M. PERCEROU (France) considered that the question raised by M. van Nierop was very important. He was of opinion that the Conference should make a recommendation in order that the matter could be studied at the same time as the question of cheques. At present, confusion arose from the fact that it was generally supposed that the cheque was equivalent to a bank-note, which was incorrect. A cheque was not currency, it was an instrument of payment. It was therefore necessary to study the question together with the problem of cheques.

M. DA MATTA (Portugal) was of M. Percerou's opinion. He recognised that the question raised by M. van Nierop was very important. Everyone who was familiar with commerce knew very well that the stipulation of payment by cheque was extremely frequent. At the same time, the problem could not be solved immediately ; time would have to be devoted to it, and the best plan would be to draft a recommendation on the subject which would appear in the Final Protocol of the Conference.

M. SULKOWSKI (Poland) accepted M. Giannini's suggestion to substitute the word "suspend" for the words "set aside". Nevertheless, he wished it to be understood that the word "suspend" implied the possibility of enacting provisions other than those laid down in Article 41, it being understood that those provisions might be only of a temporary character.

M. VISCHER (Switzerland) asked the President to be good enough to take a vote on whether Article 22 was applicable to Article 7. Personally, it was only in the negative that he would be able to accept the latter article.

M. SULKOWSKI (Poland) accepted M. Vischer's suggestion that the other States should not be bound to recognise measures taken by a State in exceptional circumstances.

The PRESIDENT asked the Conference whether it accepted the substitution of "suspend" for "set aside".

M. DA MATTA (Portugal) feared that the introduction of the verb "suspend" would create confusion in regard to the rights of a State. He would prefer to retain the words "set aside" or the words "suspend or modify the effects".

The PRESIDENT proposed the following formula :

"Each of the High Contracting Parties shall have the right . . . to derogate from the stipulation. . ."

M. Deoclecio DE CAMPOS (Brazil) considered that "derogation" was of a definite character, whereas "suspension" was of a temporary character.

The PRESIDENT was not of that opinion ; a State might derogate temporarily from a stipulation.

The formula suggested by the President was adopted.

The President pointed out that since M. Sulkowski had accepted M. Vischer's point of view that the other contracting parties were not bound to recognise the measures enacted by a State in exceptional circumstances, it was unnecessary to vote on whether Article 7 should be mentioned in Article 22.

The Président pointed out that the question raised by M. van Nierop remained open ; moreover, he had suggested that it should be considered in connection with the question of cheques.

M. GIANNINI (Italy) suggested that the Netherlands delegation should prepare a memorandum on the problem, which would be submitted to the Conference when it took up the question of cheques.

M. VAN NIEROP (Netherlands) personally accepted that suggestion, while making a reservation in regard to the opinion of the members of his delegation.

The PRESIDENT stated that for reasons of style it would be better for the article to read as follows :

"Each of the High Contracting Parties shall have the right . . . to derogate from the stipulation contained in Article 41 for effective payment. . ."

Article 7, as amended, was adopted.

ARTICLE 8. ¹

The PRESIDENT pointed out that the article had been completed by paragraph 2 :

"In the case provided for in the preceding paragraphs, an undated endorsement is presumed to have been made prior to the protest."

M. WEILLER (Italy) said that Article 8 referred to a simplification of the protest which was necessary in some cases. More correctly, it was the replacing of the protest by another formality. It concerned the declaration of the drawee who refused to pay.

The question was important for the Netherlands, but it was also important for Italy. Moreover, the same question had been settled in Article 9 of the Hague Reservations. There was, however, a difference. At The Hague it had been asked that the declaration should not only be dated, written on the bill and signed by the drawee, but also inscribed in a public register. The difference was very important from the technical point of view, since inscription in a register made the date certain and prevented incidents between the drawer and the drawee. It would, however, be logical to ask that the Hague stipulation should be adopted. There were certain States which did not make use of public registers. M. Weiller therefore proposed the addition of the following paragraph :

"Each of the High Contracting Parties may also prescribe that the said declaration shall be inscribed in a public register within the limit of time fixed for protests."

That addition might be useful to certain States and would inconvenience no one.

This proposal was adopted.

Article 8, as amended, was adopted.

¹ The Drafting Committee proposed the following texts :

"Article 8. — Chacune des Hautes Parties contractantes a la faculté de prescrire que les protêts à dresser sur son territoire peuvent être remplacés par une déclaration datée et écrite sur la lettre de change elle-même, signée par le tiré, sauf dans le cas où le tireur exige dans le texte de la lettre de change un protêt par acte authentique."

ARTICLE 9.¹

The PRESIDENT said that this article should read as follows : " By way of derogation from Article 44, paragraph 3. . . ". In several reservations, the words " of the uniform law " were incorrect. Why should they not be suppressed everywhere, since it was understood that the articles of the uniform law were always intended?

M. GIANNINI (Italy) considered, on the contrary, that the indication should be included everywhere.

Prince VARNVAIDYA (Siam) was of the same opinion.

The PRESIDENT agreed that the expression " Article . . . of the Uniform Law " should be inserted in each case, except in several articles which the Conference had still to consider and which referred to the Convention and not to the Uniform Regulation.

Article 9, as amended, was adopted.

ARTICLE 10.²

The PRESIDENT asked the Drafting Committee whether the text proposed had been accepted.

M. PERCEROU (France) wished to add the word " exact " after the words " to determine the ". It was necessary to know what fact represented stoppage of payment. It would therefore be advisable to determine the exact situation.

Article 10, as amended, was adopted.

ARTICLE 11.³

M. DUZMANS (Latvia) stated that there was no reason for limiting to paragraph 1 alone the reference to Article 45 of the Uniform Regulation. The words " paragraph 1 " should be suppressed and reference made to Article 45 as a whole.

This proposal was adopted.

The PRESIDENT drew attention to the fact that it seemed to be neither necessary nor expedient to say in this article " or promissory note ". In Article 19 of the Reservations, it was stated that the provisions of Articles 1 to 16 relating to bills of exchange also applied to promissory notes.

M. DUZMANS (Latvia) considered that that proposal affected Article 12.

The PRESIDENT replied that he would make the same proposal in regard to Article 12.

M. DUZMANS (Latvia) thought that Article 19 should read : " The provisions of Articles 1 to 10 and 13 to 16 ", instead of " 1 to 16 ". The question could be settled either by a revision of Article 19 in that sense or the adoption of the President's proposal.

The PRESIDENT explained that the system adopted by the Drafting Committee was as follows : In Article 19, it was indicated which articles in the reservations referred also to promissory notes. When the Conference considered Article 19, the question raised by M. Duzmans would be taken into account. If the system of the experts was adopted, it would not be necessary to refer to promissory notes in a special article.

M. DUZMANS (Latvia) agreed.

M. VAN NIEROP (Netherlands) asked why the words " maintained or introduced " had been used. In the Hague system, " maintain " only was used. The States, however, which did not follow that system were not obliged to adopt it. Indeed, if a public officer forgot to give the

¹ The Drafting Committee proposed the following texts :

" Article 9. — Par dérogation à l'article 44, alinéa 2 de la loi uniforme, chacune des Hautes Parties contractantes a la faculté de prescrire que le protêt faute de paiement doit être dressé soit le jour où la lettre de change est payable, soit l'un des deux jours ouvrables qui suivent."

² " Article 10. — Il est réservé à la législation de chacune des Hautes Parties contractantes de déterminer les situations juridiques visées à l'article 43 N^{os} 2 et 3 et à l'article 44 alinéas 5 et 6."

³ " Article 11. — Par dérogation de l'article 45, alinéa premier de la loi uniforme, chacune des Hautes Parties contractantes a la faculté de maintenir ou d'introduire le système d'avis à donner par l'Officier public, savoir : qu'en effectuant le protêt faute d'acceptation ou faute de paiement, le notaire ou le fonctionnaire qui, d'après la loi nationale, est autorisé à dresser le protêt est tenu d'en donner avis par écrit à celles des personnes obligées dans la lettre de change ou dans le billet à ordre dont les adresses sont soit indiquées sur la lettre de change ou le billet à ordre, soit connues par l'Officier public dressant le protêt, soit indiquées par les personnes ayant exigé le protêt. Les dépenses résultant d'un tel avis sont à ajouter aux frais de protêt."

requisite notice, the right of recourse might be lost. That was the case in England. He was often, however, a minor official from whom damages could not be recovered.

The suppression of the words " or introduced " was rejected by 7 votes to 7.

M. VAN NIEROP (Netherlands) asked why reference was made to the addresses " known to the public official drawing up the protest ", while in Article 45 it was stipulated that when an endorser had not specified his address or had specified it in an illegible manner it sufficed that notice should be given to the preceding endorser. Why was reference not made also to the addresses which were known to the holder ?

The PRESIDENT replied that it was much easier for a public official to know the address than any holder.

Article II, with the suppression of the two references to promissory notes, was adopted.

ARTICLE 12.¹

The PRESIDENT proposed that here also the mention of promissory notes should be suppressed.

Approved.

M. QUASSOWSKI (Germany) noted that when under a national legislation there was only one legal rate of interest in force applicable to all situations, it was that rate which was also valid in exchange matters.

If, however, there were several legal rates of interest, among which was a special rate for exchange matters, M. Quassowski presumed that it was the special exchange legal rate which was applicable under Article 12.

The PRESIDENT replied in the affirmative.

M. QUASSOWSKI (Germany) had considered it desirable that that interpretation of the article should be established for States, such as Germany, which had several legal rates of interest.

M. VISCHER (Switzerland) observed that Article 12, paragraph 2, of the Hague Convention contained rules relating to the rate of interest running from the commencement of an action at law (*intérêts de procès*). M. Vischer did not ask that a similar passage should be inserted in the present Convention on reservations, but that it should be noted that the States were free to fix the interest.

M. GIANNINI (Italy) said that it was not for the Drafting Committee to prepare a formula for with nobody had asked. Indeed the Conference had merely proposed the paragraph reproduced in Article 12. The question raised by M. Vischer would lead to numerous difficulties. In that paragraph, it was laid down that there should be an ordinary rate of 5 per cent or 6 per cent, while it had been considered preferable not to fix a rule in this matter. If it were desired to take that factor into consideration, it would be necessary to modify the system laid down in the paragraph. The question was, however, too complicated to be solved hurriedly at the end of the Conference.

M. VISCHER (Switzerland) simply desired to have it stated that the question was not settled.

M. GIANNINI (Italy) confirmed that that was the case.

Article 12, as amended, was adopted.

ARTICLE 13.

The PRESIDENT stated that there was a new article containing a reservation in regard to commission. He proposed first of all, however, to consider the present Article 13.

Article 13 was adopted.

ARTICLE 13 (New).

The PRESIDENT opened the discussion on the new Article 13, which was as follows :

" By derogation from Article 48 of the Uniform Law, each of the High Contracting Parties reserves the right to insert in its national law a rule prescribing that the holder may claim from the party against whom he is exercising his right of recourse a commission, the amount of which shall be determined by the national law.

" The same applies by derogation from Article 49 to a person who, having taken up and paid the bill of exchange, claims the amount from the parties liable to him."

M. DA MATIA (Portugal) considered that the formula " by derogation from Articles 48 and 49 " was not correct. In reality, it was not a derogation but a possibility for which provision was not made in the aforementioned articles.

¹ The Drafting Committee proposed the following text :

" Chacune des Hautes Parties contractantes a la faculté de prescrire, en ce qui concerne les lettres de change et billets à ordre qui sont à la fois émis et payables sur son territoire, que le taux d'intérêt, dont il est question à l'article 48, N° 2, et à l'article 49, N° 2 de la loi uniforme, pourra être remplacé par le taux légal en vigueur dans le territoire de cette Haute Partie contractante."

The PRESIDENT did not believe that the question was very important. If the amounts indicated in Articles 48 and 49 were considered as restrictive, it could be said that there was a derogation from Article 48.

M. DA MATTA (Portugal) would not press the point.

Article 13 (new) was adopted.

M. GIANNINI (Italy) observed that for the final text it would be necessary to note that Article 13 of the printed text would become Article 11, Article 11 would become Article 12, and Article 12 would become Article 13. The article which the Conference had just adopted would be Article 14, and the rest of the numbering would have to be modified in consequence.

The PRESIDENT took note of this observation.

ARTICLE 15 (former Article 14).

This article was adopted.

ARTICLE 16¹ (former Article 15).

The PRESIDENT asked the Drafting Committee whether, in its opinion, it was desirable to maintain this article.

M. GIANNINI (Italy) replied in the affirmative.

The PRESIDENT observed that in the Convention on Conflicts of Laws there was an Article 6 which corresponded with Article 14 of the Hague Convention.

M. GIANNINI (Italy) thought that it would be desirable to suppress the words " and of the Convention . . . signed this day ".

The PRESIDENT was of that opinion, but believed that it would have been better to suppress the whole article.

M. PERCEROU (France) did not agree that Article 16 of the present Convention and Article 6 of the Convention on Conflicts of Laws concerned two distinct questions.

The article was maintained with the amendment proposed by M. Giannini.

ARTICLE 17² (former Article 16).

M. MOLENGRAAFF (Netherlands) considered that, in view of the explanations given by M. Giannini at the preceding meeting in regard to the second paragraph of Article 5, it would be preferable to modify the second paragraph of the new Article 17 and to say : " The other High Contracting Parties are entitled not to recognise such clauses." If, on the contrary, the article read : " The other High Contracting Parties are entitled to determine the conditions subject to which they will recognise such clauses ", it would appear to indicate that they were bound to recognise them, subject to conditions which they would determine. It followed, however, from the explanation furnished at the previous meeting by M. Giannini that they were free to recognise or not to recognise them.

The PRESIDENT stated that when M. Giannini had submitted his observation on Article 5 he had had the same impression as M. Molengraaff in regard to Article 17. Evidently it would be possible to employ the subterfuge of fixing impossible conditions, but it was none the less true that, in principle, according to the article, the other High Contracting Parties would have to recognise such causes. The President believed that the intention of the Conference was that the other High Contracting Parties had a right either to recognise or not to recognise the causes.

M. GIANNINI (Italy) considered that the other High Contracting Parties were not entitled not to recognise such causes, but that they had to recognise them under certain conditions.

The PRESIDENT replied that if that was the case it would be advisable to maintain the text.

¹ The Drafting Committee proposed the following text :

" La question de savoir si le tireur est obligé de fournir provision à l'échéance et si le porteur a des droits spéciaux sur cette provision reste en dehors de la loi uniforme et de la convention... signée en date d'aujourd'hui.

" Il en est de même pour toute autre question concernant le rapport sur la base duquel a été émise la traite."

² The Drafting Committee proposed the following text :

" C'est à la législation de chacune des Hautes Parties contractantes qu'il appartient de déterminer les causes d'interruption et de suspension de la prescription des actions résultant d'une lettre de change dont ses tribunaux ont à connaître.

" Les autres Hautes Parties contractantes ont la faculté de déterminer les conditions auxquelles ils reconnaîtront de pareilles causes. Il en est de même de l'effet d'une action comme moyen de faire courir le délai de prescription prévu par l'article 71, alinéa 3 de la loi uniforme."

M. MOLENGRAAFF (Netherlands) would confine himself to asking for an explanation. In his opinion, the present text was not in conformity with the explanation given by M. Giannini at the previous meeting in regard to Article 5.

M. GIANNINI (Italy) replied that the Conference was at liberty to do what it desired. The formulæ adopted at the first reading were those of The Hague, but what was the Hague system? There were certain reservations in regard to which the States had no freedom of choice and which they were compelled to recognise.

There were two — precisely those which were the object of the existing Articles 5 and 17 — which the States had to recognise, but in regard to which they were entitled to make certain conditions.

The PRESIDENT pointed out that that was exactly what followed from the text.

M. MOLENGRAAFF (Netherlands) said that he had not asked for the modification of the text, but that he had wished to know its exact meaning.

The PRESIDENT asked whether the Conference was in agreement that Articles 5 and 17 should be considered as involving an obligation to recognise the causes in question. It was understood that in that case the High Contracting Parties might lay down very embarrassing conditions. At the same time, they could not refuse to recognise those causes.

M. GIANNINI (Italy) added that they might, for instance, lay down the condition of reciprocity.
Article 17 was maintained.

ARTICLE 18 (former Article 17).

M. VISCHER (Switzerland) pointed out that the Conference had decided to insert in the Convention a provision similar to the third paragraph of Article 24 of the Hague Convention, which was as follows :

“ The States also will give to the said Government a list of the legal holidays and other days when payment cannot be demanded in their respective countries.”

M. Vischer wished the Conference to insert a recommendation in order to ensure the communication of these lists.

The PRESIDENT replied that M. Vischer would be able to propose a recommendation to that effect for insertion in the Final Act.

Article 18 was adopted.

ARTICLE 19¹ (former Article 18).

The PRESIDENT considered that it would be preferable to use the word “ titres ” in the French text instead of “ effets ” in order to avoid any misunderstanding.

M. Deoclecio DE CAMPOS (Brazil) proposed that the text should be drafted as follows :

“ ...For the instruments referred to in Article 75 (1), or may exempt *them* from any special denomination...”

M. QUASSOWSKI (Germany) observed that it would be necessary to say : “ referred to in Article 75 (1) of the Uniform Law ”, as in Article 10.

Article 19 was adopted in the following form :

“ Each of the High Contracting Parties may determine the denomination to be adopted in the national laws for the instruments referred to in Article 75 of the Uniform Law, or may exempt them from any special denomination, provided that they contain an express mention that they are drawn to order.”

ARTICLE 20² (former Article 19).

The PRESIDENT remarked that, in view of the changed numbering of the articles, it would be necessary to consider whether the first words of Article 20 : “ The provisions of Articles 1 to 16. . . ” should not be changed. In the Drafting Committee's original text, the reservation in regard to cover referred also to promissory notes. The President at first sight thought that the question of cover did not apply to promissory notes. Article 21 of the Hague Convention stated : “ The provisions of Articles 2 to 13 and 15 to 20 . . . apply equally to promissory notes ”, but Article 14, which referred to cover, was not mentioned.

¹ The Drafting Committee proposed the following text :

“ Chacune des Hautes Parties contractantes peut déterminer la dénomination à adopter dans les lois nationales pour les titres visés à l'article 75, N° 1, ou dispenser ces effets de toute dénomination spéciale, pourvu qu'ils contiennent l'indication expresse qu'ils sont à ordre.”

² The Drafting Committee proposed the following text :

“ Les dispositions des articles 1 à 16, relatives à la lettre de change, s'appliquent également au billet à ordre.”

Returning to Article 20 (former Article 19) the President asked whether it would be advisable to say : " The provisions of Articles 1 to 16 " or " the provisions of Articles 1 to 18 ".

M. PERCEROU (France) proposed that Articles 1 to 18 should be mentioned.

M. GIANNINI (Italy) asked that, in order to avoid any confusion, the words " of the present annex " should be added after " the provisions of Articles 1 to 18 ".

With these amendments, Article 20 was adopted.

ARTICLE 21¹ (former Article 20).

In order to avoid any misunderstanding, the PRESIDENT asked that the words " of the Convention " should be added after " in Article 1 " to indicate that the latter did not refer to the uniform law.

On the other hand, the first part of the second paragraph did not seem to the President to be very clear. He wondered whether it would not be possible to find a better text.

M. PERCEROU (France) was of the same opinion and proposed the following text :

" Each of the High Contracting Parties further reserves the right to embody the provisions concerning promissory notes in a special regulation. . . "

This text was adopted.

The PRESIDENT did not think that the articles enumerated in this paragraph were correct.

M. GIANNINI (Italy) replied that the old numbering had been used. The reference was actually to Articles 75, 76, 77 and 78 of the Uniform Law and Article 20, not of the present Convention, but of the present annex.

Article 21, as amended, was adopted.

ARTICLE 22² (former Article 21).

The PRESIDENT noted that this article did not appear in the Hague Convention. He could not remember whether it had been discussed by the Conference at a first reading. He enquired in what conditions and in what circumstances it had been drafted.

M. PERCEROU (France) explained that the article was intended to authorise a State in the event of earthquakes, floods, etc., to call a moratorium. It often happened that in such circumstances a country was obliged for the time being to suspend maturities, or in any case the time-limit fixed for protest, in the region affected.

M. Deoclecio DE CAMPOS (Brazil) considered that the drafting of the article was too general and that it would be necessary to explain its terms.

The PRESIDENT was not certain that that question had been discussed in plenary meeting, nevertheless he was willing to allow it. He was of opinion that the article was not very clear.

M. PERCEROU (France) proposed the following formula, in order to give satisfaction to the President and to M. Deoclecio de Campos :

" Each of the High Contracting Parties has the right to adopt exceptional measures of a general nature. . . "

M. GIANNINI (Italy) proposed the following formula in order to put the provision in harmony with the other articles :

" Each of the High Contracting Parties has the right to adopt exceptional measures of a general nature relating to the extension of the limits of time for conservatory measures in relation to recourse (*actes conservatoire des recours*) and to the extension of maturities ".

This wording was adopted.

¹ The Drafting Committee proposed the following text :

" Chacune des Hautes Parties contractantes se réserve la faculté de restreindre l'engagement mentionné dans l'article premier aux seules dispositions sur la lettre de change et de ne pas introduire dans son territoire les dispositions sur le billet à ordre contenues dans le titre II de la loi uniforme. Dans ce cas, la Haute Partie contractante qui a profité de cette réserve ne sera considérée comme partie contractante que pour ce qui concerne la lettre de change.

" Chacune des Hautes Parties contractantes se réserve également la faculté de faire des dispositions concernant le billet à ordre un règlement spécial qui sera entièrement conforme aux stipulations du titre II de la loi uniforme et qui reproduira les règles sur la lettre de change auxquelles il est renvoyé, sous les seules modifications résultant des articles 77, 78, 79 et 80 de la loi uniforme et de l'article 18 de la présente convention. "

² The Drafting Committee proposed the following text :

" Sont réservées à la législation de chacune des Hautes Parties contractantes, les dispositions exceptionnelles d'ordre général relatives à la prorogation des délais concernant les actes conservatoires des recours et à la prorogation des échéances. "

M. WEILLER (Italy) thought that the Conference had forgotten to consider a very important point — amortisation. That question should be the object of a reservation. It would be desirable to adopt Article 15 of the Hague Convention and to insert it after the questions of general interest.

The PRESIDENT said that that reservation had not been discussed during the first reading. In the experts' draft of the Uniform Regulation, there was absolutely nothing on the point. Article 9 of the Convention on Conflicts of Laws read :

“ The steps to be taken in case of the loss or theft of a bill of exchange or promissory note are determined by the law of the country in which the bill of exchange or promissory note is payable.”

The words “ or in case of the holder's bankruptcy ” had been suppressed in accordance with an Italian amendment. It was therefore unnecessary to adopt the reservation in question.

M. WEILLER (Italy) said that there was a reservation in the Regulation in regard to cover. If the Conference desired to adopt the proposal which he had made in regard to amortisation, some words of explanation could appear in the report.

M. GIANNINI (Italy) said that it would be necessary to point out in the report that the uniform law did not settle the whole matter and that certain questions were reserved to the national laws. The case of amortisation could be mentioned.

The PRESIDENT considered that it was not sufficient simply to say in the report that certain questions were outside the scope of the Uniform Regulation and to instance amortisation as an example. Moreover, Article 9 would appear to govern the question.

M. GIANNINI (Italy) asked what would happen if a State signed the Uniform Regulation but not the Convention on Conflicts of Laws.

The PRESIDENT replied that the report could state that for States which did not accede to the Convention on Conflicts of Laws the question remained open.

M. SULKOWSKI (Poland) asked that an express provision should state that this question was reserved to the national legislations. He did not consider that the Conference should confine itself to mentioning the matter in the report, for that might give rise to misunderstandings. It would be desirable to draw up a new article and to revert to the reservation appearing in the Hague Convention.

The PRESIDENT read Article 15 of the Hague text.

M. QUASSOWSKI (Germany) stated that it was not possible to make reservations on every question. Some questions could obviously be settled by the national law, even if that were not stated in express reservations. That was so in regard to the regulating of the form of the protest. It could therefore be stated in the report that certain questions could be settled by the national law, even if they were not the object of reservations.

The PRESIDENT thought that the Committee of Experts was of that opinion, since they had made no provision in that connection in the Uniform Regulation. The question of amortisation was therefore, in his view, reserved to the national law.

M. GIANNINI (Italy) said that certain articles of the uniform law had been adopted for reasons of expediency and not of necessity. If it were stated that certain questions remained outside the scope of the uniform law, that would not mean that the list of matters on which States had entire freedom was exhausted. There was no objection to saying in the report that all questions not dealt with in the uniform law were reserved to the national law.

Article 22 was adopted.

ARTICLE 23¹ (former Article 22).

M. GIANNINI (Italy) drew the attention of his colleagues to the mention of Article 18. He also drew attention to Article 22, which referred to the same situation as that in Article 7. Since it had been agreed to leave Article 7 on one side, M. Giannini thought that the same action should be taken in regard to Article 22.

The PRESIDENT thought it would be preferable to mention Articles 18 to 21.

M. ALBRECHT (Germany) proposed to suppress Article 23. He was in doubt as to its meaning. If the article meant merely that the States which made use of one or other of the reservations were not acting in violation of the Convention, that was obvious and the provision was superfluous. If, however, the provision contained an undertaking by States to see that all the measures taken by the other States in virtue of the reservations mentioned in Article 23 were acted upon by their courts, that clause would appear to be very dangerous.

¹ The Drafting Committee proposed the following text :

“ Chacune des Hautes Parties contractantes s'engage à reconnaître les dispositions adoptées par toute Haute Partie contractante en vertu des articles 1 à 4 et 6 à 22.”

There were three kinds of reservations. Some permitted the contracting parties to introduce, by derogation from certain articles of the uniform law, a different system, as, for instance, in Article 3 and certain other articles. The States would decide at the time of ratification whether they would avail themselves of that right. Other reservations referred to the future legislation of the contracting parties by derogation from certain provisions of the uniform law — for instance, in Article 8 and Article 22. It was not possible at present to say what measures States might take in virtue of Article 8 or Article 22.

Finally, there were in this chapter some provisions in virtue of which certain questions remained outside the uniform law and would be settled by the national legislations. After the first reading of this chapter, the Conference had adopted the Convention on Conflicts of Laws, which would deal also with the acknowledgment of measures to be taken in the territories of the contracting parties.

It seemed that, if the article were accepted, there would be two different systems for the States which accepted the Convention and for the States which did not accept it, but which desired that the rules should be recognised by the other States in virtue of Article 23.

It would be advisable to encourage States to adopt the Convention on Conflicts of Laws and for that reason to suppress Article 23.

In regard to the questions not settled in the Convention on Conflicts of Laws, Governments could not undertake in advance to recognise the unknown measures which other States might take in future. Such recognition could in fact be compared with a bill of exchange in blank, signed by one State which could be completed by other States.

In regard to the category of reservations which left certain matters to the national legislations, it seemed that the recognition of those measures should be stipulated in Article 23. States could not be compelled to recognise the whole legislation of another State in regard to a certain matter. The engagement undertaken in Article 23 would be quite vague and would give rise to international difficulties which should be avoided.

For those reasons, he asked that Article 23 should be suppressed.

M. SULKOWSKI (Poland) was of opinion that it was extremely important to maintain the principle established by Article 23 — namely, that the reservations of a State had to be recognised by other States. For instance, there was a reservation which provided that protest could be replaced by a declaration made by the drawee. According to M. Albrecht's suggestion, Germany, for instance, might say: "The protest not having been drawn up in an authenticated document, the bill of exchange must be considered forfeited".

To take another example, Article 19 contained the reservation that an instrument which did not contain the denomination "bill of exchange" should be considered as a promissory note, provided that it contained the clause "to order". A State might say, however: "An instrument which does not contain the denomination 'bill of exchange' is not equivalent to a promissory note".

Such would be the consequences of the suppression of Article 23. There was every necessity for maintaining the article, with the exceptions suggested by M. Giannini. The reservations which had to be recognised by other States were of the same nature. If the case were otherwise, what purpose would they serve?

M. ALBRECHT (Germany) pointed out that M. Sulkowski had quoted the article referring to the replacing of the "protest by authenticated document" by a written declaration. M. Albrecht considered that the example proved that Article 23 could very well be suppressed. If the Conference adopted that point of view, the result would be that the national legislation of each State on private international law would have to decide whether a State could, or could not, recognise such protest. On the other hand, the Conference had settled the question in the Convention on Conflicts of Laws in connection with the provision concerning the form of the protest. In M. Albrecht's opinion, the second example quoted by M. Sulkowski relating to the denomination of the promissory note was also convincing. It was the national legislation of each State on private international law which would decide the matter of promissory notes issued abroad.

In conclusion, M. Albrecht stated that if the Conference wished to give Article 23 a wider meaning than that which he had explained it would be dangerous to retain it and expedient to suppress it.

The PRESIDENT asked the Conference whether it accepted the article which M. Giannini had read.

The proposal to suppress Article 23 was rejected by 9 votes to 8.

The article was maintained.

M. SMETS (Secretary of the Conference) said that it would be better to add "Article 19" to the last line of Article 21 and to say: ". . . and of Articles 19 and 20 of the present Annex".

This addition was adopted.

The Annex was adopted as a whole at a second reading.

THIRTY-FIRST MEETING.

Held on June 4th, 1930, at 10.30 a.m

President: M. J. LIMBURG.

46. Discussion of the Draft Convention providing Uniform Regulations on Bills of Exchange and Promissory Notes : Second Reading.¹

INTRODUCTORY CONVENTION.²

The PRESIDENT proposed the insertion after the names of the various heads of States of the following text :

“ Being desirous of avoiding the difficulties caused by differences in the laws of countries in which bills of exchange circulate and of thus giving more security and stimulus to international trade relations ;

“ Have appointed. . . ”

This addition was adopted.

ARTICLE I.³

The PRESIDENT pointed out that during the discussion of the reservations at the previous meeting the chairman of the Drafting Committee, in alluding to the blank which had to be filled in in Article I, had announced that a text had already been prepared which established three kinds of reservations :

1. Reservations to be presented at the latest at the time of ratification ;
2. Reservations which could still be presented after ratification ;
3. Among the latter reservations, there were two which would take effect not on the ninetieth day but two days after notification.

According to that proposal, Article I would be drawn up as follows :

First and second paragraphs, no change.

Third paragraph, the blank would be completed by the inclusion of Articles 8, 12, and 18.

Finally, it would be advisable to add a fourth paragraph as follows :

“ Each of the High Contracting Parties may, in urgent cases, make use of the reservations contained in Articles 7 and 22, after ratification or accession. In such cases, they must immediately notify direct all other High Contracting Parties and the Secretary-General of the League of Nations. The notification of these reservations shall take effect two days following its receipt by the High Contracting Parties.”

Thus, the reservations which could be made after ratification were those in Articles 8, 12 18, 7 and 22. The first three could take effect after the ninetieth day following notification. The two latter would take effect two days after the receipt of notification by the High Contracting Parties.

The reference in Article I to the three Articles 8, 12 and 18 and to the two Articles 7 and 22 was adopted.

M. ALBRECHT (Germany) said there was a slight alteration in the wording of the first paragraph of Article I. The previous wording ran :

“ The High Contracting Parties undertake to introduce in their respective territories, either in the original text or in their own languages, the Uniform Law. . . ”

The present wording read :

“ The High Contracting Parties undertake to introduce in their respective territories, either in one of the original texts or in their own languages, the Uniform Law forming Annex I of the present Convention.”

¹ See note on p. 221.

² The Drafting Committee submitted the following text :

“ The President of the German Reich.
have appointed as their plenipotentiaries the following :

“ Who, having communicated their full powers, found in good and due form, have agreed upon the following provisions.”

³ The Drafting Committee submitted the following text :

“ The High Contracting Parties undertake to introduce in their respective territories, either in one of the original texts or in their own languages, the uniform law forming Annex I of the present Convention.

“ This undertaking shall, if necessary, be subject to such reservations as each High Contracting Party shall notify at the time of its ratification or accession. These reservations shall be chosen from among those mentioned in Annex II of the present Convention.

“ The reservations referred to in Articles 1, . . . of the said Annex II may be made after ratification or accession, provided that they are notified to the Secretary-General of the League of Nations, who shall forthwith communicate the text thereof to the Members of the League of Nations and to the States non-Members on whose behalf the present Convention has been ratified or acceded to. Such reservations shall not take effect until the ninetieth day following the receipt by the Secretary-General of the above-mentioned notification.”

In his opinion, the original wording was the better, for the following reasons: The Conference was to draw up an international Convention expressed in two languages, French and English. If there were any discrepancy between the two texts, their combined effect would determine the exact meaning of the international Convention. According to the practice adopted in Germany, whenever there was a convention expressed in two languages, the text was published in the German Law Gazette in the two languages and was accompanied by a translation into German, which served as a guide to the courts and to the administrative authorities which had to apply the convention. If the Conference adopted the first paragraph of Article I in its present wording, it would be impossible to follow the above procedure, and in that case each High Contracting Party would be compelled to choose which of the two texts — French or English — they wished to introduce if they did not want to avail themselves of the option to introduce a text in their own language. In his opinion, it followed from the first paragraph of Article II that the French and English texts would be equally authentic, and it must be laid down in Article I that each contracting party undertook to introduce the uniform law in the original text. Original text in this connection would mean original text in two languages that was to say, French and English. Of course those countries which were in the happy position of having English or French as their national language might avail themselves of the optional clause when introducing the uniform law in their own language — that was to say, either only in English or only in French.

The PRESIDENT, on the contrary, thought that the amendment was an improvement. The Hague text was as follows:

“ The High Contracting Parties undertake to introduce into their respective territories, *either in the original text or in their national tongues.* . . . ”,

but it should not be forgotten that at The Hague there was only one text, while for the Convention there would be two original texts, a French text and an English text.

M. ALBRECHT (Germany) proposed the re-establishment of the original text.

This proposal was rejected by 12 votes to 4.

M. VISCHER (Switzerland) observed that paragraph 2 of Article I stipulated that the High Contracting Parties should notify their reservations at the time of ratification or accession, apart from a few exceptions.

In Annex II, even when it was not a question of true reservations, all the articles were designated as reservations — among others, Articles 16 and 17. A misunderstanding might arise in the sense that it might be thought that the High Contracting Parties had no right to make use of the provisions laid down in that article. It was not a question there, however, of true reservations.

For his part, M. Vischer thought that the High Contracting Parties could solve these questions as they desired, without making express mention of them at the time of ratification or accession. Perhaps it would be desirable to say so in the report.

The PRESIDENT said that M. Vischer's observations would appear in the Minutes.

M. GIANNINI (Italy), Chairman of the Drafting Committee, pointed out that, at the beginning of the report relating to Annex II, it was stated that the annex included the reservations and the provisions to be applied.

M. VISCHER (Switzerland) stated that he was satisfied.

Prince VARNVAIDYA (Siam) said that, inasmuch as it had not been possible to read the English text a second time, he requested that the French text should be very carefully translated.

The PRESIDENT replied that the Secretariat would certainly do so.

Mr. GUTTERIDGE (Great Britain) was sure that Prince Varnvaidya would be one of the first to recognise that the translation was a very difficult task, which had to be carried out sometimes under conditions of pressure. The matter had been gone into very thoroughly, a great deal of work had been put into the translation by the staff of the Secretariat, and he had done all he possibly could to assist them in making the English translation accurate.

Prince VARNVAIDYA (Siam) paid a tribute to the English translation informally communicated to the English-speaking delegates. In his opinion, it was a good and accurate translation, so much so that some of the amendments proposed and adopted for the French text had no need to be made in the English text. What he had in mind, however, were the modifications which had been adopted as subsequent amendments in the Conference; it was not so much a question of translation, as of putting the English text into harmony with the French.

The PRESIDENT replied that every time a text was amended it was submitted to the Translation Service of the Secretariat and immediately incorporated in the English text.

He took advantage of the opportunity — and believed he was interpreting the wishes of the Conference in doing so — to thank Mr. Gutteridge for the trouble which he had taken in that connection.

Mr. GUTTERIDGE (Great Britain) thanked the President for his observations, adding that he would do all in his power to help the work of the Conference.

Article I was adopted

ARTICLE II.¹

The PRESIDENT thought that it would be desirable to draft the second paragraph of Article II as follows :

“ It may be signed thereafter until August 6th, 1930.”

He had received the following letter from the Japanese delegation :

“ The Japanese delegation has telegraphed a report to its Government on the results of the first reading of the Introductory Convention in connection with the time-limits for signature and ratification. As a result of that report, the Japanese Government has informed us by telegraph that, in order to make possible a suitable examination of the new regulation, it would appear to be necessary to increase the time-limit for signature to three months.

“ On the other hand, if the Regulation is to be adopted in Japan, it will be necessary to modify the Commercial Code at present in force, and that modification will have to be approved by the Diet. That will involve a lengthy procedure and much time.

“ For those reasons, it is almost impossible to ratify the Convention in two years.

“ The Japanese delegation expresses its great regret at having to ask the President and the delegates to reconsider these questions and to be good enough to consider the possibility of changing the time-limits at present laid down.

“ The Japanese delegation therefore wishes to propose that the time-limit for signature be increased to three months, and that in regard to the time-limit for ratification, Article 25 of the Hague provision, which says that ‘ the Convention shall be ratified as soon as possible ’, be adopted.”

The President added, that if he made any suggestion to the Conference, he would be obliged to say that he could not accept the Japanese proposal. If it were only a question of increasing the time-limit for signature from two or three months, it might be possible to consider giving satisfaction to the Japanese delegation. It seemed to the President, however, that it was impossible for the Conference to satisfy the second request of the Japanese delegation. To agree that the Convention should be ratified as soon as possible would be to consent to a very much delayed ratification. Moreover, the President observed that countries could always begin by signing and could then consider whether they could also ratify.

M. OHNO (Japan) replied that the Japanese Government almost always ratified a Convention which had been signed by its delegation. It was therefore a question of honour for the Japanese delegation. It did not wish to sign a Convention without being sure that it could be ratified.

The PRESIDENT understood the very conscientious position taken up by the Japanese delegation and paid it a tribute. He pointed out, however, that there was still the possibility that Japan would accede. It was not possible to delay the ratification and the putting into force of the Convention for the sole reason that Japan needed more time than other countries.

M. OHNO (Japan) replied that the United States and Great Britain would not accede to the Convention. With those two countries, however, Japan had the closest commercial relations. Consequently, the Japanese delegation did not know whether its Government would be able to accede to the Convention.

The PRESIDENT very well understood the point of view which the delegate of Japan had just explained. It could be found, moreover, in the Preparatory Documents. He did not contest the view that the Japanese Government would perhaps need three years to examine very conscientiously the regulations which the Conference would have to adopt, but it would be impossible to put that in the Convention.

M. Deoclecio DE CAMPOS (Brazil) pointed out that the situation was difficult for countries other than Japan. He proposed a prorogation of six months. The Brazilian National Congress sat from May to December. According to the rules of procedure of the Congress, the Chamber of Deputies and the Senate, ratification involved a whole series of measures which necessitated time. Considerable delay had therefore to be expected in carrying out the formalities required by the rules after the executive authority had referred the documentation to be examined to the parliamentary committees for the drawing up of the bill of ratification.

He therefore thought that the period of two years should be extended and asked the Conference to take into account what he had said and to be good enough to increase the period of time allowed for ratification by the Governments. The Brazilian delegation proposed a prolongation of six months — that was to say, until December 31st, 1932.

M. GIANNINI (Italy) stated that the date fixed in Article III could be September 1st, 1932, instead of July 1st 1932. Moreover, in Article II, September 6th could be fixed as the date of signature instead of August 6th.

M. Deoclecio DE CAMPOS (Brazil) accepted this amendment.

¹ The Drafting Committee proposed the following text :

“ The present Convention, the French and English texts of which shall be equally authentic, shall bear this day's date.

“ It may be signed thereafter until (*date of the expiry of a period of sixty days from the date of the Convention*) on behalf of any of the League of Nations or non-Member States ”.

M. OHNO (Japan) considered that a prolongation to six months was insufficient, in view of the preparatory work which would be necessary.

M. QUASSOWSKI (Germany) stated that the fixing of a time-limit for ratification was justified, but that that unusual procedure should not result in excluding some States from ratification. The Conference would have to consider whether it was not possible to prolong the time-limit in order to enable all States to ratify the Convention.

The PRESIDENT put Article II to the vote with the mention of September 6th as the time-limit for signature.

Article II, as amended, was adopted.

ARTICLE III. ¹

The PRESIDENT pointed out that M. Giannini had proposed that the date should be fixed as September 1st, 1932, instead of July 1st, 1932.

This proposal was adopted by 12 votes to 2.

M. OHNO (Japan) asked the Conference whether it would not be able to make an exception on behalf of Japan in regard to the time-limit for ratification.

The PRESIDENT replied that that would be impossible ; it would upset the whole Convention.
Article III, as amended, was adopted.

ARTICLE IV.

The PRESIDENT pointed out that the date should be September 6th, 1930.

Article IV was adopted.

ARTICLES V AND VI.

Adopted.

ARTICLE VII. ²

The PRESIDENT pointed out that the words between brackets should be deleted and the end of the first sentence should read : " in respect of that Member of the League of Nations or non-Member State denouncing it ".

Article 7 was adopted.

ARTICLE VIII.

Adopted.

ARTICLE IX. ³

Mr. GUTTERIDGE (Great Britain) suggested that in the second paragraph of Article 9 the words " the High Contracting Parties may " should be followed by the words " at any time ".

¹ The Drafting Committee proposed the following text :

" The present Convention shall be ratified.

" The instruments of ratification shall be deposited before July 1st, 1932 (*date of expiry of a period of twenty-four months from the date of the Convention*), with the Secretary-General of the League of Nations, who shall forthwith notify receipt thereof to all the Members of the League of Nations and to the non-Member States Parties to the present Convention."

² The Drafting Committee proposed the following text :

" Except in urgent cases, the present Convention may not be denounced (on behalf of a Member of the League of Nations or non-Member State) before the expiry of two years from the date on which it has entered into force in respect of that Member of the League or Non-Member State ; such denunciation shall take effect as from the ninetieth day following the receipt by the Secretary-General of the notification addressed to him.

" Every denunciation shall be immediately communicated by the Secretary-General of the League of Nations to all the other High Contracting Parties.

" In urgent cases, a High Contracting Party which denounces the Convention shall immediately notify direct all other High Contracting Parties, and the denunciation shall take effect two days after the receipt of such notification by the said High Contracting Parties. A High Contracting Party denouncing the Convention under these circumstances shall also inform the Secretary-General of its decision.

" Each denunciation shall take effect only as regards the High Contracting Party on whose behalf it has been made."

³ The Drafting Committee proposed the following text :

" The High Contracting Parties may declare at the time of signature, ratification or accession that it is not their intention in accepting the present Convention to assume any liability in respect of all or any of their colonies, protectorates or territories under suzerainty or mandate, in which case the present Convention shall not be applicable to the territories mentioned in such declaration.

" The High Contracting Parties may subsequently inform the Secretary-General of the League of Nations that they intend to apply the present Convention to all or some of their territories referred to in the statement provided for in the preceding paragraph. In this case, the Convention shall apply to the territories referred to in the notification ninety days after its receipt by the Secretary-General of the League of Nations. They further reserve the right to denounce it, in accordance with the conditions of Article 7, on behalf of all or some of their colonies, protectorates or territories under suzerainty or mandate."

In his opinion, the insertion of these words would remove any possible doubt as to when this could be done.

Article 9, as amended, was adopted.

ARTICLE 10.

Adopted.

The Convention as a whole was adopted at a second reading.

47. Discussion of the Protocol of the Convention.

PROVISION I.

The PRESIDENT pointed out that September 1st, 1932, should be inserted instead of July 1st, 1932.

Provision I was adopted.

PROVISION II.

The PRESIDENT pointed out that September 1st would become November 1st.

Provision II was adopted.

PROVISION III.

Provision III and the concluding sentence were adopted.

48. Discussion of the Recommendations.

The following recommendation was adopted:

“ The Conference further recommends that the Parties to the Convention providing Uniform Law for Bills of Exchange and Promissory Notes should communicate to one another the text of the most important judgments given in their respective territories coming under the application of the said Convention.”¹

The PRESIDENT proposed that this recommendation, together with the other recommendations, should be put in the Final Act of the Conference.

This proposal was adopted.

The PRESIDENT stated that among the recommendations to which he had alluded was a Swiss recommendation as follows :

“ The Conference recommends that the High Contracting Parties should communicate to one another a list of the legal holidays and other days on which payment cannot be demanded in their respective countries.”

The recommendation was adopted.

The PRESIDENT pointed out that, in those circumstances, there would be included in the Final Act of the Conference : (1) the recommendation in regard to the communication of legal decisions ; (2) the recommendation addressed to the Institute of Private International Law at Rome ; (3) the recommendation of the Swiss delegation ; (4) the Italian recommendation that the translation of the text in the countries which had the same language should be made in common by the countries concerned.

It would also be necessary to insert in the draft Convention a transitional provision stipulating that, when a State put its new national law into force in conformity with the provisions of the uniform law, the uniform law would not apply to bills of exchange already in circulation. That provision had not been laid down at the Hague Conferences. He proposed that the Conference should insert between Articles 1 and 2 of the Convention a new article as follows :

“ In each contracting State, the Uniform Law shall not apply to the bills of exchange and promissory notes already issued and still in circulation at the time of the coming-into-force of the convention but only to the bills of exchange and promissory notes subsequently issued.”

M. DA MATTA (Portugal) considered that only the first part of this provision was necessary and that the words “ but only to the bills of exchange. . . ” could be deleted.

The PRESIDENT agreed.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that the meaning of such a provision was very doubtful. The situation in regard to bills of exchange themselves was very clear, but it was less clear in regard to subsequent transactions — for instance, acceptance, conservatory measures, etc.

The PRESIDENT was not of that opinion. He considered that under this provision bills of exchange, as well as subsequent transactions concerning bills already created, would be governed by the old law.

¹ See Austrian Proposal, Annex n° 18.

M. HERMANN-OTAVSKY (Czechoslovakia) thought that it would be preferable not to insert the provision, but to leave the national legislation of each State to settle the question.

M. STUB HOLMBOE (Norway) thought that the question was too complex to be settled so rapidly. The general principles of the law would operate, and the provision proposed would therefore appear to be unnecessary, and even dangerous.

The PRESIDENT was of the contrary opinion. If the Conference did not adopt an article of that kind, each State would act on its own account, and everyone was aware that transitional law was one of the most difficult problems of law in general.

He proposed that the Conference should adopt the provision in the following form :

“ In the territories of each of the High Contracting Parties, the Uniform Law shall not apply to bills of exchange and promissory notes already issued at the time of the coming into force of the present Convention.”

This article was adopted by 17 votes to 6 and became Article II of the Introductory Convention.

49. Discussion of the Convention laying down Rules governing Certain Conflicts of Laws in connection with Bills of Exchange and Promissory Notes : Text prepared by the Drafting Committee : Second Reading ¹.

NOTE. — *The Conference, realising the difficulty of discussing simultaneously a text drawn up in both official languages, decided to adopt the following procedure. The discussion took place entirely on the French texts, and it was only after a provisional or final decision had been taken in regard to these texts that their translation into English was made and submitted to the Conference. For that reason, it has been impossible to reproduce the English text in the record of the discussion until that text became final.*

ARTICLE I.

Adopted.

ARTICLE 2. ²

Mr. GUTTERIDGE (Great Britain) objected to the use of the word “ State ”. Owing to the difficult circumstances in which it was placed, it would be impossible for the British Empire to accept the word “ State ”, since that would cause it to stumble into a constitutional morass from which escape would be impossible.

The PRESIDENT proposed that the word “ State ” should be replaced by the word “ country ” in the first and second paragraphs.

This amendment was adopted.

M. GIANNINI (Italy) urged the Conference to delete the last paragraph.

M. PERCEROU (France) was unable to support the proposal to delete the last paragraph. He observed, however, that in the report of M. Diena, the Rapporteur, the scope of the article was strictly limited. The explanation contained in the report would allay the uneasiness which might be caused in this matter.

Article 2, as amended, was adopted.

ARTICLE 3.

The word “ State ” was replaced by “ country ”.

Article 3, as amended, was adopted.

ARTICLE 4. ³

The PRESIDENT drew attention to the amendment submitted by the Latvian delegation to replace the word “ effets ” by the word “ titres ” in the last line of the first paragraph in order

¹ See note on p. 221.

² The Drafting Committee proposed the following text :

“ La capacité d'une personne pour s'engager par lettre de change et billet à ordre est déterminée par sa loi nationale. Si cette loi nationale déclare compétente la loi d'un autre Etat, cette dernière loi est appliquée.

“ La personne qui serait incapable, d'après la loi indiquée par l'alinéa précédent, est, néanmoins, valablement tenue, si elle s'est obligée sur le territoire d'un Etat d'après la législation duquel elle aurait été capable.

“ Chacune des Hautes Parties contractantes a la faculté de ne pas reconnaître la validité de l'engagement pris en matière de lettre de change et de billet à ordre par l'un de ses ressortissants et qui ne serait tenu pour valable dans le territoire des autres Hautes Parties contractantes que par application de l'alinéa précédent du présent article ”.

³ The Drafting Committee proposed the following text :

“ Les effets des obligations de l'accepteur d'une lettre de change et du souscripteur d'un billet à ordre sont déterminés par la loi du lieu où ces effets sont payables.

“ Les effets que produisent les signatures des autres obligés par lettre de change ou billet à ordre sont déterminés par la loi de l'Etat sur le territoire duquel se trouve le lieu désigné comme étant celui où cette signature est donnée. Si aucun lieu n'est indiqué, la législation applicable est celle de l'Etat sur le territoire duquel les signatures ont été souscrites.”

to avoid a confusion of terms, seeing that, in the first line of the same paragraph, the word "effets" was used in an entirely different sense.

This amendment was adopted.

M. DIENA (Italy) said that the Italian delegation was not satisfied with paragraph 2 of Article 4. He believed that, in a spirit of conciliation, the German delegation would be prepared to accept the possibility of improving the paragraph by shortening it and saying simply :

"The effects of the signatures of the other parties liable on a bill of exchange or promissory note are determined by the law of the country in which is situated the place where the signatures were affixed."

M. Diena considered that the application of the second paragraph as it appeared in the draft might have very grave consequences, even from the point of view of capacity. He instanced as proof the following example : An Italian aged 20 signed a bill of exchange at Milan, but knowing that in Milan he was considered to lack capacity in view of his age, he mentioned Geneva on the bill of exchange instead of Milan. That would suffice to make the bill of exchange valid and productive of legal effects if the present text of Article 4 were retained. It would not be the case with the text as amended by M. Diena.

M. QUASSOWSKI (Germany) was of opinion that the question was settled in Article 2 and that Article 4 did not refer to capacity.

M. DIENA (Italy) replied that the provisions were closely connected. When a bill of exchange was signed at Milan, it must be considered as an Italian bill of exchange.

Viscount POULLET (Belgium) said that the observation of the German delegate was well founded. In Article 4 it was not a question, either directly or indirectly, of capacity. That point was settled by Article 1. Whether the signature was given at Geneva or at Milan, the bill of exchange would have no value if the party lacked capacity by virtue of Article 1.

Nevertheless, Viscount Poulet approved the text proposed by M. Diena. A bill of exchange drawn up and signed at Milan could not be allowed to indicate Geneva.

M. GIANNINI (Italy) asked the German delegation to consider that, should Article 4 appear to facilitate fiscal frauds, the ratification of agreements would be made very difficult. With the provision proposed by the German delegation, however, there was a risk of facilitating fraud.

M. QUASSOWSKI (Germany) did not believe that the Italian proposal was an improvement. The present text took into consideration the intention of the parties. For instance, a business man found himself in London. He signed there a bill of exchange, but he indicated "Berlin", because he had his residence and his offices in that town. Obviously, it was normal in such a case that the German legislation should apply. Such was the object of the formula.

Nevertheless, M. Quassowski was prepared, in order to facilitate agreement, to accept M. Diena's proposal.

He wished, however, to make a remark concerning the text. The end of Article 4 read : ". . . the country in which is situated the place where the signatures were affixed". On the other hand, the second paragraph of Article 2 read : ". . . if the obligation is entered in to on the territory of a State". It would be preferable to say : "...if his signature has been given in any territory. . .".

M. ASSER (Netherlands) was in favour of maintaining the original text. It was necessary to distinguish between two questions : the question of private law and the fiscal question. In regard to private international law, everyone knew that, in regard to obligations, the principle of the autonomy of the parties was sanctioned. The parties could agree to the law which would govern their relations. Therefore, when a person had added to his signature the name of a place which was fictitious and the subsequent holder accepted the bill of exchange, that indicated that there was agreement between the parties that the legislation to be applied should be that of the place mentioned. That was permitted and offered greater security.

From the fiscal point of view, M. Asser considered that the exchequer had always the right to prove that the mention of the place was fictitious, and if it could prove that the party who issued the bill of exchange had specified a fictitious place with a view to defrauding the exchequer, he would have to pay not only the fiscal duties but also a fine.

M. DIENA (Italy) observed that the same question had already been raised in connection with Article 3. The German delegation had made a proposal which had been rejected. To be logical, it would be necessary to act in the same way in regard to Article 4, and the more so in that the German delegation had agreed to withdraw its proposal.

M. Diena proposed, nevertheless, to say, in place of "in which is situated the place where the signatures were affixed", "in which is situated the place where each of the signatures was affixed". Indeed, the signatures might be given in several different territories.

The PRESIDENT observed that that would not be expressed by "each of the signatures", but by "each of the territories". It would be better to retain the first text.

M. QUASSOWSKI (Germany) thought that it would be possible to find a compromise. He referred to the draft of the experts which took into consideration cases in which a place was specified in the bill itself as that at which undertakings should be carried out. Perhaps it would

be possible to add to the second paragraph of Article 4 as modified by the Italian delegation :
“ . . . are determined by the law of the country in which is situated the place where the signatures were affixed, unless another place has been specified in the instrument as the place where the undertaking of the signatory shall be carried out”. There would then be a very clear regulation. He considered that it was necessary to specify a place at which the undertaking of the signatory should be carried out.

Viscount POULLET (Belgium) supported the observations of M. Quassowski.

M. GIANNINI (Italy) considered that M. Quassowski's proposal was a return to the original text. It was simply an inversion of the two questions, and no longer a compromise.

The PRESIDENT did not agree. The new text which had been proposed meant that, in general, the territory on which the signature had been given was decisive. There might, however, be an exception. It might be that the parties had agreed to designate a certain place at which the engagement made in the instrument should be carried out.

M. GIANNINI (Italy) pointed out that if the German proposal were accepted the following case might arise. A person who could not draw a bill of exchange in Italy would come to an agreement with persons of another country in which he could draw a bill of exchange. He would deliver the instrument in Italy, but it would be specified that it had been delivered elsewhere. By virtue of the application of Articles 2 and 4, such a bill of exchange would not be valid in Italy, but in the country in which it was supposed to have been drawn.

Viscount POULLET (Belgium) did not believe that M. Giannini's observation was well founded. Indeed, M. Giannini had alluded to the possibility of a person lacking capacity having put his signature to a bill of exchange. The case of persons lacking capacity, however, was governed by Article 1. It was unnecessary to regulate in Article 4 the effects of the obligation of a person lacking capacity, for actually there was no obligation.

On the contrary, Viscount Poulet thought that the German amendment could be accepted. For his part, he would hesitate to admit that the obligations of the signatories to a bill of exchange depended on the autonomy of the intention, for public credit was at stake. He noted, however that most delegates were favourable in principle to that idea. In those circumstances, the value of Article 4, however, was that when the autonomy of the intention was not expressed, it would show clearly to the judges what law was applicable. In principle, it was the law of the country in which the signature had been affixed. The German delegation, however, asked that it should be added that if the signatories had expressly specified which law should be applied, satisfaction should be given to that intention. The addition proposed by the German delegation was very reasonable if it was agreed that the autonomy of the intention governed the question. Ultimately, the great value of the proposed text was that the courts would know which law had to be applied.

M. SULKOWSKI (Poland) asked for an explanation in regard to endorsements. The validity of the endorsement did not depend on the specification of a date. If, however, the endorser had specified the date and place of endorsement, would the obligation be subject to the legislation of the said place, or would it be necessary to add that that place was designated as the place for the carrying-out of the obligation? In his opinion, the specification of the place in the endorsement was sufficient to show the intention of the signatories to submit the obligation to the legislation in force in that place.

M. QUASSOWSKI (Germany) was not of that opinion. It was necessary that the intention of the parties should be expressed.

Viscount POULLET (Belgium) agreed with M. Sulkowski, but pointed out that there were two hypotheses. The first was that in which the parties had not formally indicated their intention. In that case, the place of signature applied. If they did not wish to be subject to the law of that place, they should say so expressly, as was proposed by the German delegation.

M. SULKOWSKI (Poland) imagined the following situation. He signed an endorsement at London and specified that the endorsement should be subject to the German legislation. An enormous amount of complication would result, and it would be preferable to consider that the specification of the place of endorsement was sufficient to indicate that the endorsement should be subject to the legislation of the said place.

M. Giannini and M. Diena had raised the question of frauds in connection with the exchequer. He did not believe that that should be taken into consideration. The Conference should adopt a purely impartial point of view and disregard all fiscal considerations.

Viscount POULLET (Belgium) thought that, if two Germans in London signed a bill of exchange in that city, it should be possible for them to say that the carrying out of the undertaking would be governed by the German legislation.

M. SULKOWSKI (Poland) replied that in that case they could put “ Berlin ” and not “ London ” beside their signatures. Incorrect specifications should not be encouraged. The advantage of the German amendment was that it permitted the autonomy of the parties without any necessity for specifying a false place of issue.

Viscount POULLET agreed.

M. WEILLER (Italy) stated that it could be specified in the bill of exchange that the obligation should be subject to another law. A bill of exchange could not be conditional. It should never be possible to say: "I am bound in accordance with the French law and the German Law" in the same bill of exchange. Nevertheless, that would be the consequence of the German amendment.

M. PERCEROU (France) wondered whether the necessities involved by the unity of the instrument would not be an obstacle to the autonomy of the intention of the parties.

M. VAN NIEROP (Netherlands) asked how the third holder would know where the bill had been issued. He would know as the place where the bill was issued only the place indicated on the bill of exchange. That indication should be made in good faith. The case put forward by the German delegate in which the parties indicated *expressis verbis* a place for the carrying-out of the signatory's undertaking did not arise in practice. The holder would never know, so to say, whether the bill was or was not drawn at the place indicated on the instrument.

In the interests of the security of trade, therefore, the place indicated on the bill should be considered as the place where the bill was created, even if that place was fictitious.

M. PERCEROU (France) replied that the third holder would have the information if the bill was drawn up on a slip bearing an English stamp.

M. VAN NIEROP (Netherlands) replied that that was the only case of the kind. Apart from that case, the holder would only see the words "Paris, Berlin", without any other specification.

M. VISCHER (Switzerland) asked the Conference to accept the Italian proposal, which was the simplest. As M. van Nierop had just explained, cases might always arise in which the parties had specified a place other than the place of signature, and the exchequer could not prevent such practices. M. van Nierop was of opinion that, in the interests of the security of trade, the place specified on the bill should be considered as the place where it was created, even if it was fictitious. M. Vischer did not think that such a *praesumptio juris* and *de jure* were to be recommended. In the first place, the Conference wished to affirm the principle of the application of the law of the place at which the signatures were affixed. If a place was specified on the bill, there should also be a presumption in favour of signature at that place. That presumption, which was necessary because there was always a presumption in favour of the literal meaning of the instrument, sufficed to protect the holder in good faith. It was true that the presumption might be refuted by the person who could prove that the place specified on the bill was fictitious, but such proof would rarely be possible and, in cases where it was possible, the signatory who had specified a place other than that of signature would be liable to make good the damage possibly suffered by the holder in good faith.

The PRESIDENT put to the vote the Italian amendment, combined with the German amendment.

The combined amendments were rejected by 15 votes to 8. The British delegation abstained from voting.

The Italian amendment alone was adopted by 11 votes to 10.

Article 4, as amended, was adopted.

ARTICLE 5.¹

M. GRÖNVALL (Finland) wished the words "The person who has issued the promissory note" to be replaced by the words "The signatory of the promissory notes".

M. DIENA (Italy) thought it would not perhaps be necessary to consider that proposal, for the Italian delegation proposed the following text:

"The limits of time for the exercise of rights of recourse shall be determined for all signatories by the law of the place where the instrument was created."

This proposal was adopted.

Article 5, as amended, was adopted.

ARTICLE 6.¹

The PRESIDENT pointed out that the delegations which had proposed reservations had held conversations for the purpose of endeavouring to reach an agreement.

They had provisionally agreed to the deletion of Article 11 of the Convention and the replacing of Article 6 by the following text:

"The question whether there has been an assignment to the holder of the debt which has given rise to the issue of the instrument is determined by the law of the place where the instrument was issued."

¹ The Drafting Committee proposed the following texts:

"Article 5. — Les délais de l'exercice de l'action en recours restent déterminés pour tous les signataires par la loi du domicile du tireur ou de celui qui a émis le billet à ordre."

"Article 6. — La loi du pays où la lettre de change est payable détermine si le bénéficiaire et les porteurs successifs ont des droits spéciaux sur la provision et quelle est la nature de ceux-ci."

Baron MARKS VON WÜRTEMBERG (Sweden) pointed out that, as he had already had the honour of stating, the delegations of the Scandinavian countries had been obliged to consider the necessity for submitting a reservation in regard to the text of Article 6 as adopted by the majority of the Conference, or of providing an article of the nature of Article 11.

The text which had just been submitted to the Conference, and which was the result of long private discussions between the delegates of several countries, did not completely satisfy the delegations of the Scandinavian countries, but in view of the obvious advantage of settling the question of conflicts of the laws on cover, the Danish, Norwegian and Swedish delegations had decided to accept the text which had just been read.

M. GRÖNVALL (Finland) stated that, as he had just explained to the group of delegations which had drawn up the new text of Article 6, the possible future result of the proposed provision would be the violation of the rules on bankruptcy at present in force in Finland. As he had no instructions on the subject, M. Grönvall was compelled to refuse to accept the new text, as he had already been compelled to refuse to accept the text of the experts.

M. VAN NIEROP (Netherlands) asked why Article 6 had been amended. He did not very well understand the new text. There were a great many drafts, bills of exchange, etc., which were drawn to credit. Was it possible to speak of a debt?

M. WEILLER (Italy) explained that it was not an exchange question, but one of fact. Whether a mandate which had been accepted did or did not give rise to a debt was an individual question which could not be settled in a uniform manner. The present text did not settle it, and M. van Nierop need not be uneasy about the matter.

M. VAN NIEROP (Netherlands) stated that he was satisfied.

The new text of Article 6 was adopted by 20 votes to 1.

ARTICLES 7 AND 8.

Adopted.

ARTICLE 9.

M. DIENA (Italy) stated that he had been requested to explain that in the report "loss" should be understood to include destruction. Would it not be advisable to insert the word "destruction" in Article 9?

The PRESIDENT stated that after discussion it had originally been decided not to say "destruction" in the article.

Article 9 was adopted.

ARTICLE 10.¹

The PRESIDENT pointed out that the beginning of the article should read: "Each of the High Contracting Parties reserves. . .". Sub-paragraph No. 1 should read: "An obligation undertaken outside the territory of one of the High Contracting Parties", and sub-paragraph No. 2 should read: "Any law which may be applicable in accordance with these principles and which is not a law in force in the territory of any High Contracting Party."

Article 10, as amended, was adopted.

ARTICLE 11.¹

This article was deleted.

M. QUASSOWSKI (Germany) asked whether the transitional provision which it was proposed to insert in the uniform law should not also be inserted in the Convention on Conflicts of Laws. M. Quassowski considered that such a provision would be useful. Without it, the courts would be obliged suddenly to apply an entirely new system.

M. OHNO (Japan) thought that, although they did not appear in the Convention, the formal articles of the Convention on the uniform law were also applicable. In those circumstances, the Japanese delegation proposed that the time-limit for ratification should be three years. He pointed out that, when the Conference had been good enough to agree to that time-limit for ratification of the Convention, the Japanese delegation were not satisfied, because it had wished it to be increased to five years. Nevertheless, in a spirit of conciliation, it now wished to accept the time-limit of three years and would make every effort to persuade its Government to accept that point of view.

¹ The Drafting Committee proposed the following texts:

"Article 10. — Les Hautes Parties contractantes se réservent la faculté de ne pas appliquer les principes de droit international privé consacrés par la présente convention en tant qu'il s'agit:

1° D'un engagement pris hors des territoires des États contractants;

2° D'une loi qui serait applicable d'après ces principes et qui ne serait pas celle d'un des États contractants."

"Article 11. — En signant ou ratifiant la présente convention ou en y adhérant, chacune des Hautes Parties contractantes pourra exclure telle ou telle des dispositions de la présente convention au moyen de réserves expresses."

The PRESIDENT pointed out that the Secretariat could be entrusted with the task of drawing up the formal articles of the Convention, which would be exactly the same as those adopted for the draft Convention on the uniform law. The time-limits would also be the same. It was not necessary to discuss the question again.

M. SMETS (Secretary of the Conference) said that only one article would be different, that relating to denunciation. He had, however, already prepared a text.

Prince VARNVAIDYA (Siam) said that it was nowhere stated, as was the case in the Hague Convention, that the Convention and the uniform law should come into force simultaneously. He would like a statement to that effect to be made in the report.

M. SMETS (Secretary of the Conference) pointed out that Article 1 of the draft Convention on the uniform law stipulated that :

“ The High Contracting Parties undertake to introduce in their respective territories . . . the uniform law forming Annex I of the present Convention. . . ”

Only the Convention would have to be ratified. The documents forming the Annex would be adopted automatically at the same time as the principal Convention.

The PRESIDENT explained that the Annexes would not be ratified, but only the Convention. It was therefore unnecessary to make a stipulation in the report in that connection. It was sufficient that the exchange of views which had taken place should appear in the Minutes.

The President pointed out that M. de la Vallée Poussin had undertaken to draw up the report on the Convention on the Stamp Laws.

M. OHNO (Japan) stated that in the Convention on Conflicts of Laws the word “ signature ” should be interpreted in the same manner as in the text of the uniform law.

The Convention and the formal articles were adopted at the second reading.

THIRTY-SECOND MEETING.

Held on June 4th, 1930, at 4.30 p.m.

President: M. J. LIMBURG.

50. Entry into Force of the Convention and Uniform Regulation.

The PRESIDENT returned to the statement made at the previous meeting by Prince Varnvaidya and said that there was no doubt that at the moment a State put the Convention and Protocol into force it would bind itself to introduce the Uniform Regulation at the same time in its country. That was undoubtedly the meaning of the Convention, as was clear from its first article as well as from the various reservations.

The President had decided to return to this point in order to satisfy Prince Varnvaidya and to enable mention of it to be made in the Minutes.

Prince VARNVAIDYA (Siam) thanked the President for his statement, which gave him complete satisfaction. He would like to point out that, if the Hague text had not expressly stipulated simultaneous entry into force, he would not have raised the question.

51. Discussion of the Draft Convention on Stamp Laws.

The following article proposed by the experts and the note upon it were read :

“ If their laws do not already make provision to this effect, the contracting States undertake to alter their laws so that the validity of obligations arising out of a bill of exchange or a promissory note or the exercise of the rights that flow therefrom shall not be subordinated to the observance of the provisions concerning the stamp.

“ Nevertheless, the contracting States may suspend the exercise of these rights till the stamp laws have been complied with. They may also provide that the quality and effects of an instrument ‘ immediately executory ’ which, according to their legislation may be attributed to a bill of exchange, shall be subject to the condition that the stamp law has, from the issue of the instrument, been duly complied with in accordance with their laws.

“ *Note.* — The above is a reproduction of Article 19 of the Hague Convention. All the experts, with one exception, recommend its adoption and emphasise the extreme importance of this question. The Committee of Experts which met in December 1926 was of the same opinion when it stated ‘ that it attached the greatest importance to the adoption and application by the greatest possible number of countries of the provisions of Article 19 of the Hague Convention ’.”

Mr. GUTTERIDGE (Great Britain) submitted the following proposals :

“ The British delegation proposes :

“ 1. That a separate convention be drawn up consisting solely of provisions relating to penalties for the non-observance of Stamp Laws ;

“ 2. That the operative part of the text of the Convention should read as follows :

“ *Article 1.* — In so far as concerns cheques, each of the High Contracting Parties undertakes, if the laws in force in those of his territories to which the present Convention applies do not already make provision to this effect, to alter them so as to provide that the validity of obligations arising out of such instruments or the exercise of the rights that flow therefrom shall not be subordinated to the observance of provisions concerning the stamp.

“ Nevertheless, the High Contracting Parties may suspend the exercise of these rights till the stamp laws have been complied with. They may also provide that the quality and effects of an instrument “ immediately executory ”, which, according to their legislation, may be attributed to a cheque, shall be subject to the condition that the stamp law has, from the issue of the instrument, been duly complied with in accordance with their laws.

“ *Article 2.* — In so far as concerns bills of exchange, each of the High Contracting Parties undertakes if the laws in force in any of his territories to which the present Convention applies do not already make provision to this effect, to alter them in the sense indicated in Article 1, so far as relates to such of the bills of exchange in question as are presented for acceptance or accepted or payable elsewhere than in the territory in question.

“ Nevertheless, the High Contracting Parties may suspend the exercise of these rights till the stamp laws have been complied with. They may also provide that the quality and effects of an instrument ‘ immediately executory ’, which according to their legislation may be attributed to a bill of exchange, shall be subject to the condition that the stamp law has, from the issue of the instrument, been duly complied with in accordance with their laws.

“ *Observations.*

“ (a) The above proposal, so far as it permits of separate treatment of the question of the non-observance of stamp laws, is one which it is hoped will commend itself to the Conference on grounds of general expediency, though it is also brought forward for the purpose of facilitating the adherence of Great Britain.

“ (b) It is also submitted that it will be convenient that this separate Convention should deal with the stamping of cheques as well as other instruments. In the case of cheques, Great Britain is willing to accept the proposals of the experts.

“ (c) The separation of the treatment of the failure to stamp cheques (Article 1) from that of the failure to stamp bills of exchange (Article 2) is prompted by the consideration that this will meet the objections of the Government of any country which desires to maintain its present laws as to the effect of a failure to stamp bills of exchange which are not accepted or payable abroad, but which circulate only within its own territory.

“ (d) The omission of any reference to promissory notes is intentional.

“ (e) In the event of the above proposal not being acceptable to the Conference, the British delegate asks that reservations should be permitted to a separate Convention dealing with stamp laws and that they should be to the following effect :

“ 1. It is agreed that, in so far as concerns the United Kingdom of Great Britain and Northern Ireland, the provisions of this Convention shall only apply : (a) as regards bills of exchange and (b) as regards bills of exchange presented for acceptance or accepted or payable elsewhere than in the United Kingdom.

“ 2. A similar limitation shall apply in the case of any colonies, protectorates or territories under suzerainty or mandate of His Britannic Majesty to which the Convention may become applicable in virtue of Article . . . , provided that a notification claiming such limitation is addressed to the Secretary-General of the League of Nations before the date on which the application of the Convention to such territory takes effect.

“ 3. It is further agreed that, in so far as concerns Northern Ireland, the provisions of this Convention shall only apply with such modifications as may be found necessary.

“ 4. The Government of any Member of the League of Nations or State non-Member which is ready to accede to the Convention under Article . . . , but desires to be allowed the limitation specified in paragraph 1 above, may inform the Secretary-General of the League of Nations to this effect, and the Secretary-General shall forthwith communicate this notification to the Governments of all Members of the League and non-Member States on whose behalf the Convention has been signed or accessions thereto deposited and enquire if they have any objection thereto. If within (six months) of the date of the communication of the Secretary-General no objections have been received, the limitation shall be deemed to have been accepted.”

The PRESIDENT suggested that the Conference should begin the examination of the British proposal at Article 2, because that article dealt with bills of exchange, whereas Article 1 dealt with cheques.

This was decided.

The PRESIDENT said that this article should read as follows :

“ In so far as concerns bills of exchange, each of the High Contracting Parties undertakes, if the laws in force in any of his territories to which the present Convention applies do not already make provision to this effect, to alter them so as to provide that the validity of obligations arising out of such instruments or the exercise of the rights that flow therefrom shall not be subordinated to the observance of provisions concerning the stamp, so far as relates to such of the bills of exchange in question as are presented for acceptance or accepted or payable elsewhere than in the territory in question.

“ Nevertheless, the High Contracting Parties may suspend the exercise of these rights till the stamp laws have been complied with. They may also provide that the quality and effects of an instrument ‘ immediately executory ’, which according to their legislation may be attributed to a bill of exchange, shall be subject to the condition that the stamp law has, from the issue of the instrument, been duly complied with in accordance with their laws.”

The President added that, a few details excepted, this text corresponded to that which the Committee of Experts had intended to draw up, as expressed in Article 1 of the Convention on the Conflicts of Laws (draft of the Committee of Experts) ; only now it had been made the subject of a separate convention.

Mr. GUTTERIDGE (Great Britain) said that, when he had prepared the proposal before the conference, his desire had been to obtain a separate convention on the question of stamp duties, and for that reason he saw no other way of bringing the matter before the Conference. He fully realised the fact that he must fall into line with the wishes of the Conference. If the Conference desired to go further than he had gone in the text of his proposal, then he would ask to be allowed to make certain reservations in signing the convention. His instructions on the subject were somewhat rigid, and he asked the Conference to permit him to sign a *protocole de signature* containing the terms which the British Government was prepared to accept.

Dealing with the stamping of bills in England, Mr. Gutteridge pointed out that there was a marked distinction between bills drawn in England and payable abroad and bills drawn abroad and payable in England. Where the bill was drawn in England, it had to be drawn upon a bill-form which must bear an embossed stamp before signature. On the other hand, in cases where the bill came from abroad it need not bear a stamp in the first instance, but within a certain period of time after arrival in England it must be stamped with an adhesive stamp.

If he were asked why he was not prepared to go as far as was indicated in the text of the experts' report, his answer would be because of purely fiscal considerations. The British Government did not see its way to make a general concession on the lines indicated in the report of the experts, but they were prepared to legislate for the purpose of removing what was felt to be an undoubted grievance. There was a difference between a bill issued in England and intended to circulate abroad, and one which came to England from abroad. For instance, if a bill were issued in London to be acceptable or payable in Berlin or Milan, or anywhere else, persons in foreign countries might become parties to that bill, and it was felt to be an injustice in those circumstances to penalise foreigners who had become parties to the bill because the bill had not been previously stamped in accordance with English law. That was one grievance which the British Government was ready to remove. But it was not considered that the converse position was the same where the foreigner abroad drew on England, for the reason that there was an easy way of getting out of the difficulty by stamping the bill after receipt in England. Therefore the British Government proposed, with the consent of the Conference, to sign the Convention on those terms ; that so far as bills drawn in England on a foreign place were concerned, those bills should not be void merely because they were not stamped. They could be stamped, if proceedings became necessary in an English court, on payment of the stamp duty, together with the fine exacted by the law.

As regards cheques, Mr. Gutteridge was entirely in the hands of the Conference. If the Conference wished the Convention to include cheques, he would gladly agree. If, on the other hand, it preferred to have a separate convention dealing with stamps on cheques, he was quite willing to fall in line.

Promissory notes had been excluded because those drawn in England did not circulate abroad ; therefore the question was of no importance. For that reason the British Government did not desire any mention of them to appear against its signature.

M. PERCEROU (France) pointed out that, as the Conference only dealt with bills of exchange and promissory notes, there would seem to be no necessity to legislate on cheques, were it only from the fiscal point of view. He thought it would be better to reserve this question of the stamp on cheques until the Conference came to draw up a uniform regulation on cheques. Apart from that, stamp duties were much lighter in practice for cheques than for bills of exchange, and fiscal infractions were much less frequent.

As for the substance of the matter, it was obvious that the restrictions on which the British Government made its accession conditional very appreciably restricted the scope of the reform, since only one category of bills of exchange fell under the new provision. Bills of exchange drawn on Great Britain abroad would remain subject to the civil penalties attached to the non-observance of stamp laws. Only one category of bills of exchange would escape these penalties : those that had been drawn in England on countries abroad.

The Conference therefore found itself in rather a complicated situation. Other States were inclined to go further, in which case a special situation would arise for the British Government

and a different one for other States. M. Percerou could not clearly see how these different solutions could be reconciled.

M. SULKOWSKI (Poland) wished to draw the Conference's attention to the following fact it appeared from Mr. Gutteridge's speech that there were fundamental differences between the proposal made by the experts and that of the British Government — that was to say, the unification proposed by the experts went much further. According to the experts, States would bind themselves not to make the validity of bills of exchange depend on the discharge of stamp duties, whereas the British proposal only wished to make this concession for bills which had been accepted or paid abroad.

Mr. Gutteridge had received formal instructions from his Government and could not adopt a different point of view. In spite of that, the Conference ought not to abandon the idea drawn up by the experts for the realisation of a wider unification. The experts' formula ought to be adopted with the proviso of a reservation in favour of Great Britain. At the same time, the question of cheques could be dealt with, since that raised no difficulties for Great Britain.

M. QUASSOWSKI (Germany) thought there was a difference of form and substance between the text of the experts and the text proposed by the British delegate, on the one hand, and the text of The Hague, Article 19, on the other.

Article 19 of the Hague Convention said :

“ The Contracting States cannot subordinate the validity of obligations . . . to the observance of the provisions concerning the stamp.”

The text of the experts said :

“ If their laws do not already make provision to this effect, the contracting parties undertake. . . .”

The text of the experts therefore only provided an undertaking for States which did not already possess such a law. Other States were not included in the obligation and were free to alter their laws.

The undertaking under Article 19 of the Hague Convention was stricter and more useful than the engagement provided by Article 1 of the text of the experts.

M. SRB (Czechoslovakia) agreed with M. Sulkowski and M. Quassowski concerning the first paragraph of the text submitted to the Conference by the experts. He was against the limitations proposed by the British delegate and consequently favoured the reinstatement of the text of the Hague Convention and of the experts.

There was a Czechoslovak amendment which suggested that the second paragraph of the article drawn up by the experts should be omitted. This amendment should be understood to omit the second paragraph of the text proposed by Mr. Gutteridge.

M. Srb would lay special emphasis on the views of the experts expressed in the note to the article before the Conference. It was most important that the provisions of Article 19 of the Hague Convention should be put into force.

As the Czechoslovak Government had already pointed out, it seemed necessary, in order to assure the freest possible circulation of bills of exchange and promissory notes for all the effects of the obligations arising out of the bills of exchange and promissory notes, and the exercise of the rights derived therefrom, to be kept entirely separate from questions relating to the stamp. This principle, as expressed in the first paragraph of Article 19 of the Hague Convention, or in Article 1 of the Convention of the Experts suffered a derogation by reason of the provisions of paragraph 2. The subterfuge of Article 2 certainly made it possible for contracting States to maintain, at least in a certain measure, the practices which they had renounced when they adopted paragraph 1.

The Czechoslovak delegation quite recognised the fact that the provisions of Article 2 were a compromise. In spite of that, it seemed reasonable that these provisions should not be adopted without being the subject of fresh discussion.

M. Srb asked the Conference once more if it did not prefer, in order to favour a freer circulation of bills of exchange and of promissory notes, to omit Article 2 of the British proposal — *i.e.*, to do away with the possibility of States making certain exceptions in their national legislation to the principle which had been laid down in the first paragraph in a style that was almost solemn.

The PRESIDENT thought that it was more expedient to take as a point of departure, not the British amendment, but the text of Article 1 of the draft Convention drawn up by the Committee of Experts.¹ The text of Article 1, “ Penalties for the non-observance of stamp laws”, would be the subject of a separate convention. It was preferable to take it as a point of departure, because the President thought that after hearing the views of various members it seemed unlikely that the Conference would agree to the more restricted system of Great Britain. The Conference, as a whole, certainly seemed to favour the system of Article 1, with the exception of questions of drafting — *i.e.*, with the exception of the point raised by M. Quassowski. The Conference could discuss whether it should agree to a reservation that would allow the British Empire to accede to Convention with certain restrictions.

M. Quassowski had pointed out that, if the article proposed by the experts was compared with Article 19 of the Hague Convention of 1912, it was clear that the latter said, once and for all, that the contracting States could not subordinate the validity of obligations arising out of a bill

¹ Document C.334.M.83.1929.II (C.I.I.C.1), page 79.

of exchange, or the exercise of rights that flowed therefrom, to the observance of the provisions concerning the stamp. The article of the experts merely said :

“ If their laws do not already make provisions to this effect, the contracting States undertake to alter their laws so that the validity of obligations arising out of a bill of exchange or a promissory note, or the exercise of the rights that flow therefrom, shall not be subordinated to the observance of the provisions concerning the stamp.”

That raised a question of drafting. The President was convinced that in drawing up this article the Committee of Experts had had in every way the same intention as the authors of the Hague Convention in Article 19. It would therefore be easy to settle this question of drafting in conformity with the observation of M. Quassowski ; but, first, there was a Czechoslovak amendment to omit the second paragraph of the article proposed by the experts, which article would now form a separate draft convention.

M. GIANNINI (Italy) said that the Italian delegation was prepared to accept the text of the experts provided that it was accepted in its entirety. It could also accept the amendment proposed by the French delegation. Finally, it agreed to the proposal to settle the special problem raised by the British Empire in a separate protocol.

M. DUZMANS (Latvia) said that the Latvian delegation had put forward neither a written amendment nor a formal proposal of reservation concerning promissory notes as mentioned in the draft of the experts. No mention had been made of promissory notes on purpose. Perhaps it would be possible to do without an amendment by allowing a reservation ; but if a reservation were not allowed, the Latvian delegation would be compelled to present an amendment to exclude promissory notes from the draft of the experts. Perhaps the majority of members had no wish to modify the text ; but in that case a reservation would become necessary. The Latvian delegation was ready to enter into an engagement concerning the question of the stamp in the sphere of bills of exchange, but it was unable to bind itself where promissory notes were concerned.

The position of the Latvian delegation was the following : It was quite prepared to sign the Convention on the Stamp Laws if provision were made either for the exclusion of promissory notes in the actual text or for a reservation that would allow the Latvian delegation only to commit itself where bills of exchange were concerned. The Conference would have to choose which way seemed to it the best.

The PRESIDENT, in reply to M. Duzmans, said that he did not understand the point of view of the Latvian delegation very well so far as promissory notes were concerned. The Committee of Experts had certainly dealt with bills of exchange and promissory notes at the same time, and rightly so, and it had laid down that the exercise of the rights that flowed from a bill of exchange or a promissory note should not be subordinated to the observance of the provisions concerning the stamp.

What was a promissory note in Latvia was a bill of exchange in other countries. Therefore, if the Latvian delegation agreed to the principle that the rights which flowed from instruments drawn to order, bills of exchange or promissory notes should not be subordinated to the observance of the provisions concerning the stamp, it might perfectly well accept the first paragraph of the article proposed by the Committee of Experts.

The British delegate had declared in his amendment that he would not speak on promissory notes properly so called, since they did not usually leave their country. But in exceptional circumstances, when they did leave their country, it would be necessary to bring this provision into play. In Latvia, this exception was valid for bills of exchange. Consequently, if M. Duzmans was prepared to accept this principle, there would be no need to propose either an amendment or a reservation.

M. DUZMANS (Latvia) replied that promissory notes were not mentioned in the text of the Hague Convention. The Latvian proposal was that the Conference should return to the text of the Hague Convention.

He could not allow the Conference to think that this question was not so important for Latvia as he had suggested. He found himself unable to agree with the President, and the Latvian delegation would only sign the Convention if the Conference accepted one or other of the Latvian amendments. Considerations based on the economic and exchange life of Latvia compelled M. Duzmans to maintain his proposal.

The PRESIDENT thought that it was rather the fiscal requirements of Latvia that had dictated the preceding proposals. Fiscal laws, however had nothing to do with the validity of a document. In the case of a law suit, if an instrument had not been stamped, the judge might insist on the affixing of stamps and even the payment of a heavy fine ; but he would none the less base his judgment on the document, the validity of which was incontestible.

The President asked the Conference to vote on the Czechoslovak amendment to omit the second paragraph.

The Czechoslovak amendment was rejected by 17 votes to 4.

The PRESIDENT submitted the following amendment proposed by the French delegation :

“ The French delegation requests that the first sentence of the second paragraph of Article 1 of the Convention should be supplemented by the addition of the words “ and any fines paid ”.

“ *Reasons.* — The consequence of the provisions of Article 1 of the Convention is to modify the civil penalty laid down by Article 5 of the French Law of June 5th, 1850, in the case of an unstamped bill of exchange.

“ This penalty consists in barring the right of recourse, and its effect has been to prevent certain frauds which were very frequent before the Law of 1850.

“ At the same time, the French Government realises the difficulty of introducing such strict provisions in an international convention, especially as the text proposed by the legal experts constitutes a sufficiently effective guarantee, since, until the stamp duties have been paid, it suspends the exercise of action by the holder of an instrument which is at variance with the fiscal law of each of the contracting States.

“ It is, however, essential that the first sentence in the second paragraph of Article 1 should be completed by the addition of the words : ‘ and any fines paid ’.

“ The same addition should be made, if necessary, in regard to cheques at variance with fiscal law.”

M. PERCEROU (France) said that at the present moment the inadequate payment of stamp duties involved severe penalties in France, since it entailed the loss of the right of recourse. The French Government was prepared to abandon these civil penalties. It asked that the legal exercise of recourse should be subject to the discharge of stamp duties and the pre-payment of fines.

To some extent, a fine was the complement of the principal claim. It was accessory to it, and it would be logical to apply to it the same system. It might even be wondered, in view of the silence of the Convention on that point, whether this solution would not stand by itself, but he thought that it would be advisable expressly to affirm it in order to avoid any difficulty of interpretation.

M. DA MATTA (Portugal), with the aim of simplifying the formula, proposed that the Conference should adopt the text of the British proposal, and say :

“ Nevertheless, the High Contracting Parties may suspend the exercise of these rights till the stamp laws have been complied with.”

That provision would also cover the payment of fines.

M. DE LA VALLÉE POUSSIN (Belgium) hesitated to agree to the proposal of M. Percerou, because it did not take exact account of the consequences that might arise from the subordination of the exercise of the rights of recourse to the preliminary payment of fines. In any case, it was the drawer who had to pay the fine after creating the instrument without duly observing the provisions concerning the stamp. The application of the provision proposed by M. Percerou would paralyse the exercise of the rights of the holder and, in the end, of all those persons who should have recourse against the guarantors. That was a very strict penalty. If certain States punished deficiency of stamp duties by very high fines, they would run the risk of returning indirectly to the state of nullity which the Conference wished to avoid. In any case, this decision would have very serious effects from the point of view of safeguarding circulation, which was the principal end that the Conference was trying to reach by the means of this Convention.

M. PERCEROU (France) said that the French Government attached considerable importance to this interpretation of the law. He asked that stamp duties and fines should be complied with before taking action.

M. QUASSOWSKI (Germany) thought that the French amendment would entail a considerable restriction, which had not been adopted at The Hague. It was certainly possible to fix a fine at a level as high as the amount of the bill itself and so to make the final part of the provision contained in paragraph 1 null and void.

M. GIANNINI (Italy) pointed out that the acceptance of this rule had already brought about appreciable progress in legislation and that it was impossible to ask for further concessions in this matter without putting certain States in the difficult position of being unable to sign the Convention. It was in nobody's interest to draw up a draft which, in the end, would not be signed.

The French amendment was adopted by 12 votes to 5.

The PRESIDENT asked the Conference to give its opinion on the proposal of the Latvian delegation.

M. DUZMANS (Latvia) said that he withdrew all his amendments, but presented the following reservations :

“ Each of the High Contracting Parties reserves the right to restrict the undertaking mentioned in Article . . . of the present Convention to the provisions on bills of exchange alone.”

The PRESIDENT said that M. Quassowski preferred Article 19 of the Hague text, which was as follows :

“ The Contracting States cannot subordinate the validity of obligations arising out of a bill of exchange, or the exercise of the rights that flow therefrom, to the observance of the provisions concerning the stamp.”

That was a provision that ought to operate immediately after the Convention had entered into force.

In order to satisfy M. Quassowski, the President proposed that the Conference should take the first paragraph of Article 19 of the Hague text as the first paragraph of the article. The second paragraph would be formed by the present paragraph 1, which read as follows :

“ If their laws do not already make provision to this effect, the contracting parties undertake to modify their laws so that the validity of obligations arising out of a bill of exchange or a promissory note, or the exercise of the rights that flow therefrom, shall not be subordinated to the observance of the provisions concerning the stamp.”

Paragraph 3 would consist of the present paragraph 2, together with the French amendment. The President considered that this article might be still further reduced, but the essential point was to come to an agreement upon the question of principle, and to reserve the possibility of returning at a later date to questions of drafting.

M. PERCEROU (France) wondered whether the text of the experts was not the best in the end ; he thought that M. Quassowski might be content with that. Certainly the first paragraph of the experts stipulated that, if their laws did not make such provision, the contracting States undertook to alter their laws. He thought it was self-evident that the contracting States whose laws were already in conformity with the text would undertake not to modify them in an opposite sense. An accurate interpretation required that solution.

The PRESIDENT pointed out that there was a difference between paragraph 1 of Article 19 of the Hague text and paragraph 1 of the article proposed by the experts. The provision of The Hague would operate immediately after the entry into force of the Convention, whereas the article proposed by the experts stipulated that States undertook to modify their laws, and that might take a certain number of years.

Mr. GUTTERIDGE (Great Britain) pointed out that, in view of what had just been said, he ought to call attention to the fact that the British Government could not undertake to legislate within any definite period on that matter. That was not because they did not wish to legislate, but because of the unfortunate position in which parliamentary legislation found itself at the present moment in England. He could only say that the British Government would legislate as soon as possible. He believed there was something to be inserted in the Convention itself which would possibly get over this difficulty. His instructions were very definite that he must not agree to any period.

The PRESIDENT made it clear that he had in no way spoken of a fixed period of time. He had merely pointed out that the text of The Hague, if adopted by the Conference, would enter into force at the same time as the Convention.

Mr. GUTTERIDGE (Great Britain) replied that he did not think that could be done in England without legislation. He wanted to be quite certain that there was nothing which compelled the Government to introduce immediate legislation.

M. SMETS (Secretary to the Conference) pointed out that there was a period provided for ratification, and that the President had said that under that provision in the experts' text the sole obligation was to ratify at some time ; it was not stated exactly when.

Mr. GUTTERIDGE (Great Britain) said that he could accept the experts' text, but he would have to ask for further instructions before accepting the Hague text. It might upset the whole of the business of the House of Commons if he were to sign. The British Government would legislate as soon as they could, but they did not want to commit themselves to any definite period, because nobody knew what the position might be.

The PRESIDENT observed that if Article 19 of the Hague text were accepted, then immediately after the ratification a bill was valid although not duly stamped.

Mr. GUTTERIDGE (Great Britain) said that that was precisely what he could not accept.

The PRESIDENT thought that the statement of Mr. Gutteridge ought not to prevent the Conference from adopting the Hague text, because, whether the Hague text or that of the experts was adopted, Great Britain would have to make a reservation in both cases, since it wished to restrict the provisions on the stamp to a certain kind of bill of exchange.

Since there would be a British reservation in any case, it was of small importance whether it was an extensive one or not.

Mr. GUTTERIDGE (Great Britain) said that he would be satisfied if the Protocol of Signature contained a provision concerning the British reservation.

The PRESIDENT thought that, in order to cause the Convention to be signed by Great Britain, it was necessary to agree to this reservation. He repeated that, from the moment this reservation came into being, it was of little importance whether it was extensive or not.

M. DE LA VALLÉE POUSSIN (Belgium) thought that it would be better to take the first paragraph of Article 19 of the Hague draft, which was formal in content, whereas the draft of the experts postponed the execution of the engagements entered into by the States. The difficulties

raised by Mr. Gutteridge did not exist so far as the public law of most of the States was concerned. The adoption by the States of such a provision as the first paragraph of the draft of The Hague would entail the obligation to alter in due course the existing legal provisions which would be contrary to the engagement undertaken by these States. No difficulty arose from the point of view of constitutional law. In those circumstances, M. de la Vallée Poussin did not see the use of choosing the text of the experts, which made provision for States to enter into an agreement at a later date. Such an engagement was certainly undertaken by the mere fact of accession. The way in which States would modify their respective legislations was a question which did not concern the Conference and of which the States themselves were the sole judges.

M. GIANNINI (Italy) drew the attention of the Conference to the fact that the result would be the same whether it voted the Hague text or that of the experts. The meaning of the Hague text was that, at the moment the Convention entered into force, the contracting States would be obliged to modify their respective legislations to the extent of bringing them into harmony with this international obligation ; whereas the text of the experts said that : “ if their laws do not already make provision to this effect, the contracting parties undertake to alter their laws . . . ”. The result was that, if a contracting State had not modified its legislation at the moment when the Convention entered into force, it would violate the Convention.

M. Giannini thought that, if certain delegations attached particular importance to this point, the Conference could abide by the formula proposed by the experts and add “ at the latest, before the entry into force of the present Convention ”, after the words “ to alter their laws ”.

In the PRESIDENT'S opinion, a certain difference did exist between the two texts, but he thought it was of small importance. Personally, he was prepared to accept the proposal of M. Giannini.

Not to prolong the debate, he therefore proposed to take the second paragraph of Article 1 of the Committee of Experts, together with the French amendment that the Conference had just adopted, and to add to the first paragraph the words proposed by M. Giannini : “ at latest, before the entry into force of the present Convention ”.

M. QUASSOWSKI (Germany) pointed out that this formula only concerned States that did not yet possess stamp laws ; therefore a State with such laws remained completely free.

The PRESIDENT disagreed. It was obvious that States with stamp laws had already declared that the validity of the bill of exchange or a promissory note was independent of the provisions on the stamp. Such was the meaning of the article.

M. QUASSOWSKI (Germany) insisted on the fact that, in his opinion, States that already had stamp laws were not covered by this provision and were consequently absolutely free. This was a result that the Conference could not accept.

M. VISCHER (Switzerland) agreed with the interpretation given by the President ; but he thought that there was a reason for adopting M. Quassowski's proposal, for it was not desirable in an international convention to bind indirectly and *a contrario* those States that had no provision contrary to such a convention. It was better to bind positively all the signatory States, beginning with the general engagement which was contained in the Hague Convention.

M. SULKOWSKI (Poland) thought that the objections of M. Quassowski were not justified. The article proposed by the experts made it quite clear that if a State had legislation, according to which the validity of its engagements did not depend on the observance of the provisions concerning the same, then there was no need for it to modify its legislation.

The PRESIDENT added that, if such a State altered its legislation, it would be violating the Convention.

M. SULKOWSKI (Poland) declared that, in spite of that, he would prefer the formula proposed by the President. In his opinion, the two cases were slightly different. In the first case, there was no reason to change the financial legislation at the moment of ratification, because it was altered by the fact of ratification itself. In the case that M. Giannini had taken into account, an alteration would have to be made which could not be done without difficulty, since Parliaments would not confine themselves to altering the general principle, and the result would be a great waste of time.

Granted that M. Giannini considered that the idea that the President had just put forward had not been clearly expressed in Article 19, this article might be altered by saying that the validity of engagements arising out of a bill of exchange, or the exercise of the rights that flowed therefrom, was not subordinate to the observations of the provisions on the stamp. The result would be that this provision would come into play without making any change in national legislations necessary.

M. GIANNINI (Italy) thought that it was clear from the engagement that there was no necessity for States whose legislation was in conformity with the Convention to modify their legislation. Further, there was nothing to prevent them still from mentioning this matter in the report.

The PRESIDENT pointed out that in that case the Conference would have to add that those States whose legislation was in conformity with the principle of the article proposed by the experts might not alter their legislation. This had been pointed out by M. Quassowski. Personally, he thought that if the aforementioned States modified their legislation they would be violating the Convention.

Prince VARNVAIDYA (Siam) proposed to omit the sentence : " If their laws do not already make provision to this effect ", and to say instead : " The contracting States undertake, if need be, to alter their laws . . . "

The PRESIDENT replied that that would not be so clear.

Mr. GUTTERIDGE (Great Britain) pointed out that there again the word " State " would have to be replaced by the word " country ".

The PRESIDENT said that, personally, he preferred to take the first paragraph of Article 19 of the Hague Convention of 1912 and paragraph 2 of the text of the experts ; but the same result could be achieved by adopting the text of M. Giannini, not only because an interpretation would be available in the report, but also because it would then be a question of a separate convention endowed with a preamble of such a nature as to give full satisfaction to M. Quassowski.

The President therefore proposed that the Conference should vote upon the proposal of M. Quassowski. He added that, if it was rejected, they would have to return to the text of The Hague.

M. QUASSOWSKI (Germany) admitted that M. Giannini might be right, but in order to arrive at his conclusions it was necessary to use guile. The formula of Article 19 of the text of The Hague was shorter and clearer ; consequently, M. Quassowski formally proposed to keep paragraph 1 of Article 19 of the text of The Hague.

The PRESIDENT declared that since M. Quassowski had made this proposal the Conference would have to take the text of The Hague, paragraph 1 of Article 19, and to add to it the words " or a promissory note ", in order to clear up the matter on which it was voting. It would then have to take paragraph 2 of the text of the experts which had just been amended by the proposal of the French delegation.

M. DUZMANS (Latvia) said that the Latvian delegation was quite convinced that the text of The Hague and that of the experts would both lead to the same result. He would vote for the text of The Hague, since that was the shorter.

Paragraph 1 of the text of The Hague, with the addition of the words " or a promissory note ", and the second paragraph of Article 1 of the experts were adopted, together with the amendment of the French delegation, by 20 votes to 4.

The PRESIDENT reminded the Conference that there was a proposal of the Latvian delegation before it in the following terms :

" Each of the High Contracting Parties reserves the right to restrict the undertaking mentioned in the present Convention to the provisions concerning bills of exchange alone."

M. DUZMANS (Latvia) emphasised the psychological side of the question. The history of promissory notes showed that, first of all — for example, a century ago — the legal capacity necessary for their issue had been limited to those classes of society that were less likely to lose their way upon a path that was beset by certain dangers. In Imperial Russia, the peasant class had been debarred from the right to issue promissory notes. In Latvia, where the population was more forward, this prohibition had not existed. The result of this was that bills of exchange usually circulated in circles that were well informed — among men of business or financiers, and especially exporters or importers of bills. Promissory notes, on the other hand, were current in all circles.

M. Duzmans emphasised the lack of confidence that might be engendered if a promissory note could be drawn up on any kind of paper.

These historical, psychological and traditional considerations were of great importance for those circles that were not very well informed on commercial and financial procedure.

M. Duzmans asked the Conference to be so good as to accept this reservation, and added that motives of fiscal order certainly applied to Latvia as much as to all the other States.

M. ALBRECHT (Germany) thought that if the Conference were going to accept such a reservation there ought to be a reciprocity clause ; in other words, if one of the High Contracting Parties wanted to restrict its obligation not to demand the stamp, other parties should have the liberty to restrict their obligations in the same way.

M. VISCHER (Switzerland) thought that this Convention contained a most important provision for trade, and therefore it ought to be as little limited as possible. He did not wish a general reservation to be inserted in favour of all the contracting parties. That would be going too far. Therefore he would not vote for the reservation in question. In his opinion, Latvia should reserve the right of applying this Convention only to bills of exchange. The British delegate was to make a similar reservation covering only the case of Great Britain. Without that, there would be the risk that other States would begin to do the same thing.

The PRESIDENT said that though the proposed reservation was general in character, in practice it would probably only come into force as far as Latvia was concerned. As for the reciprocity clause, he thought that some confusion had arisen there.

The Latvian reservation was adopted by 14 votes to 5.

M. ALBRECHT (Germany) proposed that :

“ Subject to reciprocity, each High Contracting Party reserves to itself the right to restrict the undertaking referred to in the present Convention to the provisions of bills of exchange alone.”

The PRESIDENT said that M. Albrecht's proposal seemed to consist in adding the words “ subject to reciprocity ” to the reservation that had already been adopted.

M. DUZMANS (Latvia) asked what was the meaning of this addition.

M. ALBRECHT (Germany) replied that States could not claim all the advantages of this Convention and give on their part only restricted advantages.

The PRESIDENT explained that if Latvia used this reservation, other States would be able to use the same reservation and insist that the Latvian promissory notes should also be stamped before becoming valid.

M. DUZMANS (Latvia) asked if that was a theoretical point of view.

M. GIANNINI (Italy) said that in practice nothing would be done.

The addition of the words “ subject to reciprocity ” was adopted by 12 votes to 4.

M. DE LA VALLÉE POUSSIN (Belgium) had not quite understood the amendment which had just been adopted and was not without apprehension in regard to the consequences which might be involved.

The meaning which it seemed to him should be given to it, was that the States which wished to make use of reciprocity would have a right to declare null and void bills of exchange issued on their territory and payable in one of the countries which had adopted the Latvian reservation.

Was that really the meaning which should be attributed to the amendment? If that were the case, it was essential to explain the meaning of this amendment and to indicate the strict limits within which it should be applied. Apart from that the most divergent interpretations would arise.

The PRESIDENT was sorry that M. de la Vallée Poussin had not made this statement before the vote, because in that case the result might have been different.

The Latvian proposal had been more or less improvised during discussion. The President quite understood that when the German delegate had heard this reservation moved and remembered the text of other Conventions, he might have said: “ There ought to be a reciprocity clause like those that already exist in many other Conventions.” The Conference had not had the time to ask itself whether it would be easy to contemplate about reciprocity in regard to matters concerning bills of exchange. There were many difficulties concerning the place of a bill's creation, endorsements, the circulation of the instrument, etc., and perhaps the Conference should return to this question later.

Mr. GUTTERIDGE (Great Britain) said that, in view of the alterations that had taken place, he was not sure that it was much good asking for any reservations. He did not say this in any sense of pique, but he had been wondering whether the simplest course would not be for him to abstain from signing. The position had become extremely complicated. Article 19 of the Hague Convention of 1912 had been adopted, which brought this Convention immediately into force. That was an utterly impossible position for Great Britain, because Parliament had to legislate before any change could take place. Moreover, he was not quite sure whether this last amendment did not cause considerable difficulty. Considering the other reservations he would have to make, he was beginning to wonder whether it was really any good for Great Britain to sign this Convention at all.

The last amendment caused him particular difficulty, because he was not quite sure that there was not some way of getting over the difficulty caused by the introduction of the Hague rules. But even if the Conference did so, it would find itself faced with this new difficulty. He had been trying to sketch out some way of drawing up a reserve which would avoid that ; but he did not think it was possible, because if the first paragraph of Article 1 was excluded, there was nothing left which bound him in any way. In other words, the Convention had assumed such an entirely different shape from that which it had possessed when he had received his instructions from England that he did not see that there was anything to which he could put his signature.

The PRESIDENT considered that the reservations of Great Britain would restrict the scope of the Convention to bills of exchange submitted for acceptance and payable elsewhere than in the territory of Great Britain. If those reservations were adopted as well as the system of reciprocity, a very difficult situation would result.

Mr. GUTTERIDGE (Great Britain) replied that that was exactly what he felt. The British Government did wish to remedy this injustice as soon as they had time to do so. He had no doubt that they would do so, but he thought he would be rendering a disservice to the cause of unification if he tried to reconstruct a Convention which he could sign. Probably the greatest service he could render would be to refrain from signing.

The PRESIDENT noted that there was no reservation by the British delegation.

He proposed that the Convention should be called : " Convention on the Stamp Laws in connection with Bills of Exchange and Promissory Notes".

This proposal was adopted.

The PRESIDENT asked whether the Conference intended to maintain its vote on reciprocity.

M. SULKOWSKI (Poland) asked whether it would not be possible to reach an understanding before the second reading.

The whole value of the Convention on the stamp laws depended on the accession of Great Britain. An effort should therefore be made to reach an understanding. To that end, M. Sulkowski suggested that the discussion should be adjourned in order that a compromise might be found.

Mr. GUTTERIDGE (Great Britain) said that if the Conference did not like the suggestion he was about to make it could reject it. It had occurred to him that if this matter could be adjourned until the Conference dealt with cheques, he might be able to obtain further instructions from his Government which would enable the matter to be carried through.

M. SULKOWSKI (Poland) proposed that the discussion should be adjourned until the following meeting.

Meanwhile it would be possible to reach agreement.

Mr. GUTTERIDGE (Great Britain) said that, in that case, it might be possible to have one convention covering both cheques and bills of exchange, but he did not know whether the Conference would agree to that.

M. Giannini had proposed an all-embracing reservation in the Convention on the Conflicts of Laws. If something of that kind were adopted, Mr. Gutteridge might apply for further instructions, but it was not a proceeding which commended itself to him.

The PRESIDENT replied that it was not possible to consider such a proceeding.

Mr. GUTTERIDGE (Great Britain) realised that it was not a practical proposal. Therefore he thought that, unless it was possible to adjourn the question, he would have to abandon it.

The PRESIDENT asked Mr. Gutteridge whether, apart from Article 19, paragraph 1, of the Hague Convention, which was a secondary matter for the other States, he would be able to sign the Convention with reservations.

Mr. GUTTERIDGE (Great Britain) replied that he might be able to sign the Convention with the reservations which he had indicated, which would be drawn up in a protocol of signature,

The Conference adjourned for twenty minutes.

On resumption, the PRESIDENT made the suggestion that the Conference should return to the text of the experts with M. Percerou's amendment, and should admit the reservations by the British and Latvian delegates in the Protocol of Signature.

He made that proposal after having consulted various delegates in particular, and explained that M. Quassowski had drawn up a proposal of the same kind based on another system.

Mr. GUTTERIDGE (Great Britain) replied that he gladly accepted the President's proposal and thanked him for his personal intervention which had helped to bring about a settlement. He took it that the clause, which provided that if, for any reason, Great Britain should be unable to ratify by the time mentioned in the Convention, they would communicate with the Secretary-General of the League of Nations explaining their reasons, would be incorporated in the Convention itself.

The PRESIDENT pointed out that the text he had submitted would need a slight amendment. In other words, it would be necessary to add in the second paragraph after the words " to bills of exchange " the words " and promissory notes ".

The reservations presented by the British delegation for insertion in the protocol of signature were then read once more (see beginning of the meeting, page 275).

These reservations were adopted.

The PRESIDENT pointed out that the members of the Conference would still have an opportunity of examining the text of the draft Convention when it had been printed.

He had before him a proposal by the German delegation to be inserted in the Final Act at the conclusion of the recommendations. The text of the proposal was as follows :

" The Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques, having concluded the first part of its programme, decides to postpone to another session the discussion of the draft Convention on Cheques, and asks the President of the Conference to fix, with the authorisation of the Council of the League of Nations, the date of the second session of the present Conference, if possible, in January 1931.

“ Meanwhile, and in order to facilitate subsequent work :

“ 1. The Governments represented at the present Conference will, in the light of the experience of this first session, devote further examination to the draft Conventions on cheques submitted to the Conference and will, if necessary, consult circles technically concerned. This examination might deal, in particular, with the present state of legislation and with the following points :

- “ Must the drawee be a bank or a banker ?
- “ Must there be a previous agreement between the drawer and the drawee ?
- “ Must the drawer have funds in the hands of the drawee, and at what moment : at the time of presentation or at the time of payment ?
- “ Must a cheque always be payable on demand ?
- “ Must a cheque always be accepted or provided with a visa, and what shall be the effects ?
- “ How must the time-limits for presentation be fixed ?
- “ May the cheque be withdrawn temporarily and with what effect ?
- “ Prohibition to delete the crossing.
- “ What are the effects of crossing ?
- “ Is the drawer liable even if the cheque has not been presented within the fixed period of time ?
- “ If the cover is transferred to the holder, upon whom do the risks of forgery and alteration fall ?
- “ Can the drawee refuse partial payment of a cheque when there are not sufficient funds to meet it ?
- “ A typewritten cheque.
- “ Loss or theft of a cheque.
- “ Amortisation.
- “ Conflicts between transmission clauses.
- “ Domiciled cheques.
- “ Duplicates.
- “ Limitation of actions.
- “ Release of the endorser from his liability.

“ The Bureau would consider how the two lists should be combined. The second list included the following points :

- “ Is it desirable to prohibit the drawing of cheques on persons who do not carry on the profession of banking ?
- “ Must the drawer be given the right to object to payment of the cheque, and how far ?
- “ Withdrawal.
- “ Is it not desirable to prescribe special rules to meet the case in which an instrument, which otherwise satisfies all the conditions required for the validity of a bill of exchange, stipulates that it is payable not in money but by a cheque, especially by a cheque drawn on a bank abroad ?
- “ Would it not be possible to combine in a single type the crossed cheque and the cheque only for collection in use by certain countries ?

“ 2. The delegations will communicate to the Secretary-General of the League of Nations, before September 15th, 1930, the result of the examination referred to in I, adding thereto any amendments, proposals or considerations they may deem fit.

“ 3. The additional documentation thus obtained would be co-ordinated, classified and incorporated in a single document on the instructions of the Secretary-General.

“ The President of the Conference is requested to revise the document prepared by the Secretariat and to furnish the latter with any useful instructions before the document is transmitted to the Governments represented at the present Conference.

“ 4. The Conference requests the Council of the League of Nations to authorise the Secretary-General of the League to undertake the duties necessary for the execution of the above provisions.”

The PRESIDENT pointed out that, in regard to item II of the proposal it should be observed that September 15th was too soon and that it would be preferable to substitute October 15th.

M. DUZMANS (Latvia) did not think that the next session of the Conference could be fixed for January 1931 until it was known what meetings and conferences the League of Nations had in mind for that time.

The PRESIDENT pointed out that the date had been fixed in agreement with the Secretariat of the League of Nations.

M. DUZMANS (Latvia) was personally not in favour of the date, but he would accept it if the Conference considered that January was an opportune moment. He himself thought that the date was too soon.

The PRESIDENT observed that the date would not be too soon for considering the draft Convention on Cheques, since that question should have been considered at the present session of the Conference.

M. SMETS (Secretary of the Conference) stated that when the Conference would be able to meet depended on a variety of circumstances which were to some extent unforeseeable. That was why the text which the President had read contained the words "if possible, in January 1931". It was also stated that the Conference requested the President to fix, with the authorisation of the Council of the League of Nations, the date on which the Conference should meet, which obviously implied that the various authorities concerned would be consulted and their assent obtained.

Thus M. Duzmans' preoccupations had already been taken into consideration.

M. DUZMANS (Latvia) objected to January, because at that time the delegates would be detained in their respective countries on account of various obligations.

The PRESIDENT said that it was understood that, if possible, the Conference would be at the end of January.

The French, Italian, Brazilian, Portuguese, Czechoslovak, British, Greek and Polish delegations stated that they accepted the German proposal.

M. GIANNINI (Italy) would like the position of the legislations of the various countries to be added to the points to be studied by Governments.

M. QUASSOWSKI (Germany) would like the question of post-dated cheques and inequitable gain to be added to that on cover.

M. SULKOWSKI (Poland) asked that the following questions should be added : acceptance, certification and visa.

These proposals were adopted.

The PRESIDENT opened the discussion on the following recommendation submitted by the Polish delegation relating to the unification of the general principles governing the payment of stamp duties :

" The Conference,
" Considering the practical difficulties caused by the diversity of general principles applying to the payment of stamp duties,

" Recommends :

" That the Fiscal Committee of the League of Nations should study the question of *unifying the general principles* to be applied to the payment of stamp duties."

The President suggested that the Polish delegation should withdraw its recommendation for the moment. He feared that its adoption would somewhat frighten various countries whose signature to the Convention on Stamp Laws which the Conference had just adopted with so much difficulty would have to be obtained.

M. SULKOWSKI (Poland) did not insist on a vote on the recommendation. He would be satisfied if it were noted in the Minutes that such a recommendation had been submitted by the Polish delegation.

The PRESIDENT informed the Conference that Mr. Gutteridge and M. Percerou had reached agreement on an improved text for the British reservation as follows :

" It is agreed that, in so far as concerns the United Kingdom of Great Britain and Northern Ireland,

" The only instruments to which the provisions of this Convention shall apply are bills of exchange presented for acceptance or accepted or payable elsewhere than in the United Kingdom."

Mr. GUTTERIDGE (Great Britain) said that when he had thanked the President for his intervention he should also have thanked the members of the Conference for the conciliatory spirit in which they had met his difficulties. He highly appreciated their action.

THIRTY-THIRD MEETING.

Held on June 5th, 1930, at 8.30 p.m.

President: M. J. LIMBURG.

52. Discussion of the Report of the Drafting Committee.

The PRESIDENT proposed the addition, after the heading " Report of the Drafting Committee", of the names of the Chairman, the Rapporteur and the members of the Committee — that was to say, M. Giannini, M. Percerou, M. Ekeberg, M. Quassowski and M. Sulkowski respectively.

This proposal was adopted.

M. SMETS (Secretary of the Conference) pointed out that, when the report had been approved, it would be desirable to number not each paragraph but each new idea in order to facilitate reference.

This suggestion was approved.

M. GIANNINI (Italy) (Chairman of the Drafting Committee) wished to say that the work of the Drafting Committee had been carried out in a spirit of very cordial collaboration. Each chapter had been drafted by one of the members. In view, however, of the short time at the disposal of that Committee, he had asked for the collaboration of several delegates who were not members of the Drafting Committee. He desired to thank these collaborators for their valuable assistance.

M. Giannini wished publicly to thank the members of the Drafting Committee who had been required to make a particularly intensive effort. The Conference had itself worked very hard and it had had, in addition, to accomplish a really heavy task. M. Giannini's thanks went, first of all, to the general Rapporteur of the Committee and the two other Rapporteurs whom the Conference had appointed — M. Ekeberg, M. Quassowski and M. Sulkowski. His special thanks also went to the Secretary of the Drafting Committee.

The object of the note to Article 76 was to give satisfaction to the Japanese delegation, which had expressed the desire that the observations relating to signature should be repeated in regard to promissory notes.

M. Giannini added that the Drafting Committee would be the first to acknowledge that its work was imperfect, but in view of the extremely short time at its disposal it was unable to do better. He relied on the spirit of conciliation of his colleagues and asked them to point out to him or to the general Rapporteur any material errors which they might find.

In conclusion M. Giannini thanked the Conference for the confidence which it had shown in the Drafting Committee.

I. GENERAL REMARKS.

This chapter was adopted with a number of formal amendments.

II. CONVENTION PROVIDING A UNIFORM LAW FOR BILLS OF EXCHANGE AND PROMISSORY NOTES.

Paragraphs 7, 8, 9, 10, 11, 12, 13 and 14 were adopted with a number of formal amendments.

ANNEX I.

ARTICLES 1, 2 AND 3.

Adopted.

ARTICLE 4.

M. SRB (Czechoslovakia) pointed out that reference should be made to Article 22 and not Article 21 in paragraph 27.

Article 4 was adopted with a number of formal amendments in the Explanations.

ARTICLES 5, 6, 7, 8 AND 9.

Adopted.

ARTICLE 10.

Article 10 was adopted with a formal amendment.

ARTICLES 11, 12, 13, 14, 15, 16, 17 AND 18.

Adopted.

ARTICLE 19.

M. SCHELTEMA (Netherlands) recalled that the Conference had decided that the second paragraph of the article should refer to the holder of the pledge (*porteur gagiste*). Should not a sentence to that effect be inserted in the report?

M. PERCEROU (France) replied that the idea was explained in paragraph 49, where it was stated: "It is very important that the person holding the bill as collateral security should be able to transmit the bill by means of an ordinary endorsement."

M. SCHELTEMA (Netherlands) considered that the passage did not refer specially to the holder mentioned in the second paragraph of the article. The paragraph concerned the defences which might be set up and it was in that connection that the observation to which M. Scheltema had referred had been made.

NOTE. — In order to avoid unnecessary printing, only the final text of the report of the Drafting Committee appears in the first part, page 125. The changes made in the Committee's draft report will be found in the record of the discussions.

The PRESIDENT proposed that the text of the report should be completed by the addition of the following paragraph 52 :

“ It is understood that the holder referred to in the second paragraph is the pledgee. ”

This addition to the Explanations was adopted.

Article 19 was adopted.

ARTICLES 20, 21, 22, 23, 24, 25 AND 26.

Adopted.

ARTICLE 27.

M. SHIMADA (Japan) asked that the following text should be added at the end of the explanation of Article 27 :

“ It is also laid down that, in the case mentioned in paragraph 2, when the drawer has not specified a third party at whose address payment must be made, the drawee may name such third party at the time of acceptance (Paragraph 68). ”

M. Shimada explained that that interpretation had been accepted by the Conference, which had decided that it should appear in the report. He would refer in that connection to the Minutes of the discussions.

The PRESIDENT agreed and proposed that this insertion should be made.

The insertion in the Explanations proposed by the Japanese delegation was approved.

Article 27 was adopted.

ARTICLE 28.

Adopted.

ARTICLE 29.

Article 29 was adopted with a formal amendment in the Explanations.

CHAPTER IV.

ARTICLES 30, 31, 32 and 33.

Adopted.

ARTICLE 34.

M. EISNER (Yugoslavia) proposed the deletion of the words “ or extend ” in the sentence “ the endorser has the right to abridge or extend the period of presentment ”. The endorser was only entitled to abridge the period.

Article 34 was adopted with this amendment to the Explanations.

ARTICLES 35, 36 AND 37.

Adopted.

ARTICLE 38.

The article was adopted with a number of formal amendments in the Explanations.

ARTICLE 39.

M. VISCHER (Switzerland) asked that the words “ in general ” should be inserted in the sentence “ As against this, it was pointed out that, *in general*, a creditor is not obliged to accept partial payment...” The common law of all countries did not provide that the creditor was obliged to accept partial payment.

Article 39 was adopted with the amendment proposed by M. Vischer in the Explanations.

ARTICLE 40.

M. VISCHER (Switzerland) did not agree with the following sentence of the Explanations (paragraph 90) :

“ When paragraph 2 was being discussed, the point was raised as to how payment by the drawee, after maturity, but before protest, should be regarded. . . ”

If the bill had been presented on the day when it matured and payment had been made later, the moratory interest (*intérêts moratoires*) ran from the day of maturity.

M. PERCEROU (France) replied that it was not the question of interest which had been considered, but the verification of the identity of the party who has presented the instrument.

M. SRB (Czechoslovakia) pointed out that not only gross negligence, but proof of this, had been mentioned during the discussion.

The PRESIDENT replied that the sentence : " It is, however, not sufficient that the drawee should have a doubt regarding the holder's *bona fides*; his doubts must be backed up by proof", could perhaps be deleted. It might be thought that there was an ambiguity there. It could be explained on the grounds of gross negligence or *culpa levis*.

M. QUASSOWSKI (Germany) considered that the sentence in question was essential.

The PRESIDENT proposed that, in those circumstances, the text should be maintained as it stood.

The article was adopted without change in the Explanations.

ARTICLE 41.

M. MOLENGRAAFF (Netherlands) asked for the insertion in the report of a reservation which had been made in regard to Article 41.

After a short exchange of views, the following paragraph (98) was inserted :

" A reservation to this Article 41 was adopted (Annex II, Article 7).

Article 41 was adopted with the addition to the Explanations.

ARTICLE 42.

Adopted.

ARTICLE 43.

The PRESIDENT pointed out that the final sentence of paragraph 103 should read :

" This text, as maintained, therefore implies that the right of recourse *before maturity* can only be exercised in the event of the drawer of a non-acceptable bill of exchange becoming a declared bankrupt, etc."

Article 43 was adopted with this change in the Explanations.

ARTICLE 44.

Article 44 was adopted with a number of formal amendments in the Explanations.

ARTICLE 45.

Adopted.

ARTICLE 46.

Article 46 was adopted with a formal amendment in the text and in the Explanations.

ARTICLES 47, 48, 49, 50, 51, 52 AND 53.

Adopted.

ARTICLE 54.

M. PERCEROU (France) (Rapporteur of the Drafting Committee) pointed out that the Czechoslovak delegation had asked that the following paragraph (124) should be added at the end of the Explanations :

" Lastly, attention should be drawn to an addition to paragraph 5 of Article 54 (corresponding to paragraph 5 of the Hague text). It is stated that in the case of bills of exchange drawn at a fixed period after sight, the time-limit of thirty days is added to the period after sight specified in the bill of exchange."

Article 54 was adopted with this addition to the Explanations.

ARTICLES 55, 56, 57, 58, 59, 60, 61 AND 62.

Adopted.

ARTICLE 63.

M. SRB (Czechoslovakia) asked the Conference to amend the second sentence of the explanations (paragraph 137) in order to give satisfaction to the Czechoslovak delegation, which had submitted an amendment concerning the rights of the intervener against the acceptor.

M. PERCEROU (France) (Rapporteur of the Drafting Committee) proposed that the sentence quoted by M. SRB should be drafted as follows :

" The Conference also modified paragraph 1 in order to adopt a more precise formula and one which would include the recognition of the rights of the person intervening even against the acceptor."

Article 63 was adopted with this amendment in the Explanations.

ARTICLES 64, 65, 66, 67, 68, 69, 70, 71, 72, 73 AND 74.

Adopted.

ARTICLE 75.

M. GIANNINI (Italy) (Chairman of the Drafting Committee) proposed that the following paragraph (151) should be added :

“ The remarks relating to the signatures on bills of exchange must be regarded as applying to promissory notes.”

M. SRB (Czechoslovakia) considered that, if that observation were made in connection with the signatures on promissory notes, it should be pointed out that the observation regarding the language used for the text of the instrument also related to promissory notes.

M. GIANNINI (Italy) (Chairman of the Drafting Committee) considered that that addition was unnecessary. He would, however, like to give satisfaction to M. Srb.

M. SRB (Czechoslovakia) proposed the addition of the following words : “ and to the language employed in drawing up the instrument ”.

Article 75 was adopted with these amendments in the Explanations.

ARTICLES 76, 77 AND 78.

Adopted.

ANNEX II.

The PRESIDENT pointed out that the word “ reservations ”, which appeared in the title, should be deleted.

This proposal was adopted.

ARTICLES 1, 2 AND 3.

Adopted.

ARTICLE 4.

M. MOLENGRAAFF (Netherlands) proposed that the words “ a concession to French law ” in paragraph 159 of the explanations should be changed to read :

“ . . . And is a concession to the law of the countries which allow an ‘ aval ’ to be given by a separate instrument.”

There were several countries which allowed an “ aval ” to be given by a separate instrument.

M. GIANNINI (Italy) (Chairman of the Drafting Committee), asked that the words “ a tthe request of the Italian delegation ” in paragraph 160 should be replaced by “ at the request of one delegation ”. The same observation applied to Article 17.

These amendments to the Explanations were adopted.

Article 4 was adopted.

ARTICLE 5.

M. GIANNINI (Italy) (Chairman of the Drafting Committee) said that paragraph 162 of the explanations should read : “ Contrary to the general provision in Article 23 of Annex II. . . ”, instead of “ . . . the present Annex. . . ”.

Article 5 was adopted with a formal amendment in the Explanations.

ARTICLE 6.

Adopted.

ARTICLE 7.

M. DUZMANS (Latvia) wished to make an important declaration. The attitude of the Latvian delegation would be determined by the interpretation which the Conference gave to Article 7, and the report might help that delegation in endeavouring to obtain the ratification of the Convention.

It was the explanations which were the cause of the Latvian delegation's intervention. It was stated :

“ This article permits each of the High Contracting Parties, in exceptional circumstances connected with its rate of exchange, to derogate from the clause . . . for effective payment in foreign currency.”

The Rapporteur's explanation thus reproduced the text of the article as it stood. At the end of the explanations was to be found an idea which, in the opinion of the Latvian delegation, was the real idea of the Conference, as was clear from the Minutes.

The Rapporteur said :

“ These provisions were adopted in order to enable contracting parties to deal with certain economic situations which may arise at certain times in their countries . . . ”

During the discussion of the reservations submitted by the Polish delegation, M. Sulkowski, M. Giannini and others had stated that the question affected the whole economic and financial situation of countries. In Article 7, however, were to be found the words : “ . . . in exceptional circumstances connected with the rate of exchange in such State ”. The exceptional circumstances were therefore limited to the sole case of the rate of exchange. The interpretation of the real idea of the Conference might be that the State concerned was free to appreciate its economic situation as a whole. Moreover, Article 7 stipulated :

“ Each of the High Contracting Parties shall have the right, if it deems fit . . . ”

The explanations of the Drafting Committee, however, limited the interpretation of the article.

In order to explain the anxiety of his delegation, M. Duzmans took an example. The monetary unit in Latvia had been stabilised for eight years. There was therefore no monetary crisis, no exchange crisis. Nevertheless, the parties who issued bills of exchange could always insert the clause for effective payment for one reason or another. That reason might be justified or, on the contrary, the drawer might be disloyal and insert a clause for a reason which had no relation to the economic situation of the country. It might happen that the country, especially if it was small and had recently issued a new currency, would find itself suddenly deprived of foreign currency. In a great many new States, however, the cover for the national currency consisted partly in gold and partly in foreign currency. Apart from any exchange crisis, it might thus happen that one of these small States found itself suddenly deprived of the second half of its cover.

Could the High Contracting Parties interpret the possibility of derogating from the clause in question in a wide sense — that was to say, not only in the event of an exchange crisis — but also, for instance, in the event of an economic crisis preceding an exchange crisis? That was not specified in the text.

After long reflection, the Latvian delegation thought that it was still possible to avoid the difficulty even at the last moment. Indeed, the work of the Conference had been extremely hurried. The task of the Drafting Committee had been overwhelming and M. Duzmans wished to pay a tribute to the work of his colleagues. In the circumstances, however, a slight modification of the text of the article might be permitted. In view of the fact that the Conference did not intend to limit the right to derogate to crises connected with the rate of exchange, the sentence in question of Article 7 might be drafted as follows : “ in exceptional circumstances, connected, *for example*, with the rate of exchange in such State ”, or, “ in exceptional circumstances, connected with the rate of exchange of that State ” etc. That addition would enable the article to be interpreted in a wide sense. Moreover, it would be desirable not to limit the commentary to quoting the article, but to give a wider interpretation in it also.

M. Duzmans added that if in spite of the goodwill of everyone it was not possible for the Conference to give satisfaction to the Latvian delegation, the latter would greatly regret its inability to recommend its Government to sign and ratify the Convention. That conclusion would not appear exaggerated if the example which M. Duzmans had quoted, and which might occur in any small country, were taken into consideration.

M. GIANNINI (Italy), Chairman of the Drafting Committee, stated that at the beginning of M. Duzmans' statement he had been very anxious, fearing that a disaster would occur. He then realised that there would be no disaster and that the question raised could be reduced to very modest proportions.

If any reproach could be addressed to the Rapporteur in connection with the article, it was that he had extended rather than decreased the scope of the problem by stating in the commentary that the provisions were adopted in order to enable contracting parties to deal with certain *economic situations*. Indeed, if he had kept to the article adopted by the Conference, he should have stated “ certain monetary situations ”. The word “ economic ” had been employed for the purpose of allowing a certain flexibility in the interpretation of the article.

M. Duzmans would certainly admit that Article 41 referred only to monetary questions and that the reservations could only apply to the solution of problems connected with Article 41. The addition of “ etc. ” as proposed by M. Duzmans would entirely upset the system. It would change the meaning of Article 41, for it would give States such freedom that by making a reservation they could do as they liked.

Was not the case instanced by M. Duzmans still a monetary crisis? It was a crisis which had not yet occurred, but which would occur. It fell precisely within the interpretation of the article, for it was not stated that the country should wait until a crisis had occurred ; it could act when that crisis was threatened.

On the other hand, the commentary on the article should satisfy M. Duzmans, because it stated that the provisions were adopted in order to enable contracting parties to deal with certain economic difficulties which might arise at certain times in their countries.

M. Duzmans had drawn the attention of the Conference to the fact that the explanations opened with the words “ This article permits each of the High Contracting Parties . . . ” ; M. Giannini would observe that that beginning was only a textual reproduction of the beginning of Article 7. It was not really an explanation. It was added, however, that the provisions had been adopted.

Moreover, if the words "monetary situation" were employed instead of "economic situations", the article would also be applicable to the example given by M. Duzmans.

In conclusion, M. Giannini was certain that the Latvian representative could be satisfied and could sign without anxiety.

Article 7 was adopted.

ARTICLE 8.

M. SCHELTEMA (Netherlands) proposed the addition of the following paragraph (166) at the end of the comments:

"Paragraph 3 gives countries the right to make a presumption corresponding to that contained in Article 20, paragraph 2, of the Uniform Law."

Article 8 was adopted with this amendment in the Explanations.

ARTICLES 9, 10 AND 11.

Adopted.

ARTICLE 12.

Article 12 was adopted with a formal amendment in the Explanations.

ARTICLES 13, 14, 15, 16, 17, 18, 19, 20, 21, 22 AND 23.

Adopted.

CONVENTION FOR THE SETTLEMENT OF CERTAIN CONFLICTS
[OF LAWS IN CONNECTION WITH BILLS OF EXCHANGE AND PROMISSORY NOTES.]

The PRESIDENT proposed the addition, after the title: "Report submitted by M. Diena". M. Diena had been officially appointed by the Conference as Rapporteur.

M. DIENA (Italy) thanked the President, but added that he would be grateful to the Conference if it could dispense with the mention of his name.

M. GIANNINI (Italy) (Chairman of the Drafting Committee), considered that M. Diena's request should be refused. The names of the Rapporteurs should be indicated in the two reports, since they had been expressly appointed by the Conference.

M. DIENA (Italy) thanked the Chairman and the Conference.

The proposal was adopted.

Paragraphs 184 to 205 inclusive were adopted.

CONVENTION ON THE STAMP LAWS IN CONNECTION WITH BILLS
OF EXCHANGE AND PROMISSORY NOTES.

The sentence "Report submitted by M. de la Vallée Poussin" was inserted after the title.

Paragraphs 206 to 218 inclusive were adopted.

The PRESIDENT wished especially to thank M. Diena and M. de la Vallée Poussin, both of whom had been appointed as Rapporteurs at the last moment and who had submitted very complete reports in a very short time.

THIRTY-FOURTH MEETING.

Held on June 6th, 1930, at 9 a.m.

President: M. J. LIMBURG.

53. Discussion of the Final Text of the Convention providing Uniform Regulations for Bills of Exchange and Promissory Notes (With Protocol, Annexes and Final Act).

Prince VARNVAIDYA (Siam) said that in order to save time he proposed to examine the corrections in the English text with Mr. Gutteridge after the meeting.

Mr. GUTTERIDGE (Great Britain) agreed, and thanked the delegates who had already sent in observations.

Adopted.

CONVENTION.

M. SMETS (Secretary of the Conference) pointed out that a sub-title, " Title 1 — Bills of Exchange ", should be added after the title " Convention ".

This suggestion was approved.

The text of the Convention was adopted.

ANNEX I.

M. EISNER (Yugoslavia) pointed out that the second paragraph of Article 13 should read : " In the latter case ", instead of " In such cases ", because it referred only to the second case.

This amendment was approved.

M. SRB (Czechoslovakia) observed that the first paragraph of Article 46 should read : " written on the instrument " and not " in the instrument ".

This amendment was approved.

M. ALBRECHT (Germany) said that there was an omission in the French text of the second paragraph of Article 46, which should read : " . . . dans les délais prescrits *ni des avis à donner*¹".

This amendment was approved.

The text of Annex I was approved.

ANNEX II.

M. GIANNINI (Italy) reminded the Conference that it had been decided to omit the brackets in the first two lines of Article 7 and to replace them by commas.

This amendment was approved.

M. GIANNINI (Italy) pointed out that in the second line of the French text of Article 19 the words " Ces titres " should be added after the word " dispenser " .¹

This amendment was approved.

The text of Annex II was approved.

PROTOCOL TO THE CONVENTION.

The text of the Protocol was adopted.

FINAL ACT.

RECOMMENDATIONS.

The recommendations were adopted.

AGREEMENT TO DEVOTE FURTHER EXAMINATION TO THE DRAFT CONVENTIONS
ON CHEQUES SUBMITTED TO THE CONFERENCE.

M. SRB (Czechoslovakia) pointed out that in paragraph II the date " September 15th, 1930 " should be replaced by " October 15th, 1930 ".

Mr. GUTTERIDGE (Great Britain) had experienced the very greatest difficulty in finding English translations for questions 3, 14 and 15 in paragraph 1. The matter was rather important, because the text was going into a questionnaire addressed to Governments which would have to rely on the English version. Did " conflicts de clauses de transmission " in Question 15 mean endorsements?

The PRESIDENT suggested the wording " conflicts regarding transmission clauses ".

Mr. GUTTERIDGE (Great Britain) agreed. The case was apparently one which did not arise in English law.

He added that it puzzled him as an English lawyer to see " amortisation " after " perte ou vol du chèque " in Question 14.

The PRESIDENT said that Question 14 referred to a special procedure ; it should read " loss or theft of a cheque (amortisation procedure) ".

Mr. GUTTERIDGE (Great Britain) agreed.

He asked for a translation of " Guthabenklausel " in Question 3.

M. ALBRECHT (Germany) pointed out that the German word appeared in the French as well as in the English text.

¹ English text, no change.

Mr. GUTTERIDGE (Great Britain) said he would like to have an explanation between brackets in the English text.

M. PERCEROU (France) explained that, according to information that had been given him, it happened in certain countries — for example, in Austria and Germany — that it was necessary to specify on a cheque that cover existed. Therefore, “ mention obligatoire de la provision ” should be added in brackets after the word “ Guthabenklausel ”.

Mr. GUTTERIDGE (Great Britain) suggested the wording “ compulsory mention of cover in the cheque ”.

This suggestion was approved.

The Final Act was adopted.

54. Discussion of the Final Text of the Convention for the Settlement of Certain Conflicts of Laws in connection with Bills of Exchange and Promissory Notes (With Protocol).

M. DIENA (Italy) pointed out that there was missing from Article 3 a paragraph as follows, to be inserted between the first and second paragraph :

“ If, however, the obligations entered into by means of a bill of exchange or promissory note are not valid according to the provisions of the preceding paragraph, but are in conformity with the laws of the territory in which a subsequent contract has been entered into, the circumstance that the previous contracts are irregular in form does not invalidate the subsequent contract.”

The insertion of this paragraph was approved.

M. SRB. (Czechoslovakia) reminded the Conference that Article 11 should be struck out.

Further, the Conference, on the President's suggestion, had agreed to introduce the transitory provision in Article 2 of the main Convention relating to the Uniform Law into the Convention on the Conflicts of Laws. This provision could be inserted in the place of Article 11, which should disappear. In that way, the numbering of the following articles would not be changed.

M. GIANNINI (Italy) wished to have explanations on the bearing of this provision in the Convention on the Conflicts of Laws. What difficulty would there be to prevent the putting of the Convention into immediate application in the case of conflicts?

M. QUASSOWSKI (Germany) thought account must be taken of actions being carried on at the time of the introduction of the Convention.

M. GIANNINI (Italy) wished in these circumstances that the application of this transitory provision should be limited to actions being carried on at the time of ratification. It was obvious that where an action had been begun, it would be continued under the old regulations.

The PRESIDENT reminded the Conference that the German delegation had proposed that a transitory provision should be adopted for the Convention on the Conflicts of Laws. The Conference had agreed to this proposal, which would be applied not only to procedure but also, for example, to capacity. For a country with the system of “ renvoi ”, the new provisions would not apply to bills of exchange issued before the date of the ratification of the Convention.

M. GIANNINI (Italy) feared that judges might have a very difficult task when they came to apply this provision.

M. QUASSOWSKI (Germany) thought, on the contrary, that it would make their work easier.

M. DIENA (Italy) said that this question presented a very delicate and difficult aspect of transitory private international law. It would be better to avoid prejudicing anything by a hasty decision ; it would be preferable to say nothing, since otherwise the solution might be a bad one.

The PRESIDENT asked M. Diena what he meant by “ a hasty decision ”. Did he mean the decision that the Conference was about to take now or that which it had previously taken ?

M. DIENA (Italy) replied that he meant both.

M. QUASSOWSKI (Germany) thought that it was exactly because the transitory situation in this sphere was so very delicate that the Conference should adopt as clear a transitory provision as possible ; in other words, that already approved during the debates.

The PRESIDENT said that his impression at the time of the discussion of the German proposal had been that the decision taken would not be of very great importance, since the provision adopted would probably be only applicable during a period of about six months. He suggested that the Conference should adhere to the aforementioned provision and insert it in the place of Article 11, which would then disappear.

The Conference agreed.

Mr. GUTTERIDGE (Great Britain) asked if there was any difference in French between the words "émis" and "créé".

The PRESIDENT replied that there was no difference.

The Convention was adopted.

55. Discussion of the Final Text of the Convention on the Stamp Laws in connection with Bills of Exchange and Promissory Notes (With Protocol)

The Convention was adopted.

56. Second Report by the Committee on Credentials.

M. DUZMANS, (Chairman of the Committee) read the following report :

" On behalf of the Committee on Credentials, I have the honour to submit the second report to the Conference.

" Before the various delegates proceed to sign the acts that have been adopted by the Conference, the Committee on Credentials, on the invitation of the President of the Conference, has examined the documents by which the delegates to the Conference are accredited and which have been received by the Secretary-General of the League of Nations since the Committee's, first report, which was submitted to the Conference at its third meeting on May 14th. The Committee has observed that, in addition to the thirteen delegations mentioned in the first report as being in possession of full credentials both for the negotiations and for the signature of the acts, other delegations have since been authorised to sign the aforementioned acts, either by full credentials addressed to them in writing by their Prime Minister or by a telegram or letter addressed by their Government to the Secretary-General of the League of Nations.

" The delegations in possession of these powers are the following : Austria, Belgium, Great Britain, Brazil, Colombia, Czechoslovakia, Denmark, Free City of Danzig, Ecuador, Finland, France, Germany, Greece, Italy, Japan, Latvia, Luxemburg, Netherlands, Norway, Poland, Portugal, Siam, Spain, Sweden, Switzerland, Turkey — twenty-six in all.

" It will be remembered that, at the time of its first report, the Committee on Credentials stated that there were thirty-two delegations taking part in the present Conference. It is possible that there are yet other delegations that have been authorised by their Governments to sign would those delegates who have been authorised to sign and who by chance have not yet acquainted the Secretariat with the fact be so good as to inform the Conference ? "

The PRESIDENT, on behalf of the Conference, expressed his thanks to the Committee on Credentials for its work and, in particular, to M. Duzmans, Chairman of the Committee, for his report.

THIRTY-FIFTH MEETING.

Held on June 7th, 1930, at 9 a.m.

President: M. J. LIMBURG.

57. Signature of the Acts of the Conference.

The PRESIDENT invited the different delegations to append their signatures to the Acts of the Conference.

The delegations of the following countries signed all the Acts of the Conference :

Austria	Danzig	Luxemburg	Portugal
Belgium	Ecuador	Netherlands	Spain
Brazil	Finland	Norway	Sweden
Colombia	France	Peru	Switzerland
Czechoslovakia	Germany	Poland	Turkey
Denmark	Italy		

The following signed the Convention on the Stamp Laws and the Final Act :

Great Britain.

The following signed the Final Act alone :

Greece	Japan	Roumania	Venezuela
Hungary	Latvia	Siam	Yugoslavia

In addition, the Final Act was also signed by the following :

The Representative of the Economic Committee.

The Representative of the International Institute for the Unification of Private Law at Rome.

M. ONHO (Japan) said that the Japanese delegation greatly appreciated the work of the Conference, but, in accordance with instructions received from its Government, it was obliged to submit the Conventions for examination by the competent authorities before it would be able to sign. Personally, M. Ohno thought that Japan would be able to sign the Conventions within the time-limits fixed for signature, but at the moment it would merely sign the Final Act.

M. NECULCEA (Roumania) said that the situation in Roumania was peculiar, in that three different exchange legislations were in existence. In the ancient Kingdom, the legislation had been mainly inspired by Italian law ; in Bukovina and Transylvania, the Austrian law was still in existence, whereas the legislation of Bessarabia was that of the ancient Kingdom. The Legislative Council was dealing with the unification of these legislations. It had profited already by the draft of The Hague, and the Roumanian Government would certainly take into consideration the results achieved by the present Conference.

At the present moment, M. Neculcea could only sign the Final Act, but he would immediately recommend his Government to send him, as quickly as possible the full powers necessary to sign the other Acts. In Roumania, every new draft law had to be passed by the Legislative Council. For that reason, the Roumanian representative would only be able to sign all the Acts after ten days' delay.

The PRESIDENT informed the Conference that the Convention providing Uniform Regulations had been signed by twenty-two States ; the Convention for the Settlement of Certain Conflicts of Laws, by twenty-two States ; the Convention on the Stamp Laws, by twenty-three States.

M. BARBOZA-CARNEIRO (representative of the Economic Committee) made the following declaration :

Mr. President, Gentlemen, — Allow me, now that you have reached the final stage of your deliberations, to congratulate you sincerely on behalf of the Economic Committee on the successful conclusion of your work. You have achieved real progress in a most important chapter of the immense task of the international codification of law. It was in answer to a wish of the Economic Committee that you undertook and brought to a successful conclusion the difficult task of making the rules that safeguard the circulation of this marvellous instrument of international payment, the bill of exchange, as universal as possible. As a matter of fact, this was a question that had occupied the Economic Committee ever since its first meetings almost ten years ago.

I think I am right in saying that in many ways you have bettered the work of the Conferences of 1910 and 1912. You have made the system more elastic, and you have very wisely taken into account certain contingencies in the life of nations which had not struck your eminent predecessors so forcibly. I think I may say that you have considered the problem from a laudably objective point of view, and I am sure I am not wrong in affirming that this Conference has been characterised by your anxiety to make your decisions conform to the possibility of an effective unification of exchange law. Your aim has been to accomplish a work of realism. It is true that we should have liked to attain fuller results. It is a characteristic of any constructive work of this kind that it never completely satisfies the ambitions of those who have undertaken it : but, in retrospect, you must realise that there is no doubt that the work you have just accomplished is a remarkable victory in the codification of exchange law.

I wish to add that the Acts of this Conference will be yet another certain guarantee of new progress. It is sufficient to point to the increasing influence exercised by the Uniform Regulation of The Hague during the last years on the legislations of several countries to show that there need be no doubts about the beneficial effects of your achievement.

However, I could not forgive myself if I forgot to ask each of you not to leave this room without the firm intention of doing your best in your respective countries to bring about the fullest possible triumph of the idea that has inspired us here.

Allow me to express the sincere hope that the High Contracting Parties will make as little use as possible of the reservations allowed by the Conference. Thereby they will strengthen the complicated work of the unification of law, and it will be possible to look forward with confidence to the time when the scope of this work will be extended.

In conclusion, I hope that your next work on cheques will be crowned with the success that we have every right to expect after the happy termination of your labours here to-day.

The PRESIDENT first of all expressed his warm thanks, in the name of the Conference, to the representative of the Economic Committee for his kind words. He then addressed the Conference as follows :

We have now reached the end of our work on bills of exchange and promissory notes. We have succeeded in framing uniform laws for these instruments, a Convention on Conflicts of Laws and a Convention on the Stamp Law. This result is due to your perseverance, your goodwill and your untiring patience.

We now await the verdict of the Governments, and we look to them to ratify your work. We await their decision with impatience, for business men, industrialists and lawyers alike are anxious for the enforcement of uniform rules in the interests of international commercial and economic relations, with which your Governments are rightly concerned. Once the desired result is achieved, you can congratulate yourselves, if I am not mistaken, on having, for the first time, given the world an example of the international codification of the municipal law of different States.

I feel confident that the constitutional and parliamentary difficulties encountered by the Hague Convention will no longer prove an obstacle to ratification. This was what you had chiefly to bear in mind, and it was in view of this particular consideration that the Conference agreed to

the principle of immediate denunciation in urgent cases and to a relatively short period for denunciation in ordinary cases. I feel convinced, however, that the right embodied in these provisions will not be exercised. Experience and legal practice will first have to determine the utility and expediency of the common rules, and should these prove to contain any gaps or irksome provisions, the Secretary-General of the League of Nations will be asked to convene a conference to revise texts which have been found unsuited to our actual requirements.

There may, perhaps, be some criticism of the Convention providing uniform law, on the grounds of the various reservations it contains. Such criticism, however, would simply prove that the persons concerned do not realise the difficulties inherent in the question with which we, like so many others before us, have been dealing exhaustively since we first assembled here.

You were all sincerely desirous of framing a convention without reservations. You know, too, how keenly opposed to them I was myself, but we had to admit, as our discussions proceeded, that they were really necessary and constituted an indispensable condition if our work of unification was to meet with success. Moreover, as we all know, the majority of these reservations are merely temporary in character and the development of international commercial relations, which brings out every day the immeasurable advantages of uniformity, will undoubtedly lead to a number of them being dropped in turn. I should like to put one question to those critics to whom I have just referred: would they have had us imperil the fate of our undertaking by sacrificing it to this desire for absolute uniformity? I have no doubt that the majority of well-informed persons will, reply without hesitation in the negative and signify their approval of our achievement.

It is usual at the close of any conference or congress to lavish compliments or official congratulations. I must confess that such formal utterances do not appeal very much to me, but it is quite a different matter to express one's real and innermost feelings: my feelings, gentlemen impel me to thank you most warmly for your untiring and friendly co-operation. I should like to thank you one and all most cordially for your indulgence and courtesy towards me as President of the Conference. I should like also to add a special word of thanks to the Drafting Committee, which has worked day and night throughout the Conference in order to arrive at solutions — sometimes difficult of achievement — and to eliminate mistakes and inaccuracies and perfect what were sometimes hastily improvised texts. I feel sure that I shall only be interpreting the feeling of the Conference in expressing to the Drafting Committee, and in particular to M. Giannini, the Chairman, and to Professor Percerou, the general Rapporteur, our most grateful thanks.

I still have one very pleasant duty to perform, and that is to bring to your notice the readiness with which Professor Gutteridge has continually placed himself at the Secretariat's disposal in the difficult task of framing the English texts. His assistance has been invaluable and I desire to thank him also on behalf of the Conference.

Gentlemen, if it is true that the Conference is indebted to the Drafting Committee, it is no less true that there are other people to whom we should be infinitely grateful. I am thinking, in particular, of the Secretariat, the members of which have met us with a boundless devotion and an unshaken optimism. They have all contributed to the success of our work and deserve well of the League of Nations.

I suggest that we should signify our warmest approval by applauding the head of the Secretariat of this Conference, our excellent friend M. Smets, who has had to work extremely hard, but who may boast of having been one of the mainstays of our Conference.

I wish also to express, in the name of the Conference, our very great gratitude to the interpreters, who have at times been clearer in their interpretations than we ourselves in our speeches.

Gentlemen, I feel sure that we shall all carry away with us the happiest memories of this Conference. We shall be meeting again a few months hence, in order to continue our work, in the same atmosphere of confidence and friendly co-operation. I shall not bid you good-bye, but look forward with pleasure to our next meeting.

M. GIANNINI (Italy) (Chairman) of the Drafting Committee expressed his warmest thanks to M. Limburg, who had made an ideal President. Even when it was necessary to exert his authority in order to speed up the work, the President had always been good-tempered and amiable.

Now that the Conference was concluding the first part of its task, M. Giannini thought that it should thank all those who had formerly prepared the way for their work in the two first Conferences. Several speakers had said that even to-day the best solution of the problem was to be found in the articles drawn up at The Hague. In this connection, the Conference could not fail to recall with sympathy the memory of M. Asser who had presided over the Conferences at The Hague and whose son had taken part in the present Conference. M. Giannini also expressed his gratitude to M. Hammerschlag and M. de la Vallée Poussin, who had been original members of the two preceding Conferences.

The Conference must likewise thank M. Percerou, Chairman of the Committee of Experts, and the other experts present as delegates in the Conference who had, so to speak, put into shape the two drafts resulting from the work of The Hague. Moreover, it should be mentioned that M. Percerou had also acted as general Rapporteur to the Conference.

M. Giannini found that he came to the same conclusion as the President; the work that had twice been taken up at The Hague had already had a remarkable effect, direct or indirect, upon national law. He might quote the saying of Goethe that everything ought to be done over thrice. This third time, it was to be hoped, bills of exchange would acquire everywhere the uniformity desired. The Conference had always borne in mind the British and Anglo-Saxon countries and those whose legislation was based on either American or British law. This time it might be hoped that Great Britain would collaborate with the Continental countries in order to achieve real uniformity in exchange law, in which Anglo-Saxon wisdom that was due to experience would be of the greatest help. That would be the task of another Conference; but one great work had

already been accomplished. Once the uniform law came into force, the experience of daily life would make clear how the work of the Conference could be taken up again and bettered.

M. PERCEROU (France), speaking as Chairman of the Committee of Experts, did not wish the Conference to break up before he had addressed a brief expression of his sincere thanks to the President. He also wished to thank the Economic Committee, through whose initiative this Conference had been brought about. Credit for the successful completion of the work of the present Conference was due to the Conference at The Hague, which had laid the foundation-stone. It was a duty to pay a tribute to that Conference and call to mind the great services it had rendered. The Economic Committee had taken up the work of The Hague and — thanks to the President of the Conference — it had been enabled to bring it to a successful conclusion.

It was with considerable pleasure that the Committee of Experts noted that the arduous work of this Conference — which would have been more arduous still if, in the exercise of an enlightened and benevolent authority, the President had not succeeded in shortening the discussions when necessary — had concluded with the adoption of series of texts that were close enough in the main to those of the Committee of Experts and of the Hague Conference.

The result was encouraging and of good augury for the future. M. Percerou believed he was voicing the feelings of all delegates present when he said that they would be happy, when the time came, to undertake the same work in connection with cheques.

The PRESIDENT thanked M. Giannini and M. Percerou for the kind words they had addressed him. He also thanked M. Giannini for calling to mind the work of M. Asser, who had presided over the Hague Conferences of 1910 and 1912.

He declared closed the proceedings of the first session of the International Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques.

ANNEXES

ANNEX 1.

NOTE BY THE BELGIAN DELEGATION.

Before embarking upon a discussion of the substance of the drafts submitted to the Conference for study and deliberation, it is essential to agree on the aim which the latter must set before it.

As the Netherlands Government remarks in its letter of March 23rd, 1929, four objectives may be considered :

1. The Conference may confine itself to establishing certain uniform principles, and the contracting States would undertake to modify their national laws in accordance with these principles, but without being obliged to adopt the text elaborated by the Conference.

2. The contracting States would simply assume an undertaking to submit to their Parliaments within a definite period a draft law embodying the provisions of the Regulation adopted by the Conference.

3. The contracting States would conclude a Convention containing a uniform Regulation which they would undertake to embody textually in their national legislations.

4. The textual adoption of the uniform Regulation contemplated above would be compulsory on the contracting States, which would reserve the right to depart from it in regard to certain points specified in the Convention. This system was followed by the Hague Conference in 1912.

We are faced with questions which have already been studied very thoroughly. After a large amount of preparatory work already performed a long time ago, the Hague Conferences of 1910 and 1912 succeeded in drawing up texts which, without entirely satisfying everybody — as was inevitable, since they were a compromise — nevertheless constituted an enormous advance on the existing situation and on the excessive diversity of legislations which it is being endeavoured to remedy in this question of such great international importance.

Since 1918, the proceedings at The Hague have again been carefully studied by three Committees of Experts appointed by the League of Nations and by the International Chamber of Commerce.

The present Conference will endeavour to improve still further the Hague texts.

It would therefore seem that, if we desire to achieve practical results in the direction of unifying the regulations governing bills of exchange and cheques, it is only by adopting the method followed at The Hague in 1912 that we can hope to succeed.

If we adopt one of the methods indicated above under 1 or 2—*i.e.*, if we confine ourselves to adopting a sort of model draft on the basis of which the contracting States would prepare bills for submission to their respective Parliaments which could introduce amendments—we must be under no illusion ; far from achieving greater uniformity, it is much more probable that still greater diversity would be the result. Experience shows that, in the majority of Parliaments, amendments are frequently introduced in the heat of the debate which, as a result of a snap division, completely disturb the structure of a bill.

As the present provisions will be discussed by politicians who will be unaware of, or will insufficiently appreciate, the reasons underlying the opinion of the members of the Hague and Geneva Conferences, experts and specialists guided in their conclusions by discussions with the experts and specialists of other countries, it is to be feared that they will reject or modify without sufficient reason certain essential provisions unanimously adopted by the members of the Conference.

For these reasons, it seems highly desirable that the Conference should maintain the method adopted at The Hague, and should endeavour to draw up a uniform draft Regulation which, in the form of a Convention, might be submitted *ne varietur* to the contracting States for ratification.

It may be taken as an axiom that the draft Convention should only include texts relating to the essential questions on which it may be possible to reach agreement at Geneva, leaving each State free, as regards the secondary questions, either to adopt the text drawn up by the Conference or to modify it according to the necessities which may make themselves felt in each country.

If we refer to the observations submitted up to the present by the principal Governments, we find that the texts drawn up at The Hague do not seem likely to give rise to very important differences of opinion on the great fundamental questions. The most profound differences only exist between two groups of legislations—the Anglo-Saxon legislation on the one hand and the Continental European and South American legislations on the other. It may perhaps be necessary to give up any hope of reconciling these two extremely different tendencies ; but an immense progress would already be achieved if agreement could be reached between the second group of legislations. In this way, a very important first stage would have been accomplished, which would no doubt facilitate a fresh advance in future by means of conciliation between the two groups.

The objection based on the susceptibilities of Parliaments in regard to a non-amendable convention law does not appear to be valid, for parliamentary prerogatives will remain intact, Parliaments retaining freedom to accept or reject the Convention.

Is there any reason to fear, moreover, that, in 1930, when the “ international spirit ” has made much progress in the last few years, there are less chances of success than in 1912? The abandonment of the results achieved at The Hague would mark a regrettable setback and would cause profound disappointment in the business world.

ANNEX 2.

AMENDMENT PROPOSED BY THE NORWEGIAN DELEGATION.
(PROPOSAL ADDITIONAL TO THE CZECHOSLOVAK PROPOSAL.)

Article 28.

Add a second paragraph, worded as follows :

“ Protest of non-acceptance, made within the limit of time specified in paragraph 2 of Article 43, shall be valid as proof of the fact that acceptance was cancelled in proper time, failing proof to the contrary.”

ANNEX 3.

AMENDMENT PROPOSED BY THE BRITISH DELEGATION.

Article 33.

The same extension of time is desirable in the case of the presentment for payment of sight bills. If Article 22 is amended as proposed, such extension would follow automatically. But the British delegate desires to reserve his right to move, in any event, that Article 33 should read as follows :

“ A bill of exchange at sight is payable on presentment. It must be presented for payment within a reasonable time having regard to all the circumstances of the case (or alternatively within twelve months).”

ANNEX 4.

AMENDMENT PROPOSED BY THE JAPANESE DELEGATION.

Article 53.

It would be desirable to revive in Article 53, before the last paragraph, Article 53, paragraphs 4 and 5, of the Hague Uniform Regulation, which read as follows :

“ If the *vis major* continues to operate for more than thirty days after the maturity of the bill, recourse may be exercised and neither presentment nor drawing up the protest shall be necessary.

“ As regards bills payable at sight or at a certain time after sight, the term of thirty days begins to run from the date on which the holder, even before the time for presentment, has given notice of the *vis major* to his immediate endorser.”

ANNEX 5.

AMENDMENT PROPOSED BY THE DANISH, FINNISH, NORWEGIAN AND SWEDISH DELEGATIONS.

Article 53.

Paragraph 1 to be drafted as follows :

“ Should the accomplishment within the proper time of a proceeding necessary for the exercise or preservation of rights flowing from a bill of exchange be prevented by a legal provision enacted in any country or by an insurmountable obstacle (*vis major*), these rights shall, notwithstanding the expiration of the limit of time, still subsist, if the proceeding in question is accomplished as soon as possible after the obstacle has disappeared, and in any case within a period of thirty days.”

The only change in the text proposed by the Committee of Experts consists in replacing the word “ abroad ” by “ in any country ”.

ANNEX 6.

AMENDMENT SUBMITTED BY THE SWISS DELEGATION.

Article 44.

It is proposed that paragraphs 1 and 2 should read as follows :

“ The holder must give notice of non-acceptance or non-payment to his immediate endorser, and to the drawer, within the six business days which follow the day for protest, or, in case of a stipulation ‘ *retour sans frais* ’, those which follow the presentment.

“ Every endorser must, within four days, give notice to his immediate endorser of the notice which he has received, mentioning the names and addresses of those who have given the previous notices, and so on through the series until the drawer is reached. The limit of time mentioned above runs from the receipt of the preceding notice.”

Statement of Reasons. The adoption of Article 44 would mean a far-reaching innovation for Switzerland. No provision is made in the Swiss *Code des Obligations* for the notice referred to in this article. Information received from banking firms goes to show that the absence of this compulsory notice has not been attended with any inconvenience. On the contrary, the banks consider that the adoption of this notice would throw entirely unnecessary work on them. However, as all countries, with the exception of Finland and Switzerland, recognise this compulsory notice and have become used to it, I do not venture to propose that it should be dropped.

I have been told, however, that the periods laid down in paragraphs 1 and 2 of Article 44 are too short and would lead to serious difficulties. I would therefore ask the Conference to agree to an extension of these periods from four to six days and from two to four days.

ANNEX 7.

AMENDMENT PROPOSED BY THE GERMAN DELEGATION.

Article 39, paragraph 3.

For the sake of clearness, it is recommended that the following draft, corresponding to that proposed for Article 15, should be adopted for this clause :

“ He who pays at maturity is validly discharged from his obligations unless he is aware, or through gross negligence unaware, that the holder is not the legitimate holder or his representative, or else that he is not entitled or legally able to dispose of the bill.”

ANNEX 8.

AMENDMENT SUBMITTED BY THE YUGOSLAV DELEGATION.

Article 16 (reserved).

The following provision should be added to Article 16 :

“ Pleas founded on the fact that certain particulars were omitted from the bill of exchange at the time of signature may not be set up against the holder who has acquired the bill in good faith ; such pleas are allowed against other persons only if the person bringing forward the plea proves that the bill was subsequently completed in a manner contrary to the agreement made.”

The President has decided that a number of members belonging to the German, Austrian, French, Italian and Polish delegations should try to reach agreement on the question of the bill of exchange in blank and should propose a joint formula. The Yugoslav delegation has great pleasure in accepting this decision. There is every reason to believe that the delegates in question will find a satisfactory solution of this highly important problem. Nevertheless, the Yugoslav delegation feels bound to reserve its right to make a separate proposal should it not agree with the joint formula submitted by the above-mentioned delegations.

It is for this reason that the Yugoslav delegation has the honour to submit the above proposal.

ANNEX 9.

PROPOSAL BY THE ITALIAN DELEGATION.

Article 53 (a).

The action arising out of the relationship (transaction) which occasioned the issue or transfer of the bill of exchange shall continue to exist, notwithstanding the issue or transfer of the bill of exchange, unless it is proved that there has been a novation.

ANNEX 10.

PROPOSAL BY THE SWISS DELEGATION.

If it is desired to regulate the transfer of the cover in the Uniform Regulation (Italian proposal: see page 303, sixth paragraph) it is proposed that the following text should be adopted :

“ In case of the bankruptcy of the drawer, the right of action against the drawee for the restitution of the cover or the reimbursement of any sums credited to him shall pass to the holder of the bill of exchange.

“ Should the drawer note on the bill of exchange that he transfers his rights relating to the cover, such rights shall pass to the holder of the bill.

“ Once the bankruptcy has been declared or the transfer has been notified, the drawee may only pay the holder, duly certified as such, against the delivery of the bill of exchange.”

ANNEX 11.

AMENDMENT PROPOSED BY THE JAPANESE DELEGATION.

Article 54 (14).

In order to obviate any difficulty which might otherwise arise, paragraph 1 of Article 54 concerning a person specified to accept or pay in case of need should only be applicable to a person having his domicile or business seat at the place of payment.

ANNEX 12.

AMENDMENT PROPOSED BY THE CZECHOSLOVAK DELEGATION.

Article 54.

1. In paragraph 1, after the words “ specify a person ”, insert the following words: “ resident at the place of payment ”.

2. In paragraph 2, replace the words “ for any person who has signed it ” by the following words: “ for any of the recourse debtors ”.

ANNEX 13.

PROPOSAL SUBMITTED BY THE BRITISH DELEGATE.

Article...

Any High Contracting Party may, at the time of signature, ratification or accession, declare that, in accepting the present Convention, he does not assume any obligations in respect of all or any of his colonies, protectorates, overseas territories or territories under suzerainty or mandate ; and the present Convention shall not apply to any territories named in such declaration.

Any High Contracting Party may give notice to the Secretary-General of the League of Nations at any time subsequently that he desires that the Convention shall apply to all or any of his territories which have been made the subject of a declaration under the preceding paragraph, and the Convention shall apply to all the territories named in such notice ninety days after its receipt by the Secretary-General of the League of Nations.

Any High Contracting Party may at any time declare that he desires that the present Convention shall cease to apply to all or any of his colonies, protectorates, overseas territories or territories under suzerainty or mandate ; and the Convention shall cease to apply to the territories named in such declaration one year after its receipt by the Secretary-General of the League of Nations.

ANNEX 14.

COMMUNICATION BY THE SWISS DELEGATE.

Articles 47 and 48.

I have been instructed by the Federal Government to make the following communication :

1. On the second reading of the Uniform Regulation I shall revert to the amendment by the Czechoslovak delegation and shall propose that Articles 47 and 48 be completed as follows :

“ *Article 47.*

“ 4. A commission which, in default of agreement, shall be 1/3 per cent of the principal sum payable by the bill.”

“ *Article 48.*

“ 4. A commission which, in default of agreement, shall be 2 per mille of the principal sum payable by the bill.”

2. Should this amendment not be adopted by the Conference, I should ask for the following reservation in favour of the contracting States :

“ By derogation from Articles 47 and 48 every contracting State has the right to prescribe that the holder or the party who takes up and pays a bill of exchange may recover a commission which, in default of agreement, will be 1/3 per cent of the principal sum of the bill of exchange for the holder and 2 per mille of the principal sum of the bill for the party who takes it up and pays it.”

ANNEX 15.

NOTE DE LA DÉLÉGATION DE LETTONIE A PROPOS DE LA DEUXIÈME LECTURE DU RÈGLEMENT ¹

AMENDEMENTS AVEC EXPLICATIONS.

I.

Ad article 29, alinéa 1.

Il est proposé de remplacer le mot « *radiation* » par le mot « *biffure* » (ou « *biffage* », si l'on tient à souligner l'action de biffer plus que ne le fait le mot « *biffure* », ayant deux sens).

Motif. — Pour l'uniformité de la terminologie appliquée dans le Règlement. Même dans ce même alinéa se trouve déjà le terme « *biffer* », et non le terme correspondant à la « *radiation* ».

II.

Ad chapitre VIII (De l'intervention). — *Amendements aux articles 55, alinéa 1, et 60, alinéa 1.*
(tout en tenant compte des articles 56, alinéa 2, et 60, alinéa 2).

Dans l'article 55, alinéa 1, et l'article 60, alinéa 1, remplacer le mot « *indiquer* » par le mot « *désigner* ».

Motifs. — Uniformité la plus large possible de la terminologie. Surtout dans un même chapitre, il faut éviter la diversité des termes employés, lorsque le choix de termes différents (bien qu'expri-

¹ This text exists only in French.

mant la même chose, comme ici) n'est pas commandé par des particularités éventuelles des contextes. Il en est ainsi quant aux deux paires d'articles dans le chapitre VIII : les articles 55, alinéa 1, et 60, alinéa 1, *d'une part*, où le verbe « indiquer » se laisse très bien remplacer par le verbe « désigner », et les articles 56, alinéa 2, et 60, alinéa 2, *d'autre part*, où le verbe « désigner » ne peut pas être remplacé par le verbe « indiquer ». En gardant ici, dans la seconde paire d'articles, « désigner » et en introduisant ce même verbe dans la première paire d'articles, nous aurons, dans tous ces articles et alinéas, l'un et même terme : « désigner ». (Voir l'article 31, alinéa 4, où, par exemple, « indiquer » doit rester, n'étant pas remplaçable, dans ce contexte, par « désigner ».)

ANNEX 16.

NOTE BY THE YUGOSLAV DELEGATION FOR THE SECOND READING OF THE DRAFT

Article 8.

In view of the new formula for Article 8 proposed by the Drafting Committee and the observations on that article in that Committee's report, the Yugoslav delegation is compelled to refer once again to the article in question.

The observations in question make it clear that where the signatory acts, not without any power at all but beyond his powers, he is personally liable for the whole amount. "It is in this sense", the report continues, "that the Conference declared that it understood the second paragraph of Article 8."

The Yugoslav delegation, however, considers that the Conference did not declare itself in that sense.

The discussion of this question by the Conference took the following line :

Our delegate, in giving the reasons for our proposal, explained that, in his opinion, according to Article 8, the representative, if he exceeded his powers, was liable under the terms of the bill for the whole amount, and the person represented was liable within the limits of the powers given him, but that the text was not sufficiently clear as regards the liability of the person represented.

Professor La Lumia, the Italian delegate, said that the person represented could not be liable even for the smallest sum, since that would be contrary to the fundamental principle of a bill of exchange and the independence attaching to a bill. The value of a bill is the amount stated thereon. Hence, the Italian delegate was presumably of opinion that in such a case the representative was liable for the whole amount and the person represented was liable for nothing at all.

The other view was taken by Dr. Hammerschlag, the Austrian delegate. He said that where, for example, the representative had received power to issue a draft for 10,000 francs and in point of fact issued one for 20,000 francs, he was liable for the amount for which he exceeded his powers — that is to say, 10,000 francs — the person represented being liable only in respect of the rest — 10,000 francs. "That is only natural", said Dr. Hammerschlag.

The President, if I have understood him aright, is of the same opinion.

The Yugoslav delegation thus received the impression that, in view of the opinions of the President and Dr. Hammerschlag, the Conference decided to reject the Yugoslav proposal.

This last view — that the person represented is liable within the limits of the powers given him and the representative for the rest — is at all events consistent and logical.

The Yugoslav proposal, however, was designed primarily to improve the position of the bearer by granting him greater security, and, at the same time, to prevent undesirable speculation at the expense of the bearer and the guarantors.

The Drafting Committee's view, however, if I have understood it aright — namely, that the representative alone is liable for the whole amount and the person represented for nothing — (1) is contrary to the real liability of the person represented, and (2) opens up the possibility of speculation harmful to trade. It exposes the bearer or the guarantors to the risk of losing the whole amount, in view of the unsatisfactory position of the representative, since they would rely primarily upon the value of the guarantee of the person represented.

It will be seen from what I have just explained that the question before us has become even less clear than before.

In view of the divergencies in the views mentioned, on the one hand, and the lack of precision in the text on the other, this important question is likely to be interpreted in different ways.

For these reasons it is essential, in our opinion, to have an exact text in accordance with one of the views mentioned.

ANNEX 17.

PROPOSAL BY THE SIAMESE DELEGATION.

The possibility to refuse partial payment being of great practical importance to Siam, the Siamese delegation has the honour to revert to the reservation requested by the French delegation (see page 249, under Article 38, second paragraph), and to propose the following reservation :

"In derogation of Article 39, paragraph 2, of the Regulation, every contracting State may authorise the holder to refuse the partial payment of instruments payable in its own territory.

"The right thus accorded to the holder must be recognised by the other States."

ANNEX 18.

AMENDMENT PROPOSED BY THE AUSTRIAN DELEGATION.

Insert in the Convention an article reading as follows :

“ The High Contracting Parties undertake to communicate to each other through the Secretariat of the League of Nations — which shall be responsible for their translation into the official languages of the League — all decisions reached by their respective Courts in regard to the principal questions concerning the uniform regulation of bills of exchange and promissory notes.”

Reasons. — We consider that the unification of the law in regard to bills of exchange would not be altogether satisfactory unless there were a supreme international court to ensure the uniform interpretation by the judicial authority of questions connected with bills of exchange.

We do not suppose it would be possible to carry out this proposal, at all events at present.

For this reason, we consider that the adoption of the above-mentioned suggestion is essential for the uniformity of judgments in the matter, and that it would result in the uniform interpretation of the Regulation and Convention. Moreover, the observations by which the examination of the decisions to the various courts will give rise will enable any necessary amendments to be made.

We should like to point out that this proposal does not interfere with the functions of existing institutions. We consider that the proposed international exchange of judgments will be of great advantage to those institutions, and would point out that similar action is taken by the International Labour Office and the International Bureau of Industrial Property in their respective spheres.

ANNEX 19.

TEXT PROPOSED BY A GROUP OF DELEGATIONS WITH A VIEW TO THE
CONVENTION PROVIDING UNIFORM REGULATIONS FOR BILLS OF EXCHANGE
AND PROMISSORY NOTES.

CONVENTION.

The PRESIDENT OF THE GERMAN REICH.....
.....
have appointed as their plenipotentiaries the following

Who, having communicated their full powers found in good and due form, have agreed upon the following provisions :

Article 1.

The High Contracting Parties undertake to introduce in their respective territories, either in the original text or in their own languages, the Uniform Law forming Annex I of the present Convention.

This undertaking shall, if necessary, be subject to such reservations as the respective High Contracting Parties shall notify at the time of their ratification or accession. These reservations shall be chosen from among those mentioned in Annex II of the present Convention.

The reservations referred to in Articles ... of the said Annex II may be made after ratification or accession, provided that they are notified to the Secretary-General of the League of Nations, who shall forthwith communicate the text thereof to the Members of the League of Nations and to the States non-Members on whose behalf the present Convention has been ratified or acceded to. Such reservations shall take effect on the ninetieth day following the receipt by the Secretary-General of the above-mentioned notification.

Article 2.

The present Convention, the French and English texts of which shall be equally authentic, shall bear this day's date.

It may be signed thereafter until (*date of the expiry of a period of thirty days from the date of the Convention*) on behalf of any Member of the League of Nations or non-Member State.

Article 3.

The present Convention shall be ratified.

The instruments of ratification shall be deposited before the (*date of expiry of a period of twenty months from the date of the Convention*) with the Secretary-General of the League of Nations, who shall forthwith notify receipt thereof to all the Members of the League of Nations and to the non-Member States parties to the present Convention.

Article 4.

From the (*date of expiry of a period of thirty days from the date of the Convention*) any Member of the League of Nations and any non-Member State may accede thereto.

Such accession shall be effected by a notification to the Secretary-General of the League of Nations, such notification to be deposited in the archives of the Secretariat.

The Secretary-General shall notify such deposit forthwith to all States which have signed or acceded to the present Convention.

Article 5.

The present Convention shall not come into force until it has been ratified or acceded to on behalf of seven Members of the League of Nations or non-Member States, which shall include three of the Members of the League permanently represented on the Council.

The date of entry into force shall be the ninetieth day following the receipt by the Secretary-General of the League of Nations of the seventh ratification or accession in accordance with the first paragraph of the present article.

The Secretary-General of the League of Nations, when making the notifications provided for in Articles 3 and 4, shall state in particular that the ratifications or accessions referred to in the first paragraph of the present article have been received.

Article 6.

Every ratification or accession effected after the entry into force of the Convention in accordance with Article 5 shall take effect on the ninetieth day following the date of receipt thereof by the Secretary-General of the League of Nations.

Article 7.

Except in urgent cases, the present Convention may not be denounced (on behalf of a Member of the League of Nations or non-Member State) before the expiry of two years from the date on which it has entered into force in respect of that Member of the League or non-Member State ; such denunciation shall take effect as from the ninetieth day following the receipt by the Secretary-General of the notification addressed to him.

Every denunciation shall be immediately communicated by the Secretary-General of the League of Nations to all the other High Contracting Parties.

In urgent cases a High Contracting Party which denounces the Convention shall immediately notify all other High Contracting Parties, and the denunciation shall take effect two days after the receipt of such notification by the said High Contracting Parties.

Each denunciation shall only take effect as regards the High Contracting Party on whose behalf it has been made.

Article 8.

Every Member of the League of Nations and every non-Member State in respect of which the present Convention is in force, may forward to the Secretary-General of the League of Nations after the expiry of the fourth year following the entry into force of the Convention, a request for the revision of some or all of the provisions of that Convention.

If such request, after being communicated to the other Member or non-Member States between whom the Convention is at that time in force, is supported within one year by at least six of them, the Council of the League of Nations shall decide whether a Conference shall be convened for the purpose.

Article 9.

In the absence of a contrary declaration by a High Contracting Party at the time of signature, ratification or accession, the provisions of the present Convention shall not apply to colonies, oversea territories, protectorates or territories under suzerainty or mandate.

Nevertheless, the High Contracting Parties reserve the right to accede to the Convention, in accordance with Article 4, in respect of all or some of their colonies, oversea territories, protectorates or territories under suzerainty or mandate. They further reserve the right to denounce it, in accordance with the conditions of Article 7, on behalf of all or some of their colonies, oversea territories, protectorates or territories under suzerainty or mandate.

Article 10.

The present Convention shall be registered by the Secretary-General of the League of Nations as soon as it comes into force. It shall then be published as soon as possible in the League of Nations *Treaty Series*.

IN FAITH WHEREOF the above-mentioned Plenipotentiaries have signed the present Convention.
DONE at Geneva.....

PROTOCOL OF THE CONVENTION.

At the time of signing the Convention of this day's date introducing uniform regulations for bills of exchange and promissory notes, the undersigned, duly authorised, have agreed upon the following provisions :

I.

The High Contracting Parties who may not have been able to deposit their ratifications of the said Convention before.....¹ undertake to forward within fifteen days from that date a communication to the Secretary-General of the League of Nations informing him of their situation as regards ratification.

II.

If on² the conditions laid down in Article 5, paragraph 1, for the entry into force of the Convention are not fulfilled, the Secretary-General of the League of Nations shall convene a meeting of the Members of the League and the non-Member States who have signed the Convention or acceded to it.

The purpose of this meeting shall be to examine the situation and any measures to be taken to meet it.

III.

The High Contracting Parties shall communicate to each other, immediately upon their coming into force, the legislative measures taken in execution of the present Convention in their respective territories.

IN FAITH WHEREOF the above-mentioned Plenipotentiaries have signed the present Protocol.
DONE at Geneva.....

The Conference also *recommended* that the parties to the Convention introducing uniform law on bills of exchange and promissory notes should communicate to each other the texts of the most important judicial decisions given in their respective territories and coming under the scope of the said Convention.

Article 267. — La plus ou moins grande étendue des obligations de chaque endosseur ne modifie pas les droits et devoirs du tireur et du bénéficiaire à l'origine.

Article 268. — L'aval, dans les mêmes conditions, est régi par la loi du lieu où il est donné.

Article 269. — Les effets juridiques de l'acceptation par intervention sont régis, à défaut de convention, par la loi du lieu où le tiers intervient.

Article 270. — Les délais et formalités pour l'acceptation, le paiement et le protêt sont soumis à la loi locale.

Article 271. — Les règles du présent chapitre sont applicables aux bons, obligations, billets et mandats ou chèques.

Chapitre VII. — Falsification, vol, détournement ou perte d'effets de crédit et titres au porteur.

Article 272. — Les dispositions relatives à la falsification, au vol ou au détournement des valeurs et titres au porteur sont d'ordre public international.

Article 273. — L'adoption des mesures prescrites par la loi du lieu où le fait s'est produit ne dispense pas les intéressés de prendre toutes autres mesures fixées par la loi du lieu où ces actes et effets sont cotés et par la loi du lieu de leur paiement.

ANNEX 21.

NOTE BY DR. LOEBER, LATVIAN DELEGATE.

Article 62, paragraph 1, of the Regulation.

The Latvian delegation desires to revert to and support the proposal of the Czechoslovak delegation concerning Article 62, paragraph 1, adding to the first sentence the words: "and against the acceptor". If the person who pays by intervention is subrogated to the rights of the holder and in virtue thereof exercises his independent and autonomous rights (as Professor Arcangeli put it), there is no adequate reason for releasing the acceptor from responsibility in the matter of bills of exchange to the person who pays by intervention. According to Article 27 of the Uniform Regulation, the drawee, by accepting, undertakes to pay the bill of exchange at its maturity; in default of payment, the holder has a direct action on the bill of exchange for all that can be demanded in accordance with Articles 47 and 48. According to Article 46, the holder has the right of proceeding against all those who have drawn, accepted, endorsed or guaranteed by "aval" a bill of exchange, individually or collectively. Lastly, in virtue of Article 38, paragraph 1, the drawee (obviously whether acceptor or not) who pays a bill of exchange may require that it shall be given to him receipted by the holder. According to Articles 37 and 41, the holder must present a bill of exchange for payment, failing which every debtor (and obviously the acceptor, too) is authorised to make a deposit of the amount with the competent authority. Hence it follows that the person who pays by intervention, who, under the law and without any special instrument relating to bills of exchange, is subrogated to the rights of the holder, possesses all the rights which the holder could have exercised, including, therefore, rights against all debtors who were responsible to the original holder. No one will deny that the acceptor is not released from his responsibility by the fact of intervention; the acceptor obviously continues to be responsible. If we were to exonerate the acceptor from his responsibility to the person who pays by intervention, we should have to conclude that the acceptor was only responsible to the beneficiaries or, at the same time, to the first endorser or to the drawer into whose hands the bill of exchange might return in accordance with Article 49, paragraph 1. This would be a lengthy and useless procedure involving considerable expense to the acceptor and without any basis in logic. It must, therefore, be laid down that the person who pays by intervention may exercise his rights not only against the person for whom he pays and the parties liable to that person, but against the acceptor himself. This rule is not at variance with the principle adopted by the Uniform Regulation admitting intervention only in favour of the parties liable. The latter principle relates to the question of which party may indicate a case of need, or in favour of what persons the intervener may exercise intervention by acceptance or payment. This principle, however, is quite unconnected with the question arising out of the Czechoslovak delegation's proposal — namely, whether the person who pays by intervention may also exercise these rights against the acceptor as the direct and principal debtor. This last question is answered in the affirmative by the majority of the most recent laws: Switzerland (Article 781), Germany (Article 63), Czechoslovakia (Article 59), former Imperial Russia in 1903 (Article 110), Latvia (Article 108), etc. It is therefore indispensable that the person who pays by intervention should be granted the right of proceeding against the acceptor also.

Geneva, August 5th, 1930.

LEAGUE OF NATIONS

FREE CITY OF DANZIG

**THIRD REPORT
BY THE TRUSTEE FOR THE FREE CITY OF DANZIG
6 $\frac{1}{2}$ % (TOBACCO MONOPOLY) STATE LOAN OF 1927.**

(COVERING THE PERIOD FROM JULY 1ST, 1929, TO JUNE 30TH, 1930.)

In conformity with the Council resolution of September 15th, 1927, I herewith have the honour to submit to the Council of the League of Nations my third annual report, covering the period from July 1st, 1929, to June 30th, 1930.

The balance of the proceeds of the Loan on June 30th, 1929, according to the Programme of Expenditure, amounted to	£	s.	d.
	20,949	14	0
During the year under report, a sum of	19,735	3	3
has been liberated, according to the annexed specification, leaving a balance of	£1,214	10	9

On June 30th, 1929, the balance of the amount blocked for "two years' interest" to be covered out of Loan proceeds on item 2 of Programme of Expenditure, to which I referred in my two previous reports, amounted to £11,443 13 0
This amount has, during this year, been liberated in full and this item has therefore been liquidated.

The amounts received on the Tobacco Monopoly Account and the Excise Account have, according to the figures received from the *Staatshauptkasse*, been as follows:

	Danzig Gulden	Danzig Gulden
July 1st, 1929, to September 30th, 1929:		
Tobacco	1,559,254.59	
Excise duties	1,170,153.30	
	-----	2,729,407.89
October 1st, 1929, to June 30th, 1930:		
Tobacco	4,842,093.05	
Excise duties	3,953,701.95	
	-----	8,795,795.—
Making a total of		11,525,202.89

According to Article 18 of the General Bond, the total receipts of both accounts must be equal to at least 150 per cent of the maximum annual service of the Loan, which amounts to £173,300 at 25 = 4,332,500 Danzig Gulden. From the above figures it appears that, in the period July 1st, 1929, to June 30th, 1930, the total actual receipts from the Tobacco Monopoly and Excise Duties represented more than 266 per cent of the amount required for the service of the Loan.

As in preceding years, I enjoyed the benefit of the assistance of the Bank of Danzig, for which I herewith wish to express my gratitude.

Amsterdam, July 1930.

(Signed) C. E. TER MEULEN.

Appendix.

Items of Programme of Expenditure	Original Programme of Expenditure	Balance on June 30th, 1929	Sums liberated	Unemployed balance of Programme of Expenditure
	£	£ s. d.	£ s. d.	£ s. d.
1. Consolidation of Floating Debt of the State . . .	560,000	—	—	—
2. Payment to:				
A. Conference of Ambassadors	240,000	—	—	—

LEAGUE OF NATIONS

G R E E C E

**TWENTY-SEVENTH QUARTERLY REPORT
OF THE REFUGEE SETTLEMENT COMMISSION**

1.

Athens, August 21st, 1930.

The twenty-six quarterly reports which we have published regularly since February 1924 have duly recorded all the facts of any importance which have marked the course of the Refugee Settlement Commission's activity; they have supplied statistics and information on the nature of its operations. A work published by the League of Nations in 1926, entitled *The Establishment of the Refugees in Greece*, set forth methodically and subject by subject all that the previous reports had given in instalments. It also contained details and considerations for which there was no room in those reports, and thus gave a complete picture of what the establishment of the refugees had been up to that date.

The present quarterly report does not duplicate the contents of the preceding ones, nor of the League of Nations' work. It is neither a recapitulation nor a summary. On many special subjects it will rather have the character of a conclusion, and will supply some supplementary elements of appreciation to those who have followed the Refugee Settlement Commission during the seven years of its existence, and would like to form an opinion of its work and know how far it has been able to fulfil the purpose which it set before it.

* * *

Here we wish to reproduce the introduction to the first of our quarterly reports, that of February 1924:

"The Refugee Settlement Commission is charged with the settlement in Greece of the refugees upon lands assigned to it, or otherwise in productive work. Its work concerns the settlement of a number approximating to one million souls—Greek and Armenians who have fled or been evacuated from the territories of the Ottoman Empire. The larger part of these refugees began to arrive in Greece about eighteen months ago; but the influx, although greatly diminished, is continuing to a certain extent. It is estimated that there are still about 150,000 Greeks to come, chiefly from the shores of the Black Sea (Pontos) and Cicilia.

"The Commission has been promised by the Greek Government an area of land of not less than 500,000 hectares, of a suitable character for the settlement of the refugees. This land was to be given free of charge and unencumbered, and will serve two purposes: (1) as land for the refugees to settle upon and to cultivate for the purpose of becoming self-supporting citizens of Greece, and (2) as a guarantee of the loan which the Commission is administering.

"The task of the Commission is therefore twofold. On the one hand, it has to utilise the funds at its disposal in the most efficient manner possible for the settlement of the refugees in productive work; and, secondly, it has to ensure that the guarantees provided for in the Protocol are made over to it, in compliance with the conditions there stated; and that the expenditure incurred is so arranged that eventual repayment of the loan can be secured.

"The Commission assembled at Salonica on November 11th, 1923, and took the opportunity, while at the headquarters of the settlement work in Macedonia, to inspect the organisation in being and the work done by the Greek Government in that province. Macedonia is the district in which the great bulk of the refugees will be settled, because it is potentially one of the most fertile districts in Greece. It contains large areas of uncultivated but cultivable lands, and has a large number of Turkish inhabitants who,

under the terms of the Convention for the Exchange of Populations (Lausanne Treaty), are being removed to Turkey. Their departure leaves a large area of arable land and the houses thereon available for the settlement of the incoming refugees. The Commission examined the existing machinery by which the Greek Government had dealt with the settlement of the refugees upon these evacuated lands and such other lands which for various reasons can be occupied by refugees. They also inspected a number of settlements where refugees have already been installed, investigated the distribution of building materials, seed grain, agricultural implements, etc., and visited various charitable institutions organised for the assistance of the refugees. They traversed portions of the Vardar region and obtained a general idea of the conditions prevailing; inspected the completed houses and those in course of construction in different villages, and saw the refugee camps where the new arrivals are sheltered. The Commission took the opportunity of consulting the officials charged with this work, and also interviewed a number of the leading inhabitants who, for philanthropic or business reasons, were interested in the question.

“From Salonica, the Commission proceeded to Athens, where it came in contact with the Ministers and Ministries concerned with the settlement question. The Commission was at once approached by a number of Greeks with various schemes for dealing with the problem, either as a whole or in part, and many of the suggestions made were found helpful and practical.

“The Greek Government promulgated on December 17th, 1923, a Legislative Decree assuring the Commission the necessary powers, in conformity with Article I of the Protocol.

“In order to prevent the deterioration of the partially constructed houses and to save the approaching sowing season and to utilise the materials already ordered for the work of new buildings, the Commission promptly determined to arrange to continue all works then being carried on by the Government and to assume an eventual liability for the materials ordered under the existing contracts.

“It was obviously unnecessary to make an entirely fresh start; and, indeed, from what it had already seen, the Commission was of the opinion that the greater part of the machinery in being could be usefully taken over and could continue to function under the ægis of the Commission. It is impressed by the successful work already accomplished by the Government, through this agency, for the establishment of the refugees; and it desires to emphasise the opinion that the Greek Government and the Greek people have grappled with this colossal problem in a manner worthy of the highest praise. The Commission therefore arranged to assume the responsibility in respect of the payment for materials (timber and other building materials, seed, wheat, ploughs, etc.) which had been ordered by the Greek Government, but which had not yet arrived or been paid for, subject to the condition that only so much of these materials as could be utilised on lands or property which would later be made over to it, with a clean title, would be paid for by the Commission. These conditions were accepted by the Greek Government and by the National Bank of Greece, which latter guaranteed to advance the sum required for this purpose—namely, £160,000—and to recover later such portion of this expenditure as might be approved by the Commission. This enabled the continuity of the work in hand to be kept up, and at the same time safeguarded the Commission from undertaking any liability in respect of expenditure on lands which will not become the property of the Commission, or any other liability not specifically covered by the terms of the Protocol.”

What strikes one in re-reading the above is that the Commission has never departed from the broad lines of the programme sketched therein, subject only to minor modifications as circumstances required. The Members of the Council who met at Salonica took an accurate view of what had to be done, and to say this is no faint praise. The agitation created in the country by the arrival of the refugees, and the resulting confusion of ideas and opinions, might have affected the independence of judgment of the Council; the novelty and complexity of the problem might have given rise to doubts and hesitations in its mind, and disposed it rather to adopt half-measures, on which it would have been easier to go back, than to decide on a general and complete solution, committing the Commission to a course which it could not have abandoned without re-opening the whole question of establishment.

* * *

If, however, the merit of having chosen this course belongs to the Council of the Refugee Settlement Commission, that of having pointed it out and prepared for it belongs to the Hellenic Government. The extract which we have just reproduced shows that the idea and the word colonisation, and the first steps towards its realisation, precede the creation of the Commission. They are due to the Government services which had decided on the possibility of uniting the two problems which then preoccupied Greece—namely, the future of the refugees and the development of the territories annexed since 1912.

Here it is of interest to recall the total sum of the expenses of all kinds which have burdened the finances of Greece on account of the establishment of the refugees:

1. From 1922 to the end of 1930, the housing, maintenance, public health, movements of population and transport, orphanages, colonisation by the State, Service of Exchange of Populations, etc., will have cost about three milliards of drachmas—that is, taking into account

the fluctuations of exchange, about ten million pounds sterling. These sums have figured in the budgets and have been covered by the ordinary receipts.

2. On the other hand, the annual charges for the foreign and internal loans appropriated for the establishment of the refugees amount:

For the service (in gold) of the foreign debt to about	£ 1,144,000
For the service (in drachmas) of the internal debt (compensation bonds) to about	1,744,000
	<hr/> £2,888,000 ¹

* * *

In a country where all classes of the population are strongly affected by questions of general interest, so burning a question as that of the establishment of the refugees could not fail to supply matter for ample discussions. The Refugee Settlement Commission has often been commended, and the Press, native as well as refugee, has generally followed our work with sympathy. It has shown that it realised the difficulties we had to encounter and that it appreciated the results which have been obtained by degrees. Criticisms have been advanced with moderation, when they were inspired by good faith and arose from differences of opinion with regard to facts. There were others of which this cannot be said.

2.

ORGANISATION OF SERVICES OF THE REFUGEE SETTLEMENT COMMISSION.

The Protocol of Geneva regarding the creation of the Autonomous Office for the establishment of refugees in Greece was ratified by the Legislative Decree of October 13th, 1923. A second Legislative Decree made regulations for the manner in which the Office was to perform its functions.

The transfer to the Refugee Settlement Commission of the powers relating to the establishment of refugees which had until then been exercised by certain services of the Ministries of Agriculture, Public Assistance and Public Health, and by the competent councils attached to those departments, was decided in conformity with those decrees.

In order to simplify and facilitate the work, these services were detached from their Ministries and placed under the jurisdiction of the Commission, while retaining their functions. The services thus handed over were the following.

By the Ministry of Agriculture:

1. The Section of Colonisation;
2. The Directorate-General of Colonisation of Macedonia;
3. The Directorate of Colonisation of Thrace;
4. The Colonisation Bureaux of Epirus, Attica and Bœotia, Etolia and Acarnania and Crete.

By the Ministries of Public Assistance and Public Health:

1. The Housing Section;
2. The Technical Section of the *Caisse d'Assistance*.

At the moment of the transfer of these services to the Refugee Settlement Commission (in January 1924), their staffs numbered 748 employees.

At the same time, the National Bank of Greece detached and handed over to the Refugee Settlement Commission a certain number of employees who organised the financial services of the Office.

* * *

As stated in the preceding paragraph, the Refugee Settlement Commission has not sought to alter the distribution of the work as it had been established between these different services. But, as the need first was felt, it has: (1) increased the original staffs, (2) created fresh services, and (3) encouraged decentralisation as far as possible. The organisation of the Refugee Settlement Commission services early took its final shape. They were grouped under five independent Directorates, namely:

Three Directorates of Colonisation:

1. The Directorate-General of Colonisation of Macedonia;
2. The Directorate of Colonisation of Thrace (which, as has been seen, already existed and formed part of the services transferred by the Ministry of Agriculture);
3. The Directorate of Colonisation of Old Greece, Epirus and the Islands. (The nucleus of this Directorate was formed by the Colonisation Bureaux of Attica and Bœotia, Etolia and Acarnania, Epirus and Crete.)

The Directorate of Urban Establishment (under which were originally re-grouped all the services transferred by the Ministry of Public Assistance and Public Health).

Finally, the Directorate of Finance.

¹ According to figures supplied by the Accounts Department of the State and quoted by M. Venizelos in his speech in the Chamber of June 26th, 1930.

I. CENTRAL ADMINISTRATION.

The three last of these five Directorates were established at the headquarters at Athens, where also several sections of the administrative machine were at work directly under the Council—namely: (1) the Inspectorate-General; (2) the Secretariat of the Council; (3) the Personnel Section; (4) the Registry and Despatch Section; (5) the Supply Section; (6) the Office of the Legal Adviser; (7) the Arts and Crafts Office.

The Directorate-General of Colonisation of Macedonia and the Directorate of Colonisation of Thrace had their headquarters respectively at Salonica and Comotini.

We shall not enumerate all the sections and offices among which the work was distributed at the headquarters of the Directorates. The principal divisions under which the staff was classed were the following: (1) Administration; (2) Agriculture; (3) Civil Engineering; (4) Cadastral Survey; (5) Public Health; (6) Accounts.

II. LOCAL ADMINISTRATION.

I. Colonisation.

The jurisdiction of each Directorate of Colonisation was subdivided into districts, each of which was placed under a colonisation bureau. At the head of these bureaux an agronome was always placed, having under his orders administrative agents, accountants and specialists. The strength varied with the number of colonies placed under the jurisdiction of the bureau and the agricultural activity of the district. The following is the list of the colonisation bureaux:

- | | | |
|-----------------------|-------------|----------------|
| I. <i>Macedonia</i> : | 1. Salonica | 9. Yanizza |
| | 2. Langada | 10. Axioupolis |
| | 3. Pieria | 11. Chalcidice |
| | 4. Kilkis | 12. Sintique |
| | 5. Florina | 13. Serres |
| | 6. Castoria | 14. Edessa |
| | 7. Eordaca | 15. Cozani |
| | 8. Verria | |

(Cozani, the centre of colonisation for Western Macedonia, had also under its jurisdiction an office of technical inspection and the topographical service of Western Macedonia.)

- | | | |
|---------------------|--------------------|------------|
| II. <i>Thrace</i> : | 1. Comotini | 5. Xanthi |
| | 2. Alexandroupolis | 6. Drama |
| | 3. Orestias | 7. Cavalla |
| | 4. Didymoteichon | |

III. *Old Greece, Epirus and the Islands*:

Inspection of colonisation in Crete, including the four colonisation bureaux of Heracleion, Canea, Rethymno and Lassithi.
Colonisation bureaux:

- | | |
|---------------------|----------------|
| 1. Attica-Bœotia | 8. Volo |
| 2. Eubœa | 9. Larissa |
| 3. Etolia-Acarmania | 10. Lemnos |
| 4. Preveza | 11. Carditza |
| 5. Jannina | 12. Lamia |
| 6. Achaïa-Elis | 13. Paramythia |
| 7. Argos | 14. Mytilene |

2. *Urban Establishment.*

The urban quarters were and are still being built under the direction of an engineer provided with the necessary assistants. When building is completed and the refugee families have been settled in the houses, a superintendent is placed in charge of the administration of the quarter. In the large quarters of Athens, Piræus, etc., this superintendent has under his orders a certain number of employees for police duties in the buildings, for public utility services, and for the collection of debts. (For the number of urban quarters, see below, Chapter 4.)

* * *

The relative importance of the staff of each Directorate has been almost invariably as follows:

Headquarters at Athens	Per cent	10
Colonisation:		
Directorate-General of		
Macedonia	Per cent	50
Directorate of Thrace		20
Directorate of Old Greece.		10
Urban Establishment		80
		10

Movement of Staff.

	Employees
End of 1924	784
Years 1925 (end of)	1,822
1926	1,829
1927	1,755
1928	2,042
1929 (first quarter)	2,003
1930 (beginning of)	1,416

From the second quarter of 1929, the strength diminished rapidly. Whole services were transferred to the State and many dismissals took place among the remaining staff.

Strength of Staff at the End of the First Quarter of 1929.

Classes of employees	Directorate- Head- quarters ¹	Directorate General of Macedonia	Directorate of Thrace	Urban of Old Greece	Establish- ment	Total

3.

BALANCE-SHEET OF THE COLONISATION (END OF 1929).

DIRECTORATE-GENERAL OF MACEDONIA.

Credits placed at the disposal of the Director-General of Colonisation in Macedonia for colonisation purposes and their employment from January 1st, 1924, to December 31st, 1929:

	In drachmas
<i>Cattle:</i>	
Ploughing animals (oxen, buffaloes and horses)	365,607,399
Pack animals (mules and donkeys)	5,813,503
Breeding-stock (large and small)	63,714,282
	<u>435,135,184</u>
<i>Houses:</i>	
New buildings	498,360,339
Reconstructions	126,614,277
Repairs	3,000,587
	<u>627,975,203</u>
<i>Agricultural implements:</i>	
Ploughs, threshing-machines, carts, etc.	86,148,413
<i>Advances to cultivators:</i>	
Loans for maintenance	238,495,876
Seed	124,450,339
Forage	69,398,174
	<u>432,344,389</u>
<i>Advances to artisans</i>	99,293,161
<i>Carried forward</i>	<u>1,680,896,350</u>

¹ Including Directorate of Colonisation of Old Greece, Financial Services, Sections of Supply, Personnel, Registry of Archives and Directorate of Urban Establishment.

	In drachmas
<i>Brought forward</i>	1,680,896,350
<i>Cadastral survey:</i>	
Topographical work	37,230,646
Distribution	800,000
Valuation of lands and houses	4,916,539
	42,947,185
<i>Works of general utility:</i>	
1. Communications (roads, landing-stages, etc.)	4,499,622
2. Lands:	
Irrigation	11,141,902
Embankments	2,671,138
Water supply	73,740,458
3. Industry: Carpet factories	2,366,043
4. Agriculture:	
Stud farms	9,031,852
Agricultural improvements	17,106,613
Motoculture	25,404,916
Agricultural research	846,450
Manures	2,682,670
Agricultural machinery	3,172,232
5. Schools	710,500
	153,374,396
<i>Public health</i>	1,877,217,931
<i>Cost of administration:</i>	
Salaries	184,756,217
Travelling expenses	42,788,658
Office expenses, printing and sundries (lighting, heating, rent)	42,752,121
	270,296,996
<i>Transport</i>	147,845,882
<i>Maintenance of cattle</i>	5,712,990
<i>Sundries</i>	67,287,472
	2,405,098,463

These credits have all been appropriated as intended.

On January 1st, 1930, there remained an unappropriated sum of 53,217,566 drachmas.

DIRECTORATE OF THRACE.

Credits placed at the disposal of the Director of Colonisation in Thrace for colonisation purposes and their employment from January 1st, 1924, to December 31st, 1929.

Balance-Sheet for Thrace up to December 31st, 1929.

	In drachmas

Transport	1,547,826
Sundries	15,665,758
	502,898,918
Total	

Of this total, the sum of 28,273,921 drachmas remained unappropriated on January 1st, 1930.

Observations on the Above Tables.

COLONISATION.

The essential feature of the colonisation of Greece by the refugees has been the substitution of intensive cultivation for extensive cultivation. Almost everywhere else, the immigrants arriving in a country to be colonised have been able to cultivate on a large scale, and thus to make up by the extent of the land at their disposal for their lack of experience and of capital. In Greece, the contrary has been the case. Two essential facts, the small size of the holding and

the poverty of the colonists, have made labour the principal element of production. There was no alternative. Intensive cultivation imposed itself, and, in order to organise it, it has been necessary to re-educate the refugees, amongst whom the professional agriculturists themselves were ill-prepared for this system of exploitation. The cultivator had to be converted into a specialist, either by adapting the faculties he possessed to his surroundings or by developing faculties in him to suit those surroundings.

1. *The Size of the Holdings.*

This, of course, varies considerably with the fertility of the land, the quality and value of the produce, and the number of families in a given district.

As a general rule, the holding, if well cultivated, can maintain a family.

In Thrace, its area is from 20 to 60 stremmas.¹

In the valley of the Maritza, where the land is fertile, it does not exceed 15 stremmas.

In Macedonia, in the tobacco districts, it runs from 9 to 20 stremmas.

In all the rest of Macedonia, the holding is of 20 to 60 stremmas of cultivable land, not including pastures.

In Old Greece, it varies from 10 stremmas (at Néa Kios, near Argos, in the Peloponnesus—market gardens and orchards) to 80 and 120 stremmas (in Thessaly—cereals). The average is 30 stremmas.

Finally, in Crete, where subdivision has been carried to its limit, a holding is subdivided generally as follows: 11 to 15 stremmas of fields (exceptionally 30 stremmas near Candia, where old pastures have been converted into arable land); 40 to 140 olive trees, $\frac{1}{2}$ to $1\frac{1}{2}$ stremmas of vegetable garden and $\frac{1}{2}$ to $1\frac{1}{2}$ stremmas of vineyard (for the most part, Sultana grape).

2. *Methods of Cultivation.*

The generalisation of intensive cultivation has had the following results:

1. The abolition of fallow lands.
2. The introduction of the cultivation of leguminous and forage plants.
3. The introduction of early cereal crops giving large returns.²

Then comes the impulsion given:

4. To arboriculture, to which the soil of Greece is favourable. The Refugee Settlement Commission has done a great deal to develop this branch of agricultural production. Nursery gardens have been multiplied and demonstration plots have introduced new varieties.

5. To vine cultivation. Table I, given below, shows that the diminution in vine cultivation in the old provinces has been made up by the increase of vineyards in the colonised provinces.

In Macedonia, the vine had always prospered; it had disappeared owing to the phylloxera, and, in spite of the efforts of the Government to restore the vineyards with American vine-stocks, the peasants had proved distrustful. The Refugee Settlement Commission founded colonies expressly for vine cultivation in the districts of Salonica, Kilkis, Verria and Yanizza.

We have frequently drawn attention to the success of the cultivation of the sultana grape in Old Greece; 7,000 stremmas (of which 6,000 in Crete) are in full bearing.

The refugees have proved excellent vine-growers. They have introduced improved methods of pruning and manipulation. Their example has been followed by the natives.

6. To the cultivation of tobacco. As in the cultivation of the vine, the refugees have shown special skill in that of tobacco. For the results, we refer you again to Table I.³

7. To the cultivation of the olive. It is curious that, on their arrival, the refugees had very little knowledge of this cultivation. In Old Greece, where nearly 500,000 olive trees were distributed to them, their ignorance induced them to uproot them and replace them by vines or tobacco. It was found necessary to form squads to teach them how to prune and care for the trees, and the Refugee Settlement Commission went so far as to pay them for following this course of instruction. This propaganda has been carried on in 1930 by the Ministry of Agriculture, to which these services have been attached since the beginning of the year.

3. *Live-stock.*⁴

We do not possess an accurate census of the animals distributed by the Refugee Settlement Commission. They are only recorded in the refugee's personal account book. The breaking-up of uncultivated land and the agricultural development of all the available areas have reduced the nomad stock-breeding by one-half. This reduction is made up by the progress of domestic stock-breeding. The great difficulty in this department was due to the fact that a very large number of families to whom animals had to be entrusted lacked the experience necessary for their management. In spite of this, it will be seen in one of the accompanying tables how encouraging the results have been.

¹ A stremma = 0.247 acre.

² See reports on Canberra wheat of August and November 1929.

³ See Report No. 19, August 1928.

⁴ For the special care given to the breeding of live-stock, the introduction of improved breeds, the increase in the head of cattle, the creation of stud forms and breeding stations see Reports Nos. 19 and 24 (August 1928 and November 1929).

4. *Results.*

The simplest way of setting forth the results obtained by these methods would have been to show in a general table the agricultural work accomplished by the refugees up to date.

This would have been easy if motives of economy had not obliged us to close our Statistical Office, which only continued to operate until July 1929. Its bulletins frequently figured in our previous quarterly reports.

It is possible, up to a certain point, to make up for the want of a general statistical table of the work of the refugees by Government statistical tables and by the information furnished by our services on special subjects. We only give the three following tables.

The following figures are supplied by the *Annual Agricultural Statistics of Greece for 1928* (published by the Ministry of National Economy, Statistical Directorate).

From 1923 to 1928, the cultivated area of the whole territory has gradually and continuously increased from 12,690,281 to 15,901,488 stremmas, an increase of 3,211,207 stremmas, or 25 per cent of the area cultivated in 1923.

Macedonia and Thrace account for 2,319,002 and 634,221—in all, 2,953,223 stremmas, against 257,984 stremmas in all the rest of Greece.

The increase is chiefly due to the cultivation of cereals.

Cultivation of wheat:

	All Greece Stremmas	Macedonia Stremmas	Thrace Stremmas
1928	5,380,403	1,323,102	320,495
1923	4,300,145	635,106	142,942
Increase	1,080,258	687,996	177,553
		865,549	

Cultivation of barley:

	All Greece Stremmas	Macedonia Stremmas	Thrace Stremmas
1928	2,019,436	727,457	232,774
1923	1,468,376	286,023	84,019
Increase	551,060	441,434	148,755
		590,189	

Cultivation of maize:

	All Greece Stremmas	Macedonia Stremmas	Thrace Stremmas
1928	1,834,198	568,852	223,578
1923	1,542,000	340,524	147,705
Increase	292,198	228,328	75,873
		304,201	

Cultivation of rye:

	All Greece Stremmas	Macedonia Stremmas	Thrace Stremmas
1928	552,647	366,099	105,169
1923	225,422	139,977	17,232
Increase	327,225	226,122	87,937
		314,059	

Wine grapes. — The cultivated area has decreased without sudden fluctuations from 1,272,126 stremmas in 1923 to 1,215,871.

The fact is that, omitting the Peloponnesus, which remains stationary, and Thrace, where the production is insignificant, the wine-producing provinces of Old Greece are reducing their vineyards.

The area has decreased:

	Stremmas
In the Ægean Islands by	17,659
In the Ionian Islands by	41,686
In the Cyclades Islands by	18,179
In Continental Greece and Eubœa	139,052
	216,576

On the other hand, it has increased:

	Stremmas
In Macedonia by	54,642
In Epirus by	16,306
In Thessaly by	43,633
In Crete by	50,742
	165,323

Cultivation of Tobacco:

	All Greece Stremmas	Macedonia Stremmas	Thrace Stremmas
1928	939,765	471,863	120,089
1923	615,636	184,418	64,296
Increase	315,129	287,445	55,793
		343,238	

Cattle and implements procured by the refugees of Macedonia at their own expense at the time of the last census, end of December 1928 (the districts of Drama and Cavalla are not included):

Large animals:

Horned cattle	114,242
Horses	10,110
Mules	780
Donkeys	24,813

making about two head of large animals per family.

Small animals:

About five head of small animals (sheep and goats) per family.

<i>Wagons and carts</i>	13,391
<i>Ploughs</i>	19,773
<i>Agricultural implements</i>	21,000

(Without reckoning reaping and threshing machines, mechanical ploughs, etc.)

Old Greece. — Progress of Annual Cultivation by the Refugees.

Years	Areas cultivated Stremmas	Production Kilograms
1924-25	41,391	604,160
1925-26	159,100	13,208,371
1926-27	161,594	13,666,503
1927-28	196,365	15,436,182 ¹

AGRICULTURAL HOUSING.

I. *Thrace and Macedonia.*

	Macedonia	Thrace (including Drama and Cavalla)
Families established	87,084	42,687
Houses of exchangeable Turks or Bulgarians	34,222	25,683
Houses built by Government, 1922 to 1924	10,313	3,174
By the Refugee Settlement Commission, Sommer- feld Houses	9,228	445
By the Refugee Settlement Commission, directly from 1925 to end of 1929	21,015	10,982
To be built by the Refugee Settlement Commis- sion (credits granted)	634	209
Total	76,412	40,493
Supplementary houses which it would be neces- sary to build and for which credits are lacking	8,825	3,300

In this table, there are some figures with regard to the accuracy of which some reserves should be made.

Houses which belonged to exchangeable Turks or Bulgarians. — These houses often had out-buildings, such as stables, barns and storehouses, more or less apart from the principal construction. It is sometimes difficult to know whether one has to do with one or two constructions, or even

¹ See on colonisation:
Stage reached in colonisation, see Report No. 19 (August 1928).
Cost price and general expenses, see Report No. 21 (February 1929).
Especially, the impressions of Sir John Campbell and the reflections which accompany them, see Report No. 24 (November 1929).
On the colonisation in Old Greece, Epirus and other Islands, see Report No. 19 (August 1928).

with three. This depends generally on the number of families occupying them, and one knows that this number cannot always be considered as invariable.

On the other hand, it happens that a single house has been divided by internal partitions between two families inhabiting it, and that it has been regarded as constituting two houses.

Houses built from 1922 to 1924. — Here, again, the number cannot be quite accurate. These houses were built either by the Colonisation Service before the services of the Refugee Settlement Commission got to work, or by the latter before it had organised its services, and when it was only carrying on the system followed until then by the State.

This system consisted in giving the refugees materials in small quantities and an unimportant sum of money not exceeding 5,000 to 6,000 drachmas. The labour was to be supplied by the refugees themselves, at least to a large extent. This produced good results in Thrace. The Macedonian clay only gives an inferior quality of *pisé*, and many refugees only built houses of no lasting quality. Consequently, a certain number of these houses have disappeared, others have been built to the construction of which the Refugee Settlement Commission has not contributed at all, and the figures in the column cannot be absolutely accurate.

Houses built by the Refugee Settlement Commission. — The figures the accuracy of which can be guaranteed are those of the Sommerfeld houses, and those of the houses constructed by the Refugee Settlement Commission from 1925 to 1929.

Future needs. — The figures of the column relating to agricultural houses which it will be necessary to build are the result of an enquiry made on the spot and correspond almost with the real requirements. One knows that it cannot remain invariable, and that it is always liable to more or less variations.

2. Old Greece, Epirus and the Islands.

(a) Houses of exchangeables <i>repaired</i>	3,981
(b) Houses built by the Refugee Settlement Commission	10,048

In several colonies, it has happened that a family has been given two houses when the number of persons in the family was too great.

In Crete, it has also happened that a single family has been lodged in two Moslem houses. This is why, in Crete, the number of houses is somewhat greater than the number of families established.

As for the houses built by the Refugee Settlement Commission, we tried at first, as in Macedonia and Thrace, to have them built by the refugees themselves. For this purpose, we gave them a credit of 15,000 drachmas per family, but the results did not come up to our expectations. It became necessary to adopt the system of building by contractors under the superintendence of our technical service.¹

CADASTRAL SURVEY. (See below, Chapter 5.)

Water Supply of Colonies.

Under the terms of the law for the organisation of the technical services of the Ministry of Agriculture, the hydraulic services of the Refugee Settlement Commission were transferred to the Ministry of Agriculture at the end of the first six months of 1930. The Refugee Settlement Commission also placed at the disposal of the Ministry a sum of 7,500,000 drachmas, representing the balance of the credits voted by the Refugee Settlement Commission for the execution of hydraulic works.

See Report No. 24 (November 1929) for what has been done by the Refugee Settlement Commission until the end of 1929.

PUBLIC HEALTH (Thrace and Macedonia).

We have no accurate statistical information on the first two years which followed the immigration (1923 and 1924), in the course of which the death rate caused by privations and sickness was very high. At that time, three deaths were reckoned for every birth. Some colonies lost a fifth of their inhabitants.

In order to record an improvement, one must come on to June 1925. It was then that fifty rural dispensaries of the Refugee Settlement Commission began to operate. They were directed by doctors, provided with drug stores and with smaller surgical and obstetrical instruments. Later, there were added to this number nine new dispensaries, a hospital and a bacteriological laboratory.²

These dispensaries, situated in the most unhealthy districts of Macedonia and Thrace, were under the Refugee Settlement Commission from 1925 to 1929. From that year, they were placed under the Ministry of Public Health.

¹ See Report No. 9 (February 1926) for cost price of agricultural and urban houses.
Report No. 23 (August 1929) for number and valuation of Turkish and Bulgarian houses.
Report No. 24 (November 1929) for agricultural housing in general.

² See map annexed to Report No. 14 (May 1927) showing the organisation of the sanitary service in Macedonia.

Their chief service was the organisation of the anti-malaria campaign.¹ More than half of the 489,281 cases which they had to treat were due to malaria; this figure represents one-third of the population of the districts dependent on the dispensaries.

They distributed 8,500 kilograms of cachets and 912,501 tubes of quinine. Some dispensaries also successfully employed Schweinfurth green.

Three thousand eight hundred cases of tuberculosis were treated with Calmette-Guerin serum (BCG).

The dispensaries also recorded the state of alcoholism in Thrace and Macedonia.

The bacteriological laboratory has done excellent service. It prepared 150,000 tubes of vaccine and 50,000 tubes of antityphic serums.

Pamphlets and publications on health subjects—prevention or treatment—were distributed in thousands in the colonies and schools.

MOTOCULTURE (FROM 1924 TO END OF 1929).

Up to the transfer of this service to the State, the following lands were broken up or cultivated with mechanical ploughs:

Ordinary ploughing (15 to 19 cm.)	155,640	stremmas,	equivalent to	155,640	stremmas normal
Medium ploughing (20 to 29 cm.)	46,169	„	„	92,338	„
Deep ploughing (30 to 45 cm.)	68,346	„	„	205,038	„
Total	270,155	„	„	453,016	„

The general cost price per normal stremma has been 70 drachmas—i.e., very advantageous. Remarkable results have been obtained in cultivation.²

4.

BALANCE-SHEET OF URBAN ESTABLISHMENT.

(END OF 1929.)

URBAN DIRECTORATE.

Quarters	Sums expended Drachmas	Liabilities Drachmas	Total Drachmas
Old Greece and Islands	474,162,389	98,357,328	572,519,717
Macedonia	91,752,073	29,900,804	121,652,877
Thrace	183,741,672	19,374,084	203,115,756
Total	749,656,134	147,632,216	897,288,350

In this total of 897,288,350 drachmas are included 98,885,818 drachmas spent by the *Caisse d'Assistance* of the refugees in the urban quarters, which were only handed over later to the Refugee Settlement Commission.

The total sum expended by the Refugee Settlement Commission is therefore reduced to 798,402,532 drachmas.

The number of houses built or building is as follows:

	Quarters	Houses
Continental Greece	26	14,857
Peloponnesus	12	1,232
Islands	14	1,086
Macedonia	41	3,953
Thrace	32	6,215
	125	27,343

Distribution of the sums expended from the point of view of the purposes to which they were appropriated:

Building	762,695,100
Works of general utility	71,783,068
Maintenance, administration, cadastral survey and salaries of technical staff	62,810,184
	897,288,352

* * *

¹ See map of malaria in Macedonia annexed to Report No. 14 (May 1927).

² For further details, see Report No. 23 (August 1929).

Nothing need be said with regard to the urban establishment. The subject has been exhausted in the reports already published.¹

5.

LEGAL STATUS OF REFUGEE PROPERTIES.

I. AGRICULTURAL REFUGEES.

The Convention of Liquidation, the text of which we have published, settles everything concerning the properties of the agricultural refugees, as well as their debts and credits. It was only possible to take these definite decisions because a long preparatory study had made it certain that their application would now be easy and that it could be carried out in a comparatively brief period.

This preparatory study bore on the three following points:

1. The cadastral survey;
2. The valuation of the lands;
3. The set-off of the debts.

1. *Cadastral survey.* — The work of the survey is advancing.²

The areas distributed in the whole of the country amounted in February 1930 to 3,394,062 stremmas (see Report No. 25, February 1930).

On that date there were:

	Areas surveyed Stremmas	Areas distributed Stremmas
In Macedonia (to the Nestos)	10,260,000	3,160,000
In Thrace	1,336,000	64,062
In Old Greece, Epirus and the Islands	300,000,	170,000
Total	11,896,000	3,394,062

On August 1st, 1930, these figures must be altered as follows:

	Areas surveyed Stremmas	Areas distributed Stremmas
In Macedonia (to the Nestos)	10,671,000	3,781,000
In Thrace	1,470,000	135,000
In Old Greece, Epirus and the Islands	470,260	197,470
Total	12,611,260	4,113,470

2. *Valuation of lands.* — The valuation of the small patches of which the holding of each refugee is made up can only be made when the survey is complete and when, consequently, the area of each holding is known exactly.

However, it is possible to make an approximate valuation of the grand total of the lands handed over by the State to the Refugee Settlement Commission.

In Thrace and Macedonia, the area of the cultivated and cultivable lands which have been distributed to the refugees is about 4,800,000 stremmas (without pasture lands).

In Old Greece, Epirus and the Islands, the area of the cultivated and cultivable lands is 552,802 stremmas, of which 437,333 stremmas are cultivated and 115,469 stremmas cultivable. (In this total are not included 85,811 stremmas of pastures handed over to the communes, 5,648 stremmas of sultana vineyards and 436,831 olive and other fruit trees.)

The Convention of Liquidation (Articles 9, 11, 6) lays down the limits between which the mean value of the stremma must be fixed. A subsequent Agreement between the Greek Government and the Commission fixed the general mean value at 400 drachmas. The market value of the lands already established by the Commission's services will have to be more or less largely reduced, according to the districts and the quality of the land, in order to bring the general mean value of the stremma to 400 drachmas.

¹ We are referring specially to:

- (1) Reports Nos. 1 and 2 (February and May 1924) on the circumstances which induced the Refugee Settlement Commission to undertake a portion of the urban establishment.
- (2) Reports Nos. 7, 8, 11 and 12 (August and November 1925, August and November 1926) on the sale and lease of lands and houses.
- (3) Reports Nos. 15 and 16 (August and November 1927), with tables, on the census of urban refugees.
- (4) Report No. 19 (August 1928) on types and cost of housing.
- (5) Report No. 24 (November 1929) on what remains to be done for urban establishment after the liquidation of the Refugee Settlement Commission.

² See plans annexed to this Report.

3. *Set-off of debts.* — The Refugee Settlement Commission has collaborated with the State in establishing the account for working out the set-off of the debts of the agricultural refugees to the Refugee Settlement Commission or the State against the indemnities which they should receive for their properties abandoned in Turkey.

The Refugee Settlement Commission undertook:

1. To ascertain which of the cultivators whom it has established are those who, according to the decisions of the Commissions of Indemnification, are entitled to an indemnity.
2. To settle the set-off between the debit and credit accounts of the refugee.

The State undertook to ascertain the credit account and to inform the Refugee Settlement Commission officially of it so that the latter may proceed to calculate the set-off.

For this purpose, the Refugee Settlement Commission had to create a special service, which was attached to that for the collection of debts. A general list was drawn up and published of all the agricultural refugees established to any extent, whether by the State or by the Refugee Settlement Commission. This record, which is in nine volumes gr. 4to of 7,800 pages, includes about 250,000 names. (In this number are included all agriculturists, whether entitled or not entitled to an indemnity, the emigrants from Bulgaria, the Hellenic subjects, and, finally, the sons and daughters filing claims independently of those of the head of their family.)

Up to date, our services have worked out the credit accounts of 80,000 refugees. The total of their indemnities amounts to £4,449,000.

The grand total of the indemnities to be paid to the 145,000 exchangeable refugees from Turkey will most probably amount to the sum of £8,500,000.¹

II. DEBTS OF THE URBAN REFUGEES.

The debts of the urban refugees to the Refugee Settlement Commission are far from raising questions as complicated as those of the agriculturists, for the following reasons:

- (1) The establishment of the cadastral survey of the urban quarters is an easy operation.
- (2) The urban refugees are generally only debited with the value of the building and that of the ground transferred to them by the Refugee Settlement Commission. Where they have built their own houses, the value of the building is replaced by the advances which they have received for that purpose. Finally,
- (3) There is no set-off between these debts and any credit account.

The value of the house represents the value of the materials and of the labour employed.

The value of the ground includes: (1) an initial price fixed by the Commission and (2) the general expenses of the quarter distributed per square metre of the usable area. These expenses include:

- (a) The expenditure for works of general utility (roads, water supply, schools, etc.);
- (b) The salaries of the staff employed on these works;
- (c) The insurance premiums on buildings, cost of cadastral survey, etc.

At the end of 1930, the total debt of the urban refugees to the Refugee Settlement Commission will be approximately as follows:

1. Buildings (see page 12) and expenses of general utility:	
(a) By the Refugee Settlement Commission	Drachmas 818,609,426
(b) By the <i>Caisse d'assistance</i>	99,827,492 ²
2. Initial value of 27,343 building sites averaging 150 square metres at an average price of 10 drachmas per square metre.	
	41,014,500
Total	959,451,418

The Greek Government is now studying the methods whereby it could extend to the urban refugees the measures which it has recently adopted in favour of the agriculturists (reduction of the rate of interest from 8 per cent to 3 per cent, remittance of certain items of debt, etc.).³

6.

THE LIQUIDATION OF THE COMMISSION.

THE GREEK GOVERNMENT'S UNDERTAKING IN VIRTUE OF THE CONVENTION OF GENEVA OF JANUARY 24TH, 1930.

Before its liquidation, the Commission has made a point, on the one hand, of securing the rights of the bondholders of the Loan of 1924, and, on the other, of the refugees to the properties in their possession by every possible legal guarantee. On this subject, the Convention of Liquidation lays

¹ See Report No. 25 (February 1930). Debts and credits accounts of agricultural refugees.

² We have given in Chapter 4 the figure of 98,835,818 drachmas as the sum expended by the *Caisse d'assistance*. The difference of 941,074 drachmas is due to buildings erected in Thrace by the local *caisses*, for which the refugees were only debited in 1930.

³ See Report No. 26 (May 1930).

down for the Greek Government a series of obligations, which the latter has bound itself to fulfil by December 31st, 1930. These are, in order of importance:

1. The registration of a first mortgage in favour of the International Financial Commission on all the real estate owned by the Refugee Settlement Commission, which will be handed over to the Greek Government. The duration of this mortgage will depend upon the time required to complete the amortisation of the loan for the establishment of the refugees (Article 8, paragraph 1); however, every refugee who has paid his debt in full will be given a release from this mortgage.

2. The realisation of the clause according to which the Government would authorise the International Financial Commission to take from the ceded revenues, for the service of extraordinary amortisation of the 1924 Loan, whatever sum the banks charged with the collection of the refugees' debts shall have failed to pay in to the *Caisse* of the International Financial Commission by the fixed dates (Article 8).

3. The adoption of any measure tending to confirm, either in favour of the Refugee Settlement Commission or of the refugees which it has established, a full and complete right of ownership on all the lands and real properties in their possession, and the grant by the Hellenic Government of a legal title-deed ensuring for the interested parties the peaceable enjoyment of these properties and lands (Article 21).

4. The establishment by the competent services of the Greek Government, and the handing-over to the Refugee Settlement Commission, of accounts showing the debts to the State contracted by the refugees. This is for the purpose of providing for the entry of these debts in the personal account of each refugee, and their set-off against the credit which he may possess on account of the indemnities granted to him for his properties abandoned in Turkey.

5. The adoption of any measure for the purpose of obliging the Municipality of Athens to take over the services of a municipal character in the urban colonies created by the Refugee Settlement Commission on lands in the city area, such as service for the upkeep of roads, public places, open spaces, bridges, canals, waterworks, water supply of all kinds, public utility buildings, materials, etc., which the Refugee Settlement Commission has to hand over to the State before December 31st, 1930, in accordance with the Convention (Article 4).

6. The adoption of any measure required to facilitate the building of the bridges over the Nestos, uniting the sections of the Zirnovo-Borovo road which the Refugee Settlement Commission is constructing, and which could be of no service unless the Greek Government went on with the building of these bridges (Article 3).

7. Finally, the adoption of any measure to facilitate the continuation by the State of the works remaining unfinished by December 31st, 1930, the completion of which is to be borne by the State, such as cadastral survey work, construction of the Drama-Ossenitza and Zirnovo-Borovo roads, and secondary works of all kinds (completion of agricultural and urban colonies, etc.) (Article 3).

7.

SOME REMARKS ON THE WORK OF THE REFUGEE SETTLEMENT COMMISSION.

In order to pronounce an opinion on the work of the Commission, the figures given in the preceding pages must be taken into account. But how far does their authority go? They allow one to fix the cost prices of the houses built, the roads constructed, and so forth, each of these heads being taken separately. These calculations have often been made either by the Commission¹, or by the refugees, or in general by the circles nearly or remotely interested in the colonisation. But there one must stop. One must not insist further on the meaning of figures.

The Commission was neither a building company, nor a public works undertaking, nor an agricultural exploitation. The works the value of which can be determined only represent one side of the activity. The autonomous organisation, with the mission of *establishing* the refugees, was charged with various functions, and exercised an authority which, in general, belong to the State only. In many respects, it has been more than a Ministry. Yet who has ever sought to express the activity of a Ministry or that of a Government by a figure, by the calculation of a cost price?

The Commission had very early to give the most liberal interpretation to the clause in the Protocol laying down that expenditure was only to be incurred for productive works, and it incurred expenses the return for which it will long be difficult to calculate, even if it ever becomes possible to do so.

The reasons which compelled the Commission to act in this way will become evident if one considers the situation at the beginning of 1924.

On the one hand, groups of hungry, naked people, without any common origin, without any cohesion, only supposed to have followed some agricultural calling, are sent to a tract of land, mostly abandoned or fallow, lodged in chance shelters which did not protect them from the wind or the rain. They live on a distribution of rations, and death thins their ranks every day. Time is pressing. The months, the weeks, are precious.

¹ See Report No. 14 (May 1927), page 8: "Mean Cost per Agricultural Family"; and Report No. 21 (February 1929): "I. Agricultural Establishment".

On the other hand, a country ravaged by wars, lately annexed to Greece and consequently ill-known to the services in charge of the establishment, and which had lost most of its former inhabitants, who could have supplied valuable information. These were the conditions under which the work began. It was necessary to begin by a genuine exploration of the country. Topographers, agronomes, hydraulic engineers and builders came upon the scene, and their preliminary studies, their schemes, their experiments were often costly. Next came the foundation of the houses, the allotment of cultivable lands, the distribution of cattle, seed, relief. All this had to be done at once. Sometimes when the work was well advanced it was found that malaria, the impossibility of supplying the colony with drinkable water, or some circumstance arising from the ill-will or obstinacy of the refugees, led away by ringleaders and clamouring to be moved elsewhere, condemned the enterprise to failure. It became necessary to abandon everything, to move the colonists on and begin afresh in another place. There are groups of refugees whose place of establishment has been shifted as many as five times.

It will be seen how many of the works enumerated above fail to fulfil the condition of being productive laid down by the Protocol, and to what extent the expenses which they involved would, if taken into account, upset any calculation intended to fix a general cost price.

This first period of the work was followed by another; even when the colonists were installed, it was impossible to leave them to themselves.

In the agricultural calling, routine is everything. One has to do with men very close to nature who from father to son have cultivated the same produce, on the same lands and by the same methods. Here, the experience they lacked had to be made up for by constant supervision. The cultivator had to be guided, taught new methods of cultivation. The cattle he was unable to keep had to be replaced, his house to be repaired, the roads to be mended, fever to be fought; and, for all this, masons, agronomes, hydraulic engineers and doctors had to be kept or sent where they were required, once, twice or several times—in a word, a complete second series of expenses had to be incurred, the productive nature of which it is also most difficult to estimate.

Indeed, it must be said that, on the material side of the work, the Commission has not confined itself to *creating*, to *founding*; but it has been obliged to *preserve* and *maintain*—to meet the damage caused by floods, by drought, by locusts; creating experimental fields, demonstration fields, stud farms, nursery gardens, model farms. It has spent considerable sums in combating malaria and epidemics, in founding schools, in taking the place of a municipality in its urban quarters.¹

If, however, a point is made of stating the results of the Commission's work in terms of figures, it would be more reasonable (though this, indeed, would be far from conclusive) to spread the total of expenses over the whole of the families established. Thus, let us take the figure of 170,000 families (145,000 rural and 25,000 urban), which gives us, on a total expenditure of £13,400,000, about £79 per family.

On the total of £13,400,000, the cost of maintenance has amounted to about £1,700,000, or £10 per family. Spread over seven years, this represents an annual charge of £1.4 per family. It is with this that the Refugee Settlement Commission has met all the supplementary expenses which we have just enumerated. It only charges the agricultural refugee with the cost of building the house, the value of the land, and the advances it has made him. All that it has given him over and above is represented by this trifling sum, thanks to which, however, he has profited during seven years by treatment which all the native cultivators might envy him, and without which he would have succumbed more than once.

II.

But this calculation, too, will be of very little assistance to whoever desires to appreciate the work of the Commission. It is not the figures that will say whether this work has succeeded or whether it has failed. In this case, success depended on more complex factors, and, as in every case where the human element comes in, the decisive factor is the psychological and moral factor.

The Commission had to establish 145,000 families of cultivators, and the word *establish* should be taken in its proper meaning, which is not the same as to *instal*. The object of such establishment is to succeed in attaching the agriculturist to the land which he cultivates. In the field of material work, we have had to replace the fruits of the experience of several generations by a hasty training. In the moral field, we had to anticipate the action of time by creating that bond of attachment, which is generally the result of long contact between the man and the land, which requires for its development that the man should at least have been born on the land and that its surroundings should be familiar to him from childhood. It is hard enough to establish in a new country colonists who are young, strong, with few family ties, provided with the necessary resources, liking their calling, confident in the future. What, then, are we to say of these Greek refugees who had been struck by a thunderbolt; of these families, mostly bereaved of their natural protectors, exhausted by fatigue and privations, overwhelmed by ordeals and losses? By what miracle were they able to take a fresh hold on life? The Government and the Commission neglected nothing to assist them; but, in this whole question of the establishment, it is the courage, the effort and the energy of the refugees which have formed the central point round which all the rest—installation, housing, distribution of lands, help of every kind—have come to group themselves, and the real efficacy of these means should be measured by the degree in which they have contributed to develop the confidence which was springing up again in their hearts.

¹ This second period, that of maintenance, began with the year 1927 (see Reports Nos. 19 and 21, August 1928 and February 1929).

For the human as well as for the material element, the first period of installation was followed by a second period—that of maintenance and preservation. The refugee had to be supported and strengthened like a convalescent; he had to acquire the conviction that he would not be abandoned; he had to be made to lose the habit of regarding himself as having been torn up by the roots; he had to be accustomed by his work to struggle against the inherent difficulties of the agricultural calling, which are more numerous in Greece than elsewhere for reasons due to the soil and the climate.

In this direction, also, the Commission has done everything possible. To speak only of the district where the colonisation has been carried on on the most considerable scale, we repeat that for six years the Directorate-General of Colonisation of Macedonia was a real Ministry. The courtyard of the building in which its offices were lodged was filled from morning till night with peasants coming from every part of the province—some singly, others in groups—to settle their business. They found themselves at home there. They knew that they would be received by the competent employee; that their request would be examined; that justice would be done if it were reasonable and could be granted; that they would take an agent of the Commission back with them to their village if the solution required a visit to the spot; and that, in all cases, whatever the solution might be, it would be given without delay.

For the agriculturists, the Refugee Settlement Commission has been an ever-present guardian. It was this side of its activity more than anything else which maintained the colonies, strengthened them and prevented them from being dispersed. These are things which cannot be measured by the yield of the *stremma* in drachmas.

These considerations enable one to see the work of the Commission in its true light, and show the point of view from which it must be judged. To sum up, this work has been a means far more than an end.

It matters little whether the sums expended went directly to the refugee or were devoted to works of general utility. They have been well employed if they have served to increase the number of cultivators in whom the love of the agricultural profession has prevailed, from whom has been banished the feeling that everything is temporary—a feeling to which some yielded, and at the first setback left everything to follow any kind of huckster trade in the neighbouring town.

III.

This work is not yet finished. The colonies have not yet reached a degree of consolidation allowing them to be finally emancipated from the guardianship which the Refugee Settlement Commission has hitherto exercised over them. This guardianship passes to the State, which in this field will have to carry on the task which it has inherited. For some time past, the Hellenic Government has begun to apply an extensive agricultural programme¹.

Events have obliged Greece to place agriculture in the front rank of her cares, and henceforth to see in it the chief source of wealth of the country and the essential element of its future economic development. In order to carry out this programme successfully, two things are indispensable.

¹ The main lines of the programme by which the Government proposes to carry out these intentions are the following:

1. *Drainage of Marshes and Regularisation of Water-courses.*

The drainage works are being carried on chiefly in Macedonia:

(1) In the valley of the Vardar, they had been somewhat delayed. Since the proceeds of the productive loan were placed at the disposal of the Government, one may foresee that 50,000 *stremmas*, the result of the drainage of Lakes Ardjan and Amatovo, will be handed over very shortly.

The embankments of the Vardar are being finished. This is the first year in which it has been possible to avoid the river floods. Until now they used to recur annually, inflicting great damage on the riverside population.

(2) Some more years will pass before the drainage of the Lake of Yenidjé, which is now in progress, is completed. It is reckoned that this will render cultivable 320,000 *stremmas* which are now under water, and that it will improve 200,000 more by protecting them from flooding.

The cost per *stremma* of these works will be somewhat heavy.

(3) Lastly, the Government has just entrusted the same company with the works to be carried out for diverting the channel of the lower Vardar. The mouth of the river will be moved outside the Gulf of Salonica, which is in danger of being gradually silted up.

2. *Fight against Malaria.*

Here the programme has already been laid down by the Commission. The Ministry of Public Health will only have to continue to carry it out on a larger scale, if possible.

3. *Road building.*

The most important road-building works have been entrusted to the Makris Company, with which the State has signed a £6,000,000 contract. The total length of the national roads which this company will have to build is 2,200 kilometres. The average cost per kilometre is one million drachmas.

4. *Creation of Agricultural Credit.*

Independently of its financial operations, the Agricultural Bank is charged with all the service of the professional agricultural syndicates, the organisation and working of which it will have to supervise.

The Bank has also a technical service. It is on the recommendation of this latter that it grants long-term loans for agricultural improvements. This service is also studying the agricultural questions of general interest to the country.

Until now, most of the cultivators who have applied to the Bank for loans intended to devote the proceeds to the water supply of their holdings.

(See Report No. 22 (May 1929): "Re-organisation of the Agricultural Service", and in Report No. 23 (August 1929) a long description of the hydraulic works which will be executed in the basins of the Vardar and the Struma.)

The first of these is security in the country districts. To-day, this is not sufficiently guaranteed. The crops are at the mercy of the passers-by, of children, of the flocks.

The laws are good, but it is their application which is at fault. The rural police do not always succeed in enforcing respect for other people's property.

The second is the existence of a staff possessing the requisite qualities and able to meet the requirements of the situation.

To-day, Greece has the advantage of possessing such a staff. To have found a capable technical staff is a characteristic feature of the advance made by the country in the last five years. The Commission can claim its share in this change; it has contributed to the study of the agricultural resources of the country, to the introduction of new methods of cultivation and to the creation of a tradition. It has succeeded in this by encouraging initiative in its own agronomes, in singling out men who deserved to occupy the position to which they have been advanced.

The existence of this staff is one more guarantee that in Government councils the necessity of continuing to afford to the colonies the assistance and the moral protection which they still require will not be lost to view. It would not be possible to assimilate the refugee colonists to the native villagers, who have been long used to the life and the agricultural methods of the land which they cultivate. The work of the Commission will be made lasting and fruitful by care for its preservation. The final solution of the question created for the country by the arrival of the refugees depends on the preservation of what has been done; it is the preservation which will make a permanency of their establishment in the richest districts of the country.

If within some decades, in the course of which progress and fresh needs will bring about many changes in the agricultural conditions of Thrace and Macedonia, a sturdy race of peasants resulting from a blend of all the elements of Hellenism ensures an ample revenue from those two provinces and prosperity for Greece, this result will be due to the initial impulse given by the Refugee Settlement Commission. Then only will it be possible to say that the Commission has well fulfilled the mission with which it was entrusted by the League of Nations.

(Signed) J. Hope SIMPSON,
President ad int. of the
Refugee Settlement Commission.

FINANCIAL SECTION.

A. BALANCE-SHEET ON JUNE 30th, 1930.

Liabilities.

	£	s.	d.
Proceeds of the 7% 1924 Loan	9,970,016	6	9

Sums applied for the extraordinary amortisation of the 7% 1924 Loan	156,009	0	5
Various <i>per contra</i> accounts	384,314	14	1

£14,739,146 5 5

Note. — The conversion of drachmas for the purposes of the present balance-sheet is based on the average of our conversions of sterling into drachmas from the constitution of the Commission until June 30th, 1930—*i.e.*, 354.470. It should be noted that this average varies from quarter to quarter, thus explaining the variations in the figures of the quarterly balance-sheet. Thus the average at the moment when the balance-sheet on March 31st, 1930, was drawn up was 350,841. These variations, naturally, only occur in the drachma accounts.

From June 15th, 1930, under the respective article of the Convention for the Liquidation of the Commission, all the bonds deposited up to that date by the refugees on temporary account against their debts have been carried to final account. Consequently, the heading of the respective account on the debit side "*Bonds deposited by the refugees on temporary account against their debts*", has been replaced by the following heading: "*Bonds paid in by refugees against their debts*".

We give hereafter explanations on certain items of the balance-sheet:

LIABILITIES.

	£	s.	d.
<i>Receipts</i>	805,084	10	1

The analysis of this chapter is as follows:

	£	s.	d.
Interest on balances	364,257	13	6
Caution money forfeited	9,496	0	9
Various receipts	97,289	19	4
Tithe collected from agricultural refugees settled on land belonging to the Refugee Settlement Commission	216,593	2	1
Share of the Refugee Settlement Commission in payments made by refugees (25 per cent of capital repayments and 100 per cent of interest payments).	117,447	14	5
	£805,084	10	1
<i>Bonds paid in by refugees, etc.</i>	365,215	0	0

Share of the International Financial Commission:				
75 per cent of repayments of capital by refugees (£154,587 15s. 10d.) and 100 per cent of the proceeds of the sale of lands to non-refugees (£1,421 4s. 7d.)	156,009	0	5	
Rents to be refunded	3,089	15	3	
Caution money and sundry creditors	52,378	5	9	
	£211,477	1	5	

ASSETS.

<i>Balances available</i>	790,368	5	3
-------------------------------------	---------	---	---

This sum represents our balances in hand at the banks and at the Head Office in pounds sterling and in drachmas. (During the second quarter, the balances available in dollars were converted into drachmas, in consequence of the difference in the rate of interest between New York and Athens (New York 2 1/2 per cent, Athens 4 per cent), and were deposited with the banks in this city.) Needless to say, this does not mean sums available in the budgetary sense of the word. With the exception of £131,764 (representing a special reserve of £100,000 and £31,764 for unforeseen expenses), the rest is covered by appropriations already made.

<i>Bonds deposited by refugees, etc.</i>		£365,215	0	0
Bonds of the 6 per cent 1923 Loan for compensation to immigrants from Bulgaria (74,481,500 drachmas)	£	s.	d.	
	186,203	15	0	
Bonds of the 8 per cent 1926 and 1928 Loan for compensation to exchangeable refugees from Turkey (69,318,000 drachmas)	173,295	0	0	
Bonds of the 8 per cent 1927 Loan for compensation to Turkish refugees who are Greek nationals (2,286,500 drachmas)	5,716	5	0	
	£365,215	0	0	
<i>Sums applied to the extraordinary amortisation of the 7 per cent 1924 Loan</i>		156,009	0	5
75 per cent of capital repayments by refugees	£	s.	d.

B. COLLECTIONS.

Collections credited during the three months April to June 1930 amounted to:

(a) In cash, £19,718 16s. 3d., of which sum £11,234 11s. 1d. (75 per cent of capital repayments) was paid to the International Financial Commission for additional amortisation of the 7 per cent 1924 Loan.

(b) In bonds, 11,444,000 drachmas, or £28,610 (at the rate of £2 10s. per 1,000 drachmas). The distribution of these payments between agricultural and urban refugees is as follows:

	Agricultural refugees			Urban refugees			Total		
	£	s.	d.	£	s.	d.	£	s.	d.
In cash.	7,927	4	3	11,791	12	0	19,718	16	3
In bonds	18,238	15	0	10,371	5	0	28,610	0	0
	£26,165	19	3	£22,162	17	0	£48,328	16	3

(a) *Payments by Agricultural Refugees.*

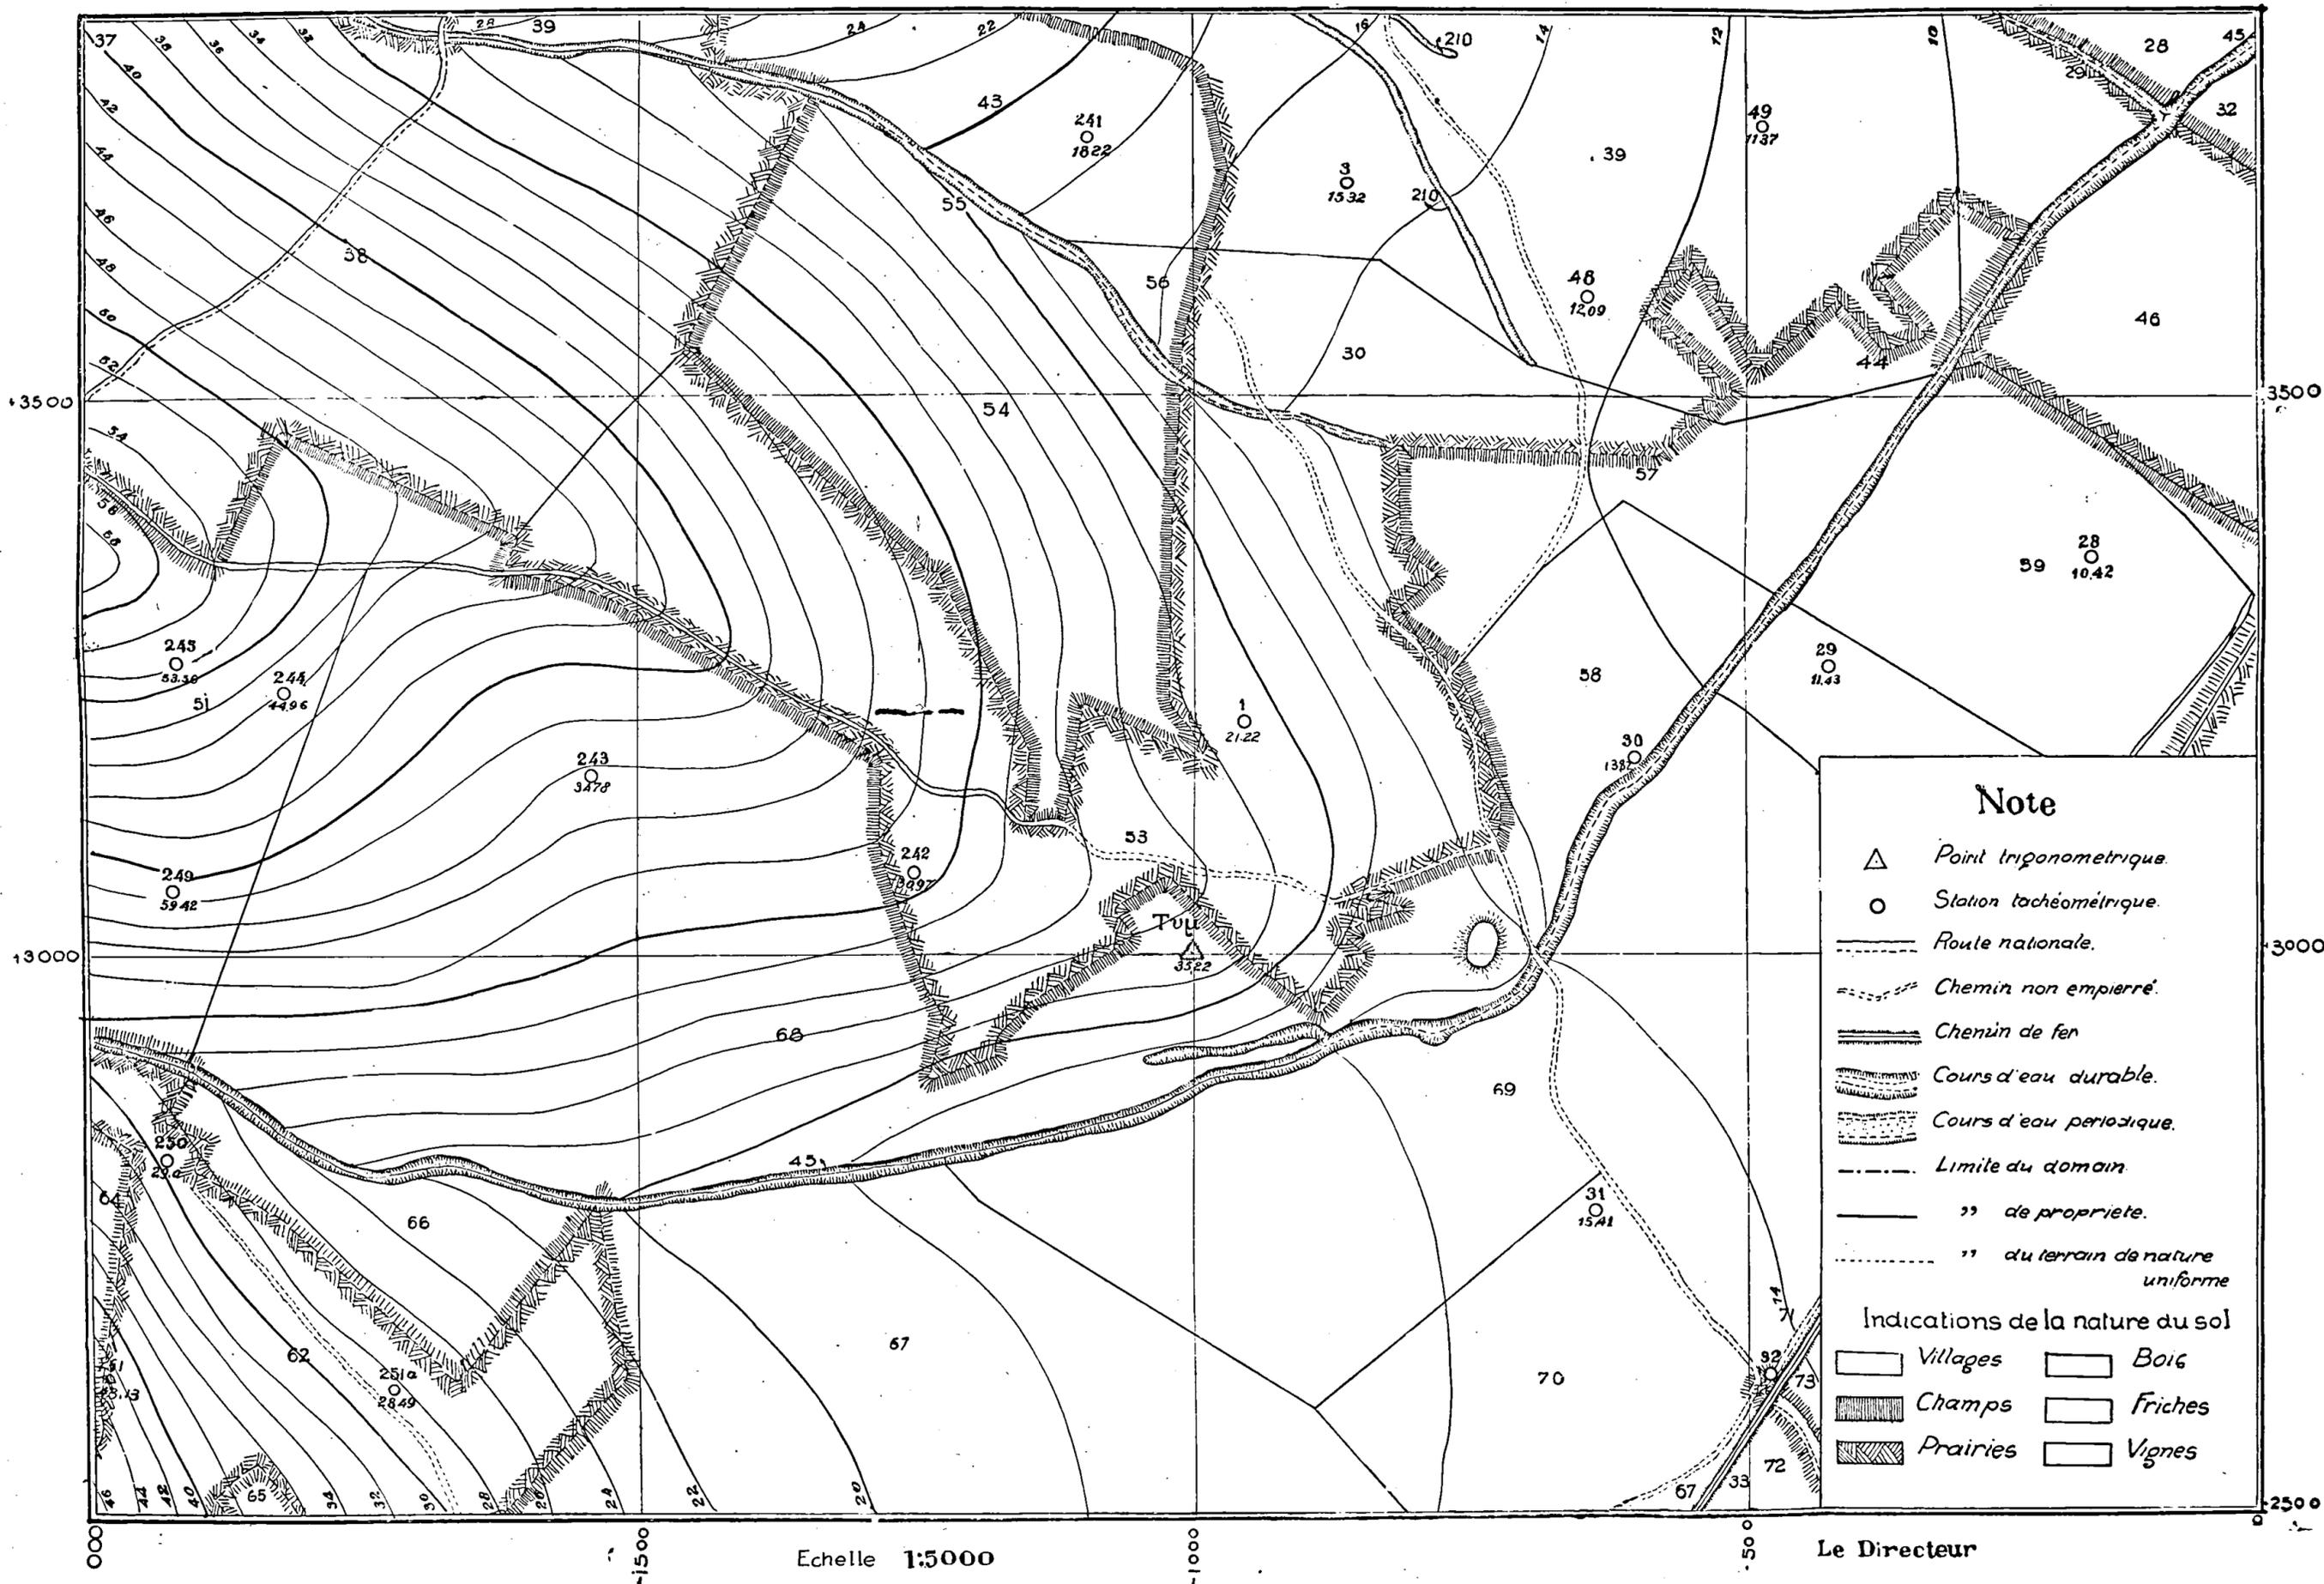

Payments made during the three months April to June 1930 amounted to 9,166,193 drachmas (in cash and bonds). Collections for the corresponding quarter of the previous year amounted to 7,192,277 drachmas, or an increase of 1,973,916 drachmas.

(b) *Payments by Urban Refugees.*

Payments made during the three months April to June 1930 amounted to 7,859,080 drachmas (in bonds and cash). Payments for the corresponding quarter of the previous year were 4,712,364 drachmas, or an increase of 3,146,716 drachmas.

I. House containing four lodgings. In pisé. Cost 65.100 drs. (16.275 per lodging).

II. Two-storey house, (two lodgings). In masonry. Cost 100.000 drs. (50.000 per lodging).

Buildings of 2nd series (1925-27).

III. House of two lodgings. In monobloc cement. Cost 32.548 drs. (16.274 per family).

IV. Two-storey house containing seven lodgings. In masonry. Cost 273.000 drs (from 22 955 to 53.848 drs. per lodging).

Buildings of 3rd series (1927-1930).

V. Normal type of house of two lodgings. In masonry. Cost per lodging 37.000 drs. (£ 100).

VI. Normal type of house. In masonry. Cost 56.000 drs.

VII. Dispensary of the Urban Quarter of Byron (in masonry). Cost 667.000 drs.

VIII. School of the Urban Quarter of Césariani (in masonry). Gift of Mme E. Venizelos. Cost 1.282.000 drs.

Geneva, August, 30th 1930.

LEAGUE OF NATIONS

**Republic of Estonia (Banking and Currency Reform)
7 % Loan, 1927**

**THIRD ANNUAL REPORT BY THE TRUSTEE,
FOR THE PERIOD FROM JULY 1st, 1929, TO JUNE 30th, 1930.**

I have the honour to submit herewith my third annual report, in conformity with the decision of the Council of the League, dated September 15th, 1927.

In Appendix I, are given the particulars of the yield of the excise revenues assigned to the service of the International Loan, for the third and fourth quarters of 1929 and the first and second quarters of 1930, together with the remittances made therefrom for the payments due in London and New York during the second half of last year and the first half of this one. The collections for these four quarters represent the following approximate percentages of one-quarter of the annual sum necessary for the service of the loan, as compared with the figure of 150 per cent required by the Protocol signed at Geneva by the Estonian Minister of Finance in December, 1927.

1929		1930	
Third quarter	261	First quarter	217
Fourth quarter	227	Second quarter	235

The average of these figures is 235 against averages of 247.25 and 225.5 for the corresponding quarters dealt with in my reports for 1927-28 and 1928-29, respectively.

The three years' service of Sir Walter Williamson as Adviser to the Eesti Pank was to have expired on May 7th last, but it has been extended for about four months at the request of the Estonian Government to enable him to complete his reports and notes up to June 30th, 1930—*i.e.*, to the end of the third year after the issue of the loan. During his time in Estonia, Sir Walter Williamson has been acting as my representative in that country, and as the appointment of Adviser is to cease under the terms of the Protocol, I have arranged with the Eesti Pank to take over the duties of Trustee's representative—following, in this respect, the arrangement made in Austria and Danzig with the Banks of Issue there.

As in the two previous years, a note by the Adviser on the general banking and economic situation in Estonia during the period dealt with in this report will be found in Appendix II.

(Signed) A. JANSSEN.

To New York : \$147,643.35 ;

representing an equivalent of Ekr. 1,027,722.84.

Appendix II.

NOTE BY THE ADVISER TO THE EESTI PANK.

In last year's note dealing with the twelve months ending June 30th, 1929, it was recorded that the general economic situation of the country had been adversely affected by the poor harvest of the year 1928, due to excessive rainfall and floods. The lessened purchasing power of the agricultural classes which this caused had had a depressing effect on domestic trade in general, while the foreign trade figures for the first half of 1929 showed a heavy balance on the wrong side, owing both to increased purchases of grain and flour from abroad, and to a fall in the value of dairy and agricultural produce exported, such as butter and potatoes. The natural result was a continuous demand on the Central Bank for foreign remittance to pay for the excess of imports, and a consequent considerable diminution of its foreign exchange reserve.

The state of affairs described was also clearly reflected in the position of the private banks, in regard to which various particulars were given which showed a deterioration in the position as compared with a year previously. This set-back was due entirely to local climatic conditions, and as the prospects for the ensuing harvest were good, a fairly hopeful feeling prevailed at the time of writing and a gradual recovery was looked for.

The expectation has unfortunately not been wholly realised, and the period from July 1st, 1929, to June 30th, 1930, has continued to be a difficult one. Although the harvest was above the average, as expected, the universal fall of values, especially of primary products which has been a marked feature of the world situation since last autumn, has militated against the farmers obtaining the prices to which they were accustomed for their cereals, particularly rye, owing to the competition of cheap foreign grain. Their purchasing power has consequently not improved to the extent that was hoped for, but nevertheless the facts given below show that the general situation is better in practically all respects than it was in the middle of 1929.

To take first the position of the Eesti Pank (Bank of Estonia), the statutory reserve of gold and foreign exchange, which fell, between the beginning of July 1928 and the end of June 1929, by Ekr. 12.5 millions from the figure of Ekr. 37.7 millions, at which it stood on the first

mentioned date, declined, by a further sum of Ekr. 2.6, to Ekr. 22.6 millions in the twelve months to June 30th, 1930. It is to be noted, however, that, on the last-mentioned date, the Bank held an amount of Ekr. 4 millions of foreign exchange outside the statutory Reserve—*i.e.*, in the currencies of countries not on a strictly gold standard basis—this figure representing an advance of Ekr. 1.8 million since the end of June 1929. It follows that the actual gold and foreign exchange holdings of the Central Institution were reduced in the twelve months by the trifling amount of Ekr. 0.8 million only. One reason for this is clear from the foreign trade figures. During the period covered by the last note, imports were greater in value than exports by Ekr. 14 millions, while, in the twelve months here dealt with, the position has been reversed—there having been an export excess of Ekr. 1 million. It is also to be noted, however, that the Bank was able to effect certain special purchases of foreign exchange, which helped to reduce the loss.

As regards the private banks, the figures given below for the end of June 1929 and 1930 (in thousands of kronen) will show that here also an improvement has been effected in the period covered by this note.

<i>Liabilities:</i>	30. VI. 1929.	30. VI. 1930.	Col. 2 as compared with Col. 1
	1	2	3
Deposits	44,346	46,589	+ 2,243
Rediscounts, etc..	19,075	20,197	+ 1,122
Correspondents	12,644	11,489	— 1,155
 <i>Assets:</i>			
Cash	3,025	3,927	+ 902
Home bills and loans	64,214	66,085	+ 1,871
Correspondents	4,565	5,222	+ 657

It will be seen that deposits have risen by Ekr. 2.2 millions, and rediscounts, etc., by Ekr. 1.1 million. These additional resources have enabled the banks to increase their portfolio of home bills and loans by Ekr. 1.9 million, at the time adding to their cash holding by Ekr. 0.9 million, while their liabilities to correspondents have been reduced by Ekr. 1.2 million, and their funds with correspondents increased by Ekr. 0.7 million. The rise in deposits, although not very large, is particularly gratifying as it has occurred in a period of general economic depression, and the following figures (also in thousands) will show that they are higher than at any previous date :

	Ekr.
30.VI.1927.	30,190
30.VI.1928.	44,035
30.VI.1929.	44,346
30.VI.1930.	46,589

The large advance during the first twelve months was due mainly, no doubt, to the great excess of exports over imports in 1927—*viz.*, Ekr. 9.4 millions, and also probably, to some extent, to the funds placed at the disposal of the National Mortgage Bank for loan purposes, early in 1928, out of the Foreign loan of the previous year.

Reference has been made above to the fact that the farmers have been suffering from the competition of cheap foreign grain, particularly rye, on which there has hitherto been no import duty. It may therefore be of interest to note that a law was passed last month providing for a State monopoly of importation of rye, and possibly also of wheat. Its object is to endeavour to ensure a sale on the internal market, at a fair price, for all surplus home-grown grain of these kinds, and to permit the importation only of such quantities of grain and flour as cannot be supplied from domestic sources. Under the power conferred on the Government by the law, a local sale price has been fixed for rye, which is about two-thirds of the highest figure reached in May 1928 and approximately double the lowest one to which it fell in June 1930. It will be of interest to see how this law works in practice, but one effect must, of course, be to raise somewhat the price of bread from its previous level. Another protective measure which has been recently enforced relates to barley and its products. In the case of barley in grain, which has likewise hitherto been on the free list, an import duty has been imposed, while the duties on barley products have been raised considerably. This latter measure is intended to check the importation of foreign barley for beer-brewing purposes and to induce the brewers to turn for preference to the local product which, it is asserted, is available in

sufficient quantities. With a duty charged on the foreign grain, the price of local barley will doubtless also rise to some extent (as is intended), and as the cost to the brewers will thus increase, the price of beer, in its turn, will also probably be advanced.

As bearing on the general situation dealt with above, the undernoted particulars of the foreign trade during the two periods of twelve months ending June 30th in 1929 and 1930 are of interest :

	Imports	Exports (In thousands of kronas)	Difference
From 1.VII.28 to 30.VI.29	133,508	119,508	— 14,000
From 1.VII.29 to 30.VI.30	112,634	113,647	+ 1,013

These figures show that, while the value of the imports fell in the last twelve months by nearly Ekr. 21 millions, that of the exports was less by only Ekr. 6 millions—the difference of Ekr. 15 millions being sufficient to convert an import excess of Ekr. 14 millions into an export surplus of Ekr. 1 million. The main reason for the great reduction in import values is doubtless the world-wide fall in prices, though legislation of a protective character enacted a year ago, in the interests of the textile and leather industries, has also had its effect.

The State financial position remains satisfactory, thanks to the prudent budget policy hitherto followed. The accounts for the year 1929-30 (which have not yet been finally closed) are again expected to reveal a surplus—this being the eighth year in succession in which the actual revenue brought to account has exceeded the expenditure. These surpluses, as has been previously mentioned, are largely utilised for the granting of loans to agriculturists and others at low rates of interest, through the National Mortgage Bank and the Land Bank, and thus help to foster the development of the country on its agricultural side. The value of this in its economic aspect is shown from the fact that, in 1929, the value of the butter exported amounted to 30 per cent of the total value of all export goods.

Tallinn, August 20th, 1930.

5. Suggested Means of preserving the Unity of the Nomenclature after its Adoption	4

I. PRESENT POSITION OF WORK.

It was in July 1927 that the Economic Committee of the League of Nations instructed the Sub-Committee of Experts to prepare a scheme for the unification of Customs nomenclature. More than three years, therefore, have now been devoted to this work.

It may seem surprising that so long a period was necessary to draw up a unified Customs nomenclature.

If the question is considered in detail, however, and if the difficulties attached to so important a piece of work are realised, it is astonishing that it should have been achieved at all.

The World Economic Conference of May 1927 no doubt did not foresee the innumerable obstacles that had to be surmounted before a unified Customs nomenclature could be drawn up. When it recommended the Council of the League of Nations "to take the initiative in drawing up an appropriate procedure for establishing, in liaison with the producing and commercial organisations concerned, a systematic Customs tariff nomenclature in accordance with a general plan covering all classes of goods", it had in mind the importance of the aim in view; but it did not take into account the numerous obstacles which would inevitably be encountered in a work of this kind.

These difficulties were brought to the notice of the Economic Committee as the work of the Sub-Committee of Experts advanced. The advice and approval which the Economic Committee on various occasions gave the Sub-Committee enabled the latter to continue its work, feeling that it saw completely eye to eye with those who had entrusted it with its task.

To-day, after the Sub-Committee has devoted twelve sessions to its work, the nomenclature has progressed so far as to enable a very clear idea to be obtained of its ultimate form.

Of the twenty-one sections into which the main classes of commodities to be included in the Customs nomenclature have been divided, fourteen are now complete.

These fourteen sections comprise all the products of the animal and vegetable kingdoms; fatty substances, greases and oils; products of the food-preparing industries, and beverages; mineral products; chemical and pharmaceutical products and the various productions of the chemical industry (colours, varnishes, perfumery, soap, fertilisers, etc.); skins, hides and

peltries ; rubber and articles made of rubber ; wood' cork and plaiting materials ; paper and its applications ; textile materials (silk, wool, cotton, flax, hemp, jute, ramie, etc.) and wares of those materials ; precious metals, base metals and machinery.

Some of these sections are among the most important in Customs nomenclature—*e.g.*, chemical and pharmaceutical products, textile materials, metallurgical products and machinery.

2 IMPOSSIBILITY OF COMPLETING THE WORK IN TIME FOR THE ELEVENTH ASSEMBLY.

(a) The Assembly of the League has been kept informed, through the Economic Committee, of the progress made by the Sub-Committee of Experts. The report submitted on September 17th, 1929, by Dr. Breitscheid on the League's economic work stated that the Sub-Committee of Experts entrusted with preparing a scheme for a unified Customs nomenclature had proved that the work could be carried out, but added that experience had already demonstrated how difficult the task was. The Second Committee of the Assembly then insisted very strongly that "the work of the experts should be pushed on with all possible speed in order that the complete draft may be terminated before the next session of the Assembly".

The report added, however, that this would not be possible unless the Committee of Experts spent more time on its work than hitherto.

As a result of the findings of this report, the tenth Assembly adopted in September 1929 the following resolution :

"The Assembly,

"Notes that the establishment of a simplified and unified Customs nomenclature is necessary for the conclusion of collective tariff agreements ;

"Considers that the Committee of Customs Experts should have completed the preparatory work entrusted to it before the meeting of the eleventh Assembly and that no efforts should be spared to obtain this result."

(b) The Sub-Committee has never failed to realise the importance of completing the unified Customs nomenclature with all speed.

It would very much have liked to complete this work within the period allotted (*i.e.*, before the eleventh Assembly met). Allowance must be made, however, for the difficulties encountered in drawing up the nomenclature.

In the first place, the experts drawing up the preliminary draft classification of the various sections and chapters have to devote a considerable part of their time to preparing these preliminary drafts. It is not enough to classify in a systematic order the various products and goods mentioned in the framework drawn up in 1928. Those products and goods have to be grouped together with due reference to the rules already adopted in most tariffs. A comparative study of these tariffs is thus essential if the unified nomenclature is to be as nearly as possible in accord with the rules commonly followed in the classification of goods. That condition is essential to enable the new nomenclature to be accepted without difficulty by the countries which have not collaborated in preparing it.

Then, again, in order to take duly into account the recommendation expressed by the World Economic Conference of 1927, the experts must work "in liaison with the producing and commercial organisations concerned". This means that preliminary understandings must be reached with representatives of groups of producers, syndicates, and even international cartels.

As will be realised, enquiries of this kind, which are carried out, not only by the members of the Committee of Experts reporting on the subject, but also by each of the experts in his own country, take a long time and are very complex and difficult.

This work carried on by the experts, in addition to the sessions which they hold every year, occupies a considerable part of their time. Moreover, the experts were chosen as being specialists in Customs matters, and each of them has his own very exacting work in his own country and for his Government, so that there could be no question of establishing a permanent organisation requiring the presence of the experts at Geneva for a whole year.

For all these reasons the unified Customs nomenclature could not be completed in time for the eleventh Assembly. There still remain to be drawn up the chapters relating to wares of stone and glass ; electrical material ; means of transport ; scientific and precision instruments and apparatus ; watch- and clock-makers' wares ; musical instruments and some articles of minor importance, such as footwear, hats, umbrellas, articles of fashion, games and toys, etc.

(c) The unified Customs nomenclature could not be completed in time for the eleventh Assembly, because it was a practical impossibility to do so. The constant aim of the Sub-Committee of Experts was to produce a nomenclature which should make due allowance for the degree of perfection reached in the various industries and for trade customs, and should, at the same time—a most important point—be both complete and simple in structure. Apart from the nomenclature itself, the Sub-Committee bore in mind the advantages that would ensure for commercial statistics, for example, which, if based on a unified nomenclature, would become mutually comparable. It was fully alive, too, to the immense advantage of the

nomenclature for the conclusion of collective tariff conventions, as, indeed, the Economic Committee had already foreseen.

This, then, is the complex and difficult work, fraught with far-reaching consequences for future international economic relations, which the Sub-Committee of Experts set itself to accomplish with a tenacity of purpose from which no difficulty has yet turned it aside. It asks the Economic Committee not to compel it to incur the risks due to over-precipitation in the work which it has taken in hand, and which it is now certain of bringing to a successful conclusion.

3. COMPLETION OF THE UNIFIED NOMENCLATURE AND EXPLANATORY NOTES ANTICIPATED BY THE END OF THE FIRST HALF OF 1931.

The Sub-Committee of Experts at present anticipates holding a session towards the end of the current year—beginning on November 12th—and another at the beginning of 1931.

Unless unforeseen circumstances intervene, the Sub-Committee expects the unified Customs nomenclature to be entirely completed by the end of the first half of 1931.

In its final form, the nomenclature will be a table classifying scientifically and systematically, by chapters and articles, the immense variety of products composing international trade.

However logically this classification is carried out, explanatory notes are necessary. Such occur in all Customs tariffs, which, besides the list of duties, have an elucidatory commentary generally entitled *Explanatory Notes on the Tariff*.

In drawing up the draft nomenclature, the Sub-Committee prepared, chapter by chapter, *an explanatory commentary* to make clear the reasons which guided the Sub-Committee in its classification. These comments also show, more explicitly than the nomenclature items themselves, the various categories of products or goods included under a given Customs item. They also mention the articles included in the general items which occur in every tariff and are commonly known as "miscellaneous items".

The explanatory notes on the unified Customs nomenclature will thus automatically be ready at the same time as the nomenclature itself.

It would then be desirable for the tables constituting the unified Customs nomenclature and the chapters of explanatory notes to be published in a similar way to the draft framework previously drawn up by the Sub-Committee (document C.346.M.103.1928.II.).

In this form, the nomenclature and the commentary thereon may be brought to the notice of all countries, both Members and non-Members of the League of Nations.

4. SUGGESTED PROCEDURE TO FACILITATE THE ADOPTION OF THE UNIFIED NOMENCLATURE BY THE VARIOUS STATES.

The League's object should be to secure, in as many cases as possible, the substitution of the unified nomenclature for the nomenclatures at present in use. This condition is essential, indeed, if the benefits referred to above are to be reaped.

Some countries have already decided on their own initiative—when revising their Customs tariffs—to adopt, at all events, the parts of the unified nomenclature already completed. This has been done, for example, by the Egyptian Government, which appointed an expert committee for the purpose. Already, more than half the nomenclature of the Egyptian Customs tariff is the same as that prepared at Geneva; and, as regards the rest, the experts preparing the new Egyptian tariff have taken as their basis the draft framework drawn up by the experts in 1928. Similarly, Sweden has now revised her nomenclature largely on the basis of the Geneva nomenclature. This example will probably be followed by Poland also. Other countries—France, for example—are waiting until the unified nomenclature is finished in order to make it the basis of their own tariffs.

These examples show how favourably the unified Customs nomenclature would be received. Before it can be used as the basis for Customs tariffs in general, however, it may have to be amended in some respects.

One of the essential conditions to enable the Sub-Committee's work to be satisfactorily carried out was that the Committee should not be too large. Work of this kind cannot be done in the atmosphere of a large assembly. The Geneva nomenclature was prepared by seven experts only—all European. Apart from the experts chosen by the Economic Committee, other equally competent persons belonging to other countries will probably wish to submit criticisms or observations, to which due attention must be given. In these circumstances, the future stages of the work may be anticipated to be as follows :

(a) In order to obtain these observations and criticisms, the nomenclature drawn up by the Sub-Committee should be communicated to the various Governments with a request to have it studied by the competent administrations and economic organisations concerned.

(b) The observations submitted would then be laid before the Sub-Committee, which would decide—if necessary with the assistance of the authors of the observations—whether and how far its original draft should be modified.

(c) For this purpose, a special session might be held at the end of 1931. In this way, the countries whose representatives did not collaborate in preparing the unified Customs nomenclature would have an opportunity of becoming acquainted with the work, examining it and discussing it.

(d) Lastly, both the World Economic Conference of May 1927 and the Preliminary Conference with a View to Concerted Economic Action, held at Geneva in February and March 1930, contemplated the convening of a future Conference which would, *inter alia*, have to determine the procedure to be followed in adopting the unified nomenclature as soon as the technical bases of an international agreement for that purpose were established.

5. SUGGESTED MEANS OF PRESERVING THE UNITY OF THE NOMENCLATURE AFTER ITS ADOPTION.

A question of capital importance will then arise, and the way in which it may be settled cannot be disregarded, because it is directly connected with the Sub-Committee's work.

The question is this : When the unified nomenclature is duly embodied in the Customs laws of a number of countries, how can its application be prevented from giving rise once more to differences and discrepancies such as exist to-day in Customs nomenclature ?

These differences and discrepancies would inevitably recur in a few years' time if the countries adopting the unified nomenclature were wholly free to settle in different ways the questions of application which will arise.

For example, when new industrial products are introduced in world trade, special items will have to be made for them in the unified nomenclature, or they will have to be so classified as to be assimilated to some product already included in the nomenclature.

These cases of fresh classification will be fairly frequent, in view of the rapid development of industry. Moreover, the Customs nomenclature obviously cannot mention every single article, product and commodity included in international trade. A nomenclature must always have general headings, often covering dozens of products made from the same components or used for the same purposes and having an approximately equal value. The "*general tariff list*" to be added to the "*explanatory notes*" will show where each article, product or commodity must be placed in the general nomenclature classification.

In order that the nomenclature may retain its uniform character, the Customs classification must be carried out in the same way in all tariffs ; otherwise, the unified nomenclature would rapidly lose the essential characteristic which it must always preserve—namely, that any given product must be certain of being classified in the same order and under the same heading in the nomenclature, in the explanatory notes and in the list.

For this purpose, the various Customs classifications, whether of new products or of products the classification of which is uncertain, must be effected in a uniform manner in all countries accepting the unified nomenclature.

The Convention to be concluded might, for this purpose, provide for a periodical meeting of experts of the countries concerned in order to examine applications received for classification. The same Committee might also be asked to examine questions arising out of the interpretation of the Customs nomenclature, but would not deal with tariff questions.

The above are the suggestions which the Sub-Committee wishes to submit to the Economic Committee. It would be glad to learn that its proposals are accepted by that Committee and by the Assembly of the League.

[Distributed to the Council, the
Members of the League, and the
Delegates at the Assembly.]

------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----

INTRODUCTION.

The Financial Committee has the honour to submit to the Council the following report on the work of its thirty-ninth session, held at Geneva from September 4th to 9th, 1930.

The following members were present:

Dr. MELCHIOR (*Chairman*);
M. DE CHALENDAR;
Dr. MLYNARSKI;
Dr. POSPISIL;
Mr. Jeremiah SMITH;
Sir Henry STRAKOSCH;
M. SUVICH;
M. WALLENBERG.

The following also attended part of the meetings:

I. *For Greek Questions:*

(a) Representing the Greek Government:

M. PAPADATOS, Under-Secretary of State in the Prime Minister's Department;
M. MANTZAVINOS, Director-General of the Treasury.

(b) Representing the Greek Refugee Settlement Commission:

Mr. Charles EDDY, Chairman of the Commission;
Sir John Hope SIMPSON, Vice-Chairman of the Commission;
M. DOMESTICOS, Director-General of Colonisation in Macedonia.

2. *For Bulgarian Questions:*

M. MOLLOFF, Bulgarian Minister of Finance;
M. Boris IVANOFF, Secretary-General at the Ministry of Finance;
M. CHARRON, Commissioner of the League of Nations in Sofia.

3. *For Estonian Questions:*

M. J. JAAKSON, President of the Bank of Estonia;
Sir Walter J. F. WILLIAMSON, Adviser to the Bank of Estonia.

I. GENERAL.

The Committee elected M. SUVICH as its Chairman as from the beginning of the next session.

2. GOLD.

(a) REPORT OF THE GOLD DELEGATION.

In accordance with the decisions of the Council of December 14th, 1928, and June 17th, 1929, the Financial Committee appointed last year a special Delegation, consisting of some of its own members with the adjunction of certain experts of international authority, "to examine into, and report upon, the causes of fluctuations in the purchasing power of gold and their effect on the economic life of the nations".

This Delegation has now submitted an interim report¹ to the Financial Committee, which it suggests should be published with certain annexed documents.

In this interim report the Delegation has only dealt with a part of its terms of reference. It has reserved for further consideration the problems of the distribution of gold, of the effect of price fluctuations on general prosperity, of the manner in which such variations can best be measured, and of cyclical as distinguished from long-term movements. These are important questions on which the Delegation is now engaged and will report later. So far it has confined itself for the moment to the question whether the prospective supply of gold is likely to prove sufficient to meet the probable monetary demand in the future. In order to throw light on this question, special efforts have been made to collect as complete and accurate statistics and estimates

¹ Document C.375.M.161.1930.II.

as possible concerning the production of gold in the past, the probable course of production in the future and the demand for gold arising both from monetary and non-monetary causes. For the purposes of estimating the monetary demand, it has been assumed that the demand for currency is dependent upon the volume of production and trade and on the monetary transactions to which such trade gives rise, and that, in the absence of any important changes in currency systems and practice, the demand for gold will be determined by the same factors. The future demand is then estimated on the hypothesis that the volume of production and of trade and the volume of notes and sight liabilities of central banks will both tend to expand at an average rate of some 2 to 3 per cent per annum.

The Delegation did not consider itself called upon to expound monetary theory in detail or to describe in detail the inter-relationship between the supply of money and the general level of prices. But, as a result of its analysis of the large mass of statistical data collected, the Delegation has reached the conclusion that the inadequacy of the supply of new gold available for money is likely at no very distant date to exercise its influence in depressing prices—a danger which, as the delegation points out, would be aggravated were gold coin to be put once more into circulation. The Delegation adds, however, that if the need is recognised, remedial measures can be found, which should correct the consequences feared for, at any rate, some time to come. It has suggested some directions in which remedial measures might be sought. To this subject, the Financial Committee understands the Delegation desires to give further consideration at subsequent meetings. Meanwhile, the Financial Committee desires to emphasise its view that the measures suggested by the delegation are appropriate and important.

Although this first report is thus restricted in scope, and parts of it will require further elaboration, the Financial Committee feels that the statistical aspects of the subject selected for study are of such fundamental importance for future work in this field, and the material now made available so valuable, that it is desirable that the report with its annexes should be presented to the Council and made public. What action should be taken to avoid the danger of a shortage of gold obviously demands mature consideration. The report contemplates, in the measures mentioned, action in varying degrees by central banks and by Governments, and in certain cases previous international understanding.

The report as a whole deserves the serious consideration of the authorities which are responsible for the monetary systems in the different countries of the world. Accordingly, the Financial Committee proposes to the Council that it should be communicated to all the Members of the League and to non-Member States in order that their attention may be drawn to this important problem. If, at a later stage, any organised international action on the part of Governments should be required, the League authorities will doubtless be ready to arrange the necessary consultation between Governments with a view to securing such action.

(b) STATISTICS ON INDUSTRIAL CONSUMPTION OF GOLD.

In the course of its enquiry, the Gold Delegation encountered special difficulties, owing to the insufficiency of the existing statistics relating to the industrial use of gold. In years to come, precise information regarding the amount of gold which is used by industry will become increasingly important for those in charge of monetary policy. The Financial Committee therefore suggests that the Council should authorise the Secretary-General to undertake an enquiry, in consultation with the Financial Committee, concerning the manner in which the statistics on the industrial use of gold could be improved.

3. FISCAL COMMITTEE.

The Financial Committee has examined the report of the Fiscal Committee concerning the results of its second session¹ and desires to take this opportunity to express its appreciation of the great value of the work which the Fiscal Committee is doing and the influence which that work is exercising on national taxation regulations. The Financial Committee attaches particular importance to the endeavour of the Fiscal Committee to arrange for the conclusion of multilateral conventions for the avoidance of double taxation and to the effort which it is making to lay down uniform rules for the apportionment of the profits of undertakings operating in more than one country. The Financial Committee expresses the hope that the Fiscal Committee may be enabled to bring these two tasks to a successful conclusion.

4. AGRICULTURAL CREDITS.

The Financial Committee has taken note of the resolution adopted by the Council on May 12th, 1930, by which it instructed the Economic and Financial Organisation to take action, so far as it is concerned, on the decisions of the Preliminary Conference with a view to Concerted Economic Action.

¹ Document C.340.M.140.1930.II.

The only question dealt with in those decisions which enters into the sphere of the Committee is that of agricultural credits. The Committee has asked the Secretariat to examine this question, and will discuss it itself at its next session.

5. GREECE.

(a) REFUGEE SETTLEMENT COMMISSION.

The Financial Committee has considered the twenty-sixth and the twenty-seventh and last reports of the Refugee Settlement Commission (documents C.341.M.141.1930.II and C.444.M.202.1930.II). It has had the advantage of further oral explanations from His Excellency M. Papadatos, representing the Hellenic Government, and from Mr. C. B. Eddy, Chairman, and Sir John Hope Simpson, Vice-Chairman of the Commission, accompanied by M. Domesticos, the Director-General of Colonisation in Macedonia. The Committee was informed of the progress made in carrying out the Convention¹ concluded on January 24th, 1930, between the Hellenic Government and the Settlement Commission with a view to the liquidation of the Commission. It understands that most of the important measures necessary under the Convention, if the Commission is to be terminated, have now been taken, and that the remainder will have been taken by December 31st of this year. The Financial Committee therefore considers the situation to be such that the Council is now in a position to take a formal decision dissolving the Commission on December 31st of the current year. In order, however, to provide against unforeseen contingencies, it would be desirable for the Council to provide that such dissolution shall only take place if, in the opinion of the Refugee Settlement Commission, the conditions laid down in the Convention signed on January 24th, 1930, have been so far fulfilled as to render a postponement unnecessary.

This is, therefore, presumably, the last occasion on which the Committee will have to report upon the refugee settlement work which has been executed during the past seven years. It does not propose to attempt any review of the work which has been done. This has been fully described in the publications issued under the auspices of the Settlement Commission in 1926, and in the quarterly reports of the Commission, particularly the nineteenth and twenty-seventh, the latter of which is before the Council.

The immigration of refugees, ending with the influx of 1922, exceeded one and a-quarter million. It suddenly increased the population of the country by one-quarter and the large majority of the immigrants were destitute. About two-thirds have been settled by the Commission either as agriculturists or as urban settlers, and now form one of the most productive elements of the country. The work was only made possible by obtaining under the auspices of the League two loans amounting to £13 million sterling. A large autonomous organisation was set up to conduct the administrative work. It was devised at Geneva and the Chairmen and Vice-Chairmen have been named by the League, the two other members by the Hellenic Government. But the entire staff of the Commission—some 2,000 persons—were Greeks, many of whom were drawn from among the refugees themselves. To the devotion and ability of this Greek staff the Commission has paid tribute in its published reports. Some idea of the magnitude of the work accomplished may be gathered from the mere statement that over 2,000 agricultural villages or portions of villages have been created, apart from some hundred urban quarters scattered in towns all over the country.

The settlement work has been a great and notable achievement, the full benefits of which will only be realised in the future. At the dissolution of the Commission, it may be said that this problem, which seven years ago threatened to overpower the unaided resources of Greece, has been substantially solved to the lasting political and economic benefit of the country. On this achievement the Greek Government are to be congratulated, and present and past members of the Settlement Commission, who have borne the main burden and responsibility of the work, deserve warm appreciation and gratitude.

With the liquidation of the Settlement Commission, another of the reconstruction tasks which have engaged the Committee's attention during the past ten years comes to an end.

(b) STATE FINANCES.

When, in 1927, it was decided that a loan should be issued by the Hellenic Government under the auspices of the League for financial reconstruction in Greece, it was thought desirable to arrange a method by which the League authorities would be able to follow the progress made by the Hellenic Government towards budget equilibrium. A clause was therefore inserted in Article V of the Protocol² signed on September 15th, 1927, on behalf of the Hellenic Government, by which the latter undertook to transmit every three months during a period of three years a report on its budget situation to the Council of the League.

This period of three years is now coming to an end, and the Council has before it the last report (document C.456.1930.II) which the Hellenic Government will submit.

The contact between the Hellenic Government and the League of Nations was not limited to the communication of written reports: on many occasions representatives of the Greek Ministry of Finance have come to Geneva to attend the discussion of the quarterly reports in the Financial Committee and to consult with the Committee upon various budget problems.

¹ Document C.107.M.31.1930.II.

² Document C.556.M.198.1927.II.

These consultations with the Greek representatives have been mutually instructive, and the Financial Committee ventures to think that they have facilitated the task of the Hellenic Government and Administration.

The Hellenic Government is to be congratulated on the results achieved. The Greek budget has shown a surplus during each of the last three years. The total of the budget is at a figure which would not seem out of proportion to the economic capacity of the country.

In the Protocol, the Hellenic Government undertook to carry out certain measures of budget reform in regard to the unity of the budget, the centralisation at the Bank of Greece of all receipts and payments of the State and State enterprises, the monthly publication of statements concerning the situation of the public finances, etc. These measures have been carried out and have proved their utility. In so far as, for special reasons, they have not yet been completed (unity of the Budget and centralisation at the Bank of Greece of all receipts and payments of the State and State enterprises), the Government intends to complete them.

In conclusion, the Committee would desire to pay a tribute to the work of M. Mantzavinos, who, first as Director of the Budget, and later as Director-General of the Treasury, took an active part in the work accomplished, and who usually represented the Greek Ministry of Finance at the discussions of the Committee.

6. BULGARIA.

(a) SETTLEMENT OF REFUGEES.

The Financial Committee noted the fifteenth and sixteenth reports of the Commissioner of the League of Nations in Bulgaria (documents C.372.M.158.1930.II and C.458.M.205.1930.II). These documents do not call for any special comment. The work of settlement is progressing satisfactorily, and M. Charron, the Commissioner, stated that the programme which is at present being executed contemplates the work being completed by the middle of next year. It is to be hoped that this will be the case, in view of the progress already made, as ascertained by the Committee after a detailed examination.

(b) FINANCIAL SITUATION.

Several written reports were submitted to the Financial Committee by the Ministry of Finance and the National Bank. The Committee also had the opportunity of examining the budgetary situation with M. Molloff, Minister of Finance, and heard an oral statement by M. Charron on this matter and on the position of the National Bank of Bulgaria.

During the last quarter, the position of the Bank has improved considerably. This is the result of the sound policy followed by the Bank during the last few months, and the latter is at present better able to perform the functions required of it. Notwithstanding the unfavourable economic circumstances prevailing at the moment in Bulgaria, as in other countries, the present position of the National Bank will assist the country to recover from the effects of this crisis.

As regards the budget, the Committee was interested to hear the statement of the measures proposed by the Minister of Finance with a view, notwithstanding the adverse conditions, to maintaining the budget equilibrium achieved during the two previous financial years. Most useful reforms have already been carried out as the result of the engagements undertaken in the Protocol or conceived in the same spirit; the favourable results so far obtained should encourage the Bulgarian Government to continue its efforts in this direction, which cannot fail to consolidate the country's credit.

(c) ENQUIRY INTO THE CO-OPERATIVE SYSTEM.

The Financial Committee noted with the greatest interest the request for collaboration addressed by the Bulgarian Government to the League Council, with a view to the better organisation of co-operatives in Bulgaria and of the institutions which support them. In carrying out its previous investigations, and more especially at the time of the issue of the Stabilisation Loan, the Committee always felt that this reorganisation was indispensable. The Bulgarian Government is therefore justified in regarding this reform as a complement to the work of financial restoration undertaken in Bulgaria under the auspices of the League. The co-operative system, provided it conforms to the tastes and needs of a nation, may be of great assistance to economic progress if it is well thought out and properly organised, and the Bulgarian Government is to be congratulated on having recognised the necessity for completing the work in regard to the settlement of refugees and the recovery of its finances in this way. The Bulgarian Government's initiative may have other no less important consequences. The Financial Committee is convinced that, as a result of the enquiries to be undertaken and of the consequent reorganisation, the principles adopted for the application of the co-operative system may also be of benefit to certain other countries in which similar conditions prevail.

The Financial Committee accordingly recommends the Council to give a favourable reply to the request submitted by the Bulgarian Government, since the task in question forms a complement

to the work already undertaken in Bulgaria under the ægis of the League and may also help to solve problems which are engaging the attention of certain other countries.

The Committee is of opinion that the desired collaboration should take the form of the sending by the League to Bulgaria of two experts having a wide experience of these questions, in order to study the problem in detail—as was done in the field of health, with the approval of the Council, by Professor Swellengrebel and Professor Jessner. These experts should draw up a report, which might, if necessary, be examined by the technical organs of the League. It is obvious that the conclusions finally adopted should not only draw attention to any defects in the organisation, but should also indicate the course to be followed in future, having regard to the social and economic structure of Bulgaria and the requirements to be met.

7. ESTONIA.

In the Protocol for the Banking and Currency Reform in Estonia, which was signed on December 10th, 1926,¹ it was provided that an adviser nominated by the Council of the League was to be appointed to the Estonian Central Bank for a period of three years. Sir Walter Williamson, C.M.G., was accordingly appointed. His term of office is now coming to an end. The Financial Committee desires on this occasion to thank Sir Walter Williamson for the valuable services which he has rendered. As a result of his written and oral reports, the Financial Committee has been able to follow regularly the progress made by the Estonian Government and the Eesti Pank, and has been able to advise them with regard to different questions which have arisen in the last few years.

The Financial Committee will, of course, remain at the disposal of the Estonian Government and the Eesti Pank for any consultation which they may desire in the future.

8. DANZIG FREE CITY LOAN 1927.

The Financial Committee has examined the third annual report of the Trustee for the Danzig Free City Loan 1927 (document C.417.M.187.1930.II). This report does not require any action on the part of the Council.

9. THE WORK AND FUNCTIONS OF THE FINANCIAL COMMITTEE.

The present meeting of the Financial Committee marks the conclusion of the first ten years of its existence. The Committee thinks it useful on this occasion to make a short general report on the stage it has now reached in its work. The main reason why this seems opportune at this moment is not the accident that a decade has just ended, but rather that the work of financial reconstruction is now so nearly completed that the kind of service which the League may render to its members in the financial field is changing in scope and in character. With or without the aid of the League, and whether or not under the direct or indirect influence and example of the work with which the League had been directly associated, the vast majority of countries with a complex economic structure have now reformed their finances and connected their currencies with gold. The process is, indeed, not complete; but, of the cases which remain, some require only the development of a policy already initiated and others present problems very different from those already solved by the League. One category of tasks is therefore nearly ended, while new problems have been brought into prominence.

In the last ten years, the principal, though by no means the sole, work of the Committee has been in connection with financial reconstruction or the establishment of refugees in certain countries. The tasks, even within each of these two spheres, have, indeed, differed considerably in importance, scope and character. In Austria, where disorganisation had proceeded very far, it was necessary to arrange for the issue of a loan guaranteed by a number of Governments and a comparatively extensive control through a League Commissioner responsible to the Council for some years. In Hungary, the problem was in some respects simpler, the required loan was issued without external guarantees, and the control through a League Commissioner was both shorter in duration and, in some aspects, modified in character. In Greece, the first problem which presented itself was the establishment of a very large number of refugees—the majority on the land; and a Commission suitable in composition for the direction of a vast task of land settlement was appointed. It was later necessary to assist Greece in placing her finances on a sound basis, and to help her in raising a loan for this purpose. The problem here, however, was not, as in the two earlier cases, one of restoring a rapidly depreciating currency, but only of strengthening and stabilising one which had elements of weakness; and the difference is reflected in the fact that the advice of a Financial Adviser appointed by the National Bank and periodical

¹ Document C.227.M.89.1927.II.

consultation of the Financial Committee by representatives of the Government and the Bank were sufficient as means of following the progress of the work. In Bulgaria, similarly, a work of refugee settlement on a much smaller scale was also followed by one of financial restoration, a single League Commissioner in this case both supervising the refugee work and also watching the financial reform as Financial Adviser. The work in these four countries has occupied the major part of the time of the Committee during these ten years. Assistance has also, however, been given to Estonia, in strengthening the National Bank, and to Danzig, both as regards the establishment of a currency and the raising of loans for constructive economic development.

In all these cases, loans were issued "under League auspices", nine being so issued in all.

The work undertaken in all the above-named countries had certain common features. In each case it involved some form of financial reconstruction, the issue of a loan or loans "under League auspices", and some form of responsibility on the part of the League for the execution as well as the original recommendation and adoption of the scheme. The variety, both in problem and in method, is, however, no less striking. For, in some cases, the whole economy of a disorganised country had to be dealt with; and, in another, only the strengthening and technical reform of a Central Bank was needed. Similarly, the method¹ adopted to associate the League with the progress of the work varied from the appointment of a Commissioner-General with extensive powers over the budget to an informal arrangement for periodical consultation.

In the first decade, therefore, the Committee has been mainly engaged upon one special and temporary category of work, reconstruction with the aid of loans issued under League auspices. This work has been important and exacting. It has naturally tended to postpone consideration of other more normal duties of the Committee as the financial advisers of the League within the framework of the Covenant. But, as stated above, this work is apparently nearing its end. No new loans have been issued under League auspices since 1928, and the work already undertaken in this sphere has been finished or is nearing completion.

The following pages describe, and classify, the work as it now is and is developing, and call attention to certain questions in respect of which it would be useful for the Council to lay down the principles on which the Committee should carry out its duties.

The work of the Committee has been, and is likely to be, very largely within that sphere of the League's duties which the Covenant describes as the "promotion of international co-operation". The development of this kind of work will, of course, depend upon expediency, opportunity and the desires of Member States at different times, and is subject to no other limiting considerations. In addition, however, the Committee is, of course, available, as the Council's financial adviser, in connection with any specific financial tasks, or the financial aspects of specific tasks arising under other parts of the Covenant.

The functions of a League Financial Committee fall, it is suggested, into three categories, each of which has some examples in past experience, but the relative importance of which seems likely to change considerably in future:

- I. General financial questions;
- II. Advice and assistance to particular States;
- III. Advice on financial questions arising out of current political or administrative work of the Council.

It will be well to consider each of these in turn.

I. GENERAL FINANCIAL QUESTIONS.

The Council will doubtless wish that, as in the past, the Committee shall consider it to be within its competence to watch general financial developments in relation to economic progress, and from time to time take the initiative of making proposals to the Council for the study of any general question that seems at the time to be of special importance.

The most notable, though not the only, examples of general financial questions, among work undertaken either on the request of the Council or on the initiative of the Committee approved by the Council, relate to double taxation, counterfeiting currency, and the gold problem. In each case the Committee has been concerned in the initiation, and, in varying degrees, the subsequent direction, of the work. But in every case the main work has been done through specialised *ad hoc* committees or Conferences. On the gold problem, a preliminary report on

¹ As regards method, the Committee would draw special attention to the small book, published by the League, on *Principles and Methods of Financial Reconstruction*.

the prospective supply and demand for gold is now being submitted to the Council.¹ The Committee hopes to follow this by a fuller study, particularly of those aspects of the problem which have a direct bearing upon practical action.

Among other problems of a similar order which demand serious consideration now or are likely to necessitate such consideration in the near future may be mentioned, by way of example, that of the recurrence of alternating periods of prosperity and depression which the present difficult situation has forced upon public attention, and that of assisting the Economic Organisation in keeping the world informed of the course of financial development. The problem of what is sometimes called the trade cycle is possibly at certain points related to that of the supplies of monetary gold with which the Committee is already concerned. But it is much wider in its range, and for any serious study would require the collaboration of experts in a number of other branches of knowledge and activity in addition to that which is represented by the Financial Committee.

Another subject on which it may prove desirable for the Committee to arrange an appropriate study is that of the conditions which determine the flow of capital from one country into another, its sufficiency, its cost, its form (*e.g.*, for the purpose of short-term credit or long-term investment), etc. Such a study might cover such factors as the effect of taxation or taxation methods, apprehensions as to loss of investments in war or through political instability, or any deficiencies in the available mechanism for arranging different forms of credit transactions; or such a selection among these as the Committee might think to be specially important and suitable for consideration at any given moment.

The Committee has also always been interested in the work which the Economic Organisation does in keeping the world informed by means of special memoranda and co-ordinated statistics of economic progress and development, and it hopes in the future to help, by advice and direction, the extension of this work.

These are only examples of the kind of general questions on which from time to time a central international body of financial advisers may make a useful contribution to the solution of the world's financial problems, either directly or in conjunction with specialised *ad hoc* committees.

II. ADVICE AND ASSISTANCE TO INDIVIDUAL GOVERNMENTS.

I. Advice without "League Loans".

The basis of the whole of the reconstruction work conducted by the League in earlier years has consisted of advice given by the Committee on problems of financial and monetary reform. For the execution of the plans of reconstruction ultimately formulated as a result of this advice, foreign money has, in fact, in most cases, proved necessary, and the practical problem of raising that money by means of international loans has thus been forced upon the attention of the Committee. In the future, however, it may well be that a number of problems of a technical character will arise, the solution of which will not demand the flotation of special loans.

These problems might, for example, concern: Treasury, budget or taxation systems; currency or Central Bank systems; the organisation of general or agricultural credit; the general financial conditions of a country; special financial difficulties in connection with State railways or roads, State savings banks, other government undertakings, etc.

In fact, there is no necessary relationship between the advice which may be sought from or given by the Committee and the immediate or subsequent issue of loans on foreign markets, whether the advice is concerned with some detailed problem or with the general financial situation in any country.

Advice and assistance in such cases might be entirely unconnected with a loan; it might, as in Estonia, be ultimately followed by a League loan; it might be followed by a loan contracted direct by the Government and not under League auspices.

We think it would be very useful to Member States who may from time to time be thinking of consulting the Committee, that the attitude of the Council and Committee should be made clear beforehand on certain points that arise under the three above alternatives.

In the first place, we suggest that the principle just stated—that financial advice should not necessarily be given only in cases connected with international loans—should be clearly recognised.

In the second place, where it proves desirable that a loan should be issued "under the auspices of the League" (a "League loan"), the Committee considers that it necessarily follows that some measure of responsibility falls upon the League with regard to the subsequent carrying out of the scheme. These cases are dealt with in the next section.

There remains the third class, in respect of which it is most desirable that the League's position should be defined. The "advice" asked may be such as to have a bearing on some future loan that a country wishes to raise, and the wish to assist the issue may be one of the objects of the request. At the same time, the Government concerned may not wish to ask that the loan should be issued "under the auspices of the League", and may not need the help of the Committee as regards the framing of the whole of the scheme with which the loan may be connected or

¹ Document C.375. M.161. 1930.II.

its execution. In the view of the Committee, there is no reason why it should not give its advice in such a case on such questions as it may be asked, without assuming any responsibility for the subsequent progress of the scheme, and without therefore being obliged to establish any system of supervision or periodical consultation. It is, however, obviously desirable that, in such cases, the limits of the League's responsibility should be exactly defined and clearly understood by all concerned. For this purpose two precautions are required:

(a) The issue of a public statement (such for example as the present report) endorsed by the Council, explaining the stage now reached in the League's financial work and pointing out that, now that financial reconstruction has been practically accomplished in most countries, recommendations of loans "under League auspices" will no longer be the normal work; that, more usually, advice only will be given, and, in that case, the League's responsibility will be limited in character to the nature of the advice and in time to the date at which it is given. It will not extend (except where specifically stated) to securing that the advice is followed or that any of the conditions declared to exist at the time of the advice are maintained afterwards.

(b) The stipulation by the Committee, whenever its advice is asked, that, if that advice is ever quoted, or even the fact of its being given mentioned in connection with a loan operation, the prospectus of the loan shall contain a statement drafted by the Committee, explaining the exact limits of the responsibility it has assumed.

These two precautions, combined with the opportunities of communicating information and of publicity which the Committee has, both through its members and otherwise, would, it is considered, be sufficient.

2. "League Loans."

There remain the cases in which the issue of loans "under the auspices of the League" ("League loans") may still be desirable in future.

There may, in the first place, still be problems of financial reconstruction more or less similar to those already undertaken, though these are not likely to be frequent in future.

The Committee is sometimes, however, asked whether it is prepared to consider schemes which are not covered by the precedents of financial reconstruction and refugee establishment. These raise the important question of principle: Should the League be prepared to be associated with the issue of a loan "under the auspices of the League" for purposes of economic development?

In general, the Committee considers that loans for these purposes should not be issued "under League auspices". There may be special circumstances, however, which would make such an issue desirable, as where the League has certain special responsibilities (*e.g.*, as regards Danzig), or where the project promises certain valuable international advantages which might not otherwise be attained.

It is desirable that the general attitude of the League should be known beforehand, and the Committee recommends that it should be defined in the following formula:

"Loans for economic development in a particular country should not, in principle, be regarded as within the scope of loans which may be issued 'under the auspices of the League', but this is not to exclude the consideration of such loans when they present special international interest or advantages."

In the light of the principle so indicated, any specific proposal should be considered on its merits at the time.

Where, in accordance with this principle, the issue of a loan "under the auspices of the League" is considered inadmissible, the Committee might still, of course, give advice on particular features of a scheme without assuming responsibility for the loan or the execution of any programme, subject to the conditions and safeguards described in the previous section.

Where, on the other hand, the issue of a loan "under the auspices of the League" is considered admissible and desirable, the necessary measures to enable the League to follow the progress made in the carrying out of any programme would be determined in relation to the circumstances of the particular case. The method would, as described above, be so arranged as to involve as little interference as possible, amounting, where the case permits, to no more than occasional consultation.

(3) *Disputes, Conciliation and Arbitration Work.*

In a number of cases in the past, the Committee has acted as conciliators or arbitrators in connection with the interpretation or execution of loan contracts to which one of the parties is a Government. This has been done in cases in which no specific provision has been made beforehand in the loan contract (as in the case of the Disconto Gesellschaft loan to Bulgaria), on the request of the two parties and after consideration by the Council of the general character of the dispute, and may also arise in accordance with a provision in the original contract

If such contracts be made in the future, they should, we think, be submitted at the time of negotiation to the League of Nations for approval. But it would only be necessary for the League to consider whether the loan was, in its general character, such as it could be associated with, and whether the actual arbitration clause was satisfactory. It would not be necessary to examine the conditions and details of the loan.

We believe that the development of such arbitration work would have valuable results for a number of reasons.

A real service might be rendered to lenders by helping to secure a settlement of disputes and the execution of contracts by means of the collective moral authority which association with the League gives (and consequently also to borrowers in the negotiations through this prospect), without the dangerous and difficult use of pressure by individual Governments. And, incidentally, such an association would help to form an effective public opinion encouraging the better and more constructive forms of international loans, as distinct from those which include obviously undesirable features.

III. ADVICE ON FINANCIAL QUESTIONS ARISING OUT OF CURRENT POLITICAL AND ADMINISTRATIVE WORK OF THE COUNCIL.

In the whole of its work, the Committee has, of course, acted as the technical advisory body to the Council of the League on financial questions. But, in addition to the problems described above, which have been primarily financial in character, the Council has referred to it from time to time the specifically financial aspects of other problems arising in the course of the Council's current political and administrative work. The preparation of the scheme of financial assistance, as a part of the general proposals advocated by the Committee on Arbitration and Security, may be taken as an example of this kind of work, though usually the questions referred are likely to be of a more limited scope and application. A more typical example is, perhaps, to be found in the work done by the Committee in relation to questions arising from Greco-Bulgarian emigration.

Financial questions arising in relation to work of the Mandates Commission, or the administration of the Saar, or the preparatory work in relation to Article 16 (and application if the occasion arose), or budgetary problems in connection with disarmament, are only instances of financial questions which have arisen or may arise within almost any sphere of the League's work on which the advice of the Committee may be needed.

* * *

The above report is an attempt to describe the main character of the work hitherto undertaken by the Committee; the stage now reached in it; the change in character of the work which is taking place as a result of the general progress in financial stabilisation that the world has now achieved; and to call attention to certain questions on which decisions of principle are desirable as a guidance to future development. A general statement endorsed by the Council would, the Committee believes, at this date be useful as a guide both to Member States, to the Council itself and League organs generally, and certainly to the Committee itself, as an indication of the kind of service which may, with prospects of useful results, be asked of the Committee, and the kind which may not.

For this purpose, the Committee ventures to suggest that the Council and Assembly should authorise the publication of this report as a statement endorsed by them, with such amendments or additions as they may consider desirable.

Appendix.

ENQUIRY INTO THE POSITION OF CO-OPERATIVE SOCIETIES IN BULGARIA.

Letter from the Bulgarian Minister of Finance to the Secretary-General of the League of Nations.

Geneva, September 6th, 1930.

[*Translation.*]

The Bulgarian Government, in reviewing the results of the work of financial reconstruction undertaken by it with the support of the League of Nations, has come to the conclusion that, in order to consolidate these results, it must extend its activities to cover matters more directly connected with the preparation of the economic revival of the country.

Immediately on achieving independence, Bulgaria began to develop co-operation in various spheres. The Agricultural Bank was set up—the origin of a whole system of co-operative societies of different kinds, which was afterwards completed by the creation of the Central Co-operative Bank.

The development of this movement was checked by the consequences of the war and the serious impoverishment resulting. The Bulgarian Government is convinced that the rationalisation of the whole system thus created is now—after the balancing of the budget during the last few years and the stabilisation of the lev—one of its most essential tasks, which it desires to undertake, on lines to be agreed upon, with the co-operation of the technical organs of the League.

The Bulgarian Government would greatly appreciate such co-operation, and I wish to ask you to consider whether this would be possible.

With this end in view, the Bulgarian Government directed the Co-operative Societies' General Board to enquire into the present position of the co-operative movement in Bulgaria. I have the honour to submit the results of this enquiry for your kind consideration.¹

(Signed) W. MOLLOFF,
Minister of Finance.

¹ The report referred to has already been submitted to the Council in document C.507.1930.II.

Geneva, October 7th, 1930.

LEAGUE OF NATIONS
FINANCIAL WORK

10(a)

**RESOLUTIONS ADOPTED BY THE COUNCIL
AND THE ASSEMBLY.**

I. GENERAL.

Resolution adopted by the Council on September 24th, 1930.

"The Council takes note of, and approves, the report of the Financial Committee on the work of its thirty-ninth session."

Resolution adopted by the Assembly on September 29th, 1930.

"The Assembly expresses its appreciation of the valuable work of the Financial Committee."

II. WORK AND FUNCTIONS OF THE FINANCIAL COMMITTEE.

Resolution adopted by the Council on September 24th, 1930.

"The Council approves the statement on the work and functions of the Financial Committee and transmits this statement to the Assembly for its consideration."

Resolution adopted by the Assembly on September 29th, 1930.

"The Assembly approves the principles set out in the statement of the Financial Committee on its work and functions which is contained in the report on its thirty-ninth session, transmitted by the Council to the Assembly for its consideration."

III. GOLD.

Resolution adopted by the Council on September 24th, 1930.

"The Council thanks the Financial Committee and its Gold Delegation for the valuable interim report on the gold question and requests the Secretary-General to communicate this to all the Members of the League and non-Member States, drawing their attention to the importance of the problem treated."

Resolution adopted by the Assembly on September 29th, 1930.

"The Assembly draws the attention of all Governments to the interim report on the question of the purchasing power of gold submitted by the Financial Committee to the Council."

IV. GOLD STATISTICS.

Resolution adopted by the Council on September 24th, 1930.

"The Council authorises the Secretary-General to undertake an enquiry, in consultation with the Financial Committee, concerning the manner in which the statistics on the industrial use of gold may be improved."

V. FINANCIAL ASSISTANCE.

Resolution adopted by the Assembly on September 29th, 1930.

"The Assembly:

"Taking note of the report submitted to it on behalf of the Third Committee,

"Thanking the Financial Committee and the Committee on Arbitration and Security for the admirable work they have done to frame the Convention on Financial Assistance:

"I. Approves the text of the said Convention which has been drawn up by the Third Committee;

"Decides to open the Convention immediately for signature by the Members of the League;

"Expresses the earnest hope that the Convention will be signed and ratified by all the Members of the League of Nations;

"Instructs the Secretary-General to take the necessary steps to bring the Convention officially to the notice of all States Members of the League that have not signed it before the end of the present session of the Assembly, in order that they may be able to do so on or before December 31st, 1931, or to accede thereto after that date;

"II. Considers it desirable that the scheme for financial assistance might be applied, when the case arises, without any delay;

"Therefore asks the Council to instruct the Financial Committee to prepare drafts for the various documents referred to in the Convention that may be necessary for its entry into force, such as protocols, loan contracts, etc."

The signature of the Convention took place on October 2nd, during the meeting of the Assembly. The Convention was signed on that day on behalf of twenty-eight Governments.

The Council decided, on October 3rd, 1930, to invite the Financial Committee to prepare drafts for the various documents referred to in the above Assembly resolution.

VI. AGRICULTURAL CREDITS.

Resolution adopted by the Council on September 24th, 1930.

"The Council notes with interest that the Financial Committee will examine the question of agricultural credits."

VII. CONFERENCE OF REPRESENTATIVES OF CENTRAL POLICE OFFICES.

In accordance with the recommendation of the Conference for the Suppression of Counterfeiting Currency, the Council decided, on September 9th, 1930, to take the initiative of calling together the first Conference of Representatives of the Central Police Offices. This Conference will begin on March 4th, 1931.

At its meeting on September 25th, 1930, the Council appointed Professor E. DELAQUIS Chairman of the Conference.

VIII. FISCAL COMMITTEE.

(a) *Report on Second Session.*

At its meeting on September 24th, 1930, the Council adopted the conclusions of the report of the Fiscal Committee on its second session, and expressed its appreciation of the Committee's work.

At its meeting on September 29th, 1930, the Assembly also expressed its appreciation of the work being undertaken by the Fiscal Committee.

(b) *Appointment of Corresponding Members.*

At its meeting on September 17th, 1930, the Council appointed the following additional Corresponding Members of the Fiscal Committee, the appointments to have effect until June 1932:

Salvador: Dr. Don Cecilio BUSTAMANTE, Director-General of Direct Taxation in Salvador.
Panama: M. Juan J. MENDEZ, Assistant Director of the National Bank.
Persia: M. Homayoun Khan SAYAH, Under-Secretary of State at the Ministry of Finance.

IX. GREECE.

(a) REFUGEES.

Resolution adopted by the Council on September 12th, 1930.

“ The Council,

“ (1) Takes note of the twenty-seventh report of the Refugee Settlement Commission;

“ (2) Approves and adopts the report of the Financial Committee;

“ (3) Having been informed by the representative of the Hellenic Government and the President of the Refugee Settlement Commission that the steps contemplated in the Convention signed by the Hellenic Government and the Refugee Settlement Commission on January 24th, 1930, as pre-requisites for the dissolution of the Commission have been or are about to be taken:

“ Decides:

“ (a) In accordance with Article XIX of the Organic Statutes of the Commission, that the Refugee Settlement Commission shall be dissolved on December 31st, 1930;

“ (b) In the event of the Commission being of opinion that, owing to unforeseen circumstances, it is necessary to postpone the dissolution of the Commission after the aforesaid date, the Commission will urgently inform the members of the Greek Committee of the Council, through the Secretary-General, and the Greek Committee is empowered, if it thinks necessary, to postpone the date of dissolution until the Council can examine the situation at its January meeting.

“ (4) Expresses its thanks and appreciation to the retiring President and Vice-President of the Commission appointed by the Council, Mr. Charles Eddy and Sir John Hope Simpson, whose services during the past four years have notably contributed to bringing the settlement work to a successful conclusion.

“ (5) Congratulates the Hellenic Government on the successful accomplishment of this great task, and expresses its thanks and appreciation to the Financial Committee who, after devising the original scheme, have given advice throughout its execution, and to all the present and past members of the Refugee Settlement Commission, whether appointed by the Council or the Greek Government, who have borne the burden and responsibility of directing its execution.”

(b) RENEWAL OF APPOINTMENT OF THE CHAIRMAN OF THE REFUGEE SETTLEMENT COMMISSION.

At its meeting of September 9th, 1930, the Council renewed the appointment of Mr. C. B. EDDY as Chairman of the Greek Refugee Settlement Commission on the same conditions which governed his previous appointment, the new appointment to extend until December 31st, 1930—*i.e.*, the date contemplated for the termination of the Commission, or to January 31st, 1931, if a similar extension of the existence of the Commission shall have proved necessary.

(c) BUDGET.

At its meeting on September 24th, 1930, the Council congratulated the Hellenic Government upon the work accomplished in the last three years in connection with its budget reform.

X. BULGARIA.

ENQUIRY INTO CO-OPERATIVE SYSTEM.

Resolution adopted by the Council on September 24th, 1930.

“ The Council agrees that the technical organs of the League should co-operate with the Bulgarian Government in the reform of the system of co-operative societies in Bulgaria; decides that two experts should be sent to Bulgaria by the League to enquire into and report upon this system; authorises its President, in consultation with its Rapporteur and with the Chairman of the Financial Committee, to appoint these experts, and authorises the Secretary-General to give the latter such assistance as may be desirable.”

The two following experts have been appointed in this connection:

M. Bohumir TREYBAL, Director of the Régional Union of Coopérative Societes at Uzhorod (Czechoslovakia).

Dr. Hannes GEBHARD, President of the Central Bank of Co-operative Credit Societies in Finland.

XI. ESTONIA.

At its meeting on September 24th, 1930, the Council congratulated the Estonian Government upon the work accomplished in the last three years in connection with its banking reform.

XII. STAFF PENSION SYSTEM.

On October 3rd, 1930, the Assembly decided to create a pension system for the officials of the Secretariat of the League of Nations, the International Labour Office and the Permanent Court of International Justice.

In this connection it was decided that a Pensions Fund should be established as from January 1st, 1931. The management of the Fund will be effected by an Administrative Board.

Article 3 of the Pensions Regulations adopted by the Assembly lays down that "on all questions regarding investment, the Administrative Board shall take the advice of an Investments Committee of three members nominated by the Financial Committee of the League of Nations, subject to approval by the Council of the League".

Geneva, September 6th, 1930.

LEAGUE OF NATIONS

SETTLEMENT OF BULGARIAN REFUGEES.

**Sixteenth Report of the Commissioner of the
League of Nations in Bulgaria.**

Period from May 15th to August 15th, 1930.

A. Settlement of Bulgarian Refugees.

I. 1926 REFUGEE SETTLEMENT 7% LOAN.

Appendix I to the present report shows the position of the 1926 Refugee Settlement 7% Loan at July 31st, 1930, including the accrued interest on the deposits in London and New York. The amount still available in foreign monies on deposit in London is £391,246.

II. YIELD OF REVENUES ASSIGNED AS SECURITY FOR THE LOAN.

The amounts paid into the account for revenues assigned as security for the 1926 7% Loan in May, June and July 1930 are shown below in leva:

Chapter of the Budget	Receipts			Monthly average of budget estimates
	May	June	July	
<i>Chapter 15</i> (Excise duty on alcohol, etc.)	5,599,121	7,587,733	6,461,841	5,416,666
<i>Chapter 16</i> (Excise duty on salt, etc.)	26,121,231	31,575,979	26,372,493	27,500,000
<i>Chapter 21</i> (Sale of matches)	9,090,000	8,676,000	9,873,000	9,583,333
Total	40,810,352	47,839,712	42,707,334	42,499,999

For the quarter under review, these receipts slightly exceed the budget estimates for the current year; this is noteworthy, as we shall see further on that the general receipts of the Treasury have considerably decreased since the beginning of the current financial year (April 1st, 1930) as compared with the budget estimates, and also with the corresponding period last year. The assigned revenues, which mainly consist of excise duties on foodstuffs, such as sugar, salt and rice, undergo seasonal fluctuations which recur regularly every year, but are less influenced by such general economic factors as those which caused the present fall in the total receipts of the Treasury.

During the quarter closed at the end of last July, the assigned revenues amounted to 131,357,398 leva as against 137,241,300 leva during the corresponding quarter last year.

Payments by refugees as interest and for the repayment of expenditure incurred in settling them were (in leva) as follows during the quarter under review:

	May	June	July	Previous payments	Total payments up to the end of July 1930
Interest	83,058	68,078	39,431	1,059,116	1,249,683
Amortisation	360,473	304,770	184,534	9,778,446	10,628,223
Total	443,531	372,848	223,965	10,837,562	11,877,906

While appreciating the full significance—from the point of view of the success and “productiveness” of the work of refugee settlement—of the increasing payments made by the refugees for the repayment of their debts, we should be cautious in our conclusions. As we have explained before, most of the items prior to those of the present quarter represent repayments made before they were due, and for this reason therefore, in spite of the small number of them, point to a satisfactory state of affairs. However, the exemption enjoyed during the first two years after settlement has now lapsed and the first contracts, concluded about May 1927, and relating particularly to deliveries of seeds have now become enforceable. Now we see from the above table that, for each month of the quarter, the amounts paid into the account have decreased, the debts falling due during the quarter have not all been settled. When, however, it is realised how impoverished are the peasants in Bulgaria, and still more our refugees, since the indifferent harvests of the last few years and the fall in the yield of the soil, this should cause little astonishment. Generally speaking, debts falling due during the agricultural season are not collected until the beginning of the autumn, when the peasant is in possession of his crop: this applies in particular to the Agricultural Bank, which administers the contracts concluded with the refugees. This year's harvest has on the whole been very good. Towards the end of the year, when we are in a position to compare the sums owed in 1930 and the sums paid, we shall have more to go upon in forming our conclusions.

III. EXECUTION OF THE SETTLEMENT PLAN.

In a few days from now, it will be just four years since the Bulgarian Government received the first funds from the Loan for the settlement of refugees on its territory. After a year of preparation and the adoption of legislative and other measures—about the middle of the summer of 1927—the executive organs had been set up and the general work was begun. At first, public opinion was sometimes very critical of the methods adopted, being naturally impatient for as rapid a solution as possible of a problem which had burdened the country for so long and was every day becoming more and more of a danger. With the Loan subscribed and its yield made available, people seemed to expect to see thousands of new dwellings spring up as if by magic and abundant crops yielded by previously uncultivated land. No one realised the difficulties to be surmounted, although the failure of previous experiments in land settlement—not, indeed, with adequate financial resources—might have served as an indication. The General Directorate for the Settlement of Refugees, which the Government was wise enough to set up as an autonomous body and to entrust to a first-class administrator with wide powers, proceeded with its programme and soon proved its use. The principal thing was to make the settlements as stable as possible. It was desired at all costs to prevent the rights of a refugee who had been installed on his piece of land or in his house ever being contested by anyone. Now, in Bulgaria, there have always been disputes in connection with land between the Government, the communes and certain other public bodies and private individuals: the survey of the country is incomplete and also the land registers. The first thing to be done, therefore, before anything else could be accomplished, was to survey the land used for the settlement of refugees. There were numerous incidents in connection with this work, which our surveyors had at times to perform under police protection, in view of the hostility of sometimes a whole village. As for the building of the houses, the best illustration we can give of the difficulties to be overcome is that the houses built or in course of construction are scattered over more than 630 localities, sometimes only one house in any particular locality. In certain parts of the country where communications are particularly bad, the material has to be transported in carts drawn by buffaloes, or on the backs of animals, over long distances.

Now, at the end of the fourth year, we can take stock of the position and congratulate ourselves on what has been accomplished. The settlement of refugees, which aroused such controversies and threatened to become a dangerous political question, is well on its way towards completion. The traveller in Bulgaria can see nearly everywhere, both in the plains and in the mountainous districts, the little white houses built by the General Directorate. At first they look like new toys but they soon become part of their surroundings. The refugees themselves add the yard enclosure and gradually acquired all the conveniences of a small farm. The produce of the harvest is stored in the barns and the new life begins.

The work of settlement has in certain respects gone beyond what was at first anticipated. These houses which are built of durable materials and are hygienic and comfortable have, simple

as they are, served as models which have not infrequently been adopted by the local peasants. The same applies to certain other aspects of the work, such as deep ploughing. The dyke at Karaboas, which is a remarkable piece of work, has aroused considerable interest as an example of work carefully prepared and methodically executed under the system peculiar to Bulgaria known as "compulsory labour". In the field of hygiene, where there still remains so much to be done, our doctors, whose special task it is to combat malaria, have made their influence felt in many directions: cleanliness of the houses and wells and the healthy upbringing of children, all of which is as much in the general interest as in that of the refugees themselves. The following chapters will, as usual, show the results achieved at August 15th, 1930, in the various sections of the programme of settlement.

(a) *Various Supplies.*

These supplies are delivered by degrees, as and when the refugee settles on his plot of land. A great deal of progress has been made with this part of our programme. The following table summarises the position with regard to the allotment of various supplies since the beginning and their value as at August 15th, 1930:

<i>Seed:</i>	Leva
10,170,577 kilogrammes at a value of	65,189,112
 <i>Live-stock:</i>	
Horses and mules: 5,943 " " "	53,352,887
Oxen and cows: 12,183 " " "	71,763,110
Buffaloes: 2,520 " " "	15,445,551
 <i>Implements:</i>	
Ploughs: 7,698 " " "	10,363,413
Harrows: 2,533 " " "	1,658,578
Handcarts: 8,951 " " "	43,662,858
 <i>Fishing Tackle:</i>	
Nets: 27 } Boats: 64 } Motor-boats: 3 }	6,160,610
Total	
	267,596,119

(b) *Houses.*

	Houses		Sheds		Byres	
	Finished	Contracted for	Finished	Contracted for	Finished	Contracted for
Built by private enterprise	3,642	3,587	2,755	2,338	3,172	2,576
Built on a monopoly basis by the General Directorate for the Settlement of Refugees.	599	371	490	328	548	360
Built by the refugees themselves	224	324	138	224	188	257
Total	4,465	4,282	3,383	2,890	3,908	3,193
Figures at the end of the previous quarter.	3,878	3,779	2,954	2,656	3,351	2,936

Up to the present, the number of applications for houses received is	9,769
Number of houses ready	4,465
Number of houses now being built	4,282
	8,747
Number of houses still to be built	1,022

Most of the houses of this last batch are to form part of the new villages to be constructed on the drained land of the plain of Karaboas, along the Danube. The progress made with the

construction of the dyke has been so rapid that it has already been possible to place a contract for 250 houses in this district. These houses are intended for refugees coming from the frontier zones, where there is no adequate provision for them at present and little possibility of improvement. We expect to be able to carry out the first of these transfers by the beginning of the autumn. The reports of the fertility of the drained land, which is composed of rich alluvial soil, spread rapidly throughout the country, and it is of some interest to note that the General Directorate is at present receiving more applications for transfers than it is able to grant, in respect of the area at present available.

The position with regard to the work in hand is, perhaps for the first time, definitely favourable. In previous years, the buildings constructed by private enterprise were very numerous, consisting chiefly of co-operative premises, and public institutions also carried out a considerable programme of work. After 1928, the work of repairing the ruins caused by the earthquake swallowed up a good deal of the available funds. The completion of this work and the consequences of the economic crisis, which have considerably reduced the expenditure of private persons and public bodies, have this year made available an abundance of labour and materials. Furthermore, our contractors have acquired more experience, and applications for the extension of the time-limits allowed are now less frequent, and there are fewer unexecuted contracts to be dealt with.

(c) *Land.*

The position at August 15th, 1930, is shown in the following table:

Department	Land surveyed (decares)	Land allotted (decares)	Number of families	Average area allotted (decares)
Burgas	549,393	486,586	11,767	41.35
Varna	68,625	61,098	1,555	39.29
Vidin	8,929	8,929	282	31.66
Petritch	120,663	111,023	4,962	22.37
Vratcha	22,621	21,872	639	34.17
Plovdiv	24,505	23,971	1,290	18.58
Plevna	18,761	17,201	517	33.27
Rustchuk	49,108	32,449	860	37.73
Stara Zagora	14,051	12,886	395	32.62
Tirnovο	17,111	17,012	455	37.39
Haskovo	156,876	131,729	3,012	43.73
Schumen	41,364	39,360	1,136	34.65
Mastanla	82,356	52,579	1,472	35.72
Total	1,174,363	1,016,695	28,342	35.87
Figures at May 15th, 1930	1,171,320	1,012,996	28,260	35.84

Owing to the absence of some of its members, the Land Valuation Committee has made little progress during the quarter under review. In the meantime, the General Directorate has continued to draw up plans of each plot to be attached to the deeds of ownership handed to the refugees; these plans now number 28,000.

The survey work still to be accomplished is mainly in connection with the part of the drained land in the plain of Karaboas which is to be used for the settlement of refugees under the arrangements concluded with the Government. This area is about 80,000 decares, and the surveyors are at present engaged on the work.

The following amounts had been spent on the land at August 15th, 1930:

	Expenditure in Leva
Clearing work: 46,225 decares	34,895,847
Ploughing: 57,410 decares	12,889,174

(d) *Means of Communication.*

The work on the Rakovsky-Mastanla Railway and on the 25 to 30 kilometres of roads, which forms part of the programme for the settlement of refugees, is proceeding satisfactorily. The work on the railway, which was so greatly delayed in 1929 and 1930 as a result of various causes beyond human control but also—and principally—by the incessant disputes with the contractors, has now been placed in the hands of the Railway Administration, in pursuance of our decision not to exceed the sum of 300,000,000 leva from the 1926 Refugee Settlement 7% Loan provided for in the programme for the construction of this line. This sum has now been used up to within 15,000,000 or so, and we shall henceforth only be responsible for the execution of those contracts concluded by the General Directorate which are still in course of execution and for sums

not exceeding the said maximum. At August 15th, 1930, the position with regard to this line was as follows:

	Kilometres
Total length	100
Length of line laid down	53
Length open for traffic	50

The most important pieces of engineering work:

- A tunnel of 1,120 metres.
- A tunnel of 310 metres.
- A 180-metre bridge over the River Arda.
- A 100-metre bridge over the River Suntlika.

The line is open to traffic up to the big tunnel; about 65 per cent of the work on this tunnel is now completed.

(e) *Draining.*

1. *The Dyke at Karaboas.*

The work is proceeding very satisfactorily. More than 4,000 men are regularly employed, and 70 to 75 per cent of the work has been completed—a remarkable achievement. The harvests yielded by the reclaimed land have been magnificent, and it is not surprising that this settlement zone is much coveted by our refugees.

2. *The Stralja Marsh.*

The negotiations mentioned in our previous report have been brought to a satisfactory conclusion. The draining of this marsh has been entrusted to the Directorate of Compulsory Labour, which is carrying out the work at Karaboas. Five hundred men are at present at work upon it. In view of the excellent results obtained at Karaboas, there can be no doubt that the Directorate will carry out this new work extremely efficiently. The contract concluded with the Directorate provides for the completion of the work by December 31st, 1930.

The marshy soil to be drained covers an area of about 19,900 decares, and the constructional work consists of canals 39 kilometres in length. Several villages situated round this marsh include some hundreds of refugees' families who will directly benefit, owing to the enhanced value of their land, from the work in course of execution. The village of Atholovo, for instance, which was constructed in 1925-26 for 100 refugees' families by a British charitable organisation is situated there.

3. *The Messemvria and Mandra Marshes.*

One is to the north and the other to the south of Burgas, which is on the coast. The work is progressing, although less satisfactorily than the previously mentioned undertakings.

(f) *Health.*

1. *Anti-malaria Campaign.*

The anti-malaria services in the Department of Burgas have been transferred to the Public Health Department, subject to the conditions mentioned in our previous reports.

The numerous colonies set up in the malarial districts of the Department of Burgas can only develop and prosper if they are effectively protected against malaria, as they have been up to the present, thanks to the organisation established under Professor Swellengrebel's plan. This organisation included a fairly numerous medical staff, and was backed by ample resources. For financial reasons, the anti-malaria services of the Public Health Department have a smaller staff and less resources at their disposal. Indeed, we have been concerned to know whether it will be possible for them, if not to make improvements, at least to consolidate the work already done. We have, therefore, once more appealed to Professor Swellengrebel for his valuable assistance. During his two weeks' stay, Professor Swellengrebel has visited the anti-malaria services of the Department of Burgas, and those in the District of Sveti-Vratch (Department of Petritch) for the maintenance of which we are responsible until April 1st, 1931, when it will be taken over by the Public Health Department.

We are not yet in possession of Professor Swellengrebel's report, but we have reason to believe that its findings will be favourable. The professor is of opinion that the steps taken by the Public Health Department are, on the whole, satisfactory and such as to promise well for the efficient prosecution of the anti-malaria campaign.

2. *Extension of the Health Services.*

The programme for an extension of the health services in the Department of Burgas worked out by Professor Jessner and approved by the Health Organisation of the League has been put into application.

This programme chiefly consists in the following up and treating of patients by doctors attached to the health service of the Department, who have followed a special course under Professor Jessner. Besides supplying sanitary material and medicaments, we have also had to arrange for the construction and equipment of the necessary premises: three out-patient clinics (two at Burgas and one at Vassiliko).

Professor Jessner, whose visit to Bulgaria is now drawing to a close, desired to supervise the inauguration of his plan, and proposes to return later when the service is working normally so as to be able to judge of the results.

We would remind you that this extension of our health services was undertaken in accordance with a request for collaboration received from the Bulgarian Government by the Health Organisation of the League of Nations and approved by the Council.

B. 7 ½ % Stabilisation Loan of 1928.

The position of the 7 ½ % 1928 Loan at July 31st, 1930, is shown in Appendix II of this report. The available amount on deposit at London and Paris in foreign exchange is about £521,000.

I. YIELD FROM THE ASSIGNED REVENUES.

During May, June and July 1930, the sums received by way of revenues assigned as security for the loan were (in leva) as follows:

May	June	July	Monthly average of budget estimates
55,976,911	54,735,346	66,860,208	108,333,333

The total receipts for the quarter amounted to 177,572,465 leva, or about the same as the preceding quarter (177,649,830 leva). The service of the Loan for the three months absorbed 72,531,362 leva, or about 40 per cent of the available sum.

The receipts for the corresponding quarter of last year amounted to 438,366,887 leva. The appreciable divergence between the present yield and that for the preceding financial year is due to the considerable reduction in imports, as shown by the figures for the trade balance which will be found below under "Statistics".

There was, however, a slight improvement in July, although the volume of imports was constant as compared with previous months. This is a consequence of the revalorisation of the Customs duties undertaken by the Minister of Finances on June 4th, 1930. Before that date, Customs duties, expressed in terms of gold, were calculated in leva at a rate varying, according to the category, from 15 to 20 leva = 1 gold leva. The new coefficient of conversion in force is 27, which roughly corresponds to par, except for certain articles (foodstuffs or raw materials), in the case of which the previous coefficient has been retained.

II. EMPLOYMENT OF THE LOAN.

I. £1,250,000 Sterling Block for Means of Communication (Article VI of the Protocol).

(a) Railways.

The programme of capital outlay was carried out without any special difficulty in accordance with the Regnoul plan. On the date of the present report, most of the block allotted to the railways is earmarked. The following was the position at August 15th, 1930:

	Leva
Value of the block allotted to the railways and harbours	672,300,000
Expenditure already authorised	660,000,000
Contracts concluded	515,254,000
Value of work undertaken on a monopoly basis	56,285,764
Sums actually expended at August 15th	357,787,049

The execution of the whole of this programme was, it will be remembered, made conditional upon the adoption of reforms by the Railway Administration with a view to securing for it a certain measure of autonomy. These reforms were sanctioned by a Law passed about a year ago, the text of which is appended to our Reports Nos. 12 and 14.

One of the most important stipulations of this Law provided for the appointment of the Director-General for a fixed number of years. This appointment has just been made for a period of five years. It was the intention of the Financial Committee of the League of Nations, which originally made the suggestion, thus to secure for the Management of the railways continuity in technical direction, which is particularly needed during the period of reorganisation inaugurated by the new Law, which is only a first stage on the way towards more far-reaching reforms.

There are other important reforms which are being carried through slowly. The opening balance-sheet, which should have been drafted on April 1st, 1929—that is to say at the beginning of the last budget year—is not yet ready, the system of accountancy has therefore not yet been entirely transformed in accordance with the provisions of Articles 47 to 52 of the Law. The Management hopes to be able to publish this very important document in the near future.

(b) *Roads.*¹

The following figures summarise the position at July 31st with regard to the employment of the total credit of 176,266,179 leva.

	Expenditure approved	Commitments on contracts (In leva)	Sums actually expended
(a) <i>By contracts:</i>			
Roads	66,160,000	52,074,300	18,159,193
Bridges	62,300,000	46,269,500	9,137,954
(b) <i>By the Directorate of "Compulsory Labour":</i>			
Roads	35,540,000	30,209,000	10,000,000 ²
(c) <i>Purchase of material.</i>			
Motor tanks	1,000,000	450,000	—
For purposes of comparison see the corresponding figures at April 30th, 1930	165,000,000	129,002,800	37,297,147
	149,100,000	119,209,300	21,310,758

In view of the very moderate progress made, as shown by this comparison, we would refer to the comments on the same question contained in the fourteenth report, page 7, and the fifteenth report page 7. We are not in a position to appreciate the considerations which have guided the Administration of Bridges and Highways, but we are convinced that, as far as the execution of the present programme is concerned, the attitude of this Administration has in fact caused considerable loss to the Government. We have done all in our power to hasten the procedure for placing the contracts and have answered by concrete suggestions the objections raised: lack of technical staff, material and means of transport. Although the competent authorities have been good enough to approve these suggestions, they have, for reasons which we cannot explain, failed to act upon them.

The season for building work will be over in two or three months, and the work done between now and then will be but a part of the programme the completion of which will thus be delayed until the autumn of 1931, whereas it would have been highly desirable, in view of the dilapidation of the railways and of the fact that the part of the loan allotted to roads is only a fraction of what is needed, to put this sum to immediate use in order to lay it out to the best advantage.

2. *£500,000 Sterling Block for Reconstruction of the Devastated Areas (Article VII A of the Protocol).*

With very few exceptions, the work of repairing the ruins caused by the earthquake, to be carried out with funds derived from this block of the Loan, will be completed this year. The following was the position at July 31st, 1930:

	Expenditure approved	Commitments on contracts (In leva)	Sums actually expended
Public buildings	280,544,100	241,259,114	190,187,566
Roads and bridges	49,247,000	42,733,220	23,457,610
Railways	7,375,000	6,342,850	5,933,072
Water conduits	10,421,000	9,694,262	5,247,909
Regulation of rivers	12,700,000	12,345,000	8,956,432
Overhead and various expenditure	9,000,000	—	4,551,696
Total	369,287,100 ³	312,374,446	238,334,285

III. BUDGET.

In our fifteenth report, we published the budget results for the year 1929-30 as at the end of the financial year—*i.e.* March 31st, 1930. The regulations in force allow of commitments being contracted on account of the financial year ended on that date, during the following three months. The following are the results of the preceding budget year, closed at the end of this additional period of three months—*i.e.*, June 30th, 1930:

¹ Erratum, fifteenth report, page 7, "(b) Roads", fifth line: for £10,000,000, read 10,000,000 leva.
² Advance on account for the work to be carried out.
³ The proceeds in leva of the block earmarked for the reconstruction of the devastated areas amounts to 336,000,000 leva. The expenditure authorised seems to exceed this sum but, owing to the economies realised when the contracts were given, the commitments are still within the £500,000 limit.

Results for the year 1929-30 at June 30th, 1930.
(Ordinary and supplementary expenditure.)
(In thousands of leva.)

EXPENDITURE				
Chapters of expenditure	Estimates for 1929-30	Results 1929-30	Results 1928-29	Difference between columns 3 and 4
1	2	3	4	5
Under ordinary and supplementary budgets	7,545,189	6,735,807	5,948,965	+ 786,842
Budget for railways and harbours	1,280,771	1,150,174	693,842	+ 456,332
"Funds": Railways and harbours	241,798	173,173	188,954	— 15,781
Other	—	—	275,598	— 275,598
	9,067,758	8,059,154	7,107,359	+ 951,795

RECEIPTS				
Chapters of receipts	Estimates for 1929-30	Results 1929-30	Results 1928-29	Difference between columns 3 and 4
1	2	3	4	5
Under ordinary and supplementary budgets	6,740,150	6,416,820	6,224,604	+ 192,216
Budget for railways and harbours	1,193,300	1,258,026	1,225,262	+ 32,764
"Funds": Railways and harbours	243,946	284,040	276,502	+ 7,538
Other	—	282,000	—	+ 282,000
	8,177,396	8,240,886	7,726,368	+ 514,518

In accordance with the Protocol, the "special funds" budget is, as from 1929-30, no longer to be separate from the ordinary budget—except in the case of the railways—but incorporated with it.

According to the following table, the book surplus for the year 1929-30 was as follows:

	Leva
Receipts	8,240,886,000
Expenditure	8,059,154,000
Surplus	181,732,000

Taking into account the fact that part of the receipts for this financial year was used to cover expenditure incurred on account of previous years (142,765,000 leva) the actual Treasury position for 1929-30 was as follows:

	Leva
Book surplus for 1929-30	181,732,000
Deducted: expenditure on account of previous years covered out of receipts of 1929-30 budget	142,765,000
	38,967,000

This last amount is also arrived at by the following calculation of the Treasury position at June 30th, 1930.

Treasury Position at June 30th, 1930.

<i>Assets</i>	(In thousands of leva.)	<i>Liabilities</i>	
Surplus for 1928-1929	156,830	Expenditure under ordinary and supplementary budgets	6,735,807
Receipts of the ordinary budget	6,416,820	Expenditure under the budget for the railways and harbours	1,150,174
Receipts of the budget for the railways and harbours	1,258,026	Expenditure under the "special funds" budget	173,173
Receipts of the "special funds" budget	284,040	Expenditure on account of previous years covered by receipts of 1929-30	142,765
Sums paid by the Greek Government under the Molloff-Caphandais Convention	282,000		
	<u>8,397,716</u>		<u>8,201,919</u>

Or a surplus at June 30th, 1930, in the account of the Treasury with the National	Leva
Bank of 8,397,716,000 minus 8,201,919,000	195,797,000
If we deduct from this amount the sum of	156,830,000

representing the surplus for 1928-29, we obtain the actual surplus for 1929-30 38,967,000

The budget thus balanced, though only thanks to a saving of nearly one milliard on the estimates—although the allocations on 1929-30 exceeded, by an almost exactly equal sum, those of the preceding financial year—and thanks to a surplus of receipts, as compared both with the estimates and the results of the preceding year. All the chapters of receipts show increases, except direct taxes, which show a decrease of 154,183,000 leva as compared with the financial year 1928-29; this exception is the result of the decision of the Government to postpone the collection of the land tax until 1930, in view of the bad harvest of 1929.

Owing to the reorganisation and the reforms already carried through, which are based both on the Protocol and the conclusions of various discussions of the Financial Committee at Geneva, we may say that the administration of the finances of Bulgaria is now established on a sound basis, ensuring both order and clarity. Thanks to the centralisation of Treasury operations and the rigorous supervision of all expenditure by the Ministry of Finance, the competent bodies are now in a position closely to follow these operations from day to day. These results are worthy of mention, as they serve to show the success which has accompanied the efforts of the Bulgarian Government to re-establish the finances of the country on a sound footing and cannot but help to strengthen the credit of the country. Nevertheless there remains a great deal to be done. Apart from tax reforms, which appear to be necessary but will require much time and very careful preparation, there are certain measures of immediate importance which might be taken with advantage. One of these is the reform of the public services, necessary in order to secure greater efficiency in these services and less precarious living conditions for Government officials. The Protocol contains undertakings relating to this question, which has just been made the subject of a detailed study containing some interesting conclusions which it is to be hoped will be put into execution without delay. As regards the machinery of the budget itself, there are certain defects which might well be rectified, such as the overlapping of two financial years by three months, which is much too long; the meeting of expenditure incurred on account of previous financial years from current receipts, and the methods of accountancy employed, especially those of the audit office. A large number of these reforms is provided for in a bill with which Parliament was unable to deal at its last session owing to press of legislative work, but which should be voted before the beginning of the next financial year.

As regards the budget year 1930-31, the Ministry of Finance has communicated the following information relating to the first three months, which shows the grave economic depression from which the country is suffering.

	Results of the first three months of the year 1929-30	Results of the first three months of the year 1930-31	3/12ths of the estimates of the year 1930-31	Difference between columns 3 and 4
1	2	3 (In thousands of leva.)	4	5
Direct taxes	145,871	143,165	235,500	— 92,335

Revenue from closed budgets	92,084	63,708	56,500	+ 7,208
Total	1,643,732	1,320,346	1,749,970	— 429,624
Special budget for the railways and harbours	287,577	274,301	465,548	— 191,247
Grand total	1,931,309	1,594,647	2,215,518	— 620,871

The budget was voted late and was not applied until a month and a-half after the beginning of the financial year. In the meantime, expenditure was liquidated against receipts. Consequently, the Ministry of Finance is not yet in a position to furnish detailed information with regard to expenditure.

We may however say that, after the middle of June, even with the most rigorous economy, receipts were not sufficient to cover expenditure in spite of the Treasury balance of 195,797,000 leva from the year 1929-30. The Government was obliged to issue 327 millions of Treasury

bonds through the National Bank, subscribed on account of certain extra-budgetary funds. This operation was the first case of application of the law relating to the administration of public funds, the text of which is to be found in Appendix III¹ of the present report. One of these bonds was rediscounted at the National Bank and appears in its balance-sheet since July 7th.

IV. NATIONAL BANK.

Appendix VI to the present report shows the position of the National Bank at the end of each of the last three months.

During this period, the deficit of the balance of accounts for 1929 was considerably reduced and, especially during the last few weeks, the National Bank received nearly every day credits in foreign exchange, exclusive of the amounts released from the two loans. It was consequently able without difficulty to keep its percentage of cover considerably above the minimum fixed by its Statutes. In this connection, it should be mentioned that the foreign exchange forming part of the cover is that which the Bank holds in the form of credits with foreign banks of issue, in accordance with the provisions of the Statutes—that is to say, currency of a country whose money is legally and actually convertible at sight at a fixed price, in exportable gold or gold exchange. In order to meet its daily requirements, the National Bank also holds elsewhere than in the central banks of issue foreign exchange coming within the terms of this definition, which is consequently not included in the calculation of the cover. The total of these two categories of gold exchange has increased fairly considerably during the last three months. Apart from the fact that the large imports in 1929 must now be practically settled, export trade has yielded fairly satisfactory results, while imports are still very small this year, as will be seen later on. The metal gold reserve is increasing almost regularly by about one million leva each week (about £1,500) by means of purchases within the country; this has been going on for several years. The metal reserve alone at present constitutes more than 30 per cent of the fiduciary issue, plus sight commitments. This is a high percentage and cannot well be increased for long without entailing a heavy loss of interest for the Bank.

Industrial investments, which amounted to 844 millions on July 31st, steadily diminished during the three months under review; they amounted to 1,361 millions at the beginning of the year, while the lowest and highest points for the previous year were 1,303 and 1,718 millions respectively.

This tightening of credit shows that the Bank has managed to make its investments very flexible; in future these investments will exclude various operations which do not come within the normal functions of a bank of issue. Another cause is the stagnation of business; commerce and industry, after the experiences of last year, are showing great caution with regard to their commitments and credit is only granted subject to every kind of safeguard. The private banks are, generally speaking, adopting the same attitude, which has led to a considerable increase in their liquid assets. It is significant that the deposits of other banks with the National Bank increased during the last quarter from 300 millions on May 23rd to 509 millions on July 23rd.

The following table shows the distribution of the investments of the National Bank as at June 30th in each of the last three years, expressed as a percentage of the total investments:

	At June 30th		
	1928 %	1929 %	1930 %
Commerce	27	25	18
Industry	35	26	26
Banks	31	46	51
Miscellaneous	7	3	5

An examination of the bills holding alone, not including advances, shows about 80 per cent for bank rediscounts.

The discount rate of the National Bank is still 10%. The Bank was of opinion that the present signs of improvement and especially the favourable turn taken by the movement of foreign exchange were not yet sufficiently stable to allow of its following the tendency prevailing abroad to reduce rates of interest; incidentally the private interest rates have not appreciably changed in spite of the present abundance of liquid assets in the banks. There is still considerable uncertainty with regard to the conditions of the marketing of the produce of this year's good harvest and the prospect of a consequent general improvement in business. As far as one can venture any statement, it may be said that considerable efforts have been made to place the finances of the country on a sounder basis and that Bulgaria is now in a position to derive full benefit from any resumption of business activity in the autumn. The exportable surplus of the various crops appears considerable—as will be seen later on in the chapter entitled "Statistics"—and likely to compensate in some measure for the fall in the prices of these products. The Agricultural Bank has this year granted credits for financing the harvest on conditions designed to avoid the accumulation of stocks and to favour exports. With this end in view, it has been carrying on active propaganda through its provincial Press organs, and the first results have already been felt.

The Law relating to the administration of the funds of the Savings Bank and various other public funds, which is, as it were, a law in application of Article 60 of the Statutes of the National Bank (see fourteenth report, page 10, last paragraph), came into force on June 5th, 1930. It has

¹ See fourteenth report, page 10, last two paragraphs.

already been applied in two cases: for the subscription of the Treasury bonds issued by the Government in July (see above under "Budget") and for an investment at three months with the Agricultural Bank, designed to enable it to grant seasonal credits at the period of the harvest. The text of this Law is given in Appendix III to the present report.

We also attach to the present report (Appendices IV and V), for information, the two following laws:

- Law of March 15th, 1930, relating to changes in the alloy titration in silver coinage;
- Law of April 28th, 1930, relating to tax exemptions accorded to credit institutions with a view to facilitating their amalgamation and the constitution of reserves.

V. STATISTICS.

(Supplied by the National Bank.)

A. Foreign Trade.

(In thousands of leva.)

	1927	1928	1929	1929	1930
	For 12 months			For 7 months	
Imports	6,173,660	7,192,372	8,162,017	4,873,219	2,518,425
Exports	6,684,201	6,379,413	6,097,356	3,500,449	3,304,656
Balance	+510,541	-812,959	-2,064,661	-1,372,770	+786,231

Imports for the first seven months of 1930 are considerably below those for the same period of previous years. Although the quantities exported are larger, the value of exports has fallen by 200 million leva as compared with the previous year:

	Quantities exported during the first seven months of	
	1929	1930
Number	343,336	815,577
Weight (tons)	137,882	217,508

The greatest increase in quantity is shown by maize, millet and beans (total, above 80,000 tons approximately); leaf tobacco (853 tons), eggs (5,032 tons). In spite of an increase in the quantity exported, tobacco shows the greatest fall in value (216,000,000 leva).

The increase in the coefficient of conversion in leva of the Customs tariff fixed in gold, which was decreed by the Minister for Finance on June 4th last, led to protests from certain countries which export to Bulgaria. It remains to be seen how this measure will affect the markets for Bulgarian products. To take only the one case—the trade between Bulgaria and Greece: in 1929, the latter bought Bulgarian goods for 485 million, and exported goods to the value of only 94 million leva. In consequence of the increase in the Bulgarian tariff, Greece denounced the commercial treaty with Bulgaria.

B. Yield of the Harvest.

The following provisional figures are based on data collected during June and July; it is now known that in some cases the actual yield was 10 to 15 per cent below these estimates. Comparison with the yield of last year's harvest, however, reveals a fact worth noting: the exportable surplus of grain this year should be at least double that of the preceding year.

	Area in hectares	Yield (tons)	Yield of the preceding harvest (tons)	1930 as compared with 1929 (+ -)
Wheat	11,103,977	1,563,437	901,937	+ 662,500
Rye	2,331,879	310,091	195,867	+ 114,224
Meslin	1,025,117	124,608	91,873	+ 32,735
Barley	2,311,640	359,137	234,427	+ 124,710
Oats	1,456,618	155,768	150,139	+ 5,629
Maize	7,272,881	1,031,249	916,181	+ 115,068
Rape	200,830	26,107	504	+ 25,603
Beans	617,950	40,166	59,529	- 19,363
Tobacco	283,490	25,000	32,592	- 8,592

C. Wholesale Price Index Number.

(1914 = 100.)

	1928	1929	1930
January	3,008	3,211	3,107
February	2,999	3,267	2,990
March	3,021	3,290	2,732
April	3,074	3,318	2,721
May	3,134	3,338	2,637
June	3,078	3,245	2,514
July	2,987	3,200	2,467

D. Total of Protested Bills.

	1928		1929		1930	
	Number	Leva	Number	Leva	Number	Leva

Appendix III.

LAW REGARDING THE INVESTMENT AND EMPLOYMENT OF PUBLIC FUNDS, FUNDS OF THE SAVINGS BANK AND OF STATE UNDERTAKINGS (SANCTIONED BY THE UKASE OF MAY 18TH, 1930, AND PUBLISHED IN THE "OFFICIAL JOURNAL", NO. 50, OF JUNE 5TH, 1930).

Article 1. — In accordance with Article 60 of the Law on the National Bank of Bulgaria, all public and State funds, Post Office Savings Bank funds and funds of State undertakings must be deposited at the National Bank of Bulgaria.

Article 2. — With a view to ensuring the better employment of sums belonging to all public and State funds at present in existence or to be constituted in future, to the Savings Bank and

¹ Not including a sum of £24,144 os. 1d., which was used direct to pay in sterling for material supplied for the Rakovsky-Mastanla Railway.

² The equivalent of interest collected by the Bulgarian Government on sums deposited abroad and paid into the loan account to make up the sum earmarked for road improvement (see twelfth report, page 9, "(b) Roads").

³ This figure represents:

(1) The unexpended balance of the block of £1,250,000 earmarked for improvement of means of communication, namely:

65,594,013 leva at the National Bank of Bulgaria;
6,311,483.30 francs at the Bank of France;
£470,213 13s. 0d. at the Bank of England.

(2) The unexpended balance of the block of £500,000 earmarked for the reconstruction of areas devastated by the earthquake, namely:

86,000,000 leva at the National Bank of Bulgaria.

to public undertakings, at present deposited with the National Bank of Bulgaria, the Agricultural Bank of Bulgaria, the Central Co-operative Bank or elsewhere, as well as of sums which may in future be deposited or released, a special committee shall be set up, called "The Committee for Administration of Public Funds", composed of the Governor or one of the Deputy Governors of the National Bank of Bulgaria as President and one representative of the following institutions: the Ministry of Finance, the Agricultural Bank, the Central Co-operative Bank, the Public Debt Office, the Post Office Savings Bank and the particular fund for the purpose of which the Committee is convened.

This Committee shall meet at the Public Debt Office periodically as required—but, in any case, once a month—to decide upon the allocation of the sums available for investment and the method of their employment. The investments recommended must be consistent with the financial policy of the National Bank of Bulgaria and any investment which, in the opinion of the National Bank's representative on the Committee, would be incompatible with such policy must be rejected.

Article 3. — The Committee referred to in the preceding article shall examine how the sums belonging to the various funds, the Savings Bank and State undertakings which are not at present administered by the National Bank, are invested and decide on the steps to be taken in accordance with the provisions of the present law.

Article 4. — By decision of the Committee taken on the basis of information previously obtained on the actual commitments as well as the future requirements of the funds in question or of the Savings Bank, the sums available, immediately or in the future, may be employed as follows:

(a) For purchasing bonds of, or guaranteed by, the State, and Bulgarian or foreign currency.

(b) For deposit, at or without notice, with the Agricultural Bank of Bulgaria or the Central Co-operative Bank for investment as previously approved by the Committee.

Any difference of opinion arising on this subject within the Committee shall be referred for decision to the Minister of Finance.

(c) For deposit, at or without notice, with the Savings Bank.

(d) The National Bank may purchase for account of the funds, and up to 40 per cent of their amount, commercial bills similar to those which under its Statutes, it is authorised to purchase for its own account.

In case of need the Bank may discount the above bills provided that this transaction, at the time when it is effected, is not compatible with its credit policy.

(e) Short-term loans on the Savings Bank, up to a maximum of 20 per cent of the latter's capital, may be granted to the Directorate-General of Railways and Ports for its requirements.

Article 5. — The provisions of all other laws inconsistent with the present law are abrogated.

Appendix IV.

LAW AMENDING ARTICLE 3 OF THE LAW REGARDING THE STABILISATION OF THE LEVA AND CURRENCY CIRCULATION IN BULGARIA (SANCTIONED BY UKASE DATED FEBRUARY 26TH, 1930, AND PUBLISHED IN THE "OFFICIAL JOURNAL", No. 281, OF MARCH 15TH, 1930).

Sole Article. — In Article 3, paragraph 1, of the Law on the Stabilisation of the Leva and Currency Circulation in the Kingdom of Bulgaria, published in *Official Journal* No. 200, of December 3rd, 1928, the figure "680" should read "500" and at the end of Article 3, paragraph 3, after the word "alloy", should be added the following words: "calculated in both cases on the basis of 100 grammes for each kind of coin."

Appendix V.

LAW CONCERNING THE FISCAL EXEMPTIONS GRANTED TO JOINT-STOCK OR LIMITED PARTNERSHIP BANKS AND TO CO-OPERATIVE CREDIT ASSOCIATIONS (SANCTIONED BY UKASE DATED APRIL 17TH, 1930, AND PUBLISHED IN THE "OFFICIAL JOURNAL", No. 20, OF APRIL 28TH, 1930).

Article 1. — Joint-stock and limited partnership banks and co-operative credit societies shall be exempt from the payment of surtaxes and supplementary charges on:

(a) Deductions from net profits placed to reserve funds, to whatever amount, up to 100 per cent of the capital;

(b) Staff pension funds and other reserve funds, with the exception of funds earmarked for guaranteeing regular dividends;

(c) Secret reserves, if any, as shown by valorisation of the balance sheet;

(d) Premiums charged on share issues for the increase of capital and paid into the reserve fund with the object of equating such issues with the real value of the existing shares and stock.

Article 2. — Any instrument, deed (notarial deeds and shares included) drawn up or issued on the amalgamation of joint-stock or limited partnership companies and co-operative societies with limited liability legally constituted and properly registered, shall be exempt from all taxation (including the tax on capital referred to in Article 94b of the Law on the 6/12 of the budget for the second half of the financial year 1919-20 and the 10 per cent surtax for the " Law Courts Fund "), dues, stamp duties, etc., if such amalgamation took place and was registered between April 1st, 1930, and December 31st, 1931.

The above exemption shall apply equally to amendments of statutes and increases of capital made on the amalgamation of the above-mentioned companies and associations.

Taxes, dues, contributions, etc., which have already been paid for amalgamations applied for before April 1st, 1930, shall not be refunded.

Appendix VI.

POSITION OF THE NATIONAL BANK OF BULGARIA.

Geneva, September 26th, 1930.

LEAGUE OF NATIONS

FINANCIAL WORK

REPORT PRESENTED BY THE SECOND COMMITTEE.

Rapporteur : M. VENNERTEN (Sweden).

The work carried out by the Financial Committee or under its general direction up to the end of last August has been recorded briefly in the report of the work of the League since the tenth session of the Assembly and in the supplement to that report. The last meeting of this Committee, however, only terminated on September 9th, and on that occasion the Committee submitted to the Council one of the most notable reports which it has prepared for a number of years. This report (document A.41.1930.II), which has been laid before the Second Committee, is divided into two parts. The first part deals with current work and the second contains a brief review of the Financial Committee's past work and a considered statement concerning its functions.

The Second Committee desires to draw special attention to this document, which was approved by the Council on September 24th, and especially to the second half of it.

The first part of the report records the successful termination, or proximate termination, of four of the major pieces of work which have occupied so much of the Committee's time in recent years — the Greek Refugee Settlement Scheme, the measures adopted in connection with Greek financial reconstruction, the Bulgarian Refugee Settlement Scheme and the monetary and banking reorganisation in Estonia.

But, since this report, considered so recently by the Council, was drafted — indeed, during the last few days — another, a fifth important undertaking for which the Financial Committee has been largely responsible — the Convention on Financial Assistance — has been brought to a successful conclusion.

While one chapter of the Financial Committee's work has thus closed, another has been opened which recounts a story, different, it is true, from the past, but of no less interest or significance.

Thus, the Financial Committee draws the attention of the Council to the fact that its special delegation set up to study certain aspects of the problem of the purchasing power of gold has now drafted an interim report dealing with one important aspect of the problem. Thus, too, a new piece of work has just been undertaken by the Committee which is of special interest in connection with the lines along which its activities are now being directed. During the course of its last meeting, the Bulgarian Government, with which the Committee has been for so long in the closest touch, asked that a study should be made of the organisation of the co-operative system in Bulgaria, under the general direction of the Committee; and it has now been definitely arranged that two experts of recognised authority on co-operative questions should be sent to study the situation on the spot. This enquiry is likely to prove of value, not only to the country directly interested, but also to the Committee itself in connection with another question of general importance that has recently come before it — namely, that of agricultural credits, referred to it by the Preliminary Conference with a View to Concerted Economic Action. This recent development will no doubt be watched by all agricultural States that are interested either in the assistance that may be afforded by special enquiries and advice or in the wider problem of the organisation of agricultural credit.

Of the four pieces of reconstruction work which are now terminating, that of the settlement of Greek refugees has deservedly attracted the most public attention. It is not, however, necessary to review in detail now the efforts which have been made during the last seven years to accomplish this end.

The progress of the work has been fully recorded in the twenty-seven reports of the Refugee Settlement Commission, particularly the nineteenth and twenty-seventh reports, and in the volume issued by the Commission in 1926. Moreover, the Assembly has in past years been informed of its progress, and is well aware of the beneficent economic, political and social consequences of the successful accomplishment of this great task.

Speaking of the million and a-half refugees who poured into Greece from Asia Minor in 1922, Mr. Howland, the past President of the Commission, says :

“ On the humanitarian side, imagination cannot compass the event. Only those can make the effort of understanding who have seen destitution, misery, disease and death in all their possible forms, and the scale of this disaster was so unprecedented as to demand even from such persons a new vision.”

The League's Commissioner in Bulgaria and the Financial Committee are of the opinion that the settlement of Bulgarian refugees will be finished by the middle of next year. Though the number of refugees was much smaller than in Greece, their settlement was of real importance both to the economic and to the political welfare of the country.

With reference to the work on financial reconstruction in Greece, it will be recollected that, when, in 1927, the Protocol for the Stabilisation Loan was signed, the Greek Government undertook to make quarterly reports to the Council on its budget situation. These reports have given the occasion for periodical consultations between representatives of the Greek Ministry of Finance and the Financial Committee of the League. The last of these reports has now been received. The work has been remarkably successful. The Greek budget has been in equilibrium during the last three years, and a number of financial administrative reforms of no small importance adopted.

The problem of financial reform in Estonia differed widely from that which had to be faced in Greece, and arose rather from currency and banking than from budgetary difficulties. When the Protocol for the Estonian Stabilisation Loan was signed, it was agreed, therefore, that the Council should nominate an adviser to the Central Bank to be appointed by the Estonian Government for a period of three years. This period has now come to an end, and the banking and currency reform has been successfully completed.

You will recollect that the Rapporteur of the Second Committee, the honourable delegate for Poland, M. Gliwic, in his extremely interesting speech last year, drew the attention of the Assembly to the fact that a special delegation consisting of certain members of the Financial Committee and other experts of international authority have been appointed “ to examine into, and report upon, the causes of fluctuations in the purchasing power of gold and their effects on the economic life of the nations ”. This delegation has made an exhaustive enquiry into the question, which must necessarily form the basis of its subsequent work, whether the prospective supply of gold is likely to prove adequate to meet the probable monetary demand in the future, and has prepared an interim report on this subject. As a result of its very careful and extensive study of the most authoritative sources of information on this subject, the delegation reached the considered conclusion, to quote the words of the Financial Committee itself, “ that the inadequacy of the supply of new gold available for money is likely to be such as to become a factor in the next few years exercising a depressing influence on prices ”. It adds, however, that remedial measures may be found to prevent the consequences anticipated making themselves felt for, at any rate, some time to come, and in the last pages of its report it indicated the directions in which, in its opinion, such remedial measures may be sought.

We have all of us learned to appreciate only too fully the disastrous effects of falling prices, and it is almost unnecessary therefore to emphasise the very great importance of the findings contained in this most illuminating report.

The Assembly will endorse the view expressed by the Financial Committee already approved by the Council, that the report as a whole deserves the serious consideration of the authorities which are responsible for the monetary systems in the different countries of the world.

Other questions on which the Financial Committee has been engaged in the course of the year under review include the Convention for Financial Assistance, to which reference has already been made, falsification of documents of value, the Greco-Bulgarian emigration, the proposed Saar loan, the Hungarian Committee of Control and the Agrarian Fund, the Danzig loans, etc.

Such, then, are the problems which have occupied the major portion of the time of the Financial Committee. But mention must be made also of the work of the Fiscal Committee, which is closely related to it.

The Fiscal Committee has been in existence now for a little more than a year. It is an advisory body for fiscal questions in general, but is primarily concerned with the question of double taxation. This youngest Standing Committee of the League is doing excellent work. It is preparing, at the moment, a multilateral Convention for the avoidance of double taxation. With the help of a grant from the Rockefeller Foundation, it is starting an enquiry into the manner in which the branches and subsidiaries of foreign companies are taxed in different countries. It has already drafted rules for distinguishing an autonomous agent from a permanent establishment, which is one of the most delicate questions in international tax law. It has also adopted, in first reading, rules for taxing patent and copyright royalties. It has prepared a statement on the bearing of the most-favoured-nation clause to taxation questions. With the Transit Organisation, it has prepared a draft Convention on the taxation of foreign motor-cars, etc.

This brief summary may suffice to show how wide is the range of questions with which the Fiscal Committee is engaged, and how actively it has been employed during this first year of its work. It should be added that the work which the League has conducted in the

field of double taxation in earlier years has no doubt contributed to the more equitable conditions which are resulting to-day from the series of bilateral agreements concerning double taxation recently signed between various States.

From what has already been said, it is obvious that the greater part of the time of the Financial Committee in recent years has been taken by its important work on financial reconstruction. As gradually, reconstruction schemes were brought to a successful termination, the Committee was able to devote more of its attention to general problems of international concern, and, very wisely in my opinion, has considered that it might be helpful at this stage to review briefly the work which it has accomplished and the new tasks which lie before it.

In the illuminating and important section of its report devoted to this subject, the Financial Committee divides its work into three main categories :

- (1) General financial questions ;
- (2) Advice and assistance to particular States ;
- (3) Advice on financial questions arising out of current political or administrative work of the Council.

Among the questions of a general financial order now occupying the attention of the Committee may be mentioned the problems of double taxation, of agricultural credits and of the influence of gold supplies on general economic welfare, to which allusion has already been made. These three questions are selected simply by way of illustration out of the many of outstanding importance that deserve and command the attention of the financial experts who have put their services at the disposal of the League.

The Financial Committee also alludes in its report to the question of the alternating periods of prosperity and depression. This question is being considered by the Second Committee in connection with the economic work of the League. In all such cases having at once economic and financial interest, the appropriate divisions of the Economic and Financial Organisation of the League will of course work in close co-operation.

The section of the report, which, in the opinion of the Second Committee, demands the special attention both of this Assembly and of each several Government, is that dealing with the advice and assistance which the Financial Committee is in a position to render to individual States. The reconstruction work carried out by the League during the last ten years has necessarily depended for its success on the sound advice which the Financial Committee has given. Incidentally, the raising of foreign loans has, in most cases, also been necessary in order to re-establish national finances on a sound basis. But, as the Financial Committee itself points out, that fact has been an accident of the abnormal circumstances of the past, and it is desirable that Governments should realise the facilities which the League offers for the wholly disinterested advice on financial questions of a body of persons of the standing and authority that the members of this Committee possess. The range of questions — whether they be related to questions of budgetary or taxation systems, currency or banking, the organisation of credit for agricultural or other credit, or the general financial conditions of a country — on which Governments may desire to avail themselves of such advice is obviously a wide one.

It is possible, of course, that the advice sought may have a bearing on some future loan that a country wishes to raise, and the Council has approved the suggestion that such advice should be given on the condition that, if the fact that it has been obtained " is mentioned in connection with a loan operation, the prospectus of the loan shall contain a statement drafted by the Committee explaining the exact limits of the responsibility it has assumed " .

It may, it is thought, be anticipated that, when advice is sought in the future, it will normally be either wholly unconnected with, or but indirectly related to, subsequent loan operations. It is not impossible, however, that problems of financial reconstruction more or less similar to those already undertaken may arise, or that a Government may desire to raise loans " under the auspices of the League " for general economic development. The Council has approved the proposal that loans for economic development in a particular country should not, in principle, be regarded as within the scope of loans which may be issued " under League auspices " ; but this is not to exclude the consideration of such loans when they present special international interest or advantages.

The third category of work before the Financial Committee— *i.e.*, " Advice on financial questions arising out of current political and administrative work of the Council ", is no less important than those to which reference has been made. The Financial Committee is, of course, the technical advisory body of the organs of the League of Nations on financial questions ; and, now that the work of reconstruction is so nearly completed, it may perhaps be expected that a greater proportion of its time will be devoted to the financial questions which arise out of the work of the League in other fields. The Financial Committee gives as examples of this kind of work financial questions arising in relation to work of the Mandates Commission, or the administration of the Saar, or the preparatory work in relation to Article 16 (and application, if the occasion arose), or budgetary problems in connection with disarmament.

The great reputation and authority acquired by the Committee during the past decade has been well deserved, for it is the fruit of hard and disinterested technical work which has produced practical and visible results known the world over.

It has often been said from the tribune of the Assembly, and particularly repeated this year, that we cannot expect from a new institution like the League quick and positive results in attempting to deal with the complex problems which beset the modern world. But here we have an example of practical results of far-reaching effect being obtained through the determined and careful work of a group of first-class experts animated by a determination to carry to a conclusion by co-operative effort the important tasks which have been submitted to it.

I beg to propose the following resolution to the Assembly :

“ The Assembly :

“ (1) Expresses its appreciation of the valuable work of the Financial Committee ;

“ (2) Draws the attention of all Governments to the interim report on the question of the purchasing power of gold submitted by the Financial Committee to the Council ;

“ (3) Approves the principles set out in the statement of the Financial Committee on its work and functions which is contained in the report on its thirty-ninth session, transmitted by the Council to the Assembly for its consideration ; and

“ (4) Expresses its appreciation of the work being undertaken by the Fiscal Committee.”

Geneva, September 29th, 1930.

LEAGUE OF NATIONS

ECONOMIC WORK OF THE LEAGUE OF NATIONS

A. GENERAL CONSIDERATIONS.

Before setting out in the present report the results of the Second Committee's discussions and submitting to the Assembly the conclusions arising therefrom, a few general impressions may be given of the main tendency of this Committee's work.

There is an unhesitating and clear determination to find a remedy for the confusion at present existing in world economy by strengthening, rationalising and systematising what is commonly called "concerted action" between States. It has been expressed with a force and depth of feeling that show the seriousness of the evils from which all countries in the world are suffering and betray a fear of the disasters that may result from this state of affairs and endanger international relations. Throughout all the Committee's discussions one idea has constantly recurred—a greater and more sincere effort must be made towards international co-operation, with a view to ensuring a peace resting on solid foundations.

To what points should this effort be directed in the economic sphere? Is it by closer co-operation between all the countries of one continent, by agreements between certain groups of such countries, by seeking for closer co-operation between continents, by lowering Customs tariffs, by rationalising the most-favoured-nation clause, by regulating credit, or by rendering more normal the movement of gold that the causes of the confusion and misunderstanding between the various countries can be most rapidly removed, and that a rational basis can be created for international trade? In the Second Committee's discussions, very few speakers questioned the value of one or other of these measures. Henceforward, there can be no doubt that they may all contribute to the desired result. Divergences of opinion appear when an effort is made to arrive at an agreement—which is, however, indispensable—on the relative importance and efficacy of these measures, the order in which they should be taken up, and the way in which they should be co-ordinated.

The investigation conducted by the Second Committee has, in this respect, given substantial results. The speeches of delegates have not only constituted a careful diagnosis of the economic ills and troubles prevailing in the world, but have also made a highly valuable contribution to that process of arranging the various tasks in order of succession, which is an essential element for the success of the work of the League.

It should be noted that the Committee had to conduct its work in accordance with the ideas and opinions expressed by the Assembly during the general discussion. Were any principles evolved from this general discussion that could guide the Committee in the investigation which it was about to make into the new demands imposed on the combined action of the States by the economic depression? Did this general discussion lead to the establishment of guiding principles which would facilitate the work of the Second Committee? It is unnecessary to recall all the statements made on any particular economic measure, but it is desirable to draw attention to certain points of agreement shown in the discussion in the Assembly which might at any rate direct the lines of the Committee's work.

Among the principal subjects forming what may be called the common setting of all the economic questions submitted to the present Assembly may be mentioned the inadequacy of national action, as a means of solving of the economic problem effectively and the more and more urgent necessity of organising world economic conditions, the usefulness of regional economic agreements—in particular, a European agreement within the organisation of the League—the evils of an excessive protectionism and the necessity of remedying them.

In addition to these general principles, other definite and special problems were raised in the debates which the Committee had to take into consideration. We may mention the manner in which, and the extent to which, the struggle against protection should be carried on; the obstacles encountered in applying the most-favoured-nation clause, and the necessity of an international settlement of this question; the basis, contents and limits of agreements between groups of States with common interests, or agreements for the exchange of certain commodities and articles; the agricultural depression; the distribution of gold; the circulation of capital, of raw materials and of labour; credit; the possibility of shortly convening the International Economic Conference.

In addition, the Committee had to report on the work accomplished since the last Assembly, particularly in execution of the resolution regarding concerted economic action. It has had the greatest satisfaction in recording the results obtained. At this point, the Committee would refer to the imposing volume of work accomplished by the Economic Organisation.

B. RESULTS OF THE LEAGUE'S WORK IN ECONOMIC QUESTIONS SINCE THE LAST ASSEMBLY.

I. The first step was taken by the *Preliminary Conference*, held at Geneva in February and March this year, which led to the establishment of the *Commercial Convention* and the *Protocol regarding the Programme of Future Negotiations*. It should be pointed out that, in pursuance of the decisions of the last Assembly, all the States Members and non-Members of the League of Nations had been invited to take part in this Conference. However, by a process of auto-selection, probably corresponding to deeply felt needs, this Conference assumed a definitely European character.

In fact, all the signatories of the Commercial Convention of March 24th, 1930, and of the Protocol of Future Negotiations are, without exception, European countries.

For the first task assigned to this Conference, a draft had been prepared by the Economic Committee in accordance with the Council's instructions. An attempt was made in this draft to embody the idea of a Customs truce on the basis of which the future negotiations were to be carried on. But, as the work of the Conference proceeded, the difficulties in the way of such a scheme loomed larger and larger as most countries did not feel that they were authorised definitely to abandon, even for a short period, the right to introduce modifications in their Customs system in favour of certain branches threatened by the depression. In taking this line, the Conference was influenced, in particular, by the precarious position of agriculture. It soon became evident that, if the Conference wished to maintain intact the project of the Customs truce, it would have to dispense with the co-operation of several important countries or destroy almost entirely the value of the principal undertaking by admitting a great number and variety of exceptions.

The Conference had apparently arrived at a deadlock, and it was only thanks to the goodwill of the delegates that it was able to adopt a new formula and draw up a Convention which has up to the present been signed by eighteen European countries. The Customs truce, as conceived by the Economic Committee, was replaced by the undertaking to prolong, until April 1st, 1931, any commercial agreements which might expire before that date.

This prolongation is supplemented by a system of safeguards intended to secure a relative measure of stability in the Customs system of the signatory countries.

At first sight, the Commercial Convention may appear a much less effective agreement than the Customs truce proper, but the Second Committee is of opinion that its value should not be underestimated. In this Convention the States have, for the first time, recognised in the most explicit manner the interdependence between their national tariff policy and the interests of other States. In consideration of this they have undertaken to submit any Customs increases—save any modifications of duties introduced by law or on account of urgent circumstances—to negotiations designed to minimise, as far as possible, the injury which such increases might cause to the interests of the other signatory States. This is undoubtedly a considerable advance.

2. The second part of the Conference was devoted to establishing a list of the questions which should form the subject of future negotiations.

The result of this work is recorded in a Protocol defining the limits within which the negotiations should take place and indicating the procedure to be followed in preparing these negotiations.

The signatures of only three countries are now required for the Protocol to constitute a complete framework corresponding to the idea of European economic union which was so strongly emphasised at the Tenth and Eleventh Assemblies.

3. In November 1929, the *International Conference for the Treatment of Foreigners* was held at Paris.

This Conference, which was attended by forty-seven countries from all parts of the world, had to deal with an extremely complicated question bearing on a wide range of subjects. It is not surprising that the Conference encountered great difficulties. It nevertheless accomplished extremely valuable work by discussing and defining, in the course of long debates, a great number of questions which are now cleared up and prepared for final decision.

The Conference began work on the basis of a draft inspired by liberal ideas and established by the Economic Committee. In many cases, the Paris Conference improved the provisions drawn up by the Economic Committee by making them clearer and surrounding them with the necessary safeguards; but it must be admitted that in its desire to make allowance for the special circumstances of this or that country, the Conference proceeded to weaken the provisions to such an extent that it found itself heading for an agreement that would certainly have provided even less than the present practice.

The Conference declined to adopt this course, and preferred to postpone the conclusion of the Convention to a second session, in preparation for which a Committee was formed.

4. *As regards the Convention for the Abolition of Import and Export Prohibitions and Restrictions*, the effects of the economic interdependence existing, in particular, between the many countries grouped together in Europe made themselves felt in no uncertain manner, and unfortunately to the detriment of the success of the contemplated action.

The fact that one of the signatory countries was unable to ratify the Convention led, by a chain of consequences involving one country after another, to the abstention of a whole group of closely connected countries, and thus reduced to seven the number of States between which the Convention is in force for a certain period. These are Great Britain, Denmark, the United States of America, Japan, Norway, the Netherlands, and Portugal—all countries in which, with few exceptions, the system of prohibitions is not applied.

5. The *Committee of Veterinary Experts* succeeded in evolving a number of important principles relating to the organisation of veterinary services, and to the institution of an international basis of a more effective struggle against animal diseases by closer co-operation between the services concerned.

6. In two spheres in particular the League of Nations has obtained striking results in the course of the past year.

The *International Conference for the Unification of the so-called "Continental" laws on bills of exchange* led to the conclusion of three Conventions, which have so far been signed by twenty-six States. In view of the attitude of these States, it is reasonable to expect that the

ratifications will take place within the periods laid down. The League of Nations will then have recorded marked progress in a question which should facilitate the normal and smooth development of commercial relations. In this way, the object of the Hague Conferences of 1910 and 1912 will have been achieved.

The regulation of the laws regarding cheques was referred to a second session of the same Conference, which will probably meet early in 1931. The interval between the two sessions is being employed in thorough preparatory work, and there is every reason to believe that the second Conference will prove as successful as the first.

7. Last year, the Assembly asked that the work relating to the *unification of Customs nomenclature* should be completed before the meeting of the Eleventh Assembly. The Second Committee noted the report submitted by the Sub-Committee of Experts to the Economic Committee, indicating what had so far been done, the work still to be accomplished and the reasons why the work could not be completed within the period laid down.

The unified Customs nomenclature can be drawn up in its entirety, accompanied by the necessary explanatory notes, by the end of the first half of 1931. The Sub-Committee of Experts has already contemplated certain forms of procedure to facilitate the adoption of the unified nomenclature by the various States and to maintain the unity of this nomenclature once it is adopted.

8. Immediately after the last Assembly, the Economic Committee summoned a joint meeting of coal experts who had already been heard in two separate groups.

The experts considered and discussed at length the various possibilities of international co-operation, to which attention had been drawn at previous meetings, including a proposal for the establishment of an international organisation grouping together delegates representing the Governments, labour, industry and consumers.

They further considered other international aspects of the question, such as, for example, how the artificial measures affecting the production or distribution of coal might be made less drastic.

The discussion thus begun was found most useful, and has furnished information and suggestions of great value: but the views concerning the different forms of possible co-operation were still too indeterminate to enable the Economic Committee to formulate conclusions.

It seemed necessary, moreover, to await the further progress of the work which is proceeding under the auspices of the International Labour Office on the adoption of international measures about conditions of work, and, in particular, hours of work in coal-mines. It will be remembered that, in June last, the International Labour Conference had before it a draft Convention, which did not obtain the necessary majority of votes and is to come up again at the next session of the Conference.

The Economic Committee will be in a position to resume its study of the question as soon as circumstances allow it to do so.

9. This year, for the first time, the Economic Committee has got into direct touch with the qualified representatives of agricultural circles by means of a meeting of experts, with the co-operation of the President and one other representative of the International Institute of Agriculture. This co-operation will provide a valuable basis for all the economic studies which the League may undertake on subjects connected with agriculture.

The reports of the experts on the nature and causes of agricultural depression in the various countries will shortly be collected together, and will undoubtedly constitute a useful basis for further discussions.

A powerful factor contributing to the conciliation of the various and sometimes conflicting views expressed concerning the programme of future work has been found, not only in that determined spirit referred to already, which actuates all persons having public responsibilities—the determination, that is, to overcome all obstacles and to organise economic peace, in the face of no matter what adversity or antagonisms—but also in the knowledge that the means to that end and the instrument required are available in the form of the Economic and Financial Organisation of the League of Nations. The Committee was unanimous, as the Assembly will doubtless be, in conveying to the latter an expression of its profound satisfaction.

10. It may be taken as certain that all problems referred for study to the Economic Organisation will be considered with the greatest care. The range and variety of the economic enquiries undertaken by the League, for which it is frequently criticised, are not the result of ill-considered initiative on the part of the executive organs of the Secretariat; they are simply the consequence of, or sequel to, decisions taken by the Assembly or the Council. The range and variety of these researches is due to the universal character of economic difficulties and their complexity and interdependence.

If the number and extent of these researches are not detrimental to thorough and efficient work, this system must be preferred to a system of fragmentary studies, limited in scope and taken up seriatim, which can only yield a partial reflection of economic realities. For time is a factor engendering continual, and sometimes abrupt, changes in these realities; and, though (as we have said above) it may be necessary for the success of the League's endeavours that the various subjects should be taken up in sequence and that efforts should be concentrated on them in turn, it is also important, at certain moments, to survey and appraise the economic situation in its manifold forms, in order to determine clearly what measures should be proposed and what their effects are likely to be.

We believe that the methods of the League of Nations, with its special studies and special conferences fitting into the framework of its general enquiries and general conferences, provides a sound means for procuring abundant and accurate information on the principal problems of the day.

C. WORK OF THE COMMITTEE.

I. *Development of the Economic Depression.*

In conformity with the preliminary discussion in the Assembly on economic subjects, the discussions of the Second Committee, which were dominated throughout by the worldwide economic depression, have either dealt in general terms with the causes and various aspects of the depression in certain countries or throughout the world, or have been directed to the elucidation of various problems of commercial policy which the development of the depression renders more and more urgent.

As regards the first point, the Committee did not consider it desirable to undertake an investigation into the causes of the economic depression to be carried on by the League independently of what others are doing in the same direction, but thought it would be well to collect the evidence which exists already and which is being gathered by different national institutions and to complete the investigations so far as there may be any lack of information.

Since the action consequent upon the first Conference is now in full swing, the Committee does not consider that the time has come to summon a Second World Economic Conference at an early date. The Economic and Financial Organisation of the League exists for the very purpose of keeping in touch with the progress of the work, elucidating obscure points, and following closely all the questions raised by the evolution of the depression. As a large number of enquiries have been conducted in the various countries on the subject of the depression and the difficulties of every kind to which it gives rise, the Committee considers that the Economic Section should devote itself to the task of scrutinising and co-ordinating this mass of data with a view to determining its main characteristics.

One special aspect of the question is that of the recurrence of periods of economic depression to which allusion was made by certain delegates in the first days of the present session.

When we consider the magnitude of the losses from which the world suffers during a period of economic stagnation similar to that through which the world is now passing, it is impossible not to be impressed by the almost absolute failure of society up to the present to devise any means by which such disasters may be averted. The Committee felt that this problem was one which imperatively demanded co-ordinated and concerted study, and recommends, therefore, in a separate resolution, (1) that the facts and special characteristics of the present depression should be ascertained and carefully sifted with the aid of work already done by national research institutions and (2) that an endeavour should also be made to study the causes of the recurrence of periods of prosperity and depression.

National investigations are already being conducted in certain countries. A number of research institutions have been founded in recent years to study this question, and a number of Governments have set up, in addition, central economic planning or advisory councils.

The Committee considers that the first step should be to ascertain, after consultation with the bodies just mentioned, by what means the work which is now being done may be co-ordinated and stimulated, to collate the results already reached, compare the experiences and researches of the various national institutions and thus at once to promote the world study of what is essentially a world problem and to devise means by which countries may acquire a greater control over their economic destinies.

The Committee, however, desires to add that it is fully conscious of the difficulties and obscurities of this highly technical scientific problem. It is not putting forward this recommendation on the assumption that any ready-made solution is likely to be rapidly discovered. It felt, however, that the League would be failing in its obligations if it refused to face the problem on the grounds that it was intricate or difficult.

The Committee notes with satisfaction that the number of ratifications necessary for the entry into force of the *International Convention relating to Economic Statistics* have now been received, and that it is, therefore, possible to begin work on the *Annual Survey of Economic Developments*, the preparation of which the Assembly recommended last year. This Survey, which is intended for the general reader, is, of course, wholly distinct from the scientific analysis of the special problems of the economic depression mentioned above.

In regard to one of the symptoms, and at the same time one of the most painful consequences, of the depression—viz., *unemployment*, the Committee understands that the International Labour Office is already enquiring into this question and into the movements of wages. It hopes that it will be possible to utilise the results of this enquiry for the projected study of the development and phases of the prevailing depression. It expresses the hope that close and continuous contact will be established to the greatest possible extent between the League of Nations Economic and Financial Organisation and the International Labour Office with a view to utilising the specialised experience of the competent organisation in connection with any other economic question that affects the interests of labour. This would apply, in particular, to the question of coal, which, as stated above, has been the subject of study and discussion by the League and which has formed the subject of a communication from the International Miners' Federation emphasising the pressing nature of this question. The Assembly cannot leave out of account the efforts which have been made by the International Labour Office, on the one hand, and the Miners' International Federation on the other to solve this important question in accordance with the general interest.

The Committee considers that the general interest is the interest also of the consuming countries. Provision should accordingly be made for the co-operation of the latter in all future enquiries or meetings.

2. *Agricultural Depression.*

The troubles from which agriculture is suffering, which are one of the primary causes, if not the sole primary cause, of the general economic depression, have been the theme of numerous speakers in the Committee, particularly the representatives of the agricultural countries of Europe. The fundamental facts are well known, and here again it would be useless to propose new enquiries. The depression has been diagnosed on a number of occasions and in more quarters than one. Additional enquiries can only yield more precise information as to the details and incidence of the depression as it has developed in particular circumstances and in particular countries. The data furnished by that valuable source of information, the International Institute of Agriculture, agree in indicating that, in the case of almost all essential commodities and raw materials, there has been a great increase in production, which is almost always in excess of the increase in consumption. In the case of cereals, and wheat in particular, the most recent data do not, unfortunately, suggest favourable prospects.

It will readily be understood that, under these circumstances and with these prospects, anxiety is increasing, that apprehension is deepening and that complaints are growing more and more insistent, while suggestions and recommendations of every kind advocating recourse to immediate and decisive remedial action abound. This state of mind was reflected in the discussions of the Committee, though tempered always by that attitude of reserve which a sense of responsibilities imposes on men of experience.

The Committee is bound to take note of all the work already accomplished by the International Institute of Agriculture, the close and continuous co-operation of which with the League of Nations is a sure guarantee of the value of the investigations and of the justification for such solutions as may be proposed. In particular, the Committee is glad to record the stimulus given by the co-operation of the two organisations in the studies on cereals and sugar, and it notes that invitations will shortly be issued by the Institute to the meetings in preparation for the second session of the World Conference on Wheat, one of these meetings being concerned with European countries and the other with countries oversea. If the Committee could express a wish on this subject, it would be that these meetings should study carefully the way in which new means may be found of utilising wheat for industrial purposes in view of the enormous stocks accumulated. Efforts towards a solution in this sense are already proceeding. It will be necessary to take them into account and to endeavour to extend them and give publicity to their methods and advantages.

Another wish which the Committee expresses is that all the countries concerned will duly afford the most effective assistance in their power to the forthcoming meeting of the Institute, which is to deal with European wheat problems.

3. *The Most-favoured-nation Clause.*

The uneasiness occasioned by the present depression is also responsible for certain difficulties which have arisen in connection with the application of the most-favoured-nation clause, as well as for the movement in the agricultural countries of Eastern Europe which has led to the proposals submitted by the latter to the other States represented in the Assembly.

Whether proposals relate to European agreements on the lines of the idea discussed in the Assembly at the initiative of the French Government, or to more limited projects for regional agreements inside Europe, or, again, to understandings covering the whole of particular branches of production, and not subject to any geographical limits—all these new and frequently conflicting ideas, springing from pressing needs, are so many symptoms of a situation the serious character of which is realised by all. The different countries, conscious of the fact that national action alone, however useful and necessary, is powerless to cope with current difficulties, are anxiously seeking for international solutions.

The Assembly cannot remain passive in face of this state of affairs. The Second Committee is of opinion, however, that it is desirable not to depart from the programme of concerted action which was drawn up, after mature reflection, by the Tenth Assembly.

Reference has already been made to certain divergences of view which became apparent in the Second Committee on the subject of the application of the most-favoured-nation clause. As stated, their origin is probably to be found in the serious difficulties with which agriculture has now to contend in almost every country. Had it not been for this depression, some countries would probably not have found themselves compelled to raise their Customs duties on certain important agricultural products, while compensating such increase by the admission of specified quotas at the old ratio of duty—a development which has been the subject of somewhat lively discussion in recent months.

The question which arises is whether, and, if so, under what conditions, the allocation of quotas is compatible with the spirit of the most-favoured-nation clause. Attention was also drawn to the desirability of studying the question whether the anti-dumping and countervailing duties are compatible with the clause, as also the question how the expression "similar products" should be interpreted.

The Second Committee has been led for these reasons to propose that the Economic Committee should continue its studies on this subject while considering the possibility of submitting the resolutions in due course to a Conference of Governments. The Economic Committee seems to be well fitted to deal with this question, on which it has already reached conclusions that have been favourably received by the majority of countries. The root of the problem is how to find a means of reconciling two conceptions, each of which might, according to the contrary views expressed, prove to be equally prejudicial.

A dogmatic and over-rigid interpretation of the most-favoured-nation clause—to which, for a long time past, commercial custom has allowed certain derogations of a geographical and ethnic character—might, as pointed out in the debate, render impossible partial adjustments which it would be very imprudent to condemn off-hand in the present serious situation. At the same time, it is necessary to prevent the most-favoured-nation clause, which is an invaluable instrument of economic understanding between peoples, from suffering to such an extent as to disturb the operation of the delicate mechanism of international trade.

In the course of discussion, two main ideas were voiced—namely, that a certain amount of elasticity should be cautiously allowed in the application of the clause whenever this appeared indispensable for the conclusion of agreements likely to bring about genuine progress in the economic life of nations; but, that, at the same time, any relaxation of the principle of the clause should be avoided, which might cause it to break down and might entail a fractional disruption of commercial relations.

Without desiring to anticipate the final opinion of the Economic Committee, the Second Committee desires to recall the conclusion at which the latter arrived in the matter of the relations between multilateral agreements of a general character concluded under the auspices of the League of Nations and bilateral Conventions based on the mutual accord of most-favoured-nation treatment.

4. *Bases and Limits of Regional Agreements.*

These reflections on the application of the most-favoured-nation clause were also suggested to the Second Committee by the fact that, both at its own meetings and at the plenary meetings of the Assembly, the question was raised whether the direction to be taken was that of European agreements—the scope of which would be virtually defined by the number and character of the signatories to the Protocol of Future Negotiations drawn up in March last—or rather that of regional agreements as forming an intermediate stage.

Although both these ideas found adherents among members of the Committee, the latter did not express an opinion.

The proposals submitted by the States which took part in the Warsaw Agricultural Conference in August last also raised similar questions of principle. On the one hand, they call for closer co-operation between agricultural countries with the object of mitigating the fierce competition which they are forced to engage in with one another and to organise harmoniously their production and trade. They wish to co-operate in order to secure better domestic organisation and, thereafter, to reach an agreement enabling them to discharge more profitably their function of grain suppliers to other European countries.

This section of the Warsaw Conference's programme cannot but command the Assembly's keenest approval. The disparity between the economic conditions of the above States and those of the so-called industrial countries, the different standard of life, the differences in the stage of organisation reached, the irrational distribution of capital, the difference in money rates are so many obstacles to the harmonious development of European economic forces. The Assembly, therefore, cannot but be gratified at the efforts of these countries to strengthen their economic structure.

The programme of the Warsaw Conference also includes requests addressed, primarily to the other European States signatories of the Protocol of Future Negotiations, and generally to the Members of the League of Nations who have met at Geneva.

One of the most important of these requests, from an international standpoint, is that for the preferential treatment which the other European States are asked to grant to the agricultural exports of the countries concerned.

During the discussions in the Second Committee, the representatives of European States, to whom this request is primarily addressed, stated that they would be glad if they could help to improve the economic situation of those countries, by enabling them to dispose at reasonable prices of their agricultural surpluses, particularly of their excess stocks of grain.

Certain delegations have, however, raised the strongest objections to the establishment of preferential treatment as provided in one of the resolutions of the Warsaw Conference. The delegations of Australia, Canada, India, New Zealand and the Union of South Africa without pronouncing upon the substance of the question, have expressed the opinion that the proposal contained in the Warsaw resolution to accord preferential treatment on the European markets to cereals produced in Europe is not a question on which the Eleventh Assembly of the League of Nations should express an opinion.

Certain other delegations pointed out that, if the question of principle of limited or regional preferential treatment were raised, they would hold that this question would have to extend to all preferential treatment whatsoever and between any States Members of the League.

The Second Committee desires not to prevent European States from improving their economic organisation, but desires to point out that the Tenth Assembly, in its resolution on concerted economic action, afforded other States the opportunity of intervening to protect their interests.

The Second Committee therefore believes that the proposals of the agricultural countries which met at Warsaw come within the scope of the economic reorganisation to be discussed between States signatories of the Protocol of Future Negotiations of March 24th, 1930, always provided, however, that, in accordance with the Tenth Assembly's resolution, the non-signatory

States may be asked to participate; and, further, that the result of all such negotiations shall be brought before a Conference which all States, without distinction, will be asked to attend.

5. *Concerted Economic Action.*

A question to which the Second Committee devoted special attention was the position of the Commercial Convention of March 24th, 1930, and the Programme of Negotiations with a View to Concerted Economic Action.

The Committee recommends that the largest possible number of States should ratify the Commercial Convention, and that States which have not signed or not ratified it should, at any rate, *in practice* give effect to its provisions.

The Committee would be gratified if, at the Conference to be held in November 1930 to decide the conditions under which the Commercial Convention will be brought into force, the States taking part would also give consideration to the Programme of Future Negotiations.

To this end the Economic and Financial Organisation of the League should be asked, first, to go through the replies to the questionnaire included in the Protocol, and single out from these replies the main points which might be discussed.

The Second Committee stresses the fact that, at any rate, no solution likely to improve economic relations should be rejected offhand. The future negotiations for joint concerted action will have reference, partly to Customs tariffs, properly so-called, in regard to which the two main proposals were to work by groups of articles and by groups of countries; partly to non-tariff questions, such as the unification of Customs nomenclature, indirect protectionism, and, in particular, export bounties, dumping, etc.

The work on these two kinds of question should, as far as possible, be conducted concurrently.

Dumping. — As regards *dumping*, the Second Committee was guided by the following considerations:

Whenever sales become difficult, either at home or abroad, owing to the usual customers having neither the means nor the need to make purchases, international competition tends to become abnormal, owing to the urgent necessity felt by large undertakings of securing, at whatever cost, employment for their workers and their plant. In such circumstances, the tendency is for dumping to develop all the more formidably, because, sometimes, owing to special circumstances, it can be practised in very many branches of manufacture and without the persons responsible being in any way concerned to maintain any proportion whatever between cost and sales prices.

The Second Committee was, naturally, disturbed by the alarming proportions which dumping has latterly assumed, but merely condemned once more this unhealthy practice.

6. *Other Questions.*

The following draft resolution seeks to establish a fair compromise by taking due account of the discussions held and the proposals made on other questions during the proceedings of the Committee. Only for the sake of brevity is no mention made of them here.

An exception, however, will be granted in the case of the question which dominated the Assembly—and which has been in the background of all the Committee's debates—the scheme for a European Federal Union. The Committee cannot close its proceedings without expressing the desire that the Assembly should assert the need for a permanent connection, and ultimately active co-operation, between the Economic Organisation and the Commission of Enquiry for European Union.

D. DRAFT RESOLUTIONS.

In conclusion the Second Committee has the honour to submit to the Assembly the following draft resolutions:

“ With reference to its resolution of September 1929, the Assembly is deeply impressed by the gravity of the economic depression at present prevailing throughout the world.

“ It believes that the concerted action contemplated a year ago is more than ever essential and urgent and should accordingly be immediately undertaken and vigorously pursued.

“ It stresses the special importance of the following points:

“ (1) It notes that the first stage referred to in the above resolution was completed at the Preliminary Conference with a View to Concerted Economic Action held at Geneva from February 17th to March 24th, 1930.

“ It accordingly makes an earnest appeal to all the States concerned to see that the Commercial Convention framed at that Conference is put into force as between the States signatories and obtains the accessions of the greatest possible number of other States.

“ (2) The Assembly has had under consideration the Protocol regarding the Programme of Future Negotiations and the report submitted to the Council by the Economic Committee on the work of its thirty-second session.

“ It expresses the hope that the Economic Committee may be able, at its next session, on the basis of the replies received from States represented at the Conference, to draw up concrete proposals so that the Council can, without delay, take steps to have the programme of future negotiations progressively carried into effect.

“ (3) The Assembly notes the proposals of the States which took part in the Warsaw Agricultural Conference, and, without desiring to pronounce on the controversial question of preferential treatment, it finds that these proposals are all part of the general programme for the organisation of the economic life of Europe and come within the scope of the meetings and negotiations provided for in the scheme of the Protocol of Future Negotiations.

“ (4) The Assembly observes that the question of the most-favoured-nation clause, which is included in the programme of future negotiations, has already been the subject of an exhaustive examination by the Economic Committee, the results of which were communicated to Governments; and requests the Council to instruct the Economic Committee to carry on, with the assistance of experts from the countries specially concerned, its investigations on this subject, bearing in mind the views expressed during the debates of the Second Committee.

“ The Assembly further requests the Council to put the question on the agenda of a Government Economic Conference as soon as the Economic Committee's investigations have made sufficient progress.

“ (5) The Assembly has taken particular note of the serious economic consequences of the various forms of dumping when they are encouraged by a policy of State intervention.

“ It expresses the desire that the subject of concerted action, not only in regard to the various forms of indirect protectionism, but also in regard to every aspect of dumping, should be studied with the least possible delay and within the framework of the future negotiations provided for in the Protocol of March 24th, 1930.

“ (6) The Assembly congratulates the Sub-Committee of Experts for the Unification of Customs Nomenclature on the work already accomplished, and recommends that the Economic Committee should supply the Council with information enabling it, at an early date, to apply the procedure proposed for facilitating the adoption by the various States of the unified nomenclature and for preserving the unity of the nomenclature after its adoption.

“ (7) Considering that disputes arising from conflicting interpretations of commercial Conventions or in connection with legislative or administrative enactments affecting international trade constitute an obstacle to economic co-operation, the Assembly endorses the recommendation already contained in the programme of future negotiations that the Economic Committee, on the basis of a careful survey of the existing juridical situations as regards treaties, should study the creation of a permanent organ of conciliation and arbitration to which all disputes among States arising from the interpretation and application of commercial conventions, whether bilateral or multilateral, might be referred without prejudice to the functions and jurisdiction of the Permanent Court of International Justice.

“ (8) Real progress in the direction of economic union cannot be restricted to the movement of commodities and capital, but must necessarily extend, under as liberal a system as possible, to the economic activities of companies and individuals.

“ The Assembly therefore deeply regrets that the complexity of the question prevented the Paris Conference of November 1929 from concluding a Convention on the Treatment of Foreigners which would have marked an improvement on the existing situation, and expresses the hope that no steps may be neglected which might contribute to the success of the second session of the Conference referred to in the Paris Protocol of December 1929 and the conclusion of a Convention on the most liberal bases possible.

“ (9) Noting that the Convention for the Abolition of Export and Import Prohibitions had, on July 1st, 1930, obtained a large number of ratifications, the Assembly regrets that certain special obstacles should have prevented this Convention from coming into force between all the countries signatory thereto, and earnestly hopes the States concerned will not abandon their decision to remove, by the abolition of prohibitions, one of the chief obstacles to the free movement of goods.

“ (10) The actual participation of Government representatives in the economic work of the League of Nations constitutes the essential guarantee for the conclusion and the entry into force of the international Conventions in conformity with the recommendations of the League of Nations:

“ The Assembly accordingly recommends that the Economic and Financial Organisation should secure the actual participation of Government representatives in the economic work of the League of Nations and that, with that end in view, the possibility of convening a Conference of Government delegates at the most suitable moment and under the most appropriate circumstances, if possible annually, should be considered.

“(11) The Commission set up by the Assembly resolution of September 17th, 1930, was instructed to consider the possibilities of close co-operation between European Governments in every field of international activity, including the economic field, and consequently the problems which this Commission will have to study are, to some extent, the same as the problems set forth in the Protocol regarding the Programme of Future Negotiations of March 24th, 1930, more especially as regards the most-favoured-nation clause and commercial policy.

“The Assembly therefore recommends that a close connection should be maintained between the work of this Commission and that involved in the execution of the above-mentioned Protocol, as both are of primary interest to the same States.

“(12) The work of the Committee of Veterinary Experts, acting under the instructions of the Economic Committee, has already led to the framing of certain important principles for the international organisation of the campaign against animal diseases, the internal organisation of veterinary services and technical co-operation on the international plane.

“The application of these principles would help to create an atmosphere of confidence between importing and exporting States, which would encourage the granting of wider facilities to international trade in animals and animal products.

“The Assembly therefore recommends that the Economic Committee should expedite this work in order, after the meeting of experts provided for October 1930, to trace the main outline of one or several international agreements on the question.

“(13) The Assembly is gratified to note the results of the Conference for the Unification of Laws in regard to Bills of Exchange and Promissory Notes, and trusts that these results will be successfully supplemented at the second session of the Conference by similar agreements regarding cheques.

“(14) Notified of the progress achieved by the Economic Committee in its investigations into international industrial agreements, the Assembly recommends that these investigations should be energetically pursued with a view to the drawing up of a general report on all the aspects of the question.

“(15) The Assembly, being informed of the results obtained by the meeting of agricultural experts summoned by the Economic Committee, expresses the hope that this essential co-operation in the consideration of all economic questions relating to agriculture will be continued.

“(16) The Assembly, impressed by the seriousness of the present situation, by the general recession of employment and trade, by the constant recurrence of such periods of economic depression and the failure up to the present to discover any concerted means for averting the losses incurred, resolves that the Economic and Financial Organisation of the League, which has already been studying the causes of fluctuations in the purchasing power of gold and their effect upon the economic life of the nations, should undertake the study of the course and phases of the present depression and the circumstances which led up to it and for this purpose it should collect the information compiled by institutions already in existence in different countries, centralise such information and, where necessary, fill up any gaps that exist.

“For this purpose the Economic Organisation, advised by, in particular the Economic Consultative Committee, should put itself in touch with national organisations, whether consultative or planning councils or research institutions concerned with this matter, and should further, with their aid, consider by what means the work now being conducted on the problem of the recurrence of periods of economic depression may be co-ordinated.

“Believing that the restoration of prosperity in the countries which are mainly concerned with agriculture and the production of raw materials is not only a worthy object in itself, but that it will also contribute to the restoration of prosperity in other countries, the Assembly desires that, in the course of the comprehensive enquiry into world economic depression referred to in the present recommendation, special attention should be devoted to the programme and investigations recommended by the agricultural experts who met at Geneva in January 1930, and to the result of the work carried out by international organisations specially qualified in such matters.

“It also recommends that, in connection with these investigations, account should be taken of the results of the enquiry conducted by the International Labour Office into unemployment and the work of other competent international bodies on this subject, in order that the Economic and Financial Organisation, having collected all the available information, may examine at the right moment the advisability of international action, due regard being had to the economic, financial and demographic aspects of the labour problem, including the question of raw materials.

“(17) In general, the Assembly recommends that, in the case of questions within the competence of other public bodies, the Economic Organisation should take advantage of the work and secure the assistance of the latter, particularly in regard to labour (International Labour Office) and agriculture (International Institute of Agriculture). The Assembly regards such continuous co-operation as an essential factor in the rationalisation of international activities.

“(18) The Assembly notes with satisfaction that the International Convention relating to Economic Statistics has now been ratified by ten States, and will therefore come into force before the end of the current year. It further notes that certain countries have already put into operation some of the provisions of the Convention.

“(19) The Assembly notes the recommendations of the Council that the work in connection with the *Annual Survey of Economic Developments*, the preparation of which was suggested at the last session of the Assembly, should not be undertaken until the Statistical Convention has come into force;

“It decides that, in order to fulfil this necessary condition:

“(a) The *Annual Survey* referred to above should be published as a League document;

“(b) The preparatory work for this enquiry should be begun during 1931.”

[Distributed to the Council and
the Members of the League.]

WORK AND FUNCTIONS
OF THE
FINANCIAL COMMITTEE

INTRODUCTORY NOTE.

The report of the Financial Committee on its thirty-ninth session (document A.41.1930.II. [F.847]) contains a Statement dealing with the work and functions of the Committee. This Statement is reprinted separately herewith.

The Statement was approved by the Council on September 24th, 1930, and transmitted by it to the Assembly for the latter's consideration. It was approved by the Assembly on September 29th, 1930.

THE WORK AND FUNCTIONS OF THE FINANCIAL COMMITTEE.

The present meeting of the Financial Committee marks the conclusion of the first ten years of its existence. The Committee thinks it useful on this occasion to make a short general report on the stage it has now reached in its work. The main reason why this seems opportune at this moment is not the accident that a decade has just ended, but rather that the work of financial reconstruction is now so nearly completed that the kind of service which the League may render to its members in the financial field is changing in scope and in character. With or without the aid of the League, and whether or not under the direct or indirect influence and example of the work with which the League had been directly associated, the vast majority of countries with a complex economic structure have now reformed their finances and connected their currencies with gold. The process is, indeed, not complete; but, of the cases which remain, some require only the development of a policy already initiated and others present problems very different from those already solved by the League. One category of tasks is therefore nearly ended, while new problems have been brought into prominence.

In the last ten years, the principal, though by no means the sole, work of the Committee has been in connection with financial reconstruction or the establishment of refugees in certain countries. The tasks, even within each of these two spheres, have, indeed, differed considerably in importance, scope and character. In Austria, where disorganisation had proceeded very far, it was necessary to arrange for the issue of a loan guaranteed by a number of Governments and a comparatively extensive control through a League Commissioner responsible to the Council for some years. In Hungary, the problem was in some respects simpler, the required loan was issued without external guarantees, and the control through a League Commissioner was both shorter in duration and, in some aspects, modified in character. In Greece, the first problem which presented itself was the establishment of a very large number of refugees—the majority on the land; and a Commission suitable in composition for the direction of a vast task of land settlement was appointed. It was later necessary to assist Greece in placing her finances on a sound basis, and to help her in raising a loan for this purpose. The problem here, however, was not, as in the two earlier cases, one of restoring a rapidly depreciating currency, but only of strengthening and stabilising one which had elements of weakness; and the difference is reflected in the fact that the advice of a Financial Adviser appointed by the National Bank and periodical consultation of the Financial Committee by representatives of the Government and the Bank were sufficient as means of following the progress of the work. In Bulgaria, similarly, a work of refugee settlement on a much smaller scale was also followed by one of financial restoration, a single League Commissioner in this case both supervising the refugee work and also watching the financial reform as Financial Adviser. The work in these four countries has occupied the major part of the time of the Committee during these ten years. Assistance has also, however, been given to Estonia, in strengthening the National Bank, and to Danzig, both as regards the establishment of a currency and the raising of loans for constructive economic development.

In all these cases, loans were issued "under League auspices", nine being so issued in all.

The work undertaken in all the above-named countries had certain common features. In each case it involved some form of financial reconstruction, the issue of a loan or loans "under League auspices", and some form of responsibility on the part of the League for the execution as well as the original recommendation and adoption of the scheme. The variety, both in problem and in method, is, however, no less striking. For, in some cases, the whole economy of a disorganised country had to be dealt with; and, in another, only the strengthening and technical reform of a Central Bank was needed. Similarly, the method¹ adopted to associate the League with the progress of the work varied from the appointment of a Commissioner-General with extensive powers over the budget to an informal arrangement for periodical consultation.

In the first decade, therefore, the Committee has been mainly engaged upon one special and temporary category of work, reconstruction with the aid of loans issued under League auspices. This work has been important and exacting. It has naturally tended to postpone consideration of other more normal duties of the Committee as the financial advisers of the League within the framework of the Covenant. But, as stated above, this work is apparently nearing its end. No new loans have been issued under League auspices since 1928, and the work already undertaken in this sphere has been finished or is nearing completion.

The following pages describe, and classify, the work as it now is and is developing, and call attention to certain questions in respect of which it would be useful for the Council to lay down the principles on which the Committee should carry out its duties.

¹ As regards method, the Committee would draw special attention to the small book, published by the League, on *Principles and Methods of Financial Reconstruction*.

The work of the Committee has been, and is likely to be, very largely within that sphere of the League's duties which the Covenant describes as the "promotion of international co-operation". The development of this kind of work will, of course, depend upon expediency, opportunity and the desires of Member States at different times, and is subject to no other limiting considerations. In addition, however, the Committee is, of course, available, as the Council's financial adviser, in connection with any specific financial tasks, or the financial aspects of specific tasks arising under other parts of the Covenant.

The functions of a League Financial Committee fall, it is suggested, into three categories, each of which has some examples in past experience, but the relative importance of which seems likely to change considerably in future:

- I. General financial questions;
- II. Advice and assistance to particular States;
- III. Advice on financial questions arising out of current political or administrative work of the Council.

It will be well to consider each of these in turn.

I. GENERAL FINANCIAL QUESTIONS.

The Council will doubtless wish that, as in the past, the Committee shall consider it to be within its competence to watch general financial developments in relation to economic progress, and from time to time take the initiative of making proposals to the Council for the study of any general question that seems at the time to be of special importance.

The most notable, though not the only, examples of general financial questions, among work undertaken either on the request of the Council or on the initiative of the Committee approved by the Council, relate to double taxation, counterfeiting currency, and the gold problem. In each case the Committee has been concerned in the initiation, and, in varying degrees, the subsequent direction, of the work. But in every case the main work has been done through specialised *ad hoc* committees or Conferences. On the gold problem, a preliminary report on the prospective supply and demand for gold is now being submitted to the Council.¹ The Committee hopes to follow this by a fuller study, particularly of those aspects of the problem which have a direct bearing upon practical action.

Among other problems of a similar order which demand serious consideration now or are likely to necessitate such consideration in the near future may be mentioned, by way of example, that of the recurrence of alternating periods of prosperity and depression which the present difficult situation has forced upon public attention, and that of assisting the Economic Organisation in keeping the world informed of the course of financial development. The problem of what is sometimes called the trade cycle is possibly at certain points related to that of the supplies of monetary gold with which the Committee is already concerned. But it is much wider in its range, and for any serious study would require the collaboration of experts in a number of other branches of knowledge and activity in addition to that which is represented by the Financial Committee.

Another subject on which it may prove desirable for the Committee to arrange an appropriate study is that of the conditions which determine the flow of capital from one country into another, its sufficiency, its cost, its form (*e.g.*, for the purpose of short-term credit or long-term investment), etc. Such a study might cover such factors as the effect of taxation or taxation methods, apprehensions as to loss of investments in war or through political instability, or any deficiencies in the available mechanism for arranging different forms of credit transactions; or such a selection among these as the Committee might think to be specially important and suitable for consideration at any given moment.

The Committee has also always been interested in the work which the Economic Organisation does in keeping the world informed by means of special memoranda and co-ordinated statistics of economic progress and development, and it hopes in the future to help, by advice and direction, the extension of this work.

These are only examples of the kind of general questions on which from time to time a central international body of financial advisers may make a useful contribution to the solution of the world's financial problems, either directly or in conjunction with specialised *ad hoc* committees.

¹ Document C.375. M.161. 1930.II.

II. ADVICE AND ASSISTANCE TO INDIVIDUAL GOVERNMENTS.

I. *Advice without "League Loans".*

The basis of the whole of the reconstruction work conducted by the League in earlier years has consisted of advice given by the Committee on problems of financial and monetary reform. For the execution of the plans of reconstruction ultimately formulated as a result of this advice, foreign money has, in fact, in most cases, proved necessary, and the practical problem of raising that money by means of international loans has thus been forced upon the attention of the Committee. In the future, however, it may well be that a number of problems of a technical character will arise, the solution of which will not demand the flotation of special loans.

These problems might, for example, concern: Treasury, budget or taxation systems; currency or Central Bank systems; the organisation of general or agricultural credit; the general financial conditions of a country; special financial difficulties in connection with State railways or roads, State savings banks, other government undertakings, etc.

In fact, there is no necessary relationship between the advice which may be sought from or given by the Committee and the immediate or subsequent issue of loans on foreign markets, whether the advice is concerned with some detailed problem or with the general financial situation in any country.

Advice and assistance in such cases might be entirely unconnected with a loan; it might, as in Estonia, be ultimately followed by a League loan; it might be followed by a loan contracted direct by the Government and not under League auspices.

We think it would be very useful to Member States who may from time to time be thinking of consulting the Committee, that the attitude of the Council and Committee should be made clear beforehand on certain points that arise under the three above alternatives.

In the first place, we suggest that the principle just stated—that financial advice should not necessarily be given only in cases connected with international loans—should be clearly recognised.

In the second place, where it proves desirable that a loan should be issued "under the auspices of the League" (a "League loan"), the Committee considers that it necessarily follows that some measure of responsibility falls upon the League with regard to the subsequent carrying out of the scheme. These cases are dealt with in the next section.

There remains the third class, in respect of which it is most desirable that the League's position should be defined. The "advice" asked may be such as to have a bearing on some future loan that a country wishes to raise, and the wish to assist the issue may be one of the objects of the request. At the same time, the Government concerned may not wish to ask that the loan should be issued "under the auspices of the League", and may not need the help of the Committee as regards the framing of the whole of the scheme with which the loan may be connected or its execution. In the view of the Committee, there is no reason why it should not give its advice in such a case on such questions as it may be asked, without assuming any responsibility for the subsequent progress of the scheme, and without therefore being obliged to establish any system of supervision or periodical consultation. It is, however, obviously desirable that, in such cases, the limits of the League's responsibility should be exactly defined and clearly understood by all concerned. For this purpose two precautions are required:

(a) The issue of a public statement (such for example as the present report) endorsed by the Council, explaining the stage now reached in the League's financial work and pointing out that, now that financial reconstruction has been practically accomplished in most countries, recommendations of loans "under League auspices" will no longer be the normal work; that, more usually, advice only will be given, and, in that case, the League's responsibility will be limited in character to the nature of the advice and in time to the date at which it is given. It will not extend (except where specifically stated) to securing that the advice is followed or that any of the conditions declared to exist at the time of the advice are maintained afterwards.

(b) The stipulation by the Committee, whenever its advice is asked, that, if that advice is ever quoted, or even the fact of its being given mentioned in connection with a loan operation, the prospectus of the loan shall contain a statement drafted by the Committee, explaining the exact limits of the responsibility it has assumed.

These two precautions, combined with the opportunities of communicating information and of publicity which the Committee has, both through its members and otherwise, would, it is considered, be sufficient.

2. "League Loans."

There remain the cases in which the issue of loans "under the auspices of the League" ("League loans") may still be desirable in future.

There may, in the first place, still be problems of financial reconstruction more or less similar to those already undertaken, though these are not likely to be frequent in future.

The Committee is sometimes, however, asked whether it is prepared to consider schemes which are not covered by the precedents of financial reconstruction and refugee establishment. These raise the important question of principle: Should the League be prepared to be associated with the issue of a loan "under the auspices of the League" for purposes of economic development?

In general, the Committee considers that loans for these purposes should not be issued "under League auspices". There may be special circumstances, however, which would make such an issue desirable, as where the League has certain special responsibilities (*e.g.*, as regards Danzig), or where the project promises certain valuable international advantages which might not otherwise be attained.

It is desirable that the general attitude of the League should be known beforehand, and the Committee recommends that it should be defined in the following formula:

"Loans for economic development in a particular country should not, in principle, be regarded as within the scope of loans which may be issued 'under the auspices of the League', but this is not to exclude the consideration of such loans when they present special international interest or advantages."

In the light of the principle so indicated, any specific proposal should be considered on its merits at the time.

Where, in accordance with this principle, the issue of a loan "under the auspices of the League" is considered inadmissible, the Committee might still, of course, give advice on particular features of a scheme without assuming responsibility for the loan or the execution of any programme, subject to the conditions and safeguards described in the previous section.

Where, on the other hand, the issue of a loan "under the auspices of the League" is considered admissible and desirable, the necessary measures to enable the League to follow the progress made in the carrying out of any programme would be determined in relation to the circumstances of the particular case. The method would, as described above, be so arranged as to involve as little interference as possible, amounting, where the case permits, to no more than occasional consultation.

3. Disputes, Conciliation and Arbitration Work.

In a number of cases in the past, the Committee has acted as conciliators or arbitrators in connection with the interpretation or execution of loan contracts to which one of the parties is a Government. This has been done in cases in which no specific provision has been made beforehand in the loan contract (as in the case of the Disconto Gesellschaft loan to Bulgaria), on the request of the two parties and after consideration by the Council of the general character of the dispute, and may also arise in accordance with a provision in the original contract. If such contracts be made in the future, they should, we think, be submitted at the time of negotiation to the League of Nations for approval. But it would only be necessary for the League to consider whether the loan was, in its general character, such as it could be associated with, and whether the actual arbitration clause was satisfactory. It would not be necessary to examine the conditions and details of the loan.

We believe that the development of such arbitration work would have valuable results for a number of reasons.

A real service might be rendered to lenders by helping to secure a settlement of disputes and the execution of contracts by means of the collective moral authority which association with the League gives (and consequently also to borrowers in the negotiations through this prospect), without the dangerous and difficult use of pressure by individual Governments. And, incidentally, such an association would help to form an effective public opinion encouraging the better and more constructive forms of international loans, as distinct from those which include obviously undesirable features.

III. ADVICE ON FINANCIAL QUESTIONS ARISING OUT OF CURRENT POLITICAL AND ADMINISTRATIVE WORK OF THE COUNCIL.

In the whole of its work, the Committee has, of course, acted as the technical advisory body to the Council of the League on financial questions. But, in addition to the problems described above, which have been primarily financial in character, the Council has referred to it from time to time the specifically financial aspects of other problems arising in the course of the Council's current political and administrative work. The preparation of the scheme of financial assistance, as a part of the general proposals advocated by the Committee on Arbitration and Security, may be taken as an example of this kind of work, though usually the questions referred are likely to be of a more limited scope and application. A more typical example is, perhaps, to be found in the work done by the Committee in relation to questions arising from Greco-Bulgarian emigration.

Financial questions arising in relation to work of the Mandates Commission, or the administration of the Saar, or the preparatory work in relation to Article 16 (and application if the occasion arose), or budgetary problems in connection with disarmament, are only instances of financial questions which have arisen or may arise within almost any sphere of the League's work on which the advice of the Committee may be needed.

* * *

The above report is an attempt to describe the main character of the work hitherto undertaken by the Committee; the stage now reached in it; the change in character of the work which is taking place as a result of the general progress in financial stabilisation that the world has now achieved; and to call attention to certain questions on which decisions of principle are desirable as a guidance to future development. A general statement endorsed by the Council would, the Committee believes, at this date be useful as a guide both to Member States, to the Council itself and League organs generally, and certainly to the Committee itself, as an indication of the kind of service which may, with prospects of useful results, be asked of the Committee, and the kind which may not.

For this purpose, the Committee ventures to suggest that the Council and Assembly should authorise the publication of this report as a statement endorsed by them, with such amendments or additions as they may consider desirable.

Estonia.

[*Translation.*]

SUMMARY No. 1 COMMUNICATED IN A LETTER OF SEPTEMBER 1ST, 1930, FROM THE MINISTRY
FOR FOREIGN AFFAIRS.

.....

As most of the measures laid down in the Convention of November 3rd, 1923, were already in force in Estonia before the latter's accession, on May 28th, 1930, to the said Convention, the Estonian Government has not thought it necessary to amend its legislation for the special purpose of adapting it to the provisions of the Convention. The Government, however, intends to be guided by the principles of the Convention whenever any amendments are made in the existing Estonian Customs laws.

The Estonian Government begs to submit, on certain points of detail, the following observations :

Ad Articles 1 and 2.

Estonian Customs legislation, which is based on the Customs Law of March 7th, 1923, was framed with the predominant idea of granting every possible facility to trade, and is already in agreement with the principles laid down in these articles. A technical revision of the Customs tariff is at present being carried out.

As most-favoured-nation treatment is a principle of Estonian Customs policy, persons and goods, irrespective of their nationality or origin, receive uniform treatment in every way as regards Customs duties and formalities.

Ad Article 3.

Estonian Customs legislation contains only a very small number of import and export prohibitions.

Detailed information on the import and export prohibitions in force in Estonia was sent to the Secretary-General of the League of Nations in a letter from the Ministry for Foreign Affairs dated December 13th, 1924, in connection with a resolution adopted on September 29th, 1924, by the Fifth Assembly of the League aimed at the final abolition of such prohibition.

In a letter of September 2nd, 1927, the Ministry for Foreign Affairs also forwarded a list of all the changes made in this connection after 1924, since when the situation has remained practically unaltered.

Ad Articles 4 and 5.

All regulations relating to Customs formalities, Customs tariffs or modifications in the said regulations or tariffs have, in accordance with the terms of the Convention, been published from time to time in the Estonian *Official Gazette*, and this practice will be continued.

Traders requiring to procure official information in regard to Customs tariffs or the amounts of charges to which any given class of goods is liable may apply to any Estonian Customs office.

Ad Article 6.

Copies of all Customs publications issued in accordance with Articles 4 and 5 will be sent by the Ministry for Foreign Affairs direct to the legations or consulates of the contracting States at Tallinn, to the Secretariat of the League of Nations, and to the International Office for the Publication of Customs Tariffs at Brussels.

Ad Article 7.

The measures taken to prevent the arbitrary or unjust application of Customs laws and regulations have already appeared in the Customs Law.

Complaints regarding the application of these laws and regulations should be sent to the Customs Committee attached to the Minister for Economic Affairs.

Ad Article 8.

Arrangements have already been made for imported goods, regarding which there is a doubt as to the exact application of the Customs tariff, to be at once placed at the consignee's disposal, subject to deposit of an amount sufficient to guarantee payment of all duties chargeable on the said goods.

Ad Article 10.

The current Estonian provisions regarding Customs treatment of samples and specimens do not differ from those in Article 10. In most of the commercial treaties concluded in recent years by Estonia, samples and specimens are treated in accordance with the provisions of Article 10. Identity cards are issued by the Commercial Department of the Ministry of Economic Affairs.

Ad Article 11.

The cases in which certificates of origin are required are shown in the " Rules for the Application of the General and Minimum Customs Tariffs " annexed to this summary.

The conditions governing their issue are laid down in the following treaties of commerce and special agreements :

Treaty of Commerce and Navigation between Estonia and Finland, October 29th, 1921, Article 6 (League of Nations *Treaty Series*, Vol. XIII) ;

Treaty of Commerce and Navigation between Estonia and the United Kingdom of January 18th, 1926, Article 7 (*T. S.*, Vol. XLVIII) ;

Treaty of Commerce between Estonia and Switzerland of October 14th, 1925, Article 12 (*T. S.* Vol. XLIX) ;

Treaty of Commerce and Navigation between Estonia and Belgium of September 28th, 1926, Article 11 (*T. S.*, Vol. LXII) ;

Commercial Convention between Estonia and Greece of January 4th, 1927, Article 14 (*T. S.*, Vol. LXIX) ;

Treaty of Commerce and Navigation between Estonia and Poland of February 19th, 1927, Article IX (only in force as regards Customs treatment, not published in the *Treaty Series*) ;

Provisional Economic Treaty between Estonia and Latvia of March 25th, 1928, Article 3 (*T. S.*, Vol. LXXII) ;

Treaty of Commerce between Estonia and Czechoslovakia of June 20th, 1927, Article 10 (*T. S.*, Vol. LXXVII) ;

Treaty of Commerce between Estonia and France of March 15th, 1929, Article 7 (*T. S.*, Vol. LXXXIX) ;

Treaty of Commerce between Estonia and Austria of December 11th, 1928, Article X (*T. S.*, Vol. XCII) ;

Treaty of Commerce and Navigation between Estonia and Germany of December 7th, 1928, Article 17 (Registered No. 2273) ;

Treaty of Commerce between Estonia and Union of Soviet Socialist Republics of May 17th, 1929, Article 14 (*T. S.*, Vol. XCIV) ;

Treaty of Commerce and Navigation between Estonia and Hungary of April 29th, 1929, Article 13 (*T. S.*, Vol. XCVI) ;

Exchange of Notes between Estonia and Latvia of August 31st, 1928 ;

Exchange of Notes between Estonia and Finland of July 10th, 1930.

As a rule, the organisations designated by the Estonian Government for the issue of certificates of origin are : the Commercial Department of the Ministry of Economic Affairs, the Chamber of Commerce and Industry and its branch offices, the Customs Offices, and the Estonian diplomatic and consular agents within the limits of the powers granted to them.

In the case of goods exported to Latvia, the following additional organisations are authorised to issue certificates of origin : the Pärnu Stock Exchange Committee and Tartu Association of Manufacturers.

No fee, other than the stamp duty legally chargeable, is levied for the issue of certificates of origin.

Ad Article 12.

The production of consular invoices is not required in Estonia.

Ad Article 13.

The present practice in Estonia entirely accords with the provision of this article. Agreements concluded with certain foreign countries concerning the recognition of suitable certificates guaranteeing the quality, purity, district of production, etc., of certain articles exported from the said countries are already in force.

Ad Articles 14, 15 and 16.

The existing practice in Estonia corresponds to the provisions and recommendations contained in these articles and their annexes.

Annex.

RULES FOR THE APPLICATION OF THE GENERAL AND MINIMUM CUSTOMS TARIFFS.

Basis: No. 1 of the Customs Law, the Law enforcing the general and minimum Customs tariffs, commercial treaties with foreign States.

The following rules shall be enforced in applying the general and minimum Customs tariffs :

§ 1. — The general Customs tariff shall apply to all goods coming from countries which have not concluded commercial treaties with Estonia, or the origin of which is not established.

§ 2. — The minimum Customs tariff — *i.e.*, the conventional and fundamental tariffs — shall apply to all goods coming from countries which have concluded commercial treaties with Estonia, on the following conditions :

(1) For purposes of identification, a certificate of origin is required :

(a) For the goods specified under numbers 1 (paragraph 2), 2, 6, 7, 10 (carob beans), 11, 15, 18, 19, 20, 21, 27 (paragraphs 1 and 2), 28, 51, 54, 62, 87 (paragraph 2), 124, 179 (paragraphs 1 and 3), 180 (paragraphs 1 and 4), 195, 196 and 197 of the Customs Tariff except cases coming under § 2, paragraph 2, (a), (b), (c), (d), (e) and (g) of the present rules.

(b) For the goods specified in Lists A and C relating to Article V of the Finnish-Estonian Commercial Treaty, for the purpose of benefiting by the special privileges of that treaty.

(2) A certificate of origin is not required :

(a) When goods coming under Nos. 27 and 28 of the Customs Tariff are accompanied by a certificate in accordance with the conditions of the Franco-Estonian Commercial Treaty confirming their purity and their right to a regional appellation of origin ;

(b) When goods are imported direct as postal packets from the contracting States ;

(c) When goods are imported from contracting States by travellers for their own use and not for purposes of trade ;

(d) When samples are imported by commercial travellers ;

(e) When the origin of the goods in one of the contracting States is proved by trade-marks on the goods themselves or on its immediate get-up (not on the outside packing for transport purposes).

Customs authorities must make a reference to these marks in the inspection documents ;

(f) When, in accordance with No. 189 of the Customs Law or the Note thereto annexed, the importer of the goods produces invoices or specifications with exact data on the origin of goods imported through the usual channel. This privilege shall not apply to the goods mentioned in § 2, paragraph 1(a) of these Rules ;

(g) When tobacco is exported by a business house belonging to a contracting State or to Estonia, having its seat in a contracting State and entered in the Commercial Register of the latter, and when such tobacco is imported by a business house in Estonia or in a contracting State, having its seat in Estonia and entered in the Estonian Commercial Register. For this purpose, production shall be required of : (i) general documents (for a calendar year) regarding tobacco exporting and importing firms ; documents concerning an exporting firm must be certified by the authorities of foreign States and legalised by the Estonian diplomatic or consular representative ; and (ii) original signed invoices for each separate consignment. If invoices are certified by the authorities of foreign States, they shall not require legalisation by the Estonian diplomatic or consular representative.

§ 3. — When, as a result of reliable information, the origin of goods is disputable, the Customs authorities may require in every case the production of certificates of origin, which must be effected within three months at the latest from the day on which the Customs authorities make such a demand.

§ 4. — The certificate of origin must certify that the goods imported originate in one of the contracting countries or have undergone treatment therein. Treatment shall only be considered as such if it is economically justified, and this justification shall, in case of doubt, be determined by the usual procedure laid down in the Customs Law ; in the case of goods treated in Finland and referred to in § 2, paragraph 1 (b), only when the value of the raw material plus the cost of treatment amounts to at least one-half of the value of the goods.

§ 5. — A certificate of origin must contain the following information : mode of packing, number of packages, marks and numbers ; nature and character (commercial nomenclature) of the goods and the exact quantities in gross and net weight, or the pieces, number or dimensions if the goods are offered for sale in such a manner.

§ 6. — When the goods are imported direct from the country of origin, the certificate of origin to be presented must be issued by the competent authorities (Chambers of Commerce, Customs offices, etc.) of that country within a period of twenty days at most in the case of European countries, and within three months in the case of non-European countries after the despatch of the goods. This time-limit shall not apply to the certificates of origin referred to in § 3.

§ 7. — When the goods are imported from a third country, presentation must be made of :

(a) the certificate of origin referred to in § 6, together with a supplementary certificate issued by the Customs authority or the management of the free port attesting that the goods have been under the continuous control of the Customs and have not undergone any handling, or

(b) the certificate of origin issued by the diplomatic or consular representative of the country or origin of the goods in the third country ; or

(c) the certificate of origin issued by the competent authority of the third country on the basis of information obtained at the place where the certificate was issued, giving the name of the country of origin, if Estonia has granted to such third country the same privileges as are enjoyed by the country of origin of the goods ; or

(d) The certificate of origin issued by the Estonian diplomatic or consular representatives, where so empowered, on the basis of information obtained at the place where the certificate was issued.

Note. — All the certificates referred to in § 7 must be issued within the periods referred to in § 6.

§ 8. — All documents of origin (certificates of origin and supplementary certificates) issued by the authorities of the contracting countries must be legalised by the Estonian diplomatic or consular representative having his seat in the country where the document of origin is issued. If there is no Estonian diplomatic or consular representative in such country, the documents of origin produced may be legalised by the representative of such country in Estonia.

§ 9. — Documents of origin do not require legalisation in the case of goods belonging to countries with which an agreement has been concluded on this subject on the basis of reciprocity.

§ 10. — Documents of origin must, if possible, be presented to the Customs authorities before examination of the goods, and in any case before the goods are withdrawn from the Customs. After such period, the certificates of origin shall not be recognised except where the person entitled to the goods has applied, before Customs clearance, for permission to deposit samples thereof (or had an exact description of the goods entered by the Customs authorities in the examination documents) and has been authorised to deposit the difference between the amount of the duties assessed under the general tariff and the duties computed on the basis of the preferential tariff. This privilege of producing documents of origin after the goods have left the Customs shall only apply in cases where the origin of the goods is indisputable and where documents of origin have, for any reason whatever, not yet been produced to the Customs. In such a case the goods shall be entered in the examination documents and be cleared through the Customs on the basis of the conventional tariff, and the aforesaid difference of Customs duties shall be levied merely as a guarantee. If, within one month after Customs clearance and release of the goods, no documents of origin have been produced, the Customs duty deposited as guarantee shall be considered as finally collected to cover Customs duties. Where a reasonable explanation is given, the Customs authorities may extend the time-limit by two months. The above supplementary documents of origin must similarly be issued within the periods referred to in § 6.

§ 11. — On the present Rules coming into force, the Instructions of the Ministry of Finance, No. 646-M, of April 27th, 1927 ; and No. 3004-M, of July 3rd, 1928 ; No. 4918, of September 10th and October 16th, 1928 ; and No. 7522-M, of January 22nd, 1929 (RT 47-1927 and RT 58-1928, RT 75 and 85-1928 and RT 8-1929) shall be abrogated.

§ 12. — The present Rules shall come into force one month after their publication in the *Riigi Teataja*.

Sweden.

SECOND SUMMARY COMMUNICATED BY LETTER FROM THE MINISTRY FOR FOREIGN AFFAIRS,
DATED MAY 25TH, 1930.¹

[*Translation.*]

During the triennial period, May 1927 to April 1930, Sweden has adopted a new Customs Ordinance (*Tullstadga*) and thereafter special Customs Regulations (*Tullordning*), both of which came into force on May 1st, 1928. The Customs Ordinance, which was promulgated by the King, contains little but fundamental provisions concerning foreign trade, its obligations and rights; whereas the Customs Regulations, issued by the Customs administration, furnish rulings of minor importance. This division into two texts is intended to facilitate the granting of exemptions and the adoption, as and when required, of amendments of a non-statutory character to the provisions concerning foreign trade.

The above-mentioned texts contain various regulations the result of which has been greatly to facilitate and simplify the execution of Customs formalities. We may mention the following examples :

Under the clause in the Customs Ordinance previously in force, vessels were required, on their arrival in Sweden, and in some cases on their departure, to stop at special points for Customs inspection. Moreover, Customs supervision of foreign goods exported from a given Customs district usually continued until the vessel reached the open sea. These forms of Customs supervision of vessels and goods have, as a rule, been abandoned in favour of a general supervision carried out by coastguards.

A former regulation required that dutiable goods exported by rail should undergo some measure of Customs inspection on arrival at the frontier station through which they left the country. This provision has now been abrogated, and the railways have been made responsible for Customs control from the time the Customs office delivers the goods to the station whence they are to be despatched.

The former Customs Ordinance contained a clause under which goods from abroad had to be declared at the Customs within eight days after arrival. On the expiry of this period, the consignee became liable to a fine. This provision has also been abrogated, and it is now laid down that goods need not be declared before being cleared through the Customs.

The new Customs Ordinance makes valuable concessions in regard to duties payable on goods which have been lost or have diminished in weight before being released by the Customs authorities; thus, not only goods accidentally damaged or lost, or diminished in weight owing to leakage, are granted relief from Customs duties and other import charges, but also those which have lost in weight owing to evaporation, desiccation, etc.

The rules for statistics of goods which were previously contained in a separate ordinance have now been incorporated in the Customs Ordinance, and the opportunity has been taken to introduce various simplifications. Thus, contrary to past procedure, a time-limit may now be given for the handing-in of statistical data without the party concerned having to give any special undertaking and without the goods being liable to detention, pending the receipt of such data.

It should, moreover, be noted that goods may now be unloaded at a larger number of small Customs stations, and that facilities are now freely granted when a vessel or any other means of transport applies to enter or leave a port which is not a Customs station with dutiable goods.

Lastly, the new Customs Ordinance provides for relief from certain charges in connection with the guarding of goods by the Customs and the payment of import duties in respect of which charges were previously imposed on traders. Thus, the guarding of goods in sheds or at the docks is now always carried out free of charge. Another rule benefits tourists; it provides that motor-cars registered in Sweden, or furnished with a pass valid in that country, may now be cleared through the Customs free of charge.

Not only are certain formalities for which a charge was formerly made never executed gratuitously, but a new tariff for exceptional measures carried out by the Customs authorities has been introduced, reducing, to a varying extent, the charges made for other formalities.

During the triennial period under consideration, a new Customs tariff (*Tulltaxa*) was also promulgated and came into force on January 1st, 1930. It is the outcome of a far-reaching technical revision of the previous tariff, having as its main object the simplification of the Customs tariff and its rearrangement in a clearer form. The new tariff does not differ appreciably from the old one as regards the scale of the protective duties and the treatment afforded to the various types of commodities.

Mention may be made of the following technical amendments :

¹ For the text of the first summary, see document C.354.M.127.1927.II.

In the first place, important changes have been made in the grouping. Whereas the former tariff was divided into sixteen main groups and twenty-five subsidiary groups, the new tariff has twenty main groups and sixty-two subsidiary groups. The grouping and the allocation of the categories of goods as between the various groups have been carried out as far as possible in conformity with the draft framework for international Customs nomenclature drawn up at the instance of the League of Nations by special experts appointed by the Secretariat. Sweden is thus the first country to give practical proof of its adhesion to this programme.

The new tariff considerably reduces the amount of specialisation by cutting down the number of headings from 1,387 to 1,153. Moreover, a large number of the notes accompanying various headings in the former tariff have now been eliminated. For example, the numerous notes to the effect that certain packings were to be included in the dutiable weight are covered in the new tariff by a general provision to which reference is made by means of letters of the alphabet attached to the various tariff numbers.

In drafting the tariff, every endeavour was made to word the headings so that misunderstandings or misinterpretations should be avoided as far as possible. With this end in view, the headings were abbreviated and simplified, all superfluous items being omitted.

Before the new Customs tariff came into force, the information furnished for commercial statistics had to conform to a list called the statistical list of commodities, the specification of which differed in many particulars from those of the Customs tariff. In consequence, when clearing goods, reference had to be made both to the tariff and to the list, so that the Customs formalities were considerably complicated and prolonged. In order to avoid this inconvenience, the list has been incorporated in the new Customs tariff, which, therefore, now includes all information necessary for clearing purposes, collection of charges and statistics.

Simultaneously with the new Customs tariff, new provisions relating to drawback came into force. These afford greatly enhanced opportunities for obtaining a refund of the duties paid on goods imported from abroad and re-exported, in the same condition or after transformation.

The underlying idea of the new rules is that the procedure for refunding should be based to a larger extent than formerly on confidence in the trader or manufacturer, whose claim to the drawback is therefore carefully scrutinised in the light of his business reputation and other respects before his application is allowed. In this manner, it is possible to concede valuable facilities in connection with Customs treatment, the main consideration being, in such cases, the commercial standing of the parties concerned.

Under the former regulations, an application for drawback might be refused when the goods in respect of which the refund was demanded were also produced in Sweden, and could therefore be obtained in the country. This restriction has been abolished. Furthermore, the right to the so-called "commercial refund" — that is to say, a refund in respect of goods re-exported without having undergone transformation, a right hitherto restricted to certain specified articles — has been extended to all kinds of goods against which no objection is raised by the Customs authorities on technical grounds or for similar reasons.

Yugoslavia.

FIRST SUMMARY COMMUNICATED BY LETTER BY THE PERMANENT DELEGATION OF THE KINGDOM OF YUGOSLAVIA ACCREDITED TO THE LEAGUE OF NATIONS, DATED AUGUST 7TH, 1930.

[*Translation.*]

Ad Articles 1 and 2.

The principles embodied in these two articles of the Convention had already been adopted in their entirety in the autonomous Regulations of the Kingdom of Yugoslavia. They have also been introduced into all commercial agreements which, without exception, contain the most-favoured-nation clause.

Ad Article 3.

Yugoslavia does not follow a policy of import or export prohibitions or a policy of rationing.

Cases in which measures of this kind might be enacted are provided for in commercial agreements (for instance, in Article 7 of the Agreement with the Belgo-Luxemburg Union and in Article 9 of the Agreement with the United Kingdom of Great Britain and Ireland). As regards the issue of any licences, the provisions of the Convention have been applied almost textually (see Article 7 of the Agreement with the United Kingdom of Great Britain and Ireland).

Ad Article 4.

This article is applied through the publication in the *Official Journal* and in the *Financial Bulletin* of all regulations, laws, modifications and supplements to laws. These laws and regulations enter into force on the date of their publication in the *Official Journal*.

Ad Article 5.

The publication in accordance with Article 4 makes it possible to follow any modifications that are introduced. Further, a Customs tariff was printed in July 1929 with all modifications and all supplements added up to that date.

In accordance with the autonomous Regulations and in virtue of Article 10 of the Agreement with Germany, the competent Customs authorities are bound to supply, in a manner binding upon them, any Customs information requested with regard to the tariffs applied to goods.

Ad Article 6.

This article is applied by sending the documents in question to the Secretariat of the League of Nations and to the contracting parties.

Ad Article 7.

The right of appeal is ensured by the Customs Law. The final appeal is to the Supreme Administrative Court (Conseil d'Etat).

Ad Article 8.

In accordance with Article 18, paragraph (a), of the Draft Law on the General Customs Tariff, goods may be put at the entire disposal of their owner before the Customs duties have been paid, subject to the deposit of security in money.

Ad Article 10.

The application of the principle stated in this article concerning samples and specimens and of the relevant provisions in the Agreements with the United Kingdom of Great Britain and Ireland, the Belgo-Luxemburg Union and Germany, is governed by Regulation C, No. 18293/928, *Official Journal*, dated June 9th, 1928.

Ad Article 11.

The question of certificates of origin is governed by the regulation published in document C, No. 143918, *Official Journal*, No. 181, dated August 17th, 1922, and by subsequent modifications and supplements.

In virtue of Article 12, paragraph 9, of the Agreement with France, certificates of origin are not required in the case of postal parcels, parcels up to 5 kilogrammes conveyed by aeroplane and commercial travellers' samples and specimens.

Ad Article 12.

Consular invoices are not required.

Ad Article 13.

In accordance with the spirit of the recommendations made in this article, the Final Protocol concerning Tariff Item 115 of the Agreement with Spain provides that certificates of analysis relating to wines and issued by the Spanish authorities shall be accepted by the Yugoslav authorities subject to the right of the latter to verify such analyses when necessary.

Ad Article 14.

Many of the recommendations contained in this article have been introduced in the autonomous Administrative Regulations.

Ad Article 15.

Registered luggage may be forwarded without Customs examination at the frontier to any place where there is a Customs office.

Ad Article 16.

Temporary import and export are governed by the Customs Law and the autonomous Regulations which accord the greatest facilities.

The Yugoslav Government has no remark to make concerning the other articles in the Convention.

Genève, le 14 octobre 1930.

LUXEMBOURG — LUXEMBURG.

Les cartes de légitimation proprement dites pour voyageurs de commerce ont été abolies dans le Grand-Duché avec la fin de l'Union douanière germano-luxembourgeoise. La Convention économique belgo-luxembourgeoise ne les a pas réintroduites, et les milieux commerciaux, les considérant comme une gêne sérieuse pour la liberté du commerce, n'en ont pas demandé le rétablissement. Ces cartes sont actuellement remplacées par les cartes d'identité que délivrent les autorités communales et qui renseignent également sur la profession des intéressés.

Identity cards—*cartes de légitimation* in the strict sense of the term—for commercial travellers were abolished in the Grand-Duchy when the Germano-Luxemburg Customs Union was brought to an end. They were not reintroduced by the Belgo-Luxemburg Economic Convention, nor have the various commercial circles, which regard them as a serious hindrance to freedom of commerce, asked for their reintroduction. They are now replaced by identity cards which are issued by the communal authorities, and which also state the holder's occupation.

LISTE DES ORGANISMES HABILITÉS POUR LA DÉLIVRANCE
DES CERTIFICATS D'ORIGINE (ARTICLE II, N° 2).

LIST OF ORGANISATIONS WHICH HAVE BEEN DESIGNATED
FOR THE PURPOSE OF DELIVERING CERTIFICATES OF ORIGIN
(ARTICLE II, No. 2).

GRANDE-BRETAGNE — GREAT BRITAIN.

Le présent texte remplace celui paru dans le document C.198.M.75.1929.II.

The present text replaces that contained in document C.198.M.75.1929.II.

Aucune organisation n'a jamais été désignée officiellement comme autorité habilitée pour délivrer les certificats d'origine en général. Cependant, conformément aux accords conclus récemment par la Grande-Bretagne avec les Pays-Bas, la Suisse et d'autres pays, pour la reconnaissance mutuelle des certificats d'origine délivrés par les Chambres de Commerce, il a été décidé que ces certificats doivent être délivrés par les Chambres de Commerce de la Grande-Bretagne et de l'Irlande du Nord affiliées à l'Association des Chambres de Commerce britanniques, ainsi qu'il est indiqué ci-dessous:

No organisation has ever been officially designated as the recognised authority for issuing certificates of origin in general. In pursuance, however, of recent agreements concluded by Great Britain with the Netherlands, Switzerland and other countries for the mutual acceptance of certificates of origin issued by Chambers of Commerce, it has been arranged that the certificates should be issued by the Chambers of Commerce in Great Britain and Northern Ireland affiliated to the Association of British Chambers of Commerce as set out below:

LISTE DES CHAMBRES DE COMMERCE EN GRANDE-BRETAGNE ET EN IRLANDE AFFILIÉES A L'ASSOCIATION DES CHAMBRES DE COMMERCE BRITANNIQUES.

Germany.

[Translation.]

In Article I, paragraph 2, of the Protocol regarding the programme of future negotiations, the Governments are invited to formulate "in their replies, if possible, concrete proposals capable of serving as a basis for future negotiations". The Government of the Reich considers that, at the present stage of the discussion, it is impossible to formulate, in regard to the various questions, any concrete proposals such as would formally bind the Government at any future negotiations. On the contrary, the Government regards its reply as a simple statement, which does not in any way bind it, of the points to be examined at later conversations.

ANNEX : REPLY TO THE QUESTIONNAIRE. ¹

A.

(a) As regards agriculture, the principal articles of which a surplus is produced in Germany are barley, oats and sugar. There is sometimes an over-supply of potatoes and products derived from potatoes (seed, flour), and of live-stock (cattle, pigs, horses). There is, likewise, a seasonal surplus of market-garden plants and fruits.

Rye, oats and sugar are the products for which the *exportation* surplus is highest. An excess of *imports* of these articles occurs only in years when the harvest is really bad ; as a general rule, there is an *exportation* surplus.

Products in thousands of tons	1913	1925	1926	1927	1928	1929
Rye	582	—148	35	—663	65	408
Oats	157	—339	—176	—180	163	395
Sugar.	1,123	25	109	55	—51	174

An excess of *imports* is indicated by a minus sign in front of the above figures.

The disposal abroad of the other commodities mentioned above, of which there is over-production in Germany, is, apart from other obstacles, hampered mainly by the lower price-levels obtaining abroad.

(b) The normal outlets for the most important products mentioned under A (a) are :

Rye : The northern countries and the Baltic States.

Oats : Great Britain, Netherlands, Belgium and Denmark.

Potatoes and products derived from potatoes : Italy, France, Great Britain and Denmark.

Sugar : France, Great Britain, Scandinavia and British India.

Flour : Great Britain, Scandinavia, Netherlands, Finland, Switzerland and Czechoslovakia.

Exports of German agricultural products to countries outside Europe are, generally speaking, lower than those to European countries.

(c) Among the practical means of facilitating the disposal and distribution of surplus agricultural production in the normal markets and in other countries with an insufficient production, mention may first be made of *internal* measures devised to achieve improved and uniform quality (standardised products).

We may further mention, as having the same object, the various conventions *concluded between States* for the purpose of forming the producing and consuming countries concerned into a market constituting a homogeneous whole—that is to say, abolishing, so far as possible, within the limits of this market, impediments to the normal disposal of the products in question. In this connection the best means of all would be the formation between countries with a surplus production and importing countries of general Customs unions, which, however, should not, of course, be limited to agricultural products. Should such Customs unions, owing to the numerous objections raised against them, be impracticable for the moment, it would be possible to contemplate the conclusion between the said States of agreements

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c); B; C and D).

for the granting of preferential tariffs. It must not, however, be forgotten that a certain number of European countries are bound by long-term commercial treaties containing the general most-favoured-nation clause, which might prevent the conclusion of agreements for preferential tariffs. It might further be recommended that the States should conjointly and systematically consider how far the situation might be improved by the granting of Customs quotas, and whether there would not be almost insuperable objections to this method as a result of the fact that the consequences of such quotas would be manifold owing to the operation of the most-favoured-nation clause. It should be observed that the surplus production of the European countries is so low that, even if it were absorbed by the European importing countries, the latter would still be obliged to import commodities in considerable quantities from other countries (see Table I attached).

There are grounds for asking whether it would be expedient to use the method of collective conventions to encourage the conclusion of treaties such as those mentioned concerning Customs unions, preferential tariffs, or, as the case may be, the granting of Customs quotas between countries with an over-production and importing countries. The experience of collective treaties acquired hitherto does not encourage the adoption of this method. For that reason, it would, perhaps, be advisable to recommend that the first step should be bilateral negotiations; and that, at the outset, the countries concerned should be left free to get into touch with those other States with which they are, in principle, prepared to enter upon such negotiations.

B.

If, as was suggested in the reply to Question A, it were found possible to increase the purchasing power of the agricultural countries by ensuring the disposal of their agricultural surpluses, these countries could, without any other measures being necessary, buy a larger quantity of industrial products. Greater facilities for the disposal of agricultural products is, therefore, a practical means of facilitating the disposal of industrial products.

The formation of Customs unions would be accompanied by an extension of the markets for manufactured products. If preferential tariff agreements or agreements for the granting of Customs quotas were concluded in respect of agricultural products, such arrangements should, naturally, be set off by the conclusion of similar agreements concerning manufactured products.

Furthermore, the practical methods of facilitating the disposal of manufactured products *in countries whose production is mainly agricultural* and which need industrial products are to reduce their Customs tariffs and to lessen the commercial impediments to the importation of industrial commodities. This result may be obtained by the reduction of the Customs tariff in all manner of ways (the States acting either independently or bilaterally or by means of collective treaties, as was recommended, in particular, by the World Economic Conference).

Any measure taken by the *countries whose production is chiefly industrial* with the object of extending the market or concentrating production at the most suitable spot—more especially in the case of the financially powerful industries—will make it possible to reduce prices and thereby to extend markets and augment by the purchasing capacity of the consuming countries.

Again, the purchasing capacity of the consuming countries may be increased by the granting of credits to such countries. A measure of that kind, however, in so far as concerns Germany, encounters serious difficulties owing to the dearth of capital, which, as is well known, has been a marked feature of the post-war period.

C.

The Customs and administrative measures which are likely to promote the extension of markets are all those which further the reduction or abolition of Customs barriers between two or more States and the removal of import and export prohibitions and other impediments to trade—in particular, indirect protectionism. Among these measures we may include treaties for the conclusion of Customs unions, or, again, conventions for the granting of preferential tariffs, provided they are framed in such a manner as to make the reciprocal exchange of goods really and appreciably easier; and likewise, speaking generally, agreements concluded between States for bilateral or collective tariff reductions and Customs quotas.

Apart, however, from official measures, agreements between industries or agricultural associations in various countries might also help to widen the markets and to improve international trade.

D.

Europe has to import considerable quantities of industrial and agricultural raw materials. There is, generally speaking, only very little over-production of raw materials in the European countries. If it is desired to facilitate the trade in raw materials in Europe, it would be desirable to employ for this purpose all the various measures set forth in the reply to Questions A to C. To effect any general improvement in the trade in raw materials, the first step would be to abolish import prohibitions and export taxes where they still exist, as well as all other export restrictions.

Austria.

[*Translation.*]

A. ¹

The Federal Government must first point out that Austria is a State of mixed economic structure. It is not one of the countries which are, strictly speaking, exporters of agricultural products, yet it cannot be classified among those which are solely importers of such articles. In certain branches of agriculture, more particularly cereals, Austrian production is insufficient ; nevertheless, even in the case of these commodities, the percentage of requirements covered by national production is so substantial that it forms a very important factor in the country's economic life. In other respects, Austria is distinctly a country of over-production.

(a) There is over-production in the following articles : timber, draught animals and breeding stock, dairy products, horses (cold-blooded), potatoes, and certain fruits and vegetables.

(b) The normal outlets for these products are :

(1) For timber : Italy, Germany, France, Czechoslovakia, Switzerland and Hungary ; it is of capital importance to Austria's timber industry to retain these markets where she has always disposed of her surplus production.

(2) For draught animals and breeding stock : Germany and, to some extent, Italy and Czechoslovakia ; Austria breeding stock used to find a considerable market in the countries situated east of Austria ; but, at present, exports to these countries have fallen materially. In the Alpine districts of Austria, where stock-breeding is one of the most important rural industries, it is vitally important to retain markets already held and to recover the outlets towards the east.

(3) For dairy products : Germany (butter and cheese) and Switzerland (butter).

(4) For horses (of Northern strain) : Germany.

(5) For potatoes : Italy.

(6) For fruits and vegetables : Germany, Italy and France.

(c) In the opinion of the Federal Government, one practical means of ensuring the disposal of surpluses, apart from Customs measures, would be to create organisations for the distribution of production. In the case of stock-breeding, the Federal Government would further suggest that it might be expedient to arrange for agreements by which countries exporting cattle for slaughter would undertake to import stock cattle from the countries where they disposed of their live-stock for slaughter.

The Federal Government would further add that the adjustment of the problems exercising Austrian agriculturists, whether as the chief suppliers of agricultural products for domestic requirements or as exporters of certain other articles, would seem to call for regional agreements as, although the trade in some of these articles far exceeds that commonly known as frontier traffic, it only embraces, in actual fact, rather restricted areas and has nothing in common with international trade properly so-called. The Federal Government thoroughly realises the serious objections which might be raised, from many points of view, to such agreements between the parties concerned. It is, nevertheless, true that an adjustment of the relations between agricultural and industrial countries and—the Federal Government feels it must stress this—countries of mixed economic structure will require further special negotiations with a view to maintaining a balance between reciprocal concessions. On this point, the Federal Government will venture later to make certain suggestions.

B.

Austrian manufacturing industry is of long standing and considerable proportions. Built up at the outset at the centre of the Austro-Hungarian Monarchy, Austrian industry found its outlets primarily in the huge domestic market devoid of all Customs barriers, and, also, in the neighbouring countries, more particularly the agricultural States to the east. When Austrian economic life recovered from the crisis experienced immediately after the war, Austrian industrial exports naturally flowed again towards the old markets with which they still had traditional connections. Recent changes, however, in trade movements show that the importance of these markets for Austrian exports has steadily decreased and that Austrian industry has had to turn to Western and to overseas markets.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire to the States. (A, (a), (b) and (c) ; B ; C and D).

The annexed table, giving the values of exports of finished products and of the main semi-manufactured products during the last six years, shows that exports to the agricultural countries (Hungary, Poland, Roumania, Yugoslavia) have fallen during this period from 646 to 491 million schillings (or from 37.6 per cent of the total exports of such goods to 26.7 per cent). Similarly, exports to all States, whether merely contiguous or the Succession States of the former Monarchy (Czechoslovakia, Germany, Hungary, Italy, Poland, Roumania, Switzerland, Yugoslavia), fell from, 1,274 to 1,199 million schillings (or from 74.3 per cent to 65.4 per cent). At the same time, exports to the other European States and to overseas countries rose from 441 to 636 millions (or from 25.7 per cent to 34.6 per cent). The increase in exports to overseas countries (from 139 to 233 millions—*i.e.*, 8.1 per cent to 12.2 per cent) is specially notable.

The above figures prove that, technically as well as commercially, Austrian industry can compete on the international market. If exports to former markets, which, geographically at least, would appear to be the natural ones for the disposal of Austrian manufactures have nevertheless seriously fallen, the explanation must be sought elsewhere.

The Federal Government is fully aware that the agrarian crisis affecting agricultural countries has diminished their purchasing power, and that this is reflected in the above figures. This change in the movement of trade seems also to be due to the gradual industrialisation of agricultural States, as well as to the measures of protection that they have adopted.

The practical means for facilitating the disposal of manufactured products would, therefore, appear to be mainly of a Customs character. On the one hand, the Western markets which these goods have recently captured should be preserved; while, on the other hand, they should be ensured access to the markets of agricultural countries, and at the same time the problem of disposing of the latter's agricultural exports so solved as to enable them to increase their purchasing capacity.

C.

In these circumstances, and bearing in mind that only proposals lending themselves to collective negotiations are likely to be capable of serving as a basis for the future negotiations referred to in Article 1 of the Protocol of March 24th, 1930, the Federal Government begs to propose the following two negotiations :

(1) That negotiations should be held between States which have hitherto not consolidated their Customs duties by treaties, and which are referred to in Article IV of the Commercial Convention of March 24th, 1930, on the one hand, and States which conclude treaties of commerce with tariff provisions, on the other hand.

The purpose of these negotiations would be the maintenance by the first group of States of the *status quo*, subject to the other group making tariff concessions. This is a question which lends itself to collective negotiations, because the States in the first group would not undertake to maintain the existing situation with one country merely, and because an individual State would be equally unable to make the corresponding concessions. These negotiations might be opened on the ratification of the Commercial Convention of March 24th, 1930.

(2) That negotiations should take place between European States exporting agricultural products and States importing them.

The purpose of these negotiations would be to dispose of the surplus production of agricultural States and to secure corresponding concessions from the same States. Here, also, it would appear expedient for negotiations to be conducted as simultaneously as possible between all the States concerned, as no one State would be able, on account of its own agriculture, to make the required concessions without an assurance that the over-production of exporting States would be distributed among several countries and not depress its own market only. It will, moreover, be much easier for States exporting agricultural products to make equivalent concessions if they obtain facilities for their exports, not merely on one market but in more extensive areas.

D.

The Federal Government believes that the economic agreements contemplated by the negotiations which it has ventured to propose in the preceding paragraph would also furnish the practical means to ensure the movement of European raw materials amongst the different countries, particularly if they were coupled with the creation of large national import and export organisations.

Belgium.

[*Translation.*]

Before replying to the questionnaire contained in the Protocol of March 24th, 1930, it may be well to recall a few of the main features of the economic system of Belgium.

Belgium has a greater density of population than any other country in Europe; it has an average of 262 inhabitants per square kilometre. Further, the country has been very highly industrialised for nearly a century. Of the entire working population, 47 per cent, or nearly a half, are engaged in industry, 18 per cent in trade and 15 per cent in agriculture. There are two primary consequences of this situation. First, as the natural resources furnished by the national territory are much below the quantities required to ensure the livelihood of so numerous a population and the supplies necessary for so highly developed an industry, Belgium has to import a large part of her foodstuffs and practically the entire quantity of raw materials consumed by her industry. Coal alone is extracted in large quantities, but here again the output is insufficient, and 40 per cent of the national requirements have to be met by importation.

Secondly, it is a vital necessity for the Belgian population to export the products of their labour. The exportable surplus amounts to close on half the total industrial and agricultural production. In the chief branches of industry, this surplus reaches a considerably higher percentage, 95 per cent in the case of plate-glass and window-pane glass; 66 per cent, approximately, in the case of zinc, explosives and matches; 54 per cent in the case of rolled metallurgical products, etc. In money value, the exportable surplus amounts to four thousand millions Belgian francs for textiles, close on three thousand millions for articles manufactured from minerals, approximately eight thousand millions for metals and metal articles, one thousand and five hundred millions for glass articles, etc.

The loss to Belgium of the normal markets in which these considerable surpluses are disposed of, or even a threat to these markets, would create a crisis which would shake the Belgian economic system to its very foundations. The export problem is not accordingly one that merely arises from time to time. It has at all times been the fundamental problem of Belgian commercial policy.

A. ¹

(a) and (b) While Belgium has to import certain quantities of agricultural products, chiefly raw materials for agriculture (oil-cake, maize, fertilisers), she is, on the other hand, owing to her intensive system of agricultural production and the growth of market gardening, floriculture, forestry, bird-rearing and horse-breeding, obliged to find abroad outlets for commodities which have a relatively high value.

There are certain products of which there is always a surplus—that is to say, products which Belgium must necessarily export in larger or smaller quantities each year—and others which she exports at certain seasons of the year and imports at other seasons. Lastly, in view of certain agricultural changes, it is to be anticipated that in a very short time Belgium will definitely begin to export other products. We may mention, for instance, pork and butter.

I. TABLE OF AGRICULTURAL PRODUCTS SHOWING A FAVOURABLE TRADE BALANCE.

Products	Average Exports, 1927, 1928, 1929	Markets
<i>A. Vegetable Products.</i>		
Sugar	1,103,847 metric quintals	France, Germany, Canada, Canary Islands, British India, Morocco, Netherlands, Switzerland, United Kingdom, Belgian Congo, Egypt, Spain, Finland, Norway, Persia, Uruguay, China, Denmark.
" Witloof " chicory . . .	248,458 metric quintals	France, Netherlands, United Kingdom, U.S.A., Germany.
Potatoes	2,886,616 metric quintals	Germany, France, Netherlands, United Kingdom.
Chicory root	364,483 metric quintals	Germany, France, Netherlands, England, Switzerland.
Live plants	103,071,000 francs	Germany, France, Italy, Netherlands, Sweden, Switzerland, Great Britain, Canada, Spain.
Asparagus	5,653 metric quintals	Germany, Netherlands.
Cauliflower	82,721 metric quintals	Germany, Netherlands.
Tomatoes	26,810 metric quintals	Germany, Great Britain, Netherlands, France.
Vegetables and fruit, preserved vegetables (green peas)	111,790 metric quintals	Belgian Congo, Germany, Argentine, Canada, U.S.A., France, Hamburg, Netherlands, United Kingdom.
Fresh grapes	27,738 metric quintals	U.S.A., Germany, United Kingdom.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c); B; C and D).

Products	Average Exports, 1927, 1928, 1929	Markets
Fresh plums	39,384 metric quintals	Netherlands, United Kingdom.
Fresh apples	226,434 metric quintals	Germany, Netherlands, United Kingdom.
Fresh pears	438,233 metric quintals	Germany, France, Netherlands, United Kingdom.
Fresh cherries	29,966 metric quintals	France, Netherlands, United Kingdom.
Fresh strawberries	1,854 metric quintals	Germany, France, Netherlands.
Fruits not specially mentioned in the tariff schedule	14,071 metric quintals	Netherlands, United Kingdom.
Fruits: Total	786,820 metric quintals	

B. *Animal Products.*

Horses	22,657 head	Germany, France, Netherlands.
Rabbits (slaughtered, but not chilled)	21,496 metric quintals	France, United Kingdom.
Eggs	626,989,000 eggs	Germany, Spain, France, Netherlands, United Kingdom, Switzerland.

II. AGRICULTURAL PRODUCTS OF WHICH THERE IS A SEASONAL SURPLUS AND FOR WHICH, WITH THE EXCEPTION OF THE FIRST, A STEADY EXPORT IS EXPECTED.

Products	Average Exports, 1927, 1928, 1929	Markets
1. <i>Beef (not chilled)</i>	32,205 metric quintals	Germany, France.
2. <i>Pork (not chilled)</i>	18,167 metric quintals	France, Germany, England.
3. <i>Butter</i>	14,385 metric quintals	Belgian Congo, Germany, France, United Kingdom.

(c) Among the practical means that might be employed to ensure the disposal and distribution of surplus production in the normal markets mentioned above and in other countries with insufficient production we may mention :

- The organisation of a commercial information service for agriculture ;
- The standardisation of Customs tariff nomenclatures and regulations ;
- The abolition of import duties and other restrictions on the free movement of agricultural products ;
- The adoption of transport facilities to take into account the special requirements of agriculture : cold storage trucks, etc.

B.

The Belgian Government is prepared to take part in any conference called to seek for means to increase the extent to which it is possible to augment the purchasing capacity of countries which consume manufactured products.

C.

There does not appear to be any one solution, applicable indiscriminately to all products and all countries, for the problem of the extension of markets and the improvement of international trade. Even if we considered only the European States, the differences of situations and interests would make any such solution impossible. The Belgian Government considers that any study of the extension of markets and the improvement of international trade will have to be based on the nature of the goods.

As regards *agricultural and breeding products*, the reduction or, better still, the total abolition of the import duties collected at the time of importation in the countries which form our principal markets, would certainly be calculated to widen the markets and to improve international trade. Dumping, and all similar practices having the same results, should be done away with completely and sanitary and other measures which greatly hamper Belgian exports of agricultural products should be reduced to what is strictly necessary.

All the commodities appearing under heading A are subject to heavy import taxes in almost all countries. The products in regard to which Belgian agriculture is particularly hard hit are potatoes, " Witloof " chicory, chicory root, horses, eggs and butter. The annex to the present note explains in detail the restrictions imposed on exports of these products in a number of foreign countries.

The question of *manufactured products* will now be considered (Section D will deal with raw materials). As has been seen above, the Belgian population derives its livelihood to a very large extent from the exportation of the products of its labour. Belgium, therefore, is normally an exporter of large quantities of manufactured goods. The proportion of our exports of manufactures to our total exports varied, between 1922 and 1929, from 55 to 60 per cent. The same is true, in varying degrees, of several European countries, more particularly of Belgium's three great neighbours, Germany, France and Great Britain.

Special attention should be paid to a first category of manufactures. These are mass products such as crude or simply rolled metals, plate-glass, window-pane glass, cement, etc.

Although certain of our neighbours, such as Great Britain and the Netherlands, afford us important outlets for these products, the greater part of our production goes to non-producing countries or countries with only a small production. The quantity sent to these countries amounts on an average to about 75 per cent of our total exports for window-pane glass and plate-glass, over 80 per cent for cement, 70 per cent for the bulk of rolled products and as much as 80 per cent for rails, sheet iron, wire and rods.

In the case of these goods, the extension of the market should not, we think, be sought for principally among the other great European producing countries.

There is no apparent probability of a considerable development of trade inside this group in the near future. The reason is simple. In the majority of cases, the production of the countries in question exceeds the requirements of the home market. The products concerned are of a uniform type and their quality hardly varies from one country to another. Any important movements can be the result only of price differences. From this point of view the possibilities of competition are likewise few. Mass products are often heavy and their transport, especially by rail, involves high costs. The trade between producing countries is accordingly determined by the localisation of industries. Each manufacturing centre has its own zone of influence which, in certain cases, will pass beyond the frontier, provided Customs tariffs are not unduly high.

Taking these factors into account, we may recommend that production should be distributed and localised on as rational a basis as possible and that trade between the different producing countries should be regularised.

This latter point is one of special importance to Belgium by reason of her liberal Customs policy. In time of crisis, or after overproduction, the principal producers, other than Belgium, can, owing to the Customs tariffs by which they are surrounded, maintain remunerative rates on the home market and sell their surplus products at low prices in neighbouring countries which, like Belgium, have hardly any protection at all. There is no need to dwell on the loss caused by practices of this nature to those who suffer from them.

This is not the place to consider the problem of industrial agreements with which the League has already dealt on several occasions and which, moreover, it still has under investigation. It may, however, be observed that, as regards the products in question, agreements of this kind, *in the present circumstances*, afford the best means of ensuring normal relations between the European producing countries.

These agreements may be plurilateral or bilateral. There are many of them already in existence; for instance, the International Steel Consortium, the Association of European Rail Manufacturers, the International Steel and Iron-Tube Combine, the International Machine-Yarn Cartel, the International Plate-Glass Convention, the agreements concluded by the Belgian cement manufacturers with the German, French and Swiss cement manufacturers, etc. Other associations are in course of formation.

The majority are based on the stipulation of territorial protection—that is to say, each market is, in principle, reserved to the national industry. In certain cases, however, import quotas may be allowed to other producing countries. Regulations of this kind, the object of which is primarily to take into account certain local circumstances, are very valuable to countries like Belgium, whose production greatly exceeds the requirements of the home market. Combines of this sort may also include provisions regarding the distribution of foreign markets.

* * *

High quality products, such as textiles, mechanical and electrical construction products, motor cars, tyres, leather, wooden objects, paper, etc., require separate examination. Although the surplus of Belgian production of these products, like that of other European producing countries, is mainly exported to non-producing countries or countries with a low production, there is nevertheless a brisk trade even within the group of the producing countries. For instance, more than half Belgium's textile exports go to Germany, France, Great Britain, the Netherlands, Switzerland and Italy. This trade is to be explained principally by the fact that these are not products of a uniform type or quality but, on the contrary, goods which are produced in a great number of varieties.

Here, again, the liberal character of the Belgian Customs system places us in a particularly delicate situation. The differences between the Belgian tariff and those of certain neighbouring countries are the cause of a very serious disequilibrium in our trade with the said countries. This disequilibrium, which is now no longer intermittent—but, on the contrary, practically permanent—is particularly noticeable in the case of textiles. For instance, in 1929, French imports of textiles into the Belgo-Luxemburg Economic Union amounted to 1,203,702 thousand francs, whereas the exports to France hardly exceeded 128,010 thousand francs, out of a total Belgian export of about four thousand million francs.

So marked a disproportion is abnormal and gives rise to constantly stronger demands for increased duties. These demands are based not only on the material loss sustained by Belgium, but also on the unequal conditions of competition.

The question arises in what way the trade in these products could be made normal.

(a) A solution could not, we think, be found in direct agreements between producers, of the kind which exist for steel or plate-glass. The nature of the products is hardly suitable for agreements which involve the rationing of production or the distribution of markets.

(b) In the absence of an agreement between producers, a collective Customs agreement, binding the different European countries concerned, might be considered. The case which, *prima facie*, appears the simplest, is that in which competition from outside Europe raises a common Customs problem for the European producing countries as a whole. This is the case, among others, of the motor-car and tyre industry.

If it is merely desired to determine the conditions under which the various European countries would compete among themselves, we encounter a serious difficulty—namely, that of finding, within any single group of products, the factors which would ensure the necessary offset for the conclusion of an agreement. This difficulty can only be got round by making the negotiations cover very wide categories of products. In any case, this would be a solution which we cannot hope to achieve in the near future.

In this connection, it would be desirable to ascertain whether there are not cases where an agreement like that concerning export duties on bones might not be considered. The formula employed is to classify the adhering countries in different categories according to their individual situations and to limit the protective rate in each category respectively. With an elastic system of this kind it is possible to bring within a single agreement countries at very different stages of economic development. The enquiries made with a view to agreements of this sort would be greatly facilitated by the adoption of a uniform Customs nomenclature and, if it were possible, by the carrying out, within a short period of time, of the suggestion contained in the French memorandum annexed to the Protocol of March 24th, 1930, regarding the programme of future negotiations. The object of this suggestion is to convert the specific duties in the various Customs tariffs into *ad valorem* duties. If absolutely necessary, it might be possible to go no further than to convert the existing specific duties into a single currency.

(c) In cases where collective agreements were found impracticable, it would be desirable to use the method of bilateral agreements—that is to say, ordinary commercial treaties.

* * *

So far we have only considered, in regard to the Customs problem, tariff questions in the strict sense of the term—that is to say, those relating to the height of the duties. There are other questions which are of great importance in this connection—in particular, those bearing on indirect protectionism, Customs formalities, Customs nomenclature, export bounties, etc. These questions, are being exhaustively studied by the League's Economic Organisation and it will accordingly suffice if we merely mention them here. The Belgian Government attaches great importance to the early conclusion of collective agreements on these different points. We single out for special mention those devised for the adoption of a uniform Customs nomenclature and the abolition of export bounties.

* * *

Apart from the general problems examined above, there are, in the matter of commercial policy, two questions which occupy the front rank to-day and demand a prompt solution. In mentioning them, we shall not be going outside the range of the questions contained in the Protocol of March 24th, 1930.

The first relates to the adjustment of the interests of agricultural countries and industrial countries.

Belgium's Customs policy as regards agricultural products is a particularly liberal one. Out of the 368 items in the tariff schedule for agricultural and breeding products, there are 207—*i.e.*, 56 per cent which are free of import duty. An even more accurate idea of the liberal character of the Belgian tariff will be gained when it is realised that, in 1929, out of a total import of 13,011,491 thousand francs worth of agricultural products of all kinds, 10,650,952 thousand francs worth—*i.e.*, 81 per cent of the total—entered the country free of all duty. All the essential products, such as cereals, wool, cotton, grain, are duty free. The only duties that exist are, in almost every case, imposed purely for revenue purposes. This system allows exports from essentially agricultural countries to develop freely. We think that the latter can hardly hope for a more favourable system.

The question, however, is far more complicated than it appears to be at first sight. In Europe, there is no country with an exclusively agricultural economic system, while there is likewise no country with an exclusively industrial economic system. Belgium is generally held to be an essentially industrial country, and yet the importance of agriculture in her economic system cannot fail to be recognised. This branch of the national activity is one of the most important in the country as regards the value both of national production and national exports. In the problem of the general adjustment of agricultural interests and industrial interests, Belgium therefore will have to put forward claims in regard to agriculture as well as industry.

Belgium has no intention of modifying the liberal system governing the admission of agricultural products to her territory. The question arises whether she could consolidate this system by treaty. Without giving any final opinion on this subject, Belgium must nevertheless say at once that, in order to enable her to do so, the three following conditions must be fulfilled as a minimum :

(1) She must obtain guarantees for the export of her own agricultural products to the countries which are the normal outlets for these products ;

(2) She must obtain equivalent advantages for her industrial products in the agricultural countries ;

(3) She must secure an arrangement safeguarding her against the threat to her unprotected market resulting from the system of export or import bounties in force in certain countries, more particularly in regard to cereals.

The second question which calls for the attention of the various Governments is the desirability of an agreement with countries like Great Britain, the Netherlands and the Scandinavian countries, which pursue traditionally an autonomous commercial policy—that is to say, countries which, in principle, do not consolidate their tariff duties by treaty.

These countries of course have a relatively liberal Customs system, but a great advance would be made towards the stabilisation of commercial relations if it were stabilised by commercial agreements.

The Commercial Convention of March 24th already involves on the part of the countries in question an undertaking not to increase the protective duties in their tariffs, nor to introduce new ones. The Commercial Convention, however, is a purely transitional instrument and we must even now consider the arrangements by which it will be followed.

The Belgian Government considers that it would be desirable for these States to agree to conclude commercial treaties with tariffs annexed thereto, stipulating, on each side, for very wide guarantees in regard to trade between the countries concerned.

Belgium, although not one of these countries, has nevertheless, like them, a fundamentally liberal Customs policy. We have at present consolidated by commercial agreement about a quarter of the duties in our tariff schedule. This consolidation is very valuable to the countries benefiting by it, since it stabilises certain specific duties, the majority of which have scarcely been adjusted to the present price-level and the incidence of which is thus appreciably lower than at the time of the Customs reform in 1924. Belgium cannot, however, extend these consolidated duties unless the countries to which we export our products give us, in return, definite guarantees for the maintenance and development of our business.

D.

Belgium is largely dependent on foreign countries for her supplies of raw materials. We import annually about 18 thousand million Belgian francs worth of raw or roughly-worked materials—that is to say, an amount equivalent to more than half our total imports. Some of these raw materials which are among the most important to our economic system come exclusively from Europe—in particular, coal and certain ores. We attach the greatest importance to there being no impediment to the movement of raw materials of European origin. In particular, we consider that trade should not be hampered by prohibitions, restrictions or discriminations. Measures should be taken to overcome the difficulties which at present prevent a large number of countries from adhering to the Convention for the Abolition of Prohibitions.

Annex.

1. *Potatoes.* — The following are the duties levied in Germany : ¹

From February 15th to April 15th	8.50 francs per 100 kilogrammes.
From April 1st to July 31st	12.75 francs per 100 kilogrammes.
From August 1st to August 31st	34.— francs per 100 kilogrammes.
From September 1st to February 14th.	17.— francs per 100 kilogrammes.

The following are the duties levied in France which is another market for potato products :

From March 1st to July 15th	29.60 francs
For the remainder of the year	21.15 francs

2. "*Witloof*" *chicory.* — France : 10.90 francs per 100 kilogrammes ; Netherlands : 8 per cent *ad valorem* ; U.S.A. : approximately 50 per cent *ad valorem* ; Germany : 34 francs per 100 kilogrammes.

3. *Chicory root.* — Germany : 7 francs per 100 kilogrammes for dried roots ; France : 4 or 17 francs per 100 kilogrammes for fresh and dried roots respectively ; Switzerland : 7 francs per 100 kilogrammes.

4. *Horses.* — Germany : 1,190 francs per horse, if worth less than 21,250 francs, and 3,060 francs per horse, if worth more than 21,250 francs ; France : horses less than 5 years old, 588 francs each, horses more than 5 years old, 882 francs each.

These rates are reduced respectively to 238 and 315 francs for a quota of 5,200 horses.

5. *Eggs.* — Germany : 255 francs per 100 kilogrammes. In consequence of the treaty with Italy the duty remains provisionally constant at 42.50 francs per 100 kilogrammes ; France : 33.60 francs per 100 kilogrammes ; Switzerland : 104 francs per 100 kilogrammes.

¹ All the duties given in this annex are shown in *Belgian francs.*

6. *Butter*. — France : 280 francs per 100 kilogrammes ; Germany : 233.75 francs per 100 kilogrammes, pending a revision of the treaty with Finland. In the latter case the tariff will be increased to not less than 425 francs per 100 kilogrammes until the end of 1933.

* * *

Among the many sanitary and phytopathological measures restricting our foreign trade and which we are anxious to have abolished we may single out the following for special mention :

Whereas imports of Belgian *potatoes* into France are subject only to one formality (production of a phytopathological certificate), Germany requires the following conditions :

(a) Consignments may only be despatched in fresh packing or, if in bulk, in closed trucks ;

(b) Each package—or in the case of goods despatched in bulk, each truck—must be sealed by the phytopathological service of the country of origin ;

(c) Each consignment must be accompanied by a phytopathological certificate containing a description of the consignment and testifying

(1) That the consignment has been inspected by an expert of the phytopathological service and found free from black scurf ;

(2) That the consignment comes from a farm not infected by black scurf and that the disease has not been observed within a radius of 2 kilometres ;

(3) That the packing has not been utilised before ;

(4) That each packing or each truck has been sealed by an expert of the phytopathological service ;

(d) The consignment is only allowed to enter Germany after a phytopathological inspection at the cost of the importer.

Live Plants. — The exportation of live plants to various countries is greatly impeded or even totally prevented by a number of phytopathological and other formalities.

Great Britain.

A.¹

With the exception of pedigree live-stock and seed potatoes, the United Kingdom is not, on balance, an exporter of agricultural products. His Majesty's Government in the United Kingdom would prefer to await the views of other countries in regard to these Questions. At the same time, as the United Kingdom is an importing country, His Majesty's Government are naturally interested in many aspects of the problem.

B.

As regards the disposal of manufactured products, His Majesty's Government wish to emphasise the primary importance, in their opinion, among the means for bringing about this object, of reducing Customs tariffs to a moderate level. In this connection, they would recall the view expressed by the World Economic Conference that tariffs "are at present one of the chief barriers to trade". The Conference, it will be remembered, drew special attention to the increases made in most countries, since before the war, of the duties on manufactured articles, and their diagnosis of the causes of this tendency appears sufficiently noteworthy to be recalled here. After referring to the factor of currency depreciation—a complicating element which has now happily been almost entirely removed—the report of the Conference proceeds :

"A second reason for the present tariff situation, both in Europe and elsewhere, is the desire of nations to keep existing or recently established industries in being, by means of tariffs, on a scale which they would not otherwise be able to maintain. These industries have grown to their present extent, in some cases, as a result of abnormal expansion during the war; in others, as a result of the desire of certain nations to attain a degree of economic independence which is not justified by their slender resources; and, again, in others, with a view to providing employment for surplus labour for which certain former outlets are at present closed.

"This increase in productive capacity has often outrun the capacity of the country to absorb the products, either as regards its material needs or its purchasing power. The result has been, either that the plant left idle has overweighted the costs of production, particularly when borrowed capital is involved, or that, in order to utilise the whole plant, and to give some return to the capital employed, it has been necessary to turn to the foreign market and so to intensify international competition.

"The desire to deal with the problem of excessive industrial capacity has usually led to an attempt to reserve the home market for home production by means of tariff barriers erected with a view to creating an independent national economy capable of producing, under the protection of the tariff wall, an increase of invested wealth and a more satisfactory return for the work of the nation. This effort to attain self-sufficiency cannot hope to succeed unless it is justified by the size, natural resources, economic advantages and geographical situation of a country. There are very few countries in the world which can hope to attain it. The artificial increase of plant which is only partly employed has meant, not only uneconomical and costly production, but also a wasteful use of the world's reduced capital resources. It has thus been one of the causes which has maintained an abnormally high rate of interest in recent years. It should be added that, so long as unduly high tariffs are maintained, this uneconomic use of capital continues and creates an increasing number of vested interests which resist a return to a sounder policy."

His Majesty's Government would further add that, while they recognise that Customs tariffs are not the only form of obstacle to trade which falls to be considered in this connection, and that much importance also attaches to such practices as fall within the generic description of "Indirect Protectionism", nevertheless, in their view, the cardinal influence is that exercised by Customs tariffs; and any attempt to deal with the other factors above mentioned, while leaving unsolved the question of Customs tariffs, would amount to leaving the larger part of the problem untouched. Moreover, any success that might be obtained in these other directions could at any time be nullified by further increases of Customs duties.

C.

As regards practical methods by which the reduction of Customs tariffs could be brought about, His Majesty's Government are anxious to obtain a reduction of all duties other than fiscal duties at the earliest possible date. They recognise, however, that, in order to keep the problem within manageable limits, it may be necessary that the negotiations should proceed by stages, a few groups of commodities being dealt with at each stage. The order in which such groups of commodities are selected for consideration might, His Majesty's Government suggest, follow generally their relative magnitude and importance in international trade. Thus, in the first place, some such groups as textile fabrics and machinery might be selected.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, B, C and D).

His Majesty's Government accordingly suggest for the first negotiations these two groups—namely, (1) textile fabrics and (2) machinery.

As regards the method by which the reduction of tariffs in relation to these two groups should be brought about, His Majesty's Government would tentatively suggest some such procedure as is outlined below :

1. Each Government participating in the negotiations should state the total Customs revenue which it derived, in the fiscal year 1929 (or that fiscal year of which the major portion fell within the calendar year 1929), from its import duties (other than fiscal duties) upon the goods comprised within each of the groups under consideration.

2. From each of these totals there would, in the first place be deducted an amount equivalent to an agreed percentage (which should not exceed, say, 5 per cent) of the value as shown in the trade statistics of the country concerned, of the goods falling within the particular group in question, imported during the above-mentioned fiscal year.

3. Each State should undertake so to reduce its duties on the commodities comprised within the group in question that, on the basis of the importations of 1929, the balance of revenue as arrived at in paragraph 2 would be diminished by an agreed percentage. Such reduction should be calculated upon the rates of Customs duty which are applicable, under either the autonomous or the conventional tariff, to goods originating in countries entitled to most-favoured-nation treatment.

4. These reductions should be spread with proportional equivalence over all the articles within the group. Exception might possibly be made of articles on which the rate of duty already falls below the agreed percentage of tolerance referred to in paragraph 2 above; and, as it may also be necessary in certain other cases to admit special exceptions to the general principle, each State should determine for itself what reductions of individual duties would be required, observing the principle, as far as possible. It would, at a later date to be fixed, send to the Secretary-General of the League, for communication to the other participant States, an explanatory statement showing, with all necessary statistical details, how the reduction of particular duties has been arranged.

5. The reduced duties thus arrived at should, it is suggested, be scheduled in a multilateral Convention, subject to their approval by the Conference, it being understood that objection could be raised if there was any wide departure from the principle of equivalence of reductions laid down in paragraph 4. By this Convention the participating States would agree to secure the enforcement of the reduced duties.

6. At the first Conference, an agreement should be reached to the effect that the work of similarly dealing with other groups (to be specified) of commodities in a determined order should be proceeded with forthwith. Subsequent Conferences should be called at agreed intervals.

The groups suggested for first consideration relate, it will be seen, to manufactured products. While His Majesty's Government particularly emphasise the importance of reducing the duties on these goods, they see at the same time an advantage in the holding, simultaneously or in close succession, of Conferences or sub-conferences of which one would deal with groups of manufactured products, while another would deal with a selected group or groups of products of agriculture, stock raising, fisheries, and their derivatives.

His Majesty's Government are not uninterested in the duties on foodstuffs. The more the duties on these are raised in Europe, the greater becomes the danger of disturbance of the market in the United Kingdom by the dumping of surpluses.

His Majesty's Government wish to make it clear that, in putting forward the above suggestions regarding tariffs, they do not by any means intend to rule out other possible proposals with a view to promoting the extension of markets and the improvement of international trade; but they would once more emphasise that, failing a resolute and effective attempt to deal with the problem of excessive and unstable tariffs, other remedial measures can, in their opinion, only have a limited effect.

D.

With regard to this question, His Majesty's Government would prefer to await the views of other Governments.

Denmark.

[*Translation.*]

A.¹

(a) As shown in the annexed Table 1, there is in Denmark a considerable over-production of the following products :

Butter : 159 million kilogrammes	} Figures for 1929.
Pork : 254 million kilogrammes	
Beef and Veal : 72 million kilogrammes	
Eggs : 47 million kilogrammes	

There is also an over-production, though smaller, of other agricultural products, such as milk, cream and cheese.

(b) The annexed Table 2 contains a detailed reply to this question. It shows that Denmark exports her agricultural products principally to Great Britain and Germany, but that various other Central European countries, such as Switzerland, Austria and Czechoslovakia, together with France, the Netherlands and Belgium, also constitute fairly important markets. Germany is the principal purchaser of live animals, beef and veal, cheese, unmilled barley and butcher's offal ; while the greater part of the pork, butter, eggs, condensed milk and tinned meat is exported to Great Britain.

(c) The Danish Government has noted with much regret the tendency at present predominating in certain countries to raise artificial tariff barriers against the importation of agricultural products from other countries, or unduly to hinder their sale. This tendency obviously runs counter to the efforts made to improve international economic relations. The Danish Government therefore considers that, in the first place, measures should be taken to reduce existing Customs tariffs ; and that, pending the realisation of this object, attempts should be made by means of international agreements to check any further tendency towards protection, not only in countries which are at present pursuing a protectionist policy, but also in those which follow a free trade policy. These measures would appear indispensable if production and consumption are to be rationalised, this being the only means of enabling the agricultural countries of Europe to meet competition from overseas countries.

The Danish Government is of opinion that countries whose policy is based on a liberal single tariff are entitled to ask that countries whose tariffs are specially established with a view to negotiation with foreign countries should take this fact into consideration to a greater extent than they are doing at present, and should recognise that these liberal single tariffs from the outset confer such advantages upon other countries that no further tariff reductions should be claimed in compensation for any facilities which protectionist countries may be prepared to offer. If this view were adopted, it would greatly facilitate the conclusion of agreements for promoting trade relations and the economic development of the countries concerned.

It is not only the fact that Customs tariffs affecting the agricultural products of the various countries are high which impedes the normal distribution of these products, but in some cases the very nature of these tariffs constitutes an obstacle. In this connection, the Danish Government has in mind the system of sliding duties on various agricultural products which appears to be again taking root in Europe, and which, on account of the instability that it involves for the production and disposal of goods, is equally prejudicial to the producer, the consumer and trade in general.

The Danish Government is aware that the exchange of agricultural products between European countries could be promoted by other measures besides the reduction or stabilisation of Customs tariffs—for instance, the distribution of products might be rationalised by creating suitable sales organisations and by obtaining the necessary credits for carrying out such measures. Denmark already possesses the necessary commercial and credit institutions for organising her agricultural production and disposing of her output.

Denmark is an exporter of live-stock products, and at the same time a large importer of agricultural produce (cereals and fodder), which represent the raw materials for her production of animal foodstuffs, the latter being regarded as the " finished " product.

Danish agriculture is based on a large output with a proportionately small net profit. The purchase of the raw materials in question on markets where the same quality is obtainable at the lowest prices is therefore of the greatest importance. As Denmark does not levy Customs duties on these products, the question of increasing her purchases of cereals and fodder in Europe is directly connected with the measures contemplated in the Protocol, which might bring about a reduction in the prices of these products grown in Europe in comparison with the prices in overseas countries.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c) ; B, C and D).

The Danish Government would very warmly welcome the adoption of measures to improve the economic position of grain-producing countries. It would, however, point to the marked difference between the agricultural system of Denmark and that of grain-producing countries, and considers that the latter are in the best position to ascertain the causes which prevent them from selling their products at prices sufficiently low to compete with overseas countries, and that they should make proposals to cope with the present state of affairs. At the same time, the Danish Government would draw attention to the fact that cereal foodstuffs are subject to export duties on leaving certain agricultural countries in South-Eastern Europe and that a policy of this kind is not, of course, an inducement to Denmark to increase its purchases from those countries.

On the other hand, in the opinion of the Danish Government, the establishment of a system of export bounties on agricultural and other products in certain countries is an artificial measure which disorganises markets and is therefore extremely prejudicial both to exports from other countries and to international trade.

Lastly, the Government would make it clear that Denmark cannot play any part in furnishing grain-producing countries with capital, and, moreover, does not consider that it is for the Governments as such to supply such credits by means of international action.

B.

The views given under A (c) above concerning the lowering of Customs tariffs are also applicable to this question, for they deal with the disposal of industrial as well as agricultural products. The Danish Government is of opinion that the division of Europe into a series of Customs areas prevents any rationalisation or efficient organisation of production, thus raising the cost of the latter and making it difficult to compete with overseas countries in the matter of prices.

There is every reason to fear that some countries, hitherto faithful to free trade principles, will no longer be able to continue this policy, unless protectionist countries, for their part, show a little goodwill by lowering their tariff walls. Any move towards protectionism made by free-trade countries would, in turn, react on the nations whose protectionist tendencies were responsible for this reversal of policy.

Genuine easing of the European situation in regard to Customs, such as would enable all free-trade countries to continue their past policy, would, therefore, be highly desirable; and, notwithstanding the deeply-rooted conviction in Denmark that the commercial position of the country calls for the maintenance of Customs autonomy, an appeal for guarantees that it would not in this event depart from its liberal policy would certainly meet with a ready response. Denmark has already given evidence of her goodwill in this matter by adhering to the Commercial Convention of March 24th, 1930.

The Danish Government deeply regrets the fate of the International Convention for the Abolition of Export and Import Prohibitions and Restrictions and considers it most desirable that work should be continued on these lines.

It also considers that an extension of the International Convention for the Simplification of Customs Formalities might promote the disposal of, and trade in, various commodities.

Furthermore, the Danish Government would submit the following observations on Question B :

In the controversy between industrial and agricultural countries, the latter declare that, if the former close their markets to agricultural products, the agricultural countries will certainly be forced to develop their industries, and this will necessarily involve higher tariffs on industrial goods, and thus a result diametrically opposed to the decrease now aimed at. In this connection, the Government would point out that, in Denmark, the market is essentially free and that the conditions for a satisfactory exchange of commodities already exist. The scheme for preferential tariffs for cereals and other goods mentioned in Annex I to the Protocol are not compatible with the commercial policy of Denmark, and the Government does not, therefore, see its way to support any such scheme. It has already been stated that there are no Customs duties on imported cereals in Denmark, and the Government therefore considers that any facilities granted to industrial countries in return for a decrease in their duties on such foodstuffs will naturally benefit the industrial products of Denmark.

C.

(In order to facilitate the preparation of a practical programme of preliminary negotiations, it is desirable that, in the first instance, so far as tariffs are concerned, mention should only be made in detail of those modifications to which the most importance is attached.)

In reply to this question, the Danish Government would, in the first place, refer to the foregoing statements. The measures which specially hamper the disposal of Danish products and which should, therefore, be modified, if possible, may be divided into two groups : (1) imposts on importation ; (2) other obstacles.

1. Certain agricultural products of Denmark are subject to import duties abroad, which are so heavy as to constitute a serious obstacle to their sale, although conditions are otherwise favourable.

We may quote the following facts by way of example :

Butter. — On August 18th last, the f.o.b. price for Danish butter was 142.— per cwt. or 254 crowns per 100 kilogrammes.

On July 31st, 1929, the autonomous tariff for butter was fixed at 50 Marks, or 44.58 crowns per 100 kilogrammes in Germany—*i.e.*, 17.55 per cent of the f.o.b. price for Danish butter.

In Switzerland, the duty on butter is 120 francs per 100 kilogrammes, or 87.1 ore per kilogramme—*i.e.*, 34.3 per cent of the f.o.b. price on August 18th.

An increase in the duty on butter, as introduced in Switzerland and Germany, can only hamper the sale of this product ; in point of fact, this measure was adopted in both countries in order to protect the national dairy industry.

In Hungary, the Customs duty on butter is 80 gold crowns, or 60.49 Danish crowns per 100 kilogrammes—*i.e.*, 23.81 per cent of the f.o.b. price on August 18th.

In Spain, the Customs duty is 1.50 gold peseta (minimum tariff), or 108 ore per kilogramme—*i.e.*, 42.52 per cent of the f.o.b. price on August 18th.

Cheese. — The f.o.b. price of 20 per cent cheese on August 18th last was 56 crowns per 100 kilogrammes.

In Czechoslovakia, the Customs duty on Danish cheese was 294 Czechoslovak crowns, or 32.63 Danish crowns per 100 kilogrammes—*i.e.*, 58.27 per cent of the f.o.b. price for 20 per cent cheese on August 18th.

In Austria, the Customs duty is 30 gold crowns, or 22.83 Danish crowns per 100 kilogrammes—*i.e.*, 40.77 per cent, of the price for 20 per cent cheese on August 18th.

In Hungary, the Customs duty is 100 gold crowns, or 75.61 Danish crowns per 100 kilogrammes—*i.e.*, 135.02 per cent of the f.o.b. price for 20 per cent cheese on August 18th.

In Spain, the Customs duty is 1.50 gold peseta, or 108 ore per kilogramme—*i.e.*, 192.86 per cent of the price for 20 per cent cheese on August 18th.

Animals for slaughter. — On August 13th, last, medium-grade calves were quoted at 46 ore per kilogramme live weight.

Since February 11th, 1930, the Customs duty on Danish live-stock imported into Germany has been 24.50 Marks per 100 kilogrammes or 21.9 ore per kilogramme, which is equivalent to 47.61 per cent of the above-mentioned market price. (Before February 11th, 1930, the duty on all Danish animals imported into Germany was 16 Marks per 100 kilogrammes, or 14.3 ore per kilogramme—*i.e.*, 31.09 per cent of the market price.) The coming into force of the new Czechoslovak tariff will involve approximately the same Customs charges on the importation of live-stock into Czechoslovakia.

Live pigs. — On August 14th last, sows were quoted at 54 ore per kilogramme live weight.

At the present time, the German Customs tariff on imported live pigs is 27 Marks per 100 kilogrammes, or 24.1 ore per kilogramme—*i.e.*, 44.63 per cent of the above-mentioned market price. This duty on live pigs is already sufficiently high, but a still greater obstacle to trade is the insecurity caused by the system of sliding Customs duties applied in Germany. Again, the coming into force of the new Czechoslovak tariff will produce approximately the same increase in that country.

Fresh beef and veal. — On August 15th last, the meat of first-grade calves was quoted at 100 ore per kilogramme.

The German Customs duty is 45 Marks per 100 kilogrammes, or 40.1 ore per kilogramme—*i.e.*, 40.14 per cent of the above-mentioned market price.

Horses. — On August 11th last, young draught horses of good quality were quoted at 650 crowns each.

The German tariff on light horses (for example, Frederiksborg horses) was 500 Marks, or 446 crowns each—a duty which was absolutely prohibitive. In Germany, the Customs tariff distinguishes between light and heavy horses, the duty being lower in the case of the latter. As Denmark is entitled to most-favoured-nation treatment of its imports to Germany, Jutland horses, Belgian horses and hybrids of these two breeds pay 140 Marks, or 124.88 crowns, each on importation—*i.e.*, 19.21 per cent of the above market price.

Barley for malting. — The price of barley is about 15 crowns per 100 kilogrammes. In Germany, the customs tariff is 15 Marks, or 13.38 crowns, per 100 kilogrammes—*i.e.*, 89.2 per cent of the above-mentioned price. This duty will clearly be prohibitive in its effects.

Intestines. — Denmark exports to Poland intestines in brine, the f.o.b. price on export being at the present time (after allowing for considerable fluctuations due to changes in world prices) 25.71 crowns per 100 kilogrammes in the case of curly intestines, and 104.50 crowns per 100 kilogrammes in the case of scraped intestines.

For the first kind, Customs duty is 50 zloty per 100 kilogrammes, or 21 crowns—*i.e.*, 81.68 per cent *ad valorem* of the above-mentioned f.o.b. price ; for the second kind, it is 50 zloty, or 21 crowns—*i.e.*, 20.1 per cent of the above-mentioned f.o.b. price.

Liver. — In Poland, the Customs duty is 150 zloty, or 63 crowns, per 100 kilogrammes—*i.e.*, 47.37 per cent of the f.o.b. price (133 crowns per 100 kilogrammes).

2. The disposal of industrial products also meets with great difficulty on account of high Customs tariffs. A few examples—which might easily be added to—are given below. Only special cases have been taken owing to the difficulty in ascertaining the value of the commodities.

Tinned ham. — In Spain, the Customs duty is 2.4 gold pesetas per kilogramme on a value of approximately 2.70 crowns—*i.e.*, 64 per cent *ad valorem*.

Vessels for the transport of milk. — The Customs duties are as follows :

In Poland	68 zloty per 100 kilogrammes.
In Hungary	45 gold crowns per 100 kilogrammes.
In Czechoslovakia	950 Czechoslovak crowns per 100 kilogrammes.

The average value of such vessels may be estimated at 150 ore per kilogramme, and the above-mentioned duties are therefore respectively 19 per cent, 23 per cent, and 70 per cent *ad valorem*.

Dry batteries. — The Customs duties are as follows :

In Czechoslovakia	1,200 Czechoslovak crowns per 100 kilogrammes.
In Poland	455 zloty per 100 kilogrammes.
In Germany	45 Marks per 100 kilogrammes.
In Hungary	220 gold crowns per 100 kilogrammes.
In Austria	65 to 165 gold crowns per 100 kilogrammes.

As the average value is approximately 2 crowns per kilogramme, the above-mentioned duties represent :

67 per cent <i>ad valorem</i> in Czechoslovakia ;
96 " " " Poland ;
20 " " " Germany ;
83 " " " Hungary ;
25 per cent to 68 per cent <i>ad valorem</i> in Austria.

Soya oil. — The Customs duties are as follows :

In Bulgaria	150 gold levass per 100 kilogrammes ;
In Italy	39 gold lire per 100 kilogrammes ;
In Yugoslavia	30 gold dinars per 100 kilogrammes ;
In Portugal	13 gold escudos per 100 kilogrammes ;
In Spain	40 gold pesetas per 100 kilogrammes ;
In Latvia	30 lats per 100 kilogrammes ;
In Roumania	1,200 lei per 100 kilogrammes ;
In Czechoslovakia	160 Czechoslovak crowns per 100 kilogrammes ;
In Greece	52.50 gold drachmæ per 100 kilogrammes.

In Greece, moreover, the importation of vegetable oil is prohibited in certain parts of the country, and, generally speaking, is only authorised when packed in special receptacles, and on condition that it is mixed with a certain percentage of cotton oil on arrival at the office for Customs clearance:

In Yugoslavia, the oil may not be imported in iron barrels.

The *c.i.f.* price for soya oil is about £35 per 100 kilogrammes, including containers (iron barrels), and the duties therefore represent :

In Bulgaria	170 per cent <i>ad valorem</i>
In Italy	44 " "
In Yugoslavia	34 " "
In Portugal	82 " "
In Spain	45 " "
In Latvia	34 " "
In Roumania	40 " "
In Czechoslovakia	28 " "
In Greece	59 " "

Superphosphates. — The Customs duty is as follows :

In Czechoslovakia	7 Czechoslovak crowns per 100 kilogrammes ;
In Poland	3 zloty per 100 kilogrammes.

At the present moment, the price is 5.75 crowns in Denmark. The Customs duty in these countries therefore represents respectively 14 per cent and 22 per cent *ad valorem*.

Rennet. — The Customs duty is as follows :

In Germany	80 Marks per 100 kilogrammes ;
In France	20 per cent <i>ad valorem</i> ;
In Italy	20 gold lire per 100 kilogrammes.

As the value of liquid rennet is approximately one crown per kilogramme, the Customs duty represents 71 per cent *ad valorem* in Germany and 14 per cent in Italy.

Among other obstacles to the free disposal of goods to which the Danish Government would particularly draw attention is the system of Customs bonds issued in various countries on the export of certain goods, and which may be used for the payment of import duties on certain other goods. In many cases, these bonds are equivalent to an export bounty which stimulates exports artificially and dislocates markets.

In other countries, similar results are obtained by the system of freight reductions on specified goods transported for a given distance. This method also stimulates production artificially and to the detriment of competing States which do not employ such measures.

The Danish Government, whilst fully recognising the right of States to adopt measures to protect the health of their live-stock and the soundness of their vegetable produce, would point out that these veterinary and phytopathological measures should, in practice, be applied in such a manner that they do not impede the course of free normal trade, and, furthermore, that they should not be applied for purposes of protection.

The Danish Government has already referred to the desirability of further consideration of the International Convention for the Simplification of Customs Formalities. It is particularly anxious that the question of the formalities to be fulfilled and the duties to be paid at the time of drawing up consular invoices and certificates of origin should be reopened. Similarly, goods bearing a trade-mark of worldwide reputation, such as the Danish horn trade mark (Lur) should not require any further certificate of origin, as this trade-mark might be considered sufficient guarantee in this respect.

In the opinion of the Danish Government, another useful measure would be to check the growing tendency to excessive specialisation in the Customs tariffs of various countries; for, not only does this impede international trade, but it might even undermine the most-favoured-nation principle.

D.

The Danish Government is of opinion that every effort must be made in this connection to abolish completely the import and export prohibitions which prevent the unrestricted circulation of raw materials and result in the establishment of artificial prices, and also to abolish export duties still in existence for commodities of this kind.

In this connection, the Danish Government would particularly draw attention to the expediency of further work on the two International Conventions relating to the Exportation of Hides, Skins and Bones (total abolition of export duties).

Lastly, it would abolish the preferential tariffs granted by the railways of certain countries to specified raw materials to the detriment of corresponding goods from foreign countries.

Estonia.

[*Translation.*]

In Estonia, the chief agricultural products of which there is a surplus over and above home consumption are stock-breeding (export commodities: butter, live-stock and meat, raw hides, eggs) and the flax and potato crops. Table I annexed gives the export figures for these articles for the last three years.

The normal outlets for food products are the markets in the neighbourhood of Estonia, including those of the Union of Soviet Socialist Republics (Leningrad district), Finland, Sweden and the chief manufacturing districts of Western Europe, more particularly those of Germany, Belgium, France and Great Britain. Industrial countries should be considered as the normal outlets for agricultural raw materials, as, for example, Belgium, France, Germany, and Great Britain for flax and Germany for raw hides. The extent of exports to these countries of the above articles is shown in the statistics of Table II annexed.

Estonia has been able to exploit only a few of these outlets, as the import of the commodities in question is seriously hampered in many of these countries by administrative measures, and to some extent by excessively high Customs duties.

Among the administrative measures of a prohibitive nature, the competent Estonian authorities would first mention the veterinary regulations which in various countries are calculated to hamper all imports of live-stock and meat, although such measures are quite uncalled for by the veterinary situation of the exporting countries, as has always been the case in Estonia. The Estonian Government was gratified to note the efforts made by the Economic Organisation of the League of Nations to settle veterinary questions. As the Preliminary Conference with a View to Concerted Economic Action has stressed the importance of a prompt solution of these questions, the Government hopes that these efforts will shortly lead to the re-establishment of normal conditions in the field of veterinary policy, and the consequent removal of the prohibitions imposed in various countries under the form of veterinary regulations.

The administrative regulations of certain countries subjecting the sale of imported meat and meat products, and the preparation of such products from foreign meat to special conditions which reduce sales to a minimum, are in a class by themselves. Although they do not come within the scope of direct import restrictions, such measures have proved capable of seriously hindering the normal marketing of such products, and of thus aggravating the difficulties at present experienced by agricultural countries.

Among the other categories of administrative measures which hamper the free development of international trade the competent Estonian authorities would like to mention export bounties and subsidies. In their opinion, such measures should only be permitted when their object is to influence the general trend of manufacture within the exporting country, and provided, further, that they do not lead to dumping prices in the countries to which the products in question are exported.

As regards Customs duties, Estonia would point to the increased duties on agricultural products in Germany, Finland and France during 1929 and 1930. Among these, special mention may be made of the German increase on butter, under the Law of July 3rd, 1929, from RM. 30 to RM. 50, and on eggs (Law of April 24th, 1930) from RM. 6 to RM. 30 per 100 kilogrammes. These increases, it is true, do not yet apply to countries enjoying most-favoured-nation treatment, they being still entitled to the conventional rates fixed, in the case of butter, by the German-Finnish treaty of commerce (RM. 27.50 per 100 kilogrammes), and, in the case of eggs, by the treaties with Italy and Yugoslavia (RM. 5 per 100 kilogrammes). As the enforcement of the above increases in duties, however, is merely contingent on an agreement to be concluded between Germany and the above-mentioned contracting countries, the possibility of higher rates being applied within the near or distant future must already be reckoned with. The following more recent increases in duties apply to all countries— viz., from April 24th, 1930, on butchers' live-stock from RM. 18 to RM. 27 per 100 kilogrammes (conventional rate from RM. 16 to RM. 24.50, the rate of RM. 16 being, however, applicable to contingents of 5,000 and 6,000 head, for 1930 and 1931 respectively, of large live-stock in the case of each State benefiting by the conventional rate), and from April 14th, 1930, on pigs, from RM. 18 to RM. 27 per 100 kilogrammes (sliding-scale duty).

Under a law of December 21st, 1929, Finland imposed a duty of 0.15, or 0.75, Finnish marks per kilogramme on potatoes, which formerly entered duty free. The same law increased the duties on meat from large cattle from 0.60 to 1.20 Finnish mark per kilogramme, on pork (fresh) from 1.35 to 2.00 and pork (salted and smoked) from 1.80 to 2.40 Finnish marks per kilogramme.

A French Decree of June 3rd, 1930, raised the Customs duty on butter from 2 francs to 4 francs per kilogramme for the maximum, and from 1 franc to 2 francs per kilogramme for the minimum tariff.

As hindrances to the free development of international exchanges have continued to increase during recent years, the result has been a serious aggravation of the present economic depression. The only remedy for this state of affairs would be a gradual return to the pre-war situation, which should, generally speaking, be taken as representing standard conditions for the distribution and circulation of agricultural products. The result of such action should be to restore the free entry into manufacturing countries and countries with inadequate agricultural production of agricultural products which do not benefit by export bounties or other such measures, and also of products which do so benefit where this does not lead to dumping prices on the home market of the importing country.

The creation of normal conditions for the distribution and circulation of agricultural products would enable the various countries to concentrate more thoroughly on those branches of manufacture for which they are naturally qualified. Their purchasing capacity would be correspondingly increased and their home markets would afford wider outlets for the disposal of industrial commodities.

The Estonian Government hopes that the efforts of the competent organs of the League of Nations to this end will achieve the required success. They can, it thinks, be certain of the support both of the agricultural and of the manufacturing States. This would mean a great advance towards facilitating economic relations by practical measures, particularly by diminishing the obstacles to international commerce, as advocated in the Tenth Assembly's resolution of September 21st, 1929—the search for such solutions having been one of the principal aims of the Preliminary Conference with a View to Concerted Economic Action.

Before the world war, Estonia exported annually to Russia, on an average, the following quantities of agricultural products, the value being calculated according to the average prices this year :

				Estonian Crowns
Potatoes	600,000 quintals at 6	Est. Cr.	=	3,600,000
Milk	62,000 „ „ 10 „ „		=	620,000
Butter and cheese	15,000 „ „ 280 „ „		=	4,200,000
Brandy	300 millions of degrees „ 0.06 „ „		=	18,000,000
Meat and live-stock				3,000,000
Various				1,000,000
				<u>30,420,000</u>

Since the war, Estonia has not exported to Russia any appreciable quantities of agricultural products.

Hungary.

(b) The normal outlets for these products are Austria, Czechoslovakia, Germany, Poland, Switzerland, Italy, and Greece.

(c) As representing an exporting agricultural country, the Hungarian Government would state that, in view of the present economic situation of its agriculturists, its primary concern has been to introduce measures capable of ensuring the practical and effective disposal of its surplus production of cereals and other agricultural return, and thus to increase the purchasing capacity of the population.

The following means, it thinks, might be employed to this end :

(1) Preferential Customs treatment by European importing countries for cereals and agricultural products of European origin.

The Hungarian Government would point out that such preferential treatment, representing, as it obviously does, a limitation of the most-favoured-nation clause, cannot adversely affect the interests of overseas countries, which will always remain the chief suppliers of the deficiency prevailing on European markets. Moreover, such preferential Customs treatment,

although it would mean that the European countries exporting agricultural products would benefit by the margin between a general and a preferential duty, would not thereby prejudice the protectionist policy of States with insufficient agricultural production, as it is always the general rate of duty which reacts on prices. Furthermore, the application of such a system, improving—as it would—the economic situation of agricultural exporting countries by increasing their purchasing capacity, would thereby unquestionably benefit industrial countries in Europe and overseas.

(2) The consolidation on a reasonable level by European importing countries of all import duties on European agricultural products, in such a manner as to leave a margin of profit to agriculturists in the exporting countries.

(3) A system of entire freedom of trade in cereals and agricultural products on the European markets, and the complete abolition of every hindrance to such trade, and of all measures aimed at the artificial restriction of the imports of cereals and other agricultural products or compulsory changes in the consumption of various agricultural products.

It is absolutely essential, in the Hungarian Government's opinion, that European importing countries should give effective guarantees to European agricultural exporting countries that all kinds of prohibitive and restrictive measures on the imports of cereals and other agricultural products, such as monopolies of any kind, sliding-scale duties, etc., should be entirely abolished.

The Hungarian Government declares that, if the countries importing agricultural products persist in their present practices regarding such imports, it may find itself compelled, in its turn, to treat imports of manufactured articles in the same manner.

B.

The Hungarian Government believes that the best way of promoting the disposal of manufactured products is to increase the purchasing power of agricultural exporting countries by promoting the export of their surplus production at satisfactory prices.

The practical means for achieving this end have been mentioned in the reply to A.

They further consider that a practical method of increasing the purchasing capacity of consuming countries would be to procure agricultural exporting countries long-term credits and more moderate rates of interest, thus enabling producers to cheapen their costs.

C.

The Customs and administrative measures likely to extend markets and improve international trade are, the Hungarian Government thinks, given in the foregoing replies to A and B.

Special mention might also be made of the following further administrative measures, the abolition of which is of capital importance :

1. The abolition of all administrative measures resembling disguised protectionism.

The Hungarian Government believes it to be really urgent and essential to give agricultural exporting countries effective guarantees that veterinary and phytopathological measures will in no case be applied as measures of indirect protectionism.

As regards veterinary measures, the Hungarian Government considers it highly desirable that the work of the International Veterinary Conference, referred to in Article 2, paragraph 7, of the Protocol regarding the Programme of Future Negotiations, should be brought to a satisfactory conclusion.

2. The abolition of all discrimination in the matter of railway and inland waterway transport rates in favour of agricultural products, including cereals from overseas, for the purpose of promoting the growth of certain maritime ports, such discrimination being directed against the products of European agricultural countries. This tariff policy on the part of certain industrial States is a material factor in restricting the markets of agricultural exporting countries.

3. The abolition of systems of prohibition or restriction of the importation of certain agricultural products by means of a margin between the import duties on the raw material and the finished agricultural product. Mention might be made, in particular, of the margin in importing countries between the import duty on wheat and that on flour. This margin, being a form of indirect protectionism, should be reduced to its natural level.

D.

To the extent that Hungary, as an exporter of agricultural products, is interested in the question of raw materials, the Hungarian Government thinks it has answered this question in the preceding paragraphs.

Italy.

[*Translation.*]

In its reply to the Questionnaire appended to Article 1 of the Protocol signed at Geneva on March 24th, 1930, the Italian Government considers it preferable, instead of conforming to the actual drafting of the questions, merely stating bare facts, to respond to the spirit of the Protocol, and particularly Article 1, bearing in mind the end which it is proposed to serve by collecting these data.

It must be pointed out, that the Customs problem, to which the Questionnaire seems especially to allude, is only one particular aspect of the general depression in the economic life of the world at the present time. In the Italian Government's opinion, it is a mistake to suppose that tariff increases are the only or the principal cause of this depression. Such increases are largely due to the defective system of production, representing attempts to counteract the damage, both actual and potential, caused by that system in the economic life of various nations.

It is, perhaps, not without reason that the preamble of the Protocol in question relates mainly to "concerted action directed to secure closer co-operation and the improvement of the regime of production", and that Article 1 of the Protocol definitely refers to the question of Customs and seems to indicate the measures which might be taken in order to bring about such an improvement. On logical and practical grounds, therefore, the Italian Government considers it necessary, in the first place, to study and improve this organisation—a task in which it would probably be advisable to adopt a different attitude in regard to the various tendencies displayed, of which protectionism is certainly the most important. At all events, it seems that it would be very difficult to deal with this special problem without considering the problem of the regime of production as a whole.

Moreover, it should be noted that the principal production statistics of each country and of international commerce are generally known, and that copious statistical data might cause the complexity of the problem of multilateral Customs negotiations—a problem for the examination of which the Questionnaire was especially framed—to be overlooked.

The Italian Government wishes, therefore, merely to make some preliminary observations which should, it considers, be restricted to a few comments on the character of Italian production and the direction of the export trade, and to some general considerations on the present position of the world economic system, and on the line of action best calculated to mitigate in some measure the increasing difficulties of international trade.

1. It may be recalled that Italy is neither a purely agricultural nor a purely industrial country. In view of its economic, political and social needs, its economic system is a mixed one.

Industrial production has greatly developed, particularly during the last twenty years, and is now one of the essential activities of the country, bringing Italy into the forefront of industrial countries and supplying a very important part of her export trade.

In these circumstances, Italy must ensure outlets in the various foreign markets both for her surplus agricultural products and for her industrial products.

One aspect of the Italian export trade is, of course, represented by the export of agricultural products, including, particularly, rice, hemp, wine, olive oil, fresh flowers, and, above all, garden and orchard produce, oranges, tangerines, lemons, etc.; tomatoes, fresh fruit and various vegetables, almonds, walnuts, hazel nuts, chestnuts, dried figs, etc., and the export of foodstuffs, which are closely connected with the agricultural production of the country (cheeses and preserves of all kinds), is very important.

There is, also, a considerable export trade in industrial products, particularly in motor-cars, electric motors and other engineering products, natural and artificial silk, sulphur, mercury, yarns and fabrics of silk and hemp, woollen fabrics, worked marble, hats, tyres, certain chemical products, etc.

It should also be noted that Italian exports find an outlet in the markets both of European countries and of countries outside Europe, the actual figures showing a percentage of 59 to 60 in the former as compared with 40 to 41 in the latter. This fact is of considerable importance in connection with the problem of multilateral Customs agreements, since it makes it essential that an agreement of this kind should either include all the countries with which Italy has important trade relations, or should be compatible with the bilateral treaties that bind her to countries likely to be left outside any multilateral agreement.

This brief account of the position in which Italy is placed brings out clearly the great difficulties that must be overcome in any satisfactory adjustment of the commercial relations between Italy and other countries. A fair measure of protection for the national production, both agricultural and industrial, must be reconciled with a measure of protection for the Italian export trade in both branches, and these interests, in their turn, must be reconciled with the interests, often divergent, of foreign production.

This complicated situation is not peculiar to Italy ; it obtains, to a greater or less degree, in a number of other States which possess a long-established industrial system or which have, in the recent post-war period, developed or expanded their industrial, as apart from their predominant agricultural, production.

There are some countries of Europe, however, whose agricultural production is not only the predominant factor, but is made up of certain " mass " products, only some of which are absorbed by the home market, while the remainder have to be exported. The position of such countries deserves to be examined in the light of the possibilities offered by the present state of European economic conditions and trade relations.

2. In order to cope with a task of such extreme difficulty, it is necessary to choose the right moment and to make sure that the indispensable preliminary conditions have been fulfilled.

With regard to the first point, it is doubtful whether the period through which we are now passing is favourable to the conclusion of collective Customs agreements of a general character. As already pointed out, one of the most striking symptoms of the present disorganisation of world trade is the increasingly keen competition that has led countries faced by the growing need of marketing their surplus products to adopt, in almost every case, still more intense forms of protectionism, which, though intended as a defensive measure for mitigating the present distress, have frequently accentuated it.

It must be recognised that, since the date on which the Commercial Convention was signed at Geneva, several countries have been led to resort to increased Customs duties, which, it seems, show no indication of having reached their highest point. There are many signs that this wave of protectionism would certainly have been much greater and much more distinctive had not the existing bilateral agreements governing the Customs treatment of the most common categories of goods succeeded in checking to a certain extent the prevailing protectionist tendencies. This does not mean that, even in the present period of economic depression, which inevitably compels us to mark time, we cannot do valuable work by examining and preparing the material and conditions that are essential for any concerted action in regard to tariffs in the not very distant future.

It would seem that one of those conditions is the coming into force of the Commercial Convention of March 24th, 1930, which would make it possible to place existing bilateral agreements on a firmer basis.

The stable position that this would create might perhaps make it easier to reach the understandings which are advocated—and rightly—by countries with an essentially free trade policy, and which are viewed with favour by all countries desirous of obviating any further obstacles to international trade.

It should be emphasised, moreover, that the economic action contemplated by the League of Nations should not only aim at lowering the tariff barriers, but also, as specified in Article 2 of the Protocol of March 24th, 1930, at abolishing or reducing all those other obstacles which, in the form of indirect protectionism or unfair discrimination between the nationals of a State and foreigners, interfere with the natural movement of international trade.

Finally, the Italian Government considers that the question of the distribution of the raw materials referred to in paragraph D of the Questionnaire is of cardinal importance from the point of view of the better utilisation of these materials, to which particular reference is made in that paragraph. Obviously, this aim cannot be achieved through special understandings of a monopolistic character between the countries producing the materials, but only through a general agreement in which the consuming countries actively participate, since the labour resources and organising powers of these countries provide excellent opportunities for the utilisation of the raw materials. Here, again, the essential general condition is evident—a reorganisation of the whole system of production.

The Italian Government, which has always warmly appreciated the League's unremitting efforts to improve economic conditions, will, of course, cordially co-operate with the League in order that its activities in this wider field may achieve all possible success.

Annex.

Latvia.

[Translation.]

A.¹

(a) The export of the agricultural products which make up the greater part of Latvian exports in general consists of butter, flax, linseed, clover-seed, summer and winter vetches, meat and bacon. In good harvest years, barley and potatoes are also exported. The following table shows the exports of agricultural products from Latvia between 1925 and 1929 in tons and in thousands of lats :

Products	1925		1926		1927		1928		1929	
	Tons	Thousands of lats								
Flax.....	19,711	40,350	25,259	37,993	16,906	26,773	12,012	25,451	10,011	13,050

Fish and preserved fish	1,011	638	698	669	1,269	1,302	2,653	1,481	2,910	1,958
Other agricultural products	—	—	—	7,476	—	6,388	—	8,597	—	8,939

Latvia took the eleventh place in 1929 among the butter-exporting States, after Denmark, New Zealand, Australia, Irish Free State, Sweden, Russia, the Argentine and Poland. She is seventh on the list of European States exporting butter. The output of butter has nearly doubled during the last five years and makes up 21.57 per cent of the total value of exports.

Since 1926, the export of flax fibre has been decreasing, as the result of unfavourable conditions on the world flax market and of the continuous fall in prices. The following table shows the position of flax growing in Latvia :

Year	Area sown in hectares	Yield per hectare in quintals		Total yield in quintals (ooo's omitted)	
		linseed	fibre	linseed	fibre
1925.....	78,100	3.6	3.9	279.1	300.2
1926.....	63,800	3.9	4.0	246.7	253.2
1927.....	63,200	2.6	2.9	166.4	185.7
1928.....	68,700	1.5	2.1	104.3	146.4
1929.....	55,800	4.1	3.9	229.6	219.3

Although the flax crop, generally speaking, was bad in 1928 and a reduction in the area under cultivation followed, flax growing was saved from extinction by the State flax monopoly, which relieves the grower of all anxiety in regard to marketing and price fluctuations, and also by the subsidies granted by the State to the grower. Flax plays a great part in Latvian agriculture and is an important export. Latvia holds an important place in the world's flax trade. In 1929, she was sixth with a total crop of 219,300 quintals, immediately after the Union of Soviet Socialist Republics (3.7 million quintals), Poland (520,000 quintals), Lithuania (360,000 quintals), Belgium (274,000 quintals), and France (255,000 quintals). The position was the same as regards linseed.

The chief difficulty in the way of a more rapid development in the export of agricultural products is lack of capital, which makes it impossible to put agriculture on a more rational basis.

(b) As the following table shows, outlets are to be found only in a few countries. Of the total exports of agricultural products, 80.4 per cent go to Germany and England.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c); B; C and D).

The table gives the distribution by countries of the exports of agricultural products in 1929, except for certain quantities of clover-seed, vetches, barley and potatoes, which were purchased by the Scandinavian countries and the United States of America.

Goods	Great Britain		Germany		Belgium		Netherlands		France		Other countries		Total
	Thousands of lats	Percentage of total	Thousands of lats										
Flax	5,437	41.7	399	3.1	6,242	47.8	—	—	433	3.3	539	4.1	13,050
Linseed	1,127	14.1	1,204	15.0	1,556	19.4	2,151	26.9	1,823	22.8	142	1.8	8,003
Clover-seed .	35	3.8	242	26.0	12	1.3	21	2.3	33	3.6	586	63.0	929
Butter	11,959	20.4	46,040	78.4	36	0.1	—	—	—	—	613	1.1	58,648
Meat, various	1,422	88.8	107	6.6	—	—	—	—	—	—	86	5.4	1,615
Fruit and berries ...	10	7.3	94	68.6	—	0.7	—	—	3	2.2	30	21.2	137
Fish and preserved fish	6	0.3	197	10.1	23	1.2	—	—	84	4.3	1,648	84.1	1,958
Vetches	114	29.0	188	47.8	—	—	9	2.3	1	0.2	81	20.7	393

The chief purchaser of Latvian agricultural products is Germany (56.8 per cent), who buys the greater part of the Latvian butter (78.4 per cent). Her position with regard to other products is also important : 15 per cent of linseed, 47.8 per cent of vetches, 26 per cent of clover-seed. The second place is taken by England, where 47.7 per cent of Latvian exports go. Bacon is purchased only by England.

Exports of flax mainly go to France and Belgium. About half the quantity exported to Belgium goes on to France, chiefly to the Lille district.

Clover-seed goes chiefly to Denmark (47 per cent), preserved fish to the United States (25.3 per cent), smoked, salt and fresh fish to adjacent countries (Poland 11.6 per cent, Lithuania 11.8 per cent).

On the markets mentioned above, to which Latvian exports are sent, the tendency continues to be towards increasing demand, so that any apprehensions with regard to the disposal of the growing output of Latvia would be out of place. Unfortunately, this tendency for demand to increase encounters several obstacles in the form of politico-economic measures— as, for example, various administrative prohibitions and veterinary or Customs measures— which hinder the export of Latvian agricultural products. This export, as may be seen from the particulars given below, consists of high-grade products required in countries where industry is developed. The prices of agricultural products are influenced to a much greater extent by the general fall on the world market.

(c) I. Measures dependent on agreements :

- (a) Lowering of excessive Customs tariffs ;
- (b) Abolition of export bounties ;
- (c) Co-ordination of the system of veterinary and phytopathological supervision.

II. Measures to be taken independently :

(a) The supervision and improvement of the quality of the products exported. One of the best methods for this purpose is the " export supervision ". A good many agricultural products such, for example, as butter, meat, fruit, berries and fish, are supervised at export from Latvia. The export of these products and to some extent their manufacture and handling are also under State supervision.

(b) Secondly, the standardisation of goods should be considered. This goes far to facilitate domestic trade and still more, international trade.

(c) The lowering of the prices of goods suitable for export. With a view to lowering costs of production and thus increasing the capacity to compete on the world market various means are employed aiming at the rationalisation of production, the improvement of technical methods, etc. Credit policy also plays an important part in this direction.

(d) Transport facilities. The interests of agriculture, particularly as regards export, are taken into consideration. The speeding-up of trains and the use of cold-storage waggons during the summer has done much for the carriage of perishable merchandise in good condition.

(e) Finally, mention should be made of the study of trade cycles and of prices, which are of indisputable importance for the development and expansion of foreign markets; this study is particularly important for the avoidance of over-production.

B.

Although Latvia is mainly an agricultural country, a new development of industry has taken place since the war, and the country now represents a certain factor in economic life.

Latvian industry has developed under the protection of a moderate tariff. The chief purchasers of Latvian manufactures are the adjacent countries, such as Russia, Lithuania and Estonia. However, advanced industrial countries like Germany, England, the United States of America and others, also buy considerable amounts of Latvian industrial products.

Without going deeply into each branch of industry, the means which Latvia has used to facilitate the export of her manufactures may be mentioned.

1. *Commercial treaties.* — The Latvian Government has taken the necessary steps to encourage the export of both agricultural and industrial products, and has concluded a number of commercial treaties. By inserting the "Russia" and "Baltic" clauses in these treaties, Latvia has left open a door for the development of her commercial relations with adjacent countries on a basis wider than the most-favoured-nation principle. These clauses were applied in practice for the first time in her treaty with Russia. Commercial treaties with Estonia and Lithuania are in an advanced stage of negotiation and the Baltic clause will certainly play a decisive part in them and will make it possible to safeguard industrial interests.

In the view of the Latvian Government, commercial treaties are an effective means of developing international relations, and make it possible to protect in the best way the national economic interests of each country. There is no need to emphasise that it is necessary to take into consideration in such treaties the purchasing power of the States which are parties to them. The exporters themselves should conform to the exigencies of the market, to the peculiarities of the importing country and to its purchasing capacity.

2. *Export credits.* — The export of industrial products is particularly favoured by a suitable credit policy. In this respect, Latvia's capacity is not very great. The two State banks, the Bank of Latvia and the State Mortgage Bank, give all the facilities in their power as regards credit for industrial concerns working for export.

The insurance of export credits has not yet been introduced into Latvia. The proper State authorities are at present dealing with the question, and are considering the possibility of such operations, which are very important in connection with any steps for reducing the risks of exports abroad, particularly to economically backward countries.

Problems connected with industrial progress have arisen only in recent years, when Latvian industry had so far developed that the home market was no longer able to absorb the whole of its output, and it was necessary to look for markets abroad. Foreign competition has forced Latvian industrialists to conform to the selling methods used in the world market, and to strengthen their position by joining international selling and producing organisations—*i.e.*, existing cartels and trusts. This phenomenon is still in its early stages, but there is no denying the existence of such a tendency—for example, in the match and the superphosphate industries and some parts of the textile industry, which are at this moment wholly or partially dependent on international organisations.

C.

The answer to this question is implied for the most part in what has been said above (see specially A, (c), I).

This is not the place for views on Customs tariffs, for these depend on a great number of circumstances, and the economic situation of each country.

D.

On this question, Latvia holds to the principle of free trade, exemplified in the Customs tariff, which lays no import duties on raw materials. Export duties exist in Latvia solely for certain qualities of timber and raw skins.

Norway.

A.¹

(a) In Norway there is over-production in certain animal products, particularly eggs and dairy produce.

(b) The surplus products were exported chiefly to England (eggs, butter, condensed and sterilised milk), the United States (cheese) and other overseas countries (condensed milk).

(c) The question, as framed, refers to all the measures mentioned in Chapter I of the Annex to the Protocol of March 24th, 1930, and also to those indicated in the Questionnaire, under C. For practical reasons, it would seem better to deal with the latter group in its own place. With regard to the first group, stress should be laid upon sections III and IV of the above-mentioned chapter. There seems to be no doubt that a better organisation of the production and sale of agricultural products, and the consequent standardisation of the quality of those products, would be greatly to the advantage of several European countries with a surplus production. Nor, it seems, is there any doubt that investment of capital in these countries, in order to encourage improvements in the technical equipment for production, would have a very considerable effect upon agriculture. If such investments could be made by means of loans granted by countries having industrial products to dispose of, the sale of these products by the latter countries might be increased at the same time. The first result of transfer of capital from one country, in the form of loans for the economic development of another, has always been an increase in exports to the country receiving the loans. This in its turn tends—given the same conditions in the two countries—to create greater purchasing capacity, while opening up possibilities of a more active exchange of goods. This is not to say that, by means of international measures, it will be possible to find a general and practicable method for promoting the economic organisation of the agricultural countries and for transferring capital. The main work in this field will more probably be done outside the international organisations, even if the latter are able to give assistance in certain special cases.

The Norwegian Government cannot recommend the adoption of the proposal mentioned in section II of Chapter I of the Annex, to the effect that the European countries should mutually agree to accord to European wheat a 50% reduction in import duties. Such a measure would be inconsistent with Norway's established policy and would, moreover, be contrary to the actual idea of freer international co-operation in economic matters.

B.

This question has as wide a scope as that mentioned under A (c). In the reply to the latter, transfer of capital has already been indicated as one means of securing larger outlets for the industrial products of the different countries. As to the other measures that might be contemplated in this connection, the most important of these will be mentioned below in the reply to question C.

C.

It seems quite clear that the development of international trade is hampered by the Customs duties at present in force, and also by a large number of administrative measures arising out of commercial policy. These considerations prompted the World Economic Conference in May 1927, to adopt certain resolutions referring thereto, and the subsequent work of the League of Nations in this field has been based on the latter. The Norwegian Government agrees with the ideas underlying that work, and holds that a gradual reduction of Customs duties, together with the removal of similar obstacles, constitute the best means of improving international trade. Admitting this, however, is not, of course, the same thing as laying down definite lines for a practical programme of future negotiations. During the three years since the World Economic Conference, the League has endeavoured to draw up such a programme, but has met serious obstacles and achieved no success in regard to the most important point—a check to the increases in Customs duties, let alone a gradual reduction of those duties.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c); B; C and D).

The hopes that were built on a convention for a tariff truce, which was to have been the first phase of this branch of the League's work, were not fulfilled. The convention that has been drawn up does not bind all the Powers, but only a few of them, to stabilise their protective duties, while the other countries are bound only to stabilise their already consolidated tariffs. The economic crisis upon which the world entered last year, and the further developments of commercial policy in the same direction as before, did not strengthen the hopes that the convention for a tariff truce would come into force, and, still less, the hopes that there would be a gradual reduction in Customs duties in the near future. The tendencies towards growing protectionism mentioned above also became evident in the free trade countries in the shape of a strong agitation for a protectionist policy. Were those countries to adopt such a policy, the difficulties from which Europe is now suffering would certainly be increased, and it would seem, therefore, that the first object of the future negotiations should be an attempt to check those tendencies. For the attempt to succeed, the countries that are in the van of protectionism must be ready to make concessions in their Customs tariffs in favour of the free trade countries, it being agreed that the latter, on their side, shall consolidate their tariffs. In short, the conclusion of a tariff convention between the free trade and protectionist countries must be regarded as the chief aim of the future negotiations.

The end in view may, of course, be attained through bilateral agreements, although collective agreements should ensure it equally well. Past experience of the latter kind of agreements is not, however, in the field of commercial policy, very encouraging, and it must be admitted that this means does not at present seem very practicable.

Norway is in a difficult position. On the one hand, she belongs to a group of countries that have not consolidated their Customs tariffs. On the other, her tariff gives her only slight protection. Her protective duties are low, as compared with those levied in most European countries, but at the same time her tariff is different from the tariffs of essentially free trade countries. Were Norway to become a party to a convention of this kind, she would, therefore, in so doing, be abandoning the commercial policy she has hitherto followed, and, moreover, she cannot undertake so readily as the free trade countries to stabilise her tariff over a number of years—particularly since that tariff is, in many respects, provisional. By ratifying the convention for a tariff truce, Norway has, however, given an earnest indication of her willingness to take part in the future negotiations, and she is also ready to participate in the discussions with regard to the plan outlined above.

D.

Movement of raw materials under satisfactory economic conditions, and their better utilisation, can be secured only through abolishing the import and export prohibitions on those materials, exempting the materials from Customs duties, and abstaining from granting any export bounty, whether direct, or concealed in the form of a reduction in transport prices. This, however, is not enough. In many cases the Customs duties on the manufactured product are an obstacle to the best utilisation of the raw materials, since they oblige the countries producing the latter to export those materials instead of the manufactured product. The question of the distribution of raw materials is the same, in such cases, as that of the most favourable position for the centres of production. Even if free trade could be secured only for raw materials, such a success would be a great step towards the end in view.

Discussion of the above-mentioned questions does not preclude the examination of other aspects of commercial policy, as provided for in Article 2 of the Protocol. In this connection stress must be laid upon the desirability of opening negotiations as soon as possible in regard to the question of indirect protectionism and export bounties. If these questions are not solved, any reduction in Customs duties may prove ineffective. Among matters not mentioned in Article 1, the Norwegian Government would draw special attention to the desirability of securing the full application in every country of the Convention on import and export prohibitions.

Naturally, it is greatly to the advantage of Norway to retain open markets for her exports, but she is also very anxious for a reduction in the various Customs tariffs which at present hamper those exports. This applies both to the Customs duties of the ultra-protectionist countries and to those of the countries following a general free trade policy.

Norway's accession to a future convention of this kind must, of course, be subject to the condition that she does not thereby pledge herself to make any exception to the general application of the most-favoured-nation clause.

The Netherlands.

[Translation.]

A.¹

(a) and (b) In the Netherlands there is over-production in very many cases: 37 items under the heading of vegetable products, 20 under the heading of animal products, 2 under the heading of farinaceous products and 4 under the heading of hides and skins, and likewise the item strawboard, are each exported to a value exceeding one million florins per annum. The total exports of these commodities amounted to 653 million florins in 1929.

As regards the relative importance of the various articles, the following are exported to a value exceeding 10 million florins per year: vegetables, green peas, tomatoes, potatoes, flower bulbs, pork (fresh), beef and veal (fresh), bacon, butter, cheese, condensed milk (pure, unskimmed and sweetened), condensed milk (skimmed and sweetened), eggs in shells, potato fecula and strawboard.

The bulk of these exports are sent to Germany and England. Belgium and France also take a considerable quantity, whilst Denmark, Spain, the United States of America, Sweden and Czechoslovakia are also valuable outlets.

Under present conditions, the above-mentioned countries, together with a few others, must be considered as our normal outlets. The position would, however, be very different if international trade were free. In this event, production and exports would doubtless have developed to some extent in other directions.

(c) For the reply to Question A (c), reference should be made to the reply given below to Question C.

B.

In the opinion of the Netherlands Government, the expansion of foreign markets with a view to the disposal of industrial products could most easily be effected, as experience has frequently shown, by the abolition, as far as possible, of existing obstacles to trade. It is on these lines that we must look for practical means to secure a more unrestricted development of international trade. The following may be mentioned as the chief measures to be adopted:

(1) Lowering of protective tariffs:

The Netherlands Government considers that in many instances it would be possible to dispose of larger quantities of goods if, when concluding commercial treaties, protectionist countries, whether armed or not with a bargaining tariff, would show greater consideration than they do at present for the liberal policy practised by certain countries, which only impose on goods imported from abroad a low, single and autonomous tariff, having no value for the purpose of concluding tariff conventions.

For their part, these countries might undertake to maintain their free trade policy, if the protectionist countries granted them tariff concessions such as would facilitate the sale of their products. The realisation of this system would appear to be feasible by means of a series of bilateral treaties, but it might be more expedient to put it into practice by means of a multilateral convention concluded between countries with low tariffs and some, at all events, of the protectionist countries of North-Western and Central Europe. The Government of the Netherlands is prepared to enter into negotiations on these lines.

It is to be hoped that the group of protectionist countries will be willing to conclude such an agreement without departing from the most-favoured-nation clause to the detriment of third countries. If, however, these countries thought that the rights derived from this clause prevented any application of the above-mentioned system, it might prove necessary to draw up multilateral arrangements with regard to the most-favoured-nation clause, providing that countries having a free trade policy of the above-mentioned description would be granted separate treatment. Thus, tariff reductions, which were granted on the conclusion of bilateral or multilateral conventions to a country which was a member of this group, and which would therefore be logically extended in full to all countries belonging to this group, need not necessarily be granted, in virtue of the most-favoured-nation clause, to other countries outside the group, unless the latter offered adequate concessions in return, like the countries in the non-protectionist group. Naturally, however, any such arrangement should not lead to the creation of a weapon directed against a particular country, nor should non-protectionist countries be compelled to discriminate against third countries, and should continue to be exempt from any discriminatory treatment on the part of such third States.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c); B; C and D).

If these conditions were fulfilled, we should successfully do away with the drawback which is constantly experienced—namely, that tariff concessions cannot be granted to free trade countries because the tariff items available in this connection must be kept in reserve for bargaining with States whose commercial policy embraces a special bargaining tariff. Under such circumstances, many countries would probably no longer see any absolute necessity for maintaining or introducing a bargaining tariff, and thus the number of countries having a liberal commercial policy would eventually be increased.

In theory, the scheme for effecting a tariff decrease by deducting a fixed percentage from all tariff duties meets with the wholehearted support of the Government of the Netherlands. In practice, however, this scheme could not be supported unless all fiscal duties were exempt from the compulsory decrease. While the reduction of tariffs is indispensable in the case of protectionist duties, duties not exceeding the above-mentioned maximum are not in general a serious hindrance to imports—at all events, in the case of finished industrial products—and therefore do not deserve to be opposed.

Furthermore, the Netherlands Government considers that the unification of Customs nomenclature will promote joint action for the purpose of reducing tariffs.

(2) Abolition of existing prohibitions and restrictions on imports and exports respectively by the putting into force, and the maintenance in force, of the International Convention of November 8th, 1927, and of the Supplementary Agreement of July 11th, 1928, as well as the abolition, as far as possible, of the exceptions therein permitted.

(3) Revision of the Convention for the Simplification of Customs Formalities signed at Geneva on November 3rd, 1923, particularly in regard to supplementary provisions concerning certificates of origin and consular invoices (their number and cost).

(4) Abolition of the excesses of indirect protectionism, amongst these being the excessively stringent regulations concerning the marking of imported goods.

(5) International agreement concerning health and veterinary measures; in this connection the regulations for hay and straw packings used for industrial purposes might be considered.

(6) Extension of existing regulations concerning international transport.

(7) Conclusion of conventions concerning railway tariffs which would restrict as far as possible the existing discrimination against foreign products and would thus endeavour to put an end to this form of indirect protectionism.

(8) Abolition or restriction of export bounties and subsidies by means of a collective agreement.

It need hardly be added that any agreements for the purpose of avoiding double taxation or in regard to the treatment of foreigners should be considered as factors militating in favour of freer trade, even if they are not directly connected with the fiscal problem.

Secondly, the specific information is asked concerning the practical means of increasing the extent to which it is possible for consuming countries to purchase foreign industrial products. The Netherlands Government supposes that this question was inspired by the controversy between industrial and agricultural countries. The latter declared that if the industrial countries did not furnish them with an outlet for the disposal of their agricultural products, they would inevitably be bound to develop their industries, and this would, in their opinion, necessarily involve the imposition or increase of duties on industrial products, that is to say, a result incompatible with any reduction of customs tariffs.

In this connection, the Netherlands Government would point out that, as its home market is open to foreign trade, it already offers the fundamental conditions enabling both industrial and agricultural countries to pay for their imports with exports. It has therefore largely contributed to the expansion of the market in so far as this lay within its power.

The granting of preferential duties on cereals, and possibly on other products referred to in Chapter I (Adjustment of Economic Relations between Industrial and Agricultural States) in the Annex to the Protocol regarding the Programme of Future Negotiations, would not be consistent with the commercial policy of the Netherlands, and the Government would certainly not give its support to the establishment of any such system.

The granting of special credits to enable consuming countries to finance their imports and exports is a measure which was applied by the Netherlands Government on a modest scale during the post-war period. Now that economic conditions are more stable, it does not feel that it can support this form of commercial expansion. It should, however, be noted that national capital, in so far as it is not necessary to the economic life of the Netherlands, resembles that of other foreign countries, and finds its way unimpeded to any country where it is in demand, provided that two conditions are fulfilled—namely, (1) that those in need of the capital and their Government furnish reasonable guarantees as regards their financial standing, and (2) that those supplying the capital are authorised to supervise the employment of such funds or to have this done on their behalf.

Lastly, the Netherlands Government considers that the power of agricultural countries to purchase manufactured goods should be stimulated, not only by those countries themselves, but by States which impede or render impracticable the importation of agricultural products.

C.

In so far as manufactured goods are concerned, reference should first of all be made to the reply given under B.

The Netherlands Government further considers that a settlement of the various questions mentioned in Section III of the Memorandum submitted by the French delegation and annexed to the Protocol Regarding the Programme of Future Negotiations, might help to remove certain economic obstacles. This result might be obtained in some measure by means of bilateral commercial treaties and by the amendment of existing multilateral conventions (Customs formalities), but a similar result could also be obtained by the conclusion of a multilateral commercial convention.

Turning to the question as to whether trusts and cartels are desirable on economic or other grounds—and, if so under what conditions—the Netherlands Government is of opinion that this question should be left on one side by the League of Nations and its organisations, which should neither encourage nor prevent the constitution of trusts and cartels, nor exercise supervision over them once they are created.

As regards the difficulties encountered by Netherlands products—and particularly by agricultural products—in foreign trade, this subject may be dealt with under the following heads :

- I. Health measures ;
- II. Import duties ;
- III. Other measures for the artificial stimulation of national production.

I. HEALTH MEASURES.

This mainly concerns agricultural products and stock-raising—*e.g.*, living plants, potatoes, flower bulbs, live animals and meat.

It cannot be denied that, in many cases, protectionist considerations have inspired the health measures adopted by certain countries.

In this connection, we may congratulate ourselves on the fact that a Phytopathological Convention, to which the Netherlands adhered, has been concluded on the initiative of the International Institute of Agriculture. Similarly, the Netherlands attaches great importance to the conclusion of the Veterinary Convention, for which the ground has already been largely prepared by the League of Nations.

The following are a few examples of very severe measures adopted by other countries which hamper the sale of Netherlands products, and which—from the point of view of the Netherlands—might be either abolished or substantially changed without involving any increase in the risk of contamination by products coming from the Netherlands :

(a) Embargo on the importation of living plants and of a few species of bulbs into a certain country. These products are imported into other countries, although the latter exercise a no less strict supervision over the phytopathological condition of vegetable produce.

(b) Embargo on the importation of fresh meat into a certain country. In the Netherlands, this embargo is keenly felt as an injustice, because refrigerated fresh meat may still be imported from a third country where foot-and-mouth disease is often more prevalent than in the Netherlands, in spite of the fact that experts have proved that the virus in refrigerated meat remains virulent for a period exceeding the time required for transport.

(c) Embargo on the importation into a certain country of live animals for slaughter. This measure is particularly objectionable, because of the discrimination which is here made on certain grounds against the Netherlands.

(d) Embargo on the importation into a certain country of potatoes owing to an exaggerated fear that potato wart may be introduced or spread.

II. IMPORT DUTIES.

The following products are amongst those most severely hit by import duties ; in one or more countries they are subject to enormous imposts, representing, in special cases, the percentage of their value indicated below :

Potato fecula and its derivatives pay considerably more than 100 per cent ; horses of Nordic race between 50 and 100 per cent ; strawboard 150 per cent ; cheese 120 per cent (other dairy products are very severely handicapped and there is every reason to fear further difficulties) ; living plants 560 per cent ; vegetables 175 per cent (the effect of import duties on the exportation of vegetables varies considerably because it depends, not only on the kind of vegetable, but also frequently—and to a very marked degree—on the season when the sale is effected, as this determines the price).

Mention must also be made of the difficulties encountered by the manufacturers of alcoholic drinks owing to the enforcement of the Convention of St. Germain-en-Laye signed on September 10th, 1919, relating to the liquor traffic in Africa. In conformity with the provisions of this Convention, there is a prohibition on the importation of trade spirits of every kind and of beverages containing trade spirits. This prohibition is, however, enforced in an inconsistent and arbitrary manner, owing to the absence of any definition of the term "trade spirits".

It should be noted that cases occur where a country endeavours at all costs to recapture its liberty to increase its import duties on certain articles—for example, by denouncing or amending commercial treaties in order to eliminate the reduced duties consolidated therein. Acting in this manner, a certain country quite recently endeavoured to regain its freedom in order to enforce an autonomous tariff for a certain commodity and to increase the duty on another commodity. In cases of this kind, the most-favoured-nation clause does not protect other countries.

III. OTHER MEASURES FOR THE ARTIFICIAL STIMULATION OF NATIONAL PRODUCTION.

1. Discrimination by means of excessively detailed schedules in Customs tariffs.

Hitherto the Netherlands has always pursued a policy which was purely free trade; the conclusion of commercial treaties was, with hardly a single exception, based on the principle of the most-favoured-nation clause.

The benefits which should accrue to the Netherlands as a result of the most-favoured-nation clause have sometimes been nullified by excessively detailed schedules in the tariffs of other countries, which act in a manner peculiarly detrimental to the agricultural and horticultural produce of the Netherlands. For example Dutch cheese is handicapped by the tariff schedules of several countries.

A commercial treaty recently concluded, under which hay, consisting of not less than 50 per cent timothy grass, may be imported into a certain country duty free, whilst other kinds of hay remain dutiable, furnishes a typical example of the results of such specification. To give a second example: A treaty has just been concluded under which the date until which early potatoes may be imported into a certain country has been advanced, with the result that the sale of early potatoes in this country does not present any difficulties except in the case of produce from the Netherlands, which reaches maturity later in the season, and cannot therefore be marketed in the country in question.

2. An example of the serious handicap experienced by the Netherlands, owing to the artificial measures adopted by other countries in order to promote the export of agricultural products, is the system of import licences employed in a certain country. Under this form of protection, the production of certain commodities, particularly rye and oats, has been increased to such an extent that the markets in neighbouring countries have been largely disorganised. We may anticipate similar disastrous results, owing to the recent enforcement of the system of import licences for meat and fish.

3. The Netherlands Government considers that one of the factors tending to prevent the restoration of normal conditions is that certain States promote the export of various agricultural products by artificial means. For instance, one Government guarantees the grower a minimum price for flax, whilst another State subsidises the exportation of bacon.

Another Government has adopted measures in regard to the production of butter and cheese which produce somewhat similar results. Yet another Government has granted a bounty of £200,000, in order to increase the land under wheat to 1,000,000 acres.

D.

With regard to the free movement of raw materials, the Netherlands Government highly appreciates the results obtained in the case of hides, skins and bones. It need hardly be said that the Government would welcome any subsequent abolition or reduction of the export duties on bones.

Our objective must be the abolition of import prohibitions and restrictions which hamper free trade in raw materials and are incompatible with the free determination of prices on the world market. The abolition of the import prohibitions and restrictions on coal and peat by certain countries would encourage the trade of the Netherlands in these commodities.

Generally speaking, free trade in raw materials would be promoted to an extraordinary extent by the total abolition of import and export prohibitions and restrictions and by the removal of duties on entering or leaving a country, or, if the latter ideal cannot be realised, by the restriction of such duties to, say 3 per cent of the value of the goods.

Furthermore, the Netherlands Government considers that preferential railway tariffs in favour of national raw materials—such as coal and other like products—are prejudicial to foreign products, and should be abolished.

Poland.

[*Translation.*]

EXTRACT FROM A LETTER OF SEPTEMBER 30TH, 1930, FROM THE POLISH DELEGATION
ACCREDITED TO THE LEAGUE OF NATIONS.

.....
In my letter No. 2989/30 of September 9th,¹ I had the honour to transmit to you the resolutions adopted on August 30th by the Agricultural Conference held at Warsaw.

In drawing your attention in particular to point 6 of these resolutions, I have the honour to inform you that, although the Polish Government has not raised the question of preferential tariffs in its reply, it is in entire agreement on this subject with the view expressed in the resolutions.

In bringing these facts to your notice, I have the honour to request you to consider this letter as an integral part of the Polish Government's reply.

.....
Reply to the Questionnaire.

A.²

(a) Exports of agricultural produce occupy a very important position in the Polish balance of trade. The four tables annexed contain figures for surplus agricultural produce available for export. The first table refers to agricultural produce, the second to live-stock and animal products, the third to products of agricultural industry, and the fourth to timber and semi-manufactured wood.

The average exports of cereals, plants and vegetable products from Poland in recent years are shown in the attached table (Annex I).

As will be seen from the annexed tables, barley is the principal export article, and is followed by leguminous vegetables, seeds, hops, flax and hemp.

In the last three years, there has been a deficit on the trade balance for rye amounting to 8,045 tons, valued at 15,377,000 zloty.

In years when the harvest is good, however, there is a considerable surplus of rye for export. For instance, in 1925 this surplus amounted to 111,738 tons, value 18,369,000 zloty; in 1926, 214,330 tons, value 66,912,000 zloty; and, in 1929, 200,247 tons, value 58,537,000 zloty.

Only in 1925 was there a surplus of wheat for export, amounting to 53,183 tons, value 15,470,000 zloty; in other years, there was a deficit.

The export of live-stock and animal products is of much greater importance in the Polish balance of trade than that of plants and cereals.

The average foreign trade figures and the exports of surplus animal products in recent years are shown in the attached table (Annex II).

The value of the exports of live-stock and animal products specified above reached 528,224,000 zloty in the three years from 1927 to 1929. This amount includes pigs, 35.1 per cent; eggs, 28.7 per cent; meat and meat products, dressed fowls and game, 14.9 per cent; butter, 12.2 per cent.

The products of agricultural industry occupy an important position among Polish agricultural exports. The average export surpluses of these products in the last three years are shown in the attached table (Annex III).

According to these returns, sugar is the most important export product of Polish agricultural industry. Fodder, potato products and alcohol are also valuable export articles.

Wood is an important export product. The average exports of this article in the years 1927-1929 are shown in the annexed table (Annex IV).

The average annual exports of timber and semi-manufactured wood in 1927-1929 reached the considerable figure of 503,412,000 zloty.

(b) It will be seen from the attached table (Annex V) that Germany is the principal market for Polish agricultural produce importing about 40 per cent of the total exports of such produce. All kinds of agricultural produce are exported to Germany—in particular, wood, eggs, butter, fodder, leguminous vegetables, cereals, seeds, poultry and sugar.

¹ See Annex VI to the present note.

² The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c); B; C and D).

Austria is the second largest market for Polish agricultural produce and is the principal consumer of pigs, meat and eggs.

The third place is shared by Czechoslovakia and England. Poland exports to Czechoslovakia principally pigs, eggs, leguminous vegetables, flax, hemp and hops. England is a market for sugar, bacon, eggs, butter, grain, seeds, flour and potato starch.

The four countries mentioned take about 80 per cent of the total exports of Polish agricultural produce.

Smaller quantities are exported to Holland (sugar, barley, rye, colza seed, calf-skins); to Latvia (sugar, barley, rye, flax, hemp and skins); to Belgium (barley and leguminous vegetables); to Denmark (barley, rye, seeds, horses); to Sweden (sugar and seeds); to Finland (sugar, rye and barley); to Italy (eggs, leguminous vegetables, sugar); to France (eggs, sugar, potatoes); to Estonia (sugar, rye and barley); to Switzerland (seeds, potato starch and eggs); to Norway (barley and fodder); to Hungary (seeds and leguminous vegetables); and to the United States (seeds, calf-skins and fodder).

(c) The tables in the replies to questions (a) and (b) summarise the exports of various surplus agricultural products and their principal outlets during the last three years and the first six months of the present year. The following table shows the proportion between the exports of agricultural produce (divided into the four main groups) and the total Polish exports.

EXPORTS IN MILLIONS OF ZLOTY.

	1924-25	1925-26	1926-27	1927-28	1928-29
Total	2,139 100%	2,130 100%	2,483 100%	2,499 100%	2,604 100%
Agricultural produce	1,055 49.3%	1,254 58.9%	1,310 52.8%	1,503 60.0%	1,482 57.0%
I. Vegetable products	162 7.6%	332 15.6%	194 7.8%	201 8.0%	278 10.7%
II. Animal products	364 17.0%	392 18.4%	426 17.2%	559 22.4%	577 22.8%
III. Products of agricultural industry	226 10.5%	203 9.5%	227 9.1%	170 6.4%	181 7.0%
IV. Timber and semi-manufactured wood.	303 14.2%	326 15.4%	463 18.7%	573 23.3%	448 16.5%

The exportation of agricultural produce shown by the above figures makes it possible to import large quantities of industrial products without endangering the balance of trade. This result is due in particular to the productive work of the agricultural population.

The reconstruction of farms devastated by the war (the fact that 3.5 million hectares lay fallow indicates the extent of this devastation) has been carried out without any financial aid from war reparations and with very little assistance from the Government; it is due almost exclusively to the individual labour and thrift of the Polish farmers. Although this effort was so successful, it considerably reduced the farmers' working capital and almost exhausted their cash reserves, thus making them unduly dependent on credit, which was obtained only with difficulty and on particularly onerous terms during the period of inflation and the financial crisis.

An improvement could not be brought about by cheap long-term credits, as the general poverty of the country made it difficult for agricultural credit societies to dispose of their mortgage bonds.

Agricultural circles were not very seriously affected by financial difficulties in respect of credits until 1927-28. It was only when Poland began to experience the effects of the general agricultural depression that these difficulties made themselves fully felt. Polish agriculture is suffering not only from the general depression which prevails throughout the world, but also from a number of troubles of a purely local character. The hardest blow was the catastrophic drop in the price of rye. Poland has 5.5 million hectares under rye, while wheat is grown on only 1.3 million hectares. A drop of 50 per cent in the price of rye as compared with the year 1927-28 is an indication of the severity of this depression. On a rough calculation, the prices obtainable at the present time are equal to only 60 per cent of the cost of production. Among the factors tending to accentuate the effects of the world depression in Poland may be mentioned, in the first place, the shortage of currency, which makes it impossible to select a suitable moment for selling the crops, and frequently forces the farmers to dispose of their produce on unfavourable terms and without regard to the state of the market.

The possible measures for facilitating trade in agricultural produce may be divided into two categories: (1) measures for rationalising production and trade; (2) measures for removing any unnecessary obstacles which impede the international exchange of goods.

With regard to the first category—*i.e.*, measures for rationalising production and trade—it must be admitted that no sphere of economic life is in such need of re-organisation as agricultural production.

The factor which has the most adverse effect on agriculture in the present economic depression is the disproportion which exists in many countries between the prices of agricultural products and of industrial articles. The causes of this phenomenon are being eagerly discussed on all sides; they are no doubt to be found to a great extent in the advanced state of the cartel movement in industry, particularly in the branches producing raw materials, and in the lack of a similar organisation for agricultural production. This state of affairs is explained by the conditions of agricultural and industrial production. In industry the quantity of goods produced depends solely on the will of the producer. In agriculture it depends on the weather and on a number of other indefinite factors. Modern industrial production is centralised in a relatively small number of large undertakings. Agricultural production is carried on on millions of farms between which it is extremely difficult to organise any definite and durable arrangement.

Nevertheless, it is evident that by improving and centralising information regarding the state of grain crops, the number of animals, stocks, prices and the state of the market in particular spheres of agricultural production, it becomes more possible to adapt this production to anticipated sale conditions.

The rationalisation of production, the necessity for which is clearly proved by the present agricultural depression, depends in every country primarily on the financial resources which farmers are able to devote to making any necessary changes in the forms of production and discontinuing the production of commodities of which the supply exceeds the demand.

This question is directly related to that of agricultural credit. Most agricultural countries cannot re-organise production and regulate supply on account of a serious lack of working capital. The creation of an international agricultural credit organisation, in which matter the initiative has been taken by the International Institute of Agriculture, is therefore of primary importance for production and normal trade.

Surplus capital, of which there is a plentiful supply in some countries, might be usefully employed in agricultural countries and would enable them to change their forms of production—that is to say, to reduce the crops suffering from over-production—in order to increase those of which the output is insufficient. This would make it possible to regulate the trade in agricultural produce and keep up a uniform supply to foreign markets. These measures would undoubtedly reduce the danger of a heavy drop in prices in countries importing agricultural products. In view of the international character of capital, this question could only be solved by an international agreement between countries possessing surplus capital and those suffering from a shortage.

It is particularly important for the rationalisation of trade that the sale of the various agricultural products should be organised by multilateral agreements of a regional character. Poland was one of the initiators of agreements of this kind when she signed the Polish-German Rye Agreement in March 1930 for organising exports of rye. The object of this agreement was to avoid harmful competition between the two countries on foreign markets.

The renewal of this agreement clearly proves that Poland desires a definite arrangement between exporters, and that she is pursuing economic and not political aims. The new agreement concluded between the wheat and barley exporters of the Danubian States pursues a similar aim to that of the Polish-German agreement. Poland can but welcome this agreement, as any increase which it effects in wheat and barley prices for those countries will indirectly influence the prices of the principal cereals exported from Poland, especially barley and rye.

In 1928, a syndicate of pig and cattle exporters was established in Poland for rationalising and centralising the export trade in pigs. This syndicate's activities have so far shown good results, and it would be advisable to investigate the possibility of extending this method of rationalising exports to other States.

The development of agricultural co-operation, in direct connection with co-operative societies distributing foodstuffs in industrial countries with an insufficient food production, would also facilitate the export of surplus agricultural produce. In this manner, the disparity between the prices paid by consumers and those obtained by the farmers would be diminished.

All the above factors indicate that, although it is by no means easy to regulate the output of, and trade in, agricultural produce, there are nevertheless a number of questions in which appreciable results would undoubtedly be obtained by international economic co-operation.

With regard to the factors included in the second category, it should be pointed out that, contrary to the recommendations of the Economic Conference of 1927 and of the Commercial Convention concluded at Geneva on March 24th, 1930, there has been not merely no reduction, but a considerable increase, in protective duties on agricultural products. A few months before the Economic Conference took place at Geneva, a marked tendency was noticeable in many industrial countries to raise the protective tariffs on agricultural products. Agrarian protectionism has been still further accentuated in some countries by the introduction of sliding tariffs, which impede trade by the very fact of their instability. Moreover, artificial conditions adverse to the international exchange of agricultural products are created by numerous domestic regulations which partake of the nature of disguised protectionism, such

as regulations regarding the percentage of foreign grain which may be used in milling in order to restrict the market for imported goods.

Among directly harmful provisions may also be mentioned the system adopted by some countries of fixing import quotas for certain agricultural products, or even absolutely prohibiting their importation. These prohibitions, which are frequently introduced on veterinary and sanitary grounds, are in many countries a disguised form of economic action.

Indeed, they cannot be justified by purely sanitary reasons or by the exigencies of the veterinary service in these countries. On the contrary, countries with better organised veterinary services and better health conditions among their cattle are, for purely economic reasons, treated less favourably than countries in which the service is not so well organised, and the sanitary condition of the cattle leaves much to be desired.

The difficulties referred to, which are common to most agricultural countries, are for special reasons greater in Poland than elsewhere. The commercial relations of Poland with her most economically powerful neighbour are far from being regulated. It is true that, after some five years of tariff warfare, the Polish-German Commercial Treaty has finally been signed, but it does not provide for the free exportation of all agricultural products to Germany. Import quotas are fixed, for instance, for pork and pigs, while the importation of other animals for slaughter and other qualities of meat is entirely precluded. Moreover, the enormous increase in Customs duties which has recently been introduced by the German Government on almost all agricultural products renders questionable all the advantages which the Polish farmer anticipated from this agreement.

The transit of Polish agricultural products, particularly those subject to veterinary regulations, depends on the consent of the neighbouring States, and is obstructed by numerous formalities which are frequently unjustified.

On the other hand, the export of these products by sea from the more distant centres of production is difficult and costly, as the Polish merchant marine is still comparatively small.

The conclusion of international conventions might remove certain factors which at present impede the trade in agricultural produce. This applies, in particular, to the question of veterinary prohibitions and restrictions, which has been studied for some years at the League of Nations by veterinary experts, and is one of the subjects of international conferences to be held next year. Indirect protectionism might also be dealt with by international conventions.

The proposal recently brought forward at Geneva regarding the transport of agricultural produce and the tariffs applied to such produce may also be mentioned as an international problem of great importance. Investigations into this matter are likely to lead to rapid results in the form of agreements providing for genuine freedom of transport and favouring the transport of agricultural produce.

The problem of reducing the level of Customs tariffs on agricultural produce is extremely difficult to solve in present conditions. Judging by the international difficulties encountered by proposals to refrain from increasing Customs duties, it is hardly to be supposed that a reduction could be speedily brought about by international conventions. It would appear that, in present conditions, bilateral tariff treaties based on the most-favoured-nation clause can alone lead to definite results in this respect. Tariff agreements between industrial and agricultural countries providing for a reciprocal reduction of Customs duties must be regarded at the present time as the best means of attaining the desired aim.

B.

In view of the present economic depression, this question is among the most important, and calls for an immediate solution. The position of agricultural countries and of countries with a predominance of agricultural production is one of the greatest difficulty. In these countries the purchasing power of the population is very low. It is insufficient to develop production on a large scale and thus to give employment to the masses of the population and increase the sale of European industrial products.

An increase in the absorptive capacity of the agricultural countries would go a long way towards solving—and even removing—the difficulties which are at present caused in industrial countries and in countries with a mixed economic structure by the lack of markets for manufactured goods. An increase in the purchasing power of agricultural countries and countries with a mixed economic structure would help to increase the sale in agricultural countries of articles manufactured in industrial countries. An increase in the buying power of agricultural countries would tend to decrease and even to remove the international difficulties which are at present being examined by international economic circles with a view to facilitating international economic co-operation.

The question how to increase the purchasing power of agricultural countries and countries of mixed economic structure is a problem of universal interest under present economic conditions.

It would not be difficult to enumerate a number of measures which might be taken, but only if applied in their entirety would they effectively increase the purchasing power of the population of agricultural countries. These measures fall into several main groups :

1. A more equal distribution of the available capital in Europe would tend to increase the purchasing-power of the consuming countries. Long- and medium-term credits granted to countries suffering from a shortage of capital would develop the economic life of those countries and create a solid basis for the importation of industrial products from abroad. Long-term credits should be given in particular to industries possessing natural conditions favourable to development and providing the possibility of paying interest and amortisation without injury to the financial balance of the country.

2. The protection of infant industries (in strict relation with the measures referred to in No. 1), and the development of industry in agricultural countries or in countries with a mixed economic structure, do not in any way injure the true interests of industrial countries. On the contrary, as the general wealth of such countries is enhanced, their power of purchasing manufactured articles from industrial countries is increased—a fact which is confirmed by the figures for exports from the principal highly industrialised countries to other industrial countries.

3. The development of export possibilities for goods of which the country has a surplus production or for which it possesses favourable natural conditions. As, under present circumstances, the agricultural countries of Europe have, for the most part, an insufficient absorptive capacity, the development of export possibilities for those countries to all the European markets, and particularly to those with a high consumption, would be a natural consequence of such a position. The practical measures which might be put into operation for facilitating exports from agricultural countries are indicated in the other parts of this reply.

4. In referring to the purchasing power of the population, the question of emigration cannot be ignored. It is closely connected with Point 2 (industrialisation). Experience has however, shown that in some countries, including Poland, industrialisation cannot, even under the most favourable circumstances, keep pace with the rapid growth of the population. Consequently, the surplus population must, at any rate for a certain time, be enabled to emigrate to countries where there is a demand for labour. This would help to increase the purchasing power both of the country of emigration and that of immigration. Freedom of emigration would thus become a valuable corrective to industrialisation.

5. The last group of important measures which may help to ensure the disposal of industrial products refers to legal provisions for regulating practical questions closely connected with international trade. They include the question of unifying the laws on bills of exchange and on the international circulation of cheques. The same group may be taken to include the standardisation of tariff nomenclature, double taxation and other arrangements which at present constitute hindrances to economic development.

In particular, what are, in the case of the products mentioned in A and B above, the Customs and administrative measures which seem likely to promote the extension of markets and the improvement of international trade ?

* * *

C.

Customs and administrative readjustments have not a decisive effect on the extension of markets and the improvement of international trade. The essential point in this problem is to raise the purchasing power of consuming countries, to which reference has been made in point B above ; suitable modifications, however, in Customs and administrative regulations are likely to lessen the difficulties which arise in international economic relations.

There are two sides to this problem. On the negative side, there are Customs and administrative measures which constitute an obstacle to the export of goods from one country to another, and which must be abolished or moderated if the market in question is to be effectively extended for exports. On the other hand, on the positive side, certain Customs and administrative measures must be introduced to facilitate the disposal of various products.

It is evident that, in the first case, protective measures, particularly import duties and prohibitions restricting the exports of other countries, play a large part ; in the second case, the measures in question refer to rationalisation, regularisation and standardisation.

The nature of the international enquiry shows that it is concerned primarily with the negative aspect—*i.e.*, with the hindrances to international trade—which it enumerates fairly definitely, and not, as hitherto, in a general and indeterminate manner.

The simplest way to deal with these obstacles to international trade will be to take them in groups.

I. CUSTOMS TARIFF LEVEL.

Every country is in a position to state without difficulty what Customs duties hinder its economic expansion. For this reason, in bilateral negotiations the two States arrive at a relatively speedy agreement as to Customs tariffs.

In respect, however, of the efforts to arrive at a multilateral reduction of the level of Customs duties, although everybody agrees to the principle, opposite measures are taken in practice. This apparent paradox is due to the following reasons: In the first place, freedom of trade is not regarded as a general economic liberty—*i.e.*, including both the exchange of goods and of labour and capital; in the second place, in dealing with the level of import duties, too much importance is attached to the duties on industrial products, which, in spite of their high level, are protectionist duties imposed solely to safeguard the production of the country against imports. On the other hand, too little importance is attached to the level of duties on agricultural produce, which are prohibitive, and in many cases give rise to a general tendency to increase all Customs duties. This question is closely connected with the necessity of increasing the purchasing power of the population of countries exporting agricultural produce.

In view of the above, special attention should be devoted to duties on agricultural produce, the reduction of which may have a favourable effect, not only on the position of countries exporting such produce, but also on that of industrial countries in search of new markets. In this connection, we will mention a number of examples relating to agricultural products exported from Poland, the exportation of which is rendered difficult, if not impossible, by excessive duties.

The following are some of the most important Polish export articles on which excessive Customs duties are imposed :

1. *Pigs.* — The total export value is about 190,000,000 zloty per annum. On one of the principal markets the present duty amounts to about 25 per cent of the Polish price. This may be increased up to 35 per cent by the system of sliding duties.
2. *Bran.* — The export value is about 29,000,000 zloty per year. On 95 per cent of the exports, a duty of 80 per cent of the Polish price is imposed.
3. *Eggs.* — The export value is more than 150,000,000 zloty per year. On 50 per cent of the quantity, a duty of 37 per cent of the Polish price is imposed.
4. *Cereals.* — Subject to a duty of 80 per cent of the Polish price.
5. *Hops.* — On 60 per cent of the exports, a duty of 80 per cent of the Polish price is imposed.

Excessive duties are imposed on other agricultural products and live-stock, which Poland could otherwise export in large quantities. This is the case, in the first place, with potatoes, starch (subject to a duty of up to 200 per cent *ad valorem*), dextrine, malt offal, cattle, meat, sheep, etc.

Agricultural products and live-stock are not the only articles suffering from the constant increase in Customs duties. Other Polish export products encounter an excessive Customs barrier in countries which represent the most important Polish markets. We may mention, for instance, mineral and other oils (the exports of which amount to about 55,000,000 zloty), certain wood products, metal wares, etc. The normal production of these articles is hindered by excessive Customs protection.

As a proof that the tariff level in certain countries threatens Polish exports, it may be mentioned that, out of twenty-nine articles on which one of the principal countries purchasing Polish agricultural products and live-stock had imposed increased duties, Poland, when negotiating for a commercial treaty, asked for a reduction on nineteen articles. These articles were the principal products exported from Poland.

In connection with Customs tariffs, a study should be made of the relation between the balance of trade and the balance of payments, in the case of both industrial and agricultural countries, and also of countries with a mixed economic structure.

The position is not the same in Poland as in certain Western countries and, to some extent, in the United States, where the balance of trade forms only a part—at times, a very important part—of the balance of payments, and a deficit on the balance of trade does not necessarily create a deficit on the balance of payments, but is frequently covered either by interest on capital invested abroad, or by other items in the balance of payments. In Poland, however, and in other countries of a similar economic character, the decisive items for the balance of payments are the debit or credit balances of foreign trade. In Poland, and other countries with similar economic conditions, the balance of trade must therefore be the subject of special attention, and must not show a deficit over a prolonged period, on account of its effect on the balance of payments.

II. SLIDING SCALE OF DUTIES.

There is a close connection between the increase of Customs tariffs and the sliding duties which have recently been imposed by some countries on the principal articles exported from Poland, such as pigs, cereals and other articles, on which duties analogous to those on grain are imposed (groats, flour, bran, malt). The system of sliding duties consists in increasing

or decreasing duties by administrative order, no fresh legislation being required. This system is particularly injurious to countries exporting agricultural produce, as it introduces an element of instability and makes calculation difficult—particularly as it is impossible in agriculture to adjust production quickly to the level of Customs duties. Long-term transactions also become very difficult.

In short, the abolition of sliding duties must be taken as a further condition for extending markets.

III. REGULATION OF IMPORTS AND EXPORTS.

The system of import and export prohibitions and restrictions, which is closely connected with the quota system (consisting in granting import permits for certain quantities of goods), constitutes a third category of obstacles to Polish exports, in addition to excessive Customs protection and sliding duties, already referred to.

Trade regulation has become a general post-war principle in the commercial policy of various countries. Since the time when European economic circles began to be guided by liberal ideas, the abolition of import and export prohibitions and restrictions has become a question of first importance.

The Convention of November 8th, 1927, did not, however, establish the principle of the total abolition of prohibitions. In Article 6 it retained "exceptions", and in Article 4, paragraph 4, it gave, *de facto*, complete liberty to regulate imports of live-stock products on veterinary grounds.

In view of the departures from the principle of the entire abolition of prohibitions and restrictions, Poland refused to ratify the Convention for the following reasons: (1) Polish exports, which consist of a limited number of products, would have been greatly hindered by all these "exceptions"; Poland could not propose other exceptions, as the export products of her principal associates are very varied; (2) exports of Polish live-stock products were threatened by Article 4, paragraph 4, as such exports depend entirely on the interpretation of veterinary regulations by the countries to which these products are sold or through which they pass in transit.

In this sphere of international political economy, a combined effort should therefore be made to extend the scope of the existing Convention by abolishing these "exceptions", and by concluding an international veterinary convention in which all contracting States would undertake not to apply veterinary prohibitions except in case of real sanitary necessity.

IV. OTHER ADMINISTRATIVE MEASURES ARTIFICIALLY HINDERING EXPORTS.

In additions to drastic and unjustified veterinary regulations, there are a number of other administrative provisions adversely affecting exports, the abolition of which would greatly assist the extension of markets. Among the difficulties which particularly affect our exports may be mentioned:

(a) Restrictions on milling—for instance, the obligation to mix a certain percentage of home flour with foreign flour.

(b) The compulsory marking of imported goods. These difficulties reside in the necessity of marking each article, which is often a very expensive process. Moreover, this measure represents a discrimination against foreign goods and a kind of official propaganda for home goods. It may be justified on the ground of protecting the consumer in respect of foodstuffs, but this argument is not valid in the case of industrial goods.

(c) Discrimination between goods from different countries by means of administrative provisions or import taxes must also be considered as an obstacle to exports. This refers particularly to coal, for which in some countries there is a preference in favour of import by sea, to the detriment of land transport.

There are many administrative provisions of this kind which hinder exports, and if they were abolished the capacity of markets would be considerably increased.

V. TRANSIT DIFFICULTIES.

Transit difficulties are a further obstacle to international trade. Their characteristic feature is that the obstacle is situated in a third State, while the adverse effects are felt by the two States exchanging their goods. Transit difficulties particularly affect live-stock products. Most transit prohibitions are imposed for alleged sanitary reasons, while in reality they constitute a means of economic warfare against certain exporting countries. This is proved by the fact that some countries at certain times have no other means of transport at their disposal, either for geographical or for climatic reasons—for instance, on account of a port's being icebound in winter—while transit is granted at the same time to other States

where the veterinary services and health conditions of the live-stock are on the same or a lower level.

Other transit difficulties encountered by Polish exports consist in excessive duties or formalities, amounting to a *de facto* transit prohibition for certain articles through certain territories.

VI. EXPORT BOUNTIES.

From the point of view of normal economic relations between different countries, export bounties instituted by any State are extremely harmful. They may make their effects felt : (1) on the home market of the importing country, by a drop, sometimes very considerable, in home prices (unless protective duties are greatly increased) ; (2) on foreign markets, by making it difficult for certain countries to compete with foreign bounty-fed products.

For these reasons, the system of export bounties—to say nothing of its being the most rigorous method of protecting production—leads other countries to increase their duties on goods which require protection against a drop in home prices. It also compels other countries exporting the like goods to take similar action. When this system is introduced by any State, it therefore shows a tendency to grow and to distort altogether the aspect of foreign commercial relations and of all international trade.

Polish exports to foreign markets are vitally affected by the export bounties introduced in various countries. The following products, *inter alia*, may be mentioned :

1. Cereals, siliquous plants, milling products ;
2. Pigs and pork.

The export bounties granted by certain countries amount to :

- (a) 70 per cent *ad valorem* on rye ;
- (b) 35 per cent *ad valorem* on pigs.

In view of the complications created in the economic life of States by export bounties, negotiations should be entered into in order to modify and restrict this policy—at any rate, for certain articles which lend themselves to a general settlement. The solution of the entire problem might be regarded as a more distant object.

VII. THE RUSSIAN MARKET.

In enumerating the difficulties at present placed by administrative and Customs measures in the way of Poland's economic expansion, we may mention the enormous decrease in Polish exports to Russia, the principal market for Polish goods before the war. This decrease is illustrated by the following figures : before the war, exports to Russia from the territories which are at present Polish attained a value of about 500 million dollars, while at the present time they amount to about 15 million dollars. In 1913, Polish exports to Russia represented 42 per cent of the total exports from Poland, while at the present time they amount to only 2 per cent.

This enormous decrease is due to a variety of causes, but particularly to the catastrophic decrease of consumption in Soviet Russia, and to the change in the legal conditions for exports, caused by the Soviet monopoly of foreign trade.

D.

The movement of European raw materials in our continent is of primary importance for the economic development of Europe. Poland possesses a number of essential raw materials in her own territory ; nevertheless, as the quantities are insufficient for her own requirements, she would regard with favour any measures facilitating their international exchange. The most important questions for the economic development of Europe are effective co-ordination in the movement of European raw materials and their distribution among countries which do not produce them but which require them for their industry, the necessary quantities being reserved for producing countries which would not be in a position to obtain them from third countries. It would therefore be desirable to conclude international conventions between producers for suitably rationalising the supply and demand of certain European raw materials (coal, zinc, etc.). Such a rationalisation of most industrial raw materials should be carried out by means of agreements between the interested parties, and not by inter-State treaties.

With regard to agricultural raw materials, the principles laid down in the replies to the preceding three points should be applied.

¹ The figures refer to the year 1929, as there were no exports to this country during the two preceding years.

Annex VI.

I. EXTRACT FROM A LETTER FROM THE POLISH DELEGATION ACCREDITED TO THE LEAGUE OF NATIONS.

.....
In conformity with the last paragraph of the resolution adopted on August 3rd, 1930, by the International Agricultural Conference at Warsaw, which reads as follows :

“ The Conference decides to forward the foregoing resolutions to the Secretariat of the League of Nations, with the request that they may be brought to the notice of the States signatories of the Protocol regarding Future Negotiations signed at Geneva on March 24th, 1930 ”,

I have the honour to transmit to you herewith the text of the resolutions adopted by the Conference.

.....
II. TEXT OF THE RESOLUTIONS ADOPTED BY THE INTERNATIONAL AGRICULTURAL CONFERENCE AT WARSAW (August 30th, 1930).

Whereas the acute difficulties through which the economic life of countries whose prosperity depends solely or chiefly on the marketing of their agricultural produce has been passing for several years form one of the fundamental causes of the general economic difficulties of Europe ;

And whereas countries whose economic organisation is entirely or largely based on agricultural production cannot escape gradual pauperisation unless they can export their agricultural produce in sufficient quantity to balance their imports of industrial products from the industrial countries—that is to say, unless a balance is established between the extent to which the principle of free trade is applied to industrial products on the one hand and to agricultural products on the other ;

And whereas isolated efforts on the part of the countries in question to overcome their present difficulties can yield only limited results ;

And whereas co-operation among those countries exporting agricultural produce which are represented at the Conference will plainly contribute to the highly desirable object of the conclusion of separate and more detailed agreements between the countries in this group ;

And whereas countries which are purely or largely agricultural cannot gain the necessary strength to defend the legitimate economic interests which are common to them all except by wholehearted common endeavour ;

And whereas unco-ordinated competition among the countries represented at the Conference tends to aggravate the difficulties from which agricultural countries are suffering, as is clearly shown by their trade balances ;

And whereas regional agreements must form a step in the direction of a general readjustment of the economic policy of the countries of Europe :

The representatives of Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Poland, Roumania and Yugoslavia, assembled at the International Agricultural Conference of Warsaw, have agreed as follows :

I. The representatives of the countries taking part in the Conference decide to submit the following proposal to their Governments :

Being anxious to eliminate competition among agricultural countries as far as possible, and convinced that the effects of such competition must be peculiarly harmful unless the export trade in agricultural produce is rationalised, the States represented at the Conference propose to devise means of re-organising the export of agricultural produce so as to make the quantities exported correspond to the needs of the importing markets.

Those countries which have suitable agricultural export machinery should endeavour to conclude bilateral or multilateral agreements regarding the export of specific agricultural products.

The Conference is of opinion that, if this action is to be successful, it should be organised in respect of each agricultural product, or in respect of groups of such products, in such a manner as to embrace all the countries exporting those products. The Conference considers that such action should be taken primarily in respect of those products which are suffering most seriously from the present depression.

The Conference holds that, with a view to the establishment of a large-scale organisation for the concerted sale of agricultural produce, especially cereals, each exporting country must :

- (a) Organise a network of silos of a kind suited to the country's needs ;
- (b) Establish a financial organisation suited to the needs of the trade in cereals, with special reference to the advances that farmers may obtain on their produce ;
- (c) Establish an organisation which will ensure a uniform sales policy in each country.

In order that there may be a permanent intelligence service in connection with the sale of agricultural produce, the Conference recommends that delegates of the export boards or similar institutions of the various countries should meet periodically to draw up joint information reports based on national and international publications relating to the sale of cereals.

To enable any country to come more speedily to an agreement for the rationalisation of exports with other countries exporting the same products, the Conference recommends that suitable organisations for the co-ordination, concentration or control of exports of agricultural produce should be set up by those countries which do not at present possess such organisations.

Realising the great difficulties involved by the problem of surpluses of agricultural produce in excess of demand, more particularly in the case of cereals, and observing that such surpluses are the prime factor in the fall in prices, the delegates assembled at the Conference, being anxious to ensure the farmer a fair yield, recommend the international organisations, more especially the League of Nations, to devote all their attention to this problem.

2. Seeing that lack of adequate statistics makes it difficult to organise the trade in agricultural produce on more efficient lines, the representatives of the States taking part in the Conference have agreed to submit to their respective Governments proposals for common action in the direction of standardising their methods of compiling statistics of agricultural exports (cereals, live-stock, meat), and to communicate to one another, with the least possible delay and at regular intervals, all statistics relating to the trade in agricultural produce.

The Polish Ministry of Agriculture would appear to be in the best position to collect these statistics and circulate them to the other States taking part in the Conference.

The statistics will be sent in accordance with arrangements to be proposed by the Polish Government before October 1st, 1930, and the first set should be sent before November 1st, 1930.

3. The representatives assembled in the Conference decide to submit the following proposal to their Governments :

The States represented at the Conference intend to lay before the League of Nations, as soon as a favourable opportunity occurs, joint proposals aiming at the conclusion of an international convention for the abolition of direct and indirect bounties on the export of agricultural produce.

A special technical commission is to meet as soon as possible to draw up a proposal to the above effect, and possibly also to prepare a draft convention. The Commission will, in particular, investigate and form an opinion upon the various forms of export bounty—that is to say, the various forms of subsidy granted by Governments to encourage the export of agricultural produce. The Polish Government is requested to collect the necessary material for the Commission's work before the latter meets, and to prepare a preliminary draft of the convention referred to above.

4. The States taking part in the Conference are unanimously of opinion that all international action in connection with veterinary questions should be based primarily on an increasingly energetic and effective campaign against epizootic diseases and on a constant improvement in the hygienic conditions of their live-stock. This should reduce the losses to farmers from disease, and should, at the same time, be accompanied by a lessening of the severity of the veterinary police regulations applying to the international traffic in live-stock and animal products.

The States taking part in the present Conference, having been informed of the progress of the work of the Special Committee of Veterinary Experts under the direction of the Economic Committee of the League of Nations, agree to make common cause in support of this work and to endeavour to secure the conclusion of an international veterinary convention under the auspices of the League as soon as possible, and in any case not later than the end of 1931.

The delegates taking part in the present Conference agree to recommend their Governments to support their veterinary services by all possible means, in order that the latter may be able to organise themselves and function according to the principles laid down by the Special Committee of Veterinary Experts of the League of Nations in co-operation with the International Epizootics Office at Paris.

Meanwhile, the delegates taking part in the present Conference agree to discuss among themselves forthwith the possibility of bilateral veterinary conventions concerning the import, export and transit of live-stock and animal products, such conventions to be concluded either before the conclusion of the proposed international convention or with the object of amplifying it and adapting it to the special needs of their respective countries ; alternatively, they will endeavour to attain the same end by autonomous regulations framed in a spirit of perfect fairness and respecting the vital interests of the countries represented.

5. The representatives of the countries taking part in the Conference decide to submit the following proposal to their Governments :

The States represented at the Conference will set up without delay a technical financial commission which will meet at Warsaw before November 10th, 1930, to draft uniform regulations regarding agricultural credit for intermediate periods (from six months to five years). These regulations should specify the basis of such credit, the forms of guarantee to be given, the nature of the obligations assumed, etc.

6. Having examined the replies of the Governments taking part in the International Agricultural Conference at Warsaw to the questionnaire embodied in the Protocol regarding the Programme of Future Negotiations signed at Geneva on March 24th, 1930, having found that the central ideas of the various replies are mutually compatible, and having also noted that certain countries are in favour of preferential treatment being granted by European importing countries to cereals and agricultural produce of European origin, the Conference adopts this view :

The delegates of those countries which have not yet made any statement to this effect in their replies to the League of Nations will submit this resolution to their Governments.

The Conference desires to point out that although such preferential treatment is obviously inconsistent with the most-favoured-nation clause, it cannot injure the interests of oversea countries, as the latter will always remain the principal sources of supply for the European market. Moreover, although such preferential tariff treatment will enable the European agricultural exporting countries to benefit by the margin between the general duty and the preferential duty, it will not run counter to the protectionist policy of countries whose agricultural output is insufficient, seeing that it will always be the general duty that affects prices. Again, the introduction of such a system will improve the economic position of the agricultural exporting countries by increasing their purchasing power, and will thereby confer indisputable benefit on both European and oversea countries.

While admitting the importance of the most-favoured-nation clause in international trade, the Conference is bound to observe that in the peculiarly serious position of agriculture the only effective and practical remedy for the agricultural depression is to make an exception to the clause for agricultural produce of European origin.

7. The representatives of the countries taking part in the Conference decide to submit the following proposal to their Governments :

Being anxious to ensure that their economic policies in the matter of agriculture shall always be co-ordinated, the States taking part in the Conference propose to hold conferences of the persons responsible for their economic policy at least once a year in their capitals. The next Conference should be held in the autumn of 1931.

The States taking part in the Conference further recognise the need for a permanent economic research board composed of their representatives. It will be the function of this board to gather up the threads of all work directed towards putting into effect the resolutions adopted by the Warsaw Conference and subsequent Conferences, and to prepare those resolutions. Accordingly, the participating Governments will appoint their representatives before October 1st, 1930, and the latter will meet as soon as possible to draft rules for the board and to carry the resolutions of this Conference into effect.

8. The representatives of the countries taking part in the Conference decide to submit the following proposal to their Governments :

The Conference recognises the desirability of adopting a uniform attitude to agricultural questions of importance to the agricultural countries in the international field, and especially within the sphere of the League of Nations. They should accordingly inform one another of their replies to enquiries made by the League and other international organisations with regard to agricultural questions, in order to co-ordinate those replies ; this might, if necessary, be done at special preparatory meetings summoned for the purpose. The States represented at the Conference should, as far as possible, co-ordinate all the proposals on agricultural subjects put forward at the Economic Conference which is to meet at Geneva in November under the provisions of the Commercial Convention signed at Geneva on March 24th, 1930.

Realising the value of co-operation between Governments and the international agricultural institutions for the defence of agricultural interests, the States taking part in the Conference decide to propose that the League of Nations co-operate continuously on all questions affecting agriculture with the Rome International Institute and the Paris International Commission of Agriculture, which represent agricultural associations in international affairs.

The Conference decides to forward the foregoing resolutions to the Secretariat of the League of Nations with the request that they may be brought to the notice of the States signatories of the Protocol regarding Future Negotiations signed at Geneva on March 24th, 1930.

Roumania.

A.¹

(a) In Roumania, the surplus agricultural products, in order of importance, are: maize, oxen, barley, pigs, eggs, beans, flour, nuts, fresh butchers' meat (large animals), oats, apples, colza, pork, pumpkin seeds, feathers, cows, poultry, millet, wheat, bran, clover seed, lentils, seed for fodder, cheese, prunes, mustard-seed, intestines, bulls and pears. (The relative importance naturally changes from year to year.)

Taking an average of five years (1924, 1925, 1926, 1927, 1928) the over-production in Roumania accounted for 55.16 per cent of the country's exports and can be divided into the following groups:

	Average for five years Percentage of the exports
I. Maize, barley, rye, wheat, oats, millet, bran, flour	36.23
II. Pigs, bulls, oxen, cows, rams	8.93
III. Vegetables, flowers, seeds, fruit, animal foodstuffs	10.00
	<u>55.16</u>

As shown in the following table:

I. Cereals.

Cereals are the chief group of agricultural products. The average exportation of cereals, over a period of 10 years, was 1,436,100 tons per annum.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B, C and D).

(a) Average exportation of cereals for 10 years (1920-1929).

(Années — Years)	Blé Wheat	Seigle Rye	Orge Barley	Avoine Oats	Maïs Maize
			(Tonnes — Tons)		
1920.	237	42.260	421.872	39.040	443.455
1921.	73.276	34.790	377.544	150.776	830.387
1922.	25.186	28.441	575.908	232.944	307.509
1923.	27.845	10.343	815.878	176.018	678.048
1924.	122.415	30.522	276.039	91.978	745.448
1925.	5.238	660	182.693	20.728	580.087
1926.	272.285	26.564	581.001	61.067	690.391
1927.	209.719	61.063	703.303	89.309	1.761.761
1928.	27.922	32.519	414.549	16.859	473.135
1929.	7.210	15.609	1.154.696	41.729	374.485
Total . . .	771.333	282.771	5.503.483	920.448	6.884.706
Moyenne } Average }	77.133	28.277	550.348	92.044	688.470

This table shows that the average exportation of the chief cereals in the last 10 years was classified in order of importance, as follows :

1) Maïs — Maize	688.500 tonnes — tons
2) Orge — Barley	550.000 » »
3) Avoine — Oats	92.000 » »
4) Blé — Wheat	77.300 » »
5) Seigle — Rye	28.300 » »
	<u>1.436.100</u> } tonnes par année } tons per annum

(b) What are the normal outlets for these products ? In respect of the destination of the cereals and cereal products, the amounts exported varied as follows :

	1923	1924	1925	1927	1928	1929
			(Tonnes — Tons)			
Grande-Bretagne Great Britain	84.896	103.931	107.365	163.296	62.224	110.065

(c) As representing an exporting agricultural country, the Roumanian Government would state that, in view of the present economic situation of its agriculturists, its primary concern has been to introduce measures capable of ensuring the practical and effective disposal of its surplus production of cereals and other agricultural return, and thus to increase the purchasing capacity of the population.

The following means, it thinks, might be employed to this end.

1. Preferential Customs treatment by European importing countries for cereals and agricultural products of European origin.

The Roumanian Government would point out that such preferential treatment, representing, as it obviously does, a limitation of the most-favoured-nation clause, cannot adversely affect the interests of overseas countries, which will always remain the chief suppliers of the deficiency prevailing on European markets. Moreover, such preferential Customs treatment, although it would mean that the European countries exporting agricultural products would benefit by the margin between a general and a preferential duty, would not thereby prejudice the protectionist policy of States with insufficient agricultural production, as it is always the general rate of duty which reacts on prices. Furthermore, the application of such a system, improving—as it would—the economic situation of agricultural exporting countries by increasing their purchasing capacity, would thereby unquestionably benefit industrial countries in Europe and overseas.

2. The consolidation on a reasonable level by European importing countries of all import duties on European agricultural products in such a manner as to leave a margin of profit to agriculturists in the exporting countries.

3. A system of entire freedom of trade in cereals and agricultural products on the European markets, and the complete abolition of every hindrance to such trade, and of all measures aimed at the artificial restriction of the imports of cereals and other agricultural products or compulsory changes in the consumption of various agricultural products.

It is absolutely essential, in the Roumanian Government's opinion, that European importing countries should give effective guarantees to European agricultural exporting countries, that all kinds of prohibitive and restrictive measures on the imports of cereals and other agricultural products, such as monopolies of any kind, sliding-scale duties, etc., should be entirely abolished.

The Roumanian Government declares that, if the countries importing agricultural products persist in their present practices regarding such imports, it may find itself compelled, in its turn, to treat imports of manufactured articles in the same manner.

B.

The Roumanian Government believes that the best way of promoting the disposal of manufactured products is to increase the purchasing power of agricultural exporting countries by promoting the export of their surplus production at satisfactory prices.

The practical means for achieving this end have been mentioned in the reply to A.

They further consider that a practical method of increasing the purchasing capacity of consuming countries would be to procure agricultural exporting countries long-term credits and more moderate rates of interest, thus enabling producers to cheapen their costs.

C.

The Customs and administrative measures likely to extend markets and improve international trade are, the Roumanian Government thinks, given in the foregoing replies to A and B.

Special mention might also be made of the following further administrative measures, the abolition of which is of capital importance :

1. The abolition of all administrative measures resembling disguised protectionism.

The Roumanian Government believes it to be really urgent and essential to give agricultural exporting countries effective guarantees that veterinary and phytopathological measures will in no case be applied as measures of indirect protectionism.

As regards veterinary measures, the Government considers it highly desirable that the work of the International Veterinary Conference, referred to in Article 2, paragraph 7, of the Protocol regarding the Programme of Future Negotiations, should be brought to a satisfactory conclusion.

2. The abolition of all discrimination in the matter of railway and inland waterway transport rates in favour of agricultural products, including cereals from overseas, for the purpose of promoting the growth of certain maritime ports, such discrimination being directed against the products of European agricultural countries. This tariff policy on the part of certain industrial States is a material factor in restricting the markets of agricultural exporting countries.

3. The abolition of systems of prohibition or restriction of the importation of certain agricultural products by means of a margin between the import duties on the raw material and the finished agricultural product. Mention might be made, in particular, of the margin in importing countries between the import duty on wheat and that on flour. This margin, being a form of indirect protectionism, should be reduced to its natural level.

D.

To the extent that Roumania, as an exporter of agricultural products, is interested in the question of raw materials, the Roumanian Government thinks it has answered this question in the preceding paragraphs.

Sweden.

[*Translation.*]

A (a) and (b).¹

The most important agricultural articles of which a surplus is produced in Sweden are cattle, pigs, pork and other meat, butter and eggs. The value of the total exports of these products amounted, in 1929, to approximately 132,279,000 Kroner. Exports of cattle were valued at 1,432,000; pigs at 4,061,000; pork at 38,647,000; other meat at 4,066,000; butter at 75,097,000, and eggs at 8,976,000.

The principal markets for these products were: For cattle, Germany; for pigs, Germany and Denmark; for pork, Great Britain; for other meat, Norway and Germany; for butter, Great Britain and Germany; and for eggs, Great Britain and Germany.

A (c), B and C.

It would, of course, be possible to ensure an extension of the markets for agricultural products, as well as for industrial products, by a convention providing for a considerable reduction in Customs tariffs and by the abolition of other restrictions on international trade now in force.

It is only natural that the League's Economic Organisation should direct its efforts towards this end. The Swedish Government is entirely prepared to help in this work. Without enumerating the Customs duties and restrictions in force in various countries which more particularly handicap the free development of Sweden's foreign trade, the Swedish Government desires to put forward the following general considerations concerning the collective method of work in the field of commercial policy.

I. REDUCTION OF CUSTOMS DUTIES.

The chief point in this problem was indicated clearly by the 1927 Economic Conference, which declared in particular that the time had come to put an end to the increase in Customs barriers and to move in the opposite direction.

The League Economic Organisation has unquestionably done everything in its power to carry out this recommendation. It first examined the possibility of negotiating general conventions for the limitation of the Customs duties on certain classes of commodities. It then undertook an enquiry into the conditions for a general and uniform reduction of all Customs duties. Lastly, it endeavoured to achieve at the least a Customs truce to hold good for a specified period of time. In these endeavours, the Organisation has had the support of the free trade countries, which have shown themselves entirely prepared to abandon their freedom of action in Customs policy in order to facilitate the conclusion of international conventions. These efforts have all failed, however, because certain other countries have refused to accept any restriction on their liberty of action and have used it to make constant increases in their Customs duties, a movement which has not ceased even now. Thus these countries, notwithstanding the attitude taken up by their delegates at Conferences at Geneva, have shown in practice that at present, at any rate, they are not ready to change their Customs policy on the lines recommended by the World Economic Conference.

It hardly appears possible to overcome their opposition by an immediate discussion of the Customs question in all its length and breadth. Experience has shown that this is not a practicable method of attaining even far less ambitious results. We have only to recall the negotiations which were held at Geneva at the beginning of the current year for the conclusion of a Customs truce. It follows that a collective tariff agreement embracing a considerable number of European countries and involving an appreciable reduction of Customs duties, and likewise the stabilisation of the present commercial policy of the free trade countries, could hardly be achieved in the present circumstances. Negotiations between the free trade countries on the one side and the protectionist countries on the other would, moreover, be impeded by the difficulties due to the fact that the various countries belonging to each of these two groups have divergent interests in regard to the different classes of goods. The considerations set forth above do not apply with equal force to the suggestion for a collective tariff agreement between the agricultural and industrial European countries with the object of extending the foreign markets for the agricultural products of the agrarian countries. Here, too, however,

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B, C and D).

there are extremely grave difficulties, particularly if it were proposed to conclude a tariff agreement granting more favourable treatment to European agricultural products than to similar commodities from overseas.

Although, therefore, the Swedish Government hardly dares hope—in the present circumstances at any rate—that the difficulties could be overcome by the opening of negotiations with the immediate object of regulating Customs duties by an international convention, it recognises the necessity of using all available ways and means. If it, nevertheless, should be decided to choose the method of negotiations, Sweden will not fail to help in the achievement of a positive result. We must not, however, conceal the fact that the responsibility, not only for the hampering of international trade by the continual raising of a large number of Customs barriers, but also for the effects of this action on the future commercial policy of the hitherto free trade countries lies with those countries whose economic policy, as practised hitherto, has prevented any effectual co-operation among the European countries in the Customs field. The creation of the requisite conditions for achieving such co-operation depends primarily on these countries.

2. STABILISATION OF COMMERCIAL POLICY.

The normal exchange of goods between the European countries is, however, impeded, not merely by excessive Customs barriers, but also by the constant changes in Customs tariffs, and, generally speaking, by the instability of the commercial policy of many countries. It is worth noticing that commercial treaties are most frequently of short duration and undergo constant changes. Recently, there has even been observed in certain countries a tendency to give a new interpretation to the provisions of commercial treaties and even to evade them.

The programme of future negotiations, of which the Questionnaire now under consideration forms part, contains several suggestions for the purpose of lessening the difficulties resulting from this state of affairs. The Swedish Government keenly desires that these proposals should be put into effect to the greatest possible extent. Without exhausting the subject, it wishes to mention the following subjects which, in its opinion, are of vital importance for improving the system governing commercial relations between the European countries, and which are at the same time suitable for settlement by international agreement.

(a) *Establishment of a standardised Customs nomenclature.* — Sweden is already applying the framework for a Customs nomenclature prepared by the Committee of Experts and hopes that a general convention on the subject will be drawn up as soon as the experts have completed their work.

(b) *A plurilateral commercial convention (without tariff provisions).* — The proposal put forward by the French delegation at the Customs Conference which met at Geneva this year deserves very serious consideration. A convention of that kind, if unanimously accepted, covering the provisions generally found in commercial treaties, would unquestionably help to remove the uncertainty felt concerning the interpretation and scope of the said provisions. A convention on these lines might, further, pave the way for a later collective tariff agreement.

(c) *Most-favoured-nation clause.* — As regards this question, a draft formula has already been prepared and submitted by the Economic Committee. Further, a careful examination has been given to the question whether and how far the most-favoured-nation clause can be invoked in order to obtain the privileges stipulated in general international conventions. That, however, is only a first step towards the settlement of the problem as a whole. There still remains the question whether anti-dumping Customs duties and compensation duties are compatible with the clause, how the term "like products" is to be interpreted, what is the effect of the clause on quota agreements and other arrangements of the kind, etc. The proposed formula does not meet these and other questions. The uncertainty at present prevailing in this connection has caused much inconvenience, particularly during the current year, and the Royal Government would welcome with pleasure a speedy and exhaustive enquiry into the subject. A clear and, if possible, complete convention on the interpretation and application of the most-favoured-nation clause would unquestionably be very valuable to all trading countries.

(d) *Dumping.* — This subject has also been discussed. The difficulty encountered has been that of finding a definition. It has had to be recognised that there are too many different forms of dumping to make it possible to bring it under any uniform rules. Certain forms of dumping can, however, be dealt with immediately by an international conference. The Swedish Government wishes to draw attention, in particular, to the dumping of agricultural products, which has recently grown very considerably, and which is carried on by means of the system of export certificates. The abuse of this system—and it is often abused—may easily have a disorganising influence on price levels, and consequently on the normal sale of goods. It would probably be desirable to have an international regulation on this subject.

D.

As regards the distribution of raw materials, the regulations in force in Sweden make no restriction either to imports or exports.

In principle, the widest measure of liberty is strongly to be desired in this matter. Certain antagonistic tendencies may be observed. For instance, in some countries the free distribution of raw materials is hampered by export and import duties, while producers are more and more commonly resorting to agreements for sharing the world markets, a fact which obviously may have very harmful consequences for the consumer.

This state of affairs could not be easily remedied by the conclusion of international conventions. The subject, however, deserves close attention, and an international regulation might perhaps be feasible on certain points. As is known, there is already in existence an international agreement concerning export duties on hides, skins and bones.

Turkey.

A. ¹

(a), (b) Our surplus agricultural products and their natural and normal outlets, referred to under (a) and (b) in section A of the Annex to Article I, are stated in the attached list.

(c) The means to be employed to ensure the disposal of these surplus products in the normal markets and in other countries with an insufficient production are of a financial or of a practical and provisional character.

1. The financial means consist, first and foremost, in ensuring that the products are sold in the consuming countries as cheaply as possible—the chief condition for which is that the import customs duties on them must be low. In order to achieve this result, Turkey seeks to obtain by means of commercial treaties the largest possible reduction in the import duties on these products.

2. The practical and provisional means consist in ensuring that the products are sold under the system of free competition and are of better quality than other similar products. Among such means are the standardisation of the products according to their kind and quality; their preparation and despatch in such a manner as to guard against circumstances rendering them unfit for consumption—*e.g.*, rot and putrefaction; supervision of the products and prevention of their adulteration; the application during their production and preparation of all the necessary hygienic and scientific measures; the making-up of the internal and external packing in such a manner as to prevent deterioration of any kind. These points were discussed at length by the Central Economic Board and, moreover, a law (No. 1705 of June 10th, 1930) concerning the prevention of adulteration, and the supervision and protection of export commodities, has been promulgated and put into force in order to attain the objects indicated above.

B.

The means mentioned in the foregoing section might also be instanced as facilitating the disposal of manufactured products, particularly in the direction of increasing the extent to which it is possible for consuming countries to purchase these products. The manufacturing industry being, however, only of recent growth in Turkey, our exports of this kind are not large enough to be taken into consideration.

C.

With regard to the Customs and administrative measures which seem likely to promote the extension of markets and the improvement of international trade in the products mentioned in A and B above, it is desirable, in the interests of every country, to abstain from levying export and transit dues. Such dues, which are calculated to hamper the trade in export commodities, are not collected in Turkey. Of the cereals and vegetable products formerly subject to an export tax, Law No. 1698 of June 8th, 1930, exempted from that tax: wheat, barley, maize, rye, buckwheat, oats, millet, peas, rice, chick-pea, beans (kidney, broad and dwarf), lentils, fox-tail grass, sesame seed, flour, bran ("paspal") and "razmol".

In addition, it is considered necessary to abolish, whenever they exist: restrictions and prohibitions in regard to foreign ships and foreign agricultural and industrial products; measures intended to withhold from some particular country the privileges extended to another country in respect of such ships and products; export bounties, together with other similar measures, such as dumping; all of which are likely to hamper international trade and the extension of markets. The chief import prohibitions and restrictions in force in Turkey being based on considerations of public health and order, or on legal provisions establishing a monopoly in certain products, it may be truly said that Turkey applies no prohibition or restriction that is unjustifiable from the commercial and economic points of view.

The Turkish Customs tariff was framed in accordance with economic and financial considerations, and the rate of the duties fixed proportionately. These duties having been reduced in certain respects in virtue of treaties, and the Powers with which a commercial arrangement, treaty or convention, based upon the most-favoured-nation principle has been concluded having also profited thereby, the Turkish duties on foreign agricultural and industrial products obviously cannot be called high, still less prohibitive. Similarly, there is no discrimination

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States. (A, (a), (b) and (c), B, C and D).

between the ships and the agricultural and industrial products of different foreign countries in respect of the privileges granted by law.

In so far as export products are concerned, there are no trusts, cartels or combines in Turkey capable of organising dumping or similar practices. Nor are there any bounties that, going beyond their natural function of encouraging the industry concerned, might restrict or render impossible the competition of another country in the same class of products. For countries the mutual trade relations of which are not dependent upon any special convention, the chief means of extending markets and facilitating international trade is to base those relations on legal and contractual provisions, establishing by negotiations such conditions as will meet their economic needs. Now that the most-favoured-nation system is being almost universally applied, countries that have not concluded such commercial treaties and conventions will obviously never be able to extricate themselves from their difficulties and to compete with success.

* * *

With regard to Article 2, paragraph 4, of the Protocol, it has not been considered necessary to give detailed particulars, since the information required is included in the particulars given above, and since, moreover, the commercial conventions concluded by Turkey, as also the conventions with regard to which she has already opened negotiations, contain provisions for preventing any application of the system of indirect protectionism.

Yugoslavia.

A.¹

(a) The agricultural products of which there is an over-production in Yugoslavia are given in the annexed list.

(b) The normal outlets for these products are exclusively the European markets—viz., Italy, Austria, Roumania (as a transit country), Germany, Greece, Hungary, Czechoslovakia, etc.

(c) As representing an exporting agricultural country, the Yugoslav Government would state that, in view of the present economic situation of its agriculturists, its primary concern has been to introduce measures capable of ensuring the practical and effective disposal of its surplus production of cereals and other agricultural commodities at prices guaranteeing producers an adequate return, and thus to increase the purchasing capacity of the population.

The following means, it thinks, might be employed to this end :

1. Preferential Customs treatment by European importing countries for cereals and agricultural products of European origin.

The Yugoslav Government would point out that such preferential treatment, representing, as it obviously does, a limitation of the most-favoured-nation clause, cannot adversely affect the interests of overseas countries, which will always remain the chief suppliers of the deficiency prevailing on European markets. Moreover, such preferential Customs treatment, although it would mean that the European countries exporting agricultural products would benefit by the margin between a general and a preferential duty, would not thereby prejudice the protectionist policy of States with insufficient agricultural production, as it is always the general rate of duty which reacts on prices. Furthermore, the application of such a system, improving—as it would—the economic situation of agricultural exporting countries by increasing their purchasing capacity would thereby unquestionably benefit industrial countries in Europe and overseas.

2. The consolidation on a reasonable level by European importing countries of all import duties on European agricultural products in such a manner as to leave a margin of profit to agriculturists in the exporting countries.

3. A system of entire freedom of trade in cereals and agricultural products on the European markets, and the complete abolition of every hindrance to such trade, and of all measures aimed at the artificial restriction of the imports of cereals and other agricultural products or compulsory changes in the consumption of various agricultural products.

It is absolutely essential, in the Yugoslav Government's opinion, that European importing countries should give effective guarantees to European agricultural exporting countries that all kinds of prohibitive and restrictive measures on the imports of cereals and other agricultural products, such as monopolies of any kind, sliding-scale duties, etc., should be entirely abolished.

The Yugoslav Government declares that, if the countries importing agricultural products persist in their present practices regarding such imports it may find itself compelled, in its turn, to treat imports of manufactured articles in the same manner.

B.

The Yugoslav Government believes that the best way of promoting the disposal of manufactured products is to increase the purchasing power of agricultural exporting countries by promoting the export of their surplus production at satisfactory prices.

The practical means for achieving this end have been mentioned in the reply to A.

They further consider that a practical method of increasing the purchasing capacity of consuming countries would be to procure agricultural exporting countries long-term credits and more moderate rates of interest, thus enabling producers to cheapen their costs.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B, C and D).

C.

The Customs and administrative measures likely to extend markets and improve international trade are, the Yugoslav Government thinks, given in the foregoing replies to A and B.

Special mention might also be made of the following further administrative measures, the abolition of which is of capital importance :

1. The abolition of all administrative measures resembling disguised protectionism.

The Yugoslav Government believes it to be really urgent and essential to give agricultural exporting countries effective guarantees that veterinary and phytopathological measures will in no case be applied as measures of indirect protectionism.

As regards veterinary measures, the Government considers it highly desirable that the work of the International Veterinary Conference, referred to in Article 2, § 7, of the Protocol regarding the Programme of Future Negotiations, should be brought to a satisfactory conclusion.

2. The abolition of all discrimination in the matter of railway and inland waterway transport rates in favour of agricultural products, including cereals, from overseas, for the purpose of promoting the growth of certain maritime ports, such discrimination being directed against the products of European agricultural countries. This tariff policy on the part of certain industrial States is a material factor in restricting the markets of agricultural exporting countries.

3. The abolition of systems of prohibition or restriction of the importation of certain agricultural products by means of a margin between the import duties on the raw material and the finished agricultural product. Mention might be made, in particular, of the margin in importing countries between the import duty on wheat and that on flour. This margin, being a form of indirect protectionism, should be reduced to its natural level.

D.

To the extent that Yugoslavia, as an exporter of agricultural products, is interested in the question of raw materials, the Yugoslav Government thinks it has answered this question in the preceding paragraphs.

* * *

Annex ad A (a).

AGRICULTURAL PRODUCTS OF WHICH THERE IS A SURPLUS IN YUGOSLAVIA.

II. ECONOMIC AND FINANCIAL
1930. II. 44. Addendum.

Bulgaria.

[Translation.]

A. ¹

(a) The Bulgarian agricultural products, which show considerable export surpluses, are enumerated in Annexes A and B.

(b) The normal markets for these products are shown in Annex C, while Annex D gives the quantities and value of the principal products exported to the most important countries during the last three years.

(c) The disposal abroad of Bulgarian exported products is meeting with obstacles due to the over-production in agriculture throughout the world, the consequent fall in prices, and the restrictive economic policy pursued in other countries with regard to imports of agricultural produce.

This policy, which is of particular interest in the present connection, manifests itself in the form of :

- (i) Customs duties on agricultural products imported into the other countries, and
- (ii) Various measures other than Customs measures taken with the immediate, though not always ostensible, object of restricting imports of the same foreign products.

With regard to the practical means of removing or eliminating the obstacles caused by the economic policy of the countries which import agricultural products, and thereby securing and enlarging the foreign market of the countries which export these products, the following may be suggested :

1. A certain improvement in international trade in agricultural products might be secured by the conclusion between the countries concerned of long-term commercial treaties, accompanied by transit, veterinary, phytopathological and other agreements. The essential point in connection with such treaties and agreements is that they should be fairly and impartially carried out. This could be ensured to a large extent by the creation of a Permanent Organ of Conciliation and Arbitration on the lines indicated in the French memorandum submitted to the Conference in February and March 1930.

2. Multilateral economic conventions concluded under the auspices of the League of Nations might also be useful. In this connection, the extension of the Convention for the Simplification of Customs Formalities and the conclusion of an international veterinary convention seem to be particularly desirable.

3. To attain this object, it would be desirable to create direct relations between the producers' co-operatives in the countries which export agricultural produce and the consumers' co-operatives in the importing countries.

4. A Customs *rapprochement* between the countries of Europe, based on preferential treatment for agricultural products of European origin, would also be useful for facilitating the disposal of such products.

How can such a measure of *rapprochement* be realised? The solution of that question will depend on the attitude of the non-European countries which export agricultural products and on the claims of the importing countries of Europe with regard to the compensatory adjustments to be made by the European countries which export agricultural products.

5. An appreciable reduction in agrarian Customs duties in the industrial countries of Europe and a restriction of the indirect agrarian protectionism as practised by these countries might serve the even more important object of facilitating the marketing of European agricultural products. The real question is how far such a mitigation of agrarian protectionism in Europe is attainable, in view of certain conditions without the removal of which there can be little hope of any substantial relaxation of agrarian protectionism, whether direct or indirect.

6. Finally, an effective means of facilitating the marketing of agricultural products would be the restricting output by the big exporters, such a policy can alone make it possible to increase prices sufficiently to ensure at least a minimum profit for agriculture.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A (a), (b) and (c), B, C and D).

B.

The marketing of products manufactured in Bulgaria must be regarded as a difficult problem, especially in view of the low purchasing power of the population consequent upon the very small profits from agriculture—the principal means of livelihood of 80 per cent of the population.

Of the various measures of an international character for improving the profits of agriculture and increasing the purchasing power of the population, the following may be mentioned :

(a) Obtaining long-term foreign credits, both for the Government and for private people, at the lowest possible rates of interest ;

(b) International restriction and rationing of production with a view to remedying the agricultural depression throughout the world.

(c) The mitigation of agrarian protectionism (see reply to A (c)).

Protectionism in Bulgaria, which is chiefly industrial and fiscal, has arisen as a result of the following circumstances :

(1) The difficult financial position of the Government, due to reparations and post-war loans for the establishment of refugees and the stabilisation of the currency. Import duties are the main source of revenue, and any reduction in this revenue would make it impossible to balance the budget.

(2) The necessity of protecting local industries, since these are not yet in a position to face the competition of foreign industry, which has been established for a longer time and is more up to date.

(3) The considerable and permanent deficit in the balance of payments of the country and the consequent danger to the stability of the currency. The average annual deficit of the balance of payments is about 2 milliard (debit trade balance, national debt and reparations, interest and dividends on foreign capital leaving the country). In view of the difficulties occasioned by the extension of exports, and the dangers involved by covering deficits by foreign loans, a certain restriction of imports by means of import duties seems to be of prime necessity.

Since the question of Bulgarian Customs protectionism has been raised, we may mention here the system of encouraging local industry, which has led to the drafting of a special law.

This law, though helping to create certain industries in the country, does, without doubt, hinder the disposal of the corresponding foreign industrial products. It must be remembered, however, that thanks to this law, a large quantity of raw materials and semi-manufactured products and all machinery enter into the country free of duty and this entirely counterbalances the protectionist tendencies of the law.

C.

The following measures are designed to abolish certain typical cases of indirect protectionism.

1. Abolition of the various restrictions with regard to the quality of the cereals imported (weight in hectolitres and admixtures) and of flour (content of starch), which do not affect similar products of the country itself.

2. Adjustment of the wide disproportion which exists between taxes on the raw product (grain) and on the manufactured product (flour).

3. Abolition of all discrimination in railway or river tariffs, whereby artificial advantages are given to certain importers, while difficulties are created for the normal purveyors of agricultural produce.

4. Restriction, as far as possible, of the system of certificates of origin and certificates of quality, as also of the obligation to have a consular stamp affixed to these certificates, as this often proves an unsurmountable obstacle to the exportation of a number of agricultural products (grapes, vegetables, live-stock, butchers' meat, etc.).

D.

The above is, in our opinion, a satisfactory answer to the questions set forth in this paragraph.

Annex C.

NORMAL MARKETS FOR SURPLUS BULGARIAN AGRICULTURAL PRODUCTS FOR EXPORT.

Goods	Countries to which the products are or may be exported
Buffaloes	Greece, Turkey, Egypt.
Bullocks and cows	Greece, Turkey, Spain, Egypt, Austria.
Wethers and ewes	Greece, Turkey.
Goats of both sexes	Greece, Turkey.
Fowls	Italy, Greece, Germany, Egypt.
Poultry	Italy, Germany.
Butter	Greece, Turkey, Egypt.
Cheese	Greece, Egypt, France, Turkey, Austria, Italy.
“Kashkaval” cheese (similar to Gruyère)	Greece, Egypt, Turkey, France.
Eggs	Germany, Austria, Switzerland, Italy, Spain, Greece, France.
Wheat and young corn	Greece, Turkey, France, Belgium, Italy, Egypt.
Rye	Germany, Belgium, the Netherlands, Austria, Greece, Egypt, Italy, Turkey.
Barley	Germany, Belgium, the Netherlands, Greece, Austria, England, Egypt, Italy, France, Czechoslovakia.
Maize	France, Austria, England, Germany, Greece, Italy, Hungary, Belgium, the Netherlands, Czechoslovakia.
Millet	Austria, the Netherlands, Germany, Czechoslovakia, Belgium, Greece, Italy.
Dry beans	Greece, France, Belgium, Germany, Italy, Egypt, Spain.
Wheat flour	Greece, Egypt, Italy, France, Turkey, Germany, Syria, Palestine, Austria, Czechoslovakia.
Bran and meslin	Germany, Austria, Greece, Italy, Hungary, France, the Netherlands, Czechoslovakia.
Fresh grapes	Austria, Germany, Czechoslovakia, Poland.
Fresh fruits	Austria, Germany, Czechoslovakia, Poland.
Cooked plums	Austria, Germany, Greece, Egypt, France.
Nuts	Austria, Germany, France, United States, Hungary, Italy, Czechoslovakia.
Fresh vegetables	Austria, Germany, Czechoslovakia.
Colza seed	Germany, the Netherlands, Austria, England, France, Czechoslovakia, Belgium, Hungary.
Vegetable seeds	Roumania, Hungary, Greece, Czechoslovakia.
Seed onions	Austria, Italy, Greece, Czechoslovakia, Hungary, Rou- mania, Germany.
Sunflower seeds	Austria, England, Germany, Greece, Belgium, Italy, the Netherlands, France.
Vetch	Italy, France, Belgium, the Netherlands, Greece, England, Germany.
Shoots for planting	Greece, Roumania, Turkey, Yugoslavia.
Tobacco	Germany, Austria, Poland, Belgium, Italy, Czechoslova- kia, Hungary, Egypt, Holland, France, Switzerland.
Wines	Austria, Germany, Switzerland, Hungary, Czechoslovakia.
Husks of oleaginous seeds	Germany, Austria, England, the Netherlands, Czecho- slovakia, Belgium, Switzerland.
Charcoal	Turkey, Greece, Egypt.
Raw sheepskins	Germany, Austria, Italy, United States, Czechoslovakia, France, Poland, Hungary.
Raw goatskins	United States, France, Austria, Germany.
Raw kidskins	Germany, Italy, France, United States, Austria.
Silkworms' cocoons	Italy, France, Switzerland, Turkey, Greece, Czechoslovakia.
Essence of roses	France, Germany, United States, Italy, Switzerland, England.
Compressed roses	France, United States, Germany.
Common alcohol	Greece, Turkey.
Refined sugar	Greece, Turkey.

Irish Free State.

A.¹

(a) (b) The principal agricultural products which are produced in the Irish Free State in quantities in excess of national consumption are as follows :

Product	Exports in 1929 in thousands of £'s.	Exports as percentage of total production	Principal countries to which exports in 1929 were sent.
Live Cattle.....	13,549	82	G.B. ² (£12,342,000, N.I. ² (£1,207,000).
Live sheep & lambs .	1,382	39	G.B. (£1,288,000), N.I. (£94,000).
Pig products :			
Live pigs	1,933	60	G.B. (£1,799,000), N.I. (£134,000).
Fresh pork	1,203		G.B. (£507,000), N.I. (£696,000).
Bacon ³	2,720		G.B. (£2,597,000), N.I. (£118,000).
Other sorts.....	205		G.B. (£184,000), N.I. (£13,000).
Total pig products .	6,061		G.B. (£5,087,000), N.I. (£961,000).
Poultry.....	950	31	G.B. (£875,000), N.I. (£73,000).
Eggs.....	3,219	44	G.B. (£2,987,000), N.I. (£228,000).
Butter.....	4,555	36	G.B. (£4,066,000), N.I. (£474,000).
Cream.....	416	90	G.B. (£378,000), N.I. (£38,000).
Wool.....	833	93	G.B. (£473,000), U.S.A. ² (£193,000), Germany (£55,000), Belgium (£44,000), N.I. (£24,000), Netherlands (£19,000), France (£11,000), Canada (£10,000).
Hides.....	301	95	G.B. (£286,000), N.I. (£9,000).
Skins.....	260	95	G.B. (£177,000), Netherlands (£45,000), Belgium (£34,000).
Horses produced for sale ⁴	2,518	84	G.B. (£2,088,000), N.I. (£173,000), France (£63,000), Switzerland (£47,000), U.S.A. (£43,000), Belgium (£26,000), British India (£23,000), Italy (£19,000), Netherlands (£9,000), Spain (£8,000).

(c) As will be noted from the answers to (a) and (b), the Irish Free State has a surplus of agricultural products for export, and, further, the export of agricultural produce is much larger than the export of manufactured products. The Irish Free State, in common with other countries, has suffered during recent years from the decline in prices of agricultural produce, and has found it necessary to take steps, by legislation and otherwise, gradually to rationalise at least certain forms of agricultural production, and further to improve the marketing organisation of its produce in the direction of standardising quality, where practicable, and arranging for large-scale marketing on modern lines.

The Government of the Irish Free State had earlier arrived at the opinion, which is quoted in the protocol regarding the programme of future negotiations (on page 6), that there was a tendency to exaggerate the importance of Customs duties as a factor in international

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A (a), (b) and (c), B, C and D).

² G.B. = Great Britain ; N.I. = Northern Ireland ; U.S.A. = United States of America.

³ There is a large import of cheaper bacon (£1,610,000), mainly from the United States of America.

⁴ There is a large import of horses from the United Kingdom of Great Britain and Northern Ireland—£1,306,000 in 1929. It is difficult to distinguish the extent to which the exports and imports of horses represent sales.

commerce in agricultural produce. Lack of commercial organisation was a more serious handicap, and there was, further, a need for rationalising certain forms of agricultural production. Defective marketing, and the absence of standardisation of quality, were problems which had clearly to be dealt with, and measures to deal with these aspects of the matter have already been adopted by the national legislature.

It may be that this opinion as to the minor importance of Customs duties arises from the fact that Irish Free State agricultural produce was chiefly marketed in Great Britain, a country which has no duties on agricultural produce. It was found, however, that, even under these conditions, the ameliorative measures referred to above were necessary, if Irish Free State produce was to compete successfully with produce from other countries, both European and overseas, which had a superior marketing organisation, and had taken steps to ensure standardisation of quality.

The experience of the Government of the Irish Free State in examining its own problem would suggest that any or all of the measures proposed in the Protocol regarding the Programme of Future Negotiations for the purpose of improving the position of the agricultural producer are wise and salutary measures. Practically all of these proposals have been, for the most part, adopted already as the national programme of the Government of the Irish Free State. An Agricultural Credit Corporation has been set up which enables credit to be obtained on the best possible terms by farmers. Co-operative production in the dairying industry has been established by law, and provision has been made for the adoption of national brands, which will only be granted to produce attaining a certain standard of quality. Consideration is being given to the fuller rationalisation of agricultural production in any and every way possible.

B, C and D.

As the Irish Free State is a comparatively new State, which, for reasons inherent in its history, has had insufficient opportunity to develop its industrial production, it is difficult for the Government, conscious that the home producer is entitled to expect a much larger share of the home market than it has yet been possible to secure him, to suggest means that might be employed to facilitate the disposal of the manufactured goods of fully developed industrial countries seeking markets for their surplus products.

The view has been urged on previous occasions by the Government of the Irish Free State that the problem of comparatively undeveloped countries necessitates special consideration by the Economic Organisations of the League. It has been pointed out that such countries in the absence of practical suggestions as to how their special needs should be met, could not be expected to fall in wholeheartedly with any plans that might stereotype, or even reduce, their existing industrial production, in favour of more advanced industrial countries.

The Government of the Irish Free State would not wish to be taken as standing in the way of any international agreements or arrangements which would tend towards the increased prosperity of other countries, but, until such time as the scheme outlined by the Economic Organisations of the League includes specific proposals for safeguarding the legitimate aspirations of industrially backward countries, such as the Irish Free State, it must be expected to exercise the utmost caution in initiating or supporting plans that might react to its own disadvantage. In justification of this attitude, it may be urged that economic organisations acting under the authority of such a body as the League have a natural duty to ensure the fullest consideration for the interests of such of its members as must be recognised to hold at present a relatively weak position.

The Irish Free State is primarily an agricultural country, but it possesses sufficient industrial experience and trained labour to enable national production to fill a much larger proportion of the home demand for manufactured goods than at present. Unfortunately, as a result of the impetus given to industrial production in other countries during the European war, with consequent over-production in the after-war period, Irish Free State manufacturers have been gravely prejudiced through the continued import of manufactured goods in large quantities that sell at prices with which Irish Free State producers could not at present reasonably be expected to compete. In such a situation, the Irish Free State Government has had no alternative but to take steps for the protection, by means of Customs tariffs, of a number of industrial products. Other countries had for many years maintained much more elaborate systems of protection. The relative positions occupied by different States in their advance towards the common aspiration of industrial prosperity showed such inequalities in opportunity, diversities in the rate of progress, and disparities in achievement that the Government of the Irish Free State has been of opinion that the Commercial Convention adopted at the Preliminary Conference at Geneva with a view to Concerted Economic Action, in February 1930, could not but cause anxiety to many States. The Convention appeared too summary in its adoption of a basis for stabilisation, too partial in its inherent exclusions, to secure under existing circumstances that general economic concert which was its aim.

The number of industrial products on which a protective duty has been imposed in the Irish Free State is small, and the rates of duty imposed low, in comparison with those generally prevailing in Europe. To stereotype what are essentially minimum tariffs, adopted as an experimental first step, on the principles contained in the Convention would endanger the legitimate ambition, held by the industrially undeveloped States, of securing a reasonable share of the home market for home industries, while it would maintain in a manifestly privileged position those other States which have had full time and opportunity to realise that ambition and stabilise their economic achievements.

It is scarcely possible at this stage to do more than indicate generally the lines along which special consideration could be secured for the circumstances of such countries as the Irish Free State. Measures taken internationally to stimulate the demand for, and improve the price of, agricultural produce would clearly be insufficient to justify the acceptance of restrictions on industrial production in States where a reasonable balance between primary and secondary production has not yet been attained. But such measures, if effectively devised and operated, must encourage States having a large interest in agricultural production to consider more favourably than is possible for them at present international arrangements for the stabilising of tariff levels on manufactured goods, provided there is no question but that, as a broad general principle, every State is entitled at any time to adopt such levels for comparable goods as any other State is entitled to adopt or maintain. Except on such a basis of equality of right, international arrangements cannot produce a general concert; they can only result in dividing members of the League into separate and antagonistic economic groups. In the view of the Government of the Irish Free State, it is extremely desirable that the Economic Organisations of the League should now undertake an international survey of the tariff levels on manufactured goods other than such as are produced only in restricted localities, with a view to informing all Members of the League as to the position in this respect of other Members with whom they are invited to enter into conventions, and to discovering whether, and to what extent, a basis of equality in the exercise of fiscal powers in the national interest can be laid down. A basis which, adopted for stabilisation tariff levels of the present date, would, in the view of the Irish Free State, be an empirical basis involving such plain inequities as to afford no prospect of an enduring international agreement. Meanwhile, the Government of the Irish Free State would find itself at liberty to approve measures for the limitation of direct or indirect bounties or subsidies to industrial production, so that the fiscal policies of the various States would become more easily comparable, and the attainment of a real common measure of equity be facilitated.

It is recognised that indirect or hidden forms of protectionism may have a detrimental effect on the interests of many States, and it would, therefore, appear desirable that a close enquiry should be made into cases of indirect protectionism, as well as into all aspects of the question of export bounties and subsidies. With this information available, it should be possible to study more accurately the problem of how consistent with the interests of other nations and in the manner least prejudicial to an international understanding, individual States could effectively proceed to encourage national production.

Portugal.

[*Translation.*]

A.¹

(a) Table A attached shows, from 1925 to 1929, the average national and assimilated exports of the principal agricultural products of vegetable and animal origin.

Among these very varied products there are two which are of much greater importance than the rest. These are liqueur and table wines, the value of which is £2,884,483, and cork in the form of sheets, bottle stoppers and discs, which amounts to £1,059,814.

Table B shows the average exports for the same period of the various industrial products of the country. Among these we would mention preserved fish, which amounts to a total of £1,642,611, of which £1,259,610 is made up of sardines.

(b) A complete reply to this question is furnished by Tables A and B, which show that Great Britain, France, North America, Brazil and the Portuguese colonies are the principal outlets for Portugal's surplus agricultural production. Her products are, however, sent all over the world, mainly to other European countries.

(c) The disposal of surplus production might be facilitated by the reduction in the importing countries of import duties and charges, and the simplification of formalities imposed on the ground of the protection of health and other pretexts, and which, in many cases, hamper the regular exchange of commodities.

A better knowledge in countries with an insufficient production of the surplus output of producing countries, including qualities and prices, the international recognition of descriptions, appellations of origin and regional marks (which is so important for the exportation of port and madeira), credit facilities commensurate with the safety and importance of the transactions, the mutual recognition of the advantages of giving preference to European markets for the products or raw materials which they can supply on better terms than others—all these things, if countries acted in an enlightened spirit of solidarity (which is, moreover, essential in view of the precarious economic situation of Europe at the present time), would help to facilitate the disposal of surplus production.

B.

The foregoing considerations under A (c) also apply in general to Question B.

At the present time, Portugal exports a large variety of manufactured products (see Table B); but, although the national industry, which is being completely reorganised, has already made great progress, the only product of which there is a considerable surplus at the moment is preserved fish. There is still a sufficient market for all the other products in the Portuguese colonies.

C.

The Portuguese Government will reply in detail to this question later, as soon as the enquiry into the matter, by the Ministry of Finance, which has consulted commercial and industrial associations in the mother-country and the colonies, is completed.

D.

The reply given above to paragraph (c) of Question A in regard to the disposal of surplus production also applies to the movement of products.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c); B; C and D).

Table A.

NATIONAL AND ASSIMILATED EXPORTS OF THE PRINCIPAL AGRICULTURAL
AND ANIMAL PRODUCTS.

Average figures for the period 1925-1929.

Description of product.	Quantity.	Value in escudos.	Value in £.	Countries to which exported.
<i>Liqueur wines:</i> Port (decalitres) ..	4,820,203	221,271,797	2,115,328	In escudos. Great Britain (130,640,000\$), France (20,700,000\$), Angola (17,910,000\$), Brazil (14,770,000\$), Germany (8,330,000\$).

Silverware	513	279,517	2,792	Brazil, France and Morocco.

Switzerland.

[Translation.]

A¹.

(a) Switzerland, whose grain production is restricted by her general economic conditions, is compelled to convert a relatively large proportion of her milk production into export articles (cheese, condensed milk, milk chocolate, milk flour for children). These articles represent her surplus agricultural production. The exports of these products have constantly decreased in recent years, as shown by the following figures :

	1913	1928	1929
	in thousands of quintals		
Fresh milk	181.2	128.5	94.6
Condensed milk	405.6	373.1	356.0
Hard cheese, in portions	356.8	216.5	248.2
Chocolate	168.2	88.6	75.8

While there has been an increase in milk production as compared with the pre-war period, the export of milk products has constantly declined. This is due principally to the fact that foreign countries have continually increased their Customs duties, luxury taxes and other imposts of the same kind, particularly on chocolate ; that in many countries Customs duties on cheese have also been increased ; that, in view of the over-production of milk abroad, the prices of milk and milk products have been greatly reduced ; and, finally that many countries have developed their cheese industry by using Swiss processes, the goods being often sold under designations likely to produce the false impression on the purchaser that they are Swiss products.

At times there is also an over-production of cattle, pigs, fruit and wine on the Swiss market.

(b) As regards the high-quality products referred to in the reply to the preceding question, it is hardly possible to speak of "normal" outlets properly so-called. Swiss cheese is sold principally to the United States of America, Germany and Italy, and also to France and Great Britain ; the remainder of the quantity exported is distributed among a large number of other countries. The position is similar in respect of condensed milk and chocolate.

(c) It is difficult to reply to this question, since, as pointed out above, Switzerland has no "normal" outlets properly so-called for agricultural products. A reduction in Customs duties (protective and fiscal), luxury taxes and other imposts of the same kind levied by foreign countries, in some cases on a very high scale, would be likely considerably to promote the disposal of Swiss products. In addition, certain countries, when selling products competing with ours, should cease to use designations of origin constituting what Switzerland regards as unfair competition. Internal measures, such as an improvement in quality, export concentration, etc., also come into consideration.

B.

This question raises extremely difficult and complicated economic problems. The Federal Council is not in a position to deal with them in detail within the limits of the present reply. The place and the circumstances in which the question was raised justify, however, the assumption that it refers exclusively, or at any rate principally, to European countries. This raises the often-discussed problem of the relations between the agricultural countries of Eastern Europe and the more industrial countries of Central and Western Europe. It can hardly be denied that there is a certain antagonism between them. It would appear that this antagonism should, without much difficulty, lead each of these groups to provide for the economic needs which the other group cannot satisfy. In the opinion of the Federal Council, it is not simply a question of agricultural countries on the one side and industrial countries on the other, for the economic structure of almost all these countries is mixed. The so-called industrial countries will not, or cannot, neglect their agricultural production while the so-called agricultural countries endeavour to maintain the industries which they have established and even to extend them and to introduce fresh industries. The Swiss economic structure is

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, a), b) and c) ; B ; C and D).

definitely of this mixed type. Although industry occupies a much larger number of persons than agriculture, the latter nevertheless continues to be of such importance that the Government cannot under any circumstances disregard it. For cultural, political and economic reasons, Switzerland must always endeavour to prevent a further decline in her agriculture. While formerly about half the inhabitants of Switzerland found their livelihood in agriculture, at the present time this branch provides a living for barely a quarter of the total population. Switzerland cannot, therefore, give her consent to any international measure likely to impair still further, or even to threaten, the existence of her agriculture, which is already undergoing a period of severe depression.

On the other hand, the Federal Council perfectly understands that the Eastern European countries, living principally on the disposal of their agricultural products, require facilities for export. It is well aware that such facilities would be likely to increase the buying power of these countries and thereby to create fresh outlets for industrial products. It would, however, point out that Switzerland imported agricultural products from the Eastern European countries to a value of 25 million francs in 1913 and 78 million francs in 1929. In spite of a certain Customs protection accorded to Swiss agriculture, which produces under much less favourable conditions than the competing agriculture of the Eastern European countries, the imports from this part of Europe have not declined, but have, on the contrary, considerably increased.

Switzerland is willing to study carefully any measures which may facilitate the disposal of agricultural products from Eastern Europe to a still greater extent. She will do so provided her vital interests are not affected.

How can such disposal be facilitated ?

(a) It is possible, to a certain extent, to meet the present situation by improving the quality of the products (standardisation), and by creating a better organisation for collecting and distributing them.

(b) In the first place, there is a temptation to seek the solution of this problem in the sphere of Customs policy. But, in the opinion of the Federal Council, this solution would meet with very great difficulties. The experience gained in recent years in the negotiation of bilateral commercial tariff treaties shows that this system has but a small effect in promoting trade. Would there be a greater possibility of overcoming existing antagonisms by means of multilateral agreements ? This appears doubtful, to say the least. The Eastern countries have made a fresh proposal ; they express the wish that their agricultural products and, in particular, their cereals should be guaranteed preferential Customs duties. The Federal Council would, however, find difficulty in accepting this proposal, because in many commercial treaties Switzerland has undertaken to guarantee to other countries unconditional and unrestricted most-favoured-nation treatment—in particular, to overseas countries exporting food products to the Federation. Switzerland could not think of violating or freeing herself from these obligations ; for, even if her exports of industrial products to Eastern Europe were considerably increased, this could not even approximately compensate for the loss of Switzerland's existing markets in the overseas countries in question. Even if the application of preferential duties to the agricultural products of Eastern Europe only slightly affected the interests of the overseas suppliers, Switzerland considers that such preferential treatment could only be granted with the latter's consent.

(c) As, therefore, in the opinion of the Swiss Government, the Customs policy method is likely to offer considerable difficulties, efforts might be made to solve the problem by creating, both in exporting and importing countries, specific organisations which could enter into direct relations with each other. This method also offers great difficulties both from the internal and international points of view. The Federal Council would, however, be willing to participate actively in a detailed study of this proposal, as of any other solution which might be proposed.

It is rightly stated that the defective organisation of international credit is a further reason for the unsatisfactory economic position of Europe. Switzerland shares this view, and considers that, by granting long-term credits to the agricultural countries of Eastern Europe suffering from the present depression, their purchasing power would be increased and the sales of industrial products to these countries would be increased proportionately. The Federal Council is prepared to take active part in the study of this proposal also, but would draw attention to the extreme importance of defining for what purposes these credits would be used. If they involved an increase of agricultural production, a further unfortunate drop in the prices of agricultural products would be brought about. It is unnecessary to point out here that this proposal of international credits involves other extremely difficult and delicate problems.

Finally, the Federal Council must refer to the particularly high Customs barriers and other obstacles to trade which at present exist in Eastern Europe. These Customs barriers and obstacles to trade restrict ever more narrowly, and, in many cases, entirely prevent the sale of Swiss industrial products. The Federal Council considers that these barriers would have to be greatly reduced if common action were taken to promote the disposal of products coming from countries which have established them.

C.

Apart from the remarks made under B, the Federal Council will confine itself to pointing out here that these measures have already been excellently defined in the resolutions of the International Economic Conference of 1927, and also in Article 2 of the Protocol of March 24th, 1930. The Federal Council considers that it is still necessary, by concluding bilateral or multilateral international agreements, to oppose energetically any fresh Customs increases and to take the quickest possible steps to lower Customs barriers and reduce trade obstacles. In this connection, the Federal Council is of opinion that the European countries which still pursue a more or less liberal Customs policy and which do not, as a rule, consolidate their Customs duties by treaties, could and should obtain guarantees from the other countries with regard to their exports. The first group of States would naturally undertake certain obligations as compensation for the guarantees given by the second group of States. The Federal Council would be willing, either alone or in combination with other countries negotiating commercial tariff treaties, to enter into negotiations with the first group of States.

D.

In accordance with the principles already laid down by the International Economic Conference, the Swiss Government holds that all export restrictions and taxes on raw materials should be abolished. With regard to international agreements in the form of cartels in respects of raw materials, wide publicity should be demanded, and in so far as these agreements are concluded between countries producing raw materials, it should be stipulated that the interests of consuming countries should be loyally protected.

II. ECONOMIC AND FINANCIAL
1930. II. 44. Addendum II.

Spain.

A.¹

[*Translation.*]

(a) The agricultural products of which there is over-production in Spain, and which therefore must be exported, are given, together with the corresponding figures, in the annexed table No. 1. If that table is examined, it will be seen that the agricultural products exported by Spain may be divided into three groups—namely:

1. Agricultural products found in a very small number of European countries—
oranges, lemons, olive oil, olives, almonds, hazel-nuts, rice, saffron, red pepper, garlic, dried figs, and raisins ;
2. Agricultural products which are found in a larger number of European countries—
wines, fresh grapes, fruit pulp, onions, melons and apricots ;
3. Agricultural products which are widely grown either by natural or by forced cultivation, such as tomatoes, onions, artichokes and potatoes.

The barriers and difficulties which hinder the distribution and disposal of these products in Europe are, for group 1, mainly fiscal ; for group 2 they are fiscal and protectionist ; and for group 3, mainly protectionist.

(b) The markets to which these products are mainly sent are those indicated in the statistical table given in Annex 2. If this table is consulted, it will be seen that almost all products exported by Spain are sent to European markets.

(c) As far as Spain is concerned, it is, above all, necessary, in order to ensure the sale of her agricultural products, to study ways and means of removing the obstacles and barriers in European markets which prevent the sale of the agricultural products enumerated in group 1 of (a). As these hindrances mainly consist of fiscal and not protectionist taxation, it would be desirable to reduce the fiscal duties in every country which hinder the import of agricultural products not produced at home.

B.

In order to facilitate the disposal of manufactured products in agricultural countries such as Spain, the purchasing power of those countries must be increased. This may be effected in the following two ways :

(1) By promoting the increase of the purchasing power of the currency in countries which have not stabilised their currency ;

(2) By facilitating in every country the sale of agricultural products from the countries in question, provided that the European purchasing country does not itself produce them, and therefore does not cause loss to its own growers.

C.

Accordingly, Spain considers that, while retaining protectionist duties, which it seems at present impossible to abolish, since they meet a very real and urgent need in every European country, it would be desirable to reduce the purely fiscal and other similar obstacles to the sale of agricultural products within the continent of Europe. In this way, the agricultural countries of Europe will benefit greatly by increasing the sale of their products, and the industrial countries of Europe will improve their position through the increased capacity of the agricultural countries to buy manufactured products.

¹ In forwarding its reply, the Spanish Government informed the Secretariat that it was not, for the moment, replying to the points contained in Section D of the questionnaire.

The text of the reply on the other points is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B and C).

Finland.

A.¹

Although Finland, like most European countries, is both an agricultural and industrial country, inasmuch as she exports considerable quantities of industrial products, in particular wrought wood, the greater part of the Finnish population (65 per cent according to the 1920 statistics) lives on agriculture, and live-stock products have for a long time been important export articles.

(a) Finland has a surplus production of butter, cheese, hides and skins, and to some extent fresh meat. The following table gives the quantities and values of these exports :

Year	Butter Tons	marks ooo,ooo's omitted	Cheese Tons	marks ooo,ooo's omitted	Hides and skins Tons	marks ooo,ooo's omitted	Fresh Meat Tons	marks ooo,ooo's omitted
1911-1915 ²	11,444	581	1,245	31	2,695	59	1,067	11
1921-1925	8,561	316	2,508	56	3,131	66	2,863	24
1925 . . .	13,191	478	3,820	77	4,755	102	3,366	31.7
1926 . . .	13,212	428	2,887	51	5,302	97	3,226	28.2
1927 . . .	15,076	475	2,949	54	5,679	111	1,551	14.6
1928 . . .	13,376	458	1,648	33	5,084	113	677	7.4
1929 . . .	16,606	537	2,194	40	5,370	99	471	5.5

(b) The markets for these surplus exports are :

BUTTER, IN TONS, EXPORTED BY THE STATE CONTROL STATION IN 1922-1929, TO VARIOUS COUNTRIES.

	1922	1923	1924	1925	1926	1927	1928	1929
Great Britain . . .	5,949	5,943	6,857	8,596	9,479	10,420	10,085	11,859

Czechoslovakia . .	—	24	—	—	—	—	—	—
Switzerland	7	—	—	—	—	—	—	—
Netherlands	—	—	—	—	—	—	—	—
Belgium	1	—	—	—	—	—	—	—
Total	7,474	6,334	8,098	12,899	13,107	15,040	13,302	16,491

In 1930, from January 1st to August 31st :

	Tons
Great Britain	8,671
Germany	3,412
Denmark	137
Norway	9
Switzerland	—
Total	12,229

The above figures show that Finnish butter is at present exported almost exclusively to England and Germany.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), C and D).

² Former amounts converted into present currency by multiplying by 11.

In the last two years Finnish cheese has been purchased by the following countries :

	1928 Kilogrammes	1929 Kilogrammes
Germany	874,864	1,177,859
Belgium.	312,924	405,318
United States of America	185,905	165,130
Great Britain	98,321	17,012
Sweden	79,923	67,200
Denmark	65,497	43,425
Norway	10,223	2,181
Poland	10,208	6,556
France	5,950	52,983
Hungary	—	53,893
Switzerland	—	9,393
Spain	—	6,145
Total	1,648,480	2,193,764

As shown by the above table, the most important markets for Finnish cheese are at present Germany, Belgium and the United States of America.

Meat has been exported from Finland to Great Britain, Sweden and Norway, and hides and skins to Germany and the United States of America, etc.

(c) The measures adopted in certain countries to increase the Customs duties on dairy produce have seriously disturbed those Finnish farmers whose attention was devoted particularly to the sale of this produce. It is probable that the increase in Customs duties on dairy produce in one European country will hinder the sale of Finnish butter and cheese and reduce the economic yield of the dairy-farming industry.

The Customs policy pursued by the United States of America has also impeded the export of Finnish cheese to that country. In 1927, about 18 per cent of the total exports of cheese went to the United States, while, since then, exports to that country have greatly decreased.

The total meat production of Finland has been calculated at about 110 million kilogrammes, and is principally consumed within the country. In the last few decades, Finland has, however, exported a certain quantity of meat, and such exports are apparently capable of considerable development. Since the war, these exports have principally gone to Sweden (partly to Stockholm and partly to the consuming centres and industrial districts of north Sweden), to Norway (principally to Oslo) and to England. Since the world war there has been a great recovery in these exports. Finnish meat is in great demand in Sweden and has been sold on an equal footing with Swedish meat.

As a result, however, of various Royal Decrees, foreign meat is placed in a special position as compared with Swedish meat. By these decrees, importers of foreign cattle or meat are obliged to report their business to the competent authority. Again, any person using foreign meat in products sold for human consumption must make a similar declaration to the authorities, mentioning the place where such products will be prepared. Moreover, by these decrees, imported meat or meat obtained from an imported animal must be stamped with the word " Utländskt " (foreign) or the country of origin. Again, all meat preparations produced even partly from foreign meat must be stamped in the same manner. Consequently, Finnish meat and meat products cannot be sold in Sweden without this stamp. Infringements of these decrees are punishable with a fine of not less than 25 and not more than 1,000 crowns. The above measures taken by the Swedish Government, which have greatly reduced the exports of Finnish meat to Sweden, cannot be regarded as measures necessary for the prevention of disease, since the meat control and the supervision of meat preparations produced in Finland are properly organised from the point of view of health.

The exports of Finnish meat to Norway have consisted principally of fresh beef. Export has been possible only when prices were favourable, especially in the cold season, and the best economic results have been obtained with large ox quarters of the highest quality. The goods are exported principally by boat via Turku-Stockholm and thence by rail in transit to Oslo ; attempts have also been made to send meat to Oslo by rail via Tornio when the temperature is suitable. These exports have been made for a long enough time and on a large enough scale to prove that the export of fresh meat from Finland to Norway is quite feasible in practice. The import duties on meat in Norway are very high.

Finnish meat exports have recently greatly decreased, principally on account of the above-mentioned obstacles to the free sale and treatment of the meat. Generally speaking, in order to develop normally the export of Finnish livestock products, the natural outlets for these products—*i.e.*, the industrial countries of England, Germany and Belgium, and also

the Scandinavian countries—should abstain as far as possible from Customs and other restrictions.

During the present depression, the prices of agricultural products are, in comparison with the pre-war period, relatively much lower than the prices of the articles required by agriculture and lower than wages, so that the purchasing power of the agricultural population is necessarily restricted. The present depression appears to be due to the following causes :

- (1) The increase in the value of gold and the resulting general drop in prices ;
- (2) The greatly increased supply of agricultural products since the war ;
- (3) The decrease in the consumption of agricultural products, due, among other things, to the fact that the adoption of mechanical methods has rendered unnecessary a large number of draught animals, while excessive Customs duties have impeded the normal growth of consumption.

It would appear that Finland's possibilities of purchasing industrial products—and this applies to many other countries—could be increased if the countries occupying a leading economic position endeavoured to remove the causes of the economic depression by adopting effective practical measures and a uniform system. In the first place, harmful fluctuations in the purchasing power of gold should be obviated by a more equal distribution of gold reserves and the stabilisation of the currencies in the various countries.

Similarly, as the great technical progress which has taken place in agriculture since the war has greatly increased its productive capacity, while the general adoption of mechanical power has considerably reduced the demand for certain agricultural products, many large producing countries no longer require the same relative amount of labour as before the war. The countries which are being converted into industrial countries should therefore not prevent the transfer of agricultural labour to industry and other trades by imposing Customs duties and other artificial obstacles.

A more liberal policy of this kind would lead to an extension and development of the markets for agricultural products, while, at the same time, the power of the agricultural countries properly so-called to purchase industrial products would be greatly increased.

C and D.

The disposal of agricultural products in the Scandinavian countries would be greatly promoted if these countries did not hinder the import of Finnish meat by administrative measures. There would appear to be no real justification for these measures, as the Finnish export slaughter-houses satisfy all reasonable requirements, while the packing and transport of meat have always been carried out in Finland with sufficient care.

In view of these facts, Finland recommends that an international convention should be concluded in the near future for unifying veterinary measures and abolishing the indirect protection which they confer.

Although the aim pursued by the League of Nations in the sphere of political economy since the great Economic Conference of 1927—*i.e.*, a considerable reduction in protectionist tariffs in all countries, especially in Europe—will scarcely be easy of attainment in the near future, as many countries find it indispensable, for the present, to protect their home production, still the partial results attained, such as the signature of the Commercial Convention of March 24th, 1930, should be welcomed as a step towards concerted economic action.

In the course of the future negotiations for greater uniformity in European Customs matters, the formal foundations, such as a unified nomenclature, must be established—at any rate on their main lines. Moreover, in order to further the solution of such questions, a comparative study should be made of the tariffs in various countries, as proposed by the French delegation's Memorandum, Section VI, appended to the Protocol regarding the programme of future negotiations. It might be advisable in the first place to make such an enquiry in regard to a group of specially important commodities in the trade between European countries. Among the groups of commodities suggested by the Economic Committee of the League of Nations in its proposals for Customs unification, timber, wood-pulp and paper are important for Finnish export. The Finnish Government, while referring to the opinions which it expressed at the beginning of this year on the Economic Committee's reports, has the honour to make the following proposal in respect of these unification plans :

It is desirable that the Customs duties of the various countries on timber and its products should be unified, and that the League of Nations should continue its efforts in respect of the standardisation of timber and the timber trade, possibly with the assistance of the International Chamber of Commerce. Moreover, a comparative study should be made of the Customs protection accorded to planed wood in the various countries on similar lines to the calculation of Customs protection on sawn wood, by comparing the import duties on round wood and sawn wood in the various countries. This would no doubt give even more significant

figures than the percentages of Customs protection on sawn wood. Such an enquiry is necessary for the further study of this question. In accordance with the results of this enquiry, the import duties on planed wood would have to be correspondingly reduced. Again, efforts should be made to clear up any similar unfairness existing in the tariffs on ply-wood.

In respect of the unification of wood-pulp and paper, in this case also the Customs tariff headings in the various countries should, in the first place, be unified. In view of the mistakes made with regard to Finland in the investigations hitherto conducted, which were pointed out by the Finnish Government in its communication at the beginning of this year, the work recorded in document E.543 of the Economic Committee should be checked, so that the comparisons of the Customs tariffs of the various countries is based on exact facts. The average market prices (not prices extracted from export statistics) should therefore be indicated; for instance, for the following standardised goods: Wet and dry mechanical wood-pulp; bleached and unbleached sulphate and sulphite cellulose, wet and dry; cardboard produced from mechanical wood-pulp; rag-board; Kraft paper; newsprint; other printing paper; brown wrapping paper; parchment paper; grease-proof; standardised writing paper; rag paper; etc.

The question of Customs duties on wood-pulp and paper is closely connected with that of the international trade in wood for paper-making and the export duties on this material. The international trade in wood for paper-making could not be organised in such a way as to permit of this material being freely bought and sold on the market, like the raw materials of the textile industry and metals, etc., but the buyer must make direct purchases abroad, and this may involve difficulties for forestry and lead to the destructive exploitation of the forests. As, moreover, the transport costs of wood are much higher than those of the products of the wood-pulp and paper industry, it is of greater advantage from the point of view of world economy that wood for paper-making should be treated in the producing country. When studying this question, therefore, attention should be drawn to the necessity of abolishing prohibitive import duties, by means of which various countries endeavour to give artificial support to their wood-pulp and paper industry.

Greece.

[*Translation.*]

The Greek Government has been unable to comply with the wish expressed in paragraph 2 of Article 1 of the "Protocol" to formulate "concrete proposals capable of serving as a basis for future negotiations". The replies reflect its views, at the present stage of the discussions, on each of the questions raised in the questionnaire, without prejudice to the attitude it may be finally compelled to adopt during the future negotiations.

A. ¹

(a) Greece has an export surplus, after supplying home consumption, of the following agricultural products :

Tobacco leaves, wine in barrels, currants, raisins, sultanas, heavy wines, olive oil, olives, dried figs, citrus fruits, almonds, locust beans, olive-kernel oils, turpentine essence, resin, raw skins and hides, wool and hair, cocoons and silk. (The figures in the annexed table represent the average annual exports of these products in the five years 1925 to 1929.)

There is, on the other hand, a definite deficit in the production of cereals and sugar. In the case of cereals, the deficit is estimated at 45 per cent of the country's requirements, and is covered by imports from abroad, especially America. There is practically no production of sugar, and Greece buys what she needs principally from Czechoslovakia.

(b) The table gives some indication of the normal outlets for each of these surplus products. For tobacco, we may mention Germany, the Netherlands and the United States of America ; for raisins, England ; for wines, France, and to some extent Switzerland and Germany ; for olives, the United States, France and Italy ; for olive oil, France, Italy, England and the Balkan countries.

The total value of the surplus agricultural produce exported abroad is estimated at about 5,500 million drachmas. These goods are mostly (*i.e.*, to a value of 3,800 million drachmas) sold on the European markets. The United States is the principal market outside Europe.

This surplus produce is sold almost exclusively to Central and Western Europe and the United States, while the agricultural countries of Europe have as yet offered outlets of only secondary importance.

(c) Greece is seriously anxious as to the possibility of maintaining, in future, the present normal outlets for her surplus production, for the following reasons :

1. The constantly increasing competition encountered by certain products in markets which they formerly commanded, from similar products of other origin. This is the case with currants, of which Greece formerly possessed a kind of "natural monopoly" of production.

2. The restrictive measures adopted by some countries importing our products, such as wine, by which their sale is greatly impeded ;

3. The existence of all-powerful combines which, by fixing prices, create serious difficulties, particularly for tobacco producers, who are thus subjected to conditions harmful to the country's balance of trade.

It is quite clear that, in order to overcome these difficulties, suitable measures should be taken, in the first place, to counteract these tendencies which are so harmful to Greek export trade, and, in the second place, to provide, by ordinary bilateral negotiations, fresh outlets for surplus products in countries where their import has hitherto been prevented by various opposing private interests. In this respect, the Balkan countries offer a suitable field. For this reason, the First Balkan Conference, which recently met at Athens, devoted its entire attention to a more rational organisation for the exchange of products, and the possibilities of a general agreement on this subject were discussed at length. An inter-Balkan

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B, C and D).

agreement of this kind, in addition to increasing mutual trade, would greatly promote the standardisation of products and enable concerted action to be taken for their sale outside the Balkans.

Greece would, in that case, not object to undertaking to purchase a part of her grain supplies from her neighbours, so long, of course, as her constant efforts had not succeeded in making her independent of imports from foreign countries. It should be noted that the Customs duties at present imposed on the import of grain into Greece by no means constitute an obstacle to such imports, since Greece cannot yet dispense with foreign cereals.

While the proposal to reserve an import quota for the Balkan countries supplying Greece with grain is of particular importance for safeguarding European production in the present period of depression, it would not prejudice the oversea suppliers, who would, as in the past, still retain a large share in the country's grain supply.

As regards tobacco, the proposed organisation of a common front between Greece, on the one hand, and Turkey and Bulgaria, which are also producing countries, on the other hand, would greatly facilitate the disposal of the surplus production, as it would tend (1) to reduce production in the same proportion in the three countries, (2) to create improved standard qualities, and (3) to keep in check the powerful organisation of the manufacturing combines, which inevitably involves a fall in prices, to the great detriment of producers.

The Greek Government does not propose to discuss here the undoubted advantages that would result from the point of view of the better disposal of surplus agricultural produce, from the systematic organisation, on international lines, of agricultural credits, arbitration or commercial disputes, etc., as all these remedies are already being advocated by the League of Nations and apparently no one denies the soundness of their principles.

B.

Greece is essentially an agricultural country, and purchases almost all the industrial products she needs abroad. Moreover, Greek manufacturers import their machinery and many semi-manufactured materials. The imports of manufactured goods continue to grow, and would grow still further if the purchasing power of the agricultural population could be steadily increased by the better and more reliable disposal of their products. The Greek Customs tariff, having been reduced by a succession of bilateral commercial agreements, is not among the highest, and cannot therefore be regarded as an obstacle to imports.

Except for carpets—an industry that has expanded in recent years and is of the highest importance to Greece, as it is the principal means of livelihood of the refugees who fled from the Near Eastern wars—Greek manufactured products can, by their nature, only be exported to the Balkan countries, and this trade is at present very small.

The conclusion of agreements for extending the markets for the small surplus production of Greek industry might be looked upon as one of the practical possibilities for safeguarding interests common to Greece and her neighbours.

C.

It would appear that the essential factors for extending markets and improving international trade are a strict and loyal observance of the provisions of bilateral treaties, a fairer and more impartial application of the most-favoured-nation clause, and simultaneous and progressive reductions of Customs barriers. But this programme must be carried out in a spirit of sincere international co-operation, to ensure improved economic conditions for all.

In the same way, the Greek Government considers that the conclusion of regional economic agreements, such as that which was the subject of general preliminary study at the recent Balkan Conference, should be encouraged.

Not only would each State be relieved of the often difficult task of finding a basis for agreement by direct negotiation with each other State, but the formation of local groups would help to clear the way for a European or even worldwide economic understanding.

Among the measures calculated to facilitate relations between the various markets may also be mentioned the simplification of Customs formalities and the abandonment of all discrimination in their application.

D.

This question is of prime importance to Greece, as the country is not endowed by nature with the principal raw materials.

The Greek Government would therefore welcome any suggestion from countries possessing raw materials with a view to their fair distribution.

Annex.

TABLE OF EXPORTS OF AGRICULTURAL PRODUCTS, SHOWING THE AVERAGE QUANTITIES EXPORTED TO CERTAIN EUROPEAN COUNTRIES DURING THE LAST FIVE YEARS, 1925-1929, AND THEIR VALUE IN DRACHMAS, COMPARED WITH THE TOTAL EXPORTS OF THE SAME PRODUCTS TO ALL OTHER COUNTRIES.

Tobacco leaves.				

In the five-year period 1925-1929, the total exports amounted to 625,334 tons, making the value of 5,855,158,000 drachmas.

Lithuania.

A.¹

[*Translation.*]

(a) The principal agricultural products of which Lithuania produces a surplus for export are: flax and linseed, timber materials, grain, butter, eggs, fruit, poultry, pigs and bacon, cattle and horses.

Lithuania has not every year a sufficient surplus of grain for export; nevertheless, the steady recovery of the country since the war, and the extensive draining of marshes and other efforts to improve agricultural production, will certainly increase the surplus of grain for export if the market is favourable, although stockbreeding is developing and also calls for a greater quantity of grain every year. The increase in exports of pigs and dairy produce is particularly notable.

(b) Lithuania exports most of her produce to European countries. Almost half the flax is purchased by Great Britain, a third by Germany, and the remainder is distributed among Belgium, France, Czechoslovakia and other countries. Most of the linseed is also exported to Great Britain. About 70 per cent of the butter exports go to Germany, and 20 per cent to Great Britain. Eggs are exported principally to Great Britain and Germany—about 45 per cent to each country—and about 10 per cent to Latvia. Rough timber is exported almost exclusively to Germany, while wrought wood goes to Great Britain, Germany, Spain, the United States of America and other countries. Cattle, pigs and geese are exported principally to Germany. Bacon, the output of which is increasing considerably, is exported to Great Britain. Horses are exported to various countries, but chiefly to Belgium, Denmark, Great Britain, Latvia and the Netherlands. In respect of grain, Lithuania generally exports rye to Latvia and a small quantity to Germany, wheat and barley to Germany, oats to Latvia, lentils, vetches and peas to Great Britain, Germany and Latvia.

(c) We are inclined to think that the principal cause of the present economic depression is to be found, not in insufficient output, but in the ill-adjusted economic system of the world.

Again, the European agricultural countries are at present obliged to accept very low prices for their agricultural produce, not on account of any abnormal increase in their production—there is, in fact, no such abnormal increase—but because there is an insufficient demand for agricultural produce in the industrial countries of Europe, although these latter countries do not produce all the foodstuffs they require.

The lack of equilibrium in the European markets is, in our opinion, principally due to the fact that, in recent years, the industrial countries themselves have been constantly endeavouring to increase their agricultural production, while continuing to import considerable quantities of agricultural produce from overseas.

It is a curious fact that although the European agricultural countries purchase the greater part of the manufactured goods from the European industrial countries, they have difficulty in finding an outlet for their produce in Europe.

The industrial countries are endeavouring to increase the profits from their works and at the same time produce a sufficient quantity of agricultural products without any regard to the normal cost of production. With this object, they raise high Customs barriers, issue sanitary regulations, and spend the profits accruing from their industry, entirely forgetting that prosperity cannot be confined in watertight compartments. The results are disastrous for both classes of country.

The basic remedy for this position is surely to be found in specialised production. In our opinion, every country must produce and manufacture those goods which cost it least. Moreover, if agricultural countries can be enabled to sell their surplus produce to industrial countries, a step of capital importance will be taken towards improving the international economic position.

An endeavour must be made to rationalise international production and co-ordinate the economic efforts of various countries, while at the same time the obstacles to the free

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B, C and D).

movement of goods must be removed. Although the abolition of these obstacles may not completely settle the problem, it will at any rate promote the movement of goods and enable the various countries to work on profitable and rational lines.

B.

In the modern economic world, the two principal producing branches—agriculture and industry—are closely connected.

It is evident that agricultural countries will buy more manufactured goods if they are able to sell their products to industrial countries and thus increase their purchasing power.

A study of statistics shows that the years following the war are characterised by a great disparity between the prices of industrial products and those of agricultural products, and between the financial yield of agriculture and that of industry.

In order to decrease this price-disparity between manufactured goods and agricultural produce, the industrial countries should, in our opinion, constantly endeavour to decrease manufacturing costs by means of rationalisation, scientific improvements in factories, and other means at their disposal.

If practical means are not found for enabling agricultural countries to increase their purchasing power and to restore the former equilibrium of prices, we consider it a vain hope that unemployment and the other economic difficulties in various countries will soon disappear.

But the European farmers themselves must also intensify their production and reduce their costs, in order to meet competition from oversea producers who possess extensive and fertile lands, mechanical methods of agriculture, and a good sales and transport organisation, and who are thus able to sell certain classes of product more cheaply in European markets.

The chief means by which the European farmer can be helped to increase his income and purchasing power are the more intensive use of agricultural machinery, the standardisation of products, a better system of purchase and sale, and other suitable measures.

The co-operative societies might, we think, do very valuable work in this field.

It would be profitable for both producers and consumers to enter into direct relations with each other.

Credits are indispensable for increasing the agricultural yield, and international action in this respect will greatly help to promote this object, and will enable these countries to purchase a greater quantity of manufactured goods.

C.

In replying to this question, it should be pointed out, in the first place, that the movement of goods might be encouraged by reducing Customs tariffs and by changing them as rarely as possible.

Other methods which might increase the freedom of trade are the simplification of Customs tariffs, the unification of their nomenclature, the simplification of various Customs and administrative formalities, the abolition of export and import prohibitions and restrictions, etc.

The various administrative and veterinary regulations cause great difficulties for agricultural countries, particularly as they are frequently unjustified.

Seeing that, since the war, there has been an increase both in the production and in the population of Europe, while the volume of international trade has decreased, it is evident that co-ordinated international action is required to settle this complex question in a more rational manner with a view to increasing international trade.

D.

It would appear to be of the greatest importance to organise the distribution of raw materials and to specialise their production.

In order to attain this main object, greater freedom of movement for raw materials is essential for the development of industry and trade:

Consequently, all countries should aim at reducing Customs duties on raw-materials, as such duties can only be justified on fiscal grounds or by exceptional circumstances.

It is naturally impossible in this short summary to examine all these questions in detail; all we can do is to record here some general ideas and suggestions which, if carried into effect, might well increase economic prosperity and ensure peace in this sphere.

Lithuania has the highest appreciation for the efforts made by the League of Nations to establish closer and smoother economic relations between the nations to their greater mutual advantage, and it is her sole desire to co-operate, as far as she is able, in this vitally important work.

Luxemburg.

The Grand-Duchy of Luxemburg is both an agricultural and an industrial country : 31.2 per cent of the population are engaged in agriculture and 47.4 per cent in trade or industry.

A. ¹

(a) and (b).

Products	Average Exports	Outlets
Potatoes	70,000 metric quintals	France, Germany, Great Britain.
Rye	60,000 metric quintals	France (Lorraine), Germany (Rhineland).
Oats	12,000 metric quintals	France (Lorraine), Belgium.
Clover-seed	8,800 metric quintals	Germany, Belgium.
Fruits	20,000 metric quintals	Germany, Great Britain, Netherlands, Belgium.
Wines	80,000 hectolitres	Belgium, Germany, Poland.
Alcohols	18,000 hectolitres	Belgium.
Tan bark	60,000 metric quintals	France, Germany, Netherlands.
Roses.	8,000,000 items	All countries.
Fruit trees and shrubs	4,000,000 items	Adjacent countries.
Forest plants	30,000,000 items	Adjacent countries.
Pigs	30,000 head	Germany, France, Belgium.
Young pigs	12,000 head	Germany, France, Belgium.
Dairy cows	3,000 head	Germany, France.
Horses	2,000 head	Germany, Switzerland.
Butter	350,000 kilogrammes	Germany, France, Belgium.
Milk	10,000 hectolitres	France.

There is an absolute surplus. That is to say, the Grand-Duchy must export annually wine, alcohol, tan bark, roses, fruit trees and shrubs, forest plants, pigs, young pigs, dairy cows, horses and butter. In the other products, the surplus is intermittent, occurring, as a general rule, only in years when there is a good harvest.

(c) To ensure the disposal of surplus agricultural production in the normal markets, it would be necessary to reduce the protective tariffs on such products to a reasonable level and to abolish import restrictions and prohibitions.

The Belgo-Luxemburg Economic Union has no Customs duties on the majority of agricultural products : Live animals, meat, milk, eggs, potatoes and cereals (except oats). The few dutiable products are very lightly taxed—for example, butter at the rate of 2.85 gold francs per quintal, oats at the rate of 0.85 gold francs per quintal.

While maintaining the principle of the most-favoured-nation clause, the Grand-Ducal Government recommends, from the standpoint of agriculture, the conclusion of agreements which would take into account the export requirements of the individual States.

B.

The disposal of manufactured products would be facilitated by the reduction of Customs duties to a more moderate level.

In connection with the export of industrial products to agricultural countries, it is highly desirable that such States should be assisted in finding outlets for their agricultural products. This would be to the advantage, not only of the agricultural countries themselves, but also of the industrial countries, which would thus obtain increased purchasing power for their manufactured products. Further, it is probable that the agricultural States, if assured of outlets for their normal production, would be less inclined to embark on premature and artificial industrialisation. Industries can thrive only with the help of protective duties, which cause the countries exporting industrial products harm far exceeding any advantages that may be derived by the agricultural States.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B, C and D).

Lastly, the disposal of manufactured products to consuming countries would be facilitated by the international organisation of long-term credits with a view to the economic equipment of non-industrialised countries short of capital.

C.

The Grand-Ducal Government recommends as Customs and administrative measures to improve international trade :

- (1) An anti-dumping campaign ;
- (2) The abolition of export bounties of every kind ;
- (3) The abolition of consular visas for certificates of origin—since they add nothing to the value of the document—or the reduction of the fee to a strict minimum, in conformity with the Convention concerning Customs formalities.

D.

As a means of ensuring the free movement of raw materials, the Luxemburg Government can only recommend the putting into force of the International Convention for the Abolition of Import and Export Prohibitions and Restrictions.

Czechoslovakia.

[Translation.]

Czechoslovakia is glad to reply to the questionnaire appended to paragraph 1 of the "Protocol regarding the Programme of Future Negotiations" of March 24th, 1930, because she feels that nothing should be left undone to overcome the agitation and insecurity resulting from protective measures lately taken throughout the world and to restore order and harmony in international economic relations. With this idea, she is resolved to contribute, as far as she is able, towards realising the aims of the League.

According to the returns for 1921, 39.6 per cent of the total population was engaged in agriculture, forestry and fishing, 33.8 per cent in industry and trades, and 10.7 per cent in commerce, finance and transport. As regards the main forms of production, therefore, Czechoslovakia has a mixed structure, both industrial and agricultural. These two elements are very important for national economy. The prosperity of one influences that of the other and, inversely, the weakening of one has an unfavourable effect on the other.

In the external trade of Czechoslovakia, industry is of greater importance, as some branches of industrial production are dependent on exports. More than 80 per cent of the exports go to European countries (in 1928, 84.2 per cent while 10 per cent goes to America, including 7 per cent to the United States; 4 per cent to Asia; 2 per cent to Africa, etc.)

Agriculture is distinguished by intensive production, in respect of both vegetable and animal products. The agricultural output covers home consumption in sole cases entirely, and in others almost entirely; it supplies raw materials for important branches of industry, and has considerable export surpluses.

The following are the replies to the various points of the questionnaire, although the information does not claim to be complete as regards either production figures or foreign markets.

A. ¹

(a) The surplus products of the soil and of the agricultural industry are: barley, oats, rye, potatoes, violet and other clover seeds, sugar-beet seeds, hops, cucumbers, onions, dried chicory root, fruit, sugar, molasses, alcohol, starch, malt, wood billets and sawn wood, breeding cattle, cattle for slaughter, horses, foals, prepared meat, ham, milk, butter, cheese, horticultural products.

It is impossible to give a permanent list of surplus agricultural products. In the near future, progress may be made in certain kinds of production on account of new tendencies, the perfecting of manufacturing processes, the improvement of certain products of the soil and of the agricultural industry, and the rationalisation of methods of distribution. On the other hand, measures of commercial policy taken in foreign countries to a great extent influence the present export possibilities unfavourably, and have caused considerable changes in the external trade and home consumption of Czechoslovakia.

(b) The most important outlets for the products of the soil and of the agricultural industry are European countries, especially those of Central and Western Europe. Many of these products are also exported to oversea countries.

The principal markets for the various products are:

Barley	Germany, Austria, Great Britain, Netherlands, Italy, Switzerland.
Oats	Austria, Switzerland, Italy, Germany.
Rye	Austria, Germany, Switzerland.
Fruit	Germany and Scandinavia.
Cucumbers	Germany, Denmark, Austria.
Potatoes	Austria, Italy, Hungary.

¹ The text of the present reply is arranged in the same order as the items of the questionnaire submitted to the States (A, (a), (b) and (c), B, C and D).

Violet clover seed	Germany, Sweden, United States of America, Switzerland.
Other clover seed	Germany, Austria, Denmark, United States.
Dried chicory root	Germany, Austria, Italy.
Hops	Germany, France, Austria, Belgium, and almost all European and oversea countries.
Sugar-beet seeds	Italy, United States, Yugoslavia, Hungary.
Beer	Germany, Austria, Switzerland.
Malt	Germany, Switzerland, Austria, Italy, Poland, and other European and oversea countries.
Alcohol	Germany.
Starch	Austria, Yugoslavia, Poland.
Cattle (all kinds)	Austria, Hungary, Switzerland.
Horses	Austria, Germany.
Milk	Germany, Hungary, Austria.
Butter	Germany.
Cheese	Austria, Hungary, Germany, Roumania.
Ham	Austria, Italy, Germany, France, Hungary, and other European countries.
Wood and cellulose	Germany, Hungary, Great Britain, France, Poland, Italy, and other countries.

The order in which the countries are mentioned in this table has no reference to their commercial importance.

Five tables are appended giving further information.

(c) Possible measures for ensuring the disposal and distribution of surplus produce on foreign markets may be divided into two categories : The organisation of production with a view to reducing manufacturing costs ; standardisation to improve and unify the quality of the goods, which, on account of the volume of agricultural production, is indispensable if competition is to be possible ; a good system of commercial information on the position in foreign markets ; rationalisation of exports, particularly by the local direction of offers.

Czechoslovakia, while merely claiming adequate protection for the branches of her production, which are purely entitled by natural and economic conditions to their existence, considers that she is entitled to demand in return that other States do not prevent the export of Czechoslovak surplus produce by insurmountable or improper barriers, and, in particular, by Customs, veterinary, phytopathological, transport or any other measures representing indirect protectionism.

B.

The industrial production of Czechoslovakia stands at a high level, is old-established, and of very varied character.

The exported goods include glass, pottery, boots and shoes and other leather goods, textiles of all kinds, bent wood furniture, paper, matches, musical instruments, iron products, machinery, etc.

The most important markets are Germany, Austria, the United States of America, Great Britain, Hungary, Yugoslavia, Poland, Italy, France, etc.

For more detailed information, demonstrating Czechoslovakia's interest in the settlement and development of international relations, see the annexed table.

As regards the raising of the purchasing power of consuming countries which are mainly agricultural, the measures mentioned under A may help to solve these questions. In addition, there are other measures which these States may adopt. In particular, State measures may be taken, even in countries that have less capital, for obtaining the credits necessary for capital expenditure or working expenses on acceptable terms. The agricultural production of these countries might be greatly improved and their purchasing power increased if steps were taken to prevent any rise, on account of measures of commercial policy, in the cost of production and the prices of the materials necessary for rationalising, extending and increasing agricultural production, and any interference with the increased consumption of foreign surplus industrial products by means of similar measures.

C.

In the replies given under A and B, certain measures have been indicated which might help, directly or indirectly, to extend markets and improve international trade. Some of these measures may be taken independently by the Governments concerned. In other cases, the parties engaged in production and trade may unite for common action ; or two States

may enter into direct negotiations with each other. It is evident that some of these measures might lead to better results if they were carried out by several States, whether in the form of international action or in that of direct agreement between the interested groups.

Moreover, various methods may be considered which would be particularly likely to lead to a collective settlement of certain questions, notably :

More rapid preparation for international action, which may be effected in stages for certain groups of goods, with a view to the collective regulation of Customs tariffs, special account being taken of the economic conditions in the various countries. In making a collective reduction in Customs duties, the difficulties which might arise from a reduction of duties by a fixed percentage uniformly applied, or from the desire to fix the duty at the same level in all countries, must be avoided.

In the opinion of Czechoslovakia, these measures also include the conclusion and putting in force as early as possible, and by the greatest possible number of States, of a multilateral veterinary convention. Such a convention would no doubt ensure the co-operation of many States in the sphere of international commercial policy under the auspices of the League.

Forms of indirect protectionism are of particular importance, as they are frequently a serious obstacle to the application of necessary measures in the sphere of commercial policy.

These forms comprise fiscal measures—*i.e.*, discrimination between goods produced in the country and those produced abroad by means of turnover and luxury taxes, discrimination in the allocation of tax abatements in home production, etc. ; tolerated or officially-supported propaganda in favour of the consumption of home products, and the compulsory use of raw materials originating in the country ; abuses connected with compulsory marking in order to distinguish foreign goods ; differentiations in transport policy ; the abuse of sanitary, veterinary, and phytopathological measures.

Actions of this kind might be supplemented by technical measures, which might be inserted in a collective agreement, such as :

The conclusion of a multilateral non-tariff commercial treaty ; the ratification by the greatest possible number of States of the International Convention relating to Economic Statistics of December 14th, 1928 ; the completion of the International Convention relating to the Simplification of Customs Formalities of November 13th, 1923, and the assurance that it would be applied and ratified by the greatest possible number of States ; the careful examination of the Arrangement of Madrid of April 14th, 1891, for the Prevention of False Indications of Origin on Goods, revised at Washington on June 2nd, 1911 ; the conclusion of an international convention regarding the unification of Customs nomenclature.

The obvious disadvantages resulting from the non-solution or only partial solution of the above problems have probably contributed to produce differences of opinion regarding the most-favoured-nation principle and the system of preferential tariffs. Czechoslovakia feels that the various aspects of this question should not be lost sight of, but should be studied in order to ascertain whether and to what extent their international settlement would further the solution of the problems raised by the Protocol regarding the Programme of Future Negotiations.

Obviously, however, the primary condition for the successful solution of these questions is loyal co-operation between the greatest possible number of States.

D.

In order to ensure the movement of European raw materials and their better utilisation, all obstacles to their export should be abolished. Moreover, the other side of the question should also be taken into account, in order that there may be no obstacle in the form of an unjustified and disproportionate margin between Customs duties on imported semi-manufactured and manufactured products produced from raw materials, the export of which should be encouraged in the manner described above. The collective action for reducing Customs duties mentioned under C would thus at the same time promote a better movement of raw materials and semi-manufactured goods.

TABLE I. — CROPS OF MOST IMPORTANT AGRICULTURAL PRODUCTS IN CZECHOSLOVAKIA FROM 1925 TO 1929.

(In quintals.)

Produits	1925	1926	1927	1928	1929	Products

<i>Malt</i>	5	5	3.181.725	3.313.769	3.685.133	<i>Malt.</i>

¹ The net production of sugar for consumption (raw) available for sale has been calculated by deducting from the total gross production the quantity of sugar for consumption (raw) available for sale obtained by treating the sugar for consumption (raw) produced in the country, stocks in the country, other sugar factories or bonded warehouses.

² This figure is negative because the total gross production of sugar available for sale is less than the quantity of raw sugar for sale obtained by treating the raw sugar produced in the country, or sugar stocked in the country, purchased from other sugar factories or in bonded warehouses.

³ Sugar for consumption is calculated in terms of raw sugar, in the ratio of 100 to 114.

⁴ Wet starch is converted into dry starch in the ratio of 100 to 62.5.

⁵ No figures available.

TABLE IV. — TIMBER PRODUCTION IN CZECHOSLOVAKIA IN 1920¹.

Espèces de bois	En stères In cubic metres	Kinds of timber
Bois d'œuvre dur	755.095	Hardwood.

LEAGUE OF NATIONS

21

SECOND INTERNATIONAL CONFERENCE

WITH A VIEW TO

CONCERTED ECONOMIC ACTION

(Geneva, November 17th, 1930)

REPLY OF THE FRENCH GOVERNMENT

**TO THE QUESTIONNAIRE ATTACHED TO ARTICLE I
OF THE PROTOCOL REGARDING THE**

PROGRAMME OF FUTURE NEGOTIATIONS

Series of League of Nations Publications

II. ECONOMIC AND FINANCIAL
1930. II. 44. Addendum III.

France.

For the guidance of the international negotiations provided for in the Protocol of March 24th, 1930, the States represented at the Preliminary Conference of February and March were requested to reply to a questionnaire, which very usefully raises the problem of the better organisation of economic relations between nations, in connection both with agricultural and industrial production and with trade. The French Government, being anxious that its reply to this questionnaire should reflect as accurately as possible the present feeling of all the interested parties, has been at pains to obtain the views of the National Economic Council, which is representative of all circles interested in production, commerce and labour in France. The Council for its part has consulted the big groups which represent the various activities of the country.

The French delegates had an opportunity during the Conference, with a view to Concerted Economic Action, and just recently at the Eleventh Assembly of the League of Nations to indicate the broad lines of the programme of organisation which they think might be adopted with a view to remedying the economic difficulties from which the world, and more especially the continent of Europe, are suffering.

Accordingly the French Government will merely preface its reply by recalling the words of one of the French delegates to the Assembly in September to the effect that the work of economic organisation, like the work of political organisation should comprise the three stages—security, arbitration and disarmament. What he meant was that the establishment of loyal and secure relations in conjunction with the regular operation of an organ of conciliation and arbitration to deal with difficulties in the interpretation of existing bilateral or multilateral conventions, is the only means of enabling efforts in the direction of tariff disarmament to bear fruit. By its support of the conclusion of a commercial convention stabilising commercial agreements, the French Government has given proof of its intention to co-operate, so far as is in any way possible, in the struggle against protectionist tariffs. But in view of the facts it feels convinced that to attempt further advance along this road would be useless so long as nothing substantial has been done towards abolishing the indirectly protectionist practices of dumping and the imposition of impediments of all kinds, which paralyse international trade often far more than the actual tariffs.

That is the logical and commonsense method which the French Government has followed in replying to the questionnaire of March 24th. It feels bound to emphasise the special character of the French national economy, which is at once agricultural, industrial, commercial and maritime. The fact that she is one of the great world colonial Powers also means that in considering any plan for the rational organisation of production and trade, France must have in mind not only the home country but also her colonies. Algeria in particular, though separated from the home country by the sea, is in fact politically and economically a natural extension of the home country, and must in any case be considered as forming an integral part of France.

A.

(a) *In what agricultural products is there over-production in each country?*

As regards many of her agricultural products France (including Algeria), has almost achieved complete equilibrium between her productive capacity and her consumption requirements. Apart from exotic products, France does not normally require to import more than a few agricultural products, while her exports—which are mainly high-quality products—are not likely to be very large.

It is also very difficult to estimate the surpluses normally available for export, on account of the extremely variable character of the harvests. For example, the French wheat crop during the period 1925-1929 varied between 73.5 in 1926 and 110 in 1929 or an average of 100 for the whole period. The vintages of recent years have also been subject to considerable fluctuations. In these circumstances it will be seen why the available surpluses are themselves extremely variable and depend not only on the size of the harvests but also on the continuance or discontinuance of successions of good or bad harvests.

Moreover it should be more accurately defined what is really meant by imports or exports of agricultural products, since the factor of quality may profoundly alter the bearing of the figures themselves. For example, France has important markets for high-quality cheese, while at the same time she imports a very considerable quantity of ordinary cheese.

Subject to these inevitable reservations, a close study of the facts shows that France has, as a rule, exportable surpluses, primarily of high-quality wine, cattle for slaughter and

dairy products, and to a lesser degree new potatoes, vegetables, fresh and dried fruits, flowers, poultry, raw hides, sugar and forestry products.

She also exports in varying proportions grain and cereals, swine, ordinary wines, etc.

To sum up, the harvests and the consumption requirements of France under present circumstances are variable factors, and their variations are still very imperfectly known.

(b) *What are the normal outlets for these products?*

Since France does not export in large quantities, and since her exports vary greatly from one harvest to another, she obviously cannot neglect any possible market.

A study of foreign trade figures shows that at the present time the countries adjacent to France are the principal importers of French agricultural products.

Further, the greater use of cold storage railway vans, improved methods of packing and the introduction of new international trains with quicker connections at frontiers are factors which may bring within the ordinary list of French markets other European markets which at present are not open, or are scarcely open, to French trade.

On the other hand, certain European countries which ought to be normal markets for France—in view of the nature of their requirements and their own output capacity—are entirely closed to French commerce by administrative measures of a sanitary or phytopathological character. Other countries which before the war provided a regular market for French wine are to-day closed to it—for example, the U.S.A. under the prohibition system and the U.S.S.R.

The totals of agricultural exports in recent years (which only partially represent over-production) do not amount in value to more than 8 to 9 per cent of the national production. The present tendency in French agricultural circles, however, is to increase these exports and thus to encourage increased production for the benefit of trade and consumers.

The principal markets for French agriculture are, in order of importance, the Economic Union of Belgium and Luxemburg, Great Britain, Germany, Switzerland, U.S.A., Italy, Spain, etc.

Question (b) is also, of course, bound to be of special interest to the countries of Central and Eastern Europe, which are very naturally alarmed at the difficulties they are finding in marketing the surplus of their own cereal production. Their desire to find markets in industrial or semi-industrial countries in Western Europe does not seem impracticable, and the manner in which it can be realised by national and international action should be made the subject of special study.

(c) *What practical means can be employed to ensure the disposal and distribution of surplus production in the normal markets and in other countries with an insufficient production?*

The observations which follow are, in the opinion of the French Government, of general application and should be equally adaptable to the French market itself and for the wider purpose of the organisation of international, and more especially European, trade.

Here again the principal difficulty seems to lie in the varying quality and quantity of agricultural products. These variations inevitably mean, too, instability in sale prices and costs of production. The extension of the market for agricultural products, which goes far to curtail the hope of price increases acting as a compensatory factor at times of bad harvests, has led all the European countries with agricultural products to protect their agriculture against foreign competition. The simplest and most straightforward form of such protection is the Customs tariff; but tariffs have to an increasing degree been supplemented by all kinds of concealed obstructions such as the method of calculating duties, tariff specifications, administrative formalities, certificates of origin and, above all, measures of health protection.

These last precautions, may be quite legitimate, but it is to be hoped that the difficulties they create for the transport of plants and animals are never unnecessarily great. International agreement on this point appears absolutely essential.

If the protection of agriculture is thus brought down to a more reasonable level it must presumably be completed or even supplemented by the rational organisation of markets.

In present circumstances action of this kind is practically essential for all agricultural countries. The line it should take in each particular market—and that will be the first step to be taken—is a matter for the individual countries to settle for themselves. The broad lines of such a programme of organisation may, however, be proposed as follows:

(1) The first requisite for the better organisation of agricultural markets is the provision of statistics (as accurate as possible and regularly kept up to date) of production, trade and consumption. The information available at present in the various countries on all these points

is notoriously inaccurate or greatly out of date. It is most important that there should be an international agreement providing a uniform model for such statistics so as to enable them to be mutually comparable.

(2) The second point to be considered is the rationalisation of production, the systematic employment of fertilisers and scientific methods of cultivation for the purpose of improving and selecting the crops grown, with a view to the likely demand, so as to increase the remuneration of the agricultural producer.

(3) The trade in agricultural products must be more strictly organised in order to reduce to a reasonable minimum the margin between the price to the producer and the sale price. In the light of past experience the development of co-operative organisations may be warmly recommended in this connection.

(4) In order to prevent the flooding of markets at times of boom harvests or shortage at times of bad harvests, and so to eliminate fluctuations in price quotations with the regrettable consequences they involve for the food-supply of various countries, the producing countries must be equipped with mechanical means of storing stocks and keeping from one harvest to another surpluses which cannot be absorbed immediately. The construction of warehouses and silos and the provision of adequate means of transport and shipment will form essential points in this particular programme.

(5) Obviously the execution of such a programme requires considerable financial resources, which all the countries interested in the improvement of the agricultural situation cannot command. The development of agricultural credit cannot be too warmly recommended as a primary means of enabling growers to finance a harvest before the actual sale of the preceding harvest. That, however, is only one chapter in a much larger programme of financial organisation to help agricultural countries towards rationalisation, and the mechanisation and provision of equipment for agricultural work. The means to be employed are not very different from those required in the case of industry, and accordingly what has to be said in regard to them should logically be placed after the reply to point B of the questionnaire.

The French Government considers that agriculture must be organised and concentrated within national limits before a more extensive move can be made towards international co-operation and organisation.

B.

What practical means can be employed to facilitate the disposal of manufactured products, particularly in the direction of increasing the extent to which it is possible for consuming countries to purchase them ?

It is universally recognised to-day that the depression from which the whole world has been suffering since the end of the War, and especially during the past year, characterised as it is by a disturbance of the balance between production and consumption, is really due at least as much to under-consumption as to over-production. It is essential, therefore, to look for some means of facilitating the marketing of the accumulated quantities of manufactured products.

The first means which suggests itself is to create new consumption requirements in the more backward continents and in countries which have not yet attained their normal process of growth. Even in the great consuming countries there is some prospect of a gradual increase in the standard of living. Needless to say, industry is keenly interested in a rapid improvement in the agricultural situation, since rural populations constitute a large market for manufactured industrial products, and their purchasing-power has in many cases been reduced to negligible proportions as a result of current difficulties.

Necessity is one of the chief spurs to human progress, and consumption may conceivably be increased by awakening in certain populations a desire to improve their standard of living. The motor-car and wireless broadcasting may be cited in this connection.

Similarly, propaganda in favour of the use of particular goods may considerably enhance sales and thus increase the wealth of the producing countries. Scientific research with a view to the fuller exploitation of natural resources will also extend the markets of industrial countries by creating new purchasing-power in producing-countries.

At the same time industrial production should be more completely organised to find ways and means of marketing its manufactures. The growth of industrial agreements, national and international—which as long experience has proved, constitute a powerful factor in the adjustment of supply and demand—should also be fostered. This form of regulation of production—for such it amounts to—should never menace the interests of consumers, however. If such agreements, exceeding their proper functions, led to forms of monopoly and unduly high prices, their anti-economic aims would soon be frustrated. But, in order to safeguard the legitimate rights of the consumer against every contingency measures of publicity should be considered such as will keep the various Governments informed of the essential clauses in the obligations assumed and enable them to exercise supervision.

Again, the creation of new co-operatives for purposes of production and consumption, and the establishment of regular relations between the two (the existence of such is

symptomatic of the movement for the rationalisation of industry and commerce) should be encouraged to the utmost.

Lastly, manufactured products, like agricultural products cannot circulate unless backed by credit, and such support is too often inadequate. The French Government considers it essential to summarise the methods it recommends in both cases.

* * *

Note on A and B.

Undoubtedly, the export of agricultural and industrial products is bound to be greatly assisted by the better utilisation of available capital and the better international distribution of credit. The table of discount rates of the various European banks of issue is sufficient to show that this distribution is not perfect. Yet the shortage of capital in a country is often due only to its inability to give sufficient security to the lending countries. The rational organisation of security should therefore be fully examined.

Credit can stimulate exports by two means, which are equally effective: it can be given directly to the consuming countries, or those countries can be given the indirect benefit of it, the export trade being enabled to give customers greater facilities.

Direct credits usually take the form of long-term loans to States, public bodies or important organisations. In all cases such capital can help the exploitation of the recipient countries, increase the wealth of their populations and consequently augment the volume of their foreign purchases. In agricultural countries such loans assist the creation and development of land and agricultural credit. They further enable surplus crops to be kept in storage, the agriculturists being given additional credit to enable them to finance the following harvest. Credits may also be given to a country direct, instead of through the Government—for example, by the establishment of banks as independent companies specialising in land or agricultural credit. This latter method, which precludes the possibility of political influence and enables the use made of the credits granted to be strictly supervised, seems in many respects preferable.

Another very effective means of developing the purchasing power of consuming-countries is to give importers extensions and facilities for payment on a very large scale. Generally speaking, it is the exporter himself who must be given additional credit facilities to enable him in turn to give facilities, to his foreign clients. In practice, the machinery of bill acceptances should be employed to place this form of indirect credit at the disposal of importing countries. Although this form of credit can only be made available on financial centres with currencies having a solid backing, abundant resources and technical experience, it is by no means utilised as much as it might be at present, and it could be more generally employed in new financial centres without injury to any countries in which it is at present in use. France has already made big advances along these lines. The establishment in 1930 of the *Banque française d'acceptation* has opened up large new possibilities of credit, which will be still more widely available in the near future.

The organisation of acceptance credits, however complete, involves serious risks owing to the difficulty of controlling large long-term credits to foreigners, whose use of the sums advanced to them cannot be supervised. Export credits should consequently be supplemented by insurance credits. The latter may be left to private enterprise or organised by Governmental authority. A considerable number of companies have been formed since the war for this purpose: as a rule they share the risks with some undertaking in the debtor country which is better placed for estimating the solvency of its own nationals.

To these forms of private or national security it would be very desirable to add a more general form of international security. The establishment of syndicates between bankers of various lending countries would make such action possible. The general extension of agreements between bankers might lead to the establishment of an international institution to regulate this class of business on the lines of the Bank for International Settlements.

In future, the arrangements made between private banks will facilitate the preliminaries of financing borrower countries, and will tend to substitute co-operation for competition, the results of which are frequently disadvantageous to all the creditors.

Industrial undertakings can themselves, moreover, co-operate with the banks in the diffusion of credit. Recognising their interest in establishing closer relations with client industries which lack capital, the undertakings of the richer countries can help by offering their own credit in place of that of the industries of the poorer countries.

C.

In particular, what are, in the case of the products mentioned in A and B above, the Customs and administrative measures which seem likely to promote the extension of markets and the improvement of international trade?

The reduction of tariff duties, where excessive, is undoubtedly calculated to improve international commercial relations. But the French Government believes, in accordance with the general idea indicated in the opening pages of the present Note, that in present

circumstances it would perhaps be chimerical to hope for new results from concerted action in connection with tariffs. The tariff policy followed by the majority of countries throughout the world is not such as to enable any readjustment of the French tariff (one of the lowest in the world) to be contemplated at present, while it renders altogether improbable the acquiescence of a number of countries in any steps with a view to tariff disarmament. The endorsement of the Commercial Convention of March 24th, 1930, by the largest possible number of States seems to represent the maximum of what can be contemplated at a time of intensified depression.

The logical and, essential course, on the other hand, is to take immediate and effective concerted action with a view to safeguarding trade and establishing compulsory arbitration.

The various stages of such concerted action were indicated, first in the memorandum submitted by the French delegation at the Conference of February-March, 1930, and secondly in the speeches of the French delegates at that Conference and at the Eleventh Assembly of the League of Nations. It will be sufficient therefore to give a brief recapitulation of them.

The French Government considers that the following points represent the necessary pre-requisites for the establishment of security in international economic relations :

The rapid enforcement by the largest possible number of countries of the unified Customs nomenclature, on the preparation of which a Sub-Committee of experts is at present engaged ;

The conversion of specific duties in the various tariffs into *ad valorem* percentages ;

Lastly, the conclusion of a plurilateral commercial convention at the earliest possible date, with guarantees in regard to the following points :

1. The most-favoured-nation clause ;
2. The application of specific tariffs (gross and net taxation, tares, etc.) ;
3. The calculation of *ad valorem* duties ;
4. Export duties ;
5. Internal duties ;
6. Certificates of origin ;
7. Customs information ;
8. Formalities in connection with transit, transshipment, etc. ;
9. The nationality of goods ;
10. The regulation of free traffic ;
11. A system of samples and models ;
12. Certificates of purity and certificates of analysis ;
13. Appellations of origin.

Further, the world has to be freed from indirect protectionist practices, excessive resort to which often makes it difficult to ascertain from the tariff itself whether the country is really protectionist or not. These practices were specified in detail in the Note attached to the French Government's letter of August 27th, 1930, to the Secretary-General of the League. There are certain points, however, which do not appear in that Note.

For example, legislation with regard to marks of origin, certificates of origin, consular invoices and consular fees for such documents, health or phytopathological regulations and the misuse of descriptions of origin all call for international regulation.

In addition, dumping in whatever form seriously disturbs commercial relations. The French Government desires to assert once more its conviction that the abolition of this scourge where it appears would go far to improve international trade.

Secondly, it appears extremely desirable to consider with the least possible delay the establishment of a permanent organ of conciliation and arbitration, with powers to examine and decide all difficulties submitted to it by the countries concerned in its establishment in regard to the interpretation and application of measures taken on the lines indicated above, as also in regard to bilateral or plurilateral commercial and customs conventions at present in force or to be concluded in the future. This step, which in no way encroaches upon the prerogatives of the Permanent Court of International Justice as the supreme instance of appeal, was suggested by the French delegation in March 1930, and was the subject of a resolution at the Eleventh Assembly of the League.

The guarantees of security and arbitration thus provided can alone open up the path to new negotiations in regard to tariffs. It will be desirable, moreover, in the first instance to settle certain questions of principle in connection with the application of tariffs. The desire recently expressed by a number of countries in various continents for the establishment of preferential tariff rates in favour of particular products or of particular countries have had the effect of raising as an urgent issue the interpretation of the most-favoured-nation clause. It appears desirable, if the equilibrium of trade is to be maintained, that the work begun in this field by the Economic Organisation of the League should be carried on actively and should lead up to international discussion on a large scale.

D.

What practical means can be employed to ensure the movement of European raw materials amongst the different countries under more satisfactory conditions and their better utilisation?

The problem of the supply of raw materials is doubtless no longer as acute as it was during and immediately after the war. Certain special questions, however, continue to arise. Passing shortages of certain raw materials may cause serious harm to countries which are dependent for their supply on other countries—and that not only because of the inadequacy of the supply but also because of the high prices which have to be paid. There should be better organisation in order to put an end to these difficulties as far as possible.

Mention should be made in the first instance of the question of prohibitions of or restrictions on the export of certain raw materials by a number of States. New efforts should be made at once to bring into force the International Convention of November, 1927, with the addition of July, 1928, which has lapsed in the absence of the necessary ratifications.

As regards the circulation of raw materials, States should agree to apply the principle of reducing tariff duties. At the same time, preferential or differential transport rates, which of course play a big part in fostering the import or export of goods, should be settled by international agreements. This question has already formed the subject of certain conventions, whereby the contracting States undertake to apply reasonable tariffs to international traffic and to abstain from discrimination detrimental to the interests of the other contracting States. In the same way the importance, for the purposes of circulation of raw materials, of the development and as far as possible the co-ordination of the principal lines of communication by land, air and water must be borne in mind. Particular emphasis should be laid on the desirability of improving the principal European waterways and linking them up with the railways.

Lastly, it is desirable to establish under the auspices of the League of Nations an international information and documentation service, to publish at frequent intervals statistical information for business circles and governments so as to show what conditions are necessary for the satisfactory distribution of products and to draw attention to abuses.

* * *

The French Government, having thus given in as precise a form as possible its answers to the League of Nations questionnaire as far as it affects France, desires to say that its interest in the European situation and in the world crisis, which recently has so seriously aggravated the European situation, is unabated. The French Government is fully prepared to give its support and to take part in negotiations between the States of Europe with a view to considering what conditions are required for the better organisation of trade between the European countries exporting and importing agricultural products. Any such measure is bound to be to the advantage of all countries, since in providing surpluses of agricultural production with larger and more regular markets it will at the same time provide industrial countries with such a stimulus as will enable them to cope effectively with the evil of unemployment.

The French Government is of opinion that the negotiations on these questions of organisation might well be begun either at the meeting of the European Commission of Enquiry, or at the Conference proposed in connection with the programme of Concerted Economic Action in March, 1931. The interval between these two meetings should allow the countries concerned to complete the necessary preparatory work.

Geneva, November 3rd, 1930.

LEAGUE OF NATIONS

SECOND CONFERENCE

WITH A VIEW TO

CONCERTED ECONOMIC ACTION

**Proposals of the Economic Committee
to serve as a Basis for the Future Negotiations**

Note. — These proposals were drawn up on the basis of the replies¹ from Governments to the questionnaire annexed to Article I of the Protocol relating to the programme of future negotiations.

The Protocol of March 24th, 1930, defined the aim of the negotiations which are to be pursued with a view to giving effect to the resolutions of the tenth Assembly of the League of Nations in regard to concerted economic action.

These negotiations are to relate, in particular, to Customs measures likely to lead to a reduction of tariffs, and to "all other practical measures aiming at a better organisation of production and at a more rational distribution of products."

The countries desirous of taking part in these negotiations were asked to communicate their views on a number of questions specified in the Protocol. Their replies have been coordinated by the League Secretariat, and the Economic Committee was instructed to collate the proposals contained therein which, when submitted on November 17th, 1930, to the Governments consulted, would serve as a basis for the projected negotiations.

In the actual words of the Protocol, the Economic Committee was asked to take account, when carrying out its work, of the situation then existing, and to formulate its proposals with a view to ensuring positive results. The Economic Committee has kept this double recommendation in view.

The analysis of the replies from Governments shows that there are three main desiderata:

The first of these relates to problems which the Economic Organisation of the League has already considered and for which it has prepared a solution: there is a desire to see the contemplated action pursued to its full and successful completion and agreements now framed or completed fully carried out.

The second desideratum is a general improvement in Customs matters by the reduction or consolidation of duties.

The third refers to the problem of the commercial exchanges of the agricultural countries in Eastern Europe.

I.

CONCLUSION OR APPLICATION OF CONVENTIONS ALREADY DRAWN UP.

The concerted action which it is proposed to take cannot be dissociated from the economic work already accomplished by the League. That work is its starting-point. Any new agreements must be based thereon. It is therefore of importance, in the first place, to strengthen this foundation for future work.

¹ For the text of the replies, see documents 2ème Conf./A.E.C./1 et Addenda.

I. *Convention for the Abolition of Prohibitions.*

Mention may be made in the first place of the Convention for the Abolition of Import and Export Prohibitions.

This Convention entered into force on the date contemplated, but it only takes effect between a small number of States and under conditions which render it precarious. The eleventh Assembly regretted this situation and expressed the hope that the "States concerned will not abandon their decision to remove, by the abolition of prohibitions, one of the chief obstacles to the free movement of goods."

It is particularly desirable at the present juncture that this hope should be realised for, while there has no doubt been a considerable decrease in the number and importance of these restrictions during the past few years, it would be a mistake to conclude that the Convention is no longer of practical value. In the absence of any contractual undertaking, there is a danger that certain States may again resort to prohibitions in the hope of escaping from their present difficulties. This would mean new impediments to trade. That would be a backward step in the work already accomplished to promote trade, which might jeopardise, or at all events seriously retard, any subsequent action.

The Convention was ratified by nineteen States, including most of the States which have since signed the Protocol regarding future negotiations. Unfortunately, certain temporary exceptions provided for in Article 6, paragraph 1, and the power conferred on States under Article 4 to maintain or impose veterinary prohibitions, have hindered certain countries from complying with the provisions of the Convention. The consequence of the economic interdependence of the majority of the European countries has been that the abstention of a few signatories has involved that of most of the others.

As regards some of these exceptions, the conditions are no longer the same as they were when the Convention was signed.

Moreover, thanks to the efforts of the League of Nations, such progress¹ has been made in the investigation of the international organisation of the campaign against animal diseases, of the development of veterinary services, and technical co-operation of States, that it is now possible to look forward to the early conclusion of agreements which should give importing and exporting States guarantees they do not at present possess, and the absence of which hampered the international trade in live animals and animal products.

That being the case, present circumstances would appear to make it imperative for the European States to undertake a further effort to secure the accession to the Prohibitions Convention of all the signatory States. It is therefore desirable that the future negotiations should deal with this subject.

2. *Commercial Convention.*

Mention should be made of another important point—the question of bringing into force the Commercial Convention of March 24th, 1930. This is another not less important condition for the success of the future negotiations.

The Commercial Convention represented the first stage in the general plan outlined in the recommendations of the tenth Assembly.

By inaugurating a period of calm and stability in Customs matters and in contractual relations, and by establishing in this sphere a real union between most of the European countries, the Convention aims at creating a situation favourable to the successful prosecution of the future negotiations for the better organisation of trade.

The Committee, having regard to the recommendations submitted to it as a guide in its work, *expresses its firm conviction that one of the most important and most urgent objects of the negotiations beginning on November 17th must be to ensure that the conditions necessary for the entry into force of this Convention are fulfilled.*

On this point, too, the eleventh Assembly made an earnest appeal to all the States concerned to see that the Convention should be "put into force between the States signatories and obtain the accessions of the greatest possible number of other States".

Like the Convention for the Abolition of Prohibitions, the Commercial Convention constitutes a necessary safeguard under present circumstances. Without it, there is a danger that States will yield to the difficulties of the hour and denounce some of their commercial agreements, so as to free themselves from irksome tariff obligations, and that there will thus be a new and disastrous increase in Customs barriers.

Finally, apart from its immediate importance, the Commercial Convention forms a useful basis for future tariff negotiations; it may be added to and developed, and it can thus facilitate a further step forward in the international settlement of Customs questions.

¹ The Sub-Committee of Experts on Veterinary Questions submitted to the Economic Committee, at its session in October 1930, a general report on the work of its four sessions. In the opinion of all the members of the Economic Committee and of the veterinary experts, this report furnishes technical data which make it possible now to frame draft proposals for a convention relating to the following questions:

- (1) Organisation of veterinary services, methods of exchanging veterinary information, closer international co-operation between the various services;
- (2) Transit of cattle and animal products, including meat;
- (3) Import and export of animal products, with the exception of meat.

3. *Convention on the Treatment of Foreigners.*

The Convention on the Treatment of Foreigners is a third undertaking which the Economic Organisation has not so far been able to bring to a successful conclusion, but which no scheme of concerted action can ignore. On this point, the eleventh Assembly stated that "real progress in the direction of economic union cannot be restricted to the movement of commodities and capital, but must necessarily extend, under as liberal a system as possible, to the economic activities of companies and individuals." The work undertaken encountered serious difficulties. The Conference summoned to carry it through was unable to reach a conclusion at its first session. By arranging for a further session, it nevertheless indicated its determination to frame a Convention drawn up in the most liberal spirit and marking a real advance on the present situation. The Conference itself laid down the procedure for the continuation of its work.

The Committee, while not modifying this procedure in any way, is of opinion that the States which meet on November 17th should begin preliminary discussions between themselves which would promote the success of the General Conference.

II.

TARIFF NEGOTIATIONS FOR THE GENERAL IMPROVEMENT OF TRADE.¹

The replies from Governments clearly indicate that the latter have a second object in view. This relates to tariff negotiations for the general improvement of trade.

Two proposals merit special attention.

One of these which appears in several replies, has been formulated with special precision by the British Government. It aims at reducing Customs duties by taking groups of commodities and proceeding by stages. In the first place, some such groups as textile fabrics and machinery might be selected as a subject for negotiations. The negotiations might then be extended to other products of industry, agriculture, stock-raising, and fisheries.

In the other proposal, States are divided into two groups: those which, while hitherto retaining their tariff autonomy, pursue a liberal commercial policy, and those again which, while pursuing the policy of conventional tariffs, possess a more or less protectionist Customs regime. This distinction corresponds, moreover, to that drawn in the Commercial Convention of March 24th, 1930. The first States would undertake to maintain their liberal system in return for tariff benefits which would be granted to them by the second group, and which would remain subject to the most-favoured-nation clause. This proposal, which also is put forward in several replies, is most clearly formulated by the Netherlands Government.

The two proposals just mentioned are evidence of the same spirit and have the same end in view. The British Government seems indeed to establish a certain connection between the continuation of the undertaking not to create new protective duties, which it assumed on signing the Commercial Convention and the conclusion of agreements for the progressive reduction of the Customs barriers of States which pursue a protectionist policy.

While there can be no possible question as to the object in view, differences of opinion may nevertheless exist as to the method to be adopted.

On the one hand, it was pointed out that the Economic Committee had already made a close examination of proposals similar to that submitted by the British Government, and that experience had shown that the procedure was necessarily slow and complicated, although it was recognised that two useful conventions had been concluded on these lines—namely, those relating to export duties on hides and skins and on bones.

The objection was also raised that it might be difficult to provide within the limits of groups of commodities, no matter how extensive, the compensating advantages and concessions which are a necessary condition for any negotiations. Further, a reduction in tariff duties based on the total Customs revenue and on the application to this revenue of a certain percentage of reduction would involve various difficulties; in particular this method may not be adaptable to the economic conditions special to each particular case, and it may impose on States sacrifices for which there would not always be a compensating advantage.

Finally, it was pointed out that States which pursue the method of conventional tariffs have already, to a varying degree, reduced or consolidated their Customs duties.

On the other hand, the method of negotiations between the group of States pursuing an autonomous commercial policy and the group pursuing the policy of conventional tariffs would have a more limited effect than the method contemplated in the British proposal. It was maintained that it would lead to an agreement restricted to a certain number of countries, that it would only affect a limited number of Customs duties and, finally, that it might make it difficult to bring about a progressive reduction extending to European Customs tariffs as a whole.

In view of these various considerations, the Economic Committee was of opinion that both the proposed methods should be retained, and that both should be submitted to the forthcoming Conference of Governments, in the hope that the Conference might be able usefully to co-ordinate them with a view to the proposed negotiations.

¹ Note. — As the Economic Committee cannot indicate in detail the main proposals submitted on this subject, it strongly recommends careful consideration of the replies received from the Netherlands, Belgium, Austria, and in particular, the British Government.

In formulating this conclusion, the Economic Committee has kept in mind the provision in the Final Act of the Conference whereby the enquiries and negotiations contemplated in Articles 1 and 2 of the Protocol should proceed *pari passu*. It considers that the matters mentioned in Article 2 may accordingly be included in the tariff negotiations which will take place on the basis of the above proposals.

Finally the Committee, taking into account the present situation, as it was explicitly recommended to do in the Protocol, cannot disguise the fact that the economic depression which is being felt in all countries makes the success of the contemplated negotiations a matter of exceptional difficulty. Nevertheless, although the crisis creates serious obstacles, the evils it is causing everywhere in the world bring home more clearly the need for an improvement in the conditions of trade and the impossibility of effecting real progress in this direction by any means other than the concerted and joint action of States.

III.

NEGOTIATIONS REGARDING THE SYSTEM OF TRADE OF THE AGRICULTURAL COUNTRIES OF EASTERN EUROPE.

A third important consideration is raised in the identical replies from Hungary, Roumania and Yugoslavia, with which Poland has associated herself in the resolutions of the Warsaw Conference. The Governments of these countries regard an increase in the purchasing power of their populations as the most effective means of extending markets and improving international trade. With this object, their chief endeavour is to take effective steps to ensure the disposal of their surplus agricultural produce at prices which will secure the farmer a reasonable return.

The first means they propose of preferential Customs treatment in the European importing countries for the produce in question ; it was pointed out that this treatment should not lead to an increased production of cereals in the countries benefiting thereby.

The three countries named observe that while such preferential treatment would, of course, constitute an exception to the general most-favoured-nation clause, it could not prejudice the interests of oversea countries, as the latter must still remain the principal source of supply for Europe, whose production falls far short of its needs.

It is further pointed out that the Customs duties in the general tariff would remain applicable to exports from outside Europe and that, as prices would be fixed on the basis of those duties, the proposed system would in no way reduce the protection afforded to agricultural interests in the importing countries ; the only sacrifice the latter are asked to make is a certain reduction in Customs duties.

The three Danubian States further ask :

(a) That the European importing countries should consolidate all import duties on European agricultural produce at a reasonable level, so as to leave a margin of profit to agricultural producers in the exporting countries ;

(b) That there should be complete freedom of trade in cereals and agricultural produce on the European market ;

(c) That all impediments to trade and measures of every kind which have the effect of artificially limiting imports of cereals and other agricultural produce or of displacing centres of consumption should be entirely abolished.

While the replies from the Danubian States bring forward the question of agricultural produce in general, they lay chief stress on cereals—naturally enough, when it is remembered that the trade in cereals is a vital problem for those three countries.

These demands were brought to the knowledge of the last Assembly of the League, was at the same time informed of the results of the Conference of the agricultural countries held at Warsaw last August. The Conference drew up a programme for co-operation among the agricultural countries of Eastern Europe with a view to putting an end to the unbridled competition among them in organising their production and trade on a better-balanced system.

The Assembly displayed the keenest interest in this part of the programme. It took the view that the differences in economic conditions, especially the price of money, form a serious obstacle to the natural development of European prosperity. It was inevitable, however, that the demand for preferential treatment should raise a controversy in the Assembly, because it amounts to an attack on the principle of most-favoured-nation treatment. The Assembly nevertheless expressed the view that, having regard to the present depression, the States signatories of the Protocol should not, in their negotiations, reject *a priori* any solution that might improve their economic relations. It showed that it was anxious not to prevent the countries of Europe from devising a better economic organisation, but reminded them that the tenth Assembly, in its resolution regarding concerted economic action, had reserved to other countries the right to take steps to protect their own interests.

Subject to this reservation, the Assembly considered that the demand of the three agricultural countries—which also appears in the Warsaw resolutions—should be included in the negotiations which are to open on November 17th between the States signatories of the Protocol.

Reference had to be made to these facts, because the Economic Committee was bound to bear them in mind in examining the replies of Hungary, Roumania and Yugoslavia.

To form a just idea of the extent of the demand for preferential treatment put forward by the three Danubian States, it is necessary to state accurately the volume of the trade to which it applies.

Theoretically, as we have seen, it questions the important principle of most-favoured-nation treatment. The preferential treatment requested would obviously constitute an exception to the most-favoured-nation clause; it could therefore only be applied with the assent of the States receiving this treatment under the treaties in force.

In actual fact, however, the cereal exports of the three countries concerned are negligible in comparison with the aggregate imports of the other European countries. Seen in its true proportions, therefore, the problem is not attended by such difficulties as appearances would suggest.

Nor must it be forgotten that the range of distribution of surplus cereals is limited by transport costs. The normal markets for these surpluses of the Danubian States are restricted to a few contiguous or neighbouring countries—chiefly Austria, Czechoslovakia, Germany, Italy and Switzerland. The most important of these consuming markets have to import considerable quantities of cereals, and these are obtained almost entirely from overseas, the share of the Danubian States being relatively negligible.

It remains to consider the position of those European countries in which, owing to the distance, cereals from the Danubian countries cannot normally find a market. Whether they would consent to preferential treatment accorded the importing countries is not an immediate practical difficulty, but merely a question of principle.

The European countries which are asked to give preferential treatment to cereals from Eastern Europe would, of course, be justified in asking for a consideration in return. This consideration would naturally take the form of Customs facilities for their imports into the Eastern countries. It does not, of course, imply the granting of preferential treatment, because that would lead to new discriminations which would inevitably raise great difficulties. Moreover, it must not be forgotten that the countries which might grant preferential treatment to cereals from Eastern Europe are far and away the chief exporters of industrial products to the agricultural countries from which they desire compensation.

Having regard to the various factors in the question, the Economic Committee considers that the proposal for the grant of preferential treatment to cereals from Eastern Europe should be included in the programme of future negotiations.

It is understood that any agreement that might be reached on such a basis could not come into force until it had been endorsed by those States, whether signatories to the Protocol or not, which are guaranteed most-favoured-nation treatment by treaty.

The Economic Committee would add that in any case the granting of preferential treatment should be regarded as an exceptional measure, to meet abnormal circumstances.

While the agricultural countries of Eastern Europe attach special importance to their demand for preferential treatment, they do not refuse to consider any other measure which might directly or indirectly help to ensure the disposal of their surplus produce on satisfactory terms.

Such measures, might relate to the organisation of trade and in the establishment of selling organisations in exporting countries and buying organisations in importing countries.

Accordingly, consideration should be given to the possibility of setting up a Commission to continue investigations in connection with the improvement of the European trade in cereals, both from the point of view of markets and from those of internal organisation, the standardisation of products, storage, transport, and the development of credit.

CONCLUSIONS.

Having carefully analysed the replies from Governments, the Economic Committee is of opinion that if the following proposals formed the basis of the future negotiations, they might lead to positive results :

1. *Re-examination of the Convention on Import and Export Prohibitions, with the object of securing the accession of all the signatory States and doing away with the temporary exceptions as far as possible.*
2. *Conditions necessary for bringing the Commercial Convention of March 24th, 1930, into force between the largest possible number of States.*
3. *Endeavour to secure a preliminary understanding among European countries in order to ensure a satisfactory issue for the second session of the Conference on the Treatment of Foreigners.*
4. *Tariff negotiations with a view to a general improvement in trade on the basis of the proposals set forth in the second section of the present report.*
5. *Negotiations regarding the trade system of the agricultural countries of Eastern Europe.*

Allemagne.

PRINCIPAUX ARTICLES D'EXPORTATION EN 1928.

1^o *Machines, chaudières et parties de machines.*

	R. M.
a) Valeur de l'exportation	1.134.000.000
Pourcentage de la valeur totale des exportations : 9,5.	
b) Principaux marchés européens de destination :	R. M.
Pays-Bas	82.000.000
France	78.700.000
Tchécoslovaquie	65.500.000
Italie	60.000.000
Grande-Bretagne	58.900.000
(Tous autres pays de destination)	768.900.000)

2^o *Ouvrages et articles en fer³.*

a) Valeur de l'exportation	862.345.000
Pourcentage de la valeur totale des exportations : 7.	
b) Principaux marchés européens de destination :	R. M.
Pays-Bas	85.900.000
Grande-Bretagne	62.300.000
Suisse	34.600.000
Italie	32.000.000
(Tous autres pays de destination)	647.545.000)

3^o *Produits chimiques et pharmaceutiques fabriqués.*

a) Valeur de l'exportation	560.878.000
Pourcentage de la valeur totale des exportations : 4,7.	
b) Principaux marchés européens de destination :	R. M.
Grande-Bretagne	42.800.000
Suisse	34.600.000
Pays-Bas	32.300.000
Italie	29.000.000
(Tous autres pays de destination)	422.178.000)

¹ Ces pays sont : l'Allemagne, l'Autriche, la Belgique, la Grande-Bretagne, le Danemark, la Finlande, la France, la Hongrie, l'Italie, les Pays-Bas, la Pologne, la Suède, la Suisse et la Tchécoslovaquie.

² Cette statistique a été établie par le Secrétariat sur la base des statistiques officielles des pays considérés.

³ Excepté le matériel pour chemins de fer, les chaudières et les parties des machines.

4° Produits électro-techniques.

	R. M.
a) Valeur de l'exportation	488.700.000
Pourcentage de la valeur totale des exportations : 4.	
b) Principaux marchés européens de destination :	R. M.
Pays-Bas	38.900.000
Italie.	24.600.000
France	22.600.000
Autriche	16.200.000
(Tous autres pays de destination)	386.400.000)

Autriche.

PRINCIPAUX ARTICLES D'EXPORTATION EN 1928.

1° Bois

	Schillings autrichiens
a) Valeur de l'exportation	248.335.000
Pourcentage de la valeur totale de l'exportation : 11,0.	
b) Principaux marchés européens de destination :	Schillings autrichiens
Allemagne.	95.286.000
Italie.	69.069.000
France	23.429.000
Suisse	20.927.000
(Tous autres pays de destination)	39.624.000)

2° Papier et articles en papier.

a) Valeur de l'exportation	170.697.000
Pourcentage de la valeur totale de l'exportation : 7,8.	
b) Principaux marchés européens de destination :	Schillings autrichiens
Italie.	33.602.000
Hongrie.	26.817.000
Yougoslavie	15.919.000
Grande-Bretagne.	6.706.000
(Tous autres pays de destination)	87.653.000)

3° Ouvrages en fer.

a) Valeur de l'exportation	167.783.000
Pourcentage de la valeur totale de l'exportation : 7,4.	
b) Principaux marchés européens de destination :	Schillings autrichiens
Yougoslavie	25.758.000
Allemagne.	23.463.000
Tchécoslovaquie	17.467.000
Pologne.	12.961.000
(Tous autres pays de destination)	88.134.000)

4° Articles en laine.

a) Valeur de l'exportation	110.452.000
Pourcentage de la valeur totale de l'exportation : 5,0.	
b) Principaux marchés européens de destination :	Schillinge autrichiens
Allemagne.	20.779.000
Yougoslavie	13.018.000
Hongrie.	12.553.000
Pologne.	11.085.000
(Tous autres pays de destination)	53.017.000)

Belgique.

PRINCIPAUX ARTICLES D'EXPORTATION EN 1928.

1^o *Fer et acier, battus ou laminés.*

	Fr.
a) Valeur de l'exportation	3.349.000.000
Pourcentage de la valeur totale de l'exportation : 11,1.	
b) Principaux marchés européens de destination :	
	Fr.
Grande-Bretagne.	592.000.000
Pays-Bas	281.000.000
Allemagne.	233.000.000
Suède.	67.000.000
(Tous autres pays de destination)	2.176.000.000)

2^o *Pierres précieuses ouvrées.*

a) Valeur de l'exportation	2.252.000.000
Pourcentage de la valeur totale de l'exportation : 7,2.	
b) Principaux marchés européens de destination :	
	Fr.
Pays-Bas	621.000.000
France	182.000.000
Grande-Bretagne.	52.000.000
Italie.	36.000.000
(Tous autres pays de destination)	1.361.000.000)

3^o *Tissus de coton.*

a) Valeur de l'exportation	1.720.000.000
Pourcentage de la valeur totale de l'exportation : 5,7.	
b) Principaux marchés européens de destination :	
	Fr.
Grande-Bretagne.	468.000.000
Pays-Bas	123.000.000
Danemark.	44.000.000
Autriche	10.000.000
(Tous autres pays de destination)	1.075.000.000)

4^o *Machines et engins mécaniques.*

a) Valeur de l'exportation	1.307.000.000
Pourcentage de la valeur totale de l'exportation : 4,3.	
b) Principaux marchés européens de destination :	
	Fr.
France	176.000.000
Pays-Bas	169.000.000
Grande-Bretagne.	112.000.000
Allemagne.	75.000.000
(Tous autres pays de destination)	775.000.000)

Grande-Bretagne.

PRINCIPAUX ARTICLES D'EXPORTATION EN 1928.

1^o Tissus de coton.

	£	
a) Valeur de l'exportation		107.298.000
Pourcentage de la valeur totale des exportations : 14,8.		
b) Principaux marchés européens de destination :		
	£	
Suisse	2.896.000	
Allemagne.	1.748.000	
Pays-Bas	1.704.000

750.000	quintaux	de seigle
1.220.000	»	d'orge
700.000	»	d'avoine
5.000	»	de farine de froment
8.000	»	Farine de seigle

B. ROLE DES EXCÉDENTS DE L'EUROPE DANUBIENNE DANS LES IMPORTATIONS DE CÉRÉALES DE L'EUROPE

Si l'on groupe les excédents de céréales provenant de la Hongrie, de la Roumanie, de la Yougoslavie et de la Bulgarie, on constate qu'ils se sont élevés :

En 1926, à	10.070.000	quintaux	de froment
	18.240.000	»	de maïs
	6.520.000	»	d'orge
En 1927, à	6.841.000	»	de froment
	21.223.000	»	de maïs
	8.578.000	»	d'orge
En 1928, à	4.874.000	»	de froment
	5.551.000	»	de maïs
	4.866.000	»	d'orge
En 1929, à	10.491.000	»	de froment
	7.006.000	»	de maïs
	12.729.000	»	d'orge

Les moyennes d'exportation des céréales considérées pour les années 1926 à 1929 dans les quatre pays envisagés sont de :

8.069.000	quintaux	pour le froment
13.005.000	»	» le maïs
8.173.000	»	» l'orge

Les importations européennes en céréales *d'outre-mer* ont été :

En 1926, de	107.770.000	quintaux	de froment
	48.240.000	»	de maïs
	13.910.000	»	d'orge
En 1927, de	157.400.000	»	de froment
	81.490.000	»	de maïs
	25.860.000	»	d'orge
En 1928, de	155.000.000	»	de froment
	81.606.000	»	de maïs
	28.856.000	»	d'orge

Le tableau suivant donne sous une forme schématique une idée *approximative* des importations de l'Europe danubienne dans les principaux pays de l'Europe intéressés.

	Importations provenant de tous les pays d'Europe, y compris l'Europe danubienne, 1929.	Importations provenant de l'Europe danubienne	Importations d'outre-mer
<i>Allemagne :</i>	Blé 850.000	410.000	20.560.000
	Maïs 540.000	430.000	6.150.000
	Orge 7.260.000	6.320.000	10.400.000
<i>Italie :</i>	Blé 860.000	590.000	16.680.000
	Maïs 740.000	740.000	6.920.000
	Orge 168.000	32.000	4.000
<i>France :</i>	Blé à peu près nulle		14.110.000 (dont 3.430.000 pour l'Afrique du Nord).
	Maïs 50.000	50.000	8.140.000 (dont 430.000 pour l'Afrique du Nord).
	Orge à peu près nulle		11.500.000 (dont 11.000.000 pour l'Afrique du Nord).

	Importations provenant de tous les pays d'Europe, y compris l'Europe danubienne. 1929.	Importations provenant de l'Europe danubienne	Importations d'outre-mer
<i>Belgique :</i>	Blé 450.000 Maïs 120.000 Orge 1.100.000	Insignifiantes » 220.000	11.330.000 5.730.000 2.160.000
<i>Pays-Bas :</i>	Blé 720.000 Maïs 1.270.000 Orge 870.000	420.000 430.000 170.000	5.830.000 8.670.000 2.320.000
<i>Autriche :</i>	Blé 2.000.000 Maïs 580.000 Orge 690.000	Presque tout d'Europe danubienne	340.000 670.000
<i>Tchécoslovaquie :</i>	Blé 1.676.000 Maïs 1.850.000	1.440.000 820.000	10.000 150.000
<i>Suisse :</i>	Blé 435.000 Maïs 30.000 Orge 560.000	431.000 20.000 380.000	4.245.000 1.060.000 220.000
<i>Suède</i>	Blé 970.000 Maïs 360.000	Insignifiantes »	1.760.000 410.000
<i>Espagne :</i>	Blé Maïs 30.000	Insignifiantes »	3.430.000 2.800.000

C'est évidemment du côté de l'Autriche, de la Tchécoslovaquie, de l'Allemagne et l'Italie, plus difficilement du côté de la Suisse et de la France, qu'un arrangement relatif aux exportations céréales de l'Europe danubienne pourrait être envisagé.

Pour le froment, les importations danubiennes de l'Allemagne et de l'Italie sont presque insignifiantes par rapport à leurs importations d'outre-mer. De même pour le maïs, mais dans une moindre mesure.

Les possibilités sont beaucoup plus limitées du côté de l'orge. Mais, parmi les Etats danubiens, le grand fournisseur d'orge et de maïs étant la Roumanie¹, le rayonnement commercial peut être beaucoup plus vaste, grâce à la navigation maritime.

Par la Méditerranée, certaines quantités de maïs roumain pourraient atteindre la France. Pour l'orge, ses besoins sont beaucoup plus faibles et sont en très grande partie couverts par l'Afrique du Nord.

Par mer, des livraisons de maïs roumain et d'orge pourraient atteindre la Belgique et les Pays-Bas.

¹ Production de la Roumanie :

1928	4.731.000 quintaux de maïs	4.145.000 quintaux d'orge
1929	3.745.000 »	11.547.000 »

C. IMPORTANCE COMPARÉE DES EXPORTATIONS PRINCIPALES DE CERTAINS PAYS INDUSTRIELS DE L'EUROPE¹ VERS :

1. Quatre pays agricoles de l'Europe orientale (Groupe A²).
2. Les principaux pays d'outre-mer exportateurs de blé (Groupe B³).

1.

ALLEMAGNE.

(Exportation totale : 13.482.700.000 R.M.)

1929.

PRODUITS CONSIDÉRÉS.

(L'ensemble des exportations de ces produits représente environ 50% de l'exportation totale allemande.)

	Valeur de l'exportation en millions de R. M.	Pourcentage de l'exportation totale allemande en 1929

PREFACE

A. PREVIOUS HISTORY.

In 1922, His Excellency M. Cesar ZUMETA, Venezuelan delegate to the third ordinary session of the League Assembly, drew the Economic Committee's attention to "the harmful effect on legitimate trade of the manufacture and sale of products which, though not infringing the regulations governing trade-marks and patents, are nevertheless a form of fraud owing to the various devices intended to disguise their real nature".

The Economic Committee submitted to the Council, in 1923 and 1924, two reports on this question. In the former, it laid stress on the fact that the protection of the consumer against worthless goods is primarily a matter for national legislation, and that it is important, from the point of view of international trade, that any measures taken with this object should not be of a kind to discriminate between imported goods and similar goods of national origin or to impose undue burdens upon international commerce.

The Economic Committee subsequently showed that the method of Customs prohibitions or restrictions is quite unsuitable as a means of overcoming the difficulties with which the buyer is faced owing to the defective quality of the goods. It examined the various means suggested as a remedy for the situation to which the Venezuelan delegate had drawn its attention, and concluded that, in the first place, it was necessary for the buyer himself to exercise care in his choice of suppliers; it also found (*a*) that in many countries there are more or less effective guarantees the existence of which should be made more widely known to the public, and (*b*) that, accordingly, all facilities afforded in the exporting country for ascertaining and testing the quality of goods should in every case be available to the foreign buyer in the same way as to the home consumer.

It is desirable that the public should be better acquainted with national laws or regulations requiring certain goods to conform to a minimum standard as regards type, composition or manufacture, and which provide for inspection and testing, the quality being guaranteed by compulsory certificates or stamps. The public should also be informed of the official, semi-official and private organisations which, at the request of the producer or purchaser, will test certain classes of goods and guarantee the quality by means of marks or certificates. It should likewise be made familiar with the marks affixed to goods conforming to specifications laid down by the competent technical institutions or committees, such as standardisation committees, and with the marks adopted by States or associations to guarantee the origin of certain goods.

If the foreign buyer is able to satisfy himself beforehand that the goods purchased by him are of the desired quality, this will obviously encourage international trade, and will prevent disputes, litigation and difficulties at the time of delivery.

Moreover, it is to the interest of all exporting countries to make known to foreign buyers the available guarantees which enable them to make certain that the article purchased will be of the desired quality.

For these reasons, the League Assembly, at its ordinary sessions in 1924, 1925 and 1926, adopted successive resolutions, all urging the necessity for completing the information collected by the Secretariat and for making this as widely known as possible, for the benefit of the public concerned.

B. NATURE AND OBJECT OF THE PUBLICATION.

The ideal aimed at was a collection of all measures of whatever description and whatever their direct object which help to furnish the necessary guarantees to buyers.

The data collected by the Secretariat for the publication in 1928 of a first edition in accordance with the wishes expressed by the Assembly and the suggestions of the Economic Committee unfortunately fell very far short of this ideal. The information obtained both from official and private sources was very incomplete; certain countries of great importance from the point of view of the question with which we are dealing were not even included in the list of those in regard to which it had proved possible to obtain information, while in other cases the information was not full enough. These defects were due to the difficulty of obtaining the requisite particulars, and the Secretariat hoped that the very incomplete publication issued in 1928 would facilitate the efforts which it had been making for several years to collect the data necessary to enable it to issue a more complete edition.

The object of the first edition was to give a clearer idea of the nature of the information requested and to show its utility. It was intended to indicate that, in many cases, measures adopted with an entirely different object may be of undeniable interest from the point of view

of the protection of buyers. This is the case, for instance, with the provisions adopted by the official and private organisations in certain countries to maintain the reputation of agricultural products abroad. It also applies to standardisation, which has been actively pursued in other countries for some years past with ever-increasing success.

The Secretariat therefore hoped that the Governments of countries in regard to which a certain amount of information was given in the first edition would supplement this and make any necessary corrections.

It also hoped that the Governments of countries in regard to which no information was given in the first edition would furnish data for the second edition.

In reply to the circular letter sent by the Secretary-General on August 28th, 1928, drawing the attention of the Governments to the preface of the first edition of that document, which stated that it was desirable that the Secretariat should obtain the data which were still missing for a number of countries and that it would also be an advantage if certain information on some countries could be supplemented, or, if necessary, corrected, the following seventeen countries which were included in the first edition of this publication sent the information requested: Australia, Austria, Belgium, Canada, Denmark, Estonia, Finland, Germany, Great Britain, Irish Free State, Italy, Netherlands, Netherlands Indies, Roumania, Sweden, Switzerland, United States.

The *Dominican Republic* and *Salvador*, which were not included in the first edition, have also sent information. Unfortunately, the particulars given by Salvador do not come within the scope of this publication.

In the present edition, countries which have themselves supplied their own final text are marked with an asterisk.

The Secretariat found it impossible to collect complete information which would have enabled it at all events to approach the ideal set forth above; however, the present publication has at least two advantages. It shows:

- (1) What has been done in this sphere in certain countries;
- (2) That publications of this kind might with advantage be compiled by the various countries themselves in regard to their national laws and regulations on the matter.

C. CLASSIFICATION OF THE EXISTING GUARANTEES INTO CATEGORIES.

The classification of the information adopted in the first edition has been adhered to in the second edition.

For each country the various data have been divided into five categories, which were only adopted after careful reflection and because they appeared to correspond most closely to the nature of the various measures useful for the protection of buyers.

Category 1: This includes laws and regulations dealing with the manufacture or production of, or trade in, certain commodities—in particular, foodstuffs—the object of which is to protect the health of men, animals and plants by ensuring the observance of certain rules of hygiene or precautions in their manufacture or preparation. In most cases, there is nothing to indicate that the rules have been complied with.

In cases of this kind, a knowledge of these regulations is of great utility, since the origin of the commodity in itself constitutes a reliable guarantee. We would instance the measures relating to foodstuffs, drugs, etc.

The special feature of this category is the *compulsory* nature of the measures, and the absence of anything to show that they have been complied with.

Category 2: In many countries, the production, manufacture, harvesting and even the sale of certain commodities are subject to compulsory official inspection, supervision or grading.

Supervision is usually exercised, either direct by the Government officials appointed for the purpose, or by private bodies entrusted with this duty by the State, or even by competent individuals.

The essential characteristic of these measures consists in an outward sign—an official mark, stamp, seal, etc., placed on the article itself or its outer wrapping, or a certificate may accompany the goods.

A large number of countries have enacted laws of this kind applicable to the most varied commodities; thus, Czechoslovakia has adopted legislation in regard to lucerne, Denmark in

regard to butter, Japan in regard to certain silks, the British Empire in regard to passenger ships, Canada in regard to fruit, Australia in regard to meat, etc.

The special feature of this category consists both in the *compulsory* nature of the supervision and control and *the affixing of an outward sign*, or the issue of a certificate.

Category 3: This category includes collective marks adopted or certificates issued by syndicates, associations or groups of farmers, manufacturers and merchants, the marks being exclusively reserved for their members. The object is to guarantee that goods bearing these marks conform to a certain more or less definite type or standard.

The object of these organisations in adopting such measures is to refuse their protection to goods for the manufacture or preparation of which methods calculated to lower the quality of the article placed on the market are employed.

Examples: The marks of the British Boot Manufacturers' Federation; the "kronmarket" in Sweden for cheeses; the marks employed in the Netherlands by certain private associations for eggs, etc.

The characteristic feature of this category is the fact that the supervision to which the persons concerned voluntarily submit is exercised by private bodies, without Government or official intervention.

Category 4: We have placed in this category all the means existing in each country which enable the purchasers of various commodities, if they so desire, to have them examined, tested or inspected before delivery; certificates are issued at the request of the persons concerned, stating the characteristics of the goods or the data which the purchasers regard as essential — dimensions, composition, degree of purity, strength, impermeability, etc.

In this connection, establishments for the conditioning of silk and thread, testing houses, official or private laboratories for research, testing and analysis, whose work covers a wide range of commodities, are of special importance.

There is an international organisation, the Société Générale de Surveillance, S.A., with headquarters at Geneva, which, together with its affiliated and corresponding bodies, is prepared to make investigations, in return for a fee, into the quantity, quality, packing etc., of raw materials, agricultural produce, manufactured goods, etc., on behalf of persons engaged in foreign trade.

The special feature of the measures included in Category 4 is the *optional* nature of the tests, which are carried out in regard to goods ready for delivery, and not, as in the previous categories, in course of manufacture or preparation.

Category 5: The last category includes civil or penal legislative stipulations providing for the cancellation of contracts if the workmanship or quality of the goods is bad, and imposing penalties on the offenders in cases of fraud.

Standardisation and specification.

The above classification is the result of patient research and repeated trial and, as already stated, was only adopted after careful reflection. Admittedly it is not perfect, but it was considered the most satisfactory.

Its principal defect is probably that it has been established on the basis of criteria which were in some cases rather vague, the result being that it was difficult to include certain measures useful for the protection of purchasers in one or other of the categories adopted.

This applies more especially to the measures adopted in various countries for the standardisation and simplification of production. Special mention should be made of the United States of America, whose position is described more fully in the part of this document dealing with that country. The reason is that this movement in the direction of standardisation and simplification in industrial and agricultural production, which originated in the United States and in England some years ago, is spreading rapidly in the former country, and experience has already shown its great advantages. It is gradually extending to other countries, in which efforts are being made by national committees or international groups to enlist the support of public opinion.

From the point of view of the buyer, and particularly of the foreign buyer, the advantages of the adoption of standards in regard to quality, manufacture, composition or dimensions are obvious. When placing his order, he need only specify the standard to which he wishes the goods to conform. He knows beforehand exactly what they should be like, and, if there is any dispute, it can quickly be settled simply by comparing the goods supplied with the standard.

As regards classification, however, it is sometimes difficult, if not impossible, to include in one or other of the categories adopted measures taken to ensure the standardisation of certain products or commodities. If standards of manufacture are insisted on in the case of certain foodstuffs, for instance, and there is no outward sign to show that the goods in question conform to this standard, the measures should be included in Category No. 1; if the standards imposed in other cases must, in addition, be officially and compulsorily guaranteed by means of an outward and visible sign,

they will naturally come under Category No. 2; lastly, if private groups possess a collective mark and adopt a standard in regard to manufacture or production to which their members voluntarily agree to conform, these measures should come under Category No. 3.

There are other cases, however, in which similar measures adopted for the same purpose cannot strictly be placed in any of these sub-divisions. When, for instance, in the last-mentioned case the association of producers or manufacturers does not possess a collective mark, the provisions in question cannot be included in Category No. 3 or in any of the other categories, although it is advisable that they should be mentioned in view of their utility to the purchaser.

These provisions may be regarded as coming under Category No. 3 in many respects, since the collective mark is usually replaced by the name of the group or association producing the goods, which implies that the latter conform to the standard adopted.

Moreover, the certificate provided for in Category No. 4 could be replaced by an invoice; and, if the buyer took the trouble to ask for it, he would doubtless have no difficulty in obtaining a certificate from his seller to the effect that the goods supplied conform to the standard of the association to which the latter belongs. For this reason, the information given under Category No. 3 for the United States of America, where cases of this kind are particularly numerous, is followed by a list of the principal associations.

Mention should also be made of the standards and specifications officially adopted by the Government, as is frequently the case in the United States, where the Government, after recognising the standards and specifications for certain commodities and publishing them, also states that all goods of the type in question supplied to it must conform to the said standards; otherwise, they will not be accepted. In such a case, the buyer need only specify in his order that the goods supplied must conform to the standard and that they will be checked by that same standard. This is more in accordance with Category No. 4.

ARGENTINE REPUBLIC

CATEGORY 1.

In virtue of the Law of October 3rd, 1923, any person whose regular occupation consists in the purchase of *oxen, sheep or pigs* for internal consumption or for export must, before he can exercise his trade or industry, register with the Ministry of Agriculture.

Similarly, *cattle markets*, frozen meat establishments, slaughter-houses or fairs where live-stock from all parts is sold by auction, may not be carried on unless they have been previously declared at the Ministry of Agriculture.

The declaration mentioned in the above law asks:

(1) To take all sanitary and other necessary measures for keeping the live-stock and its products in a healthy condition and to observe the sanitary regulations relating thereto contained in the laws and decrees;

(2) To inform the Ministry of Agriculture of the processes or operations performed in his establishment, with all details that are asked for and in the form decided upon by the executive power.

Registered persons who commit a breach of the foregoing regulations shall be liable to a fine not exceeding 5,000 pesos. In the case of a second offence, the executive power may, besides inflicting a fine, decide to suspend or cancel the entry in the register.

The Ministry of Agriculture shall also be entitled to take action in connection with the preparation of animal products, not only to ensure the strict application of the sanitary measures, but also, if necessary, to forbid the use of methods calculated to bring Argentine products into disrepute or to endanger foreign markets.

The Ministry shall enforce the law through the technical inspectors of the Meat Department, and shall give all necessary publicity to information relating to production and to the meat trade and industry.

CATEGORY 2.

The preparation of *frozen meat* and other *products of animal origin* is under the strict supervision of the inspectors of the Ganaderia Division (department for the breeding and utilisation of live-stock). Under the terms of the Government Decrees of October 4th and November 15th, 1906, inspectors are attached for this purpose to all establishments which prepare meat or export to foreign countries or consign meat from one province or territory to another.

This inspection commences upon the arrival of the animals at the premises, where they are examined before being placed in the enclosures. When passing through the corridor leading from the enclosure to the slaughterhouse yard they are again examined. Those showing the slightest symptom of any disease are eliminated. The slaughter of the animals takes place under sanitary conditions, in accordance with the regulations in force, this being followed by the macroscopical and microscopical inspection of the carcasses and the immediate seizure of any the consumption of which might be injurious to health.

The carcasses and organs seized are placed in the digester, which extracts the fat (only allowed to be used for industrial purposes), while the quarters seized are sent to special premises under the supervision of an official of the sanitary service.

The carcasses of any animals which die in the enclosures or passages of the factories are examined, the blood being bacteriologically analysed in the laboratory attached to every sanitary inspection service for its scientific investigations.

Prepared products are also analysed in special laboratories and are only allowed to be exported when found to be in a perfectly wholesome condition.

The Frozen Meat and Foodstuffs Factories Section controls every stage in the preparation of meat, and any change is forbidden in the usual procedure without previous permission from the Ganaderia Division.

Meat for export must be accompanied by sanitary labels or marks, and every cargo must be accompanied by a certificate issued by the chief of the competent division, to the effect that it has been properly prepared.

The steamer, when ready to be loaded, is examined by a sanitary inspector.

Not all the animals slaughtered in the frozen meat factories are suitable for "*chilled beef*". It is essential that animals for this purpose should be of good stock, young and well fattened.

When they reach the refrigerating chambers, the carcasses suitable for export are classified and labelled "suitable for chilled meat", or "suitable for frozen meat".

Twelve hours later, the meat, which is kept in the chambers at a temperature of 30° F. (— 1° C.), is placed in the various compartments, where the halves are divided into quarters, and the quarters are wrapped in cotton-yarn sacks, bearing the mark of the firm and that of the sanitary inspection service.

CATEGORY 3.

Apart from Government supervision, consignments are verified by the technical inspectors of insurance companies who, before giving authority to load, examine all the apparatus and machinery, the sanitary conditions of the vessel, the state of the insulating materials which form the partition-walls, etc. Further, each chamber used for chilled meat is provided with an automatic temperature register during the whole voyage.

The refrigerating chambers on the vessels are disinfected and kept at a temperature of 25° F. (— 3.9° C.) before the meat is placed in them; the temperature is brought up to 29° F. (— 1.7° C.) by the meat, and this temperature is maintained throughout the voyage. Before meat leaves the chambers of the factories, its internal temperature must be ascertained: this must always be less than 31° F. for chilled meat and between 6° and 12° F. (— 2° to — 6° C.) for frozen meat.

AUSTRALIA.

CATEGORY 1.

Exportation of the following goods is prohibited:

Margarine containing oil or other product not necessary to the manufacture of the margarine and which makes it resemble butter in colour; also margarine containing the fat of diseased animals or containing fat refined in receptacles other than open steam-jacketed kettles or pots.

Meat, unless it has been certified of sufficient quality for exportation by a Government inspector. Exportation of meat which is mouldy is prohibited or which has spoiled since examination and delivery of the certificate; or, in the case of frozen meat, which is not sufficiently frozen for exportation; or if it is a bad shape or badly packed; or when its packing is unhygienic, soiled or discoloured; or if it is loaded on ships whose holds are unhealthy; or, finally, if according to the inspector, it has not been brought on board the ship under satisfactory conditions.

Fresh fruit, certain *preserved fruits* and *dried fruits*, unless they have been prepared and graded to the satisfaction of a Government official and in conformity with regulations and according to recognised types.

Preparations of milk, before being submitted to inspection for the purpose of verifying whether they conform to certain standards of quality.

CATEGORY 2.

A law of 1905 (Commerce Trade Descriptions Act No. 16) is intended to maintain a high standard of quality for a large number of goods which are exported from this country.

It prohibits, in particular, exportation of certain goods when they do not bear a trade description in conformity with rules laid down in the regulations. Goods which do not bear trade description according to the rules and which are exported or presented for exportation or loaded on a ship with a view to exportation may be confiscated.

Any person who knowingly applies a false trade description to any goods intended for exportation presented for this purpose to the Customs or loaded on a vessel is liable to a penalty of £100. The same penalty is provided in the case of any person who exports or attempts to export.

"Trade description" means any declaration, indication or suggestion, direct or indirect, concerning:

- (a) The nature, number, quantity, quality, purity, class, measure, size or weight of the goods;
- (b) The country or place where the goods were produced or manufactured;
- (c) The producer or manufacturer of the goods or the person who has selected, packed or prepared them in any way whatever for the market;
- (d) The mode of manufacture, production, selecting, or packing or preparation of the goods;
- (e) The materials or ingredients of which the goods are composed or from which they are derived;
- (f) The fact of the application to these goods of a patent, privilege or copyright.

There is included under the name of trade description a Customs entry and any mark which, according to the custom of the trade or in the usual sense, takes the place of an indicative of one or other of the circumstances enumerated above.

False trade description signifies a description which, by reason of any omission or addition, is false or likely to mislead materially as regards goods to which it is applied. It includes any alteration of trade description either by addition, effacement or other means.

A trade description is considered as being applied to goods in the following cases:

- (a) If it is applied to the goods themselves;
- (b) If it is applied to any covering, label, reel or other thing used in connection with the goods;

(c) If it is used in a manner likely to lead to the belief that it describes or designates the goods.

The Customs has the right to inspect and examine all goods covered by these regulations and intended for exportation. It has the right to take samples for the purpose of analysis.

Customs officers may enter any ship, wharf or place, and may open any packages and take all necessary measures to enable them to carry out their duties.

Exporters must inform the Department of Markets and Transport of their intention to export goods covered by the regulations.

5 The goods to which the foregoing provisions apply are: *frozen meat, meat products, rabbits and hares, butter, cheese, condensed milk and preparations of milk, fresh, preserved and dried fruits, and the pulps of fruits, chutneys, pickles and sauces, honey, conserves, jams, fresh and preserved vegetables, seeds, plants, maize, boots and leathers, eggs in shell and egg pulp.*

All these goods must bear on the covering, in addition to an exact trade description, the word "Australia".

6 *Meat and products thereof* are prepared under the supervision of qualified inspectors, who discard from exportation everything which does not correspond to a high standard of quality. Their control covers also sanitary [conditions, [supervision and inspection of the transport; all establishments which are engaged in this trade are compulsorily registered every year.

Every beast slaughtered in the establishments mentioned is examined before and after slaughtering, and the officials of the competent administration also control the observance of hygienic rules.

7 Goods prepared for exportation in these establishments, are: *frozen meat, preserved meat, sausages, edible fats.* They also deal with *non-edible tallow and skins.*

All the edible products must be accompanied on exportation by an official certificate guaranteeing that the products comply with the required conditions.

The grading of meat and meat products by qualities is assured by the private firms themselves, but it is effected under the supervision of an inspector. Products considered as not being under a good average quality bear the seal of the Commonwealth with the words "Approved for exportation" (approved). Those which are not of a quality inferior to the current average bear the seal of the Commonwealth with the words "Accepted for exportation" (passed).

8 *Leather* is also subject to control by the administration. The latter takes for analysis samples of all leather intended for exportation which is prohibited if the leather is intended for human wear and contains: (a) any part whatever of sulphate of barium or other composition of barium; (b) more than 10 per cent of glucose and sugar combined. If the preparation is less than 10 per cent of glucose and sugar combined, the percentage must be indicated in the description only on this condition; (c) more than 3 per cent mineral ash.

9 Any consignment of *butter or cheese* intended for exportation must be examined and must be furnished with a seal of the Australian Government warranting that the required qualities exist.

Trade indications must contain in legible and apparent characters the date of manufacture, the letter "C" or "W", as the case may be, to indicate whether the cheese is coloured or white, as well as the number of the crate or barrel.

Butter and cheese intended for exportation are transported to a certain place for examination. After this examination is made, the goods are put in a special place and subjected to a certain temperature, and cannot be removed without the authority of the competent official.

The officials cannot proceed to the classification of any impure butter or cheese. Any cheese aged less than three weeks cannot be graded without the authority of the official authorised to that effect.

Cheese cannot contain any foreign matter except rennet, salt or such colouring matter as the Minister considers harmless.

Cheese is compulsorily subject to inspection and grading.

The different grades of cheese are as follows: cheese, pure, choicest, from 92 to 100 points; cheese, pure, of the first class from 90 to 91 points; second class from 86 to 89 points; third class from 82 to 85 points.

The official mark corresponding to the class of each piece is affixed to the butter and cheese intended for export by the competent official.

The exportation of butter and cheese is forbidden unless they comply with the following conditions:

(1) They must have been prepared in a factory registered by the Secretary, Department of Markets and Transport, provided that, where registration is effected in conformity with the legislation of a State, this registration may be accepted by the Secretary.

(2) Butter considered as having 92 points and over must be obtained by means of pasteurised cream.

(3) Butter or cheese graded at 92 points and over will bear on the base of the crate which contains it a legible and indelible impression of the mark of standard manufacture

representing a kangaroo and, above, the word "Kangaroo". This mark, which is contained in a circle of three inches in diameter, is affixed after the butter or cheese has been graded by an official or with the approval of the Secretary.

This mark will be affixed in a visible position on the side or extremity of the case or crate which bears the compulsory trade description.

The exportation of cheese containing margarine or other foreign fat substance is forbidden.

It is also forbidden to export butter containing fatty matters other than those of butter, ingredients for preservation other than salt, colouring matter, unless they have been declared non-injurious by the Minister, or which contains more than 16 per cent water or 3 per cent casein or 4 per cent salt, or $\frac{1}{2}$ per cent boric acid, or less than 82 per cent of fatty matter.

CATEGORY 4.

Hides. — Certain countries, such as Canada, require a certificate of origin on the importation of hides attesting that the animals from which they come were free from disease, but there exists no compulsory rule for exportation of hides from Australia. 10

The purchase of *wool* is generally only made after a previous examinations by the experts. 11

Metals, such as *copper, zinc, lead, tin, silver*, etc., are always subject to assays both by the seller and the buyer, according to the usage of the market of the metals. 12

Gold in bars bears the stamp of the mint or is accompanied by assay certificates. 13

Wheat is sold on the basis of the standard F.A.Q. 14

The conditions of exportation of wheat and *flour* are determined by usage of the trade. 15

AUSTRIA.

CATEGORY I.

1 A law dated January 16th, 1896, regulates the manufacture of and the trade in *foodstuffs* and a number of commodities such as *cosmetics, toys, wallpapers, wearing apparel, table and kitchen utensils, scales, measures and other instruments used to weigh or to measure foodstuffs.*

2 The same law also regulates the use of *colours* for house decoration and, finally, the trade in petroleum.

Agents appointed by the administrative or municipal authorities are charged with the supervision of the manufacture of and the trade in these commodities.

Autonomous bodies may also be authorised to appoint special sworn agents for the enforcement of the regulations on the trade in foodstuffs. All such agents must have adequate technical qualifications.

These agents are authorised, and, in fact, are bound, to inspect premises where goods coming under the law are sold, stored, produced or manufactured. They have authority to take samples for the purpose of analysing the substances used in the manufacture of the goods in question, together with samples of the goods themselves when they are offered for sale.

The owner is given compensation if he so requires.

The agents entrusted with the task of supervision must inspect the establishments engaged in the preparation, manufacture and transformation of foodstuffs and the trade therein, even when there is no reason to believe that the law is being infringed.

The Ministries concerned are empowered to take measures to prohibit or restrict:

1. Certain methods of manufacturing, preparing, preserving and making up foodstuffs intended for sale;
2. The sale and offering for sale of certain classes of foodstuffs;
3. The use of certain substances and colours in manufacture, and the use of certain classes of toys, wallpapers, wearing apparel, cosmetics, table utensils, etc.;
4. The sale and offering for sale of certain kinds of petroleum.

The Ministries concerned may also prohibit or restrict the manufacture and the sale or offering for sale of articles for imitating or adulterating foodstuffs, as also the sale and offering for sale of foodstuffs under an incorrect name.

Substances which are not at present used in the manufacture of the articles covered by the law can only be employed for that purpose with the authorisation of the Ministry of the Interior.

A large number of decrees have been issued, based on the Law of January 16th, 1896; these lay down detailed regulations regarding some of the substances coming under this law.

The samples taken by the agents responsible for supervision are analysed in the national laboratories. The latter are bound to file a complaint with the public prosecutor of the competent court whenever the technical analysis of an article of food or a commodity coming under the law gives rise to the belief that an offence has been committed.

3 The Law of October 25th, 1901, concerning the sale of butter, cheese, etc., prohibits the placing of *margarine* on the market unless it bears a distinctive mark and unless its packing is marked with a band of a colour fixed by ministerial decree.

Manufacture of margarine cheese must obtain official authorisation. Such manufacture is prohibited in dairies where ordinary milk cheese is made. A ministerial decree requires the addition of 5 per cent of sesame oil to substances which are used in the manufacture of margarine cheese. Shops where cheese of this kind is on sale must indicate the fact in some conspicuous place.

4 The Austrian Food Code of 1917 supplies the following classification of the percentage of fats: *cream cheese*, containing at least 50 per cent fat in the dry substance; *full-milk cheese*, 40 per cent; *cheese 3/4 milk*, 30 per cent; *cheese half-fat*, 20 per cent; *cheese one-quarter fat*, 10 per cent; skim-milk cheese, less than 10 per cent.

It was decided, moreover, that, for cheeses of the Gervais type, the minimum of fatty substances would be 50 per cent and for Camembert 30 per cent; for "Camembert gras" the minimum is 40 per cent.

5 The use of *white and yellow phosphorus* is prohibited for the manufacture of matches.

6 *Explosives* may not be manufactured, used or offered for sale unless they have been approved by the competent authority. A licence is required for the industrial manufacture of explosives,

and special authorisation must be obtained. The manufacture of *gunpowder* is a State monopoly.

The *Wine* Law dated June 17th, 1925, B.G. Bl.No.217, amended by the Law of July 17th, 1928, B.G. Bl. No.232, stipulates (1) that only processes, dilutions and additions authorised by the law are allowed in the production, transformation and making up of wines, wine musts and fruit wines (cider, perry, etc.) for trade, as also for the improvement of damaged beverages; and (2) that certain names likely to cause misunderstanding are prohibited.

The Amendment of July 18th, 1929, B.G. Bl.No.254, provides that *mixed wines* must be described as such.

In virtue of the Decree of September 24th, 1925, B.G. Bl. No.380, the production of *pharmaceutical specialities* is subject to a special authorisation granted only to pharmacies and wholesale druggists; moreover, the establishment in question must offer all the necessary guarantees. Pharmaceutical specialities may only be bought and sold after being examined by the authorities.

CATEGORY 2.

All *gold, silver* or *platinum* articles and articles which contain an alloy of these precious metals with other metals, if manufactured in the country, offered for sale or exported, must be of a fineness not less than that indicated below. The fineness must be shown on the articles themselves.

For gold articles:

- (a) 986 thousandths
- (b) 800 "
- (c) 750 "
- (d) 585 "

For silver articles:

- (a) 935 thousandths
- (b) 900 "
- (c) 835 "
- (d) 800 "

For platinum articles:

- (a) 950 thousandths.

Settings for white or colourless stones and pearls, consisting of a mixture of platinum and other metals added to gold or silver articles, must not be of a fineness less than 100 thousandths. These settings need not be stamped.

As regards *alloys*, the following may be used until further instructions: for gold—besides silver and copper—platinum, aluminium, cadmium, iron, nickel, zinc and alloys of these metals; for silver, besides copper, also platinum, aluminium, lead, cadmium, nickel, zinc and alloys of these metals. If metals other than silver or copper are used for alloys, and also if a metal cement is used containing volatile metals, such as cadmium or zinc, this must be declared at the Stamping Office when the article is presented for marking. The metals used have to be declared. In the case of platinum, any metals may be used for alloys.

Gold and *silver articles* manufactured in Austria must bear the trade-mark or the name of the manufacturer. The latter must apply to the Stamping Office, which will supply him with a stamp, this must be returned when he gives up business.

It is forbidden to place on gold or silver articles any mark resembling an official national or foreign stamp.

Manufactured products and imported goods must be submitted—classified strictly according to the fineness and the alloy—to the Stamping Office to be certified and stamped. When submitted, they must be accompanied by a declaration made on the prescribed form, giving particulars of the nature, number, weight, fineness and other qualities of the articles.

Articles which have already been inspected, but may have undergone some transformation or further treatment, must be re-examined.

Mixed articles—*i.e.*, platinum articles with gold and silver parts, or conversely—must have their various parts stamped to show the fineness. Where this is impossible, they are, as a rule, marked with a special stamp called the "stamp for mixed articles".

The stamps are as follows:

1. For articles of national manufacture:

- (a) Platinum articles: owl-moth;
- (b) Mixed platinum articles: grasshopper;
- (c) Gold articles of fineness 1, 2 and 3: an elephant's head;

- (d) Gold articles of fineness 4: a horse's head (formerly a bear's head);
- (e) Silver articles of fineness 1, 2 and 3: a hoopoe's head;
- (f) Silver articles of fineness 4: a toucan's head;
- (g) Mixed gold and silver articles: a heron's head (formerly the head of a walrus);

2. For articles of foreign manufacture:

- (a) Platinum articles: a butterfly;
- (b) Mixed platinum: a stag-beetle;
- (c) Gold articles of all four finenesses: a bunch of grapes (formerly a sea-horse);
- (d) Silver articles of all four finenesses: the wing of a bird (formerly a fish);
- (e) Mixed gold and silver articles: the head of a cockatoo.

Gold and silver articles are not only stamped with one of the designs mentioned above, but also bear the mark of the control office and the fineness. Where the same stamp is used for several finenesses, the latter are indicated by a special border. Stamps for platinum articles, as also stamps for mixed articles, have only the Office mark in addition to the design.

The letter of the various offices are:

- W for Vienna,
- L for Linz,
- G for Graz,
- I for Innsbruck,
- K for Klagenfurt,
- N for Wiener-Neustadt,
- S for Salzburg.

13 The Decree of November 19th, 1872, amended by the Decree of August 13th, 1913, makes the verification and inspection of *weights, measures and scales* compulsory. This work is carried out by special official bureaux; they employ a stamp bearing the imperial eagle. Further, each control office has its own number, which is shown on its stamp on the left of the eagle, while on the right there is a star with six points, the distinguishing mark of the Federal Office of Standards and Measures, the supreme technical organ for weights and measures. This Office, which is under the Minister of Commerce and has its headquarters in Vienna, keeps in close touch with the technical control offices that work under its direction, and every year, on the basis of information supplied by these offices, it forwards a general report to the Minister of Commerce on the position of stamping and on its own activities.

14 *Alcoholometers, saccharometers, gasometers and electricity and water meters* must also be passed by these control offices before they can be used.

15 *Maximum thermometers* have to be submitted to official inspection and to receive the certification mark. They are examined and marked by the Federal Office of Standards and Measures.

16 Austria acceded to the International Convention signed at Brussels on July 15th, 1914, regarding *fire-arms*.

The marks of the proof-houses of the countries party to the Convention are deemed to be equivalent to the national proof marks. Those countries are at present Belgium, France, Germany, Hungary, Italy and Spain.

Agreements concluded at an earlier date with Great Britain and Czechoslovakia provide for a reciprocal recognition limited to the proof marks for certain tests.

17 *Pharmaceutical specialities* may not be bought and sold unless they have been previously examined by the proper authorities. In general, they must be registered and each packet, envelope, container, etc., must, apart from the officially approved signature, bear a registration number. Products registered in this way come under a regular system of inspection and the registration has to be renewed at fixed periods. In virtue of a special authorisation, certain specialities may be exempted from periodical registration; they remain, however, subject to supervision. Such pharmaceutical specialities are marked "V.R.b." (Von der Registrierung befreit—*i.e.*, exempt from registration).

18 Apart from these specialities in the strict sense of the term, which are treated in some ways like patents of invention and trade-marks, there are certain other *medicinal preparations, materials for dressings, etc.*, which are *not* specialities, but are nevertheless sold in a standardised form. Manufacturers may, if they so desire, submit these products for the inspection and control of the official institutes mentioned in document A.26.1928.II; they are then entitled to place on their products a control stamp, a banderole, etc. It should be pointed out, however, that this distinctive mark does not confer any exclusive right, as in the case of pharmaceutical specialities. It is merely a mark showing that the article in question has been inspected. The acceptance of this form of control, moreover, is optional. The same product can be offered for sale—without the control mark, of course, but quite legally—by any person whatever authorised to engage in this branch of trade.

19 The Federal Institute for the protection of plants at Vienna inspects *nurseries* and also *plants* intended for export, ascertaining whether the plants are healthy, and then issues certificates which are officially recognised. It also controls and issues certificates for a number of *products* intended for the protection of plants.

20 The Federal Institute at Vienna for *plant-growing* and the analysis of *seeds* issues certificates showing the actual results of its examinations and analyses; these certificates are officially recognised.

The customary sealing of *clover seeds* and the verification of the guaranteed value of *seeds* resulting from a so-called "verification control" are carried out by the Ministry of Agriculture. 21
The Federal Experimental Forestry Institute at Mariabrunn deals with the *seeds of forest trees*. Its certificates are also recognised officially. 22

CATEGORY 3.

There are a large number of registered marks and signs which indicate the usual trade quality of the articles on which they are placed; for example, iron and steel are marked to show their hardness, density, elasticity, chemical composition, etc.

The "Oesterreichische Gesellschaft für Technik im Haushalt" (Austrian Company for Domestic Technique) has a sign registered "Te-Ha". This may be placed by producers and traders on household articles which the company has tested and thought worthy of recommendation on account of their good workmanship and practical utility.

CATEGORY 4.

A law passed in 1910 gave a number of autonomous technical experimental stations set up by the State, corporations, associations or private individuals the right, subject to certain conditions to issue official certificates showing the results of the examination, testing and verification of goods carried out by them. These stations are described as "authorised" testing stations. Their respective technical functions and powers are clearly defined. The competent Ministry has to approve the appointment of the directors of these stations and the scale of charges.

The provisions of the aforesaid law are enforced by the State Bureau for Technical Tests, consisting of a number of officials and a board of experts whose work is directed by the chairman.

This bureau possesses all the data required for a unification of the basic rates chargeable for tests, and for the issue of certificates and opinions. The rates charged by the authorised testing stations are calculated on this basis. The bureau has to revise some of the basic figures from time to time.

A large number of testing stations have been established; they ensure complete supervision of the goods from every point of view.

The State establishments known as the Institute for Chemical and Pharmaceutical Analyses and the Institute for Experimental Pharmacological Analyses of the Public Health Office at Vienna, independently of their functions in the technical supervision of *chemical and pharmaceutical products, drugs and other medicaments*, verify the products of private individuals or industrial undertakings if the latter ask them to do so. They even exercise a permanent control if a request is made to this effect. 23

As regards *foodstuffs* and *certain articles in general use* which come under the Law of 1896 (*vide* Category 1), general official institute for the analysis of foodstuffs have been established at Vienna, Graz and Innsbruck, each having an area of its own. 24

Special official institute for the analysis of foodstuffs and for chemical-agricultural tests are also in existence at Bregenz and Klagenfurt.

All these general and special institutes carry out analyses at the request of private individuals and of the authorities on payment of a fee; they issue official certificates.

The Federal Agricultural and Forestry Institutes issue official certificates regarding the nature or composition of the goods at the request of the parties concerned.

The Federal Chemical-Agricultural Testing Institutes of Vienna and Linz undertake strictly scientific researches into *animal and vegetable production*, examinations and analyses directly bearing on practical agriculture, the analysis and supervision of the various *fertilisers and jadders*, and physiological and microscopic analyses. 25
26

The provincial chemical-agricultural testing Institutes at Graz, Klagenfurt and Bregenz work under precisely the same conditions, but are specially adapted to local requirements.

The Federal Institute for the protection of *plants* at Vienna, which we have already mentioned above (see Category 2), is authorised to issue certificates in regard to the technical examinations and analyses which it is entitled to perform if requested to do so, within the limits of its functions as laid down in its statutes. 27

The Federal Institute for plant-growing and seed analyses at Vienna has also already been mentioned (*ibidem*). It should be noted that *seed* merchants can make an arrangement with the Institute by which their commodities may be inspected if they so desire. 28

29 The Federal Forestry Testing Institution of Mariabrunn serves as a control station for
forest seeds and also carries out tests on the strength of the different kinds of wood. The certificates
issued by it are officially recognised.

30 The Experimental Institute of the Vienna Polytechnic has authority to issue, on receipt
of a fee, official certificates for all branches of the technological analysis of *material, building*
parts and *machinery*.

31 The Experimental Institute for *gas lighting, fuel* and *combustible substances* and *heating*
apparatus is also a branch of the Vienna Polytechnic. In these various fields it undertakes, on
payment of fees, the examination of apparatus, processes and materials submitted to it by
manufacturers and other parties concerned. It also issues officially recognised certificates.

The Technological Laboratory of the Graz Polytechnic carries out, under the same conditions
as the last-named Institute, tests with regard to traction, pressure and hardness, and examines
jointing.

32 The Experimental Station for *Agricultural Machinery and Implements* of the Higher School
of Agriculture in Vienna also issues certificates, under the above conditions, for everything
pertaining to *agricultural machinery* and *implements*.

33 The Laboratory of the Federal Geological Institute at Vienna has the same functions as
the above-mentioned institutes in regard to the analysis of *ores* and *minerals, coal* and *water*, etc.

34 The Radium Research Institute of the Academy of Sciences at Vienna undertakes the
systematic analyses of *spring waters* in order to determine the quantity of radium contained
in these waters and their degree of radio-activity.

35 The Committee for the Verification of Musical Pitch of the Institute of Physics at Vienna
University is obliged to verify *tuning-forks* free of charge and to issue, if necessary, an official
guarantee sheet.

Finally, the chemical laboratories attached to the University Chairs regularly undertake
technical examinations, at the request of private individuals and on payment of a fee, when
such work comes within the province of the Chair in question. They may also issue certificates
showing the results of the examinations. These laboratories are not, however, obliged to undertake
this work nor to issue certificates.

There are, in addition, a large number of experimental and examining centres attached
to scientific and technical institutions, the chief of which are:

Federal Office for the Verification of Weights and Measures, Vienna, III, Friedrich Schmidpl., 3.

Austrian Standardisation Committee for Industry and Trades, Vienna, III, Lothringerstrasse, 12.

Experimental Institute for Building Materials and Mechanical Engineering, at the Techno-
logical Museum of Arts and Crafts, Vienna IX, Währingerstrasse, 59.

Municipal Experimental Institute for Building Materials, Vienna I, Rathaus.

Experimental Laboratory for the Railway Stock of the Vienna Federal Railway Board,
Nord-Est II, Holzhausergasse, 1.

Institute for Paper Testing (Papierprüfungsanstalt) at the Technological Museum of Arts and
Crafts, Vienna IX, Währingerstrasse, 59.

Research Institute and Experimental Institute (recognised by the State) for the textile
industry, Vienna IX, Michelbeuerng., 6.

Silk and Wool Conditioning Institute, Vienna IX, Michelbeuerngasse, 6.

Institute for Calculating the Force of Gravity, Vienna IV, Karlsplatz, 13.

Natural History Museum, Vienna, I, Burgring, 7.

Technical Centre for the Examination of Precious Stones (recognised by the State), Vienna
IX, Michelbeuerngasse, 6.

Experimental Institute for Thermodynamics and Thermotechnology, Vienna III, Strohgasse,
21 A.

Experimental Institute for Heating Apparatus of the Joint-stock Company for Examining
and Insuring Boilers, Vienna III, Strohgasse, 21 A.

Thermal Economy Company, Vienna III, The Industrial House.

Electro-Technical Experimental Institute, Vienna IX, Währingerstrasse, 59.

Radio-Technical Experimental Institute, Vienna, IX, Währingerstrasse, 59.

General Experimental Office, Vienna III, Heumarkt I.

Approved Experimental Institute for Ceramic, Glass and Enamel Ware, Vienna I, Stubenring, 3.

School and Laboratory of the Graphic Arts, Vienna VII, Westbahnstrasse, 25.

General Centre of Chemical Analyses of the Federal School and Institute for the Chemical
Industry, Vienna XVII, Rosensteingasse, 79.

School and Experimental Centre for the Leather Industry, Vienna XVII, Rosensteingasse, 79.

General State Laboratory for the Analysis of Food Products, Vienna IX, Kinderspitalgasse, 15.

Chemistry and Microscopy Laboratory of Dr. Adolf Jolles, Professor, Vienna IX, Türken-
strasse, 9.

Chemistry and Microscopy Laboratory of Dr. Max Stein, Vienna I, Börsendorferstrasse, 4.

Chemical Institute of Herr Ferdinand Wosolobe, Vienna Engineer, VIII, Piaristengasse, 54,
and of Dr. W. Traxl, Vienna V, Kronengasse, 20.

Chemistry and Pharmacology Laboratory, Vienna I, Salvatorgasse, 12.

Laboratory of Pharmacological Experiments, Vienna IX, Währingerstrasse, 13 A.

Laboratory of the General Association of Austrian Apothecaries for the Analysis of Foodstuffs,
Vienna IX, Spitalgasse, 31.

Institute for the Examination of Agricultural Machinery and Implements, Vienna XVIII,
Hochschulstrasse, 17.

Experimental Institute for Automobiles, Vienna IX, Michelbeuerngasse, 8.

Experimental Institute for Hydraulic Engineering, Vienna IX, Michelbeuerngasse, 8.

Experimental Institute for Marine Engineering, Vienna XX, Brigittenauer Lände No. 256.
Experimental Institute of Machine and other Tools, Vienna IX, Währingerstrasse, 59.
Austrian Experimental Institute and School of Brewing, Vienna XVIII, Michaelstrasse, 25.
Austrian Testing Station for the Fermentation Industry, Vienna XVIII, Michaelstrasse, 25.
Experimental Institute for Milling, Baking, Yeast Manufacturing and Allied Industries,
Vienna II, Trunnerstrasse, 3.
General Laboratory for the Analysis of Food Products, Graz, Universitätsstrasse, 6.
Technical Chemistry Laboratory of Herr Karl Lipp, Civil Engineer, Graz, Humboldtstrasse, 12.
Institute for the Examination of the Materials of the Kapfenberg Cast Steel Works, Gebrüder
Böhler und Co., Joint-Stock Company, Kapfenberg, Styria.
Federal School and Experimental Centre for Portable Arms, Ferlach, Carinthia.
General State Laboratory for the Analysis of Food Products, Innsbruck, Liebeneggstrasse, 8.

CATEGORY 5.

In pursuance of paragraphs 870 *et seq.* of the Civil Code, any person who has been tricked into concluding a contract by the other party is not under any obligation to fulfil it.

Paragraph 874 states that, in any case, the person who has brought about the conclusion of a contract by means of a trick must make good the damage caused.

The provisions of paragraphs 922 to 933 of the Civil Code with regard to warranty should also be mentioned. If any person cedes a thing to any other person or persons in return for payment, he is obliged to warrant that the article in question possesses the qualities expressly stipulated or usually considered to belong to that article, and that it can be used or employed in accordance with the nature of the article, or the stipulations specified. If there is a defect which cannot be made good or such as to render the article unfit for its ordinary use, the purchaser may demand the cancellation of the contract (paragraph 932).

In conformity with Article 335 of the Commercial Code, if the contract does not include any precise mention of the nature and quality of the article, the seller is bound to warrant trade goods of average nature and quality. The buyer is not obliged to take delivery of the goods unless they conform to the stipulations of the contract, or, failing any special stipulations, to the requirements of the law (Article 346).

In regard to the provisions of the criminal law, the rules of the Penal Code on fraud should first of all be mentioned (paragraphs 197, 199, (c) and (d); 200, 202, 203 and 205, and also 461 of the Penal Code).

Apart from these general legislative enactments, there is also a large number of special laws laying down penalties for the infraction of their provisions.

BELGIUM.

CATEGORY 1.

1 The Law of August 4th, 1890, gives the Government authority to make rules for the trade in, and the sale or retailing of, *foodstuffs* and commodities used for good fooder, and to see that those rules are enforced.

Nevertheless, the powers conferred on the Government are limited to measures for the protection of the public health or the prevention of fraud and adulteration.

The above-mentioned law also confers on the Government the right to supervise, in the interests of public health, the actual manufacture or the preparation of foodstuffs intended for sale, and to prohibit the use of injurious or dangerous materials, utensils or articles.

For the enforcement of this law the following regulations have been laid down by Royal Decree:

2 Royal Decree providing regulations on the artificial colouring of foodstuffs (December 10th, 1890) This decree forbids the use of any poisonous dyes for the colouring of foodstuffs intended for sale, such as *sweets, comfits, sugar paste, sweetmeats, pastries, food pastes, preserves, jams, syrups, liqueurs, wines, fruits, vegetables, etc.*

The bags or recipients in which painted or artificially coloured foodstuffs are packed for wholesale or semi-wholesale trade must bear in legible characters the name and address of the seller and the style of the firm.

By a Royal Decree establishing regulations with regard to the *utensils, vessels, etc.*, used in the manufacture of and trade in foodstuffs (December 10th, 1890), it is forbidden to employ for the preparation, preservation, or packing of foodstuffs intended for the wholesale or retail trade in these products, vessels, utensils, recipients or other articles the parts of which in contact with these foodstuffs consist of poisonous materials or materials injurious to health, or contain such.

Within the meaning of these regulations the following must be considered, in particular, as poisonous or injurious to health: lead and zinc, as also alloys, tinned material, soldering and enamels containing these metals, arsenic, antimony, or their compounds, and, further, the poisonous colours referred to in Article 1 of the Royal Decree of December 10th, 1890, on the use of dyes.

3 A Royal Decree (April 30th, 1897) regulating products intended for the feeding of animals stipulates that *composite substances* consisting of mixtures of industrial food products or by-products with substances of a different nature intended for the feeding of animals may not be delivered or conveyed for sale or delivery in quantities exceeding 25 kilogrammes unless they are accompanied by invoices, waybills or other documents indicating the nature and the relative proportions of the various ingredients of the mixture.

Industrial food products or by-products containing non-injurious foreign organic or mineral substances in the form of natural impurities (for instance, linseed oil-cake containing other seeds collected with the flax) are treated as mixtures if the impurities in question exceed 12 per cent.

Such articles of food may not be described as pure unless they contain less than 2 per cent of natural impurities.

4 Royal Decrees of January 29th, 1894, and December 30th, 1896, embodying regulations for the manufacture of and trade in *beer*, strictly prohibit the use of products containing substances injurious to health in the manufacture and preparation of beer. For the purposes of these regulations, the following, in particular, are considered as injurious to health: antiseptics such as salicylic acid, sulphurous acid, or their saline compounds. Nevertheless, sulphurous acid is allowed in beer if it does not exceed 14 milligrammes per litre, since its presence may be due to a careful disinfection of the barrels.

Casks, bottles or other recipients in which beer is placed for the wholesale or semi-wholesale trade must bear in clear characters the name or title of the firm, and also the address of the manufacturer or merchant.

5 Any properly registered trade-mark may be used instead of the particulars prescribed above. A Royal Decree regulating the trade in *coffee* (September 28th, 1891) prohibits the sale and offering for sale, and the holding or transporting with a view to sale under the name of coffee, of any product other than the husked seed of the coffee plant, either simply dried (green coffee) or roasted or ground after roasting.

Coffee substitutes, such as chicory, the seeds of cereal and leguminous plants, figs, acorns, dates, etc., or mixtures of coffee with coffee substitutes or with any foreign substance whatsoever, may not be sold or offered for sale or held or transported with a view to sale, except under a name

not containing the word "coffee" or derivatives, compounds or homonyms thereof, or the name of any place of origin of natural coffee. If such products are in the form of berries, such berries must be cylindrical in shape.

Similarly, a Royal Decree of November 18th, 1894, relating to the trade in *chicory*, prohibits the sale and offering for sale and the holding or transport with a view to sale, under the name of chicory, of any product other than the root of wild chicory, properly cleaned, roasted, ground into grains of a more or less fine powder, and kept protected from undue moisture, without the addition of foreign matter or the removal of its essential constituents.

The following in particular are considered not to come under the above definition: (a) chicory which at 100° C. would lose more than 15 per cent of its weight; (b) chicory which, if dried at that temperature, would leave, on being burned, more than 10 per cent of mineral substance (ash) in the case of powdered chicory, or more than 8 per cent in the case of chicory in the form of grains; (c) chicory whose content in essential principles soluble in boiling water would be less than 50 per cent (dry substance).

The bags or recipients in which chicory is offered for sale or delivered by manufacturers and wholesale or semi-wholesale merchants must bear in clear characters the name or title of the firm and also the address of the manufacturer or seller, or, failing that, a properly registered mark.

The Royal Decree of December 22nd, 1905, with regard to *brandies, prepared spirits, and alcohol* reads as follows:

"It is forbidden to manufacture, sell or offer for sale or to hold or transport with a view to sale, spirits containing a proportion of superior alcohol (calculated in amyl alcohol), of aldehydes (calculated in ethyl aldehydes) or of essential oils, exceeding 3 grammes in all per litre. The maximum proportion is reduced to 2 grammes when the spirits contain absinthe."

The same prohibitions apply to spirituous liquors containing more than 1 decigramme of hydrocyanic acid, whether free or in combination, per litre.

Under Article 561, Section 2, of the Penal Code (Article 5 of the Law of August 4th, 1890), brandies or prepared spirits are declared to be injurious if any proportion whatsoever of the following substances has been added to them:

- Nitrobenzene (essence of mirbane); salicylic aldehyde, methyl salicylate;
- Toxic alkaloids, such as poppy heads and opium, coca, nux vomica and St. Ignatius's bean, belladonna and stramonium, tobacco, sabadilla;
- Irritants or drastic substances, such as peppers and pimento, mustard, pyrethrum, grain of Paradise, intoxicating rye-grass, Indian berry, cantharides, colocynth;
- Wood spirit (methyl alcohol), raw or refined, phenols and cresols, pyridine bases, chloroform;
- Toxic mineral compounds, such as compounds of lead, zinc, copper, aluminium, barium;
- Mineral acids and oxalic acid;
- Salicylic acid or other antiseptics;
- Impure glucose, the sale of which for use in foods is prohibited by the regulations on this product.

None of the above-mentioned substances may be used in brandies or prepared spirits.

It is forbidden to affix or to retain on the bottles, jugs or other vessels containing the liquids referred to in the first paragraph of Article 2 labels with the words "without alcohol", "exempt from licence duty", or any other inscriptions implying that they do not contain alcohol.

All casks, bottles or other recipients containing brandies, prepared spirits, or alcohol for consumption must, if used in the wholesale or semi-wholesale trade or for the sale of the above products, including the retail trade, bear in clear characters the name or title of the firm and the address of the manufacturer or merchant, or, failing that, a properly registered trade-mark.

Royal Decrees regulating the preparation and trade in *flour, bread and other farinaceous foodstuffs* (September 28th, 1891, amended on June 5th, 1928). These decrees relate to the preparation and sale of flour. As regards the preparation of flour, it is absolutely forbidden to add to any kinds of flour intended for general consumption any mineral substance, however small the quantity, in particular: pipeclay, china-clay, chalk, calcined bones, sulphate of baryta, sulphate of lime, alum, sulphate of copper, sulphate of zinc, carbonates or bicarbonates of potash or of soda, hydrocarbonate of magnesia.

With regard to the sale of flour, the term "flour" is understood, for the purpose of the provisions that follow, to mean the product obtained from the grinding of wheat grain.

Any flour, other than that obtained from wheat, must bear the name of the plant from which it comes (rye flour, barley, flour, oatmeal, flour from horse beans, peas, beans, kidney beans, rice, maize, potatoes, etc).

Every flour mixture must bear a special name indicating its composition (meslin) or the name of the several constituents.

Royal Decree regulating the trade in *yeasts* (February 19th, 1894). Yeast mixen) with any foreign substance may not be sold in the wholesale or semi-wholesale trade, or be offered for sale, or held or transported with a view to sale, even in the retail trade, unless provided with a label indicating clearly in uniform and conspicuous characters, after the word "yeast" the foreign substances

Nevertheless, yeast to which only fecula or starch has been added may also bear the recognised label for mixed yeast.

The labels prescribed for yeast to which amylaceous substances or other foreign substances have been added must be put on every lump or portion of yeast or on every recipient containing yeast sold in the wholesale or semi-wholesale trade, or offered for sale, or held or transported with a view to sale, including sale in the retail trade.

The indications on these labels as to the addition of foreign substances have to be reproduced on invoices, waybills, or bills of lading when the goods are shipped.

10 The Royal Decree of April 27th, 1896, prescribing regulations for the trade in *honey* reads as follows:

“ The simple name of honey is reserved for the sweet substance made by bees from the nectar of flowers, or from other juices extracted from plants.

“ Honey supplied by bees fed specially (apart from the winter supply) on sugared substances other than the above juices must bear a name indicating the sugared substance used—for example, sugar, honey, glucose honey, or be described as mixed honey.

“ Honey substitutes and mixtures of honey with honey substitutes or any foreign substances whatever must be described as artificial honey or honey mixed with the particular foreign substance (for example, with sugar), or else be given a name not including the word ‘ honey ’ ”.

11 Royal Decree prescribing regulations as to *fish, molluscs, crustaceans*, etc. (September 27th, 1899). It is forbidden to sell or offer for sale, or to hold or transport with a view to sale or delivery, fish, molluscs, crustaceans, turtles, etc., whether fresh, prepared or preserved, containing any substances in addition to spices, condiments, aromatics, jelly made from gelatine or gelose, or substances derived from a process of smoking, unless they bear a label showing in conspicuous lettering the nature of the foreign substance which has been added.

Preserves shall bear a label showing in conspicuous lettering the kind of fish, crustacean, etc., and also, when necessary, the kind of oil or fat which has been used.

Under Article 561, Section 2, of the Penal Code, modified by Article 5 of the law of August 4th, 1890, the following fish, molluscs, etc., are declared to be harmful:

- A. Those caught by means of Indian berry or other poisonous substances;
- B. Those treated with antiseptics.

It is forbidden to use these substances in the preparation or preservation of fish, molluscs, etc., and to add to the fish in question any substance that is injurious or dangerous to health.

Recipients containing preserved fish, crustaceans, etc., for sale or delivery will bear the name or title of the firm and the address or, failing that, the mark of the manufacturer or seller.

12 Royal Decree relating to the trade in *butter, margarine* and *alimentary fats* (October 20th, 1903). Margarine and alimentary fats intended for sale must be thoroughly mixed during the churning process with at least fifty parts of sesame oil and at least two parts of dry trade fecula which has been diluted in oil for every thousand parts of the weight of fats and oils used in their manufacture.

Sesame oil may be added during the process preceding churning; the fecula must be added to the raw material immediately after they have been put into the churn.

Alimentary fats prepared without churning must have sesame oil and fecula added during the process which makes them alimentary fats in the legal sense of the term.

The product has to be packed in recipients bearing at least on the outside wrappings, besides the word “ margarine ” and the address of the manufacturer, the words “ for export only ”, placed on the top part of the recipient and satisfying all the conditions required by law for the inscription “ margarine ”.

The product must be actually exported or returned to the factory within fifteen days after leaving the factory.

13 The Royal Decree providing regulations for the sale of *tapioca* (August 30th, 1897) states that the name tapioca must be reserved for the food product prepared exclusively with fecula derived from the manioc plant.

Tapioca substitutes or mixtures of tapioca with other substances may not be sold or offered for sale or held or transported with a view to sale or delivery, unless they bear a label in which there is no mention of the word tapioca; no commercial document relating to these products may describe them by the name tapioca.

14 The Royal Decree regulating the official inspection of *butcher's meats* (March 23rd, 1901), since it deals specially with the supervision of butcher's meats for consumption in Belgium itself, is not of any interest to the foreign buyer.

The same applies to the Royal Decree of May 28th, 1901, with regard to the trade in prepared meats and meat derivatives.

15 Royal Decree regulating the trade in *vinegars* (January 30th, 1893). Recipients in which vinegars are sold or offered for sale, or held or transported with a view to sale, must bear in a conspicuous place and in clear and uniform lettering, in addition to the name or title of the firm and the address of the manufacturer or seller, an inscription, either immediately after or below the word “ vinegar ”, an indication of the raw material used in the manufacture of the product: vinegar from wine, cider or apples, pepper, beer, grain or malt, dates, dried grapes, glucose, alcohol, acetic acid, etc.

Vinegar from acetic acid may also be called diluted acetic acid. It may not contain more than 8 grammes of monohydrated or crystallisable acetic acid per every 100 c.c. at a temperature of 15° C.; liquids containing a larger proportion of acetic acid must be described differently from those mentioned, either as acetic acid or concentrated acetic acid.

When the vinegars are shipped, the names must be specified on the invoices, waybills, or bills of lading.

It is forbidden to sell or offer for sale or to hold or transport with a view to sale as vinegars under any name whatever:

1. Solutions of acetic acid which have been imperfectly purified—in particular, acetic acid not rectified by distillation;

2. Liquids containing any one of the following substances: (a) acids other than acetic acid and, in certain cases, small quantities of various organic acids (malic, lactic, tartaric, citric, etc.) the presence of which may be due to the raw material or materials whose name the product bears; (b) chlorides, sulphates or other impurities, such as salts of lime or soda, in proportions greater than those resulting from the use of the raw material or materials whose name the product bears; (c) compounds of lead, zinc or arsenic, or other substances injurious to health.

The Government may also order measures to prevent the adulteration of *medicinal substances* 16 and to ensure the preparation, offering for sale, sale or retail sale of high-grade *medicaments*. 17 Further, a law of 1858 set up an official pharmacopœia.

A law of February 24th, 1921, relating to the trade in *poisonous, soporific, narcotic, disinfectant* 18 or *antiseptic substances*, has led to a number of regulations, one of which guarantees that the products on sale have effective disinfectant and antiseptic properties.

The *cheeses* that may be bought and sold are defined by Royal Decree. 19

Those containing substances not included in the definition may not be offered for sale unless they bear a label showing clearly what foreign substance has been added.

The manufacture of and trade in cheese, moreover, come under the provisions of the Penal Code regarding the adulteration of foodstuffs.

Meat. — Animals are slaughtered in a special slaughterhouse approved for the purpose and 20 supervised by experts appointed by the Government.

The wrappings of the product offered for sale or the recipients in which it is contained must, in certain cases, indicate clearly and conspicuously the exact nature of the product. Occasionally, indeed, these indications must be given on the van transporting the product. Moreover, the carrying on of different businesses on the same premises is sometimes forbidden (the sale of butter and margarine, horse flesh and other meat).

The State checks the quality of the chemical fertilisers sold, so as to protect the interests of farmers. Fertilisers for export, however, are not subject to this supervision.

CATEGORY 2.

Meat. — Meat recognised as suitable for consumption has to bear a special mark. 21

In the case of the export to England of young pigs slaughtered in Belgium, the ordinary mark for this class of meat is replaced by a label answering the requirements of the market of destination and certifying that the meat has been examined and declared to be suitable for consumption.

The export of *horses, asses and mules, horned cattle and swine* is allowed only after an inspection guaranteeing the absence of contagious diseases. 22

Nurseries and other establishments where *plants* are grown for sale are regularly inspected 23 by the phyto-pathological service. The latter does not grant the necessary export certificate to establishments in which the plants are diseased or have been attacked by noxious insects. In addition, consignments may not be exported unless they have been examined immediately before they leave the country.

A law of 1888 instructs the Proof-House to test the strength of all *fire-arms*. They are then 24 marked to show that they have satisfied the necessary conditions, the marks differing according to the nature of the test. The recognition of foreign marks is the subject of international agreements.

Manufacturers of miners' lamps and so-called "safety" explosives are authorised to mark their products with the letters S.G.P. or S.G.P.C., indicating that they are considered as safe in fire-damp and coal-dust, after being tested at the Government Station at Frameries.

Steam boilers, before being used, must be tested by the mines Administration; this condition 25 is not required, however, for exportation. The same applies to the testing of containers for compressed or liquefied gases; the tests are carried out by the industrial inspectors.

CATEGORY 3.

26 Independently of the Government supervision of the sale of high-quality *medicaments*, a private body, the "National Codex", undertakes to examine and verify in the interest of the pharmaceutical profession the composition of pharmaceutical specialities offered for sale. It places its stamp on all products which it has inspected and found up to standard.

27 The Stock-Breeding Society, called "*Le Cheval de Trait Belge*", keeps a stud-book, which makes it possible to distinguish pedigree animals. The same system obtains in other countries for other animals.

28 The Belgian Electro-Technical Committee has drawn up standardisation rules for *electrical material*. A wire, which manufacturers of insulated wires and cables are authorised to put in their products when the latter fulfil the conditions required by the Committee responsible for supervision, serves as a distinguishing mark.

29 The construction of *steam boilers* may, at the request of the buyer, be supervised by associations for the inspection of steam apparatus. These are recognised associations, though private in character. They stamp the sheet iron used in the manufacture of the boilers. They also supervise the construction of other apparatus.

30 The National Dairy Company, a private body, inspects *butter* if requested to do so, and marks it. A large number of private technical bureaux and consulting engineers make a speciality of supervising manufacture for third parties.

31 With regard to *cements*, the "Professional Artificial Portland Cements Group of Belgium" assumed on June 3rd, 1925, the legal form of an association not working for profit; it includes twenty-eight out of the thirty-three existing artificial Portland cement factories in Belgium.

The Belgian artificial Portland cement manufacturers grouped themselves in this association with the idea, in particular, of ensuring that their products would maintain a constant standard of quality, this being an indispensable condition for the safe and satisfactory employment of the various kinds of cement.

The desired result is achieved by careful supervision of the products turned out of the works belonging to this group.

In order that buyers and consumers may have a guarantee of the quality of the cements delivered by the affiliated factories, the technical service of the group, on its own initiative, takes samples, either at the works, from the silos, from bags or barrels ready for delivery, from carts or boats about to leave, etc., or else on arrival from the building yard and at the time the cement is loaded on sea-going vessels, etc. These samples are subjected to physical tests, and, in some cases, to a chemical analysis so as to ascertain whether they possess the necessary qualities. Independent of, and in addition to, this supervision, which is due solely to the initiative of the laboratory, samples may be taken and tests made at the request of the buyer or consumer.

Besides the registered manufacturers' marks, there is a special mark which may only be used by the factories affiliated to the professional group to show that the cements have been duly inspected.

The first result of the group's investigations has been the classification of cements in three grades according to quality:

- (1) Normal artificial Portland cements (P.A.N.);
- (2) Artificial Portland cements of great strength (P.A.H.R.);
- (3) Rapidly hardening Portland cement (P.A.D.R.).

The conditions which have to be fulfilled are set forth in the specification of the State Administration.

CATEGORY 5.

An article of the Penal Code imposes penalties on any person placing on manufactured articles the name of any dealer or manufacturer who is not the actual maker, or the title of a firm other than the real firm of manufacturers, and also on any person selling or offering for sale articles marked with fictitious or altered names.

Mention may be made more particularly of the following articles of the Penal Code:

- 498, relating to fraud with regard to the identity, nature or origin of the thing sold;
- 499, relating to the quantity of things sold;
- 500, to 503, relating to the manufacture of commodities;
- 32 561, paragraph 2 and 3, concerning the offering for sale of *foodstuffs* unfit for consumption, or adulterated foodstuffs;
- 561, paragraph 4, relating to the use of false weight and measures in stores, shops, etc.

33 Mention should be made, lastly, of the law of March 30th, 1926, which regulates the retail sale of *real lace*. This law defines the articles which may be offered for sale under the name of real lace, hand-made lace, real "Brussels lace". Persons infringing these regulations are fined; in some cases their shops are closed for a period not exceeding one month.

BRAZIL.

CATEGORY 1.

Any *wine* containing a substance extraneous to its normal composition or obtained by artificial methods shall be considered as adulterated and withdrawn from consumption. Executive regulations define the normal composition and determine the methods of treatment for preserving, clarifying and improving wine; they also stipulate what substances may be added to wine. 1

Wine obtained from fermenting the juice of fruits, plants, etc., may be sold if the name of the fruit juice is added to the word " wine ".

Wine warehousemen and merchants are obliged to gum a label stating the origin of the wine, the vintage year and the manufacturer's name on each receptacle.

In the State of Rio Grande do Sul products obtained by the partial or total alcoholic fermentation of wholesome and ripe grapes or grape juice may be sold under the designation of wine.

All wine growers, merchants, exporters and, in general, all persons engaged in the wine trade are subject to sanitary supervision. They must be entered in the register of commercial firms kept by the State Health Department. They will be granted the necessary licence for dealing in wines and vine bye-products. The wine growers may not sell their products without an authorisation from the Health Commission, which conducts the preliminary analysis. The wine growers' syndicate of Rio Grande do Sul may not authorise any commercial transaction in wine without the presentation of the laboratory's certificate regarding the preliminary examination. The receptacles containing wine must state its origin.

The red wines of Rio Grande do Sul produced from pure grapes or from grapes of different qualities are classified in accordance with the percentage of alcohol and the volatile and total acidity, in the following classes: first class: " special "; second class: " superior ", and third class: " for ordinary consumption ".

Wines of a composition differing from that of the so-called wines for ordinary consumption shall be consumed by the producers, who may convert them into vinegar. *Special wines* of the type of *Rhine wines*, *Barbara wines*, *claret*, *champagne* and similar wines, must be exported or put on sale in bottles bearing a suitable mark in order to be exempt from classification. The corks and the labels affixed to the bottles containing special wines shall state the type of wine, the year of production, the name of the producer and the place of production and the words " Rio Grande do Sul, Brazil ". The class and quality of the wine, the name of the consignor and of the consignee living outside the State shall be stated on the barrel. It is prohibited to improve fermenting " must " by means of molasses. Wine growers may not keep in their cellars any products or substances which can be used for adding to wines. It is also prohibited to put plaster in to wine. 2
3

CATEGORY 2.

The Government may establish official parks to protect the national *wine* and *lard* industries. 4

CANADA.

CATEGORY 1.

- 1 Any cask of *salt* sold or offered for sale must contain 280 lb. of salt and each cask or bag of salt sold or offered for sale shall be marked in a legible and indelible manner with the gross weight, and the net in the case of a cask.

If a cask contains bags of salt, the number of bags and the total weight of salt must be marked on a stave of the cask. In addition, the name or trade-mark of the packer of the salt, if packed in Canada, and the importer's name and address in the contrary case, must be marked on each cask or bag of salt sold or offered for sale in Canada.

- 2 Each ball of *twine* sold or offered for sale in Canada must be labelled with the name of the dealer or manufacturer and the number of feet in a pound of twine.

Only twine manufactured for export and not to be used in Canada is exempt from this obligation.

Any person found in possession of unmarked balls of twine must prove that these are not intended for use in Canada.

If inspectors find in a lot of twenty balls a single ball not marked in the prescribed manner, it will be presumed that the whole lot is not marked in accordance with the legal regulations and it will be for the dealer to prove the contrary.

Inspectors or anyone deputed to supervise the enforcement of these regulations may enter the premises of manufacturers or vendors and examine all packages of twine wherever they may be.

- 3 It is prohibited to offer for sale *potatoes* designated as No. 1 quality which include specimens that are not sound, practically free from dirt or other foreign matter, or affected with frost, injury, sunburn, or damage caused by disease, insects or mechanical or other means.

The minimum size of potatoes is determined by their shape, whether they belong to the round or long varieties.

Five per cent by weight of any lot may be under the prescribed size and six per cent by weight of any such lot may be below the remaining requirements of the grade.

For the No. 2 quality, the potatoes must be practically free from dirt or other foreign matter, or frost injury, and free from serious damage caused by sunburn, disease, insects or mechanical injury.

The minimum size for the round or long varieties of this grade is smaller than the size of No. 1 potatoes.

The tolerance with respect to dimensions and quality is the same as for the No. 1 grade.

A barrel containing as nearly as practicable 7,056 cubic inches is a standard container for potatoes.

- 4 *Onions* are also required to be marketed under grade designations according to size, and shall include only sound, well-cured specimens of similar characteristics, free from doubles and scallions, not sprouted nor peeled nor with root growth; practically free from dirt, leaves or other foreign matter, and without damage caused by disease, insects, mechanical or other means.

Five per cent by weight may be under the prescribed size and an additional three per cent by weight may be under the remaining requirements of the grade.

The Act also provides for the sale of potatoes, onions and turnips by weight, and the marking of packages containing such vegetables with the grade and the name and address of the packer.

- 5 The Agricultural Pests Control Act, 1927, regulates the manufacture, importation and sale of *poisons*. "Poison" is defined in the Act as "any substance or admixture of substances represented as a means for preventing, destroying, repelling or mitigating any and all fungi, weeds, insects, rodents, or other plant or animal pest collectively or individually affecting agriculture".

Before any person may manufacture, import, advertise, or in any manner offer for sale in Canada any poison as defined above, he must register such poison under the Act. Application for registration may be made by the manufacturer, importer, or vendor, on forms which are supplied by the Department. Renewal of registration is required each year. The fee for registration or renewal is twenty dollars per brand of poison.

The application for registration must contain the following particulars: the name and address of the manufacturer; the name and address of the applicant, and if the applicant is non-resident

in Canada, his agent or representative in Canada must sign an undertaking to be responsible for due compliance with the provisions of the Act; the brand name; the formula; and a statement of analysis.

The Minister is given power to refuse registration if the poison is deemed to be misleadingly named, unsuitable for the purposes sold, or detrimental or seriously injurious to domestic animals, public health or vegetation (except weeds), when used according to directions. Cancellation of a registration is provided for if the Act is violated. Importation may be prohibited if the sale of the poison would constitute an infraction of the Act.

Every package of poison sold or offered for sale in Canada must bear a label with the following information: the name and address of the manufacturer; the brand name; the registration number; the word "poison" and symbol thereof (skull and crossbones), if harmful to human life in any sufficient degree; the antidote printed in both English and French; the guaranteed analysis; in such form as may be prescribed by regulation; and the net quantity in imperial gallons or avoirdupois pounds.

An advisory board consisting of manufacturers, practical agriculturists and departmental technicians, meet on occasion to discuss problems relating to the Act and its enforcement.

Provision is made for the inspection and analysis of poisons, and penalties are prescribed for infractions of the law.

Regulations have been established to assist in the enforcement of the Act. They prescribe the form of application for registration, the method of making application and what information is required; how the guaranteed analysis shall be stated, and how samples may be taken for analysis.

The Department of Agriculture maintains an inspection and analytical staff for the taking of samples and making chemical analysis.

All *cured fish*, excepting such as are preserved by cooking and heating and packed in hermetically sealed containers, such as tins and glass jars, are subject to inspection and are inspected under the authority of the Fish Inspection Act. The act is administered by the Department of Fisheries, and its officers act as inspectors. No official stamp is used to signify inspection or guarantee quality. Packers are compelled to pack in accordance with the standards laid down in the regulations, excepting in the case of dried and salted codfish and suchlike fish, the inspection of which is voluntary. 6

When an inspector finds the product which must undergo compulsory inspection not up to standard it is officially marked "Below quality" or "Below weight" as the case may be, and the packer becomes liable to prosecution for violation of the Act. The method of inspection is described in the Fish Inspection Act and Regulations made thereunder.

Fish preserved by cooking and packed in hermetically sealed containers are, together with all places where such are packed, subject to inspection, and are inspected under authority of the Meat and Canned Foods Act. No official stamp is used to indicate inspection, but packers are compelled to comply with the requirements of the Act, and, in the event of their failing to do so, they become liable to prosecution for each violation. The fish inspection part of this Act is also administered by the Department of Fisheries, and its officers act as inspectors.

The preparation of this class of foods is carried on under the Meat and Canned Foods Act and the regulations made thereunder. In the enforcing of these laws inspectors regularly visit the canning factories and examine the raw materials, control the sanitary conditions and methods of manufacturing. All labels must be approved before use.

CATEGORY 2.

All cream *butter* and *cheese* of Canadian origin intended for export must be graded before being exported. 7

Each package containing butter or cheese and each piece of cheese must be marked on the premises where they were manufactured, with a number corresponding to the vat or churning from which they were taken.

In grading, the official shall take from each consignment a cheese from one vat or a packet of butter from one single churning and grade the whole shipment in accordance with the result of his inspection of the sample taken.

In estimating the quality of cheese for grading purposes, graders are guided by the following rules: taste 45 points, texture 25, compactness 15, colour 10, finish 5; total 100 points.

Cheese of the special grade must score at least 94 points, 41 of which are allotted to taste. To be classed in the first grade, 92 to under 94 points must be scored, with a minimum of 30 for taste. In the second grade 87 to under 92 points must be scored, with a minimum of 37 points for taste. The third grade can have a total of less than 87 points and under 37 points for taste. In addition, graders are bound to pay attention to certain rules regarding texture, compactness.

colour, finish, packing, dimensions of cases, and must see that these are numbered to correspond with the vats.

In butter-grading the maximum is also 100 points: 45 for taste, 15 for texture, 10 for moisture, 10 for colour, 10 for salt content and 10 for packing.

Special grade. Butter classed in this grade must be made from pasteurised cream offering no reaction to tests by the "Storch" method. It should score 94 points or more with a minimum of 41 points for taste.

First-grade butter should obtain from 92 to under 94 points with a minimum of 39 points for taste.

Second-grade butter should score from 87 to under 92 points, with a minimum of 37 points for taste.

Third-grade butter may have less than 87 points, with under 37 points for taste.

As in the case of cheese, graders follow certain statutory rules regarding the texture, moisture, salt content and packing. There are special requirements as regards the cases which should always, moreover, be numbered to correspond with the churning.

Grading officials issue a certificate on special forms for each lot of cheese or butter graded. The certificate also shows the numbers of the vats or churnings of cheese or butter as the case may be.

In the case of pasteurised butter the grading official stamps the word "Pasteurised" across the certificate.

In order to be graded, butter and cheese must bear the trade-mark of the premises from which they come or another mark enabling such premises to be identified.

A grader will not grade cheese until it is sufficiently matured to permit of the quality being correctly determined. The package or box containing the butter or cheese may not be changed after the contents have been graded.

It is also forbidden to remove from a package containing butter or cheese, which has been graded, the factory brands, forwarding or other distinctive marks.

Certificates relating to butter made from pasteurised cream are stamped by the proper official with a seal across the face of the certificate reading: "This certificate is not valid six weeks after date of issue", and in the case of unpasteurised butter: "This certificate is not valid three weeks after date of issue". A lot of butter the certificate for which is no longer valid is deemed to be ungraded and must be regraded before it can be exported. If the re-examination shows a difference of grading, the official concerned will cancel the mark previously affixed by putting an x over it.

The official marks used consist of two or three concentric circles with the figures 1, 2 or 3 in the centre of the first circle, indicating first, second or third grade, respectively, and the letter S for special grade or the letter X for produce not coming under one of the above grades.

In addition, the words "First grade", "Second grade", "Third grade", "Special grade", "No grade" are stamped between the first and second circles and the word "Canada" placed below.

In the case of butter the mark also contains between the second and third circles the words "Pasteurised" or "Not pasteurised" for butter manufactured from pasteurised cream or unpasteurised cream, as the case may be.

8 *Eggs.* — Canadian eggs for export and those intended for domestic consumption, but not including eggs intended for incubation, must be compulsorily branded according to quality and grade and be candled.

"Firsts" refers to eggs which have not been held at a temperature of 40° F. or less, except in transit, when they have been subjected to artificial preservation.

This class includes the following grades: (a) "specials"; (b) "extras" with the sub-grade "pullet extras"; (c) "firsts"; (d) "seconds".

Each of these grades is classified in accordance with the size, weight, appearance of white and yolk, air cell, state of shell and other details.

Class (2), "storage", refers to eggs which have been held at a temperature of 40° F. or less. This category also includes "preserved eggs" which have been subject to any process, liquid or otherwise, intended to preserve their quality. It includes the following grades: (a) "extras"; (b) "firsts"; (c) "seconds"; (d) "cracked and dirty eggs".

The distinctions between these various grades are based on the same principles as those governing grading in the first category. An essential condition for the sale of eggs of both categories is that they must be suitable for human consumption.

Every case containing Canadian eggs intended for export must bear a mark showing the class and grade of the eggs contained therein and the words "Canadian eggs". Such mark may be accompanied by other authorised trade designations or brands, but these may not be marked more conspicuously than the mark prescribed in the regulations.

Every case containing eggs that is to be shipped from one province to another in lots of 100 cases or more must be marked on both ends with the name of the class and grade of the eggs

contained therein, according to the Canadian standards, and with the name of the country of origin when other than domestic products.

Every case shipped or delivered by persons who receive eggs on consignment or buy eggs for re-sale shall be marked, labelled or tagged in a legible manner on both ends with the name of the class and grade of the eggs contained therein, according to the Canadian standards, provided that any producers or dealer may delegate his right to candle and grade to the first wholesaler or retail dealer to whom the eggs are shipped or delivered. In each case the markings, labellings or taggings shall consist of the words "Ungraded Eggs For Shipment Only". This regulation shall not apply when the shipment is made direct from producer to consumer.

Every case containing eggs that is exposed for sale for direct purchase by consumers in a public place shall be marked, labelled or tagged in conspicuous letters with the name of the class and grade of the eggs.

A case containing eggs shall be considered to be properly marked when it contains not more than 6 ½ % of eggs below the grade stated.

Complaints on this point must be made to the vendor within twenty-four hours of receipt of the eggs.

In all places of retail sale, the vendor must display in a prominent place a card setting forth the classes and grades of eggs as defined by the Canadian standards.

It is forbidden to offer for sale or to ship eggs contained in cases marked with the name of any class or grade, unless the quality and weight is equal to, or better than, such class or grade.

The re-forwarding of ungraded eggs must be effected within forty-eight hours.

Inspectors may enter any premises for the purpose of ascertaining that every case or package containing eggs has been correctly marked in respect of class and grade.

Canadian eggs for export must be packed in accordance with very strict regulations in standard cases protected against shocks at both ends. Each standard case shall be made to contain 30 dozen eggs and must be constructed of clean, dry and odourless wood.

Even the thickness of the boards is regulated. The internal packing must also comply with certain requirements and the eggs must be kept in a cool, dry, dark or semi-dark place, free from odours.

Cases containing eggs for export in lots of 25 cases or more, and cases intended for shipment from one province to another in lots of 100 or more, shall not be shipped until they have been examined by an inspector and certificates issued. Certificates for export shall be marked across the face with the words "Export certificate".

The Government mark of approval to be placed on each case of eggs by the inspector includes the Maple Leaf emblem and the words "Canadian eggs" and "Government-inspected", together with the inspector's number. Before placing this mark on the case, the Inspector must draw samples from at least 5 % of the cases and examine at least half of the eggs in each case thus selected.

Cases shall not be marked unless they are placed in clean and sanitary warehouses or premises. The Customs authorities shall only allow the export of cases bearing the Government official and other statutory marks. Further, any shipments of 25 cases or more must be accompanied by the required certificates.

Eggs imported for domestic consumption but not intended for incubation are subject to inspection and marking at the port of entry.

After inspection cases must be marked by the inspector with the words "Foreign eggs" and "Government-inspected".

The premises of exporters engaged in the packing of *meat* and articles of food derived therefrom are subject to inspection by the Ministry of Agriculture and the mark bearing the words "Canada—Approved" shows that packing has been carried out under sanitary conditions and that the produce is fit for human food.

The "Canada Grain Act" contains extremely detailed provisions relative to the control and supervision of the *grain* trade. Considering the importance of the grain export trade of Canada, it was deemed advisable to give a summary of the main provisions of this Act, as well as the administrative mechanism which it established.

The Administration of the Canada Grain Act is under the Department of Trade and Commerce at Ottawa. It is entrusted to the Board of Grain Commissioners for Canada with headquarters at Fort William, Ontario, who report to the Minister of the above department through its Deputy Minister.

For purposes of inspecting and grading grain, there are two inspection divisions defined in the Act as "The Western Inspection Division" and "The Eastern Inspection Division", both of which are in charge of the Dominion chief grain inspector, who has general supervision and control of all inspection staff offices. Grain inspectors and deputy grain inspectors are appointed to assist the chief grain inspector, only after having passed a rigid practical examination which is conducted by a competent Grain Examining Board appointed by the Board of Grain Commissioners and the Civil Service Commission. The duty of these inspectors is to inspect grain when called upon to do so by the owner thereof or his authorised agent, and to issue certificates stating the grade of the grain inspected.

The Canada Grain Act, Sections 94 to 105, divides grain into five general classes, which it defines as "No Grade", "Condemned", "Rejected", "Commercial Grade" and "Statutory Grade".

9

10

“ No Grade ” means all good grain that has an excessive moisture, being tough, damp or wet, or otherwise unfit for warehousing.

“ Condemned Grain ” means all grain that is in a heating condition or is badly bin-burnt, whatever grade it might otherwise be.

“ Rejected Grain ” means all grain that is unsound, musty, dirty, smutty or sprouted, or that contains a large admixture of other kinds of grain, seeds or wild oats, or, from any other cause, is unfit to be classed under any of the recognised grades.

“ Commercial Grade ” means grain which, because of climatic or other conditions, cannot be included in the grades provided for in the Act. More particularly it means that the grain of one year may vary from that of the preceding year, and that a proportion of it therefore cannot be dealt with under the grades laid down in the Act, and must be provided for by grades defined by the Standards Board.

“ Statutory Grades ” means grain of the highest grades which are defined by Parliament, embodied in the Grain Act, and do not vary with the crop. Thus the statutory definitions can only be changed by Parliament. They do not vary with the crop, but are constant. The commercial grades, on the other hand, are fixed by the Standards Board, and may vary from year to year.

Very little, if any, of the grain grown in the eastern inspection division is sold for export. Canada's exportable wheat surplus consists of the grades of wheat grown in the western inspection division which are known as the “ Statutory ” and “ Commercial ” grades.

The “ Statutory Grades ” defined in the Act are known as No. 1 Hard, No. 1 Northern, No. 2 Northern and No. 3 Northern.

The “ Commercial Grades ” the standards for which are set by the Western Grain Standards Board are known as No. 4, No. 5 and No. 6. Any of the six grades of wheat mentioned above may fall under the general category of “ No Grade ”, “ Condemned ” or “ Rejected ”.

For the guidance of grain inspectors and deputy grain inspectors, the chief inspector shall each year, as soon as samples are available, select samples of the different grades of grain which are known as the official standards for the statutory grades.

The Board of Grain Commissioners has appointed a Grain Standards Board for the purpose of establishing, each year, standards for the commercial grades when, as a result of climatic or other conditions, a considerable portion of the grain, other than oats, cannot be included in the classifications provided by the Act. Inspecting officers are required and instructed to grade, in accordance with the Act, all grain defined therein, and to grade all classes of grain which cannot be graded according to the Act, in accordance with the commercial samples so selected by the Grain Standards Board.

Grain grown in the western inspection division and shipped East is first inspected at Winnipeg and again at the terminal points, Fort William and Port Arthur. Grain grown in the western inspection division and shipped West may be inspected either at Calgary or Edmonton; or at Vancouver or Prince Rupert.

Every inspector of grain must keep proper books, in which must be entered an account of all grain inspected, such books being eventually used for verifying purposes.

Nothing in the Grain Act prevents any person from selling or buying grain by sample regardless of its grade.

The bushel is determined by weighing and the weight of the bushel shall be 48 lb. for barley and buckwheat, 56 lb. for flax-seed and Indian corn, 34 lb. for oats, 60 lb. for peas, 56 lb. for rye and 60 lb. for wheat.

The Minister appoints for each division a chief weighmaster and a weighmaster in each locality where it is deemed necessary. They supervise and have exclusive control of the weighing of grain inspected or subject to inspection, or received into or shipped out from any public elevator. They give, upon demand, a certificate under their hands showing the amount of each weighing, the number of each car or cargo weighed, the initial of the car, the place where weighed, the date of weighing and the contents of the car or cargo. Such certificate shall be evidence of the facts therein contained. All weighmasters keep a correct record of all weighing done by them.

It will therefore be noted that the inspection and weighing of grain is controlled by officers employed by the Board of Grain Commissioners for Canada, who are authorised to issue Dominion grade and weight certificates for each parcel or lot of grain weighed or inspected. If, while proceeding with an inspection, the inspector is satisfied that the grain has been improperly loaded for the purpose of deception, he must not make the grade of any lot of grain inspected by him above that of the poorest quality found therein.

The standards fixed by the chief inspector for the statutory grades of grain and the standards fixed by the Standards Board for the commercial grades are used by inspecting officers for comparison purposes only in the course of the inspection of any grain. The owner or possessor, or his agent, may, if dissatisfied with the grade given at the time of the first inspection, request a

re-inspection by the chief inspector and, if still dissatisfied, he may make application to the Board of Grain Appeal, whose decision is final and binding.

This Board of Grain Appeal is composed of one qualified grain inspector who acts as chairman, and seven other members who are well-qualified judges of grain. Three members of this Appeal Board constitute a quorum but a representative of the producer must be present at each appeal.

According to the provisions of the Canada Grain Act and the rules and regulations of the Board of Grain Commissioners, all grain must be officially inspected and officially weighed in and out of all public and private terminal elevators. On grain moving through Pacific ports the inspection, when being loaded into boats at Vancouver or Prince Rupert, is final, and shipments are made direct from these ports to Great Britain and the Continent without the necessity of the grain so loaded being transhipped in any manner whatever.

Western-grown grain being shipped East for export receives its final inspection at Fort William and Port Arthur when being loaded on vessels or cars for delivery to eastern public transfer elevators. The identity of each lot or parcel of Western-grown grain shipped to a public transfer elevator in the eastern inspection division shall be preserved, but different parcels or lots of the same grade may be binned together when there is not sufficient space in the elevator to keep the parcels or lots separate. Under no circumstances shall grain of different grades be mixed together while in store in these public transfer elevators in the eastern inspection division.

All grain marked by the inspecting officer for cleaning shall be cleaned under his supervision and he may condemn any cleaning machine which in his opinion is not doing satisfactory work and may order machines installed which will satisfactorily clean such grain to its proper grade. Where grain rejected for dirt is ordered to be cleaned by the owner, the cleaning shall be subject to the provisions of the inspecting officer.

In the case of unclean grain inspected in the western inspection division the inspector shall state in his certificate the percentage of dirt necessary to be removed in order to clean the grain to the grade certified.

In each case the certificate delivered by the inspectors must accompany the grain to destination.

The Board of Grain Commissioners requires all track buyers and owners and operators of elevators, warehouses and mills and all grain commission merchants and primary grain dealers to take out annual licences before commencing operations and fixes also the amount of bonds to be given by each of them.

The Board of Grain Commissioners supervises also the handling and storage of grain, in and out of elevators, cars and boats. Persons licensed under the Act are required to keep books in form approved by the Board. The Board enforces rules and regulations made under this Act and receives and investigates all complaints in writing, under oath, of any violation of any provision of this Act, or any rule or regulation made in pursuance thereof.

The Board has all the powers of a Commissioner in this connection and applies such remedy as is provided by statute. It is also the duty of the Board to receive and investigate all complaints of any shortage in grain upon the delivery of same from an elevator to a vessel, or from a vessel to an elevator, and it has the power to assess or apportion the loss arising from such shortage amongst the elevator operators and water carriers, and the finding of the Board certified under the hand of its majority is final and enforceable in any Court of competent jurisdiction.

Every terminal elevator warehouseman shall receive for storage any grain tendered to him in a dry and suitable condition for warehousing in the ordinary and usual course of business. This grain shall, in all cases, be inspected and graded by a duly authorised inspector and shall be stored with grain of a similar grade. No grain shall leave an elevator without being officially weighed and the official certificate of weight shall be final.

Every warehouseman of a public elevator in the eastern inspection division shall receive for storage Western grain tendered him through the ordinary channels of transportation and received in the usual course of business.

Every warehouseman shall keep a true and correct record of all operations, the origin and destination of grain, in order that they may always be identified. Every terminal warehouseman in the western inspection division shall clean all grain received by him on which the inspector has set dockage for cleaning, except all rejected grades and "No Grades", which shall be cleaned only on the request of the owner.

Every terminal warehouseman in the western inspection division shall insure against fire, with companies satisfactory to the Board, all grain received.

Upon the owner or consignee of grain stored surrendering the original shipping receipt accompanied by evidence that all charges have been paid, the warehouseman shall issue to him a warehouse storage receipt for every individual car-load lot or parcel of grain. This receipt shall state the date of the receipt of the grain in store and also the quantity and inspected grade of the grain. The grain is deliverable upon the return of the receipt properly endorsed by the person to whose order it was issued, and upon payment of proper charges for storage and transportation, if any, due to the owner of the elevator. These receipts are numbered and no two receipts bearing the same number shall be issued from the same elevator except in case of a lost or destroyed

receipt, in which case a duplicate is given which shall be plainly marked on its face " duplicate ". The receipt shall state the number of each car or vessel from which the grain was received. They are delivered only after actual storage of the grain.

Upon the delivery of grain from store and when the receipt is surrendered, such receipt shall be plainly marked across its face with the word " cancelled ", and in cases where a part of the grain only is delivered out of store the receipt is also cancelled, but a new receipt for the remainder may be delivered. This new receipt shall bear the date on which the whole quantity was *originally* received into store and shall state that it is the balance of receipt of the original number.

Upon the return of any receipt by the holder thereof such grain shall be delivered within twenty-four hours after demand has been made and vessels therefor have been furnished for this purpose. In the case of the shipping of grain by railway, the warehouseman shall make demand in writing upon the railway company for the necessary number of cars, and for any delay in the delivery of grain imputable to his neglect he has to pay damages.

Every warehouseman is required before August 15th of each year to file with the Board a table or schedule of rates for the storage, cleaning, handling and fire insurance of grain in such elevator during the ensuing year, which rates shall not be increased.

A terminal warehouseman shall, unless he gives public notice that some portion of the grain in his elevator is out of condition, or becoming so, deliver upon all receipts presented grain of quality equal to that received by him. Should the grain be out of condition, or becoming so, in a western inspection division, the warehouseman shall immediately consult the resident inspector, and, if the latter is of the opinion that by re-elevating the grain it can be brought back into condition or its further deterioration can be prevented, he may order the warehouseman to re-elevate the grain at the expense of the owner. If it is found, after such examination, that the condition of the grain is such that its further deterioration cannot be prevented by re-elevation, the warehouseman shall give notice of the facts to the Board and to the owner, if the owner's address is known. Should this occur in a public elevator of the eastern inspection division, the warehouseman shall immediately give notice of the facts to the shipper of the grain and any other interested party indicated upon the bill of lading or railway shipping receipt. This notice is given by registered letter and telegram. In both cases public notice of the facts shall be given by posted notice in the elevator and also in the Grain Exchange at Winnipeg while, as regards grain in a public elevator in the eastern inspection division, also in the Grain Exchange at Toronto and the Grain Exchange at Montreal.

Upon surrender of the documents the grain found to be out of condition shall be delivered to the owner or the party entitled thereto.

Nothing shall be held to relieve a warehouseman from exercising vigilance in preserving grain after such publication of its condition, but such grain shall be kept separate and apart from direct contact with other grain.

When the grain out of condition has not been removed from store by the owner within one month, the warehouseman may sell the grain at the expense and for the account of the owner. Public notice of the intended sale shall be given in newspapers.

The inspector may also, if he sees fit, order the transfer of the grain out of condition to a hospital elevator equipped for the treatment of unsound grain. He shall, at all times, be at full liberty to examine all grain stored in any terminal elevator, and all proper facilities shall be extended to him. No terminal warehouseman shall, in the receipt, disclaim the whole or a part of his legal responsibility.

No terminal warehouseman shall be held responsible for any loss or damage to grain arising from irresistible force while the grain is in his custody, provided reasonable care and vigilance is exercised to protect and preserve it.

No terminal warehouseman shall be held liable for damage to grain by heating if it is shown that he has exercised proper care in the handling and storing thereof, and that the heating was the result of causes beyond his control. He shall be responsible for damages caused by his neglect.

" Country elevators " mean country elevators which receive grain for storage before such grain has been inspected under the Act, and which are situated on the right-of-way of a railway or on any siding or spur track connected therewith.

Any person desirous of erecting a country elevator shall make application to the railway company for a site, and, in case of dispute, such dispute shall be referred to the Board. On the allotment of any site for a new elevator, the railway company notifies the Board and it shall furnish before October 1st of each year a list of all elevators and warehouses on its lines.

Each year the Board makes and promulgates all suitable and necessary rules and regulations for the government and control of country elevators and the receipt, storage, insurance, handling and shipping of grain therein and therefrom, and the maximum rates of charges therefor in cases where handling includes cleaning grain, and also where it does not.

The person operating a country elevator shall receive the grades of grain established by this Act without discrimination as to persons delivering grain. He shall also insure the grain while so stored, keep a true and correct account in proper books of all operations and issue, in the form prescribed, a dated receipt for each individual load, lot or parcel of grain delivered at such country elevator. The manager of every country elevator equipped with grain cleaners shall clean the grain before it is weighed and the result shall be mentioned on the certificate given the seller by the purchaser.

The receipts issued by the managers of the country elevators follow the same lines and contain the same information and obligations as in the case of terminal elevators.

The grain shall be delivered under the same conditions and shipped within twenty-four hours after a call has been made by the manager upon the railway company for cars to be supplied.

When grain has been delivered at any country elevator and a cash purchase ticket issued therefor and that his paying agent within twenty-four hours after demand by the holder refuses to retain such cash purchase ticket the holder may, upon its surrender, demand in exchange therefor a warehouse storage receipt bearing same date and place of issue, and for similar grade and net weight of grain. However, the holder of such a ticket shall not be deprived of his right to payment or redemption of the same as against the warehouseman or his surety.

On the return of the storage receipts, if the shipment or the delivery of the grain at a terminal point is requested by the owner thereof the person receiving the grain shall deliver to the owner a certificate in evidence of his right to such shipment or delivery. This certificate shall be returned in exchange for the railway shipping receipt and certificates of weight and grade.

Upon giving forty-eight hours' notice to the owner or his local agent, the operator of any country elevator may forward any grain stored in his elevator to any terminal elevator in the western inspection division on the same line of railway, and on so doing shall be liable for the delivery thereof to its owner at such terminal elevator in the same manner and to the same extent in all respects as if such grain had been so forwarded at the request of the owner thereof. The grain when so delivered at terminals shall be subject to freight, weighing and inspection charges and all other charges.

Whenever the person operating a country elevator agrees with the owner of any grain to store it in such a manner as to preserve its identity by storing it in a special bin, in such case only the weights, insurance and preservation of the identity of the grain shall be guaranteed by the said operator, and he shall mark on the storage receipts the words "Special Bin", and the numbers by which such special bin or bins are known in the elevator. In every case a sample is drawn in the presence of the owner and preserved in a suitable receptacle which shall be sealed and the key of which the warehouseman retains. This sample is preserved until after such grain has been shipped and the owner thereof notified the warehouseman that he is satisfied the identity of the grain has been preserved.

If, after the shipment has been inspected, the owner is of the opinion that the identity of the grain has not been preserved, he shall notify the warehouseman in writing and both parties shall forward the sample sealed to the chief inspector to be compared with the shipment. The decision given by the chief inspector is final.

Regulations similar to those which have been mentioned, when grain is out of condition, or becoming so, are applicable in the case of grain preserved in special bins. The liability of the warehouseman is identical.

In case there is a disagreement between the purchaser and the person in the immediate charge of receiving the grain and the person delivering the grain to such elevator for sale, storage or shipment at the time of such delivery as to the proper grade or dockage for dirt or otherwise, except as to conditions, a proper sample shall be drawn in the presence of the person delivering the grain and forwarded in a suitable sack, properly sealed, to the chief inspector with the request that he examine the sample and report on the grade for dockage, the said grain is in his opinion entitled to and would receive if shipped to the terminal points and subjected to official inspection. The chief inspector shall make out in writing his finding, which shall be conclusive.

Where such a disagreement arrives on the sale of the grain from a farmer to a country elevator, the farmer shall be paid on the basis of grade and dockage offered him by the elevator, but the final statement shall be made on the basis given by the chief inspector. The Act contains many provisions intended to ensure the efficiency, the safety and the rapidity of all handling and transportation of grain by the railway companies. As an example, the Board may, on a written application by ten farmers residing within twenty miles of the nearest shipping point and on approval of the application, request the railway company to erect and maintain at such point a loading platform, and maintain there an agent to keep open for the use of shippers at all times a car order book in which applicants for cars shall make order, to seal loaded cars, to provide shippers with the regular form of grain shipping bill and, when it is properly filled out, to hand it to the conductor of the train.

Cars shall be awarded according to the order in time in which such orders appear in the order book. The rights of the applicants are strictly determined in order to expedite, as much as possible, the shipments. During a car shortage the Board may direct the railways to make an equitable distribution of empty cars to all stations or sidings in proportion to the amount of grain available for shipment. The Board may also order cars to be supplied to elevators that are in danger of

collapse, to places where grain is damp and liable to become damaged, for the purpose of distributing seed grain, or in cases where some portion of the grain in an elevator is heated and requires treatment.

The inspectors, upon the arrival of any car containing grain at certain points, shall ascertain the condition of such car and determine whether any leakages have occurred in transit. They shall make a record of any leakage found and report the facts connected therewith to the Board.

Any person desiring to carry on the business of grain commission merchant shall make application to the Board for a licence and the Board shall fix the amount of a bond to be given. The grain commission merchants shall report their sales to the consignor within twenty-four hours. All complaints must be made in writing by the consignor to the Board.

No person shall carry on the business of a track buyer without first having obtained a licence so to do from the Board and entered into a bond, with sufficient sureties, for such amount and in such form as is approved by the Board.

Every person licensed as a track buyer shall, on demand, within twenty-four hours after the receipt of the expense bill and certificates of weight and grade, account to and pay over the vendor the full balance of the purchase money then unpaid, and shall furnish duplicate certificates of weight and grade with car number and date and place of shipment. He shall keep true and correct account in writing in proper books of all grain bought by him in such carload lots and shall deliver to the vendor of each such carload lot of grain a grain purchase note, retaining himself a duplicate thereof. This note shall bear on its face the licence season, the licence number of the track buyer's licence, the date and place of purchase, the name and address of such track buyers, the name and address of the vendor, the initial letter and number of the car purchased, the approximate number of bushels and kind of grain contained therein, and the purchase price per bushel in store at Fort William, Port Arthur or other destination.

The grain purchase note shall also express an acknowledgment of the receipt of the bill of lading issued by the railway company, the amount of cash paid to the vendor in advance and also that the full value of the purchase money shall be paid to the vendor immediately the purchaser shall have received the grade and weight certificates and the railway expense bill. Such a grain purchase note shall be signed by the track buyers and the vendor shall endorse his acceptance of the terms of the sale as well as his receipt for payment of the money advanced him.

All persons desiring to carry on the business of primary grain dealers shall first obtain a licence so to do from the Board, and enter into a bond, with sufficient sureties, for such amount and in such form as is approved by the Board. All their contracts shall be made according to the provisions of the Act.

According to the provisions of the Act, the delivery of grain to any country, terminal, public or other elevator for storage, although it be mingled with other grain, and the shipping or removing of grain from its original place of storage in any of the elevators aforesaid, shall be deemed a bailment and not a sale.

AMERICAN GRAIN SHIPPED THROUGH CANADIAN PORTS.

Inspecting officers shall, when required, inspect grain of United States production passing through Canadian ports in transit to Great Britain or to a foreign country and issue a grade certificate therefor based on standard samples which are established yearly by the Grain Standards Board of the district of Montreal.

Standard samples of the different grades of American grain passing through the port of Montreal are fixed yearly by the Grain Standards Board and specimen samples are forwarded together with standards for the commercial and statutory grades of western-grown grain, to the principal Corn Exchanges and Canadian Government Trade Commissioners in Great Britain and on the Continent.

- 11 The *fresh fruit* trade is controlled and regulated by the Fruit Act, 1928.
Grades are provided for practically all fruits packed in closed packages—that is, packages in which the contents cannot be seen when the package is closed.
- 12 For *apples and pears* packed in barrels, half-barrels and hampers there are four grades—namely, No 1, No 2, Domestic and No. 3. Each of these grades requires the apples or pears to be hand-picked and to possess certain qualifications with respect to colour, size and freedom from defects.
For apples and crabapples packed in boxes the grades are Extra Fancy, Fancy, "C" grade, and Household. Each specimen must be hand-picked and possess qualifications according to grade. In all grades except Household the apples must be wrapped and the package marked with the number of specimens contained therein.
- 13 Grades are also provided for *plums, peaches, field tomatoes, cherries, grapes and cantaloups*
All packages containing fruit must be marked in a plain and indelible manner by the person or firm packing same or selling or offering the fruit for sale with the words "Packed by" and with the initials, surname and address of the person or firm. When the fruit is packed in a closed package the package must also be marked with the variety and grade of the contents.

When any fruit for which grades are provided are packed in fruit baskets the basket must be marked with the word " Ungraded " unless marked with a grade designation provided by the Act.

The marking on packages must be stamped or placed thereon before they are taken from the place where packed.

When fruit is packed in an open package bearing a grade mark the contents must meet the requirements of the grade.

By such system of marking it is possible to trace any person or firm responsible for packing any particular package.

When the contents of any package of fruit is of inferior quality to the requirements of the grade marked on the package the inspector has authority to mark the package " below grade " or to place thereon the correct grade designation.

When *peaches, plums, pears* or *grapes* intended for sale are packed when immature, the words " Immature Fruit " must appear in a clear and indelible manner on the package before it is taken from the premises where it is packed. 14

It is prohibited to sell or offer for sale fruit packed in any package and arranged in such a way as to give a false representation of the contents of the whole package. For example, it is considered a false representation when more than 10 % of the contents is of smaller size or of inferior quality or of different variety than the shown surface.

It is prohibited to offer for sale any fruit in any package that is so diseased, wormy or otherwise depreciated as to render it unfit for consumption; also no person shall sell or offer for sale at original point of shipment packages which are not well and properly filled.

The Act also specifies the dimensions for fruit packages. Barrels for apples or pears must have a capacity measurement of 7,056 cubic inches and the half-barrels 3,528 cubic inches.

Apple boxes must have a capacity measurement of 2,174 cubic inches, except in boxes having a separate compartment for each apple.

Apple crates must have a capacity measurement of 2,174 cubic inches; boxes for pears or crabapples, 1,760 cubic inches; peach boxes must be of one or other of the following dimensions: 932, 828 or 725 cubic inches; plum or prune boxes 672.75 cubic inches; cherry boxes 729 or 364.5 cubic inches; boxes for strawberries, raspberries and other berries 67.2 or 33.6 cubic inches. Fruit baskets must have a capacity of 1 bushel, 20 quarts, 11 quarts, 6 quarts and 2 quarts.

The regulations with respect to the manufacture of packages do not apply to packages manufactured for sale outside of Canada.

Any person charged with the enforcement of the Act may enter upon any premises to make examination of any packages of fruit suspected of being packed in violation of the Act. An inspector may detain for the time necessary to complete his inspection any shipment of fruit with respect to which he has reasonable grounds for believing there is a violation of the Act. Such fruit is at all times at the risk and charges of the owner, and the inspector detaining the fruit must notify the owner thereof.

A certificate issued by an inspector is *prima facie* evidence of the truth of the statements contained therein.

All imported fruit must be marked in a plain and indelible manner with the words " Imported By " followed by the initials, name and address of the person or firm importing same.

There are also regulations containing full details for the manufacture of barrels or boxes intended to contain fruit. This regulation covers the materials to be used and the dimensions of each part constituting the package. In addition, each box or barrel must bear the name of the manufacturer.

Regulations are also provided whereby no person shall export from Canada any apples, pears or plums grown in Canada unless same have been inspected and an export inspection certificate issued stating that the fruit complies with the requirements of the Fruit Act and is of the grade designated. The certificate is intended to cover shipments in continuous movement, but when a shipment is held in storage or sufficiently delayed that the condition of the fruit is liable to change, the fruit must again be inspected or a release permit in lieu thereof obtained.

Inspection of *canned, preserved and dried foods* and establishments where these are manufactured is made in accordance with the provisions of the Meat and Canned Foods Act, 1907, and regulations made thereunder. 15

The regulations govern only such products as are intended for export including inter-provincial trade.

Canned or evaporated fruits and vegetables or fruit and vegetable products must be the product of sound, clean, wholesome fruits and vegetables manufactured under sanitary conditions as defined in the regulations. 16

All products must be labelled to give (a) a true and correct description of the contents and (b) the name and address of the packer or first dealer.

Standards of quality have been defined in terms of " Fancy Quality ", " Choice Quality ", " Standard Quality " and " Second Quality " and must be declared on the label in letters not less than 3/8ths of an inch in height. These standards have been defined for such fruits as apples,

apricots, various kinds of berries, peaches, pears, plums, etc., and for such vegetables as peas, tomatoes, beans, asparagus, etc.

All fruits must be labelled to declare whether the product has been packed in " Heavy Syrup ", " Light Syrup ", or " Without Sugar " or " Packed in Syrup ... % Sugar ", this declaration to be shown in letters not less than 1/4-inch in height.

17 Canned *peas* must also be labelled to declare the size, as " Size 1 ", " Size 2 ", " Size 3 ", etc.,. These sizes are defined in the regulations and the declaration must be shown on the label in letters not less than 1/4-inch in height.

18 *Jams, jellies, marmalades and pickles*, etc., must be labelled to meet with the requirements for these products made under the Food and Drugs Act and must, unless packed in standard containers, be labelled to declare net weight.

Quality standards are defined for evaporated or dehydrated apples which shall contain not more than 25 % moisture, and the grade designation must be marked on the containers.

All shipments of canned, preserved or dried foods intended for export must be accompanied by a certificate issued by an inspector of the Department of Agriculture stating that the goods are marked in accordance with the various requirements.

All shipments of any of these products which are imported into Canada, are carefully examined, samples taken and submitted to this office for inspection, and such shipments must be labelled or marked to meet with the requirements of the regulations as to quality, etc.

19 The *Seeds Act* regulates the testing, inspection and sale of seeds in Canada for the purpose of seeding.

20 *Clover, grass, seed grain and fodder-seeds* when offered for sale in Canada must be labelled with the following information:

- (a) The name and address of the seller;
- (b) The name of the kind or kinds;
- (c) The brand name, if any;
- (d) The name of variety, when known;
- (e) The name of the grade of seed, which shall be one of the following:

(1) for the general seeds of commerce, No. 1, No. 2, No. 3;

(2) for seed derived from an inspected seed crop that was pure as to variety and was registered by the Canadian Seed Growers' Association, Registered No. 1, Registered No. 2, Registered No. 3, to which grade names there may be added such further word or words as may be prescribed by regulation to describe such damage to the seed as may not impair its utility value for seeding;

(3) for mixtures of grass, clover, or other fodder or forage crop seeds, No. 1 Mixture, No. 2 Mixture, No. 3 Mixture;

(f) The serial number of the control sample certificate or the letter and serial number of the seed inspection certificate;

(g) The origin of production for the kinds and in the manner as may be prescribed by regulation.

21 *Rape, field root and garden vegetable seeds* in lots of over two ounces may be sold under grade and labelled in accordance with the above provision, or must conform to the minimum standard of purity and vitality that may be prescribed by regulation and be labelled with the following information:

- (a) The name and address of the seller;
- (b) The name of the kind and variety;
- (c) The percentage of germination when such germination is below the minimum percentage of germination prescribed by regulation for seed of the kind;
- (d) The origin of production for the kinds and in the manner prescribed by regulation.

22 *Field root, garden vegetable or flower seeds* in lots of two ounces or less when offered for sale in Canada must conform to the standards of purity and vitality that may be prescribed by regulation and be labelled with the following information:

- (a) The name and address of the seller;
- (b) The name of the kind and variety;
- (c) The percentage of germination when such germination is below the minimum percentage prescribed by regulation for seed of the kind;
- (d) The origin of production for the kinds and in the manner prescribed by regulation.

In the case of flower seeds only (a) and (b) apply as percentages of germination and origin of production have not been prescribed by regulation.

The use of false or spurious variety names for any agricultural or garden vegetable seed is prohibited. New varieties must first be tested in Canada and licensed for sale before new variety names may be used. In the case of cereal grains the Minister of Agriculture may refuse a licence for a new variety if found to possess such inferior qualities or characteristics as to impair its value for commerce. This provision aims at protecting the reputation of Canadian grain from having the grades lowered on account of inferior varieties being grown and mixed with the present high quality grains.

Provisions are contained in the Act in regard to truth in advertising, prohibiting the sale of seeds of a quality inferior to grade No. 3 or No. 3 Mixture, and to minimum standards of purity that may be prescribed by regulation for seeds of rape, field root or garden vegetable.

Agricultural and garden vegetable seeds named in this Act imported into Canada for the purpose of selling or seeding must be branded or marked or coloured in accordance with the provisions of the Act and conform to the regulations thereunder.

Seeds purported to be graded for export shall be labelled with the following information:

- (a) The name and address of the seller;
- (b) The name of the kind or kinds;
- (c) The name of the export grade the quality of which may be defined by regulation under the following grade names: Registered Extra, Registered No. 1, Registered No. 2, No. 1, No. 2 and No. 3;
- (d) The letter and number of the seed inspection certificate;
- (e) The origin of production for the kinds and in the manner as may be prescribed by regulation.

The Minister of Agriculture is empowered to appoint an advisory board which may, at his request, prepare and recommend to him such regulations as it is of opinion should be established under the Act. This board, composed of seedsmen and farmers nominated by their respective organizations, with the Seed Commissioner as Chairman, meet annually, and the regulations now included under the Act are based on their recommendations.

Exemptions to the Act are provided as follows:

- (a) Seed that is sold to be cleaned or graded before being offered for sale for the purpose of seeding;
- (b) Seed that is held in storage for the purpose of cleaning or grading, provided that the place of storage is not accessible to purchasers of seed or the seed is labelled "held for recleaning";
- (c) The seeds of cereal grains, buckwheat, field peas, field beans and corn that are grown, sold and delivered by any farmer, on his own premises, for seeding by the purchaser himself, unless the purchaser of the said seeds obtains from the seller at the time of the sale thereof a certificate that the said seed is supplied to him subject to the provisions of this Act;
- (d) The sale of Elite stock seed that may be produced and sold by any plant breeder to a seed grower, unless such seed be again sold.

Penalties are provided for violations of the Act: forging or altering any certificate of grade, falsely marking or using the serial number of any certificate issued under the provisions of this Act; wilfully lowering the quality or value of seeds by mixing any other seeds or material therewith after the seeds have been tested and marked, or wilfully obstructing an inspector charged with the enforcement of the Act while in the discharge of his duties.

The Dominion Department of Agriculture maintains inspection and laboratory staffs to test and grade all seed offered for sale in Canada to which this Act applies, and to keep a check on the quality of the seed offered for sale to ensure its conformity with the Act and regulations.

An inspector shall have the power to inspect before export to any foreign country, or shipment within the Dominion, any plant, and to grant a certificate according to the requirements of any country demanding such, or for domestic purposes.

All certificates so issued must bear a copy of the official seal of the Plant-disease or Insect-pest Inspection Service carried on under this Act.

In the case of *potatoes* for which such certificates are required no person shall be allowed to sell or offer, advertise, expose, or hold in possession for sale, for seed purposes, any potatoes in any manner or form described or designated as certified, inspected, registered, selected, or disease-free seed potatoes unless such potatoes are contained in sacks, barrels, or other containers, to each of which shall be durably attached a certificate stating that any such potatoes contained therein have been inspected in the field and after harvest by an inspector under the Destructive Insect and Pest Act and have been found sufficiently vigorous and free from serious diseases, other pests, foreign varieties, mechanical injury, or other blemishes, to warrant them being classed as Extra No. 1 Certified Seed Potatoes. All such certificates shall bear the grower's name or number as well

as a copy of the official seal of the Plant Disease Inspection Service of the Department of Agriculture, Canada.

24 The Feeding Stuffs Act regulates the sale and inspection of commercial *feeding stuffs, flour mill by-products from wheat, and chop feeds* sold or offered for sale in Canada for the feeding of live-stock or poultry.

“ Commercial feeding stuffs ”, which include all ready-mixed feeds except those defined as chop feeds, and all by-product materials except those from wheat, must, for sale in Canada, be registered with the Minister of Agriculture and tagged or labelled by the manufacturer with the following information:

- (a) The name, brand or trade mark of the contents;
- (b) The full name and address of the manufacturer;
- (c) The specific name of every ingredient contained in the feed; (Many by-product feed materials are defined by regulations and the correct specific names therefor indicated);
- (d) The registered number;
- (e) The analysis as guaranteed by the manufacturer, which shall show the percentage content of protein, fat and fibre respectively.

“ Chop feeds ” include the mixed or unmixed meals made directly from or consisting of the entire clean grain of wheat, rye, barley, oats, Indian corn, and flax-seed, used separately or in any combination desired. Every container of mixed chop feed must be tagged or labelled with a statement of the ingredients used in the mixture.

All by-products obtained in the milling of flour from wheat must be free from added screenings or other adulterants and are standardized in name and composition as follows:

Name	Minimum Protein	Minimum Fat	Maximum Fibre
Bran.	15	3.5	11.5
Shorts	16	5	8
Middlings.	16.5	3.5	4.5
Feed Flour	—	—	2

Wheat flour by-products, singly or combined, may not constitute more than 50 % by weight of any mixed feed, and may not be combined in any proportions with screenings, scourings, scalplings, oat hulls, oat feed, buckwheat hulls, peanut hulls or shells, peat or moss. They must be labelled for sale to show the name of the by-product, the name of the manufacturer or the name and address of the importer, and the place where the by-product was manufactured.

No feeding stuff, except screenings, may be sold in Canada which contains in excess of one-half of one per cent by weight of weed seeds and materials injurious to the health of live-stock or poultry, including: Darnel (*Lolium temulentum L.*), Purple cockle (*Agrostemma Githago L.*), Wild Mustard (*Brassica species*), False flax (*Camelina species*), Wormseed mustard (*Erysimum cheiranthoides L.*), Stinkweed (*Thlaspi arvense L.*), Tumbling mustard (*Sisymbrium altissimum L.*) Hare's-ear mustard (*Conringia orientalis (L.) Dumort*), Ergotised grains. Screenings when sold separately may contain up to one per cent of such injurious weed seeds. No ground-feeding stuff may contain in excess of five viable weed seeds per ounce.

The Department of Agriculture maintains inspection and laboratory staffs and facilities to check feeding stuffs for compliance with the Act, and penalties are provided for violations, including refusal to allow inspections, the sale of adulterated or improperly, incorrectly or misleadingly labelled feeds, or the forging of registration numbers.

25 When a manufacturer of *canned fish* wishes to make an export shipment, application must be made for a certificate. An inspector is sent, who issues the certificate upon the production of a signed declaration by the packer that the contents of the tins conform to the description shown on the label. The officer examines the consignment, and, if he finds it correctly labelled, he issues the certificate and takes samples for further examination as to grading and quality.

The process of manufacture is governed by regulations which require, in the first place, a sound raw product, and sanitary handling during manufacture, as also the grading for quality, which are carefully defined in the appended regulations.

The qualities are as follows:

- (1) Fancy Quality;
- (2) Choice Quality;
- (3) Standard Quality;
- (4) Second Quality.

All exports, as also imports, are governed by these requirements and must conform to the definitions laid down in the above-mentioned regulations.

Under the provisions of the Live Stock and Live Stock Product Act of 1927 regulations are in effect for the grading and marking of *dressed poultry* according to standards of quality, grades, and weights as laid down by the Federal Department of Agriculture. The regulations as well require that all boxes shall be marked or branded to designate the grade and shall only be shipped after a certificate has been issued. 26

Under the Live Stock and Live Stock Products Act under dates of March 1924 and September 1927, regulations are in effect respecting the grading of *hogs* for commercial purposes. All hogs offered for slaughter are subject to grading by the Federal Department of Agriculture under standards and grades as set forth in the regulations. The standards are intended to bring about the production of a type of hog most suitable for the markets to which Canada has access, and the grades have been based on a strict interpretation of consumer demand, with special reference to the requirements of the British bacon trade. 27

It might be mentioned that under the authority of the Live Stock and Live Stock Products Act steps have been taken to inaugurate a system of identification of certain grades of *beef*. 28

CATEGORY 4.

The Inspection and Sale Act establishes and defines grades for *hay* and *straw* of various kinds and provides penalties for putting foreign material into bales of hay or straw intended for sale, which would improperly increase the weight or prejudicially affect the quality. The use of these grades is optional and they apply only where contracts are made "subject to inspection". The inspection and certification is done by Department of Agriculture officials at a charge to cover the approximate cost of such inspection. 29

The grade classifications for hay grown in the provinces of Ontario, Quebec, Nova Scotia, New Brunswick and Prince Edward Island are as follows:

"Prime timothy", "No. 1 timothy", "No. 2 timothy", "No. 3 timothy", "No. 1 clover", "No. 2 clover", "No. 1 clover mixed", "No. 1 dyke", "No. 2 dyke", "Mixed hay", "No grade", "Rejected", "Shipping grade".

The grades for hay grown in the provinces of Manitoba, British Columbia, Saskatchewan, Alberta and the North-West Territories are as follows:

Tame grasses — "Choice timothy", "No. 1 timothy", "No. 2 timothy", "No. 3 timothy", "No. 1 timothy clover mixed", "No. 2 timothy clover mixed", "No. 1 rye grass, brome, orchard grass or alfalfa", "No. 2 rye grass, brome, orchard grass or alfalfa", "No. 3 rye grass, brome, orchard grass or alfalfa", "No established grade".

Wild grasses — "Choice prairie hay", "No. 1 prairie hay", "No. 2 prairie hay", "No. 3 prairie hay", "No. 4 prairie hay", "No grade hay", "Rejected hay".

The grade classifications for straw are as follows:

"No. 1 straw", "No. 2 straw", "No grade straw", "Rejected straw".

CATEGORY 5.

According to information supplied by the various provinces, particularly Alberta, British Columbia, Manitoba, Nova Scotia, Ontario, Quebec and Saskatchewan, the provisions of the civil and criminal law, whereby contracts can be cancelled for defective quality or penalties be imposed for fraud, are the same as those in force in England, particularly the Act of July 15th, 1870, with the subsequent alterations and amendments.

CZECHOSLOVAKIA.

CATEGORY 2.

- 1 In accordance with the Customs Convention of March 1st, 1924, between Italy and Czechoslovakia, *essential oils* exported to Italy must be accompanied by a certificate of analysis.
 - 2 Under the Commercial Treaty between Italy and Czechoslovakia of March 23rd, 1921, *beer* exported to Italy must be accompanied by a certificate of analysis recognised by the Italian authorities, provided it has been issued by one of the duly-authorized institutions a list of which was mutually agreed to. These certificates must show the quantity analysed, the percentage of alcohol and of dry extract, and the saccharometric degree of the wort from which the beer was manufactured.

The certificates must also specify that the beer has been prepared solely from malt, hops, yeast and water, without any glycerines, salicylic, boric or oxalic acid, or other bitter substances not naturally contained in the beers.
 - 3 The Law of August 12th, 1921, regulating the marking of *hops*, in Czechoslovakia, prohibits any exports of this article not bearing the official mark, warranting not only the district of origin and the purity, but also the quality.

A Decree of November 12th, 1920, imposes a still stricter Government control in Czechoslovakia on the trade in *clover* and *lucerne* seeds. Inspection is carried out by three official organisations, which make an analysis, seal the wrappings, affix marks and issue transport permits. There are special marks and stamps for export consignments, and, when the latter are passing the frontier, Customs offices are bound to take samples. These are forwarded for further examination to the proper office.

When lucerne and purple clover are imported, each consignment must be reported by the Customs authorities to the competent organisation, and the Customs office of entry must, at the same time, forward a sample taken from the consignment.
 - 5 Under a Law of 1891, all *portable fire-arms* must undergo a compulsory test at a Government establishment; a Decree of 1899 introduced an optional test for smokeless-powder fire-arms for sporting purposes. In this case a special additional mark is added to that affixed as a result of the original test.
-

DENMARK.

CATEGORY 1.

- With regard to this category, special mention should be made of the Law of April 18th, 1910, relating to the inspection of *foodstuffs*, etc. I
- The object of this law is to ensure that goods of inferior quality and damaged or adulterated goods should not be offered for sale.
- Pursuant to the instructions of the Minister of Justice of March 15th, 1911, issued in execution of the law, the police are entitled to purchase samples of all *foodstuffs*, including *table waters*, *patented pharmaceutical preparations* and *certain articles of consumption*. The samples are then forwarded for examination to a laboratory ("Steins Analytisk-Keniske Laboratorium"), with which the State has concluded an agreement. 2
- Such purchases are permissible even when there is no reason to believe that the law has been broken.
- The law in question authorises the Minister of Justice to issue regulations determining the commodities that may be sold under the different names used for foodstuffs, and he may forbid the adulteration of these commodities with any substances likely to have an injurious effect on health, either immediately or in the long run. Among these substances are colouring matter and preservatives.
- In virtue of his powers, the Minister has imposed the following regulations:
- (a) Order of June 10th, 1913, defining what may be sold under the name of *wines and spirits*; 3
 - (b) Order of the same date prohibiting the addition of colouring matter or preservatives to *foodstuffs* intended for sale; 4
 - (c) Order of May 12th, 1916, defining what may be offered for sale under the name of *alimentary fat* and *alimentary oil*; 5
 - (d) Order of May 17th, 1918, relating to *flour contained in sausages* intended for sale; and 6
- Order of June 10th, 1921, defining what may be offered for sale under the name of *milk, cream and other produce*. 7
- The Law of April 14th, 1905, prohibits the use of *artificial sweetening substances* having a nutritive capacity less than that of refined cane or beet sugar, unless in the case of products intended for invalids. 8
- The *Pharmaceutical Law* of April 29th, 1913, contains a number of provisions intended to prevent the advertising of goods of inferior quality. It is forbidden, without authorisation from the National Health Office, to advertise surgical treatment, *electric belts*, apparatus for curing deafness, treating eye trouble, etc. The National Health Office may prohibit any advertising of remedies described as being guaranteed to cure or to disinfect, or declared to be effective against disease. 9
- On the proposal of the National Health Office, the Minister of Justice may also prohibit the sale of remedies the composition of which is not indicated (patent medicines). 10

CATEGORY 2.

- Precious metals*. — Formerly, all gold and silver articles had to be stamped in Denmark, but the Law of April 5th, 1888, prohibits the stamping of gold articles of a fineness less than 585 per thousand (14 carats), or silver articles of a fineness less than 830 per thousand (Copenhagen silver standard). II
- The stamping of gold and silver articles of the fineness indicated is optional; but, if the articles are stamped, the fineness must be shown in thousandths, and they must also bear a mark indicating the name of the manufacturer. This mark has to be registered.
- These rules also apply to gold and silver articles not manufactured in Denmark; but in that case the name of the seller is substituted for that of the manufacturer.

* * *

There are a fair number of legal provisions in Denmark relating to various commodities, applying partly to all forms of trade in these commodities and partly to the export trade.

The use of the official Danish mark, the "Lurmark" or "horns-mark" (*vide* Category 3) was regulated for the first time by the Law of March 30th, 1906. The provisions now in force with regard to this mark are contained in the Law of April 12th, 1911, relating to the trade in butter and foreign agricultural produce, and in the Royal Executory Decree of November 17th, 1911, as also in the Decree of the Ministry of Agriculture of July 24th, 1925.

12 "In accordance with these provisions, it is forbidden to export from Denmark Danish butter without the 'Lur' mark, with the exception, however, of Danish *butter* in hermetically sealed containers (*vide infra*). The 'Lur' and the words 'Dansk Smør', or a translation (generally 'Danish butter'), must be on the outside wrappings of the butter (if the butter is in barrels on two opposite staves, and, if in boxes, at the two ends). The 'Lur' must be printed or (though this is exceptional) branded on all cases made of wood."

If the butter is made up in packets of five kilogrammes or less, not only must the boxes bear the "Lur" mark, but each slab must be wrapped in parchment paper bearing this mark. If the packets are larger, two control certificates with the "Lur" must be placed on the butter, one above and one below. The "Lur" on the packing, and also on the marked paper and the control certificates, must be accompanied by control numbers corresponding to a system known only to the State Control Office ("Statskontrollen"; see below, section on control). This enables the office to distinguish the dairy from which the butter comes.

Dairies wishing to use the "Lur" mark must make a declaration to that effect to the police, and satisfy the latter that they possess the necessary equipment to ensure pasteurisation at 80° C. These dairies are registered by the State Control Office, and application for wrapping materials and control certificates bearing the "Lur" mark must be made to the State Service for Butter-Marking Control (Statens Smørmaerketilsyn) at Copenhagen, which is alone entitled to supply them.

Butter bearing the "Lur" is controlled for quality by the State Laboratory of Agricultural Research. When the butter from a dairy is recognised as being below a certain quality, and when this defect cannot be repaired within a short period with the help of Government experts, the dairy loses the right to use the mark.

The following provisions apply to all butter bearing the "Lur" mark:

It must be prepared with pasteurised cream—that is to say, cream brought to a minimum temperature of 80° C. It must contain not more than 16 per cent water and not less than 80 per cent butyric.

The butter must not contain any preservative other than common salt, nor any aniline dye.

If not in packets of five kilogrammes or less, it must bear some indication of the date when it was made. This date must appear on the control certificates and the outside wrappings, which should also show the net weight of the butter.

Danish butter may not be packed in hermetically sealed containers, except by special authorisation from the Ministry of Agriculture. No butter except that bearing the "Lur" may be packed in this way.

Adulteration of butter is invariably punished by imprisonment.

Foreign butters imported into Denmark must have on their packing the word "Udenlandsk" (foreign) in black lettering on a light ground. The letters must be 20 mm. high and must be easily readable. Re-exported foreign butter must bear the same marks as when imported. The Minister of Agriculture may authorise the repacking of foreign butter in Denmark for export in hermetically sealed containers. Such authorisation is subject to certain special conditions; among others, each container must bear an indication of the origin of the butter in stamped characters 10 mm. high. The boxes in which the hermetically sealed containers are exported must bear the same indication in characters 60 mm. high.

13 The Law of April 1st, 1925, may be mentioned here, on the manufacture of and trade in *margarine*, etc. It contains the following provisions:

1. An exact definition of what is to be understood by *margarine*.

2. This product may not contain more than 16 per cent water, less than 80 per cent fat, wax, paraffin, vaseline and similar substances, colouring matters derived from coal, substances injurious to health.

It is forbidden to use any other preservative than common salt. Nevertheless, the Minister of Agriculture may in certain cases, where the *margarine* is to be exported, authorise the use of preservatives to the extent to which these are allowed in the countries to which the *margarine* is to be sent.

Any person preparing or selling *margarine* must notify the police.

14 *Margarine* must be packed in a special way, different from that in which butter is packed. It must be marked "Margarine" and bear the name of the manufacturer and the place where it was made. *Margarine* must always contain sesame oil as a distinguishing substance.

15 The rules in force with regard to the export of prepared *milk* were laid down by the law of May 4th, 1927, to which was annexed the Circular of the Ministry of Agriculture dated October 26th, 1927.

By *prepared milk* is meant milk or *cream* which, by a process of *sterilisation*, the addition of sugar and *condensation*, or by *evaporation*, has been treated so that it will keep for a long time. 16

Milk prepared in Denmark may not be exported unless it comes from establishments which have been duly authorised by the Ministry of Agriculture. Wholesome, good quality milk and no other must be used in these preparations, and the milk or cream used must be *pasteurised* at a temperature not below 80° C. Prepared milk may not be described as full milk unless milk containing at least 3 per cent fat has been used in its preparation. The description "cream" may be applied to a product only when it has been prepared with the fatty parts separated from milk, and containing at least 9 per cent fat. *Powdered milk* must contain not more than 8 per cent water, and it may not be described as full milk unless it contains at least 23 per cent lactic fat. 17

On every box there must be a mark showing that the product has been prepared in Denmark. The number of the licence granted to the factory, the nature of the product and, in the case of condensed milk, the degree of condensation, must also be specified. The commodity must not have any other substance added to it except sugar, although in the preparation of powdered milk a very small quantity of bicarbonate of soda may be added.

Prepared milk of foreign origin may not be exported from Denmark unless the packing bears an indication of the country of origin.

If the milk or cream comes from any animal other than the cow, this must also be indicated.

Foodstuffs containing fatty substances other than milk may not be sold under names which include the words "milk" or "cream" unless this is specially authorised by the Ministry of Justice.

Cheese. — The rules that apply here were laid down in virtue of the Law of March 11th, 1921, and appear in the Ministry of Agriculture's Circular of June 2nd, 1928. 18

Anyone wishing to make cheese intended for sale must give notice to the State Control Office (*vide infra*); not more than six kinds of hard cheese and not more than three kinds of soft cheese may be made. The fat content of the dry substance in each cheese must amount to 45, 40, 30 and 20 per cent respectively and, for cheese made from skim-milk, 10 per cent. The water content of the cheese must not exceed 50 per cent in the case of Class 1 cheese, and a corresponding percentage for the other kinds. Cheeses of the Emmenthal (Gruyère) and Cheddar type will be considered as coming under Class 1, and cheeses of the Gonda and Eida types as coming under Classes 1, 2, 3 or 4, etc.

Among soft cheeses, the Danish cheese of the Roquefort type must contain not less than 50 per cent fat in the dry substance, and not more than 52 per cent water. The other soft cheeses of Classes 7, 8 and 9 must contain 45, 30 and 20 per cent fat respectively in the dry substances and not more than 60 per cent water.

On being made each soft cheese must be marked with a figure indicating the minimum percentage of fat in the dry substance which is prescribed for that class of cheese, and also with the dairy control number and the number to indicate the week when it was prepared. The mark of the percentage of fat and of the control number must be enclosed in a triangle, for Classes 1 and 5, and in a hexagon, square or circle respectively for Classes 2, 3 and 4. Hard cheeses may not be exported until they are at least four weeks old.

The wrappings of soft cheeses must show the dairy control number and, except where a certain fat content is prescribed for the cheese in question, the minimum percentage in fat of the dry substance which is prescribed for the type of cheese in question.

Eggs. — The rules that apply to the export and import of eggs are found in the Law of March 31st, 1928, and in the Decree of the Ministry of Agriculture of April 30th, 1928. 19

Only exporters who have been duly authorised may export eggs from Denmark. The export of second-quality Danish eggs is prohibited; the boxes in which Danish eggs are exported must bear marks which indicate (1) their Danish origin, (2) their quality (fresh, preserved, etc.), and (3) their assortment weight (weight per ten dozen). In addition, all "Danish fresh eggs" intended for export must have on them an oval figure with the word "Danish" inside it. The marks on the eggs must be in red, and on the boxes in brown. The method of marking must always follow certain prescribed rules. In respect of quality, the eggs are carefully and strictly controlled, and the assortment weight must be the same for every box.

Foreign eggs imported into Denmark must have a mark on each egg and also on the boxes, indicating the country of origin. These indications must be made in black indelible characters. The same rules as to marking apply in the case of export.

The above rules regarding butter, margarine, prepared milk, cheese and eggs are enforced by a special control service with the help of the police and the Customs administration. This service is in the charge of a chief inspector, who has under him four inspectors and thirteen supervisors. These officials have access to all buildings where the products in question are prepared, packed, preserved or offered for sale, as also to stations, ports or ships. They are authorised to take samples and examine the books containing the indications with regard to preparation and wholesale trade which the establishments concerned are required to keep.

The Law of April 12th and the Regulations dated November 18th, 1911, also contain rules for the trade in *foreign agricultural products*. For instance, it is laid down that certain of these products—such as eggs, honey, bacon, suet and meat, including preserves, sausages and other

food products prepared with meat—must, if they are of foreign origin and are sold in Denmark and afterwards re-exported, be marked “foreign”, so that there can be no possible confusion between Danish and foreign produce.

- 20 The principal provisions with regard to the export of *meat* are, however, contained in the Law of May 27th, 1928. That measure authorises the Minister of Agriculture to take the necessary steps to prevent the export under unsatisfactory conditions of meat, slaughter-house products, or prepared horse flesh, cattle, sheep, goats and pigs.

A Royal Decree prescribes the marks to be applied to meats of Danish origin when they are exported. The Minister of Agriculture also lays down the rules for the use of these marks and for the supervision of the slaughter-houses. It is forbidden to make or import copies of these marks without the permission of the Minister.

- 21 In the exercise of his powers, the Minister of Agriculture has published a number of notices—the latest are dated December 20th, 1924, and May 22nd, 1929—regarding the export of *meat* and other products from *horses, cattle, sheep, goats and pigs*.

The export of meat is restricted to meat and offal from animals slaughtered in the slaughter-houses duly authorised by the Ministry of Agriculture, which provides each of them with a registration number and appoints to each slaughter-house one or more veterinary surgeons and one or more inspectors, who together supervise the operations. The veterinary surgeon or the inspector must be present throughout the operations, and he must see that the rules laid down are observed. The veterinary surgeon examines the animals before and after slaughter, and all their organs, grades them in accordance with the regulations issued by the Ministry of Agriculture, and then marks the meat and offal with a stamp or a label according to the prescriptions of the Royal Decree of November 5th, 1908.

Meat from healthy animals is marked with a blue stamp, the shape of which is an oval with the words “Danmark. I. Kl. Statskontrol” inside it, and the registration number of the slaughter-house. The prescribed number of marks is stamped on certain parts of the slaughtered animal. Packings containing offal or other edible parts, and in certain cases unstamped meat, are labelled “Class I” and bear the signature of the veterinary surgeon. The stamps and labels must be affixed by the surgeon himself or under his supervision. The labels must be affixed with a seal by the veterinary surgeon or the inspector. As a general rule, the marks are stamped on the slaughtered animal; but, if the foreign importers so desire, the stamp may be replaced by a label.

- 22 First quality *pork* and *pork offal*, where there is no trace of rickets or tuberculosis in the meat or the organs, and where no part of the pleura or the peritoneum has been removed, are furnished with a certain number of red marks, stamped on the meat, consisting of the “Lur” mark, the word “Denmark” and the registration number of the slaughter-house.

By the Decree of June 1st, 1929, slaughtered pigs exported to Great Britain and Ireland must bear, in addition to the “Lur” mark, the word “Danish”, and also a stamp showing the date when the animals were slaughtered.

Meat and offal exported to countries where the regulations do not allow of complete inspection are supplied with a special label affixed by means of a seal.

Meat and offal with the oval stamp mentioned above may be exported to all countries. Pork and pork offal, however, for Great Britain and Ireland, may not be exported unless they bear the “Lur”. Nevertheless, melted fat, including lard, and meat in barrels, may be exported to Great Britain with the blue oval stamp or the corresponding label.

Meat and offal stamped “second class” must not be exported.

In order to ensure the observance of the regulations of June 1st, 1929, regarding the cutting-up and preparation of gammons of bacon exported to Great Britain and Ireland, the Ministry of Agriculture arranges for the necessary examination and also for the inspection of the authorised export slaughter-houses.

- 23 Any person manufacturing *meat preserves, sausages and other prepared meat* intended for export must be duly authorised by the Ministry of Agriculture. The latter appoints a veterinary surgeon and an inspector to supervise the making of these products, and they proceed according to the rules mentioned above with regard to the veterinary surgeon and inspectors in the slaughter-houses. Every establishment is given an official number. The containers must bear on the lid a stamp in the shape of a crown surmounting the word “Denmark” and the official factory number. For sausages, there must be a lead seal with a crown on it, together with the number of the factory. Other prepared meats bear a label on which are printed the word “Staatskontrol”, the official number of the establishment and the word “Denmark”.

Two veterinary inspectors and an official (“Veterinaerfuldmagtig”), coming under the Head of the Veterinary Service, see to it that the veterinary surgeons and inspectors appointed to slaughter-houses and other authorised establishments observe the prescribed rules.

Finally, no preservatives, apart from salt, sugar and saltpetre, may be used in connection with any of the commodities specified in the law, whether butcher’s meat or prepared meat.

- 24 There is also Government control over the export of *living domestic animals*, the object of which is to prevent the export of animals possibly suffering from a contagious disease through having been in an isolated zone.

The Law of February 25th, 1876, gave authority to the Minister of Agriculture to take whatever steps he might think necessary to this end. In the exercise of his powers, the Minister laid down a number of rules defining the conditions for the issue of export licences for living domestic animals. The rules at present in force are contained in the Regulations of April 12th, 1924, and March 31st, 1928, relating to the export of cattle, sheep, goats and pigs.

These animals may not be exported unless they have been inspected and certified as suitable for export. This examination is undertaken by specially authorised veterinary surgeons, and, if the results are satisfactory, a certificate is issued by the surgeon. In addition, a metal label, on which are printed a crown, a letter and a number, is attached to one of the animal's ears.

Certificates may not be granted if the animals are excessively lean, if they show any symptoms of disease or are actually diseased, or if they have been in contact with other animals which might have transmitted infectious diseases.

In order to prevent *animals* which may have been exposed to infection from being presented for export, it is laid down in the Decree of October 20th, 1927, that the period of isolation of a farm, owing to the presence of anthrax or infectious glossopharyngian paralysis of cattle, must be extended for six weeks after the disappearance of the disease; also, that an isolation zone with a radius of two kilometres should be defined round every farm where there has been an outbreak of foot-and-mouth disease, swine plague, or other malignant epizootic disease of a virulent character (except swine measles), and that no animal likely to contract the disease in question may be taken outside the zone until six weeks after the disappearance of the disease. The Head of the Veterinary Service, two veterinary inspectors and two administrative officials of the Veterinary Service (" Veterinaerfuldmagtig ") will be responsible for seeing that the rules laid down by the Ministry of Agriculture are observed by the veterinary surgeons employed by the Ministry for the purposes indicated above. 25

CATEGORY 3.

The Law of April 9th, 1913, protecting collective trade-marks, and the Law of March 20th, 1918, on unfair competition and the marking of goods, together with the Regulation of December 21st, 1918, published in execution of the latter law, for establishing a Registry of Companies, make it possible to give effective protection to private enterprise.

The opportunity thus afforded has been widely used; but, in the majority of cases, the collective mark is applied to goods intended for internal trade and home consumption.

The most important collective mark is the " Lur " (*vide* Category 2, paragraph 12), which is registered, not only in Denmark, but in those countries whose law allows the registration of collective marks. The " Lur " consists of four horns intertwined. (The " Lur " is a bronze trumpet discovered in Denmark in the kitchen-middens and used in olden days by Danish warriors.)

An important firm for the trade in *eggs* is the " Dansk Andels-Aegeksport " (Danish Co-operative Society for the Export of Eggs), which collects eggs from farmers throughout the country, the country being divided into districts for the purpose. 26

Each district and each of the supply firms has a special number which is stamped on each egg. The central establishment of the firm subjects all the eggs collected to a light test. Thanks to the system of marking, it is able to distinguish from which place the inferior quality eggs come, and therefore to impose a penalty on the supplier in accordance with the prescriptions laid down in the statutes of the society.

CATEGORY 4.

A Law of July 1st, 1927, relating to the trade in *living plants* and *potatoes* states that the Minister of Agriculture is entitled to take whatever measures he may consider necessary to prevent the spreading of infectious plant diseases. 27

In conformity with this law, two sets of regulations were issued on July 1st, 1923, with regard to the export of living plants and potatoes. They laid down that, in the event of such plants being exported to countries that insist on sanitary inspection, all consignments must be examined before dispatch by the department of the Ministry responsible for the control of infectious plant diseases, and the plants must be certified by this department as free from certain specified diseases.

Another Law of March 29th, 1924, and Regulations of March 31st of the same year, state that potatoes, before being exported from Denmark, may, if a request is made by the exporter, be examined by a Committee appointed by the Ministry of Agriculture. If the result of the examination is satisfactory, the Committee's inspector issues a certificate to show that measures of control have been taken in conformity with the Regulations of the Ministry of Agriculture.

There are in Denmark institutes which, if so requested by the Danish public or by foreigners undertake the examination or analysis of different commodities and then issue certificates showing the result of the analyses. As a general rule, however, application is seldom made to those institutes for the purpose of the export trade. Nor, indeed, was that the object for which they were established.

One of these establishments is the State Experimental Institute, which was formerly a private institution, but which, since 1909, has been administered by the State. On request, and subject to the payment of a fee the amount of which is fixed by the Minister, this establishment undertakes the examination of most classes of goods, with the exception, however, of foodstuffs and fertilisers.

In a very small number of cases, articles for export must have been submitted for examination by, and have obtained certificates from, this institute; this applies, for instance, to cement going to the Argentine, since the Argentine Government has imposed this condition on the importation of Danish cement.

28 There is an important organisation which ought also to be mentioned—namely, the Danish State Testing Station for *seed*, set up by private enterprise in 1871 and taken over by the State in 1891. This station tests seeds, which are produced in large quantities in Denmark—in particular, the seeds of grasses and turnips, and also imported seeds. The tests take place, on the one hand, in the laboratories, where an enquiry is made into the place of production, the degree of purity, the proportion of foreign seeds and rye-grass, the rapidity of germination, the germinative capacity, the weight of the seed, the water content, etc.; and, on the other hand, on control-farms, where the species and the stock are verified and an examination is made to see if the seeds are free from disease. Samples are sent to the station by seed producers and seed merchants.

By the terms of the contracts voluntarily concluded, owing to the existing competition, by seed merchants with the station, the latter, by means of the so-called “automatic control”, sees to it that the firms in question, when delivering their commodities to farmers, observe the guarantee given with regard to the degree of purity of the seeds, the maximum content of rye-grass, the germinative capacity, the place of production, the species and the stock. The station also takes steps to ensure that the firms in question compensate farmers for products delivered which do not correspond to the guarantee figures specified in the compensation rules of the station.

A similar control is exercised over wheat for sowing and seeds intended for export when the buyer stipulates this as a condition of the same and makes a special arrangement with the station. The Swedish Government, among others, has made an arrangement of this kind for turnip seeds of the Danish species and stocks which are produced in Denmark and exported to Sweden.

29 In conclusion, the Law of March 26th, 1898, on the trade in *fertilisers*, etc., should be mentioned,
30 as also the Regulations of January 31st, 1922, providing that any person selling fertilisers or *fodder* which have been industrially treated (if the quantity exceeds 100 kilogrammes) must furnish the buyer with certain definite indications regarding the goods, either in the contract of sale or in a special document of guarantee. The buyer is then entitled to take samples of the goods supplied and send them to a recognised laboratory for a report. Both seller and buyer are entitled to appeal against the report to the Royal Veterinary and Agricultural College.

Penalties are imposed if the prescribed document is not delivered or contains inaccurate indications, and also if adulterated samples are sent.

CATEGORY 5.

The law contains several provisions imposing penalties on persons selling *inferior quality or adulterated goods*, and also persons who sell goods under a name which is not their proper name. For instance, a penal Law of February 10th, 1866, punishes with imprisonment on bread and water for at least five days, or with a maximum period of two years in a penitentiary (in serious cases as much as six years), persons found guilty of adulterating goods or of improperly marking goods with a seal or current mark used to guarantee the quality of goods, or placing marks on goods which do not correctly indicate their quality.

The same penalties apply, in virtue of a Law of April 18th, 1910, to any person fraudulently imitating or adulterating foodstuffs which he intends to sell, or subjecting damaged foodstuffs to any treatment designed to conceal the damage, and also to anyone who, with intent to defraud, offers for sale foodstuffs which he knows to have been treated in this way.

In virtue of the Law of March 20th, 1918, on *unfair* competition, a fine is imposed, and for a second offence imprisonment, on any person who makes an incorrect statement in invoices, labels, etc., with the object of influencing demand (for example, in respect of the country of origin, the nature, composition, properties of the goods, etc.), or who gives information intended to give the buyer a wrong impression of the goods in question or other goods, or who falsely declares that the goods have been examined, controlled or recommended by public authorities or protected by patent.

The law also provides penalties for the unauthorised use of names, titles, etc., for commercial purposes.

In addition, all the laws generally impose penalties for the non-observance of the rules laid down.

In virtue of the Law of April 6th, 1906, a buyer who receives seriously defective goods may either cancel the contract or else demand redelivery or a proportional reduction in price.

The buyer is also authorised to cancel his order if there should be any considerable delay in delivery. In addition, under such circumstances, the buyer generally has the right to claim damages.

DOMINICAN REPUBLIC.

CATEGORY I.

- I The export of *agricultural products* is prohibited:
- (a) When the condition of the product is such as to induce fermentation, mouldiness or rotteness;
 - (b) When it is attacked or damaged by insects capable of destroying it;
 - (c) When it is adulterated by being mixed with foreign substances or parts of the product which are unfit for use;
 - (d) When the packing is impregnated with any substance which is injurious or likely to be detrimental to the quality of the product.
- 2-3 The export of products of inferior quality, such as *separate tobacco leaves*, *coffee* containing black and other berries which can be used to manufacture cheap industrial products, may be authorised, but only if the certificate from the inspector of fruit, and all the other papers, together with the packing, state clearly that the article in question is of inferior quality.
- In order to prevent green coffee berries being mixed with ripe berries, a circumstance which would affect the quality and the price of the product and thus be detrimental to the economic interests of the country, the berries must not be gathered until they are absolutely ripe and must not be dried on the bare ground.
- 4 A *fruit* or a *product* is considered as defective when it is soiled, damp or mixed with foreign substances; when it is green, damp or rotten or is fermenting; when it contains stones and other substances, and when the boarding does not conform to the size and shape fixed by law, or when plugs or wedges are employed to conceal defects or holes in the wood.
- The Customs inspectors do not allow products to be loaded on vessels unless accompanied by the certificate of an inspector of fruit.
- 5 (a) *Tobacco leaves* must be hung up in a loft or shed used as a drying-room for at least forty days, so that they may be properly dried. When they are sufficiently dry, they must be put together in small bundles and graded by the producer in one of the following categories:
- 1. "FF", dry leaves which are intact, which show no trace of deterioration of the edges, not showing any large holes, and of a minimum length of four decimetres.
 - 2. "F", dry leaves which are intact, without trace of deterioration on the edges, although with small holes or stains, three decimetres at least in length.
 - 3. "A", all dry leaves at least two decimetres in length not included in the "FF" and "F" categories.
- (b) Leaves which are of inferior quality, etiolated, yellow, scorched or faded (by contact with the soil) do not come within any of the above-mentioned categories, though they may be prepared for sale under the name of "*separate leaves*" for "*tobacco cut for smoking*" (*Picadaura*).
- 6 When the tobacco leaves have been put together in small bundles and sorted, they have to be divided into heaps at least one metre high. They are then left for at least thirty days.
- Only tobacco leaves prepared in the manner described above may be bought or sold.
- The tobacco leaves must not be wetted at any time before they are offered for sale.
- The packings in which tobacco is offered for sale must indicate in words the category of the tobacco they contain, and the tobacco must satisfy the conditions of the category in question.
- 7 Since September 1st, 1928, every producer of *cocoa* has been obliged to arrange for the complete fermentation of the whole bean crop, except where circumstances render this absolutely impossible, and to dry it afterwards with the necessary regard for cleanliness, so that the product may satisfy the required conditions for export.
- No buyer may accept *cocoa* unless it is dry, healthy and free from foreign substances or parts of the fruit which cannot be used.
- Cocoa intended for export has to be divided into two categories: "*fermented*" and "*current*"; every package must indicate the category to which the contents belong.
- 8 Any dealer in *seeds* or *berries* attacked by insects must have his goods fumigated before declaring them for export; the process of fumigation must be concluded at least forty hours before shipment.
- The premises or silos used for fumigation must be constructed or arranged in such a way as to prevent any escape of the gas used in the operation.

CATEGORY 2.

The inspectors of *fruit* will place their seal on packages containing articles intended for export and will issue certificates to the forwarding agents. These certificates must be presented to the appropriate Customs services before the loading of the goods can be authorised. 9

Even when the export certificate has been issued and the inspector's seal has been placed on the packages, the official appointed by the Secretary of State for Agriculture and Immigration may examine the condition of the fruit after it is placed on board if he considers this necessary or expedient. Should it be found in the course of this inspection that the fruit is in bad condition, the inspector of fruit will prevent its dispatch and will draw up an official report in duplicate on the condition of the fruit. He will confiscate the consignment and will have it kept in bond as evidence pending the decision of the competent tribunal.

He will send one copy of the report to the Secretary of State for Finance and Commerce, and the latter will transmit it to the Public Prosecutor of the area to which the port belongs from which the shipment was to be made. The Public Prosecutor will summon the shipper and the inspector of fruit and the court will impose the penalties prescribed by the law. The other copy will be deposited in the archives of the State Department for Agriculture and Immigration.

CATEGORY 5.

Any person attempting to ship fruit in bad condition is liable to the penalties laid down in Article 413 of the Penal Code, and, in the event of a subsequent conviction, the goods intended for shipment are confiscated. 10

Any inspector approving the export of defective fruit is sentenced to two years' imprisonment.

In cases brought against inspectors of fruit, the following are accepted as conclusive evidence:
(a) the testimony of the Customs supervisor; (b) the results of the verification of the products.

ESTONIA

CATEGORY 1.

- 1 The general principles of the supervision of *foodstuffs* are set forth in the Public Health Law (Collection of Laws, Vol. XIII, paragraphs 658 to 676). There are, besides, special laws for the supervision of the production of, and trade in, most foodstuffs from the point of view of health.
- 2 The law on slaughter-houses and the inspection of *meat* provides for permanent supervision and control of all public and private slaughter-houses and the industries preparing meat products. The general control is exercised by the Central Veterinary Administration, the local authorities being responsible for the direct supervision. The local authorities must take the necessary steps to erect slaughter-houses and establish services for the inspection of meat in towns, suburbs and working-class centres. The animals are inspected by veterinary surgeons before and after slaughter. So far as buildings, installation, internal organisation and veterinary supervision are concerned, all slaughter-houses, whether working for the export trade or not, must satisfy all the requirements of the law on slaughter-houses and meat inspection, and also the regulations issued by the Minister of Agriculture and the local administrations on the basis of that law.
Only meat and meat products recognised as sound may be sold as food; unsound meat is destroyed or used for technical purposes after suitable treatment.
- 3 The manufacture and offering for sale of *butter, cheese and artificial alimentary fats* come under a permanent system of control as prescribed by various laws and special regulations. This control is exercised by the Ministry of Commerce and Industry and by the Central Health Administration. The manufacture, importation, offering for sale, or sale of artificial butter containing more than 16 per cent water and less than 82 per cent fat are prohibited. With a view to facilitating analysis, artificial butter manufactured, imported or offered for sale must contain at least 10 per cent sesame oil, or not less than 0.1 per cent and not more than 0.3 per cent fecula. The above-mentioned products are analysed in the laboratories of the Weights and Measures Service or in the laboratories of local administrations.
- 4 The offering for sale, sale and manufacture for sale of any *mixture of wheat and maize flour and semolina* are prohibited by a special law, the enforcement of which is supervised by the Customs administration and the police.

CATEGORY 2.

- In Estonia, the principal articles of export are subject to previous control by expert officials. Those which do not come up to the requirements may not be exported. In certain cases, only the best commodities obtain the necessary authorisation.
- 5 *Flax* exported from Estonia must bear a distinctive mark in Estonian and in English: "Eesti line" and "Estonian flax". This mark must also include the name or the trade-mark of the firm and a precise indication of the kind of flax.
Estonian flax is divided, according to the area in which it is grown, into six kinds, and each of these is again divided into six different types. The kinds are designated by the letters P, W, PS, T and XX, P and XX corresponding to the areas from which they come. The only flax which has no special mark is "Livonian flax".
The different types are also designated by letters: G, R, HD, D, OD, and LOD, which are added to the letters signifying the kind, for instance, the D type of Werro flax bears the mark "WD". Flax for export is graded by an official appointed by the Ministry of Commerce and Industry.
 - 6 *Linseed*. — In conformity with paragraph 4 of the Decree of the Estonian Government, confirmed on November 3rd, 1926, linseed for sowing, which it is proposed to export from Estonia,

has first to be inspected. It must then be despatched in clean bags, bearing the following inscriptions in Estonian and English:

Eesti linaseeme Estonian linseed	Puhtus } % Purity }
Külvisseeme Crownseed	Puhtus } % Purity }

Only linseed with a purity of 97.5 per cent may be exported under the name of "crownseed". Its germinative capacity must be at least 83 per cent between September 1st and February 1st and at least 87 per cent between February 1st and September 1st. Humidity should never be more than 11.5 per cent. Seed not fulfilling these requirements must bear on the bag the inscription, in clear lettering: "Oliseeme"—"Oilseed".

As a general rule, neither consignments for the home trade nor those intended for export are accompanied by certificates indicating the quality of the seed. At the request of the consignor or the buyer, however, the official seed control station issues such certificates. At the same time, the station has authority, if requested to do so, to seal consignments of any kind of seed, including linseed, and in that case the goods must fulfil certain conditions. The quality of the seeds is guaranteed by certificates issued by the same authority.

Clover Seed. — The export of clover seed is only allowed in sealed bags bearing the inscription "Estonian clover seed", in conformity with the certificate issued by the seed control station of the Ministry of Agriculture, or in unsealed bags without the certificate of the control station, but only if the bags and the bills of lading are marked, "Clover seed of unspecified origin". 7

Potatoes. — Potatoes intended for countries which require a certificate showing that they are free from disease are not authorised for export unless accompanied by a special certificate from the Ministry of Agriculture. 8

The sacks and boxes are sealed by the control official, and each box or sack is accompanied by a form supplying the necessary particulars. These forms are transmitted to the control service by the produce department of the Ministry of Agriculture. In every case potatoes for export must be free from gangrene and come from areas free from that disease.

No consignment may include more than 4 per cent of potatoes affected by frost, damaged in handling or showing any traces of rot, covered with warts, or subject to bacteriological action.

Meat and Meat Products. — The export of meat is authorised only when it is recognised as fit for human consumption and marked with a stamp showing its food value. 9

The export mark with which the meat must be furnished bears the signature of an authorised veterinary surgeon and is sealed with his official seal. The mark takes the form of a square piece of brown cardboard attached to the package by an iron wire and a lead seal. If the meat is exported without packing or in a packing which cannot be completely closed, the mark is fastened direct to the goods. One side of the export mark is in Estonian, the other in English, French or German, showing where the animal was slaughtered and on what date the meat was declared fit for consumption and export was authorised.

Salted ribs must be marked with an oval-shaped stamp bearing on the upper edge the inscription "Eesti-Estonia", in the middle the slaughter-house sign, and on the lower edge the words, "Under Government control".

Sausages and other meat products must bear a seal indicating the name of the factory, its registered trademark and its address. 10

Butter exported from Estonia must be wrapped in parchment paper, put into new and clean kegs made of boxwood and fitted with eight hoops, or in boxes made of some wood which does not give the butter any taste or damage it in any way. 11

Underneath the lids of the kegs—that is to say, on the butter—there must be a control mark in tissue paper. On the lids of the kegs or boxes there must be the red mark of the exporter and the serial number of the keg or box.

Two kinds of butter are exported: best quality butter must bear, in addition to the above-mentioned indications, a special inscription stamped on the control mark: "Pure Estonian Butter, Valitsusi kontroll Reg. No. 192... Under Government Control".

The control mark also specifies the registration number of the farm and the date on which the butter was made.

No butter intended for export may contain more than 16 per cent water. No harmful colouring matter may be added, and only salt may be used as a preservative.

It must have been prepared with pasteurised cream at a minimum temperature of 80° C.

Cheese. — Cases of cheese for export have to be furnished with control marks, iron wire and a lead seal by the Control Commission. 12

Rich cheeses must contain at least 45 per cent fat; cheese three-quarters fat, 35 per cent; half-fat, 25 per cent; and quarter-fat, 15 per cent.

Cheese containing less than 15 per cent fat is ranked as skim-milk cheese. The Emmenthal type must be at least four months old. Any persons or firms exporting butter and cheese must first obtain a licence from the Government. Only butter and cheese prepared in registered dairies and approved for export may be exported.

All cheese intended for export must have a rind which is intact and must possess the taste, smell, consistency and other qualities required for each type of cheese. Each type of cheese has to be packed in a prescribed manner. The percentage and quality of cheese intended for export are determined by a committee consisting of an export controller appointed by the Ministry of Agriculture and a dairy expert.

- 13 Eggs of poultry exported from Estonia must be packed in cases in such a way that they are not damaged in transit.

The cases are sealed, and on each case and on each separate part of it a label is fastened showing in English the kind of eggs, whether they are new-laid or preserved, and the weight in kilogrammes per ten dozen.

Best quality eggs have a blue label, second quality eggs a red label, and others a yellow label.

The export inspector puts his seal on the label in such a way that a part of it is printed on the label and the other part on the box.

Eggs are not accepted for export when they are dirty, broken, under 48 grammes in weight, non-transparent or not clear, when the yolk of the egg touches the shell, or when they are marked with dark stains.

- 14 The export of *apples* is officially controlled. Apples for export and their packing are "standardised" on the basis of special laws and decrees. They are graded according to quality (size, taste, appearance, purity, healthy condition) in three classes:

I. "Prima": superior quality apples of very large size and weighing not less than from 90 to 220 grammes, according to the kind.

II. No. 1 Selected: good quality apples but not so good as the "Prima" (with a minimum weight of 70 up to 180 grammes, except for the Aport kind, which must weigh at least 250 grammes).

III. No. 2 Selected: good quality apples, but inferior to No. 1 Selection, with a minimum weight of 50 up to 150 grammes, an exception again being the Aport kind, which must weigh at least 180 grammes.

"Prima" apples are packed in cases 30 by 40 cm., with a net weight of 10 kilogrammes. Nos. 1 and 2 Selected are packed in cases 40 by 60 cm., with a net weight of 20 kilogrammes.

Apples for export are controlled by inspectors of the Ministry of Agriculture. The cases containing apples suitable for export are sealed and marked with the trade-mark and control stamp.

CATEGORY 3.

- 15 There is no special control for the export of *wood*. Export firms are obliged, however, to put their seal on sawn or cut timber, and the seal must be registered with the Ministry of Commerce and Industry.

- 16 The Estonian Society for the Improvement of Seeds ("Eesti Sordiparanduse Selts") inspects seed in the fields, and, at the grower's request, places its seal on the bags containing *seed* gathered in those fields. Samples of seed are taken in duplicate, so that they may be analysed at the official seed control station and the testing station belonging to the society (to determine the species).

The Society issues certificates indicating the quality of the seeds.

- 17 *Butter* exported by the "Estonia" Union of Agricultural Co-operative Societies bears a special mark.

- 18 *Bacon* exported by the slaughter-houses of the "Estonia" Union also has a special mark.

CATEGORY 4.

- 19 The Weights and Measures Department under the Ministry of Commerce and Industry is responsible for the inspection and stamping of *gold and silver* articles intended for sale or made to order, and for the inspection and stamping of scales and weights.

In Estonia, the Weights and Measures Department is authorised to investigate scientific and technical questions relating to industry, commerce and other branches of economic activity. This department, either on its own initiative or at the request of officials, firms or private individuals, carries out mechanical, physical and chemical experiments, analyses and tests; it examines and regulates measures and *machinery for use in industry*. 20

Pharmaceutical, cosmetic and dietetic products, and also *foodstuffs* and *spices*, are inspected by the Public Health Administration in co-operation with the Institute for the Control of Pharmaceutical Products, a body working in connection with the University of Tartu. The State bears two-thirds of the costs of inspection, and the owner of the goods one-third. 21

The *seed* trade is supervised by the seed-testing station attached to the Ministry of Agriculture, which carries out analyses and experiments concerned with the purity of seeds, their yield, etc. 22

Besides the above-mentioned institutions and establishments, the chief towns maintain laboratories which carry out similar analyses and experiments.

There is a law under which the packing of *chemical fertilisers* offered for sale in Estonia must bear a trade-mark showing the origin, trade name and percentage of fertilising substance (P_2O_5 , K_2O , N) contained in the product. 23

The buyer is entitled to require from the seller a written certificate showing the composition of the fertiliser and the weight, and certifying the accuracy of the indications on the packing and to the genuineness of the trade-mark. The regulations concerning the control of the trade in fertilisers specifies the minimum quantities of P_2O_5 , K_2O , and N which any chemical fertilisers placed on the market must contain, namely:

Superphosphate of lime	16	per cent	P_2O_5	soluble in water.
Gypseous superphosphates	30	"	"	" " citric acid.
Phosphates, precipitated	30	"	"	" " " "
Dephosphorisation slag	15	"	"	" " " "
Natural phosphates	24	"	"	under all conditions.
Bone meal	15	"	"	" "

Potassium fertilisers:

Potassium salts	30	per cent	K_2O	soluble in water.
Kainite	10	"	"	" "

Nitrogenised fertilisers:

Sodium nitrate ($NaNO_3$)	15	per cent	N	in general.
Nitrate of lime, so-called Norwegian ($CaNO_3$) ₂	12	"	N	" "
Calcium cyanide ($CaCN_2$)	18	"	N	" "
Sulphate of ammonia (NH_4) ₂ SO_4	20	"	N	" "
Chloride of ammonia (NH_4)Cl	22	"	N	" "
Saltpetre — ammoniac — sulphate	26	"	N	" "
(NH_2) ₂ CO	45	"	N	" "
Desiccated blood	12	"	N	" "
Guano	{ 10	"	P_2O_5	in general
	{ 7	"	N	in general.

Special inspectors are responsible for supervising the places where the trade in fertilisers is carried on in order to ensure that the products comply with the statutory requirements as regards quality. Samples of the fertilisers are analysed in the State laboratories.

CATEGORY 5.

Estonian civil law and Baltic private law determine the circumstances and conditions under which a buyer may demand cancellation of a sale if the seller is guilty of fraud or other infringement of the law. Provisions of this kind are, in particular, contained in Sections 2979, 3243 *et seq.*, 3369, 3890 and 3893 of the above mentioned laws.

The law prohibiting the inaccurate description of goods, which came into force in 1923, renders it illegal to import, warehouse, export, manufacture, sell or offer for sale goods bearing, either themselves or on their packings, descriptions or inscriptions containing indications which are directly or indirectly erroneous as regards the origin, quality, nature or properties of such goods. The Penal Code lays down the penalties imposed on sellers, manufacturers or other persons who make or sell articles of food unfit for consumption, who do not comply with the requisite sanitary conditions, who adulterate goods, or, in general, who contravene the laws and regulations concerning the manufacture and sale of *foodstuffs*. 24

The same Code also fixes the penalties imposed on persons who unlawfully use registered trade-marks.

FINLAND

CATEGORY 1.

- I Any person manufacturing or offering for sale *foodstuffs* or *beverages* must allow the authorities to carry out an examination in order to ascertain whether the articles in question are injurious to health and whether, in general, they are suitable for consumption.
- 2 *Fabrics, upholstery, and toys*, whether made in Finland or imported, must be examined if there are grounds for suspecting that they contain materials injurious to health.
- 3 In virtue of the Prohibition Law of June 1st, 1922, the use of *alcohol* is forbidden and the purchase, sale, manufacture, or importation of articles of consumption containing more than 2 per cent (volume) of alcohol are prohibited.
- 4 *Milk* obtained from an animal suffering or suspected to be suffering from tuberculosis may not be used as food unless it has been previously sterilised.
- 5 *Edible fats* must bear a name indicating their nature—*e.g.*, lard, beef fat, coco fat.
The words "milk" or "cream" may not be added in any form to the names applied to
6 *artificial edible fats*. If two or more different kinds of fat have been mixed and the mixture resembles
7 *lard*, it must be called "artificial lard".
- The communal authorities control the trade in articles of food; they have, for example, issued regulations for the trade in milk and cream.
- 8 The importation of, and trade in *seed* is governed by a Law dated December 30th, 1919, and by a series of decrees promulgated by the Council of State, making it unlawful to import prohibited seed and providing for the testing of seed as regards quality, germinative capacity, percentage of impurities, etc.; in the case of *fodder, artificial fertilisers, and certain other agricultural commodities* a system of inspection has been instituted in order to guarantee the quality and prevent the admixture of worthless or harmful substances.
- 9 In the case of products sold in chemists' shops, the Finnish pharmacopœia insists on a standard of purity which is determined by experimental tests.

CATEGORY 2.

- 10 *Meat* (beef, mutton, goat, horse, pork, reindeer) from animals killed in slaughter-houses or places with a population of over 4,000, or meat imported into or prepared in such places, must, before being sold as food or placed in storage, be examined and passed as fit for consumption.
The examination is carried out by a Government inspector, and the meat is stamped if sound. The stamp is blue for first-grade meat and red for second-grade meat.
Meat passed for consumption after undergoing special treatment, and also meat which has been salted, smoked or otherwise preserved, must be sealed with lead seals.
Imported meat is inspected, and, if passed, is stamped with the word "tuontilihaa" (imported meat) in red.
- 11 An inspector, approved by the competent Health Board, is attached to every undertaking which manufactures *sausages* or *other meat products*. He exercises regular supervision over the operations of such undertaking in accordance with the following principles:
Meat or meat products, whether fresh, salted, smoked, or otherwise preserved, may only be exported provided that the animal from which the meat is obtained was killed in a slaughter-house certified to conform to the statutory requirements concerning meat inspection; that the meat was passed for human consumption and stamped as first or second grade meat; and that the sausages and meat products were prepared in accordance with the statutory regulations on this subject.
If such products are for export to a country which insists on special conditions as regards the importation of meat, these conditions must be fulfilled at the time when the exports are inspected and stamped.
All meat for export must bear an export mark giving the name of the slaughter-house in which the animal was killed and the establishment in which the product was prepared. The mark must also show that the meat, when inspected, was passed as fit for human consumption.

The export mark must be signed by an inspector or superintendent. It must be in the prescribed form and contain the words "Suomi" and "Finland". On the reverse side, it must bear in French, English or German: "Finland. Accepted for export in conformity with the provisions of the Law concerning the inspection of meat, dated August 22nd, 1922".

This export mark may not, however, be placed on bacon intended for export; this must bear a blue stamp or a branded mark of the prescribed form and contain the words "Suomi" and "Finland", and the registered mark of the slaughter-house.

The export of *butter* and *cheese* is subject to official control. The State Inspection Office carries out the measures of control and the grading of the products. The Customs authorities and police see that no butter or cheese is exported unless it has been duly approved and stamped by the Inspection Office.

Any person desiring to export butter or cheese must notify the State Inspection Office.

Finnish butter may not be exported unless it is graded by the State Inspection Office and marked to show the quality. Other butter may only be exported subject to conditions fixed by the Ministry of Agriculture. Since September 1st, 1929, the only butter accepted for export is that which has obtained not less than nine points (scale 1-15) when graded by the State Inspection Office.

The dairy producing the butter must place within each cask, on the surface of the butter, a label measuring 5 by 8 centimetres and bearing the words "Pure Finnish Butter, under Government Control", as well as a letter indicating the printed series of the label and the number of the dairy. This label shows that the product was made in Finland and is a pure butter for the export trade.

Butter passed as a high-grade product by the Inspection Office and bearing the mark of origin must also obtain from this office a mark of quality, which is placed cross-wise between the two upper hoops of the cask. The chief feature of this mark is a parallelogram measuring 5.5 by 26 centimetres with the words: "Finnish Butter, Suomi Brand".

Before being given the standard-quality mark, the butter must have obtained not less than 10.7 points when graded by the Inspection Office; this means that it will remain wholesome for a normal period and that it satisfies the following conditions:

- It is of Finnish origin, is not adulterated, and is provided with a mark of origin;
- It is prepared from raw material pasteurised at not less than 80° Centigrade;
- It contains not more than 16 per cent of water;
- It contains not less than 80 per cent of fat;
- It contains no preservatives or aniline dye;
- It is carefully packed in clean casks, properly labelled;
- Neither the butter nor the cask shows any mould spots.

Any unsalted butter containing from 16 to 18 per cent of water may also be given the mark of standard quality if in other respects it satisfies the above-mentioned conditions, and if a guarantee is given to the Inspection Office that the butter will be forwarded to a country permitting the aforesaid water content.

Casks containing butter for export which fail to obtain the standard-quality mark, but whose export is permitted in virtue of the above-mentioned authorisation from the Ministry of Agriculture, are furnished with a special circular mark measuring four centimetres across and bearing the letter "T".

Provided that the Inspection Office for Butter has passed them for export in accordance with the principles laid down by the Ministry of Agriculture, the following *cheeses* may be exported from Finland: *Emmental cheese* of Finnish manufacture weighing not less than 65 kilogrammes with a fatty content in the dry state of not less than 45 per cent and other Finnish cheese for which the percentage is not less than 30 per cent. Cheese other than that mentioned above may only be exported as raw material for industrial purposes.

Large-size *Emmental and other cheeses* of Finnish origin intended for the export trade and containing not less than 45 per cent of fat are branded at the producing dairy with a triangular mark of origin measuring 7 by 7 centimeters, with the figure "45 per cent" inside the triangle and the number of the dairy under it.

Small-size full-fat *Edam and other cheeses* for export, having a fatty content in the dry state of not less than 45 per cent (40 per cent in the case of Edam cheese) are furnished at the dairy with a triangular mark of origin, each side 4 centimetres long and the words "Finnish Gov. Control"; in the middle of the triangle is the figure "45 per cent (40 per cent)" showing the minimum percentage of fat, together with a serial number and the number of the dairy. Small cheeses for export which are not full-fat are indicated by a square mark of origin, each side measuring 2.5 centimetres, and the same wording as above, as well as the figure "40 per cent" or "30 per cent" denoting the minimum percentage of fat in the dry state, a serial number and the number of the dairy. The marks of origin for small cheeses are printed on sheets of casein and attached to each cheese or placed in any other way indicated by the Inspection Office.

Full-fat cheeses for export, approved as standard-quality products by the Inspection Office in accordance with the principles laid down by the Ministry of Agriculture, and furnished with the mark of origin, must also receive from this office a circular mark denoting standard quality, 19 centimetres in diameter; this is attached to the surface of large cheeses and to the boxes

containing small cheeses. It bears, *inter alia*, the words "Finnish Gov. Control, Suomi Brand", and the figure "45 per cent"; or, in the case of Edam cheese, "40 per cent", denoting the minimum percentage of fat.

When cheese has only been passed for export as raw material for industrial purposes, the large cheeses and the boxes containing small cheeses are stamped with a parallelogram measuring 5 by 25 centimetres and bearing the words "For industry".

The Inspection Office for Butter seals with leaden seals the packages containing cheese which it has passed for export; the heraldic lion of Finland is stamped on one side of the seal and on the other the words "Finnish produce".

These provisions do not apply to goods in transit. The Cabinet may also, subject to conditions laid down by it, dispense with export control provisionally and for a specified period in the case of butter and cheese consigned to Sweden, Norway and Denmark.

14 *Margarine, edible fats and margarine cheese* must contain not less than 82 per cent fat.

This amount may not include more than 10 per cent of milk fat, and the water content may not exceed 16 per cent. Preservatives may not be added to these foodstuffs unless special authority has been obtained.

On the other hand, the admixture, during the manufacturing process, of a harmless substance designed to make the margarine, edible fat and margarine cheese easily recognisable is compulsory; it must not, however, in any way affect the quality or colour.

The packing of the margarine must bear a stamp with the words "Margariini" and the name of the maker. Similarly, the words "Margariini-juusto" (margarine cheese) must be indicated on the surface or the packing of the cheese, which must be dyed scarlet.

If the margarine or the margarine cheese were imported, this fact must be mentioned, together with the name of the importer.

The words "Margariini-juusto" (margarine cheese) must be painted in block letters not less than 2 centimetres high on the upper and lower surfaces of the margarine cheese.

The production of and trade in margarine, edible fat and margarine cheese are subject to supervision by the Government Institution for the Inspection of Butter.

The export of margarine and margarine cheese is not authorised unless these goods fully comply with the conditions laid down in the regulations, and especially with the condition that a harmless substance rendering these products easily recognisable must be added at the time of manufacture.

15 The export of hens' eggs is subject to official control. This is carried out by the Government Office for the Inspection of Butter, acting with the police and Customs authorities, as already described in connection with butter and cheese exports.

The export of Finnish eggs which weigh less than 50 grammes, or which are broken or cloudy, or with the yolk attached to the shell, or with an air chamber more than 8 mm. in depth, is prohibited.

Fresh eggs for export which have been kept at a temperature not below 42° Centigrade during storage and transport, and which have transparent or slightly visible yolks, transparent whites of regular consistency and air chambers not more than 4 mm. in depth, are accepted as eggs of standard quality, provided that the shell is clean and of a uniform colour or slightly spotted and that each egg weighs at least 53 grammes.

In addition, preserved eggs which have undergone special preserving processes, such as freezing below — 2° Centigrade or preserving in a liquid, may be exported subject to the conditions laid down by the Ministry of Agriculture.

Eggs of standard quality, other fresh eggs for export and conserved eggs must each be packed separately in export cases, the construction and dimensions of which are fixed by decree; they must be packed in fine shavings or separated from each other by a papier-mâché arrangement which gives each egg a small compartment of its own.

Under the lid of each case containing fresh eggs for export, the exporter places a circular mark of origin with a diameter of 9 centimetres; this is printed on white paper with the words "Finnish eggs, under Government Control", and with a letter denoting the printing series and the registered number of the exporting firm.

Boxes containing preserved eggs are provided with the same mark of origin, but bear in red the word "Conserved".

The top of each case must bear the trade-mark of the exporting firm as approved by the Inspection Office for Butter, together with the serial number of the case reckoned from the beginning of the current year.

The State Inspection Office supplies each case containing eggs of standard quality for export with a standard quality mark, measuring 6 by 25 centimetres, with the words "Finnish eggs, Suomi Brand".

Cases containing eggs bearing the mark of origin and passed as fit for export are closed immediately after grading by the representative of the Government Inspection Office, who uses the lead seals previously described in connection with packings for exported cheese.

In order to be stamped as fresh eggs for export, the eggs submitted to the inspection authorities by the exporting firm must be not more than fourteen days old.

The latter provisions do not apply to goods in transit.

CATEGORY 3.

Private associations are responsible for controlling the quality of *paper, paper-pulp* and *wood-pulp*. The central selling organisations, which handle the bulk of the exported paper-pulp, wood-pulp and cardboard, supervise the sale of these goods. 16

The quality is shown by the mark of the association affixed to the external packing of the goods. The quality is assessed in some cases by the private experts of these associations and in other cases by experts of the "Keskuslaboratorio Oy" (Central Laboratory, Ltd.).

The associations in question are as follows:

Association of Finnish Paper Mills;
Union of Finnish Cellulose Factories;
Union of Finnish Wood-pulp Factories.

There is no general supervision of *saw-mill products*, but most exporters of building timber have their own mark, and the leading firms take particular care to ensure that their goods are of high quality.

Sawn timber is graded according to quality, as shown in the following table, although the rules for grading may vary slightly from one exporting group to another. Generally speaking, the sawmills only sell non-graded goods, apart from those in the fifth category and waste material. It is only a few of the largest sawmills which sell their goods exactly according to the grading—first, second and third categories. Building timber is classified as follows according to dimensions.

Deals	not less than 2 inches thick, not less than 9 inches wide;
Battens	" " " 2 " " " " " 6-8½ " "
Scantlings	" " " 2 " " " " " 3-5½ " "
Boards	" " " 2 " " " " " 6 " "
Slats	" " " 1-1¾ " " " " " 3-5½ " "
Small boards	not less than 5/8 and ¾ inch thick, not less than 4-5½ inches wide;
Slating battens	¾ and ½ inch thick, not more than 3 inches wide;
Slating battens	not more than 1 inch thick, not more than 2 inches wide.

CATEGORY 4.

The following institutions are especially equipped for the analysis and testing of various goods:

Government Laboratory for Agricultural Chemistry, Helsingfors (Helsinki).
Government Institution for the Inspection of Butter, Hangö (Hanko).
Government Seed-Testing Station at Helsingfors.
Institution for the Testing of Materials at the Technical College, Helsingfors.
Institution for the Testing of Materials at the Technical Institute, Tammerfors, (Tampere).
Institution for the Inspection of Machinery, under the Agricultural Department, Helsingfors.
Chemical Testing Station, Abo (Turku).
Chemical Testing Institute, Viborg (Viipuri).
Laboratory for Agricultural and Commercial Chemistry, Viborg.

The Finnish Central Chamber of Commerce at Helsingfors employs specialists who issue expert reports on the quality of goods. These reports have hitherto been made only on imported goods.

CATEGORY 5.

In virtue of paragraph 4 of Chapter 1 of the Commercial Code, defective goods may be returned to the seller, who is obliged to accept them. If it is proved that the seller was aware of the defect without having drawn attention to it, he is obliged to compensate the buyer for the loss incurred. No compensation is payable if he is not aware of the defect. If the buyer undertook to accept the goods irrespective of quality, the contract may not be cancelled.

Chapter 36 of the Penal Code, paragraph 1, provides that any person who, for the purpose of securing unlawful gain for himself or for others, causes loss to another person in kind or in cash by making an inaccurate or misleading statement; or by failing to disclose some material fact, thus creating an erroneous belief or allowing such belief to remain uncorrected; or, lastly, by

selling counterfeit, adulterated or defective goods as genuine, without admixture or defect, is punishable with a fine or imprisonment.

In conclusion, attention may be drawn to the Law of February 8th, 1924, concerning false indications as to the origin or nature of goods, Articles 1 and 2 of which read as follows:

“ *Article 1.* — Any person who places on goods intended for sale, or the coverings in which such goods are to be offered for sale, an indication which he knows to be such as to induce the public to believe that the goods have an origin or are of a kind other than their true origin or kind, or any person who imports or attempts to import into Finland goods to which or to the coverings of which he has knowingly affixed an indication likely to mislead the public, shall be punished with a fine or imprisonment not exceeding six months, in so far as the laws do not provide heavier penalties.

“ The same shall apply in the event of any person offering for sale in Finland goods delivered to him, directly or indirectly, with his knowledge and purporting to have an origin or be of a kind other than their true origin or kind on the strength of indications placed on the goods themselves, or their covering or packings, or contained in posters, advertisements, prospectuses, price-lists, labels, invoices or other like communications.

“ *Article 2.* — Article 1 is not applicable where the name of a given locality is only used in commercial practice to denote the nature of the goods, the method of preparing them or other similar characteristics, or where the goods imported into Finland with false indication as to their origin or kind are not intended for sale. When the trade-mark affixed to any goods or to their packing is worded in a foreign language or includes pictures representing scenes and subjects in a foreign country or in the place of origin of the goods, such fact shall not be considered in itself as likely to create the belief that the goods come from the said country or place.”

FRANCE.

CATEGORY I.

- Under the Law of April 1st, 1905, for the prevention and punishment of fraud in the sale of goods and of the adulteration of *foodstuffs* and *agricultural products*, as amended by the Laws of August 5th, 1908, July 28th, 1912, March 20th, 1919, and May 6th, 1919, any person who deceives or attempts to deceive another as to the nature, essential properties, composition, content of distinctive principles, kind, origin, quantity or identity of goods is liable to imprisonment or a fine. 1 2
- Persons who adulterate, expose, offer for sale or sell *foodstuffs used as food for men or animals, medicaments, beverages and agricultural or natural products*, and likewise persons who cause others to use such commodities by means of leaflets, circulars, prospectuses, posters, advertisements or instructions of any kind are also subject to imprisonment or a fine in virtue of the above law. 3 4
- Persons found in possession of false *weights or measures* or of other inaccurate *apparatus used for weighing or measuring* commodities without good and sufficient reason, are punished with a fine and imprisonment not exceeding three months. 5 6
- The law of February 4th, 1888, concerning the prevention and punishment of fraud in the trade in *fertilisers* provides that persons who, when selling fertilisers or offering them for sale, deceive or attempt to deceive the purchaser either as to their nature, composition or the percentage of valuable ingredients, or as to the origin of the latter, are punished with imprisonment not exceeding one month and a fine not exceeding two thousand francs. 7
- The same law provides that the content of fertilising principles shall be expressed by the weight of nitrogen, phosphoric acid and potassium per hundred kilogrammes of goods, with an indication of the nature and the state of combination thereof.
- Nevertheless, if the sale is made subject to a stipulation whereby the price is determined as the result of an analysis of samples taken from the goods at the time of delivery, no indication of the exact content is required, but mention must be made of the price per kilogramme of the nitrogen, phosphoric acid and potassium contained in the fertiliser as delivered, and also the state of combination of these fertilising principles.
- The Law of August 14th, 1889, the object of which is to inform consumers as to the nature of the product sold for consumption under the name of *wine*, and to prevent fraud in the sale of this commodity, provides that no person may sell or offer for sale as wine any product other than that obtained from the fermentation of fresh grapes, and, in particular, the products derived from the fermentation of the residue of fresh grapes with the addition of sugar and water, irrespective of the proportion of these products mixed with the wine. 8
- The product of the fermentation of raisins with water may not be consigned, sold or offered for sale under any other name than *wine made from raisins*. The same applies to a mixture of this product with wine, whatever be the proportions used. 9
- Casks or receptacles containing *vins de sucre* (wine from the second vat) or wines made from raisins must bear in large letters the words *vins de sucre, wine made from raisins (vins de raisins secs)*. 10
- The same indication must be given in letters, invoices, waybills and bills of lading, according to the nature of the product sold. If any product derived from the fermentation or distillation of figs, carob beans, mowrah flowers, bell flowers, rice, barley and other sweet substances is added to *vins de sucre* or wine made from raisins, either at the time of fermentation or subsequently, such addition constitutes an adulteration of foodstuffs.
- Under the Law of July 11th, 1891, the addition to wine, *vins de sucre, wine derived from grape residue* or *wine made from raisins* of the following substances constitutes adulteration: 11 12
(1) any colouring matter; (2) products such as sulphuric, nitric, salicylic, boric or other similar acids; (3) sodium chloride to an amount exceeding 1 gramme per litre.
- The offering for sale, sale or delivery of *plastered wine (vins plâtrés)* containing more than 2 grammes of potassium or sodium sulphate per litre is prohibited. 13
- Casks or receptacles containing plastered wine must bear an indication to this effect in large letters.
- Letters, invoices, waybills and bills of lading must also contain the same indication.
- The Law of April 6th, 1897, states that the manufacture of *wine made from grape residue* and of *vins de sucre*, and their distribution for sale, are prohibited. 14
- This prohibition applies to *ciders* and *perries*, produced otherwise than by the fermentation of fresh apples, with or without sugaring. 15
- No dealer, warehouseman or retailer of beverages may under any circumstances be in possession of such wines, ciders or perries. Sweet beverages having an alcoholic content of less than 3 degrees are not included under this prohibition.
- The Law of April 25th, 1895, concerning the preparation, sale and distribution of *therapeutic sera* and other similar products, states that *attenuated viruses, therapeutic sera, modified toxins,* 16 17

18 and similar products used for the prophylactic and therapeutic treatment of infectious diseases, and also *injectable substances* of organic origin, not chemically defined and used for the treatment of acute or chronic diseases, may not be given or delivered, either free of charge or for payment, unless their manufacture and origin have been examined by the Government and the latter, after consulting the Advisory Committee for Public Health in France and the Academy of Medicine, has given the necessary authorisation.

Persons who deceive others as to the nature of the said substances, which they know to be adulterated or tampered with, and persons who deceive or attempt to deceive others as to the quality of the articles sold are punishable in the courts.

19 Under Article 53 of the Law of March 30th, 1902, any person who knowingly exposes, offers
20 for sale or sells foodstuffs, *beverages*, *preserves*, *syrups*, etc., mixed with products such as *saccharine* or any other *synthetic sweetening substances* possessing sweetening properties greater than those of cane or beet sugar, but without their food value, is liable to a fine not exceeding ten thousand francs.

The Decree of December 19th, 1910, in execution of the Law dated August 1st, 1905, concerning the prevention and punishment of fraud and adulteration and dealing with various products, provides as follows:

21 *Sugar*. — The name "*refined sugar*" is reserved for *granulated sugar*, *sugar loaves*, *sugar cubes* or *lumps*, containing not less than 99.5 grammes of saccharose per 100 grammes of product, and for the broken and powdered sugar obtained from the foregoing.

22 The name "*white crystallised sugar*" is reserved for sugar containing more than 98 per cent and less than 99½ per cent of saccharose.

23 The name "*low-grade sugar*" (*sucré roux*), "*reddish sugar*", is reserved for sugar containing more than 85 per cent and less than 98 per cent of saccharine.

24 "*Brown sugar*" is used only for unrefined cane sugar.

25 The name "*sugar candy* or *barley sugar*" is reserved for saccharose obtained in the form of large crystals by the slow crystallisation of sugar solutions.

26 "*Vergeoise*" and "*bâtarde*" are names reserved for inferior products in the solid state obtained in the process of sugar refining.

27 The name "*molasses*" is reserved for inferior products in the liquid state obtained from the manufacture or refining of cane or beet sugar.

28 The name "*invert sugar*" is reserved for the product obtained by the conversion of sugar into
29 a mixture of *glucose* and *levulose*. The invert sugar must not contain more than 20 per cent of non-invert sugar, 25 per cent of water, or ½ per cent of mineral substances. It must not contain any toxic substances. Its maximum acidity must correspond to 35 centigrammes of sulphuric acid per 100 grammes of product.

30 Under the Law of April 16th, 1897, concerning the prevention and punishment of fraud in the trade in *butter* and in the manufacture of *margarine*, no product which is not made exclusively with milk or with cream derived from milk, or with both of them together, with or without salt or with or without colouring matter, may be described, exposed, offered for sale, sold, imported or exported as butter, whether with or without a qualifying description.

All articles of food other than butter, whatever their origin, place of manufacture or composition, which have the appearance of butter and are prepared for the same purposes as this latter product, may only be described as "*margarine*". Colouring matter may not under any circumstances be added to margarine as thus defined.

31 No person engaged in the manufacture or preparation of butter may make or keep on his premises or in any place whatever *margarine* or *oleo-margarine*, and may not cause such substances to be made or to be kept by any other person in premises which he occupies. The same prohibition applies to butter warehousemen, dealers and retailers.

Margarine and oleo-margarine may only be sold at the places specially designated for this purposes by the municipal authorities.

The amount of butter contained in margarine offered for sale may not exceed 10 per cent whether this quantity is obtained by the churning of the milk or cream with the oleo-margarine, or whether it is due to an addition of butter.

Any person desiring to engage in the manufacture of margarine or oleo-margarine is required to notify his intention in Paris to the Prefect of Police, and in the departments to the *maire* of the commune in which he wishes to set up his factory.

Margarine and oleo-margarine factories are subject to supervision by inspectors appointed by the Government. These inspectors are required to check the actual making, the raw materials received, their quality, and the margarine and oleo-margarine leaving the factory. They ensure the strict observance of the regulations laid down by the Government on the advice of the Committee for Public Health.

The inspectors may at any time enter the premises of the margarine or oleo-margarine factories for the supervision of which they are responsible, the warehouses, cellars, stores or lofts connected therewith or belonging thereto, and all stores and shops in which margarine or oleo-margarine is kept or retailed.

All casks, cases, boxes or receptacles containing margarine or oleo-margarine must bear on each side in prominent and indelible letters the words "*Margarine*" or "*Oleomargarine*". The ingredients used in the preparation of the margarine must be indicated on the labels.

In the wholesale trade, the receptacles must indicate in very prominent letters the name and address of the maker.

In the case of margarine for export, the maker is authorised to substitute for his trade-mark that of the purchaser, provided that the latter mark includes in prominent letters the work "*Margarine*".

In retail trade, margarine or oleomargarine must be sold in the form of cubes stamped on one of the surfaces with the word "Margarine" or "Oleomargarine"; it must be placed in a covering which bears in prominent and indelible letters the same description, together with the name and address of the seller.

The above-mentioned inspectors, and, if necessary, special experts appointed by the Government, may enter premises where butter is manufactured for sale or where it is prepared or sold, and take samples of the goods manufactured, prepared, exposed, offered for sale or sold as butter.

They may similarly take samples at the Customs houses, ports or railway stations. As far as possible, samples are to be taken in the presence of the owner of the goods or his representative. The samples are sent to the laboratories designated by ministerial decree for chemical analysis and microscopic examination.

Glucose. — The name "*massed glucose*" is reserved for the sweet substance obtained by the saccharification of amylaceous substances with an acid having a maximum acidity corresponding to 5 decigrammes of sulphuric acid per 100 grammes of product and containing not more than 25 per cent of water, 15 per cent of dextrine and 1½ per cent of mineral substances, and no toxic materials. 32

The descriptions "*crystal glucose*" and "*crystal syrup*" are reserved for the sweet substance obtained by the saccharification of amylaceous substances with an acid having a maximum acidity corresponding to 2 decigrammes of sulphuric acid per 100 grammes of product and containing not more than 25 per cent of water, 45 per cent of dextrine and 1 per cent of mineral substances, and no toxic materials. 33

The name "*maltose*" is reserved for the sweet substance obtained by the saccharification of amylaceous substances by biological methods. 34

Honey. — The name "*honey*" is only applicable to honey made by bees. 35

If, however, the bees were fed with sugar or sweet substances other than honey during the normal honey-making season, the product thus obtained may only be described as "*sugar honey*". 36

The description "*honey*" may not be used for honey caramelised by heating or containing more than 25 per cent of water. 37

The addition to honey of edible sweetening substances does not constitute adulteration, provided that such substances are pure. Such a mixture may only be described as "*artificial honey*" or "*fancy honey*". 38

The only honey which may be described as "pure" or be given the name of a district of origin is honey produced by bees, other than sugar honey.

Confectionery. — The confectioners' product to which the provisions under this heading apply are *preserved fruits*, *fruit pastes* and *sweetmeats*. 39

By "*sweetmeats*" are meant all edible preparations in which sugar is the predominating ingredient excluding preserves, jellies and jams.

The following do not constitute adulteration in the case of products included under the present heading :

1. The use of sweetening substances other than saccharose (honey, invert sugar, massed glucose, crystal glucose, maltose), provided that nothing in the name used or in the accompanying indications can suggest that the products have been prepared exclusively with sugar;

2. The use of talc to an amount not exceeding one gramme per kilogramme of product, provided that this substance is only used to powder the surface;

3. The presence of small quantities of wax, spermaceti, vegetable oils, pure vaseline or paraffin, fecula or starch, owing to their use in treating the surface of the manufacturing apparatus which comes into contact with the products;

4. The use, in the preparation of *sugared-almond sweetmeats* (*dragées* and *pralines*), of starch, dextrin or amylaceous substances, provided that the proportion used is less than four grammes of dextrin or starch per hundred grammes of coating; if this proportion is exceeded, the products thus prepared must be described as "*dragées* or *pralines* made with flour, or half flour, two-thirds flour or three-quarters flour", according to the proportion of amylaceous material used in the coating of the said sweetmeats; 40

5. The total or partial use of gelatine, gelose or paste from fecula or starch in place of gum or white of egg in the case of products usually manufactured with gum or white of egg, provided that the name of the products thus prepared does not include the word "gum" and that it is immediately preceded by the qualifying term "fancy".

However, in the case of sweetmeats containing *Spanish juice*, the colouring part of the products must include not less than 4 per cent of Spanish juice. 41

6. The decolorisation by means of sulphurous acid of fruits intended for preserving. The use of pure gold, silver and aluminium is permitted for the metallisation of sweetmeats.

Preserves, jellies, jams. — The descriptions ". . . preserve, . . . jelly, . . . jam", preceded by the name of a fruit, are reserved for products made exclusively with refined sugar, 42

crystallised sugar, brown sugar or reddish sugar and fruit or the juice of fruit, whether fresh or preserved.

The following do not constitute an adulteration of the products :

1. The addition of pure tartaric or citric acid to an amount not exceeding two grammes per kilogramme of product;
2. The addition of cochineal in order to improve the colour.

Products to which these additions have been made are no longer entitled to the name of "pure fruit preserves".

The name may, however, be accompanied by the indication "pure sugar".

When pure tartaric or citric acid are added to an amount exceeding two grammes per kilogramme of product, the name used must be immediately preceded by the word "fancy" or "acidulated".

In the case of preserves, jellies and jams, the following do not constitute adulteration :

1. The partial or total replacement of sugar by another edible sweetening substance, provided that the description is immediately preceded by the word "fancy" or followed by the words "with glucose", or by some other qualifying term indicating the replacement in question;
2. Colouring by colouring matters other than cochineal, provided, however, that the name is immediately preceded by the word "fancy" or "coloured";
3. Aromatisation by the addition of natural or synthetic essences, provided that the name is immediately preceded or followed by the words "fancy" or "synthetic aroma";
4. The addition of gelose, gelatine, gum or starch paste, provided that the name is immediately preceded or followed by an indication of the product which has been added.

Preserves, jellies and jams containing more than forty grammes of water per hundred grammes of product may not be held or conveyed for the purpose of sale, or be offered for sale or sold under the names given above.

In the manufacture of preserves, jellies and jams, the use of fruit, parts of fruits or fruit juice preserved by the addition of an antiseptic product is prohibited.

An exception is permitted in the case of sulphurous acid, which may be used to preserve dried fruits or parts of fruits to an amount not exceeding one hundred milligrammes per kilogramme of dry product.

43 *Cocoa and chocolate.* — The name "*cocoa paste*" is given exclusively to the paste obtained by crushing roasted cocoa beans from which the husks and germs have been removed so as not to contain more than 2 per cent of husk and germ residue, irrespective of whether part of its fatty substance has been removed by pressure when hot and irrespective of whether cocoa butter has been added.

The names "powdered cocoa" and "cocoa powder" are reserved for the product obtained by pulverising the cocoa paste after removing some of the fat.

The addition of alkaline or alkali carbonates to cocoa beans intended for the preparation of cocoa powder does not constitute adulteration, provided that the quantity added does not exceed 5.75 grammes of potassium carbonate or an equivalent quantity of another alkaline carbonate per hundred grammes of cocoa assumed to be dry and free of fat, and provided that the resultant powder retains a slightly acid reaction, although no substance which might acidify it has been added.

The name used to denote the products referred to in the present article must be accompanied by the words "made soluble".

44 The name "*cocoa butter*" is reserved for the fatty substances extracted from cocoa beans, whether or not they have undergone treatment with a view to the preparation of soluble cocoa powders.

45 The descriptions "*chocolate*" and "*sweetened cocoa*" are reserved for the product obtained by mixing sugar and cocoa paste or cocoa powder in such proportions that one hundred grammes of product contain at least thirty-two grammes of paste or cocoa powder.

46 Mixtures of sugar and cocoa paste or cocoa powder containing less than thirty-two grammes of paste or powder per hundred grammes of product must be described as "*chocolate sugar*", "*chocolated sugar*" or "*cocoa sugar*".

When the aroma is due, even partly, to synthetic aromatic substances, the name of any natural aroma appearing in the name must be accompanied by the words "synthetic aroma", or the words "aromatised with vanillin".

The following do not constitute adulteration :

47 1. The addition of edible sweetening substances other than sugar, amylaceous substances or any comestible substances, provided that the name is accompanied by an indication of the quantity and nature of the substances added.

Nevertheless, the names "*milk chocolate*" and "*milk cocoa*" may be used to describe products containing at least 15 per cent of solid substances obtained by evaporating pure milk, skimmed or unskimmed.

2. The use of cocoa paste or powder rendered soluble under the conditions referred to in the present decree, provided that the name is followed by the words "made soluble".

3. The polishing of chocolate articles by the use of lac or gum benzoin.

Sweetmeats coated with chocolate may be denoted under a descriptive title including the adjective "chocolate", provided that such coating consists exclusively of chocolate.

The incorporation in the chocolate coating of any edible substances to an amount not exceeding 5 per cent of the total weight of such coating does not, however, constitute adulteration.

Spanish juice. — The name "*Spanish juice*", whether or not accompanied by the word "pure", is reserved for the product obtained by extracting all or part of the soluble substances found in the root of the liquorice plant and containing not more than 15 per cent of water. 48

No other product may be described as "pure".

The following do not constitute adulteration :

1. The addition of aromatic products to Spanish juice;
2. The addition of edible sweetening substances or gum, provided that the product still contains 6 per cent of glycyrrhizin.
The product to which this addition has been made may not, however, be described as "pure".
3. The addition of edible sweetening substances, gum, fecula and dextrin.

Such a mixture may still be described as "*Spanish juice*", provided that it contains not less than 1.5 per cent of glycyrrhizin.

The Decree of July 28th, 1908, in execution of the Law of August 1st, 1905, for the prevention and punishment of fraud in the sale of goods and of the adulteration of foodstuffs and agricultural produce, provides that the name "*vinegar*" shall be reserved for products obtained by the acetic fermentation of alcoholic beverages or solutions and containing not less than 6 per cent of acetic acid. 49

Any product not derived exclusively from the acetic fermentation of wine, cider or beer may not be held or transported for the purpose of sale, or be offered for sale or sold under the name of vinegar from wine, cider or beer.

The name of a locality or wine-growing district may not simply be added to designate any vinegar other than wine vinegar.

Mixtures of vinegar derived from alcoholic beverages and alcohol vinegars may be given the name of one of the component parts of the mixture, provided the exact proportion of the said part is also indicated.

The use of acetic acid, pyroligneous acid, mineral acids and spoilt wine is prohibited in the manufacture of vinegar. The addition of these products to vinegar is also prohibited.

Under the terms of the Law of August 1st, 1905, the following do not constitute fraudulent practices :

1. The addition to the vinegar of substances designed exclusively to aromatise them;
2. The artificial colouring of vinegar by means of caramel, cochineal, orchil or any other colouring substance the use of which has been declared lawful in decrees promulgated jointly by the Minister of Agriculture and the Minister for the Interior after consultation with the Supreme Council for Public Health and the Academy of Medicine.

However, in the case of artificial colouring, the name used must be accompanied by the adjective "coloured", in order that the colour of the vinegar may not mislead the buyer as to its nature.

The name and the word "coloured" must be printed in the same lettering.

The Decree of July 17th, 1908, in execution of the above-mentioned Law of August 1st, 1905, states, with reference to "*liqueurs and syrups*" that the name "liqueur" is reserved for *brandies or alcohols aromatised* either by maceration of vegetable substances, by distillation in the presence of such substances, by adding the products obtained by distilling such substances in the presence of alcohol or water, or by the combined use of these various processes. The preparations thus obtained may be sweetened with glucose sugar or honey. 50 51

It is forbidden to hold or to transport for the purpose of sale, or to offer for sale or sell under the names indicated in the present article, any products other than those that are exclusively entitled to these names under the said article:

1. The names "*syrup, sugar syrup*" is reserved for sugar (saccharose) dissolved in water; 52
2. The name "*syrup*", accompanied by an indication of the principal kind or kinds of product used in its manufacture, is reserved for syrups containing sugar or sugar syrup and fruit juice. 53

Nevertheless, the names "*lemon syrup, lime syrup or orange syrup*" may be applied to syrups made of sugar syrup with the addition of citric acid and the aromatised spirit of these fruits or their essence. 54

The name "*grenadine syrup*" is reserved for sugar syrup with the addition of citric acid or nitric acid and flavoured with vegetable substance. 55

The name "*orgeat syrup*" is reserved for syrup consisting of sugar and milk of almonds. 56

The description of "*mocha syrup*" or "*coffee syrup*" is reserved for sugar syrup with the addition of coffee extract. 57

The name "*gum syrup*" is reserved for sugar syrup with the addition of gum arabic or gum senegal, in the proportion of not less than 20 grammes per litre. 58

The following must be designated under their specific name, preceded by the word "fancy" or by any other descriptive term differentiating the product from those designed under the name of syrups :

1. Syrups in the preparation of which glucose replaces sugar (saccharose), even if only to a limited extent;
2. Syrups, other than grenadine syrup, to which tartaric acid has been added;
3. Syrups, other than lemon, lime, orange or grenadine syrups, to which citric acid has been added.

The following may not be used in the manufacture of liqueurs and syrups :

1. Colouring substances other than those lawfully permitted in virtue of orders made jointly by the Minister of the Interior and the Minister of Agriculture after consultation with the Supreme Council for Public Health and the Academy of Medicine;
2. Aromatic chemical products and bitter substances other than those authorised under the conditions laid down in Article 17 of the Law of January 30th, 1907;
3. Antiseptic products the use of which has not been declared lawful;
4. Resins, in the case of absinthe and similar liqueurs.

The use of any indication or sign which might mislead the buyer as to the nature or origin of the said products, where the description of origin assigned to such products must, in conformity with agreement or custom, be deemed to be the main factor in their sale, is prohibited under all circumstances and in every form whatsoever, in particular :

1. On receptacles and packings;
2. On labels, capsules, corks, seals, or any other device for closing containers;
3. In commercial documents, invoices, catalogues, prospectuses, price-lists, notices, posters, pictures, advertisements, announcements or in any other form of publicity.

59 A Decree of July 28th, 1908, prohibits the holding, the transporting or the sale under the name of "beer" of any product other than the beverage obtained by the alcoholic fermentation of a wort manufactured with hops and pure barley malt, or associated with at least an equal weight of malt derived from other cereals, amylaceous substances, invert sugar or glucose.

60 Beer derived from a wort and having a density of less than 2 degrees must be described as "small beer".

The following do not constitute fraudulent practices :

1. Clarification, either in the boiler or during or after fermentation, by means of substances the use of which is declared to be lawful in virtue of orders made jointly by the Minister of the Interior and the Minister of Agriculture after consultation with the Supreme Council of Public Health and the Academy of Medicine;
2. Pasteurisation;
3. The addition of the amount of tannin required for fining;
4. Colouring by means of caramel or extracts obtained by roasting cereals and substances authorised for use in the manufacture of beer (see above);
5. Treatment with pure sulphurous anhydride derived from the combustion of sulphur, and with pure bisulphites, provided, first, that the beer does not retain more than 50 milligrammes of sulphurous anhydride, free and combined, per litre, and, secondly, that the use of bisulphites is restricted to 5 grammes per hectolitre.

The addition to beer of any antiseptics other than sulphurous anhydride and bisulphites is prohibited.

61 In conformity with the regulations in force, the export of early "potatoes" is unrestricted, except from March 1st to May 1st.

During this period, early potatoes coming from Algeria, Spain and Italy may not be re-exported unless they are submitted to the Customs office in the original packings or accompanied by transport or other documents showing that they actually come from Algeria, Spain or Italy. If the potatoes have been handled in France, they must be accompanied, in order to prove their origin, by a certificate issued by a commercial body authorised for this purpose by the director of agricultural services of the department where the said body has its offices. This certificate will not be recognised as valid by the Customs office of exit unless it bears the signature of the director in charge of the agricultural service, whose duty it is to check the accuracy of the declarations by any means which he may deem necessary.

CATEGORY 2

62 In virtue of the Agreement with Italy, dated April 10th, 1924, *silkworms' eggs* should, as a rule, be submitted in cells with the corresponding moths and be accompanied by a certificate issued by the French service for the control of silkworms' eggs, attesting that the eggs have been produced under the supervision provided for by French laws and regulations.

'Silkworms' eggs not in cells may also be imported into Italy, but the eggs must always be supplied with the official banderole of the French control service. They must, furthermore, be packed in boxes and must satisfy the conditions required by Italian law—that is to say, they must not be the offspring of varieties already crossed between Asiatic and native breeds.

Roquefort cheese. — No cheese may be manufactured, exposed, transported, offered for sale or sold, or imported or exported as Roquefort, with or without a further name or description unless it has been : 63

- (a) Prepared and manufactured exclusively from the milk of ewes;
- (b) Manufactured and ripened in conformity with recognised and available local customs, this applying both to the place of such ripening and the method employed.

The area of production of the ewes' milk employed in making Roquefort is restricted to the present French producing areas and to areas in the home territory of France which possess the same characteristics as regards breeds of sheep, pasturage and climate.

Any manufacturer who proposes to describe his products as " Roquefort " is required to notify his intention to the local authorities of the commune where the cheese is to be ripened.

No milk other than the milk of ewes and no cheese product made from a milk other than the milk of ewes may be admitted into, accepted at or found in cheese factories, dairies and premises for ripening in which Roquefort cheese is prepared, made or ripened.

Apart from supplies for local consumption, no lactigenic product and no cheese made from milk other than the milk of ewes, may enter into, or be worked up, or sold in, the whole area of the commune in which the cheese is ripened.

Infringements of the present law are punished with the penalties provided in Articles 8 and 22 of the Law of May 6th, 1919, concerning the protection of appellations of origin, without prejudice to the application to such offences of the penalties contained in the Law dated August 1st, 1905, and in any other legal enactments. Article 463 of the Penal Code is applicable to such offences.

GERMANY.

CATEGORY I.

1 In Germany, no distinction is made between goods intended for home consumption and those intended for the export trade, except in the case of *spirits*, which may not be sold on the home market unless accompanied by a statement of strength, although this regulation does not hold good in the case of spirits intended for export.

2 The Law of May 14th, 1879, has been replaced by that of July 5th, 1927, intended to protect consumers against foodstuffs injurious to human health, and also against *foodstuffs*, which are imitations or adulterations or bear a misleading description; in this respect *tobacco* is treated in the same manner as foodstuffs. The same law grants the consumer protection against any "*articles in current use*" injurious to health. The following are regarded as "*articles in current use*": table and kitchen utensils and other articles used for the production, manufacture, preparation, measurement, weighing, packing, preservation, conveyance or consumption of foodstuffs, and which, during such process, come into direct contact with the food; products for cleaning, treating, colouring and beautifying the skin, hair, nails or mouth; artificial plants and parts thereof; petroleum; dyestuffs other than those included under the heading of foodstuffs; other articles designated by the Government with the approval of the Reichsrat after hearing the competent Committee of the Reichstag.

3 A law dated July 5th, 1887, is intended to safeguard consumers against the use of colouring matter injurious to health in the manufacture and making-up for sale of *foodstuffs*, *cosmetics*, *distempers*, *toys*, *wallpapers*, *textiles*, *candles*, *artificial flowers*, etc.; colouring matter containing antimony, arsenic, barium, lead, cadmium, chrome, copper, mercury, zinc or picric acid is regarded as noxious.

4 The use of synthetic sweetening substances—*i.e.*, of any substances obtained artificially which are used for sweetening purposes or which are potentially sweeter than refined cane sugar or beet sugar, is prohibited in the manufacture of *beer*, *wine*, *beverages analogous to wine*, *fruit juice*, *preserves*, *liqueurs and syrups*. The use of methyl alcohol for the preparation of *foodstuffs*, *remedies and cosmetics* is prohibited.

5
6 The consumer is protected against the adulteration of *butter*, *cheese or lard* by the use of *substitutes* therefor, in virtue of the law dated June 15th, 1897. This stipulates that substitutes must be mixed with ingredients which make them easily recognisable as such and must bear a description in conformity with the regulations. Such descriptions must be used in tenders, invoices, etc. The factories must be registered and subject to supervision. Butter must have a minimum fatty content and a maximum content of water. The sale of *milk* derived from diseased animals is prohibited. Such milk may only be sold after treatment which obviates all risk of the communication of the disease (Law of June 26th, 1909, concerning animal diseases). A law passed on December 23rd, 1926 (amended on March 24th, 1928), lays down that the milk trade may only be exercised by persons of good standing.

7
8
9 The adulteration of *margarine* and *synthetic lard* by the admixture of foreign substances or by the addition of an excessive amount of water is prohibited.

10 The *meat* trade is subject to supervision; animals are inspected, both before and after slaughter, and also meat products. The law of June 3rd, 1900, and the various executive measures thereto protect consumers against the sale of meat, pork butchers' products and animal fats which are unfit for consumption or injurious to health.

11 Meat recognised as fit for consumption must bear a stamp. That which is only fit for consumption under certain conditions may not be released until the causes of the taint have been removed under police supervision. Imported meat and *imported fats* are examined by special technical officers in order to ascertain whether they comply with the regulations in force.

In the preparation of meat products, the use of substances and processes which might render their consumption dangerous or which might conceal their inferior quality is prohibited. A list of the substances which may not be added to meat products is given in various decrees. The chief of these are preservatives or neutralising substances, and colouring matter.

12 *Soup cubes* and *substitutes* therefor must be extracts of meat. A minimum creatine and nitrogen content and a maximum common salt content are prescribed.

13 The *wine* trade is subject to supervision by special officers. All undertakings concerned in the manufacture or treatment of wine or in the wine trade must keep special accounts in a prescribed form showing the quantities of extract of grapes, of wine must and of all substances intended for the treatment of wine entering and leaving the works. A list is given of the processes and additions which are prohibited.

The addition of sugar to wine is subject to restrictions according to the place, season and quantity. It must also be notified, and there are regulations laying down the terms in which it is to be described. The law enumerates the chemical substances which may not be added to wine, *beverages containing wine*, or *beverages analogous to wine*. The use of synthetic sweetening substances is also prohibited. 14

Wines and mixed wines imported from foreign countries are subjected to chemical analysis in conformity with the Customs regulations concerning wines, dated July 17th, 1909. 15

Brandy may only contain alcohol of wine. So-called fancy brandies must contain not less than ten per cent of alcohol of wine. Acid may not be used in the preparation of brandies. A minimum alcoholic content is prescribed. 16

Beer. — The law lays down the raw materials the use of which is authorised for the manufacture of beer; exceptions are made in the case of special beers—for example, those intended for export. 17

The basic must content is laid down for the various kinds of beer (ordinary, on tap in casks, double and triple). The mixture of different kinds of beer is prohibited as well as the subsequent addition of water.

If fraudulent practices are suspected, the brewery may be searched.

Aerated beverages. — The law lays down that water and pure chemical products shall be exclusively used for their manufacture and likewise that the apparatus in use shall be inspected by the administrative authorities in order to ascertain that it is not liable to contaminate the products. 18

The use of any but natural fruit juices is prohibited in the manufacture of *fruit-drinks*.

When substitutes are employed the beverages must be described as *synthetic products*. 19

Cocoa. — The sale of pulverised cocoa shell or of products to which such powder has been added is prohibited, unless they have been rendered unfit for human consumption by the addition of certain ingredients. 20

Exported cocoa in respect of which a refund of Customs duty is requested must be pure and manufactured without the admixture of shell, parings or dust of cocoa. 21

Chocolate may only be sold wholesale or retail in specified weights. Slabs weighing 500, 250, 200, 125, 100, 50 and 25 gr. net are permitted. Any discrepancy in weight must not exceed 2 per cent in the case of slabs weighing more than 100 gr. and 3 per cent in the case of slabs weighing not more than 100 gr.

In order to ensure the protection of the consumer against imitation *coffee* the law prohibits the manufacture and sale of machinery for making artificial coffee beans. 22

Tobacco substitutes may not be used for the manufacture of *cigars*.

Their use for the manufacture of *like products* is subject to official authorisation and inspection by the authorities. Such authorisation is only given to firms of good standing, which are required to keep detailed accounts. 23

In the manufacture of wooden or other *matches* the use of white or yellow phosphorus is prohibited. 24

In 1905 the Federal Council adopted a convention with regard to the regulations governing the production, preservation and use of *acetylene*. 25

* * *

The laboratories for the analysis of foodstuffs are responsible for the official supervision of trade in foodstuffs and articles in current use with a view to ensuring the application of the statutory provisions. Their organisation varies from one province to another, some being State institutions, others established by towns, communes or public bodies, whilst still others are private undertakings holding contracts with the central or communal authorities to carry out the official supervision. Most of these laboratories are public institutions.

CATEGORY 2.

Weights and measures must be stamped and restamped at given intervals. 27

A regulation dated September 29th, 1927 (amended on March 28th, 1928), deals with the compulsory apposition of distinctive trade marks to foodstuffs and is intended to put into operation the provisions of the Law of July 5th, 1927, concerning *foodstuffs*. In the case of certain foods it lays down that the packets or receptacles in which they are sold to the consumer, shall indicate the name or business style and address of the manufacturer, and also give a description of the contents, in the habitual trade terms, the amount or weight (German weight and measure) and the number of articles. At the present time this provision applies to the following foodstuffs: *meat preserves*, contained in hermetically sealed receptacles, *preserved fish* and *shell fish*, *preserved milk* and *cream*, *vegetables* and *fruit*, *natural* and *synthetic honey*, *dietetic products*, *meat extract* and *substitutes therefor*, *soup cubes* and *substitutes therefor*, *soups in tablet form* ready for cooking, *potted cray-fish* and *shrimps*, *egg powders* and *substitutes therefor*, *pudding powders*, *synthetic yeast*, *spice* and *substitutes therefor*, *chocolate* and *chocolate articles*, except in packets weighing less than 25 grammes, *chocolate powder*, *cocoa*, *marzipan* and *marzipan substitutes*, *coffee* and *tea*, together with *substitutes*, *alimentary pastes*, *rusks*, *cakes*, *biscuits* and *gingerbread* (pain d'épices). 28

Meat is stamped after it has been examined and found to be fit for consumption. 29

30 The States are responsible for making any regulations concerning *synthetic milk, cream and condensed milk*, but are subject to a general ruling to the effect that the preparation of such products shall only be permitted in the case of factories of good standing and subject to special supervision.

They may not be placed on the market unless they have been prepared with certain raw materials of unexceptionable quality, unless they bear a distinctive and prominent trade mark and unless a given quantity of potato ferculæ has been mixed with them in order that they may be more easily recognised.

31 The receptacles and exterior packings in which *margarine, margarine cheese and synthetic edible fats* are sold or offered for sale must bear the words "margarine", "margarine cheese" and "synthetic edible fats" in clear and indelible letters, and also a prominent red band 2 to 5 centimetres in width.

32 *Cigarettes* prepared with tobacco substitutes, or containing such substitutes, must bear a special stamp. *Other products* containing more than 5 per cent of substitute ingredients must likewise bear a distinctive mark.

34 *Sweetening substances.* — The manufacture and sale of synthetic sweetening substances are subject to supervision by the administrative authorities. The use of such substances for the various foodstuffs is determined by law. *Foodstuffs* prepared with synthetic sweetening substances must bear an indelible and prominent inscription "Prepared with synthetic sweetening substances"—if they are sold to the consumer in packets or in special packing.

36 *Acetic acid.* — Acid solutions and essences of vinegar containing more than 15 per cent acetic acid may only be sold in small quantities and in receptacles of a special shape having corks which only permit the liquid to escape slowly.

Furthermore, the bottles must bear the name of the manufacturer, an exact description of the contents, directions for use, and, in a different colour, the words "Beware, dangerous, not diluted with water".

37 *Petroleum.* — Petroleum which is inflammable at a comparatively low temperature must bear a label drawing attention to the danger.

38 A minimum alcoholic strength is prescribed for *spirits* for human consumption and, in addition, they must be sold or offered for sale in bottles or similar receptacles bearing an inscription which will enable the purchaser to ascertain whether the contents were manufactured at home or abroad. The name of the maker and the place of manufacture must also be indicated.

39 Brandies intended for sale on the home market must bear an indication of their content of spirits of wine. The materials from which they are extracted, the processes authorised for the manufacture of *corn-brandy and fruit or berry brandies*, and likewise the conditions laid down for rum, arack and liqueurs are given in the Law of April 8th, 1922, and in the administrative regulations appertaining thereto. A minimum content of extractive properties is prescribed in the case of liqueurs. Lastly, the law embodies provisions concerning the description of various kinds of *lees* and prohibits the sale of lees containing foreign bodies or of mixed lees.

40 *Sparkling wines.* — If carbonic acid is added this fact must be noted. Sparkling wines must bear an inscription showing the country and, if necessary, the locality in which they were bottled. Sparkling wine which is prepared with fruit must bear a label stating that it contains fruit wine. In virtue of Articles 274 and 275 of the Treaty of Versailles the trade names "Cognac" and "Champagne" are reserved to French products.

42 Under the Law of July 16th, 1884 (*Reichsgesetzblatt* 1883, page 120), concerning the fineness of gold and silver articles, *gold and silver articles* may be manufactured and offered for sale irrespective of the degree of fineness; the latter may, however, only be indicated on the articles if it is of the following standard—*i.e.*, 585 per mille in the case of gold articles and not less than 800 per mille in the case of silver articles.

The fineness is indicated by means of a hall-mark showing the quantity of pure metal used and the name of the firm on whose behalf the hall-mark is affixed. The form of this hall-mark is determined by the Federal Council.

43 *Jewellery* may be hall-marked irrespective of the degree of fineness, the proportion of precious metal used being indicated in the hall-mark.

Gold and silver ware coming from foreign countries the fineness of which is indicated in a manner that does not correspond to the provisions of the present law, may not be offered for sale until they have been provided with a further hall-mark which does conform to this law.

The seller of the goods is held responsible for the accuracy of the degree of fineness indicated. If the goods are hall-marked within the country the owner of the firm on whose behalf this operation was carried out is likewise held responsible.

Penalties are provided in case of the non-observance of the above-mentioned law.

On the basis of the Law of July 16th, 1884, the Federal Council decreed (Ordinance dated January 7th, 1886) that the hall-mark for gold and silver utensils should consist of:

1. The German crown.
2. The sign of the sun ☉ in the case of gold, and the sign of the moon ☾ in the case of silver.
3. A statement of the fineness per mille.
4. The name of the firm or the business style of the firm on whose behalf the articles were hall-marked.

44 In conformity with the Law of May 19th, 1891, no *fire-arms* of any kind may be offered for sale or put into circulation until they have been tested at the official inspection establishments and there provided with a mark.

Barrels, breeches or other parts of fire-arms which, after testing, have been found to be incomplete or showing defects of manufacture are rendered unfit for use.

In the case of arms which have been found to have defects which can easily be rectified, a further test is made after the removal of these defects.

More detailed regulations concerning the method of carrying out tests, the weight and composition of the powder and shot to be used in tests and the form and method of affixing the stamp, are issued by the Federal Council.

Testing establishments are provided by the Governments of the various States of the Reich. A charge may be made for testing, but it may not exceed the expenditure incurred in this connection.

Penalties are provided in case of the non-observance of this law.

A proclamation dated April 10th, 1918 (*Reichsgesetzblatt*, 1918), concerning retail trade in thread, provides that *wool, half-wool and cotton thread* may not be offered for sale unless they are of certain standard weights and bear an indication of such weight. In the case of cotton thread the length must also be stated.

The standard units are as follows:

- (a) In weights of 1, 5, 10, 20 and 50 grammes and multiples thereof;
- (b) In lengths of 50, 100, 200, 500 and 1,000 metres and multiples thereof, in the case of sewing cotton;
- (c) In lengths of 5, 10, 20, 30, and so on, up to 100 metres, in the case of other thread.

The weight in question is the dry weight of the thread without wrapping, packing, etc., in so far as the latter is not indispensable, allowance being made for a certain degree of normal humidity amounting to 8½ per cent of the dry weight in the case of cotton thread, 10 per cent in the case of half-wool, 18¼ per cent in the case of worsted thread, and 17 per cent in the case of net thread.

The weight must be given in grammes and the length in metres; these particulars should be indicated on the goods themselves or on the packing in such a manner as to be easily recognisable.

The actual weight may not fall more than 3 per cent below the given figure on quantities of 50 grammes, 5 per cent on quantities between 10 and 50 grammes, or 10 per cent on quantities between 1 and 5 grammes. Similarly, the length may vary by 3 per cent in the case of lengths exceeding 100 metres, 5 per cent in the case of lengths between 10 and 20 metres and 10 per cent on a length of 5 metres.

These provisions do not apply to:

- (a) Thread sold with semi-manufactured goods for finishing purposes;
- (b) Thread measured and weighed on behalf of the buyer.

In conformity with the Decree dated January 11th, 1923, concerning the trade in silk ribbons, *ribbons containing silk* may only be sold under certain numbers and in widths corresponding to such numbers.

Such ribbon may only be placed on the German home market in lengths of 10 metres. The length must be indicated in a prominent manner.

Penalties are provided for any contravention of this decree.

Seed (cereals) is not considered as home-grown except in the case of seed belonging to those species mentioned in a special list which the German Cereals Office is required to publish in the German Official Gazette (*Deutscher Reichsanzeiger*), giving the name of the seedsman, the species of the crops and the area under cultivation (Post-War Economic Regulations).

Clinical thermometers must be tested by the State Physico-Technical Institute or by the regional Weights and Measures Office of Thuringia at Illmenau or the Testing Office of the State of Anhalt at Zerbst. Every clinical thermometer which is to be sold or otherwise put into circulation must be officially tested, and if it is to be sold in Germany it must be marked with an official stamp showing that it complies with the conditions laid down. It must in all cases bear either the name of the maker or his trade mark, as registered by the Patents Office, or a letter and number assigned to him by the Testing Office to which the thermometer was sent.

In the case of *boilers*, there is a compulsory examination of the steam pressure and hydraulic pressure: they are again examined on delivery.

There are special provisions dealing with *Portland cement* and its packing (barrels or sacks). The receptacle must bear in prominent characters the words "Portland cement", the name of the firm or the trade mark of the works, as well as an indication of the gross weight. The degree of pulverisation and consistency are determined by special regulations. Natural cement may not be described as "Portland cement".

CATEGORY 3.

Furthermore, there are many scattered rules on a diversity of questions (for example, in the case of electrical engineering, there are provisions dealing with the testing of *engines* and the resistance of *insulators*, etc.); these questions are often the subject of regulations made by the associations concerned. Lastly, there are a great number of rules which are the outcome of commercial practice and which refer to the quality, consistency, density, specific weight, etc., of such goods as *fabrics, yarns, paints, benzine, benzol, mineral oils, tar, lacquer, varnish*, etc.

- 53 In conformity with the regulations of the Association of German Electrical Engineers (Verband deutscher Elektrotechniker—VDE) in regard to *machinery, apparatus, electrical insulating materials*, etc., the mark VDE may be affixed to goods if a previous examination carried out by representatives of the Union justifies this course.
- 54 *Linen fabrics*: registered trade mark "Schwurhand Reinleinen" of the Union of German Linen Manufacturers, registered association, Berlin, S.W.19. — Members of this Union and those of the Union of German Flax Weavers and Spinners, registered association, Landeshut, and of the Union of German Manufacturers of Linen Sawing-Thread, registered association, Neusalz, are entitled to affix this mark, provided that the linen fabrics and finished linen goods bearing it comply with the "Rules for the description of goods as linen", Number 330 A, issued by the Government Committee on Terms of Delivery (Reichsausschuss für Lieferbedingungen, "RAL", Berlin, N.W.6), set up by the State Board for Economic Efficiency (Reichskuratorium für Wirtschaftlichkeit, RKW). Any wrongful use of this mark makes the manufacturer liable to the penalties fixed by the Union in its agreement.
- 55 *Half-linen fabrics*: registered trade mark "Fadenkreuz-Halbleinen" of the Union of German Linen Manufacturers, registered association, Berlin, S.W.19. — Members of this Union and those of the Union of German Flax Weavers and Spinners, registered association, Landeshut, are entitled to use this trade mark provided that the fabrics or finished goods bearing it comply with the "Rules for the description of mixed textiles containing linen or cotton", No. 392 A, issued by the Government Committee on Terms of Delivery (Reichsausschuss für Lieferbedingungen, "RAL", Berlin, N.W.6), set up by the State Board for Economic Efficiency (Reichskuratorium für Wirtschaftlichkeit, "RKW"). Any wrongful use of this mark makes the manufacturer liable to the penalties fixed by the Union in its agreement.
- 56 *Milk, Butter, Cheese, Eggs, Potatoes, Vegetables*. — The German Agricultural Council at Berlin, the Supreme Chamber of Agriculture for Prussia at Berlin, the various provincial Chambers of Agriculture and the co-operative societies or unions have established a certain number of rules concerning the qualitative standards with which the above mentioned produce should comply. Accordingly, certain Chambers of Agriculture and co-operative societies or unions have registered collective trade marks, which are affixed to the products or to their packings.

CATEGORY 4.

There is a large number of laboratories for the analysis of foodstuffs founded by the States or communes or even by public bodies such as the Chambers of Agriculture. Similarly, there are some private undertakings responsible for the official control of foodstuffs. These laboratories also carry out analyses on behalf of private individuals.

At the head of these institutions are chemists who have specialised in foodstuffs and who hold State diplomas and have been sworn in to the service of the State. Such laboratories are required to make out technical reports on goods intended for export.

The fees charged vary from one laboratory to another, but conform to a fixed and published scale.

In Germany there is a large number of laboratories conducting analyses of materials other than foodstuffs and the Chambers of Commerce can furnish particulars regarding them in any individual case, at the same time stating which laboratories and experts undertake the analysis and certification of the commercial value of any given materials or goods.

Almost all the Chambers of Commerce in Germany employ for the service of the public a certain number of experts competent to deal with individual industries or trades; for example, the wool trade, the potato trade and the chief local industries and products.

56 bis The Chambers of Commerce can command the services of a large number of experts covering a vast range of subjects.

A Decree dated June 28th, 1911, controls the sale of *potash salts*, but the very elaborate procedure prescribed for analyses, which are carried out by an official German testing office or by a private office under State supervision, is not compulsory unless the potassium salts are for use within the country. Analysis remains optional if the goods are not to be used in Germany.

Some of the economic departments or sections of the Reich and the States have arranged for their Chambers of Commerce and Industry to codify current commercial conditions and trade practices. This kind of codification is useful in that it gives publicity to trade practices in the branches of industry dealt with and thus promotes the turnover of their goods—and this, again, is beneficial to the consumer. The consumer reaps still other advantages from such codification because in cases of dispute the Chambers of Commerce to which the matter is referred are guided by the rules, which frequently contain indications as to the current commercial grades and standard qualities, and they decide accordingly. This institution therefore affords a guarantee for the consumer and protects his interests.

For example, the Chamber of Commerce and Industry at Berlin has established the commercial conditions and trade practices applicable to the following commodities: fruit, vegetables, southern fruit, preserved fruit and vegetables, potatoes, eggs, fresh meat, bacon, etc., butter, lard, margarine, edible fats, cheese, imported bacon and imported meat preserves, fresh-water fish, paper, scrap-iron, soap, leather, skins and furs, footwear, firewood, imported timber, unbarked timber and

veneers, chemical products and drugs, bricks and tiles, calcareous stone, sandstone, other stone; similarly, the Chamber of Commerce at Kottbus in Niederlausitz has codified the commercial practices applicable to the grain trade, milled products and fodder; whilst the Chamber of Commerce at Hamburg has dealt with the conditions applicable to the trade in cow's milk, poppy seeds, sesame seeds and ground nuts, and the Chamber of Commerce at Duisburg, with the conditions for the sale of cereals, etc.

Unification, regulation, terms of delivery and methods of control. — Agreements establishing weights and shapes, definitions, standard qualities, grades, classifications, etc., which have been freely concluded between producers, dealers and consumers (including the authorities concerned), with the assistance of technical experts, are of special value for the protection of the consumer. He is thus enabled to realise the standard of goods which he should insist upon and may reasonably expect and is able to select in the light of his knowledge the goods best suited for his purposes. As a result of such agreements, the consumer can always obtain the same articles whenever he desires. The wastage of goods, time and, consequently, money is thus reduced and disputes eliminated.

The German Reich, the States, and, above all, the industrial organisations, acting in their own interests and on their own initiative, encourage rationalisation measures of this kind.

In order to centralise these attempts, which often lack co-ordination, the authorities, the economic organisations (or producers, traders and consumers) and the scientific experts, etc., agreed to establish the German Board for Economic Efficiency (Reichskuratorium für Wirtschaftlichkeit, RKW), Luisenstrasse 58, Berlin, N.W.6.

It is the duty of the RKW to further all measures which may improve goods and increase their turnover, whilst diminishing their cost—*e.g.*, systems of regulation, fixed terms of delivery, rational production, sales organisation and rational office administration. The RKW is an autonomous body subsidised by the State. It conducts enquiries concerning co-operation between producers, traders and consumers and assists the following groups, whose work is primarily concerned with the protection of the consumer:

A. *German Standardisation Committee* (Deutscher Normenausschuss, DNA), Dorotheenstrasse 47, Berlin, N.W.7.

After the war a movement grew up in Germany in favour of measures to protect buyers against the offer of shoddy goods of inferior quality or of poor workmanship. Producers, traders and consumers in widely varying branches of industry co-operated with the technical and administrative authorities to form the DNA, a registered association, Dorotheenstrasse 47, Berlin, N.W.7 with a view to organising the work of standardisation in Germany on a uniform plan and to simplifying and cheapening the production and sale of goods by means of voluntary agreements, framed in explicit terms and dealing with measures, forms, qualities, tests and uses of various commodities and materials.

In order to avoid any abuse all standardisation schedules drawn up in accordance with the principles of the DNA bear the registered trade mark "DIN".

Any manufacturer or trader is entitled to affix this sign provided that the articles bearing it comply in all respects with the rules of the DNA and have been made in Germany. Any restrictions to which the use of the mark "DIN" may be subject are given on each standardisation schedule. The right to use the mark may be withdrawn, after due warning, from any manufacturer or dealer who affixes the mark "DIN" to articles and places them on the market in contravention of the above-mentioned regulations.

2,800 standardisation schedules have already been drawn up, this system having been recognised as the most practical to safeguard the public interest.

In addition to standards of general importance (such as volumes and sizes) various technical standards have been fixed in different fields (for example, in mining, electrical engineering and the motor-car industry). Detailed information may be found in the complete list of standardisation schedules which is published every year.

The standards are worked out by committees. Some of these are directly attached to the commercial service of the DNA, others have their own offices which work in close touch with the DNA. The following technical standardisation committees are in existence:

Technical Standardisation Committee for the Mining Industry, Essen, Post Office Box 279 (Fachnormenausschuss für Bergbau, Faberg).	57
Technical Standardisation Committee for Chemical Apparatus of the Association of German Manufacturers of Chemical Apparatus, Berlin, W.35, Potsdamerstr. 103 a (Fachnormenausschuss für chemische Geräte i/Deutsche Gesellschaft für chem. Apparatewesen — Dechema).	58
German Association for the Technical Testing of Materials, Berlin, W.7, Ingenieurhaus (Deutscher Verband für die Materialprüfungen der Technik).	59
Standardisation Committee for the Cycle Industry, Berlin, W.9, Linkstr. 11 (Fachnormenausschuss der Fahrradindustrie).	60
Standardisation Committee, Hospital, Berlin, C.2, Fischerstr. 39/42. (Fachnormenausschuss Krankenhaus).	61
Standardisation Committee of the National Association of German Engineers of the Fire Brigade Services, Magdeburg, Kölnerstr. 8 (Normenausschuss des Reichsvereins deutscher Feuerwehringenieure).	62
Standardisation Committee of the German Cinematographic Association, Berlin-Pankow, Parkstr. 2 (Normenausschuss der deutschen kinotechnischen Gesellschaft).	63

- 64 Standardisation Committee of the Motor Car Industry, Charlottenburg, Hardenbergstr. 8 (Fachnormenausschuss der Kraftfahrindustrie).
- 65 Standardisation Committee for Air Navigation established by the German Research Institute for Air Navigation, Berlin, Adlershof (Fachnormenausschuss für Luftfahrt i. Deutsche Versuchsanstalt f. Luftfahrt — Falu).
- 66 Standardisation Committee for Agricultural Machinery and Implements, Berlin, S.W.11, Dessauerstr. 14 (Fachnormenausschuss für landwirt. Maschinen und Geräte).
- 67 Sub-Committee for the Standardisation of Locomotives, Hannover-Linden, Post Office Box 55 (Engerer Lokomotiv-Normenausschuss, ELNA, Elna m. Br. Hanomag.).
- 68 Standardisation Committee for the Printing Trades, Leipzig, Ranftsche Gasse 14 (Normenausschuss für das graphische Gewerbe).
- Government Committee on Terms of Delivery, Berlin, W.6, Luisenstrasse 58/59 (Reichsausschuss für Lieferbedingungen).
- 69 Standardisation Committee for the Textile Industry established by the German Standardisation Committee, Berlin, N.W.7, Dorotheenstrasse 47 (Fachnormenausschuss für die Textilindustrie, i. deutscher Normenausschuss).
- Union of German Electrical Engineers, Berlin, W.57, Potsdamerstrasse 68 (Verband Deutscher Elektrotechniker).
- 70 Union of German Manufacturers of Machinery for the Meat Industry, Berlin-Lichterfelde-West, Aternplatz 2 (Verband deutscher Fleischereimaschinenfabrikanten).
- 71 Standardisation Committee for Woodworking Machinery established by the German Standardisation Committee, Berlin, N.W.7, Dorotheenstrasse 47 (Fachnormenausschuss für Holzbearbeitungsmaschinen i. Deutscher Normenausschuss).
- Standardisation Committee for Land Surveying established by the German Standardisation Committee, Berlin, N.W.7, Dorotheenstrasse 47 (Fachnormenausschuss für Vermessungswesen (Faverm) i. Deutscher Normenausschuss).
- 72 General Committee on the Standardisation of Vehicles, Berlin, W.10, Viktoriastrasse 25 (Allgemeiner Wagen-Normenausschuss, AWANA).

B. *Government Committee on Terms of Delivery set up by the State Board for Economic Efficiency (Reichsausschuss für Lieferbedingungen (RAL) beim Reichskuratorium für Wirtschaftlichkeit)*, Berlin, N.W.6, Luisenstrasse 58/59.

This Committee endeavours to promote the establishment of uniform terms of delivery embodied in agreements as to the qualities usually required by the trade, grades, classes, commercial forms, packing, baking of samples and the notification of defects. These rules, which are endorsed by the parties to the agreements—*i.e.*, the business Unions, the Chambers of Commerce and Industry, the public authorities, the housewives' organisations and the State and communal research offices give in almost all cases more or less detailed directions for verifying the quality, etc., of the goods. The consumer is thus enabled to carry out an appropriate test as soon as he receives the goods. Terms of delivery of this kind are already in force in the following trades: leather, animal and vegetable glues, textiles, asbestos, paints, lacquer, binding substances and agglutinants, washing and cleaning materials, office equipment and household goods.

Moreover, the RAL is also engaged in drawing up uniform rules for the description of goods, and the commodities dealt with must comply with these rules before they can be placed on the market or be the subject of business transactions; thus, there are rules for the description of linen (see under 3rd Category), cotton and mixed textile goods (see under 3rd Category), leather for saddles, cushions and bags, as well as goods manufactured by saddlemakers, harnessmakers and bagmakers.

In accordance with these agreements, the makers and dealers state in their offers of goods, in their catalogues, on certificates of guarantee and on packings, etc., that the goods comply with the regulations of the RAL and they are thus able to furnish the consumer not only with a characteristic external mark, but at the same time with recognised guarantee.

C. *German Association for the Technical Testing of Materials (Deutscher Verband für die Materialprüfungen der Technik, DVM)*, Berlin, N.W.7, Friedrich-Ebertstrasse 27.

In Germany, special testing offices for materials, many private laboratories, as well as laboratories established by large factories and even, in recent times, by small or medium-sized works, carry out tests of materials and goods of all kinds, so that a suitable selection may be made and the consumer protected against goods of inferior quality.

These offices and laboratories conform in their work either with the standards established by the German Standardisation Committee, or with the uniform rules drawn up by the *German Association for the Technical Testing of Materials*, or, again, with special regulations laid down by agreement between the interests directly concerned.

Particular importance naturally attaches to the regulations for the testing of products in cases where these are applied uniformly throughout Germany and extend beyond its frontiers, in virtue of international agreements. There are not as yet a great many regulations of this kind. Their chief value lies in the fact that they are the outcome of close co-operation between manufacturers, dealers and scientists, and that they are voluntarily adopted and enforced by all parties concerned. The German organisation concerned in working out such regulations for the testing of products is the *German Association for the Technical Testing of Materials*, which has its offices at Berlin, N.W.7, Dorotheenstrasse 40. This association can look back on more than thirty years' successful work on scientific testing of material.

It deals with materials of all kinds: building materials, fuels and ingredients thereof, articles of consumption, etc., and its work is divided as follows: (1) Metals; (2) Mineral substances other than metals; (3) Organic substances; (4) General questions.

Work has recently been carried on in close co-operation with the International Association for the Testing of Materials, which has just been formed and the headquarters of which are at Zürich.

CATEGORY 5.

A decree dated June 26th, 1916, places under a general prohibition the sale of foodstuffs bearing descriptions or indications which may be misleading. This provision was incorporated in the law on foodstuffs of July 7th, 1927.

The German law for the protection of trade marks includes clauses inflicting a penalty on any person who, with intent to defraud, presents, without the assent of the interested party, goods, receptacles or packings of goods, advertisements, catalogues, commercial letters, recommendations, invoices, or other documents in a form which is considered in the commercial circles concerned to be the distinctive mark of like goods made by another manufacturer; the same law also provides penalties for persons who, with the same end in view, place on the market or offer for sale goods bearing any such mark. Foreign goods which have been illegally marked with either the name of a German commercial firm or German district or with a trade mark inscribed on the register of trade marks, may be seized and confiscated at the time of their entry into Germany, whether they enter as imported goods or goods in transit, provided that the injured party, who is required to furnish a guarantee, makes a request to this effect.

The Law on foodstuffs of July 5th, 1927, provides for the infliction of a fine, term of imprisonment and, in serious cases, rigorous imprisonment for a period not exceeding 10 years on any person who deliberately places on the market foodstuffs or "articles in current use" dangerous to human health; if the offence was due to negligence the offender is punished with a fine and term of imprisonment or with one of these penalties only. Persons who, with intent to defraud, place on the market foodstuffs which are imitations adulterated or bearing a description likely to mislead (or deteriorated foodstuffs) are punished with a term of imprisonment not exceeding six months and a fine, or with one of these penalties only; if the offence was due to negligence the offender is punished with a fine not exceeding 150 marks or with arrest.

GREAT BRITAIN.

CATEGORY 1.

1 The *Food and Drugs (Adulteration) Act, 1928*, in addition to its general provisions relating
 2 to the composition of articles of food and drugs which are set out in Category 5, contains a few
 3 special provisions dealing with particular articles of food. *Butter* may not contain more than
 4 sixteen per cent of water. Any other article of food resembling butter (except *milk-blended*
butter) whether mixed with butter or not must be sold and consigned as *margarine*. In the case
 of *margarine* not more than ten per cent of the fat may be milk fat, nor may the water content
 exceed sixteen per cent. *Milk-blended butter* may be sold or consigned only under a distinguishing
 name approved by the Minister of Agriculture and Fisheries: it may not contain more than
 twenty-four per cent of water. *Whisky, brandy, rum or gin* may be sold diluted with water,
 without declaration of the admixture provided that the admixture has not reduced the spirit
 more than thirty-five degrees under proof.

5 By the only sections now unrepealed of the *Sale of Food and Drugs Act, 1875*, it is provided
 that *tea* may not be imported mixed with exhausted tea.

6 Under the *Public Health (Regulations as to Food) Act, 1907*, the Minister of Health has
 made regulations prescribing the composition and labelling of *condensed milk* and *dried milk*,
 respectively. In the case of *condensed milk*, the label must bear a declaration indicating whether
 it is condensed from full cream or skimmed milk and whether sweetened or unsweetened, together
 with a statement of the equivalent quantity of milk (or skimmed milk). The percentages of
 milk fat and milk solids must be not less than the following:

Description of condensed milk	Percentage of milk fat	Percentage of all milk solids, including fat
1. Full cream, unsweetened	9.0	31.0
2. Full cream, sweetened	9.0	31.0
3. Skimmed, unsweetened	—	20.0
4. Skimmed sweetened	—	26.0

Similar rules apply in the case of *dried milk*, with the difference that the *dried milk* is to be
 labelled "dried full cream milk", if it contains not less than twenty-six per cent of milk fat:
 "dried partly skimmed milk" if it contains less than twenty-six, but not less than eight per cent
 of milk fat: and, if less than eight, "dried machine-skimmed milk".

7 With regard to *drugs*, the standard of the *British Pharmacopœia*, although it has no statutory
 validity, is in practice adopted for the purposes of the *Act of 1928*.

8 The inspection and sampling of *food* and *drugs* in connection with the above-mentioned
 measures and the institution of proceedings are carried out by the officers of local authorities;
 the analysis of samples by public analysts appointed by those authorities. Samples are obtained
 by purchase of articles on sale or in some circumstances they may be taken at the place of
 delivery. Certain government departments have also rights of inspection and sampling; in
 the case of imported food the work is carried out by the Commissioners of Customs and Excise,
 and prosecutions are undertaken by them.

9 *Boiler plates* and other *material used in shipyards* are tested by Board of Trade surveyors
 or by societies responsible for the classification of shipping.

CATEGORY 2.

10 The *Law of 1926* requires sellers of certain scheduled *fertilisers* and *feeding stuffs* to furnish
 purchasers with a statutory statement showing the percentages of the valuable constituents
 of these articles; this statement constitutes a warranty that the actual percentages correspond
 with those shown in it within certain defined limits.

The Councils of Counties and County Boroughs are required to appoint, for the enforcement
 of this law, agricultural analysts as well as inspectors and official samplers. Every purchaser

has the right to have samples taken for analysis by an official sampler. In cases where the certificate of an agricultural analyst is disputed, either party may, upon payment of a fee, have a further part of the sample analysed by the Government Chemist.

The Merchant Shipping Acts require every *steamer* (and *motor vessel*) carrying over twelve passengers to, from or between places in the United Kingdom to be surveyed by Board of Trade surveyors at least once a year. They also require all ships to be provided with proper lights and life-saving appliances. The Board of Trade are empowered to issue regulations on these and other subjects. 11

The Acts further require all ships (with a few unimportant exceptions) to be marked with a loadline beyond which they may not be submerged. For this purpose a periodical survey is necessary which must be made by the surveyors of the Board of Trade or one of the classification societies recognised for the purpose.

The Anchors and Chain Cables Act, 1899, provides that a maker of, or dealer in *anchors* or *chain cables* shall not sell or contract to sell, nor shall any person purchase or contract to purchase for use on any *British ship*, any chain cable or any anchor *exceeding in weight 168 lb.*, unless it has been previously proved in accordance with the Act. The Act specifies various tests that the articles must pass and certain bodies of persons to whom the Board of Trade are authorised to grant licences for testing establishments. Licences are in fact granted to Lloyd's Proving Houses at Cardiff, Chester, Cradley Heath, Glasgow, Low Walker, Netherton, Sunderland and Tipton, the licences being renewable annually after inspection of the testing establishments. 12

The Mercantile Marine Department of the Board of Trade issues annual (or more frequent) certificates for passenger *steamers* (including *motor vessels*). For this purpose such vessels are surveyed while under construction, and tests of the materials used (e.g., *boiler plates*) are made by the Board's surveyors. Regulations governing the testing of the materials and the construction of the vessels are issued by the Department. Regulations as to the construction and efficiency of *life-saving equipment* (*boats, life-jackets, etc.*) are also issued, and such equipment is inspected by the Board's Surveyors, the boats and jackets being stamped if found satisfactory. *Ships' side-lights* are also subject to inspection by Board of Trade surveyors. 13
14
15
16

The Standards Department of the Board of Trade certifies *standards of weight* and *balances* for use therewith, *standards of length*, and *standards of capacity*, mainly for the use of the local inspectors of weights and measures. It verifies also standards destined for the use of Colonial and foreign Governments, and for some private firms. Similar work done by the Department is the verification of standard *gas-holders and meters* for local gas-meter inspectors; occasionally, again similar work is done for the Colonies. 17
18

Apparatus for testing the flashpoint of *petroleum* is also certified by the Department. 19

Weights, measures and weighing instruments used for trade purposes must be verified and stamped. 20

A series of laws from 1878 to 1926 provides that inspectors appointed by local authorities (but examined as to competency by the Board of Trade) shall verify and stamp all *weights* and *measures* and *weighing instruments* and certain kinds of *measuring instruments* (of length and of capacity) specified in the regulations of the Board of Trade and used in commerce. Such instruments must comply with the regulations issued by the Board of Trade for the purpose. Before an inspector can stamp any apparatus of new form, it is necessary that a similar apparatus shall have received the certificate of acceptability of the Board of Trade. Frequently such weights and measures intended for export, particularly to the Colonies, are stamped by inspectors here. 21

In accordance with a Law of 1926 certain *foodstuffs* must be sold only according to weight and the packages which contain such articles must be marked with the actual net weight of the goods. 22

The standards used by the inspectors are in turn verified by the Standards Department of the Board of Trade. The National Physical Laboratory maintains accurate standards of measurement and has the custody of the legal electrical standards.

All *gold* or *silver plate* or other articles manufactured of gold or silver (with certain exceptions, chiefly small articles of jewellery) are required to be assayed and marked at one of the Assay offices, which are situated at London, Birmingham, Chester, Sheffield, Edinburgh, Glasgow and Dublin. These offices are not State institutions or under Government control, but the standards of quality and to some extent the marks to be used are prescribed by Statute. The Statutes apply to imported goods as well as those made in Great Britain. In the case of gold, five marks indicating five different degrees of purity are employed (with an additional sixth mark used only at Dublin). In the case of silver there is in practice only one standard and one mark of quality corresponding to it. The marks also include an indication of the date of marking and of the maker's name, or that the article is of foreign origin. 23

The Gun Barrel Proof Act, 1868, is a local Act requiring all *gun barrels* made or imported into this country to be proved by the Birmingham Proof House and the Gunmakers' Company of London, except where the imported gun barrels bear the Official proof mark of a country with which Great Britain has concluded an agreement providing for the mutual recognition of the official proof marks of the two countries. Such agreements have in fact been concluded with Austria, Italy and Spain. 24

CATEGORY 3.

In Great Britain, trade-marks are in general the property of companies, firms or individuals, but, under Section 62 of the Trade-Mark Act, of 1905, a mark may be held by an Association of Manufacturers. This section of the Act provides that:

“ Where any association or person undertakes to certify the origin, material, mode of manufacture, quality, accuracy or other characteristic of any goods by mark used upon or in connection with such goods, the Board of Trade, if and so long as they are satisfied that such association or person is competent to certify as aforesaid, may, if they shall judge it to be in the public advantage, permit such association or person to register such mark as a trade-mark in respect of such goods, whether or not such association or person be a trading association or trader possessed of a goodwill in connection with such certifying.”

A considerable number of marks has been registered under this Section; the *British Engineering Standards Association* have registered a mark to be applied to articles manufactured according to their specifications; the *Boot-Manufacturers' Federation* have a mark which is applied to boots manufactured by their members according to a certain specification; the mark of the *British Electrical and Allied Manufacturers' Association* is applied to certain productions of its members, and the *Scottish Woollen Manufacturers' Association's* mark indicates that the material to which it is applied is manufactured in Scotland entirely from new wool.

The British Engineering Standards Association has carried out extensive work in conjunction with the most representative bodies of producers and consumers with the object of obtaining specifications which shall be generally accepted as standards for the trade. The nature of the specification differs according to the circumstances of each case, but in general it includes some directions as to the method of manufacture and the dimensions of the finished product and lays down tests that the article shall be capable of meeting.

CATEGORY 4.

Lloyd's Proving Houses make the statutory tests under the *Anchors and Chain Cables Act, 1899*; they also do a good deal of testing of *shipbuilding material* and testing of a general commercial character.

The City of Bradford Conditioning House was established in 1891 by the Bradford Corporation under a private Act for the purpose of ascertaining and certifying the true length, weight and width of *wool, tops, yarn*, etc. It makes tests for buyers or sellers and has a standard scale of charges. It is, of course, wholly or mainly used by traders, not by private purchasers.

The Manchester Chamber of Commerce Testing House, established in 1895 by the Manchester Chamber of Commerce, was originally intended for the testing of *cotton yarn* but has developed in many directions. Besides testing textile materials it now makes analyses of *dyes, sizing materials, soaps, oils, coal, water, metals, ink, drugs, paper pulp* and *foodstuffs*. The inspection of cloth for delivery to foreign Governments and foreign buying syndicates has also been undertaken, and in many cases contracts are made with the condition that before shipment all deliveries shall be inspected and approved by this Testing House.

A *Yarn Testing Bureau* which was established at the University College, Nottingham, in 1925, issues certificates on the result of tests of yarns similar to those of the Bradford Conditioning House and Manchester Testing House. The Nottingham Chamber of Commerce has drawn up model rules for contracts for the sale of yarns.

The Electrical Standardising, Testing and Training Institution Ltd., Faraday House, London, for the training of electrical engineers also maintains a testing department in which are carried out electrical, mechanical and chemical tests in connection with *machinery, instruments, apparatus* and *materials*. The tests are made at the request and expense of the public and reports on the tests are provided.

Three Societies—Lloyd's Register of Shipping, the British Corporation for the Survey and Registry of Shipping, and the Bureau Veritas-British Committee—have been recognised by the Board of Trade for the purpose of surveying *ships* for freeboard and assigning load-lines. In addition to this statutory work, the prime function of these Societies is the survey of *ships under construction* and periodically thereafter with a view to the assignment and maintenance of a “class” (“A. 1”, etc.). Each of the Societies issues regulations and maintains a staff of surveyors for this purpose, and the *material used in the construction of the ships* is tested by these surveyors in accordance with the regulations.

The National Physical Laboratory is now part of a Government Department (the Department of Scientific and Industrial Research). It maintains accurate *standards of measurement* and has the custody of the *legal electrical standards*.

It also does a good deal of testing work. During the war and since, it has tested engineers' gauges and has tested, marked and certified *clinical thermometers*; and tests are made of numbers of other *instruments* mainly of a scientific nature, such as *electrical* and *optical instruments* and *volumetric glassware*. Some of these tests are made on behalf of Government Departments administering legal standards (for instruments such as electricity meters) and for private companies manufacturing under definite specifications, such as those of the British Engineering Standards Association, and requiring tests that the instruments comply with the standards. 39
40

In addition to these public or semi-public testing establishments, there are a very large number of firms or individuals, whose main or whole business consists in testing *materials, instruments* and *apparatus*. For almost any material or apparatus used in industry, there are competent people able to make tests and reports. Usually testing is carried on by a private person or firm as a profession, but at times organised bodies carry out tests. For example, the Royal Automobile Club will make tests of a *motor-car* in respect of any of its characteristics, such as fuel consumption, efficiency of performance, etc. 41
42

Although in practice the method of precise testing is not frequently adopted for articles in a form ready for direct use by the public, there would not be great difficulty from the manufacturing end in establishing such a practice. If the purchaser is able to state in precise terms what he wants, there is little doubt that for any class of articles, manufactured or not, competent and independent people could be found in this country who would be capable of giving reliable certificates that any article or material did or did not reach a prescribed standard. It is anticipated that the difficulty would arise in obtaining and revising the standards for the wide ranges of articles in common use. In many cases there are variations in material and form that are preferred in particular countries and districts, and personal preferences are, in all cases, an important factor.

The parties to the contract are left to make their own arrangements as to the actual tests that are made; a private consulting engineer is frequently employed. (In some cases tests may be made by the National Physical Laboratory.)

Many firms have a staff engaged continuously on testing, and all materials used by them are tested. There are also many consulting engineers in all branches of manufacture, ready to make any tests that may be required for firms not having testing means of their own.

CATEGORY 5.

The *Food and Drugs (Adulteration) Act, 1928*, relating to foods and drugs provides for two principal classes of offence: 43

1. (a) the addition of harmful ingredients to any article of food or drug intended for sale;
(b) the sale of any article of food or drug thus adulterated.
 2. I (a) The sale of any article of food or drug which is not of the nature, or not of the substance, or not of the quality of the article demanded by the purchaser;
(b) the sale of any compound article of food or compound drug which is not composed of ingredients in accordance with the demand of the purchaser;
 - II (a) the abstraction from any article of food of any part of it so as to affect injuriously its nature, substance or quality, with the intent that it may be sold in its altered state without notice;
(b) the sale of any article of food so altered.
-

GREECE.

CATEGORY 2.

Currants coming from Corinth. — In order to guarantee the origin of currants coming from Corinth, it is forbidden under a Decree-Law dated September 23rd, 1926, to place the mark "Gulf" in any locality not situated within the province of Corinth on receptacles containing currants produced in the area of Corinth and intended either for export or conveyance to another port for transshipment and export.

The warehousing within the area of Corinth and the exportation from this province of currants other than those produced within the limits of the said province are prohibited.

Currants exported with the name of the exporting firm must bear an indication to the effect that they come from the province of Corinth.

The export from any port whatever of receptacles containing currants and bearing a mark which includes a word that might be mistaken for the word "Gulf" is prohibited.

Penalties are imposed for any contravention of these provisions.

HUNGARY.

CATEGORY I.

A Law dated 1895 prohibits the adulteration of *agricultural produce* and is designed to protect the health of men and animals. 1

For the purposes of this law adulteration is understood to mean any imitation or falsification of the products specified in the law which might mislead the consumer or buyer as to the origin, composition or quality of the product.

The commodities in question are *milk and dairy produce: fats, fatty or oleaginous substances* of animal or vegetable origin, *cereals, flour, pastes made with flour, honey, pimento, seed and grass seed in general, fodder and fertilisers.* 2
3
4

In the case of milk and dairy produce, a Decree dated 1921 requires persons who desire to keep a dairy or carry on the business of working up milk or dairy produce to obtain a licence from the Minister of Agriculture. The licence is only granted provided that certain conditions are fulfilled; these relate to the clean and hygienic handling of milk and milk products and to their transformation and offering for sale.

Any person applying for such a licence must furnish proof, for instance by means of diplomas and certificates, that he is in possession of the necessary technical knowledge or that he has in his permanent employ a manager in possession of such knowledge.

Undertakings which obtain a licence are subject to Government inspection.

In order to ensure the preservation of milk intended for consumption the use of suitable preservatives (hydrogen hyperoxide, 35 cubic cms. of 10 per cent solution per 10 litres of milk; formaldehyde, 1 cubic cm. of 40 per cent solution per 10 litres of milk) is permitted where transport difficulties render this necessary.

The use of such substances is subject to authorisation from the Royal Chemical Institute or from the regional chemical testing station.

The holder of the licence is held responsible for the preserving process, and preservation is only sanctioned in consuming areas in which specialists of the Ministry of Health exercise constant supervision.

The offer for sale of fats or of fatty or oleaginous substances of animal or vegetable origin is only permitted provided that their origin and place of manufacture are denoted by the name generally employed in the trade.

The general description "*table oil*" is in conformity with commercial practice, and its sale is authorised when this name is applied to various oils of vegetable origin and of miscellaneous composition prepared for human food. 5

Colza-oil may only be sold under this name. 6

Cereals and seed for fodder of a similar kind (wheat, rye, malt, fodder barley, oats, maize) must be offered for sale in accordance with trade practice. 7

Alimentary pastes made with flour which is not exclusively wheat flour must be offered for sale under the name of that cereal from which the flour was made. 8

Industrially-manufactured pastes may only contain, in addition to flour, auxiliary substances the use of which has been authorised and which are calculated to improve the taste and facilitate conservation.

The production, treatment, and sale of *wine* is regulated by a Law dated 1924. This law also embodies provisions for the prevention and punishment of fraud. 9

The only approved processes for the transformation of grapes and must are the following: concentration of the must, improvement of the must with concentrated must or with home-grown raisins, clarification, addition in the approved proportions of alcohol in the form of brandy, mutage, removal of acidity, improvement of colour by means of caramel, addition of carbonic acid, use of wine yeast, mixing the wine with the residue of another wine, racking, filtering, pasteurisation, refrigeration, mixture of musts. Any other vinification process is prohibited and is treated as adulteration.

Beverages described as wine, must and dessert wine may only be offered for sale under the above descriptions. The mixing of red wine with white wine is prohibited.

There are special provisions for ensuring the purity of the famous wines coming from the Tokay district, and the various kinds are accurately defined.

Other provisions regulate the methods of treating dessert wines, liqueurs, sparkling wines, wine brandy and tonic wines, also the addition of alcohol and pharmaceutical products.

Detailed regulations concerning the minimum content of *acetic acid* and *other products in vinegar made from wine, fruit, honey, beer, etc., special vinegars* and diluted or concentrated *acetic* 10
11

acids, are embodied in a special decree which defines the external signs indicating the quality of such goods.

12 *Substitutes for vinegar and acetic acid* may not be manufactured or offered for sale without a permit from the Minister of Agriculture.

13 The *various kinds of coffee* and blends of coffee must be described by the terms that are universally adopted on the world market and indicate the origin, kind and quality of the coffee or the composition of the blend.

14 The description "*coffee substitute*" is applicable to products in the manufacture of which chicory root, malt, figs, etc., have been used.

CATEGORY 2.

15 A Law of 1925 relating to the control mark to be placed by the Government on *dairy produce* contains special provisions concerning the determination of the quality of dairy produce intended for export.

The Minister of Agriculture is authorised to place the Government control mark on home dairy produce manufactured under Government supervision before it is offered for sale. This stamp guarantees that the dairy produce in question has been manufactured under Government control and that its quality is up to the standard required by the law.

Control is exercised by a special control office.

Government control stamps are issued to persons entitled to use them by the Minister of Agriculture through the control office.

The stamp represents the crown of Hungary with the following inscription in Hungarian above it: "Magyar állami ellenőrzés alatt Készült", and underneath, the same inscription in English: "Made under the control of the Hungarian Government".

The imitation or forgery of the mark is punished under the Penal Code. The mark may not contain any figure or sign other than that prescribed by the Minister of Agriculture in the interests of control. It must be put, at the place of manufacture, on the actual product or the packing.

Persons authorised to use the Government control mark must allow the inspectors to enter their establishments at any time and to take samples.

16 *Butter* may only bear the control stamp if it has been made from milk or pasteurised cream and does not contain more than 16 per cent of water, and provided its quality is such as to satisfy not only the provisions of the general law on the adulteration of products in general and the regulations connected therewith, but also the special provisions laid down by the Minister of Agriculture.

Dairies authorised to use the Government control stamp are forbidden to make or keep butter which is not entitled to bear the control mark: they are also forbidden to stock margarine, fats or any other substances which can be used to adulterate butter.

Butter which does not bear the Government control stamp must be exported in an entirely different packing from that used for butter bearing the official stamp.

The use of the mark without authorisation and contrary to the provisions of the law is punished under the Penal Code.

17 *Fats and mixtures of fats* having the appearance of butter and prepared for the same purpose,
18 but not made exclusively from milk, must be described as *margarine*.

19 The sale of *margarine* in packings is only authorised in packages of 5 kilograms; below this weight it must be sold in the form of standard cubes, and both the packing and the cubes must bear the word "margarine" in legible characters.

For wholesale trade the casks, cases, etc., must bear on the lid and sides the word "margarine" in clear and indelible characters.

20 Fats or mixtures of fats having the appearance of pigs' fat and prepared for the same purpose but not obtained exclusively from pigs must be sold under the name of *artificial edible fat*.

These fats may only be sold in casks, iron-hooped and bearing in indelible characters not less than 10 cm. high the words "artificial edible fat", and, underneath, the name of the factory.

21 All mills producing *wheat or rye flour* must stamp a special mark on the bags to indicate the quality of the flour. The flour thus graded must be at least up to the standard of the sample bearing the same number and adopted by the Budapest Corn Exchange.

This grading must be adhered to when the flour is resold in bags and in retail trade.

The sale of flours of different qualities mixed with each other or with other milling products is forbidden.

22 For the colouring of *alimentary pastes*, the use of certain vegetable substances which give the yellow colour of eggs is authorised, on condition that the artificial nature on the colouring is stated. Saffron, for instance, may be used for this purpose. The words "artificially-coloured produce" must appear in conspicuous characters on the packing.

The words "prepared with eggs" may only be used if each kilogram of paste contains at least two eggs. Undyed pastes without eggs must bear the words "white paste".

This compulsory wording must appear on the packing, cases, wrappings, delivery notes, invoices, etc.

The origin, type and quality of *wine* must be clearly indicated on the casks in the possession of the producer or seller. 23

Pimento may only be ground by authorised mills which have applied for and obtained a licence. The pimento which enters the mill must be ground separately for each owner. 24

Ground pimento may not be returned to the owner until it has been graded and sampled.

Ground pimento may not be sold until it has been officially graded by the proper chemical research office. This grading is valid for one year as from the date on which the produce was tested. At the end of this period the goods must be graded again after a test to ascertain that the quality has not depreciated.

Graded pimento may only be sold in packets weighing not less than 10 kilograms and bearing the official seal.

Pimento intended for export must be accompanied by a certificate issued by the Medicinal and Industrial Plants Office, which inspects the goods, affixes the seals and the grade stamp, and issues the certificate.

The Medicinal and Industrial Plants Office is responsible for the organisation and control of the crop and for the purchase of *medicinal and industrial plants* and *wild fruit*. It is also responsible for directing and controlling exports. 25

For the exportation of medicinal plants and *insects* a certificate issued by this Office must be produced. The tests are carried out for this Office by the Medicinal Plants Laboratory. The object of the test is to make sure that the quality and purity of the goods are as stated. 26

If the result of the test is satisfactory, the Office places the seals and the grade mark on the goods and issues the certificate.

The exportation by rail of *animals* and *raw materials of animal origin* is not allowed until they have been inspected by the Government veterinary officer attached to the export station. 27

The sale of *grain* and *seeds* is only authorised in quantities of not less than 10 kilograms, and provided the seller's name and the kind, origin, purity (in percentage) and germinating capacity of the seeds are indicated. 28

These particulars must be given in visible and indelible characters on the delivery note or on the actual bags. The correctness of the particulars in regard to quality is confirmed by the certificates and seal of the Government offices responsible for the analysis of seed.

Similar provisions exist for *fodder* and *fertilisers*. As regards the latter, the goods are tested by the Government and municipal laboratories, or by the Royal Institute of Chemistry. 29

Gold and silver articles must be stamped by the Assay Office after their fineness has been ascertained. There are four degrees; the fineness in thousandths is as follows: 30

Gold Articles.

1.	☉ (Sun) and the head of Apollo with rays:	920 thousandths	•
2.	☉ " " " " " " " " " "	840	"
3.	☉ " " " " " " " " " "	750	"
4.	☉ " " " " " " " " " "	580	"

In the case of small articles the third degree of fineness is simply indicated by the number 3, the sign ☉ (Sun) and the head of a chamois or fox.

For Silver Articles.

1.	☾ (Moon) and the head of Diana950 thousandths
2.	☾ " " " " " " " " " "900 "
3.	☾ " " " " " " " " " "800 "
4.	☾ " " " " " " " " " "750 "

Stamping is not required in the case of gold and silver articles intended for export when the manufacturer has previously made a declaration to this effect to the Assay Office, stating the fineness and weight of the articles and whether or not they were manufactured under the control of the Office.

CATEGORY 4.

The official control and testing establishments which examine goods either in every case or at the request of the persons concerned are as follows:

Royal Hungarian National Institute of Chemistry and Central Chemical Testing Office, Budapest.

Royal Hungarian Chemical Testing Offices at Debrecen, Keszthely and Magyaróvár.
Royal Hungarian Seed Testing Offices at Budapest and Keszthely.
Royal Hungarian Research Laboratory for Plant Cultivation, Magyaróvár.
Royal Hungarian Research Laboratory for Tobacco-Growing, Debrecen.
Royal Hungarian Research Laboratory for Animal Physiology and Fodder, Budapest.
Royal Hungarian Testing Office for Milk, Magyaróvár.
Royal Hungarian Testing Office for Alcohol, Gödöllő.
Royal Hungarian Testing Office for Machinery, Magyaróvár.
Royal Hungarian National Institute for the Analysis of Wool, Budapest.
State Railways Laboratory for the Inspection of Material, Budapest.
Municipal Institute of Chemistry and for the Analysis of Foodstuffs, Budapest.
Royal Hungarian Institute of Technology and the Analysis of Materials (Industrial Technological Museum), Budapest.
Royal Hungarian Institute for the Inspection of Weights and Measures, Budapest.
Technical Milling Committee, Budapest.
Economic Wine-Growers' Council, Budapest.

The result of the tests carried out by these Institutes is given in the certificates which they issue.

At the request of the persons concerned, the Hungarian Chambers of Commerce and Industry issue official certificates attesting the quality of the goods.

The Hungarian Chambers of Commerce, in particular that of Budapest, have at all times experts at their disposal who are competent to deal with goods of every description.

A list is given below:

1. *Budapest* (jurisdiction: counties of Pest-Pilis-Solt-Kiskun, Fehér, Nograd et Hont together; towns of Budapest, Kecskemét, Székesfehérvár).
 2. *Debrecen* (counties of Hajdu, Bihar, Szolnok, Szabolcs and Ung together, Szatmár Ugocsa and Bereg together; town of Debrecen).
 3. *Győr* (counties of Veszprém, Győr-Moson-Pozsony together, Komárom-Esztergom together; towns of Győr and Komárom).
 4. *Szeged* (counties of Csongrad, Békés, Bácsbodrog, Csanad-Arad-Torontal together; towns of Baja, Szeged, Hodmezővásárhely).
 5. *Miskolc* (counties of Heves, Borsod-Gömör-Kishont together, Abaujtoronya and Zemplén together; town of Miskolc).
 6. *Sopron* (counties of Sopron, Vas, Zala; town of Sopron).
 7. *Pécs* (counties of Baranya, Somogy, Tolna; town of Pécs).
-

INDIA.

CATEGORY 1.

In the chief towns there are legal provisions to safeguard consumers from the adulteration of certain *foodstuffs* sold to the public. 1

CATEGORY 2.

Under a law of 1923 *cotton bales* are required to be marked for the purpose of identifying the factory in which the cotton was baled and thus protecting traders from fraudulent practices such as damping, mixing and adulteration. 2

CATEGORY 4.

The Government experts are authorised to analyse certain *oils* and *foodstuffs* for account of private persons at their request and for a fee. 3

Cotton, wheat, oil seeds and *jute* are mostly sold in accordance with the standard contracts drawn up by the commercial associations concerned either in India or in the United Kingdom 4

IRISH FREE STATE.

CATEGORY I.

1 All officials of the sanitary authority have the right to inspect and examine any *animal, carcass*
2 *meat, poultry, game, fish, fruit, vegetables, grain, bread, flour, milk or butter*, and in general any
article intended for human food exposed or being conveyed for sale or deposited in any place for the
purpose of sale.

They also have the right to seize and carry away any of the above foodstuffs if found to be
obtained from diseased animals or unsound, unwholesome or unfit for consumption.

3 The officials in question must be veterinary surgeons and their duties shall include the
examination of *meat* and inspection of *cattle*.

4 The Public Health Department is also empowered to make regulations for the prevention
of danger to public health from the importation, preparation, storage and distribution of *articles*
5 *of food and drink* intended for human consumption. The Department is further empowered
6 to prescribe the manner in which any tin or other receptacle containing *dried, condensed, evaporated,*
skimmed or separated milk is to be labelled and the minimum percentages of milk fat and milk
solids in dried or condensed milks.

The Department may also direct its officers to procure for analysis samples of any foodstuffs
and to see that the regulations enacted are enforced by the local authorities.

7 *Margarine* and *butter* factories must be registered. "Butter factories" mean factories
in which butter is blended or re-worked. The same requirement is extended to manufactories
of milk-blended butter and to premises of wholesale dealers in margarine.

Officials have the right to enter these factories and establishments, inspect any process carried
on therein and take samples.

Measures have also been taken ensuring that butter or margarine with an excessive water
content is not manufactured, that adulterants are not brought into butter factories and that the
latter do not form part of, or communicate otherwise than by a public street or road with, margarine
factories.

Margarine manufacturers and wholesale dealers in margarine, moreover, must keep a register
open to the inspection of any officer of the Department of Agriculture stating the quantity and
destination of each consignment leaving their premises.

8 The Department of Agriculture may lay down regulations determining what deficiency
in any of the normal constituents of *genuine milk, cream, butter or cheese* or what addition of
9 extraneous matter or proportion of water shall raise a presumption, until the contrary is proved,
that the milk, cream, butter or cheese is not genuine or is injurious to health.

The following are to be presumed not to be genuine: milk containing less than 3% of milk
fat or less than 8.5% of non-fatty solids; skimmed or separated milk, other than condensed milk,
containing less than 9% of total milk solids; butter containing more than 16% of water.

10 The Department has likewise the right to make Regulations as to the use of preservatives
in the manufacture or preparation of *butter, margarine or milk-blended butter*.

An Order of 1908 relating to the sanitary conditions of dairies and cow-sheds provides for:

1. The registration with local authorities of all persons carrying on the trade of cow-keepers, dairymen, or purveyors of milk;
2. The inspection of cattle in dairies and the observation of certain rules in regard to lighting, ventilation, cleansing, drainage and water-supply of dairies and cow-sheds;
3. The cleanliness of milk-stores, milk-shops and of vessels used for containing milk;
4. The prescribing of certain precautions to be taken for protecting milk against infection or contamination.

Veterinary inspectors are empowered to examine dairies and cow-sheds to see that the above-mentioned measures are being carried out.

11 County Councils may appoint bacteriologists to examine *meat, milk and milk products*. These bacteriologists are placed at the disposal of the sanitary authorities. The latter may order milch cows affected with tubercular disease of the udder to be slaughtered and pay compensation up to a limit of £10.

12 Steps have also been taken to prevent the spread of disease among *animals*, the trade in which is carefully regulated. Members of the police force and departmental inspectors attend at fairs

and markets and at the stations where animals are loaded and unloaded. Waggons used for transporting animals must be cleansed and disinfected before and after use.

Frequent inspections are made at railway stations and ports in the Irish Free State to see whether Irish produce, especially that of a perishable or easily damageable nature, is carefully handled and loaded in clean and suitable railway vehicles, is carefully stored on board ships and is at all times during transit kept apart from anything liable to cause contamination or soiling and that the packing is always in good condition.

All premises used for the manufacture of dairy produce for sale must be recognised as suitable for the purpose and conform to certain conditions as to the cleanliness of the plant, machinery, utensils and of the milk, cream and all ingredients used in the process of manufacture, and as to the situation of the premises, so that the produce manufactured therein may not be exposed to any source of contamination. There must also be plenty of good and wholesome water available.

Bulk exports of *Irish butter* are only allowed to be sent from certain registered premises and on condition that they are packed and marked in accordance with the regulations. 13

These premises are: registered creameries, registered butter factories, registered premises of non-manufacturing exporters, and, in a few cases, the registered premises of manufacturing exporters who do not come under the heading of "creameries and butter factories".

There are three principal classes of butter in the Irish Free State: *creamery butter* (made from the co-mingled milk supplied by a certain number of cow-keepers), *factory butter* (blended in butter factories) and *farm butter* made in farmers' private dairies. 14 15

Only butter manufactured in registered creameries and which has not, prior to export, been removed from the packing in which it was placed at the creamery, may be exported as "creamery butter" which corresponds to the highest quality.

In order to be registered, a creamery must comply with all the conditions laid down by the law. In addition to those already indicated, there are others relating to the qualifications of the manager and his staff, the pasteurisation of milk or cream in cases where this is required, methods of packing, classes of packages used, etc.

Factories exporting butter must also comply with certain conditions laid down by law.

Similarly, merchants exporting butter must comply with conditions, securing the proper description and handling of the butter, and the suitability of their premises.

Only *eggs* coming from premises registered under the Act and complying with the conditions laid down therein are allowed to be exported in bulk from the Irish Free State. The eggs must also be tested, graded, packed and marked in accordance with the requirements of the Act and regulations made thereunder. The sale of dirty or bad eggs is prohibited. 16

The Department have very extensive powers to prevent and control the spread of *cattle* diseases. For this purpose a very strict control is exercised over the trade in cattle. 17

Orders relating to *plant* diseases are made from time to time to prevent the introduction and spread of diseases or pests. As a general rule, plants cannot be imported into the country save under conditions which secure that they are free from diseases or other pests. 18

All *bulls* must be licensed and a licence may be refused if the Department considers that the animal is unsuitable for breeding purposes. 19

CATEGORY 2.

Every package containing *eggs* exported from the Irish Free State must bear an identification mark or number corresponding to that of the registered premises from which the eggs are exported. The package will also require to be marked with the prescribed words indicating the kind, grade and quantity of eggs contained in the package. 20

Every package containing *butter* exported from the Irish Free State must also bear an identification mark or a number corresponding to that of the registered premises from which the butter is exported. 21

The packing must also be marked with words indicating that the butter is "creamery butter" if it is exported from a registered creamery, or with words indicating that it is "farmers' butter" if exported from a private dairy.

Other marks may be required to indicate the class of butter, method of manufacture, etc.

The Act of 1924 also provides for the establishment of a National Mark for butter made under "approved conditions" on "approved premises". A licence is necessary for the use of this mark. It is only granted to establishments in which a high standard as regards quality and methods of manufacture is consistently maintained.

- 22 In accordance with the law, dealers are required to mark packages containing *margarine* with the word "Margarine".
- 23 Sellers of *artificial feeding stuffs* and *manures* are required to give the buyer an invoice stating in the case of artificial feeding-stuffs the percentage of oil and albuminoids, and in the case of artificial fertilisers the percentage of nitrogen, soluble and insoluble phosphates and potash.
- The Department is empowered to take samples and to prosecute offenders.
- 24 As part of its duties, the Phytopathological Department inspects *plants* prior to export.
- If the result of the inspection is favourable, certificates of freedom from disease are issued in accordance with the requirements of countries to which the plants are exported.
- 25 Articles of *gold* and *silver* (subject to minor and unimportant exceptions), whether imported into or manufactured in the Irish Free State, are required by law to be assayed and hall-marked at the Assay Office in Dublin. In order to qualify for the hall-mark, silver must be 37-40ths or .925. Articles of gold may be marked with one or other of five different marks according to the fineness of the metal—namely, 9, 15, 18, 20 and 22 carats.

CATEGORY 3.

Under the Trade Mark Act of 1905 the Board of Trade may allow associations or individuals, whether traders or not, to register a mark affixed to goods or their packing when the object of this mark is to prove that the said association or person undertakes the examination of the goods in question in respect of their origin, material, mode of manufacture, quality, accuracy or other characteristics.

Under this law an "Irish Trade Mark" of a special design was registered by the Irish Industrial Development Association. This mark is used to indicate that the goods to which it is applied are of Irish manufacture.

- 26 Some exporters of *eggs* mark each egg offered for sale with a mark indicating that it comes from their premises.
- 27 There are in the Irish Free State a large number of societies which keep "herd books" of
28 pure-bred stock, such as, in the case of horses, *thoroughbred* and *heavy horses*, *Connemara ponies*;
29 in the case of *cattle*, Shorthorns, Aberdeen-Angus, Herefords and Kerries; and in the case of
30 *sheep*, Border Leicester, Shropshire Down, Oxford Down, Suffolks and Roscommons; and also in the case of *pigs*.
- Breeders, having pure-bred stock registered in these books, can obtain certificates from the societies.
- 31 The Department of Agriculture also keep registers of approved *stallions* of Irish draught
32 horses and of *dairy cattle*.

CATEGORY 4.

- 33 In certain cases special arrangements are made for examining growing crops of *potatoes* intended for seed purposes and certifying them as pure and true to type or description.
- In some cases also potatoes intended for export for food are examined and certified by the Department as of good marketable quality.
- 34 The official *seed-testing* station issues certificates of the purity and germination of agricultural seeds at the request of vendors or farmers on payment of a fee.
- An Act of 1920 prohibits the sale of seeds containing more than a prescribed percentage of noxious weed seeds.

CATEGORY 5.

Under the Merchandise Marks Acts of 1887 and 1911, it is an offence to apply false trade descriptions to goods sold in the Irish Free State.

Criminal proceedings may be instituted by the Department of Agriculture against vendors of *artificial feeding-stuffs* and *fertilisers* who fail to give purchasers the invoice required in such cases. 35
The invoice has also the effect of a warranty.

The Department of Agriculture may take samples of *agricultural seeds* from stocks of such seeds on the premises of retailers and wholesale vendors and may publish the results of tests made of such seeds at the Official Seed-Testing Station. 36

A registered proprietor who, without reasonable cause, fails to carry out a contract for the sale of *butter* or *eggs* from his registered premises is liable to have the registration of the premises cancelled, with the result that he would therefore be debarred from exporting these commodities. 37

A foreign buyer can take in the Irish Free State the same legal proceedings as a national for annulling a contract or for damages on the grounds of fraud, breach of warranty, etc.

ITALY.

CATEGORY I.

1 The sale of *beverages* and *foodstuffs* is subject to special supervision, heavy penalties being imposed on any persons selling or supplying articles of food or drink which are found to be tainted, infected, adulterated or otherwise unhygienic or harmful.

2 The placing on the market under the name of *olive oil* of products differing wholly or in part from those corresponding to this term is forbidden.

3 Any person manufacturing or dealing in *edible oils* other than pure olive oils must make a declaration beforehand to the mayor of the commune. The quality of the oil offered for sale must be posted up in the factory or shop and must be indicated on the containers.

Such persons must also furnish samples of their goods if so requested by the communal authority or agents of the Ministry of National Economy.

4 The manufacturer, seller, importer or exporter of *margarine cheese* must stamp on each cheese the word "margarine" in red letters, together with the trade mark, both of which must also be mentioned on the invoices, commercial letters and bills of lading. The cheeses must be coloured outside with a special fixed dye.

The directors of agricultural offices and chemical laboratories are responsible for analysing these cheeses by means of samples taken for the purpose, which they are authorised to demand through persons responsible for the supervision of the trade in cheese.

5 Persons manufacturing, stocking, selling, importing or exporting for commercial purposes *butter*, prepared wholly or partly from margarine or other oleaginous substances or other fats not obtained from the cream of milk are required to:

(1) Stamp on each piece the words "Artificial butter" or "Margarine".

(2) Specify the nature of the goods in large characters on the recipients, cloth and paper used for wrapping, and wrappers.

(3) State the artificial nature of the butter or the composition of the mixture in the books, invoices, letters and bills of lading.

(4) Post up in their premises the artificial nature of their goods: artificial butter or margarine.

Further, manufacturers or dealers in margarine or artificial butter may not add any colour to their products to make them resemble natural butter.

The terms "butter", "margarine", "oleomargarine", etc. are defined by a Royal Decree, which also prescribes the methods to be followed for their analysis.

6 *Lard* (animal fat). — The sale of bad lard or lard adulterated with inorganic substances harmful to health is prohibited.

The sale of lard mixed with other fats of vegetable or animal origin which, although not harmful, lessen the nutritive value of the product, is, however, authorised. In this case sellers must conform strictly to the regulations laid down on the matter and indicate clearly the nature and proportions of the fats added, so that the buyer may not be under any misapprehension.

7 All manufacturers of *alimentary vegetable preserves* are required to make a declaration to the prefect of the province. They must also indicate the trade-mark approved and registered in accordance with the law, give a specimen of the labels and indicate the raw materials and method of preparation which they propose to employ.

All manufacturers must have their products analysed each year by one of the chemical laboratories authorised by the Government, such as the laboratories of agricultural chemistry attached to the universities and technical schools of agriculture, the experimental agricultural stations, the Customs chemical laboratories or municipal laboratories.

8 It is forbidden to place on the market *alimentary preserves* in containers on which the following particulars are not clearly marked in indelible characters: nature of the preserve; quantities of the chief constituents; net weight; name and address of the manufacturer; statement to the effect that it is prepared in accordance with the legal provisions in force.

A Federation Institute of the preserves industry has been established, and all manufacturers producing a yearly quantity exceeding four quintals must be affiliated to it. The object of the Institute is to supervise the manufacture of and trade in preserves, and if necessary to carry out analyses and to apply the penalties provided in the case of infringements of the regulations.

The penalties are doubled or the maximum penalty provided for by the law is applied if the infringements relate to preserves intended for export.

Recipients, paper, cloth or wrappers, etc. containing alimentary vegetable preserves which are placed on the market, must also bear the following indications in addition to the above:

Tomato extracts: (1) concentrated tomatoes or tomato extract; (2) double concentrate or double extract of tomatoes; (3) triple concentrate or triple extract of tomatoes; the net weight of the contents in grammes must be given. 9

Preserves other than tomato: description of the contents (raw or salted preserves, preserves in cubes, etc.), together with the total dry residue (percentage), net weight of the contents in grammes and percentage of salt.

The manufacture of and trade in *alimentary fish preserves* in containers are subject to special regulations laid down in Decree-Law No. 1548 of July 7th, 1927. 10

It is forbidden:

(a) To manufacture the said products on premises where the hygienic regulations are not complied with;

(b) To employ workers suffering from infectious or contagious diseases;

(c) To employ processes of manufacture which do not ensure the hygienic preparation, effective sterilisation and satisfactory preservation of the product;

(d) To use tins or other containers which do not conform to the provisions of the existing health laws.

It is also forbidden to place these products on the market in containers which do not specify: (a) the contents; (b) the quality of the oil and other preservatives; (c) the net weight of the contents; (d) the name of the producer; (e) the place of manufacture.

The same particulars must be given in the case of *purées made from vegetables, fruit, etc.* 11
In the case of *mustard*, or *fruits in syrup with mustard*: weight of the drained fruit in grammes, 12
mustard syrup in grammes, net weight of the contents in grammes.

Jams and fruit preserves: percentage of sugar and net weight of the contents in grammes. 13

Preserves in which the vegetable component are kept whole by special processes: various preserves in oil or vinegar, weight of the drained vegetable in grammes and net weight in grammes.

Tomatoes peeled or unpeeled, roasted piments berries, etc.: net weight in grammes. 14

Fruits in syrup: weight of the drained fruit in grammes and of the syrup also in grammes. 15

Green peas, French beans, artichokes in their natural state in general: net weight of the drained vegetable in grammes. 16

The terms "concentrated tomatoes" or "tomato extract", "double concentrate" or "double extract of tomatoes", "triple concentrate" or "triple extract of tomatoes" may not be applied to preserves unless they contain a dry residue (less the salt added) of at least 16, 28 or 36 per cent respectively of the contents. No margin is allowed in this respect.

Concentrated products made from tomatoes may be sold under fancy names, but in this case the quantity of dry residue, less the salt, must be indicated on the container in addition to the net weight of the contents.

A margin of 10 per cent is allowed in the case of other preserves as regards the quantities and percentages of the constituents.

Persons manufacturing or selling *essence of lemon* or of *sumac* ground or in powder, mixed with heterogeneous substances, must state in clear characters the quality and quantity of the mixture on the containers, transport documents and invoices, and in their books. 17

All persons dealing in sumac or essence of lemon must furnish samples for analysis at the request of the prefect, sub-prefect, or president of the Chamber of Commerce, the samples being selected by those officials.

A Decree-Law of April 12th, 1917 concerning the preparation and sale of *wine* lays down the conditions under which wine will be regarded as natural. The Decree prohibits the preparation for sale of wine other than natural wine. This prohibition is enforced by severe penalties. 18

The trade in substances used for producing wine artificially or adulterating it is prohibited. The sale and preparation under the name of wine of *alcoholised liquids containing sugar* which are not derived from grapes are forbidden. 19

All wine-dealers must furnish samples at the request of the special agents of the Ministry of National Economy, or of other authorised agents entrusted with the supervision of the trade. The Customs offices are authorised to analyse samples submitted for export.

No one is allowed to sell *mineral waters*, whether natural or artificial, national or foreign, without previously obtaining a special licence from the Ministry of the Interior. This stipulation is supplemented by regulations specifying the waters which are to be regarded as mineral waters and which of them are considered to be natural and which artificial. The regulations also provide that these waters must be sold under the name and description and in the containers stipulated by law. The labels and processes of manufacture must also be in accordance with the regulations. 20

- 21 A licence must be obtained to manufacture *coffee substitutes*. This may be refused if the raw materials from which the substitutes are to be made are harmful to public health and their use is regarded as a "dishonest commercial practice". Thus, it is forbidden to use for the preparation of these substitutes coconut residue, date stones, etc.
- 22 Strict and constant supervision is exercised over the *oyster*-breeding industry and the sale of oysters. Concessions of certain portions of the sea for the establishment of oyster, mussel and other beds are not granted unless a favourable report is received from the provincial health authorities.
- 23 The *dyes* which are regarded as harmful and the use of which is consequently prohibited under the health regulations are those specified in a declaration of 1913.
- It is also provided that colouring matter intended for colouring foodstuffs, where this is allowed, must be sold in coverings mentioning the name of the manufacturer and the name of the substance, which must be specified in accordance with the official list.
- 24 The use of *arsenical dyes* is prohibited in the preparation of material to be used for furniture, clothing, hangings, wallpaper, and artificial flowers, leaves and other products.
- 25 In alimentary preserves the quantity of *metallic copper* may not exceed one decigramme per kilogramme.
- 26 In order to combat the diseases of *plants*, a law of June 26th, 1913, requires all owners and managers of horticultural establishments and market gardens producing or selling plants, parts of plants or seeds, to notify the prefect of the province.
- The Ministry of National Economy is authorised to inspect factories and products in any place in which they are kept and to prohibit their sale if they are considered to be infected. The Ministry is also authorised to order any necessary disinfection. It may likewise prohibit the export of plants or parts of plants and seeds coming from communes in which infectious disease has been discovered.
- 27 The sale of *vinegar* of any kind which has been adulterated in any way, and the addition of acetic acid, even if pure, to edible vinegars are forbidden.
- The term "vinegar" or "wine vinegar" is reserved for the product obtained by the acetic fermentation of wine or must which contains at least 4 per cent in weight of acetic acid, and has not had any colouring matter or other substances added to it.
- Vinegar obtained by the acetic fermentation of beer, cider or alcohol must be sold under the name of "*malt vinegar*", "*cider vinegar*", "*alcohol vinegar*", etc. This name must be mentioned on the containers and on the invoices, bills of lading, waybills and any other document relating to their sale and delivery.
- 28
- 29 The law of June 28th, 1923, on the production of and trade in *silkworms' eggs* provides that the eggs must be prepared solely by the cell system, that breeds already crossed between Asiatic types and native types must not be produced, and that hawkers are not allowed to sell silkworms' eggs.
- The sanitary supervision of the eggs is carried out by special officials who are allowed to take samples at the places where the eggs are sold when they consider this necessary, and to have them analysed by the Government institutions appointed for the purpose.
- In order to protect Italian apiculture from any risk of acariasis it is absolutely forbidden to import *live bees* from abroad.
- 30
- 31 The production of and trade in *patent medicines* are subject to special control and supervision (Decree-Law No. 1732 of August 7th, 1925).
- 32 The term "*sugar*" applies solely to the product extracted from sugar cane or beet and containing not more than 5 per cent of invert sugar. The sale of sugar adulterated with organic or mineral substances, such as glucose and saccharine and the sale of *bonbons* and *sweetmeats* sweetened with substances other than sugar are prohibited.
- 33
- 34 The sale of *syrups*, *candied fruit*, *pulps*, *jams* and *vegetable sugars* prepared or coloured with products other than the natural substance of the fruit under the name of which the product is sold is also prohibited.
- 35 The sale of *artificial syrups* is, however, allowed provided that they do not contain harmful substances or colouring matter and are not sold under names which may mislead the buyer as to the real nature of the product.
- 36 The trade in edible *mushrooms* is regulated. For this purpose the provincial health councils are required to prepare and publish a list of poisonous fungi, specifying their characteristics and the names by which they are usually known; the communal authorities are also required to include in their local health regulations a list of edible mushrooms the sale of which is authorised.
- 37 The trade in *fertilisers* (mineral superphosphates, potassium salts, ammonium nitrate, composite mineral fertilisers, organic fertilisers, mixed fertilisers), *insecticide*, *seeds*, *oil-cake* and other *cattle food* is subject to special supervision, and special regulations have been promulgated in regard to their composition.
-

CATEGORY 2.

No person may manufacture for sale *vaccines, viruses, sera* and any other similar products without a licence from the Ministry of the Interior. 38

Before they are placed on the market these products must be tested by the Government and their purity certified.

Italian *livestock* of any kind, exported definitively or temporarily, must in every case be accompanied by a health certificate and a certificate of origin. Before the animals leave the territory whether by land or sea, they are examined by the Government veterinary inspectors. 39

The Customs offices do not allow the animals to be exported without a favourable report from the veterinary inspector.

Similar regulations are in force in regard to fresh, preserved or salted *meat* or meat which is otherwise prepared, *meat preserves, extracts, concentrated broth, fresh or salted guts, fish preserves, animal fat* for consumption or industrial purposes, *parts of animals: bones, hoofs, hair, bristles, etc.* 40-42

Weights and measures and measuring instruments in general may not be sold until they have been examined and stamped. The Government measuring or testing offices are responsible for checking them and also carry out periodical tests, usually every two years, a special stamp being placed on the weights and measures to show that they have been tested. 43-44

Similar provisions are in force in regard to *gas meters*, which must be stamped before they can be used. 45

Portable firearms of all calibres or dimensions, manufactured in Italy must be tested in one of the recognised official proof-houses. Evidence that the firearms have been tested is furnished by the special stamp of the proof house in question and by a certificate. 46

As in England, *ships* are inspected periodically to make sure that they are seaworthy, that the machinery is in good condition and that the ship is fitted with the necessary gear, instruments and equipment. 47

The competent authorities issue reports which the master of the vessel is required to show, upon request, to the officials responsible for supervision or any person having an interest in the ship's cargo.

If the vessel is inspected by the special classification institute known as the "Registro Italiano", the latter issues a "classification certificate" specifying the standard of the vessel as a whole (hull, machinery and equipment).

Stricter regulations are in force for passenger ships.

All merchant vessels of a tonnage exceeding 25 tons, with the exception of pleasure or fishing boats, must have the waterline marked on the hull.

Under the Commercial Treaty concluded on January 27th, 1923, with Switzerland the authorities of the Confederation agree to recognise, in the case of *natural wines* of Italian origin imported into Switzerland, the validity of the certificates issued after analysis by the official Italian institutions. 48

The Treaty lays down the rules to be followed for the taking of samples, the methods to be employed for analysis and for assessing the results of the analysis, and the particulars to be included in the certificate. The latter must also state that the wine in question is natural wine and is free from disease and adulteration and in the case of wine with a special appellation of origin that its characteristics are the same as those of a natural wine of the same origin.

In accordance with a Customs Convention of March 1st, 1924, Czechoslovakia requires the presentation of a certificate of purity for olive oil and ground-nut oil, a certificate of analysis for rice starch and wine alcohol, and a certificate of purity for wine exported from Italy to Czechoslovakia.

The National Export Institute has established national marks for the export of *vegetables* and *fruit*. In accordance with Law No. 1272 of June 23rd, 1927, the use of the mark is optional and is reserved for exporters (merchants, producers, producers' co-operative societies) who are members of the agricultural and commercial syndical organisations recognised under Law No. 563 of April 3rd, 1926, and the Regulations No. 1130 of July 1st, 1926, and who are expressly authorised to use this mark. 49

Permission to use the mark is given by the National Export Institute, to which applications must be submitted and which is not obliged to state the reasons for its decision.

Notification that permission has been granted is published in the register of the Provincial Council of Economy in the district in which the exporter resides.

The use of the mark by authorised exporters is subject to the following conditions:

(1) The exporter must continue to belong to the syndical organisations referred to in the law.

(2) Producers must comply with the conditions in regard to selection, grading, uniformity, ripeness, preservation and other conditions laid down in the special provisions of the law.

(3) The get-up and packing must conform to the stipulations, shape and dimensions laid down in the said provisions.

(4) The mark must be accompanied by the name and address of the authorised exporter or his private mark.

(5) Articles subject to the health regulations in regard to plants must be certified by the competent inspector of the Plant Protection Service as absolutely healthy and free from animal and vegetable parasites.

The supervision of goods bearing the mark is exercised within the country and abroad by inspectors appointed by the National Export Institute in accordance with the powers granted by the regulations and special provisions.

Officials of the phytopathological inspection service attached to the Ministry of National Economy who in the matter of supervision exercised in accordance with the law are directly attached under the National Export Institute may also carry out this task.

In particular, the inspectors attached to the control service are required:

To collect and forward to the National Export Institute after previous enquiry, complaints submitted by foreign consignees in regard to the improper use of the Italian national mark;

If requested to do so to assist exporters entitled to use the mark in all disputes concerning the quality of the goods exported when the latter satisfy the conditions required for the use of the mark.

Railway and Customs administrations respectively must refuse to carry or to permit the export of vegetables and fruits intended for abroad when these commodities bear a mark to which they are not entitled owing to this having been despatched by persons not authorised to use the mark.

If products on which the mark has been placed by an authorised exporter are forwarded by non-authorised persons they must be accompanied by the original invoice made out by the authorised exporter.

Any person who makes improper use of the national mark established by law or has any share in such improper use is liable to a term of imprisonment not exceeding two years and to a fine not exceeding 2,000 lire. Any person forging or altering the mark or making use of a mark forged or altered by a third person is punished by a term of imprisonment not exceeding three years and by a fine not exceeding 5,000 lire.

Exporters entitled to use the mark who do not comply with the conditions governing its use or who submit for inspection goods which do not conform to these conditions will be treated as follows: (1) They will be warned. (2) Permission to use the mark will be temporarily suspended (for a maximum period of six months). (3) The permit will be cancelled.

The suspension and cancellation of the permit will be published at the offenders expense in the Official Gazette of the Kingdom, in the Announcement Sheet and in the journal of the Provincial Council of Economy of the district in which the exporter resides.

In special circumstances or when it is necessary to safeguard the reputation of the Italian export trade in vegetables and fruit, the Minister of National Economy, after consulting the National Export Institute, may by decree: (1) prohibit the export of products not bearing the national mark established by law; (2) decide that all vegetables and fruit of whatever description must be previously inspected before they are allowed to bear the national mark; (3) prescribe the use of special packings for consignments of vegetables and fruit intended for abroad even in the case of exporters who are not authorised to use the mark. Permission to use the mark is not transferable.

Branches and agencies in Italy of foreign companies or firms may obtain permission to use the mark when the managers or persons who otherwise represent the foreign company or firm in Italy make this request in accordance with the provisions of Article 3 of the Law.

Authorised exporters may reproduce the national mark or mention the fact that they are authorised to use it in their books, catalogues, letters, printed papers, labels and any other commercial documents.

In the case of goods bearing the mark no particulars must be specified on the outside packing other than those stipulated by the special technical regulations in accordance with the law.

Authorised exporters are required to specify in the transport documents relating to goods bearing the mark the date and number of the permit.

Authorised exporters selling goods bearing the national mark in Italy must furnish to the buyer, for presentation to the railway administrations in respect of each consignment, an original invoice mentioning the date or number of the permit.

Special seals to prove that the packing has not been opened by the successive purchasers must also be placed by the authorised exporter on the goods sold by him.

When goods sold in Italy do not conform to the prescribed conditions the responsibility rests with the authorised exporter who sold them if the seals have remained intact or were not affixed at the time of sale; if these seals have been damaged in any way the responsibility rests with the purchaser.

Special rules for the exportation of *ordinary* and *special lemons* from *Sicily* and *Calabria*, and various other varieties of Sicilian lemons. Exporters authorised in accordance with Law No. 1272 of June 23rd, 1927, to use the national mark for the exportation of ordinary and special Sicilian and Calabrian lemons and various other varieties of Sicilian lemons are required to observe the following rules: 50

Selection of fruit for export: The fruit must be of superior, first or second quality.

Superior fruit: Perfect fruit, regular in shape, not wrinkled, normal colour, which keeps for a long time and is regarded commercially as free from coccidæ, rust-marks and spots and damage (commonly known as "piticchie") and from streaks.

First quality: Fruit not absolutely perfect, skin slightly wrinkled, normal colour, which keeps for a long time, having a small number of visible defects not sufficient to spoil its appearance, and regarded commercially as free from coccidæ, rust-marks and spots, and which is undamaged.

Second quality: Fruit which is less fine, irregular in shape, with a more wrinkled skin and protuberances, regarded commercially as free from coccidæ, rust-marks, spots and damage of a nature to make it more perishable and to cause it to deteriorate en route.

The exportation of third quality fruit, which does not conform to the above conditions from the point of view of quality, but which is commercially free from spots and is strong enough to stand the journey, is authorised. It is forbidden to stamp the national mark on cases containing third quality fruit.

Packing — With a few exceptions, the fruit must be packed in a standard type of packing, consisting of a case with a flat lid, in which the fruit, which must all be of the same size, is arranged in accordance with precise instructions.

Characteristics of the packing. — The fruit must be packed in dry beechwood cases with two compartments, the ends of which, of a thickness of 17 to 20 mm., must, as a general rule, both consist of a single piece of wood. However, one of the ends—or when they are more than 28 cm. high both of them—may have a piece added, provided that this is not more than 3 cm. high, fits properly, the join being perfect, and meets the bottom of the case; the cases must have a central partition 17 to 20 mm. thick, consisting of two or three rectangular pieces which meet perfectly, either horizontally or vertically, clamped on either side with fillets which must not project and must be firmly nailed on; the sides of the case must be 4 mm. thick, consist of a single piece, or have not more than one piece added, which must not exceed 3 cm. in height; the bottom of the case must be from 3 to 4 mm. thick, consist of two or three pieces measuring not less than 5 cm., meeting perfectly and not superimposed. The lid, 3 mm. thick, must consist of a single piece, or of not more than two pieces and a fillet. On the outside the case must have three chestnut-wood hoops nailed on. Outside fillets are allowed; on the side of the lid at the corners clamps of 1.5 to 2 cm., to protect the packing, are also allowed.

Particulars to be given on the cases. — All cases containing ordinary, special or other varieties of lemons ("limoni", "limoni speciali", "limoni lunari", "limoni ricioppi" or "verdelli") intended for export must have the following particulars stamped in indelible and visible characters on them:

1. On the side on which the wooden hoops are fastened: on the left-hand half looking at the side in question, the word "primissima" (superior quality), or "prima" (first quality), or "seconda" (second quality), or "terza" (third quality), and a description of the contents "limoni", "limoni speciali", "limoni lunari", "limoni ricioppi", or "limoni verdelli"; on the right-hand half of the same side the name and address of the exporter authorised to use the mark and the number of the permit (this number is not required in the case of third quality fruit) must be given.

2. On the end of the case, next to the left-hand half of the side in question: the national mark (not required for third quality fruit) with a diameter of 10 cm., the exporter's mark and the number of fruit contained in the case.

In addition to the particulars enumerated above, only countermarks, place of destination, place of origin and any particulars which may be required by the laws of the importing country may be given. All or any of these particulars may be given on the end of the case mentioned in paragraph 2, provided that they are properly spaced and do not conceal the particulars prescribed in paragraph 2 or make them less clear.

The boxes may bear the exporter's mark on the lid.

If the cases or boxes are wrapped in jute or are placed in a bag, the foregoing particulars, arranged as stated above, must also appear in clear and visible characters on the wrapping.

Exportation of Sicilian and Calabrian confectionery lemons. — Exporters authorised in accordance with Law No. 1272 of June 23rd, 1927, to use the national mark for the exportation of Sicilian and Calabrian confectionery lemons are required to comply with the following rules:

Selection of fruit for export. — Confectionery lemons consist of selected lemons usually sold for the preparation of candied fruit or jam, provided they are regarded commercially as free from spots.

Number of fruit in a case, dimensions and minimum gross weight of cases: For the export of confectionery lemons, two types of cases only may be used, namely:

1. Cases weighing 70 English lb. on arrival: minimum gross weight when they leave the country, 40 kg.; external dimensions of the case: length 68.5 cm., width 33.5 cm., height 27.5 cm.
Number of fruit: 300 or 360, or, in the mixed packing, 300 to 360.
2. Cases weighing 100 English lb. on arrival: minimum gross weight on leaving the country 57 kg.; external dimensions of the cases: length 79 cm., width 39 cm., height 27 cm.
Number of fruit: 360 or 420, or, in the mixed packing, 360 to 420.

Characteristics of packing. — The packing must comply with the same conditions as indicated above for the export of Sicilian and Calabrian lemons.

Particulars to be given on cases. — All cases containing confectionery lemons intended for export must have the following particulars stamped on them in indelible and visible characters:

1. On the side on which the wooden hoops are fastened: on the left-hand half, looking at the side in question, the words "Confectionery Lemons"; on the right-hand half of the same side the name and address of the exporter authorised to use the mark, and the permit number.
2. On the end of the case next to the left-hand half of the side in question: the national mark with a diameter of 10 cm., the exporter's mark and the number of fruit contained in the case.

In addition to the particulars enumerated above, only countermarks, place of destination, place of origin and any particulars which may be required by the laws of the importing country may be given. All or any of these particulars may be given on the end of the case mentioned in paragraph 2, provided they are properly spaced and do not conceal the particulars prescribed in paragraph 2, or make them less clear.

If the cases or boxes are wrapped in jute, or are placed in a bag, the foregoing particulars, arranged as stated above, must also appear in clear and visible characters on the wrapping.

51 Exportation of *oranges from Sicily and Calabria*. — Exporters authorised in accordance with Law No. 1272 of June 23rd, 1927, to use the national mark for the exportation of oranges (ordinary, spherical and so-called "subsferiche"), so-called "sanguinelle" oranges (with pulp streaked with red), blood oranges (with skin streaked with red and red pulp), double blood oranges (with skin strongly marked with dark red and red pulp) and oval oranges from Sicily and Calabria are required to observe the following rules:

Selection of fruit for export. — The fruit must be of superior, first or second quality.

Superior quality: Perfect fruit, regular in shape, not wrinkled or only slightly wrinkled, of a good colour which keeps for a long time and is regarded commercially as free from coccidæ, spots, damage and defects.

First quality: Fruit not absolutely perfect, skin regular, paler in colour, having slight defects which are not sufficient to spoil its appearance and which is regarded commercially as free from coccidæ and spots and is undamaged.

Second quality: Less fine fruit with a thicker and more wrinkled skin, regarded as commercially free from coccidæ, spots and damage which might cause it to deteriorate en route.

The exportation of third-quality fruit which does not conform to the above conditions but is regarded commercially as free from spots and is able to stand the journey is authorised. Cases containing third-quality fruit must not bear the national mark.

The number of fruit contained in the cases and the dimensions and minimum gross weights of the cases must be in accordance with the regulations.

Characteristics of the packing. — The packing must conform to the conditions indicated above for the exportation of Sicilian and Calabrian lemons.

The particulars to be given on the cases are the same as indicated above for the exportation of Sicilian and Calabrian lemons.

Exportation of bitter oranges from Sicily and Calabria. — The above-mentioned regulations also apply to the exportation of bitter oranges.

Exportation of lemons from Maiori, Sorrento and Fondi. — Exporters authorised in accordance with Law No. 1272 of June 23rd, 1927, to use the national mark for the exportation of lemons from Maiori, Sorrento and Fondi are required to observe the following regulations:

Selection of fruit for export. — The fruit must be of first, second or third quality.

First quality: Perfect fruit, regular in shape, not wrinkled, normal colour, which keeps for

a long time and it regarded commercially as free from coccidæ, rust marks, spots and damage (commonly known as "piticchie").

Second quality: Fruit which is not absolutely perfect, skin slightly wrinkled, normal colour, which keeps for a long time, has a small number of visible defects which do not spoil its appearance, and which is regarded commercially as free from coccidæ, rust marks, spots and damage.

Third quality: Fruit which is less fine, irregular in shape, with a more wrinkled skin and protuberances, regarded as commercially free from coccidæ, rust marks, spots and damage of a nature to make it more perishable and to cause it to deteriorate en route.

The exportation of fourth-quality fruit which does not conform to the above conditions from the point of view of quality, but which is commercially free from spots and is able to stand the journey is authorised. It is forbidden to stamp the national mark on cases containing fourth-quality fruit.

The packing must comply with the same conditions as those indicated for ordinary and special Sicilian and Calabrian lemons.

Exportation of oranges from Sorrento, Salernitano and Fondi. Oranges from Sorrento, Salernitano and Fondi intended for export must be of first or second quality.

First quality: Perfect fruit, regular in shape, not wrinkled or only slightly wrinkled, of a good colour, which keeps for a long time and is regarded commercially as free from coccidæ, spots, damage and defects.

Second quality: Fruit which is not absolutely perfect, skin regular, which keeps for a long time, has slight defects which do not spoil its appearance, and which is regarded commercially as free from coccidæ, spots and damage.

The packing and particulars given on the cases must conform to the regulations.

Exportation of lemons from Rodi Garganico. — Lemons from Rodi Garganico must be of first or second quality.

First quality: Perfect fruit, regular in shape, not wrinkled, normal colour, which keeps for a long time and is regarded commercially as free from coccidæ, rust marks, spots and damage (commonly known as "piticchie").

Second quality: Fruit not absolutely perfect, skin slightly wrinkled, normal colour, which keeps for a long time, has a small number of visible defects which do not spoil its appearance, and which is regarded commercially as free from coccidæ, rust marks, spots and damage.

The packing and particulars given on the cases must conform to the regulations.

For the exportation of *tangerines*, the national export mark instituted by the National Export Institute must be used. The National Export Institute deals with each case separately. 52

Determination of the types of home-grown polished *rice* intended for export, official description of these types and application of the national export mark (Decree-Law No. 486 of January 8th, 1928). — Consignments of home-grown rice of official type intended for abroad must have the corresponding official description and the national export mark instituted by Law No. 1272 of June 23rd, 1927, stamped on the outside of the packing. The bags must be fastened with seals bearing the name and address of the consignor or the number of the declaration provided for in Article 3 and the national export mark. The official description of the goods must also be mentioned in the commercial documents (copy of order, invoices, etc.) and in the transport and Customs documents relating to the goods. 53

Consignments of rice in the husk and partly husked and of polished rice not of official type intended for export must have the following words stamped on the outside of the packing: "Rice in the husk", "Partly husked rice" and "Rice to sample", as the case may be. This description must also be mentioned in commercial, transport and Customs documents relating to the goods.

The transport or export of rice intended for abroad which does not bear the indications prescribed is forbidden. The railway and Customs administrations must see that this stipulation is complied with.

The provisions relating to the particulars to be given in the transport documents do not preclude the addition of any other details which may be necessary with a view to the application of the transport dues.

Firms proposing to export rice fulfilling the conditions laid down for the official types must make a declaration to this effect to the National Export Institute, mentioning the place from which the goods will usually be despatched.

For the purpose of ascertaining that the product complies with the conditions laid down for the official types of home-grown rice and that the provisions governing the exportation of rice have been observed, samples of all consignments of polished rice bearing a distinctive official description and the national export mark will be taken by the official agents on a request in writing from the exporting firm.

It is forbidden to export rice which, although it bears the official description and the national export mark, is not accompanied by a report drawn up by the official responsible for sampling and stating the approximate quantity of samples taken by him.

A Control Office is attached to the National Export Institute; its duty is to ascertain that the goods sampled fulfil the conditions required for the official types of rice, to issue certificates concerning the quality of the goods and to supervise the work of the officials responsible for sampling.

Should the Control Office discover that the goods do not correspond to the official type in question, it must at once inform the Chairman of the Commission set up for this purpose so that the measures provided for may be taken against the firm which has failed to comply with the regulations governing the exportation of official type rice.

Upon receipt of the communication, the Chairman of the Commission may order the goods to be stopped at the frontier by the Customs authorities for the purpose of cancelling the official description and the national export mark on the outside of the packing, without prejudice to any subsequent measures which it may be found necessary to take against the offending firm.

Firms which, after making the declaration mentioned above, send abroad under any of the official descriptions and with the national export mark, rice which is not in accordance with the conditions laid down for official type rice, or which do not comply with all the regulations governing the exportation of the rice in question, are liable to:

- (1) A warning;
- (2) The prohibition, either temporarily for a period not exceeding six months, or permanently, to use the description applicable to an official type of rice and the national export mark.

In addition to this temporary or permanent prohibition, a fine varying from 500 to 10,000 lire may be imposed.

The Control Office fixes special type samples of rice each year for each official type, according to the quality of the crop.

Specimen samples are deposited with the Mercantile Exchanges of Genoa, Milan and Trieste.

On the proposal of the National Export Institute, the Minister of National Economy may decide that special contracts shall be drawn up for official types of polished rice.

CATEGORY 3.

54 The organisation of unions of the producers of certain typical kinds of *wine*, for the protection of the name of their products, was authorised by a Decree-Law of March 7th, 1924.

These unions, which are under the supervision of the Ministry of National Economy, are entitled to adopt their own distinctive mark to enable the products of the members to be recognised. The latter have the exclusive right to use their own mark in conjunction with the distinctive mark of the union.

55 In conjunction with the representatives of the Ministry of National Economy, the Latium Chamber for *sheep's wool* and *cheese*, which is administered by a council consisting of members appointed by the Latium, Farmers' Union, the Cattle Owners' Syndicate, the Agricultural Society of Cattle Owners and the Association of Salters of Rome, brands each cheese intended for export to certify its genuineness.

56 Certain societies or associations keep stud-books and herd-books of *racehorses* or *cattle of well-known breeds*, similar to those used by the Draught-Horse Society in Belgium.

57 An association of *Carrara marble* producers, membership of which is compulsory, has been formed for the purpose of rationalising the industry, improving production and regulating sales at home and abroad. The association affixes to marble in the rough and sawn marble a mark of guarantee reproducing the emblem of the Commune of Carrara.

CATEGORY 4.

58 At the request of private persons, the agricultural offices and laboratories of agricultural chemistry under Government control, and also the municipal chemical laboratories, will analyse samples of *essence of lemon* and of *sumac*.

59 Private persons may have their *measuring instruments* tested by the Government measuring or testing offices.

60 *Precious metals* may be submitted to these same offices to be assayed, after which they will be hall-marked to attest the fineness, but this is not compulsory.

61 The Central Measuring Office in Rome is responsible for testing and marking, at the request of the persons concerned, *thermometers*, *alcoholometers*, *densimeters* and all other *precision instruments*.

62 Experts responsible for testing *steam boilers* must possess gauges tested by the above Office.

Certificates of analysis in respect of goods intended for export are issued by a number of institutes.

Most of these institutes will analyse products for private persons and grant certificates showing the results. These institutes are as follows: the Customs chemical laboratories, the chemical laboratories attached to the Universities or higher schools of agriculture, the laboratories for agricultural products, experimental agricultural stations, œnological stations, special schools of wine-growing and œnology, experimental cellars, agricultural institutes and public health laboratories and institutes responsible for the preparation of and trade in wine and oil.

The Chambers of Commerce are required to keep constantly up-to-date a list of commercial and industrial experts. It is therefore possible for a foreign buyer to stipulate in the contract that, before despatch the goods must be examined by an expert to be appointed by the President of the Chamber of Commerce.

Each Chamber of Commerce has at its disposal experts competent to deal with all goods in which there are commonly commercial transactions within its area.

The appointment of experts by these Chambers of Commerce does not involve them in any responsibility at law.

The Commercial Code provides that the President of the Commercial Court, or in places where there is no Court, the magistrate, may order the quality and condition of the goods sold to be checked by one or more experts appointed by the Court at the expense either of the buyer or of the seller.

CATEGORY 5.

In accordance with common law, the purchaser may not check the quality of the goods until they are delivered; this applies both to cases in which the contract is concluded on the basis of a sample and to cases in which the typical characteristics of the goods are specified in the contract.

Article 1452 of the Civil Code provides, however, that as regards goods such as *oil* and *wine*, which are usually tasted before purchase, the contract is not valid until the purchaser has tasted them and found them to be of the required quality. In this connection, commercial practice is of special importance in virtue of Article 1 of the Commercial Code. The collection of usages and customs drawn up by each Chamber of Commerce contains various provisions regulating the right of inspection. 63

Exceptions may, of course, be made in a contract to the above-mentioned principle by means of the insertion of a clause providing for inspection or tasting in advance, or a clause entitling the buyer to take samples before delivery, and to have the goods inspected to make sure that they conform in every respect to the sample or are of the desired quality.

JAPAN.

CATEGORY 1.

1 The manufacture of *certain silks intended for export* is subject to strict Government supervision and to a licence the granting of which is subject to certain conditions. The Government representatives have very extensive powers in this respect.

CATEGORY 2.

The principal goods exported from Japan are very carefully inspected in order to prevent the exportation of worthless goods and to afford every guarantee to foreign buyers.

Proof of inspection is furnished, and the result of the inspection is given on the marks affixed to the goods, or in the certificates furnished to the persons who have applied for the goods to be inspected. In both cases the methods prescribed in the regulations must be employed.

These regulations concern:

2 (a) The bleaching of "*Habutao*" silk. The supervision of the processes, material and
3 ingredients used for bleaching "*Habutao*" silk intended for export, and of *foulards, crêpes, crêpe "Kabe", Shiké foulards and silk satin fabrics* is compulsory.

(b) The prohibition to add to "*Habutao*" silk, intended for export, substances likely to lower the quality and to remove the stamp of the prefecture affixed to certify the quality of the "*Habutao*" silk after inspection unless this removal is essential or has been authorised for good reasons by the prefect. These regulations also apply to *foulards, crêpes, crêpe Kabe, pongé and silk satin* intended for export.

4 (c) Inspection bureaux for silk fabrics intended for export, and the inspection of those fabrics.

Each prefecture may establish one of these bureaux, which is then subject to the strict supervision of the Central Government; manufactures of silk fabrics intended for export must submit them to the bureau for inspection.

There are eleven of these bureaux established in the principal industrial centres producing silk fabrics: Kyoto, Gifu, Fukui, Ishikawa, Toyama, Gumma, Tochiki, Kanagawa, Aichi, Fukushima, and Yanagata. *and Yanagata*. Consequently, practically all silk fabrics are inspected before they are exported.

5 (d) In virtue of special laws for each of the following commodities, their exportation, with
6-7 certain exceptions, is only authorised, subject to a fine, after they have been inspected by the trade organisations or associations or the prefecture in the place of manufacture. The conditions of this inspection are regulated in detail for each article: *plaiting of straw, of hemp and of chips; matches, glassware, enamelled articles; hosiery, brushes, celluloid, pencils and leads, cotton goods.*

8 (e) Only those *mats ornamented with designs* which have been examined by the special Bureau set up for this purpose may be exported. The inspection covers the material, dyeing, textures, number of warps, border, length, width, weight and other details laid down in the regulations. A stamp is affixed showing the result of the examination.

The majority of the associations of manufacturers of the principal export products or the federations of those associations, have the right to instruct their experts to inspect goods and to appoint persons to carry out this task, with the approval of the prefects.

CATEGORY 3.

A part from the cases provided for in Category 2, the members of the "Associations for Staple Products" are forbidden to transport goods controlled by the Association outside the area over which it has authority; consequently, goods controlled by the Association and which are

intended for export are inspected by the competent Association, which thus affords a guarantee to the foreign buyer.

CATEGORY 4.

At the request of any person, the Government Silk Inspection Bureau will examine *silk* 9 from the point of view of the gross weight, net weight, loss of weight by scouring, and will issue a certificate in duplicate giving the result of the inspection.

This inspection is optional, but in practice all exporters have recourse to it.

The Chambers of Commerce of certain private associations issue certificates on request, in regard to the quality and origin of the goods.

LATVIA.

CATEGORY 1.

Fish preserves. — 1. The label must give an exact description of the contents of the tin, and must specify the kind of fish employed ¹.

2. Only good-quality fish may be used. It must be carefully prepared. Sprats in oil must be fresh and properly smoked. Brätlinge must be fresh, properly smoked and be without hard or soft roes. The head must be completely removed. Half the fins must be cut off. The fish must be carefully arranged in the tins, must not be in pieces, have stains or scales or other impurities on them.

3. For the manufacture of sprats only olive, sesame or walnut oil, pure or mixed, must be used. This oil may, however, contain up to 20 per cent of mustard oil and up to 30 per cent of soya oil. The oil must cover the fish completely. The kind used must be mentioned on the label.

4. The tins must be made of tin plate well coated with tin. The coating must not contain more than 0.2 per cent of lead.

5. The recipients and appliances used for the manufacture, consumption despatch and sale of preserved fish must not be of lead or contain an alloy of more than 1 per cent of lead or other substance harmful to health.

6. The labels must be firmly pasted on to the tins. The past must not contain substances which might attack the tinning and cause the tins to rust when exposed to damp.

7. Only sugar and salt may be used to prepare preserved fish; no other products of consumption are allowed. Saltpetre may form 2 per cent of the whole product.

8. The exact date of manufacture (day, month and year) must be stamped in hollow letters inside the tins.

¹ *Note.* — This does not apply to anchovies or sprats. Tins labelled "sprats" must contain stromlinge and brätlinge only, and those labelled "anchovies" brätlinge only.

LUXEMBURG.

CATEGORY I.

Wines and sparkling wines.

A special Law, dated July 24th, 1909, governs the system for wines and similar drinks.

The enforcement of the law is supervised by special Government officials appointed for the purpose.

The chief provisions of the law are as follows:

(a) Only wine made from the pure juice of fresh grapes may be sold or offered for sale as natural wine.

(b) In years when the grapes have not completely ripened, it shall be permissible to improve the wine with sugar or a sugar solution, but only in proportions strictly limited by the law.

The actual process of improvement is subject to restrictions as to the place and time at which it may be carried out, and as to the quantity and nature of the materials to be employed.

(c) Any sugaring must be notified to the competent authority.

(d) Sugared wine may not be sold as the vintage of any specified grower.

At the buyer's request, the seller must declare whether the wine is sugared or not.

(e) The law enumerates the materials which may not be added to wine. It provides severe penalties for counterfeiting and adulteration.

(f) The question of the mixing and dilution of wines is also subject to special restrictions.

(g) Every producer or seller of wines (wine-grower, wine-merchant, retailer, etc.) is required to keep special books and to enter therein the harvest, purchases, and sales of wine, and any sugaring that the wine may have undergone.

(h) Wines intended for export, as well as imported wines, are subject to official inspection.

(i) A State laboratory is responsible for analysing doubtful wines, or wines alleged not to conform to the law.

Sparkling wines.

A wine which has been made sparkling, not by natural fermentation but by the addition of carbonic acid, may not be offered for sale unless it is definitely and specifically stated to have been gasified. The country in which such manufacturing process has taken place must also be named.

Only sparkling ("champagnisé") wine originating and manufactured in the "regionalised" districts of Champagne may be sold as "champagne".

Sparkling fruit wine must be expressly declared as such, and must bear a mark to this effect.

NETHERLANDS.

CATEGORY I.

- I *Regulations regarding the sale of fertilisers, seeds and fodder.* — These legal regulations apply to all stocks produced in the country or coming from abroad.

Supervision is exercised by the Customs or the police, the representatives of these services being entitled to take samples for examination in the national agricultural laboratories.

Goods which do not comply with the prescribed rules may be seized and destroyed. Infringements are punished by imprisonment or other penalties. Some rules are applied in common to the three categories of goods mentioned above.

For instance, the designation used must be a sufficiently good description to allow of the goods being distinguished and must indicate for what purpose they may be used. The quality must be guaranteed and, in the case of mixed substances or compounds, the percentages of the ingredients must be stated either on the goods themselves or on the packing, or else in the accompanying documents.

In addition, certain special rules are laid down for each of the three kinds of goods mentioned above.

- 2 I. *Fertilisers.* — If fertilisers are not prepared for immediate use or for being spread out, and if they contain ingredients which are not usual or which may be harmful to plants, the seller must inform the purchaser of the fact and must declare and guarantee the proportions and the form and manner in which the various ingredients are mixed. In certain cases a margin of error is allowed which may in no case exceed 8 per cent.

Special provisions are laid down for the composition of Chile saltpetre, calcium nitrate, Thomas phosphate, potassium sulphate and "patent kali".

The percentages of the chemical composition are strictly prescribed for each of these different kinds of fertilisers, and if the real composition varies from that laid down, the purchaser must be informed of the fact.

- 3 2. *Seeds.* — The provisions regarding seeds apply to a great number of kinds and varieties such as grass, clover, lucerne, beans, peas, linseed, hemp, beetroot, turnips, cabbages, onions, celery, chicory, cucumbers, radishes, tomatoes, spinach, etc.

These rules provide that on the sale of such seeds, the botanical species must be guaranteed and the seeds must all be in good condition.

If these regulations are not fulfilled, the seller must inform the purchaser and must in any case guarantee a certain proportion of good seed. For certain kinds such as lucerne, linseed, clover-seed, etc., this guarantee takes the form of a statement that there is not more than one seed of other kinds in a given quantity varying from 25 to 100 grammes.

- 4 3. *Fodder.* — It is provided that the seller must inform the purchaser if the fodder is not ready for use, if it cannot be used alone as fodder, if it is not fresh, if it contains poisonous or harmful ingredients or unusual substances or, finally, if it has been subjected to any process which may affect its normal composition.

The list of cattle fodder includes oil-cake, flour or meal from wheat, rye, barley, oats, maize, peas and beans, compressed pulps, beetroot pulp, molasses, etc.

The substances and the methods used in producing these kinds of fodder are specified in each case.

The Netherlands has a "Warenwet" (law regarding goods) of September 19th, 1919 (*Law Gazette*, 1919, No. 581) under which (Article 6) each commune is obliged to draw up regulations for the control of goods and prohibiting the sale of goods:

- (a) Which are defective;
- (b) Which may be harmful to the life or health of the persons using them;
- (c) Which do not comply with the provisions laid down in accordance with the law regarding goods.

Not only is the sale of such goods prohibited, but also their storage, transport, etc.

- 5 Article 1 defined "goods" and provides that this term shall include all *foodstuffs* (except meat, for which there is a special law) and all *articles used for preparing, manufacturing or preserving foodstuffs*. The Royal Decree of March 26th, 1921 (*Law Gazette*, 1921, No. 638), gives an additional list of categories of articles included in this expression.

Finally, the law regarding goods provides that the Crown will lay down the conditions with which "goods" and other articles must comply in respect of manufacture, composition, packing, transport, etc. Articles 14 and 15 of the law regarding goods deal with the authorisation to affix marks on the goods or on packing if the said provisions are complied with.¹

In several cases, the rules laid down are not generally applicable to goods intended for export (see for instance Article 10 of the Royal Decree regarding chocolate, p. 202).

Nevertheless, other decrees refer also to exported goods, such as the Royal Decree regarding wallpaper (*Law Gazette* 1924, No. 213), the "General Decree" (*Law Gazette* 1925, No. 262), containing provisions regarding the preparation, packing and treatment of foodstuffs, the Royal Decree regarding paper, particularly Article 5 (a) (*Law Gazette* 1922, No. 109) which was amended by Royal Decree of August 4th, 1923 (*Law Gazette* 1923, No. 391), in so far as this decree deals with the definition of the terms "normal" and "standard".

6
7

CATEGORY 2.

The stamping of gold and silver articles is effected in the Netherlands at the time of importation or of manufacture in the country. This stamping, for which the manufacturer or importer must pay a fee, guarantees a fineness of 916, 833, 750 or 583 thousandths and in the case of silver of 934 or 833 thousandths; in the case of silver, only articles manufactured in the Netherlands are stamped. On the standards of fineness mentioned a margin of 3 is allowed for gold and 5 for silver. Finally, there is a taxation mark for articles of which the fineness cannot be guaranteed (for gold of a fineness lower than 583 and for silver lower than 833 and for any foreign silver) down to a limit of 250 thousandths for both gold and silver. In cases where unused articles manufactured in the Netherlands, or which have been imported and bear the mark prescribed for Netherlands articles, are exported, nine-tenths of the tax paid is refunded and a special export mark is stamped on the articles. The marks indicating the fineness are, however, not removed, so that the guarantee remains that the goods have been examined by a competent office which has found the fineness to be as indicated by the marks. This export mark does not consist of figures, but of an emblem. Manufacturers who so desire are, however, entitled to export the goods without any mark and without paying the tax.

8

There are also regulations regarding certificates of seaworthiness for ships.

9

The Royal Decree of October 19th, 1925, regarding fats (*Law Gazette* 1925, No. 421) introduced compulsory control over the processes for converting imported fats into edible fats. Imports of such fats are subject to certain conditions. The merchants authorised to carry on this manufacture also obtain the exclusive right to mark the products with the words: "Vet, geheel of ten deele uit buitenlandse producten bereid onder toezicht krachtens de Warenwet (*Staatsblad* 1919, No. 581) en voor menscheijk voedsel geschikt".²

10

Live animals: cattle, horses, sheep, pigs, etc. — Live animals are subject to compulsory examination by the Government veterinary inspectors immediately before exportation.

11

The object of this inspection is to ensure that the animals are free from any of the diseases mentioned in the law, and free from symptoms of these diseases.

In respect of animals which have been passed after inspection, a certificate is issued in duplicate, one copy of which is sent to the Director of the Veterinary Service at The Hague, while the other accompanies the animal. The certificate may be refused in cases of weakness, sores, abscesses or leanness.

With regard to cattle intended for export, the certificates specially mention the absence of contagious diseases enumerated in the law, and the fact that the animals have been subjected to special treatment, in conformity with the requirements of the veterinary regulations in the country of destination.

Fresh meat for export. — 1. Inspection; animals must be inspected before being slaughtered.

12

Slaughtered animals are further inspected, and the thoracic and abdominal viscera, the udders, etc., are labelled in order to identify them for the purpose of a subsequent inspection, if necessary.

The inspection is made more particularly as regards a number of diseases which are enumerated in the law for each kind of meat.

There is an export prohibition on meat from animals affected by any one of a large number of diseases also enumerated in the law. The prohibition also extends to animals suffering from

¹ The text of the Law regarding Goods and of the Royal Decrees issued for executing this law is to be found in the publication "*Nederlandsche Staatswetten*", Editie Schuurman en Jordens No. 99, except for the Royal Decree of June 23rd, 1925, which may be found in the *Law Gazette* 1925, No. 262.

² *Id est*: "Fats prepared entirely or partly from foreign products under control exercised in accordance with the Law regarding Goods (*Law Gazette* 1919, No. 581) and suitable for human consumption".

fractures or bearing marks of blows or wounds on the skin and subcutaneous tissues, or suffering from extensive skin disease.

An export permit may be refused if the animal has not been slaughtered in the proper manner or if the meat has an unusual smell, taste or consistency or has been carelessly handled, or if there are other reasons to think that it is unsuitable for export.

2. Marks: Meat passed for export is furnished with a light yellow label bearing the Netherlands arms and the following words in Dutch: "Meat examined for export under the Dutch Law of March 26th, 1920, and the Royal Decree of June 6th, 1922, No. 40". This label also contains the inspector's name and any remarks arising out of the inspection.

The meat may only be despatched if it is in a condition to stand the journey and if it bears the prescribed mark. The packing must be appropriate and of such a kind as not to spoil the meat.

- 13 *Butter.* — Butter control is under State supervision. It gives the foreign purchaser a guarantee that the butter is absolutely pure and does not contain more than 15½ per cent of water. The control is exercised by nine stations established by agricultural societies, which are associations of interested parties, set up and directed by themselves. Producers affiliated to the stations have no influence over the control operations.

The control mark consists of the Netherlands arms around which the words "Netherlands Butter Control under State supervision" in Dutch are printed on thin cloth paper. This paper is attached to the butter by means of a seal, so that it cannot be removed without tearing it. Each mark includes certain letters and a number registered at the control station, so that the origin of the butter can always be traced; in addition, every affiliated producer is obliged to mark the packing with an identification mark prescribed by the Director of the control station, so that the officials of the station and persons entrusted with Government supervision can immediately identify the dairy from which the goods come.

- 14 Any product containing fats other than milk fat is considered as *margarine* and must be indicated as such during the whole time of storage, transport, delivery and export.

The State dairy inspection service supervises and enforces the butter regulations. If it thinks fit, it takes samples of products subject to control and sends them to the State dairy station at Leyden.

No butter may be exported without the official mark.

- 15 *Cheese.* — In Holland, the control organisation for cheese was established at the request of the parties interested in the manufacture of this product, their object being to regularise the trade and effectively guarantee the purity, manufacture and fat content of the cheese.

Control is exercised under State supervision by cheese control stations. These are five, in number, two dealing exclusively with cheese produced from whole milk.

The station is a voluntary association of all producers undertaking to comply with the Government provisions for ensuring purity and the observance of hygienic rules. They agree to accept control and inspection by officials appointed by the Government for the purpose.

Membership of these associations is subject to certain conditions. Members not observing the established rules may in certain circumstances be expelled; in other cases, they must be expelled.

The object of the control of cheese made from whole milk is to guarantee that the cheese is really obtained from unskimmed milk without any addition of foreign matter, with the exception of substances usually employed in cheese manufacture, and that the percentage of fat in the dry matter is not less than 46 per cent and that the percentage of fat in the whey is maintained within normal limits.

The control of cheese obtained from milk more or less skimmed is intended to guarantee that it contains not less than 20, 30 or 40 per cent of fat without the addition of foreign matter.

Official marks corresponding to these four kinds of cheese have been instituted at the request of the parties. They consist of a small disc made of thin, transparent casein, on the back of which is printed in dark coloured ink in Dutch: "Dutch Cheese Control under State supervision". In the middle are the State arms, under which the words "Volvet 45%"¹ are printed for full fat cheese, only the corresponding percentages of fat being given for the other qualities. The first of these marks is round and printed in blue ink; the others are hexagonal and black.

The official marks are applied by the manufacturers who receive them from the stations under strictly defined conditions; they bear numbers and letters for the purpose of identifying the producer and the station issuing the mark.

Butter and cheese producers affiliated to the control stations are obliged to keep a strict account of these marks and of their output, so as to prevent fraudulent use being made of the

¹ Although the mark mentions the figure 45, it is understood, as mentioned in the last paragraph but one, that the minimum percentage of fat is 46.

marks. The managements of stations receiving these marks from the Government must also keep accounts which are liable to be checked.

The State dairy inspection service supervises and enforces the regulations regarding cheese.

The export of butter and cheese is only permitted on condition that the product bears the above-mentioned official mark.

Herrings. — The “Haringwet, 1927” (*Law Gazette* 1927, No. 387) contains provisions for preventing abuse in the export of herrings. The exporter is responsible for the use of barrels of the dimensions and capacity prescribed by law, for the minimum net weight of herrings in the barrels being in conformity with the law, and, in certain cases, for the kind and quality of herrings packed. He is liable to penalties in case the existing provisions are not complied with. The State exercises control over the observance of these provisions. The control regulations for Netherlands herrings established by Royal Decree of March 24th, 1928 (*Law Gazette* 1928, No. 83), provides that salted herrings exported from the Netherlands must be packed in Dutch or Scottish barrels of the prescribed dimensions and capacity. Every barrel of salted herrings exported must bear a stamp in red ink or red paint, stating the size of the barrel and the minimum net weight of the herrings in kilograms. This stamp must also mention the exporter's number. A barrel of salted herrings on export may also bear a mark on orange-coloured paper indicating that the herrings are of a certain season, that they are intact, originate from Netherlands fisheries, were packed alive and salted at sea, and that they are of the kind indicated (maiden herrings, summer herrings, full herrings, spent herrings). Barrels bearing this orange-coloured label, in addition to the red stamp, may only contain herrings of the season indicated; at least 95 per cent of the herrings in the barrel must be of the kind mentioned on the label. 16

Anchovies. — Anchovy exporters may place themselves under State control through the Association for the Control of Anchovies. 17

They may not export anchovies abroad without using packing bearing the customary control mark. They must comply with the provisions for preventing abuses in the trade in anchovies not coming from Netherlands fisheries or for preventing the delivery of anchovies in packing of an insufficient net weight or not containing the prescribed number of fish.

A penalty not exceeding 5,000 florins is inflicted for infringements of the legal provisions.

CATEGORY 3.

Electrical and gas articles. — The Central Bureau of the Association of Directors of Electricity Works in the Netherlands (*Vereeniging van Directeuren van Electriciteitsbedrijven in Nederland*) at Maestricht and the Central Bureau of the Association of Gas Manufacturers in the Netherlands (*Vereeniging van Gasfabrikanten in Nederland*) at The Hague issue certificates for electrical and gas articles respectively which have been submitted to a quality test by these Associations. 18

Horticultural products. — Various co-operative societies for auction sales have organised control, through their own paid employees, of the quality, grading and packing of these products. Some of them have even established a system of penalties for members who do not comply with the very strict rules laid down by the committees of these societies. They have adopted marks which may be considered as control marks in respect of the purity and quality of the goods. 19

This is the case in particular with the “Het Westland” society, and the “Central Bureau of Auction Sales” at The Hague.

Horned cattle, horses, asses and mules, sheep, goats and pigs. — The Stud-Book or Herd-Book Associations certify on request that certain information regarding the pedigree, appearance and other qualities of these animals is entered in the stud-books and herd-books. 20

The books of these Associations contain information regarding the milk production of cows and the percentage of fat in the milk. In the case of bulls they state the milk production of the dam, and the percentage of fat in the milk of animals on the male and the female sides.

In the provinces of North Holland and Friesland there is a so-called “sanitary service” for cattle, established by breeding societies and co-operative dairy societies. Cattle on farms that are members of these organisations are inspected at regular intervals for tuberculosis.

When an animal is sold, this service issues on request a certificate to the effect that it is free from tuberculosis.

Eggs. — A number of private associations stamp their marks on eggs as a guarantee of quality. “The North Holland Co-operative Society”, for instance, marks eggs delivered by members at certain centres. The mark indicates, in particular, the name of the supplier; the origin of the egg can accordingly be traced. 21

22 *Bulbs.* — The “ De Narcis ” Society has arranged for the inspection of planted bulbs by ten inspectors, who are empowered to prescribe the necessary measures for combating disease. This inspection is followed by a second inspection of the dry bulbs.

23 The Government phytopathological service co-operates by issuing export certificates through its officials only when it has proof that the *narcissus* bulbs have been inspected during growth and recognised as suitable for export.

In this connection the “ De Narcis ” Society issues certificates containing the name, the area under cultivation, the existence or absence of disease and, in case of symptoms of disease, any disinfection that may have taken place.

For other bulbs there are similar societies to “ De Narcis ”, in particular the “ De Hyacint, ” “ De Tulp ” and “ De Gladiolus ” Societies.

24 “ Uitvoer Controle Bureau ” (U.C.B.) is a private association of exporters and producers established for maintaining the good reputation of the Dutch products, *vegetables, fruits and potatoes*, on foreign markets.

The members of this Association, *i.e.*, undertakings for selling by auction and exporters—who must be accepted by a Committee the Director of which is not connected with exporting or producing—voluntarily accept the control of U.C.B. They are authorised to export the vegetables, potatoes and fruits mentioned below under the registered mark of U.C.B., provided these products comply with the minimum conditions fixed by the U.C.B. for each product in respect of quality, grading and packing. The mark mentioned consists of a lion bearing the Dutch flag with the words “ Export Control ” above and “ Holland ” below.

25 Special inspectors undertake permanent control, so that no products may be exported which do not correspond to the prescribed qualities. The significance of the mark used by the U.C.B. is brought to the knowledge of the foreign public by means of advertisements. The control applies to *tomatoes, cucumbers, gherkins, onions, apples, pears, grapes, potatoes and cabbages*.

There are three different grades of tomatoes; five of gherkins and four of onions.

A minimum size is required for cucumbers and potatoes. The conditions also refer to the grading, packing conditions and the weight which must always be observed and indicated. The control of potatoes also refers to dust, quality and diseases.

26 The Central Committee for the inspection of growing *seeds* at Wageningen has adopted a system for producing seeds of first-class quality based on:

1. The control of origin;
2. Examination and inspection of growing crops, in particular from the point of view of purity, variety and absence of disease, especially diseases communicated by seeds;
3. Examination and assessment of seeds or plants on sample with special reference to germinative capacity, purity, and intrinsic value.

The control and inspection are carried out by impartial and neutral agricultural societies that are members of the Central Committee mentioned above. They are assisted by Government provincial agricultural advisers.

Only seeds passing the tests are accepted by the members of the Committee. The bags are then sealed with the registered mark.

The principal seeds controlled in this manner in the Netherlands are *wheat, barley, rye, peas, broad beans, haricot beans, flax, clover and potatoes*.

There are other organisations dealing in a similar manner with approved seeds. The most important is the Control Institute of Seed Merchants at Goes.

27 The regulations existing for distillers in the town of Schiedam may be mentioned. They are communal regulations by which the distillers complying with the rules laid down by the Commune may obtain labels issued by the Commune guaranteeing the quality of *gin and spirits*.

28 There is a control association for *anchovies*, with the object of providing the purchasers with guarantees regarding the good quality and exact weight of anchovies under Government supervision. Stamps supplied by the Government are placed on the barrel.

CATEGORY 4.

29 *Seeds.* — By means of a system of optional control, including the issue of certificates and the placing of seals on the bags, it is possible in the Netherlands to obtain a complete guarantee regarding the variety and the origin of the seeds. A request must be addressed to the Government Control Station for the supervision of seeds at Wageningen.

30 *Artificial fertilisers.* — Purchases and sales of fertilisers are usually made on the conditions known as “ A.H.V. ” (general trade conditions) drawn up by the Union of Artificial Fertiliser

and Fodder Manufacturers and Merchants and by the Union of Buyers. These conditions have been registered at the Amsterdam Court of Justice and include:

- (a) Sale conditions;
- (b) The fixing of percentage margins allowed;
- (c) Arbitration rules.

The quality requirements fixed by the "A.H.V." conditions were revised on June 1st, 1925. Foreign buyers ordering fertilisers in the Netherlands may do so on "A.H.V." conditions by stipulating that samples of the goods ordered are to be submitted to the *Government Testing Station at Maastricht*. The parties concerned must see that samples are taken in the manner fixed by the regulations of this station.

For *spirits* exported to the British colonies and Australia, purity certificates are issued 31
by the excise inspectors at the request of the parties concerned. These certificates, which are issued because they are required on importation into the territories mentioned, contain a statement of the raw materials from which the spirits have been obtained, the number of distillations and the method of manufacture. It is possible to issue such certificates, because the production of spirits is subject to control by the excise officials on account of the excise duties which are levied.

There are several bureaux in the Netherlands to which purchasers may send various goods for optional examination or tests. In the first place may be mentioned the *Royal Bureau for the Examination of Goods at The Hague* (Rijksbureau voor onderzoek van handelswaren) and a number of other special bureaux such as the *Rubber Bureau at Delft*, the *Textile and Paper Bureau at Delft*, the *Bureau for the Leather Industry at Waalwijk*, the *Fuel Institute at The Hague* 32
and the *Industrial Laboratory at Delft*, and the "nijverheidsconsulenten" (industrial consultants) 33
at The Hague, Deventer and Tilburg. The *Meteorological Institute at De Bilt* verifies *meteorological instruments* at the request of the Government, and if necessary, of private persons. This Institute 34
has branches at Amsterdam and Rotterdam for verifying *nautical instruments* and correcting 35
charts, etc. These are all official bureaux, but there are also private bureaux for examining goods. 36
37

The *Royal Bureau for the Examination of Goods* (Rijksbureau voor Onderzoek van Handelswaren) at The Hague conducts surveys of all kinds of goods, except agricultural produce, and also undertakes commercial enquiries.

The *Phytopathological Service* issues certificates regarding the condition of *agricultural*, 38
horticultural, and *arboricultural* products when required for foreign countries. These certificates are only issued after a thorough inspection carried out exclusively by officials of the Service in respect of the condition of growth and production. Many of these inspections refer to plants, bulbs, potatoes, fruits and seeds intended for export.

Parties concerned may obtain on request official and semi-official declarations regarding the quality of various kinds of *fish*. 39

Shipowners may submit for Government examination salted *herrings* from Dutch fisheries 40
which have not yet been placed on the market. The result of these examinations is indicated by affixing certain marks on the cases and, if required, by making declarations.

The quality of *mussels* from natural banks or beds may also be guaranteed by a statement 41
by the Inspector of Fisheries. The fact of requesting such a statement compels the party concerned to observe the various regulations regarding the export of mussels.

There are identical regulations for *oysters*. 42

If a foreign purchaser has inserted in the contract a stipulation to the effect that the goods must be accompanied by a certificate from an expert appointed by a Chamber of Commerce, the foreigner can generally be certain that a qualified expert will be appointed in proper time, at least as regards goods usually dealt in by the members of the said Chamber of Commerce. The Chamber of Commerce only accepts moral responsibility when appointing experts.¹

Civil legislative provisions are to be found in Book III of the Civil Code, and penal regulations in Book II, Part 25 of the Penal Code, in particular in Articles 329 and 330. Control regarding the observance of the law and of communal regulations established in virtue of this law is exercised by the communal control bureaux set up under the "Law regarding Goods". Penalties are to be found in the communal regulations and in some cases in Royal Decrees, for instance, in the Decree regarding paper (Article 6).

The owners of *gold* and *silver articles* stamped with the Dutch mark may submit them to 43
the Mint for examination if they are doubtful whether the mark was affixed in accordance with existing regulations.

¹ A complete list of all Chambers of Commerce in the Netherlands with a statement of their powers is contained in Article 2 of the Royal Decree of August 17th, 1920, for giving effect to Article 1 of the "Wet op de Kamers van Koophandel" (see the publication "*Nederlandsche Staatswetten*", Editie Schurman en Jordens, No. 91, p. 101). The rights and duties of Chambers of Commerce are regulated in particular by Articles 12 to 15 of the said law (see page 147 of the same publication).

NETHERLANDS INDIES.

CATEGORY 1.

1 Legislative provisions are in force in some provinces to guarantee the quality of certain
products intended for export; *e.g.*, the provisions concerning *pepper*, under which this product may
2 not contain more than a certain percentage of dust or foreign matter, the provisions concerning
coffee, which only allow a certain percentage of humidity, the provisions concerning *copra*,
3 *rubber*, etc.

4 In many districts there are regulations regarding *milk* and other foodstuffs and articles
of consumption (such as lemonade); these regulations also apply to products intended for export.

5 With a view to preventing the exportation of *bananas* of inferior quality, the export of this
fruit from certain parts of the Netherlands Indies is forbidden.

CATEGORY 2.

6 The legislative provisions concerning the inspection of *live-stock* also apply to live-stock
intended for export. The exportation of live-stock not bearing the inspector's stamp is prohibited.

CATEGORY 3.

The registration of marks, including collective marks, is authorised by the Government.

The forging of manufacturers' or trade marks may give rise to civil action for damages and
to judicial proceedings.

CATEGORY 4.

7 Use is often made of these facilities for the exportation of *seeds*, *parts of plants*, etc.

Certificates are issued partly by the laboratories of private or semi-official institutions and
partly by Government officials.

CATEGORY 5.

In addition to the provisions of civil law, buyers, including foreign buyers, are protected
by various articles of the Netherlands Indies Penal Code.

8 The sale of *foodstuffs* harmful to health, unfair competition, fraud by the use of various
devices to disguise the nature, quality or quantity of commodities, etc., are prohibited under
penalty of a fine or imprisonment.

9 Lastly, it is forbidden to offer for sale, etc., under penalty of a fine or imprisonment, adulterated
foodstuffs, *beverages* or *medicaments*, to injure the interests of others by using an incorrect packing,
or a packing or mark belonging to another person, etc.

NORWAY.

CATEGORY 1.

The manufacture of and trade in *margarine* and *margarine cheese* are controlled by a Law of March 8th, 1902. 1-2

In accordance with this law, *margarine* is understood to mean any foodstuff resembling butter, whatever its origin, mixture or composition, for the manufacture of which a fatty substance not made from milk is employed.

Margarine cheese is cheese containing a fatty substance not made from milk.

The manufacture of these two classes of products and the operations of mixing butter or milk with *margarine* may not take place on premises used for the manufacture or preparation of butter or cheese intended for sale.

The manufacturers of *margarine* and *margarine cheese* must make a declaration to the police, stating the place of manufacture. They must keep a register and furnish each year to the Department of Agriculture precise particulars of their output during the previous year and the quantities of butter, cream of milk and other substances used. The process of manufacture must be satisfactory from the point of view of cleanliness and hygiene, and must be in accordance with the regulations.

The offering for sale, sale, importation or exportation of *margarine* or *margarine cheese* are prohibited except under those names, and without any addition other than the name of the manufacturer, place of manufacture and the usual trade indications in regard to quality. The latter may not include terms which might cause the product to be mistaken for a milk product.

Margarine and *margarine cheese* must be described by those names in commercial documents. However, in accordance with a Law of September 10th, 1909, products resembling butter made exclusively from vegetable substances may be exported to overseas countries without mention of the word "Margarine", provided that the description of the product does not contain any wording which might cause it to be mistaken for butter.

The manufacture, sale, importation or exportation of *butter* and *margarine* containing preservatives other than salt are prohibited. 3

Margarine must be packed in recipients bearing on two diametrically opposite sides the word "Margarine" or "Margarine Cheese" in letters from 1.3 to 7 cm. high in an oval 13 to 21 cm. long and 6 to 9 cm. high. The recipients must also bear the manufacturer's name or trade-mark. If the *margarine* is not intended for export, the recipient must bear an indelible red band from 2 to 5 cm. wide. 4

Margarine imported from abroad must also bear the word "Foreign" in Norwegian inside the oval or above the word "Margarine".

Margarine cheese must be coloured red on the surface over its entire thickness, and bear the word "Margarinost" (*margarine cheese*) on both sides.

When the *margarine* or *margarine cheese* is imported in packings which do not bear the prescribed marks, the goods will be detained by the Customs until these omissions have been rectified.

When *butter* or *cheese* is imported, the consignee must state whether the product is pure or mixed with *margarine*. If he cannot say, the goods will be analysed at his expense. 5

Barrels, cans, cases, etc., used for packing must be new. Exceptions are only allowed in the case of glass, stone, etc., packing, which must be cleansed with steam or boiling water.

Special inspectors are appointed by the competent Ministry to see that the foregoing provisions are complied with. They have free access to the establishments in which *margarine* and *margarine cheese* are made. They have the right to take samples, to check records, to examine raw materials and to inspect the premises and plant. The samples are analysed by the Government agricultural control stations.

The police and Customs officials also take part in this supervision. Fines are imposed in the case of infringement.

CATEGORY 2.

6 *Dried and salted fish.* — All split and salted fish and dried fish (klippfisk) intended for export must be inspected beforehand.

Only fish inferior in quality to that known as No. 3, and which is intended for export to European markets, is at present exempted from these stipulations.

The inspection of salted fish is not compulsory.

The object of the inspection is to ascertain that the product fulfils certain conditions—that it has, for instance, a certain degree of dryness. In the case of fish intended for the Catalonian market, a special degree of dryness is required. Consignments must be marked “Prepared for export to Catalonia”.

Inspection is also carried out in accordance with the classification mentioned below.

In every case the consignor must present all the documents to the chief inspector to be stamped, and in certain cases for the inspection certificate to be attached to them.

A request for inspection must be made in writing to the chief inspector of the district, mentioning the country to which the fish is to be sent, the quality and quantity of the goods, the season, method of drying the fish and nature of the packing to be used.

Requests for the inspection of salted fish must also state how long the fish has been kept in brine. Salted fish submitted for inspection must be left in brine for at least four weeks and must be sound and fresh.

The inspector stamps a mark on the outside of the packing to show that the goods have been inspected. This mark is oval in shape, with the Norwegian lion in the centre and bears the words: “Norwegian Inspection of Dried Fish” around the oval.

In the case of fish of special quality, a special mark similar to that described above is affixed; this mark also bears the figure 1, 2, 3, or 4 and the name of the place under the Norwegian lion. No. 1 is the best quality; No. 2 indicates a slightly inferior quality; No. 3, fish which is slightly damaged, and No. 4 is of a lower quality than No. 3, but is good enough to be exported as dried fish.

When the dried fish is compulsory or voluntarily submitted for inspection with a view to export, an export certificate may be granted, but it must bear the words “slightly damaged by damp”. This also applies to cases in which the fish is “slightly acid” or “slightly burnt by the sun”.

Independently of these provisions, dried fish intended for overseas markets may be inspected in accordance with special provisions, for the purpose of ascertaining whether it conforms to the special requirements of those markets.

The instructions applicable to overseas markets include the following categories:

(a) Packages exclusively containing “Norwegian No. 1” fish are marked “bacalao extra” or “bacalao selecta” at the exporter’s option;

(b) Packages containing qualities not inferior to “Norwegian No. 2” must bear the inscription “bacalao imperial” or “bacalao superior”;

(c) Packages containing fish not inferior to “Norwegian No. 3” quality may be marked “bacalao regular”;

(d) Defective fish which cannot be included in any of the three categories mentioned above, but which is nevertheless sound and good, may be marked “bacalao inferior”.

7-8 There are also special instructions for the inspection of dried “boneless” and “skinned” fish. Ling, “cusk” and cod of good quality, properly dried, may be exported under those names, but must be properly skinned and boned. Upon request the inspector will certify the kind of fish.

All fish intended for South America and Cuba must be packed in cases. Fish intended for La Plata and the west coast of South America must be packed in tins placed in wooden cases, and the certificates may be refused if the tins are not properly soldered or if the wood is not sufficiently dry.

The name of the exporter must be marked on the packing. When cases are used, his name must appear on the lid and side of the case. The marks must be legible and affixed by the exporter or packer under the supervision of the inspectors before the latter affix their own stamp.

The improper use of quality marks is prohibited. The use of marks similar to the quality mark or which might be mistaken for the quality mark is also prohibited.

Certificates issued by the inspectors for dried fish intended for export must state the name of the vessel, consignor, mark, destination, quantities of each of the official qualities, nature of packing, year in which the fish was caught and method of drying.

The certificate must bear the same date as the bill of lading and be attached to it. This fact must be mentioned in the bill of lading.

Persons giving false particulars to inspectors or substituting goods or otherwise infringing the regulations are liable to penalties.

Special measures are taken to prevent damage to a consignment of fish after it has been inspected, and, if the prescribed precautions are not taken, this fact is mentioned in the certificate.

Dried fish is classified in three categories according to size: "mixed", "medium" and "small". The first grade must not possess any defects which would cause it to be classified below the Norwegian No. 2 standard. Other fish is classified as "medium", but damaged fish is rejected. 9

The name "small" is given to fish the size of which is smaller than those specified; these specifications vary according to the different kinds.

The Director of Fisheries is at the head of the Norwegian Dried and Salted Fish Inspection Department.

The Inspector-in-Chief, who is immediately under the Director, supervises the four inspection districts—namely, Bergen, Aalesund, Kristiansund and Bodo, and there is a principal inspector for each district who supervises the work of inspection in his district.

The actual inspection of the fish is carried out by assistant inspectors. These are all Government officials, who are forbidden to receive fees from a private source.

Tinned fish. — Soldered recipients containing fish of Norwegian origin, sold or offered for sale or exported must be marked on the tin with two-colour labels or packing, brass label, etc. These labels, etc., must bear the following particulars: 10

1. Country of origin, for instance, "Norway", "made in Norway", "Norwegian", etc.;
2. The full name and address of the producer. If the name of the exporter or a foreign importer is also given, the letters used must not be larger than those for the producer's name;
3. If the fish is preserved in oil, the type must be mentioned.

When the name of the exporter or importer is given on the tins, the name of the country of origin and that of the producer or consignor must also be given.

Tins containing sprats must be marked "sprats" or "sardines" or with a translation of those words on the coloured labels or packing.

When a tin contains small herrings (*snasild*) prepared in the same way as sprats or sardines, the labels or packing must bear the word "sild" ("herrings" or "sardines" or a translation of those words).

These regulations are enforced by decrees.

Cheese. — All cheese manufactured in or imported into Norway is classified in four grades according to its content of fatty substances or fat in the dry substances: 45 per cent, 30 per cent, 20 per cent and under 20 per cent, known respectively as: full cream cheese, semi-fat, quarter-fat and skimmed milk cheese. 11

Various types of foreign cheeses (Camembert, gorgonzola, etc.) are by definition grouped in one or other of these categories. Cheeses sold under special names not mentioned in the regulations must be classified according to their percentage of fat in one or other of these four categories.

No cheese may be offered for sale under a name which might deceive the buyer as to its composition, percentage of fat or value.

Cheeses must bear a mark showing to what group they belong before they can be offered for sale. For the first three categories the mark consists of a circle containing letters and figures: F. 45, for the first quality, H. 30 for the second, K. 20, for the third. There is no mark for cheeses of the fourth category.

The producer may place his name and address on the opposite side of the cheeses.

Quality and other marks which do not conform to these instructions are prohibited.

Curd cheese. — This cheese must be classified in one of the following six categories before it is placed on the market: 12

1. Pure goat's-milk cheese made from unadulterated milk and containing at least 30 per cent of fatty substances;
2. Pure goat's milk cheese made from unadulterated milk and containing not less than 20 per cent of fat;
3. "Gudsbrandsdals" cheese made from cow's and goat's milk mixed, containing not less than 30 per cent of fat;
4. Cream curd cheese made from cow's milk and containing not less than 30 per cent of fat;
5. Half-cream curd cheese containing more than 20 per cent of fat;
6. Qualities containing less than 20 per cent.

No curd cheese may be sold under a name which might deceive the buyer as to its composition, percentage of fat or value.

Curd cheese belonging to the first four categories mentioned above must be stamped with the following marks, which must be not less than 2.5 cm. high and must be stamped on the side

of the cheese: " F.G.30 " and " F.G.20 " for pure goat's milk cheese, " B.G.30 ", " F.30 ", " H.20 " for the three following categories respectively.

All producers of cheeses which require to be marked must be registered with the Department of Agriculture which allots them a number. In addition to the compulsory marks mentioned above, this number must also be stamped on the cheeses.

Importers of cheeses intended for sale and which would require to be stamped if they had been produced in Norway, must be registered with the Department of Agriculture in the same way as Norwegian producers and have a number allotted to them. They must mark their cheeses according to the category to which they belong.

Quality marks apply both to cheeses and curd cheeses intended for export. If they are intended for a country which has special regulations or quality marks, the Department of Agriculture authorises the marking of the cheeses in accordance with these regulations.

Persons infringing any of these regulations will be fined.

- 13 The exportation of *potatoes* is only authorised if the consignment has previously been inspected, and the Customs administration must ascertain that this has been done before the exportation of the goods is allowed.

Exporters desirous of exporting potatoes must make an application to the Ministry of Agriculture on a special form. This form must state the weight, number of packages, packing, marks, place where the potatoes are to be inspected, method and date of despatch and destination.

The exporter must also state the district in which the potatoes were grown, and this may be checked by the inspectors. In the case of tubers coming from the districts of Aust-Agder, Vest-Agder and Hordaland, a certificate from the competent authority is also required, stating that the potatoes have been obtained from farms where there is no potato wart disease.

The potatoes must be inspected not more than fifteen days before they are despatched.

For purposes of inspection, samples are taken haphazard from different parts of the consignment, not less than five sacks or cases out of every hundred being examined. These are emptied and the potatoes inspected one by one. The inspection covers disease, deterioration caused by insects and quality. The consignments must be free from wart disease and maggots. They must not contain frozen, soft or rotten tubers. The potatoes must be dry and well cleaned (less than 4 per cent of earth). The consignment may not contain more than 4 per cent of tubers coated with earth or which have been damaged by insects, snails or implements. They must be carefully selected and must not include more than 5 per cent of tubers, the smallest diameter of which is under 45 mm.

The consignments must not contain tubers larger or smaller than the normal size or misshapen or green tubers.

The various varieties must not be mixed, but must be packed separately. A special mark must be used for each variety.

The potatoes must correspond to the description given and the consignment must in no case include more than 5 per cent of varieties differing considerably from this description from the point of view of shape and appearance.

Potatoes for export to Great Britain must, in the absence of any provisions to the contrary in the conditions of sale, be packed in bags containing 51 kilograms net.

The bags must be dry, clean, undamaged, stout and sewn with strong thread.

If required by the importing country, the packing must be new and bear the potato inspector's seals. The truck must in every case be sealed if the consignment is sent by rail. Before the potatoes are shipped, the inspector must ascertain that the hold is scrupulously clean.

When the above-mentioned conditions have been complied with, the inspector informs the Customs that the consignment has been inspected and issues the necessary export certificates.

The cost of inspection is borne by the applicant in accordance with the legal tariff.

- 14 *Norwegian eggs* intended for export must be absolutely fresh when they are despatched, and, except in the case of preserved or chilled eggs, they must be new laid.

In order to ascertain the freshness and quality of the eggs they are held up to the light. This operation is compulsory from the month of June to the end of the year, and throughout the year in the case of preserved or chilled eggs.

The eggs must be perfectly clean and may in no case be washed with water. If necessary, they may be cleaned with a rag dipped in vinegar.

Damaged or badly shaped eggs, or eggs with a soft shell must be rejected.

All these operations must be carried out in clean, airy premises in which there is no smell.

Eggs are classified according to their weight in English lb. per 120 eggs—namely, 18 lb. for Category No. 1; 17 lb. for Category No. 2; 16 lb. for Category No. 3, and so on, down to 12 lb. for Category No. 7.

No consignment may be below the weight per 120 eggs indicated in the above categories. Each consignment must consist of eggs of the same size.

The packing must consist of cases containing 1,440, 960 or 720 eggs. Producers may provisionally use cases containing 360 eggs if they declare to the Customs that the eggs have come from their own farm. The cases must be of the usual type employed for export. The eggs must be packed in wheat or wood straw or cardboard. No case may contain more than one category of eggs.

New-laid, preserved or chilled eggs must be packed in separate cases. This also applies to stamped and unstamped eggs and to imported and Norwegian eggs.

The cases must bear visible marks at each end; in addition to the words "Norwegian eggs", the category of the eggs and the consignor's mark must be mentioned. The eggs must be labelled respectively: "New-laid eggs", "pickled eggs" or "cold-stored eggs".

The category of weight is indicated by the words 18 lb., 17 lb., 16 lb., etc., or by the letters A, B, C, etc.

The country of origin and the words "pickled eggs" or "cold-stored eggs" as the case may be, must be mentioned on the packing of foreign eggs imported into and sold in Norway or reexported.

Imported eggs which are not so marked will be kept by the Customs until this omission has been remedied. Imported eggs must not be sold or re-exported as Norwegian eggs.

Egg-exporters must communicate with the Ministry of Agriculture, within whose province it lies to authorise them to use their premises for storing and handling eggs.

In the case of each consignment, a detailed declaration must be made to the district supervisor specifying the time and place of shipment, number of cases and weight of Norwegian and foreign eggs of each category. The supervision of imports and exports is in the hands of the Customs administration.

The above-mentioned rules do not apply to the importation and exportation of eggs in small lots having a gross weight of not more than 10 kilograms.

Horses, horned cattle, pigs, sheep and goats intended for export by sea must be examined by a Norwegian veterinary inspector immediately before shipment and may not be shipped unless they have been found free from any symptoms of an infectious disease. There must also be no reason to believe that they have been recently infected by contact with infected animals or otherwise. 15

The veterinary inspector issues a certificate to the shipper stating the number and sex of the animals.

Immediately after inspection steps are taken to prevent the animals from coming into contact with infected animals.

Each animal inspected is branded to show that it has been examined and has been recognised fit for export. This brand is reproduced in the certificate.

All vessels used for exporting animals must be inspected before each voyage by the health inspector. If there is any risk of infection, the vessel must be disinfected before the animals are put on board. Vessels are always disinfected before ruminants or pigs are shipped for export.

If the result of the inspection is satisfactory, a certificate to this effect is issued.

When the above-mentioned animals are to be exported by rail, they must also undergo a veterinary examination before they leave. A certificate is issued in this case also.

In each of more than 4,000 inhabitants, and in others on the decision of the communal authorities, the *meat of horses, horned cattle, pigs, sheep, goats and reindeer* intended for food must be examined by the health inspector. 16

The importation of fresh or salted meat is also subject to supervision or is prohibited.

Meat considered fit for consumption after inspection is stamped or marked. If it is considered unfit for consumption, it is confiscated and is not returned to the owner until it has been rendered harmless from the point of view of health or treated in such a way that it cannot be used for food.

There is an important Law dated June 27th, 1924, relating to the trade in fodder, known as "Krafftôr", chemical fertilisers and seeds.

The *fodder* covered by this law includes foodstuffs which have undergone technical or industrial treatment, and in particular mill waste and cereals and fecula sold as fodder, with the exception of maize. 17

In accordance with the law, *chemical fertilisers* are understood to mean fertilisers which have undergone technical or industrial treatment, and also lime used as a fertiliser. 18

Seeds covered by the law at present include the following kinds: 19

Oats	Radishes	Kohlrabis
Barley	Parsnips	Turnips
Rye	Onions	Fodder beet
Wheat	Leeks	Cabbages
Timothy	Red clover	Cauliflowers
Foxtail grass	Small white clover	Parsley roots
Couch grass	Wild clover	Red beet
Rye grass (2 varieties)	Lupin (2 varieties)	Celery roots
Meadow grass	Vetch	Salads
Bent grass	Peas	Fir
Ray grass	Beans	Pine
Rape	Carrots	

The manufacture and importation of, and trade in, the three classes of products mentioned above are subject to supervision.

A sample of the above-mentioned products coming from foreign countries is taken by the Customs administration for analysis, and the results of the analysis are communicated to the importer.

The agricultural supervision stations, the police and the Customs administration, or persons specially appointed for the purpose by the competent Minister are the authorities whose duty it is to see that the law is observed.

The supervisory authorities are entitled to enter warehouses and places of sale and to take samples for analysis. They may also ask to inspect the books kept for the purposes of the supervision.

If the legal regulations in connection with the sale of goods coming under the law are infringed, or if the goods sold do not answer the description of them furnished by the vendor, the latter is liable to pay damages calculated according to rules laid down by Royal Decree, even if he is not at fault.

In addition to the fines or other heavier penalties provided in the Penal Code for infractions of the law, the Minister may refuse to give importers, merchants or manufacturers who fail to make the required declarations or keep the prescribed registers the necessary authorisation to import or deal in the products covered by the law.

The law prescribes that all persons selling or dealing as brokers in the three categories of products covered by the law are bound to inform the purchaser, by specification in the invoice or on the packing, etc., of the composition and nature of the products in question.

A. In the case of fodder, the vendor is required, in any sale of consignments of a single product over 200 kilograms, to inform the purchaser by a written specification in the invoice or any other document as to:

1. The description of the goods;
2. The number of the consignment corresponding to the number in the register of the vendor;
3. The percentage of the goods consisting of articles, in the case of which a maximum or minimum quantity is prescribed.

In the case of mixed products, the nature and proportions of the substances making up the mixture are to be shown. In the case of products containing molasses the nature of the absorbent material and the sugar content are to be indicated. The importation of mixed products for the feeding of live-stock is forbidden.

Before delivery, the packing must be furnished with a distinctive mark with the name of the vendor and the particulars specified in Nos. 1 and 2 above.

In the case of the despatch of consignments weighing 5,000 kilograms and over, composed of a single class of products not liable to confusion with any other class, it is not necessary for each package to be marked; particulars of the railway or shipping line must, however, be added to the description of the goods.

The conditions with regard to description and qualities, with which the various fodder products have to comply, will be found below.

None of the fodder products enumerated below may be classified in one of the twelve categories unless they are manufactured solely out of the raw material indicated in their description, and are in fresh condition and unmixed. The last-named particular is always to be specified. They are to be sold with a guarantee in regard to the composition of the product.

- 20 1. *Dried herring powder*: (a) very slightly salted fat and protein minimum 73 per cent, water maximum 11 per cent, salt maximum 2 per cent; (b) slightly salted fat and protein minimum 67 per cent, water maximum 12 per cent, salt maximum 6 per cent; (c) heavily salted fat and protein minimum 63 per cent, water maximum 12 per cent, salt maximum 12 per cent.

The fat and protein must contain at least 12 per cent of fat; but none of the three categories specified may contain more than 15 per cent of fat. It is to be specified that the goods belong to one of the qualities above quoted and that they are prepared solely from herrings or sprats.

- 21 2. *Whale meat powder*: fat maximum 20 per cent, fat and protein minimum 82 per cent, water maximum 10 per cent. The product must be prepared solely from whale meat.

- 22 3. *Dried fish-liver powder*: fat maximum 32 per cent, fat and protein minimum 80 per cent; water maximum 10 per cent.

In ascertaining whether the three categories of products specified above are in fresh condition and suitable for the feeding of live-stock, regard will be had amongst other things to the smell, appearance, ammonia content and content (if any) of foreign matter.

- 23 4. *Cotton-seed powder*: fat and protein minimum 50 per cent, fat maximum 12 per cent. This product is only to be sold under the description of cleaned cotton-seed powder and cotton-seed cakes. It must consist mainly of pressed and ground cotton seeds.

- 24 5. *Colza-seed powder* (colza cakes): fat and protein minimum 38 per cent. This product is only to be prepared from colza seeds of the various kinds (*brassica*).

Rocket (*eruca*): fat and protein minimum 40 per cent. Rocket powder is to be prepared only from seeds of the plant *eruca sativa*.

- 25 6. *Linseed powder* (linseed cakes): fat and protein minimum 36 per cent. The product is to be prepared only from pressed linseed.

7. *Ground-nut powder* (ground-nut cakes): first quality: fat and protein minimum 56 per cent; second quality: fat and protein minimum 52 per cent. The proportion of fat not to exceed 12 per cent in either quality. The product is to be prepared solely from pressed ground-nut seeds. 26
8. *Coconut powder*: (a) pressed (including cakes), fat and protein minimum 29 per cent; (b) manufactured by process of extraction: fat and protein minimum 26 per cent. The product is to be prepared only from coconut pulp (copra). 27
9. *Soya powder*: fat and protein minimum 46 per cent. The product is to be prepared only from soya seeds. 28
10. *Products made from milling waste*: These products are to be prepared only from cereals of the kind indicated by the name of each. They may not contain parasitic seeds entire. 29
11. *Cereals and plants containing starch* may not contain more than 0.25 per cent of parasitic seeds. 30
12. *Molasses*: liquid molasses must contain at least 48 per cent of sugar and at most 25 per cent of water. 31

B. *Chemical fertilisers*. — In any sale of consignments over 200 kilograms of a single class of goods, the vendor is required to inform the purchaser by written notice on the invoice or any other document as to (1) the description of the goods (name); (2) the number of the consignment corresponding to the number in the register of the vendor; but such specification is not required in the case of native products of unvarying composition such as Norwegian saltpetre; (3) the content of the goods in vegetable nutritive principles, shown in percentages of nitrogen, phosphoric acid, potash and lime, according to the nature of the goods, together with the form in which these substances enter into the composition of the product. 32

In the case of superphosphates and potash fertilisers a guarantee will be given as to the phosphoric acid or potassium content soluble in water.

In the case of dephosphorisation slag, a guarantee will be given as to the content of phosphoric acid soluble in citric acid.

In the case of fertiliser lime and powdered lime, the lime content is to be shown. It is to contain at least 80 per cent of powder (of fineness less than 0.2 mm.).

In the case of highly hygroscopic fertilisers, in which the nitrogen percentage cannot be guaranteed, such as Norwegian saltpetre, the nitrogen content of the product may be shown in kilograms per barrel or per sack.

The purchaser has the right to insist on the goods being dry and sufficiently pulverised, and on their not containing any substance injurious to the plants.

Before delivery, the conditions of packing of chemical fertilisers, of whatever quantity, must be the same as the conditions specified above in the case of fodder.

The manufacture and sale of mixtures of chemical fertilisers are subject to conditions laid down by the Minister of Agriculture.

C. *Seeds*. — In the case of any sale of over 50 kilograms of seeds of peas, vetches or other large varieties, or of over 5 kilograms of other seeds of a single sort, the vendor is required to inform the purchaser by specification on the invoice or any other document, not later than the time of delivery, as to the: 33

- (a) Description of the goods (nature and, if possible, quality);
- (b) Number of the consignment in accordance with the commercial registers;
- (c) Germinative capacity;
- (d) Composition (in the case of grass seeds: with admixture of foreign seeds of equal price; in the case of other seeds: without admixture of other seeds);
- (e) Content of parasitic seeds;
- (f) Place of production in the case of autumn seeds and other winter plants.

If the goods are composed of mixed seeds, the nature and proportion of each kind are to be shown.

The packing has always to carry a mark showing distinctly the name of the vendor, the description of the goods, the number of the consignment, the composition and the degree of germination.

In the case of sales of consignments below the quantities specified above (50 kilograms or 5 kilograms, as the case may be), no special document of guarantee is required; but the packing (sacks, etc.) must be furnished with a mark showing distinctly the particulars prescribed under (a), (c), (d), (e) and (f) on the invoice or other documents relating to larger sales.

The only seeds which may be sold as mixtures are timothy seeds mixed with at least 25 per cent of clover.

The sale to consumers of the following species is forbidden:

Timothy	containing, of parasitic seeds, more than	1 ½ per cent
Red clover	„ „ „ „ „ „	0.75 per cent
Hybrid clover	„ „ „ „ „ „	1.00 per cent
Mixture	„ „ „ „ „ „	1.5 per cent
Cereals and plants containing starch	„ „ „ „ „ „	0.25 per cent

The seeds of peas and vetches and other large varieties in consignments of less than 500 kilograms, and other seeds of one sort in consignments of less than 100 kilograms, are not subject to the provisions of the law with regard to the taking of samples; but they will not be admitted, unless they show on the packing the name of the vendor, the description of the goods and the degree of germination of the seeds.

The import of seeds of hybrid clover, of red clover, of white clover, of timothy, of turnips and colerapes is not allowed without an import permit to be obtained beforehand from the Minister of Agriculture.

Seeds of red clover, hybrid clover and timothy, and the seeds of pines and firs of all sorts, with the exception of the varieties *pinus cembra* and *pinus sibirica*, are to be contained in sacks labelled "foreign seeds" on import into Norway. The documents with regard to sale and transport are to show explicitly that the consignments are foreign seeds.

CATEGORY 4.

34 *Herrings.* — Sour herrings may be submitted to inspection, if desired; if they are inspected, the barrels will be marked with the inspector's seal.

In the case of application for such inspection, the herrings are to be packed in barrels of a specified weight, varying according to the variety of the fish.

The inspection will deal with the condition of the herrings, the quantity of salt employed, etc. The mark showing that the goods have been inspected contains the Norwegian lion, the initials of the inspector and particulars with regard to the special variety of the herrings. The mark is also to show the month and year, the place of origin of the herrings and the class to which the consignment belongs.

In certain cases the weight is also to be given. Herrings from Great Britain are to be marked as such, especially when they are packed in Norwegian barrels.

When a consignment intended for export is inspected, the applicant for inspection must submit a declaration stating that the consignment to the best of his knowledge complies with the requirements. The inspector will then decide what quantity he will inspect and, after inspection, will give a certificate in duplicate, together with a statement that the inspection has taken place.

A certain number of stations have been established for the inspection of sour herrings.

35 The inspector will also see that the regulations with regards to the use of *barrels containing herrings* are strictly observed. Such barrels are to have a prescribed capacity, and the wood is to be of a particular quality, the use of certain other woods being prohibited. Even the thickness of the wood is to be shown, together with the number and dimensions of staves, hoops, etc.

Barrels, which have once been marked, may not be used again without the mark having first been removed.

36 Voluntary official sampling of *herring oil* and *herring manure*. Strictly impartial inspectors are appointed by the Ministry of Commerce for this purpose.

This taking of samples involves the payment of a fee. The samples are taken in the presence of two representatives of the manufacturer, and in certain cases of a representative of the consignee. Three samples are taken for each test. One is sent to a laboratory approved by the State or selected by the purchaser and vendor. The laboratories issue a certificate of analysis.

POLAND.

CATEGORY 2.

Under special legal provisions certain goods are subject to examination before being placed on the market. This applies to *weights and measures, scales, barrels, beer, alcohol, boilers, arms, certain explosive materials and drugs*¹. 1-2 3

Articles made of precious metals must be stamped by a special office: *Główny Urząd Probierczy*. These stamps guarantee the fineness of the metal. 4

Cheese. — In accordance with the legal provisions in force the standards of cheese are fixed as follows: 5

Percentage of fat in whole-milk cheese—30 to 40 per cent of the dry substance.

“ “ “ “ half-fat cheese—20 to 30 per cent of the dry substance.

“ “ “ “ cheese made from skimmed milk—10 to 20 per cent of the dry substance.

The water content may not exceed 50 per cent.

CATEGORY 4.

The Statutes of certain Goods Exchanges in territories formerly belonging to Austria and Prussia empower the Council of these Exchanges to appoint experts authorised to give a professional opinion on the characteristics of goods which are admitted by the Statutes for transactions on the Exchange and to issue through the President certificates stating their opinion.

The professional organisations also issue certificates on request.

Special organisations and agricultural associations, such as the Union of Polish Agricultural Organisations at Warsaw, control *cereal seeds* and *plant seeds*. This control covers the cultivation, harvesting and sale of the cereals in question; the organisations issue certificates. 6

At Warsaw, Lwow, Poznan, Torun and Katowice, there are special laboratories for deciding quality and issuing certificates relating to the following goods: *cereals, seeds of beetroot, clover, lucerne, grass, etc.*, and for *chemical fertilisers*. The certificates issued by these laboratories are accepted by the Courts. 7 8

Foreigners purchasing agricultural produce may have it examined by sworn brokers belonging to the Goods Exchange in the district where the goods are purchased. The certificate thus issued attests that the goods are in accordance with the conditions required for export.

The control of *coal* may be facilitated by presenting a certificate based on the results of chemical analysis. Many Polish mines possess certificates of this kind drawn up by the State Geological Institute, and an official copy certified by a notary or by the district court is supplied to purchasers if they so request. 9

These certificates state all the characteristic properties of the coal, such as the caloric value, quantity of ash, etc.

Sugar is sold on the Polish standards P.I., P.II and P.III, the characteristics of which are fixed and correspond to certain standards known and quoted on foreign markets. 10

On the sale of raw sugar the contract normally provides that a sample of the goods must be submitted for analysis by a sworn expert, who must also send samples to the chemists of the seller and purchaser for their opinion.

The quality of *timber* may be attested by the sworn broker at the Timber Exchange at Bydgoszcz or by a specially appointed expert. 11

At the request of the buyer, alcohol must be controlled and samples analysed by the Universities or Polytechnical Schools at Warsaw, Poznan, Cracow, Lwow and Lublin.

¹ No details are, however, available as to the manner in which these examinations are effected or certified.

PORTUGAL

CATEGORY 2.

1 The only liqueur wine which may be offered for sale, sold, warehoused, shipped or exported as *port wine* is that which is traditionally so described and comes from the Douro area, comprising the districts of Vila Real, Bragança, Viseu and Guarda.

A Decree of 1926 created at Vila Nova de Gaya a single and exclusive depot for the storage and exportation of wines of the delimited region of the Douro. No establishment situated outside the area of the depot and outside the delimited region will be allowed to export dessert wines under the traditional name of "port".

Exports of port wines shall be accompanied by a declaration expressly stating that such wines have an alcoholic content of 14°. Should the export casks contain wine which does not, in whole or in part, conform to the statements made in the relevant declaration, they are not allowed to leave the country, and the case is regarded as an infringement of the fiscal regulations.

In addition to this declaration, the Customs service will require an inspection certificate from the Gaya depôt. This inspection will be carried out by the inspection service of the Douro Viticulture Commission.

With a view to the application of these provisions, the Viticulture Commission shall create and register a seal, stamp or impression which it shall have affixed as an exclusive mark of the depot or of the delimited region of the Douro to all containers (barrels, casks, bottles, etc.) leaving the depot or the region in question. Wines of the Douro may only be placed in barrels for exportation in the depot established at Gaya or in the delimited region of the Douro.

After April 30th, 1930, it is forbidden to export to countries where Customs duties are imposed on the basis of the alcoholic strength, port wines having less than 18° of alcohol and less than 2° Baumé of sugar (except in the case of port in bottles). Any dessert wine despatched from the region of the Douro must, if it has a sugar content below 2°, have an alcoholic content of at least 20°.

Port wines may only be exported by the exporters entered in the special register kept by the Control Commission for the Export of Port Wine. Exporters of liqueur wines in the Douro area and Oporto merchants who have purchased such wine may be entered on the said register.

The list of exporters entered in this register is published annually, before June 15th, in the *Diario do Governo*. Any exporter charged and convicted of adulterating wine or of fraud in connection with wine has his name removed from the register of exporters, in addition to the penalty imposed by the Court.

An organisation of exporters of port wine was formed on December 10th, 1921, comprising persons who hold permits for the export of this wine. There is a Control Commission for the Export of Port Wine, consisting of the Director of the Oporto Customs, acting as Chairman, the Chairman of the Douro District Wine-growers' Committee, the Chairman of the Managing Committee of the Association of Exporters of Port Wines, and an official representative of the General Board of Agricultural Services, appointed by the Minister of Agriculture.

Among the duties of the Control Commission for the Export of Port Wines are the following: To draw up a register of exporters of port wines, to send the Government a copy of the complete list of exporters, to draw up a register of port wine exporting houses, to check monthly the books of firms entered in the register of exporters and the current account balances of each, to decide claims regarding such balances, to check, whenever desirable, the stocks of liqueur wine in exporters' warehouses, and to issue, at the request of registered exporters, certificates of origin for abroad for wines of the district.

Export declarations for port wines must be made out on printed forms of a special type and colour.

2 The despatch of *alcohol* in the region of the Douro is subject to regulation between November 10th and June 30th. The sender must declare twenty-four hours in advance to the Douro Viticulture Commission the quantity of alcohol he wishes to despatch, the name and address of the recipient and the purpose for which the alcohol is intended.

Furthermore, persons in possession of spirits (*eau de vie*) must once a year declare the quantity they have in stock and, between November 10th and June 30th, may neither sell nor employ spirits without informing the Douro Viticulture Commission.

3 To avoid all confusion between dessert wines and *table wines* of the delimited region, table wines may only be exported by large firms entered in a special register. (As table wines are

regarded those whose alcoholic content is less than 13° C. and whose sugar content is less than 1° Baumé.) All receptacles containing table wines must carry a distinctive mark.

A mark of guarantee shall be created for *Colares wines*. This mark, which shall be affixed to the bottles, shall only be granted in respect of wines which have been duly analysed; it will be supplied, on payment of a fee, by the "Adega Social Regional de Colares" when these vaults have been established, and meanwhile by the Colares District Viticulture Commission.

ROUMANIA.

CATEGORY 1.

1 The Law for the regulation of the trade in and utilisation of *methyl alcohol*, published in the "Moniteur Officiel" of April 16th, 1929, No. 83, contains provisions dealing with the manufacture and use of both crude and pure methyl alcohol. It is absolutely forbidden to use methyl alcohol in any form for the preparation of any kind of alcoholic liquors or medicaments for internal or external use, as well as in perfumery and articles used for cleaning the teeth, the hair and the skin.

This product may only be sold to industries authorised by the Ministry of Public Health to use and transform methyl alcohol.

Offenders against these regulations are liable to imprisonment for from two months to one year, and to a fine of from 20,000 to 100,000 lei (Article 18); these sentences may be increased if the alcoholic liquor thus adulterated caused death, or injury to health.

2 The Law for the prosecution and punishment of fraud in the preparation of, and trade in, *alcoholic liquors*, of June 4th, 1927, severely punishes any person in possession of, or forwarding or offering for sale as *wine*, any liquor other than that obtained from the fermentation of fresh grapes or grape must.

4 *Wines prepared by a "Champagne" process and sparkling wines* are manufactured solely from natural wine.

5 *Liqueur wines* are wines with a 15 to 20 per cent alcoholic content (volume) and not more than of 200 grammes of sugar per litre.

6 *Alcoholic fruit beverages* are those in which the alcohol, the aroma and the special flavour are produced by the fermentation and distillation of the residue of fruits, of grape wine or wine lees.

7 *Pure alcohol* is ethyl alcohol concentrated to at least 92 per cent; it is obtained by alcoholic fermentation of cereals, farinaceous substances, potatoes, roots, molasses and any other sugary or amylaceous matter, by distillation and refining.

8 Articles 62 to 65 of the Public Health Law provide for the *inspection of foodstuffs and beverages*, the penalties for offences varying from 100 to 10,000 lei fine and one to three years' imprisonment.

9 Legal regulations specify how alcohol and alcoholic beverages are to be controlled and analysed, and how *oils and aromas, juices, etc., wines, beer, sugar, honey, coffee, tea, farinaceous pastes, milk, and derivatives of milk, butter, margarine, fat, carbonic acid* are to be made.

There are legislative provisions governing the manufacture and composition of:

10 1. Cheese obtained from partly skimmed cow's milk; the content of water may not exceed 75 per cent.

2. Cheese from ewe's milk must contain at least 45 per cent of fat in the dry state.

3. Ordinary cheese, manufactured from a mixture of partly skimmed cow's milk and ewe's milk, or from a mixture of ewe's and cow's cheese, must be so prepared that the product contains at least 30 per cent fat in the dry state.

The law also contains a number of provisions prohibiting the addition of harmful, or merely foreign, substances to those which usually enter into composition of cheese. The manufacture of, and trade in, artificial cheese is also regulated by law.

The latter kind of cheese must be entirely coloured a bright red on the outside, and, wherever such cheese is offered for sale, the notice "Dealer in artificial cheese" must be conspicuously posted up.

11 It is forbidden in Roumania to sell *sewing cotton* in packages the labels of which do not specify the length in metres.

CATEGORY 2.

12 The Law for grading *cereals* of May 16th, 1928, introduced a system for the classification and warehousing of cereals in the domestic trade in, and export of, cereals.

Cereal grading is carried out annually in accordance with types fixed on the basis, as far as possible, of the chief types recognised on the world markets.

The annual list of types may only be modified by a Royal Decree, confirming a decision of the Council of Ministers following on a proposal, with a statement of reasons therefor submitted by the Supreme Board for the Grading of Cereals.

On the introduction of the grading system cereals may no longer be exported except on the basis of a grading certificates issued in accordance with the rules laid down in the law and the relevant executive regulations.

(a) *General grading.* — As a preliminary to special grading, cereal crops when harvested are graded generally with a view to apportioning the current year's crop among the types or standards laid down by the regulations.

For this purpose, the agricultural authorities take samples of cereals as laid down in the regulations and forward them to the Supreme Grading Board. The latter then arranges them according to the standard types and prepare systematic tables of the results of the grading.

The above types are used for the special grading.

(b) *Special grading.* — Special grading means the inspection of any quantity of cereals of a well-defined character in a particular type.

Grading is carried out by the employees of warehousing enterprises, who issue for each lot a certificate specifying the type to which it corresponds.

In the case of each grading operation two samples of the goods are taken and sealed, one sample being handed to the owner and the other kept by the warehouse.

The grading certificate shows the type of the goods, the name of the grader and of the person issuing the certificate, as well as the date and the district to which the classifier belongs.

The certificates shall be made out in a register containing counterfoils and handed to the person depositing the goods.

Law of 1910 introducing the *metric system of weights and measures*, together with the amendments of 1921 and 1922, and the executive regulations of the Law of May 1st, 1910—the metric system of weights and measures is the only one which may be used in Roumania; no other units of measurement may be employed. 13

Law concerning the control of *precious objects and metals* of February 15th, 1906, and the relevant executive regulations with amendments of 1925. All gold and silver articles manufactured in Roumania or imported from abroad are subject to Treasury control in respect of their standard of fineness. Various penalties are provided for persons guilty of fraud or other offences. 14

Regulations for the issue of *certificates of origin and of health for animals* and for raw animal products, dated January 21st, 1904. Chapter II of this law introduces certificates of origin and of health for animals for export, and Chapter IV lays down provisions regarding the export of raw animal products and insists on certificates of origin. 15

SWEDEN.

CATEGORY 1.

It is forbidden to import into Sweden goods bearing a false indication of origin, to give goods a false indication of origin or to offer for sale goods bearing such false indication. It is also forbidden to convey a misleading idea of the origin of foreign-made goods by marking them in such a way as to give them the appearance of having been produced or manufactured in Sweden.

1-2 Foodstuffs may not be offered for sale under a specific description if their composition differs from the normal composition of goods corresponding to that description. This provision applies more particularly to *milk, butter, margarine, fat, flour, sugar, honey*, etc. There are special provisions for preventing foodstuffs being offered for sale the consumption of which may be thought harmful to health; some of these provisions aim at keeping foodstuffs free from toxic substances; it is 3 forbidden, for example, to offer for sale *cosmetics* containing lead alloy or poisonous dyes, *children's* 4 *toys*, coloured or printed in poisonous colours, as well as various articles containing arsenic in a quantity exceeding the authorised amount.

The manufacture of, and trade in, drugs are subject to special provisions.

5 Any factory producing *pig-iron* and *steel* or any other form of crude iron must possess a stamp registered in the prescribed manner, with which its products must be marked. If articles brought to be weighed, offered for sale or conveyed to a station for loading do not bear the prescribed mark, or if such mark is indistinct and does not enable the factory of origin to be ascertained, the goods are seized and may only be offered for sale in the country or exported after having been stamped in accordance with the legal provisions.

6 Under the International Convention prohibiting the use of white phosphorus in the *match* trade, a decree prohibits the manufacture, sale or introduction into Sweden of matches the inflammable portion of which contains ordinary phosphorus.

CATEGORY 2.

7 *Natural butter*, except unsalted butter, may only be exported in containers bearing the mark "Runmärke". Butter of a quality entitling it to this mark may not contain more than 16 per cent water. Inspection is carried out by an office called "Svenska Smörprovningarna", which aims at encouraging the production in Sweden of butter which is both of good quality and suitable for the requirements of foreign trade. Samples may be drawn and submitted for examination to the various inspection offices.

8 Fresh, raw or preserved *meat*, as well as the edible portions of cattle, sheep, goats, pigs, or horses, may only be exported, apart from exceptional cases, if the meat or its wrapping bears a special mark and is accompanied by a certificate drawn up and issued in the form prescribed by an inspector.

This mark may only be used if the animal from which the meat is derived was slaughtered in a public slaughter-house or at a so-called "export" butcher's, and if the meat, after having been inspected in accordance with the regulations in force, has been passed as fit for consumption. A further requirement is that it should have been preserved by authorised methods only and that the regulations of the countries to which the meat is being exported have been complied with. Inspection and marking are carried out at the public slaughter-house by a special inspector.

9 *Sides of salt pork* (bacon and ham) which have undergone a special treatment may be given a manufacturing mark registered in Great Britain called "Runmärke" guaranteeing that the meat has been passed for export to Great Britain.

10 The export by sea of *live-animals* (*ruminants, equines* or *swine*) is only permitted if a competent veterinary surgeon has inspected them immediately before shipment and issued an export permit; furthermore, all animals passed for export must be marked in a special way in the presence of a veterinary surgeon.

11 *Margarine, margarine cheese* and *artificial fat* may only be exported if a certain amount of potato flour is added to the margarine (a certificate to this effect must be submitted to the Customs

authorities) and packed and marked in a special manner. A certain quantity of sesame oil must be added to the margarine cheese and it must be pressed in a particular way. Artificial fat must be specially packed and marked.

Cheese, in order to be offered for sale or sold as fat or semi-fat cheese, must be marked with a red or blue band, at least 2 centimetres in width. Fat cheese is cheese which, in the dry substance, has a fat content of at least 45 per cent; semi-fat cheese is cheese with a fat content in the dry substance of at least 30 per cent. Cheese, the fat content of which is less than 30 per cent or which is not marked as above, may, further, not be offered for sale or sold under any description which gives its value in terms of fat content. In no case may cheese be offered for sale or sold under a description stating that it is of better quality than fat. 12

There are a number of special provisions dealing with the preparation of *sole leather*. Sole leather must not be made heavier by means of substances which are not indispensable for tanning and dressing. Certain substances may only be used in very small quantities for bleaching and dressing. The maximum added weight permissible is also stipulated. The Government Testing Station is instructed to make investigations with a view to ascertaining whether, in accordance with the rules laid down by the Administration, such maximum has been exceeded. Leather must bear a special stamp indicating the name of the manufacturer or importer. 13

A Decree of May 9th, 1919, contains provisions for the use of cardboard, artificial leather or artificial cardboard-leather in the manufacture of *footwear* and for their importation. The use of cardboard is forbidden. Artificial leather and artificial cardboard-leather, as well as fibre cardboard chemically prepared, is only permitted for certain portions of footwear. Here again the Government Testing Station conducts the necessary investigations to see whether these provisions have been observed. Footwear manufactured in Sweden for commercial purposes must be marked with a special stamp should any of the above-mentioned substitutes have been used in the manufacture, and must further be stamped with the registered trade-mark of the factory or the business name of the manufacturer. Similar provisions are in force for imported footwear. 14

Gold, silver or platinum articles of a certain minimum fineness are controlled by the authorities and are hall-marked to show their fineness and as a warranty. The responsible authority is the Administration of the Mint and Inspection of Weights and Measures. Subject to certain special conditions, export may always be effected without complying with the domestic regulations for gold, silver or platinum articles. There are special provisions for preventing confusion between articles made of precious metals and other articles, one of these being a prohibition to place official marks on the latter. 15

CATEGORY 3.

Agricultural Organisation Societies (*Hushållningssällskap*), have set up in several provinces a system for the inspection of *cheese* manufacture. Products passed by the experts appointed by these Societies are marked "Kronmärket" (Crown Mark). 16

Several associations have also been formed with a view to giving consumers certain guarantees for the *eggs* sold by their members, this being done by means of a special mark on the eggs. 17

Under a Law of March 15th, 1918, societies founded to protect the interests of merchants or manufacturers may secure, by registration, the exclusive right for their members to use a specific trade-mark. A number of marks have thus been registered for such articles as *fruits, fish* and *honey*. 18

CATEGORY 4.

A special certificate to the effect that *matches* do not contain poisonous phosphorus is issued, after examination by special inspectors, for matches for export to the United States of America. 19

At the request of the parties concerned and on receipt of a scheduled fee, the Government Testing Institute at Stockholm investigates and tests raw materials used in industry and manufactured articles and gives an expert opinion on their mechanical, physical and chemical properties. The Institute is managed by a specially qualified Board of Directors appointed by the Government. The tests are treated as confidential if the customer so desire.

The Institute is divided into five sections dealing respectively with: (1) microscopic and thermic investigation of metals and inspection of steel manufactures; (2) testing of building materials, cement, etc.; (3) physical examination of electrical and other instruments; (4) chemical

analyses and assaying of ores, minerals, etc.; (5) chemical analyses and sampling of cellulose, pulp, paper, coal, oil, hides, etc.

The following institutions also carry out, at the request of the parties interested, examinations, tests or analyses of goods which come within their sphere of activities:

Butter Control Office;
Central Inspection Office for Potatoes;
Veterinary Inspection Office for Slaughterhouses and Export Butcheries;
Matches Control Office;
Administration of the Mint and Inspection of Weights and Measures;
Chemical Laboratories for Agriculture and Industry;
Norrbotten Laboratory for Chemistry and Vegetable Biology;
State Central Institute for Seed Testing;
Local Seed-Testing Stations;
Ultuna and Alnarp Testing Stations for Agricultural Machinery and Implements.

CATEGORY 5.

Certain provisions in the Penal Code, *e.g.*, paragraphs 7 and 8 of Chapter 12 and paragraphs 1, 3, 4, 5 and 13 of Chapter 22, contain penalties for fraud in trade or business.

STANDARDISATION AND SPECIFICATION.

The central body for standardisation is the Standardisation Commission of Swedish Industry (Svenska Industriens Standardiseringskommission), composed of representatives of the public authorities, economic organisations and consumers. At the request of the bodies interested, the Commission, after examination, determines Swedish standards and specifications. Up to the present these have been laid down mainly for machinery, certain parts of agricultural implements, and electrotechnical nomenclature. At the present time new standards and specifications are being prepared for the above and other branches of technical and industrial activity. The Standardisation Commission is affiliated to the International Standards Association (I.S.A.) and thus shares in the international co-operation organised for standardisation. As regards standardisation in the sphere of electrotechnics in particular, the Commission belongs, through special committees, to the International Electrotechnical Commission (I.E.C.) and the International Commission on Illumination.

SWITZERLAND.

CATEGORY I.

The trade in *foodstuffs* and in *household articles* and *articles of everyday use* which may endanger health or life are subject to cantonal or federal inspection. I

Every canton possesses a laboratory for the chemical, physical and bacteriological analysis of the above-mentioned foodstuffs and articles. There are even communal laboratories in certain communes.

Each canton appoints an adequate number of inspectors of foodstuffs, and in each commune or group of communes there is a local sanitary authority.

Inspectors are empowered to inspect the state of premises, apparatus and installations used for the manufacture, production, handling, preservation and sale of goods and articles liable to inspection. They are entitled to take samples for analysis.

Defective goods may be seized and, if necessary, destroyed.

The Confederation exercises supervision along the frontiers through the Customs bureaux and frontier veterinary officers. Customs officials in the Swiss Customs bureaux and warehouses inspect all goods coming from abroad which are liable to such inspection.

An Ordinance of the Federal Council promulgated in 1909 and twice revised (the second time in 1926) lays down the provisions which apply to goods being traded in, *i.e.*, imported, offered for sale or sold, or manufactured or stocked for sale.

The Chapter of general provisions was considerably amplified in the 1926 Ordinance. It lays down, in general, that foodstuffs must not contain any harmful substances. It further prohibits the employment of preservatives, colouring matter, artificial sweetening, artificial aromas and all substances foreign to the composition of the product. The exceptions to these general provisions are specified in the Chapter dealing with the foodstuffs to which these exceptions apply.

The names to be given to foodstuffs are very strictly regulated in these general provisions. When it is not possible for the consumer immediately to recognise the nature of a product, that product must bear a clear and true description. Fancy names can only be used in conjunction with the specific name of the product; the descriptions employed must exclude all possibility of mistake as to the nature and origin of the product.

From the point of view of health in particular, the Ordinance requires the greatest cleanliness in the manufacture, production, handling, preparation, stocking, packing, transport and sale of foodstuffs. The premises utilised must comply with all the requirements as regards size, arrangement, lighting, ventilation, etc. Finally, the sanitary authorities may prohibit the employment of persons suffering from infectious diseases in the production, manufacture, handling and sale of articles of food.¹

Exceptions may be made to this Ordinance in favour of foodstuffs manufactured in the country solely for export. Any person wishing to manufacture the foodstuffs in question must hold a licence issued by the Federal Department of the Interior, which notifies the cantonal health authorities of all authorisations granted. The licence is granted for one year, but may be renewed if the conditions attached to the grant continue to be observed.

For purposes of verification, manufacturers must keep special registers showing the quantities of goods manufactured for export and the quantity and nature of the raw materials used; these registers may be inspected by the cantonal authority at any time.

Only full cow's milk, without any change in its composition, may be bought and sold as *milk*. The milk of animals other than the cow must be given its specific name. This also applies to mixtures.²

Milk having more than nine degrees acidity must be so described. Only perfectly healthy milk can be offered for sale or traded in.

The Ordinance specifies a whole series of conditions which may be a danger to public health and which therefore preclude the sale, etc., of milk.

¹ In addition to the indications given above, the Ordinance includes a whole series of rules concerning foodstuffs or articles which it has not been deemed necessary to indicate because they are generally only bought and sold locally; we have merely named here a few articles which are likely to be exported normally from Switzerland.

Any person desiring to engage in the milk trade must obtain permission from the local sanitary authorities.

Such authorisation may be refused or, if it has already been granted, withdrawn, if the applicant does not satisfy the requirements laid down in the Ordinance. The sanitary authority may officially inspect the animals milked and the manner in which they are cared for.

The vessels in which the milk is collected, filtered, refrigerated, transported, stocked or served out, may not be made of lead, zinc, galvanised iron, copper or untinned brass.

3 *Milk* partially or entirely *skimmed* must be described as such. It must give a dry residue without fat of 8.5 per cent at least. It may only be transported in vessels clearly marked "Skim Milk".

4 *Cream* may contain at least 35 per cent fat. Preservatives may not be added, or colouring matter or matter intended to thicken the liquid.

5 *Preserved milk* must be so described that the purchaser can recognise what sort of milk (full milk or skimmed milk) has been used in the manufacture. It may not contain preservatives other than sugar.

6 *Powdered milk* manufactured with full milk must contain at least 25 per cent fat.

Before milk can be offered for sale under a special name, such as milk for children, invalids, etc., a request must be addressed to the local health authorities, who may only grant permission to persons or enterprises which afford the necessary guarantees that they are able to supply milk of a special quality.

7 *Cheese*. — All cheese manufactured with milk which is not cows' milk must bear an indication of its nature, unless it already bears a generally-known special name.

Cheese must be described according to the amount of fat it contains such as fat cheese, three-quarters fat, half fat, quarter fat or skimmed milk cheese, corresponding respectively to a minimum content of dry fatty residue of 45, 35, 25, 15 per cent, and in the last case less than 15 per cent. For cheeses known as *cream cheeses*, the minimum amount of dry fatty residue must be 55 per cent; and in the case of *double-cream cheeses* 60 per cent.

All cheese called simply by its specific name (such as Emmental, Gruyère, Parmesan, etc.) without any mention of its fatty content, must possess the characteristics of fat cheese.

The cheese must not contain any foreign substance, apart from salt, except in the case of certain special cheeses to which certain substances have to be added (Roquefort, etc.). Cheese may be coloured.

No cheese may be sold or offered for sale to the rind of which mineral or other substances have been added with a view to increasing the weight.

8 Products similar to cheese, the fat of which is only partly derived from the milk of cows or other animals, must be described as *artificial cheese* and the cheese itself must be distinctly coloured red.

The receptacles and packings in which artificial cheese is put up for sale must bear a clear indication of the nature of their contents.

Any person desirous of manufacturing artificial cheese must make a statement to the cantonal sanitary authorities, indicating the premises to be utilised for this industry. Manufacturers must keep a factory register. The sanitary authorities may inspect this register at any time.

9 *Butter*. — Only fat obtained exclusively from cows' milk without the addition of any other fat may be sold or offered for sale as butter.

Butter prepared entirely or partly from milk other than cows' milk must be described by its proper name. The butter must contain at least 82 per cent fat.

When sold in pats the moulding of the pat must show the weight.

10 No preservatives other than salt may be added to butter and the proportion of salt must not exceed 2 per cent; *salted butter* must be described as such.

Butter may be coloured yellow, though artificially coloured butter must not be described as "summer butter".

Butter may not be treated with chemical products (soda, etc.).

11 *Preserved fruit and vegetables*. — These must contain no preservative except alcohol, vinegar, spices, common salt and sugar. Preserved fruits may be coloured.

12 *Honey*. — By honey is meant pure bees' honey.

13 The receptacles in which foreign honey is offered for sale or sold must be labelled "foreign honey" or indicate the country of origin.

14 Mixtures of foreign and Swiss honey must be treated as if they were foreign honey.

15 All honey so heated as to have lost its fermentative or aromatic constituents must be designated as "super-heated honey".

16 Sugary products which look like honey and possess the consistency of honey must be described as artificial honey or, according to their nature, molasses, table syrup, concentrated pear juice,

etc. Mixtures of these products with honey must be described as artificial honey. The names applied to these mixtures must not allow the purchaser to suppose that they contain honey.

The names "table honey", "Swiss honey", "honey of the Alps", etc., may not be used to describe any products other than pure honey.

Natural aromas may be added to artificial honey, and as a preservative, sulphurous acid, up to a maximum of 40 milligrammes per kilogram.

The receptacles in which artificial honey is offered for sale or sold must be conspicuously marked, in indelible letters, "artificial honey". Manufacturers must keep a factory register. The sanitary authorities may inspect this register at any time.

Preserves and jellies. — Preserves are preparations obtained by cooking fruit with sugar, glucose or invert sugar. Jellies are fruit juice with sugar added, which, when boiled, acquire the consistency of gelatine at the ordinary temperature, or decoctions of fruit treated in the same manner. 17

Preserves manufactured completely or in part with dried fruit must be designated as such. Fruit residue may not be employed in making preserves. To fruits which do not jelly may be added the juice of fresh apples or apple pectine to the extent necessary to ensure proper jellying, but not to increase the quantity of the product. Amylaceous products must not be used for the manufacture of preserves and jellies or any thickening substance apart from those mentioned above.

Benzoate of soda may be added to preserves and jellies to an extent not exceeding 1 gramme per kilogram, or the corresponding quantity of benzoic acid. Preserves and jellies may be coloured.

Chocolate. — Chocolate or powdered chocolate is a mixture of ground cocoa and sugar prepared in the usual manner with or without the addition of cocoa fat and spices. The mixture must not contain more than 68 per cent sugar or less than 16 per cent cocoa fat. Mixtures of cocoa powder and sugar which contain less than 16 per cent cocoa fat must be described as sweetened cocoa. Chocolate, chocolate powder and sweetened cocoa must not contain waste (shells, germs, etc.). 18

Special products consisting of cocoa and chocolate mixed with other ingredients (ground-nuts, oats, acorns, milk, honey, etc.) must bear a title indicating the fact, such as "Chocolate with ground-nuts", "Cocoa-oats", "Milk chocolate", etc. In the case of milk chocolate, the proportion of cocoa, cocoa fat and spices must be 25 per cent at least.

Chocolate and cocoa preparations may contain artificial sweetening, provided the sweetening is correctly mentioned in the description.

Material used for packing foodstuffs. — Papers for wrapping up foodstuffs must be as tasteless and odourless as possible, and must comply with all hygienic requirements. They must not contain, either in the pulp or in the colouring matter, any arsenic, barium, lead, cadmium or mercury or any compound of these metals, with the exception of baryta or cinnabar. The employment of baryta must not, however, cause any appreciable increase in the weight of the paper. The paper must not contain any colouring materials other than those authorised in Article 321. 19

Cardboard boxes and receptacles used for the direct packing of foodstuffs must comply with the requirements laid down in the above paragraph.

Metal sheets and tubes used for wrapping up foodstuffs must not contain more than 1 per cent lead or zinc, and must be free from arsenic.

Materials and tissues used for making clothing, clothes, colours employed as dyes. — Materials and tissues used for making clothing and clothes themselves must not contain any arsenic. 20

These materials and tissues must not be dyed with colours containing picric acid or coralline, or any other harmful colouring matter which may be easily reabsorbed.

Forage, seeds, fertilisers and similar products intended for agriculture are rigorously inspected by Federal institutions for agricultural tests and analyses. 21

Pharmaceutical specialities and patent medicines are controlled by an inter-cantonal office, and the trade in these specialities and medicines is regulated by cantonal law. 22

Watch cases and other articles, gold-plated, gilded, silvered or platinised. — The description "gold-plated" and warranties of durability such as "guaranteed for five, ten, or twenty years" are only allowed when the watch cases or other articles are covered with a layer of gold which resists the action of nitric acid at 25° Baumé. The minimum fineness of the gold layer must be 10 carats, but in no case may plated gold, or merely gilded articles bear an indication of fineness in carats or thousandths, for instance, "gold-plated 14 carats", these indications being reserved for gold and silver articles; nor may any indications be given concerning the proportion (per cent or per thousand) of metal in the plated layer, for instance "guaranteed plated 50 ‰ or 50 grammes per kilogramme". 23

A Decree of the Federal Council lays down further conditions for gold leaf.

Plated articles must bear the maker's mark.

Watch-cases and other articles covered with too thin a layer of gold, or gold the fineness of which is under 10 carats, may only be sold as "gilded metal".

Special descriptions containing the word "or" (gold), such as "Orfixe", "Oridéal", etc., are not authorised for imitation articles.

24 *Plated, gilded or silvered articles* are verified on importation as regards their marks or labels but are not stamped.

Articles in silvered metal may not bear descriptions combined with the word "argent" (silver), or its translation in another language, as for instance, "Alpacca-Silber", "Wellner-Silber", etc. On the other hand, the weight of fine silver deposited on silver-plated table knives, forks and spoons may be indicated.

The specifications "platinine", "platinon", etc., are allowed in the case of platinised articles provided the word "metal" is also used in connection therewith.

CATEGORY 2.

25 *Electric meters.* — Official verification and stamping. Ordinance of December 9th, 1916 (Collection of Swiss Laws, No. 60, December 15th, 1916):

"All electric meters for measuring the consumption of electric power for the determination of the price must be officially checked and stamped.

"The official testing of meters intended for use in commerce is carried out by authorised testing bureaux, which only undertake to test meters the system of which has been approved by the Swiss Commission on Weights and Measures, on the basis of a verification of the system carried out by the Swiss Bureau for Weights and Measures.

"Testing includes a number of specified experiments to ensure whether the meters fulfil the necessary conditions.

"The stamp of the testing bureau is placed on meters which have been officially tested and have satisfied the requirements. A test certificate is issued by the bureau for each apparatus.

"The conditions which the testing bureaux must satisfy are laid down by the Commission on Weights and Measures. The bureaux may not carry out any tests other than those specified. Only officials of the testing bureaux authorised for the purpose by the Bureau for Weights and Measures may carry out official tests and stamping. These officials are required to prove that they possess the necessary scientific and practical knowledge. They are placed on oath.

"By means of periodical inspections the Bureau of Weights and Measures sees that the provisions of the Ordinance are accurately applied, verifies the apparatus, etc.

"A stamp is valid for ten years, after which the meters must be re-examined and re-adjusted."

26 *Watch-cases, jewellery and other articles in precious metals.* — All gold and silver watch cases bearing a legal indication of the fineness of the precious metal or marked with one of the "gold" or "silver" marks must also be marked with the Federal control stamp. In the case of other gold or silver articles, stamping is optional. On watch cases of low fineness (below 0.583 (14 carats) in the case of gold and below 0.800 in the case of silver) which bear an indication of their fineness, such indication must be accompanied by the manufacturer's mark (responsibility mark). Watch cases of gold of low fineness may be stamped with an official countermark ("small Federal cross") verifying the fineness, provided the latter is not less than 8 carats (0.333). The word "gold" or "silver" can, however, only be used in connection with cases and articles containing not less than 14 carats gold and 800 thousandths silver.

27 Watch cases in white gold (gold combined with palladium, nickel or aluminium) are subject to obligatory control in the same way as watch cases of gold of another colour.

28 Watch cases and other articles in platinum, whether the fineness is indicated or not, must bear the Federal control stamp. The minimum fineness is 0.950.

29 *Platinum articles* are subject to compulsory official inspection; the minimum fineness is 0.950.

30 Imported watch cases, jewellery and articles of precious metal are invariably controlled on importation. The fineness required by law is the same as in the case of articles manufactured in Switzerland. The fineness must be indicated in the case of gold and silver ware; this rule does not apply to platinum articles. Gold articles containing a low percentage of gold are specially stamped; the fineness of these articles may not be less than 8 carats (0.333); they may not be sold as "gold".

The control stamps are as follows:

(a) For articles manufactured in Switzerland:

1. 18 carats gold (0.750) and over, a head (Helvetia);
2. 14 carats gold (0.583) and over, a squirrel;
3. Silver 0.875 and over, a bear;

4. Silver 0.800, a black-cock;
 5. Platinum 0.950 and over, a chamois head;
- (b) Imported articles:
1. Gold, 14 carats and over, a lynx's head;
 2. Silver 0.800 and over, an edelweiss;
 3. Platinum 0.950 and over, an oval containing the letter E ("Etranger");
 4. Gold articles from a fineness 14 carats (0.583) down to 8 carats (0.333), an oval containing the letter A ("Ausland").

All the stamps also bear within the frame surrounding the design or letter a distinctive sign making it possible to identify the bureau at which the articles were stamped.

There are control bureaux in the following places: Bienne, La Chaux-de-Fonds, Délémont, Fleurier, Geneva, Granges (Soleure), Le Locle, Neuchâtel, Le Noirmont (Bernese Jura), Porrentruy, St. Imier, Schaffhausen, Tramelan.

Under the Commercial Treaty now in force between Italy and Switzerland, every consignment of *colours in vats* or of *gallo-cyanine* to Italy must be accompanied by a special certificate issued by the Basle Chamber of Commerce attesting the quality of these goods. 31

CATEGORY 4.

Each canton is bound to set up and maintain a cantonal laboratory for the chemical, physical and bacteriological analysis of foodstuffs and of certain household articles and articles in general use.

The cantons may authorise these laboratories to conduct analyses other than those for which they were expressly established.

Certificates for chronometers and precision clocks. — The astronomical and chronometrical observatories of Neuchâtel and Geneva receive chronometers for observation. The latter are divided into three categories: marine chronometers, ship chronometers and pocket chronometers. 32

After the regulation tests, the observatories issue certificates for the chronometers which have satisfactorily passed the tests for their category. The certificates vary in form and colour according to the tests made and include the following indications: description of the article; detailed table of the working and variations of the chronometers during the tests and the general results deduced therefrom; a copy of the rules.

The four main criteria for the regularity of a chronometer are, in the Observatory in Neuchâtel: (a) the average diurnal variation from absolute regularity; (b) the average variation corresponding to change of position; (c) compensation, which is estimated according to the thermic coefficient and the residual error of the compensation; (d) the resetting in motion.

The Geneva Observatory employs three main criteria to judge the value of a chronometer: (1) the average diurnal variation from absolute regularity; (2) the average variation from period to period or the average variation corresponding to change of position: the error of compensation for 1 degree Centigrade.

Tests for complicated mechanism and for checking clocks and watches for science or sport are carried out in both observatories.

The Observatory of Neuchâtel receives, for observation, precision clocks which are subjected to special tests. It issues certificates of regularity for clocks which fulfil the prescribed conditions.

Official Testing Office for watches of Genevese manufacture. — In the Canton of Geneva there has existed since 1886 an official testing office for watches of Genevese manufacture. Testing is optional.

Watches which are found, after testing, to reach the requisite standard of workmanship, and on which a certain minimum amount of work—in accordance with special rules on the subject—has been done by workmen living in the Canton of Geneva, are officially stamped with the arms of the State.

This stamp is made on the plate and on one of the bridges of the movement.

Apart from the stamp, the testing office also issues, if requested to do so, a certificate indicating the regularity of the watch, or, in the case of small watches which the purchaser is unable to open easily, a certificate of origin.

Apart from the stamp, a watch passed as satisfactory is provided with a ticket attached to the pendant, on one side of which is printed "Geneva watch" and on the other "officially tested".

The Testing Committee set up by decree of the Grand Council, has drawn up a number of technical rules for manufacture and has specified the conditions which watches must fulfil in order to obtain the stamp.

Regularity tests for watches. — Official offices for testing the regularity of watches exist at Bienne, La Chaux-de-Fonds, Le Locle and St. Imier. These offices accept watches sent to them to be subjected to various tests including the test for regularity. Different tests are provided for watches which have to be wound up every day, eight-day watches and wrist watches. 33

After the tests have been carried out, watches which fulfil the conditions laid down in the rules of the offices are accorded a certificate containing a detailed account of their degree of regularity, diurnal variations and the results of the observations. On the back of the certificate are printed the rules for the tests. The certificates are issued in French, German or English, as the applicant desires.

When the results obtained do not exceed 50 per cent of the figures laid down for the issue of the certificate, the certificate also contains the phrase "*particularly good results*".

These offices also undertake to verify other apparatus for measuring time, but in this case they only issue a simple statement concerning regularity if the mode of observation differs from that laid down in the rules.

The Federal Laboratory for testing materials (which is an annex to the Federal Polytechnic School at Zurich) carries out, on receipt of samples and for a fee varying according to circumstances, tests on a large number of materials, mainly building materials, metal wires, leather belts, cables, gas containers, fats, oils, paper, clay, chemical analysis, etc., and issues reports on the results obtained.

The Swiss Testing Station at St. Gall is an institution subsidised by the Federal Department of Public Economy, by the town of St. Gall, by the Commercial Directorate of St. Gall and by the principal groups of Swiss textile, leather and soap industries.

The institution is of an official character; it places itself at the disposal of the public for carrying out tests and analysing the various products of the above-mentioned industries. As the testing station does not operate for profit, the cost of analysis and tests is very low.

The tests and analyses are made in respect of samples furnished by the persons concerned, or samples taken during visits or experimental tests in the industrial establishments which have applied to the testing station for information, inspection, etc.

The station has three departments:

- Department I. Textile industry;
- Department II. Leather industry;
- Department III. Technical fats and oils and soap industry.

Each of these departments carries out all the physical and chemical tests requested by the industries concerned. These tests refer either to raw materials or to intermediary products, or to by-products and finished products. The station conducts chemical or physical analyses of every kind, tests and verifications for ascertaining irregularities in manufacture and remedies therefor. Consumers can also apply to the testing station and often do so in the case of litigious disputes.

34 Department I, *textile industry* (and *straw industry*), examines natural or artificial fibres, by-products and finished products and substances used in preparing textiles (bleaching, mercerising, dyeing and printing, preparation of yarn and tissues, etc.).

35 Department II, *leather industry*, similarly deals with raw materials (*hides and skins, tanning products*), by-products and finished products (leather) connected with the manufacture and use of leather.

36 Department III, *technical fats and oils industry* and *soap industry*, is used by the industries which employ fats and manufacture either soap or sulphurated oils and lyes. The materials dealt with include alkalies, salts, glycerine, soaps, lyes, sulphurated oils, etc.

37 The *Zurich and Basle silk testing institute* which operates like those at Lyons and Milan, is a company which grades and weighs silk at the request of the persons concerned. It communicates the results of its operations to its clients by means of bulletins, which are accepted as final by both buyers and sellers. The results are assessed according to the Zurich raw silk trade usages. In practice, when a foreign firm buys silk in Switzerland, it has the silk sent to the company's establishments by the seller, who places it there at the proposal of the buyer. The latter indicates the tests he wishes to have made, and if these are satisfactory, he causes the weight to be verified before the consignment is sent off.

38 With regard to *machinery*, current practice is not to take delivery until tests have been carried out in the presence of qualified agents designated by the buyer.

Mention should be made of the laboratory of the Swiss Association of Electricians at Zurich, the Agricultural Testing Office at Oerlikon, the agricultural chemical establishments at Liebefeld, near Berne and at Lausanne, the Seed-Testing Institute at Lausanne, the Dairy Industry and Bacteriological Institute at Liebefeld, the Experimental Arboricultural, Viticultural and Horticultural Station at Wädenswil, and the Federal Viticultural Experimental Station at Lausanne.

All these institutions carry out official work and any enquiries and tests requested by private persons.

When private persons apply to commercial or industrial associations to have an expert opinion regarding goods, these associations either merely recommend experts, without any guarantee on their part, in which case the authority of the experts is considerably diminished, or, in some cases, the associations regard the experts as their representatives, investing them with their authority, in which case they can only be regarded as agents of the associations. In the latter case, under Article 55 of the Swiss Civil Code, the associations are bound by the acts of the experts they have appointed and are in particular responsible for their faults, in addition to the personal responsibility of the experts, but jointly and severally with the latter.

UNION OF SOUTH AFRICA.

CATEGORY 1.

All *dairies* must be registered by law at the Ministry of Agriculture. Each dairy is given a number of which it has the exclusive use for its products. Qualified officials are entrusted with the execution of all the legal provisions and furnished with the necessary powers for the purpose. 1

Foreign dairy produce may only be dealt in, provided its foreign origin is clearly indicated on the wrapping.

CATEGORY 2.

Cheese may only be exported through the ports of Durban and Cape Town. The General Superintendent of Dairies must be informed of all shipments abroad. 2

In submitting a request for exportation, the producer must declare the quality of the cheese. Inspection is carried out by officials chosen by the Minister in question. Cheese is inspected and graded on premises authorised by the General Superintendent of Dairies at the port of embarkation.

There are three grades, first, second and third, depending on the taste, quality (including appearance), compactness, colour, salting, finish, and general appearance. A certain number of points is awarded for each of the above qualities, and the grading depends on the total number of points obtained.

Cheese must be packed in crates or cases which the inspector thinks are suitable and sufficiently stout for transport purposes.

The date of manufacture and the contents are indicated on the left corner of each package by means of a series of letters or figures.

On completion of the examination the inspector places on each crate or case a distinctive stamp or mark showing the grade.

The inspector issues a grading certificate to the manufacturer, an export certificate to the forwarder, and a loading permit to the shipping company. Inspectors have the right to take the samples required for their work.

The Association of Soft-Cheese Manufacturers employs a trade mark which is placed on the cheeses and indicates the guaranteed percentage of fat. This mark is green for fat cheeses (45 per cent), brown for half-fat cheeses (30 per cent), and blue for skim-milk cheeses containing less than 30 per cent fat.

- 39 Control is optional in the case of *jewellery and articles in silver and gold of Swiss manufacture*. Articles which have not been officially assayed may not bear any other indication, concerning their composition or the alloy, than that of their actual degree of fineness. If they bear this indication, they must also bear the producer's mark or sign. Articles with a small percentage of precious metal (below 0.583 in the case of gold and 0.800 in the case of silver) cannot be sold
- 40 as "gold" or "silver" without special mention of the degree of fineness. Articles in *white gold* are assayed in the same way as articles in gold of another colour. White gold may not be amalgamated with platinum unless the fact is very visibly indicated.

CATEGORY 5.

Penalties are imposed on:

- 41 (a) Any person who imitates or adulterates (with a view to deceiving the public) *foodstuffs* intended for sale;
- (b) Any person who offers adulterated goods for sale;
- (c) Any person who has rendered foodstuffs or other articles, subject to inspection, dangerous to health or to life;
- (d) Any person who has sold, offered for sale or traded in such articles and foodstuffs.

On a second conviction the penalties may be doubled. If any of these offences is committed by a person in the pursuit of a trade or industry, the Court may declare that the offender has forfeited his right to carry on the said profession or industry for a period varying from one to fifteen years. The Court may also order the judgment to be published in the press.

UNITED STATES OF AMERICA.

CATEGORY I.

The act of June 30th, 1906, forbids the manufacture, sale or transportation of adulterated or misbranded or poisonous or deleterious *foods, drugs, medicines, and liquors*, and for regulating traffic therein, and for other purposes. I

The provisions of this Act apply to foods and to drugs which have been shipped or delivered for shipment in interstate commerce, or which are exported or offered for export to foreign countries, or which are being transported in interstate commerce for sale or have been transported in interstate commerce, or which have been received from a foreign country, or which are manufactured, sold, or offered for sale in the district of Columbia, territories of the United States, or insular possessions.

(a) Drugs recognised in the United States Pharmacopœia or National Formulary for which methods of analysis have been prescribed in the said Pharmacopœia or National Formulary shall be analysed by these methods.

(b) All foods and such drugs as are not included in paragraph (a) of this regulation shall be analysed by the methods prescribed by the Association of Official Agricultural Chemists, when applicable, provided, however, that any method of analysis or examination satisfactory to the Food, Drug and Insecticide Administration may be employed.

(c) All foods or drugs for which no methods of analysis have been prescribed, either in the Pharmacopœia or National Formulary or by the Association of Official Agricultural Chemists, shall be analysed or examined by methods satisfactory to the Food, Drug and Insecticide Administration.

Any wholesaler, manufacturer, jobber or other party residing in the United States may furnish to any dealer to whom he sells any articles of food or drug a guarantee that such article is not adulterated or misbranded within the meaning of the Federal Food and Drugs Act.

Each guarantee to afford protection shall be signed by, and shall contain the name and address of, the wholesaler, manufacturer, jobber, dealer or other party residing in the United States making the sale of the article or articles covered by it to the dealer, and shall be to the effect that such article or articles are not adulterated or misbranded within the meaning of the Federal Food and Drugs Act, specifically designating the said Act.

The term " food " includes articles used for *confectionery*. The provisions of the Act relating to food, as well as the specific provisions relating to confectionery, apply to confectionery. 2

An article of food shall neither be covered with a powder nor reduced to a powder in such manner that damage or inferiority is concealed.

A poisonous or other deleterious ingredient shall not be added to an article of *food* in such quantity as may, by any possibility, render the article injurious to health. Any ingredient artificially introduced into an article of food is an added ingredient. 3

A food to which a preservative is applied externally must bear on the covering or package directions for the effective removal of such preservative.

(a) Only harmless colours and harmless preservatives may be used in articles of food.

(b) A colour, preservative or other substance, even though harmless, shall not be used in the preparation of any article of food in a manner whereby damage or inferiority is concealed.

(c) The Secretary of Agriculture shall determine from time to time the wholesomeness of colours, preservatives and other substances which are added to foods, and shall make public announcement, in such manner as he may deem appropriate, of the results of the investigations. When so published, the results of the investigation shall serve as a guide in enforcing the Act.

The label shall bear, plainly and conspicuously displayed, all the information specifically required by the Act—*e.g.*, the quantity of the contents of food in package form, in accordance with Regulation 26, and the quantity or proportion of the drugs named in Section 8 of the Act, in accordance with Regulations 24 and 25. The label shall also bear such other descriptive matter as the character of the product may require.

The term " label ", as used in the Act, includes any legend and descriptive matter or design appearing upon the article or its container, and also includes circulars, pamphlets and the like

which are packed and go with the article to the purchaser, and such letters, circulars and pamphlets to which reference is made either on the label attached to the package or on the package itself.

The name of the manufacturer or producer need not be given upon the label; but, if given, it must be the true name. The words: "Packed for", "Distributed by" or some equivalent phrase, shall be added to the label in case the name which appears upon the label is not that of the actual manufacturer or producer.

A package of food shall be plainly and conspicuously marked with the quantity of the contents in terms of weight, measure or numerical count on the outside of the container, or of the covering of the package usually delivered to the consumer.

The quantity of the contents, when stated by weight or measure, shall be marked in terms of the largest unit contained in the package, except that, in the case of an article with respect to which there exists a definite trade custom for marking the quantity of the article in terms of fractional parts of larger units, it may be so marked in accordance with the custom. Common fractions shall be reduced to their lowest terms; fractions expressed as decimals shall be preceded by zero and shall be carried out to not more than two places.

The quantity of the contents shall be stated in terms of weight or measure unless the package is marked by numerical count and such numerical count gives accurate information as to the quantity of the food in the package.

An article of food or drugs intended for export is not adulterated or misbranded within the meaning of the Act if it is established by the shipper or exporter that the article is prepared or packed according to the specifications or directions of the foreign purchaser and that no substance is used in the preparation or packing there of in conflict with the laws of the foreign country to which the article is intended to be shipped.

An article intended for export, prepared or packed in accordance with paragraph (a) of this regulation, shall be labelled on the outside container or wrapper so as to show that the article is intended for export and is prepared or packed in accordance with the specifications or directions of the foreign purchaser. This marking is required only on an article which otherwise would be classed as adulterated or misbranded.

An article prepared for export in accordance with paragraphs (a) and (b) of this regulation, if sold or offered for sale for domestic consumption, is subject to all the provisions of the Act regarding domestic sale.

4 The use of *colour* of any kind to conceal damage or inferiority in a food product is defined by the Federal Food and Drugs Act as an adulteration, and, when damage or inferiority are concealed, the employment of artificial colour is not permissible even though certified colours are used and their presence is declared on the label. In general, where colours are legitimately used in foods and beverages, a statement on the label of the presence of artificial colour is required.

When a container of a certified dye is opened, the guarantee of its purity can no longer apply, inasmuch as no one, other than the person or firm breaking the package, can further assume responsibility for its purity and identity.

The following coal-tar dyes are accepted for certification. The first number in each line is that of the dye as listed in the Colour Index of 1924, published by the Society of Dyers and Colourists of England; the second number, in parenthesis, is that appearing in former department announcements and is the identifying number of the dye given in Green's "Systematic Survey of the Organic Colouring Matters", 1904 edition:

Red shades:

- 80 (56) Ponceau/3R;
- 184 (107) Amaranth;
- 773 (517) Erythrosine.

Orange shade:

- 150 (85) Orange I.

Yellow shades:

- 10 (4) Naphthol yellow S.
- 640 (94) Tartrazine.
- 22 Yellow A B (benzeneazo-S-naphthylamine).
- 61 Yellow O B (ortho-tolueneazo-S-naphthylamine).

Green shades:

- 666 (433) Guinea green B;
- 670 (435) Light green S F yellowish;
- Fast green F.C.F. (p.-hydroxy derivative of the sodium salt of alphagurine F.G.C.I. No. 67h).

Blue shade:

- 1180 (692) Indigotine.

Yellow A B and Yellow O B are known as oil-soluble dyes, because they are soluble in edible oils but insoluble in water. The other nine dyes are soluble in water but insoluble in oils.

Official *cotton* standards of the United States have been promulgated by the Secretary of Agriculture under authority contained in two statutes: 5

(1) The United States Cotton Futures Act of August 11th, 1916, as amended March 4th, 1919; and

(2) The United States Cotton Standards Act of March 4th, 1923. (The United States Cotton Standards Act made the standards established under the Cotton Futures Act the official cotton standards for the purposes of the United States Cotton Standards Act as well.)

The cotton standards now in use under these laws are the following:

(a) Official cotton standards of the United States for grades and colours of American upland cotton, otherwise known as the *universal* standards for American upland cotton ("Public Notice establishing Official Cotton Standards of the United States for Grades and Colours of American Upland Cotton", of July 30th, 1923; effective August 1st, 1923).

These standards have been agreed upon and accepted by all of the leading European cotton exchanges, so that they are also termed and referred to as Universal Standards for American cotton. This agreement was made and entered into in 1923 by and between the United States Department of Agriculture and the Liverpool Cotton Association, the Manchester Cotton Association, le Syndicat du Commerce des cotons du Havre, Bremer Baumwollbörse, Associazione Cotoniera Italiana, Association Cotonnière de Belgique, Centro Algodonero de Barcelona, Vereeniging voor den Katoenhandel te Rotterdam, the Federation of Master Cotton Spinners' Associations of England, and the Marché de coton belge of Ghent.

(b) Official cotton standards of the United States for grades of American Egyptian cotton ("Public Notice establishing Official Cotton Standards of the United States for Grades and Colours for American Egyptian Cotton", of July 26th, 1922; effective August 1st, 1923).

(c) Official cotton standards of the United States for length of staple ("Official Cotton Standards of the United States for Length of Staple", of October 25th, 1918; effective October 25th, 1918).

In the main, the provisions of the *Cotton Standards Act* are permissive, but under the Act it is unlawful (quoting from Section 2):

"(a) In or in connection with any transaction or shipment in commerce made after this Act shall become effective; or

"(b) In any publication of a price or quotation determined in or in any connection with any transaction or shipment in commerce after this Act shall become effective; or

"(c) In any classification for the purposes of or in connection with a transaction or shipment in commerce, after this Act shall become effective, for any person to indicate for any cotton a grade or other class which is of or within the official cotton standards of the United States then in effect under this Act by a name, description or designation, or any system of names, description or designation not used in that standard *provided*, that nothing herein shall prevent a transaction otherwise lawful by actual sample or on the basis of a private type which is used in good faith and not in evasion of or substitution for said standards."

Penalties for infraction of these provisions are provided in the law.

CATEGORY 2.

All *wool* stored in federally licensed warehouses must, under the Warehouse Act, approved August 11th, 1916, be graded and *certified* according to the official United States wool standards. With this exception the grades are wholly permissive.¹ 6

CATEGORY 4.

Code of ethics, adopted at St. Louis, Mo., May 23rd, 1911, by the *American Lumber Trades Congress* (a convention of thirty retail, manufacturing and wholesale lumber associations). 7

¹ Official United States standards for grades of wool were promulgated by the Secretary of Agriculture in Service and Regulatory Announcements No. 75, issued July 16th, 1923 ("Public Notice establishing Official Wool Standards of the United States for Grades of Wool", of May 18th, 1923, effective July 1st, 1923).

“ It is the sense of the congress that this code of ethics should apply to all forest products handled by lumbermen.”

Inspection by “ Association Inspection Bureaux ” on lumber can be provided for in the contracts. The shipper must credit buyer with the amount of degrade found by inspection, irrespective of per cent determined between the grade sold and the grade shipped, at an equitable price. No claim on grade or measurement should be considered valid unless made by final consignee within five days after unloading the car.

8 There are grading rules for *cypress lumber* and *shingles*, adopted May 23rd, 1923 copyrighted
9 1916, 1918 and 1922 by the Southern Cypress Manufacturers' Association, containing standard
grades and classification of *cypress* and *tupelo* (bay poplar) as well as rules of classification and
inspection for *tupelo* (bay poplar) lumber.

10 *Hardwood lumber, cypress, veneers, thin lumber and plywood.* — The National Hardwood
Lumber Association, Chicago, has issued, in October 1924, rules for measurement and inspection
of hardwood lumber, cypress, veneers, thin lumber and plywood. These rules give the regulations
under which practically all hardwoods of this country are graded and inspected.

The National Hardwood Lumber Association maintains licensed and bonded inspectors in
the principal hardwood markets and producing centres of the United States and Canada. All
applications for “ original (national) inspection ” must be made to the secretary or a licensed
inspector by a member of the association.

It must be clearly stated in the contract of sale or purchase that national inspection is to
prevail and that the official bonded inspection certificate of the association is the agreed basis
between buyer and seller. Unless it is explicitly stated in the contract of sale or purchase that
the lumber concerned in the transaction is subject to national inspection, such inspection cannot
be insisted upon by either buyer or seller and can only be made available by the mutual consent
of both parties after a dispute has arisen.

The following form for such a clause in contracts of that nature is recommended: “ The
lumber is to be inspected according to the rules and regulations of the National Hardwood
Lumber Association by a national inspector ”.

With the foregoing clause in a contract, lumber may be inspected either at point of shipment
or at destination. But, as the association does not maintain inspectors overseas, for export
shipment only, the inspection at point of shipment is in question.

In the absence of instructions to the contrary a national inspector will inspect and measure
lumber according to the standards provided by the rules of the association.

When an inspection by an authorised inspector of the association is completed, the inspector
shall deliver to the member requesting the inspection a *certificate* in duplicate, certifying to the
amount and grade of lumber so inspected. This certificate is *final* for settlement between seller
and buyer in all cases where an agreement as to the application of national inspection exists
between the parties.

Only members of the National Hardwood Lumber Association can obtain an original national
inspection.

Reinspection is provided for in the rules, and a non-member of the association is also allowed
to call for reinspection. If the reinspection results in favour of the party complaining of more
than four per cent in money value from the original inspection, the party complaining may receive
the amount of such difference directly from the association. The association guarantees in this
way the certificates issued by its inspectors. But, as the association does not maintain inspectors
overseas, it is unable to apply the reinspection guarantee on export shipments.

11 *Rice.* — The major part of the export shipments of rice for foreign countries are covered by
certificates of quality, issued by a regular inspection bureau, and attached to the documents in the
transaction as evidence of quality delivered.

The *Rice Millers' Association* (New Orleans, La.) Inspection, for exemple, has been in operation
since November 1924, and uses, as a basis of inspection, United States Department of Agriculture
Circular 291 (Washington, D.C., October 1923), which gives specifically the grade factors of each
variety of rice. (“ United States Grades for Milled Rice ” embody the recommendations of the
Bureau of Agricultural Economics, United States Department of Agriculture, but are not fixed
and established under the United States grain standards Act.)

The shipper wishing an inspection notifies the inspection bureau by means of an inspection
application (form), which gives all information necessary to the inspection bureau for the complete
identification of the lot in question. Rice is then sampled when out of the shipper's control,
a 10 per cent sampling being made, and the individual probings are then examined for regularity
in the lot. This being ascertained, the lot is then graded under Department Circular 291 referred
to above, actual hand analyses and actual moisture tests to determine keeping qualities of shipment
being made, and the shipper is issued an inspection certificate to cover the shipment. The certificates
(form) are made on “ safety check ” paper, which discloses any attempted erasures or changes.

The Rice Millers' Association Inspection Bureau annually inspects around a million pockets
shipped for export each year on the basis of Department Circular 291. As most of the export
business is done on letter of credit basis, in case the certificate does not read in conformity with
that letter of credit, the bank handling carefully will not recognise the certificate, and the shipper
must supply a certificate reading in accordance with the letter of credit.

Dried fruit. — The Dried Fruit Association of California, San Francisco, subjects all merchandise sold for export and shipped via water by its members to inspection by this association. Official *certificates* (form), issued by the inspection department of this association, certify that the merchandise sold conforms to the recognised standards for the various grades of dried fruit. 12

The *Insecticide Act* of April 26th, 1910,¹ states that the legislative purpose of the Act is declared to be “for preventing the manufacture, sale or transportation of adulterated or misbranded *Paris greens*, *lead arsenates* and other *insecticides*, and also *fungicides*, and for regulating traffic therein”. 13
14
15

The Act is designed to regulate insecticides and fungicides which enter interstate commerce, which are imported into the United States, or which are *exported* from the United States.

By the terms of the law, it is unlawful to manufacture insecticides or fungicides which are adulterated or misbranded. Shipment of adulterated or misbranded insecticides or fungicides to any foreign country is prohibited by the law, and any person who shall ship or deliver for shipment to any foreign country, or export or offer to export the same, shall be guilty of misdemeanour provided that no article shall be deemed misbranded or adulterated within the provisions of the Act when intended for export to any foreign country and prepared or packed according to the specifications or directions of the foreign purchaser.

The Act is enforced by criminal prosecutions, publication of judgment of the courts, and by the seizure and the confiscation of the misbranded or adulterated merchandise. Regulations for collection and examination of specimens of insecticides and fungicides intended for shipment to any foreign country are provided by the law. Specimens can be submitted for examination to the Department of Agriculture or such existing bureaux as may be directed by the Secretary, and, if it shall appear from any such examination that any of such specimens are adulterated or misbranded, the Secretary of Agriculture shall cause notice thereof to be given to the party from whom such sample was obtained.

In addition to the standards and requirements of the Insecticide Act of 1910, twenty-seven of the individual States of the United States have laws regulating the manufacture and sale of this class of merchandise within their respective jurisdictions. These States are: Alabama, California, Colorado, Connecticut, Delaware, Georgia, Idaho, Iowa, Kentucky, Louisiana, Maine, Maryland, Michigan, Minnesota, Montana, New Hampshire, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, South Carolina, Tennessee, Utah, Washington, Wisconsin.²

There are *International Seed Trade Rules*,³ providing in Section 7 that shipping samples, to be taken from a bulk sample shall be sent to the buyer, to be in his hands prior to the presentation and payment of the draft or bill of exchange. 16

Section 8 provides:

Noxious Weed Seeds. — (a) The term “Absolutely dodder free”, or “Absolutely free from any other noxious weed seed specified in the sale or contract of sale” shall require that no *dodder*, or such other specified noxious weed seed, shall be found in a test of 150 grammes from a sample taken as is provided in Section 7 of these rules. 17
18

(b) If the buyer discovers the presence of dodders or such other noxious weed seed as may be specified in the sale or contract of sale in the shipping samples sent by the seller to the buyer, he may, within two days (Sundays and holidays excepted) after such discovery, by cable demand that the seller or his agent shall withhold; and the seller or his agent thereupon shall withhold the presentment of the drafts for payment until the arrival of the bulk of the identical shipments and until a reasonable opportunity shall have been given to the buyer to take a sample from the bulk of the shipment in the method provided in Section 7 of these rules, and to make a 150-gramme test of said sample for the presence of dodder or such other specified noxious weed seed.

(c) In the event of a dispute between the buyer and the seller as to the presence of dodder or such other specified noxious weed seed in the aforesaid 150-gramme test, a Government analyst in the country of the buyer shall make such a test of 150 grammes from a sample drawn by him or his agent as provided in Section 7 of these rules, and such official test shall be conclusive on the buyer and seller in respect to the presence of such dodder or other specified noxious weed seed. Until the determination of such official test, the seller or his agent shall withhold presentment of the draft for payment.

(d) The term “Dodder free” or free of any other noxious weed seed specified in the sale or contract of sale shall require that there shall not be more than ten grains of dodder or such other specified noxious weed seed in one kilogramme of agricultural seed; and, in the event of any dispute between the buyer and the seller as to the presence of dodder or such noxious weed seed

¹ “ Rules and Regulations for carrying out the Provisions of the Insecticide Act of 1910 “, of December 9th, 1910. United States Department of Agriculture, Office of the Secretary, Circular No. 34.

² Details are to be seen in United States Department of Agriculture, Insecticide and Fungicide Board, Service and Regulatory Announcements Nos. 13, 21, 35.

³ “ International Seed Trade Rules “; published by the Wholesale Grass-seed Dealers’ Association.

in the prescribed amount, a test by a Government analyst as hereinabove provided for shall be made and be conclusive on the buyer and seller. Until the determination of such official test, the seller or his agent shall withhold presentment of the draft for payment.

Any dispute arising between the parties to a sale or contract of sale of agricultural seeds, if not settled promptly by said parties, shall be submitted for arbitration and award to the arbitration committee of the Seed Trade Association of the buyer's country. An appeal can be taken to the arbitration committee of a neutral country.

19 There exist Arbitration Rules of the *Wholesale Grass-seed Dealers' Association*. The jurisdiction of the "Arbitration Committee" extends to all disputes relating to the buying and selling of *seeds* between members of the Association, and between members and non-members when in such latter case the dispute is submitted by agreement of the parties.

20 There exist rules of the *Memphis Merchants Exchange Clearing Association*, governing "call boards" and "ring trades" in *cotton seed meal*.

All tenders for meal must be made by transferable notice, accompanied by a *certificate of quality* (form) issued by the Supervising Committee. Any interested party may appeal to the Appeals Committee if the certificate of quality issued by the Supervising Committee is not satisfactory.

The certificate of quality issued by the Supervising Committee, or by the Appeals Committee, shall be final as between members of the Memphis Merchants Exchange Clearing Association; and such certificate shall hold good for tender and delivery on contracts within the time stated on the certificate.

21 The official grades for *hay* and *feed* are incorporated in a mimeographed pamphlet issued by the General Specifications Board of the United States Department of Agriculture.

There are *Rules for Seed Testing*, recommended by the Association of Official Seed Analysts of North America at its tenth annual meeting held at Detroit, Michigan, June 1917; Revised December 1921.

22 *Grain and Cereals*. — The United States Congress has enacted a law approved on August 18th, 1916, and known as the "United States Grain Standards Act"¹. This Act provides that the Secretary of Agriculture is authorized to investigate the handling, grading and transportation of grain and to fix and establish standards of quality and condition for *corn* (maize), *wheat*, *rye*, *oats*,
23 *barley*, *flax seed*, and such other grains as in his judgment the usages of the trade may warrant
24 and permit.

The standards so fixed and established shall be known as the official grain standards of the United States.

The main provisions are given below.

"Section 4. — Whenever standards shall have been fixed and established under this Act for any grain, no person thereafter shall ship or deliver for shipment in interstate or foreign commerce any such grain which is sold, offered for sale or consigned for sale by grade unless the grain shall have been inspected and graded by an inspector licensed under this Act, and the grade by which it is sold, offered for sale, or consigned for sale be one of the grades fixed therefor in the official grain standards of the United States: *Provided*, that any person may sell, offer for sale or consign for sale, ship or deliver for shipment in interstate or foreign commerce any such grain by sample or by type, or under any name, description, or designation which is not false or misleading, and which name, description or designation does not include in whole or in part the terms of any official grain standard of the United States: *further*, any such grain sold, offered for sale, or consigned for sale by grade may be shipped or delivered for shipment in interstate or foreign commerce without inspection at point of shipment by an inspector licensed under this Act, to or through any place at which an inspector licensed under this Act is located, subject to be inspected by a licensed inspector at the place to which shipped or at some convenient point through which shipped for inspection shall be under such rules and regulations as the Secretary of Agriculture shall prescribe, and subject, further, to the right of appeal from such inspection, as provided in Section 6 of this Act: *lastly*, any such grain sold, offered for sale or consigned for sale by any of the grades fixed therefor in the official grain standards may, upon compliance with the rules and regulations prescribed by the Secretary of Agriculture, be shipped in interstate or foreign commerce without inspection from a place at which there is no inspector licensed under this Act to a place at which there is no such inspector, subject to the right of either party to the transaction to refer any dispute as to the grade of the grain to the Secretary of Agriculture,

who may determine the true grade thereof. No person shall in any certificate or in any contract or agreement of sale or agreement to sell by grade, either oral or written, involving or in any invoice or bill of lading or other shipping document relating to, the shipment or delivery for shipment, in interstate or foreign commerce, of any grain for which standards shall have been fixed and established under this Act describe, or in any way refer to, any of such grain as being of any grade other than a grade fixed therefor in the official grain standards of the United States.

“Section 5. — No person, except as permitted in Section 4, shall represent that any grain shipped or delivered for shipment in interstate or foreign commerce is of grade fixed in the official grain standards other than as shown by a certificate therefor issued in compliance with this Act; and the Secretary of Agriculture is authorized to cause examination to be made of any grain for which standards shall have been fixed and established under this Act, and which has been certified to conform to any grade therefor in such official grain standards, or which has been shipped, or delivered for shipment in interstate or foreign commerce. Whenever, after opportunity for hearing is given to the owner or shipper of the grain involved, and to the inspector thereof if the same has been inspected, it is determined by the Secretary that any quantity of grain has been incorrectly certified to conform to a specified grade, or has been sold, offered for sale, or consigned for sale under any name, description, or designation which is false or misleading, he may publish his findings.

“Section 6. — Whenever standards shall have been fixed and established under this Act for any grain and any quantity of such grain sold, offered for sale, or consigned for sale, or which has been shipped, or delivered for shipment in interstate or foreign commerce shall have been inspected and a dispute arises as to whether the grade as determined by such inspection of any such grain in fact conforms to the standard of the specified grade, any interested party may, either with or without reinspection, appeal the question to the Secretary of Agriculture, and the Secretary of Agriculture is authorized to cause such investigation to be made and such tests to be applied as he may deem necessary and to determine the true grade: any appeal from such inspection and grading to the Secretary of Agriculture shall be taken before the grain leaves the place where the inspection appealed from was made and before the identity of the grain has been lost, under such rules and regulations as the Secretary of Agriculture shall prescribe. Whenever an appeal shall be taken or a dispute referred to the Secretary of Agriculture under this Act, he shall charge and assess, and cause to be collected, a reasonable fee, in amount to be fixed by him, which fee, in case of an appeal, shall be refunded if the appeal is sustained. All such fees not so refunded shall be deposited and covered into the Treasury as miscellaneous receipts. The findings of the Secretary of Agriculture as to grade, signed by him or by such officer or officers, agent or agents, of the Department of Agriculture as he may designate, made after the parties in interest have had opportunity to be heard, shall be accepted in the courts of the United States as *prima facie* evidence of the true grade of the grain determined by him at the time and place specified in the findings.

Cotton. — Under Section 3 of the United States Cotton Standards Act,¹ the Secretary of Agriculture of the United States may examine and license cotton classers, who may issue *certificates* of the grade or staple of cotton which they examine. These licensed classers are not employees of the Department of Agriculture of the United States. Their licences merely signify that the Department of Agriculture has examined into the ability and integrity of the holder and has dignified him by a public expression of its confidence. There is no requirement that cotton shipped in commerce must be inspected or classified, but it is required that, if indicated, the grade shall be of the official cotton standards of the United States. 25

Under Section 4 of the Act, the owner or custodian of cotton or any person who has a financial interest in any cotton may submit the cotton or samples thereof to the Department of Agriculture for determination of the true classification of such cotton or samples, including the comparison thereof, if requested, with types or other samples submitted for the purpose; and the Secretary of Agriculture of the United States, through his agents, may make such determinations when requested. The final *certificate* of the Department of Agriculture showing the classification or determination of the cotton so submitted shall be binding on officers of the United States and is declared to be *prima facie* evidence of the true classification or comparison of such cotton in the United States courts when involved in any transaction or shipment in commerce.

The regulations of the Secretary of Agriculture, as published in Service and Regulatory Announcements No. 80, of the Bureau of Agricultural Economics, contemplate three distinct services to be rendered by the Department of Agriculture: (1) An informal classification of samples; (2) the classification of agreed samples submitted by the parties involved in a dispute, and (3) the classification of samples the authenticity of which is established by Government supervision of the storage and sampling.

The purpose of the informal classification of samples is to assist the owner or custodian to determine the commercial value of the cotton. Upon the classification of such samples by its

¹ See Category I (Cotton).

board of cotton examiners, the Department of Agriculture will issue a Form A sample classification memorandum, stating simply that the classification of the samples as and when submitted is as shown therein. Because the department does not undertake to determine the integrity of the samples, Form A memoranda cannot have the weight of certificates.

In the second case, it is provided that, when two parties are in disagreement as to the true classification of any cotton involved in a transaction between them, they may agree upon a set of samples to be submitted to the Department of Agriculture either for a determination of the true classification or for a comparison with types or other actual samples specified in the contract. Upon the classification of such samples by its board of cotton examiners, the department will issue a Form B agreed sample certificate, which, when once reviewed, shall be deemed to be a final certificate within the meaning of the Act, but only as to the parties concerned. This service provides the means for the arbitration and settlement of disputes by a strict classification according to the standards, or by comparison with a private type or other actual samples.

It is proposed in the third case to supervise the storage and sampling of cotton, and, upon the classification of such supervised samples by its board of cotton examiners, to issue a Form C supervised bale certificate. It is required that cotton submitted for this purpose shall first be submitted through an established and recognised cotton exchange working in co-operation with the Department of Agriculture. Form C certificates, when reviewed, will be deemed to be final within the meaning of the Act. The regulations of the secretary provide means by which cotton thus "certificated" may be transferred to a future exchange market and there delivered on future contracts made in accordance with the United States Cotton Futures Act without reclassification.

It is provided by the regulations that the original classification of cotton, for the time being, shall be made either at New York or at New Orleans by the boards of cotton examiners already established in those markets under the United States Cotton Futures Act. Additional boards in the cotton belt may be subsequently set up if the demand for this service requires their establishment. Reviews or appeals under the United States Cotton Standards Act will be held in Washington, D.C., where specialists engaged primarily in the preparation of the standards are already available.

Lest there be any conflict between certificates issued under (2) and (3), it is provided that, in this country, Form B certificates shall not be final when in conflict with Form C certificates, but that as between Form C certificates issued in this country and Form B certificates issued by a duly constituted board in a foreign country, the Form B certificate is final.

Regulation No. 15 of the Secretary of Agriculture of the United States, for administrative purposes, makes effective the provisions of the agreements between the United States Department of Agriculture and the European cotton exchanges and associations above referred to with respect to the adjustment of disputes arising from contracts for the shipment of cotton from the United States. The members of the appeals committees of foreign exchanges which have adopted the official cotton standards of the United States may be designated as officers of the Department of Agriculture for the purpose of passing upon the classification of cotton involved in a dispute between a party in the United States and a party without the United States to a contract made under the rules of such association or exchange. Determinations of classification made by the boards so constituted shall be final.

The Regulation No. 15 is contained in the pamphlet "United States Department of Agriculture Service and Regulatory Announcements No. 80" (Washington Government Printing Office, 1923).

This regulation is as follows:

Section 1. — Paragraph 1: When an association or exchange located in a country other than the United States shall adopt any of the official cotton standards of the United States and when the members of the committee of such associations or exchange having final jurisdiction in the matter of appeals have been designated as cotton examiners by the chief of the bureau, such committee may be constituted for the purposes of this act a board of the Department of Agriculture and authorised to act as follows;

Paragraph 2: In so far as the exchange has adopted the universal standards, the committee may pass upon the classification of cotton involved in a dispute between a party in the United States and a party without the United States to a contract made under the rules of the association or exchange.

Paragraph 3: The submission of samples of cotton involved in such a dispute to such association or exchange or such committee in accordance with the rules of the association or exchange shall be deemed to be a submission to the Department of Agriculture.

Paragraph 4: Determinations of classification made by the boards so constituted shall be final and shall supersede, as to the parties to the dispute, any other certificate, as to grade and colour, affecting such cotton, issued by the Department of Agriculture under the Act and these regulations. When so provided in the articles, rules or by-laws of the association or exchange, such determinations may be evidenced by awards. If an award is made which does not state the classification, such board will, upon request of the owner or custodian of the cotton and the payment of a reasonable additional fee, issue a certificate showing in detail the true classification for grade and colour of such cotton, based upon a comparison of the samples with the universal standards or with a type or other samples on which the cotton has been sold, as the case may be.

Section 2. — The manner of procedure in submitting and handling samples, in classification, and in instituting and conducting arbitrations and appeals, shall be as prescribed in the articles, by-laws and rules of the association or exchange.

Section 3. — No charge shall be made by the Department of Agriculture for services performed under this regulation, but nothing herein shall be construed to prevent the association or exchange from making and collecting such fees for the service of its committee as may be found to be reasonable.

2. The purpose of the *United States Cotton Futures Act*¹ is to regulate the sale of cotton for future delivery on American cotton exchanges. It is required that all such contracts be in writing or evidenced by written memoranda, and a tax of two cents on each pound of cotton involved is imposed unless such contracts conform to certain conditions.

¹ See Category 1 (Cotton).

In practice, there is no dealing in futures contracts other than those falling under Section 5 of the Act.¹

ANNEX TO CATEGORY 4.

Observation. — The movement towards standardisation and specification has, in certain cases, led to the development of new means of protection for buyers. It would be difficult to classify these means under the categories drawn up at the beginning of the present study. Moreover, in view of the large number of types set up by the various associations and of the fact that their work in the field of standardisation and specification is constantly progressing, increasing and changing, we give here only a list of the associations which, to the Secretariat's knowledge, have set up standards and rules of classification. Other associations will probably have to be added to the list.

More detailed information as to the rules regarding standardisation and specification laid down by the various associations may readily be obtained by applying to the associations themselves for the publications they have issued on the particular branch with which they are concerned.

Standardisation and Specification.

The use of methods of standardisation and simplification has become very extensive in America. Such a system not only ensures useful production on scientific lines and in accordance with consumers' requirements, but also protects buyers against being supplied with goods unsuitable for the purpose for which they are offered and sold. The buyer, instead of choosing from samples or in some other way, may thus specify, when giving his order, certain degrees of quality or standard categories which have been drawn up either officially or by well-known commercial groups. He is thus afforded very effective protection against the risks of fraud or of false description of goods—in other words, against the delivery of articles sold as suitable for a certain purpose but in reality not possessing the durability or strength or other qualities which the purchaser, when giving his order, expects them to possess.

In this connection the United States Chamber of Commerce, in a circular dated January 10th, 1923, expressed the view that:

“ Commercial transactions are facilitated and the causes of trade disputes between buyer and seller are reduced when the sale is effected on the basis of certain standard categories of goods which are exactly known to the buyer and the seller; and this commercial usage is of particular importance in international transactions, where commercial practices and conditions differ.”

According to another circular from the United States Chamber of Commerce, Mr. Hoover, Secretary of State, reviewing world trade prospects, mentioned that the establishment of standards of quality providing foreign purchasers with an assurance that goods supplied will be absolutely in accordance with those promised when the transaction was concluded would constitute an important and, indeed, vital factor.

Standardisation and simplification are enforced in America by the Governments of the various States and by private organisations, as regards both industrial and agricultural products. The use of official standards, however—in other words, standards or categories established and prescribed by the Government of a State—is compulsory only to a very limited extent. Apart from the exceptions under Categories 1 to 5, the use of these standard categories is entirely optional, though fairly general in the various branches of commerce. The use of the specifications published by the Federal Specifications Board under the name of “ United States Government Master Specifications ” is, however, obligatory in all United States Government offices and official establishments.

The revised list published by the Federal Specifications Board on April 1st, 1925, contains specifications of industrial and agricultural products classified under 287 items. As, however, new products are constantly being added to the list, the present number of items is undoubtedly much larger.²

¹ The principal provisions of this section are:

I. That there shall be a basis grade which, unless otherwise specified, shall be No. 5, or Middling;

II. That the cotton delivered shall be of or within the grades for which the Secretary of Agriculture of the United States shall have established standards, except that cotton below certain grades, or less than seven-eighths of an inch in length of staple, or cotton which for various enumerated causes is regarded as unmerchantable shall not be delivered; and

III. That in case cotton of a grade other than the basis grade be tendered, the differences for the grades above and below No. 5, or Middling, shall be the actual commercial differences, determined as follows:

If the point or market in which the future contract is consummated is itself a bona-fide “ spot ” market, by the actual differences prevailing in that market; if the point or market where the future contract is consummated is not itself a “ spot ” market, then by the average of the differences prevailing in not less than five bona-fide “ spot ” markets to be determined by the Secretary of Agriculture of the United States as such and designated for the purpose.

It is further provided in substance that all tenders of cotton in settlement of future contracts shall be accompanied by *certificates* of the Department of Agriculture of the United States showing the true classification of the cotton delivered.

² These specifications may be obtained from the Superintendent of Documents, United States Government Printing Office, Washington, or, if not printed, from the Federal Specifications Board.

These standard qualities are widely employed in export trade for the following goods: *grain*—including *wheat, oats, maize, rye, rice, "hafir"*, etc.; *cotton*, articles prepared from *cotton seed* (and the other oleaginous products and derivatives); *tobacco, coal, products derived from mineral oil, building timber, chemical fertilisers, flour, meat and provisions, preserved fish and dried fish, fresh and dried fruits, preserves, patent foods and drugs*. In 1921, the total value of the exports of the above-mentioned goods alone amounted to almost two-thirds of the total exports of the United States. Further, *sales of copper and other metals, cement, various chemical products, iron and steel articles, a large number of mechanical construction materials* and other goods sent abroad in large quantities are effected on the basis of standard specifications and recognised grades and specific qualities.

In addition to the Governments of the various States, there are other organisations dealing with the general adoption, application and use of models, dimensions, categories or fixed qualities for American products. A complete list of these associations is given in the *Standards Year-Book* compiled by the National Bureau of Standards.¹ We give some of the most important below.

- American Association for the Advancement of Science, Smithsonian Institution Building, Washington, D.C.
- 26 American Association of Cereal Chemists, Huntzinger Building, Kansas City, Mo.
American Association of Engineers, 63, East Adams Street, Chicago, Ill.
American Association of Textile Chemists and Colorists, 5, Mountain Avenue, Maplewood, N.J.
- 27 American Automobile Association, National Headquarters, Washington, D.C.
- 28 American Boiler Manufacturers Association, Rockefeller Building, Cleveland, Ohio.
- 29 American Chemical Society, Mills Building, Washington, D.C.
- 30 American Cotton Manufacturers' Association.
- 31 American Electric Railway Association, 292, Madison Avenue, New York, N.Y.
American Foundrymen's Association, 222, West Adams Street, Chicago, Ill.
- 32 American Institute of Electrical Engineers, 33, West Thirty-ninth Street, New York, N.Y.
- 33 American Petroleum Institute, 1508, Kirby Building, Dallas, Tex.
- 34 American Railway Engineering Association, 431, South Dearborn Street, Chicago, Ill.
- 35 Association of American Steel Manufacturers, Carnegie Steel Co., Pittsburgh, Pa.
Association of Edison Illuminating Companies, Eightieth Street and East End Avenue, New York, N.Y.
- Chamber of Commerce of the United States of America, Department of Manufacture, Washington, D.C.
- 36 Institute of American Meat Packers, 509, South Wabash Avenue, Chicago, Ill.
- 37 Institute of Radio Engineers, 37, West Thirty-ninth Street, New York, N.Y.
- 38 National Association of Glue Manufacturers, 1457, Broadway, New York, N.Y.
- 39 National Association of Wool Manufacturers, 80, Federal Street, Boston, Mass.
- 40 National Hardwood Lumber Association, Straus Building, Chicago, Ill.
- 41 National Paper Trade Association, 41, Park Row, New York, N.Y.
- 42 Radio Manufacturers Association, 30, State Street, Cambridge 39, Mass.
- 43 Steel Barrel Manufacturers Institute, Bulkley Building, Cleveland, Ohio.

¹ United States Government Printing Office, Washington.

ZANZIBAR.

On November 27th, 1925, a Decree was published for the purpose of preventing the adulteration of agricultural produce.

Under the terms of this decree, the British Resident may make rules regarding *agricultural produce* intended for sale or export. These regulations will relate to: 1

1. The specific designation of agricultural produce for sale or export and the definition of each such kind of produce.
2. The percentage of impurities or foreign matter, and the maximum amount of moisture admissible in such agricultural produce;
3. The place and manner of storage, the conveyance and the treatment;
4. The mode of packing and the manner in which packages shall be marked;
5. The inspection, grading and branding of products;
6. The percentage which shall be inspected in any one consignment;
7. The abstraction or removal of samples by an Inspector for examination, inspection or analysis.

Inspectors shall be entit'ed at any moment to take from any bulk of agricultural produce a sample sufficient in quantity to enable an analysis or other examination to be made.

The decree further prohibits the forging of all documents, labels, etc., relating to the produce in question.

On the same date rules were made which are known as "*Clove Control Rules*". 2

"Cloves" shall be the specific and sole designation under which the dried flower-buds of the clove may be sold or exported.

"Clove stems" shall be the specific and sole description under which the dried peduncles or budstalks of the clove tree may be sold or exported.

"Mother of cloves" shall be the specific and sole designation under which the dried fruits, whether mature or immature, of the clove tree may be sold or exported.

Cloves, as above defined, intended for sale or export, shall not contain more than 5 per cent of extraneous matter, such as clove stems, mother of cloves, twigs or other extraneous matter.

The content of moisture shall not exceed 16 per cent, as determined by the so-called "Brown Duvel Tester" apparatus, and the cloves must not in any way be sophisticated, dyed, falsified or otherwise deleteriously treated.

The bags, bales or other packages in which any cloves are brought or sent to the Customs must be clearly marked with the owner's trade-mark or other mark of identification. Any other marks which such bags, etc., may previously have borne shall be erased or effectually obliterated.

On November 27th, 1925, also, the Director of Agriculture sent clove-growers a memorandum on the way in which cloves ought to be treated. The memorandum is drawn up in the form of recommendations, more particularly regarding the drying, cleaning and method of determining the dryness of cloves.

**ALPHABETICAL INDEX
OF PRODUCTS IN RESPECT OF WHICH MEANS OF PROTECTION
ARE AVAILABLE FOR FOREIGN BUYERS.**

Note. — This index gives, for each country included in this survey, the list of products in respect of which means of protection are available for foreign buyers. In the following pages, in order to turn up the particulars concerning any specific product, the number or numbers appearing opposite the name of that product in the above index should be looked for in the margin of the text relating to the country concerned.

(Communicated to the Council and
to the Members of the League.)

Official No C.624.M.246.1930.11.
CORRIGENDUM.

Geneva, December 24th, 1930.

LEAGUE OF NATIONS

Economic and Financial Section of the Secretariat.

SURVEY

OF THE DIRECT AND INDIRECT MEANS AT THE DISPOSAL OF FOREIGN BUYERS
TO ENABLE THEM IN A NUMBER OF COUNTRIES TO ASCERTAIN THE QUALITY
OF THE GOODS ACQUIRED BY THEM.

checked on 20.6.31
On page 41, paragraph 6, d), after the words "Order of June 10th,
1913" add:
"as amended by the Order of June 10th, 1924".

On page 41, paragraph 6, d), omit the words:
"and Order of June 10th, 1921, defining what may be offered for sale
under the name of milk, cream and other produce."

- On page 41, paragraph 6, add:
- "(e) Order of October 22nd, 1925, relating to milk, cream and other
produce.
 - (f) Order of April 22nd, 1913, relating to the examination of certain
articles of consumption.
 - (g) Order of December 3rd, 1914, relating to the use of colouring
matter in the case of certain articles of consumption.
 - (h) Order of May 30th, 1928, relating to honey."

At the end of Category 1 (on page 41), and at the end of Category
2 (on page 45), add the following:
"It should be added that in a large number of communes there are public
health regulations relating to the production of certain commodities,
such as milk and meat, and trade in the same."

On page 41, Category 2, paragraph 1, line 3, for the words "of a
fineness less than 830 per thousand" read:
"Of a fineness less than 826 per thousand"

On page 41, Category 2, paragraph 2, add the following:
"Silver spoons and forks of eleven-twelfths fine may nevertheless be
stamped with the words "11 Lodig" without specifying the fineness per
thousand."

On page 42, at the end of the first paragraph, add:
"The supplementary Law of April 10th, 1926, and the Ordinance of
October 29th, 1926, also contain provisions relating to this mark."

On page 45, Category 3, paragraph 1, for the words "and the Law
of March 20th, 1918, of December 21st, 1918" read:
"the Law of March 29th, 1924, as amended by the Law of April 9th, 1926,
and the Law on the Registration of Companies of March 31st, 1926."

On page 45, Category 3, paragraph 2, lines 1 and 2, after the
words "the collective mark" add:
"and the distinctive mark of the association."

On page 46, Category 5, paragraph 3, line 1, for "of March 20th,
1918" read:
"of March 29th, 1924, as amended by the Law of April 29th, 1926."

Geneva, November 25th, 1931.

LEAGUE OF NATIONS

ECONOMIC RELATIONS SECTION.

SURVEY

**OF THE DIRECT AND INDIRECT MEANS AT THE DISPOSAL OF
FOREIGN BUYERS TO ENABLE THEM IN A NUMBER OF COUNTRIES
TO ASCERTAIN THE QUALITY OF THE GOODS ACQUIRED BY THEM.**

Ad Corrigendum

First line: for "d)" read "a)".

Third paragraph from bottom of page, last line: for "Companies" read
"Associations".

Last line: for "April 29th" read "April 9th".

Ad "Survey"

Page 42. Insert before the paragraph beginning: "The Law of April 1st"
the following sentence:

"In the case of the goods mentioned above, it is forbidden to place on the
cases or packing the word "Denmark" or "Dansk" or a translation thereof
or any indication of a Danish place or any other indication that might
lead to the belief that the butter is Danish".

Page 42. Last line of the paragraph beginning "2. This product ..." replace
"coal" by "tar".

Page 42. The figure "14" in the margin should appear beside the paragraph
relating to milk (at bottom of page).

Page 43. Delete the two paragraphs beginning "If the milk ..." and
"Foodstuffs ..." respectively.

Page 43. Delete the figures 16 and 17 (in the margin); replace 18 by 15 and
19 by 16. The figure 17 should appear beside the paragraph beginning
"The above rules ..."

Page 43. Paragraph 10, beginning "On being made ..." line 1; replace "soft"
by "firm".

Page 43. Insert before the last paragraph which will be numbered 18 in the
margin, the following text:

"18. Since January 1st, 1926, the following provisions of the decree of
the Ministry of Justice of October 22nd, 1925, have been in force:

Milk and cream may not be described as "sterilised" unless all the
microbes and bacteria which they contained have been destroyed by a
special process and may not be offered for sale except in receptacles
with a special stopper.

Milk and cream may not be considered pasteurised unless, twenty-four hours at latest after having been drawn, the milk has been heated to 80°C. at least and then cooled to 12°C.

Pasteurised milk and cream may not be offered for sale except in bottles showing clearly the date of pasteurisation and the place where it was carried out.

Milk or cream that has been treated otherwise than by pasteurisation or sterilisation may not be offered for sale except with the approval of the Ministry of Justice, and may not be sold under the designation of "pasteurised milk". This provision does not apply to milk in powder form or to condensed milk.

Milk and cream which have undergone special treatment must bear a detailed description of that treatment on the label.

It is forbidden to add ordinary milk to pasteurised or prepared milk.

Milk or cream may be described as homogeneous when the fatty parts are distributed in such a way among the whole mass that the latter forms a homogeneous whole and there is no layer of fat on the surface when it is left to settle.

Condensed or concentrated milk is prepared with whole or separated milk with or without the addition of raw sugar (saccharose), but in such a case this fact must be stated. No other product may be added.

Milk in powder form must be made with whole or separated milk and must not contain more than 8% of water. It may be described as having been obtained from whole milk if it contains at least 23% of fatty matter. It is permitted to add sugar or bicarbonate of soda.

When a product is composed of sterilised or homogenised cream, the word "Exportflöde" (export cream) may be added to the usual information, but this word must be written in capitals of the same size and style as the indication of the kind of cream.

If the milk or cream is derived from animals other than cows, that fact must also be stated.

Foodstuffs containing fatty bodies other than milk may not be sold under designations containing the words "milk" or "cream" except by authorisation from the Ministry of Justice."

- Page 43. Insert beside the last paragraph beginning "The Law of April 12th ..." the figure "19".
- Page 44. Last paragraph (24) replace: "through having been in ..." by "or animals coming from ..."
- Page 45. Category 4, line 1, instead of "the trade in living plants and potatoes" read "the campaign against infectious diseases of plants and animal pests".
- Page 45. Category 4, paragraph 2, line 1: for "1929" read "1927".
- Page 45. Same paragraph, last line but one: insert after the word "must" the words "have leads affixed and".
- Page 45. Delete entirely the last paragraph beginning "Another Law ..."

Geneva, December 28th 1931.

LEAGUE OF NATIONS

ECONOMIC RELATIONS SECTION.

SURVEY.

Of the direct and indirect means at the disposal of
foreign buyers to enable them in a number of countries to ascertain the
quality of the goods acquired by them.

The 4th paragraph on page 75 (13-16) should be amended as follows:-

"The Mercantile Marine Department of the Board of Trade issues annual (or more frequent) certificates for passenger steamers (including motor vessels). For this purpose such vessels are surveyed by the Board's surveyors while under construction, and THEREAFTER AT INTERVALS OF NOT MORE THAN A YEAR. THE SURVEY UNDER CONSTRUCTION INCLUDES tests of the materials (e.g. boiler plates etc.) OF THE BOILERS AND MACHINERY, OF VARIOUS FITTINGS (e.g. SAFETY VALVES, etc.) AND OF THE WORKMANSHIP GENERALLY. Regulations governing the construction of the vessels and the testing of the materials, etc. are issued by the Department. Regulations as to the construction and efficiency of life-saving equipment (boats, life-jackets etc.) are also issued and such equipment is inspected by the Board's Surveyors, the boats, jackets, etc. being stamped if found satisfactory. Ships' side-lights are also subject to inspection by Board of Trade Surveyors AND STANDARD TYPES HAVE BEEN APPROVED. INSPECTIONS ARE MADE BY OFFICERS OF THE BOARD OF TRADE OF PROVISIONS TO BE SUPPLIED TO THE CREWS OF SHIPS."

The words in capitals indicate the new passages inserted.

Page 75, penultimate paragraph:

The word "Dublin" in the fourth line should be deleted.

Same page, last paragraph:

In the second line substitute the word "or" for "and".

Page 76, 1st paragraph, 2nd line:

Instead of "Trade Mark Act of 1905", read "Trade Marks Acts 1905-1919".

Page 76, 2nd paragraph (25):

The opening sentence of this paragraph should read as follows:-

"A considerable number of marks have been registered under this Section by both British and foreign associations (for example, the British Engineering Standards Association) and in some instances by foreign Governments."

Page 76, penultimate paragraph (37) should be completed by the following sentence:

"The Board of Trade are also prepared to survey and certify passenger steamers or items of equipment for passenger steamers, as indicated under Category 2."

I. HISTORY OF THE QUESTION.

In one of its resolutions, the 1927 World Economic Conference noted that "diseases which affect plants and animals diminish agricultural production, and should be scientifically combated on the basis of an international plan and international agreements".

The Conference, moreover, pointed out that "international agreements which establish sanitary supervision, if they provide the contracting countries with adequate guarantees, should, without infringing sovereign rights, remove from the regulations any suspicion of disguised protection and should add to the stability of trade relations, which is one of the conditions of successful production".

At the International Conference for the Abolition of Import and Export Prohibitions and Restrictions, which met at Geneva from October 17th to November 8th, 1927, the countries which exported live-stock products insisted on the adoption of the following declaration, which was included in the Final Act:

"The Conference,

"Approving the resolutions of the International Economic Conference held at Geneva in May 1927 relative to measures for the prevention of diseases of plants and animals by means of international agreements;

"Considering that certain of these agreements—in particular, the Berne Convention of 1881 against phylloxera—have led to successful joint action with favourable results;

"Considering that measures against epizootics and epiphyties should have in view only the protection of animals and plants or of the public health endangered by the consumption of harmful meat or plants, and should in no case be imposed or enforced as a means of hampering or discriminating against the trade of countries exporting products of the stock-breeding industry or agriculture; and

"Considering that it is desirable to adopt only measures of proved efficacy and to make their severity proportionate to the risks of infection anticipated;

"Recommends the Council of the League of Nations to undertake, with as little delay as possible and in the manner which appears to it most expedient, the necessary investigations, consultations and enquiries with a view to summoning a conference or conferences of experts, with special knowledge of all questions relating to the prevention of diseases of animals and plants, which should be invited to propose to the various Governments joint action that would be effective against the evils that all these Governments desire to combat, and at the same time would have due regard to the sovereign rights of States and the interests of international trade.

"The Conference is aware that efforts have been made by certain countries to arrive at the desired results by means of bilateral agreements; it recommends that the bodies to which the Council entrusts the investigations described above should examine the provisions of such agreements and observe their effects."

At its meeting on December 6th, 1927, the Council of the League asked the Economic Committee to study the problems referred to in this declaration.

At its meeting in the same month, the Economic Committee considered means of giving effect to this request.

As it stated in its report to the Council on the work of the above session, the Committee was of opinion that it would be expedient, before anything else was done, to determine the possibilities and to establish a framework for future international action, with the assistance of experts chosen in about equal proportions from countries in favour of such agreements and countries which had hitherto opposed them. It also decided that the question of the protection of animals and that of protecting plants should be dealt with *separately*, and that the first enquiry to be undertaken should be in connection with animals, in view of the number of countries specially interested in this question and its importance in international trade. Moreover, the International Agricultural Institute at Rome had already proposed an international conference with a view to joint international action in the matter of phytopathology. This conference met in April 1929.

In conformity with these decisions of the Economic Committee, the following experts were invited to constitute a Sub-Committee on veterinary matters;

Dr. BÜRGI, Professor, Director of the Veterinary Office of the Federal Department of Public Economy at Berne (Switzerland);

M. J. HAMR, Director of the Veterinary Section in the Ministry of Agriculture at Prague (Czechoslovakia);

Dr. C. O. JENSEN, Head of the State Veterinary Service, Copenhagen (Denmark);

M. J. NOWAK, Professor of Veterinary Medicine at the Cracow Faculty of Medicine (Poland);

M. C. PETROVITCH, Inspector in the Ministry of Agriculture at Belgrade (Yugoslavia);

M. VALLÉE, Professor, Director of the International Research Laboratory at Alfort (France);

Dr. WEHRLE, Director of the Veterinary Department in the "Reichsgesundheitsamt", Berlin (Germany);

M. LECLAINCHE, Professor, Director of the International Office for Contagious Diseases of Animals and Plants.

In a letter of invitation, the subject of the experts' discussions was defined as follows:

“ The aim of the Committee of Experts is to consider what guarantees might be given by countries that export live-stock and what facilities might be granted by importing countries on the basis of these guarantees, and to determine in general the best methods for applying veterinary supervision, taking into account the economic interests of the exporting countries and without prejudice to the interests of countries desiring to take precautions against diseases in animals.

After the first session of the Sub-Committee, which was held from January 30th to February 2nd, 1928, the Economic Committee deemed it expedient to add an Austrian and an Italian expert, in view of the central position of Austria as regards the trade in and transport of animals and the special interest shown by Italy in the success of the work entrusted to the Sub-Committee.

In accordance with this decision, the following experts were invited to join the Sub-Committee:

Dr. KASPER, Counsellor in the Ministry of Agriculture and Forests at Vienna (Austria);
Dr. Comm. C. BISANTI, Head of the Veterinary Service in the Ministry of the Interior at Rome (Italy).

In view of the important interests of Latin-America in the trade in live-stock and meat, the Economic Committee also decided to invite a South American expert to participate in the Sub-Committee's work on this subject.

At its second session from June 20th to June 23rd, 1928, the Sub-Committee of Experts had the assistance of Professor P. de Figueiredo Parreiras-Horta, Director of the Pastoral Industries Department of the Brazilian Ministry of Agriculture, Rio de Janeiro. In addition, the British Government, in compliance with the Economic Committee's request, sent a British expert, and Sir Ralph Jackson, Head of the Veterinary Department in the Ministry of Agriculture and Fisheries, London, was invited to join the experts at their second session.

In compliance with the Sub-Committee's request for special information from technical experts in certain large meat-exporting countries, with a view to conducting a full enquiry into the inspection of meat intended for export, the Economic Committee secured for the Sub-Committee at its *third session from May 29th to June 5th, 1929, the assistance of:*

M. Dionysio MENDY, formerly Director of the Montevideo Veterinary School;
Lt.-Col. H. A. REID (New Zealand), attached to the office of the New Zealand Government in London.

Dr. Juan Richelet, Representative of the Ministry of Agriculture at the Argentine Embassy in London, who had also been invited to attend the third session of the experts as technical expert in the matter of the inspection of meat, was unable to attend that session.

At the first meeting, Dr. Bürgi was elected Chairman of the Sub-Committee. •

The Sub-Committee of Experts appointed M. Vallée Rapporteur, for the first session and Vice-Chairman and Rapporteur for the subsequent sessions.

During the three first sessions the Sub-Committee has had the assistance of:

Dr. FISCHOEDER, Director in the Ministry of Agriculture, Warsaw; and, during its four sessions, the advice of

Dr. MEESSEMEIER, Head of the Veterinary Service in the Prussian Ministry of Agriculture at Berlin, who had accompanied the experts, M. Nowak and M. Wehrle respectively.

At the fourth session of the Sub-Committee, held from October 20th to 26th, 1930, Professor Jensen and Professor Parreiras-Horta were absent, detained by urgent work, M. Voracek, attended as successor to M. Hamr, and M. Markowski, assistant to Professor Nowak.

It devoted all its efforts to the thorough discussion and putting into final form of the present general report. The Sub-Committee endeavoured to deal with the question referred to it for discussion in all its aspects, particularly the case of animal products, to which it had not yet given such full consideration.

The meeting was attended by M. Schüller, member of the Economic Committee of the League of Nations, whose opinions proved, from various points of view, extremely valuable to the experts.

2. GENERAL ASPECT OF THE PROBLEM.

The enquiry entrusted to the experts, as clearly defined in the letter of invitation referred to above, bears on two questions which the Economic Committee held to be inseparable—a ceaseless and increasingly efficient campaign against diseases of animals, and improvements in the international trade in animals and animal products.

It is obviously the duty of all countries to join in the campaign against animal diseases. Every country should, moreover, realise that, if it conducts a strong campaign by all the means which science and organisation place at its disposal against the outbreak and spread of diseases among animals, it is acting, not merely in its own interests, but in the interests of all other countries. This conviction must become stronger if we consider the close relationship which exists between the health of animals and that of human beings. The first item, therefore, in every programme should be the improvement of health conditions by every possible means, including international action. The report of the Economic Consultative Committee on the work of its second session (1929) contains the following observation:

“The Economic Committee had rightly based its action on the principle that a prerequisite of any agreement concerning veterinary questions is that each country shall take effective measures against diseases.”

The Sub-Committee entirely agrees.

In connection with this problem, which is mainly a matter for veterinary science, complaints, whether justified or not, have for nearly a hundred years been made regarding the obstacles placed in the way of the international trade in live-stock and animal products on sanitary grounds (legitimate or otherwise). It is felt that health considerations and commercial policy are not always kept absolutely separate, and that prohibitions on sanitary grounds are sometimes applied in such a way as to constitute a disguised restriction on international trade. This may give rise to some dissatisfaction. If there is an impression that sanitary or health measures applied sometimes in a way contrary to the intentions of their promoters, or are being utilised for economic purposes, reciprocal distrust and possible conflict may arise.

For more than fifty years, therefore, this problem has been engaging the attention of Governments and interested circles. The most highly qualified representatives of the veterinary police have, at various meetings and at international conferences, admitted that some international agreement is necessary on these matters. The application of such an agreement will, however, be difficult owing to the particular situation of each country. In organising the campaign against diseases in animals, account must, it is true, be taken of the geographical situation of each country and of the special conditions which govern the herding and transport of live-stock in conformity with the needs of production—*i.e.*, stockbreeding and industry on the one hand, and consumption on the other.

But all countries are bound, when applying sanitary measures, to have the two following considerations in view—while they must protect themselves, they must not transmit disease to the foreign countries with which they trade. In spite of the recognised necessity of adapting health protection measures to national requirements, these principles make it absolutely necessary to observe the essential rules of veterinary hygiene and veterinary inspection, the importance of which has been endorsed by science.

In conformity with these principles, an international agreement was drawn up in 1924 for the creation in Paris of an International Office for Contagious Diseases of Animals, to be responsible to a large extent for ensuring the execution of the first item in the programme submitted to the experts—namely, the scientific campaign against diseases in animals—a campaign involving special studies on each disease and highly technical research that can only be conducted by qualified specialists.

Though relying¹ as regards this more scientific and technical aspect of the problem, on the help of the International Office for Contagious Diseases of Animals, the Director of which is a member of the Sub-Committee, the experts endeavoured, with regard to other aspects of the problem, to find a middle course between legitimate protection against disease and the necessity of facilitating international trade in live-stock and animal products.

3. ORGANISATION OF THE VETERINARY HEALTH SERVICES AND PUBLICATION OF VETERINARY HEALTH REPORTS.

At its first discussions, the Sub-Committee unanimously agreed on the following principle: mutual confidence in the veterinary organisations of the various countries—particularly in the case of countries that wish to import live-stock and animal products—is absolutely essential for the success of the work of the experts. Such confidence should be founded on absolute certitude that the various countries, and particularly exporting countries, possess a well-organised veterinary service and that the veterinary rules and regulations are faithfully observed. In addition, it is very important, both from a national and international point of view, that Governments should be known to be thoroughly well informed, by responsible technical services, regarding the situation in their country. The experts attached so great an importance to this last point that they laid down the following principle:

“No facilities can be granted as between exporting and importing countries in the matter of trading in animals and animal products unless the exact sanitary situation in the exporting countries is officially known and scrupulously recorded at regular intervals.”

¹ See the report of the Sub-Committee on its first session (February 1928), as set out in document C.525.M.155. 1928.II (E.432).

This requirement may be met by the publication of complete, accurate and honest health bulletins appearing with absolute regularity.

At their first session, the experts agreed to the following principles, which they think should form the basis of all future arrangements on the questions submitted to them:

1. It is indispensable that every country should possess an official veterinary organisation, capable of exercising effective sanitary supervision over the whole territory, divided into definite districts. The whole organisation should be under the authority of a responsible technical veterinary head, acting under the direct orders of the competent Minister of State. It may, however, be admitted that, in exceptional cases, an organisation under the authority of a professional veterinary surgeon, indirectly responsible to the competent Minister, can operate satisfactorily. Nevertheless, the necessary development of veterinary services and the necessarily more formal character of their technical organisation demand that the experts' instructions should be complied with. All organisations which are not based on the above-mentioned requirements must be considered *provisional*.

2. It is indispensable that each country should publish regularly and without delay a health report prepared on the standard lines adopted by the Committee of the International Office for Contagious Diseases of Animals.

After laying down these principles as the basis for their future work, the experts felt that it was necessary to collect information on the methods at present followed in the more important countries in the trade in animals. They therefore prepared a questionnaire¹ concerning the organisation of the various veterinary services and the means these services possessed to collect sanitary information and communicate this information to all concerned.

At its second session, the Sub-Committee considered replies from sixteen countries: Austria, Belgium, Bulgaria, Czechoslovakia, Denmark, France, Germany, Great Britain, Hungary, India, Italy, Norway, Poland, Sweden, Switzerland, Yugoslavia.

Furthermore, replies have since been received from thirteen other countries: Australia, Brazil, Canada, China, Colombia, Mexico, Netherlands, Netherlands Indies, Roumania, Turkey, United States of America, Union of Soviet Socialist Republics and Uruguay. On many important points the experts consider that this information is sufficient to enable them to give a definite opinion as to the ideal method of organising veterinary services and issuing bulletins of information.

I. Organisation of Veterinary Health Services.

The Sub-Committee of Experts again points out the imperative necessity of organising, in each country, a veterinary service under the authority of a veterinary expert directly responsible to the competent Minister of State.

It recognises that such an organisation exists in most of the countries consulted. It feels bound, however, to draw special attention to the fact that certain countries, even in Europe, have not yet entirely satisfied this condition, on which the attainment of the Economic Committee's aims so largely depends.

With regard to the details of the organisation of the veterinary services, the experts are of opinion that it need merely be pointed out that the only veterinary services which can be recognised as *regularly organised* are those which consist of definite sanitary districts under the supervision of a technical veterinary head, responsible to his Minister.

In the countries considered, there are very substantial differences as regards the proportion between the number of Government veterinary officials and, on the one hand, the area of cultivated land and, on the other hand, the number of head of cattle. The disparity between the number of veterinary officials and the area of land under cultivation is much more marked than that between the number of officials and the number of head of cattle. Accordingly, the number and the distribution of veterinary surgeons should be such as to ensure the effective and rapid inspection of all domestic animals.

The experts, however, felt bound to lay down certain important principles concerning the allocation of duties between Government veterinary officials and veterinary surgeons in private practice.

1. The Sub-Committee of Experts desires to make it clear that *only veterinary surgeons who are employed and paid by the Government can be regarded as Government veterinary officials*. It is of opinion that veterinary surgeons in private practice may, in exceptional cases, be entrusted with official health duties, but that in such cases the Government becomes *responsible* for these veterinary agents.

2. Government veterinary officials, or those who may be appointed to perform certain duties, should in all cases hold a State diploma in veterinary medicine and surgery.

3. *Every country should possess a veterinary health organisation which will enable it to make a declaration regarding the origin and so far as it is scientifically known, the state of health of animals intended for export.*

Certificates of origin and health certificates should be signed or countersigned by a Government veterinary official, and must in all cases involve the responsibility of the Government issuing them.

4. Veterinary inspection at frontiers should be carried out only by veterinary officials who are permanent or who are appointed by the Government.

5. The Sub-Committee of Experts, after having examined the question, is of opinion:

(a) That it is to be recommended that the inspection of *meat intended for sale or public consumption* should be entrusted, as a general rule, to persons holding veterinary diplomas and placed under the supervision of the Government technical veterinary services;

¹ See Annex to the report of the Sub-Committee on its first session.

(b) That, as regards meat and meat products *intended for export*, veterinary health inspection must be carried out by veterinary surgeons in the Government services or appointed by Government for that purpose.

6. The Sub-Committee of Experts, having discussed the question and recognising the importance of the disinfection of all means of transport used for the transport of animals and animal products, notes with satisfaction that nearly all the countries which have sent in answers to the questionnaire make such disinfection compulsory after each journey. The Sub-Committee considers that disinfection of this kind should be carried out under the supervision of Government veterinary officials.

II. *Veterinary Health Reports.*

In general, the experts unanimously agreed that *the only sanitary documents (reports, notices, certificates) which can be regarded as trustworthy—for importing countries—are those issued by countries which possess a regularly organised veterinary service* (see I).

With regard to the regular publication of veterinary health bulletins, the experts are of opinion, as stated above, that these documents should comply with the rules recently laid down by the International Office for Contagious Diseases of Animals, and should be in the form advocated by that office.

The International Office for Contagious Diseases of Animals has proposed the following conditions for the publication of the health bulletins which should be adopted in the various countries:

1. The health bulletins should be published on the 1st and 15th of each month, and give all information concerning the previous fortnight.
2. They should be exchanged between the highest veterinary authorities, without recourse to the diplomatic channel.
3. They should give all statistical information regarding the following diseases: cattle plague, foot-and-mouth disease, contagious peripneumonia, anthrax fever, sheep-pox, rabies, glanders, dourine, swine fever.
4. Each country may also give statistical or other information regarding other diseases.

The International Office for Contagious Diseases of Animals has considered the form in which bulletins should be drawn up with a view to presenting in a uniform manner the information thus collected, and is of opinion that the bulletins should certainly indicate the health situation on the date of publication—*i.e.*, the number and names of the major territorial divisions (provinces, departments, districts); the number of communes at present infected, and the number of communes and farms newly infected during the period under consideration.

After discussion, the Sub-Committee of Experts approved the above stipulations. The experts also recommend the standardisation of these bulletins on the basis of a unified nomenclature of diseases.

The experts are of opinion that the model uniform veterinary health bulletin drawn up by the office should be accepted by all the countries concerned, and should be inserted in all future veterinary conventions.

4. ADDITIONAL FORMS OF INTERNATIONAL VETERINARY CO-OPERATION WHICH MAY IMPROVE THE PRESENT POSITION.

I. *Urgent Information Service.*

(a) *Publication of a "Latest News" Bulletin.*

The creation of the International Office for Contagious Diseases of Animals, which has been referred to above and to which more than forty States have adhered, already constitutes a most valuable form of permanent international co-operation, particularly as regards the scientific and technical aspects of the problem. In addition, the participating States are, according to the statutes of the office, bound to send it their health bulletins and notify it telegraphically of the apparition of any particularly serious outbreak of contagious disease among animals.

As regards the collection of this veterinary information supplied by the various countries and its transmission to the participating Governments, no one can deny the importance of the office's work. The service will undoubtedly improve still further in future, and the greatest attention should, therefore, continue to be devoted to it.

All veterinary administrations appreciate at their full value the bulletins of the International Office, which they receive regularly; but these bulletins are bound to arrive late, and cannot, therefore, serve as a warning to the administrations of the various countries in urgent cases. Consequently, the information service of the International Office is mainly of statistical and scientific value and cannot, under present circumstances, be utilised for urgent communications of practical value in stamping out epizootic diseases.

Under the resolutions already passed by the International Veterinary Conferences, held in 1921 at Vienna and at Kovno, which were confirmed by the 1924 Assembly of the International Office, countries usually exchange immediately *inter se* the bulletins they are also bound to communicate to the office. Veterinary conventions which have been concluded between various countries contain the same stipulation. Certain countries send their communications to the authorities of the other countries with absolute regularity, but in many cases notification is received so late that it is of no value except from a statistical standpoint. Several of the experts pointed out that,

in this way, numerous communications are only received four months after the end of the period to which they refer.

It has, moreover, been stated that one of the causes of delay is that these communications are sometimes made through diplomatic channels instead of being sent direct by the competent departments to the departments concerned in the other country. The experts agree that communications should be addressed direct from the competent ministry to the ministry concerned in the other country, and should not pass through diplomatic channels.

In addition to the necessity of accelerating in future the exchange between States of veterinary health bulletins which, according to the conditions laid down by the International Office for Contagious Diseases of Animals, should be issued on the 1st and 15th of each month, it was thought that, even if these dates were strictly adhered to, the bulletins would often appear too late to be of immediate use as health information. The data and information they contain are often several days or even several weeks late. Consideration should therefore be given to the possibility of all countries publishing, at least bi-weekly, a communiqué containing the latest information. Certain countries have already recognised this necessity; they even publish weekly a news bulletin which makes it possible to follow the course of contagious diseases of animals almost from day to day.

The experts are of opinion that, before recommending the universal adoption of a system of urgent information, they should ask for the assistance of the International Office for Contagious Diseases of Animals, which is competent to investigate such a question.

(b) *Information by Telegraph.*

When, however, certain particularly serious infectious diseases make their appearance, it is obvious that a warning to the authorities of other countries which may be exposed to danger should be sent by means more rapid than a printed bulletin which, however speedily it may be printed, could hardly reach the authorities concerned in less than a fortnight.

Consequently, most veterinary conventions concluded between European countries contain—apart from minor variations—the following clauses:

1. If cattle plague or contagious lempneumonia in cattle should break out in the territory of one of the contracting parties, the Government of the other party shall be informed of the outbreak and extent of the disease direct *by telegraph*. (In addition to the above diseases, some veterinary conventions call for notification by telegraph in the case of foot-and-mouth disease and dourine.)

2. As regards an outbreak of contagious disease among animals in the administrative districts of the frontier zones, the authorities shall notify each other immediately and direct.

The experts are of opinion that, in the general interests of veterinary health, a determined effort should at once be made to establish a proper international service supplying information by telegraph, or to help to improve such a service where it already exists. This service should not be limited to the countries which have concluded, or may conclude, veterinary conventions and it should take prompt and decisive action.

The experts consider that the obligations of the various administrations should be limited to what is strictly necessary—*i.e.*, should be restricted to certain particularly serious diseases. The communications should be brief and sent in code. It would seem that a twofold series of communications should be contemplated:

1. Direct communications between the central offices of the services concerned—*i.e.*, between the capitals of the different countries. The communiqués should refer only to the first appearance in the country of the following diseases: cattle plague, swine plague, fowl plague, foot-and-mouth disease, contagious peripneumonia, rabies and dourine.

2. Direct communications from veterinary authorities of first instances established at the frontier to the corresponding authorities in the adjacent State.

Obviously, need for urgent action is greatest between adjacent districts. These communications should therefore refer to all the more important contagious diseases—*i.e.*, those already mentioned above and, in addition, sheep-pox, dourine, glanders, and contagious diseases among fowls.

Local veterinary authorities should also be asked, in all cases, to warn neighbouring authorities telegraphically, and not merely in writing. The latter process would, in many cases, be too slow to be of any real use.

The experts request the International Office for Contagious Diseases to determine the conditions required for the organisation and operation of their rapid information service.

II. *Other Forms of International Co-operation.*

All the foregoing considerations tend to show that an improvement in the international veterinary sanitary situation brought about by the best possible sanitary organisation in all the countries engaged in international trade would be of equal advantage to exporting and to importing countries. The former would be enabled to increase their production and facilities for the sale of their live-stock and animal products; the latter would obtain greater guarantees for the goods they are obliged to import for the needs of the population and would, at the same time, be protecting their own live-stock against the danger of disease as a result of international trade.

It was from the point of view of this common interest that the Economic Consultative Committee, at its last session in May 1929, expressed the hope that the countries concerned would co-operate loyally, adding that it trusted that all the countries represented on the Committee would consider it a duty freely to exchange information and thus each contribute towards the advancement of science.

The sole object in view is to increase our knowledge and apply it more widely; closer and more frequent contact between nations than has hitherto obtained might therefore be of great value.

In addition, in order to carry out fully their task, the experts should try to establish a number of fundamental principles acceptable to all countries. Without in any way infringing on the sovereignty of States, in certain carefully defined circumstances, agreements and special arrangements might be promoted between various countries for strengthening the campaign against diseases in animals and facilitating international trade by improving veterinary relations between the various countries; for, however reasonable the rules accepted by common consent may be, their application must, in the long run, be left to the parties concerned, and everything depends on the manner in which the rules are applied. In view of the possibility, if not the certitude, of some differences of opinion, it would be useless to lay down rigid principles. Differences of opinion should be reduced by encouraging as much contact as possible between the interested parties.

Appropriate means must be found of developing contact between veterinary administrations in the different countries. This might, in the opinion of the experts, be secured in the following way:

(a) *Admission of Students and Teachers of One Country to the Institutions and Laboratories of Another Country.* — The admission of the veterinary students and teachers of one country to the institutes and laboratories of another country should be facilitated and encouraged.

Such relations already exist between numerous countries, in which foreign students are warmly welcomed by veterinary schools and research institutes. The experts are of opinion that it is very important that international interchanges of students should be as effective as possible. Such students should be required to possess a good general education and be sufficiently well acquainted with the languages required. Given these conditions, interchange might complete and amplify the education of foreign students, and familiarise them with the teaching and research methods in use in other countries. Similarly, it would be very desirable for professors, lecturers and assistants to acquaint themselves, by visiting the institutions of other countries, with foreign methods. They would thus increase their own knowledge and enlarge their outlook. It might also be possible to organise special courses for young veterinary officers in particularly suitable institutes and laboratories abroad, thus completing their instruction and providing them with a deeper knowledge of the state of science and research work in the various countries.

(b) *Commissions of Enquiry; Individual Missions; Exchange of Veterinary Officials.* — It would be desirable to organise commissions of enquiry on the lines already followed in the case of human hygiene by the Health Organisation of the League of Nations, and veterinary officials should be exchanged between the various administrations.

A member of the Health Section of the League of Nations briefly explained to the experts the manner in which the interchange of medical officers was organised. Thanks to grants from the Rockefeller Foundation and a special item in the League budget, the Health Section organises study tours in several countries of particular interest from the health point of view. Medical officers from different countries nominated by their Governments take part in these tours.

In addition, individual missions—entrusted generally to the public health officials of a given country—are organised under special arrangements concluded between the Health Organisation and the health services of the countries in question. In this way, a number of officials of one country acquaint themselves with current practice in other countries in which conditions are particularly favourable.

The experts believe that, in veterinary work also, such exchanges might be of great value. They would lead to the study of the special conditions in the various countries of stock raising, distribution, herding and transport of live-stock, which are important factors in determining the danger of infection. These exchanges would familiarise the visitors with the special sanitary measures required to counteract the situation and prevent any introduction of infectious diseases when foreign live-stock and animal products are being imported. These missions would also make it easier to understand the various sanitary systems on which veterinary laws and working methods are based, and to appreciate their practical value.

The experts are of opinion that, in addition to commissions of enquiry consisting of responsible veterinary directors, the programme of which should be drawn up by the competent organisation of the League of Nations in conjunction with the countries concerned, the temporary seconding of young veterinary officials to the veterinary health administrations of other countries would constitute an extremely useful form of international co-operation. These officials would, in the course of several months or years, be able to gain a practical knowledge of the methods and rules

followed by foreign veterinary services, which would be of inestimable value for their training and give them a proper insight into the working of the various veterinary systems.

(c) *Permanent establishment of Veterinary Officials in the Territory of Another Country; Closer Contact between the Veterinary Authorities of the Countries concerned.* — The problem of the permanent establishment of veterinary officials of one country in the territory of another country is no doubt difficult and complicated. Not to mention the various missions which these officials might usefully accomplish, it seems that, in the case of countries between which the trade in animals and animal products is intense, an arrangement of this kind might obviate many difficulties which at present frequently arise in this branch of international trade. As a matter of fact, there already exist certain precedents and examples.

The veterinary conventions which have been concluded between Austria and Czechoslovakia, Germany and Hungary and the conventions between Czechoslovakia and Hungary, Latvia and Roumania include with slight variations the following provisions:

“Each of the two parties grants the other the right to send representatives into its territory, without previous notice, and even to appoint permanent representatives for the purpose of keeping them informed as to health conditions among animals, the organisation of cattle (meat) markets, slaughterhouses, fattening establishments, quarantine measures, etc., and as to the enforcement of the existing veterinary regulations.

“The two contracting parties shall instruct their authorities to give the necessary assistance to the above-mentioned representatives and provide them, as soon as their status has been established, with all the information required.”

The same provisions, subject merely to previous notification in the case of the despatch of representatives, have been agreed to by Austria and Yugoslavia and, on rather less definite lines, between Czechoslovakia and Poland.

The veterinary conventions concluded between Yugoslavia and Hungary, and between Yugoslavia and Greece, contain the following provisions:

“The High Contracting Parties grant each other the right to attach to their legations permanent or temporary veterinary representatives for the purpose of collecting information regarding stock-breeding, the health of live-stock, the organisation of cattle markets, places of embarkation and disembarkation, slaughter-houses, fattening establishments, quarantine stations, etc., and enforcement of the existing veterinary regulations and the present Agreement (the present provisions).

“The two parties undertake to provide these representatives with all information and to afford them all necessary assistance in carrying out their mission.”

The Austrian expert pointed out to his colleagues that, under the veterinary agreements concluded by his country with Germany, Hungary and Yugoslavia, Austrian veterinary surgeons are posted at Munich, Budapest and Zagreb.

Similarly, with the consent of the Government concerned, there are resident British veterinary officials in South America who are responsible for visiting the Argentine, Brazil, Chile and Uruguay; and there are veterinary officials from Australia, New Zealand and the United States resident in London. This exchange of veterinary officials has proved highly satisfactory.

The great advantage of these exchanges lies in the fact that they enable officials from the various veterinary services concerned to consult each other direct on all questions which arise, without having recourse to diplomatic channels.

The only reason for which the experts hesitate to propose the temporary or permanent posting of veterinary officials in the territory of another country as an essential principle is that such a stipulation might be regarded as infringing national sovereignty. The working of this system should be carefully examined, taking into account the particular relations existing between the countries in question. It cannot, however, be denied that this method would possess enormous advantages, and would harmonise the various sanitary requirements, or help to make them better understood. The experts think that the proposal might first be considered for countries for which the trade in live-stock and animal products is of great importance, and which are therefore obliged to regulate that trade by means of special agreements.

Though leaving it to the countries concerned to decide the question of the exchange of more or less permanent veterinary officials, the experts unanimously recognise that, in any event, means should be found to establish closer contact between the veterinary administrations of the countries interested, in order to prevent difficulties that may result from a large trade in live-stock or animal products.

It is already in some cases the custom, as between countries which have concluded veterinary conventions, for the veterinary administrations to communicate direct *inter se* and not through diplomatic channels, when difficulties arise in connection with the trade in live-stock. It would be well if this custom could be extended, since direct communication without recourse to diplomatic action would enable the countries concerned to exchange up-to-date information concerning

complaints or demands on veterinary matters and meet each others' views. If such communications are withheld until diplomatic intervention seems necessary, a regrettable atmosphere of misunderstanding may arise and prohibitive measures may be taken against the trade in live-stock.

5. SANITARY VETERINARY MEASURES APPLIED AND MEASURES APPLICABLE TO THE IMPORT, EXPORT AND TRANSIT OF ANIMALS.

The task of the Committee of Experts is not merely "to consider what guarantees might be given by countries exporting live-stock", but also to define "the facilities which importing countries might grant on the basis of these guarantees".

The Sub-Committee of Experts is of opinion that the principles it has laid down regarding the organisation of veterinary services and the publication of health bulletins are essential points as regard the protection of animals against disease; at the same time, these measures provide *the minimum guarantees requisite*, and correspond to the requirements of veterinary inspection and public health. Naturally, the various methods of international co-operation referred to in the previous chapter will also strengthen these guarantees to a considerable degree.

Having thus indicated the essential factors for the establishment of mutual confidence between countries having common commercial interests, the experts are now able to undertake the other part of their mission—namely, to consider to what extent and by what methods the various countries may come to an agreement to abolish such hindrances to trade as are not justified by or necessary for the legal protection of animals and public health.

The experts therefore felt that, in the first place, it was essential to institute an enquiry into the measures at present in force in the different countries in relation to the import, export and transit of animals and products of animal origin; the actual manner in which these measures are applied in the various countries must be ascertained in order to appreciate the difficulties as regards administration and hygiene which will have to be overcome. To this end the experts, at their second session, prepared a questionnaire¹ which, by decision of the Council, was communicated to the States Members and principal States non-Members of the League of Nations. At their third session, therefore, the experts had at their disposal abundant information, including replies to the questionnaire from thirty-two States: Australia, Austria, Belgium, Bulgaria, Canada, Colombia, Czechoslovakia, Denmark, Estonia, Finland, France, Germany, Great Britain, Hungary, Italy, Irish Free State, Latvia, Mexico, Netherlands, Netherlands Indies, New Zealand, Norway, Poland, Union of South Africa, Spain, Sweden, Switzerland, Turkey, United States of America, Union of Soviet Socialist Republics, Uruguay and Yugoslavia.

Since the session, information has been received from the following countries: Brazil, China, Japan, Roumania, Southern Rhodesia.

(a) *The Two Systems applied in Different Countries.* — The information thus collected shows that serious and permanent obstacles are placed in the way of the trade in live-stock for veterinary health reasons. There are, however, at least two entirely different systems which the various countries apply in regulating international trade—some place a general prohibition on the import of animals into their territory and grant permits in exceptional cases only, while others recognise the principle of free import but restrict this by more or less far-reaching prohibitions.

Under the first system often known as that of "the closed door" permission has to be obtained for the import of any live-stock. The conditions under which imports may be authorised are laid down in decrees which generally contain special regulations for the import of live-stock coming from different countries. This system, of course, does not mean that the import of live-stock from a seriously infected country cannot be prohibited altogether. England, for instance, only allows animals to be imported from certain definite countries in which neither foot-and-mouth disease nor sheep-pox exist.

Moreover, special decrees often encourage imports from given countries, and special regulations may be brought into play as a result of veterinary conventions.

The other system, known as "the open door", is founded on the principle of free import subject to certain prohibitions or legal restrictions. Under this system, certain species of animals are often allowed to enter on obtaining a permit which is almost always accorded if the animals come from a country in which the live-stock is in a good state of health. The granting of special import licences depends, in this case, on epizootic conditions in the countries of origin. It is possible therefore, that the import of animals coming from a country where disease is endemic may be prohibited, but such prohibition is, in principle, only for a limited period. Under this system, special regulations may also be adopted by means of veterinary conventions.

Both systems have advantages from the veterinary sanitary point of view, and their effects on international trade depend solely on the way they are applied. If, under the system of the "open door", permission to import is entirely refused without any decree requiring such total prohibition, the practical results may be more prohibitive than those obtained under the "closed

¹ See Annex to the Sub-Committee's report on its second session (June 1928), given in document C. 525. M. 155. 1928. II (E. 432).

door" system. It should, however, be observed that the system of the "closed door" necessitates various kinds of derogations which generally take the form of special import permits. With regard to these permits, the experts wish to draw attention to two important principles:

I. Permits should be granted in a liberal spirit, and should not be refused except for conclusive veterinary reasons.

II. The application of general permits in favour of specified countries should, whenever possible, be taken into consideration with a view to avoiding individual exceptions, which are only granted for a given number of animals and for a given period.

(b) *Bilateral Veterinary Conventions.* — In applying both systems, as we have seen, relaxations in the legal provisions and consequently trade facilities can be—and are, in fact—accorded under bilateral veterinary conventions between the two States concerned.

These veterinary conventions are of two types. The first includes those which regulate frontier traffic. Such agreements are, in many countries, an absolute necessity on account of the close relations between neighbouring States. In spite of the smallness of the territorial area to which these conventions apply, their importance is by no means negligible, either from the point of view of commercial relations or from that of the special dangers which frontier traffic and grazing involve as regards the introduction of animal diseases. The second, and more important, category includes veterinary conventions intended to lessen throughout the whole territory of the contracting parties the severity of certain laws. Generally, in this case, the parties undertake not to introduce import prohibitions or restrictions except according to the provisions laid down and specified in the conventions. The essential object of these conventions is therefore to ensure the stability of trade and speedy transactions between the two contracting countries by limiting prohibitions and restrictions, both as to duration and area, in conformity with definite rules according to the gravity of the various diseases.

The experts unanimously recognise that bilateral veterinary conventions (whether separate or annexed to commercial treaties) can facilitate international trade. They therefore seem to be an appropriate means of encouraging international trade so far as is compatible with the needs of animal health. Certain experts, however, pointed out that the mere fact that appropriate veterinary sanitary measures are prescribed does not necessarily mean that they will be effective; this depends on the way in which they are carried out. In deciding, therefore, whether it is in a position to conclude a convention of this kind, a Government must consider, not only the general state of health of the live-stock in the countries concerned, but also whether there is any evidence that the measures prescribed are conscientiously carried out. The experts admit that countries with a large and varied live-stock trade, which are consequently likely to spread epizootic diseases, are justified in exercising a certain caution in settling this question, in the interests of the protection of their live-stock.

(c) *Certificates of Origin and Health; Sanitary Inspection on Export; Joint Veterinary Inspection; Transport of Animals by Sea.* — Apart from the facilities granted under bilateral veterinary conventions, whatever system may be adopted, the import of ruminants and pigs is almost everywhere prohibited, though commercial transactions in these animals are the most important of all. When exceptions to this rule are allowed, they refer in most cases only to certain varieties coming from a given locality.

These strict prohibitions are, it is true, justified when epizootic diseases which are highly contagious and highly detrimental from the economic point of view are prevalent in a country. The prohibitions in question may take the form of absolute prohibitions to import, if this is justified by special veterinary reasons.

The experts feel that, apart, from special arrangements—which are, as a rule, very desirable—concluded between two countries by means of bilateral veterinary conventions, a series of precautionary measures differing according to the system of prohibitions, if adopted and applied by the various countries, either autonomously or by joint agreement, might enhance the value of existing guarantees and thus induce the importing countries to afford greater commercial facilities. They draw attention to the following points:

I. Certificates of origin and health are everywhere recognised as indispensable, in order to ensure sincerity and safety in commercial relations. Similarly, certificates concerning animals intended for export are of very high importance to international trade. They are generally required by importing countries and are issued by exporting countries—*i.e.*, they are in common use in international trade. But the impression exists that certificates are not always issued with the necessary conscientiousness and care, and that the certificates issued by various exporting countries are not always equally valid as guarantees. The confidence which may be placed in these certificates, even when they are issued by Government veterinary officials, depends entirely on the excellence of the veterinary organisation and the severity of the veterinary officials in a given country.

The experts unanimously agree that a certificate has no real value unless it involves the full moral responsibility of the Government in whose territory it is issued. They consider it essential that certificates for animals intended for export should only be issued on the absolute responsibility of the country delivering them.

Being convinced that this is an absolute necessity, the experts have laid down as one of the principles which should govern the organisation of veterinary services that:

“Certificates of origin and health certificates should be signed or countersigned by a Government veterinary official, or by a veterinary surgeon having authority from the Government to do so, and must in all cases involve the responsibility of the Government issuing them.”

By “the responsibility of the Government” the experts mean that the Government shall recognise that it is responsible for the selection of its veterinary officials who are authorised to sign or countersign the certificates, and that the latter must be liable to disciplinary or penal penalties in order that their responsibility may be involved if they neglect their duties.

There are very few countries which do not yet possess a complete veterinary sanitary organisation directly dependent on the State. Those of them, however, which, like Great Britain exercise direct and effective supervision over the action of the local veterinary authorities in connection with international trade, and take full and entire responsibility for that action deserve the confidence of other nations. The experts are therefore of opinion that the principle of the responsibility of the State for certificates of origin and health certificates in respect of animals is of very special importance. Such responsibility might also be involved where special accredited and authorised veterinary agents are appointed to issue certificates. These agents should be subject to disciplinary control involving the responsibility of the State. The experts therefore feel bound to insist on a principle which harmonises with the usual method of organisation of veterinary services; they have thought this fact to be of sufficient importance to warrant its inclusion as a special chapter in this report. Though they recognise the difficulties that might arise as a result of the special conditions of the administrative systems in the various countries with regard to the legal status of veterinary surgeons authorised to sign or countersign certificates, the action of the latter should, in every case, involve the entire responsibility of the issuing State as indicated above.

Finally, with regard to the manner in which the certificates should be issued, it would be very desirable to establish a model form, if not a uniform text, for the certificate of origin and health for the various kinds of animals under consideration. It is therefore interesting to note that the assembly of the International Office for Contagious Diseases of Animals, at its last session, considered the problem of the unification of health certificates and drew up a uniform model. This question is still on the agenda of the office.

II. It is obvious that, in the commercial interests of any country, the health of animals about to be exported should be as satisfactory as possible. The exporting country should therefore endeavour to prevent the export abroad of all animals that are not in perfect condition. It is even in the interests of the exporting country to forestall a refusal on the part of the authorities of the importing countries to allow the live-stock to enter their territory. It is highly important, therefore, that the veterinary inspection of animals, which should take place before the issue of a health certificate, should be made most conscientiously.

In the course of our report, we have on many occasions insisted on the principle that importing countries should be able to feel absolutely certain regarding the sanitary precautions taken, for their benefit, by animal-exporting countries. The latter should, by the effectiveness of the sanitary measures they adopt, endeavour to diminish as far as possible the risks incurred by importing countries. It is impossible for an importing country to exercise an absolutely effective control. Consequently, the sanitary measures adopted by importing countries can never be regarded as a sufficient guarantee for the protection of native live-stock and the health of human beings. On the contrary, the institutions in the exporting countries and the measures adopted by them must always be the main guarantee afforded to the importing country for the effective protection of the latter against the entry of diseased animals.

In the light of these premises, the experts have carefully considered the desirability, and even the necessity, of additional sanitary inspection to take place at the time of the export of the animals —*i.e.*, at the frontier. They came to the unanimous conclusion that such inspection might in certain cases produce very satisfactory results and might provide an important guarantee.

The information collected by the experts shows that several exporting countries do not carry out any inspection at the frontier. In some countries, such inspection is compulsory, while in others it is optional. The experts are of opinion that such frontier control should take the form, not so much of a veterinary inspection as of a careful verification of the certificates of origin, waybills, etc., accompanying each consignment, in order to ascertain that the animals have really been consigned from the places specified in the certificates and not from places that are not free from all infection. The experts are of opinion that a veterinary inspection of animals at the frontier, which would in most cases entail the detainment of live-stock at the frontier stations, is not to be recommended in view of the fact that any crowding of animals in a limited space considerably increases the danger of infection.

Consequently, the experts are also opposed in principle to the system of quarantine, which they feel should be applied only to certain animals and more particularly to pedigree stock.

The experts feel that the effect of the supervision they propose would be to render the veterinary inspection previous to the issue of a health certificate much stricter. In point of fact, the veterinary official issuing the certificate would take care to fulfil his duties most punctiliously if he knew that a further very careful examination would, or might, be made at the frontier of his country.

Under these circumstances, the mere inspection of wagons and the conditions under which transport is effected should, in general, be sufficient, in addition to the verification of the documents accompanying the consignment, as a complement to the stricter inspection which would have already been made in the interior.

Nevertheless, there still remains a danger that animals may, in spite of all precautions, contract a disease *en route*, or that animals with disease in a state of incubation when inspection took place may become definitely diseased during transport. If the disease which has broken out *en route* is not discovered in time and if, consequently, the consignment is not withdrawn, the infected live-stock will come before the inspecting authorities of the other country, an eventuality which should be avoided at all costs in the interests of the exporting country itself. The result of such an occurrence would certainly be that the authorities of the importing country would adopt rigorous measures, even going so far as to suspend, for a time, all imports from the country in question—a decision which would be very prejudicial to that country's trade.

The experts, therefore, have also considered whether veterinary inspection in the importing country when the animals are received should not be carried out in the presence of veterinary officials of the exporting country.

The experts believe that the system of joint inspection by veterinary inspectors of the two countries concerned merits very careful consideration.

For this purpose the use of international railway stations, or of common frontier stations where they exist, has been found practical. Moreover, more of such stations might be established in suitable places. It would, however, be necessary to provide the stations with the most modern equipment for conducting all veterinary operations required.

This system would offer the further advantage that the inspection of live-stock in the presence of veterinary officials of the exporting country would tend to eliminate the feelings of resentment experienced by the owners of animals the entry of which is refused or the slaughter of which becomes necessary.

Certain experts referred to the advantage of transporting animals by sea, so that animals can be slaughtered at the port of landing and need not enter the country. Other experts, however, emphasised the enormous commercial risk of having a whole cargo refused as a result of disease in a few animals.

(d) *Application of Sanitary Measures according to the Seriousness of the Disease.* — In the light of the information provided, the experts have thus indicated a few of the essential ways in which the supervision generally exercised on the import and export of live-stock might be improved. They consider that the joint application of the principles they have laid down concerning the organisation of veterinary services and the publication of health information might, together with their other recommendations, help appreciably to diminish the dangers inherent in the international trade in live-stock. The experts are therefore of opinion that it is possible to indicate, on an essentially scientific basis, the veterinary measures which, in the present state of our knowledge, seem both indispensable and appropriate for the avoidance of the import of the most serious diseases.

The various contagious animal diseases at present classified are here divided into four groups according to their seriousness and degree of transmissibility. It seems reasonable to indicate the following measures as indispensable and appropriate for each of the groups considered.

I. *First Group.*

This comprises only one disease: cattle plague.

The import of cattle may be prohibited from countries which have not been completely and certainly free from the disease for at least twelve months.

The time from which this period is to be counted is the date on which all veterinary measures were abrogated in the exporting country.

As regards animals, the prohibition extends to all species of ruminants, whether domestic or wild, and also to pigs.

II. *Second Group.*

This group comprises the following diseases: (1) foot-and-mouth disease; (2) swine plague; (3) sheep-pox; (4) contagious peripneumonia of cattle; (5) fowl plague; (6) fowl cholera; (7) white diarrhoea of chickens.

Any country which is entirely free from one of the diseases enumerated above, or is relatively little infected, is fully entitled to prohibit completely the import of receptive animals coming from the infected countries, except in the cases of fowl cholera and white diarrhoea of chickens.

Some experts are of opinion that, in the case of foot-and-mouth disease and swine plague, total prohibition would be too drastic, and that prohibition might be limited to the infected territory and neighbouring districts.

Countries already infected may allow this rule to be relaxed, having regard to the epidemic type of the disease in the places and at the time considered, the possibility of the import of a new type of virus (foot-and-mouth disease and probably swine plague), and the economic purpose for which the imported animals are intended.

Facilities for import may possibly be contemplated for animals which have been subjected in proper time to active or passive immunisation, and for animals which are intended to be sent direct to special slaughter-houses.

III. *Third Group.*

This group comprises the following diseases: rabies, dourine, glanders.

All countries are trying to eradicate these three diseases. Drastic measures as regards import are, in the case of countries at present free from these diseases, justified by the fear of reintroduction.

For purposes of import, guarantees may be demanded in the case of all these diseases. One form of such guarantee would be certificates identifying the animals as coming direct from districts which are certainly free from the disease in question. In the case of dourine, an import prohibition on stallions seems justified.

IV. *Anthrax (Milzbrand).*

Duly identified animals should come from places (stables, pastures, etc.) which are unquestionably and habitually free from anthrax.

V. *Diseases affecting Stock-Raising.*

Trade in animals specially intended for cattle-raising (more particularly breeding or pedigree animals) would be improved if there were a system of inspection which made it possible to issue an official guarantee that the animals come from farms which are unquestionably free from those diseases which, although not generally classed among contagious diseases, nevertheless cause considerable loss or constitute a danger to public health. Such are, for instance, epizootic abortion in the various species (cows, mares, sows), undulant fever, contagious mammitis, tuberculosis in all species.

6. TRANSIT OF ANIMALS.

In many of its aspects, the problem of the transit of animals is essentially international and is, from several points of view, a matter of primary importance,

In a continent like Europe, certain countries have a surplus of live-stock which they are not always able to sell in the markets of the neighbouring countries. Other countries have not sufficient live-stock and, if the neighbouring nations were to prohibit the transit of animals, they would be unable to meet their requirements.

Several experts therefore insisted that the transit of live animals may become a fundamental need for an importing country if that country has to make good a deficiency in its meat supply, seeing that certain countries are obliged to obtain their supplies from distant sources. If transit were not subject to regulations, and if each nation were entirely free to prohibit the transit of live-stock without good reason, the countries forced to import live-stock would be deprived of an article of prime necessity.

Thus defined, the question becomes of basic importance from the point of view of international trade.

When it is considered that a convoy of animals may have to traverse the territory of several countries in order to reach its destination, the international character of the problem is obvious.

International rules governing the main conditions under which the transit of live-stock may take place would, in many cases, obviate the necessity of those special arrangements which have so often to be concluded between a large number of interested countries.

It cannot be denied that the transit of animals involves, for the transit countries, some risk of infection. In particular, if transport necessitates long journeys over a wide territory, with the passage of numerous herds along the roads, the necessity of watering and feeding the animals undoubtedly involves some danger of infection of the native live-stock. But opinions differ as to the degree of risk occasioned by the transit of live-stock. Some countries hold it to be the same as in the case of imports, and therefore subject live-stock in transit to the same conditions as imported live-stock. On the other hand, most countries consider that transit under certain conditions does not involve the same danger as import, and grant, by means of veterinary conventions or special arrangements, certain facilities to live-stock passing in transit.

On this point, also, there were two opposite currents of opinion in the Sub-Committee.

Some experts held that the transit of animals involved the same risks as their import, if not greater risks. They maintained that it was not possible, for technical reasons and on account of the expense, to close the wagons so hermetically that no droppings or other infected matter could pass through. During the journey, also, it was necessary to water and feed the animals, which, in most cases, necessitated their detrainment.

Most of the experts, however, though recognising that transit countries incurred certain risks, thought that the danger might be greatly reduced, if not altogether eliminated. They are of opinion that transit countries are entitled to require the same certificates of origin and health as in the case of imports, and that animals should be subject to sanitary inspection at the frontier.

The detrainment of animals naturally involves the greatest danger; but this might, even on a long journey, be avoided by what is known as the "chain sealing" system. This system makes it possible to water and feed the animals in the wagons. These experts think that the danger of droppings or food débris falling from the wagons should not be exaggerated. Scattering of droppings might be reduced to a minimum by some apparatus installed in the trucks, if it be held that the construction of special trucks is precluded on account of the high cost.

Generally speaking, these experts felt that the transit of animals should, on account of its economic importance, always be authorised if guarantees are provided against the dangers incurred by the country of transit. A proper equilibrium must be sought between the sanitary interests of the transit countries and the lawful claims of international trade, which might be seriously affected by exaggerated obstacles placed in the way of transit.

The Sub-Committee of Experts recognises that this danger could be lessened by measures of various kinds:

(a) By requiring, in the case of animals presented for transit, guarantees similar to those required in the case of imported animals;

(b) By prohibiting or regulating the temporary unloading of animals during their journey through the territory of the transit country—which unloading may be necessary in order that the animals may receive attention (cleaning, feeding, milking, etc.);

(c) The experts think that a great advantage would be secured if it were technically and economically possible for railways to adapt trucks on hygienic lines so that they would be free from the defects of these now used—namely, the falling out of droppings and other matter which might cause infection;

(d) In any case, transit countries are fully justified in requiring the country of destination or transit to allow the unconditional entry of the animals and to recognise that no responsibility for the health condition of the animals is incurred by reason of transit.

7. IMPORT, EXPORT AND TRANSIT OF MEAT AND MEAT PREPARATIONS.

The difficulties which the trade in live-stock encounters as a result of veterinary regulations and the considerable development in the foodstuffs industry has resulted in an evergrowing international trade in meat and meat preparations. This tendency is accentuated by the fact that modern refrigerating plant makes it possible to transport these commodities over long distances without any serious drawbacks.

Though it cannot be denied that the danger of contamination is appreciably less in the case of meat and meat preparations than in the case of live animals, the danger—as is proved by numerous observations and experiments—undoubtedly exists.

In addition to preventing the spread of animal diseases, the veterinary authorities have to see that no meat or meat preparations which could be harmful to man are placed on the market.

The trade in live animals being limited by the requirements of the veterinary authorities the regulation of the traffic in meat and meat products is, from an economic standpoint, all the more important.

Countries which possess a surplus of live-stock, and also a well-developed foodstuffs industry, endeavour to export animal products where the trade in live-stock is impeded or hampered by distance or by sanitary requirements.

Moreover, the dangers connected with most animal products mainly affect human health, and the progress of science has made very searching investigations possible, so that the risk of infection is considerably diminished.

(a) *Meat.* — In general, meat can be imported more easily than live animals. Some countries, however, require an import permit, either because no veterinary conventions have been concluded on the subject, or for the import of particularly large quantities, or again for meat coming from certain localities.

The seriousness of the danger to human diet represented by different classes of meat (fresh, chilled or frozen) in certain cases varies according to whether the meat is eaten raw or cooked. If we take the case of parasitic diseases transmissible to man, frozen meat seems less dangerous than any other kind. On the other hand, the virulence of certain germs is preserved by freezing, and this question is still under consideration.

In any case, the experts unanimously agree that less danger to health attaches to the trade in meat than to the trade in live-stock. All meat, however, whether fresh, chilled, or frozen, is inspected under practically the same conditions and with the same severity by the veterinary and health authorities, no distinction being drawn between the various varieties.

In most countries, consignments have to be accompanied by a certificate of origin and a certificate of health attesting that the animal was in perfect condition before it was slaughtered and that its meat after slaughter has been found healthy. Except in a few countries, meat is inspected at the frontier. In order to ensure efficient inspection, it is generally stipulated that meat must be imported in quarters or entire carcasses, and sometimes that certain internal organs shall remain actually attached to the carcase.

Although the inspection of meat at the frontier, and of attached viscera, is harmful from the point of view of preservation, the experts readily admit that, in the case of all meat, countries should be allowed to lay down rules as to the locality in which the inspection should take place, whether at the frontier or at the place of destination. Though the adherence of internal organs which decompose rapidly may, as regards the preservation of the meat, have certain drawbacks, its importance for a thorough general inspection is sufficient to warrant this stipulation.

In the case of *chilled and frozen meat*, which mainly comes from overseas countries, the great length of the voyage practically precludes the presence of organs which are specially liable to decomposition. Some countries, therefore, no longer insist upon this point. The experts are, however, of opinion that it is important that this meat should be submitted for inspection in a state in which effective examination is possible, especially as regards the lymphatic and serous glands.

In the case of transport by rail, this examination is only feasible at the place of destination. As a general rule, the inspection at the frontier should be limited to the verification of the certificates and papers accompanying the consignment, a method which is also followed in the case of fresh meat—for instance, in Austria and Czechoslovakia.

(b) *Meat Preparations.* — Whereas the examination of meat preparations proper—such as hams or bacon, salted or dried, meat in large pieces and salted or dried meat, etc.—is generally regarded as possible, differences of opinion exist as to the relative difficulty of effectively inspecting minced meat or meat cut up in small pieces, even when histological, bacteriological and chemical methods are employed. These differences of opinion are reflected in the varying strictness of the regulations in the different countries. The experts unanimously recognise that even histological, bacteriological or chemical examination may in such cases prove inadequate.

Differences do, in fact, exist as regards the granting of import authorisations. Some countries refuse to grant them, others require one for each consignment, while others grant general and unlimited authorisations only requiring health certificates of the same type as in the case of meat imports. Germany and Poland, for instance—though the latter allows exceptions in veterinary conventions—totally prohibit the import of preserved meat and sausages. Switzerland only excludes preserved meat which contains vegetable matter or parts of animal organs, and fresh sausages.

Whereas certain experts expressed the opinion that, provided the necessary rules were strictly observed, the trade in preserved meat and sausages presented no serious risk, other experts thought the special measures adopted by the respective countries were fully justified.

It is true that scientific requirements necessitate very rigorous hygienic measures, and that practically no arguments are available against the scientific convictions of certain experts. On the other hand, countries which are quite as strict theoretically, nevertheless actually apply a more liberal system. The only way to encourage a more liberal tendency seems to be to increase confidence in the veterinary and health organisation and the processes of manufacture in the various countries. In this instance, also, international co-operation by interchange of veterinary staff or officials for the supervision of manufacture might be useful.

(c) *Certificates and Other Guarantees.* — The best method of facilitating the trade in meat and meat preparations is undoubtedly the establishment of a reliable official inspection certificate made out by official veterinary officers and certifying that the meat and meat preparations in question are derived from animals which were inspected before and after slaughter and of which the meat was recognised as fit for consumption.

If these certificates were made out in a trustworthy and conscientious manner, mutual confidence would be considerably increased and international trade would undoubtedly be increased.

Other methods likely to facilitate this trade are the conclusion of bilateral conventions, which already exist between certain countries, and, in the case of countries between which there is a great volume of trade, the maintenance of veterinary officials of one country in the territory of the other, as is already the practice between Great Britain and the South American Republics.

(d) *Transit.* — While in the case of the import of meat and meat preparations veterinary measures are indicated, it is certainly desirable that the greatest facilities should be granted for the transit of these foodstuffs. In particular, control at the frontier of countries of transit should be confined to the examination of certificates. Trucks should only be opened if the Customs authorities concerned consider this necessary in order to check the contents.

Permits for the conveyance of meat and meat preparations in transit would appear to be superfluous; or, at least, they should be very freely granted, especially when it is certain that the country of destination is prepared to accept them.

Wherever possible, the supervisory officials of adjacent countries might undertake inspection jointly, as is already done at joint or international stations.

8. INTERNATIONAL TRADE IN ANIMAL PRODUCTS (MEAT EXCEPTED).

(a) *Diseases to be considered.*

The experts are unanimous in regarding trade in those products of animal origin which are considered below to be less dangerous than trade in live-stock and meat. They admit, however,

that the danger of these products may differ for man and for animals. The danger varies according to whether effective disinfection is or is not practicable.

In international trade, the only diseases of animals the transmission of which through animal products need be taken into consideration up to the present are:

1. Symptomatic anthrax;
2. Cattle plague;
3. Foot-and-mouth disease;
4. Swine plague.

Ad 1. — The reality of the danger of *symptomatic anthrax* is universally admitted, and recent observations in Germany and Great Britain prove how serious it is. The virus lurks in skins and hides and sometimes also in bones and meat. It may be transmitted by soiled wool, hair, horns, etc., and, generally speaking, by all portions of the carcase.

The permanent nature of the virus and its considerable power of resisting all methods of destruction increase the danger of infection.

Ad 2. — Experiments have shown that the virus of *cattle plague* does not possess a long life in external media. Nevertheless, the conditions under which products are preserved may protect it from the usual influences (desiccation, light, etc.), and, moreover, the action of antiseptics on the various animal products is insufficiently known. What is known, however, of the resistance of other viruses thought to be even more fragile (*foot-and-mouth disease*) justifies the measures of extreme caution hitherto applied.

Ad 3. — It is an ascertained fact that the *foot-and mouth disease virus* is much less fragile than, until quite recently, it was thought to be. It resists desiccation for several weeks after the contamination of foodstuffs, such as hay, bran and flour. It is only destroyed by relatively high temperatures, and cold preserves it.

Fresh animal products should therefore be regarded as dangerous. Further research is necessary to determine the duration of the virulence of *foot-and-mouth disease* under various conditions.

The results of the very careful enquiries which have been conducted into the virulence of *foot-and-mouth disease* should warn us against accepting too rigidly the classical data concerning the resistance of viruses of other diseases of the same type—*cattle plague*, *swine plague*, *fowl cholera*, etc. Generally speaking, our knowledge of the resistance of viruses in animal tissues or products will have to be thoroughly revised.

Ad 4. — All that has just been said with regard to the case of *foot-and-mouth disease virus* applies also entirely to *swine plague virus*.

(b) *Guarantees required.*

The sanitary guarantees which can be given in the case of animal products are of three kinds:

(1) When the countries of origin are totally free from diseases, the transmission of which is to be feared;

(2) When the animal products come entirely from animals free from those diseases which could not possibly have been indirectly contaminated in the course of manipulation or transport;

(3) When the animal products have been subjected in the country of origin to disinfection recognised as effective, and could not have been contaminated after such disinfection during the manipulation or transport.

With regard to (1), the fact that an exporting country is definitely free from disease affords an absolute guarantee. Such guarantee could only be provided by countries possessing an administrative and veterinary organisation under which the diseases in question could not remain undiscovered. In any other circumstances exported animal products must always be regarded *a priori* as suspect and dangerous.

With regard to (2), the guarantee that the animal products come from healthy animals is often required in international trade. Valid certificates can only be provided when these products come direct from establishments subject to permanent veterinary supervision (industrial slaughter-houses, etc.); in all other cases they are of very little value owing to the difficulty of identifying for certain the locality of origin.

In addition to the above guarantee, an indication should be given of the precautions taken to avoid the contamination of products during transport. In the case of anthrax, virulent products may affect various matter, such as food for animals (seeds, oil-cake, etc.), and thus cause their indirect contagion.

With regard to (3), any uncertainty as to the immunity of the animal products necessitates their disinfection or (as the case may be) examination with a view to ascertaining the presence of virus. In general, such action will have to be taken before exportation. It implies the use of methods of proved effectiveness under the control and responsibility of the exporting State.

Co-operation in such supervision by representatives of the importing countries concerned is eminently desirable as being calculated to strengthen the value of the certificates of health issued.

Certificates issued should state very accurately the means of disinfection or supervision employed. A guarantee will be given that all precautions have been taken to avoid contamination after disinfection and during transport.

In the case of goods covered by a collective sanitary certificate, the veterinary sanitary authorities of the ports, railway stations and warehouses can issue valid partial certificates to the same effect, to accompany reshipments or parts of a consignment. Such partial certificates will be accompanied by a certified copy of the original certificate.

In all cases in which the guarantees of the harmlessness of animal products are held to be inadequate, importing countries are absolutely entitled to require either disinfection on import or examination with a view to ascertaining the presence of certain viruses. They may impose in their territory special measures in regard to the transport and industrial treatment of suspect products.

No prohibition, limitation or sanitary formality should be placed in the way of *the transit* of animal products without grave reasons, if the animal products comply with the usual conditions in regard to the healthy condition of goods in transport, and if it is certain that they will be accepted by the countries to which they are consigned.

The International Office for Contagious Diseases of Animals is requested to continue its studies and enquiries with regard to the conditions of disinfection and sanitary supervision of these products; for international agreements in this matter are, in the experts' opinion, well adapted to facilitate trade in such products.

2. REPORT OF THE ECONOMIC COMMITTEE TO THE COUNCIL.

The Sub-Committee of Experts on Veterinary Questions submitted to the Economic Committee a general report on the work done during the past four sessions.

The Sub-Committee of Experts was asked to consider what guarantees might be given by countries which export live-stock and animal products, and what facilities might be granted by importing countries on the basis of these guarantees; also to determine, in general, the best methods for applying veterinary supervision, taking into account the economic interests of the exporting countries and without prejudice to the interests of countries desiring to take precautions against diseases of animals.

In their general report, the experts first express their unanimous opinion on the principles that should govern the organisation of veterinary health services and the publication of veterinary health reports in the different countries. On both these subjects the experts reached definite conclusions as to the essential guarantees to be offered to States interested in the international trade in animals and animal products, guarantees which would give the necessary confidence regarding the health of imported animals and the wholesomeness of those animal products with which this trade is concerned.

The experts considered that a general application of these principles constitutes an essential condition of future progress.

In the field of international co-operation, the experts recognised the necessity of organising an urgent information service, if need be by telegraph. The relevant technical details should be studied by the International Office for Contagious Diseases of Animals in Paris. The experts considered a series of proposals, and made unanimous some important recommendations regarding the means of ensuring other forms of international co-operation which would be closer and more effective than it has hitherto been possible to realise.

The general report then gives the results of a thorough and detailed study of sanitary veterinary measures applied and measures applicable at present to the export, import and transit of animals. The experts devoted particular attention to the issue of certificates of origin and health, sanitary inspection at the time of export and import, methods of transport and details connected therewith.

The experts proceeded to classify contagious diseases according to their seriousness, and also differentiated between the dangers of the propagation of the various animal diseases, both by the import of animals and meat and by the import of other animal products. General transit facilities are proposed. Further, the experts contemplated a series of modifications in the veterinary measures applicable to international trade; these modifications might be made by good organisation of veterinary health services and information in the countries concerned, particularly the exporting countries.

The concluding portions of the general report are more particularly concerned with the risks of contagion by meat and meat preparations, as this trade is very important, particularly in the case of overseas countries which export large quantities of meat. Further, other animal products, such as skins and hides, pelts, horns, hoofs, wool, hair, bristles, etc., were thoroughly considered from this point of view. The experts reached the conclusion that this part of their work should be further studied in detail by the International Office for Contagious Diseases of Animals in Paris, particularly as regards the virulence of the different viruses by which disease might be propagated and the different methods of disinfection. The experts consider that international co-operation might, in this particular matter be of real assistance to international trade in these products.

The Economic Committee considered with great attention the contents of this report, and the main conclusions reached by the experts. Until the conditions mentioned above are realised, which the Committee hopes will soon be the case, it considers that States should, for the present,

be allowed to regulate in their own interest a considerable part of the international trade in the products of stock-rearing—namely, the trade in live-stock and meat. A diminution in the severity of the veterinary measures at present in force concerning the export and import of such products seems, for the time being, to be a subject on which bilateral agreements would be more appropriate.

On the other hand, the unanimous conclusions reached by the experts show that the countries concerned would probably accept an international convention regulating the transit of animals and animal products, and a multilateral international agreement dealing with the export and import of animal products, except meat.

Further, the experts' recommendations regarding veterinary organisation and services and the publication of veterinary health reports in accordance with the recommendations of the International Office for Contagious Diseases of Animals, which has dealt with this problem for several years, and their proposals for closer co-operation between the various veterinary health services in the countries concerned, might be included in a multilateral international convention which might, apparently without much difficulty, be accepted by the various countries interested in promoting international trade in the products of the stock-raising industry.

The Economic Committee accordingly requested those of its members whom it had already appointed to keep in touch with this work, to draw up, with the help of the experts who might be consulted in any way they think most appropriate, preliminary draft conventions concerning:

- (a) The organisation of veterinary health services and the methods that should be adopted for exchanging veterinary health information and for ensuring closer international co-operation between the different veterinary services;
- (b) Transit of animals and animal products (including meat);
- (c) The export and import of animal products, except meat.

The Economic Committee thinks that these main conclusions, based on the work of the veterinary experts, should be communicated to the Commercial Conference which is to be held on November 17th, 1930. That Conference will thus be able to appreciate the progress of the work done under the auspices of the Economic Organisation of the League.

Geneva, November 4th, 1930.

LEAGUE OF NATIONS

ECONOMIC COMMITTEE

**REPORT TO THE COUNCIL
ON THE WORK OF THE THIRTY-THIRD SESSION**

Held at Geneva from October 27th to November 1st, 1930.

CONTENTS.

	Page
I. Constitution of the Bureau of the Committee for 1931	2
II. Proposals for the Negotiations with a View to Concerted Economic Action . . .	2
III. Veterinary Conventions	2

<i>Annex: Proposals of the Economic Committee to serve as a Basis for the Future Negotiations.</i>	<i>4</i>

The following members of the Committee were present :

M. A. DI NOLA (<i>Acting Chairman</i>)	M. F. PEROUTKA
M. F. DOLEZAL	M. R. SCHÜLLER
M. P. ELBEL	Mr. R. J. SHACKLE (replacing Sir Sydney CHAPMAN)
M. N. ITO	M. W. STUCKI
M. F. VAN LANGENHOVE	M. M. TODOROVIC
Mr. H. A. F. LINDSAY	M. POSSE (replacing M. TRENDELENBURG).
M. V. LUNDAVIK	

The following took part in the discussions on :

- (a) *The most-favoured-nation clause and the programme of future negotiations:*
M. J. A. NEDERBRAGT (Netherlands) } Corresponding members of the
M. A. DE NICKL (Hungary) } Committee.
- (b) *The most-favoured-nation clause:*
M. ENGELL (Denmark) } Experts appointed by their respective
M. G. JAHN (Norway) } Governments.
M. HJELT (Finland) } Observers appointed by their respective
M. FELDMANS (Latvia) } Governments.
- (c) *Agricultural questions:*
M. VAN RIJN, Member of the Agricultural Economic Committee at the International
Institute of Agriculture.
M. BRIZI, Secretary-General of the International Institute of Agriculture.
- (d) *Veterinary questions:*
M. BÜRGI, Director of the Swiss Federal Veterinary Office.
M. VALLÉE, Director of the National Research Laboratory, Alfort (Seine), France.

I. CONSTITUTION OF THE BUREAU OF THE COMMITTEE FOR 1931.

In accordance with the procedure adopted by the Committee at its twenty-third session in 1927, and approved by the Council, M. DI NOLA, Vice-Chairman of the Committee, will be Chairman of the Committee for 1931, as from January 1st next.

The Committee elected M. SCHÜLLER Vice-Chairman for 1931.

II. PROPOSALS FOR THE NEGOTIATIONS WITH A VIEW TO CONCERTED ECONOMIC ACTION.

In accordance with the terms of Article 1 of the Protocol regarding the programme of future negotiations, dated March 24th, 1930, the Committee studied the replies made by Governments to the questionnaire annexed to that article with a view to formulating proposals that might serve as a basis for the negotiations contemplated in the Protocol. These proposals are reproduced in the Annex.

III. VETERINARY CONVENTIONS.

The Committee's report on this question and the general report on the work of the Sub-Committee of Experts on Veterinary Questions have been printed separately in document C.633.M.252.1930.II.

IV. AGRICULTURAL QUESTIONS.

In consultation with representatives of the International Institute of Agriculture, including M. van Rijn, member of the Agricultural Economic Committee at the International Institute of Agriculture, and M. Brizi, Secretary-General of the Institute, the Economic Committee decided to call a meeting early in January 1931 of the Sub-Committee of Agricultural Experts which it previously convened in January 1930. It will add representatives of the Irish Free State, Latvia and Sweden to the experts already appointed and will request the Director of the International Labour Office to nominate a person who, whilst having special experience in labour problems, will, if necessary, be able to supply the Sub-Committee of Experts with information as to the relationship between those problems and the general problems with which the Committee is concerned.

The experts will consider the whole of the reports which they have themselves forwarded to the Secretariat on the agricultural crisis and on the question of the divergence between prices paid to producers and prices paid by consumers.

V. CUSTOMS NOMENCLATURE.

The Committee noted the report submitted to it during the Eleventh Assembly by the Sub-Committee of Experts for the unification of Customs nomenclature.¹ This report contains, *inter alia*, certain suggestions as to the procedure to be followed for the adoption of the unified nomenclature and the measures to be taken in order to preserve the unity of the nomenclature. As, however, the experts have not yet finished their work, the Committee decided to postpone the consideration of these suggestions until the nomenclature is nearly completed.

VI. NATIONALITY OF GOODS.

This question, which is very important as regards the application of the most-favoured-nation clause, was carefully considered by the Committee. On the basis of the information collected by the Secretariat, the Committee agreed to lay down certain fundamental principles, particularly as to the criterion by which the nationality of goods should be determined. This criterion should be that of the *origin* of the goods, and the Committee decided what meaning should be given to the term "*country of origin*" in the case of both *natural* and manufactured products. The Committee also prescribed the treatment which in its opinion should be granted to *nationalised* goods and to goods that have merely been warehoused in Customs warehouses, free ports, etc., or have undergone during transport certain operations (unloading, reloading, etc.) which do not involve any industrial change in the goods themselves.

As, however, the application of these principles may give rise to certain technical difficulties, the Committee decided to submit them, for consideration from that point of view, to the Sub-Committee of Experts which has already been appointed to consider methods of specific taxation and questions relating to gross weight, net weight, tare, etc.

VII. STAMPING OF TEMPORARILY-IMPORTED SAMPLES OF ARTICLES MADE OF PRECIOUS METALS.

The Economic Committee was unable to consider the material on this question collected by the Secretariat in time to permit of any useful exchange of views on this subject. In order that its members might have an opportunity to study the different problems raised by this question, the Committee thought it advisable to postpone its consideration to the next session.

¹ See document E.609.

VIII. PROCEDURE FOR APPEAL IN CUSTOMS MATTERS.

The comparative study of the laws and regulations in force in various countries as regards appeals against the Customs classification and taxation of goods was submitted to the Economic Committee which did not, however, form any definite opinion on certain points, particularly concerning the practical application of such laws and regulations. Accordingly, the Committee decided to supplement the information it has already collected on this question and, for that purpose, to ask for the assistance of the International Chamber of Commerce.

IX. MARKS OF ORIGIN.

The Economic Committee considers that the various laws in force as regards marks of origin and the complaints aroused by their application constitute an important problem for international trade.

Certain conclusions on questions of principle have already been submitted to the Committee by its Rapporteurs. But as the manner in which the provisions are applied is often of capital importance, the Committee thinks that further information as to the actual situation is necessary before its investigations can be continued.

Accordingly, the Committee decided to submit the information prepared by the Secretariat to a small group of experts including not only officials of those countries whose laws contain provisions relating to marks of origin for foreign goods, but also others concerned, particularly exporters who are nationals of countries where serious complaints as to the obstacles encountered through the application of these laws are often made.

The Bureau of the Economic Committee was instructed to arrange for the constitution of this group of experts.

X. MOST-FAVOURED-NATION CLAUSE.

In pursuance of an urgent recommendation of the Eleventh Assembly, the Committee was anxious, at the present session, to begin a study of certain disputed questions concerning the application of the most-favoured-nation clause. They include, particularly, the question whether Customs quotas and anti-dumping duties or countervailing duties are compatible with the spirit of that clause, and also the question of the interpretation that should be given to the expression "similar products".

The countries which raised the question in the Assembly (Denmark, Estonia, Finland, Latvia, Netherlands, Norway, Sweden, Switzerland) were invited to send experts to take part in this discussion. The experts appointed by the Governments of Denmark, the Netherlands and Norway were present, whilst the Swiss and Swedish points of view were explained by the two ordinary members of the Committee who are nationals of those countries. Latvia and Finland sent observers.

The discussion was chiefly directed to the question of Customs quotas, and on this subject the Economic Committee noted that there was a divergence of opinion. Nevertheless, this question cannot be considered solely from the theoretical standpoint. Accordingly, the Committee desires further information, especially as to the nature and causes of certain important cases that were mentioned during the discussion.

The object of the enquiry into the question of *similar products*, or products of the same kind, should be to indicate, by consideration of the tariff provisions in the various commercial treaties, cases of discrimination based on the essential characteristics of commodities, and on the other hand, cases in which the discrimination is based on purely unessential characteristics and may therefore be regarded as having been imposed with a view to restricting artificially the operation of the most-favoured-nation clause.

The Committee considered that the investigation of measures to prevent dumping could best be undertaken in connection with the enquiries now being pursued into subsidies and export bounties that form part of the investigation mentioned below.

The Committee decided to instruct a Sub-Committee of some of its members, with the addition of the Netherlands and Danish experts, to study these three points, so that at its next session it might have before it a complete report on the question.

XI. DUMPING.

During the present session, the Committee held a preliminary exchange of views with regard to "dumping", which was the subject of one of the resolutions on economic matters adopted by the Eleventh Assembly. It decided to continue its investigation into dumping in all its forms, with particular reference to means which are adopted by States and which are likely to hinder the free play of economic laws—*e.g.*, export bounties and subsidies. The Committee hopes that by its next session, in February 1931, its investigation will be sufficiently advanced to enable it then to submit at least a provisional report on this question.

XII. ENQUIRY REGARDING THE PRESENT ECONOMIC DEPRESSION.

The Committee has had before it a memorandum submitted by the Secretariat concerning the procedure to be adopted in pursuance of the resolution of the Assembly dealing with the problems of the present economic depression and the recurrence of such depressions. It considers that the procedure it proposes will carry out the instructions of the Assembly. These questions will, however, also arise for discussion at the next meeting of the Financial Committee.

ANNEX.

PROPOSALS OF THE ECONOMIC COMMITTEE TO SERVE AS A BASIS FOR THE
FUTURE NEGOTIATIONS.

Note. — These proposals were drawn up on the basis of the replies¹ from Governments to the questionnaire annexed to Article I of the Protocol relating to the programme of future negotiations.

The Protocol of March 24th, 1930, defined the aim of the negotiations which are to be pursued with a view to giving effect to the resolutions of the tenth Assembly of the League of Nations in regard to concerted economic action.

These negotiations are to relate, in particular, to Customs measures likely to lead to a reduction of tariffs, and to "all other practical measures aiming at a better organisation of production and at a more rational distribution of products".

The countries desirous of taking part in these negotiations were asked to communicate their views on a number of questions specified in the Protocol. Their replies have been co-ordinated by the League Secretariat, and the Economic Committee was instructed to collate the proposals contained therein which, when submitted on November 17th, 1930, to the Governments consulted, would serve as a basis for the projected negotiations.

In the actual words of the Protocol, the Economic Committee was asked to take account, when carrying out its work, of the situation then existing, and to formulate its proposals with a view to ensuring positive results. The Economic Committee has kept this double recommendation in view.

The analysis of the replies from Governments shows that there are three main desiderata:

The first of these relates to problems which the Economic Organisation of the League has already considered and for which it has prepared a solution: there is a desire to see the contemplated action pursued to its full and successful completion and agreements now framed or completed fully carried out.

The second desideratum is a general improvement in Customs matters by the reduction or consolidation of duties.

The third refers to the problem of the commercial exchanges of the agricultural countries in Eastern Europe.

I.

CONCLUSION OR APPLICATION OF CONVENTIONS ALREADY DRAWN UP.

The concerted action which it is proposed to take cannot be dissociated from the economic work already accomplished by the League. That work is its starting-point. Any new agreements must be based thereon. It is therefore of importance, in the first place, to strengthen this foundation for future work.

1. *Convention for the Abolition of Prohibitions.*

Mention may be made in the first place of the Convention for the Abolition of Import and Export Prohibitions.

This Convention entered into force on the date contemplated, but it only takes effect between a small number of States and under conditions which render it precarious. The eleventh Assembly regretted this situation and expressed the hope that the "States concerned will not abandon their decision to remove, by the abolition of prohibitions, one of the chief obstacles to the free movement of goods".

It is particularly desirable at the present juncture that this hope should be realised for, while there has no doubt been a considerable decrease in the number and importance of these restrictions during the past few years, it would be a mistake to conclude that the Convention is no longer of practical value. In the absence of any contractual undertaking, there is a danger that certain States may again resort to prohibitions in the hope of escaping from their present difficulties. This would mean new impediments to trade. That would be a backward step in the work already accomplished to promote trade, which might jeopardise, or at all events seriously retard, any subsequent action.

The Convention was ratified by nineteen States, including most of the States which have since signed the Protocol regarding future negotiations. Unfortunately, certain temporary exceptions provided for in Article 6, paragraph 1, and the power conferred on States under

¹ For the text of the replies, see documents 2nd Conf./A.E.C./1 and Addenda.

Article 4 to maintain or impose veterinary prohibitions, have hindered certain countries from complying with the provisions of the Convention. The consequence of the economic interdependence of the majority of the European countries has been that the abstention of a few signatories has involved that of most of the others.

As regards some of these exceptions, the conditions are no longer the same as they were when the Convention was signed.

Moreover, thanks to the efforts of the League of Nations, such progress¹ has been made in the investigation of the international organisation of the campaign against animal diseases, of the development of veterinary services, and technical co-operation of States, that it is now possible to look forward to the early conclusion of agreements which should give importing and exporting States guarantees they do not at present possess, and the absence of which hampered the international trade in live animals and animal products.

That being the case, present circumstances would appear to make it imperative for the European States to undertake a further effort to secure the accession to the Prohibitions Convention of all the signatory States. It is therefore desirable that the future negotiations should deal with this subject.

2. Commercial Convention.

Mention should be made of another important point—the question of bringing into force the Commercial Convention of March 24th, 1930. This is another not less important condition for the success of the future negotiations.

The Commercial Convention represented the first stage in the general plan outlined in the recommendations of the tenth Assembly.

By inaugurating a period of calm and stability in Customs matters and in contractual relations, and by establishing in this sphere a real union between most of the European countries, the Convention aims at creating a situation favourable to the successful prosecution of the future negotiations for the better organisation of trade.

The Committee, having regard to the recommendations submitted to it as a guide in its work, *expresses its firm conviction that one of the most important and most urgent objects of the negotiations beginning on November 17th must be to ensure that the conditions necessary for the entry into force of this Convention are fulfilled.*

On this point, too, the eleventh Assembly made an earnest appeal to all the States concerned to see that the Convention should be “ put into force between the States signatories and obtain the accessions of the greatest possible number of other States ”.

Like the Convention for the Abolition of Prohibitions, the Commercial Convention constitutes a necessary safeguard under present circumstances. Without it, there is a danger that States will yield to the difficulties of the hour and denounce some of their commercial agreements, so as to free themselves from irksome tariff obligations, and that there will thus be a new and disastrous increase in Customs barriers.

Finally, apart from its immediate importance, the Commercial Convention forms a useful basis for future tariff negotiations ; it may be added to and developed, and it can thus facilitate a further step forward in the international settlement of Customs questions.

3. Convention on the Treatment of Foreigners.

The Convention on the Treatment of Foreigners is a third undertaking which the Economic Organisation has not so far been able to bring to a successful conclusion, but which no scheme of concerted action can ignore. On this point, the eleventh Assembly stated that “ real progress in the direction of economic union cannot be restricted to the movement of commodities and capital, but must necessarily extend, under as liberal a system as possible, to the economic activities of companies and individuals ”. The work undertaken encountered serious difficulties. The Conference summoned to carry it through was unable to reach a conclusion at its first session. By arranging for a further session, it nevertheless indicated its determination to frame a Convention drawn up in the most liberal spirit and marking a real advance on the present situation. The Conference itself laid down the procedure for the continuation of its work.

The Committee, while not modifying this procedure in any way, is of opinion that the States which meet on November 17th should begin preliminary discussions between themselves which would promote the success of the General Conference.

¹ The Sub-Committee of Experts on Veterinary Questions submitted to the Economic Committee, at its session in October 1930, a general report on the work of its four sessions. In the opinion of all the members of the Economic Committee and of the veterinary experts, this report furnishes technical data which make it possible now to frame draft proposals for a convention relating to the following questions :

(1) Organisation of veterinary services, methods of exchanging veterinary information, closer international co-operation between the various services ;

(2) Transit of cattle and animal products, including meat ;

(3) Import and export of animal products, with the exception of meat.

II.

TARIFF NEGOTIATIONS FOR THE GENERAL IMPROVEMENT OF TRADE.¹

The replies from Governments clearly indicate that the latter have a second object in view. This relates to tariff negotiations for the general improvement of trade.

Two proposals merit special attention.

One of these which appears in several replies has been formulated with special precision by the British Government. It aims at reducing Customs duties by taking groups of commodities and proceeding by stages. In the first place, some such groups as textile fabrics and machinery might be selected as a subject for negotiations. The negotiations might then be extended to other products of industry, agriculture, stock-raising, and fisheries.

In the other proposal, States are divided into two groups : those which, while hitherto retaining their tariff autonomy, pursue a liberal commercial policy, and those again which, while pursuing the policy of conventional tariffs, possess a more or less protectionist Customs regime. This distinction corresponds, moreover, to that drawn in the Commercial Convention of March 24th, 1930. The first States would undertake to maintain their liberal system in return for tariff benefits which would be granted to them by the second group, and which would remain subject to the most-favoured-nation clause. This proposal, which also is put forward in several replies, is most clearly formulated by the Netherlands Government.

The two proposals just mentioned are evidence of the same spirit and have the same end in view. The British Government seems indeed to establish a certain connection between the continuation of the undertaking not to create new protective duties, which it assumed on signing the Commercial Convention and the conclusion of agreements for the progressive reduction of the Customs barriers of States which pursue a protectionist policy.

While there can be no possible question as to the object in view, differences of opinion may nevertheless exist as to the method to be adopted.

On the one hand, it was pointed out that the Economic Committee had already made a close examination of proposals similar to that submitted by the British Government, and that experience had shown that the procedure was necessarily slow and complicated, although it was recognised that two useful conventions had been concluded on these lines—namely, those relating to export duties on hides and skins and on bones.

The objection was also raised that it might be difficult to provide within the limits of groups of commodities, no matter how extensive, the compensating advantages and concessions which are a necessary condition for any negotiations. Further, a reduction in tariff duties based on the total Customs revenue and on the application to this revenue of a certain percentage of reduction would involve various difficulties ; in particular, this method may not be adaptable to the economic conditions special to each particular case, and it may impose on States sacrifices for which there would not always be a compensating advantage.

Finally, it was pointed out that States which pursue the method of conventional tariffs have already, to a varying degree, reduced or consolidated their Customs duties.

On the other hand, the method of negotiations between the group of States pursuing an autonomous commercial policy and the group pursuing the policy of conventional tariffs would have a more limited effect than the method contemplated in the British proposal. It was maintained that it would lead to an agreement restricted to a certain number of countries, that it would only affect a limited number of Customs duties and, finally, that it might make it difficult to bring about a progressive reduction extending to European Customs tariffs as a whole.

In view of these various considerations, the Economic Committee was of opinion that both the proposed methods should be retained, and that both should be submitted to the forthcoming Conference of Governments, in the hope that the Conference might be able usefully to co-ordinate them with a view to the proposed negotiations.

In formulating this conclusion, the Economic Committee has kept in mind the provision in the Final Act of the Conference whereby the enquiries and negotiations contemplated in Articles 1 and 2 of the Protocol should proceed *pari passu*. It considers that the matters mentioned in Article 2 may accordingly be included in the tariff negotiations which will take place on the basis of the above proposals.

Finally, the Committee, taking into account the present situation, as it was explicitly recommended to do in the Protocol, cannot disguise the fact that the economic depression which is being felt in all countries makes the success of the contemplated negotiations a matter of exceptional difficulty. Nevertheless, although the crisis creates serious obstacles, the evils it is causing everywhere in the world bring home more clearly the need for an improvement in the conditions of trade and the impossibility of effecting real progress in this direction by any means other than the concerted and joint action of States.

¹ *Note.* — As the Economic Committee cannot indicate in detail the main proposals submitted on this subject, it strongly recommends careful consideration of the replies received from the Netherlands, Belgium, Austria, and, in particular, the British Government.

III.

NEGOTIATIONS REGARDING THE SYSTEM OF TRADE OF THE AGRICULTURAL COUNTRIES
OF EASTERN EUROPE.

A third important consideration is raised in the identical replies from Hungary, Roumania and Yugoslavia, with which Poland has associated herself in the resolutions of the Warsaw Conference. The Governments of these countries regard an increase in the purchasing power of their populations as the most effective means of extending markets and improving international trade. With this object, their chief endeavour is to take effective steps to ensure the disposal of their surplus agricultural produce at prices which will secure the farmer a reasonable return.

The first means they propose is preferential Customs treatment in the European importing countries for the produce in question ; it was pointed out that this treatment should not lead to an increased production of cereals in the countries benefiting thereby.

The three countries named observe that, while such preferential treatment would, of course, constitute an exception to the general most-favoured-nation clause, it could not prejudice the interests of overseas countries, as the latter must still remain the principal source of supply for Europe, whose production falls far short of its needs.

It is further pointed out that the Customs duties in the general tariff would remain applicable to exports from outside Europe and that, as prices would be fixed on the basis of those duties, the proposed system would in no way reduce the protection afforded to agricultural interests in the importing countries ; the only sacrifice the latter are asked to make is a certain reduction in Customs duties.

The three Danubian States further ask :

(a) That the European importing countries should consolidate all import duties on European agricultural produce at a reasonable level, so as to leave a margin of profit to agricultural producers in the exporting countries ;

(b) That there should be complete freedom of trade in cereals and agricultural produce on the European market ;

(c) That all impediments to trade and measures of every kind which have the effect of artificially limiting imports of cereals and other agricultural produce or of displacing centres of consumption should be entirely abolished.

While the replies from the Danubian States bring forward the question of agricultural produce in general, they lay chief stress on cereals—naturally enough, when it is remembered that the trade in cereals is a vital problem for those three countries.

These demands were brought to the knowledge of the last Assembly of the League, which was at the same time informed of the results of the Conference of the agricultural countries held at Warsaw last August. The Conference drew up a programme for co-operation among the agricultural countries of Eastern Europe with a view to putting an end to the unbridled competition among them in organising their production and trade on a better-balanced system.

The Assembly displayed the keenest interest in this part of the programme. It took the view that the differences in economic conditions, especially the price of money, form a serious obstacle to the natural development of European prosperity. It was inevitable, however, that the demand for preferential treatment should raise a controversy in the Assembly, because it amounts to an attack on the principle of most-favoured-nation treatment. The Assembly, nevertheless, expressed the view that, having regard to the present depression, the States signatories of the Protocol should not, in their negotiations, reject *a priori* any solution that might improve their economic relations. It showed that it was anxious not to prevent the countries of Europe from devising a better economic organisation, but reminded them that the tenth Assembly, in its resolution regarding concerted economic action, had reserved to other countries the right to take steps to protect their own interests.

Subject to this reservation, the Assembly considered that the demand of the three agricultural countries—which also appears in the Warsaw resolutions—should be included in the negotiations which are to open on November 17th between the States signatories of the Protocol.

Reference had to be made to these facts, because the Economic Committee was bound to bear them in mind in examining the replies of Hungary, Roumania and Yugoslavia.

To form a just idea of the extent of the demand for preferential treatment put forward by the three Danubian States, it is necessary to state accurately the volume of the trade to which it applies.

Theoretically, as we have seen, it questions the important principle of most-favoured-nation treatment. The preferential treatment requested would obviously constitute an exception to the most-favoured-nation clause ; it could therefore only be applied with the assent of the States receiving this treatment under the treaties in force.

In actual fact, however, the cereal exports of the three countries concerned are negligible in comparison with the aggregate imports of the other European countries. Seen in its true proportions, therefore, the problem is not attended by such difficulties as appearances would suggest.

Nor must it be forgotten that the range of distribution of surplus cereals is limited by transport costs. The normal markets for these surpluses of the Danubian States are restricted to a few contiguous or neighbouring countries—chiefly Austria, Czechoslovakia, Germany, Italy and Switzerland. The most important of these consuming markets have to import considerable quantities of cereals, and these are obtained almost entirely from overseas, the share of the Danubian States being relatively negligible.

It remains to consider the position of those European countries in which, owing to the distance, cereals from the Danubian countries cannot normally find a market. Whether they would consent to preferential treatment accorded the importing countries is not an immediate practical difficulty, but merely a question of principle.

The European countries which are asked to give preferential treatment to cereals from Eastern Europe would, of course, be justified in asking for a consideration in return. This consideration would naturally take the form of Customs facilities for their imports into the Eastern countries. It does not, of course, imply the granting of preferential treatment, because that would lead to new discriminations which would inevitably raise great difficulties. Moreover, it must not be forgotten that the countries which might grant preferential treatment to cereals from Eastern Europe are far and away the chief exporters of industrial products to the agricultural countries from which they desire compensation.

Having regard to the various factors in the question, the Economic Committee considers that the proposal for the grant of preferential treatment to cereals from Eastern Europe should be included in the programme of future negotiations.

It is understood that any agreement that might be reached on such a basis could not come into force until it had been endorsed by those States, whether signatories to the Protocol or not, which are guaranteed most-favoured-nation treatment by treaty.

The Economic Committee would add that in any case the granting of preferential treatment should be regarded as an exceptional measure, to meet abnormal circumstances.

While the agricultural countries of Eastern Europe attach special importance to their demand for preferential treatment, they do not refuse to consider any other measure which might directly or indirectly help to ensure the disposal of their surplus produce on satisfactory terms.

Such measures might relate to the organisation of trade and in the establishment of selling organisations in exporting countries and buying organisations in importing countries.

Accordingly, consideration should be given to the possibility of setting up a Commission to continue investigations in connection with the improvement of the European trade in cereals, both from the point of view of markets and from those of internal organisation, the standardisation of products, storage, transport, and the development of credit.

CONCLUSIONS.

Having carefully analysed the replies from Governments, the Economic Committee is of opinion that if the following proposals formed the basis of the future negotiations, they might lead to positive results :

1. *Re-examination of the Convention on Import and Export Prohibitions, with the object of securing the accession of all the signatory States and doing away with the temporary exceptions as far as possible.*
2. *Conditions necessary for bringing the Commercial Convention of March 24th, 1930, into force between the largest possible number of States.*
3. *Endeavour to secure a preliminary understanding among European countries in order to ensure a satisfactory issue for the second session of the Conference on the Treatment of Foreigners.*
4. *Tariff negotiations with a view to a general improvement in trade on the basis of the proposals set forth in the second section of the present report.*
5. *Negotiations regarding the trade system of the agricultural countries of Eastern Europe.*

ACTE FINAL

LES GOUVERNEMENTS DE L'ALLEMAGNE, DE L'AUTRICHE, DE LA BELGIQUE, DE LA GRANDE-BRETAGNE ET DE L'IRLANDE DU NORD, DE LA BULGARIE, DU DANEMARK, DE L'ESPAGNE, DE L'ESTONIE, DE LA FINLANDE, DE LA FRANCE, DE LA GRÈCE, DE LA HONGRIE, DE L'ÉTAT LIBRE D'IRLANDE, DE L'ITALIE, DE LA LETTONIE, DE LA LITHUANIE, DU LUXEMBOURG, DE LA NORVÈGE, DES PAYS-BAS, DE LA POLOGNE, DU PORTUGAL, DE LA ROUMANIE, DE LA SUÈDE, DE LA SUISSE, DE LA TCHÉCOSLOVAQUIE ET DE LA YOUGOSLAVIE,

Ayant reçu la convocation qui leur a été adressée par le Secrétaire général de la Société des Nations, en vue de participer à une Conférence ayant pour objet:

1^o De prendre une décision, conformément à l'article XIII de la Convention commerciale du 24 mars 1930, quant à la date et aux conditions de la mise en vigueur de cette Convention;

2^o D'assurer — conformément à une décision prise le 3 octobre 1930 par le Conseil de la Société des Nations comme suite au vœu exprimé par la onzième Assemblée, et sur la base des propositions élaborées par le Comité économique au cours de sa trente-troisième session¹ — la mise en œuvre progressive du programme de négociations ultérieures établi par le Protocole du 24 mars 1930,

Ont à cet effet désigné les délégations suivantes:

ALLEMAGNE.

<i>Premier délégué:</i>	
Le docteur H. E. POSSE,	Directeur ministériel au Ministère de l'Economie du Reich.
<i>Délégués:</i>	
Le docteur L. IMHOFF,	Conseiller ministériel au Ministère de l'Economie du Reich.
M. O. SARNOW,	Conseiller ministériel au Ministère des Finances du Reich.
Le docteur A. WALTER,	Conseiller ministériel au Ministère du Ravitaillement et de l'Agriculture du Reich.
M. E. WIEHL,	Conseiller de Légation au Ministère des Affaires étrangères.
<i>Conseiller technique:</i>	
Le docteur M. FREUDENTHAL,	Conseiller de Légation au Ministère des Affaires étrangères.
<i>Secrétaire:</i>	
M. J. VON ALBERT,	Landrichter.

AUTRICHE.

<i>Délégués:</i>	
Le docteur Richard SCHÜLLER,	Directeur de la Section économique au Département des Affaires étrangères.
Le docteur R. BOLLER,	Conseiller au Ministère fédéral du Commerce et des Communications.

BELGIQUE.

<i>Délégués:</i>	
M. F. VAN LANGENHOVE,	Secrétaire général du Ministère des Affaires étrangères.
Son Excellence M. J. BRUNET,	Ministre plénipotentiaire.
M. M. SUETENS,	Directeur au Ministère des Affaires étrangères.
<i>Conseiller technique:</i>	
M. VAN DER VAEREN,	Directeur général au Ministère de l'Agriculture.
<i>Secrétaire:</i>	
M. E. NICAISE,	Attaché au Cabinet du Ministre des Affaires étrangères.

FINAL ACT.

THE GOVERNMENTS OF AUSTRIA, BELGIUM, GREAT BRITAIN AND NORTHERN IRELAND, BULGARIA, CZECHOSLOVAKIA, DENMARK, ESTONIA, FINLAND, FRANCE, GERMANY, GREECE, HUNGARY, THE IRISH FREE STATE, ITALY, LATVIA, LITHUANIA, LUXEMBURG, THE NETHERLANDS, NORWAY, POLAND, PORTUGAL, ROUMANIA, SPAIN, SWEDEN, SWITZERLAND AND YUGOSLAVIA,

Having received the invitation sent to them by the Secretary-General of the League of Nations to take part in a Conference for the purpose of:

(1) Taking a decision in accordance with Article XIII of the Commercial Convention of March 24th, 1930, with regard to the date and conditions of putting this Convention into force;

(2) Ensuring—in conformity with a decision taken on October 3rd, 1930, by the Council of the League of Nations in response to the recommendation made by the Eleventh Assembly, and on the basis of the proposals drawn up by the Economic Committee during its thirty-third session¹—the progressive carrying into effect of the programme of future negotiations contained in the Protocol of March 24th, 1930,

Have appointed for this purpose the following delegations:

GERMANY.

<i>First Delegate:</i> Dr. H. E. POSSE,	Ministerial Director at the Ministry of Economic Affairs of the Reich.
<i>Delegates:</i> Dr. L. IMHOFF, M. O. SARNOV, Dr. A. WALTER, M. E. WIEHL,	Ministerial Counsellor at the Ministry of Economic Affairs of the Reich. Ministerial Counsellor at the Ministry of Finance of the Reich. Ministerial Counsellor at the Ministry of Supplies and Agriculture of the Reich. Counsellor of Legation at the Ministry of Foreign Affairs.
<i>Technical Adviser:</i> Dr. M. FREUDENTHAL,	Counsellor of Legation at the Ministry of Foreign Affairs.
<i>Secretary:</i> M. J. von ALBERT,	Landrichter.

AUSTRIA.

<i>Delegates:</i> Dr. Richard SCHÜLLER, Dr. R. BOLLER,	Director of the Economic Section, Department of Foreign Affairs. Counsellor at the Federal Ministry of Commerce and Communications.
--------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------

BELGIUM.

<i>Delegates:</i> M. F. VAN LANGENHOVE, His Excellency M. J. BRUNET, M. M. SUETENS,	Secretary-General of the Ministry of Foreign Affairs. Minister Plenipotentiary. Director at the Ministry of Foreign Affairs.
<i>Technical Adviser:</i> M. VAN DER VAEREN,	Director-General at the Ministry of Agriculture.
<i>Secretary:</i> M. E. NICAISE,	“ Attaché au Cabinet ” of the Minister for Foreign Affairs.

GRANDE-BRETAGNE ET IRLANDE DU NORD

ainsi que toutes parties de l'Empire britannique non membres séparés de la Société des Nations.

Premier délégué:

Sir Sydney CHAPMAN, K.C.B., C.B.E.,

Principal Conseiller économique du Gouvernement
de Sa Majesté en Grande-Bretagne.

Délégué:

Mr. C. J. FLYNN,

Du Département des Douanes et Accises.

Conseillers techniques:

Mr. R. J. SHACKLE,
Mr. F. H. TAYLOR,

Du « Board of Trade ».
Du « Board of Trade ».

Secrétaire:

Mr. G. S. BAILEY,

Secrétaire particulier de sir S. Chapman.

BULGARIE.

Premier délégué:

Son Excellence M. le professeur
Dimitri MICHAYKOFF,

Ministre du Commerce, de l'Industrie et du Travail.

Délégué:

M. Dimitri MIKOFF,

Chargé d'Affaires à Berne, Délégué permanent auprès
de la Société des Nations.

Expert:

M. Ivan GABENSKY,

Chef de la Section du Commerce et de l'Industrie
au Ministère du Commerce, de l'Industrie et du
Travail.

DANEMARK.

Délégués:

Son Excellence M. C. V. BRAMSNAES,
Son Excellence M. J. CLAN,

Ministre des Finances (chef de la Délégation).
Envoyé extraordinaire et Ministre plénipotentiaire,
ancien Président de la Commission des traités
de commerce.

M. William BORBERG,

Délégué permanent auprès de la Société des Nations.

ESPAGNE.

Délégués:

Son Excellence
M. Luis RODRIGUEZ DE VIGURI,
M. Carlos BADIA,

Ministre de l'Economie nationale.
Directeur général du Commerce au Ministère de
l'Economie nationale.
Chef d'administration à la Direction générale des
Douanes du Ministère des Finances.

M. Federico LACASA,

Secrétaire:

M. Juan DE LAS BÁRCENAS,

Secrétaire d'ambassade au Bureau espagnol de la
Société des Nations au Ministère des Affaires
étrangères.

ESTONIE.

Délégué:

M. A. SCHMIDT,

Ministre adjoint des Affaires étrangères.

FINLANDE.

Délégués:

Son Excellence M. le docteur R. HOLSTI,

Envoyé extraordinaire et Ministre plénipotentiaire,
Délégué permanent auprès de la Société des
Nations.

Son Excellence M. le docteur K. JÄRVINEN,

Professeur à l'Ecole des Hautes Etudes commerciales
à Helsinki, ancien Ministre des Finances et du
Commerce.

GREAT BRITAIN AND NORTHERN IRELAND

and all parts of the British Empire which are not separate members of the League of Nations.

Principal Delegate:

Sir Sydney CHAPMAN, K.C.B., C.B.E.,

Chief Economic Adviser to His Britannic Majesty's Government in Great Britain.

Deputy Delegate:

Mr. C. J. FLYNN,

Board of Customs and Excise.

Technical advisers:

Mr. R. J. SHACKLE,

Board of Trade.

Mr. F. H. TAYLOR,

Board of Trade.

Secretary:

Mr. G. S. BAILEY,

Private Secretary to Sir S. Chapman.

BULGARIA.

First Delegate:

His Excellency Professor Dimitri MICHAYKOFF,

Minister of Commerce, Industry and Labour.

Delegate:

M. Dimitri MIKOFF,

Chargé d'Affaires at Berne, Permanent Delegate accredited to the League of Nations.

Expert:

M. Ivan GABENSKY,

Head of the Section of Commerce and Industry at the Ministry of Commerce, Industry and Labour.

DENMARK.

Delegates:

His Excellency M. C. V. BRAMSNAES,
His Excellency M. J. CLAN,

Minister of Finance, Head of the Delegation.
Envoy Extraordinary and Minister Plenipotentiary,
former President of the Commission for Commercial Treaties.

M. William BORBERG,

Permanent Delegate accredited to the League of Nations.

SPAIN.

Delegates:

His Excellency
M. Luis RODRIGUEZ DE VIGURI,
M. Carlos BADIA,

Minister of National Economy.
Director-General of Commerce at the Ministry of National Economy.
Chief of Administration at the General Department of Customs, Ministry of Finance.

M. Federico LACASA,

Secretary:

M. Juan DE LAS BÁRCENAS,

Secretary of Embassy at the Spanish League of Nations Office in the Ministry of Foreign Affairs.

ESTONIA.

Delegate:

M. A. SCHMIDT,

Deputy Minister for Foreign Affairs.

FINLAND.

Delegates:

His Excellency Dr. R. HOLSTI,

Envoy Extraordinary and Minister Plenipotentiary,
Permanent delegate accredited to the League of Nations.

His Excellency Dr. K. JÄRVINEN,

Professor at the School of Higher Commercial Studies at Helsinki, former Minister of Finance and Commerce.

Secrétaires :

M. E. GYLLENBÖGEL,

M. P. HJELT,

Conseiller de légation à Berne et à la Délégation permanente auprès de la Société des Nations.
Secrétaire de légation à la Délégation permanente auprès de la Société des Nations.

Délégués :

M. Jules GAUTIER,

M. P. ELBEL,

M. E. LÉCUYER,

M. P. ARNAL,

FRANCE.

Président de section au Conseil d'Etat (président de la Délégation).

Directeur des Accords commerciaux au Ministère du Commerce.

Administrateur des Douanes.

Consul au Ministère des Affaires étrangères.

Conseillers techniques :

M. Jehan MARTIN,

M. P. GENTIL,

Chef adjoint du Cabinet du Ministre du Commerce et de l'Industrie.

Conseiller référendaire à la Cour des Comptes, chef du Cabinet du Sous-Secrétaire d'Etat à l'Agriculture.

Secrétaire :

M. F. SEYDOUX,

Secrétaire d'ambassade.

Délégué :

M. R. RAPHAËL,

GRÈCE.

Délégué permanent auprès de la Société des Nations.

Délégué adjoint :

M. A. CONTOUMAS,

Premier secrétaire de la Délégation permanente auprès de la Société des Nations.

Délégué :

Son Excellence M. A. DE NICKL,

HONGRIE.

Envoyé extraordinaire et Ministre plénipotentiaire (chef de la Délégation).

Délégués adjoints :

M. I. I. FERENCZI,

M. Tibor DE PECHY,

Sous-Secrétaire d'Etat au Ministère du Commerce.
Conseiller ministériel au Ministère de l'Agriculture.

Délégués :

M. Sean LESTER,

M. R. C. FERGUSON,

ÉTAT LIBRE D'IRLANDE.

Représentant auprès de la Société des Nations.

Secrétaire adjoint au Ministère de l'Industrie et du Commerce.

Délégué :

Son Excellence M. G. DE MICHELIS,

ITALIE.

Sénateur, Ambassadeur.

Délégués adjoints :

Son Excellence M. B. F. CIANCARELLI,

M. P. TROISE,

M. M. MARIANI,

M. E. ANZILOTTI,

Envoyé extraordinaire et Ministre plénipotentiaire.
Directeur général des Douanes.

Directeur général de l'Agriculture.

Directeur général de la Production industrielle et des Echanges au Ministère des Corporations.

Experts :

M. E. CARAVALE,

Le docteur G. DE VECCHI.

Inspecteur supérieur au Ministère des Corporations.

Secrétaire :

Le docteur A. BERIO,

Secrétaire de légation.

Secretaries:

M. E. GYLLENBÖGEL,

M. P. HJELT,

Counsellor of Legation at Berne and to the Permanent Delegation accredited to the League of Nations.
Secretary of Legation to the Permanent Delegation accredited to the League of Nations.

Delegates:

M. Jules GAUTIER,

M. P. ELBEL,

M. E. LÉCUYER,

M. P. ARNAL,

FRANCE.

President of Section at the "Conseil d'Etat"
(President of the Delegation).
Director of Commercial Agreements at the Ministry of Commerce.

Administrator of Customs.

Consul at the Ministry of Foreign Affairs.

Technical Advisers:

M. Jehan MARTIN,

M. P. GENTIL,

"Chef adjoint du Cabinet" of the Minister of Commerce and Industry.

"Conseiller référendaire" at the "Cour des Comptes",
"Chef du Cabinet" of the Under-Secretary of State for Agriculture.

Secretary:

M. F. SEYDOUX,

Secretary of Embassy.

Delegate:

M. R. RAPHAËL,

GREECE.

Permanent Delegate accredited to the League of Nations.

Deputy Delegate:

M. A. CONTOUMAS,

First Secretary of the Permanent Delegation accredited to the League of Nations.

Delegate:

His Excellency, M. A. DE NICKL,

HUNGARY.

Envoy Extraordinary and Minister Plenipotentiary (Head of the Delegation).

Deputy Delegates:

M. I. I. FERENCZI,

M. Tibor DE PECHY,

Under-Secretary of State at the Ministry of Commerce.
Ministerial Counsellor at the Ministry of Agriculture.

Delegates:

Mr. Sean LESTER,

Mr. R. C. FERGUSON,

IRISH FREE STATE.

Representative accredited to the League of Nations.
Assistant Secretary, Ministry of Industry and Commerce.

Delegate:

His Excellency M. G. DE MICHELIS,

ITALY.

Senator, Ambassador.

Deputy Delegates:

His Excellency M. B. F. CIANCARELLI,

M. P. TROISE,

M. M. MARIANI,

M. E. ANZILOTTI,

Envoy Extraordinary and Minister Plenipotentiary.

Director-General of Customs.

Director-General of Agriculture.

Director-General of Industrial Production and Exchanges at the Ministry of Corporations.

Experts:

M. E. CARVALE,

Dr. G. DE VECCHI.

Chief Inspector at the Ministry of Corporations.

Secretary:

Dr. A. BERIO,

Secretary of Legation.

LETTONIE.

Délégué:

Son Excellence M. J. FELDMANS,

Ministre plénipotentiaire, Délégué permanent auprès
de la Société des Nations.

LITHUANIE.

Délégué:

M. G. DOBKEVICIUS,

Conseiller commercial près la Légation de Lituanie
à Paris.

LUXEMBOURG.

Délégués:

M. A. CALMES,

Membre du Conseil supérieur de l'Union économique
belgo-luxembourgeoise.

M. J. P. MERTZ,

Directeur de la Fédération des Associations agricoles.

NORVÈGE.

Délégués:

M. G. JAHN,
M. N. ØSTBYE,

Directeur en chef du Bureau central de Statistique.
Chef de division au Ministère des Douanes.

Secrétaire:

M. T. SEIPPEL,

Secrétaire au Ministère des Affaires étrangères.

PAYS-BAS.

Délégué:

Le docteur J. A. NEDERBRAGT,

Directeur des Affaires économiques et consulaires
au Département des Affaires étrangères, Président
des Commissions pour les traités de commerce.

POLOGNE.

Premier délégué:

Son Excellence le docteur F. DOLEZAL,

Sous-Secrétaire d'Etat au Ministère de l'Industrie
et du Commerce.

Délégués:

M. M. SOKOLOWSKI,

Directeur du Département du Commerce au Minis-
tère du Commerce et de l'Industrie.

M. A. ROSE,

Directeur du Département économique au Ministère
de l'Agriculture.

M. A. ROMAN,

Chef du Bureau économique au Ministère des
Affaires étrangères.

Conseillers techniques:

M. T. LYCHOWSKI,
M. H. STEBELSKI,

Conseiller au Ministère de l'Industrie et du Commerce.
Rédacteur au Ministère des Affaires étrangères.

PORTUGAL

Premier délégué:

Le docteur CAEIRO DA MATTA,

Professeur de droit international aux facultés de
Coïmbre et de Lisbonne, Recteur à l'Université de
Lisbonne et Directeur de la Banque de Portugal.

Délégués:

Son Excellence M. Antonio Augusto CURSON,

Ancien Ministre du Commerce, Professeur à l'Institut
supérieur de commerce de Lisbonne, Directeur à
l'Administration générale des Douanes.

M. João Augusto FERREIRA DA COSTA,

Professeur à l'Institut supérieur de commerce de
Lisbonne.

LATVIA.

Delegate:
His Excellency M. J. FELDMANS,

Minister Plenipotentiary, Permanent Delegate
accredited to the League of Nations.

LITHUANIA.

Delegate:
M. G. DOBKEVICIUS,

Commercial Counsellor, Legation of Lithuania at
Paris.

LUXEMBURG.

Delegates:
M. A. CALMES,
M. J. P. MERTZ,

Member of the "Conseil supérieur" of the Economic
Union of Belgium and Luxemburg.
Director of the Federation of Agricultural Associa-
tions.

NORWAY.

Delegates:
M. G. JAHN,
M. N. ÖSTBYE,

Chief Director of the Central Statistical Office.
Head of Department at the Ministry of Customs.

Secretary:
M. T. SEIPPEL,

Secretary at the Ministry of Foreign Affairs.

THE NETHERLANDS.

Delegate:
Dr. J. A. NEDERBRAGT,

Director of Economic and Consular Affairs at the
Department of Foreign Affairs, President of
the Commercial Treaties Commissions.

POLAND.

First Delegate:
His Excellency Dr. F. DOLEZAL,

Under-Secretary of State at the Ministry of
Industry and Commerce.

Delegates:
M. M. SOKOLOWSKI,
M. A. ROSE,
M. A. ROMAN,

Director of the Department of Commerce at the
Ministry of Commerce and Industry.
Director of the Economic Department at the
Ministry of Agriculture.
Head of the Economic Office at the Ministry of
Foreign Affairs.

Technical Advisers:
M. T. LYCHOWSKI,
M. H. STEBELSKI,

Counsellor at the Ministry of Industry and Commerce.
Editor at the Ministry of Foreign Affairs.

PORTUGAL.

First Delegate:
Dr. CAEIRO DA MATTA,

Professor of International Law at the Universities of
Coimbra and Lisbon, Rector at the University of
Lisbon, and Director of the Bank of Portugal.

Delegates:
His Excellency M. Antonio Augusto CURSON,
M. João Augusto FERREIRA DA COSTA,

Former Minister of Commerce, Professor at the High
Institute of Commerce at Lisbon, Director at the
General Customs Administration.
Professor at the High Institute of Commerce at
Lisbon.

Délégué adjoint:

M. A. FERRAZ DE ANDRADE,

Premier secrétaire de légation, Chef de la Chancellerie portugaise auprès de la Société des Nations.

Délégués:

Son Excellence M. M. MANOÏLESCO,
Son Excellence M. E. NECULCEA,
M. C. POPESCU,

Ministre de l'Industrie et du Commerce.
Ministre plénipotentiaire.
Directeur général au Ministère de l'Industrie et du Commerce.

Experts:

M. J. MATASARU,
M. A. HOLBAN.

Attaché commercial en Suisse
Conseiller au Ministère de l'Industrie et du Commerce.

Secrétaire:

M. F. VRIONI,

Chef du Cabinet, Ministère de l'Industrie et du Commerce.

Délégués:

Son Excellence M. V. LUNDBIK,
M. E. INSULANDER,
M. C. GÜNTHER,

SUÈDE.

Ancien Ministre du Commerce, Directeur en chef de la Fédération des industries suédoises.
Directeur général et Chef de l'Administration royale de l'Agriculture.
Directeur des Affaires commerciales au Ministère Royal des Affaires étrangères.

Secrétaire:

M. E. DE POST,

Secrétaire au Ministère des Affaires étrangères.

Délégués:

M. W. STUCKI,
M. E. WETTER,

SUISSE.

Directeur de la Division du Commerce au Département fédéral de l'Economie publique.
Vice-Président de la Direction de la Société suisse du Commerce et de l'Industrie.

Secrétaire:

M. R. RUBATTEL,

Premier Chef de section de la Division de l'Agriculture au Département fédéral de l'Economie publique.

Délégués:

Son Excellence M. Z. FIERLINGER,
Son Excellence le docteur F. PEROUTKA,
Le docteur L. PAZDERKA,

TCHÉCOSLOVAQUIE.

Délégué permanent auprès de la Société des Nations, Envoyé extraordinaire et Ministre plénipotentiaire auprès du Conseil fédéral suisse.
Chef de Section au Ministère du Commerce, ancien Ministre.
Chef de section au Ministère de l'Agriculture.

Secrétaires:

Le docteur V. HAVLAS,
M. L. RADIMSKY,

Secrétaire au Ministère du Commerce.
Docteur en droit, Secrétaire de légation au Ministère des Affaires étrangères.

Délégués:

Son Excellence M. I. CHOUMENKOVITCH,

CHEVKRET FUAD Bey,	Consul at Geneva.
--------------------	-------------------

Ces délégations se sont, en conséquence, réunies à Genève du 17 au 28 novembre 1930.

Le Conseil de la Société des Nations a appelé aux fonctions de président de la Conférence Son Excellence M. H. COLIJN, Ministre d'Etat des Pays-Bas.

La Conférence a adopté les résolutions ci-après :

A. CONVENTION COMMERCIALE.

La Conférence a décidé de poursuivre, au cours d'une session ultérieure dont la date sera déterminée par le Secrétaire général de la Société des Nations, après consultation du Président de la Conférence, les travaux prévus au second alinéa de l'article XIII de la Convention commerciale du 24 mars 1930.

Elle constate que les délégués des pays au nom desquels l'instrument de ratification a été déposé au Secrétariat de la Société des Nations avant le 1^{er} novembre 1930, ont décidé de considérer les ratifications ou demandes d'adhésion à la susdite Convention déposées ou introduites auprès du Secrétaire général après le 1^{er} novembre 1930 et avant le 25 janvier 1931, comme ayant les mêmes effets que si le dépôt de la ratification ou la demande d'adhésion avaient été effectués avant le 1^{er} novembre 1930.

B. NÉGOCIATIONS TENDANT A L'AMÉLIORATION GÉNÉRALE DES ÉCHANGES SUR LA BASE DE LA PROPOSITION N° 4 DU COMITÉ ÉCONOMIQUE ¹.

La Conférence, ayant soigneusement examiné les méthodes auxquelles il convient de recourir pour mettre en œuvre les négociations envisagées par le Protocole relatif au programme de négociations ultérieures, constate, en ce qui concerne la quatrième proposition du Comité économique, que les négociations visées dans la proposition susdite ne pourraient être entamées à la fois entre tous les Etats signataires.

La Conférence a cependant noté avec satisfaction que certains Etats se sont déclarés disposés à négocier, dans certaines conditions, avec d'autres Etats en vue d'apporter à leurs relations commerciales des améliorations dont les Etats tiers seraient appelés à bénéficier en vertu de la clause de la nation la plus favorisée.

La Conférence exprime l'espoir qu'il sera possible de parvenir par cette voie à une détente générale dans le domaine des échanges internationaux.

C. NÉGOCIATIONS RELATIVES AU RÉGIME DES ÉCHANGES DES ÉTATS AGRICOLES DE L'EUROPE CENTRALE ET ORIENTALE, SUR LA BASE DE LA PROPOSITION N° 5 DU COMITÉ ÉCONOMIQUE ¹.

La Conférence a pris connaissance de l'étude à laquelle s'est livré le Sous-Comité désigné par elle en vue d'examiner la question des négociations relatives au régime des échanges des Etats agricoles de l'Europe centrale et orientale.

Elle a été mise au courant des efforts entrepris au cours des derniers mois par ces Etats afin de surmonter la crise dont ils sont atteints, et elle a pris note des déclarations faites par leurs représentants, d'après lesquelles le but principal de leurs efforts consiste à adapter le niveau des prix d'exportation des principaux produits agricoles à leur prix de revient.

* * *

Elle a pris note de la proposition ² présentée par la Bulgarie, la Hongrie, la Pologne, la Roumanie et la Yougoslavie, relative à un *régime douanier préférentiel* des céréales originaires de ces pays, ainsi que du contenu du rapport ci-annexé.

Elle souligne l'importance des questions soulevées par le Comité économique dans sa proposition N° 5 ¹, en ce qui concerne *l'organisation* du commerce des céréales, l'institution d'organismes d'exportation et d'importation ainsi que la collaboration des ces organismes.

* * *

Enfin, considérant que la question du *crédit agricole*, discutée à la Société des Nations depuis la Conférence économique internationale de 1927, ainsi qu'à l'Institut international d'Agriculture, est actuellement d'une importance capitale pour certains pays et demande une solution urgente, elle prend acte avec intérêt du mémorandum établi à ce sujet par la Conférence de Varsovie du 11 novembre 1930 ³.

¹ Voir document 2° Conf. / A.E.C. / 2.

² Voir document 2° Conf. / A.E.C. / 1.

³ Voir document 2° Conf. / A.E.C. / 11.

These delegations accordingly met at Geneva from November 17th to 28th, 1930.

The Council of the League of Nations appointed His Excellency M. H. COLIJN, Minister of State of the Netherlands, to act as President of the Conference.

The Conference adopted the following resolutions:

A. COMMERCIAL CONVENTION.

The Conference has decided to continue at a later session, the date of which will be determined by the Secretary-General of the League of Nations in consultation with the President of the Conference, the work provided for in paragraph 2 of Article XIII of the Commercial Convention of March 24th, 1930.

It notes that the delegates of the countries on whose behalf the instruments of ratification were deposited at the Secretariat of the League of Nations before November 1st, 1930, have decided to consider ratifications or requests to accede to the said Convention deposited or lodged with the Secretary-General after November 1st, 1930, but before January 25th, 1931, as having the same effect as if the ratification had been deposited or the request to accede had been lodged before November 1st, 1930.

B. NEGOTIATIONS WITH A VIEW TO A GENERAL IMPROVEMENT IN TRADE ON THE BASIS OF PROPOSAL No. 4 OF THE ECONOMIC COMMITTEE.¹

The Conference, having carefully considered the methods for setting on foot the negotiations contemplated by the Protocol of Future Negotiations, notes, as far as point 4 of the proposals of the Economic Committee is concerned, that the negotiations referred to in the aforesaid proposal could not be entered upon by all the signatory States en bloc.

The Conference has however noted with satisfaction that certain States have declared themselves willing to negotiate, under certain conditions, with other States in order to assure improvements in their commercial relations, from which third States would benefit in virtue of the most-favoured-nation clause.

The Conference expresses the hope that it will be possible in this way to arrive at a general "détente" in the field of international commercial exchanges.

C. NEGOTIATIONS RELATING TO THE TRADE SYSTEM OF THE AGRICULTURAL COUNTRIES OF CENTRAL AND EASTERN EUROPE, ON THE BASIS OF PROPOSAL No. 5 OF THE ECONOMIC COMMITTEE.¹

The Conference has noted the enquiry conducted by the Sub-Committee appointed by it to examine the question of negotiations concerning the trade of the agricultural States of Central and Eastern Europe.

The efforts made during the last few months by these States to overcome the crisis from which they are suffering have been explained to it and it has noted the statements made by their representatives to the effect that the main object of their efforts is to adapt the level of export prices of the main agricultural products to the cost price of those products.

* * *

It has noted the proposals² submitted by Bulgaria, Hungary, Poland, Roumania and Yugoslavia concerning a *preferential Customs regime* for cereals coming from these countries, and also the contents of the Report annexed hereto.

It stresses the importance of the questions raised by the Economic Committee in its proposal No. 5¹ as regards the *organisation* of the trade in cereals, the establishment of exporting and importing organisations and collaboration between these organisations.

* * *

Finally, considering that the question of *agricultural credits*, discussed by the League of Nations since the World Economic Conference of 1927 and by the International Institute of Agriculture, is at present a matter of capital importance for certain countries and calls for urgent solution, it notes with interest the memorandum³ prepared on this subject by the Warsaw Conference of November 11th, 1930.

¹ See document 2nd Conf./A.E.C./2.

² See document 2nd Conf./A.E.C./1.

³ See document 2nd Conf./A.E.C./11.

Notant avec satisfaction que le Comité financier de la Société des Nations a décidé, avec l'approbation du Conseil, de discuter la question du crédit agricole à sa session de janvier 1931, la Conférence demande instamment au Conseil que ce problème soit abordé vigoureusement, en tenant compte de ses aspects économiques aussi bien que financiers et en vue d'une réalisation prochaine, notamment en ce qui concerne les pays agricoles de l'Europe centrale et orientale.

D. CONVENTION INTERNATIONALE POUR L'ABOLITION DES PROHIBITIONS ET RESTRICTIONS A L'IMPORTATION ET A L'EXPORTATION.

La Conférence, s'inspirant des vœux exprimés par la onzième Assemblée et adoptant le point de vue du Comité économique qu'un nouvel effort des Etats européens en vue d'assurer à la Convention l'adhésion de tous les Etats qui l'avaient signée semble indiqué par les circonstances actuelles;

Prenant acte des déclarations faites par quelques délégations:

Prie les délégués de recommander à leurs gouvernements d'examiner la situation actuelle, tant au point de vue matériel qu'au point de vue juridique, de manière que ceux-ci puissent faire connaître au Secrétaire général de la Société des Nations l'attitude qu'ils comptent adopter en cette matière.

La Conférence exprime l'espoir que les communications de cette nature soient faites à temps pour permettre l'examen de la situation à l'occasion de sa prochaine session.

E. CONFÉRENCE SUR LE TRAITEMENT DES ÉTRANGERS.

La Conférence, informée que des conversations se poursuivent actuellement entre quelques gouvernements en vue de rechercher les principes sur la base desquels pourrait être établie une Convention relative au traitement des étrangers qui constituerait un progrès par rapport à la situation présente,

Exprime le vœu que ces conversations conduisent à des résultats permettant à la Conférence internationale pour le traitement des étrangers de reprendre ses travaux dans des conditions favorables.

F. QUESTIONS NON TARIFAIRES VISÉES A L'ARTICLE 2 DU PROTOCOLE RELATIF AU PROGRAMME DE NÉGOCIATIONS ULTÉRIEURES.

La Conférence, ayant pris connaissance du mémorandum du Secrétariat¹ sur les travaux de l'Organisation économique en matière non tarifaire,

Félicite l'Organisation économique de l'activité qu'elle a déployée dans le but de donner suite aux résolutions et vœux contenus dans l'article 2 du Protocole relatif au programme de négociations ultérieures et aux résolutions de la onzième Assemblée de la Société des Nations;

Exprime le vœu que l'Organisation économique active dans toute la mesure du possible l'étude des différentes questions faisant l'objet des résolutions et vœux ci-dessus rappelés, surtout l'étude des questions qui paraissent susceptibles d'aboutir rapidement à des solutions satisfaisantes.

G. CONTINUATION DES TRAVAUX DE LA CONFÉRENCE.

La Conférence estime qu'il serait désirable que, lors d'une de ses prochaines sessions, elle soit mise en mesure d'examiner quelle action ultérieure pourrait être envisagée.

¹ Voir document 2^e Conf./A.E.C./14.

Noting with satisfaction that the Financial Committee of the League of Nations has decided, with the approval of the Council, to discuss the question of agricultural credits at its January 1931 session, the Conference earnestly requests the Council that the consideration of this question should be undertaken energetically, taking into account its economic as well as its financial aspects, with a view to obtaining speedy results, particularly as regards the agricultural countries of Central and Eastern Europe.

D. INTERNATIONAL CONVENTION FOR THE ABOLITION OF IMPORT AND EXPORT PROHIBITIONS AND RESTRICTIONS.

The Conference, bearing in mind the recommendations of the Eleventh Assembly, and endorsing the view of the Economic Committee that a further effort of the European States to secure the adhesion to the Convention of all the signatory States appears to be indicated in present circumstances;

Noting the statements made by certain delegations:

Requests the delegates to recommend their Governments to examine the present situation, both from a material and from a legal point of view in order that they may be in a position to inform the Secretary-General of the League of Nations of the attitude which they intend to take up in this matter.

The Conference expresses the hope that the communications on this subject will be made in time to allow of consideration of the position at its next session.

E. CONFERENCE ON THE TREATMENT OF FOREIGNERS.

The Conference, being informed that conversations are at present proceeding between certain Governments with a view to finding principles, on the basis of which a Convention on the Treatment of Foreigners which would represent an improvement of the present situation might be drawn up:

Expresses the hope that these conversations may lead to results enabling the International Conference for the Treatment of Foreigners to resume its labours under favourable conditions.

F. NON-TARIFF QUESTIONS REFERRED TO IN ARTICLE 2 OF THE PROTOCOL REGARDING THE PROGRAMME OF FUTURE NEGOTIATIONS.

The Conference, having noted the Memorandum¹ by the Secretariat on the work of the Economic Organisation with regard to non-tariff questions,

Congratulates the Economic Organisation on the activity it has displayed with a view to giving effect to the resolutions and recommendations contained in Article 2 of the Protocol regarding the Programme of Future Negotiations and to the resolutions of the Eleventh Assembly of the League of Nations;

Expresses the hope that the Economic Organisation should, as far as possible, expedite the study of the different questions referred to in the above-mentioned resolutions and recommendations and particularly those questions in regard to which early and satisfactory solutions seem possible.

G. CONTINUATION OF THE WORK OF THE CONFERENCE.

The Conference considers it desirable that, in the course of some one of its forthcoming sessions, it should be placed in a position to consider what further action could be contemplated.

¹ Document 2nd Conf./A.E.C./14.

EN FOI DE QUOI, les délégués ont signé le présent Acte.

IN FAITH WHEREOF, the delegates have signed the present Act.

FAIT à Genève, le vingt-huit novembre mil neuf cent trente, en simple expédition qui sera déposée dans les archives du Secrétariat de la Société des Nations; copie conforme en sera transmise à tous les Membres de la Société des Nations, ainsi qu'aux Etats non membres ayant participé à la Conférence.

DONE at Geneva, the twenty-eighth day of November, one thousand nine hundred and thirty, in a single copy, which shall be deposited in the archives of the Secretariat of the League of Nations, and of which authenticated copies shall be delivered to all Members of the League of Nations, and to the States non-members which took part in the Conference.

ANNEXE.

RAPPORT DU SOUS-COMITÉ CHARGÉ D'EXAMINER
LA QUESTION DES NÉGOCIATIONS RELATIVES AU RÉGIME DES ÉCHANGES
DES ÉTATS AGRICOLES DE L'EUROPE CENTRALE ET ORIENTALE

ANNEX.

REPORT OF THE SUB-COMMITTEE APPOINTED TO EXAMINE
THE QUESTION OF THE NEGOTIATIONS CONCERNING THE TRADE OF THE
AGRICULTURAL STATES OF CENTRAL AND EASTERN EUROPE.

Sous la présidence de M. STUCKI (Suisse), un Sous-Comité — auquel avaient été appelées, d'une part, les délégations d'Etats dits agricoles de l'Europe orientale, Bulgarie, Hongrie, Pologne, Roumanie, Yougoslavie; d'autre part, les délégations d'Etats de l'Europe centrale et occidentale, importateurs de produits agricoles, Allemagne, Autriche, France, Italie, Suisse, Tchécoslovaquie — a été chargé d'étudier la question des négociations relatives au régime des échanges des Etats agricoles de l'Europe orientale avec les Etats de l'Europe centrale et occidentale.

1. Le Sous-Comité a soumis à un examen approfondi la proposition de la Bulgarie, de la Hongrie, de la Pologne, de la Roumanie et de la Yougoslavie, relative au *traitement douanier préférentiel* à accorder aux céréales originaires de ces pays et, à ce sujet, réserve faite de la question de principe et de la possibilité d'application, il s'est mis d'accord sur les points suivants:

I. — Le régime préférentiel susmentionné devrait être considéré comme une dérogation conditionnelle, exceptionnelle et limitée à la clause de la nation la plus favorisée, qui doit caractériser le régime normal du commerce international.

II. — Le régime préférentiel ne serait accordé que pour les céréales (blé, maïs, orge, avoine seigle) et leurs dérivés.

III. — Le traitement préférentiel ne saurait porter atteinte aux intérêts des pays exportateurs d'outre-mer, ceux-ci restant toujours les principaux fournisseurs de l'Europe, dont la production est largement déficitaire.

Le traitement préférentiel ne devrait être établi que d'accord avec les pays qui jouissent du traitement de la nation la plus favorisée et ne pourrait être appliqué qu'avec leur assentiment.

Les Etats liés actuellement par des traités de commerce bilatéraux, conclus sur la base de la clause de la nation la plus favorisée, devraient donc reconnaître, comme une exception admise à la clause de la nation la plus favorisée, le régime préférentiel, accordé dans les conditions susindiquées.

IV. — Le régime préférentiel ne devrait compromettre en rien la protection des intérêts agricoles des pays importateurs et ne devrait en aucun cas porter dommage aux agriculteurs des pays européens importateurs. Les pays exportateurs ne veulent pas demander à ceux-ci un sacrifice. L'absorption des exportations européennes ne devrait pas accroître le volume total des importations de céréales auxquelles ont recours normalement les pays dits industriels.

Les pays exportateurs ne songent pas à accroître leur production de céréales, la production mondiale dépassant déjà la consommation.

V. — Le régime préférentiel ne serait accordé que pour des quantités qui seraient limitées, par voie de contingents ou par une autre méthode, étant entendu que, pour ces quantités limitées, le consentement des pays qui jouissent du traitement de la nation la plus favorisée serait indispensable à un régime préférentiel.

VI. — Le régime préférentiel ne serait demandé qu'aux Etats importateurs de céréales d'origine européenne qui frappent de droits protecteurs lesdites importations. Il ne serait pas demandé aux pays européens qui laissent entrer les céréales en franchise ni à ceux qui leur appliquent des droits d'entrée insignifiants.

VII. — Si des Etats européens, sollicités d'accorder aux céréales un traitement préférentiel, demandaient une contre-partie aboutissant aussi à une préférence dans le régime douanier, celle-ci ne pourrait être mise en vigueur qu'avec le consentement des pays intéressés qui jouissent du traitement de la nation la plus favorisée.

VIII. -- La délégation italienne a déclaré, pour ce qui la concerne, qu'elle se borne à prendre note des précisions mentionnées dans les alinéas I à VII au sujet d'un régime douanier préférentiel à accorder aux céréales et à leurs dérivés originaires des pays agricoles de l'Europe orientale, et elle a déclaré n'être pas favorable à l'introduction de ce régime préférentiel.

2. Le Sous-Comité a été mis au courant des efforts entrepris au cours des derniers mois par les pays agricoles de l'Europe orientale en vue de surmonter la crise dont ils sont atteints, et il a pris note des déclarations faites par les représentants de ces Etats et d'après lesquelles le but principal de leurs efforts est l'adaptation du niveau des prix d'exportation des principaux produits agricoles à leur coût de revient, ce but étant conforme aux buts poursuivis par l'action économique concertée de la Société des Nations et rentrant dans cette action comme seul moyen efficace susceptible d'augmenter le pouvoir d'achat des pays agricoles.

Le Sous-Comité constate l'importance des efforts tentés par les pays agricoles de l'Europe orientale pour arriver à une meilleure *organisation* de l'exportation de leurs excédents — travaux essentiels pour la rationalisation de la vie économique internationale. Il émet l'opinion que l'étude

Under the Chairmanship of M. STUCKI (Switzerland), a Sub-Committee—to which had been invited, on the one hand, the delegations of the so-called Agricultural States of Eastern Europe: Bulgaria, Hungary, Poland, Roumania, Yugoslavia, and on the other hand, the delegations of States of Central and Western Europe which import agricultural products: Austria, Czechoslovakia, France, Germany, Italy and Switzerland—was appointed to study the question of negotiations concerning the trade of the Agricultural States of Eastern Europe with the States of Central and Western Europe.

1. The Sub-Committee examined very carefully the proposal of Bulgaria, Hungary, Poland, Roumania and Yugoslavia, concerning the *Preferential Customs treatment* of cereals grown in these countries, and in this connection, leaving aside the question of principle and the possibility of application, it agreed to the following points:

I. — The above-mentioned preferential regime would need to be regarded as a conditional, exceptional and limited derogation to the most-favoured-nation clause, which must characterise the normal regime of international trade.

II. — The preferential regime would only be accorded for cereals (wheat, maize, barley, oats and rye) and their derivatives.

III. — Preferential treatment should not harm the interests of overseas exporting countries, inasmuch as the latter will always be the main providers of Europe — a continent which is very far from producing enough to satisfy its own requirements.

Preferential treatment would require to be established in agreement with the countries enjoying most-favoured-nation treatment, and could not be applied unless they agree.

The States at present bound by bilateral commercial treaties concluded on the basis of the most-favoured-nation clause would therefore be called on to recognise as an admitted exception to the most-favoured-nation clause the preferential treatment granted under the above-mentioned conditions.

IV. — The preferential regime must not in any way endanger the protection of the agricultural interests of the importing countries, and should not in any case cause any injury to agriculturists in European importing countries. Exporting countries do not intend to ask these agriculturists to make a sacrifice; the absorption of European export should not increase the total volume of imports of cereals of the so-called industrial countries. Exporting countries do not intend to increase their production of cereals, as world production is already greater than the world's power of absorption.

V. — The preferential regime would only be accorded for quantities to be limited by quotas or other methods, it being understood that for these limited quantities the consent of the countries enjoying most-favoured-nation treatment would be indispensable before such a regime could be established.

VI. — The demand for preference would only be addressed to countries which import cereals of European origin and impose protective duties on the same. It would not be demanded of those European countries which admit cereals free of duty nor of those countries whose import duties are insignificant.

VII. — If European countries, on being approached with a view to giving preference to cereals, demand an offsetting advantage amounting likewise to a Customs preference, such preference would not be admissible without the consent of the interested countries enjoying most-favoured-nation treatment.

VIII. — The Italian delegation states that, so far as it is concerned, it confines itself to noting the details specified in paragraphs I-VII with regard to preferential treatment for cereals and their derivatives having their origin in the agricultural countries of Eastern Europe, and is opposed to the introduction of such a preferential system.

2. The Sub-Committee has been informed of the efforts made in recent months by the agricultural countries of Eastern Europe with a view to overcoming the depression from which they are suffering, and it has noted the statements made by the representatives of these countries to the effect that the principal object of their efforts is the adaptation of the export price level in the case of the principal agricultural products to the cost of production—an object which is in conformity with the aims of the concerted economic action of the League of Nations, and finds its place in that action as being the only efficacious means of increasing the purchasing power of agricultural countries.

The Sub-Committee notes the importance of the efforts made by the agricultural countries of Eastern Europe to arrive at better *organisation* of export of their surpluses, which it considers an

de ces problèmes devrait être poursuivie dans toute son étendue par une conférence économique ultérieure.

3. Le Sous-Comité constate qu'à plusieurs reprises la question du *crédit agricole* a été discutée à la Société des Nations depuis la Conférence économique internationale de 1927 ainsi qu'à l'Institut international d'Agriculture. Il considère que cette question est actuellement d'une importance capitale pour certains pays et qu'elle demande d'urgence une solution.

La pénurie des capitaux présente une entrave sérieuse au développement des relations commerciales entre les pays dits industriels et les pays dits agricoles, ce qui abaisse considérablement le pouvoir d'achat des pays dits agricoles et trouve une répercussion dans la diminution de l'exportation des marchandises des pays dits industriels.

Le fait que les capitaux abondent sur certains marchés et ne peuvent être obtenus par d'autres pays, même avec de grands sacrifices, révèle une anomalie profonde qui semblerait pouvoir être écartée, en une certaine mesure, par une meilleure organisation faisant disparaître les obstacles s'opposant actuellement à l'octroi de tels crédits.

Le Sous-Comité a pris acte, avec grand intérêt, du mémorandum fortement documenté qu'a établi, au sujet du crédit agricole à moyen terme, la Conférence qui s'est tenue à Varsovie du 10 au 13 novembre 1930.¹

Il note avec satisfaction que le Comité financier de la Société des Nations a décidé, avec l'approbation du Conseil, de discuter la question à sa session de janvier 1931. Il estime que la Conférence devrait adresser un appel pressant au Conseil de la Société des Nations, pour que ce problème soit vigoureusement abordé en vue d'une action réalisatrice de grande envergure, notamment en ce qui concerne les pays du Centre et de l'Est de l'Europe.

¹ Voir document 2^e Conf. /A.E.C./11.

essential feature of the rationalisation of international economic life. It is of opinion that the whole range of these problems should be studied by a future economic conference.

3. The Sub-Committee notes that the question of *agricultural credits* has been discussed on several occasions by the League of Nations since the World Economic Conference of 1927, as well as by the International Institute of Agriculture. The Sub-Committee is of opinion that this question is of capital importance at the present time for certain countries, and calls urgently for a solution.

The shortage of capital constitutes a serious obstacle to the development of commercial relations between the countries described as "industrial" and those described as "agricultural", and the purchasing power of the "agricultural" countries is considerably reduced thereby, leading to a corresponding reduction of the export of goods from the "industrial" countries.

The fact that there is an abundance of capital in certain centres, while in other countries it is unobtainable, even at great sacrifices, discloses a serious anomaly which might apparently be eliminated to a certain extent by a better organisation, which would tend to remove the obstacles which at present stand in the way of the granting of such credits.

The Sub-Committee has taken note with much interest of the well-documented memorandum on the subject of medium-term agricultural credits drawn up by the Conference of Warsaw of November 10-13th, 1930.¹

The Sub-Committee notes with satisfaction that the Financial Committee of the League of Nations has decided, with the approval of the Council, to discuss the question at its session in January 1931. The Sub-Committee is of opinion that the Conference should make an urgent appeal to the Council of the League that the consideration of this problem should be undertaken energetically, with a view to practical action on a large scale, particularly in the case of the countries of Central and Eastern Europe.

Tableau sommaire.

IMPORTATIONS EN ET EXPORTATIONS DE PAYS EUROPÉENS, DE CÉRÉALES,
PRODUITS LAITIERS ET VIANDES, EN 1929.

(Valeur en millions de dollars).

Note. — Les chiffres sont approximatifs et sont tirés des tableaux détaillés ci-joints ; la distribution entre pays européens et extraeuropéens est basée sur la proportion par poids indiquée dans ces tableaux.

Dans les tableaux détaillés, les articles dont la valeur totale s'élevait à moins d'un demi-million de dollars ont été omis, en général ; cependant, il a été tenu compte de ces valeurs et de leur distribution par provenance (ou destination) lors de l'élaboration de ce tableau sommaire.

Summary Table.

IMPORTS INTO AND EXPORTS FROM EUROPEAN COUNTRIES OF CEREALS, DAIRY
PRODUCE AND MEAT, IN 1929.

(Value in million dollars).

Note. — The figures are approximate and are taken from the detailed tables attached, the distribution as between European and extra-European countries being based on the proportion by weight shown in those tables.

In the detailed tables, items whose total value amounted to less than half a million dollars have been, as a rule, omitted ; but such values, and their distribution by provenance (or destination), have been taken into account in compiling this summary table.

¹ Les farines, pommes de terre, la graine de lin, le beurre, le fromage, les œufs et les viandes ne sont pas indiqués séparément.

² Animaux vivants, autres que les chevaux, l'espèce bovine et l'espèce porcine.

³ Le maïs et les deux farines ne sont pas indiqués séparément.

⁴ Toutes les viandes fraîches, fumées, salées ou conservées. Dont « autres que fraîches » (y compris le lard) = 0,01 (poids).

¹ Flours, potatoes, linseed, butter, cheese, eggs and meats are not shown separately.

² Live animals, other than horses, cattle and pigs.

³ Maize and the two flours are not shown separately.

⁴ All meats, fresh, smoked, salted or preserved. Of which, "other than fresh" (including bacon) = 0.01 (weight).

II. ECONOMIC AND FINANCIAL
1930. II. 55.

PART I.

[*Translation.*]

A. INTRODUCTION.

Under the Final Act of the International Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques, signed at Geneva on June 7th, 1930, the Governments represented at the said Conference undertook to devote further examination to the draft conventions on cheques submitted to the Conference, and to communicate the results of such examination to the Secretary-General of the League of Nations before October 15th, 1930.

In order to facilitate this examination, the Conference enumerated in the Final Act twenty-one questions, to which the Governments consulted were invited to reply.

It was provided in the said Final Act that the documentation thus obtained should be co-ordinated, classified and incorporated in a single document on the instructions of the Secretary-General, and should then be transmitted to the Governments represented at the Conference.

The present document has been drawn up in conformity with the above provisions.

B. GENERAL REMARKS ARISING OUT OF THE REPLIES.¹

1. The general impression derived from the replies of Governments to the questionnaire drawn up by the Conference at its first session is most favourable. There is every reason to hope that, at its second session, the Conference will succeed without much difficulty in achieving the object for which it is convened.

2. Unanimity appears to exist among the Governments which replied to the questionnaire as regards the conclusion, in the matter of cheques, of three Conventions on the lines employed for bills of exchange and promissory notes—namely:

(a) Convention providing a uniform law for cheques, with two annexes, containing respectively the uniform law and any reservations or exceptions of which States parties to the Convention have the right to avail themselves;²

(b) Convention for the settlement of certain conflicts of laws in connection with cheques;

(c) Convention on the stamp laws in connection with cheques.

3. The experts' draft seems likely to be generally accepted by the Governments as a basis for future agreement, although in some cases certain States appear to prefer the resolutions of the Hague Conference to the provisions adopted by the experts.

4. Several Governments have asked that the provisions of the uniform law for cheques, even when they are identical with those adopted under the Convention of June 7th for bills of exchange, should be inserted in the text of the Uniform Law for Cheques and that there should not simply be a reference to the provisions of the Uniform Law for Bills of Exchange.

Provision must, in point of fact, be made for a State to become a contracting party to the second series of Conventions without being a contracting party to the first.

C. CONCLUSIONS TO BE DRAWN FROM THE REPLIES OF GOVERNMENTS

concerning the Principal Questions raised by the Individual Articles of the Draft Regulation framed by the Experts.³

ISSUE AND FORM OF CHÈQUES

ARTICLE I.

A cheque contains:

(1) *The term "cheque" inserted in the body of the instrument and expressed in the language employed in drawing up the instrument:*

(2) An unconditional order to pay a determinate sum of money;

(3) The name of the person who is to pay (drawee);

¹ The observations from the Governments of Danzig, Roumania, Switzerland, the Netherlands and Japan having reached the Secretariat after December 1st, 1930, it has not been possible to take them into account in the present notes. These replies are printed in Part II after the preceding ones.

² This possibility seems essential in order to meet the requirements of States whose legislation may contain principles different from those embodied in the uniform law for particularly controversial questions. It may be noted that the replies frequently indicate a real desire, on the part of Governments, to make far-reaching concessions, provided that they are allowed to retain in their national laws principles to which they attach particular importance.

³ The text proposed by the experts for each of the articles is printed hereafter with their observations. The words in italics in the text of the articles show the modifications introduced by the experts on the text of the resolutions of the Hague Conference of 1912.

- (4) A statement of the place where payment is to be made;
- (5) And of the place and date when the cheque is issued;
- (6) The signature of the person who draws the cheque (drawer).

Note. — (a) The change in No. (1) of Article 1 was adopted on a majority vote.

(b) The word "unconditional" in No. 2 does not exclude the possibility of making payment in currency other than that stipulated in the cheque.

(c) With regard to the formula adopted in Article 1, No. (4), the experts refer to the observation cited below which has been taken from the annex to the minutes of the ninth plenary meeting of the Hague Conference, 1912, page 197, Article 3:

"The drawer may, however, indicate, in addition to the place for payment, other places at which the cheque may be cashed, without any charge, by the holder. This does not mean a change of drawee: the place indicated for cashing the cheque does not replace the place of payment for all necessary proceedings connected with the preservation of rights arising under the cheque: it is merely an understanding with the drawee on behalf of the holder to indicate the place at which the latter may cash the cheque."

(d) A mere error in the spelling of the word "cheque" ought not to invalidate the instrument as such.

(a) States whose legislation provides for the mention of the existence of cover in the cheque ("Guthabenklausel") claim that experience has demonstrated the utility of this provision and urge its maintenance.

Other Governments, claim, on the other hand, that this requirement is unnecessary.

In the circumstances, the best solution of the difficulty might perhaps be to authorise States whose laws contain this provision to retain it, undertaking, however, to recognise the validity of cheques issued abroad which do not bear such mention.

This might be achieved either by the inclusion of a reservation or by the insertion of an appropriate provision in the Convention for the settlement of conflicts of laws.

(b) The practice of the typed cheque, or even the printed cheque, has become so general that the replies note unanimously that the uniform law should not prohibit this practice.

Some anxiety is, however, felt as regards the increased possibility of forgery arising out of mechanical writing. It goes without saying that *all the Governments* are unanimous in demanding that the cheques shall be at least signed by the drawer.

(c) *Austria* and *Yugoslavia* have asked that the words "*le mandat*" may be substituted for the words "*l'ordre*" in the French text of No. 2 of this article, in order to bring the text into line with the corresponding provision of Article I of the Uniform Law for Bills of Exchange.

This point does not seem likely to meet with any difficulty.

ARTICLE 2.

An instrument in which any of the requirements mentioned in the preceding article are wanting is invalid as a cheque, except in the cases specified in the following paragraphs:

In default of special mention, the place specified beside the name of the drawee is deemed to be the place of payment, and, at the same time, the residence of the drawee.

A cheque which does not mention the place of payment is deemed to be payable at the place of its issue.

A cheque which does not specify the place of its issue is deemed to have been drawn in the place specified beside the name of the drawer.

Note. — With regard to the third paragraph, the experts point out that naturally, if the drawee is resident at the place of issue, the cheque can only be paid at his place of residence. If the drawee cannot be found at the place of issue of the cheque, the protest must be drawn up according to the procedure followed in the case of a false address.

1. The *Austrian* Government asks that the third paragraph of this article shall be changed so that the cheque may be payable at the place where the drawee (bank) has its head office.

2. The *Yugoslav* Government wishes to add a fifth paragraph to this article, specifying that any mention of interest in the text of the instrument is deemed to be unwritten.

The *Scandinavian States* and *Finland* have made a proposal to the same effect, but suggest the insertion of an appropriate provision in Article 7.

ARTICLE 3.

A cheque must only be drawn on a person holding funds at the disposition of the drawer, and in conformity with an agreement, express or implied, according to which the drawee is bound to pay the cheque.

Power is reserved to the Contracting States to regulate consequences, civil, penal and fiscal, where default is made in *complying with the provisions* specified in the preceding paragraph, or when a cheque, is issued post-dated, provided that the validity of the instrument as a cheque *be maintained in spite of this irregularity*.

Note. — The changes in wording have been introduced for the sake of clearness.

Three questions were raised in connection with this article—namely:

I. *At what moment must the cover exist?*

Italy, Spain, the Scandinavian States and Finland, Latvia and Poland ask that cover shall be required to exist at the time of issue.

Germany, Austria, Belgium, Hungary, Siam and Czechoslovakia, on the other hand, consider it sufficient if the funds are available at the moment of presentation.

2. *What are the effects of post-dated cheques ?*

The *German* law of March 28th, 1930, provides that the date of presentation shall be considered the real date of issue. *Italy* proposes that this rule should be taken as a basis for discussion. The *Scandinavian States* and *Finland*, like *Austria* and *Hungary*, also advocate this solution. *Belgium* considers that the Uniform Law should lay down that a post-dated cheque is not valid as a cheque.

In *Poland*, a post-dated cheque is assimilated, for fiscal purposes, to a bill of exchange. *Latvia* considers that post-dated cheques should be deemed null and void.

3. *What are the penal consequences : a. of issuing a cheque without cover ; b. of issuing a post-dated cheque ?*

Generally speaking, the Governments which replied to the questionnaire are of the opinion that the penal consequences in either case should be determined by the national law.

ARTICLE 4.

A cheque may be made payable to a specified person, or to his order.

It may be made payable to bearer.

A cheque made payable to a specified person with the words " or to bearer ", or any equivalent words, is deemed to be payable to bearer.

A cheque which does not specify the payee is payable to bearer.

A cheque may be drawn payable to drawer's order.

Nevertheless, power is reserved to the Contracting States to prohibit the issue of bearer cheques drawn on the drawer himself.

Note. — The option of prohibiting the issue of bearer cheques drawn on the drawer himself has been inserted on account of the competition which might arise between these cheques and banknotes.

In the majority of cases the replies received to the question raised by paragraph 3 of Article 4—that is, what is the effect of issuing a cheque payable to a specified person when the cheque also contains the words " or to bearer ", or any equivalent words?—are in conformity with the solution embodied in the experts' draft.

This solution is expressly approved by *Italy*, the *Scandinavian States*, *Finland*, *Poland*, *Siam* and *Czechoslovakia*.

Germany considers that, for this question, the solution providing for the greatest facilities in the matter of transmission should be adopted.

Belgium asks that the choice should be left to the bearer. *Latvia* urges that the question should be settled in conformity with the uniform law for bills of exchange.

The *Spanish* Government is of opinion that the endorser or bearer should be prohibited from changing the method of transmission chosen by the drawer.

ARTICLE 5.

A cheque is drawn on a banker. A cheque drawn on any person other than a banker is not valid as a cheque.

Power is reserved to the Contracting States, so far as relates to cheques payable in their territories:

(a) To determine what persons shall be deemed to be bankers or what persons may in this respect be assimilated to bankers;

(b) To regulate the civil, fiscal and penal consequences of drawing a cheque on a person on whom it ought not to be drawn.

Note. — 1. Differing from the solution contained in Article 5, paragraph 1 of the Hague Resolutions, the experts propose that, in principle, the only instrument to be regarded as a cheque should be one which is drawn on a banker. This is the rule admitted in most countries: it is explained by the fact that funds must be available at sight.

2. However—and this is the reason for the addition in (a)—States should be allowed in this connection to treat as bankers persons engaged in very similar professions: for instance, in France " agents de change " or " caisses publiques ".

3. The addition under (b) of the word " civil " is a consequence of excluding the possibility of drawing a cheque on a person who is not a banker. When such an instrument is no longer to be regarded as a cheque, its effects have still to be determined—a point which is left to the legislation of the individual countries.

The *Spanish* Government urges the incorporation in the future Convention of the rules laid down in Article 5 of the resolutions of the Hague Conference of 1912.

The other Governments, unanimously approve the rule laid down in Article 5, of the experts' drafts and are also unanimous in demanding that the issuing of cheques on persons other than bankers should be prohibited.

They recognise, however, the necessity of being able to draw cheques on persons other than bankers or on institutions or persons assimilated in this connection to bankers.

The Conference may perhaps experience certain difficulties in finding a formula to determine the persons or institutions, apart from bankers properly so called, on which cheques can be drawn, since this formula must be sufficiently wide to cover all the cases in which the necessity in question is recognised, and must at the same time be sufficiently restrictive not to cancel the effects of the article.

The solution might perhaps be found in a list to be presented by the different delegations to the Conference and approved by them.

ARTICLE 6.

The drawer is the guarantor of the payment of a cheque. Any stipulation by which the drawer discharges himself from this guarantee is deemed to be unwritten.

See notes under Article 20.

ARTICLE 7.

The provisions of Articles 4, 6, 7 and 8 of the draft Regulation on bills of exchange and promissory notes (which relate to the issue and form of the instrument) shall apply to cheques.

Nevertheless, the domicile, referred to in Article 4 of the Regulation on bills of exchange can only, in this case, be the domicile of a banker.

Note. — The reference to Article 4 of the Regulation on bills of exchange and the addition of the last paragraph as a consequence thereof were made at the request of one of the experts who stated that cheques "domiciled" elsewhere than at the domicile of the drawee were frequently used in his country and that the practice seemed to be a useful one.

The *majority of Governments* pronounced in favour of the inclusion in the Uniform Law of a provision authorising the domiciliation of cheques.

This is the case with *Germany, Austria, the Scandinavian States and Finland, Italy, Latvia and Yugoslavia.*

The *Belgian, Polish, Siamese and Czechoslovak Governments*, while declaring themselves in favour of admitting domiciled cheques, specify that the person with whom the cheque is domiciled must in every case be a banker.

The *Spanish Government* merely notes that the national law contains no provision relating to domiciled cheques.

It asks, however, that the provisions of Article 10 of the Uniform Law of the Geneva Convention on Bills of Exchange should be made applicable to cheques.

ENDORSEMENT.

ARTICLE 8.

Every cheque, other than a cheque to bearer, may be transferred by endorsement, even if it is not expressly payable to order.

When the drawer of a cheque has inserted in it the words "not to order", or any equivalent expression, the instrument can only be assigned according to the forms and with the effect of an ordinary assignment.

The *Spanish Government* notes that this article is contrary to the Spanish law, under which only a cheque to order can be assigned by endorsement.

ARTICLE 9.

Any endorsement must be unconditional. Any condition to which it is made subject shall be deemed to be unwritten.

A partial endorsement is null and void.

An endorsement "to bearer" and an endorsement by the drawee are equally null and void.

Any person, except the drawee, who puts his signature on the back of a cheque payable to bearer is guarantor (by "aval") for the drawer.

An endorsement to the drawee is equivalent to a discharge, except in the case where the drawee has two or more establishments, and the endorsement is made in favour of a branch in some place other than that on which the cheque has been drawn.

The *German Government* suggests modifying paragraph 4 in order that the consequences should be the same for the person who puts his signature on the back of a cheque payable to bearer as for the endorser.

The *Spanish Government* asks that paragraph 3 should be replaced by the third paragraph of Article 12 of the Uniform Law for Bills of Exchange adopted under the Geneva Convention.

ARTICLE 10.

The provisions of Articles 12 to 17 of the draft Regulation on bills of exchange and promissory notes (which relate to endorsement) shall apply to cheques, except so far as they have reference to acceptance.

No observations.

GUARANTEE AND PAYMENT.

ARTICLE 11.

A cheque cannot be accepted. A statement of acceptance on a cheque is deemed to be unwritten.

Nevertheless, the power of allowing the acceptance or certification or visa of a cheque is reserved to the Contracting States, which may regulate its effect.

Note. — The word "certification" has been substituted for the word "certificat" in the French as being clearer.

The *British* Government notes that the acceptance or certification or visa of a cheque exists in practice only in a very special case.

The *Latvian* Government has no objection to allowing the acceptance or certification or visa of a cheque.

Austria and *Hungary* are opposed to allowing the acceptance or certification or visa of a cheque.

The *Italian* Government would accept the first paragraph of Article 11. It would also be prepared to allow certification or visa, on condition that the relevant provisions are co-ordinated with the principles allowed in the matter of cover.

The *Polish* Government, although Polish law contains no provision relating to the acceptance of cheques, would be prepared to discuss the possibility of recognising the principle under the uniform law.

The *Scandinavian States* and *Finland* are of opinion that the Uniform Law should provide for the possibility of allowing the acceptance or visa of a cheque subject to the condition that a cheque which has been accepted or certified or *visé* cannot be countermanded before the expiry of the time-limit for presentation.

ARTICLE 12.

Payment of a cheque may be guaranteed by an "aval".

This guarantee is given by a third person (other than the drawee), or even by a person whose signature is on the cheque.

The provisions of Articles 30 and 31 of the draft Regulation on bills of exchange and promissory notes which relate to "avals" shall apply to cheques.

In order to obviate the contradiction between paragraph 3 of Article 12 and paragraph 4 of Article 9, the *Yugoslav* Government proposes to insert as second sentence of the third paragraph of Article 12 the following text:

"The provisions of Article 31, paragraph 3, apply only to a cheque for a specified person or to order."

ARTICLE 13.

A cheque is payable at sight. *Any contrary stipulation is deemed to be unwritten.*

Note. — Article 13 of the Hague Resolutions (paragraph 2) reads as follows: "An instrument containing any other time of payment is invalid as a cheque". In order to render the instrument as effective as possible the experts prefer the expression: "Any contrary stipulation is deemed to be unwritten". This is the wording proposed by the I.C.C.

The *Yugoslav* Government proposes that the second sentence of the article should be replaced by the following sentence:

"An instrument containing any other time of payment is invalid as a cheque."

ARTICLE 14.

A cheque must be presented for payment within the time fixed by the law of the place of payment.

This time shall be eight days at least.

The Contracting States may increase *this time or fix several times to apply respectively to cheques drawn in a country on that country or cheques drawn in one country on another country.*

Presentment of a cheque at a clearing-house is equivalent to presentment for payment.

The Contracting States may specify the institutions which are to be deemed to be clearing-houses.

Note. — The minimum time within which a cheque must be presented for payment has been reduced from ten to eight days.

It has been thought desirable to state in the third paragraph that the time for presentment may be increased in view of the distance between different places.

In *Great Britain*, the law does not fix any time-limit for the presentation of cheques. It simply specifies that presentation must take place within a reasonable period.

The *German* Government would accept the text proposed by the experts if it should prove difficult to reach agreement as regards the establishment of a uniform time-limit for the presentation of cheques issued and payable in the same country.

The *Scandinavian States* and *Finland* suggest that the Uniform Law should fix a single time-limit in all the contracting countries as regards cheques issued and payable in the country. They also recommend that a uniform time-limit should be adopted for the presentation of cheques issued in one country and payable in another; they recommend, at all events, that, in the latter case, certain rules should be fixed from which the various national laws might not depart.

The *Polish* Government is anxious that the Uniform Law should embody the provisions of the Polish law.

The *Austrian* Government distinguishes between three categories of cheques:

1. Those issued and payable in the country;
2. Those issued in the country but payable in another European country;
3. Those issued in the country and payable in a non-European country.

According to the view of the Austrian Government, there should be a special period to be accepted uniformly for each of these categories by the contracting countries. If this is not possible, there should be a minimum compulsory period to be fixed for each of the three categories.

The *Hungarian* Government urges that fixed compulsory periods should be established. It considers eight days sufficient for cheques issued and payable in the same country. For other cheques it thinks a longer period would be desirable, and it proposes the period of one year, with the option for the drawee of shortening such period.

The *Czechoslovak* Government is anxious for the adoption of uniform periods. It would agree to eight days for cheques issued and payable in the same country. Cheques payable in a country other than the country of issue would have to be sent to the place of payment within five days of their issue and presented for payment within five days of their arrival at the place of payment; in any case, however, presentation should take place within three months of issue.

The *Spanish* Government asks that the question should be settled as follows: (1) for a cheque issued and payable in the same place the period should be five days; (2) for a cheque issued in a place other than the place of payment but in the same country the period should be eight days; (3) a cheque issued abroad should be presented for payment within a period of twelve days after its arrival in the country in which it is to be paid.

The *Latvian* Government considers, that every country should have the right to determine the periods, at its discretion. It urges, however, the establishment of a uniform period for cheques payable abroad.

ARTICLE 15.

When a cheque is drawn between two places having different calendars, the day of issue shall be referred to the corresponding day of the calendar of the place of payment.

No observations.

ARTICLE 16.

Neither the death of the drawer nor his incapacity arising after the issue of the cheque shall affect the cheque.

The *Scandinavian States* and *Finland* ask that the Uniform Law should contain a stipulation providing that, if the drawee has paid the cheque after the drawer has been declared bankrupt when the drawee has had knowledge, or should have had knowledge, of that fact, the said drawee may not claim on the bankrupt estate for the amount of the cheque.

The *Austrian* Government also expressed the opinion that the Uniform Law should contain a provision to this effect.

The *Polish* Government pointed out that the national law prohibits the drawee from paying the cheque if the said drawee has been notified of the drawer's bankruptcy.

RECOMMENDATION.

The experts recommend:

- (1) That the various countries should enact such penal or civil measures as are best calculated to prevent the issue of a cheque without funds to meet it;
- (2) That States should take steps under their civil law to prevent the countermanding of the order contained in the cheque during the time for presentment;

(3) *That the possibility of countermanding the order contained in the cheque after the expiration of the time presenting it should be determined by the laws of each State.*

Note. — Recommendations (2) and (3) above replace Article 17 of the Hague Resolutions, which the experts were unable to adopt unanimously on account of the divergence of the various laws concerning the possibility of countermanding the order in the cheque and determining cases in which payment of cheques may be opposed.

Article 17 of the Hague Resolutions has therefore been omitted and has been replaced by the above Recommendations.

The observations submitted by Governments concerning recommendation No. (1) above are shown after the text of Article 3.

As regards recommendations Nos. (2) and (3) :

In the opinion of the *British, Hungarian and Siamese* Governments, the text of the Uniform Law should provide for the right to countermand the cheque at any time before or after the expiry of the time for presentation.

The *Scandinavian States* and *Finland* urge that provision should be made for the possibility of countermanding the cheque, but recommend that the principle of penal sanctions should be embodied in the Uniform Law in the event of countermanding with the deliberate effect of injuring the bearer.

The *Italian* Government considers that the cheque should be countermandable only in the case of theft or alteration, which would constitute a bar to payment.

The *German* and *Polish* Governments ask for the insertion of a provision prohibiting the countermanding of the cheque during the period for presentation.

The *German, Austrian* and *Yugoslav* Governments urge the acceptance of the principle that the drawee shall be authorised to pay the cheque even after the expiration of the time for presentation if the cheque has not been countermanded by the drawer (Article 17, paragraph 3 of the Hague Resolutions).

The *Polish, Czechoslovak* and *Yugoslav* Governments ask that the countermanding of the cheque shall be valid if the drawer of a cheque payable to a specific person or "to order" sends the cheque immediately to the drawee with an order to pay the amount to the party concerned, on condition that the drawee receives notice of the countermand before he has paid the cheque.

The *Polish* and *Czechoslovak* Governments also demand that the Uniform Law shall contain a stipulation providing that the countermand shall be valid even before the expiration of the time for presentation, provided that the cheque has not been presented during such time.

The *Belgian* and *Austrian* Governments ask for the insertion in the Uniform Law of paragraphs 1 and 2 of Article 17 of the Hague Resolutions.

In the *Latvian* Government's view, no countermand should be authorised before the expiration of the time for presentation.

ARTICLE 17 (Article 18 of the Hague Resolutions).

The drawee who pays a cheque may require that it shall be given up to him receipted by the holder.

The holder may *not* refuse a partial payment.

In case of part payment the drawee may require that the part payment shall be specified on the cheque and that a receipt shall be given to him.

Note. — In paragraph 2 the holder is denied the right of refusing partial payment, though Article 18 of the Hague Resolutions allows him to do so. In making it obligatory for the holder to accept part payment, the experts had in mind both the interests of the persons liable and the provision of Article 38 of the draft Regulation on bills of exchange, which makes it obligatory for the holder to accept part payment. The solution adopted by the experts is similar to that adopted by the I.C.C.

The Governments of *Latvia, Czechoslovakia* and *Yugoslavia* approve the principle embodied in paragraph 2 of Article 17, whereby the *holder* is bound to accept partial payment. They point out that this solution is in conformity with the solution adopted in Article 39, paragraph 2, of the Uniform Law for Bills of Exchange.

The *Austrian* and *Hungarian* Governments, on the contrary, advocate the re-establishment of the principle laid down in Article 18, paragraph 2, of the Hague Resolutions.

The questionnaire to which the Governments represented at the Conference on bills of exchange were asked to reply contained the following question:

"Can the *drawee* refuse partial payment of a cheque which is not fully covered.?"

Germany, the Scandinavian States and *Finland, Poland* and *Siam* have replied that, in their opinion, there is no need to consider this question in the Uniform Law for Cheques, as the relations between the drawer and drawee will remain outside these rules.

The *German* Government adds, however, that, in its view, the Uniform Law should not in any case contain a rule whereby the drawee would be obliged to make partial payment when the funds that he holds are insufficient.

The *Austrian, British, Italian* and *Latvian* Governments consider that the drawee should be authorised to refuse partial payment.

The *Belgian* and *Hungarian* Governments expressed the opposite view.

ARTICLE 18 (Article 19 of the Hague Resolutions).

A cheque crossed on its face with two parallel lines can only be paid to a banker.

The crossing may be by the drawer or by a holder.

The crossing may be general or special.

The crossing is general if there be only the two lines, or the word "banker" or some equivalent, or the words "and Co"; the crossing is special if the name of a banker is written between the lines.

A general crossing may be converted into a special crossing. But a special crossing cannot be converted into a general crossing.

A specially crossed cheque can only be paid to the banker named. But if he does not cash it himself he may substitute another banker.

A crossing and the banker's name may not be effaced. *Any effacement shall be deemed not to have taken place.*

The drawee who pays a crossed cheque to any person other than a banker if the cheque is crossed generally, or to any person other than the banker named, if the cheque is crossed specially, is responsible for the injury, if any, caused thereby, but the damages shall not exceed the amount of the cheque.

Any State may, in so far as crossed cheques are concerned, assimilate professions analogous to that of a banker to the profession of banker.

Note. — The object of the addition in the seventh paragraph is to make it quite clear that an effacement of the crossing does not affect the validity of the cheque: the latter continues to exist as a crossed cheque.

The last paragraph was added to meet the wishes of countries which permit the drawing of a crossed cheque on an "agent de change" for instance, or a "caisse publique" (see above, Article 5).

RECOMMENDATION.

The experts recommend that countries which at present employ only the cheque "payable in account" ("nur zur Verrechnung") should abandon this method in favour of the crossed cheque.

Note. — As a result of this Recommendation, Article 20 of the Hague Resolutions disappears. The article in questions laid down rules for cheques "payable in account".

Two questions concerning this article were put to the Governments under No. 7.

They were asked in the first their opinion of the effects of a crossing.

All the Governments, except the Scandinavian States and Finland, approve the principle embodied in Article 18 of the experts' draft. The latter States are of opinion that the text should specify that a crossed cheque: (1) can only be paid to a banker or to a client of the latter; (2) that it can only be collected by a banker on account of his client or of another banker; (3) that the cheque can only be bought by the banker from his own client or from another banker; (4) that the responsibility mentioned in paragraph 8 shall extend to the banker who has bought or collected a crossed cheque contrary to the above provisions.

The Governments were asked, secondly, whether it would be possible to combine in a single type the crossed cheque and the cheque only for collection (nur zur Verrechnung).

The *Scandinavian States* and *Finland* consider that it would be possible to adopt a single system.

The *Belgian* Government is of opinion that the cheque for collection would do double duty with the crossed cheque and that it should still be abolished.

Italy holds the opposite view and considers that a special provision should be inserted in the Uniform Law in regard to cheques for collection.

This solution is also recommended by *Germany, Austria, Hungary, Latvia, Poland, Czechoslovakia* and *Yugoslavia*.

All these States are in favour of maintaining side by side the system of crossed cheques and cheques only for collection, and accordingly urge the re-establishment of Article 20 of the Resolutions of the Hague Conference.

Germany suggests that the Uniform Law should confer on the Contracting States the right to prohibit the use of crossed cheques (last paragraph of Article 19 of the Hague Resolutions).

Austria suggests that the Uniform Law should contain a provision laying down that crossed cheques should, in countries where only the cheque for collection is used, have the same effect as the latter.

The *British* Government noted that a crossed cheque may bear the words "not negotiable", the effect of this, however, being not to prohibit the transmission of the cheque, but simply to subject the person taking it to any exceptions that may have applied to his predecessors.

Further, although this practice is not embodied in the law, it has become the custom in England to add on the crossed cheque the words "account payee". If the banker collects such a cheque on account of a person other than the party named in the cheque, he forfeits the protection accorded by the law to a banker who in good faith pays a crossed cheque in conformity with the crossing.

The *British* Government is of opinion that the results which it is sought to obtain by means of cheques for collection might be obtained by the use of crossed cheques bearing the words "account payee".

A similar proposal was made by the *Siamese* Government.

ARTICLE 19 (Article 21 of the Hague Resolutions).

The question whether the holder of a cheque has special rights on the fund against which it is drawn, and the right to maintain an action against the drawee is left outside the present Regulation.

Of the States which replied to the questionnaire, *Italy* alone asks that the Uniform Law should provide *ipso facto* for the transfer of funds to the bearer, which would give the latter the right of direct action against the drawee.

The *Italian* Government is not in favour of regulating the action for inequitable gain in the Uniform Law and points out, moreover, that this question was left outside the Uniform Law for Bills of Exchange.

All the other Governments which replied to the questionnaire are of opinion that the issue of the cheque should give the bearer no right of ownership over the fund.

All agree, further, that the holder should have the right of action in virtue of inequitable gain against the endorser or drawer when the drawer's right of recourse has lapsed owing to non-protest or the effects of limitation of action.

The *Belgian* and *Spanish* Governments propose that the holder should be given a lien on the cover which would have the effect of excluding the cover from the sum to be distributed between the creditors of the drawer in the event of the latter's bankruptcy, but for cases in which agreement cannot be reached on the solutions thus recommended, the *Belgian* Government is of opinion that the regulation of the subject should be referred to the national legislation.

CONCERNING THE RIGHT OF RECOURSE.

ARTICLE 20 (Article 22 of the Hague Resolutions).

The holder may exercise his right of recourse against the endorsers, the drawer, and the other parties liable, if the cheque, on presentment in due time, is not paid.

Presentment and non-payment must be authenticated:

- (1) By a formal instrument (protest for non-payment); or
- (2) By a declaration by the drawee, dated and written on the cheque, and specifying the day of presentment; or
- (3) By a declaration dated from a clearing-house specifying that the cheque has been forwarded in due time, and has not been paid.

Any State may:

(a) Lay down that the right of recourse against the endorsers, the drawer and the other parties liable shall be lost unless the cheque is protested.

(b) Decide what will be, in default of the protest or equivalent instruments drawn up within the time for presentment, the nature of the rights of the holder against the drawer who has not provided funds or who has countermanded the order in the cheque.

Note. — It was recognised in the case of bills of exchange that, if payment was refused, a protest drawn up in proper time was necessary for the maintenance of the rights of recourse. The above article, however, lays down that, in the case of cheques, in order to simplify the formalities of protest and avoid the attendant expenditure, a protest proper may be replaced by a declaration made by the drawee in writing on the cheque or by a declaration dated from a clearing-house.

This solution is at variance with the practice obtaining in many countries, in which cheques must be protested like bills of exchange in general. The experts therefore felt that it would be desirable, by adding a new paragraph (a) to Article 20, to allow countries, if they desire to do so, to maintain their present rules regarding protest.

They have also, under (b), made it possible for the various countries themselves to decide the nature of the rights, failing protest or equivalent instruments drawn up within the time for presentment, which the holder should be given against the drawer who has not provided funds or who has countermanded the order in the cheque, since this question is connected with that of the rights of the holder of a cheque on the fund against which it is drawn (see Article 19 *supra*).

In the questionnaire addressed to Governments, two questions relating to the substance of this article (questions Nos. 8 and 19) were raised.

The first concerns the *liability of the drawer*.

The *Belgian*, *Italian* and *Latvian* Governments are of opinion that the drawer's liability should persist in every case.

The *Belgian* Government, however, is of opinion that the drawer should be released from liability if the cover has disappeared through circumstances for which he is not responsible.

This opinion is shared by the *Spanish* Government, which urges that the drawer should be released from liability when the cover has disappeared through the action of the drawee after the expiry of the time-limit for presentation.

In the view of *Germany*, the *Scandinavian States* and *Finland* and *Poland*, the drawer should not be liable, by virtue of the Exchange Law, when the cheque has not been presented within the time-limit for presentation.

The *Hungarian* and *Yugoslav* Governments propose that the question should be settled in the same way as for bills of exchange, by a provision similar to that contained in Article 15 of Annex II of the Geneva Convention relating to bills of exchange.

The *Siamese* Government suggests that the drawer's liability should be limited to three years, dating from the expiration of the time-limit for presentation.

The second question relates to the *responsibility of the endorser*.

The *Belgian* and *Italian* Governments urge that no release should be admitted for the endorser.

Great Britain, Spain, the Scandinavian States and Finland, Hungary, Poland and Czechoslovakia consider, on the contrary, that the endorser should be allowed to release himself by means of a specific statement.

The *German* Government is of the same opinion, but they think that the endorser should, in any case, be released, if the cheque has not been presented in due time.

The *Hungarian* and *Latvian* Governments ask that the question of the liability of endorsers should be regulated in accordance with the formula adopted in Article 15 of Annex II of the Geneva Convention relating to bills of exchange.

The *German* Government proposes that the word "dated" be deleted in paragraph 2 (2) and (3) of Article 20, and that Article 21 be drafted to read as follows:

"Protest for default of payment must be made before the expiration of the time of presentation."

This in order not to make the validity of declarations replacing the protest conditional on their being made within the time for presentment.

The *German* and *Austrian* Governments suggest the deletion of paragraph 3 (a) of Article 20, a proposal already made by the *Scandinavian States and Finland* in 1929 (see Preparatory Document, page 78).

ARTICLE 21 (Article 23 of the Hague Resolutions).

Protest for default of payment, or the equivalent declarations of authentication mentioned in Article 20, must be made before the expiration of the time for presentment, either on the actual day of presentment if it is made on the last day of the time for presentment, or on one of the two business days following, provided that these days still fall within the period for presentment.

Note. — These changes have been made in Article 23 of the Hague Resolutions because: (1) in Article 20 above other forms of authentication have been assimilated to protest; and (2) in order to make it clear that, for the cheque as well as for the bill of exchange, the holder has no longer one day but two business days after payment has been refused in order to draw up the protest; while (3) the protest must in every case be drawn up within the time for presentment.

The *German* Government proposes that this article be drafted as follows:

"Protest for default of payment must be made before the expiration of the time of presentation."

(See observations under Article 20.)

The *Scandinavian States and Finland* have made a proposal similar to that of the *German* Government, but without demanding the deletion of the words "or the equivalent declarations of authentication mentioned in Article 20".

The *Austrian* and *Czechoslovak* Governments, on the contrary, consider that the rule for Article 21 should be that a protest for default of payment must be made at latest on the first business day following presentment.

ARTICLE 22.

The holder may claim from the party against whom he exercises his right of recourse:

- (1) The amount of the cheque;
- (2) Interest at the rate of 6 per cent as from the date of presentment;
- (3) The costs of the protest or equivalent declaration, of the notices served by the holder on previous endorsers and on the drawer, and other expenses.

The *Austrian* and *Yugoslav* Governments ask that a reservation similar to that contained in Article 14 of Annex II of the Geneva Convention on bills of exchange may be introduced into the future Convention on cheques.

ARTICLE 23 (Article 24 of the Hague Resolutions).

Except so far as regards acceptance, the provisions of the draft Regulation on bills of exchange and promissory notes relating to the right of recourse contained in Articles 44 to 46, 48 and 49 apply to cheques.

The *German* Government and the Governments of the *Scandinavian States and Finland* point out that, in the list of the articles of the Uniform Law for Bills of Exchange, which, under the terms of the Convention, should also apply to cheques, Article 54 dealing with cases of *vis major* is not included.

They ask that the provisions of Article 54 should also be mentioned in the list given in Article 23.

PARTS OF A SET.

ARTICLE 24 (Article 26 of the Hague Resolutions).

Except in the case of bearer cheques, every cheque drawn in one State and payable in another State, or in an oversea dominion of the same State, may be in a set of identical parts. *When a cheque is in a set of parts, each part must be numbered and must indicate in the body of the instrument the number of parts issued, failing which each part is deemed to be a separate cheque.*

Note. — The wording of the Hague article has been altered in order to bring it into line with Article 63 of the draft Regulation on bills of exchange.

ARTICLE 25 (Article 27 of the Hague Resolutions).

Payment made on one part operates as a discharge, even though there is no stipulation that this payment shall discharge the other parts.

An endorser who has transferred parts to different persons and endorsers subsequent to him are liable on all the parts bearing their signatures, which have not been restored.

The *German, Austrian and Yugoslav* Governments ask that the text of Article 24 of the experts' draft may be replaced by the text of Article 26 of the Resolutions of the Hague Conference.

The *Belgian*¹, *Latvian* and *Hungarian*¹ Governments and the Governments of the *Scandinavian States* and *Siam* ask that the provisions of Articles 64 to 66 of the Uniform Law for Bills of Exchange adopted under the Geneva Convention may be made applicable to cheques drawn in a set of identical parts.

The *Czechoslovak* Government declares itself opposed in principle to the possibility of issuing a cheque in a set of identical parts. If, however, the Conference does not share this view, the *Czechoslovak* Government considers that the provisions of the Uniform Law for Cheques should be the same as those adopted on this point under the Geneva Convention for bills of exchange.

According to the *Spanish* law, the drawer cannot issue duplicate parts of a cheque until he has cancelled the original on the expiry of the time-limits for presentation and with the consent of the drawee.

Without prejudice to this rule, the *Spanish* Government urges the application to cheques of Article 64 of the Uniform Law of the Geneva Convention for bills of exchange, provided, however, that paragraph 3 of that article applies only to cheques issued in one country and payable in another or in another part of the country of issue situated overseas.

In the event of certification being allowed, the *Spanish* Government asks that a provision should be inserted in Article 25 laying down that the drawee is liable on each accepted part which he has not recovered (Article 65, Uniform Law of the Geneva Convention).

FORGERIES AND ALTERATIONS.

ARTICLE 26 (Article 28 of the Hague Resolutions).

Except so far as regards acceptance, the provisions of Articles 68 and 69 of the draft Regulation on bills of exchange and promissory notes relating to forgery and alterations shall apply to cheques.

Note. — The words in italics have been added because, under Article 11 above, paragraph (1), cheques cannot be accepted.

The *Siamese* Government proposes the insertion in the Uniform Law of a rule in force in *Siam*, whereby a cheque bearing a forged signature of the drawer is null, but the forged signature of an endorser does not invalidate the signature of the other signatories of the cheque.

The *Siamese* Government proposes that the rules adopted by the Geneva Convention in Article 69 of the Uniform Law for Bills of Exchange should be made applicable to the alteration of cheques.

The Governments of *Germany, Belgium, Spain, the Scandinavian States* and *Finland* are of opinion that the question of risk should be left outside the Uniform Law.

In the view of the *Austrian, Hungarian, Italian, Polish, Czechoslovak* and *Yugoslav* Governments, the drawee should be made responsible for the consequences of forgery or alterations unless forgery or neglect is attributable to the drawer. This is also the system in force in *Great Britain*.

The *Italian* Government extends the liability of the drawer to cover cases in which the latter's employees have been guilty of fault or negligence.

The *Austrian, Hungarian, Czechoslovak* and *Yugoslav* Governments limit the liability of the drawer to the case in which he has himself been guilty of forgery or in which negligence can be

¹ The *Belgian* and *Hungarian* Governments having declared themselves opposed to the institution of the acceptance of cheques, the reference by those Governments to Article 66 of the Uniform Law would appear to be due to an error, unless it is to be interpreted as the expression of a desire on the part of those Governments that the rules laid down in the said article should apply to cheques if the Conference adopts in principle the possibility of providing for acceptance for cheques.

attributed to him personally, and to the case in which the forgery, alteration or negligence is attributable to his employees responsible for the dealing with cheques.

The *Latvian* Government recommends a system which is the very opposite—namely, that the drawer should be deemed primarily responsible for the consequences of forgery or alterations, the drawee being required to bear the consequences only if he has been guilty of gross negligence in accepting a document which has been altered or bears a forged signature.

PRESCRIPTION.

ARTICLE 27 (Article 29 of the Hague Resolutions).

Actions of recourse by the holder against the endorsers and drawer are barred after six months from the time fixed for presentment.

Actions of recourse by endorsers against previous endorsers and the drawer are barred after six months from the day on which the endorser paid the cheque or the day on which he was sued thereon.

Note. — If the drawer has not made cover or has withdrawn it, each State is, according to Article 20 (b) above, allowed to decide the nature of the holder's right against the drawer: hence they are also entitled to determine the period of prescription applicable to these rights.

ARTICLE 28.

The provisions of Article 71 of the Regulation on bills of exchange shall apply to cheques.

Note. — The above is the last paragraph of Article 29 of the Hague Resolutions, given as a separate article for the sake of clearness.

The *Italian* Government is of opinion that the time-limits laid down in Article 27 should be shortened and urges that the system of limitation of actions should be replaced by extinctive prescriptions.

The *Belgian* Government would like the time-limit fixed in paragraph 1 of Article 27 to run from the moment of the issue of the cheque.

The *Scandinavian States* and *Finland* accept the provisions of Articles 27 and 28 of the experts' draft, but suggest that the period of limitation for the holder's actions of recourse should begin to run as from the date of protest.

The *Siamese* Government is prepared to accept Articles 27 and 28 of the experts' draft. It would prefer, however, that the periods of limitation should be the same for cheques as for bills of exchange. It would be necessary, in its view, to choose between the time-limit of three years and the time-limit of one year fixed respectively in paragraph 1 and paragraph 2 of Article 70 of the Uniform Law for Bills of Exchange, adopted in the Geneva Convention.

The *Spanish* Government notes that, in *Spain*, actions in the matter of bills of exchange are barred at three years, dating from the due date, whether they have been protested or not and that the same rule applies to cheques.

The *British* Government states that, in Great Britain, actions of recourse against the drawer and endorsers are barred at six years as from the day on which payment is refused.

The *Belgian* Government asks that Article 28 may be replaced by a provision leaving it to the national laws to settle the question of the interruption of the period of limitation.

The *Yugoslav* Government recommends the insertion in the Uniform Law of a provision similar to that embodied in Article 17 of Annex II of the Uniform Law for Bills of Exchange adopted in the Geneva Convention.

GENERAL PROVISIONS.

ARTICLE 29 (Article 30 of the Hague Resolutions).

The general provisions of Articles 72, 73 and 73 (a) of the Regulation on bills of exchange and promissory notes shall apply to cheques.

Note. — Article 31 of the Hague Regulations is included in the draft Convention for the Settlement of the Conflict of Laws (Article 9.)

No observations.

D. SUGGESTIONS CONTAINED IN THE REPLIES OF GOVERNMENTS
CONCERNING TWO QUESTIONS NOT DEALT WITH IN THE DRAFT REGULATIONS
ESTABLISHED BY THE EXPERTS.

(Questions 12 and 14.)

Bills of Exchange stipulating payment by cheque.

The *majority of the Governments* which replied to the questionnaire is of opinion that there is no need to settle this question in the Uniform Law for Cheques, particularly as the use of such instruments is not very widespread.

The *Polish* and *Spanish* Governments seem prepared to accept the French law on this point.

The *British* Government notes that, in England, such instruments are deemed valid, and that, in practice, bankers are prepared to pay them by cheque.

Amortisation.

Of the Governments which replied to the questionnaire, the *Austrian* Government recommends the establishments of international rules governing the question of amortisation.

The *other Governments* are of opinion that this question should be left to the national law.

The *Belgian* and *Spanish* Governments propose that the question should be settled in the manner recommended in the draft convention framed by the experts concerning conflicts of laws (Article 15), omitting, however, any mention of bankruptcy.

E. OBSERVATIONS BY GOVERNMENTS ON THE EXPERTS DRAFT
RELATING TO CONFLICTS OF LAWS.

Articles 3, 4 and 6.

The *Austrian* and *Spanish* Governments suggest that the form of Articles 3, 4 and 6 of the draft should be the same as that of Articles 2, 3 and 4 of the Geneva Convention for the settlement of conflicts of laws in connection with bills of exchange and promissory notes.

Article 7.

The *Spanish* Government proposes that this Article be replaced by Article 6 of the aforesaid Convention.

Article 10.

The *Austrian* Government proposes that this provision be deleted.

PART II.

QUESTIONNAIRE ADDRESSED TO GOVERNMENTS BY CIRCULAR LETTER OF THE SECRETARY-GENERAL OF THE LEAGUE OF NATIONS No. 134, DATED JUNE 21ST, 1930, IN EXECUTION OF RECOMMENDATION No. V OF THE FINAL ACT OF THE INTERNATIONAL CONFERENCE FOR THE UNIFICATION OF THE LAWS RELATING TO BILLS OF EXCHANGE, PROMISSORY NOTES AND CHEQUES.

1. Is it desirable to prohibit the drawing of cheques on persons who do not carry on the profession of banking ?
 2. Must the drawer have funds in the hands of the drawee, and at what moment, at the time of presentation or at the time of payment ?
 3. " Guthabenklausel " (compulsory mention of cover in the cheque).
 4. Must a cheque always be payable on demand ?
 5. How must the time-limits for presentation be fixed ?
 6. Must the drawer be given the right to object to payment of the cheque (withdrawal) and how far ?
 7. What are the effects of a crossing ? Would it not be possible to combine in a single type the crossed cheque and the cheque only for collection (nur zur Verrechnung) in use by certain countries ?
 8. Is the drawer liable even if the cheque has not been presented within the fixed period of time ?
 9. What are the effects of the transfer of cover to the holder ?—Action for inequitable gain ?
 10. Upon whom do the risks of forgery and alteration fall ?
 11. Can the drawee refuse partial payment of a cheque when there are not sufficient funds to meet it ?
 12. Is it not desirable to prescribe special rules to meet the case in which an instrument which otherwise satisfies all the conditions required for the validity of a bill of exchange stipulates that it is payable not in money, but by a cheque, especially by a cheque drawn on a bank abroad ? If so, what rules should be prescribed ?
 13. A type-written cheque.
 14. Loss or theft of a cheque (amortisation procedure).
 15. Conflicts between transmission clauses.
 16. Domiciled cheque.
 17. Duplicates (parts of a set).
 18. Limitation of actions.
 19. Release of the endorser from his liability.
 20. Consequences ensuing from post-dated cheques.
 21. Acceptation, certification and visa.
-

REPLIES FROM GOVERNMENTS.

1. Italy.

[Translation.]

In Italy, the cheque is governed by the provisions of Articles 339 to 344 of the Commercial Code (see, for example, Draft Commercial Code, Articles 630 to 655 and Article 930); there are, in addition, several special provisions governing certain institutions which, although in some respects similar to cheques, come under special legal regulations and cannot therefore be included in the general regulations on cheques.

Question 1.

Yes.

Question 2.

The drawer should have funds in the hands of the drawee at the time of issue; it is, of course, understood that, in the case of this, as of the following questions, any penal provisions must be reserved for the national legislation.

Question 3.

This institution is unknown in Italian practice.

Question 4.

Yes.

Question 5.

The time-limits for presentation must be expressly fixed, due regard being had to the distance between the place of issue and the place of payment (see, for example, Draft Commercial Code, Article 649, paragraph 1).

Question 6.

No. In principle, the drawer cannot countermand a cheque, but he can stop payment in the case of theft or alteration of the instrument.

Question 7.

A crossed cheque can only be paid to a banker in the case of a general crossing, and to the banker named in the cheque in the case of a special crossing.

In Italian practice, the cheque only for collection is unknown, and it would seem difficult to bring such a cheque under the same rules as a crossed cheque. Suitable provisions, however, might be laid down for the cheque only for collection.

Question 8.

Yes.

Question 9.

Transfer of cover to the holder should *ipso facto* be operative. Cover existing at the time of the drawer's bankruptcy is applied to payment *pro rata* of *bona fide* holders of cheques issued before the bankruptcy was declared. It would seem inexpedient to regulate in this Convention the right of action for inequitable gain (*action d'enrichissement*) seeing that the question has not been settled in the Convention on Bills of Exchange.

Question 10.

A drawee paying a cheque the amount of which has been altered, or on which the drawer's signature has been forged, cannot apply to the drawer for compensation unless the latter has committed forgery, or one of his employees is responsible for the alteration or forgery. Any provision to the contrary should be deemed null and void.

Question 11.

Yes.

Question 12.

It might be well to lay down rules on this point, but there should be previous agreement as to the character to the instrument.

Question 13.

The practice, now common in certain countries, of writing out cheques by mechanical processes cannot be prevented.

Question 14.

It would appear impossible to regulate the problem of amortisation, seeing that, as a result of the discussions on the Convention on Bills of Exchange, the settlement of this question was reserved to national legislation.

Question 15.

If the cheque bears the name of the holder and also the stipulations "To Order" and "To Bearer" the cheque is deemed to be payable to order; if the holder's name is not given, but only the two above-mentioned stipulations, the cheque is deemed to be payable to bearer.

Question 16.

Domiciled cheques are admissible.

Question 17.

Article 24 of the Experts' Draft might be taken as a basis of discussion.

Question 18.

The question whether the time-limits provided in Article 27 of the Experts' Draft should not be shortened, and whether, in view of the rapid circulation of cheques, the practice of extinctive prescription should not be adopted for cheques instead of limitation of actions might with advantage be considered.

Question 19.

The endorser should not be released from his liability.

Question 20.

The provisions of the German Cheque Law of 1930 might be taken as a basis of discussion.

Question 21.

In the present state of legislation it would seem very difficult to agree to acceptance. Generally speaking, certification and visa should be permitted, subject to co-ordination with the principles laid down regarding transfer of cover (9).

2. Belgium.

[*Translation.*]

Question 1.

1. The drawing of cheques on persons who do not carry on the profession of banking should be prohibited.

The practice of drawing only on banks gives greater security to the circulation of cheques. Before opening an account for a customer, and thus permitting him to draw cheques on them, credit institutions make enquiries as to his good character and solvency. The effect is to facilitate the negotiability of instruments the parties to which have been subjected to an investigation as to the financial guarantees they offer.

In addition, no delay or difficulty is experienced in paying the instruments, as banks have always large cash reserves.

2. It should be left to the contracting States to decide what persons should be deemed bankers or be assimilated to bankers.

Owing to the fundamental diversity of practice and legislations in the various countries it would seem difficult to solve the problem of inserting in the Uniform Law a formula specifying what persons are to be deemed bankers that would be easily applicable everywhere.

Question 2.

A. The drawer must have available funds in the hands of the drawee and he must have an authorisation, if only a tacit one, to draw cheques on the latter.

B. The above-mentioned funds should exist at the time of presentation of the instrument.

The possession of available funds does not imply the existence in the hands of the drawee of an amount of money belonging to the drawer; these words are to be understood in a wider sense, and should cover all cases where the drawee may be bound, on any ground whatever, to pay the drawer an amount of money in cash and on demand: cash deposits, liabilities payable on demand, opening of credit, etc.

Question 3.

Compulsory mention of cover in the text of the cheque itself should not be required.

Such mention, which is intended to remind the drawer of the disagreeable consequences that may result from issuing a cheque without cover, would not seem very effective for the purpose mentioned or to present any real advantage. To make it compulsory under pain of nullity would have the disadvantage of detracting from the security of transactions without any adequate compensation.

Question 4.

A cheque must always be payable on demand.

This principle should be brought into line with the practice, which is becoming more and more general, of so-called "notified" cheques—that is, cheques which are only payable after the drawer has previously notified them to the drawee.

This practice, which constitutes a form of control, is particularly justified when a cheque has been issued by a stranger who is unknown to the drawee or when the amount of the cheque is exceptionally large.

The following rules might be applied to these cheques:

(1) The words "notified cheque", or their equivalent, should appear in the body of the cheque itself. This would warn the holder that he could only obtain payment after the drawee had received the drawer's notice.

(2) Receipt of such notice should not have the effect of immobilising in the hands of the banker an amount equal to the cover required for paying the cheque.

Question 5.

The minimum time-limit should be fixed at eight days only, but each contracting State should be entitled to prolong it, especially in the case of international cheques.

Question 6.

The drawer should have the right to countermand a cheque, but only within very narrow limits; the right might only be exercised after the expiration of the time-limit for presentation.

If permission were granted to exercise the right of withdrawal before the expiration of the time-limit, it would seriously prejudice the security of the circulation of negotiable instruments. Any person who receives a cheque in payment must have the same security as a person who is paid in cash. Such security is the essential condition for a wider use of the cheque as a form of payment. By its use, a whole series of payments may be made during the time-limit for presentation. Withdrawal would mean prejudicing all these payments, and making those who made them liable to recourse exercised against them. The circulation of cheques would be hampered, because every holder, fearing withdrawal, would hasten to present the cheque at the earliest possible moment.

The right to object to payment should only be exercised in cases of loss or theft of the instrument.

Accordingly, the solutions contained in Article 17, paragraphs 1 and 2, of the Resolutions of The Hague Conference should be adopted.

The expedient of a mere "recommendation", such as that inserted after Article 16 of the Experts' Draft, should be rejected. Such a recommendation would have little effect, and, in the absence of an imperative regulation in the Uniform Law, the right to countermand would still be regulated by divergent laws. If our concern, therefore, is to ensure greater security for the international circulation of cheques, this is one of the questions which it is highly desirable to solve by rules uniformly adopted by all States.

Question 7.

The effect of crossing a cheque should be to make it payable only to a banker (general crossing) or to a particular banker, if the name of such banker is written between the two lines (special crossing).

The drawee who pays to any person other than a banker or the banker named should be responsible for the injury, if any, caused thereby, but the damages must not exceed the amount of the cheque.

The cheque "payable in account" (*nur zur Verrechnung*) was introduced to serve the same purpose as the crossed cheque; both are intended to prevent a cheque being cashed by an unauthorised person. The cheque "payable in account" is thus another form of the crossed cheque, and, as the latter is the more practical and most widely used form, it alone should be regulated by the Uniform Law.

Question 8.

The drawer should be held liable whether a cheque is presented late or presented in due time. He should only be relieved of this liability where the cover has disappeared through circumstances for which he is not responsible.

Question 9.

The Uniform Law should not give the holder a right *in rem* to the cover, in the sense that he would acquire the title to it and, for that reason, be authorised to take direct proceedings against the drawee.

It would not seem impossible to arrive at a uniform legislation on this point laying down that the title to the covering funds would not be transferred to the holder, but the latter would have a right of action "for inequitable gain" against the drawee.

The question of cover is not the same in the case of cheques as in the case of bills of exchange. The guarantees given to the holder by transfer of the title to the cover, tangible in the case of bills of exchange, seem rather illusory in the case of cheques. Where a cheque has not been paid owing to delay in presentation, or when the beneficiary can no longer exercise his right of recourse because the statute of limitations is already operative, action for inequitable gain against the drawer or endorser safeguards the interests of such a payee as effectively, at any rate, as direct action against

the drawee. The latter in most cases will no longer be in possession of the funds after such a considerable lapse of time, and, in any case, it would be rather difficult to prove that the cover on which the cheque was drawn is still held by him at the moment when the action is taken.

Only in the event, perhaps, of the drawer's insolvency, would a title to the cover give the holder a genuine advantage.

His interests would be adequately safeguarded if the law granted him, not a title to the cover, but a lien on it, preventing its distribution among the creditors.

To summarise, the Uniform Law should not leave the question of the holder's rights to the cover to be decided by national laws, but should give him a lien on such cover and recognise his right of action for inequitable gain for the cheque against the drawer and the endorsers.

Only as a second alternative, and in the event of agreement on the above measures proving impossible, should the regulation of this subject be referred to national legislation.

Question 10.

This question has nothing to do with the law governing cheques, and special provisions on it should not be introduced into the Uniform Law. It is for the court to discover who is to be held responsible in each particular case, due allowance being made for all the factors of the case.

Question 11.

The drawee is bound to pay a cheque up to the amount of the cover.

Question 12.

No special rules should be prescribed on this point, except that a stipulation to the effect that a bill of exchange is to be paid by a cheque should be expressed in explicit terms, leaving no room for doubt.

Question 13.

The fact of a cheque, apart from its signature, being typewritten does not affect its validity in any way.

Question 14.

The steps to be taken in the case of loss or theft of a cheque should be regulated by the law of the country where the cheque is payable.

The word "theft" should be interpreted in its wider meaning and cover all cases in which a cheque has been fraudulently acquired.

This is the solution adopted in the Experts' Draft (Convention on Conflicts of Laws, Article 15) which, however, adds to cases of loss or theft that of the holder's bankruptcy.

No such provision should be made in the present regulations.

Article 9 of the Convention for the Settlement of Certain Conflicts of Laws in connection with Bills of Exchange and Promissory Notes only refers to the measures to be taken in case of loss or theft, and makes no mention of the holder's bankruptcy.

"It was pointed out that the true scope of the phrase 'in case of the holder's bankruptcy' was not sufficiently clear; that international questions relating to bankruptcy were very complicated and difficult to settle; that it was not advisable to adopt incidentally a rule of private international law when this question had already formed the subject of a special Convention drawn up at The Hague." (M. Diena's Report.)

These observations apply with equal force to cheques as to bills of exchange.

Question 15.

If the wording of a cheque is contradictory as regards mode of transfer, the holder of the cheque should be given the greatest latitude compatible with the wording of the cheque.

Instruments are sometimes worded: "Pay to the order of X or to bearer". The holder of a cheque so worded should have the option of choosing whichever form of transfer suits him best.

Question 16.

The Uniform Law should provide that any instrument payable at the domicile of a person not carrying on the profession of banker is invalid as a cheque.

Question 17.

A. Duplicates should only be permitted in the case of cheques issued in one country and payable in another, colonies being assimilated for this purpose to foreign countries.

B. In no case may bearer cheques be issued in duplicates or in sets.

C. Articles 64 to 66 of the Uniform Law on Bills of Exchange should be made applicable to cheques made out in several copies.

Question 18.

Action by the holder against a drawer or endorser should be barred after six months from the date of the issue of the cheque.

Action by an endorser against a drawer or other endorser should be barred after six months from the date on which he paid the cheque or the day on which he was sued thereon.

It is better to take as the beginning of the period of prescription of the holder's action against a drawer or endorser the date of issue rather than the date of expiry of the period for presentation, as it might not be easy for the holder to ascertain the latter date which may differ in the various countries.

The causes for interruption and suspension of prescription should continue to be governed by national legislation.

Question 19.

An endorser may in no case be released from his liability, and any clause to this effect should be deemed to be unwritten.

Question 20.

The post-dating of a cheque changes one of its specific characteristics, that of an instrument of prompt payment, and identifies it more nearly with a bill of exchange or promissory note.

A uniform law, therefore, should contain a provision to the effect that a post-dated cheque is not valid as a cheque.

Question 21.

A. Cheques, being instruments of payment and not of credit, should not be liable to acceptance.

B. Contracting States should be entitled to regulate the certification or visa of cheques.

3. Sweden.

[*Translation.*]

PRELIMINARY OBSERVATIONS.

The Swedish Government agrees with the International Chamber of Commerce that it would be extremely desirable, for the sake of clearness, to give the Uniform Law on cheques a different wording from that used in the law on bills of exchange. The method adopted in the Experts' Draft, of referring in a great many cases to the provisions of the Uniform Law on Bills of Exchange, does not seem very desirable, if only for the reason that the articles of this Law will not be numbered in the same way in all the countries adopting it. The Polish Cheque Law of 1924 furnishes a useful example of the advantages of the system here advocated.

In order that the next Geneva Conference should finally succeed in solving the problem of a uniform law on cheques, it would seem essential to prepare, well before the meeting, a basis of discussion in the form of completely drafted texts, as was done when the Conference had to deal with the laws regarding bills of exchange. The Swedish Government, accordingly, ventures to suggest that the President of the Conference, in virtue of the powers which it was proposed to confer on him at the last session (see Final Act, V.III), should ask the Secretary-General of the League of Nations, as soon as the opinions of the various Governments have been obtained and classified by the Secretariat, to convene a meeting of experts whose duty it would be to draw up a complete draft international law on cheques. This draft would form the basis of the proceedings of the Conference at its next session, and obviously could include alternative solutions wherever there appeared to be widely divergent opinions on important questions. It would seem advisable to delegate this task to the Drafting Committee already appointed by the Conference. The Swedish Government, of course, fully realises that the adoption of such a procedure might result in somewhat delaying the meeting of the Conference, but it is equally convinced that it would enable the object in view to be achieved more surely, more rapidly and more economically than if the meeting were to be held without a draft complete in every detail.

REPLIES TO THE QUESTIONNAIRE.

Question 1.

The Swedish Government believes that the Uniform Law on Cheques should enact that a cheque may only be drawn on a banker. The contracting States should, however, be free to assimilate to bankers persons or institutions which, though they cannot be classed as banks, nevertheless carry on a business which involves the receipt and administration of money on current accounts.

This restriction on the use of cheques is specially required in order to ensure public confidence in cheques which have now become a general instrument of international payment.

There would appear to be no real need to authorise the issue of cheques on any persons other than bankers or institutions which can be assimilated to banks. It is true that, among the traders of certain countries, there is a tendency to substitute cheques on a debtor for drafts, with the object of avoiding the comparatively high stamp duties, but this should clearly not be allowed to affect the framing of the legislation here contemplated. On the contrary, if positive and helpful results are to be achieved, it would seem necessary that the decisions to be taken should not be influenced by any secondary considerations.

In support of the restriction above advocated, attention might also be drawn to the importance of adopting regulations which not do differ too widely from British and United States of America legislation, under which cheques can only be drawn on bankers.

Even if the number of drawees is restricted as the Swedish Government suggests, special provisions will probably also be necessary for the protection of those who are *bona fide* holders of a cheque which is invalid as having been drawn on a person other than a banker. For this purpose it might perhaps be well to recognise that the holder of such a document has a right of recourse under the law on negotiable instruments, unless it is proved that, when accepting the cheque, the holder knew or should have known that it was invalid.

A recommendation should also be added to the Convention advocating the adoption of provisions penalising the issue of cheques on a person other than a banker.

Question 2.

The Swedish Government is definitely of opinion that the drawer should, when issuing a cheque, have funds in the hands of the drawee. This principle, which is, unfortunately, too often disregarded, is absolutely indispensable if the cheque is to fulfil its increasingly important function of an instrument of payment taking the place of cash transfers.

The problem of the legal penalty that should be inflicted for issuing a cheque without cover is a very different one. As explicitly stated in both drafts—that of 1912 and that of the Experts' Committee—the penalty should not consist in making the cheque null and void, and yet it does not seem possible to provide for any other monetary penalty. It is accordingly outside the purview of international legislation on the cheque to decide what should be done to establish the principle of cover in advance. The object in view seems rather to call for the adoption by the various States of penal provisions, not only against acts of fraud but also against negligence.

The Swedish Government, therefore, considers that a Uniform Law should not contain the provisions laid down in Article 3, paragraph 1 of the draft of the Experts' Committee. It would be preferable for the Conference, when adopting the Law, to recommend that Governments of signatory States, on putting the Law into operation, should enact penal provisions of the above nature. The Uniform Law should mention the existence of such provisions.

Question 3.

Mention of the existence of cover, compulsory under some legislations, is probably not essential in a Uniform Law. It seems rather inexpedient, and, in the case of holders of cheques who have no legal knowledge, hardly equitable, to make the validity of a cheque conditional on the insertion of such a clause in the body of the document. Nor could such a clause be depended upon to prevent the issue of cheques without cover. Experience shows that such stipulations gradually lose all their efficacy. Much better results, we think, would be achieved by the solution proposed in Question 2 of making offences of this kind criminal.

Question 4.

In the opinion of the Swedish Government, the projected legislation should be based on the principle that a cheque is an instrument of payment and not of credit. This limitation of the cheque's function does not appear to have been consistently observed everywhere. As stated in the reply to Question 1, the stamp duty laws of certain countries seem to have given rise to the temptation to use cheques also as instruments of credit. An international regulation, however, should stipulate that a cheque is always payable on demand, and any reservation to the contrary is void. Accordingly, if, as frequently happens, a cheque bears a date later than that of its issue, payment may be demanded immediately (*cf.*, the German Law of March 28th, 1930).

Question 5.

It is desirable, as regards the time-limits for presentation of cheques drawn between different countries, that the Uniform Law should contain provisions which cannot be departed from by the signatory States. Such provisions should either fix definite time-limits varying according to the different zones, or lay down a relation between the time-limit for presentation and the normal period required for transmission by post of a cheque from the place of issue to the place of payment.

In the case of cheques issued and payable in one and the same country, the Uniform Law should fix a definite time-limit for presentation—for example, eight days; but it would also be well in an annex to the future Convention on a Uniform Law to give each of the signatory States the right to enact provisions in derogation of this rule, provided always that the time-limit for presenting any kind of cheque should not be less than that laid down in the Uniform Law.

Question 6.

Opinions vary as to the juridical nature of cheques. Some believe that the issue of a cheque legally implies transfer of the covering funds to the legitimate holder of the instrument, and consequently that a drawer cannot object to the drawee paying the cheque, or, in other words, that he has no power to countermand it. Others hold, on the contrary, that a cheque should be considered as an order to the drawee, and giving the holder no right whatever in respect of the drawee. According to this theory, the drawee is bound to comply with any countermand of the order addressed to him by the drawer. There is yet a third theory, according to which the drawer has admittedly no right during the time for presentation to object to the payment of the cheque by the drawee, but if he expresses a wish to countermand it, the drawee may, at his option, either make the payment or hold the amount of the cheque.

In favour of the principle of the irrevocability of cheques, it may of course be urged that the value of the instrument as a form of payment is enhanced. The contrary argument, however, holds equally good—*i.e.*, that a logical application of the above principle also leads, in practice, to difficulties which are particularly obvious in the case where several holders of cheques have claims on cover which is not sufficient to satisfy them all. To preclude all possibility of countermanding a cheque would also, in certain cases, be an injustice to a drawer—for instance, who, immediately after issuing a cheque, finds that he has been defrauded. On the other hand, to give the drawee full freedom to comply with, or to ignore a countermand, at his option, would not furnish real security either to the drawee or to the holder. It is, furthermore, rather difficult to understand the real grounds for the rule here referred to, as the drawee has absolutely no cognisance of the relations between the drawer and the holder of the cheque.

Rules regarding the right of withdrawal should dispose of these legal difficulties, while at the same time safeguarding the interests of the holder. It would accordingly be advisable to give the drawer—or the drawee, as the case may be—unlimited power to countermand a cheque, but, at the same time, to provide for penalties for a drawer countermanding a cheque when he knew, or should have known, that in doing so he was injuring the holder of the instrument.

The Swedish Government therefore thinks that the Uniform Law should, as far as countermanding cheques is concerned, provide that improper withdrawal, under the circumstances above referred to, will involve penal measures.

Question 7.

The object of crossing a cheque is to prevent its use by an unauthorised holder, a crossed cheque being, in practice, only payable to a holder through the bank whose customer he actually is, and where, presumably, his character is known. It might be provided that crossing should have the effect of prohibiting the drawee from paying the cheque to a person other than a customer or another bank, and also of preventing bankers from cashing a cheque for account of a person other than the above-mentioned or buying it from such a person. The bank's customer should be deemed to be only a person actually in business relations with the bank concerned and, accordingly, having an account to which the amount of the cheque will be paid.

These are the principles which it was probably intended to embody in the draft prepared by the Experts' Committee. If this is so, the wording of the provisions in the draft would seem to call for certain observations. The provision that the cheque shall only be payable to a banker might be misinterpreted to mean that the paying banker would have no right to pay a cheque to his own client except through another bank, while the latter could encash the amount of the cheque, although the holder was not his customer. According to the draft only, the banker who is drawn is liable to pay damages for failing to observe the order implied in the crossing, although the same liability should clearly be incurred by the banker who, by cashing or purchasing a crossed cheque contrary to the clause in question, causes injury to a signatory of the cheque.

The argument that the text of the draft of the Committee of Experts corresponds approximately to the laws in force in certain countries would hardly seem to justify its acceptance as it stands; experience shows that the provisions of these laws give rise to a state of uncertainty and are a source of misunderstanding. Furthermore, the question now at issue is to submit the system of crossed cheques for adoption by a number of countries which have no practical experience of it.

As regards the provisions of certain laws regarding cheques "payable in account" (*nur zur Verrechnung*), these also seem equally open to the objection that the prohibition to pay in cash only applies to the drawee, and not to bankers cashing or purchasing the cheques.

The Swedish Government feels it should recommend the adoption, in the case of crossed cheques, of provisions clearly defining the nature of this practice as above indicated. If this is done the provisions in question could be applied also to cheques *nur zur Verrechnung*, which amounts to saying that the two forms of cheques referred to in this question can be reduced to one single type.

Question 8.

In such circumstances, the drawer should not be under an obligation of exchange (see Question 9).

Question 9.

As is clear from its reply to Question 6, the Swedish Government believes that the issue of a cheque should not imply transfer of the right to the covering funds, and that a holder, who does

not receive payment of the cheque from a drawee, should merely have his right of recourse. Should he forfeit this right by letting the time-limit of presentation lapse, or for any other reason, he should be entitled to take a civil action for inequitable gain. In such a case, it is to be assumed that the drawer has made a profit at the holder's expense corresponding to the amount of the cheque. The Swedish Government would be glad to see this solution embodied in the Uniform Law. Should it, however, be impossible to arrive at an agreement on this point, the signatory States should be free as in the case of the Convention providing a Uniform Law for Bills of Exchange, to settle the question themselves in their respective countries.

Question 10.

We think that this question should be omitted from the Uniform Law. Should the latter, nevertheless, have to lay down provisions on the question, the loss should be borne by the drawee who paid the cheque, unless the drawer or another party to the instrument was guilty of negligence. The provision regarding the liability of the drawee should be peremptory.

Question 11.

The replies to Questions 6 and 9 show that, in the opinion of the Swedish Government, the drawee should never be bound, *in respect of the holder*, to make either total or partial payment. The question as to what effect the lack of adequate cover has on any obligation incumbent upon the drawee *in respect of the drawer* is not covered by legislation on cheques.

Question 12.

Provisions of this kind are not in any circumstances covered by legislation on cheques.

Question 13.

Provided that, as is assumed, the question does not refer to the signature, the Swedish Government sees no objections to a cheque being typewritten.

Question 14.

There would seem to be no more chance in the case of cheques, than in that of bills of exchange, of agreement on uniform rules regarding amortisation.

Question 15.

The Swedish Government assumes that this refers to cases where a cheque is made out payable "to X or to bearer," or where it contains other similar incongruous clauses. If this interpretation is correct, it thinks that the solution of the question given in Article 4, paragraph 3, of the Expert Committee's Draft should be adhered to.

Question 16.

There appear to be no adequate reasons for prohibiting the domiciling of cheques.

Question 17.

The Swedish Government thinks that the provisions laid down in Articles 24 and 25 of the Expert Committee's Draft, call for no observation except that these provisions should be adapted to the amendments made by the Conference in the Committee of Experts' Draft regarding the Uniform Law for Bills of Exchange.

Question 18.

The Swedish Government supports the insertion in the Uniform Law of the provisions contained in Articles 27 and 28 of the Experts' Draft, with the reservation that the date on which the time-limit barring the holder's action for recourse starts should be that on which the protest was made.

Question 19.

In accordance with the opinion of the Committee of Experts, the Swedish Government considers that the clause releasing the endorser from liability should be inserted in the indorsement.

Question 20.

The Swedish Government begs to refer to its reply to Question 4 (a post-dated cheque is payable immediately).

Question 21.

Various opinions have been expressed regarding the effects to be attributed to the acceptance of a cheque. The objection to assimilating such acceptance to that of Bills of Exchange is the

risk that a cheque will assume the character of a credit instrument, which is not its natural function; on the other hand, there seems to be no serious objection to a provision making the drawee who signed the acceptance liable under the law on negotiable instruments, during the period of presentation prescribed by the law on cheques. It is, if anything, desirable to adopt some provision under which acceptance would be an effective guarantee to the holder that a cheque presented within the prescribed period will be paid. Any other stipulation made by the drawee in the cheque, likely to give a holder the assurance that it will be paid (certification, visa, etc.) should be assimilated in this respect to acceptance. It is essential not to make any distinction in this respect which might easily be misinterpreted by the public. The effect of acceptance, as of any other similar stipulation, should be to make it impossible to countermand the cheque during the period of presentation.

From the legal standpoint, it should be immaterial whether the stipulation has been inserted on the cheque at the request of the drawer or of a holder. If a distinction must be made between these two cases, the question of the onus of proof would give rise to serious difficulty. There seems to be no adequate reason for enacting, as the law of the United States of America does, that any stipulation made by a holder should relieve the drawer and indorsers from all liability.

The principles above advocated should be endorsed by the Uniform Law. No support can be lent to the proposal put forward by the Committee of Experts that the signatory States should have the option of enacting other provisions.

REMARKS CONCERNING CERTAIN ARTICLES IN THE EXPERTS' DRAFT.

Article 7. — Among the articles of the Law on Bills of Exchange to which this draft refers, no mention is made of Article 5, which lays down provisions regarding the effects of a stipulation as to interest inserted in a bill of exchange. The Committee of Experts seems to have thought that a clause of this kind in a cheque should be invalid. It would, nevertheless, seem advisable to insert in the Uniform Law an express provision to this effect.

Article 16. — Under the terms of this article, neither the death of the drawer nor his incapacity arising after the issue of the cheque shall affect the cheque. A cognate question is that of the effect of the drawer's bankruptcy, a question which was not touched upon by the Committee of Experts who obviously thought that it should be left to the decision of each of the contracting States. The Swedish Government considers this rather unsatisfactory and believes that a provision should be inserted in the Uniform Law to the effect that, when the drawer is declared bankrupt and the drawee, even though he was or should have been aware of the fact, has made the payment, he should not be entitled to credit his own account with the amount out of the bankrupt estate.

Article 21. — In order to make the Uniform Law on cheques correspond with that of Bills of Exchange in the matter of the protest on sight bills, the Swedish Government proposes that the last part of this article, from the words "either on the actual day", should be deleted.

Article 23. — Article 54 (Article 53 of the Experts' Draft concerning the Regulation on Bills of Exchange) does not appear among the articles of the Uniform Law on Bills of Exchange to which reference is made in this article. It seems, however, that the provisions of this article regarding the effects of *force majeure* should also apply to cheques.

Article 25. — If the Swedish Government's suggestion regarding the effects of acceptance, certification, etc., is adopted, it will be necessary to insert in the Uniform Law a provision similar to that in Article 66 of the Uniform Law on Bills of Exchange regarding the obligatory character for the drawee of any copy on which he has made a stipulation of the above kind.

[*Translation.*]

OBSERVATIONS ON THE QUESTIONNAIRE DRAFTED BY THE CONFERENCE.

Question 1.

The drawing of cheques on persons who do not carry on the profession of banking should be prohibited. Such a limitation is desirable, as it helps to concentrate the accounting operations in fewer hands and economise the use of currency; it also makes the circulation of cheques more reliable, and allows the taker of the cheque to place more confidence in the drawer.

It seems, however, inadvisable to make the validity of a cheque dependent on the observance of the above provision. In the interests of security of circulation, a cheque should be considered valid even when it is drawn on a person other than a banker.

We therefore suggest deleting the second paragraph of Article 5 of the legal experts' text and stating that the validity of a cheque is not affected if it is drawn on a person other than a banker.

Question 2.

As the function of the cheque is to act as a means of payment, the drawer should be required to have funds in the hands of the drawee. "Funds" should be given the widest possible interpretation. It should, for example, include a credit granted to the drawer.

The rule should be that funds are available at the time of presentation.

The validity of the cheque, however, should not be affected by absence of funds at the decisive moment. This is essential to the security of cheque circulation, and a provision to this effect should be laid down as the experts propose

Question 3.

By "Guthabenklausel" is meant the order in a cheque to pay the amount specified for account of the drawer ("Please pay against this cheque to the debit of my account . . . Reichsmarks to Monsieur X"). The "Guthabenklausel" is merely a stipulation regarding the form of the cheque. The real reason for requiring it is to remind the drawer that a cheque should only be issued if there are funds available; the drawer must ask himself whether such funds are available. Consequently, the "Guthabenklausel" is a guarantee against the making out of uncovered cheques. Experience has shown that the "Guthabenklausel" required by German law is very useful. Large and important business circles consider that it should be retained.

Question 4.

A cheque should always be payable on demand. The German delegation approves the experts' proposal that any contrary stipulation is deemed to be unwritten (Article 13).

Question 5.

If cheques are to form a reliable means of payment, definite time-limits of presentation are necessary. In Germany, the ten days' time-limit has proved satisfactory. Should it be impossible to provide a uniform period of presentation for national cheques, a minimum time-limit might well be fixed, and that of eight days proposed by the experts should not be shortened.

Owing to varying distances, it would seem rather difficult to establish uniform time-limits of presentation for international cheques, even in Europe. If unification proves impossible, the question should, as hitherto, be left to the various States. An effort should be made to frame regulations which would prevent, so far as the relations between any two States are concerned, the fixing of different periods of presentation according as the cheque is payable in one or the other of these countries.

We endorse the experts' proposal to fix the time-limit for presentation according to the law of the place of payment (Article 14, paragraph 1).

Question 6.

The admissibility of freely countermanding the order contained in a cheque at any moment and the entire prohibition of countermanding seem to be equally impracticable. If a cheque could be freely countermanded at any moment, even during the time for presentation, the security of cheque circulation would be impaired. On the other hand, it seems inconsistent with the character of the cheque as a substitute for cash payment calling for prompt redemption to prohibit entirely the countermanding of cheques. The best arrangement would be, not to admit countermanding of a cheque during the period for presentation, but to permit it after the expiry of such period. This would enable a holder to depend on the cheque not being countermanded during a certain period; it would simplify banking procedure, inasmuch as the bank drawn upon would, during the time for presentation, not need to investigate whether the order in the cheque had been countermanded, and it would also induce the holder to present the cheque promptly owing to the possibility of its being countermanded after expiry of the time-limit of presentation.

There would appear to be no point in, or even necessity for, making exceptions to the rule that a cheque may not be countermanded during the time for presentation, as, for instance, in the case of a cheque being lost or coming fraudulently into the possession of a third party. Otherwise, the advantages of the principle just laid down above would, to a great extent, be lost, and the obligations of the banks to investigate the validity of cheques would be increased. Moreover, the fact that the order contained in the cheque cannot be countermanded during the period of presentation simply means that the drawee is not *obliged* during that period to comply with the new order given by the drawer; if a cheque is revoked, the drawee will not be liable to the drawer if it is paid on presentation within the proper time. He may, on the other hand, comply with the order for countermanding during the period of presentation.

• Instead, therefore, of the Recommendations (2) and (3) made in Article 16, the following provisions might be inserted:

“ The countermanding of the order contained in the cheque shall only take effect after the expiry of the time for presentation.

“ Should the order contained in the cheque not be countermanded, the drawee retains the right to pay even if the time for presentation has expired.”

Question 7.

It would seem inexpedient to combine in a single type the crossed cheque and the so-called cheque for collection (Verrechnungsscheck). Such unification would impair the special features and advantages which distinguish each of these two kinds of cheques from the other kind, and from the ordinary cheque. Moreover, business people are accustomed to these cheques in their present form and a combination of the two types would lead to uncertainty and, consequently, to practical difficulties. For these reasons the experts' recommendation that countries which at present employ the “ cheque for collection ” should abandon it in favour of the crossed cheque cannot be endorsed. For payment purposes in Germany, an instrument so widely used and so satisfactory as the cheque for collection is indispensable.

Accordingly, Article 20 of the Hague resolutions should be inserted in the Uniform Law on Cheques, together with a reservation corresponding to the last paragraph of Article 19 of these resolutions.

Question 8.

It does not seem practicable to declare the drawer, or the other guarantors, liable if a cheque has not been duly presented at the proper time. The risk of losing his right of recourse if the cheque is not presented at the proper time will usually induce the holder to present it within the right period. This will accelerate the circulation of cheques, an effect which accords with their function as instruments of payment.

An action for inequitable gain should, however, be allowed where a drawer whose liability has lapsed owing to the cheque not being presented at the proper time is enriched to the detriment of the holder.

Question 9.

Under German law, the holder of a cheque has no rights against the drawee. There is no direct legal relation between a holder and a drawee. German cheque law does not recognise the idea of “ cover ”.

As regards actions by the holder for inequitable gain, see remarks under 8 and 18.

Question 10.

In German law, the loss arising from payment of a forged cheque falls, in principle, on the payee, who can only make the drawer responsible if payment of the forged cheque was due to some fault on the part of the drawer. The drawee may, by an agreement, transfer the risk to the drawer. Such agreements are only valid within the general limits of the law. They are null and void where a drawee endeavours, by their means and in a manner contrary to public policy, to make the drawer liable for the consequences of a violation of contractual agreements.

In Germany, where these principles are an integral part of ordinary law, no need is felt for such legislative regulation, all the more so as this is not so much a question of cheque law as of the immediate relations between the drawee and the drawer.

Question 11.

The question whether a drawee can refuse partial payment of a cheque when there are not sufficient funds to meet it is only of importance as regards the relations between the drawee and the drawer, not as regards the relations between the drawee and the holder, since the latter has no direct right of action against the drawee. Whether the drawee has, as against the drawer, the right to refuse partial payment of a cheque when there are not sufficient funds to meet it, depends on the terms of the cheque contract between the drawer and the drawee. This contract is subject to ordinary law, and it seems undesirable to interfere in any way with these contractual relations by means of a provision in the Cheque Law. We would, in any case, deprecate the adoption of a rule by which a drawee would be forced to make partial payment of a cheque which is not entirely covered; such an obligation would not be in conformity with business interests, which are opposed to the issue of uncovered or insufficiently covered cheques.

Question 12.

The stipulation in a bill of exchange that it is payable, not in money, but by a cheque, especially by a cheque drawn on a bank abroad, should be interpreted to mean that the drawee need not, but may, pay the bill of exchange by cheque. Such an interpretation would dispose of objections as to the legal validity of such a bill of exchange. At any rate, even though a German court ruled in one particular case that such a bill of exchange was not valid, no need has been felt for enacting special provisions for such instruments.

Question 13.

It should be permissible to make out cheques mechanically—namely, by printing or

type-writing. The filling up of the amount of a cheque by means of special machine writing is, indeed, one of the best safeguards against forgery. Signatures, of course, should be handwritten.

Question 14.

In Germany, cheques which have been lost, stolen, mislaid or destroyed in any other way are invalidated by a procedure of advertisement (*Aufgebotsverfahren*). Unification of the procedure for invalidating cheques is undesirable, as this would encroach too much on the legal systems, and particularly the law of procedure of the various countries.

Question 15.

In case of conflicts between transmission clauses, the clause which provides for the widest possibility of transmission should prevail; this encourages the largest possible negotiability of the cheque.

Question 16.

Under the German system of payments, no need has been felt to issue domiciled cheques. Seeing that the Uniform Law on Bills of Exchange has abandoned the idea of the domiciled bill of exchange, the idea of the domiciled cheque should similarly not be introduced into the Law on Cheques.

Question 17.

As regards the issue of identical parts of a cheque, Article 26 of the Hague resolutions might well be restored. It facilitates the use of duplicates and accords with the Geneva resolutions concerning the law on bills of exchange (Uniform Law on Bills of Exchange, Article 64, paragraph 2).

Question 18.

We approve of the rules regarding limitation of actions being unified and have no objections to the experts' proposals.

An action for inequitable gain should be allowed against a drawer who has been freed from his liability by lapse of time and who is enriched to the detriment of the holder.

Question 19.

It should, as in the Uniform Law on Bills of Exchange, be possible to release an endorser from his liability.

Question 20.

The issue of post-dated cheques is extremely undesirable, enabling, as it does, the drawer to defer payment at the expense of the payee. As such cheques are very widely used for small payments, artisans, small shopkeepers and the like are often affected. Furthermore, the issue of post-dated cheques amounts to an abuse, as it encourages the drawing of cheques which are not covered; the drawer, in most cases has insufficient funds to his credit at the moment of issue, but takes it for granted that he will obtain cover by the date specified in the cheque. In addition, banks are seriously inconvenienced by the necessity of examining whether a cheque is post-dated or not.

The German Law of March 28th, 1930 (*Reichsgesetzblatt*, 1930, I, page 107), is directed against this abuse of post-dated cheques. Under its provisions, a cheque presented for payment to the drawee before the date of issue named therein is deemed to be drawn on the day of presentation. Post-dating is thus legally inoperative. The holder may present the cheque for payment before the specified date of issue, and the drawer of such a post-dated cheque must reckon with this earlier presentation. There is thus no inducement to issue post-dated cheques.

The above law has been unanimously approved by all the parties concerned. The solution could hardly be more simple and reduces itself to the formula: any dating in advance is deemed to be unwritten. Provisions in virtue of which certain stipulations are deemed to be unwritten are found in bill of exchange and cheque laws. Reference might be made, *inter alia*, to the experts' draft, Article 6, second sentence; Article 11, paragraph 1, second sentence; Article 13, second sentence. The latter provision, in particular, to the effect that a cheque is payable at sight and that any contrary stipulation is deemed to be unwritten, is very closely connected with the non-recognition of post-dating. Whether a future date of payment is given in a cheque or the time of issue is post-dated, comes to one and the same thing, since in both cases the cheque can only be presented for payment at the future date specified. The German solution could thus be easily embodied in the experts' draft, and it might be advisable to insert it in the Uniform Law on Cheques, adopting the following provision:

" A cheque which is presented for payment to the drawee before the date indicated on it as the date of issue shall be deemed to be drawn on the day of presentation. Presentation may only be authenticated by means of the declarations referred to in Article 20, paragraph 2, or by protest.

" In the case of post-dated cheques, the presentation of which before the date specified therein is authenticated in accordance with Article 20, paragraph 2, no fresh presentation

- is required. The provisions, however, regarding the period of presentation, so far as concerns the computing of the time within which notice must be given (Article 23) and the beginning of the period of prescription (Article 27), shall also apply to such cheques; the date of presentation and not the date of issue shall be taken as the date from which the period begins to run."

Question 21.

Under German law, a cheque cannot be accepted. Any mention of acceptance endorsed on the cheque is deemed to be unwritten.

Cheques drawn on the Reichsbank may be certified by the latter. This certification implies that the Reichsbank undertakes to pay the holder and also assumes liability to the drawer and the endorsers for payment. This liability lapses if the cheque is not presented for payment within the period of presentation. The Reichsbank is only authorised to certify cheques after it has received the cover for them in advance.

So far as German trade feels in need of such certified cheques, this need can be met by cheques drawn on the Reichsbank. Business men and economists have expressed themselves as opposed to the Reichsbank's privilege to certify cheques being generally extended.

We approve of the solution proposed by the experts in Article 11 of the draft.

II.

FURTHER OBSERVATIONS REGARDING THE EXPERTS' DRAFT.

Question 1.

The wording of Article 9, paragraph 4, is open to certain objections. If any person, except the drawee, who puts his signature on the back of a cheque payable to bearer is guarantor (by "aval") for the drawer, he will be unable to exercise his right of recourse against any of his predecessors except the drawer. Such a right of recourse, however, should be granted. If, when transferring a bearer cheque, the transferrer puts his signature on the back of the cheque, this is, in practice, tantamount to endorsing an order-cheque, and it seems unfair to deny the right of recourse against previous endorsers to the person concerned in one case and to grant it in the other case. It should, therefore, be stipulated that anyone who puts his signature on the back of a cheque payable to bearer guarantees as an endorser.

Question 2.

The permission given in Article 20 (a) to any State to lay down that the right of recourse shall be lost unless the cheque is protested might well be dispensed with as serving no useful purpose.

Question 3.

We approve of the provision in Article 21 to the effect that protest must be made before the expiration of the time for presentation, but the further stipulation that the protest should be made on one of the two business days following the day of presentation seems open to certain objections. The holder should, we think, be free to make the protest on any day he likes during the period of presentation, even after the two business days following the date of presentation. It should even be permissible to protest the cheque on the day of presentation. Otherwise, in cases where it is clear that a cheque will not be paid, it would have to be presented twice—once for payment and again for the protest, thus needlessly complicating cheque procedure. Moreover, evidence as to the day on which a cheque was presented for payment may present difficulties; these difficulties are specially serious, in that such evidence is necessary to determine whether the cheque has been protested at the proper time and whether, consequently, a right of recourse is admissible.

In our opinion, it is inadvisable to insist on the condition that the declaration by the drawee and the declaration from a clearing-house (Article 20, paragraph 2, (2) and (3)) must be made during the period of presentation. As compared with the Hague draft, and also with existing German law, this stipulation not only makes it difficult to safeguard the holder's rights but also jeopardises such rights, without there being any strong reasons therefor. Similarly, the suggestion that these declarations should be dated might be dispensed with.

In Article 20, paragraph 2 (1) and (2), the word "dated" might accordingly be deleted, and Article 21 drafted to read as follows:

"Protest for default of payment must be made before the expiration of the time for presentation."

Question 4.

As in the case of bills of exchange, provision might be made for the case of a cheque not being presented or a protest drawn up at the proper time owing to *force majeure*.

III.

OBSERVATIONS REGARDING THE FORM OF THE CONVENTION TO BE CONCLUDED.

The Convention to be concluded on cheques might take the same form as that of the Convention, signed on June 7th, 1930, providing a Uniform Law for Bills of Exchange and Promissory Notes. The Uniform Law on Cheques to be drawn up by the new Conference would then form Annex I to a Convention containing merely the usual protocol clauses. A second annex would include the provisions which call for supplementary legislation on the part of the contracting

States, or confer on these the right to derogate from certain provisions of the Uniform Law on Cheques. A clearer distinction than that made in Annex II to the Convention, providing a Uniform Law for Bills of Exchange, should be made between these two kinds of reservations.

6. Norway.

The text of the Norwegian answer is identical with that sent by the Swedish Government and reproduced above.

7. Poland.

[*Translation.*]

Question 1.

As the funds available for covering the issue of cheques by private individuals are, under modern economic conditions, concentrated in banks, it is inadvisable to recognise other cheques than those drawn on banks.

Question 2.

To obviate the issue of a cheque without funds being available for payment, cover in advance—*i.e.*, at the moment of issue of the cheque—should be stipulated.

Question 3.

To require mention of cover as a condition for the validity of a cheque is a superfluous and useless formality.

Question 4.

In view of the function of the cheque as an instrument of payment, it should always be payable on demand.

Question 5.

The following are the time-limits for presentation under Polish law:

- (a) For cheques issued and payable in Poland, 10 days if payable at the place of issue, and 20 days if payable at another place than that of issue;
- (b) For cheques issued in a foreign country and payable in Poland, 30 days, and, if issued outside Europe, 60 days from the date of issue.

The above time-limits have, in practice, proved adequate.

Question 6.

Under Polish law, a cheque may only be countermanded by the drawer after the expiry of the time-limits for presentation. A countermand which has been made before this time is only valid, if the cheque has not been presented for payment within the time-limit. In this case, the countermand begins to be valid only after the expiry of the time-limits for presentation. A cheque payable to a given person or his order might also be countermanded when the cheque is sent direct by the drawer to the drawee—as it is especially usual when post cheques are in question—so long as it has not been handed over to the payee. Polish law further prohibits the drawee to pay a cheque when he has been notified of the drawer's bankruptcy or of the opening of amortisation procedure for the cancelling of a lost or stolen cheque.

Question 7.

The main object, though it is not wholly achieved, of the *crossed cheque* and the *cheque for collection* is to lessen the risk of the cheque being lost or stolen. The cheque for collection has, perhaps, an advantage over the crossed cheque in that it excludes payment in cash, the settlement taking place by means of a transfer. Polish law only deals with cheques for collection. As both these cheques serve similar purposes and are, furthermore, based on a usage of long standing, it might perhaps be possible to recognise both of them.

Question 8.

The drawer should only be held liable if the cheque has been presented within the time-limit of presentation and the other formalities properly complied with. This question is closely connected with that dealt with in the next reply.

Question 9.

Following the example of the Convention providing a Uniform Law for Bills of Exchange and Promissory Notes, the question of cover should not be regulated internationally, as there is at present no possibility of reconciling the two systems current in national legislation, namely, that which admits the beneficiary's title to the cover and that which only regulates the action for inequitable gain.

Question 10.

As Polish cheque law does not expressly deal with this question, it is governed by the general rules of civil legislation. Under these rules, a drawer is liable only if he was at fault. Otherwise, the drawee is liable for the loss resulting from payment of a cheque which has been found to be forged or altered. This solution is all the more to be commended, since the drawee is, from the economic standpoint, the stronger party.

Question 11.

This question is connected with the question of principle referred to above under 9. Under the systems of law which do not recognise the right of the beneficiary to the cover—the principle adopted in Polish law—the beneficiary has no direct right as against the drawee, even where the drawer has supplied funds, and the drawee is only liable to the drawer in accordance with the contract concluded between them.

Question 12.

As the question does not arise in Poland, no regulations have been made regarding it. Nevertheless, a reservation might be made that the States interested in the matter should settle the question in a way similar to that laid down in the French Law of August 28th, 1924.

Question 13.

As far as Polish law is concerned, there is no objection to a typewritten cheque.

Question 14.

Polish law on this point contains special provisions similar to those applicable to bills of exchange and promissory notes. As this is a question which can only be settled on the lines of the procedure in force in the various countries and as these reveal considerable divergencies, uniform regulation would appear rather difficult to achieve. It would, therefore, be preferable to follow the example of the Convention providing a Uniform Law for Bills of Exchange and Promissory Notes and leave this question to national law.

Question 15.

A cheque may be drawn in the name of a person, to order or to bearer. A cheque in favour of a specific individual and containing in addition the words "to Bearer" should be deemed payable to bearer.

Question 16.

There is no reason why a cheque should not be domiciled, provided, however, that it is domiciled with a bank.

Question 17.

Polish law allows a cheque to be duplicated only if it is not to bearer and is payable abroad

Question 18.

The holder's rights of recourse against the indorsers and the drawer are barred six months from the end of the time-limit of presentation, and, in the case of indorsers' rights of

recourse *inter se* and against the drawer, six months from the day when the indorser paid the cheque or from the day when he himself was sued.

Question 19.

There is no reason why this should be prohibited.

Question 20.

The only consequences ensuing from a post-dated cheque under Polish law are those of a fiscal nature, such a cheque being considered as a bill of exchange.

Question 21.

The existing law in Poland does not recognise the acceptance of a cheque, but the Polish delegation would be prepared to discuss the point, if the recognition of acceptance would be likely to popularise cheques by increasing the security of payees.

8. Finland.

The text of the Finnish answer is identical with that sent by the Swedish Government and reproduced above.

9. Austria.

I. DRAFT UNIFORM LAW ON CHEQUES.

[*Translation.*]

The following observations are based on information received from business men in reply to the questionnaire drawn up by the International Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques in preparation for the Conference on cheques which it is proposed to hold in January 1931 (see Final Act of June 7th, 1930; document C.346.M.142.1930.II).

As this document is not merely a reply to the questionnaire, but also contains observations on other provisions in the draft, the replies to the different questions are arranged, not in the order of the questionnaire, but of the various articles in the Geneva draft.

Wherever reference is made hereinafter to "Geneva drafts", this means the two drafts prepared by the League of Nations' experts for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques, and contained on pages 73 to 83 of document C.234.M.83.1929.II, while the expression "Hague draft" should be taken to mean the resolutions adopted by the second Hague Conference of 1912 (see pages 46 to 49 of the above-mentioned League document). Under "Geneva Uniform Law on Bills of Exchange and Promissory Notes" is meant Annex I to the draft Convention providing a Uniform Law for Bills of Exchange and Promissory Notes, drawn up at the Geneva Conference of June 7th, 1930 (document C.346.M.142.1930.II).

Ad Article 1.

In (2) the word "*ordre*" in the French text should be replaced by "*mandat*" (see Geneva Uniform Law on Bills of Exchange and Promissory Notes, Article 1). Similarly, taking the same instrument as an example, in (5) the date should come first and the place of issue second.

As regards compulsory mention of cover (Question 3, *Guthabenklausel*), see remarks *ad* Article 3, and as regards the effect of post-dated cheques (question 20), see remarks *ad* Article 13.

Question 13 of the Questionnaire might well be dealt with in connection with Article 1. There is no objection to making out cheques on a typewriter. The question, however, as to how abuses might be obviated by regulating the manufacture of cheque forms and the manner of filling them up is not covered by cheque law. The International Chamber of Commerce has already made various attempts to lay down international rules on this point. When feasible proposals have been made, they might be embodied in a *special* Convention dealing with the elements of security in connection with cheques.

Ad Article 2.

In accordance with Article 2, paragraph 2, of the Geneva draft, the place specified beside the name of the drawee is, in default of special mention, deemed to be the place of payment and, at

the same time, the residence of the drawee. Paragraph 3 stipulates that a cheque which does not mention the place of payment is deemed to be payable *at the place of its issue*. In the view of business circles concerned, the provisions of paragraph 3 do not meet the requirements of economic life. Paragraph 3, accordingly, should be deleted, and a provision substituted to the effect that, if the place of payment is not stated, a cheque is deemed to be payable at the place where the institution firm drawn upon has its head office (*Cf.* Austrian Cheque Law, section 4, paragraph 3).

Ad Article 3.

The Austrian Cheque Law deals with the question of the need for funds to cover a cheque, in the first place, in section 2, paragraph 1, (5), where it is emphasised that one of the essential characteristics of a cheque is "the order of the drawer to the drawee to pay a determinate sum of money out of the funds standing to the drawer's credit" (so-called *Guthabenklausel*— "Compulsory mention of cover"). The Austrian Law gives no definition of "cover". Section 23 of the Austrian Cheque Law expressly prohibits and attaches penalties (3 per cent of the uncovered amount of the cheque) to the issue of uncovered cheques or cheques with insufficient cover.

The regulation contained in the Geneva draft, which corresponds in its main points with the resolutions adopted at The Hague, should be maintained. The question as to when the funds should be available is answered by a reference to the rule under which a cheque is payable at sight (Geneva draft, Article 13); the drawer, accordingly, need only make sure that, at the moment of presentation, he has sufficient funds with the drawee to pay the cheque.

As regards compulsory mention of cover (question 3, *Guthabenklausel*), we have already stated above that under the Austrian Cheque Law, mention of cover is an essential condition for the validity of a cheque. The advantage of this stipulation is that mention of the need for cover in the body of the cheque serves as a constant reminder of the primary function of the cheque—namely, that of a payment order *backed by funds*, and warns the drawer of the undesirable consequences of issuing cheques without cover. At the same time, compulsory mention of cover strengthens—as pointed out in the detailed explanation attached to the Austrian Cheque Law—the drawer's obligation to the drawee, since the issue of an uncovered cheque, in which cover is stipulated, is tantamount to a deliberately false promise on the part of the drawer; taken along with the payment or service which the holder has made or rendered in return for the cheque, this may be of importance from the point of view of criminal law.

Ad Article 5.

Under section 1 of the Austrian Cheque Law, cheques may only be drawn on the post office savings bank, on public banks and on other institutions whose statutes authorise them to accept money for the account of others, and also on all business firms registered at the commercial court and professionally engaged in banking. There is nothing to prevent a cheque being drawn on institutions and firms other than those just mentioned; such procedure does not of itself invalidate the cheque, but an instrument of this kind *is not a cheque* in the legal sense (see Austrian Cheque Law, section 2, paragraph 2).

The question as to the effect of such an instrument depends upon the other provisions of civil and commercial law.

The provisions of the Geneva draft correspond with the Austrian Law and should, in any case, be maintained; they ensure, moreover the necessary flexibility since Article 5, paragraph 2 (*a*) of the Geneva draft very appropriately reserves power to the contracting States to determine the class of persons on whom cheques may be drawn, a right which should be taken advantage of, more particularly as regards the *post office savings banks* and *postal cheque offices* of all countries,

As regards the question whether it is necessary to prohibit the issue of cheques drawn on persons other than those carrying on the profession of banking, it might be pointed out that, during the twenty-five years' existence of the Austrian Cheque Law, no need has been felt for enlarging the class of persons on whom cheques may be drawn. Thus, strict prohibition of the drawing of cheques on persons not carrying on the profession of bankers, as Question 1 suggests, seems unnecessary, since such cheques do not affect the figures of payments to any extent, as they are not considered cheques and therefore do not benefit either by the provisions of the Cheque Law or by the various privileges in respect of duties and taxes. While believing it to be unnecessary, the Austrian Government would not object to such prohibition, however problematic its value would be if unsupported by penal provisions.

The addition made under (*b*) by the experts to the Hague draft of Article 5 (*civil consequences*) should enable the contracting States to settle the question as to the effect of an instrument drawn on a person not carrying on the profession of banking and therefore not to be considered as a cheque. Even without such express authorisation, national law would still be competent to regulate such consequences. In the analogous case of Article 2, paragraph 1, of the Geneva Uniform Law on Bills of Exchange and Promissory Notes, no provision was made for such express authorisation. If this were not agreed to, provision would have to be made for such authorisation in all

recourse *inter se* and against the drawer, six months from the day when the indorser paid the cheque or from the day when he himself was sued.

Question 19.

There is no reason why this should be prohibited.

Question 20.

The only consequences ensuing from a post-dated cheque under Polish law are those of a fiscal nature, such a cheque being considered as a bill of exchange.

Question 21.

The existing law in Poland does not recognise the acceptance of a cheque, but the Polish delegation would be prepared to discuss the point, if the recognition of acceptance would be likely to popularise cheques by increasing the security of payees.

8. Finland.

The text of the Finnish answer is identical with that sent by the Swedish Government and reproduced above.

9. Austria.

I. DRAFT UNIFORM LAW ON CHEQUES.

[*Translation.*]

The following observations are based on information received from business men in reply to the questionnaire drawn up by the International Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques in preparation for the Conference on cheques which it is proposed to hold in January 1931 (see Final Act of June 7th, 1930; document C.346.M.142.1930.II).

As this document is not merely a reply to the questionnaire, but also contains observations on other provisions in the draft, the replies to the different questions are arranged, not in the order of the questionnaire, but of the various articles in the Geneva draft.

Wherever reference is made hereinafter to "Geneva drafts", this means the two drafts prepared by the League of Nations' experts for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques, and contained on pages 73 to 83 of document C.234.M.83.1929.II, while the expression "Hague draft" should be taken to mean the resolutions adopted by the second Hague Conference of 1912 (see pages 46 to 49 of the above-mentioned League document). Under "Geneva Uniform Law on Bills of Exchange and Promissory Notes" is meant Annex I to the draft Convention providing a Uniform Law for Bills of Exchange and Promissory Notes, drawn up at the Geneva Conference of June 7th, 1930 (document C.346.M.142.1930.II).

Ad Article 1.

In (2) the word "*ordre*" in the French text should be replaced by "*mandat*" (see Geneva Uniform Law on Bills of Exchange and Promissory Notes, Article 1). Similarly, taking the same instrument as an example, in (5) the date should come first and the place of issue second.

As regards compulsory mention of cover (Question 3, *Guthabenklausel*), see remarks *ad* Article 3, and as regards the effect of post-dated cheques (question 20), see remarks *ad* Article 13.

Question 13 of the Questionnaire might well be dealt with in connection with Article 1. There is no objection to making out cheques on a typewriter. The question, however, as to how abuses might be obviated by regulating the manufacture of cheque forms and the manner of filling them up is not covered by cheque law. The International Chamber of Commerce has already made various attempts to lay down international rules on this point. When feasible proposals have been made, they might be embodied in a *special* Convention dealing with the elements of security in connection with cheques.

Ad Article 2.

In accordance with Article 2, paragraph 2, of the Geneva draft, the place specified beside the name of the drawee is, in default of special mention, deemed to be the place of payment and, at

the same time, the residence of the drawee. Paragraph 3 stipulates that a cheque which does not mention the place of payment is deemed to be payable *at the place of its issue*. In the view of business circles concerned, the provisions of paragraph 3 do not meet the requirements of economic life. Paragraph 3, accordingly, should be deleted, and a provision substituted to the effect that, if the place of payment is not stated, a cheque is deemed to be payable at the place where the institution firm drawn upon has its head office (*Cf.* Austrian Cheque Law, section 4, paragraph 3).

Ad Article 3.

The Austrian Cheque Law deals with the question of the need for funds to cover a cheque, in the first place, in section 2, paragraph 1, (5), where it is emphasised that one of the essential characteristics of a cheque is "the order of the drawer to the drawee to pay a determinate sum of money out of the funds standing to the drawer's credit" (so-called *Guthabenklausel*—"Compulsory mention of cover"). The Austrian Law gives no definition of "cover". Section 23 of the Austrian Cheque Law expressly prohibits and attaches penalties (3 per cent of the uncovered amount of the cheque) to the issue of uncovered cheques or cheques with insufficient cover.

The regulation contained in the Geneva draft, which corresponds in its main points with the resolutions adopted at The Hague, should be maintained. The question as to when the funds should be available is answered by a reference to the rule under which a cheque is payable at sight (Geneva draft, Article 13); the drawer, accordingly, need only make sure that, at the moment of presentation, he has sufficient funds with the drawee to pay the cheque.

As regards compulsory mention of cover (question 3, *Guthabenklausel*), we have already stated above that under the Austrian Cheque Law, mention of cover is an essential condition for the validity of a cheque. The advantage of this stipulation is that mention of the need for cover in the body of the cheque serves as a constant reminder of the primary function of the cheque—namely, that of a payment order *backed by funds*, and warns the drawer of the undesirable consequences of issuing cheques without cover. At the same time, compulsory mention of cover strengthens—as pointed out in the detailed explanation attached to the Austrian Cheque Law—the drawer's obligation to the drawee, since the issue of an uncovered cheque, in which cover is stipulated, is tantamount to a deliberately false promise on the part of the drawer; taken along with the payment or service which the holder has made or rendered in return for the cheque, this may be of importance from the point of view of criminal law.

Ad Article 5.

Under section 1 of the Austrian Cheque Law, cheques may only be drawn on the post office savings bank, on public banks and on other institutions whose statutes authorise them to accept money for the account of others, and also on all business firms registered at the commercial court and professionally engaged in banking. There is nothing to prevent a cheque being drawn on institutions and firms other than those just mentioned; such procedure does not of itself invalidate the cheque, but an instrument of this kind *is not a cheque* in the legal sense (see Austrian Cheque Law, section 2, paragraph 2).

The question as to the effect of such an instrument depends upon the other provisions of civil and commercial law.

The provisions of the Geneva draft correspond with the Austrian Law and should, in any case, be maintained; they ensure, moreover the necessary flexibility since Article 5, paragraph 2 (a) of the Geneva draft very appropriately reserves power to the contracting States to determine the class of persons on whom cheques may be drawn, a right which should be taken advantage of, more particularly as regards the *post office savings banks* and *postal cheque offices* of all countries,

As regards the question whether it is necessary to prohibit the issue of cheques drawn on persons other than those carrying on the profession of banking, it might be pointed out that, during the twenty-five years' existence of the Austrian Cheque Law, no need has been felt for enlarging the class of persons on whom cheques may be drawn. Thus, strict prohibition of the drawing of cheques on persons not carrying on the profession of bankers, as Question 1 suggests, seems unnecessary, since such cheques do not affect the figures of payments to any extent, as they are not considered cheques and therefore do not benefit either by the provisions of the Cheque Law or by the various privileges in respect of duties and taxes. While believing it to be unnecessary, the Austrian Government would not object to such prohibition, however problematic its value would be if unsupported by penal provisions.

The addition made under (b) by the experts to the Hague draft of Article 5 (*civil consequences*) should enable the contracting States to settle the question as to the effect of an instrument drawn on a person not carrying on the profession of banking and therefore not to be considered as a cheque. Even without such express authorisation, national law would still be competent to regulate such consequences. In the analogous case of Article 2, paragraph 1, of the Geneva Uniform Law on Bills of Exchange and Promissory Notes, no provision was made for such express authorisation. If this were not agreed to, provision would have to be made for such authorisation in all

cases where an instrument is invalid as a cheque in the absence of one of the essential conditions referred to in Article 1.

Ad Article 7.

Although, in the opinion of business people, there is hardly any call for domiciled cheques, the possibility of issuing such cheques should not be *prima facie* excluded. The future development of business technique may, perhaps, result in cheques presented at a branch being verified at the head office by means of phototelegraphy.

Ad Article 11.

In accordance with the conception of cheques adopted in Austrian law, the drawee is not a fresh debtor or a second debtor, but merely an organ of payment. As such he has only to effect payment; he makes no promise. The drawee has to take the debtor's place not as a debtor, but solely for purposes of payment. A person who has no funds out of which to pay a certain amount should not draw a cheque—there are other instruments of payment which will serve his purpose. If acceptance were recognised, it would be possible to disregard the condition that the drawer must have funds at his disposal.

Austrian Cheque Law (Section 8) expressly excludes the acceptance of cheques and considers a statement of acceptance on a cheque as unwritten. The provision of Article 11, paragraph 1, of the Geneva draft corresponds to the Austrian Law and should be maintained. On the other hand, the reference in paragraph 2 to the power reserved to contracting States should, if possible, be omitted.

Moreover, for the reasons given above, certification and visa should not be authorised. They should, in any case, not be operative in cheque law. Apart from the fact that the value of cheques not containing such indications would be diminished if cheques containing them were sanctioned, it has been found that, with the development of the law, the distinction originally made between acceptance and certification—which merely confirms the existence of cover without implying any obligation—has gradually tended to disappear.

Ad Article 12.

In paragraph 3, the reference to Articles 30 and 31, should be altered to Articles 31 and 32 of the Geneva Uniform Law on Bills of Exchange and Promissory Notes.

Ad Article 13.

A cheque is intended to take the place of cash and should, therefore, always be exchangeable for cash. The Austrian Cheque Law (Section 5) embodies this idea when it enacts that a cheque is payable at sight, even if it mentions another or no time of payment. The corresponding provision of the Geneva draft should be maintained.

Question 20, dealing with post-dated cheques, might also be dealt with in connection with Article 13.

Under Austrian law the only disadvantages—and that, solely in the case of cheques payable abroad—resulting from a cheque being post-dated, are of a fiscal character.

Of recent years, the misuse of post-dated cheques has assumed such proportions that frequent demands have been made for remedial legislation. There are, however, industrial and trading circles which affirm that post-dated cheques often serve useful purposes (*e.g.*, when payments have to be made on a specific date at a place other than that in which the debtor resides). It has been objected that the possibility of post-dating cheques facilitates their being improperly used for credit purposes and thus enables them to be given functions which they should not have. Banks, in particular, have called for regulations which would stop the tendency to post-date cheques. It would be sufficient if such a provision enacted, supplementary to Article 13 of the Geneva draft, that a cheque is payable at sight—even before the date of issue indicated thereon. The new Law of 1930, amending the German Law on cheques, contains a similar provision.

Ad Article 14.

It would be better to fix the time-limits for presentation of cheques internationally than to leave this matter to national legislation. A distinction might well be made in this respect between cheques drawn on national, foreign and oversea places. Should it be impossible to lay down uniform time-limits for presentation, the above three categories of cheques, at any rate, might be internationally established and, possibly also, minimum time-limits of presentation laid down for the various groups.

Ad Article 16.

With reference to the wording of Article 16 of the Geneva draft, the question whether "incapacity arising after issue" also includes the drawer's bankruptcy, declared after issue of

the cheque, should be made clear. Austrian Cheque Law (Section 12, paragraph 1) obliges the drawee in such case to refuse payment if he learns that the drawer has been declared bankrupt.

In regard to the countermanding of cheques, the Austrian Government has already stated, in its note of February 9th, 1929, its view that it would be a retrograde step to omit Article 17 of the Hague resolutions to the effect that countermand of the order contained in a cheque shall only take effect after the expiration of the time for presenting it. The doubts expressed on the Hague regulation refer to cases which are decidedly or infrequent occurrence and they should, in any case, give precedence to the argument that, for purposes of legal security, it should be impossible to countermand a cheque. The taker of a cheque should be protected against the possibility of the drawer, who has received value, countermanding the cheque immediately afterwards. In countries where it is customary to consider it impossible to countermand a cheque, this principle could not be departed from without discrediting cheques. The provision of Article 17 of the Hague resolutions should, therefore, be restored.

In any case, it would be advisable to rule, as in section 9, paragraph 7, of the Austrian Cheque Law, that the expiration of the time limit of presentation shall not debar the drawee from paying the cheque, so far as the cheque has not been explicitly countermanded.

Ad Article 17 (Article 18 of the Hague Resolutions).

The provision of paragraph 2, under which the holder may not refuse a partial payment, is certainly in agreement with the regulation concerning bills of exchange made in Article 39 of the Geneva Uniform Law on Bills of Exchange and Promissory Notes. The purpose of the cheque being merely to make payments which have already fallen due in another place, cheques seem to call for treatment different from that given to bills of exchange. Under section 11, paragraph 2, of the Austrian Cheque Law, the holder may refuse a partial payment, although Austrian law contains a contrary provision for bills of exchange.

Article 18, paragraph 2, of the Hague resolutions should be restored.

Austrian Cheque Law does not directly deal with the question whether the *drawee* can refuse partial payment of a cheque when there are not sufficient funds to meet it (Question 11). Under section 23, paragraph 1, of the Austrian Cheque Law, in case of insufficient cover, the drawee may make only partial payment on the cheque but is not *obliged* to do so.

Bankers, however, take the view that, in case of insufficient cover, the drawee should be entitled to refuse *any* payment. Even though he made partial payment, he would have to leave the cheque with the holder, and would thus be unable, in case of need, to prove that the cheque actually came from the drawer. A receipt given by the holder (for the partial payment made) would be of no value to him in the case of fraudulent proceedings on the part of the holder.

Ad Article 18 (Article 19 of the Hague Resolutions).

The crossed cheque is not mentioned in Austrian law. This is due to the fact that people in Austria are not yet so accustomed to leaving accounting operations to bankers as in Anglo-Saxon countries.

Austrian economic requirements, however, do necessitate the *cheque only for collection*, by which cash payment is excluded; for this reason we would be in favour of restoring Article 20 of the Hague resolutions, which corresponds to section 22 of the Austrian Cheque Law. There is hardly likely to be any objection to this, since the last paragraph of that article empowers contracting States to prohibit in their territories the system of cheques only for collection.

It seems hardly possible, in view of their different characters, to combine in a single type crossed cheques and cheques for collection, but it would be feasible to lay down a provision under which crossed cheques should, in countries where the cheque for collection only is used, be treated as such.

Ad Article 19 (Article 21 of the Hague Resolutions).

The issue or transfer of a cheque is not, in Austrian law, tantamount to the simultaneous transfer of cover. Nor has the holder a right to take action against the drawee. Austrian business men are therefore in favour of the provision contained in Article 19 of the Geneva draft (see, as regards bills of exchange, Article 16 of Annex II to the Geneva Convention of June 14th, 1930).

Reference should, moreover, be made to the observation on Article 20 in regard to (Question 8).

Ad Article 20 (Article 22 of the Hague Resolutions).

The right afforded under Article 20 of the Geneva draft to replace a protest by a declaration by the drawee written on the cheque or by a declaration from a clearing-house corresponds to the regulation contained in Article 16 of the Austrian Cheque Law. In view of the desirability of unifying the law on cheques, particularly as regards formal procedure, we support the proposal of the Governments of Denmark, Finland, Norway and Sweden to omit the reservation formulated in the Geneva draft under (a).

Having regard to the additions proposed by the experts to Article 22 of the Hague resolutions, Questions 8 and 19 regarding the liability of the drawer and of endorsers of cheques not presented within the fixed period of time or protested might be dealt with in connection with Article 20.

Section 19 of the Austrian Cheque Law provides that the holder of a cheque, after acquiring a right of recourse in respect of a claim for the settlement of which the cheque was issued or transferred, may, at his option, exercise the right of recourse or, if the cheque is returned, revert to the relations existing between him and the drawer or the endorser immediately preceding the holder, which led to the issue or transfer of the cheque. Unless otherwise agreed, the holder of the cheque may exercise *the latter option, even if presentation and protest have not been duly effected* or if the right of recourse has been lost through lapse of time. The holder, however, must accept deduction of the loss sustained by the drawer in consequence of omission or delay in presenting the cheque. Hungarian law has settled this question in a similar manner (Article 18 of the Hungarian Law on Cheques). Austrian business men are in favour of this arrangement being maintained. Should it not be generally agreed to, power should be given to the contracting States to settle the matter, as is provided in Article 25 of the Hague resolutions.

Ad *Article 21* (Article 23 of the Hague Resolutions).

Under section 16, paragraph 4, of the Austrian Law on Cheques, a protest must be drawn up not later than the first business day following presentation. The Austrian Government agrees with the Czechoslovak Government that the provisions of Austrian and Czechoslovak Law might take the place of the rather ambiguous ruling given in Article 21; this question has been regulated in the same way by Article 44 of the Geneva Law on Bills of Exchange and Promissory Notes.

Ad *Article 22*.

As regards the right to commission, a similar reservation to that in Article 14 of Annex II to the Geneva Convention should be adopted.

Ad *Articles 24 and 25* (Articles 26 and 27 of the Hague Resolutions).

The Austrian Cheque Law does not provide for the issue of a duplicated cheque. Austrian bankers consider that the experts' proposals meet a requirement of economic life. The need to draw duplicated cheques would be substantially decreased if lost cheques could be invalidated in all countries reasonably quickly.

Furthermore, Article 24 should be made to correspond with the wording of Article 64, paragraph 2, of the Geneva Uniform Law on Bills of Exchange and Promissory Notes.

Ad *Article 26* (Article 28 of the Hague Resolutions).

As it will frequently be impossible to decide where the forgery (alteration) was committed and as, moreover, the civil laws which are applicable in regard to Question 10 differ considerably, this question should be settled internationally.

Under section 20, paragraph 4, of the Austrian Law (and under the Czechoslovak Law) on Cheques, the loss arising from counterfeit or forged cheques falls on the drawer, so far as he can be shown to be guilty of some fault connected with the counterfeiting (forgery) or if the counterfeiting (forgery) has been committed by the alleged drawer's employees responsible for cheques. Otherwise, the loss must be borne by the drawee.

Bankers recommend that the liability of the alleged drawer should be extended so that the drawer would be responsible for the fault of *all* his employees—*i.e.*, such employees also as are not responsible for cheques and persons who are members of his household.

In any case, the Austrian Government supports the proposal already made by the Czechoslovak Government under which a provision corresponding to the above indications should be inserted in the Uniform Law. The proposals already mentioned are to be considered as the outcome of the principles referred to above.

Ad *Article 27* (Article 29 of the Hague Resolutions).

Under Austrian Law (section 18 of the Law on Cheques), rights of recourse against the drawer and previous endorsers are barred, after three months if the cheque is payable in Europe, and after six months in all other cases. The period of prescription as regards the holder runs from the date on which the protest was drawn up, and, in the case of the endorser, if he has paid before being notified of proceedings, as from the day of payment, and in all other cases, as from the day on which action is entered.

There is no objection to unification of the time-limits of prescription as proposed in the draft.

• Point 12 of the Questionnaire deals with the case in which an instrument which otherwise satisfies all the conditions required for the validity of a bill of exchange, stipulates that it is payable, not in money, but by a cheque.

Business men hold the view that it would be advisable for the Law on Cheques or Bills of Exchange to make special provisions for this case. This would not only mean abandoning the principle that a debt under the law on negotiable instruments must be settled in cash, but the advantage anticipated would also be very insignificant as compared with the resulting disadvantages.

It is not clear from the question whether the issue or transfer of a cheque should be permitted as delivery on payment (*datio in solutum*) or merely as a means of payment (*solutionis causa*).

If a cheque can be issued *as delivery on payment*, every holder has to bear in mind the fact that, should the cheque not be paid, his only claim is against the party who is bound under the cheque and that he can no longer exercise rights arising out of the *bill of exchange* which has been paid by the cheque. This conversion of his rights, and frequently also the trouble of having to maintain his rights arising out of the cheque, in a foreign country under unfamiliar conditions, will make the drawer of the bill of exchange and any later holder inclined to accept bills containing the stipulation: payable by cheque only where the future drawer of the cheque is known and where his solvency is unquestioned. Where cheques are used to pay bills of exchange it will often be very difficult to form a positive opinion of the solvency of the foreign drawer of the cheque.

If, on the other hand, a cheque is regarded merely *as a means of payment (solutionis causa)* it necessarily follows that the holder of the bill of exchange, whenever he is likely to receive the cheque only after the time-limit for protest has expired, will, *in any case*, take the precaution of drawing up a protest, in order, should the cheque not be paid, to maintain his right of recourse arising out of the bill of exchange. The proposed regulation would thus be very complicated and costly.

Furthermore, it would, in both cases, be necessary to solve the question as to how the loss of interest sustained by the holder of the cheque could be compensated.

In view of these considerations, it might be expedient to leave the question of payment of a bill of exchange debt by means of a cheque entirely to private arrangement as at present, more especially in view of the fact that, in each particular case, on the maturity of the bill, special conditions of payment would have to be established which would be at variance with the legal principles laid down for bills of exchange.

* * *

Amortisation procedure for cheques.

Under section 21 of the Austrian Law on Cheques, the loser of a cheque may ask the Commercial Court of the place of payment to cancel it. The relevant procedure is governed by the provisions of Article 73, paragraph 3, of the Law on Bills of Exchange; the Court must, by decree, summon the holder of the cheque to produce it within a period of thirty days. On such procedure being instituted the Court may prohibit payment of the cheque with the effect that payment contrary to this prohibition would be inoperative as regards the person who applied for cancellation.

In view of the great advantages of the procedure of amortisation, it would be advisable to have it internationally regulated.

II. DRAFT ARTICLES OF A CONVENTION LAYING DOWN RULES GOVERNING CONFLICTS OF LAWS IN CONNECTION WITH CHEQUES.

Ad Article 3.

The wording of paragraph 2 should be amended on the lines of Article 2, paragraph 2, of the Geneva Convention for the Settlement of Conflicts of Laws in connection with Bills of Exchange and Promissory Notes.

Ad Article 4.

An addition might perhaps be made on the lines of paragraph 3 of Article 3 of the Geneva Convention.

Ad Article 6.

In drafting this article, the wording of Article 4, paragraph 2, of the Geneva Convention should be taken into consideration.

Ad Article 10.

The Austrian Government endorses the Czechoslovak Government's proposal to omit this stipulation.

* * *

Finally, it would be advisable to insert in the draft temporary provisions on the lines of Article 11 of the Geneva Convention already referred to.

10. Hungary.

[*Translation.*]

Question 1.

Provisions of this kind should be reserved for national legislation and should be such as to involve juridical consequences (penalties, for example) in the case of cheques drawn on persons not carrying on the profession of banking, though not to the extent of invalidating such cheques. It should similarly, of course, be left to national legislation to define who is a banker.

Question 2.

It is sufficient if the funds exist at the time of payment, as the holder of the cheque is only concerned in receiving the money at that moment.

States, however, should have the right to determine the juridical consequences (penalties, for example) of issuing cheques without cover, as stated in the amended text drawn up by the League experts (resolutions adopted by the Second Conference of The Hague, 1912, on the Unification of the Law on Cheques, Article 3, paragraph 2), and a special proviso added that the absence of covering funds shall not invalidate the cheque.

Question 3.

This question is connected with the preceding one, from the reply to which it follows that no mention of covering funds is necessary.

Question 4.

A satisfactory solution is given in Article 13 of the Hague resolutions as drafted by the Committee of Experts of the League. The text reads as follows: "A cheque is payable at sight. Any contrary stipulation is deemed to be unwritten."

Question 5.

In the case of cheques issued and payable in one and the same country, the time-limit of eight days laid down in the experts' draft (Hague resolutions, Article 14) seems sufficient. If, however, the cheque is payable in another country than that of issue or in the colonies, longer time-limits for payment should be provided; for instance, the rule laid down for bills of exchange at sight (Uniform Law, Article 34) might be applied, provided that the drawer may curtail the period (*e.g.*, by the stipulation "payable at sight within a period of three months").

Question 6.

Countermanding should be considered valid, whether it is notified before or after the expiration of the time-limit of presentation.

Question 7.

It seems impossible to combine these two kinds of cheques in a single type, seeing that they are cheques which differ in character and purpose. Whereas the crossed cheque is intended to protect the holder against loss and theft, the cheque for collection calls for a certain specific form of payment. Contracting States, therefore, should keep both types of cheque.

As regards the crossed cheque, both forms (general and special crossing) should be authorised, in accordance with Article 19 of the Hague resolutions, but with the amendments to the original text made by the League experts.

Question 8.

If a cheque is not presented within the period of time laid down, there is no longer any right of recourse on the basis of cheque law. It is, therefore, not for a law on cheques to decide whether, in the case in question, the holder has or has not forfeited his rights against the drawer; this must be dealt with by national law, as in the case of bills of exchange, on more general principles. Article 15 of Annex II to the Geneva Convention of June 7th, 1930, on Bills of Exchange and Promissory Notes might, in substance, apply to cheques.

Question 9.

As in the case of the question No. 8, the legal implications of cover do not come within the scope of cheque law, and should be reserved for regulation by national law. The principle embodied in Article 25 of the Hague resolutions is therefore correct and is, moreover, in accordance with the view expressed in Articles 15 and 16 of Annex II to the Geneva Convention on Bills of Exchange.

Question 10.

The following rule should be laid down:

“ The loss resulting from the payment of a forged or altered cheque, where no fault is imputable to the drawee or his employee, may only fall on the drawer or the alleged drawer, if such party has been guilty of gross negligence or if his employee responsible for handling cheques has been guilty of gross negligence in issuing the forged cheque or in altering the cheque. Any stipulation to the contrary which would be more advantageous to the drawee shall be null and void.”

Question 11.

It would appear desirable to make it a rule that the drawee cannot refuse partial payment to the extent of the cover available, always provided that the holder accepts partial payment.

Question 12.

Bills of Exchange drawn on places abroad often contain the stipulation, intended to obviate loss arising from the conversion of currency, that payment should be made, not in money, but by cheque on the drawer's place of domicile. Such a stipulation is not valid under the Law on Bills of Exchange; its observance is entirely a matter for the drawee and calls, moreover, for special prudence and care on his part in incurring liability, since, if a cheque given in payment is not absolutely genuine, the parties concerned suffer injury. This method of paying a bill of exchange, consequently depends on the wishes of the parties and on the willingness of the bank which has to cash it; confidence is its main feature and makes juridical regulation both unnecessary and undesirable, as it would be in contradiction to the recognised principle of bills of exchange law.

Question 13.

As in the case of bills of exchange, there is no objection to cheques being typewritten. This does not affect the validity of the cheque. Naturally, signatures should not be given by mechanical means.

Question 14.

The action to be taken in the case of the theft or loss of a cheque should be determined by the local law of the place of payment, as Article 31 of the Hague resolutions very properly stipulates. The same principle appears in Article 9 of the Convention for the Settlement of Certain Conflicts of Laws in connection with Bills of Exchange and Promissory Notes.

Question 15.

It is not clear what conflicts are referred to here. The Uniform Law for Bills of Exchange and Promissory Notes makes no provision for conflicts of this kind. In the case of a conflict arising from the despatch of several duplicates of a cheque to different persons, the best solution would be that advocated in Article 27, paragraph 2, of the Hague resolutions, which corresponds to Article 65, paragraph 2, of the Uniform Law on Bills of Exchange. The same solution should be adopted in respect of cheques.

Question 16.

Domiciliation is incompatible with the nature of a cheque, and should, therefore, be prohibited.

Question 17.

Subject to the relevant alterations, the rules for bills of exchange (Uniform Law, Articles 64 to 66) should be applied.

Copies of cheques are, of course, unnecessary.

Question 18.

Article 29 of the Hague resolutions fixing uniform time-limits of prescription (irrespective of zones) in which distances are not considered would be a desirable solution.

Interruption of prescription might be regulated on the lines of Article 71 of the Uniform Law on Bills of Exchange and, as regards action for inequitable gain, Article 15 of Annex II to the Convention on Bills of Exchange and Promissory Notes should be applied.

Question 19.

This should be permitted, as in the case of bills of exchange (Uniform Law, Article 15) and as sanctioned by Article 10 of the Hague resolutions on cheques; there is no reason why permission should be refused.

Question 20.

To put an end to the abuses of such cheques, this question will be left to national legislation (which might lay down penalties) without specifying that a post-dated cheque is null and void. Article 3 of the Hague resolutions should, therefore, be approved. It might perhaps be added that, in the case of a post-dated cheque, the day of presentation will be taken as the day of issue, provided it is earlier than the date entered on the cheque.

Question 21.

Acceptance, certification and visaing should be prohibited.

11. Yugoslavia.

I. GENERAL OBSERVATIONS.

[*Translation.*]

1. The Royal Yugoslav Government is of opinion that the method followed at the last session of the Geneva Conference for the Unification of Laws on Bills of Exchange should also be followed for cheques. In particular, a convention should be signed whereby the contracting States undertake to embody in their national law the regulation (Uniform Law) on cheques which will be adopted at the second session of the Conference, subject to any amendments and additions allowed by the Conference as reservations. A special convention on the stamp and a special convention on the conflict of laws should thereafter be signed.

2. As regards the draft regulation on cheques, the Yugoslav Law on Cheques of November 29th, 1929, embodies the Hague resolutions, with few and unimportant modifications.

As the experts have also adopted in their draft the main principles of these Hague resolutions, the Yugoslav Government approves the essential provisions of the draft.

We are specially gratified to find that the experts have accepted two of the Hague principles—*i.e.*, cheques may not be drawn on persons who do not carry on the profession of banking, and the drawer must have funds in the hands of the drawee.

The object of cheques—to serve as instruments of payment and to economise the use of currency for payment—can only be attained by concentrating the circulation of cheques in the hands of bankers. A restriction of this nature makes for certainty in the use of cheques and tends to increase confidence in this instrument of payment. In point of fact any person will readily accept a cheque drawn on a banker if he is sure that the bank will pay it without difficulty. In countries where the population is not yet accustomed to the use of cheques, it would be positively dangerous to allow them to be drawn on persons who do not carry on the profession of banking.

Similarly, the Yugoslav Government is of opinion that the provision whereby the drawer must have funds in the hands of the drawee available at demand is absolutely essential; otherwise the cheque would cease to be a means of payment, and confidence in this commercial instrument would disappear.

All those concerned have given their opinion in favour of both these principles and have asked that the provisions on the subject in the Yugoslav Cheque Law should in any case be retained.

In practice, the drawer was bound to have funds in the hands of the drawee only at the moment when the cheque was presented for payment. Experience has, however, shown that such a regulation might be prejudicial to the interests of persons buying cheques. In the opinion of the Yugoslav Government, the law should therefore prohibit the drawing of cheques for which funds do not exist when the cheque is signed ("cheques drawn in the air"). The Yugoslav Government, however, does not think that the validity of the cheque should necessarily depend on the existence of funds, and considers that it would be enough to impose civil or criminal penalties for drawing cheques without funds, or with insufficient funds, as provided in the Yugoslav Law on Cheques (section 4 paragraph (a) 1, 2, and section 25) and in Article 3, paragraph 2, of the experts' draft.

• The Royal Government will now deal here only with No. 12 of the questionnaire annexed to the Final Act of the Conference of May and June 1930, a point which is not directly connected with the provisions of the draft Convention. The other matters raised in the questionnaire will be commented on later in connection with the provisions of the draft regulation and draft Convention on cheques.

No. 12 of the Questionnaire asks whether it is desirable to prescribe special rules to meet the case in which an instrument which otherwise satisfies all the conditions required for the validity of a bill of exchange stipulates that it is payable not in money, but by a cheque, especially by a cheque drawn on a bank abroad, and if so, what rules should be prescribed.

The Royal Yugoslav Government does not think that special rules should be prescribed for the above-mentioned case, and in particular it considers that such bills of exchange should not be regarded as fully valid.

As the law now stands, the holder of a bill of exchange may be given a cheque instead of being paid in cash. Bills of exchange which contain a stipulation that they are payable in a currency other than the currency of the country in which payment will be made, usually include the words "payable at the rate of exchange on demand". Such bills of exchange are usually paid by means of cheques drawn on a foreign country, but always drawn by an absolutely reliable bank. Accordingly, the holder of the bill of exchange seldom objects to payment by a cheque of this kind instead of payment in cash. The position would, however, be entirely different if the bill of exchange itself laid down that payment would be made, not in cash, but by means of a cheque. The holder would no longer be in a position to decide whether the bank in question was sufficiently sound, and he would be obliged to accept the cheque. It is unnecessary to refer to the risks which holders of such bills of exchange would run. The cheque would cease to be an instrument of payment. It is therefore undesirable to declare that such bills of exchange are fully valid.

II. OBSERVATIONS AND AMENDMENTS IN REGARD TO THE DRAFT REGULATION ON CHEQUES.

Ad Article 1.

(a) With a view to bringing the text of the Law on cheques as far as possible into harmony with that of the Law on bills of exchange as adopted at the first session of the Geneva Conference, the word "*ordre*" in No. 2 should be replaced by the word "*mandat*" (English text remains unchanged).

(b) Under the Yugoslav Cheque law the *Guthabenklausel* must be included in the cheque (section 1, No. 2).

Although this provision cannot be regarded as absolutely essential, it is nevertheless of some importance, as the attention of the drawer is directed to the requirements of the law in regard to cover, and also to the civil and criminal consequences of a cheque drawn without funds.

Moreover, Yugoslav business men are in favour of retaining this stipulation.

Accordingly the contracting States should at least have the right to insert this stipulation in their national law.

The following reservation is therefore suggested for Article 1:

"Notwithstanding the terms of Article 1, No. 2, of the Uniform Law, each of the High Contracting Parties reserves the right to embody in its national law a provision prescribing that mention must be made of the fund against which the cheque is drawn."

(c) The Royal Yugoslav Government considers that typewritten cheques should be deemed to be valid, like all other cheques.

The principal parts of most cheques in circulation are now typewritten.

The essential point is that the drawer should sign the cheque with his own hand.

In these circumstances, no special provisions on the matter are necessary in the Cheque law.

Ad Article 2.

In order to render the provisions as complete and as clear as possible, a fifth paragraph should be added to this article, reading as follows:

"Any stipulation in regard to interest inserted in the cheque is deemed not to be written."

Ad Article 3.

Having regard to the general observations made above (No. 2) the Yugoslav Government approves the provisions of the present article, which are in conformity with those of Article 3 of the Hague resolutions.

It agrees, in particular, with the view set out in the draft that when a cheque is issued post-dated, the validity of the instrument as a cheque should be maintained, but that the contracting States should have power to impose appropriate penalties in such cases. The Yugoslav law on Cheques has settled this question on these lines (paragraph 24, No. 1).

The second paragraph of this article should, of course, be transferred from the regulation to the annex relating to the reservations.

Ad Article 4.

The only observation to be made on this article is that the sixth paragraph should not be included in the regulation, but should be transferred to the annex for the reservations.

Ad Article 5.

In our general observations we expressed our approval of the principle that the drawee should be a banker. Accordingly, the Yugoslav Government is in favour of the provision in the draft that a cheque drawn on any person other than a banker is not valid as a cheque.

We also approve the provisions in the second paragraph; they should, however, be transferred to the annex containing the reservations.

Ad Article 6.

No observation on this article.

Ad Article 7.

(a) The question of domiciled cheques formed the subject of a long discussion at the Hague Conference, as a result of which the Hague resolutions make no provision for such cheques. The Yugoslav Government approves of this view, since the cheque, by its very nature, does not lend itself to genuine domiciling, seeing that cover would also be required at the place of domicile or with the paying agent.

The reference to Article 4 of the regulation on bills of exchange should therefore be omitted from paragraph 1 of this article, together with the whole of paragraph 2.

On the other hand, it might be permissible to indicate the place of payment (*Zahlstelle*), so as to give the holder of the cheque facilities for obtaining payment. In that case, however, the provision on the subject should make it clear that the cheque can be protected only in the actual place where payment is to be made.

(b) The words "draft regulation" should be replaced by the words "Uniform Law".

Ad Articles 8 and 9.

No observations.

Ad Article 10.

(a) To bring the reference in this article in to agreement with the Law on bills of exchange as now adopted, the words "the provisions of Articles 12 to 17 of the draft regulation" should be replaced by the words "the provisions of Articles 13 to 18 of the Uniform Law".

(b) As regards the defence that the endorser is liable the Royal Government thinks that this question should be regulated for cheques in the same way as it has been regulated for bills of exchange.

It has therefore no objection to the provisions of this article.

Ad Article 11.

(a) The Royal Yugoslav Government agrees with the statement contained in the draft that a cheque cannot be accepted, this view being in conformity with the nature of a cheque. There is, however, no need to insert the provision that a statement of acceptance on a cheque is deemed to be unwritten.

It would be sufficient if a statement of acceptance involved no consequences under cheque law, as is prescribed in the Yugoslav cheque law (paragraph 9). This statement can, however, produce effects under civil law, and these should not be abolished.

The Royal Government accordingly proposes to replace the provision contained in the second sentence of paragraph 1 by the following:

"A statement of acceptance on a cheque produces no effect under cheque law."

(b) It has no objection to make to the reservation contained in paragraph 2 of this article. It merely proposes, in accordance with its general view, to transfer the provisions of the second paragraph to the annex relating to reservations.

Ad Article 12.

(a) Under Article 9, paragraph 4, of the draft, any person, except the drawee, who puts his signature on the back of a cheque payable to bearer is guarantor (by *aval*) for the drawer.

• Under the third paragraph of Article 31 (former Article 30) of the Unified Law on Bills of Exchange which provisions are applicable to the cheque in virtue of paragraph 3 of the Article 12 we are dealing with—the *aval* is deemed to be constituted by the mere signature of the giver of the *aval* placed on the face of the cheque, except in the case of the signature of the drawee or of the drawer.

These provisions are not in harmony.

To obviate this contradiction, a second sentence should be added to paragraph 3 of this article, reading as follows:

“ The provisions of Article 31, paragraph 3, apply only to a cheque for a specified person, or to order.”

(b) To bring the reference in this article into line with the Unified Law on Bills of Exchange, the words “ Articles 30 and 31 of the draft regulation ” occurring in the same paragraph of the article should be replaced by the words “ Articles 31 and 32 of the Uniform Law ”.

Ad Article 13.

The very nature of cheques and their circulation render it absolutely essential that a cheque should always be payable at sight. Otherwise the cheque cannot be an instrument of payment capable of taking the place of currency.

All business men in Yugoslavia are definitely in favour of this principle.

We therefore support the view expressed in the draft.

We cannot, however, accept the provision in the draft that any contrary stipulation is deemed to be unwritten. Such a provision is not only at variance with the principle indicated above, but it compels the parties to accept effects which are not in accordance with their intentions.

The text of the Hague resolutions should therefore be restored in this case—*i.e.*, the second sentence of this article should be replaced by the following provision:

“ An instrument containing any other time of payment is invalid as a cheque. ”

Ad Article 14.

The Yugoslav Government accepts the essential provisions set out in this article, seeing that there is no prospect of the times being fixed uniformly.

Owing to the character of the provisions in paragraphs 3 and 5 of this article, they should be placed in the annex relating to the reservations.

Ad Article 15.

No observations.

Ad Article 16.

(a) The question of the possibility of countermanding the order contained in a cheque was fully discussed at the second Hague Conference. In the opinion of the Yugoslav Government, the solution contained in the Hague resolutions on this point is entirely satisfactory. It takes adequate account of the interest of the drawers of cheques, and also gives sufficient protection to a holder in good faith, while guaranteeing the general circulation of cheques.

The Royal Government therefore proposes to adopt the provisions in paragraphs 1 and 3 Article 17 of the Hague resolutions.

(b) In addition to the case of countermand after the expiration of the time of presentation, the Yugoslav Cheque Law also provides for another case of countermand—*i.e.*, a cheque payable to a specified person or to the order of such person, provided the cheque has been sent by the drawer direct to the drawee with an order to pay it to the person specified therein and provided the countermand is received before the drawee has complied with the order.

The Royal Government considers that it is fully entitled in such a case to recognise the drawer's right to countermand the order.

It accordingly proposes to add the following provision as a second paragraph to the Article:

“ The countermanding of the order also takes effect where the drawer of a cheque to a specified person or to order sends the cheque immediately to the drawee with the order to pay the sum to the person named in the cheque, provided the countermand is received before the drawee has complied with the order.”

(c) In place of the provision in the Hague article it would seem better to lay down that the provision of Article 40, paragraph 3, of the Law on Bills of Exchange should also apply to the cheque.

The Royal Government therefore proposes the addition to the new article of the following clause, which would form paragraph 4:

“ The provisions of Article 40, paragraph 2 of the Uniform Law on Bills of Exchange and Promissory Notes are applicable to the cheque.”

Ad Article 17.

The Yugoslav Government approves the departure from Article 18 of the Hague resolutions in regard to the right of the holder to refuse a partial payment.

The reasons which led to the insertion of the provision of paragraph 2 of Article 39 in the Uniform Law on Bills of Exchange, to the effect that a partial payment of a bill of exchange may not be refused, also hold good in regard to the law on cheques.

Ad Article 18.

The Yugoslav Government agrees with the experts in taking over the provisions of Article 19 of the Hague resolutions on the crossed cheque. It also approves the additions made to these provisions in the draft. The last paragraph should, however, be inserted in the Annex relating to reservations.

On the other hand, it regrets that the provisions of Article 20 of the Hague resolutions in regard to cheques "payable in account" also are not included in the experts' draft. The need for issuing such cheques has also been experienced in practice.

The Royal Government considers it inadvisable to recommend the use of a single type for the crossed cheque and the cheque "payable in account" only.

These two forms of cheque are used for different purposes. The first is employed principally for cash payments, subject to the reservation that the cheque can only be paid through a bank, while the second is employed for payments which consist merely of book entries. These two kinds of cheque should therefore be allowed to remain.

This is the view taken by the Yugoslav business men.

The Royal Government therefore proposes that Article 20 at the Hague resolution should also be adopted.

Ad Article 19.

Yugoslav banking circles have spoken strongly against any provision in the Uniform Law on Cheques which would lay down that the holder of a cheque acquires, along with the cheque, a right on the fund against which it is drawn.

The Royal Government considers that the bankers' view is fully justified.

The legislative enactments on the circulation of cheques should be as simple and as clear as possible. To grant the holder of a cheque a direct right against the drawee might give rise to complicated legal disputes. In countries where the right of the holder of a cheque on the fund against which it is drawn is not at present recognised, such a recognition might prejudicially affect the circulation of cheques, seeing that banks would be obliged to restrict the opening of cheque accounts, while continental disputes would shake confidence in such instruments.

The belief that a right on the fund against which the cheque is drawn would furnish an additional security is not really justified, since in the event of a dispute the holder of a cheque relies upon the support and good will of the drawer.

Moreover, the adoption of such a system would allow of various abuses, particularly on the eve of the failure of a person in debt. By taking advantage of the system referred to, he could cause loss to his creditors by issuing cheques.

The Yugoslav Government therefore approves the action of the experts, who, in accordance with the Hague resolutions, decided not to include in their draft for the Uniform Law on Cheques the principle that the holder of a cheque has a right on the fund against which it is drawn.

Should certain States wish to retain in their national law the right of the holder of a cheque on the fund against which it is drawn, such a request could be acceded to by allowing them to make a reservation. Accordingly, Article 19 of the draft, if it is retained, should be transferred to the annex relating to reservations.

Ad Article 20.

If the holder of the cheque has not presented it for payment within the statutory period, or if the cheque cannot be used for any other reason, the drawer should not be liable under the cheque law.

In such cases the holder of the cheque should be given a right of recourse against the drawer in virtue of the original claim or else an action for inequitable gain, as is the case under the Yugoslav cheque law.

On this point, a reservation should be allowed similar to that laid down in Article 15 of Annex II to the Convention on Bills of Exchange adopted at the first session of the Geneva Conference.

Ad Article 21.

No observations.

Ad Article 22.

In connection with this article, a reservation regarding cheques should also be allowed similar to that contained in Article 14 of Annex II to the Convention on Bills of Exchange adopted at the first session of the Geneva Conference.

Ad *Article 23.*

No observations.

Ad *Articles 24 and 25.*

The Yugoslav Government has no objection in principle to the provisions in the draft relating to the drawing of a duplicated cheque, since, in certain cases, it has been found necessary in practice to provide for the possibility of multiple copies.

The provisions of Article 24 of the draft should, however, be brought into line with those of Article 64 of the Uniform Law on Bills of Exchange adopted at the first session of the Geneva Conference—*i.e.*, the text of Article 26 of the Hague resolutions should be restored.

Ad *Article 26.*

(a) Under the Yugoslav Cheque Law (section 23, No. 10) the question of the person on whom the risk of a forged or altered cheque falls is regulated as follows: Should the drawer or the drawer's employees who are responsible for making out the cheque be guilty of any fault in connection with the forgery or alteration of the cheque, the drawer is responsible. In all other cases, the loss is borne by the drawee. Any stipulation to the contrary is null and void.

The Royal Yugoslav Government regards this as a fair solution, since it adequately protects both the drawer and the drawee, and also safeguards the circulation of cheques.

It therefore proposes to add the following provisions at this point:

“ Any loss resulting from the payment of a forged or altered cheque is borne by the reputed drawer of the forged or altered cheque, should he or his employees responsible for making out the cheque be guilty of some fault connected with the forgery or alteration; in all other cases the drawee is liable for the loss.”

(b) In order to correct the reference in this article and bring it into line with the Uniform Law on Bills of Exchange, Article 68 should be replaced by Article 7, and the words “ draft regulation ” by “ Uniform Law ”.

Ad *Articles 27 and 28.*

No observations.

In connection with these articles, a reservation should, however, be provided for similar to that contained in Article 17 of Annex II to the Convention on Bills of Exchange adopted at the first session of the Geneva Conference.

Ad *Article 29.*

The reference in this article to the regulation on bills of exchange should be replaced by a reference to the Law on Bills of Exchange adopted at the first session of the Geneva Conference.

III. OBSERVATIONS AND AMENDMENTS REGARDING THE DRAFT CONVENTION ON CHEQUES.

Ad *Article 6.*

This article should be reworded to bring it into harmony with Article 4, paragraph 2 of the Convention on the Conflicts of Laws adopted at the first session of the Geneva Conference. The Yugoslav Government has no observations to make on the other articles.

12. Latvia.

[*Translation.*]

Question 1.

Cheques should be issued only on banks or other credit establishments, including savings banks and post offices. This would be in keeping with the historical development of the cheque system and the special characteristics of the cheque as an instrument of payment.

Question 2.

Owing to the frequent occurrence of cases in which cheques are not covered at the time of presentation, it would be better to provide that funds should be in the hands of the drawee at the time of issue. Nevertheless, it is doubtful whether such an arrangement would get rid of uncovered cheques, for the existence of funds at the moment of issue of a cheque does not mean that it will be paid on presentation. A very heavy penalty should be imposed when a cheque is not paid owing to the absence of cover.

Question 3.

The advocates of the "Guthabenklausel" claim that it reminds the drawer of a cheque that he is assuming the obligation to pay by means of funds placed in the hands of the drawee, and that if payment is not made, he is liable to a penalty. In reality, this stipulation is a mere formality; it has therefore been omitted from the law of most countries as being merely a declaration and likely to lead to an increase in the number of cheques that are invalid owing to the accidental omission of the stipulation in question.

Question 4.

A cheque should always be payable on demand, and no departure from this principle should be recognised, as the essential character of the cheque as an instrument of payment would thereby be adversely affected.

Question 5.

The time limits for presentation should continue to differ in accordance with the economic peculiarities of the various countries. A uniform fixed period is essential only for cheques payable in a foreign country.

Question 6.

As the right to countermand the order in a cheque before the expiration of the period for presentation is apt to weaken confidence in the cheque, it should not be recognised.

Question 7.

The crossed cheque and the cheque "only for collection" are firmly established in the business worlds, and should therefore be kept in their present form.

Question 8.

The drawer may not be released from his liability for the cheque even when it is not duly presented within the period laid down. This liability could only lapse if the drawee (credit establishment) became insolvent after the expiration of the time for presentation.

Question 9.

The case referred to here is not dealt with in Latvian law.

Question 10.

Liability for the loss resulting from the forgery or alteration of a cheque should fall on the bank if it has been guilty of serious negligence in paying the cheque. Nevertheless, where the drawee has not been at fault, the consequences of a forgery or alteration fall on the drawer.

Question 11.

This question should be raised not only in regard to the drawee, but also the holder. The former should be allowed to make partial payment, and the latter should be compelled to accept this payment.

Question 12.

As this question relates to a method of paying a bill of exchange, it would be better not to include it in the law on cheques.

Question 13.

The Latvian Government has no objection, provided that the amount is written in with a special machine.

Question 14.

The amortisation procedure and annulment are essential for the protection of the drawer against possible loss, should he issue another cheque in lieu of the lost cheque and should the cheque announced as lost subsequently be found.

Question 15.

This question should be regulated on the lines of the provisions in the Law on Bills of Exchange.

Question 16.

Domiciled cheques should be recognised.

Question 17.

Multiple copies of cheques should be admitted, especially in dealings with the United States of America. The provisions relating to duplicate bills of exchange should apply in this case also.

Question 18.

Limitation of actions is as essential for cheques as for bills of exchange.

Question 19.

The release of the endorser from his liability should be regulated on similar lines to those applicable to bills of exchange.

Question 20.

Post-dated cheques should not be admitted, as otherwise there would be a danger of depriving the cheque of its characteristic as an instrument of payment, and of converting it into a credit instrument. Moreover, post-dated cheques might give rise to special difficulties where the drawer died before the date of issue wrongly inserted in the cheque.

Question 21.

There is no objection to recognising the usage followed in the United States of America, Great Britain and other countries where a cheque can be accepted. It would, however, be desirable to replace the word "accepted" by the word "certified" or some other expression, for the cheque is not really accepted. The so-called acceptance is a mere declaration that funds exist, and that they are held over for the cheque. These cheques in some ways resemble bank-notes; but this is true only for a specified period and among a small number of persons.

13. Siam.

Question 1.

Under the definition given by the Siamese Code (Section 987) and according to the interpretation given by English law, a cheque *must* be drawn on a *banker*. The opinion of the Siamese legislator has been that the distinction between cheques and bills in the matter is a natural consequence of the relationship of banker and customer, subsisting between the drawer and drawee of a cheque. Practically, since only persons carrying on the profession of banking are in a position to "clear" cheques by way of clearing-houses or otherwise, this means an economy of specie or currency notes for the State.

Question 2.

It must be noted, as a reminder of the Conference of The Hague (1912) that it was then admitted (Resolutions, Article 13) that no practical difference is to be made between time of "presentation" and time of "payment", because a cheque should be *payable on demand*. Consequently, it is sufficient that funds are in the hands of the drawee (banker) *at the time of payment*. (See England, Argentine, Austria, Brazil, Chile, Costa Rica, Denmark, Ecuador, Netherlands, Norway, Peru, Roumania, Italy.) A contrary provision would be drastic without utility. (Illustration: A person draws a cheque on Friday after business hours without funds being in the hands of his bankers. Saturday, Sunday and Monday, the bank is closed for any reason whatsoever. Supposing that, during those three days, a fixed deposit belonging to this person comes to maturity and produces interest, or that under a previous agreement, overdraft becomes permissible, etc. Why prohibit this person, who is fully aware of the circumstances, to issue a cheque without funds *at the time of issuing*? It may be impossible for him to send funds to the bank when issuing the cheque, on account of the bank's closing: Why forbid this person to free himself from his debt on Friday, as soon as a settlement has been required from him?) It is suggested consequently that the wording of the Uniform Regulation on Cheques presented by the experts (Article 3 paragraph 1) should be redrafted in order not to allow so drastic an interpretation.

Question 3.

Although German, Austrian and Hungarian laws compel the drawer to mention in the cheque an express reference to the funds assigned for meeting the cheque, to make such a mention compulsory seems rather useless formalism; and Siam sticks to her opinion already given on July 13th, 1912, at The Hague, in agreement with the majority of the other Governments—*viz.*, against the mention *Guthabenklausel*.

Question 4.

Yes. This conforms to the Hague resolutions 1912 (Article 13) and to the Siamese law.

Question 5.

Siamese Code (Section 990) dealt with the matter as follows:

“ The holder of a cheque must present it for payment to the banker within *one month* after the date of issue if it is payable in the same town where it is issued or within *three months* if it is payable elsewhere; otherwise he loses his right of recourse against *the endorser*; he loses *also* his right against the drawer to the extent of any injury caused to the drawer by failure of such presentation.

“ The holder of such cheque as to which such drawer is discharged shall be subrogated to the rights of such drawer against the banker. ”

Apart from the duration of the periods (one month and three months) this system is similar to the Spanish Code (Commercial Code, 537), Swiss Code (Code of Obligation, 835) and to the general policy of the French Law, June 14th, 1865, Article 5 (Commercial Code, 168).

“ One month ” duration has been tested by experience in Siam, primarily for Treasury orders and afterwards for cheques, and found suitable. On the other hand, the “ three months ” duration is suitable for countries where the system of road and railways is still under development or can be temporarily out of order on account of some climatic occurrences (floods in rainy season, etc.).

Question 6.

The drawer must have the right to object to payment of the cheque.

(1) This is in conformity with law on mandate (a cheque being an *order* to pay and a mandate, as a rule, being revocable). The solution seems necessary under laws (like Siamese law) where a cheque is only a kind of bill of exchange.

(2) This is practically the most efficient, cheapest and quickest remedy when a cheque is lost or stolen.

Owing to the foregoing reasons, it does not seem advisable to allow—like the Hague resolutions, Article 17, paragraph 1—withdrawal to be made only after the expiration of time for presentation. A cheque can be lost or stolen meanwhile.

Even in the countries where the system of immediate assignment of funds at the time of drawing of the cheque led to an objection to the withdrawal of a cheque, there is a clear tendency to allow it now (*cf.*, France, *Gauthier v. Poulain*, Cassation, December 17th, 1924, *SIREY* 1925, L. 9).

Subject to the ordinary rules about the liabilities for compensation and damages if the drawer countermands payment of a cheque without serious grounds, Siam cannot propose to deal with the matter otherwise than by the present provisions of Section 992 C.C.C.:

“ Section 992. — The duty and authority of a banker to pay a cheque drawn on him come to an end on:

“ (1) Countermand of payment;

“ (2) Knowledge of the drawer's death;

“ (3) Knowledge of publication of an interim receiving order or bankruptcy order against the drawer. ”

It is noticeable that Section 992 (2) is coherent with the principles of the law on mandate, and that (2) and (3) are moreover almost necessary in order to maintain an equitable treatment as regards the heirs or the creditors of a deceased drawee. Therefore, Article 22 of the Uniform Regulation drafted by the experts seems too narrow, and Article 21 is most objectionable as contrary to the rules dealing with the mandate, the Siamese and the English law.

Question 7.

Under Siamese law, a cheque crossed “ generally ” can be paid only to a banker. A cheque crossed “ specially ” can be paid only to the banker whose name stands between the lines of the crossing (Article 994, C.C.C).

Would it not be possible to combine, in a single type, the crossed cheque and the cheque only for collection (nur zur Verrechnung) in use by certain countries?

In Germany (Law March 11th, 1908, Article 14), crossing is not recognised but cheques may be marked *nur zur Verrechnung*.

It seems that the same result may be obtained by allowing the insertion in a cheque, crossed generally or specially, of a special mention. It is suggested that the mention “ only for clearing ” is possibly better than the mention “ only for collection ”, it implies the word “ clearing ” which is already used in the Hague regulations for “ clearing-houses ”. The essential difference between

a crossed cheque and a cheque bearing the mention *nur zur Verrechnung* is that the first one may be paid *in cash* and the second one may be paid only by adjustment or entry in book-keeping. It may be feared that the words "only for collection" do not give such a technical meaning and will be construed under Article 9, paragraph of the Uniform Regulation (expert's draft) which provides that a cheque endorsed "merely for collection" is a cheque endorsed with the view to give a *mandate* and nothing more.

Question 8.

It is understood that the "fixed period of time" so mentioned is the time of presentation specified by law. In such case, it seems that a drawer is liable as long as the holder has not violated the provisions referred to in the answer to Question No. 5—viz., as long as the holder has not caused any injury to the drawer by failure to present the cheque.

But, in order to enact a limitation of action against a holder guilty of negligence in presentation, it might be proposed that "no action against the drawer of a cheque can be entered later than (three years or one year) after the time for presentation has elapsed". As regards the principle of a limitation, such provisions would be in line with the Hague resolution, Article 29, paragraph 1; as regards the duration of time (three years) such provisions would be in line with Article 70, paragraph 1, of the Uniform Regulation adopted by the Conference in 1930: or with Article 70, paragraph 2, of the Uniform Regulation for Bills of Exchange (see *infra*, Question 18); as regards time of "prescription", it seems logical to place the drawer of a cheque and the maker of a promissory note (or the drawer of a bill of exchange) on the same footing.

Question 9.

This is a problem which, on account of its baffling complication or intricacy, has shown the impossibility of reaching any complete agreement between the various legislations in the matter of cheques. Generally speaking some legislations do not admit the transfer of the cover to the holder. Others admit it. Moreover, within the limits of legislation itself, some provisions are based on the first principle, other provisions are based on the second. For instance, according to English law, as a rule, the issuing of a bill does not entail an assignment of funds; but this rule is not strictly followed as regards cheques (which are, however, a kind of bill in English law) and Section 74 of Bills of Exchange Act, 1882, sub-section 3 (like Section 990 of the Siamese Code), admits that, when the holder of a cheque omits to present it within a reasonable time whereby the drawer has been damaged (*i.e.*, by the bank failing), the drawer is *pro tanto* discharged and the holder is substituted as a creditor of the bank. Such provisions are considered, even by the English lawyers, as creating a *quasi-privity* between the holder and the drawee; but, as a matter of fact, this is an exception to the general rule of English law. On the other hand, in France, as in Scotland, when the drawee has funds, the issuing of a bill, and particularly of a cheque, operates as an assignment of them in favour of the holder. This idea has been expressly embodied in the French law of February 1922, which says: "The ownership of the cover passes by right to the successive holders of the bill of exchange". France, therefore, may be considered, for the time being, as the strongest supporter of the principle called "transfer of cover"¹. However, even in France, the highest court—viz., the *Cour de Cassation*, has been compelled to admit that the drawer of a cheque may *countermand* payment: by doing so, the court is returning to the idea that a cheque is "an order" (or mandate) to pay and not merely a transfer of ownership (Gauthier *v.* Poulain, December 17th, 1924; SIREY 1925, L.19; Report, A. COLIN: *Le chèque est un mandat de paiement et non un instrument de paiement proprement dit*", page 20, colonne 1).

There is much more to be said about this question of cover, but the foregoing remarks suffice to show that, for the time being, no agreement can be reached in the matter and it is wiser to stick firmly to the Hague Convention, Article 14, which reads as follows:

"The question whether the drawer is bound to furnish cover at maturity and whether the holder has any special right on this cover, are to be left outside the regulation and the present Convention."

¹ In the past, and under the old French law, the drawing of any bill did not operate as an assignment of funds in favour of the holder. The contrary principle, which entails objectionable consequences in the matter of bankruptcy, originated in the decision of French courts afterwards embodied in the recent French statutes (see also Law of August 2nd, 1917). Theoretically, any attempt to support this principle in law has failed (LACOUR et BOUTERON: "Précis de Droit commercial", Second Edition, No. 1243). It is not to be recommended to a legislator (LYON-CAEN, "Traité de Droit commercial", Volume IV, No. 188). As far as cheque is concerned, it does not seem that this new principle entails a larger or more secure circulation of cheques in France than in England.

Inequitable gain may be more or less connected with the question of "transfer of cover" and it may arise in practice, whether the "question of transfer" is expressly dealt with in the law or not.

The action (or claim) for inequitable gain is essentially a subsidiary one governed by general principles of law which, in each national law, can be used as a remedy to gaps in general legislation or to discrepancies therein, as the case may be. It, as well as the question of transfer of cover, should be left outside the work of the Conference.

Question 10.

It would be advisable to deal with the question of "forgery" and "alteration" in separate provisions. (This was done by the Conference of the League of Nations in 1930 in the matter of bills of exchange and promissory notes.)

(a) *Forgery.* — In the English law concerning bills, the principle is that a forged signature is wholly inoperative, whether it purports to be the signature of the drawer or an endorser. In the continental system—as summarised by the Hague regulations (1912), Article 68—the forgery of a signature, either if it be that of the drawer or of an endorser, in no wise affects the validity of the other signatures. The policy of Siam is, in accordance with her law, to recommend the medium way—*viz.*, to follow the English system as far as the signature of the drawer is concerned and to follow the continental system as far as endorsements are concerned. This is the Siamese system applicable, not only to cheques, but also to bills of exchange and promissory notes. Moreover, and owing to the fact that a cheque is a special kind of bill, where the drawee is a banker, special provisions may be made in order to meet the special and somewhat contradictory necessities of practice—namely, that a banker is a drawee specially equipped for the verifying of his customer's signature and, on the other hand, that a banker paying a cheque in good faith and without negligence must not be responsible.

Conciliatory steps seem to have been taken by each system of legislation as far as cheques are concerned. For instance, English law, which does not protect the banker when the *drawer's* signature has been forged (*Orr v. Union Bank* (1854), 1 Macq., H.L.Ca.513), takes the banker as discharged when he has paid a cheque bearing a forged *endorsement* (Bills of Exchange Act, Section 60). In France, although there are many discrepancies between the decisions of the law courts, it has been held by the *Cour d'Appel de Paris* (February 1st, 1923; *Gaz. Pal.* March 11th-12th, 1923) that the risks of forgery fall on the banker when he has paid a cheque *issued* under a forged signature, and that the banker is duly discharged when he has paid a cheque bearing a forged *endorsement* (January 29th, 1924, *Recueil hebdomadaire de Jurisprudence*, DALLOZ, February 7th, 1924). Consequently, it may be hoped that conciliation between the two systems of legislation is not so difficult as it appears at a first sight.

(b) *Alteration.* — Apart from the case of forged signatures, other alterations are possible in the text of a cheque (increase of amount and so on). It seems advisable to adopt here provisions similar to article 69 of the Uniform Regulation (*re* Bills of Exchange) adopted by the Conference of the League of Nations in 1930—namely:

"In case of alteration of the text of a bill of exchange, parties who have signed subsequent to the alteration are bound according to the terms of the altered text: parties who have signed before the alteration are bound according to the terms of the original text."

Question 11.

As a preliminary remark, it must be pointed out that such a question implies actually that the holder is entitled to *require* from the banker the partial payment of a cheque, and this is contrary to the present Siamese Code Section 991, under which a banker is not bound to pay a cheque drawn on him by his customer when there is not enough money to the credit of the account of the customer to meet the cheque. In other words, such a question as implying *privity* between the holder and the drawee of a cheque is closely connected with the question of "transfer of cover" and the answer must be the same—namely, to leave it outside the Uniform Regulation.

Question 12.

If the drawer of a bill of exchange is allowed to stipulate that the payment shall be made by cheque and not in money, this stipulation, especially when the cheque at stake is drawn on a bank abroad, may be tantamount to payment in a foreign currency. This is a question of internal policy for each State, and this policy may vary for economical or political reasons. If, therefore, some provisions are made in the Uniform Regulation for cheques, a reservation must be allowed for the contracting States, as it has been admitted for the Uniform Regulation for Bills of Exchange, Article 41. To try to induce a uniform law under such conditions about a matter so peculiar and not essential does not seem at all urgent.

Question 13.

Of course, in any case, the signature must be handwritten. But, in large firms, where a great number of cheques are issued every day, the person who signs and the person who fills them are often different: thus there is already some differences between the handwriting appearing on the face of the cheque. In some countries, like France, typewriting has been objected to on the ground that typewriters do not individualise the writing (*Administration de l'Enregistrement*, January 24th, 1918).

As a matter of fact, it seems difficult to enact provision suitable for all the circumstances of the case. Moreover, a typewriter may be specially fitted and used for *preventing* forgeries and alterations in the drawing of a cheque. Consequently it seems better to enact no provision dealing with the matter in Uniform Law.

Question 14.

The "amortisation" procedure seems to have been introduced by the Austrian Law of April 3rd, 1906 (Article 21). This special word "amortisation" does not seem to be adopted by the other German legislations of language (for instance, the German Law of March 11th, 1908, Article 27), and is likely to raise some misunderstanding in English-speaking countries where "amortisation" is used with different spelling and meaning.

In any event, is it advisable to legislate the matter for cheques? After careful examination, this question in the case of bills of exchange gave rise to recommendations by the Conference held at Buenos Ayres in 1916 (Article 15), and to reservations embodied in Article 15 at the Hague Conference in 1912, finally at the Conference held at Geneva in June 1930, it was suggested that each contracting State should remain free to issue legislative provisions as regards loss or theft of a bill of exchange or of a promissory note (see report about Article 23 of the Annex II to the Uniform Law).

In the matter of cheques, many steps have already been taken and can be easily used as remedies in the case of loss or theft, such as countermanding (*supra*, Question 6), crossing (*supra* Question 7) and contingently rules as to the burden of risks when a forgery or alteration is effected by a thief (*supra*, Question 10). It is difficult to say whether the Uniform Law which actually says nothing in the case of bills of exchange should, in the matter of cheques, deal with the loss or theft by more elaborate provisions than those already specified for the cases above mentioned. Even if statutory provisions of that kind were issued, the additional remedies proposed (*viz.*, a judicial order and the giving of security) are, for the sake of speed, disregarded in practice, and business men are satisfied by a reciprocal exchange of letters of notifications and guarantee between the interested parties (banker, drawer and holder).

Question 15.

It is understood that the meaning of Question 15 is as follows: In what manner must be settled conflicts concerning the means of transferring a cheque. For instance, a cheque bears on its face *both* the mention of a specified holder and the words "or to bearer". Is such cheque to be treated as a cheque to bearer (*i.e.*, transferable by mere delivery) or as a cheque to a specified person, the words "or to bearer" being considered as unwritten (so that the cheque should be not only delivered but *endorsed* for a valid transfer).

Like the Danish, Norwegian, Swedish and Swiss Governments, the Siamese Government thinks that such cheque must be considered as a cheque to bearer. The German law of March 11th, 1918, Article 4, the Austrian Law of April 3rd, 1906, Article 3, give the same solution. English law is construed in the same way by the courts (*House Property Co. v. London County and Westminster Bank*, 1915, L. J. K. B. 1846).

This solution is very useful in practice and specially in countries like Siam—for instance, when a drawer has to deliver a cheque to some person and does not or cannot know whether the holder is illiterate or not, whether he reads a foreign language or not, whether he is able to justify his identity to the banker or not, such drawer may nevertheless, in addition to mentioning the bearer, have good reasons to make other mention (name of the holder) which may provide a useful clue to prove his payment. This mention may also be useful for the holder if the cheque is stolen from him.

Question 16.

When a cheque is made payable elsewhere than at the residence or place of business of the banker the cheque is said to be "domiciled" at the place where it is payable.

The question of "domiciled cheque" is easier to settle if Question I, as aforesaid, is answered in the affirmative—*viz.*, a cheque can be drawn only on a banker.

As a rule, when a bank has several branches, and its customer has an account at one branch only, the other branches are not bound to honour his cheque, because a bank is not

bound theoretically to keep funds available for meeting this cheque in every branch. But this rule, which is adopted, for instance, by English law, is mitigated if alternative places of payment are specified: then presentation at either of such places is sufficient. Moreover, in practice and in many countries, large banks do not make any charge for meeting at one branch a cheque which is payable in another branch, subject to these branches being found in a list ordinarily supplied to the customer from the beginning of the transactions. Consequently, except for the question of delay, the result will be the same, even if domiciliation of cheque is not expressly dealt with by the law.

Question 17.

This question does not raise any material objection and has been settled by Siamese law under provisions (Section 989, 975, 976, 977, C.C.C.) similar to the Uniform Regulation on cheques presented by the League of Nations experts on February 25th, 1927.

Question 18.

Generally speaking, Siam has no objection to Article 39 of the Uniform Regulation on Cheques drafted by the experts, but does not see why under paragraph 1 of this article the *duration* of prescription is shorter as regards the drawer of a cheque (six months) than as regards the drawer of a bill of exchange (one year) or *a fortiori* the maker of a promissory note (three years).

In Siam when a cheque has been presented for payment and a protest (or noting) drawn up, the duration is one year after the date of the protest (1002 C.C.C.). But when a cheque has not been presented within the time fixed by law, the duration of prescription, under general rule is ten years (Article 164. C.C.C.). In England, the duration of prescription is six years. In France, where the provisions concerning the maker of a *promissory note* are applied by analogy (Commercial Code, Article 189), this duration is thirty years, or at least five years, depending on the cheque being issued for meeting a civil or a commercial debt.

When uniform legislation is at stake, it seems more advisable to restrict the choice to two alternative solutions. One solution by analogy with the issuer of a promissory note, would amount to three years' duration (see Uniform Regulation on Promissory Notes, Article 70, paragraph 1). The second solution would be to adopt the same duration for both cheques and bills of exchange —viz., one year (see Uniform Regulation on Bills of Exchange, Article 70, paragraph 2).

Question 19.

This question seems settled wisely by Article 29, paragraph 2, of the Uniform Regulation on Cheques drafted by the experts.

Question 20.

Anglo-American law, which Siamese legislation has tried to approach, does not take as null and void the post-dated cheques (see Bill of Exchange Act, Sections 4 and 13). Even in France, where such cheques arouse some suspicions, it is admitted that they are valid "at least as regard endorsers" (BOUTERON, "Le Chèque", page 219).

The question may have some interest only as regards the fiscal penalties and consequently should not be dealt with in the Uniform Law.

Question 21.

Article 16 of the Uniform Regulations drafted by experts seems 'satisfactory, and, within the limits provided by the second paragraph of this article, has suggested provisions, permitting certification of cheques (*cf.*, Siamese Code, Section 993).

14. Czechoslovakia.

[*Translation.*]

In accordance with the resolution quoted in No. V of the Final Act of the Conference for the Unification of Laws on Bills of Exchange, Promissory Notes and Cheques, signed at Geneva on June 7th, 1930, the Government of the Czechoslovak Republic, after consulting the circles technically concerned, has considered in detail the questions summarised in the above-mentioned section.

In the replies to the Questionnaire, the point of view adopted by the Government of the Czechoslovak Republic concerning the draft of the League of Nations Committee of Experts, reproduced in document C.234.M.83.1929.II (C.I.L.C. I), is also stated, as far as is necessary, in each case.

•In accordance with the resolution of June 7th, 1930, the Government of the Czechoslovak Republic has not merely replied to the Questionnaire, but has examined once more the whole draft of the Committee of Experts to be used as a basis of discussion at the next session of the Conference, and has also revised its former opinions concerning this draft (see letter from the Czechoslovak Minister at Berne, dated April 10th, 1929, printed in document C.234.M.83.1929.II). The results of this examination are set out at the end of the present reply.

I. REPLIES TO THE QUESTIONNAIRE.

These replies mainly describe the law as it exists in Czechoslovakia. It should be observed that the Czechoslovak Republic has not yet proceeded to unify cheque law in its territory by any legislation of its own. Under the terms of the Law of October 28th, 1918, No. 11 of the *Collection of Laws and Decrees* concerning the establishment of an independent Czechoslovak State, the Austrian Cheque Law of April 3rd, 1906, No. 84 of the *Collection of the Laws of the Empire* (referred to hereinafter as "Law No. 84/1906"), remains in force in the former Austrian regions—*i.e.*, in the provinces of Bohemia, Moravia and Silesia—while in the former Hungarian regions—*i.e.*, in the provinces of Slovakia and Sub-Carpathian Russia—the Hungarian Cheque Law of December 28th, 1908, promulgated as Law LVIII of 1908 (referred to hereinafter as "Law LVIII/1908") is still in force.

Question 1.

According to paragraph 1 of Law 84/1906, the following may act as drawee:

- (1) Public banks or other establishments authorised by their statutes to receive money on behalf of third persons;
- (2) All other firms, registered with the commercial courts, which conduct banking operations as part of their business.

In addition, the following may be drawees: the Prague Postal Cheques Office, established by the Law of March 11th, 1919, No. 140 of the *Collection of Laws and Decrees*, and the branch of the Postal Cheques Office at Brno, established by the Decree of the Government, dated April 16th, 1926, No. 52 of the *Collection of Laws and Decrees*. In virtue of the Law of September 23rd, 1930, No. 143 of the *Collection of Laws and Decrees*, the Post Office Savings Bank will henceforth fulfil the duties of the Postal Cheques Office and will consequently be authorised to act as drawee.

Under the terms of Section I, paragraph 2, of Law LVIII/1908, when a cheque is payable within the country, only a firm which, according to its statutes recognised by a special law, or according to its description in the commercial register, conducts banking operations may be indicated as drawee. The second section of the said paragraph lays down that, in the case of cheques payable abroad, the only persons who may be indicated as drawees are those on whom, according to the law in force in the place of payment, cheques may be drawn.

Thus, the provisions in force in Czechoslovakia correspond to Article 5 of the draft of the Committee of Experts according to which a cheque can only be drawn on a banker, a cheque drawn on a person other than a banker not being valid as a cheque. The question as to who is a banker under the terms of this provision or what persons may, in order to be drawees, be assimilated to bankers, should be decided according to the law of the State in whose territory the cheque is payable. The reservation expressed in Article 5, paragraph 2 (a), of the draft of the Committee of Experts should therefore be retained.

Question 2.

It would seem that an error has crept into the drafting of Question 2. Up to the present, the laws of the various countries differ as to whether the drawer must have funds in the hands of the drawee at the time of the issue of the cheque or at the time of its presentation. The Hague Conference of 1912 considered this question and discussed whether it ought to be settled in the regulation concerning cheques. The Government of the Czechoslovak Republic thinks that Question 2 is obviously connected with this discussion at the Hague Conference in 1912.

If the question is viewed in the above light, it should be observed that, according to paragraph 23 of Law 84/1906, the drawer is liable to an administrative fine when the cheque is not paid because, at the time of its presentation, the drawer had not, in the hands of the drawee, funds which might be used for its payment, or when the cheque is not fully paid owing to the absence of available funds. The drawer is not liable to punishment if, when the cheque was drawn, he might reasonably have supposed that he would have sufficient funds in the hands of the drawee at the time of presentation.

According to paragraph 26, No. 1, of Law LVIII/1908, a drawer is liable to a fine when the drawee is not, in conformity with paragraph 13, bound to honour the cheque on presentation and does not do so, if the drawer had no reasonable grounds to suppose at the time the cheque was drawn that the drawee would be bound in conformity with paragraph 13 to honour it on presentation.

It is obvious therefore that funds must exist in the possession of the drawee at the time of the presentation of the cheque and that their inadequacy does not make the cheque null and void.

It should be observed that, in theory as well as in practice, "credit claims" (*créances*) should not be taken to mean merely liquid funds which the drawer possesses in the hands of the drawee to serve as cover for the cheque, but, in general, all the relations between the drawer and drawee which constitute legal guarantees that the cheque will be paid by the drawee. For instance, an agreement under which the drawee undertook to provide the drawer with credit up to a certain amount would be sufficient. This is certainly the explanation to be accorded, in Article 3 of the draft of the Committee of Experts, to the words "holding funds at the disposal of the drawer".

Question 3.

According to paragraph 2, No. 5, of Law 84/1906, a cheque must include an order on the part of the drawer to the drawee to pay out of his funds a certain amount of money.

Similar provisions are to be found in paragraph 1, No. 3, of Law LVIII/1908.

Clearly therefore, according to the existing Czechoslovak law, the mention of funds (*Guthaben-klausel*) is obligatory. The Government of the Czechoslovak Republic, however, is not opposed to the draft of the Committee of Experts, Article 1, No. 2, of which does not require such mention, provided that the clause in No. 1 of this article, to the effect that the word "cheque" must be expressly inserted in the body of the instrument, is not altered.

Question 4.

Paragraph 5 of Law 84/1906 lays down that cheques shall be payable in presentation (at sight) even when they contain other provisions, or contain no provision regarding the date of payment.

Paragraph 5 of Law LVIII/1908 is absolutely the same as the above.

The Czechoslovak Government therefore accepts the provisions of Article 13 of the text proposed by the Committee of Experts.

Question 5.

Concerning the presentation of a cheque for payment, paragraph 9 of Law 84/1906 lays down:

"A cheque payable at the place at which it was drawn must be presented for payment within five days, and a cheque payable at another place in Czechoslovakia, within eight days following the date on which it was drawn. Cheques drawn outside the territory of the Republic to which Law 84/1906 applies must be sent within the five days following the date on which they were drawn to the place of payment and be presented there for payment within five days of their reception. The date of the reception of the cheque at the place of payment may be proved by attestation of the postal authorities. The day on which it was drawn and the day of its arrival as well as Sundays and legal holidays are not counted in calculating the time allowed for presentation.

"Special provisions concerning cheques drawn in Istria, Dalmatia and in certain islands along the Adriatic coast on another place in Austria or vice versa no longer concern Czechoslovakia."

Paragraph 8 of Law LVIII/1908 lays down the following rules regarding the period of presentation:

"Cheques drawn within the country must be presented to the drawee at the place of payment within ten days following the date on which they were drawn. Cheques drawn in other countries of Europe except Iceland and the Faroe Islands must be presented within three weeks as from the date on which they were drawn. Cheques drawn in the maritime countries of Asia and Africa bordering on the Mediterranean or the Black Sea, or in islands belonging to parts of the world neighbouring on these seas, must be presented within the month in which they were drawn. Cheques drawn in the United States of America, Canada, Newfoundland, the Azores, Madeira, the Canary Islands or the Cape Verd Islands, must be presented within two months of the date on which they were drawn. Cheques drawn elsewhere must be presented within three months from the date on which they were issued."

It is very difficult to regulate the time-limit for presentation of cheques in a uniform law on the subject. The Government of the Czechoslovak Republic has already, in its reply given in 1929, raised a number of objections to the solution proposed in Article 14 of the draft of the Committee of Experts. It observed that the difference in the time-limits for presentation causes serious inconvenience in international commercial relations and recommended that these should be fixed uniformly for all States. In addition, it stated its opinion that the time-limit of eight days was too long—at least, in the case of cheques payable in the State in which they are drawn.

The Czechoslovak Government does not, however, maintain this latter objection and is prepared to accept the time-limit of eight days as the uniform time-limit for cheques payable in the State in which they are drawn.

On the other hand, it maintains its request that all time-limits for presentation should be fixed uniformly. It therefore recommends that the time-limit of eight days indicated above should not be prolonged by the various countries, and that a uniform rule should also be established for the presentation of cheques payable in a country other than that in which they are drawn—namely, that they should be sent within five days from the date on which they were drawn to the place of payment and should be presented for payment there within five days following their arrival, but in any case, at the latest, within three months from the date on which they were drawn. The provision of Law 84/1906, according to which cheques drawn abroad must be sent

within five days to the place of payment and presented to the drawee within a further period of five days, works perfectly well in practice. The fixing of a maximum limit of three months would ensure that cheques would in no case be in circulation for a longer period than is required by their character as instruments of payment. All persons concerned in dealings with cheques could thus be certain that cheques would be liquidated within three months as from the date on which they were drawn.

Question 6.

According to paragraph 13 of Law No. 84/1906, the drawer may withdraw the cheque as regards the drawee, only :

(1) If the cheque made out for a given person or to order, which the drawer has sent direct to the drawee in order that the sum may be paid to the person designated to receive it, has been expressly withdrawn before the drawee has carried out the order :

(2) If the cheque has been expressly withdrawn after the time-limit for presentation, or when the cheque has not been presented within the time-limit for presentation. In the latter case, withdrawal is only valid as against the drawee after the expiration of the time-limit for presentation.

The drawee, in respect of whom a cheque has been validly withdrawn, may no longer honour it.

Law LVIII/1908, lays down in paragraph 15 that the withdrawal of the cheque by the drawer is valid in respect of the drawee, only :

(1) If the cheque has been withdrawn after the expiration of the time-limit for presentation when it has not been presented for payment within that time-limit; in which latter case, withdrawal is only valid after the expiry of the time-limit for presentation;

(2) If the cheque has been sent direct by the drawer to the drawee with the order to pay the amount to the person entitled to receive it, or to the endorser designated by name or as a firm, and if notice of withdrawal has been received before the order has been carried out.

Withdrawal, which would otherwise have been valid according to No. 1, is null and void if the cheque has been lost, as regards the party who has requested amortisation, when the Courts, within the time-limit for presentation or before the withdrawal of the cheque, have forbidden the drawee to honour it.

It should be observed that according to paragraph 26, No. 2, of Law LVIII/1908, a fine representing two per cent of the amount of the cheque, and at least 200 crowns, is imposed on a drawer who, being aware that, under the terms of paragraph 15, he cannot validly withdraw his cheque, intentionally makes such use of his funds as to render the payment of the cheque impossible.

The provisions with regard to the withdrawal of cheques, as set out in paragraph 13 of Law No. 84/1906, have proved excellent in practice, and the Government of the Czechoslovak Republic recommends their incorporation in the uniform law on cheques.

Question 7.

Neither Law No. 84/1906 nor Law LVIII/1908 make any mention of crossed cheques. They merely refer to cheques only for collection (*nur zur Verrechnung*).

Law No. 84/1906 lays down (paragraph 22) that:

“ The drawer or any endorser of a cheque may, by the words ‘ to be paid to account only ’ written or printed across the face, prohibit the drawee from paying the cheque in currency. In this case, the cheque can only be utilised in accounts with the drawee or with a person having a transfer account, or with a member of the clearing-house of the place of payment. If the drawee is not himself a member of the clearing-house, he may, by words written on the cheque at the time of its presentation, make it payable with some member of the clearing-house (paragraph 4, section 1). The subsequent settlement of accounts is valid as payment of the cheque within the meaning of this law. The drawee is responsible for any loss resulting from the fact that he has not taken this prohibition into account.

“ The words ‘ payable in account ’ may not be withdrawn.”

Paragraph 11 of Law LVIII/1908 contains similar provisions.

These provisions have worked quite well in practice, and the interested circles in Czechoslovakia would be very loth to agree to the abolition of cheques marked “ payable in account ”. The Government of the Czechoslovak Republic is ready to accept the provisions concerning crossed cheques (paragraph 18 of the draft of the Committee of Experts), but recommends that Article 20 of the Hague resolutions of 1912 concerning cheques payable in account should be reinserted.

Question 8.

Paragraph 16, section 1 of Law No. 84/1906 lays down that there can be no recourse against the drawer unless the cheque has been presented for payment within the fixed time-limit. Under the terms of paragraph 19, however, the holder of the cheque may exercise his right of recourse or claim payment of the sum on the sole ground of the original claim he had against the drawer or the previous endorser, which was the reason for drawing the cheque. The holder of the cheque may even plead this claim later, provided there be no agreement to the contrary, when he has not presented the cheque or protested it within the proper time, or when his right of recourse has been forfeited through lapse of time. In this case, however, any damage suffered by the

drawer owing to the fact that the cheque has not been presented to the drawee or has been presented to him too late, has to be made good by the holder, and will be deducted from the amount of the cheque.

Paragraph 18, section 1 of Law LVIII/1908 contains similar provisions.

These provisions have worked well, and the Government of the Czechoslovak Republic would prefer that the uniform law on cheques should not modify them in any way.

Question 9.

Neither Law No. 84/1906 nor Law LVIII/1908 contains any provisions concerning the transfer of cover to the holder. According to existing Czechoslovak law, the latter does not acquire any direct right over the cover.

As the reply to Question 8 shows, the juridical relationship between the holder of the cheque and the drawer or between the holder and the previous holder, being the reason for which the cheque was drawn or transferred, remains as a rule unaffected, even after the cheque has been drawn.

Paragraph 18, section 2, of Law LVIII/1908 contains express provisions concerning an action for inequitable gain. The right of bringing such action belongs to the holder of the cheque who does not possess, against the drawer who has derived inequitable gain to the detriment of the holder, the rights indicated in paragraph 18, section 1.

In the opinion of the Czechoslovak Government, these questions cannot be settled in a uniform law on cheques, and the principle laid down in Article 19 of the draft of the Committee of Experts should be maintained.

Question 10.

According to paragraph 20, No. 4, of the Law No. 84/1906, the provisions regarding forged and altered bills of exchange (at present paragraphs 77 to 79 of the Bills of Exchange, etc., Law of December 13th, 1927, No. 1 of the *Collection of Laws and Decrees* for 1928) also apply by analogy to forged or altered cheques.

The damage caused by the payment of a forged or altered cheque only affects the alleged drawer of the forged cheque or the drawer of the altered cheque if negligence is imputable to him as regards the forgery or alteration, or if the said forgeries or alterations were committed by his employees having to deal with cheques. In all other cases, the drawee has to support the consequences. Any stipulation to the contrary is null and void.

Similarly, paragraph 22, No. 14, of Law LVIII/1908, lays down that the provisions of the Bills of Exchange, etc., Law with regard to forged or altered bills of exchange shall apply to cheques. As regards damage, paragraph 23 lays down:

“ The alleged drawer of the forged cheque or the drawer of the altered cheque is not responsible for damage caused by the payment of the forged or altered cheque unless negligence in connection with the forgery or alteration is ascribable to him or to any of his employees dealing with cheques. Any stipulation to the contrary, if it is more advantageous to the drawee, shall be null and void. ”

In its reply in 1929, the Government of the Czechoslovak Republic recommended that Article 26 of the draft of the Committee of Experts should be amplified in the sense of paragraph 20, No. 4, quoted above, of Law No. 84/1906. It maintains its opinion on this subject.

Question 11.

Paragraph 14 of Law No. 84/1906 states as a general rule that the drawee, in the absence of any legal provisions releasing him from payment, is responsible to the drawer for the payment of the cheque according to the terms of the agreement existing between them.

Paragraph 13 of Law LVIII/1908 specifies:

“ The drawee is bound, if the drawer possesses sufficient funds, to honour the cheque, even if the time-limit for presentation has entirely elapsed.

“ The drawee is responsible to the drawer for the fulfilment of this obligation. ”

The provisions of paragraph 14 of Law No. 84/1906 show that the drawee, in his relations with the drawer, may not, as a general rule, refuse payment of a cheque which is not entirely covered. It should, however, be observed that, both according to paragraph 11, section 2, of Law No. 84/1906, and paragraph 10, section 2, of Law LVIII/1908, the holder of the cheque is not bound to accept partial payment. The Government of the Czechoslovak Republic has already pronounced against the opposite principle laid down in Article 17, paragraph 2, of the draft of the Committee of Experts. Recognising, however, that this question should be settled in the same manner as in the Uniform Law on Bills of Exchange, it does not maintain its objection.

Question 12.

Existing Czechoslovak law does not recognise as valid a bill of exchange, according to which the sum for which the bill is drawn is to be paid, not in money but by a cheque.

The Government of the Czechoslovak Republic does not see any urgent need to insert any special provision on papers of this kind in the Convention concerning cheque law.

Question 13.

Under existing Czechoslovak law, there is no objection to the cheque being typewritten—apart from the necessary signatures. It is not even necessary to make any express provision on this subject.

Question 14.

According to paragraph 21 of Law No. 84/1906, the person whose cheque has been lost may claim its amortisation before a commercial court. The provisions as to the procedure for the amortisation of bills of exchange (at present paragraphs 73-75 of the Bills of Exchange, etc., Law, No. 1, 1928 of the *Collection of Laws and Decrees*) apply to the procedure for the amortisation of cheques, except that the time-limit is fixed at thirty days in the summons. At the beginning of the proceedings for amortisation, the court may, at the request of the petitioner, forbid the drawee—as a provisional measure—to pay the cheque (paragraphs 389-400 of the Rules of Application). The payment of a cheque in spite of such prohibition is null and void as far as the petitioner is concerned.

With regard to procedure, the Decree of August 31st, 1915, No. 257 of the *Collection of Laws of the Empire* on the amortisation of documents, applies.

Law LVIII/1908 lays down, with regard to the loss of cheques (paragraph 20):

“ The owner of a lost cheque may petition for its amortisation before the proper court of the place of payment.

“ The petitioner must submit a copy of the cheque or at any rate indicate its essential contents and prove that he formerly had it in his possession. If the court is of opinion that the data given are sufficient, it forbids the drawee to make payment and summons the holder of the cheque to put forward his claim within thirty days and present the cheque.

“ The time-limit of thirty days begins to run as from the day following the date on which the above-mentioned summons was for the first time published in the official journal of the country.

“ The court may also prohibit payment without obtaining proof of previous possession, provided the petitioner pays into court a deposit, the amount of which the court itself decides. In this case, when forbidding payment, the court fixes the limit-time within which proof of previous possession must be brought forward as additional evidence; if the time-limit has elapsed without such proof being given, the court annuls the prohibition pronounced on behalf of the petitioner.

“ Payment of the cheque in spite of the prohibition is held to be null and void as far as the petitioner is concerned.

“ *Paragraph 21:*

“ If, after proceedings for amortisation have been begun, the owner of the cheque proves that in conformity with paragraph 17 the cheque has been presented for payment within the prescribed time-limit and has not been honoured, he may exercise a right of recourse against the drawer. He may, however, only claim for payment if he pays a deposit into court, to remain in the keeping of the court until the end of the amortisation proceedings. If he does not pay money into court, the owner may merely request that the drawer shall deposit the sum in question with the clerk of the court.

“ If, after the publication of the summons, no holder of the cheque comes forward, the court declares that the cheque has lapsed. But if a holder presents the cheque within the prescribed time-limit, the court discontinues the amortisation proceedings, and calls upon the petitioner, after withdrawing the prohibition on his behalf, to take legal steps to uphold his right of ownership as against the holder of the cheque.”

Question 15.

“ Conflicts between transmission clauses ” probably means cases in which the cheque, as drafted, might be transferred to a new holder in several ways, for instance when it is made out to a person mentioned by name and is also made out “ to bearer ”.

In this connection, it is sufficient to refer to the provisions of paragraph 3, section 3, of Law No. 84/1906, to the effect that a cheque which contains the bearer stipulation, in addition to the name of the person on whose behalf it is drawn, is regarded as a bearer cheque. Paragraph 3, section 3, of Law LVIII/1908 contains the same provision.

Article 4, paragraph 3, of the draft of the Committee of Experts is in keeping with these provisions.

Question 16.

According to paragraph 4 of law No. 84/1906, the only places which may be indicated on the cheque as place of payment are the places in which the drawee possesses a business establishment (or branch thereof) or the place in which the clearing-house of which he is a member is situated. If the place of payment is not mentioned, or the place of payment indicated does not correspond with the conditions mentioned above, the cheque must be regarded as payable in the place where the establishment indicated as drawee has its head office, or else the place where the firm or person designated as drawee has its or his principal establishment.

Existing Czechoslovak law does not recognise domiciled cheques in the strict sense of the term. If provisions concerning the domiciliation of cheques are embodied in the Uniform Law, the text should adhere to the principle laid down in Article 7, paragraph 2, of the draft of the

Question 17.

Law No. 84/1906 does not recognise *duplicata*.

According to paragraph 22, No. 11, of Law LVIII/1908, the provisions laid down for bills of exchange in duplicates (at present paragraphs 66-69 of the Bills of Exchange, etc., Law No. 1/1928 of the *Collection of Laws and Decrees*) also apply to multiple copies of cheques, except as regards the acceptor and acceptance.

In the observations put forward in 1929, the Czechoslovak Government stated that it was opposed to Articles 24 and 25 of the draft of the Committee of Experts, which admit multiple copies. If, in spite of this, the Conference decides to maintain these articles, it should also decide that cheques made out to order, if drawn up in more copies than one, cannot be transferred by endorsement in blank. It would be necessary, moreover, to adapt Article 24 to Article 64 of the Uniform Law on Bills of Exchange.

Question 18.

According to paragraph 18 of Law No. 84/1906, rights of recourse against the drawer and previous holders lapse in three months' time if the cheque is payable in Europe, and in six months' time in other cases. The period of limitation begins to run against the holder of the cheque from the day on which protest is made, or the day on which one of the other proofs of presentation or transfer referred to in paragraph 16 has been duly furnished. But this period only runs against the endorser, if he has paid the cheque before the action is brought, as from the date of payment, and from the date on which the petition was filed in all other cases. According to paragraph 20, No. 5, the provisions laid down for bills of exchange with regard to the interruption of limitation in respect of recourse (at present paragraph 83 of the Bills of Exchange, etc., Law No. 1/1928 of the *Collection of Laws and Decrees*) also apply to cheques, with the additional provision that the presentation on bankruptcy of claims in connection with cheques has the same effect as the filing of a petition.

According to paragraph 19 of Law LVIII/1908, the right of recourse lapses:

- (1) After three months, if the cheque is payable in Europe, excluding Iceland and the Faroe Islands;
- (2) After six months, if the cheque is payable in Iceland or in any of the Faroe Islands, or in any other country outside Europe.

The period of limitation begins to run as against the holder of the cheque on the day after the first working day following that on which the time-limit for presentation expired; against the endorser, if he has paid before the action is filed against him, on the day after the day of payment; in all other cases, the day after the day on which the petition is filed.

Apart from that, the limitation of recourse is regulated according to paragraph 22, No. 15, of the aforesaid Law No. LVIII, by the provisions which apply to bills of exchange.

The Czechoslovak Government does not submit any proposal in this connection.

Question 19.

According to paragraph 15 of Law No. 84/1906, an endorser who has added to the endorsement the words "without guarantee" "*sine obligo*", or any other reservations of the same order, is released from his liability arising from endorsement.

Paragraph 16, section 2, of Law LVIII/1908 contains a similar provision.

The Czechoslovak Government recommends that this principle should be embodied in the uniform law on cheques.

Question 20.

The omission of the date on a cheque, or the inscription of a wrong date, may involve a fine, according to paragraph 25, No. 5, of Law No. 84/1906.

Similarly, paragraph 25, No. 2, of Law LVIII/1908 provides that any person who intentionally omits to date a cheque drawn by him, or who intentionally inserts a wrong date, shall be punished with a fine representing two per cent of the amount of the cheque, and not less than 100 crowns.

The post-dating of a cheque does not, according to Czechoslovak law, have any influence on the validity of the cheque, and the Government of the Czechoslovak Republic agrees to Article 3, paragraph 3 of the draft of the Committee of Experts.

Question 21.

According to paragraph 8 of Law No. 84/1906, acceptance is not recognised in the case of cheques. Any mention of acceptance on a cheque is deemed to be unwritten.

Similarly, Law LVIII/1908 lays down, in paragraph 7, that acceptance added to a cheque is null according to cheque law, and cannot be regarded as acceptance either of a commercial or of an ordinary bill. The question as to what meaning, if any, such an acceptance may have, has to be decided according to general provisions.

Existing Czechoslovak law does not recognise either certification or visa.

The Government of the Czechoslovak Republic accepts the provisions of Article 11, paragraph 2, of the draft of the Committee of Experts, and does not recommend the admission of certification and visa in the uniform law on cheques.

II. OTHER OBSERVATIONS WITH REGARD TO THE COMMITTEE OF EXPERTS' DRAFT.

The Government of the Czechoslovak Republic hopes that the Conference on Cheque Law will take up the same attitude as was adopted by the Conference at its meeting held at Geneva in May and June this year concerning bills of exchange law, and that, consequently, it will prepare a Convention which obliges the contracting parties to promulgate in their territory a uniform law on cheques, this forming Annex I to the above-mentioned Convention. Naturally, therefore, it will be necessary to exclude from the text of the uniform law on cheques some of the provisions which the Committee of Experts has embodied in various articles of its draft, and to set them out in the form of reservations in Annex II to the Convention.

Moreover, the texts adopted for cheques should be carefully harmonised with those already adopted for bills of exchange. In particular, it will be necessary to revise the quotations from articles of the uniform law on bills of exchange, to which the uniform law on cheques refers.

In this connection it may be well to point out:

With regard to Article 1, in its 1929 reply the Government of the Czechoslovak Republic proposed an amendment to Article 1, No. 1. A similar amendment was proposed for Article 1, No. 1, of the Regulation concerning Bills of Exchange and was accepted by the Conference. This amendment has not, however, been embodied in the final text of the act in question. The Conference has merely, in its report on the uniform law for bills of exchange, recognised as justified the opinion which, according to the Czechoslovak proposal, ought to have been expressed in the text itself.

In these circumstances, the Government of the Czechoslovak Republic does not insist on the proposal it made in 1929 with regard to Article 1, No. 1, of the Regulation concerning Cheques. It feels, however, that the opinion expressed in the report concerning Article 1 of the Uniform Law for Bills of Exchange should apply similarly to Article 1 of the Uniform Law for Cheques.

With regard to Article 21, the Government of the Czechoslovak Republic maintains the observations it made in 1929, according to which Article 21 ought to lay down that protest for non-payment, or similar proved circumstances as mentioned in Article 20 should be made at the latest on the first working day after presentation.

With regard to Article 22, in view of the provisions of Articles 48 and 49 of the Uniform Law for Bills of Exchange, in which the rate of interest is fixed at 6 per cent, the Czechoslovak Government does not maintain the objections it made in 1929 to the draft of the Committee of Experts.

With regard to the draft Convention, in view of the results achieved at the session of the Geneva Conference, the Government of the Czechoslovak Republic does not maintain its objections to Article 1, paragraph 2, and Article 3, paragraph 3.

Similarly, it does not maintain its objection to Article 10, for it recognises that, in relations with States which do not accept the provision to the effect that a cheque must always be payable at sight (Article 13 of the regulation) the suggested clause may have some practical value.

15. Great Britain.

Question 1.

The Bills of Exchange Act 1882 (Section 73) defines a cheque as " a bill of exchange drawn on a banker payable on demand ". Thus, from the point of view of the United Kingdom, a cheque is a special form of a bill of exchange with certain peculiar incidents of its own, and the distinctions between cheques and ordinary bills of exchange arise from the fact that the relationship of banker and customer subsists between the drawer and drawee of a cheque. The conception of a cheque drawn on some person who is not a banker must therefore be excluded so far as English law and banking practice are concerned.

Question 2.

English law leaves it to the parties to make their own arrangements as to the circumstances in which a customer may draw a cheque on his banker.

As a rule, a cheque is, by agreement, drawn against funds in the hands of a banker but, in other cases, it may be drawn in pursuance of an agreement for an overdraft, by which the banker, although not placed in funds, undertakes to honour cheques drawn on him by the customer up to a fixed amount. The banker is not under any obligation to honour a customer's cheque in circumstances other than those indicated above. If there is an agreement between the banker and the customer that cheques are only to be drawn against funds in the banker's hands, such funds must be available when the cheque is presented for payment.

Question 3.

This clause is never inserted in cheques drawn in the United Kingdom.

Question 4.

It follows from the definition of a cheque contained in Section 73 of the Bills of Exchange Act 1882 that a cheque must always be payable on demand. (See, however, answer to Question 20.)

Question 5.

In England, a cheque may be enforced by action against the drawer at any time within six years, unless the drawer can prove that he has been prejudiced by delay in presentation. The endorsers are, however, discharged from liability if a cheque is not presented for payment within a reasonable time.

It is provided by the Bills of Exchange Act 1882 (Section 74) that, in determining what is a reasonable time, regard shall be had to the nature of the instrument, the usage of trade and of bankers and the facts of the particular case. Although this rule may appear to be lacking in precision, it works well in practice.

It may be added that it is the custom of English bankers not to pay a cheque which has been in circulation for more than six months (or twelve months in the case of certain banks) without further instructions from the drawer. This custom has not been judicially recognised up to the present.

Question 6.

The drawer of a cheque is at liberty to countermand payment, and the banker on whom the cheque is drawn must give effect to such countermand (Section 75 of the Bills of Exchange Act 1882). Such countermand does not however affect the liability of the drawer of the cheque to a holder in due course.

This right of countermand serves a very useful purpose in cases where the owner of the cheque has been deprived of possession of the instrument by reason of loss or theft or any other cause.

A certain amount of difficulty is experienced where the countermand takes the form of a telegraphic or telephonic message which cannot readily be verified by the banker, but, apart from this, it does not give rise in practice either to inconvenience or to hardship, because it is a right which the drawer will not, from the very nature of the case, make use of, unless in very exceptional circumstances.

Question 7.

A crossed cheque can only be paid by the drawee banker to another banker.

Cheques may be crossed "generally"—*i.e.*, the banker to whom payment is to be made is not named in the crossing. Cheques may also be crossed "specially"—*i.e.*, the banker who is to receive payment is mentioned in the crossing, in which case payment can only be made to the named banker. Cheques may also be crossed with the addition of the words "not negotiable". The employment of this last mentioned crossing does not render the cheque non-transferable, but a person acquiring a cheque so crossed, takes it subject to any defect in the title of his predecessors. A cheque so crossed can therefore be endorsed, but the endorsement operates solely as an ordinary assignment.

In addition to the crossings referred to, all of which are sanctioned by the Bills of Exchange Act, 1882, a practice has grown up of recent years by which cheques are crossed with the addition of the words "account payee" to the crossing. This crossing is not recognised by the Bills of Exchange Act 1882, but it is well settled by judicial decisions that such a crossing does not render the cheque not negotiable or non-transferable, and that the effect of the words "account payee" is to fix the collecting banker with responsibility if he collects the proceeds of the cheque for anyone other than the payee named in the body of the cheque. If he does so, he is deemed to have acted negligently and loses the protection, hereafter mentioned, which the law affords to bankers collecting crossed cheques.

By Section 80 of the Bills of Exchange Act 1882, a banker paying a crossed cheque strictly in accordance with the crossing and in good faith and without negligence is relieved from all responsibility. Further Section 82 of the Act also protects a collecting banker who has collected the proceeds of a crossed cheque in good faith and without negligence for a customer who subsequently turns out to have either no title, or a defective title, to the cheque.

As regards cheques drawn *nur zur Verrechnung*, it may be pointed out that the results obtained by drawing a cheque in this way would appear in practice to be secured by the use of a crossing accompanied by the words "account payee", in accordance with the practice and law in the United Kingdom.

Question 8.

This question has already been dealt with in the answer to Question 5.

Question 9.

(a) The legal concept of *provision* (cover) is not known to English law. It may be added that the presentment of a cheque does not (except in Scotland) operate as an assignment to the drawee of any part of the funds in the bankers' hands against which it is drawn.

(b) There is no counterpart in the English legal system to the *action d'enrichissement*.

Question 10.

(a) In general, the risk of forgery falls on the paying banker. But there is one very important exception to this rule. By Section 60 of the Bills of Exchange Act 1882, bankers paying order cheques are relieved from the duty of verifying the endorsements on the cheque, though they must prove that the cheque in question was paid by them in good faith and in the ordinary course of business, and that the endorsement purported to be that of the payee—*i.e.*, that it was *prima facie* correct. A banker collecting an order cheque crossed generally or specially to himself with a forged endorsement will be protected if he satisfied the conditions laid down in Section 82 of the Bills of Exchange Act 1882 (see answer to Question 7).

(b) The question presumably refers to fraudulent alterations. If so, the general rule is the same as in the case of forgery, subject to this—that, if the alteration has been rendered possible by want of reasonable care on the part of the drawer when writing out the cheque, the loss will fall upon him and not on the banker on whom the cheque is drawn.

Question 11.

The drawee banker is bound to refuse partial payment of a cheque. Otherwise he would be acting in breach of his contract with his customer, and it is probable that in the majority of such cases a partial payment would be contrary to the rule of the English law of bankruptcy, which forbids a preference of a particular creditor to the detriment of the others.

Question 12.

A bill of exchange must be drawn with reference to a "sum certain in money" (Bills of Exchange Act, 1882, Section 3). A stipulation in the body of the cheque that payment should be made by another cheque would therefore render the instrument invalid. Section 9, 1 (d), however provides that the sum payable is a sum certain, although it is payable according to an indicated rate of exchange or according to a rate of exchange to be ascertained as directed by the bill.

Bills payable abroad are sometimes by agreement drawn for a sum "payable at the rate of exchange for sight drafts on London on the day of payment". Such bills are valid and would, in practice, often be paid by a cheque on a London bank.

Question 13.

Typewritten cheques are valid by English law but are discouraged by English bankers because typewriting is more easily capable of fraudulent alteration than handwriting.

Question 14.

The procedure of amortisation is not known in England. The Bills of Exchange Act 1882 contains certain provisions the object of which is to enable a holder of a cheque to enforce payment of a lost instrument, on giving security against claims which may be made thereafter on the bill by other persons (Sections 69 and 70 of the Bills of Exchange Act 1882).

Question 15.

This is a matter which does not appear to arise under English Law.

Question 16.

The only circumstances in which cheques are domiciled for payment are when cheques drawn on certain merchant bankers and non-clearing bankers in the City of London are presented for payment by other bankers; they are then accepted, payable at the office of the clearing agent of the drawee banker.

Question 17.

Inland cheques are never drawn in sets in England, but sometimes sight or demand drafts drawn by a London bank on a bank abroad, or *vice versa*, are so drawn.

Question 18.

(a) As against the drawer, all rights of action are barred when six years have elapsed from the date when notice of dishonour is received. But as for the most part the giving of notice of dishonour is excused in the case of cheques, time will run as a rule from the date of dishonour.

(b) The rule is the same as regards endorsers.

(c) The rules of the law in general relating to the revival of claims barred by lapse of time are also applicable to rights of action against the drawers or endorsers of cheques.

Question 19.

Ordinarily an endorser guarantees payment of the amount of the cheque to the holder, but by the use of appropriate words he may exclude his liability (Section 16 of the Bills of Exchange

Act, 1882). He is also discharged as already stated, by the failure of the holder to present the cheque for payment within a reasonable time (Section 74 of the Bills of Exchange Act, 1882).

Question 20.

Post-dated cheques are declared to be valid by Section 13 (2) of the Bills of Exchange Act. The drawee banker must not, however, pay such a cheque before the ostensible date it bears, for by doing so he would be disregarding the instructions of the drawer.

Post-dated cheques are disliked by bankers, but it is doubtful whether they would be prepared to agree to their prohibition under penalty. Such a penalty would be difficult to enforce if it were necessary to prove that the post-dating was intentional.

Question 21.

(a) It is the practice to accept cheques only in the circumstances described in the answer to Question 16 and such cheques are never negotiated after acceptance.

(b) The marking or certification of cheques is practically unknown in English banking practice. The only case in which cheques are marked by a drawee banker is when they reach the hands of a collecting banker too late for presentation through the clearing-house on the same day. Such marking is recognised by the custom of bankers as binding between the bankers concerned.

(c) The practice of writing a visa on sight bills is not known in the United Kingdom, but is occasionally met with on bills payable after sight.

16. Spain.

[*Translation.*]

Question 1.

The Spanish system is different (see Article 534 of the Commercial Code of 1885, which is still in force, and Article 623 of the preliminary draft of the New Commercial Code).

The system proposed in Article 5 of the resolutions of the second Hague Conference of 1912, which conforms to the remarks of the Hungarian Government, would appear preferable. It is apparently also adopted by the French legislation (see French Law of June 14th, 1865, Article 1).

Question 2.

According to Spanish law, before the issue of the cheque (Article 536 of the Code of 1885, Article 528 of the preliminary draft makes no change in the principle).

For France see Article 2 of the Law of June 14th, 1865, already quoted.

Question 3.

Spanish law is silent on this point.

Question 4.

This is so under Spanish law (Article 539 of the Code of 1885, Article 629 of the preliminary draft).

Similarly in France (Article 1, paragraph 3, of the Law of June 14th, 1865).

Question 5.

Under Articles 537 and 538 of the Code in force (Code of 1885) the time-limit is counted from the date of the cheque.

Under Article 639 of the preliminary draft the time-limit is counted from the date of the introduction of the cheque into Spain. This is the system under the Code of 1885 for bills at sight or at so many days after sight, drawn in foreign countries on Spanish markets, to be presented for payment or acceptance within forty days from their introduction into the Kingdom.

This system appears preferable, though it is less practical from the point of view of proof, since, under the present system, the date of issue of the cheque is always known, being on the cheque itself.

In any case, it appears to be very desirable to reckon from the date of the cheque, as under the French law (Law of June 14th, 1865, Article 5).

Question 6.

The French system (Article 12 of the Law of June 14th, 1865, as amended by the Law of August 26th, 1926) appears sound, and acceptable in case of loss or theft, but not in the case of

insolvency of the holder: see reasons given in Article 15 of the Draft Convention for the Settlement of Certain Conflicts of Laws in connection with Cheques.

Question 7.

Code of 1885, Article 541, and preliminary draft, Articles 632 and 633.

The system of the Spanish preliminary draft appears preferable to the system proposed, as also to the French system (last sentence of paragraph 1 of Article 8 of the Law of December 30th, 1911).

Question 8.

The drawer is liable except in the two cases specified in Article 537, paragraph 2, of the Code of 1885. Article 630, paragraph 2, of the preliminary draft adds a third case—viz., meeting of the creditors.

The wording of the French Law (Article 5, paragraph 2) appears more comprehensive: it relates to circumstances *subsequent* to the fixed period of time.

Question 9.

This question is no doubt difficult: it should be kept in mind in connection with the proposed unification. A solution might at any rate be attempted on the lines of giving priority to the holder in the case of bankruptcy of the drawer.

Question 10.

Apart from what may be applicable of the provisions with regard to bills of exchange in Article 69 of the Uniform Regulations, it does not appear easy to find a solution such as could be incorporated in the Convention. The only solution would appear to be a provision leaving the question to each country to settle by its own legislation.

Question 11.

The Code of 1885 has no explicit provision on the point. The preliminary draft deals with it in Article 628, paragraph 2, from which it may be inferred that payment cannot be refused in such case; this accords with the provision of the French Law of August 12th, 1926, Article 2, paragraph 2.

Question 12.

No provision is made for this case as regards cheques either in the Code or in the preliminary draft.

The French Law of August 28th, 1924, and Article 13 of the Law of August 12th, 1926, appear to cover the case.

Question 13.

Neither the Code of 1885 nor the preliminary draft have any explicit provision on the point in the articles dealing with cheques. There is a provision with regard to the date of the cheque in the second sub-paragraph of paragraph 6 of Article 1 of the French Law of June 14th, 1865, as amended by the Law of February 19th, 1874, which says that the date must be written in full (in words) and by the hand of the person drawing the cheque.

In practice, typewriters are used with a special arrangement which prevents (or renders difficult) forgeries and alterations, and with a special device which writes in the amount of the cheque in figures (in addition to the specification of it in words in the body of the cheque).

Question 14.

This is a matter for the legislation of the country in which the cheque is payable.

Question 15.

It should not be in the power of a third party to alter the form of transmission on which the drawer has decided. This would appear to be a matter for the legislation of the country in which the cheque is payable.

Question 16.

No explicit provision in the articles dealing with cheques.

Question 17.

The position in Spain is governed by Article 540 of the Code of 1885 (see also Article 629 of the preliminary draft).

Question 18.

Article 950 of the Code of 1885, which is reproduced in Article 185 of the preliminary draft.

Question 19.

Article 542 (in conjunction with Article 467) of the Code of 1885.
Articles 636 and 549 of the preliminary draft.

Question 20.

French law takes the view that no penalties should attach to failure to date a cheque properly, except from the point of view of taxation (Article 6, paragraph 1, of the Law already quoted). This solution appears admissible, and preferable to treating post-dated cheques as not being cheques but mere promises to pay.

Question 21.

There is no provision on the point in the Articles of either the Code of 1885 or the preliminary draft which deal with cheques.

There is an indirect reference to acceptance in Article 532 of the Code of 1885 which, in determining the liability and effect of promissory notes given by one firm to another, says: ". . . save in the case of acceptance which is reserved to . . . bills of exchange".

Article 539 says: "Cheques are payable by the drawee at the moment of presentation".

Article 639 of the preliminary draft says: "The drawer may not issue cheques payable otherwise than at sight".

The French law is similar (last paragraph of Article 1 of the Law already quoted).

The following observations are suggested by texts of the three Conventions concerning bills of exchange, and promissory notes, signed at Geneva on June 7th of this year, and the Spanish legislation on the subject.

A. GENERAL OBSERVATIONS.

1. The Conventions (regarding cheques) should also be three in number.
2. The headings should be similar to those of the Conventions on Bills of Exchange.
3. The titles and headings of the Uniform Law for Cheques (" Issue and Form of Cheques ", " Guarantee and Payment ", " Endorsement ", etc.) should be made into chapters and numbered as in the case of the Conventions on Bills of Exchange.

B. OBSERVATIONS ON THE DRAFT REGULATION CONCERNING CHEQUES.

Article 1 (2).

The word "*ordre*" in the French text might be replaced by "*mandat*" (Article 534 of the Spanish Commercial Code).¹

Article 2, Paragraph 3.

The words "*sans indication*" in the French text might be replaced by "*n'indiquant pas*", to conform with Article 3 of the Uniform Law for Bills of Exchange and Promissory Notes.¹

Article 5.

The provisions of this article are not in accordance with the Spanish system (Article 534 of the Commercial Code), and the remarks of the Hungarian Government (preparatory documents, page 74) seem to the point: see reply to point 1 of page 30 of document C.346.M.142.1930.II).

Article 7.

The changes made in the final draft of Articles 7 and 8 of the Uniform Law on Bills of Exchange must be considered preferable, as being more complete; the reference should therefore be to these articles *as thus drafted*.

Article 10 of the Uniform Law for Bills of Exchange did not appear in the draft, but in its present form, it would seem that its provisions regarding incomplete bills of exchange might also be made applicable to cheques.

¹ This will not affect the English text.

Article 8.

Is not in accordance with the Spanish system. Only cheques to order may be transferred by endorsement (Article 535 of the Commercial Code).

Article 9.

The text of Article 12, paragraph 3 of the Uniform Law on Bills of Exchange should be kept in view in the drafting of the third paragraph of this article.

The remark of the Danish, Finnish, Norwegian and Swedish Governments with regard to the word "place" (preparatory documents, page 75) appears to be well founded.

Article 10.

The new text of Article 12 to 18 of the draft Regulation concerning Bills of Exchange, which now appear as Articles 13 to 19 of the Uniform Law, should be taken into account, a reference of course being inserted to Articles 13 to 18 of the said Law.

Article 12.

Note that the articles to which this article refers are now Articles 31 and 32 of the Uniform Law on Bills of Exchange. The changes which the Conference accepted in the first paragraph of Article 29 of the draft (now Article 30 of the Uniform Law) and in the third paragraph of Article 31 of the draft (now Article 32 of the Uniform Law) should also be kept in view.

Article 14.

In accordance with the principle to which the remark of the Czechoslovak Government draws attention, the minimum period of presentation should be five days (Article 537 of the Commercial Code), the various countries being left free to increase the period, etc.

Article 18.

The principle embodied in Article 19 of the Hague resolutions has no doubt influenced the drafting of the articles of the preliminary draft of the new Commercial Code which deal with the subject.

Article 22.

The wording approved by the Conference in Article 48 (3) of the Uniform Law on Bills of Exchange (slightly modifying Article 47 of the draft regulation) might be adopted in this case.

Article 23.

A reference should be made to Articles 45 to 47 and 49 and 50 of the Uniform Law, with the changes introduced into the corresponding articles of the draft regulation (Articles 44 to 46 and 48 and 49) by the Conference, because, in each case, it preferred the new text.

Article 24.

The rule in Spain is different (Article 540 of the Commercial Code). Apart from this, the change in the wording of Article 63 of the draft regulation (now Article 64 of the Uniform Law) should be retained in this article, although it appears doubtful whether the new third paragraph can be accepted, except in so far as it related to cheques issued in one State and payable in another State or in another (oversea) part of the State in which they were issued.

Article 25.

The remark of the Danish, Finnish, Norwegian and Swedish Governments must be endorsed, if the system of certification proposed in Article 11 is approved.

Article 26.

The heading "Chapter X—Forgeries and Alterations" of Articles 68 and 69 of the draft regulation having been replaced by the heading "Chapter X—Alterations" in Article 69 of the Uniform Law approved by the Conference, the latter form ("Alterations") should be used here, with a reference to Article 69 of the Uniform Law.

Article 29.

Article 73 (a) of the draft regulation having become Article 74 of the Uniform Law, the reference should be to Articles 72, 73 and 74 of the latter.

C. OBSERVATIONS ON THE DRAFT ARTICLES OF A CONVENTION.

Article 1.

This article, which should be worded similarly to the corresponding article on bills of exchange and promissory notes, together with the usual articles in regard to signature, ratification, etc., might constitute, on the precedent of the other subjects dealt with, a convention in regard to stamp duties on cheques.

Article 3.

If the above proposal is accepted, the object of Article 2 will be to settle certain conflicts of laws in the case of cheques. It seems better to word it similarly to Article 2 of the Convention on Bills of Exchange and Promissory Notes (see the interesting communication by Professor M. Diena in document C.I.L.C.59 (proof), Geneva, June 21st, 1930, pages 30 and 31).

Article 4.

A third paragraph should be added similar to the (new) third paragraph of Article 3 of the Convention for the Settlement of Certain Conflicts of Laws in the case of Bills of Exchange and Promissory Notes (see report quoted, page 30, No. 195).

Article 6.

The wording of Article 4 of the Convention for the Settlement of Certain Conflicts of Laws in the case of Bills of Exchange and Promissory Notes (in so far as applicable to cheques) seems preferable.

Article 7.

The compromise wording of Article 6 of the Convention for the Settlement of Certain Conflicts of Laws in the case of Bills of Exchange and Promissory Notes might be followed.

Article 13.

This article embodies the principle accepted in the case of bills of exchange and promissory notes in Article 7 of the Convention above quoted: the wording of the latter might therefore be followed.

Article 15.

The words "in the case of the holder's bankruptcy" should be omitted, as in Article 9 of the Convention above quoted, for the reasons given by Professor Diena in document C.I.L.C.59 already quoted, pages 32 and 33, No. 203.

Article 16.

In Article 10 of the Draft of a Convention for the Settlement of Certain Conflicts of Laws in the case of Bills of Exchange and Promissory Notes (preparatory documents, pages 23 and 72), as also in Article 10 of the final Convention, reference is only made to the principles of international private law which the Convention embodies, whereas, in this Article 16, there is a reference to the draft regulation in addition.

On page 32 it is stated that the text reproduces Article 20 of the Hague Convention on Bills of Exchange and Promissory Notes, which is true (see preparatory documents, page 44).

But, in the observation appended to Article 10 of the Draft of a Convention for the Settlement of Certain Conflicts of Laws in the case of Bills of Exchange and Promissory Notes (see document quoted, page 23), it is said that Article 10 reproduces Article 20 of the Hague Convention of 1912; and yet the article, which has gone through into the final Convention in this form only alludes to the Convention.

[*Translation.*]

CHEQUES. — LEGISLATION IN FORCE: PROPOSED REVISION OF THE
COMMERCIAL CODE.

SPANISH COMMERCIAL CODE OF AUGUST 22nd, 1885 (Book II, Chapter II. — Second Part); ORDERS TO PAY,
KNOWN AS CHEQUES.

Article 534.

An order to pay, known in commerce by the name of cheque, is a document which enables the drawer to withdraw in his own favour or in favour of a third person the whole or part of the funds held at his disposal by the drawee.

Article 535.

An order to pay must certain:

- The name and signature of the drawer;
- The name and domicile of the drawee;
- The amount and the date of issue, which must be expressed in words;

and must state whether it is made out to bearer, in favour of a specified person, or to order; in the last case, it shall be transferable by endorsement.

Article 536.

An order to pay may be drawn on the same market or on another market, but the drawer must have previously deposited the necessary funds with the drawee.

Article 537.

The holder of an order to pay must present it for payment within five days of the date of issue, in the case of orders drawn on the same market and within eight days in the case of those drawn on some other market.

A holder who fails to present the cheque within this time loses his right of recourse against the endorsers, and shall also lose it against the drawer, if the funds held by the drawee are no longer available owing to the latter's suspension of payments or bankruptcy.

Article 538.

The time-limit of eight days fixed in the previous article for orders to pay drawn by one market on another shall be extended to twelve days from the date of issue in the case of orders drawn on foreign markets.

Article 539.

The order is payable by the drawee at the moment of presentment.
The person to whom it is paid shall state his name and the date of payment on the receipt.

Article 540.

Duplicate orders to pay may not be issued until the originals have first been cancelled after the expiration of the time allowed for presentment: the consent of the drawee must also be obtained.

Article 541.

The drawer or any legal holder of an order to pay shall have the right to specify that it shall be paid to a certain banker or company: this shall be done by crossing the order on its face and writing the name of the said bank or company or simply the words " and Co. " between the lines.

Payment wrongly made to some person other than the banker or company mentioned shall not relieve the drawee of liability.

Article 542.

The provisions laid down in the present Code concerning the joint liability of the drawer and endorsers, protests and the exercise of the right of recourse in respect of bills of exchange shall be applicable to orders to pay.

Article 543.

Bankers' or mercantile companies' orders to pay in current account, known by the name of " talones " (counterfoil cheques) shall be governed by the foregoing provisions in so far as they are applicable.

SPANISH COMMERCIAL CODE OF AUGUST 22nd, 1885; OTHER ARTICLES OF THE CODE REFERRED TO IN THE REPLIES TO THE QUESTIONNAIRE.

J

Article 467.

The endorsers shall be jointly and severally liable for the value of the bill, if it is not accepted, and for its payment, including the costs of protest and re-exchange, if it is not paid at maturity, provided the formalities of presentment and protest have been carried out in the time and manner stipulated in the present Code.

The endorser's liability shall cease if, when transferring the bill, he inserts the clause " without liability ".

In such case, the endorser shall only be responsible as regards the identity of the transferer or his right to transfer or endorse the bill.

Article 474.

Bills drawn at sight or at a fixed period after sight in foreign countries on markets in Spanish territory, shall be presented for payment or acceptance within forty days of their introduction into Spain: and bills payable on a fixed date within the time stipulated therein.

.....

Article 532.

Drafts payable to order between merchants and promissory notes also payable to order, in respect of commercial transactions, shall involve the same obligations and have the same effects as bills of exchange, except as regards acceptance which is reserved to the latter.

Promissory notes which are not made out to order shall be regarded simply as promises to pay and shall be subject to the common or mercantile law according to their nature, except as otherwise provided in the following chapter.

.....

Article 950.

Actions arising out of bills of exchange shall be barred after three years reckoned from the date of maturity, whether they have been protested or not.

The same rule shall apply to drafts and commercial bills, cheques, " talones " (counterfoil cheques) and other exchange instruments, as well as to dividends, coupons and sinking fund payments on bonds issued in accordance with the present Code.

PRELIMINARY DRAFT OF THE NEW COMMERCIAL CODE (Book II, Chapter IX. — Second Part); CHEQUES.

Article 623.

A cheque is a mercantile document containing an order to pay the whole or part of the funds of the drawer held at his disposal by a third person.

Article 624.

A cheque may be drawn in favour of the drawer or of another person, on the same or on some other market.

Article 625.

A cheque may be made payable to a specified person, to order or to bearer: it may be left uncrossed or be crossed in the manner and for the purposes stipulated in Articles 632 and 633.

A cheque made out in favour of a specified person may not be converted into a cheque to order to bearer, nor vice versa, except as regards the provisions relating to crossing.

Article 626.

A cheque made out in favour of a specified person may be transferred by an ordinary transfer, a cheque made out to order by endorsement, and a cheque made out to bearer by simply handing it over.

Article 627.

A cheque must contain:

- The name and signature of the drawer;
- The name and domicile of the drawee;
- The amount, expressed in words and in figures;
- The date of issue, the day and month being expressed in words;

and must state whether it is to bearer, to order, or in favour of a specified person.

An instrument in which any of these requirements are wanting is invalid as a cheque, without prejudice, however, to the provisions of the common law in the matter.

Article 628.

No person may issue cheques without previously furnishing the drawee with available funds or obtaining the latter's permission to draw on account of some credit against which the amount of the cheque will be charged by the latter to the drawer.

If the funds available or the amount of the credit allowed to the drawer are smaller than the sum indicated in the cheque, the latter shall produce its full effects up to the amount of the funds or the credit in question.

Article 629.

The drawer may not issue cheques payable otherwise than at sight, nor duplicates until the originals have been cancelled after the expiration of the time allowed for presentment: the consent of the drawee must also be obtained.

Article 630.

The holder of a cheque shall require the drawee to pay it on presentment: the cheque must be presented within five days of the date of issue if it was drawn on the same market, within eight days if it was drawn on some other market in Spanish territory, or, it was drawn on a foreign market, within twelve days, reckoning from the date of its introduction into Spain.

A holder who fails to present a cheque within the proper time shall lose his right of recourse against the endorsers and against the drawer if the funds held by the drawee are no longer available owing to the latter's suspension of payments, bankruptcy or a meeting of his creditors.

Article 631.

The person to whom a cheque is paid shall state his name and the date of payment on the receipt, unless the cheque is made out to bearer.

Article 632.

The drawer and any holder shall have the right to cross the cheque.

If this is done by drawing two parallel lines diagonally across the face of the cheque and writing between them the words "and Co.", the crossing is a general one and the cheque may only be presented for payment by a banker or a mercantile company.

If the name of a specified banker or company is written between the two lines the crossing is a special one and payment must be made exclusively to the person or company mentioned.

Article 633.

A general crossing may be converted into a special crossing by any holder of the cheque, but a special crossing cannot be converted into a general crossing.

The holder is forbidden to efface the crossing or the name of the banker or company specified.

Payment wrongly made to some person other than the person mentioned in the crossing whether general or special shall not relieve the drawee of responsibility.

Article 634.

The drawer and holder of the cheque may prohibit cash payment by writing across the face of the cheque the words "payable in account" or some other similar expression.

Article 635.

The settlement of cheques by the clearing system shall be governed by the special provisions relating to this matter or by the statutes of the companies.

Article 636.

Cases not provided for in the foregoing articles shall be governed by the provisions relating to bills of exchange in so far as these are applicable.

PRELIMINARY DRAFT OF THE NEW COMMERCIAL CODE: OTHER ARTICLES REFERRED TO IN REPLIES
TO THE QUESTIONNAIRE.

Article 549.

The endorsers shall be jointly and severally liable for the value of the bill, if it is not accepted, and its payment, including the expense of protest and re-exchange, if it is not paid at maturity, provided the formalities of presentment and protest have been carried out in the time and manner stipulated in the present Code.

The endorser's liability shall cease if, when transferring the bill, he inserts the clause: "without liability".

In such case, the endorser shall only be responsible as regards the identity of the transferrer or his right to transfer or endorse the bill.

The insertion of the foregoing clause by a drawer who is also an endorser, in the case of bills drawn in accordance with No. 1 of Article 526, shall only relieve him of his responsibility as an endorser but not as a drawer.

Article 526.

The drawer may make out a bill of exchange:

1. To his own order.

17. Free City of Danzig.

[*Translation.*]

The German Cheque Law of March 11th, 1908 (published in the *Reichsgesetzblatt*, page 71), as amended by the Danzig Law of September 26th, 1930 (published in the *Danziger Gesetzblatt*, page 194), applies in the territory of the Free City of Danzig. The latter Law regulates post-dated cheques in the same way as the German Law of March 28th, 1930 (published in the *Reichsgesetzblatt* I, page 107). The Cheque Law of March 11th, 1908, is hereinafter referred to as "Sch. G." (*Scheckgesetz*).

The following are our views on the questions submitted by the Conference. Under (a) of each number we give the provisions of Danzig law and under (b) our point of view on the question.

Question 1.

(a) Under Section 2 Sch.G., cheques must only be drawn (apart from public institutions) on firms entered in the Commercial Register which carry on the business of banking. Furthermore, the obligation to use the forms prescribed by bank regulations is an effective guarantee that cheques drawn on persons other than bankers (and public institutions) will not be put into circulation.

(b) With a view to the security of cheque circulation, the drawing of cheques on persons not carrying on the profession of banking should be prohibited. But, for the same reason, the validity of a cheque should not be affected if it is nevertheless drawn on another person. Article 5, paragraph 1, of the Hague resolutions is therefore preferable.

Question 2.

(a) The *Guthabenklausel* of section 1, No. 2 Sch.G., is a purely formal requirement. The legal existence of a cheque is not conditional on the actual existence of cover.

(b) As the cheque is essentially a means of payment, the drawer should in principle be required to keep funds with the drawee. The validity of the cheque, however, must not be affected by absence of funds at the proper moment.

The moment at which funds should be available is the time of presentation.

Question 3.

(a) Under Section 1, No. 2, Sch.G., definite mention of cover is obligatory.

(b) The *Guthabenklausel* (compulsory mention of cover) is the stipulation that the amount of the cheque must be paid out of the drawer's funds. It is regarded as a formal requirement and does not imply that the drawer must have funds in the hands of the drawee. It could thus be

dispensed with, but should be retained, as it has proved useful and simplifies, in particular, criminal law procedure in the case of cheque frauds.

Question 4.

(a) Under Section 7, Sch.G., a cheque is payable on demand; if any other time of payment is mentioned, the cheque is null and void.

(b) A cheque should always be made out payable on demand. The provision in the Geneva Draft (Article 13, second sentence), that any contrary stipulation is deemed to be unwritten, facilitates circulation and is preferable to the Danzig regulation.

Question 5.

(a) Under Section 11, Sch.G., the time-limit for presenting inland cheques is ten days, and, in accordance with the Regulation of March 19th, 1908, from three weeks to three months for foreign cheques.

(b) Uniform regulation of time-limits for presentation is desirable. The general adoption of a uniform time-limit for the presentation of *inland* cheques is also perfectly feasible. Too short a time-limit should be avoided, as inland cheques are sometimes also sent abroad in payment. The ten days' time-limit of the Hague resolutions is therefore preferable.

It is hardly possible to adopt a uniform time-limit of presentation for cheques *drawn in one country on another country*. The regulation of this matter should, in accordance with Article 14, paragraph 3, of the Geneva draft, be left to the individual countries. In this connection, the law of the place of payment is, as stipulated in Article 14, paragraph 1, of the Geneva Draft, decisive.

Question 6.

(a) Under Section 13, paragraph 3, Sch.G., the countermanding of the order contained in a cheque is only operative after the time-limit of presentation has expired.

(b) In the interest of the security of cheque circulation, the *unrestricted* right of withdrawal should not be allowed. At the same time, however, this right of withdrawal should not be entirely *excluded*. Preference should be given to the stipulation suggested in Article 17 of the Hague resolutions, under which countermand of the order contained in a cheque shall only take effect after the expiration of the time for presenting it. This clear, simple and certain stipulation would be equally appropriate and applicable as a general international regulation. There would then be no necessity for the experts' recommendation that the question should be left to the States to decide.

Question 7.

(a) The crossed cheque is not known in Danzig law and practice. Only the *Verrechnungsscheck* (cheque only for collection) is recognised. This cheque is dealt with in Section 24, Sch.G.

(b) As crossed cheques are not known in Danzig, no view is expressed on the question whether it would be possible and desirable to combine in a single type both forms of cheque. We think, however, that such combination is not desirable, as it would conceivably weaken the effects of *both* forms or lead to a falling-off in their use. As the cheque only for collection has proved extremely useful in practice, States which use no other form must be allowed to continue to do so; it should preferably not be replaced in such countries by the crossed cheque.

Question 8.

(a) Under Section 15, 16 *et seq.*, Sch.G., the drawer is only liable if the cheque has been presented within the proper time-limit and if notification has been made of non-payment; otherwise he is only liable under Section 21, Sch.G. for inequitable gain.

(b) The rule that the drawer is not liable if the cheque is not duly presented within the prescribed period should be adhered to. This legal consequence clears up the situation promptly and therefore facilitates cheque circulation. An action for inequitable gain should be permitted when necessary.

Question 9.

(a) Danzig law does not deal with the case of the transfer of cover to the holder. A cheque does not give rise to any direct relations between the holder and the drawee.

(b) No opinion is therefore expressed on this point; compare also Article 19 of the Geneva draft.

Question 10.

(a) Under the usage of the Danzig courts the risk of forgery and alteration falls on the drawee, except where the drawer is at fault. When arranging terms of business, banks usually transfer the risk to the drawer, so far as this is legally permissible—*i.e.*, not contrary to public policy.

Exemption from liability in the case of fraud and gross negligence is, for example, contrary to public policy.

(b) Some such regulation as to the above would seem expedient but not essential.

Question 11.

(a) This question is not dealt with in the Danzig Cheque Law.

(b) The question as to whether and how far the drawee is bound to pay the cheque, depends on the terms on which the cheque account was opened—*i.e.*, on the mutual relations between the drawer and the drawee, and is, very properly, not dealt with in the regulation.

Question 12.

(a) No provision in the Danzig Cheque Law.

(b) This is a question to be regulated by bills of exchange law. In Article 41 of the "Uniform Law on Bills of Exchange" a clause, in addition to the stipulation for effective payment in foreign currency might be inserted for the purpose, under which payment by a cheque drawn on abroad is also permissible. If such a stipulation, however, is interpreted to mean that the drawee is not *obliged*, but only entitled, to pay the bill by means of a cheque, there is no need for regulating the question.

Question 13.

(a) No provision in the Danzig Cheque Law.

(b) There is no objection to type-written cheques. Naturally, the signature must be written by hand.

Question 14.

(a) Under Section 27, Sch.G., cheques which have been lost or destroyed are invalid by a procedure of amortisation.

(b) As this procedure is very long and complicated, it should not be laid down in the regulation itself. Article 15 of the Convention is approved of.

Question 15.

(a) No provision in the Danzig Cheque Law.

(b) In the case of conflicts between transmission clauses, the decisive clause should be that giving the greatest facilities for transfer. There is no justification for declaring a cheque invalid owing to conflicts between transmission clauses. No special provision in the regulation is called for.

Question 16.

(a) Under Section 5 of the Sch.G. any mention of domicile is deemed to be unwritten.

(b) The need for domiciled cheques (*cf.*, Article 1 (4) and Article 2 of the Geneva draft), does not arise in practice, nor under the "Uniform Law on Bills of Exchange".

Question 17.

(a) Duplicates are, under Section 9, Sch.G., admissible in the case of foreign cheques with specific beneficiaries.

(b) In view of the text of Article 64, paragraph 2, of the "Uniform Law on Bills of Exchange", the wording of Article 26 of the Hague resolutions is preferable.

Question 18.

(a) Section 20, Sch.G., makes a distinction between various periods of prescription.

(b) The uniform and simpler provision of Article 27 of the Geneva draft is approved.

Question 19.

(a) Section 15, paragraph 3, Sch.G., admits of the endorser being released from liability.

(b) It is recommended that the endorser should be able to disclaim liability (in accordance with Article 10 of the Geneva draft and Article 12 to 17 of the "Uniform Law on Bills of Exchange").

Question 20.

(a) The Danzig Law of September 26th, 1930, regulates post-dated cheques in the same way as the German Law of March 28th, 1930. Under these laws a post-dated cheque can be validly presented for payment before the nominal date of issue. This is a simple, straightforward and

effective way of combating the objectionable practice of issuing post-dated cheques. A similar provision should be included in the regulation—*cf.*, provision in Article 3, paragraph 2, of the Geneva draft.

Question 21.

(a) Under Section 10, Sch.G., a cheque cannot be accepted and any statement to that effect is deemed to be unwritten.

(b) This is similar to the provision of Article 11, paragraph 1, of the Geneva draft, which should be approved. As regards the stipulation in paragraph 2 of Article 11, we would refer to a criticism in Dr. James BREIT's Commentary of 1929 on the German Cheque Law (Note 22, *ad* Section 10, page 49), reading as follows:

“ This provision in the draft international regulation on cheques is really an abandonment of the principle of international codification: one of the most important sections in the whole of cheque law is still to remain subject to national regulation.”

18. Roumania.

[*Translation.*]

Question 1.

The draft law on Instruments of Credit, submitted to Parliament by the Roumanian Government (Point 1 of the Questionnaire on the future regulation of the cheque) constitutes a departure from existing legislation under which cheques may be drawn on any person whatsoever (Roumanian Commercial Code, Article 364) and introduces the system advocated in the Regulation framed by the League's committee of experts—namely, that cheques may only be drawn on bankers. This solution is consistent with the juridical nature of the cheque, which must not be considered as an instrument of credit but as a means of payment. It is also intended to assign the cheque to its proper functions and especially to obviate many of the existing drawbacks regarding payment and thus enhance its security. As the purpose of cheques is to dispense with cash payments and facilitate transfer and clearing-house transactions, the solution seems to us to meet the latter requirements also.

The Roumanian Government believes that individual States should remain free to decide in their own particular case what persons can be assimilated to bankers, although for special reasons Roumania does not permit such assimilation in her own territory, and the same principle is embodied in the above-mentioned draft law.

As regards the definition of a banker, since, as a result of the increasing frequency of international relations, banking operations are nowadays practically uniform in type and organisation, and in view of the heavy penalties provided in Article 5 of the regulation of the committee of legal experts, which are also considered essential for the future uniform code, it would be desirable to define banking so as to avoid the serious conflicts which might otherwise arise.

Question 2.

As the wider use of the cheque depends more particularly on the certainty the holder will feel of being paid on mere presentation, the Roumanian Government believes that the following provision should be made: A drawer may only issue cheques when he has cash funds (cover) available with the drawee or if—which comes to the same thing—before drawing the cheque, he has arranged with a banker to honour his cheques. This provision, which is included in the aforesaid Roumanian draft law, is closely connected with another, to which we shall refer again in connection with Point 9 of the Questionnaire. Under this provision, in order to obviate the possibility of the cheque's being countermanded, the covering funds become *ipso facto* the property of the holder, as soon as the cheque has been drawn, without any other formality, and cannot be claimed either by the drawer's creditors or those of the endorsers (the same system as that adopted in the French law of 1926).

This is the central point in cheque regulation and is the only system capable of removing the obstacles to the more widespread use of the cheque. A banker on whom a cheque has been drawn will no longer be taken unawares by presentations for payment nor the drawer be able to countermand a cheque, since he cannot dispose of property which is no longer his. Under this system the holder will have the right to sue the drawee direct, which he was unable to do under existing Roumanian, French and Italian legislation, where he could only take proceedings against the drawer and the endorsers after protest.

A provision requiring the existence of covering funds at the time of payment would not be suitable, as it would enable the drawer to withdraw the funds in the interval between issue and presentation.

Question 3.

The stipulation *Guthabenklausel*, as known in German, Austrian and Hungarian law, is not provided for in Roumanian legislation and is seldom used. In view of the obligation, which is also stipulated in the experts' regulation, that the drawer should have funds available in order to be able to issue cheques, the mention of this obligation on the instrument does not serve any purpose. Quite apart from such mention, the drawer's liability would remain the same, always provided that the preliminary condition of having cash funds available in order to be able to issue cheques is maintained. This, moreover, is the view which prevailed at the 1912 Hague Conference.

Question 4.

Roumanian legislation is equally familiar with cheques payable on demand and cheques payable after a certain period. Nevertheless, in order to advance the cause of international unification the draft law on Instruments of credit submitted to Parliament, which endeavours to embody the largest possible number of the provisions of the committee of experts, accepts the solution advocated by the latter that cheques may only be drawn at sight (adopted at The Hague). The Roumanian Government recommends this provision to the Conference, not merely because the system is recognised by practically all bodies of law, including those of Anglo-Saxon countries, but also, and more particularly, because it is the only one consistent with the principle that the cheque is an instrument which gives its holder the right to demand immediate payment. Were it otherwise, the drawer could have used another credit instrument, such as the bill of exchange, the feature of which is that it is payable after a certain lapse of time. A cheque payable after a certain period would thus encroach upon the domain of the bill of exchange.

Question 5.

Time-limits for presentation must be fixed so as to comply with the purpose of the cheque—viz., the making of prompt payments. Future international regulation should therefore be directed to this end, the more so as this principle forms a part of most foreign legislation, where periods of five to fifteen days are fixed. The standpoint taken in the Roumanian draft law, moreover, does not seriously differ from that found in the regulation drawn up by the experts' committee, which will form the basis for the discussions of the future conference. It lays down a period of ten days for a cheque payable in the place where it was drawn (instead of eight days as stipulated in Article 367 of the present Roumanian Commercial Code and of fifteen days when the payment is to be made in another part of Roumania).

The Roumanian Government further considers that the reservation in Article 14 of the draft regulation regarding the domestic legislation of each contracting State should be maintained, but that a uniform rule should be laid down as regards the time-limit for the presentation for cheques issued in one country and payable in another. The provision of the Roumanian draft law, fixing a time-limit of thirty days if the cheque is payable in Europe (or in the same continent) and sixty days if payable outside the continent, seems to the Roumanian Government to deserve consideration by the future Conference. The work done with regard to bills of exchange, the results of which the Roumanian Government is about to adopt, furnishes a happy precedent for this method of differentiating the domestic sphere of each State from the international. Only thus can conflicts of international law be avoided.

Question 6.

The reply to Question 6 of the Questionnaire is the natural corollary of that raised in Question 2, and the same answer should therefore be given. It was stated in that answer that, in the Roumanian Government's opinion, the most effective way of affording the cheque as a legal instrument of wide possibilities of development was to make it perfectly safe. Only when the holder is confident of being paid on demand will he accept such a form of payment. Hence the necessity for legislative measures to prevent the drawer countermanding the cheque.

It would be advisable to find a uniform provision to prevent a cheque being countermanded during the time-limit for presentation. The best solution is that advocated by the Roumanian Government in reply to Question 2—viz., that the mere fact of issuing a cheque should be taken as tantamount to transfer of the cover.

This provision should be amplified by penal clauses, at the discretion of the individual States.

It will be necessary to treat any other means of preventing payment, more particularly the practice of "stopping", in the same way as countermanding.

Accordingly, the formula used in the Roumanian draft law—viz., "Until the expiry of the period of presentation a drawer may neither countermand a cheque, nor stop payment, nor dispose in any other way of the amounts in the hands of the drawee"—seems to us worthy of consideration.

Cases of the bankruptcy of the holder and loss or theft of the instrument would, of course, be excepted.

In amplification of the idea that a cheque should not be liable to withdrawal, it would be advisable to provide for penalties being imposed on a dishonest drawee who, though holding a

sufficient amount of the drawer's funds, refuses to make payment. The Contracting States might well be recommended to introduce into their national legislation penalties for such parties, as well as for a drawer who, though no longer entitled to the cover, since it has become the property of the holder, objects to payment.

Question 7.

The crossed cheque is not recognised in the Roumanian Commercial Code. It is, nevertheless, used in practice, and the above-mentioned draft law accordingly regulates its use. Under this draft law, such a cheque is only payable to a banker. Two bankers are thus required, one of whom pays and the other receives. The holder of a crossed cheque is thus unable to exercise his rights, since he is compelled to use the intermediary of a banker in order to obtain payment. The purpose of this innovation is to ensure payment being made to the real beneficiary.

The Roumanian Government believes that there is no objection to the two types of cheque, crossed cheques and cheques "payable in account", being combined by permitting the words "payable in account" to be inserted on the crossed cheque.

Question 8.

The most equitable and most legitimate solution is to release the drawer and endorsers from all liability if the cheque has not been presented within the fixed period for payment. This follows naturally from the theory that the life of a cheque is limited and that persons who are liable as endorsers cannot be held so indefinitely, seeing that, as a result of the delay, the amount has become unavailable through the action of the drawee. This is the solution adopted both in the Roumanian Commercial Code (Article 368) and in the new draft law.

Question 9.

The most important effect of the transfer of cover to the holder is to give the latter the right of direct action against the drawee for payment of the amount of the cheque.

The holder of the instrument may take an action for inequitable gain whenever he is debarred from having recourse on the instrument against the drawer, since the issue of a cheque cannot be taken as implying a modification of the basic relation.

Question 10.

In the Roumanian Government's opinion, any risks of forgery and alteration should be borne by the drawee. This question is not regulated by the existing Roumanian law. In the draft law on Instruments of Credit submitted to Parliament, the above solution has been adopted. A drawee paying a cheque the amount of which has been altered or which bears a forged signature of the drawer may only apply to the drawer for payment where the latter is to blame or if the alteration and forgery are the fault of one of his employees. Any other agreement is null and void.

This solution is based on the argument that, since a banker—the only person legally entitled to pay cheques under the system advocated—benefits from the issue of cheques drawn on him, it is natural that, whenever an amount has been altered or a signature forged, payment shall be deemed to be one of the risks inherent in banking operations. This provision should be amplified by another. The drawee must be given the right to apply to the drawer for payment when the latter is to blame or when he is responsible for the alteration or forgery. In order to ensure that the effects of this provision should not be nullified by the insertion of contractual clauses on the cheque forms usually sent to customers, which would speedily develop into formal clauses relieving bankers of all liability, the Roumanian Government advocates the insertion in the future regulation of a provision declaring such clauses inoperative.

Question 11.

With a view to relieving endorsers from some, at least, of their liabilities, the Roumanian Government thinks that, where the drawee has not sufficient funds to pay a cheque entirely, he should nevertheless be compelled to make partial payment. This view is, moreover, consonant with that expressed in the replies to Questions 2 and 9. Since the cover in the drawee's hands, even though it be less than the amount of the cheque, does not belong to him, but as a result of the transmissive effect of issue has become the property of the holder, the drawee is obliged to hold it at the latter's disposal.

Question 12.

Roumanian law does not recognise the possibility of paying a bill of exchange by means of a cheque, and the Roumanian Government sees no need for laying down rules for such a special case. This had better be left to the parties concerned and thus brought under the general principles prevailing on this subject.

Question 13.

It is not essential to use the printed forms supplied by banks. Legislation does not require such adherence to formalities as formerly. If all the special requirements of the law are complied with, a cheque may even be typewritten, provided always that it bears the original signature of the drawer. A cheque, therefore, need not be made out entirely by the drawer.

Question 14.

The Roumanian Government believes that the procedure of amortisation in the case of loss or theft of a cheque should be left to the discretion of each State. Such procedure is too intimate a part of the internal organisation of States, both as regards the judicial organs which have to make the amortisation and as regards publicity, to be capable of unification without inconvenience.

The following are, briefly stated, the main features of the regulation advocated by the Roumanian draft law: Amortisation is made by the judiciary—*i.e.*, the President of the court of law of the place of payment. Before applying to the President of the court, the payee will notify the loss or theft to the drawer and drawee, and ask the latter to suspend payment. The President of the court issues a decree containing as exact as possible a description of the instrument, and calling upon the person in whose possession it is to deliver it to the registrar of the court. This decree fixes a fifteen day time-limit of presentation, after the expiry of which, if the holder make no objection, the instrument is cancelled. Under an amortisation decision, the claimant has a right to payment. The draft law provides for the invalidation of a payment made by the debtor after the decree issued by the President of the court at the request of the party concerned has been published. This procedure does not apply in the case of non-transferable cheque, since there is no risk of its being cashed by anyone other than the real payee.

In such case, the payee is entitled to ask the drawer for a duplicate.

Question 15.

The existing Roumanian Commercial Code, as well as the new draft law, provide for the possibility of a cheque being made out to order or to bearer.

Where a cheque is drawn both to the order of a certain person and to bearer, or contains an equivalent stipulation, the Roumanian Government thinks it should be taken as being payable to bearer; and this is the principle adopted in its new draft law.

Question 16.

A cheque may be domiciled in the same way as a bill of exchange; in such case, the provisions applying to the latter instrument should operate. This is a question regarding which existing Roumanian legislation admits of no doubt, and the new draft law also embodies this principle. There is no reason why the future Uniform Regulation should not adopt it also and Article 4 of the Uniform Law adopted at the 1930 Conference could also be extended to cheques.

Question 17.

Although duplicates of cheques are of less practical importance than those of bills of exchange, owing to the shorter validity of the former, the same provisions might nevertheless be inserted in the future Uniform Regulation as in the case of bills of exchange, with the exception of those referring to acceptance, which is inconsistent with the juridical nature of a cheque. The Roumanian Government considers that the provisions of Articles 24 and 25 of the regulation framed by the committee of legal experts might also be embodied in the future Uniform Law.

Question 18.

The Roumanian Government agrees to accept the provisions contained in the experts' draft.

Question 19.

Roumanian legislation recognises the principle of the joint liability of the endorsers and the drawer of a cheque. Should the cheque not be paid, the former become liable as debtors and recourse may be had against them.

The new draft law contains a clause to the same effect, thus adopting the provisions of the regulation of the legal experts. The Commercial Code, as well as the above-mentioned draft law, permits endorsers, however, to disclaim the liability contingent on endorsement by inserting the words "without guarantee" or "without liability".

The Roumanian Government believes, therefore, that the idea embodied in Article 14 of the draft Regulation on Bills of Exchange drawn up by the committee of Experts should be retained in the future Uniform Law; the same wording would also apply to cheques under Article 10 of the Regulation on Cheques.

Question 20.

The date of issue of a cheque is very important, particularly in deciding the period of validity

of the instrument, since the time-limit of presentation begins to run as from the date of issue. Penalties should therefore be provided in the case of post-dated cheques.

In the Roumanian Government's opinion, post-dated cheques should be declared null and void, and all contracting States should be strongly recommended to provide penalties for persons issuing a post-dated instrument.

Question 21.

The inexpediency of acceptance arises from the fact that the cheque is a means of payment and not an instrument of credit, and from the principle that it can only be issued at sight and only when the drawer has funds available with the drawee at the time of issue. Any acceptance endorsed on an instrument should be deemed non-existent.

At the same time, to make cheque circulation more secure and enable the holder to verify whether a cheque has been properly issued, the Roumanian Government believes that the future Uniform Law might well provide that a banker should be entitled to satisfy himself that cover exists. The Roumanian Government believes that such certification should imply a direct obligation on the drawee to pay; this would, moreover, be perfectly consistent with the recommendation made in reply to Question 2.

The objection raised at The Hague that certification would develop into a method of defrauding creditors in event of the drawer's bankruptcy seems to be unfounded, since bankruptcy laws afford creditors sufficient power to cancel payments made to their prejudice.

The visaing of cheques, on the other hand, seems to present greater risks.

19. Japan.

[*Translation.*]

Question 1.

It should be forbidden to draw cheques on persons who do not carry on the profession of banking. The Government recommends that paragraph 1 of Article 5 of the draft should be adopted with the reservation contained in paragraph 2 of the same article. (The Japanese Commercial Code does not lay down any special restriction as to the drawee of a cheque, but cheques drawn on persons other than bankers are little used.)

Question 2.

In the Government's opinion, the drawer should have funds in the hands of the drawee at the time of presentation of a cheque. Where this provision is not complied with, paragraph 2 of Article 3 of the draft should be applied. (Under the Commercial Code, Article 536, a drawer issuing a cheque without having funds or credit is liable to a fine of from 5 to 1,000 yen (civil fine).)

Question 3.

The mention of cover should preferably be prohibited and any such mention considered as unwritten. (The Commercial Code contains provisions to this effect.)

Question 4.

A cheque should always be payable on demand. The Government endorses the provisions of Article 13 of the draft. (Article 532 of the Commercial Code enacts that a cheque should be payable at sight.)

Question 5.

The Government considers that the time-limit for presentation should be fixed at ten days and that the reservation in Article 14, paragraph 3, of the draft should be maintained. (Article 533, paragraph 1, of the Commercial Code fixes a time-limit of ten days.)

Question 6.

The right to object to payment of a cheque should only be allowed after the expiry of the time-limit for presenting it. (Article 533, paragraph 1, *ad* II, of the Commercial Code contains such provisions.)

Question 7.

As regards the effects of a crossing, the Government thinks that Article 18 of the draft should be maintained. (This corresponds with the provisions of Article 535 of the Commercial Code.)

As regards the second part of the question, it holds that cheques *nur zur Verrechnung* should not be allowed.

Question 8.

It would be better to enact that the holder loses his rights of recourse against the drawer if he does not present the cheque within the fixed period of time, but that he is entitled to exercise his right of recourse for the amount of the inequitable gain. (Provisions to this effect are contained in Article 533, paragraph 2, and Article 444 of the Commercial Code.)

Question 9.

The Government thinks it advisable that "transfer of cover" should not be allowed.

Question 10.

The Government considers that the points raised in this question should be stipulated in the cheque contract or regulated by the general provisions of private law, and consequently prefers that the Uniform Regulation should not enact special provisions on these questions. (It is customary in Japan to settle these points in the contract between the bank and its customers.)

Question 11.

The Government thinks that, under the provisions of the Regulation on Cheques, the drawee is not obliged to pay the amount of the cheque.

It believes that the question as to whether the drawee is under an obligation to the drawer to pay the amount, does not come within the scope of cheque regulations.

Question 12.

The Government thinks that no rules should be prescribed for the case referred to in this question.

Question 13.

A typewritten cheque should be considered valid when it complies with all the necessary conditions. The Government considers, however, that it would not be expedient to lay down special rules in the Uniform Regulation.

Question 14.

It would be better not to make any provision in the Uniform Regulation for the procedure in case of loss or theft of a cheque, but, in settling conflicts of law on this point, to adopt provisions similar to those on Article 9 of the Convention for the Settlement of Certain Conflicts of Laws in connection with Bills of Exchange. (Under Article 57 of the Law regarding the execution of the Civil Code, an instrument may be cancelled by the procedure of a public order of the Court. Chapter 7 of the Code of Civil Procedure contains provisions regarding such procedure.)

Question 15.

Conflicts between transmission clauses might be settled on the basis of the following principles:

(a) A cheque which specifies the payee's name and contains the words "to bearer" is deemed to be payable to bearer. (See Article 4, paragraph 3, of the draft. Such provisions are found in Articles 537 and 449, *ad* II, of the Commercial Code.)

(b) A cheque which does not specify the payee is deemed to be payable to bearer. (See Article 4, paragraph 4, of the draft.)

(c) A cheque specifying the payee only is deemed to be payable to order. (See Article 8, paragraph 1, of the draft. The Commercial Code, Articles 537 and 455, makes similar enactments.)

(d) An endorsement on a bearer cheque is not valid as such, but is deemed to be a guarantee (by "aval") in favour of the drawer. (See Article 9, paragraph 4, of the draft.)

(e) When an endorser prohibits endorsement he gives no guarantee to persons to whom the cheque is subsequently endorsed. (See Article 10 of the draft. Articles 537 and 460 contain similar provisions.)

(f) An endorsement to bearer on a cheque which is transferable by endorsement is equivalent to an endorsement in blank. (See Article 12, paragraph 3, of the Uniform Law on Bills of Exchange.)

Question 16.

In the Government's opinion, the provisions of Article 4 of the Uniform Law on Bills of Exchange should not apply to the Uniform Regulation on Cheques.

Question 17.

The Government considers that duplicates should be allowed in the case of cheques drawn

in one country and payable in another or in an oversea dominion of the same country, except in the case of bearer cheques. (Japanese law does not allow duplicates of cheques.)

Question 18.

As regards prescription, Articles 27 and 28 of the draft might be adopted with the modification that the term of six months in paragraph 1 of Article 27 should be changed to one year. (Under Article 443 of the Commercial Code, the right of recourse against prior endorsers accorded to the bearer of a cheque or an endorser who has paid a cheque lapses after one year.)

Question 19.

The Government believes it might be well to enact that the endorser should be released from all liability when the cheque is not presented within the time-limit for presentation. (These are the provisions of Article 533, paragraph 2, and Article 444 of the Commercial Code.)

Question 20.

The provisions of Article 3, paragraph 2, of the draft might be adopted regarding the consequences ensuring from post-dated cheques. Post-dating, however, should not affect the validity of the cheque. (In Japan there is no law regarding post-dated cheques.)

Question 21.

As regards acceptance, certification and visa of cheques, the Government recommends that the reservation made in Article 11, paragraph 2, of the draft should be adopted.

20. Switzerland.

[*Translation.*]

Question 1.

Yes. The draft law revising the Code of Obligations, which is at present before the Swiss Parliament, gives an affirmative reply in Article 1077, laying down that cheques may only be drawn on firms which, as proved by the entry made in the Commercial Register, carry on the profession of banking. It should be pointed out that, under Article 5 of the League experts' draft, the contracting States are left free to determine what persons shall be deemed to be bankers or may in this respect be assimilated to bankers.

Question 2.

The distinction between time of presentation and time of payment would only be important if a cheque could be paid otherwise than at sight. But, as is clear from the reply to Question 4, the latter alternative is rejected. As a cheque must, therefore, always be payable on demand, the date of presentation and that of payment are the same as far as the existence of funds in the hands of the drawee is concerned. In other words, such funds must in any case be in the drawee's hands at the time of presentation of the cheque.

Question 3.

No.

Question 4.

Yes.

Question 5.

These time-limits should be twenty days in the case of cheques payable in the country of issue, forty days for cheques payable in another Continental country, and sixty days for cheques payable overseas.

Question 6.

In Article 16 of the experts' draft, mention should be made of the bankruptcy as well as of the death or incapacity of the drawer. Only in case of the cheque being lost should the drawer be authorised to countermand it during the time-limit for presentation.

Question 7.

Both types should be introduced. As regards their juridical consequences, we would refer to Articles 1086 to 1090 of the draft Law revising the Code of Obligations, worded as follows:

“ 1086. — The drawer, as well as any holder of a cheque, may, by drawing two transverse parallel lines from top to bottom, between which may be written the words ‘ bank ’ or ‘ and Company ’, or any abbreviation of the latter, prohibit the payment of the cheque otherwise than to a bank which is entered in the Commercial Register (ordinary crossing).

“ When the name of a bank is written between these lines, payment may only be made to the bank so specified (special crossing).

“ A crossing of this kind may neither be cancelled nor altered, but the holder of a cheque with an ordinary crossing may cross it with the name of a special bank.

“ Payment made contrary to such a crossing is effected at the risk and liability of the drawee.

“ The drawee is not bound to examine whether the crossing was made by a person duly authorised thereto.

“ 1087. — The drawer as well as any holder of a cheque, may, by writing transversely across the face of the cheque the words ‘ payable in account ’ or a similar expression, prohibit payment of the cheque in cash.

“ In such case the drawee may only meet the cheque by means of a book transfer.

“ Payment by means of a book transfer shall be deemed to be a valid payment for the purposes of the law.

“ The prohibition to pay cash may not be countermanded.

“ Failure to comply with this prohibition renders the drawee liable for the damages ensuing.

“ 1088. — The holder of a cheque payable in account is entitled to demand cash payment from the drawee and, should the latter not comply, to exercise his right of recourse, if the drawee is bankrupt, has suspended payment or has been distrained upon without result.

“ 1089. — The holder of a cheque payable in account may further exercise his right of recourse, if he finds that the drawee refuses to transfer the amount unconditionally, or if the clearing house of the place of payment declares that the cheque is not a valid discharge of the holder’s debts.

“ 1090. — The provisions regarding bills of exchange shall apply to cheques in so far as they are not inconsistent with the provisions of the present chapter.”

Question 8.

No. The right to take an action for inequitable gain against the drawer is reserved.

Question 9.

Article 1032 of the draft Law revising the Code of Obligations, dealing with bills of exchange, and under Article 1090 applicable also to cheques, contains a provision enacting that, in case of the drawer’s bankruptcy, the latter’s right to take civil action against the drawee for recovery of the funds is transferred to the holder of the bill of exchange. Strictly speaking, however, this question does not come within the sphere of cheque law and would therefore be better left outside international regulation.

Question 10.

The rule embodied in Article 1083 of the draft Law revising the Code of Obligations might well be adopted. This article reads as follows:

“ 1083. — The loss resulting from a false or counterfeit cheque shall be borne by the drawee unless the party mentioned in the instrument as drawer can be shown to be at fault; such fault on the part of the drawer shall consist, more particularly, in not having taken sufficient precautions to safeguard the cheque forms sent to him.”

Question 11.

No.

Question 12.

No. These rules seem to be unnecessary.

Question 13.

Should be permitted.

Question 14.

As in the case of bills of exchange, amortisation procedure should be regulated by the law of the country. The law of the place of payment will apply.

Question 15.

This no doubt refers chiefly to the meaning of an endorsement on a bearer cheque. Article 1079, paragraph 4, of the draft Law revising the Code of Obligations enacts that an endorsement on a bearer cheque makes the endorser liable under the terms of the provisions governing recourse in the case of bills of exchange and does not change the instrument into a cheque to order. Article 8, paragraph 1, of the experts' draft does not seem to settle this problem, so that a solution on the lines of the above-mentioned Article 1079, paragraph 4, of the Swiss draft might be adopted.

Question 16.

The domiciled cheque should be permitted and Article 7, paragraph 2, of the experts' draft sanctioned. It should be permissible to mention several places of payment.

Question 17.

We accept the provision contained in Article 24 of the experts' draft.

Question 18.

Article 27 of the experts' draft regulates periods of prescription on the same basis as the draft Law revising the Code of Obligations (Articles 1049 and 1090 combined). In the Swiss draft, however, the period of prescription for actions of recourse by the holder against the endorsers and drawer are taken to run from the date of protest, and this seems preferable.

Question 19.

We recommend that the international regulation should give this option, which has, moreover, been introduced into Swiss legislation. It seems doubtful, however, whether the experts' draft looks at the matter from the same standpoint, and its wording should be improved in this respect.

Question 20.

A post-dated cheque is nowadays considered valid, but is only operative as from the date shown as the date of issue. Failing an express provision, it may be assumed that the experts' draft shares this view.

Question 21.

A cheque should neither be presented for acceptance nor be accepted.
As regards certification and visa, no provisions need be enacted.

21. Netherlands.

[*Translation.*]

Question 1.

In the Netherlands it is customary to draw cheques not only on bankers, in the strict sense of the word, but also on:

1. Cashiers ("Associatie Kassa").
2. The Netherlands Post Office (postal cheque).
3. Various communes.
4. Certain stockbrokers.

Cheques may also be drawn on any other person. The Netherlands Government considers that the special character of the cheque is thus less a matter of who is the drawee than of the point regulated in Article 3 of the draft Regulation on Cheques.

If it should prove impossible to agree on abolishing the requirement that cheques may only be drawn on a banker, it would be necessary to retain the provision of Article 5 (a) of the draft Regulation on Cheques reserving the power to national legislation to determine what persons shall be deemed to be bankers or may in this respect be assimilated to bankers (*cf.* also Article 18, last paragraph).

Question 2.

The Netherlands Government considers that the reply to the first part of the question should be in the affirmative—*i.e.*, it agrees, in principle, to the regulation proposed in Article 3, paragraph 1. The wording of this article, however, is open to criticism, in so far as the "agreement" there

referred to might be thought to mean agreement regarding the drawing of a specific cheque and not to disposal of covering funds by means of cheques generally. For this reason, the Netherlands Government ventures to suggest the following wording for Article 3, paragraph 1, of the draft Regulation on Cheques:

“ A cheque must only be drawn on a person holding funds at the disposition of the drawer and in conformity with an agreement, express or implied, *according to which the drawer is entitled to dispose of the funds by cheque.*”

or, even better:

“ A cheque must only be drawn on a person holding funds which the drawer is entitled to dispose of by cheque.”

The Netherlands Government thinks that in any case, paragraph 2 of Article 3 should be retained.

In reply to the second part of the question, it thinks that funds should be in existence at the time of presentation for payment.

Question 3.

No. The presence of the word “ cheque ” on a cheque form is sufficient; any special clause would be superfluous.

Moreover, it excludes the drawing of a cheque for account of a third party.

Question 4.

Yes. A cheque has always been considered as a sight instrument and this is entirely consistent with its economic function. The Netherlands Government therefore considers that Article 13 should, in principle, be retained.

Question 5.

The Netherlands Government can, in principle, accede to the solution contained in Article 14 of the draft Regulation on Cheques; it ventures, however, to point out that paragraph 3 of the article is, in view of paragraph 1, superfluous. In its opinion, paragraph 5 should be inserted in a special annex, as in the case of the Uniform Law on Bills of Exchange.

Question 6.

The Netherlands Government is of opinion that national legislation should be left to deal with the whole question of withdrawal and not merely with the points referred to in (3) of the recommendation which follows Article 16 and in Article 20, paragraph 3 (b) of the draft Regulation on Cheques. Article 19 of the draft Regulation also leaves to national legislation the regulation of the holder's rights over the covering funds, a question which is connected with that of withdrawal. Clearly, therefore, both questions should be settled in the same way.

Question 7.

Primarily considered, crossing should be allowed. The Netherlands Government thinks that the consequences attaching to crossing should be the following: a general crossing merely gives the right to be credited on account, a special crossing denies the right to payment of any person other than the person mentioned. In view of the reply given to the first question, it should not be stipulated, either in the case of general or special crossing, that the person named must be a banker.

The reply to the first part of the question contains, by implication, the reply to the second part.

Question 8.

The Netherlands Government believes that there is no reason why cheques should in this instance be treated differently to bills of exchange. Article 15 of the reservations to the Uniform Law on Bills of Exchange grants each of the contracting parties freedom to decide that in the event of extinctive prescriptions (*déchéance*) or limitation of actions (*prescription*), proceedings may be taken in its territory against a drawer who has not provided cover (*provision*) for the bill or against a drawer or an endorser who has made inequitable gain. This is very like the Netherlands Law which, in Articles 108, 223 and 229 of the Commercial Code allows a similar right of action against the drawer of the instrument.

Question 9.

In view of the various views adopted in the different countries and of the close connection between Question 9 and Question 6, the Netherlands Government feels bound to reply to this Question in the same way as to Question 6—namely, that this is a matter for national legislation, as is also stated in Article 19 of the draft Regulation on Cheques.

Question 10.

The Netherlands Government thinks that, in this case also, it would be preferable to apply the regulation provided for bills of exchange in Articles 16 and 40, paragraph 3, of the Uniform Law. The risk would then fall on the drawer if the drawee has acted with all due care.

Question 11.

This question deals solely with the relation between the drawer and the drawee. The Netherlands Government thinks it impossible to lay down a rule which would cover all cases, seeing that the solution depends on the relations existing between the drawer and the drawee.

The relations between the drawee and the person presenting the cheque are regulated by Article 17, paragraph 2, of the draft Regulation on Cheques.

Question 12.

Yes. It would be well, therefore, to recognise the validity of a bill of exchange which stipulates that it is payable not in money, but by cheque. It is not easy, however, to discern a suitable place for such regulation. In the nature of things, it should be inserted in the Uniform Law for Bills of Exchange. It might be well to see whether this point could not be dealt with in an annex to the Convention on Bills of Exchange and Promissory Notes.

Question 13.

Typewritten cheques should be considered valid, but it is not clear why it should be necessary to make a regulation on this point when it does not occur in the Convention on Bills of Exchange and Promissory Notes.

Question 14.

The various bodies of law differ so widely on this point that a uniform regulation will not be readily attained. The Netherlands Government, therefore, would prefer a rule similar to that laid down in the Convention for the Settlement of Certain Conflicts of Laws in connection with Bills of Exchange and Promissory Notes.

Question 15.

According to Article 4, paragraph 3 of the draft Regulation on Cheques, a cheque which reads: "Pay to Mr. X. or to bearer" has the same legal affect as a cheque to bearer.

The draft Regulation on Cheques says nothing regarding the case of a cheque which reads: "Pay to Mr. X. or to his *order* or to bearer". This is another case in which the Uniform Law on Cheques should specify which clause is to be the decisive one. Up to the present, the best solution would seem to be the following:

"A cheque payable to a specified person or to his order, with the words: 'or to bearer', or any equivalent of the same is deemed to be payable to a specified person or his order."

Question 16.

In the opinion of the Netherlands Government domiciled cheques should be allowed, since they are a practical requirement. Subject to the remarks made under Question 1, the Government would suggest deleting paragraph 2 of Article 7. If this does not suit the majority, the provision of Article 5 (a) could, at any rate, be adopted here also, following the example of Article 18, last paragraph.

Question 17.

The Netherlands Government endorses the solution adopted in Article 24 of the draft Regulation on Cheques. It should be stipulated that the number of copies issued must be stated.

Question 18.

The Netherlands Government can endorse the rule laid down in Article 17 of the draft Regulation on Cheques taken along with Article 71 of the Uniform Law on Bills of Exchange. A provision corresponding to that in Article 17, Annex II, of the Convention on Bills of Exchange, should also be adopted in the Convention on the Uniform Legislation on Cheques.

Question 19.

The Netherlands Government agrees with the rule laid down in Article 10 of the draft Regulation on Cheques, taken along with Article 15 of the Convention on Bills of Exchange, but does not see why one regulation should be made for cheques and another for bills of exchange.

Question 20.

Post-dated cheques are in current use, and the Netherlands Government is therefore of opinion that a provision should be adopted on the subject in the Uniform Law on Cheques. The

Government approves the ruling given on this point in Article 3, paragraph 2, of the draft Regulation.

If Article 34, paragraph 2, of the Uniform Law on Bills of Exchange is declared applicable to cheques, post-dated cheques will be less frequently employed in future.

Question 21.

The Netherlands Government thinks that this point should be settled by the law of the country, and agrees with the provision in Article 11, paragraph 2, of the draft Regulation on Cheques.

OBSERVATIONS ON THE DRAFT REGULATION ON CHEQUES.

General Observations.

I. It may be thought unnecessary to take the following articles from the Uniform Law on Bills of Exchange and adopt them in the Regulation on Cheques. The Netherlands Government believes, however, that their adoption is desirable, as their omission might supply an argument *a contrario*.

The following are the articles referred to: Articles 3 (paragraph 3), 10, 19, 20, 34 (paragraph 2), 40 (paragraph 3), 41, 53 and 54.

II. The references in the draft Regulation on Cheques should be adapted to the numbering in the Uniform Law on Bills of Exchange.

The draft Regulation on Cheques should accordingly refer, in Article 7, to Articles 4, 6, 7, 8 of the Uniform Law on Cheques and Bills of Exchange; in Article 10, to Articles 13 to 18; in Article 12, to Articles 31 to 32; in Article 23, to Articles 45 to 47 and 49 and 50; in Article 26, to Article 7 to 69; in Article 28, to Article 71, and in Article 29, to Articles 72, 73, 74.

Special Observations.

Article 2, Paragraph 3.

In the corresponding Article 2 of the Uniform Law on Bills of Exchange, there is no provision containing the same idea as Article 2, paragraph 3. The Netherlands Government considers that the regulation made in the Uniform Law on Bills of Exchange is incomplete in this respect, and would therefore in principle be prepared to amplify the regulation. It thinks, however, that the method by which the draft Regulation on Cheques aims at solving the point in question is rather impracticable. The parties who fail to mention expressly the place of *payment* (when there is no place mentioned beside the name of the drawer) in the cheque probably do not intend the *place of issue* (*i.e.*, the place mentioned beside the name of the drawer) to become the *place of payment*. The parties' intention is better interpreted if, in the given case, the *domicile* of the drawee is deemed to be the place of payment. Paragraph 3 should then read as follows:

“A cheque which does not mention the place of payment is deemed to be payable at the domicile of the drawee.”

Article 3, Paragraph 1 (see reply to Question 2).

Article 3, Paragraph 2 (see reply to Question 20).

Article 4, Last Paragraph.

Article 3, paragraph 2, of the Uniform Law on Bills of Exchange provides that a bill of exchange may be drawn on the drawer himself.

From Article 4, last paragraph, of the draft Regulation on Cheques, the Netherlands Government infers that this is also possible in the case of cheques. It holds the view, however, that the drawer's capacity for drawing a cheque on himself should be expressly stipulated in Article 4 of the draft Regulation on Cheques.

Article 7, Paragraph 2 (see reply to Question 16).

Article 8.

The Netherlands Government cannot imagine that the provisions of Article 11, paragraph 3, of the Uniform Law on Bills of Exchange—except where the article refers to the drawee—can apply to cheques.

Article 9, Paragraph 3.

As regards an endorsement to bearer, Article 9, paragraph 3, of the draft Regulation on Cheques should be made to correspond with Article 12, paragraph 3, of the Uniform Law on Bills of Exchange. Consequently, paragraph 3 should be drafted as follows:

“An endorsement by the drawee is equally null and void.”

and immediately below, a new fourth paragraph should be inserted as follows:

“An endorsement to the bearer is equivalent to an endorsement in blank.”

Article 14, Paragraph 3 (see reply to Question 5).

Article 14, Paragraph 5 (see reply to Question 5).

Article 16.

The Netherlands Government thinks that Article 16 of the draft Regulation on Cheques should be deleted. It is incomprehensible that a provision which does not appear in the Uniform Law on Bills of Exchange should occur in the draft Regulation on Cheques. We should reflect on the conclusions which might be drawn from an argument *a contrario*.

Article 17.

Article 17 might be deleted and substituted by reference pure and simple to Article 39 of the Uniform Law on Bills of Exchange, as has been done in the case of Articles 28 and 29 of the draft Regulation on Cheques.

Article 18 (see reply to Question 7).

Article 21.

Practically considered, the rule embodied in Article 21 of the draft Regulation on Cheques does not differ much from that on bills of exchange at sight contained in the Uniform Law on Bills of Exchange (Article 44). For reasons of uniformity, however, it would be better to adopt, in the case of the cheque also, the regulation laid down in the Uniform Law on Bills of Exchange.

22. Turkey.

1. Article 610 of our Commercial Code, which is in accordance with the corresponding provisions of the Hague Regulations, lays down that cheques drawn on persons other than a banker are valid.

It is, however, suggested in the new draft that such cheques should be deprived of the characteristics and qualities inherent in cheques proper. In our opinion, it would be preferable to maintain the Turkish legislation in question.

2. In order to ensure payment of cheques, we recommend that the provisions in our Commercial Code regarding cover should remain in force, and that cover should in all cases be ready in the hands of the drawee at the time when the cheque is drawn, as the Turkish Code does not allow of cheques payable at a specified date.

3. Under Article 606 of our Commercial Code, it is not necessary to state explicitly on the cheque that the sum to be paid will be in all cases secured by cover in the hands of the drawee. Moreover, such an obligation would tend to increase the formalities to be fulfilled in order to ensure payment of the cheque.

We do not, therefore, think it desirable to adopt this proposal.

4. If cheques payable at a specified date were introduced, they might be more widely used in place of bills, which are subject to a higher tax than cheques in Turkey.

As that would reduce the State revenues, we should prefer to retain intact the provisions of Article 618 of our Code, which deal with this point.

5. The time-limit of one month provided in Article 621 of the Code for cheques payable in a place other than that in which they were drawn is barely sufficient for our needs, in view of climatic conditions and difficulties of communication in our country, and we could not, therefore, agree to its reduction.

6. In our view, if the drawer could, in certain cases, object to payment of the cheque, it would be difficult to bring cheques into general use, and we prefer, therefore, not to take up the suggestions to this effect.

23. International Chamber of Commerce.

[*Translation.*]

The International Chamber of Commerce made a number of reservations in regard to the experts' draft on cheques. These reservations have lost none of their force and will have to be examined and discussed when the Conference meets. They are, moreover, based on the International Chamber of Commerce's Regulation, and the volume of Preparatory Documents (Geneva, 1929) gives references for each question which has been thought important. The International Chamber of Commerce is now asked to study a questionnaire on twenty-one main points, in regard to which various countries and organisations have sent the International Chamber of Commerce information and observations. It appeared essential, accordingly, to reply, however briefly,

to the questions asked, taking, of course, the discussions held at, and the instructions previously given to, the International Chamber of Commerce as a basis.

Question 1.

It seems to be generally admitted that a cheque can, in principle, only be drawn on a banker. But how can this obligation be realised in practice? Owing to the possibility of international difficulties, Norway would prefer that no such rule should be laid down, unless it is very clearly developed. There is a general desire to limit and define at the same time those parties on whom cheques can be drawn. If it is asserted that a cheque can only be drawn on a banker, should we not then define the term "banker"—not an easy thing to define, as there is no uniform conception in all countries of the profession of banking. Can a definition be found for "banker" that will be universally applicable? It would seem rather difficult.

Furthermore, will there not be a tendency almost everywhere to assimilate—as France, for instance, does—certain officials to bankers (treasury officials, stock-brokers, perhaps even notaries, valuers and certain ministerial officials)?

In a uniform law it would be advisable to state that, in principle, a cheque can only be drawn on bankers—*i.e.*, on persons actually engaged in the banking profession—and on certain specific officials also. Each country would thus have to draw up a list of those on whom cheques may be drawn, but it would seem dangerous to say forthwith who such parties are.

A request has been made that the word "cheque" should be compulsorily inserted in the body of the instrument in the language of the country where it is issued. The International Chamber of Commerce does not consider this essential.

Question 2.

There seems to be general agreement as to the necessity for the existence of funds *when the cheque is issued*. There is, however, some slight uncertainty as to the nature of such funds. Should they be liquid or payable on demand? It is not quite the same thing. "Payable on demand" would seem preferable, as it would promote the wider use of cheques, by recognising that the opening of credit would constitute cover for a cheque.

Although it may not at first sight be evident, the distinction is nevertheless important. It may happen that a banker gives a drawer credit, in which circumstances liability for payment is no longer the same as liquid funds.

Question 3.

In principle, the various answers received agree that compulsory mention of cover on a cheque is unnecessary.

Question 4.

It is generally agreed that a cheque should be payable on demand only. It should, however, not be forgotten that this question is closely connected with that of post-dating. If the latter is recognised, it will, perhaps, logically follow that a cheque may not be payable on demand, although in practice the cheque may be post-dated. It might perhaps be well to state that a cheque should always be payable on demand and to rule that, before the date of issue, it can neither be negotiated nor produce any effect.

Question 5.

The general sentiment, as expressed more particularly by Czechoslovakia, is that the regular time-limits for presentation of cheques should be unified. In some communications received, reference is made to the Polish Law. Norway, again, desires that the domicile of the holder should be taken into account, which does not seem practicable, for, unless a cheque is made out in favour of a specific individual, the holder is unknown. One case referred to by Norway is where the holder would be specified. This would seem to come under the ordinary case of the person specified.

It would obviously be useful to fix time-limits for the normal presentation of a cheque for payment, regard being had, however, to transport difficulties in the various countries and an average period being adopted.

Question 6.

On this point there are three tendencies:

- (a) Absolutely restrictive, which seems to be the proper one and was that advocated by the International Chamber of Commerce;
- (b) The much more tolerant tendency—as manifested, for example, by Czechoslovakia and Italy—based on the fear of forgery, which might always be invoked;
- (c) The quite unrestricted tendency (Norway), which, however, admits the principle that, during the usual time-limit for cashing the cheque, no objection to payment can be made.

We have received a suggestion raising, and rightly so, we think, the question of *theft*, but making no reference to the case of a bankrupt holder (French Commercial Code, Article 149).

The drawer should, it seems, not be entitled to countermand a cheque except in the case of loss or theft. The International Chamber of Commerce has always believed that payment by cheque should be assimilated as far as possible to payment by cash.

Question 7.

The replies on this point are conflicting. The Italian view, which is very clearly defined, resembles most closely the International Chamber of Commerce's proposal.

In principle, the International Chamber of Commerce believes that the crossed cheque should be recognised, and it might here be observed that the crossed cheque, which works very satisfactorily in France, is subject, in principle, to the same rules as the crossed cheque used in England and the United States—that is, in the Anglo-Saxon countries. Seeing, therefore, that crossed cheques give general satisfaction and correspond to the customs prevalent in Anglo-Saxon countries, would a departure from the unification which already exists among so many cheque-users be advisable?

On the other hand, there would seem to be no objection to allowing the stipulation "only for collection" to be inserted between the two lines thus combining very advantageously the two systems.

Question 8.

The International Chamber of Commerce thinks that the Czechoslovak and Norwegian replies are very important. In its opinion, Italy goes rather too far in adding "until the expiry of the period of prescription". After the authorised time-limit for presentation, a drawer is liable for his debt, but not in the form of a cheque.

One suggestion refers to the Chinese Code, which might be consulted.

Question 9.

Italy has devoted special attention to this question and is going into the subject of covering funds divided among the various holders of cheques.

Norway supplies observations as to the connection between the claim and the cheque.

On the basis of a suggestion received, the International Chamber of Commerce believes that difficulties may arise if it is admitted that the cover becomes property in case of bankruptcy. It is of opinion that, in the case of bankruptcy, there is no ownership, but a kind of lien on the sum or sums constituting the cover.

During the time-limit of presentation (eight or ten days), who loses the cover? Is it the drawer or the holder? If there has been no transfer of ownership, the drawer bears the loss. The holder, who has never had the ownership of the cover, has, strictly speaking, no title to claim on the basis of the right of ownership; but it would seem that he should, as Belgium suggests, have a lien on the specific amounts making up the cover as it existed during the time-limit of presentation.

Question 10.

This is a question of fact, and the person at fault should be held liable.

The question of the risks of forgery and alteration cannot be settled on hard and fast lines, as it is the question of fact which predominates:

- (a) The carelessness of the holder of a cheque-book;
- (b) A forgery so clumsy that the bank cannot fail to detect it;
- (c) An obvious alteration.

If no fault can be attributed to the drawee who paid the cheque, the loss should be borne by the drawer. On the basis of the various replies received, the courts should deal with each case on its merits and consider how to apportion the risks. The matter reduces itself to the decision of specific cases.

Question 11.

It is essential to provide that the drawee may not refuse partial payment of a cheque. The rule that no one should be compelled to accept partial payment cannot be applied here, since there may be parties interested in having partial payment accepted: endorser, surety, etc.

This question is connected with that of novation, which has not been raised. The International Chamber of Commerce maintains that third parties are interested in the maximum payment being made and the drawee should be held liable to pay up to the amount of the covering funds.

Question 12.

French law provides for such a case (Law of August 28th, 1924, in connection with Article 162 of the Civil Code) and it might be useful to take the rules there laid down as a basis for discussion. It is, however, certain that they should vary in accordance with the rules of the different countries regarding protests.

Question 13.

At the present day, objection can scarcely be taken to the typewritten cheque. Certain replies recommend the use of perforating type machines specially made for the purpose. Such details might in practice be modified with scientific progress. When cheques are typewritten, every precaution should be taken to safeguard cheque-users.

Question 14.

Amortisation is exhaustively provided for in Italian law, and the International Chamber of Commerce believes that Italian legislation, on the one hand, and the French law on the loss of bearer instruments, on the other hand, should be taken as the basis of amortisation procedure.

Question 15.

This is a question which cannot be treated elsewhere than at the Conference.

A suggestion has, however, been made to the effect that, if in the wording of a cheque there is a contradiction as regards mode of transmission—if it is stipulated, for example, “ Pay to bearer or to the order of M. . . . ”, the holder of the cheque should have the right to choose between the two modes of transmission that which suits him best. The International Chamber of Commerce considers that the choice should not be left to the holder of the cheque. In such a case as the above, the rule should be to adopt the most liberal interpretation and, accordingly, payment should be made to the bearer, as the stipulation “ to bearer ” is more comprehensive than the stipulation to a given person.

Question 16.

The principle of the domiciled cheque, as it exists in French law, should be maintained.

It has been suggested that it should be possible for a cheque to contain a stipulation regarding domicile, because, otherwise, cheques drawn on private persons could not be passed through the clearing houses. This remark is taken from M. Bouteron's book *The Cheque*. The International Chamber of Commerce would observe that Point No. 1 very properly provides that the drawee should be a person with special qualifications—banker, etc. In such case, the above argument hardly applies. The International Chamber of Commerce, nevertheless, considers that any cheque may be domiciled, and, in practice, the domiciliation of cheques is a very frequent occurrence.

Question 17.

This seems to be inconsistent with the nature of the cheque, which is *merely an instrument for the withdrawal of funds*.

If it were decided to maintain the practice, bills of exchange rules could not be applied, as there is no acceptance.

Multiple copies, moreover, facilitate fraud and make it possible to discount cheques, which is inconsistent with the general wish. If duplicates were to be sanctioned, the inevitable result would be to transform the cheque into a bill of exchange and to furnish it with all the guarantees of bills of exchange, which is precisely the thing we desire to avoid.

Question 18.

It seems essential to deal by legislation with the question whether limitation of actions under ordinary law outlasts the special limitation enacted for the cheque. Similarly, the various national law should have uniform regulations as to the period of limitation. This has always been advocated by the International Chamber of Commerce. Should there be a different rule for cheques in a civil case and a commercial case? The International Chamber of Commerce, in support of unification, considers that limitation of actions should be the same in civil as in commercial cases.

Various suggestions are made as to the form in which limitation should be indicated—for example:

“ The holders right of action against the drawer or against an endorser should be barred six months from the date of the issue of the cheque.”

A cheque in regard to which action was barred under the above conditions would be valueless as an instrument and could only serve as evidence or as an indication of obligation, the value of which would have to be decided by the Court.

The opinion of the International Chamber of Commerce does not seem favourable to an oath being taken in respect of this question. There was also a suggestion “ that actions should be barred five years after the date of issue of the cheque, more particularly actions against guarantors ”. The International Chamber of Commerce points out that in such case the only person remaining bound would be the drawee.

Question 19.

In principle, it would seem difficult not to agree to an endorser specially stipulating for release from liability, but from a practical standpoint the International Chamber of Commerce thinks that this would be inadvisable.

Question 20.

This question has been discussed at great length by members of the International Chamber of Commerce, and the replies are not all unanimous. In practice, post-dating of cheques has a certain importance, provided, of course, as we have said above, that the instrument is only valid on the date of issue. Is it possible, however, to prevent the issuer of a cheque negotiating the instrument before the date of issue? It is quite certain that he could, in practice, discount his cheque before the date of issue if he makes out post-dated cheques. We have thus to deal with a real instrument of credit, which is what we want to avoid. The International Chamber of Commerce has always taken the view that a cheque should not be negotiable before the date of issue—*i.e.*, if it is post-dated and handed to a holder before issue, no use whatever may be made of such a cheque, which is only valid as from the day of issue.

Question 21.

It would be an anomaly for a cheque to be accepted. It would also be very dangerous to agree to certification. Take the case of a cheque certified by an important credit institution of the highest standing. Such a cheque would become a banknote, there being no question of the drawer's credit, seeing that it is guaranteed by the banking institution.

Again, would it not be dangerous to accept the visa—*i.e.*, a statement to the effect that the cheque has been presented? Would this not be interfering with protest? Visas cost nothing and the protest would be replaced by a simple visa, a risky procedure, seeing that certain rights of recourse would be lost in view of the time-limits of protest not having been observed.

It has been suggested that the words "cheque to be visaed", or an equivalent expression, should be inserted in the body of the cheque. This is tantamount to saying that the cheque would only be payable after a certain minimum period necessary for receipt of advice by the drawee. The International Chamber of Commerce feels obliged to point out that covering funds should be available on issue and not at a date of payment, and that cheques should be kept separate from bills of exchange.

Geneva, January 10th, 1931.

LEAGUE OF NATIONS

**INTERNATIONAL CONFERENCE FOR THE UNIFICATION
OF LAWS ON BILLS OF EXCHANGE, PROMISSORY
NOTES AND CHEQUES**

Second Session, February 23rd, 1931.

Note by the Secretariat.

The replies of the *Brazilian* and *French* Governments, reproduced hereunder, which should have figured respectively under Nos. 23 and 24 of document C.628.M.249.1930.II, reached the Secretariat too late to be printed with the other Governments' replies.

The present document should be regarded as forming an integral part of the above-mentioned document.

Further, the **Netherlands** Government *has requested that the following amendments be inserted in the reply* which it has already forwarded to the Secretariat:

A. Page 82 of the document, question 18, line 1, instead of: ". . . . in Article 17 of the draft Regulation" read: ". . . . in Article 27"
In line 2, instead of: ". . . . with Article 71" read: ". . . . with Article 70"

B. Page 83, under figure II of "General Observations", delete the reference to Article 28 in the second paragraph.

Brazil.

[*Translation.*]

I desire to inform you that the competent authority expressed the view that Brazil was prepared to accept the unification of laws on cheques within the framework of the provisions drawn up at Geneva.

The competent authority suggests, however, that Article 4 of the Uniform Regulations published by the League of Nations on February 17th, 1930 (pages 112 *et seq.*)¹, would gain, perhaps, in clearness and preciseness if, as in the Brazilian law, available funds were deemed to cover; sums in current accounts in banks, the balance payable under contractual current accounts, and sums arising out of the opening of credits.

France.

[*Translation.*]

I have the honour to forward herewith, in conformity with the Final Act of the Convention signed on June 7th last, the French Government's observations concerning the texts relating to cheques which were submitted to the International Conference held at Geneva from May 13th to June 7th, 1930.

These texts, which include the draft Regulations framed by the legal experts (document C.234.M.83.1929.II) and the questionnaire drawn up by the Governments representatives at the aforesaid Conference (document C.360.M.151.1929.II) formed the subject of a very extensive enquiry in which the Ministerial departments concerned, the "Banque de France", the "Chambre syndicale des banquiers de Paris et de la Province", the economic groups, the Chambers of Commerce and the Commercial Courts took part. The results of this enquiry have been embodied in the observations attached hereto.

¹ *Note by the Secretariat.* — The text to be found on the above-mentioned pages of document C.234.M.83.1929.II (Preparatory Documents) is that of the "Draft Uniform Regulations governing Cheques", adopted by the Congress of the International Chamber of Commerce at Stockholm in 1927, and communicated, for purposes of information, to the Conference which was held in May and June 1930.

[Translation.]

UNIFICATION OF THE LAWS ON CHEQUES.

Observations of the French Government.

Ad Article 1.

The compulsory insertion of the term "cheque" in the instrument is approved, subject to the reservation that the French law sanctioning this innovation will not come into force until six months after its promulgation. The date of the cheque need not be written out in full. The cheque may be typewritten, but the signature must be written by hand.

Ad Article 2.

Question 20, relating to the consequences ensuing from post-dated cheques, is connected with this article, which governs the effects of a cheque in which certain compulsory indications are omitted. The Committee is of opinion that this question need not be settled under the international law; the courts of each country should be left full discretion in the matter.

Ad Article 3.

This article provides that for cheques to be drawn: (1) the drawee must hold funds at the disposal of the drawer; (2) there must be an agreement authorising the drawer to issue a cheque on the drawee. The Committee adopted this double condition.

Questions 2 and 3 of the questionnaire are connected with this Article. In reply to question 2, the Committee considers that the drawer should have liquid funds in the hands of the drawee as from the time of issuing the cheque. In reply to question 3, the Committee considers that the compulsory mention of cover constitutes an unnecessary formality and should not be adopted.

Ad Article 4.

This article provides for the solutions to be adopted when the cheque is payable to a specified person with the words "or to bearer" or any equivalent words, and when the cheque does not specify the payee. The Committee does not consider it possible to contemplate in the uniform law all the difficulties of this nature that might arise. It would be preferable accordingly to adopt more general and far-reaching formulas. It might be decided, for example, that the method of transmission of a cheque shall be determined by the drawer and cannot be modified by subsequent holders; and, secondly, that a cheque whereon the drawer has mentioned various transmission clauses shall be deemed to be transmissible under the terms of the most far-reaching clause.

Ad Article 5.

Question 1 relates to this article: "Is it desirable to prohibit the drawing of cheques on persons who do not carry on the profession of banking?"

Under the existing French law, a cheque may be drawn on a person who does not carry on the profession of banking. In this case the receipt given in acknowledgment of payment of the cheque does not enjoy the fiscal advantages allowed when the drawee is a banker. The Commercial Legislation Committee had been of opinion hitherto that the rule admitted under French law should be maintained; but it should be noted that an evolution has taken place in the views of the circles concerned, most of the economic groups being of opinion that the validity of a cheque should be allowed only when it is drawn on a person who carries on the profession of banking, or on a person assimilated from this standpoint to banker, as the function of the cheque clearly implies, that it shall be drawn on a person whose profession it is to hold funds at the disposal of third parties.

The Committee accordingly supports the opinion expressed by the majority of the bodies consulted, on the understanding that it will be for each State to define in its legislation what is meant by the term "banker" and to determine what persons can be assimilated to bankers (public administration cashiers, stock brokers, notaries, etc.).

The Committee is of opinion, further, that, while the French delegation need not ask for a reservation with a view to enabling signatory States to continue to sanction under their laws the right to draw cheques on persons who do not carry on the profession of banking, it should not oppose the acceptance of such a reservation.

Ad Article 7.

This article declares certain provisions of the Uniform Law on Bills of Exchange applicable to cheques. Those provisions should be reproduced, in order that the law on cheques may be complete in itself.

Question 16, relating to domicile, is connected with Article 7. Domicile ceases to be of any great importance if only cheques on bankers are to be allowed.

Ad Article 9.

Question 19, relating to the insertion by the endorser of the stipulation "without liability" is connected with this article. The Committee is of opinion that this stipulation, which is already sanctioned in France by usage and legal doctrine, should be recognised as valid.

Ad Article 10.

The observation with reference to Article 7 concerning the insertion in the Uniform Law on Cheques of the provisions applicable to bills of exchange applies also to this article.

Ad Article 11.

Question 21, "Acceptation, Certification and Visa", relates to this article.

Acceptation, certification and visa cannot be recognised. They may be of use in times of emergency, but in normal circumstances they can scarcely be regarded as consistent with the character of the cheque.

Further, there must be complete agreement as to the meaning of the term "visa", which, in its general sense, implies an obligation on the part of the banker to tie up the funds for the benefit of the bearer: an indirect cheque of the "Banque de France" bearing the visa of the branch where the client has his account, with a view to payment into another branch, does not represent the real meaning of the word "visa", but simply indicates something in the nature of domicile.

Reservations may be accepted as regards the possibility of admitting certification or visa, provided that these are not used in France, unless perhaps the visa, and on condition that the effects are clearly defined.

Ad Article 13.

Payment at sight. Question 4, "Must a cheque always be payable on demand?" is connected with this article.

The reply to this question was unanimously in the affirmative. Accordingly, Article 13 should be kept without reservation.

Ad Article 14.

Question 5, "How must the time-limits for presentation be fixed?" is connected with this article.

The time-limits of five and eight days in force in France are definitely inadequate and should be extended.

There is no need, however, to settle in an international Convention the time-limits to be observed within any one country; this should be left to the national law.

The time-limits governing the presentation of cheques drawn by one country on another should be settled by international agreement, with a special recommendation concerning the adoption of fixed time-limits which may be easily determined without any need for complicated calculations, for example, classifying the different countries according to zones.

Ad Article 16.

Question 6, concerning the right of withdrawal, is connected with this article.

In accordance with the views of the majority of the bodies consulted, Article 12 of the law of June 14th, 1865, should be retained in French law: this article limits the right of objection ("opposition") in the case of the loss or theft of the instrument or the bankruptcy of the holder. This right, as thus limited, should however apply, not only to the drawer, but also to the holder in case of loss or theft of the cheque. In the case of the bankruptcy of the holder, the right of objection should devolve upon the assignee. A reservation to this effect should be inserted in the Convention.

Ad Article 17.

Partial payment. — There is no reason to adopt a solution differing from that adopted for bills of exchange, so that Article 17, which prohibits the holder, in the interest of the guarantors, from refusing partial payment, should be approved.

Question 11, "Can the drawee refuse partial payment of a cheque when there are not sufficient funds to meet it?" is connected with this article. The same solution should be adopted as for the holder: the drawee should not have the right to refuse partial payment.

As regards the order of the payment of a number of cheques of the same date presented simultaneously to the drawee and totalling an amount in excess of the funds available, the solution would appear to be for the drawee to tie up the funds for the person entitled thereto; this delicate question, however, should not be settled by international means and each State should retain its right to legislate in the matter.

Ad Article 18.

Crossed cheque. — This article should be accepted.

Question 7, "Would it not be possible to combine in a single type the crossed cheque and the cheque only for collection (*nur zur Verrechnung*)?" is connected with this article.

It would be preferable to adopt the solution laid down in Article 18, which provides only for the crossed cheque, and not to admit the cheque *nur zur Verrechnung*. Moreover, the Germans themselves appear to be prepared to give up the cheque *nur zur Verrechnung* and to adopt the crossed cheque.

Ad Article 19.

This article should be kept as it stands.

Question 9, "What are the effects of the transfer of cover to the holder?—Action for inequitable gain", is connected with this article, which relates to the holder on the fund against which the cheque is drawn. All the groups consulted are of opinion that the principles of French law should be maintained in the matter, the transfer of cover having the effect of removing the cover from the ownership of the drawer into that of the holder.

Ad Article 20.

Protest. — The protest or act drawn up by a legal officer noting non-payment ensures the

accuracy of the statement of non-payment and cannot be given up in France; a reservation on the subject should be inserted under Article 20 of the Uniform Regulation.

Question 8, "Is the drawer liable even if the cheque has not been presented within the fixed period of time?" concerns this question. Under French law, the drawer is not liable if he has provided cover and if the latter has disappeared, after the expiry of the time-limits for presentation owing to the drawee's action.

The French solution in the matter should be retained.

Ad Article 21.

This article provides that the protest must be made before the expiration of the time for presentment and on the actual day of presentment if it is made on the last day of the time for presentment. This last stipulation seems excessive, as it may be materially impossible to make the protest under such conditions. In the case of presentment on the last day of the time allowed for such purpose, the making of the protest should be deferred until the first business day following.

Ad Article 23.

No observation, except that the texts referred to in the Regulation concerning Bills of Exchange should be reproduced, in order that the law on cheques may form an independent whole.

Ad Articles 24 and 25.

Parts of a set. — It would probably be well to mention in the instrument the number of copies made, but as this obligation was not allowed in the case of bills of exchange, since circumstances might necessitate the making of a new copy, there is no need to adopt any different solution for cheques.

Ad Article 26.

Forgeries and alterations. — The same observation applies as to Articles 7 and 23 — namely, that it would be desirable to reproduce the texts of the Uniform Law on Bills of Exchange.

Question No. 10, "Upon whom do the risks of forgery and alteration fall?" is connected with this article. This is a point to be settled, when it arises, by the judges who decide on the substance of the case; it would be very difficult to deal with it under any internal law and *a fortiori* under an international Convention.

Ad Article 27.

Prescription. — There is no objection to the time-limit of six months.

QUESTIONS IN THE QUESTIONNAIRE WHICH ARE NOT CONNECTED WITH THE ARTICLES OF THE DRAFT UNIFORM REGULATION.

Question 12.

Is it not desirable to prescribe special rules to meet the case in which an instrument which otherwise satisfies all the conditions required for the validity of a bill of exchange stipulates that it is payable not in money but by a cheque, especially by a cheque drawn on a bank abroad?

The Committee is of opinion that this question appears to concern bills of exchange rather than cheques, and that it should not in any case be settled in an international Convention.

Question 14.

Loss or theft of a cheque (amortisation procedure). — It is for the different national laws to determine the procedure that the parties concerned must follow to obtain payment of a cheque that has been stolen or lost. The question of the law to be applied comes under conflicts of laws, to be settled by the Convention, and it would seem that the law applicable should be that of the place of payment.

FISCAL QUESTIONS.

Article 1 of the draft Convention drawn up by the experts provides that if their laws do not already make provision to this effect the contracting parties undertake to alter their laws so that the validity of obligations arising out of a cheque or the exercise of the rights that flow therefrom shall not be subordinated to the observance of the provisions concerning the stamp.

This rule, which was admitted in the Convention of June 7th, 1930, on the stamp laws in connection with bills of exchange and promissory notes, should be admitted also for cheques, subject to an addition, as in the case of bills of exchange, in the second paragraph of Article 1, stipulating that the exercise of the said rights may be suspended until payment, not only of the stamp duties, but also of the fines incurred.
