4. No transfer of Bullion from the name of one proprietor to that of another proprietor can be permitted, after such Bullion has once been tendered to, and actually deposited in the Mint. No Bullion can be withdrawn previous to registry, except sweepings and spillages of Bullion that may have been melted, without the payment of a fee of Rupees two for each Pass permitting such withdrawal.

5. It is to be understood that, until the Bullion or Coin shall be delivered after premelting to the Mint, at the Mint Scales in the Bullion Receiving Room, it is to be considered in the custody and at the risk of the importer, to whom, however, every facility will be afforded for securing it in the Bullion Strongholds.

6. On the receipt of the Assay Report, an account current, which shall be verified by the Assistant Bullion Keeper, showing the net produce of the Bullion or Coin with reference to its weight and Assay value, after deducting the authorised amount of Mint Duty, of Refining, and of Premelting charges, will be submitted to the importer for

his examination and signature, after which shall have been obtained, a Bullion Certificate on the General Treasury, prepared in the Mint Master's Office, will be delivered to him, authorising the holder to receive the amount at twenty (20) days' sight, calculated from the date of the registry or final receipt by the Mint of the Bullion:

10. Importers of Bullion or Coin will be at liberty to withdraw the same within the day following the receipt of the Assay Report, or within the day following the registry thereof, but at no later period, on payment of an Assay fee of four Rupees for each Assay of Gold Bullion, and of two Rupees for each Assay of Silver Bullion, independent of the payment of the Premelting charges above laid down on the gross weight of such Bullion.

11. Should Bullion, after having been premelted, prove to be brittle, and not adapted for coinage, it will be returned to the proprietor, and passed out of the Mint, under a written Pass, signed by the Mint Master and by the Assistant Bullion Keeper, and the proprietor will have to pay the charges for premelting the same at the prescribed rate, calculated on the gross weight in tolas of the Bullion so rejected.

Notice.

Officers visiting the Neilgherries are, in numerous instances, at great inconvenience on first arrival, owing to their coming in expectation of finding it in their power to draw Pay, due to them in arrears, early in the month, as elsewhere. It is therefore thought that it may contribute to the convenience of future visitors if it be thus made more generally known that (there being no Pay Office on the Hills) Pay has to be drawn, after

arrival on them, by transmitting Abstracts, duly countersigned, to the Paymaster Southern Division, Trichinopoly, with a last Pay Certificate; who, provided he receive them about the 7th, includes the amount in his General Order in arrears for the past month, on the Treasury at Coimbatore, whence it is sent so as to reach this Station Office for distribution usually on the 18th or 19th. There is only this one monthly transmission of Military Pay to the Hills; so that individuals arriving too late to be included in it, as above, have often to wait another month.

Officers of other Presidencies can only draw Pay under a Certificate from the Accountant Military Department of their Presidency. Certificates from Division Pay Offices of other Presidencies are insufficient: Officers are often at protracted inconvenience after arrival from having been unaware of this.

It is also notified, that it is extremely difficult to get Bills or Notes, of any kind whatever, cashed on the Hills: individuals often suffer great inconvenience from coming with the contrary impression.

Commanding Neilgherries.

DESCRIPTION OF THE LIGHT HOUSE AT CAPE MORETON.

The Light House at Cape Moreton is situated in—

Lat. 27° 0' 3" } By Flinder.
Long. 153° 26' 30" }

And

Lat. 27° 2' 54" } By Yule.
Long. 153° 28' 46" }

It is a white stone Tower, 67 feet in height,

including the lantern, and shows a White Revolving Light of the first class, on all points of the horizon seaward, having intervals of 70 seconds between the brightest points.

The Light consists of 21 Catoptric lamps, on three faces of 7 lamps each, placed in three rows, the upper one containing 2 lamps, the middle 3, and the lower 2.

The Light House stands on the summit of the eastern projection of the north-east part of Moreton Island, and a little more than a mile distant from the north extreme of the island, bearing NW. by compass.

The centre of the Light is 391 feet above the sea at high-water, and its estimated range is $26\frac{1}{2}$ Nautical miles.

The following Magnetic Bearings are taken from the Light House:—

Flinder's Rock,—N. $\frac{1}{2}$ E. $3\frac{1}{2}$ miles.

Buoy A.—W. by N.

Light Vessel,—W. $\frac{1}{2}$ N.

Variation of Compass,— $9\frac{1}{2}^{\circ}$ E.

Government Resident.

SAILING DIRECTIONS FOR THE NORTH CHANNEL INTO MORETON BAY.

Cape Moreton is the north-eastern point of Moreton Island, and is visible from a ship's deck at the distance of eight leagues.

When first seen from the southward, it appears to be detached, as the land which connects it with the higher parts of the island is very low.

The Light House is a conspicuous object on the summit of the Cape.

With the exception of Flinder's Rock, which bears N. $\frac{1}{2}$ E. from Light House, and NNE. 3 miles distant from the north projection of the Cape, there does not appear to be any out-lying danger.

Vessels entering Moreton Bay by the North Channel should, in coming from the southward, pass about a mile from the north projection of the Cape, and steer W. $\frac{1}{2}$ N. until the NW. extreme of the bushes at Point Camboyuro is on with "Ship Patch," and bears S. by E.

The Light Vessel will then bear a little to the southward of SW. by W., and the Light House E. by S. $\frac{1}{2}$ S.; the depth will then be 7 fathoms at low-water, and the black buoy at A (*vide Chart*) will bear about SW. $\frac{1}{2}$ W. a mile and a third distant.

The Glass House Hills will be seen (in clear weather) as on the sketch, with the highest (Burwa) bearing W. 4° S., but too far distant to be used as a leading mark.

From this point, a course about a degree to the southward of WSW. will carry a ship about $\frac{1}{2}$ of a mile to the northward of the Light Vessel; stand on this course until the Light Vessel is on with Mount Tempest (the highest part of Moreton Island), bearing S. 38° E.; you will then be to the westward of the east banks, and may steer a course SE. $\frac{1}{2}$ S. for Moreton Island, or with Mount Tempest a quarter of a point open on the port bow, keeping a look-out for the effect of the tide on the ship's course. The Light Vessel may be passed on either side; she is moored S. by W., 3 cables distant from the NW. shoulder of the eastern banks. The breadth of the channel between the east and west banks is about $\frac{1}{2}$ of a mile, and the banks are plainly discernible from a slightly elevated position.

There is good anchorage for nearly a mile from the Light Vessel, in a north-westerly direction, in from 4 to 5 fathoms, where an anchor may be safely dropped in the event of wind or tide failing, or in the event of a vessel reaching thus far before dark, as it would not be safe to proceed further in the absence of daylight.

Camboyuro Point is bold of approach, and may be passed at a cable's length distant; stand past it until the extreme of the bushes bears north, and then steer south until the "Ship Patch" (sand slope) at Tangalooma Point bears ENE. a mile and three quarters distant, when a SW. $\frac{1}{2}$ S. course may be steered to an anchorage off the Bar of the River Brisbane, in 4 and $4\frac{1}{2}$ fathoms, muddy bottom,—the highest trees on "Mud Island" bearing east.

A direct course SW. by S. to an anchorage off the Bar may be steered from Cowan Cowan, by passing to the westward of the Middle Bank off Tangalooma; but as the distance off shore can be more correctly estimated by passing to the eastward of it, the tract shown in the Plan had better be adopted until a Buoy is placed on the Middle Bank.

The Middle Bank bears W. by S. $\frac{1}{2}$ S., and is two and a half miles distant from "Ship Patch."

The shore between Cowan Cowan and Tangalooma is fronted by a narrow bank, upon parts of which there is not more than four or five feet water; the south part of this bank is about a mile off shore, inside which there is anchorage which may be gained by passing between it and the "Ship Patch."

There is good anchorage in Yule's Road, off the watering-place, about a quarter of a mile from the shore, in 10 or 12 fathoms water, where wood and water can be easily obtained.

Whalers would find this a most convenient place for taking on board either of these articles; the water is supplied by a never-failing stream into the bay, and wood can be cut within fifty yards of high-water mark. An anchorage may be taken in 5 and 6 fathoms water on the bank, opposite the Pilots' Station, and more out of the strength of the tide; but the distance from the watering-place would be considerably increased.

The soundings on the Chart are reduced to the lowest water at spring tides; the rise is from three to seven feet; strong south-easterly winds cause the greatest rise, and during the prevalence of strong westerly winds in the winter the range of tide is at times scarcely perceptible. The general set of the tide is the flood to the south, and the ebb to the north, but in some places the direction of the stream is varied by the shoals.

In the Channel, between the east and west banks, the first of the ebb sets strong to the NE. over the banks; after half-tide it takes a northerly direction, and latterly about NNW. It runs ENE. through Freeman's Channel.

Coasters and steamers drawing twelve feet water may use Freeman's Channel with safety, by keeping about a quarter of a mile off the sandy beach on the north shore of the Island; they should not stand to the southward until Cowan Cowan is well open of the extreme of the sandy point at Camboyuro.

In going out by Freeman's Channel a course should be kept to the northward past Camboyuro, until the north extreme of Cape Moreton is open to the northward of the sandy beaches, but the eye is the best guide for this channel.

As Moreton Island is entirely of sandy formation, the banks nearest to the shore are constantly undergoing changes in size and position; therefore it would not be prudent for a stranger to attempt this channel without having a pilot on board.

The Ship Channel should on all occasions be used by large ships; there is a safe channel through the eastern banks, with seldom less than four fathoms water, which is generally used by steamers and other coasters, but should not be taken by a stranger. As the eastern limit of the north bank has not been ascertained, it will be advisable for vessels coming from the northward, that Mount Tempest should not be brought to bear to the eastward of S. by E. until the Light House bears ESE.; a ship will then be on the channel course, and may steer W. $\frac{1}{2}$ N., and follow the foregoing directions.

The soundings in the Channel between the east and north banks will decrease gradually from 7 to 5 fathoms, and after rounding the Light Vessel will increase to 10 and 12 fathoms, and there will not be less water until *abreast* of Tangalooma Point.

From the Pilot Station to some distance beyond Cowan Cowan the water is much deeper, and varies from 15 to 20 fathoms.

Ships making Cape Moreton late in the evening will find safe anchorage from 2 to 3 miles inside the north extreme of Cape Moreton, and about a mile and a half off shore, in 6 fathoms water.

The Bearings are magnetic. The Light Vessel has done away with the necessity for the chequered Buoy at B, but in the event of her being temporarily removed that Buoy will supply her place. The Light Vessel will show a double light at night, namely two vertical lights, with an intervening space of about 5 feet.

Government Resident.

NOTICE TO MARINERS.

The Light will be exhibited at the Light House on Cape Moreton, for the first time, on Saturday evening, the 14th February, of which all persons are requested to take notice.

The principal works of the past Season, which have been completed or nearly so, are the following :—

Breach Candy Road.—From Sunkersett's Garden-house to Tardeo, 2,900 feet in length, has been widened to nearly one uniform width by the removal of projections that were formerly dangerous to public traffic.

Baboola Tank.—A portion of the wall of this tank, 351 feet in length, has been raised 4 feet, thereby increasing its capacity to the extent of 9,69,773 cubic feet, or 60,43,631 gallons.

Kharra Tank.—Formerly a large irregular hole, and being situated in the vicinity of a number of privies, the filth found its way into it,—so did all kinds of rubbish. This has been remedied by the construction of pukka retaining and guard-walls. A notice prohibiting people washing in the tank has also been put up. By the above arrangement, this tank has become of greater value, the water being now fit for culinary and other purposes.

Naigaum Tank has been deepened by 1,82,868 cubic feet, with the view of relieving the wants of the villages of Waddalla and its neighbourhood.

Parell Tank and Villages.—The southern side of this tank, and the different corners of streets in the Parell village, were used by its inhabitants for natural purposes. The water in the former was polluted, and the village made extremely filthy. This portion of the tank, and such of the corners of streets as were so used have been enclosed by wooden fences; and, for the convenience of the villagers, two public necessities (one for males and the other for females) are being erected on suitable sites.

Erskine Road Drain.—This drain had formerly side openings with wooden shutters, and latterly the stench from the drain escaped the joints of the shutters which were worn out. The substitution of masonry work for these shutters has not only prevented the above nuisance, but has added much to the appearance of the Erskine Road foot-path.

Grant Road.—Dry stone covered drains have been constructed under the slope on the side of the old drain and the ground between the Theatre property and the Grant Road.

Rollers.—Thirty heavy stone rollers, each weighing two tons, have been made. All these, together with fourteen old iron rollers, have been rendered suitable for cattle draught. The increase in the number of rollers will facilitate the consolidation of the road metal; and the employing of cattle decreases manual labour and prevents the crowding of workmen on the public roads, which caused inconvenience to the public in general.

Hallacore's Station at Kharra Tank.—The walls of this station have been raised to 12 feet in height, and wooden gates put up. By this improvement the nuisance experienced by the passengers and the neighbourhood is very much decreased, and the depôt itself closed from public view.

Public Urinaries.—Twenty-two new urinaries, in addition to the ten old ones, are being constructed on a plan calculated to prevent the indecencies the public were under the necessity of witnessing. Now, that these places have been provided, and boards, with the inscription "*Commit no Nuisance*," have been put up at the several places which were resorted to by the Natives before these urinaries were provided. It is to be hoped that Article XV. of Regulation III. of 1845 will be strictly enforced by the Police.

Street Boards.—Black Boards, inscribed in white with the names of Streets in the English, Murathee, and Guzerathee languages, have been put up in most of the Streets within the Fort and Native Town.

Foras Road.—From the western gateway of the Parell Government House to Worlee. This road will add much to the convenience of the people passing between Parell and Worlee.

Miscellaneous Works have been executed, such as constructing a wall in Pendy Grass Lane, between Byculia and Mount Road, erecting a retaining wall round the well at Chinchpoogly; deepening and clearing tanks and wells on the Islands of Bombay and Colaba; annual repairs to the Breach and Sion Vellards; to Worlee, Love Grove, Moree, and Dharravee sluices; special repairs to tanks and sluices; raising dwarf walls on the sides of different roads; bringing to its original form the foot-path of the Colaba Causeway which had sunk considerably; shutting in the ends of the cross-drains at the Oomercarry sewer; repairing the gates of the Mutton Markets; enlarging drains which were found insufficient to carry off the rain water; and various other petty works which do not call for particular notice.

Main Town Drain.—In the preceding year, the intention which the Board entertained of arching over the open portion of the Main Drain was abandoned in consequence of Government expressing doubts of the propriety of so covering it; and Mr. Conybeare at the same time representing that drawing off the fluid portion of the sewerage, and deodorizing it, according to a plan which he recommended, would effectually prevent any nuisance arising from the drain, whereby the expense of arching it over would be saved. During the past year that scheme was in operation; but the expense attending it proved to be much heavier than was anticipated, while the results were not generally deemed so satisfactory as the Board and the Public had been led to expect. It will be seen from Statement B that the entire charge of building up the side walls, and paving the open portion of the Main Drain (Rs. 61,318-2-3) was defrayed this year.

In the Annual Report for 1853-54 the Board stated that they proposed, during the ensuing season, to complete the drainage of the New Town, and also that of the suburbs of Sonapoor, Kamateepoor, and Khetwaddy. But the state of the Municipal Fund did not admit of their doing so. It was found necessary in September 1854, in consequence of the representations of the Superintendent of Repairs, that the Contractors for watering and repairing the roads, and for scavenging the Town, did not perform these works according to their engagements, to put an end to their contract. Until March following the road-watering, and repairs and scavenging duties were performed by Establishments entertained by the Superintendent, hence an extra expenditure under these heads, during the year, of Rs. 26,007, as explained in the note appended to the last Annual Report. In the same place was mentioned the loss of Income to the amount of Rs. 50,000, consequent on the decision of the Supreme Court in 1854, that the Shop and Stall Tax was not leviable by distraint, which caused the discontinuance of the collection of that tax. A substitute for the Shop and Stall Tax was shortly afterwards proposed by the Bench to Government, namely a tax on all occupants of houses, which was approved of by Government, and a Draft Act to legalize the levy of an Occupation Tax was submitted by the Bench to Government on the 11th July 1855, but it has not yet been passed into law.

Notwithstanding these drawbacks Rs. 1,84,335-5-1 have been laid out during the past year on new works, calculated to promote the public convenience, and to improve the sanitary condition of the Town. They are enumerated in Appendix B, which also shows the amount expended on each. The balance against the Fund on the 30th April 1855, in account with

the Sub-Treasurer, Rs. 58,130-9-8, shows, however, that to this extent the Expenditure on account of new works has been met by advances from the General Treasury under the credit granted by Government.

The Appendix F is a Statement of estimated Income, and proposed Expenditure during the official year ending on the 30th April 1856. After making allowance for sums due, but which may not be collected within the year, it is estimated that the gross receipts in the ensuing season, from all sources, (inclusive of the extra assessment of $2\frac{1}{2}$ per cent. on the annual value of houses and grounds, levied by the Bench in the sanction of Government for the season 1855-56, as a temporary measure to meet the deficit in the Fund,) will amount to

Rs. 4,57,197	4	4
The expenditure (inclusive of about Rs. 55,000 for sanctioned works remaining to be completed, and Rs. 20,000 for new tanks proposed to be constructed in the ensuing season) is estimated at.....	4,46,552	6 8

The difference.....	Rs. 10,644	13 8
---------------------	------------	------

Will be applicable to the reduction of the balance due by the Fund to Government on 30th April 1855	58,130	9 8
---	--------	-----

The debt then to Government on the 30th April 1856 would be about ..	Rs. 47,485	12 0
--	------------	------

But if the works for disposing of the night soil on the Harbour side of the Island be expended, as is contemplated during the season 1855-56, their estimated cost being	67,000	0 0
--	--------	-----

The Balance against the Fund in account with Government will, in such case, amount on the 30th April 1856 to	Rs. 1,14,485	12 0
--	--------------	------

The delay in submitting this Report arises from several changes of incumbency having occurred in the Office of Clerk to the Board during the past year.

C. E. STANGER LEATHES,
Acting Clerk of the Peace.

To W. HART, Esq., Secretary to Government,

General Department.

SIR,—In acknowledging the receipt of Mr. Secretary Hart's letter No. 2521, of the 9th instant, we beg to report—

That we have examined the Accounts of the Board of Conservancy for 1854-55.

The whole of these amounts, it appears, have been previously examined and passed by the Auditor of Municipal Accounts; and the accounts of the Superintendent of Repairs are examined by the Chief Engineer of Public Works.

We have carefully examined the items of Receipt and Expenditure, and have compared them with Vouchers, and we are satisfied that they are correct.

Having generally considered all the various Works and Repairs executed, and other items of Expenditure to which the accounts relate, we are of opinion that they should receive the sanction of Government in terms of Act No. XI. of 1845.

The Abstract of Accounts received with your letter is herewith returned.

(Signed) G. I. JAMESON,

„ J. J. BERKLEY.

„ H. G. CARTWRIGHT.
