrument" which appeared in Article 74, M. Quassowski approved the observations of M. Vischer. The German-speaking delegates who had taken part in the Hague Conference had understood that the expression "Wechsel" would be allowed and that it would not be necessary in every case to mention the words "eigener Wechsel" on the instrument. The same question would arise in future. Any doubt on the subject should be removed either by a modification of the text or by a reservation.

M. PERCEROU (France) made an observation with regard to the interpretation which it would be desirable to give to sub-paragraph 1 of Article 74. The denomination of the instrument which had to appear on the promissory note was a question of custom in each country. In French-speaking countries, the term to be used in the promissory note was "billet à ordre". What was the term in German-speaking countries? Was it "Wechsel" or "eigener Wechsel"? It was a question of custom. The Convention and the Regulation did not enter into those details.

In order to avoid any confusion, the PRESIDENT drew attention to the text of Article 2 of the Hague Convention, which was as follows :

"In derogation of Article 1 (1) of the Regulation, every Contracting State may provide that bills of exchange issued in its own territory which do not contain the expression 'bill of exchange' shall be valid, provided that they contain an express statement that they are payable 'to order'."

That text concerned bills of exchange.

The same Hague Convention also contained an Article 21, which was drawn up as follows :

"The provisions of Article 2 to 13 and 15 to 20 concerning bills of exchange apply equally to promissory notes."

The Latvian delegation had put forward a reservation concerning paragraph 2 of Article 22 at the last meeting.

M. DUZMANS (Latvia) explained that the reservation of the Latvian delegation referred to the whole article.

The PRESIDENT had understood that Latvia reserved the right, if Article 22 of the Hague Convention were maintained, to apply only the second paragraph of that article, which stated :

"Each State reserves to itself the power to make provisions concerning promissory notes by a special regulation which shall be in conformity with the provisions of Title II of the Uniform Regulation, and which will reproduce rules concerning bills of exchange. . ."

M. DUZMANS (Latvia) said that what interested the Latvian delegation was the first paragraph, which dealt with the power to restrict the obligation mentioned in Article 1.

The PRESIDENT then understood that Article 22 of the Hague Convention was adopted and that Latvia would apply paragraph 1.

M. DUZMANS (Latvia) replied in the affirmative.

The PRESIDENT thought that, in order to give satisfaction to the Latvian delegation, it would suffice to keep Article 21, which was of a more general character, and the first paragraph of Article 22 ; the second paragraph of Article 22 might disappear.

M. DUZMANS (Latvia) agreed that the President's observations were correct. Latvia had an immediate interest in the application of Article 22, paragraph 1, of the Hague Convention, under which each State reserved to itself the power to restrict the obligation mentioned in Article 1. M. Duzmans, however, did not have in mind merely the immediate interest of his own country, but was also thinking of the general interest. It was for that reason that he urged the adoption of paragraph 2 as well. Suppose Latvia decided at some future time to assume the full obligation. In that case, paragraph 2 of Article 22 would be necessary. Further, those countries which had the same system as Latvia and which were not represented at the Conference would be able, at one time or another, to adhere to the acts of the Conference. The adoption of paragraph 2 would facilitate their adhesion.

To sum up, M. Duzmans made his proposal in the immediate interests of his own country and in the general interests as well.

He thanked M. Giannini for having amplified the Latvian proposal by suggesting the adoption of Article 21 as well. No delegation had made a formal proposal in regard to Article 21, but M. Duzmans thought that the Latvian proposal might be completed by M. Giannini's suggestion.

The PRESIDENT thanked M. Duzmans for his explanations and proposed that the Conference should take a decision on the Latvian proposal for the inclusion of Article 22 of the Hague Convention in the draft Convention.

The proposal was adopted.

M. VISCHER (Switzerland) said that, if the Conference adopted M. Percerou's interpretation, he would have to ask for a change in Article 2 of the Hague Convention, which he proposed should be drafted as follows :

“ In derogation of Article 74 of the Regulation, every Contracting State may provide that bills of exchange issued in its own territory which do not contain the expression ‘ to order ’ shall be valid, provided that they contain an express mention of the words ‘ of exchange ’.”

In Switzerland, every instrument containing the words “ de change ” was held to be an instrument payable to order. M. Vischer thought that Article 74 should be interpreted in the way which he had mentioned, for he saw no necessity to specify in the promissory note that it was a promissory note. If the instrument contained a pure and simple promise of the payment of a specific sum, it followed that it was a promissory note and not a draft. It was for that reason that he did not think it necessary expressly to use the words “ billet à ordre ”.

The PRESIDENT hoped that M. Vischer would withdraw his proposal, which might, in his opinion, lead to confusion. The question appeared perfectly clear. No change had been made since the 1910 and 1912 Conferences and what was now known in regard to the denomination of promissory notes and bills of exchange in the various countries had been known to the members of those two Conferences likewise.

Article 74 said :

“ A promissory note contains :

“ 1. The denomination of the instrument. . . ”

That amounted to saying that if in any country the denomination of a promissory note was “ promissory note ”, the fact should be stated in the body of the instrument ; again, if in another country the denomination was “ eigener Wechsel ”, the term “ eigener Wechsel ” should be inserted in the instrument. If in a third country the denomination was “ Wechsel ”, that term should be used.

Article 2 of the Hague Convention, dealing with bills of exchange, and Article 21, dealing with promissory notes, stipulated that there was no need of this denomination provided that the words “ to order ” appeared in the instrument.

The question was therefore quite simple and had nothing to do with the various denominations of the promissory note. In order, however, to satisfy everybody, the Convention, or a protocol, might include a provision stating that promissory notes were denominated as follows in the different countries : in Germany “ eigener Wechsel ”, in England “ promissory note ”, and so on.

In this way, everyone would immediately know what were the various denominations of a promissory note. From the legal point of view, however, the matter was clear.

M. GIANNINI (Italy) thought that the first thing to do was to come to a decision on a general question — namely, whether the reservation as formulated in Article 2 and referred to in Article 21 should be accepted. In Article 2, the reservation was formulated only in regard to bills of exchange but it was repeated in Article 22 as if the idea in that article were the same.

If this system, which seemed to be that of the Dutch delegation, were abandoned, there remained the other system — namely, the possibility of a reservation restricted to promissory notes.

Though the first kind of reservation might be sacrificed, the second was absolutely essential, for certain very simple and practical reasons. In some countries there was not merely a general determination, but often local determinations as well, which it would be very difficult to uproot.

Suppose that after the present Conference a return were made to the results that had been achieved before the world conflict and an agreement were secured between the German-speaking countries, including Switzerland, upon a single translation and a uniform regulation ; it was nevertheless known that negotiations had been entered into between Switzerland and Italy with the same object. In Italy, the term used was sometimes “ cambiale ”, sometimes “ paghere ” and sometimes “ vaglia cambiario ”, while in Southern Italy, in particular, there was an instrument which was in very common use and bore the term “ fede di credito ”. That proved that if the general reservation were abandoned, the reservation referring to promissory notes would have to be adopted, for it was extremely difficult, if not impossible, to have a single term. The French term “ billet à ordre ” would yield a translation which would be understood by no one in Italy.

M. Giannini urged the Conference to decide whether the question should be contemplated in its widest aspect. If that idea were abandoned, it would be necessary to achieve a simpler and also a clearer formula in Article 2, since he could not understand that proposed by M. Vischer.

M. PERCEROU (France) would first confirm what the President had said. Article 24 of the Hague Convention said :

“ Also the States will communicate to the afore said Government (the Government of the Netherlands) the terms which, in the language recognised in their territory, correspond with the expressions ‘ lettre de change ’ and ‘ billet à ordre ’.”

That proved that it had been left to each State to intimate the term corresponding to “ billet à ordre ”.

M. Percerou thought that there was perhaps a difference between German practice and legal terminology. In German law and in Swiss law the “ billet à ordre ” was termed “ eigener Wechsel ”, whereas in practice it was known as “ Wechsel ”.

That was a somewhat inconsistent position and one which should be done away with.

For the reasons which he had already indicated and likewise for those suggested by M. Giannini, M. Percerou thought that there should be greater elasticity in regard to the form of the promissory note and that the reservation asked for by the Dutch delegation on this point should be allowed. If that reservation were admitted in regard to bills of exchange — and to do so would be a useless and unjustified step backward — the result would be to destroy the uniformity of the bill of exchange as an international instrument ; but, as he had already said, the situation was different in the case of promissory notes.

M. VISCHER (Switzerland) put a question to the Conference. In Switzerland, French was one of the national languages and, accordingly, the French text of the Uniform Regulation would have to be allowed as proposed. While M. Vischer did not feel competent to discuss with M. Percerou questions relating to French, he was obliged to observe that his confederates who used that language flattered themselves that they spoke fairly good French. The expression used in Switzerland was “ billet de change ”, and the term “ billet à ordre ” was not sanctioned by law.

Would it be possible for Switzerland to insert in her Uniform Regulation the expression “ billet de change ” instead of “ billet à ordre ”?

The PRESIDENT replied in the affirmative.

He had intended to put the Dutch delegation's proposal to the vote only in so far as concerned promissory notes, but M. Giannini wished the Conference to vote first on the question of denomination, not only in regard to promissory notes, but also in regard to bills of exchange. In that case, it would be necessary to take a decision first on Article 2 of the Hague Convention. If that article were accepted, it followed that Article 21 relating to promissory notes would also be accepted.

M. PERCEROU (France) asked whether, if the general reservation was not allowed, the question would be put separately in regard to promissory notes.

The PRESIDENT replied in the affirmative.

M. GIANNINI (Italy) said that, as Chairman of the Drafting Committee, he had received a formal letter from the Dutch delegation asking that the reservation might be formulated in accordance with Article 2 of the Convention. It was for that reason that he had asked that the question might be put.

The PRESIDENT thought that the Conference might also vote at once on the reservation covering promissory notes and postpone the question of bills of exchange until the second reading.

M. GIANNINI (Italy) pointed out that in that case the entire work would remain in suspense.

The PRESIDENT decided accordingly to put the two reservations to the vote.

Article 2 of the Convention was rejected.

The principle of Article 2 restricted to promissory notes was adopted by 17 votes to 2.

Mr. GUTTERIDGE (Great Britain) asked that note might be taken of the fact that he had abstained from voting.

M. GIANNINI (Italy) drew the Conference's attention to the fact that with the system adopted at The Hague it had been necessary to refer to Article 22 to Article 2 in order to do away with any doubt as to the interpretation of Article 74. In view, however, of the decision which had just been taken and in order to avoid any doubt in the matter, M. Giannini hoped it might not be possible to find a proper formula for insertion in Article 74. In the affirmative, any reference to Article 74 in Article 22 would be deleted.

The PRESIDENT replied that the word “ denomination ” used in Article 74 appeared to be the equivalent of the term “ promissory note ” in the case of countries which did not use that term. He would leave it to the Drafting Committee to find the proper expression. It was obvious that the present wording of Article 21 could not be kept. The Drafting Committee would have to revise it.

The President recalled that, before examining the other reservations made by the Yugoslav and Polish delegations, M. Giannini had wished to outline the reservations which the Conference had already adopted. With that object, the President called on M. Giannini, as Chairman of the Drafting Committee, to explain these reservations.

RESERVATIONS TO THE OTHER ARTICLES.

M. GIANNINI (Chairman of the Drafting Committee) said that the reservations approved by the Conference amounted to fourteen, and were to the following effect :

A reservation of a passing nature asked for by the French delegation in regard to Article 1 ;
A reservation to Article 3 of the Hague Convention which the Conference had decided to reinsert ;

A reservation to Article 10 of the Uniform Regulation asked for by the French delegation ;
A reservation in regard to Article 31, paragraph 1, asked for by the French delegation ;
A reservation to Article 38 of the Uniform Regulation, reproducing that made to Article 7 of the Hague Convention ;

A reservation regarding the last paragraph of Article 38 ;
A reservation in regard to paragraphs 2 and 3 of Article 43 ;
A reservation in regard to Article 43 in general, and a second concerning paragraph 2 of that article asked for by the German delegation ;
A reservation in regard to Article 45, paragraph 1 ;
A reservation in regard to Article 48.

The Conference had finally reinserted, at its meeting on Saturday, Articles 13 and 14 of the Hague Convention.

The Conference had now approved the reinsertion of the reservation contained in Article 16 of the Hague Convention.

The Yugoslav delegation asked for permission to reinsert the reservation to Article 3 of the Hague Convention which had already been adopted, the reservation to Article 43, paragraph 1, of the Regulation already adopted, and it also wished to reinsert Article 15 of the Hague Convention and Article 16 of the present Convention.

The Yugoslav delegation also asked for a number of amendments to Article 8 of the Convention which would necessitate a fresh discussion regarding the reservation already adopted. It proposed an addition to Article 4 which amounted to a reservation.

Finally, the Polish delegation had submitted a request to make a reservation to Article 40.

M. Giannini asked the Conference, in the first place, to examine with the greatest prudence at the moment the reservations submitted by certain delegations and to consider, during the second reading, when the text of the Convention would be complete, whether it would not be possible to abandon a number of these reservations.

In order to hasten the work and do away with the necessity of not making too many changes at the final reading of the established text, would not the Conference be ready to read the Convention a third time? As soon as the Drafting Committee was ready to submit its text, the Conference could take its decision, since all the reservations would be before it.

M. Giannini asked it to agree to this small change, for when delegates had all the reservations before them they could in full freedom of conscience state whether they really thought that this progressive diminution of the effect of the Uniform Regulation should be confirmed.

The PRESIDENT noted that the Conference had reached a stage at which it was necessary to avoid all confusion. It had before it : (1) the reservations which had already been adopted ; (2) the reservations which had been put forward but which had not been expressly adopted ; (3) the reservations which had been formally rejected.

There were also a number of articles in the Convention drawn up by the experts concerning conflicts of law which were not a solution of these conflicts but which, in actual fact, amounted to reservations. This was another point on which it would be necessary to take a decision.

A number of these reservations had been submitted to the Drafting Committee. When that Committee had dealt with them, the Conference would be called upon to take a decision. There were, however, three reservations proposed by the Yugoslav, Polish and Greek delegations. The Yugoslav delegation asked that the following provision should be inserted in the Convention :

“ Every Contracting State has, so far as regards bill of exchange obligations, undertaken in its own territory the power to determine in what manner there may be substitutes for signature, provided that a formal declaration inscribed on the bill verifies the intention of the person who ought to have signed.”

This proposal meant the re-establishment of Article 3 of the Hague Convention of 1912.

M. EISNER (Yugoslavia) said that this reservation was necessary in countries where there were persons unable to read or write.

The PRESIDENT put this proposal to the vote.

The proposal was adopted by 18 votes to 2.

The PRESIDENT said that the Yugoslav delegation had put forward as a reservation another proposal to the effect that the following provision should be inserted in the Convention :

“ By derogation from Article 43, paragraph 1, of the Regulation, each Contracting State has the right to prescribe that in the case of bills of exchange for small amounts the notice of non-payment laid down in Article 44 shall replace the protest for non-payment provided that this notice is given by the public officer responsible for drawing up the protest.”

M. EISNER (Yugoslavia) said that, in applying paragraph 77 of the Yugoslav Law on Bills of Exchange, the Minister of Justice could, in the case of bills of exchange of which the amount did not exceed 500 dinars, prescribe that the public officer responsible for drawing up the protest should forward, at the request of the holder of the bill and to each one of the persons liable, in a registered letter, a copy of the bill of exchange together with a statement that the bill had been presented. This would take the place of the formal protest and notice provided for in Article 44 of the Regulation.

The Yugoslav Minister of Justice had already formulated a decree in which it was laid down that the notice in question must be registered. The Yugoslav delegation thought that such a provision was very useful, not only because it reduced the cost of the protest, which was of great importance in connection with bills of exchange for a small amount, but also because it allowed holders in a small way of business who in most cases were not very well educated, more easily to fulfil the necessary formalities connected with the exercise or guarantee of their rights.

The reservation proposed by the Yugoslav delegation was of importance, not only in regard to Yugoslav legislation, which would thus maintain its present practice, but also in regard to the legislation of other States, for it would permit them to introduce a similar provision.

For these reasons, the Yugoslav delegation asked the Conference to accept its proposal.

M. DE LA VALLÉE POUSSIN (Belgium) thought it would be useless to insert a reservation in the Convention in order to make a more economical procedure possible in so far as the bill of exchange was concerned. The draft Convention reproduced a provision of the Hague Convention, which would allow the Yugoslav Government to take action in this matter in whatever way it thought good without reading the authorisation of a reservation. This article, which was Article 8 of the draft Convention, stipulated that :

“ The form of and the limits of time for protest, as well as the form of other proceedings necessary for the exercise or preservation of rights concerning bills of exchange or promissory notes, are regulated by the laws of the State within whose territory the protest must be drawn up or the proceedings in question taken.”

In view of this article, the insertion of a reservation seemed to M. de la Vallée Poussin to be quite useless.

The PRESIDENT also thought that the Yugoslav proposal was neither useful nor practical, in view of the fact that the Conference had adopted, in connection with Article 43, the reservation submitted by the Dutch delegation to the following effect :

“ Every Contracting State may provide that protests to be drawn up in its territory may be replaced by a declaration dated and written on the bill itself signed by the drawee, except in cases where the holder demands the inclusion of a protest by deed in due and proper form in the text of the bill of exchange.”

He thought that this would entirely satisfy the Yugoslav delegation.

M. EISNER (Yugoslavia) said that if Article 8 of the draft Convention covered the reservations he had made he would withdraw it.

The PRESIDENT explained that this was the opinion of M. de la Vallée Poussin, but he was not entirely of this view. He thought that the Yugoslav delegation could be satisfied with the reservation adopted in Article 43.

M. EISNER (Yugoslavia) thought that this was another question. By his reservation, he asked that notice could replace protest. In those circumstances, he must maintain his reservation.

M. SOKAL (Austria) thought that Article 9 of the Hague Convention, which was drafted in that manner, could entirely satisfy the Yugoslav delegation.

M. EISNER (Yugoslavia) could not agree with M. Sokal. Article 9, in his view, concerned another question.

The Yugoslav reservation was rejected.

The PRESIDENT said that the Yugoslav delegation had submitted another reservation concerning the insertion of Article 15 of the Hague Convention.

M. EISNER (Yugoslavia) withdrew this reservation.

The PRESIDENT noted that the Yugoslav delegation asked that Article 16 of the Hague Convention should be inserted as a reservation.

In that connection, the President recalled that the Convention had previously accepted the principle of this reservation at a previous meeting, but that it had instructed the Drafting Committee to ascertain whether or not the insertion of Article 16 was necessary.

This question was therefore settled.

The Polish delegation had also submitted a reservation in the following terms :

“ Each State retains the right to issue, by derogation from Article 40 of the Uniform Law, provisions concerning the creation and payment of bills of exchange in a foreign currency.”

M. SULKOWSKI (Poland) stated that Article 40 established the principle that bills of exchange could be created in foreign currency. In addition, it established the principle that if a bill of exchange created in foreign currency contained the effective payment clause, it must then be paid effectively in foreign currency. M. Sulkowski observed that if the article were adopted as it stood without reservation, the result would be to limit the legislative power of States in the sense that they would not be able to prescribe that bills of exchange created on their territory could only be expressed in the currency of the country. In the same way, they would be unable to state that bills of exchange created abroad in foreign currency must be paid in the currency of the country, even if those bills contained the effective payment clause. Situations might, however, arise in which a State would be forced to introduce such provisions. That would be the case, for instance, during a financial crisis.

For that reason, M. Sulkowski asked the Conference to adopt the reservation in order that the legislative freedom of States should not be limited.

In addition, M. Sulkowski observed that the reservation was intimately connected with the formula which would have to be inserted in the Convention in order to determine its effects. If the Conference adopted the point of view of the French delegation, according to which each State was simply under an obligation to submit the Convention to the legislative authorities for ratification, after which, once it was ratified, changes could be introduced, it would be obvious that such a reservation as that submitted by M. Sulkowski would be unnecessary. In the same way, it would not be necessary to make a reservation if the Conference adopted the principle according to which each State could denounce the Convention in urgent cases. If, however, any other principle were adopted, it would be essential to make a reservation.

Since the question of principle had not yet been settled by the Conference, the representative of Poland believed that it would not for the moment be possible to take a decision in regard to whether or not it would be expedient to insert a reservation.

The PRESIDENT believed that the question had already been discussed.

M. SULKOWSKI (Poland) pointed out that he had already drawn the attention of the Conference to the point, but had not made any concrete proposal.

M. GIANNINI (Italy) drew the attention of the Conference to the fact that it was a bad method to make a reservation to Article 40 when the Conference no longer had it in mind. He pointed out that the article was intended to give security to States which accepted the Uniform Regulation. The State signatory would be certain that there was a system, good or bad — and one must say good, since it would have been accepted — but if each State could, on the basis of the proposed reservation, make regulations in regard to creation and payment in foreign currency, Article 40 would serve no purpose.

The problem was important, and he felt obliged to observe that though the Conference had started by manifesting a certain hatred for reservations, it now appeared to have an unrestrained liking for them. Possibly there had been some exaggeration at the beginning, but there was probably still more exaggeration at the moment.

MUNIR Bey (Turkey) asked what would be the effect of the obligations undertaken by States and what power Parliaments would have to make modifications. Those questions were not yet settled, and they were essential. While awaiting their solution, the Turkish delegation believed it should support the proposal of the Polish delegation. The question was intimately connected with the currency aspect of trade. A Government might be led to take measures in derogation of Article 40.

M. BARBOZA-CARNEIRO (Economic Committee) asked the delegate of Poland to postpone the presentation of his reservation until the second reading of Article 40. Perhaps between now and then it would be possible to find a formula which would give satisfaction. Thus the insertion of a new reservation would be avoided.

M. SULKOWSKI (Poland) readily accepted that suggestion. He had himself observed that the question should be left in suspense until the adoption of a final formula in regard to the effects of the Convention.

M. Sulkowski added that he was unable to approve the observations of M. Giannini. It was said in Article 40, for instance, that if a bill of exchange contained an effective payment clause, it must always be paid in foreign currency. If, however, a State found itself in a critical financial situation, it might be obliged to take decisions suppressing the effective payment clause. That would be a violation of an international treaty. It would be better to make the situation clear and it was for that reason that he had raised the question. He considered that it was essential to settle it, and was certain that the provision should not attack the sovereignty of any State.

M. GIANNINI (Italy) agreed that there were certain problems which greatly affected the life of States and in regard to which it was very difficult to take decisions, particularly in a special Convention which did not deal with the substance of those problems. Problems affecting the financial and economic policy of States could not be settled at the present Conference.

M. Giannini drew attention, however, to the fact that the drawer of a bill of exchange should know how it would be paid. A State could prevent its nationals from creating bills of exchange if it was in the position indicated by M. Sulkowski. It would be possible to understand a reservation referring to the creation of a bill of exchange, but not to its payment. The sole advantages of the uniform rule was that it made it possible to know how a bill would be paid, and it could only be dangerous to delete it.

M. SULKOWSKI (Poland) stated that the question concerned the payment of a bill of exchange. He had already given an example of a State which enacted a provision suppressing the effective payment clause. If the reservation were not adopted, that State would have violated an international treaty. Such a measure might, however, be absolutely necessary.

M. GIANNINI (Italy) believed that the reservation could be limited to the last paragraph. The text proposed by M. Sulkowski referred to the "provisions concerning the creation and payment of bills". Everything was included in that and half the value of the Uniform Regulation would be lost.

The PRESIDENT proposed to postpone the discussion of the reservation until the second reading of Article 40.

Agreed.

Communication from the Greek Government.

The PRESIDENT pointed out that the Conference had had before it, under date of May 13th, a communication from the Greek Government to the following effect :

"The Greek Government . . . duly communicated the drafts prepared by the legal experts to the special Committee entrusted with the preparation of a draft code on bills of exchange, promissory notes and cheques. As the work of this Committee was very largely based on the results obtained at Geneva, its draft is in essential agreement therewith. There are, however, certain differences of detail which constitute the Greek Government's reservations with regard to the Geneva drafts :

"1. Whereas the latter make protest for non-acceptance or non-payment obligatory, the draft code does not oblige the holder to make such protest save in the case of a stipulation "*avec protêt*", and the Greek Government desires to retain this rule for securities issued and payable in Greece.

"2. In the opinion of the Greek Government, the wording of those provisions of the drafts relating to securities bearing the stipulation "*retour sans frais*" ought to be more precise.

"3. Finally, the Greek Government desires to reserve complete liberty of action in respect of securities issued and payable in Greece."

M. RAPHAEL (Greece) said that the Greek delegation did not insist on points 2 and 3 of this communication, but, on the other hand, it maintained the observation concerning protest, since the Greek Government considered that it should maintain its freedom in that sphere. M. Raphael had not formulated the reservation in precise terms, as he desired first to know to what extent the Conference would be able to take account of it. He asked the President to be good enough to consult the Conference on that point.

The PRESIDENT replied to the representative of Greece that Greek nationals could adopt the custom of indicating in every bill of exchange what was laid down in the *sans frais* regulation. In Greece, protest was an exception, while it was the rule in other countries. At the same time, in spite of that somewhat special situation, the drawer and even the endorser of the bill of exchange would encounter no difficulty in making use of the *sans frais* stipulation.

The President noted that the Conference had concluded the consideration of the reservations which could be presented in the present state of its work.

TWENTY-FOURTH MEETING.

Held on May 28th, 1930, at 10 a.m.

President: M. J. LIMBURG.

31. Examination of the Draft Articles of a Convention regarding Stamp Laws and Conflicts of Laws¹.

M. SCHMIDT (International Chamber of Commerce) pointed out that at the end of the last meeting the reservations which had been made to the uniform law on bills of exchange had been enumerated and that others had been announced. If all those reservations were definitely adopted, there would in the end be more reservations than in 1910 and 1912 at The Hague. That prospect compelled M. Schmidt to make a statement in the name of the traders and bankers who were members of the International Chamber of Commerce and in his own name.

He was an enthusiastic partisan of the unification of the law on bills of exchange and was convinced that real unification would be very valuable for commerce throughout the world. Its value would, however, decrease in proportion to the increase in the number of reservations. When he was concerned with international transactions, the trader who made use of bills of exchange desired above all that the laws should be clear, simple and uniform. He was prepared to sacrifice certain customs if, on the other hand, he was spared difficulties.

¹ For the text of the Draft Convention see Preparatory Documents C234 M83, 1930, p. 70.

From that point of view, the greatest efforts should be made to reduce to the strictest minimum possible the reservations already made and those which had been announced. M. Schmidt wondered whether that result could not be reached by means of an agreement between the delegates who had announced reservations. They might form a small committee to discuss the matter once again in order to achieve mutual concessions.

PREAMBLE.

The PRESIDENT said that it was unnecessary to consider the preamble to the Convention, which would be drafted in another form.

ARTICLE I.

The PRESIDENT said that Article I referred to the penalties for the non-observance of stamp laws. The British delegation had proposed that there should be a separate convention on that subject. Doubtless that principle would receive unanimous support.

M. GIANNINI (Italy) was entirely in agreement with the proposal, but did not desire the Conference to take a decision for the moment. To his mind it was not the moment to take the whole of the British proposal into consideration. If the question of the stamp on promissory notes and bills of exchange had to be settled, it would also be necessary to settle it in regard to cheques.

The PRESIDENT replied that it was only a question of taking a decision in regard to whether the stamp laws should be the object of a separate convention, the contents of which would not now be discussed.

M. SULKOWSKI (Poland) said that the articles concerning the conflict of laws had appeared in the Hague Regulation, but the experts had put these provisions in the draft Convention because they considered that it would perhaps be possible for States which did not ratify the Regulation to accede to the Convention on the Conflict of Laws. Did that possibility exist? If not, it would be possible to revert to the inclusion of the provisions in the Regulation itself. An attempt should be made to avoid increasing the number of conventions.

The PRESIDENT asked why the possibility of the accession to the convention on the Conflict of Laws of States which did not wish to ratify the Uniform Regulation should be excluded in advance. M. Sulkowski was a member of the Committee of Experts who had taken that decision.

M. SULKOWSKI (Poland) replied that the experts had proposed the formula because they had hoped that Great Britain would be able to accede to the Convention.

The PRESIDENT considered that that hope was not excluded. Personally, he thought that, even if any State not acceding to the Regulation wished to accede to the Convention on the Conflict of Laws, the place for the conflict of laws was not in the Regulation.

M. OHNO (Japan) pointed out that the Japanese delegation approved the British proposal in principle, on condition that a clause of ratification was inserted in the separate convention.

In addition, the Japanese delegation proposed that the provisions concerning the rules regarding the conflict of laws in the matter of bills of exchange and promissory notes should be put in another convention, distinct from the Uniform Regulation and its reservations.

Mr. GUTTERIDGE (Great Britain) informed the Conference that the British Government fully realised the importance of that particular question, and he would be very glad if he might be allowed to make a brief statement on the subject of the draft Convention in so far as it related to the conflict of laws.

It was, of course, obvious that the question was one of peculiar importance, because, should it happen that there were a number of States which felt themselves unable to assent to the Regulations drawn up, but which nevertheless might be able to assent to a convention dealing with the conflict of laws, a step forward would have been taken in crossing the gulf that at present divided the various countries of the world on this question. It was his duty to inform the delegates that he had received further instructions from his Government in the matter, and that it was not possible for Great Britain to become a party to a convention on the question of conflict of laws during the life of the present Conference. The British Government felt that the present circumstances would not justify them in taking such a step, for, as he had already pointed out at the beginning of the Conference, it was obviously the duty of Great Britain to refrain from any action which might imperil that degree of uniformity of law which existed at the present moment between the Anglo-Saxon countries.

He would like to give a very brief outline of the law of England as it related to the matter. Most of it would be found in the Bills of Exchange Act, 1882, Section 72, but not the whole of it, for the reason that the Bills of Exchange Act did not deal with the question of capacity, which was left to the common law.

The English law might be briefly summarised as follows: First of all, as regards the question of capacity to enter into contracts, there was some slight doubt. English legal doctrine was not absolutely unanimous on the point, but he thought he might say with some confidence that the

general and the better opinion was that capacity in all commercial matters (not in other matters) was governed by the *lex loci contractus*. English law drew a distinction between commercial matters and other matters, and did not apply the theory of domicile to commercial matters.

Secondly, as regards the form of bills of exchange and other negotiable instruments, the form of a bill itself was determined by the law of the place where the bill was issued. As regards the form of an acceptance, including an acceptance for honour *supra* protest and endorsements, these were governed by the law of the place where such acceptance or endorsement took place. As regards obligations which arose out of the signature of bills of exchange and other negotiable instruments, these were governed by the law of the place where drawing, acceptance or endorsement, took place. As regards the duties of a holder with reference to presentment for payment, protest and so on, these were governed by the legal maxim *locus regit actum*.

He did not pretend that this was a complete statement ; there were, of course, other matters which would have to be considered in order to deal fully with the subject ; but he made this statement to draw the attention of the Conference to the fact that English law on the matter did not make any mention either of the law of nationality or of the law of domicile or of the doctrine of "renvoi".

He desired to add — and on this point he was speaking purely for himself and must not be taken as committing his Government in any way — that amongst lawyers (he was not referring to business men) the view was very generally held in England that the rules were not entirely satisfactory.

Subject to what Mr. Kennedy might have to say, these rules, besides applying to the British Empire as a whole, applied in substance to the United States of America, but the American Law Institute, a very important body in the United States of America, had been engaged recently in revising the doctrines of private international law as administered by the courts of the United States. It had drawn up a somewhat elaborate report on the question. He did not know whether that report would be followed by legislation or not but he mentioned the matter to show that in the English-speaking world the whole question of private international law was in a state of flux : he had almost said that private international law throughout the world as a whole was in a deplorable state.

In those circumstances, the British Government felt that the only prudent course was for them to refrain from any action at present ; but he was authorised to state that they were alive to the importance of the question, and that the decisions arrived at by the Conference would be examined with very great care for the purpose of ascertaining whether those decisions were such as would form a basis upon which further action could be taken hereafter to secure worldwide uniformity in the matter of the conflict of laws.

The difficulties in the case appeared to him to be largely juridical and to emanate from the state of confusion in which private international law found itself at the moment. If the Continental nations were able to agree amongst themselves on this very difficult question, a change would come over the situation, which he thought, again speaking as an individual, was bound to have a marked effect on the settlement of what was manifestly a worldwide problem of the very highest importance.

ARTICLE 2.

The PRESIDENT said that Article 2 of the Convention would probably take the form of a clause in the Preamble and that there was no need to discuss it.

CAPACITY.

ARTICLE 3, PARAGRAPH I.

The PRESIDENT observed that the Italian delegation had submitted an amendment for the addition of the words " and a promissory note " after the words " by a bill of exchange ".

The Japanese delegation had submitted a similar amendment to the third paragraph.

M. DIENA (Italy) said that the Italian proposal was not in point of fact an amendment. Its object was simply to repair an omission which was the result of an oversight. That omission, however, must be made good, since otherwise those who came to interpret the Convention later might think, in accordance with the ancient dictum, that the legislator *ubi voluit, dixit, ubi noluit, tacuit*, that the rules laid down related only to bills of exchange and not to promissory notes, especially since the double formula " bill of exchange and promissory note " occurred in all the articles of the Convention except Article 3, which spoke only of bills of exchange.

The objection might be made that it had been proposed that the contracting States should have the power to make a reservation in regard to promissory notes. If that were the case, it was yet another reason for making good this omission, since the rules for the settlements of conflicts of laws might be looked on as a safety valve or even as a form of insurance against accidents which might arise in connection with reservations or ratifications that had been postponed or refused.

It was for that reason that these rules might have a practical application even in regard to promissory notes.

Further, the formula in Article 3 said : " The capacity of a person to bind himself by a bill of exchange shall be determined by his national law. If this national law provides that the law of another State is competent to deal with the question, this latter law shall be applied ". The

question here was therefore that of the “renvoi”, a matter which had caused much discussion and everyone was aware that the system of the “renvoi” had many adversaries. M. Diena, however, although himself an opponent of the system, thought that the way in which the regulation was applied in this case was entirely to be recommended, and he thought that even those who were in principle opposed to the system of the “renvoi” might vote for this first paragraph.

In order to explain what he had in mind, he would venture to quote an Italian writer who had enjoyed a great reputation as a distinguished specialist who was not accustomed to jest when dealing with scientific matters. He had once drawn a comparison between the doctrine of the “renvoi” considered in a general manner and the game of lawn tennis. He had said that the “renvoi” system was the lawn tennis of international private law. M. Diena added that it would be a game of law tennis played by two first-class opponents who succeeded in keeping the ball going for an indefinite time.

In this particular case, the “renvoi”, as governed by this rule, would constitute what he might call a tame set of lawn tennis, for in this case there would be no indefinite “renvoi”, that being the principal fault of the system. It would be rather a game which would be of very little interest from the point of view of sport, since the set would be finished as soon as it was begun. There would be no more than two “renvois” at the outside. Recourse would be had first to national law and then, according to each case, to the law designated by the national law.

These explanations proved, M. Diena thought, that there was no danger in adopting what the Germans described as “*Weiterverweisung*”, so that the solution adopted in this article might be very helpful and practical. It had one very great advantage, that it might secure the acceptance of the countries where capacity was governed by a law other than the national law for instance, by the law of domicile or the *lex loci contractus*.

If the Conference adopted that system, it would be tilling the ground and sowing the seed for a future harvest. The British delegate had that day said that his country could not sign the Uniform Regulation. He had added that, for the moment, it was improbable that Great Britain would adhere to the articles on conflicts of law. He had not, however, squashed all hope that in a not too distant future Great Britain might be able to accede to the articles on conflicts of law. M. Diena believed that the rule on the “renvoi” as laid down in the article under discussion might, in this connection, be of great value for the future. He was aware that the first paragraph contained a phrase which might be objectionable to Anglo-American ideas. He referred to the formula stipulating that the national law must apply. He did not forget that in England there was no national act from the point of view of private law. Nevertheless, if there was no national act, M. Diena was inclined to think that in the British Empire — that great community for which no definition or legal epithet could be found in accordance with the traditional rules of public law — there did exist a British law; that was to say, a law composed of a number of local acts. Furthermore, British law contained certain rules of practice on conflicts of law, which worked equally as internal rules for the distribution of legislative competence as between the various parts of the Empire.

As this system of the “renvoi” might operate in international relations as well as in internal relations, there was ground for hoping that it would constitute a system which in the comparatively near future would make it possible to dig the Channel tunnel, which had been so long awaited, at any rate in the matter of exchange law or of conflicts of law connected with exchange law.

In conclusion, M. Diena said that his remarks concerning the British Empire applied equally to the great community of forty-eight States composing the North American Republic.

M. ASSER (Netherlands) thought that, when they had stipulated that “the capacity of a person to bind himself by a bill of exchange shall be determined by his national law”, the framers of the first paragraph of Article 3 had had in mind mainly physical persons. If that was so, it was self-evident that the application of the principle that personal status was governed by the national law could give rise to no serious objection. In the field of bills of exchange, however, it must not be forgotten that in many cases, and possibly in the majority of cases, obligations having a certain importance were subscribed not by physical persons but by moral persons. In commercial law, joint-stock companies and, under French and Belgian law, “general partnership” companies (*sociétés en nom collectif*) and “limited partnership” companies (*sociétés en commandite*) possessed legal personality. The use of the phrase “his national law” might occasion difficulties in the case of legal persons, joint-stock companies and trading corporations.

The consideration of the question from this aspect would necessarily involve the taking up of a very controversial problem — namely, whether companies which possessed legal personality, joint-stock companies and general partnership companies (*sociétés en nom collectif*), possessed a nationality and, if so, what was that nationality?

Some held that the said joint-stock companies possessed a nationality which was determined by the nationality of the majority of the shareholders; that was what was called the doctrine of control. Others maintained that nationality was determined by the statutory head-office (*siège*) or by the place in which the centre of management (*centre d'exploitation*) was situated or, again, by the nationality of the majority of the directors (*administrateurs*).

The question, therefore, which arose was whether the words “national law” should be kept in Article 3 and whether the article should not specify whether only physical persons were meant or moral persons as well.

M. Asser submitted these observations in his personal capacity, because he wished to draw the Conference's attention to the matter. The Drafting Committee, acting in consultation with the delegations, might perhaps be able to find a solution. He thought that everyone agreed that not only the question of the capacities of physical persons must be solved, but that of the capacities of moral persons, that of joint-stock companies for instance, as well.

The PRESIDENT felt that it would be very difficult for the Drafting Committee to decide this theoretical question, but he wondered — and he put this question also to M. Asser — whether it was really necessary to solve the problem in the present connection. Either moral persons had a nationality and, in that case, their capacity was determined by the national law — there might be perhaps a dispute as to which was the determining national law, but it was not for the Conference to decide that matter — or they had no nationality and, in that case, they became comparable to persons of no nationality.

M. GIANNINI (Italy) wished to point out that if the Conference took up *à propos* of each line in the articles concerning conflicts of law all the various international questions that might arise, an infinite number of supplementary conventions would inevitably have to be anticipated. The German delegation wished to have a provision covering persons of no nationality. M. Asser had raised the question of the nationality of trading companies. The Netherlands Government had already prepared a questionnaire concerning the situation of such companies. That problem would perhaps be discussed at the next Hague Conference on private international law. Was it really proposed that it should be solved at the present Conference? M. Giannini thought that the present was not the right time. The Conference should confine itself to adopting certain cautious rules which could be accepted by all delegations and which should in application relate strictly to conflicts of law in the matter of bills of exchange. It should not, in connection with each question, take up problems relating to private international law; nor, lastly, should it think of settling certain problems of substance connected with bills of exchange. In any case, M. Giannini could not, in respect of certain questions relating to trading companies, take any decision which might prejudice his attitude at the Hague Conference. The Conference should not anticipate the consideration of these problems, and if it did so it could only consider them in part.

For these reasons, he urged the Conference to disregard any special proposal of this kind.

M. ASSER (Netherlands) said that M. Giannini had pointed out that attempts were at present being made to reach some kind of agreement on the question of the personal status of joint-stock companies. In establishing the rules relative to conflicts of law, the Conference should not take into account any tentative proposals that might be going about and which might possibly come to nothing. It should take into account the existing situation. At the present moment, the previous question whether a joint-stock company could have a nationality was the subject of violent controversy. It was inaccurate to compare them with persons of no nationality. The latter were physical persons and physical persons could have a nationality. They could also, as a result of certain mischances, lose their nationality. The question to be determined was whether a joint-stock company — that was to say, a moral person — could have a nationality or not. It was difficult to speak of national laws until that question had been settled.

The PRESIDENT observed that, speaking generally, there was no such thing as the lack of capacity of a moral person in private law.

M. ASSER (Netherlands) pointed out that, in the case of companies, capacity was determined by the law of the country where the company was constituted and by the provisions of the articles of association.

The PRESIDENT thought that was another question. The problem before the Conference at the moment was whether a moral person existed or not.

The Italian amendment to the first paragraph was adopted unanimously.

The first paragraph was approved at a first reading with the foregoing amendment.

ARTICLE 3, PARAGRAPH 2.

The PRESIDENT submitted the following German amendment :

“ Add the following sentence to paragraph 2 :

“ ‘ The capacity of a person of no nationality shall be determined by this latter law ’ ”

M. ULLMANN (Germany) said that the rule recommended by the German delegation was proposed for the following reasons : The number of persons belonging to no country had increased considerably since the war, more particularly in consequence of the Russian emigration. There was accordingly need of a rule to cover these persons as well and to decide their capacity in regard to exchange obligations.

Paragraph 3 of the text proposed by the experts contained no provision of that kind. That was an omission which should be made good by the additional sentence proposed by the German delegation. According to that proposal, the capacity of persons of no nationality would be judged according to the legislation of the country in whose territory they had assumed obligations.

That solution was to be recommended for the simple reason that the principle *locus regit actum* should only apply if there was no national law by which the capacity of the persons signing could be determined. The post-war period had brought about an increase in a category of persons for whom Article 3 might cause difficulties. Those were persons with double nationality, but the number of people concerned was not sufficiently great to have a special rule to cover their case. It might be left to doctrine and jurisprudence to determine the legislation which should govern their capacity in regard to exchange obligations.

As to the wording of paragraph 2, it would appear wise to substitute for the words “ if he entered into the obligation ” the words “ if he gave his signature ”, so as to obviate doubts on

the question whether the law applicable should be determined by the place in which the signature had been given or by that in which holder (*preneur*) received the declaration of the person signing.

The PRESIDENT felt bound to say that in connection with the German amendment there arose a question of symmetry which he failed to understand. The amendment proposed the addition of the words : " The capacity of a person of no nationality shall be determined by this latter law." If, however, the paragraph were read with the addition of this text, it would be seen that all the contracting States would have to determine the capacity of a person of no nationality, because it was never known beforehand on which State's territory the person in question was going to assume obligations.

That would amount to saying by implication that all the States would have to determine the capacity of a person of no nationality. The States would be required to assume an obligation to take some kind of measure.

M. DIENA (Italy) said that his delegation thought, for the reasons indicated by M. Giannini, that the rule in question should not be adopted. If it were, it would be necessary to determine as well the status of persons with a double nationality. In regard to the substance of the matter, the last Hague Conference on Private International Law had considered the question and had adopted an entirely different criterion, that of the habitual residence of the person in question. There would, in this case, be a certain opposition between the two conferences on a question in regard to which there was no difference and for which entirely different solutions would be adopted. The wisest course would therefore be to leave the point unsettled.

Mr. GUTTERIDGE (Great Britain) observed that some doubt had been expressed in England as to the exact meaning of the wording of paragraph 2 of the text of the experts. He would put his observations on paper and submit them as occasion arose to the Drafting Committee.

The PRESIDENT said that it was a question of interpretation.

Mr. GUTTERIDGE (Great Britain) agreed that it was a question of wording and said that in the English version the matter was not quite clear.

M. QUASSOWSKI (Germany) explained that the object of his delegation's proposal was to make good a hiatus and to complete the existing text by certain provisions which devolved quite naturally from paragraph 2. A person of no nationality, not being subject to paragraph 1, was not subject to paragraph 2 either, and his case must be covered by a special provision. The German proposal, however, should not be taken as implying a change in the principle laid down in Article 3. It was possible that the text now proposed might cause confusion, but the German delegation merely wished to say that in the case of a person of no nationality it was the law of the country where he had signed the instrument that was competent in regard to capacity. That rule appeared to be in accordance with the principle contained in paragraph 2 and was merely intended to complete it.

It was possible to alter the text of the proposed amendment ; that was a question of drafting, but the German delegation had a very definite object in view — namely, to complete paragraph 2 by a provision referring to a case which was not covered at present.

M. PERCEROU (France) supposed that the German delegation had no wish to settle in a general manner the question : What would be the law applicable to the capacity of a person of no nationality. They merely wished to say that when a person of that kind had signed a bill of exchange in the territory of a third country, it was the law of the latter which should determine the capacity requisite for signing the bill.

It seemed to him, accordingly, useless to add anything to the text, since the solution was implied automatically. It would, moreover, suffice if the point was indicated in the report.

M. Percerou therefore requested the President not to close the discussion on paragraph 2 before opening that on paragraph 3, since the two paragraphs were to a certain degree related to one another, the second being intended to rectify malpractices which might result from the first.

The PRESIDENT was perfectly prepared to allow the two paragraphs to be discussed concurrently.

M. PERCEROU (France) thought that the question raised by the German amendment should be decided at once.

M. MOLENGRAAFF (Netherlands) considered that, if the Conference wished to go in the direction indicated by the German delegation, it would be preferable to say :

" The capacity of a person of no nationality is determined by the State in whose territory he has entered into obligations."

M. QUASSOWSKI (Germany) said that the remarks made by M. Molengraaff and M. Percerou were in conformity with the meaning of the German proposal. He would, however, prefer, for the sake of greater clarity, to have an addition in the body of the Convention and not merely a passage in the report.

The PRESIDENT asked M. Quassowski if he accepted M. Molengraaff's wording.

On receiving an affirmative reply, the President suggested that it should take the form of a special paragraph to be inserted between the second and third paragraphs, so as to avoid connecting up the idea contained in it with the preceding sentence.

M. SULKOWSKI (Poland) thought that the danger mentioned by M. Diena was a real one. According to the majority of legislations, the capacity of persons of no nationality was determined by the *lex domicilii*, and the German amendment was apparently incompatible with that principle. If it were desired to make good the omission to which attention had been drawn, it would be better to say :

“ The capacity of a person to enter into obligations by means of a bill of exchange shall be determined by his national law. The capacity of a person of no nationality shall be decided by the law of his domicile.”

That would be in accordance with the principle adopted by the Hague Conference for the Progressive Codification of International Law.

M. QUASSOWSKI (Germany) replied that it was not the principle of domicile that had been adopted in Article 3 but another principle. The amendment concerning persons of no nationality should be in accordance with the principle contained in Article 3, but that was not the principle of domicile.

After the explanation of the German delegate, M. GIANNINI (Italy) considered that it would be necessary for the Conference to confine itself at least to a solution limited to the case in point. The German delegation thought that as it was admitted that a person who had a nationality could validly bind himself according to the provisions of the law of the State on whose territory he had made the engagement, why should not the same principle be adopted for persons of no nationality. What somewhat shocked M. Giannini was the formula submitted. He believed that it would be dangerous to accept M. Percerou's proposal to insert the words “ or a person who has no nationality ”, by reason of the application of the principle of the “ renvoi ” established in the first paragraph, which might lead very far. For his part, M. Giannini would prefer a special paragraph, or the addition at the end of paragraph 2 of a sentence which might read as follows :

“ The latter legislation shall determine the capacity of a person deprived of nationality to bind himself by a bill of exchange.”

The German amendment was put to the vote and rejected by 12 votes to 11.

ARTICLE 3, PARAGRAPH 3.

The PRESIDENT pointed out that the Italian and Czechoslovak delegations had proposed the omission of this paragraph.

Before opening the discussion, the President wished to observe that, in his opinion, the drafting of the paragraph, was not absolutely satisfactory.

M. PERCEROU (France) said that the paragraph might be drafted as follows :

“ Every Contracting State may refuse to recognise the validity of an engagement by means of a bill of exchange entered into by one of its citizens *when that undertaking would not be deemed valid . . .* ”

In regard to the substance of the question, M. Percerou stated that this paragraph had an undoubted importance. There was a conflict between the interests of the security of credit and the interests of the protection of persons lacking capacity. If the latter point of view only were considered, M. Percerou was of opinion that it was the national law which should always apply. A concession, however, had been made to that principle by the admission that, even if the signatory of the bill lacked capacity under his national law, he was nevertheless bound if he had capacity according to the law of the country on whose territory he had signed.

It should not be overlooked that that attack on the principle might lead to grave consequences in the event of the derogation becoming systematic. M. Percerou gave the following examples : In France, the age of majority was twenty-one, whilst in Switzerland it was twenty and in other countries eighteen. The French minor who signed a bill of exchange in a country in which the age of majority was eighteen years would be binding himself. There would thus be a somewhat simple method of circumventing the rules concerning capacity. In the same way, the married woman in France lacked capacity, but at present she had capacity according to the Italian legislation. If therefore, a French married woman wished to circumvent rules concerning capacity, she had only to go to Italy and sign bills of exchange ; she would thus escape from the protection which the French law had desired to ensure for her and for her family. For that reason, it had been proposed to insert paragraph 3, which reserved to contracting States the possibility of refusing to recognise the validity of an engagement entered into on a foreign territory when it would only be deemed valid by the application of paragraph 2. The third paragraph therefore authorised the countries of citizens who lacked capacity not to regard as valid exchange engagements entered into by such persons abroad, and that in order to prevent the rules protecting the capacity of the citizens of those countries from being easily circumvented.

In France, considerable importance was attached to that question. Commercial and banking circles were in agreement that the second paragraph should be accepted without restriction, but protests had been made against this extension of capacity, as making available a means for circumventing the civil law. For that reason, the French delegation pressed for the retention of the third paragraph.

M. QUASSOWSKI (Germany) pointed out that the provisions concerning capacity were in a sense connected with public order, for it was in the public interest of a State to determine at what moment its citizens would have capacity. The States could not be compelled to admit that the provisions enacted by them in that sphere could be circumvented, but that, however, would be the result if paragraph 3 were suppressed and paragraph 2 maintained without exceptions.

Indeed, in such a hypothesis, a State would be obliged to recognise as valid the signature of a national lacking capacity which was given on the territory of another state. Such a result should, however, be avoided if the prescriptions enacted by States in the interests of their nationals were to be protected. For that reason, States had rightly been given the powers provided in paragraph 3. In that connection, M. Quassowski referred to the decisions of the experts who considered that it was necessary to avoid the circumvention of the national laws regarding the protection of persons lacking capacity by the signature occasionally given in a foreign territory. M. Quassowski supported the opinion of the experts and was consequently unable to support the proposal submitted by the Italian and Czechoslovak delegations.

M. DIENA (Italy) said that in its discussions the Conference should endeavour, above all, to make the circulation of bills of exchange as easy and as safe as possible. The result of the adoption of the third paragraph of the article, however, would be complete uncertainty in regard to the validity of bills of exchange. Moreover, there was another question which shocked M. Diena. Several internal legislations liked sometimes to make a difference between an obligation assumed by a foreigner and an obligation assumed by a citizen. That solution might be criticised from the point of view of internal law, but it could not be attacked, in default of any rule to the contrary in international law, and that by reason of the sovereignty by of each State. When an international convention was in question, it was highly objectionable to adopt entirely different rules for foreigners and citizens. Moreover, in the present case, who was the foreigner rather than the citizen? The foreigner to a contracting State was the citizen of another contracting State and *vice versa*. It would be much more preferable to adopt a single rule.

M. Diena said that it would be inconsistent, after adopting paragraph 2 with the object of facilitating the circulation of bills of exchange, to adopt a third rule which would allow each state to follow a rule at variance with the preceding rule.

For those reasons, the Italian delegation earnestly requested the deletion of the third paragraph.

M. SULKOWSKI (Poland) was also certain that if the reservation in paragraph 3 were maintained the scope of the article would be considerably limited. Would it not be possible to adopt one criterion for estimating capacity? Article 3 was really a combination of two different principles: on the one hand, the principle of the national law and, on the other, the principle of the *lex loci contractus*. What militated in the first place in favour of the adoption of the *lex loci contractus* was the fact that that principle was admitted in the Anglo-Saxon countries, and that the *lex loci contractus* arose from the bill of exchange itself, when it was a question of the exchange obligations of the drawer and drawee, since the place of the creation of the bill and the place of payment had to be specified in the bill of exchange. In the case, however, of the obligation of the other signatories to the bill, the endorser, for instance, the place of signature was not mentioned in the bill of exchange, at any rate in the greater number of cases, the validity of the signature not being subject to the indication of the place at which it was given. On the other hand, it should be taken into account that in the Continental countries the principle of the national law was everywhere admitted in estimating the capacity of a person. If it could be hoped that Anglo-Saxon countries would accede to the Convention, M. Sulkowski considered that it would be preferable to adopt the national law as the only criterion. That would enable the reservation proposed by the French and German delegations to be suppressed.

The PRESIDENT pointed out to M. Sulkowski that the amendment had been rejected.

M. SULKOWSKI (Poland) replied that the French and German delegations were nevertheless in favour of the maintenance of the reservation contained in paragraph 3; if one criterion were accepted, it would be possible to avoid the reservation.

M. GIANNINI (Italy) stated that the Italian delegation would be unable to sign the Convention if the Conference adopted Article 3 in its present form. It was inadmissible to sanction commercial fraud internationally.

The German delegation stated that the capacity of a person was a principle of public law, but if it were desired to draw the logical consequence from that principle it would be necessary to abandon paragraph 2 of Article 3. Paragraph 2 had been adopted for the benefit of trade. If the Conference considered it desirable to establish rules in the matter, it was because it found it necessary to give securities to commerce. The application of the provisions of the two paragraphs would lead to the following situation: Suppose, for instance, that a French lady — the principle would in particular be involved in the case of a married woman — went to Italy, bought there some jewels and gave a bill of exchange in payment. According to paragraph 2, she could validly bind herself. Later, however, she did not pay. The Italian trader applied to the judge, who confirmed the trader's right, but, when it became necessary to take action against her, the French judge stated that though she might have capacity in Italy that was not the case in France and the obligation was not valid. Thus paragraph 3 would absolutely sanction fraud.

M. Giannini therefore asked the Conference to adopt only paragraph 2, which would benefit commerce.

M. QUASSOWSKI (Germany) drew the attention of the Conference to the fact that the article had been adopted at The Hague because it was completed by a reservation in the Hague Convention. That article as it stood had also been approved by the experts and, in particular, by the Italian expert on the Committee of Experts.

In addition, it would be preferable to maintain a certain amount of flexibility in the article. The suppression of paragraphs 2 and 3, however, would make it too rigid. The contracting States should be able to have recourse to paragraph 3. It was impossible to consider that they could be deprived of that right.

M. HERMANN-OTAVSKY (Czechoslovakia) supported, in principle, the observations of the Italian delegation. The provision contained in paragraph 3 was contrary to the purpose of the Convention, which was intended to unify the exchange regulations in the various countries. The addition of the provision would completely alter the value of the preceding provision in paragraph 2. To maintain paragraph 3 would create difficulties in the international relations in regard to bills of exchange.

M. GIANNINI (Italy) made the following declaration :

1. He was unable to endorse the views of the German delegate concerning the part played by the Italian expert in regard to this article. The experts had not voted by name upon it.

2. The encouragement of fraud would make the text curiously flexible, and fraud was undoubtedly legalised by the terms of paragraph 3.

3. The article had been adopted in earlier days, and after twenty years of ripe reflection it could not be rejected.

M. Giannini therefore maintained his point of view.

The PRESIDENT confirmed the statement of M. Giannini that the experts had voted by a majority and that it was not known who had voted.

Paragraph 2 was approved at a first reading.

Paragraph 3 was retained by 19 votes to 10.

M. SHIMADA (Japan) asked that paragraph 3 of Article 3 should be put into harmony with paragraph 1 by the addition of the words " and promissory notes ".

The PRESIDENT said that an Italian amendment to Article 1 had been adopted according to which the words " and promissory notes " should be added. That addition would also be made to paragraph 3.

Article 3 as a whole was approved at a first reading by 19 votes to 6.

ARTICLE 4.

The PRESIDENT drew attention to the following German amendment. Paragraph 2 of this amendment was identical with the Yugoslav amendment :

" The form of any contract arising out of a bill of exchange is determined by the laws of the State within whose territory the place designated as that where the signature was given is situated. If no place is specified, the laws applicable are those of the State within whose territory the signature was actually given.

" Every Contracting State is entitled to prescribe that obligations entered into by means of a bill of exchange abroad by one of its nationals towards another of its nationals shall be valid within its territory, provided they were entered into in the form laid down by its own laws."

M. ULLMANN (Germany) stated that paragraph 1 of the German amendment was in principle the solution proposed by the experts. For the form of the contract, the law of the place where the signature was given would be valid. The question arose, however, as to what would be considered as the place where signature had been given. Was it the place where the signature had actually been given or the place specified by the signatory as the place of signature? If, for instance, a signatory had given his signature in Berlin and had specified Paris as the place of signature, would it be necessary to apply the German or the French law? In Germany, that question was much disputed.

It would appear to be necessary to adopt the place designated in the bill of exchange. That solution was in conformity with the principle according to which, in the first line, the statements specified on a bill of exchange must be taken into consideration by the law. It was also in the interest of the circulation of bills, for it gave to the parties concerned the possibility of fixing which law was applicable. It was in the interests of facilitating the circulation of bills to avoid, so far as possible, the difficulties involved in furnishing proofs. It was also in the interest of the security of circulation that every holder of a bill of exchange should be able to consider as true any specification of place inserted in a bill of exchange. It was only in the absence of the specification of the place in a bill that the place would be that where the signature was actually given.

In regard to paragraph 2 of the German amendment, some States, such as Germany and the Scandinavian countries, had adopted the principle that engagements undertaken in matters relating to bills of exchange abroad by one of their nationals towards another of their nationals would be valid on their territory provided that those engagements were undertaken in the form required by the national law. The reservation proposed in paragraph 2 would make it possible for those States to maintain the principle he had quoted. In cases in which a national was bound in regard to a co-citizen, the reservation made it impossible to invoke the non-validity of the bill, and it would thus contribute towards increasing the security of the circulation of bills of exchange.

In the proposed text, the addition made by the Committee of Experts had accidentally been omitted ; that was to say, paragraph 2 of Article 4 of the Convention. That addition, however, would be very useful. He would point out that the rule indicated was not covered by Article 7 of the Regulation, despite the wide form of wording adopted on the proposal of the Scandinavian delegations. Article 7 of the Regulation concerned bills of exchange which were valid in form and it dealt only with cases in which the signatures affixed to a bill did not bind the signatories. At the same time, according to the experts' draft, if a bill of exchange were not valid in a State owing to defect of form, the signatures affixed to the bill were none the less valid, and they bound the signatories if the signatures had been given in another State which recognised the formal validity of the bill of exchange in question.

The PRESIDENT thought that the explanations given by the German delegate made it clear that the German amendment ought to be modified. The German proposal suggested that paragraph 1 of Article 4 should be replaced by two paragraphs, but left untouched the second paragraph of the original Article 4.

Mr. GUTTERIDGE (Great Britain) asked whether the case of a forgery of a signature would be considered a matter of form.

The PRESIDENT replied that this question did not come within the scope of Article 4. The point was to make certain where the bill had been signed : the place where the signature had actually been put on the bill or some other place indicated on the bill itself.

Mr. GUTTERIDGE (Great Britain) said in that case he would repeat his question at the proper time.

M. ASSER (Netherlands) asked for an explanation of paragraph 2 of the German proposal. With a few exceptions, the article upheld the principle *locus regit actum*; but what was the meaning of the reservation that spoke of " obligations entered into by means of a bill of exchange abroad by one of its nationals towards another of its nationals " ? In exchange law, no obligation was ever entered into towards a fixed person.

Might it not be said : " Every Contracting State is entitled to prescribe that obligations entered into by means of a bill of exchange abroad by one of its nationals shall be valid within its territory towards all its nationals " ?

It was impossible to understand how obligations entered into by means of bills of exchange could be confined to a fixed person. Such obligations were towards any holder, towards an undefined creditor.

Was the German delegation ready to accept this drafting, which would mean, for example, that a German who had put his signature to a bill would have obligations towards a holder of German nationality ?

M. QUASSOWSKI (Germany) gave the following example in reply : If a German put his signature to a blank bill of exchange in France, where blank bills of exchange were not admitted since France had made a reservation on this point, the text put forward by the German delegation made it clear that he would have valid obligations towards another German.

M. GIANNINI (Italy) drew the attention of the Conference to the fact that paragraph 1 contained the legalisation of fraud. If " the form of any contract arising out of a bill of exchange is determined by the laws of the State within whose territory the place designated *as that* where the signature is given is situated ", that meant that two Germans could sign a bill of exchange at Rome and date it as from Berlin. The Conference might like to see the consequences of this fact, especially in regard to the revenue.

The second paragraph dealt with the case that had been pointed out by the German delegation, and there was less inconvenience in accepting it. There was little danger that the German law would be applied in such a case, for it was not true that it was enough to put " Berlin " on a bill in order to bring the German law into force.

M. ASSER (Netherlands) thought that the example cited by M. Quassowski did not give an exact answer to his objection. The drawer had obligations, not only towards the first holder, but towards every successive holder. Was the German delegation willing to invert the order of the phrases " within its territory " and " towards another of its nationals " ?

That would be a logical change. A German who had drawn a blank bill of exchange would have obligations towards another German.

Finally, no answer had been made to the objection concerning the generality and lack of determination of obligations undertaken by a bill of exchange.

The PRESIDENT thought that there was a misunderstanding between M. Quassowski and M. Asser. The German delegate had quoted the example of bills of exchange in blank, which, although forbidden, for example, in France, might be signed in France by a German for the benefit of another German. M. Asser had answered that he understood this case, but in his opinion the German amendment would be bettered if, in the second paragraph, the words " towards another of its nationals " were placed after the words " shall be valid " instead of before.

M. VISCHER (Switzerland) favoured the German amendment. As for the first paragraph, he thought it should be realised that it was desirable to give a legal supposition for cases where the place was specified on bills of exchange. In principle, it had been recognised that the law of

the place where the engagement had been entered into should be applied, and it would be best to keep to this principle, which had been proposed by the experts, but to add the principle that a place that had been specified was to be considered as the place where the engagement had been entered into. That was a question of wording, which could be settled by the Drafting Committee.

M. Vischer did not think that the second paragraph was of great practical importance, but in his opinion its effect would be to increase the cases of validity of bills of exchange. For that reason, he was in favour of this paragraph which laid down a principle which also existed in present Swiss legislation and which experience had proved to be good.

In his opinion, it was possible to improve the wording of the text still further, while taking into account the objections of the different delegates.

M. QUASSOWSKI (Germany) agreed to accept the modification of his proposal suggested by the President.

The PRESIDENT read the second paragraph of the German proposal as modified :

“ Every Contracting State is entitled to prescribe that obligations entered into by means of a bill of exchange abroad by one of its nationals shall be valid towards another of its nationals within its territory, provided they were entered into in the form laid down by its own laws.”

M. PERCEROU (France) preferred the formula proposed by the experts for the first paragraph, because the German text provided a very simple means of avoiding the law of the actual place of effective signature.

As for the second paragraph, M. Percerou agreed with M. Asser that obligations were undertaken towards a person unknown and not towards a definite person.

In the circumstances, he thought that the German amendment could not be accepted as a whole.

M. QUASSOWSKI (Germany) repeated that, in principle, he adopted the text of the experts which he only wished to modify slightly by allowing that the law of the State within whose territory the contract had been made was only legally applicable in certain cases, and that primarily the law of the State within whose territory the place designated on the bill was situated was legally applicable.

M. Quassowski thought that this modification was justified by legal and practical considerations.

1. It corresponded to the principle *Quod non est in cambio non est in mundo*.

A person who indicated a place after his signature ought to admit that the bill should be treated as if it had really been signed in this place. This principle, according to which the face and content of the bill were valid, was also to be found in other provisions of the regulations. In this connection, M. Quassowski recalled the last paragraph of Article 2, which said that the place mentioned beside the name of the drawer was equivalent to the place of issue. He quoted Article 28, according to which the face of a bill — namely, the visible cancellation — was equivalent to effective cancellation. He also quoted Article 44, which said that it was enough to give notice to the guarantors at their specified addresses without considering whether those addresses were accurate.

Consequently, it was always the contents, the exterior part of the bill, that had to be taken into account. This was a necessity in order to safeguard the circulation of bills, for if indications that were not written on the bill and which were unknown to the persons interested had to be taken into account the persons interested might be taken by surprise and suffer harm. The Conference ought to follow the principle of “ *Treu und Glauben* ” *i.e.*, — to take no notice of what did not appear clearly on the bill itself.

2. The German amendment recognised the will of the signatory, who very often had a special aim in view when he indicated a certain place as being the place of signature. Should a person who was travelling in a foreign country put the place of his domicile at the side of his signature, he thereby made it clear that he wished the national law of his country to be applied, and it seemed to M. Quassowski that his will should be respected.

3. The German proposal would facilitate proof. If it was not adopted, it would be necessary to prove in what place the bill had been signed, and such proof would often be difficult to make. For example, a person going by railway from one capital to another might sign a bill in the train. Would it be necessary to find out if he had signed the bill before or after passing the frontier? The same question might arise in the case of a person travelling by steamer.

Objection could not be raised that this proposal gave the signatory the right to determine his responsibility at his own will. He could not indicate an imaginary place, for it was impossible to imagine that anyone would acquire a bill of exchange with a fantastic or imaginary indication.

Consequently, M. Quassowski thought there was nothing inconvenient in his proposal, either from the legal or from the practical point of view. Moreover, it took into account both legal principles and practical considerations.

M. SCHELTEMA (Netherlands) drew the attention of the Conference to the fundamental difference between the wording of the second paragraph, as proposed by the experts, and the modified text. The case covered by this paragraph in its original form was, as he understood it, the following : two Netherlands subjects might make an endorsement in Germany in a form which was not allowed by German law. In the Netherlands, this endorsement would be valid if it fulfilled the requirements of the Netherlands law, since it was a contract arising out of a bill of exchange between two Netherlands subjects.

But what was the meaning of paragraph 2 in the modified text? It said that when an endorsement had been made in Germany by a Netherlands subject in favour, for example, of a Frenchman, if it had not been drawn up according to the German form it was not valid in virtue of paragraph 1. But if this bill came later into the hands of a Netherlands subject, this endorsement would be valid.

Was it really the wish of the Conference to create such a situation?

M. SULKOWSKI (Poland) made certain observations on paragraph 1 of the German proposal.

According to the formula of the experts, it was the place where the contract had been made which decided the form of this contract, but the German delegation wished that the place indicated on the bill should be considered as the place of signature, even if it was not the place where the bill had actually been signed. Certainly that was merely a question of form, but it was of a certain importance from the point of view of the payment of taxes. For example, should a bill of exchange indicate Berlin as the place of issue, whereas in reality it had been drawn up in Warsaw, according to the German formula which laid it down that the place of signature was that indicated on the bill, the practice of deceit in regard to the payment of taxes would be facilitated.

For this reason, M. Sulkowski thought it would be better to admit the principle that the place of signature was that where the bill had actually been drawn up. He was therefore unable to support the German proposal.

The PRESIDENT suggested that the Conference should vote on the German proposal, paragraph by paragraph, but, first, asked M. Quassowski if it would not be better to modify the first sentence of the first paragraph as follows:

“ . . . the place designated as that where the signature *has been given*.”

M. QUASSOWSKI (Germany) agreed to this modification.

Paragraph 1 of the German amendment was put to the vote and rejected by 13 votes to 10.

The PRESIDENT pointed out to the German delegation that the second paragraph contained the expression “ *en matière cambiaire* ” (“ by means of a bill of exchange ”), which so far had been kept out of the Convention. He hoped that M. Quassowski would see no objection in allowing the Drafting Committee to replace these words by a corresponding expression.

M. QUASSOWSKI (Germany) agreed with the President's suggestion.

The second paragraph of the German amendment was put to the vote and adopted by 14 votes to 8.

The PRESIDENT, before putting to the vote the two paragraphs drawn up by the experts, remarked that the adopted paragraph of the German amendment would form a third paragraph to Article 4, but the Conference would have to take into account the Japanese amendment to the beginning of the second paragraph, which suggested that the words “ or promissory note ” should be added after “ by means of a bill of exchange ”.

This addition was approved.

Mr. GUTTERIDGE (Great Britain) was obliged to confess that that article left him in a state of very great uneasiness, but he had come to the conclusion that he would not bother the Conference with his doubts; he would endeavour to solve them for himself.

The two paragraphs proposed by the experts were approved at a first reading.

The Article as a whole was approved at a first reading.

M. GIANNINI (Italy) declared that he had voted against this article.

TWENTY-FIFTH MEETING.

Held on May 29th, 1930, at 10 a.m.

President: M. J. LIMBURG.

32. Appointment to the Drafting Committee.

The PRESIDENT proposed that the Conference should elect M. Diena an additional member of the Drafting Committee for the purposes of the examination of the Convention on Conflicts of Laws.

This proposal was adopted.

33. Examination of the Convention on Conflicts of Laws (Continuation).

ARTICLE 5.

The PRESIDENT submitted the following amendments :

Amendment proposed by the German delegation.

“ The effects of the obligations of the acceptor of a bill of exchange and the maker of a promissory note are determined by the law of the place in which these instruments are payable.

“ The effects of the obligation entered into by the person giving an ‘ aval ’ and by the acceptor for honour are determined by the laws applicable to the obligation entered into by the person on whose behalf the ‘ aval ’ or acceptance for honour has been granted.

“ The effects produced by the signatures of other persons who have entered into obligations in connection with a bill of exchange are determined by the law of the State within whose territory the place designated as that in which the signature was given is situated. If no place is specified, the law applicable is that of the State within whose territory the signatures have actually been given.”

Amendment proposed by the Italian delegation.

“ Replace paragraph 2 by the following :

“ ‘ Nevertheless, the limit of time under which recourse may be exercised shall be determined for all the signatories by the law of the country of domicile of the drawer or of the person who issued the promissory note. ’ ”

Proposal by the Japanese delegation.

“ 2. Article 5 should be modified so that the effects of obligations entered into by means of a bill or promissory note should be governed by the wishes of the signatory when they are clearly specified in the bill, and so that, in the absence of such specification, they should be governed by the law of the State in whose territory the proceeding in question has been taken.’ ”

M. ULLMANN (Germany) said that, according to the principles of private international law which were recognised by German jurisprudence, the determining criterion for the nature of the obligations was the intention of the parties, and if this was not clearly expressed, it was the place of execution. The German proposal with regard to Article 5 was based on these principles, but took into account certain adjustments required by the special nature of the law on bills of exchange.

Further, the German delegation held that in a regulation concerning the effects of the obligations a distinction must be made between three categories of persons :

1. The acceptor of a bill of exchange and the person making a promissory note ;
2. The person giving an “ aval ” and the acceptor for honour ;
3. The other signatories of an exchange instrument.

In the case of the acceptor and the maker of a promissory note, the law of the place of payment was the law that must be recognised, since it was in that place that the engagements of the acceptor or of the maker of a promissory note had to be executed. That view was probably held by the experts as well, who had proposed that, when a place was specified for the execution of the engagement of the signatories, the law of the place so indicated should be applicable.

In the case of the person giving an “ aval ” and the acceptor for honour, the law to be recognised, in conformity with the experts’ draft, was that applicable to the obligation of the person for whom the “ aval ” or honour was given, since the person giving the “ aval ” or of the acceptor for honour definitely had the intention to be bound in the same terms and, consequently, to be subject to the same law as those governing the persons for whom they bound themselves.

In regard to the other parties liable, they, according to the German proposal, were not governed by the law of their domicile, but by that of the place specified as being that where their signature had been given. In the absence of any such specification, the law of the place where the signatures had actually been given applied. The German delegation accordingly wished to have the principle of the *lex loci contractus*, though modified in consequence of the special nature of exchange law; that was to say, that the substantive text of the instrument must be decisive for determining the place of signature.

The above-mentioned principle, whereby the *lex loci contractus* determined the effects of exchange obligations, had, moreover, been adopted in Article 72 of the English Bills of Exchange Act of 1882.

What were the arguments in favour of the solution proposed ?

First, the adoption of the principle of the *lex loci contractus* appeared more practical than the adoption of the principle of domicile. Difficulties might be experienced both in law and in fact in determining where the domicile of a person was situated. In places where English law was in force, it would often be difficult to ascertain the place of domicile of the party liable ; furthermore, the Hungarian Government had very properly observed in their remarks on Article 5 that the principle of domicile might give rise to disputes if there were several signatories ; that was to say, for instance, several drawers or endorsers.

It should besides be pointed out that in the majority of cases the places of signature and the place of domicile would in point of fact be identical, for it was obvious that, generally speaking, traders and bankers gave their signature at the head office of their commercial establishment.

Secondly, the German delegation proposed that the law of the place specified as being that where the signature was given should apply. They therefore allowed that an obligation entered

into in Berlin, but specifying Paris as the place of signature, should be governed in its effects by French law. Account must be had to the intention of the signatory. When he signed and added beneath his signature a foreign locality, it must be held that in acting thus he definitely intended to place himself under the law in force in that foreign locality. There was no reason, and in particular there was no reason of public interest, for not recognising that intention. It might be assumed that the specification of a foreign locality would not be given except for practical reasons. Furthermore, it could not be doubted that there were practical reasons for causing the signatory to submit himself to the governance of a foreign law. Lastly, it might be argued in favour of the German proposal that it would obviate the difficulties of proof and give increased security to bills of exchange by taking into consideration the statements actually contained in the bill for the purpose of determining the nature of the exchange obligations.

M. DIENA (Italy) said that his delegation's amendment contained two proposals. It proposed to strike out the second paragraph of Article 5 as drafted by the experts and to put in its place another text, which would form paragraph 2, but which would in point of fact have no direct relation to the paragraph which the Italian delegation proposed to delete. If the President thought it expedient to begin the discussion by considering the first paragraph of the German proposal, M. Diena would acquiesce and would explain his proposal later.

The PRESIDENT thought it preferable to begin with the examination of the first paragraph.

M. ASSER (Netherlands) wished to put a question to the Committee of Experts concerning Article 5.

The Hague draft contained, in regard to conflicts of laws, only rules relating to capacity and form and not to conflicts that might result from the nature and effects of the obligation, what in private international law was sometimes called in French the "substance des obligations" (substance of the obligations). The Committee of Experts had completed the Hague draft by adding this Article 5 concerning the "substance des obligations" (substance of the obligations), which article bore on one of the most delicate and insoluble questions in private international law.

M. Asser could agree in principle to the rule proposed by the Committee of Experts, but he wondered whether their addition was really necessary and whether it was even expedient.

With the system recommended by the experts there would be three conventions and one regulation for he assumed that the first convention would have to contain the undertaking on the part of the States to introduce the Uniform Regulation into their law subject to any reservations that were duly accepted. The second convention would relate to stamp and the third to conflicts of laws.

On the previous day, the Conference had discussed certain rules connected with the capacity and form of contracts. Those rules might be embodied in the Uniform Regulation. They were the application of the national law in regard to capacity and the application of the rule *locus regit actum* in regard to the form, and together they formed what might be described as the complement of the Uniform Regulation. M. Asser, however, considered that the question of the "substance des obligations" was only important supposing the great majority of countries refused to adopt the Uniform Regulation. The Committee of Experts had been perfectly right in suggesting this addition, for it had put forward the Uniform Regulation as a model, leaving the different States free to adopt it with or without the essential modifications. It must not, however, be forgotten that at the first meeting of the Conference the great majority of delegations had declared themselves in favour of the compulsory system, which meant that the countries would bind themselves to introduce the Uniform Regulation textually, with the exception of a few unimportant reservations, which, in part, at any rate, would relate only to form.

In consequence, M. Asser wondered whether it was desired now to examine — and perhaps to adopt — rules concerning the conflict of laws in regard to the "substance des obligations" (substance of the obligations). If it were, unfortunately, found that the great majority of States were unwilling to adhere to the Uniform Regulation, there would still be time to discuss and determine these rules on the "substance des obligations". Would it not, moreover, be somewhat dangerous to attempt to draw them up at once? Would not that in one way or another enhance the probability that the Uniform Regulation, which everyone desired, would fail to secure acceptance? Would the establishment of these rules be in conformity with the movement for unification and the spirit and scope of the work done at The Hague — namely, the 1912 Regulation, the contents of which the Conference had just examined and confirmed except for a few details?

The PRESIDENT did not wish to revert to the discussion that had already taken place, but thought that he ought to point out to M. Asser that, according to the system of the experts, it seemed that States would agree to introduce the Uniform Regulation in their legislation, not textually perhaps, but at least in principle.

M. ASSER (Netherlands) thought that that was a further reason for him to insist on his question: Why, in the circumstances, had it been thought necessary to add rules on the "substance des obligations" (substance of the obligations)?

Mr. GUTTERIDGE (Great Britain) supported the German amendment, not as delegate of the British Government, but as an English lawyer. It seemed to him that it would be a calamity if the principle of domicile were introduced into commercial law. If the members of the Conference only knew the difficulties which had arisen in England with regard to the interpretation of the word "domicile", they would have nothing whatever to do with it; it had been the most fruitful subject for theses in the University of London during the last five years, and so many people had desired to write on it that it had now been suppressed as a subject for theses. It was one of the

most vexed questions of the whole of that part of the English law which related to private international law. For these reasons, as an individual, he strongly supported the German proposal.

The PRESIDENT reminded Mr. Gutteridge that at the very beginning he himself had proposed that the word "domicile" should be replaced by the words "habitual residence".

M. DA MATTA (Portugal), before asking the President of the Committee of Experts to give an explanation of the form of paragraph 1 of Article 5, would himself suggest a slight amendment to the title of this article. As it only concerned the effect of the obligations, the word "nature" in the title "Nature and effects of the obligations entered into" seemed superfluous.

Article 5 as it stood said that "the effects of the obligations entered into by means of a bill of exchange or promissory note are governed . . . by the law of the residence of the signatory . . .".

Who was this signatory? Was it merely the drawer of the bill of exchange or the maker of the promissory note, or should it be understood that the term comprised all the other signatories? If this provision of the article only applied to the drawer or maker, M. da Matta would be ready to approve it. It conformed with a doctrine which was doubtless not approved by the majority of people — for instance, the Institute of International Law considered that the law of the place of a bill's issue should be taken into consideration and not the law of the drawer — but it was supported by a large number of "internationalists".

If they wished to give the article another meaning so that it comprised any signatory of the bill or promissory note, M. da Matta would be unable to accept it, since this solution would give rise to many complications.

M. GIANNINI (Italy) wondered whether he ought to speak or not on a problem which was in a certain sense outside the terms of reference of the Conference. Nevertheless, since the Conference was proceeding with the discussion, he thought it good to clear up the situation. The system suggested by the Convention meant the insertion of certain rules in the uniform law in order to do away with the conflicts of laws. The experts had removed these provisions and placed them in a special Convention; and apparently they had done well to do so. What was the result of this method of procedure? If the rules concerning the conflict of laws appeared in the Regulation, any State that ratified it would bind itself to apply them towards all States, whether signatories or not. On the other hand, if they appeared in a special convention, they would bind only the States signatories to this convention. There was a considerable difference between these two possibilities.

On the other hand, the fact that these rules had been put aside ought not to be considered as a kind of provocation for States not to accept the uniform law; but it must certainly be realised that certain States would be unable to accept it, and it was as a measure of prudence in such a case that provision had been made for the possibility of coming to an agreement to do away with conflict of laws.

It should also be borne in mind that the effect of certain reservations would be to emphasise certain conflicts of law. In such cases, some provision for settling at any rate the conflicts was necessary.

There were therefore two ways of helping relationships in matters of bills of exchange: either legislations could be made uniform by adopting a uniform regulation or an attempt could be made to do away with the conflict of laws by a special convention. Each of these methods was of considerable practical importance. The ideal was to reach a uniform regulation; but should this be impossible, the Convention would be brought into play. The fears of M. Asser, therefore, were not justified. There was no provocation for the non-acceptance of the Regulation, but provision was made that, in case the Regulation could not be adopted, it would still be possible to do away with the conflict of laws. It was in such a spirit that the Conference could confidently sign the Regulation and the Convention.

M. SULKOWSKI (Poland) reminded the Conference that Article 5 of the Convention dealt with the way of determining the legislation which ought to be used to estimate the legal effects of exchange obligations. He was convinced that the ideal solution would be to adopt the following rules: the legislation of the place of payment should decide the obligations of the acceptor and the legislation of the place of the issue of the bill of exchange should decide the obligations of all the guarantors. He had defended this view in the Committee of Experts, but this solution had not been accepted. It had been thought that, in view of the independence of exchange obligations, each of them could be decided, if necessary, according to a different legislation. He would not therefore insist upon his suggestion, as no other delegation had presented a formula which went so far as his, but he wished, however, to point out that, if the possibility of deciding each exchange obligation according to a different legislation were admitted, such a procedure would lead to obvious injustices.

As for the proposal made by the experts and that by the German delegation, it should be noticed that according to the experts reference had to be made to the legislation in force at the place specified in the exchange obligation, in order to find out the effects of that obligation. It was only when the obligation did not specify the place of signature that the legislation of the place of residence of the signatory ought to be brought into play. According to the German amendment, it was also the legislation in force at the place specified in the obligation that ought to decide. This principle was in conformity with the principle of the autonomy of will. A person who had specified a place in his contract thereby made it clear that he wished to submit himself to the legislation that was in force there. But there was a difference between the two arguments: if, for example, an endorser had not specified in the endorsement the place where this had been effected, the experts proposed that the legislation of the place of residence of the signatory should

be allowed to come into application, whereas the German delegation was in favour of the *lex loci contractus*. In most countries the *lex domicilii* was applied in deciding unilateral obligations. M. Sulkowski himself was in favour of the formula of the experts.

As for the second paragraph, he pointed out that, admitting the principle that the obligation of the person giving an "aval" was independent, there was no reason in such a case to apply the same legislation as to the person for whose benefit the "aval" had been given. In such cases, the principles adopted in paragraph 1 ought also to be applied in regard to the "aval": consequently, it would be best to delete paragraph 2.

M. ASSER (Netherlands) wished to reply to the two questions raised by M. Giannini.

In regard to the first point (place in which this provision of Article 5 should be inserted), he was of opinion that it should be inserted in the Convention and not in the Uniform Regulation.

In regard to the second point, he believed that there was a misunderstanding. He had not intended to say that in case of need rules should be adopted in regard to the substance of the obligation. He had simply pointed out that, in his opinion, the question was still premature. There were two methods for settling conflicts of laws; the radical method — that was to say, the unification which led to the disappearance of all divergencies — and the less radical method which allowed divergencies to subsist but which provided for the establishment of rules indicating which law would be applicable to a particular case and a particular matter.

He repeated that the Hague Conference in 1912 had deliberately refrained from speaking of the substance of the obligation, for it was concerned with the obligatory regulation to be inserted textually in legislations.

During the earlier meetings, the first Conference returned to the Hague system, and for that reason M. Asser thought that it would be more desirable to wait to see whether the great majority of States wished to accept the Uniform Regulation. In the negative case, it would be possible for the Conference to deal with the substance of the obligation during the latter session, for which provision had already been made.

M. DE LA VALLÉE POUSSIN (Belgium) wished, in order to consider the article, to take the hypothesis that the Uniform Regulation — that was to say, the return to the idea of The Hague which most of the delegations appeared to desire — would become the regular law of the contracting States.

In that hypothesis, M. de la Vallée Poussin wondered what would be the real value of Article 5. Personally, he did not see what was its value. M. Asser had stated that that article referred to the solution of conflicts of laws which might arise in connection with what was called the substance of the obligations. Between States which had adopted the uniform law there would no longer be conflict in regard to the substance of the obligations, since the matter would be completely settled except for one or two points (cover, for instance), in regard to which conflicts of laws were settled by special provisions.

Consequently, the only conflicts which could still occur in regard to the effects of the obligations were those connected with bills of exchange between contracting and non-contracting States. It could not, then, be perceived in what circumstances the provision contained in Article 5 would apply as a compulsory rule. The contracting States would be undeniably free to apply it within their own borders, but they would not be required to do so in regard to non-contracting States, which would remain completely free to apply the provisions of their jurisprudence or their legislation which were peculiar to them in matters of international law. M. de la Vallée Poussin would be glad to have the opinion of a member of the Committee of Experts in regard to the exact reasons which had caused the experts to introduce Article 5. Would it not be better to suppress the article and to refer, as at present, to the legislation which in certain countries governed conflicts of laws and which in others abandoned that task entirely to the courts?

The PRESIDENT considered that it would be desirable to begin by deciding whether the Conference wished to retain Article 5, subject to drafting, or whether it would prefer its suppression. He pointed out that the experts had had in mind a separate convention, in order that certain States which might be unable to accede to the Uniform Regulation would eventually be able to accede to the Convention. Though it was true that the States which accepted the Uniform Regulation would have no conflict to settle, it was none the less true that those States which did not adopt the Uniform Regulation would.

M. PERCEROU (France) stated that the Committee of Experts had considered that Article 5 would be useful for the following reasons:

In the first place, there were States which would not accede to the uniform law and which would perhaps be able to accede to the Convention on Conflicts of Laws.

In the second place, among the States represented at the Conference, there might be some which were not authorised by their Parliaments to ratify the uniform law and which would nevertheless be able to accede to the Convention.

In the third place, among the States which adopted the Uniform Regulation, certain conflicts might still arise on account of the reservations, and for the solution of those conflicts it would be necessary to resort to Article 5.

For those reasons, M. Percerou believed that Article 5 would be useful.

M. QUASSOWSKI (Germany) stated that the attempt of the experts to deal with the important question of conflicts of laws on the effects of obligations seemed to him to be acceptable in principle. He believed, however, that the modifications proposed by the German delegation were necessary. If those modifications were not adopted, he would prefer to suppress the article.

The PRESIDENT considered that it was necessary, in the first place, to take a decision on the German amendment.

M. GIANNINI (Italy) would ask for the suppression of the article if the German amendment were adopted.

M. DE LA VALLÉE POUSSIN (Belgium) considered that, if the Conference did not reach agreement on a satisfactory formula which received almost unanimous approval, it would be better to suppress the article. It would be preferable before doing so, however, to find a text giving satisfaction to the Conference. He did not therefore formally propose the suppression of the article, though he thought that it would be highly improbable that certain States would ratify the Convention but not the uniform law.

The PRESIDENT proposed that a vote should first be taken on the first paragraph of the German amendment. The Conference could then vote on the third paragraph. The second paragraph was identical with the experts' paragraph.

M. QUASSOWSKI (Germany) pointed out that paragraph 1 of the German proposal did not differ in principle from the text proposed by the experts.

Paragraph 1 of the German amendment was adopted by 16 votes to 8.

The British delegation abstained from voting.

M. GIANNINI (Italy) said that paragraph 3 was similar to that which had been rejected. He would therefore vote against it. The third paragraph of the German amendment said :

“ The law of the State within whose territory the place designated as that in which the signature was given is situated.”

That paragraph therefore had against it all the objections pointed out on the previous day.

M. QUASSOWSKI (Germany) did not consider that the situation of the previous day and that of the present day were similar. The text of the experts laid down that the indication in the instrument concerning the carrying out of the obligations of the signatory was decisive. That was the great difference between Article 5 and Article 4. In principle, the German provision was in conformity with that rule and only constituted a slight modification to the text proposed.

M. SULKOWSKI (Poland) wondered whether it would not be preferable to vote on paragraph 1 of the experts' proposal. In the event of the adoption of that paragraph, paragraphs 1 and 3 of the German proposal would be rejected.

The PRESIDENT observed that the first paragraph of the German amendment had been adopted in place of the first paragraph proposed by the experts.

M. SULKOWSKI (Poland) regretted that the Conference had not started by voting on the proposal of the experts.

The PRESIDENT replied that the Conference usually voted first on the amendments and not on the text. He had immediately perceived that if the first paragraph of the German amendment were adopted, as had proved the case, in place of the first paragraph of the experts, and if the third paragraph of the German amendment were then rejected, the result would be an omission in so far as the endorsers were concerned. He had intended to point that out especially to M. Diena who had spoken on paragraph 2 concerning the giver of “aval” and the intervener, in order that he might indicate what action it would be desirable to take in regard to the endorsers.

In view of the present situation, it would now be necessary to vote on the third paragraph of the German amendment.

M. DIENA (Italy) pointed out that the Italian amendment presupposed the adoption of paragraph 1 of the experts. If that paragraph disappeared, the situation would be radically changed. It was the aim of the Italian delegation to construct and not to demolish.

The PRESIDENT asked M. Diena whether, in view of the adoption of the German amendment, it was necessary to maintain the Italian proposal.

M. DIENA (Italy) replied that the Italian delegation was opposed to paragraph 1 of the German amendment.

M. PERCEROU (France) considered that the Conference should consider the Italian proposal as a whole, for it often happened that in a law one part could not be removed and replaced by another.

The PRESIDENT proposed to consider paragraph 1 of the German amendment as provisionally adopted, in order that the article might be considered as a whole. The Conference would then take a decision on the Italian amendment. Doubtless no one, whether in the German or in the Italian delegation, would wish to adopt an article devoid of unity.

Before asking M. Diena to speak, the President felt he should point out that when he had proposed that a vote should first be taken on the German amendment there was no opposition to his suggestion. It was only afterwards that M. Sulkowski and then M. Diena had presented their observations.

M. DIENA (Italy) said that the Italian delegation had studied the scope of Article 5, which was really very important, at length. Since it was very difficult, in the matter under discussion, to adopt absolutely perfect solutions, it had considered that, after all, the first paragraph of the experts' text could be accepted, although it was not entirely satisfactory. It had therefore given up its intention of proposing an amendment on the subject, thinking that the paragraph would perhaps be adopted. What, however, had particularly shocked it was the second paragraph, which appeared to it to be entirely inconsistent with the principle which dominated exchange law, that of the independence of every exchange obligation, and in particular of the exchange obligation of the giver of an "aval".

Personally, M. Diena had been somewhat surprised to note that, apart from slight differences of form, the provision of paragraph 2 of the text of the experts was reproduced in the amendments submitted by the German delegation, the more so in that M. Diena knew that the German doctrine admitted and respected the principle of the autonomy of every exchange obligation. Nevertheless, in order to make certain, M. Diena had consulted the valuable book which had been distributed to the members of the Conference with so much kindness and courtesy by the German delegation. Page 17 of that work was devoted to the law in force in Germany and in column 2, under the rubric, "Reciprocal independence of exchange obligations", the reciprocal independence of exchange obligations was clearly admitted. In column 9 of page 17, where the question of the "aval" given without indication of the person on whose behalf it had been given was dealt with, M. Diena read that :

"The giver of the 'aval' is responsible in the same manner as the principal person bound, even if the principal obligation on the bill of exchange, though valid from the point of view of form, is not valid from the point of view of substance."

It might be claimed that that was the internal law and that delegations were perfectly free to derogate, if it seemed desirable, from their internal law. That was indisputable, and the representative of Italy had never intended to contest it. But he did contest that in the same international Conference inconsistent principles could be adopted in two Conventions which were connected, although from the point of view of form they might be quite independent. The Conference itself, however, had already taken a decision on the question at the time of the adoption of the Uniform Regulation. If reference were made to Article 31 of the Uniform Regulation which, unless he were mistaken, had been unanimously adopted, the following would be found :

"The giver of an 'aval' is bound in the same manner as the person whom he guarantees.

"His engagement is valid, even when the liability which he has guaranteed is inoperative for any reason other than defect of form."

What was the meaning of that provision? It meant that the obligation of the giver of the "aval" was independent of the obligation of the person guaranteed, but the text of the Committee of Experts, reproduced in the German amendments, stated that the effects of the obligation of the giver of the "aval" and of the acceptor by intervention were governed by the legislation applicable to the obligation of the person for whom the "aval" or acceptance by intervention had been furnished.

That was a contradiction, and it would be necessary to choose between the two systems. Article 5 of the second paragraph proposed by the experts, to which the German delegation had reverted, was not concerned with the "aval" but with the security required by civil law. If the "aval" was an independent obligation, it should be treated in the same manner as the other exchange obligations. For that reason, M. Diena had just affirmed that the Italian delegation did not aim at demolishing but, on the contrary, at constructing. He believed that the rules which proceeded from the first paragraph completely covered the question of the "aval" — that was to say, that the "aval" was an exchange obligation comparable to all the others, although it had a special character. The rules adopted by the Conference on exchange obligations should also be applied to the "aval".

The Italian delegation also proposed that a third paragraph should be added in the following terms :

"Nevertheless, the limit of time under which recourse may be exercised shall be determined for all the signatories by the law of the country of domicile of the drawer or of the person who issued the promissory note."

It was quite clear that this proposal ought not to be discussed from a theoretical point of view, for the Italian delegation was the first to realise that, seen from this aspect, it was open to criticism. It should be considered solely from the practical standpoint. Even the most obstinate theorists, however, ought to realise that enormous, sometimes insurmountable, difficulties were met with in practice in many different countries, when any attempt was made to take recourse proceedings. Doubtless, if it was possible to share the optimism of M. Asser, who looked forward to the universal adoption of the Uniform Regulation, there would be no necessity to take such a state of affairs into consideration ; but M. Diena did not share the optimism of the Netherlands delegate. It was enough to recall the large number of reservations that had already been put forward. It should be realised that, as a matter of fact, legislative divergencies would always exist, and these would have to be taken into account and remedied. Since there were very different ways of referring to recourse, it would be practical for those who had to exercise recourse in different countries to arrive at a certain unity on this point. But if this unity could not be reached by means of the Uniform Regulation, they must try to obtain it by adopting a rule of international private law, which, from the theoretical point of view, would be open to criticism, but which would be of practical use in overcoming the difficulties. For that reason, the Italian delegation put forward its proposal, while taking into account the factor that gave a bill of exchange its original character — namely, the moment of issue — and confining itself solely to the question of the limit of time, but without providing for all the possible consequences of a bill of exchange.

To sum up, the Italian delegation proposed to adopt the first paragraph of the text of the experts, to delete the second paragraph of the same text as well as the second paragraph of the German amendment and to add instead the text that he had just put forward.

M. SULKOWSKI (Poland) supported the Italian text in principle. He thought that a single regulation ought to be adopted for the effect of exchange obligations, and that was what was proposed by the second paragraph put forward by the Italian delegation. In spite of that, there was a certain contradiction between this paragraph and the first paragraph, which said that, if the obligation specified the place, it was the legislation in force in that place which ought to be applied in order to estimate the legal effects of the obligation. It was only if the obligation gave no indication of the place that the legislation in force in the country of the debtor's domicile ought to be applied.

According to the Italian formula, it was always the legislation in force in the place of the drawer's domicile which decided the legal effects. He thought it was better to say that it was the place of issue which determined these effects, because in that way the contradiction which appeared quite clearly between the two paragraphs would be avoided.

The PRESIDENT thought that the only way to obtain a clear vote was for the Conference to give its opinion at the same time on paragraphs 1 and 3 of the German proposal. Otherwise they would be led, after the vote on the different amendments, to reconsider the position of the endorsers and to make a new proposal.

Once the vote on the whole of the German amendment had been taken, the Conference could see if there was any need to adopt the Italian amendment.

The German amendment was adopted by 11 votes to 9.

The British delegation abstained from voting.

M. GIANNINI (Italy) thought that when a general rule was adopted the question of utility should always be taken into account. The adoption of the rule proposed by the Italian delegation was therefore justified, even after the adoption of the first paragraph of the German proposal. He drew the attention of the Conference to the fact that the Italian proposal made an attempt to look at the question from that angle. It did not absolutely hold to the criterion it had put forward, but what it wished was to have a criterion that could simplify very complicated situations and hasten the solution of the problem. It was necessary to adopt some principle, whether that proposed by the Italian delegation or another one — for example, that of the place of issue. It was considerations of utility that justified a derogation of the principle of paragraph 1.

The Italian amendment to suppress the second paragraph of the text of the experts was adopted unanimously.

The PRESIDENT pointed out that the new text was composed of the first and third paragraphs of the German amendment.

There was an Italian amendment proposing that the following paragraph should be added :

“ Nevertheless the limit of time under which recourse may be exercised shall be determined for all the signatories by the law of the country of domicile of the drawer or of the person who issued the promissory note.”

M. SULKOWSKI (Poland) proposed that the words “ the law of the country of domicile of the drawer ” should be replaced by “ the law of the place where the bill of exchange was issued ”.

M. QUASSOWSKI (Germany) did not quite understand the bearing of the proposed amendment. What were the time-limits for exercising recourse? To be quite accurate, there were time-limits for presentment and for protesting but not for exercising recourse. The amendment perhaps referred to time-limits for prescription or possibly to the unification of the rules governing the interruption and suspension of prescription. Would it be possible to have certain explanations on this point?

The PRESIDENT drew the German delegate's attention to the fact that the time-limits referred to were not those for recourse laid down in the Uniform Regulation, but time-limits for recourse existing in various countries, principally in non-contracting and non-adhering countries.

M. VISCHER (Switzerland) thought that the Italian delegation had brought in its proposal in order to make the first two paragraphs concord. It was for that reason that it had used the phrase “ the country of domicile of the drawer or of the person who issued the promissory note ”. The German proposal having been adopted for the first paragraph, it would be preferable, in order to ensure concordance between the different paragraphs, to say “ the place in which the instruments are payable ”. M. Vischer agreed that often the place of payment and the place of signature (proposed by M. Sulkowski) were the same, but thought that the same term should be used so far as possible.

M. WEILLER (Italy) thought that certain conclusions might be drawn from the discussions which had just taken place. A principle had been adopted in regard to the law applicable to the parties liable; the various parties liable on a bill of exchange would be subject to different laws; consequently, the Conference had not, theoretically speaking, effected a unification, but had fallen into line with certain scientific necessities. There still subsisted a practical necessity, to which M. Giannini and M. Diena had referred. When a bill fell due and was not paid, there was

still the right of recourse, and in exercising that right it was essential that the person concerned should be able to go as far back as the drawer. If the time-limits differed — if, that was to say, action against the drawer involved shorter time-limits than those prescribed as against the succeeding endorsers — the latter might be under an obligation to pay and might lose their entire power of recourse.

It was for that reason that the Italian delegation had proposed the law of the country of domicile of the drawer. The latter would be applicable in regard to recourse, but merely in so far as concerned the shortest time-limit necessary for exercising such recourse.

In reply to M. Quassowski's observation, M. Weiller considered that there was no question either of the terminology employed in the Uniform Regulation or of the scientific terminology. The Italian delegation held that where there existed restrictive provisions in regard to recourse, whether prescription or loss of rights or any other limitation, the law of the domicile of the drawer should, for reasons of practical necessity, apply to all the parties liable. A formula would have to be found.

M. QUASSOWSKI (Germany) thought that he could accept in principle the Italian proposal. He wished, however, to draw the Conference's attention to the following fact. Article 8 contained provisions concerning the form and time-limits for protesting and other acts. M. Quassowski considered that in these cases it should be said that the law of the country in which these acts had been accomplished was applicable. Subject to this reservation in Article 8, he concurred in the Italian proposal.

M. EISNER (Yugoslavia) pointed out that M. Quassowski's remark concerned the amendments submitted by the Yugoslav delegation to Article 8.

The PRESIDENT observed that Article 8 dealt with the form and time-limits for protesting and other acts, whereas the Italian amendment spoke of the time-limit for exercising a right of recourse. The two questions must not be confused.

M. GIANNINI (Italy) said that, if the Conference considered that there was any other more practical criterion than that proposed by the Italian delegation, the latter would gladly withdraw its proposal. He thought, however, that the system suggested in that proposal was the most practical.

The Italian proposal was put to the vote and adopted by 21 votes.

The British delegation abstained from voting.

The PRESIDENT requested the Drafting Committee to consider whether the Italian amendment, which had just been adopted, would not be more appropriately introduced in a separate article.

The Japanese delegation had submitted an amendment identical to that of the German delegation. The Japanese delegation might perhaps agree that it had received satisfaction and withdraw its amendment.

M. SHIMADA (Japan) said that his delegation's amendment was not entirely identical with the German amendment, but he would withdraw it in a spirit of conciliation.

Article 5 as a whole was approved at a first reading.

TWENTY-SIXTH MEETING.

Held on May 30th, 1930, at 4.30 p.m.

President: M. J. LIMBURG.

34. Discussion of the Draft Convention on the Conflicts of Laws (Continuation).

ARTICLE 6.

Baron MARKS DE WÜRTEMBERG (Sweden) said that the Nordic delegations considered that this article ought not to be inserted in the Convention. The consequence would be that in certain cases the tribunals of Nordic countries would have to apply the principles that had been accepted by certain legislations concerning the right of the holder of a bill of exchange to the cover (*provision*) furnished or to be furnished by the drawer. Such, for example, would be the case for a bill of exchange drawn by a Swede in Sweden but payable in Paris. The holder of such a bill could bring into force before Swedish tribunals the French principles concerning the special rights of each holder on the cover; but it had already been admitted that these principles belonged to the jurisdiction of the civil law of each country concerned and it would, as a matter of fact, be absolutely impossible to apply them in Sweden to a drawer domiciled there without making fundamental changes in the common law.

Since the business of the Conference was limited to legislation on bills of exchange and cheques, they could not discuss provisions of international private law, which were outside the sphere of

exchange law and would necessarily bring about important modifications in the common law of the Scandinavian countries.

He therefore hoped that Article 6 would be deleted.

M. ALBRECHT (Germany) supported the proposal of the Swedish delegation to strike out the article. He asked what the "provision" covered? As a rule, when a bill was drawn a debt was owing by the drawee to the drawer. The question was whether, in drawing the bill and handing it over to a third party, the drawer operated a transfer of the underlying debt. In juridical transactions which might involve an assignment, it was usually necessary to consider whether the parties intended such an assignment or not.

In Germany, the drawer or endorser of a bill did not as a rule intend to assign the underlying debt. There might be circumstances from which it could be inferred that there was that intention, and in such cases the courts would give effect to it. In France, the position seemed to be different. In a decision taken by the Reichsgericht before the war, it was held that according to French commercial custom and usage it was generally the intention of the parties to transfer the underlying debt with the bill. In the particular case in question the Reichsgericht had accordingly held that there was such an intention, and had given effect to it even as regarded the German debtor.

In Article 6 a different system seemed to be adopted; there it was not the intention of the parties, but the place where the bill was payable, that had to be considered. The place, however, had usually no value in regard to the determination of the intention of the parties. It might be quite accidental and put in merely for convenience sake, as in the case of a bill payable at a place other than the domicile of the drawee, and it might very well be that the acceptance of the rule suggested would lead to unexpected occurrences. Was there really any need for Article 6? The jurisprudence of all countries had occasionally to deal with cases which would come under that article, but they were very rare. The decision of the Reichsgericht to which he had alluded was the only one of its kind which had occurred for fifty years.

Finally, M. Albrecht drew attention to the English text of Article 6. He noticed that it was not considered possible to translate "provision", which was added between brackets. The same difficulty would certainly arise in countries whose language did not contain the French legal term "provision". The greatest difficulties would occur when judges were called upon to interpret the term. Adequate interpretation would only be possible after a careful study of French law.

For those reasons, M. Albrecht thought it would be wise to omit the provision.

The PRESIDENT said that the Drafting Committee had presented the text of the reservations, which included an Article 15 drawn up in the following terms:

"The question whether the drawer is compelled to provide cover (*provision*) at maturity and whether the holder has special rights on this cover (*provision*) is outside the uniform law and the Convention."

The President asked if this text had been adopted.

M. PERCEROU (France) replied that this reservation had been adopted.

The PRESIDENT asked whether this reservation of Article 15 might not replace Article 6 of the Convention on the Conflict of Laws.

M. PERCEROU (France) pointed out that the reservation adopted did not deal with the question of conflict of laws, but settled in the affirmative the question whether each legislation preserved its freedom concerning the transfer of the cover (*provision*). It was precisely because this freedom had been maintained that the question of the conflict of laws had arisen.

Contrary to what had been said by some of the previous speakers, this question was far from lacking practical interest; in fact, it was a matter of daily occurrence. M. Percerou returned to the case that had just been put forward by the Swedish delegate. A bill of exchange is drawn in favour of a Norwegian holder on a debtor living in Paris. The Norwegian holder endorses it in favour of a French holder. On the day when the bill falls due, the drawer goes bankrupt. If the French debtor (usually a bank) put the French law into application, he had to pay the bearer. If, on the other hand, the law of the drawer had to be applied—the drawee would not thereby pay the holder, but would have to pay in the money to the bankrupt estate.

The drawees were placed in a situation from which there was no escape. French law ordered them to pay the holder; Swedish law, on the contrary said that they ought not to pay and that they were in the wrong when they did so. In cases, of this kind, the drawees ran the risk of having to pay twice, and that situation would have to be remedied.

The proposed solution had been adopted after considerable discussion in particular by the Institute of International Private Law. If it were rejected, a regrettable uncertainty would be left in the relations of international trade, and M. Percerou thought that that was one of the most important questions that the Conference had to settle.

On the other hand, it was his opinion, for reasons which he had exposed before the Institute of International Law — and to which he would add the following consideration, that the drawee knew the law of his own country better than any other — that the application of the law of the country of domicile of the drawee was preferable for practical reasons to the application of the law of the country of the drawer. For that reason Article 6 had had no difficulty in meeting with the approval of the Committee of Experts. The adoption of this article would be a great step forward from the point of view of international intercourse and the security of international commercial relations.

The proposal to delete Article 6 was rejected by 12 votes to 7.

Baron MARKS VON WÜRTEMBERG (Sweden) said that, as a result of the vote that had just taken place, the delegates of the Nordic countries found themselves unfortunately compelled to ask for a reservation to be inserted in the Convention on the Conflict of Laws. That would be the only reservation made on the initiative of those countries.

The PRESIDENT thought that a reservation in the Convention would have serious results and he hoped that the Nordic delegates would reconsider their decision.

Article 6 was approved at a first reading.

ARTICLE 7.

M. ASSER (Netherlands) asked for an explanation from the Committee of Experts. This article dealt with partial payment and acceptance. As was said in the note, this provision only concerned States not agreeing to unification. Apparently this was a matter that concerned the substance of obligations and had been dealt with under Article 5. He asked whether the two articles were not redundant.

M. PERCEROU (France) did not think at first sight that they were redundant. Article 5 dealt with the question of the conflict of laws for obligations entered into ; Article 7 dealt with the question whether acceptances could be total or partial, and that was a question which arose before the conclusion of the obligation. When acceptance had been given, it was necessary to ask whether partial acceptance might not be given.

The principle was the same, but he did not think that there was any redundancy.

M. ASSER (Netherlands) did not agree. Article 7 concerned the *legal effects* of partial acceptance ; it came within the sphere of the *substance* of the obligations.

M. PERCEROU (France) thought that two questions arose :

1. Was it possible to accept partially ?
2. If partial acceptance was once given, what were the results ?

M. ASSER (Netherlands) thought that the words " was it possible " showed that it concerned the legal consequences of partial acceptance. He would not, however, press the point.

The PRESIDENT considered that Articles 5 and 7 did not deal with the same question, but, if that were the case, the only criticism that could be made against Article 7 was that it was superfluous.

M. SULKOWSKI (Poland) pointed out that Article 7 did not refer only to the obligation of the acceptor, but to the legal position of the holder as well, since it decided whether he could exercise recourse in the case of partial acceptance or otherwise. It was therefore a different principle from that contained in Article 5.

Article 7 was approved at a first reading.

ARTICLE 8.

The PRESIDENT observed that there was a Yugoslav amendment proposing that the article should begin as follows :

" The form of, *place of* and limits of time for protest *or equivalent declarations*, as well as the form of and *limits of time for* other proceedings. . . . "

M. EISNER (Yugoslavia) explained that his delegation held that the *lex loci* should apply not only to the form and time-limits of protest but also to the place where they were drawn up — dwelling-houses, premises, offices of trading firms, etc.

Furthermore, under the reservations which had been accepted in virtue of Article 43, paragraph 1, it was permissible to make equivalent declarations instead of a protest. They, too, must therefore be mentioned in the article.

Lastly, in regard to proceedings other than protesting — for instance, notice — the *lex loci* should apply not only to the form but also to the time-limits. That was of particular importance to the countries accepting the Convention but not the Regulation.

M. QUASSOWSKI (Germany) supported this proposal. Article 8 definitely referred to the time-limits for protest but not to those for other proceedings — for instance, the presentment of the bill ; that was to say, those mentioned in Article 38 (new text). The French delegation had submitted a reservation to that article. There was therefore a practical question involved, and it followed that it would be preferable to determine what law was applicable, in cases of dispute, in order to decide whether the holder must present the bill on the day on which it was payable or on one of the two subsequent business days. It seemed right to settle this question according to the law of the country where the bill was effectively presented.

The PRESIDENT considered that the Yugoslav amendment would make an appreciable change in the article. It introduced into it as well the notion of place, a question to which M. Quassowski had not alluded. Again, even if it provided for the settlement of the form and time-limits of the other necessary proceedings, there would still be the question of how many days before maturity the bill must be presented.

The word " proceedings " was not in this case taken in the sense of action.

M. QUASSOWSKI (Germany) said that, in his view, presentment was a necessary act for the exercise of rights of recourse. In any case, there was no rule to cover the case of Article 37, and Article 8 must be completed in this respect. The Yugoslav amendment made the necessary change.

M. DIENA (Italy) thought that it would be begging the question if Article 8 of the Yugoslav amendment was adopted, since the place was determined by the law of the place. A formula of that sort would be imperfect both from the point of view of substance and from that of form. The text of the experts was greatly to be preferred.

The Yugoslav amendment was rejected by 14 votes to 7.

Mr. GUTTERIDGE (Great Britain) abstained.

Article 8 as a whole was approved at a first reading.

ARTICLE 9.

The PRESIDENT submitted the Italian amendment to delete the words " or in case of the holder's bankruptcy (*faillite*) "

M. DIENA (Italy) did not understand the meaning of the words " or in case of the holder's bankruptcy (*faillite*) " and considered them extremely dangerous. Bankruptcy (*faillite*) was a very delicate matter, presenting special difficulties. It had been the object of a special Convention on Private International Law signed at The Hague. In endeavouring to modify the Hague provisions, there would be a danger of encountering very grave difficulties. M. Diena could not believe that the Conference would wish to act inconsistently with the decision then adopted, and it would accordingly be undesirable to approach the problem indirectly. He would advise the Conference not to deal with the hypothesis of bankruptcy (*faillite*).

M. VAN NIEROP (Netherlands) pointed out to the President of the Committee of Experts that the article mentioned measures to be taken in the event of *loss*. In general, however, the bill of exchange was not lost in the strict sense of that word. What happened was rather the destruction of the bill owing either to the shipwreck of a steamer or to a railway accident. Did the word " loss " also cover those cases of destruction ?

M. PERCEROU (France) replied in the affirmative.

M. VAN NIEROP (Netherlands) pointed out that the article stipulated that the law of the country determined *the measures to be taken*. That was a question of procedure, not of the rights of the holder of the lost bill. According to the Netherlands legislation, the holder of a lost bill had the right to ask for payment by means of security which had to remain on deposit for thirty years. Was it the opinion of the experts that the law of the country should also determine the limitation of actions in regard to the rights of the holder whose bill of exchange was lost ?

M. PERCEROU (France) replied that the stipulation referred not only to the measures to be taken but also to the consequences of those measures. The measures to be taken and the consequential restitutions were determined in accordance with the law of the place of payment.

M. VAN NIEROP (Netherlands) pointed out that the Regulation itself did not mention that question.

The PRESIDENT said that it had been desired in the article to avoid a conflict with the system of restitution existing in various legislations.

Referring to the provision under discussion according to which the law in force at the place of payment determined the measures to be taken in the event of the loss of a bill of exchange, M. SULKOWSKI (Poland) instanced the following case : A bill of exchange was payable in France, but the endorsers were domiciled in Poland. In the event of the loss of the bill, it would be desirable to open the proceedings for restitution in Poland, in order to prevent the bill from being presented to the endorsers of that country. There would be a great objection to providing that the holder should make application in France for the opening of the restitution proceedings. For that reason, the question of restitution proceedings in connection with the lost bill of exchange should be dealt with by national legislation. In consequence, M. Sulkowski proposed the suppression of Article 9.

M. GIANNINI (Italy) thought that the Conference could easily agree to the amendment of the Italian delegation. In the long discussions which had taken place at The Hague in the two Conferences of 1910 and 1912 with a view to reaching the agreement which was at present before the Governments, the numerous difficulties in the way of a solution to the problem of bankruptcy (*faillite*) had been attacked, but no view of the whole matter had been arrived at.

It remained to decide whether the limitation of the meaning of the article was or was not justified. The reason for the formula was that it constituted a safe criterion. The objection raised at the moment referred to the interpretation of the word " measures ". If the widest possible meaning were given to that word, it would refer to questions of form and the questions of substance arising from it.

There was another question : the expediency of the criterion. If the article were suppressed, the conflict would still subsist, but if it were adopted, a safe form would be established. Otherwise

every State would interpret the method of settling the conflict for itself and, in that case, it would become almost useless to establish a convention on conflicts of laws. It would be vain to seek for a criterion safe from criticism, and the Conference would have to adopt that which afforded the minimum disadvantages. The article proposed by the experts, which took the Hague discussions into account, was the best practical criterion.

The Italian amendment was adopted by 23 votes.

M. SULKOWSKI (Poland) proposed the suppression of the article as amended.

The proposal was rejected by 13 votes to 5.

The PRESIDENT pointed out that the report would contain an explanation of the term "loss", to make it clear that it also included "destruction".

ARTICLE 10.

GENERAL RESERVATION.

Mr. GUTTERIDGE (Great Britain) said that the second proviso was somewhat difficult for an English lawyer to understand. He imagined — but hoped he would be corrected if he was wrong — that the intention was to safeguard what was known as "ordre public" on the Continent and "public policy" in England.

The PRESIDENT pointed out that, according to the principles of the Convention, a law which was not a law of one of the contracting States could not be applied.

Mr. GUTTERIDGE (Great Britain) understood the President's explanation. He took it that the proviso was really intended to be a gentle hint to other nations to accede.

The PRESIDENT replied that it was intended to urge them to do so.

M. GIANNINI (Italy) considered that the article would perhaps be in place in the uniform law, but not in the Convention.

On the other hand, he drew the attention of the Conference to the fact that the two points had an entirely different meaning. The first paragraph was justified by the fact that it was not desired that the unification should benefit those States which had not considered it necessary to make sacrifices in order to bring about that unification.

The second paragraph, on the other hand, had a moral bearing. It was an invitation addressed to States which had not acceded to adopt the Convention. Though in 1910 and 1912 that argument might have appeared to be very efficacious, it was no longer so at the present time. Nevertheless, the second point sufficed to bring into relief the disadvantages from which the States which were not parties to the Convention might suffer. It was in that spirit that the Conference could accept it.

Article 10 was approved at a first reading.

ARTICLE 10(a).

The PRESIDENT submitted the following draft article the inclusion of which was proposed by the Italian delegation as article 10(a)

"Any High Contracting Party may, when signing or ratifying the present Convention or acceding thereto, append an express reservation excluding any one or more of the provisions of the said Convention.

"The provisions thus excluded cannot be applied against the Contracting Party who has made the reservation nor relied on by that Party against any other Contracting Party."

He confessed that amendment had disturbed him considerably, for it would make it possible to introduce reservations into the Convention on Conflicts of Laws, and he considered that was dangerous. Moreover, he was certain that the Italian delegation would recognise that, for it was obvious that with the introduction of reservations the Convention might lose all its importance and its meaning.

If he had understood rightly, the amendment was the consequence of the vote which had taken place on Article 3 of the Convention. The Conference would remember that the Italian delegation submitted an amendment to the article to suppress the third paragraph. That amendment had been rejected and consequently the Italian delegation now submitted its proposal in regard to Article 10(a). It considered that the last paragraph of Article 3 opened the door to swindling. On the other hand, the experts had stated in the observations which appeared at the end of the article :

"They feel, however, that the severity of this rule should be relaxed so as to prevent national laws for the protection of incapable persons being circumvented by the chance signing of an instrument in foreign territory. They have therefore inserted as a third paragraph in this article the text of Article 18 of the Hague Convention."

The President was of opinion that, if it were necessary to choose between maintaining the third paragraph and the possibility of the introduction of reservations in the Convention, he himself would prefer to sacrifice paragraph 3 of the article.

If that paragraph were maintained, cases of swindling might indeed result. They might also result if it were suppressed, as the President of the Committee of Experts, M. Percerou, had pointed out. In those circumstances, it seemed that if the Conference could avoid the introduction of reservations it would be better to sacrifice paragraph 3, since whether it were suppressed or maintained there might still be cases of swindling.

M. PERCEROU (France) pointed out that there was a very simple means of giving satisfaction to everyone : simply to revert to the principle according to which capacity was determined by the national law. In other words, Article 3 would consist only of the first paragraph. Paragraphs 2 and 3 would be suppressed.

The PRESIDENT agreed that any solution was preferable to the possibility of the introduction of reservations in a convention on conflicts of law.

M. GIANNINI (Italy) was of opinion that M. Percerou's proposal to suppress the last two paragraphs was somewhat radical and exaggerated. On the other hand, that solution would present difficulties. For instance, when a person came forward, it was necessary to make an enquiry into his capacity from the national point of view. Circulation would not be facilitated, but the contrary would be the case.

Having said that, M. Giannini wished to explain the reason why he had submitted his proposal. In the first place, it was necessary to take into consideration that the Convention did not present a definite system. It contained fragmentary provisions, and for that reason there would not appear to be objections, from the technical point of view, to admitting the possibility of making reservations. Moreover, there was the question of expediency. As a general rule, M. Giannini was the enemy of reservations, but, in view of the fact that the Convention contained articles of which certain States disapproved, he considered that it was necessary to provide for the possibility of reservations, for with reservations it would be possible to establish a certain amount of agreement between States on conflicts of laws.

If the possibility of making reservations were not admitted, Italy would be unable to ratify the Convention on account of Article 3, the Scandinavian States on account of Article 7, and Poland on account of Article 9. Thus a certain number of States would be unable to accept the Convention if the power to make reservations were not provided.

On the contrary, if that possibility existed, the situation would appear to be more favourable. Italy, for instance, would make a reservation in regard to the third paragraph of Article 3 and would consider as valid engagements arising from the first two paragraphs of the article. France, on her side, would accept the third paragraph, since she considered that it met her requirements.

On the other hand, it should be recognised that no real uniformity resulted from Article 3, for after the principles had been fixed exceptions could be laid down. As a matter of fact, this article already contained a reservation, since the last paragraph was a reservation in itself. The Italian delegation was therefore putting forward a reservation to this reservation.

After the discussions that had taken place, M. Giannini might state in a general way that, although he himself was opposed to reservations, it was necessary to allow the possibility of them in this Convention if the Conference wished to come to any agreement on the essential parts of the Convention.

He repeated that if this was not so, several States would not sign the Convention. Should he be asked the reason, he would reply that he did not wish to sign because he liked to know exactly where he was. As a matter of fact, it was not his habit to sign conventions which he was certain would not be ratified. He was actuated not only by a feeling of moral duty, but also by loyalty towards his colleagues ; and in loyalty to them he declared that without this possibility of making reservations he was unable to sign the Convention unless the last paragraph of Article 3 were deleted. At the same time, however, he wished to take into consideration the position of other States, and he thought that some sacrifices ought to be made in order to arrive at an agreement on certain fundamental rules. It was true that was not the ideal that they had hoped for, but M. Giannini thought the Conference must take every question of opportunity into account.

M. QUASSOWSKI (Germany) said that Article 3 was not the only one that was inconvenient for certain States. Article 6 was inconvenient for Germany, and it was difficult for them to adopt a provision concerning the conflict of laws based on a doctrine regarding " cover " (*provision*) whose exact scope and meaning Germany did not understand. It was also difficult to say whether it was right to consider the law of the country where the bill of exchange was payable as the decisive law. Perhaps it would be better to consider the law of the country where the bill had been issued as decisive. In any case, it was difficult to deal with this question thoroughly, for there they were working on unknown ground. For these reasons, and since Article 6 had been adopted in spite of the vote of the German delegation, M. Quassowski would prefer the Italian reservation to be adopted.

Baron MARKS VON WÜRTEMBERG (Sweden) said that the Scandinavian delegations regretted that they found themselves unable to vote for the Italian amendment.

M. SULKOWSKI (Poland) said that he would make use of the Italian reservation in regard to Article 9.

The PRESIDENT drew M. Quassowski's attention to the following point : Was a country that brought reservations into play certain of getting what it wished ? Personally, he did not think so. In such a case, a country would fall back on international private law and the jurisprudence of the different tribunals would create a chaotic situation, since this jurisprudence would inevitably fail to satisfy States that put forward reservations.

The Italian proposal was adopted by 17 votes to 3.

M. DUZMANS (Latvia) wished the title of each article to be indicated above the article number so that the title should not be considered as part of the article itself.

He pointed out that under Article 10 occurred the title "General Reservation". Since the Italian amendment had been adopted, that title would have to be put in the plural: "General Reservations".

The PRESIDENT stated that the Drafting Committee would take that point into account.

He pointed out a question of drafting to the President of the Committee of Experts. Article 6 made mention of "the beneficiary". What was the exact meaning of this expression?

M. PERCEROU (France) replied that the beneficiary was the first holder, the person whose name was written on the bill. The word "preneur" was synonymous.

M. STUB HOLMBOE (Norway) asked if provision had been made for a ratification clause in the Convention.

The PRESIDENT replied in the affirmative.

The Convention was approved at a first reading.

35. Examination of the Draft Convention providing Uniform Regulations for Bills of Exchange and Promissory Notes.

The PRESIDENT said that the text proposed in Annex 19 had been drawn up in collaboration with a number of delegations and the Legal Section of the Secretariat.

M. GIANNINI (Italy) explained that the draft was based on the following fundamental principle. The uniform law would appear in one annex and the reservations to the uniform law in a second annex. This division would facilitate the consultation of the two texts. The Convention, with the two annexes, might be drawn up so as to consist solely of the general clause appearing in Article 1 and the special, formal and concluding clauses appearing in Article 2 and the following articles.

Article 1 reproduced the Hague system in the sense that the contracting parties undertook to introduce the uniform law in their respective territories either in the original text or in their national languages. That was to the advantage of the French and English-speaking countries and also to those countries which did not wish for a translation. Paragraph 2 referred to reservations. The reservations were not general reservations. They could only relate to questions expressly mentioned in them — that was to say, to any matters embodied in Annex 2. It had, however, been held that Annex 2 contained certain reservations which might be made at the time of ratification or adhesion. There were others, happily very few, on which it was difficult to take a decision at the time of ratification or adhesion, since they might become necessary in consequence of certain special occurrences in the economic or political situation of certain countries. These reservations, which were mentioned explicitly in the third paragraph, might be made subsequent to ratification or adhesion. Any State, however, which wished to avail itself of them, would be bound to communicate them to the Secretary-General, who would forward the information to the parties of the Convention. In this way the general and particular interests of the countries would be reconciled. This rule was dictated by caution, since otherwise the States would have been tempted when ratifying to say that they would avail themselves of all the reservations in Annex 2. Some uncertainty would obviously result. It must, however, be remembered that some reservations had been asked for by countries whose legislation was in a transitional state. In certain countries, the law was based on, or inspired by, that of other countries. These countries would need the same reservations. A whole congeries of problems had had to be considered, and it had been thought better to leave the third paragraph somewhat elastic.

The other clauses did not require any long explanation. They had been taken from the most recent Conventions adopted by the League containing improvements due to the experience gained from earlier Conventions. For some years past these clauses had been, so to speak, stabilised. Article 8 and the following articles did not call for much comment. They referred to ratification on behalf of colonies and territories subjected to the authority of a contracting State in one way or another. There was also the question of the periodical revision of the Convention, so as to bring it into line with the changing needs of international life.

Article 7, on the contrary, deserved special consideration. It stipulated two systems of denunciation. According to the ordinary system, each State might denounce the Convention after a certain time-limit, the effect of such denunciation to become operative after a stated period. There were also, however, emergencies to be considered. In such cases, the countries could not be held to the rigid system of the uniform law and thus, if they violated it, inevitably have to run the risk of violating international law. Therefore allowance was made for immediate denunciation, for reasons of State by means of a certain formality which would make it possible to reconcile the exigencies of the State concerned with those of the other States. The position of the countries signing the Convention must always be known. Paragraph 3 of Article 7 referred to these cases. The time-limit of two days laid down there was intended to reconcile the interests of the country which applied for denunciation and those of the other countries which would have to take certain measures in order to meet the new situation thus created.

The Protocol of the Convention contained three articles. The two first referred to certain situations which might arise at the time of the deposit of the instruments of ratification.

Article I stipulated that :

“ The High Contracting Parties who may not have been able to deposit their ratifications of the said Convention before. . . undertake to forward within fifteen days from that date a communication to the Secretary-General of the League of Nations informing him of their situation as regards ratification.”

Article 2 stipulated that :

“ If on. . . the conditions laid down in Article 5, paragraph 1, for the entry into force of the Convention are not fulfilled, the Secretary-General of the League of Nations shall convene a meeting of the Members of the League and the non-Member States who have signed the Convention or acceded to it.

“ The purpose of this meeting shall be to examine the situation and any measures to be taken to meet it.”

Provision had been made for the extreme case because that eventuality had to be foreseen, but everyone hoped that the article would not be applied.

Lastly, Article 3 contemplated a system of co-operation whereby the countries which had undertaken to adopt the uniform law and the Convention would be asked to communicate to one another the texts of the laws they established.

This provision had two objects. The first, which was self-evident, was the supervision of the application of the uniform law by the signatory States. The other was intended to promote one kind of co-operation between the countries in the field of the unification of exchange law.

It was with this object that the recommendation at the end of the protocol, which was due to an Austrian proposal, had been drawn up. The parties to the Convention were invited to communicate to one another the texts of their most important judicial decisions.

The group of delegations had not thought it expedient to make an article of this recommendation — that was to say, to convert it into a definite undertaking. While it was quite easy to ask the countries to communicate their laws to one another, there would be some difficulty in making the exchange of the most important judicial decisions obligatory. The gauging of the importance of decisions was always liable to variation, for it was generally the judicial authorities who judged of such matters, and their view of the importance of decisions was somewhat too personal. Each judge would be inclined to consider that his decisions were the most important that had been rendered in a country at a particular time.

To overcome this disadvantage and also that which would result from creating an obligation for those countries whose judicial business was very heavy, it had been decided to make only a recommendation.

The adoption of this proposal might be linked up to the recommendation which had been kept for the end of the discussion — that was to say, the recommendation submitted by the Italian delegation to the effect that the International Institute of Private Law should be requested to have a study made of the system of guarantees (*fidéjussion*).

M. Giannini, however, would like to submit another recommendation in accordance with what had happened after 1912 as between Germany, Austria and Switzerland, and what had been tentatively discussed between Switzerland and Italy — namely, that any two States wishing to adopt the uniform law, and having the same language, should have an identical translation as far as possible. The advantages were obvious, for if, according to the Italian saying, every translator was a traitor, a traitor in legislative matters was even more troublesome than a traitor in private life.

The Italian delegation had proposed the following recommendation :

“ The Conference, for the purpose of obviating the adoption of texts of the uniform law in the same language but containing divergencies of translation, recommends that States having the same official language should prepare the official translation of the uniform law in consultation with one another.”

This would apply, for instance, to Switzerland and Italy.

Having examined the concrete part of the Convention, M. Giannini wished to draw the Conference's attention to Article 3 of the draft, which said :

“ The instruments of ratification shall be deposited *before the (date of expiry of a period of twenty months from the date of the Convention).*”

The period of thirty days appearing in Article 2 had given rise to a long discussion, and it had been held that it would suffice in order to secure the subsequent signature of those countries which, although participating in the Conference, did not sign the Convention with the other countries.

There was an amendment by the Scandinavian delegations to Article 3, proposing that the instruments of ratification should be deposited *before July 1st, 1932*. The delegations who had drawn up the text had taken into account the parliamentary requirements in all countries and had suggested that a term of twenty months might be contemplated. If, however, the Scandinavian delegations thought a longer time-limit necessary to meet their particular needs, that would not cause any serious difficulty. Although a term of twenty months would be preferable it would be possible to adopt a time-limit of two years, but without, however, laying down a definite date, which would cause inconvenience.

Baron MARKS VON WÜRTEMBERG (Sweden) agreed with this suggestion.

M. GIANNINI (Italy) thought that it would be helpful to fix the date for the expiration of the time-limit in this way.

He requested the President to place the Convention as a whole under discussion, since it would be difficult and useless to discuss it article by article.

It would also be necessary to have a vote on the recommendation submitted to the Conference, since the report would have to cover the Convention and the recommendation.

M. SHIMADA (Japan) said that the Japanese delegation had only received the text of the Convention that morning and ventured to propose an amendment to Article 1, paragraph 1, which would be completed by the addition of the words :

“ Or to adopt in their respective systems of law all the fundamental solutions embodied in these Regulations.”

The systems of law sometimes differed from country to country. Too rigid and literal an adoption of the Uniform Regulation would meet with difficulties, which would be likely to restrict the number of countries able to adhere.

On the contrary, if the countries were allowed to introduce in their respective systems of law all the fundamental points embodied in the Uniform Regulation and if they were given a certain latitude in regard to the legal situation the adoption of the proposed Regulation would be facilitated.

In Japan in particular, where the construction of the language differed from that of the European languages and where legal technique also differed, it was almost impossible to adopt the Uniform Regulation word for word. It was for that reason that the Japanese delegation proposed their amendment.

M. DUZMANS (Latvia) wished to refer in the general discussion to the denunciation of the Convention, since many things would depend on the way in which that question was solved.

At the second meeting, after hearing the explanations of the Chairman of the Committee of Experts on the reasons for which the Hague Convention had been toned down, the Conference had held a long discussion concerning the modifications to be submitted in the event of the full rigour of the Hague Convention being restored.

The Conference had agreed unanimously that the Regulation should be discussed as if the rigid method laid down at The Hague had been adopted, leaving the final decision on this point in abeyance. The President had concluded by saying, before closing the meeting, that the great majority of members had pronounced in favour of the Hague system, and that he thought he could say that that was practically the unanimous opinion of the Conference. He had accordingly proposed, at the following meeting, to take up the consideration of the first article of the Regulation in its latest form, working provisionally on the lines of the Hague system.

The draft Convention, as M. Giannini had just explained, deviated from those lines by introducing a term of two years for denunciation.

At the second meeting of the Conference, the Chairman of the Committee of Experts, M. Percerou, had explained the methods proposed by the Committee of Experts. The method proposed deviated widely from that in the Preparatory Documents ; it was similar to the Hague method, but more rigid, except that it did not contain the time-limit for denunciation. The Conference had concurred in the opinion of the Chairman of the Committee of Experts, that that would provide a makeweight for the objections which would be felt by the Governments to binding themselves by a strict law adopted *en bloc* with no power to amend it in the more or less near future.

The Chairman of the Experts had said :

“ The Committee of Experts had proposed the following method : A text of laws or regulations could be drawn up. This text would be uniform, but would contain a larger number of reservations than usual, since it would have to be compulsory.”

It followed that a large number of entirely legitimate reservations had been anticipated, and M. Duzmans took the opportunity to say that the Conference might take comfort on one point — namely, that at this price it had a Uniform Regulation to propose to the Parliaments for their acceptance or rejection *en bloc*. That was a very valuable advantage.

M. Percerou had continued :

“ Parliaments would be called upon to adopt it on the understanding that this text would only enter into force if a certain number of States adopted it.”

A little earlier, in drawing attention to the toning-down of the Hague method, the Chairman of the Committee of Experts had said :

“ At The Hague, Parliaments had been asked, not only to ratify a uniform text, but also (and that was a more serious matter) to bind themselves not to modify that text, not only as an international convention, but also as an internal law during a period which might last as long as four years.”

The Hague Convention allowed three years for denunciation.

It was for reasons of the same kind that the right had been granted of making changes in another way.

M. Duzmans would be glad to know why the Scandinavian delegations had deviated from this policy, which was described in the Minutes of the second meeting. After discussing the value of the absence of any time-limit for denunciation, Baron Marks von Würtemberg, who had to-day submitted no amendment on Article 7, had said :

“ Nevertheless, it seemed to the Scandinavian delegations that these objections would lose much of their force if it was decided to suppress in the convention that should be eventually concluded any provision regarding its duration. If every Parliament knew that, while adopting a convention, it reserved the right to denounce it whenever it should judge fit, without the convention losing its validity for the other contracting parties, the Swedish delegation did not think there would be any talk of an infringement of national sovereignty. Those were the considerations which had led the Swedish delegation to consider that the idea of a convention of the same kind as that drawn up at The Hague, but differing in the sense that paragraph 2 Article 28 of the 1912 Convention would be suppressed (impossibility of denouncing the convention until a lapse of three years after the date of the first deposit of ratification).”

Such were the lines on which the debate at the second meeting had developed and everyone had concurred, for it had been felt that the abolition of any time-limit for denunciation was an effective method of achieving an agreement in accordance with the rigid arrangement of the Hague Convention.

The provisions of the drafts could be accepted by the Latvian delegation. M. Duzmans would have to return to the point of view which had been that unanimously shared by the Conference at the second meeting. There were serious reasons for doing so, since the delegates to the Conference would be required to furnish their Parliaments with explanations on this important constitutional question. He would further reserve his right to make, on behalf of his country, a statement on what appeared to him to be the best way of drafting this article.

Moreover, according to the new proposal, it might be thought that Article 1, paragraph 3, provided a makeweight. What was important was the power granted the States to submit reservations after the time-limit had expired. It might be assumed that the framers of the draft had considered that, as the principle of freedom in regard to denunciation had been abandoned by the determination of a two-years' time-limit — and in that a return was being made almost to the Hague system — it was desirable to have a makeweight. That argument could be put before the Parliaments. With this additional right to submit reservations, the determination of a time-limit did, of course, appear somewhat less dangerous; but it must, nevertheless, be asked whether it would not be preferable to refrain from fixing any time-limit for denunciation and, in that case, to abandon this right rather than introduce so unexpected an innovation, even though accompanied by a time-limit for denunciation.

The PRESIDENT had had great satisfaction in learning from M. Duzmans that, notwithstanding his observations, the draft Convention was not unacceptable by his delegation.

In order to obviate any misunderstanding, the President wished to give the following explanations on the decisions taken at the second meeting. Though at that meeting it had been decided that the Conference would keep to the Hague system that decision had meant that the States would bind themselves, in conformity with Article 1 of the Hague Convention, to introduce the uniform law textually, and therefore that the system of the Committee of Experts, according to which the countries would bind themselves merely to propose the uniform law to the competent authority — that was to say, to their Parliaments — was abandoned. That did not mean that at its second meeting the Conference had undertaken to conform to all the articles in the Hague Convention, and the reason why the President had spoken of conforming to the Hague system in its main lines had been in order to obviate the possibility of any criticism based on the grounds that a departure from it had been made in one article or another. The article concerning denunciation, which M. Giannini had just explained, was an absolutely essential compromise, if it were desired to secure the approval of all the States. If in a convention no time-limit for denunciation were fixed, there would arise a very difficult question which had formed the subject of proceedings between Belgium and China before the Permanent Court of International Justice and which the Court had not been called upon to settle, the two parties having come to an agreement. M. Duzmans had established a certain relation between Article 1, paragraph 3, referring to the time at which reservations must be submitted and to denunciation. M. Duzmans, however, was almost certainly mistaken. Besides, M. Giannini had already explained the considerations for which the group of delegations which had drawn up the draft Convention had made a distinction between the second and third paragraphs of Article 1. Speaking generally, it was desired that the countries which submitted reservations should formulate them not later than the time of ratification. In this way, everyone would know what the position was. That would be the rule. But there were certain exceptional cases which might justify reservations which would only operate in very special circumstances and might perhaps never be submitted.

Mr. GUTTERIDGE (Great Britain) said that, as the Convention would not be signed by Great Britain, he did not propose to discuss the text before the Conference. Silence on his part must not, however, be taken to mean that the British Government necessarily approved of the text in its present form or, in particular, of Article 9.

Prince VARNVAIDYA (Siam) recalled that M. Giannini had explained that the period allowed for signature had been fixed at thirty days because that period was considered sufficient for all the Powers represented at the Conference. It was not, however, sufficient for Siam, because the mail took twenty-five days and he understood that Conventions concluded under the auspices of the League usually provided for a longer period. M. Giannini had not given any reason why the period should be as short as possible.

Prince Varnvaidya fully realised that the Convention, and the Uniform Regulation primarily concerned the European States, but if there was no reason for fixing the time-limit at thirty days, he would like it to be raised to sixty days.

The PRESIDENT drew Prince Varnvaidya's attention to the fact that the time-limit of thirty days referred only to signature. If, at the end of the Conference, the Siamese representative had received the necessary powers for this purpose, he could sign the Convention then. Further, speaking generally, Conventions concluded under the auspices of the League more commonly provided for shorter time-limits — ten, fifteen or twenty days.

The President added that the Convention was not intended to apply only to the European States, but to all States.

Baron MARKS VON WÜRTEMBERG (Sweden) reminded the Conference that during the second meeting he had had the honour to suggest in the name of the Scandinavian delegations the idea

of a convention which could be denounced at any moment. As far as he was concerned, that was a suggestion designed as a compromise.

In the name of the delegations of Denmark, Norway and Sweden, he now declared that these States preferred the provisions concerning the right of denunciation which were to be found in the Hague Convention, but that, in cases when provisions of this kind might prevent ratification on the part of a number of States, they urged the adoption of the suggestion put forward at the beginning of the Conference.

M. SHIMADA (Japan) proposed, in the name of his delegation, that the period of twenty months provided for by Article 3 should be prolonged to twenty-four months.

The PRESIDENT pointed out that this suggestion had already been put forward by the Italian delegation.

ARTICLE I.

The PRESIDENT drew attention to the fact that the Japanese delegation had proposed the following addition to the first paragraph of this article :

“ Or to adopt in their respective systems of law all the fundamental solutions embodied in those regulations.”

The President thought that if this amendment were adopted there would no longer be a uniform law, but twenty or thirty different laws on the subject.

M. GIANNINI (Italy) reminded the Japanese delegation that he had already spoken about this question at the beginning of the work of the Conference. There were always certain differences when there was question of translating the original text into a widely different language. It was impossible to avoid that inconvenience ; but if the Conference adopted the formula proposed by the Japanese delegation there would be no longer any uniform law.

He reminded the Conference of the case of the Conventions of Brussels. Belgium had reproduced the French text of these Conventions literally in its legislation. A translation had also been made in Flemish which had been a textual reproduction of the text of the Conventions. On the other hand, translations made by other countries had departed somewhat from the original text, and in certain cases so much liberty had been taken that it had been impossible to determine whether they were translations of the Conventions themselves or of another law.

In this particular case, he was certain that there would be differences between the original text and the Japanese translation. Apart from that, no one could control the Japanese translation, unless Japan retranslated its translation.

To sum up, it seemed to M. Giannini that there would be sufficient elasticity in the translation from French to Japanese for M. Shimada not to insist upon his amendment.

M. SHIMADA (Japan) said that if his country was allowed sufficient elasticity for its translation he would not insist upon the amendment. But they would have to take into account Japanese legal technicalities and allow them a certain liberty in order to bring this system into harmony with their national laws. The Japanese delegation certainly had no intention to escape from the substance of the matter, but it was impossible for it to declare that its government would conform literally to the text.

If the Conference was unable to allow this point of view, it would be very difficult for the Japanese delegation to sign the Convention.

The PRESIDENT agreed that the translation into Japanese ought to be in conformity with Japanese mentality and customs. A translation should always be allowed a certain elasticity, but it should remain, nevertheless, a translation. It seemed impossible for other delegations to agree to the Japanese amendment.

M. SHIMADA (Japan) declared that the Japanese delegation did not insist upon its proposal, but it asked for the explanation it had given to appear in the report.

The PRESIDENT saw no objection to that course.

M. SULKOWSKI (Poland) said that Article 1 established a difference between two categories of reservations : those that ought to be indicated by each high contracting party at the time of its ratification or its accession and those which could be made after ratification or accession. In M. Sulkowski's opinion, the same procedure should be followed for reservations which could be made by States in urgent cases as for denunciation in urgent cases — *i.e.*, such reservations ought to come into force two days after the news of them had been communicated to the other contracting parties. As a matter of fact, instead of obliging a State to denounce the whole Convention, it was better to authorise it to make such a reservation, which could come into force after two days.

The PRESIDENT asked whether a decision should be taken immediately on this point. As a matter of fact, he thought that if this proposal were voted upon at the present moment it would be rejected. It was better to examine it during the second reading, at the moment when the list of reservations to be mentioned in the last paragraph of Article 1 was under discussion.

M. GIANNINI (Italy) agreed.

The PRESIDENT asked what would be the consequences of M. Sulkowski's proposal that reservations should come into force two days after notification. In his opinion, two aspects of the problem should be examined. The Conference should take into consideration the situation of the State which, in case of urgency, notified a reservation which would come into force two days later. But it must also take into consideration the situation of those persons who had signed bills of exchange which were in circulation at the moment when this reservation came into force.

As for the third paragraph of Article 1, the President drew attention to a slight improvement in the wording of the last sentence, which should read as follows :

“ Such reservations shall not take effect before the ninetieth day following the receipt. . . ”

M. VISCHER (Switzerland) pointed out that Article 23 of the Hague Convention ran as follows :

“ The Contracting States bind themselves not to change the order of the articles of the Regulation when introducing modifications or additions which they are authorised to make.”

M. Vischer asked if this provision had intentionally not been inserted in the present draft Convention, since it seemed to him to be of practical importance.

The PRESIDENT thought it was better not to reproduce this provision in the Convention. He quoted the following example : Supposing France intended to introduce the uniform law in its legislation, and supposing that the first article of its legislation on bills of exchange was, for example, Article 114 of its Commercial Code. France therefore would modify Articles 114, 115, 116 to bring them into harmony with the uniform law. An Article 117 would follow, whose provisions did not occur in the uniform law but which could exist, nevertheless, because it was not in contradiction nor incompatible with the uniform law. However, if the proposal of M. Vischer were adopted, it would be necessary to carry this Article 117 right to the end of the chapter on bills of exchange, and the President suggested that States should be allowed full freedom in this matter.

M. VISCHER (Switzerland) had put forward no definite proposal. If the President thought that it was better not to insert this provision in the draft Convention, he would not insist.

Article 1 was approved at a first reading.

ARTICLE 2.

M. DUZMANS (Latvia) thought that the period of thirty days signature provided for by this article was too short. He pointed out that, for psychological reasons, when the period was short, signatures were less numerous. Experience had often proved that.

The PRESIDENT put forward a suggestion concerning this period. He reminded the Conference that in Article 3 it had been proposed to prolong the period of ratification from twenty to twenty-four months. It seemed to him that if the Conference accepted the figure of twenty-four months for Article 3 it would be quite willing to prolong the period for signatures from thirty to sixty days, and the President hoped that that would satisfy M. Duzmans.

M. DUZMANS (Latvia) said that he was completely satisfied.

The President's suggestion was adopted.

Article 2 was approved at a first reading.

ARTICLE 3.

The PRESIDENT said that the time-limit of twenty months would be increased to twenty-four months.

Article 3 with the amendment was approved at a first reading.

ARTICLE 4.

Article 4 was approved at a first reading, the time-limit of thirty days being increased to sixty days.

ARTICLES 5 AND 6.

Articles 5 and 6 were approved at a first reading.

ARTICLE 7.

The PRESIDENT said that a small improvement had been suggested in the text. The third paragraph would read :

“ A High Contracting Party which denounces the Convention shall *directly* and immediately notify. . . ”

Further, a sentence would be added to the following effect :

“ A High Contracting Party denouncing the Convention under these circumstances shall also inform the Secretary-General of the League of Nations of its decision.”

Further discussion on Article 7 was postponed till the next meeting.

ARTICLES 8, 9 AND 10.

Articles 8, 9 and 10 were approved at a first reading.

PROTOCOL OF THE CONVENTION.

ARTICLES 1, 2 AND 3.

Articles 1, 2 and 3 were approved at a first reading.

The PRESIDENT put to the vote an Italian recommendation asking the Rome Institute of Private International Law to study the question of guarantees (*fidéjussion*).

This recommendation was adopted.

The PRESIDENT put the following recommendation to the vote :

“ The Conference, for the purpose of obviating the adoption of texts of the Uniform Law in the same language but containing divergencies of translation, recommends that States having the same official language should prepare the official translation of the uniform law in consultation with one another.”

M. MONTEJO (Spain) proposed the addition of the words “ and of the Conventions ”.

The recommendation with the foregoing amendment was adopted.

TWENTY-SEVENTH MEETING.

Held on May 31st, 1930, at 10.30 a.m.

President: M. J. LIMBURG.

36. Discussion of the Draft Convention providing Uniform Regulation for Bills of Exchange and Promissory Notes (Continuation).

ARTICLE 7 (Continuation).

M. DUZMANS (Latvia) said he would only speak on Article 7. First of all, he wished to explain his intervention in this very important question. The personality of the experts who had drawn up the draft and had sacrificed their time and energy to the task they had undertaken made it imperative that any attempt to criticise the work of such a body should be set about with prudence. He would therefore speak on this question with all due respect.

The respect due to the experts required that the Conference should be accurately informed of the reasons which had led them to adopt the text presented. This course, however, had not been taken.

It had been for that reason that M. Duzmans had intervened at the previous meeting, and he stood by his argument. The Latvian delegation had brought forward no concrete proposal, but it now raised the matter in the hope of bringing about a useful discussion on this matter of primary importance.

Nor would he bring forward any amendment concerning the substance of the question — namely, the period for denunciation of the Convention. His delegation was not completely satisfied with the actual form of the Convention and its attitude would not be appreciably modified if an amendment did away with the period for denunciation. It was necessary to emphasise the fact that Parliaments would be confronted with many difficulties concerning ratification.

It would be a mistake to think that the duration of the Convention would be shortened should there be no period for denunciation. The result was quite the contrary ; and the proof of this was that when a lasting Convention was made — such as, for example, that on the suppression of counterfeiting currency — no period for denunciation was fixed and not even the duration of the Convention.

Consequently, the fact that no period for denunciation had been fixed would not mean that the Conference had only wished to give a short lease of life to the work undertaken. The contrary was the case.

They should distinguish between the duration of the Convention and the period for denunciation. Those were two completely different things. M. Duzmans wished to point out the difference because he himself had had the chance to obtain information privately on some of the questions discussed by his colleagues in the Conference, and in doing so he had had the impression that some of them had confused the duration of the Convention and the period for denunciation.

The Latvian delegation wished no period for denunciation to be fixed in the Convention, because it hoped that such a Convention, as its nature merited, would last for ever.

M. Duzmans rather hoped that some slightly more detailed explanation of the economic aspects of the Convention might be made. It would not arouse any discussion, and for that reason he had not brought forward any proposal of amendment. Moreover, he would probably not have intervened in the discussion if his country had been the only one concerned.

The Conference should not forget that it was becoming increasingly necessary for the League of Nations to concern itself with the ratifications of the agreements that had been drawn up under its auspices. Care should be taken in this matter, especially from a psychological point of view. The League convened conferences, and its prestige had everything to gain by a large number of ratifications. M. Duzmans himself was the permanent delegate of his country attached to the League of Nations. He was, if he might say so, a devotee of the League of Nations, and for that reason he had wished to speak on this subject. It should also be remembered that the League of Nations had set up a special Committee to study the causes of the refusals to ratify the various Conventions that had been signed.

It was with the desire of securing more ratifications that M. Duzmans hoped that one of the fully authorised members of the group that had drawn up the text of the Convention would make a statement on the matter. If this were impossible, could not some explanations be given in the report when it was drawn up?

The PRESIDENT said that the Latvian delegate was inspired by the ideals of the League. He thanked him in the name of the Conference for his conciliatory spirit. It seemed likely that Article 7 could be easily voted.

M. GRÖNVALL (Finland) thought also that there was no reason to fix a compulsory period of two years for the duration of the Convention for the Unification of the Laws on Bills of Exchange and Promissory Notes. Not that there could be a real need for any State to denounce the Convention before that time, but, on the contrary, because the State that had ratified the Convention or acceded to it after modifying its internal legislation according to the principles of the Regulation would always keep this legislation intact as long as possible in the interests of trade, and consequently would not denounce the Convention within a period of two years.

As this was the situation, it seemed useless to insert in the Convention a provision which appeared to restrain the liberty of the legislative bodies of the contracting States, but which was of no practical necessity.

M. GIANNINI (Italy) wished to draw the attention of the Conference to the fact that it was impossible to base international engagements merely on the hopes expressed by M. Grönvall and which he himself shared. When a Government signed a Convention which compelled it to revise its whole legislation, it ought at least to be certain that the international agreement would last for a certain time ; but if, on the contrary, denunciations could be made fifteen days after signature, he wondered whether there was really any chance of coming to an agreement.

The Finnish delegates thought that in practice that would not happen. There was consequently no inconvenience in keeping to this formula, which gave a certain security to States signatories to the Convention, and confidence in their security, at least for a certain time. For that reason, M. Giannini asked M. Grönvall not to insist on his suggestion.

M. GRÖNVALL (Finland) thought that the provision was useless, but since the majority of the Conference was in agreement he would not press his point.

The PRESIDENT replied that Article 7 had been inserted in the Convention in a spirit of conciliation. The Hague Regulation prescribed a period of denunciation of three or four years, and no State had ratified this Regulation or the Convention. The world war had been one of the principal reasons, but not the only one. A book written by four distinguished jurists, including M. Lyon-Caen, gave interesting explanations on this point. For example, the French Parliament had been extremely jealous of its rights — right of amendment and right of initiative — and it might be said that in theory — for it sometimes happened that Parliaments concerned themselves with theory — Parliaments were deprived of their rights by the Uniform Regulation and the Convention for a period of four years, during which time they were unable to modify their legislation. That was quite true ; but, on the other hand, it might be argued that according to this theory, it would never be possible to obtain any ratifications, whereas it seemed that in this case they would be obtained. This would be the first time that there had been an international codification of domestic law.

The members of the Conference, many of whom were, or had been, members of Parliament, realised how jealous Parliaments could be. For that reason, the present text gave a shorter period for denunciation : contracting parties would be bound for a smaller number of years than in the Hague Convention.

Moreover, a safety-valve was provided for urgent cases. If unforeseen circumstances in some country or another made it necessary to modify one of the articles, then the rule prescribed by Article 7 could be brought into play. This rule was of such a kind as to reassure the French Parliament and those other Parliaments which, once the question had been raised, would be animated by the same spirit of jealousy for their rights of amendment and initiative.

All that was mainly theoretical, for the legislation of countries would not be abruptly changed by the introduction of such a law. It would be necessary to wait until custom and jurisprudence should point out certain difficulties, and in such a case the Secretary-General of the League would convene a new conference to remedy these difficulties at the request of one or more of the high contracting parties. Such was the practical, apart from the theoretical, side of the matter.

By Article 7 the Conference safeguarded both the theoretical aspect and the rights of parliaments ; but everyone was quite convinced that there would be no occasion for the article to come into force.

Article 7 was approved at a first reading.

ARTICLE 9.

The PRESIDENT drew attention to the provision in Article 9 that, " in the absence of a contrary declaration . . . the provisions of the present Convention shall not apply to colonies, oversea territories, protectorates or territories under suzerainty or mandate ". That was the system that had been adopted during the last years whenever conventions concluded under the auspices of the League of Nations were drawn up, but it went without saying that an opposite system might be adopted, such as that proposed by the British delegation¹ for the Convention on stamp Laws — namely, the possibility for any high contracting party, " at the time of signature, ratification or accession, to declare that, in accepting the present Convention, it does not assume any obligations in respect of all or any of its colonies, protectorates or territories under suzerainty or mandate ". Consequently, without this declaration the Convention would apply equally to colonies.

The President suggested that the British system should be introduced into Article 9, for the British delegation had received formal instructions from its Government according to which, should Article 9 be adopted as it was at present worded, it would be obliged to make a reservation.

M. GIANNINI (Italy) thought that it was impossible to reproduce the formula of the general Convention in the Fiscal Convention, which covered other requirements. The general Convention contained certain rules which had been expressly drawn up for the General Exchange Convention, but which could not be reproduced in the other Convention.

The PRESIDENT agreed with M. Giannini that the British proposal was obviously meant to apply to the Fiscal Convention, because Great Britain was as yet unable to sign the General Convention.

Mr. GUTTERIDGE (Great Britain) could definitely say on behalf of his Government that it would be unable to sign the Convention on the Conflicts of Laws in its present form.

The PRESIDENT said that in that case the British reservation only referred to the Fiscal Convention, but it seemed to him somewhat curious to sign two Conventions on the same day, one of which contained one system and the other a second system for the colonies. However, if the Conference thought there was no inconvenience in adopting a double system, Article 9 could be kept without any change.

Mr. GUTTERIDGE (Great Britain) said that, if he had been going to sign the Convention on the Conflicts of Laws, he would have asked that the clause in question — the Colonial Clause — should also be inserted in that Convention, because, for various reasons, the form which he had suggested was for the British Empire the only one that worked with smoothness. Inasmuch, however, as the British Government was not going to become a party to the Convention on the Conflicts of Laws, he did not press for the insertion of the clause, but merely called attention to the fact that the colonial clause, as put in the Convention on the Conflicts of Laws, was probably not quite what the British Government would have desired.

He did, however, press for the insertion of the clause in the Fiscal Convention. There was a difference between the two cases, and he thought M. Giannini agreed with him that, as the object of the two Conventions was different, there was no real reason why the clauses should be the same.

The PRESIDENT personally was not in favour of modifying Article 9. He had merely wished to point out that it seemed to him curious that several conventions should be signed on the same day, one of which contained a different colonial system from that in the other. It was essential to have the British system in the Fiscal Convention, for otherwise Great Britain would be unable to sign the Convention. That was the reason for the introduction of this colonial provision in the other Conventions.

M. GIANNINI (Italy) asked if it was understood that the general rules already set up by the Conference would be adopted also in the Convention on the Conflicts of Laws and in the Fiscal Convention, with the exception of slight modifications. For the Conflicts of Laws, for example, it would be impossible to keep the penultimate paragraph of Article 7 concerning denunciation, and in the Convention on Stamp Laws it would be superfluous to make provision for urgent cases, for to do so might provoke the denunciation of the Convention. It was the same for the Conflicts of Laws, since the rules that had been inserted there were not of such a nature as to influence the general economic organisation of a country. That was merely a standard that could be used in settling any particular question.

As for the question of the colonies, M. Giannini pointed out that the Conventions had different aims in view, and consequently there was no difficulty in introducing a different rule in one of them from that adopted in the other. If the Conference, in its desire to harmonise these different Conventions, wished to modify Article 9, M. Giannini would not oppose the step, but he wished to know quite clearly how the question of urgent denunciation of the convention on the Conflicts of Laws and of the convention on Stamp Laws were going to be settled.

¹ See Annexe n° 13.

The PRESIDENT was glad that M. Giannini had raised this question, which would allow him to clear up certain points in order to avoid any confusion.

Certain articles of the Convention providing uniform regulations for bills of exchange and promissory notes ought not perhaps to be introduced into the other Conventions. For example, the Conventions on the Conflicts of Laws and on Stamp Laws would not require such a clause ; and Article 7 in its present form would not appear in them.

The Conference might therefore confine its discussions to the question whether it wished to adopt the system of the present Article 9 for colonies or to substitute the British system in order to avoid the necessity of having a reservation put forward.

Mr. GUTTERIDGE (Great Britain) did not want to mislead the Conference. His instructions were that even in the Fiscal Convention there should be a denunciation clause.

The PRESIDENT replied that there was a clause for denunciation in every ordinary convention, and that one would be inserted in the Convention on Conflicts of Laws as well as in the Fiscal Convention ; but it would merely be the ordinary denunciation clause and no special clause would be provided to meet urgent cases.

Mr. GUTTERIDGE (Great Britain) realised that he had misunderstood the President and offered his apologies.

The PRESIDENT asked the Conference whether it was prepared to substitute the British colonial clause for the actual colonial clause in Article 9.

The Conference adopted the colonial clause proposed by the British delegation.

M. GIANNINI (Italy) emphasised the fact that it ought to be well understood that the general clauses of this Convention would also be reproduced in other conventions, except for the penultimate paragraph of Article 7 which dealt with urgent cases.

The PRESIDENT replied in the affirmative.

The beginning of Article 7 would also have to be slightly modified. The expression " except in urgent cases " would have to disappear.

The Convention as a whole was approved at a first reading.

37. Discussion of the Draft Uniform Regulation for Bills of Exchange and Promissory Notes (Continuation).

ARTICLE 62 (REDRAFT).

The PRESIDENT read the Czechoslovak and Lithuanian amendment as revised by the Drafting Committee :

" The person who pays by intervention acquires the rights resulting from the bill of exchange against the person for whom he has paid and against those who are bound to the latter by the bill of exchange."

M. HERMANN-OTAVSKY (Czechoslovakia) explained that the words " resulting from the bill of exchange " were intended to emphasise the fact that the rights in question were rights under exchange law.

The amendment was adopted.

ARTICLES 47 AND 48 (SWISS PROPOSAL).

M. VISCHER (Switzerland) said that neither the experts nor any of the Governments had proposed that the right to a commission should simply be omitted without any reservation. He had been surprised by the decision adopted and, at the time when it had been taken, had been unable to advance the objections which appeared to him essential. He had assumed that there would be no opposition to the experts' proposal, that it should be left to each country to decide whether to retain in its national system of law the right to a commission, a practice that was current in the countries where the " Deutsche Wechselordnung " obtained. The experts, who had endeavoured to prevent all reservations as far as possible, had agreed that an exception might be made in regard to commissions.

M. Vischer had received categorical instructions from his Government to request the Conference either to reintroduce the right to a commission in the body of the law, on the lines of the Hague Regulation, or to allow a reservation in favour of the national systems of law.

In Switzerland, the right to a commission was held to be a small but legitimate compensation for the work involved for the holder in the event of the non-payment of a bill. The banks, especially in the case of discounted bills, greatly preferred to have a fixed commission assigned to them by law, which commission they could demand under exchange law at the same time as the amount due to them. It could not be expected that the banks should make no charges for their work. If the commission were done away with, that would entail the suppression of any compensation, and the holder would merely be assigned the recovery of his expenses and interest on the unpaid sum of money. The banks would, in that case, seek for another means of recovering payment for their work. They would practise special rates for cashing bills of exchange, and these rates might be very high. It was precisely in order to obviate such rates that the Swiss Government wished to maintain the legal right to a commission. Their object was to protect the debtor and not to deliver him bound hand and foot to the mercy of the banks and to rates which might go beyond all reasonable bounds. Experience showed that, generally speaking,

the banks were satisfied with the commission allowed in exchange law, a commission which was fairly small and which caused no trouble in recovery. Only in exceptional cases did the banks ask for any additional commission or compensation in common law.

M. Vischer believed that those countries whose law did not provide for a commission might adopt it without trouble, and that in doing so they would not be acting to the detriment of the debtor but, on the contrary, to his benefit. No one at The Hague had apparently been opposed to the right to a commission. As to the rate, M. Vischer did not propose to suggest any definite figure. His amendment indicated the rates at present in force in Switzerland, a number of different proposals having been made in this connection. He could, however, agree to the rate of $\frac{1}{4}$ per cent proposed by the Austrian delegate.

Should the Conference refuse to incorporate the right to a commission in the body of the law, he would strongly urge it to allow the reservation which he had requested,¹ since it was a matter of much importance to Switzerland that the right to a commission should not be prohibited formally.

As to the reservation, M. Vischer did not insist on any definite wording. He would consent to its being formulated in more general terms than those he had proposed.

The PRESIDENT observed that the Conference had decided not to allow commissions under the Convention.

M. EIGTVED (Denmark) said that the Danish, Swedish and Norwegian delegations had voted a few days previously in favour of disallowing commissions, their object being to achieve uniformity and to obviate reservations, and because they had hoped that other delegations would show a spirit of reciprocity. As, however, uniformity did not appear to be possible, if the right to a commission was disallowed, it might perhaps be possible to achieve uniformity by keeping it. With this aim in view, the Scandinavian delegations were prepared to support the Swiss proposal, especially as the question seemed to them one of minor importance and as the law of the countries concerned contained provisions concerning commissions.

M. SOKAL (Austria) said that commissions were not an invention created by the banks in a conspiracy to make their bills as high as possible for debtors who had not paid debts resulting from bills of exchange. If a misconception of that kind was likely to result from the discussion of the previous week on the question of commissions, it would only be fair to draw the Conference's attention to the fact that the arguments in favour of commissions had been based on the following considerations.

The holder calculated that the sum specified in the bill would be paid on maturity, because the debt was governed by specially strict conditions, seeing that it resulted from a bill of exchange. In order to compensate the holder for his work and to repay him the expenses due to the necessity of procuring the sum immediately, he had been allowed a commission.

There is no reason for refusing the holder the protection afforded him by the various rights granted in view of that consideration.

There was another noteworthy reason as well. The commission was the outward sign of the strict character of a bill of exchange in so far as concerned the debtor. It was true that in many countries there was no need to use any such method to educate debtors, but in order to emphasise the importance of the obligations contained in a bill of exchange in countries which had not reached the same degree of economic development, it would be advantageous to adhere to commissions, so as to make it clear that default of payment was an extraordinary case involving extraordinary consequences.

For these reasons, M. Sokal supported M. Vischer's proposal.

M. QUASSOWSKI (Germany), on behalf of his delegation, supported the Swiss proposal. The experts themselves had considered it desirable to leave it to the national law to decide whether the right to a commission should be maintained. He concurred in that opinion. The countries which were in favour of the right to a commission merely asked for the retention of a practice to which they had become accustomed in actual business.

M. SCHMIDT (International Chamber of Commerce) also supported the Swiss amendment, for in his view it was quite fair that a small commission should be allowed to a man who had paid a bill of exchange in recourse, since this sometimes obliged the endorser to procure money from his banker and to incur certain expenses. The International Chamber had proposed $\frac{1}{6}$ per cent. M. Schmidt thought that the various Governments would be satisfied if the Swiss amendment was adopted.

M. SULKOWSKI (Poland) associated himself with M. Schmidt's remarks as to the desirability of substituting for the rate indicated in the Swiss amendment the rate of $\frac{1}{6}$ per cent, both in Article 47 and in Article 48. This amendment was in conformity with the provisions of the Hague Regulation.

M. HERMANN-OTAVSKY (Czechoslovakia) observed that the Czechoslovak delegation's point of view was summed up in the amendment which he had submitted to Article 47 and 48, but which had been rejected. That point of view was also embodied in the reservation which it had proposed and which had also been rejected.

The Czechoslovak delegation concurred in the Swiss proposal.

M. Deoclecio DE CAMPOS (Brazil) said that his delegation adhered to the proposal to omit any legal rate for commission. In a spirit of conciliation, however, the Brazilian delegation were

¹ See Annexe n° 14.

prepared to support the reservation made by the Swiss delegation to the effect that the national law would be left to determine the rate.

M. PERCEROU (France) understood that the Conference had already taken a decision on the question whether certain provisions relative to commission should be introduced in the Uniform Regulation. The reasons for which it had been decided to drop the right to a commission still subsisted. He would not therefore oppose the reservation made in the sense indicated by the Swiss and German delegations. He thought, nevertheless, that the reservation should be worded somewhat differently, since Articles 47 and 48 related to two distinct matters : the first to the case of a protest and the second to that of a third party who had intervened for payment. These two cases could not, in M. Percerou's opinion, be combined in a single formula. He would therefore in due course propose a somewhat different wording. He was in principle prepared to accept the reservation asked for by the Swiss delegation.

M. GIANNINI (Italy) observed that originally the Italian delegation had thought that a definite rule should be laid down, though one allowing certain guarantees in the interests of trade. As, however, the Conference had been unable to agree on the amount to be specified in Articles 47 and 48, the Italian delegation had voted against any rule being made in the uniform legislation and it would still vote against it.

There remained the question of a reservation. In this connection, M. Giannini pointed out that a new reservation had been applied for on the very eve of the discussion to be held on the possibility of restricting reservations. He would not oppose the reservation ; he would acquiesce in it without supporting it. He would accept it for the reason that it appeared to him impossible to determine the rate of the commission in a uniform law, since, if the law contained a provision of that kind, the provisional practice would become the rule. It might be hoped that the practice was purely temporary which would gradually disappear, and for that reason it would be better to have a certain degree of elasticity.

Secondly, he did not think it possible to compel all those countries which did not wish to allow the right to a commission to submit to it, as could not fail to happen if the uniform law contained a provision on the subject.

Lastly, the amount of the rate should be fixed in accordance with the special requirements of each country, and in those circumstances it would be better to leave each State entirely free.

Consequently, and subject to drafting alterations, M. Giannini proposed that the Conference should accept neither the amendment to Articles 47 and 48 nor the reservation proposed by the Swiss delegation, but a formula drafted in more elastic terms which might read as follows :

“ By derogation from Articles 47 and 48, each High Contracting Party shall have the power to prescribe that the holder may also recover a commission, the amount of which shall be determined by the national law.”

M. Giannini proposed that the matter should be left to national law, for the reason that the provision in question was a special one, which could not be made universal ; in the same way, it was clearly impossible to adopt any unduly rigid rule since the general economic situation and the special economic situation of each country might vary from time to time.

M. GRÖNVALL (Finland) concurred in M. Giannini's opinion.

M. VISCHER (Switzerland) thanked M. Giannini for the spirit of conciliation he had shown and said that he could accept the text he had proposed, provided that the Conference allowed the possibility of making a reservation on this question. As, however, the representatives of the Northern States had already declared, certain countries would prefer a uniform solution which would obviate the necessity for any reservation.

With the object of reaching agreement, if possible, M. Vischer could accept M. Sulkowski's proposal to reproduce the text of the Hague Convention, whereby the commission would be fixed at $\frac{1}{6}$ per cent in both Article 47 and 48.

The PRESIDENT proposed to put to the vote first the Swiss proposal for the amendment of Articles 47 and 48 (48 and 49 of the new text).

The fourth paragraph of Article 48 (new text) would read as follows :

“ A commission which, in default of agreement, shall be $\frac{1}{6}$ per cent on the principal sum payable by the bill.”

The fourth paragraph of Article 49 (new text) would read as follows :

“ A commission which, in default of agreement, shall be $\frac{1}{6}$ per cent on the principal sum payable by the bill.”

The above amendment was put to the vote and was rejected by 14 votes to 14.

The PRESIDENT said that he would next put to the vote the Swiss delegation's application for a reservation. He believed he was right in understanding that M. Vischer had concurred in M. Giannini's suggestion, so that the text would be as follows :

“ By derogation from Articles 48 and 49, each High Contracting Party shall have the power to prescribe that the holder may also recover a commission, the amount of which shall be determined by the national law.”

M. PERCEROU (France) proposed an amendment to this text in order to take into account the two different cases covered by Articles 48 and 49. He suggested the following wording :

“ By derogation from Article 48 of the uniform law, each High Contracting Party reserves the right to embody in its national law a provision prescribing that the holder may recover, from the person against whom he exercises his right of recourse, a commission the amount of which is determined by the national law.

“ The same provision shall by derogation from Article 49 apply to any person who, having paid the bill of exchange, seeks to recover the amount from the parties liable to him.”

M. GIANNINI (Italy) agreed to the text proposed by M. Percerou.

The text proposed by M. Percerou was adopted by 23 votes to 3.

38. Examination of the Draft Uniform Regulation on Bills of Exchange and Promissory Notes :
Text of the Uniform Regulation—drawn up by the Drafting Committee : Second Reading.¹

NOTE.—*The Conference, realising the difficulty of discussing simultaneously a text drawn up in both official languages, decided to adopt the following procedure. The discussion took place entirely on the French text, and it was only after a provisional or final decision had been taken that its translation into English was made and submitted to the Conference. For that reason, it has been impossible to reproduce the English text in the record of the discussions until that text became final.*

The PRESIDENT said that, in conformity with the Conference's wishes, delegates would not be entitled to raise points of substance at the second reading.

CHAPTER I. — ISSUE AND FORM OF A BILL OF EXCHANGE.

ARTICLE 1.

Adopted.

ARTICLE 2.

Adopted.

ARTICLE 3.

Adopted.

ARTICLE 4.

The PRESIDENT asked whether the Drafting Committee had intentionally omitted from this article the words “ domiciled bill ” which had appeared in brackets in the original article.

M. PERCEROU (France), member of the Drafting Committee, said that the words had been omitted deliberately and that an explanation appeared in the report of the Drafting Committee.

M. SHIMADA (Japan) stated that the Japanese delegation was of opinion that according to his interpretation of Article 4 the drawer could specify a domiciliary. In consequence, and as a result of the observations which his delegation had submitted on the translation into Japanese, which might be very free, that point would be clearly explained in the new Japanese law. He hoped that the Conference would be good enough to accept that point of view.

M. VAN NIEROP (Netherlands) had always somewhat feared arguments *a contrario*. He pointed out that Article 4 stipulated : “ A bill of exchange may be payable at the domicile of a third person either in the locality where the drawer has his domicile or in another locality ”. He wondered whether it might not be concluded that a bill of exchange could not be payable at the domicile of the drawee in another locality, for cases of that kind very often happened. M. van Nierop would like to be reassured on the matter.

M. PERCEROU (France), member of the Drafting Committee, reassured M. van Nierop, and stated that it had never been desired to exclude that possibility.

M. VAN NIEROP (Netherlands) asked that the interpretation should appear in the Minutes.

M. DUZMANS (Latvia) had no observation to submit in regard to Article 4. He wished to make several remarks on a series of articles. Those remarks concerned the whole of the text, and in order to shorten the discussions he had drawn up a memorandum which he was prepared to submit to the Drafting Committee. There would then be no need for him to intervene in the plenary meeting.

M. PERCEROU (France), member of the Drafting Committee, considered that it would be better to submit the remarks in public. Very often questions of drafting involved questions of principle.

¹ In order to avoid annexing two documents almost alike in their contents, it has been thought unnecessary to reproduce the text of all the articles submitted by the Drafting Committee. Only the text of articles which were amended as the result of discussion have been included. The texts which were not changed will be found either in the final report of the Drafting Committee or in the text of the Conventions themselves.

The PRESIDENT asked M. Duzmans to hand him the memorandum¹. If he considered it advisable, he would forward it to the Drafting Committee, but if he perceived that it concerned questions of principle he would not do so. In the latter case the memorandum would have to be considered as having been submitted too late.

M. DUZMANS (Latvia) accepted the President's suggestion, but asked that his memorandum should be distributed.

The PRESIDENT replied that if it raised questions of principle it could not be added to the documents of the Conference.

Prince VARNVAIDYA (Siam) suggested that, as the proposals were only drafting proposals, it would save time if M. Duzmans could indicate briefly the desired changes which the Conference could refer to the Drafting Committee if it so decided.

M. DUZMANS (Latvia) thought that it would nevertheless be better if he spoke on each article in turn.

When the Regulation came to be applied in practice, each numbered paragraph would become a self-sufficient text, and there would be no need to refer in each case to the context or to the other numbered paragraphs. It would therefore be desirable to substitute in Article 1 the word "indication" for the word "celle".²

The PRESIDENT thought there was no need to make any change. If a country proposed to embody Article 1 in its law and translated that article, it was entitled, if it thought necessary, to replace the word "celle" by the word "indication".

M. DUZMANS (Latvia) did not agree.

M. ALBRECHT (Germany) said that in the English text the wording was "statement of the place" and not "that of the place". The English and French texts should be uniform, and he would prefer "statement of the place" in both texts.

M. GIANNINI (Italy) understood that, at the outset of the proceedings the Conference had agreed that no amendments should be made on points of detail in the text of the articles. The articles of the Regulation had been studied at length and the Conference had had the benefit of the experience acquired in certain countries. Further, prior to the world war, certain countries had prepared a translation of the Hague Convention, and there was no need to do that work over again.

He proposed, therefore, to keep to the Hague text, unless the Conference wished to make any changes for certain reasons which were of great importance.

M. SHIMADA (Japan) asked whether in the new Japanese law it would be possible to say that the drawer might specify a domiciliary.

The PRESIDENT replied in the affirmative.

Article 4 was adopted.

ARTICLES 5 AND 6.

Adopted.

ARTICLE 7.

Adopted.

ARTICLE 8.³

In Article 8, the word "devoirs" in the French text was replaced by the word "pouvoirs".

The PRESIDENT drew attention to the observations of the Yugoslav delegation.⁴

M. EISNER (Yugoslavia) stated that the Yugoslav delegation had wished to draw attention to the disagreement which existed between the opinion of the Drafting Committee and the opinion of the Conference in regard to the meaning of the second sentence of Article 8.

The observations in the report of the Drafting Committee on Article 8 emphasised that, when the signatory had acted not without any power but in excess of his powers, he was personally liable for the whole amount. "It is in this sense", the report continued, "that the Conference declared that it understood the second paragraph of Article 8". The Yugoslav delegation considered that the Conference had not expressed such an opinion. The discussion in the plenary meeting of the Conference had developed along the following lines. The Yugoslav delegate had

¹ See Annexe n° 15.

² No change required in the English version.

³ The text of Article 8 proposed by the Drafting Committee was as follows :

"Quiconque appose sa signature sur une lettre de change, comme représentant d'une personne pour laquelle il n'avait pas le pouvoir d'agir, est obligé lui-même en vertu de la lettre et, s'il a payé, a les mêmes droits qu'aurait eu le prétendu représenté. Il en est de même du représentant qui a dépassé ses devoirs."

⁴ See Annexe n° 16.

explained that, in his opinion, according to Article 8, the representative, if he exceeded his powers, was liable under the terms of the bill of exchange for the whole amount, and the person represented was liable within the limits of the powers given him. The text, however, was not sufficiently clear as regarded the liability of the person represented.

The Italian delegation had stated that the person represented could not be bound, even for the smallest sum, since that would be contrary to the fundamental principle of the independence attaching to a bill of exchange. It might be concluded that the Italian delegate was of opinion that in such a case the representative was liable for the whole amount and the person represented for nothing at all.

The other view was supported by Dr. Hammerschlag. He had said that where, for instance the representative had been given power to issue a draft for 10,000 francs and issued one for 20,000 francs, he was liable for the amount for which he had exceeded his powers — that was to say, for 10,000 francs, the person represented being liable only in respect of the rest. “ That is only natural ”, Dr. Hammerschlag had said. The President would appear to have been of the same opinion.

The Yugoslav delegation had thus had the impression that, in view of the opinions of the President and Dr. Hammerschlag, the Conference had decided to reject the Yugoslav proposal.

The point of view that the person represented was liable within the limits of the powers given him and the representative for the rest was at least strictly logical. The Yugoslav proposal, however, had been designed primarily to improve the position of the holder by giving him greater security and at the same time to prevent undesirable speculation at the expense of the holder and the guarantors.

The Drafting Committee's point of view, if M. Eisner had understood it aright — namely, that the representative alone was liable for the whole amount and the person represented for nothing — was, in the first place, contrary to the real liability of the person represented and, in the second place, opened up the possibility of speculation harmful to trade. It exposed the holder and the guarantors to the risk of losing the whole amount, in view of the unsatisfactory position of the representative, since they would rely primarily upon the value of the guarantee of the person represented.

It would be seen from what he had just explained that the question had become even less clear than before.

In view of the divergencies in the views mentioned on the one hand and the lack of precision on the other, this important question was likely to be interpreted in different ways.

For these reasons, it was essential, in the opinion of the Yugoslav delegation, to have an exact text in accordance with one or other of the interpretations.

M. PERCEROU (France) stated that the report reproduced the interpretation which the members of the Drafting Committee had believed to be that of the Conference. If such was not the case, it was obvious that the report would have to be modified.

When a person had signed a draft for a sum exceeding the limit of his power, would the holder have to divide his action for payment — that was to say, would he have to sue the person represented for one part of the amount and the representative for the other part? That would appear to be incompatible with the indivisible character of bills of exchange.

The PRESIDENT observed that the relation between the representative and the person represented remained subject to the rules of the common law. In his view, the report was in conformity with the decisions taken by the Conference.

Moreover, it did not seem to be necessary to alter those decisions, for the holder could not tell to what extent the representative had powers.

The holder would begin by referring to the representative, but there remained the legal relation under common law between the representative and the person represented.

Article 8 said very clearly that when the holder of a bill of exchange knew that the representative had exceeded his powers — in most cases he could not know whether it was by 10,000, 12,000 or 15,000 francs — he could go back on the representative. The representative would have recourse against the person represented but under common law.

M. EISNER (Yugoslavia) asked what would happen in cases where the representative possessed nothing.

The PRESIDENT observed that the same question arose when the representative had no power.

There was always the legal relation under common law between the representative and the person represented.

In such cases, it was for jurisprudence to decide what action should be taken.

To elucidate that, it would be necessary to say that the person represented would be responsible for the amount for which he had given a mandate and that the representative would be responsible for the rest. That would create very great difficulties. It would be necessary to divide the amount, and the holder would have to prove for what sum the person represented had given a mandate to the representative. That would be a *probatio diabolica*.

Jurisprudence would decide the point in question, and everything would probably be cleared up without great difficulty.

Baron MARKS VON WÜRTEMBERG (Sweden) proposed that the question should be referred to the Drafting Committee.

M. PERCEROU (France) observed that the Drafting Committee had given its opinion, which was formulated in the report.

The PRESIDENT proposed that Article 8 should be adopted provisionally on the understanding that the Conference would be able to return to it, if necessary.

Article 8 was adopted provisionally.

ARTICLE 9.

Adopted.

ARTICLE 10.

Adopted.

ARTICLE 11.

The PRESIDENT noted that the last sentence of the article contained the expression “à nouveau”, while Article 14 said “de nouveau”. Should two different expressions be maintained?

M. PERCEROU (France) replied that the expression “à nouveau” referred to the verb “endorser” whilst “de nouveau” referred to the kind of bill, which had to be in blank. That was a subtle point in the French language, and the two expressions could be maintained as they stood.

Article 11 was adopted.

ARTICLES 18 AND 19.

Adopted.

ARTICLE 20.¹

M. ARCANGELI (Italy) believed that there was a drafting error in the last sentence of the article. The endorsement was deemed to have been placed on the bill after the protest and not prior to it. For that reason, M. Arcangeli proposed that the last paragraph should be drafted as follows :

“ Failing proof to the contrary, an endorsement without date is deemed to have been placed on the bill after the protest, if the protest does not reproduce the endorsement textually.”

The PRESIDENT pointed out that the paragraph was due to an amendment submitted by the Netherlands delegation. Before adopting the amendment proposed by M. Arcangeli, he invited the representative of the Netherlands to give his opinion on the Italian request.

M. MOLENGRAAFF (Netherlands) said that the proposal of his delegation referred to the case of the protest which contained no indication of the date of endorsement — for instance the protest drawn up in an unauthentic form, called a simplified protest. This form of protest did not show whether the endorsement was prior or not.

The PRESIDENT considered that it would be better to say : “ If the protest does not mention the date of endorsement ”. Was it desired to support that system ? The Netherlands delegations wished the following text to be adopted : “ Failing proof to the contrary, an endorsement is deemed to have been placed on the bill prior to the protest, if the protest does not specify the date of endorsement ”.

¹ The Drafting Committee proposed the following text :

“ L'endossement postérieur à l'échéance produit les mêmes effets qu'un endossement antérieur. Toutefois, l'endossement postérieur au protêt faute de paiement, ou fait après l'expiration du délai fixé pour dresser le protêt, ne produit que les effets d'une cession ordinaire.

“ Sauf preuve contraire, l'endossement sans date est censé avoir été fait avant l'expiration du délai fixé pour dresser le protêt.

“ Sauf preuve contraire, l'endossement est censé avoir été fait antérieurement au protêt dans le cas où le protêt ne reproduit pas textuellement l'endossement.”

M. MOLENGRAAFF (Netherlands) stated that, when the protest reproduced the endorsement without specifying the date, the protest showed that the endorsement had been made prior to the protest. If the endorsement were not prior to the protest, the protest could not contain the endorsement. There were, however, cases in which the protest contained no indication of the endorsement simplified protests.

The PRESIDENT pointed out that the word "textually" was unsuitable. It would be necessary to say: "If the protest does not reproduce the endorsement".

In those circumstances, the text proposed by the Netherlands delegation would run as follows:

"Failing proof to the contrary, the endorsement is deemed to have been placed on the bill prior to protest, if the protest does not reproduce the endorsement."

The reasons were the following: An authentic protest always indicated the endorsement. The endorsement was reproduced in the protest. Consequently, it went without saying that it was prior to the protest, because otherwise it could not appear in the protest. The last paragraph, however, referred to the simplified protest constituted by a declaration or a letter from the drawee. In that protest no mention was made of that endorsement.

In the last paragraph, it was presumed that the endorsement was made prior to protest.

M. PERCEROU (France) wondered whether it was desirable in so general a text, which laid down a principle, to enter into details concerning proof, which depended on the manner in which the protest was drawn up. Would it not be desirable to leave those questions to each legislation? If there were protests which allowed the compulsory reproduction of endorsements, the latter should be mentioned. If there were simplified protests which did not mention the endorsement, the Dutch judges would take a decision on the question. That did not concern the countries which did not know that particular system.

Consequently, he asked that the two last paragraphs should be suppressed.

M. GIANNINI (Italy) agreed. It would be very difficult in the uniform law to recognise a rule for two kinds of protest. That would compel States which only possessed the integral protest to adopt the simplified protest. It would be better to reserve the question for the national laws.

M. SCHELTEMA (Netherlands) observed that it was not certain that the authentic protest would contain the endorsements, since the form of the protest was not defined in the Uniform Regulation.

M. PERCEROU (France) considered that that was an additional reason for leaving the problem to the national legislations.

M. SCHELTEMA (Netherlands) stated that for the States where the simplified protest was not used, but where the protest did not mention the endorsement, the question arose whether the endorsement had been placed on the bill prior to or after protest.

M. SULKOWSKI (Poland) supported M. Percerou and M. Giannini.

The PRESIDENT considered that there was a difference between the second and third paragraphs. The third paragraph did not refer to the protest. It simply said:

"Failing proof to the contrary, the endorsement without date is deemed to have been placed on the bill before the expiration of the limit of time fixed for drawing up the protest."

M. GIANNINI (Italy) thought that the Netherlands delegation was in doubt whether its country's legislation would have to be modified. He considered that only the first paragraph should be left.

M. MOLENGRAAFF (Netherlands) thought that the Conference had already settled the question raised by the Netherlands delegation. It could now search for a text, but could not change the principle.

The PRESIDENT would prefer the Conference to take a decision on the two paragraphs at the next meeting.

Adopted.

TWENTY-EIGHTH MEETING.

Held on June 1st, 1930, at 4.15 p.m.

President: M. J. LIMBURG.

39. Convention on Conflicts of Laws: Declaration of the Italian Delegation.

In order to facilitate agreement on the Convention on Conflicts of Laws, M. GIANNINI (Italy) stated that the Italian delegation was prepared in a spirit of conciliation to abandon Article 10(a). It asked the other delegations who had raised objections to certain articles also to make an effort.

M. Giannini asked the President to consider whether it would not be desirable for a very small Sub-Committee to meet on the following day in order that the delegations which had made reservations might reach agreement on a clear, definite and unrestricted text.

The PRESIDENT welcome M. Giannini's statement. He himself had tried to promote an understanding without reservations on conflicts of laws. In accordance with M. Giannini's suggestion, a Committee formed of the delegations which were most interested in the various reservations to Articles 2, 3, 6 and 10(a) would, if possible, meet on the following day.

**40. Examination of the Draft Uniform Regulations on Bills of Exchange and Promissory Notes :
Text of the Uniform Regulation drawn up by the Drafting Committee ¹ : Second Reading
(Continuation).**

ARTICLE 16.

NOTE. — *The Conference, realising the difficulty of discussing simultaneously a text drawn up in both official languages, decided to adopt the following procedure. The discussion took place entirely on the French text, and it was only after a provisional or final decision had been taken that its translation into English was made and submitted to the Conference. For that reason, it has been impossible to reproduce the English text in the record of the discussions until that text became final.*

M. LOEBER (Latvia) made the following declaration :

Seeing that the Conference decided at the beginning of the second reading of the Regulation not to return to the discussion of questions of principle, but to confine itself to questions of form ;

That to settle any question as to whether a particular point in the course of the discussion refers to a question of principle or a question of form may excessively prolong the reading of the text of the Regulation at present under discussion ;

And that, at the same time, it would appear to be undesirable not to mention the provisions of the Regulation which necessitate interpretation ;

The Latvian delegation ventures to explain to the Conference its opinion in regard to the meaning of the provisions following from Article 16, paragraph 1, of the Regulation which has been adopted.

The sentence employed in Article 16, paragraph 1, of the Regulation — namely : “ Even if the last endorsement is in blank ” — is not logically in opposition to the preceding provision of the same paragraph, according to which the possessor is deemed to be the lawful holder if he establishes his title to the bill through an uninterrupted series of endorsements. On the contrary, it is understood that the word “ even ” is employed here in order to emphasise that the holder's right is justified by an uninterrupted series of endorsements, whether the last endorsement is either an endorsement in his name (*nominatif*) or an endorsement in blank. It is also understood that, in the first place, the first taker of the bill of exchange — as is stipulated, for instance, in Article 23 of the Latvian Exchange Law — is deemed to be the lawful holder.

On the other hand, the expression employed in the second paragraph of Article 16 of the Regulation — namely, “ in this connection ” — does not admit of any conclusion *a contrario*. Consequently, cancelled endorsements are deemed to be entirely unwritten and can produce no effect in connection with exchange law.

The PRESIDENT took note of the declaration of the Latvian delegation. It was obvious that, at the present stage of its discussions, the Conference could not consider whether it was in agreement with the Latvian delegation's method of interpretation.

ARTICLE 8.

The PRESIDENT recalled that Article 8 had been reserved as the result of the observations of the Yugoslav delegate. After reflection, it seemed to him that it was necessary to maintain Article 8. If the text were modified, many complications would result.

Article 8 was adopted.

ARTICLE 20.

The PRESIDENT said that after consulting the Minutes the question raised by the Netherlands delegation in regard to paragraphs 2 and 3 could, he thought, be settled rapidly.

The second paragraph had been adopted unanimously in the following text :

“ Failing proof to the contrary, an endorsement without date is deemed to have been placed on the bill before the expiration of the limit of time fixed for drawing up the protest.”

Certain delegations, the Italian among others, had said that the paragraph had no value, but that they did not oppose it.

The third paragraph had been the object of a long discussion. It might run as follows :

“ Failing proof to the contrary, an endorsement without date is deemed to have been placed on the bill prior to the protest, if the protest does not reproduce the endorsement.”

At a previous meeting, it had been stated that an authentic protest should contain the endorsements, with or without date, and that consequently a presumption which would be counter to an authentic document could not be put into a Uniform Regulation.

Doubtless in several countries the protest, an authentic document, had to contain all the endorsements, but there might be countries where it was not expressly prescribed that the protest should also contain all the endorsements with the date.

¹ See note on p. 381.

Elsewhere the Conference had permitted a reservation for countries which used as a protest an authentic document, but in which the protest might also consist in a declaration of the drawee placed on the bill of exchange ; for those countries, that presumption was necessary.

In order to avoid any difficulty, the President suggested that the third paragraph of Article 20 of the Regulation should be deleted and that Article 8 of the Convention on the reservations should read as follows :

“ Each of the High Contracting Parties may prescribe that protests to be drawn up in its territory may be replaced by a declaration dated and written on the bill itself and signed by the drawee, except where the drawer stipulates in the body of the bill of exchange itself for an authenticated protest,”

and should be completed by the following words :

“ In the case provided for in the previous paragraphs, an undated endorsement is presumed to have been made prior to the protest.”

M. MOLENGRAAFF (Netherlands) said that his delegation could accept this suggestion.

The suggestion of the President was approved and the third paragraph of Article 20 was deleted.

ARTICLES 21 AND 29.¹

The PRESIDENT said that, the Netherlands delegate having pointed out that from the point of view of the wording there was a certain relationship between Articles 21 and 29, he would open the discussion on these two articles.

M. VAN NIEROP (Netherlands) recalled that during the discussion on Article 29 he had asked who was the holder in the reference in that article to “ the assignment of the bill to the holder ”. Could a bank which had received a bill merely in order to effect its acceptance on behalf of a client be regarded as the holder or not ? The answer had been given that the bank was not deemed to be the holder, but that, nevertheless, when the bill had been assigned to the bank, the latter was in possession of (*détient*) the bill on behalf of its client, the holder, and that consequently the acceptance could no longer be cancelled.

Article 21, however, made a distinction between the holder and a person who was merely in possession of the bill, and hence it was the inevitable conclusion that the holder was the person whose name appeared in an endorsement on the bill, and that the person in possession was the mandatory of the holder who requested its acceptance in his name.

M. van Nierop feared that if the bank were asked to cancel the acceptance, it might be placed in an awkward position, since it would not know whether it was the holder or a person who was merely in possession of the bill.

The question was, of course, clear to the jurists present at the Conference, but difficulties might arise in practice and, in order to obviate them, he proposed one of the two following solutions.

Either Article 21 should be kept unchanged, while Article 29 should be completed by the addition of the words “ or the person in possession of the bill ” after the words “ the holder ”, or, alternatively the words “ by the holder or by a person who is merely in possession of the bill ” should be struck out in Article 21.

M. van Nierop preferred the latter solution.

M. ARCANGELI (Italy), while realising that the Dutch representative was right, would prefer no change to be made in Article 21, since in principle acceptance could be effected either by the holder or by his mandatory. The principle governing presentment for payment was not valid in regard to acceptance. In order to obviate the doubt that might result from the wording of Articles 21 and 29, M. Arcangeli would be inclined to strike out the words “ to the holder ” in Article 29, paragraph 1.

M. VAN NIEROP (Netherlands) agreed with this suggestion.

M. PERCEROU (France) proposed that the original formula, reading “ before the bill has left the hands of the drawee ”, should be restored.

It was necessary to take into account the case where the holder had assigned the bill for acceptance to a person who was entirely under his orders. In such a case, the proposal made by the Italian representative could not be accepted. He added that the formula “ before he has allowed the bill to leave his hands ” which might not perhaps be altogether correct so far as the form was concerned, reserved the case in which the drawee was divested of the bill involuntarily (*le cas d'un dessaisissement involontaire*).

The PRESIDENT suggested the formula “ before handing over the instrument ”.

¹ The text of these articles proposed by the Drafting Committee was as follows :

“ Article 21. — La lettre de change peut être, jusqu'à l'échéance, présentée à l'acceptation du tiré au lieu de son domicile, par le porteur ou même par un simple détenteur.”

“ Article 29. — Si le tiré qui a revêtu la lettre de change de son acceptation a bifé celle-ci avant la remise de la lettre au porteur, l'acceptation est censée refusée. Sauf preuve contraire, la radiation est réputée avoir été faite avant la remise du titre au porteur.

“ Toutefois, si le tiré a fait connaître son acceptation par écrit au porteur ou à un signataire quelconque, il est tenu vis-à-vis de ceux-ci dans les termes de son acceptation.”

M. PERCEROU (France) reminded the Conference, as had been pointed out during the discussion, that the question of the drawee-acceptor being involuntarily divested of the instrument must be considered.

The PRESIDENT said that even before M. van Nierop had submitted his remarks, and quite apart from the discordance between Articles 21 and 29, he had wondered what was the reason for which the words " or by a person who is merely in possession of the bill " had been introduced in Article 21. When the bill was presented by a mandatory of the holder, such presentment must be deemed to have been made by the holder himself.

M. PERCEROU (France) shared this view.
He suggested the formula " the holder or his mandatory ".

M. VAN NIEROP (Netherlands) said that he could concur in this suggestion, provided that the same change was made in Article 29.

The PRESIDENT thought that it would be better to delete the last part of the sentence in Article 21 — *i.e.*, the words " by the holder or by a person who is merely in possession of the bill ".

M. ARCANGELI (Italy) urged that Article 21 should be kept unchanged, but that Article 29 should be modified.

The PRESIDENT submitted the proposal to delete the words " or by a person who is merely in possession of the bill " in Article 21. If these words were deleted, Article 29 might be left unchanged ; otherwise, it would have to be modified.

M. HERMANN-OTAVSKY (Czechoslovakia) said that this particular provision in Article 21 was of some importance in regard to the question of proof. If no reference were made to the power of a person in possession of the bill to present it for acceptance, the drawee might refuse his signature and demand that the person presenting the bill should prove his right to do so. In order to prevent this question arising, M. Hermann-Otavsky would prefer to delete the end of Article 21 — *viz.*, the words " by the holder or by a person who is merely in possession of the bill ".

M. QUASSOWSKI (Germany) would prefer the maintenance of Article 21 as it stood. The provision in question appeared in a great many laws on bills of exchange, and in M. Quassowski's opinion it was necessary for practical reasons. If the words " or by a person who is merely in possession of the bill " were deleted, the banks would have to verify the right of the person who presented the instrument, and difficulties might result.

M. PERCEROU (France) was also of opinion that the text should be maintained as it stood.

The PRESIDENT was not of that opinion, but would agree to accept it.

M. VAN NIEROP (Netherlands) considered that, when the jurists present spoke of the holder, they had also in mind his representative. It should not, however, be forgotten that it was not any particular member of the Conference who would be faced with the practical difficulties. If the last proposal were accepted, there might be connivance between the acceptor and, for example, a bank manager who was asked by the acceptor by telephone to cancel the signature.

The PRESIDENT asked whether the Conference was prepared to accept the proposal of M. Arcangeli to delete the words " to the holder " in Article 29.

M. VAN NIEROP (Netherlands) proposed to replace in the French text " avant la remise de la lettre " by " avant la restitution du titre ".¹

The PRESIDENT observed that " remise " and " restitution " had not the same meaning.

M. PERCEROU (France) stated that it was not correct in French to say simply " avant la remise de la lettre " ; it was necessary to specify to whom the bill had been assigned. It would be better to say " avant la restitution du titre ". That, however, would exclude cases in which the holder had been involuntarily divested of the bill (*le cas de dessaisissement involontaire*).

The PRESIDENT thought that if the question arose at all it would arise with the word " remise " as well as with the word " restitution ".

He asked the Conference whether it would accept the following text for the first paragraph of Article 29 :

" Where the drawee who has put his acceptance on a bill has cancelled it before the assignment of the bill, acceptance is deemed to be refused. Failing proof to the contrary, the cancellation is deemed to have taken place before the bill was restored."

M. ARCANGELI (Italy) and M. PERCEROU (France) replied in the affirmative.

Mr. GUTTERIDGE (Great Britain) said he noticed that the word " lettre de change " was used in one place and the word " titre " in another, and asked whether the meaning was the same.

¹ This amendment necessitated no change in the English text.

The PRESIDENT replied in the affirmative.

M. SULKOWSKI (Poland) asked that it should be stated in the report that the word "restitution" did not settle at what moment the exchange liability came into being. It should not be allowed to prejudice the solution of the question whether the article referred to cases in which the holder was divested of the bill voluntarily or those in which he was divested involuntarily. That question remained open.

The PRESIDENT observed that, as the Conference had combined the discussion of Article 29 with that of Article 21, it would be desirable to settle the question of the Latvian amendment immediately.

M. GIANNINI (Italy) drew the attention of the Conference to the disadvantage of making modifications which had not been carefully considered in the second reading. The articles had been drafted after long discussion. They had been reviewed from the point of view of the French language. In the present case, however, the French delegation had observed that the words "biffage" and "biffure" were not French. For that reason, the Drafting Committee had used the word "radiation".

The PRESIDENT thought that, in view of M. Giannini's explanations, the Latvian delegation would not insist on its amendment.

M. DUZMANS (Latvia) stated that all amendments submitted by his delegation were subject to any modifications which the French delegation might take from the point of view of drafting. In the present case, he believed that the words "biffage" and "biffure" were French. Nevertheless, he would agree to withdraw his amendment.

Article 21 was adopted.

Article 29 was adopted, the text of the first paragraph being that proposed by the President.

ARTICLE 22. ¹

M. PERCEROU (France) proposed that the words "before a certain date" in the third paragraph of Article 22 should be replaced by "before a named date". The latter were used in Article 34, which covered the same case.

Article 22, as amended, was adopted.

ARTICLES 23 TO 26 INCLUSIVE.

Adopted.

ARTICLE 27. ²

As the result of an observation of M. HERMANN-OTAVSKY (Czechoslovakia), the words "at the time of acceptance, the drawee may designate" at the end of the first sentence were replaced by "the drawee may name . . .".

Article 27, as amended, was adopted.

ARTICLES 28 AND 30.

Adopted.

ARTICLE 31.

M. ARCANGELI (Italy) said that, according to the third paragraph, a mere signature was equivalent to an "aval" when it was placed on the face of the bill. However, cases might occur when a mere signature would be placed on the back of the bill. Such a signature might sometimes be deemed an endorsement in blank. That, however, was not always the case; and he asked if the Drafting Committee thought that in such an eventuality this signature ought to be deemed to be in any degree valid. By using the argument *a contrario*, it should be said that in such a case the signature was invalid; but M. Arcangeli thought it would be much better to set forth the principle that a mere signature, even if it were placed on the back, might eventually be considered as an "aval". If the Conference shared this point of view, the third paragraph could then be

¹ The text proposed by the Drafting Committee was as follows :

" Dans toute lettre de change, le tireur peut stipuler qu'elle devra être présentée à l'acceptation, avec ou sans fixation de délai.

" Il peut interdire dans la lettre la présentation à l'acceptation, à moins qu'il ne s'agisse d'une lettre de change payable chez un tiers ou d'une lettre payable dans une localité autre que celle du domicile du tiré ou d'une lettre tirée à un certain délai de vue.

" Il peut aussi stipuler que la présentation à l'acceptation pourra avoir lieu avant une certaine date. " Tout endosseur peut stipuler que la lettre devra être présentée à l'acceptation, avec ou sans fixation de délai, à moins qu'elle n'ait été déclarée non acceptable par le tireur."

² The text proposed by the Drafting Committee was as follows :

" Quand le tireur a indiqué dans la lettre de change un lieu de paiement autre que celui du domicile du tiré, sans désigner un tiers chez qui le paiement doit être effectué, le tiré peut le désigner lors de l'acceptation. A défaut de cette indication, l'accepteur est réputé s'être obligé à payer lui-même au lieu du paiement.

" Si la lettre est payable au domicile du tiré, celui-ci peut, dans l'acceptation, indiquer une adresse du même lieu où le paiement doit être effectué."

modified in such a way as to cover also cases in which the signature would be placed on the back of the bill.

M. DE LA VALLÉE POUSSIN (Belgium) did not think that there could be any possible ambiguity, because the text of the second paragraph made it clear that when an "aval" was given on the back of a bill it ought to be expressed by the words "good as 'aval'" or by any other equivalent formula. It was solely when the signature was on the face of the bill that there was any need to add the words "good as 'aval'".

M. ARCANGELI (Italy) concluded that in certain cases the mere signature on the back of a bill would be invalid.

M. SCHMIDT (International Chamber of Commerce) thought that if the Conference wished to acquiesce in M. Arcangeli's point of view and recognise that the mere signature on the back of the bill might be considered as an "aval", it would be necessary to make it also quite clear for whom this "aval" was valid.

M. ARCANGELI (Italy) thought that that was quite a different question.

The PRESIDENT said that they were discussing a question of substance which had not been raised during the first reading. The Hague Regulation contained a provision according to which an "aval" was expressed by the words "good as 'aval'" or by any other equivalent formula. Apparently, therefore, there could be no doubt on the matter. The third paragraph of Article 31 said that the mere signature placed on the face of the bill was deemed to be an "aval". Obviously, if the signature was put on the back of the bill, the result would not be an "aval".

M. ARCANGELI (Italy) considered that this article ought also to include the case where a mere signature figured on the back of a bill. That was an omission that ought to be rectified.

The PRESIDENT declared that the meaning of a mere signature on the back of a bill would depend on the person who was judging the affair. In certain cases, this signature might be considered as an endorsement.

M. ARCANGELI (Italy) realised that sometimes it might be quite clearly said that it was an endorsement; but it might also happen that it would be impossible to declare that such a signature was an endorsement. In the latter case, they would have to know whether the signature was valid or not.

The PRESIDENT thought that in such a case the signature was invalid.

M. ARCANGELI (Italy) wished that this interpretation should appear in the report.

Mr. GUTTERIDGE (Great Britain) said that in English law it had been held that a signature of that kind was always an endorsement.

M. PERCEROU (France) suggested that the following note should be added at the foot of the page:

"Nevertheless, in spite of the provisions of Article 31, it is quite understood that if a signature is placed on the back of a bill of exchange which cannot be considered as an endorsement in blank because it breaks the chain of endorsements, this signature, in spite of the fact that it is unaccompanied by the words 'good as aval', ought to be deemed to be an 'aval'."

That seemed to him a logical solution, but as it followed from the spirit of the text, it would suffice to draw attention to it in the report.

M. SULKOWSKI (Poland) pointed out that paragraph 2 of Article 31 said quite clearly that an "aval" ought always to bear the formula "good as 'aval'" or some equivalent formula. Moreover, it ought to be signed by the giver of the "aval", and only when it occurred on the face of the bill was it enough to have the signature without any other formula. If the Conference allowed an explanation like that just proposed to appear in the report, it would be in contradiction with the text adopted.

M. DE LA VALLÉE POUSSIN (Belgium) thought it was very important to preserve unity of method concerning an "aval" placed on the back of a bill. An "aval" ought to be accompanied by a formula which allowed no ambiguity as to the meaning of the signature. That was the aim of paragraph 2 as it stood. A signature placed on the back of a bill would always be equivalent to an endorsement.

M. de la Vallée Poussin considered that a simple and clear rule should be adopted. He therefore supported the proposal to keep the text as it stood, because it gave rise to no ambiguity.

The PRESIDENT proposed to leave the text as it stood and let nothing appear in the report on the subject.

M. ARCANGELI (Italy) asked that the discussion should appear in the Minutes of the meeting.

The PRESIDENT said that it was quite understood that the discussion would appear in the Minutes.

M. ARCANGELI (Italy) said that he was satisfied.

Article 31 was adopted.

ARTICLE 32.¹

The PRESIDENT pointed out that the second paragraph had been drawn up by the Drafting Committee before the Conference had taken its decision on the Czechoslovak amendment to Article 62. Since the Conference had adopted the Czechoslovak wording for Article 62, it would be proper to modify the second paragraph of Article 32 in order to bring it into perfect conformity with the actual text of Article 62. He consequently proposed the following wording :

“ He has, when he pays a bill of exchange, the rights arising out of the bill against the person guaranteed and against those who are liable to the latter on the bill of exchange.”

M. GIANNINI (Italy) preferred the text of the Drafting Committee.

M. PERCEROU (France), member of the Drafting Committee, thought that this was a question of relative importance.

M. SULKOWSKI (Poland) emphasised the importance of the President's suggestion. The Hague formula and that of the experts — “ recourse against the person guaranteed and his guarantors ” — did not refer to the acceptor, seeing that the latter was the principal debtor and therefore could not be considered as a guarantor. There was no reason for refusing the giver of the “ aval ” the right to go back on the acceptor, if there was one. Moreover, the problem was the same as that settled already in connection with the person paying by intervention, and the formula was changed for the same reasons : in order clearly to explain that the person paying by intervention could assert that the giver of an “ aval ” had the rights arising from the bill of exchange, not only against the guarantors but also against the acceptor. In those circumstances, the two formulæ in question should be made to conform.

M. DUZMANS (Latvia) considered that the President's proposal was not only useful, but also necessary from the point of view of future interpretation. He supported the President's proposal.

The second paragraph of Article 32 was adopted in the form proposed by the President.

ARTICLE 33.

The PRESIDENT pointed out that this article should be read as follows :

“ A bill of exchange may be drawn payable : at sight ; at a fixed time after sight ; at a fixed time after date. . . . ”

Article 33 was adopted.

ARTICLE 34.

Adopted.

ARTICLE 35.

The PRESIDENT asked the Drafting Committee if it had deliberately deleted the word “ only ” which occurred in the second paragraph :

“ In the absence of the protest, an undated acceptance is deemed so far as regards the acceptor only. . . . ”

M. PERCEROU (France) replied that the Drafting Committee had considered this word superfluous.

Article 35 was adopted.

ARTICLES 36, 37 AND 38.

Adopted.

ARTICLE 39.

Prince VARNAIDYA (Siam) pointed out that he had presented a reservation concerning Article 39.² As a matter of fact, he had only reproduced the text of the French proposal. He had thought that, in virtue of Article 7 of the Convention on the Conflicts of Laws, Siam would be able to authorise the refusal of partial payment. As this right did not exist, he was compelled to ask the Conference to grant him this reservation.

The PRESIDENT reminded the Conference that the reservation on this subject had been put aside. The French delegation, which had proposed it, had finally withdrawn it. Siam now appeared to take it up, but the President proposed to explain later to the Siamese delegate how

¹ The text proposed by the Drafting Committee was as follows :

“ Le donneur d'aval est tenu de la même manière que celui dont il s'est porté garant.

“ Son engagement est valable, alors même que l'obligation qu'il a garantie serait nulle pour toute cause autre qu'un vice de forme.

“ Il a, quand il paie la lettre de change, le droit de recourir contre le garanti et contre ceux qui sont tenus vis-à-vis de ce dernier en vertu de la lettre de change.”

² See Annex 17.

he might obtain, if not complete, at least sufficient satisfaction, without even the necessity of making a reservation.

Article 39 was adopted.

ARTICLE 40.¹

M. PERCEROU (France) mentioned that Article 40 had given rise to a long discussion whether the following words should be kept : " He who pays at maturity is validly discharged, unless he has been guilty of bad faith or gross negligence " (text of the experts) ; or whether, on the contrary, they should return to the Hague formula : " Unless there has been fraud or gross negligence on his part ". In the end, the Drafting Committee had suggested a third formula : " Unless it is paid to a person in whom it is obvious the right is not vested ". This last formula was quite abnormal, at least from the point of view of French legal terminology. The Drafting Committee had decided to return to the formula of The Hague.

As was explained in the draft report, the situation treated here was not the same as that which concerned the person who had acquired the bill. A drawee might be dealt with more liberally than a third party who had acquired the bill. The third party, before acquiring the bill, might get all the information, and in that case there was a certain delay. But the drawee to whom the bill was presented at maturity was compelled, under pain of having a protest drawn up against him, to pay immediately. For that reason, an attempt had been made to make him responsible only for a payment wrongly made in the case where there had been unequivocal fraud on his part — that was to say, fraud conditioned by gross negligence.

The PRESIDENT read the proposed text :

" He who pays at maturity is validly discharged, unless he has been guilty of fraud or gross negligence. He is bound to verify the regularity of the series of endorsements, but not the signature of the endorsers."

Article 40 with this amendment was adopted.

ARTICLE 41.

M. PERCEROU (France) said that the Drafting Committee had suggested that the first paragraph of this article should stop after the words " or the day of payment ". The second paragraph would then begin with : " The usages of the place of payment. . ." and end with " at a rate expressed in the bill ".

The PRESIDENT pointed out that in the first and second paragraphs " lieu de paiement " should read " lieu du paiement ".

M. SHIMADA (Japan) noticed that the Drafting Committee had used at the end of the first sentence of Article 41 the words " on the day of maturity " instead of the words " on the day when payment can be demanded " which appeared in the text of the experts. The new wording left uncertain the moment when the holder might exercise his recourse.

M. Shimada thought that this article ought to be taken in conjunction with Article 43, which gave the holder the right to exercise his recourse " even before maturity ".

The PRESIDENT asked the Drafting Committee if it had considered whether in cases where the date of maturity had been advanced it might be thought that there was a new date of maturity and that the rate ought to be that of the day of the new maturity — namely, of the advanced maturity.

M. PERCEROU (France) replied that the fact that the debtor was willing to anticipate payment was sufficient to advance the date of maturity.

The PRESIDENT pointed out that, according to the new Article 43, there were cases when payment of a bill of exchange could be demanded before the date of maturity, without agreement, but according to the law — for example, in cases where the drawee became bankrupt, or in certain circumstances when the drawer became bankrupt. In such cases, the question raised by the Japanese delegation could be settled by maintaining that, then, according to the law, there was a new date of maturity.

M. PERCEROU (France) declared that the Drafting Committee had decided not to modify the solution of the question.

The PRESIDENT said that the reply of M. Percerou made it necessary in the case of Article 43 to take into consideration the day on which payment of the bill of exchange could be demanded. In that case, there was advanced maturity. Consequently, as far as the question raised by the Japanese delegation was concerned, the modification made in the text by the Drafting Committee had made no substantial change.

M. SHIMADA (Japan) declared himself satisfied with this explanation.

¹ The text proposed by the Drafting Committee was as follows :

" Le porteur d'une lettre de change ne peut être contraint d'en recevoir le paiement avant l'échéance.

" Le tiré qui paie avant l'échéance le fait à ses risques et périls.

" Celui qui paie à l'échéance est valablement libéré, à moins qu'il n'ait payé à une personne qui, évidemment, n'est pas l'ayant droit. "

M. VAN NIEROP (Netherlands) wished to have an authentic explanation of Article 41. In particular, he wished to know what was meant by the words "in default". Did the expression "if the debtor is in default" mean "if the debtor is behindhand"? Was the debtor only in default when the protest had been drawn up, or was he in default between the date of maturity and protest? M. van Nierop thought that he was only in default after the protest.

The PRESIDENT thought that, so long as the debtor had the right of paying without it being possible to claim damages from him, he was not in default.

M. PERCEROU (France) thought that the debtor was in default if he did not pay on the day that the bill had been presented to him.

M. VAN NIEROP (Netherlands) considered that, so long as the protest had not been drawn up, it was impossible to say that the debtor was in default. If the text meant something different, it might be legally tenable, but it would bring about many practical difficulties. For example, a bank might present to-day a bill drawn up in foreign currency. It would calculate exactly the rate of exchange and present the bill to the debtor. If the debtor did not pay, the bill would return unpaid to the bank, which would pass it over to a process-server, who would present it anew and draw up a protest on the following day. In such a case, it was the holder who had the choice of the rate of exchange, because there had been default. But the first step was to know what was the wish of the holder, and that was already difficult enough; and, in the second place, it would be necessary to make a fresh calculation. Generally speaking, a bank that presented a bill of exchange for payment was not the holder in the proper sense of the word: it was the holder's representative. It received the bill to be cashed and often it knew nothing of the holder, who might live in China, Japan or Nicaragua, for example.

M. PERCEROU (France) pointed out that a bank would always choose the rate that was most advantageous for its client.

M. VAN NIEROP (Netherlands) replied that that was impossible, for in that case a bank would have to be able to calculate what would be the rate of exchange the next day. At Amsterdam, there was no such official rate and he believed that it was the same at Paris.

M. PERCEROU (France) replied that at Paris there was an official rate published at about two o'clock.

M. VAN NIEROP (Netherlands) took the case of a Paris bank presenting a bill of exchange at 10 o'clock that day. If the rate of exchange was disadvantageous, its client could complain on the grounds that the bank had presented the bill before two o'clock.

Finally, M. van Nierop proposed to revise the text as follows:

"Once the protest has been drawn up, the holder can ask at his choice. . ."

M. WEILLER (Italy) asked what would happen if there was no protest.

M. VAN NIEROP (Netherlands) replied that, in that case, the holder would only have to cause a protest to be drawn up.

M. EIGTVED (Denmark) thought that the advantages resulting from the provisions of Article 41 were more important than the small difficulties which bankers might meet with because of the article. He did not deny the possibility that such difficulties existed, but he thought that they were of only secondary importance.

M. SHIMADA (Japan) asked if they might not return to the original text: "on the day when payment can be demanded". That would avoid all ambiguity.

The PRESIDENT replied that there was no need to return to the text of the Committee of Experts of Geneva, because that text did not succeed in settling the question. It was impossible to get rid of a question by not talking about it.

M. SHIMADA (Japan) thought he remembered that at the first reading of the original Article 40 of the text of the experts when the Japanese delegation had asked if the words "on the day when payment can be demanded" covered, not only maturity, but also the case of recourse before maturity, the President had replied in the affirmative. They therefore proposed to return to the text of the experts.

The PRESIDENT asked the Conference to give its opinion on the Japanese proposal that they should return to the original text, which said "on the day when payment can be demanded", instead of "on the day of maturity".

M. EKEBERG (Sweden) pointed out that if the Japanese proposal were adopted the words "whether on the day of maturity" would have to be modified.

The PRESIDENT pointed out that, if they reverted to the original text, it would also be necessary to modify the second sentence. After hearing the interpretation given by the Drafting Committee, he thought it would be best to keep Article 41 unchanged.

He reminded the Conference that the Drafting Committee had asked them to examine a proposal to introduce the words " in the text of the bill itself " after the words " nevertheless the drawer may stipulate " in the last sentence of the first paragraph.

M. GIANNINI (Italy) replied that the Drafting Committee had decided not to make this addition.

Article 41 was adopted without change.

ARTICLE 42.

Adopted.

ARTICLE 43.¹

M. WEILLER (Italy) asked why a different wording had been adopted for paragraphs 2 and 3. If there were any reasons, he would like to know them ; otherwise it was better to preserve the resemblance.

The PRESIDENT read the following passage from the Minutes of the sixteenth meeting concerning the amendment put forward by the Japanese delegation. It was at that meeting that Article 43 had been adopted :

" There remained the following amendment submitted by the Japanese delegation :

" " In Article 42, which concerns the conditions of recourse before maturity, the drawee referred to in No. 2 and the drawer referred to in No. 3 should be placed on the same footing. The Article should read as follows :

" " 2. Where the drawee, whether he has accepted or not, has failed.

" " 3. Where the drawers of a non-acceptable bill have failed."

" It appeared that the Japanese delegation's object was to bring sub-paragraph 3 into line with sub-paragraph 2. As the Conference had adopted the experts' text for sub-paragraph 2, the President assumed that the Japanese delegation wished to repeat in sub-paragraph 3 the cases mentioned in sub-paragraph 2.

" *The Japanese amendment was rejected by 10 votes to 6.*"

M. GIANNINI (Italy) thought that so summary a condemnation as had been pronounced by this vote was insufficient if unaccompanied by explanations. If the Conference wished to maintain the article as it stood, it should state its reasons. Otherwise, discrimination between the cases dealt with in the second and third paragraphs could not fail to cause surprise.

The PRESIDENT said that the cases dealt with in paragraphs 2 and 3 were different. For the drawee, the words " bankruptcy (*faillite*) or stoppage of payment " were used and for the drawer the word " bankruptcy " (*faillite*) only. It was quite understandable that a distinction should be made, and that recourse should only be authorised before maturity in the event of the bankruptcy of the drawer.

M. SULKOWSKI (Poland) suggested that the Conference should again vote on the Japanese amendment.

M. VISCHER (Switzerland) asked for time to consider the matter ; for the moment, he did not know which way to vote. He believed, moreover, that the reasons for the discrimination which already existed in the Hague Convention would be found in the Minutes of the Hague Conference.

M. PERCEROU (France) pointed out that, in the case of a bill which could be presented for acceptance, the holder could always present it to the drawee for acceptance. If the latter refused, there was a definite fact : default of acceptance. It was not necessary to establish the other circumstances — stoppage of payment or execution levied without result. In the event of the bankruptcy of the drawer, if there was no declaratory judgment, it could not be proved that there was a state of stoppage of payment or of execution levied without result, for there was no definite fact which proved it.

The discussion on this article was adjourned.

¹ The Drafting Committee proposed the following text :

" Le porteur peut exercer ses recours contre les endosseurs, le tireur et les autres obligés :

" A l'échéance ;

" Si le paiement n'a pas eu lieu ;

" Même avant l'échéance ;

" 1° S'il y a eu refus, total ou partiel, d'acceptation ;

" 2° Dans les cas de faillite du tiré, accepteur ou non, de cessation de ses paiements, même non constatée par un jugement, ou de saisie de ses biens demeurée infructueuse ;

" 3° Dans les cas de faillite du tireur d'une lettre non acceptable."

ARTICLE 44¹.

M. SULKOWSKI (Poland) said that the words " Article 24, paragraph 2 " should read " Article 24, paragraph 1 ", because of the inversion that had previously been made in Article 24.

M. SHIMADA (Japan) referred to the first sentence of the third paragraph and asked if, according to this text, the protest could be drawn up on the same day that the bill of exchange was payable. It was possible to believe that this was so, since the text said " the protest . . . must be made, *at the latest*, on one of the two business days. . . . "

M. PERCEROU (France) said that the Conference had put on one side the possibility of drawing up the protest on the same day as maturity. Moreover, a Japanese amendment concerning this question had been rejected.

M. SHIMADA (Japan) replied that if this was the case there was no reason for keeping the words " at the latest ".

M. PERCEROU (France) declared that in the drafting of Article 44 the Drafting Committee had deleted these words.

M. QUASSOWSKI (Germany) thought that these words had a certain importance because of the German reservation that a protest for non-payment might be drawn up also on the day of maturity. In any case, these words would do no harm.

The PRESIDENT thought that M. Quassowski was wrong. It was because the text provided for the drawing up of the protest on one of the two business days following the day on which the bill fell due that the German delegation had demanded that it might be prescribed in the German legislation that in spite of this article the protest might be made on the day of maturity.

M. EKEBERG (Sweden) confirmed this interpretation.

M. QUASSOWSKI (Germany) said that he was satisfied.

Article 44, modified by the deletion of the words " at the latest ", was adopted.

ARTICLE 45.

M. SHIMADA (Japan) pointed out that, according to the first sentence of the second paragraph of the former Article 44 — now Article 45 — every endorser must within the two business days which followed the day on which he received notice inform his immediate endorser of that notice. That provision seemed to him to make superfluous the last sentence, which was as follows :

" The limit of time mentioned above runs from the receipt of the preceding notice."

The PRESIDENT replied that the last sentence referred to all the endorsers. There was a new period of two days for each. It was therefore necessary to retain the sentence. In order to make the idea more clear, he proposed the words :

" The periods mentioned above run. . . . "

Article 45, as amended, was adopted.

ARTICLE 46.²

M. SHIMADA (Japan) asked that the third sentence of the third paragraph should be completed as follows :

" When the stipulation emanates from an endorser *or an avaliseur for the latter*, the costs of the protest, if one is drawn up, may be recovered from all the persons who have signed the bill."

¹ The Drafting Committee proposed the following text :

" Le refus d'acceptation ou de paiement doit être constaté par un acte authentique (protêt faute d'acceptation ou faute de paiement).

" Le protêt faute d'acceptation doit être fait dans les délais fixés pour la présentation à l'acceptation. Si, dans le cas prévu par l'article 24, deuxième alinéa, la première présentation a eu lieu le dernier jour du délai, le protêt peut encore être dressé le lendemain.

" Le protêt faute de paiement d'une lettre de change payable à jour fixe ou à un certain délai de date ou de vue doit être fait, au plus tard, l'un des deux jours ouvrables qui suivent le jour où la lettre de change est payable. S'il s'agit d'une lettre payable à vue, le protêt doit être dressé dans les conditions indiquées à l'alinéa précédent pour dresser le protêt faute d'acceptation.

" Le protêt faute d'acceptation dispense de la présentation au paiement et du protêt faute de paiement."

En cas de cessation de paiements du tiré, accepteur ou non, ou en cas de saisie de ses biens demeurée infructueuse, le porteur ne peut exercer ses recours qu'après présentation de la lettre au tiré pour le paiement et après confection d'un protêt.

En cas de faillite déclarée du tiré, accepteur ou non, ainsi qu'en cas de faillite déclarée du tireur d'une lettre non acceptable, la production du jugement déclaratif de la faillite suffit pour permettre au porteur d'exercer ses recours.

² The Drafting Committee proposed the following text :

" Le tireur, un endosseur ou un avaliseur peut, par la clause " retour sans frais ", " sans protêt ", ou toute autre clause équivalente, inscrite dans le titre et signée, dispenser le porteur de faire dresser, pour exercer ses recours, un protêt faute d'acceptation ou faute de paiement.

M. DUZMANS (Latvia) pointed out that the word "avaliseur" was used in Article 46, whereas in the chapter on the "aval" (Articles 31 and 32) the expression "donneur d'aval" was employed. He quite understood that those two terms had the same meaning, but it appeared to him to be necessary, in order to obtain the greatest unification possible, to choose one of them and to use it every time in speaking of the "aval".

The PRESIDENT considered that there was no objection to employing the two expressions, which were both used in practice.

Referring to the addition of the words "or the *avaliseur* for the latter" in the last line but one of the article, M. SRB (Czechoslovakia) wondered what would be the position when the stipulation was made by an *avaliseur* for the drawer.

M. PERCEROU (France) was of opinion that the words "for the latter" should be suppressed.

M. SRB (Czechoslovakia) agreed with that suggestion.

Article 46, as amended, was adopted.

ARTICLE 47.

Adopted.

ARTICLE 48.¹

Assuming the case of the partial acceptance of a bill of exchange, M. WEILLER (Italy) asked whether recourse was exercised for the whole amount of the bill or only for that part of the sum which was not covered by the partial acceptance.

The PRESIDENT pointed out that, subject to the question of concordance which had been adjourned, Article 43 read :

"The holder may exercise his right of recourse against the endorsers, the drawer and the other parties liable at maturity if payment has not been made, and even before maturity if there has been a total or partial refusal to accept."

M. WEILLER (Italy) pointed out that, in those circumstances, it was a question of the whole amount.

M. QUASSOWSKI (Germany) drew M. Weiller's attention to Article 51. That article referred to the case of partial acceptance and dealt with recourse after partial acceptance. In that case, there was only partial recourse.

M. WEILLER (Italy) replied that that was the case if the bill was partially reimbursed, but what would happen if it were not partially reimbursed.

M. PERCEROU (France) recognised that the question raised by M. Weiller was not formally settled by the text. The solution would not appear to be in doubt, however. Since partial acceptance was allowed, it would produce effects to the extent to which it intervened.

The PRESIDENT stated that partial acceptance was allowed under the Uniform Regulation. It was necessary that there should be recourse for the party not covered by the acceptance.

M. WEILLER (Italy) thanked the President for his explanation.

In reply to an observation of M. Sulkowski, the PRESIDENT said that the question was settled by Article 51, and in the circumstances interpretation was unnecessary.

M. VAN NIEROP (Netherlands) noted that there was a question of interest at the rate of 6 per cent from maturity. He considered that interest should be calculated from the day of presentment. The holder had a right to present the bill within two business days which followed maturity. In those circumstances, the bank would calculate the interest twice over.

The PRESIDENT stated that the words "from maturity" already appeared in the Hague text.

(Continuation of footnote from previous page.)

"Cette clause ne dispense le porteur ni de la présentation de la lettre de change dans les délais prescrits ni des avis à donner à un endosseur précédent et au tireur. La preuve de l'inobservation des délais incombe à celui qui s'en prévaut contre le porteur.

"Si la clause est inscrite par le tireur, elle produit ses effets à l'égard de tous les signataires ; si elle est inscrite par un endosseur ou un avaliseur, elle produit ses effets seulement à l'égard de celui-ci. Si, malgré la clause inscrite par le tireur, le porteur fait dresser le protêt, les frais en restent à sa charge. Quand la clause émane d'un endosseur, les frais du protêt, s'il en est dressé un, peuvent être recouverts contre tous les signataires."

¹ The Drafting Committee proposed the following text :

"Le porteur peut réclamer à celui contre lequel il exerce son recours :

" 1^o Le montant de la lettre de change non acceptée ou non payée avec les intérêts, s'il en a été stipulé :

" 2^o Les intérêts au taux de six pour cent à partir de l'échéance ;

" 3^o Les frais du protêt, ceux des avis donnés par le porteur à l'endosseur précédent et au tireur, ainsi que les autres frais.

"Si le recours est exercé avant l'échéance, déduction sera faite d'un escompte sur le montant de la lettre. Cet escompte sera calculé d'après le taux de l'escompte officiel (taux de la banque), tel qu'il existe à la date du recours au lieu du domicile du porteur."

M. VAN NIEROP (Netherlands) repeated that the bank would calculate the discount for the two days in question and would benefit from interest at the rate of 6 per cent for those two days.

The PRESIDENT believed that the idea of the text was the following. If the bill was not paid and recourse was exercised, the holder was entitled to interest from maturity.

In reply to a remark of M. Sulkowski, the President said that the third paragraph of Article 48 should be completed as follows :

“ 3. The expenses of the protest, of the notice given by the holder to the preceding endorser, to the drawer and to the givers of ‘ *aval* ’, as well as other expenses.”

Article 48 was adopted.

ARTICLES 49, 50, 51, 52 AND 53.

Adopted.

ARTICLE 54.

The PRESIDENT pointed out that “ Article 44 ” in the second paragraph should read “ Article 45 ”.

Article 54 was adopted.

TWENTY-NINTH MEETING.

Held on June 3rd, 1930, at 10 a.m.

President: M. J. LIMBURG.

41. Examination of the Draft Uniform Regulations on Bills of Exchange and Promissory Notes : Text of the Uniform Regulation drawn up by the Drafting Committee : Second Reading ¹ (Continuation).

NOTE. — *The Conference, realising the difficulty of discussing simultaneously a text drawn up in both official languages, decided to adopt the following procedure. The discussion took place entirely on the French texts, and it was only after a provisional or final decision had been taken in regard to these texts that their translation into English was made and submitted to the Conference. For that reason, it has been impossible to reproduce the English text in the record of the discussions until that text became final.*

ARTICLE 55.

M. DUZMANS (Latvia) submitted the following amendment :

“ In Article 55, paragraph 1, and Article 60, paragraph 1, replace the word ‘ specify ’ (*indiquer*) by the word ‘ designate ’ (*désigner*). ”

On the PRESIDENT’S suggestion, *the Conference decided to maintain the text without modification. Article 55 was adopted.*

ARTICLES 56 AND 57.

Adopted.

ARTICLE 58. ²

M. SHIMADA (Japan) considered that it would be desirable to add “ and a receipted account ” in the last line of the text of this article after the words “ the protest ”.

The amendment of the Japanese delegation was adopted.

The PRESIDENT asked the members of the Drafting Committee whether the allusion to Article 48 in Article 58 was correct. For his part, he believed it was, but there was some hesitation on that point.

M. GIANNINI (Italy) replied that the reference to Article 48 was correct.

Article 58, as amended by the Japanese proposal, was adopted.

ARTICLE 59.

Adopted.

¹ See note on p. 381.

² The Drafting Committee proposed the following text :

“ L’accepteur par intervention est obligé envers le porteur et envers les endosseurs postérieurs à celui pour le compte duquel il est intervenu, de la même manière que celui-ci.

“ Malgré l’acceptation par intervention, celui pour lequel elle a été faite et ses garants peuvent exiger du porteur, contre remboursement de la somme indiquée à l’article 48, la remise de la lettre de change et du protêt, s’il y a lieu.”

M. DUZMANS (Latvia) pointed out that the word "avaliseur" was used in Article 46, whereas in the chapter on the "aval" (Articles 31 and 32) the expression "donneur d'aval" was employed. He quite understood that those two terms had the same meaning, but it appeared to him to be necessary, in order to obtain the greatest unification possible, to choose one of them and to use it every time in speaking of the "aval".

The PRESIDENT considered that there was no objection to employing the two expressions, which were both used in practice.

Referring to the addition of the words "or the *avaliseur* for the latter" in the last line but one of the article, M. SRB (Czechoslovakia) wondered what would be the position when the stipulation was made by an *avaliseur* for the drawer.

M. PERCEROU (France) was of opinion that the words "for the latter" should be suppressed.

M. SRB (Czechoslovakia) agreed with that suggestion.

Article 46, as amended, was adopted.

ARTICLE 47.

Adopted.

ARTICLE 48.¹

Assuming the case of the partial acceptance of a bill of exchange, M. WEILLER (Italy) asked whether recourse was exercised for the whole amount of the bill or only for that part of the sum which was not covered by the partial acceptance.

The PRESIDENT pointed out that, subject to the question of concordance which had been adjourned, Article 43 read :

"The holder may exercise his right of recourse against the endorsers, the drawer and the other parties liable at maturity if payment has not been made, and even before maturity if there has been a total or partial refusal to accept."

M. WEILLER (Italy) pointed out that, in those circumstances, it was a question of the whole amount.

M. QUASSOWSKI (Germany) drew M. Weiller's attention to Article 51. That article referred to the case of partial acceptance and dealt with recourse after partial acceptance. In that case, there was only partial recourse.

M. WEILLER (Italy) replied that that was the case if the bill was partially reimbursed, but what would happen if it were not partially reimbursed.

M. PERCEROU (France) recognised that the question raised by M. Weiller was not formally settled by the text. The solution would not appear to be in doubt, however. Since partial acceptance was allowed, it would produce effects to the extent to which it intervened.

The PRESIDENT stated that partial acceptance was allowed under the Uniform Regulation. It was necessary that there should be recourse for the party not covered by the acceptance.

M. WEILLER (Italy) thanked the President for his explanation.

Article 48 was adopted.

ARTICLES 49, 50, 51, 52 AND 53.

Adopted.

ARTICLE 54.

The PRESIDENT pointed out that “ Article 44 ” in the second paragraph should read “ Article 45 ”.

Article 54 was adopted.

TWENTY-NINTH MEETING.

Held on June 3rd, 1930, at 10 a.m.

President: M. J. LIMBURG.

41. Examination of the Draft Uniform Regulations on Bills of Exchange and Promissory Notes : Text of the Uniform Regulation drawn up by the Drafting Committee : Second Reading¹ (Continuation).

NOTE. — *The Conference, realising the difficulty of discussing simultaneously a text drawn up in both official languages, decided to adopt the following procedure. The discussion took place entirely on the French texts, and it was only after a provisional or final decision had been taken in regard to these texts that their translation into English was made and submitted to the Conference. For that reason, it has been impossible to reproduce the English text in the record of the discussions until that text became final.*

ARTICLE 55.

M. DUZMANS (Latvia) submitted the following amendment :

“ In Article 55, paragraph 1, and Article 60, paragraph 1, replace the word ‘ *specify* ’ (*indiquer*) by the word ‘ *designate* ’ (*désigner*). ”

On the PRESIDENT’S suggestion, *the Conference decided to maintain the text without modification.*

Article 55 was adopted.

ARTICLES 56 AND 57.

Adopted.

ARTICLE 58.²

M. SHIMADA (Japan) considered that it would be desirable to add “ and a receipted account ” in the last line of the text of this article after the words “ the protest ”.

The amendment of the Japanese delegation was adopted.

The PRESIDENT asked the members of the Drafting Committee whether the allusion to Article 48 in Article 58 was correct. For his part, he believed it was, but there was some hesitation on that point.

M. GIANNINI (Italy) replied that the reference to Article 48 was correct.

Article 58, as amended by the Japanese proposal, was adopted.

ARTICLE 59.

Adopted.

¹ See note on p. 381.

² The Drafting Committee proposed the following text :

“ L’accepteur par intervention est obligé envers le porteur et envers les endosseurs postérieurs à celui pour le compte duquel il est intervenu, de la même manière que celui-ci.

“ Malgré l’acceptation par intervention, celui pour lequel elle a été faite et ses garants peuvent exiger du porteur, contre remboursement de la somme indiquée à l’article 48, la remise de la lettre de change et du protêt, s’il y a lieu.”

ARTICLE 60.¹

M. Deoclecio DE CAMPOS (Brazil) emphasised that the second paragraph of this article said : “. . . the party who has named the referee in case of need. . .”. In order to put that text in harmony with the text of the preceding articles, it would be preferable to say : “. . . the party who has specified the referee in case of need. . .”.

The PRESIDENT asked the opinion of the Drafting Committee on this point.

M. PERCEROU (France) and M. GIANNINI (Italy) thought that the two words had exactly the same meaning. They saw no objection to the adoption of M. Deoclecio de Campos' suggestion.

The proposal of M. Deoclecio de Campos was adopted.

M. DA MATTA (Portugal) pointed out that the Conference had adopted the expression “ a person who is designated to accept . . . it in case of need ”, in place of “ the party who has named the referee in case of need ”, which was the text of Article 60, and asked whether it would not be desirable to modify the text.

M. GIANNINI (Italy) observed that . . . paragraph 1 stated : “ If persons domiciled there have been named as referees in case of need ”.

In his opinion, the preoccupation with terminology which the Conference was at present manifesting was not well-founded. In practice, in current speech, one said : “ name the referee in case of need ”.

The PRESIDENT was also of opinion that different terms could be employed in a law when there was no fear of ambiguity. He asked the Conference to maintain the text as it stood. The first time that the Regulation mentioned intervention was in Article 56, and it was natural to use the complete expression : “ a person who is designated to accept or pay it in case of need.”.

For the rest of the text, that was no longer necessary.

M. DA MATTA (Portugal) withdrew his proposal.

M. HERMANN-OTAVSKY (Czechoslovakia) noted that it was laid down in Article 60 that if the bill of exchange had been accepted by intervention, or if persons domiciled in the place of payment had been named as referees in case of need, the holder must present the bill to all those persons *at the place of payment* and, if necessary, have a protest for non-payment drawn up at the latest on the day following the last day allowed for drawing up the protest. If the intervener was not found at the place of payment, the holder would, under that provision, have to present the bill of exchange to all the interveners and to have the protest drawn up at the latest on the day following the last day allowed for drawing up the protest. It appeared to M. Hermann-Otavsky to be superfluous to cause the holder to assume that obligation towards persons who were not found at the place of payment. In his view, it would suffice to say : “ If a bill of exchange has been accepted by persons intervening who are domiciled in the place of payment, or if persons domiciled there have been named as referees in case of need ”, and to suppress the reference to the place of payment in the second part of the sentence.

The PRESIDENT pointed out that the article had been discussed at length in the first reading and that it was drafted in its present form in accordance with an Italian amendment. He considered that the article contained nothing superfluous.

M. HERMANN-OTAVSKY (Czechoslovakia) insisted that, from the practical point of view, the application of the provisions would lead to disadvantages that could be avoided. In particular, it would have the result of necessitating what were called in German “ Windproteste ”.

M. EKEBERG (Sweden), said that in Article 60 it was necessary to draw a distinction between two cases. In the first case, a bill of exchange was accepted by the interveners without the indication of a referee in case of need. The holder was not forced to demand acceptance, but if he did so he was also bound to present the bill of exchange, even if the acceptor by intervention was not domiciled in the place of payment. In the second case, persons had been named as referees in cases of need. They were, however, only interveners domiciled in the place of payment, and in consequence it was not necessary to repeat the words “ in the place of payment ”.

M. Ekeberg had taken the opinion of M. Percerou, who also considered that the words were superfluous.

M. GIANNINI (Italy) pointed out that the necessity of including the indication of the place of payment had been the object of long discussions and that, in order to provide for certain banking exigencies to which delegates who were at present absent had drawn attention, the Conference had finally voted the present text.

¹ The Drafting Committee adopted the following text :

“ Si la lettre de change a été acceptée par intervention ou si des personnes ayant leur domicile au lieu du paiement ont été indiquées pour payer au besoin, le porteur doit présenter la lettre à toutes ces personnes au lieu du paiement et faire dresser, s'il y a lieu, un protêt faute de paiement, au plus tard le lendemain du dernier jour admis pour la confection du protêt.

“ A défaut de protêt dans ce délai, celui qui a désigné le besoin ou pour le compte de qui la lettre a été acceptée et les endosseurs postérieurs cessent d'être obligés.”

In view of the absence of those delegates, M. Giannini did not consider that he was authorised to accept such a modification of substance. Moreover, he would repeat that it was dangerous to reopen the discussion on questions of principle during the second reading.

The PRESIDENT noted that the proposal of M. Hermann-Otavsky, supported by M. Ekeberg, referred to the second indication of the place of payment appearing in Article 60 and not to the first. In those circumstances, he also considered that the words were superfluous.

M. GIANNINI (Italy) thought he had misunderstood the observation of the representative of Czechoslovakia. In view of the explanation given by the President, he also agreed with his opinion and would accept the suppression of the words.

This proposal was adopted.

Article 60, as amended, was adopted.

ARTICLES 61, 62 AND 63.

Adopted.

M. DUZMANS (Latvia) proposed the addition to Chapter VIII, the consideration of which the Conference had just concluded in the second reading, a sub-heading "Intervention in general", for instance, as a heading to Article 55.

The PRESIDENT proposed the insertion before Article 55 of the following sub-heading: "I. General Provisions." The numbering of the two other sub-headings would naturally be modified.

Agreed.

ARTICLES 64, 65 AND 66.

Adopted.

ARTICLE 67.

M. DE LA VALLÉE POUSSIN (Belgium) asked for explanations in regard to the application of this article, for a question of particular concern to the members of the Belgian delegation, who specially represented credit establishments, was that of photographic copies, the use of which was spreading. In Belgium, photographic copies were documents which concerned only the holder or the drawer, but did not circulate. Was the Conference, however, and particularly the Drafting Committee, of opinion that a photographic copy could be considered as a copy which could be put into circulation? If so, the undoubted objections to the circulation of copies would be even greater.

The PRESIDENT did not understand why a distinction should be drawn on the basis of the text between photographic copies and other copies; the circulation of such copies could not be prohibited.

M. DE LA VALLÉE POUSSIN (Belgium) considered that, in those circumstances, the circulation of any copy would perhaps have to be prevented.

He repeated that, in the opinion of Baron Carton de Wiart, the existence of photographic copies would increase the objection to the authorisation of the circulation of copies, and stated that if they were supported by other delegations the Belgian delegation would ask for the deletion of Article 67.

The PRESIDENT asked whether other delegations supported the proposal for the deletion of Article 67 which M. de la Vallée Poussin had put forward.

The proposal to delete the article was not supported.

The PRESIDENT pointed out that in the first reading he had drawn the attention of the Conference to the fact that the expression "It must specify where the copy ends" was not clear. He had proposed to make use of the 1910 Hague text, which was completed by the words "copy up to here" between brackets. The President asked the Drafting Committee whether it would be able to accept that suggestion.

M. PERCEROU (France) stated that the Drafting Committee had considered that these words would be superfluous.

Article 67 was adopted.

ARTICLE 68.¹

The PRESIDENT pointed out that there was an amendment redrafted by the Danish and Finnish delegations to modify not only the numbering but also the text of the article by the addition of a new paragraph:

"When the original instrument, after the last endorsement before the making of this

¹ The Drafting Committee proposed the following text:

"La copie doit désigner le détenteur du titre original. Celui-ci est tenu de remettre ledit titre au porteur légitime de la copie.

"S'il s'y refuse, le porteur ne peut exercer de recours contre les personnes qui ont endossé ou avalisé la copie qu'après avoir fait constater par un protêt que l'original ne lui a pas été remis sur sa demande."

copy, contains a clause 'beginning from here the endorsement is only valid if made on the copy' or some equivalent formula, a subsequent endorsement on the original is null and void."

M. GRÖNVALL (Finland) stated that it followed from paragraph 1 of Article 68 that the original of a bill of exchange of which a copy had been made could no longer be endorsed. Nothing, however, could prevent the person in possession of the original bill from endorsing it, and in that case the copy would lose all its value, since the holder could not demand the original from the endorsee acting in good faith. The value of the copy depended entirely on the holder's confidence in the probity of the person in possession of the original. But how many times was the confidence of the creditor disappointed?

There was thus a practical necessity to provide the holder of a copy with a means of safeguarding himself against any eventuality by requiring that the original of the bill should stipulate that the person in possession of the bill should be prevented from making a later endorsement. That was the object of the amendment of the Danish and Finnish delegations.

M. GIANNINI (Italy) apologised for raising a question of a general character. The adoption of the rules contained in the chapter under discussion would involve a complete change in the Italian legal system on this point. It also seemed to him that the proposal submitted by the Danish and Finnish delegations did not correspond with the Italian law.

M. Giannini wished to draw the attention of the Conference to a question connected with Article 64. He wished to know exactly what was the system which would be involved by the rules adopted in the article, in order that he would know what attitude to take with regard to the Scandinavian proposal. According to the system which had been adopted, it was not known whether the drawer could, or could not, refuse to issue the instrument in several parts at the request of the holder after the creation of the instrument. Article 64 only allowed issue in several parts, if the parties were in agreement from the beginning. Could the drawer then be asked by the holder to issue the instrument in several parts? In those circumstances, and in view of the fact that the Italian delegation had accepted a system which was not its own, it wished to retain the rule of the Italian law: "When the instrument is issued in one part, the drawer may not refuse to issue other parts if the holder asks for them and himself pays the cost". That paragraph would be placed between the first and second paragraphs of Article 64.

The PRESIDENT asked M. Giannini to explain the relation of his amendment to Article 68.

M. GIANNINI (Italy) said that the uniform law imposed a system which differed entirely from Italian legislation. In order to accept the Scandinavian amendment, which differed entirely from the Italian law, it asked for a small concession on this point.

The PRESIDENT considered that the amendment to Article 64 could be adopted, apart from the whole question of copies. It was reasonable that the drawer should issue the bill in several parts if the holder demanded it and paid the cost.

M. HERMANN-OTAVSKY (Czechoslovakia) supported the amendment. Article 64 would, however, need further modifications if the amendment were accepted. Paragraph 2 said:

"These parts must be numbered, and each of them must indicate in the body of the instrument itself, in addition to its number, the number of parts issued."

That rule was inconsistent with the proposed amendment, for the first part could not specify the number of parts which would be made in the future. The question had been solved in the Hague text in the third paragraph of Article 63:

"Every holder of a bill which does not specify that it has been drawn as a sola bill may, at his own expense, require the delivery of two or more parts. For this purpose. . ."

The Italian amendment was similar to that provision in the Hague Regulation and the Czechoslovak delegation supported it, subject to the drafting alterations which would be necessary in order to harmonise the texts. Perhaps, however, the Italian delegation would be content with simply re-establishing the Hague text, which corresponded with its intention and which might give satisfaction to everyone.

The PRESIDENT read the Hague text:

"A bill of exchange can be drawn in two or more identical parts.

"These parts must be numbered in the body of the instrument, in default of which each part is considered as a separate bill of exchange.

"Every holder of a bill which does not specify that it has been drawn as a sola bill may, at his own expense, require the delivery of two or more parts. For this purpose, he must address himself to his immediate endorser, who is bound to help him in proceeding against his own endorser, and so on in the series until the drawer is reached. The endorsers are bound to reproduce their endorsements on the new parts of the set."

In his opinion, that was slightly different from the Italian amendment. The latter referred to the drawer. If the Conference reverted to the Hague text, the advantage of knowing the number of parts would be lost. It was a great deal more important to know how many parts existed than to stipulate that each part should be numbered.

Thus, if the Conference wished to adopt the Italian amendment, it would be necessary to consider how the second paragraph of the present Article 64 could be put into harmony with the amendment.

M. GIANNINI (Italy) had only asked for the minimum ; but if the Conference was willing to grant him more he would be very satisfied. As a matter of fact, the Italian delegation found no difficulty in accepting the Hague text. Nevertheless, he thought that it would be possible to bring the third paragraph as proposed into harmony with the two first paragraphs. It would be enough to substitute the article " the " for the word " these " at the beginning of the third paragraph.

The PRESIDENT did not think that it was necessary to return to the Hague text, for if they did so they would come back to a point that had already been settled — namely, the number of parts. He thought that the three paragraphs of the article might be brought into harmony with each other by accepting the modification proposed by M. Giannini and by deleting the word " issued " which occurred twice in the third paragraph. The text of the article would then run as follows :

" A bill of exchange can be drawn in two or more identical parts.

" When the instrument is issued in one part, the drawer may not refuse to issue other parts if the holder asks for them and himself pays the expenses.

" The parts must be numbered, and each of them must indicate in the body of the instrument itself, in addition to its number, the number of parts issued. If the number of parts issued is not mentioned on one of them, that part is considered as a separate bill of exchange."

M. GIANNINI (Italy) accepted this text.

M. SULKOWSKI (Poland) drew the attention of the Conference to two possibilities. First, it might happen that a bill of exchange contained the phrase " issued in one part ". If the text proposed by the Italian delegation were accepted, it would be necessary in this case to delete the phrase " indicating that the bill of exchange was issued in one part only ", and to replace it by the phrase " indicating the number of parts issued ". It should, however, be borne in mind that such deletion did not facilitate the circulation of bills of exchange. On the other hand, there was another possibility : that the bill of exchange had already been put into circulation and that it bore endorsements. In such a case, the question was whether the endorsers were compelled to repeat the signatures on the duplicates, or not. That question was not settled by the Italian formula.

In those circumstances, M. Sulkowski saw no other means of coming to a solution than to return to the text of The Hague as it stood, or to maintain the text proposed by the legal experts.

M. QUASSOWSKI (Germany) agreed that it was impossible to bring the second paragraph of Article 64 into harmony with the text of the Italian proposal. He supported M. Sulkowski and declared that either the Conference would have to reject the Italian proposal or return to the text of The Hague.

M. SCHELTEMA (Netherlands) thought that they might find a third solution if it were laid down that when a bill of exchange was issued in one part only the payee might ask for it to be given in several parts. The Netherlands law contained a provision of this nature.

The PRESIDENT wondered if it would not be more practical to leave the text as it stood and to discuss the Scandinavian amendment to Article 68.

M. GIANNINI (Italy) thought that it would be better to find some means of conciliation immediately, for otherwise he would be compelled to vote against the Scandinavian amendment.

M. PERCEROU (France) thought that perhaps the Conference might agree upon a compromise by limiting the holder's right of obtaining several parts until the moment when the first part had received an endorsement. This solution had been proposed by M. Scheltema.

M. GIANNINI (Italy) was able to accept this solution.

The PRESIDENT thought that they must act prudently and beware of improvised texts. He proposed that the Conference should adjourn the discussion of this article for the moment in order to continue the examination of the following articles, at the end of which they could interrupt the meeting in order to allow the Italian delegation, the President of the Committee of Experts and the representatives of the Scandinavian delegations to meet to draw up the text of Articles 64 and 68.

This suggestion was approved.

M. HERMANN-OTAVSKY (Czechoslovakia) made an observation on Article 68. The first sentence laid down that " a copy must specify the *person in possession (détenteur)* of the original instrument ". In his opinion, the expression " *person in possession (détenteur)* " had too wide a meaning ; a thief was also a person in possession. He thought that the word " *depository (dépositeur)* " was more accurate.

The PRESIDENT did not agree. He thought that the word " *depository* " had a completely different meaning from the expression " *person in possession* ".

He asked M. Hermann-Otavsky if he would kindly join the delegations which were going to draw up a text for Articles 64 and 68.

ARTICLE 69.

Adopted.

ARTICLE 70.

M. BIAMONTI (Italy) thought that the words " of recourse " in the third paragraph should be deleted in order to do away with any doubts that might arise concerning the scope of these actions:

The PRESIDENT agreed with M. Biamonti and asked the Conference if it would agree to this deletion.

The suggestion was adopted and Article 70 was adopted.

ARTICLE 71.

ARTICLES 73 AND 74.

Adopted.

ARTICLES 75 AND 76.

Adopted.

ARTICLE 77.¹

M. WEILLER (Italy) declared that since a promissory note was of so great importance in certain countries, such as Italy, the Netherlands and Latvia, he wished to be given certain explanations concerning this article, explanations which might perhaps lead to some additions.

In the first place, it was necessary that the Conference should stipulate for whom an " aval " was given when nothing was indicated. Apparently, such an " aval " was valid for the maker, but it seemed best to say so directly. Perhaps the following formula might be added to the article :

" An ' aval ' on a promissory note, for want of any indication on whose behalf it is given, is deemed to be given for the maker."

The PRESIDENT quite understood M. Weiller's statement, but wondered whether it was of any use to include a special provision on this subject.

As a matter of fact, Article 77 declared that provisions relating to bills of exchange applied to promissory notes so far as they were not inconsistent with the nature of that instrument ; and " avals " were mentioned in the list. It was quite understood that for bills of exchange, when there was no indication, an " aval " was deemed to be given by the drawer. By analogy, it might be deduced that in promissory notes, for want of indication to the contrary, an " aval " should be deemed to be given for the maker.

M. BIAMONTI (Italy) thought that the question was doubtful ; an " aval " might be deemed to be given for the maker or for the first endorser.

M. DUZMANS (Latvia) supported the Italian proposal and saw no inconvenience in adding the formula proposed by M. Weiller to Article 77.

M. SULKOWSKI (Poland) thought that the maker of a promissory note played a similar rôle to that of the acceptor of the bill of exchange. Article 77 as it actually stood left certain doubts that might be done away with by the formula of M. Weiller.

¹ The Drafting Committee proposed the following text :

" Sont applicables au billet à ordre, en tant qu'elles ne sont pas incompatibles avec la nature de ce titre, les dispositions relatives à la lettre de change et concernant :

" L'endossement (articles 11-20) ;

" L'aval (articles 30-32) ;

" L'échéance (articles 33-37) ;

" Le paiement (articles 38-42) ;

" Les recours faute de paiement (articles 43-50, 52-54) ;

" Le paiement par intervention (articles 55, 59-63) ;

" Les copies (articles 67 et 68) ;

" Les altérations (article 69) ;

" La prescription (articles 70-71) ;

" Les jours fériés, la computation des délais et l'interdiction des jours de grâce (articles 72, 73 et 74).

" Sont aussi applicables au billet à ordre les dispositions concernant la lettre de change payable chez un tiers ou dans une localité autre que celle du domicile du tiré (articles 4 et 27), la stipulation d'intérêts (article 5), les différences d'énonciations relatives à la somme à payer (article 6), les conséquences de l'aposition d'une signature dans les conditions visées à l'article 7, ou celles de la signature d'une personne qui agit sans pouvoirs ou en dépassant ses pouvoirs (article 8) ou la lettre de change en blanc (article 10)."

The PRESIDENT pointed out that that was a question of doctrine. In some countries the matter might raise doubts, but in other States there was no difficulty at all. He was not hostile to the examination of the question and asked the Conference whether it could adopt the suggestion of M. Weiller.

The suggestion of M. Weiller was adopted.

The PRESIDENT said that the question of drafting remained to be settled. The list in Article 77 should be left as it stood and that the formula concerning "avals" should be inserted to the last paragraph.

M. WEILLER (Italy) preferred to leave the article as it stood and to add a third paragraph.

The PRESIDENT asked M. Weiller to present a definite text for this third paragraph after the meeting had adjourned.

M. WEILLER (Italy) wished to ask a second question so as not to leave the task of settling so important a matter as that of *prescription* to national jurisprudences.

At what moment did limitation of action begin to take place against the person who had issued a note at sight? Two cases might occur. The promissory note might, or might not, be presented. If it was presented, it was obvious that it became payable at the moment of presentment. If it was not presented, according to Italian jurisprudence, limitation of action began after a period of one year's delay. The following text might therefore be added to the article :

"In a promissory note at sight, the limitation of actions and the action against the maker come into force immediately after protest for non-payment or, in default of protest, on the last day of the limit of time laid down in Article 34."

He thought that this addition was indispensable.

The PRESIDENT did not yet see any necessity to make this declaration. There were also bills of exchange at sight. Why should not jurisprudence and practice apply the system of the limits of time of the prescription of bills of exchange to promissory notes?

M. WEILLER (Italy) replied that the reason was because usually a promissory note at sight was not accepted. In the case of a promissory note there was an action against the maker, and that question was not dealt with in Article 70. Actually, such cases never occurred in regard to instruments at sight; but they would occur in regard to promissory notes when those had been neither presented nor protested.

The PRESIDENT emphasised the fact that Article 78 said :

"The maker of a promissory note is bound in the same manner as an acceptor of a bill of exchange. Promissory notes payable at a certain time after sight must be presented for the visa of the maker within the limits of time fixed. . ."

The President asked why nothing had been said about promissory notes at sight in Article 78. It was doubtless because in that case there was no difficulty.

M. WEILLER (Italy) replied that this difficulty had probably not been taken into consideration. In Italy, rather complicated cases had occurred. For example, a person might issue a promissory note and might be asked for nothing although a year would pass. The rule laid down a limitation of action of three years; but the point was to know at what moment those three years began to run. Was it at the moment when presentment ought to have been made or at the moment of issue?

M. SCHELTEMA (Netherlands) replied that it was at maturity.

The PRESIDENT pointed out that the holder of a promissory note at sight had a certain period of time at his disposal in which to present this note; but it was not an indeterminate period of time. Promissory notes at sight had to be presented within a certain period.

M. WEILLER (Italy) replied that that was correct so long as it concerned the preservation of the right of recourse, but incorrect from the point of view of the acceptor. The acceptor ought to reply even if the note had been neither presented nor protested. That was an essential and unconditional obligation.

M. SULKOWSKI (Poland) thought that the analogy with Article 34 was sufficient. Article 34 said :

"A bill of exchange at sight is payable on presentment. It must be presented for payment within a year of its date."

If a bill of exchange was not presented for payment within this limit of time, what were the legal consequences?

M. WEILLER (Italy) replied that in that case the right of recourse was lost; but this article said nothing about the acceptor.

M. GIANNINI (Italy) declared, as chairman of the Drafting Committee, that he agreed with M. Percerou that it would be enough to give an explanation of the matter in the report.

The PRESIDENT much preferred this solution. He feared that by accepting the amendment of M. Weiller the Conference would break the harmony of the provisions governing promissory notes and those governing bills of exchange at sight. It seemed to him difficult for the Conference to foresee at the present the consequences of M. Weiller's proposal, and for that reason he was much more willing to accept the suggestion of M. Giannini.

M. VISCHER (Switzerland) pointed out that, in spite of that, the Conference must take a decision. That was a question of substance.

The PRESIDENT replied that the Conference would be enlightened on this point by the report when it was submitted to them.

The proposal of M. Giannini was adopted.

The PRESIDENT said that the final sentence of the third paragraph of Article 77 should run as follows :

“ . . . the consequences of signature under the conditions mentioned in Article 7, the consequences of signature by a person who acts without authority or who exceeds his authority (Article 8) and provisions concerning a bill of exchange in blank (Article 10).”

Article 77 was adopted in this form, subject to drafting modifications concerning the giver of an “aval”.

ARTICLE 78.

The PRESIDENT said that in the second paragraph of this article the words “ in Article 22 ” should be replaced by the words “ in Article 23 ” and the words “ Article 24 ” by the words “ Article 25 ”.

Article 78 was adopted subject to these modifications.

ARTICLE 60 (Continuation).

M. EKEBERG (Sweden) reminded the Conference that in answer to his request it had decided to delete the following words in the fourth line of Article 60, “ at the place of payment ”, but after reflection he doubted whether this modification of the text was justified. If the holder of a bill of exchange had allowed the bill to be accepted by intervention, and if the acceptor by intervention was not domiciled at the place of payment, it was necessary therefore, according to the text adopted, to present the bill at this other place. But the periods of delay within which a protest for non-acceptance could be drawn up were too short. As a matter of fact, the end of the first paragraph of Article 60 said : “ . . . and, if necessary, have a protest for non-payment drawn up at the latest on the day following the last day allowed for the drawing up the protest”. If the domicile of the acceptor by intervention was at a distance, it was obvious that this period of delay would be too short. For that reason, he thought it necessary to return to a text which was substantially the same as that which had been proposed by the Drafting Committee ; but, in order to give satisfaction to M. Hermann-Otavsky, M. Ekeberg proposed the following text which had been accepted by M. Percerou :

“ If a bill of exchange has been accepted by persons intervening who are domiciled in the place of payment, or if persons domiciled there have been named as referees in case of need, the holder must present the bill to all these persons and, if necessary, have a protest for non-payment drawn up at the latest on the day following the last day allowed for drawing up the protest.”

The effect of this text would be that the holder's obligation would not concern those persons who were not domiciled at the place of payment.

The PRESIDENT thought that the Conference might adopt this slight modification.

M. ARCANGELI (Italy) was able to agree to this text, but wished to know whether the expression “ if persons domiciled. . . ” meant persons who were domiciled at the place of payment.

M. PERCEROU (France) replied in the affirmative and suggested that, in order to avoid ambiguity, this expression should be replaced by the following words : “ or if persons domiciled at this same place. . . ”.

The PRESIDENT repeated that serious inconvenience might result from amendments that were put forward at the last moment and affected the substance of articles. Even in this case the text proposed by M. Ekeberg and M. Percerou, which only appeared to consist of a simple drafting modification in order to clear up this article, would present certain drawbacks if it were applied to the Dutch Indies.

The original text said : “ If a bill of exchange has been accepted by intervention. . . ” (but it was not stipulated that the person intervening ought to be domiciled at the place of payment) “ . . . or if the persons domiciled at the place of payment have been named as referees in case of need. . . ”. Consequently, in so far as the referee in case of need was concerned,

the provisions of the article were limited solely to persons domiciled at the place of payment, whereas, in so far as intervention was concerned, as had been settled by the Italian amendment in the first reading, persons domiciled at the place of payment were not subject to this restriction.

The modification brought about by the proposal of M. Ekeberg and M. Percerou was inconvenient for the Dutch Indies, where special customs of intervention existed.

The President proposed that the original text should not be modified.

M. EKEBERG (Sweden) replied that his proposal did not entail a modification of the substance in the article ; its scope was the same as that of the text of the Drafting Committee, according to which it was only necessary to present the bill to all these persons at the place of payment and to draw up the protest against persons domiciled at the place of payment. That did not include those who might be referees in cases of need. It was certainly quite clear that the original text did not take such cases into consideration, since the period of delay for drawing up the protest was limited at the latest to the day following the last day allowed for drawing up the aforementioned protest. For a case of need in which the domicile happened to be far away from the place of payment, this period of delay would not be sufficient. Consequently, either the anxiety of the Netherlands delegation was not justified or the Netherlands delegation wished to compel a protest to be drawn up in a similar short period of delay also in the case of persons domiciled at a great distance from the place of payment.

M. QUASSOWSKI (Germany) said that in that case it would be necessary to prolong the periods of delay.

M. EKEBERG (Sweden) said that the prolongation of the periods of delay raised a fundamental question. For his part, he had no objection against such an amendment, but if the Netherlands delegation drew up one, the Conference ought to be informed of its scope. On the other hand the text he and M. Percerou had suggested merely reproduced more clearly what was already contained in the text of the Drafting Committee.

M. PERCEROU (France) and M. SULKOWSKI (Poland) agreed.

The PRESIDENT said that, according to the statement of M. Ekeberg, the article as amended excluded no kind of intervention, either at the place of payment by a person domiciled or not at the place of payment ; it only dealt with the periods of delay within which a protest might be drawn up for persons domiciled at the place of payment.

M. SCHELTEMA (Netherlands) considered that the question was not merely one of the period of delay for protests. The amendment proposed made intervention useless for persons who were not domiciled at the place of payment.

M. SULKOWSKI (Poland) drew the following distinction : On the one hand, there was the question of recourse and, in order to preserve the right of recourse, it was necessary, at maturity, to present a bill of exchange only to an acceptor by intervention who was domiciled at the place of payment. On the other hand, if the acceptor by intervention was not domiciled at the place of payment, the holder was not compelled, in order to have recourse against the guarantors, to present the bill to such acceptor at maturity. But it was impossible to agree with M. Scheltema that there was no reason in such a case for acceptance by intervention, because the acceptor by intervention always remained under obligation during three years even if the bill of exchange was not presented at maturity and no protest had been drawn up.

The PRESIDENT proposed that the amendment should be provisionally adopted and that the Conference should continue the discussion during the following meeting.

This proposal was adopted.

42. Discussion of the Reservations : Second Reading. ¹

NOTE. — *The Conference, realising the difficulty of discussing simultaneously a text drawn up in both official languages, decided to adopt the following procedure. The discussion took place entirely on the French texts, and it was only after a provisional or final decision had been taken in regard to these texts that their translation into English as made and submitted to the Conference. For that reason it has been impossible to reproduce the English text in the record of the discussions until that text became final.*

M. GIANNINI (Italy) said that it was necessary to suppress in the original heading — “ Convention. Annex II (Reservations) ” the word “ Reservations ” — for this Annex contained two series of provisions : provisions covering methods of application, and others which constituted what amounted to reservations.

The PRESIDENT proposed that the formal articles of the Convention should be indicated by Roman figures.

These proposals were adopted.

ARTICLE I.

M. MOLENGRAAFF (Netherlands) proposed that the text of this article should be put in harmony with that of Article I of the Uniform Regulation, which was drafted “ La dénomination de ‘ lettre de change ’ ”, in place of “ dénomination ‘ lettre de change ’ ”.

This proposal was adopted.

¹ See note on p. 331.

ARTICLES 2, 3, AND 4.

These articles were adopted.

ARTICLE 5.¹

M. MOLENGRAAFF (Netherlands) asked the meaning of the second paragraph of this article.

M. GIANNINI (Italy) replied that the same rule was found twice — in Article 5 and in Article 15. They should be considered together. There was a general provision in Article 22 which stipulated: "Each of the High Contracting Parties undertakes to recognise the provisions adopted by every other High Contracting Party. . .", apart from Articles 5 and 15. That was to say, in Article 5 as in Article 15, the High Contracting Parties were not bound purely and simply to accept the application which each contracting party might make of the reservation in the article.

The second paragraph of Article 17 said :

"The other High Contracting Parties are entitled to determine the conditions subject to which they will recognise such causes. The same applies to the effect of an action as a means of indicating the commencement of the period of limitation (*prescription*). . ."

In that case, it was considered that, in view of the nature of the Convention, the High Contracting Parties could not be bound simply to accept what was done by another party. Article 5 stipulated that :

"Each of the High Contracting Parties may supplement Article 38 of the Uniform Law so as to provide that the holder of a bill of exchange payable in its territory shall be obliged to present it on the actual day of maturity. Failure to comply with this obligation may only give rise to a right to damages."

If that rule had only a national bearing, no practical result would follow. If it were international, it might affect the other contracting parties. The question was of great importance in connection with Article 16.

In conclusion, M. Giannini drew the attention of the Conference to the fact that several delegations were doubtful about the scope of Article 22. That question would be dealt with later.

M. DE LA VALLÉE POUSSIN (Belgium) proposed that the last sentence of the first paragraph of Article 5 should read : "Failure to comply with this obligation *may* only give rise. . ." in place of "shall only give rise. . .".

Article 5, as amended, was adopted.

ARTICLE 6.

M. VAN NIEROP (Netherlands) asked for an explanation in regard to the sentence : ". . . each of the High Contracting Parties shall designate. . .". What was the meaning of the word "designate"? Was it necessary to say that the national law must stipulate "the institutions which are to be regarded as clearing-houses", or should the national law give only a description of what could be considered as a clearing-house?

M. PERCEROU (France) said that in France the national authority would not intervene in the designation of clearing-houses. In the countries where there was no administrative recognition of those bodies, the State could only give information in regard to the position of its legislation. It could not designate the clearing-houses, since from day to day others might be created.

M. VAN NIEROP (Netherlands) stated that in those circumstances clearing-houses could be freely designated, provided that they fulfilled certain conditions fixed by the national law.

M. GIANNINI (Italy) stated that, in view of the diversity of the organisation of clearing-houses in the various States, the article reserved to the national law the task of deciding which institutions should be regarded as clearing-houses and indicating the persons who should take part and benefit from them. If the word "designate" raised objections, the word "determine" could be substituted.

In answer to M. Helper, who said that in Denmark there were no clearing-houses and asked what action Denmark must take, the PRESIDENT replied that Denmark need take no action.

The substitution of the word "determine" for the word "designate" was adopted.

Article 6 was adopted.

¹ The Drafting Committee proposed the following text :

"Chacune des Hautes Parties contractantes peut compléter l'article 38 de la loi uniforme en ce sens que, pour une lettre de change payable sur son territoire, le porteur sera obligé de la présenter le jour même de l'échéance ; l'inobservation de cette obligation ne devra donner lieu qu'à des dommages-intérêts.
"Les autres Hautes Parties contractantes auront la faculté de déterminer les conditions sous lesquelles elles reconnaîtront une telle obligation."

ARTICLE 7.¹

M. GIANNINI (Italy) said that the Drafting Committee had drawn up Article 7 in the spirit of the Polish proposal. The formula which he proposed was equivalent to that suggested by M. Sulkowski. He drew the attention of the latter to the expression "to derogate from the stipulation". Would it not be better to say "to suspend the stipulation"?

The PRESIDENT pointed out that by the terms of Article 1 of the Introductory Convention the High Contracting Parties were required to make their reservations at the moment of ratification. There were also a second and a third paragraph to the article by the terms of which the High Contracting Parties had the right to make certain reservations even later. It had been understood at the first reading of the Convention that the Conference would have to specify the articles to which these paragraphs applied. If Article 7 were adopted in its present form, it would be necessary to mention it in paragraph 3 of Article 1 of the introductory Convention.

M. GIANNINI (Italy) considered that, since the Conference had reserved the question, it should also consider the article as reserved. That would facilitate the task of the Drafting Committee.

He drew the attention of the Conference to the fact that Article 1 of the introductory Convention covered three situations :

1. The employment of the reservations made at the time of ratification or accession ;
2. The employment of the reservations which might be made after ratification or accession for special reasons ;
3. Reservations made only in urgent cases.

If the Conference agreed that reservations could be made in urgent cases it would seem to M. Giannini to be very difficult to adopt the last paragraph of Article 1 of the Convention, for according to that text such reservations would not take effect before the ninetieth day following communication of them. A State could not be asked to wait three months in urgent cases.

M. Giannini proposed the following formula for reservations in urgent cases :

"Nevertheless, each of the High Contracting Parties may also, in cases of urgency, make the reservations provided by Articles 7 and 21 after ratification or accession. In that case, they should be communicated directly or immediately to all the other Contracting Parties. The declaration of these reservations shall take effect two days after the receipt of the communication by the other Contracting Parties."

That text, which would still have to be reviewed from the point of view of drafting, referred to the procedure which had been adopted for reservations which could be made in cases of urgency.

M. Giannini said in conclusion that the second category included the reservations provided by Articles 8, 11 and 17, while the third category included the reservations provided by Articles 7 and 21.

The PRESIDENT noted that M. Giannini's suggestion introduced a new element into the Convention, Article 1 of which referred to two categories of reservations only : those which could be made at the time of ratification or accession and those which could be made after ratification or accession. M. Giannini wished to draw a distinction in the reservations of the second category by saying that among them there were some the immediate application of which could be justified, and M. Giannini proposed that those reservations should take effect within two days from their communication. The reservation of Article 7 would appear in that category.

M. VAN NIEROP (Netherlands) asked the meaning of the term : "the effect of the stipulation for effective payment in foreign currency". Would that formula also include payment by cheque in the case, for instance, of a bill of exchange drawn in Germany on Amsterdam and payable in dollars by a cheque on New York?

M. WEILLER (Italy) replied that in that case it would not be a bill of exchange.

Mr. GUTTERIDGE (Great Britain) stated that in England the bill would not be considered as a bill of exchange.

M. VAN NIEROP (Netherlands) asked that the statements of M. Weiller and Mr. Gutteridge should appear in the Minutes. He then asked by what name the instrument could be called if it was not a bill of exchange. He requested the President to be good enough to put that question on the agenda, for it was of very great practical importance.

¹ The Drafting Committee proposed the following text :

"Par dérogation à l'article 41 chacune des Hautes Parties contractantes a la faculté d'abroger, si elle le juge nécessaire (en des circonstances exceptionnelles ayant trait au cours de change de la monnaie de cet Etat, les effets de la clause de paiement effectif en une monnaie étrangère en ce qui concerne les lettres de change payables sur son territoire. La même règle peut être appliquée pour ce qui concerne la création des lettres de change en monnaies étrangères sur le territoire national."

THIRTIETH MEETING.

Held on June 3rd, 1930, at 3.30 p.m.

President : M. J. LIMBURG.

43. Absence of Baron Carton de Wiart.

The PRESIDENT informed the Conference that he had received a telegram from Baron Carton de Wiart, member of the Belgian delegation, regretting that he was unable to attend the remaining meetings of the Conference.

44. Examination of the Draft Uniform Regulations on Bills of Exchange and Promissory Notes : Text of the Uniform Regulation drawn up by the Drafting Committee¹ : Second Reading (Continuation).

ARTICLE 43 (Continuation).

The PRESIDENT reminded the Conference that it had to give its opinion on the wording of the third paragraph of this article. The point was whether this paragraph should be kept in its actual form or whether it should be worded in terms similar to those of paragraph 2. In 1910 and 1912, the Hague Conferences had made this distinction, as might be seen from consulting the Acts of these Conferences, volume 1, page 91, volume 2, pages 65 and 66, for the 1912 Conference and pages 300 and 338 for the 1910 Conference. It seemed that the members of those Conferences had shared the idea that there ought to be a difference between the situations of the drawee and drawer. When the drawer had failed and his payments ceased, it was certainly possible for the drawee to accept. In such a case no difficulty arose, and there was apparently no reason for inserting an identical text concerning the drawer and the drawee in the uniform law. On the other hand, when the drawer had not failed but had merely suspended payment, or where execution had been levied without result, it was not impossible for him to pay at maturity in spite of that.

M. PERCEROU (France) said that they had to consider several cases : that in which the drawee had failed, that where payment had been suspended or where execution had been levied without result, and that of the failure of the drawer where two suppositions had to be faced.

In the case where the drawee had failed, recourse was immediately opened against the guarantors, since it was then certain that the principal debtor would be unable to pay. For what reason had both suspension of payment, even if not authenticated by a judgment, and execution levied without result been assimilated in this case? Because it had been possible to do so without raising difficulties of proof. This was the reason why : the holder, before exercising his right of recourse for non-acceptance, ought always to present the bill to the drawee for acceptance, and the protest for non-acceptance would state the reasons why acceptance had not been given. Therefore, the very fact that the protest had been drawn up would be a proof for the holder that non-acceptance was the result of suspension of payment, even if the failure of the drawee or the execution levied against him had not been authenticated by a judgment. There was no difficulty in furnishing proof.

Nor were there any difficulties in the case when the drawer had failed while the bill was acceptable, for then the holder had first to present the bill to the drawee for acceptance. There were then two possibilities : either the drawee gave his acceptance, in which case there was no right of immediate recourse since the principal debtor had given his acceptance ; or he refused his acceptance, in which case immediate recourse could be had for non-acceptance by the drawee.

But the really difficult case was the one where a bill was not acceptable and where the drawer had fallen behindhand in his affairs. The right of immediate recourse had there been limited to cases where the fact that the drawer had failed had been authenticated by a judgment, and this right of recourse had not been extended to cases where there was only a suspension of payment or an execution levied without result. Search would be made in vain among the Minutes of The Hague for the reasons why this distinction had been made. Nevertheless, a perusal of the report presented by M. Wieland with regard to a Communication from the Swiss Government revealed the following explanation : when the drawer had failed and when a judgment of this failure had been declared, it was easy for the holder to furnish proof merely by producing the judgment in question. On the other hand, when a drawer had merely suspended payment or where execution had been levied against him without result, in view of the fact that no protest for non-acceptance had been drawn up against the drawer, the holder found himself deprived of the means necessary to furnish the proof that a suspension of payment had not been authenticated by a judgment or an execution. In this case an action was inevitable, to which the guarantors against whom the holder was claiming would be parties. These guarantors would use the following arguments : " You allege that the drawer has suspended payment, but you must prove it. You also allege that execution has been levied without result ; you must prove that also".

M. Percerou thought the difference between the two texts was due to these considerations. From the practical point of view, he quite understood the grounds of this distinction, but he thought that it was difficult to maintain it from the purely theoretical point of view. When a bill was

¹See note on page 381.

not acceptable, it was the drawer who was the principal debtor until it had been paid ; and, since he was implicated, there was no rational motive for refusing the right of immediate recourse.

M. Percerou left it to the Conference to decide if it wished to take these theoretical considerations into account and to modify the Hague text, or if it wished to maintain it for the practical reasons mentioned above. He did not consider that the matter was of very great importance.

M. SULKOWSKI (Poland) thought that sub-paragraphs 2 and 3 of Article 43 should be brought into harmony with the text of Article 44, which said that in case of failure it was superfluous to draw up a protest. Sufficient proof was provided by the judgment pronouncing the failure. It was a different matter when it was a question of execution levied without result, or suspension of payment. In those cases, the fact had to be announced by protest. No difficulty arose in the case of suspension of payment or execution levied without result at the address of the drawee. On the other hand, the situation was much more complicated when it was a question of the execution or the suspension of payment of the drawer of a non-acceptable bill. If the Conference wished to bring paragraphs 2 and 3 into conformity, would it have to admit that the drawer's suspension of payment or the execution levied against his goods without result ought to be established by protest. From this, the peculiar situation would result that in certain cases a protest would be drawn up against the drawer and not the drawee. That was why the Hague Conferences had given up the idea of bringing paragraphs 2 and 3 into conformity.

M. GIANNINI (Italy) personally thought that the explanations given by M. Percerou were correct. The Minutes of the Hague Conference did, indeed, contain no mention of this subject. The Conference found itself faced by an article that had been voted for the third time as it stood without any indication of the reasons. If the Japanese delegation had not raised the question, all discussion might have been avoided ; but now the matter would have to be cleared up. There were two possibilities : either the Conference must support the Japanese proposal or it must keep the distinction between sub-paragraphs 2 and 3, but mention its reasons for doing so.

M. Giannini thought that the only argument that M. Percerou had been able to find in consulting, not the Minutes of the Hague Conference, but the explanations given by the Swiss Federal Government concerning the drafts of 1912, rested on a question of proof. But did not M. Percerou believe that the difficulties of proof that appeared in sub-paragraph 3 would also occur in sub-paragraph 2 ?

M. PERCEROU (France) replied that usually the matter would be simplified by the fact that the holder's domicile would be near that of the drawee.

M. GIANNINI (Italy) confirmed the fact that, from a logical point of view, the distinction between sub-paragraphs 2 and 3 was not justified. The Conference ought to choose one of the two formulæ ; and if it decided against the Japanese proposal, the delegates who were opposed to bringing these two sub-paragraphs into conformity ought to publish their arguments.

M. Giannini had not been convinced by M. Sulkowski's statement but perhaps he had not exactly understood M. Sulkowski's point of view.

For these reasons, he asked the Conference to take a definite decision by bringing the two sub-paragraphs into uniformity.

M. PERCEROU (France) thought that M. Giannini's statement was not quite correct. Even in the case of the failure of the drawee acceptor, it would be necessary to make a protest. Consequently, there would always be a protest announcing the suspension of payment by the drawee. In this case, there was a simplification of proof in one case which did not exist in the other.

M. GIANNINI (Italy) admitted that this fact certainly simplified proof.

M. SULKOWSKI (Poland) had a statement to make on Article 44. If Article 43 was modified in the way proposed, it would be necessary also to modify the fifth paragraph of Article 44. This concerned the manner of providing proof of the fact that an execution had been levied against goods without result, or of the suspension of payments. So far as the acceptor was concerned, proof resulted from the protest, but how could it be proved that execution had been levied without result or that payment had been suspended when it concerned the drawer of a non-acceptable bill ? In such a case, it would also be necessary to make the statement by protest, but with this peculiarity, that such a protest would be drawn up against the drawer.

M. VISCHER (Switzerland) considered that there was an omission in regard to the fifth paragraph of Article 44. The words " or the drawer of a non-acceptable bill. . ." should be added after the words " acceptor or not ".

M. SULKOWSKI (Poland) did not agree, for Article 44 provided that " if there is a stoppage of payment on the part of the drawee, whether he has accepted or not, or if execution has been levied against his goods without result, the holder cannot exercise his right of recourse until after presentment of the bill to the drawee for payment, and after the protest has been drawn up ". The Conference would therefore have to add a new paragraph stipulating that in the case of the suspension of payment by the drawer of a non-acceptable bill, and in the case where execution had been levied against his goods without result, these facts must be established by a protest drawn up against the drawer, which would be somewhat absurd.

The PRESIDENT thought that if they kept to the strict meaning of the words, M. Sulkowski was right ; but he doubted whether it was necessary to add another paragraph.

M. SULKOWSKI (Poland) pointed out that the Conference was faced by the consequences of the Japanese proposal concerning Article 43.

The PRESIDENT thought that it would have to be proved that payment had been suspended or that execution had been levied without result ; he did not consider it necessary in this case to say that proof should be made by a special protest.

M. VISCHER (Switzerland) pointed out that the last paragraph of Article 44 did not say what would have to be done in the case of suspension of payment.

The PRESIDENT thought that the last paragraph only said that, in the case of failure, it was sufficient to produce the judgment pronouncing this failure ; in other cases, it was a question of fact, and it would be enough to prove the existence of suspension of payment or of execution levied without result.

M. SULKOWSKI (Poland) thought that this proof would give rise to many disputes. In his opinion, it would be convenient to apply a rule to the drawer similar to that which had been adopted for the drawee.

M. QUASSOWSKI (Germany) drew the attention of the Conference to Article 10 of the Convention concerning reservations. This article left the legislation of each of the High Contracting Parties the right to determine the situation at law referred to in Article 43, sub-paragraphs 2 and 3, and in Article 44, paragraphs 5 and 6. It seemed in this way that a part of the difficulties might be eliminated.

M. SULKOWSKI (Poland) thought, on the contrary, that this was not a question of the assimilation of various situations in the case of bankruptcy (*faillite*), but one of proof.

The PRESIDENT agreed with M. Sulkowski. Article 10, which had been referred to by M. Quassowski, concerned the various methods existing in different countries for dealing with the cases of suspension of payment ; for example, winding up by law, composition to avoid bankruptcy, execution levied without result, and what was called in America "homestead".

M. GIANNINI (Italy) thought the question might be settled if the words " or if the drawer of a non-acceptable bill becomes a declared bankrupt " were deleted in the last paragraph of Article 44 and a new paragraph added as follows :

" The provisions of the two preceding paragraphs shall apply in the cases dealt with by sub-paragraph 3 of Article 43."

M. SULKOWSKI (Poland) thought that M. Giannini's formula could not be accepted, since it dealt with non-acceptable bills of exchange which consequently might not be presented in payment to the drawee for acceptance. In his opinion, they ought to add a new paragraph, which might be worded as follows :

" If the drawer of a non-acceptable bill of exchange suspends payment, or if execution has been levied against his goods without result, the holder cannot exercise his rights of recourse until after this fact has been declared by a protest drawn up against the drawer."

The PRESIDENT thought that the best thing would be to leave the text of Article 44 as it stood. When the drawer suspended payment or when execution had been levied without result, it was for the holder to furnish proof. Perhaps that would not be very easy, but apparently no other solution could be found.

M. VAN NIEROP (Netherlands) thought that it very rarely happened in the case of a non-acceptable bill that the holder exercised his right of recourse against the drawer because such a bill was not negotiated.

M. PERCEROU (France) returned to the text proposed by M. Sulkowski and said that he thought the word " protest " had not been correctly employed in this text. A protest was a definite deed, which declared a refusal to pay. This particular case could not refer to a protest, but to a deed which would announce the suspension of payment.

The PRESIDENT thought that the word " protest " might be replaced by " a notary's deed ".

M. VISCHER (Switzerland) thought that, in view of all the difficulties with which the Conference was faced, it would be better to keep Article 43 in its original form. It certainly seemed very difficult to bring the text of Article 44 into harmony with the proposal to modify Article 43.

The PRESIDENT put to the vote the proposal to maintain Article 43 as it had been drawn up by the Committee of Experts.

The Conference decided to keep Article 43 as it stood by 13 votes to 4.

TITLE OF CHAPTER III : ARTICLES 45, 46 AND 48.

The PRESIDENT informed the Conference that M. Percerou wished to propose certain amendments.

M. PERCEROU (France) said that he had come to the conclusion after giving the text of the draft Regulation more careful examination that certain modifications were necessary.

The first dealt with the title of Chapter III. Originally this chapter had been entitled "Acceptance". It had been pointed out that this chapter dealt not only with acceptance but also with the presentment of the bill for acceptance and consequently the title had been completed in the following way: "Presentment and acceptance". M. Percerou thought that this change was, however, to be deprecated. As a matter of fact, presentment implied presentment for acceptance and especially presentment at payment, but this Chapter said nothing about presentment at payment. M. Percerou therefore thought that it would be better to return to the original title "Acceptance". Apart from that, it was obvious that a bill would have had to be presented for acceptance before it could be accepted.

The PRESIDENT agreed with M. Percerou, but thought the matter was not of very great importance.

M. PERCEROU said that his second point concerned the third paragraph of Article 45, which said:

"Where an endorser either has not specified his address or has specified it in an illegible manner, it is sufficient that notice should be given to the preceding endorser."

He thought that the solution ought to be the same for the case where the giver of an "aval" had not given his address. From the moment, it had been thought desirable to mention the giver of an "aval" every time that the endorser was mentioned — M. Percerou was not of this opinion himself — it had become necessary to do the same thing here and to say: "Where an endorser or a giver of an 'aval' either has not specified his address. . .".

The PRESIDENT said that this observation of M. Percerou provided a new proof of the inconvenience of introducing questions of substance in the second reading. Personally, he did not approve of specifying the giver of an "aval" in all the articles. But the Conference had judged it expedient to decide otherwise and now found itself faced by the consequences of its decision.

In his opinion, the best thing would be to leave the text as it stood, since it would be impossible to say ". . . it is sufficient that notice should be given to the preceding endorser or giver of an 'aval'".

M. PERCEROU (France) said that he would not insist; he had merely wished to point out the fact.

The third paragraph of Article 45 was maintained unchanged.

M. PERCEROU'S (France) third remark concerned the second paragraph of Article 46, where it was said:

"This stipulation (*retour sans frais*) does not release the holder from presenting the bill within the prescribed time, nor from giving notice of dishonour to a preceding endorser or the drawer. . . ."

M. Percerou pointed out that it would also be necessary to refer to the giver of an "aval", since the Conference had decided to mention him expressly. Further, he thought it best to stop after the words "nor from giving notice of dishonour". The context would show to whom this notice of dishonour ought to be given.

The proposal of M. Percerou was adopted.

M. PERCEROU (France) made the same proposal concerning sub-paragraph 3 of Article 48, for which he proposed the following text:

"3. The expenses of protest and of the notices given by the holder, as well as other expenses".

M. VAN NIEROP (Netherlands) thought it would be better to delete the words "by the holder", for there might be more than one holder. He asked the Conference to imagine four holders: A, B, C and D. Holder D, for example, had given notice to holder C and holder C to holder A. In such a case, confusion might arise between the holders.

M. PERCEROU (France) would accept the following wording:

"3. The expenses of protest and of the notices given, as well as other expenses".

This text was adopted.

ARTICLE 60.

The PRESIDENT asked the Netherlands delegation if it was satisfied by the last wording that had been proposed.

M. VAN NIEROP (Netherlands) reminded the President that he had promised to give them a reply to the following question : Should intervention always be made by a person domiciled at the place of payment? This was a serious question.

The PRESIDENT declared that M. Ekeberg and himself had replied in the affirmative at the previous meeting.

M. Percerou had proposed a simple drafting alteration without any difference of substance to the text amended by M. Ekeberg. The article would then read as follows :

“ If a bill of exchange has been accepted by persons intervening who are domiciled in the place of payment, or if persons domiciled there have been named as referees in case of need, the holder must present the bill to all these persons and, if necessary, have a protest. . .”

The article, as amended, was adopted.

ARTICLE 64.¹

The PRESIDENT said that there was an Italian amendment to Article 64. This article was connected with Article 67 and with Article 68, to which there was a Danish-Finnish amendment.

M. GRÖNVALL (Finland) said that the Danish-Finnish amendment was independent of the Italian amendment and that the Danish and Finnish delegations maintained it.

The PRESIDENT said that the Italian amendment on Article 64 suggested that the following paragraph should be added between the first and second paragraphs :

“ If a bill is issued in one part, the drawer cannot refuse to issue other parts if the holder asks him and pays the expenses.”

Attention should be drawn to the fact that provision had been made first for one part which could be endorsed several times and that after a certain number of endorsements had been made a holder might wish to possess several parts.

M. SULKOWSKI (Poland) foresaw two possibilities : either the Conference should keep Article 64 as it stood or it should return to the text of The Hague (Article 63). It seemed to him that the Italian delegation might be satisfied by the latter step.

The PRESIDENT read the text of The Hague, which was as follows :

“ A bill of exchange can be drawn in two or more identical parts.

“ These parts must be numbered in the body of the instrument, in default of which each part is considered as a separate bill of exchange.

“ Every holder of a bill which does not specify that it has been drawn as a sola bill may, at his own expense, require the delivery of two or more parts. For this purpose, he must address himself to his immediate endorser, who is bound to help him in proceeding against his own endorser, and so on in the series until the drawer is reached. The endorsers are bound to reproduce these endorsements on the new parts of the set ”.

M. QUASSOWSKI (Germany) approved of the reinsertion of the Hague text, which would make it possible to issue several parts of a bill of exchange, even after the issue of the bill.

M. GIANNINI (Italy), in the name of the Italian delegation, accepted this proposal.

The text of The Hague was adopted by 18 votes to 4.

ARTICLE 68.

The PRESIDENT informed the Conference of the Danish-Finnish amendment, which consisted in adding the following paragraph to Article 68 :

“ Where the original instrument after the last endorsement before the making of the copy contains a clause ‘ commencing from here an endorsement is only valid if made on the copy ’, or some equivalent formula, a subsequent endorsement on the origin is null and void.”

M. QUASSOWSKI (Germany) thought that it would be useful to adopt this provision. The legal situation was the following. If an original and a copy existed, the two instruments could both be endorsed. It was obvious that this situation was dangerous for the parties concerned, whether for the holder or the debtor. The provisions proposed gave the holder the possibility of preventing the transfer of the original, since only the copy might be endorsed. From the point of view of safeguarding the circulation of bills, this provision was excellent.

M. GIANNINI (Italy) accepted this proposal.

¹ The Drafting Committee proposed the following text :

“ La lettre de change peut être tirée en plusieurs exemplaires identiques.

“ Ces exemplaires doivent être numérotés et chacun d’eux doit indiquer dans le texte même du titre, outre son numéro, le nombre d’exemplaires émis. Si le nombre d’exemplaires émis n’est pas indiqué sur l’un d’eux, celui-ci est considéré comme une lettre de change distincte.”

Baron MARKS VON WÜRTEMBERG (Sweden) declared in the name of the Swedish delegation that he considered the Danish-Finnish proposal justified.

M. HERMANN-OTAVSKY (Czechoslovakia) was also prepared to accept this proposal.

The Danish-Finnish amendment was adopted unanimously.

The PRESIDENT said that there was a Czechoslovak amendment to Article 68 suggesting that the word "détenteur" (person in possession) should be replaced by the word "dépositaire" (depository).

This amendment was rejected by 9 votes to 5.

Article 68, as amended, was adopted.

ARTICLE 77.

The PRESIDENT declared that this article raised the question of "avals" on promissory notes. The Italian delegation had drawn up an amendment which helped to clear up the situation. It proposed that the following paragraph should be added at the end of Article 77 :

"The following provisions are also applicable to a promissory note : provisions relating to guarantee by 'aval' (Articles 30 to 32); in the case provided for in Article 31, last paragraph if the 'aval' does not specify on whose behalf it has been given, it is deemed to have been given on behalf of the maker of the promissory note."

The amendment was adopted.

The PRESIDENT pointed out that the adoption of this amendment entailed the deletion of the following mention in the list contained in the first paragraph of Article 77 : "Guarantee by 'aval' (Articles 30 to 32)".

This deletion was approved.

Article 77 was adopted.

ARTICLE 45 (Continuation).

The PRESIDENT said that M. Sulkowski had just drawn his attention to a slight omission in connection with Article 45. The first paragraph stipulated that the holder must give notice of non-acceptance or non-payment to his endorsers and to the drawer, but without mentioning givers of "avals". On the other hand, the second paragraph contained the following supplementary provision :

"The same notifications must be brought to the notice of the *avaliseurs*."

The President proposed, therefore, to alter the first two paragraphs as follows :

"The holder must give notice of non-acceptance or non-payment to his endorser and to the drawer within the four business days which follow the day for protest or, in case of a stipulation "*retour sans frais*", the day for presentment. Every endorser must, within the two business days following the day on which he receives notice, notify his endorser of the notice he has received, mentioning the names and addresses of those who have given the previous notice, and so on through the series until the drawer is reached. The periods mentioned above run from the receipt of the preceding notice.

"When, in conformity with the preceding paragraph, notice is given to a person who has signed a bill of exchange, the same notice must be given within the same limit of time to his *avaliseurs*."

This text was adopted.

Article 45, as amended, was adopted.

45. Discussion of the Reservations : Second Reading (Continuation).

ARTICLE 7 (Continuation).

The PRESIDENT reminded the Conference that the debate had been adjourned at the moment when it had been discussing the question raised by M. van Nierop concerning Article 7 whether an instrument payable in foreign currency by a cheque drawn on a foreign bank did, or did not, constitute a bill of exchange.

M. VAN NIEROP (Netherlands) said that two reproaches had been made against him ; one, that the question he had raised could not be connected with Article 7 ; and the other, that if he was going to raise this question, he ought to have done so during the discussion on Article 1 or during the debate on the chapter concerning payment.

M. van Nierop thought that the first argument raised a preliminary question. It was necessary to know exactly whether the stipulation for effective payment did, or did not, include payment by cheque. If the Conference agreed on this point, M. van Nierop would deal with the second argument which had been made : that this question should have been raised at the beginning of the work of the Conference or at the time when it had discussed the chapter on payment.

In reply, he said that there had been no reason for him to do so, because personally he had had no doubts that a bill of exchange, containing the stipulation for effective payment when it concerned payment by cheque, was, according to the Regulation which had been drawn up and discussed by the Conference at considerable length, a true bill of exchange. In so thinking, he had been in agreement with all men of business and bankers, not only at this Conference, but all over the world. Before the present meeting, he had consulted several Genevese banks on

this very question. Everywhere the reply had been that there was no doubt that a bill of exchange with the stipulation "payable by cheque" was a true bill of exchange and treated as such. All banks endorsed it, presented it for payment and, if there was need, presented it for protest, in the same way as they exercised their right of recourse for a bill of exchange of this kind.

M. van Nierop emphasised the advantage of drawing up such bills of exchange; they provided protection for the drawer. Suppose, for example, that the drawer was a wine merchant in Bordeaux who sold his wine in the Netherlands, or a fruit farmer of Messina who sent his oranges to Amsterdam, or a manufacturer of Manchester who sold his cotton goods in India, China or the Netherlands, or a manufacturer of leather goods in Vienna. Such manufacturers usually sold their goods abroad in their own currency. If they followed the general rule by writing nothing on the bill, it would be converted in Amsterdam, for example, into Dutch currency. After that, it had to be converted again, since the sum had to be sent abroad by cheque or otherwise to the country of the drawer. The result was that two conversions took place which might be profitable to the banker, but not to the drawer. Moreover, if the bill had been drawn on an unimportant place where there was no exchange market, the drawer ran a greater risk of being defrauded by these two conversions.

Merchants asked for payment in their own currency to avoid such inconvenience. They might ask for effective payment in banknotes; but in Amsterdam, for example, would there be enough French banknotes to pay for the wine that came from France or enough English notes to pay for the cotton goods that came from Manchester, or enough Austrian schillings to pay for the leather goods of Vienna?

It was as a measure of self-protection that foreign business men had to draw up bills of exchange containing the stipulation: payment by cheque on London, on Rome, on Paris, or on Vienna, etc. This stipulation was more and more used, especially since the war, and particularly for bills of exchange drawn on Oriental countries.

It was possible that from a strictly legal point of view an instrument of this kind might be said not to be a bill of exchange; but M. van Nierop did not think that the Dutch Commercial Code stipulated that a bill of exchange ought to be paid in effective currency in hard cash. But even if it was so, was it the Conference's business to codify what was already out of fashion and to draw up a law that would only be put on the shelf? No, it was the desire of the Conference to accomplish practical and useful work for the future. As the Italian delegation had said, this Regulation ought to be infused by the vitality of industry and commerce. Otherwise, what would happen? People would go on creating bills of exchange, but they would be putting paper into circulation of the nature of which they were ignorant, and serious difficulties might result.

Moreover, to take a very pedantic point of view, why had the Conference allowed clearing-houses? M. van Nierop knew quite well that the reply would be: because they were recognised by law. But he would answer that the work these houses did was not payment by set-off (*compensation*) in the strict sense of the words. It was new discount, an operation that was not recognised by the Dutch civil law, and M. van Nierop believed that it was the same in the French civil law. The Conference had therefore agreed that a bill of exchange could be dealt with otherwise than by effective payment, according to commercial customs.

Finally, M. van Nierop considered that it was indispensable for the Conference to give its opinion on this point. If it was unwilling to allow that a bill of exchange with the stipulation "payable by cheque" was a real bill of exchange — and it was certainly its right to do so — they ought to say so in the Regulation itself; otherwise, there would be the risk that business men would not know the exact value of this paper. It was an indisputable fact that cheques were replacing money more and more. If the Conference was unwilling to admit the stipulation in question, they ought to say so clearly.

M. SULKOWSKI (Poland) said that the statement made by M. van Nierop was of great interest. In spite of that, he did not see any connection between this statement and the question actually under discussion — namely, the reservation on Article 41. He thought that the point raised by M. van Nierop ought to have been examined at the moment when the Conference defined the meaning of a bill of exchange. Nevertheless, M. Sulkowski wished, in his turn, to make the following observations. He reminded the Conference that M. van Nierop had quoted the case in which a drawer had stipulated on a bill of exchange that payment ought to be made by cheque and not in hard cash. In the view of M. Sulkowski, an instrument containing such a clause was not a bill of exchange, for the main characteristic of a bill of exchange was that it must be paid in cash. He drew the attention of the Conference to the numerous complications that would doubtless arise if it allowed the point of view of M. van Nierop. He quoted as an example the case where payment had been made by a cheque. Once this payment had been made it might be thought that the matter was over. In spite of that, it could happen that the cheque given by the drawee to the holder had been issued without provision, and it might be noticed later that it had not been paid.

M. VAN NIEROP (Netherlands) pointed out that in that case the holder had the right of recourse for cheques.

M. SULKOWSKI (Poland) agreed that the holder would have this right, but thought that he lost the right of recourse arising from the bill of exchange because the extinction of his rights had in the meantime occurred.

In his opinion, there were two quite distinct questions being discussed at the present moment; that raised by M. van Nierop and that of the reservation to Article 41. In his opinion, there was no connection between the two.

He added that, in the case put forward by M. van Nierop — *i.e.*, payment of a bill of exchange by cheque — this payment was not effected in foreign currency, whereas the reservation to Article 41 provided the stipulation for effective payment in foreign currency. If the Conference admitted the point of view according to which a bill of exchange containing a stipulation that it was payable by cheque was not a true bill of exchange, it was obvious that the reservation on Article 41 would be yet further limited in scope and less dangerous than M. van Nierop seemed to think.

M. VISCHER (Switzerland) did not wish to discuss the substance of the question raised by M. van Nierop, and thought that the Conference would not be justified in settling this question by a vote or in giving, at the last moment, an authentic interpretation on the point in question.

In spite of that, he considered the Conference ought to decide on the reservation put forward by M. Sulkowski. Personally, he wished to make certain objections to this reservation because he thought that the conference ought not to provide *expressis verbis* for the possibility of measures which might injure rights that had at least been indirectly acquired. On the other hand, he understood M. Sulkowski's desire to safeguard himself against the risk of being accused of violating the international Convention. He was therefore quite ready to grant each contracting State full liberty to take such measures as it might deem necessary in exceptional circumstances — but with one reservation. Under Article 22, the contracting parties bound themselves to recognise the provisions adopted under Article 7 by all the other contracting parties. Consequently, each State would be compelled to recognise all the measures taken in virtue of Article 7. M. Vischer thought that this provision would bind the States too closely. He preferred to grant other States entire liberty not to recognise measures taken by a State in exceptional circumstances.

Consequently, a State that wished to take measures because of exceptional circumstances and to suspend the effects of the stipulation of effective payment would be quite free to do so ; but, on the other hand, the other contracting States would reserve the right not to recognise the effects of such measures in their countries. The actual result would be to confirm the present legal situation.

M. Vischer thought that this compromise might satisfy M. Sulkowski and, at the same time, satisfy the other States, which would thereby not be compelled to undertake an obligation that might lead them too far.

M. GIANNINI (Italy) reminded the Conference that two questions had been raised concerning Article 7. The first had been put by M. van Nierop, and, in this connection, M. Giannini reproached his Netherlands colleague for raising the problem at a moment when the Conference was reaching the end of its work. The attention of the Conference ought to have been drawn to this point at the time paragraph 2 of Article 1 was being discussed.

There remained the question of Article 7. Here M. Giannini asked the Conference to allow the word "suspend" to take the place of the words "set aside".

He drew M. Vischer's attention to the fact that if his point of view had been adopted — *i.e.*, if they had admitted that States might, or might not, recognise measures taken by a State in exceptional circumstances — the scope of this article would be severely limited and even annulled. Besides that, this question could be examined at the moment the Conference came to discuss Article 22.

As for the point raised by the Polish delegation, M. Giannini reminded the Conference that the Italian delegation had already declared that all the problems of public law or those concerning States' financial policy could not be regulated by a convention. If the Conference adopted too strict a rule in this matter, it would compel States to denounce the Convention.

It was precisely in order to avoid that grave danger that the formula concerning a temporary suspension of the effective payment clause had been adopted, and it was for that reason that it appeared to M. Giannini to be necessary to substitute the word "suspend" for the words "set aside", since the question was really one of suspension and not of setting aside.

In conclusion, the representative of Italy asked the Conference to be good enough to adopt the Polish proposal, it being understood that the Polish delegation would accept Article 7 as it would be redrafted.
